It is abroad, however, that the possibility of expansion seems greatest. A visitor to foreign countries may still see the strange spectacle of huge burdens carried by donkeys scarcely visible beneath their load and of tramcars drawn by the same species of animal. Already, the motor vehicle has tended to displace these strange customs, but scope for development remains enormous. Inadequate roads and lack of purchasing power tend to restrain the pace of "motorisation" overseas, but these obstacles will no doubt be overcome in time.

The share of the future world trade in motor vehicles obtained by the British motor industry will depend, in a large measure, on the relative efficiency of manufacturers in this country. Here, again, enlightened Government policy might do much to help the British motor industry in their efforts to increase exports by further reducing and even abolishing the horse-power tax which forces British manufacturers to concentrate on the production of low-powered vehicles.

BOOKS AND PUBLICATIONS

100 YEARS OF MUNICIPAL PROGRESS*

TUESDAY is the centenary of the Municipal Corporations Act of 1835; and local government omcers are to be congratulated on the enlightened self-interest which inspired their National Association to arrange for this memorial volume. It consists of a number of essays, written by the three editors and sixteen other distinguished authorities, varying considerably in length and quality, and treating a great many aspects of the remarkable century since the English cities were re-created by the Municipal Corporations Act of 1835. These several contributions very nearly succeed in making a single and coherent book. They are all worth reading, and they do not suffer from being read in the order in which they are printed. But there is too much overlapping (certain salient facts are repeated at least three times in various places); and it would have been more logical and convenient to put the chapters on finance, Parliament and Central Control in the same part of the volume as those dealing with other parts of the machinery of local government, instead of separating them by nine essays concerned with the particular services provided.

It might, too, have been wise to include a chapter by some woman. For, except in Mr Gilbert Slater's quite admirable article on Poor Relief, the contribution of women to the development of city government hardly receives enough attention. London, perhaps, should have had a chapter to itself, and there are two other rather serious omissions. Apart from a few incidental references to foreign countries, no attempt is made to compare municipal progress in England with similar developments elsewhere. A chapter of comparisons would have been worth including (possibly at the expense of half the disproportionately long essay on the Municipal Service), especially if it had discussed German and American experience, and included some reference to Scotland.

Moreover, the history and nature of rates are nowhere adequately examined, and the reader may well be left with the impression that nothing need be said in criticism or defence of the tax by which alone English cities can raise money. Sir Josiah Stamp's valuable chapter on municipal finance seems to assume that this subject is too well known to be worth discussing.

But apart from these points of criticism, the book is admirably planned, and many of the chapters are quite first-rate. Since 1903, when the last edition of Redlich's "Local Government in England" appeared, the work of city councils has been extended on a huge scale, and no attempt which has so far been made to bring the history of the subject up to date has come nearer success than this one. Dr. J. L. Hammond's chapter (probably the best in the book) passes the whole century under review, and outlines the growth of city government in its proper context of economic and social change. Mr John Willis, in the most original of all the contributions, describes the changing relationship between Parliament and the local authorities. Dr. Jennings provides an excellent summary of what he has already written on the part played by Whitehall and the Courts in controlling local administration.

Of the chapters concerned with particular municipal services, the one on education by Professor Frank Smith is outstandingly successful; Sir George Newman's authoritative essay on public health is also illuminating; Mr Herbert Morrison's on highways and transportation covers a wide field in a most interesting way, though it would be still more valuable if it paid more attention to railways and their relation to road transport; and Sir Frederic Kenyon makes an instructive and lively article out of the depressing history of municipal museums and art galleries. But this dreary aspect of local government history certainly suggests that the statutory limitations which have always restricted the powers of English municipalities cannot wholly be blamed for the lack of æsthetic or cultural liveliness in English cities, and that even if the powers of local councils

* "A Century of Municipal Progress, 1835-1935." Edited by H. J. Laski, W. I. Jennings, W. A. Robson. George Allen and Unwin, Ltd. 511 pages. 21s.

were considerably increased, Dr. Robson would still prove to be over-optimistic in his light-hearted vision of the English city government of the future.

He points, however, to very solid ground of hope when he writes, in more sober conclusion:—

Adherents of all the major political parties are agreed in recognising the fundamental value of our municipal institutions, and this unity of opinion is of far greater moment than the temporary party conflicts about particular questions . . . which enliven the scene from time to time.

This is a conclusion which few are likely to dispute.

SHORTER NOTICES

"The Simple Case for Socialism." By G. D. H. Cole. Gollancz. 288 pages. 5s.

In this his latest book Mr Cole is in his most readable and persuasive, if not his most profound, form. The book, in his own words, is not "an economic treatise nor again a Utopia," but "a plain statement by one who has been a Socialist from boyhood, of the reasons for his faith."

By Socialism, Mr Cole means "a classless society," a "democracy" which "assures every citizen a real and effective share in the government of his own country and the world." Mr Cole makes it very clear that he wants Socialism because he wants to see human happiness and freedom established on earth—particularly the latter. "I want a free society," he says, "in the sense of a free-and-easy society, with a deep belief in letting people go their own ways in all matters that can be left free-and-easy without opening the way to social brigandage or gangsterism." At the same time he puts much emphasis on the small man's need for security: "The rich are happiest, not in being rich, but in being for the most part secure and for the most part able to enjoy the work they do."

This must be the most idealistic book that Mr Cole has written. At times he is so possessed by his conviction of the rationality and justice of the Socialist case that he almost inclines to say that for this reason alone it must prevail. How far from the orthodox Marxist! But Mr Cole is not Utopian either:—

If we Socialists (he says) can get for ourselves a leadership that is able to inspire . . . confidence, and get behind that leadership a policy and a programme which promises an orderly as well as a rapid advance towards a Socialist system . . .

Here Mr Cole certainly hits one important nail on the head.

BOOKS RECEIVED

A History of Europe. Vol. III. *The Liberal Experiment*. By H. A. L. Fisher. (London) Eyre and Spottiswoode (Publishers), Ltd. 18s. net.

The Exchange Clearing System. By P. Einzig. (London) Macmillan and Company. 220 pages. 8s. 6d. net.

Handbook of Central and East Europe, 1935. Edited by Stephen Taylor. Central European Times Publishing Company, Ltd. Zurich. 992 pages. 6s. 6d. net.

The 1935 issue of this useful compilation, first published in 1932, is now available. It contains the usual wealth of information about political, financial, industrial and social affairs; and is complete with statistics, photographs and maps. The countries covered are Albania, Austria, Bulgaria, Czechoslovakia, Danzig, Estonia, Finland, Greece, Hungary, Latvia, Liechtenstein, Lithuania, Poland, Rumania, Turkey, Yugoslavia.

Who's Who in Central and East Europe. Edited by Stephen Taylor. The Central European Times Publishing Company, Ltd., Zurich. 1163 pages. £4 4s. net.

The publishers of the above guide have now produced this new and invaluable "Who's Who." It contains 10,000 detailed biographies of statesmen, writers and public men of all kinds in the 16 countries mentioned in the preceding note. It should be of great value to all whose work brings them into contact with the politics or business of Central and S.E. Europe.

Let's Calendary. This is an attractive diary with a convenient calendar on the cover. It contains much useful information. 160 Shaftesbury Avenue, W.C.2. 6s.

MONEY AND BANKING

NEW GOVERNMENT LOANS

LAST Monday evening the Government announced the issue of two new loans. The first, a 2½ per cent. Funding Loan of £200 millions, was offered for cash at 96½ per cent., and is redeemable at any date between April 15, 1936, and April 15, 1961. The second, an issue of £100 millions 1 per cent. Treasury bonds, was offered for cash at 98 per cent., and is redeemable between February 1, 1939, and February 1, 1941. Calls on the Funding Loan are spread over various dates to April 3, 1936. Five per cent. of the Treasury bond subscriptions are payable on application, and the remaining 95 per cent. on March 2, 1936. The Treasury simultaneously gave notice to repay on March 2, 1936, the outstanding £150 millions of the 2 per cent. Treasury bonds, 1935-38, issued at par in October, 1932. Notice had already been given to repay the outstanding £44 millions of 3 per cent. Treasury bonds on April 15th next.

The net result is that the Government is redeeming £194 millions of old debt and issuing £300 millions of new debt, for which the total cash subscription will amount to £291 millions. The Government will thus have a cash "surplus" of £97.0 millions at its disposal. How far will the new issues appeal to investors? There is no doubt whatever that the Treasury bond offer is welcome to the money market, and it is not surprising that it was at once over-subscribed. Against a yield on Treasury bills to-day of a bare ½ per cent., the new bonds, assuming redemption at the latest date, give as much as £1 8s. 5d. per cent. Furthermore, the clearing banks have agreed to lend to the market against them at a special rate of ¾ per cent., or halfway between the ½ per cent. charged for loans against bills eligible for rediscount at the Bank of England and the 1 per cent. charged against other collateral. This leaves the market with an ample margin. The result of the issue was that applicants for over £200,000 only received an 89 per cent. allotment—smaller applications being allotted in full. After opening at 2s. 6d. discount, the market quotation closed at par on Thursday.

The appeal of the new Funding Loan is more difficult to appraise. On the basis of latest redemption, the investor is offered a yield of £2 13s. 10d. per cent. over a period of 25 years. His decision will depend on his view of the course of future interest rates. If he looks for the dawn of a day when 3 per cent. Local Loans will be converted, and 2½ per cent. "Consols" will stand at par, he will buy 2½ per cent. Funding Loan now, in the hope of a premium hereafter. On the other hand, if he regards this week's offer of Treasury bonds at the record low rate of 1 per cent. as an intimation that interest rates are near their lowest point, or have already passed it, he will, at least, pay the Treasury an implied compliment for their proverbial sagacity in picking on the psychological moment for the new issue.

The loan, however, was over-subscribed, and applicants for over £50,000 were only allotted 92 per cent. The scrip closed at par on the first day. Still, the City retains its belief that a large portion of this new loan has been taken up "inside." If past precedent has any present relevance, it will not be surprising if the greater part of the two loans called for repayment has already passed into the hands of the Public Departments. There is, indeed, some statistical evidence in support of this view. During the past year "tap" issues of Treasury bills have been reduced to £96 millions, and Ways and Means Advances from Public Departments by £17 millions. It is difficult to ascribe this total reduction of £113 millions in the floating assets of the Departments entirely to the operations of the Exchange Equalisation Account. Last spring the Account was selling gold and taking up Treasury bills. Conversely, the autumn gold purchases of the Exchange Account, heavy though they were, have not been accompanied by any considerable reduction in the Departments' floating assets, which have fallen only by £35 millions since early August. Clearly, other changes have been taking place, and it is at least con-

ceivable that the Departments have been turning out Treasury bills to make room for other securities. If the bulk of the loans called for repayment have been taken up in this way, the Departments will be able to "support" the new Funding Loan issue and ensure its immediate success.

What is likely to be the effect of the whole refunding operation upon the banking and credit position generally? The floating debt has increased from £916 to £935 millions during the twelve months to November 30th last. Tender issues of Treasury bills have risen from £433 to £565 millions; while the Departments' floating assets have been reduced from £483 to £370 millions. This increase of £132 millions in tender issues of Treasury bills is reflected directly in an increase of £81 millions (from October, 1934, to October, 1935) in the clearing banks' discounts, and, indirectly, in an increase of £145 millions in their deposits. By virtue of the Government's new financing operations, some £97 millions will be made available for the redemption of Treasury bills. If the money is so used, the banks may be faced with the alternative either of subscribing to the new loans or suffering a reduction in deposits. Such a reduction would not necessarily be deflationary, for it would represent simply a transfer of savings from bank deposits to the new loans. But as the reduction will leave the floating debt £78 millions lower than a year ago, it cannot be ignored by the banks, the money market or the general public.

At this point it seems advisable to correct a prevalent misconception. It has been suggested that some £44 millions out of this £97 millions of new money is, as it were, earmarked in advance, inasmuch as 3 per cent. Treasury bonds to that amount were redeemed last April. This assumption overlooks the fact—clearly stated by Mr Chamberlain in his last Budget speech—that £34 millions of these Treasury bonds were redeemed out of sinking fund money—that is, out of accumulated revenue. Only £10 millions of cash had, consequently, to be found last April, and the floating debt was increased only by this relatively small amount. That, however, is past history. What is of more immediate moment is the indisputable fact that £97 millions of new money will be available to the Treasury next year.

Speculation will, doubtless, busy itself with the eventual destination of this by no means inconsiderable sum. Initially, of course, it will be applied to the reduction of the floating debt, and it may be argued that its permanent employment in that way would be entirely in keeping with traditional Exchequer policy. In view, however, of the references to defence expenditure in the King's Speech this week, other possibilities will most certainly be canvassed in unofficial quarters. But there is no evidence that the Government intends to borrow for this purpose. In any case, the Treasury will not be required to find any very considerable amounts for re-armament immediately. The terms of the Washington Treaty relieve the country from the possibility of heavy battleship construction before the end of 1936, and additional air force expenditure will be the main item during the financial year 1936-37. All that can be said is that if the Government should decide to make fresh capital expenditure of any kind, it can do so without special borrowing by allowing the floating debt to rise again to its present level.

On the whole we may conclude that the present operation has been well timed and that conditions favour its success. It must necessarily tend, however, to add to the already large investment holdings of the joint-stock banks. By reducing the supply of Treasury bills it may also make the maintenance of discount rates more difficult. These are problems, however, which the Government may leave to the banks and the money market. The Treasury may claim that its first duty is to the taxpayer, and that the latter's best interests are served by the use of every opportunity to reduce the long-term burden of the National Debt.

FINANCIAL NOTES

The Money Market.—The payment of the War Loan dividend at the beginning of the week increased the supply of funds, but money is now so plentiful that it made little noticeable difference. A more important influence on the market is the fact that the banks are beginning to curtail their bill purchases. This is partly because their cash reserves are now being depleted by Christmas currency withdrawals, but they are also reluctant to add to their bill portfolios just before the end of the year. Discount rates have therefore become firmer. Last week the Treasury bill tender rate rose from 10s. to 9.99d. to 11s. 9.31d. per cent., and a further increase was expected to take place on December 6th. When the banks are ready to buy bills at all, they are now taking Treasury bills at ½ per cent. for dates up to February 22nd. Hot Treasury bills were freely offered this week at ½ per cent.

	Nov. 14, 1935	Nov. 21, 1935	Nov. 28, 1935	Dec. 5, 1935
Bank rate.....	2	2	2	2
Clearing banks' deposit rate ...	½	½	½	½
Short Loan rate :—				
Clearing banks	½-1	½-1	½-1	½-1
Others	½	½	½	½
Discount rates :—				
Treasury bills	½-1½	½	½	½
Three months' bank bills	½	½	½	½-1

Day-to-day money is plentiful at the normal rates. Some of the banks have also lent money into the New Year at ½ per cent., but borrowers are not finding it easy to get as much as they need.

The Bank Return.—This week the note circulation has risen by £4.3 millions, and the Christmas expansion has definitely started. The Bank has bought some more gold, and the Reserve is only reduced by £3.5 millions.

BANK OF ENGLAND					
	Dec. 5, 1934	Nov. 13, 1935	Nov. 20, 1935	Nov. 27, 1935	Dec. 4, 1935
	£ mill.	£ mill.	£ mill.	£ mill.	£ mill.
Issue Department :—					
Gold	192.2	196.5	197.2	197.6	198.4
Note circulation	385.4	401.4	398.9	401.3	405.6
Banking Department :—					
Reserve	67.3	55.9	59.2	57.1	53.6
Public deposits	8.6	15.8	21.6	19.7	7.1
Bankers' deposits	108.9	92.9	90.9	90.9	103.7
Other deposits	36.4	36.7	38.5	38.5	37.5
Government securities ..	84.8	83.5	83.6	85.5	89.4
Discounts and advances ..	9.6	11.1	9.7	9.5	10.7
Other securities	10.1	12.6	14.4	12.8	12.5
Proportion	43.7%	38.4%	39.6%	38.8%	36.1%

The War Loan dividend payment explains the big transfer of funds from public to bankers' deposits. The increase in Government securities may represent Ways and Means borrowing from the Bank to finance the War Loan dividend.

The Foreign Exchanges.—The London market has been very quiet. Early in the week the franc strengthened, and the general tone in Paris also became more cheerful. On Thursday morning, however, the tension became greater owing to fears of the outcome of the evening's debate in the Chamber. Three months' francs widened in London from Frs. 2½ to Frs. 2½ discount, and the Paris-New York cross rate moved from Frs. 15.18 to Frs. 15.18½, or to beyond the export gold point. Still, taking the week as a whole, the gold outflow from Paris has been less rapid. The franc has also improved against the guilder and the belga. Last week Brussels took gold from Paris, but this week the exchange has been inside the gold point. The Banque de France's return for November 29th shows that during the preceding week the gold reserve fell from Frs. 69,025 to Frs. 66,191 millions, while withdrawals at the end of the month raised the note circulation from Frs. 81,235 to Frs. 82,447 millions. These movements have imposed a fresh strain upon the internal banking position, for discounts at the Banque de France have risen from Frs. 9.786 to Frs. 11.218 millions, while private deposits have shrunk from Frs. 11,270 to Frs. 9,185 millions. Dealings in dollars in London have been very inactive, but the pound has im-

proved slightly to \$4.93¾. The customs returns for the current week show gold imports of £2.1 millions from France, offset by exports to France of £1.1 millions, mainly in coin. Silver exports to the United States amounted to £2.7 millions.

New York Money and Banking.—The Federal Reserve Board has fixed maximum rates for time deposits in accordance with the terms of the 1935 Banking Act. These are 2½ per cent. for deposits for six months and upwards, 2 per cent. for deposits from 90 days to six months and 1 per cent. for deposits fixed for less than 90 days. Money is easy. New York member banks' loans to brokers rose from \$856 to \$887 millions during the week ended November 27th. Other loans against securities rose from \$731 millions to \$732 millions. The \$900 millions of Treasury issues to finance work relief and other Government needs have been heavily over-subscribed. Gold imports for the week ended November 27th included \$56.0 millions from France, \$5.2 millions from India and small amounts from Canada, England, Holland and Russia. \$40.9 millions is reported to have arrived this week from France, while a further \$32.6 millions of French gold has been engaged for shipment. Foreign bank deposits with American member banks rose during the week ended November 27th from \$380 to \$437 millions. Silver imports for the week ended November 22nd are returned at \$13.1 millions, of which \$10.2 millions came from England.

Barclays Bank (D.C.O.).—This bank has had a relatively successful year. Net profits have risen from £410,000 to £473,000, and while increased provision is needed for income tax it has proved possible to raise the dividend from 5 to 5½ per cent. Most of the bank's different spheres of activity have contributed to this improvement. Business in Palestine is more active, Egypt is benefiting from the recent sharp rise in cotton, and prices of West African produce, though still low, are higher than a year ago. During the year ended September 30th last the following changes occurred in the bank's accounts:—

	(£ millions)		
	Sept. 30, 1934	Sept. 30, 1935	Change
Deposits	82.9	87.8	+ 4.9
Cash	17.0	24.4	+ 7.4
Investments	25.8	23.4	- 2.4
Advances	26.7	29.2	+ 2.5

These changes largely reflect the South African trade revival, and also the expansion in the Dominion's London balances and in internal credit conditions. In fact, under normal conditions the trade revival in South Africa would probably have brought about a greater expansion in advances.

Bank of New South Wales.—Both the Bank's report and the annual address of its President are severely critical of recent Australian central banking policy. The fall in wool prices since early 1934, the repatriation of external balances, and heavy Australian tourist expenditure abroad have all combined to reduce the Commonwealth Bank's London balances, and during the year ended November 25, 1935, these have fallen from £25.6 to £16.9 millions. This has caused a corresponding contraction in the cash balances of the trading banks and also a reduction in their deposits. Faced with this contraction, the report of the Bank of New South Wales states, the trading banks were forced either to restrict advances or to sell Government securities, and to some extent they are already following both these alternatives. The report condemns the Commonwealth Bank for its alleged inaction in face of these changes, but the cabled summary of both the report and the President's address do not suggest what the Commonwealth Bank should have done. Moreover, the President himself suggests that, owing to the recent improvement in export prices, the year 1935-36 may witness some addition to London funds after meeting all overseas commitments. This should ease the internal banking and credit position, and offer the hope of a satisfactory solution of the problem.

THE STOCK EXCHANGE

AMERICAN UTILITIES

WHEN the Roosevelt Administration, assuming office, declared "These many then shall die—their names are pricked," the utility companies stood high in the list. Their hold on life, however, has proved tenacious. They are not merely an unconscionable time dying, but are most reluctant to start the process. They countered the original "death sentence" clause in their Bill, this year, with the most prodigious "lobby" which even Congress had known. Subsequently, when the Administration had secured the re-insertion of a modified death clause in the Public Utility Holding Company Act, as finally passed, they appealed to the Courts, and have already secured a decision in one Federal Court that the Act is entirely unconstitutional. This judgment may have had the character of an advisory rather than of a legally operative decision and the final word will not be given until the Supreme Court has spoken. Meanwhile, the companies clearly regard their legal position as anything but desperate, and many have refused to comply with the initial requirement of the Act, which demanded their registration with the Securities and Exchange Commission by the first of this month. The American investing public, in turn, has persisted in valuing utility shares for their "recovery" appeal, in a context of expanding business activity, and in crediting them, implicitly, with a much greater expectation of life than the average condemned criminal. From a low point of 52.2 this year the 37 utility shares in the Standard Statistics Index have risen to a present level of 92.5 (1926 = 100). The background for the rise has been an increase in electric power production of 7½ per cent. in the first ten months of this year and as much as 11½ per cent. in the three months August-October.

Investors who desire to be bulls of American economic revival rather than bears of the Act's constitutionality—and their number probably includes a good many British investors who are interested in the self-raising potentialities of the American utilities market on its own merits—have, as it happens, a middle course open to them. Part II of the Act confers vast and vague powers on the Federal Power Commission over the rate structure of all electric utility operating companies engaged in inter-State commerce. How far these will be eventually exercised remains to be seen, but informed American opinion has been almost unanimous in regarding them of as less immediate moment than the provisions of Part I of the Act, which place the structure and financial operations of all utility holding companies and their subsidiaries under the jurisdiction of the Securities and Exchange Commission. Under Section 11 of this part of the Act, holding companies with operating subsidiaries whose operations are not confined to one State or contiguous territory are, at the Commission's discretion, to take steps within one year, after January, 1938, to divest themselves of the control of their non-contiguous properties. There is a tendency, therefore, among prudent investors, to regard the future of well-run operating companies as fairly secure against any cataclysmic developments, and to judge the holding companies, *vis-à-vis* the Act, according to their "vulnerability" or otherwise. Thus, a well-known Wall Street house has suggested that little change may, probably, be expected in the structure of such concerns as the following, whose systems are mainly intra-State, or (in one case) are outside the United States altogether:—

American and Foreign Power; American Waterworks and Electric; Buffalo, Niagara and Eastern Power; Columbia Gas and Electric; Consolidated Gas; Niagara-Hudson Power; Pacific Lighting Corporation; Public Service Corporation of New Jersey; and West Penn Electric.

The following companies, it is suggested, would be allowed to continue their corporate existence, though probably with some changes in structure:—

American Gas and Electric; Cities Service Company; Stone and Webster; United Gas Corporation; and United Gas Improvement.

Finally, the corporate existence of the following has been described as "vulnerable," with major changes indicated:—

American Light and Traction; American Power and Light; Associated Gas and Electric; Cities Service Power and Light; Federal Light and Traction; Commonwealth and Southern Corporation; Electric Bond and Share; Electric Power and Light; Engineers Public Service; International Hydro-Electric; Middle West Utilities (now in receivership); National Power and Light; North American Company; North American Edison; Standard Gas and Electric; United Light and Power; and Utilities Power and Light.

Until the constitutionality of the Act is decided by the Supreme Court, one way or the other (which may conceivably be not until after the presidential elections of next autumn), the securities of all these holding companies will carry, in greater or less degree, a legislative as well as an industrial "risk." Investors who are anxious to reduce the former to a minimum, while sharing in any benefits which may accrue under the latter category, may find interest in an examination of the limited number of operating companies whose stocks are directly available. A selection is given in the annexed table, with particulars of earnings per share, current dividends and present prices.

Of the four groups into which the public utility industry divides itself, that of electric supply is the most important. According to the Edison Electric Institute, the electric light and power companies of the United States serve approximately 25 million customers, of which about 80 per cent. are "residential" and 14 per cent. "commercial," the rest being mainly municipalities, railroads, street railways, etc. The most striking recent development has been on the domestic side, where average consumption per customer has risen from 268 kilowatt hours in 1914 to 500 kw.h. in 1929 and approximately 660 kw.h. in 1935. This intensive development has reflected, first, an improvement in lighting facilities, and, secondly, an increased use of domestic electrical appliances. One of the most important of recent "load builders" has been the electric refrigerator, and growing importance is attached to the future extension of cooking and water-heating appliances. While further development in the next decade may be intensive rather than extensive, rural electrification still offers an avenue for a substantially increased consumption. The Standard Statistics Company has recently estimated that only about 12 per cent. of the total farms in the United States are electric power consumers. The larger farms, however, may be capable of using up to 6,000 kw.h. per annum. In this connection, the fact that some \$100 millions has been set aside by the American Government to promote rural electrification may be of importance to the industry.

The national output of electricity will this year, by all appearances, regain and even surpass the 1929 "peak" figure of 90 million kw.h. Recovery started for most companies in 1933, but it is only in the last few months that the majority have been able to surmount the handicap of lower rates and higher taxes and to show gains in income. Improvement, it is believed, should next year be consistent and substantial. The fly in the ointment is less the trend of future consumption than the expressed determination of the authorities to secure reductions in charges for electricity. The Tennessee Valley Authority, with its "yardstick" of 3 cents per kw.h., is regarded as a potential threat to certain companies operating in adjacent territories in Alabama, Tennessee, Georgia and Carolina. Another menace has been the offer of Federal funds to municipalities desirous of building their own plants, though as yet few cities or towns have actually started to erect plants under these terms. In the long run, however, a policy which tends to expedite rate reductions may not be an unmixed evil, even for the producing companies; for past experience has shown that the stimulating effect of such changes on consumption has been so well marked that increased sales have more than offset its financial effect within a year or two.

Compared with the electric supply companies, many of the gas producers are at a disadvantage. Relatively high manufacturing costs prohibit the sale of manufactured gas on a competitive basis with coal or oil, and its supremacy in the field of cooking and water heating (which accounted for nearly 65 per cent. of a total gas consumption of 359,000 million cubic feet in 1934) is being increasingly challenged by the electrical industry. The outlook for the natural gas companies, however, is believed to be brighter. Within the last five or six years pipe lines have been laid down from main producing fields in areas like California, the South-West, West Virginia and Ohio for the transmission of natural gas to distant consuming centres. The Texas Panhandle-Chicago pipe line is over a thousand miles in length. Natural gas, having the advantage of almost twice the thermal content of manufactured gas, with a lower selling price, can better compete with coal and oil.

* After extraordinary appropriations. † During current year. ‡ Plus extra distribution.

Such a company as the Pacific Gas and Electric, consequently, has almost doubled its gas sales since it changed over from the manufactured to the natural product in 1929. As an industrial fuel natural gas has many advantages, and companies like Columbia Gas and Electric, which serve large industries, should gain from the rising tide of manufacturing activity.

Another branch of the utility industries—road passenger transport—has long passed its days of bountiful profits. The number of passengers carried by public transportation systems in the United States fell steadily from 15,548 millions in 1920 to 10,465 millions in 1933, with a partial recovery to 11,146 millions in 1934. Unless the popularity of the private car suffers a wholly unexpected setback, it is unlikely that earlier traffic figures will be regained. Although many traction companies have substituted buses for trams, to the extent of about 12 per cent. of their total business, results have not been universally profitable. Traffic congestion in the streets of the larger cities is already somewhat severe, and few companies can find the necessary capital for the construction of subway systems. For this and other reasons, the trend of future development may be towards the increased assumption by municipalities, rather than by private enterprise, of the duty of maintaining adequate transportation facilities in the large centres of population.

Provision of water supplies has long been even more markedly a matter of local municipal enterprise. Some private companies, however, still remain, and have the advantage over the transport concerns that their business is remarkably stable from year to year. A reasonably capitalised water company can usually pay moderate dividends, though its speculative appeal is relatively small, in view of the fact that increased dividends are dependent on the expansion of the communities served, which in many cases is a relatively slow process. The majority of the private water companies have now been organised into three major "systems." Of these, the American Waterworks and Electric Company, whose recent results are shown in our table, has combined with its water business

certain profitable electric operations in Western Pennsylvania and districts.

So much for the main operating branches of the American utility industries. Their future cannot be assessed completely without reference to the fate of the score of large, and approximately the same number of smaller holding companies, by which a large part of the electric power industry, at least, is controlled. It can scarcely be contended that there is no force in the arguments that the past finance of some holding company groups has been generous to the point of recklessness; that their capital structures have frequently been dangerously "high-gearred"; and that the necessity of paying high dividends to support these capitalisations has encouraged resistance to necessary reductions of charges by operating companies. Until the legality of the somewhat extreme reformist programme of President Roosevelt's Administration is decided, conservative investors are likely to confine their purchases either to the "non-vulnerable" companies or to a limited number of concerns—three of which are mentioned in our table—whose holdings, if the worst came to the worst, could probably be liquidated for a sufficient sum to discharge all their prior obligations and to leave a substantial surplus for distribution among common stockholders.

INVESTMENT NOTES

Treasury Borrowing Policy.—The Treasury's decision to issue £100 millions of 1 per cent. three-five-year Treasury bonds at 98 and £200 millions of 2½ per cent. twenty-five-year Funding bonds at 96½, announced on Monday evening, was a well-kept secret. The rapid closing of the lists, on Wednesday, was largely a foregone conclusion (for reasons suggested in a leading article on page 1156), which left the market less interested in the identity of possible subscribers than in the bearings of Treasury policy on probable future events. Ostensibly, the Treasury has gone out of its way to be kind to the market. It has catered both for the professional money market investor and the longer-term holder who may wish, nevertheless, to ensure the return of his capital within a single generation. The Treasury, in fact, up to a point, has given effect to an earlier suggestion of Mr J. M. Keynes that future Government offers should comprise, not a single stock, but a range of securities. The coupling of a definite redemption date with an issue price below par in both cases, again, is calculated so far as it goes to help in restoring the balance of a market which, since the conversion of War Loan into an "undated" stock, has found itself uncomfortably "long." On second and third thoughts, however, there has been a disposition to regard this week's issues as a testimony, less to the authorities' tender consideration than to their disciplinary control of the market. Whatever its ultimate effect, this week's operation is not likely to make things easier for the short-term money market; while there could scarcely have been a better indication of the Treasury's consciousness of its power in the gilt-edged market than its decision to issue as much as £200 millions nominal of a twenty-five-year stock appreciably "above the market." The 2½ per cent. Funding Loan was offered at a price of as many as 12½ points above the ex-interest quotation of the "undated" 2½ per cent. Consols, and its yield to latest redemption in twenty-five years of £2 13s. 6d. per cent. compared with £2 17s. 9d. per cent. on 3 per cent. Funding Loan, if the latter were to be regarded as a twenty-three-year stock, repayable in 1959. If interest rates, again, remain as low as they are now, 3 per cent. Conversion Loan will be repayable at its earliest date, and, at the price prevailing on the eve of the Treasury's offer, will give the same redemption yield, to a few pence, for a "life" little more than half as long. That the authorities had not over-estimated the strength of their position was shown by the all-round rise of gilt-edged prices on Tuesday, ranging up to 2½ points for a relatively short-term stock like 5 per cent. Conversion Loan and 2½ points for 2½ per cent. Consols. Whether general interest rates, nevertheless, have not reached and

passed their nadir, as we have recently suggested, is a matter which time must be left to prove. The same remark applies to the validity of the popular assumption that this week's re-financing puts an *ad hoc* re-armament loan outside the range of probability for the present.

* * *

Railway Loan Finance.—The Treasury memorandum on the procedure by which the finance of the guaranteed loan to the four group railways, announced during the election, will be effected, follows the broad lines laid down for the London Electrification Scheme. A special Treasury Company will be formed to raise up to £26,500,000 of the £29,500,000 to be spent on railway work, from which the London, Midland and Scottish will borrow £9,000,000, the London and North Eastern £6,000,000, the Southern £6,000,000 and the Great Western £5,500,000. The balance to complete the works will be provided by the railway companies from their own resources. As in the case of the London Electrification Loan, the total sum includes provision for such interest as it may be necessary to pay out of capital during the period of construction. Each railway will create 4 per cent. debenture stock to serve as collateral security for amounts borrowed from the Finance Company. As the cost of the works includes anticipation of the replacement of certain wasting equipment on the L.M.S. and the L.N.E., these companies will provide £1,250,000 and £896,580, respectively, by annual instalments over fifteen years. The issued stock of the Finance Company will have a life of 15 to 25 years. As in the case of the London loan, it will carry no sinking fund provisions. Although the L.M.S. is the largest borrower of the four companies, the Southern has the greatest equity in the probable eventual surplus between increased revenue and the service cost of the new loan. The latter, on the Southern, is mainly destined for electrification, which has already proved a remunerative proposition. Of the remaining works, one of the most significant is the electrification of the London and North Eastern line from Manchester to Sheffield, for the "Northern" companies have previously been somewhat shy of main line electrification. It is expected that Parliamentary authority for the Treasury's arrangements will be secured before Christmas, and that the new loan will be issued without delay. The 2½ per cent. debentures of London Electric Transport now stand around their issue price of 97, and an offer on similar terms would doubtless secure a satisfactory response.

* * *

Rubber and Tea Problems.—The decision of the International Rubber Committee to translate the *de facto* excess Dutch native production into *de jure* terms was not unexpected in the London market. The expedient of increasing the N.E.I. quota by 57,000 tons next year, and by 53,000 and 55,000 tons in the following years merely regularises the situation; for the whole of the increase, according to Amsterdam reports, will be allotted to the natives. Some holders of the commodity were disappointed by the Committee's decision to maintain the export quotas at 60 per cent. during the first six months of 1936, although this appears to legislate far enough ahead to satisfy moderate market expectations. The Committee has received assurance from the N.E.I. Government that the increased quota should enable the effective enforcement of restriction measures. Since the Government aims to impose individual restriction during 1936, there may be ground for hope that the native problem, which has always been a source of concern to London, may be finally solved, although at the partial expense of Malayan and Dutch plantation interests. The resultant increase in supplies is not important, but coupled with the increased basic quotas which apply next year, it may retard the achievement of a more wieldy stock position. A sharp rise in rubber shares during coming months may be discounted, particularly as a large proportion are already fully valued. Tea shares have made no response, for good

or ill, to the impending meeting of the Tea Committee and to the recent recovery in Mincing Lane. In view of the apparent improvement in prices and reduction of supplies, and the manifest caution of the Committee in applying the restriction screw, the possibility of an increased exportable percentage from 82½ to 87½ per cent. has been canvassed. Whether this would be welcomed by producers or the trade seems debatable, since the view is widely held that the restriction scheme has only recently begun to function effectively. Moreover, the price averages, it is held, are less impressive when closely examined. Ceylon teas average only ½d. per lb. higher, and the improvement in the best Northern India leaf for the season to date leaves prices only slightly above the corresponding 1933-34 season's averages. Since 70 per cent. of this crop which has yet to be sold consists of plain teas, whose improvement is so far less impressive, it is suggested that an estimation of the Northern India season would be premature at this stage. If the November delivery figures fail to achieve the promising level of October, these considerations may weigh with the Committee, although it is alive to the problem of potential excess supplies in 1938. The newly formed International Tea Market Expansion Board is to embark on a co-ordinated propaganda drive to accelerate world consumption until it overtakes potential production. This wise long-term policy, however, may not inspire a share market to which a rapid achievement of equilibrium would be more welcome. Between the plea to "let well alone" and the desire to stimulate consumption, the Committee may well be inclined to steer a safe middle course.

* * *

Course of Equity Share Values.—The ordinary share markets, last month, succeeded for a time in throwing off the discouraging influence of international political complications abroad and fears of a coal stoppage at home, and busied themselves with the more congenial task of discounting a victory for the National Government at the General

BRITISH AND AMERICAN INDUSTRIAL SHARE VALUES OVER THE PAST TWO YEARS (1928 = 100)

British: "Financial News" Index of 30 Ordinary Shares
(adjusted to 1928 base)

American: "Standard Statistics" Index of 50 Common Stocks

Election. Although the tone became quieter after polling day, and the month ended on a slight note of hesitation, reference to the attached chart suggests that the past month witnessed a definite break-away from the conditions which had held prices in check since mid-summer. In America, the rise in values, which began in March, was, if anything, slightly accelerated in pace until the latter part of the month, when a slight but perceptible reaction occurred. So far, however, there is no evidence to suggest that the lull is more than a breath-taking pause, like its American predecessors of June, August and September. Apart from British coal stoppage possibilities, there is nothing on the horizon to suggest an immediate reversal of the market trend in either centre, although the Actuaries' Index of 158

British industrial ordinary shares is slightly lower this week at 79.7, against 80.1 a week ago (December 31, 1928 = 100). The average yield figure is unchanged at 3.73 per cent. Movements in a number of constituent groups in the Index are shown below:—

Group (and No. of Securities)	Prices (Dec. 31, 1928 = 100)			Yields (%)		
	Month Ago (Nov. 5)	Week Ago (Nov. 26)	This Week (Dec. 3)	Month Ago (Nov. 5)	Week Ago (Nov. 26)	This Week (Dec. 3)
Higher this Week						
Insurance Co.'s (24).....	121.7	125.6	127.1	3.46	3.36	3.32
Coal (6).....	89.2	88.0	90.9	4.22	4.37	4.31
Home Rails (4).....	62.0	63.7	64.6	1.68	1.58	1.58
Breweries and Distill. (10)...	132.9	136.7	137.4	4.17	4.11	4.03
Lower this Week						
Building Materials (4).....	83.3	86.5	83.4	4.39	4.24	4.38
Cotton (6).....	47.0	47.3	45.0	2.18	2.09	2.09
Elec. Light and Power (16)...	129.5	131.7	130.7	3.94	3.87	3.90

The effect of this week's British Government borrowing, so long as it lasts, should be favourable. Every upward adjustment of gilt-edged prices in the last three and a-half years has been followed, temporarily at least, by a sympathetic strengthening of equity quotations.

* * *

Realisation Debenture Repayments.—The announcement that R.M. and E.D. Realisation Companies are to repay respectively 50 per cent. and 70 per cent. of their 4 per cent. first debenture stocks marks the first complete cycle of realisation and distribution for which the companies were formed. The directors are obliged to apply all net proceeds realised from the capital assets, less such sums as they consider necessary for the general purposes of the company, in redeeming the first debenture stocks and, subject thereto, in redeeming the income debenture stocks by *pro rata* payments. The effect of the payments on the income debenture stocks of the two concerns suggests an interesting comparison. Both companies were formed and capitalised on the same basic principles, and there is naturally a strong family resemblance between the respective sets of assets. But while 81 per cent. of the R.M. Company's capital structure was represented by debenture stocks, the corresponding figure for the E.D. Company was only 50 per cent. Further, the R.M. Company's issued debenture capital is divided into £1,750,000 4 per cent. first and £2,550,000 of 5 per cent. income stock, while in the case of E.D. there is £500,000 of each issue. The effect is that though the amounts to be distributed form in each case about the same proportion of the total initial valuation of the assets (16.5 per cent. in the case of R.M. and 17.5 per cent. in the case of E.D.), the proportions of the first debentures left and the relationship of the income debentures to the remaining assets is entirely different. In the case of R.M. Realisation, taking the assets on the original valuation basis, a further 16.5 per cent. have to be realised to repay the first debentures, and repayment of the income debenture issue at 10 per cent. premium would call for a realisation of a further 53 per cent., making total realisations of 86 per cent. In the case of E.D. Realisation, the respective percentages are 7½ per cent. and 27.5 per cent., making a total of 52½ per cent. Thus, the E.D. Realisation income stockholders seem to be much closer to redemption at 110 per cent., or alternatively of interest payments when income now required for the 4 per cent. debenture interest is released. The prospect for income debenture holders of both companies is, however, promising in view of the news that application to deal in Coast Lines ordinary shares is being made. This follows the disposal of 850,000 shares, and the granting of options over a similar number to a City group by the Realisation Companies.

* * *

Capital Issues in November.—Despite the interruption in the new issue market resulting from the General Election, there were obvious signs, before and after that event, of quickening activity. Our computation of new money raised during the month is £8,673,000, compared with only

To PROFESSIONAL MEN!

Lifting a burden from your shoulders

OF all men, the professional man is least protected against the vicissitudes of life. Dependent entirely on his own efforts, he has no established organisation upon which to lean in time of trouble; no understudy can take his place for long; no goodwill exists but that created by his own personality. Protection for himself and his family against all eventualities is, therefore, of paramount importance, and full and adequate protection is offered by the

"TRIPLE INCOME" PLAN

which provides

1. AN INCOME ON RETIREMENT
2. AN INCOME FOR DEPENDANTS
3. AN INCOME DURING DISABLEMENT

The "Triple Income" Plan is a very real contribution to the solving of a problem which rests heavily on the shoulders of professional people. It is designed to meet special requirements and individual needs. Full particulars, examples of its operation and cost will be gladly sent on request.

LEGAL & GENERAL ASSURANCE SOCIETY LTD.

Head Office: 10 FLEET STREET, LONDON, E.C.4.

Established 1836

Assets exceed £33,000,000

General Manager: W. A. WORKMAN, F.I.A.

£2,679 a month ago. Recent comparisons are set out below:—

Monthly Average	(000's omitted)			Total
	United Kingdom	Excluding British Possessions	Foreign Countries	
1931	4,542	3,209	761	8,512
1932	13,589	2,129	24	15,742
1933	17,520	2,429	449	20,398
1934	11,474	2,494	125	14,093
Monthly Total	Govt. Other			
September, 1934	50 6,759	2,148	300	9,257
September, 1935	Dr. 200 2,838	2,291	Nil	4,729
October, 1934	50 20,642	1,477	75	22,244
October, 1935	Dr. 600 2,425	854	Nil	2,679
November, 1934	350 9,062	1,173	8	10,593
November, 1935	Dr. 150 6,448	2,375	Nil	8,673

The largest trustee borrower was Southern Rhodesia, but the resumption of Corporation borrowing enabled Sunderland and Brighton to appeal successfully to the market. The largest general issues were made by Edmundsons Electricity and United Kingdom Gas, and the industrial offers of the month were varied, but usually rather small.

COMPANY NOTES

Paint Companies.—In an earlier note on paint shares (February 2, 1935, page 258) it was suggested that there was still room for further increases in profits from larger turnover and rather higher prices. Recent results shown in the annexed table, particularly those of Lewis Berger (to July 31st), have confirmed that view. But since February several important new factors have been introduced. First, the anticipated rise in prices has occurred. In contrast with 1934, which saw a slight falling tendency in paint prices (from £62 5s. per ton for genuine white lead paint at the beginning of the year to £61 per ton at the close), this year

has seen a vigorous recovery, which began in the early spring and has now raised the comparable price to £69 per ton or more. This does not mean that the entire margin between the two price levels has gone to swell profits. Just as the slight decline in price last year was largely offset by lower prices for the paint industry's two main raw materials, lead and linseed, so this year it must be largely offset by their steep rise. Nor is it possible to say whether the year's price movements, taken as a whole, will leave the industry better off on balance than it was last year. Whatever the long-term effect, however, it is almost certain that during the price movement this year the usual benefits will have accrued to producers from the time lag between buying raw materials (normally contracted for in advance) and selling the finished product. To these adventitious advantages—which might be expected to be greatest for the

† And 10 per cent. capital bonus.

larger holders of stock, such as Pinchin Johnson—1935 will have added a still bigger turnover and somewhat higher exports (£2,594,404 for the ten months, against £2,348,914), as well as the fruits of vigorous modernisation and extension of plant by almost all the leading concerns. Moreover, the foreign subsidiaries, which are characteristic of the paint industry's organisation, should be contributing rather better dividends; and the greater activity of shipping, including the re-conditioning of vessels long laid up, will have benefited the trade in anti-fouling and other special compounds which most of the companies produce. There can be little doubt, therefore, that the prospect for 1935-36 earnings is good. The longer prospect is less easy to assess. While overseas recovery should bring further additions to the revenues of British paint manufacturers, it is possible that home demand may recently have been stimulated by arrears of maintenance work still being carried over from the depression. Moreover, the potentialities of further building activity are important, but can hardly be assessed over a period of years. Meanwhile, the rate at which production capacity has been increased in the last two years postulates a well-maintained demand. If for any reason demand were to shrink, conditions might again become distinctly competitive. These possibilities are only outlined as latent in the situation. There is at present no sign of their materialising, nor any means of judging with certainty whether they will do so in the future.

P. and O. Accounts.—The report of the Peninsular and Oriental Steam Navigation Company to September 30th last is disappointing. The net shipping and other current income is over £90,000 lower, and has failed, by £450,000, to meet depreciation on a 5 per cent. basis and debenture

service. Reasons for a fall of nearly £150,000 in net voyage receipts are clear from the directors' report. There was no improvement in Indian freights during the year; Straits business showed little change; Chinese exports were reduced; and Australian meat exports were adversely affected by Government restrictions. Some recovery in outward trade is reported, and passenger traffic showed a slight improvement, but the directors' reference to the uncertain outlook suggests that real recovery is hardly a promise at this stage. The profit and loss accounts are presented in full detail, but ready comparison is difficult owing to "non-recurring" items. An analysis is given below both of current and exceptional income, and its distribution in the last three years:—

	Years to September 30		
	1933	1934	1935
Current income:			
Net voyage receipts	1,182,909	1,202,079	1,054,862

* On sale of steamers. † Includes loss on sale of steamers, depreciation of tugs and directors' fees. ‡ On 5 per cent. basis. † Set aside from profit on sale of William Cory shares of £418,300.

The shipping subsidiaries, whose profits were again insufficient to meet depreciation on a 5 per cent. basis, gave a somewhat higher return, although British India again passed its ordinary dividend, while Orient Steam Navigation repeated its 5 per cent. tax-free payment. These receipts, therefore, in effect take up some part of the £6 millions margin between the amount provided by the group for depreciation, and the lower charge calculated on a 5 per cent. basis. The liquid position is still enviable, but a present quotation of 18s. 3d. for the deferred stock units discounts an early resumption of dividends, which can scarcely be read into the present accounts.

Ebbw Vale and Richard Thomas.—The proposed transfer of the major Ebbw Vale assets to Richard Thomas is something of a *pis aller* for both concerns. The original intention of the latter to build its strip mill in Lincolnshire presumably represented the best technical choice available. The Ebbw Vale directors, anticipating an inevitable reconstruction in March, 1937, when the moratorium expires, might have prepared to delay the sale of the iron and steel assets and to deal with the whole position at one time. The Richard Thomas offer, however, is unexpected and favourable. The agreement, whose terms were briefly set out in last week's *Economist*, page 1106, provides for a cash consideration of £625,000 to Ebbw Vale and £400,000 in settlement of advances made by the bank to Lancaster's Steam Coal Collieries, amounting to £588,065. The assets to be acquired include the iron and steel works, the Lancaster's collieries interest, sheet mills, a power station, acid plant, coke ovens, gas and brick works, limestone and other mineral supplies, including the Irthlingborough ore fields. This list includes the only assets from which departmental profits have been earned during recent years, and excludes only certain unremunerative colliery undertakings. An immediate revenue reduction of £45,000 per annum is therefore to be expected. The sale will not directly improve

these remaining assets, which will still be burdened with heavy debt after repayment of the prior lien debenture stock. If further borrowing does not exceed the reduced limit of £170,000, the cash available for distribution to the 6 per cent. debenture holders will represent 44 per cent. of their nominal holdings. Since the present quotation is 58-68 the valuation put on the residual assets represents nearly £20 per cent. nominal. The prospect for the shareholders appears unenviable; until the investigation into the company's position is completed, indeed, the value of the surplus assets for the 6 per cent. debenture holders is itself conjectural. The endorsement of the scheme by the trustees, subject to this investigation, should ensure its confirmation.

Dorman Long Recovery.—When the future of Dorman Long aroused much controversy a couple of years ago, it was difficult to imagine that the company was actually on the verge of a real recovery. The profits for the year to September 30th were almost as great as those in any two years of the last decade. The net figure of £825,173, indeed, was £405,313 higher than that of 1933-34, an amazing advance when it is remembered that the production of basic open-hearth steel on the North-East Coast increased by only 11 per cent. during the period. At this profit level, the debenture interest—even after allowing a full year's interest on the Prior Lien stock issued last June—was covered four times. Allowing for depreciation on the basis of 33½ years' replacement of the fixed assets, the 6½ per cent. dividend on the first preference shares was covered twice, the dividend on the second preference shares was earned but not paid, and 11½ per cent. was earned on the very highly-gearred preferred ordinary and ordinary shares. An exact comparison with last year's figures is difficult to make, for the company has reorganised its profit-and-loss account as well as its balance sheet. The following table, however, gives a good indication of the advance:—

	Years to Sept. 30	
	1934	1935
Trading profit	420,510	788,605
Other income	28,674	51,364
Total income	449,184	839,969
Fees, pensions, etc.	20,005	14,796
Net profits	429,179	825,173

Debenture interest	298,477†	178,091
Bank interest	92,548	50,573
Preference dividend	...	185,768
General reserve	...	200,000
Carry-forward	Dr. 111,924*	5,010

* Adverse balance of profit and loss account eliminated in the reconstruction of November, 1934. † Only the interest on the first mortgage debenture stock was actually paid.

Despite this excellent earnings recovery, it is apparent from the balance sheet that the junior shareholders will have to wait. The bank debt still amounts to £1,553,552, despite a reduction by one-third during the last twelve months. The company, moreover, still requires liquid resources for developing its plant to deal with the growing demand. The new coke ovens will come into commission in the middle of 1936, but a large-scale rebuilding of rolling mills is projected. Distributions, therefore, may still be on a conservative scale for a year or two. Moreover, the company's recovery has been based on the boom in structural steel, and is a function of increased building and construction activity. The preferred ordinary shares are quoted at 29s. 4½d. and the ordinary shares at 22s. 3d. and look well into the future.

Associated Equipment Company.—The mere maintenance of the total dividend of this commercial motor concern checked any anticipations that the profits for the year to September last would show an exciting recovery. In fact, the "balance of trading profits" shows a not

unsatisfactory rise of £21,000 to £197,862. As the provision for taxation has been reduced from £40,000 to £30,000, the earnings available for the "straight" ordinary capital show a more substantial advance from £102,007 to £129,198. Although earnings would have sufficed for an additional 3 per cent. in the dividend, the directors have chosen to transfer £25,000 to general reserve, raising the fund to £275,000. A comparison of recent profits is given below:—

	9 mos. to Sept. 30, 1933	Years to Sept. 30, 1934	1935
	£	£	£
Balance of trading profit and net interest	123,669	191,418	209,535

Paid	56,250	93,750	93,750
Earned %	6.5½	8.8	11.1
Paid %	6.7½	8½	8½
General reserve	...	...	25,000
Carried forward	225,727	233,984	244,432

† Equivalent annual percentages shown. Actual percentages 4.9 and 5 respectively.

The year's progress may be attributed, in part, to the replacement, by standard vehicles, of the independent fleets absorbed into the London Transport organisation. The recent L.P.T.B. report stated that as many as 779 new vehicles had been placed in service during the two years to June last; and doubtless Associated Equipment, which enjoys a ten-year contract with the Board for the supply of chassis and parts for a large proportion of its fleet, has obtained a considerable part of this business. The balance sheet shows a strong current position. The company has both the means and the scope for advancing profits over a period of years, although it has yet to regain the profits level of 1930 and 1931. The £1 ordinary stock units are quoted at 44s. 1½d. xd to yield £3 13s. per cent.

South Durham and Cargo Fleet.—There is no question in the latest reports of these associated Middle-England concerns of their proximity to a "special area." Profits of both companies have expanded remarkably during the year to September last, and leave last year's reduced figures far behind. In each case, they are matched by their depreciation provisions, whose scale in the past has been a material factor in the strength of both concerns. The South Durham figures show an advance from £105,199 to £163,435, and should satisfy the best expectations which were prompted by the 11 per cent. ordinary and 5 per cent. "B" ordinary dividends announced a fortnight ago. After providing £55,000 for depreciation, against £25,000 in 1934, the ordinary dividend is covered with a margin of about 1 per cent. The Cargo Fleet profits of £150,636 are equally impressive, for they compare with a total of £14,156 in the previous year. The 2 per cent. dividend is modest in comparison with the jump in the rate of earnings from 1.7 to 8 per cent., but the margin has been applied to restoring the balance carried forward to £93,901, after providing for the premiums and expenses of the debenture conversion in April last. Comparative figures for the two concerns are given in the following table:—

	Years to September 30th			Years to September 30th		
	South Durham Steel and Iron			Cargo Fleet Iron		
	1933	1934	1935	1933	1934	1935
Profit	£43,359	£105,199	£163,435	£70,805	£94,156	£150,636
Depreciation	15,000	25,000	55,000	30,000	40,000	45,000
Taxes	2,315	2,210	2,210	2,700	2,700	2,787
Debt interest	13,500	13,500	13,500	35,598	35,265	35,927

† Including £3,000 from income tax account. § After providing £46,474 premium on debentures redeemed and new debenture issue expenses.

Both balance sheets display undoubted evidence of vigorous expansion of business. The current assets position of the group shows that increased dividends will not hamper, in the slightest degree, the extensions of plant now in progress. The Cargo Fleet debenture issue provided a surplus of new money towards the plant improvements, which include a billet and sheet bar mill to be completed about June next year. Again, South Durham is to construct a cold-rolling mill to produce wide steel sheets. Both developments may be expected to produce satisfactory earnings in due season. South Durham ordinary £1 shares are quoted at 50s. xd to yield £4 8s. per cent., and the "B" ordinary £1 shares at 25s. 7½d. xd to yield £3 18s. per cent. The market appears, perhaps not unwisely, to be tempering its expectations of a further handsome advance in profits during the current year.

United Molasses.—The preliminary figures published by the United Molasses Company indicate that the business has almost completed the second and last stage of liquidating the excessive expansion of 1928-29. In the first stage the main task was to keep the business afloat while burdened with purchase contracts for molasses, which had immediately to be run to waste. By bold selling of assets and conservation of all cash resources this stage was completed early in 1933. The next stage brought the capital reconstruction of December, 1933, with the conversion of half the £2,500,000 6 per cent. preference issue into redeemable debentures, and the issue of £314,135 funded income stock to fund preference dividend arrears—a scheme of commendable fairness and of surprising leniency considering the losses sustained. The directors declared their intention of redeeming both debenture issues as soon as possible. After the allocations now proposed only £53,000 of the funded stock will remain, out of the combined total of £1,564,135 created at the beginning of 1934. There can be little doubt that this remnant will disappear during 1936.

Such sweeping simplification and reduction of capital structure has had a rather special effect on earnings, since the funded stock was only redeemable out of profits, together with premiums, etc., on the redemption of the £1,250,000 issue. In the following comparative table, therefore (which deals with the consolidated profits of the group), the special redemption charges which have been met out of profits have been treated as non-recurring expenses for the benefit of the ordinary shares. The net earnings shown would therefore have been available if no special capital operations had been necessary.

	Years to Sept. 30,	
	1934	1935
Consolidated gross profits	£651,531	£718,200
Depreciation	283,806	297,608

Staff fund, etc.	4,000	8,000
Debt interest and pref. dividend	115,849	77,015
Earnings for ord.	247,876	335,577
Ordinary dividend	75,194	120,311
Earnings %	19.8	22.3
Dividend %	6	8
Redemption of funded stock	98,017	110,075
Other redemption	34,324*	50,000†
General reserve	Nil	80,000
Brought in	Nil	70,026
Carried forward	70,026	45,216

* Premium on redemption of 6 per cent. income stock.

† Extra allocation to redemption of funded income stock.

Viewed in this light the company's position appears distinctly favourable. Moreover, as the rate of depreciation allowed is decidedly generous, it would seem that once the abnormal redemptions are complete a more generous dividend policy will become possible without unduly impeding the accumulation of cash resources. With the recovery in tanker rates there should be room for further advance in earnings. Though the dividend yield on the present price of about 20s. is under 2½ per cent., the earnings yield (based on the calculation above) is about 7½ per cent. It would seem that the shares, though dear, are not overpriced on their potentialities.

Tobacco Securities Trust.—Stockholders of this investment concern had already foreseen the prospect of losses on the part of Dean Finance—a sub-subsidiary of the Trust—in respect of shellac loans. In a circular issued last May the directors estimated the net losses at £288,000, on the basis of prevailing shellac prices. The net receipts of the Trust for the year to October, however, show a fall of £231,304, the profits accruing on other business to which the circular referred, coupled, possibly, with the improvement in the shellac market—the price of T.N. Orange has subsequently strengthened from around 47s. 6d. to about 60s. per cwt.—has apparently contributed about £57,000 towards offsetting the heavy loss. In consequence, the ordinary dividend has been reduced to the basic 15 per cent. and the £875,000 deferred capital, which ranks for surplus earnings of only £14,802, equivalent to a mere 2 per cent. gross, receives no dividend for the first time in the history of the Trust. The division of recent profits is shown in the following table:—

	Years to October 31st,		
	1933	1934	1935
Dividends and interest received, after income tax, management expenses and directors' fees (£5,000 p.a.)	802,134	758,408	527,104
Ordinary shares—			
Dividend	619,084	623,832	497,500
Earned %	19.8	19.0	15.4
Paid %	19	19	15
Deferred shares—			
Dividend	130,333	131,333	Nil
Earned %	22.0	18.5	1.7
Paid %	18.29	18.29	Nil
General reserve	50,000	Nil	25,000
Carried forward	129,055	132,298	136,901

The report makes no reference to the shellac financing operations. Nor is the information given in the account more revealing than that of earlier years. Total assets of

£5,574,943 are composed of three major items, excluding cash, of which shares in and advances to a subsidiary company account for £3,417,673 and other investments to £1,912,188. The auditor's certificate declares that the shares and other investments of the company possess, in the aggregate, a value largely in excess of the figure shown in the balance sheet. This rather unusual "reservation" in the balance sheet is the only precise indication of its fundamental strength. The ordinary stock units are quoted at 85s. xd., compared with the year's "low" of 73s. 1½d., and yield £3 10s. 9d. per cent. The deferred units have recovered from a low level of 73s. 9d. to 82s. 6d.

Tin Company Results.—Recent tin company reports show improved profits due to high tin prices under restriction. *Kamunting*, reporting to June last, earned £172,330, compared with £105,650. Of the latest profits, £38,140 is allocated to depreciation reserve and income tax requires £31,000. The final dividend of 12 per cent. makes 20 per cent., as before. The assets of the *Pangnga River Concessions* consist entirely of shares in Kamunting, and its results are therefore identical with the previous year. Since, however, the yield on Kamunting shares is 8 per cent. and on Pangnga practically 9 per cent., the latter may be regarded as relatively undervalued. The earnings of *Ayer Hitam* totalled £44,720, against £35,050. An increased allowance is made for depreciation, and £15,000 is written off the fixed assets against £9,700. Although no balance dividend is declared, the total of 17½ per cent. compares with 12½ per cent. in the previous year. The yield indicated is the moderate one of 6 per cent. *Pattani* operates in Siam, and was adversely affected by the spread of its quota over a larger number of undertakings, with a consequent dividend reduction from 20 per cent. to 15 per cent. Even on the reduced basis, however, the yield indicated is about 10 per cent.

Broken Hill South.—After the recent spectacular rise in the shares the annual report of Broken Hill South is something of an anti-climax. True, the net profit amounted to £342,500, as against £220,200; but the larger surpluses from production in preceding periods and the higher price of silver were chiefly responsible. Lead ruled slightly lower and zinc appreciably lower than in 1933-34. The ore reserves are conservatively estimated at 3,500,000 tons, or about nine years' supply. Dividends paid out of last year's earnings totalled 6s. per share, and for the current financial year two distributions of 2s. 6d. have been made, and a jubilee bonus of 2s. 6d. is promised for January. This windfall, although very pleasant, seems rather over-discounted by a jump of 10s. in the price of the shares. Nevertheless, the yield on the current rate of dividend is 10 per cent.

Luipaards Vlei.—The incidence of taxation on this concern has come as a shock to shareholders. In the year to June 30th the company increased its operating profit to £274,450, against £235,530. Of this amount, excess profits duty required £77,500, against £49,400, surtax absorbed £12,300, and normal income tax, previously offset by losses or capital expenditure, took £34,000. After providing £5,400 for note interest, the divisible balance is reduced to £138,600, against £176,000, the 2s. shares receiving a total dividend of 9d., as against 1s. per share for 1933-34. Nearly £53,000 has to be written off from profit and loss for approved capital expenditure to permit claims for relief from excess profits duty. It is not surprising that renewed representations have been made to the South African authorities in regard to the company's position. A larger tonnage was milled, the increase in costs being more than offset by the improved yield per ton. Further development revealed increased payability, and fully developed ore reserves now stand at 2,036,500 tons, value 4.84 dwts., as against 1,857,600 tons, value 4.04 dwts. The outlook largely depends upon the possibility of modified taxation,

for the present basis presses heavily upon current earnings and hampers the extension of operations.

Other Company Results.—Our usual table of company results on page 1182 summarises the latest profits of 59 additional concerns. They display a very satisfactory scale of recovery in a wide section of British industry. The week's brewery results make a good showing, and are accompanied by increased dividends throughout the list, which includes *Benskin's*, *P. Phipps* and *H. and G. Simonds*. The first complete year's account of *Raleigh Cycle Holdings* show net revenue of £191,233, at which level the 15 per cent. dividend is almost exactly met. The operating company worked at record profits, and its net profits rose from £258,519 to £283,717, from which dividends of £194,914 were paid. The *Aerated Bread* net profit is broadly maintained at £177,256, and the dividend is repeated at 5 per cent. The full reports of *Harrods (Buenos Aires)* and *South American Stores* confirm the substantial improvement from depressed levels disclosed in the preliminary figures issued some time ago. In the investment trust group there is further evidence of a moderate recovery in net revenues. Out of the five companies shown, profits have improved in every case, and three are paying higher dividends. Among the industrial results of the week, the *Carreras* figures have been warmly received. The preliminary statement indicates a rise in net profits from £755,169 to £898,990, and the ordinary dividend has been raised from 35 to 40 per cent. This rate is the highest since 1929-30, and the figures suggest that the relief from "coupon" trading and the benefits of increased purchasing power during recovery have been substantial. Three rubber manufacturing concerns appear in the list. *British Tyre and Rubber* shows little change in net profits at £108,031, but pays 9½ per cent. against 8 per cent. in the previous year, while *India Rubber Gutta Percha* has nearly doubled the previous level of earnings and pays 6 per cent., and *Avon* profits show a similar advance, which has been "ploughed back." *Sussex Brick*, which recently acquired Dorking Brick, reports increased profits of £46,283 against £42,408 in the previous year. The net profits of *Manbré and Garlon*, who supply brewing sugar to the industry, have advanced from £303,212 to £321,736, and meet the higher dividends comfortably.

Company Meetings of the Week.—On later pages of this issue will be found the reports of the following company meetings:—British Tar Products, Town Investments, Consolidated Gold Fields of South Africa, Malaya General, Strand Hotel, Kwahu Mining (1925), Tarkwa Banket West, Follisain Syndicate, Ansells Brewery, Bowater's Paper Mills, West African Diamond Syndicate, and South West Africa Company. The chairman of West Africa Diamond Syndicate reported that the recovery in diamonds for the year ended March 31st last was a record for the company. South West Africa Company, according to the chairman, has recently reopened the Abenab Mine and is doing a much larger business. The chairman of Tarkwa Banket West spoke of the peculiar difficulties in the Gold Coast mining industry, and Mr M. L. Innes Brown, of Kwahu Mining Company referred to the connection between the various

related companies. The chairman of Malaya General Company, speaking of the rubber restriction scheme, said that one of its weakest points was the latitude given to trade in export rights. Mr A. Maitland Kisch, of Town Investments, reviewed satisfactory business and referred to a new issue of capital to shareholders on generous terms. The chairman of Consolidated Gold Fields of South Africa reviewed developments in the various mines in which the company is interested and expressed himself optimistically about prospects in the West Witwatersrand. Mr Woolley-Hart, at the British Coal Tar Products meeting, anticipated a prosperous year if a stoppage in the coal-mining industry could be averted. Major M. Gluckstein, the chairman of the Strand Hotel, reported upon the efforts that are being made to keep the company's hotels completely up to date. The chairman of Bowater's Paper Mills reported an improvement in profits as a result of lower costs and higher prices. The chairman of Follisain Syndicate explained that a partnership had been established with British Mannesmann Tube Company for the manufacture of heat-resisting tubes.

THE WEEK IN THE MARKETS

THE LONDON STOCK EXCHANGE

SETTLING DAYS

TICKET
DECEMBER 17

ACCOUNT
DECEMBER 19

ALL sections of the market have been grateful this week for an entirely unexpected stimulus in the shape of Government borrowing, to which we refer on page 1159. The terms of the Funding issue suggested the possibility of lower interest rates in prospect, and were at first received cheerfully in the gilt-edged and industrial markets, where cheap money invariably exerts a tonic effect upon the investment industrials. A closer examination of the terms, however, seemed less inviting, and on Wednesday it was clear that a large part of the applications to the Funding loan would probably come from the banks and from the Public Departments.

Initially, business in the gilt-edged market was dull, and there was no inkling of the Treasury prospectuses which appeared on Tuesday morning. They were accorded a good reception, on the assumption that the lean terms offered by the Funding loan would herald a levering-up of quotations all round. "Old Consols" jumped by 2½ on Tuesday, and were followed more discreetly by Local Loans and War Loan. Mid-week dealings opened briskly, but closing prices, despite the prompt closing of the loan lists, showed a net fall, and the slight recovery later on Thursday was limited to small fractional gains accompanying the recovery of the new scrips from their small opening discounts to par. Dominion issues were fairly steady, and although New Zealand stocks at first refused the comfort of Mr Savage's assurances, they recovered part of their recent losses on Wednesday.

Renewed weakness in Far Eastern issues was evident when the market opened on Monday, but the absence of headlines brought a certain amount of support for the better-class issues later in the week. In the South American market, Brazilian funding issues showed strength, and there was speculative support for Chilean bonds. Mexican issues rose sharply on the Bondholders' Committee's advice to retain holdings pending a later announcement. German bonds found support later in the week, but rentes turned slightly reactionary.

Home rails, which had opened with no great enthusiasm, responded satisfactorily to the improved general tone. Purchasers of Southern stocks continued to base their hopes on a favourable rating decision. The traffic of the two northward lines prompted a satisfactory rise in the marginal preference stocks, and the secured prior charges also improved. London Transport "C" stock continued in keen demand and achieved new high records on successive days.

The foreign rail market was never active, but some improvement in tone was evident after the turn of the week. Argentine stocks proved responsive to good traffic results, the Central Argentine figures being followed by two successive rises of one point to 13. Brazilian issues remained

irregular, but in the nitrate group Antofagasta were well supported.

The last account of the year opened quietly in the industrial market, for political influences were still more powerful than the garnering of recovery profits and the prospects of their continuance. It required the Treasury announcement to put real life into dealings, and, by a fortunate conjuncture, reports of final moves to secure peace in Abyssinia before the imposition of an oil sanction arrived at the same time. Activity in iron and steel shares gradually broadened, and by mid-week the market was quite active. All the leaders, including Whitehead, Guest Keen, Richard Thomas and Tube Investments, appreciated. Vickers were in keen demand on Thursday, after the publication of an optimistic "House" circular. Electrical equipment shares continued active, Crompton Parkinson staging a further spectacular rise to 126s. 3d. owing to shortage of stock and a keen demand. General Electric and British Insulated continued in demand.

A broader interest in motor shares was evident. Standard improved, and there was a steady demand for the leading commercial motor shares. The aviation group showed a revival under the lead of Rolls-Royce and Bristol Aeroplane. Brewery shares responded, somewhat tardily, to the recent good results, and to the October output figures. In the tobacco section, the Carreras profit figures excited much interest, for they suggested impressive benefit from the cessation of coupon trading and from increased general purchasing power. All the leading shares responded well, but tended to ease slightly on Thursday.

Interest revived in rayon shares, and a number of provision shares, including Tate and Lyle and the Unilever issues, improved. The miscellaneous market leaders lost their undecided appearance fairly quickly, and, in a long list of satisfactory advances, Turner and Newall, British Aluminium, and Cable and Wireless issues were perhaps outstanding. Cement issues, however, turned reactionary on the announcement of reduced selling prices, which may range from one to two shillings per ton.

Quiet conditions prevailed at first in the oil share market, but a sizeable recovery followed on Tuesday, despite poor advices from the Continent and the United States. Although mid-week gains were not fully held in all cases, "Shell" Transport were well supported in continued expectation of an interim dividend early in the New Year. The rubber and tea share markets (whose prospects are related to restriction problems on page 1160) showed little activity. Rubber shares were depressed by a slight volume of selling induced by the maintenance of the restriction percentage, and conditions in the tea share market were idle, although the tone was never depressed.

The Kaffir market ran true to the general form in the Stock Exchange this week. Political factors were happier, and operators in Johannesburg and Paris were buyers of their favourite shares. East Rand Props. received useful support, and the leading finance shares improved. West African issues were unable to maintain a mid-week recovery, and business in Australian shares was still quiet. Considerable activity developed in the Rhodesian copper shares, and De Beers attracted further attention in anticipation of a new scheme to deal with the preference dividend arrears.

FOREIGN STOCK EXCHANGES

NEW YORK

AFTER its Thanksgiving Day holiday, Wall Street continued to be dull and unsettled, in spite of the unblemished evidence of business recovery in America. Europe still spreads its shadow over the market, which finds itself disturbed by rumours of oil embargoes and compromise settlements, and estimates of dwindling foreign support for American securities on Wall Street. The market lost most ground at the beginning of this week, with A.T. and T., Western Union, and Chrysler in retreat; but railway issues were still able to hold their own and even move against the market. On subsequent days this week the market recovered, and rails continued their upward progress. Utility issues are firm, but their fate awaits the outcome of the growing struggle between utility holding companies and the Government. In the bond market, the Treasury's new financing was successful and high-grade issues are strong. In mid-week Italian bonds were up, on the strength of persistent expectations of a settlement between Britain and Italy. President Roosevelt's speech of last week failed to satisfy the criticism of opponents of the New Deal, who grow in vigour as business improves. President Roosevelt's success, where he has succeeded, may prove as dangerous for him as his failures; for a prosperous America is traditionally Republican. "Iron Age" estimates steel mill activity as 57 per cent. of capacity, compared with 56 last week; power output in the week ending November 30th was 11.5 per cent. over the corresponding week last year, and freight car-loadings in the previous week at 646,500 were 85,200 over last year's figure.

PARIS

There has been an improvement in the tone of the market this week under the stimulus of M. Laval's precarious success in his political manoeuvres. There was a certain amount of technical weakness toward the end of last week, but Saturday's business showed some recovery in domestic securities. Suez Canal continued to fall. The most marked improvement was on Tuesday, when Bank of France shares led in a general upward movement of banking shares. Suez Canal rose slightly, and there was general support for German Young Loan and for Russian bonds. In mid-week rentes fell slightly, banking shares were more irregular, and internationals were well supported. Italian bonds have been slowly improving.

	Nov. 27, 1935	Dec. 2, 1935	Dec. 4, 1935		Nov. 27, 1935	Dec. 2, 1935	Dec. 4, 1935

BERLIN

Share quotations last week changed but little and the public remained out of the market. A sharp decline occurred in Harpener Coal and a substantial rise in Berlin-Karlsruhe Machines. Breweries and distilleries rose. Steels and other standard industrials moved within narrow limits, but the week closed firm. The new week opened with a moderate advance, in which lignites made greatest gains, but Tuesday witnessed a decline, electric cable shares being an exception. Home bonds were slightly lower, Reich valorised loan being sold heavily in the middle of the week. The advance in certificated dollar bonds lasted until Thursday, and after a reaction on Friday the advance continued and the bonds closed at the year's highest. The official index number for shares in November (1924-26 = 100) was 89.51, as against 90.98 for October; bonds 94.93, against 94.92. Wednesday's opening was irregular, but prices improved later.

	Nov. 27, 1935	Dec. 2, 1935	Dec. 4, 1935		Nov. 27, 1935	Dec. 2, 1935	Dec. 4, 1935

AMSTERDAM

Last week's markets were dull, with a marked downward movement on Saturday, chiefly due to renewed political fears. The French domestic crisis, and the progress of discussion on oil sanctions continued to depress the markets as this week opened. Royal Dutch lost 3 points on Saturday, and 2 more on Monday. But on Tuesday conditions improved, and encouraged by Wall Street, prices rose. Royal Dutch rose 2 on Tuesday and 4 on Wednesday.

(Continued on page 1170)

Incidental yields on fixed interest stocks quoted below allowance is made for interest accrued since the last date of payment, less income tax at the standard rate. Where stocks are definitely redeemable at a certain date the yield includes any profit or loss on redemption, where stocks are redeemable at or before a certain date the final date for repayment is given. Where the stock is quoted at a discount and the earliest date when the quotation is above par. The return on ordinary stocks and shares is calculated by reference to the latest dividend account being taken of any enhancement or reduction of interim dividends. Allowance is made for accrued dividends in calculating the yield on "cum div" shares.

CAPITAL ISSUES

THIS week's Treasury operations have eclipsed other borrowings in interest and importance. We comment on their implications both as to policy and to market importance in a leading article on page 1156 and an Investment Note on page 1159. A varied selection of industrial issues has again sought the support of investors this week. Among them, the *Atlas Cement of South Africa* convertible debentures are, in essence, equities in the ultimate achievement of high earning power from the cement works which the company is to erect in the Orange Free State. They may appeal to the industrial investor who seeks to hedge a "development" risk in a concern with apparently favourable long-term prospects. The preference shares of *National Provincial Cinemas*, which participate for 8½ per cent. dividend on the basis of the latest profits computation, carry a high prospective yield which is familiar to cinema shareholders. The amount provided for leasehold redemption and depreciation is, however, £3,844, which appears low in relation to properties valued in all—freehold and leasehold—at £421,427. The *Mentmore Manufacturing Company* has a reasonably stable profits record in a competitive business. The vendors, broadly, retain the goodwill of the business in a controlling interest of ordinary shares, and the value of stocks, at £53,592, compares with £91,315 for the net assets acquired. The preference and ordinary shares—the latter issued at 20 per cent. premium—may appeal to the investor to whom a higher yield compensates for a limited capitalisation and the possibility of narrow dealings. Burma is not a restricting area, and the *Burmese Hydraulic Tin* prospectus estimates are therefore unaffected by the will of the International Committee. They suggest the possibility of high profits but, at this stage, the shares are predominantly speculative. An offer for sale of 5½ per cent. cumulative preference shares of *Crossley-Premier Engines* at 5 per cent. premium shows that the dividend is satisfactorily covered by the latest earnings. The profits record, however, reveals a considerable fluctuation of earnings within the three years shown. Statements "for information only" have been published by *Dancer and Hearne*, a chair-making business with rising earnings, and *Clutsum and Kemp*, an established elastic fabric concern.

In December, 1934, acquired for cash share capital of Ibstock Knitting Company, being 6,000 £1 shares at £2 1s. 6d. per share. Total combined net assets, excluding goodwill, £15,726 at cost, £140,443. Combined profits, after depreciation, years to September 30th: 1933, £14,260; 1934, £18,784. 11 months to August 31, 1935, £17,337.

BY TENDER

Alliance and Dublin Consumers Gas Company.—Issue of consolidated ordinary stock to realise £300,000 with premiums. Net revenue year ended June 30, 1935, after providing income tax, £136,262. Interest on debenture stock, £14,960. Dividend on ordinary stock already issued £108,631, leaving a balance of £12,672. Accumulated funds June 30, 1935, £194,205. Terms sold, years: 1922: 6,587,683; 1934, 12,055,147; half-year to June 30, 1935, 6,272,999. Net profits: 1933, £108,400; 1934, £112,725; half-year to June 30, 1935, £62,023. Over-subscribed.

BONUS ISSUE

Porritts and Spencer, Ltd.—The directors are issuing 302,812 new shares, fully paid, to ordinary shareholders, as a bonus in the proportion of three bonus shares for every four ordinary shares held.

ISSUES TO SHAREHOLDERS ONLY

Luton Gas.—Issue of £56,392 4 per cent. perpetual debenture stock at 106 per cent.

Reed (Albert E.) and Company.—Issue of 100,000 ordinary shares £1 at 29s. per share to existing ordinary and preference shareholders.

Kagera Mines.—Issue of 100,000 6 per cent. cumulative convertible preference shares of 5s. at 6s. per share.

Edinburgh Investment Company.—Issue of 43,200 ordinary shares £1 to holders of ordinary stock as at November 27th last in the proportion of one new ordinary share for each complete £10 of ordinary stock held. The price is 31s. per share, payable on December 31st.

Metal Box Company.—Issue of 142,883 7 per cent. cumulative preference shares of £1 at 31s. each. The list will close on December 18th.

CONVERSIONS AND REPAYMENTS

Treasury Bonds 2 per cent., 1935-38.—The whole of the £150,000,000 of these Bonds will be repaid at par on March 2, 1936.

Maritime Telegraph and Telephone Company, Ltd.—The 6 per cent. first mortgage bonds due July 1, 1941, have been called for redemption. A new issue of 30-year funding and general mortgage bonds, series "B," is being offered in exchange bond for bond. The new bonds will be dated January 1, 1936, maturing January 1, 1966, and will bear interest in Canadian funds at 6 per cent. to July 1, 1941, and 4½ per cent. thereafter, to maturity.

The Anglo-French Exploration Company, Ltd.—The whole of the outstanding debentures amounting to £15,000 will be redeemed on December 31, 1935.

De Beers Consolidated Mines.—The whole of the £2,414,600 5½ per cent. debentures will be repaid on December 31, 1935, at 102½.

FORTHCOMING ISSUES

Government of Ceylon.—An issue of £4,500,000 3 per cent. stock 1959-64 is expected and holders of 6 per cent. stock 1936-51 will be offered conversion.

Rochdale Corporation.—Power is being sought to issue £1,000,000 3 per cent. stock for repayment of short loans.

Bridgwater Corporation.—It has been decided to float a loan of £250,000 in 3 per cent. stock at 98½ redeemable 1955.

Alvis Car and Engineering.—A number of shares sufficient to finance the company's development programme are to be offered to existing shareholders.

Sound City (Films).—It is reported that arrangements are in an advanced stage for a public issue of shares in Sound City (Films), Ltd.

Yates's Castle Brewery.—At the annual meeting to be held on December 10th resolutions will be proposed for creating 50,000 additional ordinary shares £1 ranking for dividend and in all other respects *pari passu* with the existing ordinary shares. The new shares are to be offered in the first instance at par to the present shareholders in proportion to the number of ordinary shares now held.

British Cellulose.—This company is proposing to make an £100,000 issue in the New Year.

Penmains Estates.—An issue will be made next week of £100,000 5 per cent. debenture stock at par and 60,000 5½ per cent. preference shares at par.

Gas Light and Coke Company.—This company is seeking parliamentary sanction to raise £3,000,000.

CALLS DUE DECEMBER 9 TO DECEMBER 14, 1935

The grand total of calls in December 1935, is £16,128,124, which compares with £7,934,567 in December, 1934.

COMPANY MEETINGS, &c.

BRITISH TAR PRODUCTS, LIMITED

DIVIDEND [AND BONUS] 15 PER CENT.

MR WOOLLEY-HART'S REVIEW

The fifteenth ordinary general meeting of British Tar Products, Limited, was held at the Royal Victoria Hotel, Sheffield, on Thursday, November 28, 1935.

Mr A. Woolley-Hart (the chairman of the company) was in the chair.

The Secretary (Mr John Jordan) read the notice convening the meeting and the auditors' certificate.

The Chairman said:—Gentlemen,—The directors' report and the accounts having been in your hands some days, I propose, if it is your pleasure, to take them as read.

There is little I can say which is not included in the directors' report or shown in the balance sheet.

In the meantime, the present position continues much as it was a year ago. The value of some products has gone up and others down, but we hope to have no worse figures to put before you next year.

TRADE CONDITIONS

Trade conditions generally, particularly in the heavy industries, have somewhat improved, involving the lighting up of more coke ovens, and this may result in our obtaining somewhat larger supplies of raw materials so long as this condition of matters goes on and the price of coking smalls remains at an economic level.

As you are no doubt aware, the position of matters in the coal industry is very serious and, in the event of a strike of the mineworkers, your company would immediately experience the full effects of it, owing to the coke-oven plants, from which its raw materials are obtained, being compelled to close down for want of coking smalls. If, happily, a stoppage is averted the prospects for the ensuing year are, at least, encouraging.

THE ACCOUNTS

The accounts, as I think you will agree, speak for themselves, and require little explanation. On the debit side the general reserve account, as I explained last year, has been utilised to write off the balance of expenditure on experimental work, and now stands at £2,706. Sundry creditors are £17,931 against £25,521, and a bank overdraft which last year was £2,794 has been replaced by a cash credit of £5,425. On the credit side it will be seen that stocks have been reduced and stand at £14,810 against £21,796, and the sundry debtors are also less, being £54,928 against £75,230. Investments have been largely increased and their cost value is £136,747 (with a market value of £129,869 as at September 30th) against £114,200—an increase of £22,547.

It will be seen from the balance sheet that we have a large fund outside the business and your directors keep a constant and careful watch not only on the company's present investments, but also for good securities yielding a reasonable return, or even the acquisition of other trading concerns which with careful and enterprising management might be expected to yield a better return than 4 per cent. or 5 per cent. These, however, are not always easy to find and the board will always welcome suggestions on the subject from the shareholders or anyone else who is interested.

DIVIDEND RESOLUTION

I now beg formally to move that the directors' report and the audited accounts and balance sheet, as presented, be and they are hereby approved and adopted; that a final dividend of 3½ per cent., less tax (making 10 per cent., less tax, for the year), and a bonus of 5 per cent., less tax, as recommended by the board, be paid forthwith to the preferred ordinary and ordinary shareholders whose names appear on the register on this date and that a sum of £5,000 be written off contracts and goodwill account (reducing it to £45,000) and that the balance of £4,040 19s. 8d. be carried forward. I will call upon one of my colleagues to second the motion, after which I shall be glad to answer any questions to the best of my ability before putting it to the meeting.

Mr F. C. Swallow, who retired by rotation, was re-elected a member of the board, and the auditors, Messrs Bryden, Johnson and Company were reappointed. The meeting terminated with a vote of thanks to the Chairman, directors and staff.

CONSOLIDATED GOLD FIELDS OF SOUTH AFRICA, LIMITED

OPERATING COMPANY'S LARGER PROFIT
IMPORTANCE OF WEST WITWATERSRAND

The ordinary general meeting of this company was held, on the 5th instant, at 20 Aldermanbury, London.

Mr J. A. Agnew (the chairman) said that the accounts of New Consolidated Gold Fields, the operating company, showed a profit from sales, dividends, etc., of £1,513,494, compared with £1,388,060 in the previous year. There had been a further increase in revenue from dividends of £65,000, following an increase of nearly £100,000 in the preceding year. With the amount brought forward there was available £1,628,155, compared with £1,441,830 for the previous year. Against this, £100,000 had been charged as a reserve for depreciation, a similar amount to that charged in the previous year, and £300,000 had been transferred to open reserve, making that account £1,000,000. The final dividend of 2s. 9d., making 4s. per share for the year, required a net amount of £354,924, and left £320,549 to be carried forward, compared with £162,970 brought in.

The final dividend of 2s. 9d. per share on the shares of New Consolidated Gold Fields enabled the payment of a dividend of a similar amount to be recommended on the shares of the Consolidated Gold Fields of South Africa, making 4s., or 20 per cent., for the year.

WEST WITWATERSRAND

After referring to the position of Robinson Deep, Simmer and Jack, Sub Nigel, Spaarwater, Vogelstruisbult, the Chairman gave a summary of results to date on the property of West Witwatersrand Areas.

Definite evidence had been obtained of the existence of the Main Reef in fourteen bore holes over a length of 23 miles. There was a distance of 14 miles still to be drilled to the western boundary, and all the indications were that they would, beyond doubt, repeat in that section the results already obtained elsewhere. Although it was impossible to indicate any definite figures, it might be regarded as certain that a highly profitable average value could be looked for, the grade appearing to be well above that at which profitable mining operations could be conducted.

In summing up generally the West Witwatersrand position, he found it very difficult to avoid the use of extravagant terms in outlining the prospects. He thought it might safely be left to the results of the next year or two to prove the correctness of all that they had claimed during the last three years.

BURDEN OF TAXATION

With regard to taxation, the excess profits duty in its present form had so many disadvantages that the Gold Mines and, they believed, the Government were convinced that a revised and more equitable system of taxation should be devised. To this end a commission had been set up to examine the position thoroughly, and although the findings would not, it was anticipated, be made known until next year's budget, they were hopeful that those findings would be of a satisfactory nature.

The disadvantages of the present system were, first, its complications and uncertainty in application. Secondly, as a total amount of tax was apparently to be contributed from the mines as a whole, shortages from one mine had to be made up by increased payments from others. Thirdly, yearly changes in the basis of taxation were apparently necessary; and fourthly, the present system operated as a deterrent on improved efficiency.

A case had been prepared for presentation to the commission, and a majority of the groups was in favour of a tax at a flat rate on all profits to replace the excess profits duty and surtax. A straight tax permitted reasonable certainty in the calculations of prospective profits. The directors were very sanguine that before the next meeting it would have been found possible to convince the Government of the error of taxing the industry to the uttermost merely because that industry might be regarded as able to bear such taxation.

OTHER INTERESTS

The Chairman also dealt with the company's interests in Rhodesia, in the Gold Coast Colony and in America. In Australia they still maintained their interests in Lake View and Star, Wiluna Gold Corporation and Gold Fields Australian Development, and each of those three companies continued to show excellent results.

With regard to their interest in the tin industry, their holdings in the Anglo-Oriental Mining Corporation and British Tin Investment Corporation remain unaltered.

KWAHU MINING CO. (1925), LIMITED

COMPANY'S HOLDINGS AND PROPERTIES

The ordinary general meeting of the Kwahu Mining Company (1925), Limited, was held, on the 29th ultimo, at Winchester House, Old Broad Street, London. Mr M. L. Innes Browne (chairman of the company) presided.

The Chairman said:—Gentlemen,—Turning to the balance sheet, the capital remains the same as last year—£40,000. The net profit for the year amounts to £9,603 1s. 4d., which, with the £12,250 16s. 10d. brought forward from the previous year, after deduction of income tax provision, gives us the sum of £16,573 12s. 2d. profit to carry forward. On the other side of the balance sheet, property account shows the further expenditure on that account for the year, less cost of Boppo No. 2 lease sold to Marlu Gold Mining Areas, Limited, the purchase price being 400,000 fully paid up shares of 5s. each in that company.

At present market prices our shareholdings in other companies show a very substantial surplus over the amount at which they stand in the balance sheet. Shares in the subsidiary company represent our shareholding in Gold Coast Main Reef, Limited, who bought from us their Tuappim and Bondaye properties. That company has also bought the adjoining Ekotokroo Concession from Gold Coast Selection Trust, Limited. It has been agreed that the work on these properties should be done under the supervision of Major D. Gilchrist, the manager of Gold Coast Selection Trust, Limited, and in consequence the London office of Gold Coast Main Reef, Limited, has been moved and is now in the same building as the former company. One result of the increase of the gold-mining industry has been the increased demand for good managers, and it is an advantage for our late subsidiary to have the assistance of a big mining group with experienced technical advisers. I say late subsidiary, for Gold Coast Selection Trust, Limited, having subscribed at par for 300,000 shares in Gold Coast Main Reef, Limited, the latter company now has ceased to be a subsidiary. We have other properties adjoining those being developed by Gold Coast Main Reef, Limited, so, in addition to our interest as large shareholders of that company, we are further interested in the successful development of their properties as it enhances the value of our adjoining mining areas. The same applies to the success of Marlu Gold Mining Areas, Limited, to whom we sold our Boppo property. In the neighbourhood here, we own large areas of mining rights, so, in addition to our shareholding of 400,000 shares in Marlu Gold Mining Areas, Limited, we are also interested in their successful development of mines, as again it will increase the value of our adjoining properties.

With regard to the progress of Marlu Gold Mining Areas, Limited, it is reported that the results obtained from development, and the progress made with the installation of plant and machinery, continue to be entirely satisfactory, and that further developments have brought the tonnage recoverable by steam-shovel operation up to 2,813,000 tons with an average value of 4.6 dwts., while development in depth indicates a large additional tonnage; also that the tests have indicated the ore can be treated without difficulty and at a low cost. Our shareholding in Tarkwa Banket West, Limited, remains the same as last year. Our company has an issued capital of only £40,000. Against that it has £31,452 17s. 2d. in cash; useful assets in its shareholdings in other companies; also properties and options covering approximately an area of 45,000 acres, mainly situated on the Prestea-Ashanti line of reef, adjoining and in the neighbourhood of the properties now being developed.

We have already dealt with three of our mining properties. Another is under consideration and as the gold-mining industry in the Colony continues to grow we should be able to deal with many others.

The report was adopted.

Orders for the publication in these columns of the reports of Company Meetings should be addressed to:—

The Reporting Manager,

THE ECONOMIST,

8 Bouverie Street,

Fleet Street,

London, E.C.4

He understood that negotiations were in progress for a further renewal of the international agreement when it expired at the end of next year and that an overwhelming majority of Empire producers had already declared in unequivocal terms the desire of the industry for the renewal of the agreement upon the existing basis so far as the signatory countries were concerned. It was to be profoundly hoped that there would be no undue delay in completing the new agreement. Should there be any considerable delay their committee might be forced to permit of such an expansion of the uncontrolled stock as would lead back to the vicious circles from which happily the industry had now escaped.

Notwithstanding the announcement made in the Press early this year to the effect that neither their company nor any of the companies associated with it had been interested in any transactions in connection with pepper or shellac, there had been statements even quite recently as to their alleged dealings in those two commodities. He would like to repeat as emphatically as possible that there was no truth whatever in such statements and that they had not been connected in the slightest or most remote degree with any transactions of the character indicated.

The report and accounts were unanimously adopted.

TARKWA BANKET WEST, LIMITED

SOUND POSITION

The ordinary general meeting of Tarkwa Banket West, Limited, was held, on the 29th ultimo, at Winchester House, Old Broad Street, London. Mr M. L. Innes Browne (the chairman) presided.

The Chairman said: Turning to the balance sheet, there is no change in the issued capital of the company. Sundry creditors are small and are less than last year. The net profit for the year brought into the balance sheet is £18,262 18s. 8d. It is proposed to pay a dividend of 10 per cent., less income tax, which will absorb £11,621 3s. 8d. It is not a big dividend, but we are pleased, nevertheless, for it marks another step forward, and is a great advance from the position a few years ago. On the other side of the balance sheet we have property account showing the further expenditure during the year on that account, less the cost, £500, of the Boppo lease (area 827 acres) sold to Marlu Gold Mining Areas, Limited, for which we received 400,000 fully paid up shares in that company. The company's remaining leases and options cover an area of approximately 8,500 acres and are reasonably valued at the figure of £11,835, shown in the balance sheet, and are such that as the Gold Coast mining industry continues to increase we should be able to deal with them on very good terms. Government and Corporation stocks together with cash at bank amount to £85,818 19s.

The coming year should be one of interest for the Gold Coast mining industry. Much useful work has been done and knowledge gained during the past two years. It always seems a long wait from the prospecting to the producing stage, particularly so, perhaps, in a country such as the Gold Coast, where the mining industry had been neglected for so many years. Good managers with a knowledge of West African conditions were difficult to obtain and it takes time to understand the various formations, labour and local conditions. The large mining groups interesting themselves in West Africa to-day have good technical advisers experienced in opening up mines in the tropics, and able to advise and assist the local manager on the property. Isolated mining companies and small syndicates doing pioneering work in the Gold Coast have many difficulties to contend with. The development of mines in the Colony can more effectively be done by big, well-organised mining groups experienced in the opening up of mining properties in the tropics and who command a staff with knowledge of the conditions ruling in the Colony. Our aim has been to work in mutual interest with the larger mining groups interested in West Africa. Negotiations with the Government on legislative or administrative measures, railway rates, harbour dues, the extension and maintenance of roads and bridges, medical and sanitary measures and all the numerous items that affect renewed mining activity can be better carried on by a big interested group than by isolated companies. During the past two years much necessary detail work has been done in the Colony, and the coming year should be one of real advance for the gold-mining industry there. The balance sheet before you shows our company to be in a sound position to benefit from the steady advance each year in the growth of the gold-mining industry of the Gold Coast Colony. I think we are entitled to be rationally optimistic regarding the future of our company, and are justified in the expectation that the dividend now recommended will be followed each year by others.

The report and accounts were adopted.

SOUTH WEST AFRICA COMPANY, LIMITED

REOPENING OF ABENAB MINES

The annual general meeting of this company was held, on the 3rd instant, at Winchester House, London, Sir Edmund Davis, J.P. (chairman and managing director), presiding.

The Chairman, in moving the adoption of the report and accounts, having dealt with the accounts and explained at length the terms of the sale of the Hirsch Kupfer shares, said:—It is necessary that a reference should again be made to our mining operations, and it will interest you to know that in view of the large reduction in our accumulated stock of vanadium concentrates we decided a few months back to re-open the Abenab Mine, a policy which we are pleased to state has resulted in a much larger business for our current financial year. This should be followed by a substantial increase in our profits, provided no unexpected difficulties arise over the question of exchange, or any unexpected depreciation takes place in our investments. On the subject of exchange, at our last ordinary general meeting I referred to the restrictions in Germany, which were causing us considerable embarrassment in connection with the business with our friends there. It then became necessary for us to stipulate that deliveries of vanadium concentrates could only be made either against payment in sterling or against approved credits. This policy has worked in a satisfactory manner, though it has meant some reduction of profit.

For the seventh year in succession we are recommending the payment of a dividend of 5 per cent., with a bonus of 2½ per cent., or 7½ per cent. in all. In respect of the period of eighteen months covered by our balance sheet at June 30, 1922, we wrote off against the British, Colonial and Foreign investments which we then held, the sum of £698,028, of which our German and Hungarian, i.e. ex-enemy, investments were responsible for £649,338. Against these losses were set off £189,207, which we were able to recover in settlement of claims for interest and compensation in respect of German bank balances and investments, and £502,212, the difference between the par value and the price we gave for ex-enemy shares acquired.

The report and accounts were unanimously adopted.

TOWN INVESTMENTS LIMITED

SUCCESSFUL YEAR—CAPITAL INCREASED

The thirteenth annual general meeting of this company was held, on the 4th instant, at 47 Grosvenor Street, London.

Mr A. Maitland Kisch, F.S.I., chairman and managing director, said that he was in a position to report continued prosperity, the net profit for the year being £70,002, or £6,618 more than a year ago. That net profit represented net earnings of approximately 22½ per cent. upon the ordinary capital. During the past seven years undivided profits aggregating £137,000 had been placed to general reserve and the carry-forward. Having added so materially to working capital out of earnings, they had placed the company upon a strong and permanently secure financial basis. They were proposing to maintain the dividend at 14 per cent.

The profit figures were the more satisfactory when it was appreciated that their programme of building had caused a lag between expenditure of capital and receipt of revenue, and, provided that lettings continued upon the present steady scale, welcome additions to revenue would be forthcoming in the latter half of the present year.

As to their prospects, the company operated and invested in the centre of the world's greatest and most prosperous city. They possessed a National Government with sufficient power to underwrite stability and almost to guarantee prosperity. Those satisfactory conditions warranted their looking forward with interest and confidence to their work in the expectation that they might mount one more step up the ladder of progress during the present year.

The report and accounts were unanimously adopted.

An extraordinary general meeting followed, to consider a resolution increasing the capital from £450,000 to £700,000 by the creation of £250,000 additional ordinary shares of £1 each.

The Chairman said that, without actually committing himself, he could say that the directors would offer in February next 50,000 ordinary shares to ordinary shareholders upon terms to be decided in the ratio of one new ordinary share for every five held. The price at which the new issue would be made would provide an acceptable bonus to shareholders.

The resolution was carried unanimously.

WEST AFRICAN DIAMOND SYNDICATE, LIMITED

RECORD RECOVERY—FAVOURABLE PROSPECTS

The eleventh annual ordinary general meeting of the West African Diamond Syndicate, Limited, was held, on the 2nd instant, at Winchester House, London, Mr F. P. Sudbury, J.P. (the chairman) presiding.

The Chairman, moving the adoption of the report and accounts, said that for the year ended March 31, 1935, they had paid two interim dividends of 2½ per cent. each, less tax, and for the current year a first distribution of 2½ per cent., less tax, was paid on October 26 last.

Their recovery in diamonds for the year ended March 31 last constituted a record in the history of the company, and it had been possible still further to reduce the production costs. The selling price per carat had certainly improved in recent months, but the increase did not commence until after the close of their financial year.

The extension of their prospecting programme resulted in a number of options being taken up, and further examination resulted in the directors deciding to form the two subsidiary companies mentioned in the report. The first subsidiary did not hold any concession at the moment, but it was not unlikely that before many months had passed it would hold a concession over an area which, from preliminary work, looked most promising. The second subsidiary, Hellis Gold Mines, Limited, held the lease of a concession for which it had obtained the Certificate of Validity. A considerable amount of work had been done on this concession, as the values from outcrops were quite good.

He was present when the first holes were drilled for commencing the work on Adit No. 2, where the blanket was cut, and gave an average value of 8 dwts. over a 10-ft. width of reef. Another area which they had been prospecting during the past three months had given a yardage of some 4,000,000 cubic yards of combined gravel and overburden, with an average grade of over 4 grains per cubic yard, and it was considered they should be able to treat this area at a working cost which would give a working profit of over £100,000, taking gold at £7 per ounce. Their company's prospects were good, and they could view the forthcoming year with confidence.

The report and accounts were adopted.

BOWATERS PAPER MILLS, LIMITED

IMPROVEMENT ALL ROUND

The annual general meeting of Bowaters Paper Mills, Limited, was held, on the 5th instant, in London.

Mr Eric V. Bowater, the chairman of the company, said:—The circumstances under which we meet to-day are, I am glad to say, happier than those which prevailed on the occasion of our last meeting. The improvement in results has been attained as the result of full-time operation, a further increase in production, the lower cost of raw materials, and slightly better selling prices for newsprint.

Our business is carried on by a number of companies, of which the principal are your own, the parent company; Bowaters Mersey Paper Mills, Limited, the ordinary capital of which is held largely by your company, the balance being held by W. V. Bowater & Sons, Limited, the whole of whose ordinary share capital is owned by your company.

Profits of the parent company amounted to £178,316, but, notwithstanding the recovery in earnings represented by these profits, your directors do not recommend any alteration in the rate of dividend and therefore propose again to pay five per cent. on the ordinary shares. The Mersey Company's balance sheet shows a much improved position, and the profits of W. V. Bowater & Sons again show an increase. It would seem that the tendency, which manifested itself some time ago, for trade in this country steadily to improve has, to a large extent, been maintained.

For the first time since statistical records of our industry have been available, the *per capita* consumption of newsprint in the United Kingdom is the greatest in the world; previously the United States have easily led in this respect. For 1936 practically the whole estimated output of both your company's mills and those of Bowaters Mersey Paper Mills, has already been disposed of and their requirements of raw materials have been covered.

From what I have been able to tell you to-day you will have gathered that in the absence of any political or industrial upheaval, the outlook for your company and its associates should not be unsatisfactory.

The report was unanimously adopted.

MALAYA GENERAL COMPANY, LIMITED

WORKING OF REGULATION SCHEME

The twenty-seventh annual general meeting of the Malaya General Company, Limited, was held, on the 4th instant, at 7 Great Winchester Street, London, Mr T. H. Graham, the chairman of the company, presiding.

The Chairman, in the course of his speech, said that the regulation scheme was working, on the whole, satisfactorily. There were, of course, some anomalies, and, in some respect their company had not been treated as well as they might have expected. For instance, although in the twelve months ended June 30, 1934, a crop of 2,948,000 lbs. had been produced, the basis of the scheme was arbitrarily fixed on the crop produced in 1929-30, during which time they were voluntarily restricting crop in an effort to help stem the downward rush of the market price. Consequently, when the company was given a standard crop assessment for 1934 of 2,333,000 lbs., the board had felt it their duty to appeal. Although they were allowed an additional 66,000 lbs. on the appeal, that figure still fell far short of the assessment that should, in the board's opinion, have been allotted to the company. For 1936 they were still under-assessed at 2,486,640 lbs., but the board appreciated all the work done by the Committee, and that some anomalies must be expected in the working of any such huge scheme.

The board felt very strongly that one of the weakest points in the regulation scheme was the latitude given to trade in export rights. That should be stopped, and all coupons not used by a producing estate for its own crop should be surrendered to the authorities at the end of each quarter, and neither carried forward nor sold. They hoped, and had no doubt, that the International Regulation Committee would find means to put all those things right and make the working of the scheme a great success. The announcement of the committee increasing the Dutch quota by 57,000 tons and keeping to the 60 per cent. restriction level was evidence of their intentions. If they could achieve an average selling price of 7d. to 7½d. on a crop of 60 per cent. of their standard assessment, the board thought shareholders could look forward to a better result a year hence.

The report and accounts were unanimously adopted.

FOLLSAIN SYNDICATE LIMITED

DEVELOPMENT OF THE PROCESSES

The adjourned annual meeting of this company was held, on the 5th instant, at Winchester House, London.

Mr A. H. Pollen, who presided, said that there were now seven lines of development proceeding simultaneously. At the beginning of last year their strongest technical case was heat-resisting tubes. The British Mannesmann Tube Company had examined the position carefully, and was persuaded of the justice of the Syndicate's claim. A partnership had accordingly been established between the Syndicate, their subsidiary, the Follisain Metals, Limited, and the British Mannesmann Tube Company, Limited. The formation of the Follisain Tubular Products, Limited, under the management of the British Mannesmann Company, had resulted, and preparations for large production would be a matter of weeks only.

At the Lutterworth factory they must quadruple their facilities for dealing with their various alloys, amongst the most interesting of which was a new metal called "EV," the outcome of a new process. The value of the "EV" metal was fully established, and earnings depended solely upon their ability to produce. Of their other lines of development, the commercial proof as to the "HT" Process was complete. Its exploitation in tubes, the largest and most profitable field, was provided for, while the trade in boxes and other furnace fittings awaited the extension of the Lutterworth factory only. Follisain Metals, Ltd., as well as the Syndicate, had already secured a source of income from the Follisain Tubular Products, Limited, and should earn a satisfactory income from its own trade in the "HT" furnace fittings and "EV" metal.

To take advantage of this transformation in their position, they needed capital. The Syndicate needed between £40,000 and £60,000, and Follisain Metals needed an equal amount. It was therefore the directors' intention, with the approval of the shareholders, to double the issued share capital, to offer the new shares at 1s. each to the existing shareholders, share for share, and, either to arrange for the issue of at least £100,000 of the Follisain Metals participating preference shares at par, or otherwise to provide the further sums required.

The meeting closed with a cordial vote of thanks to the Chairman.

TO RESERVE ACCOUNT £80,000 0 0
£431,858 15 0

TO BE CARRIED FORWARD.....£309,823 10 6

Points from the Chairman's Speech

It has been the Company's RECORD YEAR FOR BOTH PROFITS AND DIVIDENDS.

The balance-sheet presented is the first to include a full year's figures since the acquisition of the ordinary shares of the Holt Brewery Co., Ltd., and, as predicted, they prove an undoubted success from every point of view.

There was sufficient confidence last year to spend no less than £462,332 in capital expenditure to improve licensed properties, and also to undertake extensions to brewery premises.

A record profit showing an increase of £167,312 over last year, and we are recommending a record dividend distribution on ordinary shares.

We, in conjunction with our subsidiary companies, contributed to direct taxation during the year £1,704,000, which is more than seven times the amount distributed to the Shareholders.

One of the most important developments instituted since the reorganisation of the Management has been the acquisition negotiated in 1934 which with ANSELLS EXTREMELY POPULAR BEERS in the houses of Holt Brewery Co., Ltd., has enabled us to derive such unique benefits.

All the conditions imposed by the Chancellor of the Exchequer when he reduced the Beer Duty have been fulfilled, the average gravity of our beers for the year being two degrees above the comparative period to the alteration.

We have also used the largest possible proportion of malt made from Home-Grown Barley in our blends, which is a substantial increase compared with the amount used prior to the undertaking.

The balance-sheet is particularly sound and shows a true and correct view of the present situation, and also provides for possible contingencies.

Ansell's Brewery Limited, Aston, Birmingham, 6

THE STRAND HOTEL, LIMITED

EXTENSIVE RENOVATIONS

The twenty-eighth ordinary general meeting of this company was held, on the 5th instant, at the Trocadero Restaurant, London.

Major M. Gluckstein (the chairman) said that, in connection with the renovation of the company's hotels, a fairly large number of bedrooms had been out of commission during the past year, and, coincident with this temporary loss of revenue, they introduced at the Regent Palace and Strand Palace Hotels in January last reduction in the tariff for double bedrooms from 16s. 6d. to 15s. per day. They had had available, however, throughout the year, the extra 100 bedrooms at the Regent Palace Hotel added towards the end of the previous financial year, and on balance the turnover had been slightly greater than that of 1934.

As to the physical character of the hotels, neither time nor effort had been spared in an endeavour to evolve an hotel bedroom at once practical and up to date. Draperies and carpets, and all the appurtenances dictated by modern standards, had been brought into various colour schemes consistent with present-day tastes. The brass bedstead had given place to the new fashionable wooden frame. Wallpaper had faded into a memory before the more modern painted wall surface. Wardrobes, which formerly occupied such a large area, had been replaced by fitments built into the wall of each bedroom, affording the visitor more space in the room. Bathrooms and corridors, too, were being transformed beyond recognition, and lifts capable of travelling at double the speed had replaced their outworn predecessors.

Mr Maurice Salmon said that if the company were to modernise their amenities, it might well be asked why renovation should not be extended to some of the laws which governed them, and from which they had hitherto had no relief; for hotels in this country still suffered, to a degree that was not generally appreciated, from the failure of Parliament to confer on them a rank of their own. In many respects, no distinction was drawn between the modern London hotel of over a thousand bedrooms and the small country inn, or indeed the ordinary public house.

The report was unanimously adopted.

GOVERNMENT RETURNS, &c.

NATIONAL ACCOUNTS

The total ordinary revenue for the week ended November 30, 1935, amounted to £7,379,000, against ordinary expenditure of £11,727,000. After allowing for an increase in Exchequer Balances of £118,118, the operations for the week, as shown below, increased the gross National Debt by £4,681,000 to approximately £7,985 millions.*

CENTRAL AND SOUTH AMERICAN EXCHANGE RATES

THE ANGLO-SOUTH AMERICAN BANK, LTD., issues the following details relative to quotations for certain of the South and Central American exchanges. All these exchanges, with the exception of that of Bolivia, are related to the United States dollar, and the approximate sterling rates may be obtained by applying the dollar-sterling exchange rate:—

- Bolivia.*** Official market: Sight rate, 20.26 bolivianos per £ sterling on October 21, 1935. Export selling rate 80 bolivianos per £.
- Colombia.*** Sight rate, 176½ pesos per 100 United States dollars on November 27, 1935. This rate applies to holders of permits buying in the "open" market.
- Ecuador.*** "Free" market sight rate on October 31, 10.51 sucres per United States dollar.
- Guatemala.** Sight rate on New York is maintained at 1 quetzal per United States dollar, but a commission of 1 per cent. is charged by the Banco Central for the sale of drafts.
- Nicaragua.*** Official selling rate was established at 110 cordobas per 100 United States dollars on November 26, 1934.
- Salvador.** Sight rate on October 31, 1935, 2.51 colones per United States dollar.
- Venezuela.** Sight rate on New York was maintained in October at 3.90½ bolívares per United States dollar.

* Exchange controls are operative in these countries.

GOLD MARKET

Messrs. Samuel Montagu and Company write on December 4, 1935, as follows:—

The Bank of England gold reserve against notes amounted to £197,632,279 on the 27th ultimo, as compared with £197,189,063 on the previous Wednesday. Purchases of bar gold announced by the Bank during the week amounted to £776,891. About £1,500,000 of bar gold was dealt with at the daily fixing during the week; there were one or two special orders in the market and prices have been maintained at a premium over gold exchange parities.

Although the political crisis in France is not yet at an end, there has been an abatement of the drain of gold from the Bank of France. As compared with the return for November 15th, that for November 22nd shows a reduction in the gold holding of about £18,200,000, but withdrawals since have been on a very much smaller scale.

Quotations during the week:—

	Per fine ounce	Equivalent value of £ sterling
November 28	140s. 11d.	12s. 0.69d.
" 29	141s. 0½d.	12s. 0.56d.
December 2	141s. 0½d.	12s. 0.56d.
" 3	141s. 0d.	12s. 0.60d.
" 4	141s. 1d.	12s. 0.52d.
Average	140s. 11½d.	12s. 0.65d.
December 5	141s. 0.08d.	12s. 0.60d.
	140s. 11½d.	12s. 0.65d.

The s.s. "Viceroy of India," which sailed from Bombay on November 30th, carries gold to the value of about £597,000, of which £505,000 is consigned to London and £92,000 to New York.

SILVER MARKET

During the week movements in the dollar exchange influenced the price at which the American Treasury made their purchases in the London market and the cash price varied between 29½d. and 29½d. The two months' price was unchanged at 28½d. until today when it declined to 28½d.

Purchases for America continued steadily and there was further China selling; re-selling by the Indian Bazaars was also in evidence, but there was a little buying for the same quarter as well as some carrying forward of bull commitments.

The dollar/sterling exchange may continue to be a factor, but no wide variation from the present level is anticipated in the near future.

Quotations during the week:—

IN LONDON		IN NEW YORK	
Bar silver per oz. std.	Cash Two Months' delivery	Bar Gold	Cents per ounce
Nov. 28	29½d.	Nov. 27	65½
" 29	29½d.	" 28	65½
" 30	29½d.	" 29	65½
Dec. 2	29½d.	" 30	65½
" 3	29½d.	Dec. 2	65½
" 4	29½d.	" 3	65½
Average	29-208d.		
Dec. 5	29½d.		

The highest rate of exchange on New York recorded during the period from the 28th ultimo to the 4th instant was \$4.93½ and the lowest \$4.92½.

Statistics for the month of November:—

Bar silver per oz. std.	Cash Two Months' delivery	Bar Gold	Per oz. fine
Highest price	29½d.	29½d.	141s. 7d.
Lowest price	29½d.	28½d.	140s. 11d.
Average	29-2837d.	28-9880d.	141s. 3.46d.

The directors of the London County Freehold and Leasehold Properties, Ltd., announce that Mr F. E. C. Upton, F.I.S.A., secretary of the company, has been appointed assistant general manager, and that Mr J. F. D. Yerbury, A.C.A., has been appointed secretary.

The directors of the Eagle Star and British Dominions Insurance Company, Ltd., have appointed Mr J. B. Andras, B.A., F.I.A., who has for the past four years been the assistant secretary of the company, to the position of assistant secretary. Mr A. G. Simons, F.I.A., has been appointed to succeed Mr Andras as assistant secretary.

Mr F. W. Mottley has been appointed European freight manager of the Canadian Pacific Railway Company, succeeding the late Mr T. J. Smith.

£4,849. Market conditions, particularly with regard to pitch, have been somewhat difficult, the tendency of the price of this commodity being downward, and the supply in excess of the demand. The investments, which have been increased from £114,201 to £136,747, with the market value as on September 30, 1935, of £129,869, have since the close of the company's year further appreciated, their value on November 19, 1935, being £132,492. The net profit for the year is £55,277, showing an increase of £3,457 over last year's figures. Ordinary and preferred ordinary shareholders again receive 15 per cent. dividend. The directors write £5,000 off goodwill and contracts, and carry forward £4,040 (being an increase of £563 over the amount brought in).

GILLETTE SAFETY RAZOR COMPANY.—Consolidated income account for the nine months ended September 30, 1935, shows net profit, \$3,293,893.09. Certain subsidiaries outside of North America are included for the nine months ended August 31, 1935. The earnings for the nine months are equivalent to \$10.62 per share on the preference stock and after deducting the preference dividend requirements for the nine months to \$1.06 per share on the common stock outstanding, this compares with \$1.00 earned on the common stock in the corresponding nine months of 1934. The regular preferred quarterly dividend of \$1.25 has been declared payable February 1, 1936, to shareholders of record January 2, 1936; also a dividend on the Common Shares of twenty-five cents payable December 31, 1935, to shareholders of record December 6, 1935.

UNITED MOTORS, LTD.—The reduction of the company's preference share capital has been confirmed by the Court.

SOUTH-WEST AFRICA COMPANY.—The report for year ended June 30, 1935, shows the amount available for dividend is £82,892 16s. 5d. The directors recommend the payment of a dividend of 5 per cent. and a bonus of 2½ per cent. (equal to 18.6d. per share), which will absorb £39,885 10s. 6d., and carrying forward £43,007 5s. 11d. Since the date of the balance sheet the company has purchased further £85,000 local loans 3 per cent. stock, thus bringing up its holding in this security to £100,000; £5,000 Rhodesia and Mashonaland Railways 6 per cent. consolidated debentures, which increases that holding to £15,000; and £5,000 London Passenger Transport "C" stock. The company's share interests in the companies operating in Germany are again shown as a separate item in the balance sheet. Having regard to exchange restrictions in force in Germany, it is difficult to determine the exact value of these interests. Operations have been resumed at the Abenab Mine, and production was restarted in September, 1935.

MEXICAN BONDHOLDERS COMMITTEE.—The British bondholders committee of Mexican bondholders, as a result of recent correspondence with the Mexican authorities in London and in Mexico, advises its supporters to retain their holdings in Mexican Government and National Railway securities. The recent activity in Mexican bonds may, it is stated, tempt holders to sell, but the committee believes that the recent rise in prices will be justified by events in the near future, and hopes to be able to make an official announcement during the next few days.

VACTRIC, LTD.—The first report for the period to September 30, 1935, shows profit, after expenses and management remuneration, etc., amounted to £44,368. A final dividend of 7.763d. per share is to be paid, making 10.763d. per share, or 22½ per cent., per annum, less tax for the period from December 13, 1934, to September 30, 1935. The directors recommend that £2,028 be transferred to capital reserve in respect of the profits earned prior to incorporation. £3,000 to the redeemable preference share cumulative sinking fund, and £5,000 to general reserve. A sum of £3,221 is carried forward,

DAILY MAIL AND GENERAL TRUST.—A further considerable expansion in earnings is revealed in the report for the year to September 30, 1935. Total income is up from £328,668 to £387,450. Income tax and working expenses absorb £85,962 and the preference dividends require £60,000. The final dividend and bonus of 8½ per cent. again bring the year's distribution up to 11½ per cent., leaving £143,595 to be carried forward.

SLATERS AND BODEGA, LTD.—Trading profit for year ended September 30, 1935, before providing for National insurance, is up from £105,738 to £107,142, and other income amounts to £4,209, against £4,155. Net profits, after providing for fees, tax, depreciation, etc., are nearly £6,000 higher at £38,466. The ordinary dividend is again 5 per cent., less tax. The carry-forward is raised from £2,485 to £5,108.

R. A. LISTER AND COMPANY, LTD.—The profits for year ended September 30th were £112,677, comparing with £80,869 for the previous year. The dividend on the ordinary capital, which was increased last year by a 25 per cent. capital bonus, is raised from 7½ per cent. to 10 per cent. An amount of £15,000 is placed to reserve, against nothing last year, and £10,000 is allocated to pensions. After providing for the preference dividend, commissions, tax, etc., the carry-forward is raised from £50,991 to £58,805

OIL OUTPUTS

ANGLO-IRANIAN OIL COMPANY, LTD.—Production in Iran for the month of October amounted to 587,000 tons, making a total of 6,125,000 tons for the first ten months of 1935.

BRITISH CONTROLLED OILFIELDS, LTD.—Production for the week ended November 16th: Venezuela, 14,744 barrels; Trinidad, 28,487 barrels; total, 43,231 barrels. Production for the week ended November 23rd: Venezuela, 15,052 barrels; Trinidad, 27,111 barrels; total, 42,163 barrels. Production for the week ended November 30th: Venezuela, 14,857 barrels; Trinidad, 28,386 barrels; total, 43,243 barrels.

THE BRITISH BURMAH PETROLEUM COMPANY, LTD.—A cablegram has been received from Burma reporting the production of crude oil by this company for the month of October as 30,249 barrels.

PHOENIX OIL AND TRANSPORT COMPANY, LTD.—The gross production of crude oil of the Phoenix Group for November was 89,438 tons.

VENEZUELAN OIL CONCESSIONS, LTD.—Production for the week ended October 19, 1935, was:—Bolívar District, 713,028 barrels; Maracaibo District, 30,525 barrels; total, 743,553 barrels. Production for the week ended October 26, 1935, was: Bolívar district, 728,823 barrels; Maracaibo district, 29,355 barrels; total, 758,178 barrels. Production for the week ended November 2, 1935, was: Bolívar district, 695,674 barrels; Maracaibo district, 29,563 barrels; total, 725,237 barrels. Production for the week ended November 9, 1935, was: Bolívar district, 688,755 barrels; Maracaibo district, 28,305 barrels; total, 717,060 barrels. Production for the week ended November 16, 1935, was: Bolívar district, 669,885 barrels; Maracaibo district, 27,047 barrels; total, 696,932 barrels. Production for the week ended November 23, 1935, was: Bolívar district, 718,305 barrels; Maracaibo district, 26,909 barrels; total 745,214 barrels. Production for the week ended November 30, 1935, was: Bolívar district, 763,738 barrels; Maracaibo district, 27,676 barrels; total, 791,414 barrels.

COMMERCE AND TRADE

SURVEY OF COMMODITY MARKETS

THE principal commodity markets have been subjected to a variety of different influences during the past week. Price movements have consequently been irregular.

Grain prices have declined during the past week. The bearish sentiment on the wheat markets was due in part to fears of selling pressure from France and to improved crop prospects in Australia and Argentina; but the major factor was the issue of an announcement by the Canadian Government of the personnel and policy of the new Grain Board. The three original members of the Board have resigned, their places being taken by Mr. J. R. Murray (chairman), Mr. George McIvor (vice-chairman), and Mr. Dean Shaw. That these appointments foreshadowed a change in the policy of the Board was emphasised by the new Minister for Trade and Commerce, who stated that Canadian wheat will henceforth be available at competitive prices and "will not be held at exorbitant premiums over other wheats." Linseed declined in sympathy with wheat and on reports of improved prospects for the growing crop in Argentina.

The decision of the International Rubber Committee, at its meeting on Tuesday, to increase the basic quotas of the Dutch East Indies, while maintaining the restriction

percentage at 60 for the first half of next year, disappointed the rubber market and led to a slight decline in prices. But the Dutch East Indies Government have assured the Committee that the increase in the quotas will now make it possible to enforce restriction in that area.

Lead and spelter were also easier this week, on the absence of demand, but copper scored an advance, mainly on account of the rumour that the American domestic price is likely to be increased in the near future. Tin also rose in price this week, despite the arrival of quantities of Dutch metal. Meanwhile, the markets in iron and steel continue very active and prices show a firm tendency. In response to an active industrial demand and to a restocking movement engendered by fears of a stoppage, quotations for coal have also hardened.

In the United States prices have declined a little. Thus Moody's daily index of staple commodity prices (December 31, 1931 = 100) fell from 167.0 on November 27th to 166.4 on Wednesday last, against 166.8 a month ago and 148.8 on the corresponding day last year.

COAL

SHEFFIELD.—The strike scare has caused boom conditions in the coal trade, due to extra stocking and forward buying. Best steams are decidedly scarce, and there is very little to satisfy the export

demand, which, however, is by no means brisk. Prices of house and industrial fuels have been increased, in some cases by 1s. and in others by 6d. a ton. The boom extends to furnace coke, of which there is very little available in the open market, and prices keep rising.

Quotations:—Best South Yorkshire steams, 18s. and 18s. 6d.; washed trebles, 18s. 6d. and 19s.; doubles, 16s. 3d. and 16s. 9d.; singles, 16s. and 16s. 6d.; screened gas coal, 16s. to 18s.; washed smalls, 13s. 9d. to 14s. 3d.; Derbyshire steams, 17s. 6d. to 18s. (all i.o.b.); blast furnace coke, 16s. (at ovens); best Yorkshire house, 22s. to 23s.; best Derbyshire do., 20s. to 22s. (at pits).

NEWCASTLE-ON-TYNE.—Steam coals of all classes, and Durham bunkers, are the outstanding features of the North East coal market, demand for prompt shipment being much greater than supply. Home consumers continue to stock, and there is now little coal of any description available for delivery this year. Coke of all descriptions is a firm market; home requirements are taking up all supplies and sales ahead are large. With the heavy demand for pig iron, local consumption of coke is likely to increase further after the turn of the year.

Current f.o.b. prices for export:—**NORTHUMBERLAND.**—D.C.B. screened, 16s.; smalls, 13s. 6d.; Howards, Bentinck, Newbiggin, screened, 15s.; smalls, 13s. 6d.; Tyne Prime, large, 14s.; smalls, 13s.; Hartley Main, large, 14s. 6d.; smalls, 13s. 6d. **DURHAM.**—Lambton/South Hetton screened steam, 16s.; smalls, 14s.; Wear Special, gas, 15s.; Holmside, Ryhope, Boldon, unscreened gas, 14s. 6d.; second-class gas, 13s. 6d.; coking unscreened and/or smalls, 13s. 8d.; Prime unscreened bunkers, 16s.; second-class unscreened bunkers, 14s. 6d.; prime foundry coke, 21s. 6d.; Newcastle and District gas coke, 21s.

GLASGOW.—The scarcity of supplies continues unrelieved. For export the collieries have practically nothing to offer this year, and in some cases shippers find difficulty in securing sufficient fuel to cover existing contracts. This fact is reflected in a further decline in shipments last week to the unusually low level for the season of 207,000 tons. Outputs are being largely concentrated on the home market, in which an increase in demand arising from the improvement in general industry is accentuated by active buying, prompted by the possibility of labour troubles in the coalfields. In the circumstances shipment prices are nominal, and largely a matter of negotiation.

CARDIFF.—The tonnage position at the South Wales docks has not been quite as favourable this week as last, but fairly active conditions have continued to rule on the coal market. Shipments in the foreign and coastwise trades in the week ended December 1st totalled 405,300 tons, compared with 387,100 tons the previous week, and 401,446 tons in the corresponding week last year. Most classes of sized and small coals have been very firm, but there is also an improved inquiry for large grades. As from December 1st, the 10 per cent. cut in the French quota, which became operative as from September 1st, has been restored, and exports to France are likely to show a substantial expansion during the next few weeks. How serious, on the other hand, has been the loss in the Italian trade may be gathered from the fact that only just over 9,000 tons have been shipped to that market during the past three weeks, compared with a monthly average of approximately 300,000 tons three years ago, and of 460,000 tons in 1913. Coke is very firm, and patent fuel is also a little more active; there has also been a slight improvement in quotations for Portuguese pitwood. On Monday the Executive Committee of the South Wales output regulation scheme tentatively considered suggestions for the establishment of a system of centralised control of selling, but there is disagreement between this method of control and that of a centralised sales system similar to that in operation in the Ruhr. A committee is to report on the subject after it has given consideration to the views expressed at the meeting. Coalowners were asked by the Secretary for Mines to submit to him by December 7th outlines of the contemplated scheme for the different districts of the country.

Current approximate quotations:—Best Admiralties, 19s. 6d.; seconds, 18s. 9d. to 19s. 3d.; best dries, 18s. 9d. to 19s.; Black Veins, 18s. 3d. to 18s. 6d.; Western Valleys, 17s. 9d. to 18s.; Eastern Valleys, 17s. 3d. to 17s. 7½d.; best small steams (washed), 13s. to 13s. 6d.; coking smalls, 13s. 6d. to 14s.; second steams, 12s. 6d. to 13s.; anthracite, best large, 36s. to 40s.; Red Vein, large, 22s. to 27s.; machine-made cobbles, 35s. to 51s.; French nuts, 35s. to 51s.; stove nuts, 34s. to 50s.; rubbly culm, 10s. 6d. to 12s.; special foundry coke, 37s. 6d. to 40s.; patent fuel (Crown), 21s.; pitwood, ex ship, French, 24s. 3d.; Portuguese, 22s. 6d.

IRON AND STEEL

LONDON.—While the British iron and steel industry is actively employed in practically all departments, there has been a slight decrease in the volume of new business, says the official report of the London Iron and Steel Exchange. This, however, is a seasonal movement. Deliveries against contracts continue to be made on a heavy scale, and in many departments the producing works are unable to keep pace with consumers' requirements. Business in the pig-iron section has been well maintained and most users are still prepared to book for far forward delivery. The works, however, are so well off for orders that they do not care to accept business for execution after March, 1936. Most of the transactions now passing consist of small supplementary tonnages, but there has been no decline in the receipt of specifications against current contracts. There is a strong demand for semi-finished steel, supplies of which are barely sufficient to satisfy consumers' needs, notwithstanding the heavy output.

MIDDLESBROUGH.—Total shipments of iron and steel from the Tees during November amounted to 51,545 tons—only 28 tons

less than in October. Exports of manufactured steel have increased by approximately 2,000 tons. There has, however, been a similar drop in shipments of pig iron. Home demand for pig iron against existing contracts continues heavy, and, although new business is smaller, this is due to the fact that producers are well sold. Buyers are prepared to contract farther ahead, but, owing to the increasing cost of raw material, producers are proceeding cautiously. In the meantime production of pig iron in this area is being increased; Messrs Dorman's South Bank works have started an additional blast furnace to produce basic iron, whilst one furnace is being transferred from the production of hematite iron to ferro-manganese. Messrs Giers Mills announce that they will put an additional furnace into blast at their works early in January for the manufacture of special iron. This will make a total of 28 furnaces in operation in this district, and if the demand continues to increase it will probably be found necessary to light up further blast furnaces.

For Cleveland foundry iron the price is based on No. 3 quality at 70s. per ton delivered locally. East Coast hematite pig-iron prices are so far unaltered and are based on No. 1 quality at 71s. per ton delivered in the Middlesbrough district. Blast-furnace coke is very firm at 20s. per ton delivered at the furnaces. New business in foreign ore is little heard of, but good deliveries are coming to hand against existing contracts. Steel departments are very busy, the production of semi-manufactured material being insufficient to meet requirements. Four new steamers have been ordered during the past week, one to be built on the Tyne, two at West Hartlepool, and one at a Tees shipbuilding yard. Heavy steel melting scrap is becoming difficult to obtain, but makers are endeavouring to secure supplies at 52s. 6d. per ton delivered.

SHEFFIELD.—The market for raw and semi-manufactured materials is more active than at any time since 1929. Consumers are endeavouring to increase their stocks and to enter into heavy forward contracts. Producers are discouraging this tendency and refuse to contract beyond six months' supplies. Some further advance in prices is likely, as both pig iron and coke are costing more than last month. Production of steel ingots and castings in October reached 133,000 tons—the largest monthly total ever recorded—and the twelve months' output will be well over a million and a quarter tons. The supply of billets and similar material continues to be inadequate. Apart from armaments and other special lines, business in quality steels is rather easier, and Sanctions have stopped exports to Italy, which had been on a substantial scale. Except in the tool section, exports of Sheffield's products are unsatisfactory. They have increased during the year, but not considerably, and are below former levels. There is, however, more business in the engineering and shipbuilding departments than for some time past. Makers of stainless steels are extremely busy. One progressive line in stainless steel is road direction studs, of which many thousands are being installed every week. There is also an enormous output of local refractory materials, much of it going abroad. Cutlery and plate makers have finished their Christmas season orders.

GLASGOW.—Makers are still exceedingly busy at the steel plants in the West of Scotland and the outlook is decidedly cheerful, specifications being plentiful for almost all classes of material. Makers of semis are working to capacity and output is being rapidly taken up by users. Re-rollers are rather better off this week as regards raw material, since supplies are now becoming available through the agency of the British Iron and Steel Federation. Tube-makers maintain a steady output and business placed recently includes a good proportion for export. Sheet makers are again rather busier, the orders booked being mainly on home account and including large tonnages of highly finished sheets. Boiler makers, machinery makers, marine and other engineers, in and around Glasgow, are all fully employed and have much work on hand for forward delivery. There seems every prospect of a spell of regular employment for those engaged in most branches of the iron and steel industry in this district.

CARDIFF.—Conditions in the South Wales iron and steel trade have shown little change during the past week. In the tinplate industry business has been rather quieter, and little, if any, expansion in trade with foreign countries is expected till the ban

BARGLAYS BANK

LIMITED

CHIEF OFFICE: 37, King William St., London, E.C.4

The Bank has power to act as EXECUTOR and TRUSTEE under Wills and Settlements, and as Trustee for Debenture Holders. A Pamphlet stating terms and conditions for transacting business may be obtained from the Manager of the Trustee Department, or from the Manager of any Branch of the Bank.

AGENTS IN CANADA;
BARCLAYS TRUST COMPANY OF CANADA
MONTREAL

which has been imposed so as to allow the United States to realise its prescribed quota has been removed. Both f.o.b. and inland prices are unchanged. The production of steel in October was 179,700 tons, compared with 170,100 tons in September, and 178,000 tons in October, 1934; while the output of tinplates in September was 63,800 tons, as against 53,900 tons in August and 69,600 tons in September, 1934. Shipments of tinplates at Swansea last week totalled 53,482, compared with 85,964 boxes a year ago, and stocks at the end of the week amounted to 105,381 boxes, compared with 122,294 boxes. Galvanised steel sheets continue a very quiet market, and steel bars are unaltered at £5 10s. per ton delivered locally.

OTHER METALS

COPPER.—Although there was no increase in consumptive demand, prices on the London market showed an appreciable advance during the past week. Apart from optimism regarding probable price movements in the immediate future, the rise was mainly due to better reports from America. It was again rumoured that an early advance in the American domestic price is probable. Whether or not there is any foundation for these reports, the present position of the American market would certainly not appear to justify any increase in the price. Moreover, since it would almost certainly cause a slackening of demand, and therefore an increase in United States exports, any advance in the American domestic price must be regarded as a bear point for the London market.

Sales on the London Metal Exchange: 1,850 tons on Monday against 1,375 tons last week; 975 tons on Tuesday, against 1,175 tons last week; 1,400 tons on Wednesday, as against 1,100 tons last week. Domestic spot was quoted at 8-62½ cents per lb. in New York on Wednesday, against 8-60 cents a week ago and 8-65 cents a month ago. Wednesday's official closing price for standard cash in London was £35 11s. 3d. to £35 12s. 6d., compared with £35 2s. 6d. to £35 3s. 9d. a week ago. Stocks of refined copper in British official warehouses at the end of last week, at 77,624 tons, show a decrease of 780 tons, while stocks of rough copper, at 10,583 tons, show a decrease of 175 tons on the week.

LEAD AND SELLER.—Both metals declined in price on the week, although the markets closed on Wednesday above their lowest point. Consumptive demand is at present small, but since supplies are also on the short side, the set-back of the past few days cannot be regarded as serious. An early recovery is therefore quite possible, especially since the undertone of both markets has shown no significant change during the past week.

Sales of lead on the London Metal Exchange: 1,200 tons on Monday, against 400 tons last week; 1,100 tons on Tuesday, against 2,900 tons last week; 800 tons on Wednesday against 550 tons last week. The New York quotation on Wednesday was 4-50 cents per lb., against 4-50 cents a week ago and 4-50 cents a month ago. The official closing quotation in London for soft foreign for shipment during the current month was £17 15s. per ton, compared with £18 1s. 3d. a week ago.

Sales of spelter on the London Metal Exchange: 250 tons on Monday, against 50 tons last week; 1,300 tons on Tuesday, against 50 tons last week; 550 tons on Wednesday, against 200 tons last week. Wednesday's quotation in East St. Louis was 4-85 cents per lb., against 4-85 cents the week before and 4-85 cents a month earlier. Wednesday's official closing quotation in London for "good ordinary brands" for shipment during the current month was £15 15s. per ton, against £16 2s. 6d. last week.

TIN.—As was foreshadowed here a fortnight ago, prices on the London market showed a rising tendency this week, despite the arrival of considerable quantities of Dutch tin. That a substantial amount of this tin has gone into official warehouses may be seen from the rise of 530 tons in British stocks to 801 tons. The market "squeeze" was not eased, however; no significant quantity of Dutch tin was offered on the Metal Exchange, and it would appear that sales may have been effected outside the market. In the circumstances, it must be repeated that little change is to be expected in the undertone of the London market until supplies arrive from other sources. Meanwhile, world stocks did not rise as much as was expected during November. According to Messrs A. Strauss and Company, visible supplies showed a rise of 904 tons to 15,199 tons last month. Further, since these statistics ignore the Arnhem carry-over (which decreased by 453 tons during November) the net increase in world stocks amounted only to 451 tons. This was mainly due to high deliveries in countries outside America. Despite a decline of 1,320 tons in American deliveries, to 4,035 tons, total deliveries during November amounted to 9,297 tons, against only 8,826 tons in October. Supplies rose by 379 tons last month to 10,706 tons.

Sales of tin on the London Metal Exchange: 205 tons on Monday, against 215 tons last week; 190 tons on Tuesday, against 255 tons last week; 390 tons on Wednesday, against 205 tons last week. The New York quotation on Wednesday was 51-50 cents per lb., against 51-25 cents a week ago and 52-50 cents a month ago. Wednesday's official closing quotation in London for standard cash was £224 5s. to £224 15s. per ton, compared with £221 10s. to £221 15s. last week. Stocks of tin in London and Liverpool at the end of last week totalled 802 tons, an increase of 530 tons on the week.

OTHER NON-FERROUS METALS.—Among other non-ferrous metals, aluminium ingots and bars for home delivery were again quoted at £100 per ton. Nickel, for home and export, at £200 to £205 per ton, remains unchanged. Quicksilver, on the spot, was quoted at £12 17s. 6d. to £13 per flask of 76 lbs., as against £12 12s. 6d. last week. Chinese antimony was again quoted at £67 to £68 per ton ex warehouse, duty paid. Chinese wolfram for November-December shipment was quoted at 34s. to 35s. per

unit, c.i.f., the same as last week. Platinum (refined) was quoted at £7 17s. 6d. per ounce, the same as last week.

TEXTILES

JUTE.—Dundee.—The jute industry continues in a healthy state and a substantial improvement has been recorded during the past few months. In Calcutta, stocks of both hessians and sackings in the hands of the Indian Jute Mills have steadily declined. Stocks of the former (44 million yards) are now lower than they have been for many years, and stocks of sackings total only 97 million yards, compared with 104½ million yards and 176½ million yards respectively at the end of August this year. This improvement occurred despite the unsealing of looms in Calcutta to the extent of 2½ per cent. on August 5th and another 2½ per cent. on November 11th last, making a total of 10 per cent. of the looms unsealed since November 1st last year. This represents over 6,000 looms. All other producing centres for jute goods are reporting improved conditions and Dundee spinners and manufacturers in particular have enjoyed a good spell of trade since the middle of this year. A striking instance is the large increase in consumption of hessian cloth in America, which rose from 37 million yards in June to 69 million yards in October, the latter month being the highest for any one month during the past four years.

Raw jute prices sagged a little towards the end of last week, but quickly recovered after settling day had been completed in Calcutta on Friday. Daisee-2/3 has improved from £19 12s. 6d. to £20 for full group, and Daisee-4 has been sold at £18 15s. after £18 10s. done, with Tossa-2/3 rising from £20 10s. to £20 17s. 6d. and single marks of fours sold at £20 5s., December-January. First Marks are now at £24 2s. 6d. and Lightnings at £22 2s. 6d., a rise of 7s. 6d. during the past few days, while Heart Ram has been sold at £20 5s., December-January. A quiet steady business is being done in the fibre. Prices of jute yarns are very firm, and spinners are busy enough to be able to refuse less than their quoted terms of 2s. 3d. for common 8 lb. cops and 2s. 4d. for 8 lb. spools. Twist is firm at 3½d. to 4d. for 3 ply 8 lb., and sacking yarns have been quite active at 2½d. for 24 lb. twist and 3½d. to 3½d. for 8 lb. chains. Rove and the finer yarns are quiet. A moderate business continues in jute cloth and quick delivery difficult to obtain. Prices rule firm at from 2½d. for 10 oz. 40 in. and 2½d. for 8 oz. Linoleum hessians have been sold in fair quantities and a very good demand has been experienced in sackings and tarpaulins at higher prices. Calcutta goods have shown little change, though business has ruled quiet, with buyers holding off awaiting developments of the dispute between the Associated Mills and outside mills.

COTTON.—Manchester.—Conditions during the past week have been against any general activity. Traders have been somewhat disturbed by the uncertain outlook in France and the increased tension in connection with the Italo-Abyssinian war. At the end of last week there was an easier movement in raw material rates, but during the past few days the decline has been recovered. A bullish factor has been the acreage plans of the United States Government for next year. Wide fluctuations have again occurred in the Egyptian Sakel market and speculative operations at the moment are decidedly active.

