advocating Italy's intervention in the Great War, he became the implacable foe of the official Socialist leaders while at the same time remaining a Socialist, according to Finer, "until far down into 1921." But he could not obtain power as a Socialist in isolation from the main body of the working class, and his will to power, intensified by the political necessity of "delivering the goods" to his turbulent followers, led him into alliance with the Right. With the collusion of the propertied classes, the Army and the Throne, all haunted by fear of the "Bolshevik peril," Mussolini climbed to supreme power. Once in control of the State he made his authority despotic, but he only rules on condition that he respects the fundamental rights of private property. As Finer puts it: "He detested, and he detests, the wealthy; but they had brought him to power; he had, and preserves, a native affection for the workers, but they could take his power away." In this situation Mussolini devotes himself to "the supreme interests of the nation." The preamble to the 1926 Constitution of the Fascist Party declares: "Fascism is a militia at the service of the nation. Its objective: to realise the greatness of the Italian people." The economic system is subordinated to the supreme interests of the nation through the Corporations, but these are "machinery to correct the faults of private enterprise, which is accepted as fundamentally sound"; the Fascists "have nothing to say about the division of the product of industry on any but the present system." The supreme interests of the nation do not require any radical social change; their significance lies in the international rather than the domestic sphere. The task of Fascism is "to realise the greatness of the Italian people"—by imperial expansion. For if a party rejects liberal-utilitarian values and yet at the same time rejects Socialism, what can it be but chauvinist? "Remember," said Mussolini in a speech to the Young Fascists in 1930, "that Fascism does not promise you honours or jobs or rewards, but only duty and fighting." Now, it appears, the Fascist system is soon to give its followers duty and fighting in plenty.

SHORTER NOTICES

"The Problems of the Foreign Exchanges." By L. L. B. Angas. Macmillan. 273 pages. 20s.

This book is the second of a series of three, the preceding volume bearing the title "The Problems of Money," and the third that of "Methods of Preventing Unemployment and Bad Trade." It is not stated why the second volume has been issued first, and it is perhaps not entirely just to review it separately, though the main argument of the first volume is conveniently summarised in a series of Appendices.

The title of the book might lead the reader to suppose that it is an exposition of the workings of the foreign exchanges. In fact, it is a tract against any return to the gold standard, and such expository passages as are inserted are brief and by no means as well done as the remainder of the book, especially since Major Angas is given in excess to the habit of inventing high-sounding titles for comparatively simple theses—e.g. when he wishes to say that international loans must in the long run be paid in goods he calls it The Theory of the Commodity Counterpart of International Loans.

Regarded as a tract, the book is very well done. Apart from his newly-invented technical phrases, Major Angas argues clearly and forcefully. His case against the gold standard is not that it is inherently harmful or unworkable, but that the monetary authorities of the different nations will be politically unable to fulfil the conditions which are essential to its successful working. They will not be allowed to deflate, they will not lose gold cheerfully, and they will not forbear from imposing excessive tariffs. But though he is shrewd and perceptive in his treatment of the gold standard, he is almost naively optimistic about inconvertible paper. "A paper system," he says, "permits (although it does not absolutely ensure) internal price stability," but his whole argument is founded on the premise that the degree of assurance is very considerable. Moreover, he is a stout disbeliever in the possibility of runaway exchanges and an equally stout believer in the Purchasing Power Parity theory. Others will not be so easily satisfied, and they will feel disappointed that Major Angas so briefly dismisses the alternative policy of variable gold parities.

Major Angas' book formulates a point of view which is very widely and tenaciously held, although it too rarely

achieves public expression—namely, that Great Britain has far more to gain than to lose, even in the sphere of international trade, from a regime of freely fluctuating exchanges. It would deserve a very wide audience, had not the price been fixed quite scandalously high.

"The Rebuilding of Manchester." By Sir E. D. Simon and J. Inman. Longmans. 173 pages. 5s.

This book reminds us in its historical introduction that the city of Manchester has had to pay for its nineteenth century devotion to *laissez-faire* with an haphazard, ungainly growth, slums, lack of central parks, and a grimy atmosphere. Fortunately it has in Sir Ernest Simon a patriotic citizen who has shown a way for the city to right former wrongs. He and his collaborator, Mr Inman, have prepared in broad outline a practical long-term scheme for rebuilding Manchester, which deserves to be copied by our other industrial towns.

Manchester, an elongated lozenge four miles wide by twelve miles long, with its civic and business centre to the north, is by no means unbeautiful. Four or five miles south of the centre lie pleasant middle-class suburbs like Didsbury; while the 5,500-acre Wythenshawe area that has recently been acquired by the City Council for building, contains parkways (wide strips of grass separating the footpath from the through traffic road) which, although common enough in the United States, are unique in England. But around the centre there is a thick ring of slums including tenements where shocking conditions of overcrowding exist.

The authors have evolved, with the aid of an architect, a plan whereby an enlightened City Council (suitably assisted by the Government) could rebuild Manchester without violent changes so that the whole of the area round the centre could be made like Didsbury or Wythenshawe, and the slum ring destroyed and replaced by modern flats, new parks and parkway roads. In spite of Sir Ernest's known preference for cottages in which to rehouse the working population, he concedes four-story flats (apparently without lifts, although surely the money might be found for them) to house 40,000 families; while he would put 60,000 more into cottages either in Wythenshawe or in adjacent parts of Cheshire, but at present outside the city boundary.

The book is written with extreme lucidity. There are details over which there will be disagreement. It seems a pity to stop up almost the only rapid exit from Manchester into the country by building all over neighbouring Cheshire. Perhaps the authors, if they are thinking so long ahead, have not sufficiently emphasised the possibility of building satellite towns, with their own industries, farther out, rather than as dormitories. But the book is stimulating not merely to the Manchester citizen but to anyone interested in the broader aspects of planning, of municipal government and of housing.

MONEY AND BANKING

THE STATE AND THE BANK—I

THE relations between the Government and the Bank of England have for a long time been a mystery to most people. To some extent this mystery has become intensified through deliberate misconceptions. The resentment of the Labour Party against the Bank for the rôle which it played in the crisis of 1931 still rankles, and there is no doubt that many members of the Labour Party believe that the Bank of England at that time imposed its will instead of merely stating its interpretation of the position and tendering its advice. The Bank's traditional right of note issue and the fact that its notes are legal tender have also given rise to misunderstanding, and some people really believe that the Government has surrendered to the Bank its power of control over all forms of money and credit. This view, however, overlooks the fact that the functions of the Bank derive from Parliament through legislation such as Peel's Bank Act of 1844, and the Currency and Bank Notes Act of 1928, both of which impose statutory limits upon the power of the Bank of England.

Nevertheless, the exact relation between the Government and the Bank remains largely unknown, and for this both parties are themselves largely to blame. The Government is often unwilling to discuss monetary questions in Parliament, and is always prone to take refuge in the legal fiction that the Bank of England is a private undertaking enjoying with the Government the confidential relations of banker with client. The Bank, on the other hand, recruits its directorate mainly from the City instead of from the country at large, it never explains or attempts to justify its action, and in law and in theory it is responsible to no one for its actions. In practice it would find it very difficult to run counter to the wishes of the Government of the day, and in practice the Government has unobtrusive ways of making its wishes felt. Yet the mere fact that no open conflict has in recent years developed between the Government and the Bank suggests to the public not that the Bank has always tendered good advice, but that the Government has invariably given way and accepted the Bank's advice, whether that advice was good or bad. In other words, the absence of any conflict is generally thought to indicate the subordination of the Government to the Bank in monetary affairs.

If this view is correct, it is an indictment of recent Governments more than of the Bank. But, in fact, there is no reason to suppose that it is always the Government which has given way. Still, the written and unwritten power of the Bank and its relations with the Government certainly need greater publicity than they have so far received. All that has hitherto emerged on this subject is to be found in the evidence of the Deputy-Governor of the Bank before the Macmillan Commission. This is about five years old, and as Great Britain was at that time still on the gold standard, the field within which there was room for the exercise of discretion was quite different from that of the present day. The Deputy-Governor stated broadly that the Bank acted as the Government's banker, that it gave the Government advice on all technical matters coming within the Bank's purview, and that it acted as the Government's agent in carrying out the Government's decisions of policy. Day-to-day policy is apparently a matter for the Bank alone, though even this has never been categorically confirmed. According to the Macmillan Report, day-to-day policy includes alterations of Bank rate, open-market operations, and the exercise of influence over other prominent elements in the money market, and, indeed, we would add, in the whole of the City. The Exchange Equalisation Account did not exist at the time of the Macmillan Report, and so it does not state to what extent the day-to-day operations of the Account are determined by the Government or the Bank. Nor has any such statement ever been made. Generally speaking, the Macmillan Report has ceased to be a wholly accurate guide to the facts, and most of its recommendations were concerned with the proper use

of the Bank's attenuated gold reserves. To-day the size of the gold reserve has ceased to be of vital importance.

The real difficulty behind the attempt to define the functions of the Bank is that many of its powers are unwritten and traditional—just as most of the traditions of the City as a whole are unwritten and depend upon a mass of custom developed and proved by its own members. It is clear that leadership is needed in the City, and it is also clear that at times control is desirable. That leadership and that control are exercised by the Bank of England with the City's own consent. There are some advantages in a flexible system of this kind and in an almost complete absence of restriction imposed by law. It leaves the City free to carry on its business without being hampered by Government regulation or red tape. It imposes on the City a sense of responsibility which tends to become sapped so soon as statutory limitations are introduced. At times it leaves too much scope for the rogue or the fool. Still the City has its own ways of dealing with offenders, and it can fairly reply that if business is to be carried on at all, it is necessary to assume the existence of a reasonably high degree of honesty and wisdom.

Yet there is the danger that the City may become a law to itself, and that the Bank may unconsciously acquire powers which more properly belong to the Government; and may even judge questions from the standpoint of the "City" as distinct from the nation. But that the Bank recognises the need to consider the national interest in a broad sense is proved by the fact that during recent years it has been at some pains to attend to the reorganisation of certain British industries and has also recruited part of its directorate from outside the City.

If the Bank is to retain its independence and its unofficial leadership in financial and monetary matters, it is necessary to lay down several guiding conditions:—

(1) The Bank's control and leadership must be entirely disinterested. By common consent the Bank has been disinterested in intention for a very long time. But it would be a great advantage if its knowledge of the interests of the different sections of the community outside the City were more largely obtained by direct consultation than by intuition in Threadneedle Street. In particular, there seems to be no valid continuing reason for maintaining the tradition of distance in the relations of the Bank to its clients, the joint-stock banks.

(2) The Bank must consent to a far greater degree of publicity regarding its actions. This is essential if public opinion is to acquiesce in the exercise of unwritten power over matters of public importance. The Bank must continually be explaining not only what it is doing, but also why it is doing it. At times secrecy is admittedly essential, and information may have to be withheld for weeks or even for months. Yet sooner or later information must be forthcoming, and in regard to many matters information could be released almost at once. As a matter of routine there is no reason why the Bank should not expand its invaluable Statistical Supplement into a monthly expression of opinion on questions of importance, on the lines of the Monthly Bulletin of the American Federal Reserve Board. It should also issue an annual report, which should, as far as possible, contain a full account of its doings.

(3) The Government must also consent to greater publicity. It should co-operate in the preparation of the proposed monthly and annual reports of the Bank. It should define the exact line of demarcation between the functions of the Government and the Bank, and should keep that definition up to date. In fairness to the Bank, it must be careful to explain when an apparent action of the Bank is in reality the execution of a decision of the Government, and statements in the periodical reports of the Bank of England should be supplemented and at times preceded by parallel statements from the Govern-

ment benches in the House of Commons. The adoption of these last two conditions would undoubtedly do much to clear the minds of the public of natural misconceptions which in turn have given rise to fears regarding the supposed powers of the Bank. In themselves they call for no fresh legislation or change in the status of the Bank. It would still be left to act as the technical adviser of the Government and as the link between the Government and the country on the one hand and the City of London and foreign central banks on the other hand. The only difference would be that everybody would know what it was doing and why it was doing it. This knowledge would be as much in the Bank's interest as in that of the country at large, for knowledge gives rise to confidence and to a general acceptance that the Bank's powers are being wisely exercised.

Fuller publicity would create a firmer basis of confidence on which the Bank could found its policies. But publicity for the Bank's operations is a minor matter compared with the nature of the operations themselves—a subject which raises many important questions which must be deferred to a second article. First and foremost of these problems is the re-orientation which the changed circumstances of the last few years have rendered necessary. New functions have been created both for the Government and for the Bank by the general economic confusion of the world and in particular by our own departure from the gold standard and by the attempt to control our foreign trade relations. In this new situation the line of demarcation between the Bank and the Government is much less certain than it was seven years ago. Here, former State documents such as the Macmillan Report are of no assistance at all. Secondly, public opinion is no longer disposed to give the Bank quite the same measure of independence as it has hitherto enjoyed, and it is advisable to consider the relation between the State and the Bank after taking this trend of opinion into account. No responsible person suggests that the complete nationalisation of the Bank is the only or even the best solution, and no one wants to deprive the Bank of the right or duty to carry on its own day-to-day business without ministerial or bureaucratic interference. Yet full publicity, though essential, will not entirely dispose of the problem. National interest and the maintenance of public confidence in our monetary system alike require that the right compromise should be found between the independence of the Bank in operation and the ultimate responsibility of the Government for monetary policy. To this matter—which raises the question of the Bank's constitution as well as its functions—we shall return in a future article.

FINANCIAL NOTES

A Lancashire Banking Amalgamation.—Treasury sanction has been obtained to a proposal to amalgamate two well-known Lancashire banks, the District and the County Banks. The terms provide that shareholders in the County Bank are to be offered for each share of £20, £4 paid, held by them 2½ shares of £1 each, fully paid, to rank with the existing "A" shares (£5, £1 paid) of the District Bank, together with a cash payment of five shillings. On the basis of recent Stock Exchange quotations this gives the County Bank shares a slight turn, and they are also relieved of any further liability to a call. The scheme means that the District Bank absorbs the County Bank, and should leave scope for certain operating economies and the closing of redundant branches, as well as adding to the strength of the new undertaking. On the basis of the June 30, 1935, statements of accounts, the combined deposits of the new bank amount to £71.4 millions, which compares with the £85.7 millions of deposits lodged with Martins Bank, the largest of the Lancashire banks. The new combination will initially have 592 branches, against 550 branches belonging to Martins Bank. The scheme also marks the further progress of the amalgamation movement among the Lancashire banks which followed, and may to some extent have been occasioned by, the big national amalgamations which gave birth to the "Big Five." Seven years ago Martins

Bank absorbed the Lancashire and Yorkshire Bank, while in 1930 Williams Deacon's Bank became associated with the Royal Bank of Scotland. The Union Bank of Manchester became associated with Barclays Bank immediately after the war. The net result will be to leave Martins and the District Bank as the two big independent Lancashire banks, with very little difference in size between them. This should provide a reasonable compromise between strength and independence for the purpose of meeting Lancashire's banking needs, while a further element of competition will be provided by Williams Deacon's and the Union Banks and by the numerous Lancashire branches of the "Big Five."

The Foreign Exchanges.—The London market has been very idle. Superficially there has been an improvement on the Continent. The Dutch Bank rate has been reduced from 6 to 5 per cent. and the French Bank rate from 3½ to 3 per cent. The Netherlands Bank has also regained about Fl. 25 millions of its gold losses. The forward exchange quotations for the gold *bloc* currencies have also improved during the week. Even so, three months' guilders and Swiss francs are still quoted at rates corresponding to 9 per cent. per annum, while the British control has intervened during the week in support of the French franc. It is also believed that the Netherlands Bank was only able to regain its gold by buying it in Paris on its own initiative and at an exchange rate which was not wholly remunerative. Hence confidence is still lacking in the gold *bloc* currencies, and recent news from France is hardly encouraging. The New York rate remains steady at \$4.96½. Three months' dollars are quoted at a premium of 1½ cents. This equals about 1½ per cent. per annum, which is just enough to keep American short money out of London.

The Money Market.—The Clearing Banks have experienced a fair demand for money this week, but the market has had no difficulty in obtaining loans. The banks have been buying at ½ per cent. Treasury bills maturing during the first three weeks of October, and have also bought a few September Treasuries. Hot Treasury bills are a nominal ⅞ per cent.

	July 18, 1935	July 25, 1935	Aug. 2, 1935	Aug. 9, 1935
Bank rate.....	2	2	2	2
Clearing banks' deposit rate ..	1	1	1	1

Clearing banks.....	1-1	1-1	1-1	1-1
Others.....	1	1	1	1
Discount rates :—				
Treasury bills	1½	1½	1½	1½
Three months' bank bills	1½	1½	1½	1½

Last week's Treasury bills went at an average tender rate of 11s. 9.13d. per cent. against 10s. 9.77d. per cent. a week before. The total of Treasury bills issued by tender has now risen to £510 millions, against £360 millions on March 31st last and £454 millions a year ago.

The Bank Return.—The holidays have occasioned a further increase in the note circulation to a new high record. The rate of increase during the past fortnight has been normal, and there is no need to seek any explanation beyond the holidays and the fine weather.

	Aug. 8, 1934	July 17, 1935	July 24, 1935	July 31, 1935	Aug. 7, 1935

Other securities.....	10.1	13.5	12.9	13.4	13.1

Proportion..... 41.9% 35.7% 35.3% 32.5% 30.1%
Notwithstanding the currency withdrawals by the public, bankers' deposits have risen to £82.7 millions. This is mainly because of a contraction in public deposits.

THE STOCK EXCHANGE

BRAZIL AND HER BONDHOLDERS

BRAZIL'S economic affairs have been the subject of increasingly pessimistic rumour, in London, this week. For many months past the Brazilian bondholder's lot has been unfavourable, but the further heavy fall in quotations during the last few days has, by its rapidity, surprised even a market fairly accustomed to ill-news. When Brazil's unilateral debt scheme was presented to the London market in February last year, well-informed City opinion compared the meagre terms offered on the junior issues with the supposedly favourable prospects of economic recovery in the Republic. Events, unhappily, have disproved this optimism, for during the succeeding eighteen months Brazil's economic and financial situation has undoubtedly deteriorated. As we showed in a leading article in last week's *Economist* (page 236) Brazil's economy is largely bound up with the fortunes of a single commodity, coffee, in which she has lost her effective world monopoly, after maintaining a protracted and expensive "valorisation" scheme with doubtful success.

In the absence, so far, of official information, the financial policy of Rio is obscure. Fears of a new default, expressed in the bond market this week, may have owed something, in their origin, to sustained propaganda in certain of the less responsible organs of the Brazilian press. They have received, as yet, neither confirmation nor denial, although the market, on Thursday, became rather more reassured, in anticipation of an early statement from the Brazilian Government. There is, in any case, sufficient cause for nervousness. The exchange situation is controlled on a highly confusing *ad hoc* basis, the Federal finances are becoming seriously strained, and the coffee position grows increasingly top-heavy. "Seven-day defaults" on the January and July coupons of certain San Paulo issues were symptomatic of the clouded outlook. Are these short delays the advance signal of more serious trouble for bondholders? Can the rising scale of service, under the 1934 Debt Plan, be guaranteed for Grades V to VII in the current year? Can the authorities resist pressure to review the whole of the 1934 Plan, consulting "as it seems necessary or advisable" the representatives of all the principal creditors?

These are questions to which the London market urgently requires an authoritative answer. The position is far too serious for temporising, or for vague expressions of good intention. No bondholder will deny that Brazil's difficulties are formidable, or that London may have contributed to Brazil's present situation, by a past lending policy whose generosity has been unevenly tempered by regard for immediate economic probabilities. To build El Dorado virtually on a single non-auriferous commodity, like coffee, is hazardous. The latter-day development of alternative exports such as cotton and fruit has required, on the one hand, an artificially high price in America and, on the other, a considerable change in public taste. These new crops are unlikely, in themselves, to provide economic salvation, for the area in which they can be raised is fairly localised.

It was once suggested, in another connection, that, in a state of urgency, the claims of the bondholder became comparable with those of an equity shareholder in the State economy. The London market has always recognised the force of this view in times of adversity, but with due limitation. The difficulties of a hard-pressed debtor are willingly recognised, provided that temporary alleviation is reached by mutual agreement and discussion. Machinery exists, in Brazil's case, for this very purpose. The paying agents for the various Brazilian issues have consistently regarded themselves as having special knowledge of the debtor's position, and responsibility *vis-à-vis* the creditors' security. The Corporation of Foreign Bondholders has a long record of patient work in the same field.

There is no doubt that other institutions in the City of London would gladly co-operate in any efforts to place the position on the soundest possible basis for both parties if need arose.

Negotiations, however, require time, and in the interim an unequivocal statement of intention may be appropriate from the Brazilian Government. In particular, the position of the senior Funding loans appears to call for special elucidation. These bonds, whose service has always been forthcoming, are rightly regarded as a first charge on the Federal finances. They were so recognised (together with the 20- and 40-year Funding issues of 1931) in the 1934 Debt Plan. This week's further dismaying fall in quotations has brought the 1898 issue near the level obtaining in the difficult period of 1931. Even on the disappointing trade figures for the first four months of the year, however, there should be ample sterling exchange cover for the full service of the four loans. Moreover, it is not unlikely that closer control of the exchange situation, with a view to preventing leakage, could be effected. The present level of quotations, therefore, suggests that holders are apprehensive on other than purely economic or financial grounds.

The general London view would seem to be that full service for the four Funding issues should be an essential basis of any new proposals which may be put forward. It might be necessary, temporarily, to relegate certain junior issues from their present to lower grades until the situation improved, but existing conditions are still far from desperate. The market, however, is in no mood to welcome a far-reaching unilateral departure from the 1934 scheme. As the following table suggests, Brazilian issues are numbered, at the moment, among the more speculative of the mixed bag of foreign securities marketed in London. Until present uncertainties are removed, one way or the other, their investment appeal must necessarily be limited, and their speculative appeal difficult to assess:—

† 1930 only. (a) Full sinking fund payments.

† 1930 only. (a) Full sinking fund maintained (at rate of ½ per cent. per annum on 1898 and 1914 Funding loans) by purchase under par. (b) 5 per cent. of original issue purchased annually under 1934 Debt Plan. (c) Based on scale in current year, without adjustment for coupons in arrear.

The problem, however, presents itself rather differently to existing holders, who already face formidable capital losses. Further unfavourable developments are to some extent discounted at present prices. The "bears" have naturally found their ideal *terrain* in the market recently, and to that extent a recovery on definite news would not be impossible. On the other hand, considerable selling by private holders has failed to evoke the attention

of speculative purchasers, and jobbers hold as much stock on their books as they can well afford.

In these circumstances, we reiterate our suggestion that the Brazilian Government might see its way promptly to issue a statement regarding the immediate position, to be followed by discussions with responsible quarters in London, with a view to seeking an agreed scale of temporary relief, should it appear necessary and desirable. Though the prospects of long-term recovery may well depend on the course of world demand for Brazilian coffee and her ancillary crops, Brazil has it within her power to effect far-reaching reform in her internal finances. The restoration of Budget equilibrium and the stabilisation of the milreis, to cite only two of the unrealised recommendations of the Niemeyer report, are obvious initial steps in this direction.

INVESTMENT NOTES

"Selling a Pig."—A temporary holiday respite from current company news allows investors a little breathing space in which to take stock of events and tendencies in the last few crowded months. Even a cursory glance at this year's list of capital reorganisation schemes suggests that considerable progress has been made in removing the *débris* of depression, but that no clear line of demarcation has yet been drawn between those sacrifices, in "reconstruction," which are equitable to the shareholders who make them, and those which are inequitable. True, the withdrawal, after organised opposition, of a proposal by a great South African company to reduce the future dividends on its preference shares without compensation, has been by way of "a famous victory" for the principle that, in this sphere as in others, something for nothing is not a business proposition. Other capital schemes, however, which have been successfully carried through, have forcibly illustrated the difficulty inherent in all proposals to change the rights of any given class of shareholder—namely, the impossibility of putting a firm actuarial valuation on future earning power. Perhaps the clearest illustration of this crucial difficulty, in its simplest terms, has been provided by the purchase, by a large and well-established concern in the iron-founding trades, of the shares of a company manufacturing heating appliances, after the latter, as a public concern, had published only a single set of accounts. The method adopted in this case was to base the purchase consideration on the quotations for the respective shares in "market overt," i.e. on Stock Exchange values. In effect, however, shareholders in the absorbed concern were "selling a pig in a poke," for they were required to transfer the earning power of their company, in perpetuity, at a price mainly determined by a very short past history. All transactions of this nature have the additional characteristic that the "buyers" work on interior lines, with inside knowledge of possibilities, while the "sellers" have only vague general indications to guide them. In the case of a capital scheme by a dominant combine in the chemical trades (which has been authorised by shareholders but is still before the Court), the directors were at pains to make clear both the extent of their expectation of future profits and the principles which would govern their policy in distributing them. The preference stock repurchase proposals of a major communications company, however, bring out more clearly the implications of the truism that one man can never fully know what is in another's mind. Stockholders, in this instance, were asked to relinquish a part of their stock for a cash consideration at a price above the market value when the scheme was first published. Acceptance was purely voluntary, and the stockholders had a detailed body of past accounts on which to base their estimates of probable future earning power. The terms on which the necessary cash resources for the operation were to be acquired, however, were not disclosed until stockholders had made their decision. They proved particularly favourable from the company's viewpoint, their general effect being slightly to increase its "earning equity" and, *pro tanto*, to enhance the "cover" for dividends on the non-transferred stock. While the company may be congratulated on the ingenuity of the method adopted, in the interests of all its stockholders, it may be tentatively asked

whether the decision of any transferor of preference stock would have been affected, in large or small degree, by foreknowledge of a matter directly bearing on the value of the non-transferred portion. Without criticising the procedure adopted in this or any other special case, investors may be inclined to lay down, as a general proposition, that the fundamental difficulty in all capital schemes will be minimised when every fact having a bearing on future earning power is equally present in the minds of both parties.

* * *

The Air and the Investor.—A well documented review of the position of the air industry, from an investment angle, is given in the latest bulletin of an eminent firm of London stockbrokers. By a slightly different route the writers reach a similar conclusion to that expressed in a leading article on aircraft shares in the *Economist* of May 18, 1935 (page 1141). While specialised knowledge in the aircraft share market may be rewarded with high profits, conservative investors will do well to confine their attention to a small number of the leading companies, pending the eventual consolidation of the industry—which will be achieved neither this year nor next. To all such investors, the review will be of prime service, not only for its full and conveniently grouped tables of aircraft registrations, flights, mileage, passengers, exports, etc., over the last decade, and for its analysis of the capital, profits (where existing), and type of product of every aircraft and engine company known to the Stock Exchange, but because of its insistence on the fundamental paradox of the industry's present position. Though the industry has been built up on subsidy, and might well have had difficulty in attracting much new capital in the absence of a large increase in the Air Force, its ultimate *sine qua non* is a "revival of peaceful international conditions." Without them it cannot fully exploit its peculiar advantages, since, of all transport arms, it is essentially the most "international" and the least patient of the cramping effect of narrow and frequent political frontiers. For the manufacturing industry, at present, profits are unlikely to be universal or regular. Demand is far from being standardised

TRIPLE SHELL LUBRICATING OIL

—the long list of models on which the Air Ministry is about to pronounce the death sentence affords a striking commentary on this fact—and only those companies with experience and ample resources have a reasonable chance of success. The industry may have a bright future for passenger and freight transport, particularly in North and South America, Australia, Asia, etc., where distances are great and road and rail transport are not already extensively developed. Before this stage is reached, however, two evolutionary processes must be completed. The first is the production of reliable, durable, inexpensive and fairly standardised models, whose attainment may necessitate a period of financial conservatism by large manufacturing companies, which may not be to the liking of speculative shareholders. The second is the substitution of civil for military aviation as the preponderant influence in output, design and finance.

American Company Earnings.—The Wall Street revival, to which we referred in last week's *Economist* (page 242), has been evidenced by a more or less continuous rise in quotations since the latter part of March. The movement has been especially noteworthy in Utilities, but has also been steady and substantial as regards Industrials and Rails. The somewhat sharp downward trend of the earlier weeks of the year was due, in part, to fears that second quarter earnings, generally, would reflect the absence of any expansion in the volume of trade sufficient to offset the rising tendency of costs resulting from the operation of N.R.A. and associated measures. At one time a fairly severe "squeezing" process was feared. The following table of representative corporate earnings (expressed on a "per share" basis) suggests, however, that the tendency of the market in the past four months has been paralleled by a more favourable trading experience than had been anticipated:—

Earnings in \$ per common share				
	Quarter	1934	1935	Change per Share
U.S. Steel.....	1	Dr. 1.53	Dr. 0.97	+0.56
	2	Dr. 0.11	Dr. 0.81	-0.70
Bethlehem	1	0.05	Dr. 0.70	-0.75
	2	0.56	Dr. 0.79	-1.35
General Electric	1	0.14	0.19	+0.05
	2	0.15	0.21	+0.06
General Motors	1	0.62	0.67	+0.05
	2	0.68	1.15	+0.47
Du Pont	1	0.90	0.85	-0.05
	2	0.96	0.89	-0.07
Caterpillar Tractor	1	0.42	0.58	+0.16
	2	0.68	0.97	+0.29
General Food.....	1	0.70	0.64	-0.06
	2	0.42	0.48	+0.06
Corn Products	1	0.74	0.67	-0.07
	2	0.66	0.52	-0.14
National Biscuit.....	1	0.42	0.22	-0.20
	2	0.44	0.31	-0.13
Johns-Manville.....	1	Dr. 0.28	0.15	+0.43
	2	0.16	0.56	+0.40
American Metal	1	Dr. 0.24	Dr. 0.02	+0.22
	2	Dr. 0.11	0.09	+0.20
American Tel.....	1	1.77	1.61	-0.16
	2	1.55	1.55	...

Increased earnings have also been shown by Radio Corporation, Eastman-Kodak, Timkin Bearing, Proctor and Gamble, and Baldwin Loco. Moderate declines have been shown by Industrial Alcohol, National Distillers and Bendix Aviation. American Utility earnings, as a whole, have been relatively well maintained in difficult conditions, but the railways, faced with more inflexible factors, have made a poorer showing. The impression left by a general survey is that American business profits have shown satisfactory stability during a period of readjustment, a result which gives promise of good recuperative power under more favourable conditions.

Buenos Aires Provincial Loans.—The authorities of the Province of Buenos Aires may be congratulated on their promptitude in bringing forward a scheme for the service of certain external loans as from January 1st next, when the provisional arrangements which have been in force since January, 1933, are due to expire. The offer is made to holders of the bonds shown in the table below. In January, 1933, the Government suspended sinking funds, and offered interest payments on the basis of the amounts in foreign currencies realised at current rates of exchange by the conversion of equivalent paper pesos at par, the balance being covered by Arrears Certificates. The new scheme presages the direct payment, from January next, of the revenues covered by the Unification Law to a special account with the Banco de la Nacion Argentina, from which the reduced service of "assented" bonds will be paid under irrevocable instructions from the Provincial Government. Any insufficiency will be made up, first from the proceeds of the Land Tax and Additional Land Tax, and secondly, if necessary, out of the remaining revenues of the Provincial Government. Very properly, the common fund thus created will be secured to bondholders in the order of priority of their loans, the 3-3½ per cent. Loan of 1906-9 having a first charge, the 5 per cent. Consolidation Gold Loan a second and all the others a third charge. The prospects of bondholders have been tangibly improved by the passage of the Unification Law (referred to above), under which the Central Government has become responsible for the collection of the whole of the internal consumption taxes in those provinces adhering to the law—of which Buenos Aires is one. The latter, consequently, will receive increasing sums from this source from 1936 onwards, in proportion to its relatively dense population. In view of the resulting increase in their security, bondholders will be asked to accept a reduced service as follows:—

Loan	Interest till 1938	Interest thereafter	Amortisation (1942, onwards)
3-3½%, 1906-9.....	Full 4½%	Full 4½%	0.375
5% Consolidation G.L., 1915	4½%	4½%	1.85
5% Sterling, 1908 (Drainage)	3½%	4%	1.71
4½% Ext., 1909 (Railway)*	3½%	3½%	0.75
5% Ext. G.L., 1910	3½%	4%	1.59

* English Fraction.

Though bondholders may conceivably press for power to review future arrangements, in the event of a possible further improvement in provincial economic conditions, they will probably regard the present terms as far more generous than those secured by their fellow bondholders in many other parts of South America. They will doubtless attach especial importance to the fact that, under the proposed scheme, service will be payable in the contractual currencies (other than gold pesos), and will no longer be dependent upon prevailing rates of exchange.

Danzig Bonds.—The complications which have arisen in the relations of Danzig with her neighbours (which were described in a leading article in the *Economist* of July 27, 1935, page 168, and are further discussed on page 274 of this week's issue) have inevitably affected the London market for Danzig bonds, whose history, so far as British investors are concerned, has hitherto been of the happiest. There are two separate issues in which the London market is interested. The 7 per cent. Mortgage Bonds of the Municipality of Danzig, of which £921,750 are outstanding of an original issue of £1,500,000 at 90 in April, 1925, have regularly received their full service. The expenditure of the proceeds was supervised by a trustee appointed by the Council of the League of Nations, and was devoted to the completion of hydro-electric works, the extension of water-works, the development of the harbour, etc. The bonds, which are a direct obligation of the municipality, are secured by a specific first mortgage on all lands, buildings, etc., pertaining to the municipal electric, gas and water-works undertakings. The second Danzig issue, dealt in in London, was made in June, 1927, on behalf, not of the municipality, but of the Free City of Danzig, in the shape of £1,900,000 of 6½ per cent. (Tobacco Monopoly) State Loan, of which £1,520,000 was offered in London and

£380,000 on the Continent at 91. The Twenty-Year Sterling Bonds, of which £1,183,600 are now outstanding, are a direct obligation of the Free City, secured by a first charge to the League of Nations Commissioner of receipts from the tobacco monopoly and the excise on spirits. Hitherto, Danzig bonds, like the 7 per cent. bonds of Estonia, have had the proud distinction of a clean sheet in the records of the League Loans Committee. Earlier this year quotations for the two issues touched 95½ and 89½ respectively, but current prices are no better than 70 and 60. Bondholders are not enamoured of the financial consequences of administration by Nazi representatives elsewhere. In view of Danzig's record, however, the market will continue to hope that political developments will not proceed to a point calculated to sap her economic vitality and dry up the revenue for bond service at its source. Although the flat yield on the two issues is now 10½ per cent. and 10½ per cent. respectively, their prices are still far from being at "default levels."

New Issues in July.—Conditions were propitious for the making of new "records" in the capital market last month. The British Government, after a long absence, was effectively in the market, as the guarantor of £32 millions of stock for the London Electric Transport Finance Corporation, while three British corporations, a large number of property and finance concerns (including Cables Investment Trust), and a host of manufacturing and miscellaneous concerns, all contributed to a total of £57,062,000, which is much the largest for any month since revival began:—

began :—		(000's omitted)				
		United Kingdom	Excluding Conversions British Possessions	Foreign Countries	Total	
Monthly Average						
1931		4,542	3,209	761	8,512	
1932		13,589	2,129	24	15,742	
1933		17,520	2,429	449	20,398	
1934		11,474	2,494	125	14,093	
Monthly Total						
		Govt.	Other			
May, 1934		Dr. 450	10,518	9,546	74	19,688
May, 1935		Dr. 150	15,716	1,102	Nil	16,668
June, 1934		Dr. 150	3,857	3,683	90	7,480
June, 1935		Dr. 150	14,274	669	Nil	14,793
July, 1934		Dr. 300	13,624	3,753	Nil	17,077
July, 1935		Dr. 300	53,833	3,273	256	57,062

Last month's total borrowings, in terms of "new money," it will be seen, were four times the monthly average for last year, nearly three times that for 1933, and more than seven times that of the ultra-depressed year, 1931.

Suez Canal Receipts.—Suez Canal shares, which are normally among the most active securities on the Paris Bourse, have recently suffered wide fluctuations on causes traceable, possibly, more to currency changes, doubts and fears than to movements in traffic receipts. Some fishers in troubled waters, however, are canvassing the possible effect on receipts of any outbreak of active hostilities between Italy and Abyssinia. In such an event, the Suez Canal would necessarily form an essential link in Italy's line of communications between her home base and her expeditionary force. How far have her preparations, by way of the transit of personnel and material (which have admittedly been expedited in the last two or three months) been already reflected in the traffic figures for the Canal? The following table, contrasting the figures of ships, gross tonnage and receipts for each month of this year with those of 1934, throws some light on the question:—

	Ships (Number)		Gross Tonnage (Millions)		Receipts (Million Francs)	
	1935	Compared 1934	1935	Compared 1934	1935	Compared 1934
January	487	- 10	3.79	-0.10	76.0	- 4.3
February	410	- 27	3.33	-0.07	65.2	- 1.7
March	484	+ 4	3.82	+0.03	75.2	- 2.1
April	506	- 2	4.04	+0.08	79.5	+ 2.8
May	481	- 13	3.67	-0.16	72.3	- 0.9
June	458	+ 46	3.51	+0.32	68.8	+ 8.6
July	487	+ 50	N.A.	N.A.	71.7	+ 8.1
August*	N.A.	N.A.	N.A.	N.A.	11.3	+ 1.0

* First five days. N.A. Not available.

It would appear that, in the early part of this year, the figures were tending, on the whole, to run below those of last year, but that in the second quarter the trend began to change. Since June, traffic has been definitely higher than that of a year ago. The conclusion seems to be that although Italian military or quasi-military traffic may, in itself, represent only a relatively small part of the total traffic of a Canal which is one of the main arteries of the world's shipping trade, it might be sufficient, if prolonged, to turn the scale as between a "gain" or a "loss," as compared with 1934, on a complete year's operations.

Actuaries' Investment Index.—The influence of the chief holiday week of the year on Stock Exchange prices has so far been relatively slight. The Actuaries' Index, based on last Tuesday's quotations, fully reflects the spurt in pre-holiday buying of industrial shares towards the end of last week. The total for the 158 securities in the Index comes out at 78.2 against 77.4 a week earlier, and 77.7 a month earlier (December 31, 1928=100), the corresponding yield figures being 3.81, 3.85 and 3.81 per cent. respectively. Thus the rise in prices over the past month has just kept pace with the increase in declared dividends. Figures for important sub-groups in the Index are given below:—

Group (and No. of Securities)	Prices (Dec. 31, 1928 = 100)			Yields (%)		
	Month Ago (July 9)	Week Ago (July 30)	This Week (Aug. 6)	Month Ago (July 9)	Week Ago (July 30)	This Week (Aug. 6)
Investment Trusts (14)	58.1	58.8	57.3	3.63	3.59	3.57
Building Materials (4)	91.2	90.9	94.5	4.42	4.45	4.29
Coal (6)	89.0	87.0	88.7	3.96	4.08	3.97
Iron and Steel (8)	60.2	62.3	64.6	3.31	3.22	3.13
Electric Supplies (8)	117.0	118.5	120.9	4.40	4.35	4.27
Stores and Catering (15)	83.7	82.7	83.1	4.02	4.07	4.06
Breweries and Distilleries (19)	133.8	133.2	134.0	3.97	4.09	4.07

It will be seen that, in almost every case, the rise in prices over the past month has been largely the result of dealings in the last week.

COMPANY NOTES

Textile Finishers' Shares.—Though the textile finishers handle all classes of textiles, they are dependent for the bulk of their turnover on cotton goods. They work mainly

* After allowing for full year's preference dividend.

on commission to the order of merchants, rarely handling goods at their own risk. Such a condition is particularly favourable to large combines and to inclusive trade

agreements, through the working of which the finishers, in fact, maintained substantial prosperity for some time after decline had set in in Lancashire. In the early post-War years, indeed, increased profits were earned on a larger aggregate capital than before the War, when turnover was larger. As the accompanying table suggests, however, the trade has suffered a steep decline in profits during the depression period. For a sample of six leading companies as grouped by Moodys-Economist Services, the net earnings fell from £1,235,600 for financial years ended in 1929 to a loss of £272,200 for the financial year ended 1931. The subsequent recovery has been very small, yielding profits of only £252,800 in 1933, which relapsed to £116,300 in 1934. This sharp curtailment of profits is due only in part to reduced turnover—which was not, in itself, a bar to satisfactory recovery in earlier years. The main difficulty has been a weakening of old trade agreements and a cutting of rates. Negotiations have been opened in various sections of the trade to restore order by a "redundancy" scheme. The profits of earlier years have left the chief concerns in the trade with very ample liquid resources, which have tended to rise rather than to fall during the depression. A scheme to purchase surplus plant, for sealing or destruction, might, therefore, be relatively easy to carry through. A successful scheme of the kind could no doubt bring an appreciable revival in profits to the particular section of the trade which it covered. It is possible, however, that the profits earned before the depression were in fact rather higher than was justified by the general level of prosperity in the textile trades. It would, therefore, be unwise to look for any early recovery to the old level of earnings.

Cunard White Star Accounts.—The first accounts of Cunard White Star, Ltd., are eloquent of the distance the group must go to regain normal prosperity, but of little else. The company was incorporated on May 10, 1934, but merged operation of the Cunard and White Star ships was inaugurated only on September 1st, and barely completed by December 31st, the date of the accounts. The loss of £408,090, which is carried forward, is computed as from June 19th, the date of formal transfer of the ships. It includes the losses of two foreign subsidiaries, but excludes any depreciation allowance on shipping tonnage valued in the balance sheet at £18,478,135. The utility of the accounts is further limited by the treatment of asset values, which has been forced upon the company by conditions over which it has had, largely, no control. The "fleet" figures are a fair measure of comparative tonnage values, as between the two companies, but the actual valuation of the combined fleet is greatly in excess of the present-day values of the ships. This "inflation" of the credit side of the balance sheet has been counterbalanced by the issue of the Cunard White Star's £10 millions of capital at a nominal premium of 100 per cent. From the £10 millions "premium on shares account" thus conveniently created, the company has written off net losses on the sales of ships and reduction in book values of certain acquired assets, to a total of £774,461, and losses incurred by the parent company in the Atlantic trades up to the date of the sale agreements, totalling £956,189. The *Queen Mary* is represented in the accounts by £750,000 of first mortgage debenture stock (out of an authorised total of £1,750,000), and £200,000 of income debenture stock, Class B (out of a total of £750,000), both held by H.M. Government. The company is authorised to issue, further, up to £1,000,000 of income debenture stock, Class A, also to be held by the Government. The company's immediate trading prospects were described by Sir Percy Bates, the chairman, in conservative, not to say melancholy, terms at the Cunard Steamship meeting last April. Last year's losses may be reduced as merger economies come progressively to fruition, but the company is not expected, at best, to earn or pay any dividend this year. The more distant future is a matter which depends partly on imponderable factors like the extent and duration of economic "recovery" on both sides of the Atlantic, and partly on even more elusive considerations of national and international

prestige. Competition in the North Atlantic trade has ceased, for the present, to be governed by normal commercial considerations.

Broken Hill Proprietary.—A noteworthy expansion in profits, writes our mining correspondent, is shown by the cabled summary of the annual report. For full details of its causes the complete text of the statement must be awaited. It is clear, however, that in the main the difference, directly or indirectly, reflects the improvement in metal prices. The dividend rate, however, remains at the 10 per cent. level of the preceding two years. The increase in earnings is, in fact, greater than would appear, since the latest figure has been struck after the provision of £541,950, against £427,600, for depreciation. Despite the absence of a higher dividend, therefore, the shares have risen to 53s., the highest level for many years.

Other Company Results.—Our usual summary table of profit and loss accounts, on page 307, has shrunk to holiday dimensions, for it includes the results of only 14 additional companies. Further brewery results, from Clarkson's Old and Showells Brewery, show little comparative change on previous periods. In the property group, Covent Garden Properties reports slightly lower profits, attributable to the fact that realisations of investments during the past year were practically negligible. The dividend is maintained at 7½ per cent. London and National, which is largely interested in Shell-Mex House, also reports a slight reduction in net revenue. The report of Merlimau Pegoh shows an advance in profits from £32,188 to £62,660, and the dividend is increased from 5 to 7½ per cent. In the investment trust group, Continental and Industrial, which is associated with Schröder interests, reports an improvement in net revenue from £75,333 to £87,270. A dividend of 4½ per cent. is paid for the year, compared with 4 per cent. The report of John Greenwood Millers for the first trading period of 12½ months shows that net income from the operating companies, less expenses and taxation, amounted to £53,486, and 14 per cent. is paid for the period.

THE WEEK IN THE MARKETS THE LONDON STOCK EXCHANGE

SETTLING DAYS
TICKET AUGUST 13 | ACCOUNT AUGUST 15

If activity in the "quietest" week of the year is an indication of more business to come, the market outlook is more than reasonably bright. Although the volume of trading was appreciably reduced, the cheerful undertone of the previous week persisted, under meteorological conditions normally conducive to active dealings. Prices as a whole were fully maintained, apart from a little profit-taking towards the end of the three weeks' Account which has provided a fair number of people with moderate gains. Gilt-edged stocks remained firm, though the volume of business tended to fall off. India stocks were stable and a moderate but steady demand for long-dated Australian stocks was in evidence. In the home corporation market, the new Dundee issue opened at ½ premium and that of Lowestoft at ½ premium. In the foreign bond market, the unwelcome (though not entirely unexpected) feature was a slump in Brazilian bonds, particularly the funding issues, for reasons which are discussed in a leading article on page 288. A report, on Thursday, that the Finance Minister had denied any immediate suspension of debt payments did not fully reassure the market, and the resulting recovery was only partial. The Geneva news of last week-end on the Italo-Abyssinian dispute, was father to the market's thought of a peaceful settlement, and Italian bonds enjoyed a fair recovery. Far Eastern stocks, however, remained dull, with only a slight rally in mid-week.

The week's home railway traffic returns went some way to confirm the inevitable "bumper holiday" reports, but the market's response was only half-hearted. Foreign rails were again idle, the latest returns of the Argentine companies, in particular, being disappointing.

The industrial share markets were cheerful but cautious. Popular steel shares, in particular, were subject to slight profit-taking as the end of the Account approached. Motor and aircraft shares, however, remained firm, Rolls-Royce making a new advance. Electrical equipment shares were irregular after their recent rise, and small declines occurred in quotations for electric power issues. Although brewery shares were somewhat uncertain, tobacco shares were one of the most active sections of the market. Gallaher were especially in request on the revival of rumours regarding irregular after their recent rise, and small declines occurred in quotations for "concentration" in the industry, on terms calculated to be favourable to the company. Textile shares, generally, were less active, though rises of a few pence were common to numerous companies. Courtaulds were irregular, but renewed demand occurred for British Celanese second preference on increasingly confident rumours of a dividend-funding scheme. "International" shares were less active, in sympathy with the temporarily uncertain tone of Wall Street. Both District and County bank shares were marked up on the announcement of the proposed fusion, particulars of which are given on page 287.

Quiet conditions prevailed in the oil share market, though prices were mainly held on American support, after the announcement of a new Bill providing for the permanence of "hot oil" regulation and the limitation of imports. Rubber shares attracted no public interest whatever, but prices generally were maintained in a "thin" market. The tea share market became slightly more active after a quiet opening. Buyers, however, tended to hold off pending next week's resumption of commodity sales in Mincing Lane, when substantial offerings of new season's Indian teas will be made.

"Holiday" conditions were, perhaps, most in evidence in the mining market. Kaffir prices were maintained, with a little "shop" support, but the general public appeared to be occupied elsewhere. The announcement of new financial operations in the West African market did not evoke any widespread response. Western Australian shares were idle, but Indian gold shares improved on the news that normal conditions had been restored on the field. Rhodesian copper shares were quiet, despite the improvement in the price of the metal, though Roan Antelope continued to be unostentatiously purchased. The possibility of an increased quota announcement was well discounted in the tin share market, where a little tentative investment buying was counterbalanced by an equally modest amount of professional profit-taking.

FOREIGN STOCK EXCHANGES NEW YORK

ACTIVE conditions have again prevailed this week, and for the first two days turnover was in the region of 1½ million shares. The market has, however, developed a certain irregularity, and slight declines marked the "breather" which Wall Street was inclined to take—without seasonal provocation—on Wednesday. After the steady rise of recent weeks the check is natural and desirable, but there has been no general display of speculative appetite to require purging. Further quarterly reports show a rising trend, while steel output for the current week has again moved up, although not so spectacularly as in recent weeks. The General Motors 50c. dividend brought large buying orders on Tuesday, and the stock advanced nearly two points. A number of specialties, including Eastman Kodak, also moved higher. Increased sales reported by retail stores have assisted Sears Roebuck and Montgomery Ward. Selling of rail stocks has continued, and little support has been found for utilities. The bond market has ruled fairly quiet.

PROVINCE OF BUENOS AIRES

OFFER to Holders of Bonds of the following Loans:—

PROVINCE OF BUENOS AIRES 3 to 3½% LOAN OF 1906/9.

PROVINCE OF BUENOS AIRES 5% STERLING LOAN OF 1908 (Drainage Loan).

PROVINCE OF BUENOS AIRES 4½% EXTERNAL LOAN OF 1909 (Railway Loan) (English Fraction, namely Bonds numbered from 83334 to 91687 inclusive).

PROVINCE OF BUENOS AIRES 5% EXTERNAL GOLD LOAN OF 1910.

PROVINCE OF BUENOS AIRES 5% CONSOLIDATION GOLD LOAN OF 1915.

In January 1933 the Government of the Province of Buenos Aires (hereinafter called "the Provincial Government") finding itself unable to continue in full the service of its external debt made an announcement to the holders of the Bonds of the above Loans under which the relative sinking funds were suspended for a period of three years expiring on the 31st December 1935. At the same time the Provincial Government made an offer to the holders of Bonds of the above-mentioned PROVINCE OF BUENOS AIRES 5% STERLING LOAN OF 1908, the English Fraction of the PROVINCE OF BUENOS AIRES 4½% EXTERNAL LOAN OF 1909 and the PROVINCE OF BUENOS AIRES 5% EXTERNAL GOLD LOAN OF 1910 whereby interest has been and will be paid during the three-year period to the holders of such Bonds who assented to the offer only on the basis of the sums in the appropriate foreign currency actually realised at current rates of exchange by the conversion from time to time of the number of Paper Pesos equivalent at par to the interest payable on such Loans any balance being represented by Arrears Certificates.

In spite of increases in taxation and the most rigid economy of expenditure it is already apparent that the finances of the Provincial Government will not permit the full service of the above-mentioned Loans to be resumed as from the 1st January 1936. The seriousness of the position may be appreciated from the fact that the revenue actually received by the Province from all sources has fallen to approximately 125,000,000 Paper Pesos in 1933/34 while the full contractual service of the Province's External and Internal Debt amounts to 73,933,000 Paper Pesos. This only leaves 51,067,000 Paper Pesos to meet the whole cost of administration for the year which in spite of the economies which have been effected, cannot be reduced below 84,000,000 Paper Pesos. The result is that the Province has been forced to create a large floating debt in order to balance its Budget.

Early in the present year the Province adhered to a Federal Law for the Unification of Internal Taxes which was passed by the Senate and Chamber of Deputies of the Argentine Nation on the 21st December 1934. Prior to the passing of this Law certain commodities, such as alcoholic beverages, alcohols, beers, mineral waters, matches, playing cards, and tobacco, were taxed both by the Nation and by the Provinces and each collected its own tax separately. Under the Unification Law, however, power to levy and collect the whole of the Internal Consumption Taxes in those Provinces adhering to the Law is vested in the Government of the Nation in compensation for which there is to be paid by the Government of the Nation an annual sum which, in the case of Buenos Aires, will amount to 15,294,000 Paper Pesos in 1936, rising gradually to 19,186,000 Paper Pesos in 1939. Thereafter such annual payments are to be determined by the proportion which the average of the total amounts payable under the Unification Law to Assenting Provinces in the years 1938 and 1939 bears to the average of the amounts collected by the Government of the Nation in such year, the proportion so attributable to the Assenting Provinces to be allocated amongst such Provinces in proportion to their population.

The Provincial Government's experts are of the opinion that the amounts due to the Province of Buenos Aires in the year 1940 and subsequent years will not be less than the amount to be received in 1939 and may be considerably in excess of that sum since density of population has to be taken into account which will give the Province of Buenos Aires an advantage over the other Provinces.

The basis of the scheme now put forward is improvement of the status of the Bonds of the Province by the direct payment as from the 1st January 1936 of the sums due under the Unification Law to a special account with the Banco de la Nación Argentina (hereinafter called "the Bank of the Nation") from which when reinforced to whatever extent is necessary by the proceeds of the Land Tax and the Additional Land Tax collected by the Banco de la Provincia de Buenos Aires (hereinafter called "the Bank of the Province") will be paid the amounts required to meet the reduced service (which will include expenses and service commission) of Bonds whose holders have assented to the Scheme now being put forward.

To give effect to the foregoing, the following machinery will be set up prior to the 1st January 1936:—

A. The Government of the Nation will receive instructions from the Provincial Government to pay all sums due to the Province under the Unification Law on and after the 1st January 1936 to the Bank of the Nation.

B. On and after the 1st January 1936 the Bank of the Nation will place to the credit of a special account to be opened and maintained by it and to be called "Account for Service of the Public External Debt of the Province of Buenos Aires" all sums received by it from the Government of the Nation in accordance with the provisions of the last preceding paragraph.

C. The Bank of the Province will be instructed to place all proceeds of the Land Tax and the Additional Land Tax to the credit of a separate account to be opened and maintained by it. On the first day of every calendar month subsequent to the 1st January 1936 the Bank of the Province shall release to the Provincial Government

all sums (if any) standing to the credit of this separate account over and above such a sum (the amount of which will be notified to it by the Bank of the Nation) as shall be required to make up the amount standing to the credit of the special account maintained by the Bank of the Nation to a sum sufficient to meet all Coupons and Sinking Fund payments due in respect of Assenting Bonds on such day and during a period of 185 days from such day at the official rate of exchange prevailing on that day between the Paper Peso on the one hand and the Pound Sterling, the French Franc and the United States Dollar, as the case may be, on the other hand. The balance retained by the Bank of the Province in its separate account will be held by it at the disposition of the Bank of the Nation.

D. The Bank of the Nation will receive instructions from the Provincial Government to pay out of any sums from time to time standing to the credit of the special account to the respective Paying Agents for the External Loans of the Province in the respective contractual currencies the amounts necessary under the terms of this offer to meet the service of Bonds whose holders have assented to the offer contained in this Notice or the offer to be made by the Provincial Government to its Bondholders in France or the United States of America as the case may be.

E. The Bank of the Nation will be instructed as from the 1st January 1936 to release to the Provincial Government an amount equal to the same proportion of the aggregate of the sums from time to time received by it from the Government of the Nation and the Bank of the Province as the nominal value of non-assenting Bonds outstanding from time to time bears to the nominal value of all the Bonds of the Province's External Loans outstanding at such time.

F. The Bank of the Nation will be further instructed whenever on the first day of any calendar month subsequent to the 1st January 1936 there is standing to the credit of the special account a surplus over and above the amount required to meet all coupons and sinking fund payments due in respect of Assenting Bonds during a period of 185 days from such day (including any sums due on that day) to place such surplus at the free disposition of the Provincial Government.

G. If the security for the service of Assenting Bonds shall become enforceable (but for so long only as it may remain so) all releases to the Provincial Government under the provisions of Paragraphs C, E, and F, will be suspended.

H. The Provincial Government has undertaken that it will not vary or cancel the instructions given by it for the purpose of the security contemplated above and the Government of the Nation the Bank of the Nation and the Bank of the Province will be informed that the instructions are given on that basis.

I. The Provincial Government has further undertaken that in the event of the sums available for the credit of the special account being at any time insufficient to meet the service of Assenting Bonds in the contractual currencies it will make up any deficiency out of its remaining revenues. The Bonds shall remain in all respects the direct obligation of the Province.

The annuity due to the Province under the Unification Law makes it possible for the Provincial Government to offer an excellent security to its Bondholders which the Provincial Government has determined to make available to them and in consideration of this it will ask them to accept cuts in the service of their External Bonds to the extent hereinafter specified.

The proposals now put forward by the Provincial Government contemplate that there will be three periods, and that the cuts to be imposed as on and from the 1st January 1936 shall remain in force during the first period, be slightly modified for the second period and still further for the third period. The first period will commence on the 1st January 1936 and will last for three years, the second period will commence on the 1st January 1939 and will last for three years, while the third period, commencing on the 1st January 1942, will comprise the remainder of the life of the Loans.

The available funds will be allocated as follows:—

FIRST PERIOD

3 to 3½% LOAN OF 1906/9	...	...	Full interest, no amortisation.
5% CONSOLIDATION GOLD LOAN OF 1915	4½%	interest, no amortisation.	
5% STERLING LOAN OF 1908 (Drainage Loan)	3½%	interest, no amortisation.	
4½% EXTERNAL LOAN OF 1909 (Railway Loan) (English Fraction namely Bonds numbered from 83334 to 91687 inclusive)	...	...	3½% interest, no amortisation.
5% EXTERNAL GOLD LOAN OF 1910	...	...	3½% interest, no amortisation.

SECOND PERIOD

The first two Loans will continue to receive interest at the respective rates shown above and no amortisation.

5% STERLING LOAN OF 1908 (Drainage Loan) 4% interest, no amortisation.

4½% EXTERNAL LOAN OF 1909 (Railway Loan) (English Fraction namely Bonds numbered from 83334 to 91687 inclusive) ... 3½% interest, no amortisation.

5% EXTERNAL GOLD LOAN OF 1910 ... 4% interest, no amortisation.

THIRD PERIOD

All the interest rates will remain the same as in the Second Period and the rates of amortisation will be as follows:—

3 to 3½% LOAN OF 1906/9 ... 375%

5% CONSOLIDATION GOLD LOAN OF 1915 ... 1.85%

5% STERLING LOAN OF 1908 (Drainage Loan) ... 1.71%

4½% EXTERNAL LOAN OF 1909 (Railway Loan) (English Fraction namely Bonds numbered from 83334 to 91687 inclusive) ... 75%

5% EXTERNAL GOLD LOAN OF 1910 ... 1.59%

Bondholders who accept the Government's offer will by their acceptance relinquish for the period of application of the Unification Law all existing securities for repayment of the capital of and payment of service on their Bonds in exchange for the improved security which they will receive under the Scheme.

In addition to the sums payable under the Unification Law, the proceeds of the Land Tax and Additional Land Tax (estimated for the year 1935/36 at 49,000,000 Paper Pesos) collected by the Bank of the Province will be available to the extent required to complete the service of Assenting Bonds. Irrevocable instructions which will be given by the Provincial Government prior to the 1st January 1936 will make provision for the increases in service entailed by the modifications in the cuts which are to operate in the second and third periods.

The sums passing through the special account with the Bank of the Nation will provide security for Assenting Bondholders under the Scheme and such Bondholders will receive a charge on the common fund so created and on the Land Tax and the Additional Land Tax in the following order of priority, namely:—

1. The 3 to 3½% LOAN OF 1906/9 will receive a first charge.
2. The 5% CONSOLIDATION GOLD LOAN OF 1915 will receive a second charge.

3. There will be a third charge in favour *pari passu* of all the other European Loans (with the exception of the 4½% BANCO DE LA PROVINCIA LOAN OF 1910 which is separately secured on the dividends of the Banco de la Provincia de Buenos Aires) and of the United States Dollar Loans.

The following points are material:—

(a) The service of the Internal Loans of the Province has already been severely cut and the reduced service will amount to 23,361,000 Paper Pesos per annum as compared with the contractual service of 36,140,815 Paper Pesos.

(b) Under the present proposals the Sterling, Dollar and Franc Bonds will no longer be dependent on rates of exchange as they are under the 1933/35 Scheme for the proportion of their interest which is paid in cash, but will assume their former status, as the reduced services will in each case be payable in the contractual currencies (save that holders of Assenting Bonds will surrender their option to take payment in Gold Pesos) as was the case before the 1933/35 Scheme came into force.

(c) Each sinking fund at the rate herein mentioned will operate upon the same terms in all respects as those specified in the Bonds of the particular Loan to which it relates and will commence as from the 1st January 1942.

(d) Drawn Bonds and Coupons of any of the Loans to which this Notice relates calculated at the free rate of exchange prevailing at their respective maturity dates will be accepted in full satisfaction of any liability for Provincial Taxes.

(e) The Provincial Government has undertaken that no tax or stamp duties of the Province will be levied upon any document required to give effect to the provisions of the Scheme and that it will itself bear any tax or stamp duties which may be levied thereon by the Government of the Nation.

(f) The Unification Law is expressed to remain in force for a period of twenty years from the 1st January, 1935, and contains provision for an extension for a further period of ten years. The Provincial Government has undertaken not to determine its adherence to the Unification Law at the end of the first twenty years and has further undertaken that if and when the provisions of the Unification Law finally cease to have effect it will use its utmost endeavours to maintain in force for so long as any of the Assenting Bonds remain unpaid and outstanding all machinery set up by the Unification Law and the General Bond so as to preserve the security so constituted.

Offers are about to be made by the Provincial Government to the holders of Bonds of the Loans of the Province outstanding in the United States of America and of the French Fraction of the PROVINCE OF BUENOS AIRES 5% STERLING LOAN OF 1908 (Drainage Loan) and the PROVINCE OF BUENOS AIRES 4½% EXTERNAL LOAN OF 1909/12 (Railway Loan). So far as the French Fractions of the Drainage and Railway Loans are concerned, the terms of the offer will be identical with those of this offer and the terms of the offer to holders of United States Loans which are still under negotiation will entail reductions in service corresponding to those contemplated for the European Loans. It is proposed that Assenting Holders of United States Loans should receive in addition to their share in the third charge on the sums passing through the Special Account a first charge on another special account to be created to receive certain other revenues (subject to payment thereof of the service amounting annually to 2,400,000 Paper Pesos of a certain Five-year Internal Loan of the Province of an authorised nominal amount of 15,000,000 Paper Pesos), due to the Provincial Government from the Government of the Nation, amounting annually to 5,400,000 Paper Pesos but due to expire in the year 1944.

Holders of Bonds who desire to accept the Provincial Government's offer should lodge their Bonds (either personally or through a London Agent) with the Paying Agents concerned from whom Listing Forms can be obtained. The Paying Agents are as follows:—

NAME OF LOAN	PAYING AGENTS	
	Name	Address
PROVINCE OF BUENOS AIRES 3 to 3½% LOAN of 1906/9	BARING BROTHERS & CO. LIMITED	8 Bishopsgate, London, E.C.2.
PROVINCE OF BUENOS AIRES 5% STERLING LOAN of 1908 (Drainage Loan)	ERLANGERS LIMITED	4 Moorgate, London, E.C.2.
PROVINCE OF BUENOS AIRES 4½% EXTERNAL LOAN of 1909 (Railway Loan) (English Fraction, namely Bonds numbered from 83334 to 91687 inclusive)	ERLANGERS LIMITED	4 Moorgate, London, E.C.2
PROVINCE OF BUENOS AIRES 5% EXTERNAL GOLD LOAN of 1910.	ERLANGERS LIMITED	4 Moorgate, London, E.C.2
PROVINCE OF BUENOS AIRES 5% CONSOLIDATION GOLD LOAN of 1915.	WEST-MINSTER BANK LIMITED ERLANGERS LIMITED	41 Lothbury, London, E.C.2 4 Moorgate, London, E.C.2

All Bonds so lodged will be stamped as "Assenting Bonds" and appropriately enfaced in respect of the reduction in service which acceptance of the offer will entail. New Coupon Sheets will also be supplied and attached.

The Provincial Government's offer will remain open until the 31st December 1935.

Application will be made to the Committee of the Stock Exchange, London, to grant an official quotation to Assenting Bonds of the Loans to which this Offer relates.

Copies of this Offer may be obtained at the offices of any of the Paying Agents mentioned above where also copies of a General Bond executed by the Provincial Government and of the Unification Law may be inspected by Bondholders at any time during business hours.

DATED this 8th day of August 1935.

PEDRO GROppo,

Minister of Finance.

BARING BROTHERS & CO. LIMITED of 8 Bishopsgate, London, E.C.2, will on and after the 2nd September 1935 be prepared to accept Bonds of the PROVINCE OF BUENOS AIRES 3 to 3½% LOAN OF 1906/9 in accordance with the above offer. Bonds accompanied by coupons due on the 2nd January 1936 and the subsequently must be listed on special forms obtainable at the offices of Baring Brothers & Co. Limited where Bonds may be deposited either personally or through a London Agent between the hours of 10 a.m. and 2 p.m. on any working day (Saturdays excepted) and must be left at least 10 clear days. Bonds sent through the post will be returned at the owner's risk.

Due notice will be given when Bonds of the remaining Loans to which this Offer relates may be lodged at the offices of the respective Paying Agents to be stamped as Assenting Bonds.

In calculating yields on fixed interest stocks quoted below allowance is made for interest accrued since the last date of payment, less income tax at the standard rate. Where stocks are definitely redeemable at a certain date the yield includes any profit or loss on redemption; where stocks are redeemable at or before a certain date the final date of repayment is taken as the date when the stock stands at a discount and the earliest date when the quotation is above par. The return on ordinary shares and shares is calculated by reference to the latest dividend account being taken of any enhancement or reduction of interim dividends. Allowance is made for accrued dividends in calculating the yield on "cum div." shares.

[illegible]

(a) Interim dividend provided for on 7½% basis, 50 per cent.
(b) Final dividend.
(c) Last two years' dividends worked on a 15% basis, paid in New Zealand Currency.
(d) Yield worked on redemption at par on Feb. 1, 1957.
(e) Yield worked on redemption at par on April 1, 1961.
(f) Yield worked on redemption at par on December 1, 1962.
(g) On 50 per cent. interest basis.
(h) Also Centenary Bonus 2½% yield worked on 1962.
(i) Based on interest payable in Australian Currency. † Increase of Income Tax

* Two-Hour Session.

PARIS

The Bourse opened quietly on Monday, but became noticeably more active next day. Rentes were well supported, and Suez Canal shares recovered part of the previous week's heavy losses. The mid-week tone, however, was much less certain, professional and amateur investors alike tending to hold off the market pending the publication of the Government's new batch of economy decrees, and the clearer disclosure of prospects for the continued enforcement of the old, in view of the symptoms of active discontent manifest in certain French ports. Rentes and bank shares did not entirely hold their ground. Among mining leaders, however, Rio Tinto were in firm demand, and moderate gains were recorded in diamond and gold mining shares.

	July 29, 1935	July 31, 1935	Aug. 7, 1935
Banque de France	9,980	9,950	9,950
Crédit Lyonnais	1,880	1,689	1,675
Suez Canal	18,490	18,315	17,540
Chargeurs Réunis	139	147	140
Rio Tinto	1,225	1,225	1,247
Royal Dutch	19,380	19,380	19,850

BERLIN

Foreign buying of high-priced shares with blocked marks continued last week. Prices were steady to firm, but the volume of business was not large. A sharp and unexpected reaction occurred in certain electrical issues. Little change was recorded in Reichsbank, commercial banking and shipping shares. Rayon and potash issues were firm, however, and active dealings occurred in Farbenindustrie and Siemens. The present week opened with a moderately firm tone, lignite shares, in particular, showing an advance. A certain amount of selling of bonds last week was attributed to a desire to realise cash at the month-end. Municipal issues were slightly lower this week. The market, generally, was firm on Tuesday, but quieter conditions became general in mid-week.

	July 29, 1935	July 31, 1935	Aug. 7, 1935
Reichsbank	188.75	188.50	188.00
D.D. Bank	91.50	91.10	90.50
Dresdner (New)	91.50	91.10	90.50
I. G. Farben- industrie	158.10	157.75	158.00
Norddeutscher Lloyd (New)	19.40	19.00	18.60

AMSTERDAM

On the subsidence of constitutional and currency alarms, the Bourse relapsed into a quiet and unenterprising condition. That anxiety had not been wholly allayed, however, was suggested, not only by events in the foreign exchange market, but also by a further reactionary tendency in Dutch Government bonds, and a certain amount of "refugee" buying of industrials. Philips' Lamps and Unilever were particularly firm, and a strong demand sprang up in mid-week for Royal Dutch. Despite the death

OFFER TO NEW READERS

Any reader who makes his first acquaintance with this journal with this week's issue is invited to fill up the attached:
To Publisher, "Economist Newspaper Ltd.,"
8 Bouverie Street, E.C.4.

In order to test the value of your publication I should like you to forward this to me by post for the next four weeks. If I then decide to become a subscriber, it is understood that there will be no charge for the copies thus received, but otherwise I shall be willing to pay 4s. to cover their cost.

CAPITAL ISSUES

ALTHOUGH the reception accorded to recent trustee offers has been very favourable, prospective borrowers in this market have duly observed the Bank Holiday tradition. No public offer, in fact, has presumed to compete with the rival attraction of holiday sunshine. A number of statements "for information only" have, nevertheless, been published. Of these the briefest, but most interesting, gives details of *Coast Lines* preference capital, on which dividend arrears have now been paid off. This step would appear to mark a further stage in the preparation for liquidation of the Royal Mail assets by R.M. Realisation. *Brancepeth Gas and Coke (Strakers and Love)* acquires, and will further develop, a coking business in Durham. The debentures carry a return which should attract investors who are convinced of the eventual recovery of the "special areas." Other statements have been published by *John Galloway and Company, Alliance Investment Company*, and *Southend Waterworks*. *City of London Real Property* have offered a well-secured 3½ per cent. debenture stock at 97 per cent. to existing members.

BY STOCK EXCHANGE INTRODUCTION

Alliance Investment Co., Ltd.—Particulars of issue of £100,000 3½ per cent. debenture stock. Secured by floating charge and ranks *pari passu* with existing 4 per cent. issue. Repayable at par December 1, 1975, or from 1965 on three months' notice. Stock placed at par, less ½ per cent. brokerage.

Southend Waterworks Company.—Particulars of issue of £100,000 3 per cent. debenture stock. Redeemable at par July 1, 1965. Issue placed at £99 per cent., less ½ per cent. commission. Proceeds for repayment of 8 per cent. stock and general purposes.

Lewis's Investment Trust, Ltd.—Particulars of issue of £400,000 3½ per cent. redeemable notes, 1945–50. Proceeds to repay loan of £320,000 and for capital expenditure. Formed 1929 and holds deferred ordinary capital of Lewis's, Ltd.

Net assets available for Notes (including £400,000 4 per cent. Notes in issue), £3,451,303. Profits, after debenture interest, £340,305. Issue placed at £99½ per cent. Redeemable August 1, 1950, at par, or from 1945 on three months' notice.

Coast Lines, Ltd.—Particulars of 750,000 6½ per cent. £1 cumulative preference and 1,875,000 6 per cent. £1 cumulative preference shares. 100,000 6½ per cent. and 1,823,630 6 per cent. at present held by subsidiary and sub-subsidiary companies. Rank *pari passu* for dividends and in winding up. Further particulars in current Stock Exchange Official Year Book.

Brancepeth Gas and Coke (Strakers and Love), Ltd.—Particulars of issue of £325,000 5 per cent. debentures. Secured by first specific charge on leaseholds and plant. Redeemable by December 31, 1949, by annual sinking fund, or from December 31, 1939, on six months' notice. Company acquires coking and gas business from Strakers and Love for £90,000 to be satisfied by allotment of 65,000 £1 ordinary shares, and will erect new oven and plant.

John Galloway and Company, Ltd.—Issued capital, 130,000 5½ per cent. £1 cumulative preference and 300,000 10s. ordinary shares. Formed to acquire share capital of paper mills in Midlothian. Assets, £229,724. Total consideration, £226,208. Profits, years to end March: 1933, £20,447; 1934, £22,427; 1935, £21,962.

ISSUES TO SHAREHOLDERS ONLY

City of London Real Property Company, Ltd.—Issue of £221,900 3½ per cent. debenture stock at £97 per cent. Ranks *pari passu* with existing debentures. Redeemable at company's option on six months' notice. Assets £12,764,802; total loan capital, £1,450,000. Net profit, after tax, available for interest exceeds £350,000.

Rhondda Transport.—57,549 £1 shares offered to holders, at rate of 38 per cent. at 21s. each. Notice given to redeem existing 6 per cent. debenture stock.

CONVERSIONS AND REPAYMENTS

Garage (A. W.).—The directors will redeem, at £21 per £20 debenture, on January 20, 1936, the balance (viz., 5,000) of the 4½ per cent. debentures now outstanding. For this purpose, and for the general purposes of the company, the directors have determined to create and issue £250,000 4 per cent. first mortgage debenture stock and offer to debenture-holders whose names appear on the register on July 19th the right to convert their present holdings into an equivalent nominal amount of stock.

Cheltenham Original Brewery.—45,000 ordinary shares of £1 are offered to ordinary shareholders on the register on July 19th at 45s. per share, in the proportion of one new share for every four shares held. The new ordinary shares, when fully paid, will rank *pari passu* with the existing ordinary shares in all respects except that they will not be entitled to participate in the interim dividend declared and paid on account of the year ending September 30, 1935, but will be entitled to the full final dividend in respect of that year. It is the company's intention, in due course, to apply the proceeds of this issue towards paying off the outstanding balance (£95,800) of the 5½ per cent. "Sladden and Collier" redeemable debenture stock.

Hong Kong and China Gas.—The company will redeem the existing 5 per cent. debentures, which are at present outstanding to the amount of £40,050, on October 31, 1935, create and issue at par 2,000 new 4 per cent. debentures of £50. The directors are inviting applications from the holders of the existing debentures to exchange their present holdings for new debentures, and also to apply for further new debentures for cash.

Crookers, Ltd.—The company will redeem at the rate of £108 for every £100 stock on January 31, 1936, the whole of the 4 per cent. first mortgage debenture stock of the company now outstanding.

Ferreira Estate Company, Ltd. (Incorporated in S.A.).—Directors recommend further reduction of capital by refunding 5s. per share from proceeds of realisation of assets. Owing to legal and other formalities refund cannot be made until approximately February, 1936.

The Bristol Tramways and Carriage Company, Ltd.—Notice has been given that redemption of 4½ per cent. mortgage debenture stock will be effected on February 5, 1936.

The Melbourne Electric Supply Company, Ltd.—Proposal to reduce capital from £1,750,000 to £1,250,000 by repayment of the £500,000 8-per cent. preference capital, at 5 per cent. premium, unanimously carried.

SEVERN VALLEY GAS OFFER

Wem Gas Light.—The Severn Valley Gas Corporation has offered to acquire all the issued £5 shares of the Wem Gas

OTARD'S
ESTABD 1795

THE BRANDY WITH A PEDIGREE

Light and Coke Company at £6 2s. 6d. cash per share, or in exchange for the corporation's £1 fully-paid ordinary shares, at the holder's option.

ISSUE ABROAD

Dominion of Canada.—It is intended to offer \$76,000,000 of ten-year 2½ per cent. bonds, maturing on August 15, 1945, in New York, to pay off the banking credit of \$50,000,000 maturing October 1st and the \$26,000,000 of Canadian National Railways guaranteed 4½ per cent. bonds called for October 15, 1935.

OTHER RESULTS OF ISSUES

India 3 per cent. Rupee Loan.—List opened August 5th and closed within 20 minutes, heavily oversubscribed.

Rugely Gas Company.—The recent offer to the stockholders of Rugely Gas Company on behalf of Gas Consolidation, Ltd., accepted by substantial majority.

CALLS DUE AUGUST 12, 1935, TO AUGUST 17, 1935

The grand total of calls falling due in August, 1935, is £16,443,401, which compares with £36,367,141 which fell due in August, 1934.

MISCELLANEOUS

ARGENTINE NAVIGATION COMPANY MIHANOVICH, LTD.—Gross takings and those of associated concern, Cia. Uruguaya de Navegacion, Ltd., together amounted to Argentine paper \$2,186,443 for the month of June, and following is a comparison with previous figures: Gross takings, both companies, June, 1935, A.P. \$2,186,443; June, 1934, A.P. \$1,987,666; increase, A.P. \$198,777=10 per cent. Aggregate, January-June, 1935, A.P. \$14,943,674; aggregate, January-June, 1934, \$12,858,668; increase, A.P. \$2,085,006=16.2 per cent.

TRUST OF INSURANCE SHARES, LTD.—The Trust of Insurance Shares, Ltd., announces that a distribution per unit of 4.2196d., the second half-yearly period ended on June 30th last, in respect of distribution for the first half-year was 2.9146d. per unit. The regarding the present distribution and a list of the Trust's holdings on July 31st. The two half-yearly distributions together amount to 7.1342d. per unit, equivalent to a gross annual yield of £3 17s. 8d. 3s. 8s. 11d. per cent. on the current price of 22s. 3d.

CHOSEN CORPORATION.—Dividends and interest received by the Chosen Corporation amounted to £56,995 in the year to June 30, 1935. This compares with £59,478 in the previous twelve months. Including £34,504 transferred from share premium account, £6,000 from reserve and £30 further recovered in connection with legal charges, the total income is £97,530. This contrasts with £75,283 in the previous accounts, which included £15,500 from tax reserve and £275 recovered from legal charges. Expenses totalled £17,289 against £10,990. The directors recommend a final dividend of tax, again making 15 per cent. for the year, but payable on a larger capital. The amount now paid up is £605,000, a portion of which only ranks in part for dividend.

WANDSWORTH GAS DEAL.—WALTON-ON-THAMES WORKS TO BE TAKEN OVER.—Wandsworth and District Gas Company is agreeing with the Walton-on-Thames Gas Company for the transfer of the latter to the Wandsworth Company. The holders of "A" ordinary shares of £10 in Walton Gas will receive £13 of 5 per cent. preference stock of the Wandsworth Company and £5 of consolidated stock. For every £100 of unpaid dividends on the Walton amounts. Walton "B" ordinary shares £10 will receive £15 of cent. preference stock is to be exchanged for £120 of Walton 6 per cent. preference stock, and *pro rata* for smaller amounts. Holders of the will receive a similar amount of corresponding debenture stock of the Wandsworth Company.

SHELL UNION OIL CORPORATION.—The consolidated income account of this corporation and subsidiary companies (including Shell Pipeline Corporation) for quarter ended June 30, 1935, shows gross operating earnings \$53,233,761.97 as compared with \$47,876,495.59 for second quarter of 1934. Operating and general expenses increased from \$39,925,670.53 to \$42,409,934.05, leaving income from operations \$10,823,827, compared with \$7,950,825.06. Net profit increased from \$897,591.59 to \$1,649,775.35. These results include writing off in full intangible development expenditures which amounted to \$2,359,526.80 in second quarter 1935, as compared with \$1,466,158.81 in corresponding quarter 1934.

THOMAS WALLIS AND COMPANY, LTD.—An interim report dated July 25, 1935, states that the directors and shareholders' committee have received and considered jointly the report of Messrs. Peat, Marwick, Mitchell and Company, to which reference was made at the annual general meeting of the company held in March last. Steps have already been taken for the reorganisation of the directorate and management, including the appointment of a new managing director, and in so far as the past history of the company is concerned, the matter is having full consideration. The shareholders' committee have received from the present board a report of the initial steps that the directors have taken already towards reorganising the company's business and giving effect to the recommendations. The adjourned annual general meeting will take place about the beginning of October.

GENERAL ELECTRIC (NEW YORK).—The report for the six months to June 30, 1935, shows a substantial improvement on the corresponding period of 1934. Net profit was \$11,541,428, equivalent to 40 cents a share on 28,845,927 shares of common stock outstanding. This compares with net profit of \$9,463,091, equivalent after dividends of \$1,287,534 on the special stock to 28 cents a common share in the first half of last year. Orders received during the first six months of 1935 totalled \$104,542,946, as compared with \$92,154,642 in the same 1934 period, an increase of 13 per cent.

COLE (E. K.), LTD. (NEW CAPITAL SCHEME SANCTIONED).—The scheme of arrangement between E. K. Cole, Ltd., and shareholders of both classes permitting the creation of 250,000 5½ per cent. 1st preference shares was sanctioned by Mr Justice Eve on July 29th.

HARLAND AND WOLFF (SALE OF CLYDE SHIPYARD).—National Shipbuilders Security, Ltd., has purchased the Clyde shipyard of

Harland and Wolff, Ltd., at Greenock. The yard has been closed for seven years, Harland and Wolff having concentrated their activities in their Govan establishment.

THE PERAK RIVER HYDRO-ELECTRIC POWER CO., LTD.—At meetings of the 7 per cent. participating debenture stockholders, holders of deferred interest warrants of the 7 per cent. participating debenture stock and holders of ordinary shares held on July 31st, by order of the court, and at an extraordinary general meeting of the company which followed, the scheme of arrangement dated July 3 was approved in each instance by overwhelming majorities.

ROBEY AND COMPANY, LTD.—Robey and Company, Ltd., have been carrying on business since May, 1933, under a receiver appointed by the court, have now carried through the scheme of reorganisation sanctioned by the court on July 15th, and on July 30th last the receiver was discharged. The directors will now carry on the business under the chairmanship of Mr W. T. Bell.

BREWERS AND DISTILLERS OF VANCOUVER, LTD.—The London directors of the above company announce the receipt of cabled advice from Vancouver stating that a settlement has been arranged of all outstanding claims of the Government of the U.S.A. against the company and its subsidiaries for the sum of \$500,000. Orders dismissing the various suits have been entered in the appropriate courts, thus terminating all litigation in the U.S.A. in which any of these companies have been involved. The directors consider that this settlement is in the best interests of shareholders. It releases at once the company's assets in the U.S.A., and removes the existing obstacles to the entry into the American markets of the products of the various companies concerned.

KONVERSIONSKASSE FÜR DEUTSCHE AUSLANDSSCHULDEN 24 PER CENT. STERLING BONDS.—Notice is given that scrip certificates to bearer may be lodged at the Bank of England Loans Office, 3 Bank Buildings, Princes Street, London, E.C.2, to be exchanged for definitive bonds which will be ready for issue on August 12, 1935. Bonds issued in exchange for scrip certificates marked "B" will have coupons due July 1, 1936, and subsequent coupons attached. Bonds issued in exchange for scrip certificates not so marked will have coupons due January 1, 1936, and subsequent coupons attached.

A further rise in wheat prices, which might have occurred owing to unfavourable crop reports from North America and Argentina, was prevented by Russian offers. It is understood that the Chadbourne sugar scheme, which is due to expire on September 1st, was not renewed at an international conference held in Brussels this week. Quotations for raw sugar tended to decline. The market in tea was closed. At Smithfield Market business was slack and quotations for beef were marked down. On the other hand, butter and eggs continued to rise in price.

The upward movement of commodity prices in the United States continued during the past week. Moody's index of the dollar prices of staple commodities, based on December 31, 1931, stood at 165.4 on Wednesday, compared with 161.9 a week earlier, 157.5 a month earlier and 147.1 on the corresponding day last year.

COAL

SHEFFIELD.—The increase in the export quota mentioned last week should remove the complaints of a scarcity of best steams and one or two other grades of coal. While export business continues quiet best hards are well taken up and quotations are firm at recent levels. Washed singles and smalls are also in good request, but washed trebles and doubles are quiet. In the home market there is a scarcity of coking smalls, but supplies of other classes of coal are adequate. Business in coke is extremely dull and output is rather excessive.

Quotations: Association hards, 18s. to 18s. 6d. f.o.b.; washed trebles, 16s. 6d. to 17s. f.o.b.; best Yorkshire house, 20s. to 22s. at pits; best Derbyshire, 19s. to 21s. at pits; blast furnace coke, 17s. to 18s. f.o.b.

NEWCASTLE-ON-TYNE.—Whilst prompt export demand for North East coal is limited, shipments against contracts are satisfactory. Northumberland screened steam coal is less active, owing to the seasonal decline in the English coasting trade. Graded steams remain fairly steady. In the Durham market the suspension of shipments to the Italian ports, owing to financial difficulties, is having a serious effect in the gas and coking section. There is little business in bunker coals, most brands being offered freely. Coke is quiet for prompt shipment, but makers are fairly well sold forward.

Current f.o.b. prices for export:—NORTHUMBERLAND.—D.C.B. screened, 13s. 9d.; smalls, 11s. Howards, Bentinck, Newbiggin screened, 13s. 3d.; smalls, 10s. 6d.; Tyne Prime, large, 13s. 6d.; smalls, 11s.; Hartley Main, large, 13s. 3d.; smalls, 11s. DURHAM.—Lambton/South Hetton screened steam, 15s. 2d.; smalls, 12s. 6d.; Wear Special gas, 15s.; Holmside, Ryhope, Boldon unscreened gas, 14s. 6d.; second-class gas, 13s. 2d.; coking unscreened and/or smalls, 13s. 2d.; Prime unscreened bunkers, 13s. 9d.; second-class unscreened bunkers, 13s. 3d.; Prime Foundry coke, 18s. 6d.; Newcastle and District gas coke, 20s.

GLASGOW.—Holidays in the South, currency uncertainties and acute competition from Poland make for quiet market conditions. But collieries have good orders on hand and are securing a fairly full clearance of the regulated output at satisfactory prices. Home industrial takings are expanding again, and while current demand for domestic fuel is slow, restocking for winter activities is now in progress.

Shipment prices, f.o.b. district ports: LANARKSHIRE.—Ell best, 14s. 6d.–15s.; splint best, 17s. 6d.; splint second, 15s.–15s. 6d.; navigation, screened, 15s.; navigation unscreened, 13s. 6d.–13s. 9d.; Hartley, 16s.; steam, screened, 13s.–13s. 6d.; trebles, 13s.–13s. 3d.; doubles, 12s. 6d.–12s. 9d.; singles, 12s. 6d.–12s. 9d.; pearls, 10s. 6d.–10s. 9d.; dross, 10s. FIFE.—Best unscreened navigation, 13s. 6d.–13s. 9d.; unscreened navigation, 12s. 9d.–13s. 3d.; first-class steam, 13s. 6d.–14s.; third-class steam, 12s.–13s.; trebles, 14s.–16s. 6d.; doubles, 13s. 6d.–14s. 6d.; singles, 12s. 9d.–13s.; pearls, 10s. 6d.–10s. 9d. LOTHIAN.—Best splint, 14s. 6d.; prime steam, 13s. 3d.–13s. 6d.; secondary steam, 12s. 3d.–12s. 6d.; unscreened navigation, 12s. 6d.–12s. 9d.; trebles, 13s. 6d.–14s.; doubles, 13s.; singles, 12s. 3d.–12s. 6d.; pearls, 10s. 6d.–10s. 9d. AYRSHIRE.—Best unscreened navigation, 14s. 6d.; steam, 13s.; trebles, 13s. 6d.; doubles, 13s.; singles, 13s.; pearls, 12s. 6d.; dross, 11s. 6d.

CARDIFF.—Coal shipments at South Wales ports last week totalled 403,000 tons, compared with 396,000 tons the previous week and 409,923 tons in the corresponding week last year. This week all operations at the docks were suspended on Monday, and partially suspended on Tuesday, while at the collieries work after the holidays was not resumed till the night shift on Wednesday. In these circumstances, business on the Cardiff Coal Exchange has been practically at a standstill, and it is doubtful if the week's exports in the foreign and coastwise trades will exceed 300,000 tons. Prices are nominally unchanged.

IRON AND STEEL

MIDDLESBROUGH.—Total shipments of pig iron, manufactured iron and manufactured steel from the Tees rose from 37,455 tons in June to 49,259 tons in July. The quantity shipped overseas in July was 26,647 tons, South Africa being the best customer, having taken 12,255 tons. Output of iron and steel continues to increase, and there are now 26 blast furnaces in operation in this area, three producing foundry iron, nine hematite iron, and fourteen other

kinds of iron. The market continues very strong with makers easily able to dispose of their production of foundry iron to home consumers, further parcels having been shipped to Scotland this month. Hematite makers are adhering rigidly to the prices recently fixed, and are well contracted for some time ahead. The announcement that both Dorman, Long and Company, Ltd., and South Durham Steel and Iron Company, Ltd., are installing new cold rolling plants for the production of steel sheets for motor cars, has created a good deal of interest locally, as this will provide further employment.

SHEFFIELD.—The holiday stoppage at the steel works has been as brief as was consistent with the need of rest by the men and the necessity of overhauling plant. Nearly all the steel firms are fully booked for some time ahead and the turnover of the industry registered yet another increase last month. Substantial profits are being earned in engineering, steelmaking and tool making. Progress in the export markets is disappointingly slow in comparison with that of internal trade. During the first half of the year the output of steel ingots and castings in the Sheffield area amounted to 677,000 tons compared with 619,000 tons in the corresponding period of 1934 and double that of 1932, when the trade depression marked its lowest level. Steel production in the Lincolnshire area went up from 471,400 tons in the first half of 1934 to 550,500 tons in the first half of the present year. The iron trade, which is relatively unimportant in Sheffield, is doing better than for some years past. Prices of iron and steel have been steady over a lengthy period. Favourable reports are heard from makers of almost every variety of hand and engineers' small tools. Saws are selling freely and the file plants are working up to capacity. Large quantities of engineers' small tools are coming in from the United States. Demand for cutlery, spoons and forks, and silverware, has shown some improvement.

GLASGOW.—Several important contracts were placed with Clyde shipbuilders at the end of last week, and in addition it is said that there are still a number of tenders out which are confidently expected to yield further business for Clyde yards, both passenger and cargo vessels being under consideration at the moment. The situation at the steel works continues satisfactory and, although there has been a falling off in some directions on account of holiday influences, the amount of new business placed is exceedingly good. Makers of semis also are busier. Sheet makers have been very well employed since the holidays, and demand from home users continues to grow, and makers are able to keep a fairly large proportion of the mills engaged on home business. While export trade is still poor, some improvement is noticeable in several markets. Tube makers in this district are also busy at present, and in most of the manufacturing trades employment is regular, and there is much work still on hand.

CARDIFF.—In the iron and steel trade work has been largely suspended owing to the holidays, and there was no meeting on the Swansea Metal Exchange on Tuesday. There has been no further development in connection with the proposal of Richard Thomas & Company, Ltd., to erect a tinplate works at Redbourn, and meetings of the joint committee appointed to investigate the matter are now unlikely till September.

OTHER METALS

COPPER.—The cash price advanced slightly during the past week, although the undertone of the market showed no change. Demand in this country remains quiet and deliveries in the United States American deliveries reached the record total of 73,488 short tons, against 29,813 short tons in the same month of last year. This sharp increase is accounted for by the fact that American consumers news about the future of the copper code, and began to replenish their stocks only when it became apparent that an immediate revival of co-operation was improbable. It is therefore likely that exports from the United States—which reached the high level of 11 will show a sharp fall in July. But until the American customs smelters join the scheme, there will be no guarantee that exports last month from 80,559 to 84,628 tons—a movement which indicates that there is unlikely to be a shortage of supply in the near future, although the restriction scheme is now in full swing.

Sales on the London Metal Exchange: 1,050 tons on Tuesday, against 1,000 tons last week; 1,900 tons on Wednesday, against 1,200 tons last week. Domestic spot was quoted at 7.72½ cents per lb. in New York on Wednesday, against 7.50 cents a week ago and 7.30 cents a month ago. Wednesday's official closing price for standard cash in London was £32 6s. 3d. to £32 7s. 6d., compared with £31 8s. 9d. to £31 11s. 3d. a week ago. Stocks of refined copper in British official warehouses at the end of last week, at 73,445 tons, show an increase of 740 tons, while stocks of rough copper, at 11,684 tons, show an increase of 450 tons on the week.

LEAD AND SPelter.—Neither of these markets showed any new feature during the past week. Demand is quite good, and seems likely to remain at its present level in the immediate future. The likelihood of any significant change taking place in either market before the announcement of the decision regarding the British import duties is improbable. According to the Metallgesellschaft, the world's output of smelter zinc fell from 111,372 metric tons in May to 106,521 metric tons in June, declining production in Mexico, Canada, Belgium, Holland, Germany and France being mainly responsible for the movement. But since there was one working day less in June than in May, daily output showed only a small decline from 3,593 to 3,551 tons, against 3,018 metric tons in June, 1934.

Sales of lead on the London Metal Exchange: 1,250 tons on Tuesday, against 550 tons last week; 600 tons on Wednesday, against 1,200 tons last week. The New York quotation on Wednesday was 4.20 cents per lb., against 4.15 cents a week ago and 4.15 cents a month ago. The official closing quotation in London for soft foreign for shipment during the current month was £15 10s. per ton, compared with £15 7s. 6d. a week ago.

Sales of spelter on the London Metal Exchange: 425 tons on Tuesday, against 525 tons last week; 950 tons on Wednesday, against 25 tons last week. Wednesday's quotation in East St. Louis was 4.50 cents per lb., against 4.40 cents the week before and 4.30 cents a month earlier. Wednesday's official closing quotation in London for "good ordinary brands" for shipment during the current month was £14 3s. 9d. per ton, against £14 3s. 9d. last week.

TIN.—The cash price was stationary this week, but the three-months' quotation fell by £4 per ton on Tuesday. The circumstances of this reduction are somewhat puzzling. In metal exchange circles it is believed that the movement was due to sales by a pool broker. As we go to press the International Tin Committee is negotiating in Paris. A somewhat drastic increase in quotas of from 10 to 15 per cent., which may be made retrospective from July 1st, is anticipated as a result of this meeting. The extent of the increase may serve as an indication of the future policy of the Committee, and the view is widely held that the days of the worst scarcity are over. According to Messrs. A. Strauss and Company, total deliveries during July, at 7,404 tons, showed a fall of 333 tons, despite an increase of 675 tons in American deliveries. The supply increased by slightly over 1,200 tons, and amounted to 6,486 tons; visible supplies also rose by 480 tons to 14,863 tons. Messrs. Strauss and Company attribute these increases to the fact that, during July, Malayan producers anticipated their permitted output for August and September—the quotas being allotted for quarterly periods. Hence, unless quotas are increased as a result of the International Committee's Meeting, there will be a heavy drop in the supply during August and September. In the circumstances, the quota decision is of the greatest importance.

Sales of tin on the London Metal Exchange: 260 tons on Tuesday, against 225 tons last week; 375 tons on Wednesday, against 240 tons last week. The New York quotation on Wednesday was 52.37½ cents per lb., against 52.65 cents a week ago and 52.20 cents a month ago. Wednesday's official closing quotation in London for standard cash was £233 15s. to £234 per ton, compared with £233 12s. 6d. to £233 15s. last week. Stocks of tin in London and Liverpool at the end of last week totalled 1,367 tons, an increase of 389 tons on the week.

OTHER NON-FERROUS METALS.—Among other non-ferrous metals, aluminium ingots and bars for home delivery were again quoted at £100 per ton. Nickel, for home and export, at £200 to £205 per ton, remains unchanged. Quicksilver, on the spot, was quoted at £11 10s. to £11 12s. 6d. per flask of 76 lbs., the same as last week. Chinese antimony was quoted at £70 to £71 per ton ex warehouse, the same as last week. Chinese wolfram for July–August shipment at 32s. to 34s. per unit c.i.f. remains unchanged. Platinum (refined) remains unchanged in price at £7 per ounce.

TEXTILES

COTTON.—Manchester.—The uncertain outlook for raw cotton prices has caused an unsettled tone to prevail in the market throughout the week. Demand has fallen off, and spinners and manufacturers have experienced difficulty in maintaining their position. There has been a slightly easier movement in prices of raw cotton. Much uncertainty has prevailed as to the effect of the estimate of the crop by the American Government. It is announced that the proposed subsidy on the exports of farm products will not apply to cotton. No reliable information has been received with regard to the loan plan for the new crop, and the figure will no doubt depend upon the probable growth. The spot situation in Liverpool remains very tight.

It has been a disappointing week in the cloth section, the inactivity being partly due to the holiday season of the year. There have been no indications of an improved turnover for India, and only a scrappy sort of business has been done for the minor outlets East and West, although some makers have done fairly well for the Dominions and Crown Colonies. Quite a number of miscellaneous sales have been arranged in home trade fabrics. American and Egyptian yarns have been slow of sale. More complaints have been met with from spinners, and there is a fear that unless demand revives quickly stocks will increase in first hands and more machinery be allowed to stand idle.

 London: 5 Walbrook, E.C.4, and 45 Pall Mall, S.W.1.

JUTE.—Dundee.—Owing to the big stocks which most consumers of raw jute are carrying, the possibility of a short crop this season has provided no scare and buying has been on a limited scale. The result is that jute prices have shown a distinct tendency to decline again, and speculative sellers especially have been more ready to meet buyers. It is reported that there is a big "bear" account to cover in Calcutta for the later months of this year. Trade in manufactured goods is very quiet, and consumers of the fibre have no incentive to purchase. Ordinarily, there is usually a brisker business in jute goods during the summer months, but this year buyers are purchasing sparingly, and are displaying little interest in securing their forward needs. Good First Marks are offered at £22 10s. and Lightnings at £20 10s., with Hearts at from £19 2s. 6d. for good quality and at £16 5s. for grade, August/September. Daisee-2/3 could be obtained at £17 15s. for the full group, though the usual quotation is £18, and fours at from £17 2s. 6d., with Tossa-2/3 at from £18 17s. 6d. and fours at from £18 2s. 6d., October/November. Spinners are content to hold off meantime and await further developments. Jute yarns are quiet, but prices show no change. Common 8 lb. cops are held steadily at 2s. 1d. and 8 lb. spools at 2s. 2d., while offers of business at less are being turned down. Twist remains at 3½d. for 3 ply 8 lb., and sacking yarns are steady at from 2½d. for 24 lb. web and 3½d. for 8 lb. chains. Rove is firm and in fair demand at from £18 10s. now lowest for 48 lb. and £14 10s. for 200 lb. Buyers of Rio yarns are finding it difficult to get delivery so early as they would like, as spinners are busy, and prices are firm, while carpet yarns are very steady at 3½d. for 14 lb. warp.

Business in jute cloth is confined to the smallest of quantities, though there has been a better inquiry during the past day or two. Prices are quite steady quotably at from 2½d. for 10 oz. 40 in. and 2½d. for 8 oz. Linoleum hessians and heavy goods are steady and unchanged.

Calcutta goods have weakened, and there are sellers at the lower rates of 19s. 6d. for 10 oz. 40 in. and 16s. 9d. for 8 oz. August, 19s. 7d. and 16s. 4d. September, 19s. 7d. and 16s. October/December, and 19s. 5d. and 15s. 10d. January/March. Liverpool twills are down to 51s. and "B" twills to 45s. 6d. August/September, and 51s. 3d. and 45s. 9d. October/March.

GRAIN MARKETS

WHEAT.—The continued receipt of unfavourable news regarding crop prospects in Argentina and North America was responsible for "bullish" sentiment on the markets in London and Liverpool this week, but the rise was held in check by sales of Russian wheat. In Chicago, trading became nervous and quotations erratic in the latter part of the period under review. At the close on Wednesday prices were below those ruling a week earlier.

According to the *Corn Trade News*, total shipments of wheat and flour during the past week were 811,000 quarters, against 790,000 quarters in the preceding week. On Wednesday last, "September" futures were quoted in Chicago at 90½ cents per bushel, against 94½ cents the week before and 85½ cents a month ago. Quotations in London, Wednesday: No. 1 Northern Manitoba, Vancouver, ex ship, 34s. 3d. per 496 lbs., against 34s. 6d. a week ago; No. 2 Northern Manitoba, Vancouver, ex ship, 33s. 3d., against 33s. 6d. a week ago.

FLOUR.—Demand continues quiet, and quotations remain unchanged. Shipments from North America in the past week totalled 89,000 sacks, compared with 71,000 in the previous week. Wednesday's London quotations (excluding quota payments) were: Straight run, delivered country, 26s. 6d. per 280 lbs., against 26s. 6d. a week ago, delivered London, 25s. 6d., as compared with 25s. 6d. a week ago. Manitoba patents, ex store, 24s. 6d. to 26s. 3d., against 24s. 3d. to 26s. a week ago. Australian, ex store, 20s. to 21s., against 20s. to 21s. a week ago.

BARLEY.—Imported feeding varieties have been in moderate demand at steady prices during the past few days. "October" futures were quoted at 35½ cents per bushel in Winnipeg on Wednesday, against 36½ cents last week and 35½ cents a month ago. Quotations per 448 lbs. in London on Wednesday were: "English feed" (old) at farm, 23s., the same as last week.

OATS.—On Wednesday, "September" futures were quoted at 30½ cents per bushel in Chicago, against 33½ cents a week ago and 32 cents last month. Quotations in London, Wednesday: "English Black," at farm 22s. per 336 lbs., against 22s. to 23s. a week ago; "English White," at farm, 22s., against 22s. to 23s. last week; "Chilean White," landed, 26s. 6d., against 26s. 6d. a week earlier.

MAIZE.—Shipments from Argentina continue moderate, with demand in this country well maintained. Prices are practically unchanged on the week. "September" futures were quoted on Wednesday at 75½ cents per bushel in Chicago, against 75½ cents a week ago and 76½ cents last month. Quotations in London, week ago and 76½ cents last month. Quotations in London, Wednesday: "Plate," landed, 16s. 6d. per 480 lbs., compared with 16s. 6d. a week ago; "Plate," ex ship (new), 15s. 6d., as against 15s. 6d. a week ago; "Plate," "July," 15s. 9d., against 15s. 9d.

a week ago. Yellow maize meal, ex wharf, was quoted at £4 12s. 6d. per ton, against £4 12s. 6d. a week ago.

COMPARATIVE AVERAGES OF GRAIN.—The following table gives the estimated sale of home-grown wheat during the harvest years 1931-32 to 1934-35:—

	1931-1932	1932-1933	1933-1934	1934-1935
Estimated sales of home-grown wheat—	Cwts.	Cwts.	Cwts.	Cwts.
1 week to August 3.....	26,830	24,053	102,879	57,403
49 weeks to August 3.....	3,811,753	3,550,329	6,509,480	13,823,024
Average price of English wheat per cwt.	s. d. 6 7	s. d. 6 8	s. d. 5 0	s. d. 5 4

The following is a statement showing the quantities sold and the average price of British corn in the past two weeks, and for the corresponding week in each of the years from 1931 to 1934.

Week ended	QUANTITIES SOLD			AVERAGE PRICE PER CWT.		
	Wheat	Barley	Oats	Wheat	Barley	Oats
July 27, 1935.....	Cwts. 47,458	Cwts. 5,206	Cwts. 8,056	s. d. 5 6	s. d. 6 5	s. d. 7 10

AMERICAN WHEAT MARKETS.—The following table shows wheat quotations in recent weeks, with comparative figures for 1933 and 1934:—

NEAREST FUTURE	Jan. 4, 1933	Jan. 3, 1934	Aug. 8, 1934	Jan. 2, 1935	July 31, 1935	Aug. 7, 1935
Winnipeg (No. 1, Manitoba) ..	46½	65½	94½	82½	85½	84½
Chicago (No. 2, Winter) ..	46½	84½	109	98½	93½	90½
Cent. per 60 lb.						

The visible supply of wheat in Canada at 125,984,000 bushels, shows an increase of 7,246,000 bushels on the week. Supplies a year ago amounted to 103,302,000 bushels.

OTHER FOODS

BACON.—The Marketing Board announce that, in accordance with the provisions of the present contract, the price of the Class 1, Grade C pig for the month of August is 11s. 4d. per score, against 11s. 9d. in the previous month. Bacon prices have remained steady during the past week, trading being on a moderate scale. The official quotations (per cwt. for No. 1 Sizable) which formed the basis for dealings on the London Provision Exchange this week were: English, 90s. to 95s.; Canadian, 82s.; Danish, 93s., the same as last week. Arrivals in London last week included Danish, 17,983 bales; Canadian, 3,891; Dutch, 2,757; Lithuanian, 2,017; Polish, 3,346, against 18,139, 3,494, 2,566, 2,030 and 2,679, respectively, in the previous week.

BUTTER.—Supplies continue moderate and the market has been firm this week. Quotations (per cwt.) on the London Provision Exchange on Wednesday were: New Zealand, finest salted, 93s.; Australian, choicest salted, 94s.; Danish, 110s., compared with 93s. to 94s., 92s. to 93s., and 108s. to 110s., respectively, last week.

CHEESE.—Apart from a slight improvement in the price of New Zealand, the market has shown little change this week. Quotations (per cwt.) on the London Provision Exchange on Wednesday were as follows: English finest farmers', 52s. to 60s.; Canadian, finest coloured (old), 62s. to 64s.; New Zealand, finest coloured, 46s. 6d., compared with 52s. to 60s., 63s. to 64s. and 45s., respectively, last week.

COCOA.—The "spot" quotation in New York on Wednesday was 4½ cents per lb., against 5½ cents per lb. last week. On the London market, Accras were quiet. On Wednesday last good fermented old crop, "August-September," was quoted 20s. 6d. per 250 kilos, c.i.f. Continent, against 20s. 6d. for July-August. Last week's movements of cocoa in London were as follows: Landed, 3,327 bags; delivered, for home consumption, 14,751 bags; exported, 6,987 bags; stocks, 161,358 bags, against 251,617 bags a year ago.

COFFEE.—The New York spot market has eased a little, while the London market continues quiet. In New York on Wednesday, Rio No. 7 (cash) was quoted at 6½ cents per lb., as compared with 6½ cents per lb. last week and 6½ cents per lb. a month ago. Movements of coffee in London last week were as follows: Brazilian landed, 64 cwt.; delivered for home consumption, 323 cwt.; exported, nil; stocks, 15,537 cwt.; delivered for home consumption, 2,311 cwt.; exported, 4,192 cwt.; stocks, 150,813 cwt., against 109,299 cwt. last year. Other kinds, landed, 772 cwt.; delivered for home consumption, 3,343 cwt.; exported, 1,836 cwt.; stocks, 170,549 cwt., against 101,823 cwt. last year.

EGGS.—The gradual improvement in the price of eggs continues, most imported selections sharing in the movement in Tooley Street

this week. At Smithfield Market on Wednesday, English (ordinary packing, Grade I, about 15-15½ lb.) realised 15s. to 15s. 6d. per 120, against 14s. 6d. to 15s. a week earlier, while Danish (15½ lb.) made 11s. 3d. to 11s. 9d. per 120, against 10s. 9d. to 11s. 6d. last week.

FRUIT.—Business at Covent Garden was rather dull after the holiday, states *The Fruit Grower*. Home-grown fruit is in rather short supply, and prices are generally steady at well above the normal for the time of year. Cherries have almost finished, and black currants are in limited supply and firm in price. Ripe gooseberries have maintained recent rates, while raspberries and loganberries are steady in price. Limited quantities of English plums sell at 8s. to 9s. per half-sieve, with imported supplies on a moderate scale. Hothouse grapes are not so active a trade, but peaches are rather scarce and maintain their price. Melons have enjoyed a steady sale. English apples meet a moderate trade, with Australian and New Zealand selling well at steady prices. A few small English pears are on the market, while Italian Williams realise 8s. to 11s. per crate, and Californian Bartlett 20s. to 21s. per case. Oranges and grapefruit have been a steady trade, but lemons continue exceptionally dear.

MEAT.—Demand has been slow after the holidays, and supplies at Smithfield were ample for requirements this week. Imported beef again eased slightly. On Wednesday last, Argentine chilled hindquarters were quoted at 3s. 4d. to 3s. 8d. per 8 lbs., as compared with 3s. 4d. to 3s. 10d. last week. New Zealand frozen mutton was 2s. 6d. to 3s. 6d. per 8 lbs., against 2s. 6d. to 3s. 4d. a week ago. According to the Smithfield Market official report, supplies during last week amounted to 8,442 tons, an increase of 451 tons on the corresponding week last year. Beef and veal accounted for 4,897 tons, mutton and lamb 2,606 tons, and pork and bacon 513 tons, as compared with 4,447, 2,516 and 582 tons, respectively, in the same week of 1934.

PEPPER.—Black pepper has been in quiet demand at steady prices on the London market this week. Wednesday, spot price for Lampong was 3d. per lb., against 3d. last week. Movements of pepper in London during the past week were as follows: Black, 6 tons; delivered, 6 tons; stocks, 1,792 tons, against 213 tons a year ago. White, landed, 5 tons; delivered, 442 tons; stocks, 18,074 tons, against 6,321 tons a year ago.

RICE.—The spot market has had a quiet tone, with prices showing a slightly easier tendency. The spot price of Burma No. 2, cleaned, 8s. 7½d. per cwt. a week ago, while the forward quotation, at 7s. 9d. per cwt., remains unchanged on the week. Movements in London during the past week were as follows: Landed, 1,142 tons; delivered 425 tons; stocks, 10,316 tons, against 1,951 tons a year ago.

SUGAR.—The spot market in New York remained steady until the end of last week, but quotations have shown an easier tendency this week. Trading in London has been quiet. The spot price in New York on Wednesday was 3-16 cents per lb., as compared with 3-20 cents per lb. last week and 3-28 cents per lb. a month ago. Wednesday's sales of raw sugar in London included "August delivery" at 4s. 3½d., against 4s. 4½d. to 4s. 5d. last week. The movements of raw sugar at public warehouses in London and 15,704 in the previous week and 7,381 in the same week of last year; deliveries, 16,389 tons, against 8,753 and 14,441 respectively; stocks, 141,980 tons, against 134,232 and 169,571 tons respectively.

TEA.—The following table shows the average prices (compiled by the Tea Brokers' Association) of tea sold in Mincing Lane on Garden Account in recent weeks:—

Week ending	Northern India	Southern India	Ceylon	Java	Sumatra	Nyasa-laud	Total
Aug. 1, 1934.....	13-29	12-49	12-99	Nil	Nil	12-00	12-94
Aug. 5, 1935.....	11-49	11-54	13-00	9-54	8-38	10-20	11-74
July 11, ".....	11-58	11-84	13-39	10-41	8-87	10-30	11-96
July 18, ".....	11-61	11-89	13-99	10-00	9-22	10-51	12-09
July 25, ".....	11-53	11-91	13-68	10-01	8-84	10-41	12-11
Aug. 1, ".....	11-36	11-26	13-37	9-52	8-46	10-29	11-81

The London market has been closed this week, but auctions will be resumed on Monday next.

VEGETABLES.—According to *The Fruit Grower's* Covent Garden correspondent, tomatoes continue in demand at slightly easier prices. Cucumbers are also an active trade, with prices a point 6s. to 7s. per half-bag. The short supplies of runner beans are selling well; marrows are plentiful and cheap. Supplies of cabbage normal expansion in supplies, new potatoes have experienced a seasonal fall in prices. At the London Borough Market last Tuesday, earlier. The Potato Marketing Board, at a meeting held last week-end, has prescribed a minimum riddle of 1½ in. for all varieties of potatoes.

MISCELLANEOUS COMMODITIES

VEGETABLE OILS AND OLSEEDS.—As a result of persistent unfavourable weather reports from Argentina linseed prices continued to rise. Demand, however, is only moderate, crushers displaying a marked reserve, and buying only their immediate requirements. Plate to Hull has been sold at £9 12s. 6d. per ton, but sellers are now asking up to £9 15s. Trade in Indian linseed is from River Plate ports are somewhat heavier, and the quantity now afloat for Europe has advanced to 138,300 tons (including 4,000 tons from India) while that afloat for America is 21,600 tons, against

24,900 tons a year ago. To the end of July, Argentina had exported 1,230,000 tons, and had still 660,000 tons available for export, while India is expected to ship 225,000 tons of the new crop. Cottonseed is quiet. The balance of the old Egyptian is held for £6 5s. Early shipment of the new crop is quoted at £6 September, while Hull has paid £5 15s. for January loading.

Linseed oil is steady, and in sympathy with seed, quotations have now reached the highest level recorded this year. Raw oil ex Hull mill for August delivery is quoted at £22 12s. 6d., and September-December at £22 10s. Trade in cotton oil is very slow. Egyptian crude is offered freely at £23, and refined (technical and edible) at £26 per ton (naked) ex Hull mill. Oilcakes are in about normal demand for the time of year.

RUBBER.—Despite the continued activity of the tyre and auto-

mobile industries in the United States, spot quotations for rubber have shown a reactionary tendency on the New York market. In London, holiday influences were reflected in the idleness of the market and the easier tendency of prices. But a slight recovery occurred later and, at the close on Wednesday, quotations showed little net change on the week. In New York the spot price on Wednesday was 11½ cents per lb., compared with 12½ cents per lb. a week ago. Wednesday's official closing price for standard ribbed smoked sheet in London was 5½d. per lb., as against 5½d. on the corresponding day last week. In forward positions, business has been done at 5½d. for October-December, 1935, as against 5½d. to 5½d. a week ago. Stocks in London and Liverpool at the end of last week totalled 173,898 tons, against 173,108 tons a week earlier. A year ago stocks amounted to 106,327 tons.

ANGLO-AUSTRIAN TRADE

Influential men in Great Britain and Austria are at work to promote the trade between the two countries.

The NEUE FREIE PRESSE of Vienna

as the leading Central European newspaper is an important factor in these efforts:

BRITISH SUBSCRIBERS find in it full information on financial and commercial activities in Austria, Bulgaria, Czechoslovakia, Hungary, Yugoslavia, Roumania, etc. Special Subjects are dealt with by experts in the sections "European Economics," "Insurance," "Engineering," etc. Monthly subscription **8s. 2d.**

BRITISH and AUSTRIAN ENQUIRERS are given advice and assistance in examining market possibilities, finding agents or sources of supply in both countries.

BRITISH ADVERTISERS will find a good response when using the NEUE FREIE PRESSE. It is the right medium for approaching influential business men and the wealthy classes. The considerable circulation in Central Europe outside Austria is an additional benefit for many advertisers and proves the prestige and influence of the paper.

A SELF-BINDER FOR The Economist

Week by week you keep your copies of "The Economist," and ultimately you either file them or bind them. Doubtless you are accustomed to the annoyance which attaches to the ordinary binder—the difficulty of reading half the left-hand page and the unwieldiness of the device generally.

We are able to offer our readers a binder which overcomes these irksome difficulties and is, in our opinion, the most efficient contrivance for the purpose we have yet seen.

It holds three months' issues and index, it has no wires, clips or metal contrivances, and each issue can be bound up in an instant in such a way that it can be read as easily as a well-bound book.

(IN FULL CLOTH, LETTERED ON SPINE AND FRONT)

A DESPERATE DEFENCE

THE vigour with which M. Laval and his colleagues are putting their economic policy into effect has surprised the whole world. The dilemma confronting the French Government is by this time familiar to everyone. France, one of the last of the nations to feel the effects of the world-wide depression, is labouring in the teeth of the storm which has already blown itself partly out in other countries. The vicious circle of deflation is still revolving. Incomes are still falling, the profitability of industrial enterprise is still on the wane, prices are still declining, the economic structure is still being shrunk. At the same time, France is suffering from the fact that her currency is seriously overvalued on the foreign exchange markets of the world and is under fire not only from speculators, but also from the much more formidable artillery of natural forces. The national income, as it shrinks, is compressing the revenue of the Treasury, while the expenditure of the State cannot be compressed in equal proportion. The Budget crisis is only a symptom of the underlying economic disequilibrium. But it lies nearer the surface of politics and it has been the directly unsettling element in the situation for many months past.

The immediately urgent task for any Government determined to restore equilibrium was to balance the Budget. This the Laval Government accomplished on paper in the first batch of decrees issued a month ago. The method adopted was an all-round reduction of 10 per cent. in all forms of State expenditure. French Treasury expenditure has been cut before, and it was common ground that further cuts, unaccompanied by any measures to offset the losses of those affected and to spread the burden of sacrifice more widely, were politically indefensible. But it was a pity that the decrees imposing cuts, admittedly only part of the whole policy, had to be issued in advance of the remainder of the policy. The result was the disturbances at Brest and Toulon and the strike at Le Havre, which might have been avoided if the disaffected employees concerned could have been shown that their sacrifices were not unique.

These disturbances, however, have been composed and the way has been cleared for the more positive side of

M. Laval's programme. This is comprised in no less than 83 separate decrees, which were approved by the Cabinet and signed by the President on Thursday of last week. Such a mass of legislation, covering so wide a field in such detail, and issued at one time, is probably without parallel in any country of the globe. Even M. Laval's enemies are compelled to pay tribute to the industry which has gone into the drafting of these decrees and to the courage with which they are launched. It is clear that the French governmental machine has made a supreme effort to rise to the occasion of the emergency. The impression of extraordinary measures has been heightened by the action of the Prime Minister—unprecedented in the history of the Third Republic—in summoning a conference of all the Prefects from every department in the country. These officials, the pivots of the administrative system, will bear the full responsibility for supervising the detailed application of the decrees, and it was thought desirable to impress upon them in person the urgency of their task and the need for prompt and thorough action.

The 85 decrees cover an enormous range. Even to mention the main subjects which they comprehend is to print a catalogue. There are decrees accelerating the Marquet plan of public works and providing fresh loans for local authorities at reduced rates of interest to be applied to the same purpose. A central committee is set up to train the unskilled unemployed. Another committee is to advise on means of expanding international commerce, and, for a beginning, 23 industrial import quotas are removed. There are several decrees aimed at reducing the margin between the farm price of meat and the price charged to the consumer, and empowering the Prefects to fix maximum retail prices for meat. To assist agriculture, land lease and mortgage payments are reduced by 10 per cent. and the price of nitrogenous fertilisers similarly lowered. There are numerous decrees devised for the protection of investors and the suppression of financial fraud. Bankruptcy is to be made easier for the genuinely embarrassed but more difficult for the fraudulently insolvent.

Even so brief a summary as this reveals the measure of the effort that is being made. In thoroughness, in expedition, in courage, M. Laval need fear comparison with no dictator. It would be pleasant if these qualities were all that was needed for the success of an economic policy; if it were possible to feel confident that democratic France had found a democratic solution to her difficulties. Unfortunately, M. Laval's decrees fail to inspire such complete confidence and even the friendly observer must confess to some doubts about their efficacy. In some degree this is due to their very comprehensiveness. For M. Laval seems to have drawn upon every phial of the economic pharmacopoeia; he has adopted every diagnosis and prescribed every remedy, and it is only too likely that some of them will prove incompatible with others. The Budget, for example, on the one hand has been balanced, but on the other hand loans equal to the savings of expenditure are to be made for public works. Public works are excellent if the Government's object is to diminish unemployment—but not if its first objective is to balance the income and the outgoings of the Treasury in order to put a stop to ceaseless borrowings and to restore the confidence of the market in the ultimate solvency of the State. Moreover, the primary object of the whole programme is to lower the level of prices in France, whereas a public works programme, if it has any effect at all, will tend to raise prices. Or again, it is difficult to see how agriculture can be assisted and the cost of living lowered at the same time unless the Budget is to be overloaded with further burdensome subsidies. The stimulation of foreign trade by the removal of import quotas is another laudable object—but it does not harmonise well with the defence of an over-valued franc. M. Laval might have set himself the task of defending the franc *à tout prix*, or of increasing foreign trade, or of stimulating internal trade by public works, or of reducing the cost of living, or of balancing the Budget. But to attempt all five at once is not a policy at all—it is a desperate muddle.

Unfortunately, the internal contradictions of M. Laval's policy are not the only obstacles in the way of French recovery. M. Laval is only a temporary dictator, his decrees must be confirmed or rejected by Parliament in the autumn. Hardly any element in the economic structure can be touched without somebody being aggrieved. Even if there is unanimity of opinion on the need to reduce prices, every voter is up in arms at the attempt to reduce the one set of prices by which he lives. The workers resent the cuts in wages, the small shopkeepers dislike the attempt to get retail prices down, the *rentiers* are alarmed at the reduction in interest on the *rentes*. Only if M. Laval's policy in its entirety confers such a striking general benefit on the community that this aggregation of particular injuries can be forgotten will it be politically successful. The result of this political hazard is likely to be that each line of policy will be sketched rather than applied in earnest. This can be seen in the decrees. The attempt to reduce the cost of living, for instance, has been largely confined to the price of meat, and even there the measures promulgated can hardly take effect immediately. In the liberation-of-foreign-trade department, there is the same hesitancy. Of the 23 quotas that are removed, the most important refer to mustard, telescopes and traction engines; the coal quota is apparently to be reduced! M. Laval has not only dipped into every medicine-bottle on the shelf; he has measured out quite inadequate doses of each.

In default of a miracle, even the stupendous administrative efforts which have taken shape in last week's batch of decrees are unlikely to pull France out of her difficulties. These measures, all of them more or less painful, all of them more or less difficult to administer, are being adopted—for what purpose? To avoid devaluation of the franc. Devaluation is admittedly unpopular in France. But is it as unpopular as the policy of deflation by decree? That is the question for the Chamber of Deputies to answer when it reassembles. It is said that as soon as a French Government is installed in office the Chamber begins to think about its successor. On this occasion the Chamber may need to have more than a new Cabinet waiting. If another ominous crisis is to be avoided in the autumn, the Chamber must be ready with an alternative policy.

ROAD SAFETY AND ROAD SENSE

THERE is no single measure of the growing tendency among the people of this country to move about by every possible form of transport; but evidence of the fact itself is patent on every side. The spread of the population into the territory bordering our great industrial centres involves a steadily increasing volume of traffic day in and day out; but it is at holiday time that peak figures are reached, when great masses of the population escape from the drab and sun-starved environment of the town to seek recuperation in the woodlands, on the mountains or at the sea coast.

Even the railways—after many years of decline—are reaping advantages from this *Wanderlust*. By a policy of improved service and reduced fares they are regaining some of their lost popularity; for anyone who examines our railway traffic tables will find that in the past holiday fortnight the four main lines received from passenger traffic £4,580,000, against £4,336,000 a year ago—an increase of nearly a quarter of a million. But it is on the roads that increasing "movement" is placing the greatest strain. The number of private cars licensed is increasing at more than 100,000 a year, and in the autumn of 1934, the latest date for which complete returns were available, had increased 30 per cent. in five years—although these were years of depression. This year the figures have taken another great leap forward and are estimated by the Society of Motor Manufacturers to be 12 per cent. higher than a year ago.

But, for the greater amenities and freedom of movement which these figures imply for a large part of the nation, a heavy price is being paid in human life. According to the figures of the Ministry of Transport the total number of deaths in the first year covered by the weekly returns (ending March 9, 1935) was 7,353; and in the same period 230,067 were injured. These are appalling figures. And it is disturbing that these figures compare none too favourably with those for France, where the number of motor vehicles is roughly the same as in Great Britain but the number of fatalities considerably less, or with those for the United States. The United States has approximately 12 times as many motor vehicles as Great Britain, 10 times as great a mileage of surfaced roads, and consumes roughly 15 times as much motor spirit; yet she has only 5 times as many casualties.

Clearly, the British figures amply justify the campaign in which the Minister of Transport has been engaged to reduce the "toll of the roads." The measures taken—by more general light-signals and other measures of traffic control but above all by the 30 miles an hour speed limit in built-up areas—have yielded an appreciable harvest of success. The chart below shows that since the speed limit came into operation the number of fatalities has fallen definitely below those of last year, although the number of motor vehicles and of pedal cycles on the road is undoubtedly much larger.

But the total figures are still far too high and great public interest therefore attaches to an analysis which the Ministry has just published of 1,500 fatal road accidents which occurred during the early part of the current year. The report shows that 56.1 per cent. of the accidents were due to collisions between a vehicle and a pedestrian, 26.9 per cent. to collisions between moving vehicles, and the rest to

other causes. 30.4 per cent. of the accidents occurred at road junctions or cross-roads, and 61.2 per cent. on straight roads or open road bends with good sight line. In the 1,500 accidents, 1,532 persons were killed, and these fatalities are analysed as follows:—

CLASSIFICATION OF PERSONS KILLED		Per cent.
Pedestrians	55.9	
Pedal cyclists	20.2	
Motor cyclists	12.9	
Attendants, passengers, etc.	6.2	
Drivers of vehicles other than motor cycles	4.8	

Total

Eighty-one per cent. of the pedestrians, 56 per cent. of the pedal cyclists and 32 per cent. of the motor cyclists were killed in accidents occurring in built-up areas. Clearly the pedestrians were safer, but the motor cyclist was in greater danger on the open road.

Responsibility for the 1,500 fatal accidents is assigned by the Chief Constables according to the following table:—

Causes attributed to	No. of Accidents			Per cent. of Total
	Built-up Areas	Areas not built-up	All Areas	
Pedestrians	613	123	736	49.1
Drivers	181	195	376	25.1
Pedal cyclists	137	102	239	15.9
Vehicles or their equipment ..	16	40	56	3.7
Animals	9	10	19	1.3
Weather	3	12	15	1.0
Passengers, etc.	11	4	15	1.0
Road conditions	2	6	8	0.5
Obstructions	...	3	3	0.2
Unknown	11	22	33	2.2
	983	517	1,500	100.0

The report shows conclusively that pedestrians and pedal cyclists are the most vulnerable travellers, that motor-car drivers are relatively safe, and that over 50 per cent. of accidents are attributable to carelessness on the part of pedestrians and pedal cyclists. It may be, however, that the driver shows up in too favourable a light, for too often the pedestrian did not survive to tell the tale!

If these appalling figures are to be seriously reduced, a determined attack should be made on the accident problem along three lines: better roads, better road sense, better and more strictly enforced law. For the last two hundred years we have constantly been outgrowing our road system; the type, capacity and speed of our road vehicles has changed faster than the roads could be rebuilt to suit the new requirements. But no matter what the ancient rights may be, it is absurd that one and the same road should nowadays be expected to act as common route for high-speed through motor traffic, horse and cart, pedal cyclist and pedestrian. There must in future be some segregation of traffic and specialisation of roads; we want roads which can safely be used by high-speed motors, with proper grading, banking and separation of traffic; and once we have these roads we must keep them for the purpose for which they were built. Again, there must be an end to ribbon development on through routes; by-passes must be so placed in a general town-planning scheme that they remain by-passes and do not become congested areas. A comprehensive road scheme for England will not be achieved through our present disjointed, decentralised and unco-ordinated agencies, which, even if they have the best will in the world, are without the financial powers to produce and execute a proper scheme. We shall probably have to enforce town planning throughout the country, and shall have to set up a national road board with powers to borrow, plan, compel and perform.

Perhaps the most significant conclusion of the Ministry's analysis is that carelessness among all concerned, but particularly among pedestrians, is the major cause of accidents. With the best road system in the world carelessness will claim its victims; but we cannot pretend to have reached the irreducible minimum until every effort has been made to develop a road sense among all sections of the population. The pedestrian should realise that to cross a road is as dangerous as to cross a railway track; the motorist should be constantly aware of the cost of careless driving in terms of flesh and blood, of torn limbs and crushed bodies. To pedal cyclists, notoriously jealous of what they call their rights, we commend a sense of proportion, responsibility and sweet reasonableness, with which

7, CHANCERY LANE, LONDON

they may have fewer rights, but may live longer. According to the Ministry report, of pedal cyclists killed, most of whom were young, 74 per cent. died as a result of their own carelessness. To develop this indispensable road sense the wholesale distribution of the Highway Code is a step in the right direction. It is, however, arguable that more of its instructions for behaviour on the road should be mandatory and enforceable and not merely advisory.

The best way, however, of promoting road sense is strict enforcement of the law, provided always that the law is reasonable. It should be the duty of our road authority to build roads which permit the maximum use of the capabilities of the motor car while ensuring at the same time the maximum safety of the people. It should also be its aim to keep off the road incompetent or irresponsible drivers, cyclists, pedestrians or machines. But having created the conditions of safe transport, it would then have behind it the full force of public opinion in punishing breaches of the regulations severely, and without fear or favour.

BRITISH ENGINEERING.—II

LAST week we examined recent developments in some of the leading branches of the British engineering industry. This week we continue our survey by examining the course of events in other branches of the industry.

Textile Machinery.—Exports of textile machinery are most important, for they constituted 60 per cent. of this section's total production in 1930; but they fell from a peak of 126,553 tons in 1929 to 55,567 tons in 1931. To obviate cut-throat competition at home, therefore, an amalgamation of the six leading makers was formed in September, 1931, under the name of Textile Machinery Makers, Ltd., in which the bulk of the shares are held by Howard and Bullough (Securities), Ltd., and Platt Bros. and Company (Holdings), Ltd. It was not at first successful in achieving the control of prices, and in 1933 an intensive reorganisation of production took place, with the result that the major portion of all production is now accounted for by two of the original six undertakings. Neither of the holding companies mentioned above has derived any income from the amalgamation, but there is evidence of recovery in this branch as a whole in the increase in the net profits of Tweedales and Smalley (1920), Ltd., from £28,249 for the year ended April 30, 1934, to £50,198 last year.

It is probable that the activity of the industry increased from 1933 to 1934. Exports in 1934 at 78,491 tons certainly showed a substantial increase over the 1933 total of 56,460 tons. Exports from Germany, France, Switzerland and the United States also increased, but to a lesser extent than those from this country, with the result that the British proportion of total exports (by value) from these countries increased from 38.5 per cent. to 40.6 per cent.

In 1934, Sir Walter Preston, chairman of Platt Bros., flung down a gauntlet within the industry. For coarse and medium counts, he said, the equipment of our cotton mills

was very much less efficient than that of many modern mills abroad. The challenge was taken up by the Federation of Master Cotton Spinners, and it was eventually decided to conduct practical tests in order to determine the economies realisable by installation of new kinds of machinery. The result of these tests showed that a greatly increased demand for new machinery might arise, provided that the finance for re-equipment were forthcoming. In view of the fact that many mills in the American spinning section have not covered their depreciation for a number of years, this appears very doubtful. The temporary relief brought by the price agreements does not seem likely to last, and whatever the advantages of high draft spinning or automatic looms, new finance for the cotton industry can at the moment only be provided by the banks.

More important is the proposed scheme for the sealing or scrapping of 8,000,000 redundant cotton spindles. As long as spindles are sealed against a future expansion in demand for textiles, the immediate result must be a contraction in the market for new machinery. If the scheme succeeds in increasing the profit-earning capacity of the cotton industry, however, it should hasten replacement of obsolete plant.

As regards the prospects of this branch of engineering, exports during the first six months of 1935 showed a decline of 15 per cent. compared with 1934. Improved activity in the home market has been reported, but although the newer branches of the textile industry are expanding, there can be no substantial increase in demand until the cotton industry is in a position to provide more liberal depreciation allowances. The reorganisation effected by textile machinery manufacturers has nevertheless placed them in a position to benefit from any improved demand.

Locomotives, Carriages and Wagons.—According to the Census of Production for 1930, construction of locomotives was equally divided between the railway companies and outside firms. The latter, however, are mainly dependent on the export trade, which accounted for 88 per cent. of their production in 1930. The extent of the depression in locomotive building can, therefore, be realised by the decline in exports from 50,565 tons in 1930 to 3,873 tons in 1932. Although a recovery to 9,465 tons took place during 1933, this was followed by a further decline in 1934 to 4,750 tons. There was a similar trend in the exports of other countries, and the British share of the world market for locomotives actually increased from 53.0 per cent. in 1930 to 58.3 per cent. in 1934. The activity of the industry had declined in 1932 to about 20 per cent. of the 1928 level, but it recovered to about 50 per cent. at the end of 1934, due partly to increased orders from home railways and partly to a small revival in demand from abroad, reflected in an increase in exports from 1,317 tons in the first six months of 1934 to 3,479 tons in 1935. The small increase in home rails' traffic receipts in 1934 was, however, considered sufficient to justify enlarged construction programmes, a greater proportion of which was let out to independent firms.

The latter, however, cannot continue to rely on home railways. Recovery can only be achieved by a revival of exports. The principal foreign markets in the past have been India and the Argentine. In the former, traffic receipts have increased and the construction programme for 1935-36 is considerably in excess of that for the immediately preceding years. In the Argentine, improved traffic receipts have been offset by exchange losses, and replacement on a considerable scale is impossible owing to the difficulty of obtaining sufficient foreign exchange. The long-term prospects must be considered favourable, since the British locomotive industry is not suffering so much from foreign competition as from trade restrictions and its customers' restricted purchasing power, and some day there must arise a large accumulated replacement demand.

The value of exports of carriages, wagons and parts fell from £4,593,000 in 1930 to £974,000 in 1934, but this section of engineering has also benefited from the increased proportion of the home railways' demand allotted to outside firms. Moreover, many firms have begun to construct bodies for road vehicles with a measure of success.

Agricultural Machinery.—This branch of engineering has for some years been losing its right to be considered a separate section, for agricultural machinery makers have

been increasingly extending their interests into the realm of general engineering, owing to the reduced purchasing power of primary producers throughout the world and to the trend (until recently) from arable land to grass in this country. In recent years the position of the industry has been strengthened through centralisation of control. Thus, Ruston and Hornsby, who control Ransomes, Sims and Jefferies, have a close working arrangement with R. A. Lister and Company, and have also acquired a number of companies previously belonging to the Agricultural and General Engineers group.

Although the incomes of primary producers as a whole, both here and abroad, are now rising, as a result of Government action, they are not yet sufficient for the purchase of plant on a large scale in either market. Exports of agricultural machinery fell from 23,991 tons in 1929 to 7,898 tons in 1932, but recovered to 11,145 tons in 1934. As in the case of locomotives, there must one day be a considerable and accumulated replacement demand; but exchange restrictions must be removed before exports can increase.

We conclude this survey next week by an examination of developments in the remaining branches of the British engineering industry.

GERMANY'S ECONOMIC RECOVERY—II

(BY A CORRESPONDENT)

In last week's article it was pointed out that the economic recovery in Germany since 1933 has been uneven. The "cranking-up" of the national economy by the Government's programme of public works cannot be said to have worked out to the advantage either of the purchasers of consumption goods or of the private enterprise producing those goods. The linking by the National-Socialist Government of the public works programme with a rapid rearmament programme in the last year or so suggests that recovery must have made itself most apparent in the industries producing what are known as "investment goods"—ores, metals, building materials, vehicles, machines, factories and public buildings, as well as armaments, e.g. aeroplanes, tanks, ships, guns, etc. This is reflected in the following analysis of industrial production in Germany in recent years.

The table below shows that there has been an extremely rapid recovery in Germany in the industries producing investment and production goods:—

INDICES OF INDUSTRIAL PRODUCTION IN GERMANY

Average	Industrial Production	(1928 = 100)			
		Investment Goods (1)	Special Production Goods (2)	Sources of Power (3)	Building (4)
1932	54.3	35.4	68.2	74.7	33.2
1933	61.5	44.9	74.2	77.9	41.2
1934	74.2	74.8	82.8	86.5	71.8
1934 June	81.2	76.3	78.9	83.1	73.1
1935 June	95.2	104.8	91.0	92.9	103.7

(1) Semi-finished and finished capital goods, e.g. iron, basic metals, machines and machinery, vehicles, buildings, etc.

(2) Production goods in general use, e.g. coal, gas, water, electricity, chemicals, etc.

(3) Partly included under "Special production goods." Comprises coal, petroleum, electricity, gas and water.

(4) Included under "Investment goods."

Source: Institut für Konjunkturforschung, Berlin: new indices.

While industrial production as a whole has risen to 95.2 per cent. of the 1928 average, the production of "investment goods" has surpassed it, at 104.8 per cent. The advance in the production of investment goods as a whole to well above the 1928 level is notable. It shows a greater increase than that of "building" alone; therefore the output of certain components in the group of investment goods must have risen very greatly above the general average of 104.8 for June of this year. The German official figures of production and turnover of various components in the index of investment goods show several striking features. In the

following table, indices of production for certain elements in the broad "investment goods" category are shown:—

INDICES OF PRODUCTION OF CERTAIN COMMODITIES
(1928 = 100)

Average	Pig Iron	Raw Steel	Rolling Mill Products	Zinc	Cement	Lorries	Passenger Vehicles
1932	33.4	40.0	46.8	44.6	36.8	22.9	28.6
1933	44.7	53.1	63.1	51.7	45.9	40.7	59.7
1934	74.2	82.6	92.9	74.3	79.5	80.0	95.6
1934 June	74.1	81.5	79.8	69.6	88.4	99.1	138.5
1935 June	101.1	109.8	106.3*	123.6	135.4	124.3	149.1

* May, 1935.

The National-Socialist Government's public works programme allots a very important rôle to road construction; and motor vehicles have been exempted from taxation in their first running year. This has greatly encouraged the production of cement for the new arterial motor roads, and of motor vehicles themselves. But the most striking feature of this table is the very rapid increase in production of all these commodities. The acceleration of the official rearmament programme has doubtless affected each branch favourably, notably the production of zinc, which is very largely used in the manufacture of munitions.

From a comparison of both of the tables above with the figures for the production of consumption goods, quoted in last week's article, it is clear that Germany's economic recovery has been overwhelmingly on the side of production and investment goods. For, on the one hand, the Government have aimed at capital construction on a large scale, whether the "capital" was for civil or military purposes; and, on the other hand, Germany's critical foreign trading position has compelled the Government, for the sake of imports necessary to their capital construction programme, to make inroads upon the resources of private entrepreneurs and workers alike. The private enterprises producing consumption goods have seen the import quotas of their necessary raw materials cut down and their own supplies rationed in favour of imports of raw materials necessary to the State's capital construction programme. Moreover, they have been more heavily taxed and are threatened with Dr. Schacht's new levy to aid all exports. And, on the other side, the workers have, as we showed last week, suffered a reduction in real income.

Thus, regarded from one angle, Germany's economic recovery has been purchased at a very high cost—a cost which includes the canalisation and regimentation of her foreign trade, the rigid bureaucratic control of her industries, and lagging production and consumption in her own market for consumers' goods. On the other hand, if Germany's recovery is unbalanced, it is none the less real and striking enough in that sphere of production upon which the State's programme has been first concentrated, i.e. the production of investment goods. Yet there is still another cost to be reckoned—the financial cost.

From the time of the original (Von Papen) "cranking-up" programme in 1932, with its dubious financing by the issue of "tax-remission certificates," until to-day, the bulk of Germany's public works has been financed by the issue of bills. These have either been financed direct by the Reichsbank or else indirectly by the Reichsbank through the medium of one or two institutions specially adapted for that purpose. There has been no substantial import of long-term capital into Germany since the National-Socialist Government assumed power; and, largely as a result of Germany's recent manoeuvres with her external debt service, her various kinds of "blocked" marks at big discounts, and her trade with individual countries, Dr. Schacht has been able to do little more than keep Germany's short-term credits revolving. This he has accomplished with consummate dexterity, and he has enabled Germany to live "hand-to-mouth" on the most necessary raw materials, by the judicious use of bilateral trade agreements, the reduction of Germany's "free" export surpluses with Europe, and the increasing of German exports to those countries which supply Germany's principal import needs. This being Germany's foreign trading position, it was clear that the internal expansionist programme would mean—at least at the outset, and permanently if the programme went ahead too rapidly—the piling-up of internal short-term debt.

The growth of Germany's internal debt in the last two

years, and the conflicting opinions on its present dimensions, were set out by the Berlin correspondent in last week's *Economist*; and further indications of the size of that debt will be found on page 325 of this issue. It is sufficient for the immediate purpose to point out that the official figures do not recognise as "debt" the creation during the last two years of a vast amount of short-term debt for the financing of the "work-creation" and rearmament programmes—probably to the extent of at least Rm. 15,000 millions. It is clear that there has been a vast expenditure in Germany during the last two years almost wholly on those commodities required by the State's civil and military programmes; and this expenditure has not yet been "covered" by revenue in the orthodox sense. In that sense, then, Germany's internal debt has increased; and one can justifiably ascribe much of Germany's economic recovery to this kind of credit inflation, the natural effects of which have been a vastly increased production of "investment goods" to the order of the State, and a consequent steep rise in the wholesale price-level.

Thus, the semi-official warning in *Der Deutsche Volkswirt* last week, to the effect that public works (and especially public building) was going ahead too fast, may well have come, as many thought, from Dr. Schacht himself. For it is obvious that, if the present accelerated tempo of capital construction continues, the Reichsbank will very soon be faced, if it is not so already, with the alternatives of calling a halt to the State's economic programme, or of acquiescing in a rapid turnover from an expansionist policy to one of a patently inflationary kind. What the latter would entail for the German workers at the present time one can only guess. But it is evident that Germany's economic recovery, already unbalanced on the capital construction side, would, in a drastic credit inflation, become even more top-heavy. The moral for those in control of economic policy in Germany to-day would seem to be this: In a State which has insulated itself from world economic forces, the danger that sheer inflation will arise from an "expansionist" policy becomes the more acute the more the "expansion" is accelerated. That moral is equally applicable to many other States to-day which have set out to insulate themselves from world economic forces. To none, however, is its application more urgently necessary than to Germany at present.

SHOPS IN ENGLAND: 1924-33

(BY A CORRESPONDENT)

How many shops are there in England? This article summarises an attempt to form a more exact estimate than that popularly current. In formulating the estimate a thorough survey was made of Kelly's Directories, the management of which supplied considerable assistance and information about methods of compilation. This research has now been supplemented by the occupation survey of the 1931 Census, which includes and analyses "Proprietors and Managers of Retail Businesses" in its returns. The forty-nine

volumes of Kelly's Directory which covered England when this estimate was being prepared had been compiled for different years during the period 1924-33—a fact which makes it difficult to estimate from this source alone the number existing at a given date; but by the use of a statistical device it does at least make possible a comparison with the Census figures and enables one to estimate the rate of growth of shops.

The method is obvious and simple: eleven of the areas comprised in the total estimate based on the directories were covered by directories relating to 1931. These figures—both in total and for particular classes—have been compared with, and adjusted by reference to, the Census returns. This "correction factor" has then been applied to all the figures based on the directories. The growth of shops has been calculated from these "corrected" figures. Although simple and obvious, this method is not ideal: its defects are too manifest to enumerate, but its defence must be that it is the only method possible of application. It will be reasonably correct if the eleven 1931 areas comprised in the estimate are truly representative.

The areas upon which the comparison for 1931 is based are Bedfordshire, Bucks, Berkshire, Dorset, Gloucestershire (excluding Bristol), Hampshire and the Isle of Wight, Huntingdonshire, Northamptonshire, Oxfordshire, Somerset and Wiltshire. As will be seen they weight the figures in favour of the rural areas of the South and avoid both the depressed areas and those in which the bulk of new industry is developing. The inclusion of Northants, of Hampshire with Southampton, and of Oxford with Morris and Pressed Steel do something to redress the balance.

The next test is comparison of totals. The Census gives the number of proprietors and managers of retail businesses as 56,844 for this area: the estimate based on Kelly's is 59,954. This difference of 5.2 per cent. is serious, but fortunately it is possible to explain it in a satisfactory manner. Comparing the Census number of general shops for the area, 4,795, with the estimate of 8,550, we find that the excess of the estimate in this class, 3,755, more than accounts for the excess of the total estimate, 3,110. If it be considered that the class of general shop includes the tiniest "house-shop" which can only at the best provide enough to supplement an income earned elsewhere, it seems probable that Kelly's Directories and the Census are comparable, the one record including and the other excluding this particular class of shop. The remainder of the discrepancy is so small that its absence rather than its presence would give rise to doubt.

Having provisionally assumed that the totals are comparable and that these include all the shops that provide either livelihood or principal occupation, and having adjusted the directory totals to the proportion of the Census in the

"comparable area," we are confronted with the major problem of comparing classes. And here a proviso must be entered, based on the essential unreality of any hard and fast classification of retail outlets. If one attempts to define an ironmonger or a draper, to take two classes of shop of which the limits seem sharply defined, one finds that the former shades off imperceptibly into the china and furniture shop, and that in the latter it meets the draper. And if, in hope of defining the essential ironmonger or the draper, one has recourse to *The Ironmonger* or *The Drapers' Record*, one finds their columns full of accusations against other types of trader of encroachment upon their more profitable sales. Drapers display vacuum cleaners, ironmongers sell American cloth, and both are only united in their definition of the limits of retail trading necessary to denounce the coupon advertisement schemes.

The line of demarcation between some groups is very narrow. Most general shops are mainly grocers; most grocers sell butter and eggs; and many of the multiple grocers' shops call themselves dairies. Consequently there seems to be every reason for taking them all together. Weighting them by the relative totals of their classes in the Census, we get a much smoother and more feasible record of growth. For example, suitably weighted, the 47 per cent. increase in the number of dairies in the depopulating Welsh Marches becomes an increase of 5 per cent. in the number of shops calling themselves dairies, grocers and general shops. This compares with an increase of 3 per cent. in the number of grocers, and a decrease of 6 per cent. in the number of general shops. The total result is an increase of 2 per cent. in the number of shops in the whole composite class.

The following estimates may thus be given of the numbers of the various classes of shops in England in 1931:—

General shops	
Grocers	162,700
Dairies	
Tobacconists	
Confectioners	56,400
Greengrocers	32,400
Fishmongers	7,200
Furniture, china and ironmongers	29,800
Boot shops	37,000
Textiles: drapers, clothiers, hosiers, tailors, etc.	76,900
Chemists	11,900
Butchers	34,600
Total (including unspecified shops)	537,500

A second cause of difficulty, due to the nature of the geographical basis of the estimate derived from "Kelly's," must also be overcome. In many of the cases where an

abnormally high or low rate of growth is recorded for an area, the cause is geographical because only one part of an economically united whole is under consideration. This is especially true of those cases in which towns are considered apart from the rest of the counties in which they are situated. The managers and proprietors may reside inside the town and do business in the surrounding country or *vice versa*, though the bulk of the suburbs may lie inside or outside the town boundary. One may cite the case of Hull and the East Riding of Yorkshire as an example, or that of Devon and Cornwall with the largest centre of population in either county lying on their mutual boundary.

It is in order to eliminate the disturbance caused by the factors discussed in the previous paragraph that the preceding table has been prepared, which shows the average annual rate of growth, 1924-33, of various classes of shops, and of population, for a series of areas in England. As far as possible the country has been divided into areas possessed of a certain economic individuality. The extent to which this result has been achieved may be estimated by a comparison of the rates of growth of all shops.

Somewhat surprisingly the South Coast, fourth in order of growth of population, heads the list, with the Metropolitan area, first in order of growth of population, a bad second. This is explained, however, by the low rate of increase in London itself: side by side with this increase of shops in the outlying areas and new suburbs there is now in progress a steady consolidation of trade in the hands of the multiple shop and department store in the centre. Next comes Yorkshire and, somewhat unexpectedly, Lancashire. In spite of its prosperity and its rapid growth of population the East Midlands come low on the list, perhaps as a result of a fairly rapid surrender of individual enterprise to the multiple shop. The case of East Anglia, adjacent to this area, shows signs of the same causes, whatever they may be, at work. In the Welsh

Marches population and shops are declining together, while in the extreme North-West the fall in population is accompanied by an annual increase of 1.8 per cent. in the number of shops.

Clearly there are two forces at work apart from the obvious inter-relation between local industrial and commercial prosperity. The development of new suburbs in most towns, the increase in the habit of living "in the country" due to motor transport, and the development of village life, all combine to increase the number of shops.

The development of multiple shops, except when they buy out existing retailers and until their competition succeeds in closing their rivals, acts in the same way. On the other hand the transport facilities which let the townsman dwell in the country may carry both him and the erstwhile customer of the village shop into the town to do his shopping at the "Stores," while in the long run the growth of the multiple shop must be at the expense of the small independent shopkeeper.

Even the relation between "prosperity" and a rise in the number of shops is not an inevitable one. Possibly the figures are exaggerated, but the increase in Northumberland and Durham in both greengrocers and fishmongers (types of retailing which require a minimum of capital) may be evidence of victims of depression seeking an alternative occupation. No doubt in this particular case also, as in some others, the "annual" rate of growth is a misleading title, because some of the records of expansion only cover one year which, for the locality and class concerned, may well have been exceptional. What the table gives, in reality, is a rough picture of rates of growth which have been in operation at some time during the period. It is obvious that rates of increase among retailers of the order of magnitude indicated, even if a very generous margin of error be conceded, constitute a very grave problem.

NOTES OF THE WEEK

The Paris Conversations.—While the three-Power conversations in Paris, on the basis of the Anglo-Franco-Italian treaty of 1906, did not formally begin before Friday, the British delegation arrived on Tuesday and the Italian on Thursday, so that M. Laval had time for separate discussions with each before the conference really began. At the moment of going to press, the outcome of these momentous conversations is still unknown; but, on the eve of them, there was no mistaking the rapidity with which opinion, all over the world, has been aligning itself against the now imminent prospect of a nakedly aggressive attack by Italy upon a fellow-member of the League of Nations and a co-signatory of the Kellogg Pact. One of the most impressive manifestations of this feeling on the eve of the Conference has been General Smuts' grave warning that an Italian attack upon Abyssinia would be likely to arouse the Blacks against the Whites from end to end of Africa. This warning will not have been lost upon the French, whose stake in Africa is as great as the British. The French know that General Smuts is a statesman who understands Europe as well as his own continent. It is, indeed, now happily clear that they and their Government have at last—even if belatedly—awakened to the desperate seriousness of the Italo-Abyssinian crisis. The gravity of it is extreme, for it involves not only Africa but Europe and the whole world besides. Boldness and firmness, as well as patience and a spirit of conciliation, are required of French and British statesmanship to-day. And a bold British Government need not fear that it will have a divided nation behind it; for the march of events is showing up the unreality of the antithesis—long a favourite theme of certain organs of the press—between a "safe and sensible" foreign policy which attends to nothing but strictly British interests, and the so-called "militant pacifist" policy which seeks to sacrifice the British Empire to the League. It is now clear that the British Empire will be preserved within the framework of the League or not at all. The international rule of

law, for which the League stands, is not only the first but is also the only line of the Empire's defence; and it is in this deep sense that the upholding of the League principles in this East African dispute is a British interest. Italian allegations that we are cloaking petty local imperialist aims of our own in Abyssinia under a hypocritical profession of "League-mindedness" are, indeed, very wide of the mark. With great world issues in the balance, Mr Eden and M. Laval will certainly do their utmost to secure a peaceful settlement by compromise.

* * *

The Rival Views.—Apparently M. Laval and Mr Eden will look for ways and means of obtaining economic openings for Italy in Abyssinia, without compromising Abyssinia's political independence. The crux here is Signor Mussolini's reported ambition to plant Italian settlers, under the Italian flag, on the temperate highlands which are the heart of Abyssinia and the homeland of the Amhara nation. It is on this point that the British and French mediators are likely to meet their greatest difficulties. For the Ethiopian Emperor has signified his willingness to "exchange" territory with Italy, provided he secures an outlet to the sea; but he has steadfastly refused to contemplate the complete alienation of part of his most fertile regions. It has been suggested that a protectorate over Abyssinia in the name of the League, and exercisable only by the League, would, in view of French and British disclaimers of any further interest in Ethiopian economic concessions, give Italy in effect what she requires. But is it really proper and desirable so to cloak Italian pretensions with the mantle of the League, when these pretensions have neither been set forth nor established before the League? And in any case, although the Ethiopian Emperor might possibly be prepared for a strictly impartial League protectorate, Signor Mussolini has made it plain that he

requires sufficient "mastery" of Abyssinia's most fertile territory to permit of Italian colonisation. To square the Emperor's view of Ethiopia's sovereignty and integrity with the only form of League "protectorate" acceptable to the Duce seems like an attempt to square the circle. Again, the suggestion that a regime of capitulations should be instituted by agreement in Ethiopia under which Italy could obtain her requirements, encounters precisely the same fundamental antithesis between the Duce's demands and the Emperor's legitimate concern for Ethiopia's independence. The plain fact of the dispute is inescapable; one powerful State-Member of the League has gone as far as possible to threaten forcible aggression against a small and weak fellow-member. Although the representatives of France and Britain are now negotiating with Italy outside the League framework, they at least cannot ignore the crucial issue by the handling of which on September 4th the entire League system will be judged. In the meanwhile, Signor Mussolini's warlike preparations are continuing at such a rate that the Ethiopian Emperor's cogent appeal to the League this week to raise the embargoes on the export of arms to Ethiopia can scarcely be ignored by the Powers. "Will the Council," he asks, "assume responsibility in the eyes of the world for allowing preparations to continue unchecked for the massacre of a people which constitutes a menace to none?" There is little doubt that the Council would be glad to follow a firm lead by France and Britain. Whatever the Three-Power Paris negotiations bring forth, it is of supreme importance that M. Laval and Mr Eden should take their stand on League principles, for all our sakes.

* * *

The Lights that Failed.—During the last few nights a number of dummy air attacks have been made upon the ports of Southampton and Portsmouth with the single object of testing the efficiency of the searchlight stations. Searchlights are a vital point in defence against air attacks at night, for unless the raiding enemy can be located he is immune both from anti-aircraft fire from the ground and also from the defending fighter planes. The night chosen for the practice favoured the attacking aeroplanes rather than the defending searchlights—but not more so than many other nights. The searchlight companies were largely Territorials who had only been in camp for a week. There were various other mitigating factors which do something to explain but do not entirely explain away the disquieting nature of the results achieved. On this occasion the proportion of the attacking force discovered was so small as to suggest that in the hours of darkness the country is helpless against air attack. Fortunately, the results of the large-scale manoeuvres over London a few weeks ago were by no means so negative; but taken together the exercises show that air defence against sudden night attack is still very far from adequate. Until this is corrected and the world evolves more effective means of defence, the Air Forces on which all the nations are spending such vast sums will remain almost wholly offensive. Several times in the last few years there have seemed to be opportunities of making real progress towards the only practicable solution of the air-bombing problem—namely, the complete abolition of Air Forces. Even now there is a very great degree of agreement among the politicians of the different countries on the steps which it is necessary to take. But nothing is done. If the peaceful citizens of the great cities of the world realised the appalling dangers to which they are personally exposed, with almost no possibility of defence, it would not be possible even for a dictatorial government to stand in the way of agreement. If the searchlights of Portsmouth, by failing to pierce the mist of an English night, should arouse public opinion to dissipate the cloud that hangs over the subject of aerial disarmament, the exercises of Tuesday night may not have yielded quite such gloomy results as appears at first sight.

* * *

American Liveliness.—August is traditionally almost as dull a month in politics and business in the United States as in Great Britain. But this year there has been no relaxa-

tion of activity in either direction. For one thing Congress is still in session and not within measurable distance of adjournment. There are no further Bills to come from the White House, but there is plenty of room for debate on the measures which are still in process of enactment. The Social Security Bill, which sets up an old-age pension system and the rudiments of unemployment insurance, has passed into law. But most of the other major pieces of legislation are still making their way through Congress. The Banking Bill, the Public Utility Holding Company Bill and the Agricultural Amendment Bill have passed both Houses, but in divergent forms, which must be reconciled in conference. In the case of the Banking Bill, the Senate version is not only different from that of the House, but almost contradictory to it. The most controversial of all the pending measures, the Tax Bill, has not yet passed the Senate, which is showing signs of amending it by increasing taxes on more moderate and even on small incomes—an amendment which would make it a more effective Tax Bill but a far worse election cry. On all these controversial issues the triangular wrangle between Senate, House and President may continue for some weeks to come. Nor is political activity outside Washington entirely at a standstill. The Democrats have lost an important by-election in Rhode Island. The result is hardly symptomatic of the state of opinion in the country at large, for Rhode Island is normally a Republican State, and the election largely turned upon the natural unpopularity of the processing tax on cotton in a constituency whose largest industry is spinning. But the result has vastly encouraged the Republicans, and even the voice of Herbert Hoover has once more been heard in the land. It would be rash, however, to assume that Mr Roosevelt's popularity is seriously on the wane. As soon as Congress adjourns he is to undertake an extensive speaking tour in the Southern and Western States, and the reception with which he meets will provide the first indication of probabilities for next year's Presidential election. The business world is showing an almost equal degree of activity. The motor industry is setting the pace, as it has done throughout the depression. But the pace has recently been getting increasingly hot, and even some of the previous non-starters, such as the building industry, are beginning to join in. The very rapid advances of security prices in Wall Street reflect the definitely optimistic psychology which is now dominant in America.

* * *

Sir Frederick Leith Ross's Mission.—This week Sir Frederick Leith Ross, the Economic Adviser to His Majesty's Government in the United Kingdom, has left England on a mission—announced some time ago—to study the financial position of China. The British Government intend, when their Adviser's report has been received, to confer on the subject of his inquiry with the Governments of the other countries with interests in China, of which the chief are the United States and Japan. Under normal conditions, there would be no temptation for commentators to look for more in this transaction than appears on the surface. Sir Frederick Leith Ross is an expert of great experience; the country to which he belongs has greater economic and financial interests in China than any other foreign country; the Chinese Government has signified his visit will be welcome. There is, however, one unusual factor in the situation. That is the foreign policy which Japan has been pursuing *vis-à-vis* China since the autumn of 1931: the seizure by force of the four Eastern Provinces of the Chinese Republic which have now been actually, though not legally, converted into the Japanese puppet-State of "Manchukuo"; and the still more ambitious pretension, which was put forward last year "unofficially" by "the Foreign Office spokesman" at Tokyo, to bring the whole of China within the ambit of a "Japanese Monroe Doctrine." The contention is that Japan has a special status in regard to China; and that she is entitled to regard it, and will regard it, as an unfriendly act if other Powers, either singly or through the League of Nations, enter into direct arrangements with China with a view to China's economic and financial rehabilitation without first consulting Japan. The Tokyo spokesman's

announcement was supposed to be a "trial balloon" to test how large a dose of Japanese Monroism the other foreign Powers would stand. May we infer that Sir Frederick Leith Ross's mission is another balloon, to test whether Japan really intends to challenge the right of the rest of the world to hold intercourse with China, directly and freely, in accordance with the generally recognised law of nations? Sir Frederick Leith Ross is to visit Tokyo on his way to Nanking, to seek light on the Japanese view of the Chinese financial situation. But this passing visit is certainly not to be interpreted as an application for a Japanese *exequatur*; and the Japanese Government have also—no doubt correctly—denied a crop of rumours in the Japanese press which has associated Sir Frederick Leith Ross's visit with an alleged forthcoming Anglo-Japanese conference to discuss both trade competition and arms limitation.