COTTON PRICES

	1935				Corresponding Date	
	Nov. 13	Nov. 20	Nov. 27	Dec. 4	1933	1934
Raw Cotton—Mid. American per lb.	6 69	6 73	6 73	6 68	5 21	7-04
Sakellaridis Fully Good Fair Egyptian per lb.	9-72	9 84	10 44	10 23	7 18	9-18
Yarns—32's twist per lb.	10 1	10 2	10 2	10 1	9 1	10 2
40's twist per lb.	10 1	10 2	11 1	11 1	9 1	10 2
60's twist (Egyptian) per lb.	10 1	10 1	17	17	10 1	10 2
32-in. Printers 118 yds., 16 by 16, 32's and 50's a. d.	17 9	18 0	18 1	18 1	17 3	18 6
36-in. Shirtings, 75 yds., 16 by 16, 32's and 40's a. d.	24 10 1	25 0	25 1	25 1	21 3	24 0
38-in. ditto, 88 yds., 16 by 16, 10 lb. a. d.	10 5 1	10 6	10 6	10 6	10 6	10 9
39-in. ditto, 37½ yds., 16 by 16, 8½ lb. a. d.	9 5 1	9 6	9 6	9 6	9 4	9 8

The cloth section has continued quieter. Manufacturers have met with a fair amount of inquiry, but bulk lines have been absent. Much disappointment has again been expressed at the demand lines have been booked in bleaching styles for Egypt and demand America. A mixed business has been done for the Dominions place for the home trade. Buyers as a body are still resisting irregularity in yarn quotations. American spinners of coarse counts remain very busy and there is no giving way in price, but some producers of medium numbers are more prepared to consider offers. Trade in the Egyptian section continues difficult and buyers are cautious.

COTTON ACREAGE PLANS IN AMERICA.—This week the Agricultural Adjustment Administration of the United States Government has put forward a plan for controlling the production of cotton for a period of four years. Its aim is the restriction of production by agreement with the farmers. The original scheme but this is now to be reduced to 44,500,000 acres, production must be 30 to 45 per cent. of the basis, compared with 30 to 35 per cent. in the current season. It is estimated that the arrangements now being made will limit the crop for 1936 to about

11,500,000 bales. Various benefits are to be paid to farmers and to sharecroppers in order to secure support for the proposals. The statement was considered bullish in market circles and prices advanced in New York and Liverpool. On Monday next, the Government will publish the December report on the crop for this season, and it is expected that the estimated yield will be reduced to about 10,900,000 bales against 11,141,000 bales a month ago. Although the officials at Washington in the past have made mistakes with regard to restricting the output of cotton it is now being realised in many quarters that the control is becoming more effective, and in the circumstances there seems to be little probability of lower prices. If, on the other hand, prices are forced up unduly, the competition from outside growths will be felt.

GRAIN MARKETS

WHEAT.—Prices have again become rather easier this week. Sentiment has been bearishly affected by fears of French selling pressure and by the anticipation that the appointment of Mr John Murray to be chairman of the Canadian Wheat Board foreshadows a more progressive selling policy by the Dominion. The output in Australia is now officially estimated at 140 million bushels—an advance of 5 million bushels on the earlier estimate and 6 million bushels above the official estimate for the 1934 crop. Prospects in Argentina have also improved in consequence of more favourable weather conditions.

According to the *Corn Trade News*, total shipments of wheat and flour from exporting countries during the past week were 1,275,000 quarters, against 1,186,000 quarters in the preceding week. On Wednesday last, "December" futures were quoted in Chicago at 96 cents per bushel, against 97½ cents the week before and 97½ cents a month ago. Quotations in London, Wednesday: No. 1 Northern Manitoba, ex ship, 35s. 3d. per 496 lbs., against 35s. 6d. a week ago; No. 2 Northern Manitoba, ex ship, 33s. to 34s., against 33s. 9d. a week ago.

FLOUR.—Demand for both home-milled and imported flour continues quiet and prices show little alteration. Shipments from North America in the past week totalled 78,000 sacks, as against 84,000 in the previous week. Wednesday's London quotations (excluding quota payments) were: Straight run, delivered country, 29s. per 280 lbs., against 29s. a week ago; delivered London, 28s., as compared with 28s. a week ago. Manitoba patents, ex store, 27s. 6d. to 29s. 6d., against 27s. 6d. to 29s. 6d. a week ago. Australian ex store, 22s. to 22s. 3d., against 22s. to 22s. 6d. a week ago.

BARLEY.—Little business has been transacted in imported feeding barley in this country and prices are generally unchanged. Good quality English malting barley is scarce and a limited business is being done at higher prices. "December" futures were quoted at 31½ cents per bushel in Winnipeg on Wednesday, against 33½ cents last week and 33½ cents a month ago. Quotations per 448 lbs. in London on Wednesday were: "English feed" (new) at farm, 23s. to 24s., as against 23s. to 24s. last week; "English malting" (new) at farm, 30s. to 54s., against 30s. to 54s. a week ago.

OATS.—On Wednesday, "December" futures were quoted at 25½ cents per bushel in Chicago, against 26½ cents a week ago and 26½ cents last month. Quotations in London, Wednesday: "English Black" (old), at farm, 22s. per 336 lbs., against 22s. a week ago; "English White" (old), at farm, 22s., against 22s. last week.

MAIZE.—Demand has again fallen off during the past week, and prices have eased. "December" futures were quoted on Wednesday at 56½ cents per bushel in Chicago, against 59½ cents a week ago and 59½ cents last month. Quotations in London, Wednesday: "Plate," landed, 17s. 3d. per 480 lbs., compared with 17s. 3d. a week ago; "Plate," ex ship (new), 16s. 6d., as against 16s. 9d. a week ago; "Plate," December, 16s. 7½d., against 16s. 6d. a week ago. Yellow maize meal, ex wharf, was quoted at £4 15s. to £4 17s. 6d. per ton, against £4 15s. to £4 17s. 6d. a week ago.

COMPARATIVE AVERAGES OF GRAIN.—The following table gives the estimated sale of home-grown wheat during the harvest years 1932-33 to 1935-36:—

	1932-1933	1933-1934	1934-1935	1935-1936
Estimated sales of home-grown wheat—	Cwts.	Cwts.	Cwts.	Cwts.
1 week to November 30	316,455	267,045	391,556	348,293
13 weeks to November 30	8,686,642	4,287,022	5,713,373	5,677,025
Average price of English wheat per cwt.	s. d. 5 5	s. d. 4 7	s. d. 4 11	s. d. 5 8

The following is a statement showing the quantities sold and the average price of British corn in the past two weeks, and for the corresponding week in each of the years from 1931 to 1934:—

Week ended	QUANTITIES SOLD			AVERAGE PRICE PER CWT.		
	Wheat	Barley	Oats	Wheat	Barley	Oats
Nov. 28, 1931	Cwts. 77,941	Cwts. 431,379	Cwts. 80,861	s. d. 6 9	s. d. 8 10	s. d. 7 0
Dec. 3, 1932	316,455	395,707	30,559	5 5	6 11	5 9
Dec. 2, 1933	267,045	420,569	43,502	4 7	9 1	5 4
Dec. 1, 1934	391,556	363,718	54,291	4 11	8 10	5 6
Nov. 23, 1935	381,557	394,130	63,106	5 9	8 5	6 0
Nov. 30, 1935	348,293	399,343	50,283	5 8	8 4	6 1

AMERICAN WHEAT MARKETS.—The following table shows wheat quotations for selected weeks in 1935, with comparative figures for 1934.

NEAREST FUTURE	Jan. 4, 1935	Jan. 3, 1934	Dec. 5, 1934	Jan. 2, 1935	Nov. 27, 1935	Dec. 4, 1935
Winnipeg (No. 1, Manitoba) Cents per 60 lb.	46½	65½	80½	82½	86½	84½
Chicago (No. 2 Winter) Cents per 60 lb.	46½	84½	102½	98½	97½	96

The visible supply of wheat in Canada amounts to 142,073,000 bushels, against 142,164,000 bushels last week and 123,813,000 bushels in the corresponding week of last year.

OTHER FOODS

BACON.—The decline in bacon prices has been checked. Danish has been firm this week, Irish irregular, Swedish quiet and other descriptions steady in price. The official quotations (per cwt. for No. 1 Sizable) which formed the basis for dealings on the London Provision Exchange this week were: English, 78s. to 83s.; Canadian, 72s.; Danish, 82s.; as against 77s. to 83s., 72s. and 82s., respectively, a week ago. Arrivals in London last week included Danish, 12,963 bales; Canadian, 4,440; Dutch, 3,116; Lithuanian, 1,803; Polish, 2,529; against 13,189, 4,563, 2,229, 608 and 2,024 bales, respectively, in the previous week.

BASIC PIG PRICE.—The Pigs Marketing Board announced this week that, in accordance with the provisions of the present contract, the ascertained price of Green Wiltshire style bacon is 82s. 5d. per cwt., and the ascertained cost of feeding stuffs is 7s. 9d. per cwt. The price of the Class 1, Grade C, pig for the month of December is therefore 10s. 2d. per score. Fluctuations in the basic pig price (per score lbs.) during the present contract period have been as follows:—

	s. d.		s. d.
January	11 3	July	11 9
February	11 5	August	11 4
March	11 11	September	11 0
April	11 0	October	10 2
May	10 11	November	11 4
June	11 5	December	10 2

In addition to the basic price the curers pay 1d. per score as contribution towards insurance, and 2d. per score on every pig

INDUSTRY AND NATIONAL DEFENCE

PROSPECTS FOR THE AIRCRAFT COMPANIES

THE FINANCIAL NEWS

on Monday, Wednesday, Thursday and Friday of next week

delivered and accepted to form a pool out of which will be paid a bonus to producers on pigs delivered during the first four months of the year.

BUTTER.—The market has been slow this week. Danish continues firm, but Colonial descriptions have again eased in price. Quotations (per cwt.) on the London Provision Exchange on Wednesday were: New Zealand, finest salted, 92s.; Australian, choicest salted, 91s.; Danish, 125s. to 126s.; compared with 100s. to 101s., 100s. and 125s., respectively, last week.

CHEESE.—The market has shown little change this week. English continues steady, but Colonial makes have displayed an easier tendency. Quotations (per cwt.) on the London Provision Exchange on Wednesday were as follows: English, finest farmers', 74s. to 80s.; Canadian, finest coloured (new), 56s. to 60s.; New Zealand, finest coloured, 53s. 6d., as against 74s. to 80s., 58s. to 60s., and 55s. to 56s., respectively, last week.

COCOA.—The "spot" quotation in New York on Wednesday was 5½ cents per lb., as against 5½ cents per lb. last week. On the London market, Accras have shown a slightly firmer tendency. On Wednesday last, good fermented new crop, "December-February," was quoted 22s. 4½d. per 250 kilos. c.i.f. Continent, against 22s. 3d. last week. Last week's movements of cocoa in London were as follows: Landed, 11,056 bags; delivered, for home consumption, 11,371 bags; exported, 308 bags; stocks, 121,984 bags, against 135,909 bags a year ago.

COFFEE.—The New York spot market has been firm and Rio has risen in price. The London market was quietly steady. In New York on Wednesday, Rio No. 7 (cash) was quoted at 6½ cents per lb., as compared with 6½ cents per lb. last week and 6½ cents per lb. a month ago. Movements of coffee in London last week were as follows: Brazilian, landed, 9 cwt.; delivered for home consumption, 282 cwt.; exported, nil; stocks, 12,258 cwt., against 28,079 packages a year ago. Central and other South American, landed, 630 cwt.; delivered, for home consumption, 2,480 cwt.; exported, 1,389 cwt.; stocks, 74,856 cwt., against 76,349 packages last year. Other kinds, landed, 6,222 cwt.; delivered, for home consumption, 3,682 cwt.; exported, 354 cwt.; stocks, 107,400 cwt., against 71,332 packages last year.

EGGS.—Egg prices have about reached their seasonal peak, and the London market has been steady this week. At Smithfield Market on Wednesday, English (ordinary packing, Grade I, about 15-15½ lb.) realised 19s. to 20s. per 120, against 20s. to 21s. 6d. a week earlier, while Danish (15½ lb.) made 17s. to 17s. 6d. per 120, against 17s. to 17s. 9d. last week.

FRUIT.—Business was rather slack up to the end of last week, but has since shown steady improvement with prices generally firmer. According to *The Fruit Grower*, apples have been in steady demand at Covent Garden. Home supplies are now limited and there has been a general hardening of both home and foreign prices. Pears are mostly firm, but a slightly easier tendency was noticeable at Spitalfields for Californian pears. The orange trade is active, although supplies from South Africa and Brazil are poor. Increasing arrivals from Spain, however, meet a steady trade. Lemons continue firm; but grapefruit supplies exceed demand and prices have again declined. Hothouse grapes are a steady trade. Nuts are in rather more active demand, with prices firmer except for Brazils. Bananas are expected to become dearer.

MEAT.—Supplies at Smithfield Market continue rather heavy and business has shown little change during the past week. Prices of fresh beef and of pork were a shade firmer, but other quotations were generally unaltered. On Wednesday last, Argentine chilled hindquarters were quoted at 3s. 8d. to 4s. 2d. per 8 lbs., as compared with 3s. 10d. to 4s. 2d. last week. New Zealand frozen mutton was 3s. 2d. to 3s. 10d. per 8 lbs., against 3s. 2d. to 3s. 10d. a week ago. According to the Smithfield Market official report, supplies during last week amounted to 9,799 tons, an increase of 463 tons on the corresponding week last year. Beef and veal accounted for 4,994 tons, mutton and lamb 2,820 tons, and pork and bacon 1,082 tons, as compared with 4,714, 2,616 and 1,061 tons, respectively, in the same week of 1934.

PEPPER.—Wednesday's spot price for Lampung (in bond) was 3d. per lb., against 3½d. last week. Movements of pepper in London during the past week were as follows: Black, landed, 9 tons; delivered, 2 tons; stocks, 1,457 tons, against 637 tons a year ago. White, landed, nil; delivered, 247 tons; stocks, 14,207 tons, against 11,410 tons a year ago.

RICE.—The spot price of Burma No. 2, cleaned, was 9s. 9d. per cwt. ex-warehouse on Wednesday, as compared with 9s. 10½d. per cwt. a week ago. New crop, January-February, in singles to Continent and U.K. was quoted at 7s. 6d. per cwt., against 7s. 6d. per cwt. last week. Movements in London during the past week were as follows: Landed, 139 tons; delivered, 672 tons; stocks, 5,957 tons, against 2,604 tons a year ago.

SUGAR.—The New York spot market again had an easy tone this week, prices having declined by 15 points. In London, raw sugar has been quietly steady. The spot price in New York on Wednesday was 3-10 cents per lb., as compared with 3-25 cents per lb. last week and 3-50 cents per lb. a month ago. Wednesday's sales of raw sugar in London included "March delivery" at 5s. 1½d., against 5s. 1½d. last week. The movements of raw sugar at public warehouses in London and Liverpool last week were as follows: Imports, 3,291 tons, against 31,493 in the previous week and 11,651 tons in the same week of last year; deliveries, 15,456 tons, against 14,796 and 13,835 tons respectively; stocks, 190,368 tons, against 202,533 and 123,716 tons respectively.

TEA.—The following table shows the average prices (compiled by the Tea Brokers' Association) of tea sold at Mincing Lane on Garden Account in recent weeks:—

Week ending	Northern India	Southern India	Ceylon	Java	Sumatra	Africa	Total
Nov. 29, 1934	d.	d.	d.	d.	d.	d.	d.
Oct. 31, 1935	11-65	11-50	13-39	10-89	9-31	10-85	11-90
Nov. 7, "	14-00	12-42	15-69	11-89	10-12	11-13	14-07
Nov. 14, "	13-33	12-31	15-03	12-18	9-42	11-63	13-53
Nov. 21, "	12-87	12-04	14-27	11-76	9-66	11-33	13-02
Nov. 28, "	12-86	12-21	13-88	12-91	10-49	11-54	13-01
Nov. 28, "	12-74	12-40	13-71	12-77	10-04	11-70	12-93

The quantities catalogued for this week's auctions comprised 46,087 packages of Indian and 20,712 packages of Ceylon tea. Brisk bidding was common for Indian grades and quotations for these were fully maintained. At Tuesday's Ceylon auctions common sorts realised steady prices, but teas above 1s. 1½d. per lb.—especially broken Orange Pekoe Fannings—were irregular and generally easier. Export demand was good.

VEGETABLES.—A generally rising tendency in prices has been recorded at Covent Garden. *The Fruit Grower* reports little business in English tomatoes, but Canaries are a point dealer. Supplies of cucumbers, mint and greenstuff are all rather short. Beans and mushrooms are firmer in price. Celery is plentiful, but is meeting an active demand at moderate prices. Potato prices have shown a rising tendency in certain instances, but at the London Borough Market on Tuesday best siltland King Edward were again quoted at 6s. 6d. to 7s. per cwt.

MISCELLANEOUS COMMODITIES

VEGETABLE OILS AND OILSEEDS.—Oilseeds, in common with other grains, are very quiet, with practically no demand. Linseed prices have eased in sympathy with wheat and in consequence of the continued favourable prospects for the growing crop in Argentina, which market opinion considers likely to give a probable yield of at least a million and a half tons. The official estimate is expected daily. Old crop Plate, of which an exportable surplus of 265,000 tons remains, has declined to £9 15s. per ton delivered Hull, a shade more being asked and paid for new crop January-February loading. The quantity now afloat Europe is 141,500 tons (including 19,500 tons from India), 15,000 tons more than a week ago; and for the United States 48,200 tons, against 31,800 tons a year ago. Cottonseed is steady, but inactive, Black Egyptian being quoted at £6 7s. 6d. for December loading and £6 10s. January-March.

Demand for linseed oil is limited and prices are easier. Raw oil, December delivery, ex Hull mill, is offered at £25 and January-April at £25 5s. per ton (naked). Imports of linseed oil from abroad continue on a large scale, despite the £3 10s. per ton duty; an application to increase this is still under consideration by the Import Duties Advisory Committee. Cotton oil is quiet and unchanged. Egyptian crude ex Hull is available at £26 and refined at £29 per ton. Export demand is not so good. Oilcakes are in rather better demand and are steady in price.

RADIUM.—In a Note of the Week in the *Economist* of June 2, 1934, we referred to the discovery of uranium deposits in Canada and suggested that these were unlikely to be of sufficient importance to challenge the Belgian Congo, as the leading producer of radium, for many years to come. In recent weeks several optimistic accounts of these deposits have been received from Canada. Those in the Great Bear Lake district, owned by the Eldorado Gold Mines, Ltd., are estimated, however, to contain ore to the value of \$2,400,000 only. Some 26 tons of ore were treated last year, the value of the radium, uranium, silver and lead recovered being estimated at \$210,000. No shipments of ore were made last year by the Great Bear Lake Mines, Ltd., or Canadian Radium Mines, Ltd., but a test shipment of three tons of ore to the Trail Smelter was made by Bear Exploration and Radium, Ltd. During the current year activity has increased; nevertheless, the Dominion's output of radium does not yet amount to one-tenth that of the Union Minière du Haut Katanga. Various radium deposits are reported to have been discovered in Azerbeidzhan (U.S.S.R.) in recent months, but year's output from Joachimsthal (Czechoslovakia) brings the total production of this area up to 100 grammes. The event is of interest in that it was from this Czechoslovakian ore that Madame Curie first separated radium in 1898. From the economic point of view, however, the Joachimsthal deposits are no longer important.

POTASH.—That the prospects of the Alsatian potash industry are not unfavourable is the view expressed in an article just published in the *Review* of the Allgemeine Elsaessische Bankgesellschaft of Strasbourg. Nevertheless, the exaggerated hopes at one time entertained have been somewhat disappointed. Since the new potash producers have realised that their interests will be furthered by co-operation with the Franco-German Cartel, it is suggested that the fierce price struggle between these parties in the international market can be regarded as terminated. The primary interest of the Alsatian industry centres, however, on the domestic here. In 1924 only 94,384 metric tons of Alsatian potash were sold in France and 180,093 metric tons exported; in 1934 exports had only recovered to approximately the 1924 level (182,729 metric tons), whereas deliveries to French consumers had risen to 176,350 metric tons. Meanwhile, the total gross proceeds of German potash exports in 1935 are estimated by Messrs J. Henry Schröder and

Company (the receiving bank for German potash bonds) at £2,388,800 (par value). Actual proceeds during the first nine months of the year amounted to £1,496,700 (at par), while the last three months are expected to yield the remaining £892,100. The annual service of the potash loan amounts to £1,297,778—or approximately £800,000 at par.

RUBBER.—Prices are slightly easier on the week, as a result of Tuesday's decision by the International Rubber Regulation Committee to increase the basic quotas of the Dutch East Indies as follows: For 1936, from 443,000 tons to 500,000 tons; for 1937, from 467,000 to 520,000 tons; for 1938, from 485,000 to 540,000 tons. At the same time it was decided to maintain the restriction percentage at 60, for the first half of next year, subject to the right

to review from time to time. The market was somewhat disappointed by this announcement, despite the assurance by the D.E.I. Government that the revision in the quotas will now make it possible to enforce the restriction scheme in that area.

The spot price in New York on Wednesday last was 12½ cents per lb., compared with 13½ cents per lb. a week ago and 13½ cents a month earlier. Wednesday's official closing price for standard ribbed smoked sheet in London was 6½d. per lb., as against 6½d. on the corresponding day last week. In forward positions, business has been done at 6½d. to 6½d. for January to March shipment, as against 6½d. to 6½d. a week ago. Stocks in London and Liverpool at the end of last week totalled 166,396 tons, against 166,492 tons a week earlier. A year ago stocks amounted to 128,065 tons.

THE PARIS BLUNDER

LAST Monday the world was thunderstruck by the appearance, in the French Press, of detailed and apparently "inspired" accounts of the peace terms which Sir Samuel Hoare had agreed upon with M. Laval for recommendation to the League, to Abyssinia and to Italy. These reported terms departed so far from any that the British Government had previously shown any inclination to endorse, and the concessions to the Italian aggressor were so vast, that at first the report was believed to be without foundation. Unhappily, on Tuesday afternoon, when the Government were questioned on the subject in the House of Commons, it became apparent that the "unofficial" French report of the terms was correct in substance, though possibly exaggerated in detail. This impression was, in effect, endorsed by the obvious embarrassment of Ministers from Mr Baldwin downwards, by the evasiveness of their replies, and by the summoning of two special Cabinet meetings.

The general result of these terms, if they were put into effect, would be to hand over to the aggressor about three-sevenths of Abyssinia. The French and British Governments are believed to have suggested that there shall be ceded to Italy the Tigre and the Danakil country on the north-east, the Ogaden on the south-east, and the whole of the South Abyssinia highlands on the south-west—the two latter cessions including, between them, all Abyssinia south of latitude 8 and east of longitude 36. The south-western territory is to remain under a nominal Abyssinian sovereignty, but it is to be turned over to an Italian chartered company, with its own administration and police, for settlement by Italian colonists. The reservation of nominal sovereignty is no doubt designed to lessen the shock of a scheme which includes a greater area than anything which even the French have previously proposed; but it is one of those diplomatic devices which are merely a polite way of cloaking the fact of virtual annexation. What is left of Abyssinia is to be placed under a League mandate. The only compensation which Abyssinia is to receive is an outlet to the sea—across Italian territory.

What was Sir Samuel Hoare's motive in agreeing to

associate himself with this surprising plan of spoliation? And what was the Government's motive in accepting it? For the Government certainly assumed some responsibility for the plan by agreeing to forward it to the belligerents—although a storm of protest had already broken in the House, the country, and the world. The Government's embarrassment in the House of Commons on Tuesday afternoon must be a unique experience for a Ministry that has just triumphantly won a general election. In the face of the Opposition's attack, not one of their own supporters rose to say a word in their defence. In fact, Conservative members were perplexed and confounded for a special reason of their own. For many of them, a few weeks ago, won their seats—no doubt in all good faith—largely on the strength of an assurance to the electors that the Government, if returned, would stand firmly for vindication of the League Covenant in accordance with both the spirit and the letter of Sir Samuel Hoare's September speech at Geneva.

British prestige, which soared high after that famous pronouncement, and has been steadily rising ever since, has declined precipitately this week. In the United States, in the Dominions, in the other League countries, as well as in the United Kingdom, this British *volte-face* has been greeted with equal indignation and bewilderment. "Why," the world is asking, "did the British Government ever take up this policy of implementing the Covenant at all? Why did it lead the other League Powers on? Why did it incur the bitter hostility of Italy, if, after having set its hand to the plough, it was willing to turn back like this?"

We confess to being completely at a loss to understand what the Government's answer may be. Does it fear that, unless Signor Mussolini receives adequate compensation for the "sacrifices" that Italy has made, he will run completely amok? But the Government have been prepared to run the danger of an Italian attack upon the British Empire ever since they embarked on the policy of fulfilling the Covenant; and surely the risk is less to-day than it was, since Signor

Mussolini has now at least twice crouched to spring, and twice shrunk back. Each time that he flinches, it becomes harder for him to commit the crowning act of folly. Apart, however, from the chances of an Italian attack upon us, it would be suicidal to allow this possibility to govern our whole foreign policy. We are living in a world in which the chance of an Italian attack on us in present circumstances is one of the smallest of the many possible dangers that we may be called upon to face. By showing weakness now, we should be plainly inviting a coalition of the predatory Powers to fall jointly upon the British lion and to divide between them the spoils of an empire which covers to-day a quarter of the land-surface of the world.

Or is the motive the fear of an Italian military fiasco in Africa, which might be followed by a temporary eclipse of Italian power in Europe? We know, of course, that this is the dominant consideration in the mind of M. Laval. But has he really now persuaded the British Government to adopt it? If driven to the choice, M. Laval would rather preserve Signor Mussolini than preserve the League, because (largely through the fault of British policy in the past) France counts upon an Italian military alliance much more than she counts upon collective security to help her against Germany if the need should arise. Does the British Government not know that Germany and Japan are taking this trial of collective security as a test case, and are closely watching the outcome? Does it not see that, in capitulating to Signor Mussolini, we are notifying Herr Hitler that aggression can be perpetrated with impunity and can, apparently, be made to pay?

We must leave this riddle of Downing Street unsolved until Mr Baldwin feels himself free to answer it for us. The immediate questions are: how will these Anglo-French proposals be taken by the three parties concerned, and what is to happen next?

It is safe to assume that M. Laval has already ascertained that the terms are acceptable to Signor Mussolini. We may take it for granted that they will be rejected by the Emperor of Abyssinia. We can feel almost equally sure that they will not receive, on the Council of the League, that unanimous vote that would be required in order to secure their adoption by that body. We can also be quite certain that the Council will never find that Italy has ceased to be the aggressor because the Emperor of Abyssinia has refused to part with the half of his kingdom.

In those circumstances, it is essential that the Government should clarify its position. Has it given Signor Mussolini reason to believe that in its opinion the terms proposed are fair and just? For if so, and if the Duce accepts, this country will have completely undermined its power to support the League in bringing further pressure to compel Italy to end the war on more favourable terms for Abyssinia. If this is the position, all that can be said is that the nation almost unanimously repudiates the Government's idea of a just peace.

It appears, however, that the position of the Government is more equivocal. It has been a party to a species of kite-flying, in order to test the attitude of the belligerents. At the long-delayed meeting of the Committee of Eighteen which took place at Geneva on Thursday, Mr Eden made it clear that, as England and France had no mandate to negotiate for the League, the matter was one for the Council, which is to meet next week. In the course of his speech, he sought to disinterest the Government in the substance of the actual peace proposals by his emphatic declaration that Britain would stand by the Council's decision. That decision is hardly likely to be in line with the Paris terms, even if strong pressure were brought to bear by England and France; and in the light of the spontaneous expression of public opinion in almost every country of the world, it is unlikely that such pressure will be exercised.

The remarkable demonstration of the extent to which the League is being looked to as a bulwark against wanton aggression has, indeed, been very impressive. This week's work has been a diplomatic blunder on the part of the British Government; but that will be a small matter if the collective system of security can after all be saved at Geneva from the extinction with which it seemed a few days ago to be threatened.

THE MINING DISPUTE

HOPES of an early settlement of the coalmining dispute have strengthened greatly during the last few days. The owners, in a lengthy statement, issued a week ago went far to give the impression that they had rejected the claims both for an immediate increase in wages and for national negotiations. The meeting held later between officials of the Mining Association and the Mineworkers' Federation raised hopes that a settlement might be nearer; but the Federation afterwards stated that the Association's attitude was unsatisfactory, and that a national conference of the Federation would meet on December 18th to consider further action. On Thursday night, however, the Mines Department stated that the Association had invited the Federation to meet them on Tuesday to consider the progress so far made in securing increased receipts, out of which wages might be raised.

The owners' considered apology merits at least careful and dispassionate consideration. It begins by denying the allegation that miners' wages are "scandalously low" in comparison with those paid in other industries. It admits that the average weekly earnings in 1934 were approximately 45s. a week and that the average number of shifts worked per week was 4.84 in the first six months of 1935. But it adds that "if 5½ shifts per week be taken as what a man might reasonably be expected to work in times of normal trade, it will be seen that the average weekly earnings of workers at the coal-face (including boys and youths) would be 62s. excluding allowances." It then compares this hypothetical figure with the wage actually paid in various other industries. A computation of real wages is added, which shows the real wage paid in 1934 to have been 0.4 per cent. above that paid in 1914.

It is next computed that the grant of the miners' claim for an increase of 2s. a day would cost the industry £18,500,000 a year, or 1s. 10d. per ton of commercially disposable coal. Yet the actual total "credit," the Association alleges, quoting the official ascertainment, amounted to only £4,128,199, or 5d. per ton in 1934; while the "real profit" is given as "less than £2,000,000." In reply to the allegation that there are hidden profits not shown in the ascertainment, the Association makes the following observation:—

The fact is that coal transferred to all associated undertakings—whether coke-oven plants, selling agencies or others—must be transferred at fair market prices; that it is the duty of the Accountants appointed by the miners to see that this is actually done; and that these Accountants have access to all the colliery books for this purpose.

It is then contended that the mechanisation of the industry has already made great progress; and that financial amalgamation and the institution of selling schemes are gradually evolving—though always as a result of voluntary effort and not Government intervention. Finally, the whole principle of national wage negotiations is attacked on the ground that they "have proved the cause of continual unrest."

To this statement the Mineworkers' Federation replied on Monday with a detailed criticism. They accuse the owners of insincerity in refusing to accept national wage negotiations, and point out that they have shown themselves ready for national negotiations on production, distribution, prices, trade agreements, taxation and even hours. "The motive of the employers," the Federation alleges, "is clear. They wish to depress wages to the lowest district level." The relevance of the figure of 62s. a week is then challenged on the ground that the actual average of shifts per week in the six months ending June 30 was 4.84 and not 5½; and it is urged that the actual average weekly figure of 44s. 8d. a week should be used for comparison with other industries. The Federation adds that 61.2 per cent. of the employees in the industry do not work at the coal-face, and that the average wage of these 61.2 per cent. was 38s. 5d. a week in the six months ending June 30th. In Durham one adult worker out of every three had an average weekly wage of 31s. 3d. In conclusion, the Federation maintains that selling prices could be raised by joint efforts, since 76 per cent. of total British output is sold at home and an international price agreement is not, in the Federation's view, impracticable.

It is valuable to have the detailed case of both parties to the dispute thus fully expounded in public. The opinion of the impartial observer, however, is not likely to be markedly altered by this week's exchange of views. He will gladly concede that a section of the workers in the industry is reasonably well-paid, but will note that a very large number of them are indubitably ill-paid, in comparison with current wage standards—whether or not a wage of 38s. 5d. a week can justly be described as "scandalous." It will in any case be generally felt that such a wage cannot be defended except on grounds of absolute economic necessity. The dissension over national negotiations is likely to be regarded as essentially an extension of the ubiquitous struggle over the principle of collective bargaining, in which each side attempts to weaken the collectivity of the other. And here public sympathy will probably be on the side of the admittedly weaker party.

How far the coal industry can stand a rise in wages, is a more difficult question. The public is likely to suspend judgment on the controversy over the alleged "hidden profits," until some impartial inquiry is held. But there are very strong reasons for believing that in the long run financial amalgamation, the elimination of the remaining uneconomic pits, and the rationalisation of royalties would permit lower costs of production. How far, however, and how soon, can centralised selling improve prices sufficiently to enable wages to be raised? The experience of central selling in districts where it has been tried suggests that substantial gains are possible. A co-ordinated increase in selling prices will naturally be opposed on the grounds that it is an exploitation of the home consumer, that it cannot be applied to exports, and that it consequently involves discrimination or dumping. These arguments are not entirely convincing. In so far as the present prices paid for coal by large internal consumers like the electricity and gas industries are uneconomically low, owing to the semi-monopoly position of the buyers, an increase might be justified. There are reports this week that such an increase may be made by agreement between the colliery companies and the large-scale consumers, on condition that miners' wages are simultaneously raised. If this solution can be applied, as we think it might, without a substantial rise in the price of gas and electricity to the ultimate consumer, it should certainly be welcomed; though it must be remembered that the gas and electricity industries together only account for about 17 per cent. of domestic coal consumption. The iron and steel industry, however, which takes 10.7 per cent., might well be asked to contribute, in view of the public favours showered upon it in the last few years. Again, centralised selling, even without international agreement, is not necessarily powerless to raise prices, as experience in South Wales has shown. The mere elimination of inter-British competition in foreign markets may at once enable prices to be raised and foreign competition to be more effectively met.

These conclusions were confirmed by this week's debate in the House, and particularly by the notable speech of Mr

Peake, a Yorkshire employer, who treated the miners' case sympathetically and constructively. His tone was markedly different from that, for instance, of Sir Evan Williams's letter to *The Times* a few days earlier. Mr Peake advocated the raising of internal selling prices, and strongly supported the demand for national negotiations:—

In Yorkshire (he said) there was a readiness to advocate an increase to the lower-paid men straight away. But the difficulty was that, unless there were national negotiations, it was almost impossible for them to increase wage costs without injuring their competitive power with other districts.

Mr Peake also expressed some scepticism about the spirit in which the ascertainment system was being operated in South Wales.

The three main principles of the proposed selling schemes were laid down by Captain Crookshank, who spoke for the Government in the debate. They must cover all the coal-owners in the district, and must have a measure of permanency; they must effectively prevent inter-colliery competition; and they must be so drawn up that evasions cannot occur. Captain Crookshank was probably right to concentrate at this point on the development of selling schemes, though he might well have gone a little further and given an express endorsement on behalf of the Government to the principle of national negotiations. For the best hope of a short-run solution now seems to lie in a wage increase, however slight, resulting from improved prices, coupled with a national agreement. It should not be beyond the power of reasonable men to elaborate an agreement which, if locally initiated, would at least be nationally endorsed. This, together with the proposed selling schemes, the Government should press on the industry. It should not forget, however, that the need for accelerating the long-term economies likely to accrue from amalgamation and the nationalisation of royalties still remains fundamental.

INDIA'S ECONOMIC FUTURE

THE passage into law, this year, of the Government of India Bill has marked a big step forward in the solution of India's political difficulties. But this political change is not in itself sufficient to provide the whole solution. The Indians will, rightly or wrongly, judge the success of the Bill by the course of economic events in the next few years. It may be relevant, therefore, on the eve of the establishment of the new regime, to examine some of India's economic difficulties, and see in what way we can contribute to their removal.

Although India has long been linked to the world's economy, she is still one of the most self-sufficient of countries. Only a small part—some 7 to 10 per cent.—of her total production is exported. Her economy is in fact overwhelmingly agricultural, based on a diversified system of

cropping, a mingling of many subsistence crops with a few money crops; and because of this India has been far less vulnerable in the world depression than the newer agricultural countries which specialise in one or two commodities.

None the less, the slump hit the Indian farmer hard, and his income was rapidly cut down by one half, without a corresponding decline in the price of the goods he buys or of the fixed payments he has to make to moneylenders, landlords or Government. It has been estimated that the money value of the principal crops fell by nearly 50 per cent. between 1929 and 1933, and the effect of the depression upon Indian foreign trade was severe.

The collapse of foreign trade undermined Government finances. Customs and income tax revenue declined rapidly and the commercial departments became a burden rather than a support. Central Government showed a deficit of Rs. 11.5 crores in 1930-31, and a deficit of Rs. 19.5 crores was expected for 1931-32. But by a 10 per cent. pay cut, and other emergency measures, the deficit for 1931-32 was reduced to 11½ crores, after providing nearly 7 crores for the reduction of debt. The Government has continued with this financial policy. Recent Budgets have closed with comfortable surpluses, and the 10 per cent. cut in salaries has now been restored. It must be recognised, however, that in achieving this result the Government was considerably helped by a steady outflow of gold, part of which came from the reserves of the Indian peasant, whose much maligned habit of hoarding has been a timely help to his country.

But the balancing of the Government's Budget resulted in some unbalancing of the Budgets of private individuals. Retrenchment was carried out so ruthlessly in some directions that it aggravated unemployment. Many plantations were closed down and labourers were repatriated to Ceylon and Malaya. Consumption declined in quantity and quality, with the most damaging results for those countries which supplied India with manufactures, and the decline in the purchasing power of India enabled her cheaper suppliers, particularly Japan, to gain a relative advantage over the United Kingdom.

During recent years the Government of India has taken various steps to relieve the agriculturists of their severe burden of fixed charges, to promote rural development, to regulate the export trade, and to protect Indian industry. Industrial output has increased even during the depression; the production of Indian cotton mills increased 50 per cent. between 1928-29 and 1933-34, the production of sugar increased six-fold in the last six years, and there have been similar increases in the production of iron and steel, cement and other industrial products.

Thus, India has survived the economic blizzard, and stands ready for a great economic development. Rapid industrialisation cannot provide a cure for her economic ills; for the central problem is to increase the income of the agricultural masses. The introduction of modern instruments of production and a modern economic and financial framework would benefit both India and the countries with which she trades; but this equipment would require a volume of new capital which purely Indian resources are quite unable to supply. Evidence of this can be seen in the antiquated system of providing capital which exists at present, and in the sources from which India has obtained capital in the past. While the interest charged on the highest grade loans is on an average 7 to 7½ per cent., the rate goes up to as much as 150 per cent. to masses of illiterate peasants who have to borrow in order to obtain the necessary seeds and primitive utensils to produce their harvests. And while British investments in India are estimated at around £700 millions, the only corresponding estimate of Indian capital investments (in Government and other loans and securities, joint-stock companies and industries) is £525 millions. Foreign—mainly British—capital has not only financed the bulk of Indian joint-stock banks, insurance companies, railroads and coastal shipping, but has also played a predominating part in financing her overseas trade, jute mills, plantations, mining and engineering works, and paper and cement industries.

It is certain that in her future growth, as in the past, India must rely mainly on foreign capital, but if the British

are to play their proper part, there must be a radical change in the methods they follow in their business dealings with Indians. There is, for example, growing criticism of the Ottawa Agreements in India, and it is particularly important that the Governor-General should not deny the legitimate claims of Indian industry for revision of those Agreements.

As self-government in India increases, there will be increasingly few Englishmen in Government service, and apart from this and military service the Englishman's only *raison d'être* in India is that of the trader. The British were trading in India for 150 years before they began Empire building, and their campaign of conquest was promoted mainly to secure trade. Yet from the period of conquest the commercial community has been strangled by a social inferiority complex. The military and civil authorities became a superior caste in a system of snobbery which has distracted the business man from his real job of trading and doing business. This attitude tends only too frequently to poison the business relations between many English firms and their Indian customers, and the gulf between them has been widened by the superior Englishman's refusal to learn the language, and to treat with the Indian on equal terms. This gulf is still widening with the increasing self-confidence of the Indian, and his realisation of the many jobs he can do as well as the Englishman.

Nearly all India's external communications—shipping, airways, cables and wireless—are in European hands, and the English are holding their own and giving good service. But whereas twenty years ago the bulk of the importing business was in the hands of big European, mainly British, merchant firms, to-day this business has largely been taken over by numerous small Indian merchants, who have profited by the decay of the old-time merchant; and with this change has vanished the goodwill of many a British manufacturer. British firms do only a fraction of the export trade, which is in the hands of Indian and Continental firms.

In internal activities, railways are now nearly all State-owned or controlled; road transport vehicles are supplied mainly by American firms which have developed a servicing system superior to that of British firms; banking is largely carried on by British banks which give excellent service; and mining and planting are still mainly in British hands. Some few British and foreign firms, most of them with world-wide organisations, have admitted the errors of the past, and have built up a selling and distributing organisation which maintains direct contact with its customers throughout India, and employs trained Indians in responsible positions. By their intelligence they have secured Indian goodwill and confidence, and have contributed greatly to the relief of Indian political agitation; for one of the most fertile sources of discontent and political unrest in India is the absence of suitable employment for the graduates of the Indian schools and universities.

The British have still a great part to play in India's development. But they can only play that part by relinquishing their old methods, learning to deal with Indians as equals in a common enterprise, and proving their competence and efficiency.

MOTORS AND MARKETS

In last week's *Economist* (pages 1129 to 1154) we published a detailed review of the scope, productive capacity, retail organisation and legal position of the British motor industry. We may usefully round off our Survey by examining the industry's international setting.

In this field, one country towers above all others. The possession of the largest and richest home market in the world and of Henry Ford, who first realised the possibilities of the application of mass-production methods, was responsible for the emergence of the United States as the leading producer before the Great War. The United States' lead increased during the war, when the factories of potential European competitors had been turned over to munitions and aircraft. Since the war the Western world has been rapidly "motorised." Industrialised countries fostered

domestic motor industries by tariffs, and, in this country, by a system of taxation which favoured the small car. But while they have reduced imports of American cars, manufacturers outside the United States have been unable to break the American quasi-monopoly of exports to non-producing countries.

The American position in the export trade was seriously shaken before the devaluation of the dollar in 1933, but a large part of the ground then lost has since been regained. Thanks to the scale of home demand, the position of the industry in the United States is such that no other country can compete under equal conditions with the cheap, high-powered American vehicle. The British industry leads in the manufacture of low-powered cars of a type for which there is no demand in America. These can only compete in the export markets where special factors operate in their favour, such as tariffs, the taxation system or the high price of petrol. The industry in this country has also specialised in high-powered luxury cars and "heavy-weight" lorries, but the relatively small demand for these prevents the adoption of mass-production methods. The Canadian factories are branches of the large companies in the United States, set up in order to supply the Canadian market without coming up against a tariff, and to obtain the benefit of preferential tariff rates in the British Empire. The other countries whose industries are sufficiently large to be a factor in the export trade are France, Italy and, since 1930, Germany. The manufacture, as distinct from the assembly, of motor vehicles implies a fairly high degree of industrialisation in a country; this excludes agricultural and raw material producing countries. On the other hand, profitable manufacture requires a large output. This stipulation excludes the smaller industrial countries, which produce only part of their own requirements and scarcely enter into the export trade.

The output of the six largest producing countries, since 1923, is shown in the following table:—

PRODUCTION OF MOTOR VEHICLES
(By Number)

Year	United Kingdom		U.S.A.		Canada	
	Private	Commercial	Private	Commercial	Private	Commercial
1923	71,396	23,804	3,625,989	407,279	127,976	19,226
1924	119,600	30,000	3,189,109	416,097	114,537	18,043

1934	164,000	25,000	147,330	27,328	41,056	4,495

In deference to the trend towards economic nationalism, the leading American manufacturers have settled as producers first in Canada, and later in the United Kingdom and Germany. In addition, they have established assembly plants in Belgium, Japan, Australia, Denmark, Argentina and elsewhere. The only British firm producing cars abroad is Austin, which has interests in the United States, France and Germany. The usual method of distribution in the export markets is the establishment of a branch office or subsidiary distributing company with

EXPORT

The Documentary Credit, whereby the Exporter is assured that he will receive payment immediately his goods are shipped for transit abroad, is the subject-matter of *A Brief Survey of the Financial Machinery of Exports and Imports*, copies of which may be had by asking at any local branch of the Westminster Bank

WESTMINSTER BANK LIMITED
41 LOTHBURY, LONDON, E.C.2

power to appoint and control agents, each with a territorial monopoly, working on a commission basis. The branch office normally operates a depot carrying a stock of vehicles and parts, and a service station to undertake repairs. If business grows sufficiently, the branch may develop into a factory undertaking assembly work. On the whole, it has been found unsatisfactory for an exporter to rely solely on an agent appointed for a foreign market with no branch office to control him. Many of the smaller manufacturers, however, have been compelled to adopt this practice by reason of the limited scale of their operations, and the larger concerns apply it in the less important markets.

The British industry has been slow in developing branches abroad on anything like an adequate scale. It has found the home market so profitable, in view of its rapid expansion in recent years, that it has tended to neglect the more difficult and less profitable export trade, although ultimately this is the direction in which the greatest potential growth of demand will be experienced. Many British manufacturers have been working at or near capacity during the busy months of the past two or three seasons, and would have found it very difficult, if not impossible, to execute export orders on the scale to which the American industry is accustomed. The full exploitation of the possibilities of the export markets by the British industry will probably have to await a setback to the rapidly increasing home demand. It is frequently claimed that the British system of horse-power taxation for private cars makes it very difficult to produce models suitable for the export trade. The 25 per cent. reduction in the horse-power tax this year, coupled with the increase in vehicle taxation in many markets, has partially—but only partially—removed this handicap.

Total exports of motor vehicles in recent years are set out below:—

EXPORTS OF MOTOR VEHICLES
(By Number)

Year	United Kingdom		U.S.A.		Canada	
	Private	Commercial	Private	Commercial	Private	Commercial
1923	4,556	1,898	131,901		70,220

Exports of motor vehicles have shown a tendency to expand somewhat rapidly in times of trade boom and to contract severely during the slump. This tendency is probably inherent in the industry. A customer usually buys a new car when the margin between his income and his normal expenditure widens, and postpones purchase when the margin narrows. It is noteworthy, however, that the brunt of the slump in exports in 1931-32 was borne by the Americans. This may be ascribed to the fact that their home market gave way to a far greater extent than the more stable home markets of the European manufacturers. The collapse of domestic demand in the United States caused a sudden increase in the burden of overheads per unit, thereby putting American export prices out of alignment. The position remained unchanged until the devaluation of the dollar and the recovery of the American home market in 1933. The chief obstacles met by the Americans in their new drive to capture the export trade have been threefold. They include the tariff advantages secured by British and French manufacturers in their empire markets; the tendency to use trade agreements between manufacturing and agricultural countries, such as the Anglo-Danish and German-Polish agreements, as a means of increasing motor exports; and the world-wide attempt to fill empty Treasuries and balance budgets by increasing motor vehicle and petrol taxation, which renders the American vehicle more expensive to run than the smaller European product.

CLEAN MILK FOR ALL

(BY A CORRESPONDENT)

THERE are few slogans which deserve wider currency and popularity than the "Drink More Milk" of the Milk Marketing Board. If every member of the population, rich and poor, were willing and able to act upon it we should have a healthier and happier nation. Criticism of the Board's contribution to this very desirable end has hitherto turned mainly on its price policy, which has tended to maintain the cost of liquid milk to the consumer and to divert to manufacturing processes the greater part of the considerable increase in total production since the Board came into being. There is another matter, however, of which little has been heard, but whose importance is equally fundamental. Are our milk supplies not only as abundant and cheap, but also as pure, as they might be?

The list of diseases which may be spread by bacteria carried in unclean milk is distressingly lengthy. It includes not only tuberculosis, but also undulant fever, septic sore throat, diphtheria, typhoid, paratyphoid and scarlet fever—to mention but a few. The consumer would be reassured if those in authority were able conclusively to show that his milk supplies, thanks to unremitting public vigilance, were beyond reasonable reproach. The opposite, unfortunately, appears to be the case. Lord Horder has declared that "we have positive evidence . . . that . . . milk in general . . . cannot be trusted." Lord Moynihan has estimated that 59 per cent. of cases of glandular enlargement and 35 per cent. of bone and joint diseases in England and Wales are due to the drinking of contaminated milk, the corresponding proportions for Scotland being 90 per cent. and 60 per cent. Sample surveys made in different parts of the country have elicited the disturbing suggestion that from 2 per cent. to 13 per cent. of the raw milk supplied

(with an average of 6.7 per cent.) contains tubercle bacilli. After twenty years' efforts by the Ministries of Agriculture and of Health, it is estimated that at least 40 per cent. of a British cattle population of nearly 8 millions is still infected with bovine tuberculosis. These facts are certainly disturbing. How can the problem be most effectively tackled? There are three separate lines of approach, all of which must be utilised if satisfactory results are to be achieved. The first, and simplest, is the prohibition of deliberate adulteration of milk. This is a matter of strict inspection, backed by drastic penalties. The second is the effective treatment of raw milk to destroy the bacteria of disease. The third is the eradication of tubercular cattle.

It has now been conclusively proved that the process of pasteurisation, properly carried out, kills the bacteria of milk-borne diseases. In Toronto, where the whole supply is pasteurised, there has been no single death from bovine tuberculosis in the last ten years. In Great Britain, however, there has been a futile controversy over the slight loss of nutritive value involved in the process. As a result, even in London (where conditions are better than in certain other parts of the country) nearly 10 per cent. of liquid milk supplies have neither been pasteurised nor obtained from tuberculin-free herds. In New York City, on the other hand, since 1931, 100 per cent. of milk is subject to one or other of these conditions.

Compulsory pasteurisation, however, would not eliminate the trouble at its source. Bovine tuberculosis is a wasting disease which steadily diminishes the stamina, condition and productive usefulness of the animals affected by it, and reduces both their milk yield and their effective milking life. The average milking life of a dairy cow, in an ordinary herd, is about 4½ years; in a disease-free herd, however, it is nearly 9 years. The Economic Advisory Council has estimated that £3,000,000 sterling is lost annually by curtailment of productive life, some £2½ millions of which represents the cost of maintaining herds at full strength. The loss extends to the meat market, as well as the milk market. Of the total beef condemned as unfit for human consumption, from 80 to 90 per cent. is infected with tuberculosis. Some 50 per cent. of tuberculosis in pigs is of bovine origin.

The present method of dealing with disease in British cattle is to trace back to its source every sample of milk which has been found to contain tubercle bacilli. The offending beast is slaughtered, and the farmer given compensation. There are two objections, however, to this procedure. It is effective only after appreciable damage may have been done; and it does nothing to encourage the farmer to remove from his herd the much greater number of cattle already infected but not yet giving contaminated milk. Outright slaughter of infected cattle, highly successful though it has proved in the United States, must be ruled out as impracticable in this country, where the proportion of diseased cattle is very much higher. It would cost something over £25 millions, produce a milk famine, and ruin the farmers for want of adequate compensation. The only practical policy would seem to be to prevent the spread of tuberculosis from diseased to healthy cattle, to encourage the latter's natural increase and to slaughter diseased beasts as fast as they can be replaced. Prophylactic vaccination has been suggested as a possible expedient, but is still in the experimental stage, and has not met with great favour from the authorities in Great Britain.

On the whole, the segregation of healthy from diseased cattle, successfully adopted in Denmark, may be the most practicable policy for Great Britain. Under the Attested Herds scheme, a bonus of 1d. per gallon of milk produced is allowed to owners of herds which have been registered as free from tuberculosis, but that does not carry matters very far. On August 31, 1935, there were only 60 such herds in Great Britain, and, since the scheme is voluntary, future progress will be extremely slow.

It may be suggested that segregation of all cattle reacting to the tuberculin test should be made compulsory. All cattle should have a regular clinical examination at least four times, and a tuberculin test twice a year; and the provisions of the Milk and Dairies Order of 1926, designed to secure cleanliness of cowsheds, dairies and attendants, should be strictly enforced. In this way self-supporting, clean herds would be built up, helped by the addition of

properly protected calves taken away from infected cattle at birth; and reacting cattle could be slaughtered as fast as the clean herds developed. During the progress of this long-term plan, all milk sold, in the large cities at least, should be compulsorily pasteurised whenever it had not been certified as having come from tuberculin-free cattle.

It may be objected that these proposals would be costly. But as the average milking life of healthy cattle is twice that of tubercular cattle, and their annual yield considerably larger, there would be a credit as well as a debit side to the balance sheet. Further, the industry would have an important set-off to the present annual additional cost (esti-

mated at about £2½ millions) of keeping herds up to full strength. The farmers, however, clearly could not bear the initial cost of segregation, and there might be a strong case for the provision by the Government of long-term loans on generous terms. In this way the whole problem could be solved, at the outside, in fifteen years. So far, thirty years of inquiry have produced little beyond official reports and apologies. Should the authorities be ruthless in order to eradicate disease and save life? It may be urged that the Government could find no better outlet for its energies than the cleaning up of the milk supply, and no better time to begin than the present.

NOTES OF THE WEEK

The Debate on the Address.—Two Opposition amendments to the Address were moved this week, one by the Labour Party and the other by the Liberals. The Labour Amendment deplored the "failure of the Government" to provide for "the removal of the economic causes of war" and "to recognise the need to plan the economic life of the country on the basis of public ownership in order to abolish poverty in the midst of plenty." Though necessarily concerned with generalities, the debate on this motion was distinctly more lively and illuminating than similar discussions in the last Parliament. Mr Attlee not merely complained that the Government had no policy for curing "permanent unemployment," but pointed out that the share of the wage-earners in the national income had not risen at all during the last 25 years. Mr Herbert Morrison, in a vigorous speech, said less than might have been expected about "planning" and more about "parasitic elements of society who are now living upon the productive labour of the workers by hand and by brain." "That," he said, "is what the fight is about." He also expressed his "enormous admiration for the political capacity of the British people." Sir Thomas Inskip, in reply, avoided generalities, but vouchsafed to the House the interesting information that the "unification" of mining royalties means "the purchase of these royalties by the State and thereafter their control by the State." "It would involve," he added, "a change of ownership and direction of something like 4,000 private persons to a single public ownership and control by the State in the interests of the community." So the royalties are to be nationalised at last. The Liberal Amendment urged "international co-operation for the progressive reduction of obstacles to trade" as well as a "comprehensive policy of national development." Mr Graham White argued that the British Empire was not using the full power of its enormous market to break down the world's trade barriers. Sir Kingsley Wood replied by citing the increases in the last few years in trade between Great Britain and those countries with which trade agreements have been signed. He did not observe that those countries are in most cases members of the sterling area, and that our trade with all such countries is increasing. Nor did he compare the value of our total foreign trade to-day with its value in 1929—a subject over which the Government still likes to draw a decent veil of reticence.

Submarines and Destroyers.—At the formal opening of the Naval Conference on Monday, Mr Baldwin was able to announce that France and Italy had now accepted the rules against unrestricted submarine warfare which have already been accepted by the United States, Japan and this country under the London Naval Treaty of 1930. So far, so good. The Conference has now gone into committee on the formidable question of quantitative limitation. The crux here is the Japanese demand for parity, under the euphemistic periphrasis of "a common upper limit," on the ground that this is the necessary basis for "equality of security." No one, of course, will deny that "equality of security" is the just solution of the problem; but the British Admiralty has always contended against the American, and the French Admiralty against the Italian, that "mathematical parity" does not produce equality of security as between

navies handicapped by a different amount of commitments, in the form of costliness or merchant shipping routes that have to be defended; or alternatively between navies which are assisted by a different tactical situation in the shape of naval bases or interior lines. On a ratio of approximately 3:5:5, Japan is already in a position to defy a combined attack of the British and American navies in her own waters. This means that she has Hongkong and Shanghai and the Philippines, as well as the coastal districts of China and the Soviet Union, at her mercy. "A common upper limit" would give Japan such a preponderance of naval force in her home waters that she would have a large surplus to spare for taking the offensive in the direction of Indonesia and Australasia. Japan, again, desires a drastic qualitative limitation of the size of warships and the calibre of their armaments; and on this point every taxpayer in every country concerned will be heartily with her. Yet from the point of view of the other countries this looks like a proposal from the poorest of the naval Powers that she should be allowed to have the strategic preponderance, which a mathematical parity will give her, at a price which is comfortably within her means. The Americans will assuredly retort that if they are to maintain the 5:3 ratio against Japan which Japan has now repudiated, they can only achieve this, under the conditions which Japan herself has created, by building the largest possible number of ships of the most expensive kind, in the hope that bankruptcy may in the end bring Japan to reason. So far there is no indication how this threatened naval armaments race is to be averted. Meanwhile, in the House on Wednesday, the Parliamentary Secretary to the Admiralty announced that the flotilla leader and seven destroyers of the 1935 programme had already been ordered. Lord Stanley went on to say that it was proposed to order a further flotilla of seven destroyers and "some small vessels" as "additions to the 1935 programme . . . later in the financial year, after a Supplementary Estimate has been presented." This gratuitous and arbitrary increase in our current naval programme at the very opening of the Naval Conference seems inopportune and ill-timed, to say the least.

The Bombing of Dessie.—The Italian advance is now held up on all fronts (except the diplomatic), even before the main Abyssinian forces have come into action. On the Southern Front, General Graziani's troops are back at the line from which they started, while on the Northern Front Marshal Badoglio appears to be digging himself in and wiring his present lines. On this front, no further progress at all is reported south of Makalle, along what is the only practicable line of movement, on the ground, towards Dessie and Addis Ababa. The only fighting latterly reported on the Northern Front is in the wooded Tembien mountain massif, which projects, as a dangerous salient, between Makalle and Adowa. Italian progress in this rough country is proving slow and costly—though Tembien will seem as pleasant as the Pincio compared with the Semyen massif, which is the next obstacle that the Italians will stumble upon if and when they ever cross the River Takazze. A symptom of Italian discomfiture is the sudden outburst of bombing activity from the air against towns which are not only far behind the front but are also

apparently remote from the main concentrations of Abyssinian forces. In particular, the town of Dessie, where the Emperor has his headquarters, was bombed intensively on December 6th and 7th. In the first raid, when the inhabitants were taken by surprise, there were 53 killed and 200 injured among the civil population; and the Adventist Hospital was hit and partly destroyed. The attack on it can hardly have been unintentional, since the buildings were clearly marked with red crosses visible from the air, while the raiders' success in destroying two Imperial residences in Dessie shows that their aiming was accurate. The American and European doctors serving in the hospital have signed an emphatic protest against this barbarity—a protest which is pointed by the fact that among the persons wounded is one of the hospital nurses, an American national. The second raid on Dessie inflicted far fewer casualties, since the people were now forewarned. This Italian "frightfulness" in Abyssinia will not materially help to overcome the resistance of the victim of aggression; it will merely brand the aggressor with deeper infamy.

France Breathes Again.—After three days of heated and acrimonious debate on the future of the militant private "Ligues," the representatives of the Right-Wing Croix de Feu staged on Friday of last week, not the *coup d'état* prophesied by the Left, but a veritable *coup de théâtre*. The long debate had been forced on M. Laval, who wished to proceed first to discuss the 1936 Budget, by a whole series of interpellations, mostly emanating from the Radicals and Socialists. The Radicals, on whose undivided support M. Laval depends, had become more and more uneasy and suspicious over M. Laval's benevolent tolerance of the parades and demonstrations organised by the well-armed and well-disciplined Croix de Feu. And the Socialists and Communists were convinced, to a man, that M. Laval would not hesitate to deliver over Parliament, as well as the Third Republic, to a praetorian guard composed of all the Right-Wing "Ligues," whose political executive in a Rump Parliament would be constituted by M. Laval. The potent cry of the Left: "The Republic is in danger!" ruled the first two days' debates; the Right retorted by accusing the Left of responsibility for the *fracas* of February 6, 1934, and characterising them as *assassins*; and the Left rejoined by throwing responsibility for the Limoges affray in the teeth of the Right and, *a fortiori*, of the Croix de Feu. The atmosphere on Friday was electric, when M. Ybarnégary, Basque deputy of the Fédération républicaine (Right) for the Basses Pyrénées, member of the Croix de Feu, and a close friend of its leader, Colonel de la Rocque, mounted the tribune. After he had announced that the Croix de Feu had 712,000 members pledged to blind obedience, a stupefied Chamber heard him declare that in order to avoid the risks of social dissension and civil war, it would accept the "fundamental, essential solution"—namely, the complete disarmament of the "Ligues." M. Blum, the Socialist leader, at once rose and accepted this offer; and so did the Communist leader, M. Thorez. M. Laval immediately tabled three bills, the contents of which he had presumably discussed behind the scenes with the Radicals: one to prohibit para-military groups; a second prohibiting the carrying of arms or weapons at meetings; and a third inflicting dire penalties on any publication calculated to incite to murder. He obtained his vote of confidence by 351 votes to 219; but, even so, only 76 Radicals voted for him, while 53 voted against, and 20 abstained. Already by Saturday, and with greater force by the beginning of this week, the Radicals and those farther to the Left were asking whether the brave words of the previous Friday were likely to mean much in practice. And this scepticism was increased when they perceived to what lengths M. Laval's new-found confidence had led him in the "negotiations" with Signor Mussolini and Sir Samuel Hoare. Thus, France and her Premier are breathing again, but there is a certain fitfulness in their respiration.

Britain and Egypt.—In his speech in the House of Commons on December 5th, the Foreign Secretary did his best—as we hope, with some measure of success—to repair the political damage done by his previous references

to Anglo-Egyptian relations at the Guildhall. On the British Government's behalf, he emphatically disclaimed any intention to dictate to the Egyptians on domestic constitutional issues, or even to offer them unsolicited advice in this domain. On the subject of Anglo-Egyptian relations, Sir Samuel Hoare stated that H.M. Government look forward to the establishment of these relations on a permanent footing satisfactory to both countries. He added that, although the Government remained unwilling to negotiate an Anglo-Egyptian settlement until the present international crisis had abated, this was not a cloak for any unavowed intention of putting the negotiations off "to a dim and distant future." Unhappily, the week-end at Cairo has been marked by further disorders in which the lead has been taken by students—under incitement, it is alleged, from the Wafd. At the same time, the political consolidation in Egypt, which is a necessary preliminary to fresh Anglo-Egyptian negotiations, seems to have come suddenly into being. At an interview which he had on the 9th with the British High Commissioner, Nessim Pasha is believed to have urged that, in the domestic field, the right course is to reintroduce the constitution of 1923, with or without amendment. By Wednesday the Wafdist, Liberal and Shaab leaders were in agreement on a joint demand for the 1923 constitution and the 1930 draft Anglo-Egyptian Treaty which formed the basis of the discussions between Nahas Pasha and Mr Arthur Henderson. If, however, they are satisfied of Britain's good faith, they will be willing to agree to postpone the coming into effect of the treaty until the present international crisis is over. Finally, on Thursday, after Nessim Pasha had been informed at the Residency that H.M. Government would raise no objection, King Fuad signed the proclamation restoring the Constitution of 1923. This step will restore constitutional government in Egypt without the serious delay which the drafting of a new constitution would assuredly entail. It is a good sign that the Wafd have abandoned, for the moment, their claim to be the exclusive representatives of the people and have joined with the Mahmud Liberals and Sidky Shaabists to form a Nationalist united front. If a genuinely representative Egyptian Government could be formed, that would contribute more than anything else to give a propitious start to Egypt's new-found independence.

"Autonomy" in North China.—The Japanese manoeuvres in North China resulted last Sunday in the erection of an "autonomous" Government in two out of the five Chinese provinces on which the Japanese, for the present, have their eye. And we may soon expect to see Shantung, Shansi and Suiyuan go the way of Hopei and Chahar. The newly-formed "Political Council" of Hopei and Chahar is to be nominally in the same relation to the Chinese Central Government as the genuinely autonomous South-West Council in Canton. But the parallel goes no further than the name. For the autonomy of Canton is *bona fide*—however damaging it may be to China's national strength; whereas all the world knows that none of the Northern Provinces would have thrown itself into the Japanese lions' den if it had not been dragged there by the scruff of the neck. The Japanese method has been to warn the Chinese Central Government to hold off their troops, and then to send into the ravished provinces whatever number of Japanese troops may be necessary for overcoming the resistance of the local Chinese authorities. Meanwhile, the Japanese blandly continue to assert that the "autonomy movement" is spontaneous; and they deny that their own action is a violation of the Washington Nine-Power Treaty, under which Japan has pledged herself, along with the rest of us, to respect the territorial and administrative integrity of China. The Japanese troops, they maintain, have the right of *entrée* into Hopei under the Boxer Protocols and the Tangku Armistice Agreements. And they will doubtless go on to tell us that the coincidence of the declaration of autonomy with the appearance of Japanese troops on the scene has been purely fortuitous. Meanwhile, a rather long silence at Washington about Far Eastern affairs was broken on December 5th by a statement from the mouth of the American Secretary of State himself. What Mr Hull said on this occasion has a double importance in virtue of the date of utterance on the

eve of the London Naval Conference, and also in virtue of the studiously moderate tone in which the existence of American interests in North China was re-affirmed, and the United States Government's interest in the observance of treaty obligations was re-asserted. Far-sighted Japanese should take warning from this official American statement; for assuredly it means that, however long a rope the Japanese may have, they will be pulled up short one day if they try to draw out American patience *ad infinitum*.

A Revised Austrian Budget.—News of considerable importance from Vienna has gone almost unnoticed. The 1936 Austrian Federal Budget will not enjoy the same resources and sources of revenue which enabled the deficit of 230.9 million schillings in 1934 (audited figures) to be covered, and which will enable the deficit for the current year, estimated at 79 millions, to be met. These resources were mainly new loans, foreign and internal, both at long- and short-term, and the freely available cash balances of the Treasury. By the end of last year, as M. Rost van Tonningen, the League Representative in Austria, points out in his Third Quarterly Report this year, the Treasury's available cash balances had fallen to 24 million schillings, against 119.5 millions at the end of 1930; and recourse to borrowing, either on foreign centres or on the internal market, would be extremely hazardous in 1936. The total of Austria's funded debt has risen from 2,360.6 million schillings at the end of 1930 to an estimated total of 3,586.5 millions at the end of this year. Of the increase, 215.5 million schillings is the new debt to foreign creditors of the Creditanstalt, and 523.2 millions is the increase in the internal debt to the National Bank, necessitated by the Bank's taking-over of Creditanstalt liabilities. The new Finance Minister, Dr. Draxler, who replaced Dr. Buresch only a few weeks ago, was therefore faced with the imperative necessity of revising the former Budget estimates so as to obliterate, as far as was humanly possible, the recurrent budgetary deficit, and so to avoid recourse to borrowing. To this end he has obtained Cabinet approval for a revised Budget which contains several new and important features. First, the practice of appending "extraordinary budgets" is altered. In 1934, 110.97 million schillings were spent under this head; and in the first ten months of 1935, 99.54 millions were spent on small-holdings, land reclamation, roads (31.19 millions), railway electrification (26.21 millions), etc. Accordingly, Dr. Draxler has included expenditure of 26.0 million schillings on public works in the ordinary Budget, to be met from revenue. Secondly, Dr. Draxler has recognised the danger of optimistic revenue estimates, and has budgeted for a drop in revenue from tobacco and Customs of 27.0 million schillings. With the 26.0 millions for public works now added to the ordinary Budget, he has thus to cover a deficit of 53.0 millions, which he proposes to do by economising in the "allowances" (not salaries) of certain civil servants and the expenditure of most Ministries, to the tune of 55.0 millions. Even so, expenditure of 36.0 millions on the productive State undertakings—e.g. tobacco monopoly, railways—will have to be financed by credits; so that, while no budgetary deficit emerges on paper for 1936, some credits have still to be found. Moreover, no appropriation is yet made in the Budget for the foreign creditors of the Creditanstalt. Dr. Draxler has, however, proceeded boldly and energetically to cut Austria's financial coat according to her diminishing supplies of cloth; and he has been able to carry the Austrian Cabinet with him—no mean feat, when one considers the divergent interests represented in that Cabinet.

Church and State in Germany.—While Germany is for the moment comfortably out of the limelight in the international arena, the grinding pressure of State upon Church continues within the frontiers of the Reich. The present Minister for Church Affairs, Herr Kerrl, has now run up against the insurmountable obstacle that baffled Reichsbishop Müller. The Protestant Church organisations which he sets up with his own hands remain hopelessly anæmic and unrepresentative, while the life-blood of German Protestantism continues to flow in the veins of the Confessional Movement. The Nazi Ecclesiastical Dictator

Family provision scheme

A scheme to secure a Capital Sum payable at death and a regular income over a period of years for dependants in the event of early death, at a cost which is little more than that of ordinary life assurance. It is readily adaptable, and rates will be quoted on application for policies to suit the needs of each individual.

seems now to be bending all his energies to destroying the free German Protestant Church, as a compensation for his failure artificially to manufacture a tame one. On December 4th his ordinances were defied by the Provincial Berlin and Brandenburg Synod of the Prussian Confessional Church. The Synod met at Dahlem, and was visited, but not molested, by the Secret Police. The latter, however, conveyed a warning to the Synod leaders that, if they continued to disregard Herr Kerrl's veto upon the Synod's activity, they would render themselves liable to charges of high treason, for which the maximum penalty in the Third Reich is death. Dr. Jacobi and Dr. Scharf are reported to have replied that the Author of the Christian faith was put to death on the same charges; and that they were merely doing their duty as Christians in ignoring Herr Kerrl's orders. Meanwhile, in Silesia, Bishop Zäuber has had his salary impounded by Herr Kerrl, and is to be subjected to disciplinary proceedings for having disregarded an order to cancel an examination which he was holding for theological students. This high-handed action on the Ecclesiastical Dictator's part seems to have evoked protests even from some of his own tame supporters. The truth is that the Official Protestant Church organisation which Herr Kerrl has set up is a mere façade which no longer even screens the Dictator's personal action. There is still a mild wing of the Confessional Movement, led by Bishop Marahrens of Hanover, which is attempting to co-operate with Herr Kerrl's organisation; but the indications are that the naked force which Herr Kerrl is using—and is bound to use if he means to suppress the Confessional Movement—will sooner or later induce every self-respecting German Protestant, however great a peace lover he may be, to rally behind the Confessional leaders.

Italy's Persian Oil Imports.—Quite apart from the question whether it is in accordance with Article XVI of the League for a British company to supply an aggressor State with oil, a curious dispute has arisen over the facts. How much oil has the Anglo-Iranian (Anglo-Persian) Company been selling to Italy this year? In last week's Parliamentary debate on foreign affairs, Dr. Dalton quoted "figures from an Italian source" to show that imports of oil from Persia into Italy in the first seven months of 1935 were 80 per cent. greater than in the same period of 1934. Sir Samuel Hoare stated in reply that "the quantities of oil shipped by the Anglo-Iranian Oil Company to Italy have, in fact, during the first 11 months of this year . . . been considerably less than the amount exported to Italy during the corresponding period of 1934." Sir Samuel did not specify the source of his information. The only published official figures available on the subject are the Italian trade returns, which appear to support Dr. Dalton's statement. During the first half of this year, in fact, they record an increase of approximately 90 per cent. (by volume). This was admitted in a written answer given by Captain Crookshank on Wednesday of this week to a question asked in the House. Captain Crookshank was mistaken, however, in stating that the figures for January-

June in the Italian trade returns are the "latest available." Figures up to the end of August are available, and are as follows:—

IMPORTS OF MINERAL OILS INTO ITALY IN THE FIRST EIGHT MONTHS		
	1934	1935
	Quintals	Quintals
Total imports	11,664,032	13,375,892
Imports from Persia	1,175,738	1,834,930

The increase in total imports was thus 14.6 per cent., and in imports from Persia 56.3 per cent. There has clearly been some falling off in the rate of imports from Persia since June; but despite this there is at least an apparent discrepancy between the Italian trade returns and Sir Samuel Hoare's statement. The Italian figures relate to imports into Italy and exclude oil for use in ships or in the Colonies. It has been suggested, in explanation of the discrepancy, that Sir Samuel Hoare's figures cover *all* sales of oil by the Anglo-Iranian Company both to Italy and to the Colonies direct. If so, the implication would be that exports of Persian oil for use in ships and in Italian colonies have fallen off enormously in 1935 compared with 1934. This seems, on the face of it, most unlikely. In a further written reply to a question asking for figures substantiating Sir Samuel Hoare's statement, Captain Crookshank stated that "it is not usual to disclose detailed figures relative to the commercial transactions of an individual concern." Doubtless this is true. But the Government holds shares in the company; and the public will in any case feel some anxiety about the whole matter, unless either the Government or the company are able to publish fuller information.

Rising Tin Quotas.—The International Tin Committee, on Friday of last week, decided that production quotas for the first quarter of 1936 should be fixed at 90 per cent. of the standard tonnages. The Committee thus remains faithful to the more liberal policy which it espoused last summer. A year ago production was running at only 40 per cent. of the standard tonnages. By July, 1935, the quotas had been raised, in two instalments, to 50 per cent., and further increases, to 65 and 70 per cent., respectively, were made on August 10th and October 3rd—in each case with retrospective effect from July 1st. Finally, the quotas were raised to 80 per cent. on October 22nd, with retrospective effect from October 1st. Notwithstanding the rising trend of production, total visible supplies fell, according to Messrs A. Strauss and Company, from 19,696 tons at the end of February to 11,635 tons on September 30th. Although the total rose to 15,199 tons on November 30th, the movement was insufficient to relieve the stringent position on the London market, which continues to be reflected in the abnormal spread between "spot" and three-months' quotations. Last Friday's decision, though somewhat unexpected, had little effect on the market. Moreover, although prices have shown an easier tendency this week, the "backwardation" has been practically unchanged at around £10 15s. per ton.

Employment in November.—Changes in the employment situation during the past month were mainly seasonal. There was a marked decline in unemployment in the coal-mining and cotton industries, and a considerable increase in building, tailoring and hotel and boarding-house services. These changes were reflected in increased unemployment throughout the South of England and in Scotland, with improvement in the Midlands and the North:—

INSURED PERSONS UNEMPLOYED IN GREAT BRITAIN			
	Nov. 26, 1934	Oct. 21, 1935	Nov. 25, 1935
Coal mining	250,856	219,043	190,027
Iron and steel manufacture	43,300	35,657	33,659
Engineering	97,322	79,802	76,928
Shipbuilding	70,102	62,187	57,630
Motor vehicles, cycles and aircraft	23,231	21,017	22,415
Cotton	101,379	84,907	77,279
Woolen and worsted	30,141	18,121	17,948
Boot and shoe	21,109	16,437	16,035
Tailoring	32,177	24,592	30,085
Building	177,585	142,315	159,571
Shipping service	49,363	41,816	43,888
Hotel and boarding house service	76,294	73,627	78,736
Distributive trades	217,778	212,306	211,684
All persons on registers	2,120,785	1,916,390	1,918,562

Iron and steel manufacturing, engineering and shipbuilding showed a continued and more than seasonal improvement, some part of which is probably attributable to Government expenditure. The distributive trades, and the wool textile and motor industries, however, failed to record the increased activity expected at this period of the year. There was a welcome decrease of over 5,000 during the month in the number of juveniles unemployed. The total number of persons on the registers of Employment Exchanges on November 25—some 1,918,562—consisted of 1,617,237 wholly unemployed, 221,443 temporarily stopped and 79,882 classed as "normally in casual employment." The Minister of Labour estimates the number of insured persons aged 16-64 in employment at that date as 10,537,000. This is an increase of 315,000 compared with a year ago and of 45,000 compared with October. This latter increase, however, largely reflects a reduction in the number of workpeople involved in industrial disputes. As these have been mainly in the coal industry, it follows that *actual* employment in that industry has improved more than might be inferred from the above table, which does not itself include workers directly involved in disputes.

Consumption of British Coal.—The analysis of consumption of British coal in 1934 published in the fourteenth report of the Secretary for Mines* comes opportunely at a moment when the wage-paying capacity of the industry is a matter of bitter controversy. The figures show a substantial increase in home consumption, but significantly little improvement in foreign sales:—

USES OF COAL PRODUCED IN GREAT BRITAIN (In million tons)					
	1913	1929	1932	1933	1934
<i>Home Consumption</i>					
Gas works (excluding the coal equivalent of gas coke exported).....	16.7	16.75	16.37	16.16	16.66
Electricity generating stations belonging to authorised undertakings and tramway and railway companies.....	4.9	9.84	9.81	10.33	11.17
Railway companies (for locomotive use).....	13.2	13.41	11.70	11.67	12.17
Vessels engaged in coastwise trade (bunkers).....	1.9	1.37	1.19	1.21	1.26
Iron works (blast furnaces).....	21.2	14.51	6.53	7.37	10.40†
Other iron and steel works.....	10.2	8.92	5.16	5.92	6.81†
Collieries (engine fuel).....	18.0	13.69	12.04	11.59	11.68
General manufactures and all other purposes (including domestic use).....	97.7	95.01	86.70	84.12	91.33
Total.....	183.8	173.50	149.50	148.37	161.48
Shipped abroad	98.34	82.15	57.15	56.68	57.09

Home consumption in 1934 was only 7 per cent. lower than in 1929. But shipments abroad (including consumption by steamers engaged in foreign trade) were over 30 per cent. less than in the pre-crisis year and were no higher than in the trough of the depression. But this general contraction of exports covers a very varied experience in different markets. Whereas exports to the gold standard countries—France, Belgium, the Netherlands, Germany, Italy and Switzerland—fell between 1929 and 1934 approximately from 33 to 18 million tons, sales to countries with which we have made trade agreements affecting coal rose from under 11 to over 12 million tons. The proportion of total exports of coal going to these two groups of countries changed respectively during this five years from 55 to 45 per cent. and from 17 to 31 per cent. Compared with 1933, the main change in the distribution of home consumption is the increased proportion of coal taken by iron and steel works (from 9.0 to 10.7 per cent.). This, however, is much below the considerably higher percentage of 13.5 in 1929. This fall has been accompanied by an increase in the proportion of coal consumed by gas and electricity works from 15.4 to 17.2 per cent. As the table shows, electricity generating stations are the only single group of coal-users whose actual consumption of coal in 1934 was higher than in 1929. It is, unfortunately, impossible to analyse the increased consumption under the last general heading, which includes 56.6 per cent. of the whole, and no figures of domestic consumption in Great Britain are available. This is the more regrettable since

* H.M. Stationery Office. 246 pages. 3s. 6d. net.

general manufacturers and domestic consumers are most likely to provide expanding markets for fuel in the future; and it is in these markets that the competition of rival types of fuel will be most formidable.

Shipowners' Fuel Costs.—Some of the recent improvement in tramp shipping earnings may now be affected by the threat of increased prices for bunker coal and oil. At a time when next year's coal contracts are under consideration, the coal trade is in a state of great uncertainty. Even if a coal stoppage is averted, the projected establishment of central selling agencies is likely to be accompanied by efforts to increase the price of supplies for various purposes, including bunkers. Doubtless merchants and coal depot proprietors will, as usual, be prepared to take part of the risk, but they can scarcely be expected to bind themselves to supply coal at fixed figures if the market is liable to move against them. It is expected that an increase will be made on current contract rates, regu-

lated by a system of rebates, which can be raised or lowered according to contemporary conditions. Oil suppliers are also in process of securing an advance on contract rates. Oil-engined ships are increasing steadily, and prices have long been claimed by the oil companies to be unremunerative.

The State of Ireland—a Correction.—There were certain inaccuracies and misprints in two of the tables in the article on "The State of Ireland" printed on page 1117 of last week's *Economist*. In the table on the Irish Free State Budget, the item of "Other Revenue" for the year 1933-34 was given as £8,822,000. This should have been £8,820,000. In the table giving figures of the Irish National Debt and Capital Assets, the item "Other Debt" was given for the years 1932 and 1933 as £2,380,000 and £8,497,000, respectively. The figures should have been £4,380,000 and £3,497,000, respectively. These errors were corrected in later editions of the *Economist*.

UNITED STATES

FURTHER RISE IN PRODUCTION

THE business indices of the Federal Reserve Board not only show that the index of production is at a new high record for the year, but at a figure not touched in five years, except for the single month of July, 1933. Secondly, although the seasonal summer recession was virtually absent in 1935, the upturn in the index since August is computed as almost 10 per cent. Thirdly, although the upturn is rather general, it appears mostly to be a reflection of unusual activity in the motor industry, which this year introduced its new models in November rather than in January.

BUSINESS INDICES OF THE FEDERAL RESERVE BOARD (1923-5 = 100)

	ADJUSTED FOR SEASONAL			
	Oct., 1934	Aug., 1935	Sept., 1935	Oct., 1935
Industrial production (total)	74	87	89	94
Manufactures	72	87	89	94
Minerals	81	81	87	92
Construction contracts (total)	31	38	43	46
Residential	12	24	25	25
All other	46	50	58	64
Factory employment	76.8	81.7	81.9	83.7
Factory payroll	61	69.6	72.1	75.1
Freight car loadings	57	60	62	64
Department store sales	73	79	81	77

The importance of the automobile industry in influencing these figures can be understood from the following table, which gives the components of the index of manufacturers:

	GROUP INDICES			
	Oct., 1934	Aug., 1935	Sept., 1935	Oct., 1935
Iron and steel	41	81	84	87
Textiles	89	104	106	112
Food products	107	76	78	83
Automobiles	41	64	50	89
Leather and shoes	85	103	102	102
Cement	46	44	47	52
Petroleum refining	153	169	172	*
Tobacco manufacture	120	130	129	138

* Not available.

It will be noted that in October, 1935, residential construction and motor production were double the figures of October, 1934, and it is probable that motors are chiefly responsible for the jumps in factory employment and factory payrolls; although the effect of the doubling of residential building contracts on general employment was probably greater. In theory, the argument for the presentation of new automobile models in November rather than January was the equalisation of production through the year. On this hypothesis, there is force in the inference that high

production in the fourth quarter is "borrowed" from the output of the following year. The motor industry, however, seems confident that the demand for motors is so strong that the effects of this "borrowing," if any, will be imperceptible. Furthermore, many persons are persuaded that the payment of the Soldiers' Bonus will stimulate the demand for motor cars. The reason for expecting the payment of the Bonus is the proximity of the elections.

A "LITTLE N.R.A."

Just as the Processing Taxes, originally limited to seven "basic commodities," were of necessity extended to a numerous list of potential substitutes to afford "compensation," so the "little N.R.A." of the Guffey Act is moving in the direction of a compensatory control of oil, the chief competitor of coal. This seems to be the first item on the agenda of the conference called for December 9th by Major George L. Berry, who, as Industry Co-Ordinator, is the Administrator of the skeletonised N.R.A. It has been emphatically denied that this conference is called to consider the resurrection of N.R.A.; but the trend is in that general direction. The conference of December 9th will be largely attended, but it appears that some of the largest industries will be unrepresented, or only partially represented. The demand for and opposition to projects of national industrial co-ordination derive from the fact that economically, the United States is neither a federation of States, as conceived by the founders, nor a nation, as pictured by the Brain Trust, but a federation of rather definitely demarcated sections, distinguished by differences of climate, geography and even ethnic composition. The growth of sectionalism is one of the outstanding phenomena of recent years, and the fact that these sections are bound in a common monetary union and customs union, does not alter this fact of competition. Many of the major policies of the New Deal have sought to meet problems, which, in the British Commonwealth, for example, are adjusted through the medium of currency differentials and protective tariffs. The Guffey Act was intended to equalise competition between the Northern and Southern coal fields; this involves, in sequence, an equalising of competition between the Northern and Southern coal fields, and the South-western oil fields. The original N.R.A. attempted to equalise competition between the Northern and Southern textile areas; and the lapse of N.R.A. has revived the problem. The Processing Taxes are in theory a compensation to the South and to the Middle West for the supposed benefits of a protective tariff system alleged to benefit the industrial North East. Even the silver programme is in part a compensation to a region alleged to be receiving inadequate benefits from either agricultural subsidies or protective tariffs.

The date, December 1st, set for the registration of utility holding companies under the Act of last August, has passed, and out of an estimated total of 2,000 some 57 have registered and 309 have claimed exemption. Under the law, the unregistered companies are now technically outlawed, theoretically prohibited from engaging in any commerce crossing a State line, and even debarred from the use of the mails. This outlawing of a \$15,000 million industry is an unprecedented fact, and its sequences are uncertain. Cases will immediately appear in the courts, and about 50 companies have already filed suits. But if these cases take the usual course, it will be months before the legal status of the industry is determined.

UNEMPLOYMENT RELIEF

With December 1st, the Federal Emergency Relief Administration found itself able to announce the virtual completion of its programme. Some 1,500,000 of unemployables are stated to have been separated from the federal relief rolls and returned to local responsibility; while between 3,000,000 and 3,500,000 have been enrolled on federal work projects. This is a change in the situation rather than an answer to the problem. The local units are, in some instances, more than embarrassed by the resumption of the burden of the so-called unemployables; while many of the work relief projects are small temporary expedients.

On December 15th, the Treasury will offer approximately \$1,300 millions of two issues—a 12-year 2½ per cent. bond and a 5-year 1½ per cent. note. Of this total about \$400 millions is to retire a maturing issue of 2½ per cent. notes, and the remainder fresh money. With this issue, the direct Federal debt will exceed \$30,000 millions, exclusive of the guaranteed issues. This aggregate is almost exactly double the total of the federal debt at its post-war low point of June, 1930.

NEW YORK, December 2.

FRANCE

M. LAVAL WINS AGAIN

THE "Popular Front" had planned the overthrow of the Laval Cabinet. The first attack was made on its deflation policy; but this ended in two votes of confidence in the Government. The Opposition then concentrated on the Fascist "Leagues." The question was delicate. Every party was especially anxious to lay on others the responsibility for a rupture. Finally, agreement was reached to accept the suppression of the Leagues "as semi-military organisations." There was much surprise in some quarters at this remarkable gesture of "Sacred Union." It was not, however, entirely unexpected. The reluctance of the country to embark on monetary experiments and its fear of civil war, together with the inability of the Opposition to put forward an alternative programme, made M. Laval's task easier. He played his part, however, with no less than his usual dexterity.

It thus seems that the three Bills for the suppression of the Leagues, after being revised by the Senate, will be adopted. The discussion in the Senate has been postponed till next week. If the Bills are adopted, M. Laval will have outmanœuvred the Left Opposition as well as the Fascist Leagues.

As a result of these three votes of confidence the weakness of the franc and the *rentes* has disappeared. The crisis being over, M. Tannery, the Governor of the Bank of France, is to expound in Basel the policy which the position of the franc necessitates. Comparison of the recent returns of the Bank is illuminating:—

	October 30th	November 27th
(In million francs)		
Gold	71,989	66,190
Bills discounted	8,350	10,984
30 days' advances	370	1,090
Notes in circulation	83,306	82,447
Ratio	74.36%	69.94%

The gold losses in the past month were not as high as in June. They did not exceed 6,000 million francs. And this time only a few millions were for hoarding. Most of them were due to retention of foreign deposits and trans-

ferences into dollar assets for investment in Wall Street. The Bank had to remedy the fall in circulation resulting from the gold withdrawals by increasing its rediscounts and advances.

The next task of the Government will be to obtain a rapid vote on the Budget by a repetition of the expeditious procedure undertaken by the Doumergue Cabinet. It is also hoped that the Bank rate may soon be reduced in order to lower interest rates and to foster a rise in the *rentes*, and perhaps prepare for the issue of an important conversion loan; for the 15,000 million francs limit to the Treasury's borrowing from the Bank has been reached.

Dear money is one of the most serious features of the French situation. Whereas the charge for interest on the public debt in both the English and French Budgets covers about a third of total expenditure, the total indebtedness reaches 400,000 million francs in France (State and railways) and 600,000 million francs in England. So the English Treasury can borrow 22,000 million francs at 1½ or 2½ per cent., while the last French loan, which has just been issued, only succeeded in raising 2,500 million francs at 5 per cent. at an issue price of 95.

A REVIVAL OF BUSINESS?

The monthly figures just published by the Statistique Générale show a new rise in the general index of French industrial production at 95 in October, against 94 in September and 93 in August. These figures are as follows:—

	Oct., 1934	Aug., 1935	Sept., 1935	Oct., 1935
General index	94	93	94	95
Engineering	98	96	96	96
Iron and steel	79	79	80	79
Textiles	55	66	68	71
Mines	102	98	99	100
Building (adjusted figures)	77	66	68	67
Leather (" ")	85	93	92	91
Paper (" ")	133	127	121	117
Rubber (" ")	836	761	773	809
Motors (" ")	452	402	385	385

In the motor industry, 8,846 cars and 1,488 lorries have been put on the road, compared with 6,393 and 1,435 respectively in September. The figures for the cotton industry are as follows:—

	July, 1935	Aug., 1935	Sept., 1935	Oct., 1935
<i>Spinning</i> (average per spindle in kilograms):—				
Production	1-536	1-520	1-521	1-767
Deliveries	1-533	1-563	1-561	1-872
Stocks	2-117	2-041	1-997	1-984
Unfulfilled orders	4-353	4-160	4-196	4-814
<i>Weaving</i> (average per loom in pieces of 100 metres):—				
Production	4-69	4-58	4-94	5-46
Deliveries	4-75	5-17	4-85	6-44
Stocks	9-89	9-25	9-31	8-73
Unfulfilled orders	16-41	13-59	15-97	19-21

The seasonal increase in unemployment has not been as great this year as it was last autumn. The increase this year rose from 373,441 in September to 409,466 in November, against an increase last year from 323,000 to 369,000. Railway receipts for the latest week show a decline of 5.77 per cent. compared with 1934, against an average of 11.10 for the first 46 weeks of the year. Production of electricity in October exceeded 1,000 kw.h., against 932 in October, 1934. Colonial trade for the first nine months of the year has also increased, and is likely to ensure an expansion of French exports.

PARIS, December 12.

GERMANY

ANTI-SOCIALISTIC SOCIALISTS

DR. SCHACHT's defence of "Capitalism" in his speech of the preceding week seems to have aroused resentment among hunters of economic heresy belonging to the extremist Nazi factions. His speech had been diluted by a statement that the Nazi programme of "conquering capitalism" represented "a correct viewpoint"; but this mild generality failed to propitiate persons who disapproved of the Minister's very concrete defence of capitalistic invest-

ment. At Nuremberg Herr Hitler leaped into the breach, supporting the anti-capitalists in a curious and not entirely relevant way by praising with great emphasis the Railway Corporation as a model of applied Socialism. Herr Hitler did not imply that similar "Socialistic" schemes are under way. Indeed, just as Dr. Schacht, while defending capitalism in the concrete, rendered lip-service to its impending "conquest," so Herr Hitler, praising Socialism in the supposedly concrete form of the Reich's railways, paid a tribute to "the unlimited success of capitalistic economic development in the past century."

Ever since the Nazis attained power this controversy between the two economic *Weltanschauungen* has been conducted with great politeness, and with mutual concessions so substantial that they obliterate the underlying opposition. Persons who ignore the Nazi Party's dislike of intellectual refinements attribute the inconsistency to disingenuousness or sophistry. In reality it is impossible to formulate the opposition between Capitalism and Socialism as long as Socialism is not defined; and the Party which rejects all known brands of Socialism has no idea what its own Socialism is. In Germany it is therefore practicable, and is indeed necessary, to be pro-Capitalistic and Socialistic at the same time; and no wise man neglects to assert that he is both.

THE REICHSBANK REPUDIATES ITS NOTES

By a third administrative ordinance under the Foreign Exchange Law the import into Germany of Reichsbank notes has been prohibited and notes imported in breach of the regulation, with the exception of Rm. 30 henceforth allowed to travellers, have been declared invalid for internal payments, including the settlement of existing debts. This measure is a direct repudiation of part of the Reichsbank's note circulation. Though more drastically formulated than some earlier currency regulations, it does not constitute, as seems to have been wrongly assumed abroad, a first essay in repudiation. All blocked-mark accounts, the owners of which cannot draw out in Reichsbank notes or are only permitted to use marks for specific internal purposes, also in reality imply repudiation. The new measure of repudiation goes no further. The Reichsbank does not declare notes remaining abroad, or notes imported in violation of the prohibition, to be null; it indeed provides under certain conditions for the crediting of illegally imported marks to blocked accounts. In theory and in application the new repudiation therefore is identical with the old: the only change now made is to enlarge its sphere.

Reichsbank notes abroad have lately sold at 30 per cent., occasionally 40 per cent., below their fictitious gold parity. Their recent heavy depreciation, which directly regarded is a consequence of excess of supply over demand, resulted indirectly from the register-mark system. Travellers and tourists did not buy Reichsbank notes abroad, for they could obtain register-marks at a somewhat lower price. This reduced the demand. Traders and other persons within Germany, in particular foreign firms and residents who were not allowed to buy register-marks, naturally bought the heavily depreciated notes abroad instead of paying the forced exchange rate within Germany; and the Reichsbank lost a corresponding quantity of foreign exchange.

These transactions were legal. They attained very great dimensions; indeed, all persons acquainted with the legal position who had funds abroad bought mark-currency outside Germany. The relation of supply to demand, however, has been a mystery. It has been stated that at present there is only some Rm. 2 to Rm. 3 millions of notes abroad. But as there has been for months past a current import of great dimensions and simultaneously a current supply abroad exceeding the demand, it would seem that notes, despite the export-prohibition, have been going abroad without let or hindrance. According to official utterances, the export smugglers have been emigrants. In view of the severe punishments, almost always penal servitude, imposed for violation of the law, it is not likely that emigrants have lately risked the smuggling of large quantities. According to some accounts, the market has been fed from stocks of notes acquired years ago by Swiss and other foreign banks; according to other stories, which naturally cannot be proved, exports by privileged Nazis for

various purposes have been and are still the rule. Certainly some explanation other than the official one is required of the unfailing supply.

It is assumed that the import-prohibition will lead to heavy further depreciation of the notes. In the future, it would be highly profitable, and would in fact be legal, for the Reichsbank to buy up its own notes abroad for a song and force them on foreign traders and residents at the fictitious official exchange rate. That, however, is not the Reichsbank's motive for the new repudiation. The use of the depreciated notes injured Germany's balance of foreign payments. It led to payment for German goods and services at below their value; though in view of the German currency confusion the term "value" means nothing precise. Under the new regulations, the importer of notes or the receiver, while not formally expropriated, will have only the alternative of sending the notes back or of having them paid into a blocked-note account in a German bank. If he neglects to choose one alternative, the notes will be paid into a deposit account, naturally blocked (*Hinterlegungskonto*), with the Gold Discount Bank. These rules also apply to persons within Germany who accept imported notes if they know, or ought to have known, them to be imported; so that in future there will be two indistinguishable categories of circulating notes, of which one will be invalid as currency. In practice, it is officially declared, the payee will be required to reject notes only if the sum offered exceeds the Rm. 30 allowed to travellers and if at the same time he has reason to assume the notes to have been imported. There are many ways by which this regulation will be evaded. Notes imported in large quantities could be expended for separate payments of less than Rm. 30. It seems, therefore, that the import-prohibition will succeed only in so far as the customs and postal control is effective.

"NO QUESTION OF DEVALUATION"

The Reichsbank has just made the observation that of "devaluation of the mark there can be no question." In fact, devaluation, by which is meant formal or admitted devaluation, has become ever less necessary as the mark

THE CHARTERED BANK OF INDIA, AUSTRALIA AND CHINA

HEAD OFFICE: 38 BISHOPSGATE, LONDON, E.C.2

has been progressively transformed into an internal currency. The new import-prohibition completes the transformation. The devaluation of a currency assumes international validity; which the mark has not. In an address at Leipzig, the Gold Discount Bank director, Dr. Brinkmann, recently emphasised the almost complete independence of Germany's foreign trade from the fictitious or unknown value of the currency. For he admitted that, in general, only goods of which Germany has a virtual monopoly can now be exported without subsidy. Dr. Schacht has also returned to this subject. The substance of his latest speech is that the non-German world has ruined trade and industry by currency juggling and "autarky" measures; and that these evils arose out of the "despotic will of the victor-countries," and are, therefore, a consequence of the Peace Treaty. In accord with his view that Germany stands alone in support of free trade and the maintenance of a sound and stable currency, but in opposition to the Nazi Party's most important tenet, Dr. Schacht gave a glowingly favourable account of the world's economic development in the pre-war "Liberalistic" age. He praised "the principle of international division of labour," though he admitted that the division could be pushed too far if it made individual countries unduly dependent on particular foreign commodities. As illustration, Dr. Schacht referred to the relative lowness of unemployment (in particular in England) in the pre-war age of freer trade.

BERLIN, December 11.

BELGIUM

POLITICAL TRANQUILLITY

THE re-opening of Parliament took place amid a general calm, which a year ago could not have been hoped for. The Government will probably continue in office until the special powers given to it for a year expire in March. The main cause of the return of tranquillity is the economic recovery which has followed the devaluation of last March.

Internal disputes are still apparent in the political parties. Among the Catholics (Conservatives) there are opponents of the Government; these critics made the mistake of opposing devaluation; and their mistake still rankles. They quibble about the balancing of the Budget, and predict that after the present "temporary" recovery a new and painful regression will follow. Some of the Socialist Party's supporters, meanwhile, are growing impatient, since the leaders have promised certain radical reforms for many years. They advocated a plan for the complete reconstruction of the Belgian economy. The Socialists in the Government, however, have pursued a very prudent policy.

Though the improvement in the recent deplorable state of agriculture is entirely due to devaluation, the rural representatives in Parliament are insisting that industry is more protected than agriculture in Belgium; in fact, industry is not protected on the same scale as agriculture. The most important claim now made by agricultural deputies concerns the wheat subsidy. Last year this subsidy reached 20 francs per hundred kilos, and the Government decided to abolish it in view of the rise in prices. Rural deputies are also protesting against the reduction of the import duty on butter from 9 francs to 4.50 francs per kilo. The Government believes that advantage must be taken of the present rise in prices to adapt home to world prices so that the disequilibrium may not become permanent.

Banking control is the sole important financial measure taken by the Government since the conversion of the internal funded debt in May. The qualifications for the post of banking supervisor will be, first, a university training and, secondly, a practical experience of banking technique. The task of the supervisor will very likely consist not so much in the control of banking policy as in the checking of accounts.

Parliament is now studying the Budget. The following table compares last year's estimated expenditure with the figures for the present year.

	Estimates for Fiscal Year 1936	Percentage of Total Budget in 1935	1936
Public debt	2,345	31.2	25.0
Personnel expenditure	2,495	25.3	26.6
Material expenditure	758	7.2	8.1
Miscellaneous grants in aid	405	4.3	4.3
Crown and Parliament	45	0.5	0.5
Pensions, unemployed relief, etc.	1,672	15.2	17.9
War pensions	822	8.2	8.8
Pensions state agents	612	6.2	6.5
Reparations	213	1.9	2.3
Total	9,367	100	100

This total is increased to 10,402 million francs on account of the grant of 1,033 millions to the communes and provinces. The grand total exceeds that of 1935 by 400 millions. The actual expenditure for the fiscal year 1935, however, was greater than the estimates; so that the advance is apparent only. The increase of expenditure due to devaluation has been counterbalanced by the effects of the conversion of the public debt and the reduction of expenses for unemployed relief—both also resulting from devaluation.

RECOVERY CONTINUED

Economic recovery continues; and production and trade were very active in October. The production of electricity, previously 14 per cent. above 1934, was 17 per cent. above. Exports are also expanding and unemployment decreased in October; which is contrary to the usual seasonal movement. This position is the more satisfactory since it can no longer be ascribed to the Brussels Exhibition or to an influx of tourists.

Prices are again rising. The rise in retail prices since devaluation was 11 per cent. by the end of November. Analysis of the retail price index shows that devaluation has led to a rise of not more than $\frac{1}{2}$ per cent. per month. In future, fundamental world influences will naturally govern Belgian prices.

Wages have been fairly stable so far. The average increase of wage rates may be estimated at 3 per cent. since devaluation. Judging by disbursements for pensions premiums the aggregate of all wages paid is now 9 per cent. above that of a year ago. And since then the cost of living has only risen by 2 per cent.

LOUVAIN, December 1.

JAPAN

AN INCREASE IN FARMERS' INCOMES

THE National Policy Council reported on local finance, which is in even more straitened circumstances than national finance. The Council recommends a further increase in the contribution of the national Exchequer, but suggests consolidation of grants-in-aid of various kinds, an equitable division of financial resources between central and local authorities, and reduction and readjustment of the administrative responsibility according to local needs and resources. The Council also points out the necessity for checking the tendency of population and wealth to concentrate in urban districts and for encouraging rural industries in order to maintain a flourishing rural population. An *ad hoc* committee was recently appointed to inquire into and report upon measures to encourage the development and extension of industries ancillary to agriculture and of the various kinds of workshop and small factory industries to which land workers and their families can turn during the slack seasons in agriculture.

Crop conditions deteriorated during October as a result of the unfavourable weather in the ripening period. The second official forecasts placed the year's rice crop at far less than 58 million koku, or a decrease of about 5 per cent. upon the previous estimates. The actual yield of autumn cocoon was almost certainly far less than that officially forecast. High prices, however, more than offset reduced production. According to the *Tokyo Keizai Shimpō*, farmers' gross income in 1935 from the principal products—rice, wheat and cocoon—was approximately 1,313.6 million yen, or 349.5 million yen more than in 1934, and 257.3 million yen above the five years' average. As receipts from

these three staple products represent well over three-fourths of the total agricultural income, there has certainly been marked improvement in the farmer's financial condition. The following table gives a comparison of farmers' income from the three principal products since 1929:—

	Rice	Wheat	Cocoon	Total Income
1929	873.2	59.3	655.0	1,587.5
1930	671.2	55.1	304.2	1,030.5
1931	471.1	35.5	275.6	782.2
1932	688.3	45.8	296.8	1,030.9
1933	892.5	81.2	500.1	1,473.8
1934	670.7	89.6	203.8	964.1
1935	884.8	109.0	319.8	1,313.6

The foreign trade returns for October show an increase in exports of 34,810,000 yen (17.3 per cent.) compared with October last year. The advance was largely accounted for by raw silk (18,679,000 yen), while cotton piece-goods and a few other major exports disclosed decreases, big or small. Imports amounted to 175,812,000 yen, or 1,654,000 yen (0.9 per cent.) less than October, 1934. There was a decline of 12,709,000 yen in the value of raw cotton and of 3,557,000 yen in iron and steel, offset to a large extent by a rise in the value of beans, raw wool, oils and non-ferrous metals. The export surplus for the month was 60,493,000 yen, against 24,028,000 yen in October, 1934, and for the ten months ended October, 1935, 44,253,000 yen against an import surplus of 79,486,000 yen in 1934.

FURTHER RISE IN PRICES AND PRODUCTION

The recent trend in other home trade statistics continues. The Bank of Japan's index number of wholesale prices for October registered a further rise of 2.7 per cent. on the month, and is now 6.7 per cent. higher than a year ago. Out of fifty-six articles, forty-one participated in the advance. The aggregate value of all shares listed on the Tokyo Stock Exchange at the beginning of November show a slight decline of 18 million yen, or a little over $\frac{1}{2}$ per cent. against a month earlier. Output of cotton yarn in October totalled 117,050,000 lbs., an increase of 1,343,000 lbs. over September, and rayon yarn production during last month amounted to 17,909,000 lbs., or 418,000 lbs. more than in the preceding month.

The monetary trend has undergone noticeable changes in recent weeks. The latest Bank return shows that the note circulation expanded by 128.2 million yen as against a year ago, and advances increased by 109.5 million yen. Despite these movements, short loan rates have hardened; overnight loans are quoted as high as a fraction over 3 $\frac{1}{2}$ per cent. The recent sharp rises in commodity prices are the main cause of the firmer tendency in the money market.

The economic mission to Brazil, which has just returned, proposes to establish a Japan-Brazil Trade Council in each country and to found a company supported by Japanese trade interests for the purpose of importing raw cotton and other Brazilian products. The projected company will also be interested in cotton plantations in Brazil.

TOKYO, November 12.

CANADA

THE NEW GOVERNMENT IN ACTION

THE new Liberal Ministry of Mr Mackenzie King is showing praiseworthy energy. Not only has it concluded a trade agreement with the United States, which, if it falls short of the Taft-Fielding agreement of 1911 in its scope, has many satisfactory features for Canada; but it has also taken steps to enforce economic and financial sanctions against Italy, made considerable headway towards the settlement of the trade war with Japan, and negotiated a new trade agreement with New Zealand.

The public has begun to buy winter goods, and this fact, coupled with the success of the United States treaty negotiations, has given a marked stimulus to business. The general economic index of the Bureau of Statistics, after remaining virtually stationary for some weeks, rose from 96.7 for the week ending November 2nd to 97.5 for the week ended November 9th. The following table shows four of the component factors in the index (1926 = 100).

	Car-loadings	Wholesale Prices	Bank Clearings	Prices of Common Stocks
Week ended Nov. 10, 1934	65.7	71.3	80.6	87.1
Nov. 2, 1935	70.9	72.4	75.0	103.5
Nov. 9, 1935	65.9	72.3	81.2	106.7

Retail business is being maintained at a satisfactory level, and there is evidence, at least in the Eastern Provinces, of substantially higher purchasing power in the rural communities. It has been estimated that the aggregate gross income of the farmers of Ontario, Quebec and the three Maritime Provinces is this year 691 million dollars; which is only 26 millions below the 10-year average.

NICKEL EXPORTS TO ITALY

The gold, nickel and copper mining industry are also enlarging their output. In October Italy imported from Canada 12,799 cwt. of nickel, compared with 6,968 cwt. during the whole of 1934. Nickel constituted seven-eighths of the value of Italy's imports from Canada in October.

The fishermen on the Atlantic coasts have lost their Italian market for salted and dried fish; but the salmon-canning industry is faring reasonably well. Its exports for October were double the volume for October, 1934. The lumber industry is also gaining ground, and exports of planks for October were 138,118,000 board feet, compared with 112,412,000 and 122,849,000 feet for September and October, 1934, respectively.

The Bureau of Statistics has found it necessary to revise its earlier crop estimates in the light of actual threshing returns, and the following are now its estimated yields for the principal field crops (with the data for the previous crop in brackets):—

Wheat, 273,971,000 bushels (275,849,000); oats, 416,369,000 (321,120,000); barley, 87,512,000 (63,742,000); rye, 10,610,000 (5,423,000); peas, 1,581,000 (1,588,000); beans, 1,117,000 (813,600); buckwheat, 7,972,000 (8,635,000); mixed grains, 39,567,000 (37,926,000); flaxseed, 1,433,000 (910,400); corn for husking, 7,765,000 (6,798,000). The average yields per acre in bushels are as follows, with the averages for 1934 in brackets: Wheat, 11.4 (11.5); oats, 29.5 (23.4); barley, 22.5 (17.6); rye, 13.8 (7.4); peas, 16.9 (16.7); beans, 17.3 (14.3); buckwheat, 21.0 (21.2); mixed grains, 34.3 (32.7); flaxseed, 6.7 (4.0); corn for husking, 46.3 (42.2).

The export demand for Canadian wheat has improved, but without reaching the scale which had been hoped. The price has fallen back below the level fixed by the Government, 87 $\frac{1}{2}$ cents.

The total value of imports in October was \$51,283,860, compared with \$47,228,804, and of exports \$85,749,280, compared with \$68,312,883.

Ministers are now busy preparing for the important Dominion-Provincial conference, which is to open on December 9. Two of the chief items on the agenda will be, first, the now hopelessly intertwined relations of Federal and Provincial finances and, secondly, unemployment, which is largely responsible for this muddle. Mr Aberhart, Premier of Alberta, will represent his Province; and it is said that he proposes to ask the co-operation of the Federal Government, presumably by its guarantee, in a huge re-funding operation upon the obligations of Alberta.

Most of the newsprint interests of Canada are greatly agitated over the recent purchase of the Great Lakes Paper Company, which operates at Fort William, by an American group called the Gaefell-Aldrich interests. The latter are acting on behalf of a number of American publishers who propose to form a company and operate the plant at capacity. The bondholders of the Great Lakes Company, which has been in liquidation with the National Trust Company as its receiver, have approved of the sale. But the other newsprint producers foresee that once American publishers get control of this important plant at a cheap price they will keep the export selling price of newsprint as low as possible. These producers have accordingly appealed to the Provincial Government of Ontario to veto the transaction.

Canadian financial interests appear to have confidence in Mr Dunning, the new Minister of Finance. He offered last week to the public a new Dominion loan of \$75 millions, and it was subscribed three times over in a single day. It was offered in two denominations, 4-year 2 per cent. bonds and 19-year 3 per cent. bonds at 99.43 and 98.75 respectively.

MORE ABOUT RUSSIA

THE Seventh Congress of Soviets of the U.S.S.R., held at the beginning of this year, marked a critical stage in the development of Communist Russia. At that Congress it was announced that indirect election of all Soviet organs would be replaced by direct election, that the votes of peasants would henceforth carry equal weight with those of town workers, and that the open ballot would be replaced by the secret ballot. Before Comrade Molotov announced these changes as evidence of the victory of socialism over all possible internal disruptive forces, he reported on the work of the Government since the last Congress and gave equally significant evidence of the growing strength of the Communist system. These two speeches have now been published in English. His eulogies on the triumphs of various plans were followed by the usual complaints that this industry and that industry were not living up to expectation, that the increase in the output of agriculture was seriously retarded, and that standards of workmanship were too often deplorably low.

These things we expect, and by now we have learnt to discount both the exuberance of the Plan and heart-searchings at its partial failure. What we had not expected was to find Comrade Molotov urging the Communists, of all people, to *listen to the voice of the consumer*. Nor had we expected out of Russia the following dogmatic declaration:—

The wages policy of the Soviet Government aims at raising the standard of living of the whole mass of workers—that, so to speak, is its fundamental basis. But only opportunist chatterboxes will on this account replace our policy by a policy of petty-bourgeois egalitarianism in wages, paying no consideration to productivity of labour and to the skill of the worker.

What, we wonder, has Mr Petty-Bourgeois, Opportunist-Chatterbox, George Bernard Shaw to say to that?

Unlike Comrade Molotov, Messrs Marcus Samuel and Leonard Caplan have no liking for Communism, and they have set out to investigate the success of Russian industrial and social planning "in an original way":—

They have studied (they tell us) the statements of leading members of the Russian Government; every issue of the *Moscow News* and *Moscow Daily News* has passed through their hands; and on this official information by diligent comparison of reports they have reached illuminating conclusions.

In what way their method is original does not appear, nor in what way their conclusions are illuminating. If they set out to prove that when all is said there is an amazing degree of free criticism under Communist rule, they have succeeded; but they have no more proved planning, "both socialist and otherwise," a failure than they would have damned capitalism by comparing the claims of its apologists with its actual achievements.

On the other hand, Miss Conolly's study of Soviet trade from the Pacific to the Levant and Mr Reddaway's analysis of the Russian financial system are both excellent examples of what such books should be. Miss Conolly's book, which is the conclusion of a work published in 1933, is concerned mainly with the relations between the Soviet Far East, China, Manchuria and Japan, and in order to explain the course of trade between these countries she introduces an admirable account of internal developments in the Far East of Siberia. During the first Five-Year Plan the contrast between Plan and achievement was even more extreme here than in European Russia. But of the second Five-Year Plan Miss Conolly has greater hopes,

Soviet Prosperity. Molotov. (London) Martin Lawrence. 95 pages. 1s.

mainly on the ground that the Japanese are at the back door, and the issues at stake are therefore too great for the Soviet to take any chances.

After this preliminary discussion Miss Conolly steers an agile course through the ramifications of the protracted disputes between the Soviet and Japan over fishery rights and the development of oil wells in Sakhalin, and gives a complete documented account of the thirty-year attempt of Russia to dominate Manchuria which ended with the sale of the Chinese Eastern Railway to the Japanese. The rest of the book discusses India, the Pacific Tropics, Egypt and the Levant, and the Red Sea Basin.

The word Communist still bears so many emotional connotations, even to the economist, that dispassionate studies of the Communist system are still rare. Mr Reddaway's little book is consequently very welcome for its dispassionate, and at the same time concise and lucid, investigation of a particular problem raised by the Soviet experiment. Mr Reddaway's problem is this. If competitive wages, prices and profits are not the mechanisms by which the Communist system directs resources to specific industries, and finished products to individual consumers, and if these ends are assumed to be achieved by direct planning, what part is left for money and the banking system to play? The answer in brief is that the banking system becomes the State cost accounting department; that although from the State's point of view direct action takes the part of indirect control through price, money must play its usual functions as a money of account, an aid in the distribution of resources to maximum advantage, a method of distributing incomes and reconciling supply with demand, and a means of making payments between departments. Finally, for the consumer it should be a way of exercising such freedom of choice as the system permits. Mr Reddaway pursues his analysis through all of these monetary functions, and after commenting on the impossibility of a cumulative inflation so long as prices are allowed to rise and money wages kept fixed, suggests that "the main problem before the Bolsheviks is still how to exert sufficient deflationary pressure on industry to secure economy in the use of resources of all kinds, but particularly of labour." His discussion of the dual price system and the de-rationing of bread is particularly timely now that the Torgsin stores have been abolished.

The last two of the books reviewed above are a definite addition to our knowledge and understanding of the Soviet system. A little critical impartiality is worth any amount of uncritical praise and uncritical blame put together.

MONEY AND BANKING

FRANCE'S BUDGETARY DILEMMA

LAST week, the Government of M. Laval obtained a surprising renewal of its lease of life. The three-days' debate in the Chamber, forced on the Premier by distrust among the large Radical group of his tolerance of the political "ligues," ended in professions by both the Left and the Right "ligues" of their readiness to be disarmed and controlled by Government measures. Hardly, however, had M. Laval received an overwhelming vote of confidence when the spectre at the feast again flitted into its accustomed place. The debate on the 1936 budget was fixed for Tuesday of this week.

In recent years the rule that the French Budget must be passed by both the Chamber and the Senate before January 1st of the year to which it applies has been more honoured in the breach than in the observance; and, consequently, the regime of *douzièmes provisoires*—monthly votes on account for the year under consideration—has had to be introduced. Normally every chapter of expenditure in the Budget must be separately considered by the Chamber. By the Law of the 19th February, 1934, however, an innovation was made by M. Doumergue, the effect of which was to allow, for only one year, the consideration of each Ministry's global expenditure alone. This time, the Finance Bill is presented with expenditure grouped under five main headings: public debt, supply services, other administrative services, monopolies and revenue administrations, and sundry financial services. It had been suggested that the Budget should only be considered under these five headings; and, in any case, the Government wished to renew M. Doumergue's law. But the Radicals objected to this attempt to circumvent the Parliamentary scrutiny, in detail, of national expenditure; and the President of the Chamber's Finance Committee, M. Malvy, is reported as sharing their objections. Accordingly, the Finance Committee has declined the doubtful honour of deciding on Budgetary procedure, and the whole question was to revert to the Chamber on Thursday. It has even been suggested that the deputies could vote six successive *douzièmes provisoires*, so that the new Chamber, which will come into being in the spring of next year, would be left the unenviable task of passing judgment on the probable receipts and expenditure during the last six months of next year. The net result of the political and economic manoeuvres in the Chamber and its Finance Commission during the last month or two is now apparent. Three weeks before January 1st of the new Budgetary year, the Rapporteur of the Chamber's Finance Committee, M. Baréty, has published his report on the 1936 Budget. The Radicals, both in the Chamber and in its Committee, have not only insisted on tempering some of the Government's new deflationary "cuts" with generosity to the "small men," but they have also insisted, this time, on a reversion to the procedure of protracted debates on the details of the 1936 Budget. Nor are these ominous happenings the sum total of the threats to M. Laval's administration. For the terms in which M. Baréty has couched his report do not inspire optimism.

M. Baréty's report begins by tracing the evolution of France's Budgetary history in the last few years. He shows that deficits have resulted from each successive Budget, partly owing to automatic increases in expenditure and partly to frustrated hopes of revenue. The report states that, despite economies or "cuts in foreseen expenditure" amounting to Frs. 6,000 millions in the four years 1931-32* to 1934 as a whole, expenditure increased by Frs. 3,000 millions, while revenue fell short of estimates by an aggregate of Frs. 8,000 millions. The resulting deficits have been as follows:—

(Million Francs)			
Budget Year		Budget Year	
1931-32*	5,508	1933	7,006
1932	6,017	1934	8,000

* Special Budgetary year.

The inevitable sequel has been "a rapid rise in the total national debt, which, in turn, has increased the annual Budgetary appropriations on account of interest and amortisation." The national debt was greater by about Frs. 70,000 millions at the end of 1934 than at December 31, 1930. M. Baréty's report states that the French monetary crisis of last spring was directly due to Treasury difficulties, themselves the consequences of the Budgetary deficits.

Successive Budgetary deficits have hitherto been mainly financed by Treasury borrowing, from the banks and the Bank of France. Last February M. Flandin obtained the Chamber's consent, by 450 votes to 122, to a law raising the statutory limit on the issue of Treasury bills from Frs. 10,000 millions to Frs. 15,000 millions. But by degrees the limits of borrowing from the market or the Bank have been reached, and successive French Governments have had to tinker with methods of Budgetary presentation *faute de mieux*. The new method of attaining "Budgetary equilibrium" consists merely of presenting in a separate account all State expenditure to be financed by borrowing. So far, so good. But when revenue always comes in below estimate, and expenditure has been pruned to the minimum compatible with internal social order and defences against external attack, any persistence of Budgetary disequilibrium, "covered" by capital transactions under an "extraordinary Budget," is nothing but inflation in practice. And is it likely to succeed in France's present economic circumstances? French costs and prices are already high in relation to those of America and of the sterling area; hence the Herculean efforts at "deflation" by way of the Budget. Moreover, to safeguard the franc while covering the Budgetary deficits, the Government has been borrowing hard, at short- and long-term, and also raising the Bank of France's rediscount rate. This combination of factors has increased both the cost of covering the Budgetary deficits and the rate of interest on all loans, private and commercial. Our Paris correspondent points out the implications of "dear money" in his letter on page 1202.

It is not without reason, therefore, that the Rapporteur of the Chamber Finance Committee draws attention to the dangers inherent in the 1936 "extraordinary" Budget (for armaments, equipment and public works advances), which is set down at a total of Frs. 6,230 millions, all of which is to be covered by a "recourse to public credit." As M. Baréty remarks, it is one thing for the Government to point out the advantage of grouping all "loan expenditure" into one special extra-Budgetary Budget; and quite another to include in it expenditure of a recurrent nature, which should be covered by annual appropriations in the ordinary Budget. Moreover, it is clear from the Report that, even in the final figures of the ordinary Budget, equilibrium on paper has been reached only by providing that the last-minute concessions to the "small men" shall be "covered" by the suppression of "evasions and abuses" in taxation. And there is still to be a supplementary Report comprising the extra expenditure only just agreed by the Committee. Thus, the final figures of the 1936 ordinary Budget only look well on paper:—

Receipts	Frs. 40,302,973,240
Expenditure	Frs. 40,260,164,760
Surplus	Frs. 42,808,480

But, as the Rapporteur points out, the estimated expenditure for the floating debt charge (which has recently been mounting heavily) and for unemployment is underestimated. He concludes with strong expressions of regret that continuous recourse to public credit should have raised and maintained the rate of interest at a time when almost the only remaining hope of adjustment by deflation is that of a substantial reduction in the burden of all indebtedness.

This, indeed, appears to us to be the Achilles heel of the French financial organism. With a rigid price-structure,

with incomes cut by successive deflationary "drives," and with French capital fleeing the country owing to Budgetary and political uncertainties, the French Government has been forced to denude an already attenuated long-term money-market of free capital and to load the short-term market with Treasury bills. At such a juncture, M. Laval's Government announces the proximate issue of a new National Defence Loan of Frs. 2,000 millions in 5 per cent. bonds at 95, redeemable at par 30 years hence, in order to cover the additional budgetary defence expenditure, which is now outside the ordinary Budget. Many French—and foreign—observers have watched the growth in the national debt by over Frs. 18,000 millions during 1934 to a level at the beginning of this year of Frs. 322,380 millions. They have noted the equally rapid increases in the long-term and short-term debt of the State, and they have seen the sharp rise in the cost of "running" the debt with considerable misgivings.

The great question for France and for the Government of M. Laval is: How long will the Bank of France, the big banks, and the *rentier* class continue to shoulder the burden of successive Budgetary deficits? The answer may be: Not for more than a month or two, if deposits in the big banks and the *ensemble* of savings banks go on sinking, as gold leaves the Bank of France and the country on the scale reached during the last few weeks. France's Budgetary dilemma thus becomes a function of the French *rentiers'* confidence in the political and economic future of their country. The influences which condition such confidence may be reserved for discussion in a succeeding article.

FINANCIAL NOTES

A Flurry in Silver.—Last Saturday silver in London fetched 29½d. per ounce. On Monday the price fell to 28½d. per ounce and on Tuesday to 27½d. per ounce. These prices are at present virtually decided by the American authorities, who are the only buyers now that the Chinese and Hongkong Governments are "off silver." The American Government's silver buying policy has thus succeeded only in manoeuvring America into the position of sole buyer; and the London market has come to expect that America will pay a price sufficiently high to absorb all the silver offered in the market on any one day. Moreover, the Chinese and Hongkong Governments might conceivably start to unload their silver stocks (estimated at about 350 million ounces) in order to obtain gold or foreign exchange. On Monday and Tuesday the American authorities did not buy in London, and they only bought a very small parcel—500,000 ounces—late on Wednesday; although Mr Secretary Morgenthau on Thursday said that he had bought silver every day this week "in many different places." It is credibly reported, both in New York and London, that the American authorities have been negotiating for purchases of silver from China direct; if so, this would explain their absence from the London market. It is natural that, having forced China and Hongkong off silver, the American apostles of the new "silver doctrine" should fear the effects upon themselves of being the only world buyer of silver, and that they should seek to manoeuvre the Far Eastern currencies back on to a monetary standard which necessitates Eastern silver stocks. But it must be remembered that American purchases of silver have not only been undertaken to secure for President Roosevelt the support of 14 Senators in the seven silver States, but also to provide an expeditious method of selling dollars to keep the dollar down. As we go to press, Mr Morgenthau has stated that he has not deviated from his intention to implement the silver buying programme "upon such terms and provisions as he (the Secretary of the Treasury) may deem reasonable and most advantageous to the public interest." In these last words of the silver legislation lies, perhaps, a clue to the situation. It would seem that the American authorities have not deviated from their main policy, but that they do not relish the position

of supreme silver arbiters which that policy has inevitably created for them. Happily the effects of American "havering" in the London silver market are not likely to be great. The bull position has been "combed out"; and though one or two Bombay dealers may be hit, the forward position in London is not considerable. The whole story is little else than a caustic reflection on the bewildering irresponsibility of those primarily answerable for the silver buying policy.

The Money Market.—The end of the year is casting its shadow before on the Money Market and there has been a perceptible tendency towards a hardening of rates. The joint-stock banks are beginning to find their cash reserves drawn upon to meet the Christmas demand for notes, and they had accordingly almost ceased to buy bills from the market; though on Wednesday and Thursday some banks were buying favoured maturities. One clearing bank raised its purchasing rate for end-February bills from ½ per cent. to ¾ per cent. on Monday. The average rate of allotment last Friday rose from 11s. 9.3rd. per cent. to 13s. 1.53d. per cent. and a further rise is anticipated this week. Money is slowly becoming more usable.

	Nov. 21, 1935	Nov. 23, 1935	Dec. 5, 1935	Dec. 12, 1935
Bank rate.....	2	2	2	2
Clearing banks' deposit rate ...	↓	↓	↓	↓
Short Loan rate:—				
Clearing banks	1-1	1-1	1-1	1-1
Others	↓	↓	↓	↓
Discount rates:—				
Treasury bills	1	1	1½	1½
Three months' bank bills	1½	1½	1½-1	1½

The comparatively small allotments at last week's tender led to a slightly brisker demand for "hot" Treasuries, which have been changing hands at 1½ per cent. Money is still very plentiful for day-to-day loans, but not much business has been reported in loans into the New Year, such as there is being effected at ¾ per cent.

The Bank Return.—This week's Bank return shows, in general, a continuation of the tendencies of the last few weeks. The Note circulation is rising towards its Christmas peak, and is already within less than £1,000,000 of the August peak, which was the highest figure ever recorded. This week's increase is by £5.3 millions, but the Bank has acquired a further £1 million of gold, so that the reduction in the notes held in the Banking Department is only £4.3 millions:—

	Dec. 12, 1934	Nov. 20, 1935	Nov. 27, 1935	Dec. 4, 1935	Dec. 11, 1935
	£ mill.	£ mill.	£ mill.	£ mill.	£ mill.
Issue Department:—					
Gold	192.2	197.2	197.6	198.4	199.4
Note circulation	393.2	398.9	401.3	405.6	410.9
Banking Department:—					
Reserve	59.5	59.2	57.1	53.6	49.1
Public deposits.....	7.9	21.6	19.7	7.1	6.8
Bankers' deposits	103.3	90.9	90.9	103.7	94.4
Other deposits.....	37.0	36.5	36.5	37.5	37.2
Government securities ...	85.8	83.6	85.5	89.4	84.2
Discounts and advances..	10.1	9.7	9.5	10.7	10.1
Other securities	10.6	14.4	12.8	12.5	12.9
Proportion	40.1%	39.6%	38.8%	36.1%	35.4%

The Reserve is, however, £10.4 millions lower than in the corresponding week of last year and the Proportion has fallen to 35.4 per cent. With two more weeks to go before Christmas, and the last return to be made on Christmas Eve, it is already clear that the Reserve is going to fall to a low level, unless the purchases of gold are speeded up. Bankers' deposits, which rose by £12.8 millions last week, have fallen back by £9.3 millions.

The Foreign Exchanges.—The market continues to be very quiet, the only centres of interest being in the gold *bloc* and in the Far East. The French franc continues to be

very susceptible to political news, but M. Laval's victory in the Chamber and the latest developments in the international situation have both conspired to strengthen the franc, which rallied on Friday of last week and again, after a slight relapse, on Wednesday. The net improvement over the week is from Frs. 74½ on December 5th to Frs. 74¾, on December 12th. The gold drain away from the Banque de France has slackened to normal proportions in the last ten days. Both the Swiss franc and the Dutch guilder tend to follow Paris fairly closely, since it is thought that the gold *bloc* will stand or fall together. In the Far East, the sudden change in the American silver buying has had an unsettling effect upon both the Hongkong and Shanghai dollars, both of which are slightly lower. The Chinese currency is technically divorced from silver, but the divorce is apparently considered to have got no further than a decree nisi, and dollars remain very sensitive to any changes in the silver market.

November Clearing Bank Averages.—As we anticipated a month ago, the clearing banks' cash has now risen to more normal proportions. The contraction during October was solely due to a temporary transfer of funds from bankers' deposits to public deposits at the Bank of England, and the banks did not permit it to bring about any reduction in their own resources. Now that their cash has once more returned to the clearing banks, their aggregate ratio of cash to deposits has risen from 10.1 to 10.5 per cent.

	November, 1934	August, 1935	September, 1935	October, 1935	November, 1935
Capital and reserves.....	123.4	125.7	125.7	125.7	125.7
Acceptances, etc.	122.1	93.5	90.4	93.7	97.4
Deposits (including undivided profits, etc.)	1,872.6	1,976.0	1,986.6	1,998.5	2,002.0
Total liabilities	2,118.1	2,195.2	2,202.7	2,217.9	2,225.1
Cash	206.6	210.2	204.7	201.1	211.0
Cheques, balances and items in transit.....	47.0	44.7	48.3	53.3	50.0
Money at call	130.2	143.8	142.4	136.5	142.3
Discounts	230.8	285.2	297.7	295.3	291.6
Investments	572.4	599.1	602.2	610.2	604.5
Loans and advances	739.7	749.7	747.9	758.7	759.3
Investments in affiliated banks	24.9	25.1	25.1	25.1	25.1
Cover for acceptances, premises, etc.	166.5	137.4	134.4	137.7	141.3
Total assets	2,118.1	2,195.2	2,202.7	2,217.9	2,225.1

The banks' call and short loans have risen by £5.8 millions, while their discounts have fallen by £3.7 millions. The Treasury bill tender issue continued to expand during December, so that apparently the discount market was holding more bills. Investments have fallen by £5.7 millions, while there is a further very small increase in advances. The deposits of the nine English clearing banks have risen above £2,000 millions for the first time on record.

Bank of London and South America.—The balance sheet of this institution shows that during the past year deposits have been reduced from £31.4 millions to £28.3 millions, cash in hand from £9.6 millions to £7.1 millions, and bills receivable from £6.7 millions to £6.0 millions. This is probably due to the revaluation of the bank's assets and liabilities at lower sterling rates of exchange, which correspond fairly well with the free rates of exchange now in force. It therefore does not follow that the bank's resources, expressed in terms of the currencies of the countries in which it operates, have contracted. Advances have, in fact, risen during the past year even when expressed in sterling. Gross profits have fallen for the same reason, but expenses have also been reduced, so that net profits only show a reduction from £276,000 to £210,000. The general improvement in conditions has enabled the bank to reduce its allocation to contingencies from £200,000 to £100,000, so that last year's dividend of 3 per cent. has been repeated. Banking conditions in South America remain difficult, but the Bank of London and South America continues to maintain its position.

National Bank of Scotland.—The accounts of this bank show that its deposits have been well maintained. The increase in the note circulation suggests that money is circulating more freely in Scotland than a year ago. Advances, however, show a further fall, from which it may be inferred that money is plentiful and firms are still able to finance themselves largely out of their own resources. In the absence of any greater demand for accommodation by its customers, the bank has had to add to its investments in order to find employment for its resources.

Other allocations	55	135	135
Dividend	16%	16%	16%

The decline in net profits is insignificant, and is probably accounted for by the contraction in advances, which form the bank's most remunerative assets. The dividend remains unchanged at 16 per cent. There are slight changes in the various allocations to internal funds, but the total of such allocations remains unaltered.

Barclays Bank (Dominion, Colonial and Overseas).—The speech of the Chairman at the annual meeting of Barclays Bank (D.C.O.) is always notable for its survey of conditions in the Levant, East, West and South Africa, and in the West Indies. This year Mr H. L. M. Tritton's report was, on the whole, strikingly favourable, particularly as regards Palestine and the industrial and mining community of South Africa. Unfortunately, the farmers, both in the Union and in East Africa, have not yet regained their full prosperity. The affairs of the Bank continue to expand, and its balance sheet total has almost reached £100 millions. Deposits are almost £5 millions higher, and the Bank is in the fortunate position of being able to reduce its Investments in order to increase Advances, a change which has had its effect upon the balance of profits. Mr Tritton mentioned that the bank will celebrate its centenary in 1936, its parent, the Colonial Bank, having been granted its Charter on June 1, 1836.

THE STOCK EXCHANGE

COMPANY PROSPECTUSES—A THREE YEARS' ANALYSIS

THE total of new issues offered in the London market, so far this year, now comfortably exceeds the aggregate for the whole of 1934. From the details given regularly, week by week, in the *Economist*, the main features of the year's operations are already clear. It is a case of gilt-edged borrowers first, British companies second, and the rest nowhere. But who are the real recipients of the market's favours? Down whose throats do the refreshing draughts go? The answer is comparatively simple in the case of gilt-edged borrowers, but much less obvious in that of company issues. How much of the total subscribed on company prospectuses, in the last three years, has been attributable to the general investor, and how much to "insiders"? What proportion of the whole has gone to increase the working capital of the companies concerned, and what has been paid out to vendors? To those who use the records of the issue market as an index to the amount of real expenditure on capital goods (e.g. as a major factor in business revival) the distinction is of prime importance.

The fact that no records whatever are available of the net, as distinct from the gross, amount of new capital involved in company issues has impelled us to make a detailed analysis of company prospectuses published in the last three years. The resulting figures, which are set out and discussed in the present article, cover the entire period since market activity was resumed on the completion of the War Loan conversion operation. They also serve, incidentally, as a test of the investment quality of the issues made, and throw light on the question whether the experience of the last three years has been in any way comparable to that of the 1928-29 boom, of unhappy memory. Our figures exclude "introductions" and are concerned only with companies which have made their *début* before the investor, not with capital increases by established concerns. All amounts are calculated at issue prices.

The results of our investigation relate to 210 companies, and are based on prospectus figures in every case. In these 210 issues a total cash subscription of £77,796,501 has been involved, of which 84 per cent. has been offered to the public and 16 per cent. to "insiders"—directors and their friends, issue houses, etc. In addition, some £20,979,801 has been allotted to "insiders" for considerations other than cash, i.e. as part of the "scrip" purchase price of assets transferred, or services rendered. The details may be summarised as follows:—

TOTAL CAPITAL ISSUED

	Year	Debt	Preference	Ordinary	Total
Offered to public	1933	3,403,400	3,225,000	1,935,717	8,564,117
	1934	3,578,690	6,975,860	12,656,813	23,211,273
	1935*	8,532,435	17,263,733	8,006,024	33,822,192
Total (three years) ...		15,514,435	27,464,593	22,598,554	65,597,582
Allotted to "insiders" for cash	1933	247,500	506,250	784,251	1,538,001
	1934	280,000	762,500	1,963,460	3,005,960
	1935*	1,989,140	42,500	5,623,318	7,654,958
Total (three years)....		2,516,640	1,311,250	8,371,029	12,198,919
Allotted to "insiders" for other than cash	1933	...	155,944	3,128,563	3,284,507
	1934	...	348,740	8,717,072	9,065,812
	1935*	...	380,000	8,249,482	8,629,482
Total (three years)....		...	884,684	20,095,117	20,979,801

* To first week in November.

On the assumption that the public have taken all offered to them, the figures show that for every £1 subscribed by the public, inside interests have put up a cash subscription of 3s. 8½d., and have been allotted shares, for considerations other than cash, to the amount of 6s. 5d. The inside

interests, however, have retained in their hands a much higher proportion of the equity capital than of the total capital. Out of an aggregate public subscription of £65,597,582, as much as 65½ per cent. is in the form of debentures or preference shares, while of an "inside" allotment (for cash and otherwise), of £33,178,720, debentures and preference shares account for only 14 per cent. Altogether, of a total ordinary share capital of £51,064,700 the public has obtained 44 per cent. and inside interests 56 per cent.

As the Stock Exchange is usually willing to give permissions for dealings in vendor shares after an interval of some months, a considerable proportion of inside holdings may have subsequently been transferred to public hands. The totals so far elicited, therefore, are of importance as showing that the public has been allowed to share only in a minor degree in the equity prospects of new flotations, but they do not reveal the extent to which the proceeds of new issues have been used to provide effective net working capital. Under British law, however, every prospectus is required to disclose the amount of any cash which is being paid to vendors of properties, etc., and of underwriting commission and other expenses. It is consequently possible to ascertain how much of the total capital involved in these 210 issues has remained in the various businesses after all "flotational" outgoings. The figures appear in our next table:—

"INCOMINGS" AND "OUTGOINGS"

	1933	1934	1935*	Total
"Incomings"—				
Public for cash	8,564,117	23,211,273	33,822,192	65,597,582
Insiders for cash	1,538,001	3,005,960	7,654,958	12,198,919
Total cash received	10,102,118	26,217,233	41,477,150	77,796,501
"Outgoings"—				
Cash paid to vendors	9,172,911	14,729,230	14,055,820	37,957,961
Underwriting and issue expenses	520,601	1,499,192	2,042,518	4,062,311
Total "outgoings"	9,693,512	16,228,422	16,098,338	42,020,272
Total new capital remaining in the various companies	108,606	9,988,811	25,378,812	35,776,229

* To first week in November.

The net new capital remaining in the various businesses is £35,776,229 out of a gross cash subscription, from all sources, of £77,796,501. For every £1 subscribed in cash, approximately 9s. 9d. has been taken in cash by vendors, and 1s. 0½d. absorbed in issue expenses. Vendors, it is clear, have, on the whole, preferred to take a moiety of hard cash rather than to maintain their interests wholly and permanently with the companies in question. The total share allotments for considerations other than cash, plus the cash paid to vendors, may together be regarded as approximating fairly closely to the total purchase consideration. Our investigations show that out of an aggregate of £58,937,762, computed in this way, some 64 per cent. has been taken in cash, and only 36 per cent. in scrip.

What assets have been acquired as a result of the flotations of the last three years? Some of the 210 companies included in our survey are new ventures, in mining or other fields, whose future depends on "prospects" to which no firm monetary value can at present be assigned. It has been characteristic of capital market conditions in the last three years, however, that the majority of company flotations have been concerned with a change in the status of established businesses, possessing tangible assets, in the shape of properties, machinery, stock-in-trade, etc., which have been amenable to the valuer's art. Data under this heading are available for 132 of the companies whose prospectuses have hitherto been considered. The relevant figures are shown in the next column.

ASSETS AND GOODWILL
(Based on Results for 132 Companies)

	1933	1934	1935†	Total
Total assets (excluding goodwill) ...	10,717,502	17,221,618	19,370,082	47,309,202
Consideration paid to interests concerned:—				
(a) In cash to vendors	9,103,762	12,724,590	13,481,721	35,310,072
(b) In scrip	2,793,935	5,737,187	8,599,482	17,100,624
Total	11,897,717	18,461,777	22,081,202	52,410,696
Total "goodwill"	1,180,215	1,240,159	2,981,120	5,101,494

* Excess of total consideration over total assets.

† To first week in November.

The returns are reassuring in one respect. The vendors of these established businesses have not taken out of them an excessive amount for "goodwill." The aggregate consideration, in cash and shares, exceeds the total valuation of the assets acquired by 10.8 per cent., though if assets have been valued somewhat generously, in some instances, a more substantial element of "goodwill" may be latent in their total.

Finally, it may be asked how far the public has obtained control of the companies concerned, in proportion to the amount of capital it has subscribed. Taking the original 210 companies, our analyses show that of total votes aggregating 158,460,871, some 88,684,748 are exercisable by the public. The latter thus hold a majority in the aggregate (though not in every individual case), since they control 56 per cent. of the total votes. In practice, however, the voting power of public shareholders is usually scattered, while that of inside interests is concentrated. The public's share in control, further, is not by any means proportionate to the amount of capital it has put up. As an earlier table showed, the public has subscribed 66 per cent. of the total debenture, preference and ordinary capital of these companies (including all shares allotted to inside interests), but has obtained not much more than half of the total voting power. This result largely follows from the predominance of debentures and preference shares in the public's quota, and the almost universal practice, in drawing up articles of association, of limiting normal voting rights to ordinary shares.

The conclusions suggested by this analysis are moderately satisfactory. The majority of companies which have come into the investor's ken in the last three years, have, unlike the bubble flotations which disgraced the 1928-29 boom, been established businesses, with tangible assets behind them. It would seem, further, that the total "consideration" paid for the acquisition of these businesses has been fairly closely related to the estimated value of the assets on a "going concern" basis. Provided, therefore, that the valuations are fair and reasonable, the total capitalisation of these companies should not include any large amount of "water." This result may be attributed partly to the tendency, in a period of low-interest rates, to offer investors fixed-interest securities (which must needs, as a rule, be backed by proved assets and earning power in order to be attractive), and partly to the tightening up of the law regarding prospectus disclosure effected by the Companies' Act of 1929. On the other hand, the vendors of the different businesses have taken the lion's share of their purchase price in cash, and it is obvious that any gross figure of "issued capital" greatly exaggerates the amount available for the purchase of new "capital goods." The figures do not suggest that the company financing of 1933-35 is likely to produce an eventual crop of failures in any way equivalent to that which followed the last market boom. The "risk" for the investor, is not that the companies may make no profits at all, but that they may be less successful in exploiting their new than their old capital resources, particularly in view of the fact that the original vendors have parted with so large a proportion of their interest.

These conclusions, however, apply solely to issues by prospectus. During the last three years, the method of flotation of shares in established companies, by "placing" rather than by prospectus, has greatly increased in popularity. In a future article, therefore, we propose to extend our survey so as to cover these "introductions," and to discover whether their terms, from the viewpoint of the general public, have been reasonable or otherwise.

INVESTMENT NOTES

Wall Street Remains Optimistic.—The action of the New York Stock Exchange in the last few days has not been in any way spectacular. Indeed, prices have, on the average, been slightly lower this week than at the end of last week. But the underlying sentiment undoubtedly continues to be solidly optimistic. Business news is still favourable. Steel output continues to increase and the automobile industry has had much less of a relapse after its annual show than is usual. The figures of building construction, though still low, are continuously rising. Optimism in Wall Street is being further fed by a steadily swelling stream of dividends. That the market has shown conspicuous moderation in these circumstances, however, argues the existence of certain offsetting factors. The air is filled with the clamour of denunciation of the New Deal and all its works. But this sort of talk largely emanates from Wall Street itself, which is consequently able to assess its true value with a healthy discount. In present circumstances, predictions of woe to come if American individualism is not restored in all its rugged glory are likely to be cheering to Wall Street precisely in proportion to their alarmist tenor. The greatest restraining factor is undoubtedly to be found in Europe. American public opinion may be disquieted by the reported terms of the Laval-Hoare offer to Italy, but prices are nevertheless marked up whenever a settlement seems imminent, and marked down whenever an intensification of sanctions seems the more probable immediate issue. Special circumstances are, of course, affecting particular varieties of securities. Metal shares, for example, were in favour as a means of participating both in American recovery and in possible European conflict; but they, together with other securities, were affected by the latest inexplicable turn in the Administration's incomprehensible silver policy. Utilities seem to be thriving on, rather than suffering from, the running fight between the larger holding companies and the Securities and Exchange Commission—a fight in which there are signs of an approach to an armistice. Railway securities are also showing a little more life than of late. The chief interest of the market, however, is concentrated on the main body of American industry. That real recovery is on the way is hardly questioned any longer. But there is still plenty of room for disagreement on the probable pace and the possible extent of the 1936 "bull market."

* * *

Wisdom and Folly in Shipping Finance.—Every investor in shipping shares would be well advised to read and re-read the address given by the Hon. Alexander Shaw at the P. and O. meeting last Wednesday. It is no secret that pressure has lately been brought to bear on the company to use some of its accumulated liquid resources to make a species of *ex gratia* dividend payment on its deferred stock, despite the fact that the recovery in voyage receipts has been checked, and that the company is not earning full fleet depreciation at the normal rate. The immediate earnings outlook, in fact, is even less favourable than the latest accounts suggest, for the latter are based on receipts from voyages completed last June, and do not reflect the falling off which has been experienced in the last few months in the Australian trade. The suggestion, therefore, that the company should deplete its reserves to pay deferred dividends cannot be justified as a payment "on account," in confident anticipation of an early revival in earnings. Still less can it be defended on the ground that depreciation on a 5 per cent. basis, against the 4 per cent. allowed by the income tax authorities, is "unnecessarily high." Under modern conditions of rapid improvement in shipbuilding design and methods of propulsion, and in the present circumstances of severe foreign competition, even a twenty-year "life" for a liner errs on the generous side, and a twenty-five-year "life" is demonstrably excessive. It is true that tonnage built immediately after the war was costly; but it is equally true that vessels passing out of service must be replaced by tonnage of

more elaborate and expensive type. So long as the P. and O. board continue, under the presidency of Mr Shaw as of Lord Inchcape before him, to put prudent care for future financial needs above a desire to temper the present lot of stockholders by distributing unearned dividends, they will enjoy the confidence of the majority of the company's proprietors. The latter may well reflect, as every week brings under the hammer one property after another of a once-powerful group whose policy was less austere: "There, but for sound finance, goes the P. and O." But the basic problem of increased earnings remains. If virulent economic nationalism is to continue indefinitely to postpone a thoroughgoing recovery in receipts, the company, in justice to stockholders, can no longer delay the cutting out of such services as are unremunerative. The operation of Empire-owned ships, which for half a century has linked up Australia and New Zealand with San Francisco, has been ruined by the competition of subsidised tonnage. At long last the P. and O. has decided on the complete withdrawal of its services. On every ground the necessity for this decision is regrettable. Whether the remedy is a policy of counter-subsidy, with the sky as the limit, or a reversion to financial and economic sanity by the Governments chiefly concerned, is not for the P. and O. to decide. The company is not a sovereign state, with the resources of millions of taxpayers behind it, but a trading body, which must pay its way as the condition of its own existence—and in the long run must put the interests of holders of its £15 millions of debenture and share capital before historical and sentimental considerations.

"Limited Investment Fund."—In summing up the progress of the fixed trust movement in a Special Supplement last April, we suggested that future developments might be more advantageously directed towards the "open-end" type of trust and away from the original and outmoded notion of "fixity." The first sponsors of the fixed trust movement in this country, Municipal and General Securities Company, Limited, have now formed the first industrial "unit trust." Although details of legal and administrative procedure were doubtless intricate, it appears from examination of the trust deed and publicity matter that considerable effort has been made to meet the legitimate requirements of the small investor. The Limited Investment Fund offers a range of permitted investment in the fully-paid fixed dividend and equity issues of 157 companies in which the managers are free to invest and free to "switch." Maximum holdings of individual securities are limited to 5 per cent. of the total, the fund is fully cumulative, and certificate holders can obtain, half-yearly, the percentage distribution in each security. The amount available for distribution will be certified by chartered accountants, and the necessary adjustments will be made where dealings in the underlying securities are cum dividend. Normally, at least forty securities will be held, and the present intention is to earn a yield of 4 per cent., which appears broadly in keeping with contemporary investment conditions. The portfolio is wide enough to include companies of moderate size with good future prospects, and gold-mining interests will be limited to the finance houses. The preliminary charge will be 4 per cent., including brokerage of 1½ per cent. In addition, an annual charge of ½ per cent. on the average value of the fund during each year will be made for management and trustees' remuneration. The implications of the new fund are important to fixed-trust investors, who have not hitherto been compelled, as a rule, to exercise any judgment of management capacity. If the latest formation sets a precedent for further "open-end" industrial issues, this point will call for close attention, and, possibly, for some substantiation of the respective managers' qualifications to use the wide powers of "switching" to the advantage of their unit holders. Doubtless, the trustees concerned, who will presumably require, as in the present instance, wide powers to supervise the interests of the investor, will first take steps to assure themselves on this point. Students of unit trust movement, as well as the small investor, will find the pure experience of the latest formation with the record of 3s. 8½ investment indices with much interest. With its other than purchase, abstention from pools and under-

writing, and effective though limited investment discretion, it may present advantages to the small investor which are denied both by the purely fixed trusts and by the managed investment trusts.

Industrial Profits in November.—The percentage improvement shown in our computation of industrial profits for November is less impressive than that of the previous month, although in terms of absolute profits the latest increase is considerably higher. The 160 reporting companies represent the most substantial profit-earners among the early "winter group," whose net results are commonly more stable than those of the smaller concerns which swelled the October returns. Figures for recent months are set out below:—

Reports published in	No. of Companies	Rise or Fall in Profits*	Reports published in	No. of Companies	Rise or Fall in Profits*
1934—			1935—		
September ...	89	+40.63	April.....	242	+16.49
October	165	+49.70	May	244	+11.07
November	143	+33.97	June	191	+21.72
December.....	159	+25.09	July.....	232	+13.44
1935—			August	38	+ 5.93
January.....	111	+14.15	September...	77	+ 9.28
February.....	218	+ 8.43	October	166	+27.19
March	261	+22.54	November...	160	+17.47

* After payment of debenture interest.

The reports of the month disclose net profits of £12,810,708, compared with £10,905,448 in the preceding year. Analysis of the individual groups shows that November was a "brewery month." Nineteen concerns showed an increase of £342,822 in net profits, and few failed to pay increased dividends. In the iron, coal and steel group, ten companies increased their profits from £457,542 to £641,432. A small sample of building material companies reported an increase of £205,993 in total profits, at £1,005,499. Investment trust net revenues continued to expand slowly, but satisfactorily. Elsewhere, useful recoveries were also shown by the widely-cast finance, land and investment group, by paper, electrical equipment companies, and by important miscellaneous industrial concerns such as Electric and Musical Industries and Turner and Newall.

Actuaries' Investment Index.—Although the week has been undistinguished in the security markets, the Actuaries' Index of 158 ordinary shares has reacted after its temporary setback at the beginning of this month, and reached a new high "record" for the present recovery epoch. Last Tuesday's figure was 80.7, against 79.7 a week earlier, and 78.7 a month earlier (December 31, 1928 = 100). The corresponding yield averages were 3.69, 3.73 and 3.75 per cent., respectively. Most of the constituent groups in the index have shared in this week's upward tendency:—

Group (and No. of Securities)	Prices (Dec. 31, 1928 = 100)			Yields (%)		
	Month Ago (Nov. 12)	Week Ago (Dec. 3)	This Week (Dec. 10)	Month Ago (Nov. 12)	Week Ago (Dec. 3)	This Week (Dec. 10)
Insurance (24)	122.4	127.1	129.6	3.44	3.32	3.28
Investment trusts (14) ...	56.0	58.9	59.2	3.68	3.50	3.47
Iron and steel (8)	66.8	66.7	69.0	3.23	3.49	3.41
Motors (5)	53.8	51.8	53.1	3.86	4.69	4.50
Electric supplies (8)	128.6	130.5	136.1	4.06	3.95	3.80
Home rails (4)	62.9	64.6	66.7	1.62	1.56	1.51
Breweries and distill. (19)	134.6	137.4	139.0	4.13	4.03	3.99

Although the composite index has risen by nearly seven points since the beginning of this year (from 73.9 to 80.7), the average yield has fallen only from 3.75 per cent. to 3.69 per cent. In other words, increased dividends have largely kept pace with higher prices.

City Education.—The progress of City institutions in catering for City educational needs is revealed by addresses delivered by eminent spokesmen at recent prize distributions. The City of London College, which, in addition to a specialised course on the Stock Exchange, also provides for

the needs of general commercial and banking students and includes lectures on staple products, appears to be hampered by nothing except inadequate accommodation. The increase in enrolments is sufficient witness to its usefulness, and to the support which is given to the College in all quarters in the City. The L.C.C. Stock Exchange classes labour under a similar disadvantage, and the attendance is at "peak" capacity. Both institutions are consistently supported by the Trustees and Managers of the London Stock Exchange, with the object of raising the general standard of professional education and knowledge. It is, perhaps, permissible to stress the fact that no formal qualification is at present available for Stock Exchange students. There may be a case for filling this void, both in the "secondary" level of the City colleges, and in the specialised courses associated with the London University Commerce degree.

COMPANY NOTES

Shipbuilding Companies.—The revival in shipbuilding which started in 1934 raised the quarterly average of work in hand (mercantile) from the level of about 280,000 gross tons, to which it had fallen in 1932 and 1933, to nearly 570,000 gross tons. This level, however, was little over half the standard of a poor year before 1929, and up to the end of September has not been maintained this year. This, however, does not appear to imply that a new and much lower level must be regarded as normal in future, but merely that shipbuilding is suffering from a lag in recovery. Even on a mercantile fleet reduced from 20.3 million gross tons

fore, no longer a mass of idle tonnage standing between the shipbuilder and his market; and, as the sudden increase in demand for shipping accommodation showed this autumn, there is no longer a hopeless surplus of available vessels on the main routes. A relatively small further recovery in international trade might strengthen the shipping industry's position considerably; a movement which may possibly be portended by more active commodity markets this autumn. Once shipowners began to regain confidence, the placing of orders with shipbuilders would follow rapidly. The balance sheets of the majority of shipowning companies have reflected the cessation of new building in a steady accumulation of surplus liquid funds. In many cases shipowners have not been able to earn as much depreciation as they could wish; but, absolutely, cash resources have tended to rise, and there can be little doubt that the shipping industry as a whole commands ample resources to finance a rapid increase in building orders once conditions indicate a resumption of building. It is even conceivable that as the immediate post-war rush to replace old or torpedoed tonnage caused a 1920 peak in orders which at times seemed to be starving the volume of orders in later years, the simultaneous obsolescence of those peak-year orders may soon begin to produce a second wave, albeit of smaller dimensions. In any case, these and the more general influences will be assisted by the Government's "scrap and build" offer, and the special influence of naval re-equipment may prove a highly important factor. Meanwhile the considerable revival in 1934-35 profits shown in the annexed table suggests that even the modest recovery in shipbuilding activity during the period was sufficient to allow the depression improvements in plant and organisation to give a good account of themselves. As the substantial fixed charges of the shipbuilding industry allow profits to improve rapidly once a satisfactory turnover has been reached, it is not impossible that some striking recoveries may be seen once international trade allows activity to resume its normal level.

to 17.6 million gross tons during the depression period, replacements would be some 700,000 gross tons a year, assuming an average life as long as 25 years, and a considerable further output would be required for our normal overseas customers. Average annual launchings of 1,000,000 gross tons in the future (against 1,200,000 to 1,500,000 tons before the depression) might not put expectations unduly high, although only 460,000 gross tons were launched in 1934. When this level will be recovered depends primarily on the rate at which international sea-borne trade revives. It is possible, however, that a considerable measure of revival in shipbuilding could come about in the relatively near future. Partly through scrapping and sales and partly through re-employment of tonnage, the volume of shipping laid-up in United Kingdom ports has now been reduced to little more than the pre-depression normal. There is, there-

The Bank has over 370 Branches in Africa, and Agents and Correspondents throughout the World. The closest touch with Trade and Industrial conditions is maintained, with special attention to Commercial and Credit Intelligence. This service is available to Exporters, Importers and others wishing to develop trade with South, East and Central Africa.

THE STANDARD BANK MONTHLY REVIEW is sent post free on application. It gives the latest information on all South, East and Central African matters of Trade and Commercial Interest.

James and Shakspeare Evidence.—The hearing of summonses against Garabed Bishirgian, J. H. C. E. Howson and Louis Hardy, in relation to a prospectus of James and Shakspeare, Limited, was continued at the New Court, Guildhall, on Wednesday. The earlier proceedings were summarised in the *Economist* of November 30, 1935, page 1078. On Wednesday, Mr Duncan McKellar, of Thomson, McIntock and Company, chartered accountants, gave evidence regarding the pepper and shellac deals of Williams, Henry and Company, of whose ordinary capital James and Shakspeare had acquired six-sevenths. Mr McKellar stated that at June 30, 1934, there were outstanding purchases of 51,000 bags of shellac of an approximate value of £400,000 and an open position in pepper of 2,460 tons, of the approximate value of £200,000. On September 3rd, the open position was for 66,800 bags, for which Williams, Henry and Company had paid £109,500 on account, leaving a balance of approximately £400,000, and an open pepper position involving about £1,000,000. On December 6th, the pepper and shellac position was discussed at a directors' meeting of James and Shakspeare. It was then explained that an arrangement had been made with the Dean Finance Company for a loan of £364,201, under certain conditions. By December 31, 1934, the open pepper position of Williams, Henry and Company had increased to about 18,000 tons, the amount which the company had to pay being about £2,000,000. It was agreed on January 4th that the Dean Finance Company would meet any shellac position which might arise, but that James and Shakspeare would assume the obligations of Williams, Henry and Company as to pepper. The evidence then dealt with alleged share transactions in certain companies, in which Mr Howson and Mr Bishirgian, *inter alia*, were described as being concerned. The circumstances preceding the publication of the prospectus of James and Shakspeare were also described. Evidence was given as to the arrangement of loans with the Midland Bank to finance pepper, and, finally, as to the failure of James and Shakspeare, in February, 1935. The hearing was adjourned.

* * *

Shellac and Tobacco Securities.—Mr Reginald McKenna's speech at the Tobacco Securities Trust meeting last Monday was naturally occupied with the "grave and regrettable mistake"—to use his own words—of the Dean Finance Company's shellac transactions. This frank admission followed a review of the efforts of the latter company—itsself a sub-subsidiary of the Tobacco Securities Trust—to save a shellac position entered into by Williams, Henry and Company, which had been assisted by loans from Dean Finance on a wide margin. The shellac position was also referred to at the hearing of summonses against certain individuals at the Guildhall on Wednesday, a summarised report of which appears above. Unfortunately, declared Mr McKenna, the knowledge that James and Shakspeare were heavily committed in the pepper and shellac forward market was discovered only at the end of 1934, necessitating further loans to Williams, Henry in the hope of saving the shellac position. Dean Finance was therefore laden with shellac to be sold against the loans, involving losses, at May prices, of £288,000 and, at end-October prices, of £170,000. In the chairman's words, such a loss must be seriously displeasing to stockholders. Thirty per cent. of the holding has been sold, but the accounts have wisely been drafted on the basis of much lower shellac prices than those of October 31st, owing to stockholding and realisation expenses. Interesting light was thrown by the chairman's speech on the component parts of the Trust's revenue. On the basis of shellac prices prevailing on October 31st, the estimated loss (£170,000) on shellac transactions was covered by the combined net revenue of the Trust, and of Tobacco Investments (a subsidiary), together with profits of Dean Finance on its other transactions, without taking into account the dividends received from the tobacco interests. Applying this criterion to a normal year, it would appear that the tobacco dividends may provide as much as £600,000, assuming that no account is taken of any exceptional sources of profit in the 1934 figures, and that all net

income of the subsidiaries was, in fact, distributed. Both assumptions may, possibly, be challenged, but the results support the suggestion that the Trust may regain its stride fairly quickly, provided that no further disappointments are in store regarding the shellac stocks. The market gave a good reception to the speech by further bidding the deferred stock to 87s. 6d. xd., against a "low" of 73s. 1½d. this year.

* * *

Baldwins Conversion Questions.—The 6½ per cent. convertible debenture stockholders and 7 per cent. "B" preference shareholders must decide immediately whether to exercise their respective rights to convert into ordinary shares, for the latest date for notice is Wednesday next, and the rights expire on December 31st. The circulars which have been sent out by the company will therefore be welcomed by both classes to assist them to choose wisely. The decision is more crucial to the "B" preference shareholders, for their interest, of £719,175, compares with only £108,361 convertible stock now outstanding. The latter may be redeemed at 5 per cent. premium in two years' time, and stands at 120. Conversion into ordinary shares at the rate of 6s. per share would give the debenture holder £137 10s. worth of ordinary shares after their fall to 8s. 3d. on the publication of the circulars. The near prospect of repayment suggests that the exercising of the conversion rights and re-investment of the proceeds will commend itself to the convertible debenture holders. The "B" preference shareholders, however, have little incentive, in terms of capital profits, to convert. They may exchange for every two shares held into five ordinary shares on payment of 10s. The total costs are therefore 47s., and the present value of the new holding 41s. 3d. Again, the earnings prospect does not suggest further geometric possibilities. Basing their opinion on the first ten months of this year, the directors anticipate that the 1934 profits will be approximately maintained. This estimate excludes any prospective dividend from the British (Guest, Keen, Baldwins) Iron and Steel Company, since the reconstruction of the Cardiff works has inevitably disorganised production. It is computed that £205,000 may be earned for ordinary dividends and taxation, compared with £91,331 last year. Calculations of the eventual requisite dividends and earnings to yield a profitable exchange to "B" preference holders depend, inevitably, on the extent to which the ordinary capital is increased by voluntary conversions, and upon the prospective income from the British (Guest, Keen, Baldwins) plant next year. On the latter point, however, the circular provides no clue, and while exchange might well prove advantageous if present hopes are realised, and would widen the equity basis, the latent "unknowns" in the equation indicate the somewhat speculative nature of the operation.

* * *

Ind Coope and Allsopp.—The full accounts of this brewing merger (whose preliminary figures were set out in the *Economist* of November 30th) show the results achieved during the first complete year's working of the new regime. Detailed comparison of the figures with those of the previous year is unsafe, for the Allsopp acquisition dated from May, 1934, while the accounts now presented show the considerable changes resulting from the transfer of the Allsopp assets into the merger company's books. The rise in total profits from £626,673 to £842,049 suggests that the success of the merger has been assisted by the rising trend of brewery profits in every district in the country. The splitting up of the trading profit and dividend receipts into "Ind Coope" and "Allsopp" items, however, is an unprofitable task; for although the Allsopp assets have been merged, no indication is given of the effective date of the operation. Since the Allsopp net profit in the previous year was £220,000 (of which £165,793 was received by Ind Coope and Allsopp and shown under "dividends received"), the latest figures suggest that part, at least, of the Allsopp earnings again found their way into dividend receipts of the merger company before the transfer of assets had been completed. The following table is therefore a safer indication of the present

earning power of the group than a comparison of the year's progress:—

	Years to September 30,	
	1934	1935
Trading profit	391,724	567,463
Interest and dividend receipts	234,949	274,586
Total profits	626,673	842,049
Fees	12,568	13,615
Compensation fund and taxation	67,555	98,199
Depreciation	52,055	71,307
Mortgage, deposit & debenture interest	102,690	148,945
Debenture redemption provision		17,371
Preference dividends	52,974	75,140
Ordinary shares—		
<i>Earned</i>	<i>338,831</i>	<i>417,472</i>
<i>Paid</i>	<i>229,356</i>	<i>285,916</i>
<i>Earned %</i>	<i>§</i>	<i>36·5</i>
<i>Paid %</i>	<i>§</i>	<i>25</i>
Property reserve	32,906	61,165
General reserve	50,000	50,000
Carried forward	339,060	359,450

§ Earnings and dividend percentages not shown owing to absorption of Samuel Allsopp in March, 1934. Earnings percentage for year calculated on ordinary capital ranking and charging actual preference dividends was 33·2 per cent. Dividends paid, 6 per cent. on original Ind Coope ordinary capital of £874,218 and 16½ on merger company's capital of £1,475,698.

Wholesale changes are shown in the balance sheet between interests in subsidiary companies and other fixed and floating assets. The first item shows a round reduction of £2,271,000, and is largely offset by a corresponding increase of £2,146,000 in fixed asset items, while cash and stocks are substantially higher. The report refers to adjustment of the book values of certain of these assets, although the aggregate value has not been increased. The consolidated balance sheet shows a position as strong as any brewery shareholder could expect. The £1,475,698 of ordinary capital is covered by net assets amounting to £3,567,749, and the report admits the existence of further internal reserves for contingencies, which are thought adequate. The £1 ordinary stock units are quoted at 113s. 6d. to yield £4 8s. per cent. The advantages of the merger are probably not exhausted at this comparatively early stage, and the shares rank among the soundest brewery issues.

* * *

Timothy Whites and Taylors.—The report of this "chain retailing" organisation, to September 28th, does not lend itself to comparison with previous results, since the original company acquired control of the Taylors (Cash Chemists) group, and assumed management of their branches, mid-way through the year. The directors are satisfied from the results of the first half-year's trading under the new arrangement that benefits will accrue to all parties to it. When centralisation was proposed, the directors assessed potential economies at £40,000 per annum, ordinary share earnings at £158,500, subject to reserves, and reasonable expectations of a 25 per cent. ordinary dividend after the reorganisation. While the accounts throw no light on progress towards the first estimate, and the ordinary earnings are £124,677, an ordinary dividend of 22½ per cent. has been paid, compared with 17½ per cent. on the former deferred capital of Timothy Whites. The group now controls 765 retail branches, including 172 "dual" shops selling drugs and hardware. This is a lower figure than the 1,000 stores in the Boots' organisation, but it suggests an approach to effective rivalry in this class of retailing. A policy of modernisation is being pursued, and further new shops are contemplated. The liquid position is sound. The ordinary 5s. shares are quoted at 22s. 6d. to give the relatively high yield of £5 3s. 6d. per cent.

* * *

Carreras' Progress.—After the almost universal warnings by tobacco company chairmen in the earlier part of this year that higher raw tobacco costs might affect profits adversely, the improvement in Carreras' gross trading profit from £852,403 to £901,638 is better than might have been expected. The explanation, however, is to be found partly

THE INDUSTRIAL AREA OF THE NORTH-EAST COAST

NORTH-EASTERN ELECTRIC SUPPLY CO. LTD.
Carlisle House, NEWCASTLE-UPON-TYNE

in the continued vigorous increase in home and export tobacco consumption (in the first three quarters of 1935 raw tobacco "entered for home consumption" amounted to 163,319,307 lbs., against 155,744,848 lbs. in the first three quarters of 1934) and partly in the movement in the stock figure in Carreras' own balance sheet. Against £2,011,005 at October 31, 1934, the stock this year is carried at £1,639,468. This movement is parallel to a general reduction in bonded stocks of leaf tobacco, and reflects the policy of the manufacturers in drawing on their large accumulated stocks when the price of leaf tobacco rises. Carreras may thus have modified the effects of dearer raw material, while some non-recurrent profit will no doubt have been earned, as is usual when conservatively valued stocks are reduced for the purpose of supplying current requirements. The comparative movement of profits in the last three years has been:—

	Years to October 31,		
	1933	1934	1935
Total gross profits	868,182	853,318	992,390
Pension fund, fees and taxes	24,555	58,054	51,059
Depreciation	40,039	47,395	49,382

Ordinary shares (all classes):			
<i>Earned</i>	<i>778,588</i>	<i>682,869</i>	<i>826,949</i>
<i>Paid</i>	<i>620,048</i>	<i>620,048</i>	<i>620,048</i>
<i>Earned %</i>	<i>46·9</i>	<i>39·6</i>	<i>48·6</i>
<i>Paid %</i>	<i>35</i>	<i>35</i>	<i>40</i>
To reserve, etc.	49,836†	47,905*	100,000
Carried forward	1,249,596	1,264,512	1,282,834

* Contribution from profit and loss towards writing off £297,905, cost of terminating coupon trading. † Issue expenses written off.

Despite the record output this year, the number of workers employed in tobacco manufacturing is the lowest for at least thirteen years. There is reason to suppose, therefore, that the industry is still increasing its efficiency. The 1935 profits of Carreras may thus contain elements of permanent benefit, while the recent recession in leaf tobacco prices should, temporarily at least, remove fears for the effects of higher leaf tobacco costs. It would seem that the increase in the total distribution from 35 per cent. to 40 per cent. reflects a justifiable confidence in the prospect for the current year. The £1 "A" ordinary shares are quoted at £8½ to yield £4 10s. per cent.

* * *

Coast Lines "Introduction."—The "introduction" of Coast Lines Ordinary to the Stock Exchange has demonstrated that this lately much-criticised method of starting public dealings can, if applied on the right lines and in the right cases, serve a very useful purpose. Within an hour or two of the beginning of dealings a sizeable block had been placed round 18s. 3d. without any suggestion of discriminative allotment, undue dealing margins or misleading marks. These shares, together with the balance of the first block of 850,000 purchased by the "Group" from the Realisation companies, having passed into investment hands, the market was then left with a further substantial block, representing part of the 850,000 shares under option, at a slightly higher price, and there are now free dealings round 18s. 9d. Everyone concerned is to be congratulated on the management of this operation. The criticism has been voiced that a "statement for information" should have been published in connection with this introduction. There is, however, no real cause for complaint in this respect, for the company is already a public concern and its reports have been regularly published. The "Group" which purchased the Ordinary shares judged,

correctly, that they would be able to find a natural market without going to the expense of extensive advertisement. The consequences of a mistaken judgment would have fallen on the parties to the deal and would not officially have concerned the company or even the Stock Exchange, which has merely given permission to deal in an already existing issue of a company whose Preference stocks have been dealt in for many years. Immediately before the "introduction" the company paid its first Ordinary dividend since the Royal Mail collapse in the shape of a 2 per cent. interim, which was retained by the "Group." In market circles it is confidently stated that the shares will be established on a 5 per cent. basis. The complicated inter-shareholdings between Coast Lines and its subsidiaries were discussed in the *Economist*, August 24th, page 384, and September 21st, page 571. A rough estimate taking account of these duplications suggests that, on the 1934 figures, Coast Lines Ordinary are on an effective earnings basis of perhaps 8 per cent.

Malayan Tin Dredging Results.—Our mining correspondent writes:—The reports of Malayan Tin Dredging and of its subsidiary, Southern Malayan, make their usual satisfactory showing. Although the production quota was slightly increased, both companies produced all the tin required by the operation of only two dredges. The outstanding feature of the statistics, therefore, is the increase in the quantity of gravel treated. Malayan Tin treated 5,048,760 yards, against 3,745,400 yards in the previous year, while Southern Malayan treated 5,080,700 yards, against 3,215,400 yards. In the former instance little change occurred in the average yield, but in the latter it was 0.384 kati per cubic yard, as against 0.51 kati. Since the price per ton realised was somewhat reduced, the higher profits are primarily due to the increased yardage. Last year the Malayan Tin earned £91,640, as against £78,270, and with the balance dividend now declared the distributions will total 45 per cent., against 36½ per cent. for 1933-34. Amortisation is now substantially reduced to £1,940, whereas twelve months ago £29,280 was provided and £20,000 transferred to reserve. The increased investment holding of £247,360 against £325,380, is offset by a reduction in the cash balance to £28,490, which covers the balance dividend with only a small margin. On the basis of the past year's total dividends, the yield is about 7½ per cent., but the declaration of a second interim dividend, making 32½ per cent. on account of the current period, suggests that a further increase is in prospect. Of the area of 2,198 acres owned, 1,123 have been dredged. The Southern Malayan profit amounted to £88,800, against £76,100; and the total dividend is increased from 20 to 22½ per cent. Since the date of the accounts, the associated Southern Perak Company has been absorbed for a consideration of 270,000 shares, making a total area of approximately 4,887 acres, of which only 796 acres have been dredged. On the basis of last year's dividends the yield indicated is barely 6 per cent. Presumably the market is making some allowance for the lengthy life of the undertaking and for larger distributions. A 12½ per cent. dividend on account of the current year will be disbursed with last year's final payment, making 20 per cent. to date. With the good dividends announced this week by Tronoh and Southern Tronoh, these results suggest favourable prospects during the present year for efficient tin producers.

December Rand Dividends.—In view of the liberal allocations to meet the profits surtax during the first half of the year, and of the prospective modification of the taxation basis next year, it was reasonable to expect some improvement in the December dividends. The increased distributions declared this week merely serve, in the main, to bring the totals up to the level of 1934. So far as can be judged, little if any allowance has been made for the return of excess taxation much canvassed a few weeks ago. The Daggafontein payment is substantially increased, while the cut in the Geldenhuis Deep rate reflects the shrinkage in profits and the difficulties which have been encountered. The appended table contrasts the latest declarations with

those of June and gives the totals for the two years. The Union Corporation group and Witwatersrand Deep announcements have yet to come to hand.

	Dec., 1934	Total, 1934	June, 1935	Dec., 1935	Total, 1935

* Tax free. † Less tax, 10/- share.

Among the finance companies, Anglo-American Corporation—which resumed payments on its ordinary shares with 10 per cent. last December—now declares a 20 per cent. dividend, the rate of the associated New Era undertaking again being 10 per cent. The Rand Mines is to pay 4s. per share, making 7s. 9d. for the year, against 7s. 6d.; while Transvaal Consolidated Land has increased its distribution from 7½ per cent. to 10 per cent.

Other Company Results.—The reports of sixty-six companies whose accounts have been received this week will be found in summarised form in our usual table on page 1240. The brewery group again makes a satisfactory showing. All profits and dividends are higher, from the larger concerns like *Peter Walker and Son*, whose net earnings have advanced from £391,805 to £492,612, to the smaller and highly prosperous local companies. Among the property concerns, *Second Covent Garden* has issued a satisfactory report, and pays a 6 per cent. ordinary dividend, while *Taylor and Woodrow Estates* reports profits of £44,376 for its first year's operations, covering the 10 per cent. dividend with a wide margin. In the heavy industry group, the *Redpath, Brown* recovery is outstanding, for net profits have jumped from £20,282 to £76,976 and ordinary dividends are resumed with a 10 per cent. payment. *Armstrong Siddeley Development* earnings are now a matter of interest to Hawker Siddeley Aircraft shareholders, since that concern holds the ordinary capital. Although net profits are over £20,000 higher at £175,857, the ordinary dividend is maintained at 10 per cent., and a substantially increased credit balance is carried forward. The report of *Combined Egyptian Mills* shows no relief from the adversity which has prevailed in the industry for so long. The investment trust net revenues are still showing steady improvement. Among this week's reports are the successful *Northern American* and *Army and Navy*, both of which have increased their dividends. The general industrial concerns include *Sunlight Laundries*, whose profits are reduced, somewhat surprisingly, from £57,327 to £50,796, while the dividend is 16½ per cent., against 25 per cent. in the previous year. The report refers to the increased cost of better quality work, while the company's charges are practically standardised. Reduced profits are also reported by *Booker Brothers, McConnell* and by *Cobbold and Company*. The principal recoveries in this group are shown by *Ilford, Waterlow and Sons, Millon Proprietary* (the dividend being raised from 11½ per cent. to 25 per cent.) and *Low Temperature Carbonisation*. The Rand dividends are set out above.

Company Meetings of the Week.—On later pages of this issue will be found the reports of the following companies:—British Overseas Bank, Commercial Bank of Scotland, Barclays Bank (Dominion, Colonial and Overseas), P. & O. Steam Navigation, Tobacco Securities Trust, Nelson Financial Trust, New Zealand Loan and Mercantile Agency, London and Rhodesian Mining and Land, Rhodesian Anglo-American, Steaua Romana (British), Ashanti-Adowsena, British Burmah Petroleum, Anglo-Ecuadorian Oilfields, Kamunting Tin Dredging, British Tyre and Rubber, and Luipaards Vlei Estate and Gold Mining. The Governor of the Commercial Bank of Scotland referred to the changes in industrial and financial conditions in the past year, and to the banks' difficulties in finding profitable use for their funds. At the British Overseas Bank meeting, the chairman discussed the difficulties of international trade and condemned the widespread tendency to regard gold, and gold alone, as the basis of credit. Mr McKenna, at the meeting of Tobacco Securities Trust, referred to the loss made by the Dean Finance Company on shellac, and said that a grave and very regrettable mistake had been made. British Tyre and Rubber Company had slightly lower earnings last year, but was expanding its activities. Mr Harold Nelson, of Nelson Financial Trust, recorded the effect of recent trade movements on the Trust's holdings. Since the last general meeting, Rhodesian Anglo-American has increased its interest in Rhokana Corporation to 53.9 per cent. of ordinary and "A" share capital. Mr Fraser reported that Steaua Romana (British), Limited, had made rapid development of a new field, and discussed exchange difficulties in Roumania. Mr Turk, of Luipaards Vlei Estate and Gold Mining, objected to the taxation burden on the company. The chairman of Ashanti-Adowsena (Banket) Goldfields reviewed the prospects of the mine and announced that production had commenced. British Burmah Petroleum Company can only restore dividend-paying capacity by augmenting crude production and refining throughout, said Mr Lionel Holland. Mr Williamson, of Anglo-Ecuadorian Oilfields, said that the most striking feature of the year's operations was that production had been maintained in spite of a reduced drilling programme and a decrease in the footage drilled. Mr John Howeson, of Kamunting Tin Dredging Company, said that in spite of drastically curtailed output, the balance to profit and loss was by a substantial margin the highest in the company's history. The speeches of the Hon. Alexander Shaw at the P. & O. meeting and of Mr H. L. M. Tritton at the meeting of Barclays Bank (D.C. & O.) are referred to in Notes on pages 1211 and 1209 respectively. The chairman of New Zealand Loan and Mercantile Agency reported that profits were lower than last year owing to the heavy drop in the price of wool and other commodities in which the company was interested. Lord Lurgan, at the meeting of London and Rhodesian Mining and Land Company, said that the company had done considerably better than in the previous year from revenue of a recurring nature.

THE WEEK IN THE MARKETS

THE LONDON STOCK EXCHANGE

SETTLING DAYS

TICKET
DECEMBER 17

ACCOUNT
DECEMBER 19

"PEACE" in the air has meant little to the Stock Exchange this week. Like the members of another House, dealers showed more surprise than relief on the publication of plans which, despite their individual differences, suggested the query whether sanctions were necessary to secure such good terms for aggression. In the well-founded belief that the terms would meet with opposition in Geneva, the Stock Exchange rightly held its hand is discounting a "peace" recovery. There were, in addition, some advance signs of the seasonal falling off in business, as the end of the last account of the year approached. Coupled with outside distractions, such as the latest hint from Dr. Schacht, and the extraordinary situation created in the silver market by

OTARD'S
ESTABD 1795

THE BRANDY WITH A PEDIGREE

the American authorities' refusal to play their hand in the new deal for silver, the week's news set a rather dull tone in many parts of the "House."

Gilt-edged stocks opened the week in dull mood, and after a modest recovery on Tuesday remained quietly firm during the rest of the week. Business was certainly sub-normal, and prices of the leading stocks changed little after Tuesday's close. New Zealand issues, in the Dominion list, recovered a further part of their recent losses.

In the foreign bond market, German issues were very unsettled following Dr. Schacht's week-end statement that the debt service presented increasing difficulty, even at the present attenuated rates. Suspecting smoke before the fire, holders of German issues promptly sold, and the market was in a weak state until Thursday's partial improvement reversed the trend. The Far Eastern issues continued their recent improvement, although some uneasiness developed among Chinese issues on unauthenticated rumours that Customs collections were meeting interference in some centres. The delay in meeting the Montevideo coupon affected Uruguayan bonds, and the whole of the South American market wore an uneasy appearance.

In the home rail market, initial dealings were subdued by a fair amount of profit-taking, particularly in Southern issues, which enjoyed useful rises last week. The suggestion that the rating decision might be delayed until the New Year brought further disappointment in the train of traffic figures which the market refused to acknowledge as reasonably satisfactory. The market was particularly cheerless on Wednesday for these reasons, and prices of all stocks, from prior charges to the most depressed junior issues, were affected.

The foreign rail market continued lifeless, and was further troubled by indifferent traffics. Quotations, which had previously been maintained, were unable to resist the gloomy atmosphere, and falls of up to a point were recorded.

Turnover in the industrial markets tended to fall away as the week proceeded. In some directions the week opened well, with good support for International Nickel, but the general appearance of irregularity in most markets accurately portended the course of the week's dealings. Aviation and motor issues opened more actively, but interest was not fully maintained. Crompton Parkinson, after their recent spectacular rise, fluctuated considerably, as profit-takers alternated with new speculative purchasers. Movements in other equipment shares were small and usually irregular.

Iron and steel shares displayed no consistent purpose, despite the Sheffield production figures. There were some small improvements in Tuesday's list, but most of them were lost in the quiet reaction which set in later. The Baldwins statement (see page 1214) caused some disappointment, and the ordinary shares fell to 8s. 3d. Brewery shares were inclined to ease, despite a little selective purchasing of a local character. Tobacco shares, broadly, received modest but faithful support, and the Tobacco Trust issues again recovered following the chairman's speech, discussed on page 1214. Some store shares attracted attention in midweek, and in the provision group Cerebos improved on share-splitting rumours.

Among the miscellaneous leaders, business was distinctly selective, and usually related to individual prospects. Murex provided one good feature early in the week, and some of the building issues, including the metal window concerns (on reports of a working arrangement) also improved before the mid-week recession. Many of the leading issues which were to the fore last week succumbed to profit-taking. In the bank share list, Hongkong and Shanghai recovered slightly and withstood mid-week profit-taking.

Oil shares attracted little attention throughout the week,

although there were some improvements on Thursday, when Apex rose on the report of favourable developments in the South-West area. Price changes were commonly small among the leaders in each direction.

The rubber and tea share markets gave an indifferent performance. The considerable fall in Dutch native shipments gave only negative support, for it assisted the day's moderate selling orders without prompting any advance. Interest in tea shares disappeared, and while sales of the leading shares were readily effected, there was no support from the public.

The main topics in the mining markets were December dividends and silver. The former, set out on page 1216, provided no excitement for a rather lifeless Kafir market, for most expectations were realised, and there were no "bumper" distributions from excess taxation refunds. The base metal group suffered from the open break in the silver market on the withdrawal of American support, described on page 1208, Burma Corporation being affected most severely. Movements in the West African and Australian markets showed no enthusiasm, but tin shares made a modest response to higher dividends, referred to on page 1216. De Beers preference issues made further sharp advances in anticipation of a revised scheme, but Rhodesian copper issues were considerably quieter.

FOREIGN STOCK EXCHANGES NEW YORK

THE features of the week on Wall Street have been the continuing influence of European politics, the unshakable indices of improving business conditions and the temporary effect of the Treasury's changed silver policy. Last week closed with a marked recovery after two days of irregular movements. This week opened with renewed uncertainty, and the Treasury's refusal to maintain high bids for the large volume of silver offered precipitated a further decline. On Wednesday the market decided to put away evil thoughts, and there was general improvement in prices, particularly for steel, building and utility stocks. And the news from Europe gave further encouragement, since peace appears to be a bull point; no matter what price is paid for it. It is generally considered that the market is all set for

another substantial rise. Interest on the bond market has been concentrated on speculative rail bonds, and on Italians. *Iron Age* reports a further increase in iron and steel output and a rise in steel prices; demand from the automobile industry is maintained, and there are rapidly improving prospects for increased demand from the railroad and utility industries. Principal utility holding companies have refused to register by December 1st, and are urging a rapid decision on suitable test cases; this the President wishes at all costs to postpone until after the election.

PARIS

M. Laval's success in the Chamber last Friday encouraged all sections of the market, and there were gains of 2 points in rentes and substantial improvement in banking issues. On Saturday the prospect seemed less favourable, and rentes lost ground in a general profit-taking. This week opened with renewed uneasiness, which was overcome as the Laval-Hoare deal became known and its prospects of success exaggerated. But in midweek the rising tide of world protest put the Bourse back in despondency and prices slipped downward. International issues were firmer, with the prominent exception of Suez Canal shares, although there was considerable uneasiness about the American silver policy and the prospects of a new German moratorium.

BERLIN

Last week's share quotations fluctuated in general within narrow limits. Steels, engineering, and breweries were rather weaker, Engelhardt Brewery losing ten points; but paper-pulp shares and electric cables advanced. Banks were little changed. In the bond market Mexican issues improved and intermittent buying of Austrian and Hungarian bonds was reported. Reichsmark loans were steady, and certificated dollar issues made a further advance. The new week opened with a decline in shares; but on Tuesday afternoon a slight recovery occurred, and certificated dollar bonds, in particular Prussians, again rose. The Bourse turned irregular on Wednesday, Siemens and Schuckert falling considerably.

AMSTERDAM

The tone of the Stock Exchange has been relatively dull throughout the week, and there was little activity except in the American section, which followed the fluctuations of Wall Street. There was a slight improvement at the opening of the week in Royal Dutch and in rubber issues, but prices fell back again later. In midweek there was a pronounced reaction under the influence of the silver difficulties, and Philips Lamps fell three points.

CAPITAL ISSUES

THE turnover in the new issue market this week has again been appreciable, although the largest operation on behalf of the *Ceylon Government* is a conversion operation involving no new money. The new 3 per cent. issue carries a maximum life of nearly 29 years, and will effect a considerable saving of interest, for it replaces a 6 per cent. issue made in the hard times of 1921. The terms are reasonable, and the security is enhanced by the Colony's economic recovery during the last two years. The *Essex County* stock is issued on terms only slightly dissimilar from those of the recent Brighton issue, which was accorded a dutiful rather than an enthusiastic reception. A yield fractionally under 3 per cent.—even on a county stock—accompanied by a 30-year maximum life at a time when interest rates seem more likely to rise than to fall further may represent the market's *maximum sensible*. An offer of *Southhook Potteries* shares, the 5½ per cent. preference at par and the 5s. ordinary shares at 40 per cent. premium, suggests that the company has been reasonably capitalised on the basis of recent profits, which have shown a striking increase during the last three years. Nearly one-third of the net assets acquired consists of stock, as certified by the company's officials. The issue of the ordinary shares at a substantial premium, however, raises the question whether such indirect payment to the vendors for goodwill is not more appropriately raised in the company's own books, and written down as necessary. Subject to this goodwill component, the ordinary shares may carry good prospects, and the issue appears under good auspices. The service of the 4½ per cent. debenture stock of *Somerset Collieries* is reasonably covered by net profits during the last six years, and the coal-bearing areas have an estimated life of 200 years, compared with the 31-year life of the stock. The businesses acquired have been under the same management for some years, and the stock, although giving a high yield, may be regarded as a satisfactory smaller colliery debenture. The mixed issue of debenture stock and preference shares by *Penmount Estates* follows the usual form of residential property issues. The properties have been valued inclusive of certain repairs and decorations to be carried out

at the vendor's expense. Both issues, which are small, have limited attraction for the general investor. Among the week's "introductions" is included *Bridgewater Corporation*, a non-trustee borrower which has raised the maximum of £250,000 under this method in 3 per cent. stock, 1955, at 98½ per cent. An established dye manufacturing company, *L. B. Holliday and Company*, has published particulars of a 4½ per cent. debenture stock placing, which is well secured by recent net profits. Other statements have been published by *Glacier Metal Company*, a bearings metal producer with a rising earnings trend, and *Peruvian Associated Gold Mines*, which has been formed to develop properties on which certain veins have been exposed.

(s) In our table on page 1170, December 7th issue, we showed £44,000,000 for repayment of 3 per cent. Treasury bonds on April 15, 1935. Actually, as £34,000,000 of this total was repaid out of Sinking Fund money, the net figure was only £10,000,000 and the balance has been deducted accordingly from our conversion total and added to our new money total

LONDON ACTIVE SECURITY PRICES AND YIELDS

NOTE—Shares with a New York Quotation or with definite American interest are distinguished by italics

In calculating yields on fixed interest stocks quoted below allowance is made for interest accrued since the last date of payment, less income tax at the standard rate. Where stocks are definitely redeemable at a certain date the yield includes any profit or loss on redemption, where stocks are redeemable at or before a certain date the final date of repayment is taken when the stock stands at a discount and the earliest date when the quotation is above par. The return on ordinary stocks and shares is calculated by reference to the latest dividends, account being taken of any enhancement or reduction of interim dividends. Allowance is made for accrued dividends in calculating the yield on "cum. div." shares.

Cole (E. K.), Ltd.—Issue of 250,000 5½ per cent. first cumulative preference shares £1 to existing preferred and ordinary shareholders. At 20s. 6d. per share. Issue made for development purposes. Net assets, May 31, 1935, including proceeds of present issue, exceeded £788,000. Average annual profits for five years and four months to May 31, 1935, £123,176 after depreciation.

East London Rubber.—The unissued 20,000 5½ per cent. cumulative preference shares will be issued at 21s. per share and offered to existing preference shareholders in the proportion of one share for every nine shares registered on December 7th.

Paringa Mining and Exploration.—1,061,600 shares of 1s. are offered to shareholders registered at the close of business on December 2nd at 2s. 6d. per share (sterling), in the proportion of one new share for every two shares held.

Edinburgh and Dundee Company.—This company is issuing 43,200 ordinary shares of £1 at 31s. in the proportion of one new share for each £10 of ordinary stock now held.

Mashaba Rhodesian Asbestos Company.—The directors propose to issue 1,500,000 new shares at 1s. 3d. per share in proportion one new share for each two held on November 30th. With the proceeds of the issue, the purchase of new properties will be completed, and the balance will be utilised for development and the general purposes of the company.

Southern United Investment.—Issue of 10,000 £1 shares to existing shareholders at par. The list will close on December 18th.

Alvis Car and Engineering Company, Ltd.—Issue of 720,000 ordinary shares of 5s. each at the price of 8s. per share. Messrs Ian Anderson and Nairn, of 1 Throgmorton Street, E.C.2, have underwritten this issue for a commission of 1½ per cent. on the issue price and a fee of 2,500 guineas in consideration of this underwriting and other services. List closes December 21st.

Booker Brothers McConnell.—This company is issuing 25,000 new ordinary shares of £1 at par to ordinary shareholders. Registered December 10th.

Enfield Rolling Mills.—In order to finance the purchase of London Zinc Mills and extend the business generally, the directors of Enfield Rolling Mills propose to issue at 20s. 6d. a further 140,000 shares to shareholders in the proportion of one for each three at present held. The issue has been underwritten.

CONVERSIONS AND REPAYMENTS

Government of Ceylon.—Offer of £4,500,000 3 per cent. inscribed stock, 1959-64 to holders of 6 per cent. stock, 1936-51 (of which £6,212,993 is outstanding) at par; cash subscriptions also invited to make up £4,500,000. Public debt, £14,181,769; accumulated sinking funds, £5,296,987. Revenue: 1932-33, Rs. 106,090,728; 1933-34, Rs. 104,100,361; expenditure, 1932-33, Rs. 92,698,229; 1933-34, Rs. 93,444,581. Loan repayable at par July 1, 1964, and on three months' notice from July 1, 1959. Cash lists were closed at noon, Dec. 9th.

Treasury Bonds 3 per Cent.—The numbers were announced, in a special supplement to *The London Gazette* on December 10th, of the £44,000,000 of 3 per cent. Treasury Bonds drawn on December 3rd for redemption at par on April 15, 1936.

Nuttall's Breweries.—Issue of £1,000,000 4½ per cent. mortgage debenture stock at par. This stock is offered to holders of the existing 6 per cent. debenture stock by way of exchange, and they are being offered a bonus of £7 on conversion or repayment.

Northern American Trust Company.—The directors are issuing £203,122 3 per cent. debenture stock, 1965-75, at 90. Holders of £200,000 terminable debentures have the right to convert into the 3 per cent. stock on the basis of £100 of new for each £100 of old stock now held.

Tyne-Tees Steam Shipping.—This company announces that on December 31, 1935, it will redeem the whole of its outstanding 4½ per cent. first mortgage debenture stock at 105 per cent.

Yates's Castle Brewery.—50,000 ordinary £1 shares are to be offered to shareholders at par in the proportion of one new share for every two held. The proceeds of the issue will be used to redeem the balance outstanding of 6 per cent. debentures, amounting to £53,450.

Allied Ironfounders.—The outstanding convertible debentures will be redeemed at par on January 1, 1936.

Salisbury (Southern Rhodesian) 4½ per Cent. Loan.—Numbers are announced of certain bonds of the Salisbury (Southern Rhodesia) 4½ per cent. municipal loan for £100,000 drawn for redemption on December 31, 1935.

FORTHCOMING ISSUES

Sears (J.) and Company, Ltd.—A meeting will be held on December 20th to consider a resolution providing for the creation of £2,000,000 of debenture stock. Holders of the company's £1,750,000 of 5 per cent. debenture stock are expected to be offered the right to convert into new 4 per cent. stock.

Twentieth Century Cinemas.—We understand that the issue of participating preference and ordinary shares by Twentieth Century Cinemas will be made before Christmas.

South African Druggists.—The subscription list will open on December 17th for an issue by South African Druggists of 400,000 5½ per cent. cumulative preference shares of £1 each at 21s. per share and 400,000 ordinary shares of 5s. each at 7s. per share.

Metropolitan Electric Supply Company.—The directors of the Metropolitan Electric Supply Company, Ltd., are considering the making of a large debenture issue early in the New Year. The amount involved is likely to be in the neighbourhood of £1,000,000, and it will probably bear interest at the rate of 3½ per cent. Part of the new money is required to repay existing temporary loans, the balance being devoted to new capital purposes.

Warner's Radio and Electric.—Underwriting arrangements are in hand for an issue of 6 per cent. cumulative preference shares of 10s. and ordinary shares of 1s. in Warner's Radio and Electric.

OTHER RESULTS OF ISSUES

Burmese Hydraulic Tin.—The lists for the issue at par of 300,000 ordinary shares of 5s. each closed at 9.5 a.m., December 6th.

National Provincial Cinemas.—The subscription list for the issue of 325,000 6 per cent. cumulative participating preference shares of £1 each at 22s. per share was closed at 9.5 a.m., December 6th. The issue was over-subscribed about 25 times.

Mentmore Manufacturing.—Subscription lists for the issue of 147,000 6 per cent. cumulative preference shares of 10s. each at par and 147,000 ordinary shares of 5s. each at 6s. per share were closed at 9.5 a.m., December 6th. The issue was over-subscribed.

Australian Internal Loan.—The £7,500,000 Australian internal loan has been fully subscribed.

CALLS DUE DECEMBER 16 TO DECEMBER 21, 1935

The grand total of calls in December 1935, is £16,128,124, which compares with £7,934,567 in December, 1934.

REPORTS AND NOTICES

Messrs Thomas Skinner and Company announce that *The Bankers' Almanac and Year Book*, 1935-36, will be published on December 23rd.

BANKS

MIDLAND BANK, LTD.—The directors of the Midland Bank, Ltd., have the pleasure to announce that they have elected Sir Francis L'Estrange Joseph, K.B.E., J.P., D.L., to a seat at their board.

MISCELLANEOUS

CABLE AND WIRELESS (HOLDING) LTD.—Cable and Wireless (Holding), Ltd., announces that the remaining legal formalities in connection with the reduction of the capital of the company have been completed, and payment of the amounts due in respect of assented stock will be made on and after December 22nd against delivery to the company of the assented stock receipts.

CARRERAS, LTD.—After writing off all charges including advertising, depreciation, directors' remuneration, etc., the net profit for year ended October 31, 1935, is £942,007, against £804,942 last year. The dividend on the ordinary, "A" ordinary and "B" ordinary shares is again brought up to 35 per cent., less tax, by a final distribution of 20 per cent., and in addition there is also a cash bonus of 5 per cent., less tax, making a total payment of 40 per cent. A sum of £100,000 is placed to contingencies fund, against nil, while tax requires £6,756 less at £43,017. After allocating £7,042 to employees' superannuation fund, the carry forward is £18,322 higher at £1,282,834.

MANBRE AND GARTON, LTD.—An increase of £27,274 in net profits in the year to September 30, 1935, to £330,486, is reported by Manbre and Garton. The ordinary dividend is raised by ¼ per cent., to 14 per cent., and deferred shareholders receive 68.8 per cent., against 65 per cent. The transfer to special reserve is halved at £5,000, and £2,000, against nil, goes to pensions reserve. After allowing £14,700 to write off debit balance of discount on the debenture stock, the carry-forward, subject to staff bonus, is £3,246 down at £198,169. Meeting at Incorporated Accountants' Hall, W.C.2, December 12th, at noon.

EBBW VALE STEEL IRON AND COAL COMPANY, LTD. (AGREEMENT WITH RICHARD THOMAS PASSED).—At the meeting on December 6th, resolution for sale agreement was, on being put to meeting, lost by a large majority. A poll was demanded, result being majority in favour of 1,936,699 votes, including proxies.

ARMSTRONG SIDDELEY DEVELOPMENT.—The Armstrong Siddeley Development Company reports a further substantial advance in profits during the year to September 30, 1935. The net balance, at £175,856, shows an increase of £24,723 on the previous year. After paying the preference dividend and maintaining the ordinary dividend at 10 per cent., the carry-forward is increased from £72,169 to £158,072. No further addition is made to the special reserve fund, which was last year raised to £350,000 by a transfer of £100,000.

COAST LINES SHARE DEAL.—The R.M. and E.D. Realisation Companies have sold 850,000 ordinary £1 shares in Coast Lines, Ltd., to "a strong group," with the intention of subsequent sale to the public. The purchasing group has the option to purchase a further 850,000 shares, and, if this option is exercised, these shares also will be distributed. The Coast Lines has declared an interim dividend, to be paid December 17th, of 2 per cent. on its ordinary shares, the first payment for many years. Dealings started on the 850,000 shares on December 6th at 18s. 9d. ex-dividend.

COMPANY MEETINGS, &c.

THE BRITISH OVERSEAS BANK, LIMITED

REVIEW OF THE YEAR'S OPERATIONS

DIVIDEND MAINTAINED

LESSONS FROM ERRORS OF THE PAST

GOLD AND CREDIT

MR ARTHUR GAIRDNER ON MODERN TENDENCIES

The sixteenth annual general meeting of The British Overseas Bank, Limited, was held, on the 10th instant, at 33 Gracechurch Street, London, E.C.

Mr Arthur C. D. Gairdner, Chairman of the Bank, presided.

Apologies for absence were received from Sir Edgar Horne, Bt., and Mr R. T. Hindley, two of the Advisory Directors.

The Secretary, Mr A. E. Thorne, having read the notice convening the meeting and the report of the auditors,

The Chairman said: Ladies and Gentlemen, it is with deep regret that I have again to refer to the loss we have sustained in the death of a valued colleague. I speak of Mr Bernard Rollo, an original Director of the Bank—indeed, he was interested in its formation from the moment when the idea was first discussed. Mr Rollo was an outstanding personality in the City of London. Probably no one there was the recipient of so many personal confidences as our late colleague, and never did he fail to help in one way or another those who came to him. This trust he guarded with a fervour that was almost religious, and the faith in his discretion was absolute. His wide experience and the quiet vigour of his judgment made him invaluable as a colleague, while his generosity of mind and his deep understanding and sympathy make his loss an irreplaceable one to all who have known him.

To fill the vacancy the Board have appointed Mr T. F. Tallents, who, after a gallant military service, has had a varied business experience. We feel that his knowledge will be very useful to the Bank and that the shareholders will warmly adopt his election to the Board when it comes before the meeting for confirmation.

DIFFICULT CONDITIONS

In most respects the year we have just come through has been much the same as the preceding twelve months. Our own accounts have been smaller in volume than usual, but this does not apply to the number of transactions. In the case of acceptances, for instance, we issued some 20 per cent. more than during the previous year. No doubt the reduction in volume arises not only from the lower prices of commodities but from the restrictions and difficulties of trade which cause everyone to act with the greatest circumspection.

Uncertainty, intensified by the manner in which the gold *bloc* countries have reacted against those belonging to the sterling *bloc*, was again the dominant feature in the financial world. Expression of this movement is found in the crises which occurred in Belgium and Danzig, the currency values of both countries having been lowered. In the prevailing conditions of uncertainty, however, I do not feel that any purpose would be served by discussing present-day problems as they affect particular countries, but it might be useful if for a moment one turns to the past to see if our experience teaches any lesson by which mistakes can be avoided in the future.

MISTAKE OF THE WAR INDEMNITY

The first mistake which comes to mind is naturally the imposition of the huge war indemnity on Germany. It is now obvious that not only was this payment an impossible burden to redeem, but that the endeavour to do so upset the equilibrium not only of Germany, but of the whole World. The next grave error that most of us would think of was the attempt to settle inter-governmental indebtedness. This attempt added to the instability occasioned by the endeavour to redeem the war indemnity, to which I have already referred.

The disturbance of international finance caused by these two factors has been increased by an attitude of mind it is difficult to define, and I do not think it has received a name. What I mean is the widespread tendency to regard gold, and gold alone, as the basis of credit and to forget its real functions and limitations, with the result that some of the most dangerous inflationary tendencies

of the past few years have been indulged in by those who believe themselves to be the strictest exponents of financial orthodoxy.

GOLD RESERVES

Gold was originally the medium in which national, and for that matter individual, reserves were held, because for various reasons it was widely acceptable as a means of payment; and from the power it gave to settle indebtedness easily and promptly came confidence in the credit of the possessor, and hence ultimately the credit structure that has been built on it as a foundation. The credit structure, however, rests not on the gold reserve behind it but on confidence—confidence that the country is sound economically and financially, and that the Government can pay its way and balance its budgets. The possession of an adequate gold reserve, it is true, may be an important factor in creating and maintaining this confidence, and in this sense may be a necessary part of the basis of credit. The modern fallacy, however, is the argument that a gold reserve is by itself a sound basis of credit, and that a credit structure may legitimately be erected on it, irrespective of the underlying economic and financial position.

Gold, immobilised in a Central Bank and kept there by every device of restriction and prohibition, has lost the qualities which originally made it valuable as a reserve. It is not available to settle temporary indebtedness, and the fact that the Government or Central Bank will go to any lengths to avoid using it for this, its natural function, is in itself enough to undermine the confidence on which the country's credit structure depends. Meanwhile, this preoccupation with the maintenance of idle and ineffective stocks of gold may lead a country into all kinds of expedients of unsound economic and financial policy and to difficulties which no amount of gold reserves can avail to overcome.

THE OLD IDEA

The old idea was that the gold standard was automatic in that an unsound credit policy would defeat itself by leading to a loss of gold reserves, and so to a contraction of credit. On this assumption the principle of basing credit policy on gold reserves might possibly be defensible. This requires, however, a freely operated gold standard, a condition that no longer exists under present systems of exchange and trade restrictions, and, indeed, may never be realised again.

While conditions remain as they are now, there is no sure foundation for recovery until the World re-learns this rather elementary truth—that credit depends on confidence, and confidence in the sound and orderly management of national affairs, in balanced budgets and in a healthy relationship between foreign receipts and payments. A policy based on the present gold obsession is ineffective and may very easily result in serious consequences to the countries which pursue it.

One hears with considerable frequency that what is desirable is a redistribution of gold, but it follows from what I have said that a redistribution, should it take place, will in itself provide no solution of the difficulties apparent in the World. That, in my opinion, has to be sought for deeper. In such circumstances there is little purpose in discussing general questions as they affect the various countries with whom we are in business relations.

POLAND

In Poland, with which country we have had for many years intimate and cordial relations, a heavy blow has fallen in the death of Marshal Pilsudski. The devotion felt for him in his own land was perhaps never more justified than in his death, when it was seen that his vision had taken into account all the difficulties with which his beloved country would then be faced, and that he had quietly and unobtrusively prepared for this event so that

all that was necessary was to give effect to the measures his prescience had recommended. A general election shortly followed, from which it was obvious that the desire of the whole country was to carry out the views of their patriot soldier. The changes in the government, which such a disturbance in the national life necessitated, are being quietly carried out, while the steadfast calm with which Poland has dealt with this crisis—in addition to the world crisis, which in itself has been sufficient to undermine the confidence of countries whose national life has been much longer established—has been the admiration of all, and a surprise to those not intimately acquainted with that country.

A BANK FUSION

The year has also seen the carrying through of a fusion between the Bank Handlowy and the Anglo-Polish Bank. Much reorganisation has been necessary, but we are confident that next year will show that this historic Polish Bank has been reborn, and that, with a youthful vigour, it will enter upon a long period of usefulness to Poland, thus fulfilling the promise of strength which its friends desire.

You will see from our accounts that this fusion has brought about a substantial diminution in our "Investments in Subsidiary Companies," as the value of our shares in the Bank Handlowy now appears under "Other Investments."

No incident of an outstanding character has occurred in any other country with which we are in close business relations, and, as I have already said, I do not feel that remarks of a general character are called for at the moment.

PROFIT FOR THE YEAR

It will be seen from our accounts that the profits earned in the past year have only just been sufficient for the payment of our usual dividend. It is clearly essential, however, for every Bank to continue to build up its reserves, and we trust that the future, more profitable than the immediate past, will allow us to do so.

These profits, of course, are linked particularly closely with the progress of international recovery and, though in the past few years we have been repeatedly disappointed, I continue to think that we are not without reasons for confidence. At home the return of the National Government and the steady improvement in production and in employment are reassuring factors. Abroad, the Abyssinian problem and the activities of Japan in the Far East have gone far to counteract the modest recovery that had begun to show itself in many quarters. At the same time, it is surprising that, in view of these troubles, and in spite of so many restrictions, the latest and not the least disturbing of which is the policy of sanctions, international trade continues to function and, here and there, shows signs of growth.

NEED FOR PATIENCE

There are then, I repeat, some reasons why we may expect the forces of recovery to win the day, but in the meantime I must ask your patience during the difficult period through which we, in company with so many others, are passing.

It now remains for me to propose the adoption of the report and accounts, which I shall ask Mr Norman L. Hird to second, but before putting the motion to the meeting I shall be glad to reply to any points on which further information is desired.

I now move the following resolution:—"That the report and accounts for the year ended 31st October, 1935, as audited and certified by your Auditors, now before the meeting, be approved and adopted; that the dividend of 6 per cent. for the year recommended on the "A" ordinary shares be approved and paid to shareholders on the register of members at the closing of the books on 26th November, 1935."

MR NORMAN HIRD'S SPEECH

Mr Norman L. Hird (Advisory Director):—Mr Chairman, Ladies and Gentlemen,—I have much pleasure in seconding the adoption of the report and accounts. As the Chairman has told you in his speech to-day, and as you were probably quite aware even before you received your copy of the balance sheet, it has been a very difficult year and we do not pretend that the profits are as high as we should have liked. However, we are hopeful about the future even if the year that has gone was rather disappointing.

I want you to realise that the accounts put before you to-day represent a great deal of efficient and hard work on the part of both the Management and the Staff. The Chairman's modesty prevented him from saying anything about that, but I am in a quite detached position and I know a good deal of what goes on, and I can assure you that the work has been extremely efficiently done. I often wish that the public could see behind the scenes of a Bank, but that, of course, is impossible. As they cannot

do that, I also sometimes wish that they would pay sufficient for the banking services rendered. That would be equitable, reasonable—and very unpopular. (Laughter.) It is extraordinary what an amount of work is involved in even the most ordinary transactions, and that is particularly true of foreign exchange.

We are all conscious of the fact that in good times shareholders are full of thanks to the Management and Staff for the excellent results and good dividends, but I do not think it is sufficiently realised that it is really in bad times that shareholders ought to be most thankful to them, because the amount of worry is very much increased in periods of difficulty. I am quite satisfied, however, that the shareholders of the British Overseas Bank are under no delusion and that they do appreciate the extraordinarily good work that is done here. (Hear, hear.)

POLISH DECORATION FOR THE CHAIRMAN

Our Chairman referred to Poland, which is a bright spot economically and politically in a rather dark Europe. Mr Gairdner has been a very good friend to Poland and a very wise counsellor, and I think you will be glad to hear that the people of Poland are grateful for his services and particularly glad to know that one of the highest Orders than can be conferred on anyone has been given to him by the Polish Government. (Applause.) I am also glad to say that the services of Mr Dudley Ward have also been recognised by the Polish Government. (Hear, hear.) That, Ladies and Gentlemen, is all I have to say and I have very much pleasure in seconding the adoption of the report and accounts. (Applause.)

The Chairman: If there are no questions to be asked, I put the motion to the meeting. Those in favour; those against; that is carried unanimously. I will now ask Sir James Caird to move the next resolution.

RE-ELECTION OF DIRECTORS

Sir James Caird, Bart. (Deputy-Chairman):—Ladies and Gentlemen,—I have been allotted the very pleasing task of proposing the re-election of Mr Arthur Gairdner and Mr Duncan Stirling as Directors and the confirmation of the appointment of Mr Tallents. Need I say more of Mr Gairdner than that if there had been no Mr Gairdner there would have been no British Overseas Bank. He is a banker of outstanding abilities; we are all proud of him and nothing has given us more pleasure than the recognition by the Polish Government of his abilities by conferring upon him the very high distinction of Commander of the Order of Polonia Restituta, with Star. I am sure you will join with me in congratulating him. (Hear, hear.)

Then Mr Duncan Stirling has been a very worthy addition to our Board. His knowledge of the financial world and of our foreign connections and clients has again and again proved valuable. Mr Tallents is our youngest recruit. His career up to date and his training promise much and the Board heartily welcomes his youthful energy and ability. I will ask Mr Campbell to second my proposal.

Mr Nigel L. Campbell (Director): I have great pleasure in seconding that.

Sir James Caird: I put that to the meeting. All in favour; against; unanimous. (Applause.)

The Chairman: I call upon a Shareholder to move the resolution for the appointment of Auditors.

Mr Walter Scott: I propose:—"That the retiring Auditors, Messrs. George A. Touche & Co. and Messrs. McClelland, Ker and Company, be re-appointed as Auditors of the Company for the current year at the same remuneration, namely, a collective fee of £750."

Lt.-Com. W. M. Knowles: I beg to second that.

The Chairman: I have pleasure in putting the motion to the Meeting. Those in favour please signify; those against; carried unanimously. Ladies and Gentlemen, that is all the business before us and I thank you very much for your kind attendance.

VOTE OF THANKS

Mr Scott: Mr Chairman, Ladies and Gentlemen, once again it is my pleasure to propose a hearty vote of thanks to our Chairman. I am sure we are all pleased to see him again looking so well. I hope, Sir, that you feel equally as well as you look. We are also pleased to hear of the Order which has been conferred upon you. I hope it will not make you too proud to recognise us next year. (Laughter.) I should also like to congratulate you upon your very excellent speech. (Hear, hear.) We all were able to understand it as you rendered it so plainly. I hope some shareholder will second my vote of thanks to the Chairman.

Mr Miles Ashworth: I have pleasure in seconding that.

Mr Scott: All in favour; that is carried unanimously, Mr Chairman.

The Chairman: Mr Scott, Ladies and Gentlemen,—Your friendly feeling is very deeply reciprocated not only by myself, but also by my colleagues on the Board and by the Management and Staff. I can assure you one and all that, whatever may be the results of our endeavours, they do the best they can for you. They do not spare themselves in thinking how in these extremely difficult times losses can be avoided and profits earned. It is a very difficult problem, but my colleagues and I are doing our best for you in those respects. I thank you very much. (Applause.)

Mr Scott: There is one thing that I forgot, and that is to convey our most hearty thanks to the Staff and to all in the service. Will you kindly convey our thanks to them?

The Chairman: I assumed that you had included them. I know that you intended to do so.

The proceedings then terminated.

TOBACCO SECURITIES TRUST COMPANY, LIMITED

EFFECT OF SHELLAC TRANSACTIONS

MR R. McKENNA ON THE POSITION

The eighth annual general meeting of Tobacco Securities Trust Company, Limited, was held, on the 9th instant, at the registered offices of the company, Westminster House, 7 Millbank, London, S.W.

The Rt. Hon. Reginald McKenna, P.C., presided.

The Chairman said:—Ladies and Gentlemen,—The notice convening the meeting and the directors' report and the accounts for the financial year which closed on October 31st last have been circulated, and with your approval we will take them as read. The secretary will read the auditor's certificate.

The Secretary (Mr E. A. Blockley) accordingly read the certificate of Lord Plender, of Messrs Deloitte, Plender, Griffiths and Company, chartered accountants, appended to the accounts.

The Chairman continued: In addressing you last year I referred to the net revenue for the year 1933-34 as £758,409, but a note of the directors subjoined to the revenue account for that year showed that a sum of £79,049 for depreciation on certain foreign investments of a subsidiary company had not been provided for out of the year's profits of the company, but had been met out of undivided profits brought forward from the previous year. This year, I regret that the net revenue is shown at a much smaller figure, namely, £527,103. The difference is largely accounted for by a provision made by Tobacco Investments, Limited, to cover the loss made by the Dean Finance Company, Limited, and by the non-payment of a dividend this year by the latter company.

DEAN FINANCE AND SHELLAC

In May last a circular was sent to our shareholders stating that the loss of the Dean Finance Company arising from advances made by them on the security of shellac and the underwriting of shares in the issue of James and Shakspeare, Limited, amounted approximately to £288,000. The loss was calculated on the basis of the market price of shellac on the day before the circular was issued, and it so happened that shellac then stood at about the lowest figure to which it fell in consequence of the catastrophe. Between April and October 31st, the date to which our accounts are made up, we have sold a fair amount of shellac at rising prices, and if we now take the market price of the present stock as on October 31st, the loss, which stood at £288,000 in May, is reduced to about £170,000. A grave and very regrettable mistake was made. There is, however, another side to the picture. The past record of the group of which this company is the parent has not been unsuccessful. Quite the contrary, and the misfortune in the year just ended will, I trust, have no recurrence. Taking, I repeat, the market price of shellac on October 31st as the basis of the estimate, the estimated loss on the shellac transactions is covered by the combined net revenue of this company and Tobacco Investments, Limited, and the profits of the Dean Finance Company, Limited, on other transactions for the year to October 31, 1935, without taking into account the dividends received from the shareholders in tobacco companies allocated to our company on its formation.

In making up our accounts, however, we have taken shellac on a less favourable basis. We recognise that although, in the seven or eight months from March to October, 30 per cent. of the holding has been disposed of, there is still a large amount to sell, and the expenses connected with the storage and sale of shellac have to be taken into account. A figure considerably below the market price of October 31st has been taken.

In the general revival of trade which is taking place it may be hoped that there will continue to be a fair and even improving market for shellac, and inasmuch as the price at which it has been valued is a very low one compared with the average price in any one of the last five years, we trust there will be no further disappointment from this transaction and that we may look forward to a more normal course in the progress of our company.

PROFIT AND ALLOCATIONS

I have already referred to the profits shown on the revenue account of Tobacco Securities Trust Company, and the figure I have given you of £527,103 is clear of all charges and expense of management. An interim dividend of 5 per cent. on the ordinary capital has already been paid, absorbing £165,833, leaving a balance of £361,270 to be carried to the balance sheet. There was brought forward from last year £132,298. These two sums make a total of £493,568. The directors recommend that a distribution be made of a further dividend of 10 per cent., less income tax at the rate of 3s. 5d. in the £ on the ordinary capital, amounting to £331,666.

Of the balance remaining, it is recommended to transfer £25,000 to general reserve, which will bring the general reserve account up to £175,000, leaving to be carried forward £136,902.

The Chairman concluded by moving the adoption of the report and accounts.

Sir Hugo Cunliffe-Owen, Bart. (vice-chairman), seconded the resolution, and, the chairman having replied to questions, it was carried.

Mr Albert Edward Aldridge and Mr Leonard Wilkinson were re-elected directors and the Rt. Hon. Lord Plender, G.B.E., LL.D., F.C.A., was reappointed auditor.

NELSON FINANCIAL TRUST, LIMITED

IMPROVED RESULTS AND PROSPECTS

The ordinary general meeting of Nelson Financial Trust, Limited, was held, on the 9th instant, at Southern House, Cannon Street, London, Mr Harold Nelson (chairman and managing director) presiding.

The Chairman, in moving the adoption of the report and accounts, said that the company's investments numbered 770, and the net depreciation on October 31st was 6.92 per cent. The revival of trade in this country had given a great impetus to many industrial concerns, and quotations for equity shares had risen in some cases to a figure which discounted a long period of prosperity. On the other hand, in a widespread list of securities there were many directions in which there had been retrogression since last year. Railway stocks generally showed a further depreciation, especially Argentine. Foreign stocks, more particularly European, reflected the prevailing unrest, and commodity shares, such as tea, rubber and coffee, were generally down on last year's values. Holdings in pastoral companies had reflected the result of a bad spell of drought in Australia and the downfall in last year's wool prices, although here there had been a marked improvement.

The gross income at £68,469 showed an increase of £18,265, reflecting the use of the new debenture money and improved revenue generally, while the net income showed an improvement of £5,365, which enabled the directors to recommend the final dividend of 1½ per cent. on the ordinary stock, making 3½ per cent. for the year. With regard to the current year, unless anything unforeseen occurred, there appeared to be a fair prospect of their being able to improve further the ordinary stock distribution.

The report was unanimously adopted, and a vote of thanks to the chairman, directors and staff terminated the proceedings.

OFFER TO NEW READERS

Any reader who makes his first acquaintance with this journal with this week's issue is invited to fill up the attached:

To The Publisher, "The Economist Newspaper Ltd.,"
8 Bouverie Street, E.C.4.

In order to test the value of your publication I should like you to forward this to me by post for the next four weeks. If I then decide to become a subscriber, it is understood that there will be no charge for the copies thus received, but otherwise I shall be willing to pay 4s. to cover their cost.

THE COMMERCIAL BANK OF SCOTLAND LIMITED

SATISFACTORY RESULTS—INCREASED PROFIT

STEADY IMPROVEMENT IN TRADING CONDITIONS AT HOME

EARL OF MAR AND KELLIE'S INTERESTING REVIEW

The annual meeting of the shareholders of The Commercial Bank of Scotland, Limited, was held at Edinburgh, on the 12th instant, the Earl of Mar and Kellie, governor of the bank, presiding.

In submitting the report the governor said:—It has always been a pleasure to me to preside at the annual general meeting of the shareholders of the bank, but I have an added satisfaction this year in meeting you on the occasion of the one hundred and twenty-fifth anniversary of the foundation of our institution.

PAST TWENTY-FIVE YEARS' PROGRESS

Twenty-five years ago the Marquis of Tweeddale, the then governor of the bank, in submitting the annual report, said that he felt entitled to congratulate all concerned with the bank—shareholders, directors and officials—not only on its unsullied and unblemished record of one hundred years, but also on the splendid business condition in which it found itself at the end of one hundred years' existence—a condition which he thought would remain so long as the management was in the hands of men like those who directed the affairs of the bank at that time. I venture to think that the results achieved during the past twenty-five years, and the position attained by the bank, as exemplified in the report and balance sheet, which I have the pleasure to submit for approval, amply justify Lord Tweeddale's prediction of twenty-five years ago.

IMPROVEMENT IN TRADING CONDITIONS

During the past year there has been a steady improvement in trading conditions at home, and there is now established that feeling of justifiable confidence in the future which is a necessary preliminary to any extensive development in trade and industry. The much hoped for improvement in international conditions does not appear appreciably nearer, and the many disappointments and uncertainties experienced in the international field since last we met are too well known to require any comment from me; suffice it to say that against a background of experiment in new forms of Government and control of industry and finance in many parts of the world our well-tryed if less spectacular system at home again commands the respect of most thinking people.

From a banking point of view the year under review has not been without its difficulties, not the least of these being the difficulty in finding profitable use for the substantial sums available. On the other hand, improving conditions are reflected in a satisfactory experience in the matter of bad debts.

BALANCE-SHEET ITEMS

Turning now to the report, you will observe that the directors have applied to the reserve fund a sum of £100,000 from profit realised as a result of investment changes during the year, and that when a further sum of £50,000 from the ordinary profits of the year has been added the reserve fund reaches the substantial figure of £3,000,000, or £750,000 more than the paid-up capital of the bank. It is interesting to note that the bank has now well over 8,000 shareholders who are principally of Scottish domicile, and our experience is that the number is steadily increasing.

NOTES IN CIRCULATION

Notes in circulation at £3,351,000 exceed last year's figure by almost £130,000, and the fact of our circulation throughout the year having consistently exceeded the previous year's figure by a substantial amount, I think, may be taken as clear evidence of the improved conditions of trade to which I have already referred.

Our deposits and other creditor balances at £40,783,000 are higher than last year by over £1,800,000, and it is a particular satisfaction to know that this increase is very well spread, and that a substantial portion is represented by current account balances.

Acceptances and other engagements on account of customers and banking correspondents at £2,208,000 are higher by almost

£500,000, which is a reflection of the development of our foreign business, to which we have given greater attention in recent years.

ASSETS

On the assets side you will find cash items grouped together and making a total of £9,902,000, or almost £700,000 more than last year. British Government securities exceed last year's figure by about £2,600,000, and now stand at the substantial total of over £24,000,000. Having regard to what you have heard from this chair from year to year, you will not be surprised to know that the market value of our investments shows a very satisfactory appreciation over the figure appearing in the balance sheet. An adequate proportion of our investments consists of short- and medium-dated stocks. Investments outside the strictly gilt-edged group now amount to the nominal figure of £205,000.

Bills discounted at £1,132,000 are more than last year by over £250,000, which is an altogether satisfactory indication of improved trading conditions.

LOANS AND ADVANCES

Loans and advances stand in the balance sheet at £13,247,000, a figure less by about £1,300,000 than was the case a year ago. It is sometimes assumed that the figure appearing under this head may be taken as an indication of the tendency in trade and commerce, but to be a useful guide an average figure throughout the period requires to be taken, as with an active business there are quite normal substantial fluctuations in the daily total of advances, and on this occasion the figure at the date of the balance sheet happened to be almost the lowest for the year. As a matter of interest, I may say that during certain months of the year our total of advances exceeded £15,000,000, and the average for the year was substantially over £14,000,000. You will see, therefore, that our advance business is active and liquid.

Heritable property stands in the balance sheet at £40,000 more than it did twelve months ago. Throughout the year we have continued our policy of bringing our properties into a high state of efficiency, and a number of important new properties have been added to our list, including a commanding site in Aberdeen for the new West End office which we have established there.

PROFIT AND ALLOCATIONS

The net profit for the year, which is arrived at after providing for all bad and doubtful debts, etc., amounts to £396,950, or about £17,000 more than last year, which I think may be regarded as very satisfactory.

As to the allocation of the profits, interim dividends have been paid on the "A" shares at the rate of 16 per cent. per annum, and on the "B" shares at the rate of 10 per cent. per annum, and it is now proposed that a distribution to both classes of shares be made at the same respective rates for the second half of the year, both subject to income tax. It is also recommended that in order to mark the occasion of our one hundred and twenty-fifth anniversary a special bonus of 2 per cent., less income tax, be paid to the "A" shareholders. You will observe that £50,000 has been placed to the reserve fund, as I have already mentioned; £30,000 has been credited to the trustees for the officers' pension scheme, and £50,000 has been utilised in writing down the cost of heritable properties. After providing for these dividends and allocations there remains a sum of £62,122 to be carried forward.

RE-ELECTION OF DIRECTORS

It is proposed that I should be re-elected governor and Lord Mackenzie deputy governor, and that the extraordinary directors, whose names appear on the list, be re-elected. It is also proposed that Dr. Nasmyth, the ordinary director who retires at this time, be re-elected. Mr Macfarlan and Mr Annan, the auditors, being eligible, offer themselves for re-election for the current year.

Before I move the adoption of the report I think I might mention, and I am sure you will be pleased to hear, that the board have recognised the very valuable services of the staff by

granting them a special bonus on this anniversary occasion. The welfare of the staff has the very close interest of the directors and management, and the pension and other schemes greatly help to maintain and develop an esprit de corps, which redounds to the advantage of all concerned.

It is a great pleasure to us to have a pensioner, Mr James Mathison, at one time agent at Selkirk, who, a few days ago, celebrated his one hundredth birthday. That, I think, is something of a record, but it will also interest you to know that we have a shareholder present to-day who has attended all but two or three of our annual meetings over a period of fifty-three years, and has accordingly seen the reserve fund grow from £540,000 to £3,000,000, the deposits from £9,000,000 to £40,000,000, and the balance sheet total from £12,000,000 to almost £52,000,000.

The governor then moved the adoption of the report, and the motion having been seconded by Sir William Johnston was put to the meeting and carried.

At the close of the meeting, on the motion of Mr P. T. Mackintosh, W.S., a vote of thanks was accorded to the directors and the staff for their services during the year, and acknowledgment was made by Mr Robertson Durham, on behalf of the directors, and by Mr Erskine on behalf of the staff.

LUIPAARDS VLEI ESTATE AND GOLD MINING

EXPANSION OF OPERATIONS AND PROFITS

Presiding at the annual general meeting of the Luipaards Vlei Estate and Gold Mining Company, Limited, held on the 10th instant, in London, Mr E. Turk (the chairman) said that the profit for the year to June 30th last, before providing for South African taxation, was £262,421, or £40,000 more than for the preceding year. This taxation had absorbed £123,810, against £49,416 last year, and the year's profit was reduced to £138,611. They had written off from development account £17,121, and had set aside as "approved capital expenditure" £52,970. The interim dividend of 25 per cent. (6d. per share) absorbed £68,570, and the directors now recommended a final dividend of 3d. per share, making 37½ per cent. for the year. This would leave £10,738 to be carried forward. The balance sheet showed a strong position, with general reserve account £123,000 and reserve for depreciation of machinery, plant, etc., £100,000. The financial position was equally strong, cash and liquid assets at June 30th last, less current liabilities, left a surplus of over £158,000, after providing for the interim dividend of £68,570 paid in July last. Capital items stood at extraordinarily low values as evidenced by the figure of £80,102, representing the company's entire mining rights and freehold estate.

BURDEN OF TAXATION

In the profit and loss account they had provided for normal tax £34,000, excess profits duty £77,517, surtax £12,292. The two latter were open to strong objection, with regard both to the high rate of tax and to the indiscriminate hardship involved by their incidence. The original Act of 1933 provided for a minimum tax free standard profit of 2s. 6d. per ton, which was unfortunately repealed in the 1934 Act. The position was, therefore, that they were paying tax on practically their entire profit.

The tonnage treated was 509,900 tons, a monthly average of 42,500 tons, but in October last the record figure of 47,500 tons was reached. They anticipated a further increase to 50,000 tons in the near future.

The development accomplished during the year was 39,080 ft., the percentage of payability being 69.23 per cent., which they regarded as very satisfactory. After crushing about 510,000 tons of ore the total ore reserves were 2,593,000 tons, or nearly 500,000 tons higher than the previous year, and were equal to nearly four and a half years' supply at the present rate of crushing. Development on the eastern side of the property was progressing satisfactorily, and some long stretches of high-grade ore had been encountered in the drives towards the Tudor section. The Tudor shaft was being unwatered and reconditioned preparatory to the development of this important area. The year's operations had again demonstrated the mine's ability to return increasing profits, developments were good, their property was a large one with a life of at least 30 to 40 years, and, subject to a satisfactory revision of the taxation question, they felt confident that the next year would see them well on to the way to their more ambitious programme involving a considerable increase in production, towards which end work was now actively proceeding.

The report was unanimously adopted.

RHODESIAN ANGLO-AMERICAN, LIMITED

COPPER PRODUCTION AND CONSUMPTION

The adjourned ordinary general meeting of Rhodesian Anglo-American, Limited, on the 9th instant, was held in London.

Sir Edmund Davis (deputy-chairman of the company) presided, and in the course of his speech said:—On the debit side of the profit and loss account there are the usual charges and debenture interest, the latter amounting to £49,057, being three months' interest on the 7½ per cent. debentures since redeemed—and twelve months on the issue of £750,000 of 5 per cent. debentures. This leaves a balance profit carried to the appropriation account of £120,865, to which we have added the balance brought forward as at April 1, 1934, £202,680, and after deducting income tax, £32,424, we have carried the balance of £291,221 to the debit side of the balance sheet under the heading profit and loss account—profits unappropriated.

At our last ordinary general meeting, held on July 16, 1934, reference was made to our large interest in Rhokana Corporation, Limited, which then amounted to 44 per cent. of its issued capital. Since then we have acquired certain interests in the Bwana M'Kubwa Company, bringing our holding to nearly 53.9 per cent. of the aggregate of the ordinary and A share capital of Rhokana Corporation, which is very satisfactory in view of the great future of that undertaking.

We have included with our report the report and accounts of Rhokana Corporation, Limited, as well as the speech of its chairman at the ordinary general meeting held on October 30th last. From a perusal of these documents you will be able to form your own opinion of the sound financial position and of the great value of the sections of their mining properties which have been brought to the production stage. The sections referred to are the N'Kana and Mindola inside the two mineral grants of ten square miles each. From these they could, if advisable, produce nearly two and a half times their present quota basis of 4,200 long tons per month; but, for purposes of rough calculation, you may take it that by the end of 1937 the production could be increased to 10,000 short tons of copper per month. In this connection you should bear in mind the possibility of it becoming necessary at a later date for the three operating copper-mining propositions in Northern Rhodesia—namely, Rhokana Corporation, Roan Antelope, and Mufulira, in agreement, of course, with the other large producers—to increase their production.

Consumption of metals is increasing at a very rapid rate and, of course, such increase includes copper, which has resulted in a gradual reduction of stocks, which at the end of October amounted to about 500,000 long tons. Should consumption continue at its present rate—that is, roughly, on a basis of 1,400,000 long tons per annum—the existing stocks should show a further reduction within the next few months and, if so, it is reasonable to suppose that the Northern Rhodesian mines would have to increase production and, with copper at about the present price, profits of Rhokana Corporation should be much larger than shown in that Corporation's accounts to June 30th of the current year.

So far as the price of copper is concerned, I think it must be in the interests of the Northern Rhodesian producers that this should not exceed £40 per long ton, as it would be better for these mines, situated in which I consider to be the largest copper field in the world, to increase production and thus make profits of something between £15 and £20 per ton rather than make larger profits and at the same time see other mines brought into production and perhaps leaving the industry again in its previous position—that is, with a larger production than possible consumption.

At the end of September, 1935, the United States production for the month was stated to be 49,900 long tons, and the production outside 80,000. For October the United States 46,700 long tons, and the production outside 84,000. The apparent consumption for September, 1935, was about 43,600 United States and 87,700 outside; and for October, 59,000 United States and 105,000 outside. In these two months production came to 251,600 long tons and consumption 295,300, which meant a decrease in stocks of about 43,700 long tons.

With reference to a possible distribution of profits by our own company, that is a matter which must stand over until we have the results of the current financial year's operations of Rhokana Corporation, and, should they be as good as the past year, or even possibly better, I think that you may look forward to our then making some distribution.

The report was unanimously adopted.

BARCLAYS BANK (DOMINION, COLONIAL AND OVERSEAS)

IMPROVING TRADE CONDITIONS

INCREASED PROFIT AND DIVIDENDS

CONDITIONS IN WEST INDIES

I hope, in due course, to have an opportunity of visiting the West Indies and British Guiana, where this bank has carried on business for the last hundred years.

Thanks to the assistance afforded by the mother country through preferential duties, the sugar industry there has been maintained during the past year, and estates have generally been able to meet their expenses, or even, where weather conditions have been favourable, to make small profits. Despite steadily falling prices for some years, necessitating severe curtailment of costs, the sugar planters have resolutely faced the position, and have, year by year, improved their outputs, through better cultivation and improved machinery. The sugar industry is a vital one to the majority of our colonies in these areas, and it is to be hoped that the recent small improvement in price is a precursor of better times to come.

From this brief review the shareholders will realise how widely the branches of the bank are situated, and, in addition to the territories mentioned, the bank is, of course, established in Mauritius, Malta, Gibraltar, Hamburg and New York. It will be appreciated that your directors are in a unique position to feel the pulse of much of our imperial trade, and it would, I think, be fair to say that in these Dominions, Colonies, Mandated Territories, and other countries in close relation with Great Britain, the year generally has seen further progress towards a return to more normal conditions.

THE INTERNATIONAL SITUATION

It is hoped that the international situation will improve, so that attention may be concentrated upon a world-wide attempt to cope with those great commercial and economic questions of production, distribution and consumption, which should be the real pre-occupation of the moment. It is only in a state of world peace that the restoration of general prosperity can be best sought and achieved.

I have just referred to the fact that the bank has carried on business in the West Indies for one hundred years, and shareholders will be interested to learn that upon June 1st of next year this bank will, in fact, celebrate its centenary, for The Colonial Bank was established under Royal Charter granted by His Majesty King William IV, upon June 1, 1836. In 1925, by special Act of Parliament, the powers granted in that Charter were extended to permit of an increase of capital, which enabled the bank to acquire the business of the National Bank of South Africa, Limited, and the Anglo-Egyptian Bank, Limited, so that, as a legal entity, Barclays Bank (Dominion, Colonial and Overseas) is actually a continuation, under a changed name, of the old Colonial Bank.

PROFIT AND LOSS ACCOUNT

The net profit for the year ended September 30, 1935, after making provision for bad and doubtful debts and contingencies, amounts to £473,400, to which has to be added £216,816 brought forward from the previous year, making a total of £690,216 to be dealt with. The net profit shows an increase of £63,000 compared with last year, principally owing to the increased demand for advances, and the bank has again had a satisfactory experience in regard to bad and doubtful debts.

The board has thus been enabled again to place a sum of £100,000 to the reserve fund, bringing that fund up to £1,850,000.

Interim dividends at the rate of 8 per cent. per annum on the cumulative preference shares and 5 per cent. per annum on the "A" and "B" shares, less income tax at the rate of 4s. 5d. in the £ in all cases were paid in June last. The board now recommends the payment of final dividends at the rate of 8 per cent. per annum on the cumulative preference shares, and at the rate of 6 per cent. per annum on the "A" and "B" shares, less income tax in each case at the rate of 4s. 5d. in the £. The dividend for the year, therefore, on the "A" and "B" shares is at the rate of 5½ per cent., which is ½ per cent. higher than for the previous year. After making these appropriations, there remains a balance of £223,396 to be carried forward.

The report and accounts were adopted.

GOLD MINING IN SOUTH AFRICA

A continuance of prosperous conditions in the gold mining industry has put the Union of South Africa in a strong financial position, and I am glad to think that the diamond industry also shows signs of improvement. Reports indicate that both retail and wholesale trading conditions in the principal towns in the Union have made progress since last year, and to some extent this is also manifest in country districts.

In Southern Rhodesia business conditions continued to show progress throughout the year, mainly as an outcome of the expansion of the gold mining industry.

In Northern Rhodesia, steady expansion and a large constructional programme on the copper mines are reported. Since June, 1935, production has been restricted, in accordance with the agreement for curtailment of production concluded at a World Copper Producers' Conference held in New York last March. Since then, stocks have shown a reduction, and the price of the metal has improved.

PROGRESS IN EAST AFRICA

In East Africa, whilst the farming community is still suffering from the effects of several consecutive years of drought, locust invasions and the severe slump in primary commodity prices, there are indications of improved conditions.

During the second half of the current year, sisal, wheat, dairy products and wool have all benefited by the upward tendency in market prices, and a brighter tone generally is in evidence. The maize market, however, continues to be depressed, and low prices have ruled for coffee throughout the year.

Further progress has been made in the development of gold mining. From Tanganyika approximately 50,000 ounces of gold were exported during the first nine months of the year, and in Kenya, although the majority of the more important companies have yet to reach the producing stage, the industry is already of material benefit to the colony, as large sums are being expended on development and on the erection of plant.

Figures for the three East African territories (Kenya, Tanganyika and Uganda) in respect of the period January to June, 1935, showed revenue in excess of budget estimates.

In West Africa the gold mining development on the Gold Coast has continued. Prospecting is active, and exports of raw gold during the year show considerable increases. The cocoa crop is well up to the average, though the tonnage is not expected to reach that of the last main season, when a record crop was exported.

In Nigeria, trading conditions generally are more promising, produce prices being higher than last year.

In Sierra Leone, exports of gold are increasing and prospecting for payable lodes continues. There is also a steady production of diamonds. The financial position of the colony has improved, and it is now expected that the year will close with a substantial surplus.

It is interesting to note that in the report of the West African Currency Board for the year ended June 30, 1935, it is stated that during the year currency issued showed a net increase of £1,800,000. To some extent this reflects the better prices which have been paid on the Coast for local produce.

LONDON AND RHODESIAN MINING AND LAND COMPANY, LIMITED

SOUND POSITION AND ENCOURAGING OUTLOOK

The ordinary general meeting of the London and Rhodesian Mining and Land Company, Limited, was held, on the 12th instant, in London.

Lord Lurgan, K.C.V.O., who presided, said that the total credit on profit and loss account was £141,197, and after deducting the usual charges and adding the balance brought in, there was £188,379 available. The profit showed a decrease of approximately £35,700 as compared with the previous year, but they did considerably better than in the previous year from revenue of a recurring nature. The directors recommended a final dividend of 5 per cent. in respect of the year ended June 30th last, together with an interim dividend of 5 per cent. for the current year, and the amount carried forward was £96,128, which considerably more than met the final dividend and practically met the interim dividend for the current year, without taking into account the results so far obtained. The results to date justified them in expecting to be able to maintain the increased rate of dividend now recommended. Last year they wrote off through appropriation account £40,580, made up of loss on ranching, £15,580, and £25,000 written off livestock, but this year they had deducted £25,000 from reserve account to meet the loss on ranching and still further to write down livestock.

THE ASSET POSITION

With regard to the assets, stands and buildings appeared at £67,735, but shareholders would be interested to know that the municipal valuation of these properties was no less than £133,447. Mining properties and other interests, at £41,464, could not be said to be over-valued, as they brought in a revenue of from £10,000 to £15,000 a year, and included the very valuable Rennie Tailour's Concession, on which there were no less than twenty-two small producing properties at the present time. Their share investments were in a very satisfactory position, showing appreciation in the market price at the date of the accounts of £398,474, and the position was even better to-day. Over 69 per cent. of their quoted securities were paying dividends or interest. Taking investments at their valuation, namely, £881,660, and adding thereto debtors and cash, less creditors, £120,000, stands and buildings at their book figure of only £67,735, livestock at their low written down figure of £42,058, and sundry assets, £10,988, they had a total of £1,122,441 against their capital of £1,000,000, or a surplus of £122,441. This was exclusive of their mining properties, which brought in over 25 per cent. per annum on their book figure, and 1,640,000 acres of land, including their ranches, with all buildings, etc., thereon—a very satisfactory position.

The Cam and Motor Company had again had a record year, and dividends had been declared amounting to 7s. in all up to June 30th, while a further dividend of 4s. had since been declared. The monthly returns since June 30th had shown an improvement, while development results at depth still continued in every way satisfactory. They had sufficient ore reserve tonnage to keep the mill running for about eight years, apart from tonnage being opened up from current development work, so that the company could look forward to regular dividends from this interest for many years to come.

SOUTH AFRICAN COAL ESTATES

The South African Coal Estates Company had had a record year and had declared a dividend of 10 per cent., together with a further 6½ per cent. for the current half-year. Dividends had also been received from the Eastern Transvaal Consolidated Mines and the African Investment Trust. He would draw attention to the fact that the company was now interested in the Rezende Mines, as well as in a number of dividend-paying Kaffir companies. Production of gold in Rhodesia constituted a record for the colony during the year to June 30th last, and more than 25 per cent. was produced under this company's management.

The results from ranching had again been disappointing, but the management reported that so soon as the Wiltshire Estate was free from quarantine they expected improved results. The company had very large land assets, and the beneficial occupation of the developed holdings was vital to this section of their interests. It was to be hoped that there would be a revival in world conditions, which would reflect itself in better prices for produce, and in this connection he might say that there was a distinctly more optimistic view being taken by those who should know.

The report and accounts were unanimously adopted.

ASHANTI-ADOWSENA (BANKET) GOLDFIELDS, LIMITED

PRODUCTION STAGE REACHED

The first annual general meeting of this company was held, on the 10th instant, at Abercorn Rooms, London.

Mr G. Seymour Fort, C.B.E., who presided, said their superintending mining engineer, Mr Stockfield, had anticipated that the plant would be ready for production in September, 1935. Unfortunately, mainly arising from the large demands for mining machinery from various quarters, their suppliers had been unable to keep to the dates of delivery and consequent delays had occurred. Great credit was due to Mr Stockfield and the company's staff that, in spite of those unforeseen delays and other difficulties, it had nevertheless been possible so to expedite the work of erection that a cable had been received stating that production had commenced on December 2nd and that the treatment plant was running very well and was working gradually up to full capacity.

Mr Stockfield wrote as follows:—"The mine, as is often the case with a mine that has been standing idle so long, required a great deal of cleaning up and repairing underground.

"In the meantime I may express my opinion that our anticipations will be fully realised, although it must not be forgotten that a certain amount of absorption of gold in starting up a new plant is inevitable, and therefore the first returns may not be quite as good as they should be. My ultimate opinion is that our prospects are very bright and point to the fulfilment of our expectations.

"Finally, I would like to draw your attention to the fact that all difficulties have been overcome, and the 42 miles of motor transport, from the railway station at Oda to the mine, is only one of them, and there has been no break in the continuous and expeditious progress that has been made in the work from the start."

Since that report of Mr Stockfield was posted to shareholders, the directors had received the cable advising them of the commencement of production, and they could congratulate themselves that, so soon after the provision of capital, they had reached the stage of production.

The report and accounts were unanimously adopted.

STEUA ROMANA (BRITISH), LIMITED

DEVELOPMENT OF NEW FIELD

The fifteenth annual general meeting of Steaua Romana (British), Limited, was held, on the 10th instant, at Winchester House, London.

Mr William Fraser, C.B.E., the chairman, who presided, said: Since our last meeting, the petroleum industry in Roumania has been faced with a variety of complex problems. Among them the most serious has been the absence of a free exchange for foreign currency. Regulations were introduced to ease the difficulty, but the relief which they gave has been inadequate. It has been customary, for example, for a premium of 100 per cent. on official rates to be freely offered and taken on unofficial exchange transactions which are not subject to regulation. Petroleum exporters, however, received only a 10 per cent. premium on official rates. Fortunately for the Roumanian petroleum industry, this disadvantage was offset by developments in other directions. It is to be regretted that owing to the Roumanian exchange position, Steaua Romana have been unable to make repayments of advances previously accorded to them, although their "lei" balances have recently increased in a very gratifying manner.

In October last our colleague, Sir Albert Stern, and the managing director, Mr Percy Anderson, visited Roumania. They reported their satisfaction with the present position of Steaua Romana. They were especially impressed with the rapid and efficient development of the Steaua Romana's new field at Bucsan. This field has justified expectations and is now producing 2,000 tons of crude a day—approximately 50 per cent. of Steaua Romana's pipeline and refinery capacity.

The aggregate production of oil in Roumania during the same period was 8,562,884 tons. That of Steaua Romana was 1,205,364 tons—an increase of 3.17 per cent. over the previous year.

The profit for the year, before making provision for taxation, was £90,776. The decrease in profit as compared with last year is due principally to the fact that no dividend was paid by the Steaua Romana Company, Bucharest. With your approval, the board now propose to pay a final dividend on the ordinary shares of 2 per cent. (less tax), making 4 per cent. for the year, placing the sum of £10,000 to general reserve, £2,500 to the reserve for staff pensions, and carrying forward a balance of £30,880 1s. 7d.

The report and accounts were unanimously adopted.

BRITISH TYRE AND RUBBER COMPANY, LIMITED

POLICY OF EXPANSION

The meeting of this company was held, on the 9th instant, at Winchester House, Old Broad Street, London.

Sir Walrond Sinclair, K.B.E., the chairman, who presided, said that the year showed a manufacturing and trading profit of £185,854, which, with miscellaneous receipts, gave a total of £188,926, as compared with £181,641. The earnings included for the first time dividends on their holdings in their main subsidiary, the India Rubber, Gutta Percha and Telegraph Works Company. After allowing for that, the earnings of their own company showed a slight contraction on a strictly comparative basis, but having regard to the keen competition experienced, and the inevitable delay in even partial adjustment of selling prices to the considerably higher cost levels of raw materials ruling throughout the year, the directors regarded the comparatively small reduction as quite unimportant. A dividend on the ordinary shares of 3½ per cent. had already been paid, and the board now proposed a final dividend of 4½ per cent. and a cash bonus of 1½ per cent., making a total of 9½ per cent. as compared with 8 per cent. a year ago.

As to the position of the India Rubber, Gutta Percha and Telegraph Works Company, the board had reason to be satisfied with the developments resulting from acquisition in 1933 of control of that old-established company. In the past year it had earned a profit of £51,186, comparing with £26,053 in the previous year and a loss of £46,226 the year before.

Two new acquisitions had been made during the year—one at home and one abroad. At home they had acquired control of the old-established business of James Lyne Hancock, Limited, and believed that business would become an integral and profitable part of their organisation. In Denmark they had secured control of a well-established business for the distribution of the classes of rubber products which their company manufactured, and that undertaking was already working profitably. Negotiations were also in progress for additional acquisitions, but he would like to emphasise that such acquisitions were embarked upon either with a view to widening the company's activities or to increasing its productive efficiency.

The report and accounts were unanimously adopted.

NEW ZEALAND LOAN AND MERCANTILE AGENCY, COMPANY, LIMITED

THE FALL IN WOOL PRICES

The forty-first annual general meeting of this company was held, on the 12th instant, at 10 Coleman Street, London.

Mr W. W. Paine presided in the unavoidable absence of the chairman of the company, Mr Harold G. Brown, and read the speech prepared by him, which stated that the balance of commission, interest and other accounts at £428,000 was some £57,000 less than last year. The decrease in their revenue was mainly due to the heavy drop in the price of wool and other commodities in which they were interested. Although during the year they had actually sold more wool, the total proceeds of sale were considerably less than in the year before. On the whole, he thought they could congratulate themselves that the results were no worse.

After payment of the interest on their two debenture stocks, they were left with a balance to the credit of revenue account for the year of some £17,000, which represented rather less than one-half of the net amount required to pay the dividend on their first preference stock. They had foreseen that it was questionable whether they would be able to earn the whole of that dividend, and last year they had carried forward a balance of £77,000 with the object of enabling them to meet the dividend on the first preference stock, even though it might not have been earned in full. They recommended that one year's dividend on this preference stock should be paid.

In considering the results, they had to bear in mind that the profits which they published were arrived at after providing for the loss on exchange involved in remitting money to this country from Australia and New Zealand. While their accounts did not show the exact amount of that exchange loss, he could tell them that during the year to June 30, 1935, it amounted to more than £42,000. Had it not been for that item, they would have earned their full dividend on the first preference stock with a very considerable surplus.

With regard to the future, he thought they might look forward to better results during the current year, if the present prices of commodities could be maintained.

The report and accounts were unanimously adopted.

BRITISH BURMAH PETROLEUM COMPANY, LIMITED

THE TORBANITE INTEREST

The twenty-fifth ordinary general meeting of the British Burmah Petroleum Company, Limited, was held, on the 10th instant, at Southern House, London.

The Hon. Lionel Holland (the chairman), in the course of his speech, said that the past year had brought no revival in oil prices. The year's trading profit was £14,578, and after meeting expenses, debenture interest, and depreciation at the usual rate, there was a loss of £15,191. More than £300,000 was paid in taxation in India during the year, making over £800,000 in the last three years of repeated loss.

Their dividend paying capacity could only be restored by largely augmenting crude production and refinery throughput. Their geologists believed that there were yet areas from which a substantial supply of commercial oil could be won. By exploiting these areas in conjunction with the producing fields their advisers believed the necessary production could be obtained to give satisfactory returns even at present prices.

The company's interests were now definitely distributed between India and South Africa. They held over 90 per cent. of the issued capital of the Rangoon Oil Company, and this holding represented almost the whole of the item "Shares in Subsidiary Companies." There was a large addition to the value of interests in associated companies, consequent upon the South African investment, which had increased from £10,000 to £239,000. The shareholding in the South African Torbanite Mining and Refining Company was taken at cost, the average cost being a little over 6s. per share, against a market value of more than 15s. Torbanite was the richest known mineral producing oil on distillation.

Besides options covering more than 100,000 acres of torbanite-bearing lands not yet systematically prospected, the Torbanite Company held mining rights over nearly 5,000 acres of proved value, estimated to be sufficient to supply its requirements for 30 years. As yet the forecasts in the prospectus had been made good in every particular. Within 13 months of that company receiving its certificate to commence business in South Africa the "Satmar" motor spirit was on the point of being introduced to the South African market. Sales would commence on the 20th instant.

The report and accounts were unanimously adopted.

KAMUNTING TIN DREDGING, LIMITED

RECORD PROFITS—ORE RESERVES INCREASING

The twenty-second ordinary general meeting of Kamunting Tin Dredging, Limited, was held, on the 10th instant, at 20 Aldermanbury, London, E.C.

Mr John Howeson (the chairman) said that during the past twelve months progress had been more than maintained. Despite the drastically curtailed output, the figure of £172,327, which was the balance carried down in the current profit and loss account after charging all operating and overhead expenditure, exceeded the corresponding figures in the two preceding accounts by over 60 per cent. in the case of 1934 and 120 per cent. in the case of 1933 and was by a substantial margin the highest profit the company had yet achieved. The total revenue, amounting to £239,793, had increased by more than £71,000 and the balance carried down, after charging all expenses at the mines and in London, by upwards of £66,000.

Whereas the increase in 1934 over 1933 had been attributable almost entirely to the recovery in the price of tin, the much greater increase reported this year was due to two quite different, and certainly no less gratifying, causes—a larger output and materially lower costs. In the previous year the permitted output was restricted to 1,222 tons of concentrate, which were sold at the average price of £137 per ton, while the production cost was £45 10s. and the all-in cost £51 per ton. For the year under review their ordinary quotas were increased to 1,494 tons, and the sale of tin concentrate realised a little over £131 per ton, but the production cost was brought down to £33, and the all-in cost was only £37 per ton of concentrate.

On all sides there was evidence of the virility of the business, which had never been in a healthier condition. Financially the company was particularly well placed, the present cash balance being £118,000, which would be increased to £170,000 when the balance of £52,000 was received from the Buffer stock. There was more tin in sight to-day than had been extracted during the whole of the company's long life, and a large amount of ground still remained to be prospected. The ore reserves were still increasing and their value to-day was probably £5,000,000.

The report was unanimously adopted.

PENINSULAR AND ORIENTAL STEAM NAVIGATION COMPANY

BRITISH SHIPPING AND SUBSIDISED COMPETITION

The Honourable Alexander Shaw, chairman, presided on Wednesday, December 11th, at the ninety-fifth ordinary general meeting of the Peninsular and Oriental Steam Navigation Company, held at the company's offices, 122 Leadenhall Street, E.C., and, in the course of his address, said:—The operating profit of the company's ships before depreciation totalled £1,054,000. The decrease compared to last year's was mainly on account of necessary repairs and alterations to vessels. Another element in the decrease was that the charges on freight were also higher. The voyage accounts were, as usual, those for voyages completed not later than June 30th, and, therefore, did not reflect the falling off in earnings experienced within the last few months in the Australian trade. This falling off was due to a variety of causes. There had been a certain disinclination of shippers to send freight via the Suez Canal and Mediterranean on account of the European situation and the consequent rise in rates of insurance on cargoes. Again, the drought experienced in Australia this year had had a serious effect on the carryings of certain commodities, and the restriction of exports of meat had on some occasions resulted in the expensive refrigerated space of the special vessels employed in the trade leaving Australia in great part empty.

As to the company's accounts, it was undoubted that a policy of providing depreciation at the rate of 5 per cent. per annum upon the original cost of the ships until they reach twenty years of age was a serious matter, involving a charge of about £1,300,000 per annum. Although in the present state of shipping there could be few concerns which had done better, or even as well, the fact remained that the company had not been able to find out of the year's profits the full depreciation required, and this had a direct bearing upon the dividend problem. It had been argued that the depreciation was unnecessarily high. The view that depreciation was unnecessarily high must be subject to some qualification before it could be safely accepted. Supposing that a considerable part of the annual charge for depreciation was swept away, the problem would still remain of providing for the necessary replacements of the company's vessels—a provision which could be made only from the company's earnings.

In regard to the bearing of all that on the dividend problem. As would be remembered, year after year, dividends had been paid on the deferred stock which, as was frankly stated, were not justified by the year's ordinary earnings. They had been paid in the hope that the shipping depression would long since have departed. But it required some real recovery in international trade, particularly in inter-Empire trade, and evidence of a more active determination by Government to see fair play for British ships, before founding faith and action on an early return of full vessels and better freights. The necessity to provide for the replacement of the fleet in years to come had always to be kept in mind, and had a direct bearing upon the allocation of the company's resources. It was willingly agreed that every year the question of dividend had to be reviewed in conjunction with a reasonable outlook upon all the surrounding circumstances; and of these there weighed not least anxiously and heavily upon the mind of the board the fact that the deferred stockholders had now for four years been asked to forgo a dividend. The payment of such a dividend consistently with sound finance was the goal to which all efforts were being directed.

AEROPLANE COMPETITION

The Chairman then proceeded to comment on the competition with steamers by aeroplanes and airships. Anybody who considered this matter might agree that the air was destined to play an increasingly important part in the carriage of letter mails and passengers, and that it was wise for the board and management to keep, as they did, an eye upon all these developments and to be prepared, under proper conditions, to co-operate with air services. The point was not being disregarded. Already one of the allied companies had a large interest in an air service and was making a success of this pioneer effort. It was also actively preparing, in co-operation with others, to take its part in developing and operating further air services. It would be rash, however, to assume either that the sea transport of passengers, mails and commodities was destined to be supplanted by air transport, or that, in such case, shipping companies could preserve any large

part of the present value of their assets by the process of switching over to air.

In spite of the growth of air mails, the actual bulk of mails carried by P. and O. steamers now, as compared with 1913, had very greatly increased, and with a return of commercial prosperity would undoubtedly go on increasing. In 1913 the P. and O. Company's vessels carried outwards from Europe 334,658 bags of mail. In 1934 they carried 488,559 bags, an increase of 46 per cent. The latest figures for 1935 had recently become available, and showed a further considerable increase and revealed that last year the mail carried in P. and O. ships was greater than in 1913 by over 50 per cent. That was a remarkable figure.

As regards passengers, the air was not necessarily destined to take them all or any very considerable proportion of them. Considering the safety, the comfort and the restful holiday provided by the modern steamship, it could not be doubted that travel by sea would continue to retain its attractiveness, especially to a nation of seafarers. The company's policy, therefore, was to maintain and increase the amenities offered to passengers and to shippers, and at the same time to be ready at all times to enter into friendly co-operation with air services.

S.S. "STRATHMORE"

Referring to the new P. and O. vessel, the "Strathmore," the chairman said that a decision to build a new ship of the type of the "Strathmore" was a very serious matter. In the first place the vessel must be demanded by the exigencies of the trade, both present and future. This was, of course, the case with the P. and O. Company, after parting with two vessels for breaking up, namely, the "Ballarat" and the "Mantua." The company had therefore to provide a vessel which would have adequate capacity with properly insulated space to fulfil, when needed, the company's obligations in the Australian trade.

When it was considered that the "Strathmore" provided 1,350,000 "man days" of useful work, and kept off the dole for eighteen months no less than 14,000 individuals, including the families of the men concerned, was it not rather remarkable that lines which were anxious to lay down vessels very similar to the "Strathmore" and to use them on essential Empire Services, should hitherto have had their task made impossible by the fatal unwillingness of Empire Governments to give them the least assistance in their unequal struggle with those highly subsidised foreign lines which in certain directions were rapidly making it impossible for British ships to remain at sea at all.

THE PACIFIC PROBLEM

He referred in particular to the problem of the survival of British liner services in the Pacific. The losses incurred by the two Empire companies concerned in the Pacific liner trade between Australia and New Zealand on one side of the ocean, and San Francisco and Vancouver on the other, continued. Not only had it been impossible for a series of years to earn a single penny for depreciation on the ships carrying on those services, but the out-of-pocket losses were so enormous that no private enterprise could long bear the exhausting burden. It had become quite clear that if the British Government and the Governments of Canada, Australia, and New Zealand wished to retain any service of British Empire ships at all across the Pacific they would have to decide upon a policy of assisting those who for so many years had been upholding the British flag at such grave loss.

EARLY WITHDRAWAL

In the absence of support it had been decided with great regret to withdraw altogether the service of Empire ships which for about half a century had linked up Australia and New Zealand with San Francisco. This decision was entirely due to the disastrous effect of highly subsidised foreign competition. When this British service was withdrawn there would only be left the Canadian-Australasian Line linking up Australasia and the North American Continent. That line was making a great struggle to keep the flag flying, but at such enormous sacrifice that it depended entirely upon the Governments of the Dominions concerned and upon the Government here whether that last remaining British link could be kept intact.

If this line were allowed to perish it was unlikely that it would be replaced by a British concern, and with it would disappear also the large sums spent every year in the Dominions on wages, stores, repairs, and so on—to say nothing of the expenditure in this country upon the building of new vessels which the Canadian-Australasian Line was only too anxious to lay down if it could be made economically possible to do so. It was entirely for these Governments to decide whether they would allow a situation to arise where passenger and mail traffic between Australasia and the American Continent would be conducted solely by foreign shipping. If they did not feel that they could take the necessary measures to retain a British Empire Line at all, it would be fair if they would frankly say so. It was not fair that present conditions should be allowed to continue. It was not business and it was not commonsense.

EXCESS WORLD TONNAGE

The effect of the shipping policy of foreign countries had been so to inflate the tonnage of the world that it was wholly in excess not only of present requirements, but of any dimensions which world trade was likely to attain in our time. If some countries were prepared to spend their taxpayers' money lavishly upon a mercantile marine which was not required by their own trade, nor by the trade of the world, but was merely an ancillary to naval ambitions, or a means of whittling away and eventually extinguishing sections of the purely economic trades built up by Britain, then it was no use asking such countries to be good enough to rationalise their shipping so as to place it upon economic lines. A mere request was futile. To make any progress one must have something to bargain with. But in present circumstances Britain had nothing to bargain with. Certain important foreign countries had their restrictions, direct and indirect, on the shipping of other lands, but Britain's trade was open to them all. They were enabled to keep uneconomic services in operation and uneconomic ships at sea because of subsidies, the lack of which made it impossible for Britain to compete with them. It was becoming apparent that no effective response would be made to British overtures to foreign maritime powers on that subject until the British Government had shown by definite action its determination that the ships of Britain should have fair play; that, if all argument failed, then subsidy would be met by subsidy, and, if need be in the last resort and in proper cases, restriction by restriction.

The report and accounts were unanimously agreed to.

Sir J. Fortescue Flannery offered congratulations to the chairman upon his complete restoration to health and moved a resolution of thanks and appreciation to the chairman, the directors and the company's staffs ashore and afloat for their services in the past year.

Mr H. L. Uring Clark said that it gave him the greatest pleasure to second the resolution, and to say how very happy they were to see the chairman there that day. He also wished on behalf of the shareholders to pay a tribute to the very able way in which Sir William Currie had carried on in the chairman's regrettable absence.

The vote was unanimously accorded amid applause and after the chairman's thanks the proceedings terminated.

ANGLO-ECUADORIAN OILFIELDS, LIMITED

INCREASED DIVIDEND

The seventeenth annual general meeting of this company was held, on the 10th instant, at Winchester House, Old Broad Street, London.

Mr H. C. R. Williamson (the chairman), in the course of his speech, said that the directors were glad to be able to submit accounts which he believed would be generally regarded as satisfactory. The net profit of upwards of £129,000 showed an increase of £49,000 over that of the previous year, and it was proposed to pay a dividend of 7½ per cent., less tax, as compared with 5 per cent., less tax, last year, and to increase the amount carried forward by approximately £6,000. The company's investments in Government securities had increased by some £19,100, and the book value of their other securities had increased by over £100,000 in the year. Their total holding securities figured in the books at £616,014, the market value to-day being materially higher. It was probable that they would dispose of a portion of their investments during the current year, as they would shortly have to face considerable capital expenditure in connection with the expansion of their local refining operations. The most striking feature of the year's operations on the field was that production had been maintained at the required figure in spite of a reduced drilling

programme and a decrease in the footage drilled. The natural decline in the deep wells had been remarkably small. With regard to the position of the world's petroleum industry, one outstanding feature of 1935 was the increase in consumption, but this satisfactory feature had been offset by an even greater percentage increase in production. The prospects of the company in the current year depended, of course, in the main on American prices for crude oil. Having in view the results of the year to date, and given a maintenance of present prices, rates of exchange, and political stability, he thought it was fair to assume that the next report submitted by the directors would be little, if any, less favourable than that now presented. If such should be the case they would be enabled again to recommend a moderate dividend and at the same time to continue to pursue a conservative policy as regarded depreciation.

The report and accounts were unanimously adopted, and a resolution was passed converting the shares of the company into stock.

GOVERNMENT RETURNS, &c.

NATIONAL ACCOUNTS

The total ordinary revenue for the week ended December 7, 1935, amounted to £10,091,000, against ordinary expenditure of £42,082,500. After allowing for a decrease in Exchequer Balances of £73,380 the operations for the week, as shown below, increased the gross National Debt by £31,919,000 to approximately £8,017 millions.*

(000's omitted)			
	£		£
Treasury Bills	+ 2,846	N. Atlantic Shipping Issues	- 29

Rhodesia	£ 99 15 0	£ 99 15 0
South Africa	£ 100 2 6	£ 100 2 6

THE ANGLO-SOUTH AMERICAN BANK, LTD., has received telegraphic advice from the Madrid Branch that the gold surcharge for the payment of Spanish Customs duties has been fixed for the period December 11th to 20th at 138.64 per cent. The previous rate was fixed as from December 1st at 139.11 per cent.

CENTRAL AND SOUTH AMERICAN EXCHANGE RATES

THE ANGLO-SOUTH AMERICAN BANK, LTD., issues the following details relative to quotations for certain of the South and Central American exchanges. All these exchanges, with the exception of that of Bolivia, are related to the United States dollar, and the approximate sterling rates may be obtained by applying the dollar-sterling exchange rate:—

Bolivia.*	Official market: Sight rate, 20.26 bolivianos per £ sterling on October 21, 1935. Export selling rate 80 bolivianos per £.
Colombia.*	Sight rate, 176½ pesos per 100 United States dollars on November 27, 1935. This rate applies to holders of permits buying in the "open" market.
Ecuador.*	"Free" market sight rate on October 31, 10.51 sucres per United States dollar.
Guatemala.	Sight rate on New York is maintained at 1 quetzal per United States dollar, but a commission of 1 per cent. is charged by the Banco Central for the sale of drafts.
Nicaragua.*	Official selling rate was established at 110 cordobas per 100 United States dollars on November 26, 1934.
Salvador.	Sight rate on October 31, 1935, 2.51 colones per United States dollar.
Venezuela.	Sight rate on New York was maintained in October at 3.90½ bolívares per United States dollar.

* Exchange controls are operative in these countries.

GOLD MARKET

Messrs. Samuel Montagu and Company write on December 11, 1935, as follows:—

The Bank of England gold reserve against notes amounted to £198,409,107 on the 4th instant as compared with £197,632,279 on the previous Wednesday. Purchases of bar gold announced by the Bank during the week amounted to £1,000,216. In the open market about £1,400,000 of bar gold offered at the daily fixing was absorbed by general demand. Following the improvement in the political situation in France, conditions became easier and prices have ruled at about dollar parity, the premium over which gradually disappeared.

The s.s. "Mooltan," which sailed from Bombay on the 7th instant, carries gold to the value of about £482,000 consigned to London.

SILVER MARKET

Until the 7th inst. prices remained unchanged at 29½d. for cash and 28½d. for two months' delivery, sales by China, the Indian Bagaars and speculators and purchases for America being the features. There was an unusual development on the 9th instant, when there was a sudden change in the attitude of the American

Treasury. The daily order from this quarter had hitherto been received in London at the time of fixing, but on the day in question it was given only after a long delay. There was a considerable amount of silver available and the absence of the principal buyer was disconcerting. Ultimately the American authorities made their wishes known, being willing to give support, but only at lower rates, consequently prices fell ½d. to 28½d. for cash and 28½d. for two months' delivery. As was to be expected, the occurrence had a very disturbing effect and resulted in large amounts being offered in the market yesterday. There was again a long delay and fixing was postponed until later in the day. After negotiations with the American Treasury it transpired that although they were willing, at a reduced price, to take a part of the cash silver offering, they were not prepared to go beyond this. In the circumstances the brokers had no option but to decide that no prices could be quoted on account of the rule that the official quotations were fixed at a price at which all effective offerings must be absorbed. To meet the situation and in the interests of clients it was decided to-day temporarily to suspend this usage and to sell in proportion to the amount which could be disposed of. On this basis the price for cash was fixed at 27½d., at which, however, the American Treasury were buyers of only a very small amount, representing about 7½ per cent. of the total cash offerings. In the absence of demand for forward silver, no price could be fixed for that delivery. The outlook has been rendered all the more uncertain in view of the obscurity which surrounds the future intentions of the United States authorities.

News was received on December 5th that the Hongkong Government had decided to take over all silver stocks and to establish an exchange fund to control the international value of the Hongkong dollar. Holders of British, Mexican or Hongkong dollars or subsidiary coin or bullion exceeding a value of ten dollars are required to surrender same within one month to the Treasurer, who will pay for coin in Hongkong currency at the face value and for bullion at the rate of 128 cents per fine ounce. All silver coins and bullion surrendered to the Treasury will be paid into the exchange fund. This measure follows the embargo placed on the export of silver from Hongkong as from noon on November 9th and is not unexpected, some such action being generally anticipated as a natural sequence to the new currency system recently adopted by the Chinese Government.

THE BRADFORD DYERS' ASSOCIATION, LTD.—The directors will pay the interest on the 4 per cent. debenture stock on January 1, 1936, but have decided to postpone payment of dividend on 5 per cent. cumulative preference stock for the six months ending December 31, 1935.

BRITISH INDUSTRIES FIXED TRUSTS (SECOND PORTFOLIO).—The trustees, the Midland Bank Executor and Trustee Company, Ltd., announce an income distribution of 6.5302 pence per sub-unit, free of income tax, for the six months' period ended November 30, 1935. Income warrants will be posted on December 30, 1935, to certificate holders registered as at November 30th.

FORESTAL LAND.—Forestal Land, Timber and Railways is to re-enter the dividend list after a lapse of four years, with an interim payment of $2\frac{1}{2}$ per cent., less tax, on January 1, 1936. The previous distribution was in 1930, when an interim of $2\frac{1}{2}$ per cent. was followed by a final dividend of 4 per cent. The issued capital is £5,574,689, of which £3,708,837 is in £1 ordinary shares.

BULOLO GOLD DREDGING LTD. (Incorporated in British Columbia). With reference to the announcement dated October 29, 1935, of the declaration of a dividend of \$1.40 (Canadian) the rate of exchange on December 10, 1935, was \$4.98 to the £. The gross amount of the dividend is \$s. 7,402.21 per share, less Canadian income tax of 5 per cent. (1s. in £) and United Kingdom income tax at 3s. 6d. in the £, 1s. 3.165d. per share; and the net dividend payable to United Kingdom shareholders is 4s. 4.237d. per share. The dividend warrants will be posted on December 20, 1935.

COMMERCE AND TRADE

SURVEY OF COMMODITY MARKETS

APART from the collapse in silver, due to the partial cessation of American Government demand, the principal commodity markets have shown few outstanding features during the past week. Price movements have again been somewhat irregular, no general tendency being yet discernible.

Among industrial raw materials, quotations for coal have shown a tendency to harden. Industrial demand continues active, domestic requirements are now at their height, and important consumers still show a disposition to accumulate stocks in anticipation of a stoppage. In the circumstances, it is highly probable that a satisfactory solution of the mining dispute would cause easier conditions to prevail. Meanwhile, quotations for iron and steel remain firm and in many cases pressure for delivery is so considerable that "prompt" prices are largely nominal. On the other hand, non-ferrous metals have declined in price. In the case of tin the movement is traceable to the increase in production quotas, to which we refer in a Note of the Week. The decline in copper, lead and spelter was mainly due to nervous selling in connection with the crisis in the silver market—which is fully discussed in our Money section.

Early this week, the Washington Department of Agriculture sprang a surprise upon cotton users by estimating this season's American crop at only 10,734,000 bales. The figure was considered bullish, and prices advanced a few points in both New York and Liverpool; but "long" liquidation subsequently produced a reaction and the gain was lost. Flax was also easier, but wool and jute continued firm. The market in rubber is slowly recovering from last week's setback.

Wheat prices continue to sag. Absence of demand has been sufficient to counteract the favourable effect of a bullish commercial estimate of Argentina's export surplus. With the exception of maize, other grains have eased in sympathy. Oilseeds have been a quiet market, but linseed oil rose sharply on the prospect of an increase in the import duty on foreign oil from £3 10s. to £5 per ton. A firm

(Continued from page 1223)
WOOLWICH EQUITABLE BUILDING SOCIETY.—During the year ended September 30, 1935, the society completed 14,185 individual advances, involving £7,158,855, which represented an increase of more than three-quarters of a million pounds over the total for the preceding year and constituted a record in the society's history. Total assets amount to £30,112,549, against £27,094,596. In April, 1935, a reduction was effected in the rate of interest to be charged on new advances, and, for the year, an increased rate of rebate of interest has been allowed to old borrowers. A reserve for this rebate, amounting to £82,000, has been created out of the profits for the year. Meeting, 20 Aldermanbury, E.C.2, December 17th, at 3 p.m.

UNITED MOLASSES COMPANY.—The full report of United Molasses for the year to September 30, 1935, shows that trading profits have risen by over £47,335, to £652,384. Total consolidated profits of the company and its subsidiaries rose from £651,531 to £718,200. The total depreciation allowance was £297,608, against £283,806. The company's profit, after depreciation fees, management charges, is up from £343,946 to £420,592. Interest and repayment costs of the income and debenture stocks take £178,965, and after providing for the 8 per cent. dividend (against 6 per cent.) on the ordinary shares, £80,000 is placed to reserve. The carry-forward is £45,216, against £70,025 brought in, including undistributed profits of subsidiary companies. Only £53,413 of the 4 per cent. cumulative funded debt now remains outstanding.

THE NATIONAL BUILDING SOCIETY.—The eighty-sixth annual report to October 31, 1935, shows a net increase in share capital of £2,079,537 to £24,594,989. Mortgage assets total £24,594,553, an increase of £2,457,361. Total assets stand at £27,281,737, an increase of £2,394,049. Reserve funds amount to £1,295,946, an increase of £202,372. The society's holdings in Stock Exchange securities and Corporation loans total £2,032,513 on October 31, 1935. The society's investments in trustee stocks showed an excess of £88,533 over the book value on that date.

APEX (TRINIDAD) OIL.—The board of Apex (Trinidad) Oilfields, Ltd., announces that it has been advised by a cablegram from the general manager that the result of recent drilling operations had been to enhance the value of the whole of the south-western area of the company's property, and as up to the present no value had been given to this area there will therefore be a definite increase in the oil reserves. It is also anticipated that the production of oil for the current financial year should be at least maintained at the level of last year's output.

tone has again been displayed at the Mincing Lane tea auctions, and the market in raw sugar has been steady.

In the United States prices have again tended downwards. Thus, Moody's daily index of staple commodity prices (December 31, 1931 = 100) stood at 164.2 on Wednesday, against 166.4 a week earlier, 166.5 a month ago, and 150.8 on the corresponding day last year.

COAL

SHEFFIELD.—The recent rush of orders has disorganised the market. There is now scarcely any "free" coal, either for inland or export trade, all the available supplies having been bought under contract. As a result, shippers cannot obtain fuel for their overseas customers. Prices for most classes of fuel have been raised. The present difficulties are due to heavy inland buying, some of it precautionary on account of the unsettled state of the industry. Good quantities of manufacturing fuel have recently been contracted for. Consumption is on an unprecedentedly high level. Electrical undertakings require more small coal than at any former time, and the boom has extended to house coal. Larger production quotas are being pressed for.

Quotations: Yorkshire Association hards, 18s. 6d. to 19s.; washed trebles, 18s. 6d. to 19s.; screened gas coal, 16s. 6d. to 18s.; washed steam smalls, 13s. 9d. to 14s. 3d.; Derbyshire steams, 18s. to 18s. 6d. (all f.o.b.); best Yorkshire house, 22s. to 24s.; best Derbyshire house, 21s. to 23s.; blast-furnace coke, 16s. (all free on rail).

NEWCASTLE-ON-TYNE.—Although Tyne shipments showed a decrease last week of 66,530 tons compared with last year, the market remains firm. Domestic needs are now at their height and home industrial requirements continue to expand, with the result that prices for prompt shipment are more or less nominal. Apart from the good demand from coaling stations, there is little additional trade from abroad. Coke of all descriptions is very firm, the inland trade taking up all supplies.

Current f.o.b. prices for export: NORTHUMBERLAND.—D.C.B. screened, 16s.; smalls, 13s. 6d.; Howards, Bentinck, Newbiggin, screened, 15s. 6d.; smalls, 13s. 6d.; Tyne Prime large, 14s. 6d.; smalls, 13s.; Hartley Main large, 14s. 9d.; smalls, 13s. 6d. DURHAM.—Lambton/South Hetton screened steam, 16s. 6d.; smalls, 14s.; Wear Special gas, 15s. 6d.; Holmside, Ryhope, Boldon unscreened gas, 15s.; second class gas, 14s.; coking unscreened and/or smalls, 14s.; Prime unscreened bunkers, 16s.; Second-class unscreened bunkers, 15s.; Prime Foundry coke, 22s.; Newcastle and District gas coke, 21s. 6d.

GLASGOW.—Stringency continues on the Scottish coal market. The major part of the output is being concentrated on the home market, in which demand is brisk owing to the increased industrial

activity and the uncertain labour position. Already the output quota for inland supply, recently raised by 5 per cent., has been exceeded, and a further application for increase has been lodged. Practically no coal is available for additional export business this month, and in some cases there is difficulty in securing contract supplies. The collieries are also well placed for export orders into January. Prompt prices remain nominal.

CARDIFF.—Pressure of shipments at the South Wales docks has been exceptionally heavy this week. The tonnage position has been unusually favourable, and with the seasonal inland demand at its height colliery owners have found it difficult to meet requirements within their supply quotas. Fears of a possible stoppage in the New Year over the wages question have led to the accumulation of stocks, and it is probable that supplementary allocations will be given by the Central Council to meet the position. Sized and other small coals have been scarce, particularly for prompt positions, and have been commanding prices above schedule; the market for large classes has been firmer than at any other time during the current year. The Algerian State Railways are reported to have covered their requirements for Welsh coal and patent fuel up to approximately 100,000 tons over next year. Current inquiries include from 175,000 to 250,000 tons of large, and between 60,000 and 70,000 tons of smalls, for the French State Railways over 1936, and from the Madrid Zargossa and Alicante Railways for 45,000 tons over the first half of next year. Coke and patent fuel have been in good demand; and with the collieries working more regularly pitwood prices have been firmer, with quotations for Portuguese wood ruling up to 23s. ex ship. Coal shipments in the foreign and coastwise trades last week totalled 387,000 tons compared with 405,300 tons the previous week, and 367,808 tons a year ago; while for the year to December 8th the total exports were 18,302,200 tons compared with 18,795,644 tons.

Current approximate quotations: Best Admiralties, 19s. 6d.; seconds, 18s. 9d. to 19s. 3d.; best dries, 18s. 9d. to 19s.; Black Veins, 18s. 3d. to 18s. 6d.; Western Valleys, 17s. 9d. to 18s.; Eastern Valleys, 17s. 3d. to 17s. 7½d.; best small steams (washed), 13s. to 13s. 6d.; coking smalls, 13s. 6d. to 14s.; second steams, 12s. 6d. to 13s.; anthracite best large, 36s. to 40s.; Red Vein large, 22s. to 27s.; machine-made cobbles, 35s. to 51s.; French nuts, 35s. to 51s.; stove nuts, 34s. to 50s.; rubbly culm, 10s. 6d. to 12s.; special foundry coke, 37s. 6d. to 40s.; patent fuel (Crown), 21s.; pitwood, ex ship, French 24s. 3d.; Portuguese, 22s. 6d. to 23s.

IRON AND STEEL

LONDON.—The rather quieter conditions which recently developed are likely to rule until the end of the year; but there are signs that the slack period will be shorter than usual, says the official report of the London Iron and Steel Exchange. In most departments of the steel trade manufacturers are inclined to welcome a lull in new business, as it will give them some opportunity to overtake deliveries, which have recently been falling into arrears. In the pig-iron market business has been confined to supplementary parcels, but many producers will close the year with contracts on their books for delivery as far forward as September, 1936. There has been no decline in business in the semi-finished steel department, and consumers are finding it difficult to secure their full supplies. Additional quantities of Continental steel will shortly be available for users in this department; despite the heavy deliveries which are being made, there is considerable pressure to place fresh business. The demand for finished steel products has been affected by the approach of the end of the year and the annual stocktaking period. The business transacted has consisted principally of small parcels, but a revival in demand is anticipated as soon as the holidays are over. Inquiry on export account has increased, but business with overseas markets is rather disappointing.

MIDDLESBROUGH.—Demand for pig iron continues active and, in addition to the furnaces reported last week as being restarted, it is confidently anticipated that further furnaces will be put into operation early in the New Year. Steel is in increased demand and the decision of the steel makers at their meeting at the end of last week not to increase prices has created more confidence in the position. The demand for semi-manufactured steel continues to absorb all the current output, but the position will be alleviated during the current month by the arrival of parcels of this class of material from the Continent. Consumers of pig iron are anxious to place contracts for delivery farther ahead, but producers, being well sold, are hesitant to accept additional commitments for forward delivery. Although the export of hematite pig iron to Italy has ceased, this is balanced by the increased consumption of users in Sheffield and the Midlands.