* * *

The Murder of General Nagata.—Last Monday Major-General Nagata, the Director-General of Military Affairs in the Japanese War Office, was cut down and killed, in his office, by a member of his own staff, Lieutenant-Colonel Aizawa. This crime is an apt commentary on the ostensibly abstract question of Japanese constitutional theory on which we commented in last week's *Economist*. Last week we suggested that the Army was perhaps being given theoretical compensation for having been brought to heel by the Government in the field of practical politics. If our conjecture was right, we must assume that General Nagata's murderer was expressing the dissatisfaction of junior ranks at this exchange of the substance for the shadow of power. Certainly General Nagata has been the right-hand man of the War Minister, General Hayashi, in the recent purge which has affected no fewer than 4,700 military officers, including so big a "gun" as the Inspector-General of military education, General Mazaki, who was dismissed by General Hayashi last month. This purge was directed against the element in the Army which stands for the assertion of the Army's independence against the Government at Tokyo, and for the abuse of this independence in order to conduct a high-handed and aggressive "forward policy" on the Asiatic Continent. This was the movement which General Hayashi was attempting to curb; the murder of General Nagata is the retort. Happily, the rumour that the crime would be followed by General Hayashi's resignation has not proved true. The rumour is significant, however, because in Japan political assassins have always been heroes. The rumour is also disturbing, because it may herald another bout of militancy in Japanese foreign policy. The military outbreak of September, 1931, in Manchuria was accompanied by an outburst of political murders by junior officers—the assassination of Baron Inouye, Baron Dan, Baron Inukai. This dastardly crime can only be taken as a black omen.

* * *

Italy's Economic Manœuvres.—Will Signor Mussolini's "forward" foreign policy be held back by economic difficulties? Many people are asking that question; and certainly a number of reports in the last few days indicate that the Duce's preparations in East Africa have given the economic screw in Italy a severe twist. First, the Bank rate in Italy was raised last Monday from 3½ to 4½ per cent. This follows a drop in the gold reserve from 5,523 million lire to 5,257 million lire in the last ten days of July. Thus, despite the strict control of Italian citizens' and firms' foreign securities and assets, gold is flowing out; and this emphasises the reason for the recent decree abandoning the statutory requirement of 40 per cent. gold cover against notes and sight liabilities. Secondly, the need for transport of goods and men to East Africa has led to the withdrawal of many Italian ships from the Black Sea route, and to the crowding of tramps and transports through the Suez Canal. Many foreign ships, chiefly Greek, are under charter for this purpose; and it is reported from Germany that thirteen vessels, with a total tonnage of 120,000, have been purchased by Italy from foreign countries, while negotiations

are continuing for further ships. Thirdly, Italy has been trying hard to buy cotton, but she has met with a rebuff in the United States, where the Government-owned Export-Import Bank has declined to grant short-term credits to American exporters of United States cotton to Italy, despite the huge American stocks of a commodity which is one of the "sinews of war." Fourthly, it is reported that Italy already owes South Wales and Durham exporters over £1,500,000 for coal; that the sum of £1,770,792 was still outstanding on August 7th under the Anglo-Italian trade agreement and awaiting transfer to British exporters; and that, in view of her indebtedness to British coal exporters, Italy has chartered seven Greek ships to transport new Italian purchases of Polish coal to Italy. Italy's industries, more than those of any other European Great Power, ourselves included, depend on imported raw materials. But the diversion of normal trading activities to fulfil the abnormal national requirements of warlike preparations is notoriously a most uneconomical business, the high cost of which must fall on the belligerent nation alone. For normal exports then fall off, as they have been doing in Italy. How, then, is Italy to pay for her greatly increased imports, as well as for her Suez Canal tolls, which, as we showed last week, have greatly increased, and for these purchases of ships abroad? If her exports remain stable, and if no one will grant her credits abroad, Italy will either be unable to foot some of her suppliers' bills at all, or else she will pay out of her citizens' foreign assets—that is, out of capital.

Wise Words in India.—The conviction that the new Indian Constitution is both workable and in India's best interests is steadily growing in India. The latest evidence of this is the important speech by Mr H. P. Mody in Bombay on Tuesday. Mr Mody, who was formerly Chairman of the Bombay Millowners' Association and who participated in the Round Table Conferences in London, is of the opinion that, at this juncture, all Indians of all political persuasions who are determined to give the new Constitution "a full and fair trial" should combine politically to work that Constitution, and to fight the disruptive forces in India. There was a clear-cut issue: Was the Constitution to be worked or wrecked? He believed it could be worked, and should be worked, in the interests of all Indians. To that end Bombay should set itself at the head of a new movement, which should unite those who wanted the reforms to be put into practice. Mr Mody saw no need for conflict between British commercial interests and the development of India's commerce and industry; rather would reciprocity agreements on Ottawa lines provide a basis for their mutual prosperity. Another piece of news from India this week augurs well for the new Constitution. The Maharajah of Patiala, who is Chancellor of the

FRANCE

THE SECOND BATCH OF DECREES

POLITICAL and business circles have been surprised by the extent of the second batch of decree-laws, which comprised 83 decrees instead of the expected 20. Their scope, moreover, is extremely widespread. No doubt the majority of the new measures are directed to "economies" and economic recovery, as, for example, the revision of ex-servicemen's pensions, the speeding-up of public works schemes, the reduction in the cost of living (as the result of agreements with the relevant concerns) and also the first relaxation in quotas. The same may be said of the decrees for the protection of investors, which revise the law on the rights of shareholders in the case of increases of capital, check share-pushing, introduce increased penalties for swindling, reform bankruptcy law, increase the responsibility of company directors, etc. All these measures aim at reviving confidence among the investing public.

Other decrees, especially those of secondary importance, as, e.g. those on garden allotments and the river police, seem to have nothing to do with economic problems. They are exceptions, it is true, but nevertheless they provoke some critics to observe that the procedure of decree-laws should be strictly limited to measures of emergency character. The same observers in the past, however, have doubted the efficacy of decree powers in any case, arguing that they had already been accorded to President Doumergue, who had made no serious use of them. M. Laval at any rate will not incur this reproach. He knows that the French crisis is as much psychological as economic, in consequence of the decline of the State's authority and of business morality; and he also knows that public opinion is tired of endless theoretical controversies which must finally lead the country into monetary and social adventures. The majority of the country has therefore applauded the energetic words with which he concluded the instructions which he gave to the Prefects whom he had convoked in Paris in order to explain the mechanism of the decree-laws.

Although the Socialist leader, M. Léon Blum, insinuates that M. Laval hopes to become dictator(!), the former knows that it will be difficult for Parliament, when it returns from recess, to refuse the voting of the decrees—the more so as the majority of these measures have already been "adopted" for some time by the Chamber or the Senate, though without becoming law, owing to the inability of Parliament to finish its labours. Observers who are particularly competent to assess the moves in the Party game emphasise that the leader of the Socialists no longer cares to bring down a Government of moderates, which, in his view, must incur the unpopularity of heavy, though unavailing, sacrifices. On the other hand, he does not want to have to take the helm himself and face the same difficulties on the eve of the General Election. These considerations explain why the Brest and Toulon riots may well have been provoked by external elements without the support of the trade unions or of any political clique. It may be, however, that if the Government cannot prove the efficacy of its emergency measures in the autumn, the Opposition will be forced to declare its hand. Discontent with the "cuts" is widespread, and the Opposition will find this a fertile field for political cultivation.

THE PROSPECTS OF RECOVERY

The question is thus to analyse the chances of economic recovery in the next three months. There are two grave problems. The first concerns the fate of the farmers. This depends in turn on two things: a fall in the cost of living, which may make itself felt rather quickly, and, more important, a rise in the price of wheat. With regard to the latter possibility, the 1935 crop is abundant but of poor quality. The actual situation in the wheat market could thus—with moderate financial support—afford M. Laval some hope. The second grave problem centres on the effort to bring down interest rates, in which the predecessors of M. Laval were unsuccessful. It is probable that another vigorous

effort will be made in that direction. The Stock Exchange seems ready for a strong rise in rentes. The new reductions in the rediscount rate of the Bank of France from $3\frac{1}{2}$ to 3 per cent., and of the rate of advances on securities to 4 per cent.—the latter figure has not been seen since 1911—as well as similar measures for Treasury bonds and National Defence bonds, have all been welcomed. But these measures, because of seasonal dullness on the Stock Exchange, have so far had little effect on rentes.

On Wednesday M. Laval had long conversations with the Governor of the Bank of France, the head of the Stock Exchange, the directors of the big banks and big insurance companies, and finally the director of the Crédit Agricole. On the same day M. Tannery, Governor of the Bank of France, issued an appeal to the people of France for confidence in the Government and in a revival of trade. M. Tannery emphasised that distinct signs of improvement had been observable in the world during the last few months. He declared that the task of adapting national economies to new conditions was now sufficiently advanced to permit the latest sacrifices, so courageously conceded by the country as a whole, to bear fruit; but for this purpose they would need the aid of the hoarded milliards of francs. Whether these will come out, however, depends mainly on external circumstances, and notably on the reality of the recovery on Wall Street, and on the issue of the guilder from its afflictions.

INDUSTRIAL PRODUCTION MAINTAINED

The Statistique Générale has just published its June figures showing industrial production in France:—

	June, 1934	April, 1935	May, 1935	June, 1935
General index	99	93	92	92
Engineering	99	93	92	92
Iron and steel	98	96	95	95
Textiles	80	80	81	80
Mines	62	59	63	64
Building (adjusted figures)	102	101	101	101
Leather	81	70	65	62
Paper	98	89	90	91
Rubber	159	133	132	132
Motors	892	754	758	767
	456	411	423	423

In the motor industry, 13,544 automobiles and 1,555 lorries were put on the road in June, compared with 14,558 and 1,772 in May.

The figures for the cotton industry are as follows:—

	March, 1935	April, 1935	May, 1935	June, 1935
Spinning (average per spindle in kilograms):				
Production	1,281	1,272	1,442	1,408
Deliveries	1,420	1,356	1,486	1,443
Stocks	2,152	2,083	2,148	2,145
Unfulfilled orders	3,851	3,877	4,690	4,477
Weaving (average per loom in pieces of 100 metres):				
Production	3,71	3,60	4,28	4,26
Deliveries	4,51	3,61	4,36	4,44
Stocks	10,05	9,83	9,89	8,32
Unfulfilled orders	11,72	12,09	14,91	16,96

The figure of bankruptcies in July was 1,100, compared with 890 in June and 854 in May. Bankruptcies and judicial liquidations together were 1,460 in July, compared with 1,252 in June and 1,216 in May.

PARIS, August 14.

GERMANY

THE REICH DEBT CONTROVERSY

SINCE the question of the increase in Reich indebtedness was opened in the Bureau of Statistics' report summarised last week, the Press has taken the matter up, and, without settling the major question, has thrown some sidelights on the borrowing process. Many Germans began some time ago to compile their own figures of the real debt, and

as time went on they increased their figures. They are still increasing them. The German journals which now discuss the matter mostly put the "probable" or "approximate" increase of debt since the beginning of 1933 at Rm. 5,000-5,500 millions. But they present these figures as their own conclusions based only in part on obscure official data; and none of them pretends that the official monthly return is correct. The latest total in this official return is Rm. 13,022 millions (against Rm. 11,838 millions on January 31, 1932). The *Frankfurter Zeitung* now puts the total Reich debt at some 18,000 millions. The main cause of the disparity—which is insignificant compared with that revealed by market estimates—is the exclusion from the official return of all debt classed as "advance financing." The official view that this does not constitute debt because it will be repaid out of revenue some day would justify the denial that there is any debt at all! In accord with this view the official total does not include the tax credit certificates, though there is an exact official return of the circulation of these; and does not include the work creation bill debts or the rearmament bill debts, which the Bureau of Statistics says have accumulated of late. Yet the official return professes to include all "short-term" debts, and even includes a small sum of Reich bills proper.

It is very likely that owing to the "insertion" of various institutions as "bearers" (*Träger*) of work creation and rearmament, the Reich itself could not furnish a precise debt return; indeed, the latest quarterly *Wirtschaftskurve*, compiled before the Bureau of Statistics' report but issued some days later, says that, owing to the fact that the "inserted" financial institutions publish no reports, "an exact estimate of the advance liabilities of future Budget years is not possible." These "advance liabilities" constitute the "new debt" under discussion. It is officially assumed that, of these liabilities, not only the tax credit certificates but also the debts for work creation and rearmament will be repaid out of increased revenue in the future. The 1932 plan, under which the tax credit certificates were first launched, was to repay them within five years. A recent Finance Ministry statement says that the expected increase in the tax revenue up to 1940 will be absorbed in repayment. The institutions, other than public and semi-public banks, which have been "inserted" or "interposed" in the borrowing process are mostly limited liability companies (*Gesellschaften m.b.H.*), not share companies (*Aktiengesellschaften*), which is the general form for large German financial and industrial undertakings. Judged by their titles, some of these limited companies ought really to have little or nothing to do with finance. There is a special Company for Public Works; and in addition there is the German Building and Land Bank and also the Rentenbank Kreditanstalt, which arose in July, 1925, out of the original Rentenbank, which was created for currency purposes.

The *Frankfurter Zeitung*, which estimates the circulation of "special bills" for work creation and rearmament at about Rm. 5,000 millions, says that the financing and holding of these bills is "far less a riddle than foreign utterances imply." This statement is true if the total is really only some Rm. 5,000 millions. The Reichsbank in its last annual report laid emphasis on its part in carrying the bills. It seems that at the end of 1934, when the total circulation of these bills was declared to be only Rm. 3,000 millions, the Reichsbank held Rm. 2,500 millions. Owing to the expedient of issuing promissory notes which was begun in May, the Gold-Discount Bank is now a substantial holder; in May and June, with the cash obtained by selling these notes, it was able to take over Rm. 600 millions of "special bills." The *Konversionskasse* for German foreign debts (untransferred service) and the German Clearing *Kasse* have also been brought into the financing scheme, but only as bill holders. The former had until recently large deposits in the Reichsbank, which have been much reduced. The present total holding of "special bills" by the Reichsbank and its dependent banks is unofficially put at Rm. 3,500-4,000 millions.

PRICES STILL RISING

The wholesale-price index-number for August 7th is 102.4 (1928 = 100), as against 102.2 on July 31st. The prices of animal products, non-ferrous metals, and artifi-

cial fertilisers rose considerably. The rise in retail prices of certain foodstuffs continues, and there are local shortages in supply. The condition of non-cereal crops, other than sugar-beet, deteriorated in July, but is better than a year ago. The second official estimate of cereals yields is lower than that made before harvesting, but is (except for oats), higher than last year's yield figures.

FOREIGN TRADE AND INDUSTRIAL ACTIVITY MAINTAINED

The half-yearly foreign trade return shows a continued tendency towards equalisation of trading accounts with individual countries and Continents. Imports from overseas declined by 23.8 per cent., as compared with the first half of 1934; while imports from Europe increased by 7.7 per cent. In the second quarter of this year, however, the decline in imports from overseas slackened. The unsatisfactory German fodder crop of 1934 has increased imports from Russia, Denmark, and some other European countries; and there was also a large increase in iron-ore imports. Imports from Great Britain increased; but from the United States they declined by Rm. 135 millions. With Brazil, Argentina and Chile, Germany had very large passive balances, but the passive balance in trade with the United States fell to Rm. 31 millions. Exports were 6 per cent. lower than in the first half of last year; exports to Europe declined by 11.6 per cent., but those to overseas increased by 13.2 per cent. The trade accounts with Russia show Rm. 102 millions of imports and only Rm. 16 millions exports. Germany's passive trade balance with all overseas countries was Rm. 308 millions, against Rm. 636 millions in the first half of 1934. It is significant that the active balance with Europe has now declined to Rm. 147 millions, from Rm. 425 millions in the first half of last year.

The number of unemployed at the end of July was 1,754,000, having fallen during the month by 122,000. The decline in July, 1934, was 55,000. The journal of the Reich Chamber of Economy, discussing the alleged foreign exaggeration of the number of German unemployed, calculates that even if there are still 2,600,000 of statistically "invisible" unemployed, there were 3,500,000 of them in January, 1933. If one includes these, the total number in 1932 must have been 9½ millions! So that even if there are now 2,600,000 "invisible unemployed," a decline of five millions in the 2½ years could be claimed.

The July monthly reports for the heavy industries and for shipbuilding are favourable. In the cotton industry, conditions were irregular, and in West Germany spinning employees were discharged. Iron-ore imports in the first half of this year were 7 million tons, against 3,622,000 tons in the first half of 1934. The official organ of the Verein Deutscher Eisenhuetten comments favourably on the International Steel Cartel agreements, but says that price-advances, so far confined to medium and thick sheets and universal steel, may be expected in the next few months. Exports of paper and paper goods in the first half-year were 171,000 tons, against 145,000 tons in the first half of 1934; imports were 7,500 tons, against 10,600 tons. Exports of optical-glass articles have increased considerably, and imports declined. Little progress has been made in selling to Russia under the agreement concluded in April. Under this agreement Russia was to order German goods on current trade account up to Rm. 60 millions this year, and to order a supplementary Rm. 200 millions before April, 1936, to be financed by German bank credit. The Russian negotiators, it is stated, insist on paying world-market prices, which contention the Germans reject in principle, with the further objection that there are no world-market prices for certain articles, such as machines.

AUSTRIA

INTEREST RATES FALLING

THE present rate of interest on deposits withdrawable at once, namely, 2½ per cent., is the lowest for decades. Even in the quiet pre-war days it was nearly always higher. This record low deposit rate reflects the easy tone on the money market. At the same time, it would be rash to anticipate a similar development on the capital market.

The reduction of Bank rate, apart from the automatic effect of cheapening credit, was not intended to test whether depositors were prepared to accept a lower rate. The idea was, by increasing the gap between the return on bonds and that on deposits, to attract the latter into the market for fixed-interest securities. This effect has not eventuated. The security market remains stagnant, due to some extent to the general midsummer lull. But security quotations have not risen. The movement on the bond market is represented by the following index figures:—

	1935	May	June	July
State and provincial loans	101.3	100.9	101.0	101.0
Mortgage bonds	103.9	103.7	104.2	104.2
Municipal and other bonds	103.0	102.9	103.0	103.0

During the past year the circulation of mortgage bonds and communal bonds has sunk by 15 millions to 560 million schillings, a fact which tempers the satisfaction felt at the marked improvement of quotations for these bonds during the period. The shortage of credits available for Austrian agriculture is caused chiefly by the extensive protective measures taken for the benefit of the farming class, which have made the public shy of such investments.

CEREAL OUTPUT EXPANDING

In all other directions, however, the policy of protection for agriculture has been successful. Now the harvest season is here the improvement in Austrian grain production is worth noting. It is not even necessary to make comparisons with conditions immediately after the war. Since the year 1930 the area under wheat has expanded from 205,000 hectares to 225,000; and under rye from 375,000 to 390,000. Even on the basis of the poor results of last year and this year, the increase in the harvest is estimated at 10 per cent. This increase follows on a rise in prices. The average price for wheat has gone up since 1930 from about 24 to nearly 37 schillings per 100 kilograms, while in rye there has been a rise during the same period from 20 to 26 and in brewing barley from 28.50 to 32 schillings. Thus, grain suppliers have considerably increased their incomes; moreover, during the same period the prices of industrial articles required by farmers have fallen. It should also be noted that the cereal growers have been afforded extensive facilities in selling their produce through the development of the agrarian co-operative system. The situation in other branches of farming is much less favourable. Cattle raising, dairy farming and lumbering are doing poorly; while the mountain peasantry especially are having a thin time.

A NEW PAPER TRUST

There is animated public discussion of the price policy of the recently concluded Paper Trust. The Austrian paper mills had got into low water through the acute competition of recent years, from which, as they explained to the Government and to the public, there was no way out except through a cartel. To-day, however, a complete change has occurred in public opinion; for immediately it had come into being the Paper Trust ordered a price increase of such dimensions as had never been known before in Austria, even in the time of the post-war inflation. On one day the prices of most sorts of paper were raised by 50 to 60 per cent. The monthly output of paper this year has fluctuated about 1,700 wagons—i.e. somewhat higher than in the three pre-ceding years, not up to the output in the boom years, but about 20 per cent. higher than in 1924. Exports, too, have been maintained in recent years. This procedure is of special significance in Austria. In the past few months there has been a definite movement in favour of cartels, and the Government itself presided at some of the discussions. A delegate of the Ministry of Commerce has now been approached to inaugurate a cartel of cotton weavers. It is highly probable, however, that the price policy of the Paper Trust will create general distrust of cartels.

VIENNA, August 6.

FINLAND

NATIONAL FINANCES STILL IMPROVING

THE current revenue of the State from January to May was about the same amount as last year. As current expenditure was also approximately the same, and as the finance accounts for 1934 showed a considerable surplus, the State finances present an encouraging aspect this year.

During the last few months the composition of the National Debt has undergone certain alterations as a result of the conversions begun in 1934. Several bond loans have been converted to lower rates of interest, and some foreign loans have been redeemed by internal loans. These changes will be found in the following table:—

	Dec. 31, 1933	Dec. 31, 1934	June 30, 1935
Funded debt—	Mill. mks.	Mill. mks.	Mill. mks.
Foreign	2,384.0	2,282.6	1,880.8
Internal	716.0	990.7	1,181.4
Floating debt—			
Foreign	358.9	59.0	59.0
Internal	48.8	49.5	172.8
	3,507.7	3,381.8	3,294.0

As the redemptions agreed upon have been regularly carried out and many bonds have been repatriated, the National Debt has decreased and, in particular, the service payments to foreign countries have been reduced.

Finland's short-term foreign debt increased during the first half of this year by close on 70 million marks to about 1,505 millions. Concurrently, foreign short-term balances in Finland decreased by about 330 million marks to about 2,125 millions. The balance of short-term indebtedness thus deteriorated by approximately 400 million marks, though at the end of June Finland had a short-term net credit balance of about 560 million marks. This movement, which seems to conflict with the general improvement, is due partly to seasonal fluctuations in international payments and partly to the redemption of the country's long-term foreign indebtedness to the extent of about 200 million marks, as well as to other fortuitous circumstances.

THE IMPORT SURPLUS RE-EMERGES

In the first half-year imports increased considerably, but the rise in exports was small.

(In million marks)

First half-years—	Imports	Exports	Surplus Export (+) Import (—)
1932	1,354.3	1,910.3	+ 556.0
1933	1,650.4	1,945.0	+ 294.6
1934	2,187.0	2,367.7	+ 180.7
1935	2,403.2	2,374.7	— 28.5

In volume imports increased by 9 per cent. in comparison with the corresponding period last year and were 98 per cent. larger than in 1932, when they were at their lowest. The increase in the volume of exports was only 2 per cent. over last year, and it exceeded the 1932 figure by 2 per cent. The trade balance, which had always been adverse degree positive in 1932-34, again recorded a small import surplus this year. The large jump in imports was principally accounted for by machinery, metals, vehicles and transport equipment, and in raw materials for home industry.

The money market was extraordinarily easy in June and July, as it was last year and at the beginning of the current year. Deposits in the joint-stock banks exceeded earning assets to a greater extent than ever before, so that "cash" stood at a record level.

HELSINKI, July 24.

CHILE

FOREIGN AND HOME TRADE IMPROVING

WHILE internal economic conditions are steadily improving, the recovery in export trade shows signs of slowing down. Unless there should be increased demand and better prices for Chilean export products, notably copper, the recent upward movement in exports is unlikely to continue.

The foreign trade returns for the first five months of the

present year, together with the figures for the corresponding period of 1934, are as follows:—

	(In gold pesos of 6d.; and including coin and specie)	January-May, 1934	January-May, 1935
Exports		212,890,100*	234,338,500†
Imports		72,726,300	118,157,000
Export surplus		140,163,800	116,181,500

* Revised figure.

† Provisional figure.

While imports rose by 45,430,700 pesos, exports were only 21,448,400 pesos higher in 1935 than in 1934. It is probable that when the export figures for 1935 have been revised, the increase in exports over the previous year will disappear. The higher export figure for 1935 is accounted for by mining products (chiefly copper, as a result of the world's armaments needs), which rose from 73,111,000 pesos to 106,089,000 pesos, and also by fertilisers and iodine, which increased from 72,609,400 pesos to 75,740,400 pesos. Exports of wool and other textiles declined in value from 29,736,700 pesos to 14,875,200 pesos.

The sharp rise in imports is explained mainly by the fact that Chile is now purchasing abroad the machinery and other material so necessary for the efficiency of her industries and railways, with which she was obliged to dispense during the worst years of the crisis. The chief changes in the value of imports during the first five months of each year are as follows:—

	(In gold pesos of 6d.)	1934	1935	Increase
Coin and specie		32,800	8,581,500	8,548,700
Machinery and material for railways and tramways		466,100	4,609,200	4,143,100
Vehicles (unspecified) and spare parts		2,643,200	4,973,900	2,330,700
Industrial machinery		7,151,600	12,953,200	5,801,600
Iron and steel goods		6,877,200	14,033,100	7,155,900
Textiles		15,726,600	24,139,900	8,413,300

The increased imports of bullion and coin are notable. Judging by present trends there is little likelihood that Chile's active visible trade balance in the current year will be as favourable as in 1934. It is interesting, however, to note that the prospects for Great Britain's share of Chilean imports are brighter than for some time past. The following figures show the percentage of imports from the four countries which supply most of Chile's needs:—

Imports from—	Average 1928-30	1932	1933	1934
	Per cent.	Per cent.	Per cent.	Per cent.
United States	32.2	23.1	22.0	28.7
Great Britain	16.9	12.9	12.1	23.2
Germany	15.5	14.8	11.4	10.2
Peru	4.9	13.0	14.2	8.8

The indices of domestic trade are almost entirely favourable. The wild movements of prices and currency statistics which were characteristic of Chilean economy until a year or so ago have now disappeared. In the second week of last May the currency in circulation amounted to 936.6 million pesos, against 932.6 millions a year before. The wholesale price index was practically unchanged at 339.3 (1913 = 100) in May, 1935, compared with 343.1 in May, 1934. The cost of living in Santiago shows the same stability, being 40.2 per cent. higher in May last than in March, 1928; and in May, 1934, it was 39.3 per cent. higher than in March, 1928.

REVENUE RISING FAST

The position of the Government finances is now exemplary. For the first five months of the year ordinary revenue amounted to 474.5 million pesos, compared with 344.4 millions in the same period of 1934; while ordinary expenditure only rose from 335.5 million pesos to 381.9 millions. The increase in business activity is shown by the movements at the clearing houses of Santiago and Valparaíso, which amounted to 1,332 million pesos in May, 1935, compared with 1,102 millions three months earlier, and 1,030 million pesos in May, 1934. Both deposits and loans at the commercial banks and the National Savings Bank together have risen steadily during the last twelve months. Deposits rose from 1,892 million pesos in May, 1934, to 2,181 millions in the same month of the current year; and loans from 1,635 million pesos to 1,859 millions.

Industrial production is still on the upgrade. Last May it was 39.4 per cent. above the average of the three pre-depression years (1927-29), whereas in February it was 37.5 per cent. higher, and in May, 1934, only 18.4 per cent. On the same index basis, industrial sales show a similar increase, being 121.4 in May, 1934, and 140.3 and 139.8 respectively in February and May of this year.

For the first five months of 1935 Chilean gold production amounted to 3,228 kilograms, against 2,717 kilograms in the same period of 1934. Gold obtained from mines and alluvial washings fell off considerably, but this was more than offset by increased quantities found in other minerals.

Unemployment is still declining. In May the total of those registered as seeking work was 12,209, of whom 7,926 were labourers and the rest black-coat workers and domestic servants. The corresponding figures were 14,431 and 9,510 three months earlier and 29,015 and 20,040 in May, 1934.

SANTIAGO DE CHILE, July 29.

CANADA

TRADE WAR WITH JAPAN

THE controversy between Canada and Japan about their trade relations came to a head about July 20th. Definite word arrived from Tokyo that the Japanese Government had actually carried out its threat to penalise Canada for what it claimed to be unfair discrimination of Canada's exchange-dumping duty against Japanese goods, and had clapped on a 50 per cent. surtax against ten of Canada's chief exports to Japan. One significant feature of the surtax is that nickel, copper and other metals are excluded from its scope; but it will apply to lumber, pulp, packing paper, flour, starch, and minor items. The Canadian Government contended that the exchange-dumping duty involved no special discrimination against Japan. They intimated their willingness to take cognisance of Japan's claim that, since the dumping duty was first imposed, the yen had appreciated in value and its increase had raised the costs of production in Japan. Accordingly they offered to modify the dumping duty. But the Japanese Government held out obdurately for the complete abolition of the duty, and would not accept the Canadian argument that this would involve discrimination against other countries, including Britain. Now by way of reprisal for the Japanese surtax the Bennett Ministry has by Order-in-Council imposed a general surtax of 33½ per cent. on all imports from Japan, to become operative on August 5th, so that goods in transit can escape it.

Canada stands to lose more by the trade war than Japan, since in the fiscal year 1934-35 she sold to Japan goods valued at \$16,935,869, of which about three-quarters will be affected by the Japanese surtax. British Columbia will be particularly hard hit by it as it will be tantamount to an embargo upon exports of lumber and pulp; and exporters of these commodities state that for the first time in years they have not a single order from Japan on their books. In the same fiscal year Canada bought direct from Japan goods valued at only \$4,424,654, but she imported indirectly another \$4 millions' worth through the United States; and as the surtax can hardly be applied to them, there is here a loophole which the Japanese might use partially to frustrate Canadian retaliation. It is announced that, although commercial hostilities have begun, negotiations for a settlement are to continue.

FOREIGN EXCHANGE FUND

The Government has now created its Foreign Exchange Fund, which apparently amounts at present to \$63 millions, but apparently it has not yet begun to use it, and is credited with having invested \$40 millions of it in 3 per cent. Dominion Bonds bought from the Bank of Canada, \$15 millions more in short-term Treasury bills, and with keeping about \$8 millions on deposit in the Bank of Canada.

Now the prairie provinces, during the most critical period, are being visited by an extremely severe heat wave with temperatures as high as 100 degrees. But as in most places the reserves of moisture were satisfactory, the hot weather has proved beneficial in hastening maturity and,

if it is not prolonged unduly, should do no damage. In Manitoba and Saskatchewan considerable damage has been done by red-stem wheat-rust, a plague which develops under conditions of high humidity and rank growth. The infection is worse and more widespread than it has been for years. On the other hand the wet weather has checked the grasshopper plague, which is causing some damage in Saskatchewan. The grain crop is still very late, and harvesting on the earliest fields will not begin for three weeks. The western hay crop is good and pastures are excellent. In Eastern Canada, thanks to abundant moisture, the crops are uniformly good, but severe hailstorms have caused heavy losses in various localities. Throughout practically the whole Dominion there has been an abnormally large crop of small fruits and the later fruit crops are also very promising. The Government has not yet appointed the new Grain Board or fixed the minimum price for the wheat crop of 1935. Mr Reid, the Premier of Alberta, and other agrarian spokesmen are demanding a minimum price of 80 cents per bushel, on the ground that this figure is required to give the farmer a reasonable return; but the *Financial Post* thinks this figure is at least ten cents per bushel too high and might involve the Treasury in a loss of between \$75 and \$100 millions in the coming crop year.

BUSINESS SEASONALLY SLACK

Business is experiencing its usual midsummer torpor, and trade in the cities is suffering from the absence of many residents on holiday. The Bureau's general economic index for the week ending July 13th was virtually stationary as compared with the previous week, the figure being 98.6 (as against 98.5). The only serious change in the component factors was in the item of bank clearings, for which the index figure was 82.0, as compared with 87.2 a week before. There has, however, been a further improvement in the unemployment situation, due largely to an increased demand for farm labour, and the Bureau's employment index at the beginning of July stood at 99.5, as compared with 97.6 for June 1 and 101.0 and 84.5 for July 1, 1934, and July 1, 1933, respectively. Conditions generally are now estimated about 40 per cent. better than at the low point of the depression, and if the upward trend has been less pronounced in the first part of 1935 than it was in the same period of 1934, there has been a considerable gain. In the first six months of 1935 the production of sugar has jumped nearly 22 per cent., of footwear 18 per cent. and of pig iron 65 per cent.; but on the other hand the output of steel fell, the production of flour dropped 6 per cent., and imports of cotton, wool and rubber showed a substantial decline, which presaged curtailment of the activity of these industries.

Foreign trade returns for June were not so satisfactory. The value of exports was only \$51,893,189, compared with a value of \$58,045,528 in June, 1934; but the value of imports was slightly larger, being \$46,738,689, compared with \$46,185,892. The unemployed are continuing to cause a good deal of trouble through dissatisfaction with relief measures and particularly with the management of relief camps; and plans had been concocted for a converging march on Ottawa to lay grievances before the Government. But they have largely petered out and only small contingents of marchers reached the capital. Premier Hepburn of Ontario has announced that all single unemployed men in Ontario are to be struck off the relief rolls as ample farm work is available, and that married men who will not take farm work offered them will share the same fate. Business generally is expected to remain dull until the General Election is over.

OTTAWA, August 3.

SOUTH AFRICA

PROGRESS IN JOHANNESBURG

OWING to the absence of Ministers in July, such business as requires their authority has to wait. Thus we have had no definite move in regard to the Departmental inquiry into mining taxation, though the Government are, unofficially, almost bound to give some indication of their

proposals before the mining companies decide on their December dividends.

A considerable amount of interest has been aroused locally by the purchase by a London company of seven substantial blocks of modern flats in Johannesburg, at a total price of £559,000. During the last few years there has been a very great increase in the construction of this class of property, both in town, where the blocks of flats have shops on the street level, and also in the nearer residential suburbs. At present, investments in property of this description are highly profitable, some of the new buildings having been fully let when still only concrete skeletons, and actually occupied weeks before their final completion. The present rate of growth of Johannesburg and the Reef is very great and shows no sign of slackening—the population of the Witwatersrand is about 800,000 now—within measurable distance of the million on which hopes have been centred for years. The Exhibition to be held next year, to celebrate the fiftieth anniversary of the foundation of the town, will probably give further impetus to the growth of the district. The gross loan debt of the City of Johannesburg is £8.7 millions, and it is considered likely that the city will before long wish to raise fresh loans to an ultimate total of some £4 millions.

GOLD VERSUS FARMING

At the annual meeting of the South African Reserve Bank, the Deputy-Governor, after referring to the fact that the reserve fund is now £1,000,000 and equal to the capital, pointed out that the gold holdings of the bank, at current value, are almost equal to its liabilities to the public. At standard value the ratio is now nearly 60 per cent. The Governor referred to the fact that, under the Currency and Exchanges Act of 1933, all gold acquired by the bank since the beginning of 1933 is held for the account and at the risk of the Union Government. Under Section 8 of that Act, the Government guaranteed the bank against any loss, and appropriated any profit, resulting from dealings in gold undertaken to maintain parity with sterling. This guarantee, which was viewed with misgiving by certain political critics in 1933, seems likely to have satisfactory results from the Government point of view. The bank's current holding of gold exceeds that of January, 1933, by about £20 millions at standard value, and this quantity has been acquired on an almost continually rising market.

The local maize growers are still concerned with ways and means of obtaining more for their grain than its world price. Maize, therefore, like other local products, is exported at a loss in order to sustain the price in the home market; the Mealie Export-Quota Percentage for the year ended May 31, 1936, has just been fixed at 50. Although farmers themselves still appear to believe in this and comparable financial expedients as ordinary procedure and not as temporary measures, there are signs that official circles should begin to succour themselves. At a recent conference of farmers from the Transvaal and Orange Free State one delegate—whose name, unlike others, was not recorded—said that constant loans and subsidies were having a bad psychological effect on the farmer, and led to his getting into serious disrepute with other sections of the community. Now that this view is at last receiving recognition, we may see an improvement in the general efficiency of an industry which is the direct support of about a third of the European population of the Union. The impression that rural faith in farming in this country has perhaps been misplaced is also gaining ground—General Smuts being the most important but by no means the only speaker who has lately enlarged on the subject. It is becoming more widely appreciated that even the prosperous farmers depend on the town markets, particularly those of the Transvaal.

Prosperity throughout the country is being more than maintained, although there has been some natural slackening in the rate of development. Careful critics are constrained to urge that far-sighted use should be made of the profits of the present boom period. As is usual in comparatively young countries, the tendency is for the authorities and the public to act as though momentary advantages were bound to prove permanent.

JOHANNESBURG, July 23.

BOOKS AND PUBLICATIONS

IMPERIAL IMPLICATIONS

MR. LEONARD BARNES' latest volume* extends his studies of imperialism from Africa to the Empire at large. The book is in four sections. In the first we are presented with a searching criticism of the ethic lying behind our administration of so many and distant parts of the earth's surface. The remainder of the book consists of a series of expositions and illustrations of the central theme, that if any good is to come of the Imperial venture, careless opportunism must be replaced by constructive and co-ordinated effort based on an exact study of human behaviour. This section is inevitably far more discursive and less complete in itself. The second half of the volume is devoted to an analysis of the economic basis of empire and to suggestions, mainly of an economic order, for reform. Thus, the effects of exports of capital to Empire countries is investigated with a view to estimating the net social advantage, if any, involved. Adopting the thesis elaborated by Mr C. K. Hobson in his "Export of Capital," it is argued that from the point of view of the British working classes the financing of the Empire is entirely injurious. The withdrawal of capital, by raising the rate of interest and diminishing the productivity of labour, readjusts the division of the national income to the disadvantage of labour. This, it is realised, may not cause a fall in wages if output has been increasing; but the best that the labouring classes can hope for is a declining share of an increasing total. It is suggested that even this may be a myth conjured up by economists, for it is considered unlikely that the interest received on overseas capital investments is ordinarily sufficient to compensate for the loss in productivity at home. Mr Barnes notes, too, that borrowing countries appear inevitably to progress to the point of being unable to pay one loan without importing fresh capital, a process that can bring little benefit to the working classes of creditor countries.

This case, however, can be met by another, which:—

- (1) Takes account of the fact that every capital export from England is necessarily a capital import into the borrowing Empire country where, if the logic of the first case is correct, the productivity of the working classes and their share in the total product must both be increased;
- (2) Assumes, what is not unreasonable, that capitalists invest abroad because of the greater opportunities of gain, thereby adding more to the national income than would investment at home;
- (3) Recognises that capitalists deprived of opportunity for foreign investment do not necessarily invest in domestic enterprises immediately;
- (4) Points to the stimulating effects of foreign loans on exports from the lending country.

Many of Mr Barnes' criticisms have a much greater validity when applied to the Colonial Empire than they have in the Dominions. That the Colonies do not inevitably yield large and certain fortunes to the daring Empire builder is now generally recognised; but if returns to enterprise are not always high, wages are universally low, and it would be difficult to convince an African native that imports of capital work equitably all round. Does this exploitation of colonial resources bring benefit to the British working class? There is reason to believe that it does. The Colonial Empire, as Mr Barnes shows, is no longer presenting an open door to the rest of the world; it is a closed preserve of British industry. Low raw material prices, therefore, will act as a subsidy to British employment, low food prices as a subsidy to wages, and the preference-tied Colonial markets as a stimulus to the export industries.

Mr. Barnes has plans of a broad, social nature to develop the Empire. He wants to even-up wages rates in the Dominions, to co-ordinate and speed up development in the Colonies, and to give the Empire's depressed classes a fair deal. To that end he demands understanding, sympathy, information and research. He sketches out plans for freer trade and a Colonial Investment Board. It is unfortunate

* "The Duty of Empire." Gollancz. pp. 318. 10s. 6d.

that this last cannot be constituted at once, even if it did not function until after Mr Barnes' "revolution." It would be well occupied thinking out the implications of its existence. What would be its attitude to investment in the Empire by foreigners? Could it limit itself to investment control, or must it be empowered to regulate the migration of labour? Should Dominion countries receive loans purely on their financial merits, or ought they not to be asked to relax the shackles on commodity movements as a condition of the removal of the restraint upon overseas lending?

Economists have flinched from the dust on Empire economics; and it is refreshing to meet a Socialist who does not shy at the word "Empire," but settles down in dispassionate mood to explore the possibilities of social and economic progress in the Empire.

SHORTER NOTICE

"Vegetable Marketing in England and Wales." Ministry of Agriculture. Economic Series. Number 25. His Majesty's Stationery Office. 1s. net.

The Ministry of Agriculture's Orange Books on marketing have a high reputation for accuracy and comprehensiveness, and we therefore welcome this newcomer to the series. The avowed object of this Report is "to provide a general picture of present-day marketing conditions in respect of some 40 different kinds of vegetables produced commercially in this country for human consumption." It contains an exhaustive survey of sources of supply and of marketing in all its aspects and is, indeed, an extremely valuable reference book on the subject with which it deals. At each stage an effort is made to compare British conditions and practices with those which obtain abroad. In many cases the comparison is by no means flattering to the British producer and it becomes increasingly evident that he has a long way to go before he can claim to be as efficient as many of his foreign competitors.

The Report therefore indicates various directions in which there appears to be scope for the adoption of improved methods. Five main objectives are put forward, particular emphasis being placed on the first and last of these; improvement in the quality of the produce offered and in the method of presentation; the stimulation of demand by suitable advertising; the reduction of the risks and therefore of the costs of the marketing process—by standardisation, improved market intelligence, bulking of supplies, and withholding low-grade produce from the market; the closer adjustment of supply to demand over the relatively long period; the adoption of uniform trade practices and the introduction of some form of registration of salesmen and dealers. It is concluded that the attainment of these objectives—among which might have been included the provision of adequate statistics—will necessitate some form of organisation on a national basis. There follows the cryptic statement that such an organisation "would almost necessarily involve the exercise of powers derived either from the Agricultural Marketing Acts, or from other legislation designed for the purpose." In its efforts to promote the better marketing of vegetables—by the National Mark scheme and in various other ways—and to improve the quality and variety of the produce offered to the public the Ministry is deserving of every encouragement. But are we to assume that it is looking forward to the establishment of yet another "marketing scheme," to organise scarcity for the benefit of sectional interests? We sincerely hope not.

MONEY AND BANKING

THE STATE AND THE BANK—II

LAST week we discussed, in broad terms, the relations between the Government, the Bank of England and the City, and emphasised the need for giving greater publicity to the Bank's actions. This week we propose to examine further the relationship between the Government and the Bank in the light of the changed situation created by our departure from the gold standard and the new problems that have arisen in regard to the control of currency and the capital market. This discussion will raise the issue of the constitution of the Bank and what changes, if any, are required. The financial institutions of the City of London may be envisaged as a large and complex piece of machinery which plays an essential part in the nation's economic life. The ultimate controller of that piece of machinery must inevitably be the Government as representing the nation; and where broad questions of financial and monetary policy are concerned the Government alone should decide how and whether that machine should be driven. The Bank is the operator in charge, whose duty it is to drive the machine and to keep it lubricated and in repair. In all these technical matters the Government should give great heed to the Bank's advice, especially if the Bank says that the machine is being overloaded or used for a purpose for which it is not designed.

It must be admitted at once that it was far easier both to direct and to operate the machine in the days of the pre-war gold standard than either during the gold standard of 1925-31 or during the past four years. In the old days the main test was whether we were gaining or losing gold, and gold losses could be corrected without imposing an intolerable strain upon the whole country. During 1925-31 the machine could only be operated in an overloaded and strained condition, which ended in its breakdown, while since 1931 it has been a different machine of vastly greater complexity.

There are various important ways in which it has become more complex. First and foremost, we are off gold, so that we neither gain nor lose gold automatically, nor do gold movements possess their former significance. Instead the Bank has to operate the Exchange Equalisation Account, which is a new addition to the machine, demanding a new technique which is having to be learned by experience. Moreover, a whole new set of political-economic questions have arisen to affect the daily routine work of the Government and the Bank. In addition to the work needed to keep the pound in its appropriate relation with the dollar, the gold *bloc* currencies, and those of the sterling area, new problems in the technique of making international payments have been created by tariffs, commercial treaties, international trade and exchange restrictions, exchange clearings and foreign trade generally. At home there are the new questions of maintaining or raising the wholesale price-level; of balancing wages, costs and retail prices; of chronic unemployment, the special areas and public works, including housing, and finally such matters as debt conversion, Budget policy and many new aspects of public finance. In many of these matters the Bank is involved, both as the operator of our financial machine and also in its relations with other central banks, including the new Dominion central banks, and with the Bank for International Settlements. The Bank of England's overseas relations, in fact, have provided it with an entirely new field of work, in which care is needed to prevent purely monetary operations from conflicting with the objectives of Government commercial policy in relation to the Empire and to foreign countries.

The net result is that the Government, through the Treasury, has been brought into far closer contact with the City than it was in former and simpler years. The centre of gravity has, in fact, tended to shift away from Threadneedle Street towards Whitehall, and the Government has to concern itself more with details of operation as well as with those of broad policy. In other words, the powers and routine duties of the Treasury have expanded since 1931 at

the expense of those of the Bank. Nevertheless, the Bank is still the Government's agent and technical adviser, and has to keep even closer contact with the Government to-day than in the past.

We are not here concerned with the school of political thought which will be satisfied with nothing short of complete nationalisation. These views are commonly based on a misconception of the Bank's present position and of the rôle which it can and does in fact play. But leaving theory and dogma aside, the course of events has created conditions which justify a reconsideration of the constitution of the Bank of England. In theory, the Bank is a private institution, charged with certain duties, both statutory and unwritten, but controlled by its shareholders, who in theory elect the Governor, Deputy-Governor and Court of Directors, and are also ultimately responsible for the appointment and retirement of the Bank's staff. In practice, certain changes have taken place during recent years. The Governor is no longer elected for only two years, for the present Governor has held office since 1920. The present Deputy-Governor has risen from the staff of the Bank, thereby carrying into effect Bagehot's suggestion that the Deputy-Governor should correspond to the permanent head of a Government department. The directors of the Bank no longer represent exclusively "City" interests, and two of the directors are now full-time and fully-paid employees of the Bank. The Governor has also recruited a personal staff of technical advisers, and of these two have come to the Bank from the Treasury. Finally, it is inconceivable that the Governor could continue to hold office in opposition to the wishes of the Government of the day or that a new Governor could be elected without the *de facto* approval of the Cabinet.

The main need, therefore, is for a codification of what has already become accepted practice. The exact legal ownership of the Bank's capital is comparatively unimportant. The Bank has long ceased to make its profits a major consideration, and the profits arising from the note issue already accrue by statute to the Exchequer. A legal limitation of the Bank's profits at approximately their present level would please public opinion and would involve little real change. There is little to be gained or lost by transferring to the State the ownership of the Bank's capital, which may reasonably be left as it stands at present. It is of greater importance to make it clear that the Governor, not the Court, is in control of policy—as he really is to-day—and that the Government has the final word in his appointment, as in the case of any other important public servant. Thus, in future, the election of the Governor—and possibly the Deputy-Governor—should be made subject to the approval of the Cabinet.

It is equally important to give the Governor security of tenure and full protection from political pressure, for at times it is almost certain that the carrying out of his duties may compel him to take unpopular action and he may often find himself in the position of having to give the Government unpalatable advice. Hence, once he has been elected, he should hold office for a statutory period of some length, such as seven or ten years. During his term of office he should be as secure and as immune from criticism as a judge, and should only be removed from office on the deliberate decision of both the Bank Court and the Government or by a motion in both Houses of Parliament. This would protect him from any passing and unjustifiable wave of unpopularity.

There remain the two problems of keeping step between Government policy and Bank policy and, secondly, of keeping the latter in close touch with the needs of the country—a matter of increasing importance if the trend towards economic nationalism continues, to the detriment of our international trade and commerce.

The first problem requires that the Government should co-ordinate the various activities of its own component parts; and the solution of the matter we are discussing

depends therefore to some extent upon any future reforms at Whitehall, for if the Government decides to set up an Economic General Staff or some other co-ordinating body some liaison machinery will have to be devised between that body and the Bank of England. In the meantime the functions of the Treasury Committee at the Bank are obviously of growing importance. As to the second matter, it has been suggested that a special Advisory Committee to the Governor should be appointed, consisting of representatives of industry, commerce, labour, commercial banking and economic science. This suggestion, which is paralleled in the structure of economic organisations in many countries of the world, is an alternative to the proposal that the Court of the Bank should itself be "representative." As against the mixed Court idea, the Advisory Council has many advantages. It is, for example, fairly obvious that the directors of the Bank should themselves be experts in finance rather than spokesmen for various national interests. The effective use of an advisory body, the functions of which require careful definition, is an art which depends on personality and tradition. If it could be developed at Threadneedle Street it would go far to remove any lingering sense of distrust and would strengthen the hands of the Bank in pursuing a steady course at times when a fickle public opinion might be calling for unwise or panic action.

It will be appreciated that these recommendations involve little real change. They really imply the overt recognition of changes which started many years ago and are still going on to-day. The main need is to give the country the assurance that the Bank has both the will and the technical ability to make the national interest paramount, and to make this assurance so clear that no one can be ignorant of it or doubt it. The last thing these recommendations imply is a criticism of the Bank in its present stage of evolution. Rather do they call for an acceleration of its growth along its present lines. This is the real safeguard against ill-conceived and revolutionary change, and is the only sure way of developing the Bank in accordance with the national needs of the future and of ensuring that it commands the confidence of the public in carrying out its supremely important functions.

FINANCIAL NOTES

Silver and the Exchanges.—The main event this week has been the threatened collapse of the silver market, due to heavy offerings from the East. On Wednesday and Thursday the fixing was delayed until official American support was forthcoming. On Wednesday the price was finally fixed at 29½ d. an ounce, or a fall of ½ d. on the day, and the American authorities bought over 20 million ounces, while on Thursday the price was fixed at 29 d. per ounce, with further American buying. In one sense the fall in silver may come as a relief, for early in the week the Hong Kong exchange stood at below the export point. This forced on the Hong Kong banks the alternative of losing more silver from their already depleted reserves or tolerating a depreciation of the currency. Unfortunately, the exchange has since fallen in sympathy with the decline in silver, so that as yet no relief has been obtained. Meanwhile the American silver purchases in London have caused the dollar to weaken, and the spot rate has depreciated in London to \$4.98½ and in Paris to Frs. 15.07. The gold *bloc* currencies weakened against sterling to some extent in sympathy with the dollar, but have improved against the dollar. Their forward rates, however, have moved to rather wider discounts. The British Control has been giving support by buying spot francs at Frs. 75½, and using the francs to buy gold in Paris. Paradoxically enough, the London price of gold has fallen low enough to make it profitable to buy gold in London for re-sale in Paris, so that in effect the gold bought by the British Control came in part from London. The chief uncertainties at the moment are the large amounts of silver which may still be hanging over the market and the outlook for the gold *bloc* currencies.

The Money Market.—Most of the Clearing Banks have not been ready buyers of bills this week, and as Treasury bill issues by tender are still running £5 millions a week in excess of maturities, the market had a fair quantity of bills to take up. This created a good demand for loans, and one or two of the banks at times found themselves able to place most of the money at their disposal.

	July 25, 1935	Aug. 2, 1935	Aug. 9, 1935	Aug. 16, 1935
Bank rate.....	2	2	2	2

Three months' bank bills	1	1½-1	1½-1	1½-1

A few banks have bought October Treasury bills at ½ per cent., but there have been no buyers of hot Treasuries, which are a nominal 1½ per cent. There has been a little business in early November Treasury bills at 1½ per cent.

The Bank Return.—Most of the holiday notes have now returned, with the result that the circulation is reduced by £6.3 millions. This has restored the Reserve to £47.8 millions and the Proportion to 34.1 per cent.

Total assets	2,063.0	2,148.5	2,162.9	2,200.7	2,204.8

The main movement is an increase of £29.7 millions in the banks' discounts. Between June and July the average quantity of Treasury bills issued by tender rose from £471.4 to £493.7 millions, or by £22.3 millions. The banks were also buying more freely in July. It is possible, however, that some of the banks have been transferring bonds maturing within a few months from investments to discounts. Investments are reduced by £8.9 millions, and call and short loans and advances show little change. The banks' ratio of cash to deposits has risen from 10.8 to 10.9 per cent.

THE STOCK EXCHANGE

LONDON ELECTRIC TRANSPORT SCHEME

To the average London transport user the issue, last month, of a Government-guaranteed loan of £32 millions (by way of 2½ per cent. Guaranteed Debenture Stock in a company formed to finance an impressive programme of electrification and other works) may have come as the first outward demonstration of the fundamental change effected by the substitution of a London Transport Board for a heterogeneous collection of public and private undertakings. During the two years since the "appointed day" on July 1, 1933, the change in the outward semblance of London's traffic facilities has been indistinguishable to the layman. In fact, the Board has been proceeding with the initial preliminaries to its immense task with a celerity which augurs well for its future efficiency. In the first place, it has been welding something over 160 component undertakings into a single cohesive and ramified system. In the second, without any body of precedent to assist it, the Board has succeeded in concluding a statutory pooling scheme with the suburban lines of the four main railways. The scheme approved on June 18th brings the Board to grips with its main task. It has secured financial backing in the highest quarters, whose support is capable, now and in future, of rendering economic many projects which might not otherwise be feasible in the lifetime of the present generation.

The *raison d'être* of the proposals may be illustrated by reference to the maps on the opposite page, based, by courtesy of *The Railway Gazette*, on those in a recent supplement to that journal. In the interests of simplification, all railway lines not in the ownership of the London Passenger Transport Board and outside the present scheme have been omitted. The picture must be regarded as tentative, for many important details have yet to be worked out, but the main lines of the Board's strategy can be readily perceived. Of all its problems, the improvement of transport facilities in the north-eastern area of Greater London is the most urgent. The electrification of certain "Great Eastern" lines of the London and North Eastern Railway will relieve the heavy pressure of suburban traffic at the Liverpool Street terminus in two ways—by permitting a maximum "rush hour" electrified service, and by enabling cross-London "Tube" trains to run over "Great Eastern" lines.

The second area affected by the new development is served by "Great Northern" suburban lines of the London and North Eastern Railway. Certain northern districts, in which building development has been proceeding rapidly, will be connected with inner London by electrified lines affording connection with the "Tubes" at East Finchley and at Finsbury Park. The "Great Northern" line from the latter junction to its King's Cross terminus is not, however, being electrified. The "Tubes" will carry the "electrified" traffic southwards over their existing lines.

The third main objective is the improvement of facilities on the west side of London. Here, the Metropolitan Railway is, as it were, being absorbed into and co-ordinated with the London Transport Board's system. The indispensable direct "Tube" connection will be provided by a new line from Finchley Road to the "Bakerloo" section of the existing trans-London "Tube" system. Further west, the Metropolitan Railway, by track and station enlargement and improvement, and by extended electrification, will be made capable of taking heavier traffic. The Great Western line from Ruislip to North Acton will be given two new electrified tracks, and directly related to the "Tube" system. Finally, a proposal standing somewhat apart from the rest is the substitution of trolley vehicles for tramcars on not less than 148 route-miles.

Although limitations of space preclude the enumeration of important ancillary details, the above summary sufficiently indicates the *raison d'être* of the new proposals. Apart from trolley vehicle substitution—the most economical way of coping with the Board's legacy of out-dated road transport—the proposals relate almost exclusively to railways,

which, unlike the roads, are completely owned and controlled by the Board, or by other members of the London Transport "pool." They aim at the extension into outer suburban areas, not simply of electrified services in general, but of "Tube" trains in particular. A second objective appears to be, not the running of electric trains to "dead-end" termini in the centre of London, but their through progress right across London. This was a leading principle in "Underground" policy in pre-Board days.

The proposals are certainly not the last word in transport improvement. Though the railway proposals relate exclusively to areas north of the Thames (the Southern Railway's suburban services are already electrified), many "gaps" remain even there. Between the Loughton line, for example, on the one hand (whose electrification to Epping, or even Ongar, is a possibility) and the Cockfosters and High Barnet lines, on the other, a large area—densely populated in its southern and rapidly developing in its northern portion—will remain outside the electrified network. The present scheme, therefore, may be the destined forerunner of other far-reaching plans, in the fullness of time.

Its finance, for this reason, demands careful scrutiny. The deciding factor, in the present instance, has clearly been the Government's epoch-making decision to grant the Board and the other undertakers borrowing facilities identical with its own. How far was this policy due to considered judgment that a "unified" metropolitan utility undertaking was economically qualified to receive assistance inappropriate, say, to the old "Underground" group? How far was it attributable to quasi-electoral considerations of the provider of employment? That the latter question may not be wholly irrelevant is suggested by a certain appearance of official haste in publishing the scheme, obtaining parliamentary sanction, and issuing four-fifths of the scheduled total of the necessary loan, while the details of many of the essential works were still in an embryo state. The Government, indeed, would appear to have raised the major portion of the necessary funds and pressed them upon the Board and the railway companies, before the latter had had time to obtain formal parliamentary powers, to be a matter of years, to consult all parties whose interests may be affected, or even, in some instances, to determine the scope of their own requirements.

In all other respects, however, stockholders in the respective undertakings have every reason to regard the Government's terms as generous. If an undertaking like the London Transport Board, whose capital has all been issued, ultimately secure an "equity" in the return from new works financed, "all-in," at something under 3 per cent., Treasury will take 4 per cent. debenture stock of the railways, and "A," "B" and "C" stock of the rail-Board, as collateral, the annual interest service of the Transport works will be met from the revenues of the London Passenger Transport Pool, to which their earnings will be "deficiency" of net earnings, as compared with interest charges, will correspondingly increase or reduce the total in the "standard" year, 1932, in which the Board and all four main railway companies are entitled to share in agreed proportions. The resulting position is summarised in the annexed table.

If the new works eventually increase the divisible amount of the pool by an amount equal to 2½ per cent. on £32 millions (or proportionately on £40 millions), the participants in the pool will be, so to speak, "all square." If pool revenues increase by 3½ per cent. of £32 millions (i.e. by 1 per cent. more than the 2½ per cent. for loan service), the amounts credited to the participants will be raised by the figures shown in the last column of the

table. If the increase in pool revenues is only 1½ per cent. (i.e. if a deficiency of 1 per cent. occurs), the sums paid to the participants will be reduced by the same amounts. Thus, of the four group railways, the Southern, which has no direct capital participation in the new scheme, has the largest stake in its "equity," on the earnings side, while those of the London and North Eastern and the Great Western are negligible, by comparison with receipts from their undertakings as a whole.

The new money, however, has been raised on such eminently favourable terms that an "excess" of earnings is much more likely than a "deficiency." Every 1 per cent. "excess" on the lines shown in the table, would be equivalent to approximately 0.30 per cent. additional earnings on Southern preferred ordinary, or, alternatively, 0.26 per cent. on Southern deferred ordinary stock. These percentages are scarcely of major importance to Southern Railway stockholders. The "C" stockholders of the London Transport Board, however, have more at stake. Out of a present total issued capital of £111,535,454, the Board has £25,379,787 in "C" stock. Every 1 per cent. "excess" in pool revenues, on the lines shown in the table, would be worth additional earnings of 0.78 per

Undertaking	Capital Liability for Issue of £32,000,000 (a)		Interest and Earnings Position

(a) In 2½ per cent. Guaranteed Debenture stock, 1930-35, of London Electric Transport Finance Corporation (a "Treasury" company). (b) In equal amounts of "A," "B" and "C" stock. (c) In 4 per cent. Debenture stock. (d) Approximate; to two decimal places.

cent. thereon. This, when the new works come to fruition, may well be sufficient, as a "marginal" percentage, decisively to influence the attainment or otherwise of the "C" stock's "standard" earnings of 5½ per cent., or its maximum future earnings of 6 per cent.

LONDON TRANSPORT SCHEME — PROPOSED DEVELOPMENTS

INVESTMENT NOTES

Changing Market Phases.—The markets have reached and passed the half-way mark in the holiday month with an activity which has had no parallel since the boom year 1928. In the first fifteen days of this month (a period of ten working days), the total number of bargains marked in the entire London Official List, as compared with last year, has increased by 12 per cent. and the number in the "industrial" markets by as much as 54 per cent. For technical reasons, these figures cannot be regarded in any sense as a measure of the actual increase in the volume of business, but the testimony of brokers and dealers is unanimous both as to the substantial nature of recent buying and its increasingly "public" character. The initial tendency of those professionally familiar with the ways and annals of markets is to regard the present trend as of satisfactory omen for the autumn months. Second thoughts, however, inspired by the caution habitual among masters of a difficult art, are prompting the question whether symptoms of the passing of market initiative from "inside" to "outside" have not infrequently been, in the past, the first signal of disequilibrium and ultimate reaction. Present activity is by no means universal. Despite the success of the Treasury, for example, in "screwing up" the price of new trustee issues, there is no confident belief that gilt-edged stocks will enjoy a substantial autumnal rise. The view is becoming more widespread that the authorities' policy will be increasingly directed, not towards the semi-starvation of the new capital market in order to secure an advantageous price level for the conversion of existing loans, but towards the feeding of the market by fresh offers, of unknown but probably substantial magnitude, for purposes at which, for the moment, one can only guess. A steady and absorbent rather than a rising market, on this hypothesis, may best suit the Treasury's book. Among industrial shares, the rise in certain groups, notably steel, motor, aircraft and electrical equipment shares, is showing evidence of having outstripped reasonable "recovery" expectations. Recovery itself, having ceased to be the virtual monopoly of a limited number of industries, may well be destined to lose in impetus what it gains in breadth. Another significant sign of a changing phase is the tendency of "control" to ease. The squeezing of the tin market is at an end. The American authorities, for the moment at least, are weakening in their support of silver prices. Output restriction in rubber and tea, it is now almost universally recognised, cannot and will not proceed to extreme lengths. Against the sustaining influence on British share markets of a prospective continuance of firm conditions in Wall Street must be set the unsettlement which would follow any outbreak of active hostilities in the Italo-Ethiopian quarrel, whose effects, though possibly slow to gather momentum, would certainly be cumulative. Altogether, ardent over-discounting of this month's superficially favourable market symptoms may be unwise. Any fresh upward movement may be sound in proportion to its breadth rather than its pace and height.

Commission on Gilt-Edged Stocks.—This week's decision of the Stock Exchange Committee to make certain changes in the rules regarding commission on transfers of specified gilt-edged stocks (writes a "House" correspondent) owes its origin to the fact that as a Government security nears its effective redemption date the market in it becomes increasingly professionalised. To private investors there is usually little attraction in a stock which has only a few years to run. It is precisely in this field, however, that financial institutions (who pay income tax, not on interest receipts, as such, but on their net profits) find the most remunerative scope for the employment of short- or medium-term money. As the prospective life of a security becomes shorter the importance of fractional differences in its price is magnified to the actuarial eye. The economic practicability of exchanges running into seven figures may, on occasion, be determined by a difference of as little as one-

sixteenth of 1 per cent. The Committee's proposed amendments to the Commission Rules, which are to come up for confirmation on August 26th, relate to dealings in Conversion 5 per cent., 1944-64, and Conversion 4½ per cent., 1940-44. Their objects are twofold. They are designed, first, to attract business to the "House" which is now directly negotiated, frequently, between large professional dealers, and, secondly, to facilitate large-scale exchanges which may be impracticable at the existing scale of commission. These objects should be clearly differentiated. While straightforward "outside" one-way deals are common, it is rarely possible by such means to negotiate a "straddle," which would involve precisely complementary requirements on the part of both buyer and seller. The effect of the proposed amendments will be to reduce the minimum commission chargeable on Conversion 5 per cent. from one-eighth per cent. to one-sixteenth per cent., and on Conversion 4½ per cent. from one-sixteenth to one-thirty-second, the alleviation being limited to transactions for the same principal in not less than £50,000 of stock. Both these stocks are favourite subjects for delicate "straddles," which are often inspired by brokers. The latter will, therefore, welcome a change which widens the scope for ingenuity.

"Timeo Danaos."—When Greece meets her bondholders, then comes the tug-of-war. For six months the Greek Government has declared itself incapable of paying more than 35 per cent. on its external debt interest. With equal persistence, however, the League Loans Committee and the Corporation of Foreign Bondholders have reiterated their conviction that the transfer of 50 per cent. is well within Greece's capacity. An offer of 35 per cent., made in respect of coupons falling due on certain loans on April 1st last, was repeated in May, when further coupons matured, and has been renewed, this week, in respect of coupons which fell due from June 1st to July 14th. The advertised notice states that payment of the coupons is to be considered *eo ipso* as an acceptance by the bondholders that the whole settlement of the loans concerned during 1935-36 will be effected in exactly the same manner as for 1934-35. The announcement proceeds, however, to declare in apparent contradiction that such acceptance "will not prejudice the rights of bondholders towards any further payment whatsoever, which might be agreed upon for 1935-36." What are bondholders to make of all this? Their best policy may well be to await the outcome of the Committee's efforts to secure an equitable and unequivalence of the offer, in the face of the advice and warnings of their representatives, as most unwise. In the Greek Budget for the current year an amount of 1,574.4 million drachmae has been set aside for the 35 per cent. scale of report of the International Financial Commission, however, showed an increase in assigned revenues from 3,580 million drachmae in 1933 to 3,935 million drachmae in 1934. The League Loans Committee is, therefore, on firm ground in demanding the payment of the additional 350 cent., of the interest due. The rate of increase in monopoly, stamps and Piraeus customs receipts alone for the first six months of the current year would contribute one-third of the amount demanded in a full year. Meanwhile, bondholders are not likely to ignore the publicity which has been accorded to Greek armament orders within the last few days.

Rubber and Tea Control.—Events in the rubber and tea industries are reminiscent of the historic confusion in the Tuscan army, when those behind cried "Forward" and those in front cried "Back." Investors may find significance in the fact that the official bodies which have the responsibility of administering contemporary restriction schemes are evincing the greatest reluctance to apply the screw more tightly, while the "ginger groups" which are insistent on more drastic measures are, perhaps fortunately, in no position to enforce them. The Report of the

International Tea Committee, for example, on the second year of the export regulation scheme, which ended last March, maintains that the Committee acted for the best in raising the exportable percentage from 85 to 87½, but admits that absorption of tea has shown a tendency to decline. This statement is the more noteworthy since the Report, in a later section, estimates that potential supplies of tea, from areas at present in existence, will by 1938 exceed last year's absorption figure by as much as 315 million pounds. The remedy suggested, however, is not increased manipulation in any shape or form, but propaganda to increase world consumption, such as may well be fostered by a body like the recently formed International Tea Market Expansion Board. In the rubber market, the International Committee, whose members must now be seriously considering the lines of their policy for 1936, has declined to give any advance indication of its views. In certain quarters, however, associated with a "shareholders'" body, formed earlier this year, strenuous efforts are being made to obtain support for the idea of a species of buffer pool, to hold rubber from the market and release it only at prices determined by representatives of agencies and shareholders. The suggestion comes at an unfortunate moment, in view of events in the tin market.

Actuaries' Investment Index.—Uncharacteristic behaviour in "holiday" markets is attested by this week's movement in the Actuaries' Index, which has risen from 78.2 on August 6th to 79.4 last Tuesday (December 31, 1928 = 100). Over the past fortnight alone, the price index has risen by 1.8 points, while the average yield has fallen from 3.85 to 3.77 per cent. The following table shows, clearly enough, which stocks have been the largest beneficiaries from market optimism:—

Group (and No. of Securities)	Prices (Dec. 31, 1928 = 100)			Yields (%)		
	Month Ago (July 16)	Week Ago (Aug. 6)	This Week (Aug. 13)	Month Ago (July 16)	Week Ago (Aug. 6)	This Week (Aug. 13)
Banking & Discount Companies (12)	115.3	116.0	117.8	4.07	4.04	3.98
Iron and Steel (8)	90.4	64.6	67.7	3.32	3.13	3.01
Motors (5)	54.1	55.9	58.4	4.85	4.67	4.47
Oil (5)	67.9	69.0	72.0	4.57	4.54	4.36
Electric Supplies (8)	116.1	120.9	123.7	4.44	4.27	4.12
Home Rails (4)	70.9	67.4	69.9	1.51	1.54	1.52
Breweries and Distill. (19)	131.8	134.0	135.2	4.02	4.07	4.08

Over the past month, "money shares," like those of the banks, have been firm, but the really spectacular gains have been reserved for groups like steel, motor, electric equipment and oil shares.

COMPANY NOTES

Radio Manufacturing Companies.—The opening of "Radiolympia," this week, with its attendant blaze of publicity, provides a suitable occasion to review the present earnings outlook of the handful of radio companies whose shares enjoy a Stock Exchange quotation. The spectacle of an industry whose total output has increased prodigiously in little over a decade, without providing more than meagre average profits in the majority of cases, is not without parallel. In all "new" industries a certain time interval is required before basic technical conditions and profit-margins become reasonably stable. The radio industry in this country may not be far from the conclusion of this first stage in its development. For nearly a year it has been possible to obviate price-cutting. On the distributing side the manufacturers have been able to insist on price maintenance with greater assurance, since they have now sought refuge in joint policy. On the manufacturing side, the extent of standardisation, even in different models, has brought substantial economies in costs. There remain, primarily, the problems of coping with transient fashions—mainly to set design—for technical changes, pending the eventual production of television receivers on a commercial scale, are not so important as formerly. Only by the production of many models—as practised by certain leading motor concerns—can the radio manufacturer insure

To PROFESSIONAL MEN!

Lifting a burden from your shoulders

Of all men, the professional man is least protected against the vicissitudes of life. Dependent entirely on his own efforts, he has no established organisation upon which to lean in time of trouble; no understudy can take his place for long; no goodwill exists but that created by his own personality. Protection for himself and his family against all eventualities is, therefore, of paramount importance, and full and adequate protection is offered by the

"TRIPLE INCOME" PLAN

which provides

1. AN INCOME ON RETIREMENT
2. AN INCOME FOR DEPENDANTS
3. AN INCOME DURING DISABLEMENT

The "Triple Income" Plan is a very real contribution to the solving of a problem which rests heavily on the shoulders of professional people. It is designed to meet special requirements and individual needs. Full particulars, examples of its operation and cost will be gladly sent on request.

against the risk of "missing the market" in any one year. Meanwhile, the rate of expansion seems likely to frustrate the perennial prophets of ultimate saturation for some time ahead. Although the number of licences now in issue is well over the seven million mark, there is no reason to suppose that instalment selling will not, in time, penetrate the largely untapped working-class demand. Moreover, the

steady progress of electrification seems bound to encourage the use of the convenient "all-mains" receiver in areas which formerly relied upon battery sets. The replacement demand, therefore, constitutes an important part of the total market. Even with these indications, however, it would be unwise to budget for an all-round increase in radio profits. The shares of established producers offer opportunities to the speculative investor who is in close touch with the industry, but to the general investor the

shares of Electric and Musical Industries, which is in an assured position of leadership, and has an important stake in television developments, probably offer the most satisfactory equity in the industry.

* * *

Electrical Equipment Shares.—Electrical equipment shares have enjoyed a twofold "recovery equity" during the past eighteen months. The industry supplies a demand with a normally rising trend, and has specially benefited from new housing and industrial constructional activity. The recent course of profits, set out in the accompanying table, has broadly confirmed the views we expressed a year ago (see the *Economist*, August 4, 1934, page 234), and, by recent indications, more increases in earnings are on the way. The index of new orders, compiled by the British Electrical and Allied Manufacturers' Association, shows a further moderate rise during the first six months of the year, with some transfer of emphasis from export to home business. The price structure in the heavy section of the industry has been strengthened during the past year. The recurrence of finely cut contracts is hardly likely under present recovery conditions. It is, of course, possible to overestimate the value of some recent construction schemes,

† Of which 6 per cent. free of tax.

which have received over-wide publicity. The extent of the benefits which the electrical equipment industry is likely to derive from the £40 millions London Transport scheme, for instance, has been put by an authority like Lord Hirst at little more than £5 millions. The electrification schemes announced by the London and North-Eastern and Southern Railways a fortnight ago, however, were of direct concern to the market. The first is estimated to cost £500,000, while the second contemplates an expenditure of "several millions of pounds" on further electrification, to be spread over a period of ten years. The market interpreted the latter scheme as a direct invitation to purchase English Electric, since the company receives orders for train equipment, and the £1 ordinary shares have advanced to par on the argument that the contract sensibly improves the prospect of eventual dividend payments. Something less spectacular is perhaps indicated for the companies cited in our table. The demand for secondary transmission lines and domestic equipment, however, following the completion of the "Grid," seems likely to bring good business for some time to come, although profit margins in light equipment are not always generous.

Cable and Wireless Scheme Defended.—The speech of Mr J. C. Denison-Pender, at the extraordinary meeting of Cable and Wireless (Holding), Limited—held, on Thursday, by a tragic coincidence, but a few hours after Sir Basil Blackett's death in a motoring accident in Germany—was an urbane defence of the company's decision to finance the repayment of part of its preference stock by the formation and public flotation of an investment trust. The Governor recognised that the reception accorded to the latter proposal had been much less uniformly congratulatory than that given to the original preference repayment offer. The company itself, as Mr Denison-Pender agreed, had every reason to be gratified with the public's response, for although the eventual total of £6,453,407 preference stock surrendered was below the maximum of £7,739,625 available, it was nearly three times the minimum of £2,322,000 stipulated in the original terms. Perhaps the best compliment to the directors on their acumen has been the rise in the value of all the company's stocks which has followed its publication. With the passing of the scheme by stockholders, the matter now goes for sanction to the High Court, and, if all goes well, the cash distribution to stockholders may be made before the end of the year. The Governor was at pains to explain the reasons for the company's decision to finance the operation on "trust" lines. The company's critics may not be wholly satisfied with the statement that it was only at a late stage, when it was seen that the scheme would involve the provision of a very large sum of money, that the directors abandoned their original anticipation of securing the necessary funds by selling securities on the market. Actually, the total surrenders were below the maximum stipulated in the offer. Is it to be inferred that the directors expected only a small response? From the company's point of view it is incontestable that the method actually adopted was most advantageous, and those who devised it may yet live to earn the thanks of the stockholders whom it largely benefits. Once the decision had been taken, the attitude of the directors would also appear to have been beyond cavil. Our own criticism of the absence of any intimation, with the original offer to stockholders, of the fact that the method of finance would involve an "equity" calculated to increase the earnings available for non-surrendered stock, is explained but, perhaps, not entirely removed by the disclosure that, in this instance, *post* and *propter* were not synonymous.

* * *

Some Textile Schemes.—The flow of company capital reorganisation schemes has been only slightly interrupted by the holiday season. In the last few days two textile companies have issued proposals. The first, made by British Bemberg, Limited, is a straightforward "cut" in a capital composed of 5s. shares, from each of which 4s. is to be written off, with subsequent consolidation of the resulting 1s. shares into £1 shares. The company, which was registered in July, 1928, to manufacture artificial silk under an agreement with A.G. Bemberg of Barmen, has £1,000,000 of issued capital. The shares, however, have never been dealt in on the London Stock Exchange, and the company (which has made losses, after debenture interest, in every year since its inception) has remained chiefly under German and Dutch auspices. The second scheme, however—sponsored by the Amalgamated Cotton Mills Trust, Limited—is of wider interest, particularly in Lancashire. The Trust was registered just before the end of the spinning and weaving companies, and associated with one of the best known of all, Messrs Horrockses Crewdson and Company, Limited, of Preston. The latter reduced its capital from £5,500,000 to £4,105,000 in 1927 and to £2,477,500 in 1932. It is now proposed that the Trust shall cancel altogether its 100 per cent. holding of Horrockses Crewdson's issued ordinary shares (£77,500), liquidate certain other engagements. In return, holders of Horrockses £1,492,042 6 per cent. mortgage debenture stock are asked to reduce their principal to £497,347, and to release the Trust from its guarantee of principal and interest. Horrockses' £1,492,022 preference shares are to be reduced from £1 to 6s. 8d. denomination, and the guarantee of the Trust is, likewise, to come to an end. The Trust, in short,

is proposing to cut its losses, on the best terms available, on an asset which has certainly proved costly from start to finish. The operation is, at least, typical of the process of clearing financial wreckage which is indispensable to the establishment of any new order in the Lancashire cotton industry.

* * *

Tin Shares and the Quota.—The market, with fair reason, has regarded the increase in the tin quota as, on the whole, a "bull point" for tin shares. We discuss the implications of the International Committee's decision, so far as it affects the commodity, in a note on page 322. From the earnings aspect, the Committee's decision promises increased revenues, particularly to the lower cost producers. The increase of as much as 30 per cent. in the previous scale of production will secure a wider spread of fixed costs, thus increasing working profits per ton on a higher output. The outlook, on the long view, is more uncertain. Present conditions in the United States seem propitious for rising tin consumption during coming months, but the new scale of production largely discounts such an increase. Further, the extent of the fall in the forward price of tin, upon which the miners' profits are based, cannot be finally determined as yet. The price has fallen by £7 16s. 3d. from £216 on the eve of the announcement to £208 3s. 9d. this week. Compared with this natural reaction, the fall in the artificial cash price has been meteoric. Finally, the uncertain fate of the Restriction scheme, in its present form, after the end of 1936, may make for market unsettlement. For the present, however, the decision of the Committee seems to bring production nearer the optimum profit level. Provided that the more liberal policy can be maintained—and it would seem that the Committee has taken note of recent criticism—and that the price level is spared a substantial further fall, the shares of low- to medium-cost producers, of which a selection is given in the accompanying table, may have a speculative appeal.

Company (and Share denomination)	Earned for Ordinary, years ending in			Dividends paid, years ending in			Present Quotation	Yield on Dividend for latest year (%)	
	1932	1933	1934	1932	1933	1934

† Interim of 5 per cent. paid in respect of 1935.

The yields given in the table make no allowance for increased interim dividends which have been paid in some cases for the current year.

* * *

Other Company Results.—The second week of the August holidays has brought few reports of note. Our table of profit and loss accounts on page 352 gives the results of thirteen companies published this week. In the brewery section, the report of Friary Holroyd and Healy's shows a modest improvement in net profits to £126,447, which has been distributed in the increased dividend of 11 per cent. The City of San Paulo Improvements Company has enjoyed a better year and net profit amounts to £25,087. Sales of land have continued to improve during the first five months of the current year, but the stringent regulation of the Brazilian exchange still prevents the board from dealing with exchange differences on net assets in Brazil, for which no specific provision has been made. The first report of Guildhall Property Company shows total rent and other income of £68,655, and a net profit of £38,287. Of the former amount, however, as much as £29,820 has been credited in respect of sales of land to a subsidiary company.

ODHAMS (WATFORD) LIMITED

ISSUE OF

450,000 5½% Cumulative Preference Shares of £1 each
at 21s. per Share

INVESTMENT REGISTRY LIMITED

ANNOUNCES THAT THE SUBSCRIPTION LIST IN CONNECTION WITH THE ABOVE ISSUE WAS CLOSED AT 9.5 a.m. ON FRIDAY, THE 16th AUGUST, OWING TO THE ISSUE BEING HEAVILY OVER-SUBSCRIBED.

Shareholders are entitled to ask whether the latter company has, in fact, been able to realise the land acquired, since otherwise the crediting of inter-company profits in the parent company's books would appear premature.

* * *

Company Meetings of the Week.—On later pages of this issue will be found the reports of the following companies:—Cable and Wireless (Holding), Watney Combe Reid, Covent Garden Properties, Millars' Timber and Trading, and Merlimau Pegoh. Mr J. C. Denison-Pender's speech at the Cable and Wireless (Holding) meeting is discussed on page 336. Addressing shareholders in Watney Combe Reid, Colonel O. P. Serocold discussed the company's policy of writing off losses on reconstruction of licensed houses out of current revenue. Mr Philip E. Hill, at the Covent Garden Properties meeting, disclosed that some £280,000 of freehold ground rents had been satisfactorily realised. Mr G. Kingsley, at the Merlimau Pegoh meeting, discussed the advantages of the programme of estates consolidation which the company had pursued. At the meeting of Millars' Timber, which approved the reorganisation scheme, Mr James White declared that prospects of a substantially larger profit in 1935 were very good.

THE WEEK IN THE MARKETS THE LONDON STOCK EXCHANGE

SETTLING DAYS
TICKET AUGUST 27 | ACCOUNT AUGUST 29

THE "House" barometer recorded a perceptible change of pressure, with a thundery tendency, in the latter part of this week. At the outset, the second holiday week had been as cheerful as the first, with business in certain favourite industrial groups showing signs of auto-intoxication. On Wednesday afternoon a breath of outside suspicion induced sufficient selling to suggest that markets might not, after all, be as firm as they appeared, and the tendency thereupon became irregular.

The gilt-edged market opened bravely, but had its own cares by way of vague reports of forthcoming Government loans. In the recession "undated" stocks suffered most, as having most to lose by the replacement of "conversion" by "new borrowing" as the Government's presumed objective. Trinidad 3 per cents., despite heavy over-subscription, did not maintain their opening premium. India stocks also lost ground, the new 3 per cent. being weak with the rest. Fractional declines occurred in Dominion stocks.

In the foreign market Brazil maintained sphinx-like silence regarding her intentions, and her bonds, after a moderate recovery, were sold on renewed uneasiness. Japanese loans were unaffected by the assassination of a military leader, but Chinese bonds weakened on the Nanking Government crisis. Home railway stocks were quiet, the week's traffic returns being satisfactory on the passenger side but disappointing as regards merchandise receipts. Transport "C" stock rose to par, some sections of the market reading, into the wording of the announcement of an October dividend declaration, the promise of a substantial additional dividend payment in respect of 1933-34.

In the industrial market, the week opened with spectacular symptoms, particularly in steel and motor shares, the market reading intentions of exact scientific forecasting into Sir Herbert Austin's talk to dealers. Electrical equipment shares were also in active demand, on news of the forthcoming placing of contracts with E.M.I. and Baird for television equipment. Radio shares in general, however, were not appreciably affected by the opening of the annual exhibition. Buying of aircraft shares was stimulated by a market "slip" setting out the names and makers of machines specified in new Air Force contracts. All these groups, however, became irregular on profit-taking in the latter part of the week, though market opinion was divided as to the extent of the open account in indi-

vidual instances. Brewery shares, apart from Bass, showed slight irregularity throughout, the market paying increasing attention to the signs of a decline in the production trend recently. The inclination of speculative buyers to go into the byways of the market, to find recovery counters among the more depressed industrial groups, was evidenced by the strength of certain shipbuilding shares and of the lower-priced textile issues. Bleachers preference, for example, rose nearly 3s. on Wednesday, and Bradford Dyers were also in favour. Shipping shares were similarly supported, particularly Furness Withy and P. and O. deferred. Little interest was taken in store shares, and tobacco shares were equally quiet, with the exception of Tobacco Securities Trust deferred, which continued their recovery. The further rise in Cable and Wireless was due to appreciation of the possible benefits of further Wall Street revival, rather than to any inferences from the speech of the chairman at Thursday's meeting, which is discussed on page 336. Bank shares were well maintained and insurance shares received investment support.

Oil shares were strong at the beginning of the week, on buying described as "influential", rather than on any fundamental change in the American situation. An easier tendency, however, was in evidence later. After a transient appearance of increased interest on Tuesday, the rubber share market relapsed into coma, the dullness of the commodity, which was no better than 5½d. on Wednesday, being an adverse influence. Tea shares were firmer without any noteworthy increase in the volume of business.

Little of this month's "holiday activity" has come the way of the Kafir market. Tuesday's promise of speculative revival was unfulfilled, the slow progress of arrangements for reviewing the South African mining taxation system causing adverse comment. Business in West African shares was lifeless, but in the Australian market, Commonwealth had a slight rally. The weakening of American support for the silver market was reflected in quotations for Burma Corporation and other producers. Tin shares attracted considerable attention at the beginning of the week, on considerations which are discussed in a Note on page 337, but the rapidity of downward readjustment in the cash price of the metal tended to bar further progress in the later days of the week. Little business was done in copper shares, changes in quotations being mostly downwards.

FOREIGN STOCK EXCHANGES

NEW YORK

WALL STREET has again enjoyed an active week. Until Wednesday, turnover had been running confidently above the two million share mark, and the Saturday session itself would not have disgraced many full days earlier in the summer. The market, however, has by no means taken the bit in its teeth, and as Wednesday's rather patchy session illustrated, each moderate advance is being satisfactorily consolidated. The result is not a "blue-chip" boom—the speculative charger is now largely hobbled by new Exchange regulations—but a satisfactory advance some what akin to the steady rise in the London market from the spring of 1933. Rails were more prominent at this week's opening, but Utility, Steel and Communications issues were also strong. Utilities, indeed, provided the centre of interest on Tuesday, under the lead of American Telephone and Consolidated Gas. The whole market, however, reverted to a somewhat lack-lustre mood in mid-week, although fractional gains at the close bore witness to a late revival of interest. Government bonds turned weaker on the eve of Wednesday's Treasury offer, but second-grade bonds—particularly rails—were active and strong. The industrial background remains favourable to further advance. Steel output is two points higher at 49 per cent. of capacity, as estimated by the "Iron Age," and scrap prices are still rising. Power output has shown a favourable trend, and further corporation statements are satisfactory.

PARIS

Business on the Bourse showed a more encouraging trend this week. Rentes opened stronger and recorded fractional gains as the week progressed. The settlement of last week's trouble in the ports, the initial success of M. Laval's further decrees, and the declaration by the Governor of the Bank of France that the machinery of credit would be set to restore cheap money, reassured the financial quarter. Bank shares gained ground in sympathy, and arbitrage issues were rather stronger, except with Amsterdam. Sharp rises occurred in Suez Canal and Royal Dutch. Business on the Coudisse, including French industrials, tended to improve towards mid-week.

	Aug. 7, 1935	Aug. 12, 1935	Aug. 14, 1935		Aug. 7, 1935	Aug. 12, 1935	Aug. 14, 1935

BERLIN

Share prices declined in the middle of last week, but later a recovery set in which continued this week. Direct dealings between banks increased, and there were further blocked mark purchases by foreigners, with Farbenindustrie providing a feature. Steels and lignites were bought, and activity broadened in Deutsche Erdöl, Harpener and, on a dividend increase, Deutsche Linoleum. Shipping issues were slightly weaker. In the bond market, municipal issues were in demand. In general, however, quotations were little change. The official share index number (1924-26 = 100) for July is 94.66, as against 93.74 in June; for bonds 95.29, against 95.25.

	Aug. 7, 1935	Aug. 12, 1935	Aug. 14, 1935		Aug. 7, 1935	Aug. 12, 1935	Aug. 14, 1935

AMSTERDAM

The market opened in rather uncertain mood, in view of the political situation, and the only active section was in American stocks, in sympathy with Wall Street. Government bonds were again weak, owing to heavy realisations, and could only make a slight recovery on Wednesday's improved bank return. Industrial shares opened in fair demand, but a reactionary tendency set in later.

CAPITAL ISSUES

TRUSTEE borrowing has been resumed this week with an issue of 25-year stock, carrying 3 per cent., by the *Trinidad Government*. The terms of the issue, at par, marked a further stiffening of the (presumably) official view on interest rates. Only three weeks earlier, the Common-

NOTE—Shares with a New York Quotation or with definite American interest are distinguished by italics.

In calculating yields on fixed interest stocks quoted below allowance is made for interest accrued since the last date of payment, less income tax at the standard rate. Where stocks are definitely redeemable at a certain date the yield includes any profit or loss on redemption; where stocks are redeemable at or before a certain date the final date of repayment is taken when the stock stands at a discount and the earliest date when the quotation is above par. The return on ordinary stocks and shares is calculated by reference to the latest dividends, account being taken of any enhancement or reduction of interim dividends. Allowance is made for accrued dividends in calculating the yield on "cum div." shares.

Copies of the Chairman's speech in full can be obtained on application to the Secretary, Stag Brewery, Pimlico, S.W.1.

Mr J. C. Denison-Pender, the Governor, who presided, proposed: That the capital of the company be reduced from £53,700,000, divided into £23,219,618 5½ per cent. cumulative preference stock, 280,382 5½ per cent. cumulative preference shares of £1 each, £20,767,077 7½ per cent. non-cumulative "A" ordinary stock, 432,923 7½ per cent. non-cumulative "A" ordinary shares of £1 each, £8,702,782 "B" ordinary stock, and 297,218 "B" ordinary shares of £1 each, to £47,246,593, divided into £16,766,211 5½ per cent. cumulative preference stock, 280,382 5½ per cent. cumulative preference shares of £1 each, £20,767,077 7½ per cent. non-cumulative "A" ordinary stock, 432,923 7½ per cent. non-cumulative "A" ordinary shares of £1 each, £8,702,782 "B" ordinary stock, and 297,218 "B" ordinary shares of £1 each, and that such reduction of capital be effected by cancelling and extinguishing altogether £6,453,407 of the 5½ per cent. cumulative preference stock (being the preference stock which the holders have agreed to sell to the company and the company has agreed to purchase conditionally upon the reduction of capital involved in such sale and purchase being duly resolved upon and confirmed by the Court), together with all dividend accrued thereon and unpaid, the company paying to the holders of such stock the capital (namely £1 in respect of each £1 stock) paid up thereon, together with interest on such capital at the rate of 3 per cent. per annum (less income tax) from July 31, 1935, until the last day of the month in which the confirmation of the Court is obtained.

The resolution was duly carried.

The report and accounts were adopted; the new articles and the capital proposals were approved. The Chairman stated that the proxies were overwhelmingly in favour of the scheme.

A complete analysis of the approximate position of the National Debt on June 30, 1935, appeared in the *Economist* for July 6.

EXPENDITURE	Estimate for the year 1935-36	Total Issues out of the Exchequer to meet Payments			
		April 1, 1935, to Aug. 10, 1935	April 1, 1934, to Aug. 11, 1934	Week ended Aug. 10, 1935	Week ended Aug. 11, 1934
ORDINARY EXPENDITURE					
Interest and Management of National Debt	£ 224,000,000	£ 94,365,689	£ 95,612,395	£ 470,083	£ 434,492

Total	...	291,516,068	280,019,570	9,888,616	7,762,492

The aggregate revenue and expenditure to Aug. 10, 1935, is shown below:—

FINANCIAL YEAR, 1935-36, APRIL 1, 1935, TO AUG. 10, 1935

(000's omitted)

	Revenue	Expenditure
Revenue	203,978	266,086
Gross increase in borrowing	64,734	383
Less:		
New Sinking Fund	2,243*	
Net borrowing	62,491	266,489

* Authority will be sought in the Finance Bills to meet the amount of the Statutory Sinking Funds in 1935 by borrowing.

POSITION OF THE FLOATING DEBT

	Aug. 11, '34	Mar. 31, '35	Aug. 10, '35	Aug. 10, '35
Ways and Means Advances Outstanding	£	£	£	£
Advances by Bank of England	—	—	—	3,750,000
Advances by Public Departments	32,200,000	34,060,000	15,350,000	7,600,000
Treasury Bills Outstanding	832,140,000	799,320,000	895,025,000*	7,575,000
Total Floating Debt	864,340,000	833,380,000	910,375,000	3,775,000

* Includes £3,000, the proceeds of which were not carried to the Exchequer within the period of the Account.

TREASURY BILLS BY PUBLIC TENDER

Tenders for £40,000,000 Treasury bills were opened on August 9, 1935, and the total amount applied for was £60,605,000. Tenders were accepted for Treasury bills at three months dated Monday to Friday at £99 17s. 0d., about 67 per cent., and above in full; Saturday at £99 17s. 1d., and above in full. The average rate per cent. was 11s. 9-37d. The amount allotted was £40,000,000. The following table shows the weekly record at various dates:—

Date	Amount Offered	Total Applications	Amount Allotted	Average Rate %
1933				
January 6	45,000,000	73,830,000	45,000,000	0 16 10-84
July 7	45,000,000	83,890,000	42,000,000	0 10 4-85

Messrs Samuel Montagu and Company write on August 14 1935, as follows:—

The Bank of England would reserve against notes amounted to £192,774,457 on Tuesday, showing no change as compared with the previous week.

Larger supplies of £2,500,000 have been offered this week in the market—altogether £1,750,000 having been dealt in. In

consequence the premium over the gold exchanges has narrowed, to-day's price being practically on the parity of the Bank of France's buying price.

August 15	140s. 1d.	12s. 1-55d.

The s.s. "Rawalpindi," which sailed from Bombay on the 10th inst., carries gold to the value of about £323,000, of which £150,000 is consigned to London and £173,000 to New York.

fine ounces as compared with 889,026 fine ounces for June, 1935, and 876,094 fine ounces for July, 1934.

The steady sequence of prices was broken on the 12th inst. when prices eased a d., being fixed at 30 d. for cash and 30 a d. for two months' delivery, the American Treasury only being willing to acquire silver at this price. Although the decline in itself was small, the fact that America had now maintained the previous level caused further nervousness and large offerings were made by Indian Bazaar and speculative bulls, whilst in addition there was selling on China account.

Yesterday in the face of further heavy offerings, America again showed reluctance, with the result that there was another set-back, prices falling to 29 $\frac{1}{2}$ d. for both deliveries. Similar conditions prevailing to-day, prices fell sharply to 29 $\frac{1}{2}$ d., at which figure America secured a large amount.

The market is uncertain and depends, of course, upon the attitude of the American Treasury, whose buying price may, in some measure, be influenced by the dollar/sterling exchange.

Quotations during the week :—

IN LONDON

IN NEW YORK

REPORTS AND NOTICES

The Chartered Bank of India, Australia and China announce that Mr J. L. Crockatt, their chief manager, will retire on pension on August 31st after 40 years' service in the bank. In his place the court of directors have appointed Mr A. H. Ferguson to be chief manager, and Mr W. B. White will be the second manager, both appointments with effect from September 1st.

The Imperial Bank of Iran announce that Mr E. M. Eldrid has retired from the post of manager at the London office, but will retain his seat on the board. Mr F. Hale, the sub-manager, has been appointed manager, and Mr F. A. Ayrton sub-manager.

The directors of William Hollins and Company, Ltd., announce with regret the resignation of Mr E. L. Paget, the deputy chairman of the company. He will retain his seat on the board. Mr E. D. A. Herbert, O.B.E., M.A., has joined the board, and has been appointed deputy chairman.

GOVERNMENT, &c.

GOVERNMENT OF ROUMANIA.—Proceeds of a special export of wheat and barley will be used to meet coupon due on August 1st last in respect of the Monopolies Institute 7 per cent. loan, 1929 (sterling tranche).

REPUBLIC OF NICARAGUA 5 PER CENT. STERLING LOAN, 1909.—The Council of Foreign Bondholders are advised that £2,015 17s. 4d. the equivalent of 10,000 gold cordobas, has been received in respect of the August, 1935, instalment of the service of the above loan.

EXTERNAL DEBT OF HONDURAS.—With reference to Article 8 of the arrangement ratified on March 8, 1926, the Council of Foreign Bondholders have been advised by the National City Bank of New York that the total collections from the sale of consular stamps of the Republic of Honduras for June, 1935, amounted to \$34,115.90.

MISCELLANEOUS

WILLIAMS DEACON'S BANK LTD. give notice that in order to prepare the interest warrants due September 1, 1935, on Wolverhampton Corporation 3 per cent. stock, 1924-54, the books will be closed from August 19th to August 31st inclusive.

CROWN ZELLERBACH CORPORATION (SAN FRANCISCO).—The operations for the year ended April 30, 1935, after giving effect to all charges for depreciation, depletion, bond and debenture interest and income taxes, resulted in a consolidated net profit of \$1,407,513.97, equivalent to \$5.62 per share on the Crown Zellerbach Corporation preference stocks outstanding in the hands of the public. This compares with a consolidated net profit of \$1,633,240.29 or \$6.51 per share, for the preceding fiscal year. Dividends of \$2.25 per share, totalling \$563,694.48 were paid during the year on the Crown Zellerbach Corporation preference stocks, representing quarterly dividends of 37½ cents per share during the first two quarters and 75 cents per share during the third and fourth quarters. This compares with dividends of \$1.50 and \$375,752.61 paid during the preceding year. At April 30, 1935, the accumulated unpaid dividends on the preference stocks amounted to \$4,384,485, or \$17.50 per share, of which \$4,133,943, or \$16.50 per share, was in arrears.

SOUTH EASTERN GAS CORPORATION.—An offer to acquire the issued ordinary and additional capital stock of the Lewes Gas Company for cash, or shares of the corporation, has been made.

EDMUNDSONS ELECTRICITY CORPORATION, LTD.—Operations of the Edmundson group of companies during July, 1935, as compared with July, 1934, show an increase of 19 per cent. of units sold.

AMALGAMATED BANKET AREAS, LTD.—It is announced that this company has acquired the entire share capital of the Tarkwa Gold Areas, Ltd., and 92.2 per cent. of the share capital of the Tarkwa Southern Mines, Ltd. The balance of these latter shares is held by Taquah and Abosso Mines, Ltd. The completion of this transaction was effected on July 31, 1935, when this company assumed control.

WESTERN AUSTRALIAN GOLD PRODUCTION.—During July, 57,194 ounces of gold were received at the Royal Mint, Perth, value £401,787 sterling, equal to approximately £502,235 Australian.

BRITISH PISTON RING.—It is proposed to divide existing £1 ordinary shares into four shares of 5s., carrying one vote per share; the existing 20,000 7½ per cent. cumulative £1 preference to be known as "A" preference shares carrying four votes per share; and to create 50,000 5 per cent. redeemable £1 "B" preference shares redeemable at par at the company's option from July 31, 1940, carrying one vote per share.

MINIMAX.—It is proposed to convert 60,000 cumulative participating preferred shares of £1 into ordinary shares, to be divided into four shares of 5s.

TANGANYIKA TERRITORY GOLD OUTPUT.—Total exports of gold from whole of Tanganyika Territory for June, 1935, were £4,848 ounces valued £27,061, of which 3,172 ounces, valued at £18,742, from Lupa goldfield.

FLETTONS, LTD.—Directors announce that sales and profits for first half of current year exceed those for corresponding period last year. New works are now completed. Whole production has been sold, and sales for period constitute a new high record.

TOKYO ELECTRIC LIGHT.—Report for half-year ended May 31st making yen 23,585,609; legal reserve, yen 800,000; bonuses to annum, yen 12,886,860; surplus forward, yen 9,678,749.

THE VICTORIA FALLS AND TRANSVAAL POWER COMPANY, LTD.—At an extraordinary general meeting of the above company, held August 1, 1935, the special resolutions increasing the capital of the company to £4,500,000 and making certain alterations in the articles of association of the company were confirmed. A resolution reserve fund was also passed.

AGA HEAT LTD.—It is announced that more than 90 per cent. of the shareholders have assented to the offer made by Allied Ironfounders, Ltd.

SALE OF COLLIERIES: FUSION WITH YORKSHIRE AMALGAMATED.—Yorkshire Amalgamated Collieries, Ltd. (Sheepbridge Main Colliery Company at Dodworth. The collieries will be maintained in reserve until re-opening is justified.

WELLINGBOROUGH GAS.—Proposal to amalgamate Irthlingborough Gas with this company will be considered August 26th.

HESKETH ESTATES, LTD.—It is announced that this company has entered into a contract for the sale of its Droitwich interests, completion to be made by October 1st next.

LEHMAN CORPORATION.—The Lehman Corporation reports a record net asset value of approximately \$101 per share on 682,000 shares of capital stock outstanding, thus more than recapturing its paid-in capital per share for the first time since 1929.

THE SINGAPORE TRACTION COMPANY, LTD.—It is proposed to create £250,000 5 per cent. convertible first mortgage debenture stock; to implement conditional agreement of July 25, 1935, between company and Shanghai Electric Construction Company; to increase capital by creation of 150,000 further £1 ordinary shares; to cancel special rights of reversionary share and convert it into ordinary share; and to extinguish Shanghai Company's rights of management.

LEGAL AND GENERAL ASSURANCE SOCIETY, LTD.—In succession to Mr C. S. Johnson, recently promoted to fire and joint accident manager, the directors announce the appointment of Mr H. A. Hitchings as manager of the City office at 69 King William Street.

INTERNATIONAL NICKEL COMPANY OF CANADA.—Earnings for three months to June 30th, \$8,257,932, an increase of \$889,207 over second quarter of 1934. Net profit for the period, \$5,420,615, equivalent to 34 cents per share on common stock. This compares with net profit of \$4,917,627 for first quarter 1935, equal to 30 cents per share.

PALESTINE ELECTRIC CORPORATION.—Annual report for 1934 shows gross revenue 64.56 per cent. higher, and profits £P.242,342, compared with £P.149,298. Dividend, 7½ per cent., free of tax (against 5 per cent.). A sum of £P.25,000 transferred to tax and contingencies reserve and £P.70,000 to general reserve. The carry-forward £P.34,239, against £P.34,050 brought in.

BOULDER PERSEVERANCE, LTD.—Output for July, 1935. Tonnage, 7,942; profit, £11,563 (Australian currency).

BRITISH AND DOMINIONS FILM CORPORATION.—Mr C. M. Woolf has been appointed managing director.

We are informed by Messrs J. B. Were and Son that from August 1st a new method of charging brokerage on the Stock Exchange of Melbourne on Internal Australian Government Consolidated Loans was introduced. As from that date, buyers will be charged brokerage at the rate of 5s. per cent. on face value, and sellers will be charged at the rate of 5s. per cent. This arrangement will supersede the method applicable hitherto, under which buyers were not required to pay brokerage, while sellers were charged 10s. per cent. brokerage, which, in the hands of the broker acting for the seller, was divisible equally with the broker acting for the buyer.

COMMERCE AND TRADE

SURVEY OF COMMODITY MARKETS

THE prices of important commodities have been subject to considerable fluctuations this week. It is important to note, however, that the fall in prices was almost without exception due to changes on the supply side and not to a decline in demand. Thus, the slump in tin prices was the direct consequence of the increase in production quotas, discussed in a Note of the Week. Copper was also slightly cheaper than a week ago, but lead and spelter were marked up a little. The decline in the prices of linseed and linseed oil is due to a break of the drought in Argentina. Rubber showed a sagging tendency. Business in iron and steel has so far been well maintained. The absence of the usual seasonal decline is ascribed in the official report of the London Iron and Steel Exchange to the firm tendency of prices.

Among textile raw materials, cotton was marked down on the publication of the official forecast of the United States crop. Wool prices remained firm, but flax, hemp and jute were marked down a little.

Wheat prices fluctuated within narrow limits. The official estimate of the United States wheat crop indicates that that country will have little or nothing available for export during the current wheat season. Quotations for raw sugar partly recovered from the setback of last week. At Smithfield beef prices showed some improvement. Quotations for eggs continued their seasonal upward trend.

In the United States declines in some prices were offset by rises in others. Moody's index of the dollar prices of staple commodities, based on December 31, 1931, stood at 165.6 on Wednesday, compared with 165.4 a week earlier, 158.0 a month earlier and 149.7 on the corresponding day last year.

COAL

SHEFFIELD.—The outlook for the export trade is brightening and an increased volume of business is anticipated in the near future. Demand has already improved for washed doubles and singles, which are rather scarce. Shippers also complain of inadequate supplies of best steams, cobbles and smalls. As holiday stoppages are now over, outputs are being increased. Inland consumption is responsible for substantial tonnages of industrial fuels of all kinds, previous high records being maintained. Supplies of coke exceed current consumption.

Quotations are: Yorkshire Association hards, 17s. 6d. to 18s. 3d. f.o.b.; Derbyshire best hards, 17s. to 17s. 6d. f.o.b.; best South Yorkshire house, 20s. to 22s. at pits; Derbyshire do., 19s. to 21s. at pits; blast furnace coke, 13s. at ovens.

NEWCASTLE-ON-TYNE.—Market conditions are dull, with very little fresh prompt inquiry from abroad. Northumberland steam collieries are working fairly regularly at present, but the small volume of business in screened coal is being felt and it is feared that idle time may be experienced before the month is over. The cessation of shipments to Italy is now having a marked effect upon the Durham position, where many collieries are idle owing to the lack of this trade. Gas and coking coals are weak and all classes of bunkers are offered freely for any position. Coke is quiet for prompt shipment.

Current f.o.b. prices for export: NORTHUMBERLAND.—D.C.B. screened, 13s. 9d.; smalls, 11s.; Howards, Bentinck, Newbiggin screened, 13s. 3d.; smalls, 10s. 6d.; Tyne Prime large, 13s. 3d.; smalls, 11s.; Hartley Main, large, 13s. 3d.; smalls, 11s. DURHAM.

—Lambton/South Hetton screened steam, 15s. 2d.; smalls, 12s. 6d.; Wear Special gas, 15s.; Holmside, Ryhope, Boldon, unscreened gas, 14s. 6d.; second-class gas, 13s. 2d.; coking, unscreened and/or smalls, 13s. 2d.; Prime unscreened bunkers, 13s. 9d.; second-class unscreened bunkers, 13s. 3d.; Prime foundry coke, 18s. 6d.; Newcastle and District gas coke, 20s.

GLASGOW.—New business on export account remains quiet. Prices, however, are firm, for collieries are fairly well placed with contract business, and recently a considerable amount of covering of speculative sales by exporters has taken place. In the shipping districts the better classes of steam coal, navigation qualities and washed smalls are well booked for some time ahead. In the home market, industrial requirements are good, and demand for house coal is tending to expand again.

Shipment prices f.o.b. district ports: LANARKSHIRE.—Ell best, 14s. 6d.—15s.; splint best, 17s. 6d.; splint second, 15s.—15s. 6d.; navigation, screened, 15s.; navigation, unscreened, 13s. 6d.—13s. 9d.; Hartley, 16s.; steam, screened, 13s.—13s. 6d.; trebles, 13s. 6d.—14s.; doubles, 13s.—13s. 6d.; singles, 12s. 6d.—12s. 9d.; pearls, 11s.; dross, 10s. FIFE.—Best unscreened navigation, 13s. 6d.—13s. 9d.; unscreened navigation, 12s. 9d.—13s. 3d.; first-class steam, 13s. 6d.—14s.; third-class steam, 11s. 9d.—13s.; trebles, 13s.—16s. 6d.; doubles, 13s. 6d.—14s. 6d.; singles, 12s. 9d.—13s.; pearls, 10s. 6d.—10s. 9d. LOTHIAN.—Best splint, 14s. 6d.; prime steam, 13s. 6d.—13s. 9d.; secondary steam, 12s. 6d.—12s. 9d.; unscreened navigation, 12s. 9d.—13s.; trebles, 14s.—14s. 6d.; doubles, 13s. 3d.—13s. 6d.; singles, 12s. 9d.—13s.; pearls, 10s. 9d.—11s. Ayrshire.—Best unscreened navigation, 14s. 6d.; steam, 13s.; trebles, 13s. 6d.; doubles, 13s.; singles, 13s.; pearls, 12s. 6d.; dross, 11s. 6d.

IRON AND STEEL

MIDDLEBROUGH.—Owing to the holiday season, the pig-iron market is not quite so active, but whilst new transactions may be fewer, producers have good order books and have no difficulty in placing their output, which, however, is chiefly going to home consumers. It is understood that inquiries for hematite iron are being received from Italy, but merchants are waiting for the liquidation of their outstanding accounts before entering into new business. The price of Cleveland foundry pig iron is based on No. 3 grade at 67s. 6d. per ton delivered Tees-side and 69s. 6d. per ton to North of England areas. A fair amount of hematite iron had been sold before the recent rise in prices, but consumers are not hesitating to pay the official minimum price for No. 1 quality at 71s. per ton delivered locally. Shipments of all classes of pig iron from the Tees during the first 13 days of August amounted to 3,957 tons, as compared with 3,808 tons during the same period in July.

Next week is the local holiday week, when the foundries in this area will be idle and rolling mills will in some cases cease operations in order to effect the necessary repairs.

Production of semi-manufactured and manufactured steel continues to increase, works being well supplied with orders for finished steel of all classes. Small quantities of semi-manufactured steel are being imported under the agreement with the Continental steel cartel.

Blast-furnace coke is in good supply, with sellers quoting 19s. per ton delivered to Tees-side works, whilst best Bilbao rubio is 17s. 6d. per ton c.i.f. Tees. Heavy steel melting scrap is very firm at 52s. 6d. per ton delivered at the works. There will be no market here on Tuesday next owing to the holidays.

SHEFFIELD.—Conditions at the local steel works continue active and several branches of engineering which have been established in Sheffield comparatively recently have developed flourishing businesses. The booking of new orders has been less brisk lately owing to holiday influences, but there is plentiful work on hand and good prospects for the remainder of the year. Steel makers appear well satisfied with the agreement with the European cartel. It is well satisfied that one of its effects will be to mitigate competition anticipated that one of its effects will be to mitigate competition in overseas markets and enable this country to obtain increased export business. A firm in Canada is providing steel makers with a new supply of ferro-silicon and competition has already caused

some reduction in the prices of that material. Hitherto the bulk of the ferro-silicon used in this country has been obtained from a syndicate of makers on the Continent. The steel specialities for which Sheffield is noted are all running strongly and engineers' requirements keep well above the average of the first half of the year. Rolling mills and forges working for hire are on full time; this indicates a steady call for ordinary lines of steel. Stainless steels are booming, and each month establishes new records of output of this material. The year's production will probably be double that of 1934. Confidence in the future of local industry is widespread. Employment remains steady, but Sheffield still contains 34,000 wholly or partially unemployed.

GLASGOW.—Activity is well maintained in the heavy steel trades in this district. All the plants are fully employed and there is a steady flow of orders for almost all materials. Makers of semis are finding business plentiful. In the sheet trade, export business shows further improvement both in black and galvanised sheets, and makers are able to keep a larger proportion of their plant operating. Tubemakers have a large amount of work on hand at present and export business is increasing. Steel bar re-rollers are busy and there is a somewhat better demand for wrought iron.

OTHER METALS

COPPER.—There have been no new developments in the copper situation, though prices showed a sagging tendency during the past week.

Sales on the London Metal Exchange: 1,200 tons on Monday; 750 tons on Tuesday, against 1,050 tons last week; 1,200 tons on Wednesday, as against 1,900 tons last week. Domestic spot was quoted at 7.62½ cents per lb. in New York on Wednesday, against 7.72½ cents a week ago and 7.62½ cents a month ago. Wednesday's official closing price for standard cash in London was £31 17s. 6d. to £31 18s. 9d., compared with £32 6s. 3d. to £32 7s. 6d. a week ago. Stocks of refined copper in British official warehouses at the end of last week, at 73,343 tons, show a decrease of 102 tons, while stocks of rough copper, at 11,659 tons, show a decrease of 25 tons on the week.

LEAD AND SELLER.—Markets were featureless and prices moved within narrow limits. In the United States spelter stocks rose during July by 2,814 short tons to 115,723 short tons. Stocks are now 8,098 short tons larger than at the end of May. According to the Metallgesellschaft, world smelter output of lead declined between May and June from 119,882 to 106,706 metric tons. The principal reductions occurred in Mexico, the United States and Germany.

Sales of lead on the London Metal Exchange: 300 tons on Monday; 600 tons on Tuesday, against 1,250 tons last week; 1,400 tons on Wednesday, against 600 tons last week. The New York quotation on Wednesday was 4.20 cents per lb., against 4.20 cents a week ago and 4.15 cents a month ago. The official closing quotation in London for soft foreign for shipment during the current month was £15 15s. per ton, compared with £15 10s. a week ago.

Sales of spelter on the London Metal Exchange: 150 tons on Monday; 175 tons on Tuesday, against 425 tons last week; nil tons on Wednesday, against 950 tons last week. Wednesday's quotation in East St. Louis was 4.50 cents per lb., against 4.50 cents the week before and 4.30 cents a month earlier. Wednesday's official closing quotation in London for "good ordinary brands" for shipment during the current month was £14 6s. 3d. per ton, against £14 3s. 9d. last week.

TIN.—The quota decision of the Tin Committee on August 9th, which is discussed in a Note of the Week, brought about a complete change in the tin market situation. The cash price declined during the week by no less than £22 15s. and is expected to fall further. At the same time the three months' quotation fell by only £7 15s. and was on Wednesday only £2 10s. lower than the cash price. There is no doubt that the sharp fall of the past week was largely the result of speculative short selling. The increase in quotas from 50 to 65 per cent. is widely believed in London metal circles to be the result of strong outside pressure on the International Tin Committee. The Tin Committee will meet again on September 11th. If it maintains the quota at the present level, prices may decline in the coming autumn and winter. If quotas are reduced again to 50 per cent. or to even a lower level, then the same sharp recovery must set in as after the collapse of the tin price on the occasion of the private pool revelations early this year. All the more so as tin consumption remains at a fairly satisfactory level. It is true that European demand has tended to decline, but the United States tin consuming industries are much better employed than usual at this time of the year. Thus, American tinplate mills are still running at 85 to 90 per cent. of their capacity. In any case the next few weeks will be of considerable importance for the future of the tin market. At the moment sellers are still careful owing to their previous experience. But if the quota is not reduced on September 11th, they will in all probability sell much more freely.

Sales of tin on the London Metal Exchange: 390 tons on Monday; 165 tons on Tuesday, against 260 tons last week; 400 tons on Wednesday, against 375 tons last week. The New York quotation on Wednesday was 48.75 cents per lb., against 52.37½ cents a week ago and 52.50 cents a month ago. Wednesday's official closing quotation in London for standard cash was £211 to £213 per ton, compared with £233 15s. to £234 last week. Stocks of tin in London and Liverpool at the end of last week totalled 2,437 tons, an increase of 1,068 tons on the week.

OTHER NON-FERROUS METALS.—Among other non-ferrous metals, aluminium ingots and bars for home delivery were again quoted at £100 per ton. Nickel, for home and export, at £200 to

£205 per ton, remains unchanged. Quicksilver, on the spot, was quoted at £11 10s. to £11 17s. 6d. per flask of 76 lbs., as against £11 10s. to £11 12s. 6d. per flask last week. Chinese antimony was quoted at £70 to £71 per ton ex warehouse, the same as last week. Chinese wolfram for July-August shipment at 32s. to 34s. per unit c.i.f. remains unchanged. Platinum (refined) remains unchanged in price at £7 per ounce.

TEXTILES

COTTON.—Manchester. — Business in yarn and piece goods has again consisted of small lots to meet urgent wants. A restraining influence on buyers at the moment is the distrust of raw material prices. The crop statistics published by the American Government at the end of last week were bearish, and prices in Liverpool and New York have tended to decline. Plants continue to experience favourable climatic conditions, and there is already talk of the September forecast of the yield being larger than the August report.

Although cloth inquiry has shown a slight improvement, there has not been any particular expansion in turnover. A few more Indian contracts have been arranged, chiefly in light bleachers for Calcutta and Karachi and fancies for the up-country markets. Necessary buying has taken place in a variety of goods for the markets of the Dominions and the Crown Colonies, whilst useful lines have been reported in finishing cloths for South America and the Continent. Home trade business has been patchy and buyers have not been in the mood to make replacements, although a fairly healthy movement continues to take place in summer goods. American yarn quotations have been easier and irregular, with a limited business. With regard to Egyptian qualities the feature of importance has been the further attempt of spinners to put into operation a price-fixing scheme, and quotations have been advanced by 1d. to 3d. per lb. Some business has been forced out, but many buyers are cautious in placing orders at the higher prices.

AMERICAN COTTON CROP.—At the end of last week the Department of Agriculture of the United States Government published its first report on the cotton crop for the 1935-36 season, the indicated production being given as 11,798,000 bales. This was about 300,000 bales more than expected and compares with a crop of 9,195,000 of 9,636,000 bales. A feature of the report was the high yield per acre of 198.3 lb. against 160.9 lb. a year ago and 170.9 lb. for the immediate effect on prices was not very marked. However, during the last few days an easier movement has shown itself, and prices are now about ¼d. per lb. lower than just previous to the Government report. During the past month plants have been favoured by good weather and, in the absence of any real setback, it is anticipated that the September forecast will be higher. The crop has had the intensive cultivation. Moreover, heavy fertilisation, and land. Traders are still concerned about the future policy of the Washington Government relating to loans to farmers this season. That if, when the new crop begins to move, there appears to be a tendency for prices to be depressed, the Administration will not hesitate to offer ample loans that would immediately absorb excess supplies. Sentiment in trade circles continues bearish, and the further to depress prices.

COTTON YARN PRICE SCHEME.—The decision of spinners of Egyptian yarns in the Lancashire cotton industry to reinstitute a price-fixing scheme has not taken the trade by surprise. For months worse than at any time for a number of years. The position was such that the leaders of the industry again decided to test spinners of all spinners was held in Manchester on Friday last to consider the position and the steps necessary to be taken in order to secure a basis of co-ordination and definite understanding in regard to the selling prices of Egyptian type yarns. The proposals were enthusiastically received, and it was decided to reinstitute what is known as the 2s. and 2s. 6d. individual cost method to operate for a period of three months. This "Gentleman's" Agreement is a temporary measure, and in the meantime a special Committee will formulate a scheme based on a pool and quota system, or any other equitable scheme, which the leaders consider most suitable. The result of the movement has been that Egyptian yarn quotations have been advanced by 1d. to 3d. per lb., according to quality. These prices have so far been maintained though yarn users have attempted to resist the higher prices.

WOOL.—Bradford. — The wool textile industry is now passing through the quietest time of the year. A little private buying has, however, taken place since the close of the last London Sales. This is evidence that makers in the West Riding are short of supplies. August is usually a very slack time, all industrial towns and villages in this district having their general holiday during that month. As a rule, quietness obtains from Whitsuntide to the end of August, but this year mills have continued to run most encouragingly, and it is only this month that general quietness has been felt. This is a welcome change, clearly indicating healthy conditions throughout the industry.

There continues to be a very satisfactory inquiry for merino combing wool, and stocks are exceedingly light, there being a growing conviction that when the Australian selling season opens on September 2nd current prices will be maintained. The home trade in particular needs combing wool, and any buying on the part of other countries will lead to a very strong market in Sydney. Usually at this time of the year there are firms prepared to risk the future by taking less money for tops from November onwards, but little of this has been done so far. Crossbreds are holding their own, but business in tops is not as active as in merinos. Prices for all qualities remain firm.

GRAIN MARKETS

WHEAT.—Wheat prices in this country fluctuated within narrow limits during the past week. On August 9th, an official estimate of the United States wheat crop was published, indicating a yield of 608 million bushels, compared with 496 million bushels harvested last year. The Canadian crop is expected to yield about 300 million bushels, against 276 million bushels in 1934. Canadian stocks at the end of July amounted to 203 million bushels, compared with 193 million bushels a year ago.

According to the *Corn Trade News*, total shipments of wheat and flour during the past week were 800,000 quarters, against 811,000 quarters in the preceding week. On Wednesday last, "September" futures were quoted in Chicago at 86½ cents per bushel, against 10½ cents the week before and 85½ cents a month ago. Quotations in London, Wednesday: No. 1 Northern Manitoba, Vancouver, ship, 33s. 3d. per 496 lbs., against 34s. 3d. a week ago; No. 2 northern Manitoba, Vancouver, ex ship, 32s. 3d., against 33s. 3d. a week ago.

FLOUR.—Shipments from North America in the past week totalled 96,000 sacks, compared with 89,000 in the previous week. Wednesday's London quotations (excluding quota payments) were: straight run, delivered country, 26s. 6d. per 280 lbs., against 26s. 6d. a week ago, delivered London, 25s. 6d., as compared with 25s. 6d. a week ago. Manitoba patents, ex store, 24s. 6d. to 26s. 3d., against 24s. 6d. to 26s. 3d. a week ago. Australian, ex store, 24s. 3d. to 26s., against 20s. to 21s. a week ago.

BARLEY.—"October" futures were quoted at 34½ cents per bushel in Winnipeg on Wednesday, against 35½ cents last week and 35½ cents a month ago. Quotations per 448 lbs. in London on Wednesday were: "English feed" (old) at farm, 23s., the same as last week.

On Wednesday, "September" futures were quoted at 26½ cents per bushel in Chicago, against 30½ cents a week ago and 31½ cents last month. Quotations in London, Wednesday: "English Black" (old), at farm, 22s. per 336 lbs., against 22s. a week ago; "English White" (old), at farm, 22s., against 22s. last week; "Chilean White," landed, 26s. 6d., against 26s. 6d. a week earlier.

MAIZE.—"September" futures were quoted on Wednesday at 75½ cents per bushel in Chicago, against 75½ cents a week ago and 76½ cents last month. Quotations in London, Wednesday: "Plate," landed, 16s. 6d. per 480 lbs., compared with 16s. 6d. a week ago; "Plate," ex ship (new), 15s. 6d., as against 15s. 6d. a week ago; "Plate," "August," 15s. 7½d., against 16s. a week ago. Yellow maize meal, ex wharf, was quoted at £4 12s. 6d. per ton, against £4 12s. 6d. a week ago.

COMPARATIVE AVERAGES OF GRAIN.—The following table gives the estimated sale of home-grown wheat during the harvest years 1931-32 to 1934-35:—

	1931-1932	1932-1933	1933-1934	1934-1935
Estimated sales of home-grown wheat—	Cwts.	Cwts.	Cwts.	Cwts.
1 week to August 10	28,217	51,628	85,463	46,782
50 weeks to August 10	3,988,412	8,574,496	11,130,328	13,889,806
Average price of English wheat per cwt.	s. d. 6 7	s. d. 6 0	s. d. 5 0	s. d. 5 4

The following is a statement showing the quantities sold and the average price of British corn in the past two weeks, and for the corresponding week in each of the years from 1931 to 1934.

Week ending	QUANTITIES SOLD			AVERAGE PRICE PER CWT.		
	Wheat	Barley	Oats	Wheat	Barley	Oats
Aug. 8, 1931	Cwts. 21,284	Cwts. 1,156	Cwts. 4,314	s. d. 6 6	s. d. 6 9	s. d. 6 9
Aug. 15, 1932	28,217	1,752	4,466	6 7	6 9	7 7
Aug. 12, 1933	51,628	7,407	18,782	6 0	9 7	5 6
Aug. 11, 1934	85,463	3,305	16,502	5 0	8 2	6 7
Aug. 3, 1935	57,403	5,356	10,711	5 4	6 7	7 10
Aug. 10, 1935	46,782	3,863	22,200	5 4	6 7	6 8

AMERICAN WHEAT MARKETS.—The following table shows wheat quotations in recent weeks, with comparative figures for 1933 and 1934:—

NEAREST FUTURE	Jan. 4, 1933	Jan. 3, 1934	Aug. 15, 1934	Jan. 2, 1935	Aug. 7, 1935	Aug. 14, 1935
Winnipeg (No. 1, Manitoba) —Cents per 60 lb.	46½	65½	87½	82½	84½	82
Chicago (No. 2 Winter) —Cents per 60 lb.	46½	84½	101½	98½	90½	86½

The visible supply of wheat in Canada at 123,426,000 bushels, shows a decrease of 2,558,000 bushels on the week. Supplies a year ago amounted to 101,673,000 bushels.

OTHER FOODS

BACON.—The market in bacon was quiet and prices of English and Irish qualities were irregular. The official quotations (per cwt. for No. 1 Sizable) which formed the basis for dealings on the London Provision Exchange this week were: English, 90s. to 95s.; Canadian, 82s.; Danish, 93s., the same as last week. Arrivals in London last week included Danish, 17,652 bales; Canadian, 3,762; Dutch, 2,785; Lithuanian, 2,041; Polish, 2,583, against 17,983, 3,891, 2,757, 2,017 and 3,346, respectively, in the previous week.

BUTTER.—The recent improvement in prices was maintained during the past week, though Danish grades were slightly cheaper. Quotations (per cwt.) on the London Provision Exchange on Wednesday were: New Zealand, finest salted, 95s.; Australian, choicest salted, 94s.; Danish, 109s. to 110s., compared with 93s., 94s., and 110s., respectively, last week.

CHEESE.—Quotations (per cwt.) on the London Provision Exchange on Wednesday were as follows: English finest farmers', 56s. to 65s.; Canadian, finest coloured (new), 50s. to 52s.; New Zealand, finest coloured, 48s., compared with 52s. to 60s., 62s. to 64s. and 46s. 6d., respectively, last week.

COCOA.—The "spot" quotation in New York on Wednesday was 5 cents per lb., against 4½ cents per lb. last week. On the London market, Accras were quiet. On Wednesday last good fermented old crop, "August-September," was quoted 21s. 9d. per 250 kilos, c.i.f. Continent, against 20s. 6d. last week. Last week's movements of cocoa in London were as follows: Landed, 504 bags; delivered, for home consumption, 6,072 bags; exported, 10 bags; stocks, 155,780 bags, against 249,517 bags a year ago.

COFFEE.—Demand for coffee at the auctions in London was poor, but quotations for Brazilian in New York registered a slight rise. In New York on Wednesday, Rio No. 7 (cash) was quoted at 6½ cents per lb., as compared with 6½ cents per lb. last week and 6½ cents per lb. a month ago. Movements of coffee in London last week were as follows: Brazilian, landed, 2 cwt.; delivered for home consumption, 10 cwt.; exported, 344 cwt.; stocks, 15,185 cwt., against 28,413 cwt. a year ago. Central American, landed, 859 cwt.; delivered for home consumption, 1,898 cwt.; exported, 1,325 cwt.; stocks, 148,449 cwt., against 107,354 cwt. last year. Other kinds, landed, 88 cwt.; delivered for home consumption, 2,477 cwt.; exported, 1,681 cwt.; stocks, 166,215 cwt., against 100,726 cwt. last year.

EGGS.—Quotations for eggs continued their seasonal upward movement. At Smithfield Market on Wednesday, English (ordinary packing, Grade I, about 15-15½ lb.) realised 15s. 6d. to 16s. per 120, against 15s. to 15s. 6d. a week earlier, while Danish (15½ lb.) made 12s. to 12s. 6d. per 120, against 11s. 3d. to 11s. 9d. last week.

FRUIT.—According to *The Fruit Grower*, business at Covent Garden recovered well after the temporary lull of Bank Holiday. All dessert fruits are selling readily and most prices are at a satisfactory level for the time of year. The soft fruit season is almost finished, but some black currants and raspberries left are meeting good inquiry, while cultivated blackberries are beginning to arrive in fair quantity. Arrivals of English plums are heavier and realising moderate prices, but Continental varieties are mostly of poor quality and cheaper. Supplies of Australian and New Zealand apples are falling and prices are rising. But English apples are in better form and some large cookers are now available. Prices of hothouse grapes, small English and Italian peaches inclined lower, but sales were steady. Home-grown melons and finest peaches are in good demand. Oranges continue a good market, with prices firmer, and lemons are still very dear. Grape-fruit shows little change. Reports from Spitalfields show similar movements in both demand and supply, though lemons showed a moderate trade at somewhat easier rates, and imported plums, gages and peaches moved freely.

MEAT.—There was an improvement in the demand for beef at Smithfield Market at higher prices. Business in mutton and lamb was slow. On Wednesday last, Argentine chilled hind-lamb was quoted at 3s. 8d. to 4s. per 8 lbs., as compared with 3s. 4d. to 3s. 8d. last week. New Zealand frozen mutton was 2s. 6d. to 3s. 6d. per 8 lbs., against 2s. 6d. to 3s. 6d. a week ago. According to the Smithfield Market official report, supplies during the last week amounted to 888 tons, a decrease of 282 tons on the corresponding week of the year. Beef and veal accounted for 3,817 tons, mutton and lamb 1,349 tons, and pork and bacon 411 tons, as compared with 4,897, 1,606 and 513 tons, respectively, in the same week of 1934. Another round of cuts drive him?

PEPPER.—Wednesday, spot price for Lampung was 3d. per lb., against 3d. last week. Movements of pepper in London during the past week were as follows: Black, landed, nil; delivered, 22 tons; stocks, 1,767 tons, against 213 tons a year ago. White, landed, nil; delivered, 80 tons; stocks, 18,277 tons, against 6,326 tons a year ago.

RICE.—The spot price of Burma No. 2, cleaned, new crop, was 8s. 6d. per cwt. on Wednesday, as compared with 8s. 6d. per cwt. a week ago, while the forward quotation, at 7s. 6d. per cwt., shows a fall of 3d. on the week. Movements in London during the past week were as follows: Landed, 2 tons; delivered, 287 tons; stocks, 10,031 tons, against 2,068 tons a year ago.

SUGAR.—Quotations for raw sugar showed a firmer tendency. The spot price in New York on Wednesday was 3.18 cents per lb., as compared with 3.16 cents per lb. last week and 3.28 cents per lb. a month ago. Wednesday's sales of raw sugar in London included a "December delivery" at 4s. 4d. to 4s. 4½d., against 4s. 5½d. to 4s. 5½d. last week. The movements of raw sugar at public warehouses in London and Liverpool last week were as follows: Imports, 9,858 tons, against 24,137 in the previous week and 10,318 in the same week of last year; deliveries, 7,931 tons, against 16,389 and 7,574 respectively; stocks, 143,907 tons, against 141,980 and 172,315 tons respectively.

TEA.—The qualities catalogued for this week's auctions comprised 54,082 packages of 5-lb. bags of Ceylon

Total	33,229,621	36,443,449	223,048,967	242,873,704

tea. Demand for common tea was slow and prices irregular, but there was keen competition for good liquoring qualities at firm prices.

VEGETABLES.—According to *The Fruit Grower*, salads sold well in the London markets last week and even prices for culinary vegetables were above the average for the time of year. Tomatoe beans were rather short after the holiday but arrived in large quantities later in the week and closed at low prices. Average runners, 1s. to 2s. 6d. The potato trade was steady, with recent Borough Market. Marrows are meeting good inquiry at firm price but cabbages are not clearing so well.

MISCELLANEOUS COMMODITIES

VEGETABLE OILS AND OLSEEDS.—Reports of a break in the drought in Argentina have been confirmed and have induced crushers' requirements covered for the time being. The current quotation for Plate afloat and for shipment August-September shippers have reduced their quotations somewhat, interest in Argentine shipments continues on a moderate scale, the total date exceeding 1½ million tons, leaving 640,000 tons still available.

for export before the new crop is ready. Shipments from India are disappointingly small. The quantity now afloat for Europe is 139,400 tons (including 3,700 tons from India), rather more than last week; and for the United States and Canada 23,800 tons, against 19,400 tons a year ago. Very little of the old Egyptian cottonseed is now available and is held at a slight premium over the new seed, which is expected to commence shipment late next month. October loading is quoted at 6s. 2d. per ton.

Quiet conditions prevail for vegetable oils. Linseed oil is lower in sympathy with seed. Raw oil ex Hull mill, August delivery, is quoted at £22 per ton, naked, and September-December at £21 15s. Cotton oil is slow and crude ex Hull is offered freely at £22 10s. and

refined at £25 10s. A slightly improved demand for oilcakes is reported.

RUBBER.—The market in rubber has not been very active, and on Wednesday prices showed a sagging tendency. In New York the spot price on Wednesday was 11½ cents per lb., compared with 11¼ cents per lb. a week ago. Wednesday's official closing price for standard ribbed smoked sheet in London was 5½d. per lb., as against 5¼d. on the corresponding day last week. In forward positions, business has been done at 5½d. to 5¾d. for October-December, 1935, as against 5¼d. a week ago. Stocks in London and Liverpool at the end of last week totalled 175,201 tons, against 173,898 tons a week earlier. A year ago stocks amounted to 107,236 tons.

THE Frankfurter Zeitung

Founded in 1856

The newspaper for home
and foreign news

The Frankfurter Zeitung has a wide Home circulation and in addition is read throughout the world for its up-to-date and reliable survey of important economic and political events in Germany and all other countries.

Surveys are made by its own correspondents in all the principal capitals. The Frankfurter Zeitung considers the English point of view on various subjects. There is therefore an ever-growing demand in England for the Frankfurter Zeitung and its various supplements.

A SELF-BINDER FOR The Economist

Week by week you keep your copies of "The Economist," and ultimately you either file them or bind them. Doubtless you are accustomed to the annoyance which attaches to the ordinary binder—the difficulty of reading half the left-hand page and the unwieldiness of the device generally.

We are able to offer our readers a binder which overcomes these irksome difficulties and is, in our opinion, the most efficient contrivance for the purpose we have yet seen.

It holds three months' issues and index, it has no wires, clips or metal contrivances, and each issue can be bound up in an instant in such a way that it can be read as easily as a well-bound book.

(With this Issue appears our Monthly Trade Supplement)

ITALY SAYS "NO!"

SIGNOR MUSSOLINI has faced Europe—and even more than Europe—with what Mr Ramsay MacDonald described this week as "the most serious thing we have had to face since 1914." The procedure laid down by the Council of the League of Nations at Geneva on August 3rd, which the Duce accepted, had envisaged the possibility that France, Italy and this country, who are the signatories of the 1906 Three-Power Treaty regulating the respective economic interests of those Powers in Abyssinia, might usefully conclude an agreement which would meet the Italian claims. To that end, the delegates of France and this country met Baron Aloisi and his colleagues in Paris at the end of last week. They found the Italians still unwilling to state precise claims against Ethiopia. So M. Laval and Mr Eden, by dint of much discussion with the Ethiopian representative and of careful and exhaustive drafting, produced a provisional agreement which embodied very substantial and advantageous concessions of an economic order by Abyssinia to Italy. This draft agreement, which was put forward merely as a basis for fruitful discussion, was of a kind which would have enabled the League to delegate to the Three Powers the task of "assisting" Abyssinia. But it was apparently to be understood that France and Britain would not press for their legal share in this assistance, and that Italy would derive the bulk of the advantages under a new Four-Power Treaty with Abyssinia. The "open door" commercial principle was to be safeguarded. Moreover, the draft agreement provided for the security of Italy's East African colonies and subjects.

The French and British delegates transmitted these far-reaching and promising proposals to Baron Aloisi on Friday with the intimation that if they were not acceptable it was difficult to see how the Three-Power negotiations could continue. Signor Mussolini, with the scantiest of courtesy, did not deign to reply at once, but retired to rouse the military ardour of a Blackshirt battalion bound for East Africa. Eventually, on Sunday, the Duce contemptuously refused to discuss the terms of the proposed agreement. This resounding "No" from Rome left the French and British delegates no alternative but to wind up the dis-

cussions. And Baron Aloisi was left urging upon the journalists in Paris several disingenuous distinctions between the "integrity" and "independence" of Abyssinia in the 1906 Treaty; the alleged insecurity of the Italian colonies in the face of Ethiopian "aggressiveness"; and Italy's need of colonial expansion. Not one of these contentions was incapable of satisfaction by League or diplomatic machinery, both of which Baron Aloisi's chief has so summarily brushed aside.

Thus, Signor Mussolini has perverted the motto of the Italian revolution of 1849—"L'Italia farà da se"—into a calculated and callous rejection of the first principles of that system of collective security for the Small Powers of the world which has been painfully evolved during the last sixteen years. More than that. He has flouted the canons of extra-League diplomatic procedure to which he had freely subjected himself. He has given notice of his intention to repudiate Treaties to which Fascist Italy had set her seal, and therewith the principle of "modifications by common negotiation." He has openly declared his preference for war at all costs—and war upon a fellow-member of the League of Nations. He has decided that, for Italy's purposes, the "ancient law" of the jungle is best adapted; and in so doing he has aimed a blow at the very delicate structure of European security, as well as at his very recently concluded *entente* with France, whose own security is bound up with the League. In the name of "colonial expansion" he has deliberately incurred the risk—risk which General Smuts, speaking from South Africa, has gravely emphasised—of setting the African native population against the white; and this in a Continent where Italy, France, Belgium, Spain, Portugal, Great Britain and one of her Dominions already have large colonial possessions of her own. He has affronted the and some millions of native subjects. He has affronted the moral opinion of both the Old and the New World, as expressed unmistakably in the most authoritative organs of the Press. And he has done all this with the aim of establishing "the Fascist Empire." Well may the world ask, in the words of another Roman: "To what end will this unbridled audacity drive him?"

The world is left to await the coming of September 4th, the appointed day on which the Council of the League, again in conformity with the provisions of its second resolution of August 3rd, must meet to examine the Italo-Abyssinian dispute in all its aspects. And there can now be little doubt that the whole future of the League itself will be at stake at that meeting. In this connection, the attitudes of the French and British Governments are vital. It is by now fairly evident that the smaller Powers, and probably the whole Council—Italy being excepted as one of the disputants—will respond at once to a combined Franco-British lead. Nor can there be any question but that this lead should be in the direction of the preservation of the fundamental principles of the League in the face of a Power bent upon forcible aggression. Nor, again, is there any doubt but that British public opinion would wholeheartedly endorse British co-operation in the fulfilment of League obligations. On Wednesday, the leaders of His Majesty's Opposition were called into conference at the Foreign Office; and in public they have emphasised their belief in the necessity to uphold these obligations. On Thursday, the Cabinet held an all-day sitting; and the report that the Government have decided to stand by our obligations under the Covenant shows that the Cabinet has not been deaf to the voice of public opinion or blind to the far-reaching implications of the situation.

The task before the League on September 4th is plain. Moreover, only five days after this critical date, the full Assembly is to meet; and the Assembly contains very many more smaller Powers than the Council. Signor Mussolini has challenged the League's *raison d'être*, its capacity for performance, and the temper of its constituent Powers. That challenge may not be flung down as a gauntlet by September 4th. The Duce may yet decide not to commit technical aggression against Abyssinia before that date. But there remains barely a fortnight for discussions with France and the other members of the Council, on a common line of action at Geneva. What the negotiations in the meantime may bring forth, no one can say. Signor Mussolini has placed France in a cruel quandary, between the hammer of threatened Italian aggression in Africa and the anvil of dangerous repercussions in Central Europe. But one thing must remain as crystal-clear for France as for this country: If the League is proved impotent in the face of aggression by one of its Members upon another, then we shall all be left floundering in the welter of a pre-war international anarchy. Italy's dictator may profitably spend the few days of grace that remain to him in pondering the ultimate fate of those who incontinently draw the sword.

WIRELESS

At present, wireless is "in the news." It is as much in the public eye as in the public ear. During the last week or so there have been many occasions when the future of the wireless industry, of the British Broadcasting Corporation, and of the use of wireless for political and educational purposes, have been featured in the press. There have been the international conference of educationalists at Oxford, the announcements of important changes in the "high command" at the B.B.C., and the opening of the Radio Exhibition at Olympia and of its counterpart in Berlin. What reflections on this great post-war innovation do these events prompt?

One of the clearest incidental proofs of the grip that broadcasting has on the nation lies in the interest that everything connected with the B.B.C. excites in the public. Months of waiting are necessary before the ordinary man can obtain a seat in Broadcasting House to listen in person to a performance that can be heard with equal effect and greater comfort at his own fireside; and every major change in the personnel of the Corporation is reported in the press and anxiously canvassed by its readers.

If such interest is intelligent, it is a healthy symptom, for it indicates that the people who absorb the daily menu like to know what *chef* is preparing it; and as the personal equation must be allowed for in every estimate of the value of what is broadcast, it is all to the good that listeners should know something of the personality and intellectual

equipment of those who are in control. This consideration is particularly important in a country which maintains the wireless as a strict monopoly; and more important than ever where wireless is not only a scientific novelty but represents an experiment in administration which has never before been attempted. And that is exactly what wireless in Great Britain does represent.

As it grew plain in the days following the war that the State was not likely to surrender wholly the industrial territory that it had won from the individual, one of the ideas that were widely adopted and advocated was that of the semi-official public corporation which should combine the best of two systems. It was to give us at once the steadying influence of disinterested control and the "ginger" of individualistic enterprise and effort. Of the corporations that were founded, by far the best known to the public is the B.B.C., which covers the widest ground and touches the life of the ordinary man most often and most obviously. After these ten years or so of experiment, would the ordinary man say that the thing is turning out a success? In one way, certainly yes. All listeners have their private complaints against the programmes. But on the whole the general verdict would be that the difficult task of keeping the country entertained, instructed and elevated three hundred and sixty-five days in the year is carried out with surprising freshness and enterprise.

But from another point of view the verdict would probably be less favourable. In the B.B.C. we have a Corporation which is neither official nor unofficial, which has close relations—how close the ordinary man cannot tell—with the Government and with one Department of Government in particular; but it has no Minister to answer for its administration in Parliament, and consequently its policy cannot be officially defended or effectively attacked. It is a great collector of revenue for the State; but there is no estimate on which the Opposition can subject its operations to the criticism which every spending or collecting Government Department may have to face at any moment and expects once in every year. Changes of management, control and policy can be brought about almost unobserved; and we are faced with the peculiar paradox of a public service, more often and more widely discussed and criticised in private than any other, exempt from the ordinary operations of parliamentary criticism. It would not be correct to describe the B.B.C. as irresponsible; but it might not unfairly be called untouchable, and that fact indicates a point for serious thought in working out the further development of these semi-public corporations.

It may be argued with some effect that it is infinitely better to have a great organ of publicity too much detached from Parliament than to allow it to become the bondsman of Government; and if we thought that the present arrangement guaranteed a permanent independence of broadcasting we would put up with almost any evils to secure it. A wireless handcuffed to the Government of the day is one of the major terrors of our generation, almost the most dangerous weapon in the dictator's armoury. Herr Hitler was not slow in seeing what wireless could do for him, and he has been able to make a deadly use of this invention, which brings his views into every German home with far greater certainty than a controlled press, and shuts out the opinions of his critics more surely than the censorship. To dominate the German wireless stations is simple enough, and by a careful manipulation of the local stations, the standardisation of cheap receivers and their availability for everyone, he can make it impossible for any but the most expensive sets to import heretical foreign matter to the orthodox German fireside. A correspondent who was staying in a German town when the Führer made his great Reichstag speech in May has sent us a note he made at the time recording his impression of that great wireless occasion:—

I do not know enough German to understand Hitler's speech, but I shall not soon forget the effect that it made on me. In the afternoon there had been an atmosphere of excitement, since the Führer was to speak to us in the evening. When the time came the wireless was started in every hotel in the town and the guests gathered to listen. In theatre and opera house the play was held up, and for two and a half hours the audiences willingly or reluctantly had to listen to Hitler. In the streets, which were almost deserted except at the wireless shops, great crowds collected

by the loud-speakers, and stood silently for the two and a half hours, while empty trams slowed down to abate their noise as they moved gently by. It was a nation being talked to by a man, and I should not wonder if 80 per cent. of the population of Germany heard the speech to-night. Surely, never before did a politician declare his policy to such an audience.

In this country there is no such obvious domination of the wireless by the politician, but it is impossible even in normal times to know what influences the B.B.C., and it is very difficult to believe that, if ever we are involved as principals in a first-class international crisis, the Government of the day will not take control and use the wireless to remould our views nearer to its heart's desire. And how easy it would be for a Government, which had rightly or wrongly determined that war was inevitable, to create in an hour or two on the wireless a war-mind up and down and across the land! Not only so; there are impalpable connections between Government and broadcasting which are capable of use for negative, as well as positive, "controls" of public opinion and the popular mind.

What antidote there is to these dangers we do not know, unless it be the highest possible standard of impartiality and responsibility in our statesmen. As it needs a better man to drive a racing car at 150 miles an hour round Brooklands than it did to drive a chaise in a country lane, so it takes a better man to handle a grave international crisis to-day than it did before the high-speed mechanism of wireless and modern propaganda was put at the politician's disposal. Indeed, the world's fate may be decided by the use that the world's statesmen one day make of the world's wireless.

BRITAIN'S OVERSEAS MARKETS

THE development and prospects of our foreign trade have recently been examined with considerable interest; for foreign trade has been the laggard in Britain's "recovery," and still accounts for much of our unemployed labour and industrial plant. The figures of our overseas trade in the first half of this year enable us to examine these developments more closely.

During the first six months of this year our total trade turnover increased by £14 millions as compared with the first half of 1934. This expansion, however, is the combined result of a decrease of £3 millions in imports to £359 millions, and of an increase in exports of £17 millions to £206 millions. As compared with the same period of 1934, we took £3 millions more goods from British countries and £6 millions less from foreign countries. The expansion of our exports was also mainly to Empire countries, who bought £10 millions more from us in the first six months of this year than in the first half of 1934.

The following tables show the distribution of our trade between foreign and Empire countries quarter by quarter:

IMPORTS (£000,000)									
Imports from	Europe (including Dependencies)			Other Foreign Countries			Empire

It will be noticed that while the decline in our imports from foreign countries has been marked since the beginning of the year, the increase in our purchases from the Empire has been concentrated in the second quarter. This was due to the renewed upward trend in our domestic recovery and to the consequently increased demand for raw materials in the late spring. Exports, on the other hand, have not been so well maintained during the second quarter. This is to some extent a regular seasonal movement, although last year it was masked, in the case of British countries, by the very strong general upward trend in our exports. The following table gives details of our trade with European countries:—

* Including dependencies.

On the import side there are continued indications of the transfer of our custom from foreign to Empire countries. Russia shipped smaller quantities of grain, hides and timber to this country, while reductions from Denmark consisted mainly of pig and dairy products, and from Sweden of timber, dairy produce and paper-making materials—all of which we purchased, in larger quantities, from Dominions. On the other hand Russia, Latvia and Belgium have all benefited from our increased consumption of flax, and imports of subsidised wheat from France were increased by over £1 million. Imports from all other European countries fell off. This, however, has not, as yet, reacted unfavourably on exports. There has been a continued increase in exports to Scandinavian and Baltic countries (which now import more than in 1929), particularly of iron and steel manufactures, machinery and chemicals. Russia has also taken more machines, while exports of non-ferrous metals

have expanded to all countries. The increase of nearly £3 millions in exports to Germany is largely due to an increase of nearly £2 millions in sales of raw and manufactured woollen goods, and some expansion of coal exports. On the other hand, exports to European countries outside the sterling area show a decline in almost all commodities—a reflection of the intensification of quotas and of increasing exchange difficulties in these countries.

Trade with foreign countries outside Europe has moved similarly to that with European countries:—

* Including dependencies.

With the exception of certain special commodities, such as tin from Bolivia, copper from Chile and refined petroleum from Persia, we have reduced our imports from almost all countries. The fall of £3 millions in imports from the United States is mainly due to declines in imports of cotton and motor spirit. The increase in our exports to the Argentine has been mainly in iron and steel manufactures; and to Japan and the United States in machinery and, in the latter case, tin. Both Persia and Iraq have been good customers, as a result of their increased prosperity through the rapid expansion of the market for their main product—petroleum. Most South- and Central-American States, on the other hand, have experienced exchange difficulties similar to those of the European gold bloc, and have reduced their purchases from Britain.

The picture of trade with the Empire, shown in the following table, is very much more pleasant than either of those preceding:—

TRADE WITH BRITISH COUNTRIES—FIRST HALF-YEAR

Excluding I.F.S. ...	...	170,582	132,651	135,447	...	141,086	75,700	85,945

From certain countries we took less imports than a year ago: New Zealand (wool), Ceylon (tea), India (shellac, leather and tea), South Africa (wool and hides), West Indies and Mauritius (sugar). But apart from our restricted imports of sugar, most of which comes from British countries, we have considerably increased our imports of foodstuffs this year—grain, mutton and lamb, and dairy produce from the Dominions; and fruit from Palestine and the West Indies. We have also taken more non-ferrous metals from Canada and Northern Rhodesia. On the

export side we find an expansion of all markets except the West Indies, which have suffered severely from the sugar crisis. As in other countries enjoying a measure of recovery, the commodities which are most in demand, and which account for the larger part of this expansion, are iron and steel manufactures, especially railway materials, machinery, electrical goods and vehicles. West Africa and India also took more of our cotton goods, but in other parts of the Empire the policy of quotas on Japanese goods seems to have had little effect on our own trade.

Unlike exports, re-exports to Empire countries have fallen from £5.5 to £5.2 millions; while re-exports to foreign countries have risen slightly owing to increased *entrepôt* trade with Russia, Italy and the United States. These movements, however, are unimportant compared with the main figures of exports and imports, which show a substantial increase in the proportion of our trade going to British countries.

BRITISH ENGINEERING—III

WITH this article, the third in the series, we conclude the survey of the developments in the various branches of the British engineering industry.

Machine Tools.—This section is largely dependent on activity in other branches of engineering. In 1930, 34 per cent. of its total output was exported; but in the last few years this percentage has varied widely. Exports reached a maximum of 23,826 tons in 1932, mainly owing to large purchases by Russia; they fell to 8,887 tons in the following year, but recovered to 12,304 tons in 1934. Exports to Russia fell from 19,234 tons in 1932 to a little over 4,000 tons in each of the following years. A revival in Russian orders is expected, for under the Anglo-Russian trade agreement there is a strong incentive for Russia to purchase her machine-tool and machinery requirements here.

The present increase in activity seems well founded, for it is based on a revival in home industry, particularly in connection with the motor industry and on a less spectacular increase in exports. The only other country to achieve an increase in exports of machine tools in 1934 was the United States, but the British proportion of the combined exports of the principal manufacturing countries was then higher than for many years (except 1932).

Imports of machine tools are considerable, amounting to 6,564 tons in 1934. In view of the success achieved by British manufacturers in the export market, this is surprising; but the value per ton of imports (£216) is very much higher than that of exports (£131), which would indicate that the former consist mainly of certain precision and special tools.

Constructional Engineering.—Activity in this branch of engineering can only be gauged by the number of its employees, which fell from 25,953 in July, 1929, to 19,198 in 1932 and 1933, and recovered to 24,747 in 1934. Home demand is mainly dependent upon railway companies and local authorities, though more and more steelwork is being used in large buildings. The recovery in 1934 must be ascribed mainly to the latter factor, since it was achieved without any assistance from large-scale Government expenditure, and railway programmes were also below normal. The prospects of continued expansion are favourable, since whatever the Government's policy on public works may be, that branch of demand is unlikely to fall any lower, while the 1935 railway programmes show considerable expansion.

In both 1933 and 1934, however, export demand exceeded home demand, notable examples of constructional work abroad being the Lower Zambesi Railway Bridge and the Mettur Dam in Madras. The greater part of the demand was from the Empire, but towards the end of 1934 orders for a number of bridges were received from the Chinese Government. It is probable that export demand will continue to expand slowly, though, again, it is hampered by exchange restrictions.

General Engineering.—This very large group remains for our examination. No sub-division of the group is possible in a short survey, though it accounts for about 40 per cent.

The New York Trust Company

Capital Funds \$32,500,000

CABLE ADDRESS: NYTRUSTCO

EUROPEAN REPRESENTATIVE'S OFFICE:

8 KING WILLIAM STREET, LONDON, E.C.4

of all those employed in the engineering industry. It enjoyed a considerable recovery during 1934; employment increased from 398,448 in July, 1933, to 447,000 at the same date in 1934, though the latter figure remains considerably below the 1929 figure of 533,748.

Summary.—Throughout all branches of the engineering industry the recovery in 1934 was mainly due to the home market. While domestic demand for the industry's products has probably not reached saturation point, any considerable expansion in the future must depend on a revival in exports. During the past few years most branches of the British engineering industry have maintained, or even increased, their percentage of world trade; and an expansion in exports therefore mainly depends on the mitigation of exchange restrictions and an increase of purchasing power abroad. The two countries which chiefly compete with the British industry are Germany and the United States. While Germany has in recent years lost some of her former ascendancy, there is the danger that she will quite possibly go on concluding barter agreements, on the lines of that arranged with South Africa at the end of last year. The devaluation of the dollar provided a stimulus to exports from the United States during 1934, but by the end of the year it was apparent that this was being offset by increased wages and shorter working hours under the various codes. The Schechter decision regarding the legality of N.R.A. may result in renewed competition from the United States, but it is as yet too early to assess the international effects of that legal decision.

In any case, this short survey of developments in the leading branches of one of Britain's greatest industries shows that a measure of recovery has speedily been made from the catastrophic low level of activity in 1932. This argues that the industry as a whole is well placed to benefit from either a badly-needed recovery in world trade or from further expansion in domestic activity.

There can be no question that a recovery in world trade would be of the utmost benefit to the industry—especially to those of its branches which turn out, or are dependent upon the production of, textile machinery, locomotives, rolling stock, and ships. In design and construction of ships, locomotives and rolling stock, the industry can probably more than hold its own in the overseas markets; but in the matter of design and modern requirements the important section of textile machinery has lagged behind both its overseas competitors and the other branches of British engineering. No doubt, depression in our own cotton textile industry has been a retarding influence; but where, as in the case of the production of British artificial silk tissues, the most up-to-date and efficient textile machinery has been required, it has had to be imported from abroad. There is, therefore, much scope for improvement in this section of British engineering. With regard to continued domestic recovery, there are two vital factors involved: the continuance of the "building-boom," and the probable effects of an accelerated and expanded rearmament programme.

There are now indications that, even if the "building boom" assumes more modest and normal proportions, increased armament construction will soon have an effect on many branches of engineering.

For the future of the industry as a whole, however, there are two main requirements. There must be continued reorganisation of the industry's various sections, where there is frequently only a complex of small competing units—many of them at, or under, the "margin" of profitability. And—a point which is so often ignored—more attention must be concentrated on technical education within the industry, for this constitutes an important factor in competitive efficiency. What Germany has achieved for her engineering industry, by means of a highly efficient technical education, is well known.

On the Continent, technical education takes the form principally of a full-time, practical education before entry into the engineering industry. In this country, technical education relies mainly on the apprenticeship system under which the apprentice attends evening classes at evening institutes or colleges. In 1933, the number of apprentices in the engineering and metal working industries attending such evening classes was 123,703, while only 1,575 full-time students attended engineering colleges. In addition 6,973 employees were released during the day for technical education. The main disadvantage of the apprenticeship system lies in the fact that usually only a narrow range of training is provided; and for this reason many engineering employees would prefer the Continental system. The Ministry of Education, however, after conducting an inquiry in certain Continental countries in 1932, recommended that the part-time system should be retained in this country, but that the system of releasing employees during the day should be more widely adopted. It may be that, by comprehensive use of this method, the competitive efficiency of British engineering can rapidly be increased.

CANADA'S POLITICAL FERMENT

(BY OUR OTTAWA CORRESPONDENT)

CANADIAN politics are in a ferment. The Canadian Federal Parliament is still undissolved and the date of the coming General Election has not been announced. A statement recently made by the chief organiser of the Conservative Party indicates September 23rd as the probable date of polling. Meanwhile, the whole country is being flooded with electioneering oratory and propaganda. The election now promises to be a confused *mêlée*, with at least three candidates contesting most seats, and four in not a few constituencies. Already nearly 400 candidates have been nominated for the 245 seats, and the final number who will go to the polls promises to exceed the 531 who stood in the election of 1930.

The troubles of the Conservative Ministry of Mr Bennett were numerous and grave even before Mr Stevens founded his Reconstruction Party. Indeed, no Canadian Government has ever entered a Federal election with the omens so adverse. Prince Edward Island is a tiny province, but this fact cannot conceal for the Conservative Party the ominous symptoms of popular feeling shown in the result of a provincial election held there on July 23rd, in which the Liberals, carrying every one of the 30 seats, swept a Conservative administration out of office. This result leaves the Conservatives without control of a single Provincial administration in the Dominion, and the Liberals in possession of seven. Following upon a similar result in New Brunswick in June it bodes ill for the chances of Conservative candidates in the Federal election in the Maritime provinces, where the party's strength in 1930 was proportionately greater than anywhere else. Damage is also being done to the Conservative cause by a *saute qui peut* flight of Ministers to comfortable havens outside the vicissitudes of politics. Three of them, including Mr Rhodes, the Minister of Finance, and Mr Sauve, the Postmaster-General, have taken Senatorships as a prelude to withdrawal from office; a fourth has been appointed to a judgeship; the Minister of National Revenue has announced his impending retirement from public life; and at least two more, including Mr Guthrie, the Minister of Justice, have no intention of contesting their seats. Premier Bennett, although not yet in perfect health, has decided to lead his party during the campaign; he will therefore have to reconstruct his Cabinet on the eve of the election and, under existing circumstances, it will be extremely difficult for him to make good the dearth of sound Cabinet material in his following. The Conservatives have been steadily hoping that they would have as an election counter at least a modest trade reciprocity treaty with the United States; but the negotiations seem to be in a state of suspended animation. If they cannot get such a treaty before the election, they will contend that they ought to be kept in power because they are the only party who will keep vigilant watch over the interests of Canada in trade negotiations with her mighty neighbour. Mr Bennett and his party have lost the initiative which they managed to seize with their "New Deal" programme early in the year, and they are committed to a very difficult rearguard action with the odds heavily against them.

The Liberal Party, led by Mr Mackenzie King, have considerable justification for their belief, based on the results of Federal by-elections and provincial elections, that the voters have become disillusioned about the efficacy of high tariffs as a cure for Canada's troubles, and tired of the general policies of the Conservative Party. But complaint has been freely made in recent months, even in Liberal circles, that Liberal leaders have been relying too complacently upon the unpopularity of the Government to waft them into power, and have not troubled to present to the country a constructive programme.

The appearance of the new Reconstruction Party, led by Mr Stevens, renders it imperative for Mr King to propound a definite policy for his party. He is expected to do so in a series of nation-wide broadcasts, with which he will open his campaign at the end of July. He will direct his main indictment against the high tariff policy of the Government on the ground that, instead of decreasing unemployment, it has increased it by depressing the basic natural industries through loss of foreign markets which were closed by retaliatory tariff legislation; and that it has aggravated the consequences of the depression for Canada. He will pledge his party to bring back the tariff to that prevailing at the close of the last Liberal regime, and to revise the Ottawa agreements by negotiation, but not to abrogate them. Some of his lieutenants have been trying to commit the Liberal party to the nationalisation of the Bank of Canada, but Mr King has evaded any such pledge. He will also be very cautious in his pronouncements on the Constitutional question, for the province of Quebec, where he expects to regain most of the seats lost by the Liberals in 1930, is traditionally very jealous of Provincial rights and has an ingrained horror of any tampering with the British North America Act, by which the religious and linguistic rights of the French-Canadians are safeguarded. On the whole, the Liberal Party will conduct a "middle-of-the-road" cam-

paigned, and try simultaneously to convince Radicals that it will tread the path of reform, and to persuade Conservative business-men that it can be trusted to embark on no perilous adventures. If the Liberals win the election, Mr Mackenzie King will be handicapped in the task of forming a presentable Ministry by the fact that the two ablest of his lieutenants, Mr Dunning, his former Minister of Finance, and Colonel J. L. Ralston, who in recent sessions has steadily grown in political prestige, have been compelled for private reasons temporarily to drop out from public life.

Radical elements in Canada during the last three years have been rallying round the Co-operative Commonwealth Federation, which came into existence in 1932 as a political "holding-company" for agrarian and labour organisations and groups of the Socialist intelligentsia. It has adopted a programme which could fairly be described as socialistic, but it sedulously eschews the use of the Socialist label through fear of frightening off rural voters, among whom the tradition of "rugged individualism" is still powerful. The C.C.F. has at present some 15 representatives in the House of Commons, but it has not yet been able to build up an efficient nation-wide organisation. Moreover, it suffers from the lack of press support, its only partisans being a few weekly newspapers. It has, however, very considerable strength in the two most westerly provinces, British Columbia and Alberta, and a fairly large following in Saskatchewan and Manitoba and in the industrial centres of Ontario. East of the Ottawa River its only serious foothold is in the City of Montreal, where it has at last, despite the bitter hostility of the Roman Catholic hierarchy, begun to make headway in converting the French-Canadian workers to its doctrines. But it could scarcely hope at this election seriously to challenge the two historic parties; and now its whole future as well as its immediate prospects are threatened by the advent of the new Reconstruction Party.