Prices are unchanged and the fixed minimum quotations are as follows: for No. 3 Cleveland foundry pig iron, 70s. per ton; for No. 1 East Coast hematite, 71s. per ton, both delivered locally. Good Durham blast-furnace coke is stronger, makers asking up to 21s. per ton delivered at the furnaces. Foreign ore can be purchased for early shipment only at increased prices, owing to the present tendency of freights. Heavy steel melting scrap is scarce and prices are distinctly firmer. Whilst some users are understood to be only offering 52s. 6d. per ton, it is reported that some buyers have paid up to 54s.

Large quantities of constructional steel are being turned out locally, whilst the demand for shipbuilding requisites, plates, etc., has considerably improved. Railway material is also in rather better demand. Further orders for new ships have been placed on the North-East Coast during the past week.

SHEFFIELD.—Most of the steelworks will be closed from Christmas Eve until the following Monday. This is shorter than the usual holiday. So great is the pressure for semi-material that it has

been decided to keep the open-hearth furnaces in production over the Christmas period. Employment in the steel and engineering trades has increased. The general position of the steel and allied industries remains as active as ever. The work of obtaining orders presents no problem, but there are difficulties in giving prompt delivery. This is due partly to the extreme scarcity of skilled engineers and mechanics, which necessitates much overtime working. The Universities are not turning out enough trained laboratory workers to meet the requirements of the steel and chemical branches. Makers of small tools report heavy demands from the engineering shops. Stainless steel is being sold as fast as it can be made. A recent adaptation of the material to industrial purposes is the making of stainless wire ropes and cables, while in America brass-band instruments are being made of stainless steel experimentally. The seasonal trade for cutlery has finished up with a greater turnover than at one time seemed probable, but business in silver and electroplated goods is by no means satisfactory. Steelmakers are not satisfied with the present state of the export trade, nearly all the recent progress having been confined to the home market.

GLASGOW.—The favourable conditions which have been ruling lately continue and there is no sign of the falling off in orders which is commonly looked for as the end of the year approaches. Steel plants are fully employed and a very satisfactory feature is the variety of material which is in constant demand, giving evidence that the position is improving in many of the manufacturing industries. Further contracts have been placed with Clyde shipyards during the present week and of these several are to be equipped with engines built at Greenock. At the sheet mills there is general activity, with a fair tonnage still on books both for black and galvanised sheets. Export demand is still rather poor. Wrought-iron makers are busier and anticipate being able to carry on steadily for some months to come on account of the increased demand. In practically all the manufacturing trades, plants are running to capacity and bookings are satisfactory. The difficulty in securing fuel supplies is causing some anxiety in all branches.

CARDIFF.—Conditions in the South Wales iron and steel industry are practically unchanged. The pig-iron and steel furnaces are well employed, but the tinplate works are operating at only just over 50 per cent. of capacity, and there are no signs of expansion in the sheet market for export. The inland demand for sheets, however, is quite good. Prices of tinplates, galvanised sheets and steel bars are unaltered. Last week's shipments of tinplates from Swansea totalled 102,171 boxes, compared with 53,452 boxes in the previous week and 85,736 boxes a year ago; while stocks fell to 73,361 boxes, as against 126,380 boxes at the corresponding period last year. Messrs Richard Thomas and Company are reported to have acquired the Bryn Tinplate Works, near Pontardawe, with an output of approximately 4,000 boxes per week.

OTHER METALS

COPPER.—The market was firm in the early part of the period under review, but weakened later. Consumers' demand remained small, and sales by holders who had become nervous in connection with the silver crisis consequently had a depressing effect upon prices. Some recovery is, however, probable when the silver market becomes more settled. In the United States a similar tendency has been evident. The New York export quotation, which had risen to 8-90 cents per lb., fell back to 8-75 cents this week; the domestic quotation also lost 10 points on the week.

Sales on the London Metal Exchange: 2,425 tons on Monday against 1,850 tons last week; 1,275 tons on Tuesday, against 975 tons last week; 1,325 tons on Wednesday, as against 1,400 tons last week. Domestic spot was quoted at 8-52½ cents per lb. in New York on Wednesday, against 8-62½ cents a week ago and 8-47½ cents a month ago. Wednesday's official closing price for standard cash in London was £35 2s. 6d. to £35 3s. 9d., compared with £35 11s. 3d. to £35 12s. 6d. a week ago. Stocks of refined copper in British official warehouses at the end of last week, at 76,577 tons, show a decrease of 1,047 tons, while stocks of rough copper, at 10,433 tons, show a decrease of 150 tons on the week.

LEAD AND SPELTER.—Both metals have suffered this week from the crisis in the silver market. Lead fell to below £17 a ton, while spelter slumped almost to £15. The nervousness which produced these price movements does not, however, appear to have been well founded. A long-term decline in the price of silver would almost certainly raise the cost of producing lead and spelter, and might therefore be expected to restrict the production of these two metals. Moreover, the current position is healthy. Prospects of consuming industries are favourable. Supplies of lead are rather short, while in the case of spelter the prospects of a re-establishment of the International Cartel have improved since Sir Robert Horne's speech at the annual meeting of the Imperial Smelting Corporation. The present weakness of lead and spelter is therefore unlikely to endure.

MUTUAL LIFE ASSURANCE

In an old-established office paying high bonuses is one of the most attractive investments now available to the public

Write to—

NATIONAL PROVIDENT INSTITUTION
 48 GRACECHURCH STREET, LONDON, E.C.3
 ESTABLISHED 1835

Sales of lead on the London Metal Exchange: 600 tons on Monday, against 1,200 tons last week; 850 tons on Tuesday, against 1,100 tons last week; 1,800 tons on Wednesday against 800 tons last week. The New York quotation on Wednesday was 4.50 cents per lb., against 4.50 cents a week ago and 4.50 cents a month ago. The official closing quotation in London for soft foreign for shipment during the current month was £16 17s. 6d. per ton, compared with £17 15s. a week ago.

Sales of spelter on the London Metal Exchange: 400 tons on Monday, against 250 tons last week; 350 tons on Tuesday, against 1,300 tons last week; 1,700 tons on Wednesday, against 550 tons last week. Wednesday's quotation in East St. Louis was 4.85 cents per lb., against 4.85 cents the week before and 4.85 cents a month earlier. Wednesday's official closing quotation in London for "good ordinary brands" for shipment during the current month was £15 2s. 6d. per ton, against £15 15s. last week.

TIN.—During the past week both the spot and forward quotations have declined by ½ 5s. per ton. Demand was limited, while offerings were rather more liberal. In view of the decision of the International Tin Committee (discussed in a Note of the Week) to raise production quotas to 90 per cent. of the standard tonnages during the first quarter of 1936, some decline in quotations may be looked for early next year. On a 90 per cent. quota, exports will amount to approximately 185,000 tons per annum. Consumption, on the other hand, does not at present exceed 145,000 tons, and is unlikely to rise above 150,000 tons annually during the next three months.

Sales of tin on the London Metal Exchange: 150 tons on Monday, against 205 tons last week; 275 tons on Tuesday, against 190 tons last week; 330 tons on Wednesday, against 390 tons last week. The New York quotation on Wednesday was 49.75 cents per lb., against 51.50 cents a week ago and 53.00 cents a month ago. Wednesday's official closing quotation in London for standard cash was £219 to £219 10s. per ton, compared with £224 5s. to £224 15s. last week. Stocks of tin in London and Liverpool at the end of last week totalled 941 tons, an increase of 139 tons on the week.

OTHER NON-FERROUS METALS.—Among other non-ferrous metals, aluminium ingots and bars for home delivery were again quoted at £100 per ton. Nickel, for home and export, at £200 to £205 per ton, remains unchanged. Quicksilver, on the spot, was quoted at £12 17s. 6d. to £13 per flask of 76 lbs., the same as last week. Chinese antimony was again quoted at £67 to £68 per ton ex warehouse, duty paid. Chinese wolfram for November–December shipment was quoted at 34s. 6d. to 35s. 6d. per unit, c.i.f., as against 34s. to 35s. per unit last week. Platinum (refined) was quoted at £7 17s. 6d. per ounce, the same as last week.

TEXTILES

COTTON.—**Manchester.**—There has been no increase in activity since a week ago. Spinners and manufacturers have complained of practically all orders being for retail lots, and leading buyers are adopting a policy of purchasing from hand to mouth. In some quarters the opinion prevails that if contracts are withheld, producers of yarn and piece goods will soon be more prepared to consider offers. In raw cotton circles the feature of interest has been the publication by the United States Government of important statistics relating to the crop for this season. The estimated growth at 10,734,000 bales is less than expected, but after a small advance in prices a selling movement showed itself in New York and Liverpool and prices are now lower than a few weeks ago. This country is now receiving larger imports from America, but demand for the article is rather quieter. Amongst operators there is much uncertainty as to the policy of the Washington officials in releasing supplies of Government cotton and nervousness as to the decision of the Supreme Court regarding the legality of the Agricultural Adjustment Administration and the Bankhead Act.

Although subsequent inquiry in piece goods has been fair, manufacturers of flax were able to make much progress and in some cases overtook. The running down. Makers of cloth suitable for India and week's end of the paucity of practicable demand. Dealers in the cloth are not inclined to commit themselves to fresh contracts until some decision has been reached with regard to the import duties. A fair miscellaneous business has been reported for Egypt, South America, the Crown Colonies and the Dominions, the bulk of the demand running on printed and dyed goods. Home trade purchases have been small. Buying in the yarn market has been patchy. Quite a number of orders have been booked in coarse American counts, but some spinners of medium number are complaining that delivery instructions are not coming in very freely. Irregular buying has occurred in Egyptian qualities.

WOOL.—**Bradford.**—During the closing two days of the recent London sales prices recovered some of the ground lost on the previous three or four days. This was largely due to French buying, and the auctions finished with merinos up to 5 per cent., and crossbreds about 10 per cent., above the close in October; the rise was even more in slipes. The best feature was undoubtedly the keen competition, and the fact that 119,000 bales were disposed of is proof of a good buying disposition in all sections. The home trade is reported to have absorbed 58,000 bales, the Continent 58,000 bales, and America 3,000 bales, the carry-over being 29,000 bales. Stocks awaiting sale in Coleman Street are thus quite light. The news from Australia this week is hardly so satisfactory as previously. All cables say that prices for merinos have eased a good 5 per cent.; at that level, however, there has been active buying by Japan and the home trade.

In manufacturing centres, business remains active. There is a movement on foot among Huddersfield manufacturers to induce Lancashire cotton weavers to take up residence in the West Riding, and learn the art of woollen weaving—an operation which can easily be performed by cotton weavers. Mills continue to be run full time, although some spinners say that there is hardly the same pressure for yarns as during recent months. Merino tops have eased slightly in Bradford, but there is no depression and consumption remains large.

GRAIN MARKETS

WHEAT.—The markets have shown no outstanding features this week, but prices are again a little lower. An absence of demand has offset the favourable effect of a low commercial estimate of the yield of Argentina's new crop. Harvesting of the Australian crop has been interrupted by scattered hailstorms, but no significant damage has been reported. Meanwhile, the French Government is making progress with its scheme for exporting 2,500,000 quarters of wheat or flour.

According to the *Corn Trade News*, total shipments of wheat and flour from exporting countries during the past week were 1,311,000 quarters, against 1,268,000 quarters in the preceding week. On Wednesday last, "December" futures were quoted in Chicago at 95½ cents per bushel, against 96 cents the week before and 93½ cents a month ago. Quotations in London, Wednesday: No. 1 Northern Manitoba, ex ship, 35s. per 496 lbs., against 35s. 3d. a week ago; No. 2 Northern Manitoba, ex ship, 33s. 9d., against 33s. to 34s. a week ago.

FLOUR.—Demand for both home-milled and imported varieties has again been quiet and prices have a slightly easier tendency. Shipments from North America in the past week totalled 76,000 sacks, as against 78,000 in the previous week. Wednesday's London quotations (excluding quota payments) were: Straight run, delivered country, 29s. per 280 lbs., against 29s. a week ago; delivered London, 28s., as compared with 28s. a week ago. Manitoba patents, ex store, 27s. to 29s., against 27s. 6d. to 29s. 6d. a week ago. Australian ex store, 21s. 9d. to 22s. 3d., against 22s. to 22s. 3d. a week ago.

BARLEY.—Imported feeding descriptions have again been in quiet demand and markets have shown little change. Supplies of English malting descriptions have been restricted by bad threshing weather and prices are steady. "December" futures were quoted at 47½ cents per bushel in Winnipeg on Wednesday, against 31½ cents last week and 33 cents a month ago. Quotations per 448 lbs. in London on Wednesday were: "English feed" (new) at farm 22s. 6d. to 24s., as against 23s. to 24s. last week; "English malting" (new) at farm, 30s. to 54s., against 30s. to 54s. a week ago.

OATS.—Demand for both native and foreign oats in this country remains exceptionally quiet and prices are barely steady. On Wednesday, "December" futures were quoted at 25½ cents per bushel in Chicago, against 25½ cents a week ago and 26½ cents last month. Quotations in London, Wednesday: "English Black" (old), at farm, 22s. per 336 lbs., against 22s. a week ago; "English White" (old), at farm, 22s., against 22s. last week.

MAIZE.—Quotations have displayed a firmer tone this week, owing to an improvement in demand. Weather conditions in Argentina continue very favourable for the growing crop, but the future course of prices will be influenced by subsequent reports from that area. "December" futures were quoted on Wednesday at 58½ cents per bushel in Chicago, against 56½ cents a week ago and 59½ cents last month. Quotations in London, Wednesday: "Plate," landed, 17s. 6d. per 480 lbs., compared with 17s. 3d. a week ago; "Plate," ex ship (new), 16s. 6d., as against 16s. 9d. a week ago; "Plate," December, 16s. 7½d., against 16s. 7½d. a week ago. Yellow maize meal, ex wharf, was quoted at £4 15s. to £4 17s. 6d. per ton, against £4 15s. to £4 17s. 6d. a week ago.

COMPARATIVE AVERAGES OF GRAIN.—The following table gives the estimated sale of home-grown wheat during the harvest years 1932–33 to 1935–36:—

	1932–1933	1933–1934	1934–1935	1935–1936
Estimated sales of home-grown wheat—				
1 week to December 7	Cwts. 267,558	Cwts. 338,534	Cwts. 380,540	Cwts. 318,377
14 weeks to December 7	3,957,200	4,625,556	6,093,915	6,195,402
Average price of English wheat per cwt.	s. d. 5 4	s. d. 4 7	s. d. 4 10	s. d. 5 8

The following is a statement showing the quantities sold and the average price of British corn in the past two weeks, and for the corresponding week in each of the years from 1931 to 1934:—

Week ended	QUANTITIES SOLD			AVERAGE PRICE PER CWT.		
	Wheat	Barley	Oats	Wheat	Barley	Oats
Dec. 5, 1931	Cwts. 61,685	Cwts. 405,398	Cwts. 54,592	s. d. 6 7	s. d. 8 5	s. d. 7 0
Dec. 10, 1932	267,558	346,273	54,633	5 4	6 11	5 9
Dec. 9, 1933	338,534	375,163	45,712	4 7	9 2	5 3
Dec. 8, 1934	380,540	312,573	41,241	4 10	8 7	6 8
Nov. 30, 1935	348,293	389,343	50,283	5 8	8 4	6 1
Dec. 7, 1935	318,377	367,864	35,421	5 8	8 3	5 11

AMERICAN WHEAT MARKETS.—The following table shows wheat quotations for selected weeks in 1935, with comparative figures for 1934.

NEAREST FUTURE	Jan. 4, 1933	Jan. 5, 1934	Dec. 12, 1934	Jan. 2, 1935	Dec. 4, 1935	Dec. 11, 1935
Winnipeg (No. 1, Manitoba)	46½	85½	78	82½	84½	83½
Chicago (No. 2 Winter)	46½	84½	100½	98½	96	95½

The visible supply of wheat in Canada amounts to 141,684,000 bushels, against 142,073,000 bushels last week and 123,639,000 bushels in the corresponding week of last year.

OTHER FOODS

BACON.—Demand has improved this week and prices remain steady. The official quotations (per cwt. for No. 1 Sizable) which formed the basis for dealings on the London Provision Exchange this week were: English, 78s. to 83s.; Canadian, 72s.; Danish, 82s.; as against 78s. to 83s., 72s. and 82s., respectively, a week ago. Arrivals in London last week included Danish, 13,111 bales; Canadian, 3,474; Dutch, 2,024; Lithuanian, 1,975; Polish, 2,167; against 12,963, 4,440, 3,116, 1,803 and 2,529 bales, respectively, in the previous week.

BUTTER.—At the beginning of the week demand for Colonial descriptions was slow and prices again tended downwards. At the lower level, however, a more active trade was reported. Danish has again showed a firm tendency this week. Quotations (per cwt.) on the London Provision Exchange on Wednesday were: New Zealand, finest salted, 86s. to 87s.; Australian, choicest salted, 86s.; Danish, 127s. to 128s.; compared with 92s., 91s. and 125s. to 126s., respectively, last week.

CHEESE.—Business has been fairly good this week and prices remain about steady. Quotations (per cwt.) on the London Provision Exchange on Wednesday were as follows: English, finest farmers', 74s. to 80s.; Canadian, finest coloured (new), 56s. to 60s.; New Zealand, finest coloured, 55s., as against 74s. to 80s., 56s. to 60s. and 53s. 6d., respectively, last week.

COCOA.—The "spot" quotation in New York on Wednesday was 5½ cents per lb., as against 5½ cents per lb. last week. On the London market, Accras have again scored a slight advance. Wednesday last, good fermented new crop, "December–January," was quoted 22s. 7½d. per 250 kilos. c.i.f. Continent, at 22s. 4½d. last week. Last week's movements of cocoa in London were as follows: Landed, 251 bags; delivered, for home consumption, 4,264 bags; exported, nil; stocks, 117,971 bags, against 140,895 bags a year ago.

COFFEE.—The New York spot market has been barely steady and last week's rise in Rio has been lost. The London market has shown a quieter tendency this week. In New York on Wednesday, Rio No. 7 (cash) was quoted at 6½ cents per lb., as compared with 6½ cents per lb. last week and 6½ cents per lb. a month ago. Movements of coffee in London last week were as follows: Brazilian, landed, 16 cwt.; delivered for home consumption, 136 cwt.; exported, nil; stocks, 12,133 cwt., against 27,936 bags a year ago. Central and other South American, landed, 57 cwt.; delivered, for home consumption, 1,820 cwt.; exported, 2,182 cwt.; stocks, 70,911 cwt., against 73,637 packages last year. Other kinds, landed, 677 cwt.; delivered, for home consumption, 3,681 cwt.; exported, 447 cwt.; stocks, 106,135 cwt., against 70,675 packages last year.

EGGS.—The London market has been generally steady this week. Quotations have now reached the seasonal peak and Danish have eased a little. At Smithfield Market on Wednesday, English (ordinary packing, Grade I, about 15–15½ lb.) realised 19s. to 20s. per 120, against 19s. to 20s. a week earlier, while Danish (15½ lb.) made 16s. to 16s. 6d. per 120, against 17s. to 17s. 6d. last week.

FRUIT.—The *Fruit Grower* states that business at Covent Garden was not so active as had been anticipated. Nevertheless, apples, both home and imported, cleared well at firmer prices. Supplies of pears were limited, so that quotations were steady in spite of a limited inquiry. Hothouse grapes were firmer. Nuts were a steady trade, with a small advance in Brazils. Oranges met a brisk inquiry, with heavy arrivals from Spain selling well at moderate prices. Lemons are still dear, and business is restricted. Special Christmas lines—Christmas trees, English holly, French mistletoe and tangerines—are arriving in good quantities and selling at fair prices.

MEAT.—Demand for beef, mutton and lamb at Smithfield has been moderately good this week, and prices have been firmer. Supplies of pork have, however, been in excess of requirements. On Wednesday last, Argentine chilled hindquarters were quoted at 3s. 10d. to 4s. 2d. per 8 lbs., as compared with 3s. 8d. to 4s. 2d. last week. New Zealand frozen mutton was 3s. 4d. to 4s. per 8 lbs., against 3s. 2d. to 3s. 10d. a week ago. According to the Smithfield Market official report, supplies during last week amounted to 9,845 tons, an increase of 787 tons on the corresponding week last year. Beef and veal accounted for 4,851 tons, mutton and lamb 2,751 tons, and pork and bacon 1,286 tons, as compared with 4,506, 2,486 and 1,198 tons, respectively, in the same week of 1934.

PEPPER.—Wednesday's spot price for Lampong (in bond) was 3½d. per lb., against 3d. last week. Movements of pepper in London during the past week were as follows: Black, landed, 66 tons; delivered, 5 tons; stocks, 1,518 tons, against 718 tons a year ago. White, landed, 27 tons; delivered, 238 tons; stocks, 13,996 tons, against 12,234 tons a year ago.

RICE.—The spot price of Burma No. 2, cleaned, was 9s. 7½d. per cwt. ex-warehouse on Wednesday, as compared with 9s. 9d. per cwt. a week ago. New crop, January–February, in singles to Continent and U.K. was quoted at 7s. 6d. per cwt., against 7s. 6d. per cwt. last week. Movements in London during the past week were as follows: Landed, 49 tons; delivered, 517 tons; stocks, 5,489 tons, against 2,349 tons a year ago.

SUGAR.—Raw sugar has been in steady demand on the New York market, and spot prices are unchanged on the week. Trading in London has been on a quiet scale at unchanged rates. The spot price in New York on Wednesday was 3.10 cents per lb., as compared with 3.10 cents per lb. last week and 3.50 cents per lb. a month ago. Wednesday's sales of raw sugar in London included "March delivery" at 5s. 1½d., against 5s. 1½d. last week. The movements of raw sugar at public warehouses in London and Liverpool last week were as follows: Imports, 31,289 tons, against 3,291 in the previous week and 11,053 tons in the same week of last year; deliveries, 16,717 tons, against 15,456 and 15,409 tons respectively; stocks, 204,920 tons, against 190,368 and 119,360 tons respectively.

TEA.—The following table shows the average prices (compiled by the Tea Brokers' Association) of tea sold at Mincing Lane on Garden Account in recent weeks:—

Week ending	Northern India	Southern India	Ceylon	Java	Sumatra	Africa	Total
Dec. 6, 1934	d. 11-72	d. 11-53	d. 13-26	d. 10-09	d. 9-53	d. 11-10	d. 11-93
Nov. 7, 1935	13-33	12-31	15-03	12-18	9-42	11-03	13-53
Nov. 14, "	12-87	12-04	14-27	11-76	9-66	11-33	13-02
Nov. 21, "	12-86	12-21	13-88	12-91	10-49	11-59	13-01
Nov. 28, "	12-74	12-40	13-71	12-77	10-04	11-70	12-93
Oct. 5, "	12-61	12-31	13-56	13-04	10-27	11-56	12-83

The quantities catalogued for this week's auctions comprised 48,317 packages of Indian and 18,736 packages of Ceylon tea. All Indian grades have been in good demand at this week's auctions, and quotations have been well maintained at recent levels. Rather more irregularity was shown at Tuesday's Ceylon sales, and light liquoring sorts were rather easier; other grades, however, were steady, while Orange Pekoes for export were a little dearer than a week ago.

VEGETABLES.—Business at Covent Garden was moderately active, according to *The Fruit Grower*, with most lines included firmer. Greenstuff was rather short, especially towards the end of last week, and cleared well with best samples showing slight increases in price. Celery and mushrooms were plentiful and a little cheaper. Peas and beans remained firm; carrots, prawns and turnips rose in price. Canary Island tomatoes were a steady trade at slightly higher prices. Potatoes were in good demand at London markets and, with a slackening in supplies, prices ruled distinctly higher. Best siltland King Edward seed since at 6s. 6d. to 7s. 6d. per cwt. at the Borough on Tuesday last, against 6s. 6d. to 7s. last week.

MISCELLANEOUS COM-

VEGETABLE OILS AND OILSEEDS.—Markets are quiet but steady. Linseed is in slow demand but is at £19 15s. accepted for new Plate, January shipment. The Argentine continue to progress favourably. The high estimate of the area under linseed is 6½ million acres, or 444,000 tons more than was indicated in September. An outturn of at least 1,500,000 tons is therefore anticipated, should nothing happen to mar the harvest. Shipments of the old crop are fairly heavy. The quantity now afloat for Europe is 157,500 tons (including 1,000 tons from India)—6,800 tons more than a week ago—and first the United States and Canada 36,500 tons, against 28,800 tons a year ago. About 100,000 tons of the Plate surplus will be carried over to next season, against 55,000 tons in December last year. Cottonseed

is dearer but inactive. Black Egyptian is held for £6 10s., December-January loading.

Lined oil is much firmer on receipt of an intimation that the Import Duties Advisory Committee had acceded to the application of the seed crushers and had advanced the duty on foreign oil from £3 10s. to £5 per ton. Raw lined oil ex Hull mill is now quoted £26 per ton (naked), December delivery, and £26 5s., January-April. Cotton oil is quiet but steady. Egyptian crude ex Hull is offered at £26 and refined at £29 per ton. Oilcakes are in good demand and steady.

RUBBER.—The market has slowly recovered from the disappointment caused by last week's increase in the basic quota of the Dutch

East Indies—which, it is hoped, will make it possible to enforce the restriction scheme in that area. There has been a steady flow of trade buying and spot prices show a rise of about ½d. on the week.

The spot price in New York on Wednesday last was 12½ cents per lb., compared with 12½ cents per lb. a week ago and 13½ cents a month earlier. Wednesday's official closing price for standard ribbed smoked sheet in London was 6½d. per lb., as against 6½d. on the corresponding day last week. In forward positions, business has been done at 6½d. to 6¾d. for January to March shipment, as against 6½d. to 6¾d. a week ago. Stocks in London and Liverpool at the end of last week totalled 165,526 tons, against 166,396 tons a week earlier. A year ago stocks amounted to 129,462 tons.

THE TRIUMPH OF PUBLIC OPINION

The impression in this country, and in the whole world, created by Sir Samuel Hoare's resignation of the Foreign Secretaryship of Great Britain is one of general astonishment, not unmingled with relief. The annals of democracy afford no precedent to the spectacle of a Government, returned with a majority of more than two to one, abandoning under the pressure of public opinion, within five weeks of its election, a foreign policy approved by the Prime Minister, the Foreign Minister and all the Cabinet.

More than a little sympathy will be felt with Sir Samuel Hoare personally. He is certainly not an "astute" diplomat in the more sinister sense of the term. On the contrary, he gained the confidence of Indians and of all political party leaders at home by his straightforward handling of the India Bill earlier this year; and in a single speech at Geneva on September 11th he raised British prestige to a higher pinnacle than at any time since the war. That speech was the beginning of a "positive" reorientation in British foreign policy, which was subsequently epitomised in the Government's Election Manifesto and secured them their overwhelming majority in the House of Commons. The new policy was one of "steady and collective resistance to all acts of unprovoked aggression," in company with the other members of the League of Nations; and it was sufficiently powerful to rally over fifty nations to active support of the League Covenant.

Yet, only three days ago, the new policy which had achieved so much and seemed to be on the point of achieving so much more, appeared to be lying in ruins. Members of all parties were agreed that the Paris terms, underwritten by the British Government and urged on the Emperor of Abyssinia with the "utmost influence" of our Minister in Addis Ababa, were utterly incompatible with the Covenant of the League. If Cabinet support of the proposals was a blunder, how came the blunder to be committed? And why was the resignation of so promising a British Foreign Secretary rendered imperative?

The answer, such as it is, was given in the House on Thursday evening. It is threefold. Sir Samuel Hoare—who went to Paris without instructions—was so impressed with

the urgent need of conciliation and the danger of the situation drifting into a war in which Great Britain would be left to act alone, that he allowed himself to be drawn into drafting terms which were the minimum that M. Laval would agree to put forward. The best defence that he could make for them was that they fell far short of Signor Mussolini's annexationist demands formulated before he went to war.

Secondly, we have Mr Baldwin's astounding admission that he and the Cabinet were not in touch with the Paris proceedings—"were not aware, until they heard that it was accomplished, that an agreement had been come to in Paris." Though the Government disliked the terms, the leakage in Paris forced them to act quickly; and they therefore assented rather than throw over a colleague. Mr Baldwin admits that this was a mistake which it will take time to rectify.

But, thirdly, the Government did not apparently appreciate fully what it had done or realise that the terms were in contradiction to its election pledges, until the voice of the country—reinforced by the expression of opinion all over the world—made itself heard.

That voice has spoken in no uncertain terms and to it the Government has responded. The proposals are absolutely and completely dead, "and the Government will make no attempt to resurrect them."

What his future policy will be Mr Baldwin did not disclose—except to say that it would continue to be based upon the League of Nations and that "we are prepared, collectively, to fulfil our part in every way." And there, for the moment, the matter stands; for the leader of the Opposition, by giving the debate a personal and party turn, made sure that Mr Baldwin would automatically secure his majority.

The dramatic events of the last fortnight, however, suggest certain reflections. Hitherto, in many influential quarters, the idea of the League of Nations and of collective security has received only half-hearted support; and its implications have never been fully realised. To some professional diplomats, the League was only one of the

pieces on the international chessboard. To the British party politician—in the more derogatory sense of that term—support for the League may have appeared merely a convenient instrument to rally the great "peace vote" at the polling booth. Those who regarded the League and the principle of collective security from either of these standpoints ignored the fact that in the eyes of the overwhelming mass of the people, in this as well as in other countries, the League is the hope of the world and of its civilisation. It is impossible for any Government, however great its majority, to play fast and loose with convictions and aspirations which are so deeply rooted in the hearts of the people.

In the second place, it is clear that in this country, which is still a democracy, public opinion is not merely a useful barometer for politicians; it is an all-powerful political force. A leading German newspaper has epitomised this moral in a single striking phrase. On Thursday, the *Hamburger Fremdenblatt* said of Sir Samuel Hoare's resignation: "It shows that the public is stronger than a strong man." The lesson will not be lost upon millions of observers in countries where public opinion is "State-managed."

Finally, the events of this last week are a tribute to the efficacy of a free press in faithfully interpreting public opinion. With the exception of the Italianophile *Daily Mail* and *Daily Express*, none of the leading daily newspapers of this country has been found to support the notorious "peace plan"—or, indeed, wholeheartedly to support the Government in any particular of the sorry story. The moral will not be overlooked, either by the British Government or by the world as a whole. And Signor Mussolini would do well not to under-estimate its cogency.

BACK TO THE LEAGUE

As we go to press this week, much in the crowded story of the last fortnight remains uncertain; but two crucial facts stand beyond question. In the first place, the Anglo-French terms of December 8th are unacceptable to the League, to Italy, to Abyssinia, and to an overwhelming majority of the British people. In the second, it is the urgent duty of the Government to retrieve its lost prestige, in the eyes of the world, by resuming the initiative which it abandoned a fortnight ago.

The publication last week-end of the details of the Hoare-Laval proposals intensified rather than allayed the apprehension which the Paris "leakage" had first aroused. They confirmed the partition of Abyssinia on the lines shown on the attached map. On this map, areas to be made over to the League, to Italy, to Abyssinia, and to an overwhelming majority of the British people. In the second, it is the urgent duty of the Government to retrieve its lost prestige, in the eyes of the world, by resuming the initiative which it abandoned a fortnight ago.

This ill-omened and ill-considered scheme is dead, and it is of greater immediate moment to consider what should be our policy under the League Covenant than to award censure to those responsible either for the project or for the manner of its presentation. The Government's duty is clear. It must take up its task at Geneva at the point reached a fortnight ago, and press for the continued and intensified application of sanctions against the aggressor—above all of the vital oil sanction. It may not now suffice simply to encourage the maintenance of the sanctions already in operation. Other States members of the League may well be indisposed to return to the *status quo ante* December 8th.

"The French and British Governments," they will say, "have inveigled us into joining with them in imposing sanctions which in their belief were only going to be slowly and partially effective. But at the moment when the vital

PROPOSED PARTITION OF ABYSSINIA UNDER THE PARIS PLAN

oil sanction was coming into our agenda, they almost broke up the whole collective system in an attempt to avoid imposing a sanction really likely to bring the war to an early end. They must give proof of new good faith by joining with us in imposing the vital sanction forthwith."

The Government, we believe, should accept both the challenge and the risk it involves. This risk has been manifest from the outset. Suppose Signor Mussolini carries out his threat of attacking the British fleet in the Mediterranean? And suppose, at the same time, M. Laval goes back upon his promise to put French naval bases at our disposal and to lend us the French Navy's aid? He is, of course, pledged to both; and in answer to a question in the House of Commons on Wednesday, Mr Baldwin announced that (contrary to rumour) the French promise still holds. The speech with which Mr Neville Chamberlain wound up last Thursday's debate tended to confirm this view. He suggested, moreover, that the British Government was prepared to agree to an oil sanction if other nations would co-operate and accept the consequences.

The risk, then, is that we may be called upon to repel an Italian attack upon us. That is still a risk which anyone might hesitate to incur if the alternative were an immunity from all risks of any kind. But, in our actual situation, honour and vital interests are identical. For if we are going to confess before the world that a threat of force on Italy's part is enough to compel us to renounce our declared policy and to repudiate our acknowledged obligations, then we shall be loudly inviting an attack upon us from all comers. The man who flinches from the risk of having to fight for his honour will assuredly be forced before long to fight for his skin.

At the Council meeting on Wednesday Mr Eden declared, in the British Government's name, that the Anglo-French plan had been no more than a *ballon d'essai*. His Government could neither recommend nor support it if it were not agreeable to the League, to Abyssinia and to Italy. By the time Mr Eden was speaking it was already clear that the plan was acceptable neither to the Emperor of Ethiopia nor to the Head of the Italian Government. Signor Mussolini has once more proclaimed his utter intransigence. What excuse, then, has M. Laval for not going forward with us? His pretext for presenting the plan was to give the aggressor a last chance before imposing the vital oil sanction. It seems unlikely that he will venture now upon a repudiation of pledges which, in the present temper

of the French Chamber, might quickly bring about his fall. Still, we must face the possibility that France may fail us. In that event we suggest we must still impose the oil sanction in collaboration with all the League countries that will take part. Notifications of a willingness to join in imposing it have already, indeed, been received at Geneva from Russia, Roumania, Iraq and Mexico, among others. We are already assured of support from all those League members who hold the key to the oil sanction. And we may hope, once again, for parallel action from the United States. Even if concerted action could not be achieved—if we were reduced to acting alone or with only a minority—it would still be the Government's duty to deny to the Italians the use of British oil. It is repugnant to public opinion in this country that the Italian bombing planes should be fuelled, even in part, directly or indirectly, with oil supplied by a company in which the British Government is a large shareholder.

The plain truth—underlined by Signor Mussolini in his speech on Wednesday in the Pontine Marshes—is that there is at present no possibility of finding an easy option for the discharge of our obligations. Aggression must be checked in its course and foiled of its object. And it is essential that we should not lose sight of this major aim, or relax our efforts to press on towards its realisation, in our immediate reaction from the anxiety under which we have been labouring for the past two weeks. It is no doubt something that, at the eleventh hour, the Government should have abandoned a course on which it should never have entered. We must go forward—this time without flinching. At the moment, action at Geneva is even more important than action in London or in Paris.

EGGS AND POULTRY

THE Report* of the Eggs and Poultry Reorganisation Commission for Great Britain, published on Tuesday, comes at a season when poultry has a traditional claim upon the attention of the British public. Separate Reorganisation Commissions for England and Wales and for Scotland, which were appointed in October, 1933, to prepare marketing schemes for eggs and poultry, under the Agricultural Marketing Acts, reported early this year, and their recommendations were discussed in our issue of February 16th last (page 354). As they were not empowered, however, to make recommendations for the control of imports, a further Commission was constituted from among their members to report upon methods by which the proposed marketing schemes could be facilitated: (a) by measures affecting the importation of poultry products; and (b) by co-operation with Northern Ireland. This week's Report brings the embryonic marketing schemes a stage further in the lengthy process of gestation.

The Report gives the following estimates of supplies of shell eggs:—

UNITED KINGDOM—SUPPLIES OF EGGS IN SHELL

Source	1924		1930*		1934	
	Quantity	% of Total	Quantity	% of Total	Quantity	% of Total
Home production	Millions 2,590	52	Millions 3,885	55	Millions 4,764	68
Empire imports	624	12	698	10	696	10
Foreign imports	1,777	36	2,474	35	1,548	22
Total	4,991	100	7,057	100	7,008	100

* 1930 was the year of maximum importation.

Production in England and Wales doubled over the past decade, but the expansion was rather less rapid in Scotland and Northern Ireland. Home production shows wide seasonal fluctuations, but imported supplies vary within much narrower limits. Imports rose to a peak level of 3,172 millions in 1930—a 32 per cent. increase over 1924—declined sharply to 2,202 millions in 1933, and recovered slightly in 1934 and 1935. The contraction, which occurred

in foreign, not in Empire, imports is attributed to the depreciation of sterling, the imposition of import duties, and the fall in home prices. Entries from Empire sources now account for about one-third of the total. During 1930—the year of maximum importation—egg prices suffered a sharp decline and the fall continued until the present year, despite the cut in foreign imports. The diminishing returns, about which British producers have recently been complaining so vociferously, clearly cannot be laid at the foreigner's door; the cause is to be sought rather in the remarkable expansion of home supplies.

For table poultry, the relevant estimates, summarised in the Report, are these:—

UNITED KINGDOM—SUPPLIES OF TABLE POULTRY

Source	1925		1931*		1934	
	Quantity	% of Total	Quantity	% of Total	Quantity	% of Total
Home production	'000 cwt. 989	73	'000 cwt. 1,315	67	'000 cwt. 1,636	78
Empire imports	93	7	111	6	157	8
Foreign imports	281	20	540	27	292	14
Total	1,363	100	1,966	100	2,085	100

* 1931 was the year of maximum importation.

Total supplies of fowls average about 1,450,000 cwt. annually—of which only about 12 per cent. are imported. Production of table fowls in this country is largely subordinated to egg production, and has therefore increased *pari passu* with the output of eggs. Annual supplies of turkeys have recently averaged about 370,000 cwt.—of which some 70 per cent. come from overseas. Home production of turkeys, ducks and geese has shown no significant expansion recently. Retained imports of dead poultry as a whole, however, increased substantially between 1925 and 1931; foreign imports almost doubled. Owing to the imposition of higher duties in September, 1933, imports fell sharply in the following year. The duties, being specific, fall most heavily upon the cheaper classes of poultry, and affect the poorer consumer most severely. Moreover, in the case of turkeys—which comprise over one-half of total imports—the burden has fallen almost exclusively upon the poor man's Christmas dinner; since the well-to-do can afford the larger and more expensive domestic product, upon which no duty is paid. Prices generally have fallen since 1929, but not so steeply as in the case of eggs.

The Commissioners believe that the domestic poultry industry should be encouraged and assisted to expand—despite its remarkable growth without Government help in post-war years. After examining a number of possible methods of import control for eggs, the Commission reaches the conclusion—with which we completely agree—that regulation by quotas would be an unsuitable policy. If, however, the home marketing boards were to undertake the storage of eggs during the spring "flush" period, then, it is recommended, imports should be regulated quantitatively during the period of storage. A "moderate"

increase in current rates of duty is suggested as the central feature of the new policy, since the present tariff on foreign supplies—ranging from 1s. to 1s. 9d. per great hundred—is deemed unlikely to bring about the further cut in imports which is considered necessary. It is suggested that the proposed increase of 6d. per 120 should be imposed upon all imports; the existing margin of Dominion preference would thus be preserved and the home producer would receive additional protection. As to the necessity for the increase, the Report is not convincing; and in our view any increase in the tariff on so important a foodstuff is to be deplored. With one exception, the Commissioners are opposed to any increase in the duties on egg products.

Since the British tariff might be neutralised by export bounties in foreign countries, the Commission further recommends that one-quarter of the proceeds of the import duties—say £340,000 annually—should be earmarked for the assistance of the home industry. These funds—which could be used in development and efficiency services and in defraying some of the initial expenses of the proposed marketing schemes—should be administered by a permanent commission of three independent persons, appointed jointly by the Minister of Agriculture, the Home Secretary and the Secretary for Scotland. The rates of duty and the percentage allocated to the industry should be subject to review after three years.

Concerning table poultry, the Commission reaches the refreshing conclusion that the home industry already enjoys a sufficient margin of protection. No increase in the current duty of 3d. per lb. on foreign imports, and of from 4d. to 7d. per lb. on Irish supplies, is therefore recommended. It would be too much to expect the Commissioners to advocate any reduction in the present high rate of duty; but we welcome the conclusion that no further increase is justifiable.

While two separate marketing schemes are proposed for England and Wales and for Scotland, respectively, co-operation with Northern Ireland would be secured by means of a co-ordinating committee, which should be consulted on all matters of common interest. The Report closes with a salutary observation with which, surely, few impartial observers will disagree:—

"... The greatest permanent advantages to the home industry can come only by changes in the machinery and methods of marketing on some such lines as those suggested by the earlier Commissioners; without them the effects of the recommendations we now make are likely to be minimised, if not lost. We strongly urge, therefore, that our present proposals should not be regarded as offering an easy substitute for reorganisation, but as a supplement to it."

It is now for the half million poultry keepers in this country to consider their verdict.

AMERICA INSURES IN LONDON

(BY OUR INSURANCE CORRESPONDENT)

It is common knowledge that the ramifications of British insurance companies are world-wide, but it is not so generally realised that approximately 50 per cent. of the total premium income in their Fire and Miscellaneous (including Workmen's Compensation and Motor insurance) branches is obtained in the United States of America. In 1934 the improvement in employment and business activity in that country resulted in a considerable expansion in premium income, as is shown by the various tables given below, which are based on the official reports of the companies, furnished to the American insurance authorities and published by the Spectator Company of New York. Underwriting profits have been adjusted to conform with the British practice of allowing for an unexpired risk reserve equal to 40 per cent. of the premium income. The exchange is taken at £1 = \$4.86½ throughout.

Of the two branches of insurance business mainly transacted by British companies in America, namely Miscellaneous and Fire, the former is definitely the less satisfactory. In general, Workmen's Compensation insur-

ance in the U.S.A. has been found to be unremunerative, but last year showed an improved tendency. On the other hand, Motor insurance, which is by far the most important of the Miscellaneous branches and accounts for nearly 50 per cent. of the premium income in these branches, was very unfavourable. It is to be hoped that the efforts now being made to obtain official sanction from the appropriate State authorities for an increase in motor insurance rates will bring them to a more adequate level.

The following table gives the aggregate results of eleven companies or groups of companies, including the principal British offices represented in America in the Accident and Miscellaneous branches of insurance.

Year	Premiums £	Underwriting Profit	
		Amount of Profit £	Percentage of Premiums
1928	28,126,000	774,000	2.8
1929	28,423,000	78,000	.3
1930	27,065,000	439,000	1.6
1931	24,953,000	168,000	.7
1932	22,312,000	377,000	1.7
1933	22,513,000	16,000	.1
1934	23,657,000	275,000	1.2

How the individual offices have fared in the U.S.A. in the past two years is shown in the following table:—

Company or Group of Companies	1933				1934			
	Premium Income (Accident and Miscellaneous)	Underwriting Profit or Loss		Percentage of Premium Income	Premium Income (Accident and Miscellaneous)	Underwriting Profit or Loss		Percentage of Premium Income
		Amount	Per-centage of Premium Income			Amount	Per-centage of Premium Income	
1. Commercial Union	2,209,000	106,000	+ 4.8	2,497,000	203,000	+ 8.1		
2. Employers' Liab.	6,173,000	173,000	+ 2.8	6,902,000	109,000	- 1.6		
3. General Accident	3,015,000	156,000	+ 5.2	3,325,000	328,000	+ 9.8		
4. Liverpool & Ldn. and Globe	3,397,000	43,000	- 1.3	3,214,000	93,000	- 2.9		
5. London & Lancs.	496,000	18,000	- 3.6	559,000	9,000	- 1.6		
6. Norwich Union	585,000	41,000	- 6.9	480,000	99,000	+ 20.5		
7. Phoenix	2,163,000	5,000	- .3	2,105,000	21,000	+ 1.0		
8. Royal	3,168,000	77,000	- 2.5	3,137,000	27,000	- .9		
9. Royal Exchange	309,000	8,000	- 2.6	296,000	44,000	+ 15.0		
10. Sun	796,000	26,000	- 3.2	893,000	15,000	+ 1.6		
11. Yorkshire	202,000	21,000	+ 10.3	208,000	53,000	+ 25.1		
	22,513,000	16,000	- .1	23,657,000	275,000	+ 1.2		

The experience of the individual offices, which it will be seen varied considerably, is influenced by the particular types of insurance chiefly transacted by them. It should be noted that the published results for 1934, as officially compiled in the U.S.A., are more favourable than are shown here, owing chiefly to the different methods used in estimating the reserves for unexpired risk. This factor is of particular effect in the case of Workmen's Compensation in times of increasing employment such as 1934. In view of the very large amount of this type of insurance transacted by the Employers' Liability the results shown above for that office are probably rather unfair in respect of the year 1934.

The results of the Fire branch make more cheerful reading. There was considerable expansion in the premium income, and, what is even more gratifying, further improvement in the underwriting profits as compared with the satisfactory results of 1933. Below are given the aggregate results of twenty companies or groups of companies which have been selected to comprise all principal British offices doing business in the United States.

Year	Premium Income £	Underwriting Profit	
		Amount £	Percentage of Premium Income
1928	31,278,000	2,531,000	8.1
1929	31,225,000	2,236,000	7.1
1930	27,688,000	647,000	2.3
1931	25,814,000	41,000	.2
1932	23,546,000	507,000	2.2
1933	22,851,000	1,430,000	6.3
1934	24,314,000	1,614,000	6.6

The results of the Fire insurance business of the individual companies or groups of companies for each of the last two years are shown in the following table.

Company or Group of Companies	1933				1934			
	Premium Income (Fire)	Underwriting Profit or Loss		Percentage of Premium Income	Premium Income (Fire)	Underwriting Profit or Loss		Percentage of Premium Income
		Amount	Per-centage of Premium Income			Amount	Per-centage of Premium Income	
1. Atlas	629,000	+ 26,000	+ 4.0	646,000	+ 22,000	+ 3.4		
2. Eagle Star & Brit. Dominions	472,000	- 6,000	- 1.2	494,000	- 15,000	- 3.0		
3. Caledonian	394,000	2,000	- .4	388,000	11,000	+ 2.8		
4. Commercial Union	2,541,000	+ 142,000	+ 5.6	2,622,000	+ 50,000	+ 1.9		
5. Century	265,000	+ 14,000	+ 5.1	328,000	+ 7,000	+ 2.1		
6. Employers' Liab.	371,000	+ 22,000	+ 5.8	394,000	+ 40,000	+ 10.2

It is apparent that the results in the Accident and Miscellaneous branches have for many years been unsatisfactory, and it is difficult to see any immediate sign of improvement. There is little probability of saving in expenses, including taxation; and in the principal branch, namely, Motor insurance, the rates charged are inadequate under present conditions. In 1934, automobile casualties in the U.S.A., at 35,000 persons killed and approximately 1,000,000 persons injured, showed an increase in each case of 17 per cent. on the previous year's total. On the other hand, total Motor insurance premium income in that country was practically the same in both years. Unfortunately the causes of the increased casualties are deemed to be largely of a continuing nature. The sanction of the appropriate State authorities is required to any alteration in rates, and even where the appeal of the companies is fully successful, considerable delay must occur. Hence the tendency will be for the risk to outrun the rate of premium. The chief hope of the companies probably rests on educational and legislative factors combining to reduce the automobile risk. In the Fire branch, results of the last two years were distinctly favourable, and it may be rather optimistic to regard these years as average.

"THE OLD ORDER CHANGETH . . ."

It was Scrooge who observed that Christmas merely made us one year older, and not one penny the richer. This Christmas there will be many who, with one eye on the alarums and excursions which vex and convulse the nations, will be tempted to share the gloom of Dickens' miser. For the world's affairs at Christmas, 1935, do not present a pretty reckoning.

Yet there are more things in life than even the momentous political issues that were debated in the House of Commons on Thursday; and wherever the feast of Christmas is kept men may well seize this moment to ask themselves how it fares with their own country. Are they "not one penny the richer"? Are they haunted by the ghost of the past, or do they see visions of the future? Are they happier and more united this Christmas, or are there weaknesses and dissension in the national life?

Chacun pour soi. So let us ask Father Christmas—who has certainly been visiting our shores now for a millennium and a half—what he thinks of "This England" at the time of his 1935 visit. Is England—are we—changing? And if so, in what direction? Are we nicer or nastier than our fathers and mothers, our grandfathers and grandmothers? Are we better-mannered, more cultured, more capable; or are we more spoiled, more pretentious, less energetic, less honest among ourselves? Are we growing up, and easier to live with? Or are we, as a nation, on the slopes of an

infantile regression, lacking the character of those trained in a sterner age?

The discerning eye will perhaps detect one curious feature of our English life. The national family is unbalanced. Owing chiefly to the evil days of 1914-18 we are a family in which the elders still wield supreme authority, the elders who were in their prime before 1914. Between these elders set in political authority and the younger members of the family, there is "a great gulf fix'd"—a gulf of almost two generations. Our country's rulers are between 60 and 75 years of age; whereas barely more than a century and a half ago the younger Pitt was Prime Minister of England at 23. United as a family on the surface, therefore, we yet have this division of authority, of interests, of outlook, of power even, which arises simply from the absence of "the war generation." Yet the time is fast approaching when, one by one, the "old, familiar faces" will be gone. In industry, in trade, in the temples of finance and insurance, in the great corporate professions of the law and medicine, in trade unions, the Press, and in the closer corporations of Government and the fighting services—everywhere the younger generation is knocking at the door. What will they do with the power they so soon must wield?

We cannot give an answer to this question, for we claim no clairvoyant gift of seeing into the future. But at least we know that the decisions that must be taken relate to a world far different from that of the generation that is passing away. To-day we hurry home for Christmas from all over the world by giant aeroplanes; we listen to services from cathedrals, thousands of miles apart, in our own drawing-rooms; we have better and quicker news of the world's affairs than we thought possible even ten years ago. To-day, whether we are employers or employed, many of us have cars or motor-cycles and sidecars; and if we have not, we can command luxurious travel, whether by road or rail, for a shilling or two. The world is open to every man; the nations of the Continent are nearer neighbours than ever before; and as a result our own national life, especially that of the younger element in it, is subject to much wider cultural and intellectual influences.

By a strange provision of fate, our national culture in 1935 seems to have shown definite evidences of a real renaissance. As often before in English history, the troubles of the Continent have redounded to our advantage. Look where we will to-day, we see in music, in medicine, in the drama, in literature, in the technical research and experimentation of our great industries, in the cult of the open air, in scientific and academic achievements—even in economic analysis!—that England is gradually but certainly building up the foundations of a great revival. And this revival is gaining recognition abroad; partly, perhaps, because of the surprisingly favourable nature of Britain's economic recovery from 1933 onwards, and partly because of the problematical condition of the authoritarian States of Russia, Germany and Italy. Certainly, competent foreign observers of our English national life would admit, with M. André Siegfried, that to whatever our revival was due it has not been created by the State. It is rather the first effects of the emergence of a younger England, the first real revival of the nation's life force after the shock of the war and its long-drawn after-effects.

Have the young men and women of England a clear idea of the goal before them? Hardly. But it is significant that the "youth movement" in our country is not made to order, but is natural and spontaneous. For the present, at all events, it cuts across all parties, all creeds, all prejudices and all castes. Later, it will doubtless affect the political life of the country as the nation becomes conscious of new desires, new claims and new visions. If the past decade has been a disappointing one, few in England can doubt that we are on the threshold of a new activity.

But, meanwhile, we are still at Christmas, 1935, amid wars and rumours of wars, alarums and excursions, muddle and stress, fears and timidities, just as we have been for many Christmases past. So let us dwell rather on the thought of England as she may become than on that of England as she is. And—not forgetting our neighbours all over this narrow world—let us toast both "absent friends" and "our noble selves," and repledge ourselves to peace on earth among men of good will.

NOTES OF THE WEEK

Miners' Wages and Coal Prices.—Tuesday's meeting between miners and owners did not reach a final settlement of the wage dispute, as had been predicted in some optimistic quarters. It was the first direct discussion of wages between the Mineworkers' Federation and the Mining Association since 1926. It is true that the owners' representatives, Sir Evan Williams, president of the Association, and Mr W. A. Lee, secretary, described themselves for the purpose of the meeting as "among the colliery owners' representatives, but not acting on behalf of the owners' national organisation." If the owners' objection to national negotiations, however, can be satisfied by this formula, nobody else is likely to resent it. The owners stated that they had met with some success in arranging to increase the pithead price of coal. Reports of increases varying from 6d. to 2s. a ton have been received from all parts of the country during the week; and details of these will be found in our Commerce and Trade section. The increases, however, the owners stated, had not been as great as had been hoped. They could therefore do no more than promise unspecified advances in wages in all districts on January 1st, details of which would have to be worked out by district negotiations. It is encouraging to find that increases have been offered in the exporting as well as inland areas. The miners' spokesmen, however, declared themselves "dissatisfied" with this offer; presumably on the ground that it contained a guarantee neither of definite quantitative wage increases nor of national negotiations. It was therefore agreed that the owners should "ask the districts to decide and to intimate . . . for the information of the Mineworkers' Federation representatives particulars of the offers which they are prepared to make." A further meeting between the Federation and the Association, soon after Christmas is consequently to be held. In the meantime, Wednesday's delegate conference of the Federation authorised its representatives to call a strike on January 27th. On Wednesday also Captain Crookshank indicated in the House of Commons that the Government were not prepared to grant a subsidy or guarantee a loan to enable wages to be raised immediately. He added a warning that the Federation would "assume very grave responsibility . . . if it should fail to allow full investigation of the offer made by the owners." We trust that the Federation will allow this investigation, and on the other hand that the owners will accept the principle of national negotiation and at the same time make an offer of specific wage increases. It would be disastrous to let the opportunity of settlement slide, now that so much progress has been made. Already the nationalisation of royalties and the institution of central selling have been undertaken; a Royal Commission on Safety in Mines has been appointed; and a rise in pithead prices has been found possible, thanks to the general reflationary movement which the national economy is to-day enjoying. On no account should a dispute over national negotiations, or a mere failure to state the actual terms of the proposed wage increases, impede the consummation of a settlement already within the industry's grasp. Public opinion has so far been largely on the miners' side. But if the Federation should be over-hasty in using the strike threat, or should refuse a reasonable offer of increased wages, the valuable asset of public sympathy may easily be jeopardised.

Mr Chamberlain and the Housing Boom.—In defending the grant of a Government guarantee to the railways' borrowing plans, Mr Chamberlain, in the House last week, used the interesting argument that the housing boom might be expected to fall off at about the time the railway works would be at their height.

The rate of house building at the present time (he said) is such that, if it were continued, it is quite certain that in a comparatively short period the country would be over-built. . . . When you have over 300,000 houses being built every year, a rate which is in advance of the ordinary demand for houses, and when we have caught up the arrears, we must expect that the rate would diminish.

Mr Chamberlain did not seem to distinguish very clearly between the purely private demand for houses that is likely to be encountered if no Government assistance is given, and the real social need that could be met by a truly vigorous slum clearance and anti-overcrowding programme. The unassisted lower middle-class demand of the last four years is probably nearing its end, according to the opinion of most experts. And a sharp rise in the rate of interest or the price of food might kill it outright. We also agree with Mr Chamberlain that such a collapse, re-armament or no re-armament, would deal a fatal blow to the domestic recovery movement. But the real working-class need for better houses remains enormous, although the present level of incomes prevents it from being expressed in monetary terms. We estimated a year ago that if a decent standard of housing were to be attained in this country, and due allowance were to be made for obsolescence, something like 300,000 houses a year should be built in the next 20 years. This rate has now been attained; but Mr Chamberlain seems to contemplate its falling off with something like equanimity. He said, it is true, that when the present boom wanes, "to some extent its place will be taken by the extra house-building which will be required to carry out the new programmes of local authorities to deal with overcrowding." But this does not argue a determination to use the Slum Clearance and Overcrowding Act to keep the rate of building up to 300,000 houses a year. And after all if a visitor from Mars were to contemplate the East End of London, he probably would not leap to the conclusion that the railways should be electrified at once and the slums cleared, perhaps, afterwards. We do not say this in disparagement of the Government's railway development programme, which is an excellent example of combined private enterprise and public supervision. But here if anywhere a due sense of proportion should be preserved.

Tremors in France.—The shock of Sir Samuel Hoare's fall has caused, as might have been expected, repercussions in France. On Tuesday, M. Laval's Chamber majority in a vote of confidence on his foreign policy had already sunk to 52; and the long-threatened split then revealed in the Radical group now bids fair to become permanent. For on Wednesday, M. Herriot, who has long been performing the circus trick of cantering with a foot on each of two horses, was called by rebels of his own group to give an account of his reasons for riding the Laval horse in foreign policy. Ever since Signor Mussolini challenged the League by attempting the rape of Abyssinia, and ever since M. Laval constituted himself the Duce's pander, the French Radicals have been hard put to it to endorse M. Herriot's expedients for retaining M. Laval in office. Neither M. Herriot nor any other group leader wants to incur the responsibility for bringing down M. Laval and forming a new Government, especially when any new Government will probably have to bear the added responsibilities of a budgetary and "franc" crisis in the remaining few months before the General Election. Such timidity, however, has not held in check the bolder spirits of the Radical group—the younger men of the stamp of M. Pierre Cot, a former Air Minister. On Wednesday, as a direct result of the *débâcle* of the Laval-Hoare "peace plan," M. Herriot was told by one of his own group, who had already voted against M. Laval the day before, that, as a Minister of State and as leader of a group which had contributed several members to the Laval Cabinet, M. Herriot's defence of his equivocal attitude in the last ten days amounted to *maquignonnage*—rank duplicity. Thereupon M. Herriot called on the member to withdraw the remark. The member refused. And M. Herriot promptly resigned his Presidency of the Radical group in a fury. This has caused quotations for M. Laval's "futures" to drop heavily; for what is one Herriot in the Chamber against many rebel Radicals? In France, tempers cool as quickly as they become heated—as in the debate over the "Leagues"—and this may still hold the Radical group together. But one thing seems certain. M. Laval has lost "face" in France by his

avowed preference of Mussolini to the League. However the course of French politics may run between now and the Elections, it does not seem as if M. Laval will be steering the French Government all the time. And this may have a great influence on the future of the franc.

The Air Pact—with a Difference?—On December 13th, the British Ambassador in Berlin was received by Herr Hitler, together with the German Minister for Foreign Affairs, Baron von Neurath. According to the official *communiqué*, they had "a frank and confiding discussion of the possibility of a limitation of armaments. Further consideration was also given to the Anglo-French proposals for an air pact between the Locarno Powers." This *communiqué* was not published until 24 hours after the event; and there has been a noticeable attempt to minimise the importance of the conversation. But Baron von Neurath is reported to have told Sir Eric Phipps that Herr Hitler was prepared to conclude the air pact between the Locarno Powers at any time, provided that his adherence were no longer made conditional upon his also entering into the projected East European and Danubian security pacts. Is this conversation, we wonder, a move in some game of scrapping (under guise of "reforming") the League of Nations and giving its name to a new four-Power pact between the United Kingdom, France, Italy and Germany, with Belgium thrown in? Is the League to be offered a pact under which Germany would renounce any ambitions at the expense of either the European or the African possessions of the West European Powers in exchange for a free hand for herself in Eastern Europe? The present British Government and its predecessor have only too often proclaimed unofficially, and even hinted officially, that they do not care a fig for what happens to Eastern Europe. And although, in spite of that, we have hitherto been committed to a concern for Eastern Europe by our obligations under the Covenant of the League, these obligations would lapse if the Covenant were to be "revised" in the sense of depriving the small States and Russia of the protection of Articles X and XVI. There remain the treaties that have been negotiated since the war between the East European Successor States and France, as well as the mutual guarantee treaty—signed but not yet ratified—between France and Russia. But there have been indications that M. Laval might be not unwilling to throw Russia and the Little Entente to the wolves, if he could thereby make sure of "squaring" Germany without losing his Italian alliance and his British *entente*. In fact, M. Laval is to-day the *éminence grise* of Europe. All this raises the question: On what terms is Herr Hitler actually prepared to conclude the air pact with his Western neighbours? On terms that take account of these neighbours' existing international obligations? If that is the setting of the proposal, then it is all to the good. On the other hand, if our present fashioners of British foreign policy are thinking, in collusion with their French colleagues, of securing our own countries against a German air attack at the price of giving Germany free rein elsewhere, then the policy is as short-sighted as it is dishonourable.

Industry versus President in America.—The "breathing spell" in the New Deal onslaught on American individualism, whose advent was welcomed with mutual rejoicings only a few months ago, seems definitely at an end. The precarious armistice has for some time been strained by the judicial attacks of industrialists on the agricultural processing taxes and by the revolt of the utilities against the Holding Company Act. But in the last few weeks the remaining reserves have disappeared and verbal warfare has broken out in full violence. The annual Congress of American Industries, which last year tinged its acquiescent attitude with no more than a few faint criticisms, this year heard its President describe the New Deal as "a deliberate, well-timed, rapid-fire, devastating attack by economic crackpots, social reformers, labour demagogues and political racketeers." At the same time a meeting was being held in Washington in the

attempt to revive the N.R.A. and restore to it some at least of its former regulatory functions. But though Labour in general was sympathetic to this idea, the opposition of industry was so strongly expressed that the conference had to be abandoned. It is clear that Mr Roosevelt has lost the support of Big Business and Big Money. It is all the more necessary for him to ensure his support in other directions, particularly among the farmers, who have most reason to feel gratitude for the efforts of the New Deal. Last week he addressed the National Farm Bureau Federation at Chicago and gave his audience a long defence of his agricultural policy, particularly against the charge that the farmer has been betrayed by the Canadian Trade Agreement. But he also took occasion to round on his critics by the use of such phrases as "calamity howlers," "dispensers of discord" and "political profiteers." In short, the outlines of next year's electoral campaign are beginning to appear. Mr Roosevelt hopes to be able to count upon the farmers and Labour, but he will be opposed by the formidable forces of business and finance. Geographically, the lines of conflict are between the East and West for the Republicans and the Middle-West and South for the Democrats. The issue will depend on the ability of each party to attract defections from the ranks of the other. Meanwhile, economic conditions continue to improve with surprising rapidity and regularity. It is beginning to look as if Mr Roosevelt, having been carried into office by depression in 1932, will be continued in office by returning prosperity in 1936.

The Japanese Naval Claim.—The Naval Conference in London unobtrusively continues to work out according to expectation—though hardly according to plan. The expectation now being realised is the difficulty of finding common ground for making a plan of any sort. The Japanese have placed their dish on the table—decently swathed in a napkin, so that no one can see if it is fish, flesh or fowl. It is said that the Japanese have sought to sweeten their dish by suggesting that the tonnage comprised within their proposed "common upper limit" might be treated globally. That is to say, each country might be permitted to lay out its equal total allocation of tonnage upon whatever ships it pleased, instead of being confined, within the global total, to a special limit for each category. But this "concession" seems unlikely to reconcile the British and American delegations to a proposal which in their view is incompatible, on any interpretation, with their own demand for parity of security. So the Japanese proposal is being left lying on the table while the British are bringing forward their suggestions for an agreement on "qualitative limitation," coupled with unilateral declarations by each country of its maximum necessary naval construction over a period of years. If the Japanese will not play at this game, is there any prospect that the conference will bear fruit? It is unlikely that anyone will have the hardihood to declare the conference bankrupt for many a long day. But what we may perhaps inevitably expect to see is something like a "gentleman's agreement" between the British Empire and the United States. Such an agreement would reply to any Japanese attempt at an armaments race with an overwhelmingly greater combined construction programme. After three or four years of it, the Japanese will come to realise that, while they may have been able to denounce the 5 : 5 : 3 ratio *de jure*, they cannot improve upon it *de facto* by way of unrestricted competition. This prospect of teaching Japan by experience is costly, dangerous and forbidding. But nothing brighter seems to be showing above the horizon at the moment.

An Italian Defeat.—The most important engagement in the Abyssinian war since the capture of Adowa took place this week. Italian troops suffered a reverse, admitted in an official announcement by Marshal Badoglio; and much of the ground gained in the North during the last two months seems to have been lost. The attack was made from across the Takazze River on the Italian right wing east of Makalle. Some 3,000 Abyssinians are reported to have forded the river and attacked the Italian position under cover of darkness. After a short engagement the Italians retreated northwards towards Aksum and Adowa, and the Abyssinian onslaught was not finally repulsed until Italian reinforcements, tanks and aeroplanes came to the rescue of the retreating column. According to Marshal Badoglio, some 500 Abyssinians and 200 Italian native troops were killed in the final battle. The Italian armies as a whole have not, of course, been seriously shaken by this reverse. But the Abyssinians have shown that they are now sufficiently well-armed and well-led to use the natural advantages of the ground and counter-attack at night against isolated Italian positions. Marshal Badoglio's position is not a happy one. Virtually half the six months available for the campaign is now past; and his troops are scarcely any further advanced in north, east or south than they were after the first week of the invasion.

Elections in Egypt.—The situation in Egypt has been moving rapidly since last week. The restoration of the Constitution of 1923 has led Nessim Pasha to cancel his decision to resign, and he is remaining in office to hold an election—thus stealing a march on the United Front, which had hoped to supersede him and to negotiate with the British Government for an Anglo-Egyptian treaty. It is unfortunate, both for Egypt and for us, that there should be any delay at all in the installation of an Egyptian Government really representing the country. But the United Front may have been formed only to be broken. For there seems to be a serious doubt whether it will be able to survive the election. The Wafd appear to be in danger once more of making their old—and so many times disastrous—mistake of attempting to elbow all other parties and personalities aside and to claim a monopoly of the representation of the Egyptian people. Their picture of the post-election regime is said to be a Wafd in office—to carry out the negotiations with Great Britain—and the rest of the United Front in opposition! This is no promising basis for a fresh effort to achieve an Anglo-Egyptian settlement. We profoundly hope that the Egyptian United Front will survive the election and will then form an Egyptian national coalition Government for conducting the negotiations. Meanwhile, it is at least something to the good that a constitution is in force again in Egypt and an election in prospect. Moreover, the United Front's note to the British High Commissioner, proposing that the abortive 1930 treaty shall now be concluded, is a statesmanlike document, couched in very moderate and conciliatory language. Meanwhile, Egypt is still heaving under the ground swell of the storm which was raised by Sir Samuel Hoare's Guildhall speech and which was afterwards fomented by the Wafd—though the Wafd are now doing their best to pour oil on these troubled waters. All parties concerned will be best promoting what is, after all, a common Anglo-Egyptian interest if they see to it that the Egyptian elections are held, and that the Anglo-Egyptian negotiations are resumed, with the greatest possible expedition.

Another Spanish Cabinet.—To the accompaniment of execrations from both Right and Left, a new Cabinet came into office in Madrid this week. This followed the ninth ministerial crisis since September, 1933, when the Constituent Cortes died of anæmia. Although Señor Azáña describes the new ministers as "a collection of refugees from a shipwrecked coalition"—that of the C.E.D.A. (Gil Robles' party) and the Radicals—the formation of the new Government under Señor Portela Valladares, the veteran independent politician and able administrator who held office in the last monarchist government before the dictator-

ship in 1923, is a notable achievement. Faced by a virtual paralysis of the body politic, the Spanish President, Señor Alcalá Zamora, has made his decision and is exercising his prerogative to dissolve the Cortes. For the time being, its sessions are merely suspended until January 1st; but a decree of dissolution will not be long delayed in the New Year, and the first ministerial act will be to fix the date for new elections, which must take place within sixty days from dissolution. There is something to be said for allowing the present Government of "peace and concord" to carry on until the end of January. This would permit Señor Chapaprieta, who continues as Minister of Finance, to make one more effort to obtain parliamentary approval for the long-delayed Budget and its complementary finance laws. The President's latest move spells checkmate to the hopes of Señor Gil Robles and his party—numerically the strongest in the Cortes—of forcing through a reform of the Constitution along the lines favoured by the Catholic forces. Up to December 9th, a two-thirds majority was necessary before any proposals for reforming the Constitution could take effect. The composition of the House, even if a number of Radicals were won over to the views of the C.E.D.A., precluded any such possibility. By the terms of the Constitution itself, however, after that date only a simple majority is required. And, if such a vote had been obtained, the Cortes would have been automatically dissolved and new elections arranged. Presumably, members of the majority party, the C.E.D.A., would have then held the key positions in the Cabinet—the Ministry of the Interior, and all that this signifies in a country with Spain's election traditions. The President has, in short, stolen Señor Gil Robles' thunder. It remains to be seen if he will use it, like Jove, to good effect.

President Masaryk and President Benesh.—Last Saturday, President Masaryk of Czechoslovakia resigned from the presidential office on the ground of old age, and with the recommendation that Dr. Benesh should be his successor. On Wednesday, Dr. Benesh was duly elected, in a joint session of the two Houses of Parliament, by 340 votes out of 440. Only 24 votes were cast for the other candidate, Professor Nemec; and 76 votes—those of the Henlein (South German) Party—were not cast. Both the first and the second President of Czechoslovakia are men of the people who distinguished themselves as scholars before they were called, by the nation's need, to become statesmen. They have worked together in close and constant harmony since they founded the Czechoslovak Republic in exile during the war; but it has fallen to the younger man to play the more contentious part during the post-war years, and he can hardly bring to his presidency that precious asset of universal regard and veneration which was enjoyed by the veteran statesman. President Masaryk is now 85 years old; he has been President for 17 years; and he has been re-elected four times. In his long and varied life, he has shown himself well qualified to play at least four different parts with supreme dignity and effectiveness. Before he became President he had, for four years, to stand the test of serving as the exiled leader of an apparently hopeless national cause. Before that, again, he was a most effective deputy in the Austrian Reichsrat. And, in an earlier age, he had made a European reputation as a Slavonic scholar. Masaryk's outstanding permanent characteristic has been his fearless straightforwardness—especially in unmasking frauds. It was he who pilloried the pre-war regime of the Dual Monarchy before the eyes of the world by exposing the spuriousness of the allegedly incriminating documents which had been made the basis for the notorious Agram treason trial. The victims were a number of prominent Yugoslav subjects of the Monarchy. But perhaps the bravest act in a perpetually brave life was the feat of purely scholarly criticism which first brought Masaryk into prominence. As a young Slavonic scholar, Masaryk devastated his fellow Czech nationalists, and almost drew upon himself their condemnation as a traitor to the national cause, by proving the spuriousness of an ancient manuscript which had been regarded till then as one of the title-deeds of the Czechs' claims to a national

existence. This first entry on the scene of the Czech national hero aptly illustrates a quality which has won him the place which he has long since held in his countrymen's hearts.

Women and the Double Shift.—The suitability of the double-shift system for women and young workers was debated in the House on Tuesday on the second reading of the Employment of Women and Young Persons Bill. According to pre-war legislation the working hours of women and young persons had to fall within a twelve-hour period. This provision was "temporarily" suspended in 1920 to facilitate increased production in the boom period. The suspension, however, has remained in force ever since; and 36,000 women and young persons are working the double-shift system to-day. By the new Bill the Home Secretary is to be permanently empowered, on the joint application of an employer and a majority of the workers concerned, to permit successive shifts of not more than eight hours between 6 a.m. and 10 p.m. The Bill was defended by Mr Geoffrey Lloyd, Under Secretary to the Home Office, as embodying the unanimous report of an impartial committee of investigation. In the course of the debate the Bill was both criticised and defended from opposing sides of the House. Several Labour members denounced it as a piece of reactionary legislation, resented by the worker. Sir John Withers (Conservative) supported this point of view, and contended that it was injurious to the health of young women to get up at 4 or 5 in the morning; he also deplored the application of identical regulations to women and young persons. Mr C. Brown (Labour), however, a member of the committee of investigation, supported those Conservatives who believed that the system would be preferred by the workers if it produced shorter hours and longer week-ends. The question is very largely one for the workers themselves. But there is much to be said for the suggestion of Mr Rhys Davies and Miss Horsbrugh that the approval of the workers should be obtained by secret ballot, as used to be the case, and not "by consultation," as the Bill proposes. Miss Megan Lloyd George, another member of the Committee, proposed instead that an advisory committee should supervise the "consultation" of the workers; and the Home Secretary accepted her suggestion. On the face of it, this hardly seems an adequate or necessary substitute for the proposed secret ballot.

"Lawful Judgment of Peers."—For the first time since 1901 the House of Lords met on December 12th in its ancient capacity as a criminal tribunal of first instance. Lord de Clifford had been indicted for the manslaughter of a young engineer in a motor smash; and, if Parliament is in Session, no peer can be tried on a charge of felony otherwise than before the House of Lords. Lord de Clifford was found to have "no case to answer." This historical capacity of the Upper House is the heritage bequeathed to the twentieth century from the thirteenth, when the Barons in 1215 assembled at Runnymede, demanded from the King, in Magna Carta, the right that no man should be condemned *nisi per legale iudicium parum suorum*—"unless by legal judgment of his equals." At that time, the Barons of England were not overwhelmingly liberal and democratic in their demand. They wanted freedom from arbitrary imprisonment by the King only for their own rank. But in later ages other classes of the people achieved power, and English justice might well have become chaotic. Clericals might have been judged only by clerics, bakers by bakers; perhaps motorists only by other motorists and never by pedestrians! As it is, the literal meaning of *parum suorum* has become confined to the Barons of Parliament, and then only in a case of felony. For all other citizens in our democracy, and for Barons who commit plain misdemeanours, the criminal courts will judge us before a jury composed of the traditional "twelve shopkeepers." Now that our judges' decisions can no longer be controlled by King or Government, we can rest content to have it this way. And as for the trial of a peer by his fellow Peers of the Realm, with all the antiquated procedure necessitated by a literal translation of a seven-centuries-old parchment, it seems both anomalous and otiose.

Iron and Steel Production.—Except in the tinplate section, which in South Wales is only working at 50 per cent. of capacity and does not expect any immediate expansion of demand, business in the iron and steel industry continues to be active in all branches. Exports are still poor, but home consumption in the North-East and in Scotland has been further stimulated by recent orders for ships, and in Sheffield by aeroplane and armament orders. Demand for constructional and railway materials continues to be good and has been encouraged by the prospect of Government support for public works borrowings. The relevant figures are shown below:—

(In thousands of tons)

Period	Production		Foreign Trade	
	Pig Iron	Steel Ingots and Castings	Total Imports	British Exports
1913—Monthly Average	855.0	638.6	185.9	414.1
1929 " "	632.4	803.0	235.2	364.9

" November	525.1	903.3	77.0	215.8

On a daily basis production of pig-iron in November was approximately the same as in the previous month. Pig-iron prices were raised in mid-November, and although consumers had bought forward very freely in anticipation of this rise, new business continued moderate, and home demand more than compensated for the lack of export orders. Production of steel goods reached a new record average daily figure in November, and demand for semis, especially from re-rolling firms, has been so great that many manufacturers have been unable to maintain deliveries and are welcoming the normal slackening of business at the turn of the year. Moreover, they have been unwilling to accept contracts for more than six months ahead owing to fears of further increases in the cost of their raw materials, pig iron and coke. In view of this stringency in the market, the Federation of Iron and Steel Manufacturers has arranged to increase import quotas of semis, and increased supplies from abroad should be available shortly. Besides this shortage of certain steel goods, Sheffield reports a severe shortage of skilled engineers which is entailing a good deal of overtime working.

Excitement in Wheat.—The quietude of the world's wheat markets was unexpectedly disturbed on Friday of last week by an announcement from Buenos Aires. This year's Argentine crop will be the lowest for many years, and exports to Europe will consequently be very small. The markets, however, were surprised to learn that the Argentine Government would raise its official buying price from 5.75 to 10 pesos per quintal (i.e. from about 2s. 2½d. to 3s. 9d. per bushel). This price at which the Government will purchase wheat from the farmers gives no necessary indication of the level at which it will sell. The announcement, however, immediately caused a jump of about 4½d. per cental in Liverpool wheat futures, while Winnipeg and Chicago advanced by the maximum permissible amount of 3 cents and 5 cents per bushel, respectively. Despite a slight profit-taking reaction on Saturday, the price gain has generally been well maintained, and recent developments in the statistical position appear to justify more optimistic views. World production this year is the smallest since 1924, and exportable supplies in the 1935-36 season are estimated by the International Institute of Agriculture at only 800 million bushels, against 900 millions last season and as much as 1,375 millions in 1928-29. Import requirements may show a slight increase to 540 million bushels, against 529 millions in 1934-35. The carry-over

figures would thus be further reduced to 260 million bushels at the end of this season. This result has been achieved, however, not by the ingenuity of man, but by disease and drought in the main producing areas. It may be unwise to assume the indefinite continuance of a sequence of such favourable "accidents."

Sterling and International Prices.—British wholesale prices remain very firm. During the past fortnight the complete *Economist* index number has risen by 0.3 per cent., and the primary products index number also by 0.3 per cent. The increase has been mainly in cereals and meat prices. American prices continue to sag. The *Economist* primary products index number has fallen by 0.8 per cent., while the complete Irving Fisher index number has fallen by 0.7 per cent. During the latter part of the autumn there have been signs of a divergence between the course of British and American prices. French prices are still rising in a way which suggests that higher import prices are having an effect. German prices are practically unchanged.

* These figures relate to Dec. 11th.

Details of the group indices comprising the complete *Economist* index number on the date of our suspension of the gold standard and for recent dates are given below:—

	"ECONOMIST" INDEX (1927 = 100)			
	Sept. 18, 1931	Nov. 20, 1931	Dec. 4, 1931	Dec. 18, 1935
Cereals and meat	64.5	69.7	69.5	72.2
Other foods	62.2	61.2	61.3	61.1
Textiles	43.7	63.2	62.7	61.6
Minerals	67.4	83.4	83.6	82.9
Miscellaneous	65.8	78.0	77.6	77.9
Complete index ..	60.4	71.3	71.1	71.4
1913 = 100	83.1	98.1	97.8	98.2
1924 = 100	52.2	61.6	61.4	61.7

The past fortnight witnessed appreciable advances in wheat, flour, maize, meat and potatoes. Barley, oats and rice were cheaper, while bacon was unchanged. Tea and coffee fell slightly, and there was a small advance in butter. In the textiles group cotton, flax and hemp were all cheaper, but wool is unchanged and jute a shade higher. In the minerals group the price of house coal has been advanced, but there was a general decline in non-ferrous metals. Among miscellaneous materials there were advances in rubber, linseed oil and sulphate of ammonia, and declines in hides and cement.

Overseas Trade in November.—The substantial expansion of overseas trade recorded in October continued last month. Both imports and exports increased to some extent on a daily basis, while the following table shows a rise of about 10 per cent. on both sides of the account as compared with a year ago:—

	OVERSEAS TRADE Month of November (000's omitted)			
	1933	1934	1935	Change between 1934 and 1935
Total imports	£63,739	£64,557	£71,455	+ £6,799
British exports	34,435	36,125	39,400	+ 3,275
Re-exports	3,619	4,008	4,572	+ 564
Total exports	38,054	40,133	43,972	+ 3,838
Excess of imports over exports	25,675	24,524	27,483	+ 2,959
Transshipments under bond	2,005	2,001	2,485	+ 484

The increase in imports in the last two months has done little more than offset the low level of certain earlier months, particularly in imports of raw materials. Our purchases of wood and timber, cotton, wool, rubber and hides for the eleven months are still substantially less than in 1934. Imports of foodstuffs, on the other hand, have increased by £5.3 millions, and of manufactured goods (mainly non-ferrous metals, machinery, oils and vehicles) by £11.6 millions. The following table summarises the position:—

	OVERSEAS TRADE Eleven Months (000's omitted)			
	1933	1934	1935	Change between 1934 and 1935
Total imports	£612,851	£669,515	£683,571	+ £14,056
British exports	337,012	361,874	391,037	+ 29,164
Re-exports	45,084	47,683	49,821	+ 2,138
Total exports	382,096	409,556	440,858	+ 31,302
Excess of imports over exports	230,755	259,959	242,712	- 17,247
Transshipments under bond	21,908	21,844	22,946	+ 1,102

Exports, with a total increase of £59 millions compared with 1933, show expansion in all directions except the coal markets, where there has been a small decline.

Volume of Trade.—The following tables give details of trade in different commodities:—

	RETAINED IMPORTS Month of November		
	1933	1934	1935
Wheat	10,061	8,096	9,834
Beef and veal	959	1,098	1,051
Mutton and lamb	345	350	380
Sugar (unrefined)*	3,649	2,954	2,875
Iron ore and scrap	271	429	422
Wood and timber, sawn, soft:—			
Planned or dressed*	82	80	110
Other than planned or dressed*	533	534	574
Raw cotton	1,586	943	1,616
Sheep's and lambs' wool	48,651	33,929	43,263
Flax, hemp and jute	555	656	652
Crude petroleum*	23,450	25,874	23,890
Hides, wet and dry	40,239	50,235	37,893
Wood pulp	108	124	149
Rubber	182	202	208
Unwrought copper*	94	360	76
Pig lead	15,112	30,398	13,591
Tin:—	27,530	24,474	28,429
Ore and concentrates	2,072	4,096	3,850
Blocks, ingots, slabs and bars	420	262	1,652
Iron and steel manufactures	92	104	77
Machinery	3,752	4,782	5,534

* Total imports.

Imports of foodstuffs in November rose from £32.5 millions in 1934 to £34.3 millions in 1935. The increase in imports of wheat has been accompanied by a considerable rise in average values. Imports of beef and mutton have been fairly stable throughout the year, with a slight transfer of custom from the Argentine to Empire countries. Imports of pig products, on the other hand, especially from Denmark, have been further reduced. Tobacco imports increased considerably in volume, but prices fell so much that the total values remained almost unchanged. Raw material imports rose by nearly £3 millions. This was

mainly accounted for by textile raw materials and hides, a welcome sign of renewed internal activity. Imports of machinery continue to expand, and purchases of non-ferrous metals, which are notoriously erratic from month to month, show an increase in the eleven-month period from £19.9 to £25.4 millions, an increase which is shared by all metals. The next table gives an analysis of exports:—

Item and Measure	BRITISH EXPORTS Month of November		
	1933	1934	1935
Coal	3,607	3,318	3,496
Iron and steel scrap	20,465	24,887	18,567
Pig-iron and ferro-alloys	14,370	13,690	14,036
Railway materials	9,433	15,487	22,184
Total iron and steel manufactures	184	220	216
Textile machinery	6,999	6,910	5,510
Total machinery	27,956	31,074	32,729
Cotton yarns	12,671	10,642	12,413
Cotton piece-goods	170	172	158
Wool tops	4,084	3,799	4,607
Worsted yarns	3,429	2,621	3,249
Woolen tissues	5,159	4,993	5,584
Worsted tissues	2,730	2,206	3,166
Linen piece-goods	6,025	5,996	5,966
Leather boots and shoes	46,517	42,978	40,853
Leather	21,449	21,285	26,034
Paper and cardboard	356	299	337
Locomotives (complete and parts)	7	2,158	993
Motor vehicles and chassis	5,380	5,754	6,800

* Complete only.

The expansion of export markets continues to be mainly confined to sales of iron and steel goods, machinery, motor vehicles and locomotives. The increased exports of textiles, leather, pottery, cutlery, etc., may be interpreted to mean that, as in our domestic recovery, world revival is extending demand from capital to consumption goods. In the case of woollen manufactures, cotton yarns and paper and cardboard, however, the increase in sales is no more than a recovery of the ground lost last year. Germany was responsible for most of the increase in wool exports. Exports of coal to Italy have naturally continued to decline, but even when this has been allowed for, exports of coal in the first eleven months of the year to all other countries only increased by some 400,000 tons.

OVERSEAS CORRESPONDENCE

From our Correspondents in each centre

FRANCE

[The resignation by M. Herriot of the leadership of the Radical-Socialist Party is discussed in a Note on page 1252.]

M. LAVAL WINS YET AGAIN

BY 306 votes to 252 M. Laval has beaten off yet another attack from the Left, this time on foreign policy. In his speech he recounted the efforts he had made to reconcile the idealism of the League Covenant with the Franco-British attempts to reach a peaceful settlement. The Left's case seemed to have been weakened, first, by the Baldwin-Laval agreement, and, secondly, by the declaration of Mr Eden that the Abyssinian affair would not necessarily be a precedent for such an eventuality as a conflict on the Rhine. M. Laval's majority was a narrow one. But the Chamber was in doubt about the then impending debate in the House of Commons, the result of which will be known when the next foreign affairs debate takes place in the Chamber on December 27th.

Meanwhile the Chamber is rapidly voting the Budget, in order that it may be certain to be passed by December 31st. The general atmosphere has been improved by a lowering of the interest rate on National Defence Bonds from 4½ to 4 per cent. The *rentes* however, are awaiting a similar gesture from the Bank of France, the rediscount rate of which is still at 6 per cent., though it is rumoured that gold has begun to return to the Bank. But the Bank seems to be worried about the latest increase of its bill portfolio

Shipping Freight Index.—As measured by our monthly index number, the general level of whole cargo shipping freights fell by 1.6 per cent. during November, following a rise of 12.3 per cent. during October. The current figure of 95.6 compares with 86.2 in November last year and 85.5 in November, 1933. Details of the index number are as follows:—

	(1898-1913 = 100)				
	Average, 1913	November, 1934	September, 1935	October, 1935	November, 1935
European waters	110.0	86.6	92.8	106.4	103.2
North America	113.1	76.6	78.7	87.1	87.7
South America	123.4	79.5	82.3	87.7	86.4
India	106.3	94.5	88.9	110.0	109.7
Far East and Pacific	117.4	89.0	90.4	98.6	94.9
Australia	127.9	90.8	86.4	95.3	91.7
Total	116.3	86.2	88.6	97.2	95.6

Freights generally were dull during November and inquiry limited. Newcastle reports a fair demand in the Baltic direction. The coasting market at Swansea has displayed considerable activity and rates are firm. In the East of Scotland the coal export trade has been active, particularly at the port of Methil. Glasgow reports that shippers are mainly interested in the Baltic section, where the tone is firm. Movements of the various sections are as follows:—

	Index No.	Inc. or Dec. Points		Index No.	Inc. or Dec. Points
Home trade	103.0	+ 3.9	South America:—		
Bay—outwards	121.1	— 1.8	Outwards	64.8	— 3.4
Bay—homewards	93.5	— 1.7	Homewards	108.0	+ 0.9
Mediterranean:—			India—outwards	95.5	+ 0.8
Outwards	107.5	— 27.2	India—homewards	124.0	— 1.3
Homewards	91.0	+ 1.8	Far East, etc.	94.9	— 1.7
North America	87.7	+ 0.6	Australia	91.7	— 3.6

Expressed as a percentage of the average for 1913, the complete figure of our index number for November is 82.2, compared with 83.5 for October and 74.1 for November, 1934.

to 10,091 millions. It is refusing to issue notes to replace those drawn out by hoarders and capitalists taking refuge in Wall Street. Money rates are very tight; the contango rate for the last account reached 8 per cent., a record since May, 1928.

In a remarkable article which he has just published M. Pierre Strohl, the General Secretary of the Bank of France, observes that since the stabilisation of the franc the total of coins and notes of denominations from 5 to 100 francs has been almost unchanged at 30,000 million francs; while that of the 500 and 1,000 francs notes increased from 26,228 millions in 1926 to 54,500 millions in August last. Yet the simultaneous diminution of trade and decline of the price index from 599 to 397 should have reduced the demand for notes. M. Strohl concludes that these unused notes are hoarded. And he explains that between 1928 and 1931 some 26,000 millions of notes were issued against gold, which had been repatriated as a consequence of various complications inherent in the economic or political crisis. This money might possibly become dangerous in the case of panic. The problem consists not in creating new notes but in bringing the present enormous hoards into circulation, in order to assist a rise in *rentes* and a lowering of interest rates.

INCREASE IN IMPORTS AND EXPORTS

Total foreign trade in November showed a new increase of 82 million francs. Exports increased by 68 millions, and they had already increased by 172 millions in October.

The total is now close to that of January, which was the best of the year:—

FOREIGN TRADE IN NOVEMBER (Fr. thousand)			
	November, 1935	Change since October, 1935	November, 1934
Imports:—			
Foodstuffs	543,710	+ 13,501	— 101,653
Raw materials	898,124	— 4,571	+ 68,960
Manufactured goods	294,478	+ 4,025	— 38,694
Total	1,736,312	+ 12,955	— 71,387
Exports:—			
Foodstuffs	251,173	+ 29,082	— 47,593
Raw materials	393,330	+ 20,819	— 48,020
Manufactured goods	776,704	+ 18,322	— 92,139
Total	1,421,207	+ 68,223	— 187,752

The import surplus for the month is 315 million francs, against 370 millions in October. The tonnage exported continues to rise. But the increase is principally in raw materials, while exports of manufactured goods, in tonnage as well as in value, remain far below those of November, 1934. Briefly, the results for the first eleven months of the year show that the import surplus for 1935 will slightly exceed 5,000 million francs and will be covered by the tourist receipts and interest on foreign investments. The value of the total of trade will again have diminished by more than 4,000 millions, but in tonnage it is nearly stable. The tonnage of exports, however, is steadily increasing; the great change lies in the decline of exported manufactured goods.

Various indices confirm the impression that the general economic situation is improving. The total of the deposits in the big banks again increased in October:—

	September 30, 1935 Fr.	October 31, 1935 Fr.
Crédit Lyonnais	11,093,799,602	11,053,948,811
Société Générale	9,222,486,088	9,304,871,320
Comptoir d'Escompte	7,029,137,151	7,015,456,003
Crédit Industriel et Commercial	1,338,806,188	1,365,356,629
Totals	28,684,229,029	28,739,632,763

The total of bank clearings in November was 31,849 million francs, against 30,281 millions in October, 24,295 millions in September and an average of 27,012 millions in 1934 and 31,545 millions in 1933.

The difficulties of the export trades still persist, but the producers are unwilling to agree among themselves to utilise the terms of the Flandin Bill for enabling compulsory cartels. The text had been issued at the instigation of the silk manufacturers of Lyons. It was never voted by the Senate, however; so that a decree-law was necessary for applying it. But when submitted to the manufacturers at Lyons for application, the proportion required for the creation of a cartel (two-thirds of the producers and three-quarters of the production capacity) was not obtained. These compulsory agreements had been designed to protect small enterprises; and this is evidently why they have been rejected by the big producers.

PARIS, December 19.

GERMANY

[The following account of the reception of the Hoare-Laval peace terms in Germany was written before the receipt in Berlin of the news of Sir Samuel Hoare's resignation and of the report of Thursday's debate at Westminster.]

RECEPTION OF THE HOARE-LAVAL PLAN

ON Friday of last week, when the Anglo-French peace terms were officially disclosed to the newspapers, H.M. Ambassador in Berlin had a meeting with Herr Hitler. Germans expressed the view that this meeting was designed as a diversion. It was not denied that there were reasons for a meeting; there were only too many. All important Anglo-German questions, and first of all armaments, affect Germany's policy towards international co-operation, and her attitude towards the League of Nations. The peace terms are therefore a matter of high importance to Germans; and it is well that their various opinions should

be known. Some Germans, honest war-mongers, oppose any kind of international co-operation. Other Germans desire co-operation, but consider that the League's structure, principles and statutes are unsound. Others have nothing against the League in these respects, but reject it as a "family party" of the West European victor countries. To the family party they concede that, while it is unscrupulous in its aims and its methods, it has the virtue of solidarity.

When Italy's plan to attack Abyssinia was first known beyond doubt, all Germans expected a family-party settlement. London and Paris would, of course, frown (Paris, however, on only one side of its face) when sanctions were mooted. Both of them, it was said, believed and hoped that the League would disagree. When the League agreed, it was predicted that sanctions would not be enforced. Only when they were enforced did opinion really change. A main factor in the change was the British Government's heroic pose. At that time the British peoples boasted (and a German journal of only last Saturday affirms that they had reason to boast) that Great Britain's reputation stood higher than at any time in her history. London's soft speech and (apparently) iron acts; its wise indifference to Italy's insults and threats; the quiet concentration of forces in the Mediterranean without demonstrativeness yet, wisely, without secrecy—all these things made their impression.

"FAMILY-PARTY COMBINATIONS"

But there remained doubters. Mr Baldwin, they conceded, might be sincere. But family-party combinations and traditions of fifteen years were sincerer still. They did not see why England should daily declare that she was Italy's friend, when she ought to have been declaring that she was not Italy's friend, and was indeed acting as Italy's enemy. It was not England's business to be Italy's friend. There were other suspicious circumstances. So when Germans learned that the peace conditions must be "acceptable" to Italy, they visualised friendly meetings of uncles and nephew in a public house and predicted a *Kuhhandel*. A *Kuhhandel* is a horse-coper's deal.

Of the varying German prophets, the prophets of a mere *Kuhhandel* have been the worst discomfited. These expected at worst the intellectual refinements of the horse-coper; and they see, they say, only primitive sand-bagging. And Great Britain alone is the sand-bagger. France, it is conceded, was all along honest in her dishonesty. She showed from the first aversion to measures of coercion, and she joined in them, as was said and as is plausible, as a result of open or implied British threats to secede from the "party." The indictment is therefore against Great Britain. It is not that Great Britain "betrayed" the League idea; that is a matter for moral and intellectual damages. It is that she gratuitously embroiled fifty countries with Italy. These countries, in consequence, were insulted, boycotted and threatened; they suffered direct financial loss; and they were compelled, again with loss, to adapt their commerce and industry. Great Britain tried to involve also non-League countries, and did involve the United States to the extent, according to report, of Italian protests in Washington. Failing to involve Germany, she picked with her a small quarrel, which might have become a big quarrel, by requiring proof of the origin of German exports. Having so set the whole world by the ears and caused it as much loss as it could, Great Britain then reversed engines.

The most serious among the Berlin daily journals praises the Government. The terms, it says, admit, if belatedly, that countries which want other countries' territory may take it by force; and Germany will hold Britain to her word. This means not German aggression; it means that if Britain champions the acquisition of colonies by force, it must at least support Germany's peaceful "demand" for colonies—"demand" is the word used by a German Minister.

Germans are convinced that the real cause of the *volte face*, even though the British Government may not know it, was the family party "complex." That was too deep-rooted to be eradicated by the most genuine temporary impulse of political virtue. The "complex" was insidiously and irresistibly working all the time. As proof, the Germans ask what would Great Britain and France

and Italy have said had Germany sent an armada against Ethiopia? According to a League ruling, they say, we had as much right as Italy. Now the obvious reply—that the notion of a German attack on Abyssinia is so grotesque that no man would ever dream of it—say Germans, gives the whole show away. The notion is grotesque only because the family party "complex" is in the blood of Europe.

BERLIN, December 18.

HOLLAND

NEW POLITICAL CRISIS FEARED

THE position of the Colijn Cabinet has remained dubious since the last crisis in July. Now it is again rumoured that a conflict is threatening between the Second Chamber and the Government; this time the occasion is the Education estimates. The Government wishes to effect considerable economies on education. This aroused opposition from the outset, and the economies in question were consequently removed from last summer's Retrenchment Bill. Now, however the subject is again coming forward for discussion on the Education estimates; and no agreement has yet been reached between the Government and the Chamber.

Events in France have been taken comparatively coolly on the Amsterdam foreign exchange market. For a long time the market and the guilder rate remained insensitive to the dangers besetting M. Laval, but on November 22nd a rather extensive fall of the guilder in terms of foreign currencies developed. The dollar reached the gold export point once more, and sterling advanced from 7.25½ to 7.31. Nevertheless, exports of gold from Amsterdam to America have been small.

The reason for the comparatively calm behaviour of the Amsterdam exchange and stock markets is presumably that Holland has been even worse off already. Moreover, the conviction is constantly growing here that the part played by the English Exchange Equalisation Account on the international exchange market is of unmistakable importance in present circumstances. The relation of the guilder and the French franc to the sterling currencies is largely governed, for the time being, by the London Equalisation Account. On the other hand, America is virtually on the gold standard once again, and there is consequently an export of gold to New York as soon as the dollar rate calls for it.

THE EFFLUX OF GOLD

The efflux of gold from Holland, however, has been so limited that in the past month the Netherlands Bank has actually recorded an increase in its stock of gold. On November 11th the stock of gold amounted to 613.1 millions, and on December 2nd they were 628.1 millions. Moreover, the Central Bank's deposits of gold abroad are gradually being shipped to Amsterdam. These stocks of gold abroad accordingly diminished from 88.2 millions on November 11th to 68.1 millions on December 2nd.

Although the Amsterdam gilt-edged market has still failed to display any significant advance, and the yield of long-term loans accordingly shows no decline, it is nevertheless evident that there has been some recovery of confidence. Now, for the first time for a long period, the opening of subscriptions for a new loan has been announced, viz., a 4½ per cent. loan for the Province of North Holland amounting to 5 million guilders at a price of 99. As in the spring of this year Provincial authorities secured funds at 3½ per cent., it is evident that the new loan is on none too favourable terms. In view of the extensive flight of capital which has taken place from Holland, it is hardly likely that there will be any fall in the long-term rate of interest for the time being, especially as M. Laval's success in France has by no means induced political tranquillity in Holland.

As the result of the introduction of a Bill into the Second Chamber designed to finance bridge-building by means of increased taxation on petrol, the Royal Dutch (Shell) interests have set forth in an address to the Members of Parliament protests against any increase in the extent of taxation on motor transport. Such an increase, the company allege, would lead to a reduction in motor-car traffic in the

Netherlands. In the years 1930 to 1934, the number of passenger motor cars increased by an average of 5,561 per year. From June, 1934, to June, 1935, however, this increase only amounted to 105 cars. Goods vehicles increased between 1930 and 1934 at the rate of 2,181 a year; between 1934 and 1935, on the other hand, there was a decrease of 2,269 vehicles. The increase in motor buses has almost ceased. This decline is in striking contrast with the development of motor-car traffic in England.

The Netherlands trade returns for October show an increase in both imports and exports. Not only was the value of both imports and exports far higher than for the preceding month, but it exceeded the figure for the corresponding month of last year. Imports advanced from 1,758,000 tons and a value of 75.98 million guilders in September to 1,968,000 tons and a value of 94.42 millions in October. Exports increased from 1,022,000 tons and a value of 59.4 million guilders in September to 1,241,000 tons and a value of 69.9 millions in October. Imports and exports month by month in recent years have been as follows:—

	Imports (In million guilders)			Exports (In million guilders)		
	1933	1934	1935	1933	1934	1935
January	95	100	76	58	56	55
February	86	81	70	55	51	51
March	99	94	80	65	61	54
April	89	85	78	54	54	50
May	97	87	78	61	57	58
June	97	89	73	62	59	51
July	104	86	76	56	58	54
August	105	87	76	62	69	61
September	111	78	76	74	69	59
October	109	87	94	63	62	70
November	109	88	...	63	60	...
December	108	75	...	52	56	...

The steep advance recorded in October was presumably attributable to increased importing and exporting of various produce induced by the then prevalent fear of war.

SWEDEN

NEUTRALITY AND DEFENCE

RECENT events have generated a feeling in Sweden that a strong defence force offers the chief protection for her traditional neutrality. Even the Socialists have come to this conclusion, as the recent speech of Mr Sandler, Foreign Minister and prominent member of the Swedish Labour Party, proves. Mr Sandler stated that collective League action could not be substituted entirely for national defence forces.

Since notice of the termination of the Anglo-Swedish Commercial Treaty of May 15, 1933, must be given before January 7, 1936, informal negotiations have been in progress for some time. There are good prospects that the present Agreement will be prolonged with only slight readjustments. The steady development of Anglo-Swedish trade under the Agreement was illustrated in a remarkable speech made by the Swedish Crown Prince at the recent dinner of the Anglo-Swedish Society in London.

A report on the proposal for a Swedish oil monopoly has been prepared by a special committee appointed by the present Swedish Labour Government. According to this report, the institution of a State monopoly for imports and distribution of oil would cost about Kr. 65 millions, Kr. 31 millions of which would be required for taking over installations from foreign oil concerns now operating in Sweden. The monopoly would yield an annual income of Kr. 11 millions. The proposal will certainly raise considerable opposition in political and economic quarters. It is thought to be a test case in the Labour Government's programme of State monopolies.

HIGH LEVEL OF BUSINESS MAINTAINED

General economic activity is still on a high level, though industry is becoming increasingly dependent on the home market and the building boom. The export trade is meeting with considerable difficulties. The value of Sweden's foreign trade this year has been as follows:

(Million kronor)				
	October		January-October	
	1934	1935	1934	1935
Imports	129	145	1,060	1,180
Exports	115	122	1,035	1,039
Import surplus	14	23	25	141

The increase in imports is due to bigger volume as well as higher prices. Among countries exporting to Sweden, the first place is still held by Germany, and the second by Great Britain. Imports from Great Britain, however, are steadily rising at the expense of imports from Germany. The increase in imports in October was chiefly in raw materials, and that in exports partly in pulp and paper. Exports of pig iron, as well as production for domestic consumption, have been brisk. Wooden goods exports, though lower than last year, have lately shown a slight revival on account of better demand from Great Britain. At a meeting of representatives from the main wood exporting countries, among them Sweden and Finland, held recently in Copenhagen, it was decided that during 1936 and 1937 offers of sawn wooden goods should be adjusted to the minimum requirements of the wood-importing countries. Soviet Russia is a party to this agreement.

Employment is fairly satisfactory. There was a seasonal rise in unemployment from 41,000 in September to 47,000 in October; but this compares with 85,000 in October, 1934.

On the money market, general abundance still prevails, with new peak figures for the joint-stock banks' "Cash and at Bank of Sweden" holdings. A slight increase in public deposits, with a marked shift from time to sight accounts, has taken place. Following the Bank of Sweden's heavy gold purchases, which during October amounted to Kr. 21.4 millions (gold kronor), the total foreign balances of the Bank and the 28 joint-stock banks dropped from Kr. 850 millions on September 30th to Kr. 843 millions on October 31st. Stock Exchange prices have been well maintained.

STOCKHOLM, December 10.

JUGOSLAVIA

THE SERBO-CROATIAN DEADLOCK

AFTER some improvement, the Serbo-Croatian question has again reached deadlock. In his latest declaration to a foreign journalist Dr. Maček, the Croatian leader, has expressed himself in favour of a federal solution. A federal status, he envisaged, might also be granted to four or five more provinces: Slovenia, Montenegro, South Serbia, Voivodina, and perhaps Bosnia with Herzegovina. In this federation Serbia and Croatia would have three joint Ministries, those of war, foreign affairs and finance. Everything else, even Parliaments, would be separate, although there might also be a common Diet, in addition to the regional Diets. Such demands are regarded as entirely unacceptable by the "Unitarian Front" now in power, which is especially galled by Dr. Maček's presuming to talk in the name of the other non-Croatian provinces. The Serbian Opposition, however, considers the plan acceptable with certain modifications.

The chief difficulty in putting it into practice lies in the fact that Dr. Maček refuses to enter the Belgrade Parliament, even should there be new elections, or to settle the reorganisation of the State through Parliamentary action. Instead, he demands that it should be settled by direct negotiations between Serbian and Croatian representatives. Such a mode of solution, which would be non-Parliamentary, and therefore not strictly constitutional, has little likelihood of ever being accepted by the Regency. The difficulty is further increased by the fact that Dr. Maček and the Opposition, beyond a working agreement, have not yet been able to elaborate any joint programme. All this is, naturally, playing into the hands of the Government, which is postponing elections *sine die* as being purposeless in present conditions. The only improvement is that the Croatian Opposition has ceased to have the same virulent character as it assumed late in the summer.

The lessening of political tension seems to be running parallel with an economic improvement which has been gathering momentum during the last two or three months. Both internal and external trade have improved. The number of tons carried by river traffic reached over two millions in August, while railway truck loadings in October were 270,000, both record figures for the last four years. Foreign trade figures for September and October are as follows:—

	1934				1935			
	Exports		Imports		Exports		Imports	
	Tons	Mill. dinars	Tons	Mill. dinars	Tons	Mill. dinars	Tons	Mill. dinars
Sept.	305,400	367.0	90,430	311.1	314,000	384.1	84,300	287.7
Oct.	350,000	423.5	60,600	349.1	359,000	493.5	121,400	395.3
Ten mos. Export	2,821,000	3,042.4	718,500	2,963.0	2,829,000	3,268.9	789,900	3,006.4
Surplus				79				263

The most important fact is the closing of the economic scissors which have for four years moved against the peasant. Thus, while in 1933 the export price index stood at 59.1, as against an import index of 70.1 (1926 = 100), with a gap of 11 points against the agricultural producer; in November, 1935, the two indices stood at 71.2, as against 72.5, with a gap of only 1.3 against the peasant.

RISE IN PRODUCTION AND WAGES

This has, naturally, increased the purchasing power of the peasants, and this again is reflected in industrial production. In September, the number of insured workers in employment reached 594,340, which is not only the highest figure since 1930, but also only 37,000 below the peak number during that year. And during September, for the first time for a long period, a certain rise in wages, although fractional, took place. The average registered wage rose to 21.77 dinars from 21.56 dinars in June. This is, however, still half a dinar below the wage in September, 1934, and nearly five dinars below the best wage average in 1930. Relatively the heaviest pressure is felt by the salaried

classes, which had their salaries cut by between 7 and 15 per cent., just at the time when the cost-of-living index rose from 63.2 in 1934 to 71.2 in November, 1935.

The new Yugoslav Budget, as submitted by the Minister of Finance to Parliament, is balanced at 10,307,040,784 dinars. It is thus, on paper, about 57 million dinars larger than last year's Budget. In fact, it is, compared item by item, about 500 million dinars smaller, because the new Budget includes all expenditure, and thus breaks with the bad habit of introducing a number of expenditure items surreptitiously in the form of "extraordinary Bills" in order to create a more favourable view of the Budget.

The *Jutro* of Ljubljana has published an interesting article advocating that the dinar should be tied to the pound, and thus join the sterling area. This is the first time that such a step has been advocated in this country.

BELGRADE, December 15.

TURKEY

SANCTIONS AND THE DARDANELLES

THE National Assembly approved the League sanctions without demur. It was a staged debate. A deputy was put up to ask whether neutrality would not be better, and whether compensation would be received for the harm ensuing to Turkish trade. The Foreign Minister, Rushdi Aras, ignored the questions, and simply announced the Government policy. He insisted that Turkey had no intention whatever of being drawn further into the present conflict. But she would do what her obligations to the League involved—and no more. Meanwhile she would attend to her defences, and especially to the point where they were most hampered—namely the Dardanelles. He promised that in the event of some unexpected war threatening Turkey the Government would be ready to take over the full defensive control of those Straits and to supersede the present international restrictions. He hoped that the time was not far off when the claims of Turkey to hold the Dardanelles would be freely granted. It is clear that this is desired as a reward for Turkey's support of the League in the present crisis.

The first effect of sanctions has been that Italian vessels have been prevented from loading chromium, despite their claim that the cargo was for Marseilles. It is thought that Turkey will not suffer very much from sanctions, though she has been selling larger quantities of coal and cereals to Italy than usual.

The second Republican census of Turkey last month gave a total population of over 16 millions, an increase in eight years of over 2½ millions. Immigration is proving one of the main sources of new population. Large numbers of Turks "left behind" in the Balkans when the Turkish Empire had to retreat are now seeking homes in the new Turkey under Atatürk.

AN EMIGRATION INTO THRACE

Roumania has granted favourable conditions to its Turkish citizens who want to return home. The consequence is that the port of Constanza is crowded with thousands of Turkish emigrants waiting for ships from Turkey to take them off with their cattle and effects. There are some 8,000 still to come this season, while from Bulgaria, where the conditions have not been made so favourable, 35,000 have come. These new citizens are cultivators and are being installed in Thrace. It is planned to settle half a million there and so to develop this war-scarred province. Considerable economic benefit to the region is already being felt from the arrival of these immigrants. The Government is doing its best to instal them on modern lines in model dwellings and villages.

Two more railways have been finished and opened. The first covers about 400 kilometres of line from Filios to Irmak, and is designed to open up the coal region of Zoungouldak on the Black Sea. It has been built by a Swedish-Danish group at a cost of nearly £2,000,000. A remaining 25 kilometres will bring the railway right up to the coal mines and will be built with all modern equipment for transport and the handling of coal. It is expected that

NATIONAL BANK OF GREECE

Established in 1841

Affiliated Bank:

HELLENIC BANK TRUST COMPANY
51 Maiden Lane, NEW YORK

Capital paid up and Reserves Drs. 1,205,000,000

this small section will cost £800,000 and will be working two years hence. Meanwhile, the coal industry is going ahead and the annual output and exports are increasing substantially.

The other line just opened is known as the "copper railroad," and runs from Ankara to Diarbekir, tapping the State copper mine of Ergani. The next line opened will be a further section of the strategic railroad from Afion to Adalia, which is being built to serve in the case of an attack on Anatolia from the Mediterranean.

From the middle of this month the price of coal has been reduced by 130 piastres a ton (just under 4s.) by the action of the Government. Coal-owners have been warned not to lower wages. The Government has also decided to put the coal-mining basin under a single administration. When this is done, it is estimated that coal prices will be able to be brought down by about 9s. as compared with last year's prices.

ISTANBUL, December 1.

LETTER TO THE EDITOR

FRANCE AND DEVALUATION

TO THE EDITOR OF THE ECONOMIST

SIR,—Up to the present time 1935 appears to have shown that lack of confidence is the paramount factor undermining the position of the franc. This mistrust has from time to time been fanned (at times on a state bordering on panic) by events only most indirectly related to French economic conditions. To identify this psychological weakness, *to-day*, as an effect of *present* economic conditions may very well be a serious error of analysis.

It is worth while to consider the evidence in support of this view. In point of time, the first weakening of the franc was due to the unreasoning "gold clause" scare, aggravated in early spring by the defection of the belga from the gold *bloc* currencies. The crisis that came to a head with the fall of the Flandin and Bouisson Ministries was, to a considerable extent, political and of course, to a considerable extent, also generated by the serious budgetary position. Rightly or wrongly, as you have frequently remarked, the French identify the strength (or weakness) of the budgetary position with the strength (or weakness) of the currency. Again, during the autumn, weakness has once more super-vened by reason of the Abyssinian position, another weakening of the Franco-Italian understanding, the evident likelihood of heavier expenditure on defence, the cleavage between the Right Centre and Left Centre, on both of which M. Laval must rely, and renewed activity on Wall Street. Naturally enough, this potentially dangerous position has shown its strength when M. Laval's position has been called in question.

At each "crisis" it has been evident that the weakness resided within the country—the forward market has not been subject to heavy speculative transactions, import of coin into France has taken place, while bullion has been moving outward, and the raising of bank rate has been seen as evidence of a determination to save the franc rather than as a potent instrument for attracting money. In fact, then, the problem of the franc is a psychological problem, and for that reason devaluation, by one means or another, seems the only ultimate solution and the easiest policy. For "deflation" calls attention to the morbid state of French finances without curing it (and, indeed, without being any other.

than a deflation of confidence); while the abandonment of effort to balance the Budget would possibly be taken as a sign that the franc was doomed. Confidence will not allow reflation, and necessary expenditure prevents deflation.

Yet it is possible to suggest that to-day the economic position of France need not drive the franc as in fact it is being driven. In other words, that devaluation is not the only economic solution.

First, it would appear that the balance of payments on current account is not adverse to France, or, if it is, not to a depth sufficient, other forces ignored, to drive the franc off gold: £900,000,000 would finance the adverse balance for some time. During that time remedial forces might be expected to be operative. The gold currencies showed depreciation in value (in terms of other currencies) under the pressure of the present available annual supplies of some £24,017. The dollar, the strongest gold currency, should eventually depreciate as gold purchases (aided by silver purchases) continue. This is true whatever happens to the United States price level; it is reinforced if we derive reasonable inferences from some \$3,000 millions of excess reserves, recent utterances and happenings in the U.S.A.

A depreciating dollar would take with it the gold bloc currencies. Additionally, a weakening of the franc—with the dollar—might stimulate the disbanding of gold and aid events. Were not the stability of the franc identified with the balancing of the Budget and deflation, one might expect a policy of modest encouragement to industry and cheapening of money rates to be practicable. For a time it would disclose, perhaps, an over-valuation of the franc that "deflation" and controlled trade are masking. But over-valuation of this kind is much less menac-

ing, to the State and to the Bank, than capital export which the exchanges cannot carry.

As it is, there are psychological difficulties. Nor are these all. If the Exchange Equalisation Fund were wedded to a given sterling price for gold (say 141s.) or a given franc (and dollar) exchange, it could prevent the franc depreciating as it ought and the dollar depreciating as it must, unless United States capital imports continue at the present scale. For we should import gold to depreciate sterling equally with the depreciation of gold currencies. And this would renew the problem and promote hoarding. This policy, could it be followed, would demand goodwill and imagination from this country, and would involve American conditions that cannot safely be predicted.

Perhaps, then, to-day, devaluation of the franc is inevitable because it is thought to be inevitable, or because saving the franc has been made to appear dependent upon a policy that could never have achieved success.

Finally, it is well not to forget that devaluation of the franc may promise future problems not very much more attractive than the present. A devalued franc linked to a dollar depreciating by reason of inflation would, perhaps, in the end be a less attractive proposition than present anxiety. Altogether the French attitude, while perhaps unwise—though that is perhaps partly our own fault—seems more understandable when regarded objectively than you appear to consider.

Yours, etc.,
J. STAFFORD.

The University, Manchester.

BOOKS AND PUBLICATIONS

THE "LIBERAL EXPERIMENT"*

MR FISHER has finished his task as triumphantly as he began it. To those who have read all three of his volumes it will be agreed that the first section of the book, that on the civilisation of Greece and Rome, was remarkable for the freshness and vividness of its writing, and for the vigour of its grasp. No doubt the unity of the subject contributed powerfully to the effectiveness of the treatment. But from the breakdown of the Roman Empire through the Middle Ages up to the threshold of the nineteenth century, any such unity was much harder to find, and Mr Fisher's second volume was, in the nature of things, less satisfying than the first.

With this third volume, which deals with modern Europe from the French Revolution onwards, the subject becomes more malleable, though no less rich; and Mr Fisher has imposed a further unity upon it, by treating the whole period under the title of "The Liberal Experiment."

To regard the turbulent and variegated life of modern Europe from this single viewpoint, has great advantages in construction; and the easy sense of constructive power is even more notable in this volume than the force of striking and summary phrase was evident in the first. All the first third of the book deals with France—a proportion which is just; for whether in the significance of the ideas let loose by the Revolution, in military and diplomatic ascendancy, or in the qualities of a brilliant and creative culture, France stood throughout that period at the heart of Europe—as in a sense she still does, though with not the old ascendancy.

Mr Fisher's intimate feeling, like that of most educated Englishmen, is sympathetic to the standards of French culture; it is prettily revealed, after a long catalogue of the achievements of Goethe in art, science and literature, by a characteristic comment: "Had he learned from the French the art of making a brief well-proportioned book, he would have added another to the many services which he rendered to the German people." That is not to say that there is bias in Mr Fisher's treatment of Germany—indeed, the book is singularly detached and free from bias, in spite of its definite viewpoint. His description of the rise of Germany to a dominating position in Europe, and in especial of the achievement of Bismarck for good or ill, is a model of its kind; there is no better account in English.

Yet one may doubt whether "The Liberal Experiment"—even when the emphasis is placed as Mr Fisher does upon

the "experimental"—correctly describes this century in which the dominant factor in Europe was the rise to power in Germany of a nation militarist, autocratic, fanatically nationalist. The title "Freedom and Organisation" which Lord Russell gave to his survey of the nineteenth century perhaps expresses more exactly the dualism, the sense of balance, the uneasy equilibrium which accomplished so much in that age, but which in its breakdown in our own time has increased the possibilities of danger even more acutely.

SHORTER NOTICES

"The International Money Markets." By John T. Madden and Marcus Nadler. London, 1935. Sir Isaac Pitman and Sons, Ltd. xiii + 548 pages. Price 21s. net.

The difficulties in the way of writing a comprehensive study of the International Money Markets are almost overwhelming. The author of such a study must combine a sound knowledge of economic principles with an exceptional flair for the institutional "frictions" which modify in practice the smooth and instantaneous working of the mechanism described by theoretical analysis. He must be able to give a compact history of the main component parts of the world system without much repetition, and to clarify the main trends in a mass of detail. And if he avoids all the dangerous pitfalls in the narrative part of his work, he is still threatened by the rapid changes which may render his labours out of date before he has finished them.

Professors Madden and Nadler have acquitted themselves of their heavy and thankless task with greater success than most of their predecessors. The first five chapters give a good, if not completely unbiased, view of the mechanism of the gold standard, of the history of the international financial kaleidoscope since 1919, and a general comparative analysis of the various money markets. The authors evince a strong preference for the automatic gold standard, as they conceive it to have functioned in pre-war days, and deplore any "interference" with its working. While one must wholeheartedly agree with their criticism of the reckless tendency to expiate insane economic nationalism with an ever-growing volume of international lending, one wonders whether their generalised strictures on the gold-exchange standard and open market operations are really justified. After all, the pre-war gold standard also worked through periodic breakdowns; and it is difficult to see how an unnecessary deflation could have been avoided after the war without the adoption of the monetary reforms urged by the Brussels and Genoa Conferences. It would surely be a pity if the faults admittedly perpetrated in the '20s should induce scientists to adopt a completely negative attitude towards the possibility of a sane management of

economic affairs, an attitude which, since it enables a repudiation of responsibility, will only too gladly be adopted by Governments and other authorities.

In the descriptive parts of their work, the authors succeed in giving a very adequate picture of the development and the structure of the American, British, French, Dutch, German, and Swiss financial markets and systems. Their preference for "sound money" shows itself also in this part, especially in the treatment of developments in the "Gold Bloc," where some of the consequences of the gratuitously imposed deflationary policy are seriously understated. The authors' treatment of the British market could undoubtedly have been improved by the study of recent English economic literature. But on the whole they have written what looks likely to become a standard book of reference in its field.

"Nations Can Live at Home." By O. W. Willcox. Allen and Unwin. 279 pages. 10s.

The author of this extremely depressing book believes that "international trade should be handled in a manner befitting its nature as a disturber of international goodwill and as a potential breeder of wars." Starting from this premise, he argues that the food-importing countries are "over-populated," and that they should make every effort to relieve themselves from their dependence on foreign supplies of food by intensive home production, founded upon the new advances in agriculture made possible by the discoveries of modern agro-biologists.

Dr. Willcox is thus the advocate of self-sufficiency carried to the logical conclusion of a denial to mankind of the advantages of the international division of labour, and of an acceptance of a low and primitive standard of life as the normal condition of a fear-ridden world. His proposals for the application of his policy in Great Britain are no doubt practicable, but they would involve the destruction of nearly every export industry and the impoverishment of innumerable farmers overseas at present producing food and raw materials for the British market. Common sense revolts at this gloomy and defeatist programme, which is a striking sign of the complete revolution in thought that has taken place since the days of Cobden and his followers, who believed that international intercourse would foster the cause of goodwill and peace among nations. Economic nationalism has made great headway in recent times, but it has not yet reached a point which justifies such counsels of despair as this.

Important and useful innovations in this indispensable work of reference include tables of quarterly average rates of exchange in addition to the annual average rates, and the publication not only of the latest available balance sheet figures but those of the previous year also.

OFFICIAL PUBLICATIONS

The following may be obtained from H.M. Stationery Office, Adastral House, Kingsway, W.C.2.

Public Social Services. Return showing, so far as particulars are available, the total expenditure in England and Wales under certain Acts of Parliament during the financial years 1900, 1910, 1920, 1930, 1933 and 1934, respectively. Cmd. 5025. 4d. net.

Post Office Fund. Statement showing the Post Office Net Surplus for the year ended March 31, 1935. 1d. net.

Fleets. Particulars of the fleets of the British Commonwealth of Nations, United States of America, Japan, France, Italy, Soviet Union, and Germany on the 1st day of January, 1936. Cmd. 5038. 1s. 6d. net.

A GOVERNMENT SERVICE for BUSINESS MEN

"THE BOARD of TRADE JOURNAL" The authoritative weekly journal of the Board of Trade contains essential news for exporters. It includes news of trade openings, exchange regulations, commercial treaties, Customs regulations, etc. The issue of December 12, 1935, contained a special forty-page supplement giving the complete text of the proposed amendments to the Australian tariff. Annual subscription 30s. post free.

COMMERCIAL and ECONOMIC REPORTS The unrivalled collection of information provided by the Reports of the Department of Overseas Trade on world economic conditions may be obtained on and after January 1, 1936, regularly on a subscription of £2 net instead of £3. This sum covers all the reports on individual countries issued within 12 months. The Reports place before the business community a concise, informative account of factors affecting commerce in the principal Empire and Foreign markets.

THE COLONIAL EMPIRE

The Economic Survey of the Colonial Empire for the year 1935 is now available. It contains a series of surveys of the area, population, occupations, resources, and general economic position in the British non-self-governing Colonies, etc. In a separate section a series of memoranda are provided on the various important commodities and raw materials produced in the Colonial Empire. 25s. (25s. 7d.)

REPORT on the IMPORT DUTIES ACT INQUIRY, 1933

Under the Import Duties Act, 1932, provision was made for the Board of Trade to review the effects it might have had on industry by the collection of statistical returns. The Board has now issued Part I of such an inquiry relating to the year 1933, and dealing with the following trades:—

- Textiles (15 trades).
- Leather and Clothing (6 trades).
- Food (5 trades).
- Chemical and Allied Trades (9 trades).
- And certain Miscellaneous Trades (9 trades including rubber, fancy articles, linoleum, games and toys, sports requisites).

The inquiry constitutes the first statistical review of the industrial position that has been carried out since the general change that took place in 1932 in the tariff policy of the United Kingdom. 5s. (5s. 6d.) Part II in the Press.

BRITISH INDUSTRY. OUTPUT STRUCTURE and EMPLOYMENT

The Board of Trade has prepared a general Report on the Fourth Census of Production (1930). It gives a summary statement of the industrial position of the country as a whole, and it contains detailed analyses of the results of the census not before printed. A volume of the utmost importance to all students of the economic situation of the country 3s. (3s. 3d.)

MONEY AND BANKING

FRANCE AND THE FRANC

IN all the French financial crises of the last four years certain phenomena have recurred with striking regularity. Not only do the French peasants, *rentiers* and industrialists react to a *crise de confiance* with almost classic uniformity; they are even forced to do so by the very nature of the French financial and banking organism. If they distrust the banks they can hoard notes, almost unperceived, for the cheque is rarely used in France. If they distrust the currency, they can turn their securities into bank deposits, the deposits into notes, and the notes into gold at the Banque de France. They can then bury or export their gold to a foreign safe deposit, whence it will never return until real confidence in the future gold content of the franc is restored. Here are some figures which reflect the results of the "confidence crises" during 1934 and 1935:—

"BIG FOUR" FRENCH COMMERCIAL BANKS
(Millions of francs)

N.B.: These are the latest figures which include cash holdings

	Cash, and at Banque and other banks		Bills discounted, inc. Treasury Bills		Total deposits: sight, current accounts, time, and notice	
	1934	1935	1934	1935	1934	1935
End January...	7,079	6,584	19,031	17,857	32,809	30,846
End August...	6,859	5,709	17,849	17,102	31,164	28,589

* Société Générale, Crédit Lyonnais, Comptoir Nat. d'Escompte, and Crédit Comm. etc

Total deposits are down by Frs. 6,200 millions in the twenty months, of which Frs. 2,200 millions were withdrawn in the first eight months of this year. While the total of bills discounted has barely fallen by Frs. 2,000 millions in the whole period, it fell by Frs. 1,200 millions in the first eight months of last year. It is known that between August, 1934, and last August, when the bill portfolio dropped by only Frs. 747 millions, its composition was changing in favour of the Treasury bill. This was due partly to the Government's increase of the statutory limit on the Treasury bill issue from Frs. 10,000 millions to Frs. 15,000 millions last February, and partly to M. Flandin's desperate efforts to circumvent the refusal of the Banque de France to grant the Government further accommodation at that time. It is now freely stated in Paris that the commercial banks are holding Treasury bills and short-term Government paper "to capacity." Finally, the banks' "cash" had undergone, by the end of last August, the striking reduction of Frs. 1,150 millions, or 17 per cent., in a year. In September and October deposits rose to Frs. 28,684 millions and to Frs. 28,740 millions respectively, but the only way to discover how the banks' cash has moved is to look at the Banque de France returns for the latest date. They are shown below:—

BANQUE DE FRANCE
(Millions of francs)

	Dec. 8, 1935	Aug. 31, 1934	Dec. 7, 1934	Aug. 30, 1935	Dec. 6, 1935
Assets (chief items):—					
Gold reserve	77,079	82,037	82,314	71,742	65,905

Cover:—					
Gold to sight liabilities, %	79.1	80.0	80.8	74.6	70.6

The figures show that the most startling fall has occurred, not in the gold reserve—although that has reduced the "proportion" by 10 points in a year—but in deposits at the Banque de France. This fall has not been due merely to private demands made on the banks, and thence on the

Banque. It has also reflected the demand made on the *ensemble* of savings banks, and thence, through the Caisse des Dépôts et de Consignations, on the Banque. Although much gold has been taken out, the note circulation has been maintained, for the bill portfolio has almost tripled in two years. Moreover, it is reported in Paris that the Banque itself is now practically "full" with its quota of Treasury bills. It is also stated that the increased limit of Frs. 15,000 millions of the issue of these bills has been reached. Certainly, the phenomenal rise in the Banque's bill portfolio is not purely on commercial account; M. Régnier admitted that the Banque held Frs. 4,000 millions of Treasury bills many weeks ago, and over Frs. 2,500 millions of the large increase recorded in the last twelve months has occurred *since the end of August*.

The classical raising of the Banque's rate of discount to stem the efflux of gold merely increases the Treasury's problem. It pushes up the cost of carrying the increased and increasing floating debt; and it removes to an even remoter future any possibility of mobilising the short- and long-term markets so as to lower the intolerable burden of the whole national debt. Thus the deficit grows again; and again confidence oozes away. The threat to the Budget is thus transformed into a threat to the banking structure.

What expedients are there which might arrest so vicious a spiral? First, of course, is that of M. Flandin: manipulation of the Bourse and money markets, "cheap money," while maintaining the gold parity. The Banque de France is responsible for having refused to help in the technical execution of this solution last spring; and at present it is impossible. Secondly, there is the possibility of such a boom in the U.S.A. and the world as a whole as may push up not only raw material prices (France has to import raw materials), but also the prices of those finished products exported by France as well as by her competitors. This solution is wildly improbable within the short space of time still left to extricate the French Treasury and Government from their dilemma. There remains, therefore, the solution which envisages the abandonment of the present "free" gold parity of the franc—whether by exchange restrictions, embargo on gold withdrawals and exports, or by outright devaluation to a lower gold parity.

If France goes over to a regime of exchange restrictions without a change in the franc's gold parity, her economic agony will be prolonged. German, Italian and Central European experience shows that, to make exchange and capital embargoes effective, the entire economic life of a country must be State-controlled. Thus we are left with outright devaluation, or with an internal and external gold embargo. In either case the danger facing France still remains that of "confidence"; for the great hoards of notes and gold must be tempted to perform an economic function. Probably some flight into "real values" would in any case occur; and therefore devaluation to a new gold parity, *à la Belge*, seems the "consummation devoutly to be wished" for France. Such a solution seems most calculated to relieve pressure on the exchanges, repatriate "flight" funds, remove the necessity for import restrictions and cover the Treasury and Budget deficits by means of the "profit" on the gold reserves and by the increases in revenue likely to follow. It would also remove the continuous uncertainty about the franc's future. This would enable the Government at last to reduce interest rates, lower the burden of the debt, and restart investment. This way, the initial disturbance of a "flight into commodities" would be of the shortest duration.

In France's present political temper, before an imminent general election, no deputy or group leader wants to assume responsibility for devaluation. This means that M. Laval's "strength" is really only a reflection of his opponents' weakness. It also means that devaluation of the franc cannot, presumably, come in a "cool and ordered" manner, such as that demanded by M. Paul Reynaud.

Yet if the present *impasse* continues into January, with the Treasury hammering in vain at the grille of the Banque de France, and the Banque unable to offer any advice beyond "No devaluation," then the Banque in turn may find itself forced, before long, to go to the Government and say: "In order to save the banks—and ourselves—you must suspend convertibility of our notes into gold, or else devalue." That way devaluation will not come quietly. It will come "terrible as an army with banners." And by that time the gold stock at the Banque will have sunk to such exiguous dimensions as to necessitate, to secure sufficient "writing-up" profit on that gold reserve, not a slight, but a very considerable devaluation.

FINANCIAL NOTES

A New Clearing Bank.—When the District Bank absorbed the County Bank last August, it became the seventh largest bank in England and so definitely attained the status of a clearing bank. This has now been recognised, for the District Bank has been admitted to membership of the Bankers' Clearing House as from January 1, 1936. For reasons of convenience it will not take its seat until January 15th, after the pressure caused by the New Year work of the banks has diminished. The District Bank's election clearly adds to the homogeneity of the British banking structure, and so is welcome on these grounds alone. We must, however, add one word of warning. Its election will introduce a discontinuity both in the weekly returns of the Clearing House and in the monthly averages of the clearing banks, which for England alone will now number ten instead of nine. The former discontinuity is insuperable, and so for a time at least the returns of clearings will be a less certain guide. As regards the monthly averages, we propose to publish for the next year two sets of totals, one including and the other excluding the District Bank. This will facilitate comparisons with previous years.

The Silver Confusion.—The London Silver market is steadily drifting into a worse state of confusion. Following the almost complete cessation of American buying at the beginning of last week, it was decided to suspend temporarily the rule of the London silver market, which stated that a price must be fixed at which all effective offerings would be absorbed. Since the middle of last week the price fixed does not necessarily equate supply and demand, and in point of fact only a very small proportion of the silver on offer in London each day has been disposed of since this decision. The price for spot silver has been steadily marked down until on December 19th it stood at 22½d. per ounce, against 29½d. immediately before the break, but American demand has practically dried up, and on December 18th there were no dealings. Meanwhile, new forward positions are maturing every day, so that the pressure to sell spot silver is steadily increasing. The first serious consequence of this *impasse* is that on Wednesday it became necessary to suspend dealings in Bombay until the end of the week, and there is no doubt that the position there will need careful handling. The main point for holders of silver all over the world to realise to-day is that at current prices the American Treasury is the sole buyer, and that the American authorities will only buy as much (or as little) as they like, and do not undertake to operate in any particular market or maintain any particular price for silver of non-American origin. In other words, silver has become a dangerous commodity to hold.

The Foreign Exchanges.—French francs have been firmer this week owing to the covering of short positions opened during the autumn crisis. On Wednesday sterling dropped to Frs. 74½ and the dollar to Frs. 15.09½, but political developments caused the franc to weaken slightly on Thursday. Three months' francs improved to Frs. 1½ discount on Wednesday, but have since widened again to Frs. 2½. Three months' Swiss francs were steadily offered

and have depreciated from 25 to 35 centimes discount. Spot dollars have been very steady at just under \$4.93, but dealings have been very limited. Canadian dollars improved from \$4.98 to \$4.96 on the rise in wheat prices, but have since returned to \$4.97½. The London market generally has been quiet.

The Money Market.—The banks have ceased buying bills until the end of the year, and discount rates are consequently firmer. There were heavy applications for Treasury bills at last week's tender, the average rate rising from 13s. 1.53d. to 14s. 6.02d. per cent., and successful applicants initially held on to their bills in the hope of securing a larger turn. The market realised, however, that the tender had been "staged," and held off buying, with the result that the turn quickly disappeared. Late this week, February and early-March Treasuries were quoted at ½ per cent. and hot bills at ¾ per cent., but there was very little business. January maturities were quoted at 1 per cent.

	Nov. 28, 1935	Dec. 5, 1935	Dec. 12, 1935	Dec. 19, 1935
Bank rate.....	2	2	2	2
Clearing banks' deposit rate ...	½	½	½	½
Short Loan rate:—				
Clearing banks	½-1	½-1	½-1	½-1
Others	½	½	½	½
Discount rates:—				
Treasury bills	½	½	½	½
Three months' bank bills	¾	¾	¾	¾

Christmas currency withdrawals have depleted the banks' cash, while the refusal of the banks to buy bills has increased the market's need of loans. There has therefore been a good demand for money. Loans into January now cost 1 per cent. against eligible bills and more against other collateral.

The Bank Return.—There has been a further increase of £8.6 millions in the note circulation, making the total Christmas increase £20.6 millions to date.

BANK OF ENGLAND

	Dec. 19, 1934	Nov. 27, 1935	Dec. 4, 1935	Dec. 11, 1935	Dec. 18, 1935
	£ mill.	£ mill.	£ mill.	£ mill.	£ mill.
Issue Department:—					
Gold	192.2	197.6	198.4	199.4	200.0
Note circulation	402.0	401.3	405.6	410.9	419.5
Banking Department:—					
Reserve	50.8	57.1	53.6	49.1	41.2
Public deposits.....	8.4	19.7	7.1	6.8	10.3
Bankers' deposits	90.7	90.9	103.7	94.4	79.8
Other deposits.....	37.0	36.5	37.5	37.2	37.3
Government securities ...	83.8	85.5	89.4	84.2	82.7
Discounts and advances ..	7.0	9.5	10.7	10.1	7.2
Other securities	12.4	12.8	12.5	12.9	14.2
Proportion	37.3%	38.8%	36.1%	35.4%	32.3%

The main movement in the banking department is a drop of £14.6 millions in bankers' deposits. This is largely due to Christmas currency withdrawals, but the week's increase in public deposits is also a contributory factor.

New York Money and Banking.—Money remains very easy, and the return issued on December 13th showed that member bank excess reserves had reached a new high record of \$3,310 millions. The immediate trend is likely to be downwards owing to Christmas currency withdrawals and bank payments for the recent Government bond issues. During the week ended December 11th New York member banks' loans to brokers rose from \$919 to \$950 millions, and other loans rose from \$734 to \$744 millions. The gold influx has now largely ceased, only \$6.3 millions having arrived from France late last week. Total engagements of gold for shipment to the United States since September 9th are \$818 millions, of which \$790 millions had arrived by the beginning of this week. Foreign bank balances with American member banks fell during the week ended December 11th from \$443 to \$441 millions. This is further evidence of the cessation of the flight of foreign funds to the United States. Silver imports for the week ended December 6th were \$10.3 millions, of which \$6.8 millions came from England. During the ten days to December 18th the New York market price of silver has fallen from 65½ to 55½ cents an ounce.

THE STOCK EXCHANGE

STOCK EXCHANGE "INTRODUCTIONS"

In a leading article in last week's *Economist* (see page 1210) we analysed the leading features of every new company prospectus issued since 1933. The results were moderately reassuring, since they suggested that the recent revival of capital market activity has been free from the grosser abuses of the 1928 boom. More criticism has recently been heard, however, of the matter and manner of certain issues, effected not by way of a public prospectus offer, but by "introduction" to the Stock Exchange. The Stock Exchange Committee, in fact, are now concluding a full review of the machinery of the "introduction" method, in order to prevent in future, if possible, the not unjustifiable dissatisfaction aroused by certain recent placings.

It is necessary to retain a sense of perspective when allegations are made of "unfairness," "market manipulation," and "financial ransom." Actually, it is rarely that the public demand for "placed" shares is large enough immediately to establish a spectacular premium on the "placed" price. An examination of our records during the present year suggests, indeed, that the number of obvious instances can be counted on one hand, although as many as 150 statements have been published "for information only." Indeed, there have been many cases where active dealings have not followed such publication, and have not been intended to follow it. If a successful private concern under personal management, for example, loses its direction by reason of death or other causes, freedom to market a block of shares in the concern, with the cachet of a Stock Exchange marking, may affect relatively few public investors. When provision has to be made, again, for payment of death duties, a modest statement giving particulars of the concern, but not necessarily involving the placing of a block of shares with a market firm, may have great convenience. As a general rule, the "introduction" method seems apt for relatively small issues. It is cheap, for the range of facts required and the scope of press advertising (which may be limited to two newspapers) are both restricted. That increasing resort had been had to it is suggested by the following table, which is based on the prices at which dealings actually started, and excludes an appreciable number of cases in which business was not immediately recorded:—

	"Introductions"		Prospectus Offers†
	Nominal Capital introduced	Cash involved at opening prices	
1931	8,757,183	8,883,578	102,044,291
1932	15,046,360	16,335,341	188,909,963
1933	34,811,194	39,123,520	244,780,500
1934	28,247,872	42,310,082	169,108,700
To date—			
1934	28,247,872	42,310,082	168,808,700
1935	31,739,482	49,633,742	236,147,637

† To the public, or to shareholders; excluding conversions, but including issues by governments, municipal corporations, etc.

On the somewhat arbitrary assumption that the value of a whole stock can be derived from the price of that relatively small proportion of it which may have changed hands at the start of business, the recent figures reveal a "premium" of around 50 per cent. on the nominal value of the capital involved. This is not necessarily a feature for criticism; in many cases it has merely translated into market terms a real appreciation based on high earning power on a modest initial capital. The calculations suggest that the cash involved in "introductions" now ranges between one-quarter and one-fifth of the total amount of new money raised by prospectus offers to the public and to shareholders.