This Party is still in the embryo stage, and it is difficult to see how Mr Stevens and his allies, in the short time at their disposal—at the outside, only two months—can hope to create a national organisation and so make good their threat to place candidates in every constituency. The fifteen-point programme embodied in Mr Stevens' manifesto has many points in common with the platform of the Co-operative Commonwealth Federation. Both of them favour nationalisation of the Bank of Canada, a merger of the railways under public ownership, and a generous programme of public works for the absorption of the unemployed, together with a more equitable system of relief. If Mr Stevens were not in the habit of denouncing Socialism as wholly impracticable for Canada, there would be no reason why the C.C.F. and the Reconstruction Party should not be merged forthwith. The C.C.F. has no leader able to match Mr Stevens in national prestige and campaigning experience, so it will probably see a lot of its supporters drift away to the Reconstruction Party. Mr Stevens may be without funds and eminent supporters, but he has one tremendous asset. He is the only Canadian politician within living memory who has given up a Ministerial salary for what he thought was a just cause. He is a real political hero in the eyes of many people; the young inmates of unemployment relief camps whose case he has pleaded, employees of stores and factories whose low wages he has criticised, retail merchants who regard him as their champion against the great chain and department stores, and cattle raisers who have been delighted with his denunciations of the packers' combine. Probably no Canadian leader has to-day such a large personal following of genuine admirers. He has, however, revealed an inclination towards currency inflation; and Mr Aberhart and his Social Credit Party in Alberta, whose activities were described in a recent number of the *Economist*, have announced their willingness to co-operate with him on terms. But it remains to be seen whether Mr Stevens can organise his cohorts in two months and get their vote delivered at the polls. If he cannot accomplish this, his Reconstruction Party will have only a nuisance value at the election. It will, however, be more of a nuisance to the Conservatives than to the other parties, and might reduce their strength in the new Parliament to such small dimensions that their survival as a separate force in Canadian politics would prove none too easy.

NOTES OF THE WEEK

The Ban on Arms for Abyssinia.—On Wednesday of last week the Abyssinian Government appealed to the Governments of the States members of the League Council, begging for a removal of the embargoes on the export of arms to Abyssinia which are at present in force in most of the arms-manufacturing countries of Europe, including this country. The Abyssinian case, as we pointed out, was overwhelmingly strong last week. It has become morally unanswerable now that the Paris negotiations have broken down. For this breakdown is flagrant. No one can any longer pretend that Signor Mussolini does not mean to go to war with Abyssinia. The British Government's explanation of its own embargo was that it was determined to do nothing to exacerbate Italian feelings so long as a ghost of a chance remained of securing a peaceful settlement through mediation. That chance is now virtually extinct, and the Italian Government has shown by its action last week, and by the campaign of vilification of Great Britain which the Italian press has been allowed to pursue, that it takes less than no account of British feelings. Not only has the policy of kind words to Italy been proved unsuccessful; we have a positive obligation to allow—perhaps even to assist—Abyssinia to secure the arms with which she may be able to ward off the impending aggression. The Cabinet at its meeting on Thursday decided to prolong the embargo "for the present," but it was made clear that this does not necessarily imply that it will be maintained until September 4th. This decision may mean one of two things. On the one hand it may mean that the British Government, in spite of the provocative behaviour of Italy, is still determined to persist with the method of kindness. In view of the very small chances of success in such an endeavour, and the very severe handicap which every day of delay imposes upon Abyssinia, such a decision would be disgraceful. It would be bad enough if we were to fail, once again, to keep our engagements under the Covenant to preserve the integrity of a weak and peaceful member of the League who was being attacked by an aggressor. It would be monstrous if, in order to avert the aggressive Power's hostility from ourselves, we were to penalise its victim by deliberately depriving her of the means for self-defence. But secondly, the Cabinet's decision may mean that there are certain technical obstacles to the immediate raising of the embargo, and that when they have been overcome the export of arms will be resumed. It is to be hoped that this is the correct explanation of a rather puzzling decision. In the Abyssinian case our obligation to remove the present arms embargo exists independently of the League Covenant; for we are bound, together with France and Italy, under a treaty concluded between the three Powers and Abyssinia in 1930, to allow the Emperor of Abyssinia "to obtain all the arms and munitions necessary for the defence of his territories from external aggression." Our obligation is unquestionable, and the embargo should be removed at the earliest possible moment.

American Neutrality.—There has been talk in Washington for some time past of legislation to secure that the United States shall not be involved in future wars as she was in the last. The old doctrine of the freedom of the seas has gone by the board, and the prevailing Congressional opinion is that America should cut off all intercourse with belligerent nations rather than, by insisting on her right to free intercourse with both sides, run the risk of falling foul of one of them. But it has needed the critical turn taken by the Italo-Abyssinian dispute to stir Congress to the point of legislation. The Senate on Wednesday passed without a vote a resolution recommended by its Foreign Affairs Committee providing

That upon the outbreak and during the progress of war between or among two or more foreign States the President shall proclaim such fact, and it shall thereafter be unlawful to export arms, ammunition, or implements of war from any place in the United States or possessions of the United States to any port of such belligerent States or to any

neutral port for transshipment to or for the use of a belligerent country.

The President by proclamation shall definitely enumerate the arms, ammunition, or implements of war, the export of which is prohibited by this Act.

The President may from time to time by proclamation extend such embargo upon the export of arms, ammunition, or implements of war to other States as and when they may become involved in such war.

This very sweeping resolution goes too far for some of the advocates of neutrality. It would make action by the President mandatory so far as the original belligerents were concerned, and would prevent any discrimination between them, even if one of them should be a flagrant aggressor. Moreover, the last sentence might be interpreted as applying to States engaged in forcibly restraining the aggressor in accordance with decisions of the League of Nations. The House of Representatives has before it a resolution prepared by its own Foreign Affairs Committee after consultation with the Department of State, which provides

That upon the outbreak of or during the progress of war between or among two or more foreign States, or whenever the President finds that conditions existing in any part of the world are such that the shipment of arms, ammunition, and implements of war from the United States may involve the United States in international complications or contribute to armed conflict, and when in either such case the President finds that the imposition of restrictions on the export of such war material from the United States will serve to maintain peace between the United States and foreign nations, or to protect the commercial interests of the United States and its citizens, or to promote the security of the United States, and shall so proclaim, it shall thereafter be unlawful to export arms, ammunition, or implements of war from any place in the United States to such countries as the President may designate.

The President's influence will undoubtedly be cast on the side of the House version, which would give him a much greater latitude of discretion. The final form of the resolution, however, depends, as does the final text of many important Bills now before Congress, on the compromise which can be reached in secret conference in the hurried hours of the final scramble to adjourn. It would be a pity if the United States, in its anxiety to avoid "entanglements," put itself in the position of refusing even moral support to the attempts less self-centred nations may make to establish a system of international morality and law.

* * *

Congress Near Adjournment.—The pace of legislation in Washington is working up to a climax in the expectation of an almost immediate adjournment of Congress. The session has already lasted longer than usual and the temperature of political dispute throughout the country is rising so rapidly that Congressmen are very anxious to get home and look after their own political defences. The President, however, refuses to consent to an adjournment until all his Bills are enacted. A long list of measures has accumulated, all of which have been passed by one or other House, and some by both, though in divergent forms. Of the major measures only the Social Security Bill has been actually enacted, but agreement has been reached between the two Houses on the Banking Bill, the Tax Bill, and the Bill to extend and consolidate the powers of the Tennessee Valley Authority. The other Bills are still being disputed between the two Houses, some of them, notably the Public Utility Holding Company Bill, hotly disputed. It is a peculiarity of the American legislative system that, though talk is virtually unlimited in the earlier stages of a Bill, its final form is decided in a secret conference between delegates of the two Houses and that final form is enacted without debate. Moreover, the conference is frequently, as at present, postponed until the hurried closing days of a session, the President, and the country, being presented with a batch of large, but often ill-considered, Acts at the very last moment. The haste of the Democratic minority to return home has been increased by a remark-

able revival of activity in the Republican Party. That Party has survived in a stronger form than seemed possible only a few months ago. It is frankly optimistic, believing that an amalgamation of all the different forms of discontent with the New Deal will yield as large a protest vote against Mr Roosevelt in 1936 as he united against Mr Hoover in 1932. This is at present rather extreme optimism, but next year's Presidential election is clearly going to be more of a contest than it might have been. The great difficulty of the Republicans, as is always the case under the American system with the party out of office, is to find a candidate. He must be well enough known to attract support, sufficiently opposed to the New Deal to attract the Conservative Democrats, without being so cautious as to throw the Progressive Republicans into the arms of the President. And since the President is an Easterner, the Republican candidate has a chance to collect votes from the West if he himself comes from beyond the Mississippi. The first of the "straw votes," in which Americans delight, shows Senator Borah as the leading candidate, with Mr Frank Knox, of Chicago, and Governor Landon, of Kansas, as his nearest rivals. Mr Hoover is well down the list. These personalities are important, for an American Party, with no continuing policy or organisation, takes its meaning from the character and beliefs of its leader, and the nature of the opposition to Mr Roosevelt, as it takes shape in the next few months, whether it is successful or not, will very largely influence the policy of the United States, in domestic and foreign affairs, until 1940.

Dr. Schacht Hits Out.—No one could doubt Dr. Schacht's courage. His speech at the opening of the Königsberg Eastern Fair last Sunday affords ample proof of it. Only a little over a year ago Herr von Papen was allowed to make a famous warning speech against the Nazi extremists. The bloody purge of June 30, 1934, followed in a very short time, and in the *mêlée* Herr von Papen barely escaped alive. In the last few weeks a wave of Nazi extremism has again been let loose over Germany; Dr. Goebbels gave it a noisy blessing in his notorious speech at the Tempelhoferfeld a few weeks ago; and since then, the Nazi Party stalwarts—including Herren Goebbels, Julius Streicher, Baldur von Schirach, and Himmler—have all been leading an anti-Semitic, anti-Catholic, anti-Protestant, anti-Stahlhelm, and anti-"carpers" crusade. In some of their utterances the typical Nazi lack of sympathy with "big business," *rentiers*, banks, and the canons of economic commonsense, has been apparent; and as Dr. Schacht is the only economic dictator of Germany, the shafts of the Nazi Party's leaders flew uncomfortably near him. The speech at Königsberg last Sunday constituted his flaming retort to them. For interfering with Germany's economic policy, he roundly condemned "those persons who, in the dead of night, heroically smear shop-windows; who proclaim every German who buys in a Jewish shop as a traitor . . . and who, in the legitimate struggle against priests who dabble in politics, cannot distinguish between the abuse of the pulpit and true religion." The effects of these disturbances on Germany's necessary economic relations with foreign countries could not be a matter of indifference to Germany or to Dr. Schacht himself. The Nazi State should be based on law and order, not on the predilections of irresponsible individuals. The State had taken, and still needed, very many people's savings for its vast work-creation and rearmament programmes; moreover, consolidation of the enormous sums spent for financing these schemes "in-advance-of-revenue" would inevitably become necessary one day; and then it would have to be done from the "industry and savings of the people." Dr. Schacht went on to reaffirm his desire to make every effort to satisfy the "existing demands" of Germany's creditors. This can scarcely bring more than cold comfort to Germany's creditors, whose eyes will probably remain fixed on the internal stresses and strains of the political structure in Germany. As Dr. Schacht said, the financing of the work-creation and rearmament programmes was only possible under Germany's "authoritative" (*sc. totalitarian*) State. Presumably the reason is that in such a State any-

thing can happen at any time. But the moral can hardly fail to be noted by foreign observers. Meanwhile, many of them must be wondering what Herr Hitler, in his Bavarian retreat, is thinking about the verbal see-sawings in Germany's high places.

Italy's Economic Position.—How far is Italy dependent on imports? Has she built up substantial stocks of certain key commodities? What is the present position of Italian trade and industry? These questions are continually being posed to-day. Here some indications are given in reply to them. First, according to the latest figures of the Ministry of Corporations, the index of industrial production in Italy (basis 1928 = 100) has risen from 72.98 in 1932 to 80.49 in 1933, to 88.33 last year; and the May figure this year at 113.55 compares with a figure of 89.47 for May last year. The branch of industrial production which shows the steepest rise is that of the metallurgical and mechanical industry, for which the index rose from 75.85 in May of last year to 100.72 in May this year; but the production of textiles and of buildings and construction in general showed almost as great an increase. Wholesale prices have risen steeply in the past year; the index of the Provincial Office of Corporative Economics at Milan (basis 1913 = 100) shows that, after a falling trend down to July of last year, the index rose from 272.91 in that month to 379.12 last month. The purchasing power of the lira during the twelve months has therefore dropped from 36.64 per cent. of its pre-war level to only 31.34 per cent. last month—a fall of nearly 15 per cent. in a year. In sympathy with wholesale prices, the cost of living, as far as it can be ascertained, is also showing a rising tendency. As for necessary imports, Italy needs about 12-15 million tons of coal per annum; 60-70,000 tons of copper; about 200,000 tons of iron ore; about 1,000,000 tons of scrap and other steel; 25,000 tons of lead; 90-100,000 tons of manganese; 1,500 tons of nickel; about 500,000 tons of motor spirit and crude oil; and 15,000 tons of spelter and zinc. In tungsten, tin, imports; and her domestic production of wool, fodder, coal, petroleum and motor spirit, cannot nearly suffice for her requirements in peace time. The following table shows how some of Italy's chief imports have been moving:—

Commodity	1932	1933	1934	1934 Jan.-May	1935 Jan.-May
Meat, salted, preserved, etc.	14,608	4,417	5,819	2,281	3,983
Barley..... quintals	34,192	37,771	68,617	19,487	26,484
Flax..... quintals	20,131	17,254	19,487	12,438	44,234
Cotton (raw)..... quintals	1,902,001	2,197,764	1,871,647	1,010,541	13,986
Copper, ingots..... quintals	515,204	602,201	629,988	1,010,541	798,364
Nickel, ingots..... quintals	4,989	8,829	15,452	280,378	428,177
Lead, ingots..... quintals	83,149	85,209	60,519	6,148	7,981
Tin, ingots..... quintals	37,712	39,983	42,155	15,646	67,785
Zinc, ingots..... quintals	16,378	11,804	28,074	7,943	21,422
Coal..... tons	8,017,827	8,790,209	11,781,354	4,296,825	5,575,887
Coke..... tons	760,493	771,545	852,331	290,819	326,072

Italy's imports of wheat and maize have not increased, for domestic production has risen steeply. Her imports of cotton, wool and rubber have not increased—despite Italian efforts to make heavier purchases abroad—owing to difficulties over Italy's foreign exchange resources and her securing the necessary credits abroad. Already the London banks are considering if it is safe to keep open their credit lines with Italy; and there is little doubt that the decision will be adverse. It is more than likely that the New York banks will take a similar view. These indications are enough to show that the way of Italy, as an aggressor, may yet prove hard. It is known that stocks of certain commodities of armament materials, cotton, wool, fodder and rubber. The auspices at present are not such as to encourage the belief that Italy, if she decides on war, will easily be able to secure increased supplies of most of these "vital imports." In the event of American action under the "neutrality legislation" (see page 365) and of League action in the shape merely of an "economic boycott," Italy may well find her economic situation rapidly becoming critical.

The Milk Poll.—The result of the poll of registered producers of milk, which was announced on Monday, was much more favourable to the Board than had been anticipated. The opposition to the Board among dairy farmers has been very vocal, especially at public meetings, and such unofficial test votes as had been held showed only a small majority in favour of the scheme's continuance. The majorities shown by the poll, however, were very large, 81 per cent. of the producers voting in favour of the scheme. In the second poll, in which a producer has one vote for each of his milch cows, the majority was increased to 86½ per cent. Since only 98,000 producers voted out of 167,000 on the register, the discontented minority is revealed to be less than 12 per cent. of the industry. It is important to remember, however, that the vote was taken, not on the perfections or imperfections of the present scheme, but on whether there should be a milk marketing scheme in any shape or form. Had the vote gone against the Board, there would have been no organisation left to bargain with the dairymen, no power to protect the "liquid" market from the competition of "manufacturing" milk. The vote cannot therefore be interpreted as absolving the Board from the responsibility of pursuing their search for amendments and improvements. That amendments are necessary is shown more clearly than ever by the figures of milk production in July which were released with the result of the poll. During the month 80.86 million gallons of milk were produced, of which 34.03 million gallons were surplus to the requirements of the "liquid" market. The "surplus" is now beginning its seasonal decline and is 10 millions less than in May, but it is 15 millions more than in July last year. The essential principles of the scheme are that an absolute separation is maintained between the "liquid" and "manufacturing" market, but that the receipts from the two markets are pooled and a flat rate per gallon paid to each producer, irrespective of the use made of the milk he produces. Now if the surplus is small, the "pool" price will be little less than the "liquid" price, and only those producers who could formerly rely on selling all their milk for liquid consumption will be adversely affected. But with every increase in the "surplus," the gap between the "liquid" price and the "pool" price widens and a fresh batch of producers consider themselves aggrieved. In July, for instance, the "surplus" converted a "liquid" price of 13d. into an average "pool" price (before deductions for expenses, etc.) of 10.5d. a gallon. The Board's task is to prevent the "pool" price falling any lower, and the solution it favours is to fix a quota for each producer on which the "pool" price will be paid, any excess production being paid for only at the "surplus" price. In the long run it would be more satisfactory to lower the "liquid" price and increase consumption, but there is much force in the Board's contention that the reaction to this would be far too slow to cope with the present emergency. In the circumstances, the Board's proposal is probably the best that can be devised. With its future now assured for at least twelve months, it is to be hoped that the amendments to the scheme will be put through before next spring's flood of "surplus" milk begins.

A Daniel Come to Judgment.—Lord Nuffield has put the cat among the pigeons, with a vengeance! Speaking at a dinner last Friday, he told his hearers that the prices quoted by British steel producers were a third greater than those of foreign competitors. The result was that British motor manufacturers could not reduce their prices further. The steel manufacturers, he continued, were taking advantage of the duties on imported steel instead of increasing their production and lowering their prices. This handicapped motor manufacturers and should cease at once. "Unless they change their methods," added Lord Nuffield, "I will go so far as to say that we will buy our steel outside this country." How strange are the mutations of the protectionist mind! Less than a year ago Lord Nuffield told Englishmen that they should refrain from the unpatriotic practice of buying the cheaper foreign cars. We then asked:

Does he consider all international trade immoral? Or would he feel justified in purchasing some of his raw

Family provision scheme

A scheme to secure a Capital Sum payable at death and a regular income over a period of years for dependants in the event of early death, at a cost which is little more than that of ordinary life assurance. It is readily adaptable, and rates will be quoted on application for policies to suit the needs of each individual.

Established 1844 Funds exceed £19,000,000

materials from foreign countries, if he could not get them so cheaply at home?

Lord Nuffield has answered our questions in person; but in so doing he has refuted his earlier argument. There is no better cure for a belief in protection than a little protection for others!

Chinese Banditry and International Politics.—The tragic death of Mr Gareth Jones will have come as a shock to all who knew him. The Chinese authorities are not unduly to be blamed; for they did warn Mr Jones and his companion not to travel by the route on which they were captured. At the same time, it is a serious confession of inefficiency for any Government to have to proclaim that, in territory which is nominally under its authority, it is only able to keep the peace on certain lines of communication and not elsewhere. And this admission is apt to have international consequences when the partially anarchic territory happens to be on the threshold of the dominions of a Power with a stronger hand, which is ready and anxious to extend still further the limits of its own domination at a less competent neighbour's expense. If and when the Japanese do extend their military occupation from Jehol Province, which they have already incorporated forcibly into "Manchukuo," to Chahar Province, where they have so far only made a few tentative reconnaissances, they will probably not forget to remind the British public that Chahar was the scene of Gareth Jones's death. A fresh Japanese advance in this direction is always on the cards. In fact, the political tension along the Chahar-Jehol border was the lode-stone which drew Mr Jones and Dr. Müller into the bandits' haunts. It is therefore worth considering whether a further Japanese advance into Eastern Mongolia really would bring with it an improvement in internal law and order as an offset to the international lawlessness of such an act. Perhaps the answer to this question is given by the coincidence that, the day before Gareth Jones' body was found in Chahar, the Japanese authorities in "Manchukuo" admitted that, in a recent raid by "bandits" on the administrative office of one of the districts of the Japanese dependency on the Asiatic mainland, seven Japanese—including the Japanese Adviser to the district Government and his staff—had been killed. The Japanese have never succeeded in stamping out "banditry" in the Manchurian and Mongolian territories of which they have taken possession. The reason is, of course, that, in the territories under Japanese occupation, the traditional "economic" banditry has taken on a political complexion; and the criminals who would formerly have had the settled population against them have now coalesced with the patriots who are up in arms against a foreign domination. This transformation of "economic banditry" into "political banditry" is no improvement, but a lamentable change for the worse.

The Danzig Settlement.—It is satisfactory to be able to record the rapid settlement—and this by direct negotiations—of the serious dispute between Poland and Danzig which recently came to a head. The first step was achieved on August 8th by the initialling of an agreement under which the Danzig Government withdrew its recent decree permitting certain foodstuffs and other commodities to be imported duty-free from Germany into Danzig. The Polish Government, as its contribution to the agreement, withdrew the duties which had been imposed a few days earlier upon imports into Poland *via* Danzig. The second step seems to have been accomplished by way of a verbal understanding. The Danzig Government has agreed to the immediate opening of discussions between the Bank of Danzig and the Bank of Poland on the "freezing" of Polish export proceeds in Danzig as a result of the recent and unilaterally imposed regulations in Danzig for the control of the gulden. In return for this rather tardy conciliatoriness on the Danzig Government's part, the Polish Government seems now to have given a verbal assurance that it will abide by the arrangement, ratified on September 18, 1933, by which Poland undertook to give equal economic treatment to Danzig and to the new Polish port of Gdynia. It is the remarkable feat of having created Gdynia *ex nihilo* since the war which has given Poland the whip hand in her dealings with Danzig ever since. The Danzigers are certainly wise to think twice before they ruin their city economically for the sake of making a gesture of political independence. On the other hand, if Poland did ruin Danzig economically for Gdynia's benefit, then Danzig would have no interest left in the post-war political *status quo*, but she would have the strongest economic as well as political incentive to seek reunion with the Reich—a piece of territorial treaty revision which Poland could not accept with equanimity.

A Falling Japanese Birth-Rate.—The curve of the Japanese birth-rate is a matter of world-wide interest and importance. It is one of the major factors that have determined, and will doubtless continue to determine, the course of Japanese foreign policy; and Japanese foreign policy is now one of our heaviest anxieties. Human nature being what it is, an increase of population pressure is apt to discourage people from calmly seeking a reasonable solution for their problems—indeed, to drive them, instead, into heady emotions and violent courses. The point can be illustrated by the effects of the aggressive foreign policy which Japan has been pursuing since the autumn of 1931. Politically, this policy can be traced back unmistakably to the emotional reaction of the Japanese agricultural proletariat under an unusually severe turn of the economic screw. But, of course, the actions in which this emotion has found vent have immensely increased the burdens on the back of the Japanese peasantry, without bringing their feet one step nearer to the Promised Land. Manchuria is useless to the Japanese as a field for colonisation—partly because they cannot stand the climate, and partly because the Chinese and the Koreans have already dug themselves in on the land. Since the Manchurian market is also a comparatively small affair, the hard-pressed Japanese people has gained practically nothing from the huge military and naval expenditure which it has incurred—not to speak of the political crop of Chinese hatred and Anglo-American suspicion. We have to hope for an outbreak of rationality in Japanese minds, and from this standpoint, the news of a remarkable fall in the Japanese birthrate, which means a future relaxation of economic pressure, is very good news indeed. The figures speak for themselves. The annual net increase of the population of Japan has fallen from a peak of 1,007,868 in 1932, to 927,209 (or 13.79 per thousand) in 1933, and to 809,224 in 1934. This last figure means a rate of net increase which is the lowest for any year since 1920, and is well below the average for the whole period of thirty-three years which the statistics cover. It is true that the fall is accounted for to a slight extent by a remediable increase in the death-rate. But the fall in the birth-rate is the principal factor in the decline of the net increase. The number of births in 1934 was

2,043,807 (or 29.97 per thousand). This is the lowest figure recorded since 1924, and is 138,936 births less than the number in the peak year, 1932. These figures are good hearing not only for Chinese, Mongol, Russian and Western ears, but, if Japanese minds are wise, for Japanese ears as well. Japan, in fact, shows in her social structure the same tendencies as the Western world. Would it not be better to co-operate with that world in the Far East?

The Toll of the Factory.—On all sides we see signs of returning prosperity and increased industrial activity. This has brought with it the reabsorption into employment of workers who have been unemployed perhaps for several months, or even years—men and women who have lost something of the cunning of their trade and something of their workshop, or machine, sense. An expansion of industrial activity after a chronic depression also encourages reorganisation in workshops and the introduction of new processes, during which output must be maintained. These two factors between them probably account for a considerable increase in industrial accidents in the last two years. The number of accidents which have disabled a worker from earning his or her full wages for more than three days, and are therefore of a fairly serious nature, rose from 106,164 in 1932 to 113,260 in 1933, and to 136,858 in 1934. Deaths from industrial accidents have increased from 602 to 688, and to 785 in the same years. The increase is distributed over all sections of industry, but it has been most pronounced in the metal and building industries, which have so far taken the lion's share of trade recovery. This fact bears out the contention of the Chief Inspector of Factories, in his Annual Report,* that the increase in accidents is mainly due to trade revival. On the other hand, he points out that the total number of accidents is far too great, and that many could be avoided by a comparatively small expenditure of effort and forethought by both employers and workers. Much progress has been made in the provision of guards for the most dangerous types of machinery, and of satisfactory exhaust and protective arrangements in processes connected with the production of poisonous chemicals; and in the encouragement of the workers' interest in the safety of their work. But far more might be done along both these lines, particularly in the "Safety First" instruction of young workers either in schools or when they first come into industrial employment. The accident rate among girls in the chief industries employing children is in most cases twice as high as that among adult women; while the rate among boys is also very much higher than among men. A second corollary to increased industrial activity, according to the reports of factory inspectors, is the extension of normal working hours to the legal limit and an increase in overtime. In view of the large numbers of skilled and unskilled workers in almost all districts who are unable to find jobs, this may seem almost anti-social. But here again there is a premium on continuous employment. After a depression, with long spells of "short-time," employers find that it is worth their while to pay overtime rates rather than take on new hands who, in any case, will probably take some time to get into the rhythm of factory work. Flagrant breaches of the law with regard to hours of work, the employment of children and the Truck Acts are not common, but during 1934 over sixty firms were prosecuted for such offences, of which eighteen were bakers. The pity of it is that—with the exception of cases coming under the Truck Acts involving, for instance, the deduction of large sums from wages to cover small damages caused in the course of work—most of the infringements of the law relating to conditions of employment are due to stupidity rather than to cupidity.

British Industrial Development in 1934.—The Board of Trade's 1934 survey of the number of factories in the United Kingdom opened, extended and closed, contains much interesting information on the trend of in-

* Annual Report of the Chief Inspector of Factories and Workshops, 1934. Cmd. 4931. H.M. Stationery Office. 2s.

dustrial development in this country.* The total number of new factories opened in 1934 was 478, and the number of persons employed in them at the end of 1934 was about 37,200. In addition, 144 factories were extended, but the effect on employment of these extensions, and of the closing of 515 factories, cannot be measured. An analysis of changes by industries throws further light on the nature of British recovery:—

Trade Group	Factories opened		Factories extended		Factories closed	
	1933	1934	1933	1934	1933	1934
1. Non-metalliferous mining products.....	12	10	2	5	...	7
2. Bricks, pottery, glass, etc.	14	27	...	12	2	8
3. Chemicals.....	15	18	3	1	14	21
4. Iron and steel, primary and secondary processes.....	28	22	11	10	36	25
5. Engineering.....	48	40	19	21	62	48
6. Vehicles.....	16	13	10	8	13	10
7. Non-ferrous metals.....	8	12	4	1	13	9
8. Textiles.....	59	60	13	25	118	153
9. Leather.....	10	11	1	1	3	10
10. Clothing.....	116	122	21	24	81	109
11. Food, drink and tobacco.....	37	24	11	14	13	21
12. Timber.....	40	55	4	9	22	47
13. Paper, printing and stationery.....	33	30	4	5	18	24
14. Miscellaneous.....	31	34	6	8	21	23
Totals.....	467	478	109	144	416	515

The textile group is the only one to show a contraction in the number of factories in the past year. Of the total number of new factories opened in 1934, 209, or over 40 per cent., are located in Greater London. The number of new factories opened in the Midlands and in North-West England was 83 and 82, respectively. In Wales and Monmouth only five factories were opened. The number opened in Scotland was 18. An attempt has been made by the Board of Trade to obtain information concerning the motives which influence industrialists in the choice of sites for their factories. Of 299 new factories opened, accessibility of raw materials accounted for the location of 33, proximity to markets for 27, suitability of labour for 18, cheap land, low rent or low rates for 17, proximity to other factories in the same industry for 33, transfer as part of the process of rationalisation for four, and proximity to employer's residence for four. Convenience of premises is given as the reason for the location of the remaining 163 factories. These figures show that a considerable change is still going on in both the structure and location of British industry.

British Industrial Production.—There is further evidence this week of our domestic recovery during the last twelve months. The official index of industrial production in April-June, published in this week's *Board of Trade Journal*, shows a decline of 1.6 per cent. as compared with the first quarter, but a rise of 6.3 per cent. on the corresponding period a year ago:—

Group	1934			1935	
	March Quarter	June Quarter	Dec. Quarter	March Quarter	June Quarter
1. Mines and quarries.....	97.5	86.2	94.5	85.1	87.0
2. Iron and steel.....	118.1	117.6	116.4	121.9	123.2
3. Non-ferrous metals.....	104.5	113.2	145.4	142.2	138.4
4. Engineering and shipbuilding.....	88.7	92.3	102.4	105.7	102.9
5. Building materials and building.....	123.2	136.3	138.1	138.0	151.4
6. Textiles.....	118.4	111.2	116.7	119.0	116.8
7. Chemicals, oils, etc.	106.5	104.6	105.0	109.3	108.6
8. Leather and boots and shoes.....	109.7	104.9	107.1	116.8	119.4
9. Food, drink and tobacco.....	96.4	102.5	107.2	98.2	107.2
10. Gas and electricity.....	(a)	(a)	(a)	(a)	(a)
Total of manufacturing industries (2-10)†.....	107.0	107.6	114.7	115.9	115.2
Total of all groups (1-10)†.....	105.6	104.6	111.8	113.0	111.2

† Includes also various industries not specified above. (a) No information is available as to the quantities of gas made in each quarter. The available data for electricity have been included in the general index.

Each of the group indices shows an improvement compared with the second quarter of 1934. The expansion of production during this period was most marked in the case of non-

* Survey of Industrial Development, 1934. H.M. Stationery Office, 9d. net.

ferrous metals, engineering and shipbuilding, and building materials and building. The indices of the production of iron and steel, buildings and building materials, footwear and food, drink and tobacco continued to increase between the first and second quarters of 1935, but the other component series showed a decline. Meanwhile, the latest evidence of the state of trade in this country, summarised in our monthly Trade Supplement which we publish with this issue, points to a continuation of the upward trend of business activity.

The Importance of the Export Trade.—In a Special Memorandum issued by the London and Cambridge Economic Service, Messrs G. W. Daniels and H. Campion, of the Economics Research Section of Manchester University, present the results of their investigation to determine the relative importance of the export trade of Great Britain. They have adopted two methods of calculation. The first is to calculate the gross value both of total production and also of exports. The gross value of exports can be found by taking the trade return figures and deducting an allowance for transport and similar costs between the place of manufacture and the ports. The gross value of production involves a larger calculation. In addition to the net output as shown by the Census of Production, additions must be made for raw materials imported or produced in this country and for transport and distribution costs on all materials going into the finished products. Moreover, a comparison of gross figures will give a correct picture only if it can be assumed that exports contain, on the average, the same proportion of imported materials as goods produced for home consumption. In point of fact, exports probably contain a higher proportion of imported materials. Comparison of gross figures will accordingly exaggerate the importance of the export trades. The second and more accurate method, is to compare net values. Production can be estimated from the Censuses of Production and of Agriculture. The net value of exports can be calculated by applying to each category of goods the ratio between gross and net value of output shown by the Census of Production in the relevant industry. The ratio of exports to total production given by this calculation should be virtually the same as the ratio of employment provided by exports to total employment. The results of the calculations (after several more adjustments which are explained at length in the Memorandum) are as follows for the years 1924-25 and 1930-31, with comparative estimates for 1913 and for 1934:—

	1913	1924-25	(£ millions) 1930-31	1934
Gross value of total production.....	...	2,580-2,725	2,325-2,485	...
Gross value of exports.....	...	745-760	510-525	...
Proportion of exports.....	...	27½%-29½%	20½%-22½%	17½%-19½%
Net value of total production.....	...	1,903-1,923	1,830-1,862	...
Net value of exports.....	...	410-460	310-360	...
Proportion of exports 27%.....	...	21%-24%	16½%-20%	13½%-16½%

The decline in the proportion since 1930-31 is very largely due to the revival of home production since 1932. These figures refer, of course, only to actual output and not to capacity. On the subject of unemployment, Messrs. Daniels and Campion estimate that "the number of persons employed in 1930 in producing goods for export is estimated at 200,000-400,000 less than the number employed in 1924." In 1934, they estimate that the number of unemployed *directly* thrown out of work by the decline in exports was 500,000 more than in 1924. When the number unemployed in 1924, and those indirectly affected, are added in, it will be seen that the decline of exports has been responsible for half, at the very least, of the unemployment now existing. Calculations such as these cannot, by their nature, be precise, but it is essential that some estimate should be made if the nature of the unemployment problem and the outlines of a solution are to be clearly understood.

Overseas Trade in July.—The significance of the figures of our foreign trade in July can be gauged from imports and exports of leading commodities. In comparing this year with last it must be remembered that there was an extra working day in July this year, so that small increases have no significance:—

RETAINED IMPORTS

Month of July

Item and Measure	1933	1934	1935	
Wheat	'000 cwt.	8,419	9,168	8,401
Beef and veal	'000 cwt.	1,085	1,155	1,340
Mutton and lamb	'000 cwt.	748	640	636
Sugar (unrefined)	'000 cwt.	3,386	3,238	4,205
Iron ore and scrap	'000 tons	236	356	469
Wood and timber, soft :				
Planned or dressed	'000 loads	98	120	116
Other than planned or dressed	'000 loads	771	992	827
Raw cotton	'000 centals	1,260	864	711
Sheep's and lambs' wool	'000,000 lbs.	25	16	42
Raw silk and waste	'000 lbs.	396	444	370
Flax, hemp and jute	'000 tons	19	13	22
Crude petroleum	'000,000 gallons	43	40	33
Hides, wet and dry	'000 cwt.	122	104	133
Wood pulp	'000 tons	226	229	190
Rubber	'000 centals	89	275	212
Unwrought copper	'000 tons	11	24	21
Pig lead	tons	24,740	20,899	21,302
Tin :				
Ore and concentrates	tons	2,376	2,974	4,175
Blocks, ingots, slabs and bars	tons	175	1,030	757
Iron and steel manufactures	tons	63,257	126,078	90,104
Machinery	tons	3,350	5,648	6,095

The considerable reduction in imports of wheat is mainly in Argentine wheat. It is no doubt due in part to the increase in price as compared with last year, and has been more than counteracted by increased imports of maize, the price of which has fallen. The very substantial increase in imports of sugar during the past month—which, however, has not been sufficient to make up for the reductions in the first six months of the year—presumably follows the limitations placed by the Government on the extent of the payments made on domestic sugar-beet cultivation. The increase is almost entirely from St. Domingo. The sharp reduction in imports of crude petroleum is a reflection not so much of falling demand for oil in this country as of the establishment in Persia and other oil-producing countries of refineries of their own, which now export increased quantities of motor spirit. The metal industries continue to demand increased quantities of tin, iron ore, machinery and lead; but imports of iron and steel manufactures, mostly in a very elementary stage of manufacture, have been curtailed as a result of the recently concluded agreement with the Continental Steel Cartel.

BRITISH EXPORTS

Month of July

Item and Measure		1933	1934	1935
Coal	'000 tons	3,271	3,379	3,679
Iron and steel scrap.....	tons	19,866	16,396	11,973
Pig iron and ferro-alloys	tons	11,011	8,948	12,930
Railway materials	tons	7,805	19,506	28,206
Total iron and steel manufactures	'000 tons	156	197	206
Textile machinery	tons	4,224	7,021	5,621
Total machinery	tons	23,788	29,274	34,537
Cotton yarns	'000 lbs.	10,413	10,283	11,935
Cotton piece goods.....	'000,000 sq. yds.	155	170	170
Wool tops	'000 lbs.	4,262	2,566	3,987
Worsted yarns	'000 lbs.	3,527	2,798	2,909
Woolen tissues	'000 sq. yds.	5,593	6,683	6,477
Worsted tissues	'000 sq. yds.	3,319	3,223	4,107
Linen piece goods	'000 sq. yds.	5,722	5,472	5,550
Linen piece goods	doz. pairs	40,421	35,640	28,598
Leather boots and shoes.....	doz. pairs	40,421	35,640	28,598
Leather	cwts.	37,343	17,630	21,476
Paper and cardboard	'000 cwts.	302	292	311
Locomotives (complete and parts)	tons	514*	1,011	1,422
Motor vehicles and chassis	number	3,541	4,461	5,213

* Complete only.

In most categories the above figures are very encouraging, but there are one or two black spots. The decline in our exports of boots and shoes, for instance, has continued unabated for some years now, as a result of increasing competition from cheaper foreign, particularly central European, factories. The reduction in the volume of our exports of textile machinery is not altogether surprising in view of the increase in average values. Exports of almost all other types of machinery, however, especially mining machinery for British Malaya and other British countries, have increased. Overseas demand for railway materials, motor vehicles and other iron and steel manufactures continues to expand, especially in Africa, India

and the Dominions. Germany continues to take more woollen goods than last year; but there was no further increase in demand for cotton piece goods from India or the Colonies.

* * *

British Crops in 1935.—Harvesting is now proceeding apace in many parts of the country, the spell of warm, dry weather being ideal for the purpose. But the absence of rain earlier in the year has had an adverse effect upon the yield of the more important grain crops. This fact emerges from the latest Monthly Report of the Ministry of Agriculture, which contains the first official forecast of the production of wheat, barley and oats in England and Wales during the season now ending. Under the stimulus of the subsidy, a further slight expansion in the acreage under wheat occurred during the past season, but the yield per acre is likely to be 2 cwt. below last year's figure. The estimated production therefore shows a decline of 11 per cent. compared with last season's outturn. Partly as a result of the competition of wheat, the area under barley decreased by 8 per cent., while a reduction of 1½ cwt. in the yield per acre is reflected in the forecast of total production, which shows a drop of 17 per cent. from last year's figure. The yield of oats is expected to be ½ cwt. per acre less than in the previous season, but since the acreage shows an increase of 1 per cent. the output of this cereal will be only slightly smaller than during last year:—

	Acreage		Production	
	1934	1935	1934	1935
	'000 acres	'000 acres	(actual)	(forecast)
Wheat	1,759	1,771	'000 tons	'000 tons
Barley	861	793	1,748	1,576
Oats	1,402	1,416	727	623
			1,116	1,097

Among other crops, early potatoes have been yielding rather poorly, and it is doubtful whether an average yield will be obtained from the main crop. Root crops are in variable condition, but all are now in need of rain. The same observation applies to hops, although the warm weather has been favourable to hop-bines, which are generally healthy. Haymaking has been carried out under exceptionally favourable conditions, the quality being good and the yield heavier than anticipated.

* * *

Iron and Steel Production in July.—There has been little evidence this year of the usual decline in activity in the iron and steel industry during the summer. The returns of the British Iron and Steel Federation reveal a substantial increase in the output of pig iron and steel between July, 1934, and the past month. Calculated on a daily basis, the output of crude steel was 32,100 tons in July, as compared with 35,800 tons in June and 29,900 tons in the corresponding month a year ago. Daily production of pig iron remained practically unchanged between June and July, but was appreciably higher than in July, 1934:—

(In thousands of tons)					
Period	Production		Foreign Trade		
	Pig Iron	Steel Ingots and Castings	Total Imports	British Exports	
1913—Monthly Average	855.0	638.6	185.9	414.1	
1929 " "	632.4	803.0	235.2	364.9	
1932 " "	297.8	438.5	132.7	157.4	
1934 " "	344.7	585.3	80.9	180.2	
1934 " "	498.2	738.3	113.9	187.8	
1934—June	514.9	757.5	98.0	204.1	
" July	528.3	718.2	128.4	197.1	
" August	503.3	667.0	102.2	183.4	
" September	500.3	734.7	89.5	198.0	
" October	527.1	812.0	120.2	220.9

" May	558.9	853.3	86.4	213.9	
" June	528.3	770.0	98.2	195.1	
" July	547.3	808.3	90.2	205.7	

Imports of iron and steel materials in July were appreciably smaller than in June and in the corresponding month

year ago. On the other hand, the volume of British exports in July shows an increase on the previous month and on July, 1934. South Africa, British India, Canada, Australia and New Zealand were our best customers in July, in that order. An important development during the past month was the ratification, on July 31st, of the five-year agreement between the British iron and steel industry and the International Crude Steel Cartel. As the agreement provides for a limitation of imports into this country and as demand from the leading consuming industries is being well maintained, the outlook for the iron and steel industry remains good.

* * *

Transvaal Output in July.—According to the Transvaal Chamber of Mines the gold output of the Witwatersrand during July amounted to 908,922 fine ounces, while outside districts produced 18,881 fine ounces, making the total for the month 927,803 fine ounces at a valuation of 140s. 6d. per fine ounce. The total is thus higher than in any month since August, 1933, as the following table shows.

Month of	1929	1930	1931	1932	1933	1934	1935
January ...	Fine Ozs. 876,452	Fine Ozs. 882,801	Fine Ozs. 914,576	Fine Ozs. 936,784	Fine Ozs. 967,457	Fine Ozs. 907,641	Fine Ozs. 890,875
February ...	815,284	818,189	839,937	914,012	883,145	826,363	821,246
March	866,529	889,370	910,998	960,035	946,863	874,112	882,309
April	872,123	868,606	882,337	949,796	895,097	865,822	869,956
May	897,598	916,213	910,279	965,644	944,604	898,418	916,035
June	856,029	887,867	897,750	899,011	918,633	888,129	889,026
July	889,480	912,652	916,843	981,160	923,671	876,094	927,803
August ...	889,601	921,081	916,425	991,322	934,714	881,861	...
September ..	849,553	903,176	916,024	961,501	901,799	857,442	...
October ...	888,690	926,561	945,113	974,965	908,888	885,627	...
November ...	861,593	884,753	900,510	978,716	896,468	878,847	...
December ...	851,134	908,492	923,353	980,618	894,156	866,037	...
Total ...	10,414,066	10,719,760	10,874,145	11,553,564	11,017,485	10,486,383	10,197,250

The following table shows the number of natives employed at the mines during the past nine months:—

	Nov., 1934	Dec., 1934	Jan., 1935	Feb., 1935	Mar., 1935	April, 1935	May, 1935	June, 1935	July, 1935
Gold mines	249,935	252,036	257,683	257,953	259,417	262,678	264,067	267,209	268,409
Coal mines	13,031	12,981	13,247	13,353	13,476	13,385	13,677	13,945	14,097
Total...	262,966	265,017	271,030	271,306	272,893	276,063	277,744	281,154	282,506

The rising trend of native employment has been further strengthened during the month.

UNITED STATES

TAXING BIG ESTATES AND INCOMES

THE Tax Bill has passed the House by a large and almost entirely partisan majority (282 to 96)—a very different Bill from the one originally offered and bearing only distant resemblance to the scheme suggested in the Presidential message. The principal features are increased surtaxes on individual incomes above \$50,000 (estimated yield \$45 millions); a graduated corporation tax varying only from 13½ to 14½ per cent. (estimated yield \$15 millions); an excess profits tax, ranging from 5 per cent. to 25 per cent. (estimated yield \$100 millions); and an inheritance tax from 4 per cent. to 75 per cent. (estimated yield \$86 millions). As a revenue measure the Bill is without significance, as the aggregate estimated yield is only 4 or 5 per cent. of the current Budget, and 8 or 10 per cent. of the current deficit. As a social measure the inheritance taxes are the significant item and would amount to confiscation of the larger estates. There were already in being a Federal estate tax and State transfer taxes which together (using the New York transfer tax as an example) approximated to the British taxes on estates from \$400,000 to \$4,000,000 and were considerably heavier than the comparable British taxes (or than those of any other nation) on estates above \$4,000,000. With the proposed tax the total levy crosses the British at \$100,000, and is practically double the British in the higher categories. For example, at \$1,000,000 the combined tax is about 42 per cent.; at \$4,000,000, 61 per cent.; at \$10 millions, 73 per cent.; and so on to a maximum of almost 87 per cent. When one takes into account the frequent shrinkage of estates during transmission, and the large fees necessarily involved in the settlement of estates complicated by numerous State taxing jurisdictions, it is clear that estates above \$10,000,000 would be virtually extinguished in the process.

The increased taxes on personal income will still leave our rates nominally below the British on all except a few of the highest incomes, but only "nominally," because of the different fiscal status of "capital appreciation" in the two countries, and because many States impose heavy income taxes. As only about 8,000 returns show taxable income above \$50,000, comparatively few persons are affected by the proposed new surtaxes.

The new excess profits tax (which was introduced as a substitute for a graduated corporation tax) will have an uncertain effect on corporate profits. Hitherto corporations have been subject to a capital stock tax on an accepted valuation, and a 5 per cent. excess profits tax upon earnings above 12½ per cent. of the valuation. The new taxes begin at 5 per cent. on profits above 8 per cent., and run up to 20 per cent.; and from the fact that the estimated yield is put at \$100 millions, while the Federal corporation taxes in the calendar year 1934 yielded under \$500 millions, it would appear that the estimate assumes an over-all increase in corporation taxes of about 20 per cent., or makes an extremely optimistic forecast of corporate earnings.

In the hands of the Senate Finance Committee the Tax Bill underwent another metamorphosis, designed to double the revenues anticipated in the House version. The principal change was the lowering of the categories on which the personal surtax was applicable, and a reduction in personal exemption limits from income tax. In this form the surtax would have begun with 4 per cent. on incomes above \$3,000, while personal exemptions would have dropped from \$2,500 to \$2,000 for married persons and from \$1,000 to \$800 for single persons. The proposed inheritance tax became an increase of the present Federal estate tax, but the schedule was not greatly altered. The excess profits tax on corporations was reduced, and the capital stock tax increased; a tax on intercorporate dividends was added.

The successive forms of the Bill are noteworthy. In the President's message increased income taxes were proposed only for very large incomes; the House applied increased surtaxes to incomes much lower than those originally proposed; the Senate Committee not only would have lowered the incidence of the surtax, but would make the normal income tax applicable to a greatly widened group of persons. The President's proposal of a graduated corporation tax was only nominally retained in these two drafts; but the excess profits tax, not mentioned by the President, appears in both. The inheritance or estate tax, suggested by the President only for very large estates, is in both the Senate and the House form applicable in a severe form on comparatively small estates.

The Senate's proposal to "tax the poor" encountered, as was to be expected, an instant storm of protest. The Senate Committee precipitately abandoned its taxes on small incomes, and inserted a graduated corporation profit tax following closely the lines of the Administration's early

recommendations. With the refusal to widen the base of taxation, all prospect of raising any considerable amount of revenue expired, and the estimates for the Senate Bill equal those of the House measure at about \$250 millions. The two measures are now sufficiently similar (differing practically only on the graduated corporation tax) to promise rather prompt action. The tangled course of this measure has been given in some detail in this correspondence because it is significant. The Federal Treasury has reached (if not passed) the maximum rates available under its present system of taxes; to secure materially larger revenues the basis of Federal taxation must be broadened. For political reasons Congress is unwilling to broaden the base; yet in the same week in which the House passed the Tax Bill Congress approved additional appropriations to the regular Budget almost equal to the anticipated yield of the new taxes. In spite of the eagerness of Congress to adjourn—of which convincing evidence is afforded by the agreement of the bonus advocates not to attach their favourite measure as a rider to the Tax Bill—there is some prospect that the more confiscatory features of the Bill will be modified in the Senate.

BUSINESS IMPROVING

The harvest season is now far enough advanced to permit generalisations regarding wheat, maize and cotton. Our wheat crop, in the North-Western States, has been severely damaged by heat and rust. Estimates of yield are now roughly put at 125 million bushels less than earlier expectations, and about the same amount above last year's harvest. The quality of the damaged crop will be low, and the United States will be under the necessity of importing a certain amount of high-grade wheat for milling. The maize crop, however, has been favoured by weather, and promises to be ample, particularly in view of the reduced number of pigs.

The official forecast of the cotton crop indicates 11,798,000 bales—that is, 2,600,000 bales above last year. Almost the entire increase comes from the States west of the Mississippi River, whose yields last year were cut by the Great Drought. No loan price has yet been announced, but assurance has been given that Federal funds will be forthcoming if needed. In short, thanks to the drought in 1933 and 1934, and a combination of heat and rust in 1935, the wheat programme has so far been rather successful. With last year's 9½ million bale cotton crop, the domestic price was maintained by methods only nominally different from those of the discredited Farm Board. It is indicated that the same methods will be employed this year, although two alternatives are offered. One is the abolition of the processing tax, which, the trade contends, limits domestic consumption; the other, which is gaining ground in Congress, is a modified revival of the old McNary-Haugen plan for dumping the surplus with the aid of an export bounty. The present system of Government purchase of the cotton surplus is obviously unsatisfactory. While the removal of the processing tax would probably increase domestic consumption, the probable increase would not absorb the surplus; and the export bounty is even more objectionable now than when it was proposed a decade ago. Cotton is one of our outstanding agricultural problems, and it will be conceded that no steps have yet been taken in the direction of anything that looks like a permanent solution. The centre of the problem is our refusal to accept a market price for an export commodity.

Business is excellent. For some eight months business activity has been maintained at a level about equal to the peak briefly touched in 1933 and temporarily held in the spring of 1934. Steel operations are currently reported at 48 per cent. of capacity, which, relative to the levels of the preceding spring, is unusually high for mid-summer. The brightest area is, of course, the motor industry, which is described as "booming." The greatest percentages of improvement are recorded by branches of the "durable goods" industries, i.e. agricultural implements, machine tools and residential building. Retail trade was good through the spring, and is making a most favourable comparison with the slump months of last summer. Non-residential building is almost completely stagnant, and typical heavy industries (such as railroad equipment) are

still in deep depression. Geographically, New England seems the lowest area, and the Pacific Coast the highest. Generally speaking, the level of industrial activity has for some months been above the corresponding period of 1934 by a percentage greater than would be suggested by comparison of the standard indices of production.

NEW YORK, August 13.

FRANCE

COST OF LIVING FALLING

ALL the decree-laws, with the exception of three or four texts of minor importance, have now been published. As far as wholesale prices are concerned, and notably that of wheat, the Bank of France has agreed to help the agricultural credit co-operatives by financing the wheat crop. Discount credits will be opened at these institutions, the amount granted being:—Against 1934 wheat, 50 francs per quintal on stocks in the possession of co-operatives, and 40 francs on stocks held by the grower; and against 1935 wheat, 45 francs and 35 francs respectively. The rate of 35 francs will apply to "free wheat" not in co-operatives. The actual price of free wheat is slightly higher than 50 francs. This news has been welcomed by the agricultural community, who recently were anxious to sell the new crop at any price in order to obtain cash, and it should help the movement to raise wholesale agricultural prices.

As to the cost of living, the Prefects are following the recommendations of the Government, and news is coming from numerous departments that the prices of bread, meat, groceries, etc., have been lowered by agreements with the local corporations concerned. For the time being, wholesale and cost-of-living indices are rapidly falling. The wholesale price index at the end of July was 334 (1914 = 100), against 344 at the end of June and 361 at the end of July, 1934. The monthly average was 366 for 1934 and 407 for 1932. The cost-of-living index for Paris stood at 490 at the end of May, against 494 at the end of February, 522 at the end of May, 1934, and an average of 526 for 1932.

It is too soon to gauge what real progress will be made towards economic recovery in the next three months. But it is certain that the rate of progress could be accelerated by a favourable attitude of public opinion and the markets. Hence the two last speeches of M. Tannery, Governor of the Bank of France, and of M. Marcel Régnier, Minister of Finance. Opposition to the new measures is decreasing, and politics are on holiday for the time being. Market confidence is reappearing. In the savings banks, deposits are exceeding withdrawals; short-term Treasury bonds are being freely taken up; the situation of the Bank of France also shows an improvement. Money, however, is still being hoarded, for "private deposits" stick at Frs. 10,000 millions, at the lowest ebb since the stabilisation of the Frs. 10,000 millions of gold which were exported in the last franc crisis have not returned home. This explains the last speech of the Governor, M. Tannery, which must be taken to mean that it is superfluous for the Bank to make vast credit operations, with a view to the launching of new big issues on the market, so long as billions of hoarded money refuse to leave their safes. The Government must therefore have been pleased by the recovery on the Stock Exchange last week, which affected *rentes* as well as industrial shares. The opinion on the Stock Exchange is that the economic crisis must be lessened first of all in Wall Street, where it was born, and that, as many English newspapers emphasise, this rising trend on Wall Street simply registers an improvement in business activity which is now patent in almost every country of the world.

NEW FALL IN FOREIGN TRADE

Imports into France in the month of July were valued at Frs. 1,742 millions, against Frs. 1,676 millions in June, and Frs. 1,714 millions in July, 1934. Exports were Frs. 1,103 millions, against Frs. 1,235 and 1,351 millions respectively. The deficit in July, 1935, was thus Frs. 638,862,000, against

Frs. 440,994,000 and Frs. 363,242,000 respectively. The following table shows the figures of the foreign trade of France during the first seven months of the year:—

	(Frs. 000's omitted)		Difference in 1935
	First seven months of 1934	1935	
Imports:—			
Foodstuffs	4,380,944	3,576,869	— 804,075
Raw materials	7,255,687	6,637,831	— 617,856
Manufactured goods	2,676,288	2,131,915	— 544,373
Total	14,312,919	12,346,615	— 1,966,304
Exports:—			
Foodstuffs	1,392,843	1,447,400	+ 54,557
Raw materials	2,964,305	2,479,596	— 484,709
Manufactured goods	5,804,680	5,132,517	— 672,163
Total	10,161,828	9,059,513	— 1,102,315

Total foreign trade for these seven months was Frs. 21,406 millions, against Frs. 24,475 millions for 1934—a decline of Frs. 3,069 millions. The larger fall was in imports, at Frs. 1,966 millions, or 13 per cent.; while it was Frs. 1,102 millions, or 11 per cent., in exports. If the figures of quantity be examined, there is a diminution of 1,110,814 tons in this year's figures out of a total imported of 25,982,000 tons, while the tonnage of exports has increased by 1,045,064 tons out of a total of 17,074,839 tons.

PARIS, August 22.

GERMANY

DR. SCHACHT'S SPEECH

THE President of the Reichsbank and provisional Minister of National Economy, Dr. Schacht, opened the Königsberg Fair with a long address, in which he discussed home policy, the peace treaty, rearmament, the New Plan, and public finances. (This speech is discussed in a Note on page 366). The reports of this speech issued for the foreign Press differ materially from those published at home, and condemn more sharply recent internal disorders. Dr. Schacht declared that he personally could not be indifferent to the consequences at home and abroad of undisciplined attacks on domestic opponents and other "pests." He discussed financial and economic conditions mainly from the viewpoint of rearmament, to which in particular, he said, is due the abolition of the great army of unemployed. State policy, Dr. Schacht declared, is entirely dominated by the historic task of restoring Germany's armaments with the aim of securing the country's material and cultural foundations. All branches of public policy, among which financial and economic policies rank first of all, are directed towards this goal. "To conscription and the will-to-defence correspond an economic duty and an economic will." Authoritative and expert persons at home and abroad, proceeded Dr. Schacht, are cracking their heads over the problem whence the Government has obtained money. The secret lies entirely in "homogeneous and strict concentration of all financial and economic policy," which is possible only where there is an authoritative State-structure. Taxes had come in well; and the fluidity of the money market had made it possible for the Reich to issue Treasury bonds to a considerable extent. The money introduced into the economic process through orders placed by the State had been again put at the disposal of the Reich for its great tasks. The small increase in currency circulation and the somewhat larger increase in the volume of non-cash payments were a natural consequence of a greater business turnover. Consolidation of the short-term debt at some later date, added Dr. Schacht, is an important and unavoidable task; judged by normal standards, the sum needed for this purpose is "monstrously large." Dr. Schacht again declared against depreciation of the mark, emphasising the interests of all who lent their savings to the State.

Dr. Schacht said nothing precise about the dimensions of the new debt or about the borrowing process. Newspaper estimates of the new debt continue to appear and tend to rise slightly. *Die Bank* estimates the total short- and middle-term debt to be Rm. 9,500 millions. The official return for July 31st puts the floating debt at Rm. 2,932 millions, but this figure contains no bills except Rm. 400

millions, and consists almost entirely of Treasury bonds. The consolidation of any considerable part of the floating debt within visible time appears impossible. There has been no consolidation worth mentioning since the war. The present system of borrowing at short term for repayment out of an uncertain future revenue is, on a much increased scale, the same system which led after 1926-27 to the carried-over annual deficits, which were also to be repaid out of future revenue. Short-term borrowing was inevitable, for it has not at any time been possible to float any considerable long-term loan for consolidation purposes. The present funded debt, now returned at Rm. 10,265 millions, appears indeed to be larger than the officially admitted short-term debt; but this appearance is delusive, for Rm. 8,541 millions of the total is home debt. Of this sum, Rm. 3,333 millions is valorised pre-inflation debt, and a further Rm. 1,168 millions is in inscribed bonds issued for compensation of German citizens who suffered war-time losses. Neither of these involved any appeal to the capital market. The two items make up half the total funded debt in German currency. Most of the remaining half consists of Treasury bonds, which are in reality short- or medium-term securities; and the only consolidated loans outstanding are Rm. 346 millions borrowed in 1927 and Rm. 500 millions borrowed this year. The 7 per cent. long-term loan of 1929 disappeared by conversion last year.

FOREIGN TRADE AND BUSINESS ACTIVITY IMPROVING

The foreign trade balance in July was active by Rm. 28½ millions, compared with a passive balance of Rm. 42 millions in July, 1934. Both imports and exports were larger than in June. The increase in imports was mainly from European countries, but imports from the United States of cotton and oil recovered somewhat. The increase in the value of exports as compared with June was 12.9 per cent., but export prices declined slightly, and the increase in quantity was correspondingly greater. Exports to Italy and China declined; to Great Britain, Sweden, the United States, Argentina and Brazil they increased considerably:—

	June	July	Jan.-July
	(Millions of marks)		
Imports:—			
Livestock	3.1	2.2	21.2
Foodstuffs	67.4	70.1	569.2
Raw and half-manufactured materials	203.3	212.6	1,509.5
Manufactured goods	44.1	45.6	357.5
Totals	317.9	330.5	2,457.4
Exports:—			
Livestock	0.2	0.2	1.6
Foodstuffs	5.6	7.4	40.2
Raw and half-manufactured materials	56.8	60.0	424.1
Manufactured goods	255.4	291.4	1,855.4
Totals	318.0	359.0	2,321.8

The *Stahlwerksverband* reports favourably on the home and export markets for steel. In particular, the tube section is active. Output of pig iron in July was 1,093,000 tons, against 979,000 tons in June; in the seven months of the year it was 6,695,600 tons, against 4,663,200 tons the year before. Cement output in the first half-year was 370,000 tons, against 270,000 tons in the same half of 1934. Already in 1934 cement production was double that of 1932. The *Reichspost* reports a considerable increase of business in the first quarter-year.

Money continues abundant. Treasury bonds and the new promissory notes are almost the only available short- or medium-term investment, the latter being increasingly in demand. That the Reichsbank's credits nevertheless slightly increased in the second half of August was due to special causes. The gold reserve has fallen by Rm. 10 millions. The Reich Depts Administration announces that the dollar Treasury bonds of 1923, the first "stable-value loan" issued after the inflation, will be repaid in marks at the current rate of exchange, instead of at the contracted rate of 4.20 marks. The Courts have so far decided that 4.20 marks must be paid, but the Reich is appealing.

The wholesale price index for August 14th was unchanged at 102.4. The Minister of Economy has enjoined stricter control by the price-supervision authorities; and the Reich Nutrition Corporation has rejected a suggestion from agricultural quarters that retail prices should be allowed to rise until the increase in consumption ceases. It has been

necessary to give monetary assistance to miners in Saxony, including some who are working full time.

The price of cattle rose in the farming year 1934-35 by 14 per cent. The gross receipts of farmers from sales in that year are returned at Rm. 8,227 millions, against Rm. 7,466 millions in 1933-34; expenditure, including depreciation, was Rm. 5,200 millions against Rm. 4,986 millions respectively. The net income from farming is shown to be about the same as that of 1928-29, when gross receipts were 25 per cent. higher than now.

BERLIN, August 21.

DENMARK

THE FARMERS IN DIFFICULTIES

It has become necessary to put the brake on heavy grain imports, and this for two reasons: namely, to economise the exchange reserves of the country and to safeguard grain producers. An extraordinary sitting of the Rigsdag was therefore convened, and following an agreement between the political parties, a Corn Law was passed, to remain in force until the end of August, 1936. Under this law there will be a levy on all grain imports, so that prices c.i.f. Danish ports will be as follows:—

(Per 100 kilograms.)

Wheat and barley	Kr. 13.0
Oats and mixed corn	Kr. 12.0
Rye and maize	Kr. 11.50

The proceeds of the levy will be paid into a special fund, and this will be distributed among the smaller landowners in special proportions. If the proceeds of the levy do not reach Kr. 16 millions, the balance will be obtained by an extraordinary increase in the income tax.

The Danish delegation on bacon for the British market has now returned from its negotiations in London; and the avowed intention of His Majesty's Government to organise the British bacon industry in such a way that, little by little, Danish bacon would not be required in the British market is viewed with grave anxiety in this country. It must not be forgotten that of Denmark's total exports of about Kr. 1,200 millions per annum, bacon, lard and meat exports account every year for nearly Kr. 450 millions.

IMPROVING FINANCIAL POSITION

The monthly balance sheet of the National Bank at July 31st shows, for the first time in many months, an improvement in the foreign exchange position to the extent of Kr. 1.9 millions. There has been a big improvement in the exchange position of the private banks, so that the foreign exchange position of the country as a whole is estimated at Kr. 12.5 millions better than when last estimated. One reason for this temporary improvement is improved foreign trade (there was an export surplus of Kr. 8.1 millions for June); another is the increase in tourist traffic. Another interesting figure in the National Bank's balance sheet is the decrease in its bond holdings from Kr. 148.3 millions to Kr. 129.7 millions. Of this reduction, however, Kr. 11.2 millions is a loss due to the fall in three bond quotations, and only Kr. 7.4 millions represent the value of the bonds sold by the bank. None the less, the reduction can be taken as an expression of the Bank's policy in tightening the money market and putting a brake on the building boom.

The Exchange Control Office has now sent out the import licences for the end period of this year. Their distribution among the various countries supplying Denmark with her imports is as hitherto, i.e. a preference is given to imports from countries buying Danish produce. The greater part of the imports will, as in previous periods, come from Great Britain.

The latest published index of production (for June) is 120 (1931 = 100), and has not undergone any change since April. The unemployment situation is also quite satisfactory, the number of unemployed being at present 63,791, which is 2.1 per cent. below the corresponding figure last year. However, a seasonal rise in the unemployed total sets in at this time of the year, and this tendency is now becoming evident.

COPENHAGEN, August 6.

CZECHOSLOVAKIA

UNCERTAINTY IN AGRICULTURE AND INDUSTRY

THE Parliamentary session after the elections moved uneventfully towards recess. The Government have concluded negotiations over the corn monopoly and were to discuss various social measures concerning labour exchanges, reduction of working hours, etc., but all these questions have been postponed till the autumn. The general economic situation has lain under the spell of uncertainty about foreign currencies. There has been a seasonal revival in trades working for the home market, but production for export is still wrestling with great difficulties.

Harvest expectations were very good; recently, however, the crops have suffered from persistent drought. Farmers assert that the harvest will be much poorer than anticipated. The Ministry of Agriculture's estimates still suggest that the harvest will be better than a year ago. The corn monopoly has been tightened up and extended in its application to various fodders. Despite last year's good harvest, and the consumers' demand for lower wheat prices, prices have not been changed; on the contrary, they may even be raised. According to the new "adjustment," the area under wheat cultivation would be curtailed. This question is now under discussion, for it is becoming clear to all and sundry that fixation of prices without corresponding adjustment of production is not possible in the long run. This year's experience has amply demonstrated that fixed prices will lead to increased production. The wheat surplus is even jeopardising the business of the monopoly, and it could easily impose a heavy burden on the country's finances. To alleviate the pressure of stocks on the market, emergency reserves of about 20,000 truck-loads of wheat, to be paid for by the State, are to be created.

From April to June the general index of wholesale prices rose from 697 to 722; agricultural products stand at 754, but industrial products are at 687. The index of industrial production in May rose to 68.2, against 66.1 in April. The number of unemployed declined in June and is now 602,760, or 9.6 per cent. less than in May. This improvement is due to recovery in the home market only. Output of coal in June declined to 759,000 tons, against 817,000 in May; that of coke to 112,000 tons, against 116,000 in May; and that of lignite to 991,000 tons, against 1,135,000 in May. Production of pig iron in June was 67,673 tons, and of steel 84,382 tons. In the first half-year, production of iron was 29 per cent. and of raw steel 18.2 per cent. higher than a year ago. In the pottery and metal industries a slight recovery set in as a result of belated building activity. No changes have been recorded in the engineering industry. The textile trade shows a decline in export business owing to competition from countries which give export premiums. Sales declined in the chemical industry, as in other industrial groups.

The following are the trade figures for the first half-year, compared with last year's showing:—

	(In million Cz.K.)	
	First Half of 1934	First Half of 1935
Exports	3,151.1	3,319.5
Imports	3,053.4	2,888.5
Export surplus	97.7	431.0

Difficulties over payment from abroad impose a constant bar to further exports. According to a statement by the National Bank at the end of March, debts due for Czechoslovak goods in countries which do not control the exchange were Cz.K. 1,219 millions; while in countries which have clearings and other restrictions they were Cz.K. 2,243 millions. Recently, negotiations with Italy regarding the adjustment of exports have been concluded. Trade negotiations with Austria will probably be resumed at the end of August and with the Netherlands in the autumn.

In order to foster public works, Cz.K. 1,417 millions were allotted in this year's regular budget and Cz.K. 1,828 millions in the extraordinary budget; while the autonomous bodies contributed, with State aid, Cz.K. 791 millions for this purpose, so that the available total is over Cz.K. 4,000 millions. The revenue is now showing a substantial decline in comparison with budget estimates. In the autumn it will prove difficult for Government and Parliament to prepare next year's budget.

PRAGUE, July 27

JUGOSLAVIA

THE Stoyadinovitch ministry coincides with a new move in Serbo-Croat relations, which had been gravely strained during the election and after. The Jevtitch regime had started well. The release of some political prisoners and the relaxation of some of the more irksome laws had won for that regime a certain amount of passive goodwill. Its weakness, however, lay in its lack of an organisation or a following among the people. It is this that made M. Jevtitch a prey to suggestions of coercion during the election from some of his reactionary colleagues. And this ultimately brought about his downfall. The Stoyadinovitch ministry is now charged with the task of taking up the work for a more democratic regime at the point where M. Jevtitch left off. But it is only to prepare the instruments and preliminary conditions for a possible solution. This implies primarily the drawing up of three laws: an election law providing for a correct manifestation of popular will, and for secret ballot; a press law restoring reasonable freedom to the press; and a law to facilitate party formations and thereby to permit of a return to normal political life.

In expectation of these laws the contours of some of the future political groupings are emerging. First, there is a union of Serb radicals, Slovene clericals and Bosnian Mohammedans into one big Yugoslav Centre-Conservative formation. On the right of this would be the remainder of M. Jevtitch's following. On the left, a liberal coalition of Serb democrats and Bosnian agrarians. In addition there might be a small left-wing agrarian group and several minor semi-fascist formations. The attitude of the Croats is more difficult to define; for while on the one hand Dr. Matchek declares himself willing to collaborate loosely with the Liberal group, he refuses to form either a political party or a coalition with them, on the plea that no economic or social problems can be attacked until after the solution of the Croat national problem.

PRODUCTION AND TRADE DULL

State revenue in May amounted to 744 million dinars as against 749 millions in 1934; truck loadings in June to 110,000 as against 113,000; unemployment to 10,935 as against 9,186; while wholesale prices were 63.9 as compared with 65.6. On the other hand the index of employment has risen from 91.6 to 100.1 (average 1926-29 = 100), and the index of mining production from 84 to 90.4. Foreign trade is also improving.

	1934		1935	
	Exports	Imports	Exports	Imports
May	Tons 283,500 Mill. din. 251.8	Tons 103,800 Mill. din. 327.7	Tons 318,400 Mill. din. 287.2	Tons 105,400 Mill. din. 368.0
June	Tons 283,200 Mill. din. 238.7	Tons 69,600 Mill. din. 322.3	Tons 251,300 Mill. din. 242.1	Tons 69,100 Mill. din. 281.7
Six months	Tons 1,559,400 Mill. din. 1,589.6	Tons 430,300 Mill. din. 1,750.5	Tons 1,580,500 Mill. din. 1,774.9	Tons 441,200 Mill. din. 1,746.3

The harvest is not likely to be above the average. Maize, affected by drought, will probably yield about 25 per cent. less than last year, and wheat may give a surplus of only 15,000 truckloads for export. Prunes and all fruit are less abundant, and cattle may be affected by rising fodder prices. Tourist traffic on the other hand is developing extremely satisfactorily. Thus, while tourists spent 1,570,122 nights in holiday resorts in 1934, the corresponding number in 1935 was 4,644,560. The total number of foreigners who visited Yugoslavia last year was 234,000 and they are estimated to have acquired about 309 million dinars for expenditure in Yugoslavia.

The amount of available capital is relatively plentiful. Deposits have risen from 9,837 million dinars in June last year to 10,935 millions this year, 269 millions of this sum having gone into State and 168 millions into private banks. Further, deposits at the National Bank have reached 1,404.5 million dinars, the highest figure for three years. Interest rates have been reduced to 11 per cent. for the maximum chargeable by private banks, and to 7 per cent. for the average charged by State banks. The maximum paid by banks on deposits is 4 per cent., often not more than 3 per cent., and in exceptional cases even less. The

NATIONAL BANK OF GREECE

Established in 1841

Head Office: Athens

Branches and Agencies throughout Greece

Branches and Agencies in Egypt:
CAIRO, ALEXANDRIA, ZAGAZIG

Affiliated Bank:
HELLENIC BANK TRUST COMPANY,
51 Maiden Lane, NEW YORK

Capital paid up and Reserves Drs. 1,205,000,000

National Bank rate is 5 per cent. The Government intends to mobilise available funds in order to use them for a more liberal credit policy to industry and in order to further public works. A first instalment of 100 million dinars for public works, forming part of a more ambitious scheme of 1,000 millions, has already been subscribed by the National Bank and the State Mortgage Bank.

The remaining eight-twelfths of the 1935-36 budget have been voted by Parliament, and amount to 6,780 million dinars, 4,609 millions being for general administration and 2,171 for State enterprises. This makes the total budget 94 millions larger than that for 1934-35, part of the increase being accounted for by an increase in the debt service.

BELGRADE, August 5.

BULGARIA

A NEW CONSTITUTION

THE new Constitution, promised by the Government of Mr. Toshev on April 22nd, is being drafted on the lines of corporative representation and participation of the people. It is still uncertain whether it will be voted by a plebiscite or a special constituent assembly composed of representatives of the corporations and deputies chosen by the people.

Meanwhile the general situation has become quieter, partly owing to reduced Government intervention in economic life. The alcohol and petrol monopoly has been abolished.

IMPROVING BUDGET AND FOREIGN TRADE SITUATION

An improvement in the State Budget has taken place since the beginning of the year, mainly as a result of reduced expenditure. State revenue amounts, for the first half of the year, to 2,845 million leva (as against 3,261 millions for the corresponding period of 1934), while expenditure was 3,139 million leva (3,719 millions in 1934). This improvement and the discounting at the National Bank of some Treasury bills (with the approval of the League of Nations) have facilitated the repayment of arrears. Ordinary revenue has declined compared with last year, except in the last two months, when a considerable increase over the 1934 level was registered.

In the first half of the year there has been an increase in the turnover of foreign trade as compared with last year:—

	Imports	Exports	Balance
	(million leva)		
First half 1934	1,040	1,154	+114
First half 1935	1,369	1,369	...

The value of exports has increased by 19 per cent., as against an increase of 32 per cent. in that of imports. This revival, due to increased exports of raw tobacco, cattle, etc., has not, however, helped the balance of payments, as, in the first place, it concerns countries with which Bulgaria

has clearing arrangements, and, in the second, has been more than counteracted by the increase in imports.

The grain crop has proved much better than the poor crop of last year. The wheat and rye crop is estimated at 16,497 thousand quintals, as against 12,986 thousands for 1934. This increased production will certainly leave a surplus for export. The crops of rapeseed, maize, fruit and vegetables are also very good. Some improvement in the balance of payments may be expected in the autumn, when exports of cereals, usually sold against free foreign exchange, will take place on a larger scale.

SOFIA, August 9.

AUSTRALIA

IMPORTS UP, EXPORTS DOWN

AUSTRALIAN import trade during 1934-35 has shown an increase, following on increased exports in the previous financial year, when the wool market was booming. But while imports of merchandise have risen from £59,435,000 in 1933-34 to £72,428,000 in 1934-35, exports have fallen from £89,957,000 to £81,682,000, and the visible export surplus has thus declined from £30,522,000 to £9,254,000. If bullion and specie are included, of which the net exports (after deducting imports) were £6,661,000 for 1934-35, against £7,338,000 for 1933-34, the total export surplus in 1934-35 is only £15,915,000, against £37,860,000 the year before—a decrease of £21,945,000. After allowance is made for interest on Government and local authorities' loans payable abroad (officially reckoned at £23½ millions)

and for other external payments—including an exceptionally large expenditure of Australian tourists this year—there is a reduction in London balances from the high point reached a year ago. It looks as if, in order to balance the two sides of the account during 1935-36, some reduction in imports will be effected.

The general increase in business activity, as well as in import trade, during 1934-35 is reflected in the quarterly average returns of the trading banks. Exclusive of the Commonwealth Bank, these show £253,705,457 of advances—an increase of £16,742,256 as compared with the year before. Government and municipal securities at £52,013,205 show a decrease of £98,781, an increase in ordinary Government securities being balanced by a decrease in Commonwealth Government Treasury bills. Deposits at £291,708,859 show a decrease of £5,263,266, current accounts being greater by £5,138,481, but fixed deposits less by £10,401,747. The decline in deposits is partly due to the shifting of funds held here on overseas account, which is still in progress, though only on a small scale.

The somewhat unfavourable result of the 3½ per cent. £12,500,000 internal loan, of which approximately £1,700,000 was left with the underwriters, together with public criticism of the large borrowing programme of the Governments, point to the need for reconsideration of the financial position. The Loan Council is to meet in October, and, according to published reports, a reduction of £4,000,000 or more will be provided for in the loan estimates of the Commonwealth and States for 1934-35. At present these exceed £30 millions, inclusive of provision for sinking funds and of States' revenue deficits.

MELBOURNE, July 30.

BOOKS AND PUBLICATIONS

MEN, MONEY AND MACHINES

AN extraordinary amount has been talked and written in the last five years about the economic consequences of mechanisation. To judge by these two books,* however, the controversy has now begun to result in some clarification of the public mind; and at least two important conclusions seem to be gaining general assent. The first of these is that the fact of mechanisation is not primarily relevant at all to the problem of money and purchasing power; the second is that, despite this, the social effects of mass production methods are even more far-reaching than was at first realised.

The first of these two books is a symposium in which various industrialists, representatives of the workers, and "observers" express their several points of view. The industrialists include Sir Harold Bowden and Sir Richard Redmayne; the workers' representatives Mr A. Varley and Mr William Ferrie; and the "observers" Sir Arnold Wilson and Mr E. F. M. Durbin. The only chapter which examines the problem as a whole is Mr Durbin's, and it will consequently be the most interesting to those who are not concerned with any special aspect of it. Mr Nash's book, which also sets out to solve the wider economic problem, is an excellent introductory essay. It is popularly and fluently written, and bears few, if any, of the marks of academic disputation. But the author has taken the trouble to familiarise himself not only with the relevant facts and figures, which so many controversialists ignore, but also with the principal arguments of those who have already written on the monetary problem. Mr Durbin's essay and Mr Nash's book, taken together, leave very little to be said on the economic aspect of the problem.

Mr Durbin first points out that the fundamental nature of the machine is to enable more to be produced with a

given amount of labour; and Mr Nash similarly lays his finger on an important fallacy when he remarks that power production does not reduce the total demand for labour, since physical exertion is not the sole function of human effort. It follows, Mr Durbin observes, that the invention of a labour-saving machine enables mankind either to work less and consume as much as before, or to work as much and consume more—and to consume more either of the commodity in question or of some other commodity. The objectives of increasing leisure or increasing production, as a result of mechanisation, are therefore alternatives. We cannot have our cake and eat it; though we may, of course, eat part of it and keep the rest. Further, as Mr Durbin shows, mechanisation should not produce a reduction in consumers' purchasing power; since in so far as less is spent on a commodity that has become cheaper, more will be spent on some other commodity. General unemployment will not, therefore, result; and the explanation of such unemployment must be sought elsewhere. The real consequence of mechanisation is to leave a surplus of labour in certain contracting industries; and Mr Durbin makes interesting suggestions for tackling this problem of genuine technological unemployment.

Mr Nash reaches the same conclusion as a result of an admirable critical examination of the views of Mr Fred Henderson, Major Douglas, the "technocrats" and others. The main conclusion that emerges from Mr Nash's discussion is that mechanisation does not raise a new monetary problem at all; since the crucial factor for the monetary problem is the value of total consumers' expenditure, not the volume of goods produced, but to the total of cost affected by an increase in goods produced. Mr Nash consequently goes on to a discussion of the general monetary problem, and he ends with a broad acceptance of Mr Keynes's views and an advocacy of public works expenditure for the cure of cyclical depression.

The clarification of the monetary aspects of mechanisation does not, unfortunately, mean that the problem is solved. This is most decisively demonstrated by the earlier

chapters in Mr Williams's symposium. Of these, the two most interesting are those of Mr Ralph C. Hazell, writing about the printing industry from the employer's viewpoint; and that of Mr Varley, writing on the mining industry from the worker's viewpoint. In the printing industry mechanisation has led to increased employment, shorter hours, higher wages and no lack of skilled work. In coal-mining, on the other hand (though it is reducing costs, as Sir Richard Redmayne shows), it is not raising wages; it is making the mines, if anything, less safe; it is not reducing hours; and it is making a given number of hours' labour far more intense and exhausting than it was before. The fact—so alarmingly brought out by Mr Varley—that in certain industries mechanisation is making a given number of hours' labour far more arduous, though hours are no shorter or wages higher, is at once the most important and the most disquieting of the social aspects of the problem.

SHORTER NOTICES

"French Import Quotas." By F. A. Haight. P. S. King and Son. 131 pages. 7s. 6d.

European commercial policy has undergone a radical transformation in recent years, the present tendency being to insist more and more upon "balanced trade" with each and every foreign country. In this evolution the import quota has played a leading rôle. French in origin, this pernicious instrument of commercial policy has been widely adopted since 1931. Mr Haight's careful and objective study is therefore opportune.

Although of doubtful legality, the import quota was adopted by France in 1931 as a *pis aller*, because other methods of defending the franc (devaluation, deflation or a drastic increase in tariffs) were considered inadequate or politically inexpedient. The abandonment of the gold standard by Great Britain in 1931 and the subsequent depreciation of the dollar gave a fillip to its use, but considerable modifications were introduced in consequence of the administrative difficulties encountered. By the middle of 1933, Mr Haight informs us, France had been successful in severely limiting the application of the "most-favoured-nation" clause and in securing the de-consolidation of most of her tariff duties. But the system of import quotas which originated as a temporary "means of defence" became an important bargaining weapon, thus acquiring a position of permanence which was not originally intended. Mr Haight reaches the significant conclusion that, although few impartial observers would claim that it has benefited the country as a whole, the abandonment of this restrictive system has become politically impossible.

The author devotes two chapters to a statistical study of its effects upon the French national economy. He points out that, while imports of foodstuffs had shown a heavy increase in 1931, imports of manufactures (which had more than doubled between 1927 and 1930) actually declined in that year. The application of quotas to industrial imports cannot therefore be defended as an emergency measure necessitated by the special circumstances of 1931. The general adoption of quotas effected a substantial cut in imports of particular commodities, but failed to reduce total trade to the desired extent. This was partly due to the practice of issuing special licences, and partly to increased importation from the colonies. Meanwhile, in consequence of various protective measures, French wholesale and retail prices were propped up. Stagnation of the export industries has been the inevitable result. In recent months, however, the Administration has shown its determination to eschew devaluation and to pursue the unpleasant alternative of deflation to the bitter end. As Mr Haight rightly suggests, no significant measure of trade recovery in France can be looked for until the over-valuation of the franc has disappeared.

"Le Pétrole et son Economie." Various Authors. Paris: Librairie Technique et Economique. 30 fr.

No industry has risen in so short a time to such a dominating position as the petroleum industry. Sporadic use of petroleum products was made by the ancient people of Babylonia, but the industry as such can be dated from the well sunk by Colonel Drake in Pennsylvania 76 years ago. Its phenomenal progress is due mainly to the invention of the internal combustion engine. So swift has been the industry's rise that legislators find it difficult to keep pace with the problems raised by petrol-driven vehicles of all

kinds, in all elements. But legislators have not been slow to appreciate the potentialities of petroleum as a source of revenue, as a factor in the balance of trade and as a sinew of war.

The manifold aspects of the oil industry are now gathered together in an admirably documented French volume. It may be doubted whether any work so complete will be found in any language. The writers are all experts whose knowledge is practical as well as theoretical. "Le Marché Britannique du Pétrole" is treated by Mr. Cecil W. Wood, of the *Petroleum Times*; M. Pizanty, of the *Moniteur du Pétrole Roumain*, performs a similar function for his country, and Signor Bosco, a well-known authority in Italy, for that land, while Señor Alvarez covers Spain. Most of the other writers are French, and they deal with every aspect of the industry—production of crude petrol, refining, transport, the American codes, the position of petroleum in Germany, Russia and the Far East, the rise of the Iraq industry, the fiscal burdens on oil, the technical problems of bringing petroleum to standard specifications, and the industry's outlook. The writers are lavish with tables, charts and maps.

MONEY AND BANKING

FINANCING SMALL CONCERNS

FOUR years ago the Macmillan Report called attention to a gap in the British financial system. "It has been represented to us," the Report said, "that great difficulty is experienced by the smaller and medium-sized businesses in raising the capital which they may from time to time require, even when the security offered is perfectly sound." This passage in the Report aroused considerable attention, and since then certain attempts have been made to fill the gap. It must be emphasised that the real need is not so much for short-term or even "not-quite-so-short-term" finance—though the need for this kind of accommodation is also not specially catered for—but for permanent capital, or at least for accommodation, the repayment of which can be spread over a period of at least five years. This means that a banker is definitely precluded from undertaking this class of business, while even certain new institutions which undertake to provide medium-term finance would feel unwilling to lock up more than a small proportion of their capital for a relatively long period. It has so far been accepted as axiomatic that the work of providing permanent capital can only be undertaken by special finance companies, established for the purpose. British banks have steadfastly refused to lock up their customers' funds in long-term industrial advances or investments, and their immunity from failure during the past six years is largely traceable to this policy.

Hence so far the gap has largely remained unfilled, partly because neither potential lenders nor potential borrowers have realised the nature of the problem. Essentially it is a question of bridge-building between investor and entrepreneur, and the needs of both must be considered. The small manufacturer cannot obtain the specific kind of capital he requires, nor can the small investor in these days of lower long-term interest rates easily obtain a good return on his capital, together with reasonable security and negotiability of his holdings. So far, public opinion has concentrated upon the needs of the manufacturer. This has made recent expressions of opinion in the public press appear somewhat partial and superficial in character.

A finance company which sets out to bridge the gap must bear both kinds of needs in mind, and must know clearly what it can, and cannot, do. Consider first its attraction for the investor. It cannot appeal to the big institutional investor, such as the bank, the insurance company or the trust company, for such institutions must either keep their funds liquid or else they have their own interests which they wish to develop. Nor can it appeal to the wealthy, expert investor, for he finds greater interest and profit in conducting his own operations on the Stock Exchange. All this is not entirely a question of theory. It has been tested in actual practice.

The real appeal ought to be to the host of small investors who have lost heavily in income through conversion, but who desire the safety and negotiability of their capital as much as a gain in income. To be justified in appealing to them, a finance company must be managed by men of undoubted integrity combined with skill in examining all propositions laid before them. We lay the utmost emphasis upon these two points, because this kind of activity could easily become a fruitful field for the knave, the fool, or the incautious optimist. The bridge which the finance company builds must be above suspicion and fully equal to the traffic it will have to carry.

We can next approach the problem from the borrower's point of view. First, the finance company must keep its risk within narrow limits. Even if it spreads its risks over many propositions, a single failure would be a serious matter, especially in the early days when the company still has to build up reserves and win reputation. This means that a finance company cannot help entirely new undertakings. The entrepreneur must have made the first start on

his own account, and must be able to present some record of achievement. What the finance company can do is to help the entrepreneur to traverse quickly the road leading from a successful start to complete large-scale success. But it cannot give him his first start.

Help of this kind cannot be cheap, for the finance company has definite expenses of its own. It has its own overheads. Every proposition put before it must be carefully "vetted," and in many cases this requires solicitors, accountants and expert advisers. And only one proposition in ten or twenty will survive. The finance company must build up its reserves, and it must keep part of its resources in liquid—and therefore in unremunerative—form. Next, the finance company must exercise continuous supervision of a firm, though tactful, kind over all those whom it helps. This may mean that the borrowing company will have to admit a representative of the finance company to its board, remunerate him adequately, and be guided in certain matters by his advice. Finally, the finance company must pay a reasonable return upon its own capital, which, however great the skill and integrity of the management, does not rank as a gilt-edged investment. As we have said, one of the essential needs is to give the small investor a better return than he can get upon gilt-edged stock; and unless this return is forthcoming the capital will not be subscribed.

The financial structure of the whole scheme can now be discussed in greater detail. The finance company itself in its early days should be of very moderate dimensions, though not so small that it cannot spread its risks. The finance company is an innovation, and it must be content to build itself up by easy stages. Initially its resources should consist entirely of share capital. It cannot readily issue debentures, for its security consists mainly of its own investments, which are not readily realisable. Later on, when it has established itself and accumulated liquid reserves, it can consider the question of issuing debentures. The proportion in which its capital should be divided between preference and ordinary shares, and the rate of interest on its preference capital, are matters for careful consideration. The rate of interest must be high enough to attract capital and make allowance for the small element of risk, but it must not be too high, or else it will not be able to offer reasonable terms to those whom it assists. The ordinary shareholders must be prepared to exercise patience for some years to come. Security and adequate reserves must be the first consideration.

Relations with small manufacturers and merchants must follow certain definite rules. Adequate and systematic "vetting" must be the basis of the whole scheme, and any speculative business must initially be avoided, however attractive it sounds. The company must not deal with private individuals with unlimited liability, but must insist that they form themselves into a private company before they receive assistance. The finance company will be well advised to appoint its own representative to the board, and that representative must have definite, but not oppressive, powers. He must act as adviser and friend, as well as a guardian. As far as possible the finance company will insist on adequate insurance against casual risks, and it might well effect the insurance itself through a general arrangement with its own brokers.

The exact form of assistance given must depend upon individual circumstances. On the whole, it should avoid making permanent loans, but should take up redeemable debentures or redeemable preference shares. The date of the final redemption should be far enough ahead not to cripple the borrower, but it must be remembered that the underlying purpose is to enable the borrower to expand his business at an accelerated rate. If this purpose is achieved, the sum originally borrowed will rapidly become small in proportion to the size of the business, and so repayment

will become an easy matter. If success does not follow, the finance company must cut its losses as quickly and as conveniently as it can. The redemption of capital advanced is important to the finance company for three reasons. First, it reduces the risk and helps the company to keep itself more liquid. Second, it adds to the company's profits in more ways than one if it is able to keep turning over its capital. Incidentally, this helps it to reduce its charges. Third, it enables the finance company to give assistance to a far greater number of people during a given time. From the general point of view, the third reason is in some ways the most important.

Finally, there are arguments in favour of the finance company taking a small but permanent share in the equity of any undertaking which it helps. Provided that the finance company is not greedy, there is no fundamental objection to this, while if the company "spots" a series of winners, it will gain a permanent source of income. Once sufficient reserves have been established, this equity income can fairly be ear-marked for the benefit of the ordinary shareholders.

This is a rough outline of how the financing of small industries could be conducted. Those who undertake the work must realise that they are entering upon a task of great responsibility and trust. They are acting as the link between the small investor and the small business undertaking, and the small investor will be venturing his capital entirely upon their integrity and judgment. If the business is conducted with foresight, then it should succeed and make an important contribution towards the economic progress of the country. If, on the other hand, it is initiated mainly with the idea of earning large and quick profits, then a single failure by one of its clients may bring the whole finance company down in ruins. This will not only involve the small investor in loss which he cannot afford, but will constitute a serious set-back to the execution of a promising idea.

FINANCIAL NOTES

The Foreign Exchanges.—The London market has been very idle. At the end of last week there was a temporary rally in the dollar to \$4.96½, due to the market's reaction to the repurchase of the General Electric Company shares from American holders, while on Thursday of this week the dollar again strengthened to \$4.97½ owing to international political developments. Otherwise the New York rate has stood at just over \$4.98. There has been practically no movement in the gold *bloc* currencies. French francs have been steady at just over Frs. 75. The British Control has been in evidence, but very little intervention proved necessary. Three months' francs are a shade weaker at Frs. 1½ discount. Three months' guilders first strengthened from 2½ to 18 cents discount, but have since come back to 22 cents, while three months' Swiss francs have been steady at about 35 centimes discount. Spot lire have been held by the Italian authorities at Lire 60½, but three months' lire have weakened to a nominal rate of 7 lire discount, or 46 per cent. per annum. It is still very difficult to deal in spot lire in London except at the official rate, but there are reports of the growth of a black market on the Continent.

Danish Farmers and the Kroner.—An intriguing situation has developed in Denmark. For some time past certain sections of the farmers have been conducting an agitation against the Government on the ground that agriculture receives too small a share of the national income. More recently they have formed the idea that they could conveniently bring pressure to bear upon the authorities by requesting foreign importers of Danish farm produce to defer payment, the object being to create a temporary shortage of foreign exchange. It was hoped that one consequence would be an automatic depreciation of the kroner which would bring about an economic readjustment in their favour. Our Copenhagen correspondent now cables that the co-operative slaughteries have agreed to support the farmers, but that the authorities have countered by raising the Bank rate from 2½ to 3½ per cent. This may be more

than a general precaution, for it will add immediately to the cost of the farmers' short-term indebtedness. Our correspondent adds that the bank's total foreign exchange reserves expanded by Kr. 12.5 millions during July, but the situation is not entirely easy, and there is a possibility of a further curtailment of import licences during the last four months of the year. Primarily the issue lies between the Danish Government and the farmers, but the episode reminds us that we cannot take the monetary stability of the sterling area entirely for granted.

The Money Market.—The return of more of the holiday currency circulation has helped to make money a shade easier. The banks have bought Treasury bills of all dates up to early November at their minimum rate of ½ per cent. Hot Treasuries are nominally quoted at ½ per cent., but there are no buyers.

	Aug. 2, 1935	Aug. 9, 1935	Aug. 16, 1935	Aug. 23, 1935
Bank rate.....	2	2	2	2
Clearing banks' deposit rate ...	1	1	1	1
Short Loan rate :—				
Clearing banks.....	1-1	1-1	1-1	1-1
Others.....	1	1	1	1
Discount rates :—				
Treasury bills	1½	1½	1½	1½
Three months' bank bills	1½-1	1½-1	1½-1	1½-1

A few months ago there was a fair quantity of Italian agency bills in the discount market, and the opinion was then expressed that they were being taken too freely. Since then the market has either been declining to take many of such bills or has been quoting a penal rate. The result is that comparatively few of these bills are now held in the market. It is also believed that the British banks are cutting down their credit facilities to Italy as quickly as they can, but even if this report is correct, it will be several months before bills drawn against such credits finally disappear.

The Bank Return.—This week the Bank has added about £500,000 to its gold stocks, this being the largest increase for many months. Another £5.1 millions of notes have been returned from circulation, and the Reserve has increased by £5.7 millions :—

	BANK OF ENGLAND				
	Aug. 22, 1934	July 31, 1935	Aug. 7, 1935	Aug. 14, 1935	Aug. 21, 1935
	£ mill.	£ mill.	£ mill.	£ mill.	£ mill.
Issue Department :—					
Gold	191.7	192.8	192.8	192.8	193.3
Note circulation	379.4	408.3	411.8	405.5	400.4
Banking Department :—					
Reserve	72.8	45.1	41.5	47.8	53.5
Public deposits.....	37.4	24.4	17.2	16.8	15.9
Bankers' deposits	82.1	75.7	82.7	86.3	93.9
Other deposits	35.7	38.5	37.8	37.0	36.9
Government securities.....	84.5	87.4	87.2	82.0	83.5
Discounts and advances	5.8	10.8	14.1	15.2	13.0
Other securities	10.3	13.4	13.1	13.2	15.0
Proportion	46.9%	32.5%	30.1%	34.1%	36.4%

The main movement in the banking department is an increase of £7.6 millions in bankers' deposits. The chief cause of this is the return of the holiday currency from circulation.

New York Money and Banking.—New York money rates are unchanged. New York member banks' loans to brokers were \$873 millions on August 14th, against \$880 millions on July 24th. Other loans by member banks against securities have fallen during these three weeks from \$748 to \$736 millions. The Banking Bill has now been passed in substantially the form in which it left the Senate and has been sent to the President for signature. It creates an Open Market Committee, to govern Federal Reserve Banks' operations in Government securities, authorises the Federal Reserve Board to raise reserve requirements and to raise and lower the Reserve Bank's rediscount rates, and continues the insurance guarantee of bank deposits up to a maximum of \$5,000. The amendment permitting banks to underwrite new issues has been dropped. Silver imports for the week ended August 9th were returned at \$14.6 millions. \$7.1 millions came from England, \$3.6 millions from Mexico and \$3.0 millions from French Indo-China.

THE STOCK EXCHANGE

GAS HOLDING COMPANIES

GREAT BRITAIN, who has been generous in her export of financial suggestions, methods and precedents to America, has hitherto taken little in return. Within the last few years, however, she has begun tentatively to follow the United States practice in at least one respect. The Gas Holding Company has taken root on British soil, but the seed appears to have suffered a sea-change on its trans-Atlantic journeys. Although the making of gas from coal is one of the oldest of British industries, the tendency towards concentration in large capitalistic units has, up to the present, made far less headway in it than in many newer trades.

Although large companies, like the Gas Light and Coke, South Metropolitan, South Suburban, Tottenham and District and Wandsworth and District companies, operate in the London area, and companies like Newcastle-upon-Tyne and Gateshead, Bournemouth Gas and British Gas Light Company, in the provinces, the industry is still carried on by over a thousand separate undertakings, most of which have statutory powers giving them virtual monopoly within their own area. These undertakings, as public utility concerns, have long been subject to legislative limitations which do not apply to companies in many other industries. Charges for gas and dividends on ordinary capital, for example, have been limited by various methods. Although the credit of the majority of individual concerns has always ranked high, and the rates at which they have been able to raise new capital have been relatively favourable, the difficulty of amalgamating separate undertakings has resulted in a narrow and often highly localised market for their stocks.

The Gas Holding Company endeavours to overcome this difficulty by purchasing controlling interests in a considerable number of undertakings, usually in contiguous areas, supplying their needs from a single common source, or a limited number of sources, and securing the normal economies of centralised control. A parallel is afforded by the evolution of the brewing industry, in which, during the last twenty years, the larger companies have increasingly tended to buy out the smaller undertakings in order to obtain the "monopoly powers" of their tied houses, under licensing limitations, and have thereupon proceeded to close the local plants and supply all requirements from their centralised establishments.

American experience has aptly illustrated many of the dangers, as well as the advantages, of the large utility holding company. The latter has frequently included within its *agis* a heterogeneous range of industries, like gas, electricity, water and steam, with motives predominantly financial rather than economic. Capital "gearing" has frequently been excessive, the issue of considerable bond and preference capital by the operating companies leaving the holding company with an ultimate equity representing but a small fraction of the total outlay on plant development. Recent American scandals, again, have elicited the disclosure that, in many cases, the holding concern has reversed its role of financier of the working capital requirements of the operating concerns by borrowing from its own subsidiaries, in order, possibly, to support the market in its own shares, or to achieve some other ulterior object. Under such a system, the failure of the holding company must necessarily involve the operating concerns in a common disaster.

So far, the movement in Great Britain has succeeded in steering clear of these questionable practices. Of the seven gas holding companies formed in recent years, only two—South Western Gas and Water Corporation and Associated Gas and Water undertakings, have acquired interests outside the gas industry, and none includes electricity or other utility industries in its scope. Although the operating companies have retained their identity, the amount of their indebtedness ranking before the holding company's interest

is usually small. The financial results of association with holding company interests are claimed to have been beneficial to the operating concerns, which have been able to obtain borrowing facilities, in the way of business, either from the holding company direct, or, by drawing on the latter's credit, from outside sources on more favourable terms.

The movement in its present form, however, has scarcely had more than two years' existence in Great Britain. Though the relatively rapid expansion of some of the more active companies suggests that its opportunities will not be wasted for lack of energy, it has clearly had insufficient time, as yet, to occupy more than a small part of its potential field, or to formulate more than a few rudimentary working principles. Four of the seven companies recently formed are, in fact, largely in the embryo stage. The United Kingdom Gas Corporation, Limited, controls a couple of undertakings in Wales and Lancashire respectively, while its wholly-owned subsidiary, Caledonian Gas Corporation, Limited, controls nine small undertakings in Scotland with a combined annual output of less than 250 million cubic feet of gas. The Associated Gas and Water Undertakings, Limited, under the *agis* of the East Surrey Gas Company, has acquired seven undertakings with a total annual "make" of approximately 230 million cubic feet. The group's arrangements, incidentally, mark an exception from the rule mentioned in a previous paragraph, for the subsidiary companies are empowered to invest in the stocks of the holding company, and it is understood that this right has been exercised.

Another group, Gas Consolidation, Limited, which aims at the amalgamation of gas companies with adjoining territories into appropriate geographical units, acquired four subsidiaries in the centre of England and is interested, through a holding of deferred shares, in one of the larger groups referred to below—the Severn Valley Gas Corporation. In some respects, the scope of Gas Consolidation, Limited, is the widest of all the holding companies formed so far, for it includes the provision of hire purchase finance facilities for the smaller gas undertakings throughout the country, in order that the latter may afford their customers facilities already enjoyed by those of the larger undertakings. Its service organisation, further, is designed to afford financial accommodation for extensions and improvements to all companies which may be interested.

Of the three remaining gas holding companies, which are active and well established, the South Eastern Gas Corporation, Limited (in which the Gas Light and Coke Company is directly interested), was formed in 1933 to bring under a single management various companies in Kent and South Eastern England having adjoining territories. Its ultimate aim is to supply the greater part of the area under its control from a small number of central stations. In the meantime it is claimed that substantial economies have already been achieved by way of improved by-product sales and centralised buying of supplies of coal and gas appliances, and that some of these economies have already been passed on to consumers, since eight out of sixteen have reduced their charges.

The second largest company in the trio, the Severn Valley Gas Corporation, Limited, was formed last year and has amalgamated a number of substantial companies in the area indicated by its title, including the suppliers of important towns like Stroud, Cheltenham and Gloucester. The *rationale* of joint working is exemplified by the fact that the main pipes of the two last-named undertakings already extend to points only a few hundred yards apart, and the achievement of economies has already begun to be reflected in reductions in charges to consumers inside the corporation's area. Since the end of its last financial year the Corporation has acquired the Newport (Mon.)

Gas Company and a number of smaller undertakings in the same area.

The South Western Gas and Water Corporation, Limited, also established last year, has not closely followed the principle of "contiguity" adopted by the other two companies, for the undertakings which it has acquired are spread over a large area in the south-west of England and are separated, in some cases, by many miles. It remains to be seen whether the benefits secured by the individual undertakings will be mainly limited to economies in the purchase of supplies and coal. Although the Corporation has included water in its activities, the *terrain* of the area served is not well adapted to through mains for the supply of either gas or water, and is somewhat sparsely populated.

The size, scope and capitalisation of the three largest holding companies at the end of their last financial years are compared in the following table:—

	South-Eastern Gas	Severn Valley Gas	South Western Gas and Water
CAPITALISATION:—			
Debtures, etc.	£450,000	Nil	£180,000
Preference capital	£1,045,511(a)	£302,781	£94,337
Ordinary capital	£1,062,679	£369,939(b)	£413,363
OUTPUT OF SUBSIDIARY COMPANIES:—			
No. of subsidiaries	16	10(c)	22(d)
Total annual make of gas (million cu. ft.)	4,672	1,680	597
Make of largest subsidiary (million cu. ft.)	1,051	684	87
Average make per company (million cu. ft.)	301	168	30
Total make, adjusted to proportions of share capital acquired by holding co. (million cu. ft.)	4,095(e)	1,200	567
Total capital, per mill. cu. ft. of annual make	£548	£400	£1,000(f)
Ditto, allowing for outside holdings	£825	£561	£1,180
COST OF ACQUISITION:—			
Compensation to subsidiary directors, etc.	£119,818	£41,561	£37,076
Formation and other expenses	£31,999	£13,352	£20,856
Total cost	£151,817	£54,913	£57,932
Cost per mill. cu. ft. of annual make	£31 10s. 0d.	£32 12s. 6d.	£96 10s. 0d.(f)
Ditto, adjusted for outside holdings	£37 1s. 6d.	£45 15s. 0d.	£102 3s. 6d.
Written off, by last balance-sheet	£151,817	£53,115	£23,082
Amount remaining (ditto)	Nil	£1,798	£34,850

(a) Including £200,000 4 per cent. preference, issued May, 1935. (b) Including deferred shares. (c) Excluding companies purchased since end of last financial year. (d) And two water companies. (e) Debiture stock of subsidiaries omitted from this calculation. (f) Allowing for cost of two water companies.

South Eastern Gas, it will be seen, is much the largest of the three concerns. Although it controls only sixteen gas undertakings, against the South Western Company's twenty-two, it includes one subsidiary making over 1,000 million cubic feet of gas per annum. The total "make" of the companies under its auspices is nearly three times that of the Severn Valley group (apart from the latter's most recent acquisitions) and nearly eight times that of the South Western undertakings. The Severn Valley Corporation, on the other hand, has the lowest capitalisation of the three, in relation to the annual output which it controls. If allowance be made for outside holdings in the subsidiary companies, every million cubic feet of annual gas output, on the latest available figures, is capitalised at £561 in the case of the Severn Valley Corporation, at £625 in that of the South Eastern, and at £1,160 in that of the South Western.

Investors, who have learned by long experience that unproductive costs by way of formation expenses, compensation, etc., are apt to be a heavy millstone round the neck of new "merger" companies, may be relieved to discover that the gas holding companies, for the most part, have avoided excessive charges under this heading. Two of them have, in fact, already eliminated these items, virtually or wholly, from their balance sheets. The actual figures show somewhat surprisingly wide variation when expressed in terms of the output of the companies acquired, the total non-productive initial expenditure per million cubic feet controlled (allowing for outside shareholdings), ranging from £37 in the case of South Eastern Gas to £102 in that of South Western Gas. Expressed as a proportion of the total issued share capital, preliminary expenses were 5.9 per cent. in the case of South Eastern Gas, 8.2 per cent. in that of Severn Valley Gas, and 11.4 per cent. in that of South Western Gas.

The earnings and dividend record of various gas holding companies, and the present price and yield of their securities, are shown in the next table:—

Ordinary Shares (£1)	Date of Accounts	Earnings (Ordinary)	Paid (Ordinary)	Present Price	Yield (%)
South-Eastern Gas	Mar. 31, 1935	7.0	6	s. d. 28 6	£ s. d. 4 4 3
Severn Valley Gas*	Mar. 31, 1935	5.7	5	22 6	4 9 0
South-Western Gas and Water	Mar. 31, 1935†	5.0†	5†	23 6	4 5 4
Associated Gas and Water	Mar. 31, 1935‡	6.0†	5†	21 6	4 13 0
Gas Consolidation	May 31, 1935††	4.7†	4†	21 6	3 14 6

* Ordinary shares. £99,000 deferred shares held by Gas Consolidation, Ltd. † Period from February 14, 1934. ‡ Per annum. § Period from December 4, 1933. †† First accounts for eleven months' period.

All the ordinary shares are quoted at a premium and afford an income yield which, in most cases, is comparable with, or possibly slightly in excess of, that obtainable on sound and "seasoned" industrial equities.

Although anything like a final judgment on the future of the gas holding company, from the investors' viewpoint, is inappropriate as yet, certain conclusions emerge from the evidence already available. The sponsors of this new development have avoided many features of the American utility holding company system, but no clear idea seems yet to have been established as to what is a reasonable price to pay for a given undertaking or undertakings, or as to the canons of choice in deciding upon the advisability or otherwise of any given acquisition. The economies of carefully planned control of a body of contiguous or nearly contiguous small companies may be considerable, but their utility must decline rapidly where the companies' territories are scattered. Any tendency towards amalgamation for amalgamation's sake may, therefore, be deprecated. In the long run, the benefits to be secured, if holding company development is to be really worth while, may be not purely financial but physical, by way of centralised supply, large-scale production, and some form of "grid" distribution. Those companies, consequently, may have widest scope for useful expansion which have the support both of important "City" connections and of one or more of the larger concerns already established in the gas industry, whose technical experience is unrivalled.

It may be doubted whether, in the long run, the new departure will hold any attractive possibilities for the more speculative type of promoter or investor. Impressive as the potential fruits of scientific amalgamation in the industry may be, the "equity" in the shares of a holding company must be limited by the relatively low yield level appropriate to gas stocks in general, and by the statutory operation of the sliding scale principle, under which consumers are automatically the largest beneficiaries in the fruits of improved technique. If the movement is to develop on the right lines, it is the more conservative investor to whom it must chiefly appeal.

INVESTMENT NOTES

Markets and the Italo-Ethiopian Dispute.—For some weeks past, the stock markets (or, more correctly, the general public whose support has been driving prices upwards), have been consciously averting their attention from the possible implications of the Italo-Ethiopian dispute. Ever since "recovery" first began, three years ago, the markets have been domestically preoccupied, and it seemed supererogatory to spoil an attractive home prospect, for the coming autumn and winter, by anxiety over a foreign cloud, no bigger than a man's hand. It was the abruptness of the breaking off of the Paris negotiations, following Signor Mussolini's refusal of an "economic" settlement, which caused investors suddenly to realise that the cloud was already showing portentous expansion. The hurrying home of Ministers, the Downing Street conversation with Party leaders, the "gravest since 1914" declaration of Mr MacDonald, and, finally, Thursday's emergency Cabinet meeting—news of which, in every case, first reached investors in the markets mainly through the

medium of Press headlines—completed the *volte face* of investment sentiment from purposive optimism to alarmed watchfulness. Of "bear selling" in the true sense of the term, there was little. A precautionary marking down of prices by dealers was general in the early part of the week, and was only one degree less extensive in the markets for certain recently favoured industrial shares (including steel, armament and aircraft counters), than in the gilt-edged market itself. Despite the fact, however, that a good many people had profits to take, given the occasion to take them, there was no heavy volume of liquidation. The chief exceptions to this rule were gold mining shares, which were affected by heavy selling from South Africa, and certain vulnerable groups, like silver shares, which were depressed by commodity market conditions and reports of an important Bombay failure. In mid-week, however, a moderate rally was in progress when the publicity given to Mr MacDonald's statement provoked a bout of indubitable liquidation, which appeared to come, not from the market itself, but from outside investment quarters. The present disposition of the Stock Exchange itself is to stand fast until the situation has cleared, one way or the other. Much, however, obviously depends on the attitude of the public. Professional dealers and institutions such as the investment trusts can scarcely be expected to show eagerness to take large quantities of stock on their books, so long as the immediate outlook appears to be menacing but incalculable.

Investment in the "War Zone."—Fortunately for the investor, the range of British securities which would be directly affected by an outbreak of Italo-Abyssinian hostilities is relatively small. The Italian 5 per Cent. 1862 Maremmana Railway Bonds, and the Ten-Year and Twenty-Year Sterling Bond issues of the Italian Credit Consortium, for Public Works, which touched 90½, 109½ and 110, respectively, last year, have already fallen to 47½, 96½ and 77. The entire outstanding total of these issues, however, is no more than £2,220,280. In the Foreign Rails list, there is an issue of 3 per cent. Italian bonds, guaranteed by the Italian Government (of which £19,349,200 is outstanding) which were last quoted at 28½ in April last. The British stake in Italian industry is not considerable, apart from the Courtauld interest in Snia Viscosa, whose lire 200 ordinary shares, which touched 85s. 7d. last May, are now standing at 52s. 6d. In Abyssinia, British investments are virtually non-existent, though in the hinterland of possible hostilities are companies like Sudan Plantations. It is true, however, to say that the securities directly concerned are negligible compared with those which might be vulnerable to the wider complications and implications of the dispute, particularly if it were definitely to assume the guise of a threat to the collective system in international relations, or to British colonial interests in the source of the Blue Nile and/or the continued control of the Mediterranean-Suez Canal-Red Sea-Gulf of Aden route. Meanwhile, the City continues closely to follow the economic repercussions of present tendencies in Italy itself, whose direction is sufficiently indicated by a sharp upward movement in the wholesale price index (according to the Milan Office of Corporative Economics) from 280.2 in January to 319.1 in July last (1913 = 100). The index for minerals and metals, most significantly, has jumped in the same period from 296.4 to 364.3. The effect of the movement has been masked by "control" of the spot lira exchange, but is more adequately reflected (as we show on page 379) in a widening of the forward discount rate to the equivalent of a quotation of 67½ lire to the £ for three months, against a "controlled" current quotation of 60½.

Canada Comes to New York.—The prospectus offering \$76 millions of Ten-Year 2½ per Cent. Bonds in America, for Canadian Government refunding, is an instructive historical document, if nothing more. It extends to 23 pages, and is divided into as many chapters, complete with content. British investors, who, in the case of Dominion Government issues, are habituated to a single leaf prospectus, perhaps, an inset giving a few

selected budgetary and trade figures), may be impressed by the mass of relevant detail considered necessary to the formation of the American investor's judgment. The prospectus, indeed, is nothing less than a condensed version of "The Canada Year Book." Its chapter headings include such subjects as "Debt Record," "Railways," "Gold Reserve, Currency and Banking System," "Balance of International Payments, 1927-34," "Economic Production," "Foreign Investments," etc. It bears on its face a notice, in capital letters, to the effect that the bonds "have not been approved by the Securities and Exchange Commission" and that "it is a criminal offence to represent that the Commission has . . . made any finding that the statements . . . are correct." A further clause, however, reveals that the Commission is not registering disapproval but disclaiming responsibility for the issue. The prospectus also bears on its face the following table, which certainly appears to be a model of lucidity:—

	Price to Public	Underwriting Discounts or Commissions	Proceeds to Registrant
Total	\$74,290,000.00*	\$1,330,000.00	\$72,960,000.00*
Per unit ...	\$977.50*	\$17.50	\$960.00*

* And accrued interest.

Other features are a list of "Principal Underwriters," giving 39 names, and summarised particulars of every outstanding bond of the Canadian Government, issued and payable in any currency. It is obvious that the subscriber who has conscientiously perused and weighed every statement in this massive document will have a working knowledge of Canadian conditions and prospects which an expert of the Dominion Bureau of Statistics might well envy. Is it possible, however, that by the time he has really mastered its contents, he may find that the loan has been offered, subscribed—and, perchance, even repaid?

Building Societies in 1934.—The new high records established during last year by the building society movement receive their usual informed comment in the *Building Societies' Year Book*,* the official publication of the National Association. The advance of 11 per cent. in total assets to £555 millions was the greatest on record. New advances increased by over 20 per cent. towards £125 millions, and total mortgages outstanding rose by 12.3 per cent. to over £475 millions. The facilities for house purchase which the movement provides have been of manifest importance among the diverse influences contributing towards economic recovery at home. The *Year Book* gives a comprehensive record of fact, opinion and event. It discusses, for example, not only the new income tax arrangement recently concluded with the Revenue authorities, but also the failure to make effective progress towards co-operation in the movement. The prospect of concerted action, indeed, received an exasperating and well-nigh fatal blow in the spring, when certain societies, apparently acting on a misunderstanding of assurances previously given, decided to reduce interest rates forthwith. The reconciliation of conflicting views, already difficult, was thus subjected to an unfortunate additional strain. The adoption of a code of uniform procedure has, therefore, been again delayed. The Association has pressed for reduction of the lending powers of local authorities under the Small Dwellings Acquisition Acts from £800 to £400, but it is to be noted that the guarantee system for working-class houses for letting, set up under the Housing Act of 1933, has been little developed during the year.

Actuaries' Investment Index.—The effect of the intrusion of Signor Mussolini into the British industrial share markets is duly recorded by a decline in the Actuaries' Index of 158 securities to 78.5 last Tuesday, as compared with 79.4 a week earlier and 77.2 a month earlier (December 31, 1928 = 100). The corresponding figures

* Compiled and edited by George E. Franey (Franey & Co., Ltd., 37 Cursitor Street, E.C.4. Price 7s. 6d.).

of average yield are 3.82, 3.77 and 3.86 respectively. Among the component groups, the indices for coal shares and cotton shares show an appreciable rise, but the tendency in practically all other groups is downward, as the following table suggests:—

Group (and No. of Securities)	Prices (Dec. 31, 1928 = 100)			Yield (%)		
	Month Ago (July 23)	Week Ago (Aug. 13)	Last Week (Aug. 20)	Month Ago (July 23)	Week Ago (Aug. 13)	Last Week (Aug. 20)
Building materials (4)	90.9	95.1	92.3	4.44	4.26	4.38
Iron and steel (8)	60.3	67.7	64.7	3.31	3.01	3.12
Motors (5)	54.0	58.4	54.5	4.87	4.47	4.79
Oil (5)	66.8	72.0	68.1	4.67	4.36	4.61
Electric supplies (8)	116.7	123.7	121.5	4.42	4.12	4.19
Home Rails (4)	71.3	69.9	65.3	1.51	1.52	1.59
Breweries & distill. (19)	131.7	135.2	132.3	4.14	4.08	4.17

The reaction (which, in fact, started in the middle of last week), continues to be most noteworthy in groups like iron and steel, motor and building material shares, which have provided favourite counters for optimism during recent weeks.

Industrial Profits in July.—We received 232 company reports last month, showing an aggregate rise in profits of 13.44 per cent. by comparison with the previous year. Figures for recent months are shown below:—

Reports published in	No. of Companies	Rise or Fall in Profits*	Reports published in	No. of Companies	Rise or Fall in Profits*
1934—		%	1935—		%
May	251	+23.43	January ...	111	+14.15
June	201	+20.44	February ...	218	+8.43
July	197	+27.10	March	261	+22.54
August	30	+35.47	April	242	+16.49
September ...	89	+40.63	May	244	+11.07
October	165	+49.70	June	191	+21.72
November ...	143	+33.97	July	232	+13.44
December	159	+25.09			

* After payment of debenture interest.

The reports of the month disclose net profits of £14,696,351, as compared with £12,955,621 in the preceding year. The increase of £1,740,730 is shared among 17 out of 21 groups in our analysis, the largest contribution being made by 14 breweries, whose net profits (after debenture interest), at £6,244,851, show an increase of £516,429. Some 29 "miscellaneous" companies' profits, at £2,109,582, show a rise of £479,603, and those of 48 rubber companies, at £482,612, a rise of £328,646. Another plantation industry, however—tea growing—has the unhappy distinction of making the worst showing of any group, for the reports of 39 companies, published during the month, show a decline of £546,842 in net profits, from £692,035 to £145,193.

COMPANY NOTES

Flour Milling Companies.—Since the re-opening of the capital market in the current revival phase, the number of flour-milling enterprises available for public investment has been increased by the conversion into public companies of Ranks, Ltd., and of several smaller concerns. Considering the importance of the industry, however, the number of public companies in the flour-milling trade is few. Their records, however, are sufficient to illustrate a characteristic liability to fluctuation in their profits. This contrast with the traditional solid prosperity of the miller is due to the complete reorganisation and reorientation of the industry which has been necessitated by modern conditions. Instead of running a local business, milling the farmer's wheat on commission, the modern miller has become a wheat importer on a large scale, with his mills and warehouses at the ports of importation. He has thus been compelled to accept a substantial market risk in place of the relative stability of his former commission business. To combat this risk the millers have sought, with some success, to improve their buying and selling policy, and have embarked on sidelines in cattle and animal foods. Some of them have also sought to initiate a stable dividend policy irrespective of their actual profits for the year. It would seem reasonable to hope that the millers, like other processors of raw materials,

Announcing:

Investors Second General Trust

A new investment in 27 of the strongest and soundest companies in British Industry, which shows a gross annual yield, calculated on the dividends, exclusive of capital bonuses paid by these companies in the past year, of over

5%

This new Trust has been created to succeed the well-known and popular Investors General Fixed Trust, which was introduced to the public under the same auspices in February, 1934. Like its predecessor, the new Trust spreads its funds over the shares or stock of a balanced selection of the most stable and successful companies in British industry, namely:—

London Midland & Scottish Railway Co.	J. Lyons & Co. Ltd.
Southern Railway Co.	Spillers Ltd.
Allied Ironfounders Ltd.	United Dairies Ltd.
Imperial Chemical Industries Ltd.	F. W. Woolworth & Co. Ltd.
Burma Corporation Ltd.	Lake View & Sun Ltd.
Atlas Electric and General Trust Ltd.	Government Gold Mining Areas (Moffat & Co.)
Gas Light and Coke Co.	Robinson Deep Ltd.
Imperial Continental Gas Association.	Distillers Co. Ltd.
Burmah Oil Co. Ltd.	Imperial Tobacco Co. (G.B. & I.) Ltd.
London County Freehold & Leasehold Props. Ltd.	Ind. Coops & Allsopp Ltd.
London Brick Co. & Folders Ltd.	Associated Newspapers Ltd.
British Plaster Board Ltd.	Daily Mail & General Trust Ltd.
Boots Pure Drug Co. Ltd.	Griffiths Hughes Proprietaries Ltd.
	J. & F. Costa Ltd.

The Trustees are:

Royal Exchange Assurance
—Established by Royal Charter in 1720—

The Bankers are:

Barclays Bank Limited

The Trustees collect the income (less tax) paid on the underlying securities and distribute it without any further deduction among investors who hold sub-units in the Trust, in proportion to the numbers of sub-units held.

These distributions are made on two fixed dates each year: 1st March and 1st September.

Sub-units may be bought or sold through any Bank or Stockbroker, the Managers undertaking to repurchase any sub-units offered to them at a price not less than the correct proportion of the price which would be realised by the securities underlying a unit on the London Stock Exchange less the usual adjustments, as explained in the Booklet.

For full information write, telephone or telegraph for Booklet 16a to

The Managers:

Investors Specialised Fixed Trusts Ltd.

will steadily improve their resistance to fluctuations of their own raw commodity; but it would be rash to assume that they have yet achieved immunity. The risk involved in a combination of this liability to profit fluctuation with a high capital "gearing" in the case of Spillers deferred stock appears to be appreciated by the market, which values the units on a relatively high yield basis. How far the tendency

towards lower bread consumption will prove dangerous, or how far it may be remedied by the publicity recently introduced by the Millers' Mutual Association, is difficult to assess. Flour-milling shares, though sound in the long run, should be held in fairly small blocks by any investor to whom stability of income is important.

Coast Lines and the Royal Mail Liquidation.

Since the formation, at the beginning of this year, of "realisation" companies to handle the liquidation of Royal Mail and Elder Dempster assets, the market in the leading stocks of the group has shown consistent advance. The extent of the improvement must, indeed, be gratifying to holders who have retained the courage of their convictions, as the following comparison with quotations twelve months ago suggests:—

	Price, Aug. 16, 1934	Present Value of Securities given in Exchange	Equivalent in Old Stocks	Extent of Rise in past year
African Steam 6% Deb. ...	48½	...	72½	24
Coast Lines 5% Debenture	92	...	104	12
R. M. 5% Debenture	44½	R. M. Realisation Co.: 50% Income Deb. 97 15% Ord. 28/-	68	23½
E.D. 5% "A" Debenture	66½	E. D. Realisation Co.: 50% 1st Deb. 100 50% Income Deb. 97 30% Ord. 28/-	137½	69
Lampport & Holt Debenture	40½	20% Coast Lines Deb. 104 16½% Lampport Line Ord. 5/- 42½% Lampport & Holt Debenture 35 12½% Cash	80½	20½

A mainspring in this recovery has been the improvement in the position of Coast Lines. In 1934 this company earned £360,445, an increase of as much as £170,828. This rise in earning capacity had several important consequences. In the first place, it fully restored the status of the 5 per cent. debenture stock, the interest on which calls for £100,000 per annum. The greater part of the £2,000,000 of this issue was formerly held by various members of the R.M.S.P. group. The successful "placing" of large quantities at rising prices in recent months is believed to have materially assisted the general position. Among other

reactions, the recent cash distribution to Lampport and Holt debenture holders may probably be traced to this source. The Coast Lines recovery, however, has irrigated the dry channels of the group in other ways. The company's improved 1934 earnings, with a bonus from reserves of subsidiary companies, have enabled the directors to bring up to date the dividends on the £750,000 6½ per cent. preference and £1,875,000 6 per cent. preference, which have involved the distribution, during the past twelve months, of no less than £645,000 gross. A large part of this substantial amount has found its way back to members of the group, including the British and Irish Steam Packet Company, in whose capital Coast Lines itself has a large stake. The present value of the various group holdings of Coast Line preferences, and also of the £2,000,000 ordinary, has greatly improved as a result of these developments. Last year the ordinary shares were given little consideration, but with preference arrears out of the way they can now be regarded as on a 3½ per cent. earnings basis on the strength of the 1934 profits. Apart from the sale of the Glen Line to the Holt group no news of further developments in the Royal Mail position has been issued recently. From time to time possibilities such as the flotation of a new company to acquire Royal Mail House are canvassed. The liquidation of the valuable Union Castle shareholdings awaits the result of the effort to deprive the ordinary shares of their normal voting control. The trend of events, however, clearly indicates that the danger of haphazard or even hasty liquidation of the assets of the group will be avoided.

Calico Printers' Setback.—The tendency to "write up" the value of Lancashire cotton textile shares, recently in evidence, was sharply checked by the publication, last Wednesday, of the preliminary figures of the Calico Printers Association for the twelve months to June 30th last. In 1927-28, the Association earned 15.2 per cent. and paid 7½ per cent. on its Ordinary stock, but in no subsequent year has as much as 1 per cent. been earned. In 1933-34, working profit showed a modest but encouraging rise from £629,516 to £674,935, but the latest announcement suggests that last year saw a setback of approximately 17½ per cent. in aggregate working profit, to an estimated figure of £556,894. The preference dividend more than absorbs the proceeds of a draft of £100,000 on general reserve:—

	1933	Years to June 30, 1934	1935
Working profit	629,516	674,935	556,894*
Depreciation, repairs, etc.	366,790	371,263	375,125
Directors' fees	10,800	10,800	(?)10,800
Debenture interest	128,000	128,000	128,000
Balance of profit	123,926	164,872	42,969
Preference dividend	150,805	150,805	150,805
Ordinary	Dr. 26,879	14,067	Dr. 107,836
{ Earned	Nil	Nil	Nil
{ Paid	Nil	0.9	Nil
{ Earned (%)	Nil	Nil	Nil
{ Paid (%)	Nil	Nil	Nil
Reserve	50,000	Nil	Nil
Total carried forward	33,596	47,663	100,000
			39,827

The £1 ordinary stock units dropped from 10s. 7½d. to 8s. 6d. on Wednesday, after the announcement, and the 5 per cent. cumulative preference units from 17s. 9d. to 16s. 9d. The report must be awaited for fuller information regarding last year's setback, whose causes will doubtless be further analysed in the lucid and exhaustive review of conditions in Lancashire which stockholders have now learned to expect from their chairman's speech. To a large extent, undoubtedly, the Association is a victim of economic nationalism. Its finances, however, remain strong and liquid. At the end of June, 1934, it had surplus liquid assets, excluding stock-in-trade, of £2,170,000, including Government and other securities valued at £1,583,000, while total reserves and carry forward aggregated £1,648,000. The Association is strong enough to ride out the longest

storm. Stockholders, however, will be cautious in estimating possibilities of a striking recovery in earning power, in view of the conditions described in our review of the outlook for textile finishers' shares, in the *Economist* of August 10th, page 291.

Associated British Picture Corporation.—This film producing and exhibiting concern is to be congratulated upon its latest results and upon the clarity with which they have been set out. The transfer, during the year, of the various cinema properties from subsidiary concerns, has resulted in a break of accounting continuity. Total profits have increased, under the new financial organisation, from £573,198 to £656,725. Provision is made, for the first time, for £192,573 in respect of mortgage and debenture interest, of which the principal is secured upon properties and other assets now directly held by the Corporation. After these increases in prior charges, however, equity earnings have increased from £82,977 to £182,927, and the recovery has therefore easily outstripped the increase in ordinary capital, as the following table shows:—

	1933	1934	1935††
Profit and dividend receipts	138,395	156,967	656,725†
Fees and taxation	29,866	25,534	90,398

†† Figures for 1934-5 include revenue of Associated British Cinemas.

‡ Compares with £573,198 in previous year.

‡ After crediting £149,698 undistributed profits of Associated British Cinemas.

Certain balance sheet changes have been involved by the inclusion of the A.B.C. subsidiary, for its reserves and undistributed profits (the latter amounting to £149,698) have been transferred to the parent company's books, and shares in subsidiaries are correspondingly reduced. After the transfer of £162,806, the balance on general reserve amounts to £1,000,000. The consolidated statement which the directors issue for the first time shows that the group position like that of the parent company is not over-liquid, but film productions either complete or in progress are valued at £551,128. The report states that the outlook is good, and that arrangements for distributing a number of the Corporation's productions in America have been concluded. The £1 ordinary shares, quoted at 8s. 6d. to yield £5 17s. 6d. per cent., carry reasonable equity prospects in an essentially speculative industry.

General Electric Comes Home.—The announcement, last week, that a London group, headed by Lazard Brothers and Company, Limited, had acquired a large block of General Electric shares from American interests, aroused no market repercussions. It is reported that over 400,000 shares have been repatriated, and the cost at the prevailing quotation would therefore approach £1½ millions. The transaction is, possibly, of greater retrospective than prospective interest. The repatriation of a large block of Boots Pure Drug shares, several months ago, was associated with a "marketing" operation which has no parallel in the present instance. The G.E.C. shares, it will be recalled, were enthusiastically purchased by American interests before the Wall Street crash. Their acquisition led to the taking of steps by Lord (then Sir Hugo) Hirst to prevent control from falling into American hands by restricting voting power to British shareholders and by the

creation of "British" ordinary shares, which, however, came under criticism and were not eventually issued. If the American average purchase price for the shares approached the 1929 "high" of 8½s. 3d., against a repatriation price believed to be in the neighbourhood of 6½s. 6d., the operation represents a not unprofitable "bear" transaction for British investors generally.

Odhams Press Developments.—The success of last week's issue of 450,000 5½ per cent. £1 preference shares at 2½s. by Odhams (Watford), Ltd. (guaranteed as to dividends by Odhams Press, Ltd.), adds interest to an analysis of recent developments in the parent company's capital structure. During the last three years the issued ordinary capital of Odhams Press has remained unchanged at £750,000. Debenture stocks, however, have increased from £900,000 to £1,250,000, and preference shares from £747,000 to £1,125,000. Reductions have been secured in the effective rates paid on both classes, but since 1930 debenture and other interest has increased from £44,554 to £75,500, and preference requirements from £48,218 to £70,500. Earnings for ordinary shares have increased from £186,923 to £219,622 in the same period, during which ordinary capital has remained unchanged after an increase during the year 1930 from £410,000 to £750,000. The total amount due from subsidiary companies to the parent has increased in the last three years from £971,000 to £1,360,000. A Properties subsidiary was formed in 1932 to acquire property, plant and a publishing licence, whose revenue is derived from sub-leases and sub-licences to Odhams Press. The return on its issued capital, including debentures, of £1,236,000 is secured by a species of rent charge, ranking before Odhams Press prior charges. The total amount received by Odhams Properties in the latest year for rents and royalties amounts to £129,347. It does

COMMERCIAL SERVICE

The Bank has over 370 Branches in Africa, and Agents and Correspondents throughout the World. The closest touch with Trade and Industrial conditions is maintained, with special attention to Commercial and Credit Intelligence. This service is available to Exporters, Importers and others wishing to develop trade with South, East and Central Africa.

THE STANDARD BANK MONTHLY REVIEW is sent post free on application. It gives the latest information on all South, East and Central African matters of Trade and Commercial Interest.

not follow, however, that this amount represents a gross increase in the prior charges of Odhams Press, since the assets of the Properties Company were acquired from two previously existing Odhams subsidiaries. The formation of the Watford subsidiary adds a further contingent liability to the company's guarantee of service on nearly £300,000 7 per cent. debenture stock of Daily Herald (1929), Ltd. In the Odhams (Watford) prospectus the profits of Odhams Press were shown after carrying forward "development expenditure and trading losses incurred during development" of Daily Herald (1929), Ltd.

Guildhall Property Questions.—The affairs of a company with an issued share and debenture capital of £760,605 are incontestably a matter of investment interest. The Guildhall Property Company, Ltd., on March 27, 1934, made a public issue of 210,000 6 per cent. £1 preference shares, 600,000 5s. ordinary shares and £350,000 5 per cent. first mortgage debenture stock at par. On August 8th last the company published its first report and accounts, which showed (a) that the purchase of all its properties was not completed till last December, and (b) that a net profit (after expenses, debenture interest, etc.) of £45,037, out of which, *inter alia*, a total ordinary dividend of 7½ per cent. was paid, had been arrived at after crediting a profit of £29,820 on the sale of land to a subsidiary company. It would not appear that all the questions raised by perusal of the accounts were fully dealt with by the chairman at last Tuesday's meeting. On the propriety of a distribution, from revenue, of profits derived from sales of land to a new subsidiary before the latter had, in fact, itself realised the assets, the chairman was silent. The net valuation of the subsidiary's assets at over £350,000 scarcely bears on the principle involved. A simple arithmetical calculation discloses that, in the absence of the special credit of £29,820 from the sale, net profits would not have fully covered even preference dividend requirements. In the course of his speech, the chairman dealt with the question of the managing director's new agreement, concluded shortly after the public issue in March, 1934, cancelling the five-year agreement set out in the prospectus. "Owing to increased duties," the managing director's remuneration now includes a fixed sum *plus* a percentage of net profits after debenture service and preference dividends. For the period March, 1934-June, 1935, his remuneration is given in the accounts at £3,834, compared with a prospectus figure of £1,500 (inclusive of directors' fees). The balance sheet shows preliminary expenses, etc., at June 30th last of £49,587, from which only £4,958 has been written off, out of earnings for the initial period. The outlook, however, includes certain favourable factors, described by the chairman at the meeting, whose operation may tend to improve the outlook, both as regards liquidity and future earnings.

Other Company Results.—Our summary table on page 398 includes the results of nine additional concerns. Strettons Brewery reports net profits for the nine months to June 30th of £87,851, representing an increase, if calculated on an annual basis, of nearly £11,000 on the previous year's result. The dividend rate, on an annual basis, is calculated at 34½ per cent., compared with 31 per cent. in the previous year. The accounts of Illovo Sugar Estates, whose shares have come to the London market during the year, show net profits of £50,475, and 12½ per cent. has been paid for the year to March last. Brightside Foundry has enjoyed a much better year, for profits have advanced from £11,979 to £21,073, and the dividend is raised from 2½ to 10 per cent. The profit of Tyne-Tees Shipping are lower at £19,350, but the 5 per cent. dividend has been maintained. A satisfactory recovery is shown by Compass Investment, whose profits have advanced from £20,136 to £25,150, and the 2 per cent. dividend is earned with something to spare. In the miscellaneous group Chadburn's (Ship) Telegraph and Lawes' Chemical Manure report improved earnings, but the profits of Toogood and Sons are slightly lower.

THE WEEK IN THE MARKETS THE LONDON STOCK EXCHANGE

TICKET
AUGUST 27

SETTLING DAYS

ACCOUNT
AUGUST 29

ALTHOUGH the latest Board of Trade figures revealed the virtual maintenance of industrial activity, the markets, for once, had no time to spare for "underlying bullish factors" of a domestic kind. The voice that breathed over Eden and Laval, at the Paris conversations, was unmistakably the voice of Mars, and both professional and private investors were constrained, unwillingly, to listen. The dullness which began in the middle of last week was intensified, and passed into reaction on Wednesday, after Mr MacDonald's dramatisation of the situation's gravity. Gilt-edged stocks fell sharply, and prices were lowered in the industrial markets—first as a precaution, and subsequently in response to a more perceptible volume of selling. As usual, at the hint of a crisis, London's behaviour was phlegmatic compared with that of some other centres. Johannesburg, for example, turned a heavy seller of gold mining shares, and Bombay was upset by a silver failure. Even the Wall Street revival tended to be checked, temporarily at least.

The selling of Gilt-edged stocks, particularly the longer-dated issues, was chiefly by holders of smallish amounts, of the order of £5,000 to £10,000, the larger institutions being inclined to stand fast and await events. India loans had a similar downward course, the new Three Per Cents. falling to a discount for the first time. Dominion issues were relatively steady at the outset, but joined in the general movement in mid-week.

The foreign bond market, inevitably, was depressed. The Italian Maremmana and Credit Consortium "A" and "B" Bonds were heavily marked down, but an even more significant fall occurred in Austrian bonds, on the argument that Italy's preoccupation with Abyssinia would leave Austria with an exposed flank. Egyptian issues were also weak. Far Eastern stocks were dull, but among South American bonds Brazilians stood out against the prevailing trend, on a more charitable interpretation of the Rio Government's intentions.

It is doubtful whether even a brilliant batch of traffic figures would have saved home railway stocks, in the encircling gloom, from appreciable losses. As it happened, the returns were colourless and disappointing, and a certain amount of nervous selling affected all securities from debentures to non-earning ordinary stocks. Little business was done in foreign rails, substantial marking down of prices by dealers, at the beginning of the week, failing to attract new buying.

The tone of industrial shares became increasingly uncertain. In the early hours of Wednesday it appeared that marking down of quotations might achieve its immediate purpose, but the afternoon's "1914" headlines sharply checked the rally. Before the close on Thursday, however, the tone was slightly harder. The markets most unfavourably affected were iron and steel, motor, aircraft and electrical shares, a noteworthy feature of the decline being that somewhat vulnerable, after their rise of last week. Textile shares were back in earnings of the Calico Printers' Association (discussed in a Note on page 384) had a depressing effect on scattered selling. Brewery shares also receded "the country," and leading tobacco issues were affected by the general *malaise*. The market turned against its recent favourites, such as British Oxygen and Tate and Lyle. Bank shares showed only a moderate, though irregularity and dullness.

A general fall occurred in oil shares prices, and although the tone was a little steadier on Tuesday, on a certain amount of American support, business became increasingly difficult as the week wore on. Rubber shares were neglected and slightly easier, while tea shares, having resisted prevailing tendencies at the outset, owing to the generally pre-tendency of new season's teas at the auctions, became irregular on later days.

The course of prices of Kaffir shares was disappointing. After an early bout of liquidation, Johannesburg showed signs of a favourable turn on Tuesday afternoon, but the market was wholly unable to resist political fears on Wednesday. West Africans showed renewed weakness, and the relative steadiness of Commonwealth stood in sharp contrast to movements in other Western Australian stocks. Copper shares attracted a modest demand on the rise in the metal, but Rhodesian issues failed to maintain their initial improvement. Tin shares attracted little attention, the rise in the "cash" price of tin being regarded as a temporary phenomenon, associated with the exhaustion of "buffer pool" stocks.

FOREIGN STOCK EXCHANGES

NEW YORK

WHILE Congress has grumbled in its work of rushing through Bills deserving of closer discussion than is possible at the end of an over-prolonged session, Wall Street has halted, and again marched on. By a species of "conditioned reflex" the market was temporarily scuttled on Monday, in response to the Administration's success in achieving the passage of the Guffey Coal Bill through the House. Industrials lost two points in a wave of selling, but steel and chemical groups were stronger on this week's war talk. No net recovery was shown on Tuesday. The market tended unfavourably to discount the Administration's tighter hold on Congress, and scarcely welcome the passage in the Senate of a Neutrality Bill seeking to impose an arms embargo on warring nations. The market found more assurance in domestic news, and steel, farm implement and metal shares responded on Wednesday. Rail stocks showed little improvement, and the bonds were irregular. Government issues improved early in the week after a period of weakness, and continued strong in mid-week trading. Italian issues inevitably were a weak feature. The market remains impressed by current business news, and a further

* Two-Hour Session.

PARIS

The Bourse opened rather heavily this week, and speculative operations depressed quotations throughout the list. Suez Canal were lowered following the failure of the diplomatic negotiations on the Italo-Abyssinian question, but a recovery promptly ensued. Market conditions showed improvement on Tuesday, owing to supporting orders, and under the lead of *rentes* most sections—and particularly internationals—closed at the best levels of the day. Irregularity developed in mid-week as a consequence of uncertainty in the London market, and although *rentes* and armament issues maintained their initial firmness, arbitrage sales depressed international counters.

LONDON ACTIVE SECURITY PRICES AND YIELDS

NOTE—Shares with a New York Quotation or with definite American interest are distinguished by italics

In calculating yields on fixed interest stocks quoted below allowance is made for interest accrued since the last date of payment, less income tax at the standard rate. Where stocks are definitely redeemable at a certain date the yield includes any profit or loss on redemption; where stocks are redeemable at or before a certain date the final date of repayment is taken when the stock stands at a discount and the earliest date when the quotation is above par. The return on ordinary stocks and shares is calculated by reference to the latest dividends, account being taken of any enhancement or reduction of interim dividends. Allowance is made for accrued dividends in calculating the yield on "cum div." shares.

(Continued from page 387)

BERLIN

The chief feature of last week's share market was heavy buying of banks. Deutsche-Disconto, Dresdner and Commerz- und Privat each rose six points, and Handels-gesellschaft was firm. The two linoleum securities gained substantially on dividend increases. In general the market was firm, with the exception of shipping shares, which resumed their decline. Daimler Motors rose above par, and interest was shown in other traction concerns. The lower-priced shares of small companies, including the unofficially quoted issues, were also the subject of inquiry. Bond prices changed little, but some municipals were sold. The new week opened with a lower tendency in share prices. Tuesday's market was steadier, although shipping shares touched a new low level. Quiet conditions on Wednesday developed into general easiness, which affected bank and industrial shares, although rayons tended to improve.

	Aug. 14, Aug. 19, Aug. 21, 1935	Aug. 14, Aug. 19, Aug. 21, 1935

AMSTERDAM

The market was preoccupied, quietly but unmistakably, by the breakdown of the Three-Power Conference over the week-end. The weaker tendency of the guilder failed to evoke any interest in shares, and leading industrial, commodity and oil issues were listless and depressed during the first two days. On Wednesday, however, the tone was reversed in the share markets on modest buying orders. The Government bond market, however, remained depressed throughout.

CAPITAL ISSUES

THE new issue market has lapsed into quiescence this week, as a result of the disturbance to market sentiment which has arisen from the failure, so far, to reach a pacific solution in the Italo-Abyssinian dispute. No public issues, either trustee or industrial, have accordingly braved the market reaction. Particulars of a trustee issue by *Dundee Corporation* have, however, been advertised "for information only." The amount involved is £700,000, in 2½ per cent. stock with a 15-year life. The issue has been placed, not in the market (where it would infringe the "understanding" which limits corporation "placings" to £250,000), but among the Savings Banks in the four principal Scottish centres. The proceeds are to replace mortgages of which the major portion is already held by the subscribing banks. The issue has been sold at 98 per cent., and the terms are therefore more favourable to the borrower than those obtained on the 3 per cent. loan at par, issued in London at the end of July. Particulars have also been advertised of a 3½ per cent. debenture issue by *Rio Claro Investment Trust*, of which only part has been placed as yet.

ISSUES OF THE WEEK

BY STOCK EXCHANGE INTRODUCTION

Dundee Corporation.—Issue of £700,000 2½ per cent. redeemable stock, 1950. Sold at 98 per cent. to savings banks of Dundee, Edinburgh, Glasgow and Aberdeen. Repayable July 15, 1950. Secured on whole revenues, and ranks *pari passu* with existing stocks. Proceeds for mortgage repayments. Rateable value, £1,499,437; present rate, 8s. 3d. in £. Net debt, £6,631,227, £4,477,842 productive and housing.

Rio Claro Investment Trust.—Particulars of issue of £200,000 3½ per cent. debenture stock, 1947-72. Redeemable at par on six months' notice after December 31, 1946, or finally on January 1, 1972. £60,926 stock sold at par, less ½ per cent., and balance will be issued as required. Secured by second floating charge.

ISSUES TO SHAREHOLDERS ONLY

Ridgmont Fletton Brick.—240,000 5s. ordinary shares offered to shareholders at par in proportion of two new for every five shares held.

J. and F. Stone Lighting and Radio, Ltd.—Issue of 85,000 6 per cent. cumulative redeemable 1 preference shares at par to shareholders. Proceeds for part purchase price of District Supplies, Ltd., of £133,000, of which £73,000 cash and balance in 5s. ordinary shares. Assets acquired valued £230,257. Subscription guaranteed at 5 per cent. commission. Redeemable at 22s. 6d. from June 30, 1937, on various conditions.

CONVERSIONS AND REPAYMENTS

Covent Garden Properties.—Outstanding 5 per cent. debenture stock to be repaid January 1, 1936, at £102 10s. per cent.

New South Wales 3 per cent. Stock, 1935.—This issue will be repaid at par on October 1st.

New Zealand Government 5 per cent. Stock, 1935-45.—This stock will be repaid at par on October 1st.

Imperial Chinese Government Gold Loan, 1908.—Bonds for £250,000 drawn August 6th will become due for redemption at par October 5, 1935.

Société Intercommunale Belge d'Electricité.—The company has decided to draw £150,000 nominal 5½ per cent. sterling bonds additional to £3,500 nominal laid down in the redemption table. Bonds will be paid at offices of M. Samuel and Company at sterling value on September 1, 1928, based on fixed rate in sterling of gold per fine ounce on September 2nd next, and payment will be made on September 5th.

ISSUE ABROAD

Canadian Government.—Further refunding operations totalling \$115,000,000 are anticipated before mid-October.

FORTHCOMING ISSUES

Wandsworth and District Gas.—An offer of £150,000 of 4 per cent. perpetual preference stock by tender is anticipated.

Maclean's.—Offer of 750,000 6 per cent. redeemable 1 preference shares at 21s. each is anticipated.

East African Goldfields.—It is proposed to increase the capital to £600,000 by the creation of 775,000 shares of 5s. each.

British Marine Aircraft.—A public issue will be made in the middle of September.

British Celilynd.—Public issue expected next month.

RESULTS OF ISSUES

City of London Property.—List for £221,900 3½ per cent. debenture stock closed August 16th, over-subscribed six times.

Odams (Watford).—List for 450,000 5½ per cent. preference shares closed 9.5 a.m. August 16th. Heavily over-subscribed.

Union Steel Corporation (of S.A.).—Excess shares applied for in respect of issue of 725,000 ordinary shares allotted in ratio of 21 per cent. of rights applications.

CALLS DUE AUGUST 26, 1935, TO AUGUST 31, 1935

The grand total of calls falling due in August, 1935, is £16,443,401, which compares with £36,367,141 which fell due in August, 1934.

COMPANY MEETINGS, &c.

GUILDHALL PROPERTY COMPANY, LIMITED

SATISFACTORY FIRST YEAR

The annual general meeting of the shareholders of Guildhall Property Company, Limited, was held, on the 20th instant, at No. 20 Grosvenor Place, London, Mr F. H. Rogers, M.I.Mech.E. (the chairman), presiding.

The Chairman, in the course of his speech, said:—The accounting period under review covers some fifteen months from March 23, 1934, to June 30, 1935. It is proposed that future accounting periods shall run from July 1st to June 30th.

Owing to the usual unavoidable delays that arise in the conveyance of property, particularly as in the case of our company where there are a large number of individual properties, the bulk of which are freehold, with the resultant investigation of titles, it was not until December 3, 1934, that the purchase and conveyance of the whole of the company's properties was completed and the company commenced to receive the benefit of its full income. In these circumstances your directors consider the profit and loss account as satisfactory.

Dealing with the assets side of the balance sheet, our freehold properties at cost amount to £543,865, and the leasehold properties—less amortisation—to £117,510, making a total of £661,375.

The other substantial item is represented by the investment of £59,797 in our subsidiary, the Guildhall Development Company, Limited, the whole of the issued share capital of which is owned by our company.

The gross revenue amounts to £77,477, and after payment of the preference dividend the directors recommend a final dividend on the ordinary shares at the rate of 2½ per cent. actual, making a total of 7½ per cent. for the period.

DEVELOPMENT OF BISHOPSTONE PROPERTY

The subsidiary company was formed last year, and has acquired a freehold building estate of over 900 acres on the South Coast at Bishopstone, near Seaford, Sussex; a freehold estate in London now in course of development; and has taken over the development of part of the freehold land owned by our company which was not income producing. The subsidiary company has already built, and let on repairing leases, a number of commercial properties, and it is anticipated that before the end of the present year it will be receiving a net income from this London estate alone in excess of £10,000 a year.

The most valuable of the subsidiary company's assets is the freehold building estate of over 900 acres at Bishopstone, Sussex, beautifully situated between the Downs and the sea. Since its purchase the estate has been town-planned and brought within the Urban District of Seaford.

The intensive development of this area of the Sussex Coast by the Southern Railway Company has resulted in our property now having the benefit of a fast electric train service to Victoria and London Bridge. Arrangements are being made for an additional railway station to be built on the actual property, while its confines adjoin two golf links. In addition there is good anchorage for yachts at Newhaven, which abuts the western extremity of the estate, and there are, of course, the ordinary amenities of the seaboard over a very considerable area facing the property.

SALES IN EXCESS OF VALUATION

The survey, lay-out and sale of this estate have been placed in the hands of Messrs Duncan B. Gray and Partners, of Mount Street, whose reputation and success in estate development of this kind are well known. This firm has recently valued this property at £520,565, subject to an ultimate development expenditure of approximately £81,000, which will be provided out of the proceeds of sales of portions of the property. Sales have already been made at prices in excess of such valuation. The subsidiary will not engage in speculative building, but in selling or leasing its lands in conformity with the plans and lay-out of its surveyors.

In conclusion, our company is now in receipt of the full income from its properties (more than 80 per cent. of which are freehold properties within the London area) amounting to over £63,000 per annum (apart from any profit derived or to be derived from the subsidiary company), which is in excess of the annual revenue referred to in the prospectus. The greater part of this revenue is derived from properties let upon full repairing leases.

Your directors look forward with confidence to the future progress and development of the company's business.

The report and accounts were adopted.

GOVERNMENT RETURNS, &c.

NATIONAL ACCOUNTS

The total ordinary revenue for the week ended August 17, 1935, amounted to £20,454,000, against ordinary expenditure of £10,444,500. After allowing for a decrease in Exchequer Balances of £400,742, the operations for the week, as shown below, decreased the gross National Debt by £10,410,000 to approximately £8,107 millions.

Rhodesia	£ 99 15 0	£ 99 15 0
South Africa	£ 100 2 6	£ 100 2 6

THE ANGLO-SOUTH AMERICAN BANK, LTD., has received telegraphic advice from the Madrid Branch that the gold surcharge for the payment of Spanish Customs duties has been fixed for the period August 21st to 31st at 138.29 per cent. The previous rate was fixed as from August 11th at 138.60 per cent.

CENTRAL AND SOUTH AMERICAN EXCHANGE RATES

THE ANGLO-SOUTH AMERICAN BANK, LTD., issues the following details relative to quotations for certain of the South and Central American exchanges. All these exchanges, with the exception of that of Bolivia, are related to the United States dollar, and the approximate sterling rates may be obtained by applying the dollar-sterling exchange rate:—

Bolivia.*	Official market: Sight rate, 20.26 bolivianos per £ sterling on June 12, 1935. Export selling rate 80 bolivianos per £.
Colombia.*	Sight rate, 190 pesos per 100 United States dollars on August 17, 1935. This rate applies to holders of permits buying in the "open" market.
Ecuador.*	"Free" market sight rate on July 17th, 10.50 sucres per United States dollar.
Guatemala.	Sight rate on New York is maintained at 1 quetzal per United States dollar, but a commission of 1 per cent. is charged by the Banco Central for the sale of drafts.
Nicaragua.*	Official selling rate was established at 110 cordobas per 100 United States dollars on November 26, 1934.
Salvador.	Sight rate on July 9, 1935, 2.51 colones per United States dollar.
Venezuela.	Sight rate on New York is at present maintained at 3.91½ bolívares per United States dollar.

* Exchange controls are operative in these countries.

GOLD MARKET

Messrs Samuel Montagu and Company write on August 21, 1935, as follows:—

The Bank of England gold reserve against notes amounted to £192,774,496 on the 14th instant, as compared with £192,774,457 on the previous Wednesday.

During the week the bank announced the purchase of £477,014 in bar gold.

Business in the open market has been very active and at the daily fixing about £3,000,000 was dealt with during the week. Offerings the premium over gold exchange parties practically disappeared. Sales of gold on Indian account were a feature and it is possible that these were not unconnected with the adjustments of positions in Bombay.

Quotations during the week:—

	Per fine ounce	Equivalent value
August 15	140s. 1d.	12s. 1.55d.
" 16	140s. 2½d.	12s. 1.42d.
" 17	140s. 4d.	12s. 1.29d.
" 19	140s. 2½d.	12s. 1.42d.
" 20	140s. 1d.	12s. 1.55d.
" 21	139s. 11½d.	12s. 1.68d.
Average	140s. 1.75d.	12s. 1.48d.
August 22	140s. 0d.	...

The s.s. "Mooltan," which sailed from Bombay on the 17th instant, carries gold to the value of about £1,425,000, of which £975,000 is consigned to London and £450,000 to New York.

SILVER MARKET

The market has been very active and, except for one day, the cash price remained at 29d., at which price the American Treasury has been a consistent buyer for prompt delivery. Sales on China account have been considerable and nervousness occasioned by difficulties in connection with the monthly settlement in Bombay caused reselling by the Indian Bazaars and speculators, as a result of which the bull position has been further reduced.

LONDON TRANSPORT

Week ending August 17, 1935	*Takings	Compared with corre- sponding period of last year
Aggregate 7 weeks ending August 17, 1935	£518,700	+ 16,000
	£3,788,800	+ 84,000

* For an explanation of the manner in which the figures are made up, see the Economist, March 17, 1934, page 810.

Note.—The receipts this year include receipts of bus and coach undertakings not absorbed by London Transport in the corresponding period of last year. In order to make a comparison with the previous year, the figures for that year have been adjusted on the basis of the best information available.

(c) Including £149,698, undistributed profits of subsidiary company.

REPORTS AND NOTICES

The directors of Eno Proprietaries, Ltd., announce that Mr Ernest H. Cooper has been appointed to the board of the company in succession to Mr C. M. Henning, who has resigned because of continued illness. Mr Cooper is the chairman and managing director of Gillette Industries, Ltd.

Major-General Sir John H. Davidson, K.C.M.G., C.B., D.S.O., a director of the Union Bank of Australia, Ltd., African Mercantile Company, Ltd., and other companies, has accepted a seat on the board of Dalgety and Company, Ltd.

The following have been elected to the board of the British Plaster Board, Ltd.: The Right Hon. Lord Belper, D.L., J.P., W. Geoffrey Allen, George J. German, H. W. Kemp, H. Leigh Newton. The Rt. Hon. Lord Belper, D.L., J.P., has been elected chairman of the board, and Mr J. N. Derbyshire, J.P., F.C.A., has retired. Owing to increased duties in his capacity as director, Mr Donald W. Carmichael has relinquished the position of secretary, and Mr Robert Gilmour Forsyth has been appointed in his place.

The directors of Hamiltons Taverns, Ltd., announce that Major S. G. Kingsley has joined the board.

Mr J. S. E. Todd has resigned from the Board of the Property and Reversionary Investment Corporation, Ltd., owing to a complete breakdown in health.

Mr Albert Leslie Wright is now both chairman and managing director of the Butterley Company, Ltd. Mr Arthur FitzHerbert Wright, the late chairman, remains on the board of directors.

Admiral Sir Cyril T. M. Fuller, K.C.B., C.M.G., D.S.O., and Lt.-Col. J. A. Dunnington-Jefferson, D.S.O., have been elected to seats on the head office board of Yorkshire Insurance Company, Ltd., in succession to the late Mr Donald S. Mackay and the Hon. Geoffrey Howard.

GOVERNMENT, &c.

BRAZILIAN FOUR PER CENT. LOAN 1911.—Messrs. N. M. Rothschild and Sons announce that coupons due September 1st may be presented for payment in cash at 27½ per cent. of face value.

GREEK STABILISATION LOAN.—The Greek Government proposes to pay 35 per cent. of the coupon due August 1st.

URUGUAY 3½ PER CENT. DEBT.—The Bank of London and South America, Ltd., Montevideo, have received \$188,541.26 Uruguayan, purporting to be 45 per cent. of customs receipts in respect of the first half of August.

MINES

THE MYSORE GOLD MINING COMPANY, LTD.—Information has been received that conditions on the Mysore Mine are now quiet, but the strike continues and all work remains suspended. The situation on the Ooregum and Champion Reef Mines is now normal.

KLERKSDORP CONSOLIDATED GOLDFIELDS, LTD.—Directors have under consideration early formation of subsidiary company to acquire from company portions of the farms Rhenosterspruit No. 16 and Syferfontein No. 47 about 5,700 acres, including 184 acres of and freehold farm Rhenostershoek No. 52. Subsidiary will also acquire buildings, roads, equipment installed during past year, for cash.

NORTHERN TRANSVAAL GOLDFIELDS, LTD.—Application for permission to deal in the company's shares on the London Stock Exchange has been renewed, but consideration of the application has again been postponed until presentation of the company's accounts for the second year to March 31, 1936.

RUBBER

EAGLEHURST RUBBER ESTATES, LTD.—The crop secured during the year ended March 31, 1935, amounted to 397,119 lbs. of rubber, and the average net sale price obtained for the total crop, including stocks, was 5.548d. per lb. The standard production assessments for the years 1934 and 1935 have been fixed as follows: 1934, 456,418 lbs.; 1935, 435,457 lbs. The balance brought forward from last account was £1,195; profit for year ended March 31, 1935, £1,616, giving an available balance of £2,811. The directors recommend the payment of a dividend of 2 per cent., less tax, paid on July 31, 1935, which will absorb £2,000, leaving £811 to be carried forward.

MISCELLANEOUS

NORTH METROPOLITAN ELECTRIC POWER SUPPLY COMPANY.—Adjourned meeting of debenture stockholders will be held August 22nd, to consider amendment of trust deed to facilitate issue of further stock ranking *pari passu* with original stock.

BIGGS MANUFACTURING COMPANY, DETROIT.—Net profit for first half 1935 is \$6,545,458, after depreciation, Federal taxes and charges, equivalent to \$3.37 per share against \$1.87 per share for first half 1934.

ULTRA ELECTRIC (HOLDINGS), LTD.—Notice accompanying statutory report states that Ultra Electric, Ltd., has made steady progress and the turnover since April 26th exceeds that of any like period in company's history.

ROBERTS BREWERY.—It is understood that the Stock Exchange Committee has for the present refused permission to deal in the issues of Roberts Brewery. It has intimated that application can be renewed after the issue of the first annual accounts. No appeal is being lodged against the decision.

BURTOL CLEANERS, LTD.—Directors announce that company's first financial period will be closed September 30, 1935, covering 14½ months' trading.

"TIN SHARES AND THE QUOTA."—The interim payment of 5 per cent. attributed to Consolidated Tin Mines of Burma on page 337 of last week's *Economist* should refer to Tronoh Mines.

CABLE AND WIRELESS LIMITED.—The index number representing the estimated monthly receipts from traffic as related to comparable traffic in the year 1929 was 66.7 for July, compared with 70.2 for June. The corresponding figures for 1934 were 68.9 and 70.1 respectively.

HERBERT GREEN AND COMPANY, LTD.—In their report for the period to June 30th the directors state that the delay in delivery of essential machinery has been solely responsible for the failure of the company to fulfil prospectus forecast of production and dividends. Production is now expected by the end of September and as from that date the trading and earning programme should be capable of fulfilment.

GENERAL ELECTRIC COMPANY.—A London group headed by Lazard Brothers and Company, Ltd., has secured a block of ordinary shares, understood to total 400,000, from American owners, with Treasury permission.

GAUMONT-BRITISH PICTURE CORPORATION.—It is announced that the corporation is to acquire three cinema-variety halls from H. and G. Kinemas for a cash sum stated to be in the neighbourhood of £700,000. Gaumont Super Cinemas has been formed to acquire the properties with a capital of £400,000. A debenture operation is anticipated to provide finance.

PENRIKYBER NAVIGATION COLLIERY.—Acceptances of Sir Clifford Cory's offer to purchase received to extent of over 90 per cent. of outside shareholders' shares.