In what circumstances is the "introduction" method normally adopted? It is frequently resorted to by public companies desirous of marketing shares previously in

private hands. An apt recent example, on which we commented favourably last week, was the "placing" of Coast Lines ordinary shares. Again, existing concerns frequently "place" moderate amounts of new capital to avoid the elaborate procedure of a public issue. Numerous investment trusts have lately "introduced" small lines of debenture stock by this method. More frequently, however, shareholders in established private companies, with satisfactory earnings records, market their shares on the Stock Exchange in this way. A variant of this case occurs when the assets or capital of an existing concern are taken over by a new company, whose shares are subsequently "introduced." A final possibility is the "placing" of one class of capital under cover of a prospectus issue relating to another class. This procedure was adopted, for example, in the marketing of Griffiths Hughes ordinary shares in July last year and of British Aeroplane ordinary shares last June. On both occasions it attracted a certain amount of adverse comment.

In assessing what the public obtains for its money, obvious difficulties arise, due largely to the differences in the form and circumstances of each introduction. In many cases, assets figures are either withheld from the published information or are restricted to extracts from balance sheets. There are relatively few cases in which concerns have recently acquired existing businesses and set out the valuation of the assets and the considerations paid. In all cases during the last three years where such information has been made available we have made a careful statistical analysis of the significant facts, subject to necessary statistical adjustments. We have endeavoured to obtain a documented answer to the question: What has been the eventual market capitalisation of those companies which have revealed their assets figures? Figures are, in fact, available for 56 companies. The first table analyses the issues by categories and shows the "goodwill" component included in the initial dealing price:—

	Year	Debtenture	Preference	Ordinary	Total
Nominal capital introduced.....	1933	850,000	1,375,000	1,150,000	3,375,000
	1934	147,000	1,715,000	1,857,500	3,722,500
	1935*	147,000	1,904,205	4,918,682	6,969,867
Total (three years)		997,000	4,994,205	7,926,182	13,917,367
Amount paid by public (at opening prices)	1933	850,000	1,505,625	1,522,250	3,877,875
	1934	148,750	1,846,687	3,379,812	5,226,499
	1935*	148,750	1,974,521	7,562,522	9,685,793
Total (three years)		998,750	5,326,833	12,464,584	18,790,167
Difference between nominal values and opening dealing values	1933	Nil	130,625	372,250	502,875
	1934	1,250	131,687	1,522,312	1,653,969
	1935*	1,750	70,316	2,643,860	2,715,926
Total differences, three years		1,750	332,628	4,538,422	4,872,800

* To end October.

In contrast with the comparable public issues analysed on page 1210 of last week's *Economist*, the figures suggest that the placing of equity capital has appreciably exceeded that of fixed interest and dividend securities during the last three years. It has obtained an undoubtedly favourable response from the public. The so-called "premium" paid on the ordinary shares during the last three years represents 57 per cent. of their nominal value. We cannot proceed directly to infer, however, that the "difference" represents so much adventitious cash profit secured by vendors or intermediaries, for two reasons. First, as has already been pointed out, the premiums may reflect a reasonable valuation of earning power. Secondly, we have no consistent information regarding the terms at which intermediary parties, e.g. City houses handling the issues, have themselves acquired the shares they are "placing." A certain check, however, may possibly be obtained, under

the first heading, by reference to the published asset figures of the companies concerned. The following table summarises the available information:—

	Market Value of Capital Introduced	Value of Assets of Companies concerned
1933	3,877,875	3,530,907
1934	5,226,499	2,929,921
1935*	9,685,793	2,448,138
Total, three years	18,790,167	8,908,966

* To end October.

Over the three years, the relation between market valuation and basic assets may not necessarily have been excessive, for most of the companies have come to the market bearing their sheaves—in the shape of proved earnings—with them. It is noteworthy, however, that the tendency to float an increased proportion of equity capital by "introduction" has been lately accompanied by a parallel increase in the market valuation of "goodwill." Subject to this proviso, the impression given by the figures discussed in this article is moderately—though only moderately—favourable. Final judgment can be given only when information of the course of earnings under the new regime has been published for all the companies. The companies analysed, further, do not include some of the more striking instances in which market comment has been aroused by heavy public demand and high market premiums.

The question of "inadequate" or alleged "manipulative" placing is particularly troublesome for all concerned—including the Stock Exchange Committee. Vendors, it may be urged, can avoid selling their assets at too low a figure by seeking expert advice and, if necessary, consulting more than one brokerage firm. There is no suggestion of a Stock Exchange "ring" in this connection. The firms doing the placing, in turn, may contend that a substantial market risk is involved, for which they are entitled to appropriate remuneration. Finally, it may be, and often is, argued that the investor has only himself to blame if he pays an excessive price.

But does the machinery always work "normally"? A high price resulting from overwhelming demand in a market freely supplied with shares is one thing, and a high price in a deliberately "fed"—or, rather, "starved"—market is another. Withholding of opening stock is bound to foster extravagant opening prices, and to suggest to the public the possibility of monopoly exaction. Such rumours, right or wrong, are damaging to the Stock Exchange, and we welcome the decision of the Committee to take all necessary steps to deal with this and other relevant matters. The reputation of "The House" must needs be that of Caesar's wife. No abuse should be permissible which can be checked at its source by such a device as, say, insistence on the immediate availability of a minimum number of shares before permission to deal is given. In some instances, of course, it might happen that dealers would find their quota a real burden, while in others their books would be rapidly depleted. But some small inconvenience, in such instances, would be a moderate price to pay for the maintenance of public confidence. We suggest, further, that a repetition of certain much-advertised cases would readily be avoided. As a matter of policy, the machinery of a public issue, either by prospectus or offer for sale, rather than that of "introduction," should be employed whenever it is evident from the outset that a substantial public demand is to be expected. A prospectus issue, advertised in advance, and offering equitable chances to all applicants in the event of over-subscription, would be of greater advantage both to the investor and "the City" than a hectic scramble for shares.

INVESTMENT NOTES

Markets and the Political Crisis.—The course of the markets during the last fortnight has reflected the changing aspects of the political situation, though in a way that has evidently surprised some observers. The Stock Exchange

has, on occasion, to draw a distinction between its opinions as a body of electors and its interests as the representative of investors. Every piece of news is tested, first, by its probable effect upon the rate of interest or the level of industrial prices, and secondly by the extent to which it accords with the private feelings of members. In nine cases out of ten, the two tests are identical. But this is the tenth. The Stock Exchange has never been particularly enamoured either of the League of Nations in general or of the policy of sanctions in particular. But a sudden reversal of policy which makes the British Government look ridiculous abroad and threatens a political crisis at home could hardly meet with approval in the City, and the private opinions expressed on the Stock Exchange have been as vitriolic at the Government's expense as anywhere else. But the effect on prices is a rather different matter, for a speedy peace would undoubtedly be a bull point for both the gilt-edged and the industrial markets, while the continuance of sanctions and the threat of war will no less certainly act as depressants. Prices, consequently, have tended to rise whenever the prospects of immediate peace (however distasteful the price) have brightened a trifle, and to fall whenever a return to vigorous sanctions has appeared more likely. Investors as such are not directly concerned with the details of the Government's foreign policy, but they will hope that the outcome of the crisis will be the re-establishment of a firm course, steadily pursued, with no more upsetting oscillations or bewildering reversals. The economic outlook is still not unfavourable. It is true that, in the gilt-edged market, the effect of the recent conversion issues has quickly worn off and that the tendency has recently been downward. But, barring external crises, no drastic increase in money rates is in prospect, while the industrial news seems to point to a continuance of guarded optimism. Whether as electors or as investors, "the City" will hope for a firm and speedy settlement of the crisis.

* * *

The Railway Loan.—The House of Commons this week has passed the Railways (Agreement) Bill, which authorises the Treasury to guarantee the £26,500,000 Loan to be advanced to the four group railways for their special development programmes. As the special finance company which is to be the actual borrower of the money is to be formed "as soon as the powers have been obtained from Parliament," investors may presumably look forward to the issue of the Loan very shortly after the holiday. In the course of the debate, Mr Chamberlain said that it was "most probable" that the finance company would raise the whole £26,500,000 "in one lump," following the precedent of the £32 millions London Electric Transport Finance Loan last summer. That loan was in the form of 2½ per cent. guaranteed stock, redeemable 1950-55 and issued at 97 per cent. This stock is now quoted slightly below the issue price, but the price now includes some 10 per cent. of accrued interest. The Railways Loan will be governed by the similar conditions as to redemption, and it will doubtless be offered in the form of 2½ per cent. stock at about the same price as the Transport stock—possibly a little lower. The decision to issue the whole Loan in one lump, again raises the problem of the temporary investment of the bulk of the money, since the actual expenditure will extend over five years. This point was raised in the House of Commons and elicited the reply from the Chancellor that the directors of the finance company could not invest the money without first consulting the Treasury. That no doubt is a satisfactory safeguard so far as "types" of investment are concerned, but it does not entirely meet the suggestion that the company should resist any tendency to invest for longer periods than the actual dates of expenditure of the money would justify. In this respect, the assurance may not greatly console those railway stockholders who have noted that any loss involved by any unfortunate investments will be borne by the railway companies.

* * *

Canada's Debt Problem.—The conference of Dominion and Provincial Governments, which met at Ottawa last week, decided to set up a National Financial Committee to

consider questions of increased federal assistance to the provinces and of plans for large-scale debt conversion. The Committee is to meet early next month under the chairmanship of the Dominion Minister of Finance and its decisions will clearly be of the highest importance, not merely to Canada, but to the large body of British investors in Canadian securities. The increased assistance which is being sought by the provinces naturally points to increased Dominion control over provincial finances. The creation of a National Loan Council, somewhat on the Australian model, which would undertake the conversion of the provincial debts as opportunity offers and would co-ordinate future borrowing, has frequently been mooted, but has so far attracted limited support. The great disparity between the credit ranking of the Dominion Government and of the provincial governments, however, emphasises the much needed relief to provincial budgets, particularly in the West, which could be secured by the conversion of provincial debts into Dominion obligations. This procedure would not be unwelcome, in some cases, by the British investor. The recent policy of responsible Ministers in British Columbia, Alberta and Ontario has further disturbed the confidence of the British investor in Canadian provincial stocks. While long-term Dominion sterling loans yield about $3\frac{1}{2}$ per cent. at present market prices, the yield on most of the provincial stocks ranges from $4\frac{1}{2}$ to 5 per cent. Few of the provincial loans quoted in London are convertible at an early date and the Financial Committee may therefore have to consider whether some voluntary conversion offer to bondholders is expedient. To judge from the "risk premium" inherent in the high yields on the provincial stocks, many British investors might be willing to consider a reduction of interest in exchange for a Dominion guarantee of service and principal.

Argentine Wheat and Rails.—Although the Argentine rail market found slightly better form towards the middle of the week, it opened in thoroughly depressed fashion on the Argentine Government's decision to raise its basic purchase price for wheat from 5.75 paper pesos to 10 pesos per quintal. The market has for some time been discounting a bad crop, owing to drought, but the latest estimates show that it is the lowest for twenty years, and the surplus which will be available for export to Europe is bound to be exiguous. The situation may help the world's grain markets (on the lines we suggest in a Note on page 1255), but it will be very unwelcome for the hard-hit Argentine railways. All are interested in wheat traffics, directly and indirectly, as we showed in the *Economist* of August 31st, page 433. The direct effects of a reduced wheat haul and a substantial part of the indirect effects on the Argentine economy of a lower return for an important cash crop had already been foreseen. The extent of the Government's assistance to the farmers, however, has prompted doubts regarding the extent of any exchange relief which may be forthcoming for the railways. If the financial provision involves any call on the accumulated profits fund—provided by the "turn" of 2 pesos to the £ which the authorities have obtained from their exchange control operations—the hope that this fund may be employed for "equalisation" of freer exchange facilities, at more favourable rates to remitters, will be diminished. An official pronouncement in either sense, however, is lacking, although the Central Bank now controls the official exchange accounts.

Actuaries' Investment Index.—The Actuaries' Index of 158 industrial ordinary shares reflects the market's embarrassment and uncertainty, arising from the political crisis which has gathered force since the leakage of the Paris proposals for settlement of the Italo-Abyssinian dispute. The slight setback in the index to 80.3, compared with 80.7 a week ago and 80.0 a month ago measures the extent of these feelings before Wednesday's Cabinet crisis and Thursday's tense debate. The corresponding yield figures are 3.70, 3.69, and 3.73 per cent., respectively.

The following table shows the course of some leading groups:—

Group (and No. of Securities)	Prices (Dec. 31, 1928 = 100)			Yields (%)		
	Month Ago (Nov. 19)	Last Week (Dec. 10)	This Week (Dec. 17)	Month Ago (Nov. 19)	Last Week (Dec. 10)	This Week (Dec. 17)
Insurance (24)	125.0	129.6	128.6	3.37	3.28	3.29
Building Materials (4) ..	96.8	93.4	92.0	4.23	4.37	4.44
Cotton (6)	48.6	46.5	44.2	2.09	2.08	2.11
Oil (5)	71.7	72.1	71.0	3.15	3.13	3.17
Electric Supplies (8)	128.6	136.1	135.1	3.99	3.80	3.83
Home Rails (4)	63.9	66.7	65.5	1.59	1.51	1.55
Miscellaneous (52)	72.7	74.2	74.3	3.90	3.81	3.84

The majority of the component indices are "the turn" lower, at present prices, but the steadiness of the miscellaneous group reflects the continued interest in a specialised selection of leading counters.

COMPANY NOTES

"Christmas Trade" Companies.—To a private man Christmas is a blessed stage on his winter journey, when two months separate him from the last of autumn and two from the first of spring. To the distributor, the season has a similar, if more anxious, significance. December is not merely the month of Christmas presents, but it marks the peak and turning point of the winter selling season. Stocks which remain unsold by Christmas must pass into the Janu-

ary sale, with prices marked down. Some goods may even have missed the year's market, and, if they are classed among fashion goods, the January 31st stocktaking will have to treat them conservatively—for fashion, ever volatile, may leave them outmoded in a few weeks. Budgeting and buying for the Christmas trade have thus become one of the more delicate branches of retail store

management. The opportunities of the Christmas month are substantial. As the retail trade indices show, sales in December—in London—are worth nearly one and a half times the volume of an average month, and in the London "food and perishable" departments (which seem to supply Christmas fare to many customers outside their area) December is worth more than one and four-fifths of the average. It is essentially for the retail storekeeper, therefore, that Christmas is a decisive trading season. At one remove, its importance is scarcely less for the wholesaler and merchant. In theory, the retailer should have calculated his prospects and placed his orders accordingly, carrying the Christmas risk mainly on his own shoulders. But in practice, the season of goodwill once past, the retailer will not neglect any opening for returning unsold goods to his wholesale supplier. With the increase in the size of the retail store such openings have not diminished. Behind the wholesalers, the Christmas season dwindles in importance as its risks and opportunities decrease. The makers of "Christmas specialties" are a small class with a special interest. The cigar makers are at least the hardy subject of traditional Christmas jokes. The wine merchants, brewers and distillers do not stint their Christmas advertising. Raphael Tuck with their calendars and Christmas cards, Aspreys with their trinkets and tokens, and Fortnum and Mason with their good fare—to all of these Christmas is a speciality. The accompanying table sets out the profits of a few distributors (as a sample of a large class) and of a few producers of "Christmas goods." But the producers of the true "Christmas specialties" are the farmyard, the cook and the coppice; and long may they remain so.

B.A.T. Profits.—The dividend and report of British American Tobacco will set aside those very faint misgivings which found expression during the period of external pressure on, and eventual abandonment of, the Chinese Silver Currency. The market has always regarded B.A.T. as a "silver" stock, although its activities are widely located in four out of the five continents, and despite the Chairman's assurance at the last meeting that the company was less dependent on any one market than ever before. The maintenance of the dividend, however, is reassuring in view of continued difficulties in world markets and the insignificant relief from chaos in the Exchanges. The disclosed profits figures of the group have never afforded any necessary insight into the trend of earnings. The indicated profits are £16,190 higher at £5,469,171, but this apparent improvement does not affect the dispensable profits in any material sense, as the following analysis shows:—

	Years to September 30,		
	1933	1934	1935
Profit	5,403,066	5,452,981	5,469,171
Preference dividends	585,000	585,000	585,000
Ordinary shares (free of tax):			
Earned	4,818,066	4,867,981	4,884,171
Paid	4,716,627	4,729,519	4,735,936
Earned %	20.4	20.6	20.6
Paid %	20	20	20
Carry forward	2,071,180	2,209,642	2,357,877

A profit and loss account consisting of one credit item, defined by statements involving 120 words and drawn up on the most formal holding company lines, affords no adequate basis of information for appraisal of investment merit. Lack of knowledge of the trend of group earnings involves dependence upon presumption. Of the subsidiary concerns, it seems likely that the majority should have made satisfactory progress, although the Chinese difficulties and the ill-fated participation of Tobacco Securities Trust in commodity financing operations may offer exceptions. The balance sheet totals £48,168,029, of which £33,223,415 consists of shares of and loans to subsidiary and associated companies. The auditors' report again states that these investments possess, in the aggregate, a value largely in excess of the book figures, which is compatible with considerable undisclosed strength, with difficult problems of valuation of foreign assets and, possibly, with certain minor unprovided losses or depreciations. Since the accounts,

To men in the fifties and sixties

It is not generally realised that for an annual premium of £47 : 12 : 6 a man aged 55 next birthday can effect a Whole Life Assurance of £1,000 with right to Bonuses under the Distinctive System of

The Scottish Provident Institution

Write for booklet explaining 'The Distinctive System'

London (City) Office 3 Lombard Street, E.C.3
HEAD OFFICE 6 St. Andrew Square, EDINBURGH
FUNDS EXCEED £23,500,000

however, provide no further information on this point, and since allocations from trading profits are undisclosed, it is impossible to estimate the effective assets and earnings positions. That the company is so strongly placed in the world tobacco trade provides more, rather than less, justification for more adequate annual reports. The £1 ordinary stock units are quoted at £5½, to yield £3 9s. per cent. free of income tax.

Turner and Newall Report.—The full report of this asbestos concern (whose preliminary profits statement was discussed in the *Economist* of November 30th, page 1080) extends to fourteen large pages and incorporates many progressive features. The legal balance sheet is set out in helpful fashion, with a comparison with the previous year. The group balance sheet discloses the point at which consolidation has been effected. A separate statement of general investments is given. And, finally, a print is provided of the chairman's speech to be read at the meeting on January 16th next. Provided with such a generous range of information, the stockholder may appear ungrateful if he tactfully refers to a missing corner-stone—the lack of a consolidated statement of group profits. It could hardly prejudice the enormous strength of the group, which is displayed in the following analyses of the consolidated balance sheet of the undertaking for the past three years:—

	CONSOLIDATED FIGURES IN £'000 AS AT SEPTEMBER 30TH (AT MARCH 30TH FOR CERTAIN SUBSIDIARIES)		
	1933	1934	1935
Liquid assets (cash, investments, debtors and stock)	3,500	3,741	3,847
Current liabilities and final dividends ..	922	1,212	1,396
Net current assets	2,578	2,529	2,451
Fixed assets (land, buildings, machinery, mining properties and development) ...	6,289	6,302	6,695
Depreciation and amortisation reserves ..	1,918	2,116	2,365
Fixed physical assets as written down ..	4,371	4,186	4,330
Investments in associated and subsidiary companies	131	464	478
Goodwill and other assets	252	226	226
Less specific reserves	13	62	78
Net balance of assets	370	628	626
Total assets	7,319	7,343	7,407
Preference stock	1,444	1,444	1,444
Ordinary stock	4,844	4,844	4,844
General reserve and balance of profit and loss	1,031	1,055	1,119
	7,319	7,343	7,407

Since net current assets amount to nearly half the net fixed assets, internal resources will be sufficient to finance further expansion of business and the relatively small factory reorganisation which may remain after the completion of the

extensions at Rochdale. The chairman's speech reports progress in all directions and voices definite confidence in the future prospects of the building materials group, even if the building boom comes to an end, since these products have been made "increasingly attractive" to the industry. The brake lining, welding, insulation, acoustical materials and chemical branches of the undertaking have all contributed to the year's progress. The mining companies have increased their production and development work and have set up a reserve fund for amortisation of the properties. The £1 stock units rose to 70s. after the publication of the report, and yield £3 11s. 6d. per cent.

Pass and Joyce Scheme Abandoned.—The decision of the directors of Pass and Joyce, Limited, to abandon the proposed capital reconstruction will be received with satisfaction by the preference shareholders and with approval by the wider circle of investors who have been solidly opposed to recent attempts to prejudice the contractual rights of preference shareholders. In its original form the scheme presented the objectionable feature of heavy sacrifice of preferential and participating rights, unaccompanied by any adequate compensatory share in the equity, and was criticised in the *Economist* of November 30th mainly on this ground. The revision of the scheme adds further support to the growing volume of precedent in which preference shareholders have successfully resisted schemes which took inadequate cognisance of their rights. This display of effective resistance by a democratic financial institution against policies imposed "from above" affords the best safeguard against future threats to their interests.

Crittall Manufacturing Company.—On Thursday the capital reorganisation scheme submitted with the recent accounts was approved by the preference and ordinary shareholders. Although points were raised at the meetings regarding the specific provisions for writing down the assets, the decision showed the general approval of a scheme which, in essentials, was well devised. The way may now be cleared for the shareholders to participate in the recent recovery of the business, possibly during the current year. Profits, as the following table shows, have expanded from approximately £93,636 in 1932-33 to the record figure of £280,504 in the latest year:—

	Years to August 31,		
	1933	1934	1935
Total profit (approx. 1933 & 1934)	93,636	202,595	317,370
Depreciation (approx. 1933 & 1934)	26,000	29,000	61,866
Expenses and fees	39,654	19,330	18,307
Debiture and note interest	75,000	78,750	78,750
Earned for dividends	Dr. 47,018	75,515	158,447
Preference dividend	Nil	Nil	101,719
General reserve	Dr. 45,163	Nil	67,534†

Carried forward 2,342† 81,357† 70,551
† After crediting income tax adjustments of £2,000 and £3,500 respectively.

† Transfer to reorganisation suspense account.

The net earnings have covered the payment of all preference arrears since December, 1931, and after transferring £67,534 for the reorganisation scheme the credit balance is £70,551. The scheme, in its essentials, maintains the rights of the preference shareholders and puts the entirely nominal burden of writing down asset values on the equity holders. Some £750,000 will be provided by reducing the £1 ordinary shares to 5s., which, together with £80,000 from general reserve and the allocation from the latest profits, will be applied in reducing the assets by £897,534, of which no less than £609,150 is for overseas subsidiaries. Two new issues are contemplated. The first entails £850,000 4½ per cent. debenture stock, for converting the existing 6 per cent. issue (£500,000), repaying the bank overdraft (£150,000 approximately), meeting the preference dividends, and providing some £115,500 for working capital. Secondly, the 6½ per cent. notes are, in effect, to be converted by a new issue of 5½ per cent. first preference shares. These operations will entail an increased total interest charge of a mere £750 per annum, and the existing preference shareholders will enjoy identical rights under

the new regime as before, with the working capital strengthened to meet expanding business requirements. Export business is improving and few would care to set an immediate term to the building boom. The ordinary shares have been active since the publication of the proposals and at a current price of 27s. 10½d. the ordinary shares offer a prospective earnings yield of about 9½ per cent.

The Silver Crisis and Silver Shares.—Before the announcement of the changes in the American silver buying policy (discussed in a Note in last week's *Economist*, page 1208) silver prices stood around 29½ pence per fine ounce. In its monopolistic position as sole purchaser, the U.S. Treasury has succeeded in reducing the quotation to a nominal figure of 22½d. this week, simply by withdrawing its support. On Saturday of last week, and Wednesday of this week, however, no business was transacted, and a 5 per cent. ration for sellers on Monday and Tuesday indicates that the official prices fixed bear little relation to the basic situation in the market. The decline has come at an unfortunate time for silver producing companies who have already been adversely affected by the recent weakness of lead and zinc—jointly produced with silver by most companies. For lead and zinc, however, there may be justification for the view that the relapse is merely temporary. The same can hardly be said for silver, though the caprice of the official United States policy has for long been notorious. The fall in silver prices involves a serious fall in revenue for the mining concerns. The following table shows the consequences of a fall of 1d. per oz. on the latest year's production of seven leading producers, and the percentage equivalents of the shortfall on the ordinary capital.

	Percentage on	
	Production Revenue	Paid Up Ordinary Capital
	(Ounces)	
Broken Hill South	2,310,000	9,400 1.2
Burma Corporation	5,776,000	23,600 0.3
El Oro	3,481,000	14,200 5.0
North Broken Hill	3,154,000	12,900 1.8
Sulphide Corporation	1,415,000	5,800 Ord. 1.3 Pref. 0.7
Trepca	1,566,000	6,400 0.6
Zinc Corporation	1,190,000	4,900 Ord. 1.1 Pref. 0.7

Apart from El Oro the reduction in profits, though serious, hardly seems to be of the first magnitude. The extent to which the fall can be off-set by any rise in zinc and lead prices varies considerably for the different companies. In the case of Zinc Corporation a fall of as much as 10d. per oz. in the price of silver is fully counterbalanced by a rise of £1 per ton in the price of lead. For North Broken Hill the corresponding figure is only 4½d. per oz., and for Burma Corporation and Sulphide Corporation less than 3d. per oz. But as the average price of lead in the year ending June, 1935, was only £11 6s. per ton, which is more than £5 below the current quotation, the increase in profits from lead alone should be sufficient to off-set with a comfortable margin any likely fall in silver prices in the near future, even for the less fortunately circumstanced companies. Moreover, the additional receipts from the advance in zinc (now about £2 a ton in excess of the average for 1934-5) have also to be included in the computation.

Further Rand Dividends.—The outstanding feature among the December Rand mining dividends which were published too late for inclusion in last week's *Economist*, is provided by Geduld Proprietary. This company is paying 7s. 3d., compared with 6s. 9d. for the first half-year, raising the total for this year to 14s., compared with 13s. 6d. In the case of the East Geduld the payment of 4s. 6d. compares with two preceding dividends of 4s. 3d., and the total of 8s. 9d. compares with 8s. 3d. for 1934. The further cut in the Modder Deep distribution reflects the treatment of low-grade ore which accompanies the approaching exhaustion of the property; the total of 4s. 6d. for 1935 compares with 6s. in respect of 1934. Witwatersrand Deep is to pay the same rate as before, making an aggregate for the year of 17½ per cent., against 20 per cent. In accordance with the established rule on the Stock Exchange, the whole of the current half-year's dividends have been deducted from current quotations, although the warrants will not be sent out until the end of January.

Other Company Results.—The reports of a further 31 companies are summarised in our usual table on page 1293. In the brewery group, all four companies show increased profits, although in the case of the largest concern, *Joshua Tetley and Son*, the increase is very small. The iron, coal and steel group also shows uniformly favourable results, and the *Sheepbridge Coal and Iron Company* has raised its interim dividend from 1½ per cent. to 2½ per cent. This story of improvement cannot, however, be continued right down the list. The *Scottish Australian Company* shows a net loss of £62,031, compared with a net profit of £89,813 last year, thus reflecting the less favourable pastoral conditions in the Antipodes. The *Triumph Company* reports a larger loss than last year, and the result of the first year's working of *Hillman's Airways* has also been a loss of £39,766. The experience of the rubber and tea companies is mixed, but the batch of investment trust reports again show consistent increases in profits. *Agar Cross and Company* has managed to reduce its loss, although conditions in the Argentine do not yet permit of profits being earned. *Cow and Gale* has increased its profits in spite of the falling birth rate. *R. E. Jones* shows a profit only fractionally below last year's figure. The increase in the profits of *Frederick Leney and Sons* from £35,996 to £47,286 is another indication of the continuing prosperity of the drink trades. The improvement, from a net loss of £2,719 to a net profit of £29,686, in the results of *Chinese Engineering*, is largely due to a recovery of tax paid. The actual trading profits reflect the difficulties which have been experienced by the Kailan Mining Administration in North China.

Company Meetings of the Week.—On later pages of this issue will be found the reports of the following company meetings:—Mexican Railway, Bank of London and South America, National Bank of Scotland, Orient Steam Navigation, Rhodesian Corporation, Mining Trust, Barranquilla Investment Trust, Taylor Woodrow Estates, Second Covent Garden Property, Malayan Tin Dredging, Southern Malayan Tin Dredging, Messina (Transvaal) Development, Low Temperature Carbonisation, Carreras, Ind Coope and Company, Timothy Whites and Taylors, Gold Coast Banket Areas, Youanmi Gold Mines, Ariston Gold Mines (1929), and Thistle-Etna Gold Mines. Mr J. W. Beaumont Pease, at the Bank of London and South America meeting, reviewed the course of recovery in South American countries, and saw in each signs of improvement. Col. W. A. Bristow said that sales this winter of Low Temperature Carbonisation Company's Coalite were a record. The chairman of Malayan Tin Dredging (Mr C. V. Stephens) hoped the tin restriction scheme would be continued. Mr C. V. Stephens, chairman also of Southern Malayan Tin Dredging, regarded the results achieved on the low permissible output as very satisfactory. At Ind Coope and Allsopp's meeting the chairman reported increased profits, and complained of high taxation. Barranquilla Investment Trust, said the chairman, proposed to invite remaining shareholders of the railway company to exchange their shares for shares in the Trust. At the Orient Steam Navigation Company's meeting the chairman discussed the growth of competition between air and sea transport, and said that in general air travel set up more demand for ships than it took away. Viscount Lee, at the meeting of Youanmi Gold Mines, said that dewatering of the old mine should commence in February. At the Carreras meeting it was reported that the general improvement in trade had increased the company's profit. The chairman of Timothy Whites and Taylors said the six months' trading under the new agreement fully justified the merger. Mr Arthur Collins, chairman of Taylor Woodrow Estates, discussing forecasts of the slump in building, said that that date is not yet in sight. Mr Vincent Yorke, discussing results of the Mexican Railway Company, said the accounts were burdened through exchange difficulties and increases in pay-roll as a result of labour disputes and legislation. Business prospects are good, but perhaps not good enough to offset these continuous increased demands from employees. Messina (Transvaal) Development Corporation, said the chairman, had maintained its financial position in spite of the drop in the price of copper. Captain

Every Investor should study the advantages of Investors Second General Trust

as an investment for his capital

- 1 Investors are enabled through the Trust to spread a sum as small as £19 (approx.) over a wide range of industries, thus securing greater safety of capital and greater steadiness of income.
- 2 The yield of 5% is the gross annual yield at a price of 19s. per sub-unit, calculated only on the dividends paid by the companies in the past year. Capital bonuses are additional.
- 3 All the companies in the Trust are good dividend payers, and each, by itself, is considered a sound investment.
- 4 The Trust is assured continuity of management through the creation of a special fund for this purpose deposited with the Trustees.
- 5 The investment is readily marketable. Under the terms of the Trust Deed the Managers are under an obligation to repurchase sub-units at any time, as explained in the Booklet.
- 6 The Trust is cumulative in character, all capital bonuses of 10 per cent. and over being retained in the Trust to enhance the capital value of the investment.

5%

is the approximate gross annual yield shown and this yield is derived from 17 of the strongest and soundest companies in British industry.

THE COMPANIES ARE:

London Midland & Scottish Railway Company	J. Lyons & Company Ltd.
Southern Railway Company	Spillers Limited
Allied Ironfounders Ltd.	United Dairies Limited
Imperial Chemical Industries Ltd.	P. W. Woolworth & Company Ltd.
Burma Corporation Limited	Lake View & Star Limited
Atlas Electric and General Trust Limited	Government Gold Mining Areas (Modderfontein) Cons. Ltd.
Gas Light and Coke Co.	Robinson Deep Limited
Imperial Continental Gas Association	Distillers Company Limited.
Burmah Oil Company Ltd.	(G. B. & I.) Limited
London County Freehold & Leasehold Properties Ltd.	Ind. Coope & Allsopp Ltd.
London Brick Co. and Forders Ltd.	Associated Newspapers Ltd.
British Plaster Board Ltd.	Daily Mail & General Trust Limited
Boots Pure Drug Company Ltd.	Griffiths Hughes Proprietaries Ltd.
	J. & P. Coats Limited.

The Trustees are
Royal Exchange Assurance
— Incorporated by Royal Charter in 1790 —

The Bankers are
Barclays Bank Limited

To confirm the soundness of investing in this trust the Managers suggest that you consult your Bank Manager or Stockbroker, through either of whom sub-units may be bought or sold. For full information write for Booklet No. E.C.4 to

H. B. Jameson reviewed the transactions of Rhodesian Corporation. The chairman of Second Covent Garden Property announced an increased dividend and emphasised the high quality of the company's tenants. At the Ariston Gold Mines meeting the chairman reported that the mine would soon be crushing a largely increased tonnage of ore with lower working costs. Sir G. B. H. Fell, chairman of Thistle-Etna Gold Mines, reported on the progress of development work. Although the profit and loss account for the initial period of Gold Coast Banket Areas shows a loss, the chairman disclosed that working profits are now being made. Lord Castle Stewart, chairman of Mining Trust, Limited, said that there had been a very considerable improvement in the Trust's finances.

THE WEEK IN THE MARKETS

THE LONDON STOCK EXCHANGE

SETTLING DAYS

TICKET
JANUARY 7

ACCOUNT
JANUARY 9

WHILE the Stock Exchange has watched with lively interest the growing political crisis which broke late on Wednesday night with the resignation of the Foreign Secretary, the market repercussions have been fairly limited. Possibly the City's dismay, earlier in the week, was connected with a sense of diminished British prestige abroad, which was hardly to be appeased by later overseas comment on the resignation of Sir Samuel Hoare. The immediate reaction to the announcement was a lowering of quotations by dealers in every section of the market, but these defensive measures slightly under-estimated the slight recovery in support during Thursday afternoon, when the critical debate began.

Government stocks opened the week in depressed fashion, owing to the political crisis in London and Paris and to a certain indigestion in the new issue market arising from the under-subscription of the Ceylon and Essex loans. M. Laval's speech in Tuesday's debate in the Chamber apparently put some life into the market, although it seemed still dismayed by the misadventures of British policy. Business showed its customary pre-Christmas decline, but the ebb and flow of professional activity was sufficient to ensure a sensitive response to Signor Mussolini's fiery declaration on Wednesday. The market closed on Thursday in a cautious but steady mood, having resisted four days of extraneous political disturbance in a satisfactory fashion, but with an inevitable lowering of quotations.

In the foreign bond market, there was some recovery in Brazilian issues, following Mr Beaumont Pease's calculation of the available cover for the debt service, and the prompt announcement regarding the January coupon payment on the 1898 Funding loan. Argentine issues were also better, and Far Eastern issues tended to recover slightly in mid-week. European bonds were irregular at first and made an indifferent showing later in the week, French issues displaying weakness on Thursday on the depreciation in the franc.

The home rail market opened in the same mood of cheerlessness which prevailed last week. Stock was not pressed for sale, but the support was so limited that the tendency was inevitably downward. Southern preferred were most affected in the opening session, but recovered on Tuesday. Other junior stocks which had been previously depressed also staged a fair recovery, and the mid-week market was steady although quiet. Initially, the lowering of quotations on Thursday was protective, but the miners' vote for strike notices added further to the gloom.

The calculations of the wheat harvest in the Argentine (see page 1268) depressed the railway stocks at first, although some support followed the publication of the traffic figures. The feature in the foreign rail market, however, was San Paulo, whose 15 per cent. increase in rates next year greatly encouraged the market.

The industrial share market failed to display any Christmas spirit at the commencement of the three-week account. The market was too preoccupied with the incomprehensible drift of politics to pay much attention to the November trade figures and to the more hopeful situation, at the beginning of the week, in the coal negotiations. On Thursday, the miners' decision to hand in their notices at the end of January combined with the critical debate in the House of Commons to damp all speculative attention.

Iron and steel issues attracted slightly increased attention in mid-week trading, despite the rising tendency of coal prices, and most of the leading issues moved higher. Aircraft issues showed some prominent features, including Petters and De Havilland. Crompton Parkinson were again active among electrical equipment issues, rising in fluctuating fashion above the $\frac{1}{2}$ mark, but reacting later. Brewery shares returned to favour on provincial buying, and Distillers found useful support.

Among the trans-Atlantic counters, International Nickel moved in sensitive fashion on both tacks, but the mid-week improvement was not maintained. Cables and Wireless, exceptionally, but with accurate caution, made little response to the impending traffic index, which proved indifferent. Tobacco shares were favoured by the maintenance of the B.A.T. dividend and profits (see page 1269) and received moderate support. Among the miscellaneous industrials, there was no lack of features, although the general tone ruled quiet and hesitant for the larger part of the week. Turner and Newall, whose full report is discussed on page 1269, moved over the 70s. mark. Firmness was also displayed by British Oxygen and Murex, and most building material shares were brighter before Thursday's unsettlement. A number of store and provision shares also showed modest improvement.

The oil share market opened in subdued fashion, recovered a firmer tendency by mid-week, and became depressed on fears of Continental selling. Apex were firm on Wednesday, and the lower profits and the reduction in the dividend from 35 per cent. to 27½ per cent. announced on Thursday were broadly in accordance with market estimates. The rubber and tea share markets remained in a listless state, and movements in prices were very small.

The Kaffir share market opened under the common cloud of a three-week account and a growing manifestation of political tension which affected the general tone of dealings. The usual week-end orders were few indeed, and despite some partial rally of support on Tuesday, the market was largely neglected by the public and little influenced by professional activity. The West African market tended to pick up, under the lead of Bibiani, and Gold Coast Selection, which had previously been depressed, made a better showing. Australian issues seemed more lively, while Rhodesian copper and tin mining issues remained steady.

FOREIGN STOCK EXCHANGES

NEW YORK

THROUGHOUT the second half of last week Wall Street returned to a condition of uncertainty and relative weakness. The lower price of silver drove down metal shares, and the market was sympathetic to this movement. The Dow Jones index at Saturday's close was 140.38, compared with 144.47 a week ago. On Monday of this week the fall was continued, and there were substantial losses in metal and steel shares, but later there was a marked rally in shares which have recently been particularly weak. At mid-week there was a firm undertone, but business was dull; the market is confident of a renewed upward trend in the long run, but is still undecided about the immediate present. Silver and Europe continue to offset expectations of recovery. Gold continues to flow into America, and excess bank reserves are mounting, but not even Major Angas' torch of confidence has been able to touch off the growing powder magazine under the stock market. On the bond market the revived demand of the American Legion for bonus payment pushed down Treasury issues, but there was an upward movement in speculative bonds. Reports of business are still good. Electricity output last week reached a new high record, and was 12.2 per cent. over last year's figure. Activity in the steel industry is 55.5 per cent. of capacity according to *Iron Age*, compared with 56 per cent. last week. The Securities and Exchange Commission is busy proving in its trial of Mr Meehan that it takes more than mere legislation to root out "unethical" practices in the stock markets. War on the constitutional front continues. The Supreme Court is advancing its next session to give a more rapid decision on the agricultural policies of the Government, and the utility holding companies are adamant against the holding company law.

* Two hour Session.

PARIS

Throughout the week the market has been dull, trading sluggish, and activity only recovered from its suspense at midweek, when domestic securities made a slight recovery. Apparently operators were then able to squeeze some drops of reassurance from M. Laval's barely-won vote of confidence in the Chamber. International and foreign securities were almost as dull as domestic, in sympathy with the lack of interest on foreign centres. After slight fluctuations during the week Rentes stand slightly lower than a week ago, banking shares slightly higher, and Suez Canal almost unchanged.

BERLIN

The share market last week was dull and weak, the average loss on standard industrial shares being 2 points, and ranging higher for minor companies. Bank, Reichsbank and potash issues were also lower. Public utilities were affected by a sharp drop in Dessauer Gas. Home bonds were irregular. Mexicans reacted after their recent substantial advance, and while most dollar bonds changed little, the certificated State issues declined. The new week opened with an irregular, and in general weaker, share market, but Tuesday witnessed a repurchasing movement, particularly of steels, and a slight advance in quotations resulted.

AMSTERDAM

Trading on the Bourse has been stagnant all the week, and political uncertainty in Europe damps down the occasional attempts to revive interest. The volume of business has been very small, but the tone of the market has at no time been undermined. This week Redjang Leong was a curious exception to the general conditions, for its quotation rose from 170 on Monday to 227 at mid-week. In general, quotations in all sections of the market are substantially as they were a week ago.

(a) Interim dividend. (b) Final dividend. (c) Last two yearly dividends. (d) Nine months. (e) Also special non-recurring bonus of 50 per cent. free of tax paid out of a surplus on assets realised. (f) Includes 14% from capital accretions. (g) Including bonus 5% free of tax. (h) 7½ per cent. basis. (i) Based on dividend of 15 per cent. (j) Calculated on basis of 7½ annas dividend per share paid for 1894-95. Taken at 16 annas to one rupee. (k) Annas per share. (l) Also bonus 300 per cent. from reserves in A shares. Yield worked on a 25 per cent. basis. (m) Worked on a 7½ per cent. basis. † Free of Income Tax.

CAPITAL ISSUES

IN number, this week's capital issues are impressive, for as many as ten prospectuses and offers for sale have appeared before the holiday "close season." Many, however, are small mixed issues of the high denomination preference cum low denomination ordinary type, which seems to be returning to favour despite the objections which have frequently been levelled against it. The largest issue to the public is of £500,000 debenture stock in *West of England Electric Investments*, a holding concern with Whitehall Electric affiliations. The terms of the issue recognise its high investment ranking. *Greenfriar Investment* is a new trust, with the same management as the successful Witan Investment Company. The public participation is limited to 10,000 shares of £10. An addition to the growing number of South African companies with a London market is provided by *South African Druggists*. The businesses acquired have a progressive record during the past three years, but the consideration paid for their shares includes a substantial goodwill component, and the group's net assets of £541,615 include £200,906 for stock and £267,654 for debtors. The preference shares are reasonably covered on the latest profits, while the ordinary shares, issued at 40 per cent. premium, may appeal to a more speculative class of investor impressed by South Africa's recovery prospects. An offer for sale of *Allied Bakeries* preference and ordinary shares shows that the businesses acquired are rather widely distributed, although old-established, and the rising trend of earnings may be assisted by economies of centralisation. *Twentieth Century Cinemas* is a further recruit to the ranks of cinema companies. The high indicated return on the mixed issue of preference and ordinary shares may be coupled with recent pronouncements regarding cinema building and profits expectations. *Warner's Radio and Electric* is a small concern which adopts the 10s. preference and 1s. ordinary share (at 100 per cent. premium) capitalisation. The latest year's profits, before deducting depreciation, show a large jump, which is attributed to hire-purchase selling. The debtor and creditor items in the net assets computation appear on the high side, possibly for this reason, and the shares have limited attraction in view of the competitive nature of the trade. The *N.W. (Costumiers)* offer for sale is broadly of similar type, although the progress in earning power appears steadier. The shares are designed to appeal to the more speculative type of investor. *Mid-Wales Electric Power Company* is a new electricity supply holding concern which begins its career modestly with the acquisition of a small company in Snowdonia. The extent of the debenture issue is at this stage too limited to attract wide investment interest. The small preference issue of *Cellon* seems reasonably secured by earnings, although it is of rather specialised interest. The 1s. shares of *Kent and Sussex Oilfields* are frankly speculative, and are duly recognised as such in the prospectus. They provide a convenient option for those who regard the discovery of oil in this country as a matter of patient development. The only "introduction" this week is of a line of debenture stock of *Scottish Mortgage and Trust Company*.

OFFER TO NEW READERS

Any reader who makes his first acquaintance with this journal with this week's issue is invited to fill up the attached:

To The Publisher, "The Economist Newspaper Ltd.,"
8 Bouverie Street, E.C.4.

In order to test the value of your publication I should like you to forward this to me by post for the next four weeks. If I then decide to become a subscriber, it is understood that there will be no charge for the copies thus received, but otherwise I shall be willing to pay 4s. to cover their cost.

PUBLIC OFFERS

Mid-Wales Electric Power Company, Ltd.—Issue of £50,000 4½ per cent. mortgage debenture stock at par. Formed to acquire shares, etc., in electrical undertakings, capital of Yale Electric Power being first acquisition. Profits of Yale company, before depreciation, years to June 30th: 1933, £3,636; 1934, £3,174; 1935, £4,110. Depreciation estimated £575. Purchase price for 16,700 £1 ordinary and 1,000 5 per cent. cumulative participating £1 preference, of Yale capital, £69,250, of which £49,250 cash and balance in 2s. ordinary shares. 50,000 2s. ordinary shares to be subscribed. Lists closed at 9.5 a.m. December 17th.

Greenfriar Investment Company, Ltd.—Issue of 75,000 £10 shares at par, of which 65,000 shares have been applied for and will be allotted in full. Formed to conduct investment trust business, under same management as Witan Investment Company, which will provide accommodation and staff at fee of £1 per £1,000 of loan and share capital. The list closed at 9.30 a.m. December 17th. Over-subscribed.

South African Druggists, Ltd.—Issue of 400,000 5½ per cent. cumulative £1 preference shares at 21s. and 400,000 5s. ordinary shares at 7s. Formed as holding company in South Africa to control wholesale druggist business of Sive Brothers and Karnovsky and subsidiaries. Profits of group, after depreciation: 1932-3, £42,184; 1933-4, £55,762; 1934-5, £74,004. Net assets involved, £541,615. Purchase consideration is £820,000, payable £520,000 in cash and balance in 1,200,000 5s. ordinary shares. Subscription list closed 9.5 a.m., December 17th, very heavily oversubscribed.

Cellon, Ltd.—Issue of 70,000 6 per cent. £1 cumulative preference shares at 21s. Formed as private company 1918 to manufacture aeroplane dopes, etc. Net assets £162,074; including net proceeds of present issue and ordinary shares recently issued, £192,074. Profits after depreciation: 1932, £15,355; 1933, £15,080; 1934, £20,012. Proceeds of issue for repaying loans £38,500; balance for additional working capital 20,000 5s. ordinary shares recently issued at par, and existing capital reorganised.

Twentieth Century Cinemas, Ltd.—Issue of 240,000 6 per cent. cumulative participating (up to 8 per cent.) 10s. preference, and 120,000 5s. ordinary shares, at par. Acquires three cinemas and capital of Metropolitan and Provincial Cinematograph Theatres, owning five cinemas, and 99 years' lease of further cinema now under construction. Nine cinemas valued £224,586, after first mortgages. Combined profits, years up to March 31st: 1933, £27,967; 1934, £38,238; 1935, £40,095. Net profits, latest year after £3,510 amortisation leaseholds and depreciation of fittings, £1,750 mortgage interest and £4,500 directors' fees and administration charges, £30,335. Purchase considerations: Eight existing cinemas, £213,500, of which £123,500 cash and balance in 5s. ordinary; for lease of cinema under construction, £50,000, of which £25,000 cash and balance in 5 per cent. first mortgage.

Warner's Radio and Electric, Ltd.—Issue 120,000 6 per cent. cumulative 10s. preference shares at par and 240,000 1s. ordinary shares at 2s. Formed to acquire radio and electrical retailers' business founded 1929. Net assets £74,629, acquired for £72,500, cash £26,500 and £46,000 in 1s. shares. Profits, after provision for interest on unmatured instalments under hire purchase agreements before depreciation, years to September 30th: 1933, £6,470; 1933, £8,268; 1934, £24,782. List closed 9.5 a.m., December 18th.

Kent and Sussex Oilfields, Ltd.—Issue of 606,000 ordinary shares of 1s. each. Company formed in 1931 to prospect for oil and natural gas, under licence granted by Department of Mines in 1931. Operations south of Three Bridges Station to 1,880 ft. depth showed oil at six points. Now intended to sink new well to 4,000 ft., costing approximately £24,000.

OFFERS, FOR SALE

West of England Electric Investments, Ltd.—Offer for sale of £500,000 3½ per cent. debenture stock at £99½ per cent. by Lazard Bros. and Company, Ltd. Redeemable by June 30, 1980, at par, by sinking fund commencing year ending June 30, 1937, or on three months' notice, from June 30, 1941, to June 30, 1960, at 102, and at par thereafter. Company holds ordinary shares and other investments in electricity supply companies in West of England. Profits, years to March 31st: 1933 (approx.), £25,559; 1934, £30,022; 1935, £37,314. Net assets £1,122,594, of which £1,102,933 investments at cost. Stock purchased by Lazard Bros. at 97½ gross, plus other expenses of offer. List closed 9.10 a.m. December 17th. Applications for amounts up to £1,000 have been allotted in full. On larger applications the allotment has been on the general basis of 66 per cent.

Allied Bakeries, Ltd.—Offer for sale of 275,000 5½ per cent. cumulative £1 preference at 21s. and 412,500 5s. ordinary at 6s. per share. COMPANY MEETINGS, &c.

MEXICAN RAILWAY COMPANY, LIMITED

MR VINCENT YORKE'S SPEECH

The 141st ordinary general meeting of the Mexican Railway Company, Limited, was held, on the 18th instant, at Winchester House, Old Broad Street, London, E.C., Mr Vincent W. Yorke (chairman of the company) presiding.

The Secretary (Mr C. Tennant) having read the notice convening the meeting and the report of the auditors.

The Chairman said:—I do not think it will be necessary for me to detain you long to-day. As you may remember at our last meeting six months ago, when I had just returned from a visit to our property, I dealt very fully with the economic situation in Mexico and our own position and prospects. Very little change in either respect has come about since then and I regret that I shall have little or nothing of an encouraging nature to say to you now.

GROSS RECEIPTS AND PASSENGER EARNINGS

The gross receipts for the first half of the year are by no means unsatisfactory and show an increase of 6.3 per cent. on those of the corresponding half-year, in spite of an actual decrease in passenger earnings of 3.7 per cent. The falling off in these earnings is undoubtedly due to the curtailment of tourist traffic, brought about by the several disasters to ships of the Ward Line, and does not reflect any decrease in the spending power of the ordinary passenger. Goods traffic, which shows an increase of 9.5 per cent., has been substantially swollen by large consignments from Europe of cast-iron pipes for the drainage of Mexico City, of which we carried nearly 15,000 tons during the half-year. The large increase in sundry receipts amounting to 47.7 per cent. is purely a matter of bookkeeping, amounts received for wagon hire from other railways having been credited to receipts, instead of being deducted from operating expenses. Fuel oil for the second half-year in succession shows a very serious falling off of 18,000 tons in weight and \$173,000 in money, which has been due, as before, to the competition of the Aguila Company's pipe-line.

If we had been able to maintain our expenses more or less at the level of the corresponding half-year, we might have really improved our position, but these unfortunately show the disheartening increase of 9.6 per cent. Of the increase amounting to just over \$500,000 no less than \$320,000 is directly attributable to concessions to our employees in the form of increase in rates of pay, payment for the day of rest, higher pensions, and so forth.

RESULTS UNSATISFACTORY

The final results are, therefore, most unsatisfactory, as, in spite of the substantial increase in gross earnings, the net earnings have fallen from \$757,500 to \$632,700, a decrease of nearly \$125,000.

As naturally follows, the increase in gross earnings has entailed an increase in tonnage, and we carried 28,500 more tons than in the corresponding half-year. This has thrown a fresh strain on our already overtaxed equipment, and has brought into even clearer relief the necessity of fresh expenditure on renewals account, about which I had so much to say at our last meeting. As a first step in this direction we have ordered 50 new freight cars, which have arrived in Mexico, and will help to ease the situation.

There has, unfortunately, been no improvement in the rate of exchange, either during or subsequently to the half-year under review, and after crediting the amount received from discounting the Coupons on the 40-Year Bonds, of which I spoke at the last meeting, we find ourselves £31,000 short of the debenture interest which has accrued from January 1st to June 30th last, and the total to the debit of net revenue account has now reached the alarming total of over £468,000.

RENEWAL OF MORATORIUM

It has been obvious to us for some time past that we should have to seek a renewal of the moratorium which expires at the end of this year, and we, accordingly, approached our debenture holders with a new scheme of arrangement last month. The new scheme, which follows very closely the old scheme, is to last for

BANK OF LONDON AND SOUTH AMERICA, LIMITED

DIFFICULT TRADING CONDITIONS

MR J. W. BEAUMONT PEASE'S REVIEW OF CONDITIONS IN SOUTH AMERICA

The seventy-third ordinary meeting of the Bank of London and South America, Limited, was held, on the 17th instant, at 6, 7 and 8 Tokenhouse Yard, London, E.C., Mr J. W. Beaumont Pease (the chairman) presiding.

The Chairman, in the course of his speech, said: You may remember that four years ago the bank's published reserve was reduced by the transfer of £1,500,000 to our internal reserve. We have this year felt justified in restoring to the published reserve a sum of £500,000. This has been done by a transfer from our inner reserve, which remains with a substantial balance to meet contingencies.

I have yet another year of difficult trading to record. World peace and the restoration of confidence between nations have not yet appeared on the horizon, and until these are definitely in sight I am afraid we cannot expect relief from the many complications under which international trade is still being carried on. The day for reformation and stabilisation of the world's monetary systems would seem to be still far distant, and the fluctuating value of currencies and the restrictions on their transfer will meanwhile continue to be an indeterminable factor in the conduct of our business. This factor is one beyond our control, but is one which has a direct bearing on our earning capacity in terms of sterling. We can only hope that in the course of time a recovery from the present low values of at any rate some of the currencies will come about.

Before the world crisis South American countries enjoyed and had become accustomed to liberal credit from their overseas friends, and the constant inflow of capital benefited their exchanges greatly. This "invisible" export being no longer available to them, they are thrown upon their own resources and are dependent entirely upon the exports of their products to provide them with the necessary foreign currency to pay for their essential imports, and only by an excess of exports over imports are means available to meet the "invisible imports"—namely foreign debt service, fixed charges on foreign capital investments, and profits of foreign concerns, etc. Adjustment to the altered conditions is a difficult and lengthy process, more so in some countries than in others, but in the main I feel that they are all working to the best of their ability to meet the situation with the resources at present available to them. Any improvement in the position of foreign creditors must lie in the measure of future prosperity that will fall to the individual countries.

DEPRECIATION OF CAPITAL EMPLOYED ABROAD

There was a note on our balance sheet last year that in countries where restrictions were in force the books had been closed at the official rates of exchange. The so-called "free" rates have been used this year, except in the cases of Argentina and Uruguay, where the "average tender rate" and the "free controlled rate" respectively have been adopted, as at these rates we have been able to effect remittances. One result of this change is a marked effect on the item shown on the assets side of the balance sheet as "depreciation of capital employed abroad," which has suffered what may be described as a nominal rise in the year from £913,000 to £1,490,000. So long as we function and exchanges remain unbalanced this figure will fluctuate in sympathy with any rise or fall in the rates. When, however, new parities are definitely established, an adjustment to the new rates will have to be effected, though what the figure of depreciation may then be it is, of course, impossible to forecast now. Our reserves, fortunately, amply take care of this at present. In the balance sheet, current and deposit accounts, etc., standing at £28,000,000, showed a fall of £3,000,000, due to the lower rates of exchange at which local currencies have this year been converted to sterling in our books. Cash in hand, at bankers, and at call at £7,144,000 bears a ratio of 25½ per cent. to deposits, and our investment in British Government securities is slightly higher at £955,000.

PROFIT AND DIVIDEND

The gross profit is £993,000, but to arrive at a real comparison we must apply last year's conversion rates, which would bring the figure up to £1,121,000, as against £1,132,000, from which it will be seen that the actual gross trading profit, after making provision for bad and doubtful debts, has fallen by £11,000 only. There is a net profit of £209,914, as compared with £276,330 last year, the fall of £66,000 being accounted for as follows:

£35,000 in respect of the lower sterling value of the currency profits at the exchange rates ruling on September 30th last, £20,000 in increased charges, and a decrease of £11,000 on gross trading profits. In the principal lending centres competition is keener than ever, and to ensure a participation in the business offering rates to-day have to be cut very fine. On the other hand, deposit rates do not permit of a proportionate reduction owing to the competitive influence of other forms of investment which now find public favour in view of the improved internal conditions in some countries. Not only have we had to contend with the narrowed margin between deposit and lending rates, but in one important centre, where the exchange profit of the banks is officially fixed, this item in our profit and loss account has been largely curtailed, and I therefore trust you will agree that under the circumstances our labours have produced as satisfactory a result as could possibly be expected.

Your board still feel the world outlook to be somewhat unsettled, and this enhances the necessity of that cautious policy for which this bank has always been known. I therefore propose that a dividend of 3 per cent. be paid and that £100,000 be transferred to contingency reserve, the balance, £167,274, being carried forward.

RECOVERY IN ARGENTINA

Argentina is to-day enjoying the fruits of her Government's persistent efforts to consolidate and strengthen the country's finances. Five years ago, when commercial depression was at its worst, I expressed the opinion that in the case of Argentina there was no cause for undue pessimism, and that the country would when the tide turned quickly recover in view of its manifold resources. Events have shown that my confidence in the country has been fully justified. In reviewing the outstanding features of her past progressive year various financial achievements are worth recording. The 1934 Budget, which was expected to result in a deficit of about 5,000,000 pesos, was practically balanced within a few thousand, and that after caring for extraordinary unbudgeted expenditure of over 20,000,000 pesos. The floating debt, which three years ago totalled 1,207,000,000 pesos, has been reduced by the end of June last to the relatively low figure of 109,000,000 pesos. The strong credit status which had enabled the Government successfully to reduce the National Debt service in 1934 was invoked again this year, and similar reductions were effected with equal success in some of the municipal and provincial debts.

Laws have been enacted which will accomplish far-reaching changes in the banking and monetary regimes of the country and should sustain the stability of both. Among the more important is the establishment of a central bank by a law which follows broadly the suggestions made by Sir Otto Niemeyer in 1933. The new bank has taken over from the Conversion Office the gold reserve of the nation, which in coin and bullion represents a little under £50,000,000 gold. The equivalent of this reserve had until then figured in the nation's peso accounts at the rate of 11.45 dollars to the pound sterling, but when transferred it was brought into the books of the bank at its market value, or about 25 dollars to the sovereign. As a result of the revaluation a sum of 701,000,000 pesos became available to the State, which has been applied to the reduction of its debt to the bank of the nation, payment of Treasury bills, provision of capital for the central bank, and of capital and a reserve fund for an allied department, the Frozen Assets Institute.

Prospects for the coming harvests are not brilliant. A severe drought that persisted throughout the period of ploughing and sowing and at the time of germination in certain districts has greatly reduced the areas sown to wheat and linseed by about 25 per cent. in each case. Reduced exports of these cereals may, however, be partly compensated by higher world prices. Both financially and economically the country is to-day in far healthier circumstances.

BRAZIL AND URUGUAY

Apart from the recent disturbances, which all friends of Brazil were glad to see so promptly and effectively dealt with by the energy and activity of the authorities, internal conditions in Brazil during the past year have not been marked by any untoward events. On the whole, there is a general feeling that internal conditions have shown some improvement, and this is demonstrated by the expansion of industrial and other undertakings in Sao Paulo and elsewhere.

Uruguay has been consolidating her financial position during the year, and the result of her efforts evidences an appreciable progress in this direction. After many friendly conferences and discussions in London between representatives of the Uruguayan

and British Governments a trade agreement was evolved and signed in June last, which was finally ratified in Montevideo on November 13th. The general effect of the agreement should be to give stability to Uruguay's export market and to encourage the mutual trade between the two countries. Uruguay's outlook for the next twelve months is rather brighter than in recent years. Prospects for the coming wool season and harvests are so far favourable.

CHILE, COLOMBIA, AND PARAGUAY

The general situation in Chile has shown a distinct improvement during the past year. The Budget has been balanced and there has been no political unrest. Unemployment is no longer a problem and there are but few factories which are not working full time.

With regard to Colombia, the treaty of peace with Peru signed in Rio de Janeiro in May, 1934, was formally ratified by the Colombian Congress on September 20th last. Relieved by the definite elimination of a factor that had intermittently disturbed the progress of the two nations for many years, Colombia may reasonably be expected to resume the headway she was making from the financial setback of 1931.

The past year in Paraguay has been coloured by the difficulties and anxieties of the conflict with Bolivia, which came to an end on June 14th, but while the period could not be abnormal the country has borne itself well and has managed to keep its main industries alive in spite of the shortage of labour.

The restrictions on international trade which have been so much in evidence during recent years still continue, to the detriment both of the countries in which we operate and, consequently, also of our Bank. On the other hand, in practically every case the internal position of these countries shows some improvement. The return to more normal conditions is a slow and uphill task, but this Bank will, as ever, endeavour to contribute as far as it can in assisting the upward movement, and, although during the process our profits must necessarily suffer as compared with those of happier times, our business is sound and our organisation has been so much improved that we are, I believe, in a better position than ever before to reap the benefit of freer and more active trade whenever that takes place.

The report and accounts were unanimously adopted.

THE NATIONAL BANK OF SCOTLAND, LIMITED

SATISFACTORY RESULTS

The one hundred and tenth annual general meeting of this bank was held, on the 19th instant, in the bank's head office, Edinburgh, Mr C. H. Scott Plummer, director, presiding in the absence of the Most Honourable the Marquess of Lothian, C.H., the governor of the bank, who was unavoidably detained by Parliamentary duties in London. The address by the governor was read by the general manager.

The Marquess said: In submitting the accounts of the bank for the year which ended on November 1st last, your directors desire to express satisfaction with the results. The profits vary little from those of previous years. They have been determined after making full provision for all bad and doubtful debts and for rebate and all charges. With the balance brought forward from the previous year the amount available for distribution is £352,224. After setting aside £136,400 for the payment of a dividend at the rate of 16 per cent. per annum, less tax, which the directors recommend, the balance has been allocated as follows:—To heritable property account, £80,000; to trustees for officers' pension scheme, £50,000; to staff widows' fund, £5,000, leaving to be carried forward the sum of £80,824.

The most notable change on the liabilities side of the balance sheet is seen in the note circulation, which shows an increase of nearly 10 per cent. over the figures at the corresponding date a year ago, affording definite evidence of greater industrial activity. Deposits, although slightly lower, exceed 35 millions, while acceptances are practically unchanged. Endorsements, guarantees and other obligations are somewhat higher at £1,327,000.

On the assets side of the balance sheet the immediately liquid resources stand at the very considerable amount of 9½ millions, evidence that the bank is in a position to meet any demands which may be made upon it at any time. The holding of British Government securities amounts to £17,789,000, a figure considerably below the market value, but an increase over the previous year of 1½ millions. It is, however, a little disappointing that advances, represented by bills discounted, loans and advances on current account, again show a decrease. This is mainly due to the fact that improvement in trading conditions has enabled borrowers in many cases to make repayment of their accommodation.

The report and accounts were adopted.

ORIENT STEAM NAVIGATION COMPANY, LIMITED

SUBSIDISED FOREIGN COMPETITION

The thirty-sixth ordinary general meeting of the Orient Steam Navigation Company, Limited, was held, on the 17th instant, at the company's offices, 3 and 5 Fenchurch Avenue, London.

Sir Alan G. Anderson, G.B.E., M.P., presided in the absence in "Orion" of the chairman (Mr I. C. Geddes).

Sir Alan Anderson said that turning to the accounts the profit and loss balance was £249,469. The board recommended for the year a dividend of 5 per cent., free of tax, on the ordinary shares.

The passenger trade had shown a small improvement in passenger earnings on the Mail Line, which had been almost exactly offset by a fall in the profits on cruises in European waters.

Since the close of the company's financial year "Orion" had been delivered, and after successful trials and a cruise in which she was admired, she was now on her maiden voyage. The company had placed an order for another vessel of approximately the same dimensions and speed as "Orion," to be named "Orcades," and to be delivered in the summer of 1937.

While the board were confident of the progress of Australia, they were not blind to difficulties, some peculiar to the company's enterprise, some shared with Australia and the British Empire. The competition of the air, for example, would grow rapidly. In the board's view, it was not only in the interest of shipping lines and their shareholders, but of the nation, that Great Britain, which had for so long ruled the waves, should, in taking to the air, avoid as far as possible disturbing and damaging her machinery of established finance and of personal contact. In several European countries shipping companies had already joined in the national enterprise of air, and in the directors' view similar co-operation was the wise and first step in the effort which Great Britain must make to ensure that the Union Jack should on the main routes overseas be flown in the air as well as on the ocean. While here and there the air must necessarily become a competitor of the sea and rail in general, his colleagues and he believed that it would set in motion more travel and more demand for ships than it took away.

The board were advised that they had power to make an investment in air on a moderate scale, but as air transport was not contemplated when the Orient Company was formed, they might find it desirable to ask the shareholders to approve an extension of the company's constitution to give specific authority to take their due share in this new development of their enterprise.

Subsidised foreign competition on their route was limited to minor lines, but on the Pacific Ocean the Matson steamers were enabled, by large grants of public money, to offer a first-class service far below cost. As had already been publicly announced, this uneconomic competition would secure for the U.S. line a monopoly of the Pacific route to Australia unless the British Empire sustained the old-established British lines on the Pacific. The British lines were not being driven off the sea by their own failure. They are not asking for a subsidy to shelter or condone inefficiency, but no private purse could compete against the concentrated wealth of a great nation. While it could not be believed that the British Governments concerned would allow such a foreign monopoly to control an important route he need scarcely remind the shareholders that their only direct interest was to deplore the disturbance which was spread by subsidies beyond the route immediately involved. An uneconomic standard of luxury maintained on one route reacted upon and depreciated services such as those of the company conducted on economic lines elsewhere.

The report and accounts were unanimously adopted.

Orders for the publication in these columns of the reports of Company Meetings should be addressed to:—

The Reporting Manager,

THE ECONOMIST,

8 Bouverie Street,

Fleet Street,

London, E.C.4.

TAYLOR WOODROW ESTATES, LIMITED

STEADY PROGRESS OF THE BUSINESS

The first ordinary general meeting of Taylor Woodrow Estates, Limited, was held, on the 18th instant, at Winchester House, Old Broad Street, London, Mr Arthur Collins (chairman of the company) presiding.

The Chairman, in the course of his speech, said:—This company specialises in the acquisition of estates of about 50 acres, more or less, but all of moderate size, on which to build houses of the popular type, ranging from £395 to £1,300. The demand for the company's houses is steady, the purchasers accepted by the company have to be of good standing, and the houses they acquire from the company in pleasant surroundings are well built and well kept, as any visitor to any one of our estates will see.

Content with a moderate profit per house, with keen buying of large quantities of materials, importing timber direct to our own wharf near our London estates, and manufacturing our own joinery, the company is able to give accommodation in a real home at a price which compares favourably with our competitors. Competition is keen, and buyers, especially housewives, are discriminating, so that only by continuous and consistent good service can a company in our trade increase its business.

With this general introduction we may turn to the year's accounts and observe firstly the steady progress of the business we own.

The companies now amalgamated in Taylor Woodrow Estates, Limited, have the following record:—

	£
Profits year ended October, 1931	7,614
Profits year ended October, 1932	10,583
Profits year ended October, 1933	23,029
Profits year ended October, 1934	39,438
Profits year ended October, 1935	44,376

We did not declare any interim dividend this year, for the company was only incorporated in February last, and we wished to have this year's accounts before we declared any dividend. In future, commencing with the current year, the board will consider the payment of an interim dividend after the first six months' trading. In this connection the shareholders should know that we get the benefit in 1936 of a considerable number of houses sold in this last autumn which are now being completed for occupation. The profits on those completions will come into the current year's accounts. As our sales are continuing to exceed those of the corresponding months last year, we think the dividend prospects for 1936 are good.

CONSERVATIVE FINANCE

Our profits, £44,376, are arrived at upon the most conservative basis, and our practice in distributing dividends is in keeping with it. Our preference dividend of £6,000 per annum in a full year's trading is covered many times over in this, our first year, when we had only about seven months of active operation.

We are distributing 10 per cent. on the ordinary shares, requiring £15,000 (before deducting income tax), and when an outside estimate of what might be our income tax liability is deducted from the carry-forward there is left another 10 per cent. on the ordinary capital, which we are retaining in the business.

We should like to draw your attention to the liquid position of our company. We have very little indeed locked up in manufacturing premises, machinery or plant. Our fixed assets do not amount to 10 per cent. of our total capital.

Our shares stand in the Stock Exchange List at prices which we believe represent an undervaluation. It may be due to the general idea that this trade is benefiting from a boom in building which will pass, and it is frequently thought and said that the number of houses available in the London district will soon equal the number of families to be housed. Even if it were so, however, our experience indicates that modern economical and labour-saving houses like those we build and sell will long be in demand. It is the opinion of the directors that the date is not yet in sight when the company's houses will be surplus to requirements. The building industry has its trade cycles, of course, but a sound and well-managed building company which is not over-capitalised offers a good investment.

It is the desire of the board that I should express in the most generous terms our appreciation of the services of our managing director, Mr Frank Taylor, the two assistant managing directors, Mr Hanson and Mr Rigg, our salesmen, our architect and general staff, and all our workmen.

The report and accounts were unanimously adopted.

CARRERAS, LIMITED

INCREASED NET PROFIT

POPULARITY OF COMPANY'S PRODUCTS

The thirty-second annual general meeting of Carreras, Limited, was held, on the 19th instant, at Arcadia Works, Hampstead Road, London, N.W.

In the absence of the chairman, the Most Hon. the Marquess of Reading, owing to a chill, Mr Edward S. Baron, a managing director, proposed that the chair should be taken by Mr Harry W. Danbury, who read Lord Reading's speech, in the course of which it was stated:—The result of the year's trading, after making ample provision for depreciation on buildings, plant, machinery and other items and charging all expenses, including the full amount of advertising, shows a net profit of £942,007, an increase of £137,065 over the preceding year. By the addition to this year's total net profit of the amount brought forward in last year's balance sheet, namely, £1,264,512, there is an available balance in the profit and loss account of £2,206,519, which the directors propose to appropriate as shown in their report, leaving £1,282,834 to be carried forward to next year.

The increased net profit is, of course, mainly due to the improvement in the general trade and industry of the country during this year which has led to greater expenditure by the public, of which part has been attracted to the purchase of cigarettes and tobacco. Fortunately, I am glad to say, your company has secured the advantage of a fair proportion of the additional trade. This increase, in conjunction also with other factors, has resulted in a larger net profit for the year, as shown in the balance sheet, and the board have therefore recommended the payment of a cash bonus of 1s. per share on the ordinary and "A" ordinary shares, and 1½d. per share on the "B" ordinary shares, which will involve the additional distribution to the shareholders of £88,578 5s.

RESERVE FOR CONTINGENCIES

You will also observe that it is proposed to allocate a sum of £100,000 to a contingencies fund. The board are of opinion that it is wise in the interests of the company and its shareholders to form this fund. The tendencies of overseas trading and other considerations make it desirable to provide an additional reserve to meet any expenditure that may be found necessary in future years to deal with increased competition or with altered conditions in the home or export markets which it may not always be possible to foresee.

Our investments, other than those in subsidiary companies, amount to the sum of £1,116,845 at cost, an increase of £330,000, due in part to the smaller outlay I have just mentioned and also to variations in our business requirements of actual cash resources. The market value of the securities representing these investments exceeds the book value by a considerable amount.

POSITION FURTHER CONSOLIDATED

You will recognise that the position of the company has been further consolidated as a result of the past year's trading. If you agree to the allocations recommended, our specific and general reserves will amount to £1,188,764, which, with the balance of profit and loss account carried forward, will make a total of £2,471,598 available for eventualities.

I am pleased to say that public appreciation of the company's products continues to grow. Some of my colleagues have visited several important centres in the Provinces, Scotland, Wales and Ireland, and overseas, at various times during the past year, and from all quarters have gained evidence of the popularity of our leading brands and of the goodwill of the trade and the public towards us.

Notwithstanding that competition in the industry is very keen, your board have confidence that by steadfastly maintaining the standard of quality which is the sure foundation upon which the company's reputation has been built, and by availing themselves promptly of every modern improvement in manufacturing processes, they will cause increased demand for their products throughout the country, and also in our overseas markets.

I am pleased to tell you that your directors are satisfied with the trading in the new financial year so far as it has proceeded, and if the present conditions of trade continue, your directors have every reason to hope that the results to be placed before you at the next annual meeting will also satisfy you.

The report and accounts were unanimously adopted.

GOLD COAST BANKET AREAS, LIMITED

OPERATIONS ON A PROFITABLE BASIS

The second ordinary general meeting of Gold Coast Areas, Limited, was held, on the 19th instant, at Winchester House, London.

Mr Robert Sweeny (the chairman), in the course of his speech, said:—The profit and loss account, which covers the initial period of production, March 1st to June 30th, shows an excess of expenditure over income of £8,195, after allowing for depreciation. I am glad to say that operations for the past three months have been on a profitable basis, the estimated mine working profit for this period amounting to £6,500. The working profit for the month of November amounted to £3,147.

During May and June the tonnage of ore crushed and milled was at the rate of about 3,000 tons per month. This tonnage has been increased to an average during the last two months of 4,400 tons. The increase in the yield of fine ounces of gold has been more pronounced. The gold production for the period, from the start of operations in February up to the end of June, was at the rate of less than 500 ounces per month, as compared with an average of 1,044 ounces during the past five months. These figures indicate steady and continuous improvement in mine output and general operating conditions.

ADDITIONS TO PLANT

Additional equipment will enable us to carry out a more active development programme. A third 1,000 cubic feet compressor started operating in October, and a fourth similar compressor has been ordered. Installation of the three-throw plunger pump was completed last month. Extensive stope preparation work, which was essential in the initial stage of mine production, has somewhat retarded development to date. The footage driven for development and stope preparation during the four months since the end of June amounted to 2,520 feet, as compared with 3,346 feet for the period of the report.

Judging from the advices of our engineers, the board consider that there is every prospect of substantially increasing the tonnage of ore reserves within a reasonably short time, and steps have already been taken to equip the power, mine and metallurgical plants for a higher rate of production than 6,000 tons per month, which is the capacity of the present treatment plant. Since the period of initial adjustments, the operation of the metallurgical plant has been very satisfactory. Our working costs in West Africa, including a 2s. development redemption charge, have been reduced in October and November to 28s. 11d. per ton milled. Increased output should naturally continue to affect the working cost favourably.

Your company has a substantial interest in Cheriaman and Akoko Gold Mines, Limited, and a considerable investment in South Banket Areas, Limited. In the opinion of your directors, the concessions of the South Banket Areas, Limited, covering about 10 square miles of the Tarkwa Banket reef system, constitute a very valuable and promising holding.

AMALGAMATED BANKET AREAS

The large increase in the capital reserve of the company during the past year is the result of our participation in the formation of Amalgamated Banket Areas, Limited. As we held 900,000 shares of Amalgamated Banket Areas, Limited, as our vendor consideration, and Nigerian Gold Mines, Limited, held 1,100,000 shares as joint vendors, it was suggested by the important mining interests who had the contract to purchase the Abbontiakoon Properties, that we should concede 200,000 of our shares, and Nigerian Gold Mines, Limited, 300,000 of their shares, on condition that the Abbontiakoon Properties were transferred to Amalgamated Banket Areas, Limited, at cost, the mining interests themselves undertaking to provide the additional cash resources necessary. The Abbontiakoon's proved available ore reserves at the present stage of development, are estimated to be 830,237 tons, averaging 6.62 dwts. per ton, over a stoping width of 42.6 inches.

This producing mine of Amalgamated Banket Areas, Limited, lies on the line of Banket Reef between the properties of South Banket Areas, Limited, and those of your company. The work that we have done on Gold Coast Banket Areas as well as the experience on adjoining properties, confirms our belief that these Tarkwa Banket mines are destined to be big mines. Our aim is to reach a large daily production at the earliest possible moment. For this a greatly increased development campaign is necessary.

The report and accounts were unanimously adopted.

YOUANMI GOLD MINES, LIMITED

PROGRESS OF OPERATIONS

The first annual ordinary general meeting of Youanmi Gold Mines, Limited, was held, on the 17th instant, at the Institute of Chartered Accountants, Moorgate Place, London, the Rt. Hon. Viscount Lee of Fareham, P.C., G.C.B., the chairman, presiding.

The Chairman, in the course of his speech, said that all the preliminary operations had been proceeding smoothly and expeditiously during the last six months. Their consulting engineer on the spot estimated that the unwatering of the old mine should commence about the beginning of February and should be completed in four or five weeks. Meanwhile, such portions of the old workings as were accessible would be reconditioned, whilst the mining and treatment of surface and oxidised ore would be commenced as soon as the plant was completed and ready for action.

He desired to emphasise that "Youanmi" was neither a "prospect" nor an unproven property. It was already an established mine of high potentialities, which under modern conditions and equipment, improved methods of treatment, and enhanced value of gold should only require good management and intelligent direction to ensure success and a satisfactory return to its shareholders. In that connection the directors, whilst deprecating extravagant forecasts and undue optimism were quietly confident that the future of the mine was assured and that estimates of production, as set out in the prospectus, would be justified by results. No fresh bodies of payable ore had been proved by diamond drilling in the Northern Section, but the bores put down there revealed conclusively that the shears persisted and the indications were sufficiently favourable to justify the company in taking up three additional leases, totalling 42½ acres, in that section.

RESULTS OF RECENT BORING

At the southern end of the property, and on hitherto unexplored ground newly acquired since the issue of the prospectus, important results had been obtained by diamond drilling showing that the three lodes in the south of the Pollard shaft were persisting in depth and that ore, having an assay value of 28 dwts. per ton over a width of 41 inches, had already been encountered at a depth of 400 ft. in the Main Pollard Lode. (Hear, hear.) In the opinion of their consulting engineer that was a fact of the highest importance, holding out expectations that further lenses of valuable ore would be discovered in that section, which was well beyond and to the south of the old workings, although easily accessible from them, and, therefore, capable of rapid development.

It might fairly be claimed that the discoveries in that area, which was entirely virgin ground, constituted what was in effect a new mine of great promise, of which there was no record or knowledge at the time that the prospectus was issued, and which must now rank as an additional asset of great potential value.

POTENTIALITIES OF WESTERN AUSTRALIA

The directors were firm believers not merely in the future of gold as a commodity, and of gold mining as a profitable and honourable business essential to the community, but, in particular, of Western Australia as one of the richest, most extensive, and yet least developed of all known gold-bearing areas. It was not likely that they would embark on new ventures if they were not imbued with quiet confidence that the Western Australian field was perhaps the most promising of any of which they had knowledge, and that the political and economic conditions there were as favourable, and as likely to remain so, as could be encountered anywhere else in the world.

They had been fortified in that belief not merely by the actual progress of gold-mining in Western Australia during the last few years, but by the sane and statesmanlike attitude that had been taken up by its Government, which, although Labour in politics, was substantially conservative in its attitude towards the industry within its sphere of administration.

That line of policy was largely due to the influence and lead of the Minister of Mines, Mr J. W. Munsie, who was a working miner himself and who had too much practical experience to commit political errors which could only have the effect of "killing the goose with the golden eggs," and of injuring his own country, of which he was so capable and patriotic a servant.

The report and accounts were adopted.

SECOND COVENT GARDEN PROPERTY COMPANY, LIMITED

SATISFACTORY POSITION

The second annual general meeting of the Second Covent Garden Property Company, Limited, was held, on the 18th instant, at the Hotel Victoria, Northumberland Avenue, London, W.C.

Mr Philip E. Hill (the chairman) said:—Ladies and gentlemen,—Our accounts show that the net revenue for the year is £111,583, that our preliminary expenses of £55,225 6s. have been eliminated, and that we have a balance on share premium account of £14,749 13s.

ADDITIONAL PROPERTIES ACQUIRED

During the year we have acquired additional properties to the extent of £1,956,765, of which £1,846,419 are freehold and £110,346 leasehold, and to provide for this we made an issue of 3½ per cent. Debenture stock, preference and ordinary shares, on satisfactory terms to the company. The full revenue benefit of these purchases will, of course, only be felt in the ensuing year. We are, however, able to recommend the payment of a dividend of 6 per cent. on the ordinary shares, which compares with that of 5 per cent. a year ago, and it is reasonable to assume an increased distribution on the ordinary shares for the current year.

SAFETY OF SOUND PROPERTY INVESTMENTS

Experience has proved the safety of sound property investments, although, in common with other investments, however careful one may be, it is difficult to entirely eliminate risks. We have adopted the policy—and so far with considerable success—of combining the properties purchased with the acquisition of first-class covenants. In most instances the status of our tenants is such that their covenant for payment of rent, apart from the property itself, is worth as much as we paid for the property. This, I am sure, you will regard as an eminently satisfactory position, and I think that our future may be looked forward to with every confidence.

The Chairman moved the adoption of the report and accounts, which was seconded by Mr Louis Nicholas and carried unanimously.

MESSINA (TRANSVAAL) DEVELOPMENT COMPANY, LIMITED

EFFECT OF LOW COPPER PRICES

The annual general meeting of this company was held, on the 18th instant, at Southern House, London.

Lieut.-Colonel John P. Grenfell (the chairman) said that the balance sheet showed that the financial position of the company had been maintained in spite of the drop of over £4 10s. per ton during the year in the average market price of copper. The year had been an unusually difficult one for the copper industry, the average price for standard copper having been only £28 18s., which was lower than any year's average in the history of the metal, and so in order that employment and the maintenance of the industry might not be jeopardised they approached the South African Government and received from them a grant towards the cost of development and a loan, free of interest. This loan, which stood in the balance sheet at £24,793, was repayable only when the company was in a position to pay dividends to its shareholders, and then by instalments calculated according to the amount of working profit in excess of 6 per cent. upon the issued share capital in any year. They were thus able fully to maintain and improve the plant, to sink their shafts, and to increase development to include the opening up of new areas. The receipts from sales of copper and from sundry revenue amounted to £267,945, as compared with £299,086 in the preceding year. Although the production of copper was greater by 223 tons, the reduced price obtained accounted for the difference. The total expenditure for the year totalled £266,647, and there was a balance of £1,512 as the result of the year's working.

The total of the ore reserves, 1,217,830 tons, was 54,167 tons higher than in the previous year, and the value was 2.39 per cent. Cu, as against 2.25 per cent. Cu. This satisfactory feature was largely due to the new ore developed at the Harper Mine. The Harper ore reserves were classified as proved and probable, which meant developed on more sides than one, and possible ore. This latter was ore which was developed on one side only, and resulted from the development in the levels having outrun the actual blocking out of the ore, but developments since had confirmed the possible ore as ore developed.

The report and accounts were unanimously adopted.

MINING TRUST, LIMITED

PROSPECTS AT MOUNT ISA

The annual meeting of the Mining Trust, Limited, was held on Thursday, December 19th, at Winchester House, London.

Rt. Hon. the Earl Castle Stewart, M.C. (the chairman) said:—The excess of income over expenditure for the year amounted to £111,783, an increase over the previous year of £15,014. The debit balance to be carried forward has been increased to £417,080, but against this £41,500 represents claims upon the Income Tax Commissioners.

Having regard to the discharge of a liability of £45,000, to the recovery of over £650,000 in the value of our quoted securities and to the greatly augmented value of our cash resources, we trust that shareholders will appreciate the very considerable improvement in our finances which has occurred during the past year.

At Mount Isa Mines the production of lead amounted to 38,168 tons, an increase of 2,272 tons, and the production of silver amounted to 2,326,982 ounces, an increase of 642,083 ounces. The zinc section of the mill was placed in operation early in October of this year, and shipments of concentrates will commence shortly.

The average price of lead throughout the year under review was £11 5s. 8d., a figure even lower than that for last year. There has been a considerable improvement since July, due partly to the action of our Government in regard to the duties imposed under the Ottawa Agreement, and partly to closer co-operation amongst the producing interests.

But what the principal producers can do for lead by co-operation amongst themselves they cannot do for silver, because the price of this metal depends so largely upon Governmental purchases.

As compared with an average price of 19.5d. for the calendar year 1933 and 22.9d. for the calendar year 1934, the average price of silver for the year under review was approximately 27.87d. This improvement in the price has been mainly due to buying by the U.S. Government. Within the last few days there has been a sharp break in price following upon the decision of the American authorities not to take all the silver offering upon the London market. In this field it would seem to me that at this very moment there is ample scope for closer co-operation between this country and the U.S.

The Britannia Lead Refinery has continued to operate most satisfactorily throughout the year.

You were informed at this meeting last year that negotiations were proceeding with the Sydney board in regard to the financial reconstruction of New Guinea Goldfields Company, and this reconstruction has now been effected.

In the past one of the greatest handicaps in developing the Edie Goldfield has been the inadequacy of power. During the year the transmission line from Bulolo Gold Dredging Company's power house has been completed, and power from this source has made it possible to enlarge the drilling programme.

The Edie Mill, which is expected to operate on a scale of about 30,000 tons per annum, has been completed and trial runs are now being conducted. It is estimated that there is now a sufficient supply of ore ready for stoping on the Edie Veins Nos. 1 and 2 and on the Karuka Vein to keep this mill operating for at least four or five years, while diamond drilling to date indicates that the productive life of these veins may be considerably prolonged.

A share interest has been acquired in the Saudi Arabian Mining Syndicate. This syndicate has obtained a concession covering a very large area adjacent to the Red Sea coast. One likely property is already being tested. A recent circular from the directors of the syndicate to their shareholders states that preliminary investigation has disclosed the existence of a tailings dump containing 400,000 tons of material assaying roughly 8 dwts. Au. A diamond drilling campaign has been started to test in depth the veins, from which it is presumed that the material in this dump was originally drawn. Core recovery from the first drill hole has been uniformly good and has given the following results:—

From 125 ft. to 135 ft. average 5.22 dwts. Au.

From 268 ft. to 270 ft. average 32.66 dwts. Au.

From 270 ft. to 276 ft. average 5.87 dwts. Au.

Our assets show a very considerable recovery in value, that our cash position is strong and that the prospects for Mount Isa are certainly considerably better if the silver market recovers its balance and if metal prices do not fall much below the levels at which they have been maintained over the past five months.

The report was unanimously adopted.

BARRANQUILLA INVESTMENT TRUST, LIMITED

DISTRIBUTION OF 10 PER CENT.

The first annual ordinary general meeting of the Barranquilla Investment Trust, Limited, was held, on the 16th instant, at Shell-Mex House, London.

Mr P. R. Chalmers (the chairman), in moving the adoption of the report and accounts, said that the accounts under review marked the first stage of the work on which they had embarked on June 19, 1934, and showed that they had accomplished what the directors had asked the shareholders to hope for. They had brought 316,579 shares of the railway company into the trust and had paid the anticipated 5 per cent. dividend for the first year. It was true that they were able to recommend a further 5 per cent., making 10 per cent. for the year, but that final payment had no part in their programme and was due to the accidental cause mentioned in the report.

They now hoped to commence the second stage of their work, which they would start when they received instalments of return of capital from the railway company, namely, the building up of a sound and progressive portfolio of investment securities, and they would hope to have accomplished the first part of that, or to have made a beginning at least before they met the shareholders again next year. In the meantime they proposed to take steps to enlarge the scope of the trust upon the same foundation by inviting the remaining shareholders of the railway company to join them by exchanging their shares for shares in the trust. The directors strongly recommended that a final offer should be made to the shareholders of the railway company, and they were now considering a proposal which they hoped might commend itself to the present members of the trust and to the potential ones.

Mr T. M. Priestley (managing director) seconded the resolution, which was carried unanimously, and the retiring director (Mr P. R. Chalmers) was re-elected.

ARISTON GOLD MINES (1929) LIMITED

A GREAT BODY OF ORE DEVELOPING

The sixth ordinary general meeting of Ariston Gold Mines (1929) Limited, was held, on the 19th instant, at River Plate House, London.

Mr Francis Allen (the chairman) said that during the year under review development expenditure increased by £87,363, excluding the amount written off. The major portion of this increase was accounted for by a large addition to the ore reserves and the remainder to the extension of the workings on the Anfarjah section of the property, the initial expenditure on the new main shaft and to outside areas. The one great piece of work they had embarked upon during the year was the sinking of the main shaft, which was essential for ultimately dealing with the great body of ore which was steadily developing. They had placed the contract for sinking with the François Cementation Company, and, in addition to sinking the shaft, they were, in fact, also using the Cementation process for shutting off excessive water met with in the course of their sinking. The contract stipulated for sinking a minimum of 130 feet per month, but if the ground proved fairly easy, and with a tempting bonus for anything over 130 feet, it was hoped that it might be more rapid. It was also hoped that by the time they were down 300 feet they would have passed into harder ground, where the necessity for concreting the shaft would no longer exist. Underground development would be pushed to meet the shaft at its lowest point, so that haulage might commence without loss of time.

A further important feature of development was the speeding up of the winding at the north shaft. If their general manager, Mr Dobbs, was right in his views, and they had no reason to doubt him, knowing his ability, the monthly tonnage crush should increase by July next year to 12,000, as against the prevailing 8,000. Such an increased tonnage would add largely to their profit and would substantially lower working costs and bring the profits well over the £100,000 per annum.

He had had the opportunity on the previous day of a talk with Dr. McCann, who had recently paid a visit to the Ariston Mines. Dr. McCann was the consulting geologist to the New Consolidated Gold Fields Company, and he had given a wonderfully re-assuring account of the tremendous body of ore which they had underground at Ariston. His view was that the ore body was so strong that it would continue greatly in depth, and he added that he could see no reason why the mineral values should decrease. He (the chairman) felt justified in saying from all he had heard that when the new shaft was finished Ariston would certainly be one of the greatest mines on the coast and a very profitable one.

They would steadily continue the policy of developing for a large production on completion of their new shaft, and when that was accomplished they could easily see the great future in front of the company, since they were making large profits on crushing 8,000 tons per month, whilst on completion of the shaft they would be crushing 20,000 tons or more with their working costs much lower.

The report and accounts were unanimously adopted.

MALAYAN TIN DREDGING, LIMITED

DIVIDEND OF 45 PER CENT.

The twenty-fourth annual general meeting of Malayan Tin Dredging, Limited, was held, on the 16th instant, in London.

Mr C. V. Stephens, who presided, in the course of his remarks, said:—The company's production was limited under the International Tin Restriction Agreement to an average of 32.05 per cent. of the standard assessment of the year, as compared with an average of 29.6 per cent. for the previous year. The profit for the year, £91,644, when added to the balance brought forward from June, 1934, makes the total credit balance of profit and loss £161,876. The directors recommend payment of a final dividend of 10 per cent., making 45 per cent. in all for the year, and leaving £69,934 to be carried forward.

With regard to the International Tin Restriction Scheme which expires at the end of next year, I sincerely hope that if difficulties arise they will be overcome and that the control scheme will be renewed, because I believe that regulation of production affords the producer the choice between earning a reasonable return on his outlay and of passing through a period of senseless and costly competition. I trust also that a final decision will be reached within the next six months, for, if the scheme is to terminate at the end of next year, it is only right that the producers of Malaya, representing over 1,000 mines, should know the position at the earliest possible date so as to enable them to prepare for the competitive struggle which would follow.

As regards the future, the consumption of tin is better than it has been for a number of years and trade activity in this country and in America continues to expand.

The substantial increase in the domestic quota of Malaya during the last six months from 32 per cent. to 65 per cent., the rate fixed from the commencement of next month, has greatly increased the prospects of your company.

The report and accounts were unanimously adopted.

SOUTHERN MALAYAN TIN DREDGING, LIMITED

IMPROVED RESULTS—INCREASED DIVIDEND

The ninth annual general meeting of Southern Malayan Tin Dredging, Limited, was held, on the 16th instant, in London.

Mr C. V. Stephens (the chairman), who presided, in the course of his remarks said:—The permissible output during the year averaged 32.05 per cent. of assessment. The company's production amounted to 1,161 tons of tin ore, including 124 tons produced under the Buffer Pool scheme. This production compares with 976 tons in the year before. The ore won realised £150,457, and the average price received was £141 8s. 4d. per ton. The sum of £25,296 was paid as royalty to the F.M.S. Government. Expenditure at the mine increased from £37,681 last year to £48,349 in the year under review. The average cost per cubic yard of ground worked decreased from 10.09 cents to 7.76 cents per cubic yard. The accounts show a profit for the year of £88,807.

The directors recommend payment of a final dividend of 2½ per cent., making 22½ per cent. in all for the year and leaving £23,049 to be carried forward.

I consider there is every reason to regard the results achieved on the low permissible output as very satisfactory. The total dividend for the year of 22½ per cent. compares with 20 per cent. for the previous year and with 5 per cent. for the year before.

The effect of the increased quotas has already been shown in the estimated profits since July, which to the end of last month total £83,441, as against £51,356 for the same period last year.

This company is now the owner of one of the finest dredging properties operating in Malaya. With a fair price for the metal and a reasonable production quota we have, I submit, good reason to regard the future success of this company's operations with a substantial degree of confidence.

The report and accounts were unanimously adopted.

THISTLE-ETNA GOLD MINES, LIMITED

PROGRESS OF DEVELOPMENT WORK

The first ordinary general meeting of this company was held, on the 19th instant, at the Institute of Chartered Accountants, London.

Sir G. B. H. Fell, K.C.I.E., C.S.I. (the chairman), said that the programme which they set themselves on the formation of the company was to prove the continuance of the reef beyond the dyke, both in the Etna and the Thistle sections. It would be seen from the report that by the end of September last considerable progress had been made, although that progress was slower than was anticipated. The new incline shaft on the Thistle Mine had been sunk to 351 ft. and had entered the dyke at 298 ft. In the Etna Mine the new incline shaft had been sunk to 282 ft.; in both cases the reef was exposed. On the North Extension of the Etna Mine a strike of 398 ft. had been proved on the first level. The latter discovery was important, because except for a short distance in the middle the strike was on an entirely fresh ore body. The values on the strike so far exposed averaged 12.6 dwts. over a width of 15 in.

The diamond drilling programme which had been carried out proved beyond question that the reefs, both in the Etna and Thistle sections, did continue beyond the dyke, and there were good grounds for anticipating that the values which would be disclosed when they reached that horizon and commenced development would prove to be even higher than those which had been encountered in the course of the development work carried out above the dyke.

As to when the property was likely to reach the stage of production, it was contemplated that the first section of the mill ought to be available for use in May next.

Since the date of the report, No. 1 Winze from the first level of the Etna section had holed into the second level at 61 ft., the values averaging 9.4 dwts. over 23 in. On the Etna North Extension, in the B. Shaft section, values were good. At 50 ft. values were 12.2 dwts. over 34 in. Since September 30th 585 ft. of development on reef had been sampled, of which 190 ft. had proved payable, averaging 10.5 dwts. over 18 in., or 189 in. dwts. The report and accounts were unanimously adopted.

IND COOPE AND ALLSOPP, LIMITED

YEAR OF SATISFACTORY PROGRESS

The twenty-third ordinary general meeting of Ind Coope and Allsopp, Limited, was held, on the 16th instant, in London.

Colonel Sir George L. Courthope, Bt., M.C., M.P. (the chairman), said that the year under review had been one of steady and satisfactory progress. The combined breweries at Burton had been reorganised, and various departmental activities of the two old companies had been fused. The wine and spirit departments had been concentrated in B. Grant and Company, a company which now had a turnover of more than a million a year and was earning satisfactory profits. The number of subsidiary companies, of which there were thirty-four at the time of the amalgamation, had been reduced to twenty.

The trading profit amounted to £567,000, and interest £274,000, and, after charging mortgage and debenture interest, income tax, sinking fund, fees, etc., the net profit was £492,000, which was £59,000 better than the comparable figures of the two companies last year.

The barrellage sold showed a reasonable increase, most of which was sold in bottle. Improving trade of the country was reflected in an increase of profits from the Managed Houses. There was an available balance of £670,000, and the directors proposed that £200,000 be employed in payment of a final dividend on the ordinary stock of 17½ per cent., less tax, making 25 per cent. for the year; that £61,000 be transferred to the Public House Improvement and Licence Reserve, bringing it up to £225,000; that £50,000 be added to the general reserve, which would then stand at £850,000, and that the balance of £359,000 be carried forward.

Last year he spoke at some length about the excessive taxation imposed upon their industry. The burden remained, and the pressing need of its reduction. During the past year the steady recovery of industry and employment justified the expectation of a substantial surplus of revenue over expenditure. The return of the National Government for a second period of office gave them confidence that this recovery would continue. This should render possible further reductions of taxation in the Budgets of the next few years, and they had every reason to press for a share of this reduction for their own industry.

The report and accounts were unanimously adopted.

RHODESIAN CORPORATION, LIMITED

VALUABLE HOLDINGS

The tenth ordinary general meeting of this corporation was held, on the 18th instant, at River Plate House, London.

Captain H. B. Jameson (the chairman) said that their shareholdings stood in their books at £630,881, of which £10,196 represented the cost of unquoted shares. At July 31st last the market value of the quoted shares was in excess of the book value to the extent of over £200,000, and the value at the present time, allowing for sales which had since been made, was considerably higher. The profit for the year was £138,507, and they recommended the payment of a final dividend of 2½ per cent., less income tax, making a total payment of 10 per cent. for the year. Further, profits made during the current year justified them in paying an interim dividend of 5 per cent., less income tax, for the year 1935-36. The warrants for both dividends would be posted on January 31st next.

Coming to their mining interests, the result of the year's working at the Fred Mine had not been quite so good as last year, the profits being £35,153, as against £39,910.

With regard to their shareholdings, the Wanderer Consolidated Gold Mines, in which they had maintained their large shareholding, and had every reason to be satisfied with it, the profits were very encouraging, and last year the dividend was raised to 11½ per cent. They had an important interest also in the Far East Rand, which consisted of large holdings in East Rand Consolidated, Limited, Spaarwater Gold Mining Company, Limited, and West Spaarwater, Limited. East Rand Consolidated had large cash resources and held 35 per cent. of the issued capital of the Spaarwater Gold Mining Company and also a considerable interest in West Spaarwater, Limited. The haulages from the Sub Nigel Mine had been advanced far into the property of the Spaarwater Gold Mining Company.

The company had also participated in the issue of West Spaarwater, Limited. The township of Jameson Park had been established on the Maraisdrift Farm, in the midst of a rapidly developing mining area. Good roads had been made, electric lighting, a good water supply, and complete system of modern sanitation had been installed.

The report was unanimously adopted.

TIMOTHY WHITES AND TAYLORS, LIMITED

INCREASED PROFIT AND DIVIDEND

The seventh ordinary general meeting of Timothy Whites and Taylors, Limited, was held, on the 19th instant, at the Hotel Metropole, London.

Mr Philip E. Hill (the chairman) said:—In view of the changes that have occurred in the capital structure of your company during the past year, our trading profit of £278,146 is not strictly comparable with that of £203,597 for the previous year, but you can and doubtless have compared the dividends which your directors have felt justified in distributing and the fact that we are paying a final dividend of 15 per cent., following an interim dividend of 7½ per cent., making 22½ per cent. for the year, as compared with 17½ per cent. last year, and at the same time are able to increase the amount of our carry-forward from £29,411 to £36,895 indicates that your business during 1935 has made satisfactory headway.

A year ago, in a circular letter dealing with the merger of the Taylor group with your company, I stated that after careful examination of the trading figures there should be an amount of £122,510 available after the payment of interest and dividend on your prior charges. As you will see from the accounts, this proved a conservative estimate, as the amount available is actually £128,176.

A year ago I spoke with confidence as to the outlook for your company after the merger. We have only had six months' trading under the new agreement, as we took over control on April 1, 1935, but it is already evident that the step was a wise one and in the interests of all concerned. You will appreciate that economies arising from a merger of this sort can be considerable, but they take time to effect.

The history of this company has been one of continued progress. The business was started, as you probably know, by the late Timothy White nearly ninety years ago with one shop in Portsmouth. The Taylor companies started also with one shop, opened by the late Mr Mason in Leeds some sixty years ago. To-day, our company is one of the largest multiple concerns in the country, controls 765 branches, of which 172 are double shops dealing with drug and hardware lines, and employs some 10,000 persons.

The report and accounts were unanimously adopted.

LOW TEMPERATURE CARBONISATION, LIMITED

ANNUAL GENERAL MEETING, DECEMBER 13, 1935

POINTS FROM THE SPEECH OF THE CHAIRMAN.
COL. W. A. BRISTOW

The eighteenth annual general meeting of Low Temperature Carbonisation, Limited, was held, on the 13th instant, at Southern House, London, E.C.

Colonel Whiston A. Bristow, M.I.E.E., F.R.Ae.S. (chairman and managing director), presided, and the following are points from his speech:—

1. Profits on trading account, £103,846, increase of £16,560.
2. After writing off sundry non-recurring items and paying debenture interest, it is proposed to pay 3½ per cent., less tax, on the whole of the ordinary share capital of £1,275,000.
3. Cash at bank, on deposit and Government securities total £436,710. In addition, investments in Doncaster Coalite, Limited, £277,825.
4. The company's holding of ordinary shares in Doncaster Coalite, Limited, has been valued at £120,000, and the reserve so created has been utilised for the purpose of reducing the amount representing patents, trade marks, goodwill, etc.
5. The "Coalite" process has been still further improved; also the quality and size of the present "Coalite" fuel. This winter's sales constitute a new record.
6. Twenty-two Royal Air Force squadrons flying on company's coal petrol this year. A number of roadside pumps now being erected for supply to motoring public. Quality and performance acclaimed as remarkable.
7. Diesel oil now being made from coal. Six months' bench and road tests satisfactorily completed. New Diesel oil and chemical plant in course of construction—ready in January.
8. Large consignments of "Coalite" oil being despatched weekly to Imperial Chemical Industries, Limited, Billingham, for conversion into petrol by hydrogenation.
9. Further "Coalite" works expected to be in operation in time for next winter's trade.

A print of the Chairman's full speech will be sent on application to the Low Temperature Carbonisation, Limited, 28 Grosvenor Place, London, S.W.1.

GOVERNMENT RETURNS, &c.

NATIONAL ACCOUNTS

The total ordinary revenue for the week ended December 14, 1935, amounted to £9,361,000, against ordinary expenditure of £12,053,000. After allowing for an increase in Exchequer Balances of £95,401 the operations for the week, as shown below, increased the gross National Debt by £3,001,000 to approximately £8,020 millions.*

		(000's omitted)		
2½% Funding Loan		+ 19,487	Treasury Bills	 — 10,056
			Public Department Advances	 — 4,750
			Road Fund Temp. Advances	 — 970
			P.O. and Teleg. Cap. Expenditure	 — 600
			National Savings Certificates	 — 50
			N. Atlantic Shipping Issues	 — 29
			British Shipping Issues	 — 31
		+ 19,487		 — 16,486

* Including £375 millions on Account of Exchange Equalisation Fund and Borrowing or Statutory Sinking Fund.

A complete analysis of the approximate position of the National Debt on September 30, 1935, appeared in the *Economist* for October 5th.

* Includes £12,000, the proceeds of which were not carried to the Exchequer within the period of the Account.

TREASURY BILLS BY PUBLIC TENDER

Tenders for £45,000,000 Treasury bills were opened on December 13, 1935, and the total amount applied for was £76,980,000. Tenders were accepted for Treasury bills at three months, dated Monday to Saturday at 99 16s. 4d., about 44 per cent., and above in full. The average rate per cent. was 14s. 6-02d. The amount allotted was £45,000,000. The following table shows the weekly record at various dates:—

Date	Amount Offered	Total Applications	Amount Allotted	Average Rate %
1933				
January 6	45,000,000	73,830,000	45,000,000	0 10 10-84
July 7	45,000,000	83,890,000	45,000,000	0 10 4-85
October 6	45,000,000	100,450,000	45,000,000	0 12 9-98
1934				
January 5	35,000,000	76,260,000	30,000,000	0 18 11-5
April 5	40,000,000	80,390,000	38,000,000	0 17 9-01
July 6	35,000,000	62,745,000	32,000,000	0 16 4-14
October 5	35,000,000	65,260,000	31,500,000	0 15 9-702
1935

† Free of income tax.

AGAR CROSS AND COMPANY.—Directors state that as results for year to June 30th last show a loss, no dividend would be payable on ordinary or on either class of preferred shares. Half-year's interest on 5 1/2 per cent. debenture stock will be paid as usual on December 31st.

AIRE WOOL COMPANY, LTD.—The first dividend on 6 per cent. cumulative preference shares in respect of half-year from July 1, 1935, will be paid on January 1, 1936. The shares in respect of half-year will be closed from December 23rd to 31st, inclusive.

BARCLAYS BANK LIMITED.—The transfer books of the company will be closed from January 1st to January 23rd next, both days inclusive. Shareholders will be entitled to the dividend in respect of the shares registered in their names in the books of the company at the close of business on December 31st.

BLEACHERS' ASSOCIATION.—No interim dividend will be paid on 5 1/2 per cent. preference stock. It has been paid to June 30, 1935.

BULGARIAN 7 PER CENT LOAN.—The trustees of the Kingdom of Bulgaria 7 per cent. Settlement Loan, 1926, have received from the Government sufficient sums to provide for a payment of 15 per cent. of the interest coupon due January 1, 1936, and they are arranging for the coupon to be paid at this rate.

BULOLO GOLD DREDGING, LTD. (Incorporated in British Columbia).—With reference to the announcement dated October 29, 1935, of the declaration of a dividend of \$1.40 (Canadian), the rate of exchange on December 10, 1935, was \$4.98 to the £.

The gross amount of the dividend is 5s. 7.47d. per share, less Canadian income tax of 5 per cent. (1s. in £) and United Kingdom income tax at 3s. 6d. in the £, 1s. 3.18d. per share, and the net dividend payable to United Kingdom shareholders is 4s. 4.29d. per share.

CITY OF MONTEVIDEO 6 PER CENT. LOAN, 1889.—Baring Brothers and Company, Ltd., announce that the municipality have remitted the necessary funds to provide for the payment of the interest due December 1, 1935, on the bonds of the above-mentioned loan, in accordance with the Decree of the Uruguayan Government dated December 13, 1935.

CREDIT FONCIER D'ALGERIE ET DE TUNISIE.—An interim dividend of Francs 16.50 net per share has been declared, payable on or after January 1, 1936, against coupon No. 56. This dividend is in respect of the bank's year ending December 31, 1935, and is the same as was declared last year.

CUNARD STEAMSHIP.—Payment of dividends deferred on 5 per cent. cumulative preference stock and 6 per cent. second cumulative preference stock due January 1, 1935. These dividends have been paid to June 30, 1935.

FIRST BRITISH FIXED TRUST.—Municipal and General Securities Company announces that the payment on First British Fixed Trust coupon No. 9, which matured on December 15, will be 8d. per sub-unit, free of tax. The certificate of Messrs Price, Waterhouse and Company, dated December 10th, shows that they compute the dividend payable to be 466 1/8s. 7.52d. per unit (= 8.03176d. per sub-unit), composed of cash dividends and bonuses (less income tax). A balance of 0.03176d. per sub-unit is to be carried forward to the next distribution.

INVESTORS GENERAL FIXED TRUST.—Investors Specialised Fixed Trusts, Ltd., managers of Investors General Fixed Trust, announce that a distribution amounting to 4.73 pence net per sub-unit (after deduction of income tax) has been made to certificate holders of record November 7, 1935.

MARCONI'S WIRELESS TELEGRAPH COMPANY, LTD.—A dividend for the year 1935 at the rate of 7 per cent. will be payable on and after January 1, 1936, on 7 per cent. cumulative participating preference shares, to shareholders registered on books at December 31, 1935, and to holders of share warrants to bearer.

MIDLAND BANK LIMITED.—The transfer books of the company will be closed on December 24, 1935, for that day only, for the preparation of the dividend payable on February 1, 1936.

ASSOCIATED GAS AND WATER UNDERTAKINGS, LIMITED.—The directors of Associated Gas and Water Undertakings, Ltd., announce that the company has acquired the controlling interest in the East Surrey Gas Company.

PASS AND JOYCE, LTD.—The directors have cancelled the special meetings of the preference and ordinary shareholders and the extraordinary general meeting pending further consideration of the proposals for reorganisation of the capital of the company. Meetings will be called shortly at which revised proposals will be submitted.

BAIRD'S REVISED SCHEME.—The number of proxy votes cast in favour of the scheme by "A" ordinary shareholders is 1,753,240, not one vote being cast against it. The voting by deferred ordinary shareholders was: In favour of the scheme, 809,831; against, 1,355.

SILVER AND STEELCRAFTS.—We understand the Committee of the Stock Exchange on December 18th rejected the application for permission to deal in 160,000 6 per cent. cumulative preference shares of 10s. each fully paid, numbers 1 to 160,000, and 180,000 ordinary shares of 5s. each fully paid, numbers 1 to 180,000, in Silver and Steelcrafts, Ltd.

BRITISH PLASTER BOARD MERGER.—A pending merger with a well-known plaster manufacturing concern is announced by British Plaster Board, Ltd. A circular to the shareholders says that a provisional agreement has been entered into with the object

of acquiring the whole or not less than 90 per cent. of the share capital of Cafferata and Company, Ltd. The agreement, it is pointed out, is by way of amalgamation, the shareholders of Cafferata and Company accepting ordinary and preference shares and a cash payment in exchange for their shares. For the purposes of the acquisition it is proposed to increase the authorised capital from £850,000 to £1,000,000. The directors say that they think it advisable to have a number of unissued shares in reserve for future developments. Meeting at noon at Liverpool on December 23rd.

COUNCIL OF FOREIGN BONDHOLDERS (LORD BESSBOROUGH ELECTED PRESIDENT).—At the court of the Council of the Corporation of Foreign Bondholders, held on December 12th, the Rt. Hon. the Earl of Bessborough was elected president, in the place of Mr Cecil Lubbock, who had expressed his wish to retire from that office, as from January 1, 1936.

THE MEXICAN DEBT.—No decision regarding the Mexican external debt service can yet be taken, according to a statement issued by the British Committee of Mexican Bondholders. The experts appointed to study the external debt problem have not yet completed their task. The Mexican Government has confirmed that provision will be made in the 1936 Budget for payment of sums to British and other European creditors who are holders of agreed claims against Mexico for damages resulting from the revolution.

COMMERCE AND TRADE

SURVEY OF COMMODITY MARKETS

The general level of commodity prices has shown little change over the past week, a rise on some markets being offset by a fall on others. The obscurity of the political outlook and uncertainty regarding the Washington Government's silver policy have had a depressing influence in certain directions. On the other hand, grains and oilseeds have been buoyed up by the decision of the Argentine Government to raise the official prices at which it will purchase wheat and linseed from the farmers. This decision, which is further discussed in a Note of the Week, was responsible for a sharp advance on world wheat markets, Liverpool December futures rising by about 7d. a cental on the week. The rise in linseed amounts to about £1 ros. per ton.

The position on the coal markets continues stringent, and prices have been raised this week. Iron and steel are also in active demand, and makers of semis are showing reluctance to increase their forward commitments. On the other hand, copper, lead and spelter have again declined in price, mainly on account of nervous selling in connection with the disturbance of the silver market. In the case of copper, the technical position has improved in consequence of the weeding out of the bull account, and the market may be expected to display greater firmness when consumers' demand becomes more active. Tin remains scarce and is again dearer. The gradual improvement in rubber prices has continued under the influence of a steady trade demand, but further liquidation has produced a renewed fall in cotton. Other textiles—with the exception of wool—are generally easier.

Among foodstuffs, prices of provisions have been firmer than of late, while meat, eggs and potatoes are dearer. Quotations for tea continue firm, and sugar and coffee are maintained at recent rates.

In the United States, as in this country, prices have been "marking time." The tendency is reflected in Moody's daily index of staple commodity prices, which stood at 164.0 (December 31, 1931 = 100) on Wednesday last, against 164.2 a week earlier, 167.0 a month ago, and 151.4 on the corresponding day last year.

COAL

SHEFFIELD.—The inland demand for coal last week was very heavy. Production was increased but it did not equal requirements and the export market has been brought almost to a standstill through lack of supplies. Prices have been advanced a shilling or two shillings all round, including coke. Should the threatened stoppage be avoided there will be a very quiet spell in the coal industry.

Quotations (nominal): Yorkshire Association steams, 18s. 6d. to 19s.; screened gas coal, 16s. 6d. to 18s.; washed steam smalls, 13s. 9d. to 14s. 3d.; Derbyshire steams, 18s. to 18s. 6d. (f.o.b.); best Yorkshire house, 23s. to 25s.; best Derbyshire house, 22s. to 24s.; rough slacks, 11s. to 12s. (all at pits); blast-furnace coke, 16s. (at ovens).

NEWCASTLE-ON-TYNE.—All classes of Northumberland and Durham coal continue firm and are scarce for the next few weeks. Northumberland steam collieries have a steady trade with the

Scandinavian countries, and demand from the English coast has been much greater, as home consumers have been accumulating stocks in case of trouble in the coalfields. Shipment figures from the port of Blyth, the principal outlet for this coal, are at a record. Shipments of Durham coal from the Tyne are less than a year ago, but production is at a good level, as much more coal is required to meet the local industrial demand.

Current f.o.b. prices for export: NORTHUMBERLAND.—D.C.B. screened, 16s.; smalls, 13s. 6d.; Howards, Bentinck, Newbiggin screened, 15s. 6d.; smalls, 13s. 6d.; Tyne Prime large, 14s. 6d.; smalls, 13s.; Hartley Main, large, 14s. 9d.; smalls, 13s. 6d. DURHAM.—Lambton/South Hetton screened steam, 16s. 6d.; smalls, 14s.; Wear Special Gas, 15s. 6d.; Holmside, Ryhope, Boldon unscreened gas, 15s.; second-class gas, 14s.; coking, unscreened and/or smalls, 14s.; Prime unscreened bunkers, 16s.; second-class unscreened bunkers, 15s.; Prime foundry coke, 22s.

GLASGOW.—The increase of 500,000 tons in the quota for home supply has not, as yet, greatly eased the conditions of stringency. Demand remains keen, and, as regards industrial fuel in particular, not satisfied in many cases except after considerable delay. House coal maintains recent strength. Business is very quiet in the export branch, with the collieries fully booked into next month. Even contract requirements are not always readily available. The effect is seen in a further reduction in weekly shipments, those for the period to December 14th being unusually meagre for this season at 198,000 tons.

CARDIFF.—Shipments of coal have been exceptionally active at the South Wales ports during the past few days. Total exports in the foreign and coastwise trades last week amounted to 431,500 tons, compared with 387,000 tons the previous week, and 382,818 tons in the corresponding week last year; but it is probable that the returns for the current week will establish a record volume for the current year. All classes have shared in the increased demand and for some of the sized and small classes quotations have further hardened. On Monday the owners decided to raise inland prices by 2s. per ton for supplies to public-utility authorities; by 1s. 8d. per ton for house coal; and by 1s. per ton for industrial coal, in order to meet the demand for an increase in wages. The higher prices came into operation on Tuesday for current deliveries, and as from January 1st in the case of contracts which receivers have agreed to revise. These higher prices, however, do not affect more than about 40 per cent. of the output, even assuming that they are agreed to by all contractors. On the basis of the recent earnings of the industry they cannot by themselves enable the owners to improve wages by more than 1s. per shift. The industry has still to face the problem how far it can raise export prices. It is reported that the Admiralty have placed orders for 250,000 tons for delivery over the next three months and that an Italian firm has bought 50,000 tons on a cash basis for delivery over the next twelve months.

Current approximate quotations: Best Admiralties, 19s. 6d.; seconds, 18s. 9d. to 19s. 3d.; best drys, 18s. 9d. to 19s.; Black Veins, 18s. 3d. to 18s. 6d.; Western Valleys, 17s. 9d. to 18s.; Eastern Valleys, 17s. 3d. to 17s. 7½d.; best small steams (washed), 13s. to 13s. 6d.; second steams, 12s. 6d. to 13s.; coking smalls, 13s. 6d. to 14s.; anthracite, best large, 36s. to 40s.; Red Vein, large, 22s. to 27s.; machine-made cobbles, 35s. to 51s.; French nuts, 35s. to 51s.; stove nuts, 34s. to 50s.; rubbly culm, 10s. 6d. to 12s.; special foundry coke, 37s. 6d. to 40s.; patent fuel (Crown), 21s.; pitwood, ex ship, 24s. 3d. French, Portuguese 22s. 6d.

WORKINGTON.—The coal trade is booming, and on top of the advance in the price of house coal by 3s. 4d. comes this week one of 2s. on the price of round coal for shipment to Ireland. Much of the liveliness is accounted for by the fact that, with the Whitehaven collieries idle, production is 10,000 tons weekly short of the normal level. As there is not enough coal to go round, owners are concentrating on local landsale, their most remunerative

market, and are restricting Irish shipments to between 2,000 tons and 3,000 tons weekly. Even so, it is difficult to satisfy the demand for industrial fuel, and though the Whitehaven ovens are not working, the coking plants are short of smalls. Iron smelters, deprived of Whitehaven's coke output of 2,000 tons per week, are compelled to import that quantity from the East Coast. Prices are very firm. Best round is 23s. 6d.; washed doubles, 22s.; washed singles, 21s., all f.o.b.; smalls, 15s. 6d.; best house coal, 35s. 8d.; house nuts, 34s. at station; gas coal, 27s.; local coke, 15s. 6d. to 16s. 6d. per ton.

IRON AND STEEL

LONDON.—The volume of new business has contracted with the approach of the holidays, but there has been a fair amount of inquiry for delivery early in the New Year, says the official report of the London Iron and Steel Exchange. The pressure to obtain deliveries against contracts, however, has not been relaxed, and most works are operating at a high rate of capacity in order to meet customers' requirements. Business in pig iron has been on a limited scale, but heavy contract deliveries have been made, and will continue until the commencement of the holidays. Most consuming industries will enter the New Year with a large reserve of orders, and active buying is expected early in 1936. Uncertainty regarding the price position has led some consumers to offer business for far forward delivery; but producers have shown little inclination to extend their commitments. In the semi-finished steel department works are operating at capacity, and are unable to keep abreast of demand. The requirements of consuming industries appear to be expanding, and it is difficult to place orders for near delivery. In the finished steel section heavy deliveries are being made, and there has been a fair amount of new business on offer. The general tendency however, has been to postpone fresh purchases until the New Year. The demand from overseas continues quiet, but the volume of inquiry indicates the possibility of some improvement in this direction.

MIDDLESBROUGH.—The strength of the iron and steel market here is fully maintained, and, whilst actual transactions may be fewer, this is explained by the fact that makers are well sold and that production of pig iron is being fully absorbed. Buyers of pig iron are anxious to place contracts for further ahead but makers are now adopting a cautious attitude in view of the increase in prices of raw materials. The feeling is that the production of pig iron in this area will have to be increased early in the New Year, but that this will be restricted to some extent by the shortage of coke. Prices of pig iron are unaltered, No. 3 Cleveland foundry pig iron being quoted at 70s. per ton and No. 1 East Coast Hematite iron at 71s. per ton delivered in the Middlesbrough area. Shipments of all classes of pig iron from the Tees during the first seventeen days of December amounted to 5,263 tons, as compared with 6,468 tons during the same period in November. Despite the heavy home demand, parcels of 500 tons have been shipped to Denmark and 250 tons to Sweden during the past week.

Steelmakers continue very busy, the demand for semi-manufactured material being strong. Whilst some of the rolling mills will be idle for two days during Christmas week, the holidays will, generally speaking, be shorter than for some years past. Foreign ore for prompt shipment commands higher prices, chiefly owing to the freight position. Good Durham blast-furnace coke is now firm at not less than 21s. 6d. per ton delivered at the furnaces. Heavy steel melting scrap has become so scarce that buyers are now offering 55s. per ton, delivered at the works here.

SHEFFIELD.—No seasonal slackening of activity is to be found at present. Order books are still well filled and the mills and forges serving the finished industries are running up to full capacity. The decision at numerous works to take a full week's holiday next week is influenced by the necessity of overhauling plant and also by the inconvenience of lighting up fires for only a few days. New Year prospects are described as favourable. Exports, however, instead of expanding, have shown a reactionary tendency during the last quarter of the year. Over the eleven months, however, exports of iron and steel show a gain of 100,000 tons. But the total does not equal half the tonnage of pre-war years. Machinery and electrical goods make a good showing in the November returns. Tools and cutlery in overseas markets are holding their recent advance. As regards iron and steel products, there are gains in exports to Empire markets, while trade with foreign countries has declined rather sharply. Russia continues to take considerable quantities of ferro-tungsten for manufacturing high-speed and other alloy steels, but her purchases of British steel are still declining. Steel business with Scandinavian countries is not quite so brisk as it has been most of the present year. The market for steel scrap continues firm, notwithstanding large imports. Business in the silver electro-plate branches is unsatisfactory; there has been very little seasonal trade this year.

GLASGOW.—Conditions show little change. Steel makers and makers of semis are all working to capacity; practically all have several months' work still on hand and are finding difficulty in meeting the many demands for prompt delivery. While sheet makers are not able to keep all the existing plant in operation, a large proportion of the mills are running to capacity and output is being rapidly absorbed—mainly by home users. The export business remains quiet. The position as regards Clyde ship-building still improves, the most important announcement made this week being that Messrs Harland and Wolff have secured an order for a 9,000-ton cargo motorship from the Donaldson Line, Ltd., Glasgow. The vessel will be built at Govan. Practically all branches of the industry in the Glasgow and Clyde districts are busy. It was decided on Wednesday to advance the price of sheets by 5s. per ton, for both home and export purposes.

CARDIFF.—Business in the tinplate trade has been a little more active during the past week. Prices are unaltered, but sales are stated to have been more numerous both for the inland and export purposes, and it is expected that the ban on supplies to certain overseas countries will be removed early in the New Year. Galvanised steel sheets continue very quiet, and quotations for sheets as well as for bars are unchanged. Shipments of tinplates at Swansea last week totalled 88,399 boxes, compared with 72,592 in the corresponding week last year, but stocks have dropped to 57,051 boxes, as against 138,914 boxes a year ago.

WORKINGTON.—The year closes with business in the North-West Coast hematite pig-iron market as active as in any of the busy months since early autumn. Makers are more heavily sold than even during the early post-war boom. Their only trouble is to obtain a production adequate to satisfy local needs, which represent 60 per cent., and those of the Midlands, South Wales, Scotland and the Continent, representing the remaining 40 per cent. of the make. But the position will be considerably relieved when, with the relighting in January of the big furnace at Workington, the relining of which has been completed, another 3,000 tons weekly will be available. Consumers are still buying forward and are pressing hard for delivery. The anticipated rise in prices has not yet taken place and Bessemer mixed numbers therefore remain at £3 15s. per ton at Glasgow; £4 1s. at Manchester; £4 4s. 6d. at Birmingham; and £4 6s. at Sheffield, with an extra 2s. 6d. to 5s. per ton for special brands. Malleable iron is in lively Midland request at £5 15s., and refined iron is also a sharp trade. The entire output of ferro-manganese at Workington is being readily sold at from £10 15s. to £11 5s. per ton home. Steelmakers are not booked quite as far ahead as iron makers but they have plenty of orders on their books to keep them engaged for another six months. Workington is rolling rails, billets, bars and slabs and Barrow rails, hoops and strips. The output of native hematite ore is no more than sufficient for the smelters of the district and is to be enlarged next year. The ore is quoted at from 13s. 6d. to 14s. 6d. per ton.

OTHER METALS

COPPER.—The market closed on Wednesday with a net loss of 8s. 9d. per ton on the week, although prices recovered from the lowest point of £34 7s. 6d., reached on Tuesday. The decline was mainly due to liquidation of certain speculative holdings—under the influence of the silver crisis and the uncertain political outlook. Consumers also continued to buy with reserve. With the reduction in the bull account, the technical position of the market has, however, improved; moreover, consumers' stocks will certainly need replenishing after the close of the year, when industrial activity should show a seasonal expansion. The outlook is therefore good—especially in view of the decline in world stocks; the decline is stated to have amounted to as much as 20,300 tons during November, the unofficial statistics putting stocks at 374,000 tons at the end of last month. Price expectations should not be too bullish, however; for the Rhodesian producers do not favour excessive prices, and American exports continue large. United States exports amounted to 221,495 short tons in the first ten months of this year, against 218,729 short tons in the corresponding period of 1934—when the total was already twice as large as in 1933. Moreover, Canada's output is on a high level and advices from Chile speak of heavy production in that country.

Sales on the London Metal Exchange: 2,650 tons on Monday against 2,425 tons last week; 3,750 tons on Tuesday, against 1,275 tons last week; 1,400 tons on Wednesday, against 1,325 tons last week. Domestic spot was quoted at 8.42½ cents per lb. in New York on Wednesday, against 8.52½ cents a week ago and 8.60 cents a month ago. Wednesday's official closing price for

standard cash in London was £34 13s. 9d. to £34 15s., compared with £35 2s. 6d. to £35 3s. 9d. a week ago. Stocks of refined copper in British official warehouses at the end of last week, at 77,073 tons, show an increase of 496 tons, while stocks of rough copper, at 10,364 tons, show a decrease of 69 tons on the week.

LEAD AND SELLER.—Although there were no outstanding features in the lead and spelter markets during the past week, both metals eased slightly under the influence of the general economic and political situation. World spelter production, according to the Metallgesellschaft, rose during October by over 5,300 metric tons to 115,597 metric tons. The daily rate of production in that month—3,729 tons—was the highest yet recorded since the onset of the depression. Contrary to the recent trend, lead production also rose sharply during October—according to the Metallgesellschaft—to 120,775 metric tons, against only 105,427 metric tons a month earlier. The movement was mainly due to the resumption of work in Mexico and to a jump in United States output. Minor increases were, however, also recorded in Canada, Rhodesia, Australia and Spain.

Sales of lead on the London Metal Exchange: 1,050 tons on Monday, against 600 tons last week; 900 tons on Tuesday, against 850 tons last week; 1,000 tons on Wednesday, against 1,800 tons last week. The New York quotation on Wednesday was 4.50 cents per lb., against 4.50 cents a week ago and 4.50 cents a month ago. The official closing quotation in London for soft foreign for shipment during the current month was £16 15s. per ton, compared with £16 17s. 6d. a week ago.

Sales of spelter on the London Metal Exchange: 550 tons on Monday, against 400 tons last week; 1,050 tons on Tuesday, against 350 tons last week; 750 tons on Wednesday, against 1,700 tons last week. Wednesday's quotation in East St. Louis was 4.85 cents per lb., against 4.85 cents the week before and 4.85 cents a month earlier. Wednesday's official closing quotation in London for "good ordinary brands" for shipment during the current month was £14 18s. 9d. per ton, against £15 2s. 6d. last week.

TIN.—Supplies are still very scarce and, although the market closed on Wednesday below the week's best, a gain of £1 15s. per ton was recorded in the cash price and of £2 7s. 6d. in the three-months' quotation. Activity in American consuming industries is again on the increase and European buyers are also anxious to secure some supplies. Rumours regarding difficulties in connection with the quotas of the Belgian Congo and Siam had no significant influence on the market, since there is little fear concerning the general renewal of the restriction scheme.

Sales of tin on the London Metal Exchange: 175 tons on Monday, against 150 tons last week; 240 tons on Tuesday, against 275 tons last week; 485 tons on Wednesday, against 330 tons last week. The New York quotation on Wednesday was 49.37½ cents per lb., against 49.75 cents a week ago and 51.00 cents a month ago. Wednesday's official closing quotation in London for standard cash was £220 15s. to £221 per ton, compared with £219 to £219 10s. last week. Stocks of tin in London and Liverpool at the end of last week totalled 800 tons, a decrease of 141 tons on the week.

OTHER NON-FERROUS METALS.—Among other non-ferrous metals, aluminium ingots and bars for home delivery were again quoted at £100 per ton. Nickel, for home and export, at £200 to £205 per ton, remains unchanged. Quicksilver, on the spot, was quoted at £12 17s. 6d. to £13 per flask of 76 lbs., the same as last week. Chinese antimony was again quoted at £67 to £68 per ton ex warehouse, duty paid. Chinese wolfram for November-December shipment was quoted at 34s. 6d. to 35s. 6d. per unit, c.i.f., the same as last week. Platinum (refined) was quoted at £7 17s. 6d. per ounce, the same as last week.

TEXTILES

COTTON.—Manchester. —The market has been unsettled, partly on account of the decline in raw cotton prices and partly owing to the important developments relating to the Hoare-Laval peace proposals. Naturally, there is a good deal of nervousness as to what may happen during the next few weeks. Immediately after the publication of the United States Government statistics on the cotton crop, the New York and Liverpool markets had to meet heavy selling, and it is quite evident that the "long" interest factor has been the silver situation, and there is now increased nervousness as to the future of the processing tax and the Bankhead Act. The slump in Egyptian Sakel illustrates the highly speculative character of that market. Some operators have had to meet substantial losses as the decline from the top figure is about 1d. per lb.

It has been an unsatisfactory week for manufacturers of piece goods. No increased activity can be recorded for India, owing to uncertainty regarding the import duties, but some moderate lines have been booked in fancies and specialties, chiefly for Bombay, Karachi and the up-country markets. Some makers have done rather better for the Dominions and the Crown Colonies, there being business in dress fabrics for Australia, sheetings for South Africa and shirtings and coloured goods for West Africa. Some fine cloths have been booked for Scandinavia and Switzerland, while contracts have been arranged in satens for South America. Home trade purchases have been on a restricted scale. The movement is not yet pronounced, but there are signs of looms in some districts running out of work. The yarn market has been generally slow with more irregularity in quotations. Coarse American counts are firmly held, but very little has been done in medium and fine numbers. Contracts worth mentioning in Egyptian descriptions have been in few hands.

COTTON YARN PRICE FIXING.—Although there is still a considerable amount of price-cutting in the yarn section, spinners of coarse American counts have had an agreement on a legal basis for about 15 months, and the movement has achieved success. The Committee has now secured additional support from four more mills; out of 39 mills eligible for membership the legal document has now been signed by the directors of 37 companies. The arrangement has been strongly supported by Mr Frank Platt, the managing director of the Lancashire Cotton Corporation, Ltd., and the minimum prices have not only prevented losses, but have enabled the mills to improve their margins. The original agreement was for 18 months and will come up for renewal in February next, but there seems no doubt but that it will be continued.

JUTE.—Dundee. —There is little fresh business, but spinners and manufacturers are busy with orders and are able to adhere firmly to their prices. In the circumstances, buyers could not be expected to purchase for forward delivery and are awaiting the outcome of events in Calcutta, where the Indian Jute Mills' Association is endeavouring to bring about an agreement with non-members to co-operate in the matter of working hours. The non-member mills in some cases are working 108 hours per week, while the associated mills are working only 40 hours per week, in order to keep supply within the limits of demand. The Mills' Association has threatened that, unless the non-member mills agree by December 31st to curtail their output, all the mills in the Association will increase their production by working 54 hours per week after March 31st next. All are therefore anxiously awaiting further developments, for if the associated mills are forced to declare "war" against their competitors, the enormous increase in production of jute goods would be bound to have a depressing influence on the market.

Prices of raw jute have wavered around recent limits, and for Daisee-2/3 £20 5s. is named for the full group and £20 10s. for good single marks, Shiva being sold at the price on Tuesday, with Daisee-4 at from £18 15s., and Tossa-2/3 at from £21 7s. 6d. and fours at £20 7s. 6d. to £20 10s., December-January. Good First Marks are offered at £23 15s. and Lightnings at from £21 17s. 6d. for Gouti, while Heart Ram is quoted at £20 10s. and Walat £20 5s., December-January. Jute yarns are still very firmly held at 2s. 3d. for common 8-lb. cops and 2s. 4d. for 8-lb. spools, though there is little business to test these rates. Twist is now generally named at 4d., though 3½d. could be done for 3-ply 8-lb., and sacking yarn spinners are very busy, and experiencing a fair demand at 2½d. for 24-lb. welt and 3½d. to 3½d. for 8-lb. chains. Rove is very firm at £20 10s. to £21 for 48-lb. and £16 10s. for 200-lb., and the finer yarns and carpet descriptions are meeting with some little demand at firm rates. The cloth market is quiet, but manufacturers are extremely busy, so much so that they can scarcely cope with deliveries against specifications. Prices remain firm at from 2½d. for 10-oz. 40-in. and 2½d. for 8-oz. Linoleum hessians are firm, but there is little new business, while a very good demand is forthcoming for heavy goods.

GRAIN MARKETS

WHEAT.—The event of the week was the announcement by the Argentine Government, on Friday last, of a sharp increase in its official buying price from 5.75 to 10 pesos per quintal. The announcement, which is further discussed in a Note of the Week, was responsible for a substantial advance on the principal wheat markets of the world. Thus, December wheat rose from 5s. 11d. per cental in Liverpool on Thursday, December 12th, to 6s. 6½d. at the close on Wednesday. It is now clear that Argentine exports to Europe will be on a small scale during the present season. Demand for Australian has been very active this week.

According to the *Corn Trade News*, total arrivals of wheat and flour at principal ports of Europe during the past week were 1,311,000 quarters, against 1,268,000 quarters in the preceding week. On Wednesday last, "December" futures were quoted in Chicago at 101½ cents per bushel, against 95½ cents the week before and 96½ cents a month ago. Quotations in London, Wednesday: No. 1 Northern Manitoba, ex ship, 36s. 3d. per 496 lbs., against 35s. a week ago; No. 2 Northern Manitoba, ex ship, 35s. 3d., against 33s. 9d. a week ago.

FLOUR.—Prices have advanced this week in sympathy with the sharp rise in wheat. Shipments from North America in the past week totalled 109,000 sacks, as against 76,000 in the previous week. Wednesday's London quotations (excluding quota payments) were: Straight run, delivered country, 29s. 6d. per 280 lbs., against 29s. a week ago; delivered London, 28s. 6d. as compared with 28s. a week ago. Manitoba patents, ex store, 28s. 3d. to 30s. 3d., against 27s. to 29s. a week ago. Australian ex store, 22s. 6d. to 23s., against 21s. 9d. to 22s. 3d. a week ago.

BARLEY.—Some advance in quotations has been witnessed this week. "December" futures were quoted at 34½ cents per bushel in Winnipeg on Wednesday, against 32½ cents last week and 33½ cents a month ago. Quotations per 448 lbs. in London on Wednesday were: "English feed" (new) at farm 22s. 6d. to 24s., as against 22s. 6d. to 24s. last week; "English malting" (new) at farm, 30s. to 54s., against 30s. to 54s. a week ago.

OATS.—On Wednesday, "December" futures were quoted at 26½ cents per bushel in Chicago, against 25½ cents a week ago and 27 cents last month. Quotations in London, Wednesday: "English Black" (old), at farm, 22s. per 336 lbs., against 22s. a week ago; "English White" (old), at farm, 22s., against 22s. last week.

WHEAT.—The upward spurt in Chicago, following the announcement of the Argentine Government regarding its buying price for wheat, was not held, and prices closed on Wednesday showing a loss on the week. London quotations are, however, above those ruling a week ago. "December" futures were quoted on Wednesday at 57½ cents per bushel in Chicago, against 58½ cents a week ago and 60½ cents last month. Quotations in London, Wednesday: "Plate," landed, 18s. 6d. per 480 lbs., compared with 17s. 6d. a week ago; "Plate," ex ship (new), 17s. 6d., as against 16s. 6d. a week ago; "Plate," December, 17s. 6d., against 16s. 7½d. a week ago. Yellow maize meal, ex wharf, was quoted at £4 15s. to £5 per ton, against £4 17s. 6d. a week ago.

COMPARATIVE AVERAGES OF GRAIN.—The following table gives the estimated sale of home-grown wheat during the harvest years 1932-33 to 1935-36:—

	1932-1933	1933-1934	1934-1935	1935-1936
Estimated sales of home-grown wheat—				
1 week to December 14.....	Cwts. 262,930	Cwts. 263,443	Cwts. 349,100	Cwts. 352,153
15 weeks to December 14.....	4,220,130	4,888,999	6,443,015	6,547,555
Average price of English wheat per cwt.	s. d. 5 3	s. d. 4 6	s. d. 4 11	s. d. 5 9

The following is a statement showing the quantities sold and the average price of British corn in the past two weeks, and for the corresponding week in each of the years from 1931 to 1934:—

Week ended	QUANTITIES SOLD			AVERAGE PRICE PER CWT.		
	Wheat	Barley	Oats	Wheat	Barley	Oats
Dec. 12, 1931.....	Cwts. 82,018	Cwts. 363,143	Cwts. 52,183	s. d. 6 5	s. d. 8 6	s. d. 7 2
Dec. 17, 1932.....	262,930	364,045	41,099	5 3	7 0	5 8

Dec. 14, 1935.....	352,153	325,391	32,911	5 9	8 2	5 10

AMERICAN WHEAT MARKETS.—The following table shows wheat quotations for selected weeks in 1935, with comparative figures for 1934.

NEAREST FUTURE	Jan. 4, 1933	Jan. 3, 1934	Dec. 13, 1934	Jan. 2, 1935	Dec. 11, 1935	Dec. 18, 1935
Winnipeg (No. 1, Manitoba) —Cents per 60 lb.	46½	65½	77½	82½	83½	85½
Chicago (No. 2 Winter) —Cents per 60 lb.	46½	84½	97½	98½	95½	101½

The visible supply of wheat in Canada amounts to 141,623,000 bushels, against 141,684,000 bushels last week and 123,470,000 bushels in the corresponding week of last year.

OTHER FOODS

BACON.—Bacon has been in steady demand this week and the market has had an active tone. The official quotations (per cwt. for No. 1 Sizable) which formed the basis for dealings on the London Provision Exchange this week were: English, 78s. to 83s.; Canadian, 72s.; Danish, 82s., as against 78s. to 83s., 72s. and 82s., respectively, a week ago. Arrivals in London last week included Danish, 14,251 bales; Canadian, 3,385; Dutch, 2,660; Lithuanian, 1,688; Polish, 2,740; against 13,111, 8,474, 2,024, 1,975 and 2,167 bales, respectively, in the previous week.