COMMERCE AND TRADE

SURVEY OF COMMODITY MARKETS

COMMODITY markets have been quite active since the end of last week. Demand for non-ferrous metals was particularly good at rising prices. Copper, lead, spelter and tin were all appreciably dearer than a week ago. There was a sharp recovery in the price of "spot" tin from £208 15s. per ton to £225 15s. per ton. The event of the week in the metal market was the publication of the recommendations of the Import Duties Advisory Committee concerning the duties on lead and spelter. Business in the iron and steel markets has fallen off, but a revival of demand is confidently expected early in September. The market in vegetable oils and oilseeds remained firm owing to the expectation of a substantial reduction in Argentina's linseed crop. The market in rubber was dull and quotations continued to decline.

Among textile raw materials, cotton was slightly dearer, but the outlook for this textile fibre will remain uncertain until the United States Government announces its policy concerning the new crop. The price of raw wool remained firm. Flax and hemp are scarcely changed in price on the week, but jute was slightly cheaper. Quotations for Italian silk were marked up during the past week.

Owing to the warm weather and an abundance of supplies, prices of meat and bacon were marked down. On the other hand, demand for fruit and vegetables was active. Supplies of certain varieties of fruit are smaller than a year ago. Little change has taken place in quotations for raw sugar and tea, but wheat prices advanced sharply on adverse crop reports from North and South America.

The upward movement of commodity prices in the United States continued during the past week. Moody's index of the dollar prices of staple commodities, based on December 31, 1931, stood at 167.1 on Wednesday, compared with 165.6 a week earlier, 158.9 a month earlier and 153.9 on the corresponding day last year.

COAL

SHEFFIELD.—The export quota for this district was increased last week, but it came too late to be of benefit so far as the present month is concerned. It should help the export trade in the future. The July exports were down compared with previous months. Forward inquiries are coming along rather more freely than of late, especially for best quality hards, which remain firm. Washed singles and smalls are also a good market. Big tonnages of small fuel are going to the coke ovens and the generating stations, and are relatively scarce. Inland consumption of industrial fuel continues heavy and prices are steady. Orders are coming forward for house coal in view of approaching higher winter prices. Coke is plentiful and prices rather easy.

Quotations: Association hards, 17s. 9d. to 18s. 3d., f.o.b.; Derbyshire do., 18s. to 18s. 6d. f.o.b.; Yorkshire washed trebles, 16s. 6d. to 17s. f.o.b.; best Yorkshire house, 20s. to 22s. at pits; best Derbyshire do., 19s. to 21s.; blast-furnace coke, 13s. at ovens.

NEWCASTLE-ON-TYNE.—There was another decrease in coal and coke shipments from the Tyne last week, the quantity being 253,418 tons, which is 52,083 tons less than in the corresponding week last year. The total decrease for this year to date is 430,000 tons.

The Northumberland steam market shows little change, all grades being in ample supply. Ahead, over the winter months, inquiry is good, and substantial sales have been made to the Scandinavian countries and the English coast. Durham gas and coking coals are plentiful, there being little fresh foreign trade. Patent oven coke is offered freely for prompt shipment.

Current f.o.b. prices for export: NORTHUMBERLAND—D.C.B. screened, 13s. 9d.; smalls, 11s.; Howards, Bentinck, Newbiggin screened, 13s. 3d.; smalls, 10s. 6d.; Tyne prime large, 13s. 3d.; smalls, 11s.; Hartley Main large, 13s. 3d.; smalls, 11s. DURHAM—Lambton/South Hetton screened steam, 15s. 2d.; smalls, 12s. 6d.; Wear special gas, 15s.; Holmside, Ryhope, Boldon unscreened gas, 14s. 6d.; second-class gas, 13s. 2d.; coking unscreened and/or smalls, 13s. 2d.; prime unscreened bunkers, 13s. 9d.; second-class unscreened bunkers, 13s. 3d.; prime foundry coke, 18s. 6d.; Newcastle and district gas coke, 20s.

GLASGOW.—The feature is the continued steadiness of prices in face of restricted export demand. Only Lanarkshire prime splint has lost ground and this because of the stoppage of shipments to Italy. Contract work and a good deal of covering by exporters keep collieries busy, and the better classes of steam coal especially are well booked. Industrial requirements remain heavy, and domestic demand tends to expand.

Shipment prices f.o.b. district ports: LANARKSHIRE—Ell best, 14s. 6d.—15s.; splint best, 17s. 6d.; splint second, 15s.—15s. 3d.; navigation, screened, 15s.; navigation, unscreened, 13s. 6d.—13s. 9d.; Hartley, 16s.; steam, 13s.—13s. 6d.; trebles, 13s. 6d.—

14s.; doubles, 13s.—13s. 6d.; singles, 12s. 6d.—12s. 9d.; pearls, 11s.; dross, 10s. FIFE—Best unscreened navigation, 13s. 6d.—13s. 9d.; unscreened navigation, 12s. 9d.—13s. 3d.; first-class steam, 13s. 6d.—14s.; third-class steam, 11s. 9d.—13s.; trebles, 13s.—16s. 6d.; doubles, 13s. 6d.—14s. 6d.; singles, 12s. 9d.—13s.; pearls, 10s. 6d.—10s. 9d. LOTHIAN—Best splint, 14s. 6d.; prime steam, 13s. 6d.—13s. 9d.; secondary steam, 12s. 6d.—12s. 9d.; unscreened navigation, 12s. 9d.—13s.; trebles, 14s. 6d.—15s.; doubles, 13s. 3d.—13s. 6d.; singles, 12s. 9d.—13s.; pearls, 10s. 9d.—11s. Ayrshire—Best unscreened navigation, 14s. 6d.; steam, 13s.; trebles, 13s. 6d.; doubles, 13s.; singles, 13s.; pearls, 12s. 6d.; dross, 11s. 6d.

IRON AND STEEL

MIDDLESBROUGH.—No market was held this week owing to the holidays. Most of the foundries and steel mills in this area were closed this week, when the opportunity was taken to effect repairs and renewals. Business in pig iron was therefore quiet, but owing to increasing home demand it is expected that there will be considerable activity early in September.

Shipments of all classes of pig iron during August, up to and including the 20th, amounted to 6,891 tons, as compared with 5,412 tons during the same period of July, and, whilst regular shipments of pig iron are being made to Scotland, a fairly large parcel of approximately 1,200 tons has been shipped to Denmark and approximately 500 tons to South Africa.

SHEFFIELD.—A falling off in the buying of iron and steel material is attributed to holiday influences. The local works are as active as ever, or nearly so. Special lines of steel, and certain engineering lines recently developed in Sheffield, are selling freely. Steel makers are indignant at the attack on them by Lord Nuffield, and deny that steel prices have been increased except in minor instances. Before the tariffs the bulk of the imported alloy steels went to the motor works. Tool makers are showing concern at the great increase in imports of American tools since the United States went off the gold standard, and are bestirring themselves with the object of getting the duty raised from 20 per cent. to 33½ per cent. They think that only a 50 per cent. duty would give them the necessary protection against American competition. The local tool works are, however, very busy, and the trade is yielding profitable returns to most of those engaged in it. Exports of Sheffield steel and tools to Soviet Russia are at a rather low ebb. That country, however, continues to import from England large quantities of ferro-tungsten and other ferro-alloys used in the manufacture of special steels. As regards the latter, Soviet Russia now appears to be independent of foreign supplies. The cutlery and plate branches are comparatively quiet. The export trade maintains previous levels, but fails to expand appreciably.

GLASGOW.—The position of the iron and steel industry in the West of Scotland remains very satisfactory. In many branches regular employment seems assured for some months. Clyde shipbuilding is still quiet, but during the past ten days two further orders have been added to the work on hand, one being a passenger and cargo steamer for the Ellerman line to be built by Messrs Barclay, Curle and Company of Whiteinch, and a passenger steamer for the L.M.S. Railway Company's Ardrossan-Arran service to be built at Govan by the Fairfield Shipbuilding Company. Steel-makers and manufacturers of semis are very busy. Export business in sheets continues to improve and home users are continuing to take very large quantities of both black and galvanised sheets from the local mills. Tube makers are also busy at present. There has been an exceptionally heavy demand just recently for various plant items and makers of steel plant equipment are fully employed.

OTHER METALS

COPPER.—The week ended last Wednesday witnessed the best copper market for several months, the cash and forward quotations having risen by £1 10s. and £1 16s. 3d. per ton, respectively. The rise is traceable to both speculative and consumer buying. This

DER OESTERREICHISCHE VOLKSWIRT

is the most important and influential economic and financial weekly in

CENTRAL EUROPE

Subscription Rate: - Half-yearly £1: 15

VIENNA: IX. PORZELLANGASSE 27

was partly caused by anticipation of a war in Abyssinia, but the fact that the quiet summer season is drawing to a close is also important. In New York, demand reached a record level on Monday, when it was reported that 69,000 tons of the metal had changed hands, and producers took the opportunity of raising their domestic price from 8 cents to 8.50 cents per lb. electrolytic. If demand remains at its present level the American domestic quotation may soon be advanced to the former "pegged" price of 9 cents per lb. According to unofficial estimates, world stocks declined by 10,300 short tons to 571,000 short tons in July, thus reaching a new low level for 1935. As has frequently been the case, it was impossible to compare the latest statistics with those of the previous month, and it would therefore be extremely useful if publication of the official statistics, discussed at the New York conference in March, were begun as soon as possible.

Sales on the London Metal Exchange: 4,100 tons on Monday, against 1,200 tons last week; 3,800 tons on Tuesday, against 750 tons last week; 4,300 tons on Wednesday, against 1,200 tons last week. Domestic spot was quoted at 7.97½ cents per lb. in New York on Wednesday, against 7.62½ cents a week ago and 7.62½ cents a month ago. Wednesday's official closing price for standard cash in London was £33 7s. 6d. to £33 8s. 9d., compared with £31 17s. 6d. to £31 18s. 9d. a week ago. Stocks of refined copper in British official warehouses at the end of last week, at 73,471 tons, show an increase of 128 tons, while stocks of rough copper, at 11,309 tons, show a decrease of 350 tons on the week.

LEAD AND SELLER.—For the first time for several years, the price of lead passed the £16 level on Wednesday, when spelter touched £15 per ton. A good demand coupled with short supplies was responsible for this rise. But the event of the week was the announcement of the new import duties, the implications of which are discussed below.

Sales of lead on the London Metal Exchange: 500 tons on Monday, against 300 tons last week; 1,150 tons on Tuesday, against 600 tons last week; 2,750 tons on Wednesday, against 1,400 tons last week. The New York quotation on Wednesday was 4.30 cents per lb., against 4.20 cents a week ago and 4.15 cents a month ago. The official closing quotation in London for soft foreign for shipment during the current month was £16 2s. 6d. per ton, compared with £15 15s. a week ago.

Sales of spelter on the London Metal Exchange: 1,300 tons on Monday, against 150 tons last week; 700 tons on Tuesday, against 175 tons last week; 1,025 tons on Wednesday, against nil tons last week. Wednesday's quotation in East St. Louis was 4.60 cents per lb., against 4.50 cents the week before and 4.35 cents a month earlier. Wednesday's official closing quotation in London for "good ordinary brands" for shipment during the current month was £15 per ton, against £14 6s. 3d. last week.

REVISED LEAD AND SELLER DUTIES.—The recommendations of the Import Duties Advisory Committee are given effect in a White Paper (Cmd. 4983) published on Thursday. The duties on unwrought lead and spelter will be reduced, as from Tuesday next, to 7s. 6d. and 12s. 6d. per ton, respectively, or 10 per cent. *ad valorem*—whichever is the less. At the present level of quotations, the new duties represent a substantial reduction on the duty of 10 per cent. *ad valorem*, which has hitherto been operative. The new arrangement is the result of co-operation between producers, consumers and the London Metal Exchange, and there is every prospect that it will work satisfactorily. Hitherto, the duties have had a depressing effect on quotations for, although both Empire and foreign lead and spelter are dealt in on the London Metal Exchange, consumers were not keen to purchase foreign metal upon which the duty would have to be paid. Even small quantities of foreign metal, therefore, had a depressing effect upon prices. The new regulations do not oblige either party to deal in Empire metal, but dealers are given the alternative of supplying foreign metal at the quoted price or Empire metal at the quoted price plus a "premium" equal to the duty. Thus, although the duties are still on "buyer's account," they will no longer tend to force prices downwards. To prevent any adverse effect on export trade, Empire producers have agreed to provide for a rebate, equivalent to the amount of the duty, on lead used in exported goods in which the cost of lead is an important factor. Moreover, it is provided that both Empire producers and consumers shall transact more business through the London Metal Exchange, in order that the latter may be re-established as an effective market in these metals. This revision of the duties may be regarded as an important step forward and even if present expectations are disappointed no harm need result, for the arrangements are avowedly only an "experimental compromise," which may be readily revised in the light of further experience.

SILVER.—Silver has had another eventful week, prices in the bullion market on Wednesday being 29d. per oz. for spot and 28½d. for forward. Two events of outstanding importance during the past week were the decision of the United States Senate to open an inquiry into the Government's silver policy as soon as Congress begins its summer recess, and the failure of a leading speculator in Bombay. The Senate inquiry is expected to be "friendly," for Senator Pittman, under whose leadership it is to be held, has recently become a supporter of the President's silver policy. The failure of the firm in Bombay, which may be followed by similar difficulties for other "bulls," did not come as a surprise. It has been known for some time that bull speculators in India have been losing money heavily since May, and that they might be involved in difficulties, since their speculations were financed largely with borrowed capital. It has even been suggested that the heavy sales of the past fortnight were all traceable to the troubles of bull speculators. These sales have, however, improved the technical position of the market, and it would not be surprising if a steadier tendency developed in the near future.

TIN.—"Bears" have once again been caught in the tin market. From Thursday of last week, when prices were no higher than £208 15s. per ton for cash and £208 2s. 6d. for forward metal, quotations have steadily advanced. But the sharp rise of the past few days is not so important as would appear at first sight, and was brought about by a relatively small demand for nearby tin. This experience should serve to remind speculators that supplies are still scarce, and that the Tin Committee still has the market under its control. Nevertheless, the rise seems to have been somewhat overdone, and it will probably be partially lost as soon as supplies are affected by the increase in the quota.

Sales of tin on the London Metal Exchange: 320 tons on Monday, against 390 tons last week; 260 tons on Tuesday, against 165 tons last week; 300 tons on Wednesday, against 400 tons last week. The New York quotation on Wednesday was 51.00 cents per lb., against 48.75 cents a week ago and 52.50 cents a month ago. Wednesday's official closing quotation in London for standard cash was £225 to £226 per ton, compared with £211 to £213 last week. Stocks of tin in London and Liverpool at the end of last week totalled 2,490 tons, an increase of 55 tons on the week.

OTHER NON-FERROUS METALS.—Among other non-ferrous metals, aluminium ingots and bars for home delivery were again quoted at £100 per ton. Nickel, for home and export, at £200 to £205 per ton, remains unchanged. Quicksilver, on the spot, was quoted at £11 7s. 6d. to £11 10s. per flask of 76 lbs., as against £11 10s. to £11 17s. 6d. per flask last week. Chinese antimony was quoted at £70 to £71 per ton ex warehouse, the same as last week. Chinese wolfram for July-August shipment at 32s. to 34s. per unit c.i.f. remains unchanged. Platinum (refined) remains unchanged in price at £7 per ounce.

TEXTILES

COTTON.—Manchester. Spinners and manufacturers have experienced another unsatisfactory week. Only few producers have sold their output. Competition for the limited number of orders continues severe. A disturbing factor at the moment is the political situation in Europe. As far as raw cotton is concerned, all interest is centred on the loan to farmers policy of the United States Government. It is rumoured that an official statement will be made within the next day or two. It is understood that the officials at Washington and the politicians cannot agree. If the loan is maintained at 12 cents prices will probably advance, but this decision will mean more cotton going into the hands of the Government. If the loan figure is reduced, then a fall in prices is inevitable. Weather advices from the belt continue favourable and crop estimates are increasing. A bearish factor is the probability of hedge selling during the next month or two.

Manufacturers of piece goods have met with very little encouragement. A fair amount of testing of prices has taken place, but leading buyers remain cautious. Not more than a sorting up business has been done for the several outlets of India, practically all the orders being in light fabrics and fancies. Nothing has been put through for China, but some odd lots have been mentioned for Singapore. Coloured goods continue to move off fairly well for West Africa and some moderate lines have been booked in printing and finishing qualities for South America and the Dominions. Home-trade buyers have not been in any hurry to place orders with makers. There is a tendency for looms to run out of work. A slow demand has been reported in American yarns and buyers have found prices somewhat irregular when tested. Egyptian spinners have held firmly for the higher quotations, but for the most part business has been blocked. The testing time for this price-fixing scheme will probably come in three to four weeks.

COTTON WEAVERS' WAGES.—There are indications that the legalisation of cotton weavers' wages under the Cotton Manufacturing Industry (Temporary Provisions) Act has not eliminated all difficulties in the manufacturing section of the cotton industry. When the legalised wage list came into operation on July 15th, a number of manufacturers had contracts on their books based on cut wages; they were in a dilemma, because an increase in wages meant a loss on the unfulfilled contracts. There have been rumours that some of these firms have taken a chance and have continued wage cutting despite the Act of Parliament. In the absence of such practices there could not be the continuance of the wide variation in the prices for cloth quoted by manufacturers. It is understood that a number of complaints are about to be dealt with and these will be considered by a small committee of representatives of the Manufacturers' Association and the Operative Weavers' Amalgamation. It is reported in some quarters that the Minister of Labour is determined to place the weaving industry

on a sound basis and, if necessary, further control will be instituted in the form of all manufacturers working under a licence from the Government, and that if there is a violation of the regulations the licence will be withdrawn.

JUTE.—Dundee.—"Bear" sellers of raw jute have dominated the market and prices have steadily declined, with only occasional spells of steadiness. Though the Bengal Government have declared their intention to restrict sowings again next season, they have not issued any statement regarding the extent to which these will be curtailed. The weather has improved in the jute-growing districts, but a lack of steeping water now reported may affect the quality of the fibre, and there may be a scarcity of the finer grades of jute. As a result of the dearth of business at the manufacturing end of the trade, business in raw jute is on a small scale. This season the Indian jute mills have not yet given the market the support to which it is accustomed at this period of the season. Hence the weakness of prices. Unless business in yarns and cloth improves here, short-time working will become a fact before long. Buyers appear to be insatiable in their desire for lower prices as the result of the falling prices of raw jute, but they apparently forget that yarns and cloth did not advance in price to the same extent as did the fibre earlier in the year.

The full group of Daisee-2/3 has been sold down to £16 7s. 6d. and after £16 10s. had again been taken, sellers became more reserved and £16 15s. became lowest, with single marks quoted at from £17 2s. 6d. and Daisee-4 at from £16, after £15 15s. taken, October-November. Tossa-2/3 has come down to £17 12s. 6d. for full group and to £16 15s. for fours, October-November. Good First Marks are now available at £21 10s. and good Lightnings at £19 10s., with Hearts at £18 10s., and grade qualities at £19 5s. for Firsts, £17 12s. 6d. for Lightnings and £15 10s. for Hearts, August-September.

Jute yarns are very quiet and spinners are in some cases thinking of curtailing their production. Common 8-lb. cops are quoted at 2s. and 8-lb. spools at 2s. 1d., but buyers are reluctant to pay these limits. Twist is quiet at 3½d. for 3-ply 8-lb., and sacking yarns at 2½d. for 24-lb. weft and 3½d. for 8-lb. chains. Rove remains quite steady at £18 10s. for 48-lb. and £14 10s. for 200-lb., and the Rio yarns could be shaded with business.

Cloth business continues slow and prices are rather indefinite owing to lack of orders of sufficient importance to test them. The quoted rates are from 2½d. for 10-oz. 40-in. and 2½d. for 8-oz. Linoleum hessians are very firm and makers are busy, while heavy goods are meeting with a moderate demand.

Calcutta goods have declined in sympathy with raw jute and 19s. 3d. is now named for 10-oz. 40-in. and 16s. for 8-oz., September, and 19s. 1d. and 15s. 7d. for October-December, with Liverpool twills at 50s. 3d. and "B" twills at 44s. 7½d., August-September, and 50s. 6d. and 45s. October-December.

GRAIN MARKETS

WHEAT.—The past week has seen some recovery of quotations, and trading became more active towards the close of the period under review. Harvesting of spring wheat has reached an advanced stage in the United States, but the quality is reported to be poor. In Canada, the crop has suffered from drought and rust over a considerably wider area than was at first supposed, and private estimates of the yield have been revised in a downward direction.

According to the *Corn Trade News*, total shipments of wheat and flour during the past week were 817,000 quarters, against 800,000 quarters in the preceding week. On Wednesday last, "September" futures were quoted in Chicago at 89½ cents per bushel, against 86½ cents the week before and 86½ cents a month ago. Quotations in London, Wednesday: No. 1 Northern Manitoba, Vancouver, ex ship, 34s. 6d. per 496 lbs., against 33s. 3d. a week ago; No. 2 Northern Manitoba, Vancouver, ex ship, 33s. 6d., against 32s. 3d. a week ago.

FLOUR.—Shipments from North America in the past week totalled 109,000 sacks, compared with 96,000 in the previous week. Wednesday's London quotations (excluding quota payments) were: Straight run, delivered country, 26s. 6d. per 280 lbs., against 26s. 6d. a week ago; delivered London, 25s. 6d., as compared with 25s. 6d. a week ago. Manitoba patents, ex store, 24s. 3d. to 26s., against 24s. 6d. to 26s. 3d. a week ago. Australian, ex store, 19s. 9d. to 20s. 9d., against 24s. 3d. to 26s. a week ago.

BARLEY.—"October" futures were quoted at 35½ cents per bushel in Winnipeg on Wednesday, against 34½ cents last week and 36 cents a month ago. Quotations per 448 lbs. in London on Wednesday were: "English feed" (new) at farm, 23s., the same as last week.

OATS.—On Wednesday, "September" futures were quoted at 27½ cents per bushel in Chicago, against 26½ cents a week ago and 31½ cents last month. Quotations in London, Wednesday: "English Black" (old), at farm, 22s. per 336 lbs., against 22s. a week ago; "English White" (old), at farm, 22s. against 22s. last week; "Chilean White," landed, 26s. 6d., against 26s. 6d. a week earlier.

MAIZE.—"September" futures were quoted on Wednesday at 74½ cents per bushel in Chicago, against 75½ cents a week ago and 76½ cents last month. Quotations in London, Wednesday: "Plate," landed, 16s. 6d. per 480 lbs., compared with 16s. 6d. a week ago; "Plate," ex ship (new), 15s. 6d., as against 15s. 6d. a week ago; "Plate," "August," 15s. 9d., against 15s. 7½d. a week ago. Yellow maize meal, ex wharf, was quoted at £4 10s. to £4 12s. 6d. per ton, against £4 12s. 6d. a week ago.

COMPARATIVE AVERAGES OF GRAIN.—The following table gives the estimated sale of home-grown wheat during the harvest years 1931-32 to 1934-35.

	1931-1932	1932-1933	1933-1934	1934-1935
Estimated sales of home-grown wheat—	Cwts.	Cwts.	Cwts.	Cwts.
1 week to August 17	26,233	263,433	71,825	137,807
51 weeks to August 17	4,014,645	8,837,919	6,660,881	14,007,613
Average price of English wheat per cwt.	s. d. 6 7	s. d. 5 4	s. d. 5 1	s. d. 4 7

The following is a statement showing the quantities sold and the average price of British corn in the past two weeks, and for the corresponding week in each of the years from 1931 to 1934.

Week ended	QUANTITIES SOLD			AVERAGE PRICE PER CWT.		
	Wheat	Barley	Oats	Wheat	Barley	Oats
Aug. 15, 1931	Cwts. 25,824	Cwts. 1,866	Cwts. 6,427	s. d. 6 6	s. d. 7 6	s. d. 6 5

Aug. 10, 1935	46,782	3,863	22,240	5 4	6 7	6 8
Aug. 17, 1935	137,807	14,079	42,814	4 7	7 7	6 3

AMERICAN WHEAT MARKETS.—The following table shows wheat quotations in recent weeks, with comparative figures for 1933 and 1934:—

NEAREST FUTURE	Jan. 4, 1933	Jan. 3, 1934	Aug. 22, 1934	Jan. 2, 1935	Aug. 14, 1935	Aug. 21, 1935
Winnipeg (No. 1, Manitoba) Cents per 60 lb.	46½	65½	84½	82½	82	87½
Chicago (No. 2 Winter) Cents per 60 lb.	46½	84½	104½	98½	86½	89½

The visible supply of wheat in Canada, at 124,952,000 bushels, shows an increase of 1,526,000 bushels on the week. Supplies a year ago amounted to 99,501,000 bushels.

OTHER FOODS

BACON.—With arrivals heavy and demand poor, prices have shown an easier tendency this week. The official quotations (per cwt. for No. 1 Sizable) which formed the basis for dealings on the London Provision Exchange this week were: English, 87s. to 89s.; Canadian, 78s.; Danish, 87s.; as against 90s. to 95s., 82s., and 93s. respectively, last week. Arrivals in London last week included Danish, 17,560 bales; Canadian, 3,120; Dutch, 2,879; Lithuanian, 2,000; Polish, 3,802; against 17,652, 3,762, 2,785, 2,041 and 2,583, respectively, in the previous week.

BUTTER.—The market has had a quiet undertone and prices are a shade lower on the week. Quotations (per cwt.) on the London Provision Exchange on Wednesday were: New Zealand, finest salted, 94s. to 95s.; Australian, choicest salted, 93s. to 94s.; Danish, 108s. to 109s., compared with 95s., 94s. and 109s. to 110s., respectively, last week.

CHEESE.—Prices have been steady during the past few days. Quotations (per cwt.) on the London Provision Exchange on Wednesday were as follows: English finest farmers', 56s. to 65s.; Canadian, finest coloured (new), 50s. to 52s.; New Zealand, finest coloured, 48s., the same as last week.

COCOA.—The "spot" quotation in New York on Wednesday was 5 cents per lb., against 5 cents per lb. last week. On the London market, Accras were quietly steady. On Wednesday last good fermented old crop, "October-December," was quoted 21s. 9d. per 250 kilos, c.i.f. Continent, against 21s. 6d. last week. Last week's movements of cocoa in London were as follows: Landed, 624 bags; delivered, for home consumption, 4,353 bags; exported, 809 bags; stocks, 151,242 bags, against 245,998 bags a year ago.

COFFEE.—Although trading in New York has been quiet, prices are unchanged on the week. The London market has shown a similar tendency. In New York on Wednesday, Rio No. 7 (cash) was quoted at 6½ cents per lb., as compared with 6½ cents per lb. last week and 6½ cents per lb. a month ago. Movements of coffee in London last week were as follows: Brazilian, landed, 119 cwt.; delivered, for home consumption, 172 cwt.; exported, 562 cwt.; stocks, 14,570 cwt., against 28,358 cwt. a year ago. Central American, landed, 125 cwt.; delivered, for home consumption, 125 cwt.; delivered, for home consumption, 125 cwt.

MUTUAL LIFE ASSURANCE

sumption, 2,269 cwt.; exported, 1,738 cwt.; stocks, 144,567 cwt., against 102,194 cwt. last year. Other kinds, landed, 493 cwt.; delivered, for home consumption, 3,213 cwt.; exported, 1,768 cwt.; stocks, 161,727 cwt., against 97,712 cwt. last year.

EGGS.—The upward movement in the price of eggs was checked during the past week. At Smithfield Market on Wednesday, English (ordinary packing, Grade I, about 15–15½ lb.) realised 15s. 6d. to 16s. per 120, against 15s. 6d. to 16s. a week earlier, while Danish (15½ lb.) made 11s. 9d. to 12s. 3d. per 120, against 12s. to 12s. 6d. last week.

FRUIT.—Despite a certain seasonal slackness of demand, prices of most of the regular seasonal lines have been high on account of short supplies. *The Fruit Grower's* Covent Garden correspondent states that plums have been making a better showing, but that supplies have been much below normal. Black currants have been in limited supply and firm in price, while cultivated blackberries have encountered a good demand. English apples are in moderate supply while English pears have been more in evidence. Demand for hothouse grapes has declined and prices have eased off. Grapefruit continue firm and lemons dear. Oranges have also risen in price slightly this week.

MEAT.—At Smithfield Market a slow demand was again encountered this week, with prices showing little variation from last week's level. On Wednesday last, Argentine chilled hind-quarters were quoted at 3s. 6d. to 4s. per 8 lbs., as compared with 3s. 8d. to 4s. last week. New Zealand frozen mutton was 2s. 10d. to 3s. 6d. per 8 lbs., against 2s. 6d. to 3s. 6d. a week ago. According to the Smithfield Market official report, supplies during last week amounted to 7,989 tons, a decrease of 148 tons on the corresponding week last year. Beef and veal accounted for 4,055 tons, mutton and lamb 2,933 tons, and pork and bacon 558 tons, as compared with 4,348, 2,625 and 660 tons, respectively, in the same week of 1934.

MILK.—As a result of the ballot of registered producers held this month, the Milk Marketing Scheme for England and Wales is to be continued. Eighty-one per cent. of the producers (representing 86½ per cent. of the cow population) voted in favour of the scheme. Information regarding the operation of the scheme during July, as issued by the Milk Marketing Board, is given in the following table, together with comparable statistics for earlier months:—

* On account to the nearest farthing. † 13d. per gallon in the South-Eastern Region.

PEPPER.—Wednesday's spot price for Lampong was 2½d. per lb. against 3d. last week. Movements of pepper in London during the past week were as follows: Black, landed, nil; delivered, 20 tons; stocks, 1,747 tons, against 202 tons a year ago. White, landed, nil; delivered, 193 tons; stocks, 18,084 tons, against 6,395 tons a year ago.

RICE.—The spot price of Burma No. 2, cleaned, new crop, was 8s. 6d. per cwt. on Wednesday, as compared with 8s. 6d. per cwt. a week ago, while the forward quotation, at 7s. 6d. per cwt., also remains unchanged on the week. Movements in London during the past week were as follows: Landed, 36 tons; delivered, 133 tons; stocks, 9,934 tons, against 2,061 tons a year ago.

SUGAR.—The New York spot price of raw sugar, which had been steady for some time, underwent a sharp advance this week. The London market has had a rather quiet tone. The spot price in New York on Wednesday was 3.45 cents per lb., as compared with 3.18 cents per lb. last week and 3.20 cents per lb. a month ago. Wednesday's sales of raw sugar in London included "December delivery" at 4s. 5d., against 4s. 4d. to 4s. 4½d. last week. The movements of raw sugar at public warehouses in London and Liverpool last week were as follows: Imports, 20,543 tons, against 9,858 in the previous week and 3,750 in the same week of last year; deliveries, 14,999 tons, against 7,931 and 14,395 tons respectively; stocks, 149,451 tons, against 143,907 and 161,670 tons respectively.

TEA.—The following table shows the average prices (compiled by the Tea Brokers' Association) of tea sold in Mincing Lane on Garden Account in recent weeks :—

Week ending	Northern India	Southern India	Ceylon	Java	Sumatra	Nyasa- land	Total
Aug. 16, 1934	d. 13-59	d. 12-23	d. 12-90	d. 10-28	d. 9-89	d. 11-58	d. 12-78
July 11, 1935	11-58	11-84	13-39	10-41	8-87	10-30	11-96
July 18, "	11-61	11-89	13-69	10-00	9-22	10-51	12-09
July 25, "	11-53	11-91	13-68	10-01	8-84	10-41	12-11
Aug. 1, "	11-36	11-26	13-37	9-52	8-46	10-29	11-81
Aug. 15, "	11-84	10-82	12-99	9-44	8-61	10-28	11-81

The quantities catalogued for this week's auctions comprised 38,698 packages of Indian and 26,170 packages of Ceylon tea. At the Indian auctions good teas were in active demand, with other grades about steady in price. The common Ceylon descriptions were inclined a little easier, with good quality teas in strong demand.

VEGETABLES.—According to *The Fruit Grower*, tomatoes, cucumbers eased off a little in price at the end of last week, but subsequently recovered somewhat. Mushrooms have been in short supply and are dear. Runner beans and green peas continue in consistent demand, but prices of the former have been very variable. Marrows are plentiful and cheap, while Dutch onions are fetching 6s. 6d. to 7s. per bag; Egyptian onions are not receiving much attention. Bunched beetroot sell well, with bunched turnips and washed carrots making recent rates. With heavier arrivals, prices of potatoes continue their gradual downward movement. At the London Borough Market on Tuesday, King Edward made 6s. to 7s. per cwt., against 7s. to 8s. a week earlier.

MISCELLANEOUS COMMODITIES

VEGETABLE OILS AND OILSEEDS.—Generally steady conditions prevail though business is not very active. Reports that, owing to insufficient rain during sowing operations, the new Argentine crop will not come up to last season's level has helped to strengthen the market; but as against this a larger yield in the United States (363,000 tons, as compared with 131,000 tons) is expected to reduce import requirements and release more seed for Europe. The final area under linseed in Argentina it is stated will not exceed 6½ million acres, providing for a yield of 1,600,000 to 1,700,000 tons, contingent upon favourable growing conditions in the near future. Crushers' demands are only moderate and governed by the sale of oilcake. For September shipment to Hull £9 6s. 3d. and for December £9 10s. have been paid. The quantity now afloat for Europe is 106,600 tons (including 1,500 tons from India), 33,000 tons less than last week, and for the United States and Canada 15,800 tons, against 26,000 tons a year ago. Shipments of Indian linseed continue small and shippers' quotations beyond buyers' ideas. The small balance of the old crop of Egyptian cottonseed is held for £6 15s. and new crop, September loading, is offered at £6 10s. with a fair demand.

Lined oil is steady in sympathy with seed and prices show no material change. Raw oil ex Hull mill for August delivery is quoted around £22 10s. and September-December £22 7s. 6d. per ton naked. Cotton oil is steadier on a better export demand. Egyptian crude ex Hull is available at £23 10s. and refined at £26 10s., prompt. Oilcakes are in better request and steady.

TIMBER.—Smaller quantities of European and Canadian building and joinery woods came forward last month, which shows that importers have maintained their cautious buying policy, whilst London dock stocks of deals, battens and scantlings are now well below those of a year ago; the heavy stocks which existed at the arrivals and by better balanced, both by this season's smaller the shippers' large unsold balances and the weakness in the forward market. Prices for Russian wood have been drastically cut to section of the market is showing more activity; others are expected into importers' hands. There is little change in consuming centres more markedly before the end of the shipping season, but trade with Germany continues most disappointing.

Supplies of shipbuilding woods are sufficient for demand. Teak is firm in price, with not too much on hand. There has been an increased importation of British Columbian log timber. American pitchpine timber has tapered off in call, with imports nil in July; but stocks are ample. Mahogany has been moving slowly into consumption, both in log and lumber specifications. American hardwood shipments are keeping up well. Forward business has, however, been light, as shippers' rates on the whole have been too high to attract business, especially this month when many principals have been on holiday. Receipts of Canadian woods are increasing, while a better consumption of hardwoods next month is almost certain. The same applies to plywoods next month is almost more than doubled compared with those of 1933.

POTASH.—In contrast to the position in Germany, to which we referred in our issue of July 20th last (p. 162), the French (Alsatian) potash industry suffered a deterioration during the first half of the present year. Exports were well maintained, but domestic deliveries fell off as a result of the crisis in French agriculture. Production the six months ended June 30th amounted to only 133,380 metric tons, against 137,070 metric tons in the corresponding period of 1934. During the past few weeks the tendency of the world market has remained unchanged. It is rather surprising that nothing has

August 24, 1935

THE ECONOMIST

recently been heard about the results of the negotiations between the cartel and the Spanish producers. It will be remembered that a temporary agreement between the two parties was reached in April last, and it was anticipated that negotiations would be concluded in June. However, Mr Chalbeaux, the president of the Union Espanola de Explosivos (the leading Spanish producer) referred in a favourable sense to the agreement in the course of a speech at the general meeting of his company earlier this year. And the absence of any "dumping" by Spain since that date gives grounds for the belief that the understanding between Spain and the Cartel remains in existence.

RUBBER.—The past week has witnessed little change in the position of this market. The uncertain political outlook, which

A SELF-BINDER FOR The Economist

Week by week you keep your copies of "The Economist," and ultimately you either file them or bind them. Doubtless you are accustomed to the annoyance which attaches to the ordinary binder—the difficulty of reading half the left-hand page and the unwieldiness of the device generally.

We are able to offer our readers a binder which overcomes these irksome difficulties and is, in our opinion, the most efficient contrivance for the purpose we have yet seen.

It holds three months' issues and index, it has no wires, clips or metal contrivances, and each issue can be bound up in an instant in such a way that it can be read as easily as a well-bound book.

"BRITISH INTERESTS"

UNLESS the unexpected happens, the British Government will be faced within the next few days with the necessity of making a momentous choice. Our representatives in Geneva must either take the lead in setting in motion collective action which involves the fulfilment of the League Covenant, at the risk of a collision with a State member who is a Great Power; or else they will have to condone a breach of the Covenant so flagrant that a failure to prevent or to penalise it will assuredly bring with it the collapse of the League.

While the world is waiting to see which line the British Government is going to take, the Government is being assailed, from two quarters, by critics who fear that they may come down on the side of upholding the Covenant. In the Italian press it is being suggested that this show of British concern for the League of Nations is just another example of the notorious "British hypocrisy," which is once again advancing "British interests" under the pretence of public spirit. At the same time a section of the British Press is shouting to the Government that it must on no account incur the smallest risk in order to uphold the Covenant against Signor Mussolini, because, in this Italo-Abyssinian conflict, no important British interest is involved.

What is noteworthy about these two sets of critics is that, whether they are writing in Rome and Milan, or in Edinburgh and London, when they say "British interests" they both mean something which in our view—as we hope to show in this article—has little or nothing to do with one vital British interest which is now clearly at stake.

Our Italian critics think that the British Government is exclusively concerned with the effect which an Italian conquest of Abyssinia would have upon the security of the sea-route from England to India, and of the water-supply from Lake Tana to Egypt. The British are determined, say these Italians, not to let either of these British Imperial assets fall under the control of a foreign Great Power; and so these British are trying to thwart Italy's legitimate attempt to

acquire a small colonial empire, by invoking newfangled principles of so-called international law and order which were never mentioned when the great British colonial empire was being acquired in the recent past. Simultaneously, the Government's domestic critics are saying that these British interests in the Blue Nile and the Red Sea are not of such importance as to warrant a quarrel with Italy. If only, they say, the British Government will stand out of Mussolini's sun, and keep on good terms with him, he will satisfy his natural ambitions at Abyssinia's expense and will afterwards behave as a good neighbour towards a British Empire which he will no longer envy or covet when once he has acquired an Ethiopian empire of his own.

For our own part, we agree with the Italian critics in believing that the Red Sea and the Blue Nile are in the British Government's mind. And we agree with the English critics in thinking that the British interests of this local and concrete kind that are involved in the Italo-Abyssinian conflict are not of a magnitude that would justify H.M. Government, by the pre-War canons of foreign policy, in incurring a risk of war in order to frustrate Italian ambitions. We believe that, as far as these local questions go, the Government is steering a sensible middle course—neither ignoring them altogether nor allowing them to assume an undue importance in the shaping of British policy.

But when this has been said, we have not yet touched the heart of the matter. For the supreme British interest in the world to-day is neither to be found in waters, salt or fresh; nor in soils, fertile or barren. Our vital British interest to-day is the preservation, confirmation and extension of that reign of international law and order which all men of good sense have been trying to establish since the morrow of the Armistice of 1918. It is true that this fundamental interest of the British Empire happens to be the recognised and cherished interest of all the other States in the world—with the momentary exception of three whose rulers imagine (most mistakenly, as we believe) that their interest lies in

a return to an international anarchy. In this matter, the interest of the British Empire is, in fact, identical with the general interest of mankind. But it remains a fact which cannot be explained away, either by denouncing the British Government's support of the League as a Machiavellian piece of hypocrisy, or by pouring scorn on it as a Quixotic form of crankiness. It is a hard and crucial fact that British interests are bound up with the vindication of an international rule of law; that the Empire and the League stand or fall together; and that the collective system of security is the British Empire's last, as well as first, line of defence.

Some Englishmen to-day seem actually to be looking forward to a breakdown of the collective system with a kind of gleeful *Schadenfreude*. "Then," they tell us, "we shall be back in the good old pre-War world; and, after all, the British Empire did not do so badly for itself in the nineteenth century." This is just about the most dangerous illusion in which any Englishman of this generation could indulge. For to dream of bringing back our British nineteenth century is as fantastic as whistling for the wind. In the nineteenth century, all the Great Powers in the world except the United Kingdom herself were cooped up on the European Continent. Our more rapid expansion was due to the early development of our coal resources; to our command of the sea and the ubiquity of our merchant marine; to our abandonment of agricultural protection, with the resulting growth of our population and trade; and to our almost complete financial predominance. In these circumstances the British Navy was more than a match for any conceivable anti-British naval combination. And, behind the impregnable rampart of this British predominance on the seas, we acquired and consolidated an Empire scattered over the face of the earth which had, and needed, no defence except the Atlantic and Mediterranean fleets. This situation was tolerable for the world, because for the most part these territories, as well as the United States, were open to emigrants, and trade was free. To-day, this straggling, world-wide Empire is still in being, but its naval defences have been turned—partly by the fact that some of the greatest of the present Great Powers are situated overseas, and have built themselves great navies, and partly by the fact that the invention of flying has welded the metropolitan island of the British Empire on to the European continent.

A consciousness of this change for the worse in our dominant strategical position is one—though only one—of the considerations that have turned us in this country into consistent supporters of the League from the start. But perhaps most of us have not even yet realised clearly and vividly quite how defenceless the British Empire will be, and how alluringly it will invite attack, if the collective system of security now breaks down. In that case, the States of the world will be reduced, once again, to reliance for their protection upon their own physical strength exclusively, without having any law to invoke against an aggressor, or any claim to demand assistance from their neighbours. If we relapse into a nineteenth-century anarchy under the strategical conditions of the twentieth century, the British Empire will be at the mercy of a coalition of the "hungry" Powers. What could we do, for example, if Germany attacked the British Isles from the air while Italy closed the Mediterranean route by air-power and occupied the Nile valley by land-power (from bases in Libya and Abyssinia), and Japan simultaneously attacked Hong-kong, Malaya, New Zealand and Australia by sea? Against such a conspiracy, the British Empire would be helpless. It would simply be partitioned. And we need not think that we could buy our predatory neighbours off by conniving at their depredations against the smaller fry (in imitation of the unscrupulous young lady of Smyrna who "seized up the cat and said 'Granny burn that',", when her grandmother threatened to burn her). For who can suppose that Italy's appetite will be satisfied with Abyssinia, or Japan's with Manchuria, or Germany's with—let us say—Austria and Lithuania? These scraggy bits of cat's meat will simply whet the great carnivores' appetites for the fat quarry that lies under their noses. That quarry is the British Empire. If we allow Italy, as we have allowed Japan, "to get away with it" in her lawless attack upon

somebody else's property, the Italians will be no more grateful to us than the Japanese have been. They will simply judge—and judge correctly—that the British are "on the run"; and they will then conspire against us with the other Powers who have already succeeded in defying the law without having yet succeeded in filling their bellies. The whole pack of them will take their second, and satisfying, helping of the good things of this world at the British Empire's expense.

If we have—as we shall have—to fight for our own lives after having allowed the League to be overthrown, we shall certainly be defeated. And this not merely because our strategical position will be hopeless, but because we shall have neither allies, nor friends nor sympathisers. In fact, if we carry out to the end our present economic policy of turning the old nineteenth-century free-trade British colonial empire into a closed market for British industry, the sympathies of the world may actually be on the side of the pirates, as they were on Drake's side when he harried the Spanish Main. But the British Empire will continue to be the best guarantee of the world's peace so long as it is broad-based on political and economic freedom, eschews a dog-in-the-manger policy and makes accessible the great resources which it controls for the needs of other peoples.

The policy of salvation for the British Empire is to stand up boldly for the League and at the same time to implement Article XIX of the Covenant by a pooling of colonial markets and sources of supply. The one absolutely fatal policy is to show that we are afraid to risk a collision with any other Great Power—even for the sake of our supreme British interest in the maintenance of international law and order—and at the same time to exclude all foreigners from any share in those vast colonial markets and sources of supply under the British flag. Here is the issue that lies before the British Government. *Caveant consules ne res publica aliquid detrimenti capiat.*

TOWNS, SLUMS AND TRANSPORT

THE housing problem in this country is, by general consent, that of the slums. The private builder can safely be left to cater for those whose incomes allow them to choose their residential area, and its distance from their workplace. But the slums—those areas where the workers of an earlier age were housed near their work—these have become residential islands in all our big cities, islands about which the long waves of suburban villas and the outer factories extend in sprawling disorder. Right at the heart of our big cities are the warehouses, the great rail, river, and canal termini, the goods depots, the shopping centres, and the headquarters of all business and administration. Mingled with all these there are the really bad slum areas. Beyond them, stretching towards the country, are the more select residential areas; and in between these and the central area there is a region of once-proud, now shabbily genteel, houses and villas, tending towards slumdom. Farther out still, parcelling up the green countryside and trickling along all the road and rail routes, are the new residential and the new industrial areas, indiscriminately intertwined.

This growth of irradiating circles of mixed residential and commercial properties has now gone on in all our big cities, unchecked and unplanned, for well over a century. Time, like an oyster, has secreted layer upon layer of new buildings round a central core. The result is no pearl; it is mere confusion. At the centre, ground-rents have grown with the growth of the cities and with the growth of the transport problem; but these ground-rents have to be paid at the centre both for slum-dwellings and for business premises. The intense building activity of the last few years has made up some of the leeway between the potential demand for middle- and lower-middle-class housing accommodation; but it has not affected the slums to any great extent. The Government's Housing Measures were introduced to meet the urgent needs of the working classes for housing accommodation at a rent, including rates, of about 10s. per week in the provinces, and about 11s. per week in London. It looks as if the Government meant business;

and certainly the latest measure may induce or compel local authorities to set about handling their own slum areas, providing alternative accommodation while they demolish the slums, and raising more adequate and more beautiful homes where evil dwellings stood before. But, once a long-run view is taken, there are ancillary problems in this slum question which need careful consideration.

Where do we want business, and where do we want people to live, in our cities? Is it really wise to pull down central slums on valuable sites and rebuild new blocks of workers' flats in the same spot, even if all the inhabitants get a little more air and space per person? As the new satellite towns begin to link up and form another band of densely populated districts, is it not an opportune moment to examine whether new industries should be tempted into cities, or slum dwellers expelled into healthier surroundings? Nobody wants de-slumming if it merely means expensive re-slumming a generation or two ahead.

Ideals are one thing; their realisation another. But certainly we could do with more planning in the new residential and industrial building which is, and is increasingly likely to be, continuing in and about our big cities. Under the Slum Clearance Act, local authorities will be able to make surveys of their whole area in relation to the clearance plans. Some of them will doubtless find it possible to remove slums altogether and re-house in other districts. But in the big cities, and especially in London, the problem is aggravated by the conflicts of local powers, and the absence of an over-riding central housing authority.

The first essential would seem to be an effort to plan the housing of each urban agglomeration as a whole. So long as the L.C.C. is planning for one part of London and a variety of other bodies for the rest; so long as Leeds and Bradford, Manchester and Salford, Newcastle and Gateshead go their own separate ways, housing can hardly avoid being a muddle. But should an authority attempt to rehouse the slum dwellers on the sites they now occupy or should it move them to the outskirts of the district? If it adopts the first plan, it may provide enough cubic feet of house-room for each person, and overcrowding in that sense will be remedied. But there is overcrowding in another sense—shortage of fresh air and recreation space—wherever there are more than about twelve families to the acre, whether they are housed in two-storey or ten-storey buildings. And, if it adopts the second plan, it has the difficulty of transporting the workers to and from their work. There is a natural tendency towards the decentralised solution. The middle classes and some of the more well-to-do workers are moving out of the central areas of the cities. Between 1921 and 1931, for instance, the population of the County of London actually declined by 2 per cent., while the population of Greater London outside the County increased by 27 per cent. But this tendency has not even begun to relieve the pressure on the slums. Limehouse, East India Dock Road, all the East End, Southwark, Euston, Clerkenwell and Finsbury, are all almost as full as ever of poor working people in poor housing accommodation; and new industries are springing up amid green fields, many of whose workers come from the areas mentioned above, while the clerks living round the green outskirts come into the City and West End to work.

The Government's policy on overcrowding, as shown in the recent Act, has a definite bias in favour of the rehousing of overcrowded persons *in situ*, by means of tall blocks of flats. The overcrowding subsidy is proportional to the cost of land, and since the cost of building is thus more nearly equalised between city and country, the absence of transport costs favours the city flat as against the country cottage. There are several objections to such a policy. It does nothing to diminish congestion, as distinct from overcrowding. Indeed, it may even increase it, for by bringing down the level of rents in central sites it removes one of the few existing inducements to industry to settle outside the towns. The policy also amounts to a perpetuation and subsidisation of the high value of land which is due solely to the existing congestion. But to all these objections there is the very cogent reply that in many cases nothing else can be done. In the East End of London, for example, the alternative is rehousing on the site with no reduction of congestion, or no rehousing. Is it not better,

say the defenders of the official policy, to have congestion than overcrowding and congestion? Moreover, in the special case of London, the distances are so great and the transport system already so overtaxed, that wholesale removal is hardly a practicable policy.

These arguments may all be admitted. But it does not necessarily follow that other methods of tackling the problem should be excluded. A lesson may perhaps be taken from other capital cities. In Berlin, for example, there is a quite perceptible differentiation of functions between areas: a high-rented business and industrial area, empty by night, and a comparatively low-rented belt of living areas, empty of workers by day. This arrangement has not been planned; it has grown up by virtue of the fact that there is a large subsidy to Berlin transport, amounting to nearly £8 millions a year, and levied on the railway revenues of the whole country. There are cases in England where the application of public money to the reduction of the cost of transport to and from the outskirts, rather than to the reduction of rents at the centre, would be a much more economic policy. Or again, there are cases where an industry and its workers might be persuaded to move out *en bloc* to the country or the near-country if they could receive the same assistance that the State will give for rehousing in their present congested locations. These and other solutions should be tried, not in substitution for, but in addition to, the existing policy of flat-building.

The housing problem is coming to be recognised as one of the most intractable and complex with which the country is faced, and he would be a hardy reformer who claimed to know any single remedy which would suit all circumstances. Unfortunately there is reason to fear that it is being tackled along lines that are both too narrow and too rigid. On the one hand, the link between housing and town planning, without which housing is a muddle and town planning a failure, is weak, if not totally absent. And, on the other hand, there is no recognition in the official policy of the need for an elastic approach to the problem, by which public money would be available for the assistance of whatever measures seem best fitted to meet the circumstances of particular districts. If these two defects could be remedied, the way would be opened for a very real and rapid advance in the standard of housing of the working class in this country—the class whose needs we, as a nation, have only recently begun to consider.

THE OUTLOOK FOR QUICKSILVER

THE recent history of the quicksilver or mercury-producing industry provides an outstanding example of the disastrous consequences of an attempt to keep prices at an artificial level. In contrast to the demand for the majority of non-ferrous metals, the demand for quicksilver between 1913 and 1929 showed only a small increase. On the other hand, the price of quicksilver in 1929 was treble that of the pre-war year. Stimulated by the sharp rise in prices

between 1922 and 1927, productive capacity outside the United States was developed out of all proportion to the potential demand at current prices. A disastrous collapse in the price in the autumn of 1928 was prevented by the formation, on October 1, 1928, by the Italian and Spanish producers of a cartel known as "Mercurio Europeo." By establishing a central selling agency, designed to limit supplies, the cartel was able to maintain prices at a high level and to postpone the day of reckoning until the middle of 1931. Between May, 1931, and August, 1932, however, the London quotation declined from £22 7s. 6d. per flask of 76 lbs. to £9 10s. per flask. The stocks of the cartel had risen to 5,170 metric tons as early as the end of 1930, and the proportion of world output produced by Italy and Spain declined from 88 per cent. in 1927 to 57 per cent. in 1931. The use of substitutes was stimulated during the period of high prices. For example, substitutes have been found for mercury used in the form of fulminate in explosive caps, in the mirror industry, and in the manufacture of disinfectants and wireless valves.

Since the beginning of 1934, however, there has been an improvement in the demand for quicksilver owing to the coincidence of a lower level of prices with a substantial recovery of productive activity in a number of consuming countries, especially in the manufacture of armaments. But although the price in London has risen to about £11 10s. per flask, the present price is still nearly 50 per cent. below the average of 1929. The development of world production and prices in recent years is shown in the following table, compiled from the statistics issued by the Metallgesellschaft A.G.:

WORLD PRODUCTION AND AVERAGE PRICE OF QUICKSILVER

	Production (in metric tons)					Average price per flask of 76 lbs.† in London	
	Italy	Spain	United States	Mexico	World	£	s. d.
1913.....	1,004	1,246	688	166	4,028	7	9 2
1925.....	1,334	1,277	812	39	3,565	13	17 1
1926.....	1,371	1,594	260	45	4,002	15	13 6
1927.....	1,971	2,492	384	81	5,100	21	7 11
1928.....	1,996	2,492	384	81	5,100	21	7 11

† Not yet available. † Flask of 75 lbs. prior to 1927. * Estimates.

As quicksilver is used for numerous purposes, the improvement in demand was largely due to the recovery in industrial production, though the armament industry has probably contributed substantially to the revival. The chemical industry alone uses between 25 and 35 per cent. of world consumption of quicksilver. But as the consumption of quicksilver by the chemical industry is spread over numerous drugs, cosmetics and other chemical products, changes in the production of any one of these chemicals exercises little influence over the total consumption of quicksilver. Next in importance as a consumer comes the explosives industry, which even in times of peace accounts for about 15-20 per cent. of world consumption; from 10-15 per cent. of the world consumption is absorbed in the form of oxide for anti-fouling marine painting, and equal amounts are used (a) in the construction of electrical apparatus and (b) in the production of thermometers, barometers and other instruments. About 10 per cent. of world consumption is employed in the manufacture of paints and a further 5-7 per cent. in the felt industry. As the use of quicksilver in boiler installations is subject to wide fluctuations, the percentage of world consumption used for that purpose cannot be calculated. Quicksilver has long been employed for the purposes enumerated above, and although "Mercurio Europeo" has offered prizes for the discovery of new uses, there have been no important developments in recent years. On the contrary, substitutes have successfully been employed for a number of purposes.

There is a strong presumption that the armaments boom, and the consequent increase in the manufacture of explosives, anti-fouling marine paint and measuring instruments, has been an important factor in the revival of consumption during the past year. Thus, Germany has increased her imports of quicksilver from 357 metric tons in 1932 to 488 metric tons in 1933 and 650 metric tons in 1934, compared with 348 metric tons purchased abroad in 1929. German

imports continued to increase in 1935, although industrial consumption per month was fixed at 30 per cent. of the average monthly consumption in 1934 by the Metal Supervisory Board. Similarly, the rapid increase in British imports, from 139 metric tons in 1929 to 379 metric tons in 1933 and 560 metric tons in 1934, can scarcely be explained by the industrial revival. The increase in the demand for Germany, the United Kingdom and a number of other countries was responsible for an increase in the combined exports of Italy and Spain from 959 metric tons in 1931 to 2,219 metric tons in 1934.

Owing to the rapid improvement in demand, world production in 1934 was substantially higher than in 1933 and probably exceeded 3,000 metric tons. The bulk of the world's quicksilver supply is derived from Italy, Spain, the United States and Mexico. But although the United States possesses large deposits and is theoretically self-sufficient, costs of production are relatively high. As a result, she normally becomes an importer during periods of low world prices despite an import duty of \$19 per flask. Thus, while the United States produced 97 per cent. of her requirements in 1931 when prices were still high, about 70 per cent. of her consumption in 1933 consisted of imported quicksilver. It is possible that the development of Russia's deposits may in time render that country independent of foreign supplies. France has been developing her deposits in Algeria, but owing to the low grade of the ores it is improbable that she will become self-sufficient. On the other hand, China may one day become an important exporter, for she possesses extensive deposits in the provinces of Kweichow and Hunnan.

With the exception of Italy, Spain, and the United States and possibly Russia, all the important industrialised countries are dependent on foreign supplies. And in view of the importance of quicksilver as a war material and the increase in the production of armaments, the price of quicksilver is more likely to rise than to fall in the near future. Thus, the demands of Mars are likely to constitute the salvation of "Mercurio Europeo." It is an ill wind, indeed, that blows nobody any good!

HUNGER AND SELF-SUFFICIENCY

"Malthusian nightmares of an overcrowded world living on the brink of food scarcity need trouble us no longer. We are entering an era of plenty. It must not, however, be assumed that the vast improvements in the technique of food production which are now taking place will automatically and *per se* reduce malnutrition throughout the world. Their first effect can be seen in the economic crisis which has resulted, in certain countries at least, in an increase in malnutrition.

The problem of malnutrition is largely a social and economic problem, and as such concerns politicians, economists, agriculturists, social workers, etc., as closely as it concerns the medical profession."

In these words two medical experts, writing in the latest issue of the Quarterly Bulletin* of the League of Nations' Health Organisation, invoke our attention to certain less evident implications of the so-called "over-production" of the world's food supplies.

Since the onset, in 1928, of the economic depression in world agriculture we have slipped imperceptibly into thinking that the demand for foodstuffs by the industrial populations of the Western world—if not by the world as a whole—has become static. We have tended, without much critical examination, to believe that the Western peoples, if not the world as a whole, needed no further production of primary foodstuffs. The demand for basic elements of food, we have been told, is practically inelastic; and the trading world has virtually reached limits of the demand for those elements. Yet both in industrial and primary producing countries there are millions of unemployed who exist very near, if not actually below, a level of subsistence where definite malnutrition results.

The two doctors whose words we quote above summarised the available data in the leading coun-

* "Nutrition and Public Health," by Et. Burnet and W. Aykroyd: League of Nations; Quarterly Bulletin of the Health Organisation: Vol. IV, No. 2, June 1935. Allen and Unwin 2s. 6d. net.

on nutrition, composition of diets, malnutrition, relation between diet and growth in children, diet and immunity from disease, etc. They review all the evidence. And after all this, these experts in nutrition are compelled to conclude that "in all countries the great mass of the population, mainly because of ignorance and poverty, do not reach the simple standard of dietary excellence demanded by modern nutritional science." More than that, the nutritional requirements which they themselves are disposed to consider "adequate" are, in comparison with those proposed by other well-known authorities, including the Advisory Committee on Nutrition of our own Ministry of Health, most conservative. Yet these two experts are driven to the conclusion that the amount of food which the world at present produces is "enormously less than the amount required" adequately to nourish its peoples.

This startling conclusion—when all primary producers are almost prepared to hang themselves in expectation of plenty—prompts reflections of a kind calculated to disturb the almost invulnerable equanimity of the most hardened self-sufficiency-mongers. Since the war, technical progress in the production of primary products, especially foodstuffs, in the "wide, open spaces" overseas has careered ahead. Costs of production per unit have fallen. But the markets for the greatly increased overseas production have shrunk, because, at the same time, highly industrialised countries of the West which normally absorbed this overseas output decided to raise their own wheat, sugar, meat, dairy produce and fruit. They said that they found their industrial labour and equipment for exports to the overseas countries was no longer required. And so the half of the globe which was equipped to produce the primary needs of the other half had set about constructing its own industries behind high tariffs; and the other half of the world, which was equipped to produce the industrial needs of the first half, set about planting its unwanted millions on land which was very expensive to cultivate, and therefore required the protection of equally high tariffs.

In the event, of course, technical progress had gone ahead so fast in both industry and agriculture that both halves of the world were left with great surpluses of unemployed labour. This labour could have been absorbed in both industrial and extractive countries, if only both had agreed to specialise on the production for which they were best adapted, to exchange its products for the specialised products of the other half of the globe, and so to expand both kinds of production as to swell the total volume of the world's material welfare. As it is, "primary" countries are desperately turning for their salvation to a hot-house kind of industry, and industrial countries are turning equally desperately to a hot-house kind of agriculture. Now the nutrition experts come forward and say: "The majority of the world's peoples are undernourished. Produce more food!"

It is no technical difficulty which prevents all countries from producing more food. Heaven knows the Governments of Western industrialised countries have strained every nerve and everyone's pockets in their endeavours to produce more of their own food. But do they stop to consider the *relative* cost of this home-produced food—relative, that is, to the cost of production of all the manufactures on which the greater proportion of their populations is engaged? They do not. Nor do they consider the cost of their home-produced food relative to the cost of the identical—and often better—quality of food raised overseas. Nor do they consider that higher prices for food mean less demand for the other things produced by other than farmers. Moreover, they barely give a thought to the manufactured exports or "services," which are equivalent, reckoned in labour-time and wages, to so many pounds' worth of agricultural imports. And, conversely, the Governments of the overseas countries do not think how much the progress of their national real income is checked by the artificial diversion of their resources to the development of domestic industries. It is scarcely a matter for wonder if all parties in this economic Caucasus-race find the prizes hardly commensurate with the effort—if, in the words of the experts, their peoples "do not reach the simple standard of dietary excellence demanded by modern nutritional science."

Finally, may we not legitimately supplement this conclusion of the nutritional experts with one of even wider application? May we not remark that, if there is "enormously less" food being produced in, and for, the world than is really needed, there is "enormously less," also, of all those material appurtenances and benefits of Western culture and civilisation which are still denied to the majority of the world's inhabitants? May we not look for a resolution of this paradox?

Perhaps, this hope is not altogether vain, despite the extent to which the eggs of the world's economic system have by now been scrambled. Economists everywhere are pointing out the need, first, for diversification of production; and then for standardisation and mass production. This suggests that much more of many more *varieties* of products, agricultural and industrial, could be profitably produced, if only they were capable of being exchanged. It does not seem beyond the bounds of possibility that even the most hard-boiled economic nationalists, both in primary-producing and industrial countries, will very soon realise the rigid limits which such economic nationalism sets to the expansion of the world's productive processes and to the progress of each country's national real income. Already the world's shippers and traders are beginning to cry out, in many lands, against the dead hand of the State, with its trade barriers, which darken counsel, obstruct knowledge and hinder commerce. There are, grievously, "special areas" in the world as a whole, as depressed as in this country. There are agrarian populations going short of the cheap amenities of an industrial civilisation; and there are industrial populations suffering malnutrition only a stone's throw, as it were, from those who are being paid not to produce foodstuffs. It may not be so very long before the voice of the people in the world's "special areas" is vehemently raised, in unison with those of the traders and shippers, to demand the unshackling of those economic chains which prevent the progress of their material welfare, and which may soon prove to be all they have to lose.

THE SUEZ CANAL

The Suez Canal has assumed great importance in the Italo-Ethiopian dispute; and it must assume much greater importance if Italy makes war on Ethiopia. We therefore give below an outline of the principal provisions which regulate the international status of the Canal, and a summary of the chief points raised by the suggestion that the Canal should be closed to the vessels of a Covenant-breaking State. This summary is based on two important monographs published in the last few days. The first is the Memorandum (Vol. VI, No. 3) in the Geneva Special Studies series on "The Suez Canal and League Sanctions," by Dr. Raymond Buell, published by the Geneva Research Centre. The second is the current issue of the Bulletin of International News, Vol. XII, No. 3, containing an article on "The International Status of the Suez Canal," published by the Royal Institute of International Affairs, London.

COMPANY AND ITS POWERS

In 1856 the Viceroy of Egypt granted a 99-year concession from the date of the completion of the Canal to the Société

Universelle du Canal Maritime de Suez, organised by Ferdinand de Lesseps. The Company is an Egyptian corporation with its head office (Siège Social) in Paris, and it is subject to Egyptian and French law. The Company is governed by 32 directors, of whom 21 are French, 10 British (including three appointed by H.M. Government) and one Dutch. Of the total of 800,000 shares issued, 353,204 (just over 44 per cent.) are in British hands. This is largely the result of the purchase by the British Government in 1875 of all the Egyptian Government's initial allotment of shares under the concession, namely, 176,602 shares. This British holding is the largest block of shares, the balance being held by many private investors, mostly French.

The Company has no political rights; the Canal is part of Egyptian territory; and in 1866 the Company recognised the Egyptian Government's right to police the Canal and to defend it, provided the measures did not interfere with free navigation. By Arts. 14-15 of the 1856 Concession, the Company was obliged to keep open the Canal as a "neutral" passage to any merchant ship. The 1856 Concession, however, was only an agreement between Egypt and the Company. Any other State at war with the Ottoman Empire could have attacked the Canal. For many years there were proposals by various Governments internationally to guarantee the Canal's freedom. In 1882, during Arabi Pasha's revolt, the British tried to secure collective intervention to support the Egyptian Government. France hesitated; finally, in 1882, British forces were landed and sent through the Canal against Arabi; and the Canal was closed for several days.

THE 1888 CONVENTION

Eventually, in the Convention of Constantinople, on October 29, 1888, Britain, Germany, Austria-Hungary, Spain, France, Italy, the Netherlands, Russia and Turkey declared (Art. I):—

The Suez Maritime Canal shall always be free and open, in time of war as in time of peace, to every vessel of commerce or of war, without distinction of flag.

Consequently, the High Contracting Parties agree not in any way to interfere with the free use of the Canal, in time of war and in time of peace.

The Canal shall never be subjected to the exercise of the right of blockade.

Also, by Art. IV, the Canal "remaining open in time of war as a free passage, even to ships of war of belligerents," the H.C.P. agree that "no right of war" or "act of hostility" shall be committed within the Canal and a radius of three miles from the ports of access, even though the Ottoman Empire should be one of the belligerents. Finally, the Convention of 1888 provided that the guarantees of free navigation through the Canal should be supervised by the Agents of the Signatory Powers in Egypt; that the Canal should be defended first of all by Egypt; that if Egypt had not the necessary means, she could appeal to Turkey, who "shall, if necessary, concert with them (the H.C.P.) on the subject."

Britain, however, made a general reservation relating to the sections providing for international supervision "in so far as they would not be compatible with the present transitory and exceptional condition now found in Egypt" and they would interfere with British interests there.

Since then, the right of American and Spanish warships to use the Canal has been granted in principle. In 1904-5 Russian warships were allowed by Britain to use the Canal on their way to fight Britain's ally, Japan; and Italian warships used it in the Italo-Turkish war of 1911, though Egypt was then still nominally part of Turkey.

THE WAR AND POST-WAR POSITIONS

On August 15, 1914, the Egyptian Government issued a proclamation authorising British military forces to exercise any rights of war in Egyptian ports and territories. The Officer Commanding the British troops issued an order prohibiting any enemy vessel from entering the Canal. Not till November 5, 1914, did war break out between Turkey—still nominally suzerain over Egypt—and Britain, who was occupying Egypt. In December, 1914, "in view of the state of war arising out of the action of Turkey," Britain proclaimed a protectorate over Egypt. The Canal was fortified and defended, and the British naval forces exercised the right of search within three miles from the Canal, on the ground that ships using the Canal might carry materials likely to damage it. Contraband so discovered could be freely taken through the Canal, but it was promptly seized by British ships outside the three-mile limit.

Whatever differences of opinion existed over the rights of Egypt and Britain so to vary the provisions of the 1888 Convention during the war, the post-war peace treaties recognised that the 1888 Convention, as signed by Germany, Turkey, Austria and Hungary, was still in force; the defeated Powers transferred to Britain the special powers conferred on the Sultan by the 1888 Convention; and the treaties recognised the British protectorate over Egypt. Turkey, however, in the Treaty of Lausanne of 1923, only renounced "all rights and title whatsoever over or respecting the territories situated outside the frontiers" laid down in that Treaty. Any questions arising from the recognition of Britain's protectorate over Egypt were to be settled by "agreements to be negotiated subsequently in a manner to be determined later between the Powers concerned." The problem is thus whether Britain and Egypt alone are the Powers concerned, or all the Signatories of the 1888 Convention.

The British Government in 1922 terminated the Egyptian protectorate and proclaimed Egypt "an independent sovereign State," reserving, however, to the absolute discretion of the British Government (a) the security of British Imperial communications in Egypt, (b) the defence of Egypt against all foreign interference or aggression, direct or indirect, (c) protection of foreign interests in Egypt and minorities, and (d) the Sudan. These reservations were not accepted by the Egyptian Government; but it is clear that they cover the protection of the Suez Canal by Britain.

Thus, Egypt is territorially sovereign over the Canal; but she is neither a Party to the 1888 Convention regulating traffic in the Canal, nor a Member of the League of Nations. And Britain has reserved, explicitly in 1922 and implicitly on many occasions since then, a right to defend the Canal which was accorded after the war in the recognition of the British protectorate over Egypt. Egypt, on the other hand, since her sovereignty was proclaimed, has never specifically conceded this British claim.

THE COVENANT AND THE 1888 CONVENTION

Does the League Covenant supersede the 1888 Convention whenever there are inconsistencies between them? By Art. XX of the Covenant, League Members agree that all obligations or understandings between them which are inconsistent with the Covenant's terms are abrogated; and Members have the duty imposed on them under Art. XX to take immediate steps to release themselves from pre-existing obligations inconsistent with the Covenant's terms. An imposing array of international lawyers support the view that the Covenant's terms must prevail where inconsistencies arise, as arise they might if the inauguration of "Sanctions" under Art. XVI of the Covenant demanded the closing of the Suez Canal to a defined aggressor, in contravention of the terms of the 1888 Convention. Moreover, all signatories of the 1888 Convention are Members of the League. And to paralyse the execution of "sanctions" by upholding a preceding Convention between these Members, which is repugnant to the Covenant's provisions, would be to stultify the very aim and objectives of the League.

On the other hand, Italy might challenge the closing of the Canal before the Permanent Court of International Justice. This would probably involve the adjudication by that body of the precise legal relations between Britain and Egypt; yet Britain in 1922 reserved her right to regard her relations with Egypt as not open to question by any foreign Power.

IS CLOSING THE CANAL NECESSARY?

The Bulletin of International News sums up the practical, as opposed to the legal, problem of the closing of the Canal in these terms: Closing the Canal involves the ability to enforce closure. Since closure would presumably be decreed as a League "sanction" against the declared aggressor, to enforce this sanction involves being prepared for war in the Red Sea or Mediterranean. But any Power or Powers, charged with the execution of such a "sanction" as the closure of the Canal, could effect it, or their, objective just as easily by a naval cordon round the entrances to the Canal, outside the three-mile limit; for such Power or Powers must in any case envisage naval action to effect closure of the Canal. "It becomes therefore a question of preventing approach rather than prohibiting transit." The purely legal problems in all probability would never arise.

In any case, it is for the League Council to decide who is an aggressor, and what kind of "sanctions" are to be imposed to restrain aggression. If the Members of the League Council were determined to impose such "sanctions" as would close the Suez Canal to the aggressor, they could do so more effectively, without the danger of legal disputes, and probably at no greater cost, by inaugurating a blockade of the entrances to the Canal outside the three-mile limits.

NOTES OF THE WEEK

The Duce Convoles his Cabinet.—On Wednesday, the French and Italian Cabinets met to discuss their policies for the League Council's meeting in Geneva next week. Signor Mussolini's decision to convoke the Italian Cabinet—in which he himself holds a majority of the portfolios—was sudden. The Cabinet met at Bolzano in the course of the Italian manoeuvres, in which 500,000 troops, as well as aircraft and mechanised units, have been demonstrating Italy's ability to hold her Northern frontiers against an invading army. The Italian Cabinet have decided to make a declaration at Geneva next week defining Italy's position with regard to the Ethiopian problem; and to accompany the declaration with "proofs" of Italy's claims on Ethiopia. Moreover, it is reported that Italy—who, it will be recalled, insisted in 1923 on Ethiopia's fitness to enter the League—is now to demand the expulsion of Ethiopia from the League. If she does, we cannot imagine that any member of the League Council will be found to acquiesce in so monstrous an attempt to deprive Ethiopia, for Italy's nefarious purposes, of her rights to League protection, whatever that protection may amount to. The Italian Cabinet's *communiqué* also reiterates, though in more diplomatic terms, Signor Mussolini's statement that "sanctions mean war"; and it declares that the Italian military experts have already taken "the necessary decisions and measures to deal with" sanctions of a warlike nature. But the *communiqué* tempers these admonitions to the League Council with an express declaration that, in her dispute with Ethiopia, Italy has and desires no quarrel with Britain. Some idea of the economic pressure upon Italy's inconsiderable resources can also be gauged from the Cabinet's decision to compel the cession of all foreign credits held by Italians to the authorities, and the exchange of all foreign securities held by Italians for nine-year 5 per cent. Italian Treasury Bonds. Italy's needs of "necessary imports" are evidently increasing at such a rate as to necessitate the imposition of a complete State monopoly over the foreign assets of all Italians.

France and the League.—M. Laval has decided to take a very strong team to Geneva next week; and the French Cabinet, which also met on Wednesday, agreed to its composition. There will be, besides M. Laval himself, M. Herriot, and M. Paul-Boncour—both former Prime Ministers and Foreign Ministers of France, and both staunch supporters of the Covenant and of that system of collective security which constitutes the very heart of the Covenant. But what instructions did the French Cabinet give to this striking triumvirate of French delegates to a Council meeting which will almost certainly prove as decisive for the future of the League, as for that of Europe and of France herself? As we go to press the air is thick with misty conjecture. The French Cabinet are variously reported as opposed to measures which involve "extension of the Italo-Ethiopian dispute"; as opposed, therefore, to effective "sanctions"; and doubtful about the British Government's will to stand as firmly against all future infractions of international obligations as they do against the threatened Italian aggression upon Ethiopia. This last is a clear reminder of the French discomfiture at H.M. Government's conclusion of the recent Anglo-German Naval Treaty, which plainly, though unilaterally, recognised a big breach in the Versailles Treaty—and this so soon after the Anglo-French agreement of last February on a common line of action over proposals for European security. If this latter report is true, France has put her finger on the old weakness in British foreign policy: namely, the British hesitancy to underwrite a comprehensive European collective security system. Now, however, a much more vital issue is at stake. For France has to decide whether she will let the League, which has been the sheet-anchor of her post-war security, go overboard, and risk the departure of the British from an ineffective League—indeed, from Locarno and Continental politics altogether. More than ever is it becoming plain that events in the next few days and weeks must decide whether Europe is to develop in future in a setting of international law and order, or in an anarchy of frenzied alliances.

Congress Adjourns.—The Congressional session—one of the longest and most eventful of recent years—has at last come to an end. It expired in some confusion at midnight on Monday of this week. Most of the contentious Bills, which have been disputed between the Senate and the House of Representatives, were re-written in final compromise form by the end of last week, and it had been intended to adjourn on Saturday. As is usual, the last-minute compromises, reached in private conference and rushed to enactment without public discussion, are difficult to ascertain. On the public utility holding company measure, however, which was the chief bone of contention between the two Houses, the Senate and the President seem to have obtained the better half of the bargain. The famous "death sentence" clause has passed into law with only minor amendments. Each integrated public utility system is to be allowed one holding company and one sub-holding company and the Securities and Exchange Commission is empowered to make discretionary exceptions. In other words, the onus of proof that they have a right to survive is laid upon the companies. At the last minute, adjournment was delayed, first by the dispute whether neutrality legislation should be mandatory or discretionary—the Senate, with its mandatory version, winning—and secondly by the dislike of the Senators from cotton States for the Administration's newly-announced cotton policy, to which reference is made in a Note on page 414. All these obstacles were finally surmounted and all that remained was for the Senate to pass the Bill appropriating money to administer some of the Acts which have become law in the last few weeks. This was the opportunity taken by Senator Huey Long to "filibuster" for five hours in favour of higher loans for cotton farmers. He did not gain his point, but he succeeded in "talking out" the appropriation Bill. The session which has thus ended has been most fruitful of large and important New Deal laws. The Social Security Act, which sets up a system of old age pensions and unemployment insurance, the gigantic Work Relief Act, the Banking and Public Utility Acts—these alone would be an excellent record for a single session, but they are merely the leaders in a long list of Acts, which the American public will now have leisure to digest. What political mood will result from the digestion is the question of the hour. The President's influence over Congress, which appeared to have been seriously weakened some months ago, was strongly re-established in the closing days of the session. Whether his hold over the country is also as strong as ever, will perhaps emerge from the tour which he is now to begin.

Mr Churchill's Gesture.—The split in the Conservative Party is apparently to disappear, or at any rate to become submerged. Mr Winston Churchill, who for the last four years has been leading a Right-wing revolt against the Government's India policy, announces this week that the feud is now to end. In a letter to the chairman of the West Essex Unionist Association, Mr Churchill proclaims that he and his supporters have "done our best and done our duty. We can do no more." He goes on to quote words used by Lord Salisbury after the successful passing of the Reform Act in 1867 in face of Conservative opposition:—

It is the duty of every Englishman (Lord Salisbury said), and of every political party, to accept a political defeat cordially and to lend their best endeavours to secure the success, or to neutralise the evil, of the principles to which they have been forced to succumb. . . . As far, therefore, as our Liberal adversaries are concerned, we shall dismiss the long controversy with the expression of our earnest hope that their sanguine confidence may prove in the results to have been wiser than our fears.

The quotation is perhaps even more pointed than Mr Churchill intended; for even he would presumably not advocate to-day the repeal of the Reform Act of 1867. His letter as a whole breathes a spirit of personal conciliation and constitutional propriety which both his political friends and opponents will recognise and respect. It also declares his intention "to labour for a sane and stable

Parliament at the forthcoming General Election," "to provide for the defence and safety of the country and the Empire," and "to play our part with other nations in maintaining the peace of the world." This declaration will probably be interpreted as implying the decision of Mr Churchill and his supporters to join ranks with the official Conservative Party in face of the common enemy at the General Election, but to remain, nevertheless, as a "ginger" group within the Party councils. Whether the ginger is to be applied in the direction of establishing an isolated and heavily armed British Empire, or of honouring our obligations to the League, Mr Churchill's words do not make altogether clear. His letter will do something, however, to confound those cynics who have been inclined to regard his Indian campaign as mainly inspired by personal motives. The political split in the Conservative Party is now apparently at an end; and Mr Churchill accepts defeat. Are we to infer that whatever personal differences may have existed up till now have also been conjured away?

Washington and Moscow.—Last Sunday the American Ambassador at Moscow presented to the Soviet Government a note of protest which seems likely to force to an issue the vexed question of the relations between those two organs of the Russian Communist Party: the Soviet Government and the Third International. The Third, or Communist, International ("Comintern") has just been holding a congress in the capital of the only country in the world where it can enjoy the hospitality of a Government of its own colour. The proceedings of this Congress have supplied the American Government with evidence, out of the Third International's own mouth, that this propaganda organisation has been carrying on, from its base of operations in Soviet territory, a subversive campaign in the United States at dates subsequent to November 16, 1933. On that date, M. Litvinov promised President Roosevelt, in writing, not to permit the formation or residence on Soviet territory of any organisation or group which has subversive activities in the United States on its agenda. Thus the Soviet Government finds itself to-day in the same embarrassing position *vis-à-vis* the American Government in which it found itself *vis-à-vis* the British Government eleven years ago, after the publication of "the Zinoviev Letter." On that occasion, the Russian Communist Party—which was, and is, the common master of the Third International and the Soviet Government—preferred to jeopardise the then recently re-established relations between the Soviet Government and the British Government, rather than clip the Third International's wings. During the intervening eleven years the whole situation has changed, profoundly from the Russian Communist Party's point of view. In 1924 the Soviet Union was in no serious danger of being attacked by force of arms, while the propaganda of the Third International then had a fair prospect of capturing Germany and thereby winning a base of operations in Europe. To-day the Soviet Union feels itself in serious danger of being attacked by Germany and Japan. It therefore needs to make friends with the non-Fascist Mammon of unrighteousness—particularly the United States, whose diplomatic recognition of the Soviet Government was accorded in exchange for M. Litvinov's since violated pledge. True, in their reply to Washington, the Soviet Government still employ the old, old excuse that they are not the masters of the Comintern. But to-day the Russian Communist apostles of the world revolution are in the wilderness—Zinoviev in Siberia, Trotsky in bourgeois Europe—while the Soviet Union is under the rule of a man whose slogan is "Socialism in a single country." To-day the Soviet Union is the basket in which the Russian Communists have all their eggs, while the Third International has become a useless impediment. The recent meeting of the Third International was convened only reluctantly after repeated postponements. Now that it has got the Soviet Government into the trouble which they feared, its future seems anything but assured.

Social Credit in Alberta.—Mr Aberhart, the "Social Credit" champion, whose origin and programme were described in the *Economist* of June 29th, has won a sweeping victory in the Alberta elections. He is to form a Government immediately, and Major C. H. Douglas, the father of Social Credit, is apparently setting out for Canada to advise him. Mr Aberhart's principal proposal is the free payment of \$25 a month to every adult citizen of Alberta. The payment is intended to be a permanent subsidy to consumers' purchasing power, designed to exploit the potential productive capacity of the Province. How is this "social dividend" to be financed? Mr Aberhart's pronouncements do not appear to have been very clear on this point. According to some reports he proposes to raise the money by a kind of turnover tax on retail trade. This plan would amount to nothing more than an eccentric, burdensome and apparently pointless form of redistributive taxation. Secondly, he might attempt to raise loans within the structure of the existing banking system. But there would obviously be a limit to such loans; and the practical effect of a policy of this kind would be merely to increase the deficit and the indebtedness of the Province. In any case, as Major Douglas has already indicated in his official criticism of Mr Aberhart's proposals, neither of these expedients would be genuine "Social Credit." The essence of that doctrine is the financing of free consumers' credits by a steady and permanent creation of new money. But how is Mr Aberhart, as Prime Minister of Alberta, to create new money without transgressing the limits set by Canadian banking law? He cannot found a Government bank and issue an unlimited amount of notes. For the Bank Act of June, 1934, provides that from the day on which the Bank of Canada commenced business the maximum of notes issued by a chartered bank should not exceed "the amount of the unimpaired paid-up capital of the bank" on that day; and that subsequently the maximum should be progressively reduced. The only other possibility before Mr Aberhart would presumably be to found a Government bank and issue unlimited credit irrespective of cash reserves. He has already spoken of using the "real resources" of the Province as a "basis for credit." Such credit would not be convertible into cash and would only be usable within Alberta if its citizens chose to accept it. If they did so accept it, however, and it was expanded indefinitely, it would eventually dwindle in value in terms both of commodities and of the Canadian dollar. In any case, there are further legal obstacles to any such scheme. The Bank Act of June, 1934, provides that a "bank cannot issue notes or commence the business of banking until it has obtained from the Treasury Board a certificate permitting it to do so." Mr Aberhart cannot set up a new bank, therefore, without the Treasury's permission. But even if he obtained permission, the amount of credit which the bank could issue would be severely limited. For the Bank of Canada Act provides (clause 27):—

Every chartered bank shall . . . maintain a reserve of not less than 5 per cent. of its deposit liabilities within Canada and such reserve shall consist of a deposit with the Bank (of Canada) and of notes of the Bank held by such bank.

Unless, therefore, Mr Aberhart can devise some form of tax certificate or I.O.U. which will be accepted as currency by the citizens of Alberta, but not regarded as such by the Dominion lawyers, it does not seem likely that any genuine Social Credit scheme will be attempted in that Province.

— And the Coming Federal Elections.—Faced with this constitutional *cul-de-sac*, Mr Aberhart is apparently to organise a campaign in the Federal general elections which are to be held on October 14th. Up till recently a resounding defeat for Mr Bennett has seemed certain, and a resounding victory for the Liberals almost equally certain. Not long ago, however, Mr H. H. Stevens entered the field with his new Reconstruction Party. This intervention, on the face of it, seemed more likely to injure the C. C. F. (farmer-labour) Party, and possibly the Liberals, rather than the Conservatives; for Mr Stevens's policy is one of radical social reform. But on the whole

Mr Stevens did not seem to have much chance of seriously affecting the election result. Now, however, a second splinter party, in the shape of Mr Aberhart's League, has entered the lists. There was at one time talk of an alliance between Mr Aberhart and Mr Stevens; but this was never probable, since Mr Aberhart stands for permanent inflation and Mr Stevens for nothing more than orthodox credit expansion to cure depression. Disunited, the two parties seem very unlikely to effect the result of the elections substantially. And even if they had been able to unite, they would probably have achieved little. For party allegiances and party alignments are very strong in Canada. And there are not yet any signs that Mr Aberhart's influence extends beyond the distressed farmers of his native Alberta; or that Mr Stevens has yet attained to any electoral influence at all. On the whole, Mr Mackenzie King's chance of victory, and Mr Bennett's prospect of defeat, seem to have been little, if anything, dimmed by the week's events in Alberta.

American Cotton Manœuvres.—One of the incidents which delayed the adjournment of Congress at the end of last week was the announcement by the Agricultural Adjustment Administration that it would lend cotton at only 9 cents a pound on their crop instead of 12 cents lent last year. The 12-cent figure has been the object of a great deal of criticism both inside and outside the United States. It has had the effect of maintaining an artificial price for cotton and stimulating cotton growing in other countries, notably in Brazil, at the expense of American exports, and there can be little doubt that a price of 9 cents more nearly approximates to the world price. The announcement of the new price was accompanied by a complicated scheme designed to guarantee to the cotton farmer that his return, from selling price and "deficiency payments" combined, would not be less than 12 cents a pound. But the Senators from the cotton States were not appeased by this concession, and an amendment was promptly tacked on to one of the Appropriation Bills, instructing the Administration to make loans of 12 cents a pound. A compromise was eventually reached on the figure of 10 cents, but the attempt to rescind the mandatory 12-cent amendment was defeated by a filibuster by Senator Huey Long. Rather than accept the amendment, the Administration preferred to let the whole Bill drop, with the result that the offer of 10 cents now stands good. The original announcement of a 9-cent loan had caused a wave of selling in the Liverpool and New York markets, which resulted in a decline in prices of about $\frac{1}{4}$ d., but there was some recovery when the compromise was reached. Our Manchester correspondent reports that there has been much criticism in trading circles of the methods adopted by the United States Government in announcing their intentions, and it is a long time since spinners and manufacturers were so confused and harassed. Now that the details are more fully known it is believed that the plan will remove many of the disadvantages of the 12-cent loan for last season. Larger exports from the United States are expected, and it is probable that the tight spot position in Liverpool will be relieved. It is hoped, however, that no further changes in the scheme will take place. It remains to be seen whether world consumers will replenish stocks at around 5 $\frac{1}{2}$ d. for American cotton. The United States Government, of course, has control of nearly 6,000,000 bales, and it is understood that this cotton will not be sold at less than 13 cents per lb. On the other hand, the new crop is making good progress, and it is expected that the September Government estimate will be fully 12,000,000 bales, against a yield for last season of only 9,636,000 bales.

"Consistent" Deflation in France.—Deflation, to be successful, as M. Rist has recently urged, must be "consistent"—that is to say, all prices and incomes must be permitted, or compelled, to fall proportionately and simultaneously. But unfortunately any attempt to make them do so encounters legal and political difficulties which in a modern democratic State are being daily proved to be insurmountable. Already M. Laval's deflation, which began with a heroic effort to be "consistent" in defiance even of legal contracts, is proving, in face of political obstacles, not a consistent deflation at all, but a contradictory com-

pound of deflation and reflation. Consistency would enjoin that if incomes were reduced, retail prices of food should be reduced; and that if retail prices were reduced, wholesale prices should be reduced also. For the retail trader cannot possibly afford a coincidence of rising wholesale and falling retail prices at a time when owing to the general deflation of purchasing power his turnover is steadily shrinking. It is only when an increase in consumers' demand expands his turnover that the economic scissors can smoothly close once more. In France, therefore, at the moment "consistent deflation" requires a fall in wholesale prices of food. Are the farmers ready to accept this? On the contrary they are vehemently, and indeed rebelliously, demanding a rise. A meeting of the Wheat Producers' Association last week passed a resolution demanding a "fair" price for wheat and threatening that if it were not conceded by September 15th a movement to "break off all relations with the State" would be started by the peasants. And the Government, so far from resisting this pressure, evidently consider it politically necessary to give way. Public advances to the wheat producers are being increased, and other measures are being taken to support prices, in order to "expand rural purchasing power." In practice, in fact, M. Laval's "consistent" deflation seems to mean deflation for Government employees and reflation for peasants. Similarly with the import quota system. "Consistency" requires an enlargement of quotas, an increase of imports and a fall in prices. But the coal-owners have pointed out to the Government this week that, in the existing conditions of general contracting activity, only a reduction in quotas can prevent a further increase in unemployment. A 10 per cent. reduction has consequently been granted. As our Paris correspondent shows very plainly this week, the sharp reduction of coal consumption still proceeding in France makes it necessary steadily to reduce imports if the low level of internal production is even to be maintained. This is yet another example of how the attempt to maintain artificial currency values is increasing the obstacles to international trade. In France, as everywhere else, political obstacles are making it in fact impossible for deflation to be "consistent." And if it is not consistent, we entirely agree with M. Rist, it cannot possibly be successful.

— And British Coal.—British exporters will be most severely hit by the cut in the French coal quota. Under the quota, imports from the United Kingdom have already declined both relatively and absolutely. The period adopted for the purposes of the regulation were the three years 1928-30, when the quantity of coal imported from the United Kingdom averaged 11,768,000 metric tons per annum, and that of coal, coke and patent fuel 11,935,000 tons. In 1934 the corresponding figures were 7,757,000 tons and 7,865,000 tons, respectively. In the basic period, the proportion of the total coal imports into France obtained from the United Kingdom was 53.5 per cent., and of all classes of fuel 42 per cent. Last year the proportions were 46.6 per cent. and 39.8 per cent. The decline has continued during the present year, when imports of crude coal have been at the rate of approximately $\frac{7}{8}$ million tons, representing 38.1 per cent. of imports from all external sources of supply; while of the aggregate imports of coal, coke and patent fuel the British proportion has been only 33.4 per cent. These figures are subject to one or two qualifications. In the first place, there has been a change in the character of the French demand for foreign fuel. The development of the coke and briquette branches of the industry have diminished considerably the country's dependence on external sources of supply for these classes of fuel—particularly

BRITANNIC ASSURANCE COMPANY LIMITED

Motor and General Insurances transacted

Chief Office: BROAD STREET CORNER, BIRMINGHAM

in the case of coke. In the administration of the quota system it has been the aim of the French authorities to concentrate on the volume of the coal, coke and patent fuel imports, calculated in terms of coal, and not solely on that of coal alone. One of the chief results of this policy has been to increase the purchase of German raw coal in order to restore the balance disturbed by the greatly reduced importation of German coke. In the second place, Saar coal entering France is now included in the returns of German imports, and under the terms of the Naples agreement, France agreed to import at the rate of approximately 2 million tons per annum from the transferred region. In the third place, consumption in France has fallen since the quota system has been in force. It averaged about 80 million tons in 1928-30, but at the present time consumption is at the rate of only about 66 million tons per annum. Of the coal equivalent of all the French imports of coal, coke and patent fuel in 1928-30 Great Britain supplied 40 per cent., but during the first five months of the current year our share has been only 35.8 per cent. On the other hand, the supplies received from Germany (inclusive of the Saar coal since February 18th) have increased from a ratio of 33.5 per cent. to 34.4 per cent.; Belgian imports have declined from 16.2 per cent. to 15.7 per cent. and those of the Netherlands from 7.8 per cent. to 7.4 per cent.; while imports from other countries (including Poland, Indo-China and Russia) have increased from 2.5 per cent. to 6.7 per cent. This change in the direction of demand has taken place, moreover, in spite of factors which should have favoured trade with Great Britain. One of these has been a slight fall since 1930 in the average f.o.b. value of all the coal exported from the United Kingdom; another, the suspension of the gold standard by Great Britain and the depreciation of sterling by about 40 per cent. in terms of French francs; and a third, the inclusion in the Anglo-French Agreement of June, 1934, of (1) a clause guaranteeing "the existing percentage" of the normal quota for imports of United Kingdom coal, and (2) a barter pact between the mineowners of the United Kingdom and the representatives of the Syndicate of French coal importers for the exchange of coal pitprops on a monthly basis of 40,000 tons of coal for about 27,000 tons of pitwood (three tons of coal against two tons of pitwood). What British coal-owners and exporters complain of is that, in the light of the assurances given to them, they are not getting their proportionate share of the French import trade. The facts certainly appear to suggest that there is some justification for this complaint.

The Cost of British Wheat.—The 1932 Wheat Act guaranteed a price of 10s. per cwt. on all certified sales of wheat raised by registered British growers, provided these sales did not exceed 27 million cwts. Since then, the home production eligible for "deficiency payments," which raise the "free" market price to the guaranteed price, increased from 20.4 million cwts. in the cereal year 1932-33, to 29.6 millions in 1933-34. The Wheat Commission now announce the provisional figures of the income and expenditure of the Wheat Fund for the cereal year 1934-35, ending on July 31st last. The Fund is raised by a levy on all flour imported or milled, sufficient to enable the "deficiency payments" to be made to the growers. In the cereal year just ended, certified sales of British wheat have again risen—this time to nearly 36 million cwts. In consequence of this excess of 33½ per cent. over the statutory limit of 27 million cwts. eligible for "deficiency payments," these payments to growers will only be made on 75 per cent. of each grower's certified sales. Thus the wisdom of a statutory provision limiting the amount of home-grown wheat eligible for subsidy is at once apparent; for in three years British registered wheat-growers have doubled their output, and exceeded by one-third the statutory limit. On the other hand, the levy on all flour consumed in this country provided just under £7 millions in the cereal year ending July 31st last, and the total income of the Wheat Fund (including income from investments) reached £7.1 millions. The working of the Wheat Act is observable in a reduction of our imports of foreign flour in 1934-35, and another small

increase in deliveries of home-milled flour. We are thus becoming more self-supporting in wheat; and it is at least a good thing that, under the 1932 Wheat Act, we are enabled to assess the cost of the process, and that the cost is limited. All the same, the raising of £7 millions in indirect taxation of a most regressive kind outside the Budget, and the diversion of the proceeds to one class of the community, should perturb all those concerned about our political and economic development.

Rationalising Shipping.—The International Shipping Conference have now received replies from all the constituent associations, except the United States, giving their comments on the draft scheme of rationalisation of shipping prepared by the preliminary conference last January. It appears that all countries who have replied accept the principles of rationalisation and recognise the need for some form of co-operative action to adjust the supply of tonnage to the demand, at a higher level of freight rates. But the original scheme has come in for a good deal of criticism. For example, Great Britain and Japan favour alternative schemes instead of the original one discussed in the *Economist* of August 10th. The Chamber of Shipping of the United Kingdom and the Liverpool Steam Ship Owners' Association have jointly submitted a draft for a voluntary non-contributory scheme. Under this plan, ship-owners would agree to lay-up an agreed percentage of tonnage as ascertained at an agreed date. The Conference still hope to receive a reply from United States shipowners. Meanwhile, the replies received from all the other countries have been circulated for examination to the constituent associations in the hope that a second preliminary meeting may take place in October. But the chances that an international scheme will be adopted in the near future remain somewhat slender.

Britain's Criminals.—Are we as a people becoming more, or less, law-abiding? The Home Office has just published the criminal statistics for the year 1933, which show that on the whole the trend is downward, despite the increasing number of regulations and the improved methods of police recording of offences. In 1933 a total of 603,619 persons were found guilty of offences of all kinds, 540,955 of non-indictable and 62,663 of indictable offences. Of the former more than half the convictions were for road offences, which have increased by about 25 per cent. compared with the average for 1924-29. On the other hand, the number of convictions for other minor offences, especially for drunkenness, shows a steady downward tendency, although there was some increase in 1933 compared with the record low level of 1932. Of indictable offences, over 91 per cent. are against property, 73 per cent. of all adults convicted being guilty of larceny, 8 per cent. of house-breaking, and only 5 per cent. of sexual offences and other offences against the person. The number of indictable crimes known to the police increases from year to year, but as compared with five years ago the increase is mainly in thefts and frauds. There is one very disturbing feature in these figures—the enormous amount of crime among juveniles. In 1933, 17 per cent. of the males found guilty of indictable offences were under 14, and over 25 per cent. were between 14 and 21. Girls have apparently not quite the same criminal tendency—or temerity—for the corresponding proportions were only 7 and 21 per cent., respectively. The proportion of offenders in the male population under 21 is three or four times greater than that in the group over 30. Of course, offences committed by children are, on the whole, of a minor character; but the disquieting thing about juvenile crime is its rapid increase. The proportion of children under 16 charged in juvenile courts, per 100,000 of the population aged 10-16, rose continuously from 280 in 1923 to 307 in 1929 and to 370 in 1933. This increase is noticeable for all types of crime, and especially in the age-group 14 to 16. It is largely a question of Satan finding mischief for idle hands. Despite greater possibilities of employment, the increase in the number of school-leavers between 1934 and 1937 will aggravate the situation, unless an alternative—for example, full-time education up to 15 or 16—is provided.

Retail Sales in July.—People in this country are spending more on retail purchases. Although our domestic recovery has been most marked in the heavy industries, the trades which furnish our needs of consumption goods are steadily making headway. The Board of Trade's figures for the value of retail sales in July are particularly encouraging, since, contrary to the normal seasonal trend, they do not show a decline from the figures for June. The total value of sales in July was 6.7 per cent. higher than in the corresponding month a year ago. As sales increased by 3.1 per cent. between July, 1933, and July, 1934, retail sales are now about 10 per cent. higher than two years ago:—

INDEX OF VALUE OF RETAIL SALES, GREAT BRITAIN
(Average Daily Sales in 1933 = 100)

Period	Food	Other Merchandise	Total
1932	102	99	101
1933	100	100	100
1934	103	103	103
1934—June	103	103	103
July	98	107	102
August	100	79	90
September	101	92	97
October	102	109	105
November	106	110	108
December	121	148	134
1935—January	102	108	105
February	106	83	95
March	107	92	100
April	110	112	111
May	110	112	110
June	110	108	109
July	105	113	109

The improvement in retail sales between July, 1934, and the past month was well spread, both geographically and between various categories of merchandise. The increases varied from 5.3 per cent. in Scotland to 8.1 per cent. in Southern England. Sales of food and perishable articles, which represent about 47 per cent. of the total sales reported, rose by 7.7 per cent.; and sales of other merchandise increased by 5.9 per cent. The increase in sales of other merchandise varied from 1.5 per cent. in piece-goods to 9.1 per cent. in hardware. The money value (at cost) of stocks at the end of July was 0.5 per cent. higher than a year ago. Moreover, prospects of further expansion in our retail trade are quite encouraging.

Sterling and International Prices.—Wholesale price movements have been wide and divergent during the past fortnight, but on balance there has been some recovery in sterling prices. The *Economist's* complete British index number has risen by 0.9 per cent., and has nearly regained its loss of the previous fortnight, while primary products have risen by 0.2 per cent. In the United States primary products have fallen by 0.1 per cent., but the Irving Fisher general index number has risen by 1.1 per cent. Since the New Year there has been a steady divergence between the two American index numbers, for primary products have fallen by 9.1 per cent., while the general index number has risen by 6.6 per cent. During the past fortnight there has been some recovery in French wholesale prices, while the

Italian index number has risen to 101.2, or 1.2 per cent. above the basic figure, which relates to September 18, 1931. German wholesale prices are a shade lower.

Details of the group indices comprising the complete *Economist* index number on the date of our suspension of the gold standard and for recent dates are given below:—

	"ECONOMIST" INDEX (1927 = 100)			
	Sept. 18, 1931	July 31, 1935	Aug. 14, 1935	Aug. 28, 1935
Cereals and meat	64.5	68.3	67.0	69.0
Other foods	62.2	60.1	58.3	58.0
Textiles	43.7	56.6	55.6	56.4
Minerals	67.4	80.3	79.8	81.0
Miscellaneous	65.8	75.0	74.7	74.4
Complete index...	60.4	68.1	67.3	67.9
1913 = 100	83.1	93.7	92.6	93.4
1924 = 100	52.2	58.8	58.2	58.6

In the cereals and meat group there were sharp declines in English wheat and oats, but other grain prices were higher. There was a big advance in English barley. Most meat prices are higher than a fortnight ago, but there has been a sharp fall in bacon. Among other foods, tea has fallen, but there was a small recovery in cheese. In the textiles group, raw cotton and jute are lower, but wool tops are firmer and there has been a big advance in raw silk. Non-ferrous metal prices are all higher. Among miscellaneous materials there were small increases in hides and linseed oil, a small decrease in rubber, and a bigger fall in sulphate of ammonia.

UNITED STATES

A LEGISLATIVE RUSH

THE long first session of the 74th Congress is now in its final hours. Bills over which Committees have dawdled for months, and bills scarcely familiar to (if, indeed, ever read by) the members, are rushed through in a hasty effort to terminate the session and escape from Washington. On Monday, August 19th, both Houses passed the Banking Bill and the Railroad Labour Retirement Bill; the House passed the Guffey Coal Bill; and the Senate the Frazier-

Lemke Farm Mortgage Moratorium Bill. The Tax Bill and the Utility Holding Company Bill are in conference. With a few odd additional bills, the passage of those in process will complete the "must" programme; and its consummation represents a triumph for the power and persistence of the Administration. Left to its own discretion, Congress would have adjourned weeks ago; for it is no secret that it has had little enthusiasm for any of these measures.

The Frazier-Lemke Farm Moratorium Bill (awaiting action in the House) and the Railway Pension Bill are both restatements of measures passed in the last Congress and promptly declared unconstitutional. The latter Bill is significant largely because it constitutes a specific amendment

to the Social Security Bill, on the signature of which the ink was scarcely dry, for it provides a scale of pensions for railway workers higher than that of the Social Security Bill. The effective date of the Bill is March 1, 1936, but, curiously, the legislation which is required to collect funds for the plan is to be the subject of a separate Bill not yet introduced. The haphazard character of the Bill is recognised, since it carries a provision for the study of changes to be introduced before the Bill goes into effect. Existing railway pension schemes are not materially disturbed by this Act. The Frazier-Lemke Farm Mortgage Moratorium Bill should not be confused with the Frazier-Lemke Mortgage Refinancing Bill, which provides for the assumption of \$3,000 millions of farm mortgages by the Federal Reserve banks on a virtual no-interest basis; action on this Bill is scheduled for January.

The Guffey-Snyder Coal Bill for the control of the bituminous coal industry is a legislative attempt to revive the principles of N.R.A. in a specific industry. The country is to be divided into 23 coal regions, each of which is to determine details of wages, hours and other elements of the cost of production. On the basis of these findings, minimum coal prices are to be established and a punitive tax is imposed upon any operator who infringes its provisions. The Bill illustrates the sectional conflict which lay at the bottom of the real demand for N.R.A. It is sponsored by the Northern operators, who find their competitive position threatened by the Southern mines, and opposed by the Southern operators, who see it as a barrier to a widening market. Apparently, it is strongly endorsed by the United Mine Workers, who were dissuaded from striking by the promise of its passage. Doubts of the constitutionality of the Bill were general in Congress, and shared by the President; in its passage in the House by a majority of only 26 votes, although it was on the "must" list, 93 Democrats joined 73 Republicans in opposition. Although the Guffey Bill recreates an N.R.A. code for the local industry, it is free from one constitutional objection. The provisions constitute legislative action by Congress, rather than a blanket delegation of legislative power to the executive. The constitutional question is therefore that of the inclusion of coal mining within the inter-State commerce clause of the constitution.

THE REVISED BANKING BILL

The Banking Bill, which was the only legislative measure of the session subjected to thorough hearings and deliberate consideration, has passed both houses, but in a form radically different from its initial draft. It contains a number of important administrative changes, but none that mark extreme departures from existing practice. The Federal Reserve Board (to be known as the Board of Governors of the Federal Reserve System) is to be reduced from nine to seven members, by the elimination of the two *ex-officio* members, the Secretary of the Treasury and the Comptroller of the currency. The governors, appointed by the President, will serve for a term of 14 years without eligibility for reappointment, at salaries of \$15,000, exceeding those of Cabinet members. The Open-Market Committee (whose composition was the subject of the strongest controversy) is composed of the seven Governors and of five representatives of the Reserve Banks. Discount provisions are liberalised, by removing some of the old discrimination against "non-eligible" paper. The present provisions authorising the Board to alter member bank reserve requirements are narrowed, by prescribing the present requirements as minima, but limiting increases in requirements to 100 per cent. of the present scale.

One feature of the Act, to which strong exception was taken, was the provision for real estate loans. As passed, member banks are permitted to lend on real estate 60 per cent. of their time and savings deposits; the loans may amount to 60 per cent. of the appraised value, and run for 10 years, provided provision is made for amortising 40 per cent. of the loan within the period. Considering the important part which real estate loans played in the late banking crisis, the retention of this provision is somewhat surprising; but its consequences are presumably offset by the retention of the present guarantee of deposits up to \$5,000 by an annual assessment amounting to one-twelfth of one

per cent. of all deposits. State non-member banks with deposits of \$1,000,000 must join the system by 1942 or lose their insurance. In short, the Act largely maintains the *status quo*, whereas the initial draft aimed practically at the creation of a central bank as an appendage of the Treasury.

Business news continues favourable, with steel operations at 48.8 per cent. of capacity compared with the spring high (January) of 53 per cent. The shifting of the automobile seasonal peak, however, disturbs the interpretation of the significance of this demand for steel. But whereas in the spring it was generally stated that automobile industry was the brightest spot in our economic picture, this position is now being taken by residential building. Although residential building makes a less favourable comparison with its peak years than does automobile manufacturing, it is currently showing a greater increase over the figures of a year ago. Similarly favourable comparisons are also made by the machine tool and light machinery industry. In 1934 the United States had little more than a consumers' goods economy; in 1935 there has been a distinct recovery in what might be called light durable goods, or durable consumers' goods.

AN IMPORT OF CAPITAL?

The foreign trade figures for June showed merchandise exports of \$170 millions, almost identical with June, 1934; and imports of \$157 millions, or \$20 millions above June, 1934. Net gold imports were almost \$230 millions, and net silver imports about \$9 millions. For the first half of 1935, compared with the first halves of previous years, the figures are as follows:—

FOREIGN TRADE OF UNITED STATES—FIRST HALF-YEAR (\$000,000)

Merchandise :	Exports	Imports	Balance
1933	669	592	+ 77
1934	1,036	863	+ 173
1935	1,024	995	+ 29
Gold :			
1933	94	184	— 90
1934	13	852	— 839
1935	1	805	— 804
Silver :			
1933	3	27	— 24
1934	8	19	— 11
1935	12	91	— 79

The visible balance (merchandise, gold and silver) was as follows:—

VISIBLE BALANCE OF THE UNITED STATES—FIRST HALF-YEAR (\$000,000)

	Merchandise	Gold	Silver	Export (+) or Import (—)
1933	+ 77	— 90	— 24	— 37
1934	+ 173	— 839	— 11	— 677
1935	+ 29	— 804	— 79	— 854

For the sake of comparison the figures are given for three years of the late twenties:—

1926	— 95	— 81	+ 12	— 164
1927	+ 243	— 132	+ 11	+ 122
1928	+ 292	+ 373	+ 11	+ 676

The difference is astonishing. The gold exports of 1928 were, of course, exceptional; but, except for 1926, the excess of merchandise exports in the first half of each year from 1924 to 1931 exceeded \$200 millions, and twice passed \$300 millions; and, except in 1925 and 1928 (years of gold exports), the combined merchandise and gold movement gave a fluctuating but rather small active balance, which could be explained in terms of our foreign loans. The cessation of these loans, except as compensated by the suspension of payments on previous loans, might be expected to change the balance from active to passive; but it is difficult to account for the extraordinary movements of the first half of 1934 and 1935, except on the theory of a large flight of foreign capital to the United States. The Department of Commerce in its exhaustive annual study of the balance of payments in 1934, found some evidence of such a phenomenon:—

If it be assumed (the report says) that in 1934 the reported "credit" balance of approximately \$466,000,000 on merchan-

dise and service account is substantially correct, it follows that more than \$800,000,000 of the year's net import of gold and silver reflected a net inward movement of capital of equal volumes. Of the latter total, only somewhat more than \$200,000,000 . . . is accounted for. . . .

The existence of an inflow of capital seems to be fairly well established.

NEW YORK, August 20.

FRANCE

THE FARMERS' PRICE DEMANDS

THE price of wheat is now one of M. Laval's chief problems. Last Sunday more than 10,000 farmers assembled at Rouen and presented the Government with this dilemma: higher prices for farm produce or a refusal of farmers to pay their debts and taxes. On the same day M. Laval, speaking at Clermont-Ferrand, said, "The new wheat crop will not be sufficient for French consumption. Present prices are too low. The recent rise is still insufficient, and it will go further."

The Minister of Agriculture, M. Cathala, states that the reason why advances to the farmers can be accelerated is just because the recent decree laws have restored Budgetary equilibrium, as a result of which the Bank of France is to assist the Treasury to finance the 1935 crop. It is also reported that the forward market for wheat is to be restored in a few days.* Very likely the result of the wheat struggle may decide the fate of the Cabinet, when Parliament reassembles in November.

It is certain, meanwhile, that much progress has been made in the struggle for a lower cost of living which the Prefects are pushing vigorously forward. The diminished purchasing power of consumers is naturally also helping to reduce prices. M. Laval's principal political props at the moment, in fact, are the bad wheat crop and the disunity of the Left-wing Parties. On the other hand, his position might easily be upset by external events. Monetary troubles in Holland, for instance, would at once revive the activity of the devaluationists here.

It is difficult to prophesy what the effects of this political situation will be on monetary events. A rapid dishoarding of money would stimulate economic recovery. But monetary and political fears are of too recent a date and have taken too strong a hold on the public to be given up in a few days, despite the appeals of the Government and the Bank of France. Moreover, the money market, which does not possess the organisation and the flexibility of the City of London, is hampered by the consequences of the recent crisis and the persistence of certain bad practices. The maintenance, for instance, at 3 per cent. of the public savings banks interest rate seems to be inspired by purely political motives, since at the same time the Government is anxious to see a rise to par in the 4 per cent. rentes, to pave the way for a big conversion scheme. This high rate paid by the savings banks is perhaps the cause of the substantial contraction of deposits in the big banks, which are paying an interest rate of only $\frac{1}{2}$ per cent. to $1\frac{1}{2}$ per cent. (and have recently suffered withdrawals resulting from the recent monetary crisis). The following table shows the decline of these deposits:—

	June 30, 1934	Dec. 31, 1934	June 30, 1935
Crédit Lyonnais ...	11,867,145,063	11,801,200,937	11,301,289,892
Société Générale ...	9,796,221,721	9,922,216,562	9,418,144,900
Comptoir d'Escompte			
Crédit	7,552,357,829	7,602,206,331	7,172,221,922
Industriel et Comm.	1,432,746,306	1,436,342,555	1,463,922,132
Totals	30,648,470,919	30,761,966,385	29,355,578,846

In spite of this decline in deposits the liquidity of the big banks remains considerable, particularly as the fear of a psychological crisis is inducing them to maintain a very high liquidity. But their funds are unfortunately not fully employed. They cannot be invested in rentes,

* During the last fortnight the price of wheat has risen rapidly from 55/58 francs a quintal to 75/78 francs, and experts expect a rise before long to 90/100 francs, which is alleged by the farmers just to cover their costs.

as would be done by the English banks; a most unfortunate circumstance for the State, the banks and the market. At present the banks, in order to safeguard their liquidity, are discounting commercial paper at high rates, while great industrial concerns, which have a superfluity of funds, instead of depositing their funds at the bank, are investing them directly in short- or middle-term Government securities. All these circumstances are adverse to a general lowering of interest rates.

COAL PRODUCTION DWINDLING

Production in the French coal mines during July, 1935, totalled 3,835,594 tons in 27 working days, against 3,725,026 tons in June in 24 working days, and 3,836,594 tons in July, 1934 (25 working days). The average daily production was therefore 141,985 tons, against 155,209 tons in June, and 153,464 in July, 1934. The number of men employed was 225,505 at the end of July, against 225,463 at the end of June and 234,599 at the end of July, 1934. This sharp decline in French coal production is a consequence of a catastrophic decline in internal consumption. For the first six months of the year consumption was 33,520,000 tons, a decline of 2,380,000 tons or 7.1 per cent. compared with the first six months of 1934. Production was smaller by 1,241,000 tons at 23,426,000 tons. Stocks, nevertheless, have increased by 400,000 tons, despite a diminution in imports of 793,000 tons (31 per cent. of the diminution of consumption). And despite a diminution of 14,000 in the labour force during the last twelve months, unemployment during these six months was at an average of 22.2 working days, against 21.8 during the same period of 1934.

This situation explains the new cuts in the coal import quota, which were adopted this week in an attempt to re-establish equilibrium in the coal market. The cuts were also intended as a compensation for the reduction of coal prices, which had been requested by the Government as a means to the lowering of the cost of living.

PARIS, August 29.

GERMANY

THE GOVERNMENT'S FINANCIAL POLICY DEFENDED

At the opening of the Leipzig Fair the Finance Minister, Count Schwerin von Krosigk, delivered a long address on general financial and economic policy. The German foreign debts problem, he declared, could only be solved either by a reduction of the interest and amortisation liability in connection with a moratorium or by an increase of the German export surplus. He further denied the foreign complaint that German "autarkic" tendencies were responsible for the default, and pointed out that this view was inconsistent with the simultaneous foreign allegation that default was caused by excessive imports in the interest of home industrial recovery. The "New Plan" of import control was not an ideal solution, but it had been forced on Germany by measures and conditions for which she was not responsible. Count Schwerin von Krosigk also dealt with current criticism of the short-term financing of "work creation." The short-term credits, he said, must either be repaid out of ordinary revenue or be funded. Already within the limits of the Budget a part of the tax-credit certificates of the Papen and Reinhardt Plans had been redeemed. In addition, certain kinds of expenditure which in 1933 were financed with credit had now been taken into the ordinary Budget. Concerning the amount of the debt, he only said that outside Germany, "not always without a certain partiality," exaggerated reports of the German short-term debt were circulated. As is usual in official utterances, he spoke as if "work creation" were the sole cause of the new indebtedness, and did not mention expenditure on rearmament.

Within a week of Dr. Schacht's declaration at Königsberg that the Reich's floating debt must be consolidated, two new loans, together totalling 1,000 million marks, have been announced. The sum of Rm. 500 millions will be subscribed by the savings banks on long term (28 years) according to the terms of an agreement between the Reichsbank and the Girozentrale savings bank organisation; the

interest rate will be $4\frac{1}{2}$ per cent. and the issue price 98 $\frac{1}{2}$, and the loan will be amortised annually at 2 per cent. of the original sum. The loan is almost identical with the savings bank loan, also of Rm. 500 millions, contracted in January this year. Both loans are practically forced. In May, between these operations, there was a third loan, also practically forced, from the insurance companies. About this loan there has been a mystery. The fact of its conclusion was never officially announced; the amount actually raised has not been divulged; and the loan is omitted from the last schedule of debt which purports to include all Reich liabilities outstanding at the end of June.

It was officially stated that the yield of the first savings bank loan was to be used for redeeming Reich bills, but that is not stated this time. The question, however, is hardly important for, in so far as bill debts are consolidated, much heavier new bill debts are being contracted. The savings banks can probably find the money with ease, inasmuch as their new deposits have of late considerably exceeded withdrawals, and since early 1934 the total deposits have exceeded the highest figure reached before the credit crisis of 1931, which caused a heavy temporary decline. Savings bank funds have been a potent factor in the recent extreme abundance of money. While the new loan, being long-term, compels the banks to lock up money, it is an operation that will influence the money market in the official desired direction of counteracting excessive fluidity, rather than affect the capital market proper.

Another Rm. 500 millions is to be raised by the sale in the open market of $4\frac{1}{2}$ per cent. Treasury bonds at 98 $\frac{1}{2}$, to be marketed between October 3rd and December 20th. These bonds will run for a term of ten years from October 1st, 20 per cent. to be redeemed annually from 1941 on. The choice of a middle-term instead of a long-term loan for the publicly issued part of the total Rm. 1,000 millions is probably due to the recent falls on the Bourse bonds market.

Money continues plentiful. The month-end demand is being partially met out of temporarily available public funds. The savings banks' returns for the first quarter of the year show a continued increase in credits for "work-creation." The Reichsbank's return for August 23rd shows a decline in credits and investments of only Rm. 112 millions. Coming after an almost unchanged total in the second week of August this indicates considerable borrowing, one factor in which was probably the harvest demand. The new Reich loans will probably reduce the money market fluidity, but may very likely be in part financed by selling promissory notes. Deposits in all banks increased in July by Rm. 117 millions, but in the great banks declined by Rm. 90 millions. The decline in the loans total continued.

CONSUMPTION STILL DECLINING

According to the Reich Nourishment Corporation's report the stock of bread grain within Germany at the beginning of the new farming year is 14,800,000 tons, against 14,300,000 tons a year ago, and of fodder grain 9,500,000 tons against 9,300,000 tons. The number of employed at the end of July is returned at 16,640,000, having increased by 136,000 during the month. Industry in July was occupied to 65.8 per cent. of the number of working places, as against 65.2 per cent. in June; but the improvement was as usual confined to the production goods branches, and activity in consumption goods continued to decline. The Leipzig Autumn Fair opened favourably, with about 25 per cent. more foreign, and a still larger increase in British, visitors than a year ago; and a considerable increase in foreign exhibitors. The wholesale trade turnover in the first half of the year was 5 per cent. above that of the first half of 1934, but this increase is entirely due to the rise in prices. In June, with the exception of one group of goods, the turnover was considerably smaller than in June, 1934.

Ingot steel output in July was 1,447,000 tons, as against 1,248,800 tons in June; in the first seven months 8,733,400 tons, against 6,580,600 tons. The export of heavy steel goods, in particular of bars and tubes, has increased; also the export of motor cars and of electrical articles, in particular cables, dynamos, installation materials and lamps.

BERLIN, August 29.

HOLLAND

UNEMPLOYMENT STILL RISING

THE number of unemployed is still steadily rising. The official statistics showed 333,932 registered unemployed on July 27th, as compared with 331,635 on July 13th. Moreover, the enforcement of the wage cuts necessitated by Dr. Colijn's deflation policy is a constant source of trouble. The situation in the Tilburg woollen industry has become still more acute, and a conference between employers and employees under the leadership of the Government arbitrator, Professor Aalberse, has failed to yield a basis for agreement. Now the employers have undertaken not to enforce any cut in wages for the coming week.

The third Tuesday in September, the traditional date of the reassembly of Parliament after the summer recess, is being awaited with keen interest, as the newly constituted Cabinet will then meet Parliament for the first time. The wireless speech delivered by Dr. Colijn, the Prime Minister, shortly after the new Cabinet had been formed, did not bring about any relief in the all-round tension nor any reversion to confidence. It is not known whether the controversy between Dr. Colijn and the Catholic members has been given up. In many quarters it is considered that the gulf is too wide to be bridged.

Imports as well as exports increased slightly in July as compared with June, but they were considerably below the figures for the corresponding period of last year. The following table shows Dutch imports and exports month by month since January, 1933:—

	(Excl. gold and silver) in million guilders					
	Imports			Exports		
	1933	1934	1935	1933	1934	1935
January	95	100	76	58	56	55
February	86	81	70	55	51	51
March	99	94	80	65	61	54
April	89	85	78	54	54	50
May	97	87	78	61	57	58
June	97	89	73	62	59	51
July	104	86	76	56	58	54
August	105	87		62	69	
September	111	78		74	69	
October	109	87		63	62	
November	109	88		63	60	
December	108	75		52	56	

Imports of gold and silver during July amounted to 43,501,527 guilders, and exports to 82,086,853 guilders. AMSTERDAM, August 26.

NORWAY

INCREASED BUDGET EXPENDITURE

BEFORE adjourning for the summer the Storting finally voted the Budget for 1935-36. Total expenditure will amount to 436.9 million kroner, compared with 396 million kroner in the preceding year. Of the 436.9 millions for this year 316 millions represents ordinary expenditure. Capital expenditure will account for 71.5 millions and expenditure on various Government enterprises for some 49 millions. Ordinary revenue is estimated at 382.6 millions and capital revenue at 51.7 million kroner.

A turnover tax of 1 per cent. has been brought into operation as from July 1st. With a few exceptions this tax is levied on all articles of consumption and production, and as practically all such articles have to pass through the hands of at least two "intermediaries," the tax is actually not 1 but at least 2 per cent. The tax is calculated to realise some 30 million kroner.

Various important conversion operations have been carried through during recent weeks, not only by public and semi-public institutions, but also by a number of shipping and industrial concerns. The amazing rapidity with which even loans of the latter categories have been ab-

sorbed by the investing public, to whom issues of this kind have hitherto failed to appeal, is, of course, ascribed to the comparatively high yield, ranging from about 5 per cent. to $5\frac{1}{2}$ per cent., against the 4 per cent. to $4\frac{1}{2}$ per cent. now obtainable on Government and municipal loans.

In consultation with British interests, certain regulations have been drawn up by the Government limiting the coming whaling season from December 1st to March 15th for the hunting area south of 40 deg. lat. Formerly such regulations only applied to the area south of 50 deg. lat., and hunting was permitted up to March 31st. At the same time the total production of Norwegian companies has been fixed at 1.1 million barrels, while the total for other nationalities was put at 1.2 million barrels.

FURTHER FALL IN UNEMPLOYMENT

Unemployment declined from 34,800 on May 15th to 29,700 on June 15th. (To give a correct absolute total these figures should be increased by 60 per cent. to account for those districts where there is no labour exchange.)

Foreign trade figures for May show considerable expansion. The value of imports was 75.3 million kroner, against 66 millions in May last year; and exports were 46.7 millions, compared with 42.8 millions. The June figures indicate some contraction compared with the preceding month, while the turnover is practically unaltered as compared with June last year. The import surplus during the first half-year amounted to 104 million kroner, compared with 88 million kroner during the same period last year. There has been an appreciable increase in the number of foreign tourists visiting Norway this summer. A great number of these tourists have been on cruises in the West Coast fjords and the Northern midnight sun districts.

OSLO, August 21.

ROUMANIA

THE POLITICAL STRUGGLE

THE National Peasant Party intends to continue its agitation, begun in the spring, to overthrow the Liberal Government. The Liberal Party is somewhat weakened by the difference of opinion between the Prime Minister, M. Tataresco, and the leader of the party on the constitutional question. Moreover, the Government is obviously unable to grapple successfully with economic problems, as is shown by the unsatisfactory state of foreign trade and the public finances. Nevertheless, it has retained so far the full confidence of the King, and is supported by the influential circles surrounding him.

The foreign trade regulations remain in the centre of public attention. In accordance with the new regime instituted on June 10th, the National Bank pays a premium of from 10 per cent. to 40 per cent. over and above the official rate of exchange on exports, namely 40 per cent. on wheat and its derivatives, 30 per cent. on barley, oats and rye, 15 per cent. on maize, 30 per cent. on livestock and animal products, 25 per cent. on timber and timber products, 10 per cent. on petroleum products and 25 per cent. on other produce. This premium will be accorded on the export of goods payable in the following currencies: French, Swiss and Belgian francs, Italian lire, pesetas, Dutch florins, pounds sterling, Egyptian and Palestine pounds, U.S.A. and Canadian dollars, Czechoslovakian, Danish, Norwegian and Swedish crowns, whether free or in clearing. Foreign currency sold to the National Bank, and not the product of exports, receives a premium of 30 per cent.

But for all foreign exchange obtained from the National Bank, whether for the payment of imports or for other purposes, a premium of 44 per cent. must be paid; only certain payments for arrears of trade debts are exempt. The latter regulation has resulted in many strong protests from foreign countries. Meanwhile, the import quotas for the three months July to September are being fixed according to value instead of weight.

HUGE FALL IN IMPORTS

Foreign trade during the five months January to May, 1935, compares with the same period of last year as follows:—

	1934 Lei		1935 Lei	
	Exports	Imports	Exports	Imports
Exports	5,203,145,000		5,282,260,000	
Imports		5,185,810,000		4,242,564,000
Export surplus ...	17,335,000		1,039,696,000	

While exports have increased only slightly there is almost a 20 per cent. decrease in imports. The proceeds of the surplus exports have partly been utilised for the payment of trade debts in arrears and are partly blocked in the respective countries; while the remainder is required for the needs of the State. The enormous weight of the accumulated trade debts is crippling Roumania's trade.

The harvest this year compares favourably with that of last year. The wheat crop, though in many instances of indifferent quality, is expected to be considerably larger, and the exportable surplus is estimated at about 700,000 to 800,000 tons. Last year no wheat was exported. Barley and oats production is also greater in quantity than that of 1934, and about 1,500,000 tons are believed to be available for export. An exportable maize surplus of between 2,000,000 and 2,500,000 tons seems probable. On the whole, Roumania is likely to have a production of cereals and other agricultural produce at least 30 to 35 per cent. greater than that of last year.

HOPES OF A BALANCED BUDGET

Revenue from direct taxation during the present financial year so far compares favourably with the estimates. But the tax of luxury articles and the turnover tax yielded 157 millions in April, against an estimate of 230 millions. There is also a serious deficit in the railway receipts. The Minister of Communications expects the total deficit for the year to reach the figure of Lei 2,300 millions.

Nevertheless, the Minister of Finance hopes to balance his income and expenditure account for the year. Total Treasury receipts for the three months April, May and June amount to Lei 4,557,805,789, and expenditure to Lei 4,980 millions. The Minister expects to cover the deficit for the first six months by the profit resulting from the issue of new coins. He also hopes to effect economies of Lei 300 millions in the public services during the year.

A Ministerial decree of June 21st has fixed a premium on gold amounting to Lei 30,000 per kgr. and a further premium of 27 per cent. on the world price of silver. This decision, combined with the payment of export premia and the imposition of the premium of 44 per cent. on foreign exchange, shows that the depreciation of the currency is at last officially recognised, although hardly to its true extent. The situation is reflected in rising internal prices.

BUCHAREST, August 22.

ARGENTINA

A CABINET CRISIS

A FEW weeks ago there were continuous rumours of an impending Cabinet split, and it is known that the Ministers of Finance, Agriculture, and Interior each in turn presented their resignations, but the President refused to accept them. The crisis has now been smoothed over. A preferential agenda had been prepared by a special committee of the Chamber of Deputies in which the Transport Co-ordination Bill is included. A decree has also been passed regularising the various dispositions of the new Banking Law. This decree, which clarifies certain articles of the Banking Law, becomes effective on September 1st, after which date all banking institutions must conform to the requirements of the law.

After a prolonged period of drought, moderate rains fell throughout the affected areas on August 7th and 8th. It is considered that these rains will materially assist the lin-

owing to the drought, was so hard and dry as to make ploughing impossible, and in consequence there are large areas of land still untilled. Many farmers who have been unable up to the present to sow wheat are now considering the possibility of putting down maize, as the risk attaching to late wheat sowings are too great. The prospects for maize in 1936 are not, however, encouraging, as it is estimated that there will be a surplus carried forward from 1935 of about 2,000,000 tons; so that, if an increased acreage is sown this year and another bumper crop is obtained the disposal of that crop and the 1935 surplus will be difficult.

Revenue for the month of July has increased by some \$9 millions as compared with the 1934 returns, but at the same time expenditure has increased by over \$14 millions. In a comparison of the figures for the first seven months of 1935 and of 1934 the most prominent feature is the large increase in "salaries" and "general expenses," which are up by \$20 millions and \$17 millions respectively. There is a substantial increase in revenue from Customs and ports, as also from income tax.

It is reported that Messrs Vickers, Limited, have obtained a contract to construct, for the Argentine Government, a cruiser of about 5,000 tons. The Italians competed keenly for the contract, for they have built several of the ships at present in commission in the Argentine Navy. Vickers Armstrong's tender was, however, the best from the technical point of view—the lowest in price, and completion guaranteed in the shortest time.

EXPORTS AT RECORD LEVEL

The following are the export figures for the first seven months of the present year, compared with those for the same period in 1934:—

QUANTITIES EXPORTED IN TONS AND AVERAGE PRICES DURING FIRST SEVEN MONTHS OF 1935 AND 1934

	1934	1935	1934	1935
	Quantities		Prices	
	Tons		\$	\$
Chilled beef	199,491	199,427	373.25	382.37
Frozen mutton	30,470	31,369	371.29	458.85
Unwashed wool	73,663	91,066	1,149.99	790.73
Wheat	2,834,359	2,842,589	57.42	67.03
Maize	3,235,065	3,764,626	48.28	47.15
Linseed	864,886	1,141,545	122.82	118.29
Oats	210,846	311,056	36.19	52.57
Barley	473,684	375,485	44.81	57.19

QUANTITIES EXPORTED IN TONS FIRST SEVEN MONTHS, 1935 AND 1934

	1934	1935	Percentage Increase or Decrease
Pastoral products.....	667,079	713,234	+ 6.9
Agricultural products	8,094,933	9,141,869	+ 12.9
Total	9,094,560	10,148,970	+ 11.6

MARKET VALUE OF EXPORTS FIRST SEVEN MONTHS, 1935 AND 1934

	1934	1935	Percentage Increase or Decrease
Pastoral products.....	298,429,310	307,369,339	+ 3.0
Agricultural products	491,565,641	661,807,093	+ 22.4
Total	835,068,572	951,553,853	+ 13.9

AVERAGE PRICES RULING IN 1935 AS COMPARED WITH 1934 (Percentage increase or decrease)

Chilled beef	+ 2.4	Unwashed wool	- 31.2
Frozen beef	+ 2.9	Butter	+ 41.3
Frozen mutton	+ 23.6	Wheat	+ 16.8
Salted cowhides	- 0.1	Linseed	- 3.7
Unwashed sheepskins..	- 28.6	Maize	- 2.3
Oats	+ 45.3	Barley	+ 29.1

The figures for July are disappointing, although the seven months compared very favourably with 1934 figures. The tonnage exported during the first seven months of 1935 is the highest since 1932 and the value has not been exceeded since 1929. Meat shipments were up in July, and the 1935 figures now show an improvement over those for 1934. The prospects for August and September exports, however, are less encouraging. One of the reasons for this is that British

and European purchasers of maize are not interested in that commodity at the prices quoted by the Argentine Government who have bought the crop at the basic price of \$4.40 per 100 kilos. Needless to say the Government do not desire to sell at a loss, and are consequently withholding shipments until such time as prices in the foreign markets improve.

BUENOS AIRES, August 20.

CANADA

BUSINESS IN SUSPENSE

[The victory of the Social Credit Party in Alberta and the prospects for the General Election are discussed in Notes on page 412.]

BUSINESS conditions are more or less stationary, in anticipation of the approaching General Election. The index of production of the Bureau of Statistics for the week ending August 3rd stood at 99.3 as compared with 100.1 for the previous week, a decline which was not more than seasonal. The carloading figure for the week ending August 3rd, at 41,689 cars, showed a decline of 1,653 cars compared with the previous week; but was only 487 cars below the figure for the corresponding week of 1934. Tourist traffic is larger than in any recent summer. One factor which is preventing any improvement in business is the unsatisfactory wheat marketing situation.

The wheat carryover at the end of the last crop year on July 31st is placed by the Bureau of Statistics at 2034 million bushels, almost ten million bushels more than the carryover on July 31, 1934. Export clearances of wheat during the crop year were only 118 million bushels, compared with 153½ millions in the previous year. The grain trade has been chaotic for some weeks past, and export sales have been reduced to a feeble trickle; but the Government has now appointed the new Grain Board, which will consist of Mr J. I. McFarland, the Government wheat agent in Winnipeg, Mr D. L. Smith, who will represent the interests of the pools, and Professor H. C. Grant of Manitoba University, an agricultural economist. The Winnipeg Grain Exchange has, with the withdrawal of the July option, been virtually on a cash basis. But, with the appointment of the Board, trading in October and December futures will soon become effective, although it will continue to be subject to a limit on price movement and to certain regulations about selling operations designed to prevent speculators from establishing a short line in the market for longer than one day.

The export trade has been shrinking, but better prices are being paid nevertheless for certain agricultural products. There is also greater activity in the construction industry, due largely to new public works and a great expansion of the summer tourist traffic. The volume of new construction contracts awarded in July was much larger than in July, 1934, and brings the aggregate of building and engineering work now on hand to a point more than 20 per cent. above the level of a year ago. The lumber industry in British Columbia is feeling the depressing effects of the cessation of orders from Japan, but the Eastern lumbermen are doing fairly well although they are renewing their complaints about unfair Russian competition in the British market. The newsprint industry, after a quiet period in June, seems now to have a brighter outlook. Most of the leading producers have now come to a working agreement about their export marketing policy; and, as a result an offer of a large contract for newsprint at \$40 per ton was recently rejected as inadequate by a Canadian company.

BUOYANT FEDERAL REVENUES

The Federal revenues show an encouraging buoyancy, and the yield for the first four months (ending July 31st) of the current fiscal year is given at \$146,015,000, compared with \$133,881,000 for the same period last year. Expenditure during the same period was \$139,005,000, compared with \$136,895,000.

The stock markets were listless, with a slightly reactionary tendency during the latter half of July and the early days of August. But the upward movement in New York a week or two ago brought them to life, and since then there has been more activity than for months past. A wide range of stocks recorded advances; though for several days the favourite stocks with both investors and speculators were the power stocks. Later, attention was switched to pulp and paper stocks. The bond market has been steady, with a strengthening tendency, and the average yield of six leading bonds had decreased to 3½ per cent. for the week ending August 8th.

OTTAWA, August 20.

LETTER TO THE EDITOR

UNEMPLOYMENT IN GERMANY

TO THE EDITOR OF THE ECONOMIST

SIR,—I see that the German Institut für Konjunkturforschung has done me the signal honour, in its Weekly Report of the 22nd instant, of imputing to your editorial pen my calculations and analysis of the German unemployment situation in the first of my two articles on "Germany's Economic Recovery" (*Economist*, August 10th, p. 271). At the risk of considerable trespass upon your space, I must support my calculations of the amount of "invisible unemployment" in Germany with certain detailed statistics—statistics with which I did not consider it necessary to burden an already long article.

The Institute challenges both my calculations and my conclusion that there were at the end of last June something over 4 millions of "unemployed" in Germany, of which about 2.4 millions do not appear in the official statistics and have therefore been termed, in Germany, "invisible." It says that you—meaning I—have ignored the omission of 1.6 million officials from both the employment and unemployment figures; and that the number of the "invisible" unemployed should be reduced by that amount. And, after a painstaking analysis of undisputed tendencies and sources, it purports to prove that "invisible unemployment" fell from only 799,000 in June, 1933, to 722,000 at the end of last June.

But the Institute both proves and protests too much. First, as I specifically pointed out, the calculation of "invisible unemployed" from a comparison of the course of the official (*Krankenhasse*) employment figures and of the unemployment figures since 1929 gives only a partial "showing" of the true situation. But the point at issue is not what absolute amount of "invisible" unemployment this method shows at the end of last June. It is the relative movement between 1929 and 1933 and 1935; and such a relative movement can be deduced from the comparison, if all the qualifications which I specifically mentioned are borne in mind. In this connection, it is significant that the same Institute as now impugns my calculations used this same method to ascertain the "invisible unemployment" in September, 1932—i.e. before the advent of the National-Socialist Government. At that date, the Institute's Report put the "invisible" figure for July, 1932, at 1.8 million, in addition to the official unemployed figure of 5.4 millions. Moreover, I would call your attention to the following sentence which appeared in *Die Deutsche Wirtschaftszeitung* (the organ of the Reich Chamber of Economics) of the 9th instant:—

"Even if the 2.6 million statistically 'invisible' able-bodied men and women are counted as unemployed in the middle of 1935, the total figure of the unemployed amounts to 4.4 millions." (Quoted in the *Berliner Börsenzeitung*, 9th instant.)

This remark is meant to indicate that real unemployment has substantially fallen since 1931 and 1932. So it has; but to nothing like the extent which the Konjunkturinstitut would have us believe. There is a "great gulf fixed" between the Institute's gross figure of 2.6 millions of visible and "invisible" unemployed at the end of last June, and the Reich Chamber of Economics' estimate—which is 182,000 higher than my own!

Secondly, however, the German Institute states that I have made "several basic errors" in my use of the 1933 occupational census; and it charges me with having "overlooked

completely" the inclusion of 1.6 million officials in the census, and their exclusion from the current figures of employment and unemployment—with the result that I have expanded the "invisible" total by 1.6 million. Nothing of the sort. My basic calculation of 20.7 million workers in June, 1933, had already allowed for this, for a very pertinent reason.

The census of 1933 contained "invisible unemployed," to the tune of some 1.3 million workers and shop assistants. They were enumerated as "Independents," "Independents without profession," and "Workers together with dependents." My calculation was based on a comparison of the divergences between the rates of increase of certain categories of workers between the 1925 and the 1933 censuses. Thus, "workers and shop-assistants plus civil servants" only increased by 0.9 per cent.; while the "Independents" (mostly those "one-man-shops" to which the Institute's Report refers) increased by 32.4 per cent., and the "Independents without profession" increased by 51.5 per cent. Finally, "Workers together with dependents" have increased by 4.0 per cent., while "Workers (only)" have increased by only 1.6 per cent. I cannot here refer to the legal and administrative changes which brought workers under other than the real "workers" category in the 1933 Census. Suffice it to say that, although the Institute is right in stating that many people were leaving the "workers" category in the depression, it is disingenuous in not recognising that, despite changes of nomenclature, these people were never anything else but workers.

On the basis of the trends evidenced in a comparison of the 1925 and 1933 censuses, I calculate that there was an "excess" of 376,000 "Independents" in 1933, of 921,000 "Independents without profession," and 198,000 young persons between 14 and 16, counted as "dependents of workers." The total of 1,495,000 additional (unoccupied) workers would raise the official 1933 Census figure of 21,681,000 workers, shop-assistants and civil servants to a maximum of 23,176,000. We should set this maximum against a lower estimate of 22,363,000 workers in 1933, obtained by adding 3.6 per cent. (the increase in the population of working age between 1925 and 1933) to the 1925 total of workers. If we strike an average between these two estimates of the 1933 working population, we get 22,719,000, from which we must deduct the civil servants. But, be it noted, not, as the Institute recommends, 1,577,000 civil servants. For 377,000 of them are private servants and assistants with no title to pension; and the *Krankenhasse* employment figures do include these. We deduct only 1,200,000 officials from 22,719,000 workers. Then from the resulting figure we have still to deduct incapacitated workers (329,000), monks and nuns (100,000), the higher-salaried shop-assistants (200,000), and the other employed persons outside the official figures (200,000). Eliminating persons changing their jobs, we arrive at my basic figure of 20.7 million workers in 1933—having deducted the officials.

This unconscionably long description has been rendered necessary because the Third Reich's first Census in 1933 is not inherently comparable with that of 1925. The Institute apparently thinks it is. In my article, I ventured to indicate why I think there are to-day more than 4 millions of unemployed workers in Germany. The Institute's Report adduces nothing to shake my conviction that this figure is a more sober computation than its own.

I am, Sir,

Yours very truly,

INTERNATIONAL BANKS

THE veil which tradition, prudence, loyalty and conscience have strangely combined to draw over bankers' operations is at last being carefully removed, and a new chapter in economic history is being written. Mr Baster has added a notable contribution to the history of banking in this able sketch* of the activities of British bankers in the international field.

The conclusion of the book is inevitably depressing. For Mr Baster has to describe the growth of economic nationalism since the war, and cannot see any signs that the delicate mechanism which, after a painful and difficult growth, was worked by the international banks will be allowed to develop as it should for the economic advantage of the world. "In the long run," Mr Baster writes, "the banks will have to face the unpalatable fact that the growth of nationalistic feeling in the economically subordinate countries will set a definite limit to the expansion of their business."

Mr Baster also remarks that "the banks owe very little to Government initiative or assistance." His extremely interesting description of nineteenth-century overseas banking fully bears this out as a historical statement. He points out the occasional incursions of political motives where "the political connections of concessionaires were inevitably deciding factors in the distribution of official favours, as, for instance, those between Lazard and Lord Stratford in the case of the Ottoman Bank, or Anderson and Consul-General Wood in the case of the London Bank of Tunis." Banks in South America seem to have been singularly free from Government interference from the British side, except for diplomatic protection in extreme cases; and even in China the cautious attitude of the Government towards the Consortium may be noted. Indeed, as Mr Baster points out, the only clear example of domination by a Government of an overseas bank of British origin is that of the Ottoman Bank, and there it was the French Government (with nominally an equal voice) which controlled it in accordance with the ups and downs of French foreign policy. Finally, when the British Trade Corporation was amalgamated with the Anglo-Austrian Bank in 1926 the experiment of a "new tradition" in British banking seems, temporarily at least, to have come to an end.

Mr Baster thinks that it is not even certain that the international banks will proceed steadily to amalgamate with the great deposit banks, still less enter into any national, or nationalised, organisation. The international banks may be better suited to weather the storm on their own, and to turn in the end to the new banking systems of the place of their abode rather than to the city of their origin. Until recently "the characteristic specialisation of the London money market has been reflected in the almost complete independence of the overseas banks," which have been "without any direct support from the great deposit banks" in their historical development.

This book is very readable and short, despite the great number of institutions in Europe, South America and China whose history it covers. Compression occasionally obscures the history of individual banks, and a brief alphabetical appendix of every bank mentioned, with the main events of its life, would be a welcome addition to the twenty-six excellent tables.

SHORTER NOTICE

"The Causes of War and the Conditions of Peace." By Quincey Wright. Longmans, Green and Company. 125 pages. 5s.

Mr Quincey Wright is Professor of International Law at Chicago University. In 1927 the Social Science Research Committee initiated an inquiry into the causes of war, under his directorship. Professor Wright's book is one of thirty

* "The International Banks." By A. S. J. Baster. P. S. King. 269 pages. 12s. 6d.

studies which have already been contributed to this inquiry, and it represents an anticipation of the final synthesis which will be published by the Chicago Committee.

"The problem of peace and war," Professor Wright says, "is the problem of maintaining dynamic equilibrium in the world community," and he develops this contention in the five short chapters of his book. In the first chapter he defines the causes of war and the conditions of peace more or less in terms of each other, emphasising four main conditions. The first of these is the existence of an absolute desire for peace, a desire which precludes all intransigent opposition to opinions, laws or existing conditions. The second is an international organisation capable of restraining conflicts inevitable in a dynamic society. The third is an international legal system which will represent and satisfy existing interests; and the fourth is such a stable equilibrium between material forces as alone can keep the peace if the other three conditions are imperfect. In his excellent third chapter, Professor Wright examines the interdependent problems of disarmament, security and the balance of power, and tries to show how, in present circumstances, the balancing of antagonistic armed forces can alone secure the stable balance of power which is an essential part of security.

It is interesting to notice how Professor Wright reconciles what, three or four years ago, was still widely considered the pre-war doctrine of the balance of power with absolute support of the League of Nations. He sees in the League of Nations the potential fulfilment of every one of the four conditions of peace which he enumerates. "The maintenance of suitable opinion no less than the maintenance of the balance of power, the development of law and the settlement of controversies in the world community, are functions of the League of Nations." Professor Wright does not ignore those deep-rooted human instincts which are the conditions of all society and even of progress itself, though they make for war. But he pleads convincingly for continued support of a League which has accomplished so much in such a short historical period, and which, if supported, is capable of consummating the world movement towards unity and integration which should finally remove the natural causes of war.

Professor Wright's book is clear and stimulating, and taken together with its wide bibliography, it could hardly be improved as an introductory study of the causes of war and the conditions of peace.

BOOKS RECEIVED

The New Deal and Foreign Trade. By A. E. Taylor. (New York) The Macmillan Co. 301 pages. \$3.00.

State Taxation of Motor Vehicles. By A. J. Dooley. (Philadelphia) University of Pennsylvania. 171 pages. No price stated.

Income Tax Up to Date. New Edition. By H. J. Gully. (London) The Financial News. 24 pages. 9d.

A useful little book in which changes, both of rates and reliefs, are clearly set out each year.

The First Class Township in Pennsylvania. By P. B. Willauer. (Philadelphia) University of Pennsylvania. 118 pages. No price stated.

Indian Sugar Industry (1935 Annual). By M. P. Gandhi. (Calcutta) M. P. Gandhi, 135 Canning Street. 56 pages. Rs. 2/4.

An annual report of one of India's most important industries.

MONEY AND BANKING

POUND AND DOLLAR

SINCE mid-summer the New York exchange has developed signs of slight weakness. The movement has not been very pronounced, for against sterling the dollar only depreciated from \$4.94½ on June 30th to just over \$4.98 in the middle of August; and there has since been a tendency towards a recovery. Forward dollars have also maintained their premium of about 1½ cents for three months. It is, however, unusual for the dollar to weaken immediately prior to the autumn, and perhaps it is more significant that in the middle of August the gold *bloc* currencies also strengthened against the dollar, though they remained weak against the pound. This shows that the main force at work was the pull of the pound against the dollar, which to some extent acted as a drag upon the gold *bloc* currencies as well. What has caused these movements?

The immediate influences upon the dollar can be summed up in one word—silver. True, alternative reasons for the depreciation of the dollar have been advanced. For example, a few weeks ago the view was expressed that the American Tax Bill was driving American funds abroad. This view always appeared fanciful, and in any case, any such flight must have been more than offset by the revival in Wall Street, which has proved an attraction to the European investor. There has also been evidence during the past ten days that the rapid development of the Italo-Abyssinian crisis was provoking a flight of funds from Europe to the United States, and the recent rally in the dollar may be attributable to this cause. Nor do the gold *bloc* currencies yet command real confidence. On balance it looks as if the resultant of all these forces would tend to work in favour of the dollar, and not against it. This brings us back to silver.

The first break in the London silver market came in the middle of July. The United States authorities intervened and spent about \$20 millions on silver in two days. This temporarily depressed the dollar to \$4.98½. Another break was threatened a month later, and again the American authorities intervened. On August 14th alone they bought 25 million ounces, and they made further purchases on subsequent days. They must have spent anything up to another \$15 or \$20 millions, and it was at this time that the exchange again weakened to over \$4.98. The foreign exchange market was narrow and idle during most of August; so that, while the dollars offered in London against these silver purchases were easily absorbed, it is not surprising that the exchange moved against the United States. If further silver purchases prove necessary during the next few weeks, the exchange rate is likely to remain weak.

The continued premium on forward dollars can easily be explained. First there is the margin between London and New York short-term money rates. London rates are slightly the higher, and perhaps would justify a premium of half a cent on three months' dollars. Next, any depreciation in spot dollars causes the forward rate to depreciate as well; for the premium on forward dollars means a premium over the spot rate of the day. Thus traders and others who know that they will need dollars in the future have been tempted to buy forward dollars while the rate remained weak, and such purchases help to maintain the premium over the spot rate. Finally there are fears about the European political situation which inspire forward purchases of dollars by way of re-insurance against a possible depreciation of European currencies. The only counter-influence is the revival of European interest in American securities. Foreign purchases of American stocks are frequently hedged by a sale of forward dollars in anticipation of the ultimate sale of the security.

This brings us to the second main consideration, namely, the outlook for the dollar. To-day we are on the threshold of the season of the year when heavy purchases of dollars are usually made to pay for crop movements from the United States to Europe. Are these purchases going to be

as great as usual? On the whole the answer appears to be in the negative. To begin with, the United States is not likely to be a serious exporter of wheat. Her own crops have suffered considerable damage from rust, and she will probably have to import a certain quantity of high-grade wheat. Cotton is more of an enigma, especially as the new loan scheme (discussed in a Note on p. 414) has still to be tested. It may, however, induce American growers to sell more freely. Also recent weather reports are favourable and crop estimates are increasing. There is no evidence that tobacco shipments will be other than normal, and these always create a considerable demand for exchange. There is, however, one final point of some importance. The accumulation during the years of depression of heavy unsold stocks of staple products has enabled consumers to spread their purchases more evenly over the whole of the year, instead of concentrating them in the months immediately following the gathering of the crops. This tends to reduce the intensity of the seasonal demand for dollars. Together with the absence of wheat exports and greater use of "outside" qualities of cotton this may prove the determining factor during the coming autumn. This is why we suggest that the seasonal pressure on the exchanges may be less than usual.

Finally, there is the question of the fundamental relation between the pound and dollar. Nearly a year ago we published some tentative calculations, based (A) on the assumption that the pound and the dollar were in equilibrium in 1929, and (B) on the assumption that the pound was then over-valued by 10 per cent. We summarised these calculations into a table, which is reproduced and extended below:—

EQUILIBRIUM RATES OF EXCHANGE BETWEEN POUND AND DOLLAR

Indices compared	Nature of Prices compared	Equilibrium Rates					
		April, 1933		Aug., 1934		June, 1935	
		A	B	A	B	A	B
Bureau of Labour—Board of Trade	Wholesale....	\$ 4.27	3.84	\$ 4.93	4.44	\$ 4.78	4.28
Irving Fisher—Board of Trade	Wholesale....	4.00	3.60	5.14	4.63	5.31	4.78
Nat. Ind. Conf. Board—Bowley	Wages	4.00	3.60	5.14	4.63	5.17	4.65
Bureau of Labour—Ministry of Labour	Cost of living	4.17	3.75	4.42	3.98	4.69	4.22

All these comparisons are tentative, and during the past ten months there have been contrary movements in the two comparisons based upon wholesale prices. Still, the comparison between the Board of Trade and Irving Fisher index numbers is the more representative; and this, as well as those based on wages and the cost-of-living, shows that the equilibrium rate has drawn closer to the actual exchange rate during the past ten months. The figures, however, still seem to indicate that a rate of \$4.98 over-values the pound, and if this is true, the dollar should have a rising tendency. It is difficult, owing to the lack of data, to make a similar calculation for the dollar and the franc, but here again it is probable that the under-valuation of the dollar is less pronounced than it was a year ago.

This view is borne out by a cursory examination of recent American overseas trade statistics. Throughout 1934, the United States had a continuous export surplus which for the last eight months of the year averaged \$40 millions a month. In 1935, the monthly export surplus suddenly dropped to under \$10 millions, and in April and May, there was an import surplus of a few million dollars. This import surplus may be seasonal, but the general impression is both that the dollar is now in closer equilibrium with other currencies, and also that the course of trade is now working much less in favour of the dollar. It may be that our

tentative calculations exaggerate the under-valuation of the dollar in terms of other currencies.

On the whole it looks as if the autumn strengthening of the dollar may be less pronounced than usual. The trade balance is telling much less in favour of the United States while the seasonal demand for dollars may also be on a sub-normal scale. The under-valuation of the dollar should tell the other way, but experience has shown that the theoretical equilibrium rate is just as likely to move towards the actual exchange rate as to pull the latter down towards it. There are, however, two imponderables which are likely to exert the greatest influence of all. These are the course of the silver-buying policy, and the trend of European politics. If the American Treasury remains a heavy purchaser of silver in London, then the dollar will depreciate. If war breaks out between Italy and Abyssinia, and especially if it has serious repercussions in Europe, then the dollar will, in all probability, appreciate. Either development can, for a time at least, have a far greater influence upon the New York exchange than the more normal influences of international price-levels and commercial exchanges.

FINANCIAL NOTES

Anglo-Italian Exchange Agreement.—Since the conclusion of this Agreement last April, £1,484,000 has been transferred to British exporters through the mechanism of the scheme. The sum awaiting transfer on August 21st was £1,934,000 and the accumulation of these arrears has caused feelings of acute discontent among British exporters. The usual explanation is that British importers are reluctant to pay the sums due by them into the clearing account at the Bank of England, and that this is causing a shortage of sterling available for British exporters. The scheme is not compulsory upon British importers, but in practice they are probably not to blame for their alleged failure to make use of the scheme. When a bill of exchange is presented for payment to the British importer, he pays the collecting bank in London, and the collecting bank remits the amount in accordance with the instructions received from the Italian exporter or his bankers. If the collecting bank is instructed to pay the proceeds into the clearing account at the Bank of England, it does so. If it is instructed to deal with them in any other way, it equally does so. This suggests that the real onus of making use of the scheme lies not on the British importer, but on the Italian exporter, and the number of cases in which the collecting bank is not asked to pay to the Bank of England suggests that the Italian authorities are not instructing their exporters to avail themselves of the scheme. It is significant that as all Italians must declare, and be prepared to hand over to the authorities, any foreign exchange held by them, any failure to use the scheme automatically places fresh exchange at the disposal of the authorities. The burden, however, falls upon the British exporter, in the shape of the delay experienced in receiving payment. This places the partial failure of the Anglo-Italian Agreement in an entirely new light.

Uncertain Dutch Outlook.—Our Amsterdam correspondent calls attention to the technical improvement in the position of the Netherlands Bank. Since the crisis at the end of July, the Bank has recovered Fl. 28.2 millions of its gold losses, while loans granted by it have been reduced by Fl. 70.8 millions. Its gold ratio has risen from 64 to 70.5 per cent., and on August 3rd it reduced its rediscount rate from 6 to 5 per cent. There is evidence, however, that this improvement is superficial, for both the dollar and the French franc are still quoted at about the export gold point, while short-term rates in the Amsterdam money market have been well up to Bank rate and at times above it. It is believed that the Netherlands Bank has been repurchasing on its own initiative some of the francs sold by it at the time of the crisis, and converting these francs into gold. Thus there has not been a natural influx of gold into Holland, and if the Netherlands Bank has been buying francs it is easy to see why the guilder remains weak against

the franc and dollar. The Amsterdam stock market is weak, and there is some demand for dollar securities. All this points to the continuance of a flight of capital from Holland, and surprise has been expressed that the Netherlands Bank has not decided to raise its discount rate again.

The Foreign Exchanges.—The market has been very idle. Little spot silver was on offer this week, and the consequent absence of American purchases caused spot dollars to strengthen from \$4.98 to \$4.97½. Three months' dollars came on offer at 1½ cents premium, against 1½ cents last week. The common American practice is to buy forward dollars whenever spot dollars are being sold against silver, the object being to take advantage of the depreciation in the dollar which accompanies silver purchases. As no silver was bought this week, there was no demand for forward dollars. The leading gold *bloc* rates are a shade stronger, but there is very little business. The British Control has continued to support the franc. Forward belga are a little weaker. Spot lire eased off early in the week, but the Italian authorities quickly brought them back to the pegged rate of lire 60½. Three months' lire are quoted at 5-7 lire discount. The remittance of Italian currency to Italy has been controlled for some time, and as a result it is now possible to deal in Italian notes in small quantities in London at a rate of lire 67 and upwards.

The Money Market.—Conditions are entirely unchanged; last week's Treasury bills went at an average rate of 11s. 4.93d. per cent., against 11s. 1.94d. per cent. the week before. This week the banks have bought Treasury bills for dates up to the third week of November at ½ per cent. There was no business in hot Treasuries.

	Aug. 9, 1935	Aug. 16, 1935	Aug. 23, 1935	Aug. 30, 1935
Bank rate.....	2	2	2	2
Clearing banks' deposit rate ...	2	2	2	2
Short Loan rate :—				
Clearing banks.....	1-1	1-1	1-1	1-1
Others.....	1-1	1-1	1-1	1-1
Discount rates :—				
Treasury bills	1-1	1-1	1-1	1-1
Three months' bank bills ...	1-1	1-1	1-1	1-1

This week the tender is being increased from £40 to £45 millions. Maturities have lately been at the rate of £40 millions a week instead of £35 millions, and so the increase in the tender restores the former rate of increase of £5 millions a week in the total tender issue. In view of the Exchange Account's continued purchases of gold, which is steadily reducing tap issues of bills, it is not surprising that the tender issue is continuing to expand.

The Bank Return.—The note circulation has again fallen with the further return of holiday currency, but the week's contraction is very small.

	BANK OF ENGLAND				
	Aug. 29, 1934	Aug. 7, 1935	Aug. 14, 1935	Aug. 21, 1935	Aug. 28, 1935
	£ mill.	£ mill.	£ mill.	£ mill.	£ mill.

Proportion	47.7%	30.1%	34.1%	36.4%	38.1%

In the banking department, the most striking movement is a decline in public deposits to £9.4 millions. The Government has heavy dividend payments to make next week, and it will probably have to borrow on Ways and Means from the Bank. Bankers' deposits have risen to £96.9 millions, and next week's dividends are likely to cause a further

GREAT WESTERN RAILWAY

A CENTENARY REVIEW

To-day, August 31, 1935, is the hundredth anniversary of the enactment by Parliament of a Bill conferring legal existence upon a railway designed to run from Bristol to London, from which has evolved, without break of nomenclature, ownership or tradition, the present Great Western system, with its 3,793 track-miles, and its £150,000,000 of issued debenture and share capital. The story of the Great Western—whose main lines radiate from London (Paddington) to Devon and Cornwall, Wales and, through Birmingham, to the Mersey, with important ancillary dock, steamship, hotel, canal, and other interests—epitomises all that is fundamental and much that is picturesque in British railway development. The Centenary thus affords an appropriate occasion for an analysis of the company's inception and evolution, its present position, and its special opportunities and problems.

A HUNDRED YEARS IN RETROSPECT

THE first successful Great Western Parliamentary Bill received the Royal Assent on August 31, 1835. The first fare-paying passenger was carried on June 4, 1838, and the complete London-Bristol line was opened in June, 1841, at a total capital cost of £5,877,120. From this nucleus has grown the system whose present-day size and scope is indicated by the map on page 427.

Although the use of the term "Great Western" as early as August, 1833, suggested that the Fathers of the Line had set no narrow territorial limit to its ultimate expansion, it is quite certain that they did not foresee the part which goods traffic would play in its future economy. The "broad gauge" of seven feet, instead of the four feet eight and a half inches which was standard on all English lines outside the Great Western orbit, was adopted on the advice of the company's great engineer, Brunel (after the London and Birmingham Railway had refused terminal facilities at Euston), and maintained in the face of considerable criticism, expert and otherwise. While the Great Western, however, was most stoutly defending its child during the Parliamentary "gauge war" of the 'forties, events were already conspiring to present the company with an inevitable choice between isolation and increased traffic, and it was clear on what lines its final judgment would be framed.

The broad gauge was all very well for extensions into relatively virgin territory with a low traffic density, like Somerset, Devon, Cornwall and (at that time) South Wales. These could be entrusted to separate companies, in which the Great Western had financial and directorial interest without control. An effort, however, to apply the same principle in the area north of the London-Bristol line, where the company came into competition with systems as strong as its own, led to the speedy "rebellion" of the Oxford, Worcester and Wolverhampton Company, which went over to the narrow gauge. To reach the Birmingham area the Great Western had to fight its own battle, at first hand, not at second hand. Its purchase, in 1846, of the Birmingham and Oxford Junction and the Birmingham, Wolverhampton and Dudley Railways brought it directly inside the preserves of the London and North-Western. The "Battle of the Gauges" became still more embittered in 1854, when the absorption of the Shrewsbury and Birmingham and the Shrewsbury and Chester Railways carried the Great Western to the area of the Mersey. The latter acquisition, however, was effected on terms which effectively precluded the extension of the broad gauge north of Wolverhampton. Though Great Western trains appeared at Birkenhead in 1857, the appearance of the "mixed gauge" at Paddington was a much more portentous development. It was not altogether surprising that, early in the 'sixties, the company, rather than face the prospect

of being shut out from permanent participation in the growing traffic between Wales, the West Midlands and the Metropolis, agreed to amalgamate with the West Midland and South Wales Railways.

This final break with the tradition of "magnificent isolation," consummated in 1863, was probably the most decisive event in Great Western history. It had been heralded by the passing of many able and devoted men who had done much for the old regime—Isambard Kingdom Brunel, one of the greatest civil engineers of all time; Charles Alexander Saunders, secretary and general superintendent, who was perhaps the most formative of all influences in Great Western history; and Charles Russell, chairman of the company throughout one of the periods of fiercest competition. One great figure of pioneer days, however, remained to see the company through an almost desperate financial crisis in the later 'sixties, to weld the new "group" into a unitary system, and to establish its prosperity on a secure basis in the 'eighties. Daniel Gooch, "Superintendent of Locomotive Engines" in 1837 at the age of twenty-one, was called to the chair in 1865 after a single year's break with the company, and ruled for the next twenty-four years.

The conversion to the narrow gauge, authorised in 1866, was not finally completed until 1892, the delay being due mainly to the absorption, in 1876, of various "associated" but hitherto independent broad-gauge companies west of Bristol. The financial results of the period of retrenchment and consolidation were satisfactory. They were accompanied, however, by a somewhat rigidly conservative policy which did not enhance the Great Western's popularity with the travelling public. The period from the late 'eighties to the outbreak of war in 1914 was, subsequently, devoted to improving facilities to the higher level demanded by modern railway conditions. The Severn Tunnel had been opened for traffic in September, 1886. The most important subsequent development, before the Great War, was the "rounding off" of the system by lines giving direct transit to Bristol and South Wales (1903), Taunton and the West (1906) and Birmingham (1910).

The war intervened before the company had secured the full fruits of this policy. Before the system had recovered from the physical effects of that epoch of Government control, it was presented with new problems arising out of the Railways Act of 1921. "Grouping" offered few administrative problems to the Great Western—which was already a "group"—but it compelled the company to absorb, *inter alia*, numerous South Wales concerns, predominantly interested in the coal trade, on the basis of their results in the prosperous year 1913. Depression in the coal industry, and competition from motor transport, were matters

of concern to the management before the piling of Pelion on Ossa by the general economic depression of 1930 onwards. From this crisis the railways are only now beginning to emerge.

So much for a century's history of the Great Western

GREAT WESTERN FINANCE

FROM the consideration of a century's annals of the Great Western Railway, we turn to review the principal features of its technical and financial development. A comprehensive survey of the company's growth from the earliest days, when the paid-up capital amounted to £125,000, up to its centennial year, with a capital little short of £150 millions, constitutes a fascinating, but formidable, work of historical research. It is complicated, moreover, by the steady progress of absorption of affiliated and competing lines, to which reference is made in the preceding section. By courtesy of the company, however, we have made an analysis of the main financial and operating trends of the century. The table on page 427 gives, in its four sections, statistics of finance, passenger and goods traffic, and operating experience for each decennial year from 1840 to 1930. The last year unaffected by war-time Government control, 1913, was also the first year in which ancillary businesses were separated in the form of accounts ordained by the 1911 Act. Thereafter a break of eleven years in the table is occasioned by the non-publication of complete accounts during the control period from 1914 to 1921. The series is resumed, however, in 1924, the first complete year of amalgamation under the 1921 Act. The subsequent history is shown by reference to the years 1929, 1932 and 1934, which characterise pre-depression, mid-depression and recovery conditions.

In considering the financial history of the company, the year 1840 provides an eminently suitable base, for, after more than four years' work, the completion of the line to Bristol was within sight. The sections then opened, at a cost of over £5½ millions, were, however, already fulfilling their promise, and the first ordinary dividend of 1½ per cent. was paid for the second half of 1840. In that year, moreover, the company carried a million passengers for the first time. With the completion of the Bristol line, net revenue expanded so satisfactorily that dividends of 8 per cent. were paid in 1845 and 1846. By 1850, however, the depression of the late 'forties, coupled with the rapid growth of new capital expenditure in connection with the "Battle of the Gauges," had caused a reduction in the dividend to 4 per cent.

The 'fifties marked a period of financial difficulty, for the expansion in revenues failed to march in step with the rapid growth in capital, which, during this period, was being largely raised on prior-charge issues. Although net receipts exceeded £1 million in 1860, the dividend payments were only gradually being stepped up after a period of stringency which, in 1858, reduced the dividend to only 1½ per cent.—the lowest figure on record. A similar but more serious oscillation occurred during later years of the following decade. In the two half-years to January and July, 1867, the depletion of cash resources necessitated the offer of stock dividends in lieu of cash payment. So critical, indeed, was the financial position of the company that Daniel Gooch appealed, unsuccessfully, to Disraeli for Government assistance to the extent of £1 million. The strain imposed upon current revenue was accordingly very severe, and but for capable handling might well have proved disastrous. The end of the decade, however, marked the turning point, for the amalgamations of the 'sixties, which brought the West Midland and South Wales lines into the group, immediately proved their worth—though the purchase terms, in the light of contemporary conditions, were somewhat costly.

During the 40 years which followed, the fortunes of the company were well established. The period began with a consolidation of the capital structure, in which no fewer than 40% and 10% of stocks—apart from ordinary—

Railway. In succeeding sections of this Review we propose to discuss in detail certain technical and financial features in the company's development, its economic and industrial background, and, finally, its outlook in relation to current questions of traffic, wages and rating.

were reduced to three classes. Further increases of capital marked the absorption, during the 'seventies, of additional lines, including the Bristol and Exeter and South Devon—which incidentally brought control of the Cornwall Railway, and gave the Great Western until 1923 the largest mileage in the Kingdom. As in previous decades, dividends dipped until the new acquisitions had fructified fully. Careful, indeed austere, financial management, however, made recovery from the brink of financial disaster in the 'sixties doubly assured. From 1881 until 1893 dividends were never below 5½ per cent., and in six years exceeded 6 per cent. The rate of increase in capital receipts inevitably tended to slow down, and revenue expanded steadily under the influence of economic progress and the indirect benefits of the narrow gauge. At the end of the 'eighties a sudden spurt in revenue somewhat anticipated the progress made towards the turn of the century, both in financial results and in the improved travelling facilities with which they were associated. The benefits of the new forward-looking policy accrued almost immediately to the ordinary shareholders, whose dividends were never lower than 5½ per cent. from 1902 to 1913.

The tabulation is resumed in 1924, after amalgamation had been effected with relatively little disturbance. Except in the year of the General Strike, the company demonstrated its ability to earn satisfactory profits on the new capital structure until the onset of depression in 1930. Within three years, however, net revenues fell from £8,198,644 to £4,459,403. The directors have evidenced their faith in the line and in the virtues of "full trustee" status, by maintaining ordinary dividends at 3 per cent. during the last four years.

In assessing the operating results achieved during the century, a point of importance at once emerges. In 1840 the proportion of passenger traffic to total receipts (in accordance with the directors' anticipations) was as high as 89 per cent. Only twenty years later the proportion had fallen to 59 per cent. although the company still had no major industrial territory. In succeeding decades the proportion tended to become stabilised somewhat below 50 per cent. Since the war it has further fallen towards the 40 per cent. level. Although the Great Western as an "industrial" line ranks only third among the four main railway systems of to-day, its character has thus shown a steady change, as its interests, particularly in South Wales, have broadened. The lack of post-war progress in the latter area, however, is evidenced by the fact that goods tonnage showed only modest advance between 1924 and 1929. In the subsequent depression the loss of freight has been severe.

After due allowance for this trend factor, however, the course of passenger and freight figures in each decade marches in fair conformity with the length of line operated. Between 1860 and 1870, for instance, the issued capital and mileage were roughly doubled, while the number of passengers and freight tonnage were virtually trebled. Receipts per passenger and freight train mile, however, had already begun the steady decline which continued until 1910. In the same period the trend of gross expenses per train mile rose slowly at first and then more rapidly as facilities were improved and direct costs increased. The "monopoly power" of the company, in common with all other lines, was already tending to slip away. Progress from 1850 to 1900, in short, was based on a growing volume of traffic, handled at a smaller net receipt per train mile. Both receipts and expenses per train mile rose sharply in the years before the War.

(Continued on page 428)

STATISTICAL SUMMARY

The following table gives a statistical picture of the financial and operating results of the Great Western Railway—mainly at decennial intervals—from 1840 onwards. Although every endeavour has been made to secure a comparable basis throughout, adjustments have been necessary, from time to time, owing to successive absorptions of other lines, changes in accounting procedure, etc. For example, in the section headed "Finance,"

charges for rent of leased lines, deducted before striking net revenue, have been added back, e.g. in the 1880 and 1900 figures, where funding has occurred on the absorption of the lines concerned. The adjustment in each case, however, is small. Changes in accounting involve a more serious break in comparability in the "Operating Results" section from 1913 onwards, when ancillary traffic receipts and expenditure are separately stated for the first time.

Year	FINANCE			PASSENGER TRAFFIC				GOODS TRAFFIC			OPERATING RESULTS						
	Total Capital (incl. debentures and loans)	Net Revenue	Ord. Divs. (£)	Total passengers	Receipts	Receipts per pass. train mile	Proportion pass. traffic to total traffic receipts	Total Tonnage	Receipts	Receipts per freight train mile	Length of line operated	Total receipts per train mile	Gross expenses per train mile	Total receipts from all sources	Total expenditure	Proportion expenditure to total receipts

(Continued from page 426)

In 1913 the accounts, in accordance with the 1911 Act, showed traffic and ancillary businesses separately. Even in those relatively prosperous times ancillaries made an unimportant contribution to net revenue—apart from their functions as "feeders," whose effects elude statistical measurement. After economies had been effected during the amalgamation, however, the proportion of expenditure to ancillary receipts was considerably reduced—a matter of special note, in view of the Great Western's position, *inter alia*, as one of the largest dock-owning interests in the country. On the other hand, traffic expenses, which rose from £9,704,677 to £26,321,445 between 1913 and 1924, clearly reveal the inroad on net revenue resulting from higher wage-costs. The operating ratio rose, in the same period, from 64 to 83½ per cent. In contrast to other systems, however, Great Western "grouping," in 1922, did not afford scope for large operating economies, for the system was already an effective whole. In consequence, the reduction in the ratio to 78½ per cent., before the depression supervened, was a meritorious achievement. The

full effects of post-war management, however, are best shown by a comparison of gross expenses per train mile, which have been reduced by nearly 23 per cent. from 99.7d. in 1924 to 77.1d. in 1934. This result compares with a fall in traffic receipts per train mile of just over 20 per cent. in the same period. The toll in ancillary revenues, however, has been severe owing to reduced export activity. In view of the company's interests in one of the most depressed "special areas," which is at the mercy of world trade restrictions, these results must be accounted satisfactory.

Unfortunately, the prospect for a substantial revival in industrial conditions in South Wales is still clouded. Apart from its connection in the industrial Midlands, the company has been somewhat insulated from the fruits of domestic recovery. In the long run, granted a return to saner world conditions, the company's fortunes will be strengthened by the gradual restoration of the areas which it serves. The outlook in these areas is the subject of the following section.

INDUSTRY IN GREAT WESTERN TERRITORY

As early as the 'nineties of last century the railway map of Great Britain had begun to take on a modern appearance. The Great Western Railway system already reached out from London to Birkenhead in the North, to Penzance in the West, and to Weymouth in the South. Between these arms the railway now embraces a substantial portion of the southern area of Great Britain, including densely populated industrial regions, fertile agricultural land and some of the most beautiful coastlines which these islands possess. In the development of this area the Great Western Railway has played an important part, and its own growth, in turn, has been to some extent governed by economic changes in the districts it serves.

Before turning to a consideration of these separate areas, it may be useful to glance back over the past century at the movement of population in the counties in which the company now operates. According to the Census of 1831, the total population of these counties (excluding London) amounted to 4,978,000—or rather less than 36 per cent. of the total population of England and Wales. During the next ninety years the population of this area grew rapidly, reaching 11,615,000 by 1921, an increase of 133 per cent. on the 1831 total. Owing, however, to an even more rapid expansion in the industrial areas of the North of England, the percentage of the total inhabitants of England and Wales residing in the "service area" of the Great Western fell to 30.5, despite the rapid development of South Wales. The decade between 1921 and the last Census witnessed some modification of these tendencies. The population of Wales and Monmouthshire suffered a decline from 2,656,500 to 2,593,300 (about 2½ per cent.), but, owing to the "southward drift" of industry which has been evident in this country since the war, the proportion of the population resident in the G.W.R. "service area" rose slightly to 31 per cent. of the total. This increase was fairly well spread over the counties concerned, but was most evident in the areas around Birmingham and London. If the population of the Metropolis itself were included, the increase would, of course, be appreciably greater. Ignoring London, the counties served by the G.W.R. now possess an aggregate population of some 12,381,000.

The absence of any uniformity of economic conditions over this great area is clearly brought out in the following table, based on statistics published by the Ministry of Labour:—

INDEX NUMBERS OF INSURED PERSONS IN EMPLOYMENT, JUNE, 1923 = 100					
Year	London	South- Western Area	Midland Area	Wales	All England and Wales
1924	101.9	103.5	103.8	100.5	103.4
1929	119.7	117.0	111.0	84.6	110.0
1930	119.0	117.9	107.2	78.6	105.6
1931	118.5	116.4	101.3	73.4	101.2
1932	116.9	114.3	101.3	68.6	100.2
1933	121.0	117.0	107.2	72.5	104.5
1934	127.0	121.5	113.6	73.8	108.9

The relative prosperity of London and the South-western counties and the unhappy position of Wales stand out in vivid contrast when these figures are examined.

While the wealth of any country is partly dependent on the efficiency of its transport system, a glance at the above table will show that efficient transport in itself is not sufficient to ensure the well-being of any area. To appreciate the economic value of a modern railway system, however, one has only to recall the fact that the journey by barge from Bristol to London, in the eighteenth and nineteenth centuries, frequently occupied three weeks. The industrial area centred on Birmingham, now served by the Great Western, affords an excellent example of the localisation of industry which is possible when transport is efficient, and of the extent to which population may expand in such circumstances. By railway transport the diversified metal industries of Birmingham have easy access to coal and iron ore supplies, and to the markets for the finished products which they manufacture. Since specialisation in any industry is conditioned by the extent of the market, the latter, in the absence of an efficient transport system, is bound to be restricted. To-day, Birmingham, which is an important railway focus, produces a wide range of metal products, from screws and nails to small arms, motors and railway rolling stock. During the past century the population of Warwickshire grew from 336,600 to 1,535,000 and, as has been indicated in the table above, employment in the Midlands has experienced a substantial improvement from the depression of 1931 and 1932. In Birmingham itself there are still many men unemployed, but the total has fallen sharply during the past year and a further measure of improvement may be looked for in the near future.

An area in which the Great Western now has the nearest approach to a monopoly of rail transport is South Wales, where the necessity for hauling coal from the mines to the coast gave rise at an early date to the tramway systems which were the precursors of the modern railway. Numerous Welsh coal-mining railways, of which the Taff Vale was the chief, were absorbed into the Great Western after the "grouping" in 1922. Since that date well over £2,000,000 have been spent in adapting and reconstructing the equipment of these lines in order that 20-ton wagons may be used in the coal shipment trade. It is clear that the area owes much to the enterprise of the railway, while, on the other hand, the Company finds South Wales one of its most important customers. Besides owning the railways, the Great Western also controls the ports in the area, and over 6 per cent. of its total gross receipts last year were derived from the operation of docks, harbours and wharves. South Wales is interested in most branches of the iron and steel industry, and also has industries based upon non-ferrous metals, but the area is chiefly dependent upon coal. The prosperity of Wales, and of that portion of the rail-

way which serves this area, is bound up with the fortunes of the coal shipment trade. According to one authority, coal was being sent by rail (via Gloucester and Basingstoke) to Southampton as early as the 'fifties of last century and used for bunkering purposes at that port. The increasing importance of coal as a source of heat and power during the latter half of last century is shown by statistics of production in South Wales. Output increased from 14.2 million tons in 1875 to 24.3 millions in 1895 and 56.8 million tons in 1913. This rapid growth in the output of coal was naturally reflected in the prosperity of the Welsh railways during the period. Exports abroad account for about one-half of the output of Welsh coal, while, roughly, a further 9 per cent. is absorbed as bunkers. For the purposes of the shipment trade, Cardiff is admirably situated at the mouth of the Bristol Channel, and this city, like Barry, its satellite, owes much to railway enterprise. In recent years this dependence upon the export trade has, however, been a grave disadvantage, since the output of coal and iron and steel from the area has undergone relatively greater fluctuation than the production of those commodities in the country as a whole. The story is briefly told in the following table:—

PRODUCTION IN SOUTH WALES AND MONMOUTHSHIRE

Year	Pig Iron		Steel Ingots and Castings		Coal	
	'000 Tons	% of U.K. Total	'000 Tons	% of U.K. Total	'000 Tons	% of U.K. Total
1913	889	8½	1,807	24	56,830	20
1920	692	8½	1,884	21	46,249	20
1929	926	12	2,336	24	48,150	19
1930	542	9	1,503	20½	45,108	18½
1931	280	7½	1,274	24½	37,085	17
1932	353	10	1,347	25½	34,874	16½
1933	451	11	1,769	25	34,355	16½
1934	495	8½	1,848	21	35,339	16

It is convenient at this juncture to point out the importance of the Severn Tunnel. Before the completion of this engineering feat in 1886 the bulk of the traffic from London to South Wales passed through Gloucester, although a rail and ferry service had been opened in 1863 and a single-line bridge across the river at Lydney completed in 1879.

The line to the West of England serves an area originally

somewhat isolated and neglected, but now of growing importance to the company. From earliest times, Cornwall has been famous for its tin-mining industry, and, as in South Wales, the earliest Cornish railways (e.g. the Redruth and Chacewater) were mineral lines. In the post-war period, foreign competition drastically reduced the volume of this traffic, but in more recent years the high price of tin has made it possible to reopen certain of the Cornish mines. Thus the output of tin ore rose from 920 tons in 1931 to 2,337 in 1933. Some further expansion is possible, but the transport of minerals in this area is unlikely to make great demands upon the services of the Great Western. A much more important source of revenue has come into existence as a result of the rapid growth of the population of London—viz. the transport of horticultural produce from Devon and Cornwall (and the Scillies) to the Metropolis. Similar produce is grown in the Channel Islands, a large part of which is imported at Weymouth and sent to London by the Great Western. Nowadays, London's milk supply is also drawn from a very wide area. It is becoming increasingly evident that speedy and reliable transport is as important to the agriculturist as to the industrialist. In some branches of agriculture, indeed (e.g. market gardening), it is a *sine qua non*.

The climate of Devon and Cornwall, however, does not appeal merely to the horticulturist; it has also a decided attraction for the holiday-maker. Its importance may be gauged from the fact that, in 1934, 42 per cent. of the Great Western receipts from railway operation were derived from passenger train traffic. In the absence of modern transport facilities, this area would inevitably have remained beyond the reach of the majority of Londoners. From early days, however, the G.W.R. has been noted for its long-distance passenger expresses. Such resorts as Minehead, Barnstaple, Newquay, Penzance, Torquay and Paignton owe much to its enterprise in placing them within easy reach of some of our most populous areas. The direct route to Cornwall, completed in 1906, is now the shortest line to that area. In addition, the company has done much to develop the popularity of resorts in the Channel Islands by its Weymouth service, and has recently acquired an interest in Jersey Airways, a young service which is attracting increasing numbers of air-minded holiday-makers.

CURRENT PROBLEMS AND FUTURE PROSPECTS

WHAT of the future? It will be convenient, at this point, briefly to recapitulate the conclusions reached in the preceding section, and to see what light they throw on the outlook.

It is a truism that railway revival is a function of general trade recovery. In the Great Western's case, however, the generalisation is overlaid with so many exceptions, qualifications and anomalies that its value as a practical indicator is doubtful. In the first place, the Great Western's traffics are not necessarily representative of the distribution of different industries in Great Britain as a whole. Its traffic "catchment area" does not include any large part of the industrial areas of the North or of Scotland. It takes in the active Birmingham area and the South-West Midlands, but is "weighted" by the coal industry of South Wales. The latter, with its high export percentage, has been a sufferer from the process of world trade strangulation, without sharing in the limited benefits secured by the north-east coast as a result of the Government's bilateral trade agreements with Northern European countries. For the rest, the company is keenly interested in the steel industry of South Wales and Birmingham. It has large agricultural areas whose population, in the last hundred years, has increased more slowly than that of Great Britain generally. Finally, it has an important passenger traffic, which is greatly swelled at holiday times.

Of all post-war developments it is clear that depression in the South Wales coal trade has cost the Great Western most. An eventual return by the nations of the world to

economic sanity may enable South Wales to recapture some of her lost overseas trade. In the immediate future, however, it is probable that, on balance, some benefit may accrue to the area as a result of the recent agreement between the British iron and steel industry and the Continental Steel Cartel. The reorganisation schemes which have lately been in evidence in the South Wales coal industry, further, give grounds for hoping that Welsh exporters will be in a position to take full advantage of any openings which may occur in markets overseas. Moreover, there appears to be no reason why the industrial area of the Midlands should not enjoy an increasing measure of prosperity as time goes on. The "southward drift" of industry, again, shows no signs of abating, and its benefits to the Great Western should be progressive. Every increase in the population of the Home Counties will also necessitate the transport of larger quantities of milk and other foodstuffs from distant areas to the capital; and it is improbable that the railway's share of this traffic will decline. As regards the conveyance of passengers, the outlook is perhaps rather more uncertain, for the influence of road competition (particularly private cars) is not easy to assess. So far, however, as the long-distance traffic is concerned, it is hard to believe that the Great Western passenger trains will ever be decisively threatened by competition from the roads. On the contrary, it is quite conceivable that the habit of travelling for pleasure—the importance of which remained unappreciated for so long—will

grow substantially in the future, and that the railways will receive an appreciable share of its first fruits.

On the industrial side, a revival in export trade would certainly be of material assistance to the Great Western. Between 1929 and 1934 its dock and harbour receipts declined by £1,112,122 from £3,086,147 to £1,974,025. As the company has been able to reduce expenses for various reasons by no more than £717,483, the operating ratio has risen from 82 per cent. to 95 per cent., and net receipts have fallen from £543,532 to £88,893. As docks provided 60 per cent. of total takings from all ancillary businesses in 1929 and only 49½ per cent. in 1934, the benefits which the company would secure from increased export trade need not be laboured.

Of the newer ancillary businesses, air transport may hold out future possibilities as a link, for example, between territories north and south of the Bristol Channel, and an adjunct to the company's Channel Islands service, particularly in the holiday months. The service, however, is merely in its infancy, and is far, as yet, from paying its way. In any case, the Great Western system is already so compact that the scope for air development, apart from semi-luxury traffic at high rates, must needs be limited.

There are, however, two sides to every balance sheet, and the relative inelasticity of receipts has compelled all railway managements seriously to consider every practicable possibility of reducing expenses to the economic minimum. It is here that the anomalies of the present system are most clearly apparent. In the first place, the railway wages bill is very considerably higher than in pre-war days, and the wages structure far more rigid. It is not widely realised that the traffic conveyed and the total receipts of the Great Western (like those of other companies) are actually higher to-day than in 1913. The lines now incorporated in the Great Western secured total gross revenue from railway operations of £25,289,629 in 1934, as compared with an approximate figure of £18,053,050 in 1913. The figures are not completely comparable, but it is not far wide of the mark to say that total receipts are about one-third higher than in the pre-war year. This result is due to the increased average level of rates and fares, despite recent reductions to retain or attract traffic. Of all parties, however, which are interested in the working of the railways, labour has gained most since the war. For a time, in 1920, the Great Western's wages bill was treble that of 1913. Even to-day the average level of wages receipts is at least 100 per cent. above that of pre-war days.

If the railways' ability to secure far-reaching reductions under this heading is limited, it is only one degree less circumscribed as regards possible economies at the expense of railway-users. The theory of the Act of 1921 that a Railway Rates Tribunal can adjust charges so as to produce a given "standard revenue" has been tacitly suspended ever since it became legally enforceable. The "monopoly" conception behind it takes no account of the growth of competitive road transport. The additional road transport powers secured by the railways on the one hand, and the increased taxation and greater regulation of road vehicles on the other, have done something to reduce the disparity between the burdens carried by the two transport arms. The prospect, however, that road vehicles will ever be saddled, as the railways are, with the responsibilities of "common carriers" is somewhat remote. The licensing provisions of road transport legislation may ultimately impose a limit on the more irresponsible and uneconomic type of competition for goods transport, and, by creating larger operating units, in which the railways can take a

financial interest, make possible a *modus vivendi* similar to that which the railways have already secured on the road passenger side. That day, however, is not yet. In the meantime, the railways, in order to safeguard and expand their traffic, must rely on methods of "transport salesmanship," which preclude salvation by the policy of drastic retrenchment in expenditure under all headings, which carried the Great Western through the lean years of the 'sixties and 'seventies of last century.

There has never been a time when so many external influences are concerned with the determination of what the railways shall pay and earn. A National Board fixes the rates of pay and other conditions of service. The Railway Rates Tribunal has legal responsibility for determining the level of freight rates and passenger fares. The Railway Assessment Authority values the railways' hereditaments for rating purposes, under the Act of 1930, which, broadly, substitutes central for parochial assessment. All these bodies are concerned, directly or indirectly, with the level of railway charges. The extreme confusion into which the rating question has been thrown, this year, is an object lesson in the difficulties which present themselves.

As early as 1867 a Royal Commission on railways declared that "the general principle on which railways should be rated is a clear one, viz. to take the net annual value of the land as improved in the hands of the railway company by the construction of the line, stations and other works, without reference to their profits as carriers." Under the Railways (Valuation for Rating) Act, 1930, however, the Assessment Authority is required to value the hypothetical rent of railway hereditaments by reference to average net receipts (i.e. "profits") in a given period—for the present quinquennium, the average for 1928 and 1929. This has resulted in the Great Western's being placed on the valuation roll for rating, in a period of severe contemporary depression, with the largest figure of net annual value which has ever been proposed as a single valuation in the history of rating.

From the Assessment Authority's finding, however, an appeal lies to the Railway and Canal Commission. Such an appeal, in the Southern's case earlier this year, led to the reduction of that company's liability to about half the original figure, and the Assessment Authority thereupon fixed the London and North Eastern's assessment at nil. The net result of recent findings however, has been to produce an almost intolerable state of uncertainty. It must be remembered that the entire basis of present freight rates for certain commodities, including specified agricultural products, export coal, etc., may be upset if the method of subvention by contributions from a Rebates Fund, to which 75 per cent. of railway rating charges have been paid, is endangered by the reduction of the Fund to a state of bankruptcy. In this connection account must be taken of the fact that railway rating assessments for the next quinquennium will in any case be based on net revenue figures in a period, not of comparative prosperity, but of deep depression.

For these reasons a certain conservatism is appropriate in estimating the probable course of events in the near future. The pace, magnitude and distribution of future industrial revival in Great Britain are largely outside legislative control. The company, however, in common with the three other great railway systems, would appear to be on sound ground in pressing for the removal of all anomalies which are susceptible to treatment on rational lines.

THE STOCK EXCHANGE

"G.W.R."

ON August 31, 1835, King William the Fourth assented to a Bill authorising the construction of a railway from London to Bristol. By their very choice of a title, its promoters testified to a territorial ambition in the public's service, which their successors, for the last hundred years, have consistently and most successfully translated into terms of train-miles. The Great Western Railway (whose history and outlook are the subject of a special Centenary Review on pages 425 to 430 of this issue of the *Economist*) has an investment record scarcely approached in the railway annals of any country. Since 1840, its total capital (including debenture stocks) has risen from £5,331,528 to £149,867,833, and its ordinary capital from £2,803,923 to £42,929,732; but in no complete year have ordinary shareholders gone without a dividend. On four occasions they have received a total of 8 per cent., and their average for the whole period has been a shade under 5 per cent. Every £100 of original Great Western ordinary has received £468 in dividends.

By every criterion the Great Western may take pride in its record. It has been a great line, with high traditions, served by men of giant stature. It was in the London counting house of George Henry Gibbs that the name "Great Western" was first minted. Isambard Kingdom Brunel ranks with the greatest civil engineers of all time. Among others who gave much to the Great Western three pioneer names stand out: Charles Alexander Saunders, ablest of negotiators and noblest of men; Charles Russell, the company's champion during the "Battle of the Gauges"; and Daniel Gooch, who, rebuked for his "incapacity" during the company's early locomotive troubles (which were none of his doing), lived to make Great Western engines famous through the world, to lay the first Atlantic cable, and to carry the company through its worst financial crisis.

At a time when the company, in common with other British railways, is confronted by problems as perplexing as ever faced the Fathers of the Line, a careful appraisal of the last hundred years holds more than historical interest. What is the secret of the company's enduring progress, its essential soundness and stability, which have left it, after every crisis, with enhanced reputation and renewed internal strength? Investors may find the answer, possibly, in a certain steadfast opportunism, with the slightest vein of obstinacy, which is not uncharacteristic of the British national temperament. The company has never neglected an opportunity, refused battle or defended an untenable position to the point of surrender. It was content to develop outlying areas of its "Empire" by separate but uncontrolled companies, like the South Wales, the South Devon, and the Cornwall Railways, so long as their progress was unthreatened from outside, but it unhesitatingly accepted the financial and "political" responsibilities of complete ownership when delay would have been disastrous. In the heat of the battle for the "broad gauge" it purchased the "fighting Shrewsbury" railways, and a few years later had made its final choice between isolation and co-operation with the rest of the national railway system. For long its directors held strong views against the "pampering" of the third-class passenger, and its system became a famous training ground for the spartan qualities which at all times have been an asset to railway travellers. Yet it was wise enough, half a century ago, to bow to public opinion and, with characteristic thoroughness, to build up a reputation for speed, reliability and comfort which time has not diminished.

The Great Western held numerous advantages when the railway "new deal" was carried through, thirteen years ago, and "grouping" and the challenge of the internal-combustion engine were about to transform the entire outlook. A glance at the map on page 427 will show how nearly the Great Western's lines approach to the ideal of a compact and "planned" system. Its three great arteries,

from London to the Mersey, South Wales and Cornwall respectively, came completely within its ownership, by a process of natural evolution, sixty years or more ago. In 1922-23 it had few "foreign" lines to assimilate and "personal" problems to solve. Unlike the other three railways, it was not concerned with the welding, into a coherent and cohesive system, of properties competitively constructed and developed. The last six years, however, have revealed a reverse side to the medal. The Railways Act of 1921 did not merely saddle the Great Western with a number of South Wales "coal" lines and the attenuated Cambrian Railway. Such morsels, however tough, would normally have been far more easily digested than the hearty meals necessitated by the Great Western amalgamations of 1863 and 1876. Given the continuance of the underlying conditions which the draftsmen of the 1921 Railways Act had in mind, the company's task would have been child's play compared with that of other "group" concerns. The latter were compelled to absorb various lines which, at bottom, were incapable of being fitted into a logical transport framework, and were included for no better reason than their pre-existence. As events have turned out, however, the practical importance of this differential, from the investor's viewpoint, has tended progressively to dwindle. Unexpectedly severe depression has expedited the effort, on all railways, to secure the working economies of "grouping," and the Great Western, having less leeway to make up, has had smaller scope for spectacular gains. Above all, investors can now perceive, far more plainly than in 1922-23, the full implications of the argument that the Railways Act made South Wales, with its ramified rail and dock system, not merely an important but a decisive factor in the company's economy. Statutory choice of the year 1913 as a datum period brought in the Great Western as a buyer, in the vernacular of the market, at the ceiling. The incidence of the depression of 1930 onwards, in a predominantly "export" area, has emphasised the price factor in the bargain. The fact that the output of coal from South Wales in 1934 was only 35 million tons, against nearly 57 million tons in 1913, speaks for itself.

Happily, the equity in Great Western ordinary stock is not a simple function of the British Government's policy in a "depressed area." On many other parts of its system the Great Western has powerful long- and short-term economic forces working on its side. The map on page 427 shows why the "pull" of London must needs have a major influence on future development. All Great Western main "roads," ultimately, lead to London. The check to the company's northward expansion, which made the Mersey its rubicon by the end of the eighteen-fifties, appears as anything but an unmixed evil to-day. The "southward drift" of industry, the rise of new trades, and the change of Britain's fiscal system have meant much to the Birmingham and Central Midland area. The contemporary stimulation of the agricultural industry, again, and the development of some of its branches, like milk production and market gardening, whose market must be served by speedy long-distance transport, suggests that many rural lines, from Buckingham to Cheshire and from Berkshire to Cornwall, may have a more important rôle in the next hundred years of Great Western history than in the last.

The company opens its second century of public service with a property whose physical efficiency challenges that of any railway in the world. The strength of its internal finances has done much to stifle the criticism that recent declarations of 3 per cent. ordinary dividends, when actual net operating revenue has barely covered preference requirements, may have placed a generous valuation on the retention of "full trustee" status. Recovery has now, however, brought the ordinary stock once again within the earnings zone. That the directors will choose a centenary year for a reduction of dividends is improbable. Investors will trust,

however, that if the company meets its problems to-day in the spirit in which it has overcome them in the past, a moderate subvention from Providence (which proverbially avours those who help themselves) or, it may be, from the ate collector, will speedily restore earnings and dividends o a satisfactory common level.

INVESTMENT NOTES

Course of Share Values.—August, the traditional holiday month, has seen a *volte face* in London market sentiment, which may be temporary but is certainly far-reaching. Market commentators have been almost unanimous in ascribing its origin to a species of *crise de confiance*, associated with doubts regarding British policy in the event of an Italo-Abyssinian war, and in emphasising the basically favourable nature, otherwise, of underlying technical conditions. The chart given on this page suggests a possible doubt of the correctness of this explanation. The continuous rise in British equity share values this spring lasted longer without a break than any of its predecessors during the period of "recovery." Its gradient during the greater part of June was distinctly "steep," and the July reaction was followed by a further period of sharp advance, with an equally well marked fall subsequently. Some of these symptoms are characteristic of a market which, technically, has become top-heavy. Investors, therefore, may not be justified in assuming that, if "war" factors are removed,

BRITISH AND AMERICAN INDUSTRIAL SHARE VALUES OVER THE PAST TWO YEARS (1928 = 100)

British: "Financial News" Index of 30 Ordinary Shares (adjusted to 1928 base)

American: "Standard Statistics" Index of 50 Common Stocks

the market will necessarily resume its confident upward course. Meanwhile, in America, optimism, which has hitherto tended timidly to hide itself in "service" bulletins and cautiously worded brokers' reviews, has come out into the market place. Despite this week's slight reaction after Congress adjourned on a characteristic note of anticlimax, the markets have gone well beyond previous high points. The curve of prices since last March, indeed, suggests a more purposive movement than any of the short-lived rallies and recessions of the preceding twelve months. A stationary has given place to a rising trend. This year's net gain, starting from almost exactly the same point as the "rally" in the autumn of 1933, has already made a gain of ground exceeding that of its predecessor by about 30 per cent. The prospects of Wall Street are further discussed in a subsequent Note. Meanwhile, the Actuaries' Index figures which follow suggest that, in London, the vicissitudes of the past month have left gilt-edged stocks appreciably lower, and most other stocks little changed, on balance.

Group (and No. of Securities)	Prices (Dec. 31, 1928 = 100)			Yields (%)		
	Year Ago (Aug. 28, 1934)	Month Ago (July 30, 1935)	This Week (Aug. 27, 1935)	Year Ago (Aug. 28, 1934)	Month Ago (July 30, 1935)	This Week (Aug. 27, 1935)
Fixed Interest:

Home Kails (4)	77.6	66.6	62.0	1.54	1.54	1.64
Brew. and Distill. (19)	113.4	133.2	130.6	3.89	4.09	4.24

The aggregate index for 158 industrial shares stands at 76.4 against 77.4 a month ago and 71.2 a year ago, the corresponding yield figures being 3.91, 3.85 and 3.68 per cent. respectively. It is noteworthy that, over the last twelve months, the net rise in industrial share prices has failed to keep step with increased dividends.

Wall Street, Congress, and the President.—Wall Street on Tuesday celebrated the rising of Congress, after the longest and most exhausting Session since 1922, by a curiously abrupt fall, with losses running to 3 points. Possibly the market had been paying more attention to recent improvements in industry than to manoeuvres in Congress. It will now have ample leisure to examine the results of the hectic legislative rush of the final days of the Session. On the whole, Wall Street has shown remarkable complacency, recently, in view of the President's evident determination to keep Congress's nose to the grindstone on a programme in which "reform" came first. Doubtless, the markets have regarded the Supreme Court as not the least of their allies, for the latter has made an almost fatal breach in the N.R.A. structure, and may in due course occupy itself with more recent "salvage" legislation. The market may be less well-advised, however, in over-discounting the President's net loss of prestige in recent weeks. His undoubted political finesse may be required to pursue his recent "middle course" as next year's elections draw closer, but until the battleground is chosen the market will probably continue to regard politics with circumspection. It is obviously too early to "take a view" as to the President's chances. Mr Huey Long, the Boanerges of American politics, has ceased merely to amuse and is now a troublesome portent, whose eventual significance in the Southern Cotton Belt might prove crucial. Wall Street's long rise is far short of a boom. It has been based on industrial improvement, which has run counter to the customary summer experience. Each rise has been well consolidated, and the speculator, who is now compelled to declare his short interest and to provide 55 per cent. cover on "margins," has been quite restrained. Tuesday's break showed that complete market confidence is by no means restored. Who could expect so much after the President's success in substantially obtaining his demands in the Banking and Utilities Bills?

Alberta and Canadian Credit.—The decision of the electors of the Province of Alberta to worship strange economic gods, upon whose political implications we comment in a Note on page 412, comes as an unfortunate sequel to a number of recent incidents, such as the debt-reducing endeavours of the Mayor of Vancouver and the power contract cancellations of the Ontario Government, which have tended cumulatively to prejudice Canadian provincial credit in the eyes of the British investor. Although the new Government of Alberta, lacking sovereign currency or credit powers, may find it easier to call spirits from the deep than to ensure their response, the London market has taken no chances this week. The

quotations for all Alberta's stocks have been marked well down, and business has become almost nominal. This attitude of conservatism has affected other Canadian Provincial stocks, as the following table suggests:—

	Highest, 1935	Official Quotations		Actual Business (Aug. 28) 1935	Yield at Middle "Quoted" Price (%)

(a) No quotations.

The market has long realised that the financial position of some Canadian Provinces, particularly those in the wheat belt, is stringent to the point of danger, but hitherto prices have been sustained by the belief that the Dominion authorities would be prepared to go to considerable lengths to support the credit of the authorities concerned. Investors could scarcely be unmoved, therefore, if there were any serious prospect that the elections of next October would result in the return of a new Dominion Government pledged to unorthodox financial "experiments" of any kind. Fortunately, as we show in our earlier Note, such an outcome appears beyond the bounds of immediate possibility. Recent events, nevertheless, may well strengthen the case of those who advocate a complete overhaul of Canada's credit position, particularly as regards the financial relationships between the Provinces and the Dominion, on the lines adopted by Australia some time ago. There are numerous points of similarity, and it may be that Mr Aberhart is destined for the same catalytic function in Alberta as was Mr Lang in New South Wales. In Australia, it was found that good intentions were not enough, and that co-operative financial effort must extend to detailed state and federal budgeting. British investors, who have every sympathy with the economic difficulties of Canada's western Provinces, would welcome wider appreciation of the need for collective effort to overcome them.

Argentine Railway Outlook.—Argentine railway stocks have lately had a reactionary tendency, partly in sympathy with the trend in other markets, and partly owing to unfavourable reports regarding crop prospects. The entire crop situation has been overshadowed by the extended drought of the past few months, which partially broke on August 8th. No further rains, however, have been reported during the last few days. The maize crop, which matured before the drought became serious, has this year reached the record figure of 11,500,000 tons. The maize growers have failed to obtain an increase in the minimum guaranteed price fixed by the Grain Regulating Board, which continues to purchase the cereal at an agreed purchasing price of 4.40 pesos per 100 kilos, and has ample resources from the exchange profits fund. So far, however, with ships waiting to load, the purchases have been readily disposed of. The outlook for wheat, linseed, and oats, however, is not wholly reassuring. The hard ground having interfered with ploughing, the area sown is on an average some 40 per cent. lower than last year. The wheat yield in the Province of Buenos Aires, which produces 40 per cent. of the Argentine wheat crop, may be improved by the beneficial but sparse rains which fell on August 8th. Later reports, however, suggest that wheat, linseed and oats, in most areas, are suffering from the absence of further rain. Although it is too early to forecast harvest yields, even the most favourable growing conditions during the

next month or so can hardly be expected to compensate for the decreased sowings, and (apart from maize), the railways may have less grain to carry during the normal crop-moving season at the end of the year. The part played directly by grain transport in the economy of the four largest British-owned Argentine railways may be approximately inferred from the following table, which shows total takings from maize, wheat, linseed and oats, on each line, during the twelve months ended June 30, 1934:—

	B.A.		B.A.	
	Great Southern	Central Argentine	Western	Pacific
Total gross receipts	10,516,260	9,870,864	3,612,117	5,843,973
Receipts from—				
Maize	117,736	1,336,331	214,036	377,658
Wheat	1,361,786	1,371,884	495,341	526,237
Linseed	183,672	298,504	19,871	65,434
Oats	228,862	N.A.	54,870	8,863
Percentage of total receipts derived from—				
Maize	1.1	13.5	5.9	6.5
Wheat	12.9	13.9	13.7	9.0
Linseed	1.7	3.0	0.5	1.1
Oats	2.2	...	1.5	0.2

N.A.—Not available.

The Central Argentine is a "maize and wheat" line. The B.A. Great Southern and B.A. Western are "wheat lines." In 1933-34 the four cereals together provided 17.9 per cent. of total gross receipts on the Great Southern, 30.4 per cent. on the Central Argentine, 21.6 per cent. on the Western and 16.8 per cent. on the Pacific. In addition, barley is important on the B.A. Great Southern and B.A. Western. The rôle of the grain crops as determining factors of general Argentine prosperity, however, is of greater moment to stockholders than these figures imply. In view of the uncertain immediate prospect in this direction, railway stockholders would welcome reassuring evidence in other directions. In particular, they would like to be convinced of the determination of the Chamber of Deputies to pass the Buenos Aires rail and road Co-ordination Bill without undue delay, and of the willingness of the railway unions cheerfully to implement the new regulations (under a recent Presidential award) which were issued on August 14th, with effect from November 1st.

G.W.R. and the Historian.—The historian, be he antiquarian, student of transport economics, or financier, will find a wealth of first-hand material, carefully chosen and conveniently assembled, in the various reviews published this week in connection with the Great Western Railway Centenary. Our own analysis, appearing on pages 425 to 430 of this issue, is concerned mainly with the extent to which the company's past results and present economic background afford a clue to its probable future development. Among our contemporaries, *The Times* deals vividly with the more picturesque side of the last hundred years, and, *inter alia*, furnishes an instructive

account of the distribution of staff duties on a system employing nearly 100,000 workers. The *Financial News* includes a financial survey which may be of particular interest to the research worker, since it sets out particulars of capital, earnings and dividends, without a break, for every year since the company's inception. The question of ancillary activities—particularly important on the Great Western—also receives descriptive and critical treatment. The *Financial Times* supplement includes a broad survey of the financial history of the railway and discusses in further articles the operating experience of the century, the effect of the post-war amalgamation, and the growth of ancillary services. Sir James Milne, general manager of the company, contributes interesting articles to these latter supplements dealing with the company's problems and prospects.

COMPANY NOTES

Hotel Companies.—The hotel business is essentially "high-gear." A high proportion of its charges and costs is fixed, with relatively little possibility of savings during depression. The profits of favourable years are largely derived from lettings of the most expensive rooms in the hotels concerned. This applies to general utility hotels as well as to luxury hotels, though the latter naturally

lock up a larger sum in fixtures and fittings which postulate prosperity for their profitable employment. The annexed table of representative results shows that, during the recent depression, a sharp general decline has occurred in hotel profits. Among the luxury hotels there have been several cases where even debenture holders have had to make sacrifices. Whether "high-gearing" will be able to restore profits to the old levels as recovery proceeds has yet to be seen. Profits have recovered slightly from the lowest depression figures, but remain well below the scales of 1929 and earlier years. Not only have the hotels suffered from a reduced number of visitors, but they have been compelled significantly to reduce their charges, and, at the same time, to improve their service and modernise their fixtures and decorations. Conditions, clearly, have been most competitive. It may be that in the luxury class part of the profits of the pre-depression years were a by-product of the American boom, which is unlikely to have a successor during the next few years. Since hotel charges,

further, even outside the luxury class, are to some extent regulated by the luxury scales above them, it is possible that the whole level of hotel charges may have suffered a permanent or quasi-permanent reduction. It has already been demonstrated that such isolated events as the inflow of visitors for the World Economic Conference of 1933 cannot have any great effect on earnings. A fairly high general level of prosperity is evidently required for good profits, with the public well removed from the "economy" mentality inherited from depression years. The current reasonable level of industrial prosperity is clearly not sufficient. Though hotel shares may prove to be late-maturing "recovery" investments, the "industry" as a whole may well be suffering from an over-supply which is independent of purely cyclical influences.

White Star—Official Receiver's Report.—The melancholy "account rendered" for misjudgment and reckless optimism in connection with the Royal Mail failure, is extended by this week's report of the senior Official Receiver on the position of White Star Line, Limited. The company, registered on January 12, 1927, with a capital of £5 millions in preference and £4 millions in ordinary shares, failed with assets of £362,805 against liabilities returned at £2,643,670. The company was formed to purchase the issued shares of the Oceanic Steam Navigation Company, Limited. The latter, incorporated in 1869, had inaugurated the White Star Line steamship service across the North Atlantic in 1871. As a result of the purchase of its shares by the International Mercantile Marine Company, its ships had come under American control, although they continued to fly the British flag. At the date of the "repatriation" (negotiated by Lord Kylsant on behalf of the Royal Mail Company), the Oceanic Company wholly owned 18 vessels of 362,340 registered tons and had a joint interest with two other companies in a further 18 vessels of 164,686 tons. For the calendar years 1927 to 1929, the White Star accounts showed the following profits: £255,744; £372,611; £335,155; and for the years 1930 to 1934, the following losses: £108,555, £301,794, £35,180, £12,117, and £2,306. Six per cent. ordinary dividends were paid for 1927 and 1928, and 6½ per cent. preference dividends continued up to December, 1929, while the half-yearly dividend due on July 1, 1930, was paid by the Royal Mail Company under a guarantee. All dividends thereupon ceased. Finally, under an agreement of December, 1933, between the Cunard Company, the Oceanic Company and the Treasury, the Oceanic assets were merged in Cunard White Star Limited, in return for 38 per cent. of the latter's nominal share capital. The first year's results of the merger company were discussed in the *Economist* of April 20, 1935 (page 916). It is clear that the whole of the publicly held preference capital and, still more, the group-held ordinary capital of White Star Line, has been lost. The Official Receiver's report suggests that, even in the absence of the extraordinary and unforeseeable slump in North Atlantic shipping, from 1930 onwards, the company's prospects of financial success would have been most precarious. It paid "excessive prices" for its assets—including the Oceanic shares (£7,000,000), the Australian Commonwealth fleet (£2,307,088), certain Shaw, Savill and Albion shares (£919,928), and two Royal Mail ships (£1,157,612). It could not immediately find the money for these purchases, and was subject to heavy interest charges, on the unpaid balance, from the outset. Its equity was held, in the form of partly paid ordinary shares, by companies in the Royal Mail group, only one of which, when the matter came to its ultimate test, proved "good" for its liabilities. Much sympathy may be felt for the subscribers to the White Star preference issue, and some, perhaps, for the International Mercantile Marine Company. The latter made a thoroughly bad bargain, although it was presumably aware that it was driving hard terms and taking an appreciable risk in agreeing to deferred payments. But no sympathy whatever can be extended to those responsible, as immediate purchasers, for a deal whose unwisdom, in the light of facts of which they alone had complete knowledge, should have been evident from the outset.

Film Finance.—Mr John Maxwell's speech at this week's meeting of Associated British Picture Corporation covered a wider field than the Corporation's progress during the past financial year. The chairman reviewed the balance-sheet rearrangement, by which the Corporation now owns the majority of the cinemas formerly directly held by the Associated British Cinemas subsidiary concern. This operation has provided the new debentures with a more attractive security, while the corresponding transfer from A.B.C. undivided profits has been applied towards increasing the reserve to a round £1,000,000. By far the largest contribution to profits is provided by the cinema department, which has enjoyed a good year. The adjustment of the entertainments tax on cheaper seats from July should bring further improvement during the current year. In the film department, however, Mr Maxwell regarded the prospect as less pleasing. In his words, "British film production seems to be looked upon as a sort of new Klondike—flowing with easy money." During the last eighteen months reasonable profits have been dissipated owing to mounting costs and more ambitious productions, which have failed to win commensurate box-office returns. The American industry learned this lesson a few years ago. Until there are clearer prospects of a world market for British films, producers' ambitions must obviously be restrained. A few spectacular films, which have attracted wide publicity recently, cannot, apparently, offer a return comparable with honest "bread-and-butter" productions. Mr Maxwell put the losses involved in the 1928-29 reconstructions as high as £2,000,000. Possibly a more confident view is taken in some other quarters, if authenticity attaches to the report that, in some cases, financial assistance for film production can be obtained from the London insurance market against delivery of negative. Another development on the producing side has recently been announced by British and Dominions Film Corporation, which is to lease one of its sound stages to a new producing company. Mr Maxwell made no direct reference to the renewed activity in cinema purchase and construction which has been reported in the last few weeks. In this connection, also, American experience provides clear lessons of the danger of strategic purchases at inflated prices.

Depression in Kaffirs.—Depressed conditions which have characterised general markets during the last week or two have been accompanied by more pronounced weakness in South African gold shares. At times, in fact, it has been impossible to sell any sizeable line even of the leading issues, with anything short of a drastic concession on the nominal price. The extent of the decline in quotations for "heavies" and "new prospect shares" is shown in the following table:—

	1934			1935

Spaarwater	...	...	...	16/9	16/9	13/-	12/3

Various explanations of this weakness have been forthcoming. It has been suggested that in the event of open hostilities between Italy and Abyssinia, the price of gold would be unpredictable and might suffer a serious decline. It seems easier, however, to adduce reasons why, in this event, the price should rise rather than fall. Other commentators have laid stress on General Smuts' warning that an attack by Italy on Abyssinia might arouse animosity against the white races throughout Africa. While this is

A NEW FIXED TRUST: SECURITY FIRST TRUST

is now available for the investment of sums of £21 (approx.) and upwards, showing a gross annual yield (based on the dividends paid by the undermentioned companies in the past year without counting any capital bonuses), of

5½%

Through Security First Trust, you may spread your investment over the shares or stock of the following 23 first-class British companies, which are sound dividend payers and notable for their very strong financial and trading positions.

undoubtedly a danger which must occupy the attention of responsible statesmen, it is hardly likely to be a factor of immediate import on the Rand, where the native labour is not sufficiently educated to take an interest in questions of "weltpolitik." Again, it has been suggested that the present malaise in the Kaffir market is to be traced only indirectly to the Abyssinian crisis, and has its origin in financial indigestion in Johannesburg. While that centre has undoubtedly indulged in excesses represented by the shares of new companies not even quoted in London, jobbers here declare that they can trace only a moderate volume of selling as emanating from the Cape. The true reason for the fall would appear to be of a more technical nature. The Kaffir market has held the attention of the speculative investor for the past three years. In the recent movement to lighten commitments it has in consequence had to bear its full share of selling. Jobbers in this market are accustomed, when business is all one way, to seek relief from the finance houses. Of late, however, the "shops" have not been buyers, and the market has found it difficult to stand on its own feet. In some quarters it is suggested that the houses have their hands too full with commitments for new mining enterprises to have resources available for absorbing large lines of the older-established shares. Others consider that the "shops" are merely waiting, in order, eventually, to take shares at real "bargain prices." The latter policy, however, would be attended with some danger if the recession were to induce many of the market's recent "outside" supporters to remain outside it for a considerable time.

Other Company Results.—The list of 12 company reports, summarised on page 448, is, perhaps, outweighed in investment importance by the dividend declarations of the week. Among the latter, the directors of Staveley Coal and Iron recommend a final payment of 5 per cent., tax free, making a total for the year of 8 per cent., against 6½ per cent. net. Sheepbridge Coal and Iron is to pay 11d. per share final, the total for the year amounting to 6½ per cent., compared with 5 per cent. These distributions are the highest since 1923-24 and 1926-27, respectively, and they had a good market reception. Unchanged interim dividends have been announced by Pinchin Johnson, Boots Pure Drug and London and Thames Haven Oil, while H.P. Sauce is to make a first interim payment of 7½ per cent. Triplex Glass has announced a 30 per cent dividend in respect of the latest year, an increase of 5 per cent. In this week's list of reports, Neepsend Steel is to pay 20 per cent., against 12½ per cent., and net profits have shown a striking advance from £24,869 to £44,559. In the miscellaneous section, Initial Services shows a further expansion in net profits from £219,792 to £238,388. The 50 per cent. cash dividend is maintained, and is accompanied on this occasion by a 100 per cent. scrip bonus. Renold and Coventry Chain has enjoyed a better year. Although export trade has been hampered to the extent of 75 per cent. by various restrictions, home demand has brought an increase in profits from £85,942 to £96,598, and the dividend is increased from 6 per cent. to 7½ per cent. Fodens, Ltd., who turned from steam to Diesel traction three years ago, have experienced a rather severe setback. Experimental work and a small type of vehicle have entailed considerable loss, amounting to £40,978, compared with a previous profit

of £37,449. Depressed conditions in the South Wales coal trade are reflected in the report of Insoles, which shows a loss of £14,735, increasing the debit carried forward to £126,752. Among other companies, Carter and Company and Meccano report improvement in net profits. In the Finance section, Industrial Finance and Investment shows a sharp fall in net revenue from £54,636 to £34,431, which is not specifically explained in the report.

THE WEEK IN THE MARKETS THE LONDON STOCK EXCHANGE

SETTLING DAYS
TICKET SEPTEMBER 10 | ACCOUNT SEPTEMBER 12

THE behaviour of the markets this week was a study in suspense. At the outset, with professional quarters determined on no account to commit themselves before the League meeting on September 4th, a dribble of selling depressed prices everywhere, but in mid-week the tone became somewhat stronger. The recovery, so far as it went, was encouraging but obscure. The political background had shown no change. Any suggestion that the improvement reflected Mussolini's declared tenderness for British Imperial rights, or the French Cabinet's alleged hostility to "sanctions," would rate the market's optimism above its judgment. The alternative suggestion that the movement represented normal bear covering would presuppose the existence of a "short" position, which has hitherto been denied. Doubtless, next week's events will resolve the question whether the sharp reaction of the second half of August has been tactical or technical.

Two and a-half per cent. Consols were among the most noteworthy sufferers from the decline in most gilt-edged stocks, on Monday and Tuesday, but gained a full point next day. India stocks became quiet, but firmer, after a pronounced early recession. The result of the Alberta elections (whose implications are discussed in a Note on page 432), was a widening of dealing margins and an almost complete cessation of business in the stocks both of Alberta and other Canadian prairie Provinces. Foreign bonds were dull and heavy, Italian issues being further marked down on a report, on Thursday, of drastic decisions by the Minister of Finance. German Potash Loans were weak on the further decline in exports.

Home railway stocks moved with the rest of the market at the beginning of the week, but failed to share in Wednesday's improvement, in view of the frankly disappointing nature of the week's batch of traffic figures. Even the Great Western (whose history and present position are the subject of a special Centenary Review on pages 425 to 430 of this issue), shared in the general trend, although dividends on its ordinary stock are regarded as independent of contemporary traffic fluctuations. Foreign rails were idle and neglected. Argentine stocks, however, remained unaffected by the uncertain factors in the crop outlook, which are discussed on page 433.

In the opening days of the week industrial share values registered the distinct aversion of dealers and "shops" to the taking-in of even moderate amounts of stock. In mid-week, however, the market partly regained its poise, although the volume of actual business showed no great expansion. The change revealed itself partly in a renewed inquiry for armament and aircraft shares, which had previously receded in common with the rest, and partly in a like tobacco shares. Iron and steel shares were helped by bridge. Brewery shares, which had previously received intermittent support, became appreciably firmer. Cable and Wireless, in which a short position had existed since the publication of the unfavourable July traffic figures, shares, however, were largely unaffected by the better tendency, apart from rayon shares, which responded on Thursday to a very satisfactory July output return. Bank shares were easier, and insurance shares also tended

The oil share market was divided between satisfaction over the passing of "control" legislation in America, and fears of a possible "cut" in prices. Buyers were generally found for all shares offered at the beginning of the week. Later, however, despite the maintenance of "record" petrol consumption figures in America, quotations generally took a downward turn. Rubber shares were dull with the commodity and failed to obtain benefit from the mid-week improvement in other markets. The public continued to hold aloof from tea shares, and prices, after a slight initial resistance, became sensitive to a steady trickle of selling.

The mining markets, at the outset, appeared to have no bottom. By Tuesday evening many Kaffir shares had reached practically their lowest levels for the year. Next day, however, the whole market hardened, the recovery being due partly to a belief that an oversold position had been created, and partly to the tentative emergence of bargain hunters. West African issues turned firmer, but Western Australians attracted little interest. Rhodesian copper shares moved against the current, being firm at the beginning of the week, after an encouraging Roan Antelope quarterly statement, and easier subsequently in sympathy with the price of the metal. Tin shares, after being subject to scattered selling, showed fractional rises on later days.

WALL Street's sigh, when Congress rose in the early minutes of Tuesday morning, was not wholly of relief. The market celebrated what might have proved an almost festive occasion by a general downward movement, which gathered sufficient momentum to produce 3-point losses. Such apparent perversity is not readily explicable. In the previous session, the market had made the best even of the modified "death sentence" provisions which the President had obtained in the Utilities Act. Steels, moreover, had remained unaffected by a recession in production for the current week. The market on Tuesday, it would seem, suddenly became aware of the considerable amount of legislation which had been passed in the final weeks of the session, and the significance of the President's manoeuvre

in prolonging the sitting until his demands had substantially been met. Sales were well over the two million mark on Tuesday, and the weakness of leading industrials, rails and utilities continued in heavy initial selling on Wednesday. A partial recovery ensued, however, and the market closed with fractional losses. In the bond market, Government issues opened in weak style, owing to the imminence of Treasury operations on Tuesday, but the tone was appreciably steadier in mid-week dealings. The half-point fall in steel production to 50 per cent. of capacity, according to the "Iron Age," is attributed to a reduction in tinplate demand, and to delayed automobile specifications. There is little sign, as yet, of any "war" demand for finished goods, the prospect of which has excited the steel share market during the past fortnight.

Two dull days opened the week's dealings. The international outlook restrained speculators, and business was very limited. With the exception of rentes, prices moved downward. Continued selling of South African mines (Continued on page 440)

LONDON ACTIVE SECURITY PRICES AND YIELDS

NOTE—Shares with a New York Quotation or with definite American interest are distinguished by italics

In calculating yields on fixed interest stocks quoted below allowance is made for interest accrued since the last date of payment, less income tax at the standard rate. Where stocks are definitely redeemable at a certain date the yield includes any profit or loss on redemption; where stocks are redeemable at or before a certain date the final date of redemption is taken when the stock stands at a discount and the earliest date when the quotation is above par. The return on ordinary stocks and shares is calculated by reference to the latest dividends, account being taken of any enhancement or reduction of interim dividends. Allowance is made for accrued dividends in calculating the yield on "cum div." shares.

(Continued from page 437)

was reported, but London buying prompted a mid-week rally. Internationals were uneasy under the reactionary lead of Suez Canal. On Wednesday, when the Government's policy in the Italo-Ethiopian question was interpreted as favouring a middle course, a fair recovery ensued, which brought renewed strength to rentes.

BERLIN

Last week's share market opened dull, and even leading companies were at times not to be found in the list. Shipping issues recovered above the lowest recent levels, but the general tendency was downwards, and late in the week heavy selling resulted in fairly sharp reactions. The first two days of the new week witnessed further declines, although public utilities were an exception. In particular, potash shares were depressed, and Reichsbank was quoted twelve points below the July "high." Bond prices last week were steady, with slight advances predominating, but became irregular this week. Dollar bonds were generally somewhat weaker. The mid-week market continued very quiet, and prices showed irregularity. Reichsbank showed a modest rally, and shipping issues improved slightly.

	Aug. 21, 1935	Aug. 26, 1935	Aug. 28, 1935		Aug. 21, 1935	Aug. 26, 1935	Aug. 28, 1935

Norddeutscher Lloyd (New)	16.00	16.60	16.90				

AMSTERDAM

The Bourse opened in dull fashion, with business extremely limited and prices fractionally lower. An improvement in the American section on Tuesday was not held, for Wall Street advices proved disappointing in mid-week. Industrial shares fluctuated, and became reactionary on Wednesday. Commodity shares throughout the list lost ground as the week progressed. Shipping issues held their ground fairly well, but Royal Dutch were heavily sold on Wednesday. The bond market showed a slightly firmer trend.

BY STOCK EXCHANGE INTRODUCTION

The Earl of Dudley's Round Oak Works, Ltd.—Particulars of issue of £400,000 4½ per cent. first mortgage debenture stock, 1965. Secured on all assets; redeemable at £101 per cent., August 31, 1965, or at £102½ per cent. from December 31, 1940. Proceeds to repay £330,000 stock and bank advances. Issue purchased at 97 per cent. Profits, after depreciation, years to June 30th: 1933, £2,034; 1934, £51,625; 1935, £57,443. Total assets, £1,114,570.

OFFER TO SHAREHOLDERS OF SCARBOROUGH GAS COMPANY

United Kingdom Gas Corporation, Ltd.—This Corporation is understood to have made an offer to the Scarborough Gas Company on the basis of £122 2s. 6d. in cash or 112 fully-paid 4½ per cent. cumulative £1 preference shares in the Corporation, plus 16s. 3d. in cash for each £100 of preference capital. An offer of 4½% preference or preferred ordinary is also being made to holders of the company's ordinary £100 stock.

CONVERSIONS AND REPAYMENTS

Northern Ireland Land Bonds.—Guaranteed 4½ per cent. bonds amounting to £27,380 have been drawn for payment on or after November 1, 1935, at the Bank of England.

Spanish Conversion Loan.—Details are available of a 4 per cent. conversion loan for 979,000,000 pesetas (approximately £27,000,000 at current rates). The loan is to replace a 5 per cent. issue of the same amount.

The Empress Brewery Company, Ltd.—This company will repay its 5 per cent. first mortgage debenture stock on February 29, 1936, at £110.

The Oldfield Brewery, Ltd.—This company will repay its 5 per cent. first mortgage debenture stock on February 29, 1936, at £110.

BONUS ISSUE

Initial Services, Ltd.—The capital is to be increased by £600,000 to £1,225,000 by the creation of 2,400,000 ordinary shares of 5s. each. It is proposed to capitalise £225,000, part of the general reserve, and to appropriate this by the distribution of 900,000 ordinary shares to the ordinary shareholders registered on September 11th next, in the proportion of one new share in respect of each now held.

PRIVATE PLACING

Midland Electric Corporation.—This company has placed privately £300,000 of 3½ per cent. first mortgage debenture stock, 1964-73, at par.

OFFERS ABROAD

Basle City Loan.—The City of Basle is taking up a loan amounting to Frs. 22,000,000. The bonds of Frs. 1,000 each will bear interest at 4 per cent. and will be issued at 94.65 per cent. plus stamp duty of 0.60 per cent. They will be repaid at par on September 15, 1945. One-half will be used for the consolidation of current obligations and the other half for work creation and other purposes.

German Government Loan.—The German Government will offer, from September 4th to 16th, Rm. 500,000,000 (£41,666,000) 4½ per cent. bonds to the public at 93½. The bonds are to mature in ten years, but 20 per cent. of the issue is to be redeemed yearly from 1941 onwards.

FORTHCOMING ISSUES

Ericsson Telephones.—An extraordinary general meeting is to be held on September 25th to consider altering the Articles of Association. Proposals will be made that the issued ordinary shares £1 be converted into stock, the capital be increased to £700,000 and £75,007 10s. be applied, out of reserve, in paying up 300,030 of the unissued ordinary shares of 5s. in the increased capital. These shares to be distributed amongst the ordinary stockholders in the proportion of one ordinary share for each £1 of ordinary stock held.

Projectile and Engineering.—An extraordinary general meeting is to be held September 10th to consider the capital being increased to £250,000, by the creation of 250,000 additional ordinary shares of 10s.

Acadia Sugar Refining.—An extraordinary meeting is called for September 9th to consider creation of sinking fund bonds of an aggregate principal amount not exceeding \$2,500,000, on terms as directors may determine.

Weyburn Engineering Company, Ltd.—An issue of 120,000 6 per cent. cumulative preference shares 10s. at par, and 160,000 ordinary 5s. shares at 6s. 3d. per share is expected in September.

Graltan Warehouses.—It is understood that this concern is to be converted into a public company.

RESULTS OF ISSUES

Dutch Treasury Bills.—Subscriptions for 3½ per cent. and 4 per cent. notes totalled Fls. 27,653,000, of which Fls. 25,062,000 (£3,580,000) has been allotted. The average discount of the bills was 4½ per cent.

Reichsbahn Treasury Bills.—The final figures of the conversion of the 6 per cent. Reichsbahn Treasury bills into Rm. 150,000,000 (£12,500,000) of 4½ per cent. bills show that Rm. 96,490,000 (£8,041,000) of the new issue was taken up for conversion purposes and Rm. 181,730,000 (£15,144,000) subscribed for by new subscribers, making a subscription total of Rm. 278,220,000 (£23,185,000).

CALLS DUE SEPTEMBER 2, TO SEPTEMBER 7, 1935

The grand total of calls falling due in August, 1935, was £16,443,401, which compares with £36,367,141 which fell due in August, 1934.

COMPANY MEETINGS, &c.

ASSOCIATED BRITISH PICTURE CORPORATION,
LIMITED

A STRONG POSITION

The eighth ordinary general meeting of the Associated British Picture Corporation, Limited, was held, on the 28th instant, at Winchester House, London, Mr John Maxwell (chairman and managing director) presiding.

The Chairman, in the course of his speech, said that with regard to the profit and loss account, the total available balance of profit was £560,238 and, after an appropriation of £162,805 to general reserve, bringing it up to £1,000,000, and setting aside £125,000 to a new reserve for depreciation, it was proposed to pay a final dividend of 6 per cent., less tax, on the ordinary shares, making 10 per cent. actual, less tax, for the year.

As to the cinema department, which was by far the largest contributor to their profits, the cinemas had had a good year's trading and showed a substantial increase of profit on any previous year. Since the close of the financial year they had had the benefit of the readjustment of entertainments tax, by which the Chancellor of the Exchequer had remedied an undoubted grievance. They had acquired a number of additional properties, and the benefit of their earnings would be felt during the current year, so that altogether he looked forward to a substantial improvement in profits.

In the film distribution department—represented by Pathé Pictures, Limited, and Wardour Films, Limited—the profits showed a slight increase; indeed, that department had remained remarkably steady in earning capacity during the eight years of the company's existence. The film production department's prospect was not quite so pleasing. During the last twelve to eighteen months conditions in film production had become increasingly difficult. Costs had been mounting steadily, individual films had become more expensive, and gross receipts had not been increasing proportionately.

They were not dependent to any extent on their film production department, and, although conditions in that department continued difficult, they would be able to maintain and, he believed, increase the profits of the corporation as a whole. They had so aligned their policy and programme that, even if untoward events should come to pass, they would not be prejudicially affected, and, when the present feverish activity had burned itself out, they would, with their large material resources, be able to take full advantage of the undoubted prosperity which the business of film production could have under normal trading conditions.

The report and accounts were unanimously adopted.

DAVIS ESTATES, LIMITED

VALUABLE AND INCREASING GOODWILL

The statutory meeting of Davis Estates, Ltd., was held, on the 27th instant, at Winchester House, Old Broad Street, London, E.C., Mr A. F. Davis (deputy-chairman and managing director) presiding.

The Chairman said: Our chairman is away, and he regrets he cannot preside at this meeting. Since the statutory report has been in your hands for some days, you will no doubt wish me to take it as read. Our preference shares were the only capital offered for public subscription, and you will note from the statutory report that all the cash from such issue has been received in full. All the ordinary shares have been allotted and have been paid for in full, in cash, in accordance with contract No. 12 shown in the prospectus.

The company's business in the main consists of the purchase of land and the building of house and shop properties, and the sale thereof, with, in addition, the letting of certain properties. Your directors have continued to give their particular attention to two important matters. Firstly, the acquisition, as and when suitable opportunities occur, of further carefully-selected sites for development purposes; in this connection a number of estates have been acquired which should be successfully developed. Secondly, the company is considerably increasing its annual income from its property investments, and the wisdom of this policy is self-evident, and I see no reason why our general business should not retain its present level, and our profits continue to be maintained.

Further, I would like to mention the appreciable number of sales which we are obtaining solely through recommendations from satisfied purchasers. Your directors feel that the company has a very valuable goodwill, which is being increased constantly by the large body of satisfied owners of Davis-built homes.

The proceedings terminated with a vote of thanks to the chairman.

Mr George Hill Tulloch was elected a director of the Bank of Ireland on August 14, 1935, to fill the vacancy caused by the death of Sir Lingard Goulding. Mr Thomas Shannon Martin succeeded to the post of governor of the bank on April 1st last, on the expiration of Sir Lingard Goulding's term of office as governor.

Mr Henry Hart, of Messrs Hart Moss and Company, chartered accountants, of Sheffield, Rotherham and Barnsley, has been appointed assistant secretary of the Sheepbridge Coal and Iron Company, Chesterfield. He succeeds the late Mr E. G. Haslam, son of Mr T. E. Haslam, secretary and a director of the company. Mr Hart is a son of one of the founders of Hart Moss and Company.

South Africa	100 17 6	101 7 6	101 7 6	102 7 6	102 17 6

THE ANGLO-SOUTH AMERICAN BANK, LTD., has received telegraphic advice from the Madrid Branch that the gold surcharge for the payment of Spanish Customs duties has been fixed for the period August 21st to 31st at 138.29 per cent. The previous rate was fixed as from August 11th at 138.60 per cent.

CENTRAL AND SOUTH AMERICAN EXCHANGE RATES

THE ANGLO-SOUTH AMERICAN BANK, LTD., issues the following details relative to quotations for certain of the South and Central American exchanges. All these exchanges, with the exception of that of Bolivia, are related to the United States dollar, and the approximate sterling rates may be obtained by applying the dollar-sterling exchange rate:—

Bolivia.*	Official market: Sight rate, 20.26 bolivianos per £ sterling on June 12, 1935. Export selling rate 80 bolivianos per £.
Colombia.*	Sight rate, 190 pesos per 100 United States dollars on August 17, 1935. This rate applies to holders of permits buying in the "open" market.
Ecuador.*	"Free" market sight rate on July 17th, 10.50 sucres per United States dollar.
Guatemala.	Sight rate on New York is maintained at 1 quetzal per United States dollar, but a commission of 1 per cent. is charged by the Banco Central for the sale of drafts.
Nicaragua.*	Official selling rate was established at 110 cordobas per 100 United States dollars on November 26, 1934.
Salvador.	Sight rate on July 9, 1935, 2.51 colones per United States dollar.
Venezuela.	Sight rate on New York is at present maintained at 3.91¢ bolivares per United States dollar.

* Exchange controls are operative in these countries.

REPORTS AND NOTICES

MISCELLANEOUS

ASSOCIATED BRITISH PICTURE CORPORATION.—The ordinary shares of this Corporation are of 5s. denomination, and not, as incorrectly stated in last week's issue (page 385) £1 nominal.

THE SUSSEX BRICK COMPANY, LIMITED.—This Company is to purchase the share capital of the Dorking Brick Company, Ltd. The Company proposes to increase its Capital to £540,000 by the creation of 120,000 new 8 per cent. Cumulative Preferred Ordinary Shares of £1 and 280,000 new Deferred Shares of 5s., which will be offered to existing shareholders on bonus terms, and underwritten by The Charterhouse Investment Trust, Limited.

ROAN ANTELOPE COPPER MINES.—A substantial increase in earnings is shown in the quarterly statement to June 30, 1935. Gross revenue amounted to £481,500, compared with £454,272 in the preceding three months. Operating expenditure, including London and mine administration charges, totalled £295,500, leaving an estimated surplus of £186,000, or £57,300 more than in the March quarter. After providing for debenture interest and premium on redemption £23,000 and reserve for depreciation £37,500, the profit, subject to taxation, is £125,500, as against £68,241 in March.

COMMERCE AND TRADE

SURVEY OF COMMODITY MARKETS

The majority of commodity markets have again been quite active, and the general trend of prices has been upwards. Industrial raw materials were in good demand. Quotations for lead and spelter continued to rise, partly owing to the revision of British import duties. Copper is scarcely changed on the week, but there was a sharp recovery in the price of "spot" tin, because supplies on the market remain small. Demand for coal by British industry continues at a high level, but the position in South Wales has deteriorated owing to the decline in exports to Italy. Moreover, the reduction in the French import quota by 10 per cent. from September 1st, discussed in a Note of the Week, will increase the difficulties of Welsh collieries. Transactions in iron and steel materials have tapered off since the beginning of August, but business is expected to be resumed on a large scale early in September. Prices of linseed and linseed oil have declined a little owing to better crop reports from Argentina. Dealings in rubber were a little more active, but quotations are scarcely changed on the week.

The event in the market for textile raw materials was the erratic movement of cotton prices due to conflict of opinion at Washington concerning the policy to be adopted in respect of the 1935 crop. It now seems fairly certain, however, that loans to farmers will be continued at the rate of 10c. per lb. instead of at 9c. per lb. as first proposed. The implications of the change in the policy of the United States Government are discussed in a Note of the Week. The market in wool has been firm, and it is expected that the improvement in quotations will be maintained during the sales in Australia which begin next Monday. The price of Italian and Japanese raw silk was marked up a little. Jute was slightly cheaper than a week ago, but hemp and flax were practically unchanged in price.

Foodstuffs were generally dearer than a week ago. As a result of the colder weather demand for meat increased at rising prices. Bacon prices continued to fall, but quotations for butter and cheese were higher than last week. At the Mincing Lane tea auctions keen competition drove up prices. Most kinds of fruit are dearer than a year ago. Liverpool wheat quotations are scarcely changed on the week.

In the United States the recent upward movement of commodity prices appears to have been temporarily checked. Moody's index of the dollar prices of staple commodities, based on December 31, 1931, stood at 164.5 on Wednesday, compared with 167.1 a week earlier, 162.4 a month earlier and 155.3 on the corresponding day last year.

COAL

SHEFFIELD.—Demand for steam coal is being well maintained and export enquiry is rather more active. Bunkering coal is a brisker market than for a long time. Inland demand for industrial fuels is maintained at former high levels. The market is recovering

WIGGINS, TEAPE AND COMPANY, LTD.—The following is a comparative statement of the results of the company and its subsidiaries:—

	Two Quarters ended June 30th	
	1934	193

COMPARATIVE AVERAGES OF GRAIN—The following table gives the estimated sale of home-grown wheat during the harvest years 1931-32 to 1934-35:—

	1931-1932	1932-1933	1933-1934	1934-1935
Estimated sales of home-grown wheat—				
1 week to August 24	Cwts. 40,854	Cwts. 340,650	Cwts. 176,562	Cwts. 337,193
52 weeks to August 24	4,055,499	9,178,560	6,837,443	14,344,806
Average price of English wheat per cwt.	s. d. 6 2	s. d. 5 0	s. d. 5 3	s. d. 4 5

The following is a statement showing the quantities sold and the average price of British corn in the past two weeks, and for the corresponding week in each of the years from 1931 to 1934:—

Week ended	QUANTITIES SOLD			AVERAGE PRICE PER CWT.		
	Wheat	Barley	Oats	Wheat	Barley	Oats
Aug. 22, 1931	Cwts. 24,780	Cwts. 935	Cwts. 7,250	s. d. 6 4	s. d. 8 5	s. d. 6 2
Aug. 27, 1932	40,854	9,003	16,148	6 2	7 5	6 11
Aug. 26, 1933	340,650	63,649	46,420	5 0	11 0	5 5
Aug. 25, 1934	176,562	29,743	30,706	5 3	10 5	6 4
Aug. 17, 1935	137,807	14,079	42,814	4 7	7 7	6 3
Aug. 24, 1935	337,193	27,899	41,399	4 5	9 0	6 2

AMERICAN WHEAT MARKETS.—The following table shows wheat quotations in recent weeks, with comparative figures for 1933 and 1934:—

NEAREST FUTURE	Jan. 4, 1933	Jan. 3, 1934	Aug. 29, 1934	Jan. 2, 1935	Aug. 21, 1935	Aug. 28, 1935
Winnipeg (No. 1, Manitoba)	46½	65½	81½	82½	87½	85
Chicago (No. 2 Winter)	46½	84½	102½	98½	89½	87½

The visible supply of wheat in Canada, at 126,337,000 bushels, shows an increase of 1,385,000 bushels on the week. Supplies a year ago amounted to 98,257,000 bushels.

OTHER FOODS

BACON.—Prices were again marked down on Friday of last week, but have subsequently been fairly steady for the majority of descriptions. Demand for English and Irish has been disappointing, but the advent of cooler weather should lead to a general improvement in demand. The official quotations (per cwt. for No. 1 Sizable) which formed the basis for dealings on the London Provision Exchange this week were: English, 83s. to 85s.; Canadian, 76s.; Danish, 83s.; as against 87s. to 89s., 78s. and 87s. respectively, last week. Arrivals in London last week included Danish, 16,876 bales; Canadian, 3,380; Dutch, 2,818; Lithuanian, 1,979; Polish, 3,011; against 17,560, 3,120, 2,879, 2,000 and 3,802, respectively, in the previous week.

BUTTER.—Under the influence of a firm demand, prices have shown some recovery during the past week. Quotations (per cwt.) on the London Provision Exchange on Wednesday were: New Zealand, finest salted, 96s.; Australian, choicest salted, 95s.; Danish, 108s. to 110s., compared with 94s. to 95s., 93s. to 94s. and 108s. to 109s., respectively, last week.

CHEESE.—New Zealand cheese has been a firm market, its price having risen during the week. Quotations for most other descriptions have been steady. Quotations (per cwt.) on the London Provision Exchange on Wednesday were as follows: English finest farmers', 56s. to 65s.; Canadian, finest coloured (new), 52s. to 53s.; New Zealand, finest coloured, 49s. 6d., as against 56s. to 65s., 50s. to 52s. and 48s., respectively, last week.

COCOA.—The "spot" quotation in New York on Wednesday was 5 cents per lb., against 5 cents per lb. last week. On the London market, Accras were quietly steady. On Wednesday last good fermented old crop, "October-December," was quoted 21s. 7½d. per 250 kilos, c.i.f. Continent, against 21s. 9d. last week. Last week's movements of cocoa in London were as follows: Landed, 4,355 bags; delivered, for home consumption, 5,830 bags; exported, 3,480 bags; stocks, 146,287 bags, against 243,502 bags a year ago.

COFFEE.—The New York spot market has had a quiet undertone, with prices steady. The spot market in London has ruled quietly steady throughout the week. In New York on Wednesday, Rio No. 7 (cash) was quoted at 6½ cents per lb., as compared with 6½ cents No. 7 (cash) and 6½ cents per lb. a month ago. Movements per lb. last week and 6½ cents per lb. were as follows: Brazilian, landed, of coffee in London last week were as follows: Brazilian, landed, 14,560 cwt., against 28,331 cwt. a year ago. Central stocks, 14,560 cwt.; delivered, for home consumption, American, landed, 313 cwt.; delivered, for home consumption, 1,896 cwt.; exported, 2,398 cwt.; stocks, 140,586 cwt., against 102,638 cwt. last year. Other kinds, landed, 568 cwt.; delivered, for home consumption, 1,455 cwt.; exported, 1,937 cwt.; stocks, 158,903 cwt., against 95,587 cwt. last year.

EGGS.—The Tooley Street Market showed weakness on Monday and prices at Smithfield are now a little lower than those ruling a week ago. The cooler weather should stimulate consumption shortly. At Smithfield Market on Wednesday, English (ordinary packing, Grade I, about 15-15½ lb.) realised 15s. to 16s. per 120,

against 15s. 6d. to 16s. a week earlier, while Danish (15½ lb.) made 11s. 6d. to 12s. per 120, against 11s. 9d. to 12s. 3d. last week.

FRUIT.—A steady trade has been in progress at Covent Garden, with prices well above the average for August, states *The Fruit Grower*. Plums have made a rather better showing, but have been cleared without difficulty each morning. The moderate supplies of English dessert apples are meeting a good demand. Worcester showing colour fetch up to 8s. per half-sieve and 7s. to 9s. per half-box. Australian and New Zealand apples from store hold their price at from 14s. to 18s. per box. Fair quantities of English pears have been coming forward. Hothouse grapes have been a rather slow trade, but English and Belgian are about unchanged in price; Dutch are cheaper. Melons have not done quite so well, but peaches are in rather short supply and are dearer. Blackberries are a steady trade, while Kent cobnuts are now arriving. All varieties of oranges have eased in price, on account of a less active demand. Grape fruit are going out better. Lemons are a little easier, although still dear.

MEAT.—The undertone at Smithfield Market has been rather better than in recent weeks, with chilled beef clearing well at higher prices. Most other descriptions have been in quiet demand at unchanged rates. On Wednesday last, Argentine chilled hind-quarters were quoted at 10s. to 4s. 6d. per 8 lbs., as compared with 3s. 6d. to 4s. last week. New Zealand frozen mutton was 2s. 10d. to 3s. 6d. per 8 lbs., against 2s. 10d. to 3s. 6d. a week ago. According to the Smithfield Market official report, supplies during last week amounted to 8,153 tons, an increase of 391 tons on the corresponding week last year. Beef and veal accounted for 4,444 tons, mutton and lamb 2,675 tons, and pork and bacon 565 tons, as compared with 4,209, 2,542 and 536 tons, respectively, in the same week of 1934.

PEPPER.—Wednesday's spot price for Lampung was 2½d. per lb., against 2½d. last week. Movements of pepper in London during the past week were as follows: Black, landed, nil; delivered, 38 tons; stocks, 1,709 tons, against 194 tons a year ago. White, landed, nil; delivered, 213 tons; stocks, 17,871 tons, against 6,444 tons a year ago.

RICE.—The spot price of Burma No. 2, cleaned, new crop, was 8s. 6d. per cwt. on Wednesday, as compared with 8s. 6d. per cwt. a week ago, while the forward quotation, at 7s. 9d. per cwt., shows a rise of 3d. on the week. Movements in London during the past week were as follows: Landed, nil; delivered, 4 tons; stocks, 9,930 tons, against 2,269 tons a year ago.

SUGAR.—The spot market in New York has had a firm undertone, and prices are higher on the week. In London, trading has been quiet, with quotations a shade easier. The spot price in New York on Wednesday was 3-50 cents per lb., as compared with 3-45 cents per lb. last week and 3-20 cents per lb. a month ago. Wednesday's sales of raw sugar in London included "December delivery" at 4s. 3½d., against 4s. 5d. last week. The movements of raw sugar at public warehouses in London and Liverpool last week were as follows: Imports, 27,239 tons, against 20,543 in the previous week and 12,400 in the same week of last year; deliveries, 17,346 tons, against 14,999 and 15,766 respectively; stocks, 159,344 tons, against 149,451 and 158,304 tons respectively.

TEA.—The following table shows the average prices (compiled by the Tea Brokers' Association) of tea sold in Mincing Lane on Garden Account in recent weeks:—

Week ending	Northern India	Southern India	Ceylon	Java	Sumatra	Nyasa-land	Total
Aug. 23, 1934	13-16	11-85	12-63	9-98	9-56	11-47	12-38
July 18, 1935	11-61	11-89	13-69	10-00	9-22	10-51	12-09
July 25, "	11-53	11-91	13-68	10-01	8-84	10-41	12-11
Aug. 1, "	11-36	11-26	13-37	9-52	8-46	10-29	11-81
Aug. 15, "	11-84	10-82	12-99	9-44	8-61	10-28	11-81
Aug. 22, "	15-15	10-65	12-82	9-88	8-57	9-60	13-01

The quantities catalogued for this week's auctions comprised 42,875 packages of Indian and 25,555 packages of Ceylon tea. The Indian grades met a good market. Quality teas were again in active request, while medium and common sorts maintained recent rates. At the Ceylon auctions on Tuesday common tea was firm to dearer, while good qualities were keenly competed for at higher prices. Export demand continued good.

VEGETABLES.—*The Fruit Grower's* Covent Garden report states that the price of tomatoes, which had eased off last week, recovered over the week-end. Jersey outdoor are now in evidence, and are fetching 4s. to 4s. 6d. per dozen lbs. Cucumbers are rather easier in price. Good cabbage is firm in price, while green peas are steady on short supplies. Marrows have encountered a fairly good trade, but runner beans are cheaper. Mushrooms hold their price, and turnips are also unaltered. But carrots and cauliflower have cheapened this week. The Potato Marketing Board have made a new order prescribing a compulsory minimum riddle of 1½ in. for all varieties of potatoes sold for human consumption. The object of the regulation is to reduce supplies and to improve the quality of the samples marketed. Trade has been steady this week and, at the London Borough Market on Tuesday, King Edward ranged in price from 6s. to 7s. per cwt., the same as last week.

MISCELLANEOUS COMMODITIES

VEGETABLE OILS AND OILSEEDS.—The unsettled political situation and other adverse factors have created a very dull feeling, and trade continues within very narrow limits. With regard to linseed, reports of weather conditions in Argentina leave the probable area under linseed in doubt, but against a probable reduction there have to be set a large unsold balance of the old crop and the expected smaller requirements of the United States. With some pressure on

the part of re-sellers Plate is easier, and for early shipment has declined to about £9 2s. 6d. Indian shippers show no real disposition to meet the market and business is almost non-existent. The quantity of linseed now afloat for Europe is 92,700 tons (including 400 tons from India) 14,000 tons less than last week; and for the United States 22,800 tons (all from the Plate), against 28,500 tons a year ago. Cottonseed is in active demand, and a good trade in Egyptian at advanced prices is reported. Old crop is held for £7 and upwards, and for new up to £6 8s. 9d. September loading and 6 5s. October have been paid.

Linseed oil is in fair demand, and is easier in sympathy with seed. Raw oil ex Hull August delivery is now quoted £22 and September-December £22 2s. 6d. per ton (naked). Cotton oil is steady. Egyptian crude ex Hull is available at £23 10s., and refined at £26 10s.

WHOLESALE COMMODITY PRICES

UNITED KINGDOM

The prices in the following are revised with the assistance of an eminent firm in each department.

LONDON, August 28th			The prices in the following are revised with the assistance of an eminent firm in each department.

IS THIS
MAN'S AIM?

A pamphlet of Disarmament cartoons which appeared in *Review of Reviews* June 1934. A striking reminder that desire for peace and horror of the barbarism of modern warfare are common to all mankind.

16 pages. Price 2d. Post free, 3d.

SONGS FOR
NEW SOLDIERS

A collection of anti-war verse which appeared in the *Review of Reviews* during 1933 and 1934. It is desired that this booklet should reach as wide a Public as possible.

24 pages. Price 6d. Post free, 7d.

PEERS OR
PEOPLE?

First published in 1907. A book wherein *The House of Lords* was weighed in the balance and found wanting, by W. T. STREAD, founder in 1890 of the *Review of Reviews*. This work has today just as timely an appeal as when first published.

264 pages. Price 11s. Post free.

READING
CASES

Handsomely bound in black leather-cloth, with title embossed in gold. The retaining mechanism is completely hidden, and each of twelve issues can be firmly filed, while the finish justifies the case pride of place in library or book case.

Price 3s. 6d. Post free.

REVIEW OF REVIEWS

Published Monthly on the First. Price One Shilling.
Annual post free Subscription, Inland or Abroad, 12s.

REVIEW OF REVIEWS

Production Department
11 BREAM'S BUILDINGS, LONDON, E.C.4

SATURDAY, AUGUST 31, 1935
THE FINANCIAL NEWS

publishes and presents with its ordinary issue for to-day a special review on the occasion of

The Centenary of
the
GREAT WESTERN RAILWAY

PRINCIPAL CONTENTS:

One Hundred Years of Railway Finance.

G.W.R. Personalities—past and present.

The Administrative Machine—its growth and organisation.

G.W.R. Stocks as Investments.

The Group's Ancillary Industries—their importance and growth.

In the first week of its operation, the G.W.R. carried 10,360 passengers: now every week it carries 1,850,000. Its capital has grown from £125,000 to nearly £150,000,000. Its story is the story, not only of a great railway, of engineering feats, of financial battle and of administrative genius; it is the story of the development of the West of England. To the Railway Shareholder the review provides a mass of material which has never before been available to him: to the general investor it presents a fascinating record of British industrial development.

Copies are obtainable at all railway bookstalls and from good newsagents everywhere price 2d., or 3½d. post free, direct from The Publisher

THE CURTAIN RISES

ON Wednesday the curtain was rung up on what the world expected to be an epic drama. The most critical of all League Councils then began its public session to consider a dispute which has vexed and harassed the world for very nearly a year—the Italo-Abyssinian controversy. No sooner, however, was the curtain rung up by Mr Eden's report on the abortive Paris negotiations between Italy, France and Great Britain than Baron Aloisi, on Signor Mussolini's instructions, abruptly and completely rang it down again. The real drama did not begin.

The British representative, in a short but deeply impressive speech, indicated for the first time the full implications of the extent to which a still integral and sovereign Ethiopia was prepared to go to meet Italian claims upon her. Mr Eden informed the Council that France and Great Britain had drawn up a series of suggestions in order to meet the Italian desire that Italy's predominant political and economic interests in Abyssinia should be recognised. The proposals, which they believed Abyssinia would accept, were to serve as a basis of discussion. They envisaged "assistance" for Abyssinia's development under the aegis of the League; but in effect they gave to Italy the power to reorganise Abyssinia's economic life, by the control of economic, financial, commercial and constructional developments, of foreign settlement, of anti-slavery measures, of communications, and of frontier and other police services. Mr Eden reminded the Council that Italy had rejected these proposals.

The British representative, however, went on to clarify once again the British Government's position in the dispute. This was a welcome statement; for the news late last week of the amazing, but now fortunately cancelled, mineral concession obtained from the Ethiopian Emperor for an American company by a British subject, had unloosed once again those foreign tongues which are only too easily unbridled for the purpose of imputing veiled and sinister motives to the policies and diplomacy of the British Government. We discuss on a later page the sorry *entr'acte* provided by Mr Rickett and the concession. Mr Rickett seems to have played no greater rôle than the little dog who invariably runs across the road in front of the

big procession. Mr Eden's task was to assure the Members of the Council of his Government's good faith and firm intentions. This he did to good purpose. The British Government, he said, "are acutely conscious of their responsibilities as members of the League," and "are prepared to fulfil their share of such responsibilities." He assured the Council of the most whole-hearted British co-operation to that end. And he issued a blunt warning that a failure by the League in this dispute would mean that it would collapse, together with the new conception of international order for which it stands, and for which the nations—Italy not the least of them—had striven since the war. "There is," he went on, "in this dispute between Italy and Ethiopia no question of any political or economic conflict between the United Kingdom and Italy." And, again, "the nature of the task which lies before the Council is plain. It is our duty to use the machinery of the League that lies to our hand." Though many observers had expected that M. Laval would express different views on the report presented by Mr Eden, M. Laval, on behalf of France, expressed appreciation of Mr Eden's speech, and issued a reminder that the Covenant bound all Members of the League. "We are all anxious to respect the obligations of the Covenant," he concluded; "we all have the will to serve peace."

Events were quickly to prove that M. Laval was over-sanguine. For Baron Aloisi at once characterised the Paris offer as wholly unacceptable, and launched a vitriolic attack upon Abyssinia. It was a country, he said, which ought never to have been admitted to the League. Italy recognised she had made a mistake in 1923 in sponsoring the Abyssinian application for membership. "Ethiopia cannot have either equality of rights or equality of duties as compared with civilised States." Italy withdrew all confidence in Ethiopia; would not recognise her as an equal in the discussions before the League of Nations; and reserved her right to settle accounts with Ethiopia in her own way. And to the journalists, after the meeting, Baron Aloisi was even more uncompromising. Was Ethiopia, a Member of the League, to be treated as an outlaw because Italy said so? he was asked. That would be the best way

of putting it, he admitted. Italy's decision, he told them, was "final and irrevocable."

The Council, thus flouted and nonplussed, could only adjourn; but not before the Ethiopian representative had pointed out that Italy's allegations against Ethiopia infringed one of the provisions of the Covenant which was inserted at the request of, and is most jealously regarded by, the smaller Powers—the provision in Art. XV, s. 8, that the internal affairs of a country should not be made a pretext for inroads upon its sovereignty. On Thursday evening the Council met again; but the Italian delegate walked out when the Ethiopian representative began to speak. Moreover the Italians objected to the inclusion of France and Britain in a Committee of Five which the Council proposed to charge with the examination of the dispute. Signor Mussolini has thus defied the Council and dared it to proceed to the exhaustive examination of his dispute with Abyssinia, for which it was expressly convoked. In these circumstances it is evident that the Council should proceed on its own lines and leave it to Signor Mussolini to quit the Council table and begin that aggression upon which he is so inflexibly set. Then will be the time for the Governments of France and Britain—with the already evident and impressive support of the Scandinavian, Little Entente and Balkan States, Spain, and others—to implement their protestations of fidelity to the obligations of League membership.

The Italian dictator has enlarged his affront to the moral opinion of the world into an affront to the entire post-war system of pacific settlement of disputes. He tells the League Council he will have none of their mediatory efforts. Indeed, he will not have peace at all. He has himself confirmed what *The Times* said of him last week: "Signor Mussolini is out for blood. He means to have a war." He has presented not one shred, not one jot or tittle of a legal "case" against Abyssinia at Geneva, as many hoped he would. He has flouted covenants to which his own hand had affixed Italy's seals. He repudiates peaceful methods and plumps for the old rule of "bloody arbitrament." He does this because he considers Italy has the right to outlaw Abyssinia both from the comity of sovereign nations and from the protection of the League. And he does it despite the fact that the two Italian representatives on the Conciliation Commission have this week concurred in a unanimous report, under the able presidency of M. Politis, the fifth arbitrator, that "no one was really to blame" for the unfortunate Walwal affray last November. Like the sinister Isvolsky, rubbing his hands at the sight of the 1914 conflagration, the Duce exclaims: *C'est ma guerre!*

The greatest danger lies in delay. Delay in League procedure plays the Duce's game and runs the risk of facing France and Britain, who should lead the League and its supporters, with a *fait accompli* in Abyssinia. This week all the French working-class organisations and the entire Labour movement in this country have urged upon their Governments the vital need to employ all the means envisaged by the League to prevent Italian aggression. Signor Mussolini must be made to feel, forthwith, that the old policy of "bullying the little chap" will not even be permitted to become effective or profitable. The League Covenant and Kellogg Pact were brought into existence to outlaw that policy. Those—including Italy—who signed these instruments forswore the use of the bludgeon. Peaceful progress, ordered change, modifications of treaties and political situations by negotiation and agreement—all these are foreseen and provided for within the League framework. In this country in the last few days there has been abundant evidence of growing support for British recognition of the needs of "expanding nations." But these needs can only be met by negotiated agreements. And there can be no other forum for such negotiations than Geneva. In flouting Geneva, Signor Mussolini flouts the forum from which he has most to hope, for the least expenditure of blood and money. He pins his faith on war. In the face of such wilful perversity the decision of our own Government, of the French Government, and of the Council of the League which waits upon their attitude, must be unhesitating and unequivocal. The strength and authority of the League must be made manifest. Any other way lies confusion worse confounded.

THE NATION'S HEALTH

It is a comfort to be reminded that, despite wars and rumours of wars, the active care of the State for the health and welfare of the people has steadily, if slowly, advanced in this country in the last 25 years. Every year the development of these health services in all their bewildering multiplicity is reviewed by the Ministry of Health's Report. The current issue of this massive but far from inhuman document seizes the occasion of the King's Jubilee to survey in retrospect the achievement of 25 years. It is a remarkable story. For the very services, the mere suggestion of which aroused bitter controversy and vehement opposition 25 years ago, are now accepted by all persons and all parties as one of the foundations of Great Britain's social structure.

Twenty-five years ago only the germ of our present health services existed, in the form of the old Poor Law and a rudimentary Old-Age Pension scheme. There was not even a "Ministry of Health." Under that name it came into being in 1919 as a result of the amalgamation of the National Health Insurance Commissioners and the Local Government Board. Unquestionably the most important event, however, in the field of health during the reign was the creation of the scheme of National Health Insurance in 1912. The scheme provided for the payment of cash benefit in time of sickness, for medical benefit, for maternity benefit and sanatorium benefit. The number of persons affected, estimated in 1912 to amount to 11 millions, had grown in the last year of record to 16,450,000. Medical service is now provided by 16,500 insurance practitioners; and in the last 10 years over £150 millions have been disbursed in statutory sickness and maternity benefits and over £90 millions in medical benefit. And so prudently have the finances of the scheme been conducted that it has been possible to spend another £53 millions in additional benefits. In 1925 the insurance system was extended by the establishment, also on a contributory basis, of a widows', orphans' and old-age pension scheme. Under this scheme £232,981,000 has been expended, and this is additional to the £103 millions paid since 1926 under the Old-Age Pensions Acts, 1908-24.

Equally remarkable has been the expansion of local government services in the last 25 years. The Report illustrates this with the following table showing the expenditure, other than out of capital, on some of the main services in the two periods:—

	1910-11 £ million	1932-33 £ million
Education	29	83
Highways, etc.	15	47
Relief of the Poor ..	13	33
Housing	1	39
Public Health	12	46

This tremendous growth of municipal activity has naturally given rise to a whole series of administrative and financial problems; and the first big attempt to solve these, the "Derating" Act of 1929, was clearly no more than a fragmentary beginning. Similarly, in the work of housing and town-planning, the third branch of the Ministry's activities, comparatively little advance has yet been made in the attack on two formidable social evils.

Accordingly, when we turn from Sir Kingsley Wood's survey of the last 25 years to his more controversial account of the Ministry's stewardship in the past year (March 31, 1934-March 31, 1935), we find that the problem of housing occupies the centre of the picture. This undoubtedly reflects the general public conviction that now that our education, old-age, sickness and unemployment services have reached maturity, if not perfection, the task of providing decent houses for the workers remains the crux of the social problem. The housing campaign is now proceeding on the three fronts of the slum-clearance programme, the overcrowding provisions of the new Act, and the still continuing boom in unsubsidised private building. The implication contained in the Report that the whole succession of the Government's housing measures, from the abolition of the subsidy in 1932 to its reintroduction in the Overcrowding Bill of 1935, were a coherent series carefully thought out in advance, and in no way influenced by the pressure of public criticism, may perhaps be taken with a

few grains of salt. But, however this may be, the Government's policy must be judged by its fruits. The professed object of the slum clearance programme, initiated in 1933, was the clearance in five years of 280,000 houses and the erection of 300,000 new houses in their stead. The total number of new houses actually built under this programme up to March 31, 1935, was 41,231, of which 23,662 were completed during the year. Slum-clearance, in fact, is proceeding at an increasing tempo; but the acceleration will have to be much greater still if the full programme is to be accomplished by 1938.

Unsubsidised private building achieved during the year the record output of 286,050 houses. This is claimed by the Report as a "substantial justification" of the policy of "reliance upon private enterprise." How many of these houses, however, can be classed as available for the poorer-paid workers? The number of houses built, according to the Report, of a rateable value of £13 (£20 in Greater London) or less was 105,344. Of these 33,103 were "occupied by persons other than their owners"—i.e. let. The Report also adds the following rather dubious reassurance:—

Many of the houses built by private enterprise for sale are of the working-class type, and many persons who in the past would have looked to Local Authorities to provide them with housing accommodation are, thanks to the financial facilities for house purchase now readily available, able to buy their own houses.

No one will deny that there is some truth in this. But the figure of 33,103 small houses built to let in the last year shows conclusively that though the output of workers' houses by unsubsidised private enterprise is increasing, it is nowhere near great enough either to rehouse the great mass of the poorer-paid workers, or to occupy the building industry to anything like full capacity when the middle-class demand dwindles, as dwindle it must. The practical effect of the overcrowding Act, passed into law in August, will consequently be watched with the closest attention.

In the case of town-planning, as of housing, the chief difficulty is to stimulate the enthusiasm of the local authorities. Whether the whole system which leaves so much responsibility to the local authorities may not be in principle wrong, the Report does not of course consider. But it has to admit that progress in town-planning also is still extremely slow. At present the town-planning powers available to local authorities are negative and not constructive. Yet even though the first scheme came into operation in 1913, only 150,000 acres are covered by schemes in operation to-day. It is true that if all schemes in the various preliminary stages of preparation are considered, some 15 millions out of the 37 million acres in England and Wales may be said to be covered. And there have been some successes during the year. A joint planning committee for the Lake District, representing the various local authorities concerned, has been established; and the London County Council's offer of £2,000,000 towards the creation of a "Green Belt Round London" has made the realisation of this long-planned project a reasonable certainty. At the same time the amount spent by local authorities on the purchase of land for preservation as open spaces has increased substantially during the year. On the other hand, the failure of the scheme for the preservation of the South Downs, due to an unresolved dispute between the East Sussex County Council and the County Borough Council of Brighton, illustrates how many obstacles still remain. And it is a melancholy reflection that the sum of our housing and planning legislation still provides no effective supervision whatever of the appearance and architecture of new houses. The general architectural deterioration that has taken place in England since the municipal building era of 1919-1931 is the most lamentable, and not the least important, feature of the present private building boom.

Taken as a whole, the Report prompts the conclusion that the foundations of our health services have been well laid—but only the foundations. A mere reading of the Report shows how much has been accomplished in 25 years. A glance at the actual world around us, however, shows how much there still remains to do. And comparing the conditions now existing with the record of 25 years' advance, one cannot help wondering what conditions must have been like 30 years ago, when there were no old-age pensions, no health

or unemployment insurance, and no housing subsidies. Even in the Report itself—which in places inclines to complacency—there is much material for concern. It is, no doubt, good to read that the misguided municipal economy campaign of 1931-33 has now been abandoned, and that the loans to local authorities sanctioned by the Minister for purposes other than housing rose from £20,344,465 in 1933-34 to £26,026,397 in 1934-35. But there is a regrettable lack of sympathy or even interest in the Report in the possibility of combating malnutrition by the extension of direct or indirect grants to specially necessitous consumers. Moreover, the obstinate increase in maternal mortality continued this year; while a further growth in the number of persons receiving poor relief suggests that the ravages of the depression in exhausted savings and diminished employability are being felt more keenly by the Ministry of Health if less keenly by the Ministry of Labour. And it may perhaps be remarked that if the total sums spent on health since 1910 were compared with the total spent on armaments, the figures would not look quite so edifying. While we congratulate ourselves, therefore, on the achievement of the last 25 years, we must conclude that the need is still for an acceleration, and not a slackening, in the development of our national health services.

BUTTER AND CHEESE

ALMOST two years have elapsed since the inauguration of the Milk Marketing Scheme for England and Wales. That scheme set out to organise the production and marketing of milk and to secure an adequate return to producers; but, in the event, it has raised the price of milk to the consumer, and in so doing has stimulated a vast increase in domestic production of milk. The milk which consumers have not been able and willing to buy has gone to the "manufacturing market," and caused a glut there. At the same time, the prices of butter and cheese in this country fell sharply, and imports rose. Thus, the Milk Marketing Board has not only had to face criticisms of its management of milk supplies; it has also had to meet very effective competition from abroad in the two chief derivatives of milk—butter and cheese. And this foreign competition has even led to demands for further protection of milk producers, either by a tariff or quota on imports of these vitally important products of milk. Such protection would be a definite blow to the standard of living of the people of this country.

The evolution of the British market for butter and cheese during the past few years is well described in a recent Report of the Imperial Economic Committee.* It is there shown that, although the home farmer has a virtual monopoly of the domestic market for fresh milk, this is by no means the case with butter. Although precise information is unobtainable, it is safe to say that home production has accounted

* "Dairy Produce Supplies in 1934." H.M. Stationery Office. 1s. 6d. net.

for less than one-tenth of the total supplies of butter sold on the United Kingdom market in recent years. In the census year 1930-31, production of farm butter in Great Britain was put at 702,800 cwts., while the Imperial Economic Committee estimates that British production of creamery butter amounted to about 63,300 cwts. in the calendar year 1930. Total production in Northern Ireland was 166,500 cwts. in 1930-31. While it is not possible to estimate home production in 1934, the Imperial Economic Committee points out that "the total production of farm and creamery butter in 1930-31, amounting to 932,600 cwts., may be taken as representing production in each succeeding calendar year."

Imports of butter into the United Kingdom have been steadily increasing in recent years, and the annual value of such imports is now greater than that of any other food-stuff. There is a tariff of 15s. per cwt. on imports of foreign butter, but under the Ottawa Agreements Empire butter was given the privilege of free entry to the United Kingdom market for three years, from November 15, 1932. Until last year Denmark was our principal source of overseas supplies, but the Anglo-Dutch trade agreement provides that imports of Danish butter shall not exceed 2,300,000 cwts. per annum, unless total imports exceed 8,100,000 cwts., in which case Denmark is to be allotted "an equitable share" of the excess. Since 1932, imports of Danish butter have shown a slight decline; and in 1934 Denmark yielded first place to New Zealand, whose exports to the United Kingdom reached a record total in that year. Supplies from Australia have shown an even more rapid rise during the past decade, and the Commonwealth is now our third most important source of supply. Despite this substantial relative increase in Dominion imports, supplies from non-Empire countries have continued to expand since 1929.

UNITED KINGDOM—BUTTER IMPORTS AND PRICES

Year	Imports ('000 cwts.)					Prices (a) (per cwt.)	
	From New Zealand	From Australia	From Denmark	Total(b)	Empire Percentage	New Zealand	Danish
1929	1,304	768	2,204	6,397	41.5	s. d. 173 9	s. d. 182 0
1930	1,564	951	2,319	6,822	45.0	131 3	150 0
1931	1,926	1,558	2,486	8,980	49.5	114 6	130 0

(b) Including other countries not separately specified.

This movement is largely traceable to the tightening up of quota restrictions by importing countries desirous of fostering their domestic production, and the consequent diversion of supplies to the United Kingdom market. There is now scarcely a single foreign exporting country whose butter exports are not subsidised in one way or another.

That it has not been possible to market these heavily increased supplies without a substantial reduction of prices, is made abundantly clear in the above table. The depression may be held responsible for some part of this slump in prices, but it is significant that no improvement was experienced during the "recovery" years, 1933 and 1934. To complete the picture, however, it must be noted that prices this year have been well above those ruling in 1934. In view of the cheapness of butter, however, considerable interest attaches to a report current this week that the Danish Government intends to invite the co-operation of Australia and New Zealand in an effort to control the international market. Butter production overseas has doubtless yielded a poor return in recent years, but the British consumer has reaped no small benefit from the decline in prices. There is solid ground for satisfaction in the knowledge that the *per capita* consumption of so valuable a food as butter increased from 18.7 lbs. in 1930 to 25.2 lbs. in 1934 (according to the estimates of the Imperial Economic Committee). Some part of this increase was undoubtedly at the expense of margarine.

The history of the butter market during the past few years is therefore the story of heavily increasing supplies and steeply falling prices. The case of cheese, although similar in some respects, offers certain interesting contrasts. Turning first to the question of home production, we find a similar paucity of statistical material. The computations

of the Imperial Economic Committee, however, afford some light. It may be concluded that home production did not vary appreciably between 1931 and 1934, but amounted to about 1,000,000 cwts. in each of these years. As a result of the operation of the Milk Marketing Scheme, however, the past two years have witnessed a substantial change-over from farm-cheese production to factory-cheese production in Great Britain. As home supplies account for about one-quarter of all the cheese consumed in this country, domestic production of cheese is relatively more important than that of butter.

In recent years the relative stability of our home production of cheese has been equalled by the steadiness of imported supplies. In marked contrast to the case of butter, imports of cheese have been fairly stable, at a total of some 3,000,000 cwts. per annum. Imports from New Zealand have been slowly rising since 1930 and now account for about 70 per cent. of total imports. Imports of Canadian cheese, on the other hand, have tended downwards, and a further sharp contraction took place last year. Australian supplies, although relatively small, have been mounting steadily during the past decade and reached a record total in 1934. In view of the fact that our supplies of cheese from foreign countries are subject to a tariff of 15 per cent. *ad valorem*, whereas Empire supplies are duty free, it is not surprising that foreign imports (principally from the Netherlands and Italy) showed a gradual relative decline between 1930 and 1933. This tendency was, however, arrested in 1934. The *per capita* consumption of cheese in the United Kingdom now amounts to some 9½ lbs. per annum.

UNITED KINGDOM—CHEESE IMPORTS AND PRICES

Year	Imports ('000 cwts.)					Prices (a) (per cwt.)	
	From New Zealand	From Canada	Total Foreign	Total(b)	Empire Percentage	New Zealand White	Canadian White
1929	1,801	723	418	2,994	86.0	s. d. 91 3	s. d. 104 9
1930	1,961	678	407	3,112	84.1	77 6	90 6

(a) Annual average prices for first quality on the London Provision Exchange. Source: Imperial Economic Committee.
(b) Including other Empire countries not separately specified.

The past six years have witnessed a gradual decline in prices realised for Dominion cheese, although the steadiness of supplies has prevented the fall from being quite as acute as in the case of butter. Quotations for New Zealand qualities, which had suffered a sharp reduction in 1933, fell only slightly last year, and were actually well above the previous year's level in the early months of 1935. Since June, however, this gain over 1934 has been lost. The Canadian cheese exporters in recent months have been more fortunate; for the reduced supplies of matured Canadian qualities have been marketed this year at prices which have consistently shown a substantial gain over those of 1934. Home-produced Cheddar, Cheshire and Caerphilly became still cheaper between 1933 and 1934, but the decline in the price of the former has been checked during the present year. Prices for English Cheshire, on the other hand, have been running materially below the 1934 level in recent months.

Certainly our domestic producers of butter and cheese have a problem to face. It is greatly to be hoped, however, that the policy of "protection first; reorganisation now" will not be pursued in the case of two such important constituents of our standard of living as butter and cheese. We have had a pretty taste of that policy with milk and bacon; and the adoption of the same policy for the iron and steel industry has made so hard-bitten a protectionist as Lord Nuffield cry out against it. The moral is that a thoroughgoing reorganisation of the butter-and-cheese-producing sections, is urgently needed. The rising figures for the consumption per head of dairy products demonstrate that low prices and imports from abroad mean a rising standard of living. To set out merely to raise prices again by shutting out imports, without effecting a cut in costs of production and distribution by reorganisation, is to take a big step backwards.

PROGRESS IN PALESTINE

(BY A CORRESPONDENT)

PALESTINE is the one country which has forged ahead in the world economic depression. Her immigration, her heavy imports of capital, her rapid industrial and agricultural development, her rising exports and imports—all these are evidences of a state of affairs which can scarcely be paralleled in any other country during the last few years. Nor has the general movement slackened in the current year.

The industrial expansion of Palestine, which was so marked during the past two years, has been well maintained this year. The large increase of immigrants bringing with them investment capital has stimulated economic activity and strengthened the forces of recovery. Considerable sums of capital for further use are now becoming available, for wide areas of citrus plantations have reached the period of maturity. In the course of 1934, £10 millions were invested in building, citrus fruit cultivation and industry. But of this sum building accounted for more than half the total. It is, significantly enough, the shortage in housing facilities that is the most spectacular feature of Palestine's present economic development. Consequently, the productive forces of the country are now being diverted from citriculture and manufactures to solve this acute problem.

The feverish pace of building has failed to ease the housing situation, and rents are expected to soar still higher at the next moving season. A survey conducted by the Jewish Federation of Labour in the city of Tel Aviv at the end of 1934 showed that in six hundred apartments and bungalows with 3,653 rooms, chosen as a representative sample, the average density of population per room was 2.07, while in the suburbs the figure rose to 5.50. Monthly rents for unfurnished rooms varied from £1.5 to £3.5 in the most recently constructed buildings. As immigration in the first six months of this year is equal to that for the whole of 1933, the prospect that the problem will abate in the near future appears very remote.

While domestic architecture in Palestine is very compact—largely due to the high price of land—the scarcity of room space is directly related to the shortage of labour. Out of a Jewish labour force of 64,000 in May of this year, 15,000 were employed in building, and another 20 per cent. were engaged in subsidiary industries. The high wage rates obtaining in this field raised the general level of wages throughout the country, but not sufficiently to halt the drain of labour to the building trades from other branches of economic activity. While labour is cheap throughout the whole of the Near East, plasterers in Tel Aviv received as much as £10.9 per day at the end of last year. Again, due to the housing shortage, building costs rose 26 per cent. in 1934 over the level prevailing two years previously. This increase was mainly induced by the labour shortage, as the price of materials only rose 10 per cent., while wages rose 60 per cent. The mechanism of free prices and wages is

no longer adequate to ensure the supply of the building industry with the requisite amount of labour; and pressure is being brought to bear on the Government to relieve the strain on the national economy by an increase in the number of immigration certificates allotted bi-annually.

Year	Jewish Immigration		Factories and Workshops			Imports	Exports
	Total	Capitalist (Possessing £1,000 or more)	Em- ployees	Capital	Output		
1933	30,327	3,250	19,510	Mn. £P 5.27	Mn. £P 5.40	Mn. £P 11.1	Mn. £P 2.6
1934	42,859	5,124	25,000	6.50	5.40	15.2	3.3
1935 (6 months) (1st quarter)	30,474	2,112	...	...	...	4.4	2.8

The industrial development of the country is largely concentrated in the vicinity of Tel Aviv and Haifa. The latter, for which the new settlements in the Valley of Jezreel constitute the hinterland, is rapidly assuming importance as the gateway to the Near East. As the southern terminus of the Mosul pipeline, the port of Haifa is gaining strategic significance; this will be enhanced when the projected railroad tapping the Middle East is completed. Tel Aviv, on the other hand, is developing medium sized industries, while the large-scale, heavy units tend to gravitate towards the northern shipping centre. The bulk of industrial capital is being invested in large factories. The last census undertaken by the Jewish Agency in 1933 indicated that of 3,388 establishments investigated, these constituted only 7 per cent. of the total number, but accounted for 81 per cent. of the capital invested, 57 per cent. of the output, and 44 per cent. of the labour force. This tendency has been accentuated in the past year. During the first quarter of the present year the importation of machinery rose more than 75 per cent. over that for the first quarter of 1934. The efficiency of Palestinian industry has grown perceptibly and the quality of local products has greatly improved in the last two or three years. One or two examples of the rate of industrialisation are significant.

The Palestine Electric Corporation, serving practically the entire country with the exception of Jerusalem, nearly doubled its sales of power for industrial purposes during 1934. A new station is being erected at Haifa, and current will be generated with oil supplied by the Iraq Petroleum Company. Palestine Potash, Limited, which is exploiting the mineral deposits of the Dead Sea, has increased its productive capacity for potash from 10,000 to 25-30,000 tons annually, and the output of potash and bromine rose by 50 per cent. during 1934. The Portland Cement Company, Nesher, working at full capacity, is able to supply only about half the needs of the country. From being an exporter of this product, Palestine has become an importer on a relatively large scale.

The steep rise in labour costs is at present restricting the avenues of investment in Palestine. Funds are not deficient; bank deposits in March, 1935, totalled £16

millions, an increase of £P3.5 millions in a period of twelve months; and there has also been an accumulation of capital in the special accounts which the Reichsbank maintains for transfer to Palestine. German Jews desiring to export their capital may deposit it in one of two accounts, depending on whether they desire clearance in the near future or at a later date. The Havarah, Limited, acting as trustee in Palestine, attempts to find customers for machinery and building materials manufactured in Germany, so as to establish a credit with the Anglo-Palestine Bank or the Bank Der Tempelgesellschaft, which is the agent of the Reichsbank. The account in Germany is utilised for paying the exporter, and the funds collected by the Havarah, Limited, against the eventual sales are deposited, at a discount, to the credit of the person originally transferring the capital. The rapidity of transfer depends on the amount which is currently being deposited in Germany and on the ability of the trustee to dispose of the German products. The recent worsening of the position of the Jews in Germany has resulted in the accumulation of large balances at the German end, while in Palestine investment is limited by the rising industrial costs. No further deposits have been accepted since February, and there is now a large body of capital held abroad waiting to be invested. For any estimate of Palestinian economic potentialities this sum should be added to the redundant money lying idle in the banks of Palestine.

The rapid and extensive economic expansion of the country has been accomplished with relatively little external borrowing. Thus Palestine will escape the obligation of remitting large sums abroad on interest account. Despite an investment of £P6 millions in buildings (twenty largest centres) during 1934, the chief mortgage companies did relatively little business, which suggests that a collapse of real estate prices would in the first instance only lead to a technical readjustment of values, rather than to widespread hardship. Interest rates have steadily declined, and the technical position of Palestinian industry has been strengthened by several substantial reductions by the Palestine Electric Corporation in the price of power.

From this short survey of Palestine's economic position one fact stands out with inescapable clarity: the Palestinian national economy is suffering from acute shortage of labour. This sounds almost heretical in a world of unemployment; but it is not too much to say that unless Palestine can alleviate the burden of excessive labour costs on her national economic structure, no matter how much capital and savings she borrows or piles up, its profitable utilisation, both in domestic and foreign trade, must remain severely circumscribed. Sufficiency of capital; deficiency of labour; that is Palestine's problem.

LEAGUE AND AGGRESSOR

In view of the extreme importance of the Council session which began in Geneva on Wednesday, we print the relevant sections of the Covenant below, together with a summary of the more important precedents of League action in respect of "aggression," and a review of the Italo-Ethiopian dispute to date.

PRESIDENT WILSON'S FOURTEENTH POINT

"A general association of nations must be formed under specific covenants for the purpose of affording mutual guarantees of political independence and territorial integrity to great and small States alike."

THE RELEVANT ARTICLES OF THE COVENANT

ART. X.: "The Members of the League undertake to respect and preserve as against external aggression the territorial integrity and existing political independence of all Members of the League. In case of any such aggression or in case of any threat or danger of such aggression the Council shall advise upon the means by which this obligation shall be fulfilled."

ART. XI.: (1) "Any war or threat of war, whether immediately affecting any of the Members of the League or not, is hereby declared a matter of concern to the whole League, and the League shall take any action that may be deemed wise and effectual to safeguard the peace of nations. In case any such

emergency should arise the Secretary-General shall on the request of any Member of the League forthwith summon a meeting of the Council.

(2) It is also declared to be the friendly right of each Member of the League to bring to the attention of the Assembly or of the Council any circumstance whatever affecting international relations which threatens to disturb international peace or the good understanding between nations upon which peace depends."

ART. XII.: (1) "The Members of the League agree that if there should arise between them any dispute likely to lead to a rupture they will submit the matter either to arbitration or judicial settlement or to inquiry by the Council, and they agree in no case to resort to war until three months after the award by the arbitrators or the judicial decision or the report by the Council.

(2) In any case under this Article the award of the arbitrators or the judicial decision shall be made within a reasonable time, and the report of the Council shall be made within six months after the submission of the dispute."

ARTS. XIII. and XIV. provide for arbitration, for non-recourse to war against a State complying with an arbitral or judicial decision, for the Council's powers to propose what steps shall be taken in default of compliance, and for the Council's right to refer questions to the Permanent Court of International Justice at the Hague, set up under Art. XIV.

ART. XV.: (1) "If there should arise between Members of the League any dispute likely to lead to a rupture, which is not submitted to arbitration or judicial settlement in accordance with Art. XIII., the Members of the League agree that they will submit the matter to the Council. Any party to the dispute may effect such submission by giving notice of the existence of the dispute to the Secretary-General, who will make all necessary arrangements for a full investigation and consideration thereof.

(2) For this purpose the parties to the dispute will communicate to the Secretary-General, as promptly as possible, statements of their case with all the relevant facts and papers, and the Council may forthwith direct the publication thereof.

(3) The Council shall endeavour to effect a settlement . . .

(4) If the dispute is not thus settled, the Council either unanimously or by a majority vote shall make and publish a report containing a statement of the facts of the dispute and the recommendations which are deemed just and proper in regard thereto.

(5) Any Member of the League represented on the Council may make public a statement of the facts of the dispute and of its conclusions regarding the same.

(6) If a report by the Council is unanimously agreed to by the members thereof other than the Representatives of one or more of the parties to the dispute, the Members of the League agree that they will not go to war with any party to the dispute which complies with the recommendations of the report.

(7) If the Council fails to reach a report which is unanimously agreed to by the members thereof, [other than the disputants] "the Members of the League reserve to themselves the right to take such action as they shall consider necessary for the maintenance of right and justice.

(8) [excepts matters within domestic jurisdictions of parties].

(9) The Council may in any case under this Article refer the dispute to the Assembly. The dispute shall be so referred at the request of either party to the dispute provided that such request be made within fourteen days after the submission of the dispute to the Council."

(10) [provides for voting procedure in the Assembly].

ART. XVI.: (1) "Should any Member of the League resort to war in disregard of its covenants under Arts. XII., XIII., or XV., it shall *ipso facto* be deemed to have committed an act of war against all other Members of the League, which hereby undertake immediately to subject it to the severance of all trade or financial relations, the prohibition of all intercourse between their nationals and the nationals of the covenant-breaking State, and the prevention of all financial, commercial, or personal intercourse between the nationals of the covenant-breaking State and the nationals of any other State, whether a Member of the League or not.

(2) It shall be the duty of the Council in such case to recommend to the several Governments concerned what effective military, naval or air force the Members of the League shall severally contribute to the armed forces to be used to protect the covenants of the League.

(3) The Members of the League agree, further, that they will mutually support one another in the financial and economic measures which are taken under this Article, in order to minimise the loss and inconvenience resulting from the above measures, and that they will mutually support one another

in resisting any special measures aimed at one of their number by the covenant-breaking State, and that they will take the necessary steps to afford passage through their territory to the forces of any of the Members of the League which are co-operating to protect the covenants of the League.

(4) Any Member of the League which has violated any covenant of the League may be declared to be no longer a Member of the League by a vote of the Council concurred in by the Representatives of all the other Members of the League represented thereon."

[Note.—The League Assembly in October, 1921, passed a resolution containing the following passage: "It is the duty of each Member of the League to decide for itself whether a breach of the Covenant has been committed. The fulfilment of their duties under Art. XVI. is required from Members of the League by the express terms of the Covenant, and they cannot neglect them without breach of their treaty obligations."]

THE PRINCIPAL PRECEDENTS

1921: *The Yugoslav-Albanian Dispute*.—In 1921, Albania, a Member of the League whose boundaries had not yet been settled, appealed to the League under Art. XI. in consequence of Serb and Greek activities on Albanian frontiers. The Council set up a Commission of Inquiry, but owing to delays to meet Italy's wishes, the Serbs invaded Albania. The British Government telegraphed to the Secretary-General, urging instant convocation of the Council. Serbia was threatened with the application of Art. XVI. Albania's frontiers were delimited, and in November the Council secured the withdrawal of the Serb armies behind the Albanian frontiers.

1923: *The Corfu Dispute*.—In 1923, while a Commission set up by the Council of Ambassadors was delimiting the Greco-Albanian frontier, the Italian members, including General Tellini, were ambushed and killed on Greek territory. Italy sent a 24-hour ultimatum to Greece, to which Greece duly replied, at the same time as she appealed to the League under Arts. XII. and XV., stating her willingness to accept arbitration. A few hours later, the Italian Government bombarded and occupied the Greek island of Corfu, denying the Council's competence to handle the dispute, on the grounds that the Conference of Ambassadors was seized of the points at issue. The Council affirmed its right to deal with any dispute that could lead to war; but the Conference modified the terms of a settlement in favour of Italy, on condition that Signor Mussolini evacuated Corfu. As Greece paid the 50 million lire originally demanded by Italy, Italy evacuated Corfu.

1925: *The Greco-Bulgarian Dispute*.—Frontier incidents led to a Greek invasion of Bulgaria, who appealed to the League under Arts. X. and XI. The President of the Council was empowered to send a telegram ordering both sides to cease fire, and to summon the Council forthwith. The Council insisted on the withdrawal of all troops within national boundaries, and requested France, Great Britain and Italy to send a Commission of military officers to the frontier to supervise the execution of the Council's requirements. A Commission of Inquiry later assigned responsibility to Greece and fixed an indemnity on behalf of Bulgaria. The Council adopted this report and both sides concurred in the settlement.

1931-32: *The Annexation of Manchuria by Japan*.—In September, 1931, the Japanese army, alleging that a railway incident in Manchuria constituted "provocation" by China, overran Manchuria.

China appealed to the League under Art. XI. on September 21, 1931. On October 14th, despite Japanese objections, the U.S.A. was invited to join the League Council's deliberations, as a State concerned in the matter and as a signatory of the Kellogg Pact. Japan proposed an impartial inquiry; the Council agreed; and the Lytton Commission sailed for China in February, 1932. But on January 3rd, China, in view of threatened developments in Shanghai, appealed again to the League under Arts. X. and XV. The League Assembly therefore became seized of the dispute, and a special session was convened for March, 1932.

As Russia and U.S.A. were intimately concerned, but were not League Members and could offer no undertakings to apply sanctions, the dispute was referred by the Assembly to a Committee of Nineteen. Nothing was done till the Lytton Report, which condemned Japan's action, and proposed an autonomous province of Manchuria under Chinese sovereignty, was published on October 2, 1932. In February, the Assembly adopted the Report of the Committee of Nineteen, which stated that Chinese sovereignty should be maintained, condemned Japan's actions, and called on Japan to retire to the railway zones. Japan refused, and gave notice of retirement from the League instead. No sanctions were ever applied by the League.

THE ITALO-ETHIOPIAN DISPUTE AND THE LEAGUE

Ethiopia appealed to the League on January 3, 1935, under Art. XI. At the January Council meeting it was decided with the consent of both parties, that conciliation should be attempted, as provided in the Italo-Abyssinian Treaty of 1928, failing which the dispute should come up in May. At the May Council meeting, Signor Mussolini agreed to the two Abyssinian members of the Conciliation Commission, recognised the Council's right to handle the dispute by August 25th if arbitration failed to reach a settlement, and by July 25th if the two Italian and two Abyssinian arbitrators had not agreed on the fifth arbitrator. The arbitration proceedings came to a complete deadlock, and the Council met on July 31st. It was decided to attempt progress along two lines: first, by the Council's securing the appointment of the fifth arbitrator, and secondly, by tripartite negotiations in Paris between Italy, France and Great Britain.

The Council, however, then passed a second resolution, as follows: "The Council decides to meet in any event on September 4th to undertake the general examination in its various aspects of the relations between Italy and Ethiopia." The tripartite negotiations evolved a Franco-British offer of wide economic powers in Ethiopia to Signor Mussolini which was ignored by him; and the Paris meeting broke up.

The Italo-Ethiopian dispute on the League Council's agenda this week does not specify under which Article of the Covenant it is to be discussed. Since January, Ethiopia appealed to the League a second time, but under Art. XV., mentioning also Art. X.; Italy, however, declined to discuss the dispute under Art. XV., in view of the conciliation proceedings.

The five arbitrators of the Conciliation Commission, however, reported unanimously on September 4th that no final responsibility for the Walwal affray could be assigned to either side. This apparently leaves the dispute before the League under Arts. X., XI. and/or XII. and/or XV.

THE PRESENT COUNCIL

The following States are Members of the present Council of the League: Great Britain, France, Italy, U.S.S.R., Czechoslovakia, Mexico, Poland, Denmark, Argentina, Australia, Portugal, Chile, Spain and Turkey. Germany is still technically a Member, but sends no delegates.

NOTES OF THE WEEK

The Abyssinian Oil Concession.—The world was astounded on Saturday of last week to learn that a concession covering the exploitation of oil and many other minerals in the whole eastern half of Abyssinia had been granted by the Emperor to the African Exploitation and Development Corporation, through the agency of a British subject, a certain Mr Rickett. The Corporation was incorporated by nominees in the United States some months ago, and its beneficial owners were unknown. This news could not possibly have come at a more unfortunate time. The real owners of the concession could not be discovered, but the suspicion was immediately aroused, and freely expressed, both in Italy and in other countries, that it was an attempt of British diplomacy to forestall Signor

Mussolini's designs upon the natural wealth of Abyssinia. The British Government took what steps it could. It disclaimed all knowledge of the concession, expressed its emphatic disapproval of it, and conveyed its formal advice to the Emperor to disavow it. Nevertheless the suspicion remained. The effect on Italian opinion could perhaps be ignored, since the Italian press has from the start attributed Great Britain's attitude to consideration for her selfish interests alone. But on other countries, and most particularly upon France, the effect was to impair, if not destroy, confidence in Great Britain's disinterestedness. Fortunately, the mystery was solved in the nick of time before the Council meeting. On Tuesday representatives of the Socony-Vacuum Oil Company (a merger of the Standard

Oil Company of New York with the Vacuum Oil Company) asked for an interview with the American Secretary of State and informed him that the African Exploitation and Development Corporation was, in fact, a subsidiary of the Standard Oil group of companies, which were therefore the sole beneficiaries of the concession. The Secretary of State is reported to have expressed forcible disapproval of the whole incident, and he secured from the company the abandonment of the concession. It was also announced in Washington that "not a shilling of British money" was involved in the transaction. The affair thus had a comparatively happy ending; and Mr Cordell Hull's prompt and statesmanlike handling of the matter is significant of both the American Government's anxiety not to prejudice the labours of the peacemakers, and of the strength of American public opinion when roused against the anti-social activities of large concerns. The motives of H.M. Government are cleared of suspicion, and the concession itself, which might have been a source of legitimate irritation to Italy, is abandoned. But it would be idle to deny that a very nasty taste has been left in the mouth of the general public. It was perhaps natural that the Emperor, in his desperate need of cash, should have been ready to sell such a concession; though he cannot have been unaware of the political repercussions, unfavourable to Abyssinia's cause, which it would necessarily have. But the discovery that there are still oil companies prepared to advance their private gain under the cloak of anonymity, careless of the effect their actions may have upon the peace of the whole world, is enough to confirm the very worst suspicions of "oil diplomacy" which have ever been uttered. There is some satisfaction to be drawn from the fact that Mr Rickett's nationality—and his honorarium—were the only connections of Great Britain with the affair. But the moral to be drawn surely is that it should be made impossible for British subjects, by transactions which profit only themselves, to thwart the policy and diplomatic effort of their country.

A Papal Pronouncement.—On August 27th the Pope gave audience, at Castel Gandolfo, to the members of an international congress of Catholic trained nurses. He was speaking to a group of Catholics who, if war did break out, would be called upon at once to take an active part in mitigating its horrors; and he took the occasion to make a noteworthy pronouncement on war in general and, in particular, on the threat of war between Italy and Abyssinia. At first reading, some commentators were inclined to criticise the Pope's words as being over-diplomatically non-committal. But this is not how they strike anyone who studies them with a knowledge of the traditional style of Papal pronouncements and of the extreme caution which the Popes have—wisely and rightly—been apt to use in modern times in any public statement on the burning religious and moral issues of the day. The Pope began by giving a fair statement of what the Italian Government's present policy looks like to foreign and to Italian eyes respectively. He then went on to lay down certain propositions of his own which will be supported not only by Catholics but by people of all religions who have at heart a really just and reasonable solution of the present crisis. In the first place, the Pope declared unequivocally that a sheerly offensive war (if Italy were proved to be contemplating that) would be an unjust war. Having said so much, he did not need to underline the implications; for it is notorious that, according to the doctrines of Christian theology, an unjust war is a sin which the Church is bound not only to condemn in the abstract and in general but also to prohibit her members, as individual souls, from committing or abetting. In the second place the Pope declared that the distinction between a legitimate and an illegitimate war must be drawn sharply and strictly. "The right of defence has certain limits which must be observed if this defence is not to become guilty." In the third place, he suggested that other ways than war could and should be found for meeting the need for expansion, and for access to the world's controlled resources and markets. When these three points are taken together and allowance is made for the difference between the style of the Vatican and the

parliamentary language of Westminster, we shall be struck by the close agreement between the Pope's pronouncement of last week and Sir Samuel Hoare's speech in the House of Commons just before the beginning of the recess. In both we find a balanced insistence upon the same dual policy; on the one hand a clear condemnation of the resort to aggressive force; on the other a wise and reasonable recognition that, if you want to prevent an explosion you must not only reinforce the boiler-plates but must also open the safety-valve.

The T.U.C. and Unemployment.—The outstanding declaration in the field of home policy at the Trades Union Congress this week was Mr Bevin's offer to co-operate with the Government in a specific plan to rescue the distressed areas. The T.U.C. has clearly despaired of any rapid solution of the problem. A committee of the Council recently expressed the view that large scale unemployment would persist in the distressed areas for some time, whether a Conservative or a Labour Government was in power. And a report recommending specific palliatives was adopted by the Council on Tuesday. This report proposes that the Special Areas Commissioners should be given full powers, unhampered by Departmental control, to promote economic development in the areas; and that they should be provided with much more generous funds than those at present available. The report also supports many of Mr P. Malcolm Stewart's recommendations, including those for the State ownership of mining royalties, the raising of the school-leaving age and the extension of old-age pensions. The most specific proposal was for the "thorough spring-cleaning" of the derelict parts of South Wales, and their development as a tourist area by the construction of a new trunk road and a road bridge over the Severn. In moving this report, Mr Bevin made the further suggestion that if the Prime Minister would set up a Commissioner's Council, and allow it a grant of £20 millions the T.U.C. would willingly co-operate in the attempt to rescue the still distressed areas. There is no doubt that some much bolder interim policy than the Government's present improvisation will have to be adopted before long. But such a policy must be fitted into a general plan designed to re-employ in really productive activities the resources now being wasted in South Wales, the N.E. coast and the Clyde district. And this will be impossible, in any reasonable space of time, unless our export trades are revived. If they do not revive, the areas will become distressed once more, as soon as the suggested £20 millions have been spent. The most hopeful and realistic suggestion in the T.U.C. report is that for development of part of South Wales as a tourist area. Cornwall has already shown how the ever-expanding tourist industry can absorb a great deal of labour released from a contracting industry in its midst. But unfortunately the mining population of South Wales is very many times that of Cornwall; and something more than the tourist industry, growing and likely to grow though it is, will be necessary if all the unemployed in the special areas are to be absorbed.

A Democratic Dispute.—The activities of "disruptive elements"—more particularly Communists—in the ranks of the trade unions were discussed by the T.U.C. on Tuesday. This danger, and the measures taken by the Council to meet it, have been greatly agitating the trade union movement during the past year. The General Council had addressed two circulars during the year, one to the unions and the other to trade councils. The first asked the executive committees of unions to consider drawing up or amending regulations "so as to empower them to reject the nominations of members of disruptive bodies for any official position." The second circular—known to dissentients as the "black circular"—made a ruling that any trades councils which admitted delegates associated with Communist or Fascist organisations should be removed from the list of councils recognised by the Congress. The circular had been approved by 283 trades councils; and only 18 had objected to it. Nevertheless, a considerable volume of opposition was manifested at the

Conference. The arguments urged against the circulars were two: first, that they were unwarrantable interferences by the General Council with local affairs; and secondly, that no ban should in any case be placed on the political opinions of any union members. The General Council was defended by Sir Walter Citrine, Mr Bevin and Mr G. Hicks, all of whom maintained that it was the Council's duty to protect the trade union movement against externally organised attempts at disruption. Mr J. Bromley, of the locomotive engineers and firemen, was found among the opposition, and the Miners' Federation moved a resolution to refer back the first of the circulars. This resolution was only defeated by 1,869,000 votes to 1,427,000. A vote of censure on the General Council, however, was defeated by 1,944,000 to 539,000. The debate as a whole demonstrated that sympathy for Communist methods is extremely rare in the ranks of British labour. Indeed, almost every one of the General Council's critics expressed his disapproval of Communist activities. Paradoxically enough, it was the strength of the delegates' desire to preserve the fully democratic character of the trades unions that led them to oppose the Council. Similarly on Wednesday the reluctance of Congress to accept instructions from externally controlled bodies impelled it to reject the proposal for collaboration with the Communist Trade Union International. Indeed, there was never a more vivid demonstration than this week's Congress how deep and instinctive is the attachment to democratic methods of the average British trade unionist.

Taking Position for Geneva.—As usual, the forthcoming meetings of the League Council and Assembly have been preceded by local meetings between the representatives of the various European blocs of States. This year, these meetings are of special interest in a most critical international situation. The Foreign Ministers of the four Scandinavian countries met at Oslo last week and issued a statement announcing their intention to work for the maintenance of the principles of justice represented by the League, and for a settlement of the Italo-Abyssinian dispute in conformity with the Covenant. This statement has since been followed up by speeches in the same sense from both the Norwegian Foreign Minister, M. Koht, and the former Swedish Foreign Minister, M. Undén. The speech of the former Swedish Foreign Minister grappled boldly with the question of possible collective sanctions. This is, of course, the attitude which the Scandinavian countries might have been expected to adopt. Nevertheless, it is good news that they have definitely taken this stand and that they have made their policy public. For the Scandinavians have a moral influence in the world which is out of proportion to their "man power" or their economic or military strength. Their lead will embolden all the other small countries to range themselves, in this crisis, in support of principles, and in defence of an institution, in which they know well that their one hope of salvation lies. If it is true, as we argued last week, that the salvation of the British Empire—and, for that matter, the salvation of France—is likewise bound up with the League, we may hope to find strong support forthcoming at Geneva for any Power or Powers that take the lead there in launching a bold and statesmanlike policy.

Politics in Central Europe.—The members of the partially overlapping Little Entente and Balkan groups, which have also been meeting in council, belong, like the Scandinavians and ourselves, to the category of States whose supreme national interest is the maintenance of international order. Three out of the five—namely, Yugoslavia, Greece and Turkey—are more afraid of aggression from the Italian side than from any other quarter. All five States are the natural allies of France so long as she constitutes herself the champion of the reign of law in international relations. But their position is embarrassing now that they have to deal with a France who is now—very humanly—struggling with a temptation to purchase Italy's friendship at the sacrifice of what has hitherto been the cardinal point of French foreign policy. It is perhaps significant that the

conference of Little Entente Foreign Ministers at Bled last week has given prominence to the Little Entente's opposition to a Habsburg restoration at either Vienna or Budapest. For while this is a point on which Czechoslovakia wholeheartedly agrees with Yugoslavia and Roumania, it is a matter on which France is indifferent and on which there is a direct conflict of policy between the Little Entente and Italy. At the same time, the Little Entente seems inclined to accept an invitation to a Danubian Conference for safeguarding the independence of Austria on the basis of a Franco-Italian proposal which has been submitted not only to the Little Entente States, but also to Germany, Hungary, Poland and Austria herself. The proposal is reported to contain suggestions for a multilateral pact in four clauses: one guaranteeing the independence of Austria; one binding the signatures to mutual non-interference in one another's internal affairs; one committing them to the principle of non-aggression; and one providing for consultation (not sanctions) in an emergency. Presumably the Little Entente Council's latest pronouncement against a Habsburg restoration is intended to refer specifically to clauses 2 and 3 of this Franco-Italian project. It has always been recognised that the negotiation of this Danubian Pact will be a difficult business, and it is rather surprising to learn that the proposed conference is expected to meet at the end of this month. Do the French and Italian Governments expect to see the Abyssinian crisis happily disposed of, by that date, to the satisfaction of all parties? Or is this a timely warning that France and Italy are standing "at the ready" in Central Europe?

Church and State in Germany.—The struggle of wills among the present rulers of Germany on the question what the religious policy of the Third Reich is to be is evidently still undecided. The week before last, when the Catholic Bishops of Germany were holding their annual conference at Fulda, a conciliatory gesture was made by Herr Kerrl, the recently appointed Reich Minister for Church Affairs. He sent an official of his department to Fulda with friendly messages. No doubt it was his intention to stave off an open breach between the Catholic Church and the Reich Government; and in this he has succeeded. Yet the Pastoral Letter, drawn up by the Bishops of Fulda, which was read from all Catholic pulpits in Germany last Sunday, has proved to be sufficiently unpalatable to Nazi tastes for the authorities to have forbidden the Press to print it. The Bishops have, indeed, given their sorely harassed flock a clear lead on the fundamental issues between religion and the totalitarian State. The two crucial passages in the Pastoral Letter are as follows:—

(1) If the law of the State comes into conflict with the law of Nature and the Commandment of God, the word applies, "We must obey God rather than man"; (2) It is said that religion has nothing to do with politics, but it must be replied that a man cannot be a Christian at home and a heathen in the street.

These are two fundamental issues on which a compromise is really impossible, and since the Nazi zealots seem as full of determination at present as the Christians, we may prophesy that the present lull is unlikely to last very long and that, sooner or later, the storm is bound to break. Moreover, the Nazis' efforts are proving as unsuccessful on the Protestant front as on the Catholic. After a personal

conference with Herr Hitler, Herr Kerri has proposed to the Protestants that—as a “provisional” measure for putting an end to the present “chaos”—all the Protestant churches in Germany shall accept a State control not only over their finances and administration, but even over their ecclesiastical discipline. This proposal has been rejected by the leaders of the Confessional Movement, on the ground that the whole issue of the Church conflict was the preaching of the true faith. It is becoming daily clearer that the German Catholics and the German Protestants are fighting the same battle. He would be a bold man who prophesied complete victory for the State on such a battlefield.

* * *

A G.W.R. Centenary Decision.—On August 31st, three days before Sir Malcolm Campbell made a new land speed “record” by driving a motor car over a measured mile at an average of 301.129 miles per hour, the Great Western Railway “Centenary train” covered the 117½ miles between Bristol and Paddington (*via* Badminton) in 105 minutes 29 seconds, at an average speed of 66.9 miles per hour. The difference between the two speeds may be striking, but each, in its own sphere, was a triumph of engineering and organisation. Sir Malcolm’s feat, however, far-reaching as its technical implications may be, was merely an intrepid *tour de force*, executed once and for all by a single driver of superlative skill at considerable personal risk. The Great Western’s achievement, though a “record” for a scheduled run of over 100 miles in Great Britain, was merely the “send-off” for a new service which will make the journey in the same time, both ways, once a day from next Monday onwards. Every suggestion of a “stunt” was studiously excluded by those responsible for this new landmark in British railway history. The engine was the famous “King George V,” which has been working regularly since its construction at Swindon as long ago as 1927. The train consisted of eight coaches, 265 tons loaded, in which over 100 people travelled at a maximum speed of 88 miles per hour, with so high a degree of safety and comfort that no drop was spilled from any teacup in the course of the whole journey. The company could have paid no fitter compliment to the City of Bristol, whose business men and institutions played so decisive a part in the inauguration of the Great Western a hundred years ago. It is a far cry to the days of the 1840’s, when, on the opening of the original Great Western line, the fastest London to Bristol train had a schedule of 4 hours 10 minutes, and unhappy third-class passengers made the journey, in 9½ hours, in open vehicles whose ends and sides extended a bare six inches above the seat level. The new service, incidentally, will not be the fastest, start to stop, in the world—nor even on the Great Western itself. For the last three years the latter’s famous “Cheltenham Flyer” has been booked to cover the 77.3 miles between Swindon and London in 65 minutes, at an average speed of 71.4 miles per hour. The German “Flying Hamburger” has a faster time, but is not a steam train. In Canada, some years ago, the C.P.R. introduced a train covering the 124 miles between Smiths Falls and Montreal West at a start-to-stop average of 68.9 miles per hour, and recent developments in the United States of America have also resulted in the establishment of faster times than those of the Great Western’s services. Nevertheless, the British company may take pride in an achievement which is designed, like its predecessors, not as a spectacular feat, but as a permanent addition to the amenities of the travelling public.

* * *

The “Terriers.”—A decision of considerable importance, and of historic interest, was announced on Wednesday. From October 1st next the responsibility for all military services affecting the British Territorial Army will be transferred from the Parliamentary Under-Secretary of State for War to the appropriate Military Member of the Army Council; and thenceforward each member of the Army Council will have the same responsibility for the Territorial Army as he now has for the Regular Army within his particular sphere. This change-over of responsibilities inside the War Office places the “Terriers”

within the same organisation as the “Regulars,” and thus gives belated recognition to their great importance. It is worth recalling that the late Lord Haldane’s great achievement at the War Office in 1908 was his organisation of the Territorial Army on a national scale. And it was one of the greatest of our early war-time blunders when Lord Kitchener affected to belittle the “Terriers’” capacities, and set about raising an army of raw recruits when he had the results of Lord Haldane’s work ready to his hand. The present decision is thus as much a belated recognition of Lord Haldane’s foresight—a recognition never publicly accorded to him in his lifetime—as it is of the fitness of the “Terriers” for the purposes of the Army Council. This week’s decision may well herald a revival in recruiting for a non-Regular service which is now recognised as of great importance in our system of national defences.

Art in Industry.—Materialism need not mean crudity. Why should not the new machinery of the industrial age spread beauty and elegance, rather than ugliness and vulgarity? This question has begun to stimulate even Government Departments to action. The Board of Trade in January, 1934, appointed a Council for Art in Industry, and this council has just issued a report called “Education for the Consumer.” The report goes straight to the heart of the matter, lays most of the blame for the present low standards of our articles of everyday use on the poor taste and lack of appreciation of consumers; decides perfectly correctly that the only way to improve the situation is by education of the children; and recommends the overhaul of the system of teaching Art in our elementary and secondary schools. It concludes that the children should give far more of their time to art; that wood and metal work should be taught as subjects related to design and not merely as technologies; that the School Certificate examination should be modified to correct the present emphasis on “abstract” subjects desired by Universities for academic degrees; that art should be a compulsory subject in training colleges; that the training of teachers should be greatly improved; and that there should be a great improvement in the standards of school buildings and equipment. “The whole course of art should aim at enriching the stock of images and impressions which the child gathers at school. Art should cease to be a thing apart, and should permeate all the activities of the school . . . British manufacturers will then be encouraged—they may even be compelled—to pay more and more attention to design.” Reform of education is necessarily slow, but with 600,000 children leaving elementary and secondary schools every year, an enormous amount of good could be done in even so short a time as ten years. Any Government should be ready and willing to help in the task of arresting “uglification.”

* * *

Sir J. Stamp on Stabilisation.—There is a growing body of opinion which favours the attempt to discover some workable compromise between the old “automatic” gold standard of the past and the freely fluctuating exchange movements of to-day. This week Sir Josiah Stamp, speaking at the international conference of building societies at Salzburg, made a further contribution to the debate. On the whole, Sir Josiah seems to advocate something rather nearer to the old rigidly conceived gold standard than either Sir Arthur Salter in his recent articles in the *Economist* or the international conference of economists held in Belgium in July—unless of course Sir Josiah is relegating the “ultimate” stage of his plan to a very distant future. The reconstruction of the international gold standard, Sir Josiah said, must be approached in successive stages. First, the true parities between the principal currencies, irrespective of speculative factors, must be ascertained with reasonable accuracy. Secondly, there must be a *de facto* establishment of such parities “provisionally, with ample scope for adjustment during a trial period.” Thirdly must come the “closing up of the zone of exchanges into narrow ranges, with experience, and the establishment of periods of trial.” Fourthly and finally would come the institution of a com-

plete international gold standard in which “goods and services must be paid for by goods and services,” and “creditor nations must not receive their debts predominantly in gold.” With these ultimate aims, and with the proposal for successive stages of advance, there will be fairly general agreement among those who realise the value of a world monetary standard, but recognise that it cannot be built in a day. When Sir Josiah goes on, however, to lay down that “movements of gold must be allowed to have full measure of effect upon the volume of credit and the level of prices and wages,” he raises many anxious questions. Does he mean, for instance, that an over-valued currency must always be adjusted by a deflation of money costs and not an alteration in the gold parity of the currency? And when he says that the standard “must be managed by co-operative effort working to a common and intelligent end,” does he mean merely that the value of gold should be internationally managed, or that individual gold parities should be alterable by agreement? These fundamental questions will have to be answered before much further progress towards an international standard can be made. For the experience of the last ten years has lent weighty support to the view that the process of re-adjusting currency values by an alteration in cost levels is often not only painful but impossible.

* * *

Indo-Japanese Trade Pact.—Figures recently published by the Government of India on the first year’s operation of the Indo-Japanese trade agreement appear at first glance to throw a very favourable light on its possibilities. The cotton protocol embodied in the terms of the agreement provided that if Japan bought 1,000,000 bales of cotton from India in a year, she would be automatically entitled to export to India 325 million square yards of cotton piece-goods during the same period, this amount being distributed in a fixed proportion among four categories of cloth; and, further, that if she increased her import of Indian cotton to 1,500,000 bales she could, in return, export 400 million square yards, this being the maximum export permitted. The agreement came into operation on January 8th last year. During 1934 India’s net exports of raw cotton to Japan amounted to 2,053,534 bales, and during the first quarter of this year exports amounted to 392,078 bales. Against this Japan was entitled to export to India for the period from January 8, 1934, to March 31, 1935, a total of 477,997,260 square yards. But actually Japan’s exports to India amounted to no more than 401,169,574 square yards. The following table, showing the development of India’s exports of raw cotton to Japan and of her imports of Japanese piece-goods during the past three years, suggests that the balance of advantage arising from the trade agreement has so far been in India’s favour.

Year ended March—	Indian Exports of Raw Cotton to Japan		Indian Imports of Piece-goods from Japan	
	Tons	Sq. yds.	Tons	Sq. yds.
1933	193,686	509,516,012	182,566	300,652,248
1934	182,566	300,652,248	359,033	335,671,020
1935	359,033	335,671,020		

But it is probable that, in addition to the Indo-Japanese trade agreement, other influences contributed to the remark-

able increase of India’s exports of raw cotton to Japan in 1934. Until a few years ago Japan’s imports of Indian cotton normally exceeded her purchases from the United States. It was only in 1932, following the heavy slump in the price of United States cotton, that Japan’s imports of the American fibre began to exceed her purchases in India. In 1934, however, prices of United States cotton were raised deliberately by means of crop restriction and other measures. As quotations for Indian cotton did not rise proportionately, Japan probably found it profitable to increase her purchases of Indian cotton at the expense of United States cotton. Thus, Japanese consumption of Indian cotton during the six months ending January 31, 1935, once more exceeded her consumption of United States cotton. Moreover, total consumption of raw cotton in Japan rose from 3,094,000 bales in the year ended January 31, 1934, to 3,545,000 in the following year. It seems, therefore, too early to attempt to assess the effect of the agreement itself on Indo-Japanese trade.

* * *

Shipping Freight Index.—As measured by our monthly index number, the general level of whole cargo shipping freights fell by 1.0 per cent. during August, following a fall of 1.2 per cent. during July. The current figure of 82.1 compares with 89.6 in August last year and 81.4 in August, 1933. Details of the index number are as follows:—

	(1898-1913=100)				
	Average, 1913	August, 1934	June, 1935	July, 1935	August, 1935
European waters	110.0	91.1	91.4	91.7	88.5
North America	113.1	77.4	79.8	79.5	78.2
South America	123.4	85.4	82.4	82.5	82.3
India	108.3	96.1	86.5	83.4	83.3
Far East and Pacific	117.4	91.5	77.7	73.6	77.7
Australia	127.9	96.1	86.4	87.2	82.8
	116.3	89.6	84.0	83.0	82.1

Hull reports that rates are being well maintained, though there is little expansion in the demand for tonnage. The Liverpool market remains dull and Newcastle states that owners are holding tonnage as they can get better business from the near Continental coal ports. At Newport rates have shown a downward tendency following a slight improvement in freights, but at Swansea the coasting market is particularly slow and inquiry for both the Bay and Mediterranean is poor. There is little activity in the Glasgow market. Movements of the various sections are as follows:—

	Index No.	Inc. or Dec. Points		Index No.	Inc. or Dec. Points
Home trade	83.1	- 2.6	South America—		
Bay—outwards	111.9	+ 3.6	Outwards	64.0	- 1.5
Bay—homewards	82.3	- 8.0	Homewards	100.6	+ 1.1
Mediterranean—			India—outwards	81.4	- 1.4
Outwards	91.8	- 10.0	India—homewards	85.2	+ 1.3
Homewards	79.1	+ 0.7	Far East, etc.	77.7	+ 4.1
North America	78.2	- 1.3	Australia	82.8	- 4.4

Expressed as a percentage of the average for 1913, the complete figure of our index number for August is 70.6, compared with 71.3 for July and 77.0 for August, 1934.

UNITED STATES

THE UTILITIES BILL PASSED

THE closing hours of the Congressional session became a stampede, as an incredible number of major Acts were passed so rapidly that there was barely mention, much less discussion, of them in the Press. The passing of the Railway Pension Bill was a distinct surprise, as it had been understood that it would be held over for the January session. This Act provides the taxation to finance the pension scheme.

The much-discussed Holding Company Bill passed, including the compromise “death sentence.” This granted a certain element of administrative discretion in regard to holding companies that are immediate combinations of locally proximate operating companies; its administration is entrusted to the Securities and Exchange Commission. Curiously enough, Wall Street had persuaded itself that either the Bill would not pass or that at the eleventh hour it would be reduced to some innocuous form. On this hypothesis a great bull market had developed in the securities of precisely the companies that were most vitally affected, and whose securities had previously been most

depressed by anticipatory apprehensions. Between the middle of March and the middle of August the common indices of utility equities showed an advance of just one hundred per cent.; but far greater increases were common in numerous individual issues. The passage of the Bill in full severity was followed immediately by the appointment to the S.E.C. of a new *ad hoc* member, regarded by the financial community as completely in accord with the Act. The result was heavy liquidation of the shares which had been most violently bulled.

The weakness of the Government security market has now persisted over some weeks, and while it has not been severe, it has attracted attention and a certain amount of discussion. The professional explanation is that the Treasury's recent experiment of selling periodically long-term 2½ per cent. bonds at auction has resulted in poor distribution that has weakened the technical position of the market, particularly in advance of the large refunding operations set for October, when the last of the fourth 4½ per cent. Liberty Loan will be refinanced. Another more fundamental reason may be mentioned. In the first half-year the Treasury made no demands for fresh money, and drew upon its previously accumulated cash balances. This created an ideal situation for the great refunding operations of the period, and long-term Government issues rose to a figure which gave a return well under 3 per cent. Since the end of June the Treasury has been making continuous demands for fresh money, and there is sound reason to expect that these demands will continue, since the recent session of Congress made appropriations of over \$8,000 millions and perhaps close to \$10,000 millions, of which much less than half is covered by anticipated revenues. This creates a situation for the last half-year quite different from that of the first half, for the Treasury must conduct its refinancing operations concurrently with large demands for new money.

COTTON PRICES AND SENATOR HUEY LONG

With the entire legislative programme passed, save what was regarded as a routine deficiency Bill, Congress was on the point of adjourning when the Administration proposed, in lieu of the 12 cents a pound loan on cotton, a scheme for lending 9 cents plus a subsidy up to 3 cents a pound to all who would sign the crop-reduction agreement. The advantages of this proposal are obvious. Presumably it would increase consumption of American cotton by reducing the price to the American processor, and also stimulate exports. The plan was, however, met with a storm of protest from Southern Congressmen, who were committed to the 12 cent loan plan. A provision for the 12 cent loan was immediately appended to the deficiency Bill, and a complementary proviso for loan of 90 cents a bushel on wheat added for good measure.

The incident illustrates three important facts: (1) In general this country is now deeply committed to Governmental price fixing of agricultural commodities; (2) in the case of cotton two facts are apparent: (a) that there is little prospect of reducing the crop to domestic requirements, and (b) no disposition on the part of the producer to accept the world price; (3) when some special advantage is given to one crop, protagonists of other crops are quick to demand equivalent advantage—a sectional adaptation of the "most favoured nation" principle. Broadly speaking, the Government has so far, under the old Farm Board and later under the A.A.A., followed the practice of buying the unexported cotton surplus under a variety of euphemisms.

The problems of compensating advantage are illustrated by the new potato control. Potatoes can be and are grown in every part of the United States, and with the curtailment of other specific crops farmers all over the country have expanded potato production, to the disadvantage of the sections which specialise in potatoes. The potato control permits a farmer to grow five bushels for his own consumption, but any production beyond that amount is permitted only under licence from the Secretary of Agriculture. The penalty provided for buying as well as selling bootleg potatoes is more severe than that prescribed for infractions of the liquor law during prohibition, when selling only was an offence.

A compromise was finally reached on the cotton programme along the lines proposed by the Administration,

except that the loan price was raised to 10 cents and the producer given an unqualified guarantee of 12 cents on condition that he "signs up" for next year's curtailment, whose magnitude is not yet divulged. The Senate, however, had already voted to adjourn at midnight of August 26-27, and a five-hour filibuster by Senator Huey Long, who advocated the 12-cent cotton and 90-cent wheat loans, killed the deficiency Bill to which they were attached—a matter of no small embarrassment to the Administration, as the appropriations it carried were required for the operation of several recent legislative Acts.