BUTTER.—The market ruled steady this week at about previous rates. Quotations (per cwt.) on the London Provision Exchange on Wednesday were: New Zealand, finest salted, 87s. to 88s.; Australian, choicest salted, 86s. to 87s.; Danish, 127s. to 128s.; compared with 86s. to 87s., 86s. and 127s. to 128s., respectively, last week.

CHEESE.—A firm tendency has been displayed this week, with Australian and New Zealand descriptions recording a rise. Quotations (per cwt.) on the London Provision Exchange on Wednesday were as follows: English, finest farmers', 74s. to 80s.; Canadian, finest coloured (new), 56s. to 60s.; New Zealand, finest coloured, 59s., as against 74s. to 80s., 56s. to 60s. and 55s., respectively, last week.

COCOA.—The "spot" quotation in New York on Wednesday was 5½ cents per lb., as against 5½ cents per lb. last week. The London market in Accras has been rather quiet this week. On Wednesday last, good fermented new crop, "December-February," was quoted 22s. 6d. per 250 kilos. c.i.f. Continent, against 22s. 7½d. last week. Last week's movements of cocoa in London were as follows: Landed, 3,913 bags; delivered, for home consumption,

11,179 bags; exported, nil; stocks, 110,705 bags, against 143,904 bags a year ago.

COFFEE.—Although the tone of the New York market has been rather dull, spot quotations are unchanged. The market in London has been quiet and prices show an easier tendency. In New York on Wednesday, Rio No. 7 (cash) was quoted at 6½ cents per lb., as compared with 6½ cents per lb. last week and 6½ cents per lb. a month ago. Movements of coffee in London last week were as follows: Brazilian, landed, 44 cwt.; delivered for home consumption, 28 cwt.; exported, nil; stocks, 12,154 cwt., against 27,856 bags a year ago. Central and other South American, landed, 929 cwt.; delivered, for home consumption, 4,601 cwt.; exported, 1,346 cwt.; stocks, 65,893 cwt., against 72,899 packages last year. Other kinds, landed, 2,120 cwt.; delivered, for home consumption, 5,751 cwt.; exported, 491 cwt.; stocks, 102,013 cwt., against 70,537 packages last year.

EGGS.—With rather short supplies and an active demand, the Tooley Street Market was firm on Monday. At Smithfield Market on Wednesday, English (ordinary packing, Grade I, about 15-15½ lb.) realised 20s. to 21s. per 120, against 19s. to 20s. a week earlier, while Danish (15½ lb.) made 16s. 6d. to 17s. per 120, against 16s. to 16s. 6d. last week.

FRUIT.—According to *The Fruitegrower*, business last week at Covent Garden was steady, but showed no exceptional seasonal activity. Home supplies of apples were very limited and, with a steady demand, Cox's hardened slightly, while American varieties showed little change. Pears were less in demand, but prices were unchanged. Hothouse grapes met a better inquiry, with firm quotations for black and with white inclined dearer. Nuts were a moderate trade at steady prices, except for a decline in walnuts. Oranges were in fairly brisk demand. Supplies from South Africa were limited, and those from Brazil were of poor quality; but arrivals of good quality oranges from Spain sold at fair rates. Lemons were easier. Grape fruit were a slow trade, with heavy stocks.

MEAT.—Demand for beef at Smithfield Market has been good, and chilled hinds have risen in price. Trade in other descriptions has been very fair at about late rates. On Wednesday last, Argentine was chilled hindquarters were quoted at 4s. to 4s. 8d. per 8 lbs., as compared with 3s. 10d. to 4s. 2d. last week. New Zealand frozen mutton was 3s. 4d. to 4s. per 8 lbs., against 3s. 4d. to 4s. a week ago. According to the Smithfield Market official report, supplies during last week amounted to 10,265 tons, an increase of 79 tons on the corresponding week last year. Beef and veal accounted for 5,066 tons, mutton and lamb 2,820 tons, and pork and bacon 1,150 tons, as compared with 4,985, 2,604 and 1,165 tons, respectively, in the same week of 1934.

MILK.—Information relative to the operation of the Milk Marketing Scheme during November, as issued by the Milk Marketing Board, is given in the following table, together with comparable statistics for earlier months:—

	Nov., 1934	Aug., 1935	Sept., 1935	Oct., 1935	Nov., 1935
Regional pool prices* (per gallon)	d.	d.	d.	d.	d.
Northern	14	10	12½	13½	13½
North-Western	14	10	12½	13½	13½
Eastern	14½	10½	13	13½	13½
East Midland	14	10	13	13½	13½
West Midland	13	9½	12½	13	13
North Wales	13½	10	12½	13½	13½
South Wales	14	10½	12½	13½	13½
Southern	14½	10½	13	13½	13½
Mid-Western	13	9½	12½	13	13
Far Western	13	9½	12½	13	13
South-Eastern	14½	10½	13½	14	14
Liquid milk price (per gallon, all regions)	16	13	16	17	17
Manufacturing price (per gallon, average)	6-27	5-73	5-54	6-222	5-804
Total sales under contract	60-28	70-65	66-06	68-56	64-85
For liquid consumption	44-38	45-03	46-01	47-27	45-59
For manufacturing	15-90	25-62	20-05	21-29	19-26

* On account to the nearest farthing.

Accredited producers receive 1d. per gallon in addition to the above prices. Premiums for level deliveries, and for Grade "A" or special services, are paid to the producers concerned in addition to the pool price. Transport charges are payable by individual producers and are deducted from accounts.

PEPPER.—Progress continues to be made with the task of liquidating the surplus stocks of white pepper, and imports of this commodity have practically ceased. Meanwhile, demand for black pepper remains quiet. Wednesday's spot price for Lampong (in bond) was 3½d. per lb., against 3½d. last week. Movements of pepper in London during the past week were as follows: Black, landed, 3 tons; delivered, 9 tons; stocks, 1,512 tons, against 745 tons a year ago. White, landed, nil; delivered, 96 tons; stocks, 13,900 tons, against 12,654 tons a year ago.

RICE.—The spot price of Burma No. 2, cleaned, was 9s. 7½d. per cwt. ex warehouse on Wednesday, as compared with 9s. 7½d. per cwt. a week ago. New crop, January-February, in singles to Continent and U.K. was quoted at 7s. 4½d. per cwt., against 7s. 6d. per cwt. last week. Movements in London during the past week were as follows: Landed, 55 tons; delivered, 292 tons; stocks, 5,252 tons, against 2,513 tons a year ago.

SUGAR.—In New York, spot sugar remains steady at unchanged rates. The London market continues quiet but steady. The spot price in New York on Wednesday was 3-10 cents per lb., as compared with 3-10 cents per lb. last week and 3-40 cents per lb. a month ago. Wednesday's sales of raw sugar in London included

"March delivery" at 5s. 1½d. to 5s. 2d., against 5s. 1½d. last week. The movements of raw sugar at public warehouses in London and Liverpool last week were as follows: Imports, 24,178 tons, against 31,269 in the previous week and 28,989 tons in the same week of last year; deliveries, 15,389 tons, against 16,717 and 14,882 tons respectively; stocks, 213,709 tons, against 204,920 and 133,467 tons respectively.

TEA.—The following table shows the average prices (compiled by the Tea Brokers' Association) of tea sold at Mincing Lane on Garden Account in recent weeks:—

Week ending	Northern India	Southern India	Ceylon	Java	Sumatra	Africa	Total
Dec. 13, 1934	d. 11-35	d. 11-34	d. 12-82	d. 10-18	d. 9-38	d. 10-81	d. 11-61

The quantities catalogued for this week's auctions comprised 43,837 packages of Indian and 18,046 packages of Ceylon tea. The rather smaller offering of Indian grades again met a strong market. For Ceylon descriptions demand was quieter, but prices were maintained, with the exception of fannings, which were mostly

easier. Export inquiry was good and leaf grades were generally dearer. No further auctions will be held until January 6, 1936.

VEGETABLES.—At Covent Garden last week kitchen vegetables showed a generally hardening tendency, according to *The Fruit-grower*, owing to the colder weather. All greenstuff was dearer; cauliflower was rather short, but a good supply of Brussels sprouts was available. Beans were firmer, while onions are expected to become dearer. Celery was plentiful and prices remained moderate. Cucumbers were in limited supply. Potatoes arrived in somewhat smaller quantities, but demand at the various London markets was fair and prices continued to rise. Best siltland King Edward sold at 7s. 6d. to 8s. per cwt. at the Borough on Tuesday, compared with 6s. 6d. to 7s. 6d. last week.

MISCELLANEOUS COMMODITIES

VEGETABLE OILS AND OLSEEDS.—A steadier and more confident feeling prevails. The decision of the Argentine Grain Regulating Board to increase the minimum price of Plate linseed to 14 pesos caused shippers' prices to be marked up accordingly. After the first flush, prices settled down and business for January shipment has occurred in view of the strong wheat situation in Argentina. Shipments at the River Plate ports are heavier. The quantity now afloat for Europe is 151,500 tons (including 21,600 tons from

India), 6,000 tons less than in the previous week; and for the United States and Canada 40,200 tons against 18,200 tons a year ago. Reports of the growing crop in Argentina continue favourable. Cottonseed is steady but in poor request. Black Egyptian for shipment in the New Year is offered at £6 7s. 6d. to £6 10s.

Linseed oil is dearer, more in sympathy with seed than in consequence of the increase in the import duty on foreign oil, which had been for some time expected, and therefore had less effect on prices than might have otherwise been the case. Current price of raw oil ex Hull mill for December delivery is £27, and for January-April £27 5s. per ton (naked). Cotton oil is in some demand for export and is steady. Egyptian crude ex Hull is offered at £26 and refined at £28 10s. per ton. Oilcakes are in good demand and steady.

RUBBER.—There have been no events of outstanding interest in the rubber market. A steady trade demand, coupled with some reserve on the part of sellers has, however, brought about a further slight improvement in quotations this week. The spot price in New York on Wednesday last was 13½ cents per lb., compared with 12½ cents per lb. a week ago and 12½ cents a month earlier. Wednesday's official closing price for standard ribbed smoked sheet in London was 6½d. per lb., as against 6½d. on the corresponding day last week. In forward positions, business has been done at 6½d. for April-June shipment, as against 6½d. a week ago. Stocks in London and Liverpool at the end of last week totalled 163,636 tons, against 165,526 tons a week earlier. A year ago stocks amounted to 132,499 tons.

THE Frankfurter Zeitung

Founded in 1856

The newspaper for home
and foreign news

The Frankfurter Zeitung has a wide Home circulation and in addition is read throughout the world for its up-to-date and reliable survey of important economic and political events in Germany and all other countries.

Surveys are made by its own correspondents in all the principal capitals. The Frankfurter Zeitung considers the English point of view on various subjects. There is therefore an ever-growing demand in England for the Frankfurter Zeitung and its various supplements.

INDUSTRY AND NATIONAL DEFENCE

As next week is broken by the Christmas holiday, we shall be temporarily discontinuing articles in the above series.

The series will recommence in the New Year (January 1st, 2nd and 3rd) with a full analysis of the position and prospects of

VICKERS AND CAMMELL LAIRD

In the ten articles of the series to date we have covered the probable scope and division of expenditure on the Air Force, Navy and Army, the earnings prospects for the Aircraft Companies, and also for some of the smaller ancillary armament firms.

From January 1st onwards we shall deal individually with the outlook for the big companies such as

(With this Issue appears our Monthly Trade Supplement. Owing to the Christmas Holidays our usual table of London Active Securities and the section on Commerce and Trade have been omitted in this Issue)

LOOKING AHEAD

THE debate in the two Houses of Parliament on the 19th of this month addressed itself both to the past and to the future, and it was concerned with a domestic as well as an international crisis. In disposing of the domestic crisis, and also of the past chapter of history, Parliament has done its work thoroughly. The "Anglo-French peace plan" has been certified dead, and we now have an assurance—which rests on the strength of public opinion even more than on Mr Baldwin's words—that there will be no attempt to revive it, or anything remotely resembling it. Sir Samuel Hoare has fallen—the first and probably the least guilty, but certainly not the last or the most sensational, of the casualties which the crisis is going to inflict upon the *disperata* squadron of European statesmen. Therewith, our own ten days of national humiliation are over.

But do not let us be tempted, on that account, to relapse into the comfortable illusion that we can rest, inert and secure, upon the *status quo* which the Government's recantation may seem at first sight to have restored. For there was another aspect of the debate which was concerned, not with home affairs, but with the international arena, and looked, not to the past, but to the future.

The relatively comfortable but utterly unrealistic *status quo* is like a cockleboat that has been ground to pieces between two icebergs. On the one hand we have the amendment to Mr Attlee's motion which was moved by Lord Winterton, accepted by the Government, and adopted by a majority of the House of Commons. This amendment binds the Government to remain faithful to the vehemently proclaimed policy of the nation. "Any terms for settling the Italo-Abyssinian dispute," it declares, must "be such as the League can accept." And it is certain that the Government will henceforth be held to this reaffirmation of its previous pledges by a lively

recollection of the force of the national indignation at its recent attempt to adopt an easier, but dishonourable, option. Thus, country and Government together are pledged, and re-pledged up to the hilt, to accept no settlement that does not uphold the Covenant. They are pledged to vindicate the collective system of security, and prevent the perpetrator of aggression from profiting from his crime at the expense of his victim.

This, now doubly endorsed, national will and determination is a hard fact that is about to make history. Another is the fear which was expressed, in his speech on the Thursday before last, by Sir Samuel Hoare:—

More than once in our history (the late Foreign Secretary reminded the House) we have given—and rightly given—all our sympathies to some threatened or downtrodden race; and, because we have been unable to implement the effect of those sympathies, all that we have done has been to encourage them; with the result that, in the end, their fate has been worse than it would have been without ourselves.

Is our conduct now going to have the same disastrous outcome for Abyssinia? In repudiating, as a scandal, a "peace plan" that would have left the Emperor some four-sevenths of his kingdom, are we heading for "a moment of disillusionment" in which we shall find that we have allowed Abyssinia to be "destroyed altogether as an independent State"? There are many who remember how, both during and after the Great War, we "let in" and "let down" the Armenians. We encouraged them to compromise themselves hopelessly with the Turks. We relieved our own feelings by rejecting all half-measures for Armenian independence, in the spirit in which we have just rejected the East African "peace plan." And so, while we indulged our sentiment, we led the Armenians to their destruction. Nor, indeed, was

this the first time that the moral indignation of the British people had merely encouraged a wronged people to immolate themselves upon the altars of alien oppressors. For these same wretched Armenians were encouraged to resist the Turks in the pre-war era by the righteous wrath of the British public. And, for them, with dire results. Is there to be the same final reckoning between the British people and the Abyssinians?

Sir Samuel Hoare was profoundly right to raise this question, but we can reply without hesitation that the answer is in the negative. In the case of the Armenians, Britain assumed a moral responsibility which had no counterpart in the realm of law and contract. In the case of the Abyssinians, our equally heavy British moral responsibility is brought home to us, in terms which we cannot evade, by our solemn and precise contractual obligations, under the Covenant, to a country which is a fellow-member of the League. It is our pledges under the Covenant, reinforcing the voice of our conscience, that have compelled us to repudiate the "peace-plan." These same pledges now forbid us to content ourselves with the sentimental relief which this gesture has brought. The Covenant does not allow us simply to relieve our feelings about H.M. Government and M. Laval and Signor Mussolini, and then leave Abyssinia to her fate. The Covenant pledges us to sever all our economic relations with a constitutionally certified aggressor, completely and immediately. We have so far taken the feeble and more dangerous course of implementing this duty piece-meal; but we have now also flatly refused to take refuge from the further execution of our duty by becoming accomplices in a shameful betrayal.

The alternative to the discredited and discarded peace plan is not to stand at ease and fall out, but to take the next step forward. This, of course, is the step which the peace plan was deliberately intended to forestall and prevent. We are back again face to face with the vital oil sanction, and with the threat of war which Signor Mussolini has breathed—probably without knowing, himself, whether he means business or not. To impose the oil sanction is part of our covenanted pledge; for it does not become a military sanction through Signor Mussolini's choosing to make it a *casus belli*. It is one of those strictly economic sanctions which are compulsory, and not optional, under Article XVI. And this brings us to Mr Neville Chamberlain's speech, which was much the most important of the forward-looking speeches in the debate.

In answering Dr. Dalton's question whether we had asked the other Powers besides France what their attitude would be in case of an attack upon this country by Italy, and whether any of them had refused assistance, Mr Chamberlain remarked that, if there were danger of attack, this attack must be in the Mediterranean. All the States-members, therefore, were not asked, but only those bordering on the Mediterranean. The attitude of France was by far the most important to us; and "from the Powers we asked, and from France in particular, we had the most complete and loyal assurance that they would come to our aid if we were attacked by Italy." The Government, he continued, had had a good deal of information from various quarters that, if they were to proceed with oil sanctions, Signor Mussolini might depart from his declared intention of replying to economic sanctions by measures of a non-warlike character. But this, Mr Chamberlain announced, need not necessarily retard the imposition of oil sanctions. If the League should decide that oil sanctions should be applied and that they could be effective, and the British Government were satisfied that "all the members of the League who matter are not only ready to give us assurances, but are prepared to take their part in meeting an attack which might be sudden and unexpected, then we, too, are prepared to play our part and to agree to the imposition of an oil sanction."

Here is a fair, open and honourable offer, and we believe that it will be accepted. We believe that those assurances will be implemented. We believe that the oil sanction will be imposed. We believe that it will be effective. We believe that, at last, the rule of law and justice will be vindicated. This, and this alone, will bring Signor Mussolini to his senses; and by so doing will illumine with a ray of hope the darkest corners of the world of international affairs.

THE FATEFUL YEAR

THE world well knows when "the post-war epoch" began. It does not yet know if that epoch is ended. Many years after 1935, however, when the history of that eventful epoch comes to be written, we can be tolerably certain that the year now drawing to its close will mark a kind of chronological watershed. In 1935, apart from a host of lesser occurrences which in any normal year would have passed for great occasions, three outstanding events have limned "the shape of things to come."

The first in order of time was the peaceful return of the Saar territory to Germany, according to the plebiscite held in January under League auspices and in strict conformity with the Treaty of Versailles. Without the unique guarantees of order and impartiality under League administration—to secure which Britain as well as other non-interested Powers sent military contingents—an occasion already embittered by traditional animosities might have acted as tinder for a conflagration.

The second great event of 1935 was more disquieting, more sinister in its implications. On March 16th Herr Hitler, pleading the abortive Disarmament Conference of 1932-34 in aid, tore up the disarmament clauses of the Versailles Treaty by decreeing compulsory military service. This was the first overt breach in the juridical foundations of post-war Europe—for, since 1919, Europe's affairs had been regulated by scrupulous adherence to the provisions of this great international instrument. Herr Hitler's act evoked the Stresa Conference between Italy, France and Great Britain, at which, on April 14th, the three Governments condemned the German action. Three days later, at Geneva, the League Council unanimously endorsed this protest at the unilateral rupture of solemn engagements. Not only did the League protest; but on French initiative a sub-committee of experts was appointed to advise on the technical economic measures which might be necessitated by the automatic entry into force of Article XVI of the Covenant, the "sanctions article," against a State defaulting on its engagements.

The third great event of 1935 was to prove the most fateful. A petty border affray at the wells of Walwal occurred in December, 1934, which in the sequel shattered the "Stresa front." For this tiny incident served as a pretext to Signor Mussolini for a war of aggression against Ethiopia; and this in turn drove a wedge between France and Great Britain over collective security, as envisaged in the League Covenant.

On January 7th, in Rome, M. Laval concluded his far-reaching Franco-Italian *entente*. The French gave Italy a good deal of desert south of Libya; ceded to them a block of French shares in the French railway from Jibuti to Addis Ababa; and finally regulated the status of the Italians in Tunis—a matter which had always been the cause of acute tension between the two countries. In return, Italy agreed with France to maintain Austrian integrity, if necessary by force of arms; and, as an earnest of her friendly intentions towards France, moved certain Italian divisions from the French frontier, thus allowing the French in their turn to denude their Italian border and to strengthen the forces on their German front. At the time it was freely reported that M. Laval had also promised the Duce that France would "disinterest herself" in there. M. Laval has always stoutly denied that he meant "a free hand" for military measures. But the bald history of the last nine months of diplomatic bustle shows that M. Laval has proved himself less tenacious of League principles than of his new-found Italian friendship.

Scarcely a single observer imagined in January the ultimate consequences either of an Italian war of aggression upon Abyssinia, or of the Franco-Italian agreement of January 7th. For from these two occurrences have sprung events which are now pregnant with terrible possibilities. In the first place, the aggressive war upon which the Duce has wantonly embarked has brought the League of Nations itself, and therewith the entire post-war system of collective security, to its acid test. The chronicle of events is well known. At the end of the year came the amazing crisis in British politics as a result of an "arrangement" put forward in Paris by M. Laval and agreed by Sir Samuel

Hoare. Finally, the *dénouement* of the 1935 act of the drama was Sir Samuel Hoare's resignation, upon the Paris "arrangements" being disowned by public opinion and—somewhat tardily—by the British Cabinet; and the advent of Mr Eden as Foreign Secretary.

But there have been lesser events, too. On February 3rd there was the Anglo-French Memorandum on European Security, which aimed at substituting for Part V of the Versailles Treaty—the part limiting Germany's armaments—a new and negotiated agreement. This hope was shattered; for the British "White Paper" followed; and Herr Hitler's advisers knew that Germany's armaments had already progressed too far to be screened further. The Anglo-French Memorandum also proposed a Western Air "Locarno" Pact, and a Security Pact for Eastern Europe as a corollary, which would have greatly eased the tension in Europe. Again, however, the British armaments programme followed so swiftly that Sir John Simon's and Mr Eden's exploratory visit to Berlin was postponed. The Eastern Pact idea proved abortive owing to the German and the Polish refusals to conclude anything but bilateral non-aggression pacts with their neighbours.

Scarcely had the ink dried on the Stresa and Geneva condemnations of Germany's breach of the Versailles Treaty than the British Government concluded a bilateral agreement with Germany, setting a limit to Germany's navy at 35 per cent. of the total British naval strength. As the result of this agreement Anglo-French relations cooled; and this made it more difficult, later on, to rally M. Laval to a hundred-per-cent. League policy against Italy over the Abyssinian dispute.

Finally, towards the end of the year, the delegates of the American, Japanese, French, Italian and British Governments, together with representatives of the British Dominions, assembled in London to begin the onerous task of finding a successor to the Washington and London Naval Treaties, in order to avoid the outbreak of a lively race in naval re-armament. This task had not been rendered easier by the foreign policy of the Japanese Government, which, all the time that the West had been embroiled over European and African problems, had been dictated by the Japanese Army chiefs. These, in their turn, had been steadily absorbing, *in situ*, larger and larger tracts of Northern China and Mongolia. General Smuts' "cloud in the East, no larger than a man's hand," is steadily looming larger on the horizon.

Thus, in 1935 we have witnessed great revolutions in world affairs. First there has been the revolution in French foreign policy. M. Laval has largely thrown overboard the post-war French alliances, and France's loudly-protested fidelity to League principles, in exchange for Italian friendship. This has had the effect of ranging the Little Entente and Balkan Entente States, together with the Scandinavian countries, Holland, Belgium and Soviet Russia, behind the British. In the second place we have had a reorientation of British foreign policy. This revolution has been solely due to the pressure of freely-expressed

public opinion. Last summer 11½ millions voted for a League policy in the famous "Peace Ballot"; and these greatly assisted the National Government in the General Election of November 14, which was fought largely on foreign policy. Thirdly, however, we have harvested the combined results of these two revolutions in foreign policy. We have been compelled to witness a world of distraught States, rushing hither and thither in search of any expedients to attain national "security."

The high hopes raised by the Saar settlement and the Franco-Italian *entente* in January, and by the Anglo-French offer to Germany in February, were dashed to the ground by Herr Hitler on March 16th. At the close of the year German re-armament still spells the substitution of an arms race for all hopes of disarmament; the outcome of the Italo-Ethiopian dispute still lies on the lap of the gods; and, in the Far East, Japan, undeterred in her designs on China now that Europe is so preoccupied, is making hay while her rising sun shines. This is a sorry ending to a year which began so auspiciously. Yet one thing stands out for our comfort. It is the supreme merit of the League of Nations and its Covenant that it offers a simple principle of collective security, behind which all can rally and to which all must contribute. Sir Samuel Hoare did a great service to civilisation when, in September, on behalf of H.M. Government, he gave the nations a lead towards "peace by collective effort." The League is now being tried out, in action against an aggressor, for the first time. If 1936 sees the victory of collective reason and collective effort in restraint of wanton aggression, mankind will be better able to sleep sound o' nights; and the dark days of 1935 will not have been passed in vain.

BRITAIN'S EXPANDING INDUSTRIES

A GRADUAL transfer of labour from the basic manufacturing industries to the "secondary" trades, and to the provision of services, is the natural accompaniment of a rise in the general standard of living—and of the technological progress that makes that rise possible. Such a transfer has been proceeding steadily in this country for a long period, and it is clearly discernible despite the cyclical disturbances of the last five years.

The Ministry of Labour publishes annual figures of the distribution by trades both of the insured and the employed population. In the 12 years between July, 1923, and July, 1935, the total insured population increased by 17 per cent. Some expansion in the insured population was recorded in each separate group of trades, with the single exception of "mining and quarrying"; but the "manufacturing" group increased only by 5.7 per cent.

The same story is told in an even more illuminating form by the figures of actual employment. The following table gives the total of persons employed in the different groups, as a percentage of the total of persons employed

throughout the country, during a succession of years between 1923 and 1935:—

Industry Group	Percentages of the Total Number of Insured Persons in Employment in different Industry Groups, at the end of June				
	1923	1929	1932	1934	1935
Fishing	0.2	0.2	0.2	0.2	0.2
Mining and Quarrying	12.8	8.9	7.0	6.5	6.5
Manufacturing	49.3	49.4	45.9	47.0	46.9
Building and Contracting	7.2	8.2	8.2	8.7	9.1
Transport and Distribution	18.2	20.9	24.2	23.2	22.9
Gas, Water and Electricity	1.6	1.4	1.6	1.7	1.6
Miscellaneous Service	4.8	5.7	6.7	6.8	6.9
Banking, Insurance, etc.	2.1	2.0	2.3	2.3	2.3
National and Local Government	3.8	3.3	3.9	3.6	3.6
Totals	100.0	100.0	100.0	100.0	100.0

The most marked general trend since 1923 is the relative decline of mining and manufacturing, and the relative growth of building, transport and distribution. Indeed, the comparative importance of the demand for labour of the mining and building industries has been completely reversed. Nevertheless, there has been a distinct tendency for the shift in relative importance to slow up in the recovery years since 1932. Depression hits the heavy industries hardest, and "manufacturing" consequently shows a greater relative revival in years of cyclical recovery.

In order to analyse these general movements in more detail we may accept the Ministry of Labour's division of the national economy into expanding and contracting industries. An "expanding" industry is one employing more persons in June, 1935, than in June, 1923, and a contracting industry one employing less. It is impossible to make an exact quantitative comparison between years before and after 1927 because of a change in classification; but with the help of the Ministry's index number a general comparison can be made. If we adopt this method, we can show in the following table the shifts in employment in the most important "contracting" trades:—

Industry	(INDEX NUMBER. JUNE, 1923=100)								
	Number employed in June, 1935	1925	1929	1930	1931	1932	1933	1934	1935
Coalmining	638,502	75.8	74.0	69.2	56.8	52.7	54.3	53.0	54.3
Boots and shoes	113,751	100.6	93.1	89.9	87.7	85.6	98.1	89.4	90.6
General engineering	460,420	103.9	105.8	98.7	81.6	77.3	78.4	87.7	91.0
Cotton	344,100	117.7	109.0	75.1	74.4	79.8	85.2	81.9	78.4
Iron and steel	123,992	88.1	89.6	78.8	54.5	54.0	62.7	79.2	77.0
Woolen and worsted	188,578	81.7	85.2	75.3	66.4	70.7	82.2	74.9	78.2
Shipbuilding and ship repairing	89,540	103.6	108.9	97.5	58.3	46.4	45.3	55.5	61.5
Dock, harbour, etc.	113,646	92.5	87.9	83.7	79.1	83.8	82.5	86.7	85.5
Railway (non-permanent)	128,013	88.3	76.1	74.5	72.0	65.6	60.4	69.9	73.8
National Govt.	106,787	91.7	72.5	67.2	71.6	69.9	64.3	63.5	69.6

The influence of recovery is sharply apparent. Even among the "contracting" trades there were increases in employment between 1934 and 1935. Coalmining actually recorded a slight rise; though it still remains, with 54.3 of the 1923 employment figure, the most "contracted" of any industry in the Ministry's list—with the exception of "carriages and carts" (52.9) and pig-iron (51.6). The industries which contracted further during the year included cotton and, curiously enough, iron and steel (steel melting and iron puddling, iron and steel rolling and forging). Substantial recovery, however, was achieved by general engineering, woollen and worsted, shipbuilding and railway service.

Continued revival is also apparent among the "expanding" industries, most of which have advanced further this year. "Electric Cables" now employs over twice as many persons as in 1923; and the trade which actually heads the Ministry's list of increases is another electrical one, "electric wiring and contracting" (313.2). Substantial advances are also shown by motors, furniture, the metal and food industries, building, transport, hotels, etc., and professional services. The fact that employment in building has increased by something like 240,000 in the last three years shows to what extent the general recovery of employment has been dependent on the housing boom. In the distributive trades there has been a surprising, though only fractional, relapse this year, after a series of uninterrupted gains. Nevertheless, the increase in employment in the distributive trades since 1923 is still around 600,000, and equals the whole of the decrease in coalmining. It is

noteworthy, however, that this year distribution, our chief "expanding" industry, shows a loss, and coalmining, our chief "contracting" industry, shows a gain. The following table shows the detailed changes in the chief "expanding" industries:—

Industry	(INDEX NUMBER. JUNE, 1923=100)								
	Number employed in June, 1935	1925	1929	1930	1931	1932	1933	1934	1935
Electric cables, etc.	130,689	116.4	139.3	146.6	144.4	158.5	168.0	189.3	203.1
Industries not separately specified	120,114	113.6	130.4	126.8	124.4	125.8	134.4	150.0	153.8
Motors, etc.	257,029	116.4	134.4	125.2	115.5	114.4	127.9	143.2	149.9
Furniture, etc.	121,683	110.5	135.2	134.2	130.8	126.9	130.6	140.9	145.1
Metal industries	213,541	110.1	123.2	118.6	111.4	112.6	123.2	136.6	148.7
Food industries	110,993	108.0	122.0	120.7	120.0	130.2	131.2	131.8	131.8
Hosiery	102,193	106.0	121.2	110.7	109.1	118.9	121.3	126.1	124.2
Printing, etc.	255,711	107.9	119.7	122.2	120.1	122.1	123.0	122.5	121.9
Drink	98,701	113.4	111.7	109.3	107.7	101.7	106.8	108.8	108.4
Tailoring	186,198	106.0	109.9	107.9	109.5	107.5	110.9	107.0	107.5
Bread, etc.	152,706	90.9	96.2	97.5	97.4	100.3	104.5	106.7	108.4
Public works	138,194	125.1	136.0	146.7	213.5	188.0	159.6	154.7	159.7
Building	849,576	112.6	126.8	121.8	117.9	106.2	118.8	132.5	141.5
Tramway & bus	180,438	110.2	147.5	153.8	162.2	167.0	168.2	170.2	176.3
Distributive	1,799,371	116.9	136.9	140.0	144.3	149.0	153.5	155.4	155.3
Road transport	180,202	113.2	136.0	135.3	141.7	138.5	139.7	147.0	150.6
Hotels, etc.	372,747	117.6	136.3	136.0	142.2	141.8	149.8	156.7	162.9
Professional services	145,438	105.9	115.6	119.3	123.3	126.2	131.9	138.0	142.2
Local govt.	294,903	104.7	120.1	132.2	138.2	135.9	138.2	139.6	139.8

The total of persons employed in all "expanding" industries in June, 1935, was 7,930,405, an increase of 40 per cent., or rather over 2,100,000 persons since 1923. About 175,000 persons a year have consequently been absorbed into employment in the "expanding" industries in the last 12 years. The total employed in all "contracting" industries in June, 1935, was 3,123,595, a decrease of 26.2, or rather over 1,000,000 since 1923. And the total employed in all industries was 11,054,000 in June, 1935, an increase of 11.7 per cent., or about 1,000,000 persons since 1923. During these 12 years, therefore, which cover most of the ups and downs of the trade cycle, the broad picture is not one of a steady discharge of workers from all industries owing to technological progress. It is rather one in which the "expanding" industries have absorbed into employment a number of persons equal to (a) all those losing employment in industries suffering a fall in demand; (b) all those losing employment as a result of technological progress; and (c) 1,000,000 additional persons. The total insured population, however, has increased by about 1,900,000 during the 12 years; so that we are left with about 900,000 more unemployed at the end of the period than the beginning.

How far have the 2,100,000 persons absorbed into the "expanding" industries been actually transferred from the "contracting" industries, and how far have they been drawn from the increase in insured population? We can assume that something like 200,000 must have been transferred from the "contracting" industries; since even if the increase of 2,100,000 in the "expanding" industries included the whole 1,900,000 increase in insured population, there would remain 200,000 to come from another source. Agricultural labourers, further, are uninsured, and any agricultural labourer finding employment in the "expanding" industries in the last 12 years would appear in the official figures as emanating from an "increase in the insured population."

Would it be true to say, however, that apart from the above 200,000, the 800,000 others who have lost employment in the "contracting" industries have merely remained unemployed there? Some light is thrown on this question by a special inquiry recently conducted by the Ministry. This shows that the "net transfer" of insured persons away from the coalmining industry in 1934-35 was about 20,000 (of whom 10,000 entered the building industry). Between 1923 and 1935 the insured population in the industry fell by about 300,000, or about 25,000 a year. We may take it therefore that about 20,000 to 25,000 persons have been leaving the coal industry every year; both as a result of individual transfers and as a result of decisions by boys who might otherwise have entered it not to do so. But the total decrease in employment in the coal industry in these years was about 600,000, or 50,000 a year. It seems reasonably safe to assume, therefore, that about half of the persons losing employment in coalmining have actually transferred to other trades, while half have remained unemployed.

To apply the same test to other industries is a little more difficult. For employment in iron and steel, shipbuilding and cotton has been rising since 1932. Between 1923 and

1932, however, there was a decrease, in shipbuilding, of 30.2 per cent. in the insured population, and 63.6 per cent. in the employed population; in iron and steel of 17.7 per cent. and 46 per cent., respectively; and in cotton of 7.4 per cent. and 20.2 per cent., respectively. In general, therefore, we may not be far wrong if we assume that of the 2,100,000 persons absorbed into employment in the expanding industries, about 500,000 have actually been transferred from the contracting industries and about 1,600,000 have been drawn from the increase in "insured population."

NEW CAPITAL IN 1935

To those actively engaged in the London new issue market, the year 1935 has been satisfactory and not unprofitable. Under the stimulus of continuing cheap money, there has been a steady flow of prospectuses, whose quality, by general admission, has been somewhat above the average. After a brisk half-year, the pace slackened perceptibly in the third quarter on the intrusion of the Italo-Abyssinian crisis. Before the end of the year, however, the Treasury's re-intervention, as a borrower on unexpectedly favourable terms, restored at least an appearance of market confidence, and the year closed with an approximation of its opening strength.

Public issues, as analysed in the *Economist's* regular weekly computations, fall into two main classes—offers for conversion of existing obligations and offers involving subscription of new money. Conversion issues reached a higher total in 1935 than in any year since 1928, apart from 1932, when the figures were swollen by the Treasury's conversion of nearly £2,000 millions of 5 per Cent. War Loan. The year's aggregate was £312.2 millions, against £241.9 millions in 1934 and £223.1 millions in 1933. These figures, however, include British Government conversion issues of £204.0 millions, £105.0 millions and £50.8 millions respectively. It is clear that the pace of conversion issues by other borrowers—including British industrial companies—has perceptibly slackened:—

CONVERSION ISSUES BY OTHER BORROWERS THAN THE BRITISH GOVERNMENT

	1933	1934	1935
(Million £)	172.3	136.9	108.2
100	79½	63	

Since the amount of "callable" stock bearing high interest rates is limited, the benefits of cheap money are likely, henceforth, to accrue mainly to "new" rather than to "old" borrowers. Our estimates of total "new money" issues are grouped under two headings. The first comprises offers of all kinds made by prospectus (including increases of capital by existing companies), while the second is concerned with offers by way of a Stock Exchange "introduction." The former group includes all issues by the British Government, which can scarcely be omitted from any computation, in view both of their magnitude and their moral effect on the market. Their aggregate, however, varies so considerably from year to year as to make the total new issue figures misleading as a guide to activity in the market as a whole. We show below, therefore, for every year since 1929, first, the aggregate totals for all issues and secondly, the figures exclusive of British Government borrowing:—

TOTAL CAPITAL INVOLVED IN "PROSPECTUSES" AND "INTRODUCTIONS"

(Prospectus Figures at Issue Prices; "Introductions" at Opening Stock Exchange Quotations)

(Million £)

Year.....	1929	1930	1931	1932	1933	1934	1935
Amount.....	328.8	291.7	111.0	204.5	283.8	211.4	281.5

TOTAL (EXCLUDING BRITISH GOVERNMENT ISSUES)

Year.....	1929	1930	1931	1932	1933	1934	1935
Amount.....	263.4	228.1	101.3	101.8	133.0	167.3	193.5
1929=100	100.0	85.8	38.5	38.7	50.5	63.5	73.5

Sun Life Assurance Company of Canada

(Incorporated in Canada in 1865 as a Limited Company)

The Company has been rendering service to the public in Great Britain for more than 41 years by enabling prudent men and women to safeguard their own and their families' future, through comprehensive Life Assurance and Annuity plans.

Total New Business in 1934 in Great Britain and Ireland

£7,000,000

Total Assurances in force at November 15th, 1934, in Great Britain and Ireland

£67,000,000

H. O. LEACH (General Manager), 2, 3 & 4 COCKSPUR ST., LONDON, S.W.1

The volume of new borrowing (excluding British Government issues), fell in 1931 and 1932 to little more than one-third of its dimensions in 1929. It has been steadily recovering, however, during the last three years, and is now approaching a level a little less than three-fourths that of 1929. Although the total new capital involved in Stock Exchange "introductions" is slowly increasing (it was £45.4 millions this year, against £42.3 millions in 1934 and £39.0 millions in 1933), much the larger part of all new offers is still made direct to the public or to shareholders. The amount and destination of this "public" money, in every year since 1928, are set out in the next table:—

TOTAL "PROSPECTUS" BORROWING (Million £)

Calendar Years	British				Empire	Foreign	Total Issues
	Govt.	Home Corps.*	Others	Total Home			
1928	83.9	14.9	164.8	263.6	63.2	42.3	369.1
1929	65.4	8.3	124.3	198.0	61.0	26.2	285.2
1930	65.6	41.7	63.3	170.6	61.4	35.7	267.8
1931	10.7	8.0	35.8	54.5	38.5	9.1	102.1
1932	102.7	28.8	31.6	163.1	25.5	0.3	188.9
1933	150.8	24.5	34.9	210.2	29.2	5.4	244.8
1934	44.1	36.1	57.5	137.7	29.9	1.5	169.1
1935	88.0	51.1	81.6	220.7	15.2	0.2	236.1

* Including county and public board loans.

The total for 1935, under all headings, was £67.0 millions higher than in 1934, and almost equal to the figures for 1933. Although this year's aggregate is less than two-thirds that of the boom year, 1928, it is only 14½ per cent. below the average for the active years 1929 and 1930. Such comparisons, however, do not tell half the story, for certain far-reaching changes in the distribution of new borrowing have occurred in the meantime. New British Government borrowings (including amounts used to reduce floating debt, but excluding conversion issues), though they have fluctuated widely from year to year, have recently been less considerable than in 1932 and 1933—the first two years of the cheap money regime. The total of "home corporation" issues, on the other hand, has tended to increase as low-interest rates have become established, and is running at a much higher level than in the 1928-29 period. The figures include borrowings on behalf of "public boards," and are swollen in 1935 by the issue of £32 millions by a Treasury company on behalf of the participants in the London railways electrification scheme. Total borrowings by "others" are a near approximation to the volume of new capital raised publicly by home industry. Although this year's aggregate is more than twice that of any one of the three years of depression, 1931-33, it is only 56½ per cent. of the average for the active years, 1928-29. The figures strongly support the view that trade activity, rather than the level of interest rates, is the chief determinant of the volume of new industrial borrowing.

The latest figures under the headings of "Empire" and "foreign" borrowing stand in sharp contrast to those of domestic capital issues. Not only are they far below the

levels of the years immediately preceding the depression; they have shown no tendency to recover in the last year or two. In 1935, the total capital raised publicly for employment overseas was only 6½ per cent. of the total for all purposes, against 28½ per cent. in 1928 and 30½ per cent. in 1929. During the four years in which the Treasury "embargo" on foreign lending has been in force, issues for oversea countries outside the Empire have shrunk to vanishing point. It is clear that present low interest rates are operative in a market which is limited, partly by prevailing economic conditions and partly by deliberate Treasury policy, mainly to domestic borrowers. The pendulum has, indeed, swung violently since 1913, when over 80 per cent. of the total new capital included in our analyses was destined for use abroad.

What proportion of the whole has been raised, in recent years, by companies, as distinct from governments, corporations, etc? The figures are shown below:—

TOTAL "COMPANY" ISSUES (BY PROSPECTUS)
(Million £)

	1928	1929	1930	1931	1932	1933	1934	1935
Deb.....	46.4	29.8	49.7	23.9	14.8	17.3	14.1	25.2
Pref.....	45.1	31.5	15.8	6.9	12.8	12.7	21.5	31.7
Ord.....	111.2	116.0	22.1	20.3	6.0	10.0	44.9	37.3
Total	202.7	177.3	87.6	51.1	33.6	40.0	80.5	94.2

Company issues in 1935 represented only 40 per cent. of the total new "prospectus" borrowings under all categories. Of the year's aggregate of approximately £94 millions, debenture issues accounted for 27 per cent., preference shares for 33½ per cent. and ordinary shares for 39½ per cent. The table affords no support whatever for the suggestion that British companies are tending markedly to increase their debenture indebtedness under a low interest regime. Indeed, the average amount raised by "new" debentures in the last three years has been less than half that of the 1928-30 period when rates were high. A more noteworthy result of current conditions has been the return to semi-popularity of the preference share, which, four years ago, had almost disappeared from the new issue market. The detailed tables given on page 1332 show that the largest company borrowers last year were mining, exploration and finance companies, which accounted for 28 per cent. of the total company issues by prospectus. Public utility concerns (electricity, telegraphs, gas and water) obtained 14 per cent. of the total raised, and the steel and engineering group came third with 6 per cent. of the whole. Particulars of the largest individual issues will be found in our supplementary tables.

Altogether, the figures given in this review suggest that "recovery," in the new issue market, as in industry, has made steady progress in the last three years. Its activity is far more *insular* than before the depression. Whether it is likely to regain its former level while overseas borrowers (even those in the sterling area) are virtually excluded and home borrowers of trustee status are officially "regulated" is an open question. Company borrowing is steadily expanding, but not at a rate anything like sufficient to fill the gap. If, as Mr Chamberlain suggests, the Treasury sees no prospect of a long succession of State-guaranteed loans for big public works, on the lines of the London electrification loan and the forthcoming Railway Loan, the British Government seems likely to remain the chief pace-maker in the market.

FOLLOW-MY-LEADER

(BY A CORRESPONDENT)

THERE is a growing tendency to-day to conceive and apply new industrial legislation in the spirit of a famous Christmas game in which the players, one by one, seek to escape from their seats, but are forcibly restrained by others representing Authority's sentinels behind each chair. The suggestion, express or implied, is that unless uniformity is rigidly imposed over a whole industry or occupation, such chaos will intervene as to make a breakdown inevitable. If one producer cuts his prices by 5 per cent., the rest must

fall into line. Then someone else cuts again, and so a cumulative process is set up which may have no necessary limit, short of zero. The popular remedy is to draw up a "code" and enforce it without exception. Even in Great Britain we are witnessing the authoritarian extension of this doctrine to agriculture, and a growing tendency to apply it in industry. Severe Star Chamber penalties await the milk producer or distributor, for example, who attempts to dispose of his produce below the price fixed by the Milk Marketing Board.

But is it true that, if "unbridled individualism" were permitted, the consumer in the long run—and not too long at that—would be completely deprived of his supplies? If so, then surely such a state must be reserved for those industries in which—to take an extreme case—certain producers are willing not merely to "cut" their prices, but to give away their output for nothing. Yet such brigandage actually prevails in many occupations not yet sheltered by the State's protective wand. Journalism is one of them. The bane of every editor's life is the gratuitous contributor. There is no "gentlemen's agreement" among literary gentlemen, and no Manuscripts Marketing Board. Yet, despite an occasional growl from Fleet Street, professional journalism continues to exist as an occupation. Able writers still find it a remunerative industry, and free enterprise riddles out the small potatoes.

Again, for how many years has the publishing trade been on the brink of ruin, owing to the host of amateur novelists, who are frequently prepared to publish even at their own expense, i.e. at a "negative" price? For centuries the stage-struck have been strangling the dramatic profession. In sooth, the arts in general began to perish from the moment when the first dilettante lifted voice, pen or brush without stipulating for Chelsea terms. An army of unscrupulous charitable busybodies crowds a sick room in every emergency, but nurses do not yet walk the streets. And what a case might not the professional economist, of all men, make for protection by the State! At the end of an arduous and expensive apprenticeship to his trade he finds that, on a conservative computation, at least half the population is prepared to deliver lectures, gratis, on any economic problem whatever, everywhere, at any time. He is undercut by politicians, bankers, company chairmen, retired lieutenant-colonels, bishops, coroners, and every Demosthenes around the Marble Arch.

The truth is that, in every walk of economic life, many people are prepared to work for a price which others would deem inadequate. Their existence undoubtedly affects the terms on which the others are remunerated, but there are usually not enough of them, and what they offer is not good enough, to make *expertise* too common. There are of course, a few exceptions. Professional Sunday school teaching has been swamped by so many amateurs that the pay has been reduced to nil. At least one correspondent of the *Economist* would be prepared to be a most efficient M.P.; but his minimum fee is £1,000 per annum, and there are 615 blacklegs willing to do the job for £400. Stipendiary magistrates are disgracefully undercut by unpaid J.P.s. Every local government councillor displaces a skilled man from what might have been a remunerative post.

In industry and trade proper, however, there is little philanthropy. The motives of "price-cutters," in fact, are usually the precise opposite. They are out to obtain a larger, not a smaller, remuneration, and have no intention whatever of indulging in action which will lead to their final extinction. There is a certain irony in the accounts of the early lives of great captains of industry, who have spent years of struggle and hardship (*anglicé*, working on terms which no decent legislative code would permit) and now proclaim that interlopers, struggling in turn to build up a business, threaten industrial annihilation by selling at 1 per cent. below the list price.

But who are the draughtsmen of the regulations which bind us to close early, charge by rote, and stick, like cobblers, to our lasts? Usually they are distinguished civil servants who, to their credit, are prepared cheerfully to work twelve to fourteen hours a day in their offices, do dramatic criticism three nights a week, write articles for the best reviews, and work out prize-winning entries for acrostics and crosswords while they boil their eggs or Sundays. And that is the humour of it.

NOTES OF THE WEEK

The New Foreign Secretary.—Mr Baldwin could not have done better than recommend Mr Eden for the Foreign Secretaryship. Mr Eden has not only gradually and consistently built up a sound popular following in the country on the basis of his sincere advocacy of a "100 per cent. League policy." He is also one of the two members of the present Cabinet who were at school when the war broke out. At 38, he is our youngest Foreign Minister for a very long time; and, as such, he represents not only the post-war outlook, but, we believe, the post-war combination of idealism and hard-headedness. Apart from one or two discordant notes—in quarters where discordancy was manifest long before Mr Eden became Foreign Secretary—his appointment has been received by the country with something very nearly akin to a sigh of relief. And the exasperation produced by the news in Rome has almost recommended the appointment in even the most sceptical British eyes. In Geneva, New York, Scandinavia, the Dominions, and the Low Countries the news has been heartily welcomed. In Paris good wishes have been tempered with an understandable apprehension now that British foreign policy looks like being direct and consistent. In Berlin, opinion is mainly favourable. The facts speak for the appointment. Mr Eden is young; he acquitted himself well in the war, then took a brilliant First in Oriental languages at Oxford; is a remarkable modern linguist to whose personal gift of "getting on with the other fellow" all parties bear witness; and he has already performed many of the tasks of Foreign Secretary with great ability for two years. We believe that Mr Eden will abundantly justify the great confidence which the country has placed in him.

Miners and Owners.—The situation in the mining industry remains critical, and the crucial meeting between owners and miners on January 8th will be awaited with keen anxiety. Some success has attended the owners' efforts to raise coal prices against large consumers. This week the Coal Merchants' Federation of Great Britain has recommended its members to accede to the request for an increase of contract prices on January 1st. The Co-operative Union Coal Trade Association, however, has issued a statement which appears to accuse the owners of engineering advances in prices without making any concrete offers of increased wages to the miners. We cannot believe that the margin now left between the miners' claim and the owners' offer is large enough to provoke a strike, particularly as it is only the next six months' wages which are really now in question. If the difficulty of offering substantial wage increases in the export areas is now the chief obstacle, it should be possible to organise some kind of wage pool in the four weeks still remaining before the strike notices take effect. And should this difficulty be overcome, and the claim for national negotiations conceded in principle, the miners might be well advised to accept what would then be offered them.

Collective Security in the Mediterranean.—We now know that the Government have directed inquiries to the other States Members of the League with seaboard on the Mediterranean to discover whether, if the Italians attacked us in that area, we could count upon the support and assistance of these States. We are anxious to be assured, not merely of co-operation by the navies of the countries concerned, but also—and perhaps even more—of being given the hospitality of their territorial waters, harbours and dockyards for the use of our own navy in such an untoward event. France was approached in October, and then gave an outwardly satisfactory reply. But three weeks ago, when Sir Samuel Hoare met M. Laval in Paris, it was widely reported that M. Laval had expressed his inability to implement his October promises, unless the British Government agreed to put up the "peace plan" to Signor Mussolini. Now the inquiry has been addressed to Spain, Yugoslavia, Turkey and Greece, and prompt affirmative

replies have been received from all but the first of these four Powers. Moreover, at Geneva on December 20th, the representatives of the Little Entente and Balkan Entente countries—that is, Yugoslavia, Greece, Turkey, Czechoslovakia and Roumania—unanimously reaffirmed their desire for the strict application of the League Covenant and their pledge to adhere to its terms. Roumania is reported to have given an explicit assurance that, if any of the three Mediterranean members of the two interlocked groups were to be attacked by Italy for having honoured their promise to the British Empire, then she would intervene with her own armed forces in their defence. The affirmative response of Greece is particularly important—and also particularly praiseworthy—in view of her geographical position. But the hesitation of Spain is little to her credit; for both France and French North Africa screen the Mediterranean coast of Spain from any direct Italian attack. The situation in the Mediterranean will not become entirely clear until we have seen what happens during the next few days in France. But it already looks as though Signor Mussolini would have to reckon with a formidable array of forces if he did take the desperate step of running amok.

A Useful Adjournment.—The British and American view at the Naval Conference is that, owing to the insulation of Japan's home territory by its great distance from any danger of an effective American or British naval attack, equality of security can be attained by Japan at a level of naval strength very much below that needed by the British Empire and the United States. The Japanese seem inclined to criticise this view—and the French and Italians to concur with them—on the ground that it is simply an attempt to introduce the old ratio system under a new guise. The answer is that the most vigorously expressed Japanese objection to the ratio system was psychological. And the British plan is an attempt to satisfy Japanese psychological needs, without a sacrifice of British and American material security. We are asking Japan, in effect, to assess her own ratio upon herself. The suggestion cannot be dismissed as tricky or inept; for this was precisely the basis of that "gentlemen's agreement" under which Japan herself used to restrict the immigration of her nationals into the United States, until this admirable arrangement was unhappily abrogated by the extension to the Japanese of the Oriental Exclusion Clause of the United States Immigration Restriction Act of 1924. The British proposals will remain under consideration during the Christmas recess—the Conference adjourned on December 20th in order to meet again on January 6th. Meanwhile, the gravity of the dangers ahead has been brought out in rather a startling way by a statement that is attributed to Senator Key Pittman, the chairman of the Foreign Relations Committee of the Senate at Washington. The Senator is reported to have expressed the opinion that a war between the United States and Japan is inevitable, sooner or later; and he is said to have gone on to suggest that it would be a good plan to bring the Japanese to their senses in good time by a joint Anglo-American naval demonstration in the Western Pacific. Explosive stuff, indeed!

The Japanese Army Goes On.—The Japanese generals—for the politicians and Foreign Office seem to be completely overshadowed—are making the most of our preoccupations in Europe in order to press forward with their aggressive policy in Eastern Asia. During the last few days they have demanded the cession to Manchukuo of six districts of the Inner Mongolian province of Chahar, adjoining Jehol. The so-called autonomous Government at Tungchow, in Eastern Hopei, has made further encroachments, outside the demilitarised zone. These have now extended not only to the important, half British-owned, Kailan coalmines, but also to Tangku, at the mouth of the Peiho River, just below Tientsin. Finally, on December 19th Moscow reported a raid on an Outer Mon-

golian frontier-post by a Japanese force which had crossed the border out of Manchukuo in the neighbourhood of Lake Dolonor. This last is perhaps the most dangerous of the three encroachments. Outer Mongolia is a Soviet Republic in alliance with the Soviet Union; so that a conflict between Outer Mongolia and Manchukuo could easily resolve itself into one between the Soviet Union and Japan. At the same time, the Russians are quite as anxious as the Chinese to prevent the Japanese from having any pretext for waging war upon them on the grand scale. It is therefore probable that both of these victims of Japanese aggression in the Far East will obstinately continue for the present to turn the other cheek every time that the Japanese inflict upon them some further buffet. The truth is that to-day, as during the Great War, the fate of the Far East depends upon the outcome of events in other parts of the world. At the present moment Far Eastern destinies are being decided in London and at Geneva. The Russians and the Chinese are waiting to see whether the collective system of security is going to be vindicated successfully against Italy, and whether the United States and the British Empire are going to be drawn together by their common concern over the intransigence of the Japanese at the Naval Conference. If these two things were to happen, the combined effect would be to transform the Far Eastern situation profoundly—and this altogether to Japan's disadvantage—without any local change at all in the military situation in the Far East.

Land Workers' Insurance.—At last the unemployment insurance system is to be extended to agricultural workers. This week, a year after the Report of Sir William Beveridge's Statutory Committee, the Government has published a Bill based on its main recommendations. Some 750,000 persons, including 50,000 women, will be affected by the scheme; and it is estimated that the average rate of unemployment will be $7\frac{1}{2}$ per cent. There is to be a weekly contribution of 4½d. each from the worker, the employer, and the State; a higher rate than that proposed by the Beveridge Committee. The benefits are also to be higher. An adult male worker will receive 14s. instead of the 12s. proposed; and his wife 7s. instead of 6s. 6d. For the first child 3s. will be paid, and for subsequent children 2s. 6d. A family of four will therefore obtain 26s. 6d.; but the Beveridge Committee's maximum of 30s. is to be retained. The problem in fixing benefits has been to find a level substantially above public assistance rates and substantially below wage rates. It seems to have been felt that the Beveridge Committee's 12s. would have been scarcely above the public assistance level. We are glad that it has been found possible to raise the benefit figures; but it must be admitted that the contribution of 4½d. will be by a no means imperceptible deduction from the incomes of some households. And it is not certain that in some cases the public assistance authorities may not still offer higher rates. The whole problem, however, has been beset by so many perplexing practical difficulties that to have devised a workable scheme, and given 750,000 agricultural workers the chance of obtaining relief out of their own savings, is itself a considerable achievement.

Britain's Social Services.—How much do we as a nation spend on our social services? And who are "we"? For Unemployment Insurance "we" are the State, the employers and the registered employed, in roughly equal proportions. For National Health Insurance and widows', orphans' and old-age contributory pensions "we" are the State and, to a very great extent, the employers and the beneficiary contributors themselves. For the still-continuing unemployment "transitional benefit" in the localities it is the State who pays. For poor relief it is mainly the local government region, but also the State, who pays. For expenditure on education the local citizens pay part of their rates, the Exchequer makes block grants and direct grants, and there are also voluntary contributions, endowment revenue, and teachers' superannuation contributions. For expenditure on housing, local ratepayers, central taxpayers, and municipal householders all contribute—the

latter through their rents. The following table is extracted from the annual White Papers on "Public Social Services," the latest issue of which, carrying the story up to the end of the financial year 1933-34 (Cmd. 5025), is just published. It shows the total expenditure from all sources for each social service which, coming under some form of public control or another, is known as "public":—

	EXPENDITURE ON SOCIAL SERVICES: ENGLAND AND WALES, AND SCOTLAND (£ millions)					
	Year ending March 31					
	1924	1930	1931	1932	1933	1934
Unemployment Insurance	48.0	53.3	101.6	122.8	117.7	101.5
Health Insurance	30.9	38.6	38.6	37.5	37.5	36.0
War Pensions	69.6	31.4	49.2	47.0	44.5	42.8
Other Pensions	24.0	62.2	72.1	78.4	81.3	83.2
Education	86.6	100.5	104.8	108.3	101.5	102.9
Working-class Housing	16.6	35.6	40.4	42.3	44.3	44.8
Poor Relief	41.9	45.0	42.5	41.2	44.1	46.1
Miscellaneous	14.5	17.4	19.5	20.0	21.3	22.6
Without War Pensions	332.1	404.0	468.3	492.5	492.2	479.3
	262.5	352.6	419.1	445.5	447.7	436.5

While the increase in the "good years" between 1924 and 1930 can be ascribed to social progress, unemployment insurance alone accounts for the great increase in the total from 1929-30 to 1930-31 and 1931-32. Thereafter, as the scope of this insurance is narrowed, expenditure on poor relief begins to rise. In 1933-34 the reduction in unemployment expenditure more than accounts for the reduction in the total. While war pensions are naturally decreasing annually, other pensions are increasing. But in these figures there has been in recent years considerable redistribution of the burden of expenditure. For example, in education, working-class housing and poor relief, local authorities have had to decide either to damp down their activities or to maintain them on purely local resources—i.e. mainly the ratepayers. Thus, "we" as a nation are maintaining our public social services; but it is not quite the same group of contributors who are providing the resources.

Shipping—Subsidies or Self-Help?—The recent announcement in the House of Commons by Dr. Burgin that the tramp shipping subsidy will be continued for another twelve months is not exactly "news" (writes our shipping correspondent), since it was understood from the outset that the subsidy was to run for two years. The authorities are apparently satisfied that the subsidy has effected some improvement in British tramp shipping, and are prepared to ask Parliament for a further £2,000,000 on the same terms as before. That some revival has occurred in recent months is incontestable; but there is room for difference of opinion how far it has been due to the Government's intervention as paymaster, and how far to the proverbial disposition of Providence to help those who help themselves. In particular, credit must be given to the results of the organised efforts of the Tramp Shipping Administrative Committee, under its chairman, Sir Vernon Thomson. This representative body was formed under the ægis of the Chamber of Shipping and started its operations in the River Plate trade. A schedule of minimum freights was drawn up and the support of tramp owners at home and abroad solicited to make the schedule binding. The minima were fixed at reasonable rates, and the flow of forward tonnage into the market was regulated strictly to the needs of the trade. The response revealed an unexpected degree of unanimity among tramp owners of many nationalities. After the withdrawal of Italian tonnage from the River Plate (for war purposes), the schedule was operated with encouraging success, and in the autumn minimum rates were raised. Similar freight schemes were applied to the Australian, Canadian and Black Sea trades, with the same result. The crucial test proved to be the St. Lawrence scheme. From the beginning of the season until September, the bulk of Canada's grain exports was carried in liners and the chartering of tramp steamers came virtually to a standstill. In September, however, chartering was resumed, the minimum rates were readily secured, and in October improved rates were obtained. Still more recently

the open winter ports of Canada and the Northern Range, and the United States have been added to the schedule, and outward canal freights from United Kingdom and Continental ports to these destinations have been incorporated into the scheme. The fruits of self-help among tramp ship-owners, in a period of gradual (but by no means universal) improvement in trading conditions, have been rare and refreshing. The lesson should be neither overlooked nor misconstrued by the industry.

Northern Talks.—The heads of the three Scandinavian Governments, Mr Hansson from Sweden, Mr Stauning from Denmark, and Mr Nygaardsvold from Norway, met in Helsingfors a fortnight ago, where they attended a conference of Socialists of the four Northern countries. The three Scandinavian countries have Social Democratic Governments, but the Finnish Government is a coalition Ministry in which the Socialists have no seat. In these circumstances some surprise has been expressed at the choice of Helsingfors for the conference, and official quarters in the Northern countries have been particularly anxious to emphasise the informal character of the meeting. Nevertheless, Mr Kivimäki, the Finnish Prime Minister, took advantage of the opportunity of meeting his Scandinavian colleagues. In spite of their informal character the Helsingfors consultations will have a certain bearing on the future policy of the Northern bloc as a whole and of Finland in particular. Whereas the three Scandinavian countries are following the course of a growing political and economic orientation towards Great Britain, Finland's attitude has so far been one of oscillation between the Scandinavian and the Polish-German combines. The recent friendship between France and Soviet Russia has considerably strengthened the pro-German under-current, especially among the ultra-nationalists and in military quarters, which for obvious reasons keep their eyes constantly on the Eastern frontier and look for security in co-operation with the militarily strong Polish-German combine. For the moment, however, the course of a Scandinavian orientation has again gained the upper hand. In statements made on December 5th in the Finnish Parliament, both the Prime Minister and the Foreign Minister emphatically declared themselves in favour of a close Finnish-Scandinavian co-operation. Since this pro-Scandinavian political course is supported in the Finnish Parliament by the Social-Democratic Party as well as by the Swedish Party, which together hold 99 seats out of 200, it can be taken for granted that under the prevailing political constellation the Finnish Government will be able to follow this line in spite of the opposition of the ultra-nationalists and siren songs from Warsaw and Berlin. The termination of the Anglo-Scandinavian Trade Agreements is not very distant, and it is to be hoped that the Foreign Office will not be so pre-occupied with the Mediterranean that it cannot foster the growing sentiment of commercial and political friendliness to Great Britain in Scandinavia.

A Creditanstalt Settlement?—The collapse of the Austrian Creditanstalt in May, 1931, ushered in the crisis. The State took over its debts; and the National Bank took over its deposits, on Government guarantee. But, both for the international creditors of the Austrian Creditanstalt and for the Austrian Budget, a settlement of the external "live claims" on the Austrian State has long been overdue. These claims amount to about 180 million schillings; no appropriation has yet been made in any Austrian Budget for their liquidation; and this *pendente lite* situation has always been a query overhanging Austrian finances. A few weeks ago the new Finance Minister, Dr. Draxler, made the International Committee of Creditors an offer, which was rejected. Now he has made a new offer, which has so impressed the Committee as to merit their recommendation for its acceptance to the various creditors. Details have not yet been worked out, but it is reported that the Austrian Government offers the Committee an immediate 60 million schillings' worth of foreign currencies, cash down, plus 20 annuities in foreign currencies of 2,000,000 schillings

each, divided proportionately among the creditors. If foreign creditors representing 75 per cent. of the total "live claims" ratify, the agreement will enter into force in about two months' time. The National Bank is to provide each creditor with his own currency through the B.I.S. The new offer is greatly to be welcomed, for it will relieve the Creditanstalt of pension charges for the "standstill" bonds, and, finally, regulate the financial chaos left by the 1931 collapse. And the foreign creditors can feel relief, too, for obvious reasons. Many of the world's creditors would be content with a cash repayment of 33½ per cent. of their original capital, plus an annuity worth 10 per cent.

British Shipping in the Pacific.—Recent events have brought to a head the question of subsidised competition by American and Japanese lines in the Pacific (writes our shipping correspondent). The statements of the Hon. Alexander Shaw and Sir Alan Anderson, about the imminent withdrawal of British services, have been followed by the passing of an urgent resolution by the Liverpool Chamber of Commerce, calling the attention of the Government to the grave concern with which that development is viewed. The services affected are those of Empire-owned companies which link Australia, New Zealand and San Francisco. It is possible, further, that similar action may be taken for the Canadian-Australian liner services between Australasia and Vancouver, and for British services between Vancouver and Hongkong. The resolution further declares that the termination of these services would break a vital link in Empire communications, and calls for an immediate decision by the Government on policy in the Pacific. The menace to the British lines is undoubted. Japan's subsidy to its Pacific service last year totalled £450,000, while the American Matson line received subsidies of £265,733 for its mail steamers and £43,349 for its cargo steamers. It also effected a saving in shipbuilding loans, as compared with British market prices, estimated at £176,239. The American Dollar line service from Seattle receives a subsidy of £120,000 a year, and the States Steamship Co. of £80,000 a year. British ships, on the other hand, receive only payment for the carriage of mails, the Union Steamship Co. of New Zealand, the chief British line in the Pacific trade, being paid but £68,640 for this service. The maintenance of Empire communications is a vital matter, but the Government's decision will be anything but easy to make. To join in a holocaust of subsidies may be merely to make a distressing situation intolerable. In any case, the matter calls for close consultation with the two Dominions concerned—and probably for a formal round table discussion with America and Japan.

Socialism in New Zealand.—The new Government in New Zealand, a correspondent writes, is Labour, not Labour with a dash of Liberal. Whatever Mr Savage, the new Prime Minister, may have said in recent weeks, however, there are unlikely to be revolutionary experiments, still less repudiation of external obligations, or really ill-advised monetary changes. The commercial banks are strong and solidly administered, so that the problem of 1893-95, when the Labour Government had to rescue the Bank of New Zealand, does not now arise. The Reserve Bank is not under Government control and holds very large London funds. No alteration in its status is contemplated for the immediate future. There is an apparent contradiction, however, between the Government's expressed intention to appreciate the currency while spending more freely and guaranteeing export prices; but all the circumstances need to be taken into account. The most important proposal is that to guarantee export prices. This reflects a wholly understandable desire to insulate the Dominion's economy from the wild fluctuations of the external market. If the guaranteed price is fixed at a level low enough to build up sterling reserves that can be drawn on when prices fall, the results may be very good. Export is well organised through the semi-governmental Export Control Boards, and much production, for example that of dairy produce, is soundly based upon efficient rural

co-operation. The Dominion is at the moment well placed with high production, favourable export prices, a heavy excess of exports over imports and a growing accumulation of sterling assets largely in the hands of the Reserve Bank. If the guaranteed prices are reasonable, there should be in the next year or so an interception of funds that might otherwise be dissipated in rising land values and freer expenditure. While it may be hoped that in fact little or no appreciation of the New Zealand pound will be found desirable or even possible, there is little likelihood of fantastic monetary experiments. Major C. H. Douglas has been in New Zealand and his practical proposals were too absurd to be seriously considered. What does exist is exasperation and even desperation at the economic and financial consequences of such wide fluctuations of export prices as have recently been experienced. Moreover, the

increased tariff protection which is certain to come, since the backbone of the new Government is in the towns, will have a bearing on the exchange position. Imports will be discouraged. There are already signs also that the announced intention to appreciate will cause a temporary import of short-term capital. As usual, the test of the new policies will lie in administration. Of all British countries, New Zealand is probably the most typically British in its opportunist empiricism. The Labour Party has been too long in opposition, its leaders are too experienced Parliamentarians, and the temper of their constituents is too conservative, to warrant apprehensions of revolutionary proposals. They resemble, particularly in their protectionism, the Labour Party which ruled Australia in the early days of federation, rather than the Lang faction which later came into power in New South Wales.

UNITED STATES

BUSINESS AND THE NEW DEAL

THE long-smouldering conflict between organised business and the New Deal found expression in the past week in the outspoken resolutions of the National Association of Manufacturers. This follows the open defiance by the utility companies expressed in their refusal to register with the Securities and Exchange Commission as prescribed by the Holding Company Act. It is a reaffirmation of the attitude disclosed by the replies to a referendum submitted to the members of the United States Chamber of Commerce. Other evidence is found in the fact that only about 2,500 acceptances were received by Major Berry (N.R.A. Administrator) in response to some 5,000 invitations for the conference scheduled for this week. It appears that the major industries, such as steel, automobiles, chemicals and textiles, are not represented.

These events mark the opening of a new phase. Initially, the attitude of organised business to the New Deal was one of enthusiastic co-operation; this evolved gradually into passive, and has now developed into aggressive, opposition. It must be understood that this is not, at least as yet, political opposition, for the simple reason that there is no organised political machine to which it might adhere. The Republican Party exists as a skeleton political mechanism, but the Party itself is divided between its right and left wings, and few are willing to predict whether in next year's campaign the party will take a platform and candidate from its "radical" or its reactionary faction.

The immediate battleground is the Courts, and the engagement is the Processing Tax case now being heard. This case is awaited with more interest than the Gold Clause decision of last January, whose result was generally anticipated; or the N.R.A. decision of last May, for the N.R.A. had long been moribund. The processing taxes are of vital interest to everyone. For some months payments have been suspended under injunction—that is, they have been paid into escrow. These taxes are unpopular with producer, processor and consumer. Their disappearance would not necessarily affect the agricultural programme vitally, as the benefit payments now attributed to the processing taxes might simply be added to the deficit. As has hitherto been stated, there is as yet no consensus of opinion as to the probable decision of the Court; even if the Court upholds them, there is a possibility of their abolition by Congress.

For the first time, Washington has released its official estimate of the number of unemployed. It must be considered an estimate merely, as the only census of unemployment was that of early 1930. Since that time various agencies have published estimates, notably the American Federation of Labour and the National Industrial Conference Board; and these estimates have rarely been close

to each other. The figure commonly cited has been about 10 millions; but this was difficult to reconcile with the relief rolls, which before the separation of the "unemployables" were continuously around 5,000,000. The official estimate is now given for September, 1935, as 10,915,000, compared with 15,071,000 at the brief period of the Bank Holiday. For October, 1933, it is put at 11,176,000, and it seems to have fluctuated near that figure ever since; that is, the gain in employment has virtually equalled those coming of age.

If that figure is accepted, the 3,500,000 provided for under the present Works Progress Administration are scarcely more than one-third of the total unemployed. It is impossible to reconcile this figure with the range of personal observation; there is a demonstrable scarcity of skilled labour in many fields; casual labour is by no means plentiful nor pressing on the market; and the trend of hourly and weekly wages seems still to continue its persistent rise. None of these facts can be readily harmonised with data which show far more employable unemployed persons left to their own resources than are provided for by any formal relief. The figure stands, however, as the only available official estimate; but it is by no means unatipuously accepted.

THE RISE IN REAL INCOMES

Although the wholesale price index is little higher than it was eight or nine months ago, the rise in the cost of living persists, and is rapidly making up the lag that was noted earlier. About half the decline from 1929 to 1933 has been recovered. As the greatest decline occurred in food, the greatest increase is also found there. The data of the National Industrial Conference Board shows an advance in food prices of nearly 40 per cent. from the low of 1933, and of almost 10 per cent. in the past year. Rent is also estimated to have risen about 16 per cent. from its low point, and most of this has occurred in the past year; it is the counterpart of the increase in residential building. On the other hand, clothing prices are estimated to be lower than a year ago. It is extremely difficult to relate this increase in the cost of living to individual income. The general trend of hourly wages has been up this year; and, more important, the continued maintenance of a fairly high level of production has increased the number of hours worked. The conclusion seems justified that factory labour in 1935 has received some increase in real as well as money income. Among the so-called white-collar workers, instances of increased salaries, or of promotions to higher salaried positions have not been uncommon; but they cannot be described as general. Probably in the aggregate this group has felt some loss of real income in the current year. On the other hand, its real income (if any) in 1932 and 1933 was relatively high. On the whole both factory workers and office workers, if employed, are receiving a real income not far from that of the late 20's; for the reduced money income has been offset by the lower cost of living. And for the majority of employed persons, since

1933, an increase in money income has kept pace with the increased cost of living. Persons who were but intermittently employed in 1932 and 1933 have, of course, experienced the gain that comes from more regular employment. A minority of persons, whose salaries are comparatively rigid (like some but not all municipal employees) have money incomes equal to those of the late 20's, and a substantial gain in real income; in some instances, however, this has been offset by the increase in taxation.

The fall in the cost of living was rapid and deep and the rise has been almost equally rapid, and by no means yet completed. The effect of the two movements on individual or family fortunes is as yet secondary to the question of actual employment. For the money income of factory workers is the composite of a high hourly rate applied to a short week, giving a high hourly rate and a low weekly money wage. Thanks to lower living costs, the weekly real wage is fairly satisfactory. In other words, the benefit of the lower cost of living has been absorbed by the shortened week, leaving the worker a net gain in the form of leisure—an item of value not included in "real income" statistics. This year, however, there has been a tendency towards longer hours and rising costs of living.

SILVER SHOCKS

The sudden withdrawal of the Treasury from the silver market took New York by surprise, and was an emphatic reminder of the doctrine of the Secretary of the Treasury, enunciated many months ago, that our entire monetary policy is on a twenty-four hour basis. Essentially, the episode is an illustration of the conflict between the Government's silver policy and silver programme. The silver policy is directed toward the international re-monetisation of silver, and the Government took the lead in the movement by adopting, in the legislation of 1933 and 1934, a bi-metallic standard of unfixed ratio. The programme of raising the price of silver indefinitely militated against the policy, forcing the demonetisation of silver in the only area where it was fully monetised, and affecting adversely its monetary status in other areas.

With these developments, the amount of silver offered in London greatly increased, and U.S. imports in September and October exceeded \$40 million in each month, while for November they were above \$60 million. Altogether it would appear that in three consecutive months the Treasury imported a sum of silver exceeding one year's current world mine output. The sudden suspension of buying, however, throws no additional light. The Treasury buys silver under the Act of Congress of June 19, 1934, which directs the Secretary of the Treasury to purchase silver "at home or abroad" "whenever and so long as the proportion of silver in the stocks of silver and gold of the United States is less than one-fourth of the monetary value of such stocks" "at such times and upon such terms" as he may deem advantageous, provided that no purchases be made "at a price in excess of the monetary value thereof." The monetary value of silver is \$1.29 an ounce.

Apart from the legislation itself, it is important to recall the diverse interests of those who forced this legislation. The silver block includes the traditional bi-metallists, those who are interested primarily in a subsidy to a local industry, and inflationists who ally themselves with silver, not because of a love of silver, but because it offers the least opposed medium for expanding the currency. But even this synthesis does not fully include the silver interest. Scratch a silverite and find an Anglophobe. For reasons which have never been clear, silver has always been identified as a weapon against London's control of the world price level, and the silver programme has the support of multitudes who are not silver miners, nor outright inflationists, nor theoretical bi-metallists, but who see in the metal a mystical shield and buckler against the fiery darts of the City of London. The summary of these considerations is (a) that there is little prospect of silver being dropped as an integral feature of the New Deal; and (b) there is no basis for conjecturing in detail the future metamorphoses of either the policy or the programme.

NEW YORK, December 12.

FRANCE

THE BUDGET, THE "LEAGUES" AND THE "PEACE PLAN"

THE first reading of the Budget Bill has been voted by the Chamber, and there is much probability that the final vote will be taken before the end of the year. Public attention is therefore concentrated on two major problems: the question of the Fascist "Leagues," and secondly the Abyssinian conflict.

The position of the "Leagues" and the whole political situation has been altered by the debate in the Chamber on December 6 and the "reconciliation" which then took place. There can be no return to the position which existed before the "Croix de Feu's" spokesman declared the wish of that body to "reform" rather than abolish the Parliamentary system. Great progress has consequently been made towards an appeasement of political strife.

The failure of the Hoare-Laval "peace plan," on the other hand, has produced a most involved situation. The primary purpose of this plan was to organise conciliatory negotiations which would postpone the oil embargo. The plan is now dead, but no decision has been taken at Geneva about the oil sanctions. A move by the French Government in this direction is inconceivable; and Paris is therefore in suspense.

The Laval Cabinet was formed in June with a definite programme, for which special powers were asked by M. Laval himself: the "defence of the franc" and the avoidance of devaluation. This policy necessitated the issuing of 500 new decree-laws and the acceptance by public opinion of a 10 per cent. cut on all State charges, including rentes interest. By these economies, which were estimated by the Government at 5,000 million francs, the deficit on the ordinary Budget was eliminated and the Budget total was cut to the following figures:—

	Frs.
Revenue	40,434,512,653
Expenditure	40,431,074,137
Surplus	3,438,516

But an extraordinary Budget for "exceptional" military and public works expenditure, the total of which reaches 6,230 millions, must be covered by loans; and to this a 4,500 million railway deficit must be added. Large loans must therefore be expected, and some have already been issued by the Government. These are sometimes effected by direct loans on Treasury account, and sometimes through various public departments such as the Crédit National. If there is no new accentuation of the crisis, and if fiscal receipts remain at their present low ebb, it is anticipated that the borrowing needs of the Treasury will be 12,000 million francs (about £160 millions) during the first six months of 1936, and 3,000 million francs in the second six months. It is also known that the Bank of France has rediscounted in the last few months a certain amount of Treasury Bills.

PUBLIC OPINION AND DEVALUATION

If the Laval Cabinet fell while the financial situation was so unstable, what would be the position of a new Prime Minister? Would he pursue the same policy? Or would he refuse to assume such heavy responsibilities? Perhaps he would lay before Parliament a balance sheet and emphasise the importance of the public debt, particularly of the short-term Treasury debt. But it would be difficult in that case for him to adopt the present loan policy. He would be hindered by the hoarding of money which would be the necessary consequence of the publication of the figures. Confidence would have been destroyed, and the chance of raising loans rendered very slender. Devaluation in such circumstances might become inevitable as a first consequence of the impossibility of realising Treasury payments. The alternatives before the new Cabinet would be: deflation and loans on the one hand, or devaluation on the other.

In that case there would probably be devaluation, and not "adjustment" of French prices into equilibrium with foreign ones. Devaluation would enable the State to meet

its payments by means of an immediate revaluation of the gold stock of the Bank, and so would stimulate a revival of business. But the whole problem is still dominated by the political outlook, which depends on the reactions of the "man in the street" to a new "fall of the franc." If these reactions could not be held in check, and if the devaluation was not accepted by public opinion, great social disturbances might follow. The fact of the devaluation would probably not be as important as the subsequent course of policy. The presentation of the operation and the precautionary commentaries which accompanied it would have more significance than the operation itself.

Such are the lines of reflections which are depressing the rentes. These now stand at the lowest of the year, as the following table shows:—

	1935		
	High	Low	Dec. 21st
3 per cent. perpetual	84.97½	72.20	71.30
3 per cent.	86.15	73.75	74.35
4 per cent., 1917	90.30	73	73.60
4 per cent., 1918	89.75	73.40	73.65
5 per cent., 1920	120	101	101.45
4½ per cent., 1932, "A"	95.85	80.50	80.55
4½ per cent., 1932, "B"	94.05	79.20	79.25

Industrial shares, on the other hand, are much better; and the index stands at 180, against a "low" of 175 and a "high" of 206. But how much of this rise is due to hopes of devaluation and how much to hopes of a recovery which would naturally produce a rise of industrial stocks first and rentes afterwards? That is the question.

PARIS, December 24.

GERMANY

"A REVOLUTION IN ENGLAND"

THE statements by British Ministers to Parliament last week failed to modify Germany's views on international co-operation. The British Government, it is still held, committed a breach of faith, which has not been made good by its confession of error. To Germans the "family party" theory of the League seems to have been confirmed. Great Britain, it is officially established, acted under French pressure; and France has never concealed her "family party" view that devotion to the League must not prejudice her friendship with Italy. To egoistic "family party" diplomacy no German objects. It is merely the Dual, Triple and Multiple Alliance system of history immemorial. The objection is to the simultaneous profession of impartiality implied by membership of the League.

If on this issue the British Parliamentary debate yielded nothing new, amazement was created by the uprising of the British public. Not a revolt, but a revolution was the impression in Germany. German newspaper correspondents in England chose the word "revolution"; and they might have added that a country which achieves revolution by vote of confidence must be sincerely pacifist. But was the revolution, it is asked, logically against the "family party" principle, or, with less logic, only against its inevitable application in a concrete case? Of the future Germans remark that sanctions, though their sphere may be extended, have irrecoverably lost their vigour; and it is surmised that the peace terms will be determined mainly by the military position at the time when they are negotiated. It is therefore noteworthy that Berlin press experts paint the military outlook for Italy in dark colours. German judgments of this nature are more impressive than English; for in view of the impartiality officially imposed on the German press there can be no suspicion that the wish is father to the thought.

The November foreign trade returns show an almost undiminished export surplus, which, after the official warning of October that no more active balances might be expected this year and that the whole year's account would therefore only about balance, is regarded as satisfactory. The export surplus on the eleven months is Rm. 77 millions, as against an import surplus of Rm. 240 millions in the same months of 1934. No increase in exports to Italy is mentioned, but there was a substantial increase in imports of Italian goods. It is announced that Russia's orders

under the German Rm. 200 millions credit plan of April so far total only Rm. 80 millions, but that further deals are near completion. The November trade returns are:—

Imports :—	Oct.	Nov.	Jan.-Nov.
	(Millions of Marks)		
Livestock	3.9	6.1	37.2
Foodstuffs	87.0	96.8	887.5
Raw and half-manufactured materials...	205.2	202.3	2,332.3
Manufactured goods	39.9	41.0	517.9
Totals	336.0	346.2	3,774.9
Exports :—			
Livestock	0.2	0.3	2.4
Foodstuffs	7.1	8.1	67.1
Raw and half-manufactured materials...	75.4	77.3	704.6
Manufactured goods	307.8	311.6	3,078.0
Totals	390.5	397.3	3,852.1

The number of unemployed in November increased by 156,000 as against an increase of 86,000 in November, 1934. Internal trade is irregular. In most articles the wholesale turnover in the third quarter of the year was 15 to 10 per cent. higher than in the same period of 1934, but in some goods lower, in cloth, indeed, 42 per cent. lower. Christmas retail trade is believed to have been normal. Railway traffic has increased slowly.

ELECTRICITY SOCIALISATION REVOKED

Among new laws is one regulating the electrical and gas industries. The Electricity Socialisation Law of 1919, which provided for Nationalisation, is revoked, and Reich supervision is substituted. The new law admits Reich control of investment in electricity and gas undertakings, but it contains no radical provisions. The Konjunkturinstitut describes the restrictions on investment already imposed in many trades as a sacrifice necessary for re-armament. The same authority has issued a "quality index" for consumption-goods, from which it appears that the average quality of these goods declined 10-15 per cent. between 1928 and the bottom of the depression.

Coal output in October was 13,455,000 tons, against 11,597,000 tons in October, 1934. Pig-iron output in November was 1,196,200 tons, against 1,197,800 tons in October; and steel output 1,483,300 tons, against 1,551,600 tons. In both cases output per day rose. Orders in the machinery industry in the autumn were 12 per cent. higher than in the good trade year of 1928. Orders for home industry were small, and as foreign orders were 43 per cent. below the 1928 level, the only explanation of this activity is re-armament.

After a temporary pressure on the money market due to tax payments and the holiday demand, liquidity was restored by the temporary availability of public funds. The year closes with the day-money rate about 1 per cent. lower than at the end of 1934. The Reichsbank's return for December 14th shows evidence of the temporary strain; there was practically no decline in total of credits, and Rm. 6 millions of gold was lost. The food shortage and delays in settlements for export are responsible for the recent decline in the total currency reserves, which stand at Rm. 87 millions, as against Rm. 100 millions in the summer. The prohibition against the import of Reichsbank notes is being rigorously enforced on land and sea frontiers and in the post.

The Reich Railways Association announces for public subscription a loan of Rm. 500 millions 4½ per cent. Treasury bills at 98½. The yield will be used for the reduction of short-term debts. This is described as a long-term loan; in fact it is repayable at 100 on January 2, 1944. The Reich's own Rm. 500 millions issue of this year, also at 4½ per cent., was for ten years, but is repayable in five annual instalments beginning in 1941. Of "long-term" public loans in this sense Rm. 1,800 millions were issued or announced in 1935. This total includes the mysterious or forced loan from the insurance industry, of which neither the amount nor even the nominal total has been revealed. The amount is believed to have been Rm. 300 millions. The banks foresee a shortage in the capital market next year. Farmers want badly to borrow. The Erbhof Law, however, prohibits borrowing on mortgage, and the banks refuse to lend on personal guarantee. It seems certain that the law will be amended; and, if so, the demand for capital will

increase. The only argument against amendment is the Reich's now familiar claim to absorb all available capital for work-creation and armaments.

No returns of Reich expenditure are being issued, and the Budget for 1935-36 remains a mystery, though, it is officially admitted, it will close with a deficit. Total Reich revenue is also unknown. Revenue from taxation in November was Rm. 801 millions, as against Rm. 646 millions in November, 1934; and in the first eight months of the financial year Rm. 6,223 millions against Rm. 5,317 millions. Income, corporation income, and sales taxes have come in well; Customs and Excise (except the beer tax) better than in November, 1934. If allowance is made for changes in the taxation system, the eight months show receipts exceeding by Rm. 772 millions those of the corresponding period of 1934. Local finances have improved. Many municipalities, however, will be unable to balance their Budgets in 1936.

BERLIN, December 23.

AUSTRIA

THE BUDGET AND UNEMPLOYMENT

ENHANCED business activity in Austria has rendered it possible for the Minister of Finance to curtail public works expenditure in the coming year, without having to fear any serious reaction on the labour market. In the current year State employment schemes have provided work for 22,000 to 74,000 people, according to the season. And about 90 million schillings of public money will be available for industrial orders in 1936. It appears to have become a dogma in Central Europe that the State, quite apart from providing employment, cannot refrain from feeding the labour market indirectly by distributing such orders.

In so far as the State is obliged to curtail public works expenditure, it assumes the responsibility of stimulating private investment. Unfortunately, however, the big banks are observing a strictly conservative credit policy. Although many concerns in recent years paid back a considerable portion of their overdrafts and thus greatly helped the banks to accumulate an abundance of available resources, the banks are very chary of making advances. The savings banks are also still very reluctant to grant long-term credits. The consequence is that non-interest-bearing bank deposits at the National Bank recently reached a new high level at 352 million schillings.

The Minister of Finance believes that his new and strict Budget will encourage private investment. It is supposed to do this, first, by ensuring the stability of the schilling, and, secondly, by further economies. But these economies will undoubtedly be felt very keenly in various quarters. Agricultural subsidies are to be curtailed or eliminated, and pensions to ex-State employees who receive incomes from other sources are to be suspended. Other public bodies are following the Government's lead, and most of the Provinces and municipalities have balanced their Budgets. In Vienna the tax on milk has been raised slightly to cover the City's newly-imposed contribution to the cost of the State police.

CLEARING AND COMPENSATION TROUBLES

The machinery of clearing and compensation agreements, which has characterised the commercial policy of Austria and Central Europe in general, is already beginning to disclose defects. The idea of attempting to "balance" trade with individual States can scarcely be pushed much further without danger of paralysis. This would be the more apparent if the economic position were not obscured by the present war and armaments boom. The situation is to-day such that, even in countries where quotas are available, Austrian exporters are cautious, because the transfer—not the payment—of invoice amounts is uncertain, and months of delay sometimes ensue. Radical measures have to be taken for the collection of those outstandings. An illustration of this was the recent decision to alter the Austro-Hungarian clearing agreement and transfer at 90 schillings to 100 pengö instead of 80 to 100, as heretofore. The pengö

was too high in relation to the schilling, which gave a kind of export premium to Austria. Industrialists have relinquished this premium, however, and probably a part of their trade, as they could not otherwise secure payment. Relations with various Balkan States are still worse; and credits due in Italy and Czechoslovakia are increasing.

Recently published figures disclose enhanced activity in practically all trades. In October exports compared with October, 1934, rose from 81 to 84 million schillings, and imports from 107 to 122 million schillings. The rise in imports is entirely due to increased imports of raw materials and cattle. The number of unemployed receiving benefit has fallen from 260,000 to 227,000 in the same period. Production of iron ore has risen from 49,000 to 94,000 tons, and of cellulose from 1,906 to 2,109 tons. The index of steel output has shot up from 52 to 80, and of rolled-goods output from 54 to 79. The decline in the paper industry, on the other hand, is due to the large increase in prices prescribed by the new paper cartel. The consumption of foodstuffs has risen, according to the index, from 95 to 104. It is observable that the number of unemployed on the dole is now keeping pace with that of unemployed applying for work. Not long ago there was a divergence owing to increased severity in admitting unemployed to benefit. There were in the whole of Austria 290,000 unemployed in search of work in September as against 332,000 in September, 1934. On the other hand, the membership roll of the Vienna sick funds has risen from 436,000 to 463,000.

VIENNA, December 15.

CZECHOSLOVAKIA

THE NEW PRIME MINISTER

ECONOMIC activity in Czechoslovakia has been suffering from political unrest and from uncertainty about the Italo-Abyssinian war and the effect of sanctions. Doubt about the future of certain currencies, especially those of the gold bloc, has also contributed to restlessness.

In November there was a change in the Government. The former Minister of Agriculture, Dr. Hodža, a Slovak, who has been noted for his broad political and economic ideas, became Prime Minister. In his statement during the Budget debate on December 5th the new Prime Minister spoke firmly in favour of collective security as a guarantee of peace and of the further extension of collaboration in Central Europe. His speech was also a confession of faith in democracy. The starting point of Dr. Hodža's policy is the fact that Czechoslovakia's national economy is mixed and that it is therefore necessary to work towards the co-ordination of both agricultural and industrial interests. Dr. Hodža advocates a managed economy in agriculture. He also admits the necessity of increasing exports, expanding investment activity, lowering rates of interest and alleviating indebtedness. He is in favour of balanced Budgets and the reform of the public administration.

The harvest has on average been very good, although in some parts damage has been done by the extensive drought. The wheat yield has been estimated at 168,995 trucks, which is 32,879 more than in 1934; the yield of rye at 163,841 trucks or 11,613 more; that of barley at 106,132 trucks, or 2,703 more; and that of oats at 102,712 trucks, or 15,185 less than last year. The fact that cereal prices had been secured by the monopoly naturally led to an extension of the area under cultivation, especially in wheat. The Corn Company bought in the first year of its existence 1,854,286 tons of cereals, and it is estimated that at least 500,000 tons have been sold illegally, in evasion of the monopoly, so that a much stricter control has had to be introduced.

Industrial production has risen moderately. The index in September stood at 75.8 against 70.4 in July. The number of unemployed persons at the end of November was 679,900, or 78,510 more than in August. This increase is partly seasonal.

Production of coal in October was 1,086,536 tons, against 1,049,313 tons a year ago; that of lignite 1,408,575 tons, against 1,497,569 tons; that of coke 146,400 tons, against 119,600 tons; that of pig iron 76,723 tons, against 54,523 tons; and that of raw steel 110,596 tons, against 80,800 tons. The general industrial situation thus shows a certain improvement. Exports of glass are better, and the paper industry has improved slightly. The situation in the textile industry is still far from satisfactory. The wholesale gold index in November was 86.2, against 85.6 a month ago. In fact, after a decline since the summer, prices have again risen. The retail price index for foodstuffs rose between January and October from 667 to 706.

Imports for the first ten months were 5,189 million Cz.K., or 12.4 million Cz.K. less than a year ago. Exports were 6,433 million Cz.K., or 589.5 million Cz.K. more than a year ago. If exports of precious metals and coins are excluded, however, net exports of goods rose in comparison with last year by only 60.6 million Cz.K. The necessity for assisting exports is generally acknowledged, even in agrarian circles.

A BALANCED BUDGET

The Budget is under discussion in Parliament. Revenue is estimated at 8,033.5 million Cz.K. and expenditure at 8,032.2 million Cz.K. The public debt amounts to 40,933.7 million Cz.K.; the internal debt is 30,773.3 million Cz.K., and the external debt 8,160.4 million Cz.K. The Government intends to push through the Budget, adjust some taxes and lower interest rates by $\frac{1}{2}$ per cent. on deposits and by $\frac{1}{3}$ per cent. on loans. Further, the problem of indebtedness, especially in agriculture, is to be solved by means of a prolongation of instalments on mortgages, a grant of facilities for farm debts settlement, and finally a lowering of interest on public debts by conversion.

The money market has recently been easy. In the autumn a certain revival took place especially as a result of the financing of the harvest, of building activities and of the seasonal advance in production. At present, however, rates are again declining. In the last few weeks Stock Exchange prices have improved, especially on the share market. The Stock Exchange index rose between October 25th and November 22nd from 99.4 to 101.7.

PRAGUE, December 13.

ARGENTINA

THE EXPORT SURPLUS

The following figures show the foreign trade position in 1935:—

QUANTITIES EXPORTED AND AVERAGE PRICES DURING THE FIRST ELEVEN MONTHS OF 1934 AND 1935

	Tons		Average Prices (Pesos)	
	1934	1935	1934	1935
Chilled beef.....	318,776	314,827	365.26	393.88
Frozen beef.....	28,796	25,452	235.87	243.39
Mutton	44,559	45,113	393.42	497.85
Canned meat	56,012	62,616	267.37	299.24
Salted and dried cowhides	113,842	127,056	532.65	578.61
Unwashed wool.....	86,787	102,463	1107.14	791.61
Wheat	4,505,364	3,753,359	61.52	70.29
Maize	5,100,405	6,358,796	54.59	45.82
Linseed	1,213,883	1,645,741	124.92	120.51
Oats	461,373	376,133	45.78	54.39
Barley	528,223	418,099	47.55	56.17

VALUE OF EXPORTS DURING FIRST ELEVEN MONTHS OF 1934 AND 1935

	1934	1935	Increase or Decrease
	\$	\$	%
Pastoral products	421,839,707	455,260,380	+ 7.9
Agricultural products....	824,901,420	899,947,471	+ 9.1
Total	1,318,572,542	1,415,683,773	+ 7.3

QUANTITIES EXPORTED IN TONS; SAME PERIOD AS ABOVE

	1934	1935	Increase or Decrease
	\$	\$	%
Pastoral products	987,542	1,047,092	+ 6.0
Agricultural products ...	12,641,938	13,579,042	+ 7.4
Total	14,160,133	15,076,357	+ 6.5

PERCENTAGE INCREASE OR DECREASE IN AVERAGE PRICES OF EXPORTS DURING FIRST ELEVEN MONTHS OF 1935, AS COMPARED WITH 1934

	%		%
Chilled beef.....	+ 7.8	Wheat	+ 14.3
Frozen beef.....	+ 3.2	Maize.....	- 16.1
Mutton	+ 26.5	Linseed	- 3.5
Salted cowhides	+ 9.6	Oats	+ 18.8
Unwashed sheepskins.	- 18.7	Barley	+ 18.1
Unwashed wool.....	- 28.5	Rye	- 4.8

Exports for November were the lowest in tonnage except for December, 1934, for the past two years. Owing to improved prices, however, the value exceeded that of November, 1934. Average prices of practically all exports, with the exception of maize, linseed, rye and wool, show an improvement over those ruling last year.

The sharp decline in exports, unless it is accompanied by a corresponding falling off in imports, has quashed all hopes of an export surplus reaching anything like the \$400 millions mark at first predicted for 1935; and until some such figure is reached it is difficult to foresee any marked rise in the value of the peso. No big increase, however, in exports can be expected during the coming year, as the harvest looks like being below the 1934-35 crop. The best hope for Argentina appears, therefore, to be an all-round increase in the prices of primary commodities.

"BASIC PRICES" RAISED

The Ministry of Agriculture has just announced an increase of the basic prices which they pay for wheat and linseed. These have now been raised from \$5.75 and \$11.50 to \$10 and \$14 respectively. This entirely unexpected move was due to the poor crop prospects and the belief of the Ministry that the prices at present ruling for these commodities are a consequence of hasty offers and advance sales. Owing to the falling off in production of wheat and linseed in the Argentine it is expected here that the statistical position of these commodities in world markets will be greatly improved during 1936 and that there will be a general rise in prices. This is probably true of linseed; but it is doubtful whether the shortage of Argentine wheat will very materially affect international markets. As a result of the advance in basic prices, however, local prices rose immediately, and as the majority of producers have not effected forward sales, this rise will undoubtedly be of real benefit to the farmers.

REVENUE AND EXPENDITURE GROWING

Commercial failures show a healthy reduction compared with 1934; and the general feeling is that the majority of firms which have weathered the storm of the last five years will be able to carry on. Given a normal harvest, there should be a progressive decline in the number of failures. Meanwhile, the Budget revenue and expenditure continue to increase by leaps and bounds. The improvement in revenue figures is extremely gratifying.

The official exchange rate is now controlled by the Central Bank. It is no longer subject to tender by interested parties, but is fixed every day by the Bank. There has been little change recently in interest rates, and free market exchange rates remain very steady around \$18 to the £. A further conversion operation was effected recently, in which \$88 millions of Municipality stock was successfully converted from 6 per cent. to 5 per cent. Over 90 per cent. of the holders took up the new bonds.

BUENOS AIRES, December 18.

OFFER TO NEW READERS

Any reader who makes his first acquaintance with this journal with this week's issue is invited to fill up the attached:

To The Publisher, "The Economist Newspaper Ltd.,"
8 Bouverie Street, E.C.4.

In order to test the value of your publication I should like you to forward this to me by post for the next four weeks. If I then decide to become a subscriber, it is understood that there will be no charge for the copies thus received, but otherwise I shall be willing to pay 4s. to cover their cost.

LABOUR IN AGRICULTURE

AGRICULTURE employs more labour than any other industry in the world, but its labour problems have never received an attention proportionate to their importance. Moreover, the attempts, both national and international, to improve the conditions of labour have largely passed by the agricultural labourer, whose welfare has been neglected in comparison with that of other types of worker. It is only this week that a Bill providing for unemployment insurance for British agricultural workers has seen the light of day. Mrs Howard's admirable international survey* of labour problems connected with agriculture, which is published under the auspices of the Royal Institute of International Affairs, is therefore very welcome. The survey is confined to wage-paid labour and excludes from its scope the family labour of peasant proprietors, whose problems are of a different kind. Mrs Howard, who was for many years chief of the Agricultural Service of the I.L.O., has been able to draw on the wide sources of information available at Geneva, and her work is authoritative and reliable to an unusual degree. The present volume will prove indispensable to all students of agricultural economics.

The reasons for the neglect which agricultural labour has received both from theoretical inquirers and from practical reformers are that it is very far from homogeneous, that it is backward in organisation, and that it merges by imperceptible degrees into the family labour of the peasant which is not remunerated by money wages. In spite of these difficulties, it is possible to reach certain generalisations which are true of paid agricultural labour as a whole. The most important of these are that such labour is relatively badly remunerated and that its conditions of work are unsatisfactory. The reasons for this unfortunate state of affairs are admirably analysed by Mrs Howard, who calls attention to the peculiar conditions of supply and demand in this chronically over-stocked labour market. The efficiency of the agricultural industry and of the individual worker are both low; the standard of payment is largely traditional; agriculture is the dumping ground of much unemployed urban labour; and the seasonal nature of farming renders a certain wastage of labour inevitable. Moreover, the agricultural labourer is continually faced by the competition of the peasant proprietor, whose standard of living is low, and who regards his work on the soil as a "way of life" rather than as a source of measurable income.

Indeed, the real cause of the poverty of the agricultural labourer is the poverty of the agricultural industry; and no substantial and lasting rise in the standard of agricultural wages can be hoped for until the profitability of the industry itself is increased. Mrs Howard is alive to this difficulty, but urges, nevertheless, that some effort should be made to improve the wages, hours, housing, education and other conditions of the workers pending the solution of the deeper problems of agricultural production. While everybody will agree that such efforts are highly desirable, it is very doubtful how far they can be successful while the capacity of the agricultural industry to bear increased costs remains as low as it is to-day. The weapon of the tariff is powerless to alleviate the condition of the workers in the food exporting countries, whose salvation must lie in international action, organised on different lines for groups of countries in different stages of development. No doubt some good results could be attained by action directed on these lines, but the only fundamentally sound way of improving the lot of the agricultural labourer is to improve the productivity and the profitability of the industry itself.

The prospects of such improvement do not appear very bright at a time when every government is shaping its national agricultural policy in pursuit of such ends as the home production of food, the stoppage of the drift to the towns, the settlement of the urban unemployed, the creation of a "green proletariat"—in short, in pursuit of almost every end except that of the prosperity of agriculture regarded as a business. Until governments are prepared to

* "Labour in Agriculture." By Louise E. Howard. Oxford University Press. 320 pages. 18s.

allow agriculture to progress and develop along natural lines, without being interfered with for all sorts of non-agricultural considerations, attempts to improve the condition of agricultural workers by artificial expedients will attain small measure of success.

SHORTER NOTICES

"L'Europe Nouvelle. (Special Number.) La Dévaluation est-elle une Solution?" By Roger Auboin and others. 73 bis. Quai d'Orsay. Paris.

This very interesting special number of "L'Europe Nouvelle" reads like a reply to Sir Henry Strakosch's supplement to the *Economist*, published a year ago under the title of "The Road to Recovery." The purpose of M. Auboin and his collaborators is to prove that devaluation would not help France out of her present troubles. M. Auboin's arguments are ingenious, well-documented, and entirely unconvincing.

In discussing the effects of devaluation on prices, he and his collaborators argue that devaluation will not raise wholesale prices; that it must raise the cost of living; and that it will not have any effect on prices at all. Yet, in fact, as their own figures show, it has in almost every case raised wholesale prices substantially and the cost of living hardly at all, and so brought the one into adjustment with the other. It is twice stated here that the cost of living and wholesale prices in Great Britain to-day have not moved relatively to one another since 1931. This is untrue. The British cost of living index (1929=100) fell from an average of 89.6 in 1931 to 88.4 in November, 1935; and the wholesale index (*Economist*: 1929=100) rose from 67.7 to 75.7 in the same period.

M. Auboin seems to underrate the part played by low interest rates in promoting recovery after devaluation. He also argues that devaluation is not necessary to achieve such interest rates. We can only suggest that he compares his own graphs of the course of bank rate in Great Britain, the United States and France in the last two years. Again, he affirms with great emphasis that recovery has only followed devaluation where strict Budgetary deflation has been continued. Does he then regard the Budgetary policy of the United States and Japan in the last three years as models of rigorous orthodoxy?

M. Auboin also dilates much on the "peculiar features" of France's crisis. We seem to remember that Great Britain's crisis had "peculiar features"; so had America's, and South Africa's, and Australia's, and Denmark's, and Argentina's, and Belgium's. It is odd that they should all have been surmounted by the same remedy. We congratulate "L'Europe Nouvelle" on a most interesting number. But we are not persuaded.

"Statistical Review of the Work and Finance of the London Voluntary Hospitals for the year 1934." King Edward's Hospital Fund for London. 32 pages. 1s. 6d.

This survey, issued by the King's Fund, gives a most interesting account of the financial fortunes of the London hospitals during the present depression. Expenditure has been steadily rising, as more patients are treated; it rose from about £3,250,000 in 1930 to nearly £4,000,000 in 1934. The total receipts of the hospitals, however, fell by £600,000 between 1930 and 1932; but rose by £100,000 in 1933 and £480,000 in 1934. Total receipts in 1934 were £4,895,000. Some 53 per cent. of this came from voluntary gifts, including legacies.

MONEY AND BANKING

THE MONEY MARKET: A RETROSPECT

THE year now at its close has been one of the quietest the money market has ever experienced. Rates have certainly been low, and only small profits have been earned on holdings of bills. But money has always been easy to borrow; and for the greater part of the year the clearing banks have fixed by agreement both their rates for loans and the minimum at which they have been prepared to buy bills. Rates have stood at $\frac{1}{2}$ per cent. for loans against Treasury bills and other bills eligible for rediscount at the Bank of England, and at 1 per cent. for loans against other collateral. A few weeks ago the clearing banks agreed to lend against the new 1 per cent. Treasury bonds at $\frac{3}{4}$ per cent. On the other side of the bill-brokers' account the clearing banks, since February, have bought Treasury bills at a minimum rate of $\frac{1}{2}$ per cent. Further, most of the banks have ceased to tender for Treasury bills in competition with the discount market, and have also refrained from buying Treasury bills with less than about eleven weeks to run. As a result, allottees of bills by tender have been compelled to hold them for at least a fortnight; and this has been a deterrent against the staging of Treasury bills noticeable early in the year. Since March 31st, indeed, the supply of "tender" Treasury bills has been steadily expanding. The average tender rate, in fact, has been slightly above the $\frac{1}{2}$ per cent. charged by the banks for loans and paid by the banks for Treasury bills, and bill-brokers have thus been left with a slight margin of profit. On the whole, therefore, 1935 has been a more comfortable year than its predecessor, which saw Treasury bill rates fall at times as low as $\frac{1}{4}$ per cent. and made the holding of bills unremunerative.

Although discount rates for technical reasons have been rather firmer this year than last, there is a fairly widespread belief that 1935 may prove to have been the culminating point of an era of cheap and plentiful credit, which began in 1932. To explain in precise terms the causation of this development is not easy. To some extent, its origin was psychological and may be traced back to such a sequence of events as the balancing of the budget, the suspension of the gold standard, and the return to power of the National Government in the autumn of 1931. Returning confidence brought money back to London and enabled both the Bank of England and, later, the Exchange Equalisation Account to add largely to their gold stocks. Simultaneously, the earliest stages of the trade revival were reflected in a repayment of outstanding bank advances. In 1932, consequently, the banks found both that their cash was being replenished and that their loans were being repaid. They had thus abundant resources for investment in the short-term and the long-term market.

Once this fundamental explanation of the inauguration of the cheap money regime is clearly understood, the course of subsequent events is capable of statistical illustration. The following table sets out certain items in the Bank of England's returns for November, 1929, and each subsequent November from 1931 onwards:—

	Nov., 1929	Nov., 1931	Nov., 1932	Nov., 1933	Nov., 1934	Nov., 1935
Gold	135	121	139	191	192	198
Fiduciary issue	260	275	275	260	260	260
Government securities	58	57	69	68	80	85
Total	453	453	483	519	532	543
Deduct public deposits	17	27	27	19	25	20
Net total	436	426	456	500	507	523
Note circulation	355	354	358	368	377	401
Bankers' deposits	58	60	78	103	96	91
Total notes and deposits	415	414	436	471	473	492

The chief sources of available "money," by way of currency and "bank cash," are (a) the gold in the Bank

of England; (b) the fiduciary note issue; and (c) Government securities in the banking department. Of the "money" created in this way the Government takes a certain amount into public deposits, while passing disturbances arise from changes in other assets and liabilities of the Banking Department of the Bank of England.

The correlation between the two sets of total figures, it will be seen, is relatively close. It is clear that the main cause of the expansion since the enforced restriction of late 1931 has been the addition of £77 millions to the Bank's gold stocks. This, however, has been reinforced by an addition of £28 millions to the banking department's holdings of Government securities. In these two increases we may find the main mechanical basis for the simultaneous expansion of £78 millions in the total of notes in circulation and of bankers' deposits. Incidentally, it would appear that the authorities might, at their will, extend the present period of cheap "market" money by adding to the banking department's holdings of Government securities, or by transferring gold from the Exchange Equalisation Account to the issue department of the Bank.

We may now proceed a stage further. What has been happening to the clearing banks? The answer is shown below:—

	Nov., 1929	Nov., 1931	Nov., 1932	Nov., 1933	Nov., 1934	Nov., 1935
Cash	190	173	193	216	210	214
Call and short loans	144	109	116	99	135	147
Discounts	233	240	391	317	232	293
Investments	249	300	425	569	589	621
Advances	989	900	785	737	755	773
Deposits	1,789	1,706	1,898	1,928	1,911	2,039

To interpret this table, it is necessary to remember: (a) that the supply of bank cash is not under the clearing banks' control, but depends upon the conditions affecting the supply of "money," already described; (b) that the banks endeavour to maintain a constant ratio between cash and deposits, so that as cash increases, both deposits and earning assets rise in approximate proportion; and (c) that demand for advances made by credit-worthy borrowers cannot be directly stimulated by the banks but is a function of the general course of trade and the supply of funds from other sources. Between November, 1931, and November, 1935, the expansion of £41 millions in bank cash had as its sequel an expansion of £333 millions in deposits, while advances fell by £117 millions. Thus the banks have had, on balance, an additional £409 millions to employ in other ways. Some £91 millions have gone into discounts or into call and short loans, and some £321 millions into securities. One need scarcely go much further to explain the fall in short and long-term interest rates during the last four years.

On the other hand, the supply of commercial bills available for the market has diminished since 1929 with the contraction of international trade, and little or no increase has occurred since 1931. In November of that year "tender" Treasury bills totalled £530 millions. By November, 1934, they had been reduced to £434 millions. This contraction contributed materially to the lowering of interest rates, by driving the banks into the gilt-edged market. The total tender issue has since risen to £565 millions, but the last quarter of the financial year is approaching, and as part of the proceeds of the Treasury's recent borrowing will be available, in due course, for the reduction of the floating debt, current figures may well prove to be at a "peak" level. It may be fair, therefore, to conclude that the supply of bills is being reduced, by comparison both with 1931 and with the succeeding expansion in the demand for bills. The discount market may find difficulty in maintaining even the narrow margin of profit obtainable this year. So far as the

country as a whole is concerned, the mechanism which has functioned during the last four years remains in being, and the authorities hold the control-lever. The ultimate course of future interest rates depends, necessarily, on wider considerations, such as the future demand for capital, an important ingredient in which may be the dimensions of "new" Government borrowing, as distinct from refinancing operations. Other factors may be the duration and extent of further industrial recovery, and the maintenance of confidence in the stability of sterling and its financial guardians.

FINANCIAL NOTES

The Money Market.—The Christmas expansion in the note circulation has depleted the banks' cash resources, while the banks also held few of the bills maturing early this week. The result is that the banks have found themselves short of money, and on Tuesday morning three of the banks were calling their loans from the market and were not lending any fresh money. Loans into the New Year, when obtainable, cost $1\frac{1}{2}$ – $2\frac{1}{2}$ per cent. for money repayable on January 1st, and $1\frac{1}{4}$ per cent. for loans to later dates. There was some precautionary borrowing from the Bank of England on Christmas Eve.

	Dec. 5, 1935	Dec. 12, 1935	Dec. 19, 1935	Dec. 24, 1935
Bank rate	2	2	2	2
Clearing banks' deposit rate	$\frac{1}{2}$	$\frac{1}{2}$	$\frac{1}{2}$	$\frac{1}{2}$
Short Loan rate:—				
Clearing banks	$\frac{1}{2}$ –1	$\frac{1}{2}$ –1	$\frac{1}{2}$ –1	$\frac{1}{2}$ –1
Others	$\frac{1}{2}$	$\frac{1}{2}$	$\frac{1}{2}$	$\frac{1}{2}$
Discount rates:—				
Treasury bills	$\frac{1}{2}$	$\frac{1}{2}$	$\frac{1}{2}$	$\frac{1}{2}$ – $\frac{3}{4}$
Three months' bank bills	$\frac{1}{2}$ – $\frac{3}{4}$	$\frac{1}{2}$	$\frac{1}{2}$ – $\frac{3}{4}$	$\frac{1}{2}$ – $\frac{3}{4}$

Business in bills was very limited. There was a small demand for hot Treasury bills, and some bank bills were being offered at good rates. February Treasuries were quoted at $\frac{1}{8}$ per cent. and Treasury bills at rates ranging from 1 up to $1\frac{1}{2}$ per cent. The higher rate is for the earlier maturities, as these will now have to be carried for most of their time on money borrowed at $2\frac{1}{2}$ per cent. from the Bank of England.

The Foreign Exchanges.—The London market was very quiet immediately before Christmas, and rates remained very steady. The New York rate was unchanged at \$4.92 $\frac{1}{2}$. French francs were round about Frs. 74 $\frac{1}{2}$, but it is believed that the British Control had to buy a few francs in Paris. Three months' francs have moved on either side of Frs. 2 $\frac{3}{4}$ discount, but the market had a fairly good undertone. The Dutch and Swiss rates were unchanged. The London price of silver continues to fall, and on Tuesday afternoon it was fixed at only 20 $\frac{3}{4}$ d. per ounce. Silver was quoted in New York on Monday at 50 $\frac{1}{2}$ cents per ounce. The market appears to be a little firmer, and some buying in Bombay is reported. Still there are heavy forward contracts maturing early in the New Year, while some dealers are afraid that the price may fall to 18d., which would correspond with the current rate of 14 $\frac{1}{2}$ d. for the Chinese dollar. The Chinese currency is now off silver, so that that argument is not entirely convincing.

Anglo-French Banking Corporation.—Last Saturday it was announced that an unknown buyer had made an offer to the shareholders of this bank to buy their shares at a price of 7s. 6d. each. The purchaser will not proceed unless 80 per cent. of the shares are offered to him by January 6th, and the result will be announced on January 14th. The purchaser has also arranged for Mr F. A. Szarvasy, the present chairman, to serve as chairman and managing director for a term of years. The present directors advise acceptance of the offer, and point out that while last year ended with a trading profit of about £5,000, accumulated liabilities are such that in the event of liquidation the shareholders could not hope to receive more than 5s. a share within six months, plus a further maximum of 3s. spread over several years and less the costs of liquidation.

The bank was founded in 1928, originally to do business between England and France, but it quickly extended its activities to Germany, Austria, Hungary and Chile. Then came the 1931 crisis, with the result that a large part of its assets were blocked abroad or else could only be recovered at a heavy loss. In its original form, the bank began business much too late to build up reserves or, indeed, to have a real chance. Assuming that the new offer is accepted, it will be interesting to see how the bank is operated in the future.

Money Rates in 1935.—We publish below our customary tables of average short-loan rates and discount rates for 1935. Our main purpose is to give a comparison with previous years, but this year's average short-loan rates need careful interpretation. The average is compounded mainly of the $\frac{1}{2}$ per cent. rate charged during the whole year by the clearing banks for loans against bills eligible for discount at the Bank of England; and the one per cent. charged by them for loans against other collateral. Hence, it is illegitimate to compare this average with the average yield on bills. For this purpose the loan rate should be taken as $\frac{1}{2}$ per cent.

Whole year	2 9 6	3 0 10	1 15 7	0 15 5	0 16 10	0 14 10 $\frac{1}{2}$

The tables give the average rate for three months' bank bills. For Treasury bills, which are now of far greater importance, the average tender rate was 9s. 2.11d. per cent. for the first half-year, 11s. 9.69d. per cent. for the second half-year, and 10s. 5.90d. per cent. for the whole year. Since February 22nd the clearing banks have, by agreement, not bought Treasury bills at rates of less than $\frac{1}{2}$ per cent.

The Bank of Montreal.—The annual general meeting held on December 2nd was the first held since the inauguration of the Bank of Canada, and Mr Jackson Dodds, one of the joint general managers of the Bank of Montreal, had some interesting information to give on changes in the bank's balance sheet. "Gold and coin" has been reduced from \$15.1 to \$1.7 millions, as the bulk of the bank's gold had to be handed over to the Bank of Canada. Former items such as "Dominion Notes" and "Deposit in Central Gold Reserve" are now replaced by notes of the Bank of Canada and by the Bank of Montreal's deposit with the new central bank. The note circulation of the Bank of Montreal has dropped during the year from \$35.3 to \$30.0 millions, while the legal maximum is being reduced on January 1st from \$36.0 to \$34.2 millions. Sir Charles Gordon in his presidential address said that the earnings of the bank were already being affected by the transfer of some of its former functions to the Bank of Canada. He also complained of the recent general reduction in interest rates, which, he alleged injured depositors as well as the banks themselves.

THE STOCK EXCHANGE

THE DISTILLERS COMPANY

THE Distillers Company, Ltd. (whose products are known wherever men keep Christmas or Hogmanay) was an 1877 amalgamation of six distillery firms, associated with famous names like Haig, Bald, Macfarlane, Mowbray, Stewart, McNab and Menzies. Its original paid-up capital of £600,000 has grown to a present total (debenture, preference and ordinary) of £13,160,962, with an aggregate market capitalisation of £55.9 millions. It is the centre of a group of companies which produce and market the greater part of Britain's supplies of industrial and potable spirit, manufacture kindred products from vinegar to solvents and plaster board, turn out bottles, crates and packing for their own products, and have branches and connections throughout the world. Its £1 ordinary stock units, quoted at 97s. 6d., stand, by common consent, in the front rank of British industrial securities. We propose, in the following article, to analyse the structure, connections, financial position and prospects of the Distillers' organisation.

The capital ownership and inter-relationship of the parent company and some fifty-three of its subsidiaries, sub-subsidiaries and associated concerns are set out in the annexed table and chart. The grouping largely follows the lines of historical development. In the last twenty years of the nineteenth century the company extended its interests, steadily and cautiously, on the Scotch whisky side, and entered the export trade. The first decade of the twentieth century was a decisive and formative period for Distillers. The group built up important connections in Ireland, fought a prolonged litigious battle with the "pot still" whisky producers, obtained a firm footing in the industrial alcohol trade (after the Government had given special taxation facilities on the report of a Departmental Committee), and extended its power as far south of the Tweed as London. The war—whose long-term effects on the distilling industry were profound—was a period of further consolidation and extension. To the last fifteen years belong (1) the production of Discol motor spirit (now marketed in conjunction with the "Cleveland" petrol of the Petroleum Storage and Finance Company); (2) the formation of the Methylating Company to centralise the control of the group's industrial branches; (3) the establishment of large-scale bottle manufacturing; (4) the purchase of a large interest in the vinegar trade; (5) the consolidation of the group's interests in Northern Ireland; (6) the segregation and extension of the export business; and, above all, (7) the great amalgamation of 1925, by virtue of which the great Scottish distributing houses of James Buchanan, John Dewar and John Walker, of international fame, were brought under the aegis of the Distillers' system.

The characteristic features of this record are calculated to inspire the investor's confidence. The company's acquisitions, despite their complexity, have been well considered, well timed and conservatively financed. The existing branches of the group's activities are clearly defined, logically related, well spread geographically, and in harmony with far-reaching evolutionary tendencies in the trade. On the financial side, as our detailed table shows, by group (by contrast, e.g. with most concerns in the brewing industry) is almost entirely free from debenture and mortgage indebtedness. The parent company itself has only £270,000 of debenture stock outstanding against a paid-up preference and ordinary capital of nearly £13 millions, and only one of the other companies in our table has any outstanding charges whatsoever. Although some of the subsidiaries and sub-subsidiaries have appreciable amounts of preference shares, the great bulk of the capital of the combine is on an "equity" basis—and in any case, a considerable part of existing subsidiary

(a) This column should be read in conjunction with Distillers' percentage holding where more than two group companies are interested. (b) Controlled by British Trusts Association which holds 57.8 per cent. of equity. Beaufoy Grumble & Co. hold 16.3 per cent., and approximately one-third of preference shares. The latter has interest in Beaufoy's Wines. (c) Large nominee holdings accounted for 37.2 per cent. at date of last returns. Beneficial ownership unknown. (d) Other Turner & Newall, Ltd., hold remaining 40 per cent. (f) Other "B" shares held by Erdos (7.8 per cent.). (g) Not controlling interest. (h) Distillers holds 79.796 preference and all founders' shares. (i) All preference shares held by Daniel Crawford & Son, Glasgow. (j) Balance in each class largely held by J. & W. Nicholson & Co., Ltd. (k) Haig-Verein Hölzerkohlen Industrie, Frankfurt, hold 23.6 per cent. of ordinary. Methylating interest also held by controlling co.'s. † Entire preference interest also held by controlling co.'s. ‡ Original controlling co.

preference capital is held by the group itself. Minority interests are not, as a rule, important. Investors may draw two basic inferences. In a group whose financial structure is at the same time low-gear and compact, fluctuations in profits will be related directly to changes in the industry. They will also tend to be confined within narrower limits than in the case of most combines whose capital structure is complex and highly ramified.

What has been the recent trend of earnings and dividends? How far do the results throw light on events to come? From the summary of the parent company's figures for the last ten years, given below, it is clear that earnings rose steadily in the years succeeding the Buchanan-Dewar-Walker amalgamation of 1925. They suffered a setback with the onset of general economic depression in

1931-32, but have subsequently shown reassuring powers of recovery, though the pre-depression level has not yet been fully regained. A conservative distribution policy has resulted in the retention "in the business" of no less than £3,850,000 of profits during the last ten years, and has served as a "buffer" for stockholders during depression. In 1932 and 1933, when earnings reached their lowest point during the decade, ordinary dividends dropped only from 20 per cent. to 17½ per cent. For the last two years the company has been able comfortably to pay the pre-depression dividend rate. The financial traditions of nearly sixty years, however, suggest that only a most striking expansion in earnings, above the highest point to which they have yet attained, would be regarded as justifying a significant further increase in dividends.

DISTILLERS ORGANISATION
(Including non-controlled industrial affiliations)

If this interpretation of near-future possibilities is correct, the speculative appeal of Distillers Ordinary stock, at its present price, would appear relatively limited. The yield of £4 2s. per cent. on the £1 units is, indeed, appropriate to an investment whose attractions, though substantial and enduring, are confined almost wholly to the solid, conservative and semi-permanent investor. That progress will be steady rather than dramatic is further suggested by recent developments on the trading side. The abolition of "prohibition" has produced no spectacular increase in American sales. Although the group is relatively well placed in the export markets generally, no far-reaching expansion in sales is in sight. At home, there has been a silent revolution in the economic importance of some of the group's main activities. Consumption of potable spirit declined between 1925 and 1934 from 12,195,000 proof gallons to 8,629,000 gallons under a crushing Exchequer duty which successive Chancellors have shown no disposition to alleviate. On the other hand, British production of methylated spirit has increased from 8,413,000 gallons to 14,388,000 gallons, and production of industrial alcohol from 751,000 gallons to 19,402,000 gallons over the same period. In round figures, the total output of spirits has risen by 60 per cent. in a decade, but 70 per cent. of the whole, to-day, has a destination other than the human throat, against only 30 per cent. in 1925.

The group has shown consummate acumen and foresight in developing its productive resources in harmony with—and frequently in advance of—these far-reaching industrial developments. In the long run, these afford a safeguard for the investor, since it is clear that the Distillers Company has hitched its wagon to a progressive, not a falling star. For the present, however, a brake is set on rapid expansion in earnings by the fact that the profit per gallon on industrial spirit is very much less than that on the drinkable product. A prudent management will doubtless continue voluntarily to quote the lowest possible price for its "industrial" products, in order to stimulate an increase of consumption to which, as yet, no bounds can be set.

INVESTMENT NOTES

Variations on an I.C.I. Theme.—The detailed judgment of Mr Justice Eve in the I.C.I. case (which was determined in the company's favour on November 13th last) avoids any pronouncement on abstruse questions of accounting principle, which were raised in the course of the original evidence (see the *Economist* of November 16, page 972). Mr Justice Eve's decision was made mainly on grounds of fact. His Lordship found that no part of the reduction in the company's capital was required for the replacing of lost capital; that the scheme sent out to shareholders contained all necessary information; and that no suggestion had been made of any misrepresentation or misconduct on the company's part. His Lordship further declared that the evidence given at the hearing had disposed of the suggestion that there existed undisclosed reserve funds or hidden undistributed profits. The company's evidence that the retention of its deferred shares would be detrimental to its capital structure was uncontradicted. The view of the proposals taken by this paper from the outset has thus been endorsed in the highest quarter. The incidental implications of certain of the terms of the scheme will continue, however, to be a bone of contention among professional accountants. Broadly, the company, at its inception, had capitalised, so to speak, a "goodwill" which had still to be acquired; for the deferred shares represented the capitalised value of the expected economies of amalgamation. On the directors' showing, the roseate expectations of the company's founders are unlikely to be realised, but the necessity, in any future increase of capital, of preserving the appropriate relationship between the ordinary and the deferred shares threatened to be a source of embarrassment. Should "goodwill" be capitalised at all? There is one school of accounting, whose views were aptly summarised by Mr P. D. Leake in a lecture given last October (and reproduced in

the *Accountant* of November 30), which holds that even the capitalisation of current earning power, as such, is vicious. Holders of this view declare that industrial share capital which is not represented by "tangible things and rights to tangible things" is "unreal and non-existent." Suppose the going-concern value of land, buildings, plant, stock-in-trade, book debts, etc., of a business is £100,000 and a company is formed to buy that business for £200,000. Then, it is argued, either the capital of the new concern should be fixed at £100,000, and the shares should be issued at a premium of 100 per cent., or the law should be amended to allow of the issue of "no par" shares against the £100,000 of "goodwill." Such ascetic principles are, in practice, honoured almost universally in the breach. Whenever a business changes hands, *earning power* (which has no necessary and direct connection with the accounting value of the tangible assets) is almost invariably the chief determinant of the purchase price, and the purchase price, in turn, influences the capitalisation of the new company. Sometimes, as Mr Leake shrewdly points out, it even affects the mental processes of experts who are "valuing" the assets, in which, avowedly, "nothing is included for goodwill." But is not earning power, in the last resort, the true and sole "asset" of a business? Of what concrete importance, to investors or anyone else, is a figure based on the adjusted cost of the permanent way and rolling stock of a bankrupt railway running through a derelict territory to an abandoned terminal? To capitalise *future* earning power, however, is obviously a hazardous proceeding. There is a proverb regarding the best laid schemes of mice and men, to which, it may be inferred, the directors of Imperial Chemical Industries are now prepared heartily to subscribe.

"Patent Medicine" Companies.—Both as a matter of legal fact and as an investment label, those products known as "patent" medicines would better be described as "branded" medicines. By law the true patent medicine is subject to stamp duty at a considerable rate. Experience has shown, however, that once a widespread "goodwill" has been built up, formulae which were previously kept secret can be published without risk that competitors,

copying the formula, will be able seriously to affect the "goodwill" attached to the brand name. "Goodwill" is of the essence of the branded medicine business. But it must be true "goodwill" for consistent commercial success. By its qualities, the product must be able to retain the custom which has been initially secured at very high advertising cost. In this business a high percentage of lost customers can be fatal to profits. Thus, provided that the drug, or salt, or mixture—be it never so ordinary by its common name—brings real relief for some common human ailment, a skilled management, which produces the remedy in refined form, can build up a very large and very sound

business. The depression record of some leading concerns, covered in the annexed table, shows that the business can be made proof even against the severer fluctuations of the industrial cycle. Claiming special—and sometimes unique—qualities, the branded medicine minimises the substitution risk and establishes a quasi-monopoly. It can consequently fix the price at "what the traffic will bear." Once established, it occupies a very stable position. Only a small proportion of its costs is represented by raw materials and other "uncontrollable" items. Management, manufacture, packing and, above all, advertising are the main elements of cost; and they are the kind of costs which show good returns on a rising turnover. Moreover, the first three items are precisely those in which great improvements and economies have been effected during the last decade and in which scope still exists for further progress. The trading "patent" medicine companies thus offer prospects of good profits over the next few years. Apparently the only sudden danger to which they are liable is that of a sweeping rise in advertising rates; and that is not a serious risk at present. The risk of competition is a slower and less easily discernible danger. But all branded medicines are apparently subject to some law of diminishing returns, and new lines or appeals must be introduced periodically if profits are to be maintained. Lost ground may even be concealed for a time by economies on advertising, though ultimately such a course must be fatal. As a general rule, branded medicine shares may be classed as reasonably good investments for the discriminating investor. But directly profits begin to show sluggishness or decline which is not explainable by obvious general influences or by special causes which are demonstrably transient, they should be avoided, for the essential "goodwill" may be ebbing.

A Cement Scheme.—Many are the uses of Christmas. The season of good will brings a respite to the harassed stockbroker, and an opportunity of quiet retreat to the investor who desires to plan for the new year, those "tasks in hours of insight willed" which can be "through hours of gloom fulfilled." To the normal routine of business, however, the holiday is a serious impediment; and shareholders in the Central Portland Cement Company may ask what element of crucial urgency has determined the decision to present them with the details of a scheme for the absorption of their company by Alpha Cement, in a week when only three full working days are available. In any case, the agreement between the two companies was signed on December 17th, although the circular calling an extraordinary general meeting for December 30th (i.e. the Monday after Christmas), was dated December 21st, and reached the majority of shareholders only on December 23rd (i.e. the Monday before Christmas). The terms of the offer, itself have been the subject of some criticism in the market. The Alpha Company is to allot 135,000 new 5½ per cent. cumulative preference shares of £1 and 120,000 ordinary shares of £1 to the Central Portland Company, whose present issued capital consists of 125,000 6 per cent. preference shares of £1 and 1,000,000 ordinary shares of 4s. On the basis of market prices of 23s. and around 6s., respectively, for Central Portland Cement shares on the eve of the offer, the total market capitalisation of the company is £443,750. The present value of the shares to be received in exchange, at 22s. 6d. and 38s., respectively, for the preference and ordinary of the Alpha Company, is approximately £380,000. The correct valuation of the Central ordinary shares turns necessarily on the company's earning power. The directors declare that developments in the company's territory will "seriously affect" its outlook, and that the results for the fifteen months to December 31, 1935, will not justify a payment of more than 5 per cent. on the ordinary shares (which received 5 per cent. for the twelve months to September 30, 1934, and 10 for each of the two preceding years). As the current financial period, however, has been practically completed, shareholders will regret that the directors have been unable to furnish a more detailed estimate of profits. *Prima facie*, an expanding group like Alpha Cement, whose interests are fairly well

"KEYSTONE SECOND CERTIFICATES"

A MODERN PROFIT SHARING FIXED TRUST INVESTMENT

HALF OF MANAGERS' PROFITS IN ADDITION

Following the phenomenal success of the original "KEYSTONE CERTIFICATES"

"KEYSTONE SECOND CERTIFICATES"

are being issued in response to the increasing demand for a further

MODERN PROFIT-SHARING FIXED TRUST INVESTMENT

The outstanding features of this investment are as follows:

- 1 You participate in 50 per cent. of the Profits of the Managers, in addition to Dividends of Companies forming the Underlying Security.
- 2 You may purchase the certificates and pay by instalments.
- 3 At the present price of 17/3 per Sub-Unit and based on last dividends, you obtain a Gross Yield of approx. FIVE PER CENT. exclusive of non-recurring Bonuses and Rights.

"KEYSTONE SECOND CERTIFICATES" form a twin Investment with the original "KEYSTONE CERTIFICATES" both having entirely different portfolios of underlying securities and operating as two distinct PROFIT SHARING FIXED TRUSTS.

The two Investments have been so arranged that by investing in both you obtain an interest in over 100 Companies and you will receive dividends quarterly, namely in April and September from "KEYSTONE CERTIFICATES" and in January and July from "KEYSTONE SECOND CERTIFICATES."

spread, may have wider opportunities than a more localised undertaking such as the Central Company. The fact that the Alpha Company paid a 4 per cent. interim dividend last October, against no interim whatever for the preceding year, suggests the probability that the total for 1935 will be well above the 5 per cent. paid for 1934. The bargain may, therefore, turn out, in the long run, to be reasonably advantageous for the Central Company's shareholders. An 8 per cent. payment by Alpha would represent available earnings of 4.7 per cent. on the existing Central ordinary shares, while a 10 per cent. payment would represent earnings of 6.0 per cent. The circular, however, gives no estimate of the dividend which the Alpha Company is likely to pay. The relevant considerations, it will be seen, are by no means simple, and shareholders would have appreciated an ampler opportunity to study them.

Pyramiding in excelsis.—The recent death of Mr M. J. Van Sweringen is a tragic sequel to the repurchase only a few weeks earlier, by him and his elder brother, of control of the railway system they had built up. The name of Van Sweringen will always be associated with the pyramiding of holding companies, and the latest transaction carried this practice to what must surely be its ultimate degree. The brothers Van Sweringen had built up, before the depression, a railway "empire" including the Chesapeake and Ohio, Erie, Missouri Pacific, Nickel Plate, Pere Marquette, and Chicago and Eastern Illinois lines, and totalling 22,600 miles. Much the biggest earner of these lines was (and is) the Chesapeake and Ohio, of whose common shares a working majority is held by Chesapeake Corporation. Chesapeake Corporation is controlled by Alleghany Corporation, and this, in turn, was originally controlled by a personal holding company of the Van Sweringen brothers. As all these companies had large amounts of bonds and preferred stocks outstanding, the "gearing," even in pre-depression days, was very high. Depression, however, brought lower earnings, and the Messrs Van Sweringen had to raise bank loans to prevent defaults on such of the obligations of the various holding companies as would endanger their control. Among the collateral put up for these loans was the majority of the common stock of the Alleghany Corporation, the keystone of the whole structure. The loan being in default, this collateral was recently auctioned, and the vital shares were bought by the Van Sweringens for \$3,121,000, with such trifles as coal mines, tramway systems, suburban developments, road-haulage companies, a hotel, a department store and a 52-storey office building thrown in. So for little more than \$3,000,000 control is re-acquired (subject to the pending reorganisation of two of the lines) of companies which have \$1,286 millions of funded debt and \$300 millions of preferred stocks outstanding (at face and par values respectively), as well as common stocks with a current market value of nearly \$550 millions—a total of over \$2,100 millions. Even this may not be the end of the story, for the Alleghany shares were actually repurchased by Mid-American Corporation, a new private holding company incorporated for the purpose, in which it is possible that the Van Sweringen brothers had only a fractional equity. Truly it was not only the monks of the Middle Ages who could balance myriads of angels on the point of a pin. These brothers of the Middle West ran them very close.

Chosen Corporation Questions.—Since the Harman era, Chosen Corporation shares have been a highly professionalised market, subject to fluctuations which appear to have been just as disconcerting to the present board as to shareholders and the market. In his address to shareholders, last August, Mr Serge Rubenstein, the managing director, pointed out that the varying fluctuations of the shares on the Stock Exchange was not a matter with which the board could be concerned, but expressed surprise that there had been a fall in the price of the shares instead of the rise which he inferentially suggested would be justified by the situation. He referred to the increase in output and profits, the reduction of costs and the "very

substantial improvement . . . in the technical position in the Great Nurupi Mine." The shares, which were then quoted round 20s. 9d. fell to 9s. 6d. on the day following the sensational circular letter issued by Messrs McCarthy and Binns, the company's consulting engineers, to the shareholders. Subsequently to the report and annual meeting held on August 2nd, circulars had been issued on September 30th and November 26th conveying further good tidings regarding the financial and mining position of the Corporation generally. The official view is that conditions at the mines have never been better, but the engineers insist that the condition of the only working mine, the Great Nurupi, has caused them serious and growing concern, which has been frequently reported to the board. Shareholders may search the last report in vain for any hint of criticism regarding the mining position. In the opinion of the engineers the ore reserves are the smallest in the history of the company and dangerously low if production is to be maintained at the current rate, yet the last report referred to "an ample supply of ore to keep the mill working at full capacity for at least another three years." Criticisms are also levelled at the official references to finances. However, the engineers offer some encouragement in regard to the possibilities of the area to the east of the Lone Tree Pass Fault which, given "time," "patience" and "considerable expense," may appreciably extend the life of the mine. It is evident, however, that very large issues are opened up by the conflict between the statements of the Board and those of Messrs McCarthy and Binns, and, in view of the exceptional circumstances, there would appear to be strong ground for pressing for a complete review of the finances and mining position by some outside authority. The issue would appear to turn largely on matters of fact which should be readily ascertainable by this means.

Apex (Trinidad) Oilfields.—Although the preliminary profits and reduced dividend of this concern indicate a setback during the year to last September, the position is not unexpected, and seems less cheerless than the figures indicate. The total dividend of 27½ per cent. was midway between market estimates. The fall in oil profits from £348,700 to £300,468 may be regarded as reasonable in view of the substantial reduction of output to 425,036 tons for the latest year. Analysis of the preliminary statement of profits shows the following comparison with recent results:—

	Years to September 30, 1933	1934	1935
Oil profits	365,424	348,700	300,468
Amortisation of wells	128,652	130,973	126,422
Expenses (net)	9,745	7,433	4,011
Reserve for taxation	34,547	21,442	40,706†
Directors' additional remuneration	8,750	8,750	6,875
Earned for dividend	183,730	180,102	122,454
Paid	175,000	175,000	137,500
Earned %	37.3	36.3	24.5
Paid %	35	35	27½
Carried forward	110,509	115,611	100,565

† Includes special amortisation.

The 27½ per cent. dividend entails a draft on the credit balance of slightly over £15,000, but the payment may be defended on several grounds. It is anticipated that production for the current year should be at least maintained at the level of last year's output. More important, in the long run, is the reserve position. Two years ago, the general manager estimated the life of the property then proved at 19 years. Information received early this year indicated promising developments in the southern area, which is situated 1½ miles from the main field. It now appears that the recent drilling operations have been successful in the whole south-western area, resulting in a definite increase in the oil reserves. Shareholders, therefore, should find much in the forthcoming accounts and chairman's speech to compensate for the reduced dividend. The shares have recently recovered some of their lost ground, and stand at 23s. to yield 6 3s. 9d. per cent.