With Congress adjourned, the next focus of political interest will be the sessions of the Supreme Court, which re-assembles in October. The spring session included such historic decisions as that relating to the gold clause, the railway pensions, the Frazier-Lemke farm moratorium, and the N.R.A.; it is expected that the winter session will include decisions on the processing tax and possibly the Guffey Coal Act. Payments under the processing tax have largely been suspended, and a decision adverse to the A.A.A. would probably provoke far more controversy than the N.R.A. case; for when all is said, N.R.A. had many enemies and, outside of Washington, few friends. The constitutional issue, at present dormant, is likely to become active before Congress reassembles in January.

The Neutrality Act perhaps provoked more interest abroad than here; for it was hurriedly passed in Congress and scarcely mentioned in the Press. In a general way, however, it probably reflects public opinion, which can only be described as definitely isolationist.

BUSINESS NEWS EXCELLENT

Business news continues excellent, except in textiles, where the uncertainty over the price of cotton is restraining activity. Rayon, however, is rather active, and there has been a sudden and exceptionally strong demand for silk. The bright spots of the situation continue to be automobile output and residential building, whose increase this year has been phenomenal. It is especially noteworthy that, although new automobile models are at hand, there is little anticipatory slackening of demand. In regard to the residential building, it is worth while to note the part played by obsolescence. While at the beginning of this year there was probably a real housing shortage in certain localities (at least, the statistical data pointed that way), the factor of obsolescence seems to be of almost equal importance. New houses sell readily, houses ten years old with some difficulty, and dwellings older than ten years are rated as obsolete.

Steel production is now at about 48 per cent. of capacity, which compares well with the spring levels, an unusual condition for this period of the year. If, instead of classifying goods as light or heavy, or as consumer goods and capital goods, they are classified by the purchaser as goods for individual consumption and goods for corporate use, it will be observed that there is an excellent (almost a booming) demand for all articles of individual consumption, whether summer vacations, shoes, electric refrigerators, automobiles or dwelling houses; but the demand for distinctly producers' goods, by corporations, is relatively low and is limited to machine tools and lighter types of machinery, probably for replacement rather than for original installation. Nevertheless, this demand is well above that of last year.

NEW YORK, August 27.

FRANCE

REVENUE RECEIPTS STILL FALLING

THE Minister of Finance has just published the revenue figures for July, which were 3,168 million francs. The deficiency, compared with the estimates, was 484 million francs, or a figure sensibly higher than the average monthly deficiencies in 1934 (the last quarter excepted) and 1935. Thus for the first seven months of the year the deficit, compared with the estimates, was 2,540 million francs. If ordinary Budgetary receipts for this year are compared with those of 1934, a shrinkage of 1,568 million francs is apparent. The turnover tax yielded only 543 million francs

in July, or a deficiency of 140 million francs compared with the estimates, which is double the monthly average deficiency of this tax's yield during the first quarter of the year.

These poor results demonstrate the absence of any business recovery and the seriousness of that absence. Such a recovery, the Government realises, can alone result in Budgetary equilibrium, and can alone permit such a reduction in taxes and lowering in the rate of interest as would produce the desired fall in the cost of living. Such a fall, the Government declares, is not incompatible with a rise in the price of farm products, since the discord between agricultural and industrial prices is principally due to excessive taxation and interest rates combined with a very small turnover. A rise in the purchasing power of the farmers, resulting from higher prices, is nevertheless desired by the Government.

The Government is therefore pleased with the rapid rise in wheat prices caused by the recent decree-laws permitting the resumption of forward quotations on the Paris wheat market, and also of the easy credit given to the farmers who withhold their crops from the market. Within two weeks the price of wheat has risen from 62 francs (official lowest) to 83 francs per quintal, and is expected to continue to soar. It is noticeable that a rise of 30 francs per quintal on a crop of 75 millions of quintals would increase the purchasing power of the farmers by more than 2,000 million francs.

REDUCTIONS IN PROPERTY TAXES

In another decree-law the Government has reduced the special tax on first sales of real estate and the special tax on first sales of business concerns. These measures do not compensate the interests concerned for the 10 per cent. cut in the *rentes* which was made in July. It has nevertheless been welcomed by financial interests, which are constantly agitating for a reduction in taxation. There are also hopes that a recovery in building activity might result from these tax changes. At present building activity is at its lowest ebb, with an index in June of 62 (1913 = 100), against 65 in May, 70 in April, 76 in February, and an average of 82 in 1934, 91 in 1933 and 100 in 1922.

Recovery should at least be assisted by the abundance of money which has been apparent in the last few weeks. It is hampered, on the other hand, by foreign events. The general feeling, however, is that the rise in *rentes* would be accelerated if a favourable issue was assured to the Abyssinian conflict.

The Stock Exchange is well satisfied with the first measures of the Laval Government, and particularly with the rise in wheat prices. The *rentes* are rising steadily, and the 4½ per cent. "A," for instance, is at its highest since April, 1935.

A decree-law has just created a new bank, the "Credit Colonial." This step has been taken owing to the difficulties experienced by the colonies in raising short-term credits. It is a first realisation of the recommendations made by the last Imperial Conference. The loans granted by the new bank may be guaranteed by the Governments of the colonies and protectorates. The initial capital of the bank, amounting to 20 million francs, will be subscribed by the Credit National, Banque de l'Indochine, Banque de l'Afrique Occidentale, Banque de Madagascar, Banque de la Martinique, and Banque de la Guyane. The bank is from now on authorised to issue debentures for an amount up to 500 million francs.

PARIS, September 5.

GERMANY

FURTHER RISE IN FOOD PRICES

THE prices of livestock, animal products and fodder have again risen. After a conference in Berlin between provincial and party authorities, which was made necessary by the rise in food prices, new measures have been taken, based on the principle that in general the rise must cease. The Reich Food Minister had declared on August 24th that this was his special domain, since the question of the pro-

Sun Life Assurance Company of Canada

(Incorporated in Canada in 1865 as a Limited Company)

The Company has been rendering service to the public in Great Britain for more than 41 years by enabling prudent men and women to safeguard their own and their families' future, through comprehensive Life Assurance and Annuity plans.

Total New Business in 1934 in Great Britain and Ireland

£7,000,000

Total Assurances in force at November 15th, 1934, in Great Britain and Ireland

£67,000,000

H. O. LEACH (General Manager), 2, 3 & 4 COCKSPUR ST., LONDON, S.W.1

longation of the Reich Prices Commissary Law, which expired on July 1st, had not been settled. Under the new regulations the producers' prices of food potatoes have been reduced by varying amounts up to 50 pfennigs a centner lower than those of the crop of 1934. The reduction is to be passed on to the consumer. The prices of pork, pork lard, beef and beef suet are to be reduced to the level of March 31, 1935, but finer qualities of beef are not affected. The Reich Board for oils and fats has been required to fix producers' maximum prices for these products; and producers' prices for one sort of cheese are to be fixed and consumers' prices to be reduced. A later ordinance forbids price increases for sausages.

These measures hardly meet the situation, for the main complaint lately has been the rise in the price of eggs, vegetables and fruit. The unsatisfactory fodder crop of 1934 caused increased slaughtering and a decline in the number of pigs. There is a shortage of foodstuffs in certain markets, and retail dealers from time to time have nothing to sell. The Food Ministry admits a shortage of meat, vegetables and fruit, but affirms that this is temporary, being in the case of vegetables and fruit due to the cold spring. The shortage of eggs is also officially attributed to the weather, and an advance in prices has been permitted in order to encourage production and to reduce consumption by farmers. But it is not proposed to allow the average price of eggs in the whole farm year to rise above that of 1934-35. Increasing reluctance is being shown by farmers to market certain kinds of goods. The grain-producing farmers were discontented with the regulation of prices in 1934, which they complain gave them insufficient compensation for the reduced volume of their crops.

LARGER COAL EXPORTS TO ITALY

The Railway Corporation's car loadings in July were 7.9 per cent. higher than in July, 1934. In July, for the first time since the depression, the Corporation's revenue covered not only the operating outlay but also the fixed charges and the contribution to the Reich, and even left a small surplus. Coal output in July was 11,985,000 tons, and in the first seven months 79,257,000 tons. Coal exports to Italy have sharply increased, and reached 601,000 tons in July, as against 453,000 tons in July, 1934, and 223,000 tons in July, 1933. The pig iron market is active. The trade press deals with the prospect of Russian competition in exports of heavy iron and steel. The Berlin Soviet Trade Mission recently published an optimistic account of Russia's export capacity. German exports of tubes have greatly increased, but export prices have fallen. An agreement has been reached for regulating production and prices in the seamless and welded tube trades.

In the last week the credit market has developed a sharp tension, which is attributed in part to increasing activity in home trade and to the harvest demand. In fact, however, it seems to have been also due to public borrowing plans. In spite of the general money market liquidity and very low interest rates, August witnessed considerable borrowing; and September began with signs of credit expansion. In

August, nevertheless, the Gold Discount Bank was able to absorb further money. Its maturing promissory notes were prolonged and further sales were effected, so that by the end of the month some Rm. 600 millions of these notes were in circulation. The August month-end settlement demand was nevertheless much greater than had been expected; and by Tuesday this week the strain had not perceptibly relaxed. In consequence a considerable parcel of maturing promissory notes, for the first time since the original issue in May, was not prolonged, and the sales of Reich Treasury bills and bonds fell to a minimum.

In the last week of August the Reichsbank's credits and investments rose by the large sum of Rm. 519 millions to Rm. 4,753 millions; note circulation by Rm. 393 millions to Rm. 4,032 millions; and total circulation by Rm. 541 millions to Rm. 6,153 millions, of which Rm. 1,565 millions consisted of token coins. While the demand for cash for the new Railways Corporation Treasury bonds accounts for part of this considerable expansion, it seems that the two Reich loans announced last week had begun to cast their shadows ahead; and it is surmised that the need for cash for taking up these will cause considerable selling of the older Reich short-term issues and of the Gold Discount Bank's notes. The official policy, as often announced, is to capture as much of the money that is investible either on short or on long term for Reich purposes, in order to cover the invisible deficits caused by work-creation and rearmament. In particular, the aim is to mobilise for long-term investment the superfluous money market funds which have been so much in evidence since the spring.

The Reich debt continues to be the subject of newspaper conjectures. According to the official schedule it increased in June by Rm. 64 millions, whereas the unscheduled tax-credit-certificate debt declined by Rm. 44 millions, so that the admitted increase is only Rm. 20 millions. The debts of the States are returned for March 31, 1935, at Rm. 2,560 millions, which is Rm. 45 millions lower than at the end of 1934.

BERLIN, September 4.

AUSTRIA

ECONOMIC RECOVERY CONTINUING

ECONOMIC activity in Austria is still expanding. Production and turnover in many trades are rising; even though most of the statistics are not available for August, which coincided with the height of the foreign tourist season, and a not unfavourable harvest. In July, energy output in Austria amounted to 104 million kilowatt hours against 91 millions last year. The output of iron ore rose from 54,000 in June to 71,000 tons in July (56,000 in July, 1934). The index of crude iron production jumped in the same period from 44 to 69, and of crude steel from 82 to 87. Output in the paper industry has reached a record level. But there has been some relapse in the cotton spinning and weaving mills.

Most important, however, is the fact that after a long regression, turnover in most trades is beginning slowly to improve, or at least, to cease falling. In June the index of commodity turnover rose from 80 to 84 (79 last year), after falling in June. Consumption of foodstuffs and footwear has at last been increasing, while in the clothing industry there is a slight fall. In almost all cases, however, the figures are higher than those of last year. And in the middle of August there were in Austria only 215,000 unemployed in receipt of the dole, against 254,000 a year ago.

Austria has practically no commercial relations with Abyssinia. Indeed, the only commercial relation existing with that country has probably been destroyed by present events. For many decades the Vienna Mint has been making the coins used in Abyssinian commerce, i.e. the Maria Theresa thaler or dollar. For some time now orders for the minting of such coins have not been received; and if the reports that Abyssinia intends to take its currency off silver and to base it on the pound sterling are confirmed, this last remnant of the respect once commanded by Austria in the African continent will also disappear. Italy placed large orders for a while in Austria, mostly for various kinds of timber, but the preference quotas for Austrian goods are

now largely exhausted, so that these exports have come to a halt, especially as the payment transfers have slowed down. A decline is also reported in the number of visitors from Italy, though the weakening of the lira has meant keener competition by Italy for foreign tourist traffic.

SUCCESSFUL TOURIST SEASON

The slackening in Austrian exports, which has been observable for several months, has been fully compensated by a simultaneous rise in foreign tourist traffic. The success of the touring season is of significance politically, as much of the economic discontent due to the losses caused by the German 1,000-marks tourist tax has vanished. Austria is now very popular with tourists, especially this year in view of the Salzburg Festival and the opening of the wonderful road over the Grossglockner. A general increase of something over 30 per cent. in tourist traffic since last year is reported.

Austrian exports fell in June for the first time for a long period, but the total balance for the first half-year is still active. Imports of pure merchandise traffic have fallen from 563.5 to 559.2 millions, while exports have risen from 411.1 to 423.1 million schillings:—

	Raw Materials and Semi-manufactured Goods (Millions of Schillings)	(Percentage of Total Imports)	Finished Goods (Millions of Schillings)	(Percentage of Total Imports)
Imports:—				
1st half-year:				
1934 ...	225.8	39.1	178.0	30.8
1935 ...	218.3	38.4	178.2	31.4
Exports:—				
1st half-year:				
1934 ...	115.3	27.2	284.6	67.2
1935 ...	122.6	28.6	285.0	66.4

Imports from Germany fell from 99.8 to 90.1 million schillings, while exports rose from 63.3 to 76.2 million schillings. Imports from Hungary declined from 61.4 to 59.1 million schillings, and exports rose from 43.2 to 47.8 million schillings. Exports to Italy jumped up from 46.2 to 60.4 million schillings, and imports from 26.5 to 30 million schillings. The improvement in the Austrian balance of foreign trade has been achieved almost entirely in relations with these three countries.

The holdings of foreign currencies at the National Bank are steadily increasing, in spite of the slight decline in foreign trade registered in recent months. Since April 1, 1935, foreign holdings have risen from 32 to 103 million schillings. This increase is practically due to improving tourist traffic and to an influx of foreign capital.

VIENNA, September 3.

POLAND

TROUBLE WITH SOVIET RUSSIA

THE death of Marshal Pilsudski four months ago provided the Soviet Government with an excellent opportunity, if they desired one, for moving towards an improvement in Polish-Soviet relations. The present leaders of the Government and Army, it was pointed out, are probably less deeply moved by anti-Russian sentiments than the late Marshal. Unhappily, the Soviet leaders have reacted in the opposite direction to the Marshal's death, and relations between Warsaw and Moscow have grown steadily worse since May 12th. The recent expulsion from Moscow of M. Berson, who represented almost the entire Polish Press, and the manner in which it was done, made a very unfavourable impression here and provoked bitter attacks in the Press on the Soviet Government and the Comintern.

When the Polish diplomatic scales tilt upwards against Soviet Russia, they tilt downwards in favour of Germany, although the Polish Government would like to keep them even. Difficulties with the Soviets also have an immediate adverse reaction on Polish-Czech relations, and start the Poles off on a more active Baltic policy. Ordinarily, they might be expected to exacerbate Franco-Polish relations, but they have not done so in the present instance. Perhaps

because Poland has serious doubts about the permanence of Franco-Soviet friendship. The pact of mutual assistance has not yet been ratified.

The official attitude towards the Italo-Abyssinian crisis is one of extreme reserve, the authoritative Press declining to "take a position." Poland is not directly interested in Abyssinia, nor violently in love with the League, but she does value highly her friendly relations both with Italy and Great Britain, and desires to see the "Stresa front" maintained. It seems safe to venture the opinion, therefore, that Poland will follow the lead of France at the forthcoming meeting of the League Council.

ELECTIONS ON SEPTEMBER 8TH

Polling will take place on September 8th for the election of 208 Deputies for the first Sejm under the new Constitution, and on September 15th for the election of 64 Senators. The President of the Republic in the week following will appoint 32 Senators to complete the Senate membership of 96. The public is taking not the slightest interest in the electoral campaign, and everything has been "cut and dried," so that the new Parliament will cause the Government no trouble. All the leading Opposition parties are boycotting the so-called elections. The Cabinet will be reconstructed after the elections, and it is expected that all the forces of the Government will then be concentrated on economic recovery and financial reforms. The Budget deficit in the first four months of the present fiscal year (April-July) amounted to 106 million zlotys, the average monthly deficit for the past four years having been between 20 and 25 million zlotys.

The volume of foreign trade continues to be very small. Exports in the first seven months of this year amounted to a value of 519 million and imports to 490 million zlotys, as compared with 554 millions and 463 millions respectively in 1934. The decline from 91 to 29 million zlotys in the active balance is serious, and is partly due to the tariff reductions provided for in the commercial treaty negotiated with the United Kingdom early this year. While the long-deferred problem of "motorization" (Poland has the lowest *per capita* motor vehicle registration of any European country) has not been solved by the new treaty, increased imports of other commodities from the United Kingdom, as will be seen from the table below, are steadily reducing the surplus of Polish exports to England.

	JANUARY TO JUNE			
	Imports into Poland	Exports from Poland	(Percentage of Total Trade)	
	1934	1935	1934	1935
United Kingdom.....	9.9	11.6	20.0	17.7
Germany	12.0	14.5	17.4	16.5
United States	15.4	14.2	2.4	5.4
France	6.1	5.2	4.5	3.6
Czechoslovakia.....	4.0	4.1	5.3	5.6
Soviet Russia	1.8	1.3	4.8	2.1

The decrease in exports to, and increase in imports from, Germany is not unwelcome because of currency transfer difficulties. Poland is understood to have a substantial sum tied up in Germany as a result of existing restrictions.

The harvest is above the average of recent years. Grain prices, however, are at their lowest point since the war, and agricultural distress is very acute. This problem and the Budget deficit are now the major concerns of the Government.

WARSAW, September 1.

JAPAN

MINISTER'S WARNING AGAINST INFLATIONARY LOANS

THE Government departments have now submitted to the Treasury the estimates for the next fiscal year. The new items of expenditure in the departmental estimates amount in the aggregate to over 1,100 million yen, which, together with fixed charges, brings up the Budget total to about 2,800 million yen, if they are budgeted *in toto*. Since there is no other way in the circumstances to meet such colossal claims than by fresh borrowing, the Treasury intends to cut down these demands to the order of 600

million yen, which can be prudently financed by loans, and keep down the Budget total to somewhere about the same amount, or even less, than that of the current year. As the fighting services, however, account for more than half of the new charges, and the War Ministry and the Admiralty will not easily acquiesce in any drastic reduction, a hard fight with them over the Defence Estimates is expected.

This has impelled Mr Takahashi, the Finance Minister, to warn both the Cabinet and the public against the danger involved in the deficit-covering loan policy. In a statement which he gave out just before he took a summer vacation he elaborates his standpoint and pours cold water on a growing optimistic belief that the financing of the Budget by borrowing can be pursued indefinitely without bringing about any inflationary effects. With all his vast experience and immense prestige, however, it remains to be seen how far he can stand up to the military chiefs.

PROFITS AND FOREIGN TRADE STILL INCREASING

The earnings statements so far published of important industrial companies for the past half-year show that industrial recovery in this country has still been continuing throughout the broad range of industry. A large number of concerns in iron and steel, mining, shipbuilding, machinery and tools, electricity and gas, shipping, railways and tramways, sugar, breweries and milling groups have fared considerably better, and the mid-summer dividends have been generally maintained. The textile results, however, have been rather adverse; all leading cotton mills, except the Kanegafuchi, recorded heavy decreases in profits. The experiences of the big banks for the June half-year are varied; net profits of Yasuda rose from 4,288,000 yen to 4,712,000 yen, while those of Dai-ichi fell from 4,712,000 yen to 4,264,000 yen.

The returns of our foreign trade for July continue the story of steady progress as a whole, making favourable comparison with both those of the previous month and those of a year ago. Imports, at 198,436,000 yen, were 28,905,000 yen, or 17 per cent., in advance of those of July, 1934; while exports, at 207,113,000 yen, were up by 27,853,000 yen, or 13.8 per cent. Nearly 12 million yen of the increase in imports was in textile materials. Raw cotton imports, which had been decreasing in recent months, have again expanded. On the export side, an encouraging feature is the marked increase in the raw silk trade. Exports of cotton piece-goods and silk and rayon manufactures were also well maintained, although their expansion continues to slow down noticeably.

The downward tendency in commodity prices has apparently been arrested. The Bank of Japan's wholesale index number for July remained unchanged at 180.2. Increases in cereals and silk and silk manufactures were offset by decreases in cotton manufactures, fertilisers and most building materials. Security prices have moved up. The aggregate value of all shares quoted at the Tokyo Stock Exchange on August 1st was up by 54.2 million yen to 5,849.5 million yen as against a month ago. Textile production, on the other hand, shows a decline. The output of cotton yarn in July totalled 113,082,000 lbs., a decrease of 8,716,000 lbs. over June, and rayon production during last month amounted to 18,545,000 lbs., or 71,000 lbs. less than in the preceding month.

The decline in the output of textile yarns during last month is mainly attributable to restriction. Since

BRITAIN IN DEPRESSION

This book is a chronology of events in all important industries brought about by the Depression of 1929, and is a guide to the various official and non-official sources of information indispensable to research workers. Every economist and business man will find the information of the utmost significance and value.

PITMAN, Parker Street, Kingsway, W.C. 2

July 1st cotton mills which belong to the Cotton Spinners' Association have been run at 72.4 per cent. of capacity, or 3.8 per cent. less than in June, and rayon factories also inaugurated organised curtailment of operations by 20 per cent. on July 1st. Rayon producers have again cut down operations by a further 10 per cent. as from August 10th. Cotton spinners also are talking over a further restriction of output.

TOKYO, August 9.

NEW ZEALAND

THE MEAT AGREEMENTS WITH GREAT BRITAIN

The agreements on the regulation of meat imports into Great Britain have been received with general satisfaction throughout the Dominion, and have improved confidence in the future of meat products. A striking and immediate result was a substantial rise in the prices of store sheep. New Zealand had always imagined that regulations and quotas necessarily meant restriction of exports. The quota agreements reached appear to fix limits at least equal to the maximum amounts yet exported of both sheep and beef products. This result supports the view that quotas mean expansion for the British farmer, the *status quo* for Empire supplies, and contraction for foreign supplies. New Zealanders recognise the difficulties of the British farmer, but they regard Britain's meat difficulty as mainly a beef problem which New Zealand's small supply can affect but little; and they are particularly anxious that mutton and lamb, on which New Zealand depends so largely, should not be restricted.

Recent movements of both wool and butter prices have also been upward. Local dealers estimate that New Zealand wool prices are now about 30 per cent. above the average level of last season and hope that the rise will continue until the local sales begin in November. New Zealand butter, which has been very low and touched 65s. per cwt., is now about 90s. in London, and the statistical position is regarded as favourable to further advances.

Export prices are of very real importance; for the Dominion's exports average 42 per cent. of the total value of its production, and fluctuations in export values are quickly reflected in internal business. For the year ending June, 1934, exports were valued at £N.Z. 49 millions; and for the year ending in June, 1935, the value is N.Z. 43 millions, a decline of £N.Z. 6 millions. But on account of high wool prices the 1933-34 figure was regarded as somewhat exceptional, and though it stimulated business expansion, the rate of expansion appears to have been retarded but little by the subsequent fall.

IMPROVED BUDGET RESULTS

A significant indication of the improvement that has occurred is found in the returns for public revenue and expenditure for the latest financial year. For the first time since 1930 a substantial surplus is shown without the aid of reserves brought in as revenue. Taxes were increased in 1933-34, but the rates of taxation for 1934-35 remained unchanged. Consequently the increase in the yield of taxation, from £N.Z. 17.06 millions to £N.Z. 20.18 millions, or of 18 per cent., demonstrates a useful expansion of the sources of taxation. Unemployment taxation, paid into a special fund and excluded from the Budget, falls on practically all incomes and yielded £N.Z. 4.41 millions in 1933-34 and £N.Z. 4.56 millions in 1934-35. But the rate was reduced from 1s. in the £1 in the earlier year to 10d. in the £1 in the latter. Hence the increased yield denotes an increase in taxable income of more than 20 per cent. Taxation, total revenue and expenditure for the past three years were as follows:—

	£N.Z. millions		
	1932-33	1933-34	1934-35
Customs and excise	6.78	7.14	8.09
Sales tax	0.04	1.85	2.17
Highways taxes	1.68	1.70	1.91
Stamp and death duties	3.00	2.71	3.52
Income tax	3.55	2.96	3.80
Other taxes	0.55	0.70	0.69
Total taxation.....	15.60	17.06	20.18

	£N.Z. millions		
Other revenue	4.47	4.43	5.94
From reserves	2.50	2.00	...
Total revenue.....	22.57	23.49	26.12
Expenditure	22.53	24.20	24.50
Surplus	0.04	0.71*	1.62

* Deficit.

Tax revenue appears to include a windfall in death duties for the latest year, and other revenue includes a windfall of £N.Z. 1.36 million, being the profit accruing to the public account from about £N.Z. 1.3 million of gold coin exported by the Reserve Bank during the year. The estimate allowed for the taking of £N.Z. 300,000 of reserves into revenue for 1934-35, but they have not been required. Parliament is expected to meet later in August, after the return of the Ministerial party from London; and in view of the last surplus, the buoyancy of revenue, and the general election to be held at the end of the year, an optimistic Budget is anticipated for 1935-36.

The Reserve Bank, which fixed its discount rate at 4 per cent. when it opened on August 1, 1934, has just lowered that rate to 3½ per cent. No business was recorded at the old rate, and in view of the abundance of money and the low rates paid on fixed deposits, it seems doubtful whether the rate is yet nearly low enough to attract business. With £N.Z. 61 millions deposits and £N.Z. 43½ millions advances, the trading banks have less than £N.Z. 500,000 discounts. It has been repeatedly stated, however, that, through the agency of the Reserve Bank, it is hoped to develop a short money and discount market. The lowering of the Bank rate may be a first exploratory move in that direction. At the end of June the Reserve Bank's resources totalled £N.Z. 27.9 millions. On the liabilities side were capital and reserve £N.Z. 1.5 million, bank notes £N.Z. 9.1 millions (note circulation £N.Z. 6.1 millions), State deposits £N.Z. 13.3 millions, and banks' deposits £N.Z. 3.9 millions. The chief assets were gold £2.8 millions (at face value), sterling exchange £N.Z. 22.8 millions, and investments £N.Z. 2.1 millions.

CHRISTCHURCH, August 1.

LETTER TO THE EDITOR

FINANCING SMALL CONCERNS

TO THE EDITOR OF THE ECONOMIST

SIR,—As the volume of employment afforded by the smaller and medium-sized businesses is a matter of national importance, while heavy taxation imposed by the State is in part responsible for the difficulty in finding finance for such concerns, it appears that this class of undertaking has a claim for State help in obtaining the necessary financial assistance. It is not suggested that the State should directly supply capital; but as it is already interested in the fortunes of individual companies through the Trade Facilities and Agricultural Credit Acts some similar assistance might be granted to an institution formed to finance small concerns. With this aid the finance company could borrow at advantageous rates, thus allowing it to build up the necessary reserves without requiring to charge very high rates for the capital provided.

One of the difficulties facing such a finance house would be that of getting into touch with concerns requiring capital, not only around London, but all over the country. This, however, would be largely overcome if it could be arranged that every bank branch would act as an agent. An additional advantage would be that the bank managers would be able to supply information about local industrial conditions and the character of the various applicants for assistance, while no doubt they would also be able to reduce the number of unsuitable applications.

There is also a class of investor who wishes to take an interest in a particular concern, but who has not the experience or facilities for thoroughly "vetting" the proposition, and if the finance house would undertake to carry out investigations for the general public it would be of additional service. The fees from this class of work would help to reduce the overhead charge of the expert staff necessary for the ordinary business of the finance house.

Yours faithfully,
ALEXANDER KENNEDY.

Ardvoulin,
Ayr.

BOOKS AND PUBLICATIONS

AMERICA'S ECONOMIC CAPACITY

IN no country is the search for facts and figures pursued more diligently than in the United States. And not the least prolific of the numerous American research centres is the Brookings Institution, which is at present engaged in a study of "the relation of the distribution of national wealth and income to economic progress."

The purpose of the investigation is "to determine whether the existing distribution of income in the United States among various groups in society tends to impede the efficient functioning of the economic system." The three volumes under review set out the facts. In a fourth book we are promised suggestions of "ways and means of bringing about a more effectively functioning economic system."

In the first volume* Mr Nourse and his associates investigate the productive capacity of the United States and the extent to which it has been utilised in the past. The approach to the problem is essentially technical. Nevertheless, the results are interesting. Thus, it appears that the margin of unutilised capacity was not, in general, increasing in mining or manufacturing during the past thirty years. Between 1925 and 1929 between 80 and 83 per cent. of the capacity of available plant was utilised. Similar estimates for agriculture, transport and merchandising cannot be made owing to the lack of sufficient data, but it would seem that transport facilities in relation to demand were greater in 1929 than in 1900. The authors contend that technically production in 1929 could have exceeded actual output by 20 per cent. and that the income of 15 million families could have been increased by \$1,000 each. The authors also conclude that the United States was not living beyond its means in 1929 in the sense that it was failing to make adequate provision for replacement of plant and equipment.

An examination is then undertaken of the amount, distribution and disposition of the national income.† If allowance is made for changes in prices and for the growth of the population the national income in 1929 (in "real" terms per head of the population), showed an increase of about 38 per cent. as compared with the year 1900. In 1929 manufacturing contributed about 23 per cent. to the total income. Wholesale and retail trade contributed approximately 17 per cent., agriculture 10 per cent., transport and communications 9 per cent., Government activities 8 per cent. and services about 11 per cent. The distribution of the national income in 1929 was approximately as follows: employees, 66 per cent.; non-corporate entrepreneurs, 16 per cent.; investors in corporate securities and other property, 18 per cent. The share of the national income going to investors was fairly stable between 1909 and 1929. About 80 per cent. of the national income in 1929 represented remuneration for current effort and 20 per cent. went to the owners of property.

It appears that 10 per cent. of the families, those with incomes above \$4,600, contributed no less than 86 per cent. of the total savings made in 1929; 12 per cent. of the total savings were made by those whose income varied between \$3,100 and \$4,600; while 80 per cent. of the population, with incomes below \$3,100, contributed only 2 per cent. to the total amount saved. The percentage of the aggregate of individual incomes which is saved has tended to increase since the beginning of the century, especially during the post-war years when the distribution of the national income favoured the rich. On the other hand, the authors did not discover any significant change in corporate savings. While the total amount saved by companies hastened to increase with the increase in profits, there is no evidence of an increase in the proportion of profits retained in businesses between 1909 and 1929. The

† "America's Capacity to Consume." By M. Leven, H. G. Moulton, and C. Warburton. The Brookings Institution. 272 pages. \$3.00.

authors conclude that "the unfulfilled desires of the American people are large enough to absorb an output many times that achieved in the peak year 1929"—a conclusion which might have been hazarded even without an elaborate statistical inquiry!

Mr Harold G. Moulton, President of the Brookings Institution, deprecates the absence of "any thorough analysis of the economic implications of the process of capital formation in a capitalistic society."‡ He has little sympathy with Professor Hayek's analysis. "The assumptions on which he (Hayek) predicates his whole argument are not in accordance with the facts of the business world." On the basis of the evidence afforded by the industrial history of the United States, Mr Moulton reaches the following conclusions. "New capital is constructed on an extensive scale when consumption is expanding rather than when it is contracting." Moreover, "in a period when the output of both consumption and capital goods is being increased, there is an expanding flow of funds through both consumption and investment channels." Finally, "the growth of new capital is adjusted to the rate of expansion of consumptive demand rather than to the volume of savings available for investment." Incidentally, the rate of interest and its rôle in the process of capital formation are scarcely mentioned in Mr Moulton's analysis.

The information contained in these three books is most interesting and valuable, and will be very useful to all economic inquirers—whether or not they accept the positive analysis and conclusions promised in the final volume of the series.

SHORTER NOTICE

"The History of the Canadian Bank of Commerce." By A. St. L. Triggs. Volume III, 1919-1930. Toronto: Bous and Mann, Ltd.

Books on economics are often arid. The reader will come with surprised delight upon this intensely interesting history of banking under the peculiar circumstances of Canada. He will not be disappointed in his search for hold-ups, successful and baffled; for curious notions about the nature of banks and banking; for lights upon banking development in new lands; and for shrewd and instructive comments, ushered in without the least ostentation, upon practical banking problems. The many handsome illustrations, of old devices when banking was young, of new sky-scrapers now that the Canadian Bank of Commerce stands four-square against all the winds of commercial panics, add to his pleasure.

MONEY AND BANKING

WILL THE MARK BE DEVALUED?

(BY A CORRESPONDENT)

IN the reconstruction of international currency relations, Germany holds a peculiar place. She does not belong to the group of countries with depreciated currencies, since she formally maintains her old parity. Neither does she belong to the gold *bloc*. For her currency has been surrounded with a barbed-wire fence of compulsory regulations for the control of foreign exchanges, which prevent the export of gold and the free purchase of foreign exchange, this being the only way whereby Germany has been able, artificially, to maintain the stability of her currency. Germany and Italy are the only great industrialised countries in this position.

Leading Government and economic circles in Germany have for some time been earnestly studying the problem. A year or two ago the belief still persisted that Germany might be spared the necessity of taking drastic decisions about the Reichsmark. To-day, there is but one view on the matter, at any rate among the leading economists. It is assumed now in Germany, that a depreciation of the gold *bloc* currencies is bound to take place sooner or later. The attempts of the countries with depreciated currencies (in particular the United States) to bring about a rise in prices have not hitherto met with nearly enough success to relieve the position of the gold *bloc*. On the other hand, further deflation in the gold *bloc* countries is very difficult to achieve, if for no other reason than the social tension it would provoke. The vague hope that the inflationary efforts of the countries with depreciated currencies and the deflationary efforts of the gold *bloc* countries might meet half way and thus enable Germany to join a somewhat reorganised world economy system without either deflating prices or devaluing the currency has thus perforce been abandoned.

The movements of the German internal price-level are of course the most important among the factors which are pushing Germany towards devaluation. Wholesale prices in Germany rose by 11 per cent. between April, 1933, and April, 1935—a movement which entirely detached the German price-level from those either of the off-gold countries or of the gold *bloc* countries. As a result of this rise of prices, Germany now has a higher price-level, measured in gold, than any other country, in spite of the sharp deflation of 1930-32. There is another method of measuring the extent to which the German price level is out of line with that of the rest of the world: the 1,000 million Reichsmarks which Germany spends on export subsidies gives an approximate idea of the magnitude of this deviation. This sum represents no less than 25 per cent. of the present total value of exports from Germany. This means that German exports, amounting to some 4,000 million marks per annum, are rendered possible by means of Government subsidies to the tune of 1,000 million marks; the internal value of the total volume of German exports amounts, therefore, to 5,000 million marks. According to these figures a devaluation of one-fifth would be needed to maintain even the present attenuated volume of exports. If, in addition to this, an allowance is made for the increase in the prices of imported raw materials which would follow a devaluation, the minimum necessary devaluation would amount to 25 per cent.

But over and above such a devaluation Germany would undoubtedly need a provision for an increase in exports above their present level, for, being a debtor State, she has to achieve a surplus in foreign trade. The question of foreign indebtedness, in combination with the problem of prices, forms the pivot for a devaluation: if Germany is at all willing—as we presume she is—to satisfy her foreign creditors, she can do so only by increasing her exports. Confronted with this fact, the creditor countries which are

at the same time importers of German goods or competing against these goods on other markets, find themselves in a peculiarly embarrassing position. Germany's foreign debts were contracted in the creditors' currencies. The value of the Reichsmark is therefore of no interest to the creditors, whose only interest is in the highest possible volume of German exports. But as competitors, it is not in their interest that the competing power of German exports be increased inordinately. This is not, of course, a new dilemma; and it would be too much to expect, even after all these years, that the creditor countries will recognise the dilemma, still less that they will take the initiative in resolving it. But if the initiative is to be left to Germany, a resumption of debt payments necessitates a drastic devaluation of the Reichsmark.

Several other reasons are driving Germany towards devaluation. A devaluation would afford new reserves for purposes of further credit expansion. The state of public finances is another reason. The internal State indebtedness has grown rapidly in the course of the last two years and a devaluation, if accompanied by a rise in prices, would relieve the burden. At this point, however, an objection may be raised which has a strong hold on German opinion: German monetary policy has for some time been pursuing with great energy the funding of the floating debt. Would not a devaluation thwart these efforts? Would it not destroy the confidence which is necessary for large-scale conversion? British, and lately Belgian, experience—the latter particularly impressive—shows that confidence in the capital market is certainly not weakened by devaluation of the currency. Germany is, however, particularly sensitive in all matters involving confidence, and it might be advisable to delay currency reorganisation until the possibilities of consolidation have been exhausted.

This raises the question of what would be the appropriate moment for a German devaluation. The answer is that Germany has plenty of time. Under the present "settlement" of her foreign debts, Germany will probably be in a position to maintain an approximate equilibrium of her foreign trade by means of export subsidies on the one hand, and of compensation agreements, etc., on the other. The choice of the time for devaluation will also be influenced by the fact that Germany is hardly in a position to let her currency find its own level after the present parity has been abandoned. Even remembering that, in addition to the known gold reserves of some 94 million marks, there are still secret reserves, the sum total would still be inadequate to form a large enough manipulation fund, such as is indispensable in a case of this kind. Germany would therefore be compelled to establish at once a new fixed relation to gold at the same time that she devalued. But this would be a risky thing to do before the international exchange outlook has fully cleared. The moment of devaluation will therefore in all probability be deferred—since there is no immediate technical compulsion to depreciate the currency—until the leading gold *bloc* and depreciated currency countries stabilise their currencies. Even then much will depend on whether this stabilisation is provisional, as has frequently been recommended, or permanent.

There is still another objection which used at one time to be frequently raised in Germany, and which has a special bearing upon the ethics of currency manipulation. It used to be the current opinion in official circles some time ago that it would be more advantageous for Germany not to devalue, but to maintain exchange restrictions, thereby depressing German obligations on foreign Stock Exchanges, and then to devote part of the export profits to the repurchase at low prices of these obligations. The system thus practised in 1933 and 1934 is well known. Germany has

actually succeeded in redeeming at favourable rates large portions of her foreign indebtedness. But she has also expended for this purpose a good deal of her foreign currency reserves, and for months now has not been in a position to continue the game, so that direct export subsidies have now taken the place of the former repurchases of bonds and scrips. This argument has therefore now lost its validity. There has also been some weakening of the belief that a nation which only ten years ago experienced an inflation of exceptional magnitude cannot yet afford a second currency devaluation without confidence being seriously shaken for a long time. The numerous successful devaluations, especially the recent Belgian one, which have been carried through by Germany's neighbours and have resulted in increased prosperity in the countries concerned, constitute, it must be presumed, a good psychological preparation for Germany. Even the German people are gradually realising the difference between the unrestrained inflation of 1920-23 and a limited reduction of the external value of a currency, such as has been effected by most countries of the world during the last few years. For the rest, the National-Socialist regime has succeeded in mastering even more difficult psychological problems, and drastic changes in currency policy are easier to enact under a dictatorship than in countries with a parliamentary constitution.

FINANCIAL NOTES

Brazil's Exchange Problem.—The rally in Brazilian Government bonds this week has been due to a return of confidence following publication of the June trade figures. Owing to larger shipments of cotton and coffee, exports in that month rose by £450,000 (gold), and, with a decrease of about the same amount in imports, the active balance of trade for the month was £1,135,000 (gold), compared with £1,922,557 (gold) for the whole of the first five months of the year. For the first half of 1935, Brazil's export surplus has therefore reached over £3,000,000 (gold); and, although this compares with £5,250,000 (gold) for the same period of last year, it would appear that the service of the foreign debt is reasonably safe, always provided Brazil's exports are maintained. At present, exchange obtained from exports is subject to two quotas, i.e. 65 per cent. for the commercial exchange market and 35 per cent. for official purposes. Assuming exports of over £16,000,000 (gold) during January-June, 1935, a 35 per cent. quota for the whole year should be amply sufficient to meet the present reduced service of the bonded debt and the Frozen Credit Agreements and leave a margin to be added to the 65 per cent. quota to pay for imports. However, further expansion in exports is probably necessary to meet other exchange requirements, such as Consular expenses abroad, private remittances, and dividends, etc., while the present tendency is to restore the balance of payments by a restriction in imports. It is therefore perhaps not surprising that, rather than provide direct exchange remittances, Brazil should endeavour to obtain a London bank credit for the £1,000,000 cash payments provided for under the Anglo-Brazilian Agreement of March last to meet small commercial arrears due to British traders. Delay in making this payment, as well as in issuing the 4 per cent. bonds, has probably been—apart from exchange uncertainties—also due to the necessity of compiling details of the debts. In any case, negotiations for a special banking credit of £1,000,000 are understood to be proceeding in London, presumably to be of a short-term nature with prior security. Evidently financial authorities derive sufficient satisfaction from the June trade figures to consider that the exchange position may warrant the advance.

The Foreign Exchanges.—Both the dollar and the chief gold *bloc* currencies have moved against the pound during the last week; the dollar from 4.96½-7½ on August 30th to 4.94½-95 on Thursday of this week, and the franc from 75½-¾ on the earlier date to 74½-75½. But the chief gold currencies have been weaker on New York. This probably reflects a general desire on the part of holders of

liquid funds to "get into dollars." There is evidence from the Continent that, as a result of Continental fears about the European political situation, a movement of this kind set in last week. Considerable buying of dollars on Continental account would naturally be reflected in a dearer quotation in sterling for dollars. The spot lira is being held, but the rate for conversion of "clearing lire" into sterling at the Bank of England went against Italy on and after Tuesday, from 60.60 to the pound to 60.67. The forward rates have been erratic. Three-months' dollars, which stood at 1½-¾ cents premium over the week-end, cheapened to 1½-¾ on Tuesday and Wednesday and remained there on Thursday. This may reflect forward sales of dollars as a "hedge" against spot buying. While the discount on three-months' French francs has narrowed slightly from 1½-¾ francs discount on Monday to 1½-¾ on Thursday, the three-months' guilder has been very much on offer, the one-month rate widening from 5-6 cents discount over the week-end to 5½-7½ cents discount on Wednesday and 6-8 on Thursday. Three-months' guilders cheapened from 18½-20½ cents discount last Friday to 21-23 cents discount on Wednesday and 21½-3½ on Thursday. The Brussels and Zürich rates have been steady.

The Money Market.—Money rates were firmer at the end of last week. The usual payments of dividends and interest on Monday were of the order of £25 millions. This influence, the hesitancy of the Stock Exchange to borrow, and the lack of interest in the gilt-edged market, combined to cause a glut of funds in the money market, which was exceptionally easy. The banks bought very few bills; and in any case the market was disinclined to sell. Hot Treasuries were bought at ½-¾.

	Aug. 15, 1935	Aug. 22, 1935	Aug. 29, 1935	Sept. 5, 1935
Bank rate.....	2	2	2	2
Clearing banks' deposit rate ...	½	½	½	½
Short Loan rate:—				
Clearing banks.....	½-1	½-1	½-1	½-1
Others.....	½	½	½	½-¾
Discount rates:—				
Treasury bills	½	½	½	½
Three months' bank bills ...	½-¾	½-¾	½-¾	½-¾

Last week, the market secured all it wanted in the £45 millions Treasury tender, the rate rising to 12s. 1.73d. against 11s. 4.93d. the week before. Another £45 millions are on offer this Friday; and the outstanding amount of bills by tender will then be about £530 millions, or £100 millions above last year's figure.

The Bank Return.—This week, the note circulation is up by £2 millions, as a result of month-end influences; and public deposits are down by £3½ millions, probably as a result of the September disbursements on Government securities.

BANK OF ENGLAND					
	Sept. 5, 1934	Aug. 14, 1935	Aug. 21, 1935	Aug. 28, 1935	Sept. 4, 1935
	£ mill.	£ mill.	£ mill.	£ mill.	£ mill.
Issue Department:—					
Gold	191.8	192.8	193.3	193.4	193.4
Note circulation	381.3	405.5	400.4	399.6	401.6
Banking Department:—					
Reserve	71.0	47.8	53.5	54.5	52.5
Public deposits.....	29.6	16.8	15.9	9.4	5.9
Bankers' deposits	88.9	86.3	93.9	96.9	100.1
Other deposits.....	36.9	37.0	36.9	36.5	38.6
Government securities.....	85.0	82.0	83.5	81.3	83.4
Discounts and advances	6.9	15.2	13.0	12.9	14.1
Other securities	10.8	13.2	15.0	12.3	12.8
Proportion	45.6%	34.1%	36.4%	33.1%	36.3%

The rise of £2.1 millions in Government securities may reflect Government borrowing on Ways and Means advances for the above-mentioned disbursements; and both Discounts and Advances and Other Securities have risen. Perhaps as a result of the fall in Public Deposits and of the rise in all securities, Other Deposits have risen sharply by over £2 millions. Bankers' Deposits are still rising; while the "Proportion" has this week dropped back again.

THE STOCK EXCHANGE

A CHANGED MARKET OUTLOOK?

EVENTS have not been kind to evangelists of "planning" in the stock markets. Though the close season of August and September, as a rule, lends itself readily to the consideration of autumnal perspective, a series of untoward developments has this year brought the business of policy-making completely to a standstill. A market, like a democracy, can usually be relied on to give a soundly realistic verdict on broad principles, when it has had ample time to review the evidence. Its instinct, however, when confronted with a situation whose basic causes it fails clearly to comprehend, is to play for time.

For the last three years, against a background of rising prices, the markets have been almost exclusively pre-occupied with domestic factors. They were unprepared for the sudden re-orientation of the outlook implied by tardy recognition of the international implications of the Italo-Ethiopian dispute. Since August 14th, when the abortive Eden-Laval negotiations opened, the *Financial News* ordinary share index has dropped from 104.2 to 98.5 (with a partial recovery to 100.5) and the fixed-interest security index from 138.8 to 136.4. The volume of dealings has been reduced, and "sentiment" has varied from hour to hour, as rumour has painted the prospects of this week's League meeting in glowing or sombre colours.

Technically, the equity share markets were vulnerable, in mid-August, to any unfavourable external development. The last upward movement in equity shares, which started in April, had travelled faster and further, without pause for breath-taking, than any of its predecessors since "recovery" began. Normally, a temporary recession might have been expected to find dealers and "shops" more than willing to take in stock, in order to replenish their depleted supplies. Their unwillingness to do so has given some

colour to the charge that the reaction has been partly a vote of "no confidence" by the market in its own stability. A wide marking down of prices may have tended to defeat its purpose, by encouraging rather than discouraging further liquidation. Many people, to-day, hold securities showing a handsome profit which they may be reluctant to consolidate on a minor reaction, but are anxious to safeguard on any formidable threat to basic price levels.

It is an axiom that war is the investor's greatest enemy. The South African War brought to an end the long period of low interest rates and high security values of the 'nineties of last century. The Great War of 1914 was associated with the temporary closure of the Stock Exchange, and a decline in gilt-edged quotations to the lowest level for a century. Investors, at the moment, are inclined to dwell—perhaps over-pessimistically—on the alternative that "intervention" by Great Britain in the present crisis may ultimately be incompatible with a 2 per cent. Bank rate and all that it means, while non-intervention may be purchased at the cost of an era of intensive re-armament whose financial consequences may be scarcely less unfortunate. With this week's events at Geneva, and their background, we deal on earlier pages of the *Economist*. At this stage, it may be less profitable to attempt to anticipate the findings of the League, for good or ill, than to reach a clear understanding of the forces which will determine the main lines of investment policy, in the absence of "alarms without." The charts on the following page may be of service in this respect. They show the course of prices and yields on "Old Consols," and on representative industrial debenture, preference and ordinary securities (according to the Actuaries' Index), at quarterly intervals for the entire period from 1928 onwards.

ECONOMIC PHENOMENA IN THE "NINETIES" AND THE "THIRTIES"

It will be seen that fixed-interest stocks reached their nadir in the autumn of 1931, when Britain left gold, and industrial equities in the middle of 1932. After a sharp subsequent upward movement—representing, presumably, the passing of the *crise de confiance* of 1931—a steadily rising trend has been common to all groups. The "Old Consols" curve, inversely reflecting "pure interest rates" has, in fact, been the most irregular of the four. Since the beginning of 1935 it has suffered a noteworthy setback. Industrial ordinary share values have had a series of ups and downs in the last twelve months, but their *trend*, on the whole, has been progressive.

A scrutiny of the "yields" chart, however, conveys a somewhat different impression. Before the yield on "Consols" reached its lowest point, at the end of last year, the

similarity of movement of certain economic "pointers," such as employment, Bank Rate and gilt-edged prices, in the last few years and in the historic low-interest phase of the 'nineties. The charts on the opposite page show that if the year 1928 is regarded as comparable with 1890, the "fit" of the respective curves is remarkably close. Bank Rate reached its minimum level within much the same number of months in both periods. The unemployment curve attained and maintained a high plateau and thereafter declined with a more or less identical time-sequence in either case. The upward movement in "Consols" prices, though more rapid and irregular in the 'thirties than in the 'nineties, has so far had much the same timing.

Historical comparisons should not be pushed too far. The low-interest period of the 'nineties, in any case, ended with the South African War, which was, in its way, as "abnormal" an event as any likely to emerge from the present international situation. For what it is worth, however, the chart of the earlier period reveals that, on the attainment of the stage which the present cycle appears, by analogy, to have reached, short-term interest rates became increasingly firm about eighteen months before gilt-edged security values started their secular decline. The activity of trade, however, as evidenced by a low unemployment figure, continued for at least another three years.

We may suggest that though the evidence considered in this article is far from conclusive, it is consonant with the view that the markets, in the last few months, have reached and passed the rubicon dividing one major stage in the "recovery" cycle from another. The "overlap" of exceptionally low interest rates and increasing industrial activity, characteristic of the first stage of recovery after earlier depressions, has invariably had a limited duration. For some time past industrial ordinary shares appear to have been fulfilling their characteristic function in the succeeding phase of the cycle, by preserving intact the capital of their holders at a time when long-term interest rates have been showing firmer symptoms. Apart from the consequences of any breakdown of international relations, there is no reason to doubt that prospects of a further rise in industrial earnings and dividends, possibly for the next three years or more, may be well founded. Already the revival, which started mainly in the capital-producing trades like steel and building, is tending to percolate through the national economy.

In the gilt-edged market, however, the atmosphere appears subtly to have changed since the Treasury permitted the resumption of new borrowing, three months ago, under conditions suggesting that they were more anxious to secure the subscription of new loans than to maintain any arbitrary price-level for old securities. The subsequent appearance of the London Transport issue, coupled with Olympian hints that the authorities have an open mind on the subject of public works borrowing (whether for "constructive" purposes or for armaments is immaterial), may be the signal that the "conversion period," in the gilt-edged market, is at an end. The Treasury, on this argument, is no longer determined to starve the market, to secure a given price-level, but to feed it with new securities at such prices as are likely to ensure subscription.

If this interpretation of official intentions is correct, then the period of steadily rising gilt-edged quotations is almost certainly over. Even if the Italo-Abyssinian crisis were, after all, to achieve a peaceful settlement, investors could not necessarily look for a return to the conditions ruling in the recent past. An outbreak of war, in Europe or elsewhere, would probably tend to accentuate factors making for lower fixed-interest security values, and to cause a sharp differentiation, in the ordinary share market, between securities with and without an "armament equity." In the absence of disturbing external factors, however, the incidence of firmer interest rates may still have to be reckoned with. If rising dividends on ordinary shares appear to offer a sanctuary for capital values, the vested interest of certain institutions, like the banks, in the maintenance of the gilt-edged market, by reason of their exceptionally large present holdings of Government securities, may be insufficiently powerful to off-set all the consequences of a transfer of mobile resources from the less to the more promising field of investment.

We have on earlier occasions drawn attention to the

PRICES AND YIELDS OF BRITISH SECURITIES, 1928-35

INVESTMENT NOTES

"Soviet Sevens."—Some discussion has been prompted this week by reports that the Soviet Government is to place a line of 7 per cent. gold bonds in this country. It is understood, however, that the bonds in fact form part of a 7 per cent. Second Five-Year Plan Internal Loan (issue of the first year). This loan, which is the only Russian issue available for overseas purchasers, is in gold roubles, and may be bought at current exchange rates in sterling. Interest, on a gold basis, is similarly converted, and the bonds may be re-sold to the issuing agents at the exchange equivalent of their face rouble value. These bonds have been advertised for sale in the United States for some months by the Soviet American Securities Corporation of New York. There would appear to be no immediate intention of a "placing" of the bonds in London, and, in any case, the Treasury's sanction would presumably be required. Nor has the availability of the bonds in London, through the agency of the Moscow-Narodny Bank, attracted any considerable publicity. The credit of the U.S.S.R. has improved in recent years, but its recent record in commercial transactions is not the sole determinant of its long-term investment status. The London market would not necessarily be averse to a resumption of long-term lending, but its terms would certainly include some consideration, partial though it might be, of outstanding British claims. Formal assumption of these responsibilities on the part of the Union would undoubtedly secure a better response than the bait of a high-yielding bond, offered in a roundabout way, on the assumption that by-gones were by-gones.

Peruvian Debt Provision.—Peruvian issues have received support this week on cabled reports that the Budget makes provision (to an extent at present unknown) for some payment on the foreign debt. The decision will be welcomed by bondholders, who have observed the improvement in economic conditions in the Republic, for the foreign exchange position is sound, and the trade and Budgetary situation reasonably satisfactory. The Peruvian Government has thus shown itself willing to meet the requests of the creditors' representatives for renewed consideration of their claims. Until further details are available, however, as to the amount of the provision and its proposed application, comment must necessarily be reserved. Two points, however, would appear to merit particular attention. Reasonable balance should be preserved, when payments are resumed, between interest and sinking fund provision. Investors cannot afford to countenance, in any way, the recent tendency of certain States to re-purchase their bonds at default levels, while the holders are receiving attenuated interest payments. Secondly, the position of the American issues would seem to call for special treatment. The outstanding amounts of American lending to Peru during 1927 and 1928 exceed \$91½ millions. By comparison, the British balances of £3,393,800 appear insignificant. It is strongly felt in London, however, that the somewhat extravagant generosity of American lenders, who were late entrants into a field previously restricted mainly to "seasoned" British loans, should be appropriately discounted in the terms of any temporary arrangement.

A Free State Conversion.—The Irish Free State Government has given notice that it intends to redeem or convert the First National Loan at the earliest possible date, which is December 1st of this year. This loan, which was issued at 95 in 1923, carries interest at the rate of 5 per cent. It contains unusually onerous sinking fund obligations, and its conversion will prove a substantial relief to the Free State taxpayer. The original amount of the loan was £10,000,000, of which £7,248,007 is outstanding. The

terms of the conversion issue have not yet been announced, but it is believed in Dublin that not more than 3½ per cent. will be offered. Its success seems almost a foregone conclusion, as the loan is held largely by trustees, charities and corporations. Whether the Government will find it possible to effect any new borrowing at an equally low rate is less certain in view of the reception afforded to the Fourth National Loan and of the general hardening of interest rates in the Free State, where the demand for capital appears to have outrun the supply of new savings.

Industrial Management and the Investor.—It is not often that the Transactions of the British Association provide discussion of matters of direct importance to the investor. The Department of Industrial Co-operation, however, covers a wide field of industrial management problems at its meetings, and the often neglected place of the investor in this field received constructive treatment in a paper read by Mr Hargreaves Parkinson before the Department on September 6th. The author established the general case for a financial democracy of relatively small investors, jointly responsible for the provision of the immense resources involved in the development of large-scale industrial units. The legal conception of the limited company, however, is in practice considerably modified. Any attempt by shareholders to exert their legal powers towards effective joint action is qualified by a growing unwieldiness of company memberships, and by a species of "constitutional oligarchy" which is exerted by the board of directors. The machinery of the proxy system, for instance, almost invariably works in favour of the board, and effective criticism of questionable policy may be repeatedly blocked by the poll, until crisis welds an unorganised body of shareholders in common purpose. Under present conditions, as the author pointed out, it is impossible and undesirable to permit the shareholder to interfere at will with the day-to-day management of his company. It is, however, equally difficult to present effective criticism of arbitrary policy, since the average board is, for practicable purposes, unassailable. The first suggestion made in this week's paper, for the more effective working of the financial Demos, envisages the publication to shareholders of detailed information so that their control may be rationally exercised. This reform would include the provision of fully documented annual reports, improved holding company accounts and detailed quarterly progress reports. There is no case for withholding this information for, in many industries, businesses commonly know more of the internal affairs of their competitors than the latter's shareholders. This suggestion will meet little informed criticism, in view of recent financial disclosures. The second suggestion, however, breaks new ground. It proposes that a small representative committee of shareholders should be elected by the members of each company, not necessarily in virtue of their interests, but of their probity and business judgment. The committee would be furnished by the management with sufficient information to enable it to decide at its regular meetings on matters which are now, theoretically, within the ambit of shareholders' sanction. The committee, it is proposed, would have no other function in its relations with the management. Its recommendations would be submitted to the shareholders before the latter were called to decide on matters affecting them. The suggestion may be commended to the attention of managers of leading companies and their progressive shareholders. Its adoption, in practice, would seem to turn upon—and would undoubtedly assist—the gradual development of propitious relations between the board room and the shareholders' assembly room. In cases where the atmosphere has been strained, however, a board is hardly likely to greet more effective supervision in shareholders' interests with any ready show of favour. As a "constitutional convention" in the realm of finance, the organisation of such committees could undoubtedly protect the shareholder and encourage the highest management capacity. But like all such conventions, its development will probably be best achieved by a growing body of non-statutory precedent, fostered by a small number of influential concerns.

Actuaries' Investment Index.—The continued timidity in the share market, which has prevailed since the belated recognition of the implications of the Italo-Ethiopian dispute, is reflected in a further fall in the Actuaries' Index to 75.9, compared with 76.4 a week ago, and 78.2 in Bank Holiday week (December 31, 1928 = 100). The yield figure is unchanged at 3.91 per cent. compared with 3.81 per cent. a month ago. A selection of component indices follows:—

Group (and No. of Securities)	Prices (Dec. 31, 1928=100)			Yield (%)		
	Month Ago (Aug. 6)	Week Ago (Aug. 27)	This Week (Sept. 3)	Month Ago (Aug. 6)	Week Ago (Aug. 27)	This Week (Sept. 3)
Banks and discount co.'s (12)	116.0	115.5	114.4	4.04	4.06	4.10
Insurance co.'s (24)	122.0	120.0	119.1	3.45	3.50	3.52
Electric Light and Power (16)	134.3	131.4	129.9	3.78	3.87	3.92
Gas (7)	132.5	133.8	132.9	4.51	4.47	4.50
Iron and steel (8)	64.6	63.4	64.5	3.13	3.21	3.17
Breweries and distilleries (19)	134.0	130.6	128.7	4.07	4.24	4.29
Miscellaneous (52)	70.6	69.0	68.9	3.96	4.06	4.07

In almost every group, quotations have more than lost the unseasonal gains recorded in the middle of August. The movement of "fixed-interest equity" shares, including the "money" and public utility groups, illustrates the effects of a waning gilt-edged market. The fall in brewery shares over the month has been rather spectacular, in view of the reports which will shortly be due. Investors retain their trust in iron and steel shares as an armaments "hedge," although the valuation of certain counters is by no means modest.

Problems for Rubber Shareholders.—Since we reviewed the outlook for the rubber share market, in conservative terms, in our issue of July 20th last, page 132, the price of the commodity has broken away from the moderate level of 6d. a pound, at which it had been "anchored" (but not "pegged") for several months, and now stands at 5½d., after falling as low as 5½d. this week. The decision of the International Committee, which may be meeting in the next few weeks to consider its policy as regards restriction quotas and percentages for 1936, will thus be a matter of prime moment for holders of rubber shares. Events so far have certainly failed to bear out the optimistic prophecies of those who maintained that declining production percentages of 75 for the first quarter, 70 for the second quarter and 65 for the remainder of this year, would produce a progressive tightening of the market. Stocks of crude rubber in the United Kingdom have, in fact, increased, since the end of last year, by 41,778 tons to a total of 176,705 tons. The latest available figures for the United States disclose that while total stocks declined, in the first five months of this year, from 355,000 tons to 319,284 tons, a subsequent reversal of the tendency raised the total to 330,528 tons at the end of July. The consumer, in fact, appears to have been successfully "playing" the restriction scheme. Despite the activity of the motor industry in many countries, apparent consumption in the United States, for the first seven months of this year, has risen only from 293,743 tons to 295,162 tons, while in the United Kingdom, consumption has been only 53,251 tons against 63,427 tons, and in the rest of the world 194,203 tons against 219,670 tons. Manufacturers, in fact, have been drawing on supplies acquired in restriction's earlier days, in anticipation of such a decline in the price as has now materialised. The market has largely played into their hands. It is understood that there is an extensive bull position to be liquidated in October-December rubber. The herd of "stale bulls" has been gratuitously augmented by certain Malayan producers, who have shipped well under their permissible total of exports, and must make up the deficiency (amounting to 17,124 tons for the fourteen months to July last) before the end of September, or lose their export licences. While all indications point to a recovery in the price, once the present concatenation of unfavourable factors has dispersed, no one will envy the Committee its immediate task. Meanwhile, the share

market has continued to register disillusionment, and many quotations are lower than at the inception of the restriction scheme in April last year, as the following table suggests:—

Company	Share De- nomina- tion	Prices				Yield on Last Dividend (%)
		End April, 1934	Highest, 1934	Highest, 1935	Present	
Allied Sumatra	£1	16/9	20/3	17/1½	11/9	4 4 6
Anglo-Dutch	£1	23/3	29/3	25/3	19/-	4 4 0
Anglo-Java	1/-	1/-	1/5	1/0½	-7/8	3 15 0
E. Asiatic	2/-	2/10½	3/6	2/9½	1/10½	5 6 6
Grand Central	£1	17/-	21/6	19/6	14/4½	5 11 0
Gula Kalumpang	£1	21/3	29/4½	25/-	20/-	5 0 0
Linggi	£1	20/-	25/7½	20/7½	16/3	Nil
Merlimau Pegoh	2/-	2/6	3/10	3/6	2/7½	5 14 0
Tanjong Malin	£1	22/6	28/9	29/7½	22/6	4 9 0
U. Serdang	2/-	3/10½	4/6	3/10½	2/10½	4 3 9

In practically every case, the highest prices of the last seventeen months were reached shortly after last year's announcement of restriction.

New Issues in August.—The new issue total for August, amounting to £2,419,000, reflects the usual holiday quietness, although the contrast is heightened this year by the high figure recorded in July, resulting from the London Electric Transport and Cables Investment issues. Recent comparisons are set out below:—

Monthly Average	(000's omitted)			
	United Kingdom	Excluding Conversions British Possessions	Foreign Countries	Total
1931	4,542	3,209	761	8,512
1932	13,589	2,129	24	15,742
1933	17,520	2,429	449	20,398
1934	11,474	2,494	125	14,093
Monthly Total	Govt. Other			
June, 1934	Dr. 150 3,857	3,683	90	7,480
June, 1935	Dr. 150 14,274	669	Nil	14,793
July, 1934	Dr. 300 13,624	3,753	Nil	17,077
July, 1935	Dr. 300 53,833	3,273	256	57,062
August, 1934	50 1,500	471	Nil	2,021
August, 1935	Dr. 200 949	1,670	Nil	2,419

Only two public issues appeared during the month, on behalf of Trinidad Government and Odhams (Watford).

COMPANY NOTES

Armament Shares.—When we last discussed the prospect for armament shares we concluded that, despite the very low level to which yields had already fallen, the outlook remained good, owing to the large replacement requirements which had accumulated during the depression—if for no more sinister reason. Unhappily, our forecast has been more than fulfilled. Writing in this week of September, 1935, however, it is not easy to forecast the course of armament shares over the next few years. Fundamentally, the prospect depends on whether League principles fail or triumph at the present session. In retrospect, it can be seen that so long as the Disarmament Conference was in prospect or in existence, an appreciable effort was made, particularly in this country, to restrict armament orders. That effort is reflected in the poor, or relatively poor, profits of armament firms or armament departments of composite firms, whose results for recent years are set out in the annexed table. Stalemate at the Disarmament Conference happened to coincide with incipient economic recovery. The first increases in national armaments expenditure could thus be attributed to the "overtaking of arrears of defensive equipment," which contributed to some "natural" recovery in armaments profits. Latterly, however, a new argument for re-armament has been heard, which does not speak of "arrears" but of "dangers." So far, this happens mainly to have affected the Air Force in this country, but it is a general policy applicable to all

forces. This would appear to indicate a new degree of demand, unknown so long as Disarmament Conference hopes remained. In addition, it is undoubted that our own Navy is equipped with ships much above the usual age. A "normal" replacement demand of considerable dimensions is likely to show itself as soon as the new agreements of this and next year are settled. The general prospect for armaments demand is thus "good" independently of any catastrophe which may occur in Abyssinia or Europe. It should be realised, however, that in the event of any sudden

* Half-year's profits multiplied by two.

pressure on the manufacturers for national re-equipment, profits are certain to be closely limited by State action and public opinion. Revival from depression, rather than great positive prosperity, would therefore be in prospect. Investors who do not wish to speculate should also reflect that if League principles are upheld in such a way as to prevent war, the opportunity may occur for a new start towards collective security and some measure of arms limitation. In any event, investment should only be in the concerns which have a sound record. Bargain-hunting can be left to specialists.

"Unilever" Stores' Position.—For some time past falling profits and dividends have suggested that the Unilever group of retail stores have been meeting unusual difficulties. It is now announced that the interim dividends of the Home and Colonial and Maypole Dairy concerns are to be passed after an unbroken period of more than a decade. The directors state, in each case, that since the beginning of the year they have been engaged in reorganising selling policy, with a view to re-establishing the turnover on a larger basis. The improvement in trading justifies the continuation of the policy, although it entails a temporary reduction in profits. For the inauspicious trend of both companies, recently, various reasons have been adduced, such as the effect of falling butter prices or margarine consumption, depression in basic industrial areas, and falling commodity prices. These factors, however, have been common to provision retailing in general. The experience of the group (which also includes Lipton and Meadow Dairy) appears difficult to reconcile with the satisfactory results of such a competing organisation as the International Tea Company's Stores, or with the increase of 6.2 per cent. in retail sales of food and perishables during a period of relatively stable prices from February to July, compared with the same period of 1934. The late chairman of Home and Colonial described a new policy of decentralised management to the length at the meeting in March. The latest announcement that modernisation of shops is in progress may therefore mark the supersession of the earlier

policy, whose advantages in a chain organisation would presumably be exhausted at an early stage. Shareholders will anxiously await the eventual results of the new policy, for recent events have taken their toll of share prices.

Investment Trust Recovery.—The improvement in investment trust revenues continues, in modest fashion, to reflect the general advance on the home industrial front. It is still tempered, however, by the difficulty, at this insular phase of the recovery cycle, of obtaining an adequate return upon foreign portfolios. Nevertheless, recent profit figures, as a whole, show a significantly larger percentage increase compared with the previous year, than those published earlier in the year. During May to July, the advance ranged between 15.6 and 20.5 per cent., after debenture interest had been met. The following table analyses seven recent reports, on the model adopted in our Investment Trust Supplement of December 1, 1934:—

(Amounts in £'000)							
Years ending	Bankers Investment (a)	British Steamship (a)	Continental and Industrial (a)	Industrial and Gen. (a)	Investment Trust Corp. (a)	Trustees Corp. (a)	Witan Investment
Date of accounts	Apr. 30	June 30	May 31	Mar. 31	May 1	May 31	Apr. 15

(a) For particulars relating to "ordinary," read "deferred" throughout.

The revenue figures have been adjusted, where necessary, to a net basis, after income tax and, to preserve comparability, exceptional credits, such as tax repayments, have been excluded. On this basis, the sample shows an advance of 8.8 per cent. in total income during the latest year. Equity earnings, however, have increased by as much as 18 per cent., as a result of the "gearing" factor. In four cases dividends have been increased, usually by ½ per cent., and with one exception, all are well covered by increased earnings. The assets position shows general improvement. The British Steamship, Continental and Industrial, and Investment Trust Corporation all report appreciable reduction in portfolio depreciation, which is covered substantially—and in the last case handsomely—by available reserves. The Trustees Corporation book values are fully covered, while Witan Investment has achieved a further increase in investment appreciation. The tide of investment trust fortunes has ceased to ebb, and in the absence of international calamity the guarded optimism displayed by recent chairmen's speeches may well be justified.

Triplex Safety Glass.—Although this company's trading profit has fallen, in the year to June 30 last, from £130,787 to £126,692, the precise trend of earnings is difficult to ascertain. The latest figure includes a 10 per cent. dividend (£3,797 net) from Triplex (Northern), Limited,

against nothing in the previous year, but is shown after charging the cost of certain patent rights acquired during the year. Since the company returned 10s. per £1 share to holders three years ago its capitalisation has been distinctly low in relation to its earning power, and this year's increased dividend of 30 per cent. is paid out of earnings of nearly 56 per cent.

	Years to June 30,

* Transfer fees, interest on investments, profit on realisation of investments, etc. † Including royalties, £45. ‡ Written off goodwill. § It is not the present intention of the board further to increase reserve.

The company already appears to be well on the way towards the establishment of a dominant position in its trade comparable, *mutatis mutandis*, with that of Courtaulds in the rayon industry, after much the same experience of over-production and weak selling by competitors formed during a market boom. That, however, is now very much past history. The company's products are standard on most British motors, and their increased use on military and civil aircraft (not to mention such vehicles as armoured cars) gives the shares a "rearmament equity" whose interest, under contemporary conditions, need not be stressed. The management is showing commendable zeal in developing new products. In 1933-34 the whole cost of the plant for manufacturing "toughened" glass was met out of liquid resources. Within the last twelve months the rights in a new type of glazing glass, "Thermolux," have been acquired, and a new subsidiary, Quickfit and Quartz, Limited, has introduced a proprietary scientific glassware on the market. The 10s. shares, at 74s. 9d. xd, yield £4 os. 3d. per cent. on a 30 per cent. dividend, and as much as £7 9s. 3d. per cent. on earnings, and would seem to hold appreciable future promise.

Sussex Brick Merger Questions.—Last week's announcement that this company had purchased the share capital of Dorking Brick Company has been amplified by a circular to shareholders dated August 30th. Certain points emerge from this document, however, on which shareholders may consider further information desirable. The purchase price involved is £257,500, to be financed by the issue of 120,000 £1 preferred ordinary shares and 280,000 5s. deferred shares. The assets involved are not specifically valued, but are included in a statement of combined net assets of the two companies. Since the Sussex Brick figures are based on the balance sheet at September 30, 1934, shareholders are therefore under a disability in calculating the amounts attributable to the Dorking undertaking. The respective positions of the two concerns, on this basis, appear to be as shown below:—

	Combined Statement†	Sussex Brick as at Sept. 30, 1934	Dorking Brick computed 123,393
Fixed assets	433,462	310,069	123,393
Current assets—			
Stock	44,046	36,813	7,233
Debtors, etc.	49,506	33,487	16,019
Cash	51,900	54,837	Dr. 2,937
Subsidiary Co's. ...	6,698	6,698	...
Current liabilities ...	65,298	54,377	10,921
Net current assets ...	86,852	77,458	9,394
Net total assets	520,314	387,527	132,787

† Sussex Brick figures based on balance sheet as at September 30, 1934; Dorking Brick fixed assets on valuation dated August 17, 1935, and current items on balance sheet as at September 30, 1934.

From this analysis it would appear that the net assets involved are valued at £132,787, leaving a presumptive balance of £124,713 to represent valuation of goodwill. This would represent between six and seven years' purchase of the average "adjusted" profits of Dorking Brick for the last three years. The profits, after depreciation and after such adjustments as are "appropriate," in the opinion of the auditors, have risen from £13,697 for the year to September 30, 1932, to £26,044 for 1933-34. The latter figure, however, takes no account of the results of the Old Crown Derby China Works, formerly conducted by the Dorking Company, but recently sold. No information is available regarding the terms of this disposal, since the Dorking Company's fixed assets are taken at a valuation dated August 17, 1935, presumably after the transfer had been effected, and the current assets at balance-sheet figures as at September 30, 1934. The profits of the Dorking Company are stated to be in excess of those for the corresponding period last year "exclusive of a non-recurring loss" accruing from the China Works business. No information is given as to the issued capital and directorate of Dorking Brick. From the latest return at Somerset House, it would appear that the issued capital amounts to £55,000 in £1 shares, after a bonus issue of 100 per cent. in January last. The directors are given as Gerald Thomas Gorst, Francis Edward Howard Paget and Joan Florence Paget. The terms of the bonus issue would appear somewhat surprisingly favourable to the preferred ordinary shareholders, who, though they are pure "preference" holders, without any equity rights, are entitled to four new shares for every five held, at 23s. per share against a current quotation of 27s. 9d., compared with rights to seven deferred shares for every twenty held, at 9s. against the present marking of 12s. 3d. In view of the attractive bonus terms in each case, the decision to underwrite the issue at 1 per cent. would appear equivalent to "paying twice over" to ensure subscription. An explanation of the points raised in this Note might, we suggest, be given at next Tuesday's extraordinary meeting before shareholders are asked to authorise the necessary increase of capital.

TRIPLE SHELL LUBRICATING OIL

Debenhams Improvement.—Early in 1934, this company (which owns a direct controlling interest in many famous retail businesses, including Bobby's, Drages, Harvey Nichols, Plummer Roddis, Stagg and Russell, etc.), overhauled a somewhat unwieldy financial organisation, its subsidiaries, Debenhams Securities and Drapery Trust, being absorbed into its own undertaking on terms involving a considerable writing-down of capital. The company has subsequently made gratifying progress. Its capital structure is still decidedly "high geared," some £9,151,411 of debenture and preference capital ranking ahead of £500,000 ordinary shares. Thus an increase of 11 per cent. in profits, from £585,992 to £654,928 for the year ended July 31st last, more than doubles the percentage earnings on the ordinary shares—if an amount equal to the requirements of the Third Preference shares, which did not rank for dividend until August 1, 1934, be allowed for in calculating the ordinary earnings of the preceding year:—

	Years to July 31 1934	1935
Balance of profit and loss account*	585,229	654,929
Total profits	585,992	654,928
Debenture interest and fees	146,253	145,427
Directors' fees	Nil	1,500
Preference— 6½% first	130,000	130,000
6½% second	140,000	130,000
7% third	Nil†	119,000
Ordinary— Earned	167,739	129,001
Paid	Nil	62,500
Earned (%)	43.8†	29.7
Paid (%)	Nil	12½
To reserve fund	50,000	50,000
Total carried forward	119,740	136,241

* Including dividends from subsidiary companies and other investments, rents and interest receivable, and after providing for income tax. † Third preference shares did not rank for dividend till August 1, 1934. Had they ranked for year to July 31, 1934, earned rate on ordinary would have been 13.1 per cent.

The recovery in profits appears to be due both to an increased volume of sales and to improved internal arrangements. The company has recently acquired an old-established business at Great Yarmouth, and disposed of the undertaking of J. and E. Bumpus, whose island site has

been leased for 99 years. The balance sheet suggests that subsidiary and other loan and current accounts with the parent company are being steadily reduced, with beneficial results to the latter's cash position. Market interest has been chiefly concentrated, recently, (a) on the Third Preference 10s. shares, which are covered 1.34 times by last year's profits and yield £6 4s. 3d. per cent. at their present price of 11s. 3d.; and (b) on the ordinary 1s. shares which stand at 3s. 4½d., to yield £8 16s. per cent. on earnings and £3 14s. per cent. on a 12½ per cent. dividend. The latter necessarily have speculative possibilities—so long as total profits are rising.

Other Company Results.—This week's reports, summarised on page 494, include the results of 13 additional concerns. Improvement is shown in three "heavy industry" reports. In this group the net profits of *R. and W. Hawthorn, Leslie and Company*, have advanced from £16,157 to £23,194, despite depressed conditions on Tyne-side, and the dividend is increased from 4½ per cent. to 5 per cent. *J. Blakeborough and Sons*, the Yorkshire engineers, also report a substantial recovery, and ordinary dividends are resumed with a 5 per cent. payment. Interesting dividend announcements in this group come from *Lockgelly Iron and Coal*, which is to pay 4 per cent. for the year, after 8 years' absence from the list, and *Sheffield Forge and Rolling Mills* whose 5 per cent. payment is the first for fourteen years. In the stores group, *Harvey, Nicholls and Company*, the Debenhams subsidiary, report net profits of £103,211. Owing to the capital changes effected when the business was converted into a public company in May, 1934, this result is not directly comparable with the previous year. Textile reports continue to make a poor impression. Both *Leigh Mills* and *Wardle and Davenport* report lower earnings, but dividends are maintained at the previous year's levels. *D. Gestetner* reports an advance in net profits from £121,364 to £156,056, the dividend being increased from 30 to 35 per cent. It is proposed to make a 12½ per cent. capital bonus. The Imperial Chemical Industries ordinary interim dividend is maintained at 2½ per cent. Associated Portland Cement is to pay a maiden interim of 5 per cent., and British Portland announces an increased payment of 7½ per cent. against 5 per cent.

Company Meetings of the Week.—On later pages of this issue will be found the reports of the Palestine Electric Corporation and the City of San Paulo Improvements and Freehold Land Company. At the Palestine Electric meeting the Marquess of Reading stated that during the past year the Corporation had connected 13,463 additional consumers and increased its sales of energy by over 70 per cent. Mr Herbert Guedalla informed shareholders of City of San Paulo Improvements that sales of all properties had shown a pleasing increase.

THE WEEK IN THE MARKETS THE LONDON STOCK EXCHANGE

SETTLING DAYS

TICKET SEPTEMBER 10 | ACCOUNT SEPTEMBER 12

THE market's traditional distaste for the muddy waters of international affairs has not been alleviated during this week's unfolding of the Italo-Abyssinian dispute in Paris and Geneva. The early reverberations aroused by the now notorious Standard Vacuum oil concession quickly died away. The market's chief concern for peace may have contributed to a rather hopeful tone on Tuesday, but later news suggested that the wish largely fathered the thought. Wednesday's proceedings at Geneva were studied with partial relief on the mild outline of French policy, but dealers showed continued reluctance to take a view of the

course of events, owing to Italy's uncompromising policy. Tuesday's "bump" and a milder recovery on Thursday provided the only relief from a week of sagging gilt-edged prices. The rise, however, was largely confined to the sensitive irredeemable issues. Early relief from a previous display of nervous selling was partially maintained, but the unpromising start at Geneva prompted a dull tone late on Wednesday. India loans followed a similar fluctuating course. Canada issues turned weak, following the importunities of Calgary, from the land of Social Credit, for Federal assistance to avert default on its September debt payments.

Foreign bonds continued uneasy. Austrian issues were sold on Monday, but responded later to the progress in the Danubian Pact negotiations. German bonds moved in similar fashion, although the Potash issues were talked higher on current sales estimates. Peruvian issues attracted some attention on the reported provision for foreign debt service in the Budget, discussed on page 476. Chilean bonds were reactionary, but irregular support assisted Brazilians.

The market's expectation of better rail traffics was confirmed this week, although the figures were anything but exciting and rather disturbing as to mineral traffic. After a quiet uneasy opening, improvement set in on Tuesday, but the fractional gains established were not wholly maintained as the market relapsed into quietude. Idle conditions prevailed in the foreign rail section, but prices were broadly maintained.

The industrial markets took their cue from gilt-edged. Nervousness was temporarily allayed on Tuesday, but quieter—though possibly less uneasy—conditions set in later. Throughout the week fair support was evident in certain sections, primarily with an armament interest. Iron and steel issues, including Hadfields, John Brown and South Durham, received steady and widening attention, and aircraft issues, particularly Bristol Aeroplane, responded to reports of high pressure business. Motor shares, after initial uncertainty, maintained Tuesday's firmer tendency, Standard providing a strong feature. Brewery issues tended to recover after a poor start, on more confident consideration of the July production figures. Dullness prevailed among electrical equipment shares and rayons became easier. In the stores group, the Unilever concerns were depressed on the passing of the interim dividend, discussed on page 478. Bear covering strengthened leading tobacco issues, but irregularity ensued in mid-week. Among leading miscellaneous counters, an easier tendency followed Tuesday's improvement, which was evidently due in part to bear covering. Imperial Chemical ordinary were in demand on dividend anticipations, although the declaration was in fact unchanged, and many building issues recovered more than their initial losses. Triplex continued in request on the profits figures, set out on page 478. Electricity supply shares recovered from initial easiness, and firmer conditions prevailed among bank and insurance shares as the week progressed.

Oil shares opened in dull fashion, largely on account of the Californian price cutting. Precautionary marking down of leading issues, however, attracted buyers, and firmer conditions were assisted by increased Continental interest on Tuesday. Renewed easiness appeared later, however, in sympathy with the general tone.

Conditions in the rubber market were anything but happy. The sharp weakening in the price of the commodity brought down share quotations in its train. The mid-week recovery relieved the market of considerable selling pressure, but it was insufficient to recoup early losses. The share outlook is discussed on page 477. After a certain hesitation, the tea share market developed a firmer tendency in mid-week, for the rising tendency in the Mincing Lane sales attracted buyers to a market rather short of shares.

The opening tendency in the Kaffir market suggested a continuation of the depressed tone which has overhung the market for many weeks. Prices were marked down on Monday almost without exception, and it appeared that forced selling was still in progress. On Tuesday, however, "shop" support was at times in evidence, and a slight widening of demand had a rather flattering effect upon quotations. Even the Cape appeared as buyer on Wednesday.

day, and the August returns encouraged a brighter tone, particularly in the "heavies." West African counters staged a partial rally on Tuesday, which was not maintained, while Australian issues remained extremely quiet. Rhodesian copper shares showed little change, while tin shares, with the exception of Malayan issues, ruled dull on Wednesday's sharp fall in the metal.

FOREIGN STOCK EXCHANGES

NEW YORK

SINCE Congress took its leave of Washington, the strong market movement, on which so many hopes are being built, has failed to gather its expected headway. Many operators prolonged Monday's Labour Day holiday, and it was only at the end of a very quiet session on Wednesday that signs of increased activity and higher prices were manifest. The recent quietude has probably been seasonal, political and not unhealthy. Despite America's much-advertised isolation from the war problems of a troubled Europe, this week's critical discussions at Geneva have been closely followed by professionals and public alike. So far as domestic possibilities go, time is being profitably spent on a study of the heterogeneous output of the closing hours of the Congressional session, and neither first nor second impressions are wholly reassuring. The prophets of a resumption of market activity, which are still in a large majority, base their case on non-legislative recovery forces—the more than seasonal advance in industrial operations, the increase in retail business, the revival of demand for "capital goods" and, above all, the indications of growing activity in the building trades. For the moment, however, the markets are awaiting a new buying lead. The strongest securities this week have been Government bonds, helped by the speedy over-subscription of the Treasury's issue of \$500 millions in three-year notes. Unex-pected weakness, however, has been evident in bank shares, after the reduction of the dividend of the Central Hanover

Bank and Trust Company from \$1.50 to \$1. Amusement shares have been one of the firmest features of the general market. Although heavy selling of oil shares tended to abate, early in the week, on hopes of an early settlement of the Californian "war," no more hopeful news has as yet been received from the scene of hostilities. Public appreciation of the methods of great oil companies has not been enhanced by the denial, admission and subsequent renunciation, by the American Standard Vacuum Oil Company (jointly owned by Socony-Vacuum and Standard Oil of New York), of interest in the Abyssinian concession obtained on behalf of the African Development and Exploration Corporation by the mysterious Mr Rickett.

* Two-Hour Session. (s) Labour Day.

PARIS

The Bourse opened irregularly on Monday, partly on Abyssinian fears, but mainly in view of the incidence of the ordinary monthly settlement. Subsequently, however, the market showed a disposition to take an optimistic view of possibilities at Geneva, and a moderate amount of buying produced a fair rising tendency in an oversold market. Renten became steady, after losing over a point on Monday. Bank shares recorded fractional rises on Tuesday, but tended to slip back later. The *Coulisse* was fairly active, diamond shares in particular making headway, while gold mines, at long last, ceased to recede.

BERLIN

Last week, markets were the dullest of the whole year, many important stocks being, at times, unquoted. Shipping shares showed a tendency to recover, but most other quotations had a downward trend. Heavy selling occurred at the beginning of this week. By the end of Tuesday declines of 2 to 4 points in quotations were common. Although shipping shares were again relatively steady, weakness was shown by lignite, steel and electrical issues and by a number of public utility shares. Reichsmark bonds were also on offer, though average prices showed only a small net decline. Falls of 2 to 3 points were common among dollar bonds. The general tone remained uncertain in mid-week.

AMSTERDAM

Markets opened in unsatisfactory fashion, pessimism over possible developments at Geneva being accentuated by the news of the alleged Abyssinian oil concession. Considerable liquidation occurred in certain shares, Royal Dutch in particular losing 4 points on Monday. Rubber shares were also weak, on the persistently downward trend of the commodity. Next day, however, the Bourse was quieter, and although dullness was common to most sections, the volume of liquidation appeared to have been checked. Oil shares recovered on the news that the American interests concerned had renounced their Abyssinian rights. Both rubber and sugar shares were steadier. In the industrial market, however, a slump occurred in Philips Lamps, which dropped 7 points on Wednesday on the postponement of the dividend declaration.

CAPITAL ISSUES

THE capital issue market, like the rest of the City of London, is waiting on events at Geneva before resuming normal post-holiday operations on a normal scale. The sole public issue of the week is an offer by an established ironmongery and plumbers' merchant business, *Kennedy's (Bournemouth)*. Profits, which are set out for ten years, have had their ups and downs, but the outlook appears relatively good, though the shares, which will have a narrow market, may be regarded as possessing primarily a local interest. The week's advertisements "for public information," relate to placings by a large Midland electric power distributing company, an hotel and property-owning concern, and the *County Borough of Southend-on-Sea*. The latter's £914,703 of 3 per cent. redeemable stock, 1950, is a trustee offer, whose total amount is well in excess of the Stock Exchange limit of £250,000 for London market "placings." The issue, however, is on a similar footing to a recent Dundee

OFFER TO NEW READERS

Any reader who makes his first acquaintance with this Journal with this week's issue is invited to fill up the attached:
To Publisher, "Economist Newspaper Ltd.,"
8 Bouverie Street, E.C.4.

In order to test the value of your publication I should like you to forward this to me by post for the next four weeks. If I then decide to become a subscriber, it is understood that there will be no charge for the copies thus received, but otherwise I shall be willing to pay 4s. to cover their cost.

Name.....

Address.....

operation, some £824,703 having been placed by the corporation direct, by way of conversion of mortgage loans. The remaining £90,000, for new capital expenditure, will be raised by cash subscriptions.

ISSUE TO SHAREHOLDERS ONLY

The Broken Hill Proprietary Company, Ltd.—It has been decided to make an immediate issue to shareholders of 1,493,854 shares of £1 each equal to one share for each two existing shares. Price of issue 30s. per share. Dividends declared pro rata to amount paid provided instalment has been paid six months at least prior to declaration.

CONVERSIONS AND REPAYMENTS

Irish Free State 5 per Cent. Stock, 1935-45.—The whole of this stock will be redeemed at par with accrued interest on December 1, 1935.

OTARD'S
ESTABD 1795

THE BRANDY WITH A PEDIGREE

Ford (J. J.) and Sons.—This company will pay off the 6½ per cent. perpetual debentures on March 2, 1936, at 105 per cent., together with interest from October 1, 1935, to March 2, 1936.

London County Council.—Local bonds for housing, due September 30, 1935, will be paid off at par on that date.

United States 2½ per Cent. Bonds and 1½ per Cent. Notes.—The United States Treasury announces an optional offer of 2½ per cent. 10- to 12-year bonds or 1½ per cent. 3½-year notes in exchange for \$1,250,000,000 (£250,000,000) Fourth Liberty 4½ per cent. bonds to be redeemed on October 15th. In addition, the Treasury is issuing for cash \$500,000,000 (£100,000,000) 1½ per cent. 3½-year notes to be dated September 16th. Oversubscribed in one day.

India Government 6 per cent. Bonds, 1935-37.—Holders are reminded that bonds of the loan bearing coupons due April 15, 1936, and all subsequent coupons should be lodged at the Dividend Pay Office, Bank of England, 3 Bank Buildings, Princes Street, E.C.2, for redemption on October 15, 1935.

Canadian Government Loan.—The Canadian Government has obtained a five-months' loan of \$20,000,000 (£4,000,000) from a group of Canadian and New York banks at an interest rate of three-quarters of 1 per cent. The proceeds are for the redemption of the outstanding £23,740,000 of 7 per cent. Grand Trunk Railway debentures, maturing on October 1st.

CALLS DUE SEPTEMBER 9, TO SEPTEMBER 14, 1935

The grand total of calls falling due in September, 1935, was £16,099,085, which compares with £4,766,761 which fell due in September, 1934.

COMPANY MEETINGS, &c.

PALESTINE ELECTRIC CORPORATION, LIMITED

MANY NEW CENTRES CONNECTED

The twelfth ordinary general meeting of The Palestine Electric Corporation, Limited (Incorporated in Palestine), was held, on the 5th instant, at the Offices, 3 Bedford Square, London.

The Most Honourable the Marquess of Reading, P.C., G.C.B., G.C.S.I. (chairman of the company), presided, and, in moving the adoption of the report said that the results of the company's operations for the twelve months of 1934 had proved satisfactory in all respects. During the year they had connected 13,463 additional consumers, and their sale of energy had increased by over 70 per cent. The net profit for the year being £165,511. Adding £34,051 carried forward from last year, they obtained the amount of £199,562 shown in the balance sheet. The board proposed to set aside £70,000 to general reserve, bringing this reserve up to £100,000, and a further £25,000 for British income tax and other contingencies. They recommended a dividend for the year 1934 on the ordinary shares of the corporation of 7½ per cent., free of British income tax.

The capital expenditure for the year was £392,161, of which £223,387 was in respect of the New Haifa Power Station, £12,473 on the second circuit of the 66,000-volt transmission line from Haifa to Tel-Aviv, £80,584 on high tension transmission lines, £31,002 on low tension distribution lines, £13,117 on various civil engineering works in connection with the Jordan hydro-electric development, £15,055 on plant and equipment, mainly in respect of the extension of the Tel-Aviv transformer station, £16,264 on meters and £279 on various small works.

The directors had continued their policy of extension of supply, and many new centres were now connected to their system of distribution. The new Haifa power house was now completed, and both the 6,000- and the 12,000-kw. turbo-generators had been in commercial operation for some time. The present total generating capacity of all the power stations belonging to the corporation amounted to 41,275 kw.

FURTHER EXTENSIONS

In order to cope with the demand for energy, they were compelled to carry out further extensions, and one additional turbo-generator of 12,000 kw. capacity, together with the necessary boiler plant, transformer and switchgear was now on order for the new Haifa power house. Material was also on order for a second 66,000-volt transmission line from the first Jordan power house to Tel-Aviv, as the existing line would soon become inadequate for carrying the growing load. Surveys were being carried out at present for the purpose of examining and preparing projects for and estimates of further hydro-electric development between Lake Huleh, in the upper reaches of the Jordan, and Lake Tiberias.

Their rates for electrical energy were reduced very considerably in January, 1932. Since then further revisions had been made from time to time, the last reduction having been introduced as from July 1st last. It was the policy of the directors, in the interests of the consumers and of the economic development of the country as a whole, to keep the rates as low as possible, and further reductions in the rates would be introduced as and when conditions might make it possible.

The capital of the corporation had been reconstructed since their last meeting. Issues had been made of the 600,000 "A" ordinary shares at 25s. per share, and of the 600,000 redeemable cumulative preference shares at par. The main object of the issue of new capital was the provision of funds for the redemption of the then outstanding debentures and debenture stock, for construction of the new Haifa power house and for extensions of the transmissions and distribution lines. The issue of the preference shares to the public met with remarkable response, the issue having been oversubscribed thirty-two times.

The development of Palestine in practically every field of economic activity had been extraordinary during the past few years, and in this development electricity had played a leading part. The demand for electricity and the gross revenue of the corporation had continued to increase during the present year. The expansion of their works had necessitated the increase of their staff in practically every department of their organisation, and it gave him much pleasure to record their great appreciation of the loyal and efficient service rendered by their officers and employees in all departments.

The Rt. Hon. Lord Hirst of Witton seconded the motion, which was unanimously approved.

CITY OF SAN PAULO IMPROVEMENTS AND FREEHOLD LAND COMPANY, LIMITED

BETTER CONDITIONS

The chairman, Mr Herbert Guedalla, F.C.A., presided at the twenty-third ordinary general meeting held, on the 5th instant, at River Plate House, London, and in dealing with the balance sheet emphasised that the assets and liabilities in Brazil had been taken at the fixed exchange of 6d. per milreis. There had been a pleasing increase in the sales of all properties, particularly of Jardim America, which was now nearly all disposed of. Attention was being paid to Pacaembu, where it was proposed to build a stadium to seat 40,000 spectators, and negotiations to this end with the San Paulo Municipality were progressing. Profits showed a material increase, and the selling prices, taken at 6d. per milreis, continued well above the valuation in the balance sheet. Both of the subsidiary companies had made small profits, which had been carried forward.

Some remittances had been received, but at the present time there was great difficulty in effecting transfers of funds. Conditions in San Paulo showed a continuing improvement. The population was growing and cost of living had not much increased. Brazil was rich and self-supporting, but the balance of trade in her favour had decreased by reason of large imports early in 1935. This state of affairs no doubt affected exchange, and it was understood that measures were being taken to control the situation. He thought that such measures would be supported by Brazil's foreign creditors. Another factor in the milreis problem was the deficiency on the Brazilian Budget. Unless remedied, that must affect the buying power of the milreis and economic position of the country. The directors had to consider whether it was wise to turn land into debtors in currency, which might depreciate, but on the other hand they must earn enough revenue to cover outgoings, obligations to debenture holders, etc. The directors had decided that at present the question of exchange could not be dealt with in the balance sheet. The large amount of debtors was payable over a long period of years. Prices of certain estates had been raised, and examination was being made of the position in order to establish values which would perhaps compensate for the drop in value of the milreis.

The report and accounts were adopted.

GOVERNMENT RETURNS, &c.

NATIONAL ACCOUNTS

The total ordinary revenue for the week ended August 31, 1935, amounted to £7,910,000, against ordinary expenditure of £10,366,211. After allowing for a decrease in Exchequer Balances of £417,211, the operations for the week, as shown below, increased the gross National Debt by £2,040,000 to approximately £8,104 millions.* (000's omitted)

Public Dept. Advances	+ 3,300	Treasury Bills	- 835
		National Savings Certificates	- 50
		P.O. & Telegraph Cap. Expenditure	- 25
		British Shipping Assistance	- 35
	+ 3,300		- 1,260

* Including £375 millions on Account of Exchange Equalisation Fund and Borrowing or Statutory Sinking Fund.

A complete analysis of the approximate position of the National Debt on June 30, 1935, appeared in the *Economist* for July 6.

IRON AND STEEL

MIDDLESBROUGH.—Shipments of pig iron, manufactured iron and steel from the Tees during August amounted to 50,028 tons and of this quantity pig and manufactured iron exported was 4,620 tons and manufactured steel 26,831 tons. Large quantities of steel have gone to China, Denmark, India and South Africa. Shipments of pig iron to Scotland reached 5,010 tons, the position there having returned to normal after the holidays in July. The pig-iron market is more active, traders having now returned, and more inquiries are circulating. There are practically no stocks of pig iron and demand from foundries in this area and Scotland fully absorbs production. East Coast hematite pig iron is in good request by home users, but export business is quiet. It is reported that Italian buyers are again in the market, but business is not likely until satisfactory financial arrangements are made. Prices are firmly maintained on the basis of 67s. 6d. per ton delivered locally for No. 3 Cleveland foundry pig iron and 71s. per ton for No. 1 East Coast hematite.

Steel works in this area have made a good start after the holidays. Demand for finished and semi-finished steel is very heavy and specifications are coming in freely. In some cases, more steel furnaces have been lighted and rolling mills are working three shifts.

Heavy steel scrap is scarce, with prices firm at 52s. 6d. per ton delivered works here. Foreign ore is based on best Bilbao rubio at 17s. 6d. per ton c.i.f. Tees, whilst good Durham blast-furnace coke is nominal at 19s. per ton delivered furnaces.

SHEFFIELD.—The local steel and allied industries remain in a very strong position. An increased demand for steel, especially for naval shipbuilding, aircraft and automobile construction during the winter months is regarded as a certainty. Steel makers are showing their confidence in the future by placing contracts for ores for next year's deliveries. Makers of stainless steels are constantly being asked to deal with new applications of the material for industrial purposes. Basic steel furnaces, rolling mills and forges are well employed and are booking fresh business. Business in acid steel, which has been comparatively quiet, is improving. The bar-iron trade is none too brisk. The seasonal revival of demand for cutlery and plate is making its appearance and normal conditions henceforward are likely. Unemployment in the iron and steel trades is declining, but there are many colliers out of work.

GLASGOW.—Steelmakers in the West of Scotland find demand increasing from various consumers and plants are working to capacity. Output is being rapidly absorbed, order books are still well filled, and there is every prospect of continued activity. Makers of semis are also busy and supply a large proportion of the requirements of local consumers. At the tube works business is plentiful and full-time working general. Sheet makers are supplying large quantities of highly finished sheets for various manufacturing purposes in this country, and the bulk of their output is being utilised for home manufacturers. Export demand is slow to expand, but makers in this district are able to keep a considerable proportion of their plant regularly employed. Re-rollers of steel bars, etc., are working steadily.

CARDIFF.—There is a steady inquiry for tinplates, but demand for galvanised sheets continues unsatisfactory, although a slight improvement was reported on the Swansea Metal Exchange on Tuesday from one or two markets. Quotations for both products are unaltered, and steel bars are also unchanged at £5 5s. per ton. Exports of tinplates at Swansea last week totalled 71,580 boxes, compared with 40,200 boxes the previous week and 117,798 boxes in the corresponding week last year, but owing to the reduced outputs stocks totalled less than 50,000 boxes, as against nearly 102,000 boxes a year ago.

OTHER METALS

COPPER.—The market has been slightly easier this week—a development which was not unnatural in view of the recent rapid rise. But the international political situation may give grounds for a further hardening of quotations before very long. Supplies are at present more abundant than was anticipated when the restriction scheme came into operation. Northern Rhodesia, which was allotted a quota of 10,731 tons under the scheme, produced a record total of 12,750 tons in July, against 9,356 tons in June. United States exports in the same month again exceeded the quota by over 150 per cent., amounting to 21,978 short tons, against a quota of 8,000 short tons. Of this total, 5,887 tons were shipped to Japan, 5,034 tons to the United Kingdom and 4,288 tons to Italy. Production in Chile is also reported to be running at a record level. In this country, stocks in official warehouses reached the high level of 87,006 tons last week-end, an increase of 1,698 tons on the week. In the circumstances there is little immediate danger of any shortage of supplies. In the United States, deliveries reached the new high record of 124,600 tons in August, so that some falling off in high record is not improbable in the near future—especially in view of the fact that at least two-thirds of last month's deliveries were used to augment consumers' stocks.

Sales on the London Metal Exchange: 1,550 tons on Monday, against 3,600 tons last week; 1,625 tons on Tuesday, against 2,100 tons last week; 1,500 tons on Wednesday, against 3,500 tons last week. Domestic spot was quoted at 7-92½ cents per lb. in last week. New York on Wednesday, against 8-02½ cents a week ago and 7-72½ cents a month ago. Wednesday's official closing price for standard cash in London was £32 16s. 3d. to £32 17s. 6d., compared with £33 3s. 9d. to £33 5s. a week ago. Stocks of refined copper in

British official warehouses at the end of last week, at 75,572 tons, show an increase of 1,623 tons, while stocks of rough copper, at 11,434 tons, show an increase of 75 tons on the week.

LEAD AND SPELTER.—The tendency in both these markets has been somewhat irregular during the past week and the introduction of the new contract has obviously had little effect upon prices hitherto. Nevertheless, its adoption is regarded as a long step forward towards a healthier market situation. At one time during the past week, spelter was only 3s. 9d. cheaper than lead and it looked as though the price of the former might soon equal that of lead. Although the difference widened again later, it is probable that the price of spelter will move nearer to that of lead in the near future, especially if the expected Zinc Conference is held in the course of the next few weeks. According to the statistics of the Metallgesellschaft, world production of smelter zinc rose from 106,321 metric tons in June to 110,392 metric tons in July. The increase was mainly due to a rise in the output of Canada, Mexico and Belgium.

Sales of lead on the London Metal Exchange: 600 tons on Monday, against 500 tons last week; 800 tons on Tuesday, against 400 tons last week; 850 tons on Wednesday, against 800 tons last week. The New York quotation on Wednesday was 4-35 cents per lb., against 4-35 cents a week ago and 4-20 cents a month ago. The official closing quotation in London for soft foreign for shipment during the current month was £15 11s. 3d. per ton, compared with £16 a week ago.

Sales of spelter on the London Metal Exchange: 800 tons on Monday, against 900 tons last week; 200 tons on Tuesday, against 1,100 tons last week; 1,000 tons on Wednesday, against 1,025 tons last week. Wednesday's quotation in East St. Louis was 4-60 cents per lb., against 4-60 cents the week before and 4-50 cents a month earlier. Wednesday's official closing quotation in London for "good ordinary brands" for shipment during the current month was £14 18s. 9d. per ton, against £15 8s. 9d. last week.

TIN.—The market in tin has also had an easier tendency during the past few days. Interest at present centres upon next week's meeting of the International Tin Committee, for the quota for the fourth quarter of the year will be fixed at this meeting, and the decision reached will give a definite indication as to the future policy of the Committee. The first effects of the recent increase in production quotas are reflected in the August statistics. According to A. Strauss and Company, the supply rose from 6,486 tons in July to 9,160 tons in August. But since August also witnessed an increase in deliveries to 9,321 tons (against 7,404 tons in July) and a drop of 484 tons in the Straits carry-over, stocks declined by 645 tons to 14,218 tons. In view of the fact that the increase in the quota will be fully felt during the next few weeks, however, a rise in stocks is likely to take place during the current month. Meanwhile the American tinplate industry is rather less active, but Welsh tinplate makers are well employed. Price movements are likely to be small until after next week's meeting of the Committee, but if the present quota of 65 per cent. is maintained, some decline in quotations may be expected.

Sales of tin on the London Metal Exchange: 200 tons on Monday, against 130 tons last week; 231 tons on Tuesday, against 115 tons last week; 375 tons on Wednesday, against 90 tons last week. The New York quotation on Wednesday was 48-55 cents per lb., against 49-15 cents a week ago and 52-37½ cents a month ago. Wednesday's official closing quotation in London for standard cash was £219 10s. to £220 per ton, compared with £220 10s. to £221 last week. Stocks of tin in London and Liverpool at the end of last week totalled 1,325 tons, a decrease of 382 tons on the week.

OTHER NON-FERROUS METALS.—Among other non-ferrous metals, aluminium ingots and bars for home delivery were again quoted at £100 per ton. Nickel, for home and export, at £200 to £205 per ton, remains unchanged. Quicksilver, on the spot, was again quoted at £11 7s. 6d. to £11 10s. per flask of 76 lbs. Chinese antimony was quoted at £69 to £70 per ton ex warehouse, this price being unchanged on the week. Chinese wolfram for September-October shipment at 32s. to 33s. per unit c.i.f. remains unchanged. Platinum (refined) remains unchanged in price at £7 per ounce.

TEXTILES

COTTON.—Manchester.—Business has not shown any expansion, and buyers continued their policy of operating from hand to mouth. Uncertainty exists concerning the future price of raw cotton, and there has been nervousness with regard to the outcome of the deliberations at Geneva. Traders have been slow in recovering from the effects of the new scheme of the United States Government for controlling cotton supplies and prices. It is anticipated that raw cotton will now be more freely offered by growers, and exports from America are expected to increase. There is every probability of considerable hedge selling during the next month or two. On Monday next the Washington Government will publish further crop statistics, and it is generally believed that the production estimate will be over 12,000,000 bales, against 11,798,000 bales a month ago. In the futures market the difference between near and distant positions has been narrowed.

Business in piece goods has been generally unimportant. A certain amount of buying has taken place in light fabrics and fancies, but heavier styles continue to move off slowly. Numerous manufacturers are harassed by the absence of practicable demand for India and looms are running out of work, especially in the Blackburn district. Printed and dyed goods have been sold in moderate quantities for the Dominions, the Crown Colonies, South America and the Continent. Not more than necessary buying has taken place in home trade fabrics. In American yarns sales have increased somewhat, especially in coarse counts. Egyptian qualities remain quiet. There is much difference of opinion amongst

Egyptian spinners as to the details of a more permanent scheme to take the place of the "Gentleman's" Agreement which is now in force.

COTTON OVERLOOKERS' WAGES DISPUTE SETTLED.—There was some surprise in Manchester on Tuesday last when it was officially announced, that the threatened strike of loom overlookers in the weaving section of the Lancashire cotton industry had been averted by the employers conceding the demands of the trade union. At a meeting of representatives of the Cotton Spinners' and Manufacturers' Association and the Northern Counties Textile Trades Federation the manufacturers agreed to recommend to their members that overlookers' wages should be restored to the basis existing prior to July 15th, that is to the Uniform List, plus 67 per cent. This decision means that overlookers will not suffer any reduction in their earnings as a result of the changes in the wage rates of the weavers, which have been legalised under a new list. For the time being this development brings peace in the weaving section of the industry. But amongst the operatives there is considerable dissatisfaction at the cuts in wages in the new legalised list. Moreover, despite the fact that the new list only came into operation in the middle of July, the Weavers' Amalgamation has asked for a joint meeting with the Manufacturers' Association to discuss certain changes, and this joint conference has been arranged for Friday, September 13th. It is understood that the weaving employers are formulating plans for a general reduction in the wages of all work-people in the weaving sheds other than weavers, and if action is taken, overlookers will be included.

WOOL.—Bradford.—The event of the week, writes our correspondent, was the opening of a new selling season in Sydney, the eyes of the whole trade interested in the course of wool values being turned to that centre. Cables so far received clearly indicate a very strong market, for prices have advanced more than anticipated. Private cables indicate that while there is a difference of opinion as to the actual cost of tops, it is patent that warp 64's are going to cost 33½d. and average 64's 33d., with 70's ½d. to 1d. more. These prices exceed all expectations, and are being very largely dictated by Japan and the Continent. As a matter of fact, during the first two days of the current series, Japan secured about 50 per cent. of the offerings, and France and Germany bought bigger quantities than was anticipated. The home trade has been taken by surprise, and no firm is able to sell on to-day's cost basis. Home consumers expected to buy on a basis of about 25½-26d. clean Bradford for good average top-making wools, but good 64's wools are selling on a clean basis of about 28½d. and average 28d., with 60-64's pieces and bellies at 26d. Raw material prices have thus been carried to a point which is too high for home consumers. It would seem as if the activity in the wool textile world abroad is even more pronounced than it is in the West Riding of Yorkshire, and a very different feeling will have to inspire spinners and manufacturers at home before they can pay current prices for wool. However, prices seem to be rising, with merinos still leading.

The effect of the rise in prices upon consuming centres has been to improve the position of merinos in particular. Stocks are exceedingly low in consuming centres, and at one price or another several Bradford topmakers must cover forward sales. The home trade feels disposed at the moment to let foreign buyers go ahead, because prices ruling overseas to-day are substantially beyond what home spinners and manufacturers can pay, in the absence of an increase in the price of finished products. If current prices are going to last, this is bound to have a beneficial effect upon the course of crossbreds, for these are still relatively cheap. Probably the home trade will not do a great deal until London sales open on September 16th, when offerings are likely to be more than the majority expected. The whole position is an interesting one, and as far as we can see, the rise in wool prices was justified.

JUTE.—Dundee.—A slump in prices of Calcutta goods has been the principal feature of the jute trade in recent days. This has been brought about by the fact that the Indian Jute Mills' Association has now decided to unseal next February the remaining 5 per cent. of the 15 per cent. of their looms sealed up since 1931. On November 1st last year, the first quota of 2½ per cent. of these sealed looms were unsealed, another on May 1st, and another on August 6th, while, according to agreement still another 2½ per cent. will be unsealed on November 11th next. The decision to unseal the remaining 5 per cent. next February is the result of some dissatisfaction expressed by some members of the Association with the competition from mills outside the Association which have no restriction of hours or machinery.

Stocks of both hessians and heavy goods have shown a considerable increase. During August, stocks of hessians rose 11½ million yards to 104½ million yards, and saskings increased by 20 million yards to 176½ million yards. Trade, therefore, is not

OVER ONE HUNDRED YEARS OF SERVICE

SCOTTISH UNION & NATIONAL
INSURANCE COMPANY

increasing to an extent to absorb the extra production of the unsealed looms, which, when the whole 15 per cent. are working again, will require the disposal of an additional 360 million yards of cloth.

The total jute crop is forecast at 6,396,700 bales for this season, compared with the revised figures of last season of 8,525,000 bales, but the actual quantity received last season was 9,793,000 bales. World consumption is now estimated to be at the rate of over 10 million bales per annum, so that, if the forecast figures are assumed to be correct, the supply of fibre for this season will be about 3½ million bales short of requirements. Yet prices for raw jute have displayed weakness and down to £15 15s. has been quoted for Daisee-2/3 full group and a good business done at £16, to which the price has recovered, with Daisee-4 at £15 5s., Tossa-2/3 quoted at £16 12s. 6d. and four's at £15 17s. 6d., October/November. First Marks are named at from £20 5s., and Lightnings at £18 15s., with Hearts at from £17 10s., August/September.

Jute yarns are very quiet and nominal. Though 1d. less might be accepted, spinners are not quoting less than 2s. 0d. for common 8 lb. cops and 2s. 1d. for 8 lb. spools. Spinners continue quite busy with orders on hand and they are not pressing for fresh business. Other yarns continue unchanged.

Only trifling lots of jute cloth are being bought for immediate use, with buyers unwilling to purchase any distance ahead in view of the lower rates quoted for Calcutta goods. Quotations are steady at 2½d. for 10 oz. 40 in. and 2d. for 8 oz., but less might be taken with a good order. Linoleum hessians are very firm, and heavy goods continue in moderate request at unchanged rates.

Calcutta hessians have been sold at 17s. 5d. to 17s. 7d. for 10 oz. 40 in., and from 14s. to 14s. 3d. for 8 oz., according to position of shipment.

GRAIN MARKETS

WHEAT.—Chicago quotations have recovered somewhat during the period under review, the movement being traceable to renewed reports concerning the poor quality of the American spring wheat crop. It is reported that millers in Minneapolis are experiencing difficulty in securing the class of wheat required to maintain their flour standards. The Canadian Wheat Board has not yet indicated the price at which it will buy from growers, and quotations in Winnipeg have been irregular during the past week. Trading in Liverpool has been active and prices have been well maintained.

According to the *Corn Trade News*, total shipments of wheat and flour during the past week were 1,889,000 quarters, against 1,241,000 quarters in the preceding week. On Wednesday last, "September" futures were quoted in Chicago at 88½ cents per bushel, against 87½ cents the week before and 90½ cents a month ago. Quotations in London, Wednesday: No. 1 Northern Manitoba, Vancouver, ex ship, 33s. 6d. per 496 lbs., against 33s. 9d. a week ago; No. 2 Northern Manitoba, Vancouver, ex ship, 32s. 9d., against 33s. a week ago.

FLOUR.—Demand for both home-milled and imported has shown some improvement this week and prices are rather firmer. Shipments from North America in the past week totalled 77,000 sacks, compared with 95,000 in the previous week. Wednesday's London quotations (excluding quota payments) were: Straight run, delivered country, 27s. per 280 lbs., against 27s. a week ago; delivered London, 26s., as compared with 26s. a week ago. Manitoba patents, ex store, 25s. 3d. to 26s. 9d., against 25s. 6d. to 27s. a week ago. Australian, ex store, 20s. to 20s. 6d., against 20s. to 20s. 9d. a week ago.

BARLEY.—English malting qualities have been in rather better demand this week, but quotations show little alteration. The trade is now awaiting the decision of the Import Duties Advisory Committee on the application for an increase in the duties on imported barley. "October" futures were quoted at 32½ cents per bushel in Winnipeg on Wednesday, against 34½ cents last week and 35½ cents a month ago. Quotations per 448 lbs. in London on Wednesday were: "English feed" (new) at farm, 21s. to 23s., as against 21s. to 23s. last week; "English malting" (new) at farm, 30s. to 56s.

OATS.—The market in oats has shown no new features this week. On Wednesday, "September" futures were quoted at 25 cents per bushel in Chicago, against 25½ cents a week ago and 30½ cents last month. Quotations in London, Wednesday: "English Black" (old), at farm, 22s. per 336 lbs., against 22s. a week ago; "English White" (old), at farm, 22s., against 22s. last week; "Chilean White," landed, 27s. per 320 lbs., against 27s. a week earlier.

MAIZE.—Chicago prices have recovered during the past week, but Liverpool quotations are a shade lower than those ruling a week ago. "September" futures were quoted on Wednesday at 73½ cents per bushel in Chicago, against 70½ cents a week ago and 75½ cents last month. Quotations in London, Wednesday: "Plate," landed, 16s. 9d. per 480 lbs., compared with 16s. 9d. a week ago; "Plate," ex ship (new), 15s. 9d., as against 15s. 9d. a week ago; "Plate," ex ship (old), 15s. 9d., against 15s. 9d. a week ago. Yellow maize "August," 15s. 9d., was quoted at £4 10s. to £4 12s. 6d. per ton, against £4 10s. to £4 12s. 6d. a week ago.

COMPARATIVE AVERAGES OF GRAIN—The following table gives the estimated sale of home-grown wheat during the harvest years 1931-32 to 1934-35:—

	1931-1932	1932-1933	1933-1934	1934-1935
Estimated sales of home-grown wheat—				
1 week to August 31	90,165	346,869	356,281	429,655
53 weeks to August 31	4,145,664	9,525,429	11,734,996	14,774,461
Average price of English wheat per cwt.	s. d. 5 9	s. d. 4 10	s. d. 5 2	s. d. 4 6

The following is a statement showing the quantities sold and the average price of British corn in the past two weeks, and for the corresponding week in each of the years from 1931 to 1934:—

Week ended	QUANTITIES SOLD			AVERAGE PRICE PER CWT.		
	Wheat	Barley	Oats	Wheat	Barley	Oats
Aug. 29, 1931	Cwts. 21,500	Cwts. 2,625	Cwts. 8,751	s. d. 6 3	s. d. 9 2	s. d. 6 3
Sept. 3, 1932	90,165	21,658	34,734	5 9	8 2	6 7
Sept. 2, 1933	346,869	295,398	42,986	4 10	11 0	5 3
Sept. 1, 1934	356,281	110,998	33,883	5 2	10 10	6 5
Aug. 24, 1935	337,193	27,899	41,399	4 5	9 0	6 2
Aug. 31, 1935	429,655	87,699	55,085	4 6	9 6	6 1

AMERICAN WHEAT MARKETS.—The following table shows wheat quotations in recent weeks, with comparative figures for 1933 and 1934:—

NEAREST FUTURE	Jan. 4, 1933	Jan. 3, 1934	Sept. 5, 1934	Jan. 2, 1935	Aug. 28, 1935	Sept. 4, 1935
Winnipeg (No. 1, Manitoba)	46½	65½	82½	82½	85	82½
Chicago (No. 2 Winter)	46½	84½	104½	98½	87½	88½
Cents per 60 lb.						

The visible supply of wheat in Canada, at 126,635,000 bushels, shows an increase of 298,000 bushels on the week. Supplies a year ago amounted to 98,164,000 bushels.

OTHER FOODS

BACON.—English and Irish bacon have again been in rather slow request, but a better inquiry is reported for other descriptions and prices are about steady. The official quotations (per cwt. for No. 1 Sizable) which formed the basis for dealings on the London Provision Exchange this week were: English, 79s. to 85s.; Canadian, 76s.; Danish, 83s.; as against 83s. to 85s., 76s. and 83s. respectively, last week. Arrivals in London last week included Danish, 17,337 bales; Canadian, 3,486; Dutch, 2,929; Lithuanian, 1,973; Polish, 3,816; against 16,876, 3,380, 2,818, 1,979 and 3,011 cwts. respectively, in the previous week.

BASIC PIG PRICE.—In accordance with the provisions of the present contract, the Pigs Marketing Board announce that the price of the Class I, Grade C pig for the month of September is 11s. per score, against 11s. 4d. per score in August.

BUTTER.—Following the rise of last week, a further substantial improvement in quotations has taken place during the past few days. Supplies have been shorter and demand good. Quotations (per cwt.) on the London Provision Exchange on Wednesday were: New Zealand, finest salted, 102s. to 103s.; Australian, choicest salted, 102s.; Danish, 118s., compared with 96s., 95s. and 108s. to 110s., respectively, last week.

CHEESE.—The market has again been firm, with Colonial descriptions showing a rise on the week. Quotations (per cwt.) on the London Provision Exchange on Wednesday were as follows: English finest farmers', 56s. to 65s.; Canadian, finest coloured (new), 52s. to 55s.; New Zealand, finest coloured, 50s. 6d., as against 56s. to 55s., 52s. to 53s. and 49s. 6d., respectively, last week.

COCOA.—The "spot" quotation in New York on Wednesday was 5½ cents per lb., against 5 cents per lb. last week. On the London market, Accras were quietly steady. On Wednesday last good fermented new crop, "October-December," was quoted 11s. 10½d. per 250 kilos, c.i.f. Continent, against 21s. 7½d. last week. Last week's movements of cocoa in London were as follows: landed, 3,518 bags; delivered, for home consumption, 9,658 bags; exported, 654 bags; stocks, 139,493 bags, against 236,537 bags year ago.

COFFEE.—After an early price decline, the New York spot market has been steady. Trading in London has been quiet. In New York on Wednesday, Rio No. 7 (cash) was quoted at 6½ cents per lb., as compared with 6½ cents per lb. last week and 6½ cents per lb. a month ago. Movements of coffee in London last week were as follows: Brazilian, landed, nil; stocks, 14,293 cwt., against 15,555 cwt. a year ago. Central American, landed, 649 cwt.; delivered, for home consumption, 2,337 cwt.; exported, 1,221 cwt.; stocks, 137,677 cwt., against 100,724 cwt. last year. Other kinds, nded, 536 cwt.; delivered, for home consumption, 3,040 cwt.; exported, 1,001 cwt.; stocks, 155,398 cwt., against 94,060 cwt. at year.

EGGS.—Prices for most descriptions remain unchanged, and a steady tendency was in evidence at the London Egg Exchange is week. At Smithfield Market on Wednesday, English (ordinary

packing, Grade I, about 15-15½ lb.) realised 15s. to 16s. per 120, against 15s. to 16s. a week earlier, while Danish (15½ lb.) made 11s. to 11s. 9d. per 120, against 11s. 6d. to 12s. last week.

FRUIT.—The Fruit Grower states that trading at Covent Garden has been good, moderate supplies of most of the leading lines clearing at prices above the normal for the time of year. Good supplies of English cooking apples are meeting an improved demand, while dessert apples are also a good market. New Zealand and Australian are now practically all cleared. Pears are selling well, and plums are a steady trade; only limited quantities of greengages are available. Blackberries have been in consistent demand at 4d. to 6d. per lb. Cob nuts are now more plentiful and cheaper. Hothouse grapes are in rather larger supply and encounter a somewhat slow trade. Melons are not selling so well, and peaches are cheaper owing to increased supplies of Italian. Oranges are a shade dearer on rather shorter supplies, but lemons have eased, although still relatively dear. Grapefruit sell rather better, but supplies are plentiful and prices a point lower on the week.

MEAT.—Trading has been rather slow this week, although chilled beef realised rather better prices. On Wednesday last, Argentine chilled hindquarters were quoted at 4s. 6d. to 4s. 10d. per 8 lbs., as compared with 4s. to 4s. 6d. last week. New Zealand frozen mutton was 2s. 10d. to 3s. 6d. per 8 lbs., against 2s. 10d. to 3s. 6d. a week ago. According to the Smithfield Market official report, supplies during last week amounted to 8,900 tons, an increase of 517 tons on the corresponding week last year. Beef and veal accounted for 4,897 tons, mutton and lamb 2,736 tons, and pork and bacon 693 tons, as compared with 4,262, 2,782 and 734 tons, respectively, in the same week of 1934.

PEPPER.—Wednesday's spot price for Lampung (in bond) was 2½d. per lb., against 2½d. last week. Movements of pepper in London during the past week were as follows: Black, landed, nil; delivered, 26 tons; stocks, 1,683 tons, against 239 tons a year ago. White, landed, nil; delivered, 149 tons; stocks, 17,722 tons, against 6,464 tons a year ago.

RICE.—The market has continued steady during the past few days. The spot price of Burma No. 2, cleaned, new crop, was 8s. 6d. per cwt. on Wednesday, as compared with 8s. 6d. per cwt. a week ago, while the forward quotation, at 7s. 9d. per cwt., remains unchanged on the week. Movements in London during the past week were as follows: Landed, 99 tons; delivered, 633 tons; stocks, 9,424 tons, against 2,520 tons a year ago.

SUGAR.—Prices in New York suffered a decline at the end of last week, but have since been steady. The London market was quiet at the beginning of the period under review, but showed a firmer tendency later. The spot price in New York on Wednesday was 3.45 cents per lb., as compared with 3.50 cents per lb. last week and 3.16 cents per lb. a month ago. Wednesday's sales of raw sugar in London included "December delivery" at 4s. 4½d. to 4s. 5d., against 4s. 3½d. last week. The movements of raw sugar at public warehouses in London and Liverpool last week were as follows: Imports, 7,630 tons, against 27,239 in the previous week and 8,457 in the same week of last year; deliveries, 22,180 tons, against 17,346 and 14,976 respectively; stocks, 144,794 tons, against 159,344 and 151,785 tons respectively.

TEA.—The following table shows the average prices (compiled by the Tea Brokers' Association) of tea sold in Mincing Lane on Garden Account in recent weeks:—

Week ending	Northern India	Southern India	Ceylon	Java	Sumatra	Africa	Total
Aug. 30, 1934	d. 13-66	d. 11-65	d. 12-45	d. 9-70	d. 9-48	d. 11-41	d. 12-59
July 25, 1935	11-53	11-91	13-68	10-01	8-84	10-41	12-11
Aug. 1, "	11-36	11-26	13-37	9-52	8-46	10-28	11-81
Aug. 15, "	11-84	10-82	12-99	9-44	8-61	10-28	11-81
Aug. 22, "	15-15	10-65	12-82	9-88	8-57	9-60	13-01
Aug. 29, "	17-26	10-76	13-08	9-99	8-44	10-09	14-12

The quantities catalogued for this week's auctions comprised 45,164 packages of Indian and 24,976 packages of Ceylon tea. Trading was active for all descriptions, and prices again showed a rising tendency.

VEGETABLES.—According to *The Fruit Grower's* Covent Garden correspondent, tomatoes have steadily declined in price during the past week. Cucumbers are also not doing so well. Greenstuff ran rather short at the end of last week, and prices of cabbage, green peas, marrows and best samples of scarlet runners showed a firmer tendency. Some outdoor mushrooms are on the market and are selling at 8d. to 10d. per lb. Horse-radish is in short supply and dear. Supplies of potatoes on the various London markets remain on a fairly liberal scale, although the new riddle regulation has done something to reduce loadings. Trade has not been quite so good this week and prices are occasionally easier. Thus, at the Borough Market on Tuesday, King Edward ranged from 6s. to 6s. 6d. per cwt., against 6s. to 7s. a week ago.

MISCELLANEOUS COMMODITIES

VEGETABLE OILS AND OILSEEDS.—The improved crop outlook in Argentina and the large quantities afloat for Europe have influenced the linseed market in the direction of easier prices. Plate September loading to Hull has been sold at 9 1s. 3d. per ton, but has recovered somewhat, while October is at a premium over earlier positions. Reports of the prospects in Argentina are rather more favourable, though it is generally accepted that the area under linseed will be substantially less than last season. Shipments of the old crop proceed steadily and the balance available for export has been reduced to 545,000 tons (estimated), as against 420,000 tons actually shipped in the remainder of 1934. New Indian linseed is moving off very

slowly indeed, and although quotations are now lower they are still not low enough to attract business. The quantity now afloat for Europe is 111,100 tons (including 1,300 tons from India), 18,400 tons more than last week; and for the United States and Canada 34,500 tons, against 30,700 tons a year ago. A little of old crop Egyptian cottonseed on spot is held for 7 2s. 6d. and for new seed early October 6 8s. 9d. has been paid.

Linseed oil is in fair demand and steady at about unchanged prices on the week. Raw oil for delivery to April next year ex Hull is quoted around 22 5s. per ton, naked. Cotton oil is firmer and for Egyptian crude ex Hull 24 10s. is now asked. Oilcakes are in better demand and dearer.

RUBBER.—The London spot price for ribbed smoked sheet shows a fall of ½d. on the week, and at one period quotations dipped to

5½d. per lb. The obscurities of the international political outlook and the heavy increase in shipments from Malaya during August were the factors mainly responsible for this sagging tendency. In view of the present position of the markets, the meeting of the International Regulation Committee on September 24th is awaited with considerable interest. The spot price on Wednesday was 11½ cents per lb., compared with 11½ cents per lb. a week ago. Wednesday's official closing price for standard ribbed smoked sheet in London was 5½d. per lb., as against 5½d. on the corresponding day last week. In forward positions, business has been done at 5½d. to 5¾d. for October-December, 1935, as against 5½d. to 5½d. a week ago. Stocks in London and Liverpool at the end of last week totalled 176,705 tons, against 175,363 tons a week earlier. A year ago stocks amounted to 104,638 tons.

BRITAIN TAKES HER STAND

WITHOUT hysteria, but with just the right amount of emphasis, Sir Samuel Hoare has told the world that Britain has taken her stand. Simply and without qualification he declared at Geneva Great Britain's intention to fulfil her obligations under the League Covenant if others will do the same. To the simple-minded, the statement that a country will keep its word would scarcely seem to constitute a great historic announcement. Yet historic it undoubtedly was; and the cynics may yet prove correct in their belief that if nations faithfully carried out their mutual obligations the results would amaze the diplomats of the world.

The fact is, of course, that during the 'twenties there have been two fears in English minds about our commitments under the Covenant. One was that we should be very embarrassed if we had to take action against a State, such as Germany, which revolted against treaty provisions that we believed to be unreasonable. In short, we became less and less willing to underwrite the Treaty of Versailles with all its extravagances. The other cause of hesitation was that we were not prepared to implement the "economic sanctions" under Art. XVI of the Covenant, if that meant falling foul of the United States. If we ourselves felt a doubt on these scores, it was natural that other countries questioned the sincerity of our undertakings. Subsequently, the Japanese seizure of Manchuria in 1931 and the later failures and shortcomings of the League have further undermined its prestige and shaken confidence in its ability to prevent a war of aggression. Would any single country run any risk to enforce the League's authority against any offender, small or great?

Such was the question at the back of every mind when Sir Samuel Hoare rose to speak to the Assembly on Wednesday. The declaration he then made represented nearly all shades of opinion in this country. Britain, in fact, has come to the conclusion that civilisation must choose between the rule of law in international affairs and reversion to the rule of the jungle. Britain is on the side of law; and if other countries will play their part, she is ready to shoulder her full responsibility for its enforcement. This declaration has given fresh, and much-needed, impetus to

support for the League principle; and if in the next few days it commands equally definite support from other members, it should empower the League to prevent aggression by Italy against Abyssinia, or at all events to stop the war if it breaks out. If the League does this, the vindication of law in international affairs will have been achieved. It is a task supremely worth while; and if it succeeds it will have set the world once more on the upward path.

From the British point of view the case could not have been better put. Great Britain has not supported the League from selfish motives. We have seen the old alliance system force the world to the brink of destruction; our only hope is a collective system for ensuring peace. Such a system is not a super-state, but implies an undertaking to co-operate in preventing war. It not merely involves machinery for dealing with disputes; it also presupposes that armaments should be limited to the minimum necessary for national safety and the enforcement of common action. Further, it provides the possibility of bringing about peacefully and without resort to war such economic and political changes as become inevitable in the changing circumstances of the world. But the system has not given the necessary sense of security—the most obvious proof of which is the rising scale of armaments throughout the world. There are also several "vacant chairs" at Geneva. The obligations of the Covenant remain, but their burden on League members has been increased manifold.

What, then, is to be done? To this Sir S. Hoare's answer—always on the assumption that the risks are borne collectively—was given in the following declaration:—

On behalf of His Majesty's Government in the United Kingdom, I can say that they will be second to none in their intention to fulfil, within the measure of their capacity, the obligations which the Covenant lays upon them. The ideas enshrined in the Covenant have become a part of our national conscience.

The British Foreign Secretary went on to refer to the need of provision for economic changes. He offered the co-operation of Great Britain in an inquiry into the distribution of colonial raw materials in order that "all fear of

exclusion or monopoly may be removed once and for all." As an earnest of British desire to meet legitimate grievances this offer is of the greatest value, though it may be objected that colonies are more desirable, in the eyes of the "Have-Nots," as markets and as fields of endeavour for settlers and traders than as sources of raw materials.

Finally, this British attitude in support of the League was not one taken merely for the present occasion:—

I cannot believe that it will be changed so long as the League remains an effective body and the main bridge between the United Kingdom and the Continent remains intact.

While the general tenor of this speech reflects British public opinion as it is at present, from the leaders of the T.U.C. to the learned correspondents of *The Times*, it is equally true that the last paragraph means what it says: The League Covenant is the only basis on which Britain can co-operate with Europe. If the Covenant is not made effective, then Great Britain will undoubtedly revert increasingly to "isolation."

Will the Foreign Secretary meet with a response? The small nations, represented by Holland, Belgium and Sweden, spoke emphatically in support on the following day. Among the Dominions, although Mr Bennett, faced with a general election, has taken refuge in vague generalities, General Hertzog has been most outspoken in his demand that the League should do its duty. It is a moment when no country—least of all the European countries—can afford to answer lightly; for the Italo-Abyssinian dispute has reached a stage where a clash between Italy and the League would seem almost inevitable.

During the past week, Italy has circulated her much-advertised statement of the case against Abyssinia. It is a case which contains very little, if anything, that is new. There is, however, a great deal of detail to prove that Abyssinia is a backward country; that the Emperor's writ does not always run in outlying parts of the country; that border raids occur; that slavery still persists; and that cruelty is still rife among a primitive people. But many of the facts date from the time of Abyssinia's admission to the League or earlier. And although some of the accusations might be justified, the solution was surely to be found in a request to the League to insist on the speedier enforcement of the commitments concerning slavery which Abyssinia undertook in 1923; and in a fuller observance of her treaty with Italy. Failing satisfaction, a possible modification of Abyssinia's status in the League might fairly have been requested. None of the Italian charges or contentions justifies Signor Mussolini in taking the law into his own hands and repudiating his obligations to a fellow member of the League. Italy's attitude at Geneva has been one of no compromise, and at the moment of writing the Committee of Five set up by the Council is being compelled to report that, owing to Italian intransigence, the situation is one of complete deadlock.

In these circumstances, the lining-up of France and other countries with Great Britain means in effect saying to the Duce: "You must not tear up all your promises to Abyssinia by taking the law into your own hands and invading her territory. That will constitute an act of war against all of us, and—whatever may be the merits of the issues which you have refused to discuss round the table—we must see to it that your private war against Abyssinia does not succeed." Will France stand for such a policy? Clearly, its consequences may be serious. But that it would lead to a German-Italian alliance we do not believe. Although Herr Hitler's system may owe much to Fascism, the Führer himself has always believed that Germany should avoid getting herself into a position of antagonism to England and France. Nor do his personal relations with the Duce suggest that he would find such a companion congenial. True, France cannot lightly ignore all possibilities. Yet she would undoubtedly be the gainer if it were known that the covenants of the League were a reality, and that all could count on concrete and collective support against aggression.

When these considerations have been duly weighed, we cannot doubt what the answer will be. It will then be for Signor Mussolini to decide whether these declarations are to be put into practice in the world's first police action, or whether Italy is ready to bow to such a demonstration of the League's solidarity and determination.

BRITISH LABOUR

If any proof were needed that British labour has a great deal more to lose than its chains, last week's Trades Union Congress would supply it. In the T.U.C. the outlook and interests of the average working man are more accurately reflected than anywhere else. And, by common consent, no Congress since the war has been more "conservative" in temper than that held this year. The British trade union movement is the strongest in Europe, perhaps in the world; and this week the T.U.C. General Council was able to report that membership is again increasing. Unquestionably the movement owes its survival and its success mainly to the fact that, throughout its history, it has been realistic rather than dogmatic, preferred the substance to the shadow, and known—with some exceptions—when to preserve existing benefits and when to ask for more. And equally unquestionably the present leaders of the T.U.C. are in the tradition; shrewd and severely practical men who understand a bargain, distrust catchwords, and know well enough that as long as the British working man's hours and wages are protected, he cares little whether his leaders call themselves comrades, knights, baronets or dukes.

Nowhere has the good sense of the T.U.C. been more apparent than in the decisive enthusiasm with which it has rallied to the defence of democratic institutions. There have been some superficial critics who supposed that the episode of the General Strike and the firm stand made by the T.U.C. against Mr MacDonald in 1931 were evidence of a contempt among trade unionists for the essentials of Parliamentary Government. And in the last few years there have been various, if insignificant, "disruptive elements" within the Labour movement itself which, largely on doctrinal grounds and for factional ends, have attempted to weaken the workers' attachment to Parliament. This year's Congress, even more than that of a year ago, has demonstrated the futility of both sets of critics. Not only did the delegates formally uphold the General Council's decision to refuse co-operation with all non-democratic groups; but even the critics of the anti-Communist resolutions showed that they were inspired, not by a love of Communism, but by a desire to preserve the democratic character of the trade union movement itself. The leaders of the General Council were in some danger of being called "dictators" for attempting to enforce the exclusion of anti-democratic elements! Without doubt the T.U.C. is now as powerful a force within the Labour movement making for strictly Parliamentary methods as the co-operative movement is making for freer trade. This is because the British trade unionist has read aright the lessons of the last 15 years of Continental history. He realises that democracy is everywhere the greatest friend of working-class interests; that in democratic countries the workers' standard of living is highest and in "authoritarian" countries lowest; and that it is the very success of democracy in promoting a juster distribution of wealth that has in fact led to attacks upon it by the privileged classes. If the British trade unions forgot all the other lessons of history, they would assuredly not forget this one.

There will of course be some to maintain that the General Council is getting too conservative; that it is in danger of becoming a vested interest concerned only to further, like any other monopolist, the advantage of a certain section of producers; and that it is not even solicitous for working men who happen not to be members of trades unions. Nobody who reads last week's debates, however, can maintain that the T.U.C. is forgetting the unemployed, resting content with benefits already secured, or disregarding the need for progress in the work of social reform. A whole debate was spent in discussing the distressed areas; and Mr Ernest Bevin made a very striking and sensational offer to co-operate with the Government in carrying out a comprehensive relief programme based on the recommendations of Mr P. Malcolm Stewart. The raising of the school-leaving age was again unanimously urged, as well as the provision of old-age pensions of £1 a week at 60; and plans for the co-ordination of the coal and cotton industries under Government control were also approved. These are all proposals which, whatever may be thought of their details and immediate practicability, remain within the British tradition of gradual but effective

reform. And in offering its "maximum assistance" to the miners in the coming wage conflict, the Congress showed that it is still true to the primary purpose of trade union existence—though the wording of the resolution suggested that the lessons of 1926 have not been forgotten.

Finally, in calling for the immediate introduction of the 40-hour week without reductions in wages, the Congress was consciously building on the solid gains of the past, even if in this instance it allowed its enthusiasm to blind it somewhat to some very genuine practical snags. It is natural that a working-class organisation, impressed by the coincidence of mechanisation, unemployment and apparent over-production, should turn to reduction of hours as the obvious remedy; just as it is inevitable that individual employers and individual countries should point out that shorter hours without lower wages must mean higher costs. The obstacles to the introduction of a 40-hour week are more substantial than most speakers at the Congress cared to admit. But the end is in itself desirable; and we may consequently welcome the persistent pressure towards it which the T.U.C. quite properly maintains.

The sharpest test of all in the conflict between the General Council's "realist" policy and the utopian aspirations of some of the delegates came in the debate on the League and the possible use of sanctions against Italy. The occasion was the more dramatic for the presence of Mr Lansbury, who remains staunchly opposed, as a matter of conscience, to the use of armed force in any circumstances whatever. His attitude, and its unquestioned sincerity, will be understood and respected by everyone; even though, to those who do not share it, its application in a cynical and sordid world would appear no more than gratuitous folly and weakness. There were some at the Trades Union Congress who agreed with Mr Lansbury in opposing force on principle. And there were even a few who still hankered after the old peace policy—which had some attractions before the collapse of trade unionism in Central Europe and the entry of Russia into the League—of international trade union action to stop war. But this is a dream which is steadily losing support among British trade unionists, even if Sir Stafford Cripps appeared to give it a blessing in a speech on Sunday, in which he spoke of the imposition of League sanctions as a "capitalist war"—thus ranging himself to the Left of Stalin. The vast majority of the Congress were content to accept the world as it exists; and a resolution was carried by 2,962,000 votes to 177,000 calling upon the British Government, in co-operation with the other members of the League, to use all measures provided by the Covenant to prevent Italy's "unjust and rapacious attack on the territory of a fellow member of the League."

It is sometimes remarked that the inclination of the T.U.C. towards radicalism or moderation depends on the movement of the price level and the cost of living. When the price level rises, it is said, the unions move to the Left; and when it falls, they move to the Right. In 1920 their policy was aggressive and radical; while to-day, since the cost of living has not yet started to rise, they are correspondingly moderate. There is some truth in this. But it must not be forgotten that the occasions on which the T.U.C. came nearest to extremism since the war were 1926 and 1931; and at both these moments the purpose of their action was a resistance to wage reductions necessitated by monetary deflation. The fact is that either a marked fall or a marked rise in prices forces the trade union movement into a combative attitude. Doubtless in theory the unions ought to be prepared to accept reductions in money wages when the cost of living is falling. But too often there is a lag before the cost of living falls; and in any case the money income a man receives is a more immediately tangible thing than the prices of the things he buys. In an imperfect world the workers' representatives must consequently look first to the level of money wages, and seek to defend it when prices are falling and raise it when they are rising. It is consequently only in periods when prices are reasonably stable that the T.U.C. can peacefully co-operate, as this year it showed its desire to do, in the steady advancement of social reform. This is a reflection which at once emphasises the great responsibility of those formulating our monetary policy, and the intimate concern of the unions with the manner of its formulation.

7, CHANCERY LANE, LONDON

THE SEVENTY-FOURTH CONGRESS—I

THE adjournment of Congress on August 27th clearly marks the end of the second phase of the New Deal. The first phase was the hectic period of emergency legislation and of the assumption by President Roosevelt of almost dictatorial powers in the summer of 1933. That phase ended with the emergency itself. The Congressional sessions of 1934 and 1935 have been of a very different temper from that of 1933. The President has, on the whole, retained his leadership. He has had some rebuffs, as any President must have, so long as the separation of powers is the ruling dogma of American constitutional law. He has had to exercise patience and reach his ends by the devious route of compromise and negotiation. But he has attained his major objective of consolidating the legislative basis of his policy. A few days after the adjournment Mr Roosevelt wrote to a correspondent that his programme was now substantially complete and that there was little need for further legislation. The third phase, which is now opening, is thus intended by the President to be one of steady development of the policies already laid down, attended and assisted, as he hopes, by "substantial and widespread recovery." With the Presidential election approaching these are the obvious political tactics. Whether they can be carried out depends upon two factors neither of which is in the President's control. The first is the continuance of the present strong upward tendency in business activity. If there were to be a relapse, Congress would be forced to make at least some show of activity. The second is the fate of the basic New Deal Acts in the autumn session of the Supreme Court. The Court's veto on the N.R.A. had comparatively little political effect, since the usefulness and popularity of the N.R.A. were already exhausted. But if the Agricultural Adjustment Act were to be declared unconstitutional, the fat would indeed be in the fire; for the Act is popular with the farmers, who have great power in Congress and whose votes are essential for Mr Roosevelt's re-election. But unless he is forced into activity, the President foresees no more great Acts either of relief, of recovery or of reform.

The Acts passed by this year's Congress can therefore be regarded as the final instalment of the New Deal. The list of Acts is long, and many of them are important. Most of them were the subject of violent disagreements between the Senate and the House of Representatives, and in many cases the final text was not agreed upon until the last hours before adjournment. It will accordingly be useful to summarise the main provisions of the more important enactments.

Some part of the time of Congress was spent in the last two months of the session in amending the more important Acts of the New Deal in such a way as to bring them within the bounds of constitutionality laid down by the Supreme Court in the Schechter case in May. Thus the

A.A.A. Amendment Act seeks to defend the original Act against the charge of excessive delegation of legislative power to the Executive by reciting at length the precise details of the schemes put into effect by the Secretary of Agriculture and by ratifying all the action taken under the original Act. The operations of the Act are also carefully confined to interstate and foreign commerce. The other provisions of the Amendment Act are mainly detailed extensions of the scope of A.A.A. Potatoes are added to the list of crops to which the restriction programme can be made to apply, and the special compulsory restriction schemes for cotton and tobacco are continued. Another Act contains some minor extensions of the already very liberal system of Government credit for farmers. The Frazier-Lemke Farm Mortgage Act is an attempt to reenact in a modified form an Act of the same name passed by the last Congress but since vetoed by the Supreme Court. It provides that any farmer threatened with foreclosure may be declared bankrupt; his property is then appraised at its current value and he is left in undisturbed possession of it for three years upon payment of such rent as may be fixed by the Court. At the end of the three years he may regain complete possession by paying the amount of the appraisal, whatever the amount of the mortgage. In other words, the Act provides for a three-year moratorium, together with a reduction in the amount of mortgages to the present value of the property. It remains to be seen whether this Act will fare any better than its predecessor at the hands of the Supreme Court.

With some ten million unemployed in the country, it is only natural that relief should have been one of the most important subjects of legislation, and the gigantic Work Relief Act, passed in April, possibly qualifies as the leading enactment of the session. The Act appropriates \$4,000 millions, together with balances of \$880 millions remaining from previous appropriations, for the purposes of relief. Eight broad categories of projects are identified, with sums earmarked against them, but otherwise the President's discretion in spending the money is virtually unfettered. When the Act was passing through Congress an attempt was made by the Labour interests to insert a provision compelling the payment of the prevailing standard of wages on all projects. The President successfully resisted this proposal, and the Act, as passed into law, directs that prevailing wages shall be paid only on strictly Federal building projects (i.e. buildings which would have been erected in any case). The payment of wages below the standard has already caused sporadic strikes in New York and elsewhere, but the Administration takes the view that it is impossible to pay standard wages to all the unemployed. As it is, the vast sum appropriated may be insufficient. The President wishes to employ 3,500,000 persons for a year, which means a sum, after providing for projects already under construction, of little more than \$1,100 per head. This will not permit public works projects in the normal sense, which have been found to cost about \$2,130 per man employed. "Work relief" is therefore likely to prove to be more relief than work, although an effort will be made to keep up the appearance of demanding work in return for all assistance granted.

The Social Security Act can also be included under the heading of relief. This Act provides for the institution of a contributory old-age pension system. Taxes are to be imposed equally on employers and workers, rising to a total of 6 per cent. of wages by 1949. The payment of pensions is to start in 1942 and the pensions will range from \$10 to \$85 a month, depending upon the amount of contributions. A similar tax on wages is instituted for the purpose of financing unemployment insurance schemes, but the details of the schemes are left to the States, who will receive grants-in-aid out of the proceeds of the Federal tax. The Act also provides for Federal grants to the States for a variety of purposes. The most important of these is the provision of immediate pensions for aged needy persons. The Federal Treasury will double the State contribution up to a total for the Federal share of \$15 a month. Other provisions are for payments to needy dependent children, health services (with particular reference to mothers and children) crippled and homeless children and the blind.

The collapse of N.R.A. re-opened the whole question of industrial rehabilitation, and Congress passed Acts relating to three individual industries. The most important of these was the Guffey-Snyder Coal Act. This imposes a tax of 15 per cent. on all coal mined, but allows a rebate of nine-tenths of the tax to all producers who comply with the terms of a Bituminous Coal Code. This Code is to include provisions for price-fixing in twenty-three districts and labour provisions similar to those in the original N.R.A. The device of a tax has been resorted to in an attempt to get round the Supreme Court's veto, but this is the Act which the President asked Congress to pass in spite of their reasonable doubts of its constitutionality, and those doubts will persist until the Act has come before the Court. The other two industrial Acts are one prohibiting the shipment across State lines of so-called contraband or "hot" oil, and one permitting the reorganisation of bankrupt railroads by the Courts over the objections of a minority, and in some cases even a majority, of the creditors and shareholders.

In the field of labour the only important Act was the Wagner-Connery Labour Relations Act. This reaffirms the right of collective bargaining, and declares that the representatives of more than half the employees in any unit shall be entitled to be the sole representatives of the workers. It lays down five "unfair labour practices" by forbidding employers to interfere with workers in the exercise of the collective bargaining rights, to dominate or assist any labour organisation (i.e. to organise "company unions"), to discriminate against union members, to discharge employees for giving evidence on labour matters or to refuse to bargain collectively. A National Labour Relations Board is appointed to supervise the operation of the Act. This is another Act whose constitutionality will be in grave doubt until a test case has been heard.

A second article will summarise the provisions of the Banking Act, the Public Utility Holding Company Act, and the other principal measures passed in the recent session.

ANOTHER EMPIRE'S PROBLEMS

THE "great depression" of world prices began with the prices of primary commodities. Many of the countries producing these commodities were the colonial possessions of one or other of the great industrialised Powers; and the continual increase in the burden of all costs and indebtedness, due to the catastrophic fall in prices, constituted a grave problem for the colonial Powers themselves.

In the Dutch empire deflation seems to have reached the goal of a new equilibrium between costs and prices at a lower level. Moreover, this has occurred despite the dependence of the Netherlands East Indies' exports upon certain primary commodities which have been the most injured victims of both economic nationalism and the collapse of world prices—sugar, rubber, coffee and tea. The Netherlands East Indies' Budget totals since 1929 show that great progress in adaptation has been made; though the Governor-General has had to cut expenditure to the irreducible minimum for order and security.

Year	Revenue	Expenditure	Surplus (+) or Deficit (-)
1929	524.0	515.0	+ 9.0
1930	439.0	524.0	- 85.0
1931	380.0	481.0	- 101.0
1932	284.0	424.0	- 140.0
1933	252.0	376.0	- 124.0
1934	267.0	349.0	- 82.0
1935*	250.0	300.0	- 50.0

* Estimates.

Despite voluntary debt conversion and budgetary economies, a succession of deficits increased the consolidated national debt to Fl. 1,261.1 millions at the end of 1933 and to Fl. 1,369.2 millions at the close of last year. On the other hand, the floating debt declined from Fl. 251.0 to Fl. 139.4 millions in the same period.

By a final effort, consisting of an additional tax on the use of petrol and of an export duty on plantation rubber, the Government expect that budgetary equilibrium will be restored in 1936.

In the depression, all prices slumped together; but in the last year or so some prices have begun to move sharply upwards. True, in the principal cases this has only been due to restriction schemes in which the Netherlands East Indies participated (tin, rubber, tea, tobacco) or from which it benefited (petroleum). In the case of sugar, a restriction scheme has profited the Netherlands East Indies nothing, while the lamentable British speculation in pepper has actually led to extended cultivation. In various other cases (coffee, palm oil, kapok, copra) effective restriction has either not yet begun or is only in its initial stages. The effects of price movements on the quantities exported can be gauged from the following table, the several commodities in which account for roughly four-fifths of Netherlands East Indies' total exports:—

PRINCIPAL EXPORTS OF NETHERLANDS EAST INDIES

Commodity	1929		1933		1934	
	'000 m. tons	Mill. Fls.	'000 m. tons	Mill. Fls.	'000 m. tons	Mill. Fls.
Rubber	314.5	234.4	351.4	36.9	465.5	88.1
Sugar	2,981.3	311.6	1,386.1	62.1	1,388.5	45.8
Coffee	83.4	89.5	72.3	25.6	83.2	22.6
Tea	82.8	86.1	81.6	26.4	72.9	22.6
Fibres	81.1	35.0	121.6	26.5	94.9	22.6
Petroleum, fuel, etc.	4,440.0	185.2	4,874.3	105.0	5,154.5	99.6
Copra	484.6	97.6	548.2	42.8	434.6	17.8
Palm oil and kernels	42.8	12.1	140.0	11.9	147.0	9.7
Deil tobacco	17.2	64.4	9.6	20.8	11.3	24.4
Vorstenland tobacco	10.0	10.4	10.1	9.9	9.3	9.1
Java tobacco	47.1	7.6	29.9	6.4	23.9	5.5

In 1933, total export proceeds were only a third of their 1929 figure, though much greater quantities of rubber, fibres, petroleum, copra, palm oil and palm kernels were exported in that year. Only sugar and tobacco then showed substantially smaller exports. Last year total export proceeds were again up, mainly due to the rubber, tea and tobacco restriction schemes.

The exports of the Netherlands East Indies have been severely curtailed, for they are mainly those which suffered the greatest falls in prices. Java's sugar production is down to one-sixth of the pre-depression peak, at 500,000 against 3,000,000 metric tons. This has enabled stocks to be reduced, and these will be cleared by early in 1937; but half the industry is idle. The Government proposes to stabilise the annual output at 1.5 million metric tons, of which only 1.2 millions could be exported; in 1933 and 1934, however, even with exports from stocks, only 1.39 millions could be exported. The industry therefore accounts for much unemployment and a reduction in the colony's purchasing power; nor can any other crop be substituted for sugar at present.

The Government's control of native-produced rubber, for the sake of the restriction scheme, is a perpetual problem. Perhaps purchases of the natives' rubber plants with the proceeds of the export tax would make restriction really effective; but then the plants must be destroyed and the land only given back to the natives on condition that they do not use it for rubber. What else they could use it for is a puzzle. For the tea restriction scheme has not brought the expected benefits; prices have risen in sterling (India and Ceylon) more than in florins. Consumption in the United States has fallen as consumption of alcohol has risen; and London tea stocks have risen. Tobacco is doing better and finding new markets for better qualities; so that cultivation is to be increased by 10 per cent., not to increase final production, but to give a greater field for selection of leaves. Coffee production has practically been wiped out as a result of over-production in Brazil, which absolutely controls the world price. Though Netherlands East Indies' coffee is imported free into Holland, the Mother Country has only taken a quarter of the total Netherlands East Indies' production in the last six years. Exports remain stable at about 85,000 metric tons, but coffee cultivation is manifestly unprofitable.

On the other hand, the International Tin Restriction Scheme has worked out very favourably for Java and Sumatra. The fusion of the State mines with the smaller

concerns of the Billijon Mij will yield larger profits to the State, while absolving the latter from direct administration. The price of palm oil is again improving, after the collapse caused by the raising of the United States' tariff. In the production of cinchona bark, kapok and pepper, prices are still depressed, following earlier expansion of production, and export of cinchona can now only be made under licence. Petroleum output, which is under the control of the Shell concern, has latterly been on the increase. Thus, on the whole, the basic situation in Netherlands East Indies is healthier than for many years past. But what is the trading position?

The greatly reduced purchasing power of the Netherlands East Indies' population is apparent in the following table. The fall in the prices of exported primary products has cut the value of exports by two-thirds since 1928-29, and that of imports—which are mainly manufactures—by almost three-quarters.

NETHERLANDS EAST INDIES' BALANCE OF VISIBLE TRADE
(In million florins)

Year	1927	1928	1929	1930	1931	1932	1933	1934
Exports	1,658	1,590	1,488	1,191	798	574	493	528
Imports	927	1,030	1,166	922	610	410	331	300
Export surplus	729	560	322	269	188	164	162	228

The surprising maintenance of the export surplus, at levels sufficient to cover all services on Netherlands East Indies' external debt, has only been possible because the sources of manufactured imports have been changed, to the disadvantage of the Mother Country and to the advantage of countries with depreciated currencies, e.g. Japan and the sterling area. Japan's share in Netherlands East Indies' imports has risen phenomenally. The following table shows the percentage distribution of Netherlands East Indies' foreign trade among the principal countries:—

PERCENTAGE OF NETHERLANDS EAST INDIES' TOTAL IMPORTS AND EXPORTS FROM OR TO VARIOUS COUNTRIES

From or to	Netherlands East Indies' Imports			Netherlands East Indies' Exports		
	1931	1933	1934	1931	1933	1934
Holland	19.4	12.8	12.9	20.7	22.0	27.2
U.K.	7.6	9.7	9.9	8.9	5.3	7.2
Germany	8.9	7.5	7.1	2.2	2.2	2.5
France	1.0	0.9	1.0	3.0	3.9	3.2
Belgian-Luxembourg	1.6	1.9	1.4	13.1	11.4	10.7

The expansion of Japan in the Netherlands East Indies' market has been aggravated by a reduction of Japan's sugar and coffee imports from Netherlands East Indies, owing to her extended cultivation in Formosa, and by the increased amount of Japanese shipping in the carrying trade to and from the Netherlands East Indies. The only

rejoinder the Netherlands East Indies' Government can make is by quotas, and these have not so far stemmed Japan's advance. Moreover, the already severely reduced purchasing power of the Netherlands East Indies' population can scarcely be further curtailed by restrictions of the cheapest imports. For this reason the Netherlands East Indies' authorities have recently devised the motto "Industrialisation" as a reply to Japan's advances and already the Netherlands East Indies' factories producing soap, beer, biscuits, Goodyear tyres, cement and textiles have shown that the native workers can rival the Japanese on even lower wages, and turn out goods of better quality.

Fundamentally, however, the Netherlands East Indies have to solve a long-run problem. The prevailing troubles of Netherlands East Indies are due to a sudden frustration of expectancies in various branches of primary production for a world market. That world market has collapsed and left Netherlands East Indies grievously over-equipped. Can these colonies of an already industrialised Motherland solve their problems by a rapid turnover to industrialisation in the hope of achieving, at best, an Autarkic equilibrium?

GERMANY'S DEBT

It is not often that the utterances of Dr. Schacht strike anything but apprehension into the hearts of Germany's creditors. Recently, however, his minatory manner, which he has practised upon creditors so often in the past, was reserved for the extremists of the Nazi regime. In vigorous terms, in a recent speech, he denounced the Jew-baiters, the inflationists, the extravagant spenders of public money, and the debt repudiators.

"We must not forget," declared the president of the Reichsbank, "that not Governments but thousands of private persons who have lent us their savings are our creditors. We greatly regret that Germany is not able to meet her obligations to the full, and I shall not cease to continue the fulfilment of existing claims as far as it is possible."

This was a courageous statement, for which creditors will be duly grateful, though there is little else in the German scene to give them comfort.

The tale of German debts and default, as Dr. Harris relates it in a book recently published under the auspices of the Royal Institute of International Affairs,* is one of questionable faith and dubious ingenuity, ornamenting a history of economic and political misfortune that would have been evil enough in itself.

German apologists, including Dr. Schacht himself, have been at pains to shift the responsibility for the present state of affairs from Germany to the creditor countries, accusing them on the following five counts. The exaction of reparations, together with the other penalties of Versailles, caused the inflation of 1923, destroyed Germany's internal sources of credit and forced her to borrow abroad. The debts incurred before 1930 merely balanced reparation payments, and in this way the rest of the world got its money back. The creditors pressed the loans on Germany, often investing recklessly. Germany's inability to pay is due to the refusal of creditor countries to accept her goods, the only means whereby payment can effectively be made. And clearing agreements, entered into for the purpose of collecting their debts from Germany, have in practice strangled German exports. It is impossible categorically to refute any of these charges, but in Dr. Harris's comprehensive and impartial narrative there is much evidence with which to parry them. He shows, for instance, that between 1924 and 1930 Germany's borrowings totalled between 2½ and 3 times as much as she paid in reparations. She used them to build up reserves of working capital, to rationalise her industries, and to finance a very substantial increase in the German standard of living. As for the effect of clearings, the figures quoted by Dr. Harris from the *Economist* show that German exports to non-clearing countries have fallen quite as fast as those to countries with which she has clearing

agreements; their effect is rather to equalise imports and exports by promoting the former while hindering the latter. It is plain, therefore, that a clearing agreement is far from being a guarantee of debt payment.

But the fundamental question is, how far must Nazi Germany herself take responsibility for her present inability to transfer her debt service abroad. The maintenance of a sufficient credit balance of trade after 1931 required either depreciation of the reichsmark or a course of strict deflation designed to drive down the German price level. Germany has done neither of these things. She has adopted internal policies that have speedily and substantially raised the price level and increased industrial costs. And she has maintained the nominal parity of the reichsmark, while attempting to secure by various devices the same stimulation of exports as would derive from a depreciation—largely at the expense of the creditors, who have been obliged to cut their losses by selling blocked marks at a discount, or by reselling to Germany, at bargain prices, bonds debased in value through Germany's own action.

The story of enforced losses can be read between the lines of Dr. Harris's statement, that "by the beginning of 1934 the total of Germany's foreign indebtedness must have been reduced to about 11 milliards, rather less than half of its original total." A good deal of this reduction was due to depreciation of the pound and the dollar; but that only benefited Germany because she maintained, *vis-à-vis* the outside world, the nominal value of the reichsmark.

There is no evidence that any German leader deliberately planned, as a long-term programme, the development of Germany's external economy, financial and commercial, towards its present condition—which a famous character of Mr A. P. Herbert's would have described as "too fallacious." A series of day-to-day experiments appears to have been improvised as occasion arose, rather as a desperate financier staves off exposure and collapse by one ruse after another. Internally as well as externally, Germany has been building a house with the cards of economic fiction. There is an echo of Whittaker Wright finance in the chain of transactions—Reichsbank rediscounting, guarantees by the Golddiskontbank, Papen tax-remission certificates, institutional "bearers" of work-creation and rearmament bills, and so on—whereby short-term credits are transmuted into long-term obligations. "We have financed from the future" confessed Dr. Schacht in his speech of August 18th. Eventually the day of reckoning must come; and he warned the German people that "at some future date" the sums that have been needed for the work schemes and for rearmament, which "are of unheard-of magnitude judged by a normal standard . . . will have to be funded by the work and the savings of the German people." Dr. Schacht, unlike some National Socialist leaders, can see beyond the end of his own nose, and much more than the shape of other people's.

The task of funding is not going to be easy; for it means the reversal of that deflationary trend which has hitherto been evident in Germany's national economy. The short-term financing, however skilfully covered up, has had its inevitable result in an expansion of the currency and credit basis, and in a rise of both the wholesale and retail price levels. There is an ominous pressure for higher wages, which Dr. Schacht found it necessary categorically to beat back. "Again and again," he declared, "we must tell the German people that they do not live in a land which flows with milk and honey." How many enthusiasts for Hitler thought that milk and honey would flow when the Nazis had thrown off the "tyranny of interest" and vigorously, and how successfully, can the Nazi regime pursue the deflationary programme that Dr. Schacht's pronouncement implies—if he really means what he says? How great is Dr. Schacht's authority in relation to those Nazi elements of which Herr Streicher is the most notorious protagonist, and which this very week are splendidly arrayed on the rostrum, together with Herr Hitler, at the every creditor of Germany is bound to ask when estimating the value of the Reichsbank's president's speech. They are, moreover, questions the answers to which must determine much more than economic developments in the Third Reich during the months that lie ahead.

NOTES OF THE WEEK

Tariffs and Gold.—The spread of economic nationalism and the possibility of reconstructing an international monetary standard, were discussed by Professor J. G. Smith in his presidential address to the Economic Science section of the British Association at Norwich last Friday. Professor Smith's account of the growth of economic nationalism was illuminating; and he clearly emphasised the fallacies implied in the pursuit of "autarky." His diagnosis, however, seems to have been a little equivocal in some respects. Is it really true that mass production has supplied a rational ground for economic nationalism? Could it not just as easily be argued that the economies of mass production can only be secured in the widest possible market, and that the loss resulting from artificial limitation of markets has consequently become greater than ever? And is it true that existing trade restrictions are the result of a long-term movement? Are they not really due, at any rate mainly, to the attempts of embarrassed nations to protect themselves from the internal effects of the deflation that began, for whatever reason, in 1929? Similarly, when Professor Smith comes to recommend this country to return to gold, he recognises that many preliminary conditions must be fulfilled; but he is inclined to under-rate the effect of monetary maladjustments in originating and perpetrating trade barriers. He repeats the traditional argument that fluctuating exchanges are a formidable barrier to trade. Unquestionably they are such a barrier. But there are others; and among them is the existence of currencies attached to gold at artificial parities. Anyone who examines impartially the history of the last two years will be forced to conclude that the attempt to maintain artificial gold parities by such countries as France, Holland and Switzerland, not to mention Germany and Italy, has led to a contraction of international trade; while the abandonment of such parities by Belgium, Argentina, South Africa and others has led to an expansion. Phrases like "monetary chaos" are misleading. It is sometimes forgotten that a world of gold currencies fixed to gold at false parities is a form of monetary chaos much worse confounded than a world of freely fluctuating exchanges. The real task, if international trade is to be restored, is to find the right exchange ratios first and then consider how to maintain them.

A National Food Policy.—A most admirable paper on nutrition and agriculture was read by Sir John Orr at Norwich on Tuesday. The problems of agriculture and nutrition, Sir John Orr said, should be considered together. If the money incomes of the mass of consumers were increased, it would be possible to raise the price of home-produced food without any restriction of overseas supplies. Consequently we needed a "national food policy into which both agricultural and public health interests can be fitted and reconciled." Investigation, Sir John Orr stated, had shown that consumption of those foodstuffs like potatoes and bread, which were the cheapest suppliers of energy, was relatively uniform throughout the whole population. But in the case of more expensive suppliers of energy like milk, eggs, fruit and vegetables, consumption rose uniformly with income. In families with an income of not more than 10s. per head per week, consumption of liquid milk averaged not more than a pint per head. In the highest income groups it rose to five pints per head. The same was true of eggs and fruit. Not until one reached incomes of £1 a week per head was "the diet, according to modern standards, adequate for maintaining health." It was estimated, Sir John Orr said, that there were about 20 millions of the population of Great Britain below this economic level. To raise the diet of these consumers to a level of 25s. a week per head would mean an increased consumption of about 20 per cent. and increased purchases of about £200 millions a year. The percentage increases in consumption necessary to reach this would be: milk, 42; butter, 27; eggs, 28; fruit and vegetables, 53. How is this

most desirable joint solution of the agricultural and health problems to be achieved? "It is probable," Sir John Orr suggested, "that the solution will be found by modifying the functions of marketing boards in the direction of making them public utility companies which will run the processing centres—slaughter houses, bacon factories and milk depots." Some lowering of retail prices would thus be made possible as a result of reduced costs of production. But Sir John Orr did not attempt to pretend that a really adequate nutrition standard could be established without State assistance.

The rest of the gulf (he said) between what the farmer would get to give a remunerative price and what the consumer is asked to pay should be bridged by a direct subsidy from the State paid to these boards. The subsidy should be regarded as more in the interests of public health than of agriculture.

The degree of financial assistance which can be given for this purpose must of course depend on the amount of funds that are available. But there is no doubt that public money could not possibly be spent in a more beneficial way. Sir John Orr is to be congratulated on indicating the principles of the sort of national food policy that is likely to be of great importance in the future.

The Fraternal Totalitarians.—It was surely not to be expected that the Fascist dictator of Italy—condemned in his peculiar form of external diplomacy by the virtual unanimity of world opinion—would not lift his eyes to the Northern Italian hills from whence might come some help. Only a distance of 50 miles across these hills separates Italy from Germany, that other European Great Power which, like Italy, is a dictatorship and a totalitarian State. Italy once feared German aggression upon Austria; and last January she sank her differences with France in order to prevent Nazi expansion into Central Europe, and so to the Brenner Pass from which the Nazis might look down upon hundreds of thousands of their kith and kin in the Italian Trentino, or South Tyrol. That once seemed a cogent argument to Signor Mussolini. Now, however, he has apparently decided that there is, after all, a mystical affinity between two dictatorships, two totalitarian States which so plainly urge their need of territorial expansion, two nations which have their own special reasons for disliking an "effete and disunited Parliamentaryism," and for despising—even for quitting—the comity of nations which abjures war as an instrument of national policy. The Duce therefore took the occasion of the new Italian Ambassador's presentation of his credentials to Herr Hitler in Berlin last Sunday to offer an Italian olive-branch to the Nazi Führer. The gesture was graciously welcomed, and these were the significant phrases and expressions of mutual esteem which were then recorded. At the present moment, said the Italian Ambassador, German-Italian relations were full of extraordinary significance for "peace and the balance of strength." In the future they may acquire it "in still higher degree." Italy demanded "understanding for her legitimate interests" equal to that which she has and will have for those of others. To the Italian protestations of amity and community of interests with the Nazi State, Herr Hitler replied that Italo-German relations would certainly be of the greatest importance for future political development; and the German Press organ which reflects the German Foreign Office's views confirmed this next day. But a doubt here assails the observer of this totalitarian fraternisation. Can Herr Hitler view the lightning conversion of the Duce to sympathy with Germany's "legitimate interests" as a compliment and with equanimity? Is Austria henceforth to become a "legitimate interest" of Germany in Signor Mussolini's eyes, after the intense diplomatic zeal of the Duce during the last year or so to prevent such a recognition? Will Herr Hitler, the mainstay of whose policy is Anglo-German friendship, cheerily

* "Germany's Foreign Indebtedness." By C. R. S. Harris. (London) Oxford University Press. 5s.

a brother dictator who counters British insistence on international obligations with a threat of forcible aggression? We credit Herr Hitler with a profounder sense of political realities and a stronger flair for diplomacy than Signor Mussolini has lately shown. He may, at present, well pray to be spared the attentions of an embarrassing friend.

* * *

A Breathing Spell.—With Congress safely out of the way, President Roosevelt has once more abruptly changed the tack of the New Deal. Replying to a friendly enquiry which was made at the appropriate moment the President announced that the legislative part of his programme was virtually complete. He has not departed, he says, from his original aims, which were "to seek a wise balance in American economic life, to restore our banking system to public confidence, to protect investors in the security markets, to give labourers the freedom to organise and protection from exploitation, to safeguard and develop the national resources, to set up protection against the vicissitudes of old age and unemployment, to relieve destitution and suffering, and to relieve investors and consumers from the burden of unnecessary machinery." The President goes on to say "it seemed to Congress and to me better to achieve these objectives as expeditiously as possible, in order that not only business but the public generally might know those modifications in conditions and rules in economic enterprise which are involved in our programme. This basic programme, however, has now reached substantial completion and the 'breathing spell' is here—very decidedly so." This is in appearance, if not in fact, a very sudden *volte face*, for it is only a few weeks since the President was forcing upon a reluctant Congress measures as radical as the Public Utilities Holding Company Act and the so-called "Soak the Rich" tax programme. But a halt in the stream of Acts was clearly called for on political, if not economic, grounds. The President expects to get his main support in the Presidential election from the South and West; but although his position in the South will be strengthened by the assassination of Senator Huey Long (to which reference is made in the following Note) he needs to carry at least one or two States in the industrial East and Near West to be sure of re-election. The tide of industrial recovery appears to be flowing more strongly at the moment than at any time since the onset of the depression; the business news, as our New York correspondent reports, is almost uniformly satisfactory. There is a fairly general belief, by no means confined to Wall Street and Big Business, that the more recent phases of the New Deal have been more of a drag upon than an incentive to recovery, and the President's action can therefore be construed as an attempt to reassure the industrial East that the convalescence of confidence will not be disturbed by any further changes of treatment at the hands of the legislative physician. Recovery, if it can be secured, will be a far more valuable ally to the President than any of the interests, vested or other, that might be served by new legislation.

* * *

Huey Long.—Huey Long, Senior United States Senator from Louisiana and virtual dictator of that State, was shot in the State capitol at Baton Rouge on Sunday evening and died early on Tuesday morning. His assailant, who was killed by the Senator's bodyguard, appears to have been inspired by political hatred, and, though he acted alone, he was undoubtedly fulfilling the wishes of a large section of the people of Louisiana, embittered by the ruthless way in which Long had in the last few years entirely perverted the democratic system of the State to his own personal uses. This crime removes from the stage of American politics one of the most picturesque figures that has ever occupied it. Huey Long's career did not differ very much from that of the ordinary American politician until 1928, when he was elected Governor of Louisiana by a minority vote in a three-cornered contest. Once in office, however, he showed himself particularly adept at attracting a personal following. In part his tactics were those of the "machine" familiar to most American States—that is, the use of patronage and the power of appointment to reward

adherents and punish enemies. In a word, Huey Long's control was founded upon graft, carried further and applied more ruthlessly than by any save the most notorious Tammany regimes. But he also strengthened his electoral position by a vast programme of building roads, bridges and schools. This was financed by reckless borrowing, but since the poorer voters were relieved of direct taxation, the increase in the State debt did not lessen Long's popularity. Even his opponents concede that he showed himself to be an uncommonly energetic and competent administrator. In 1932 he was secure enough to hand over the Governorship to an adherent and have himself elected Senator, but even from Washington he kept a firm hand on his State and it was at the end of a special session of the Legislature called to pass a batch of laws strengthening the dominance of the Long "machine" that he was shot. In the Senate he started as a firm supporter of President Roosevelt, but he soon became disgusted with the President's moderation, turned into a savage opponent and started building up a "Share-the Wealth" campaign. In Washington, the offensive personalities and the obstructive tactics in which he indulged made him universally execrated, but he had made himself into one of the best-known, if not most popular, figures in the country. He had recently announced that he would be a candidate for the Presidency in 1936. Nobody conceded him any chance of election, but some observers thought that he might succeed in detaching enough votes from Mr Roosevelt to secure the election of the Republican candidate. In recent months, however, his influence had appeared to be smaller than had been thought, and an attempt to extend his control from Louisiana to the neighbouring State of Mississippi had failed. His death unquestionably strengthens the President's position, for he was the only potential leader of the left-wing Radicals who had any practical experience of politics or any nucleus of political backing.

* * *

The Swastika Flag.—Some weeks ago a band of demonstrators eluded the police and tore down the swastika flag from the *Bremen* just as she was about to sail from New York harbour. Last week, a New York magistrate, Mr Brodsky, bound over the men accused of rioting. And on Saturday the German Ambassador at Washington, Dr. Luther, made a verbal protest to the Secretary of State, Mr Cordell Hull, over the action of the New York magistrate. Mr Brodsky may have been right for all that we can tell, on the merits of the case, in the extreme leniency of his treatment of the alleged offenders. It would be difficult, however, to approve the magistrate's action in expressly basing his leniency on the ground of the existence of extenuating circumstances, and then explaining what he meant by making a vehement and even vituperative attack upon the Nazi regime in Germany. The fact that the magistrate happens to be a Jew accounts for, without excusing, his behaviour. At the same time, of course, it reduces to vanishing point any moral effect which he may have intended his political tirade to produce. If it is pleaded that it was only human for a Jewish magistrate to take this line about anti-Nazi rioters, it must be answered that a judge who gives way to his own human feelings is unfit to sit on the bench. Mr Brodsky has, in fact, behaved exactly as he himself, on his own showing, would expect to see a Nazi magistrate in Germany behave if he were called upon to try a gang of Nazis who had been rioting against the Jews; and he has done no service to the cause of freedom and democracy by doing his worst to reduce the standard of justice in one great democratic country to the lowest of Nazi levels. Incidentally, he has exceeded his powers in going out of his way to deal with foreign affairs, which are the Federal Government's prerogative; but it is one of the awkward features of the old-fashioned constitution of the United States that the Federal Government has no effective means of disciplining the State and municipal authorities. The United States Government's embarrassment and the German Government's annoyance are also both accentuated by the notorious fact that Mr Brodsky's anti-Nazi strictures accurately reflect the sentiments of the great majority of his fellow-countrymen—Aryans as well as non-Aryans—and probably of most of the world outside Germany.

The Swiss Referendum.—The referendum which was taken this last Sunday in Switzerland on a proposal for a revision of the Federal Constitution of 1874 has resulted in a decisive victory for the constitutional *status quo*. The proposal was defeated by 501,000 votes against 194,678, and in 21 cantons out of 25. This result is contrary to general expectation, which was that the proposal would be carried by a small majority. The Swiss Constitution is both old-fashioned and awkwardly complicated by the legislation and the referendum decisions that have come into force to supplement it during the past sixty years. On common-sense grounds, therefore, there is a strong case to-day for consolidating and bringing it up to date. And we may conjecture that if the present referendum had been taken in, say, September, 1913, it would have resulted as a matter of course in the adoption of the proposal. What has defeated the attempt at constitutional reform in Switzerland this year is the political history of the last twenty years in other parts of Europe: the rise of extremist parties of both the Right and the Left; the violent seizure of power by these extremists; and—most pertinent to the present situation in Switzerland—the insidious capture of power by constitutional or semi-constitutional means in order to break or abolish the existing Constitution when once the crypto-revolutionaries have entrenched themselves in office. The Swiss have not been blind to what has been going on all round them in Italy, Austria, Germany and Russia. Evidently, the fate of the present Swiss proposal was sealed in advance when the Swiss extremists, such as they are, came out in support of the proposal as a possible opening for really fundamental constitutional changes. No doubt their chances of being able to use the present proposal for this ambitious purpose were very slender; but the moderate majority of the electorate seems to have made up its mind, in these circumstances, to take no chances at all. Yet the friends of parliamentary democracy, in Switzerland and abroad, can scarcely congratulate themselves on the result. For an institution cannot be in a very healthy state when one dares not reform. When parliamentary democracy is under so heavy a fire of hostile criticism nothing can do greater harm to the cause than the rigid maintenance of obsolete parliamentary Constitutions which are not working well. Though the Swiss anti-democrats may be weak in numbers to-day, they have time on their side; for the voting on Sunday seems to have gone largely by age. Sooner or later Swiss statesmanship will have to take the risk of opening the safety-valve if it is to avoid the greater risk of an explosion.

* * *

The Resignation of General Hayashi.—We have lately had occasion to comment on the courage and the statesmanship which General Hayashi has been showing as Minister for War at Tokyo. He has been grappling manfully with the social evil under which Japan has been labouring since 1931: the dictation of public policy by army officers. The force which has been leading—or pushing—the Japanese Government and people into an aggressive foreign policy during the last four years has been a faction in the Army (represented in greatest strength among the junior officers) which has believed in the Army's right and duty to play a political rôle, and has thrown itself into politics with the avowed purpose of "gingering them up." The more desperate spirits among these soldiers in politics have not hesitated to remove by assassination any older and more responsible statesmen who have attempted to restrain them. The list of Japanese victims of Japanese political crimes of violence during these years includes some of the most distinguished people in Japan, from a Prime Minister downwards. In dealing with these wild-cats, General Hayashi must have been aware that he was taking his life in his hands. His method has been to remove the leaders of the militant political faction from key-positions in the Army, or even to put them on the retired list. He won his crowning victory in July, when he dismissed from the post of Inspector-General of Military Education his opponent General Mazahi, who was openly resisting his chief over the question of further changes affecting no less than 4,700 officers. General Hayashi has had his way; his policy has been carried through. And the news of his

resignation on September 4th is almost certainly not to be taken as meaning that his enemies have been too strong for him. We may judge this from the name of his successor, General Kawashima, who is hailed as a neutral but is reported to have given General Hayashi his effective support in the July crisis. The new War Minister may be expected to confirm and maintain the results of General Hayashi's policy, even if he does not carry the policy further. General Hayashi's own purpose in resigning is no doubt to set the seal upon what he has done by a gesture of moral appeasement. The officers who have lost their positions are probably expected to accept the *fait accompli* with a better grace when they see the Minister who has dismissed them imposing the same discipline upon himself.

* * *

Greek Diplomacy.—The issue between Monarchists and Republicans in Greece, which has persisted ever since the breach between King Constantine and M. Venizelos in 1915, is being fought out sooner than we anticipated. In a Note in these columns on July 27th we commented on this cardinal issue of Greek politics and emphasised the need for a "less unanimous setting" for the plebiscite which was to decide finally in favour of one or the other forms of constitution. Since then, however, the Monarchists have drawn General Kondylis, the War Minister, ever nearer to leadership of their cause; and Monarchist activities have redoubled in pertinacity, in order to reap all possible benefit from the public disapprobation of the Venizelist (Republican) revolt of last May. The Mayor of Athens has lately been in London as an emissary, so it is said, to ex-King George. And the Greek Premier, M. Tsaldaris, has been steadily manoeuvred into a dilemma: resignation, which leaves the Royalists an open field, or dependence on a forcible Royalist faction in his Cabinet. On Monday the tension reached breaking-point. General Kondylis then proceeded to remove General Panayiotakos, leader of the Anti-Monarchist group in the Army, from the scene of politics by having him arrested on the very threshold of the Cabinet Council Chamber. General Panayiotakos had tried to prevent the War Minister from assuming complete ascendancy over the Premier and so forcing M. Tsaldaris to declare himself—and *ipso facto* his Cabinet—in favour of the Monarchy. The Republican general's reward was a bayonet wound which landed him in hospital under a strong guard; and the *coup* by General Kondylis was then utilised to bring pressure on the Premier. M. Tsaldaris promptly made an announcement that he personally favoured a Monarchy, which should be both limited and constitutionally democratic. This placed the President of Greece himself, M. Zaimis, in a quandary; for the Premier should logically have proceeded either to convoke the National Assembly for the plebiscite, or else to reshuffle the Cabinet on purely Monarchist lines. Meanwhile all that is certain in the Greek situation is a pretty general condemnation of the rôle played by the Monarchist War Minister. As long as

events move in Greece on the lines followed this week, foreign observers can only conclude that both the Greek constitution and Greek politics provide little more than an arena for the personal ambitions and rivalries of political and military cliques.

* * *

Denmark and Depreciation.—For some time now a sectional organisation of pig-breeders and dairy farmers in Denmark, known as the "L.S. farmers," have been urging upon their Government the need for further depreciation of the currency. Not content with normal political methods of persuasion, these farmers have threatened to withhold from the banking authorities the sterling proceeds of their co-operatives' exports of bacon. This would naturally deplete Denmark's supply of foreign exchange and so force down the krone. The threats of the L.S. farmers have recently attained formidable dimensions, for it is rumoured that they even intended to have the proceeds of their bacon exports and dairy produce to the United Kingdom sent back to Denmark in the shape of good British pound notes. These they would promptly hoard, thus forcing the krone down to the desired level of 25 or even 30 to the pound. The Danish Ministry of Commerce has met these threats with an official announcement reminding all Danish exporters of their duty, under the law of December 22nd last, to repatriate without undue delay all foreign exchange arising from exports, and to pay it into Danish banks. Any form of non-compliance with this law is strictly illegal. Our Copenhagen Correspondent telegraphed on Thursday that the situation is viewed with equanimity by the Government, as the threats of the farmers arise from only a few separatist groups which have no substantial following among the co-operative slaughteries and creameries. Moreover, the proceeds of Danish exports pass through a strictly limited number of exporting concerns; and in the last month Denmark's foreign exchange position has improved slightly. Thus the extraordinary expedients envisaged by the dissident Danish farmers are not likely to coerce their Government and bring about a drop in the krone. That is all to the good; for any fresh Danish currency depreciation would inevitably have unfavourable repercussions on Denmark's foreign trade, in the shape of increased tariffs or decreased quotas abroad.

* * *

India and Lancashire.—Is the old quarrel between Indian and Lancashire cotton manufacturers going to break out again? Since October 28, 1933, relations between the two principal groups supplying the Indian market have been regulated by the agreement then signed by Mr (now Sir) H. P. Mody on behalf of the Millowners' Association, Bombay, and Sir William Clare-Lees, on behalf of the British Textile Association. This agreement stabilised the Indian duties on British cotton yarns and textiles and artificial silk textiles until December 31, 1935. This position was statutorily confirmed in the Government of India's Indian Tariff (Textile Protection) Amendment Act which was passed on May 1, 1934; but the Commerce Member, Sir Joseph Bore, then made it clear that after December 31, 1935, the needs of India's textile industry for its "reasonable protection" (in the words of the 1933 agreement) would have to be revised. The Government of India have therefore this week appointed a Tariff Board, under the chairmanship of Sir Alexander Murray, to inquire into the need of the Indian industry for protection from British competition. The following are the terms of reference to the Board:—

To recommend on a review of present conditions and in the light of the experience of the effectiveness of the existing duties, the level of the duties necessary to afford adequate protection to the Indian cotton textile industry against imports from the United Kingdom of (a) cotton piece goods, (b) cotton yarn, (c) fabrics of artificial silk, and (d) mixture fabrics of cotton and artificial silk. By adequate protection is meant duties which will equate the prices of imported goods to the fair selling prices for similar goods produced in India.

The Board will give a full opportunity to the cotton textile industry, whether in India or the United Kingdom, to

present its case, and, if necessary, to answer the cases presented by other interested parties. The definition of "adequate protection" above is none other than that on which most tariffs are mistakenly raised—the "equating of costs of production" theory. "Mistakenly" because equating costs at their highest level never leads to the greatest possible amount of trade; nor is it likely to do so for India in this case. It is greatly to be hoped that the Indian textile manufacturers, having warded off Japanese competition, will not set out to achieve a monopoly of the home market by securing so "adequate" a protection that no opportunity whatever is afforded to Indian textile consumers to purchase Lancashire's products.

The Price of Milk.—The Milk Marketing Board, fortified by their victory in the poll of their constituents taken last month, have been negotiating with the distributors of milk the terms of the annual contract for the supply of milk for liquid consumption, and the negotiations have reached deadlock. This contract runs from October 1st to September 30th each year and it specifies not only the price at which milk will be sold at wholesale to the dairymen but the minimum price at which it may be sold at retail. The dairymen proposed reductions in the wholesale price of eightpence per twelve gallons throughout the year, and in the retail price of fourpence per gallon for two summer months. In other words, the distributors' margin was to be left untouched. The Board responded with a demand for an increase of fivepence per dozen gallons in the wholesale price with no increase in the retail price. The Board propose, in accordance with the terms of the scheme, to enforce their views, subject only to confirmation by a statutory Investigating Committee. This autumnal wrangle is an annual affair and the only change brought about by the Milk Marketing scheme is that it is the farmers rather than the distributors who now have the power, in the last analysis, to override the other side. In the present instance, both sides are attempting to reduce the other's profits, the distributors in order to lower the retail price, the farmers in order to line their own pockets. It may be suggested that both parties are about equally at fault. The continued and increasing profits of the milk distributing companies suggest that the distributors' margin might well be reduced without any damage either to equity or to efficiency. As for the farmers, it is well known that the whole future of the scheme is threatened by the continuing enormous increase in the production of milk. It is true that as a larger and larger proportion of the total production of milk has to go into manufacture, the average price received for milk falls, and it is understandable that the farmer, led by his spokesmen to believe that the scheme would guarantee him higher prices, is setting up a howl and putting pressure upon the Board to raise the price of liquid milk. But it is obvious that an increase in the price will stimulate a still greater spate of unsaleable milk and produce further embarrassments for the luckless Board. Anyone who can take his eyes off the politics of the matter can see quite clearly that the only reasonable course is to reduce the retail price of milk by lowering both the wholesale price and the distributors' margin. If it is impossible for a Board elected by the producers ever to agree to such a course, that demonstrates not the unreasonableness of the suggestion but the utter unsoundness of attempting to regulate a complicated market by a body unable to regulate production and unwilling to lower prices in any circumstances at any time.

Power Consumption in Britain.—A country's consumption of fuel and power is a good index of its economic development. How has consumption of power moved in this country in recent years? The chart below shows changes in the relationship between total consumption of coal, consumption of electricity by industry, and general business activity in the United Kingdom during the past ten years. The general trend of economic activity in this country is represented by the annual figures of our new Index of Business Activity. The scope and

method of construction of the new index were explained in the Trade Supplement to the *Economist* of June 29th. The indices of coal and electricity consumption are two of the fourteen constituents of the complete Index of Business Activity. The index of coal consumption is based on the average daily output of saleable coal, less exports of coal, manufactured fuel and coal shipped for the use of steamers, and is corrected for variations of stocks at pit-head. The index of the consumption of electric power by industry represents the first attempt to measure changes in industrial consumption of electricity in this country. The index is based on the average daily output of "authorised undertakers," less units generated for domestic purposes and for use in traction and public lighting.

ECONOMIST INDICES OF BUSINESS ACTIVITY

It will be seen that coal consumption has followed the trend of general business activity fairly closely since 1928, though the divergence between the two indices has tended to increase during the past two years. The fact that the decline of coal consumption between 1929 and 1932 and the increase since then was smaller than the contraction and expansion of general business activity during this period may be ascribed to the relatively inelastic demand for house coal. In contrast to the decline of coal consumption, demand for electric power by industry has doubled in the past ten years. Thus, the depression only retarded, but did not arrest, the rapid growth of electrification in this country.

The Rise in Wheat Prices.—At this time of the year wheat markets are notoriously unstable and easily swayed by crop reports or rumours which subsequently prove exaggerated. The rise in wheat prices during the past four weeks has been very substantial. Liverpool wheat futures are about 20 per cent. dearer than they were in the middle of August. Although complete details of this year's world crop are not yet available, it was fairly evident a month ago that the requirements of importing countries during the season ending in July, 1936, would be about the same as in the 1934-35 season. The main cause of the sharp rise of wheat prices in recent weeks is the deterioration of crop prospects in North and South America and in Australia. The reduction in the supplies of wheat in exporting countries justified a moderate rise in prices. But the improvement was to some extent anticipated by the Canadian Prime Minister, Mr Bennett, who announced on September 6th that the Government had fixed the minimum price for the 1935 crop at 8½ cents per bushel for No. 1 Northern wheat, Fort William basis. As Canada is likely to be the principal exporting country this season, Mr Bennett's decision exerted a strong pull on wheat prices in other coun-

Rates will be quoted on application.

tries. The improvement has been well maintained during the past few days, and on Wednesday the quotation for October futures at Liverpool actually exceeded 6s. per cental. It now appears that the yield of Canada's crop will be little better than last year. The first official crop estimate, published on September 11th, indicates a crop of about 290.5 million bushels, as compared with 275.8 million bushels harvested last year. The official estimate of the United States crop, issued on September 10th, is lower than the August forecast. The total wheat crop in that country is now estimated at 595 million bushels, against a yield of 608 million bushels expected a month ago. Moreover, and this is of considerable importance, a substantial proportion of North American wheat will be unfit for milling. If current estimates of world supplies and demand for wheat are reasonably accurate, free-market prices during the present season may show an improvement on the average price in 1934-35.

* * *

Tin Quota Decision.—The International Tin Committee decided at their meeting in Brussels on Wednesday to recommend to the Governments of British Malaya, Nigeria, the Dutch East Indies and Bolivia that the production quotas for the last quarter of the current year should remain unchanged at 65 per cent. of the 1929 standard tonnages, to which figure they had been raised on August 9th. This welcome decision certainly suggests that the Tin Committee have decided to adopt a more reasonable policy. Nor need they regret this step, for the immediate reaction on the market has been distinctly favourable. The price of "spot" tin was actually marked up from £219 2s. 6d. per ton on Wednesday to £221 17s. 6d. on Thursday morning, while the quotation for three months' tin advanced from £209 2s. 6d. per ton to £210 10s. per ton. The difference between the quotations for "spot" and three months' tin is thus still substantial, but the divergence may become smaller when increased supplies come on to the market. It is stated in the official *communiqué*, issued by the Tin Committee, that proposals for the extension of the restriction scheme beyond 1936 had been considered and that a final decision need not be taken prior to the date of expiry of the scheme at the end of next year. It is to be hoped that the concession to tin consumers in the shape of increased supplies from the original restriction countries will be continued at the next meeting of the Committee on December 6th; for "starvation" of the tin market benefits no one, least of all the actual producers themselves.

* * *

Sterling and International Prices.—British and American wholesale commodity prices continued their upward trend during the past fortnight. As will be seen from a comparison of the indices of primary products with the more comprehensive indices, the upward movement has been most marked in raw materials and crude foodstuffs. It is interesting to note that the renewed upward trend of wholesale prices in France is largely due to an increase in quotations for domestic products. The prices of commodities included in the index which France has to import have

scarcely changed since the beginning of August. As is only to be expected, commodity prices in Italy continue to rise.

Details of the group indices comprising the complete *Economist* index number on the date of our suspension of the gold standard and for recent dates are given below:—

"ECONOMIST" INDEX

(1927 = 100)

	Sept. 18, 1931	Aug. 14, 1935	Aug. 28, 1935	Sept 11, 1935
Cereals and meat	64.5	67.0	69.0	69.6
Other foods	62.2	58.3	58.0	59.0
Textiles	43.7	55.6	56.4	57.3
Minerals	67.4	79.8	81.0	80.7
Miscellaneous	65.8	74.7	74.4	74.9
Complete index...	60.4	67.3	67.9	68.4
1913 = 100	83.1	92.6	93.4	94.2
1924 = 100	52.2	58.2	58.6	59.1

With the exception of the index for minerals, comprising coal, iron and steel materials and non-ferrous metals, all the group indices showed a rise during the past fortnight. The sharp rise in wheat prices, discussed on page 511, is reflected in the index for cereals and meat. Butter, cheese

and meat are responsible for the advance of the index for "Other foods," and wool, hemp and Egyptian cotton for the rise in the "Textiles" index.

A Further Rise in Employment.—Employment in this country is forging ahead in a most encouraging way. In Great Britain, as revealed in the official returns, it scored a further improvement during August. There were 10,424,000 insured persons (aged 16 to 64) in employment on August 26th, this total being 43,000 higher on the month and 244,000 more than at the corresponding date last year. The number of registered unemployed fell from 1,972,941 in July to 1,947,964 in August, this contraction of 24,977 being of approximately normal seasonal dimensions. An increase of 32,000 in the number wholly unemployed was more than counterbalanced by a substantial reduction in those "temporarily stopped." Total unemployment shows a drop of 188,614 over the past year. How the improvement affected some of our more important industries is shown in the table below:—

INSURED PERSONS UNEMPLOYED IN GREAT BRITAIN

	Aug. 20, 1934	July 22, 1935	Aug. 26, 1935
Coal mining	307,433	293,839	256,489
Iron and steel manufacture	48,889	40,191	37,356
General engineering	74,789	64,440	61,668
Shipbuilding and repairing	69,994	62,962	61,500
Motor vehicles, cycles and aircraft	30,817	26,158	24,725
Cotton	121,421	99,824	98,904
Woolen and worsted	53,881	30,824	29,229
Jute	9,746	17,485	8,186
Tailoring	34,321	26,880	33,801
Boot and shoe manufacture	35,352	21,614	21,333
Building	142,077	133,805	130,994
Dock and harbour service	47,743	47,421	49,503
Distributive trades	200,037	193,641	199,765
All persons registered	2,136,578	1,972,941	1,947,964

Recovery still continues in coal mining, engineering, iron and steel manufacture, building and in the construction of motor vehicles, cycles and aircraft. In the textiles group employment in the cotton trade shows a marked improvement over last year, although not to the same extent as in the woollen and worsted trades. In both cases unemployment again declined during August. There was also a substantial reduction last month in the number of "temporarily stopped" in the jute industry, due to the termination of local holidays. It may also be pointed out that there was a heavy increase in juvenile unemployment—which might have been avoided if the school-leaving age had been raised. An encouraging feature of the returns is the drop in unemployment in the distressed areas of the North-East and Scotland. A smaller improvement was recorded in the Midlands and in the London area. On the other hand, unemployment increased substantially in the North-Western area and, to a lesser extent, in Southern England.

OVERSEAS CORRESPONDENCE

From our Correspondents in each centre

UNITED STATES

BUSINESS RECOVERY MAINTAINED

INSTEAD of the usual decline in industrial activity in July, the rate was so well sustained as to lift the seasonally adjusted index of manufactures. The following table shows the data:—

FEDERAL RESERVE BANK'S BUSINESS INDICES

(1923-25=100. Adjusted for seasonal)

	July, 1934	June, 1935	July, 1935
Industrial production (total)	76	86	86
Manufactures	74	84	84
Minerals	85	98	36
Construction contracts (total)	27	30	25
Residential	12	24	46
All others	39	36	80.4
Factory employment	79.4	79.9	65.3
Factory payrolls	60.5	66.4	58
Freight car loadings	61	63	80
Department store sales	73	80	

EMPLOYMENT AND PAYROLLS

(Unadjusted)

	May, 1935	June, 1935	July, 1935
Factory employment	81.1	79.6	79.5
Factory payrolls	68.5	66.4	65.3

The figures of the National Industrial Conference Board for the same months show a minute decline in hourly rates

between May and July (from \$.599 to \$.598), an equally minute increase in weekly hours worked (from 36.3 to 36.4), with the average weekly pay approximately unchanged (\$21.76—\$21.75). Of the 25 industries tabulated by the National Industrial Conference Board, only two reported average hours of work per week in excess of 40 in July, and none over 41. Although the standard N.R.A. week was 40 hours, the data show that only in exceptional industries was this figure even approached. While there have certainly been numerous scattered adjustments in hours and wages in concerns not covered or partially covered by the data, this fact must be set against the coincident fact that the period covered from May through June and July is ordinarily one of seasonal recession which has been absent this year. On the other hand, the testing period has not been long enough to prove anything, and it is quite possible that these microscopic changes indicate a trend. At all events, organised labour is increasingly emphasising the 30-hour week as the panacea for unemployment.

RIISING COMMODITY PRICES

The rising cost of food is becoming increasingly onerous upon the urban population, and in some instances is leading to public protest. The National Industrial Conference Board's cost of living index shows a rise of about 5 per cent. in the past year, the advance in food and rent of about 10 per cent. being partly offset by a fall in clothing and fuel. The Bureau of Labour Statistics index of retail food prices for mid-August was 122.3, compared with 111.8 for mid-August, 1934, and 107.4 in the middle of April, 1934. The following table shows the movement of the groups in that interval; April 10, 1934, is used as the base, as it immediately preceded the culmination of the Great Drought:—

RETAIL FOOD PRICES

	1913=100	April 10, 1934	Aug. 19, 1934	Aug. 13, 1935
All foods	107.4	111.8	122.3	122.3
Cereals	144.7	149.6	150.6	150.6
Meats	110.5	121.1	161.3	161.3
Dairy products	99.7	103.4	104.6	104.6
Eggs	69.5	87.8	104.3	104.3
Fruits and vegetables	130.3	116.1	106.2	106.2

The rise has principally been in the price of meat and eggs; and the price of meat has become distinctly high compared with that of other foods. The retail price of cereals was little affected by the drought, which made the previous official controls somewhat more effective. The drought was a much greater influence on wholesale prices; and the following table shows its general course. The drought was recognised late in April, 1934; its effect on prices seems to have reached its maximum about the end of the year; and since that time the movement has been irregular, persisting longest in livestock and meat prices.

PRICE CHANGES IN REPRESENTATIVE COMMODITIES

	(Cents per unit)	April 15, 1933	April 16, 1934	Jan. 2, 1935	Aug. 31, 1935
Wheat	63.00	80.50	105.50	104.50	104.50
Maize	33.50	43.00	91.75	75.00	75.00
Oats	21.75	27.88	56.88	28.75	28.75
Rye	46.00	52.75	77.50	46.25	46.25
Cattle	5.05	6.30	8.15	10.80	10.80
Hides	6.70	11.00	9.00	10.50	10.50
Hogs	3.75	3.90	7.35	10.75	10.75
Lard	4.48	5.33	12.75	15.88	15.88
Wool	40.285	79.18	63.93	65.07	65.07
Cotton	6.70	11.80	12.85	10.65	10.65
Cottonseed oil	3.90	5.25	10.80	10.17	10.17
Flaxseed	118.25	172.00	197.75	152.50	152.50
Butter	20.00	23.50	32.75	25.75	25.75
Eggs	13.25	18.00	29.00	26.50	26.50
Sugar	1.10	1.42	1.75	2.55	2.55
Scrap steel	10.25	14.50	13.25	13.25	13.25
Copper	5.15	8.50	9.00	8.50	8.50
Lead	3.25	4.25	3.70	4.35	4.35
Zinc	3.10	4.40	3.75	4.60	4.60
Silver	28.75	45.50	55.00	65.38	65.38
Tin	25.70	55.10	50.75	49.12	49.12
Silk	124.00	132.00	146.00	190.00	190.00
Rubber	3.55	11.94	13.74	11.79	11.79
Copper	7.50	10.13	9.62	6.38	6.38
Cocoa	3.40	5.25	5.25	4.90	4.90

In the metals and the imported commodities, and even the distinctively industrial agricultural commodities, cotton

and wool (but not silk, or, of course, silver) there has been little rise since April, 1934; perhaps even a down trend. The immediate influence of the Great Drought on agricultural prices culminated about the turn of the year, and with the new crops many prices weakened badly. In livestock and meat prices the shortage is still effective.

But the basic fact is that the economy of the United States has, not only since the spring of 1933, but since the summer of 1934, been under the influence of forces which have powerfully moved commodity prices. In part, these have been monetary; more, they have been the result of direct measures of price control; and, still more, they have reflected the consequences of the drought.

A 2½ PER CENT. GOVERNMENT CONVERSION

The Secretary of the Treasury has announced that the last block of the Fourth 4½ per cent. Liberty Loan will be exchanged on October 15 for 10-12 year bonds bearing a 2½ per cent. coupon. The sum involved is \$1,250 millions, out of a maximum total of about \$8,000 millions, and the terms offered are more favourable to the Treasury than any of the preceding offers; the first block was converted on a 3½ per cent. basis. At the same time the Treasury is asking for \$500 millions of new money in 1½ per cent. 4½ year notes. This latter announcement seems to mark the ending of the auction issues (except of Treasury bills) which had aroused the active resentment of the financial community and had worked none too well for the Treasury—the last offer having been only partially subscribed.

The United States is coming to have an extremely complex debt structure, owing to the popularity of the issue of notes of intermediate term. For example, the distribution of the public debt has developed as follows:—

PUBLIC DEBT OF UNITED STATES

(\$'000,000)

	Total	Bonds	Notes	Certificates	Bills	Non-interest bearing
June, 1932...	19,487	14,250	1,465	2,831	616	326
June, 1933...	22,539	14,223	4,780	2,200	954	381
June, 1934...	27,053	16,510	6,932	1,635	1,404	573
July, 1935...	29,210	14,576	11,065	254	2,028	1,196

The certificate of indebtedness, once the standard short-term issue, has disappeared except for special funds, while the Treasury bills, originally three-month issues, have been lengthened out in instances to a year. For its new money the Treasury has been relying more and more on the note, of which about \$2,000 millions are now scheduled to mature each year between 1936 and 1940, in which period there are no bond maturities; the latter begin in 1941, with about \$1,000 millions a year to 1945. The general scheme of the debt structure at present consists, therefore, of about \$2,000 millions of Treasury bills maturing within any given year; and an aggregate maturity of various note issues amounting to \$2,000 millions a year, followed by the long-term debt, none of which matures before 1941, and comparatively little before 1945. This structure is supported by a set of money rates extremely advantageous to the Treasury, varying from the nominal on the bills to about 3 per cent. on the longest issues, while the increased debt charge (carried by the mounting deficit) has been almost completely offset by the combination of refundings and the very low rates prevailing on the short issues. It will be noted, however, that the whole system of deficit financing has come to depend upon the availability of bank credit created to that end; and its success, or even its maintenance, depends upon the continued supply.

FRANCE

FARMERS AND PRICES

In a speech on Sunday, M. Cathala, Minister for Agriculture, emphasised the recovery in the price of wheat, which has risen from 60 to 86 francs. He declared that this was due partly to the small crop, but also partly to the measures adopted by the Government with the aid of the Bank of France to raise prices. He added that the Cabinet was aware of the risk that higher prices might provoke excessive sowing which would resuscitate the danger of surplus crops. That, he said, was why the Government had decided to create, with the aid of farmer delegates, a central organisation of the agricultural industry. After insisting that the rise in wheat prices would have been impossible without the budgetary decree laws which provoked a return of confidence, M. Cathala announced that the Bank of France had agreed to accord the wine growers the same credit facilities which the farmers were already enjoying. This may be an event of great importance at the moment of the grape harvest and on the eve of the elections of senatorial delegates.

The August figures of the "Statistique Générale de la France," which have just been published, show that wholesale prices are rising while the cost of living continues to drop. The general wholesale price index was 343 at the end of August, compared with 334 in July; while the "material products" index had risen from 353 to 366. The "alimentary products" index is much higher at 339, against 320 (vegetables: 294 against 267) whilst the "industrial products" index is nearly unchanged. The quarterly cost of living in Paris has fallen from 526 in the first quarter of 1934, to 494 in the first quarter of 1935, and 490 in the second quarter of 1935.

The Government, politicians, press and public opinion are baffled by the problem of prices, i.e. the maladjustment between wholesale prices and the cost of living. Many examples are noted daily. Thus, an ox worth 1,600 francs has its price increased by 500 francs of transport, duties, slaughter rates, etc., before it is delivered to the butcher, who in his turn adds several hundred francs. The price which the producer of a pig receives never exceeds 50 or 60 per cent. of the price finally paid by the consumer. The margin between the price of wheat and bread, which was 50 per cent. of the cereal value in 1914, is now 120 per cent. This margin between wholesale prices and the various fixed costs which enter into retail prices is the principal cause of the present economic crisis. Consequently, all economists agree in emphasising the absolute necessity of a reduction in interest charges.

The Government's programme depends on cheap long-term money and a wholesale conversion of public and private interest rates. Prices of rentes are at the moment rising:—

	Highest	Lowest	1935 July 4th	Sept. 10th
3 per cent.....	84.97½	75.05	76.45	80.10
5 per cent. 1920.....	120	105	104.80	110.65
4 per cent. 1918.....	89.75	77.60	77.15	83.70
4½ per cent. "A" 1932	95.85	82.65	82.85	90.25
Treasury bonds 5 per cent. 1934.....	1,035	930	939	972
Treasury bonds 4½ per cent. 1934.....	1,025	928	937	971

All these rentes had their interest reduced by 10 per cent. in July.

The rise is slow but regular. It is being assisted by purchases by the public saving banks and by a certain return of confidence, principally due to the fall in rates on day to day loans (1 per cent. in the last 8 days), by an increase in deposits in the public saving banks, and by a cessation in the rise in unemployment (which is now almost stationary on a level 15 per cent. higher than a year ago). Confidence is also fostered by the firm tendency on Wall Street to which Paris is very attentive; but the Italo-Abyssinian conflict, on the other hand, is disturbing. The recent firmness of the market was also helped by the increase of 150 million francs of gold in the last statement of the Bank of France (a small fraction, however, of the 10,000 millions which left France

during the June monetary crisis). It is also being suggested that the rise in rentes might be accelerated by a new lowering of the bank rate.

HOPES OF EXCHANGE STABILISATION

So acute is the internal economic problem that the French public were not very excited by the recent rumours about eventual Anglo-American negotiations for the fixing of new gold parities. The visit to Portugal of Mr Morgenthau and the recent speech of Sir Josiah Stamp at Salzburg are considered as halts on a long voyage. Economic writers here believe that the idea of a return to the gold standard is making progress in certain quarters in London. But they still insist that the fixing of new parities as foreshadowed by Sir Josiah would not affect the currencies now on the gold standard. It is still believed here that M. Laval's deflationary experiments may provoke disheartening and so stimulate an internal recovery here, similar to that in the United States and Great Britain; and this, it is argued, might pave the way for a revision of the trade relations between the three great powers. Such a procedure, it is added, would conform to the conditions which have always been laid down by British official statements as necessary preliminaries to a fixing of gold parities.

PARIS, September 12.

GERMANY

WORKERS' DISCONTENT WITH FOOD SHORTAGE

THE cost-of-living index number for August was 124.5, as against 124.3 for July. As the index number for January, 1933, was 117.4, a rise during the Nazi administration of only 6 per cent. is officially admitted. A maximum producers' price for eggs was decreed last week. The existing minimum prices were slightly reduced and traders' margins were limited. In Berlin shops last week certain food products, some native, some foreign, could not be bought. Among industrial workers there is continued serious discontent with the high prices and the scarcity of food. The chief of the German Labour Front, Dr. Ley, speaking recently to Neunkirchen miners, affirmed that honour and not wages was the chief interest of German workmen.

The main issue with the workman (he said) is not his ridiculous wage-pennies but the dignity of his position; and ultimately wage-questions settle themselves if the worker respects himself. In the last resort, the mine worker cannot be paid with money at all; what he receives is only a petty remuneration for his unremitting labour. It is therefore all the more ridiculous for people to begin to haggle about such little things.

Such treatment of a social question that every day becomes more serious is not to the taste of the working-class population. The worker sees before his eyes the increasing wealth and the ostentation of numerous party officials and magnates, and the passing into their hands by unknown means of valuable properties formerly owned by private citizens.

The number of unemployed at the end of August is returned at 1,706,000, which is 48,000 fewer than at the end of July. In August, 1934, the number of unemployed declined by 28,000 to 2,398,000. Last month building and most of the heavy industries improved, but the number of short-time workers in the textiles trade increased. The footwear trade, which was long depressed, seems to be reviving. The Leipzig Autumn Fair, in spite of a large number of exhibitors and visitors, developed very unsatisfactorily and according to some accounts catastrophically. The relatively favourable newspaper reports are alleged by traders and experts to have been untrue. The cause of this unfavourable development seems to have been the stagnation in the consumption goods trades. A report to the members' assembly at the Ruhr Coal Syndicate states that, in consequence of marketing difficulties, the number of passed shifts increased from 605,000 in June to 629,000 in August. The report states that competition in all the syndicate's markets is undiminished, being sharpest of all

in South Germany. Saar business has been injured by the import of English coal; and from the coast far into the interior, and also in the Berlin market, offers of English coal have increased. Belgian coal goes to South Germany, Dutch coke is competing in South Germany and on the coast, and Upper Silesian coal is competing in Central and South Germany.

The home steel market continues to be fairly active, but it is threatened with loss of business through the reduction to 15,000 tons a month of railway corporation orders for permanent-way materials. Till lately these orders were 26,000 tons a month and in 1934 were 40,000 tons. The corporation pleads the need for economy. Both home and foreign orders for machinery are increasing. In January-July, however, exports of machines were only 116,824 tons, against 130,598 tons in the same months of 1934. According to newspaper figures 29 per cent. of the combined German-British-American machinery exports in the first half of this year was German, whereas Germany's share before the depreciation of sterling was 55 per cent. The British share increased in the same period from 21 to 35 per cent.

THE REICHSBANK'S POSITION

The short-term credit market last week and early this week was under the influence of the new Reich loans. The market was tighter. The interest rate on day loans was 3½ to 3¾ per cent., and the demand for the Reich short-term issues and for Gold Discount Bank promissory notes was small. As in the preceding week maturing series of the latter were not prolonged. Although no official figures have been issued, the marketing of the Rm. 500 millions 4½ per cent. Treasury bonds (effective yield 4.68 per cent.) is described as a success. According to newspaper reports between two-thirds and three-quarters of the total issue had been placed by September 10th. In order to avoid disturbance of the money market the actual subscriptions to this loan have been spread over three months, the first instalment of 30 per cent. not being payable until October 3rd. The Reichsbank's return for September 7th nevertheless indicates that substantial payments by members of the bank syndicate have already taken place, probably also preliminary payments by the Girozentrale on account of the second (also Rm. 500 millions) long-term Savings Bank loan. On the other hand, an increase in the Reichsbank's holding of Reich Treasury bills, and a sharp decline in deposits, show that the commercial banks have been realising cash for meeting the impending demand for money by private subscribers to the Treasury bonds issue.

The preliminary payments on account of the loans substantially reduced the Reichsbank's holding of "work-creation" bills. The bills portfolio declined by the large sum of Rm. 254 millions, and the total sum involved in bills, advances and securities dropped by Rm. 256 millions, which is 49.3 per cent. of the August month-end increase, as against a decline of 30.5 per cent. in the corresponding week of 1934. This change in the Reichsbank's position seems to conflict with the tension in the money-market witnessed since the end of August. The usual market fluidity after the turn of the month was not observed. The Reichsbank's position has, nevertheless, greatly improved. In reality the new borrowing measures, by eliminating a part of the work-creation bills, have attained their aim of consolidating some of the floating debt—in so far as the replacement of floating debt by middle term Treasury bonds can be described as consolidation. In a new official report it is claimed that about Rm. 1,750 millions of the floating debt has been consolidated in the last year. This estimate includes the long-term loan (supposed to have been nominally Rm. 500 millions) secretly imposed on the insurance companies. But the official report admits strangely that the sum obtained from the Insurance Loan is not known.

The authorities' success in expanding credit for work-creation and rearmament, without admitting the process to any considerable extent in the Reichsbank's balance-sheets, is a considerable technical achievement. The weekly returns for September 7, 1935 and 1934 are very much alike. The gold reserve rose in the year from Rm. 75 to Rm. 95 millions; the exchange reserve was nearly unchanged; the holding of securities valid as currency-cover (open market purchases) fell from Rm. 416 to Rm. 341

TRADING ABROAD

The existence of restrictions in a given country may temporarily prohibit dealings in forward exchange, but up-to-date information on this and on all points bearing on Forward Exchange generally may be obtained through any branch of the Westminster Bank. For any who may be unfamiliar with the facility, a very brief outline entitled *Forward Exchange* is always available at its counters

WESTMINSTER BANK LIMITED

HEAD OFFICE: 41 LOTHBURY, LONDON, E.C.2

millions; bills increased from Rm. 3,435 to Rm. 3,746 millions; deposits from Rm. 668 to Rm. 696 millions; and circulation rose from Rm. 3,709 to Rm. 3,881 millions. The circulation of Rentenbank notes increased from Rm. 306 to Rm. 384 millions, and the total circulation, including coins, from Rm. 5,629 to Rm. 5,951 millions.

BERLIN, September, 11.

ITALY

THE NEW FINANCIAL DECREES

THE reaction of the markets to the new emergency financial decrees issued at Bolzano on August 28th was immediate and considerable; but the lost ground is already being gradually recovered. The market was naturally mainly interested in the decree which limits variable dividends distributed by commercial industrial companies and firms. No dividend higher than 6 per cent. of the paid capital or the average dividend paid in the last three years may be distributed in the next three years. The excess profits must be invested in State securities, which remain the property of the company or firm, but are not disposable for the next three years. It is not clear if the limitation of dividends concerns only joint stock companies, or if it will be extended to private companies with unlimited liability which do not publish and are not obliged to compile yearly balance sheets.

The reinvestment problem will perhaps be the most thorny. During the war, when a similar limitation of dividend was enacted, companies were free to invest non-distributable profits in the enlargement of their plants or operations. What will happen now if a company has to invest in new plant? Profits not being realisable, it will be obliged to resort to the market or to the banks, and to compete with the State for the supply of new savings. Probably application will be made to the Treasury for authorisation to invest excess profits. As the establishment of new plant or the extensions of old must already in most cases be authorised by the Government, the present dividend limitation will have the effect of extending the authorisation system to all companies or firms.

Not less significant is the imposition of a tax of 10 per cent. on all dividends, interest coupons, bonuses and benefits accruing to bearer shareholders and to debenture holders or bondholders. Only State securities are exempt from the tax. This tax reproduces the main features of the 15 per cent. war-time tax, which was abolished at the beginning of the present regime. It is not a compulsory tax, as the holder, by registering the security, can avoid the liability to pay it. Its aim cannot therefore be considered mainly and directly fiscal. But it will induce a number of holders to register; thus reducing the possibility

of evading the personal income tax (supertax, as distinct from schedule income tax, for which the problem of evasion does not exist). Possibly the most important result, however, of the tax, coupled with the limitation of dividends, will be to make variable-dividend and private fixed-interest securities more similar to State securities. Savers will not discriminate between State securities, which have a fixed capital value, and fixed-interest and variable-dividend securities, the income from which many people hoped to see rising in consequence of present circumstances.

Markets proved immediately sensitive to the changed outlook for security yields. The following table shows the nominal capital, the most recent dividend and the market price of several representative variable-dividend securities:

	Denomi- nation of div. share.	Last div.	Price quoted on (Lire)		
			Aug. 28	Aug. 29	Sept. 3
Bank of Italy	600	60	1,420	1,420	1,420
Olcese cotton mill ..	200	12	326	240	274
Snia Viscosa	230	16	429	335	353
Montecatini (fertilisers, etc.)	100	8	194	160	175
Fiat (motor-car)	200	10	445	342	360
Edison (electricity) ..	600	48	797	721	764
Eridania (sugar)	250	20	412	380	398
Italgas	10	0.70	13.75	12.50	13.30
Risanamento (real es- tate)	450	45	975	905	940
Pirelli (rubber)	500	47.50	1,226	1,030	1,105

The Bank of Italy's shares did not move, because they are registered and therefore not liable to the 10 per cent. tax, and also because dividends were already limited to 60 lire.

THE MOBILISATION OF FOREIGN SECURITIES

The Stock Exchange was much less interested in the third emergency decree, which made it compulsory for Italian citizens living in Italy to cede against cash all credits held in foreign countries and to sell against nine-year Treasury 5 per cent. bonds all foreign securities (at the price current on August 28, 1935) and Italian securities issued in foreign countries (at the price current on December 8, 1934). On December 8th it was declared compulsory to make a statement of these credits and securities; and a part of them has already been sold by agreement to the Treasury. The amount of the remaining part, which the Treasury can now take over, is not known. Two authoritative statements can be quoted: (1) Signor Azzolini, Governor of the Bank of Italy, in his report of March 30, estimated at about 6,000 million lire the investments made by Italians in foreign countries from 1928 to May, 1934. Investments previous to 1928 ought to be added; and investments in unsaleable securities, in frozen credits, in lands, real estate and industrial ventures must be deducted; (2) Signor Angeloni, Commercial Counsellor to the Italian Embassy in Washington, estimates at 388.5 million dollars the total amount of Italian securities issued in the United States. Reimbursements reduced the total to 282 million dollars, of which about 50 per cent. are held by foreigners. The Italian Treasury, therefore, can still purchase the rest, viz. about 140 million dollars, which are the property of Italian citizens living in Italy. A part of this has already been purchased since December 8, 1934.

The Italian economic system is being more and more controlled by State Agencies. The recent creation of a Government monopoly for coal, tin, copper and nickel was designed to facilitate purchases and payments through the State Railway Agency, and the limitation, by order of the Superintendent of foreign exchange, of private compensations between imports and exports to amounts included in the general import quotas, excludes the possibility of increasing imports against old exports. Before December 31, 1937, all motor vehicles used for public or private passenger transport must be adapted from oil or nafta to gasogenous or other substitute systems. Industrial *autarky* is expected to reduce the deficit in the balance of foreign payments. So far, however, the task is proving extremely arduous. In the first seven months of the year, imports decreased from 4,572.5 in 1934 to 4,412.3 million lire in 1935; but exports decreased from 3,023.5 to 2,816.6 millions, leaving an import surplus of 1,595.7 this year against 1,549 millions in 1934.

TURIN, September 8.

BELGIUM

SUCCESS OF DEVALUATION

It is now possible to assess more clearly the economic results of the devaluation in March. Broadly speaking, the results have been exactly what the advocates of devaluation expected. Unemployment has fallen by about 37 per cent. since the beginning of the year. This is partly seasonal; but the greater part of it is due to a fundamental recovery. The number of unemployed in Belgium in 1935 has been as follows:—

At the end of the month—	Totally Unemployed	Partially Unemployed
January	223,300	158,400
February	220,800	157,200
March	206,500	148,400
April	181,000	127,400
May	159,500	114,500
June	146,500	104,000

Since the end of June unemployment has been stationary; and some seasonal rise is likely as autumn approaches.

The railway traffic figures show clearly that a general economic improvement has occurred. At the beginning of the year railway traffic was 7 per cent. less than in the same period of 1934. In April there was an increase of 11 per cent., in May of 15 per cent., in June of 6 per cent., and in July of 2 per cent. The number of cars loaded in August again showed an increase, and was 8 per cent. greater than in August, 1934, and 15 per cent. greater than the average for the first quarter of the year. In the first quarter the railways showed a loss of 100 million francs, and in the second quarter of only 13 millions. In the third quarter an appreciable net profit will probably be recorded. This will, of course, be in part due to exceptional receipts attributable to the Brussels Exhibition.

Opponents of the devaluation have now been driven to ascribe the nation's economic recovery, which they can no longer deny, to this Exhibition. It is true that business has been stimulated by the Exhibition. But employment must have been improved *before* its opening. At one time 15,000 to 20,000 workmen were engaged on the preparation of the Exhibition, and this aid to employment vanished in the Spring when the Exhibition was opened—and the devaluation was achieved. The Exhibition is not employing any more men now than a year ago.

Belgium's shipping trade has advanced steadily. Exporters have followed the advice of the Government not to reduce their export prices; and their restraint has astonished everyone in Belgium. The volume of the export trade has consequently only increased a little. And the increase in export values has not been as great as the "coefficient of devaluation." In July exports were 30 per cent. greater in value than in the same month of last year, while the "devaluation coefficient" is 39 per cent.

GREAT IMPROVEMENT IN BUDGETARY SITUATION

The Budgetary situation which was critical in the first quarter of 1935, is now so changed that Budgetary equilibrium has in fact been achieved. The total deficit has been officially estimated at 450 million francs for the fiscal year 1935. But this deficit is due almost entirely to the first quarter of the year; ever since the devaluation revenue has balanced expenditure or even shown a small surplus.

The following table records the astonishing improvement in the receipts from certain taxes which is, of course, due to the business recovery following devaluation. The first figures relate to the registration tax imposed on sales of real estate, and the second to stamp dues inclusive of the heavy sales tax of 2½ per cent. on all transactions and of the luxury tax.

RECEIPTS FROM INDIRECT TAXES

(compared with receipts in 1934)

	Registration	Stamp Dues
	%	%
First quarter	-13	-11
April (after devaluation) ..	+58	+19.6
May	+42	+22.9
June	+48	+9.2
July	+46	+15.8

The devaluation has thus enormously improved the general situation. The movement of prices is particularly satisfactory. The wholesale price index is now stabilised at a point 19 per cent. above the devaluation level, which increase is about half the "devaluation coefficient." So far, retail prices have risen by only 6½ per cent. The advocates of devaluation estimated that the total increase would ultimately be 10 to 15 per cent.

LOUVAIN, September 1.

GREECE

RESTORATION OF THE MONARCHY

A RESTORATION of the monarchy may be considered as certain. During his brief stay at Bled, in Yugoslavia, the Greek Premier, M. Tsaldaris, is reported to have discussed with Prince Nicholas of Greece the question of the restoration and the internal policies to be followed after the return of the King. In usually well-informed circles it is believed that a digression from orthodox Parliamentary rules through the creation of a so-called "dynamic" State is envisaged and, indeed, may become inevitable, considering that a large percentage of the population is Republican. On his return from Bavaria, M. Tsaldaris, the Premier, is expected to pronounce himself, as his ally General Kondylis has already done, in favour of the restoration, but at the same time to declare that his Government will remain, as already promised, neutral during the forthcoming plebiscite. Thus the two parties forming the Government would commit themselves to work for the Royalist regime. To many people this professed neutrality seems, in the circumstances, inconceivable.

A DECLINE IN ECONOMIC ACTIVITY

The index of economic activity published by the Bank of Greece shows a sharp fall in March, from 106.4 to 88.3. A year ago it showed a rise from 85.8 to 94.7. This decline is largely the result of the revolt which broke out at the beginning of March last. The index for subsequent months has not yet been established, but the Superior Economic Council reports that during the first half-year of 1935 some slackening of general economic activity occurred as compared with the corresponding period of last year. Foreign trade, on the other hand, expanded during the first six months of this year as compared with a year ago. But the passive trade balance has also increased, while emigrants' remittances have declined at the same time.

In the circumstances, the cover in gold and foreign exchange of the Bank of Greece has been reduced by some 357 million drachmas, and its proportion to the circulation has fallen from 78.1 per cent. to 67.44 per cent. Meanwhile the index number for wholesale prices and that for the cost of living have continued their upward movement.

The public revenue amounted in the first six months of this year to Drs. 4,872 millions, compared with Drs. 4,365 millions in the corresponding period of last year, or an increase of Drs. 507 millions, due chiefly to larger receipts from import duties, the result of more imports. Expenditure during April and May—for which months only have returns been published—amounted to Drs. 1,090 millions, against Drs. 772 millions for the same months of 1934.

A committee has recently been set up, named the "Superior Economic Defence," under the chairmanship of the Prime Minister and with the Ministers of Foreign Affairs, Finance, Agriculture and National Economy, and the Governor of the Bank of Greece, as members. The purpose of this body is to co-ordinate the activities of the State on questions concerning the national currency, credit, savings, and agricultural, industrial and commercial policy. At the most recent meeting of the Committee the foreign exchange position was thoroughly investigated, in view of the steady decline of the Bank's reserves. The Minister of Finance has stated that the fall in the reserves is due to delay on the part of exporters of currants in surrendering foreign exchange.

ATHENS, August 20.

FINLAND

BUDGET REVENUES INCREASING

THE Government has completed its Budget estimates for 1936, and they will be submitted to the Diet this month. The principal items, compared with the corresponding figures in the Budget for 1935 and the finance accounts for 1934, are as follows:—

	1934	1935	1936
	Mill. Mks.	Mill. mks.	Mill. mks.
Revenue:			
Current revenue	3,366.9	3,173.9	3,307.0
Loans issued	503.6	...	300.0
Other capital revenue	265.2	181.9	193.0
Total	4,135.7	3,355.8	3,800.0
Expenditure:			
Current expenditure	2,599.2	2,677.0	2,730.5
Redemption of loans	394.2	93.2	364.9
Other capital expenditure	1,107.3	584.7	703.9
Total	4,100.7	3,354.9	3,799.3
Surplus	35.0	0.9	0.7

Expenditure on defence and education has been increased. The increase in the current revenue is principally due to expectations of a greater yield from existing taxes on account of the improvement in economic conditions.

Foreign trade was very lively in July. Imports increased heavily, and exports were maintained at the same level as in 1934. The figures are as follows:—

	Imports		Exports	
	Volume	Mill. mks.	Volume	Mill. mks.
1932	100	300.5	100	498.6
1933	115	350.1	141	692.3
1934	158	418.4	135	761.0
1935	171	490.9	137	712.5

THE CHARTERED BANK OF INDIA, AUSTRALIA AND CHINA

Incorporated by Royal Charter 1853

CAPITAL - £3,000,000
RESERVE FUND - £3,000,000

Drafts issued on the undermentioned Agencies and Branches, Bills of Exchange bought and received for collection, Letters of Credit issued, and every description of Banking business undertaken.

The Bank also undertakes Trusteeships and Executorships.

BRANCHES AT

Alor Star (Malay States), Amritsar, Bangkok, Batavia, Bombay, Calcutta, Canton, Cawnpore, Cebu, Colombo, Delhi, Haiphong, Hamburg, Hankow, Harbin, Hongkong, Iloilo, Ipoh, Karachi, Klang, Kobe, Kuala Lumpur, Kuching, Madras, Manila, Medan, New York, Peiping (Peking), Penang, Rangoon, Saigon, Semarang, Seremban, Shanghai, Singapore, Sitiawan (F.M.S.), Sourabaya, Taiping (F.M.S.), Tientsin, Tongkah (Bhuket), Tsingtao, Yokohama, Zamboanga (Philippine Islands).

HEAD OFFICE: 38 BISHOPSGATE, LONDON, E.C.2

The considerable increase in imports this year is due to a great extent to imports of raw materials, while the comparatively poor export figures are a result of lower prices.

FURTHER FALL IN UNEMPLOYMENT

Industrial production, which expanded markedly in 1933 and 1934, has been less active this year. The index of the volume of industrial production, indeed, was 139 for the first half-year, compared with 130 last year and only 97 in 1931; but in June it dropped to 129, as against 136 a year ago. This fall is due to slacker conditions in the exporting industries, especially as regards the saw-mills. Unemployment has fallen month by month during the year, partly owing to seasonal causes. The number of unemployed at the end of July, when the seasonal position is usually at its best, had dropped to 3,732, in comparison with 10,988 last year and over 23,000 in 1932.

There has been a growing easiness in the money market. Deposits increased further, and amounted to the following totals (in all banks and savings institutions) during January-June:—

1933.....	298 million marks.
1934.....	547 " "
1935.....	551 " "

The total credits of the joint stock banks increased in January-July by 222 million marks. At the same time their deposits grew by 477 million marks.

The strong position of the Bank of Finland also reflects the ample supply of cash. At the end of July its credits amounted to 783.3 million marks, as against 855.5 and 942.1 millions a year ago and two years ago; while the reserve of foreign currency amounted to 1,352.8 million marks, compared with 969.4 and 782.2 millions in the two previous years.

HELSINKI, September 1.

ARGENTINA

RAILWAY COSTS AND REVENUES

THE general economic situation in Argentina remains good. The recovery, which followed the devaluation of the currency, has now resulted in a widespread expansion of production, employment and foreign trade. The movement is being carried further by the Government's cheap money policy.

The conversion of 7 per cent. Buenos Aires Municipal bonds met with entire success. Out of a total holding of \$43,000,000, holders of only \$1,493,000 have failed to accept the conversion offer. The Municipality have consequently decided to convert their 6½ per cent., 1923 bonds. These are divided into three series as follows: circulation, A, \$48,507,250; B, \$16,150,300; C, \$2,394,800. Series B and C, if unconverted, will be redeemed at par on October 1st and series A on January 1st. It is expected that this conversion will meet with the same favourable reception as the former.

The Decree controlling the Press, which has been criticised by both foreign and local Press interests, is shortly to be repealed, as certain clauses have been pronounced to be contrary to the Constitution.

Some interesting figures have recently been published showing the expenditure and revenue of railways in the Argentine during the past ten years. Taking 1924-25 as a basis, receipts for 1933-34 were down by 21 per cent., whereas expenditure showed a reduction of only 11 per cent. Comparing these figures with those obtaining in the United States and Great Britain during similar periods, which showed reductions of 51 per cent. and 54 per cent. respectively in the case of the former country and 26 per cent. and 24 per cent. in the case of the latter, it is apparent that whereas in the United States and Great Britain it has been possible to offset the decline in receipts by reducing expenditure, it has not in the Argentine. The text of the

arbitral resolution issued by President Justo for modifying working regulations on the railways has just been made public. These regulations will, it is hoped, make it possible for the railways to effect considerable economies in running expenses without in any way interfering with the service which they give to the public.

WHEAT HARVEST PROSPECTS

Owing to the rains which fell during the early part of the month, sowings of linseed have taken place on a fairly large scale and in certain places late-type wheat has also been put down. Reports from the interior are, however, far from satisfactory, as except in the Province of Buenos Aires germination is poor and wheat is, in consequence, patchy.

There has been considerable discussion in Congress about the basic price of \$4.40 per 100 kilos. which the Government are paying for maize. The producers are clamouring for an increase. During the discussions it was pointed out that between November, 1933 and August, 1935, the Government had made a profit on their exchange operations, of some \$197,000,000, and that a proportion of these profits should go to the producers of maize and other grain. This profit has actually been allotted as follows:—\$69,500,000 to the Government for payment of debt services; \$9,100,000 to the grain board; \$3,100,000 to the milk regulating board; \$300,000 to the cotton industry; and \$3,000,000 to the meat trade. The balance is being utilised as an exchange equalisation fund.

Imports for the month of July were the highest registered since November, 1934, which was a record month, and as a result of this big increase, combined with the falling off of exports, the export surplus for July was only slightly in excess of \$9,000,000.

MARKET VALUES IN FIRST SEVEN MONTHS

Item	1934	1935	Increase or Decrease
Imports	\$ 598,590,473	\$ 668,703,778	+11.7%
Exports	835,068,572	951,558,853	+13.9%
Balance of trade	+236,478,099	+282,855,075	+13.0%

ARGENTINE IMPORTS, ACCORDING TO COUNTRIES OF ORIGIN DURING FIRST SEVEN MONTHS OF 1935 AND 1934

Countries of Origin	1934	1935	1934	1935
	\$	\$	Percentage	
United Kingdom....	123,841,975	136,468,179	22.8	22.1
United States	80,770,080	91,608,279	14.9	14.8
Germany	58,654,111	53,313,947	10.8	8.6
Belgium	24,175,715	39,843,050	4.5	6.4
Italy	41,685,520	29,117,593	7.7	4.7
Brazil	26,731,325	28,122,941	4.9	4.6
France	28,847,984	27,072,173	5.3	4.4
Japan.....	10,232,536	26,897,486	1.9	4.4

Despite the decrease in the export surplus in July the surplus for the first seven months of 1935 is considerably greater than last year. An analysis of imports continues to show a falling off in foodstuffs and tobacco and a considerable increase, both in tonnage and value, of textiles, iron, machinery and vehicles, and fuel and lubricants. There has been a falling off in production of petroleum by the State oil fields.

Budget revenue and expenditure figures for the first eight months of 1935 and 1934 have now been published.

	1934	1935	Increase
	\$	\$	\$
Revenue	636,543,330	676,103,471	40,560,141
Expenditure	637,928,529	675,789,671	37,861,142

Inland revenue shows a falling off of \$12,000,000 due to the increased share allotted to the Provinces under the scheme for unification of taxes. Income tax, sales tax and customs and ports have all produced considerably larger revenue this year, and it has accordingly been possible to make less use of credit operations and still meet current expenditure. Revenue from credit operations is actually down by some \$14,000,000. Salaries and miscellaneous expenditure both show large increases; but public debt services, due to the various conversion measures adopted during last year, are down by \$42,000,000.

BOOKS AND PUBLICATIONS

OUR STRICKEN PORTS*

FOUR years ago, when the Conservative Party was agitating for tariffs to cure the depression, it was pointed out by innumerable critics that protection, however it might favour certain inland industries, would infallibly ruin our export trades and our ports. The present Government, denying that any such thing would happen, introduced a sweeping tariff. To-day our ports and our export trades are duly ruined, and the Government, contemplating them with perplexity, refers to them as "special areas," and devises trifling and ephemeral palliatives in its futile efforts to revive them.

In this pamphlet, compiled by the Liberal Free Trade Committee, and in particular by Mr F. W. Hirst, Sir Norman Hill and Professor W. A. Bone, the bitter and inescapable facts about our stricken seaports are unambiguously set out. The authors give the figures for imports and exports, in volume and value, and for unemployment for each district in turn, both before and after the introduction of tariffs. The comparison between 1929 and 1933 is perhaps a little unfair in some respects, since 1933 was a year of much greater cyclical depression than 1929. But in general the statistics tell a rigidly objective story of crushing and chronic depression in our seaports.

The trade of Liverpool, which made a rapid recovery after the depression of 1921-2, has scarcely made any during the recovery of the last two years. Unemployment in Liverpool and Birkenhead rose from 60,388 in May, 1929, to 104,247 in May, 1935. In Manchester between 1929 and 1933 imports fell from £68,880,000 to £35,520,000 and exports from £30,390,000 to £10,910,000; and unemployment doubled between May, 1929 and May, 1935. Newcastle's imports fell from £22 millions to £11 millions, and exports from £19 millions to £9 millions between 1929 and 1933; and unemployment rose from 43,210 in 1929 to 74,780 in 1934. At Stockton-on-Tees imports actually fell from £766,000 in 1929 to £33,000 in 1933, and exports from £140,000 to £6,000. The same melancholy tale can be told of Hull, Newport, Cardiff, Swansea and innumerable smaller towns. London, almost alone among our ports, is handling a greater tonnage of seaborne trade to-day than before the depression. This is partly due to the shift in the economic centre of gravity of the country, but also partly to the fact that commodities like petrol, oil and tobacco, which have not been affected by protective duties, figure largely among London's imports.

It is a remarkable fact that almost every one of the following important seacoast towns had 100 per cent. more unemployed in May, 1935, than in May, 1929: Liverpool, Birkenhead, Manchester, Barrow-in-Furness, Sunderland, Newcastle-on-Tyne, Stockton-on-Tees, Middlesbrough, Hartlepool, Grimsby, Ipswich, London, Portsmouth, Southampton, Newport, Cardiff and Swansea. There could be no more overwhelming condemnation of the policy of attempting to cure unemployment by fostering internal trade alone. Mr Hirst and his colleagues have done a most valuable service in preparing this excellent pamphlet, and so calling attention once again to the ever more insistent need for a determined effort to revive our foreign trade.

SHORTER NOTICES

"Monetary Mischief." By George Buchan Robinson, Columbia University Press. (London) H. Milford. 10s. net.

This book is a vigorously-expressed criticism of United States monetary policy. The author has a profound belief in the efficacy of the Federal Reserve System and in the gold standard—always provided that those in authority do not sin against the light. Accordingly, he believes that control of the monetary system should remain outside political control.

He also points out the paradox that the United States, the greatest creditor in history, has devalued her currency by repudiation of her gold certificates and by her tremendous creation of "printing press money."

"Was Europe a Success?" Joseph Wood Krutch. Methuen. 116 pages. 3s. 6d.

In a foreword to this book Mr C. E. M. Joad claims for Mr Krutch that he answers the question why intelligent men and women are not to be found in the ranks of the Communist Party. The answer he gives, is that Communism intends to, and would, destroy those very conditions which made intelligence possible and Europe a success. These conditions are individualism, freedom and variety. It is these conditions which, according to Mr Krutch have made "European art and thought superior to all others," and the European man "the most successful in exploring that realm of consciousness which appears to be exclusively human." That individualism, freedom and variety are the *sine qua non* of European civilisation, Mr Krutch firmly believes. Communism, on the other hand, through its ruthless suppression of all opposition, its subordination of the individual to a tyrant State, its emphasis on collectivity and on man only as an economic animal is, according to Mr Krutch, the absolute enemy of European culture, which alone gives Europe the right to be called a success. It is even, he affirms, the avowed aim of communism to destroy this "bourgeois" culture.

It is a pity that Mr Krutch, in a really praiseworthy attempt to defend liberal culture, has not examined more deeply the essence of that culture and the attitude of Communism to it. This attitude has changed considerably in the last few years. Soviet writers now claim openly to be the real defenders of European culture through their earnest desire to widen the basis of the society which supports it. There are threats to European culture at least as subtle as, and more immediate than Communism, and we regret that a book in defence of liberal culture should be unworthily slight and superficial.

MONEY AND BANKING

AMERICA'S BALANCE OF PAYMENTS

THE preliminary figures of the Balance of Payments of the United States in 1934 were printed and discussed in the *Economist* of May 11, 1935 (page 1070). Since then the Department of Commerce has issued the usual detailed study,* and it is possible to analyse the figures at somewhat greater length. It is impossible, however, in the scope of an article to exhaust, or even adequately to summarise, the information in this 76-page pamphlet, the regular publication of which can only be the subject of envious admiration on the part of students of international economics whose own Governments do not treat them with such statistical generosity. The annual bulletin usually includes the results of some special study relating to the Balance of Payments. This year there has been a special inquiry into receipts and payments of insurance funds, and the Department is also instituting a census of foreign holdings of American securities. This census is not yet complete, but the preliminary results have already shown that foreign holdings—and the equivalent payments of interest and dividends—are much larger than had previously been suspected.

The figures of the balance of payments for 1934 are shown in the following table, together with the figures for 1929 and 1933:—

BALANCE OF INTERNATIONAL PAYMENTS OF THE UNITED STATES
(Millions of dollars)

Commenting last year upon the 1933 figures, we remarked that they did not show any of the results normally to be expected of a country whose currency has been depreciated, and suggested the explanation that the effects of a depreciating currency are likely to be different from, and frequently opposite to, those of a depreciated currency. The 1934 figures confirm this diagnosis. The dollar was devalued and stabilised at the end of January, 1934, and the exchange rates between New York and the rest of the world were tolerably steady throughout the year. The effects are chiefly noticeable in the figures for merchandise trade. Both imports and exports increased, but the positive balance was considerably larger. It would have been larger still had it not been for the heavy imports of silver. Excluding silver, the positive balance is the largest since 1930, and the largest in proportion to total trade since 1921. The largest increases in exports were to countries whose currencies depreciated earlier than the dollar; increases in exports to Japan and the United Kingdom alone made up half the increase in the merchandise export balance. The

* "The Balance of International Payments of the United States in 1934." By Amos E. Taylor. Department of Commerce Trade Information Bulletin No. 826. (Washington) Government Printing Office. 10 cents.

increase in imports was fairly widely spread over the world, and the balance of merchandise trade with each of the continents moved in favour of America. It is interesting to note that the increased exports were of manufactured and semi-manufactured goods.

The service items are not greatly different from 1933. The larger debit balance for shipping and freight represents in part an increase in dollar freights as a result of devaluation, in part an increase in trade. Tourist receipts and payments both increased, leaving the balance unchanged. Expenditures of American tourists in Europe declined, while expenditures in Canada and Mexico increased. Immigrant remittances and charitable payments were lower, but the report notes a substantial increase, for the second year, in payments sent abroad by Jewish organisations. The reduction in the net receipts of interest and dividends was due both to reductions in receipts and to increases in payments. The reductions in receipts are stated to be due in the main to the repatriation of American banking funds in Europe and to repurchase by foreign nations of their bonds listed on the New York market.

As a result of these various changes, the balance on current account has increased substantially. It is interesting to note that it is larger than the net receipt of interest and dividends. In other words, the United States in 1934 did not take any part of her interest receipts in the shape of goods and services.

The capital account also shows interesting movements. Under the heading of short-term capital a net inflow is shown for the first year since 1927. There was an increase of \$86 millions in foreign balances and short-term banking assets in the United States, while similar balances and assets held abroad by American banks were reduced by \$106 millions (mainly owing to reduction of German Standstill credits). The long decline of New York as an international banking centre is thus apparently at an end, although at the end of 1934 America's foreign banking assets exceeded her liabilities by \$400 millions. Non-banking short-term capital movements are entered as a net debit of \$8 millions, but, as is pointed out below, this figure is probably far from correct. The movements on long-term capital account are shown in the following table:—

LONG-TERM CAPITAL ACCOUNT, 1933-34			
Inflow (+) or Outflow (-) of Capital			
	1933	1934	
New foreign issues publicly made in United States.....	- 71	- 9	
Less refunding issues, commissions, discounts, etc.	+ 61	+ 9	
Bond redemption and sinking-fund payments:			
Received from foreigners.....	+123	+114	
Paid to foreigners	- 50	- 25	
Direct investments:			
New direct investments abroad and privately-taken foreign issues...	- 91	- 48	
Direct investments of foreigners in United States	+ 7	+ 12	
Resale to foreigners of direct investments made in previous years	+ 50	+ 14	
Purchase and sale of existing securities:			
Purchases by Americans of foreign securities.....	-685	-405	
Sales by Americans of foreign securities.....	+565	+510	
Purchases by foreigners of American securities	+760	+480	
Sales by foreigners of American securities	-580	-480	
Net result of arbitrage transactions.....	- 40	+ 30	
Balance of long-term capital account	+49	+202	

The last group of items is much the most interesting. I.

1933 Americans were buying foreign securities while foreigners were buying American securities. In 1934 there was a closer approach to unanimity. Foreigners' purchases and sales cancelled out, while Americans tended to sell their foreign holdings.

There were thus positive balances on current account and on both long-term and short-term capital account, aggregating in all \$766 millions. This sum would in any case have had to be settled in gold. As it was, imports of gold and currency came to \$1,265 millions, most of the gold being imported in the weeks immediately following upon the devaluation, and in the course of the gold *bloc* "scare" in the autumn. These excessive gold imports compel the Department of Commerce to enter a "Residual item" of no less than \$499 millions. The report suggests that from \$175 millions to \$325 millions of the total is to be ascribed to the import in 1934 of gold earmarked in foreign countries during 1933 for American governmental authorities who make no public returns of their holdings, and to unrecorded purchases and sales of securities. The balance must be represented by an inflow of private funds. It is suggested that the largest part was due to a reduction by American non-banking firms of their foreign balances, which had been swollen during 1933 by leaving abroad the proceeds of exports. If these movements could have been recorded, they should have gone to increase the figure shown for the net import of non-banking short-term capital.

The year 1934 was clearly abnormal, and it is perhaps unnecessary to point out that the world, whether on the gold standard or not, cannot afford to send America \$1,265 millions, or even \$766 millions, in gold every year. The indications are that the figures for 1935 will have a more normal appearance. It is certainly to be hoped so, for no form of international monetary system will be workable unless the current accounts of the nations' Balances of Payments are approximately offset by normal capital movements, without the need either for gigantic movements of gold or for excessive fluctuations of the exchange rates.

FINANCIAL NOTES

The Money Market.—Despite the market's disappointment with last week's tender, rates have not hardened, for the general uncertainty on the Stock Exchange has made money even more abundant. One or two banks have been persistent buyers of bills at the usual $\frac{1}{2}$ per cent., and "hot" bills have been taken at the slightly higher rate:

	Aug. 22, 1935	Aug. 29, 1935	Sept. 5, 1935	Sept. 12, 1935
Bank rate.....	$\frac{1}{2}$	$\frac{1}{2}$	$\frac{1}{2}$	$\frac{1}{2}$
Clearing banks' deposit rate ..	$\frac{1}{2}$	$\frac{1}{2}$	$\frac{1}{2}$	$\frac{1}{2}$
Short Loan rate:—				
Clearing banks.....	$\frac{1}{2}$	$\frac{1}{2}$	$\frac{1}{2}$	$\frac{1}{2}$
Others.....	$\frac{1}{2}$	$\frac{1}{2}$	$\frac{1}{2}$	$\frac{1}{2}$
Discount rates:—				
Treasury bills	$\frac{1}{2}$	$\frac{1}{2}$	$\frac{1}{2}$	$\frac{1}{2}$
Three months' bank bills	$\frac{1}{2}$	$\frac{1}{2}$	$\frac{1}{2}$	$\frac{1}{2}$

The general feeling in the market is that there is no reason to expect a further rise in the rate on Treasury bills on Friday of this week, when another £45 millions are on offer. The money market has been extremely inactive throughout the week.

The Foreign Exchanges.—The cessation of silver buying in America, the consequent free play of the seasonal demand for dollars, and the continuance of the "flight into dollars" from the Continent all combined last week-end to intensify the rise in the dollar which began a fortnight ago. On Monday, however, the pound "came back" after dollars had been officially sold from New York, and silver purchases for the American Treasury had begun again. The dollar cheapened from 4.92 $\frac{1}{2}$ to 4.93 $\frac{1}{2}$; and the gold *bloc* currencies were all cheaper in sympathy. The raising of the Italian bank rate on Monday did not avail to support the

lira which closed at 60 $\frac{1}{2}$, while three months lire were cheaper at 5 $\frac{1}{2}$ lire discount. On Tuesday and Wednesday, sterling was sold by the British control to arrest the upward tendency of the pound; but on the latter day commercial buying of dollars set in again, and the pound, though steady against Continental centres, yielded $\frac{1}{8}$ cent to the dollar on the day's business. Forward dollars have been steady. The Paris, Amsterdam, Brussels and Milan three-months rates all widened to larger discounts early in the week, but on Wednesday and Thursday they narrowed again and were quoted at 1-1 $\frac{1}{2}$ francs, 21-23 cents, 9-11 centimes and 5-6 lire respectively. Far Eastern and South American rates were steady.

The Bank Return.—This week, the only noteworthy movement was the redistribution of £10 millions from bankers' and other deposits to public deposits.

BANK OF ENGLAND

	Sept. 12, 1934	Aug. 21, 1935	Aug. 28, 1935	Sept. 4, 1935	Sept. 11, 1935
	£ mill.	£ mill.	£ mill.	£ mill.	£ mill.
Issue Department:—					
Gold	191.8	193.3	193.4	193.4	193.4
Note circulation	379.0	400.4	399.6	401.6	400.3
Banking Department:—					
Reserve	73.4	53.5	54.5	52.5	54.0
Public deposits.....	16.5	15.9	9.4	5.9	16.0
Bankers' deposits	103.2	93.9	96.9	100.1	91.0
Other deposits	36.8	36.9	36.5	38.6	37.8
Government securities.....	84.9	83.5	81.3	83.4	84.5
Discounts and advances	6.3	13.0	12.9	14.1	12.4
Other securities	10.2	15.0	12.3	12.8	12.2
Proportion	46.8%	36.4%	38.1%	36.3%	37.2%

The increase in public deposits is probably to be ascribed to the incidence of the increased payments made in recent weeks for Treasury bills.

August Clearing Bank Averages.—The August returns of the nine London clearing banks show a sharp rise in cash and deposits from the figures in August of last year; but both items are slightly less than in July of this year:—

	August, 1934	May, 1935	June, 1935	July, 1935	August, 1935
Capital and reserves.....	123.4	125.7	125.7	125.7	125.7
Acceptances, etc.	108.7	113.8	109.1	97.3	93.5

Discounts	220.0	215.9	242.3	272.0	285.2
Investments	540.2	603.5	608.0	599.1	599.1
Loans and advances	740.7	755.4	760.5	759.6	749.7
Investments in affiliated banks	24.6	25.2	25.2	25.1	25.1
Cover for acceptances, premises, etc.	153.1	157.8	153.1	141.2	137.4
Total assets	2,050.6	2,162.9	2,200.7	2,204.8	2,195.2

This time last year there was definite evidence of some credit contraction, for both cash and deposits had fallen to the lowest levels since November, 1932. The August figures this year show not only a balance sheet total higher than in August of 1934 by £145 millions at £2,195 millions; they also show a rise of £39 millions above the total in August, 1933. The distribution of the credit expansion in the last year among the different items is interesting. Deposits are now £157.5 millions up on the year, while the banks' acceptance business has definitely declined. On the assets side of the sheet, cash is up proportionately, and the item "cheques, balances and items in transit" shows a slight rise. There is a good deal more money at call, and £65 millions more in discounts, the latter being a sharp movement back towards the 1933 level of £357.1 millions. There is an equally steep rise in investments to a new August "high" record of £599.1 millions; but there is a slight, but welcome, rise in advances, which still stand, however, at only £5.4 millions above the figure in August, 1933.

THE STOCK EXCHANGE

PALESTINE AND THE INVESTOR

At a time when shortage of capital and excess of labour supplies are the common problems of Western Nations, the description of conditions in Palestine, given by a correspondent on page 459 of last week's *Economist* may have occasioned surprise, amounting almost to incredulity, in the minds of some readers. Here is a country which, though its modern economic development is hardly a decade old, is already over supplied with capital relatively to its labour resources. It is the purpose of the present article to see how far the British investor has played his traditional rôle in an area of undoubted economic promise.

Palestine's adequacy of funds has, in fact, been largely provided "from within." Unhappy political trends in Europe, combined with natural Zionist aspirations, have encouraged a large wave of Jewish immigration, seeking new opportunities for its enterprise and capital. The growing percentage of Jewish immigrants with a capital exceeding £1,000—as much as 12 per cent. of the total 1934 influx—explains Palestine's ability to finance her progress without substantial recourse to international capital markets. Thus, the dangers of excessive borrowing have been avoided. Investors, with the chastening example of many South American States in mind, will not underestimate the relevance of this factor, as regards the security for the limited amounts of capital which have actually been raised in Great Britain.

Palestine has certainly taken a wide view of her economic potentialities. The war period left her with the basis of a modern transport system. She has since built up an electrical network stretching from Lake Tiberias to Haifa and extending south to Tel Aviv. The port of Haifa has been constructed with deep-water quays, and now forms the seaboard outlet of the southern branch of the Iraq oil pipeline. Industrial areas have been developed in the Haifa and Tel Aviv hinterlands and citrus culture has been reorganised and extended on "capitalist" lines. Company registrations have moved in step with this ample progress. The majority are small local companies, but at least three established concerns have offered shares to British investors. Their favourable reception, at a time when overseas industrial investments are not enthusiastically regarded, may reflect the market's confidence that concession terms have been fairly devised, and will be adequately protected. All foreign persons may, in fact, hold land on equal terms with Palestinians, and no economic discrimination is practised. Factors making for discontent, largely among Arab Nationalists and Jewish settlers have yet to reach final settlement, but the Government has effected a gradual improvement in public security.

This reassuring view as regards investment status has been attested by the readiness of important London institutions to afford facilities to Jewish interests in Palestine. The Prudential Assurance Company, for example, has indicated the conditions under which it would consider a loan, not exceeding £1,000,000, to the municipality of Tel Aviv, for public works and repayment of existing debt. The terms contemplate redemption within 25 years, and interest at 4½ per cent. Various conditions proposed for the compliance of the municipality, however, require the approval of the authorities, both in Palestine and in this country, and early completion is not expected. Again, Lloyds Bank has advanced £500,000, at 4 per cent. minimum, for 15 years to the Jewish Agency. This organisation is concerned with the provision of essential services for the establishment of the Jewish National Home, which this country is pledged to assist under the terms of the Palestine Mandate. The work of the Agency in assisting the development of electricity supplies, mortgage finance, potash exploitation and industrial finance has been an invaluable factor in the development of Palestine.

The credit standing of the area, in short, is high by comparison with that of other partially developed regions. The Government, however, has no independent loans outstand-

ing. The 5 per cent. stock, of which £4,475,000 is in issue, is fully backed by British Treasury guarantee. The proceeds were employed for purchase of railways and equipment, and the Haifa harbour construction. Guarantee powers for further loans up to £2 millions have been taken by the Treasury. There would appear to be little present likelihood that the guarantees will need to be implemented. Since the beginning of 1932 healthy budget surpluses have accumulated, amounting to over £2½ millions at March, 1934, and estimated at £4.7 millions at March last. For this result, the buoyancy of revenue is largely responsible, though expenditure upon public services has shown substantial expansion, and the desirability of providing against the possibility of future agricultural depression has been recognised.

To the general investor, however, a gilt-edged stock, standing at a high premium, and redeemable at the borrower's option in seven years, may not be the most attractive of investment media. The choice of industrial securities offered by the London "Lists" is not, in fact, very wide. It includes the preference shares of a bank, the preference and equity issues of two public utility undertakings, and the shares of a company recovering potash from the Dead Sea. The recent trend of earnings and prices is set out in the accompanying table:—

Company (and Date of Accounts)	Total Profits	Ordinary Dividends	Quoted Issues (all Shares £1 or £1 denom.)	Quotations	Yield (%)

(a) Flat. (b) To redemption. (c) Issued August, 1935, at par. † Free of income tax. (d) Issued February, 1935. Prospective yield on last ordinary dividend.

The Anglo-Palestine Bank was incorporated as long ago as 1902 and is controlled by the Jewish Colonial Trust. The head office at Tel Aviv is served by ten branches. Its deposits were almost trebled between 1932 and 1934. Over the same period a loss of £3,748 has been replaced by a profit of £113,843. For 1934 some £90,000 was transferred to reserve fund, raising the balance to £140,000, against an ordinary capital of £300,854. The provision for the 4½ per cent. redeemable preference shares, which were placed at par last month and now stand at 21s., is well assured on the latest earnings, irrespective of the increased activities of the bank, to which the proceeds will be devoted. The shares, however, carry an appreciable redemption risk, since they are optionally callable after June, 1940, at 2s. 6d. premium, and subsequently at lower premiums until final redemption from July, 1950, at 21s. per share.

Of the two electricity undertakings, Jerusalem Electric and Public Service Corporation is a "Balfour Beatty" company. It operates over 480 square miles in and around Jerusalem, under a concession for 44 years from 1928, with contingent powers to the High Commissioner to extend the period for a further 16 years. The High Commissioner receives a moiety in surplus profits after provision for depreciation and reserves and a 10 per cent. dividend on capital spent on the concession. Between 1933, when the

INVESTMENT NOTES

first dividend was paid, and 1935 (years to March 31st), net operating receipts, including sundries, rose from £25,047 to £44,174, and equity earnings from 9.4 per cent. to 14.9 per cent. The surplus of net income over the modest dividend payments has been applied in clearing away issue expenses, and the way may have been prepared for increased payments.

A second utility company, the Palestine Electric Corporation, operates a hydro-electric station on the River Jordan, together with three other power-houses, and has 1,393 kilometres of transmission lines. The Corporation was assisted at its birth in 1923 by the Jewish Foundation Fund, and holds two concessions with a duration of 70 years from 1926. Its terms of operation confer valuable equity rights on ordinary and "A" ordinary shareholders. It is provided that if the Corporation is unable, after March, 1936, to pay a dividend of 8 per cent., tax free, on its expended capital, after provision for depreciation and reserves, it has the right to increase its rates to cover such a distribution. The terms of participation in profits by the High Commissioner, to be applied to reduction of rates, and the power of optional purchase at 10-yearly intervals from the 37th to the 67th year of the concession, do not appear unduly onerous. Sales of current have been quadrupled since 1931, and existing installations are being vigorously expanded to meet growing consumption. The issue in February last of redeemable preference and "A" ordinary shares provided for repayment of outstanding debentures, and for important works at Haifa. The latest year's profits, related to the new capital structure, show that earnings available for the increased equity amount to over 9 per cent., irrespective of the prospective return on the plant extensions. The equity prospects of the Corporation, construed from the latest accounts and from Lord Reading's speech at last week's meeting, may appeal to the long-term investor.

The progress of Palestine Potash has been less spectacular. The company's initial development has synchronised with a period of depressed agricultural purchasing power and of acute competition in the potash market. The prospectus accompanying an issue of 5½ per cent. redeemable participating preference shares, in February last, recognised that earnings might fail, for the next two years, to provide ample cover for dividends. Fixed payments have in fact been guaranteed by the Anglo-Palestine Bank up to July, 1937. To the speculative nature of the industry, moreover, must be added a "redemption risk," since the preference shares are callable on any dividend date at 2s. 6d. premium. Partial equity conversion rights, however, are available, and the prospects of eventual participation in profits may be regarded as a compensating factor. At this stage the shares must be regarded as making their primary appeal to the speculative investor, who looks for a continuance of the rising trend of potash consumption in competition with other fertilisers. In the meantime, the development of bromine and other chemical products may afford additional "bread-and-butter" revenue.

It will be seen that the British investor's direct interest in Palestine is at present confined mainly to a limited number of large-scale undertakings in traditionally "capitalist" industries. The growth of indigenous activities like fruit-growing, however, may indirectly benefit the Palestine-domiciled public utility and banking undertakings, together with such concerns as Barclays Bank (D. C. and O.), I.C.I. (Levant), Tilbury Dredging (Egypt) and numerous exporting concerns in the British electrical, motor, oil and heavy industries. The foundations of the new order appear, in general, to have been soundly laid, though there are certain adverse features in the current position, such as the high level of labour costs, particularly in the building industry, and the present dependence of citriculture upon a narrow export market, in which the United Kingdom and Germany predominate. The former factor, however, is a function of the Government's immigration policy, and co-operative selling organisation may lead to better diversification of export markets. Ultimately the establishment of self-government, contemplated under the terms of the British Mandate, may involve investors in a political risk, but the policy of the administration since 1922 is of good augury for the future relations of the two countries.

London, New York and Europe.—The impression left in the City by Sir Samuel Hoare's speech, on Wednesday, was that the initiative in Europe's crisis had passed squarely from Italy to the League, and that a courageous British policy might win many converts in quarters which had hitherto held that peace could not be too dearly purchased. The Foreign Secretary's reference to international freedom of access to raw materials prompted a natural question whether such an ideal would be compatible with the maintenance of restriction schemes for materials like rubber and tin, to which a very small number of countries were parties. Though the volume of Stock Exchange business on the eve of Sir Samuel's speech had continued on a reduced scale, and prices had not been fully maintained, the general tone had shown firmness contrasting forcibly both with the weakness of the later days of August and the gravity of the issues involved. Some conservative quarters, indeed, have questioned whether investment sentiment has as yet been adequately re-adjusted to an outlook which, whatever course events may take, is certainly not identical with that of even a few months ago. To the insular-minded (who are all the more numerous in view of the commanding rôle of domestic revival during the last two and-a-half years), such indicators as the satisfactory August figures of employment, electrical generation and steel production, appear strong arguments for the retention of sound industrial equity shares. Even the present check to new investment in fixed-interest stocks is described as a forerunner of increased pressure and higher gilt-edged prices. The latter thesis, however, may be questioned in the light of the conditions indicated in our leading article on the market outlook in last week's *Economist* (p. 474). Any investment policy, as regards ordinary shares, which omits to take account of the possible repercussions of a European trial of strength on Britain's domestic economy, may be hazardous to the point of danger. With the firing of the first shot by any aggressor an exodus of capital from more than one European country would doubtless be set in motion. That part of this capital would come to London, even if Britain were directly or indirectly a party to the struggle, would appear almost a foregone conclusion. That, however, could scarcely be the whole story. Current events have conspired to enhance the "pull" of New York as a potential repository for liquid resources, quite apart from her position as a non-member of the League, separated by some thousands of miles from a discordant Europe. The President's promise of a prolonged breathing space from legislative innovation, coming after several months of business revival and a rise of 32½ per cent. in share values from the lowest point of the year, may well re-awaken public ardour for market speculation which has been largely dormant since 1929. Further currency experimentation, involving an appreciable exchange risk for foreign investors, appears to be excluded by the President's self-denying ordinance. It may be suggested, therefore, that investors on this side, in reviewing the outlook the next few weeks or months, should pay due regard both to the effect of Continental possibilities on British market psychology and to the potential economic consequences of further American revival.

Canadian Debt Policy.—Mr R. B. Bennett, Prime Minister of Canada, in a broadcast address on Monday evening, made an eloquent plea for a "new deal" in the matter of Canada's debts. It was the country's intention, he declared, to pay all her obligations as long as possible, but it would be "unwise, unprofitable, unpatriotic and profligate" to continue to bear a burden which might finally crush the country. The Government, accordingly, would invite the Canadian people to convert their holdings in Dominion, Provincial, municipal and railway stocks at substantially lower rates of interest. As regards her external obligations, Canada held a proud place among nations as a country whose word was as good as her bond.

but external debts could only be paid in goods and services. The debt to the United Kingdom paid itself in this way; that to the United States did not, but a treaty was under negotiation which was calculated to achieve that "highly desirable adjustment." Mr Bennett's suggestion for a Loan Council closely follows the lines advocated in a Note in these pages on August 31st (page 432), in which we drew attention to the numerous points of similarity between Canada's present position and that of Australia some time ago. British investors, however, may be cautious in assuming that events will necessarily follow the same happy course in both instances. In the first place, Mr Bennett is hardly in a position to make a firm offer on the eve of a general election whose result, so far as he is concerned, is anything but a foregone conclusion. It cannot be assumed that a Dominion Government, of different though "orthodox" party views, would necessarily be hostile to a financial programme whose broad wisdom may be generally recognised, and whose inception is overdue. A request to internal bondholders to accept a reduced income is, however, scarcely an election-winning plank, and it may be doubtful whether Mr Mackenzie King, for instance, will, as a matter of tactics, acknowledge himself to be bound in any way by Mr. Bennett's suggestion—at least until the election is over. In the second place, the success of Australia's policy was due, not merely to its innate virtues, but to a subsequent rise in wool prices which beneficially affected both her national income and her overseas payments balance. In Canada's case, there is no guarantee that Fate, in an economic context, will be so kindly disposed. Investors will remember, further, that, before Australia evolved her famous "Premiers' Plan," the Federal Government had already assumed responsibility, as guarantor and ultimate controller, for the overseas debts of the individual States. Is the Dominion Government, in Canada, prepared to undertake such a responsibility, *de jure* as well as *de facto*? The decision would involve, on the one side, the relinquishment of valued constitutional rights and, on the other, a shouldering of financial obligations whose potential gravity is graphically illustrated, *inter alia*, by the news that Mr Aberhart, the new "social credit" Premier of Alberta, has negotiated a loan of \$2½ millions this week from the Dominion authorities. Finally, Canada is much more deeply indebted than Australia to the United States of America. Her negotiators may be on the horns of an awkward dilemma. Failure, in the last resort, to meet her external obligations in full would prejudice Canada's credit in New York, whose goodwill, as a basis for future borrowing, Canada cannot afford to lose. On the other hand, Washington is unlikely to be moved to grant demonstrably favourable terms to Canada in any forthcoming commercial treaty by an implied threat in the matter of debt payments, which Canada may, in any case, be unable and unwilling to enforce.

"Goodwill" in Share Values.—One of the principal investment canons in depression or recovery is the necessity for basing share valuation on a solid basis of earning power. Conservative investors examine the earnings record of a company, and base their computations upon the average achievement. These tests, however, are apt to be overlooked when speculative appetites thrive by what they feed upon. For those who wish to know whether they are buying assets or prospects—more or less speculative—it is possible to devise fairly simple rough tests. We have set out in the following table an analysis of the "goodwill" element in recent market prices of pairs of leading shares in six industries. The "assets available for equity" figures are derived from a net worth balance-sheet analysis, after deduction of intangible assets. In other words, they represent the total ordinary capital, *plus* all free reserves and carry forward, *minus* all intangibles. The results necessarily assume that the book value of the fixed assets represent their true value, but this may be a large postulate in some cases. The amounts under this heading are deducted from the total market valuation of the ordinary shares, giving a figure which roughly represents the current valuation which the market is placing upon the "goodwill" of the business.

Finally, this valuation is divided by the latest year's earnings for ordinary shares revealing the number of year's purchase of recent earnings in current share prices. The figures for the six pairs of companies require careful interpretation. They are necessarily affected by any arbitrary element in either assets or profits. Any temporary market influences may seriously qualify the results. Moreover,

Company	Total Market Valuation of Equity Cap.	Assets available for Equity Cap.	Computed value of "Goodwill"	Earnings for Ord., Latest Year	No. of Years' Purchase of "Goodwill"
Aerated Bread	£'000 1,748	£'000 1,410	£'000 338	£'000 87	4
Lyons (J.)	12,286	4,228	8,058	519	16
General Electric	11,450	7,684	3,766	438	9
Associated Electrical Ind.	8,330	5,911	2,419	249	10
Imperial Tobacco	255,700	44,632	211,068	8,737	24
Carreras	13,940	4,037	9,903	683	15

United Steel Cos.	10,590	7,062	3,528	498	7
Bass Ratcliff and Gretton	13,850	4,075	9,775	491	20
Ind Coope and Ailsopp	7,820	2,615	5,205	339	15
Marks and Spencer	23,740	3,018	20,722	811	26
Woolworth (F. W.)	82,500	9,364	73,136	3,560	21

† Deferred and liaison deferred shares.

comparisons should properly be made with data covering identical periods. Broadly, however, the comparisons shown should be capable of explanation to justify purchases of individual shares. Investors should be put on inquiry by such differences as between Imperial Tobacco and Carreras. There may be in this, and many other cases, an explanation sufficient to meet the point, but such analysis challenges the investor to satisfy himself that the reasons offered are adequate.

Industrial Profits in August.—We received 38 company reports last month, showing an aggregate rise in profits of 5.93 per cent. by comparison with the previous year. Figures for recent months are shown below:—

Reports published in	No. of Companies	Rise or Fall in Profits*	Reports published in	No. of Companies	Rise or Fall in Profits*
1934—		%	1935—		%
June	201	+ 20.44	January	111	+ 14.15
July	197	+ 27.10	February	218	+ 8.43
August	30	+ 35.47	March	261	+ 22.54
September	89	+ 40.63	April	242	+ 16.49
October	165	+ 49.70	May	244	+ 11.07
November	143	+ 33.97	June	191	+ 21.72
December	159	+ 25.09	July	232	+ 13.44
			August	38	+ 5.93

* After payment of debenture interest.

The reports of the month disclose net profits of £1,563,366, as compared with £1,475,889 in the preceding year. The figures, however, are scarcely representative, since they include few major industrial reports. Ten concerns in the miscellaneous section, including Associated British Pictures and Initial Services, show an advance in profits from £549,786 to £660,120. In the remaining twelve groups, however, the results published by twenty-eight companies are equally divided between small gains and losses.

A New Finance House.—Following on the news that certain partners of J. P. Morgan and Company and Drexel and Company, have formed a new company in America for the purpose of underwriting and financing under the name of Morgan, Stanley and Company, comes the announcement of the incorporation, in London, of a new finance company to be called First British-American Corporation. The new company will act as the correspondent of the First Boston Corporation, whose European interests it will take over. The First Boston Corporation is the "security offshoot" of the First National Bank of Boston, which has paid dividends and avoided recourse to the

American Treasury throughout the financial crisis. The First British-American Corporation will not be actually controlled by the First Boston Corporation, but the latter will have three directors on the board, namely, Messrs. J. W. Hambuechen, Nevil Ford and A. M. Pope. The first-named, who will be chairman, is also a partner of the private banking house of Michelis and Company of Zurich and was formerly a partner of A. E. Wassermann of Berlin. The fourth director of First British-American will be Mr Robert Boothby, M.P., lately a partner in a well-known firm of London stockbrokers. Anglo-American co-operation in the field of international finance, always welcome, is doubly so at a time when sterling is unattached to gold or to any gold currency. The new development may be symptomatic of the tendency of economic nationalism in foreign countries to drive international bankers back to London as the most profitable financial centre.

Actuaries' Investment Index.—The somewhat improved resistance to political factors which the share markets displayed early this week is reflected in the movement of the Actuaries' Investment Index, which is calculated at 76.5 on Tuesday last, 75.9 a week ago and 79.4 a month ago (December 31, 1928 = 100). The corresponding yield figures are 3.83, 3.91 and 3.77 per cent. respectively. A selection of component indices which have strengthened during the week is set out below:—

Group (and No. of Securities)	Price (Dec. 31, 1928 = 100)			Yields (%)		
	Month Ago (Aug. 13)	Last Week (Sept. 3)	This Week (Sept. 10)	Month Ago (Aug. 13)	Last Week (Sept. 3)	This Week (Sept. 10)
Banks and Discount Co.'s (12)	117.8	114.4	115.2	3.98	4.10	4.07
Building Materials (4)	95.1	89.9	91.5	4.26	4.50	4.43
Electric Light and Power (16)	135.2	129.9	131.4	3.77	3.92	3.87
Iron and Steel (8)	67.7	64.5	65.8	3.01	3.17	3.12
Motors (5)	58.4	52.7	54.0	4.47	4.90	4.85
Home Rails (4)	65.9	61.6	62.7	1.52	1.64	1.61
Breweries and Distill. (19)	135.2	128.7	130.9	4.08	4.29	4.22

Investment equities, such as bank and electricity shares, appear to have checked their recent sympathetic fall with gilt-edged. Greater support has been forthcoming for building and iron and steel issues, based on dividend declarations and upon the argument that domestic recovery stands apart from the threatening consequences of the Italo-Abyssinian dispute. Perennial Tuesday optimism put home rail issues higher, and brewery investors tended to show more confident anticipation of forthcoming reports.

COMPANY NOTES

Aircraft Companies.—In earlier comment on the prospect for aircraft shares, we have dealt with both the favourable general prospect for the industry and the fluctuations to which the profits of individual companies must nevertheless be liable. Recent developments have not affected the position fundamentally. By substantially increasing the "favourable" general prospect, however, they have to some extent reduced the individual fluctuation risk for *established* companies. Thus, in commenting on the 1935-36 Air Estimates the then Under-Secretary for Air put the R.A.F. total purchases of machines (including replacements) at "over 1,000," and added that the 1935-36 orders for machines would be "nearly 100 per cent. more" than those for 1934-35. Subsequently, on May 23rd, Mr Baldwin declared that under the newly accelerated programme for the home defence force "the Air Ministry would require from the aircraft industry within the next two years a good deal more than the number of machines which the Under-Secretary of State mentioned in the course of his speech on this year's estimates." As these figures compare with a total output for the whole industry for all purposes of 1,434 machines in the census year 1930, it is evident that the output for R.A.F. purposes alone this year

AN EVER-PRESENT ANXIETY TO PROFESSIONAL MEN

YOU plough a lone furrow. Upon your unaided efforts depend the well-being and comfort of yourself and your family both now and in later life. Few can help you, none can take your place. If ill-health visits you your income ceases until you are back in harness again. Small wonder that such eventualities cause you anxiety.

A practical method of dispelling the anxieties which though "out of sight" can never entirely be "out of mind" is the

"TRIPLE INCOME" PLAN

which provides

1. AN INCOME ON RETIREMENT
2. AN INCOME FOR DEPENDANTS
3. AN INCOME DURING DISABLEMENT

The "Triple Income" plan provides the most complete safeguard that any professional man can desire. Protection so comprehensive is worth investigating. Send to-day for full particulars and learn at what moderate cost security may be achieved.

LEGAL & GENERAL ASSURANCE SOCIETY LTD.

* Prospectus profits on different basis from those for 1934 and 1935.
† Tax free. ‡ 14 months reduced to 12 by simple proportion. § Available for pref. participation and for ord. after fixed 10 per cent. pref. div.

not at present so widely used. This operates, temporarily at least, to flatten out the tendency to fluctuations, both because the companies which have been in eclipse are provided with ample, if not highly remunerative, work, and

because certain limitations on the royalties claimable by the successful manufacturers seem likely to prevent soaring profits for them. The Government has also declared its intention of seeing that no undue profits are earned. In general, however, the total "dividend" which the aircraft industry will have to share out between its individual units over the next two years is virtually certain to be larger than in any recent year. The present international situation is likely, if anything, to raise that "dividend" by permanently increasing home and foreign demand. The liability to individual fluctuations, nevertheless, remains. It is possible that the considerable reduction recently made by the Air Ministry in the time of the experiment-tenders-trial order-establishment cycle may reduce the length of the fluctuation periods. It will not eliminate them, however, any more than the annual cycle of the motor industry has eliminated them there. Nor is there any guarantee of prosperity to newly promoted concerns without an established product, even in the most "favourable" conditions of general demand. The possibilities latent in civil and commercial flying have been developed materially in the last two years and may become highly important in the future. But the present prospect for aircraft companies (a selection of whose recent results appears in the annexed table) is dominated by the British, and to a less extent the foreign, Air Force demand. The conclusion would appear to be that, while present yields on aircraft shares may justify themselves for the leaders, the market must be prepared for disappointments. Investors would be well advised to close their ears to "tips," "rumours," and market hearsay generally.

* * *

Beet Sugar Finance.—The amalgamation of all the United Kingdom beet sugar factories into one corporation, proposed in a recent White Paper (Cmd. 4964, July, 1935), may be viewed (writes a correspondent) in the light of the company statements published under the British Sugar (Subsidy) Acts, 1925 and 1934, by the Ministry of Agriculture. It is understood that certain companies are pressing for effective recognition of the fact that some of the producers built their factories in less attractive situations "at the wish of the Government, in order to relieve unemployment." Presumably, such "recognition," if granted, would be reflected in higher capitalisation of the merger company. It may be of interest, therefore, to see how present fixed asset values compare among different companies. The following table, which is based on official data, takes as a measuring rod the book values of factories, expressed in terms of the tonnage of beet in the 1934-35 campaign.

Company	Year when Factory opened	No. of Factories	Book Value of Beet, 1934-35 Campaign
<i>Anglo-Dutch Group</i>			
English Sugar Beet Corporation	1912	1	£ s. d. 0 14 9
Home-Grown Sugar	1921	1	0 17 0
Ely Beet Sugar Factory	1925	1	0 12 3
Ipswich Beet Sugar Factory	1925	1	1 4 3
King's Lynn Beet Sugar Factory	1927	1	1 5 3
<i>Anglo-Scottish Group</i>			
Anglo-Scottish Beet Sugar Corporation	1924	2	1 7 3
Second Anglo-Scottish Beet Sugar Corporation	1926	3	2 1 0
West Midland Sugar Company	1925	1	1 7 9
<i>Bury Group</i>			
United Sugar Company	1925	1	0 16 0
Central Sugar Company	1926	1	0 14 9
Yorkshire Sugar Company	1927	1	1 16 0
Shropshire Beet Sugar Company	1927	1	1 19 6
<i>Lincolnshire Group</i>			
Lincolnshire Sugar Company	1927	1	1 4 9
Second Lincolnshire Sugar Company	1928	1	1 13 9
<i>Wissington Group</i>			
British Sugar Manufacturers	1925	1	1 15 0

The differences are striking, and suggest that, if the basis of capitalisation is the position of the weakest companies,

appreciable "watering" may result. During the present year, some £740,000 has been distributed from reserves by three of the Anglo-Dutch companies and dividends for the 12 months ended March 31, 1935, have been paid by all the companies in this group and the Bury group, and by the West Midland Sugar Company, Ltd. We show the year of establishment, in each case, in view of the contention made, quite reasonably, by the chairman of the Lincolnshire Sugar Company at the shareholders' meeting on June 25th last, that, as the company had not come into existence until three years after the Subsidy Act began to operate, it missed the three fat years of high subsidy and sugar prices.

* * *

Courtaulds and Staple Fibre.—Courtaulds' ordinary shares rose on Monday from 54s. to 56s. 3d. (with a subsequent relapse to 54s. 6d.), following the announcement of a Treasury order, on the recommendation of the Import Duties Advisory Committee, removing the excise duty on staple fibre and other artificial silk waste, as from September 10th, and providing for certain consequent modifications of drawbacks from January 10, 1936. The duty was reduced from 6d. to 3d. per pound in July, 1934. Staple fibre consists of artificial silk cut into short lengths at the time of manufacture, with a view to subsequent spinning into yarn, either by itself or mixed with wool or cotton. It is recognised by the Committee as affording a valuable alternative material for the older textile industries, and yielding a product with qualities of its own. Its use, widely developed abroad, has been hampered by excise duties in this country. A duty on a raw material is difficult to defend at all times, and in this particular case, its incidence was calculated to impair development in certain of the more depressed branches of the older textile trades, without yielding any considerable revenue to the Exchequer. The market's instinct in fixing upon Courtaulds as the most immediate beneficiary was probably sound. The company, which is already the chief producer of staple fibre, has secured a start of some months in the race to take advantage of the Treasury's clemency, by its decision, last year, to build a new factory at Greenfield, North Wales. On the latter's completion, the company will have a productive capacity of 9,000 metric tons per annum. At present, Japan is the largest contributor to a total world production of staple fibre which reached 16,200 metric tons in the first half of this year, with Italy, Germany, France and Great Britain next in order. Courtaulds, however, has wisely followed its own precedent, by reducing its price of staple fibre rayon not only by the amount of the reduction in the excise duty, but by a further 1½d. per pound, the new price being 11d. against 15½d. As always, the company's objective would appear to be to stimulate a demand to which no present limit can be placed, rather than to maintain any arbitrary profit margin per unit. Altogether, it may be presumed that though this week's Treasury announcement has not fundamentally affected the dictum of the company's interim dividend statement—"the present trading position does not warrant the expectation of a higher total dividend distribution than for 1934"—it may be regarded as one of numerous factors making for confidence in the company's eventual position.

* * *

An Electrical Dispute.—Unity, as a virtue, commands a premium in the boardroom. Shareholders in Southern Areas Electric Corporation, Ltd., who have been called upon to adjudicate (at an extraordinary meeting on September 20th) in a dispute between two directorial parties, will trust that settlement, one way or the other, may come quickly, for the sake of their future profits. The company was registered in 1933 to acquire holdings in electricity supply undertakings. In 1934, four of its subsidiaries agreed to employ as their manager, for five years, a company called Power Management, Ltd., owned by W. H. Botsford and Company, Ltd. At the end of last May, after an annual meeting at which the chairman, Lord Elibank, had made a hopeful speech on the outlook, a directors'

meeting resolved, by the exercise of the chairman's casting vote, that the performance of its duties by the managing company was not satisfactory. In June, the four subsidiary companies gave notice to terminate their agreement, this action automatically bringing the arrangement between the parent company and the management company to an end. The Power Management Company contends that the increase in units sold by the subsidiaries is convincing testimony to the adequacy of its management and that the decisive resolution was, in effect, sprung on its representatives on the board without warning. Subsequently representatives of the subsidiary companies have joined the board. The reply of the Power Management representatives has been to requisition a meeting to authorise the election of sufficient additional directors to give them a majority on the board. Shareholders will trust that more detailed information regarding the basic matters in dispute will be furnished before they are asked to make a difficult decision. It may be questioned, indeed, whether they should, in any case, have been given the invidious duty of intervention at this stage. A shareholders' meeting is not the most effective of bodies for adjudication on difficult matters of fact, and, in this instance, the machinery provided in the original agreements does not appear to have been fully utilised. The latter provided for impartial arbitration in case of dispute; and as the two sides have so far failed to agree on an arbitrator, it may be asked why recourse has not, apparently, been had to the power to apply to the President of the Institution of Electrical Engineers to nominate one. At the moment, shareholders are unaware of the reasons for the alleged unsatisfactory performance by the managing company of its duties. The published facts, so far as they go, do not suggest any *prima facie* case for such a conclusion. That the dissatisfied directors are gentlemen of high repute and standing, and that their policy is apparently supported in certain "market" quarters, are facts which are immaterial to the main issue. It may be suggested, therefore, that if the difficulties between the two parties prove, unhappily, irreconcilable, a disinterested arbitrator should be appointed, or, if the appeal to Cæsar is persisted in, shareholders should not be required to furnish a decision on indirect and inferential evidence.

* * *

Second Alliance Trust.—The adverse influence of the dollar exchange, which in the previous year was responsible for a reduction in the dividend of this successful company from 22 per cent. to 18 per cent., is again reflected in the latest accounts to July 31st last. Total income, however, is some £5,000 higher at £180,866. Expense items show little change, with the exception of interest, which shows a modest reduction, and presumably will be further reduced by the debenture funding operations during the year. The available earnings cover the 18 per cent. dividend comfortably, but the transfer to Contingent Reserve is reduced from £25,000 to £10,000, leaving the balance at profit and loss slightly increased. Comparative revenue figures for three years follow:—

	Years to July 31st		
	1933	1934	1935
Investment and other income	190,474	175,649	180,866
Expenses and fees	8,406	8,194	8,894
Taxation	31,788	30,340	30,050
Interest	60,026	58,649	56,074
Preference dividend	23,822	24,216	24,675
Ordinary shares—			
Earned	66,432	54,250	61,173
Paid	58,231	48,431	49,350
Earned %	25.1	20.2	22.3
Paid %	22	18	18
Contingent reserve and other provisions	946†	25,994†	10,742†
Carried forward	31,624	11,449	12,531

† Includes expenses of debentures, £946, £994, and £742 respectively.

Broadly, the latest results suggest that the effective increase in income has been as satisfactory as that of most other old-established trusts recently. The yield from the American mortgage business, it is true, remains small, but the Trusts' interests in this field have been reduced to small

dimensions after steady liquidation. The assets position has substantially improved, for the depreciation of about 1 per cent. shown in the latest report compares with 8½ per cent. in the previous year. The outlook for the current year, apart from additional exchange difficulties, appears progressive, and the ordinary stock, quoted at 46s ex dividend to yield £3 17s. 6d. per cent., may be placing a reasonable valuation on recovery prospects.

* * *

Rand Mining Taxation.—A pronounced but short-lived effect upon the Kafir share market (writes our mining correspondent) followed the news of the appointment of a Departmental Committee to take evidence on the existing method of taxation of the gold mines and to report thereon to the Ministry of Finance. The Committee is to comprise Mr A. F. Corbett, a Commissioner of Inland Revenue, Mr S. M. Hill, Chief Clerk to the Income tax department, Dr. Hans Pirow, Government Mining Engineer, Mr E. W. Snell, Assistant Commissioner of Inland Revenue, Mr H. J. Dewar, Chief Accountant of the Treasury, and Mr H. S. H. Donald, Government Mining Surveyor. The official side will obviously be well represented, but the Committee includes no representatives of the mining industry as such. The latter, however, can safely be relied upon to neglect no opportunity of stating its case. How far shareholders are likely to benefit cannot, at the moment, be estimated. Mr Havenga has stated his willingness to consider any reasonable proposal, provided the Union Government receives the full amount of the increased profits to which it considers itself entitled. It would appear, therefore, that effective recommendations will be confined to removal of existing anomalies and other unnecessary, but irritating, complications. Such action might benefit some companies but prove to the detriment of others. In any case, no alteration can be made before the next Union Budget is presented in March or April, 1936.

* * *

Dividends of the Week.—If current company news were the only factor affecting the markets, something of a post-holiday boomlet might now be in progress. In last week's issue we reported that *Associated Portland Cement* had decided to pay the first interim in its history, at the rate of 5 per cent., while its subsidiary, *British Portland Cement*, had increased its interim distribution from the long-standing 5 per cent. to 7½ per cent. The *Imperial Chemical Industries* interim was maintained at 2½ per cent.—not, perhaps, a surprising decision in view of the impending action in the Courts concerning the deferred capital reduction. A number of concerns have inaugurated interim dividend payments this week. Among them *Cerebos* is to pay 10 per cent. interim in respect of the thirteen months to December next, as compensation to shareholders for waiting an additional month. *British Power and Light* announces an interim payment of 2 per cent., compared with an annual rate of 5 per cent. paid in the previous period. It was stated earlier in the year that steady progress had been recorded by every subsidiary concern. In announcing a final dividend of 4½ per cent., increasing the dividend for the year from 5½ per cent. to 7 per cent., the directors of *United Steel Companies* state that profits have improved. The dividend was below the best estimate, however, and the shares fell rather sharply on the announcement. Increased payments have also been announced by *Bolsover Colliery* (2½ per cent. interim, against 1½ per

SOUTHERN CROSS GOLD DEVELOPMENT, LTD.

Notice to Holders of Option Certificates to Bearer

NOTICE IS HEREBY GIVEN that the Directors have decided to extend the period during which the option to subscribe for shares in the capital of the Company as conferred by the outstanding Option Certificates to Bearer can be exercised from the 30th September, 1935, to the 31st March, 1936. Option Holders are invited to present their certificates at the registered offices of the Company, 341, Salisbury House, London Wall, London, E.C.2, for endorsement.

By Order of the Board,
R. BACKER, Secretary.

September 5th, 1935.

cent.), and *Ketton Portland Cement*, whose final dividend of 5 per cent. raises the total distribution from 5 per cent. to 7½ per cent. Disappointing announcements have come from *Whitworth and Mitchell*, whose sharply reduced profits only permit a 6½ per cent. distribution, compared with 10 per cent. for the previous year, and *Whitehall Court*, whose final payment of 3½ per cent. brings the total dividend to 7½ per cent., against 10 per cent. *Gaumont-British* dividends are unchanged, though profits show a small rise.

Other Company Results.—The profit and loss accounts of 16 additional companies are summarised in our usual table on page 541. This week's textile results are prominent, if depressing, for they record a further setback in earnings. The full report of *Calico Printers* confirms the preliminary figures discussed in the *Economist* dated August 24th on page 384, but no explanation of the sharp fall in earnings is given. The equally disheartening fall in the profits of *Whitworth and Mitchell* from £100,849 to £70,749 is attributed almost entirely to overseas trade restrictions, with its corollary of over-production in the home market. The report refers to the possibility that, in the absence of a revival in overseas trade, a return of capital may be considered. The report of *Grosvenor House (Park Lane)* shows that net profits have advanced from £50,000 to £61,464. The debenture conversion expenses are now written off, and the balance of new construction costs has been wiped out by a profit on re-sale of the freehold of the site. Among home industrial concerns, *Ketton Portland Cement* shows the fruits of the building boom and a firmer price structure in the industry by a sharp increase in profits from £34,957 to £50,249. The full report of *Lochgelly Iron and Coal* reveals that profits have jumped from £14,375 to £40,511. The improved outlook resulting from the trade agreements with Northern European countries has encouraged the directors to increase operations on properties which were on the point of liquidation two years ago. An equally spectacular recovery is shown by *W. H. Dorman*, whose profit of £11,596 against £1,030 suggests that, after a long period of difficulty, the production of Diesel engines may bring prospects of financial rehabilitation. The poor results of *British Lion Film Corporation* are accompanied by details of a reorganisation scheme which is stipulated before additional working capital can be provided.

THE WEEK IN THE MARKETS

THE LONDON STOCK EXCHANGE

SETTLING DAYS
TICKET SEPTEMBER 24 | ACCOUNT SEPTEMBER 26

THE behaviour of the market this week has been as good as most investors could expect, and, possibly, better than most student of foreign politics would have dared to predict. The new account opened with a firmness of tone in marked contrast to the positive uneasiness which characterised the previous fortnight. Perhaps the Stock Exchange, whose insight into foreign politics seems often to come by a species of spasmodic revelation and more seldom by analysis, is still avoiding the full implications of Sir Samuel Hoare's frank statement of policy at Geneva. The atmosphere of almost placid calm in later dealings on Wednesday, at any rate, was altogether at variance with the repercussions in political circles. Popular appeals to investors to maintain faith in domestic recovery have been reinforced by the continued improvement in employment, electrical output and steel production. There has, in fact, been little disposition to sell, and more than a disposition to expect the best from a situation which contains so many elements for the worst. Whether markets will observe the prudence of a more substantial discounting of the situation may turn on the reactions to M. Laval's speech on Friday.

The Gilt-edged market opened quietly, but its steady tone waned as the week progressed. The dearth of new business

had little effect upon quotations until Wednesday, when a fuller volume of unsupported selling—particularly of Old Consols and War Loan—brought a general half-point setback. Steadier conditions, moreover, were not sustained on Thursday, and further losses were recorded. Some demand was reported earlier in the week for home corporation stocks, but it proved short-lived. Dominion issues were quiet, Canadian issues making no response to Mr Bennett's assurances regarding debt reorganisation, discussed on page 523.

In the European list, Italian and Austrian bonds moved irregularly lower, the latter being affected by fears of an Italo-German understanding. Brazilian bonds staged an early revival on the trade debt arrangements and hopes of prompt payment of the October coupons. The advance attracted profit-takers, but was largely regained on Thursday. Chinese issues were firmer, Tuesday's dealings revealing considerable interest in the outcome of Sir Frederick Leith-Ross' visit.

The home rail market opened steadily, borrowing its tone yet again from hopes of satisfactory traffics, with the inevitable reaction when the poor results became known. The only feature was provided by London Transport "C" stock, which was carried to a new "high" of 102 in anticipation of next month's dividend announcement. Argentine issues derived support early in the week from the advance in wheat, and reports of rains, but tended to ease from mid-week.

The industrial market receded in hesitant fashion, but the tone was leavened by a number of features. On Monday, for example, Courtaulds advanced sharply on the announcement (see page 526) that the duty on staple fibre was to be removed. Motor shares derived support from the registration figures, Standard again being active, but the tone was not sustained. Brewery shares reflected confident anticipation of the August output figures, but did not hold their early improvement. Trans-Atlantic issues responded to Wall Street's bright tone, International Nickel and U.S. Steel receiving best support. Aviation shares were less active, although there were individual speculative features. Iron and steel shares opened firm, but activity in mid-week reflected the tendency to take profits after a sustained rise. Electricity supply issues failed to respond to the generation figures, and equipment issues lacked life. Textile shares showed more promise at the beginning of the week, but it proved short-lived. In the miscellaneous section building issues received early support, which declined in later dealings, and the miscellaneous leaders, which showed advances of 3d. to 6d. on Monday, lost as much on Tuesday and Wednesday.

Business in the oil market was very restricted, and both leading and speculative issues were unable to resist the dwindling tendency of quotations. The Californian oil situation continued to depress the market, for the latest output figures suggested that substantial over-production was still proceeding.

Tea shares came back to favour during the first part of the week, although Thursday brought a check to the sustained upward movement. Indian shares took the lead, but Ceylon issues caught up on Tuesday. The market resisted profit-taking in mid-week, and investment demand found dealers with limited supplies of shares. Rubber shares showed a rather paradoxical firmness on early days of the week in view of the dull conditions in Mincing Lane. Little business, however, was in progress, and investors seemed disposed to await the slow development of restriction in effecting the long-expected reduction of stocks.

The Kaffir market staged a sharp recovery on Monday in anticipation of taxation developments, but later news that a committee of enquiry was to be set up (see page 527) brought the realisation that its fruits would inevitably be slow to mature. Early support for "heavy" shares was encouraged by Cape purchases, but the movement could not be sustained. Hesitancy spread on Tuesday and continued on the two following days, as public support was reduced to a minimum. Speculative counters suffered most in the quieter conditions, but even finance issues were not fully maintained. Early interest in West African counters soon waned, and East Africans became uncertain after opening confidence. Australian gold shares also turned recessionary. Business in Rhodesian copper issues was

small, and tin shares made a negative response to favourable dividend announcements.

FOREIGN STOCK EXCHANGES

NEW YORK

THE boom, which for a space did fail, trebly thundered at the end of last week, when the President, in reply to Mr Roy W. Howard, of the Scripps-Howard newspaper chain, declared that the basic reformist programme of the Administration had reached "substantial completion" and that a breathing spell was at hand. This, the most favourable news the market had had since the summer of 1933, caused, naturally, a disposition to extract from the latest figures of production and business activity a prophetic virtue which, on a first reading, had been strangely overlooked. The violent death of Senator Huey Long, subsequently, was scarcely a market factor except to the extent that an obscure local vendetta removed one demagogic opponent from the President's electoral path next year. Last Saturday's Wall Street turnover of 1,290,000 shares was the highest for any half-day for nineteen months, rises of 1 to 4 points occurring in leading utilities, industrial and farm equipment shares. On Monday, business was again heavy, but the tone became more hesitant. Profit-taking, however, was sharply checked on Tuesday afternoon, and next day the market pressed forward on a wide front. The movement was publicly supported and not unduly discriminative, a general sense of increased well-being finding expression in purchases of market leaders as such, rather than with any precise reference to the prospects of their individual industries. Most prominent counters in the motor, chemical, engineering, railroad, distilling and amusement industries—particularly the last-named—were all in the van of buying. Apart from a little irregularity in Government issues, the domestic bond market was consistently firm. An issue of \$24 millions in 4½ per cent. bonds, by Republic Steel, reached a 4 point premium after speedy sale. Many industrial pointers, admittedly, are favourable. "Iron Age" puts this week's steel mill output at 52.5 per cent. of capacity, against 50.5 last week, though no increase in demand is reported from the automobile industry. Last week's power output was as much as 12 per cent. higher than that of the corresponding week last year. The possibility of tacit ratification of the Government's silver buying policy has been widely canvassed.

Efforts to obtain a voluntary curtailment agreement to end the Californian oil "war" are meeting serious resistance, but will be continued for the present.

* Two-Hour Session.

PARIS

Investment activity was overclouded by uncertainty over the outcome of the week's momentous Geneva discussions. The Bourse opened with a firm tone on Monday, but the volume of new orders proved disappointing. Rentes were steady, and bank shares were firm on balance. On Tuesday, however, a hesitant opening was followed by fairly extensive selling, from which bank shares particularly suffered, though lower quotations were common to most groups. In the middle of the week business became greatly restricted, and even Rentes, which had

NOTE—Shares with a New York Quotation or with definite American interest are distinguished by italics

In calculating yields on fixed interest stocks quoted below allowance is made for interest accrued since the last date of payment, less income tax at the standard rate. Where stocks are definitely redeemable at a certain date the yield includes any profit or loss on redemption; where stocks are redeemable at or before a certain date the final date of repayment is taken when the stock stands at a discount and the earliest date when the quotation is above par. The return on ordinary stocks and shares is calculated by reference to the latest dividends, account being taken of any enhancement or reduction of interim dividends. Allowance is made for accrued dividends in calculating the yield on "cum div." shares.

(Continued from page 529)

previously resisted depressing influences, were affected by the general atmosphere. International counters made a firmer showing. Though gold mining, rubber and oil shares were less widely marked down than other issues, speculators showed extreme reluctance to commit themselves on either tack. A revival of activity was regarded as unlikely until the international situation, one way or the other, had become clearer.

	Sept. 4, 1935	Sept. 9, 1935	Sept. 11, 1935		Sept. 4, 1935	Sept. 9, 1935	Sept. 11, 1935

BERLIN

In the first part of last week the market had a depressed appearance. Before the week-end, however, a general recovery was in evidence, under the leadership of chemical shares. Saturday's buying was active, and as the market was not well supplied with stock some leading issues, particularly potash shares, made substantial gains. A prominent exception to the improved trend, however, was Reichsbank, which dropped several points during the week on sustained selling. The present week opened inauspiciously, declines being common to most stocks. A dull and uncertain tendency continued on Tuesday. Reichsbank bonds had a weak appearance and certificated dollar bonds were lower. Russian pre-war loans, however, were bought on talk of a Soviet borrowing transaction in London. (The nature of this reported "borrowing transaction" was indicated in a Note on page 476 of last week's *Economist*.) The market was somewhat more cheerful in the middle of the week, industrials generally tending to improve. The rally, however, was by no means universal. The official Bourse index number (1924-26 = 100) has been calculated at 95.48 for August against 94.66 for July, and the bond index at 95.35 against 95.29.

	Sept. 4, 1935	Sept. 9, 1935	Sept. 11, 1935		Sept. 4, 1935	Sept. 9, 1935	Sept. 11, 1935

AMSTERDAM

Although the Bourse, on the whole, was firmer than in the preceding week, business remained on a very small scale and tended to become erratic as the week progressed. Among industrial shares, Philips Lamps made a good recovery on Monday and Tuesday, but subsequently reacted. Oil shares were neglected, and rubber shares were dull on the published scales of duty on the commodity in the Dutch East Indies. A fair buying movement occurred in Netherlands Shipping Union. The tendency of Dutch Government bonds continued downwards.

	Sept. 4, 1935	Sept. 9, 1935	Sept. 11, 1935		Sept. 4, 1935	Sept. 9, 1935	Sept. 11, 1935

BY STOCK EXCHANGE INTRODUCTION

Monks Investment Trust, Ltd.—Particulars of issue of £100,000 3½ per cent. first debenture stock ranking *pari passu* with existing first debenture stock. Redeemable at par on December 31, 1980, or from December 31, 1975, on three months' notice. £80,000 stock placed privately at £97½ per cent., balance of £20,000 in course of being placed.

PRIVATE PLACING

Young Accumulator.—The Young Accumulator Company (1929) has placed privately a line of nearly 60,000 shares of 2s. each to provide funds for the expansion of the company's business.

BONUS ISSUE

Gestetner (D.).—At the general meeting on September 27th a resolution is to be submitted that a sum of £31,875, part of the undivided profits standing to the credit of the reserve fund, be capitalised and applied in paying up in full 127,500 unissued ordinary shares of 5s., such shares credited as fully paid-up to be allotted to ordinary shareholders registered on September 27th, in the proportion in which they would have been entitled thereto if distributed by way of dividend.

CONVERSIONS AND REPAYMENTS

Godfrey Phillips, Ltd.—At an extraordinary general meeting held September 10th the recently issued 184,500 £1 ordinary shares were converted into stock.

International Power and Paper Company of Newfoundland.—The International Power and Paper of Newfoundland has called a meeting for October 4th, at Winchester House, of holders of £1,890,900 5½ per cent. "B" debenture stock. It is proposed to issue "A" mortgage debenture stock under guarantee of the Treasury for purpose of providing for redemption of 4½ per cent. "A" mortgage debenture stock, and new mortgage debenture stock is to be issued to the Treasury in exchange for 4½ per cent. extended "A" stock. If sanctioned, notice will be given to "A" stockholders of redemption at par of the whole of outstanding "A" stock on January 15th, 1936.

OFFERS ABROAD

German Treasury Bonds.—The Foreign Currency Control Office invites foreign owners of "blocked reichsmark credits" to subscribe to the 500,000,000 rmks. 4½ per cent. Treasury bonds which form part of the 1,000,000,000 rmks. loan recently issued by the Reichsbank for the consolidation of unfunded Government credits.

Republic Steel Company.—A public offer of \$24,000,000 (£4,800,000) of convertible 4½ per cent. bonds at par was made September 10th in connection with that concern's merger with the Corrigan McKinney Steel Company. The bonds are to be convertible into common stock at \$20.50 per share. The proceeds are for the retirement of \$6,419,000 of the Republic Steel Company's 5½ per cent. bonds and \$7,346,000 of various bonds in subsidiary concerns. The balance is to be utilised for working capital.

FORTHCOMING ISSUES

William Hartley, Ltd.—This company is considering making a 3½ per cent. preference shares.

Nations'ists (Proprietary), Ltd.—This company is about to issue £75,000 7 per cent. cumulative participating preference shares.

Projectile and Engineering Company.—It has been decided to offer 125,000 ordinary shares of 10s. at 17s. 6d. to shareholders in proportion of one new share for each two held.

(g) Payable in Sydney in Australian currency. (h) Absorbed £89,250. (i) Absorbed £83,750. (j) Also capital bonus of 20 per cent. (£42,500) from general reserve. † Free of income tax.

THE BOLSOVER COLLIERY COMPANY, LTD.—An interim dividend in respect of 1935 on ordinary shares of 2½ per cent., less income tax, will be paid October 11, 1935. This represents an increase of 1 per cent. as compared with the previous year and is in conformity with the statement made by the chairman at the last annual general meeting in regard to interim dividends.

FOREIGN GOVERNMENT BOND TRUST.—Municipal and General Securities Company announces the third income distribution by the Foreign Government Bond Trust of 5d. per bond-unit, tax free, payable October 1st on presentation of Coupon No. 3 at the City office of the trustee, Lloyds Bank, Ltd., 72 Lombard Street, London, E.C. The distribution covers a period of six months from September 6, 1935, and is derived from the interest received on the foreign Government bonds selected from the list of 117 bonds in which the trust is permitted to invest. The distribution for the corresponding period last year was 5d. for the initial five months and 6d. on April 1st for the half-year.

The Sussex Brick Company, Ltd.—At meetings which were held at Horsham September 10th, resolutions increasing the capital of the company to £540,000 by the creation of 120,000 new 8 per cent. cumulative preferred ordinary shares of £1 each and 280,000 new deferred shares of 5s. each were passed unanimously. The company is increasing its capital to purchase the whole of the issued share capital of the Dorking Brick Company, Ltd.

Macleans, Ltd.—List will open on September 17th for issue of 750,000 6 per cent. cumulative redeemable preference shares at 21s. per share.

Crown Flour Mills.—An issue of £160,000 4½ per cent. debenture stock will be made shortly.

Ruberoid Company.—An offer of 300,000 5½ per cent. redeemable preference shares will be made next month.

J. Brockhouse and Company (Ireland).—A public issue by this company will shortly be made in Dublin.

CALLS DUE SEPTEMBER 16, TO SEPTEMBER 21, 1935

The grand total of calls falling due in September, 1935, is £16,099,085, which compares with £4,766,761 which fell due in September, 1934.

REPORTS AND NOTICES

BANKS

THE NATIONAL BANK OF AUSTRALASIA LTD.—The National Bank of Australasia Ltd., announce the establishment of a local Board of Advice in Sydney, N.S.W. The first members of this Board of Advice, which will be similar to those already in existence in London and Brisbane, are Sir Colin Stephen, Mr Hunter White and Lieutenant-Colonel Hon. T. A. J. Playfair, D.S.O., O.B.E., V.D., M.L.C.

MINES

SOUTHERN CROSS GOLD DEVELOPMENT, LTD.—The directors have decided to extend the period during which the option to subscribe for shares in the capital of the company as conferred by the outstanding option certificates to bearer can be exercised from September 30, 1935, to March 31, 1936. Option holders are invited to present their certificates at the registered offices of the company, 341 Salisbury House, London Wall, London, E.C.2, for endorsement.

RUBBER

KUALA MUDA RUBBER ESTATES, LTD.—Profit for year ended March 31, 1935, amounted to £31,320, as compared with £19,427 in previous year. Debenture interest absorbed £12,600. Interest on 7 per cent. notes, £2,500. Redemption of 7 per cent. notes (1st series) £12,600. Transfer to income tax reserve, £2,281. Carry forward, £716. The crop collected during the year amounted to 2,577,060 lbs. The average cost f.o.b. was 2-55d. per lb. The estates' standard production for 1935 has been fixed at 3,244,600 lbs. The average gross price realised for all grades of rubber was equivalent to 6-64d. per lb. London landed terms.

MISCELLANEOUS

FIRST BRITISH AMERICAN CORPORATION, LTD.—The official announcement is made of the incorporation of a new financial company in London, "First British American Corporation, Ltd.," with an initial capital of £200,000 to carry on the business of a financial house and will act as correspondents of First Boston Corporation, New York, whose European interests it will take over. It will commence business on September 16th, at 3 Lombard Street, E.C.3. The chairman will be Mr J. W. Hambro, who is a director of the First Boston Corporation and of Michels and Company, of Zürich, and the board will include Mr Allan M. Pope and Mr Nevil Ford, president and vice president respectively of The First Boston Corporation. Mr Robert Boothby, M.P., who has tendered his resignation as a member of the Stock Exchange will join the board as soon as his resignation has been accepted. Mr Willem van Tets, who has hitherto represented The First Boston Corporation in London, will join the management of the new corporation.

CERTIFIED ACCOUNTANTS.—The next examinations of the London Association of Certified Accountants will be held on December 3rd, 4th and 5th in Belfast, Birmingham, Bristol, Cardiff, Cork, Dublin, Edinburgh, Glasgow, Hull, Leeds, Liverpool, London, Manchester, Newcastle-on-Tyne, Nottingham, Plymouth and Sheffield. Women are eligible under the Association's regulations to qualify as certified accountants upon the same terms and conditions as are applicable to men. Particulars and forms are obtainable at the offices of the Association, 50, Bedford Square, London, W.C.1.

BRITISH LION FILM CORPORATION.—The report to March 31, 1935, shows that gross profits on trading increased from £42,128 to £52,875. Net profits increased from £5,801 to £14,891. Film stocks increased from £50,187 to £94,833. Reconstruction proposals provide for capital increase from £210,000 to £750,000. 300,000 6 per cent. convertible debenture stock to be created. £125,000 in debentures, and £25,000 in ordinary shares will be subscribed by Mr S. W. Smith, Mr N. L. Nathanson and Mr A. P. Holt. Present 12s. 6d. preferred ordinary shares to be converted into 7½ per cent. non-cumulative participating preference shares. The present holders will receive five new preference shares for each four at present held, and given the option to subscribe for one ordinary share for each preference share at any time within five years at par. Present deferred shares of 4d. each nominal to be converted into new preference shares at the rate of 30 deferred shares for one new preference share. Present deferred shareholders to have the option at any time within five years of subscribing for new ordinary shares at par at the rate of three new ordinary shares for each preference share held. Meeting, Holborn Restaurant on October 3rd.

Not the only Pebble on the Beach

All the World is talking of our wonderful ship "NORMANDIE" and her meteoric sweep into fame has perhaps caused the public to be momentarily forgetful of our other famous ships, each unsurpassed in its sphere. The same exquisite style, faultless service, and the traditional French Line cuisine is the lot of the traveller on a French Line ship, no matter which one he may choose for his crossing.

The fleet is unsurpassed on the Atlantic, and no unit is more than eight years old.

French Line

Southampton—New York

"ILE DE FRANCE"

a ship that has for eight years carried more luxury passengers between Channel Ports and New York and vice versa than any other ship irrespective of size.

"NORMANDIE"

the World's largest and fastest liner. "The Perfect Ship."

"LAFAYETTE"

the World's third largest motor-ship, the acme of comfort combined with economy, a "Cabin" ship.

"CHAMPLAIN"

the World's largest "Cabin" liner. Handsomely decorated and furnished. Big cabins. Vast saloons, unrivalled decks.

FROM SOUTHAMPTON

ABYSSINIA— AND THE MARKETS

What has your daily paper done to keep you abreast of the developments at Geneva and their effect, now and in the future, on the markets?

Has it helped you in framing your investment policy?

Has it told you what significant stages to look for in the gradual unfolding of the League machinery?

Perhaps your paper has been too much occupied in pleading its own case—pro-League—anti-League—or whatever it may be—that it has scarcely bothered to help you understand the day-to-day facts at all.

Perhaps it is so occupied with the ultimate political significance of this crisis of League principles that it has considered the financial and market angle *infra dig*.

Perhaps the financial pages that you read have just never bothered about it—have never even taken the trouble to tell you how the machinery of the League works in a case like this, still less attempted to relate it to the market position.

You would not have suffered these drawbacks if you had been reading

THE FINANCIAL NEWS

Ask the "F.N." readers amongst your friends and they will tell you.

THE FINANCIAL NEWS has dealt day after day, in its leading articles and investment notes, with the latest Italo-Abyssinian developments—what they mean, where they lead, how the market is taking them, what effect they should have on gilt-edged values, industrials, gold mines. . . .

THE FINANCIAL NEWS has no political axe to grind. In this matter, as in others, its sole aim is to help and advise the investor and business man, and to watch over the interests of the business and financial community.

AN OMINOUS CALM

THE chief characters in the Italo-Abyssinian drama are at present off-stage. An interval has arrived. But in this brief respite, the scene, both at Geneva and elsewhere, is being rapidly set for a momentous decision; and there can only be a very short lapse of time now before the fateful words are uttered.

The delay in the last week, after Sir Samuel Hoare's and M. Laval's firm speeches at Geneva, has given the Council's Committee of Five, and its drafting sub-committee of three, time to elaborate the League's official offer to both parties in this critical dispute. On Wednesday, Señor Madariaga, the Chairman of the Committee of Five, presented its report to the representatives of Italy and Ethiopia. What this report contains has not been officially disclosed. It is known, however, that it proposes a system of international assistance to Abyssinia, designed to establish the authority of the central Government, secure the abolition of slavery, maintain order in frontier provinces, and generally develop the country's potentialities in accordance with the cardinal principles of Western civilisation and under the ægis of the League. Apparently a surrender of Abyssinian territory to Italy is also envisaged; and in compensation Ethiopia is to receive a corridor to the Red Sea through the colonial territories of France and Great Britain.

Much of this plan for international "assistance" to Ethiopia admits, by implication, the validity of many criticisms of Ethiopian administration contained in the Italian "case." But the Committee's report gives no special and overriding privileges to Italy in the Ethiopian gendarmerie, or in other administrative departments; and—no doubt due to the insistence of the British representative—it is very careful to ensure that no infringement of Ethiopian sovereignty has been counselled. The report is described as less favourable to Italian claims than the famous offer made by the French and British delegates at Paris last July. And Signor Mussolini, in his turn, is reported to have said that, if that forecast were correct, the Committee's proposals could only be regarded as a derisory offer.

The Italian Cabinet met on Wednesday and was adjourned until Saturday, after approving a number of new

or increased taxes and the arrangements for a "voluntary" internal War Loan. The implications of these emergency financial measures are discussed in a Note on page 569 of this issue. Of greater importance are the hopes aroused by the adjournment of the Italian Cabinet—hopes that wiser counsels might yet prevail upon Signor Mussolini. Yet though this preliminary instalment of the financial burdens Italy will be called on to bear may have a sobering effect, the Cabinet adjournment does not, in itself, indicate that the Italian Government is engaged in second thoughts. It may mean that Signor Mussolini and his henchmen are not so foolish as to announce a decision before they have seen the Council Committee's report.

But there is some ground for thinking that the warning utterances of loyal Italians have reached the ears of Signor Mussolini. They will have pointed to the crushing economic burden which he must inevitably impose on the country if, as he threatened to do last week-end, he insists on "going right ahead." The heads of the Italian Services cannot have left him in much doubt about Italy's predicament in the possible event of naval, as well as economic, action in restraint of Italian aggression under Art. XVI of the League Covenant. The Duce appears to have abated the provocation in his speeches—though not that in the articles of his well-drilled Press—during the last few days. It would therefore be an error, in our view, to assume that the present interval in the drama is merely formal. These are, however, genuinely fateful hours; and M. Laval did well to urge Baron Aloisi to go to Rome, even though the Duce subsequently refused to receive any "advice from Geneva."

What will be the background of the Duce's reflections? There has been no change of position whatever in Great Britain's fundamental attitude. Despite the resignation of Lord Ponsonby from Labour Party leadership in the House of Lords and despite the attitude of Mr Lansbury and of the Socialist League, there is no important body of opinion in this country which does not now support in its entirety the doctrine contained in Sir Samuel Hoare's speech last week. As a nation we are prepared to shoulder our share of the responsibility for sanctions, should they prove

necessary to maintain the international order embodied and safeguarded in the League Covenant. On this point, the country is as united as it was in its determination to honour its pledge to Belgium in 1914. Indeed, for many people our present attitude would appear no more than a debt of honour which we owe to those who fought for an international ideal in the Great War. Moreover, the determination of the British Cabinet to give the fullest support to the attitude taken by our representatives at Geneva is shown by the movements of certain units of the Home Fleet to Gibraltar. Among these vessels are the battle-cruisers "Hood" and "Renown"; and the former is the most powerful warship in the world. It will not have escaped Italy's attention that the strength of the British Navy in the Mediterranean has been nearly doubled since the end of July.

But what is France prepared to do? Taken at its face value, M. Laval's declaration in specific terms that France would not fail in her obligations under the Covenant was unimpeachable. Yet a grave doubt remains. It is persistently and not incredibly reported that M. Laval has given a personal pledge to Signor Mussolini that he will not be a party to any action against Italy beyond the limits of "economic sanctions"; and it is also reported that M. Laval is eagerly seeking, now in this direction and now in that, for a way of escape from France's obligations under the League Covenant. If by such endeavours the French Prime Minister can secure a fair settlement between Italy and Ethiopia without war, he will have deserved well of humanity. But if his policy is to exploit the opportunities that Geneva only too clearly offers for procrastination and delay until Italy presents us all with a *fait accompli*; or, alternatively, if he, in the name of France, limits the League's efforts to some ineffective sanctions of a minor character—such as refusing to lend Italy money—then he will have done both the League and his own country a scarcely reparable disservice. It cannot be too clearly stated at this juncture that the world is not interested in legalistic questions whether this or that Article of the Covenant should be invoked. The fundamental issue is whether a threatened act of aggression can or cannot be prevented or arrested by the collective powers of the League. If the Members of the League merely do something that makes Italy feel a little more uncomfortable than she is in any case going to feel, but does not prevent or arrest her unwarrantable invasion of Ethiopia, the League will have failed and will have proved its impotence—its impotence on behalf of France or of anyone else. If Signor Mussolini attacks Abyssinia, the future course of history will depend not on whether the League will act or not, but on whether it will act effectively. If M. Laval is not prepared to face this acid test, it is very much in the interests of France that he should hand the responsibility to someone who will. If France and Britain cannot lead the League boldly and in unison, in the face of all eventualities, the outlook for both of them—and for Europe—is black indeed.

RECOVERIES AND RECOVERY

UNHAPPY the few countries in the world that cannot show some measure of economic recovery in the last year or so! Consider the course of the world depression since 1929, and the defensive measures it has elicited in all countries: currency devaluation in most of the world, exchange controls and clearings, "blocking" of debt services, steep increases in tariffs, strangulation of imports by quotas, subsidisation of exports, embargoes on foreign lending, Government-sponsored public works on Government-induced cheap money, multiplication and aggrandisement of State subsidies to national producers, statutory control of production and fixation of prices—in brief, all the regressive artifices which render national self-sufficiency more profitable for domestic producers by increasing the burden of indirect taxation on domestic consumers. Add to this of intensification of re-armament in a feverishly distraught world. Now if there were no economic recoveries to be recorded in the various national units after five years of such disruptive economic zeal, the fruit of human effort would surely be but dust and ashes in the mouth. The

wonder is not that there should be some measure of specific economic recovery within the various countries of the world, but that, after Herculean strivings, it should be so uneven and so limited. As for any general recovery in the world as a whole and in trade between the different countries—well, like Dr. Johnson's dog that walked on its hind legs, the wonder is not that it does it badly, but that it can do it at all!

These considerations are prompted by the receipt of the fourth annual World Economic Survey of the League of Nations, that for the year July, 1934-July, 1935.* Mr J. B. Condliffe has the unenviable, but necessary, task which is cheerfully shouldered by any small boy watching a conjurer—that of explaining miracles in terms of prestidigitation! In analysing the world's economic progress year by year, Mr Condliffe probes the administrative prestidigitation of the chief trading countries, and presents both his narrative and his conclusions with a range of illustrative charts and statistics which is unequalled in economic documentation.

According to the latest Survey, "the economic outlook at the beginning of 1935 was distinctly more confused and unpromising than it had been a year earlier." A year ago the Survey noted that the indices of recovery in the majority of the more fortunate countries—mostly those which had devalued their currencies or allowed them to depreciate—had come to a halt; and that, in any case, "recovery" had not been translated to the sphere of international trade. Now, a year later, the new Survey has to record a slow continuance of recovery in the indices of separate countries, but, in the words of the Director of the International Labour Office in his latest Report, the recovery has been "superficial rather than fundamental." Production remains low; there are still vast, stagnant pools of unemployment in the chief industrial countries; and in the world's primary-producing countries there are unemployed plantations and labourers. Despite the extension of self-sufficiency measures and the building and re-armament booms in most countries, production in most countries had not even regained the 1929 level six years thereafter. The trading world by mid-1935 was still parcelled up into distinct sections. Among these the divergent movements of price-levels, exchange controls and rapidly rising trade barriers prevented the accomplishment of a basic equilibrium, on which trading relations could once more safely impose a general economic recovery. The gold bloc were still deflating prices and throttling imports. The pseudo-gold countries with exchange controls—e.g. Germany, Hungary, Roumania and, within the last year, Italy—were engaged in equalising imports and exports with individual countries all round. The United States developed its active balance of trade even further in 1934 and early 1935 as a result of an undervalued dollar, of the repatriation of American capital in 1934, and of a flight of European capital to America in 1935; and thus, despite heavy silver purchases, drained gold from the rest of the world. And, finally, the sterling area as a whole developed an increase in its passive trade balance, *vis-à-vis* the outside world, from £129.8 millions in 1933 to £213.4 millions in 1934, which drove sterling down by 5 per cent. between the close of 1934 and March of this year.

As the Survey is quick to note, industrial production, especially the production of steel, textiles and buildings, in the world as a whole forged ahead in 1934; and employment increased while unemployment declined. But "the characteristic feature of the recovery that has been proceeding slowly and unevenly since the middle of 1932 is its dependence upon national markets and national policies... international trade shows little sign of revival." Where wholesale prices have risen, as in the sterling group of countries, the Survey concludes that "restriction of the supply of important commodities, rather than an increase in demand," is the cause; and such a rise of prices was offset by falling prices and dwindling imports in the gold bloc countries, which has only made for unbalance. Even currency depreciation itself, Mr Condliffe points out, has so far been as potent in deflating prices in foreign markets as in raising them in domestic markets.

* "World Economic Survey." By J. B. Condliffe. Publications of the Economic Intelligence Service of the League of Nations. London: Allen and Unwin. 300 pages. 6s. net.

A most striking feature in national recoveries is the general effect in the industrialised countries with depreciated currencies of tariff insulation and cheap money policies on building costs and activity. In an illuminating series of tables the Survey shows that the sharp reduction in the long-term interest rate due to cheap money has been the most potent stimulant of that building boom which has developed in these countries—and this despite rigidity of wages and in the price of building materials. Building and re-armament together can account for much of the domestic recoveries in Britain, Germany, Japan and Sweden. The primary producing countries, on the other hand, have found their markets in the industrial countries shrinking as a result of the safeguarding of the home producers in the latter. They have therefore had recourse to accelerated industrialisation as their national solvent of depression—often on the untransferable debt services which the industrial creditor countries refuse to accept in the form of primary imports! Thus, the international division of labour becomes less extensive and more national; world trade remains at a low ebb; and the unbridged debtor-creditor hiatus persists.

In the field of industrial relations, the Survey shows that the industrial real wages of those in employment, after rising by about 10 per cent. between 1929 and 1933, began to fall during 1934; for the rise in the national cost-of-living levels outran a slight rise in money wages. Entrepreneurs, on the other hand, both in industrialised and primary producing countries, have contrived to exert sufficient pressure, either on their Governments or on markets, to maintain and even raise prices by restricting production and by roping off their markets. Thus, the profitability of enterprise—and to a lesser extent of agriculture—re-emerges at lower levels of production; but the communal wellbeing is scarcely benefited. Mr Condliffe notes a redressment, by these methods, of the great gap between the prices of primary products and those of manufactured goods, by which the onset of the depression was first signalled; but he is careful to point out that the maintenance of the, at present, narrowed "spread" between them implies continuance in the future of the Governmental and other measures which have raised primary prices by restricting production. That possibility is open to grave doubt.