Further Tin Results.—A further batch of distributions by tin producing companies shows consistent improvement. Of the Eastern concerns, *Gopeng* has declared a balance dividend of 3d. for the last financial year, making a total of 2s. 4½d., as against 2s. 1½d.; and together with the final, an interim payment of 9d. will be distributed in respect of the current year against a 4½d. interim twelve months ago. *Pengkalen* has declared 7½ per cent. dividends on the participating preference and ordinary shares, bringing the totals for the financial year to 27½ per cent. and 17½ per cent. respectively, compared with 25 per cent. and 15 per cent. for the previous year. Among the Nigerians, *London Nigerian* recommends a final dividend of 4 per cent., making 12 per cent. as before. Concurrently, however, a 5 per cent. interim will be paid, against 4 per cent. a year ago. The gross earnings for the twelve months to June last totalled £207,700, against £158,900; but owing to higher costs, the net profit showed a smaller advance of £39,950 to £143,400. A satisfactory feature of the report is the increase in ore reserves, which are nearly 4,000 tons higher at 40,900 tons. Following its financial reorganisation, *Naraguta* declared 3½ per cent. in September and now announces a further distribution of the same amount; while *United Tin Areas*, which has also reduced its capital this year, has declared a second interim dividend of 7½ per cent., the first having been at the rate of 10 per cent. It may be mentioned that several of the smaller Nigerian concerns—including *Jantar Nigeria*—have recently paid relatively substantial dividends.

Rand Selection.—The increase in the profits of this Kaffir finance undertaking, writes our mining correspondent, is larger than might have been inferred from the increased dividend, for they rose from £367,200 to £482,900 for the year to September last. Shareholders receive 40 per cent. (absorbing £400,000) against 30 per cent., while £100,000 is transferred to reserve, and taxation, at £60,000, requires £25,000 more than in 1933-34. The balance carried forward is therefore reduced from £199,900 to £122,800. No exact comparison of the appropriation account items is practicable since the 1934 statement included a number of non-recurring credits, including premiums on shares and a special exchange reserve written back. The feature of the balance sheet consists in the increase in the current assets items, which now total £484,950, compared with £341,120 twelve months ago. But whereas cash then accounted for £104,800, it now stands at £630 only. Little change has taken place in the net amount of the company's holdings, but certain realisations have been made, and interests acquired in the Spaarwater, Vlakfontein and West Witwatersrand Areas. On the basis of last year's dividend the shares afford the attractive yield of about 7½ per cent.

Other Company Results.—The usual table of company profit and loss accounts on page 1333 gives results of 20 other companies. One of the most interesting of these results is that of *Fairey Aviation*, whose net profit has been reduced from £47,534 last year to £39,112 this year. Taken in conjunction with the passing of the preferred ordinary dividend of *Airspeed*, it may serve to moderate some of the excessive enthusiasm which has been shown on occasions recently for aviation stocks. This week's batch of rubber and tea companies also includes a number of unfavourable reports. *West Hartlepool Steam Navigation's* profits are also lower. The two investment trusts in the list both show increased profits, in accordance with the present general tendency among the trusts, which has further been emphasised by the declaration of a dividend of 3 per cent. (against nothing last year) by *Great Northern Investment Trust*. *W. Abbott and Sons*, the shoe manufacturers and retailers, show a small loss, against a small profit last year. *Cooper and Company's Stores*, on the other hand, has slightly increased its earnings. Among the industrials, *Matchless Motor Cycle* reflects the unfavourable conditions which are general in the industry. Continued activity in the printing trade has

Apply to above address for particulars of Sites for Works

contributed to a further increase in the profits of *Monotype Corporation*, while *Rubber Regenerating Company* has earned a reasonable profit. *Chappell and Company*, the piano manufacturers, have increased their profits.

Company Meetings of the Week.—On later pages of this issue will be found the reports of the following companies:—Scottish Australian Company, Stoll Theatres Corporation, United Molasses, Agar Cross and Company, Booker Brothers McConnell and Company, Gold Coast Selection Trust, Marlu Gold Mining Areas, Gold Coast Main Reef, and Murchison Gold Development. Sir Oswald Stoll, at the meeting of Stoll Theatres Corporation, praised the company's financial procedure in retaining generous reserves for depreciation, and attacked the entertainments duty; but, as he himself admitted, the earning capacity of the industry is "not to be disparaged." Mr William A. Agar discussed the difficult conditions in the Argentine, and said the prospects of Agar, Cross and Company were considerably improved by the recent increase in the price of Government wheat purchases. The chairman of Gold Coast Selection Trust spoke of conservative book values for the company's holdings, and Mr Agnew described very satisfactory development work. The chairman of United Molasses announced that the £254,000 invested by the company last January in English beet sugar factories has been written down by £75,000, representing bonus distribution and dividends received during the year. He did not anticipate the Government's intended Bill for regulating the industry would be unsatisfactory from the company's point of view. Mr Campbell Inglis, of the Scottish Australian Company, reported a loss due to fall in wool prices and drought. Booker Brothers, McConnell and Company are approaching the end of seven lean years, according to the chairman, and developments were hoped for in gold production in Demerara. The chairman of Murchison Gold Development described valuable additions to the company's property. Lord Dorchester, at the Gold Coast Main Reef meeting, reported highly gratifying development results. Marlu Gold Mining Areas, said Mr H. G. Latilla, was in almost an unique condition, and the mine had been developed and production would commence, all within a period of less than three years.

THE WEEK IN THE MARKETS THE LONDON STOCK EXCHANGE

SETTLING DAYS

TICKET	ACCOUNT
JANUARY 7	JANUARY 9

A WEEK broken by the Christmas holiday gives the London Stock Exchange greater opportunity for seasonal celebration than for earnest attention to business. The conviviality of the Stock Exchange is proverbial, and members this week have not failed to live up to tradition. The City's interest in markets has been transferred from Capel Court to Leadenhall and Smithfield, and bulls and bears alike have been more closely engaged with the fowls of the air than with their own species.

There were, in fact, few investment pointers during the week. Widespread fog on Monday limited the attendance in the "House" and added to the seasonal distractions. City opinion took note of Mr Eden's appointment as Foreign Secretary, reflecting that a firmer policy in the future might involve a more vigorous search for effective sanctions, to which the "House," as a whole, has never really warmed. Again, the season of goodwill has fallen when the situation

in the Mediterranean is anything but clear. There are difficult problems facing investors in their New Year decisions.

The gilt-edged market reflected all of these influences. Selling was not heavy on Monday, but the market was as dismal as the weather, and the "irredeemables" led a general reaction towards lower, but steadier, levels. India and Dominion issues were quiet, but some anxiety (though no alteration in quotations) was caused by the report that the Auckland Transport Board intends to pay its two January coupons in New Zealand currency instead of sterling.

In the foreign market, lower-grade Brazilian issues attracted some attention, although the Funding issues seemed to have exhausted their advance. Among the European issues, German bonds were dull, and the sensitive Danzig loans fell abruptly. Japanese loans held their ground, although Chinese issues were nervous on reports of disturbances in Shanghai.

Home rail stocks opened somewhat easier, unaffected by the meeting arranged between the coal owners and men for January 8th and disinclined to examine dividend prospects closely. Fractional declines throughout the list were attributable to lack of support to meet a minor amount of selling. Foreign rails continued very quiet, the only feature being provided by San Paulo, which fell as a result of profit-taking after last week's advance.

In the industrial share markets, business was at times hardly sufficient adequately to test quotations. There were, however, a number of features, despite the dwindling of general business. Imperial Tobacco achieved a new high level, on cheerful dividend and bonus estimates, and were assisted by the increased distribution of United Tobacco South. Some of the pre-Christmas new issues began rather adversely, but an exception was provided by South African Drug, which established a useful opening premium. Richard Thomas were the only prominent feature in a quiet steel group, on the acquisition of the American Rolling rights, and reports of an agreement with Austin Motor.

Motor shares remained irregular, and aviation issues showed only a semblance of firmness on Monday. Recent favourites in the electrical equipment group receded, but brewery shares remained very firm, although hardly able to muster a further advance. Many store and provision shares resisted the pre-holiday recession, and the building material group was steady, with the exception of Alpha and Central Cement, which both eased on the merger proposals (criticised on page 1321). Triplex found some support, but such recent favourites as Turner and Newall were the turn easier.

In the oil market little business was recorded, and since the Continent was uninterested, the leading issues found difficulty in maintaining their opening steadiness. The rubber share market, defying tradition, opened in a more cheerful mood on Monday, but tea shares remained neglected owing to the approach of the holiday and of the meeting of the International Committee.

The Kaffir market had no speculative or public following. Business was small and most quotations were lower, although General Mining mustered some initial support. In the East African market, Kentan improved on the report. Tin and copper shares merely held their ground.

We understand that Mr Ernest Osman Harborow (trading as B. M. Clarke and Company) has been declared a defaulter upon the Stock Exchange.

FOREIGN STOCK EXCHANGES

NEW YORK

WALL STREET ended last week with a firm flourish in spite of European difficulties and the approach of Christmas, and the volume of business increased substantially. Aviation stocks were in the lead; oil and motor shares moved up, but rails and utilities were somewhat weak. Government and gilt-edged bonds were firm, and due attention was paid to speculative bonds. This week the market settled down into holiday quietness, with prices more irregular. The changed silver tactics of the Treasury continue to disturb the market, but silver producers are a little more confident and hope that the main blow will be borne by speculators. Business

indices are monotonously good. The seasonal decrease in freight car loadings is smaller than last year by 35,300; automobile output for week ended December 21st exceeded 100,000; there are many good dividend announcements. The Government gained a point against its critics when the Tennessee Federal District Court upheld the Tennessee Valley Authority Act, but lost a point in Kansas when the constitutionality of the Wagner Labour Dispute Act was challenged by the Federal Judge. The Supreme Court has agreed to short-circuit ordinary procedure to test the Guffey Coal Act.

BY STOCK EXCHANGE INTRODUCTION

H. Lotery and Company, Ltd.—Issue of 250,000 5½ per cent. cumulative £1 preference shares and £250,000 debenture stock 4½ per cent. at par. Stock repayable finally at 102½ on November 30, 1970, or at 105 to 1960 and at 102½ thereafter, on six months' notice. Acquires general clothing contractors' business. Profits before charging depreciation and income tax, years ended May 31st: 1933, £57,647; 1934, £79,519; 1935, £56,466. Net assets, excluding goodwill, £410,841. Valuation of properties £327,730, excluding stock in trade and goodwill. Purchase price £560,000 payable £310,100 in cash and £249,900 in ordinary shares.

PRIVATE PLACING

Brighton and Hove Gas.—The Brighton Hove and Worthing Gas Company have placed privately £50,000 4 per cent. perpetual debenture stock.

CONVERSIONS AND REPAYMENTS

Spicers, Ltd.—The directors are issuing £350,000 4½ per cent. registered notes. The £114,000 of 5½ per cent. notes are being redeemed and holders are offered the right up to January 3rd to exchange into an equal amount of the new issue. Holders accepting will receive a special payment of 1½ per cent. for the period January 6 to June 22, 1936, representing the difference in interest rates on the old and new notes.

FIXED TRUST

Keystone Second Certificate.—Managers, Second Keystone Fixed Trust, Ltd. (British Industrial Corporation Group). Portfolio, 50 industrial debentures, preference and ordinary shares. Managers guarantee repurchase and may eliminate shares at discretion. Trust life 10 years; loading charge 8 per cent. Certificate holders receive 50 per cent. profits of managers after charging expenses of managers as certified by auditors. Trustee, Midland Bank Executor & Trust Co. Ltd.

FORTHCOMING ISSUE

Derbyshire Stone, Ltd.—Incorporated for the purpose of merging various undertakings engaged in the quarrying of Derbyshire limestone and the production of tarred limestone kerbs, setts, architectural stone, etc. The authorised capital will shortly be increased to £420,000 divided into 210,000 5½ per cent. cumulative preference shares of £1 and 210,000 ordinary shares of £1 for the purpose of acquiring the quarrying assets of Constable Hart and Company, J. Hadfield and Sons, and the entire issued share capitals of Creatorex and Son, Ltd., and Buxton, Hopton Wood Stone Firms, Ltd.

OTHER RESULTS OF ISSUES

Twentieth Century Cinemas.—We understand that underwriters of the recent issue of shares had to take up about 50 per cent. of each class.

C.T.C. Bazaars.—The subscription lists for C.T.C. Bazaars £550,000 issue closed December 21st at noon.

N.W. (Costumiers).—Lists for the offer for sale of 128,000 6½ per cent. cumulative preference shares of 10s. each at par and 300,000 ordinary shares of 2s. each at 2s. 6d. were closed at 9.5 a.m. December 20th.

Metal Box.—The issue of 142,883 7 per cent. preference shares of the Metal Box Company has been heavily over-subscribed.

Nuttall's Breweries.—More than 90 per cent. of the debenture holders of Nuttall's Breweries exchanged into the company's new issue.

CALLS DUE DECEMBER 30, 1935, TO JANUARY 4, 1936
The grand total of calls in December, 1935, is £16,128,124, which compares with £7,934,567 in December, 1934.

REPORTS AND NOTICES

GOVERNMENT, &c.

AUSTRIAN CREDIT ANSTALT.—The Austrian Government has submitted an offer for the final settlement of the live claims, the principal features of which involve an immediate payment in cash in foreign currencies (equivalent to 60,000,000 Austrian schillings) and the payment over twenty years also in foreign currencies of annuities (equivalent to 2,000,000 Austrian schillings each). The International Committee of Creditors intends to recommend this offer to the creditors for their acceptance, but the full details of the proposal still remain to be worked out.

BANKS

LLOYDS BANK LTD.—Mr Francis Adams Beane, chief general manager of Lloyds Bank, Ltd., for the past seven years, has been appointed vice-chairman of the board of directors. He is retiring from the general management at the end of 1935. Mr Beane has been on the staff of the Bank for 48 years. He began as a junior clerk at the Longton (Staffs.) branch in 1887. Until last year Mr Beane was a member of the council of the Institute of Bankers and is still a member of the advisory council of the Bankers' Development Company, Ltd., and a director of the Bank of London and South America, Ltd.

INSURANCE

THE LIVERPOOL AND LONDON AND GLOBE INSURANCE COMPANY, LTD. (INTERIM BONUS DECLARATION).—The directors declare the following interim bonuses on all policies entitled to participate, which become claims by death or maturity in the year 1936: 45s. per cent. per annum for whole-life and limited payment policies; 40s. per cent. per annum for endowment assurances.

RAILWAYS

BUENOS AIRES GREAT SOUTHERN AND BUENOS AIRES WESTERN RAILWAYS.—Mr Robert Stuart and Mr Cecil Roberts, joint general managers of the B.A. Great Southern and B.A. Western Railway Companies, are reported to have resigned.

MINES

KENTAN GOLD AREAS, LTD.—The report for year ended September 30, 1935, shows that the results from Tanganyika Territory appear to be most promising, as good gold values are being obtained over exceptionally big widths. At Muinto Dineiro a borehole has cut a sulphide ore body containing gold at a depth of 1,000 feet below the outcrop, showing that the mineralised sediments which contain the gold persist to that depth. A bulk sample of 4 tons of sulphide ore averages 6.16 dwts. gold per ton, showing

COMPANY MEETINGS, &c.

STOLL THEATRES CORPORATION, LIMITED

BURDEN OF ENTERTAINMENT TAX

SIR OSWALD STOLL'S PROTEST

The seventh ordinary general meeting of the Stoll Theatres Corporation, Limited, was held, on the 21st instant, at the London Coliseum, St. Martin's Lane, London, W.C.

Sir Oswald Stoll (chairman and managing director) presided.

The Secretary (Mr Roland J. Bentley) having read the notice convening the meeting and the auditors' report.

The Chairman said: Ladies and gentlemen, I rise to move the adoption of the report and accounts which I assume may be taken as read.

After comparing the figures of the balance sheet with those of last year, the Chairman continued: One or two shareholders have written asking why we do not use our credit balance to pay dividends. I for one shall be glad to do so at the proper time. Assets can be increased by writing up real values unduly or by not writing doubtful values down. These processes might permit of paper profits.

Where certain depreciation provisions are made, although the depreciation may be only imaginary, assets may seem to suffer, profits may be impaired, investments may have a weak appearance. But if the causes of apprehension are known, if their removal is not only practicable but almost inevitable, and if, on their removal, what was thought to be lost may be found, years of patience can then be well rewarded. We have remained under a cloud in the hope and belief that people with patience, backed by reason, are always rewarded.

A leading chartered accountant has commented upon our large margin of security for further borrowings, but there lie before us improved conditions for theatres as well as general trade, in which circumstances the credit balance we have is large enough to warrant a belief that dividends are on the way. Adequate cash profits would soon convert our credit balance into cash, and allow us to write back excessive provisions for various depreciations in the accounts of our subsidiaries, leaving cash profits free for cash dividends.

THE ENTERTAINMENTS DUTY

The companies controlled by this company have paid close on £3,000,000 in Entertainments Duty out of receipts paid by the public to see its entertainments. That money had to be earned and paid over to the Board of Customs for nothing. The stage entertainment portion of it had to be earned by theatres, actors, artistes, musicians, and stage workers, who had to be paid not out of this money but out of other money to the full amount.

To this extent there was a doubling of the cost of those essentials of our business without a doubling of their value or attractiveness. Roughly speaking, it has been a gratuitous tax which required us to earn six million pounds in order to get value for three million pounds. Earning capacity of that calibre is not to be disparaged.

There is a reference in the report to 300 members of the last Parliament having signed a petition to the Chancellor of the Exchequer to remove the Entertainments Duty upon skilled personal employment on the theatrical and music hall stage, where its effect is most destructive and far-reaching. We have fought a patient fight for this for years without any success until the Budget of this year.

When taxation makes a business organisation provide £2 for every £1 of essential expenses, when that pound for pound yields no benefit to the business, when £1 for £1 amounting to millions of pounds must be handed over to a Government department without any allowance even for the cost of the business staff used to collect it, when no regard is paid to the wreckage of values and the prevention of reasonable return upon capital which the system causes, it is plain that the responsible authorities ought to give more reason for such financial persecution than the mere statement that they need the money.

No Government needs money which will destroy skilled, individual personal employment. If the principle were applied all round no human being could earn a living in this country. It was proved to the Chancellor that the stage theatre industry had shrunk to one-third of its former proportions, although its growth and prosperity are necessary as the keystones of other industries.

DIFFERENTIATION OF STAGE AND CINEMA

This was sufficiently proved to cause Mr Chamberlain to differentiate between the stage theatre and the cinema in the manner referred to in our report. But the differentiation has not gone far

enough. It should go to the full length to which it seriously concerns specific kinds of human employment so that enough specific attractions can survive to keep every worthwhile stage theatre not only workable, but progressive and profitable. Those specific attractions are the human material vital to the making of pictures too. If they decline further and are stamped out the wonderful picture industry of the country will receive its death blow.

Millions of money invested in it will be lost and many thousands of ushers and checktakers dependent on it will be thrown out of work. This is not a question which should wait for annual Budgets as if it were a normal question of taxation. It is a mistake which should be rectified regardless of Budgets and normal taxation.

This has been a hard row to hoe, but in delivering the address for the deputation received by the Chancellor on March 6th this year, I caught Mr Chamberlain's eye and I felt that at last a Chancellor of the Exchequer had seen the whole subject in a clearer light. For that reason I have perhaps greater hope than most people that the mistake, having been seen, will be rectified.

I now beg to move: "That the directors' report and balance sheet at September 30, 1935, and profit and loss account for year ending that date be approved and adopted and that the balance of £99,815 9s. 8d. at credit of profit and loss account be carried forward to the current year's accounts."

Mr Douglas McCraith seconded the resolution, which was put to the meeting by the Chairman, and carried by a large majority.

The retiring directors were re-elected and the auditors were reappointed.

MURCHISON GOLD DEVELOPMENT, LIMITED

AMPLE CASH RESOURCES

The annual general meeting of Murchison Gold Development, Limited, was held, on the 20th instant, at River Plate House, London.

Major-General the Hon. Sir Newton J. Moore, K.C.M.G., V.D., who presided, after referring to the loss they had sustained through the death of the late chairman, Mr John Waddington, and to the absence in Australia of the present chairman, Mr Claude de Bernales, said that the revenue receivable by the company for the period under review amounted to £3,199, and after charging all ordinary expenditure there remained £3,330 to the debit of revenue account to be carried forward. The total cash resources of the company amounted to £108,189, and that sum was sufficient to carry out the already decided development policy. Shares under option until June 30, 1936, if exercised, should provide a further £149,369.

IMPORTANT ACQUISITION

An important acquisition to the Emu property had been made during the year by the pegging out on behalf of Emu Gold Mines, Limited, of three gold-mining leases adjoining the eastern boundary and by taking options over three prospecting areas. Preliminary operations on those latter areas had revealed the existence of six veins varying from several inches up to 3 ft. in width. Values fluctuated from 3 dw. to 1½ oz. per ton. These veins appeared to be tributary to some large formation which it was hoped to locate in the prospecting and drilling campaign now in hand. As a result of the encouraging development work carried out the options over those areas had since been exercised.

THE RIVERINA PROPERTY

The acreage of ground held by Riverina Gold Mines, Limited, had been increased from 96 to 572 acres, an acquisition which adequately protected the property in every reasonable direction, and incidentally added greatly to its auriferous area. The directors were disappointed that the Riverina property had not yet been brought to the production stage, but that had been occasioned by the collapsed state of the underground workings as revealed by the unwatering of the mine.

Mr de Bernales and Colonel Sir William Campion were now in Australia, and in the course of their visit were making a tour of inspection of the Emu and Riverina properties. Their knowledge and advice would undoubtedly be of great assistance in speeding up the development of the mines. Visits of London directors were undoubtedly not only valuable to the particular mines in which they were interested, but were beneficial to the gold-mining industry generally in helping to secure the sympathetic support of the people in an industry which had done so much for Western

* The report was unanimously adopted.

GOLD COAST SELECTION TRUST, LIMITED

GOOD PROSPECTS AT ABBONTIAKOOK AND TARKWA

The sixth ordinary general meeting of the Gold Coast Selection Trust, Limited, was held, on the 20th instant, at the Institute of Chartered Accountants, Moorgate Place, London.

Mr H. G. Latilla (the chairman) said that after taking into account the usual administration expenditure, a profit of £25,124 had been made during the year, as a result of the sale of investments and dividends received. The investments consisted of large shareholdings in Ariston Gold Mines (1929), Limited, and Marlu Gold Mining Areas, Limited. The book value of those was £259,420, and the market value at that date was over £2,560,000. Since the end of the financial year they had acquired share interest in the Amalgamated Banket Areas, Limited, and Gold Coast Main Reef, Limited. The total market value of their investments to-day exceeded £2,680,000.

Their interest in Amalgamated Banket Areas had been acquired on what they considered favourable terms. In July last the Banket company had purchased the whole of the interests of the American Smelting and Refining Company in the Abbontiakook and old Tarkwa Gold Mines. From the former mine, the company was at present making a monthly profit averaging £11,000.

Mr John A. Agnew said that the most important features concerning the future of the company that had developed during the past year had been the satisfactory exposures in their recently acquired dredging areas, mostly on the Ancobra River, and the purchase by the company of a very substantial interest in the Amalgamated Banket Areas, Limited. The importance of the interest purchased in Amalgamated Banket Areas centred in the recent acquisition by that company of the Abbontiakook and Tarkwa Mines. The former was at present producing from 9,000 to 10,000 tons of ore monthly, on which a profit of about 20s. per ton was being made.

Steps had been taken to reorganise the power plant, and make certain additions with the object of accelerating development work, and a commencement would shortly be made with the sinking of a new vertical shaft, which was estimated to cut the ore body to about 2,000 ft. If they were successful with their accelerated programme of development work through the existing mine openings, it was anticipated that by the time the shaft reached the reef they would be able to forecast with safety treatment on a scale of not less than 20,000 tons of ore monthly of a grade approximating to that at present being won. The ore reserve position was already very good, and prospects at the bottom of the mine indicated that a very much larger plant than the present one would be justified with many years' work ahead of it.

It was intended to unwater the old Tarkwa Mine as soon as the equipment was ready, and from past very encouraging results there appeared to be every prospect of very material additions to the ore reserves being made available from this source in the course of further development.

On the N'Tubia section the results of development work had been very encouraging, and it was expected that the third level would be opened up very shortly, and, as on the second level, very good values had been shown for over 1,000 ft. in length, they looked forward with considerable confidence to finding this shoot of ore continuing in depth.

The development figures on Bibiani North property were most encouraging, and work on the main shaft of this property was being pressed forward with all possible speed.

The report and accounts were unanimously adopted.

MARLU GOLD MINING AREAS, LIMITED

SUBSTANTIAL ORE RESERVES

The first ordinary general meeting of Marlu Gold Mining Areas, Limited, was held, on the 20th instant, at the Institute of Chartered Accountants, London.

Mr H. G. Latilla, in moving the adoption of the report and accounts, said that the only revenue received by the company during the year was a profit from the sale of investments, plus dividends and interest, amounting to approximately £20,000. The credit balance of £13,419 had been applied in writing off part of the preliminary expenses, which now stood at £3,307. Cash at bankers stood in the accounts at over £280,000. He thought shareholders would agree that to-day's position of the company reflected great credit on the general manager and his staff, and it was almost unique when it was considered that a mine had been developed containing approximately 3,000,000 tons of payable

ore reserves actually proved and production would commence—all within a period of less than three years.

Mr John A. Agnew, in seconding the resolution, dealt with the operations carried out during the year and said that there was a substantial increase shown in the ore reserve position, there having been added 1½ million tons of ore of a value only slightly less than that shown for the ore reserves a year ago. It was reasonably certain that treatment operations would commence with practically 3,000,000 tons of ore proved and there was no doubt that the latter figure would be substantially added to as further development work was carried out. The continuance of the crushed ore zone material had been proved to a considerably greater depth than was shown a year ago. Up to date the width of the ore body in the deeper ground was considerably less, but the average value was substantially higher.

The experience so far gained with the mechanical shovels which were in operation for the purpose of preparing the ore deposit for the supply of deliveries to the mill would appear to confirm the views expressed on more than one occasion, to the effect that working costs were likely to be extremely low when the larger plant was brought into operation.

The development work in the lower portions of the main Marlu deposits had not reached a stage where the location of the main shaft, having regard to the development of the ore body at much greater depth, could be determined to advantage, and a commencement had already been made with that work. That shaft would serve to open up also the big quartz vein in depth which had been already partially explored from the old Bogosu shaft workings.

It was expected that the treatment plant would be ready for production about August next. It might be said generally that in the matter of mine development, in all operations that would tend to throw light on the correctness of the views previously held about very low working costs that might be anticipated when the plant was in full operation, and in the successful and efficient treatment of the ore, they were perfectly satisfied that their early expectations would be more than realised.

The report and accounts were unanimously adopted.

BOOKER BROTHERS, MCCONNELL AND COMPANY, LIMITED

CONDITIONS IN DEMERARA

The annual general meeting of Booker Brothers, McConnell and Company, Limited, was held, on the 20th instant, at 14 Trinity Square, London, Sir Alfred Sherlock, the chairman, presiding.

The Chairman, in moving the adoption of the report and accounts, referred first to the loss sustained by the deaths of the vice-chairman, Mr H. J. W. Holt, and Mr C. H. Nicolson. Continuing, he said that the profits for the year had amounted to £55,380, a reduction of £8,000, entirely due to the dividend from their main subsidiary being only 3 per cent. instead of 5 per cent.—a difference of £14,000. The results of the Demerara branch had been disappointing, and he was afraid they could not look for better trading conditions in the Colony until there had been a greater development of local industries, of which the one holding out most hope of large-scale improvement was gold. Gold was undoubtedly present, and it would not be very long before there was more activity in that industry, which would be of great benefit to the Colony and to their own firm, which handled approximately 25 per cent. of the Colony's trade.

Estates Company had just managed to come out without loss, though the company had only been able to pay a small dividend of 3 per cent. out of its revenue from interest and dividends. He thought that next year, owing to the wonderful 1935 crop, they would be able to pay 5 per cent., and possibly further strengthen the reserves.

During recent months there had been serious labour disturbances. When he went to Demerara early next year he would go into the question very carefully to see if there were any really legitimate complaints to be remedied.

Prices had been extremely low, but just recently there had been some improvement, and he could not help feeling that they were approaching the end of a period of seven lean years. The key to the whole position, however, was the action which might be taken by Governments.

The report and accounts were unanimously adopted, and the resolution increasing the capital of the company to £675,000 by the creation of 25,000 new ordinary shares of £1 each was unanimously approved.

UNITED MOLASSES COMPANY, LIMITED

CURRENT YEAR'S IMPROVED TRADING

The tenth annual general meeting of the shareholders of the United Molasses Company, Limited, was held on the 20th instant at Bush House, Strand, London, Mr F. K. Kielberg (chairman and managing director) presiding.

The Secretary (Mr James Don, A.L.A.A.), having read the notice convening the meeting and the report of the auditors,

The Chairman, in moving the adoption of the report and accounts, said:—Your company owns ample tonnage to meet its ordinary requirements, and the directors have no present intention of adding to the fleet, either by building or purchase.

The company's purchase of the two Norwegian tank vessels referred to in the directors' report was effected in order to terminate in the most economical and advantageous manner two unprofitable charters which had still four years to run. That part of the purchase price which represented payment for cancellation of the charters has been debited to the year's profit and loss account, and at the present rate of earnings of the two vessels the balance of the purchase price will be written off in three to four years. The purchase will result in a considerable annual saving to the company.

I am glad to be able to state that the company has no further contracts which in existing conditions are likely to prove unprofitable.

The company's equipment in Java has during the last three years been reduced sufficiently to bring it into line with the decline in the production of molasses in the Island. Adequate provision to meet this reduction has been made in past accounts.

The company's equipment in Java has during the last three is not large, and ample provisions have been made to meet any losses likely to arise under this heading.

BEET SUGAR INTERESTS

The total sum which the company last January invested in English beet sugar factories amounted to £254,000, but the book value of this investment has since been reduced to £75,000, representing bonus distribution and the proportion of dividends received during the year, which represented profits accrued prior to acquisition. The conditions under which the beet sugar industry will operate in the future have for some time past been the subject of negotiations between the Government and a committee representing the beet factories. The Government has announced its intention of introducing at an early date a bill for the future regulation of the industry. The terms of the bill are not yet known, but I have no reason to believe that they will be unsatisfactory from the company's point of view as shareholders in the industry. Your directors attach great importance to the company's association with the sugar industry in this country, and it is their intention, as opportunity offers, further to extend the company's interests in this connection.

PROVISION FOR DEPRECIATION

I now come to the reasons which have caused your directors, in the accounts for the last two years, to provide depreciation at a rate in excess of the percentage usually accepted as adequate. Approximately 85 per cent. of the book value of the company's fixed assets are represented by tank vessels, and our experience shows that conditions governing the employment of tankers are subject to violent fluctuations, accompanied by long periods of depression, during which even modern and efficient vessels cannot earn sufficient profits to provide for normal depreciation. That was the position for over three years following the collapse of the freight market in the second half of 1930, and had it not been for the successful operation of the International Tanker Owners' Association, of which Mr H. T. Schierwater is chairman, it is doubtful whether the company's vessels, when not employed in the molasses business, would have been able, even during the last two years, to earn anything for depreciation. Conditions are therefore not yet normal, and I am satisfied that it is in the best interests of the company that the present rate of depreciation should be maintained, if profits permit, for at least another year or two. This will greatly strengthen the balance sheet and justify a lower percentage for depreciation whenever rates of freight in future years happen to be less satisfactory than at present.

Business during the first quarter of the company's new year has been satisfactory and shows an improvement compared with the same period last year.

The report was unanimously adopted and a dividend of 8 per cent., less tax, was declared on the ordinary shares.

SCOTTISH AUSTRALIAN COMPANY, LIMITED

MR CAMPBELL INGLIS ON THE OUTLOOK

The annual general meeting of the Scottish Australian Company, Limited, was held, on the 20th instant, at 197 Winchester House, Old Broad Street, London, E.C.

Mr Campbell Inglis, chairman and managing director, in the course of his speech, said: Gentlemen,—Twelve months ago I had the pleasure of presenting you with a very favourable statement of accounts, which not only permitted the payment of a dividend of 5 per cent. on the ordinary stock, plus a bonus of 2½ per cent., but also allowed of the carrying forward of no less than £40,000.

At that meeting, while sharing the pleasure of the shareholders at those favourable results, I was careful to point out that there was another side to the picture, for whereas the profit had been the result of good wool prices and a propitious season, in both directions there was, at the time of my last speaking to you, a distinct reverse.

ADVERSE FACTORS

The warnings which I then gave you are borne out by the accounts which you now have before you. To put it very shortly, the fall in the price of wool, plus the incidence of Colonial taxation, deprived us of a profit, whilst the drought which prevailed over the greater part of Queensland, and to some extent in New South Wales, caused the loss. In the year we are now dealing with wool prices fell by some 35 per cent.—a fall in no way due to depreciation in the quality of the material, but to world causes over which no management, however diligent, could exercise any control. In addition to this, under the laws of Queensland, in which many of our properties are situate, income tax is calculated by reference to the previous year, no allowance being made for losses brought forward; hence, in our year of trouble, we had to pay tax on a year of prosperity.

But for the two causes I have referred to we should have come out just about level, instead of having a loss of over £60,000 to show. Although our losses of sheep were great, even on the most stricken stations a reasonable residuum was left, and we have already started filling up the losses by the purchase of further breeding stock.

LATEST NEWS

Our latest news from Australia indicates that conditions are still very dry on the company's stations in Queensland and Northern Australia, though with two exceptions they are quite safe for a month or two. In the meantime we may reasonably expect the usual seasonal storms. On the whole, considering the time of the year, conditions may be regarded as satisfactory as can be looked for, except at the two stations mentioned, from which, to make quite sure, it has been considered expedient to move some of the sheep to more favoured localities. In New South Wales, with the exception of our Corrella-Warraweena Station, where good rain is needed, conditions are stated to be quite satisfactory.

We are taking steps to strengthen our organisation in every possible way, and in particular we are hoping that in the near future an important addition will be made to the management in Queensland, with a view to ensuring that every individual manager shall be accorded in time of trouble immediate and sympathetic support and assistance from headquarters.

I have dealt fully with the drought position, and you will naturally wish to know how wool stands.

I am pleased to be able to inform you that there has been a substantial increase in world prices, and that at the moment the market seems to be thoroughly good and sound, both statistically and commercially.

On the other hand, you ought to know that our wool clip for the current year is far short of that for the previous year, this being due directly and indirectly to the drought; directly by reason of deaths and indirectly by reason of the fact that in many cases we had to shear our sheep three months too early. The increase in the price of wool will to quite a considerable extent offset the shortage, but not sufficiently to make up for that shortage.

The board have felt justified in making a transfer of £60,000 from the general reserve to the appropriation account, while in addition they were able to resort to a taxation reserve accumulated on this side to meet the burden of colonial taxation.

As a result of these transfers we have been able to recommend the payment of a modest dividend on the ordinary stock, in addition to the dividends on the preference stock, while leaving a balance of £10,975 to be carried forward.

The report and accounts were unanimously adopted.

Head Office: 1 Dale Street, Liverpool, 2 | (Chief Office): 1 Cornhill, E.C.3

GOLD COAST MAIN REEF, LIMITED

ENCOURAGING DEVELOPMENTS

The second ordinary general meeting of the Gold Coast Main Reef, Limited, was held, on the 20th instant, at River Plate House, Finsbury Circus, London, E.C., the Right Hon. Lord Dorchester (chairman of the company) presiding.

The Chairman, in the course of his speech, said:—Shareholders will remember that the Gold Coast Selection Trust, Limited, agreed to subscribe for 300,000 shares in the unissued capital of this company at the par price of 5s. per share. We have recently called upon them to exercise this right, and they have promptly done so, paying £15,000 on application. The shares were allotted to-day, and we shall accordingly call upon the allottees for the balance owing of £60,000. This will increase the total of our cash at banks to over £145,000, a strong and eminently satisfactory position.

I will now say a few words in connection with the progress which is being made by our engineers in the field. We have been fortunate in securing the services of Major D. Gilchrist as general manager.

It has been decided to concentrate development work at Bondaye, where some promising assays over good widths are disclosed in Major Gilchrist's report. We have recently received a cablegram from Major Gilchrist containing some very good development results. It reads, as follows:—

"Gold Coast Main Reef, at 152 ft. level, crosscut No. 11 north, reef averages 8 dwts. over 48 ins.; crosscut No. 12 north, reef averages 8.4 dwts. over 48 ins.; crosscut No. 8 south, reef averages 12.1 dwts. over 42 ins. At 250 ft. level, reef intersected at 164 ft. in main crosscut and averages 55.2 dwts. over 48 ins. At surface, prospecting by shallow adits has disclosed reef 350 ft. along usual strike, south-west from previous known end of the body of ore, averaging 39.6 dwts. over 30 ins."

It will be conceded that these developments are highly gratifying and encouraging. We have recently shipped out to the mine the first units of the permanent power plant; this will be installed at Bondaye, and will enable rigorous development of this section to be pushed ahead. During the next few months we should gather sufficient data to permit consideration of the all-important question of a reduction plant.

Work upon the Tuappim section of our properties has been temporarily suspended, it being apparent that Bondaye holds the better prospects, and it is desirable to concentrate upon one section. Tuappim, however, has not been devoid of encouragement, and we shall turn our attention to it again in the future.

I do not think it desirable to say a great deal about our new Ekotokroo property, since we have only just taken possession and have not had an opportunity to prospect the concession. I do know that the vendors, the Gold Coast Selection Trust, Limited, consider it has distinct possibilities, preliminary prospecting having disclosed two reefs carrying good values. The Ekotokroo area covers the south-west extension along the strike from Anfargah.

I feel convinced that we own valuable areas, and that we shall be rewarded in due course. The next six months should prove particularly interesting, and we shall acquaint shareholders with details of the progress made periodically.

The report and accounts were adopted.

AGAR, CROSS AND COMPANY, LIMITED

EFFECTS OF ARGENTINE DROUGHT

The twenty-ninth ordinary general meeting of Agar, Cross and Company, Limited, was held, on the 23rd instant, at Dorland House, 14-16 Regent Street, London.

Mr William A. Agar (the chairman), in the course of his speech, said that the directors regretted that the results of the trading for the year to June 30th, 1935, still showed adverse results, but, although the company did not reach the profit-earning stage, it was at least very satisfactory that the improvement foreshadowed a year ago had actually materialised to a marked extent. During the year conditions in the Argentine had steadily improved, both economically and commercially, but during the past few months the country had suffered from one of the worst and most widespread droughts experienced for many years, with serious results on the current harvest.

GOVERNMENT ACTION

The estimated exportable surplus of wheat and linseed for the coming season was so reduced on past years' surpluses that the Argentine Government had decided about ten days ago to raise the basic prices at which they were prepared to purchase wheat and linseed from the agriculturists to 10 pesos per 100 kilos. for wheat and 14 pesos for linseed. Those minimum prices showed a very considerable rise on the prices which had been ruling immediately prior to the issue of the Government decree, and the benefit to the producers would undoubtedly be substantial, with most probably favourable repercussion on the business of this company.

Had it not been for the Argentine drought the directors would have been reasonably optimistic with regard to the current year's prospects. The sales for the first four months of the current year—July-October—were, month by month, better than for the corresponding months of the previous year. November was the first month to reflect the drought situation. They were advised that all conditions in the agricultural zones in the Argentine were at least a month late this year, and they must therefore "wait and see."

The report and accounts were unanimously adopted.

GOVERNMENT RETURNS, &c.

NATIONAL ACCOUNTS

The total ordinary revenue for the week ended December 21, 1935, amounted to £12,214,780, against ordinary expenditure of £12,474,777. After allowing for an increase in Exchequer Balances of £306,997 the operations for the week, as shown below, reduced the gross National Debt by £47,000 to approximately £8,020 millions.*

† Free of income tax.

MEXICAN RAILWAY.—The directors announce that an Order has now been issued by the Court sanctioning the new scheme of arrangement for the debenture stocks and debentures. As provided in the scheme, the payment of the half-year's interest on the 6 per cent. perpetual debenture stock, which fell due on January 1, 1933, will be made on January 1, 1936. The registers of the stock will be closed from December 18th to 31st, inclusive.

NATIONAL FIXED TRUST CERTIFICATES (Unit "D").—Midland Bank Executor and Trustee Company, Ltd., announces that the third income distribution upon National Fixed Trust certificates, unit "D," representing the period from June 2, 1935, to December 1, 1935, will be paid to certificate holders registered as at December 1, 1935, at the rate of 3.9038d. net per sub-unit on the due date, January 1, 1936.

PETERS, LTD.—The directors announce that the improved position following the sale of one-half of the shares of Westland Aircraft in July last enables them to recommend to the half-year's dividend on the preference shares for the current year, and a distribution to the half-year's shareholders in the form of a cash bonus of 2s. per share, free of tax. Payment of these dividends and bonus will be made on January 10, 1936, to all those whose names appear upon the register of shareholders on December 31, 1935.

STATE OF BAHIA.—The Ethelburga Syndicate, Ltd., have now received official notification from the Secretary of Finance of the State of Bahia that the Governor ratified the following law on November 26, 1935. Art. 1: The service of payment of interest and sinking funds of the External Debt of the State is suspended as from the publication of this law until December 31, 1936. Art. 2: Any provisions to the contrary are hereby revoked.

SHEPHERD COAL AND IRON.—The directors announce an interim dividend of 6d. per £1 ordinary share, or 2½ per cent., less tax. This compares with 4d. per share (14 per cent.), the interim rate paid in each of the six preceding years. For the previous 12 months the final dividend was 11d. per share, making 6½ per cent., the largest distribution on the £1,171,157 of ordinary capital since 1928-27.

APEX (TRINIDAD) OILFIELDS, LTD.—The report and accounts for the year ended September 30, 1935, will be issued on January 6, 1936, and the annual meeting will be held on January 16, 1936. Oil profits amount to £300,468, less amortisation of wells £108,422, head office expenditure (net) £4,011. Net profit, £170,035. Add balance brought in, £113,611 = £283,646. Less interim dividend No. 30 of 10 per cent., directors' additional remuneration thereon, reserve for income tax, and special amortisation of deep well No. 214, £93,206, leaving a credit balance of £190,440. Final dividend 17½ per cent., less British income tax of 2s. 3d. in £, making 27½ per cent. for year. The balance of profits to be carried forward amount to £100,565. The transfer books and register will be closed from January 7, 1936, to January 16, 1936.

NEW CAPITAL IN 1935

THE ECONOMIST

TRADE SUPPLEMENT

New Series

SATURDAY, JULY 27, 1935

No. 146

THE STATE OF TRADE

THE renewed expansion of business activity, which began last April, continued during the past month. Moreover, the outlook remains fairly satisfactory, for the conditions for further expansion still exist. Profitability of enterprise continues to increase, as is shown in our monthly analysis of industrial profits. And, despite the slight revival in the capital market, money remains cheap. Recovery remains most marked in the capital equipment industries, but the consumption trades are now also beginning to make headway in this country.

Contrary to the normal seasonal movement, employment continued to increase in June, when it reached a record level. The branches of activity in which the improvement was most marked include building, public works contracting and certain ancillary trades, engineering and iron founding, shipbuilding and ship repairing, iron and steel and tinplate manufacture, the hosiery and jute industries, certain food manufacturing industries, printing and bookbinding, the transport and distributive trades, as well as hotel and boarding house services. On the other hand, unemployment showed a slight seasonal increase in coal-mining, motor vehicle construction and in the clothing and footwear trades. With the exception of the Midlands and North-East England, all other districts experienced a reduction in unemployment during June. But the proportion of insured workers unemployed still varies considerably—from 7 per cent. in South-East England to 30.6 per cent. in Wales.

Our new index of Business Activity (adjusted for seasonal variations) continued to rise in June, when it slightly exceeded the highest level reached in 1929. Of the component series of the Index, shown on page 3, seven rose, while six declined between May and June. Only two indices, relating to consumption of cotton and imports of raw materials, were lower than in June, 1934. The index of employment rose slightly between May and June; on the other hand, consumption of power was somewhat smaller than in May. The figures for steel and cotton consumption and for the volume of exports of manufactures registered an appreciable rise. The increased turnover of money both in London and the Provinces is reflected in the rise in the indices of bank clearings. The index of building activity is slightly lower than in May, as the value of building plans passed in June was considerably less than a year ago. But in view of the fact that the plans passed in May were unusually high, the decline in June does not necessarily portend the end of the building boom.

The outlook for the heavy industries remains good. There are no signs of a decline in building activity in the near future, though building costs are now rising gradually. Orders in hand with the iron and steel and engineering industries are sufficient for the maintenance of the current level of activity for several months. Exports of iron and

steel have recently made little headway, but demand from some of the principal consuming industries at home, including motor vehicles and building construction, is likely to be well maintained. Despite a seasonal decline in the output of coal, the position of that industry is slightly better than a year ago. Sales of chemicals, which are used in most branches of industry, have been satisfactory.

The industries engaged in the manufacture of consumers' goods have also made some headway during the past month. Thus, the textile trades as a whole as well as the leather and food, drink and tobacco trades all experienced a slight improvement as compared with May and as compared with June, 1934. Although home demand for consumers' goods has risen by about 10 per cent. during the past two years, it must be remembered that many of these industries are largely dependent on exports, which have so far shown little expansion. Retail trade showed a slight seasonal decline between May and June, but the money value of sales was nearly 6 per cent. higher than in the corre-

sponding month a year ago.

World industrial production, especially of capital equipment, continued to rise between January and April. Thus, the index of world industrial production, calculated by the Institut für Konjunkturforschung, rose from 102.6 (1928 = 100) in January to

103.8 in April. In April, 1934, the index stood at 96.9. On the other hand, the latest figures of world trade show little improvement as compared with a year ago. In the United States the gradual decline in industrial activity since January appears to have been arrested in June. Moreover there are at last signs of the beginning of an improvement in the capital equipment industries there. The most encouraging features are the gradual expansion of dwelling-house construction and the increase in the activity of the metal industries and of the capital market. Although the stage may at last be set for a sustained revival, there are still many difficulties and uncertainties ahead which may delay recovery.

Persistent stagnation still characterises business conditions in France, Holland and Switzerland. Such slight improvements as have taken place in recent weeks are mostly due to seasonal influences. Official statistics point to further increase in business activity in Germany, but the improvement appears to be most marked in the heavy industries. Italy has experienced a striking expansion of industrial activity in recent months accompanied by a steep decline in unemployment. There has also been further improvement in Norway and Sweden, and industrial activity in Belgium is now slightly above the level of a year ago. With the exception of the coffee-growing countries, Latin America continues to gain ground; and in the Far East, Japan's industrial activity has been maintained. Conditions in Australia, Canada and South Africa remain fairly satisfactory.

HOME INDUSTRIES AND TRADE

The following reports on British industry cover, in most cases, the period to the middle of July. In the remainder they relate to the month of June.

COAL

Unemployment continues on a large scale and, on account of an increase in the number of men "temporarily stopped," the position suffered a further deterioration during June. The seasonal slackness of demand was reflected in output figures, which declined sharply between May and June. On a daily basis, however, production was again above last year's level. The export position is patchy, there being a good demand for certain classes and an almost complete absence of inquiry for others. Total shipments declined last month, but some improvement has been noticeable in recent weeks in South Wales. A fair demand for industrial fuel has been in evidence, but trade in house coal suffers from a seasonal depression. Nevertheless, pit stocks are smaller than at this time last year, and prices have been firm. Next month should witness an appreciable improvement in this section.

IRON AND STEEL

Activity in the iron and steel industry continued to expand during the past month. Calculated on a daily basis, the output of steel ingots and castings rose from 32,200 tons in June, 1934, to 35,600 tons in May and 35,800 tons in June, 1935. Imports of iron and steel materials in June were slightly higher than in May, but almost unchanged as compared with a year ago. On the other hand, exports show a reduction on May and on the corresponding month a year ago. Negotiations concerning the details of the five-year agreement between the British Iron and Steel Federation and the Continental Crude Steel Cartel, which should come into force on August 8th, have not yet been concluded. Meanwhile, there has been a slight seasonal decline in new business, but order books are well filled and the outlook for the principal consuming industries remains good.

ENGINEERING

The expansion of productive activity in the engineering industry has been well maintained, but there has been a seasonal lull in inquiries and in new business. Both imports and exports of machinery showed a decline between May and June, but, while exports in June remained well above the level of the corresponding month a year ago, the volume of imports was the same as in June, 1934. There has been a seasonal recession in the demand for agricultural machinery, and business in machine tools and in textile machinery has fallen off a little. There has been little change in the marine engine section. Demand for mining and excavating machinery and for boilers and boiler-house equipment has been well maintained, and the electrical section continues active. A slight improvement has been noticeable in the power equipment, locomotive and sugar machinery sections.

MOTOR INDUSTRY

Despite a seasonal slackening of demand, sales of new cars continue above the 1934 level. New registrations of private cars totalled 24,960 in May, against 22,221 in the same month of last year; in the period October to May new registrations showed an increase of 22 per cent. over the corresponding total for the previous season. The rising trend of imports was checked last month, only 831 private cars being imported, as compared with 1,125 in June, 1934. The export position continues satisfactory, and manufacturers are concentrating attention upon the production of more powerful cars at the lowest possible price, to compete in markets overseas. Exports in June comprised 4,069 private cars and 1,110 goods vehicles, against 3,057 and 808, respectively, a year ago.

CHEMICALS

In the home market a satisfactory volume of business has been transacted in most industrial chemicals during the past month, chief interest being shown in acetone, acetic, formic and oxalic acids. Apart from a good seasonal demand for certain products, such as citric and tartaric acids, trade in pharmaceutical preparations has been limited. In the coal tar products market creosote oil has continued in good demand and sales of refined coal tar have been on a very fair scale, but there has not been much interest in other products. Business in wood distillation products has been steady, but inquiries are not very numerous. The trade returns for June show a decrease of £221,150 in the value of chemicals, drugs, dyes and colours exported as compared with June, 1934. Imports registered a decline of £45,308 as compared with June, 1934.

COTTON

The past month has witnessed little change in the position of the industry. The raw cotton situation continued to be dominated by the control policy of the United States Government, and the tight spot position has tended to become more pronounced. The American Government has estimated the area under cotton for the 1935-36 season at 29,166,000 acres, an increase of 4.6 per cent. on a year ago; it is too early for any reliable estimate of the yield to be made. Inquiry for piece-goods from certain quarters has increased somewhat, but it is doubtful whether any more business has been done than in recent months. The home trade has benefited from the hot weather. Although the *Economist* index of cotton consumption rose from 90½ in May to 97½ in June, the position of the spinning section remains unsatisfactory, and only 70 per cent. of the spindles were in operation on June 30, as against 77 a year ago. Buyers of yarn have continued their hand-to-mouth policy and sales have been difficult to arrange. The past month has been notable for the introduction of legalised wages for operative weavers.

WOOL

The slow improvement in the price of raw wool, which began in March, continued during the past month and sales at Coleman Street have been substantial—home demand being the mainstay of the series. But the reluctance of manufacturers to respond has caused difficulties in the spinning section, where new contracts on a remunerative basis are hard to secure. As regards the weaving section, June witnessed little general change in the employment position, although the improvement over last year was maintained in the worsted branch. Exports of woollen and worsted tissues recorded an advance on the month, but sales of the former in foreign markets were smaller than in June, 1934. Exports of wool from Australia and New Zealand in the year ended June 30th totalled 3,458,000 bales, or 89,000 bales less than in the previous season, an increase of 118,000 bales in shipments from the Commonwealth being more than offset by a reduction of 207,000 bales in exports from New Zealand.

ELECTRICITY

INDEX OF GENERATION OF ELECTRICITY*
(Great Britain, excluding London and Wales)
(Monthly Average, 1923-24 = 100)

May	110	128	117
June	109	124	115

* Copyright of the British Electrical and Allied Manufacturers' Association.
The above index is a 12-month moving average of new orders received by the heavy plant section of the industry. It is based on the horse-power and not on the value of orders.

JUTE

The price of the fibre, which had been slowly rising for some months, suffered a slight setback about the middle of July; this was traceable to uncertainty about the policy of the Bengal Government concerning next year's crop. Business in yarns and cloth has been slow, but the employment position in the industry underwent a further slight improvement last month.

RAYON

Production of rayon yarns remains at a comparatively high level, and some easing off in the hosiery trade deliveries has been counterbalanced by an improving demand from the weaving section. Business in fashion fabrics for the autumn is somewhat slow in developing, but other sections of the weaving trade are relatively good for the time of the year, and not the least pleasing feature is the improving tendency in fabric export business.

LINEN

The raw material remains firm in price, but business is restricted, holders' ideas of prices being much above what potential consumers are prepared to pay. Yarns are in quiet demand,

as is usual at this time of year. Current cloth contracts are nearing completion, but it is stated that producers are anticipating an early renewal of demand for coming season goods, especially for fancy and dress linens.

BOOTS AND SHOES

Employment showed a decline last month in most of the principal centres, but was considerably better than at this time last year. Exports of leather footwear were again lower on the month and fell short of last year's corresponding figure. Imports exhibited a similar movement.

POTTERY

The unemployment percentage for June again showed little change, compared with the previous month and with the same month last year. Conditions are variable, North Staffordshire being least favourably situated. Exports of general earthenware showed a recovery during June, although still less than at this time last year.

AGRICULTURE

According to the Ministry of Agriculture, it is doubtful whether a full average yield of wheat will be reached, and the yields of barley and of oats may be a little under average. The yield of early potatoes is likely to be appreciably reduced in the areas affected by frost, and lifting has been delayed. Prospects are generally favourable as regards main crop potatoes. Turnips and swedes made good progress during June. Mangolds are mostly a good plant, but rather backward; sugar beet is variable. Hop vines are healthy and vigorous, but still backward. Grass made

rapid bottom growth during June, but the present forecast of the yield of both seeds and meadow hay is below the ten years' average. With the improvement in the pastures and a plentiful supply of water, cattle and sheep have done well.

SHIPPING

The *Economist* index of whole cargo shipping freights rose by 0.4 per cent. in June to 84.0 (1898-1913=100), compared with 83.8 in June last year. In recent weeks the various markets have continued in a condition of stagnation, although the Far Eastern market has shown a slight improvement.

BUILDING

Employment showed a slight improvement during June, all the separate occupations with the exception of painters sharing in the movement. Compared with a year ago, there was some improvement in Scotland and in the South-Western and Midland Counties, but in Wales there was a slight decline. Building activity continues on a high level and is a mainstay in the process of recovery at home. The total of building plans approved by 146 local authorities in Great Britain (published by the Ministry of Labour), which reached a record total in May, showed a reduction during June. In consequence, the *Economist* index of building activity (1924=100) declined from 221 in May to 217 in June, against 195½ a year ago.

RETAIL TRADE

The value of retail sales during June showed little change compared with May, but exceeded the total for June, 1934, by 5.8 per cent.

HOME TRADE STATISTICS—JUNE, 1935

STATE OF TRADE OVERSEAS

BRITISH EMPIRE

Australia.—Crop prospects and pastoral conditions have considerably improved as a result of recent rains. The market in wool was active during June and the recent upward movement in quotations was maintained. The textile and clothing trades have received a stimulus from the wintry conditions prevailing in recent weeks, while the building and motor-car trades are also active. Imports in May were 23 per cent. above last year's level, while exports recorded an advance of 41 per cent., thus increasing the "favourable" trade balance.

South Africa.—The weather is normal and reports regarding crops and livestock are favourable. The wool-selling season has now closed with a negligible carry-over, and the outlook for the new season is considered good. The mohair market continues quiet, but hides are firm in price on limited supplies. Building activity in Johannesburg shows no sign of abatement; retail business is steady and wholesale orders better than a month ago. Railway earnings continue above budget estimates. Imports in June were above, and exports below, last year's corresponding figure.

Canada.—Despite the uncertainties caused by the wheat situation and the imminence of the general election, the seasonal slackening in business activity is less than usual, and the Bureau of Statistics' index of business activity is about 7 per cent. above last year's level. The mining, automobile and footwear industries are showing increased activity, while construction contracts awarded in June were 50 per cent. in excess of the corresponding figure for 1934. Industrial production is still moving gradually upward and crop conditions in many parts are better than a year ago.

India.—The uncertainties of the American situation were reflected in the condition of the Bombay cotton market in June. Business was restricted and speculative activity lacking. Inquiry for piece-goods was also poor and prices continued weak. The Calcutta jute market has been easy. The acreage under jute for the 1935-36 season is estimated by the Bengal Government at 1,858,200 acres, against a revised figure of 2,604,200 acres for the 1934-35 crop; publication of this estimate had little effect on the market.

EUROPE

France.—Persistent stagnation still characterises business conditions in France. The official index of industrial activity has remained unchanged at 93 (1913 = 100) between January and May. A year ago the figure stood at 101. Such improvements as have taken place in recent weeks are mostly due to seasonal influences. Although the number of persons in receipt of unemployment benefit continued to decline from 418,471 on June 8th to 393,469 on July 6th, it must be remembered that many foreign workers have been repatriated. The drastic cuts in Government expenditure announced on July 17th indicate that an adjustment of prices is still sought by deflation rather than by devaluation.

Germany.—There has been a further expansion of industrial activity. The index of industrial production, calculated by the Institut für Konjunkturforschung, rose from 94.7 (1928 = 100) in April to 96.3 in May. The expansion in recent months was most marked in the case of production goods. The improvement appears to have been maintained in June, for the number of unemployed, as officially reported, declined from 2,019,300 at the end of May to 1,876,900 at the end of June. The average daily output of pig iron and of coal registered a slight rise, and that of crude steel a slight decline, between May and June. Carloadings fell from 125,300 per day in the first week of June to 121,600 per day in the first week of July. Both imports and exports balanced at about Rm. 318 millions in June. In May imports were Rm. 332.5 millions and exports Rm. 337.0 millions. Wholesale prices and quotations for industrial securities continued their gradual upward trend.

Italy.—Industrial activity continued to expand rapidly in May, when the official index of production stood at 113.6 (1928 = 100), as compared with 106.7 in April and 89.5 in the corresponding month a year ago. The motor vehicle, engineering and textile trades all recorded a marked increase in activity during recent months. Unemployment, as officially reported, has declined rapidly. The value of short exchange securities has risen sharply, and wholesale prices continued their upward trend.

Norway.—The latest figures of industrial production indicate increased activity, the index figure for May having risen to 111, against 109 in April. The rise was very pronounced in export industries and in the consumption goods trades. Judging from unemployment figures for June, registering a decline of some 5,000, as well as from statistics of foreign trade, there is reason for anticipating a continued improvement in industrial activity. The freight markets, especially for tankers, showed some improvement, and laid-up tonnage declined by about 28,000 tons d.w.

Greece.—Despite the unfavourable weather conditions which prevailed in May and June, crops—especially cereals—are expected to be satisfactory. Prices of currants tended to fall in an inactive market. The tobacco trade continued to be brisk. Despite larger areas cultivated with tobacco this year, the harvest will be much smaller than in 1934, owing to bad weather. Foreign trade returns made again a good showing in May. Receipts from the revenues assigned for the service of the public debt were also higher in May, but the foreign exchange reserves of the bank of issue are reported as steadily declining. Conditions on the Athens Stock Exchange improved in June and prices rose generally.

UNITED STATES OF AMERICA

The gradual decline in industrial activity since January appears to have been arrested in June. The *Annalist* index of business activity rose slightly from 79.0 in May to 79.1 in June. A year ago the figure stood at 77.2. There are at last signs of the beginning of an improvement in the capital equipment industries. The most encouraging features are the gradual expansion of dwelling-house construction and the increase in the activity of the metal industries and of the capital market. But although the stage may at last be set for a sustained revival, there are still many difficulties ahead which may delay the upward movement. Since the abandonment of N.R.A. on June 16th attacks have been concentrated on A.A.A., but the future of the devices to raise prices of agricultural products embodied in A.A.A. remains uncertain.

LATIN AMERICA

The value of Argentine exports in the first half of 1935 was higher than in any corresponding period since 1929 and showed an increase of 16 per cent. on January-June, 1934. The improvement is due partly to a rise in the price, and partly to an increase in the volume, of exports. Grain prices declined in June, and the Argentine Grain Regulating Board is now buying maize from growers at the basic price of 4.40 pesos per 100 kilos. Lack of rain is causing apprehensions regarding growing crops. Freedom in the Brazilian exchange market to the extent of 65 per cent. established on February 11th has been short-lived, and while that percentage of exchange is still allocated to the so-called "free" market, the authorisation of the Exchange Control is again necessary before remittances can be made abroad. The Coffee Convention in Rio de Janeiro is considering plans for the 1935-36 crop, and it is believed that 4,000,000 bags will be withdrawn to stabilise the market, to be paid for by taxation. Chile's exports for January-April, 1935, were 186 million pesos of 6d. (gold), against 181 millions in the same period of 1934, whilst imports increased to 94 millions, against 57 millions a year ago. The sterling quotation in the "export" market is now 119 pesos per £ and follows fluctuations in the New York-London cross rates; private remittances, such as dividends, are temporarily difficult to obtain. Difficulties of marketing coffee continue in Central America.

THE FAR EAST

In general, Japan's industrial activity is being well maintained, although the principal commodity markets have recently had a dull tone. Business in cotton textiles, both for home and abroad, has been somewhat inactive in recent weeks, but raw silk is now rather firmer. The index of wholesale prices in Tokyo (1900 = 100) stood at 180.2 in June, against 182.4 in May and 174.5 in June, 1934. Imports amounted to 207 million yen in June, and exports to 199 million yen, against 201 and 183 million yen, respectively, a year earlier. In the first half of the current year, imports were 16 per cent. and exports 17 per cent. above the level of a year ago. The excess of imports was 8 per cent. higher on the year. China's imports declined to 91.53 million dollars in June, against 86.26 millions a year earlier, while her exports increased slightly to 41.23 million dollars, compared with 49.17 millions in June, 1934.

STATISTICS

In the following tables we give trade and other statistics for as many countries of the world as possible, our endeavour being to combine brevity with comprehensiveness. The greater number of the figures are taken from the *Monthly Statistical Bulletin* of the League of Nations (published by George Allen and Unwin Ltd.).

SATURDAY, AUGUST 24, 1935

No. 147

THE STATE OF TRADE

THERE has so far been little evidence of the normal seasonal decline in business activity during the summer. Moreover, in the absence of serious international complications, a change in credit policy, or a rapid increase in wage rates, the expansion of economic activity in this country is likely to continue during the coming months. Under the influence of a credit policy directed to the maintenance of low interest rates, profitability of enterprise is still on the up grade. As is to be expected in our home-trade "recovery," the capital goods industries are forging ahead more rapidly than the consumers' goods trades, though the latter are now gradually gaining ground.

Contrary to the normal seasonal movement, employment continued to increase, reaching a record high level in July. The improvement in employment was more pronounced in the engineering, iron and steel and motor vehicle industries, in electrical cable and apparatus manufacture, the woollen and worsted and hosiery trades, the transport and distributive trades, in most of the food and drink industries, as well as in hotel and boarding house services.

On the other hand, employment declined in most of the clothing trades, in cotton spinning, in the linen industry, and in building and public works contracting. With the exception of the Midlands, Scotland and Northern Ireland, all the other districts experienced a reduction in unemployment during July. The proportion of insured workers unemployed in July varied from 6.6 per cent. in South-Eastern England to 29.8 per cent. in Wales.

Following the steep rise in our new Index of Business Activity—adjusted for seasonal variations—between March and June, the figure for the past month showed a slight decline. Of the component series of the index, shown on page 11, six rose, six declined, and one remained unchanged. But the index of imports of raw materials was the only one to show a slight decline as compared with the corresponding month a year ago. The indices showing a decline between June and July include coal and electricity consumption, merchandise on railways, iron and steel consumption, exports of British manufactures and town clearings. The decline in the index of coal consumption is largely due to a sharp increase in exports in July. The drop in the index of merchandise on railways is seasonal, and accounts for a fall of 0.5 per cent. in the complete index.

On the other hand, the indices of employment, postal receipts, building activity, consumption of cotton, imports of raw materials and shipping movements all show a rise between June and July. The renewed expansion in building activity and in imports of raw materials is particularly satisfactory.

The outlook for the capital-equipment industries remains encouraging. The normal summer recession in the volume of activity, and in the volume of new business in iron and steel, has this year been much less marked than usual.

Deliveries continue on a large scale, and most manufacturers have sufficient orders on hand to ensure the maintenance of the present level of activity for many months to come. Moreover, a further increase in demand for iron and steel materials is expected early in September. The engineering industry has continued to make headway in recent weeks, and there has been a steady expansion in activity and in the volume of new business. The volume of inquiry continues to grow, and confidence in further progress is fairly widespread. The output of coal during recent weeks has been above the level of a year ago, but although home consumption is likely to be maintained, prospects of a further improvement in exports are less encouraging. The outlook for the building industry remains favourable, for the decline in building plans approved in June was followed by a substantial increase in July.

A number of trades engaged in the manufacture and distribution of consumers' goods have shown some improvement in recent weeks. With a few exceptions, the expansion

has been much less marked than in the case of capital-equipment industries. There has been an improvement in the motor vehicle industry and in the majority of trades connected with building. Moreover, the woollen, silk and hosiery trades have also gained ground.

The recovery in the wool textile industry has been appreciable, for the number of insured unemployed in July was 10.8 per cent. smaller than a year ago.

Developments abroad continue to be irregular. Thus, business conditions in the British Dominions, in Scandinavia and in Argentina show a considerable improvement as compared with a year ago. In Germany the output of investment goods continued to increase, but production of consumers' goods has fallen steeply, well below the level of a year ago. The downward movement of business activity in Belgium was arrested following the devaluation of her currency, and the latest evidence from that country reveals a gradual improvement. On the other hand, there have so far been no signs of a revival in France, Holland and Switzerland. Business activity in Japan, though still well above last year's level, has tended to decline since the beginning of the year. Trade in China is still dull.

There has been little evidence this year of the normal summer recession of business activity in the United States. The view is now gaining ground that the recent improvement marks the beginning of a real revival, in contrast to the many "false starts," since the beginning of 1933. There is some evidence to support this view in the gradual expansion of the capital-equipment industries. Dwelling-house construction is gradually making headway, and there has been a definite improvement in the iron and steel and engineering industries as a result of the decision of a number of important manufacturing concerns to increase their expenditure on plant, renewals and replacements.

HOME INDUSTRIES AND TRADE

The following reports on British industry cover, in most cases, the period to the middle of August. In the remainder they relate to the month of July.

COAL

Activity continues slightly above last year's level. Output (calculated on a daily basis) suffered a further seasonal reduction between June and July, but exports reached a high total last month. Business in recent weeks has been affected by the holidays. Industrial fuels have been in fair demand and a shortage of some grades is reported. Trade in house coal is at a low level, and the restocking movement in preparation for the autumn has not yet assumed substantial proportions. In the export markets forward business is quiet. The difficulty of obtaining payment from Italy and the reduction in the French import quota have been unfavourable factors, which have been especially noticeable in South Wales. The position at the Humber ports has been eased by an increase in the export quota.

IRON AND STEEL

The normal summer recession in the volume of activity and new business in iron and steel has this year been much less marked than usual. Calculated on a daily basis, production of pig iron and crude steel in July was well above the level of July, 1934. Moreover, although the daily output of steel in July was somewhat lower than in June, pig iron production was well maintained. The volume of imports in the past month was smaller, but that of exports was larger, than in June and in the corresponding month last year. The event of the past month was the ratification, on July 31st, of the five-year agreement between the British iron and steel industry and the International Crude Steel Cartel. Another important development was the increase in wages in the heavy steel industry, from August 5th. The new wage rates, which are equivalent to an increase of about 4 per cent. on previous rates, are subject to review after one year. The outlook for the industry remains good. The majority of manufacturers have well-filled order books, and new business, stimulated by the rising trend of prices, has so far been well maintained.

ENGINEERING

There has so far been little evidence of the usual summer recession in the engineering industry. July witnessed an expansion of activity, and there has been a steady improvement in the volume of new business. Moreover, the volume of inquiries continues to grow and confidence in further progress is fairly general. As far as individual sections of the industry are concerned, there has been a spurt in the activity of manufacturers of textile machinery. Messrs Howard and Bullough have received an order for 1,000 ring doubling frames. This is understood to involve about half a million spindles and to be the largest single order ever placed in this country. There has been an improvement in the marine engineering and machine tool sections, and export demand for mining machinery has tended to increase. With the exception of a seasonal decline in demand for agricultural machinery, the situation in other sections has undergone little change in recent weeks.

MOTOR INDUSTRY

Despite a seasonal lull in activity, pending the preparation of new season models, new registrations of private cars totalled 21,351 in June, or rather more than in the same month of last year. Sales of goods vehicles were, however, smaller than in June, 1934. Imports of cars continued to decline in July, and were substantially smaller than in the corresponding month a year ago. The export position is rather less satisfactory, for although sales of private cars overseas continue well above last year's level, there was a slight setback between June and July. Exports of commercial vehicles were practically unchanged on the month.

CHEMICALS

Despite a certain slackness due to the holiday period, conditions have been fairly satisfactory. Acetic and formic acids, formaldehyde and lithopone have been in fair demand, but little business has been transacted in arsenic and barium chloride. Demand for creosote was maintained, and some inquiries are now being received for supplies of coal tar pitch. In the market for wood distillation products there was little demand for wood tar and charcoal, although business in wood naphtha was good. Methyl acetone was in active request, but increased foreign supplies have caused a reduction in the price of this commodity.

COTTON

Although the evidence is somewhat conflicting, there appears to have been some improvement last month. Thus, our index of cotton consumption in the spinning section recorded a further rise, although the percentage of spindles in operation was again unchanged at 70, against 73 a year ago. Exports of cotton manufactures expanded during July and were a little larger than in the same month of last year. On the other hand, a decline in imports of raw cotton is an unfavourable omen. It appears that a substantial part of the inquiry received in recent weeks has not been backed by firm offers, while the expansion of business has been held in check by bearish sentiment regarding raw cotton prices; it is highly probable that the American crop will be appreciably larger than was expected a month ago. In the Egyptian spinning section another attempt is being made to establish a price-fixing scheme and spinners have raised their quotations. The testing time for the new rates will come a little later on.

WOOL

Although the wool textile industry is now passing through what is normally the slackest period of the year, there is no evidence of

any decline in activity during July. Employment actually recorded a slight improvement over the previous month and was substantially better than at this time last year. The export markets also reflect a favourable position, for shipments of tops, yarns and tissues last month continued above last year's level. The inquiry for raw material was sufficient to maintain the gradual upward movement of prices, and retained imports of sheep's and lambs' wool in July showed a substantial rise on the month and were more than twice as heavy as in the same month of last year. It would appear, therefore, that an expansion of activity may be looked for in coming months.

ELECTRICITY

* Prepared by the Economic and Statistical Department of the British Electrical and Allied Manufacturers' Association.
† Corrected for seasonal fluctuations, for the increase in electrification (trend), and for connections to the "grid."

ELECTRICAL INDUSTRY

The volume of new home orders for heavy electrical machinery has tended to taper off, but export business has been well maintained.

INDEX OF NEW ORDERS RECEIVED BY HEAVY ELECTRICAL MANUFACTURING INDUSTRY*
(1920 = 100)

Period	Home	Export	Total

June	109	124	115
July	101	123	109

* Copyright of the British Electrical and Allied Manufacturers' Association. The above index is a 12-month moving average of new orders received by the heavy plant section of the industry. It is based on the horse-power and not on the value of orders.

JUTE

Despite the announcement by the Bengal Government that the restriction on sowings would be continued in 1936, jute prices have been weak during the past month. Stocks are heavy and buying has been on a small scale. Trade in manufactures has been quiet and unemployment showed a seasonal increase between June and July, although still below the level of a year ago.

RAYON

Demand for rayon yarns, which was rather slack after the holiday period, is now reported to be showing a steady improvement. The weaving section is interested in various speciality types of yarns, but, although large-scale sampling is taking place, little bulk buying has been in evidence. Nevertheless, the immediate outlook is encouraging.

LINEN

Preliminary reports regarding the new crop fibre suggest that the output from most European producers will be larger than last year, but of variable quality. But there is likely to be a smaller exportable surplus from Russia. Transactions in flax have been confined to immediate requirements, with prices remaining firm. Yarns and cloth have again been in quiet request; new season orders are not yet forthcoming.

BOOTS AND SHOES

Activity in the footwear trade is fairly satisfactory for the time of year. There was a slight seasonal decline in employment in July, but the position was again much better than at this time last year. Exports totalled 38,679 dozen pairs last month, against 29,343 dozen pairs in June and 45,827 dozen pairs in July, 1934.

POTTERY

Little change in the employment position occurred last month, business again being slack. Conditions, however, are very variable, overtime being worked in some districts and short time in others. The export position showed a further improvement last month, shipments of general earthenware being heavier than in the same month of last year.

AGRICULTURE

According to a report of the Ministry of Agriculture, the corn harvest was commenced during July under ideal conditions. The yield of wheat is estimated to be approximately equal to, but that of barley and oats below, the ten years' average. It is at present doubtful whether an average yield of potatoes will be reached. All root crops are in need of rain, and on present appearances yields will be somewhat below average. The yield of seeds hay is estimated to be below, but that of meadow hay above, the ten years' average. The yield of hops is expected to be rather under average. Cattle have done moderately well, but the shortage of keep was felt towards the end of the month. Sheep and lambs are generally in good condition. Milk yields generally show a decline.

SHIPPING

Chartering continues on a hand-to-mouth basis, and, with excess tonnage available, the freight markets have again been weak. Our monthly index number of whole cargo shipping freights (1898-1913 = 100) fell from 84.0 in June to 83.0 in July, against 85.3 in July last year. The Tramp Shipping Administrative Committee decided last week to extend the minimum rates scheme to certain markets hitherto excluded.

BUILDING

Building activity in this country continues on a high level, and there is little likelihood of any appreciable slackening in the near future. Employment in July showed a decline among painters, but little change among other occupations. Compared with a year ago there was an improvement in all areas except Wales and Northern Ireland. This improvement is reflected in our index of building activity (1924 = 100), which stood at 219 last month, against 197½ in July, 1934. Some indication of the future course of activity may be obtained from the Ministry of Labour's estimates of building plans approved by 146 local authorities in Great Britain. Plans approved last month totalled £10,266,000, against £7,945,000 in June and £8,842,000 in July, 1934. With the exception of that recorded in May, 1935, this figure constitutes a record.

RETAIL TRADE

The official statistics are not available as we go to press, but an important London store reports that sales have been satisfactory in recent weeks.

STATE OF TRADE OVERSEAS

BRITISH EMPIRE

Australia.—Latest evidence suggests that business activity still continues above the level of a year ago. But a cable received from the National Bank of Australasia states that 18 per cent. of the trade unionists were still registered as unemployed during the June quarter. Prospects of further progress have been enhanced by good rains and higher prices for important exports. Banking statistics reflect growing trade, with increases in advances and deposits at call.

South Africa.—Although the rate of progress has recently tended to slow down, economic activity continues on the up-grade. Thus railway earnings are well above Budget estimates and Government revenues are well maintained. The improvement in the price of certain of the Union's main exports should increase the purchasing power at home. Imports during the first half of the year were 18 per cent. in excess of the corresponding total for 1934, while, among exports, a heavy decrease in shipments of gold and wool was counterbalanced by an increase in other categories. In July both imports and exports were larger than a year ago.

Canada.—Business conditions are rather patchy, but on the whole trade appears to be appreciably better than at this time last year. Crops—especially wheat—have suffered as a result of black rust in the western regions, and the impending Federal election has had the usual unsettling effect upon business enterprise. Nevertheless, the iron and steel industry and the building trades have been more active recently, and some substantial Government contracts have been placed.

India.—Following the quiet spell in June the Bombay cotton market showed a firmer tendency last month, but little new buying was in evidence for export purposes. Business in piece-goods was quiet and confined to urgent needs. The Calcutta jute market also had a quiet tone, with prices showing an easier tendency. Favourable reports have been received regarding the progress of the monsoon. Foreign trade in June was below the previous month's level, although slightly in excess of the corresponding total for 1934.

EUROPE

France.—There has so far been no evidence of an improvement in business conditions. The official index of business activity declined from 93 (1913 = 100) in April to 92 in May and remained unchanged in June. A year ago the index stood at 99. The number of persons in receipt of unemployment benefit continued to decline from 393,469 on July 6th to 380,559 on August 3rd, but this improvement is ascribed to repatriation of foreign workers and to seasonal influences. Car-loadings of foreign workers and to seasonal influences. Car-loadings declined from 39,000 per day during the week ending July 6th to 37,500 per day during the last week in July. The vigorous efforts made by the Government to stimulate recovery by a deflationary re-adjustment of prices has already led to a sharp fall in wholesale prices of home-produced goods. Thus, the official index of prices for national products declined from 375 (July, 1914 = 100) on June 22nd to 354 on August 10th. The trend of the prices of industrial securities has been downwards since July.

Germany.—General industrial activity has been well maintained in recent weeks, and the official statistics show a further decline in the number of unemployed from 1,876,600 at the end of June to 1,754,000 at the end of July. The indices of the Institut für Konjunkturforschung show, however, that the expansion in the production of capital equipment has been accompanied by a reduction in the output of consumption goods. Thus, the index of the output of production goods rose from 77.1 (1928 = 100) in June, 1934, to 101.8 in June, 1935, while the index of the output of a group of consumption goods fell from 90.9 to 79.3 during the same period. The output of coal from 125,900 per day in the last week of June to 122,700 per day during the week ended August 3rd. Prices of industrial securities (especially mining and heavy industry) continued to rise in recent weeks.

Italy.—Industrial activity declined sharply in June, when the official index of production stood at 102.1 (1928 = 100), compared with 113.6 in May and 85.7 in June, 1934. The number of wholly unemployed declined from 866,570 in June, 1934, to 755,349 in May and 638,100 in June, 1935. Wholesale commodity prices and quotations for industrial securities continued to rise, but the trend of fixed-trust bearing securities has been downwards.

Norway.—The official index of industrial production rose from 117.5 (1928 = 100) in May to 123.5 in June, as compared with 117.4 in the corresponding month a year ago. The improvement in business activity was accompanied by a further decline in unemployment. There was a spurt in sales of timber in June and the volume of transactions has since been substantial, Great Britain taking considerable quantities of sawn wood.

Greece.—Agricultural production for this year is on the whole satisfactory. Of the two principal articles of export, tobacco continues to enjoy favourable market conditions, but currants are suffering from foreign competition. Foreign trade returns continue to make a good showing compared with the corresponding period of last year. The decline of the cover of the bank of issue has not been arrested. A further slight rise was recorded by the index of wholesale prices. Business on the Stock Exchange was restricted in July and prices tended to fall.

UNITED STATES OF AMERICA

The expansion of industrial activity, which began last June, continued throughout July. In fact, there has been little evidence this year of the normal summer recession in business. The *Annalist's* monthly index of business activity rose from 79.5 in June to 80.8 in July. A year ago the index stood at 73.2. The view is now gaining ground that the recent improvement marks the beginning of a real revival in contrast to the many false starts since the beginning of 1933. There is some evidence to support this view in the gradual expansion of the capital equipment industries. A number of important manufacturing concerns have decided to increase their expenditure on plant renewals and replacements. Dwelling house construction is also gradually making headway, and there has been a definite improvement in the iron and steel and engineering industries. The improved outlook is reflected in a substantial rise in the price of industrial securities.

AMERICAN TRADE STATISTICS—JULY, 1935

LATIN AMERICA

Cable advices from Argentina indicate that a break occurred in the drought on August 8th. The rain was necessary, but it occurred too late to prevent a reduction of 37.40 per cent. in the area sown to fine cereals. The unsatisfactory crop conditions have resulted in a rise in grain prices. Argentine foreign trade returns for January-June, 1935, reveal an increase in both imports and exports compared with the corresponding period last year. The export surplus has risen from 212 to 273 million paper pesos. In the import markets, there continues to be strong competition from Japan, especially in cotton textiles. In Chile, there has occurred a check to the rapid progress of internal economic recovery, there having been a contraction in the supply of credit. The Coffee Convention held in Rio de Janeiro last month reached agreement on many points concerning the movement of the coffee crop, the arrangements to remain in force until December, 1937. While the result has been disappointing to interests who looked for further valorisation, the plan is considered an important step to deal with surplus stocks of coffee. Peruvian trade is seasonally quiet, and conditions in the Central American countries show little change.

THE FAR EAST

Business activity in Japan, although still above last year's level, appears to have undergone a gradual decline since the beginning of the year. The index of business activity, compiled by the *Oriental Economist*, shows a fall from 108.6 in January to 104.4 in May, against 101.5 in May last year. In recent weeks the market in raw silk has been firm and prices of rayon have moved upwards. Wholesale prices in Tokio continue above last year's level. Japan's imports amounted to 198 million yen in July, against 170 million yen in July, 1934, while her exports totalled 207 million yen, against 179 million yen last year. China's imports fell from \$91,530,000 in June to \$64,380,000 last month, while her exports rose from \$41,230,000 to \$45,960,000, as compared with \$73,530,000 and \$44,910,000, respectively, in the same month of last year.

STATISTICS

In the following tables we give trade and other statistics for as many countries of the world as possible, our endeavour being to combine brevity with comprehensiveness. The greater number of the figures are taken from the *Monthly Statistical Bulletin of the League of Nations* (published by George Allen and Unwin, Ltd.).

Unless otherwise stated, the figures represent authorised share issue of new joint stock companies at home, and the increase in the value of existing companies. Bonus shares are excluded from the figures. In the case of the Netherlands, Switzerland and the U.K. both bonus shares and convertible issues are included. Excluding Treasury Bills. Excluding large railway issues. Excluding issues of the Bank of England exceeding £100,000 on the Dutch market including Colonial, and since Jan., 1935, the issue of the Société de Banque Suisse, figures of net amount of new issues. Until end 1922 paper currency of the Swiss Confederation. Figures of new issues of capital paid-up. Compiled by the Bank of England. Figures of new issues of capital paid-up, excluding western departmental issues since 1928 amounts actually issued, whole territory.

No. 148

THE STATE OF TRADE

The impression left by the latest evidence of the state of trade in this country is that business has been "marking time" in recent weeks. The improvement in the first half of the current year has so far been well maintained, and there are no signs of a setback in the near future. In fact, a strong seasonal upward movement is expected in the activity of most industries during the next few months, provided no untoward developments occur in the international field.

Employment showed a seasonal increase of 43,000 in August, when the total number of insured persons at work surpassed all previous records. There was a marked improvement between July and August in the coal-mining industry, but employment also increased in iron and steel manufacture, general engineering, shipbuilding, motor vehicle, cycle and aircraft manufacture, as well as in the building, furniture, pottery, cotton and wool textile industries. On the other hand, employment declined in most of the clothing trades, in the linen industry, in dock and harbour services and in the distributive trades. There was a reduction in the number of unemployed in North-Eastern England, Scotland, the Midlands and in London; but an increase in North-Western, South-Western and South-Eastern England, as well as in Northern Ireland. The proportion of insured workers unemployed was still more than 20 per cent. in North-Eastern England, in Wales and in Northern Ireland.

After declining slightly between June and July, our new Index of Business Activity—adjusted for seasonal variations—remained unchanged in August. Of the component series of the index shown on page 19, six rose, three remained unchanged and four declined between July and August. But with the exception of coal consumption, merchandise on railways and imports of raw materials, all the component indices show a rise between August, 1934, and the past month. The indices showing a decline between July and August include cotton consumption, imports of raw materials and bank clearings. But imports of raw materials in August remained well above the average for 1934 and 1929. The figures for industrial consumption of electricity, merchandise on railways, postal receipts, building activity, iron and steel consumption, and shipping movements all rose between July and August. The indices of employment, coal consumption and exports of British manufactures remained unchanged.

The trend of our new indices of business activity and other trade indicators show that recovery is still concentrated in the capital equipment industries. Our index of building activity reached a new record in August. Building activity is now considerably above the pre-depression level. The expansion of this branch of activity is in a large measure responsible for the fact that business activity has recovered to the level of 1929, although the volume of

exports of British manufactures is still less than three-quarters of what it was six years ago. But as the building industry is very sensitive to changes in production costs and in the rate of interest, its future has tended to become a little clouded by the international situation. However, the latest figures of the value of building plans passed by 146 local authorities indicate that the trend of building activity is still upwards. It is possible that if the construction of middle-class houses by private enterprise slackens the leeway will to some extent be made up by working-class building under slum clearance schemes.

Reports from iron and steel centres continue to be encouraging. Deliveries remain heavy, new business is still expanding, despite heavy forward contracts placed previously, and orders on hand are very substantial. The engineering industry continues its steady progress; and the profitability of this branch of activity has almost recovered to the pre-depression level. Orders on hand are considerable and will ensure a good start for the industry in 1936.

The coal trade has suffered somewhat from the further cut in the French import quota and from the reduction in exports to Italy. Business in industrial chemicals has been fairly good in recent weeks. The motor industry and household equipment trades remain quite active. The wool textile

industry continued to gain ground, and its position is now appreciably better than a year ago. On the other hand, the situation in the cotton industry has undergone little change during the past few weeks, and business in the linen and footwear industries has tended to decline. There was a sharp seasonal decline in retail sales between July and August, but the total value of sales in the past month remained well above the level of a year ago.

Reports of business conditions in foreign countries are not unfavourable, with the exception of those relating to the on-gold countries. The situation in France, Holland and Switzerland can be described as one of persistent stagnation. In Germany, the previous improvement in business activity has so far been maintained, and the news from Scandinavian countries remains fairly satisfactory. On the other hand, there has been a steep decline since May in industrial production in Italy. The latest information from the principal Latin-American countries reveals little change, and industrial production in Japan continues above last year's level.

In the United States there was a pause in the expansion of business activity during August and early September, but it is confidently expected that recovery will continue during the remainder of the year. Evidence of a revival in the capital equipment industries is steadily accumulating. Expenditure on re-equipment of plant is increasing, orders for machine tools are expanding, and residential construction is gradually making headway. The latter is a particularly encouraging sign.

HOME INDUSTRIES AND TRADE

The following reports on British industry cover, in most cases, the period to the middle of September. In the remainder they relate to the month of August.

COAL

The coal trade appears to have been "marking time" during August. A considerable reduction in the number of persons "temporarily stopped" brought the unemployment percentage below the July level; the improvement was fairly well spread geographically, being most marked in Yorkshire and least evident in Wales. On the other hand, the output of saleable coal (calculated on a daily basis) showed practically no change in August and was smaller than in the same month of last year. The home demand for industrial fuel has been steady and the house-coal trade has now begun to shake off the lethargy associated with the summer months. Although overseas trade continues to encounter various obstacles—including the difficulty of securing payments from Italy—exports last month were above the corresponding figure for 1934. But a further cut of 10 per cent. in the French import quota came into force on September 1st. Meanwhile an element of uncertainty has been introduced into the outlook in consequence of the possibility of labour troubles in the industry.

IRON AND STEEL

The iron and steel industry continued to make headway during the past month. In contrast to the normal seasonal decline between July and August, the average daily output of steel ingots and castings rose this year from 32,100 tons in July to 32,400 tons in August. Production is now well above the level of a year ago, partly owing to the reduction in imports. Imports of iron and steel materials continued to decline in August, when they were substantially smaller than a year ago. Exports in the past month were also slightly smaller than in July, but showed some improvement on the corresponding month a year ago. Meanwhile, the outlook for the principal consuming industries remains encouraging, and production of iron and steel is expected to continue its upward trend during coming months.

ENGINEERING

The progress of the engineering industry continues almost without interruption, and the profitability of this branch of activity has practically recovered to the pre-depression level. The normal seasonal decline in the volume of new transactions during August was less marked than usual this year, and there has been a further increase in new business during September. Orders on hand are substantial and will ensure a good start for the industry in 1936. As far as individual branches of the industry are concerned, manufacturers of excavating, mining and lifting machinery are enjoying a period of considerable activity. Demand for textile machinery has tended to expand, and there has been a spurt in overseas locomotive orders in recent weeks. The position of the agricultural machinery section is also slightly better. Business in machine tools is fair. Other departments show little change on the month.

ELECTRICAL ENGINEERING

The volume of new home orders for heavy electrical machinery declined sharply in August, but the latest information indicates a considerable improvement since the beginning of September.

* Copyright of the British Electrical and Allied Manufacturers' Association. The above index is a 12-month moving average of new orders received by the heavy plant section of the industry. It is based on the horse-power and not on the value of orders.

MOTOR INDUSTRY

Activity in the British motor industry continues well above last year's level, although the summer months have naturally witnessed some seasonal slackness. In July, however (the latest month for which statistics are available) some 25,780 private cars were produced, against 20,374 in July last year. The output of commercial vehicles showed an increase over the same period from 6,820 to 7,920. Earlier in the year imports of cars were substantially in excess of the 1934 figures and the total for the past eight months is 10,068, compared with 7,548 last year. The months of July and August, however, witnessed a sharp drop in imports. A substantial fall in exports of motor vehicles was also recorded last month.

CHEMICALS

Home trade in industrial chemicals and dyestuffs has been on a very fair scale during the past month. Following a slack period

in August, business in coal-trade products is now much more active and there has been a decided improvement in the demand for essential oils. Trade in wood distillation products and pharmaceutical chemicals has been very quiet. The value of exports of chemicals, drugs, dyes and colours during August was £111,232 below last year's corresponding figure, although the year's total to date still exceeds that of 1934 by £353,548. Imports last month showed an increase of £85,805 on the year.

COTTON

There was no improvement in the position of the industry during August, and a further substantial decline in retained imports of raw cotton took place last month. One element of uncertainty was, however, removed by the announcement that the Washington Government had decided to offer a loan of 10 cents per lb. to growers, coupled with a subsidy of 2 cents per lb., in respect of the 1935 crop. Employment in the British cotton industry showed little change between July and August, but our index of cotton consumption by spinners recorded a sharp decline. On a daily basis, exports of cotton yarn showed a slight rise and exports of piece-goods a slight fall last month. On balance, the industry appears to be a little better off than at this time last year, for there has been an improvement in the volume of inquiry during the past three weeks, some producers having booked more orders. A scheme for controlling prices and production in the Egyptian section has been published and was considered by a mass meeting of spinners on September 27th. The outcome of the meeting is not known as we go to press.

WOOL

A further modest improvement in the employment position was recorded last month, and the industry is now much more favourably situated than at this time last year. The recent rise in quotations for raw wool has now been checked, and when the latest series of London auctions opened on September 17 the level of prices showed little alteration compared with rates ruling at the close of the previous series. The improvement in employment last month affected most sections of the industry and was well spread geographically. Exports of tops and yarns suffered a slight contraction in August, but this is accounted for by the fact that there was one working day less than in July. On the other hand, exports of woollen and worsted tissues, and of blankets, were higher last month. Home demand is reported to be good and the outlook for the next few months is moderately encouraging.

ELECTRICITY

INDEX OF GENERATION OF ELECTRICITY*
(Great Britain, excluding London and Wales)

* Prepared by the Economic and Statistical Department of the British Electrical and Allied Manufacturers' Association.
† Corrected for seasonal fluctuations, for the increase in electrification (trend), and for connections to the "grid."

JUTE

Mainly as a result of the termination of local holidays, the employment position showed considerable improvement between July and August. But prices—both for the raw material and for jute manufactures—have continued to weaken. No orders were forthcoming from the United States or Argentina, and Calcutta producers are having difficulty in finding outlets for their increased production. In the circumstances, the immediate outlook for Dundee manufacturers is not encouraging.

RAYON

After the normal seasonal lull, business in most sections of the trade has broadened out considerably and there is now a good demand for rayon yarns. Demand for specialties is tending to exceed supplies. The event of the month was the removal of the 3d. per lb. excise duty on staple fibre. This, coupled with additional reductions in the price of the fibre and yarn, should lead to a substantial increase in consumption.

LINEN

The trade is still awaiting the official Soviet prices for the new crop fibre, since these will be the main determinant of the general basis of flax prices. Meanwhile, business in yarn and cloth is quiet, but producers are anxious to make sales in order to maintain production. Exports to British Dominions have been well

maintained, but the United States market is slow. Trade with the Continent is difficult owing to quotas, monetary restrictions and the like.

BOOTS AND SHOES

The past month witnessed a slight improvement in the employment position, but considerable local variations still exist. Short-time working is still common throughout the industry, although overtime is also being worked in some areas. Exports of leather footwear increased last month and exceeded last year's corresponding figure.

POTTERY

The position of this industry shows little change. Employment is still slack, although some improvement was recorded last month and the depression is less acute than at this time last year. The volume of exports shows little change compared both with July and with August, 1934.

AGRICULTURE

It is officially reported that the corn harvest was practically completed during August and that the condition and quality are good. The yield of wheat is equal to, but the yields of barley and oats will be slightly below, the ten years' average. The yield of potatoes is expected to be below average, but the crop is free from disease. Turnips and swedes are a variable crop and will be under average, but mangolds are expected to yield only slightly under average. The quality of hops is better than usual and the yield normal. The condition and quality of hay is reported to be very good. Cattle and sheep have done only fairly well, owing

to the shortage of grass and, in some areas, water. Milk yields dropped considerably.

SHIPPING

The freight market has experienced a slight improvement in recent weeks. There has been a seasonal increase in the demand for tonnage by the grain trade and the homeward markets have had a firmer tendency. The recent improvement in the Far-Eastern market has also been maintained. Quotations have fluctuated little.

BUILDING

Building activity is still forging ahead and the latest statistics are encouraging. Employment in the building trades showed a slight improvement in August, the movement affecting the majority of the separate occupations. The London area benefited most from the change, while there was a slight deterioration in South-West England, the Midlands and Wales. The expansion of building activity in the country as a whole is reflected in the movements of the *Economist* index (1924 = 100), which rose from 219 in July to the record level of 222 in August; a year ago the index stood at 198½. The continuance of the building boom in coming months seems assured, for the statistics of building plans approved by 146 local authorities, published by the Ministry of Labour, have been at a high level recently.

RETAIL TRADE

The value of retail sales last month was 4.7 per cent. above the 1934 level, the increase being common to all districts except the West End, which recorded a sharp decline. The improvement affected all categories except piece-goods.

STATE OF TRADE OVERSEAS

BRITISH EMPIRE

Australia.—Evidence of Australia's recovery is contained in the Budget figures for 1934-35, published this week. Revenue exceeded estimates by over £4 millions and the year closed with a surplus of £711,000. The higher prices recently obtained for the staple exports of the country are the main factors responsible for the improvement. A cable from the National Bank of Australasia emphasises the much-increased activity in the motor car, engineering, building and associated trades. But rain is needed in many agricultural districts.

South Africa.—According to cabled information from the Standard Bank of South Africa, farming conditions were unchanged in August. At the opening wool sale of the season at Cape Town on September 8th prices were about 10 per cent. above the June level and 80 per cent. of the offerings was sold. Railway earnings still exceed Budget estimates, and the building trades remain fully employed. Retail trade continues poor. Both imports and exports in August were well above last year's level.

Canada.—Over a wide area the wheat crop has suffered extensive damage from rust and frost, the yield being frequently low and the quality poor. Business conditions showed some improvement in August. Bank debits and car-loadings are lower than at this time last year, and the newsprint industry is still depressed. But activity in the construction, automobile, steel and textile industries continues to advance. The uncertainty occasioned by the impending federal elections will shortly be removed.

India.—On the Bombay cotton market quotations declined sharply during August, largely as a result of "bearish" crop reports. Local spinners have had little business. Demand for piece goods has also been quiet. The Calcutta jute market has again had an easy tone and local mills are having difficulty in disposing of their output. Imports rose by 113 lakhs during August, while exports declined by 3 lakhs.

EUROPE

France.—The situation in France may be described as one of persistent stagnation. The official index of business activity in July remained unchanged at the low level of 72.4 (1928 = 100) to which it had fallen in May. A year ago the index stood at 77.2. The number of persons in receipt of unemployment benefit declined from 379,327 on August 10th to 377,499 on September 14th. Car-loadings increased slightly from 37,600 per day during the week ended August 3rd to 39,900 per day during the first week in September. The absence of an improvement is reflected in the prices of industrial securities. After rising from 181 (1913 = 100) on August 3rd to 186 three weeks later, the official index of ordinary shares declined to 177 on September 21st. Following a sharp decline during July, the official index of wholesale prices rose sharply during the five weeks ended September 21st. The rise in recent weeks is largely due to an increase in the prices of domestic products.

Germany.—The latest information indicates that the improvement in trade conditions has so far been maintained. The index of industrial production, calculated by the Institut für Konjunkturforschung, rose from 93.7 (1928 = 100) in June to 96.9 in July. A year ago the index stood at 82.4. But it is significant that the increase in productive activity as compared with July, 1934, appears to have been confined to capital goods, for the component index of the output of consumption goods with an elastic demand actually declined from 89.7 (1928 = 100) in July, 1934, to 80.9 in July, 1935. The official statistics show a further decline in the number of unemployed from 1,754,100 at the end of July to 1,706,000 at the end of August. Coal production tended to increase during the five weeks ended September 7th, and car-loadings rose from 121,200 per day during the week ended August 10th to 131,400 per day during the first week in September. Pig-iron production rose from 1,093,000 tons in July to 1,144,900 tons in August. As a result of an increase in exports and a decrease in imports, the export surplus rose from Rm. 28 millions in July to Rm. 50 millions in August.

Italy.—After rising steeply from 92.5 (1928 = 100) in January to 113.6 in May, the official index of industrial production declined sharply to 102.1 in June and 92.9 in July. The number wholly unemployed at the end of July was 637,972, against 638,100 at the end of June and 886,998 at the end of the corresponding month a year ago. After rising gradually in recent months, prices of securities declined sharply during August and September. Wholesale prices continued to rise.

Norway.—Holiday stoppages were responsible for a sharp contraction in industrial activity during July. The official index of industrial production declined from 123.5 (1928 = 100) in June to 95.8 in July, against 103.4 in July, 1934. Figures for August are not yet available, but the foreign trade returns for that month point to increased activity. Business in the wood, wood-pulp, and paper markets was rather quiet. There has been some improvement in the freight markets, and laid-up tonnage was reduced by about 30,000 tons d.w. during the past month.

Greece.—Production of cereals was higher this year than in 1934. Conditions in August continued favourable in the tobacco market and unfavourable in that of currants. Foreign trade returns for July show an increase compared with July, 1934. Domestic trade, however, is slack owing to the unsettled political situation. For the same reason and in consequence of a rise in tango rates of interest, prices on the stock exchange declined and business was restricted. Receipts from revenues assigned for the public debt were higher in July compared with a year ago. The gold and foreign exchange reserve of the bank of issue increased slightly in August.

UNITED STATES OF AMERICA

There was a pause in the expansion of business activity during August, but the previous improvement has so far been well maintained. The improvement during the past year is reflected in the rise of the *New York Times* index of business activity from 71.8 during the week ended September 15, 1934, to 86.4 during the second week of this month. It is confidently expected that recovery will continue during the remainder of the year. Such expectations are founded on the growing evidence of a revival in the capital equipment industries. Several important industrial concerns have decided to spend large sums on re-equipment of plant and new orders for machine tools have shown an appreciable increase. Moreover, residential construction is also gradually making headway.

AMERICAN TRADE STATISTICS—AUGUST, 1935

LATIN AMERICA

As a result of the drought, the area sown to fine cereals in Argentina is substantially less than last season, although the area still likely to be abandoned depends upon weather conditions in the near future. A pronounced advance has occurred in local grain prices, which may at least partially offset the effect of reduced crop yields. The anticipated benefit to Argentina of the higher grain prices is reflected in a sharp appreciation in the value of the paper peso in the "free" exchange market. Prospects in Brazil appear somewhat brighter, by reason of the increased export surplus revealed for the month of June last; the exchange position is still obscure, especially in relation to unremitted debts, but a better tone has been maintained in the coffee markets. It is yet too early to expect direct evidence of the benefit likely to accrue to Chile from the recently signed three-year marketing agreement between Chilean nitrate producers and the synthetic nitrate interests. There appears to be a temporary shortage of "export" exchange, whilst there is evidence that the rapid improvement in internal economic conditions may have run its course for the time being. Peru should benefit greatly from the rise in world prices of raw cotton. It is at present between seasons for the Central American coffee-producing countries; exchange conditions in these republics have been affected in varying degree by the low coffee shipments from the new crops continue to be affected by import quotas.

THE FAR EAST

Industrial production in Japan continues above last year's level and business activity is well maintained. During the past month developments in the market in raw silk have been favourable to the agricultural community. Quotations have advanced on the prospect of a scarcity of late autumn cocoons and on an improved demand from the United States. On the other hand, cotton yarn prices have fluctuated, a decline towards the end of August being counterbalanced by an advance early in September. According to preliminary figures, Japan's excess of exports over imports amounted to 40 million yen in August. China's imports fell from \$91,530,000 in June to \$64,380,000 in July, against \$73,530,000 a year ago. On the other hand, her exports rose to \$45,960,000 in July, compared with \$41,230,000 in June and \$44,910,000 in July, 1934.

STATISTICS

In the following tables we give trade and other statistics for many countries of the world as far as possible, our endeavour being to combine brevity with comprehensiveness. The greater number of the figures are taken from the *Monthly Statistical Bulletin of the League of Nations* (published by George Allen and Unwin, Ltd.).

No. 149

THE STATE OF TRADE

AFTER A short pause early this summer, business activity in this country has resumed its upward trend. The latest evidence is particularly encouraging, for it reveals an expansion of activity over a wide front. Moreover, a setback in the near future seems unlikely, unless the dispute between Italy and the League of Nations ends in an international disaster. Activity in the capital equipment in dustries, especially building, is still on the up-grade, and sales of consumers' goods at home are also gradually making headway. The tendency of industrial profits, analysed monthly in the *Economist*, is still upwards. Further, recent pronouncements of the Chancellor of the Exchequer suggest no foreseeable change in monetary policy. One cloud there is, however, on the horizon—the decision of the Mineworkers' Federation to ballot on a national stoppage. An important development in recent weeks has been the sharp rise in commodity prices. Although the war scare may have been the immediate cause of the re-stocking movement which led to an increase in prices, the upward movement is soundly based on an improvement in the underlying conditions of supply and demand. The rise in prices, if maintained, may provide an incentive to increased production in certain industries. Moreover, as the recent rise in commodity prices was not accompanied by a corresponding decline in the gold value of sterling, it will tend to relieve the deflationary pressure on the gold bloc.

of the volume of imports of raw materials is particularly encouraging, as it points to a future increase in activity.

Recovery continues to be most marked in the capital equipment industries. The rise in the index of building activity to a new high record indicates that this important branch of industry is still gaining ground. It is noteworthy, however, that the expansion of building—which was originally confined to dwelling-house construction—has recently been reinforced by the expansion in the construction of other classes of buildings. The increase in the demand for iron and steel is reflected in the continued expansion of this branch of activity. Production of steel last month actually exceeded that of September, 1929. Moreover, new business is still increasing, and the majority of heavy steel works have sufficient work on hand to ensure a high level of activity for several months. It should be added, however, that the engineering industry has been marking time in recent weeks, for buyers have shown some hesitancy in undertaking new commitments. But the

Year	Index (approximate)
1932	100
1933	88
1934	110
1935	118

goods trades, especially those which depend on the building industry, have also experienced some improvement; but expansion in these trades was less marked than in the heavy industries.

The most encouraging developments abroad are the gradual but sustained recovery in the United States, and the rise in the prices of primary products. An indication of the gradual recovery of the capital equipment industries in the United States is that machine tool orders last August were treble those of the corresponding month last year, and the highest since 1929. Nevertheless, the expansion of activity in certain directions is restrained by the possibility that the processing taxes and other New Deal legislation may be declared unconstitutional by the Supreme Court at Washington before the end of the year.

The rise in the prices of industrial raw materials and crude foodstuffs should benefit primary producing countries, e.g. Australia, Argentina, Canada, South Africa and India. The latest news from these five countries remains fairly satisfactory, though the yield of some of Argentina's crops has been seriously reduced by persistent drought. Reports from Canada are still encouraging, and the improvement in Scandinavian countries appears to have been maintained. Moreover, there are no signs of a setback in Japan, though China's foreign trade fails to improve. On the Continent, Germany's capital goods industries continue to maintain a high level of activity, and Belgium is gradually gaining ground; but there is still no perceptible improvement in France, Holland and Switzerland.

HOME INDUSTRIES AND TRADE

The following reports on British industry cover, in most cases, the period to the middle of October. In the remainder they relate to the month of September.

COAL

Although the number of persons employed at the collieries showed a slight reduction in September, the output of saleable coal registered a substantial seasonal advance last month. But production fell a little short of last year's corresponding figure. The export trade failed to improve, the volume of shipments being rather less in September than in the previous month. In consequence, the position in South Wales remains unsatisfactory, while Durham's condition is also rather poor. On the other hand, the satisfactory position in the Northumberland field is traceable to the maintenance of trade with Scandinavian outlets. The rise in freight rates, due to the war in East Africa, has made certain consumers reluctant to enter into forward contracts. Meanwhile, home demand for house coal continues to expand, but is largely confined to secondary qualities.

IRON AND STEEL

Activity in the iron and steel industry continued to expand during the past month, when the output of steel exceeded that of September, 1929. The bulk of the increased production continues to be absorbed by the home market. Imports of iron and steel materials in September were little changed as compared with the corresponding month a year ago, but exports showed a decline. Meanwhile, the volume of new business continues to expand. Deliveries of pig iron are at a high level and stocks at blast furnaces are not heavy. Consumers of semi-finished steel are active and pressing for delivery. Most sections of the finished steel trade are busy, and the majority of heavy steel works have sufficient work on hand to ensure a high level of activity for several months.

ENGINEERING

The engineering industry has been "marking time" in recent weeks. Buyers have shown some hesitancy in undertaking new commitments, and the general outlook is at present a little uncertain. The value of machinery imported into this country in September was higher than a year ago, but smaller than in August. On the other hand, exports showed an improvement both over August and over September, 1934. As far as individual branches of the industry are concerned, manufacturers of machine tools and sugar-crushing and refining machinery have experienced some improvement in new orders. Business remained good in boilers, prime movers and in lifting machinery. Demand for textile machinery was fair. The mining machinery and marine engineering sections have suffered a slight recession. Other sections of the industry have experienced little change in recent weeks.

ELECTRICAL ENGINEERING

The past month witnessed a further contraction of new home orders for heavy electrical machinery, but foreign orders continued to increase.

* Copyright of the British Electrical and Allied Manufacturers' Association. The above index is a 12-month moving average of new orders received by the heavy plant section of the industry. It is based on the horse-power and not on the value of orders.

MOTOR INDUSTRY

Activity in the motor industry continues on a high level, and in August sales of new private cars totalled 17,165, as against 10,797 in the same month of last year. On the other hand, new registrations of goods vehicles were slightly lower than a year ago. Exports of cars and commercial vehicles during September amounted to 3,507 and 182, respectively, against 2,753 and 167, respectively, in September, 1934. The Exhibition at Olympia affords a climax to a year of increasing activity, and it is interesting to note that the motor-boat and marine section has evoked considerable interest. The biennial Commercial Motor Transport Exhibition will be held at Olympia from November 7th to 16th.

CHEMICALS

There has been increased business in coal-tar products and pharmaceutical preparations during the past month. Industrial chemicals continued to be in quite active demand, and trade in wood distillation products has been steady although rather lifeless. There was an increase in overseas trade during September, exports of chemicals, drugs, dyes and colours being greater in value by £20,244, and imports by £63,493, than in the same month of 1934. The best items in the export trade were aluminium compounds and coal-tar products. Exports of ammonium sulphate, and dyes and dyestuffs showed a large decrease in value as compared with September, 1934.

COTTON

Although the evidence is somewhat conflicting, there appears to have been a slight seasonal improvement between August and September. Thus unemployment showed a moderate decline, and the percentage of spinning spindles in full production rose from 70 to 75. Exports of cotton yarn were slightly above, and exports of piece-goods considerably below, last year's level. Subsequently, however, the volume of inquiry broadened and prospects have become brighter in recent weeks. The coarser end of the trade, however, in both yarn and cloth, has been more active than the finer sections, and there has been increased buying of drills, twills, tent cloths and other coarse goods. Some of these contracts have undoubtedly been for war purposes. A definite improvement has also shown itself in the turnover of heavy materials for the home trade. Spinners, in both the American and Egyptian sections have had a more encouraging month than for some time past.

WOOL

The improvement noted a month ago has continued, and the position is substantially better than at this time last year. There was an appreciable increase in the number of workpeople employed in September and a large increase in wages paid. Exports of wool tops, woollen and worsted yarns and blankets during September were larger than in August, while the rising trend of imports of raw wool is a good omen for the future. The gradual improvement in the price of the raw material in London, Australia and South Africa has been maintained in recent weeks and is reported to have given confidence to operators throughout the industry. Bradford is absorbing large quantities of wool and the majority of mills are working full time. The outlook to the end of the year appears good.

* Prepared by the Economic and Statistical Department of the British Electrical and Allied Manufacturers' Association.
† Corrected for seasonal fluctuations, for the increase in electrification (trend), and for connections to the "grid."

JUTE

The past month witnessed a considerable improvement in this industry, although unemployment remains on a high level. Prices of the raw material have risen and quotations for yarns and cloth have been marked up. Spinners and manufacturers are reported to be well supplied with orders. The future action of the Indian Jute Mills' Association, however, remains a source of uncertainty.

RAYON

Demand for rayon yarns remains keen and there is no indication of a general reduction in prices. Many Lancashire firms are well booked up with orders, and the number of looms engaged on rayon is larger than ever before. Hosiery firms are beginning to get busier again, and the next few weeks should see a steady increase in demand for rayon underwear.

LINEN

Following the liquidation of remaining stocks, fair quantities of new crop Soviet fibre have been sold at prices well above those accepted by holders of old crop stocks. The consequent advance in flax prices has led to general activity in yarns, while business in cloth, both for home and export, has improved.

BOOTS AND SHOES

Latest evidence suggests that a further slight improvement was recorded last month. Unemployment declined in almost all producing centres and was well below the level of a year ago. Exports of leather footwear again increased in September, but were smaller than in the same month of 1934.

POTTERY

Employment in the pottery industry showed a further improvement in September and was better than in the same month of last year. The volume of exports of general earthenware continued above the 1934 level, but suffered a slight contraction between August and September.

AGRICULTURE

The corn crop is officially reported to be comparatively free from disease. The yield per acre of wheat is estimated at 17.6 cwt., that of barley at 15.7 cwt., and that of oats at 15.3 cwt. The yield of main crop potatoes is forecast at 5.7 tons per acre, which is 0.3 tons less than the ten years' average. Turnips and swedes are below average, the estimated yield per acre being 9.5 tons. Mangolds are likely to yield 17.2 tons per acre. Although the roots have improved during September, sugar beet may yield a light crop. Cultivation is well forward and in some districts ploughing was commenced earlier than usual. Cattle have done well, having benefited by the fresher pastures, and milk yields are now normal. Sheep have made good progress.

SHIPPING

The past month has witnessed a substantial improvement in freight rates and a reduction in available tonnage. The movement is reflected in our index of whole cargo shipping freights (1898-1913 = 100), which rose by 5.4 per cent. to 86.6 last month. The outbreak of hostilities between Italy and Abyssinia is, naturally, the main factor involved, although the general demand for commodities had been showing a gradual improvement for some time past.

BUILDING

Available data suggest that building activity in this country continues to increase and that there is, as yet, no indication of a recession. Moreover, the upward movement, which was originally largely confined to dwelling-house construction, has recently begun to affect other classes of building also. The recent expansion is reflected in our index of building activity (1924 = 100), which rose from 222 in August to 224 in September, as compared with 198½ a year ago. Apart from a slight seasonal decline in the decorating branch, employment in the building trades showed little change last month, but the position in all areas except Wales was better than at this time last year. The value of building plans approved, both for residential and other purposes, in recent months has been sufficient to maintain activity for some time to come.

RETAIL TRADE

The official statistics are not available for publication this week, but an important London store reports continued progress.

STATE OF TRADE OVERSEAS

BRITISH EMPIRE

Australia.—The improvement in business activity is reflected in the unemployment percentage, which declined from 17.6 in the second quarter of the year to 15.9 in the quarter ended September 30th. As was pointed out in the Federal Budget speech, the rise in export prices of wool, wheat, butter and base metals should cause a steady improvement in the country's trade balance. Meanwhile, heavy rainfall was experienced over a wide area last week-end, with the result that crop prospects have improved.

South Africa.—According to cabled information from the Standard Bank, farming conditions and crop prospects are generally satisfactory. Increased activity in the maize markets is attributed to speculation in cereals induced by the European situation. The wheat crop is estimated at 5,000,000 bags, against 4,603,000 bags last season. The wool market continues firm. The building trades are active at all centres and plans passed at Johannesburg in September constitute a record. Railway earnings continue above Budget estimates.

Canada.—Despite the uncertainties inevitably associated with a general election, the improvement in business activity which began in June appears to have been well maintained in September. The advance in wheat prices, coupled with an improvement in the export demand, has had favourable repercussions in the farming community, while other agricultural products have also encountered an improved demand. Mineral production has recently shown a substantial increase, and carloadings reflect a considerably increased movement of miscellaneous freight.

India.—Following a period of weakness early in September, due to a bearish American crop report, sentiment on the Bombay cotton market subsequently improved, partly as a result of developments in East Africa. Prices advanced on an improved inquiry from Japan and the prospect of an increased demand for war purposes. The Calcutta jute market showed a similar improvement, while demand for tea was strong at advancing rates.

EUROPE

France.—Business activity in France remains practically unchanged at the low level to which it had fallen at the end of last year. The official index of industrial production in August remained unchanged at the low level of 73.2 (1928 = 100). A year ago the index stood at 76.4. The number of persons in receipt of unemployment benefit declined slightly, from 377,499 on September 14th to 371,865 on October 5th. Similarly, carloadings rose from 38,800 per day in the last week of August to 43,700 per day a month later. The absence of an improvement in business conditions is reflected in the almost uninterrupted decline in the prices of industrial securities. In contrast to the movement of industrial securities, wholesale prices continued to rise in recent weeks, partly owing to an increase in the prices of imported commodities. A further rise in world prices (in terms of gold) would tend to relieve the position in France.

Germany.—Productive activity in Germany has so far been well maintained. The index of industrial production, calculated by the Institut für Konjunkturforschung, stood at 95.2 (1928 = 100) in August, against 95.6 in July and 81.5 in the corresponding month a year ago. But the expansion of production since last year was confined to production goods. The index of the output of consumption goods with an elastic demand was 81.7 (1928 = 100) last August, compared with 87.0 a year ago. As our Berlin correspondent pointed out in last week's issue of the *Economist*, there is at present a shortage of food supplies which may last some time. The number of unemployed, as officially reported, increased by 8,000 during September, as compared with a decrease of 116,000 during September, 1934. In general, industrial reports remain favourable. Production of coal rose from 446,597 metric tons per day in August to 476,727 tons per day in September. Prices of industrial securities declined slightly during September, but wholesale prices are scarcely changed on the month.

Norway.—Following the precipitous fall in the index of industrial production in July, on account of holiday closing, there was a correspondingly sharp rise in the figure for August, from 91 to 106. Unemployment figures for September indicate a rise of about 4,200 compared with the preceding month, but are practically unaltered compared with September last year. Foreign trade figures for September indicate an appreciable expansion. The trend of domestic trade is upwards.

Italy.—After declining from 102.1 to 92.8 between June and July, the official index of industrial production (1928 = 100) rose to 95.2 in August. A year ago the index stood at 87.0. The number of workers wholly unemployed declined from 637,972 at the end of July to 628,335 a month later, compared with 866,570 a year ago. Prices of industrial securities continued to decline, and wholesale prices of commodities to increase, in recent weeks.

Belgium.—The latest information suggests that the reaction in business activity consequent upon the devaluation "spurt" has given way to a gradual revival at the beginning of August. Evidence of the improvement is found in the decline in unemployment during September. Receipts from taxation increased in August and September; consumption of electricity is on the up-grade; and the volume of retail sales remains satisfactory.

Jugoslavia.—Both home and foreign trade during most of September was relatively good. Fair exports and a moderate harvest have contributed towards a hardening of prices, and this has somewhat alleviated the position of peasants. Industrial and mining activity, employment and saving deposits and State receipts are all above the level of last year. Some uncertainty, due to European political developments, subsequently developed.

UNITED STATES OF AMERICA

After a pause in August and early September, the gradual expansion of business activity has been resumed. The improvement is reflected in the rise of the *Annalist* index of business activity from 82.7 in August to 84.1 in September. A year ago the index stood at 66.5. An indication of the gradual revival of the capital equipment industries is provided by the appreciable expansion of orders for machine tools. Thus, machine tool orders last August were treble those of the corresponding month a year ago, and the highest since 1929. There is also evidence of an increasing demand for consumers goods in the expansion of retail sales and motor-car production. Moreover, there are as yet no signs of over-stocking by wholesale and retail merchants, despite the upward movement of commodity prices. On the other hand, the expansion of activity in certain directions is restrained by the possibility that the processing taxes of A.A.A. and other New Deal legislation may be declared unconstitutional by the Supreme Court. The improved outlook is reflected in a vigorous rise in the prices of industrial securities.

LATIN AMERICA

The period of drought in Argentina has ended. But the export surplus of wheat will probably not be more than 2,000,000 tons, and may be less. The present quantity of maize available for shipment is nearly 5,000,000 tons, but it must be borne in mind that local consumption will be much greater this year, as farmers have fed maize to cattle, owing to the shortage of pasture. The check to the expansion in the value of Argentine exports compared with last year, which commenced in July, continued in the following two months, and, unless reduced exports in ensuing months are compensated by higher prices, there appears likely to be further contraction in the export surplus. In Chile also, imports tend to increase in greater proportion than exports, this being a reflection of the buoyancy of internal trade. Brazilian conditions continue to be affected mainly by the difficult exchange situation, the tone of the so-called "free" exchange market being nervous and irregular; buyers of exchange are reticent, it being thought apparently that the European political situation may lead to large purchases of Brazilian foodstuffs. In Ecuador, control over 25 per cent. of the export exchange has been withdrawn, whilst in Colombia the proportion which has to be sold at the official rate has been lowered from 15 to 12 per cent.

THE FAR EAST

Latest evidence suggests that Japan's economic activity has been well maintained. Raw silk prices have registered a sharp advance, which should assist the agricultural section of the population. Quotations for cotton yarn and rayon have been maintained and the general level of wholesale prices is substantially higher than a year ago. Japan's imports in September amounted to 145 million yen and exports to 236 million yen, against 155 million yen and 171 million yen, respectively, a year ago. China's imports fell from 56.18 million dollars in August to 45.33 million dollars in September, while her exports rose from 45.33 to 45.94 million dollars. Imports and exports a year ago totalled 77.48 million dollars and 41.69 million dollars, respectively.

STATISTICS

In the following tables we give trade and other statistics for as many countries of the world as possible, our endeavour being to combine brevity with comprehensiveness. The greater number of the figures are taken from the *Monthly Statistical Bulletin of the League of Nations* (published by George Allen and Unwin, Ltd.).

No. 150

THE STATE OF TRADE

In general, the marked improvement in business activity noticeable in September was maintained in the past month. Moreover, the latest evidence suggests that, after a pause in October, the upward movement was resumed in November. Indeed, in the absence of a coal strike, there is every probability of further expansion of business activity in the near future, for industrial profits, the mainspring of enterprise, are still on the up-grade. There is no sign that the economic sanctions imposed on Italy by the League of Nations, are likely seriously to affect business activity in this country.

Employment rose to a new record in October. The number of insured persons, aged 16-64, in employment in Great Britain at the end of October, at 10,492,000, showed a rise of 14,000 on the previous month and one of 279,00

HOME INDUSTRIES AND TRADE

The following reports on British industry cover, in most cases, the period to the middle of November. In the remainder they relate to the month of October.

COAL

Some improvement was recorded in this industry during October. The output of saleable coal showed an increase and was slightly in excess of last year's corresponding figure; the number of wage-earners on the books was rather larger than in September, but slightly smaller than a year ago. Although exports recorded a slight increase last month, comparison with October, 1934, reveals a substantial reduction. The position remains quiet, little contract business having been arranged in recent weeks. Labour troubles in South Wales at the end of October threw deliveries into arrears, and thus led to some increase in activity later. During November the fear of a national stoppage has prompted many industrial users to lay in stocks. A clarification of the outlook might therefore be followed by a temporary setback. The house-coal trade is fairly satisfactory, but fluctuates with the vagaries of the weather.

IRON AND STEEL

Demand for iron and steel continues to expand with the upward trend of activity in the building, motor car, shipbuilding, engineering and armament industries. The output of steel in October was higher than in any month since March, 1927. The failure of exports to expand is causing little anxiety at the moment, for the industry appears to be unable to satisfy even the requirements of domestic consumers. All sections are well employed, and it is understood that a number of concerns have been obliged to withdraw from the market, as their output has been sold for many weeks to come. The stringency appears to be acute in the semi-finished steel section, and a hurried increase in imports in excess of the quotas fixed under the international steel agreement has been found necessary. Prices of a number of materials have been advanced, and this has caused dissatisfaction among certain consumers.

ENGINEERING

After a period of "marking time" in September and early October, activity in the engineering industry has resumed its upward trend. The volume of new business has recently tended to increase. Exports in October were the highest since October, 1930. The recent improvement has affected practically all sections of the industry. The marine section has benefited from the spurt in shipbuilding orders during the last six weeks. There has been an appreciable improvement in the power equipment and in the mining, conveying and lifting machinery sections. Demand for textile machinery is a little better and business in machine tools is fairly good. The only dull section at the moment is agricultural machinery, where business has shown a seasonal decline.

ELECTRICAL ENGINEERING

A further slight contraction in the volume of new home business in heavy electrical machinery in October was compensated by an expansion of foreign orders.

INDEX OF NEW ORDERS RECEIVED BY HEAVY ELECTRICAL MANUFACTURING INDUSTRY*
(1920 = 100)

Period	Home	Export	Total
1927—October	81	208	112

* Copyright of the British Electrical and Allied Manufacturers' Association. The above index is a 12-month moving average of new orders received by the heavy plant section of the industry. It is based on the horse-power and not on the value of orders.

MOTOR INDUSTRY

The year ended September, 1935, saw the record output of 311,544 private cars and taxis, as against 256,866 in the previous year. In the same period 92,176 commercial vehicles were produced, compared with 85,633 in 1934. Exports of private cars increased from 3,507 in September to 5,006 in October, against 3,926 in the same month a year ago. On the other hand, imports showed a fall over the year from 840 in October, 1934, to 582 last month. At the Commercial Motor Transport Exhibition this month representatives were present from over forty foreign countries, and a keen interest was taken in latest developments in this branch of the industry. At the Exhibition some ninety diesel-engined vehicles were shown, while 200 others could be fitted with either diesel or petrol engines; it is obvious that the diesel engine has an important part to play in the future development of commercial transport in this country.

CHEMICALS

There has been a general improvement in the home chemical market during the past month. A good business has been transacted in industrial chemicals, including acetic acid, acetone, formaldehyde, formic and oxalic acids, and a very fair interest has been shown in pharmaceutical chemicals and coal tar products. Trade in wood distillation products showed a distinct improvement over the previous month, and wood charcoal and allied products are now in steady demand. Exports during October showed an increase of almost £200,000, compared with those of a year ago, the movement being mainly attributable to larger exports of sodium compounds, drugs and medicines, dyes and dyestuffs, and painters' colours and materials. Imports were valued at £310,307 more than in October, 1934.

† Corrected for seasonal fluctuations, for the increase in electrification (trend), and for connections to the "grid."

COTTON

October statistics show a further improvement and the industry is now considerably better off than at this time last year. The spinning section has benefited most. Thus, the percentage of spindles in full production rose from 70 in October, 1934, to 75 in September, 1935, and to 83 last month. Our index of cotton deliveries also rose from 85 a year ago to 91½ in October, 1935. The volume of employment and of wages paid has also increased considerably over the year. The export position is patchy. Sales of both yarns and piece-goods in overseas markets showed a substantial improvement last month; exports of yarns were also well above last year's level, but exports of piece-goods showed a decline. The heavy increase of 13½ per cent. in imports of raw cotton between September and October may be partially due to buying in anticipation of a further rise of prices, but it is a good augury for future activity. On the other hand, it is reported from Lancashire that demand has recently eased, and that fewer orders are being booked.

WOOL

Activity in October continued well above last year's level. Employment in all departments and in almost all districts registered a further improvement, and the amount of wages paid again advanced. Spinning and weaving machinery is busy and is estimated to be working at about 90 per cent. of capacity in the West Riding. Overtime is common in this area, and it is reported that a shortage of piecers and weavers has been experienced. Demand from overseas continued satisfactory during October, exports of tops, yarns, tissues and blankets all showing an advance. Exports of tops and of tissues also exceeded last year's corresponding figure. The increased activity in consuming centres has been accompanied by a hardening of quotations for raw wool and a good demand was encountered at the London auctions which opened on November 18th. The outlook appears still favourable.

JUTE

Quotations for the raw material have been very firm during the past month and yarns and cloth have tended to advance. The position of the jute trade in this country has shown a substantial improvement and manufacturers have a good volume of orders.

RAYON

New business in rayon yarns has contracted somewhat in recent weeks, but the spinning section is still busy. The dress goods trade and the section producing linings are moderately active. Furnishings and corset cloths are in brisk demand; there is a strong call for staple fibre and spun rayon yarns.

LINEN

Flax prices have steadily advanced to the highest level this year. Buyers are active, but the selling monopolies have disposed of a high percentage of their exportable surplus and are disinclined to enter into further engagements at present. Yarns and cloth are in good demand, but prices are rather disappointing in view of the cost of raw material. Made-up and fancy goods are selling freely, and export trade is improving.

BOOTS AND SHOES

The footwear trades showed a further improvement last month. The volume of employment increased, short-time working was reduced, and overtime was more common. Exports of leather footwear, while showing little change compared with a year ago, recorded a substantial advance during October.

POTTERY

The slow improvement recorded in recent months continues, although conditions in the industry are uneven. The number of workpeople employed and total wages paid showed an increase last month and was above last year's level. On the other hand, exports fell short of the corresponding total for 1934.

AGRICULTURE

The lifting of the potato crop was hindered by wet weather, according to an official report. Generally, the quality of the potatoes is good, but there are more than the usual disparities in yield; the yield per acre is forecast at 6.0 tons. Root crops have grown appreciably during the past two months. The yield per acre of turnips and swedes is forecast at 9.5 tons, that of mangolds at 17.8 tons, and that of sugar beet at about 8 tons of washed and topped beet. Wet weather hindered autumn cultivation, particularly in the western half of the country and on heavy lands. At least as much wheat as in recent years is likely to be sown. All classes of livestock made normal progress during October, and milk yields are average for the time of year.

STATE OF TRADE OVERSEAS

BRITISH EMPIRE

Australia.—According to a cable from the National Bank of Australasia, a further general expansion of industry and trade has taken place. The output of butter is increasing seasonally, wheat crops are finishing well and summer feed and water for stock are virtually assured. Wool has been selling freely in a strong market. Unemployment has registered a further decline, while secondary industries, the building trade, retail trade and wharves are on the increase; overseas trade is expanding.

South Africa.—Farming conditions have been improved by good general rains, states a cable from the Standard Bank. Maize markets have been inactive, owing to the disparity between local and export prices, but wool markets showed a firmer tendency. Hides have been easier in anticipation of sanctions against Italy, but winter mohair has been in good demand. Railway earnings continued above budget estimates, and building activity has been well maintained. Greater activity is reported in practically all manufactures, but retail trade has been disappointing.

Canada.—The improvement in business activity continues, and has recently been most noticeable in the heavy industries, where the depression was previously deepest. The Canadian Bank of Commerce suggests that an important factor was the increased purchasing power of the farming community, but that the large volume of construction contracts and the requirements of the automobile industry must also be taken into account. Employment is on the up-grade, steel production is increasing and the lumber cut is being well maintained. Foreign trade declined slightly in September, but exports were well above the level of recent years.

India.—Rainfall has been general and standing crops are in average to good condition, except in Bengal, where drought has been experienced. The area under cotton and sugar cane is estimated to be above, but that under rice, sesamum and groundnuts to be below, last year's level at this time. Imports increased by 160 lakhs and exports by 248 lakhs in October; imports were lowered by 66 lakhs and exports higher by 213 lakhs, compared with October, 1934. The excess of exports over imports has increased.

EUROPE

France.—Business activity in France showed a slight improvement during September, the latest month for which statistics are available. The official index of industrial production in September, at 94 (1913 = 100), compares with 93 in August and 95 in September, 1935. The iron and steel, building and textile industries all registered a slight improvement in September. The number of persons in receipt of unemployment benefit also declined slightly during September. Since then, however, the number of persons in receipt of benefit has increased again, from 373,446 at the end of September to 398,462 on November 16th. Carloadings rose from 42,500 per day during the first week of October to 45,500 per day at the end of the month, but declined to 41,200 per day during the week ended November 9th. Wholesale prices continued to rise in recent weeks. Meanwhile, a new financial crisis has come to a head, but the issue was still undecided as we went to press.

Germany.—Industrial activity in Germany has been maintained so far, but at the expense of consumers' goods. The index of industrial production, calculated by the Institut für Konjunkturforschung, rose from 96.5 (1928 = 100) in August to 102.8 in September. The increase in unemployment as officially recorded, from 1,713,900 at the end of September to 1,828,000 at the end of October, is ascribed mainly to seasonal influences. Pig-iron production rose from 1,112,700 tons in September to 1,197,800 in October. Carloadings increased from 132,600 per day in the first week of October to 145,500 per day during the first week of November. The note circulation rose slightly from Rm. 6,258 millions in September to Rm. 6,259 millions in October. Prices of industrial securities continued their gradual downward trend, but the tendency of wholesale prices remained upwards. Both imports and exports in October, at Rm. 336 millions and Rm. 391 millions respectively, showed an increase of Rm. 18 millions over September.

Austria.—The upward trend of business activity continued during September and October. The number of applicants for work declined from 325,547 at the end of September, 1934, to 292,560 at the end of August, and 289,944 at the end of September, 1935. The output of crude ore in October was 93,900 metric tons, compared with 84,970 tons in September and 49,300 tons in the corresponding month a year ago. Pig iron production rose from 12,155 tons in October, 1934, to 21,089 tons in September and 22,720 tons in October, 1935. During the same period steel output rose from 13,506 tons to 16,500 tons and 20,748 tons respectively.

Greece.—According to final returns this year's production of wheat was higher than in 1934. Conditions continue satisfactory in the tobacco market and are somewhat better as regards currants. Olive oil prices have risen considerably. Internal trade and industrial activity were rather slack under the influence of the political situation, but foreign trade returns for September show an increase both in imports and exports. Tax receipts are higher, while the foreign exchange reserves of the bank of issue have slightly increased. Stock exchange quotations experienced a recovery.

Poland.—Industrial activity in Poland continued its gradual expansion during September, when the index of production of the Polish Institute for Economic Research stood at 69.0 (1928 = 100), compared with 66.9 in August and 62.6 a year ago.

UNITED STATES OF AMERICA

Industrial activity continued to expand in October and in the first half of November, and the pace of recovery has tended to quicken. The expansion of activity is reflected in the rise of the *Annalist* index of business activity from 83.6 in September to 87.1 in October; a year ago the index stood at 70.5. The heavy industries are gradually making headway; demand for consumers' goods, especially motor cars, is increasing, and the market for new issues is expanding. Moreover, it appears that the Government at Washington has no intention, for the time being, to restrain the expansion of business activity and the rise in the prices of stock exchange securities. Thus, recent warnings concerning the dangers of the present monetary policy were brushed aside as unwarranted by Mr Eccles, Governor of the Federal Reserve Board, at a recent meeting of the Board's Advisory Council. On the general economic situation Mr Eccles remarked, "there is no limited amount of goods or of frantic bidding for a limited amount of goods or of an expansion of bank credit save through the purchase of Government securities."

AMERICAN TRADE STATISTICS—OCTOBER, 1935

	Sept., 1935	Oct., 1935	Compared with Oct., '34

LATIN AMÉRICA

The cessation of the drought in Argentina has considerably improved crop prospects ; it is still too early accurately to gauge the probable yield of fine cereals, although it is stated officially that the substantially smaller acreage and subsequent losses will cause a notable reduction. Shipments of maize have fallen off, and it now appears certain that the carry-over of this grain to next season will be considerable. The Argentine Government is reported to be considering a Decree to provide for the suspension of official sales of exchange by auction and for future rates to be fixed by the Central Bank ; the Decree has not yet been issued, but it is presumed that its object would be chiefly to meet the objections of the railway companies to the present system of remittances. Internal trade in Chile continues active, but a small decline has latterly occurred in both imports and exports. In Brazil, exchange market conditions are slightly less stringent, but the tone is still undecided ; the exchange difficulties are apparently checking the increased flow of imports. Peruvian foreign trade continues active and the sol has risen in value in terms of sterling. Despite the change of political regime, trade conditions in Ecuador are satisfactory.

THE FAR EAST

The event of the month was the adoption on November 3rd of a managed paper currency in place of the silver standard by China. China's imports rose from 54.4 million national dollars in September to 61.2 millions in October, against 79.0 millions a year earlier, while her exports increased from 45.9 million dollars in September to 48.4 millions last month, against 42.7 millions in October, 1934. In Japan cotton prices were weak early in November, but rallied later in sympathy with American cotton. Raw silk suffered a reaction. Japanese imports and exports in October totalled 176 million yen and 236 million yen respectively, against 130 million yen and 223 million yen in the previous month.

STATISTICS

In the following tables we give trade and other statistics for as many countries of the world as possible, our endeavour being to combine brevity with comprehensiveness. The greater number of the figures are taken from the Monthly Statistical Bulletin of the League of Nations (published by George Allen and Unwin, Ltd.).

against a possible coal strike. As a result, quotations for coal have been advanced. If agreement is reached between coalowners and coalminers, a temporary slump in demand will have to be reckoned with.

The sudden revival of the textile trades continued in recent weeks. Unemployment in the textile industry as a whole is appreciably lower than a year ago. The improvement during the past year has been most marked in the wool, cotton and jute textile trades. The revival of the wool textile industry is largely due to the rise in raw wool prices caused by the realisation that the world's available supplies this season are smaller than a year ago. This has given rise to a restocking movement and to the increased activity in the industry. Among other consumers' goods industries, the footwear trade has continued to improve, but activity in the clothing industry as a whole has tended to decline. Moreover, unemployment showed some increase in the industries concerned with the provision of food, drink and tobacco. Although the official figures of retail sales in

The graph illustrates the business activity index in the United Kingdom from 1932 to 1935. The vertical axis (Y-axis) represents the index value, ranging from 85 to 125 in increments of 5. The horizontal axis (X-axis) represents the years from 1932 to 1935. The index starts at approximately 90 in early 1932, fluctuates with a general upward trend, and reaches a peak of about 120 by late 1935. There is a notable dip in early 1933 followed by a sharp rise, and another period of relative stability around 110 in 1934 before a final significant increase in 1935.

1935 (End)	120

during the past year, and according to the index of the Institut für Konjunkturforschung, it has recovered almost to the pre-depression level. On the other hand, the volume of world trade has made little headway during the past year and remains more than 20 per cent. below the level reached in 1920.

In the United States the expansion of activity which began last May has apparently not yet run its course. On the contrary, most of the indications point to continued progress in the coming year. There are still very few signs of improvement in the gold *bloc* countries, though there have been some faint signs of revival in France, where another financial crisis has been overcome. Industrial activity in Germany has been maintained so far, but the Institut für Konjunkturforschung's latest index of the output of consumption goods is below the level of a year ago. Increased armament activity is partly responsible for the sustained improvement in Central European countries. The latest reports from Scandinavia are still fairly satisfactory. In Belgium economic activity continues to expand and is now well above the level of a year ago.

The news from the Empire is generally good. Australia, South Africa and Canada continue to make headway. Together with South America, British Empire countries are benefiting from the rise in prices of raw materials and foodstuffs. The latest information from Japan indicates that there has been no further increase in business activity during recent months, and the news from China remains unsatisfactory.

HOME INDUSTRIES AND TRADE

The following reports on British industry cover, in most cases, the period to the middle of December. In the remainder they relate to the month of November.

COAL

The coal trade was more active in November, output showing an increase compared both with the previous month and with November, 1934. The increase was especially marked in South Wales and affected all other areas except Scotland and Northumberland. The heavy buying of all classes of fuel—which was traceable to a good industrial and domestic demand and to a stocking-up movement in anticipation of a stoppage and of a rise in prices—has continued in recent weeks. A satisfactory settlement of the dispute would give rise to quietude on coal markets, but a strike, commencing on January 27th is now a possibility, in consequence of the decision of the delegate conference of the Mineworkers' Federation on December 19th. November exports were up on last year, but firmer prices and stringency of supplies have adversely affected this section in recent weeks. The last cut in the French import quota has, however, been restored.

IRON AND STEEL

Activity in the iron and steel industry continued to expand in November and early December, and many manufacturers are welcoming the normal slackening of new business at the turn of the year. Pressure to obtain deliveries against contracts remains as strong as ever. Demand for pig iron continues on a large scale. Manufacturers of semi-finished materials are mostly operating at capacity and many appear to be unable to keep abreast of demand. Deliveries of finished steel are heavy. Many manufacturers are unwilling or unable to extend their commitments. In contrast to the buoyancy of home demand, exports failed to make headway. Meanwhile, reorganisation is proceeding gradually. Machinery to handle the import and export business of the British Iron and Steel Federation was set up at the beginning of December with the formation of the British Iron and Steel Corporation.