On the financial side, the Survey points out that international exchange problems to-day impose a great strain, even on national recoveries. In the under-valuation of the dollar and the over-valuation of the gold bloc currencies lie the main reasons for the strain. On the other hand, gold reserves are now greatly increased in the world; and there is a strong and dangerous possibility that a sharp credit inflation and rise of prices may gather speed once it is let loose, say, in America, and lead to another unbalanced industrial boom. In that case, the perennial peril of vast short-term capital funds may play havoc with the exchanges once again. These considerations urge the necessity for the establishment of greater freedom in trade and of correct relationships between national currencies. The most interesting fact which the Survey shows under this heading is the drastic narrowing down of both active and passive trade balances in all countries between 1929 and 1934. As these balances have both dwindled, together with the volume of "invisible" trade, the available funds for the transfer of international debt services have shrunk; and the problem of shifting them has become more acute. While "blocked" funds in debtor countries have been reduced, new "blockings" on commercial account have emerged under bilateral clearings; and it would seem that only Satan has driven out Beelzebub.

The impression left by the League's survey in the mind of the observer is scarcely comforting. The conjuring tricks of the world's Governments in the economic sphere are not so very impressive; and when this prestidigitation is so scrupulously analysed they become less so. Millions of unemployed; "distressed areas" in both industrial and primary countries; cheap money, but a predominant desire to "keep it liquid"; and an international political tension which waxes with economic self-sufficiency. These are the inescapable facts we must set against the slightly—but only slightly—improved indices of so many purely domestic recoveries. The League Survey concludes that in the summer of this year the signs of economic improve-

ment were "more encouraging than at any preceding period since the depression began, . . . given economic peace and international co-operation." Will the nations and their Governments pay this smaller price for a wider recovery, or will they go on paying the higher price for sectional improvements?

SHEEP'S CLOTHING

In our last survey of the wool situation* we reached the conclusion that the boom in wool prices during 1933 had been liquidated, but that a sharp rise in prices in the coming months was unlikely. Actually, prices remained fairly steady between September, 1934, and March, 1935; but since then quotations have again moved sharply upwards. Thus, prices at the opening of the Australian wool auctions on September 2nd this year showed an increase of 15-20 per cent. over the closing quotations in June, and of 25-30 per cent. as compared with those realised at the opening of the sales a year ago. Although quotations have since declined a little, they remain well above the level of a year ago.

Wide fluctuations in the price of wool influence to a great extent the dimensions of the national income of the leading wool producing countries, and vitally affect their capacity to purchase commodities from other countries. For example, the total value of Australia's wool sales, as estimated by Messrs Dalgety and Company, Ltd., declined from £A.52,165,778 in the season ended June, 1934, to £A.38,526,025 in 1934-35, and the price realised per lb. fell from 16d. to 10d. during the period. New Zealand's wool bill declined even more sharply, from £N.Z.10,451,565 in 1933-34 to £N.Z.4,486,479 in 1934-35, and the average price per lb. fell from 11d. to 6½d. It is, therefore, important to know if the recent rise in prices was justified and if it is likely to be maintained.

Although estimates of supplies available during the season ended June 30, 1936, are still based on a considerable element of surmise, they appear by no means excessive. Such evidence as is available suggests that the carry-over of wool into the current season was smaller than a year ago, both in producing and consuming countries. Thus, stocks at selling centres in Australia declined from 65 million lbs. at the end of June, 1934, to 26 million lbs. at the close of the past season. Similarly, supplies of unsold wool at South African ports fell from 23 million lbs. to only 4 million lbs. On the other hand, New Zealand's carry-over in 1935, at 87 million lbs., showed an increase of 37 million lbs. on the previous year. But the increase in the carry-over of crossbred wool in New Zealand and Argentina was more than offset by a decrease in stocks elsewhere.

Moreover, supplies in consuming countries at the end of the past wool season also appear to have been lower than a year before. Stocks at the principal British ports and at railway and canal depots in Yorkshire declined

* Economist, September 29, 1934.

from 220 million lbs. at the end of June, 1934, to 172 million lbs. at the end of the past season. The principal warehouses in Japan contained 48.5 million lbs. of wool at the end of May, as compared with 76.9 million lbs. a year ago. Similarly, raw wool held by dealers, manufacturers and topmakers in the United States fell from 176 million lbs. at the end of June, 1934, to 142 million lbs. a year later. Supplies of tops and noils in the United States were also appreciably smaller than a year ago; and stocks of tops at the principal commission combing establishments of Belgium, France, Germany and Italy fell from 67 million lbs. at the end of June, 1934, to 50.9 million lbs. at the end of the past season.

While stocks at the end of last season were lower than a year ago, it is already fairly evident that the 1935-36 wool clip may probably be smaller, but certainly not heavier, than last year's production. As the following table shows, the clip of 1934-35, like that of the preceding year, was appreciably smaller than production in 1928-32:—

WORLD WOOL PRODUCTION
(In millions of lbs., "greasy" basis)

Season	Production						Index of Wool Prices (July, 1914=100)
	Australia	Argentina	New Zealand	Union of South Africa	United States	United Kingdom	
1928-29..	968	347	272	290	384	114	3,888
1929-30..	938	353	273	309	400	112	3,915
1930-31..	912	361	271	302	433	111	3,820
1931-32..	1,007	378	283	314	460	113	3,822
1932-33..	1,062	388	288	330	435	119	3,832
1933-34..	985	385	301	284	450	120	3,714
1934-35..	1,020	385	292	213	438	114	3,668
1935-36..	950	...	...	240	...	...	...

Sources: Production, Imperial Economic Committee. Price Index, Weekly Wool Chart.

The decrease in world production during the past two seasons was mainly due to smaller clips in Australia and in South Africa. The severe decline in South Africa's clip was caused by the disastrous drought of 1933, which depleted the sheep population of that country. As the flocks in South Africa have partially recovered from the drought, the clip is expected to show an increase of about 27 million lbs. during the present season. New Zealand's sheep population increased slightly, from 28.6 millions in 1934 to 29.0 millions in 1935, and as the flocks are in good condition, production of wool may show some increase in the current season. But a slight expansion of output in South Africa and New Zealand will probably be more than offset by the reduction, estimated at 70 million lbs., in Australia's clip. Moreover, the clips of Argentina and Uruguay are not expected to show an increase, especially as weather conditions in these countries have been unfavourable during the summer. Total supplies of raw wool in 1935-36 are, therefore, likely to be somewhat smaller than in the previous season.

On the other hand, there are no grounds for expecting a decline in consumption during the present season. Statistics of retained supplies, compiled by the Imperial Economic Committee, reveal a considerable redistribution between various countries in recent years. It is noteworthy that since 1929 the United Kingdom has regained its position as the world's leading consumer of raw wool:—

RETAINED SUPPLIES OF RAW WOOL
(In millions of lbs.)

Year	United Kingdom	United States	France	Germany	Italy	Japan	U.S.S.R.	Total*
1928	523	621	542	386	151	115	472	3,102
1929	556	669	594	373	164	107	480	3,288
1930	591	585	606	356	163	115	378	3,107
1931	591	618	492	328	142	189	280	3,027
1932	677	489	503	335	198	204	199	2,896
1933	691	602	590	366	225	239	201	3,150
1934	605	544	378	338	183	181	204	2,683

* Including Belgium, Canada, Czechoslovakia, Poland and Spain.

The severe reduction in the imports of the leading consuming countries in 1934 indicates that they had bought in excess of requirements during the boom in the preceding year. But the excessive stocks then acquired had been largely worked off by the spring of 1935. The re-stocking movement which began last April arose, therefore, from

the need to replenish stocks. This re-stocking movement, which was the direct cause of the rise in prices, was not yet reflected in the import statistics of the first five months of the current year. During that period, the ten leading consuming countries imported 1,100 million lbs., a fall of 5 per cent. from the figure for the corresponding period in 1934, and one of 13 per cent. as compared with 1933. Since then, however, a number of countries appear to have imported larger quantities than a year ago. For example, British imports rose from 89 million lbs. in July-August, 1934, to 144 million lbs. during the past two months. But although the re-stocking movement has probably not yet gone too far, there is a danger that it may develop into a "scramble" like that of 1933. This would inevitably be followed by a collapse of prices. While it is true that the underlying conditions of supply and demand justified a moderate rise in price, they do not seem to justify a further rise.

THE SEVENTY-FOURTH CONGRESS—II

The first article, published last week, summarised the main provisions of those Acts passed in the recent session of Congress which were concerned with Agriculture, Relief, Social Security and Labour.

THE Banking Act excited a great deal of controversy in the course of its passage through Congress. It was considerably amended, especially at the instance of Senator Carter Glass, and is a much more conservative measure as finally enacted than it was when originally drafted. It abolishes the Federal Reserve Board, substituting for it a Board of Governors, each Governor being appointed by the President for a fourteen-year term. The President will designate one of the Governors as chairman for four years. The heads of the twelve Federal Reserve Banks are to be re-named Presidents; they are to be appointed by the directors of the Banks, subject to approval by the Board of Governors. The Act creates a Federal Open Market Committee, consisting of the seven Governors and five representatives of the Reserve Banks. This Committee is to decide on the purchase or sale of securities in the open market, the Reserve Banks being given no discretion in the matter. The limitations on purchase of United States Government bonds by the Reserve Banks are removed, but it is provided that these bonds may only be bought in the open market. To assist in controlling credit, the Board of Governors is given power to increase, up to double the present figure, the minimum reserves required to be kept with the Reserve Banks by member banks of the Federal Reserve System. Changes in discount rates are to continue, as at present, to be proposed by the Reserve Banks and approved by the Board.

The member banks are empowered by the Act to increase their investments in real estate. They may lend up to 60 per cent. of the value of properties for not more than ten years, but the total of such loans may not exceed the capital and surplus of the bank or 60 per cent. of its time and savings deposits, whichever is greater. This is a surprising provision in view of the part that real estate loans played in undermining the American banking system. It is doubtless inspired by the anxiety to increase building activity, but whether valour in the cause of recovery has outrun discretion in the matter of banking liquidity will remain to be tested by the next real estate boom. Finally, the Act continues the deposit insurance scheme. Deposits up to \$5,000 per depositor are to be fully insured, the funds being raised by an annual assessment upon banks of one-twelfth of 1 per cent. of their deposits. Insurance will only apply to banks which are members of the Federal Reserve System.

The net effect of this Act will be to continue the process of centralising the authority of the Federal Reserve System in Washington, as the twelve Federal Reserve Banks will henceforth be virtually the servants of the Board of Governors. Centralisation of control will not, however, mean political control, for the Governors are to have long terms, and are not eligible for re-appointment. Moreover, the Secretary of the Treasury and the Comptroller of the Currency, both political appointees of the President in office, are no longer to be members of the Board. Finally, the

Reserve Banks are forbidden to purchase Treasury obligations except in the open market, a provision which forces the Treasury to submit its credit to the test of the market. In its earlier stages, the Bill included a clause withdrawing the prohibition, imposed in the Banking Act of 1933, on banks engaging, directly or through subsidiaries, in the issue of securities. The banks and private banking houses have always provided a large part of the machinery of the new issues market, and their elimination has undoubtedly been partly, if not largely, responsible for the paucity of new issues. Enmity to the banks, however, secured the elimination of the clause in the passage of the Act through Congress. It is impossible not to suspect that in this instance penal fervour has been allowed to obstruct the course which would most have assisted recovery. Since the Act was signed, several of the partners of J. P. Morgan and Company have resigned to form a new firm, Morgan, Stanley and Company, which is to engage in the issue of securities. If several more strong issuing houses can be formed in this way with the personnel of the banks and banking houses, a resumption of activity in the New York market may perhaps be looked for.

Before leaving the subject of finance, the Gold Clause Act should be mentioned. This makes all "gold clause" obligations of the United States immediately payable, with a view to their conversion into new bonds without the gold clause. The Act also forbids all suits against the United States claiming damages under the gold clause.

Congress has also devoted considerable attention to the subject of electrical power. An Act was passed reinforcing the Tennessee Valley Authority in its struggle with the courts. It is given specific powers to generate and sell power, whether to private persons or to local authorities, and to make loans to municipalities for the purpose of enabling them to buy their own distribution facilities. More important than this reaffirmation of the "yardstick" policy, however, is the Public Utility Act, designed to dissolve the holding companies which have always been a conspicuous, and not always a happy, feature of American public utility finance. A fierce controversy has raged between the two Houses of Congress over this measure. The Senate Bill, with the concurrence of the President, declared roundly that holding companies should go, except such as could establish grounds for exemption. The House rejected this "death sentence" and put the onus of proof upon the Government. The final compromise is much closer to the Senate version. The Securities and Exchange Commission, which is to administer the Act, is given the power to grant exemption, but the exemptions are severely limited. To secure exemption a company must control only "geographically integrated" operating companies and it must be separated from them by not more than one intervening layer of holding companies. A holding company may not, without the permission of the S.E.C., issue bonds secured upon its holdings of securities, and it may not supply services, either of a financial or of a constructional nature, to its subsidiaries except upon a strict cost basis. These two provisions will prevent the growth of excessive pyramiding of financial structures and the "milking" of operating companies by holding companies for various more or less fictitious "services," which has been the major source of income of many holding companies. This Act is drastically severe, almost punitive, in character. It will involve the liquidation, possibly in most unfavourable circumstances, of many of the largest utility systems and can hardly fail to inflict injury upon many investors.

The last of the great controversial measures of the session is the Revenue Act, imposing the so-called "Soak-the-Rich" taxes. The President originally proposed that in addition to the existing estate taxes, which are levied on the estate of the deceased, there should be inheritance taxes levied upon the bequests received by each inheritor. Congress, however, preferred to increase the estate taxes. The rates are increased on all estates, the increase ranging from 1 per cent. at \$10,000 to 10 per cent. over \$50,000,000. The highest rate is to be 70 per cent. Gift taxes, at three-fourths of the rate of the corresponding estate taxes, are also imposed. The income surtaxes are also increased on all incomes over \$50,000, the increase in the rate on the highest incomes being from 59 per cent. to 75 per cent. The tax

on the income of corporations, formerly at a flat rate of 13½ per cent., is to be graduated from 12½ per cent. to 15 per cent. The capital stock tax, excess profits tax and the tax on dividends of personal holding companies are all increased and a new tax is imposed on intercorporate dividends. These new taxes and tax increases, which affect almost exclusively corporations and rich individuals, are estimated to produce an additional revenue of \$250 millions.

Among the miscellaneous enactments of the past session, mention may also be made of the Home Mortgage Relief Act, and of the Neutrality Act. The former Act, which liberalises the requirements for loans on mortgage to be made by the Federal Home Loan Banks, is another illustration of the importance that is attached to a revival of house building. The Neutrality Act is the embodiment of the national passion for avoiding "foreign entanglements." It makes it mandatory upon the President, until the end of February, 1936, to forbid the export of munitions to all belligerent States. In addition the President may (without limit of time) remove American protection from all American citizens travelling in ships belonging to belligerent nations. There are also provisions for securing publicity for all exports of munitions.

This, then, is the completed framework of the New Deal. The President's supporters will say that it constitutes a nice balance of Relief, Recovery and Reform. His opponents will say that the punitive Reform measures effectively impede Recovery and thus themselves cause the need for Relief. In the thirteen months between now and the Presidential election, Mr Roosevelt's programme will have to stand the test of economic events. And at the end of that time the electorate will have to judge whether he has gone too far or not far enough, or whether they consider the New Deal to be, as the President claims, a balanced and successful effort by a sovereign Democracy to be the master of its own economic fate.

PROGRESS IN EDUCATION

It is probably easier to teach the young mind how to shoot than to equip it for playing a part in a highly complicated industrial civilisation. In this country in recent years more and more schoolchildren have been entering an already congested labour market at the age of 14; and the growth in juvenile unemployment has compelled all thinking observers to ask: Are we training our children in the best way for industry, as well as for citizenship? The needs of primary, secondary and part-time education in this country have thus become more and more insistent. It is already nine years since the Hadow Report recommended the division of our primary school education into two sections, separated at the age of 11, and the complete reorganisation of the schools themselves. In recent years these reforms have been held up by lack of funds; and the raising of the school-leaving age to 15 has still not been realised.

The recently published Annual Report of the Board of Education* shows that reorganisation along the lines of the Hadow Report has now been resumed. More than 53 per cent. of the children over 11 were in reorganised schools by the end of March, 1934; and the number of schools on the "Black List" was further reduced during 1934. Capital expenditure of £4,449,000 was sanctioned during the nine months ended December 31, 1934—an increase of £886,000 on the amount approved for the whole financial year 1933-34. The number of classes in elementary schools containing more than 50 pupils has declined almost continuously from 17.0 per cent. of the total in 1924 to 5.5 per cent. in 1933, and 4.1 per cent. in 1934. This is progress; but how far has it gone?

In elementary schools roughly one-third of the classes still contain between 30 and 40 pupils, and another third between 40 and 50. The number of uncertificated teachers—i.e. those with no degree or training college experience—though it is less than in former years, amounts still to 28,284 out of a total of 173,906 teachers. And yet training colleges are being forced, at a loss to themselves, to cut

* "Education in 1934." Being the Report of the Board of Education and the Statistics of Public Education for England and Wales. H.M. Stationery Office. Cmd. 4968. 3s. 6d.

down the number of their admissions, owing, as the Report of the Board of Education points out, to the decreased opportunities of available employment. The present level of teachers' qualifications is worst in rural areas. In 800 small village schools in England and Wales even the head teacher is not certificated. In secondary schools similar conditions exist. Out of a total of 17,730 teachers, 1,928 are untrained non-graduates; while the number of classes of over 30 rose from 5,274 in October, 1933, to 5,632 in October, 1934. This is, of course, due to the temporary increase in the total number of children of secondary school ages. The remedy for this situation recommended by the Board of Education to Local Education Authorities (Circular 1441) is not to extend facilities, even temporarily, but to draw their attention to the need for regulating admissions to schools. Of course, if the main road is definitely blocked, the traffic must be diverted. But it should at least be along roads going in the same direction, and not into the waste land.

Owing to changes in the birth rate, the school population has now passed its maximum. On March 31, 1934, there were 5,634,920 elementary school children, compared with 5,576,752 a year earlier; and the total number of children in each yearly age group from 13-14 to 6-7 was lower than in the one above, ranging from 772,000 to 595,000. The number of children in 1934 aged 12 to 15 was abnormally high, therefore, and as these children grow up, the secondary school population will show a tendency to increase. It rose indeed, from 441,883 in March, 1933, to 448,421 in March, 1934; and at the beginning of the school year 1934-35, the number of admissions showed an increase of 4.5 per cent. compared with the previous year. This expansion, however, will automatically cease. What folly, then, say some critics, to build new schools, train new teachers and expand medical services for children who will not be there! But it is surely not too much to hope that our conception of adequate standards of education, even for a smaller school population, may develop in coming years. A decent minimum standard of equipment for the present generation of school children will not appear lavish in a few years' time, even if all allowance is made for the decline in the number of pupils. Indeed, it would be absurd, in any circumstances, if the numbers of secondary schools were allowed to decline.

But when we have collected the children into healthy surroundings with enough qualified teachers to go round, the fundamental problem still remains. What is the aim of all this State education? On what lines are the curricula of our 6 million English school children to be planned? At the deliberations of the recent World Education Conference at Oxford, representing many important international teachers' organisations, one guiding principle did seem to emerge and to be accepted by traditionalist and modernist alike. This was the conclusion that no instruction is of any real value or significance to a child unless it bears some relation to its everyday life and environment.

Along these lines, two different aspects of education, in particular, have come to be studied and emphasised in recent years. First, there is the idea of "Education for Citizenship," on which a special course for teachers was organised by the Board of Education in 1934. The importance of this idea and its dangers as a weapon in

unscrupulous hands, has been emphasised by the very efficient mass political education now provided by totalitarian States, and also by the power of certain strong sectional interests to influence uneducated opinion through the press and the cinema.

The second aspect of education which has recently gained some prominence is the vocational. This has found expression in the growth of both part- and full-time technical institutions of various kinds, and in the introduction of practical instruction into almost all secondary schools. This problem of technical education has been brought to the fore by the decline of apprenticeship and, in the past two years, by the obligations laid on Local Authorities by the Unemployment Act of 1934 to provide courses for unemployed juveniles up to the age of 18. Hitherto, girls and boys could only be compelled to attend courses by the threat of withdrawal of benefit. But as this was not payable until the age of 16½, those aged 14 to 16½ were only provided for in so far as they chose voluntarily to attend courses. The result of the new legislation is to necessitate the provision of a large number of new centres and classes under the joint supervision of the Board of Education and the Ministry of Labour. This raises the question of the ground they ought to cover, and the advantages of encouraging use of such classes by juveniles who are already in employment, and by those who do not leave school at 14, but wish to enter industry later. In 1933-34 there were 32,751 full-time students at junior technical and commercial schools and at trade and art schools, compared with 32,113 in the previous year. But the Report points out that of the existing 31 trade schools, 27 are in or near London, and that 17 County Boroughs and many large towns of over 60,000 inhabitants do not even possess a junior technical school. This is due, as is the inadequacy of equipment in many art schools and classes, to the lack of co-operation between Local Education Authorities, which do not find it worth while to set up separate technical institutions for their own areas, and have not yet evolved suitable regional schemes. Work is, however, progressing along these lines. The value of this type of education is undoubted, and its cost well repaid, by the increased efficiency of the young people who become workers. In certain large firms where investigations have been made, it has been found that the proportion of children from technical schools who rise to staff positions before the age of 21 is far above the average.

The numbers of part-time students are rising slowly and amounted to 938,691 in 1933-34, compared with 888,675 in the previous year. But at present, only 3 per cent. of part-time students at technical institutes are allowed any working time for study purposes by their employers. Attendance at such classes, therefore, must involve considerable mental and physical strain on those students who come from a long day's work. It is surprising that more employers do not realise the value to themselves of trained recruits to industry, especially as in many industries there are now continual complaints about the lack of young skilled labour. Until the school leaving age is raised, technical education, even of a fairly general nature, can only be carried on under some part-time arrangement made with industry. If the labour market is not to be glutted with untrained recruits, and if the skill and working capacities of the rising generation are to be raised, industry has an important rôle to play.

NOTES OF THE WEEK

Labour Dissensions.—The Labour Party has not been able to preserve a wholly united front in its attitude to the League of Nations and the use of sanctions against Italy. In the report issued by the National Executive of the Party on Monday, as a preliminary to next week's Conference, the official Party policy of full support for the Covenant was reformulated, and the Government was criticised for not making its intentions clear to Italy at an earlier date. Last week's decision of the T.U.C. in support of sanctions was thus again reaffirmed. During the week-end, however, there were renewed signs of the persistence of extreme pacifist doctrines in certain sections of

the Labour Party. At a series of "anti-war" conferences, summoned by the Socialist League, but consisting of various Labour organisations, considerable dissensions appeared. At Manchester Mr Clynes spoke strongly in favour of sanctions. In London, however, Sir Stafford Cripps, who was recently urging the use of military force against Japan, apparently argued that since the imposition of sanctions against Italy would be a piece of British Imperialism, only economic and not military sanctions should be used. Of all possible attitudes, this seems the most irrational and irresponsible. And it is completely at variance with the Party's declared policy. It was not very surprising therefore to learn

on Thursday that Sir Stafford had resigned from the National Executive of the Party. Fortunately, the influence of the Socialist League, even in the Labour Party, is negligible; and if it were to secede on the present issue, its departure would be no more of a loss to the Party than its present opposition to sanctions is an embarrassment to the Government. With Lord Ponsonby, however, who resigned the leadership of the House of Lords on Wednesday, more sympathy will be felt. Like Mr Lansbury, he finds himself conscientiously opposed to the use of armed force in any circumstances. Lord Ponsonby's resignation, however, is no more likely to influence the Party than that of Sir Stafford Cripps. The League policy advocated in the Executive's report is certain to be endorsed by the coming Party Conference, however animated the discussions may be.

An Offer from France.—An offer to reduce trade barriers in return for agreements by other countries to stabilise exchange rates was made by M. Bonnet, French Minister of Commerce, in a speech to the Assembly of the League on Wednesday. This is a notable offer which might, given favourable conditions, lead to a real advance in international economic co-operation. Much, however, depends on the details of M. Bonnet's proposals, and these have not yet been made very clear. If M. Bonnet is asking for a permanent, unconditional stabilisation of exchange rates, Great Britain neither will, nor should, acquiesce. The advantages of our freedom to pursue an internal economic policy unhampered by gold and exchange movements have been shown by the last two years' experience to be much greater than any which could be obtained from a stabilisation of exchanges and a slight liberalisation of French tariff policy. If, on the other hand, M. Bonnet is proposing individual trade agreements which would remain valid as long as exchange rates remain stabilised, it would only be worth Great Britain's while to accept if France would agree to devaluation before stabilisation. There are two very good reasons for this. In the first place, nobody who studies the present economic state of France (which is discussed in the succeeding Note) can really believe any mitigation of trade barriers to be possible, as long as the present deflation continues. The French farmers at the moment are vehemently demanding a series of heavy *increases* in tariffs and restrictions. Secondly, even if formal tariff reductions were made, nobody in this country would expect any increase in trade to result as long as the internal deflation in France continues. Great Britain has found in the last two years that her exports to countries with overvalued currencies are contracting, and her exports to countries with readjusted currencies expanding. The only offer, in fact, which Great Britain would be prepared to consider would be one of provisional stabilisation in return for devaluation and a reduction of trade barriers by the gold countries. At the same time the British Government should show its willingness to reduce our own tariff rates. British opinion regards the maintenance of a low bank rate as of far greater importance than the fixing of exchange rates; and there is no belief here in the possibility of a lasting recovery in the gold countries without devaluation. Until the French, Dutch and Swiss authorities realise these facts, little advance towards agreement is likely.

Deflation in France.—The French Government's deflationary measures are having their inevitable effects. Such measures, though appearing to alleviate the crisis for the moment, merely render its subsequent intensification the more certain. When the policy of a high bank rate and Budget cuts was adopted last June, we ventured to point out that it would only result in reduced purchasing power, an intensified maladjustment between prices and fixed costs, a further contraction in economic activity and consequently in the yield of taxes, and eventually in a recrudescence of the Budget deficit at a lower level. All this has already begun to happen with a rapidity that must have startled even those who most expected it. The forcible reduction in the cost of living has brought the

Family provision scheme

A scheme to secure a Capital Sum payable at death and a regular income over a period of years for dependants in the event of early death, at a cost which is little more than that of ordinary life assurance. It is readily adaptable, and rates will be quoted on application for policies to suit the needs of each individual.

Established 1844 Funds exceed £20,000,000

selling prices both of retailers and farmers into complete disequilibrium with their costs. A representative of the Paris Bakers' Association made the following statement this week:—

The recent rise in the price of wheat would make a rise in the price of bread inevitable. Given the present price of flour, bread ought to cost 1.60 francs instead of 1.50 francs. If the price of wheat should rise by another 20 per cent., as both the Government and the farmers hoped, the price of bread would have to be raised to an even higher figure.

The price of wheat, however, though uneconomically high for the bakers, is at the same time uneconomically low for the farmers. The leader of the Front Paysan, speaking at Châteaubriant on Saturday, said that "low incomes and high costs" were ruining the farmers; and he threatened the organisation of a quasi-Fascist movement if nothing was done to raise prices. The farmers in general are now refusing to pay taxes; and in the vine-growing district a bitter strike against reductions in wages is in progress. The whole situation, which is no more than a repetition of the familiar and inevitable impact of a deflationary price policy on fixed costs, is apparently most puzzling to French critics, who describe it as the "problem of prices," utter vague threats against the "parasitic" middleman, and do not stop to inquire why no such problem existed and the middleman was not parasitic until a few years ago. Meanwhile the next stage in the downward movement has begun. The revenue is already shrinking once more. In July total revenue was 15 per cent. below the estimates, and the yield of the turnover tax over 25 per cent. below. Clearly it is now merely a matter of time till the Budget crisis comes again to the surface. Deflation has had as fair a trial in France as it ever could have anywhere. It has been pursued comprehensively and ruthlessly, and supported by an almost fanatical popular belief in the sacrosanctity of the present gold parity of the franc. Yet it has encountered, just as surely as any other post-war deflation, innumerable and ineradicably fixed costs permeating the system; and it has just as visibly failed. It is difficult to believe that the French people, with the example of Belgium's recovery before their eyes, will protract much longer their present self-inflicted sufferings.

—And in Holland.—Holland, with the examples of Belgium and France also before her, still prefers deflation to recovery. Trade, production and employment are still dwindling; on Monday the bank rate had to be raised to 6 per cent. to ward off a new attack of the now chronic flight of capital which this week cost the Bank 37 million guilders in gold losses. On Tuesday the Government's latest bout of budgetary deflation was introduced into the Chamber. The deficit, thanks to the prevailing depression, now stands at 119 million guilders. This is to be met by a cut of 5 per cent. in the wages

of all Government officials; by cuts in expenditure on social insurance, pensions and unemployment relief; and by increases of 20 per cent. in the turnover tax, stamp duty and registration duty, of 30 per cent. in death duties, and in the dividends, bonus and pension taxes. Altogether about 95 million guilders will be saved by economies, and about 20 million guilders raised by increased taxation. It will be noted that no cut has been made in the interest on Government securities, as in the case of the Laval economies. All the above measures are calculated to intensify the depression in Holland. Yet devaluation was described in the speech from the Throne as "impossible to consider," without any reasons being given. It is true that the Government is to attempt to stimulate economic activity by subsidies to various industries, and public works such as the reclamation of the Zuyder Zee are to be continued. Unfortunately, however, these isolated reflationary efforts cannot hope to be effective, as long as the general deflation necessary to support the present gold parity of the guilder is maintained. The fact is that Dr. Colijn's policy, like M. Flandin's and M. Laval's, is hopelessly contradictory. It does not seem even yet to be generally realised that reflation and the maintenance of overvalued exchange parities are utterly incompatible policies.

The Indian Financial Inquiry.—Before any steps can be taken to introduce provincial autonomy under the new Government of India Act, it is laid down that an Inquiry into India's finances shall be made. The need for such an inquiry was recognised in H.M. Government's original ("White Paper") proposals for Indian Constitutional Reform put forward by the Government in 1933; and it arises by reason of the intricacies of the Central and Provincial Governments' finances in India and of allocations of resources between them. The Act lays down the main lines of India's future Federal finances; but it is provided that the allocation by the Centre of a share in the income tax and jute export duty proceeds among the Provinces, and the fixing of central grants-in-aid to necessitous Provinces, shall be settled by Order-in-Council, of which drafts will have been laid before Parliament. It was announced on Tuesday that H.M. Government have decided that a special inquiry is to be held, "so that they and Parliament may be furnished with an independent review of the financial position of the Provinces and the Centre, and with technical advice upon these financial questions, which have to be determined by Order-in-Council." On the invitation of the Secretary of State, Sir Otto Niemeyer, G.B.E., K.C.B., has agreed to undertake this inquiry during the forthcoming cool season in India. The terms of reference are fairly wide, for they include "any ancillary matters arising out of the financial adjustments between the Government of India and the Provincial Governments regarding which H.M. Government may desire a report." "Alternative expedients" to a re-allocation of resources between Central and Provincial Governments are to be given "due consideration." Sir Otto's fitness for this important task is not open to question; for he was Controller of Finance in the Treasury from 1922 to 1927, and since then he has been a high official at the Bank of England, a Director of the Bank for International Settlements, and, since 1922, a member of the Financial Committee of the League of Nations. He has also conducted expert inquiries at the request of the respective Governments into the finances of Australia, Brazil and Argentina. It is good news that the inquiry is to be made without delay; and it is worth recalling that on May 23rd last Sir Samuel Hoare, then Secretary for India, said in the House of Commons in regard to India's finances:—

As at present advised I see no reason why, when this (Government of India) Bill reaches the Statute Book, provincial autonomy should not be brought into operation in a very short time, and why from the financial point of view there should be any delay in subsequently setting up the all-India Federation.

The Government have not been slow to give India this earnest of their good intentions.

Egypt and Britain.—With Libya on one side Abyssinia on the other, and the Suez Canal running through her own territory, Egypt is in the thick of the present international *imbroglio*. During the last few days there have been cryptic statements in the Egyptian Press on the subject of Anglo-Egyptian relations. Last Saturday it was reported, and on Sunday denied, that the Prime Minister of Egypt had received verbal assurances, from the second-in-command of the Mediterranean Fleet, that this country was disposed to look after Egypt's defence. On Monday, the Egyptian Press declared that the British High Commissioner had given the Egyptian Government a written undertaking that Britain would not infringe any rights enjoyed by Egypt, and that the British authorities would not take any special measures in Egypt except by agreement with the Egyptian Government. These reports must be treated with reserve, pending confirmation; but we may surmise that the British and Egyptian Governments are nearer to being in accord with one another over the Italo-Abyssinian crisis than they have been over most of the problems which they have had to discuss in the past. The Egyptians naturally sympathise with a small African nation which is being put under pressure by a great European Power. At the same time, they are fully alive to the difference between British whips and Italian scorpions, and aware of the probability that a release from their present irksome relations with this country would merely expose them to the danger of falling into far more unpleasant relations with Italy. It is unfortunate both for Egypt and for this country that the combined statesmanship of their Governments has not yet succeeded in replacing the present anomalous relations between them by a treaty. Our position in Egypt still rests upon our unilateral declaration of February 28, 1922, in which we recognised Egypt as an independent sovereign State, while provisionally reserving to our own discretion four points: (a) The security of the communications of the British Empire in Egypt; (b) the defence of Egypt against all foreign aggression or interference, direct or indirect; (c) the protection of foreign interests in Egypt and the protection of minorities; (d) the Sudan. Thereafter, on March 15, 1922, H.M. Government instructed British diplomatic representatives in all foreign capitals to notify the Governments to which they were accredited that "the termination of the British protectorate over Egypt involves no change in the *status quo* as regards the position of other Powers in Egypt itself"; and that H.M. Government "would regard as an unfriendly act any interference by another Power in the affairs of Egypt." These declarations still govern the situation to-day. If, to-day, Anglo-Egyptian relations were regulated by a comprehensive treaty, and if Egypt were a member of the League of Nations it would have been better for both of us.

Germany and her Laws.—At the special session of the Reichstag which was held last Sunday at Nuremberg during the Nazi Party rally three new laws were read by General Göring and were duly passed by a mechanical legislature. The first law makes the party flag into the national emblem of the Reich. This is harmless enough; for the Nazis have as good a right to impose the Swastika upon Germany as the Bolsheviks have to impose the Red Flag upon Russia. The other two laws are more serious. One provides for German citizenship and divides the population of the Reich—on lines long since foreshadowed—into the two categories of active citizens and passive subjects. Presumably it is the intention to degrade to this second category those citizens against whom the Nazi regime has a racial or political bias (e.g. Jews, Communists and Pacifists). It seems to be still uncertain whether loss of active citizenship will carry with it a loss of economic rights as well. If this is the effect, then the Jews in Germany will have been virtually thrust back into the ghetto without even being allowed to earn their living within the ghetto walls. But if the *jus commercii* is still in suspense, there is no doubt about the *jus connubii*, for this is expressly denied to the Jews by the third new law "for the protection of the German blood and the German honour." This lays down that "marriage between Jews and citizens of the nation of German or kindred blood are forbidden. Marriages entered into despite

this decree are considered invalid, even if they are entered into abroad for the purpose of circumventing this law"; and "sexual intercourse outside of the marriage covenant between Jews and citizens of the nation of German or kindred blood is forbidden." This caste legislation marks a terrible social regression—and this precisely in a field in which the Modern State has hitherto displayed one of its principal virtues. Even those who have deplored the march of the State toward "totalitarianism" in modern times have found some consolation in the fact that this omnipotent state did at least confer the boon of equality before the law upon all its subjects. And equality—even in servitude—is something. In the Third Reich, however, we are now to witness a totalitarian state which has not even this compensating advantage. Germany is to be a totalitarian caste-state on the lines of the old Ottoman Empire with its "human cattle," or of ancient Sparta with her Helots. How speedily have these ancient barbarisms returned to the Western World of the twentieth century!

* * *

And now Memel!—The approaching elections in the Memel territory of Lithuania are likely to be a critical event in the history of Europe and of the League. On September 12th the three Powers, France, Great Britain and Italy, who are guarantors of the Memel Statute of 1924, made strong representations to the Lithuanian Government in which they asked for an assurance that the elections would be conducted as the Statute provides. Last Sunday Herr Hitler made a reference to Memel in his speech at the Nazi rally at Nuremberg. The reference was strictly correct in substance and moderate in tone; for what Herr Hitler demanded was that the guarantor Powers in particular, and the League in general, should take adequate steps to insure that the Statute would be loyally observed. The Lithuanian Government are reported to have invited the guarantor Powers to send representatives to the spot to watch how the elections are conducted. Such an offer ought certainly to be accepted. But it does not solve the problem; for it is possible that the result of the elections may be improperly decided in advance by a high-handed manipulation of the electoral rolls. In fact, alterations in the Lithuanian electoral laws were introduced last month, and put into force on September 7th, with a view to disfranchising persons implicated (justly or unjustly) in charges of treasonable activities against the Lithuanian Government as a result of the recent monster treason trial of German Memellanders. It is said that this new legislation may disqualify as many as 8,000 German voters in the Memeland; and it is also rumoured that the Lithuanian authorities have smuggled about 10,000 non-Memellander Lithuanian citizens on to the Memeland register of electors. These alleged figures are impossible to check—though it seems certain that the new law has disqualified two prominent German candidates—an ex-President of the Memeland Directorate, and an ex-Mayor of the City of Memel. Vast mischief will have been done, however, if there is even a colourable pretext for the charge that these Memel elections have been "rigged" with the guarantor Powers' acquiescence. For Germany will then have a pretext for declaring that no remedy remains, except direct action on her part, for righting the wrongs of an oppressed German minority. And, of all places in Europe, the Memeland is, of course, the one place where a German *putsch* could be made with a prospect of impunity—considering the weakness of Lithuania and the complacency which Poland would be likely to show towards Germany in any anti-Lithuanian Nazi move. We do not underestimate the difficulties of the Lithuanian Government's position. A Nazified German minority is no doubt very difficult to handle. Yet for Lithuania herself, as well as for the guarantor Powers, it is of vital importance that the whole conduct of these Memeland elections should be above reproach.

The Settlement of the Assyrians.—While the supreme question for the League—"to be or not to be"—is on the razor's edge, there is a grain of comfort in the news that, last week, the League came within sight of a solution of the long-standing Assyrian problem. The Assyrians, it will be

remembered, are a refugee Nestorian Christian community from the highlands of Turkish Kurdistan who found asylum behind the British lines in Iraq during the war, and afterwards settled down, during the period of British tutelage, in the expectation of becoming permanent residents in Iraqi territory. This expectation has been disastrously disappointed. The Assyrians have been victims of the political emancipation of Iraq in 1932. The head-on collision between the Assyrians and the Iraqi Government was partly due to the truculence of the Assyrians themselves; partly to the chauvinism of the Iraqis; and partly to our own anxiety (for motives that were honourable in themselves) to liquidate our semi-mandatory responsibilities in Iraq at the earliest possible moment—at a risk of leaving the Iraqis to paddle their own canoe before they were completely competent to navigate all the shoals and rapids that lay ahead of them. For the last two years the Assyrians have been living from hand to mouth, partly still in Iraq itself, and partly in the adjoining French mandated territory. There have been proposals to settle the Assyrians in Brazil, in British Guiana, and in the French West African territory in the bend of the Niger; but these suggestions have all broken down. Now, however, at last we have—thanks to the French Government—a practicable scheme for settling the Assyrians in a highland country with a good soil, where they can grow the crops and live the life to which they have been accustomed. The settlement site in question lies in the Alouite district of the French mandated territory—a hill country, overlooking the Mediterranean, to the north of the Lebanon. Incidentally, this scheme has the financial advantage of bringing down the cost of transportation to a minimum. A favourable report has been made to the League Council by a committee which has been looking into the proposal. It remains to find the money. The total cost is estimated at about £600,000. The British Government are to be commended for having undertaken to contribute five-twelfths of this (apart from their *pro rata* share in any League contribution) on three conditions: first, that the special British contribution shall not exceed £250,000; second, that Iraq shall make a special contribution of an equal amount (i.e. double her present offer of £125,000); and, third, that the League itself shall raise the rest. It is profoundly to be hoped that this scheme will become a reality.

* * *

The Milk Controversy.—The announcement at the end of last week that the Milk Board intended to impose upon the distributors the terms for the annual contract period beginning on October 1st, which they had rejected in negotiation, has stirred up a fierce battle of manifesto and counter-manifesto. The Board's terms secure an increase in the wholesale price from an annual average of 15s. 1½d. to 15s. 6½d. per dozen gallons. The Board also have power to fix in the contract the minimum price at which milk may be sold retail. This has been left unchanged, so that the farmers' gain is the distributors' loss. The dairymen have the statutory right to appeal to the Minister of Agriculture for the terms to be reviewed by the Committee of Investigation. This they have promptly done and at the same time retailers have been warned not to sign any contracts, as they might not be subject to adjustment in the case of the terms being altered. Much is being made of the possibility that this may involve some stoppage of supplies in the first days of October, but it is inconceivable that the cause of either party would be advanced by putting the public to any inconvenience. From the array of facts quoted by either side the onlooker can take his choice. He can learn, for example, that in the London region the distributors' margin of 11½d. per gallon is larger than the farmers' average receipt of 10d. per gallon. He can also learn that "on every contract since the Milk Marketing Board commenced business the price to the consumer has been put up." But it is unlikely that he will be convinced of the righteousness of either side. He will observe the omission of any defence by the distributors of the equity of their existing margin. He will note the failure of the Board to explain how an increased price can have any effect but to intensify the already almost overwhelming surplus of milk. And he will conclude that the milk scheme, with its producer-elected monopoly, will soon prove utterly

unworkable without some independent tribunal to fix prices. It is axiomatic that it is useless to control prices without also controlling the volume of production; but such control is far too dangerous a weapon to be entrusted to a Board which is compelled to serve one particular selfish interest with all the myopia induced by annual elections.

Oil Development.—Quite a flutter was caused in the City on Monday when it was officially announced that Sir Edward Mountain and Mr L. C. Patterson had resigned their directorships of Mosul Oil Fields, Ltd., and an associated concern, British Oil Development Company, Ltd. The B.O.D. Company was formed in close association with Mr F. W. Rickett, who obtained the recent Abyssinian mineral concession; and it was granted a concession for the development of oil in a 45,000-mile area by the Iraqi Government. Mosul Oil Fields, Ltd., was registered as a private company on November 23, 1932, to acquire and hold the whole or any portion of the shares of the B.O.D. Company and to carry on the business of producing, refining, transporting, etc., petroleum and its products. It was at first reported that the reason for the resignations of the two above-named directors was the acquisition by Italian interests of a majority shareholding in both companies, which were formerly managed by British interests. There is no reason to suppose that this is so. As the Somerset House return reveals, these two directors had both resigned on or before July 9th last; and one would expect any increase of foreign participation to have occurred before that date. It is therefore interesting to examine the Mosul Company's development. The authorised capital of Mosul Oil Fields was originally £1,000,000, but it was subsequently increased and reorganised. It is now £2,333,333 6s. 8d. in 4,000,000 "A" ordinary shares of 6s. 8d. each and 1,000,000 ordinary £1 shares. Up to January 10th of this year £465,418 had been paid in cash on 201,610 ordinary and 791,424 "A" shares; and £788,579 was "considered as paid" on 788,579 ordinary shares. It is interesting to note that under an agreement as long ago as December 12, 1933, "relating to the formation of a company to exploit an oil concession in Iraq obtained by B.O.D. Company, Ltd.," it was decided not to form the said company; and 160,000 shares were allotted to F. W. Rickett or his nominees in satisfaction of all claims and demands on his part against the Mosul Company, the B.O.D. Company, and other parties to the agreement. On January 10th of this year the largest ordinary shareholder in the Mosul Company was the Azienda Generale Italiana Petroli, Rome, with 248,470 ordinary and 625,000 "A" shares; and a group of Continental interests, mainly Swiss, Dutch, and German, accounted for a further 220,000 ordinary shares and 143,000 "A" shares, of which latter 106,500 were allotted for cash in March of this year. No recent transfers have been registered. Viscount Goschen, a director of the Westminster Bank, remains chairman of both companies, which, according to a statement by Mr Rickett on Tuesday, are now foreign-controlled. It is understood that a condition of the original Iraqi concession was that the operating company or companies should be registered in London and managed by British interests. Now that two British directors have resigned, however, there are only four British directors of Mosul Oil Fields—Viscount Goschen, Mr W. R. Brown, Lord Glenconner and Mr Percy L. Hunting; of nine other directors, one is French, two are German, one is Iraqi and five are Italian. What, in these circumstances, does "management" mean? Does the majority of foreign directors now actually control the operations and dividend policy of two companies? These are the questions the City is asking; but as the Mosul Company is only producing very heavy oil at present, and as it is not yet on a revenue-producing basis, the answers to these questions can safely be awaited without undue perturbation.

Speculation in Commodities.—The commodity markets have recently been providing a happy hunting ground for speculators. Reasoning seems to have given way to willing credulity. The markets have been swayed by mass psychology and prices subjected to wide fluctuations, to the detriment of both producers and consumers.

The recent "scramble" for a number of important commodities can scarcely be justified by reference to changes in the underlying conditions of demand and supply. For example, the price of Liverpool wheat futures has risen by no less than 30 per cent. since the middle of August to the highest level since September, 1930. A moderate rise in wheat prices was probably justified by the deterioration of crops in the principal exporting countries. But rumours of an imminent world shortage of this cereal have no substance whatever. The fact that prices of linseed and linseed oil in Argentina advanced merely because of the rise in wheat prices reveals the frame of mind prevailing among dealers in commodities. On Wednesday, cotton prices advanced under the influence of extensive buying from Bombay and the Continent. The explanation given for the purchases by India is the fear that Indian cotton exports may be held up in the event of hostilities between Italy and Ethiopia. Owners of cotton in India, therefore, decided to guard against this risk by selling Indian and buying United States cotton as a "hedge." Again, expectations of an increase in the demand for war materials are mainly responsible for the scramble for non-ferrous metals during the past week. Thus, sales of copper on the London Metal Exchange rose from 5,400 tons during the first three days of last week to 11,550 tons between Monday and Wednesday this week. During the same period the turnover in lead and spelter rose from 1,650 tons to 14,600 tons and from 400 tons to 2,550 tons, respectively. Quotations for these metals advanced under the influence of heavy purchases. The price of lead reached the highest level since 1930, and the quotation for copper in the United States rose to 9 cents per lb., which was the price fixed under the copper code. There is a danger that this rush to buy raw materials and crude foodstuffs will run ahead of actual requirements and will be followed by a collapse in prices which would harm the slow progress of economic recovery.

Labour in the Cotton Industry.—The manufacturing section of the cotton industry is still beset with dissatisfaction among the operatives. The leaders of the Weavers' Amalgamation last week placed their case before the employers' organisation, requesting an upward revision in wage rates for those operatives who have suffered severe wage reductions as a result of the legalised wages agreement. These workers, who number some thousands, are engaged in towns such as Nelson, Colne and Skipton, where fine and fancy fabrics are woven. The Central Committee of the Cotton Spinners' and Manufacturers' Association considered the request on Tuesday and decided to resist the application. The operatives' trade union has been informed of this decision, and it now remains to be seen whether other steps will be taken to change the employers' views. The employers themselves are faced with difficulties, but in another respect. Although the legalised wage agreement is supposed to be in operation, it is known that a number of firms are breaking the agreement. This is more or less proved by wide disparities in cloth prices, which are obvious to all traders on the Manchester Royal Exchange. The employers have had evidence placed before them of the particular firms which are alleged to be paying wages below the official rates, but it is difficult to obtain definite evidence which would be accepted in a Court of Law. The assistance of the Ministry of Labour is being sought in the matter, and a full statement on the position has been forwarded this week to Mr F. W. Leggett, the Chief Conciliations Officer in London. It is proposed that authority should be given to the Home Office Factory Inspectors to inspect mills and interrogate weavers with a view to ascertaining if the firm is paying the legalised wage rates. Those employers who are observing the agreement are earnestly hoping that definite charges will soon be made and that the guilty employers will be heavily fined, as provided for in the Act of Parliament.

Overseas Trade in August.—The figures of our overseas trade in August show that imports (on a daily basis) continued on their downward trend which started in May and were lower than a year ago, especially in the

textile group. Exports, on the other hand, rose fractionally compared with July, and were more than 10 per cent. higher than a year ago. The following tables give figures both for August and for the first eight months of the year:

OVERSEAS TRADE—MONTH OF AUGUST
(000's omitted)

	1933	1934	1935	Change between 1934 and 1935	
Imports	£ 56,875	£ 59,371	£ 59,145	- 826	- 1.4
British Exports	30,997	32,090	34,883	+ 2,793	+ 8.7
Re-exports	4,300	3,302	4,186	+ 884	+ 26.8
Total exports	35,297	35,392	39,069	+ 3,677	+ 10.4
Excess of imports over exports	21,578	24,579	20,076	- 4,503	- 18.4
Transshipments under bond	2,350	2,019	2,024	+ 5	+ 0.2

OVERSEAS TRADE—FIRST EIGHT MONTHS
(000's omitted)

	1933	1934	1935	Change between 1934 and 1935	
Imports	£ 430,163	£ 479,393	£ 479,092	- 301	- 0.1
British exports	236,179	255,089	277,737	+ 22,648	+ 8.9
Re-exports	33,775	36,431	36,744	+ 312	+ 0.9
Total exports	269,954	291,521	314,481	+ 22,960	+ 7.9
Excess of imports over exports	160,209	187,872	164,611	- 23,261	- 12.4
Transshipments under bond	15,592	15,651	15,818	+ 167	+ 1.1

The increase in exports, both in August and in the preceding months was not confined to any one class of goods, but ranged from meat and dairy produce to wool, oil, and vehicles, machinery and iron and steel products. As August is usually an industrially slack month, the figures indicate that the general position has been well maintained.

Volume of Overseas Trade.—The movements in our imports and exports of particular commodities in August are given in the following tables. They show no significant change from the movements in previous months:—

RETAINED IMPORTS
Month of August

Item and Measure	1933	1934	1935
Wheat	'000 cwts. 8,158	7,906	7,023
Beef and veal	'000 cwts. 1,225	1,111	1,309
Mutton and lamb	'000 cwts. 525	634	505
Sugar (unrefined)*	'000 cwts. 3,731	3,189	3,579
Iron ore and scrap	'000 tons 240	400	403
Wood and timber, soft sawn	'000 loads 100	99	113
Planned or dressed*	'000 loads 988	903	754
Other than planned or dressed*	'000 loads 1,094	956	555
Raw cotton	'000 cents 176	142	187
Sheep's and lambs' wool	'000 cents 463	436	445
Raw silk and waste	'000 lbs. 15,724	16,325	17,329
Flax, hemp and jute*	'000 galls. 27,289	44,750	45,617
Crude petroleum	'000 tons 136	100	117
Hides, wet and dry	'000 cwt. 180	176	194
Wood pulp	'000 tons 102	814	318
Rubber	'000 cents 11,989	19,027	22,976
Unwrought copper*	'000 tons 22,258	30,658	26,798
Pig lead	'000 tons 2,929	4,127	3,421
Tin	'000 tons 214	1,101	1,450
Ore and concentrates	'000 tons 79,574	101,972	74,040
Blocks, ingots, slabs and bars	'000 tons 3,951	6,995	5,146
Iron and steel manufactures	'000 tons		
Machinery	'000 tons		

* Total imports.

The reduction in the value of imports was mainly due to reduced purchases of wheat and tea (in spite of a fall in prices) and by lower quotations for barley and maize. More butter, beef and fresh fruit of almost all kinds was imported than in either 1933 or 1934. Imports of raw and partly manufactured materials reveal an expansion of demand among manufacturers of textiles other than cotton, but a falling-off from the high level of last year in imports of machinery, iron and steel manufactures, timber and certain non-ferrous metals, all of which are the materials of the heavy industries. In general, the trend of imports suggests that home industry does not seem to expect much further expansion of activity in the manufacture of capital goods in the immediate future; but demand for consumption goods both from home and abroad is being well maintained. Our exports showed a rapid increase in the later part of 1934, so that a comparison of recent monthly figures with those of last year is now beginning to appear less encouraging than in previous months.

BRITISH EXPORTS
Month of August

Item and Measure	1933	1934	1935	
Coal	'000 tons	3,202	3,269	3,451
Iron and steel scrap	'000 tons	21,130	19,555	9,568
Pig iron and ferro-alloys	'000 tons	9,335	13,843	12,077
Railway materials	'000 tons	8,041	30,201	28,979
Total iron and steel manufactures	'000 tons	155	193	202
Textile machinery	'000 tons	4,418	5,245	5,135
Total machinery	'000 tons	23,256	25,903	28,339
Cotton yarns	'000,000 sq. yds.	149	169	161
Cotton piece-goods	'000 lbs.	3,722	2,650	3,634
Wool tops	'000 lbs.	3,892	2,527	2,503
Worsted yarns	'000 sq. yds.	6,742	7,671	8,025
Woollen tissues	'000 sq. yds.	3,748	3,343	3,946
Worsted tissues	'000 sq. yds.	6,132	5,354	4,492
Linon piece-goods	doz. pair	46,126	33,337	30,494
Leather boots and shoes	cwts.	25,457	16,521	19,831
Leather	'000 cwts.	337	313	323
Paper and cardboard	'000 cwts.	1,838*	632	1,191
Locomotives (complete and parts)	Number	3,212	4,036	4,406
Motor vehicles and chassis				

* Complete only.

Exports of coal to all important countries except Italy and Norway have gone up. There has been a continued increase in exports of iron and steel goods (especially of steel plates to Australia), machinery (mainly mining, electrical and Diesel engines to British countries), cutlery, motor vehicles and locomotives. The South African and Indian markets for all these commodities show no signs of contraction. A notable increase in exports of woollen goods is also evident, particularly to Germany and Japan. This is mainly due to the very low level to which stocks abroad had been allowed to fall. Exports of other textiles and of consumption goods do not make such a good showing; but, in general, the August figures show that our sales abroad are being well maintained.

Chile's Finances.—Whereas revenue from exports of nitrate of soda was formerly a leading item in the Chilean national Budgets, these now exclude that item, which is earmarked for the foreign debt service fund. The latter is presumably accumulating pending arrangements with the bondholders. It is therefore particularly encouraging to note that a fiscal equilibrium has been achieved in Chile during the past year or so; and it is expected that 1935 will close with a surplus of some 50 million pesos, while some expectations are that the surplus will be as high as 100 million pesos. In the estimates of the 1936 Budget, income is estimated at 1,209.3 million pesos, against expenditure of 1,208.4 millions, showing an estimated surplus of 900,000 pesos; and, as the estimates appear to have been drawn up in the same conservative manner as in the two preceding years, it may well be that this surplus may not only be realised but even exceeded. A feature of the national accounts, however, is the steady expansion in the figures, those for 1936 given above comparing, for example, with an estimated expenditure in 1935 of 1,013.5 million pesos, and an income of 1,013.6 millions. Expenditure has expanded mainly by reason of the Decree which has increased by 25 per cent. the salaries of civil servants and the armed forces, as well as of the State school teachers, which altogether account for nearly 100 million pesos per annum. It is also proposed to repeal the extremely unpopular 2 per cent. turnover tax and substitute a 4 per cent. tax on imports and a 2 per cent. tax on all sales from the national factories and wholesale warehouses. In presenting the 1936 estimates to Congress, the Minister of Finance has rightly emphasised the necessity for national economy, particularly by the abrogation of certain national services of doubtful utility. So far as the general Chilean position is concerned, there are indications—including pressure on exchange for remittances—that the limit of present internal recovery has probably been reached. Imports during the first half of 1935 were more than 50 per cent. higher than in the same period of 1934—due in the main to heavy purchases of machinery, etc., for the rapidly expanding national industries.

Iron and Steel Production in August.—The British iron and steel industry continued to make headway during the past month. The returns of the British Iron and Steel Federation reveal a substantial increase in production of

pig iron and steel between August, 1934, and the past month. Since exports of iron and steel in August were only slightly higher than a year ago, the greater part of the increase in home production is due to the curtailment of imports. In contrast to the normal decline between July and August, the output of crude steel rose this year from 32,100 tons in July to 32,400 in August:—

(In thousands of tons)

Period	Production		Foreign Trade	
	Pig Iron	Steel Ingots and Castings	Total Imports	British Exports
1913—Monthly Average	855.0	638.6	185.9	414.1
1929	692.4	803.0	233.2	364.9
1932	297.8	438.5	132.7	157.4
1933	344.7	585.3	80.9	160.2
1934	498.2	738.3	113.9	187.8
1934—July	528.3	718.2	126.4	197.1
" August	503.3	667.0	102.2	193.4
" September	500.3	734.7	89.5	198.0
" October	527.1	812.0	120.2	220.9
" November	507.6	766.0	104.1	219.9
" December	513.5	654.5	114.5	186.8
1935—January	521.2	757.8	130.5	181.2
" February	483.1	769.5	103.3	172.9
" March	554.2	841.9	128.0	175.8
" April	526.3	808.7	62.7	210.9
" May	558.9	853.3	86.4	213.9
" June	529.3	770.0	98.2	195.1
" July	547.3	803.3	90.2	205.7
" August	543.4	759.9	74.3	202.5

Imports of iron and steel materials continued to decline in August. Imports from Belgium alone declined from 44,415 tons in August, 1934, to 26,735 tons in the past month. The percentage fall in imports from Germany and Luxemburg was even more marked. On the other hand, imports from British countries, other than India, rose from 5,916 tons to 11,491 tons during this period. Exports of iron and steel in August were slightly lower than in July, but showed some improvement on the corresponding month a year ago. South Africa, British India, Australia and the U.S.S.R. substantially increased their purchases from this country, but exports to Canada were lower than in August, 1934. The reduction in exports over the year was

most marked in the case of China, Japan, Norway, Italy and Brazil. Exports to China alone decreased from 23,348 tons in August, 1934, to 7,699 tons last month. Meanwhile, the outlook for the principal consuming industries remains encouraging, and production of iron and steel is expected to continue its upward trend in coming months.

* * *

Transvaal Output in August.—The Transvaal Chamber of Mines has issued its customary statistics for August which reveal a slightly increased output of gold at 929,331 fine ounces, compared with 927,803 fine ounces in July, and 881,861 fine ounces in August, 1934. The gold produced in August, 1935, was valued at £7 per fine ounce as compared with £7 os. 6d. for July, 1935, and £6 18s. for August, 1934. The following table shows the monthly production since the beginning of 1929:—

Month of	1929	1930	1931	1932	1933	1934	1935
January ...	876,452	882,801	914,576	936,784	867,457	907,641	890,875
February ...	815,284	818,188	839,837	914,012	883,145	826,363	821,246
March ...	866,529	888,370	910,998	960,035	946,883	874,112	882,309
April ...	872,123	868,606	882,377	949,796	895,097	865,822	869,956
May ...	897,598	916,213	910,279	965,844	944,604	898,418	916,035

"ABOUNDING CONFIDENCE"

LABOUR DAY (the first Monday in September) in American economic theory marks the division between summer slackness and autumn recovery. This year there was no summer slackness; but industry enters the autumn with abounding confidence. The headlines in the Press, in so far as they relate to business, employ only comparatives or superlatives—that industry is "better" than at some past time or is the "best" for so many years. The general tone of the articles conveys the impression, not of "recovery" or "improvement," but of actual prosperity and incipient boom. To a considerable extent this attitude of exuberance is based upon comparison with the slump of last September; but in many industries conditions are excellent, judged by any standard. This is true of the groups generally catalogued as consumer industries; it is still more true of what may be called the luxury consumer industries, such as the automobile and liquor industries, floor coverings, electric refrigerators, etc. Summer resorts were generally crowded this season, and attendance at motion pictures is equal to the best. The rapidity of the rise in residential building has been phenomenal; owing to the late spring residential building showed almost no increase over depression levels in the first quarter of the year, but in the second and third quarters it developed with almost explosive rapidity.

While the industries which are doing best are still those which cater for the individual consumer, they are not the "consumption goods" industries, but rather the durable consumer goods—automobiles, farm machinery, dwellings,

etc. Indeed, the industries not yet recovered are for the most part those whose corporate customers are still under a cloud—railroad equipment and heavy electric installations. The railways are not yet earning profits, and the utility companies still face an uncertain future. Industrial building is almost completely stagnant, as most concerns find their present space adequate; but industrial re-equipping is active, and this has brought prosperity to the electrical equipment industries in spite of the absence of their former largest customers. In short, the change in atmosphere since last spring is almost incredible; it is out of proportion to the change in the indices of production, which for August will hardly be as high as they were in the first quarter, for example; but it is not inconsistent with them, for they have maintained month after month a level which they barely touched in 1933 and held but briefly in 1934.

11,000,000 STILL UNEMPLOYED

The skeleton at this feast is the fact that unemployment is virtually at peak level. The Federation of Labour still estimates the number of unemployed at 11,000,000; and if this figure is at all accurate it is equal to the total of unemployment in 1932 and only exceeded by the estimates of 13,000,000 made at the time of the bank holiday. The National Industrial Conference Board gives a figure of about 10,000,000. Estimates from two such diverse sources must be given credence, although admittedly both are but based on samples. The only official figures come from the relief rolls, which in May (the last reported date) numbered 4,817,000, representing 19,250,000 dependent persons. This figure represents a small decline from the absolute mid-winter peak, but the figures have shown only minor changes from the first. Of course, many unemployed are

not so destitute as to "go on relief"; on the other hand, a single family on relief may include more than one unemployed person; hence the discrepancy between the relief statistics and the unemployment estimates is not so wide as appears at first.

It will be recalled that the Administration programme announced in January contemplated division of the persons on relief into two categories. Some 1,500,000 classed as "unemployables" were to be returned to the local authorities; the other 3,500,000 were to be put on public works projects. This undertaking has proved more formidable than was at first supposed, partly because the public works projects originally outlined were geographically remote from the unemployed, and partly because the appropriation of only \$4,800 millions, divided among so many claimants, precluded undertakings which had any considerable cost of machinery, materials or overheads. The result is that eight months after the programme was announced only about 800,000 persons have been provided for: 500,000 in civilian conservation camps (an increase of about 200,000); 250,000 on works projects, and 70,000 on other projects. In some States, the entire burden of relief is assumed by the Federal Government, in others only a fraction. In May (the latest published figure) Federal relief expenditures were \$144 millions, State expenditures \$20 millions and local expenditure \$24 millions. Assuming that aggregate was apportioned equally among the 5,000,000 cases, it would work out at less than \$40 a month. Actual relief allowances to April are stated to have averaged \$28.95; but of course on works projects the payment was higher than on simple relief. Information on the subject of "turnover" is extremely limited, although there have been "news releases" that have mentioned the increased proportion of "white collar" cases on relief.

In many of the Northern cities a disproportionately large percentage of the relief cases are negroes. The northward migration of the southern negro became a marked phenomenon after the war, but it seems to have been accelerated by the depression and by the cotton curtailment programme. In the South, the coloured population is largely agricultural and rural; in the North it has become congested in the cities, and being less securely rooted, and probably less trained for urban activity than its white competitors, gives rise to a major problem of relief.

This is the paradox of the American recovery. Probably the revival of industrial activity from the depth of depression will compare favourably in this country with that in any other major industrial country. Our economy has reached a stage which can be graded as "prosperous," although one would have to limit this adjective with some geographical qualifications. But so far as the statistical data show, only in the first phase of the rebound was there any considerable absorption of the unemployed; and the autumn of 1935 presents the paradox of seeming widespread prosperity combined with unemployment of all but maximum proportions. So far, the whole problem has merely been charged to the Federal deficit and handled by a succession of alphabetical agencies which are practically indistinguishable. In other words, the unemployed have been cared for by the Federal Treasury; but the problem of unemployment remains almost exactly where it was in the nadir of the depression.

NEW YORK, September 10.

FRANCE

A PLEA FOR EXCHANGE STABILISATION

FRENCH public opinion welcomed the plea for exchange stabilisation which M. Bonnet, the French Minister of Commerce, put forward at Geneva this week. Coming after the suggestion of Mr. Morgenthau, it is thought to mark a new step on the way towards general exchange stabilisation. M. Bonnet's proposal to push forward simultaneously the expansion of trade and the stabilisation of exchanges has been inspired by the will to reconcile the English desire for freer trade with the French intention to maintain the present gold parity of the franc.

The estimates of Budget expenditure in 1936, after having been approved by the Cabinet, are to be laid before the Parliamentary Committee in the next few days. The total of these estimates will be reduced to Frs. 42,000 millions, which represents a diminution of more than Frs. 5,000 millions in comparison with the preceding Budget, which was Frs. 47,500 millions. An extraordinary Budget will probably be added to the ordinary one, and it will cover expenditure which was till recently charged to the Treasury but is now to be financed by loans. Thus the total financial liabilities of the State will be made plain.

The presentation of the Budget gives rise to another question, that of the voting by Parliament of the decree-laws of last July. Will the decree-laws be inserted at once in the next Budget Bill? This seems to be necessary, if the Frs. 42,000 millions estimate is to be attained. Supporters of the Cabinet are nevertheless pointing out that if M. Laval did this he would risk the life of the Cabinet, although he has been authorised to wait until December 31st before securing Parliamentary approval of his measures.

These deflationary decrees are attacked daily by the Opposition. The summer holidays are now over, politics are starting again, and the chances of the Laval Cabinet are already under discussion. M. Leon Blum, the Socialist leader, is strongly opposed to the decrees, whilst the Radical-Socialists, the moderate ones in particular, remain supporters of the Government. On the other hand, certain Conservatives, knowing that it is not the desire of the Opposition to take over the Government before the elections of next May, are discussing the possibility of a Ministerial crisis which would force the Front Populaire to take the helm in a Cabinet headed by such a personality as M. Paul-Boncour, who recently advocated a union of all national parties against private interests in order to institute a new "managed" economy. An accord between the Left parties, however, seems at the moment very difficult; as was proved by the recent discussions of the "Left delegation," a body representative of various Left Parliamentary parties, which is co-operating with extra-parliamentary or revolutionary groups to devise a programme which would rally all the Left parties in a "Front Populaire."

The "Left delegates" differ for one thing on financial policy and the control of the Bank of France. And if certain politicians of the Right (anti-capitalist) and the Left (supporters of a "planned economy") are ready for national planned attacks on private capitalism, others are led by more political considerations. M. Blum, whose troops are gliding towards the Communist Party, seems to favour a coalition of all the Left "without the Radicals." Meanwhile the Soviet authorities would like to see a Government supported by the Radicals, and able to maintain in France a financial and military strength sufficient to face the German danger.

All these political constructions depend, however, on the prevalence of calm in the field of foreign policy. The

whole position would be drastically altered if the Abyssinian question or new German threats should stir national sentiment here. The speeches at the Nürnberg Congress contained certain menaces for peace, and any defeat for the Government's peace policy would reinforce its internal position. First indications of coming political changes will be given in the senatorial elections on October 20th, in which M. Laval is a candidate. Five days after, from October 25th to 28th, the Radical-Socialist Congress will take place, in which the Right Wing supporters of M. Herriot will have to face again the Left Wing supporters of M. Daladier.

FOREIGN TRADE STILL DWINDLING

The following table contains the returns of foreign trade in August:—

	July, 1935	August, 1935
Imports:—		
Foodstuffs	474,934	529,916
Raw materials	976,339	915,021
Manufactured goods	290,728	252,647
Totals	1,742,001	1,697,584
Exports:—		
Foodstuffs	175,131	162,144
Raw materials	323,432	312,278
Manufactured goods	604,576	699,727
Totals	1,103,139	1,174,149

In the first eight months of 1935 French imports amounted in value to Frs. 14,044,000, compared with Frs. 15,980,000 in the same period of 1934, a decline of 12 per cent. Exports fell by 11 per cent., from Frs. 11,577,000 to Frs. 10,234,000. In volume eight months' imports are down by 1,250,000 tons and exports by 1,078,000 tons.

The Statistique Générale has just published its monthly figures showing industrial production in France (1913 = 100):—

	July, 1934	May, 1935	June, 1935	July, 1935
General index	98	92	92	92
Engineering	99	95	95	95
Iron and steel	80	81	80	80
Textiles	58	63	64	64
Mines	102	101	101	98
Building (adjusted figures)	81	65	62	62
Leather (" ")	98	90	91	93
Paper (" ")	157	132	132	133
Rubber (" ")	836	758	767	760
Motors (" ")	463	422	421	412

In July 13,187 automobiles and 1,536 lorries were put on the road, compared with 13,544 and 1,555 in June.

The figures for the cotton industry are as follows:—

	April, 1935	May, 1935	June, 1935	July, 1935
Spinning (average per spindle in kilograms) :—				
Production	1-272	1-442	1-408	1-536
Deliveries	1-356	1-486	1-443	1-533
Stocks	2-083	2-148	2-145	2-117
Unfulfilled orders	3-877	4-690	4-477	4-353
Weaving (average per loom in pieces of 100 metres) :—				
Production	3-60	4-28	4-26	4-69
Deliveries	3-61	4-36	4-44	4-75
Stocks	9-83	9-89	8-32	9-89
Unfulfilled orders	12-09	14-91	16-96	16-41

The figure of bankruptcies in August was 722, compared with 1,100 in July and 890 in June. Bankruptcies and judicial liquidations were 1,027 in August, compared with 1,460 in July and 1,252 in June.

PARIS, September 19.

GERMANY

THE NEW ANTI-JEWISH LAWS

ALTHOUGH outwardly an impressive affair, the Nazi Party's demonstration at Nürnberg brought less changes in legislation than was expected. The foreshadowed Ghetto law for Jewry has been postponed. The monopoly given by a new law to the Swastika flag might possibly be considered a victory over the military-aristocratic element, whose nationalist sentiments are associated with the pre-war flag. But it seems that the new law was designed as a protest

against foreigners as a result of the "Bremen" disorders in New York. More than once the Nazi Party has justified purely domestic measures on the ground of its desire to confound the outside world. The native military-aristocratic element cares less than is supposed about the new flag monopoly. This is one of several matters of mere demonstration which may be left safely to the nominal rulers so long as power in important matters remains in careful hands. The Nürnberg meeting was mainly a demonstration—primarily against the Jews. Although the denunciations of Russian Communism were even lengthier and more vehement than the denunciations of the Jews, Communism was presented as a mere phase of the Jewish question. Indeed, towards Communism, independently of its alleged Jewish associations, National-Socialism is ambiguous. It dislikes the system as much as but no more than it dislikes other non-Nazi systems; it co-operates with Communism as with other systems when co-operation seems profitable.

Aversion to the Jews is the one sentiment common at all times to all Nazis. But the new anti-Jewish legislation passed at the close of the Nürnberg demonstration has little practical importance. Marriages between Jews and German "Aryans," henceforth prohibited, have of late been prevented by illegal official action and by mob violence. The new law of nationality and citizenship is not clear. While expressly depriving the Jews of Reich citizenship, and enacting that only Reich citizens shall have full political rights, it neglects to define the last term, therefore leaving unsettled the question whether Jews are to be denied the vote. The laws bear signs of careless preparation, and were apparently drafted at the last moment in order to crown the Party demonstration with formal measures that would satisfy enthusiasts.

THE "SECRET" INTERNAL DEBT

An optimistic summary of the Reich Finances was presented to the Nürnberg Congress by Herr Reinhardt, the Secretary of State, of the Finance Ministry. Herr Reinhardt estimated that tax reductions totalling Rm. 1,135 millions a year have been granted by the present administration; and that the official interest-reduction measures have resulted in an annual saving of Rm. 235 millions a year to the States, municipalities and private business. On the subject of Reich borrowing, on which Herr Reinhardt threw no light, the Finance Minister has published data in a periodical journal. Like Dr. Schacht, in a recent speech, Herr Schwerin von Krosigk admits that doubt about the magnitude of the debt is not confined to foreigners. But he attributes to foreigners the current "fantastic" estimates of new indebtedness. The alleged secret debt of Rm. 10,000 millions to Rm. 16,000 millions (in reality even higher figures have been mentioned) is, he says, a fiction. This had been alleged to be a bill debt; but the total bill circulation, public and private, has risen by only Rm. 4,500 millions since the beginning of 1933. In handling the not identical question of the total increase in the debt since early 1933, Herr Schwerin von Krosigk treats the question as one of estimate and conjecture; and puts the increase roughly at between Rm. 6,000 and Rm. 7,000 millions. Only for the part of the Reich debt, long-term and short-term, which is always precisely returned does he give precise figures; but his figures do not agree with the usually returned figures. His table shows this debt to have actually declined in the first two Nazi years, putting it at Rm. 12,200 millions on January 1, 1933, and at only Rm. 11,600 millions on January 1, 1935. It must be concluded that the Finance Ministry is unaware of the amount of the debt; and if, as is conjectured, Reich Finance is confused with party and party organisation finance this ignorance can be understood. The Finance Minister puts the combined Reich, State and municipal debt on January 1, 1935, at Rm. 26,900 millions, as against Rm. 26,600 millions on January 1, 1933; but these figures, he admits, do not contain the so-called "secret" debt, the total of which he only estimates.

Money this week is easier, and the day-loans rate on Tuesday was down to 3-3½ per cent. The Reichsbank's return for September 14th shows a moderate increase in credits and investments.

The wholesale price index number for September 11th was 102.1, unchanged. The rise in retail prices and the

shortage of necessities in Berlin and in some other cities continue. It has been impossible to buy various staple kinds of meat. The population has been officially advised to consume canned meat. The Berlin Police President, acting as price-supervision authority, announces that the food supply of a large city cannot always be expected to meet the wishes of housewives; it is the duty of housewives, he affirms, to adapt their buying to the condition of supply. The same authority has prescribed rigid maximum prices for the chief kinds of meat. He reports that whereas formerly the price regulations were in general observed, of late there have been hundreds of cases of violation. In fact, at least as regards meat, the regulations are ignored by dealers without exception. The official prices have practically no relation to market conditions, and in consequence both sellers and consumers treat the price schedules as demonstrations designed to comfort the official mind. The prices actually charged in shops are up to 100 per cent. higher, sometimes more, than those in the official list; in the open-air markets they are a little lower than in the shops.

The foreign trade return for August shows a decline of imports and an increase in exports, both in part due to seasonal causes. The export surplus of Rm. 50 millions is the largest since December, 1933. As compared with August, 1934, in which the same seasonal influences operated, the trade balance improved by Rm. 59 millions. The passive balance in the first eight months of the year is only Rm. 86 millions, as against Rm. 265 millions in the same months of 1934. In August, contrary to recent tendencies, the decline in imports fell mainly to European countries:—

	July (Millions of Marks)	August	Jan.-Aug.
Imports:—			
Livestock	2-2	3-3	24-6
Foodstuffs	70-1	64-8	634-0
Raw and half-manufactured materials	212-6	209-7	1,719-3
Manufactured goods	45-6	39-8	397-2
Totals	330-5	317-6	2,775-1
Exports:—			
Livestock	0-2	0-1	1-7
Foodstuffs	7-4	5-6	45-8
Raw and half-manufactured materials	60-0	61-0	485-2
Manufactured goods	291-4	300-9	2,156-0
Totals	359-0	367-6	2,689-0

The number of unemployed is officially returned as having fallen in August by 48,000 to 1,706,000. At Nürnberg it was officially stated that the real number of unemployed is only a little over 1,000,000. Another official report puts the effective intensity of occupation of industry at considerably higher than the monthly returns show. These returns are based on the percentage of working places filled and on the percentage of the maximum working time actually worked. The latest percentages are respectively 65.8 and 59.4. A new official report states that certain trades have already nearly attained the highest practically possible intensity of occupation if considerations of profitable working are taken into account. In such branches operation to the theoretically full extent would be automatically prevented by higher working cost. Pig-iron production in August was 1,144,900 tons, against 1,093,000 tons in July; in the first eight months it was 7,840,500 tons, against 5,461,800 tons in the same months of 1934.

BERLIN, September 17.

HOLLAND

NEW FLIGHT FROM THE GUILDER

A DECIDEDLY nervous tendency has been predominant on the money, foreign exchange and stock markets at Amsterdam, throughout the week. Premonitions about the approaching encounter between Parliament and the new Cabinet at the reassembly of Parliament on Tuesday exerted their influence days in advance, just as if Holland's monetary future would be decided on that day. Advancing

money rates on the open market (5½ per cent.), actually exceeded the official discount rate of the Netherlands Bank. The exchange rate approached the gold export point against both the dollar and the franc. The flight from the guilder was steadily gaining impetus, and guilders for future delivery were quoted at a big discount. Renewed selling pressure also manifested itself again on the stock markets; and 4 per cent. state loans fell to a new low level at 91½ per cent. The flight from the guilder, necessitating an export of gold, is not the only cause of the tightness on the Amsterdam money market. Another cause is the effort of the big Dutch banks to keep their assets as liquid as possible in preparation for what may happen.

The exports of gold are tying up funds to a large extent. The weekly return of the Netherlands Bank shows that gold stocks have been depleted by 37 million guilders in the past week. The Bank is not only releasing gold to maintain the guilder rate, but has also been selling French francs at a rate of 9.79 on the exchange market. All these transactions have resulted in further withdrawals of funds from the Amsterdam money market. A consequence of the resulting scarcity of money has been that on two successive occasions the Minister of Finance's issues of Exchequer Bonds have been a failure.

The return of the Bank also shows for the item of "loans" a rise of 27 million guilders to 170 millions, as well as an increase in "home bills discounted" by 10 millions to 57 millions. The credits outstanding were accordingly 37 millions larger than a week ago. The circulation of bank notes dropped by 11 millions to 792 millions, with the result that the gold coverage of the bank's liabilities at call decreased from 71.4 per cent. to about 67 per cent. The shipments of 37 millions worth of gold, as well as the Bank's further expansion of credit by 37 millions, necessarily involved a rise in the official rate of discount last Tuesday, and the rise announced was from 5 per cent. to 6 per cent. This measure, which is more a reflection of the serious position on the Amsterdam money market, than a measure to defend the guilder, simply resulted in interest rates on the open market running up to 6 per cent. On the foreign exchange market the guilder was a trifle firmer, although the dollar remained above the gold export point.

The speech from the Throne, delivered by the Queen at the reassembly of Parliament on Tuesday, did not result in any measure of relaxation. The general course of policy set forth by the Government in the speech was devoid of anything likely to improve the general situation. Once more it was stated that the Government did not regard devaluation or abandonment of the gold standard as beneficial to the community at large. An increase in certain taxes is announced, as well as additional cuts. The fostering of further industrialisation in the country by the foundation of an industrial finance company is also proposed. But there is no sign of the slightest modification of the Government's fundamental policy of deflation. The Parliamentary debates are accordingly being awaited eagerly, as well as the publication of the Budget figures for the coming fiscal year. Until then the tension will most likely continue. Exports of gold are still going on.

PRODUCTION AND EMPLOYMENT STILL DECLINING

Trade and production is still steadily declining. The strike in the Tilburg woollen industry, occasioned by the announcement of an additional wage cut of 5 per cent., has spread. The number of strikers is now well over 4,000, and almost the entire woollen cloth industry is at a standstill. There are no signs of a settlement of the dispute, which has been in progress for weeks.

The statistics for the second quarter of 1935, published by the Rotterdam Chamber of Commerce, demonstrate in striking fashion the alarming decline in the traffic of the Port of Rotterdam. Between April and June, 1935 (inclusive), the number of sea-going vessels entering the Port of Rotterdam was 2,684, compared with 2,888 during the corresponding period of last year. The net tonnage was 4,395,110, compared with 4,515,195 last year. The maritime goods traffic in Rotterdam amounted to 6,609,621 tons, compared with 7,206,823 tons last year. For Antwerp the corresponding figures were 5,291,184 and 4,990,985 respectively. The arrivals of ore at Rotterdam and Vlaardingen amounted to 1,593,633 tons (last year 1,689,350). The

quantity of grain dealt with by the grain elevators declined from 926,637 tons to 546,604 tons.

Unemployment is still increasing. On August 10th, the number of unemployed was 340,635, an increase of 6,703, compared with a fortnight before. A Government bill is now being drafted to provide for restrictions on the employment of female labour with a view to extending the employment of male labour.

The official trade returns issued by the Central Statistical Bureau are summarised below:—

(In millions of guilders, excluding gold and silver)

	July 1935	August 1934	August 1935	Jan.-August 1934	Jan.-August 1935
Imports	76	87	76	710	607
Exports	54	69	61	466	434
Percentage of imports covered by exports ...	70.9	79.0	80.6	65.5	71.4

Imports of gold and silver in August, 1935, amounted to 14,217,449 guilders and exports to 21,141,295 guilders.

AMSTERDAM, September 18.

HUNGARY

A CHEAP MONEY POLICY

THE Bank rate was reduced on August 29th from 4½ per cent. to 4 per cent., the lowest level in the history of the National Bank of Hungary. Dr. Fabinyi, the Finance Minister, declared that the reduction of the Bank rate is in full harmony with the Government's financial measures, and it is generally expected that the Government will endeavour to pursue a cheap money policy. For almost three years there has been no change in the Bank rate, which had stood at 4½ per cent. since October, 1932, and it seemed that that level was regarded by the authorities as the lower limit. But successful efforts of other countries to liquidate financial burdens of the past by means of cheap money have finally convinced the National Bank that they must keep up with the times.

The new policy should help to relieve debtors of their onerous burdens. With the reduction of the Bank rate to 4 per cent., maximum interest charges have been reduced to 7½ per cent. on short-term debts; and a Government decree is in preparation to relieve the still heavily indebted farmers. As the larger part of the farmers' long-term debts affect foreign creditors a final settlement is not expected; but the present limitation of interest payments to 5 per cent., instead of the original 7 and 7½ per cent., will probably be extended for another year, pending a general scaling down of interest rates in harmony with the capacity of debtors.

THE BUDGET DEFICIT

Provisional figures for the budgetary year ended on June 30th, as compared with the previous financial year, are as follows:—

	1933-34 (In million pengö)	1934-35
Expenditure:—		
Actual budgetary.....	717.0	728.1
Actual extraordinary	86.3	84.2
Total	803.3	812.3
Receipts:—		
Actual budgetary.....	758.6	762.9
Actual extraordinary	6.6	6.8
Total	765.2	769.7
Deficit	38.1	42.6

The above figures of expenditure include the non-transferred portion of the League Loan service, which amounted to 20.3 million pengö, so that the actual cash deficit in 1934-35 totalled only 22.3 million pengö, the financing of which did not cause any difficulty. The budgetary position has considerably improved since 1931, and were it not for the large deficit on the State railways and ironworks the Budget would be balanced. The extraordinary expenditure recorded above was spent mostly on financing the deficit of the railways and the ironworks. The Financial Committee of the League of Nations, having examined the budgetary

situation, concludes that the Treasury's position is decidedly more favourable now than it was in 1934 or 1933. Furthermore, the Committee states that the cash deficit is not causing any trouble, as the Government can re-borrow the untransferred amounts of its debts service.

In the long run the Government will benefit greatly by the new cheap money policy, especially if the Bank rate is again reduced, partly because lower debt burdens will improve the taxpayer's capacity, and partly because with the reduction of the Bank rate the interest payable on internal Treasury bills will also be reduced. Provided that expenditure in the current budgetary year does not exceed that of 1934-35, there is a reasonable hope that the Treasury's position will continue favourable, in spite of the drought which is adversely affecting the farmers' capacity to meet tax payments in the distressed areas. On the other hand, indirect taxes, especially the turnover tax, are likely to continue to bring in good yields on account of the rise in wholesale prices, which is now beginning to affect retail prices. In the first seven months of the year the wholesale price index averaged 87, as against 76 in the similar period of 1934. The increase was chiefly due to higher agricultural prices, though the discrepancy between agricultural and industrial prices is still very considerable.

BUDAPEST, September 12.

CHINA

NANKING AND CANTON

THE chief political event of the last few weeks has been the resignation of Mr Wang Ching Wei, President of the Executive Council, and his subsequent decision to resume office. For a time the political horizon was clouded by the possible collapse of the Central Government through the withdrawal of Mr Wang and his friends, and the situation was serious enough to bring Marshal Chiang Kai Shek back to Nanking after an absence of eight months. However, calm is once more restored and Marshal Chiang has returned to his particular task of supervising the anti-Communist campaign.

The possible retirement of Mr Wang caused surprisingly little excitement in Canton. This may have been because the present administration there is in the midst of negotiations with Nanking for the repayment of various advances, amounting to \$20 to \$30 millions, made during 1926. These funds were provided by the Cantonese to finance the Northern Expeditionary Force, which, under the leadership of Chiang Kai Shek, marched from Canton to the Yangtse and ultimately established the Central Government in Nanking. One would have regarded these loans as in the same category as war debts, but possibly the demand for repayment may be merely a Chinese way of asking for a subsidy. Canton's three-year reconstruction plan is probably proving a more expensive matter than its authors bargained for, and as the conversion of various private enterprises into provincial monopolies has so far done nothing to improve the economic condition of the people the local Government are looking to the Central Government for help. For this reason relations between Canton and Nanking are probably more friendly than they have been for some years.

DEPRESSION IN HONGKONG

Trade conditions in Hongkong remain very unsatisfactory. All branches of trade are depressed and purchasing power is at a very low ebb. The statistics of trade for the first half of 1935 show a small decline compared with the corresponding period of 1934, but there has been a big falling off since 1932, as the following table shows:—

	1932	First six months 1933	1934	1935
		(000,000 omitted)		
Merchandise.....	335	259	195	191
Gold and silver...	43	16	29	24
Total	378	275	224	

		EXPORTS			
Merchandise.....	242	211	157	142	
Gold and Silver...	54	63	55	38	
Total	296	274	212	180	

Japanese imports increased from 8 per cent. of the total in the first half of 1934 to 11.5 per cent. for the present year, while the percentage for imports from the United Kingdom fell from about 8 per cent. to 6½ per cent. This latter figure compares with 13 per cent. for the first half of 1932, which was perhaps an abnormal period owing to the anti-Japanese boycott. On the other hand, imports from U.S.A. have risen from 6.5 per cent. to 7.4 per cent. As will be seen from the above table, the movement of treasure continues on a large scale in proportion to the value of mercantile trade. While the export of gold bars during the past six months has diminished in volume, compared with the outflow of the last three or four years, shipments of bar silver and silver coin have increased. It is partly due to this efflux of silver that the note issue of the Colony has contracted since the beginning of the year from \$158 millions to \$130 millions.

Certainly the spending power of the Colony is very much reduced. Rents have been forced down to uneconomic levels; clothing in the piece is priced at so many yards to the dollar; cinemas report decreased takings, despite reduced prices; the returns of all public utility companies appear to be on the decline; and in various other directions there are unmistakable signs that the public is feeling the pinch. The Government has suffered considerably, and although there is still a substantial surplus from past years, the Budget, to be presented next month, will probably reflect the ravages of the depression.

As a result of the recent report of the Economic Commission, efforts are now being made to encourage tourist traffic by systematic advertisement of the charms of Hongkong and the provision of facilities to render the stay of visitors a pleasant one. A travel association has been formed under the auspices of the local Government, who have made a grant of \$25,000 to the funds of the association. The first object of the association is to attract tourists from other parts of the East, and already the cool, dry climate of the winter months is bringing to the Colony a growing stream of visitors from Malaya. A low rate of exchange is, of course, an advantage in this respect, and the greater the decline in the dollar the cheaper Hongkong will become as a holiday centre for those whose income is on a sterling basis. Visitors from Australia are also on the increase, and there seems to be ample scope for the travel association to prevail upon American tourists in the Far East to break their journey in Hongkong.

Unfortunately, the Colony still lacks regular air communications with other parts of the world. There is some apprehension here lest Hongkong be altogether left out of air travel systems, now that China has many regular lines and the trans-Pacific service may shortly connect Manila with Canton. It is known that various plans for linking Hongkong with Imperial Airways are under consideration, but it is to be hoped that a service, even if only of a trial nature, will not be long delayed.

HONGKONG, September 1.

CANADA

MR ABERHART'S PLANS

THE amazing result of the provincial election in Alberta, and the appearance of a "Social Credit" Government, caused a great sensation which has not yet died down. Events in Alberta are being watched with keen interest, not merely by the politicians and financiers, but by the whole country. The United Farmer Ministry of Mr R. G. Reid was left without a single seat in the legislature, and Mr Aberhart lost no time in forming a Social Credit Ministry of eight members. Their names are unknown outside their own communities; but Mr Aberhart, who has to find himself a seat, has taken along with the Premiership the Ministry of Education and left the key position of Pro-

vincial Treasurer, which he was expected to take, to a certain Mr Charles Cockroft. This gentleman runs a general store in the village of Gadsby. His financial prestige is derived from experience gained in the accounting department of a chain store organisation in Alberta. But apparently the right-hand man of Mr Aberhart is to be Mr E. F. Manning, who headed the poll in Calgary and has been brought into the Ministry. Rumour credits Mr Manning with being the real inspirer of the Social Credit crusade, and it is also said that he imbibed the gospel of Major Douglas while studying in Great Britain with the aid of a scholarship given every year by Mr R. B. Bennett.

The Aberhart Ministry embarks on its official career in circumstances of grave difficulty. The result of the polling on August 22nd caused both a slump in all securities connected with the Province and a demand for payment of provincial savings certificates on an ominous scale, with the result that a few days later the outgoing Reid Government found it necessary to suspend repayment of these certificates. A large part of the money derived from their sale had been invested in Provincial bonds; and when these had slumped badly and become a drug upon the market it became obvious that the claims for repayment could not be met indefinitely. Furthermore, the Provincial Treasury is reported to be almost bare of cash and to have had scarcely enough in hand to pay the salaries of civil servants for August.

Mr Aberhart seems quite cheerful, nevertheless. He has issued several reassuring statements to the effect that there is not the slightest ground for alarm on the part of holders either of savings certificates or provincial bonds, and that his Government, although it will persevere with its resolve to inaugurate a new credit regime, will sternly maintain the general credit of the Province and redeem its pledge to pay 100 per cent. on both bonds and certificates. Meanwhile he has laid his plan for an exhaustive investigation of the exact state of the Provincial finances, and has been carefully explaining that considerable time must elapse before a workable Social Credit scheme can be involved. Moreover, he has decided to forswear his feud with Major C. H. Douglas, who still remains upon the pay-roll of the Government of Alberta as financial adviser. He has now been called in to advise.

NEGOTIATIONS WITH MR BENNETT

But a depleted Treasury, pressing obligations and anxious creditors constitute problems of compelling urgency, and Mr Aberhart has already found it necessary to make approaches to Mr Bennett by telephone for financial succour, as obviously the normal channels for raising money are now closed to him. According to a statement issued by Mr Bennett, the Premier of Alberta estimated that a sum of at least \$12 millions would be required within the next year to enable his Government to meet its debt obligations and discharge its liabilities for unemployment relief and other problems, and he was assured by Mr Bennett that Alberta would be treated fairly by the Federal Government and would be given whatever reasonable assistance was possible for the purpose of coping with its financial difficulties.

Furthermore, the situation in Alberta promises to bring to a head the whole complicated problem of the Provincial finances, since the Federal Government's finances are inextricably involved in them through the substantial loans which it has made during the depression, not only to Alberta but to other Provinces. It is becoming plain that whatever Government is in power in Ottawa after October 14th will be compelled to face the problem with bold reconstructive measures; and it looks as if there will soon have to be undertaken a national effort for the stabilisation of Canadian public finances through the co-operation of the Dominion and Provincial Governments. The solution which is being suggested is a general conversion loan, which would reduce the aggregate debt burden, and the establishment of a National Loan Council on the Australian model which would exercise budgetary control over the Provinces.

Simultaneously an impetus would be given to the demand for constitutional reform designed to reinforce the powers of jurisdiction and the taxation authority of the Federal Government. The Province of Quebec might, as the result

of recent developments in Alberta, become more favourable to constitutional changes which would strengthen the central authority. But if the Aberhart Ministry decided to launch an experiment in Social Credit it would perforce resist any changes which would weaken its scope of jurisdiction and impair its taxing powers. Meanwhile the Social Credit Party has rejected overtures for an alliance with Mr H. H. Stevens's Reconstruction Party, but it has decided to nominate its own candidates, at least in Alberta, for the Federal elections which are to be held on October 14th.

The Western crop survey of the Bureau of Statistics, published on August 20th, is again a pessimistic document. In the districts of Manitoba and Saskatchewan, where the rust attack was most severe, there has been a progressive deterioration of the crop; and the report states that "there will be very little bread wheat worth threshing in Manitoba since the yields are low and the grades poor, while durum wheat is also seriously effected." Further West there has been freezing temperatures and a snowfall, and "spotty but heavy frost damage" is reported from the Peace River district of Alberta and over a 250-mile stretch of country running from west of Edmonton, Alberta, to Scott, Saskatchewan. The superintendent of the Dominion Experimental Farm at the latter place describes this "as the most serious summer frost ever experienced while grain was standing." In quite a large area, however, which has so far escaped both frost and rust, the grain crops are good. But the harvesting operations have been delayed by the inclement weather, and owing to the heavy straw, which is badly tangled and lodged, they are proving both expensive

and laborious. Accordingly estimates of the Western wheat crop are now being reduced to below 300 million bushels.

Despite the adverse crop reports from the West, there has been a distinct improvement in business in the past month. The general economic index of the Bureau of Statistics for the week ending August 10th climbed to 101.6, a gain of 2.3 over the figure for the preceding week and of 7.2 over that for the parallel week of 1934. The following are the data for three of the chief components of the latest index with the comparative figures:—

	Carloadings	Wholesale prices	Bank clearings
Aug. 10, 1935 ...	69.9	71.7	101.9
Aug. 3, 1935	72.5	71.8	81.9
Aug. 11, 1934 ...	70.7	72.9	86.1

Considerable stimulus has come from the generous programme of public works which is being promoted by the Federal Government. All industries interested in building operations have benefited, and some of the depressed durable goods industries have been able to increase their scale of operations. The newsprint industry is also doing better; and exports of newsprint for July were valued at \$7,446,820, compared with \$7,263,463 in July, 1934.

Imports in July were valued at \$48,414,397, a gain of \$1,700,000 over the June figure. Exports were valued at \$57,786,238, a gain of \$5,000,000. This is satisfactory in a month which usually shows recessions in both figures. The percentage increases over the figures for July, 1934, were 9.7 for imports and 1.8 for exports.

OTTAWA, September 2.

BOOKS AND PUBLICATIONS

AURI SACRA FAMES

THE entrepreneur has long wandered vaguely and uneasily through the economic text-books. In this book* he parades in full flesh, pioneer in the most speculative of industries, risking wealth and prestige on the unknown potentialities of a desert called the Witwatersrand. Mr Emden writes for the economist, the moralist and the mere gossip, and his narrative, although slipshod at times, is usually able and invariably interesting. His collection of short biographies has a persuasive "through the keyhole" atmosphere, which suggests effectively the drama and intrigue of the first twenty years of the Rand.

The origin of the Rand, as the author shows, lay in the diamond mines of Kimberley. The latter threw up three great powers—Rhodes, Barnato and Beit—whose newly-made fortunes, imagination and strategy were essential to turn a "ten pennyweight proposition" into an industry which has produced gold valued at £1,227 millions in its fifty years' history. Rhodes came from a vicarage in Bishop's Stortford, a studious but restless youth who set foot in South Africa at seventeen. Barnato, quick witted, flamboyant and unsteady, was the son of a Whitechapel shopkeeper. Beit, who had learned what diamonds really looked like (unlike some of the early prospectors), arrived in Kimberley as a buyer at the age of twenty-two, and established himself as a speculator of longer vision than his fellows.

Of these three, Rhodes is the centre, but for all his legendary far-sightedness, he nearly missed his chance on the Rand. Gold he regarded as a gamble; diamonds as a certainty. It seems fair to say that his major success was the consolidation of the De Beers diamond mine, after long negotiation and financial warfare with Barnato. He made mistakes on the Rand, and the formation of the Gold Fields group, for all the financial swashbuckling which marked its inception, was by no means a pioneer achievement. Rhodes had the manner of the superb adventurer; ends, and not means, were his concern. He could thus proceed with the formation of the Chartered Company "whose only substratum was in fact imagination," but he also depended

upon the financial insight of Beit to prepare the market for his ideas. The Jameson Raid marked the tragic peak of his career, not because it was an unwarrantable attempt to usurp power in the Transvaal, but rather because it was an ill-conceived and clumsy failure.

Barnato was one of the few to stand aside in this venture, and, indeed, "made Kruger see reason" after its leaders had been sentenced to death. The Raid, nevertheless, was symptomatic of the pressure for political power of a dominant *emigré* mining group over the established simple farming community who distrusted gold and the adventurers who came in its search. But the united front of the Uitlanders from 1897 made a final struggle for power inevitable; and the Boers were in the end unseated in the Transvaal.

Mr Emden's book, however, is chiefly concerned with these events as they affect his gallery of personalities. The history of the Raid, and the adventurous figure of "Dr. Jim" must be pieced together from too many references to make a satisfactory account from the historian's point of view. Mr Emden is at his best in his descriptions of the conquistadores of the Rand. His account makes it clear that they were something more than the "Park Lane millionaires" who formed the contemporary butt of music-hall humour. Robinson, however, was certainly among their ranks. With his elephantine self-confidence, he could not tolerate working in partnership with Wernher Beit, and turned, mistakenly as it afterwards proved, to the west. His personal animosity against the success of the "Corner House" and Rhodes reached the fantastic lengths of an attempt to break the De Beers monopoly. The story of his frustrated desire for a peerage, which unhappily coincided with serious financial revelations, and his settlement in Park Lane complete a life whose personal ambition and unappeased vanity can rarely have been equalled.

Such figures, however, are more characteristic of the early days of the field. Beit was of sounder stuff, and in partnership with Wernher—"they think I am only Beit's Christian name"—he adopted the principle of floating undertakings only when they had reasonable prospects of success. This combine formed the basis of the present Central Mines and Rand Mines group. A sounder prospecting technique, encouraged by German engineers, replaced

the early speculation. By the mid-'nineties, ten groups controlled the Rand, and their financial power on the European Bourses was paramount. At that time an international share boom was in full swing, and the concentration of sound shares in the hands of the mining finance companies led to an astonishing demand for rubbish. The crash was inevitable, and Mr Emden's account suggests more than a suspicion that the Rand financiers engineered and profited by it. But the industry had been consolidated, and its major personalities had risen to the surface—accompanied by a certain amount of scum—secure in their lucky triumphs. If Kaffir shareholders require insight into the pioneer days on the Rand, this is the book for them. But if they cherish a belief in the unsullied idealism of our South African Empire builders, they had perhaps better leave it unopened.

SHORTER NOTICES

"Industrial Profits in the United States." By Ralph C. Epstein. (New York) National Bureau of Economic Research. (London) Macmillan. 678 pages. 21s.

This exhaustive study is based upon official material collected by the Department of Commerce for the Committee on Recent Economic Changes. Professor Epstein has been fortunate in having behind him the statistical resources of the National Bureau of Economic Research, with the result that his book is probably the most thorough inquiry into industrial profits which has ever been published. The broad findings are summarised first; then the earnings of large corporations, divided under eighteen industrial groups; then the earnings of small corporations similarly treated; finally, a group of chapters on "Problems of Estimation and Interpretation." Professor Epstein is well aware of the many pitfalls which beset the path of the statistician who would estimate average profits, but his findings are nevertheless definite enough to provide plenty of interesting material.

"The Economics of Inflation." By H. Parker Willis and John M. Chapman, Columbia University Press. (London) Milford. 430 pages. 22s. 6d. net.

This book embodies the work of the Banking Seminar of the School of Business, Columbia University. It consists of two parts, the first twelve chapters being a discussion by Professors Willis and Chapman on "Contemporary Aspects of American Inflation," the remainder of the book being a collection of essays by various members of the seminar on different aspects of inflation.

The purpose of Part I we are told in the conclusion, "was to present the theoretical aspects of what is termed inflation in such a way as to permit the average reader easily to form an idea of the issues involved in the subject." It cannot be said that this excellent object has been achieved. While some useful and interesting points are made, the argument is wholly one-sided. The authors appear to have been so carried away by their opposition to the policy of the present Administration in the U.S.A. that they have omitted entirely to present the case for the expansionist point of view. That so much nonsense should be poured out on the inflationist side, does not really excuse the scientific critic from maintaining an objective attitude.

From the start the discussion is confused by a failure satisfactorily to define the term "inflation." This is certainly no easy task. But some of the essays in Part II tackle it far better than Professor Willis. To say, as Professor Willis does, that "What is called inflation in the United States is essentially a debate about the redistribution of the national income and wealth" is scarcely adequate. Such an approach implicitly ignores what is to the plain man the dominating fact to-day—namely, the existence at the outset of unused resources and economic disequilibrium. Little attempt is made to distinguish between the major Continental inflations, the 1924-29 boom in America, and the present attempts at monetary expansion.

The essays in Part II fall into two classes. There are some interesting statistical and applied studies, and there are some articles of a purely theoretical character. Of the former, Mr Radice's analysis of "Inflation and the Distribution of Income" deserves special mention. The conclusions are interesting and based on a careful and lucid discussion of the available statistics. Of the latter, Mr Schumacher provides a long and closely-argued essay on inflation and production which will interest the more academic reader, and Mr

Heilperin and Dr. Machlup write cogently on over-production and decreasing costs respectively. While the second half of the book contains work of a much more profound character than the first, many of the essays are also marred by hasty generalisations and half truths springing apparently from the same strong deflationist bias which influences the authors of Part I.

MONEY AND BANKING

BRITAIN'S OVERSEAS INVESTMENTS

SOME years ago the *Economist* conducted an investigation into British overseas investments, the results of which were published in a series of articles in 1930. About the same time Sir Robert Kindersley began his investigations into the same subject, which were originally confined to bonds but were later extended to cover all marketable securities. In the September issue of the *Economic Journal* Sir Robert Kindersley has revised his detailed analysis of British investments abroad up to the year 1933, with provisional estimates for 1934. For purposes of convenience, Sir Robert classifies securities into (a) Empire and foreign Government and municipal loans, (b) bonds and shares of registered British companies operating entirely or mainly abroad, and (c) bonds and shares of Dominion, Colonial and foreign companies registered and operating abroad, but quoted on the stock exchanges of the United Kingdom. In addition, a rough estimate has been made of foreign securities held in the United Kingdom, but not dealt in regularly in British markets; other private investments abroad such as property and mortgages; and the overseas assets of British companies whose main activities are in the United Kingdom.

Despite an increase in repayments of capital from £39.7 millions in 1932 to £49.4 millions in 1933, the nominal value of British capital invested in Empire and foreign government and municipal loans rose from £1,432 millions in 1932 to £1,480 millions in 1933. The increase in the nominal value of these investments is in part due to certain new foreign loans in 1933 issued for the funding of unpaid interest and frozen balances. An example is the Argentine Government 4 per cent. loan for £13½ millions, issued in exchange for balances awaiting remittance to the United Kingdom in accordance with the Anglo-Argentine Trade Convention of May, 1933. New cash subscribed to foreign loans in 1933 amounted to only £5 millions, as compared with repayments from abroad of nearly £11 millions. On the other hand, the new issue market for Dominion loans was active in 1933, for Empire countries took advantage of the improvement in their financial status. Indeed, new issues for Dominion loans in 1933 totalled £116 millions, of which £79 millions was subscribed in cash, the balance representing conversions.

An interesting feature is the persistent decline in the proportion of our total investments in Government and municipal loans which is invested in foreign countries. Thus, the nominal value of Empire loans rose from £1,036 millions at the end of 1928 to £1,109 millions at the end of 1932 and £1,147 millions at the end of 1933; but the amount invested in foreign loans declined from £364 millions at the end of 1928 to £333 millions at the end of 1933. As a result the proportion of foreign loans to total Government and municipal loans declined from 26 per cent. at the end of 1928 to 22.5 per cent. at the end of 1933. It is perhaps no coincidence that the pronounced preference for Empire investments has been accompanied in recent years by a similar reorientation in Britain's overseas trade, the trade with the sterling area having increased noticeably at the expense of trade with other foreign countries. As a result of an increase in trade within the sterling area, reinforced by the revival of activity in gold production, remittances between the constituent countries in that area have been facilitated, and scope for investment in these countries increased.

Preliminary information for 1934 indicates that income from foreign bonds was maintained in that year. Moreover, the interest on new Empire and Colonial loans has probably offset a reduction in interest rates on old loans, due to conversions.

The nominal value of British investments in bonds and shares of registered British companies operating entirely or mainly abroad rose from £1,205 millions at the end of 1932 to £1,211 millions at the end of 1933. There was a

slight reduction in loan capital from £389 millions to £387 millions; but the amount invested in share capital rose from £816 millions in 1932 to £823½ millions in 1933. The reduction in the nominal value of loan capital is largely due to an increase in repayments from abroad, from £4.8 millions in 1932 to £7.8 millions in 1933. Similarly, the decline in the total income from these investments from £42.5 millions in 1932 to £41.9 millions in 1933 is largely due to a reduction of approximately £1 million in interest on loan capital.

Dividends distributed by British companies operating abroad rose from £29.4 millions in 1933 to £33.2 millions in 1934, and the average return on capital invested increased from 3.6 per cent. to 4.0 per cent. during this period. The improvement was due partly to an increase in the demand for raw materials and partly to the rise in the prices of tin, tea and rubber engineered under restriction schemes.

The results of Sir Robert Kindersley's examination of British holdings in Dominion, colonial and foreign companies are less reassuring. The nominal value of British investments in these securities declined from £719 millions in 1932 to £695 millions in 1933. Both dividend and interest income fell in 1933, but in the following year there was a sharp improvement, the dividends paid, at £23.5 millions, exceeding those of any year since 1930. The increase of £3 millions in the dividends paid between 1933 and 1934 was due to general improvement in the sterling area as well as to a further depreciation in the gold value of sterling, which was responsible for another advance in the average price of gold from 124s. 9d. per ounce in 1933 to 137s. 8d. per ounce in 1934. The dividends received by British investors from their holdings in gold-mining shares alone are estimated to have increased by £1½ millions between 1933 and 1934.

We can now summarise the changes in British overseas investments as a whole in recent years. After declining from £3,410 millions at the end of 1931 to £3,355 millions at the end of 1932, the nominal amount of British overseas investments in quoted securities rose to £3,386 millions at the end of 1933. Repayments of loan capital had risen from £26.8 millions in 1931 to £48.0 millions in 1932 and £66.8 millions in 1933. Sir Robert Kindersley's estimate of the nominal amount of other British investments abroad is £285 millions at the end of 1932 and £280 millions at the end of 1933. On this evidence, the total British capital involved in all forms of overseas investment increased from £3,640 millions at the end of 1932 to £3,666 millions at the end of 1933. Although the absolute change in the nominal amount is of little importance, the reversal in 1933 of the downward trend which had been noticeable since 1930 is significant. Changes in the annual income from British overseas investments since 1929, as estimated by Sir Robert Kindersley, are shown below:—

BRITAIN'S OVERSEAS INVESTMENT INCOME, 1929-34
(In millions of £'s)

	1929	1930	1931	1932	1933	1934*
Dominion, Colonial and Foreign Government and Municipalities	64.7	64.7	65.9	62.4	61.1	61.0
British Companies (registered in the U.K.)	86.0	76.5	48.8	42.5	41.9	45.7
Foreign and Colonial Companies (registered abroad)	61.7	51.0	40.8	39.2	35.3	39.3
Other Investments (not covered by above)†	18.5	16.8	13.2	12.3	11.4	12.1
Total	230.9	209.0	168.7	156.4	149.7	158.3

* The figures for 1934 are provisional.
† The average rate of income derived from these investments is assumed to be the same as that obtained from negotiable securities.

Caution should be used in quoting the absolute amounts of these figures. To begin with, the *Economist's* investigations suggested that Sir Robert Kindersley's earlier

figures were too low. Furthermore, the totals include dividends and interest distributed only. They do not cover other homeward remittances, such as reserve appropriations, which have to be allowed for in the balance of international payments. But the variations in Sir Robert Kindersley's totals have nevertheless a direct bearing on the balance-of-payments situation.

The estimated increase in our overseas investment income from £149.7 millions in 1933 to £158.3 millions in 1934, does not fully reflect the improvement in our foreign assets. During the years of the depression, large sums were drawn from reserve to meet dividend payments and other commitments, while the usual allocations to provide for depreciation and obsolescence were well below normal. The increase in earnings in 1934 provided British companies with an opportunity to improve their financial position, with the result that the proportion of profits placed to reserve during that year rose sharply.

Prospects of further improvement are fairly encouraging. Income from Government and municipal bonds is unlikely to suffer from serious loss through further default, while, on the other hand, there is hope for an improvement in income as a result of negotiations for at least partial resumption of service. Moreover, the expansion of trade within the sterling area, and the probability of a continued high price for gold and for higher raw material prices may lead to an increase in the earnings of a large number of British companies operating abroad. But there is little hope that the increase from British overseas investments will again reach the level of 1926 and 1927, when it amounted to £300 millions per annum; for even with a large increase in international trade a return to the pre-slump level of prices for raw materials is out of the question.

FINANCIAL NOTES

The Money Market.—Lombard Street was very dull this week. The market, having frightened "stags" of Treasury bills last week by dropping the tender rate by 1s. 9d. per cent. to 10s. 7.02d. per cent., held on to its bills and declined to sell. The banks could have taken more bills, though they avoided the "hot" Treasuries; and one bank on Thursday started buying early December maturities. Money rates have been even easier. Small amounts have been lent at under ½ per cent. The latest rates are as follows:—

	Aug. 29, 1935	Sept. 5, 1935	Sept. 12, 1935	Sept. 19, 1935
Bank rate.....	2	2	2	2
Clearing banks' deposit rate ..	1	1	1	1
Short Loan rate:—				
Clearing banks.....	1-1	1-1	1-1	1-1
Others.....	1	1-1	1-1	1
Discount rates:—				
Treasury bills	11	1	1	1-11
Three months' bank bills	11-1	11-1	11-1	11-1

There has been very little "outside" borrowing from the market, which is an indication of the prevalent desire for liquidity. There is consequently little ground for expecting a rise in the tender rate this week, when another £45 millions of Treasury bills are on offer, despite their popular end-December maturity.

The Foreign Exchanges.—The guilder was under heavy pressure early in the week. By Friday it already stood below the gold export point against the French franc. On Monday and Tuesday there was some recovery due to the raising of the Bank rate from 5 per cent. to 6 per cent., though by that time much gold had been lost. The recovery was continued on Wednesday, and the guilder still stood well above the gold export point on Thursday afternoon. The other gold currencies did not reflect the weakness of the guilder early in the week. There was a tendency throughout the week, however, for the dollar to continue its

recent rise. The dollar-sterling rate moved from 4.95 on Saturday to 4.92½ on Thursday. On Tuesday and Wednesday sterling weakened slightly against the gold currencies also, and the Paris rate moved below 75. The official rate for lire remained around 60½, but forward discounts increased further in a nominal market. Far Eastern and South American currencies have shown little movement on balance.

New York Money and Banking.—Brokers' loans by Member banks of the New York Federal Reserve for their own account increased by \$51 millions last week to \$903 millions. There was a slight drop in loans "to others," leaving total loans higher by \$37 millions at \$1,621 millions. Bank clearings of the leading 47 cities in the United States in the week ended September 17th were \$4,686.8 millions, an increase of 7.3 per cent. over the corresponding week last year. The gold flow into the United States continues unabated. It is coming from Canada, France, Holland, England, India and even China. In the last seven days gold to a total of over \$25 millions has been engaged for shipment to America; and over \$13 millions had been actually imported. Within the last fortnight \$759 millions out of the \$1,250 millions of the called Fourth Liberty bonds have been converted. As a result, \$331 millions have been converted into bonds and \$428 millions into notes. The conversion is lagging somewhat. Short-term money rates continue at low levels.

The Bank Return.—A further return of notes in circulation after the holiday season is recorded in this week's bank return; the figure is now once more at the June level. The reserve was correspondingly increased by £2.2 millions, and the proportion has risen to 38.1 per cent., as compared with 48.1 per cent. a year ago.

THE STOCK EXCHANGE

WALL STREET HOROSCOPE

Six months ago, the American stock markets, after nearly two years of "gliding," started an upward movement more purposive, to outward appearance, than any since the short-lived semi-boom which followed President Roosevelt's assumption of office. Anxious watchers in Wall Street, last July, saw the share index clear all previous "highs" of the Roosevelt period. Its subsequent progress has suggested reserves of power and energy possessed by few of its short-lived predecessors since 1929-30. Despite breath- and profit-taking setbacks, like that which occurred at the beginning of this week, average share values have already risen by 35 to 40 per cent. from the lowest point of this year. Commentators, hitherto conservative to the point of cynicism, have been accomplices in a whispering campaign to propagate the view that in a year's time quotations may have shown a net hundred per cent. rise. Is the much-propheesied "Big Recovery" at hand?

Certainly, the economic background is favourable in many respects to market activity. By the beginning of 1935 the effects of currency devaluation (which left the dollar under- rather than over-valued internationally), had had time and space to work and spread. The influence of the "Brain Trust"—particularly its gold manipulatory section—over Presidential policy had tended, like the proverbial old soldier, not so much to die as to fade away. The Administration, it is true, remained divided in allegiance between Reform and Recovery. During the course of the spring and summer, however, it became evident that American business was regaining sufficient confidence in its own vitality to withstand both the discovery that much of the New Deal was unconstitutional, and the President's determination that Congress should not adjourn without passing new "reformist" measures whose constitutionality, in some instances, appeared equally questionable. Contemporary Stock Exchange revival in America, in fact, has been built largely on the same four pillars as its counterpart in Great Britain—devaluation, domestic business revival, returning confidence, and cheap money.

Current American market analyses are concerned largely with the differing prospects of individual groups of stocks. To authorities further removed from the centre of affairs, however, at least equal importance appears to attach to the tendency, over the last six years, for the prices of many groups to move, at critical periods, more or less in unison. We may check this impression by close examination of the following table, for which we are indebted to the courtesy of the Standard Statistics Company of New York. It summarises the market history of numerous share groups since 1929:—

STOCK PRICES
(Standard Statistics Indices: 1926=100)

Group (and No. of Securities)	1929, Highest	1929-35, Lowest	1934, Highest	1935		
				Lowest	Beginning of August	Latest
Automobiles (13).....	294.4	23.8	121.0	75.7	118.1	130.3
Building equipment (12).....	174.8	16.8	72.8	56.4	84.1	88.9
Machinery (10).....	193.9	26.2	91.9	91.9	119.4	125.9
Mining & smelting (10).....	347.2	28.6	152.2	111.0	143.5	156.5
Retail trade (26).....	206.9	28.8	81.3	66.8	84.5	86.8
Steel and iron (11).....	255.0	20.1	70.5	37.8	58.5	66.3
Textiles (28).....	144.3	19.5	66.4	42.2	49.7	52.6
All industries (357).....	218.9	31.9	90.5	74.5	94.2	98.7
Railroads (38).....	173.5	13.0	51.4	27.4	34.6	37.6
Utilities (37).....	330.4	52.2	83.4	52.2	78.9	81.9
All stocks (421).....	228.1	32.3	82.1	63.1	82.0	85.9

The initial impression of widespread disparity owes much to the choice of a year so far back as 1926 as a base for the indices, and to the fact that the high prices of 1929 (which many Americans, consciously or unconsciously, still regard as a measuring rod), had the irrationally wide "spread" typical of the most violently speculative boom ever known.

In fact, during the subsequent depression, every group shown in the table reached its low point in the same month—June, 1932—with the sole exception of utility shares, which, after being singled out as special objects of Rooseveltian reforming zeal, were at their nadir in March this year. The remaining groups, for the most part, attained their "highs" of 1934 in February of that year, and their "lows" of 1935 in March last. Railroad stocks, admittedly, have lost most and regained least. Utilities, whose prestige has been impaired, temporarily at least, by matters outside their control, have also lagged in recovery. Both these groups may be less responsive than industrial shares generally to revivalist influences, though neither is likely to be wholly neglected by investors who can discriminate between good, bad and indifferent companies in any industrial or legislative context. Industrials, however, have been the spearhead of the rise in British equity values, and appear to be cast for the same rôle in America. There they suffered a common fate in the depths of depression, when prices in practically every group fell to something between one-third and one-fifth of the 1926 base level. In the initial stages of recovery, with one or two significant exceptions, they tended on the whole to move in unison. It is only in comparatively recent months that "selectivity" has been conspicuously in evidence, and the spread of quotations has tended to broaden. Selectivity, however, is normally associated less with primary than with secondary stages of revival, when the true outlines of economic affairs can be distinguished with progressively increasing clarity. Along what channels is the tide of recovery flowing? The annexed tables may suggest an answer:—

PERCENTAGE CHANGE, COMPARED WITH 1934

	1935			
	Jan.-Mar.	April-June	July	August
Automobile production.....	+ 47.1	+ 21.4	+ 27.5†	+ 27.3†
Steel output.....	+ 23.3	+ 20.1	+ 46.6	+ 46.6

* Excluding New York City. † Provisional estimate. ‡ In 37 States.
§ These figures include "Benefit Payments." If the latter are excluded, the increases for the first quarters of this year are 0.9 and 13.7 per cent., respectively.
(a) Percentage increase in pig iron production over corresponding month in 1934: July, 24.1 per cent.; August, 67 per cent.

The table deals with the latest phase of America's recovery. The four sets of data to which pride of place has been given—automobile production, steel output, freight car loadings, and electric power—are pre-eminent among the "pointers" on whose contemporary behaviour market operators are accustomed to base week-to-week judgments. The automobile figures are encouraging, if due allowance be made for the fact that, in the second quarter of 1934, their rise tended to out-distance that of any other economic indicator. This year's movements in the index of freight car loadings have been disappointing. The same phenomenon has been common to the goods traffic figures of the British railways. There is more than a suspicion that road transport competition is affecting the reliability of this index in most countries. The electric power figures suggest that the revival in national activity as a whole has gained breadth and pace in the last few weeks. The steel output figures are, perhaps, the most significant of all, particularly when related to the index of building contracts and, still more, that of orders for

INVESTMENT NOTES

Janus in the Markets.—Investors, who of all men have a vested interest in peace, have been anxiously watching outside the Temple of Janus this week. Will twentieth-century Rome decide, in the face of a world opinion with which Numa had not to reckon, that the gates must be opened? The eventful meeting between Signor Mussolini and his Cabinet has been postponed, as we write, to the end of this week, but responsible international commercial and financial interests, while hoping for the best, are taking precautions against a different outcome. On Monday last a meeting of Lloyd's underwriters decided to cancel the "war risk" clause at present included in all open contracts. On the expiration of the necessary ten days' notice to merchants, separate "war" contracts will be made at special rates, subject to 48 hours' notice. In the commodity markets, also, a disposition is evident to discount the consequences of a possible breach of the peace. With the movement of prices of important materials like wheat, cotton, copper, etc., we deal in a Note of the Week on page 556. Investors, rightly, are showing little disposition as yet to search for gains in these troubled waters, since it is clear that speculative anticipation rather than firm current demand will play a leading part in any further sharp upward movement, and that quotations may be subject to incalculable fluctuation as the kaleidoscope of world prospects changes. The London Stock Exchange, meanwhile, continues to pursue a waiting policy. The volume of business has contracted further. Though large-scale liquidation is as little in evidence as ever, prices have again receded, despite the inclination of dealers, in the gilt-edged market and elsewhere, to raise quotations fractionally on every piece of news which, by any stretch of imagination, can be regarded as hopeful. The market's policy, in short, is to "even its book" at the end of each day and leave the rest to providence.

* * *

Italy and London.—The week's financial developments in Italy have been followed with detached and critical interest in London. The terms of Signor Mussolini's offer of "Rendita" 5 per cent. bonds, at 95 per cent. (with facilities for holders of 3½ per cent. State bonds to convert to the extent of 80 lire per 100 lire nominal of their present holdings), have been interpreted as evidence of the Duce's determination to render subscription as attractive as possible. Five per cent. is a rate of interest with many historical "war" associations. In every country, Governments have recognised means of bringing pressure on various financial institutions to secure a large response to "defence" issues, and there is little doubt but that history will repeat itself, by way of a heavy subscription, in the present instance. The market is much more concerned with the possible extent of the Italian authorities' holdings of British securities, as a result of their requisition of foreign bonds from their nationals. Part of this week's conspicuous weakness in Paris has been due to the belief that Italian Treasury holdings of French rentes and other bonds are significantly large. Though British holdings may be less considerable, the market would be reassured if authentic information were forthcoming as to their amount. The course of the foreign exchange market suggests that the "pull" of America, to which we refer in a leading article on this page, is becoming increasingly evident, though the movement of capital is not, as yet, on a very serious scale. In the London new issue market, despite the appearance of a Treasury-guaranteed "conversion" prospectus, large-scale trustee borrowing has not been resumed, and it is unlikely that the authorities will take any risk while the international outlook remains obscure. Broadly, it is believed that, if a peaceful solution is secured at the twelfth hour, on any terms, a strong upward movement in prices will follow immediately, in all markets from gilt-edged to gold mining shares. If "economic sanctions" are found necessary, a further seepage of values is looked for, without any catastrophic break in the markets. Any threat of a spread of warlike measures outside the African field, however, would undoubtedly have more serious consequences.

machine tools. In Great Britain recovery has been built on increased production in the "capital" industries, particularly steel and housing. In America this development, which implies a certain harmony between industry and its environment, has come much later. Its emergence at this particular moment, however, lends special significance to the President's announcement of a truce to new "reformist" legislation.

There are many factors, however, which may apply an effective brake to any dramatic market movement. Though the index of bank debits, in the table above, shows evidence of better use of the nation's ample credit facilities, the implications of the indices bearing on popular purchasing power are less certain. Factory pay-rolls are still slowly expanding, but both wholesale prices and the cost of living continue to rise. On the other hand, the farmers are definitely better off this year, and in recent months their increased income has not been due entirely to "benefit payments." Is the nation spending more? The evidence is inconclusive. Department stores sales have certainly been running higher this summer than last, but the trend of sales by mail order houses and by "ten cent" companies like F. W. Woolworth is less certain. Subsidiary indices like the number of new insurance policies taken out and the acreage of advertising space in the leading newspapers, suggest that the latest phase of "recovery at the base" has still to permeate through much of the national economic structure.

Cautious Wall Street "bulls," however, maintain that such permeation is only a matter of time, and that it is the business of stock markets to discount reasonable probabilities. If they are right, prices will scarcely go much higher without inviting serious investment attention on this side of the Atlantic. At the moment, the London market (as we showed in a leading article a fortnight ago), has been reduced to a state of nervous indecision by the unexpected emergence of a "war risk," at a time when industrial recovery is still in full swing but the rise in gilt-edged securities is showing perceptible signs of having spent its main force. The fear of exchange losses through further reduction of the dollar's gold content is no longer a bogey for British investors. The danger of an epoch of uncontrollable "inflation," though not exorcised, has been relegated by Wall Street—perhaps somewhat optimistically—to the indefinite future.

America's "pull" for European investors, however, may be mitigated by numerous factors. In the first place, the present share market recovery is certainly not starting from scratch. The index for all equity stocks stands at little more than a third of the fantastic level reached in 1929. It is, nevertheless, nearly three times as high as at the bottom of the slump. Earnings yields are low, or, as regards the common stocks of numerous companies, non-existent. Allowing for the fact that industry has already taken the main impact of increased costs under the New Deal, which will henceforth be recurrent but not progressive, it would still appear that present prices are discounting the effect of increased activity on profits in 1935 and, probably, part at least of 1936. The market does not look for sensational repercussions from the Government's unemployment relief programme, though its financing may be a disturbing agent in the bond market. The outlook for a really big bull movement in Wall Street appears to be dependent on the re-attraction of a clientele which burned its fingers badly in 1929, and has shown only incipient and sporadic interest in subsequent rallies. Recent legislation, designed to curb the manipulative aspects of security speculation, may handicap but will not exclude such a clientele, if its imagination is again fired by the hope of vast capital gains.

That time, however, is not yet. The market, for all its cheerfulness, is still critical, discriminating, and at least one part professional. The omens, in short, favour a further rise, particularly in the shares of companies in the "heavy" and constructional industries. The movement, however, lacks one essential constituent of the classical boom. Its inspiration is drawn from hopeful estimation of "orthodox" tendencies in national revival. Miracles are at a discount. The Wall Street rise has still a fair way to go before the market loses contact with solid earth.

More Capital Schemes.—The unsettled international situation has not halted the process of company capital reorganisation, which has been steadily progressing for months past. Three announcements, made in the last few days, have a bearing on this matter. Shareholders in the *Associated Automatic Machine Corporation*, a former Hatry company, agreed to the writing-off of over £1,000,000 of dead assets from the company's capital last June. The scheme now awaits the sanction of the Court. At a meeting on Wednesday the chairman was able to declare that the subsidiary company, *British Automatic* (of whose capital *Associated Automatic* holds 98 per cent.), hoped to distribute a dividend next year. The old-established tank steamer-owning and broking business of *John I. Jacobs* has notified its shareholders of a proposal to write down its issued and ordinary capital by £160,000, reducing the nominal value of each share from 20s. to 12s. This reduction will largely wipe out the deficiency of £170,000 which has been revealed by a recent valuation of assets. The 7 per cent. cumulative preference shareholders are unaffected by the scheme, and as the reduction in the nominal value of the ordinary shares leaves their equity entirely unimpaired, no opposition is expected. Finally, the textile fabric manufacturing business of *William Hollins and Company*, established at Mansfield as far back as 1784, proposes to repay 75 per cent. of its £360,000 of 5 per cent. cumulative preference capital by making holders a cash return of 15s. per £1 share. The company, at the end of last year, had municipal short-term investments and cash totalling nearly £305,000, and this aggregate has subsequently been increased by a further £100,000. In the five years to 1929 the company's annual profits averaged nearly £138,000, but since the depression began they have on three occasions failed fully to cover the £18,000 required for preference dividends, though the latter have been regularly paid. The company has a large interest in the export trade, and the directors believe that, under present conditions, there is little prospect of their being able to employ surplus assets profitably, either for investment or business expansion. The scheme will benefit both the company and its shareholders. It will relieve the former of three-fourths of a 5 per cent. obligation through the sale of cash and securities returning a present income of well under 3, and possibly under 2, per cent. The preference shareholders will be repaid at the equivalent of par in respect of 75 per cent. of a total holding valued on the Stock Exchange at 16s. 9d. per £1 share, i.e. at a discount of 16 per cent. The operation, however, can hardly be taken as a precedent by any of the numerous companies whose preference shares carry dividends, say, of 7 per cent. or more, and command a substantial market premium.

Oil in California.—The lack of improvement in the oil situation in America is a matter of disappointment to investors and producers alike. The trouble has its origin in California, where, on the breakdown of the cartel following on the Schechter decision of the Supreme Court, production from independent sources increased rapidly and price-cutting developed in the gasoline market. At the moment California is producing about 100,000 barrels a day above the "allowable," but now academic, figure fixed by the restricting authorities. The Oil Bill, rushed through Congress before its adjournment, did nothing to relieve the situation. Its official approval of the so-called Inter-State Oil Compact merely allowed the oil-producing States to agree to co-operate in measures of restriction if they were willing to do so. California, so far, has not been willing. In an attempt to put a stop to independent price-cutting the Standard Oil Company of California cut the price of crude oil on August 29th from \$1 to 50 cents per barrel and followed this cut on September 5th by reducing gasoline prices by 2 cents per gallon throughout the territory where prices had remained normal. Attempts are now being made to bring the independent oil producers in California into line, and at a conference this week of over 400 independent producers 85 per cent. on a barrelage basis agreed to sign a curtailment agreement. Until the erring

15 per cent. have also, however, come into line, restriction in California is not likely to be effective. The following table gives the latest outputs of the principal oil-producing States as compared with the "allowables":—

	CRUDE OIL PRODUCTION—Barrels daily	
	Present Week	Above or below September Allowable
Oklahoma	449,550	— 56,450
Texas (estimated).....	1,027,000	— 32,900
California	613,500	+ 113,800
Total U.S.	2,660,100	+ 47,100

Negotiations are still proceeding with a view to obtaining the consent of the independent producers of California to restrict output to a daily level of 531,000 barrels. Whether these succeed or not, the reassuring fact is that consumption of oil products is still increasing.

Actuaries' Investment Index.—Markets have quickly lost the slight signs of confidence which were evident early last week. The downward movement, which has affected all sections of the market, has brought prices to the levels prevailing before the vigorous upswing during the summer. On Tuesday this week the general level of 158 industrial shares, according to the Actuaries' Index, was 75.4, compared with 76.5 last week and 78.5 a month ago (December 31, 1928 = 100). The corresponding yield figures are 3.89, 3.83 and 3.82 per cent. respectively. A selection of group indices illustrates the general nature of the fall:—

Group (and No. of Securities)	Prices (Dec. 31, 1928=100)			Yields (%)		
	Month Ago (Aug. 20)	Last Week (Sept. 10)	This Week (Sept. 17)	Month Ago (Aug. 20)	Last Week (Sept. 10)	This Week (Sept. 17)
Insurance (24)	122.0	118.9	117.8	3.44	3.53	3.57
Coal (6)	92.4	88.2	86.7	3.99	4.26	4.35
Electric light and power (16)	133.8	131.4	128.5	3.75	3.87	3.96
Oil (5)	68.1	65.6	64.0	4.61	3.47	3.55
Home rails (4)	65.3	62.7	60.9	1.59	1.61	1.63
Stores and catering (15)	82.8	80.2	78.4	4.07	3.90	3.99
Breweries and distilleries (19)	132.3	130.9	128.7	4.17	4.22	4.29

Although contemporary market uncertainty has a major common factor in the development of the Italo-Abyssinian dispute, other influences are also operative in certain sections of the market. Home rails, for example, reflect a series of indifferent coal and merchandise traffics in recent weeks and a certain dwindling of interest in rating appeal possibilities. A recurrence of price-cutting has depressed oil shares, and there are early signs of disagreeable labour developments in the coal industry.

COMPANY NOTES

Companies "In the Household."—In earlier notes it has been suggested that trades producing articles of durable household consumption may expect a substantial revival in profits as economic recovery becomes general. The recent profits of the various groups have tended to confirm this view. Replacements of household furniture, furnishings and apparatus can be deferred in times of depression, but accumulate to form a powerful latent demand, which is released as recovery restores purchasing power. It happens that the present recovery movement has added the factor of a boom in house construction to stimulate "original" as well as "replacement" demand. In some sections of the household equipment group, the prosperity of revival contrasts particularly sharply with the difficulties of the depression period which has seen a very sudden curtailment of purchasing. In the furniture trade this is particularly noticeable, and is emphasised by the credit risk on hire-purchase accounts. Though the proportion of bad debts incurred on hire-purchase contracts was much lower than critics of the system had feared, a relatively small propor-

tion of bad debts can have serious effects in a trade where the outstanding accounts due on hire-purchase contracts are commonly twenty times the normal net profit. Another characteristic of household equipment trades is their liability to serious price cutting when depression opens. Partly because the production of many classes of household equipment has only relatively recently been organised on a large scale, and partly because constant improvement in manufacturing costs is becoming a normal factor in modern industry, the manufacturers are able during prosperous years to increase their profit margin by cost reduction. There is thus room for price-cutting as soon as demand flags. Furniture, linoleum, wallpaper and electrical apparatus provided examples of this tendency during the last depression. In revival, trade agreements tend to emerge

* Broken period equated to 12 months. † Varying periods equated to 12 months and related to year in which greater part of the period fell. § Tax free.

(cf. the linoleum and wallpaper industries) to restore the price level. It thus appears that household equipment trades as a whole are subject to somewhat wide fluctuations in earning power which limit their appeal to the general investor, but enhance their attractions for the skilled operator. The figures shown in the annexed table, for representative companies, suggest that fluctuations are cyclical and tend to affect the trades as a whole, thus differing from the fluctuations common in the motor, aeroplane and radio industries, in which the fortunes of individual companies differ widely according to the success of their current models. As an exception, large holding concerns such as *Radiation* (gas fires) or *Michael Nairn and Greenwich* (linoleum) may be able to flatten out the fluctuations by a profits or dividend stabilisation policy.

A "Deal" in Coast Lines?—For some time past unofficial but persistent reports have referred to the possibility of a "deal" in the 2,000,000 £1 ordinary shares of Coast Lines. At present, the majority of these shares are held by or on behalf of the following:—

Lord St. Davids } R.M. Realisation Company.....	893,000
Prudential Ass'ce. }	
H. and W. Nelson	130,000
McGregor, Gow and Holland } R.M. Realisation	74,000
David McIver and Co.*	25,000
Sir W. McLintock (Lampont and Holt Debenture Trustees)	276,000
James Moss and Co. (a Lampont and Holt subsidiary)*.....	90,000
Duke of Abercorn } E.D. Realisation	230,000
Sir Samuel Scott.....	
Union Castle	275,000
	£1,993,000

* In liquidation.

A "deal" on the lines suggested would obviously give effect in part to the purposes for which the realisation companies were formed. R.M. Realisation would be the principal interest affected, and a successful placing would raise the question of the position of the latter's 4 per cent. first debentures, which are redeemable at the company's option at 102 up to January 1, 1938. If a public offer on reasonable terms were contemplated the shares would in all probability attract good support. The coasting trade is in a comparatively sheltered position. Its earnings, though seriously reduced, were never as severely affected during the depression as those of overseas shipping. During the last three years the coasting trade has in fact regained a substantial measure of prosperity. Coast Lines itself showed small net profits even in 1932, and results have subsequently improved sharply, and have permitted the discharge in cash of accumulated arrears of preference dividend. On the basis of 1934 results—allowing for normal preference dividends—the ordinary shares appear to be on a 3½ per cent. earnings basis. It is typical of the financial structure on which the Royal Mail group was

COMMERCIAL SERVICE

The Bank has over 370 Branches in Africa, and Agents and Correspondents throughout the World. The closest touch with Trade and Industrial conditions is maintained, with special attention to Commercial and Credit Intelligence. This service is available to Exporters, Importers and others wishing to develop trade with South, East and Central Africa.

THE STANDARD BANK MONTHLY REVIEW is sent post free on application. It gives the latest information on all South, East and Central African matters of Trade and Commercial Interest.

constructed that as a result of interlocking shareholdings the revenue of Coast Lines for 1935 will presumably reflect the discharge of the company's own preference dividend arrears. During 1935 arrears and current distributions to the tune of £645,000 have been distributed. Of this sum some £300,000 may have found its way back to Coast Lines itself through the latter's holdings in British and Irish Steam Packet, Belfast Steamship and (indirectly) City of Cork Steam Packet. Each of these concerns has a substantial interest in Coast Lines 6 per cent. preference. It may be sincerely hoped that a simplification of this structure will be effected if the ordinary shares become a public market.

Staveley Progress.—The results of this important Midland coal and iron company confirm the satisfactory impression made by the announcement of an increased dividend at the end of August. Net trading profits and dividend receipts for the year to June 30th last have advanced by £50,000 to £518,983, and since the provision for depreciation is slightly lower, the amount available for the "straight" ordinary capital has increased from £264,774 to £316,289. This amount, with a small draft on retained profits, suffices for the higher dividend and the repeated transfer of £50,000 to general reserve. Profits for the last three years are analysed below:—

	Years to June 30		
	1933	1934	1935
Profit and dividend receipts, after management expenses and taxation.....	404,820	468,973	518,983

Ordinary shares			
Earned.....	220,668	264,774	316,289
Paid.....	169,267	220,048	270,828
Earned %†.....	6.5	7.8	9.3
Paid %†.....	5	6½	8
General reserve.....	50,000	50,000	50,000
Carried forward.....	108,556	103,282	98,743

† Free of income tax. § Includes £10,000 additional depreciation of workmen's houses in each year.

These results are attributable mainly to the high level of activity in the construction trades. It is reported, for example, that the output of sand-spun iron pipes has again advanced. These products are in keen demand by contractors for drainage and other purposes. Four blast furnaces have been operated in the pig-iron section, the increase of one unit following an improved demand and a clearance of stocks. If the coal section had prospects of more than the "very slight improvement" shown last year, the already favourable outlook in the other departments would be enhanced. Reports from Sheffield indicate that important plant extensions are projected. The pipe foundries are to be extended to increase the output of small-sized pipes used in the building trades, and a reduction in costs of the order of 30s. per ton is anticipated. Handling equipment has been installed, and the widening chemical departments will be further extended by the erection of a sodium chlorate plant. The shares are a suitable medium for participation in the high level of constructional activity, but they may be less adversely affected than building shares if and when a set-back occurs. Even in 1931-32 the low level of earnings covered the 5 per cent. tax-free dividend adequately, and the financial position of the company is thoroughly sound. The £1 ordinary shares are quoted at 43s. 9d. to yield £3 13s. 2d. net and £4 14s. 4d. gross.

Gaumont British Position.—The accounts of the largest cinema concern in this country are not generous of information regarding the position of the group as a whole, as distinct from that of the holding company. The figure for "Profit, including income from investments, etc.," shows an advance from £692,214 to £720,483. Inasmuch, however, as shares and debentures in and advances to subsidiary companies amount to £10,372,068

out of total assets of £13,745,513, shareholders would welcome the supplementing of this information by a consolidated statement of group profits, assets and liabilities. *Prima facie*, the corporation has achieved a relatively small expansion of earnings in the latest year, as compared with a considerable rise a year earlier. The absence of any charge for income tax, however, may reflect a more substantial advance than the figures in themselves suggest:—

	Years to March 31		
	1933	1934	1935
Profit, including income from investments, etc.	462,612	692,214	720,483
Income tax	34,306	27,866	(a)
Depreciation	28,643	28,307	28,936
Debenture interest, sinking fund and expenses	88,687	216,871	287,407
Preference dividend.....	93,750	163,750	178,750
Ordinary and "A" Ordinary shares—			
Earned.....	217,226	255,420	225,390
Paid.....	175,000	210,000	210,000
Earned %.....	9.3	9.0	7.7
Paid %.....	7½	7	7

Reserve..... (b) (c) —
Carried forward..... 129,455 134,875 150,265
(a) No charge shown. (b) Transfers from reserve £954,545 bonus share issues, and £675,287 redemption premiums, issue expenses, and depreciation of investments. Remaining balance, £1,000,000. (c) £43,224 added to reserve, of which £40,000 from revenue. Balance reduced to £500,000 after writing off General Theatre Corporation shareholding, and sundry commissions and premiums. † And 20 per cent. capital bonus.

The increase in earnings during the last two years has been insufficient to maintain the rate of earnings on the increased ordinary capital, after meeting a higher total for prior charges. The current position is not altogether liquid. Cash holdings are as low as £6,555, while the secured bank overdraft has risen from £133,172 to £667,537. Possibly this advance may be associated with the expansion of "other debtors" than subsidiaries; from £152,591 to £587,450. The chairman at the last year's meeting declared that an issue of £500,000 debentures was impending. So far, however, only £160,000 would appear to have been placed at 3½ per cent. discount, and some measure of further "funding" may be in the board's mind. The 10s. ordinary and 5s. "A" ordinary shares, at 11s. and par respectively, yield £6 12s. and £7 5s. 6d. per cent. These figures are eloquent of the conservative attitude of investors in a somewhat speculative industry.

Eastwoods' Increased Profits.—Shareholders in Eastwoods, Limited, brick manufacturers and dealers in builders' materials, may congratulate their directors on the company's ample participation in the increased activity of the building trades. Within a couple of years, earnings on the company's £300,000 of ordinary capital have risen from 11 per cent. to nearly 28 per cent., and the latest dividend is at twice the rate paid for 1932-33. The results for the last three years are shown below:—

	Years to March 31		
	1933	1934	1935
Profit, after depreciation*	62,490	91,871	110,720†
Expenses, salaries and debt provision... ..	14,871	14,718	19,421
Directors' and auditors' fees	1,260	1,260	1,260
Taxation reserve	5,220	2,500	5,000
Preference dividend	10,500	10,500	10,500
Ordinary			
Earned	30,639	62,895	74,539
Paid	22,500	37,500	45,000
Earned %	11.1	23.4	27.8
Paid %	7½	12½	15
General reserve	10,000	22,500	22,500
Investment reserve	—	1,411	†
Total carried forward	9,289	10,773	16,811

* Including receipts from subsidiary companies. † Plus £11,194 profit on realisation of investments, transferred direct to investments reserve. ‡ See preceding footnote.

The report ascribes increased profits to further substantial expansion in trading in all departments. It may be pre-

sumed that, in addition, the company has benefited from "price stabilisation measures" in the cement industry, to which the chairman made approving reference at the last meeting. It is clear, moreover, that the company is pursuing its policy of acquiring additional works as opportunity offers. Such additions, last year, added £34,273 to the total of fixed assets, before depreciation, and the new properties would appear to have been profitable. Although "current" items in the balance sheet suggest that the company and its subsidiaries are handling a progressively increasing volume of business, the position remains thoroughly liquid. The £1 ordinary shares, for some time past, have been on a fairly high yielding basis. At the present price of 58s., cum 10 per cent. final dividend, they return £5 3s. 4d. per cent. on dividends and £9 12s. per cent. on earnings.

Anglo-Siam Corporation.—A slight improvement in Eastern conditions has brought welcome expansion of business to the general trading branches of the Anglo-Siam Corporation, but its important teak forests are unable, as yet, to make their due contribution to revenue. Trading profits show a rise from £3,917 to £19,054. This result is not unsatisfactory in existing conditions, but until teak prices can be raised above the present low level there can be little prospect of a return to the highly successful experience of the Corporation between 1925 and 1929. Forest operations have again been restricted, but the saw-mill has been operating since October last year to meet the moderate increase in sales, albeit at unremunerative prices. Dividend and interest receipts are also rather higher at £21,941, and the total profit, after crediting non-revenue items in respect of investment profits, tax recovery and reserves written back, has increased from £41,799 to £48,045. Since expense items show little variation, the inclusive net profits, at £23,529, are broadly increased to the same extent. For the first year since 1931-32 the increased ordinary dividend of 8½ per cent. is partially

covered out of current earnings, which represent nearly 4½ per cent. on the ordinary capital, before including the non-recurrent items. The principal changes in the balance sheet reflect the improved trading turnover. The shares are quoted at 45s. to yield £3 17s. 3d. per cent.

Other Company Results.—We summarise, in the weekly table on page 588, the results of 25 additional companies. This week's list is expanded by a number of interesting home industrial reports covering the year to June last. *Ardath Tobacco* profits are little changed at £460,427, the dividend being repeated at 12 per cent. tax free. *Cohen, Weenen and Company* report a slight reduction in net profits from £70,306 to £67,377, but the repeated 8 per cent. dividend is covered with a small margin. A number of new industries provide a feature this week. *Ferranti*, the radio and electrical equipment manufacturers, disclose an appreciable fall in profits, from £68,245 to £54,304, but here also the repeated 6 per cent. dividend is well covered by earnings. *Press Caps*, which manufactures bottle-sealing devices, shows a further expansion in profits from £19,287 to £25,561, the dividend on the increased ordinary capital being increased from 7½ to 10 per cent. *Qualcast*, makers of precision castings, announce a record turnover. Profits show relatively small expansion, since they reflect a further reduction in prices and a progressive wage policy, but they afford generous cover for the 20 per cent. dividend. The profits of *London Express Newspaper* are slightly lower at £146,042, although the report refers to substantial increases in the advertising revenues of the group. It would appear, therefore, that provision for contingencies, which is set aside before striking disclosed profits, has been increased during the latest year. *Sir J. L. Hulett*, which owns sugar refineries and plantation interests in Natal, has achieved a substantial improvement in earnings during a difficult year. Net profits, at £178,307, compare with £133,435 in the previous

Compared with the previous year, the available tonnage shows an increase of 112,100 tons, the average value is lower by 0.4 dwt. and the stoping width is 0.3 inch greater. The increase in tonnage is due chiefly to the inclusion of ore which has become payable owing to a further increase in the value of gold and a decrease in working costs. The lower value of the reserve is accounted for by the low value of the ore developed and the inclusion of the low grade ore referred to.

In all the above estimates of ore reserve and ore developed, the figures are based upon the working costs and price of gold prevailing at the time the estimates were made.

The full Report and Accounts (with Plan of Workings) may be obtained from the London Secretaries, A. MOIR & Co., No. 1, London-wall Buildings, E.C.2.

year, and provide for the increased dividend of 7½ per cent. Crop and locust conditions are stated to be more favourable for the current season. Improved trading conditions are evident from the report of *Leyland and Birmingham Rubber*, whose net profits have increased from £50,307 to £66,218. Among basic industry reports, that of *S. Instone* again witnesses the difficult conditions prevailing in the South Wales coal export and shipping trades. The small group of rubber reports shows no regular trend of profits, for those of *Bantam (Java)* are nearly halved at £7,746, while *Banteng (Selangor)* and *Langkapoera (Sumatra)* report increased profits and dividends. A number of industrial concerns, including *British Insulated Cables*, *Scottish Power* and *Indestructible Paint*, have announced unchanged interim dividends.

MINING NOTES

Johannesburg Consolidated Report.—The preliminary statement of results of Johannesburg Consolidated for 1934-35, issued contemporaneously with the dividend declaration, showed a setback of some £200,000 in net profits. Doubtless the decline is attributable mainly, if not entirely, to the slightly less favourable market conditions which prevailed during the period. In the December six months the Kaffir market experienced a severe shake-out, chiefly as the outcome of over-speculation in Johannesburg; while during the past six months taxation has loomed large. Last year's accounts include what the directors describe as "a substantial amount" from realisations. That the sum, however, is less than before may be inferred from the reduction in the appropriation to reserve. Investments show a moderate expansion, but the principal current change in the balance sheet is an improvement of appreciable extent in the cash position. A table of significant items in the accounts for the past three years follows:—

	Year ended June 30		
	1933	1934	1935
Stocks and shares	4,896,450	6,454,150	6,626,260
Mining properties and advances ..	151,390	133,871	127,400

Carried forward	161,070	168,643	170,673

* Including dividend. † Includes £100,000 to staff pension fund.

Perhaps the most interesting item in the directors' report is the announcement that the company has recently secured from the Union Government the lease of a large area south of the Durban Roodepoort Deep. In view of the expansion of the company's borders through absorption of the New Steyn Estate, this ground must constitute a distinctly deep level. Boring is to be carried out as soon as possible. Encouraging references are made to the improvement in the diamond trade and to the prospects for copper—the latter being rather out of date. On the basis of the dividends of the past two years the indicated yield is just under 6 per cent.

Four Rand Companies.—The annual reports of the quartette of Witwatersrand Gold subsidiaries of the Rand Mines-Central Mining group, whose financial years terminate on June 30th, show in every instance an expansion in ore reserves, though this feature is more prominent in the case of Consolidated Main Reef and Modder East than in that of the other two companies. Comparison with earlier figures is affected by the qualification that in 1932-33 and 1933-34 tabulated particulars in the consulting engineers' report excluded additional material brought into the payable category by the higher price of gold. The figures, how-

ever, are now made up in the light of current conditions, and, as might be expected, there is a decline in average values as measured in dwts. Some salient statistics relative to the past three years are set out below:—

	Working Profit	Dividends	%	Carried forward	Ore Reserves	Value, dwt.
	£	£	%	£	Tons	dwt.
Con. M. Reef:						
1932-33...	410,380	166,700	13½	149,840	3,431,260	5.6
1933-34...	601,306	212,160	17½	181,420	5,787,090	5.1
1934-35...	624,290	296,310	23½	200,920	7,130,300	4.7
Modder East:						
1932-33...	390,980	209,430	22½	132,580	3,994,700	4.7
1933-34...	606,550	232,700	25	151,950	4,186,100	4.7
1934-35...	615,220	255,970	27½	132,820	5,142,300	4.7
New Modder:						
1932-33...	2,049,470	1,435,000	102½	205,850	7,617,700	6.1
1933-34...	2,304,860	1,470,000	105	224,690	7,760,100	5.5
1934-35...	2,280,210	1,505,000	107½	198,960	7,872,200	5.1
Nourse:						
1932-33...	228,910	107,750	13½	94,780	3,611,700	4.9
1933-34...	370,050	146,940	18½	110,290	3,580,800	4.9
1934-35...	350,580	146,940	18½	98,330	4,007,100	4.7

Consolidated Main Reef has acquired a large amount of additional ground, comprising the undermining rights of 522 claims and, in addition, a partially worked-out area of 111 claims. As the claims now owned total 2,932, the question of "life" will scarcely arise for some time to come. Capital expenditure for the year totalled £163,280, less £13,080 from the sale of ex-enemy shares. Taxation, at £238,540, shows a small decrease as compared with the preceding year. Included in the balance forward is £83,910 profit on the sale of ex-enemy shares. **New Modder** has largely reduced the grade of ore milled, last year's average being just under 5 dwts., against 6.7 dwts. in 1932-33. That the ore reserves now show a small increase is attributable to the inclusion of quantities of very low-grade ore. On the whole, prospecting on the various subsidiary ore bodies has disclosed somewhat indifferent values. Like Consolidated Main Reef, **Modder East** has extended its borders, but to a limited extent, the additional ground comprising some 106 claims. A marked decline is shown in the value of the ore milled, the latter having fallen slightly below the average of the reserves, against a figure of 5.56 dwts. for 1932-33. Encouraging results attended work on the claims in Modderfontein No. 6, recently leased from the Union Government. Payable ore developed amounted to 1,650,910 tons, that figure being substantially greater than the total extracted from the mine. No striking feature emerges from the **Nourse** statistics. The shares give a satisfactory yield.

Australian Mining Results.—*Gold Exploration and Finance Corporation of Australia* was floated last year under influential auspices. The market ran the shares up to 15s., but the present price is only about 8s. The company acquired the interests of various Australian and British-owned undertakings in the Commonwealth, the largest holdings comprising shares in Western Mining Corporation, Triton, Gold Mines of Australia, Bendigo, Napoleon and Carshalton Mines, plus options over large blocks of shares in four of these undertakings. Subsequently, the holding in Western Mining Corporation has been largely increased, and a further company, Gold Mines of Kalgoorlie, was floated in London, in which Gold Exploration received 300,000 shares and has purchased an additional 59,400. The accounts show a cash balance at March 31st of £125,000, irrespective of share holdings. The report is accompanied by a lengthy statement by Mr G. Lindesay Clark, which does not lend itself to concise comment. Considerable possibilities exist, but in all probability additional resources will be required. Since its formation *Gold Mines of Kalgoorlie* has relinquished some of the options taken over and has exercised others, besides acquiring additional ground from the Gold Exploration and other concerns. At one time last year the shares were rushed up on a rich "strike" in the Iron Duke property, immediately adjoining the area of the North Kalgurli. In subsequent work, however, the values were not maintained. Results of mixed character have been indicated by work on various leases. As certain of the properties acquired, however, had been partially developed and operated by previous owners, the company

is already in a position to start milling operations on a small scale. An arrangement is being made with the Lake View and Star for use of the old mill of the Associated Gold Mines. The actual and probable ore reserves so far developed are estimated at 113,000 tons, assaying 8 dwts. A feature of the accounts is the strength of the financial position, the actual cash available on March 31st exceeding £400,000. At the meeting of *Commonwealth Mining and Finance* on Tuesday the chairman set at rest queries which had been raised regarding the state of the finances by mentioning that the company still had £328,000 in hand. He also mentioned that the value of the ore reserves on the Yellowdine property (in which a 50 per cent. interest is held) might be assumed to be approaching £2,000,000. A favourable account was given of developments on other properties controlled.

The Spaarwater "Strike."—The Spaarwater Gold Mining Company was floated partly in view of the situation of the property in relation to that of Sub Nigel, and partly on geological indications. At the date of flotation, drives at three different levels were being made from the Sub Nigel into the Spaarwater area. Up to this week results were not particularly encouraging. The company, however, has now announced the intersection of high-grade reef on both sides of the dyke encountered in the No. 28 West haulage. During the March and June quarters the whole of the driving at this level was off the reef, but a diamond drill intersected the ore in the footwall, the core assaying 7.6 dwts. over 24 inches. During the June quarter in these various workings some 505 feet were sampled, of which 205 feet (or 40.6 per cent.) was payable, averaging 23.4 dwts. over a reef channel of 15.3 inches, or 358 inch-dwts. According to latest advices 10 feet sampled on the west side of the dyke gave 576 inch-dwts., while on the east side of the dyke fifteen feet sampled gave 724 inch-dwts. These values are of similar tenor to those recorded in the Sub Nigel mine itself some time ago. The new developments, however, are considered to be outside any hitherto known shoot, and may represent the first of a series of high-grade ore bodies parallel with those occurring in the Sub Nigel property. If this view proves correct, optimistic expectations in regard to Spaarwater's ultimate prospects may be justified. The 5s. shares are now quoted around 14s. 6d. ex option, as against 19s. 6d. cum option earlier in the year.

Company Meetings of the Week.—On later pages of this issue will be found reports of the meetings of Commonwealth Mining and Finance, and Grosvenor House (Park Lane). The speech of the chairman of Commonwealth Mining is dealt with in a Note on "Australian Mining Results" on page 574. At the Grosvenor House meeting the chairman, Mr A. O. Edwards, declared that the venture of constructing a new ballroom had been successful. Income from hotel rooms had shown encouraging increase for the first six months, but progress had since been somewhat disappointing. The great expectations of the "Silver Jubilee" period, in the luxury trades, had not been altogether fulfilled.

THE WEEK IN THE MARKETS

THE LONDON STOCK EXCHANGE

SETTLING DAYS

TICKET
SEPTEMBER 24

ACCOUNT
SEPTEMBER 26

THE behaviour of the market this week has been extremely sensitive, but suggestive of a certain want of cohesive policy. Investors have taken no further steps in preparation either for peace or war, and the mood has reflected a tendency to clutch at each recurrent news item, sometimes without too close examination of its *bona fides*, and to act

THE INDUSTRIAL AREA OF THE NORTH-EAST COAST - - - - -

solely upon its short-term implications. Since the defining of a unanimous opposition to aggression on the part of the League powers is itself only a week old, the markets' attitude is not inherently unreasonable, for the economic and political potentialities of League resistance are not appreciably clearer than a week ago. The effects of political uncertainty have perhaps been somewhat limited by consideration of domestic industrial prospects, but this week's movements have clearly shown that the confident mood which persisted long after the Italian attitude had been made clear has completely evaporated. Gilt-edged have again fallen this week to a low level for the year, while the behaviour of industrial equities contrasts with the striking activity in the commodity markets which has reflected war-hedging purchases.

The gilt-edged market opened under pressure from nervous sellers, and was unable to muster appreciable support when quotations fell by as much as 1 point. Its condition on Tuesday can only be described as "loose," for it was beguiled, about mid-day, by rumours of an Italian compromise, only to lose its advance when the story was questioned. Thereafter conditions became steadier, although the trend of business did not suggest that quotations were very firmly established. India and Dominion stocks were depressed in sympathy with gilt-edged, although their movements were steadier in mid-week.

In the foreign bond market, Brazilian Funding issues enjoyed good support, the market's uneasiness regarding the October coupons having been set at rest. The European group was thoroughly disturbed, Italian issues remaining a nominal market and Austrian issues reflecting that country's invidious position in the event of a breach of peace. Chinese bonds maintained their firm tone, but Japanese issues tended to lose ground.

The home rail market, already disturbed by market conditions, also bore the burden of a further week of disagreeable traffic returns. London and North Eastern issues were weak on the substantial fall in receipts, but the entire market was in a very depressed state. London Transport "C" stock also failed to maintain its high level. In the foreign section, Cordoba debentures received speculative support in response to reports suggesting the eventual possibility of the exercise of the Argentine Government's option to purchase. The Argentine and Brazilian sections remained quietly steady, while American and Canadian Pacific issues improved during the week.

The industrial market maintained a tentative attitude, with the uncertain political situation in mind and the end of the account in prospect. Selling did not appear important, but certain sections sometimes lacked the benefit of supporting orders. The international group, headed by International Nickel, continued "set fair," although British-domiciled stocks were not always happy. A number of recent favourites, regarded only a fortnight ago as satisfactory "armaments cover," tend to fade from interest. Aviation issues, for example, lost impetus, while iron and steel issues, after moving irregularly for two days, eventually took the downward course. The motor section was stirred solely by premature expectation of the Austin announcement, and was otherwise barely steady. Both electrical equipment and supply issues tended to lose ground, although they were not active. Brewery issues continued uncertain, and fractional losses were recorded until the tone improved slightly on Thursday. Leading tobacco issues also failed to maintain Tuesday's rather firmer front. Apart from Harrods, store issues showed little change. United Dairies, however, fell sharply to 59s. (with a subsequent rally to 60s.) on the open breach between the Milk Marketing Board and the distributors regarding the terms of the new contracts. The features of the dispute are reviewed in a Note of the Week on page 555. The Unilever issues opened firmly on guilder devaluation

suggestions, but lost ground after Dr. Colijn's reaffirmation of policy. Rayon issues were broadly maintained. Although miscellaneous industrial shares included a few firmer features on Tuesday, after an indifferent opening, they were largely confined to the building group. Limited support was accorded to the investment leaders, however, later on Thursday.

Business in oil shares remained limited. There were signs of moderate support as the week progressed, but it had a somewhat spasmodic character. Rubber shares opened under the pall of rubber at 5½d. in markedly depressed fashion, and since speculative support was limited the market found little relief from extreme dullness. Selling was restricted to small lines, but there were few buyers disposed to anticipate the much-publicised future reduction in stocks. The recent recovery in tea shares lost impetus, for profit-taking, which particularly affected Assam issues, outweighed the continued advance in Mincing Lane.

Interest in Kaffir shares broadened this week, with assistance from Johannesburg, a number of favourable annual reports, and news of a "strike" on Spaarwater. Speculative issues met with more support, but finance and "heavy" shares also improved. West African issues showed less consistency and again turned recessionary after Tuesday's mild improvement, and Australian issues followed a similar trend. Rhodesian copper issues were firmer on the course of the metal market, with a possible Roan Antelope dividend as additional bait. Tin shares were slightly firmer in mid-week, although the London Tin preference dividend postponement overshadowed the mining shares.

FOREIGN STOCK EXCHANGES NEW YORK

WALL STREET, engrossed in its own future, has nevertheless been compelled to give a certain attention to European war clouds this week. Whether the undecided tendency of the market at the beginning of this week was, even indirectly, a reflection of the doubts and fears of most European Bourses may be gravely doubted. Wednesday, which witnessed a revival of expansionist sentiment in Wall Street, was one of the worst of Paris's "bad days." When the quarrels of the Old World assume a particularly