ENGINEERING

The engineering industry as a whole continued to progress in recent weeks. Order books are better than at any time since 1929 and the volume of new business continues to expand. The volume of exports in November was slightly larger than a year ago. As far as individual branches of the industry are concerned, prime movers and electrical equipment are the strongest features. There has been some improvement in the demand for locomotives, printing and textile machinery. The position of manufacturers of boilers and boiler-house equipment, lifting and mining machinery is fairly favourable. There has been a spurt in the demand for sugar crushing and refining machinery. Business has undergone little change in marine engines and is seasonally dull in agricultural machinery.

ELECTRICAL ENGINEERING

The downward movement in the volume of new home business in heavy electrical machinery gave way to an improvement during November, and export orders continued to expand.

INDEX OF NEW ORDERS RECEIVED BY HEAVY ELECTRICAL MANUFACTURING INDUSTRY*

* Copyright of the British Electrical and Allied Manufacturers' Association. The above index is a 12-month moving average of new orders received by the heavy plant section of the industry. It is based on the horse-power and not on the value of orders.

MOTOR INDUSTRY

In the private car section production continues above last year's level. Thus, in October new registrations in Great Britain totalled 22,676, or 26 per cent. more than in October, 1934. On the other hand, registrations of commercial vehicles have recently dropped below the 1934 level, the October figure of 5,789 showing a decline of 8 per cent. over the year. The export trade continues to show an improvement over last year, although overseas sales of private cars suffered a decline from 5,906 in October to 4,925 last month. Imports this year have also been in excess of 1934 figures, although the increase has been smaller in recent months. On the whole, the outlook still appears favourable, and it is reported from the Midlands that many factories have had to be enlarged to cope with orders.

CHEMICALS

Home market business has been generally satisfactory. Industrial chemicals have been in good demand, and the coal tar products market has been quite active, naphthalenes, creosote and tar acids being the best items. Trade in wood distillation products has improved, but, owing to large stocks, prices have not advanced. Fair interest has been shown in pharmaceutical chemicals, and some products, particularly bismuth salts, bromides and iodides, have been in good demand. During November exports of sodium compounds, drugs and medicines, dyes and dyestuffs, and painters' colours and materials were considerably above those for November, 1934. The least satisfactory items were aluminium compounds, disinfectants and insecticides and glycerine.

ELECTRICITY

INDEX OF GENERATION OF ELECTRICITY*
(Great Britain, excluding London and Wales)

* Prepared by the Economic and Statistical Department of the British Electrical and Allied Manufacturers' Association.
† Corrected for seasonal fluctuations, for the increase in electrification (trend), and for connections to the "grid."

COTTON

The improvement noticed in October appears to have continued last month and manufacturers are reported to be busy on existing contracts. Our index of cotton deliveries again rose in November and is now substantially above the 1934 level; the percentage of spinning spindles in full production was maintained at 83 last month, against 72 in November, 1934. Amongst operators in raw cotton uncertainty still prevails as to the future of the American processing tax and the Bankhead Act. Imports of raw cotton again increased last month, to well above last year's level. Exports of yarn were well maintained in excess of the corresponding 1934 figure, but exports of piece-goods declined and were smaller than a year ago. Uncertainty regarding the future of the Indian import duties hampers trade with that country. Meanwhile, it is reported from Lancashire that less new business has been booked recently.

WOOL

The position of the industry continues to show improvement. Employment further increased last month and is now better than for many years past. Where machinery is idle this is usually due to a shortage of hands and, in consequence of the volume of business, Christmas Holidays were curtailed. Exports continue well above last year's level, although shipments of wool tops and of woollen and worsted tissues were rather smaller in November than in October. Meanwhile, increased activity has caused a good demand for raw wool and a strong tone was displayed at the London auctions this month; prices were about 5 per cent. above the October level. Satisfactory sales are also reported from Australian centres. The outlook continues favourable, and the heavy increase in imports of the raw material last month is a good augury for activity in the New Year.

JUTE

Although little fresh business has been booked recently, manufacturers are still busy on existing orders; but unemployment in the industry remains heavy. Exports continue above last year's level. The dispute between the Indian Jute Mills Association and the "outside" mills concerning the question of hours is causing some concern, since a substantial increase in production is probable unless a settlement is reached.

RAYON

Although new business is less active, deliveries against contracts have been well maintained. The Chancellor's announcement that no change will be made in the excise duty before March, 1937, has removed uncertainty and assisted business. Attention is still being paid to staple fibre and spun rayon yarns made from it.

LINEN

High flax prices have restricted sales, since spinners cannot cover costs. Manufacturers have also had to refuse considerable orders for dress and fancy goods, buyers' offers being too low. November returns show a further improvement in export trade.

BOOTS AND SHOES

Little change was recorded in November. Employment continued fairly good in most centres, but both short time and over-time remain common. Exports showed a decline last month and were below the 1934 level.

POTTERY

The completion of Christmas orders was followed by some decline in employment at the end of November. The export position showed little change, but the volume of overseas sales continued below the 1934 level.

AGRICULTURE

Land work is not so forward as usual, states an official report. Early sown corn has germinated well. Total production of potatoes is estimated at 2,919,000 tons; while the quality and condition appear to be fairly good, the tubers are smaller than usual. Total production of mangolds is put at 4,566,000 tons. The quality of the roots is generally good, but they are slightly smaller than usual. The yield per acre of swedes and turnips is estimated at 9.3 tons, which compares unfavourably with the ten-year average of 11.9 tons. Sugar beet crop does not appear to be up to average, and the sugar content will probably be below normal. Cattle and sheep have only done moderately well, but winter keep has not been drawn upon to a greater extent than usual. Milk yields are about normal.

SHIPPING

As forecast a month ago, freights suffered a setback in November, the *Economist* index falling by 1.6 per cent., after a rise of 12.3 per cent. in October. A period of stagnation has ensued. Meanwhile the Government has announced its intention of continuing the tramp shipping subsidy next year.

BUILDING

While building activity as a whole continues to expand, the boom in dwelling-house construction has about reached its peak. Thus, the *Economist* index of building activity rose to 233 in November (1924 = 100), against 228 in October and 205 in November, 1934; but the number of houses built by private enterprise without State assistance in the six months ended September amounted only to 125,593, against 136,965 in the corresponding period a year ago. On the other hand, the value of building plans approved for industrial and commercial purposes has recently been increasing at a much greater rate than the corresponding total for residential building, thus suggesting that the building boom could continue despite a slackening of the housing boom. Meanwhile, unemployment in the building trades, although smaller than at this time last year, showed a seasonal increase in November.

RETAIL TRADE

Although the official statistics are not available as we go to press, it seems probable that the increase recorded in October was well maintained in November.

HOME TRADE STATISTICS—NOVEMBER, 1935

	Oct., 1935	Nov., 1935	Compared with Nov., '34	Oct., 1935	Nov., 1935	Compared with Nov., '34

STATE OF TRADE OVERSEAS

BRITISH EMPIRE

Australia.—The wheat yield will probably exceed that of the previous harvest, states a cable from the National Bank of Australasia. Although the wheat market is dull, prices of wheat and butter are higher than a year ago. Wool is selling well at prices much above those of 1934. Engineering, construction, textiles, automobiles and retail trade are all ahead of last year and large Christmas sales are expected. Employment shows improvement.

South Africa.—Following the recent rains, farming conditions appear fairly favourable, states the Standard Bank. Maize markets are quiet, but prices remain firm. A surplus of wheat is considered certain and the price problem has been referred to the Control Board. Wool and mohair markets are strong, but hides are weaker. Building activity continues unabated and railway earnings are buoyant. The position of manufacturing industries continues to improve.

Canada.—After a temporary setback in September, business showed further improvement in October, the official index (1926 = 100) rising to 107.2, against 95.9 a year earlier. More recently railway freights and bank clearings have improved, while automobile production has attained the highest output for ten years. Prices of primary products are now on the up-grade. Employment has expanded considerably, but unemployment remains a serious problem.

India.—The Bombay cotton market has had a dull tone on account of a poor home and export demand. Piece-goods have been steady in price, although trade has been only fair. The area under cotton is now estimated at 24 million acres, or 7 per cent. in excess of the revised estimate for 1934. On the Calcutta jute market little business has been transacted recently. Tea prices have been easier, owing to a decline in quality. Foreign trade increased in October.

EUROPE

France.—The latest information suggests that the situation in France has at last undergone a slight improvement. Both industrial production and the value of foreign trade have shown an upward tendency. The official index of industrial production (1913 = 100) rose from 93 in August to 94 in September and 95 in October. The increase in the number of persons in receipt of unemployment benefit, from 380,719 at the end of October to 409,466 at the end of November, is ascribed to seasonal influences. Car-loadings increased from 39,000 per day during the week ended November 2nd to 44,900 per day during the week ended November 23rd. The slight improvement in business activity is reflected in a rise in the prices of Stock Exchange securities. But wholesale prices also continued to rise, and it is difficult to see how a policy of deflation on the gold standard can be successful without a more marked advance in world prices.

Germany.—The expansion of industrial activity has been maintained. The index of production, compiled by the Institut für Konjunkturforschung, was 103.2 (1928 = 100) in October, compared with 103.4 in September and 84.7 in the corresponding month a year ago. But while general industrial activity is well above the level of a year ago, the index of the output of consumption goods declined from 93.1 in October, 1934, to 91.6 in the corresponding month in 1935. The number of unemployed, as officially recorded, increased from 1,828,700 at the end of October to 1,985,000 at the end of the past month. This increase is ascribed mainly to seasonal influences. Production of coal in the Ruhr District rose from 357,600 tons per day during the first week in November to 365,200 tons per day during the first week in November. Car-loadings rose from 143,100 per day during the week ended October 26th to 149,100 per day during the week ended November 23rd, but declined to 133,300 per day in the first week of December. Imports and exports in November were Rm. 346 millions and Rm. 397 millions respectively. Wholesale prices and quotations for industrial securities are scarcely changed on the month.

Denmark.—According to the Statistical Department, industrial production is somewhat higher than last year, but unemployment has only been reduced from 18.4 per cent. to 17.1 per cent. and is again approaching the figure of 100,000. The building boom is on the wane, and this might sooner or later make itself felt in other trades. Rising prices for raw materials will be to the disadvantage of Denmark, but it is to be hoped that improvement abroad will benefit this country through increased sales of Danish produce.

Greece.—Sowing of cereals took place in November under favourable weather conditions and on a larger area than last year. The market for tobacco continued lively. Stocks of this produce show a considerable decline since 1931. On the other hand, exports of currants are still lower than those of last year. A very poor output of olives and olive oil, due to inclement weather conditions, is finally estimated for the current year. Foreign trade in October was larger as compared with October, 1934. Though public revenue is on the whole increasing, the financial situation inspires anxiety owing to the growth of expenditure.

Norway.—There was no increase in industrial production in October as compared with September, the index figure being unaltered at 117, while there was a decline of 3 points at the same time last year. The figures of foreign trade, however, indicate an appreciable improvement, and several branches of export and home industries registered increased turnover. The firm tone prevailing in the share market—although influenced by international developments—is also indicative of the increased activity that has been the salient feature in recent industrial developments.

UNITED STATES OF AMERICA

The expansion of economic activity which began last May continued in November and in the first half of December. The improvement is reflected in the rise of the *New York Times* index of business activity from 93.1 during the week ended November 16th to 95.9 during the second week of December. Since the middle of December business activity has tended to decline a little, but so far the seasonal re-session has been less marked than usual. An important statement on monetary policy, issued jointly by the Board of Governors of the Federal Reserve system and its Open Market Committee, in the third week of December, indicates that there will be no deliberate restriction of credit in the near future, for there was at present "no evidence of over-expansion of business activity." Production and employment are still well below the pre-depression level. Despite uncertainty concerning the judgments of the Supreme Court over some of the New Deal legislation which may be given in January, the outlook remains fairly encouraging.

* Preliminary estimates made by Messrs Moody, subject to revision. † Federal Reserve Board Index of Factory Employment. ‡ Closing prices. § Partially estimated. || Compared with Oct., 1934.

LATIN AMERICA

The event in Argentina has been the announcement on December 13th of a sharp increase in the minimum basic prices at which the Grain Regulating Board is prepared to purchase grain from farmers. The advance is from 5.75 to 10 pesos per 100 kilos. for wheat and from 11.50 to 14 pesos for linseed. Losses of the Grain Regulating Board have to be met from the Exchange Profits Fund, and the change in the basic grain prices may influence the Government's exchange policy. The yield of the grain crops this season—especially wheat—must be substantially below normal. The coffee situation in Brazil appears to have gradually improved during the current year, and both coffee quotations and exchange rates are remarkably steady, despite the recent short-lived political revolt. Chilean conditions appear little changed, although there is a continued shortage of cover in the export exchange market, and the rate has risen to 125 pesos per £ sterling after having touched 128 pesos; sales of export exchange by the Government have not yet been resumed. The Peruvian Congress has approved the Trade Treaty negotiated with Chile. Exports of coffee from Colombia this year promise to constitute a record, and the crop outlook in the Central American countries generally appears fairly favourable.

THE FAR EAST

Japan's foreign trade continues well above last year's level. Imports increased in November, but exports were reduced, mainly in consequence of diminished sales of raw silk and of cotton goods. The money market remains active, but capital issues are somewhat stagnant. Despite certain irregularities, the tone of the stock markets has been good. Commodity markets have, however, been rather inactive; the reaction in raw silk has had an adverse effect in other directions and textile prices have recently suffered an all-round reduction. Wholesale prices declined by 0.2 per cent. during November. Meanwhile, China's departure from the silver standard appears to have had a favourable effect upon her exports—which increased from 48.40 million dollars in October to 60.23 in November, against 49.77 a year ago. Imports also increased last month, but remained below the 1934 level.

STATISTICS

In the following tables we give trade and other statistics for as many countries of the world as possible, our endeavour being to combine brevity with comprehensiveness. The greater number of the figures are taken from the *Monthly Statistical Bulletin of the League of Nations* (published by George Allen and Unwin, Ltd.).

PRODUCTION (Thousands of Metric Tons)

HEAD OFFICE: BARTHOLOMEW LANE, LONDON, E.C.2.

ESTABLISHED IN 1824.

Assets exceed £30,000,000.

LIONEL N. DE ROTHSCHILD, O.B.E., Chairman.

FIRE DEPARTMENT

COMPREHENSIVE POLICIES are issued for Buildings and for Contents of Dwelling Houses.

LIFE DEPARTMENT

The "ALLIANCE" issues a wide range of policies designed to meet all needs. Special attention is invited to the "Alliance" Family Protection Policy and to the Scheme of Deferred Assurances for Children.

MOTOR INSURANCE

The Company's MOTOR POLICIES are framed on broad and generous lines and comprise all the most modern developments of Motor Insurance. Motorists should insure with a Company of undoubted financial stability.

The "Alliance" has transacted business successfully and progressively for more than 100 years, and it offers a complete insurance service—Fire, Life, Accident, Marine, etc. To be under-insured in any direction means a small present saving, but when a claim arises it may involve serious loss. See that your insurances are adequate before it is too late. Full information will be supplied on application to any of the Company's Agents or Establishments.

GENERAL RESULTS OF THE YEAR

The British insurance business has by now earned the name of an industry, both for the extent of its operations and the magnitude of the funds employed. The latest figures for the "industry's" experience in 1934 show that its strength has been unimpaired by economic depression, and that many sections of the "industry" have never been in a stronger position. Insurance, indeed, in this country would seem to have become as widespread a convention as the use of a bank—if not more so. This year our annual Insurance Supplement is of special interest, as the technical procedure of Life Offices is described in the three special articles which follow.

We give below, in accordance with our usual practice, a table showing the general results of 22 of the most important companies in respect of all branches of insurance in

1934. The figures in the table have been calculated on a uniform basis for all the offices. The aggregate results show further improvement in 1934; on the whole, fire insurance profits were greater, and accident and miscellaneous profits were smaller, than in 1933, owing to a large extent to the trading results in the American field. The reserve for unexpired risks, except in the marine branch, has been taken in all cases at 40 per cent. of the premium income of the year, which is the basis used by the majority of offices. It is not possible to use a uniform method of calculating the underwriting profits in the case of the marine accounts, and the method of the company concerned has been followed. Special attention is drawn to the headings of each column in the table below, for these explain the principles upon which our calculations are made. These calculations may

UNDERWRITING PROFIT

differ from the published results of individual companies, as is only to be expected when various data are reduced to a comparable basis; and this fact should be borne in mind.

The trading surplus shown in column 2 has been obtained after deduction of all allocations to investment, contingency, etc., reserves, for it is not possible to state in any instance how much of the transfer (if any) may be regarded simply as an addition to free reserve and how much is required by ordinary business prudence. Some slight injustice may be introduced in individual cases by this system, which, on the whole, however, is probably the fairest to adopt.

Column 4 indicates the amount of the contribution to the net trading surplus derived from the operations of the life department. Such profits emerge from actuarial valuations, and in the majority of cases these valuations take place only at quinquennial intervals. It may be mentioned that some companies set aside the shareholders' proportion of surplus revealed at a quinquennial valuation, and, in each year of the new quinquennium, credit one-fifth of such surplus to profit and loss. This practice is not universal, however, and hence the absence of any figure in this column for those companies which transact life business merely means that no valuation was due to be made. The Prudential is in a special position, since the life profits

belong entirely to the "A" shareholders, and the table is concerned only with the "B" shareholders, whose interest is confined to the remaining departments, and who have no rights to any share in the surplus of the life and annuity department; the negative entry of £190,000 shown in the table represents a transfer of this amount from profit and loss to strengthen the basis of valuation of the sinking fund policies.

DIVIDEND POSITION

It will be seen that during 1934, 78 per cent. of total dividends was met out of interest earnings, or, excluding the Pearl, whose activities are confined mainly to life assurance, 84 per cent. By a policy of meeting the cost of at least a very substantial part of the dividend from interest earnings, a considerable portion of the underwriting profits is available to augment reserves. As a result, the offices are in a very strong financial position.

The premium income reverses the tendency of recent years, and shows a substantial increase in 1934 over the corresponding figures of the previous year; and the net trading surplus is very substantially better. It is very satisfactory to note a slight increase in the total net interest earnings, though this was due to a fall of 6d. in the rate of income tax. In most cases the rate of dividend has remained the same as in 1933.

Year	Total Premium Income (Excl. Life Annuity and Sinking Fund)	Underwriting Profits		Dividend Position		
		Net Trading Surplus (Excl. Life Annuity and Sinking Fund)		Total Net Interest Earnings	Cost of Ordinary Share Dividend	Proportion of Dividend Met out of Interest Earnings
		Amount	Percentage of Premium Income			
1929	119,734,910	2,851,132	2.4	7,368,926	8,219,274	% 90
1930	114,944,401	1,996,275	1.7	7,320,575	8,322,312	88

LIFE INSURANCE STATEMENTS

I.—ANNUAL STATEMENTS

The annual statements prepared and presented by the ordinary trading concern are designed to show two important facts. One is the profitability or otherwise of the year's operations, the other is the solvency of the concern at the end of the accounting period. The establishment and publication of these facts may take place at shorter intervals than one year, but only in exceptional circumstances is a longer period than this allowed to elapse before the results and position are ascertained.

In the case of life insurance companies it is the exception rather than the rule for so full a disclosure to be made annually. The statements published by life insurance companies may broadly be divided into two groups. On the one hand, there is a body of limited information which all companies are statutorily obliged to furnish every year—consisting in effect merely of interim statements, and on the other there are the full statements which are published on the occasion of the periodical valuation, which may be annual, but more usually is quinquennial.

The principal returns in the first group consist of the revenue account, a balance sheet, and particulars of new business effected during the year.

The following is an imaginary and greatly simplified example of a revenue account.

REVENUE ACCOUNT (000 omitted)	
Life fund at beginning of year	23,571
Premiums	1,522
Interest received, less income tax	963
Fees, etc.	1
	26,057
Claims by death	840
Claims by maturity	482
Surrenders	206
Cash bonuses	20
Commission	85
Expenses	135
Life fund at end of year	24,289
	26,057

This account is little more than a statement of the receipts and payments for the year. The effect of charging a level premium for an increasing risk is that the office receives in premiums during the early years an amount which, after payment of expenses, exceeds the amount required to cover the risk of death. This excess premium is accumulated at interest to provide a fund which will ultimately be used to meet liabilities through maturities or deaths, when the annual premiums themselves are quite inadequate to cover these liabilities. But the revenue account gives no indication whether the addition to the fund during the year is adequate to provide for additional liabilities incurred. It therefore makes no attempt to show the profitability or otherwise either of the new contracts introduced into the

account during the year or of the old contracts still running and represented in it. It merely shows the nominal value of the accumulated life funds at the beginning of the year, adds to it the amounts received or due in the course of the year on account of premiums, interest, etc., and deducts the amounts paid out or due on account of claims, expenses, etc., occurring during the year. The balance is carried forward as the total of the fund at the end of the year. It is no more permissible to draw deductions from such an account regarding the profitability of the year's operations than it would be to deduce the profits of an ordinary business from a study of its bank pass book.

Nor are there many other unambiguous deductions to be drawn from a single year's revenue account, though a comparison of the accounts for several successive years may provide information of some value. If, for instance, the outgo for the year is in excess of income, so that the fund decreases in amount, the cause may have been unusually heavy claims, but the movement is at least as likely to have been due to the fact that the company's scale of operations has recently been decreasing. If the decrease in the fund coincides with a prolonged decline in the volume of new business, the probability that the second explanation is the correct one is greatly increased.

Again, if a concern shows in its revenue account a rising proportion of expenses and commission to premium income, the explanation may be less economical administration, but on the other hand it may be a reflection of the adoption of a policy of expansion, for a considerable proportion of expenses is attributable to the cost of acquiring new business. An analysis of the changes in the volume of new business over a series of years may help to decide which explanation is more likely to be correct.

With regard to the figure for the apparent rate of interest, this is usually determined by dividing the interest earned during the year by the mean fund for the year, less half a year's interest, an adjustment in respect of income tax being allowed for expenses. The result, therefore, is affected by the way in which the assets constituting the fund are valued. If profits on the sale of investments are allowed to swell the nominal size of the fund, the apparent rate of interest earned will be lower than if they are used to write down the values of retained securities. In other words, the larger the reserve hidden in the valuation of the assets, the higher will be the apparent rate of interest earned. Thus a relatively high figure for the interest rate may be due, *inter alia*, to the fact that the company's investment policy has been more venturesome or more successful than that of other concerns, or to the fact that the valuation of its assets is more conservative.

The other main annual statement, namely, the "balance-sheet," is in the following form:—

BALANCE SHEET (000 omitted)	
Liabilities	Assets
Life fund at end of year	24,289
Capital and reserves	1,868
Claims unpaid	166
Other liabilities	99
	1,877
	2,325
	19,869
	1,235
	59
	106
	626
	325
	26,422

The main item on the liabilities side is the life fund as taken from the reserve account, and, as has already been indicated above, the actual figure is merely a balance struck from the cash flow and need not necessarily correspond to the actual insurance liabilities. The other items on this side, apart from capital and reserves, consist of claims admitted but not yet paid and liabilities incurred for income tax, commission, etc., and not yet discharged. On the assets side the principal items are the investments and loans of the company, classified under a score or more of headings, but not, except in the returns of a very few companies, separately itemised. It is therefore generally impossible to

make any independent estimate of the current market values of the securities held. The wording of the important footnote explaining the method of valuing Stock Exchange securities varies from company to company. In some it is stated that all securities are valued at or below market prices on a given date, in others at or below cost, though in all cases the aggregate value of the securities (or in some concerns of the total assets), is certified to be above that shown in the balance sheet. In a period of rising security values the latter is the more conservative method; in a period of falling values the former. An alteration in the wording of the note may therefore be significant.

Apart from some limited information regarding the distribution of investments, the "balance sheet" adds little to our knowledge; all that it states, in effect, is that the provision shown as having been made for future liabilities is represented by actual assets. It gives no information as to whether the provision made is in fact adequate to cover the deferred liabilities which the company has incurred on its contracts of insurance, and no assistance towards ascertaining even whether the concern is solvent or not.

II—THE VALUATION STATEMENT

Doubtless a large number of persons, especially those with prospects of a fairly steady income, do make some sort of long-period calculation of their finances. Household expenses will run on all the time, there is a mortgage to be paid off over twenty years, a son to send to college in ten years' time, another in twelve. It will not always be possible to meet these obligations out of current earnings, and life has to be adjusted, perhaps many years in advance, if the programme is to be fulfilled. It is safe to say, however, that very few attempt to perform the calculation scientifically, and perhaps the number of unknown variables would in most cases render such an attempt futile even if made. But a financial institution, with a complicated set of future revenues and future commitments, must regularly perform the task in the most scientific manner possible, since it has much less power than the individual to modify the programme, and moreover it is responsible, not for the

The unbroken period of over Two Centuries through which the Royal Exchange Assurance has successfully pursued its business is a striking manifestation of those vital qualities of Integrity and Financial Stability without which Insurance cannot be regarded as satisfactory.

ROYAL EXCHANGE ASSURANCE

Incorporated A.D. 1720

Head Office: Royal Exchange, London

Branches and Agencies throughout the World

conduct of a single life, but for the fortunes of thousands.

The way in which an insurance office tests the adequacy of its provision for future commitments is by conducting a periodical valuation. The principle of such a valuation is simple, but the practical application is a highly skilled technical operation. By combining a mortality table and a rate of interest, it is not difficult to ascertain the discounted present values of all future claims and future receipts from premiums in respect of existing contracts. As part of the premium received by the office goes to pay expenses and to provide for future bonuses, the premium which is usually valued is what is known as a net premium, and represents the theoretical premium required, on the valuation basis, to provide the sum assured. The difference between the discounted values of the future claims and of future net premiums represents the capital sum which the company must have in hand as a reserve. The excess of the amount of the Life Fund, as built up in the interim Revenue Accounts, over this reserve is the valuation surplus.

If all life insurance were conducted under contracts which give a fixed amount of insurance to the policyholder—as under without-profits policies—the whole of the surplus, if any, would belong to the shareholders. In fact, however, many policyholders elect to share in the risks of the business—in mutual insurance societies, indeed, these risk-bearing or “with-profit” policyholders bear the whole of the risk. They do this by paying larger premiums per £100 of guaranteed benefit than are paid by without-profits policyholders, and in return they are entitled to receive a large proportion (usually 90 per cent.) of the profits earned, or in mutual societies the whole of them. That some profit will be earned is almost certain, for if expectations were exactly fulfilled the whole of the additional premiums paid by the with-profit policyholders would be available for profits. Whether, in fact, the profits will be sufficient fully to compensate them for the additional premiums paid will depend on many factors, including the future courses of mortality and interest rates.

The results of the valuation so obtained are presented in something like the following form:—

VALUATION STATEMENT	
(000 omitted)	
Life insurance fund	£ 24,289
Net liability	21,253
Surplus	3,036

It would now be possible to draw up the true balance sheet of the concern. If in place of the Life Fund at the top of the liabilities side we insert “Net liability on account of current life contracts—£21,253,000,” and at the foot of the same column we add “Valuation surplus—£3,036,000,” the balance sheet at once becomes similar to that of any other business firm.

It should, however, be observed that the apparently precise figure of the surplus bears only a somewhat indeterminate relationship to the profit actually earned during the period. As Life Offices almost invariably use in their valuations a rate of interest substantially below, and often a rate of mortality appreciably less favourable than, those used in fixing premiums, it follows that the surplus revealed by the valuation does not necessarily represent the profit which has been earned. The proportion of this sur-

plus which may safely be distributed to policyholders as bonuses is therefore a matter for the decision of the actuary of the company, after reviewing the rates of mortality, interest and expenses that are actually being experienced.

The results of this decision are shown in the statement published regarding the allocation of the surplus. The part which the actuary does not consider itself free to distribute will be carried forward as an unappropriated balance. Of the remainder a proportion will be allocated to the shareholders, where these exist, and the balance will be available for the with-profit policyholders.

The most usual method in this country of distributing profits to policyholders is by adding to the amounts insured under the various policies a percentage of the sum insured for each year of the preceding valuation period—e.g. 2 per cent. per annum, or £10 for the quinquennial period per £100 assured. If the bonus is a “simple reversionary bonus,” the percentage is calculated on the amount originally assured; if a “compound reversionary bonus” on the original amount plus all subsequent bonuses. This method appears to be the most popular with the public in this country, and it has the additional advantage that it is easily explained to intending insurers and is simple in operation. Policyholders are also given the option of taking the cash value of these additions to the sums insured, and as the surrender value of a policy increases with the age of the policy, it follows that the amount of cash which can be allowed as the surrender value of the bonus addition also increases with the age of the policy.

III—THE PROFIT AND LOSS ACCOUNT

The Life Insurance Statements mentioned in the two preceding articles are of interest both to policyholders—especially with-profit policyholders—and to shareholders. There remains one which is of interest to shareholders alone and which therefore does not appear among the statements of mutual societies. This is the Profit and Loss Account, which shows the profits available for distribution to shareholders and their allocation. One source of these profits is the interest earned on as much of shareholders' capital and reserves as has not been required to provide for the premises, etc., in which the company carries on its business. These shareholders' funds, which constitute the ultimate reserve for the company's liabilities to its policyholders, are invested separately from the general life funds (though the assets which represent them are not always shown separately in the balance sheet), and the income earned on them is the property of the shareholders alone. Another source is the shareholders' proportion of the life profits as ascertained at the periodical valuation. These may be spread over the years intervening before the next valuation, one-third or one-fifth, as the case may be, being brought into the Profit and Loss Account each year, or alternatively may be credited at once after the valuation and gradually drawn upon for dividends during the intervening period. Finally, if the company, in addition to life insurance, conducts a business also in fire, accident, marine, or other types of non-life insurance, the profits from each of these branches must be separately listed in the Profit and Loss Account.

The form of the Profit and Loss Account varies a good deal, but that of a company conducting a life business only

may read something as follows:—

£ (000 omitted)	
Balance brought forward	268
Interest, etc., not carried to revenue account, less income tax	83
One-fifth of shareholders' proportion of life profits, as shown at last valuation	45
Shareholders' proportion of interim bonuses	4
	400
Income tax	9
Directors' fees	5
Written off premises	15
Dividends—	
Interim	40
Final	50
	90
Balance carried forward ..	281
	400

While mixed companies, carrying on both life and non-life insurance business, must keep a separate revenue account for each class of business and show the profit derived from each class separately in the Profit and Loss Account, they are under no obligation to earmark the assets representing the reserve kept against each class of business, and on the balance sheet the assets of all the different funds are in some cases combined into one total. All interest receipts, not credited to any of the separate revenue accounts, are carried to the Profit and Loss Account in one total, and no attempt is made to show their origins.

LIFE ASSURANCE RESULTS

Last year saw a further appreciation in the assets of life offices, and in the great majority of cases aggregate book values of the Stock Exchange securities are now considerably smaller than corresponding market values at the end of last year. This practice of undervaluing the Stock Exchange securities, combined with the effect of interest on such non-variable assets, e.g. mortgages, as were acquired when general interest rates were higher, has the effect of showing the funds to be earning rates of interest very considerably in excess of those which can be obtained on new money, being earned on the mean funds. To-day, less emphasis is perhaps laid on appreciation in capital values than in the past. What is really of vital importance to the offices is the net rate of interest earned on their liabilities, i.e. on the actuarial reserves. In the case of every company these are at present, and normally, less than the amount of the life fund. Thus, while the published rates of interest are higher than would be obtained if they were calculated on the market values of the securities held, the rate of interest calculated on the reserves is still higher; so that the true interest margin over valuation requirements exceeds that suggested by the published rates. The reduction in the rate of income tax from 5s. to 4s. 6d. in the £ gave very welcome relief to the offices, and its effect is clearly evident in the net rates of interest earned last year; even so, it is somewhat surprising to find that, in spite of the continuance of low yields from new investments, the net rates of interest were, in general, actually in excess of those earned in 1933. Owing to the altered investment conditions, the offices have been compelled to revise drastically the annuity rates in use prior to the Government conversion operations in 1932. In that year the amount received in purchase monies for annuities was over £13 millions compared with £5 millions in 1931. No doubt a certain amount of the increase was obtained at the old rates, but in 1933 the figures of the previous year were fully maintained. Last year further revisions of rates were found necessary; nevertheless, there was a noticeable expansion in business. As life annuity payments are treated in their entirety as income for taxation purposes, there is evidently a deep-rooted demand for annuities. In the United States the expansion of annuity business in the last few years has been even greater than here, and a contributory cause may have been the recognition given in that country by the

authorities that each annuity payment is made up partly of interest and partly of refund of capital. The principal reason for the increased public demand for annuities is no doubt the greatly reduced income from investments; but there are indications that the matter goes deeper than this. In life assurance there is a cognate tendency, not greatly developed so far, it is true, to assure for income rather than for a capital sum. In these times of uncertainty and swift changes, there is much to be said for the individual handing over all the responsibility of investment to a life assurance company, whose resources are sufficient to allow of a wide spread of risk and which has at its disposal the best financial advice.

An event of major importance to life offices took place last year in the publication by the Institute and Faculty of Actuaries of the mortality experience in this country of life offices during the years 1924-29. The new mortality table has already been adopted by some offices in the calculation of premiums and in published valuations. The summary of the returns made by the British life offices to the Board of Trade for 1933 shows that, exclusive of industrial insurance policies, there were 5,382,000 policies in force at the end of that year, representing sums assured and existing bonuses of £1,758,670,000. The total interest income in 1933 was £33,734,000 and the premium income £76,831,000, while the accumulated funds totalled £833,191,000. The following table is compiled from the same official source:—

Year	Aggregate Net Sums Assured under New Policies Mill. £	Increase or Decrease per cent. compared with preceding Year
1919	131	+79.5
1920	147	+11.5
1921	109	-25.3
1922	106	-2.8
1923	112	+5.7
1924	124	+10.7
1925	130	+4.8
1926	129	-.8
1927	148	+14.7
1928	160	+8.1
1929	162	+1.2
1930	166	+2.5
1931	161	-3.0
1932	164	+1.9
1933	183	+11.6

We have omitted the figures of the Dominion offices, as there are no published figures of the new business obtained by them in this country. The total world production of each office is available, but this item is not relevant to our present purpose.

It will be seen that new business last year was much in excess of the 1933 figure. We remarked last year on the large increases in the industrial-cum-ordinary type of office, and it is pleasing to find that last year showed further large expansion. This favourable progression has doubtless been made possible by the improvement in the unemployment position.

(b) *Annuity Business*.—The following table shows that in the case of most offices the amount of consideration for annuities increased substantially last year. From the point of view of the offices the attractiveness of this business depends partly on investment policy. The initial difficulty must be faced of investing the purchase moneys on an interest basis which is remunerative relative to the rate used in the calculation of the annuities, but there are offices which are apparently able to utilise the money to good purpose in other than marketable securities. The interest on the annuity fund is virtually on a gross basis, and as annuity contracts in this country are on a non-participating basis, any profits earned form a very welcome addition to the surplus distributable to the life assurance contracts.

There has always been a suspicion that annuitants, in the mass, enjoy greater longevity than is assumed in the terms of their contracts, and that part of the interest profits must be considered as a set-off against the loss thus incurred. In recent years, however, there has been a change of attitude on the part of some authorities, who hold that with the widening of the appeal the annuitant type is tending more nearly to resemble the average of the population in regard to mortality. In other words, that a person buying an annuity does not so consciously "select" himself as he did in the past. There is probably a good deal of truth in this view.

PREMIUM RATES

Last year many offices altered their life assurance premium rates. In doing so they were influenced by two considerations, viz. the continuance of the low level of interest rates on new money, and the publication of the new mortality experience. The first of these two factors operates to raise, and the second to lower, the level of premiums. On the whole, alterations have been in an upward direction, with considerable variations between different offices. In those contracts in which the interest element predominates, such as short-term endowment assurances, considerable increases occurred, while at the other end of the scale, where mortality is of more importance than interest, as in temporary assurances, rates were often reduced drastically. At the popular assurance ages there was no marked change in "whole life" assurances. In order to give equitable treatment to existing with-profits policyholders, whose present funds were invested at higher rates than are now obtainable, the increases made were greater and the decreases smaller in the case of participating rates than in that of non-profit rates.

EXPENSE RATIOS

It has been our custom to give a table showing the ratio of expenses and commission to premium income, but under modern conditions of life assurance it is doubtful if expense ratios serve any very useful purpose—particularly for comparative uses between different offices, and even in respect of the same office at different times. We have always made allowance in our table for the effect of single premiums, but not for annuity business. With the great increase in the latter, which is by no means evenly distributed over the offices, it becomes necessary to make corrections for this business. Some offices, it is true, have separate annuity funds while others show their annuity expenses and commission separately, but the majority include these items in their life account. Any basis of correction must be in part arbitrary and may be unfair in certain cases.

It is necessary to bear in mind also such considerations as the proportion of new premium income, with its attendant heavy initial expense and commission, any distinctive bonus system based on relatively small premiums and variations in the type of policy issued. In all these circumstances it has been decided, on this occasion, to dispense with the usual table.

MORTALITY

The published figures of the companies do not enable any exact conclusions to be formed about the mortality experience during the year. There is little doubt, however, that in 1933 it was considerably better than in 1932, and there appears to have been a further improvement last year. The standard mortality tables still used by the majority of offices are based on the experience of British offices during the years 1863-93 and have long ceased to represent modern conditions, so that any statements of the percentage which the actual experience bears to that expected by these tables have largely lost their meaning and may be misleading. No doubt the use of these obsolete tables will gradually be superseded by the new mortality table published last year, both in the calculation of premiums and in the valuation of liabilities.

INTEREST EARNINGS

The rate of interest earned on the funds of a life assurance company is the most important indication of its profit-earning capacity. Income tax is charged on the gross interest earned less expenses, so that the effective rate of tax on the gross interest is considerably lower than the standard rate. Under present conditions this effective rate is probably about three-quarters of the standard rate.

In comparing the figures in the next table, it should be borne in mind that the difference between the rates earned by two offices is not due entirely to the particular distribution of the investments, and may arise, for example, from one office taking the book values of its assets on a more stringent basis, or from the fact that the interest credited to the life account includes interest from investment or other specific reserves not forming part of the life funds.

* Adjusted figures—excluding Reversions.

It will be seen that in 1934 the reduction in the rate of income tax was more than sufficient to offset any fall in the gross rate of interest earned. This result is better than might have been expected, and is of great importance from the point of view of trading profits and bonuses.

LIFE OFFICE INVESTMENTS

The following table shows the percentage distribution of the assets of the principal companies, the average of the percentage held in each group of assets by all companies, and also the average percentage holdings in each of four groups, viz.: Mutual, proprietary, industrial-cum-ordinary and composite offices.

ENDOWMENT POLICIES WITH HOUSE PURCHASE PRIVILEGES

SOME ADVANTAGES OF ENDOWMENT POLICIES

Issued by the
WESLEYAN & GENERAL ASSURANCE SOCIETY

- 1 If you take up a policy at once, you can obtain it at a cheaper rate than you will have to pay in the future. "DO IT NOW."
- 2 You may be insurable now, but not insurable in the future, when an advance for House Purchase would prove of great service to you.
- 3 The Life Assurance comes into force immediately the first premium is paid; the policy is a sound investment even if the privilege of obtaining an advance is never exercised.
- 4 You can take out your policy now and defer the selection of the house until a suitable property is available.
- 5 The premiums paid under these policies enable you to obtain statutory rebate of income tax.
- 6 The policy entitles the assured to all the benefits of an ordinary Endowment Assurance Policy with the additional advantage of being available for House Purchase.

STEELHOUSE LANE, BIRMINGHAM

A. L. HUNT, F.S.S., F.C.I.I.
Managing Director

The above division of the companies into the four groups shown is convenient for many purposes, but there seems little correlation between the investment policy of an office and the group to which it belongs. Perhaps it might be argued that the mutual offices invest less than the average in mortgages and more than the average in ordinary shares. For the purposes of comparison we give below the average of the percentages of all the above companies in each of the last four years. Owing to the general fall in interest rates and to other causes, it has become increasingly difficult to obtain attractive mortgages and the proportion of assets so invested (including policy loans) has fallen steadily in recent years. Investment in British Government holdings appears to have passed its peak, while the steady diminution in foreign and Colonial

Government and municipal securities continues. Debenture, preference and ordinary stocks each recorded a substantial increase during the year. The market values of the assets in the majority of companies must have increased considerably in 1934.

Class of Assets	Year			
	1931	1932	1933	1934
Mortgages, including loans on policies	28.8	27.2	24.2	22.8
British Government securities	18.0	20.4	22.0	21.3
Indian, Colonial and Foreign Government securities	10.0	9.5	9.7	9.2
British municipal and county stocks	1.9	2.1	2.9	2.9
Indian, Colonial and Foreign municipal stocks	3.2	3.0	2.8	2.9
Debtless stocks	16.2	15.9	16.4	17.7
Preference and guaranteed stocks	7.0	6.7	6.8	7.6
Ordinary stocks	5.3	5.1	5.6	6.4
Reversionary interests, properties, and other assets	9.6	10.1	9.6	9.2

LIFE OFFICE VALUATIONS

The Assurance Companies Act, 1909, provides that every life office "shall cause an investigation to be made into its financial position including a valuation of its liabilities" at least once in every five years, and these investigations mark the occasion for the distribution of bonuses to policyholders. Our usual complete analyses of the results of the valuations made at the end of last year appear below. In the majority of cases, the rates of bonus were the same as declared at the previous valuations; but increases took place in the case of the National Mutual, the Royal, and the Equity and Law Life. On the other hand, the results shown by the Law Union and Rock were disappointing, while moderate reductions took place in the bonuses of the Atlas and the Friends' Provident. The rates declared by the Guardian and the Marine and General were only slightly less favourable. In present financial circumstances the results on the whole must be considered highly satisfactory.

Valuation Results
ANNUAL VALUATIONS

Britannic Assurance Company

The usual annual valuation of this company was made, and the results together with those of 1933 are given below.

	1933	1934
Ordinary Branch :—		
Surplus earned during the year	£341,966	£366,844
Brought forward from previous year	79,933	117,245
	421,899	484,089
Allocations :—		
To Bonuses to policyholders	236,064	252,946
Shareholders' account	33,590	32,990
Investment reserve fund	30,000	30,000
Contingency fund	...	25,000
Staff pension fund	5,000	5,000
Carried forward to next year	117,245	138,153
	421,899	484,089

Industrial Branch :—		
Surplus earned during the year	623,592	664,551
Brought forward from previous year.....	116,473	128,465
	<u>740,065</u>	<u>793,016</u>
Allocations :—		
To Bonuses to policyholders	211,600	236,850
„ Shareholders' account	235,000	265,000
„ Investment reserve fund	70,000	70,000
„ Staff pension fund	95,000	95,000
„ Carried forward to next year	128,465	126,166
	<u>740,065</u>	<u>793,016</u>

The rate of bonus declared in respect both of the Britannic and British Legal (an amalgamated company) was again 38s. per cent. calculated on the sum assured. As will be seen from the above table the trading surplus was sufficient not only to meet the cost of this bonus but also to allow of liberal contributions to investment reserve and contingency reserve—which acts as a bonus equalisation fund—and to increase the carry forward.

Co-operative Insurance Company

The usual annual valuation of the ordinary and industrial life departments of the Co-operative was made at December 31st last, and the basis of interest and mortality adopted appeared to be the same as in 1933. The results are given below:—

	Year 1934	
	Ordinary Branch	Industrial Branch
Surplus earned during the year	208,846	127,494
Brought forward	75,229	104,748
	<u>284,075</u>	<u>232,242</u>
Allocations :—		
To Bonuses to policyholders	221,285	153,177
„ Carried forward to next year	62,790	79,065
	<u>284,075</u>	<u>232,242</u>

In the ordinary branch the rate of bonus under assurances with immediate participation in profits is the same as in the previous year, namely 36s. per cent. calculated on the sum assured. In the industrial branch the basis of distribution of surplus was also the same as in 1933.

London Life Association

The annual valuation of the liabilities of the London Life and its associates—the Clergy Mutual and the Metropolitan Life—was made at December 31, 1934, and the results are given below:—

	1933	1934
Ordinary trading profits of the year.....	502,494	527,326
Profits on investments	284,532	147,640
Amount brought forward from preceding year	232,415	346,916
	<u>1,019,441</u>	<u>1,021,882</u>
Allocations :—		
To Bonuses to policyholders	391,525	387,589
„ Strengthening of actuarial reserves ..	...	58,141
„ Investment reserve fund	250,000	150,000
„ Staff superannuation	31,000	...
„ Transfer to reserve	...	175,000
„ Amount carried forward	346,916	251,152
	<u>1,019,441</u>	<u>1,021,882</u>

The reserves were calculated on the same mortality and interest bases as before. The “bonus reserve” method is the system of valuation adopted, and the future rate of bonus assumed (London Life) was 30s. per cent. in the reversionary bonus class, and future increases in the rate of reduction of $1\frac{1}{2}$ per cent. in the other participating class. The rate of bonus actually declared for the year beginning on July 1, 1935, is 35s. per cent. and the rate of reduction is 2 per cent. These rates are the same as in the previous year.

Pearl Assurance Company

The usual annual valuation of the liabilities of the Pearl was made at December 31, 1934, and the trading results of the last two years are given below:—

	1933	1934
Ordinary Branch :—		
Surplus earned during year	1,081,360	1,171,090
Brought forward from previous year.....	267,464	291,814
	<u>1,348,824</u>	<u>1,462,904</u>
Allocations :—		
To Policyholders' bonus	744,936	779,532
„ Shareholders' account	186,234	194,883
„ Investment reserve fund	100,000	100,000
„ Staff Pension fund	25,840	26,031
„ Carry forward to next year	291,814	362,458
	<u>1,348,824</u>	<u>1,462,904</u>
Industrial Branch :—		
Surplus earned during year	1,249,826	1,178,992
Brought forward from previous year.....	546,493	649,574
	<u>1,796,319</u>	<u>1,828,566</u>
Allocations :—		
To Policyholders' bonus	572,585	603,319
„ Shareholders' account	400,000	400,000
„ Investment reserve fund	100,000	100,000
„ Staff pension fund	74,160	73,969
„ Carry forward to next year	649,574	651,278
	<u>1,796,319</u>	<u>1,828,566</u>

As in 1933 the rate of bonus in the ordinary branch was £2 per cent. calculated on the sum assured; the rates of bonus in the industrial branch also remained unchanged.

Prudential Assurance Company

The results of the last two valuations of this Company are given below:—

	1933	1934
Ordinary Branch :—		
Surplus earned during the year.....	2,902,962	3,175,644
Capital profits	...	770,419
Exchange adjustment	28,087	—399,712
Brought forward from previous year.....	258,140	551,327
	<u>3,189,189</u>	<u>4,097,678</u>

Allocations :—

From 1931 reserve for bonus	18,495	...
	<u>6,572,320</u>	<u>7,650,959</u>

Allocations :—		
To Bonuses to policyholders	3,814,579	4,509,734
„ Special contingency fund	458,333	285,000
„ Bonuses to shareholders	1,125,000	867,994
„ Bonuses to outside staff	656,455	651,622
„ Strengthening reserves	517,953	350,000
„ Carried forward to next year.....	6,572,320	986,609

Last year considerable sums were applied in strengthening reserves, including the placing of the annuity reserves on the most modern annuitant mortality. In the Ordinary branch, as in 1933, the reversionary bonuses for 1934 are 46s. per cent. for whole life and 40s. per cent. for endowment assurances, calculated on the sum assured. In the Industrial branch, 1934 marked the completion of a process which has gone on steadily since 1923 of bringing the Industrial policies into line with Ordinary policies as regards the form of bonus. Profit sharing in this branch started in 1907, and until 1923 took the form of allocating surplus each year in the form of a “mortuary” bonus, that is, bonuses payable only in the event of a claim arising within a limited period. In 1923 ordinary reversionary bonuses were declared on policies issued subsequent to 1922, and year by year since then this datum line has

been moved back until in 1933 all policies issued after 1888 were included. Last year policies issued prior to 1889—there were still 1,246,000 such policies for sums assured of over £15,000,000—were brought in, to meet the cost of which an allocation of £600,000 has been made from the Special Contingency fund. The rate of bonus on policies issued during 1889—1934 is 30s. per cent.; to the earlier policies now included very substantial initial bonuses have been given, and next year they will be included for ordinary annual bonuses. It should be noted that these Industrial policies have no contractual right to bonus.

Refuge Assurance Company

The results of the last two annual valuations of the Ordinary and Industrial branches of the company are given below. In each of the two years the surplus in the Industrial branch is brought out after providing for increased stringency in the actuarial reserves.

	1933	1934
Ordinary Branch :—		
Surplus earned during the year	1,126,604	1,122,673
Brought forward from previous year	596,861	627,202
	1,723,465	1,749,875
Allocations :—		
To Bonuses to policyholders	896,637	913,841
„ Shareholders' account	99,628	101,538
„ Investment reserve fund	100,000	100,000
„ Carry forward to next year	627,202	634,496
	1,723,465	1,749,875
Industrial Branch :—		
Surplus earned during the year	334,706	302,934
Brought forward from previous year	90,553	125,497
	425,259	428,431
Allocations :—		
To Bonuses to policyholders	149,388	148,036
„ Shareholders' account	50,374	48,462
„ Investment reserve fund	100,000	100,000
„ Carry forward to next year	125,497	131,933
	425,259	428,431

The bonus in the Ordinary branch is again at the rate of 38s. per cent. calculated on the sum assured and it will be seen that the cost of the bonus is very well within the current surplus earnings. In the Industrial branch an allocation has been made which will be applied to increase the amount payable, where necessary, under claims occurring in the current twelve months, to that which would have been payable under the latest scale of benefits.

Standard Life Assurance Company

The usual annual valuation of the liabilities of this company was made at November 15th last, as a result of which a compound bonus at the rate of 42s. per cent. has again been declared. On this occasion the assurance contracts have been valued by the A 1924-1929 tables, select net premiums being used. As before, the rate of interest assumed is 2½ per cent. both for assurances and annuities. The results of the last two valuations are given below :—

	1932-33	1933-34
Surplus earned during the year	394,884	406,096
Surplus income transferred from guarantee fund	39,958	38,816
Brought forward from previous year	30,306	30,746
	465,148	475,658
Allocations :—		
To bonuses to policy holders	334,402	344,429
„ Transfer to inner reserve	85,000	85,000
„ Pension fund	15,000	15,000
„ Carried forward to next year	30,746	31,229
	465,148	475,658

It is stated that the reserves for the liabilities are in the aggregate greater than such reserves would have been if the basis previously employed had been adopted.

Wesleyan and General Assurance Society

The customary annual valuation of the liabilities of this Society was made at December 31st last, and the

results are given below. The basis of valuation appears to be identical with that of the previous year.

	1933	1934
Ordinary Branch :—		
Surplus earned during the year	147,702	136,596
Investment profits realised	5,120	7,472
Transferred from Industrial Branch	12,525	19,873
Brought forward from previous year	94,894	100,952
	260,241	264,893
Allocations :—		
To Bonuses to policyholders	127,489	134,687
„ General reserve fund	20,000	27,000
„ Staff pension fund	11,800	13,800
„ Carried forward to next year	100,952	89,406
	260,241	264,893
Industrial Branch :—		
Surplus earned during the year	153,520	173,798
Investment profits realised	5,909	8,799
Brought forward from previous year	97,468	98,400
	256,897	280,997
Allocations :—		
To Bonuses to policyholders	76,897	81,800
„ Staff pension fund	48,200	56,200
„ Bonuses to outdoor staff	16,700	18,043
„ Ordinary Branch (gross of tax)	16,700	25,643
„ Carried forward to next year	98,400	99,311
	256,897	280,997

The rate of reversionary bonus declared in the Ordinary branch is 46s. per cent. for Whole Life and 40s. per cent. for Endowment assurances, calculated on the sum assured. In each case 6s. of the bonus arises from profit transferred from the Industrial branch. The sum of £81,800 shown above as distributed to Industrial policy holders has been applied to bring all policies issued prior to 1927 into line with those issued since that date in making premiums cease at age 65 provided that not less than 20 premiums will have been paid when that age is attained. Since the Society instituted its profit-sharing scheme in 1927 nearly £500,000 has been allotted to policy-holders in the Industrial branch, although contractually they are not entitled to any allocation at all.

Biennial Valuation

National Mutual Life Assurance Society

The biennial valuation took place on December 31st last and the results, together with those of the valuation at December 31, 1932 are given below :—

	1931-32	1933-34
Trading surplus	279,718	308,430
Profit on investments	33,526	896,314
Brought forward	205,305	254,253
	518,549	1,458,997
Allocations :—		
Bonuses to policyholders :—		
(a) Normal distribution	240,745	249,606
(b) Additional distribution	...	51,736
Valuation expenses and staff pension scheme	5,000	5,598
Strengthening of valuation basis	18,551	123,110
Reserve Fund	...	600,000
Investment reserve fund	...	150,000
Carried forward	254,253	278,947
	518,549	1,458,997

The rate of interest used in the valuation of the liabilities is again 3½ per cent., but on this occasion the new mortality table A 1924-29 has been used at an additional cost, compared with the previous table, of £123,000. At the last distribution in 1932 the bonus rates were 42s. 6d. per cent. on Whole Life policies, 37s. 6d. per cent. on Endowment assurances, and 15s. per cent. on the low premium participating class. These rates, which are calculated on the sums assured and existing bonuses, are repeated on this occasion. In view of the very favourable trading experience during the past two years, an additional special distribution has been made, bringing the total distribution to 52s. 6d. per cent., 45s. per cent. and 17s. 6d. per cent. respectively for the classes above mentioned. These bonuses are, of course, on an extraordinarily high scale, and one which has never been equalled, even by this Society which enjoys a reputation for high bonuses.

Triennial Valuation

Atlas Assurance Company

It will be remembered that the distribution of surplus in respect of the triennium ended December 31, 1931 was postponed in view of the exceptional financial situation then existing, and the distribution was finally made after the publication of the 1932 report. The rate of bonus declared was 48s. per cent. compound, but on the present occasion the rate has been reduced to 42s. per cent. compound. This reduction was perhaps somewhat unexpected, but does not remove the Atlas from the class of high bonus-paying offices. The valuation basis has been strengthened on this occasion, and amongst the changes made is the use of the A 1924-29 tables for the non-profit assurance contracts. The cost of strengthening the reserves is apparently about £175,000; the cost of the three years' bonus at 42s. per cent. is £460,000. Although the distribution of bonus is triennial, the company makes an annual valuation of its liabilities, the results of which are published in the reports; and it would be possible, therefore, to furnish the usual comparative table of results. In view of the postponement of the distribution for the triennium 1929-31, however, figures deduced might be rather misleading, and we therefore omit the table.

Quinquennial Valuations

Equity and Law Life Assurance Society

The quinquennial valuation was based, as regards mortality, on the new mortality table (A 1924-29), whereas in 1929 the O^M and O^M (5) tables were employed. In considering the trading surplus shown below of £983,916, in relation to the amount distributed to policy-holders and shareholders, viz. £1,242,947, it should therefore be borne in mind that the effect, in whichever direction, of the change in the mortality basis is incorporated in the surplus. Also, the heavy initial expenses involved in the great accretion of annuity business in recent years combined with

the stringency of the annuity reserve basis have almost certainly involved a heavy valuation strain, from which future surplus should emerge.

	1925-29	1930-34
Trading surplus earned during quinquennium	816,421	983,916
Profits on investments and on reversions	190,603	378,084
Brought forward from previous quinquennium	116,635	203,629
	1,123,659	1,565,629
Allocations :—		
To Bonuses to policyholders	798,285	1,118,653

	1,123,659	1,565,629

Under the Society's system of distribution the rate of bonus declared on any policy depends to a large extent on the rate of premium charged. The minimum rate of bonus is 45s. per cent. per annum calculated on the sum assured for Whole Life, and 42s. per cent. per annum for Endowment assurances, but as much as 80s. per cent. per annum applies in some cases. At the last investigation the minimum rate was 42s. per cent. per annum for both classes.

Gresham Life Assurance Society

The quinquennial valuation of the liabilities took place at December 31, 1934, and the results of the last two investigations are given below :—

	1925-29	1930-34
Trading surplus earned during quinquennium	702,125	1,018,337
Investment profits realised	56,946	12,800
Brought forward from preceding quinquennium	11,549	15,026
	770,620	1,046,163
Allocations :—		
To Bonuses to policyholders	630,000	844,200
„ Shareholders	75,594	99,395
„ Staff pension fund	50,000	90,000
„ Carried forward to next quinquennium	15,026	12,568
	770,620	1,046,163

The minimum rate of bonus is 35s. per cent. calculated on the sum assured as in 1929, but the maximum rate for policies of long duration is 80s. per cent. against 60s. per cent. A sum of £330,000 has been reserved as the sum required to convert the aggregate liability in foreign currencies to its sterling equivalent at rates of exchange current on December 31st last. The foreign currency assets have not been similarly written up, thus creating a hidden reserve against exchange fluctuations.

Friends' Provident and Century Life Office

The report issued for the year 1934 includes the results of the quinquennial valuations made at December 31st last of both the Friends' Provident and the Century. The basis of valuation used for the Century policies was unchanged, but for the Friends' Provident policies the new mortality table (A 1924-29) was adopted, and more stringent reserves made for existing bonus. No indication being given of the cost of the changes made, the following figures ignore this factor.

	1925-29	1930-34
Trading surplus earned during quinquennium	682,552	774,654
From investment reserve fund	24,402	25,000
Brought forward from previous quinquennium	706,954	30,328
	706,954	829,982
Allocations :—		
To Bonuses to policyholders	676,626	696,887
„ Staff pension fund	...	30,000
„ Staff bonus	...	4,000
„ Carried forward to next quinquennium	30,328	99,095
	706,954	829,982

The rate of bonus is 35s. per cent. per annum compound compared with 42s. per cent. per annum compound declared at the previous distribution.

Guardian Assurance Company

The results of the quinquennial valuation of the liabilities of the Life Department at December 31st last

shown below are obtained after applying a sum in excess of £70,000 in strengthening the actuarial reserves.

	1925-29	1930-34
Surplus earned during the quinquennium	917,348	973,862
Brought forward from previous quinquennium	39,864	57,212
	957,212	1,031,074
Allocations :—		
To Bonuses to policyholders	720,000	834,525
„ Shareholders	180,000	92,725
„ Carried forward to next quinquennium	57,212	103,824
	957,212	1,031,074

The bonus system is of the contribution type, under which the special aim is to distribute bonuses in strict equity according to plan, age at entry, and duration. In principle, such methods have advantages over the more usual systems used in this country, but opinion differs widely how far the end in view is attainable in practice. Be that as it may, the varying bonuses brought out make direct comparison with simple or ordinary bonuses rather complicated, but on the whole the rates declared by the Guardian, which are smaller than on the last occasion, are quite favourable.

Law Union and Rock Insurance Company

The published accounts of the Law Union and Rock include the figures of the "Rock" and the "Crown," both of which have long ceased to transact new business. The quinquennial valuation of each of the three funds took place at December 31, 1934.

	1925-1929	1930-1934
Trading surplus earned during quinquennium	999,748	939,555
Brought forward from previous quinquennium	70,351	109,099
	1,070,099	1,048,654
Allocations :—		
To Bonuses to policyholders	857,862	608,488
„ Written off securities	...	314,984
„ Shareholders	103,138	66,756
„ Carried forward to next quinquennium	109,099	58,426
	1,070,099	1,048,654

In each case the bonus results must be considered as definitely disappointing. Five years ago the rates of bonus were extremely good, being 45s. per cent. compound for the Law Union and Rock and 50s. per cent. compound for the Rock, while in the case of the Crown, where bonus varies with age and duration, high rates were also declared. On this occasion the bonus in each of the first two cases is 32s. per cent. compound, and in the case of the Crown no bonus is declared. The substantial reductions appear to be connected with the position of the Company's Canadian farm loans, which have been a source of some anxiety for a number of years. Reserves have been set up against depreciation of these mortgages and the Directors have felt that a cautious policy should be followed meantime in distributing surplus.

Marine and General Life Assurance Society

The results of the quinquennial valuation are given below :—

	1925-1929	1930-1934
Surplus earned during quinquennium	474,785	428,624
Brought forward from previous valuations	15,616	83,648
	490,401	512,272
Allocations :—		
To Bonuses to policyholders	406,753	383,836
„ Staff pension fund	...	25,000
„ Carried forward to next valuation	83,648	103,436
	490,401	512,272

On this occasion the A 1924-29 tables were used for assurances and deferred annuities instead of the O^M table. The rate of interest was again 3 per cent. The reserve for annuities is on a more stringent basis on this occasion, interest being taken at 3 per cent instead of 4 per cent. Bonuses in the whole-life class are maintained at the previous figure of 50s. per cent per annum calculated on the sum assured ; for Endowment assurances the rate in 1929 varied between 46s. per cent. and 50s. per cent. according to the original term, but on this occasion 46s. per cent. is declared for all terms.

Royal Insurance Company

The quinquennial valuation of the life assurance and annuity branches took place on December 31, 1934. The bases of mortality and interest used in valuing the life assurance contracts were the same as on the previous occasion but some strengthening of special reserves took place. In the annuity section the reserves were increased to the extent of £77,000 by treating attained ages in each case as one less than the actual. The results of the last two valuations were as follows :—

	1925-1929	1930-1934
Surplus earned during quinquennium	2,654,796	3,159,018
Brought forward from previous quinquennium	311,611	911,528
	2,966,407	4,070,546
Allocations :—		
To Bonuses to policyholders	1,854,879	2,252,483
„ Shareholders	200,000	250,000
„ Strengthening reserves	...	266,743
„ Carried forward to next quinquennium	911,528	1,301,320
	2,966,407	4,070,546

The rate of bonus is increased from 42s. per cent. to 45s. per cent. both calculated on the sum assured ; the cost of the bonus, it will be seen, is well within the trading profits earned.

University Life Assurance Society

The results of the quinquennial valuation of the liabilities of the University—which was on the same basis as before—are given below together with the corresponding figures of five years ago.

	1925-1929	1930-1934
Trading surplus earned during quinquennium	146,354	126,049
Capital profits from investments	3,087	...
Brought forward from previous quinquennium	48,793	67,088
	198,234	193,137
Allocations :—		
To Bonuses to policyholders	118,031	107,611
„ Shareholders	13,115	13,009
„ Carried forward to next quinquennium	67,088	72,517
	198,234	193,137

The same rate of bonus as on the last two occasions, namely 50s. per cent. per annum on the sum assured, was declared.

FIRE INSURANCE

The following tables relate to 23 companies, most of which derive an important part of their premium income from U.S.A. In that country both premium income and profits last year were very satisfactory. Accordingly, the aggregate premiums of these companies, after showing a steady diminution over a period of years, showed an advance on 1933, while a high average profit, viz., 10.2 per cent of the premium income, was attained.

The steady increase in the average commission ratio is somewhat disconcerting, and although foreign commission rates, which are generally heavy, are largely outside the control of the British offices, there seems to be scope for improvement in the agency system in this country. The rate of commission varies considerably in the different offices; thus the Alliance, which does no business in the U.S.A. and is known to possess a very select class of business at home, has a commission ratio of only 14.6 per

cent., while at the other end of the scale the Century, which has the second smallest premium income of the group, expended in commission last year 27.9 per cent. of its premium income.

It is encouraging to record, in spite of increased foreign taxation, a decrease not only in the average expense ratio, but also in the actual amount of expenses. Among the results of individual offices, the Alliance shows up very well as a profit-earner, but on this occasion it yields its usual place of honour to the General Accident, which secured a profit ratio of no less than 23 per cent. The Guardian deserves special congratulation, however, in the very large increase of profits from 1.5 per cent. to 17.1 per cent. of premium income. Each of the 23 companies made a profit which, except in five cases, exceeded the corresponding figure in 1933.

MARINE INSURANCE

Marine Insurance premium income in 1934 in the case of most companies showed some increase as compared with 1933, and reflected a larger amount of tonnage afloat. Conditions remained very difficult, however, and the prospects in the next few years are regarded generally as being none too bright. Following on severe reductions in 1933, a further cutting of rates was witnessed last year, particularly in the later months; it has been estimated that in the last three years shipowners have benefited by aggregate reductions of from 25 per cent. to 30 per cent. Competition is very keen, as the marine insurance market is much in excess of requirements, and the terms quoted

leave insufficient margin for the catastrophe risk which is bound to eventuate from time to time. Under these conditions it appears almost impossible to obtain any special co-operation between the offices. Satisfactory accounts under present conditions must depend on a reduction in casualties, and on a rating-up in the cost of fleets with a sub-normal record. A matter which has given cause for grave concern is the war risk in relation to cargoes. Up to 1914 the usual practice was for marine policies to exclude the war risk as affecting cargoes, but since the war this special risk has been covered by the normal contract not only during time at sea, but also before

shipment and for considerable periods after discharge. It is clear that on the outbreak of war very great liability might be involved to a large marine company by an accumulation of goods at a great port. At present, negotiations are taking place to limit war risk cover to goods actually afloat, and for a very restricted period after discharge. With the fall in the premium income in recent years there has been an unavoidable increase in the expense rate in the case of the five composite offices shown in the second table of this note; the expense rate increased from 14 per cent. of the premium income in 1929 to 19 per cent. last year.

Marine insurance claims occur over a period of years following the payment of the relative premiums, and it is the practice of those companies who confine their activities mainly to this class of business to leave the underwriting account open for two years. The account is then closed by taking the unexpended balance of the first year's premiums to profit and loss, after making suitable provision for further claims by a transfer to a suspense account. Hence the 1934 report shows the profit which, it is estimated, emerges from the 1933 premiums. The following table gives the results obtained during the past five years by representative marine companies:—

Office	Account	Premiums	Claims and Suspense	Expenses	Surplus or Deficit
British and Foreign	1929	£ 550,408	£ 435,158	£ 95,222	£ 20,028
	1930	454,580	308,045	95,391	51,144
	1931	481,573	345,603	97,855	38,115

It is the general practice of composite offices to present their marine accounts in the form used for their fire and accident business; the claims are thus to a large extent unrelated to the premiums appearing in the same account. The amount transferred to profit and loss does not represent the underwriting profit of any particular year or years; the results can be gauged approximately by comparison of the total premiums received over a period of years with the total claims and expenses in the same period.

The following table refers to five composite offices doing a large marine business:—

Office	Premiums	Claims	Expenses
British Dominions:—	£ 638,814	£ 643,131	£ 90,822
	1929 481,194	474,806	76,590
	1930 413,794	368,709	64,759

MISCELLANEOUS INSURANCE

The accident and miscellaneous premium income in 1934 showed considerable expansion. This resulted in the large addition, in respect of the 22 companies to which the following table refers, of £1,255,000 in the reserve for unexpired risk. In 1931 and 1932, due to the fall in premium income, there were large releases from this reserve; while in 1933 there was only an insignificant increase. The elaborate American official statistics—which presumably best reflect operating conditions there—show more favourable results last year for the British offices than are brought out by the British method of dealing with unexpired risk reserve, due in some part to the increase in rates which has taken place in the last year or two. Experience in workmen's compensation insurance in U.S.A., although still unsatisfactory, was much improved;

on the other hand, motor insurance experience was definitely bad and much worse than in the previous year. It is understood that efforts are being made to obtain the sanction of the appropriate State authorities to a modification in motor insurance rates in accordance with the greater liabilities incurred under present-day conditions. Among the results of individual offices, the Alliance and North British and Mercantile always record a satisfactory profit in this class of business, and last year was no exception. The largest loss, viz.: £290,000, equal to 4.5 per cent. of the premium income, was incurred by the Employers' Liability and arose in the main from its large motor business in U.S.A. (but for details of this loss see the *Economist*, April 6, 1935, page 794).

In such a wide category of business as Accident and Miscellaneous insurance, the experiences of the various companies are bound to differ greatly; for the distribution of each company's total business as between accident, motor, workmen's compensation, etc., will differ from that of any other company.

In the accident section, claims in 1934 represented a

smaller proportion of premium income than in the preceding three years, and expenses again declined as a proportion of that income. The fall in profits in miscellaneous insurance is not as significant as the rise in premiums and in the reserve for unexpired risks. These constitute a technical improvement in the finances of miscellaneous insurance.

BRITISH BANKING TRENDS

THREE months ago, when discussing the June 30th statements of accounts of the leading British banks, we called attention to the increase in the banks' cash during the preceding twelve months, and suggested that the growth in the joint-stock banks' cash and deposits might conceivably arise from a limited inflation of credit, acquiesced in, if not predetermined by, the Government. The truth of this suggestion may be tested by a detailed examination of British banking statistics, which we have carried back to March, 1933, or to approximately the beginning of the trade recovery.

It is best to consider the relevant statistics in their logical order. The Bank of England's gold stocks, fiduciary note issue and note circulation between them determine the size of the banking department's reserve, which equals the sum of the first two items minus the third. The total of deposits in the banking department varies with the size of the department's reserve plus earning assets. But total deposits are divided into public, bankers' and other deposits. Neglecting minor and less variable items, it is sufficiently correct to say that bankers' deposits are governed mainly by the combined size of the Reserve plus Government securities held in the banking department less public deposits. The joint-stock banks' cash is obviously dependent upon bankers' deposits, and equally obviously is a main determinant of the size of the joint-stock banks' deposits and earning assets.

BANK OF ENGLAND

Date (End of month)	Gold	Note Circulation	Reserve	Govt. Securities	Public Deposits	Bankers' Deposits
1933—March.....	£mn. 171.8	£mn. 367.1	£mn. 80.6	£mn. 57.7	£mn. 21.2	£mn. 92.8
June	189.4	375.1	75.5	75.4	14.1	105.1
September	190.4	370.8	81.0	73.8	16.5	97.3
December	190.7	392.0	59.7	88.0	22.2	101.2
1934—March.....	191.1	378.8	73.4	77.1	17.5	94.5
June	191.5	381.7	70.5	81.0	17.6	96.3
September	191.9	377.0	75.5	81.6	37.9	82.0
December	192.3	405.2	47.6	87.5	9.9	89.1
1935—March.....	192.5	381.4	71.7	87.6	20.1	96.6
June	192.7	396.9	56.5	96.2	16.2	102.4
September	192.7	400.8	52.4	88.7	8.9	100.8
October	193.4	399.6	54.5	81.3	9.4	96.9
November	193.6	398.2	56.2	83.2	19.5	87.2

Owing to any lack of serious change in the Bank's gold or the fiduciary note issue, the size of the banking department's Reserve has been governed entirely by the size of the note circulation, that is by the demand for currency by the joint-stock and other banks and by the public. As the note circulation has been steadily expanding under the influence of the trade revival, there has been an equivalent contraction in the Reserve, which first became noticeable in early 1934 and which began to accelerate in early 1935.

Had nothing happened to counteract this drop in the Reserve, bankers' deposits must also have fallen. This would have caused a contraction in bank "cash," with a consequent tightening of credit just at the time when it was essential to continue debt conversion and to ensure the continuance of the trade revival. The Bank has therefore taken steps to neutralise the contraction in its Reserve by acquiring additional Government securities. The inverse correlation between fluctuations in the Reserve and in Government securities is, of course, by no means exact, but over the whole period from March, 1933, to September, 1935, the Reserve fell by £24.4 millions, while Government securities were increased by £25.5 millions.

The result is that total deposits at the Bank of England have tended to remain constant. The composition of the total, however, has changed considerably, for unfortunately there have been wide, if unavoidable, fluctuations in public deposits. Payments and repayments arising out of conversion operations—especially when these include loan issues or redemptions in cash—discrepancies between Treasury bill issues and

maturities, the enormous size of the post-war Budget, and the operation of the Exchange Equalisation Account easily account for large and sudden changes in the cash balances of public departments, and at times public deposits have risen to high figures. This has introduced a disturbing influence into our credit mechanism, and, in fact, changes in the size of bankers' deposits have been caused by fluctuations in public deposits even more than by changes in the Reserve and earning assets of the banking department.

Taking a broad survey, bankers' deposits expanded slowly during the latter part of 1933. They fell again in the middle of 1934, but have since steadily recovered until only a few weeks ago, when once more they began to shrink. Bank cash naturally exhibits much the same tendency. There was a slow increase until early 1934, followed by a drop which lasted until August of that year, followed in turn by a steady expansion. This persisted until August last, when a slight contraction (in sympathy with bankers' deposits) became noticeable.

Coming now to the joint-stock banks, their position is summarised in the following table:—

TEN CLEARING BANKS

Date (monthly average)	Cash	Call and Short Loans	Discounts	Invest- ments	Advances	Deposits
1933—March.....	£mn. 207	£mn. 109	£mn. 348	£mn. 510	£mn. 766	£mn. 1,925
June	213	101	352	544	775	1,978
September	215	91	355	563	750	1,957
December	213	119	311	565	735	1,941
1934—March.....	219	120	202	547	753	1,831
June	199	141	228	549	757	1,870
September	207	137	213	563	754	1,858
December	216	151	255	594	753	1,923
1935—March.....	214	133	207	614	767	1,971
June	217	143	244	624	775	2,003
September	219	145	274	615	775	2,019
October	213	149	287	615	765	2,013
November	208	147	299	618	763	2,024

Bank deposits equal roughly the sum of the banks' cash and earning assets. The banks also make a practice of preserving an approximately constant ratio between their cash and deposits, so that the size of bank deposits is also governed by the size of bank cash. Changes in the latter have already been discussed, but before considering the trend of bank deposits, it is easiest to consider the banks' chief earning assets.

Call and short loans were relatively low in 1933, but increased in 1934 and again in 1935. The explanation of these changes probably lies in the efforts made by the joint-stock banks to raise discount rates and to make it more remunerative for bill-brokers to hold bills against loans. The first of these was made in October, 1933, and while this broke down a year later, a more successful effort was made in February, 1935. Meanwhile, in November, 1934, the cost of call and short loans against eligible bills was reduced from 1 to $\frac{1}{2}$ per cent.

As regards discounts, the joint-stock banks have been largely at the mercy of the Treasury, for Treasury bills form the greater proportion of bills in the London market. Apart from the seasonal redemption of Treasury bills in the spring of each year, from the end of 1932 until April, 1935, there was a steady reduction in the total of tender issues of Treasury bills, the net fall being from £666 to £360 millions. Budget surpluses, debt funding, and frequent sales of *devisen* and acquisition of Treasury bills by the Exchange Equalisation Account in support of sterling explain this decline. Last April, however, the movement was abruptly reversed, and the tender issue has since risen to £545 millions. The main cause is undoubtedly the Exchange Account's heavy purchases of gold and *devisen* in support of the franc, which proved necessary until almost the end of August, for these have entailed equivalent reductions in the Account's holdings of Treasury bills.

The clearing banks' discounts have moved in much the same way. Last April they stood as low as £199

* Includes Money at Call and Short Notice.

millions, but by September they had risen to £299 millions, or to the highest level since December, 1933.

Advances continued to fall until January, 1934. That was only natural, as one of the early consequences of the trade revival was the liquidation of bank loans of long standing which had been frozen by the trade depression. If, however, the size of total bank advances failed to expand, their quality became greatly improved, as frozen loans were repaid and new, sound loans were granted. An immediate consequence was that all the banks were able to reduce their allocations to bad and doubtful debts, and in many cases were able to bring previous allocations back into profit and loss.

In the spring of 1934, there was a seasonal increase in advances. Income-tax demands upon bank customers may be one explanation, but by then the building boom was beginning, and advances to builders are always heaviest at the beginning of the fine weather months. The rate of increase slackened off in June, but there was a similar seasonal spurt in the spring of 1935. The net result of these movements is that last August advances were practically the same as at the beginning of the revival in March, 1933. The real change has been the improvement in character.

The final item among the banks' chief earning assets is that of investments. Except for a slight check in the winter of 1933-34 these have been steadily rising, mainly because the banks had no other way of employing a steadily increasing proportion of these funds. Whereas in March, 1933, they were only £510 millions, or 26.5 per cent. of deposits, by September, 1935, they were £618 millions, or 30.5 per cent. of deposits. It should be added that the banks never write up the book value of their securities, so that much of the steady advance in gilt-edged prices has gone to swell the banks' inner reserves. The recent setback in prices can easily be made good out of these inner reserves.

The widest movement over the whole period has been in discounts, which dropped, from £348 to £202 millions and then rose to £299 millions. It is not therefore sur-

prising that deposits at the joint-stock banks followed much the same curve. From £1,925 millions in March, 1933, they fell to £1,831 millions a year later, and have since risen to a record figure of £2,024 millions. The latter rise is as much due to the expansion in investments as to the recovery in discounts, but even so the latest ratio of cash to deposits is 10.2 per cent., or not much below the ratio of 10.7 per cent. for March, 1932.

During the past year there has been some change in the character of bank deposits. In 1932, current accounts represented 49.5 per cent. of total deposits, and as recently as August last year this ratio was no higher than 51.9 per cent. Since then there has been a more rapid increase, and in August last the current account ratio was as high as 54.3 per cent. This is higher than any annual average from 1930 onwards. The low level of deposit interest rates may be one explanation, but it is equally likely that the trade revival is adding to the demand for liquid funds.

To sum up recent changes, the fundamental fact is that definite steps have been taken by the authorities to maintain and even to augment the supply of bank cash. Changes in external pressure are taken care of by the Exchange Equalisation Account, and the expansion in the note circulation and the depletion of the Bank's Reserve has been neutralised. The main gap in our technique may be the absence of any means of minimising the effect of fluctuations in public deposits. On the other hand, an ample supply of bank cash is not in itself sufficient to maintain bank deposits, for experience has shown that it is also necessary to avoid any heavy contraction in tender issues of Treasury bills. When such a contraction occurred in 1934, the authorities were taking away with one hand what they were trying to give with the other hand; and one not wholly desirable consequence was that the banks were driven into the gilt-edged market. Still, taking a broad survey, we have successfully solved the problem of combining easy credit conditions at home with the control of an unstabilised pound abroad.

THE GOLD BLOC UNDER PRESSURE.

(BY A CORRESPONDENT)

The year 1935 was a trying one for the gold bloc. The successive storms which broke out on the foreign exchange market were reviewed in the *Economist* of July 6; weakness of sterling in February and March, devaluation of the belga on April 2nd, followed by practically uninterrupted attacks on the gold currencies, Switzerland in April, Holland in April and May, France in May and June, Switzerland again in June, and since the publication of the above-mentioned survey two new attacks on the guilder created difficulties for the Colijn Government in July and September.

It has often been contended in the gold countries that "speculation" was responsible for the monetary difficulties experienced by them. Speculation has played its part, but by far the most important factor of weakness for their currencies was the fits and starts of capital exports. Not only did the foreigners withdraw the small balances they may have kept in the local banks, but the nationals of the gold countries bought foreign currencies and sold their investments in national currency to purchase investment securities abroad. The net result was that the total gold reserves of France, Holland and Switzerland, which stood around 100,000 million French francs at the beginning of the year, now stand around 85,000 millions. Holland and Switzerland have lost roughly 30 per cent. of their gold reserves and France about 13 per cent.

The corollary of these gold losses was heavy withdrawals at the banks as shown in the table on page 8. Figures concerning the Dutch banks are not available, but withdrawals are said to have been as heavy there as in the other gold countries. The first reactions of the

commercial banks were therefore to draw on their balances on the Central Bank and to call for fresh credit. The central banks tried to check the rising tide by raising their discount rates—not for the purpose of attracting foreign funds, which would have been impossible—but simply to bring their rates into line with market rates and also as a gesture, as a kind of public statement that they were prepared to fight. Switzerland managed to keep its rate as low as 2½ per cent., but France and Holland went as high as 6 per cent.

The efforts of the central banks tending to contract credit and reduce the amount of national currency on the market had different results in the three countries. Holland certainly obtained positive results in this direction. The note circulation has decreased, and after each attack the loans and discounts granted by the Central Bank quickly returned to normal levels. The public's balances with the Netherland Bank, however, have not been replenished, and the traditionally conservative liquidity of the commercial banks cannot but have been reduced proportionately, although it is said not to have been seriously impaired.

Switzerland had somewhat the same experience. The bank note circulation and the deposits with the Central Bank decreased moderately. It should be mentioned in this connection that the Swiss National Bank, anxious to secure a large gold reserve, requested in April (and, probably in August also) the Swiss banks to deliver to it part of the gold bullion which they held for their own account, thus replenishing in part both its own metallic cover and the banks' balances. The Swiss problem is, however, more than a simple transfer problem. The

large amount of frozen credits (both in Central Europe and within Switzerland), which the banks have been carrying for years, is not liquidating itself quickly, and heavy withdrawals at the banks are therefore a direct threat to their very existence. The liberal legislation concerning bank failures which was adopted early in the year found a ready application on June 11th, when a few days after the plebiscite a two-year moratorium had to be granted to the Banque Commerciale de Bâle.

The Dutch and Swiss Central Banks thus simply gave temporary assistance to a narrow market. The Bank of France, on the contrary, may be said to have itself financed in part the outflow of gold. The deposits with the Bank of France were reduced seriously, but at the same time the note circulation remained steady and new credits were liberally granted in the form of loans and discounts. The reason for this is that the storm broke out in France at the very time when the Treasury was in dire need of money, so that the Bank had to accept under the pressure of circumstances what it had refused to M. Flandin in January, namely the rediscounting of Treasury bills. As the money supply of the market remains scarce, the Governor of the Bank declared on August 14th, i.e. when the "cheap money policy" was started anew after the reduction of the discount rate to 3 per cent., that such rediscounts were to be considered a permanent policy of the Bank of France. This is certainly the most important step taken in France for the last few years, not only because of the guarantees it provides for both Government and banks, but also because of its inherent dangers. The bill portfolio of the Bank of France is now about 3,000 million francs higher than a year ago, and the largest part of this sum presumably consists of Treasury bills. The commercial banks' balances with the Central Bank have ceased to be on an abnormally high level (the smaller banks and the provincial banks have drawn particularly heavily on them) but the fact that Treasury bills are eligible leaves the

general liquidity of the banks unimpaired after the crisis.

When we look back at this difficult period, two facts stand out. In the first place, the three gold countries under review have—so far as currency and banking are concerned—stood the test. They are still on gold and they have shown that a sound technical position is not as negligible an element as was often contended. In the second place, practically none of the lost capital has returned. This is a serious warning. When one of the Central Banks announces an increase in its gold reserve, it may mean that the commercial banks have delivered metal which they held before (as was the case in Switzerland) and this does not amount to an improvement in the real position of the country. Alternatively, one member of the bloc may be defending its own currency by sending gold to another member. This, in turn, does not amount to an improvement in the position of the gold bloc at large, nor does it mean that money is flowing back to the country in question except during the last days, when the pegging of the pound sterling brought about sales of gold by the British Equalisation Fund. The reluctance of capital to return is due in part to the attraction of the New York Stock Market, but is mainly due to the uncertainty regarding the gold currencies.

In fact, what has happened during the last few months may be termed a continuous deterioration of the money markets of the gold bloc countries. The benefits which theoretically accrue to the banking community from a stable monetary standard should be abundant and cheap money at short and long term, and an easy investment market. But the flight of capital has now been carried to such an extent in the countries which remained faithful to the gold standard that this no longer holds true for them. Fixed income securities have declined seriously in Zürich and Amsterdam and have recovered to an insufficient extent in Paris. Subscription to Treasury bills

has become difficult even in Holland. A "cheap money policy" under such circumstances and when the Central Bank must be prepared to restrict credit in order to check speculation, is unthinkable. The liquidity of the commercial banks may be preserved, thanks to a liberal policy of the Central Bank, but the absence of borrowers from the business world makes it impossible to put money in circulation except through the channel of the budgetary deficits. To-day the question can be raised whether

France, who could lose 10,000 million francs of gold in May and June without major trouble, could again sustain such a drain on its reserves. Until the end of 1933 there was undoubtedly much injustice in the Anglo-Saxon contention that the gold bloc was a factor of monetary instability. Since then, however, the depression has wrought such deep evils in the gold bloc countries that they constitute, to say the least, a factor of serious uncertainty.

AMERICAN BANKING

(BY A CORRESPONDENT)

THE account of American banking for the period under review falls naturally under three topics—changes represented by the banking data, changes in legislation, and a discussion of such underlying trends as seem to be influencing the present and its projection into the future.

As usual, the principal changes in the Reserve Bank statements derive from the precious metals. Between March and August the monetary gold stock increased by above \$600 millions and in the year ended August last by almost exactly \$1,200 millions, that is, at the rate of about \$100 millions a month, of which about 90 per cent. represented imports. As the statements show, this gold was immediately attributed to the Reserve Banks under the item of "gold certificates or due from the United States Treasury"; and, in addition, in the past five months, some \$300 millions of "gold certificates" were created against the profit on the revaluation of existing gold stocks made in February, 1934. Also, during the year ended July, 1935, silver certificates rose from \$498 millions to \$833 millions, the issues being principally of the \$5 and \$10 denominations. From this it will be seen that since the nationalisation of silver in

August, 1934, the issue of silver certificates has considerably exceeded \$300 millions, a sum equal to about one-fourth of the increase in monetary gold in the same time. Currency held by the public has risen during the past year from \$4,896 millions to \$5,066 millions. This is partly due to more active trade, but may also be due to hoarding.

The chief changes in the position of the Treasury and Federal Reserve Banks are summarised in the following table:—

RESERVE BANKS AND TREASURY ITEMS
(\$000,000)

	Aug. 29, 1934	Mar. 27, 1935	Aug. 28, 1935
Monetary gold stock	7,981	8,563	9,197
Gold certificates in Reserve Banks	4,979	5,567	6,482
Money in circulation	5,345	5,436	5,573
Bills discounted	21	8	9
Bills bought	5	5	5
U.S. securities	2,432	2,430	2,430
Member bank reserves	4,127	4,285	5,346
U.S. Treasury—General account	30	393	50
Federal Reserve notes	3,103	3,131	3,352

To interpret this table, it must be remembered that the control of the credit base lies entirely in the hands of the Treasury, with the Reserve Banks but the passive agents of a policy whose directive is outside their jurisdiction. The consequence of these developments was an increase, from March to August, of more than \$1,000 millions in the already plethoric cash reserves of the member banks; and this was mainly due to the increase in the nation's monetary gold stock.

Turning now to the data of the Reporting Member Banks, their condition is shown in the following table:—

REPORTING MEMBER BANK ITEMS
(\$000,000)

	Aug. 29, 1934	Mar. 27, 1935	Aug. 28, 1935
Total loans and investments	17,708	18,463	18,533
Loans on securities	3,247	3,028	2,899
All other loans	4,555	4,581	4,446
U.S. securities	6,627	7,281	7,310
U.S. guaranteed securities	...	681	927
Other securities	3,279	2,892	2,951
Reserve with Federal Reserve banks	3,132	3,174	4,129
Net demand deposits	12,926	14,150	15,952
Time deposits	4,510	4,466	4,387
Government deposits	1,203	1,016	518

Net demand deposits increased in the past five months by almost \$2,000 millions, while the increase in the past year exceeds \$3,000 millions. Notwithstanding the steady climb in deposits, total loans and investments during the past five months hardly rose at all, as large purchases of (or exchange for) Government-guaranteed securities and small purchases of Government and other securities scarcely more than offset the liquidation of collateral and other loans. In this respect the March-August period is in contrast with the preceding August-March period, when the banks were heavy buyers of the Government issues. The reason is, primarily, that from March to August, 1935, the public debt showed little increase, and the Government security holdings of the member banks are a direct function of the increase in the public debt.

This extraordinary increase in deposits has also created a new problem for the "commercial" banks. While no ratio of capital funds to either deposit liabilities or earning assets has ever been prescribed, banks habitually adhere to certain standards. The capital funds of banks were depleted to some extent by the losses of the depression, and while some of these losses have since been recovered, the ratio of bank capital funds to deposit liabilities (now at new peak levels) is much lower than before. The problem is further complicated by the R.F.C. preferred stock and debentures, which a large proportion of the banks accepted willingly or other-

wise; and which, while technically a part of the banks' capital funds, are actually on a different status.

Although no interest is paid on demand deposits, the extremely low rates prevailing on the only available type of bank asset has made it increasingly difficult for banks to maintain earnings, particularly in the case of banks with large obligations to the R.F.C. As was mentioned above, there have been substantial recoveries of loans written off during the depression; and the advance in the bond market has provided the banks with capital gains, realised or unrealised. But quite apart from these windfalls, the frequent reduction of bank dividends is evidence that banks are finding it extremely difficult to make earnings on their equities.

Loans have declined substantially since both March last and August, 1934. The decline for the year exceeds \$400 millions and is, of course, a reflection of the increase in deposits. The community is abundantly supplied with deposit credits derived from the Federal deficit, or from the metallic imports, without the necessity of resorting to bank loans on its own account; nevertheless, the static loan figures probably mask a considerable degree of lending activity, for, as old loans have been paid off, strenuous efforts have been made to replace them. This has led banks into various forms of instalment financing and small personal loans, such as the "renovising loans"; and so considerable has been this extension of bank activity that it constitutes a rather serious invasion of a field formerly occupied by finance companies. The increase in residential building has undoubtedly provided a substantial demand for bank loans, although the statistics do not reflect it.

Even so there has been during recent years a definite trend away from commercial banking. To illustrate this point, the following table traces developments over a decade:—

REPORTING MEMBER BANK ASSETS
(\$000,000)

	Aug. 26, 1925	Aug. 28, 1929	Aug. 31, 1932†	Aug. 28, 1935†

E.C.2

Between 1925 and 1929 there was almost no net increase in investments (the public debt was being reduced in that interval), only a small increase in other loans, and an increase of about 50 per cent. in collateral loans. There was almost no rise in net demand deposits, but an increase in time deposits, so that only a nominal increase in reserves was required; these were maintained by heavy borrowings at the Reserve Banks.

In the years after 1929 total loans and investments were contracted, but are now restored to the level of 1925, although only 91 cities are now included in the tabulation, compared with 101 formerly. Net demand deposits are much higher than in 1925 or 1929. Loans of both kinds are only about half the level of 1925, and "other securities" are at the same level; but Government securities have more than trebled. In the last three years, from the summer of 1932, it will be noted that net demand deposits have risen by 50 per cent., while time deposits have fallen. Cash reserves have more than doubled. Both classes of loans have fallen, each by about \$1,000 millions; holdings of "other securities" are still unchanged—the only invariable item; but holdings of Governments have doubled. This trend is illustrated by the following table of percentage distribution of assets:—

	REPORTING MEMBER BANKS PERCENTAGE DISTRIBUTION OF ASSETS				
	Aug. 26, 1925	Aug. 28, 1929	Aug. 31, 1932	Aug. 28, 1935	
Total loans and investments	100	100	100	100	
Loans on securities	28	34	24	15.5	
Other loans	43	42	32	24	
U.S. securities	13.5	12	26	44.5	
Other securities	15.5	12	17.5	16	
Ratio reserves to earning assets	8.7	7.4	9.8	22	

In 1925, about 70 per cent. of these bank assets consisted of loans, and lending could be considered the principal activity of a commercial bank; loans now constitute but 40 per cent., and the major function is investing. The relative diminution of the commercial function is, as the tabulation shows, continuous over the decade. The main function of the banking system of the United States is to-day the financing of the Federal deficit.

The Banking Act of 1935 has been too thoroughly discussed to require restatement. Substantially, one may say that the original draft proposed material modifications of the functioning mechanism of the Reserve System. In its final form it virtually perpetuated the *status quo*. The greatest single innovation was the removal from the board of the two *ex officio* members—the Secretary of the Treasury and the Comptroller of the Currency. One other feature requires brief reference. The Board of Governors is continued in its power to raise member bank reserve requirements, but is limited to the doubling of the present requirements. This rather curious limitation was apparently inserted to prevent the sudden inauguration of the 100 per cent. reserve requirement, which had some following and which could, if imposed by mere administrative order, have revolutionised our entire banking structure.

The Act, however, is of secondary importance. The charter of our monetary policy is not to be found in the Reserve Act, but in the Thomas Amendment of 1933 and its two derivatives, the Gold Reserve Act, of January, 1934, and the Silver Purchase Act of June, 1934. So long as these Acts remain in force, and so long as the policy of Treasury deficits continues, the functions of the Board of Governors of the Federal Reserve System will be limited to matters of administrative routine.

BANKING IN SOUTH AMERICA

(BY A CORRESPONDENT)

BANKING conditions in Latin America are in the main naturally dependent upon the overseas trade movement, and although in several of the Republics distinct recovery has taken place in this respect during the past year, activity is still much below the level considered normal in the years preceding 1929. During the past twelve months there have been many variations in the exchange control regulations existing in most of the Republics, but, generally speaking, their restrictive effect is still severely felt, especially in connection with the free movement of funds. Through the operation of compensation trade treaties and similar arrangements of a reciprocal nature—phenomena brought about by the international competition for such trade as is passing, as well as by the contemporary wave of economic nationalism—much of the overseas trade of the Continent is now "canalised," while in certain cases the value of exports is largely retained abroad for the liquidation of outstanding commercial debts. Normally, a large part of the proceeds of many important export lines remains abroad, so that it is now more than ever the case that the recorded export surpluses of the States concerned do not present an accurate index to the balance of payments or of the available reservoirs of foreign exchange.

Comparing the export figures of the Republics for 1935 to date with those for last year, improvement is shown in most cases, but there is evidence of a persistent underlying demand for the replenishment of stocks of imported goods, and consequently an expansion in the value of imports tends to a great extent to offset that of exports. The flow of imports is, however, officially controlled in outstanding cases—such as Argentina, Brazil and Chile—through systems of permits, the object being to protect the exchange position and being not unrelated to the service of foreign bonded debts where this is still wholly or partly being met or where there are aspirations to renew suspended services.

In Argentina the economic situation has steadily strengthened during the past two years, largely owing to the effectiveness of the policy of consolidation followed in respect to the national finances and public debt. Not only have internal and external debts been funded to lower interest bases, and foreign debt to some extent repatriated, but the new exchange regime set up at the end of 1933, together with the machinery of the Grain Regulating Board for the assurance of minimum prices to grain producers, has been successful in practice. It has, indeed, resulted in the accumulation of large foreign exchange profits and foreign currency reserves—now transferred to the new Central Bank, which began to function early in June last. The Central Bank is in a strong position, having taken over at the same time the gold reserves of the Conversion Office, valued on the new basis of the equivalent of 25 paper pesos per £ gold. The note circulation of the Republic is now in the sole charge of the Central Bank, which on June 30th last held gold at home to an amount of 1,224.4 million pesos and gold and foreign currencies abroad totalling 122.6 million pesos, these two items together being equivalent to 72.17 per cent. of the note issue and sight liabilities combined, whereas the minimum reserve under the Organic Law of the Central Bank is 25 per cent. The clause in the Law providing for note convertibility, however, is expressly suspended, and it is clear that Argentina will not legally stabilise her currency until the leading world currencies are also stabilised. Shares in the Central Bank are held by the commercial banks and the Government—for whom the new Institution will act as financial agent—while a general supervision of the banking industry will be exercised.

The Argentine export figures for the first seven months of 1935 make a distinctly favourable showing compared with those in the corresponding period of last year, but the tendency for the growth of imports to outstrip the

rise in exports already referred to is demonstrated in the returns for the month of July, for which period the surplus of exports was only 9.4 million pesos, in comparison with 36.5 million pesos in June, 1935, and 24 million pesos in July, 1934. The cereal crop outlook is distinctly less favourable than a year ago, owing to the prolonged drought experienced in the Republic during the growing season, and it is known definitely that the area under cultivation is heavily reduced. On the other hand, should the enhanced world demand for wheat continue, and the present upward movement in cereal prices be sustained, the anticipated crop shortage may be offset at least in part by the higher level of prices.

Under the present system of foreign exchange control, the Government is able to regulate the import movement and also to intervene in both the official and "free" exchange markets. Consequently, and especially in view of the fact that the new Central Bank is now functioning, it is to be presumed that whatever may be the crop marketing position in the coming exporting season, it will be possible to obviate violent movements in the exchange such as were considered inevitable in years past in times of crop shortage and consequent restricted exports.

The close control which the Argentine Government exerts over the volume, nature and origin of imports is shown by the fact that importers wishing to obtain exchange through the official market are called upon to provide themselves with a prior exchange permit—to be obtained before placing orders abroad, or at latest before arrival of the goods. The British export trade to Argentina is working smoothly, inasmuch as prior exchange permits are granted preferentially in respect of British goods imported into the Republic—in accordance with the terms of the Roca Agreement—and payment is obtained regularly at the more favourable official rate. Goods may be imported into Argentina without a prior permit, but in such cases a special exchange surcharge

is imposed, bringing the cost to the importer up to 20 per cent. above the rates charged in the official exchange market. This surcharge has operated largely to stem the flood of cheap Japanese and other competitive goods, and the Roca Agreement is maintaining British supremacy in the Argentine import markets. In view of the reciprocal nature of this Agreement, it is hoped and believed that on its expiration next year it will be possible to extend the terms on a basis which, while providing for the legitimate claims of the British Dominions, will ensure an equitable proportion of the British market for Argentine products, particularly meat.

The Chilean export trade movement continues to compare favourably with that of last year, but the remarks already made regarding the heavy potential demand for imports are particularly applicable to Chile. In the first six months of 1935 exports were 270 million pesos of 6d. (gold), against 252 million pesos in the corresponding period of 1934, while imports were as much as 140.8 million pesos, against 88 million pesos. Consequently, the export surplus was only 129.2 million pesos, against 164 million pesos. There appears reason to believe that the internal recovery is approaching the limit set by present circumstances. This appears to be borne out by official banking statistics, which show that the advances of the commercial banks increased in the first five months of 1935 by 147.4 million pesos.

It is believed that the greater part of the "frozen" commercial debts in Chile have now been liquidated, but the extremely heavy increase in imports—mainly due to purchases of machinery and raw materials for the rapidly-expanding national industries—taken in conjunction with the effects of the various compensation treaties in force with many European countries, has recently caused a shortage of foreign exchange, which, although probably temporary, is at present affecting remittances. The general outlook in Chile appears comparatively

favourable, especially in view of the recent conclusion of a fresh international marketing agreement between the Chilean nitrate of soda producers and the synthetic nitrate interests, which extends over a three-year period and gives Chile an export quota somewhat above her actual shipments of nitrate for the twelve months ended June last.

The Brazilian situation is difficult and obscure, mainly owing to the very uncertain exchange situation, which is complicated by the frequent issue of new regulations and verbal instructions relative to the exchange control. At a recent convention of the coffee-growing States held in Rio de Janeiro, marketing arrangements for the current coffee year were elaborated, and it remains to be seen to what extent these prove of assistance to the industry. There appears every reason to believe that efforts will not be relaxed in the future to increase the importance of cotton as a secondary export from the Republic. A mass of frozen commercial debts has yet to be reimbursed to foreign creditors, but efforts are being made to deal with these, as, for instance, by the Anglo-Brazilian Payments Agreement of March last. The latest Brazilian foreign trade returns show a somewhat better tendency, and upon a continuation of this movement depends the rehabilitation of exchange markets and business conditions generally.

BANKING IN AUSTRALIA AND NEW ZEALAND

(BY A CORRESPONDENT)

THE export season 1935-36, which is just commencing in Australia and New Zealand, has opened encouragingly. It is too early yet to judge the prospects for the whole season, but the first wool sales in Australia have brought higher prices, and with wool the price of other pastoral products has risen. Wheat, butter, cheese and the principal metal exports are also in better demand. The following summary table shows the rising tendency of export prices clearly in Australia. The tendency is not yet reflected in the New Zealand index, mainly because of the lag in wool prices there, but all other main export groups have risen.

EXPORT PRICES IN AUSTRALIA AND NEW ZEALAND
(1927=100)

	Australia	New Zealand
1934—January	84.1	72.3
May	72.0	70.5
July	64.6	72.5
1935—January	59.5	68.0
May	65.4	67.3
July	67.7	...

This more favourable prospect for the immediate future is reflected in the indices of share values for both Dominions. The New Zealand index rose steadily throughout 1934, and the rise has continued in 1935. The Australian index, on the other hand, fell in the first half of 1934, but has since more than recovered this loss.

Peruvian foreign trade activity is maintained, and there is no foreign exchange control, remittances being made without any restriction. The country, however, is largely dependent upon the course of cotton and sugar prices in the consuming markets. Exchange control has also been obviated in the Central American Republics of Salvador, Guatemala and Venezuela, but as the principal export of these countries, as well as Colombia and Nicaragua, is coffee, the present position in the world coffee markets, accentuated by European quotas, results in varying degrees of exchange and trading difficulties in the Central American markets.

With the partial economic recovery which has undoubtedly taken place, the political situation in South America appears to have strengthened, while welcome factors are the amicable relations restored between Peru and Colombia and the cessation of the unfortunate dispute in the Chaco between Bolivia and Paraguay. From the banking point of view, however, it is regrettable to observe the promotion in some Republics of social legislation of an advanced character, as well as the intensification of the tendency to apply legislative measures designed to assist debtors at the expense of creditors, in some instances on a basis which cannot be regarded as otherwise than inequitable.

SHARE PRICES IN AUSTRALIA AND NEW ZEALAND[§]
(1926=100)

	Australia	New Zealand
1932—December	74.4	68.3
1934—January	95.1	92.2
July	90.4	93.5
December	100.4	101.7
1935—June	102.1	102.8 (May)

The check to recovery in Australia indicated by the share index was, of course, due largely to the sharp fall in wool prices in the season 1934-35. The banking and trade statistics available to the middle of 1935 show clearly the influence of this factor.

AUSTRALIAN IMPORTS AND EXPORTS
(£ stg. (millions))

	Exports	Imports	Excess
July, 1933—May, 1934	87.1	53.8	+33.3
July, 1934—May, 1935	77.5	67.6	+10.0

As will be seen from this summary table, the marked fall in the active export balance of commodity trade was caused both by a decline in export values and by an increase in import values. This is a familiar phenomenon in distant countries. Imports ordered at a time of increasing prosperity often do not reach their destination until export prices have fallen. In this case there was expansion of export values because of the very high wool prices ruling in 1933-34; but the imports which, a year later, reflected the general expectations of greater

prosperity coincided with a decline in wool prices of over 30 per cent. in the 1934-35 season. As was pointed out in the columns of the *Economist* at the time, there was some tendency to expansion of local expenditure also, and when the necessity came early in 1934 for checking this expenditure there was some talk of the exchange rate being depreciated again. Fortunately the rates have been held steady; but the passing strain, both domestic and external, is clearly reflected in the banking returns:—

AUSTRALIAN BANK DEPOSITS
£A. (millions)

Year	Quarter	Interest Bearing	Non-Interest Bearing	Total	Percentage of Interest Bearing to Total
1934	I	189	102	291	65
	II	196	101	296	66
	III	193	98	290	66
	IV	189	103	292	65
1935	I	187	106	293	64
	II	185	107	292	63

It is clear from these deposit figures that, despite the strain on the balance of payments, credit has continued to be liberated for current use, so that the total of deposits has been well maintained. Advances have increased both absolutely and relatively to deposits; but the cash reserve ratios have declined, the balances of the commercial banks with the Commonwealth Bank having fallen substantially:—

AUSTRALIAN BANK ADVANCES
£A. (millions)

Year	Quarter	Advances	Government Securities	Total	Percentage of Advances to Total Deposits
1934	I	235	52	287	99
	II	237	52	289	97
	III	242	51	293	101
	IV	248	50	299	102
1935	I	249	53	303	103

CASH RESERVES OF AUSTRALIAN BANKS
£A. (millions)

Year	Quarter	Cash with Bullion and Notes	Cash with Commonwealth Bank	Total Cash Reserves	Ratio to Total Deposits
1934	I	16.9	30.9	47.8	16.41
	II	14.9	38.4	53.3	17.95
	III	15.1	36.6	51.7	17.84
	IV	15.7	31.4	47.1	16.13
1935	I	15.7	26.1	41.8	14.25
	II	14.8	23.7	38.5	13.20

The London funds of the banks also ran down fairly considerably, as the next table will show:—

Year	Quarter	Australian Trading Banks (£stg. (millions))	Commonwealth Bank (£stg. (millions))	Total (£stg. (millions))
1934	I	28.6	17.1	45.7
	II	26.4	24.7	51.1
	III	16.2	23.2	39.4
	IV	15.7	20.2	35.9
1935	I	19.6	15.4	35.1
	II	19.4	19.0	38.4

There is always a seasonal movement, swelling London funds as the proceeds of the export season accumulate in the first half of the year and draining them as imports are paid for. In 1935 the accumulation was markedly less than in the previous year, and it is obvious that the Commonwealth Bank's funds were drawn upon rather heavily.

Despite these symptoms of strain, the banking resources of the Commonwealth were adequate to provide for increasing credit expansion. Bond yields rose rather sharply from the low point in October, 1934 (2 1/8 per cent. for bonds maturing up to ten years ahead) to 4 1/2 per cent. in November, 1934, and rates of interest are lower than at any time during the last forty years. The rate on advances is 5 per cent., and on deposits the trading banks pay from 1 1/2 per cent. for three months up to 2 1/2 per cent. for twenty-four months. In these circumstances it is not surprising to find business active, especially in the building industry. The value of building

Security with Economy

The utmost safety is assured for valuables and documents placed in the Safe Deposit at the Head Office of the Midland Bank. Private persons and accredited officers of companies, corporations, firms and associations may become renters and derive the following advantages of this service:

SECURITY: A specially constructed strong room, protected by a circular door and frame weighing 35 tons, contains many thousands of private safes fitted with deed boxes. Each renter is supplied with the only two keys of his safe, to which he thus has sole access as often as desired.

PRIVACY: Renters may examine the contents of their boxes, deal with correspondence and conduct interviews in private rooms equipped with telephone and stationery.

LOW FEES: The inclusive annual fee is 10s., 20s., 30s., 50s. or 60s., according to the size of safe selected by the renter.

INSPECTION IS CORDIALLY INVITED

contracts in Sydney and suburbs in the first half of 1935 was almost four times as great as in the first half of 1933.

The New Zealand banking returns are confused by the transactions arising out of the setting-up of the Reserve Bank. Fundamentally the economic situation resembles that of Australia, the favourable export balance having fallen in 1934-35 as compared with 1933-34 by over £10 stg. (millions), because of increasing imports and falling export prices. There is the same maintenance of bank deposits and transfer from fixed to current accounts, and increasing advances, together with an apparent drain on the cash ratios and some running down of London funds, but the transactions with the Reserve Bank make it difficult to measure these accurately:—

CANADIAN BANKING

(BY A CORRESPONDENT)

THIS year has seen "a sharp break in the evolution of the Canadian banking system," as the creation of the new central bank, the Bank of Canada, was described by the president of the Canadian Bankers' Association. Last autumn the Dominion Government appointed Mr Graham Towers, a young Canadian banker, to be Governor and Mr J. A. C. Osborne, Secretary of the Bank of England, to be Deputy Governor. The offer to the public of the 100,000 shares of \$50 each met with a wide response, and "the first shareholders' register contains some 12,000 names. The first general meeting was held on January 23rd, the principal business being

the election of seven directors (the original scheme for governmental choice of the first board having been abandoned). The election was in fact run by the Canadian Chamber of Commerce, all the candidates elected having been sponsored by that body. The seven include representatives of primary and manufacturing industries and other outstanding commercial interests, and are drawn from all geographical sections of the Dominion. This Board will meet four times a year. The Governor, the Deputy Governor, one of the seven directors and (without voting power) the Deputy Minister of Finance form an Executive Committee. Power is, in fact, con-

CASH RESERVES OF NEW ZEALAND BANKS
£N.Z. (millions)

Year	Quarter	Coin, Bullion and Notes	Cash Reserve Bank	Total	Percentage to Total Deposits
1934	I	5.1	...	5.1	8.41
	II	5.1	...	5.1	7.99
	III	4.5	16.1	20.6	32.44
	IV	2.7	12.4	15.1	24.79
1935	I	2.5	6.5	9.0	14.92
	II	2.3	4.2	6.5	10.62

The last table would seem to indicate that, despite the depressing effect of lower export prices, the local credit expansion attendant upon the depreciation of the exchange and the building up of London funds balanced by Treasury bills in New Zealand that were later taken over by the Reserve Bank, has left the trading banks with greater cash reserves.

Meanwhile the presentation of the report of the Reserve Bank's first year of operations in August, 1935, has led to considerable discussion. It is evident that the Bank's operations have been restricted and circumspect. Not much information was disclosed, and there is a certain amount of restlessness concerning what in some quarters is regarded as an undue shrinking from publicity. The discount rate of 4 per cent. has been reduced to $3\frac{1}{2}$ per cent., but in fact no discount business was done at the higher figure, and it is clear that the Bank's chief function, in default of a local money market, is the management of the exchange rate on sterling. One other important factor deserves note. The Budget has benefited to the extent of £1,360,000 from the profit on the sale of gold, and this was a major factor in the surplus for the year of £1,626,000. With expanding credit and low interest rates, as well as rising export prices, the outlook for the Dominion is better than it has been for some years.

centrated in the hands of the Governor, for without his concurrence no decision of the Board or of the Executive Committee is to be operative.

The first Returns of the Bank of Canada, taken in conjunction with the monthly statements of the Chartered Banks, showed that the establishment of the Bank of Canada had brought about two main changes in the reserve and note issue arrangements of the country. Firstly, there was the transfer of the Dominion note issue, and the assets held against it, from the Ministry of Finance to the Bank of Canada. Secondly, there was the transfer from the Chartered Banks to the Bank of Canada of about two-thirds of their gold and about three-quarters of their holdings of Dominion notes (Dominion notes now becoming Bank of Canada notes). In exchange for these assets the Chartered Banks received deposits with the Bank of Canada. The first Returns of the Bank of Canada simply showed, in summary, the results of its arrangements with the Ministry of Finance and the Chartered Banks. The Bank of Canada began its career with notes in circulation amounting to about \$90 millions and bankers' deposits about \$150 millions, as the main liabilities, the

Dollars converted to sterling at \$5 to the £.

assets being gold coin and bullion \$106,936,000, a small (and variable) amount of foreign exchange, and Dominion Government securities varying round about \$140 millions.

The Return of July 10th showed that the Bank of Canada had revalued its gold, as authorised by Parliament. The item "Gold coin and bullion" leapt in a week from \$107 millions^{to} to \$180 millions. No new statutory price has been fixed, and it is therefore presumed that the gold has been valued at the market price on the date of each return. This would account for the quite insignificant variations which have been shown in this item in returns subsequent to that of July 10th. The profit on the revaluation was used to reduce holdings of Dominion Government securities. This accountancy increase in the gold reserve has had the effect of increasing the reserve ratio (proportion of reserve to deposit and note liabilities) from about 43 to about 65 per cent. The Bank of Canada Act fixed 25 per cent. as the minimum reserve ratio. So far as the monetary base is concerned, therefore, the Canadian system would allow ample provision for a great expansionist movement.

It is notable that, apart from the revaluation of gold mentioned above, changes in the Bank of Canada's reserves are confined almost entirely to its holdings of foreign exchange, particularly in the item "Reserve in U.S. funds," which is the greater part of the foreign exchange holdings of the Bank.

Recovery has made further headway in Canada during the year. Mining activity in particular has expanded notably. The Index of the Physical Volume of Production has risen from 95.8 to 99.2, though employment shows a slight decline between June, 1934, and June, 1935. Bank debits, contracts awarded and notes in circulation all show marked increases. The wheat crop is rather larger than a year ago, though so much of it is of poor quality that farmers' purchasing power is unlikely to reflect the recent higher wheat prices. The Chartered Banks, however, have profited much less from recovery than they might have hoped. The index numbers (with seasonal adjustments) showed that current loans have continued their decline, the figures for June, 1935, being 88.4, against 92.5 in June, 1934, and 94.8 in May, 1933. In Canada, as elsewhere, there appears to be a marked

tendency for economic activity to become more and more independent of bank loans. The Chartered Banks, on the basis of their increased cash reserves, have consequently added to their investments, which at the end of April exceeded \$1,000 millions for the first time.

The Government has continued its policy of stimulating recovery by reducing interest rates and has been supported by the Chartered Banks, the latter attempting to protect their profits. Interest paid on savings deposits was reduced to 2 per cent. by the Chartered Banks and Government Savings Banks in the autumn of last year. At the same time, arrangements were made to allow the Farm Loan Board to reduce the rates charged on mortgages. As from June 1st the Chartered Banks further reduced the interest allowed on savings deposits of firms, companies and associations (but not individuals) to 1 per cent. These reductions in interest rates, together with the security purchases by the Chartered Banks, have further depressed the yield on bonds. The same factors,

together with the progress of recovery, have also stimulated a further rise in common stocks.

External trade was much greater in value in 1934 than in 1933, but the goods export surplus remained practically unchanged at \$145 millions. Net tourist income was higher. The net balance on income account was slightly larger than in the previous year. International security movements showed a balance of purchases by Canadians amounting to \$20 millions. In addition to this there was some movement of short-term capital from Canada, covered by the balance on income account.

In the immediate future it seems doubtful whether the new Social Credit Government in Alberta can force any great change in the monetary situation. A more serious cloud is the problem of public debt in the Dominion generally. There have been some indications lately of a growing realisation of the need for some comprehensive solution of the problem; but with the best will in the world the question is inevitably most difficult.

Dollars converted to sterling at \$5 to the £.

INDIAN BANKING

(BY A CORRESPONDENT)

INDIAN banking conditions have shown little change during the past year. The Bank rate has remained at 3½ per cent. throughout and in view of the restricted demands of trade and industry for finance, bankers have found it difficult to employ their funds at remunerative rates, more especially as the Government have been able to obtain their Ways and Means requirements without recourse to much short-term borrowing. The total of Treasury Bills outstanding with the public, which in January, 1935, amounted to about Rs. 27 crores, was consistently reduced until at the end of August only some Rs. 8 crores remained. This factor coupled with the steady purchase of sterling by the Reserve Bank kept the call money markets in the towns well supplied

with funds at minimum rates. The speculative financing of large silver stocks and the investment of funds in securities has, however, provided some means of utilisation of these surplus resources. Commodity prices remain disappointing, the Calcutta wholesale price index number of all commodities, which, in January, 1935, showed a welcome rise to 94 (July, 1914=100) having fallen since to 89 in August last. The favourable balance of trade still depends upon the continued exports of gold, and these fortunately for the exchange position as yet show no sign of ceasing.

The most important event in the history of Indian banking in recent years has been the inauguration of the Reserve Bank of India which is now exercising its full

functions as a central bank. In this connection the weekly returns published by the Reserve Bank are of the greatest interest, more especially as previously those banking statistics which were available were published only after such considerable delay as to be of little current value. It will be noted that the separation of the business of the bank into Issue and Banking Departments results in the bank's own weekly statement being issued in two parts, the note issue return being in practically the same form as the old Paper Currency return except for the information relating to notes held in reserve. This statement taken in conjunction with the consolidated statement of the returns made by scheduled banks under Sect. 42 of the Reserve Bank Act allows a much closer approximation to be made as to the amount of notes in circulation. Thus, comparing recent returns it is possible to trace since April 1st, when the Reserve Bank took over the control of the note issue, the gradual transference of some Rs. 16 crores of notes from the general banking system to the Banking Department, in spite of the fact that the total of notes issued has increased by some Rs. 7 crores. It will be remembered that the convertibility of the silver rupee into notes and vice versa was expressly retained under the Reserve Bank Act and herein lies the explanation of the increased note issue; for notwithstanding the recent silver scare, silver rupees to an additional amount of Rs. 7 crores have been exchanged for notes since April 1st. This tendency of silver rupees normally to be replaced by notes was noted by the Hilton Young Commission of 1926, and arises from the gradual spread of education and banking knowledge.

In the establishment of a silver redemption reserve fund of Rs. 10 crores invested in sterling assets the Government have provided a 40 per cent. external cover against any silver rupees which the bank may, under the provisions of Sect. 36, require the Governor General to redeem in full legal tender value should its holdings of silver coin become excessive.

The relations of the scheduled banks with the Reserve Bank are of primary importance in the regulation of credit, and the information contained in the weekly returns which these institutions are compelled to make to the Reserve Bank is published in the following consolidated form.

STATEMENT OF SCHEDULED BANKS (In thousands of Rs.)

	Week ending Aug. 16, 1935	Aug. 23, 1935
1. Demand liabilities in India	1,10,44,18	1,10,74,87
2. Time liabilities in India	98,21,54	98,21,32
3. Cash in India :—		
(a) Notes	5,51,49	5,82,11
(b) Rupees	53,21	55,30
(c) Subsidiary coin	27,17	26,58
4. Balance with the Reserve Bank in India	29,57,91	32,42,02
5. Advances in India	92,32,43	90,27,06
6. Bills discounted in India	3,41,53	3,60,27

It will be recalled that the Joint Committee of the Legislative Assembly which considered the Reserve Bank Bill admitted in view of the diversity of Indian conditions the extreme difficulty of drafting any general definition of "banking business." The first list of scheduled banks, compiled from such statistical tables relating to banks in India as were available, comprised generally all institutions whose paid up capital and reserves exceeded an amount of Rs. 5 lakhs. These are each required to keep a minimum deposit with the Reserve Bank based on the amount of their time and demand liabilities, in return for which they obtain discounting facilities. Provincial co-operative (apex) banks are also allowed discounting facilities, but need not make compulsory deposits with the central bank. The largest sources of rural credit, however, namely the indigenous bankers, are entirely outside the banking system at the moment, as they depend almost wholly on their own financial resources. The Reserve Bank's credit policy will thus have little effect where agricultural credit is concerned unless and until these agencies are brought within the banking structure, for as yet co-operative and

MACMILLAN

THE ECONOMICS OF STATIONARY STATES.

By A. C. PIGOU, M.A., Professor of Economics in the University of Cambridge. 12s. 6d.

"With the very complicated economic structure of the world to-day, this analytical method has much to commend it, and the student of economics should be able to profit therefrom by clarifying his ideas as to the real implications of each stone in the economic edifice." —C. Ralph Curtis (*Financial News*).

THE RUSSIAN REVOLUTION, 1917-1921.

By WILLIAM HENRY CHAMBERLIN. 2 vols. Illustrated. 42s.

The author devoted twelve years to the production of his work, almost wholly spent in the Soviet Union. All the principal leaders are vividly portrayed.

THE RUSSIAN FINANCIAL SYSTEM.

By W. B. REDDAWAY. 5s.

The author's material was mostly gathered in a series of interviews with officials of the State Bank in Moscow during August and September, 1934.

THE NEXT FIVE YEARS: An Essay in Political Agreement.

By 152 Signatories of all shades of thought. Second impression. 5s.

"Close-packed with matter, much of it very provocative. It calls for close consideration, but it should be read with a challenging mind." —W. W. Hadley (*Sunday Times*).

THE CLASH OF PROGRESS AND SECURITY.

By ALLAN G. B. FISHER, Professor of Economics in the University of Otago, New Zealand. 8s. 6d.

That the possibilities of material progress are apt to be frustrated in the effort to gain individual security in a capitalist economy is the theme examined in this book.

joint stock banking reaches a small proportion of agricultural borrowers. In the figures shown above the proportion of bills discounted to the total of other advances should be noted, for it is of great importance that the Reserve Bank should seek to create a bill market in India. The encouragement of the drawing of rupee bills in connection with the external trade of the country would provide a useful stimulus in this connection, as would also some differentiation in the rates of interest charged by the Bank as between loans and discounts.

The credit needs of Indian agricultural and industrial interests cannot be estimated with any degree of accuracy, but when it is stated that the annual value of agricultural produce amounts to perhaps some Rs. 800 crores, while the total internal trade of a country with 350 millions of people can hardly be less than ten or twenty times the value of its external trade of about Rs. 300-400 crores annually, it is evident that the total advances shown by the scheduled banks represent little more than a fraction of the finance necessary. The Imperial Bank by virtue of its branch organisation plays the most important part among banks in financing the country's internal trade and appended are statistics showing the fluctuations in the amounts of advances of the Imperial Bank between the first weeks in February and August for the last 8 years. These dates represent approximately high and low levels of trading and agricultural activity and the progressive decline shown by the figures should be noted as evidence of the effect of the fall in commodity prices, while if the amounts of loans granted are multiplied four or five times to represent the total advances of the banking system it will still be apparent that the great bulk of credit comes from sources outside banking organisations. It is for this purpose that the Reserve Bank is required to formulate proposals for the attachment of the indigenous banker as an integral part of the banking

system and for the effecting of a closer connection between agricultural enterprise and the operations of the bank.

One further point must be noticed. The absence of any general definition of "banking business" has already allowed some institutions otherwise qualified to get themselves removed from the list of scheduled banks and as foreshadowed by the Joint Legislative Committee additional legislative proposals will doubtless be necessary when further practical experience of the effect of Sect. 42 has been gained. It is already clear that if the Reserve Bank is to control credit effectively, it cannot allow any suitable institutions with impunity to remain outside its direct influence, for apart from other considerations the evasion of the obligations laid upon scheduled banks as to keeping free deposits will bestow an unfair competitive advantage.

IRISH BANKING

(BY A CORRESPONDENT)

THE most important event that occurred in Irish banking during the year was the appointment of a Commission of Inquiry "to examine and report on the system in the Irish Free State of currency, banking, credit, public borrowing and lending and the pledging of State credit on behalf of agriculture, industry and the social services." The personnel of this Commission, including several bankers, economists and civil servants, is calculated to inspire confidence, and its report should be the most significant document for the student of Irish banking since the reports of the Parker-Willis Commission of 1926.

Obviously, the question of the retention of the link with sterling is the outstanding question in the Commission's terms of reference. The existing arrangements for keeping the Irish pound linked to the pound sterling at par have worked well, but advocates are to be found favouring the depreciation of the Irish pound to the level of the Australian or New Zealand pound in the interests of the rural debtors and exporters. A movable parity finds favour in other quarters, but the general view is that no case has been made for altering the present standard of value, which not only facilitates trading and financial transactions with Great Britain, but also ex-

tends to Ireland the benefits of such currency stability and the feeling of confidence enjoyed in the "sterling area."

In the sphere of banking there is a good deal of opinion, largely based on nationalistic sentiment, in favour of the establishment of a central bank in the Free State. The Currency Commission, which is the existing note-issuing authority, is not a central bank and possesses no powers to regulate credit conditions with the object of maintaining or restoring either external or internal equilibrium. The establishment of a central bank would, of course, be in line with the policy pursued in the other Dominions, and would be a step towards the consolidation rather than the disruption of the sterling area, but there are peculiar difficulties in the Free State owing to the intimate connection between the Irish and the British banking systems. The question really is whether the transformation of the Currency Commission into a Central Bank entailing a widening of the powers of the note-issuing institution would add any useful element to the financial superstructure of the country. It will certainly be found that in relation to the London

market an Irish Central Bank like, for example, the Scandinavian banks would maintain close connections.

Another matter that will engage the attention of the Commission is the degree to which loans on the security of land are hopelessly frozen. There is no doubt that many farmers in Ireland, like farmers all over the world, find their bank debts very onerous in view of the agricultural depression. It is very difficult to say to what extent this constitutes a real problem in the Free State. No two loans are exactly alike and no general formula for the relief of borrowers could be found; moreover, many loans that are frozen to-day may become thawed out to-morrow. It must not be overlooked that a considerable measure in relief of overhead charges has already been effected by the halving of the land annuities. Finally, any tampering with contracts in respect of Irish land should be undertaken only on the strongest possible justification.

In respect of public borrowing and lending the Commission will doubtless have something of value to say regarding the rapidly accumulating public debt for housing and other capital development. The rate of interest

WEST END BRANCH: 9, Northumberland Ave., W.C.2

New York Agency: 67, WALL STREET.

Hamburg Agency: 49, SCHAUENBURGERSTRASSE.

Over 370 Branches, Sub-Branches and Agencies in South, East and Central Africa.

EXECUTOR AND TRUSTEE BUSINESS CONDUCTED.

COMMERCIAL SERVICE

The Bank has over 370 Branches in Africa, and Agents and Correspondents throughout the world. The closest touch with Trade and Industrial conditions is maintained, with special attention to Commercial and Credit Intelligence. This service is available to Exporters, Importers and others wishing to develop trade with South, East and Central Africa.

THE STANDARD BANK MONTHLY REVIEW is sent post free on application. It gives the latest information on all South, East and Central African matters of Trade and Commercial Interest.

BERTRAM LOWNDES, London Manager.

has recently been rising against Irish public authorities, and anxiety is felt about the success of the coming conversion of the First National Loan, which is announced to be attempted before the end of the year. The reasons for this hardening of interest rates are not far to seek: the demand for new capital has grown substantially in the last two or three years, while the supply of new savings has not increased proportionately. Much of the financing of the new schemes of capital development has been accomplished by the realisation of external investments, which makes necessary the offer of an attractive yield to capitalists. This repatriation of capital invested abroad is not without its effects on the invisible balance of payments to the magnitude and nature of which the Banking Commission will necessarily devote much attention, since the decline of the visible export trade has rendered the country increasingly dependent on its invisible income from abroad to pay for the large volume of imports necessary to maintain its standard of living.

The so-called "divided balance sheet" of the Free State banks is usually taken as affording an indication of the movement of funds in and out of the country, any change in the amount of the excess of outside assets over outside liabilities being interpreted as showing in which direction the flow has been. The summary in the annexed table suggests that the drain observed last year has continued, though at a diminishing rate. These statistics, however, are not conclusive, since many of the external investments held in the Free State are not included in the banks' figures, and even the banks' own investments may be valued on a different basis at different dates so as to render comparison difficult. It may, however, be safely concluded that the current balance of payments of the Free State was passive last year and remains passive this year, although the precise amount of this unfavourable balance may not be estimable.

The divided balance sheet also shows that deposits in the Free State have declined. This decline may be attributed partly to the withdrawal of savings from the banks for investment in some of the attractive gilt-edged securities floated during the year, partly to the realisation of past savings by farmers to tide them over bad times, and partly to a removal of funds from the Free State branches of the banks in anticipation of a possible depreciation of the currency. The last movement, which was probably at no time significant, has stopped since the appointment of the Banking Commission. The banks' investments in the Free State increased towards the end of last year, but have since tended to recede to the normal figure. This movement probably indicates that the banks found themselves left with large quantities of certain new public issues floated last year which have since been digested by the general public.

The banks' earnings have tended to decline owing to the prevailing low interest rates, the high taxation, and

the reduction in advances. One of the banks has reduced its interim dividend this year. The profits of the banks, which tend to be exaggerated in popular discussion, do not amount to more than about $\frac{1}{2}$ per cent. of their resources. A new Act limiting the liability of the stockholders of the Bank of Ireland was passed during the year.

The Report of the Currency Commission for the year ending March 31, 1935, states that the value of the legal tender notes fluctuated during the year between a minimum of £6,998,133 and a maximum of £8,243,421, the latter being the highest figure ever attained by this issue. The amount of old Irish banknotes still outstanding is £1,447,259, and it is estimated that a substantial part of this figure represents "dead" notes. The issuing banks do not concur with this opinion, as many notes are hoarded in country places and are not presented for many years, and no note can be regarded as "dead" in Ireland from the mere fact of its non-appearance. The surplus income of the Commission for the year 1934-35 amounted to £206,523, the earnings continuing to be affected by the low interest rates obtainable on British Government securities in which the Commission's assets are invested.

SOUTH AFRICAN BANKING

(BY A CORRESPONDENT)

THE South African banking figures for the end of the second quarter of 1935 show that little progress has yet been made towards adjusting the highly abnormal situation arising out of the devaluation of the currency at the beginning of 1933. As will be remembered, this action had the twofold effect of causing the large amounts of capital previously exported to return to the country and of maintaining during 1933 and the first part of 1934 a very large export surplus on the normal balance of international payments. In consequence of these developments, by June last year the deposits of the public with

South Africa, though probably not to a sufficient extent to cover the repayment of the war debt without drawing to some extent on the excess reserves of the banking system.

This conclusion is supported by an examination of the combined returns of the South African commercial banks for June 30, 1935. As compared with the figures of a year earlier, these show a rise in advances in the Union of £6.5 millions, together with a fall in deposits in the Union of about £2 millions. Of the £8.5 millions of additional resources thus required, £1.7 millions were

the commercial banks in the Union had risen to the relatively enormous figure of nearly £88 millions, of which £66 millions was on current account, while the banks' cash reserves had risen to nearly £32 millions, or well over £20 millions in excess of normal or legal requirements.

The slight modifications of this situation during the past year seem to have been entirely due to the exceptional transaction in August, 1934, whereby the South African Government repaid to the British Treasury the £7½ millions balance of its war debt. It is true that the foreign trade figures of the Union, as published, indicate a heavy adverse balance of payments for the twelve months ended June 30, 1934, in consequence both of a further rise in imports and a sharp falling off in exports. The fall in exports was, however, entirely due to the action of the South African Reserve Bank in converting a large part of its foreign exchange reserve into gold and concentrating its gold holdings in the Union. To do this it held back new gold from export, using its London holdings of gold and sterling to meet current demands for exchange, and thus caused a sharp fall in exports of gold. As it makes no difference to the Bank's real position whether it holds its gold in London or Pretoria, this apparent decline in exports must be ignored. For practical purposes exports may be calculated by adding to the exports of produce other than gold the total value of the gold produced in the Union during the year. (Had there been any imports of gold during the year these would also have to be included.) After making this adjustment, we find that exports during the twelve months ending June 30, 1935, amounted to about £101 millions, while imports totalled about £72 millions, leaving an export surplus of £29 millions. No official estimate of invisible items is yet available, but the excess of payments to, over payments from abroad, on income account, is hardly likely to have exceeded some £26 or £27 millions, while the balance on capital account, apart from the exceptional transaction of the war debt, is likely to have been in favour of South Africa. It is probable, therefore, that, apart from the war debt transaction, the balance of payments remained in favour of

obtained by a reduction in South African investments. Of the remaining £6.8 millions, the banks drew on their surplus balances with the Reserve Bank to the extent of £1.7 millions, while the remainder seems to have been supplied out of the banks' reserves outside the Union. This more profitable use of their resources has, of course, been reflected in the rise in their earnings during the year.

With regard to the future, it seems likely that the expansion of business activity and of imports, which has been so striking a feature of the past two years, will be rather less marked during the coming twelve months. The recovery in South African business activity seems to have been based very largely on the increased prosperity of the gold-mining industry. This has reacted upon general business, not merely through the increased employment by the mines of labour, stores and capital equipment, but also through the expenditure of some part of the large profits made by many holders of gold-mining shares. When shares are sold at a profit some part of the purchase price, which was capital in the hands of the purchaser, is regarded as income by the seller. The spending of a part of such profits gives rise to an ever-widening circle of demand for many types of

goods, especially, perhaps, for durable consumption goods. To some such process may be attributed a part, perhaps considerable, of the recent expansion in the South African demand for imports. Recently the rise in mining shares has ceased, and has been succeeded by a not inconsiderable reaction. It is, therefore, not unreasonable to expect that, in the near future at least, the expansion of business and imports will proceed more slowly than during the past two years.

It is, indeed, already possible to detect in the current statistics some signs of this slowing down of the rate of expansion. Bank debits during the second quarter of 1935 were substantially below those for the corresponding quarter of 1934; and though practically the whole of the decrease occurred in the Transvaal, where it was no doubt attributable largely to a decline in stock exchange activity, the total for the other Provinces was at any rate no higher than a year before. The expansion in building activity is also becoming less rapid in some districts, and especially in Johannesburg, where the increase had previously been most marked, while the general index of industrial activity has ceased to rise for several months. Imports are still above the level of a year ago, but are rising more slowly than they were last

NOTES.—(a) Not available.

(b) Including throughout balances with the South African Reserve Bank.

(c) Excluding Money at Call, which for this year is included with other assets.

The change in the figures between 1925 and 1926 is due to the incorporation of the National Bank of South Africa, Ltd., with Barclays Bank (Dominion, Colonial and Overseas).

year, and with exports also rising a little it seems likely that the balance of normal international payments for 1935-36 will not be very far away from equilibrium.

If this expectation were fulfilled, a position would have been reached where the current position was again in approximate equilibrium, while a very large accumulated surplus, the result of several years of a highly favourable balance of payments, continued to lie unused in the hands of the banking system. The tangible assets which represent this surplus consist at present mainly of the large excess gold reserves held by the South African Reserve Bank. The Reserve Bank owes a more or less corresponding amount to the commercial banks, who hold enormous excess balances with it, and these in turn owe it to the public, who own deposits with them to an amount greatly in excess of normal. The excess gold reserves of the Reserve Bank, valued at cost, are at present about £20 millions; but if bankers' balances with it were reduced to a normal figure, of about £5 millions, the excess would be not far short of £30 millions, in addition, of course, to any profit made on the resale of the gold. The excess reserves of the commercial banks are in the neighbourhood of £21 millions, and if their current accounts were reduced to a normal level they would be about £24 millions. What may be termed the excess deposits in the hands of the public may be estimated at about the same figure.

It is now understood that during the coming year the South African Government intends to make use of these surplus reserves to pay off a part of its overseas debt, by raising a conversion loan in the Union and using the proceeds to redeem maturing obligations in London. A very considerable operation of this type is both feasible and, given that the money can be raised as cheaply in South Africa as in London, probably desirable; for it will reduce towards normal the various excess balances mentioned above and remove the possible danger of an excessive further expansion of bank credit. So long as the total of foreign debt paid off is kept within the limits of the above-mentioned excess reserves of the public and the commercial banks, such an operation could probably be carried out without any serious rise in interest rates. Only if these limits were approached or exceeded would any considerable tendency towards financial stringency become apparent.

In view of the check to the expansion of business and of the fall in security prices, it seems unlikely that bank advances will show any very great increase during the coming year over the level of the last nine months, while, since the rates of interest offered on any new conversion loan will presumably be far below bank overdraft rates, there will be little temptation to borrow from the banks in order to invest in the new stock. Thus probably almost the whole of the amount paid off in London will be reflected in a fall in bank deposits in the Union. At the same time, the banks' balances with the Reserve Bank will show a corresponding reduction, while part of the Reserve Bank's gold will have to be exported to London and sold to pay off the maturing debts of the Government. An incidental effect of this transaction would be to help to strengthen the gold value of sterling and in some degree to reduce interest rates in London.

Bank profits have now begun to recover from the setback which reached its climax in 1932 and 1933. During those years the general trade depression both affected the current earnings of the banks and also necessitated heavy appropriations for bad and doubtful debts, particularly in respect of loans to farmers. The general recovery in trade, and the advance in the prices of maize and wool, must by now have placed many of the banks' loans upon a much sounder basis, while the revival in South Africa's import and export trade must also be adding to the profits derived from financing external trade. In the long run bank earnings depend largely upon the general rate of interest, and rates, if anything, are likely to stiffen. The expansion in business is increasing the demand for credit, while if an internal conversion loan is issued to repay debt in London, this, again, will affect interest rates. Nor will the banks be affected by any reaction in security prices, for these hold very few South African securities. The outlook for bank profits is, therefore, quite hopeful.

BANCA COMMERCIALE ITALIANA

(Limited Company incorporated in Italy)

ESTABLISHED IN 1894

Head Office: MILAN.

Capital: 700 million Lire.

Reserves: 144,785,576 Lire.

Branches in every centre of commercial and industrial importance in Italy, and in most of the best known tourist resorts; also in London, New York, Istanbul and Izmir.

Affiliated and Auxiliary Institutions in France, Switzerland, Yugoslavia, Hungary, Bulgaria, Roumania, Greece, Egypt, Morocco, U.S.A., Brazil, Argentina, Chile, Uruguay, Peru, Colombia, Ecuador, etc.

TRAVELLERS' CHEQUES ISSUED.

Correspondents to the Italian Treasury

For those making a Will

The exceptional facilities of the Midland Bank Executor and Trustee Company, an affiliation of the Midland Bank, should strongly appeal to all who have not yet made a will or desire to revise existing plans for the subsequent care of their estates, however small. The Company acts in the following or similar capacities: ¶ executor or trustee under a will; ¶ trustee under a marriage or other settlement; ¶ trustee for any club, society, hospital or religious, charitable or other institution; ¶ manager of an estate; ¶ trustee for debentures or debenture stock. The use of its services ensures the following advantages:

CONTINUITY: The expense and trouble of appointing new trustees are avoided.

SECURITY: The Company is responsible for the acts of its officials.

EFFICIENCY: All officers have been specially trained for their duties.

ACCESSIBILITY: Co-trustees and beneficiaries may inspect their records at any time.

LOW FEES: The fees, fixed at date of appointment, are exceptionally low.

SECRECY: The staff are pledged to secrecy.

Solicitors, accountants, stockbrokers and estate agents named by testators or settlors are employed whenever possible.

A 28-page book fully describing the services and quoting fees may be obtained free on personal or written application to any of the 2130 branches of the Midland Bank or the 12 separate branches of the

BANK SHARES

THE bank shareholder, with the experience of recent months in mind, may be permitted the natural inquiry which is suggested by it. Does the falling tendency of gilt-edged quotations herald an era of firmer interest rates, irrespective of the political risk factor which is now exercising the market? And if this is so, how far will "money" shares be forced to accompany gilt-edged movements? Already the decline has been significant. The monthly calculations of the Actuaries' Index show that gilt-edged prices, as measured by 2½ per cent. "Consols," reached a peak of 165.3 at the end of 1934, and had fallen to 147.4 at the end of September (December 31, 1928 = 100). Over the same period the index of twelve bank and discount company shares has fallen from 114.2 to 111.0. The decline, it is true, is considerably less severe than in the case of "Old Consols," but it contrasts with a slight rise, over the period, in the level of industrial ordinary shares from 73.9 to 74.2 which is accompanied, moreover, by a more significant increase in the dividend yield. From the crisis period of 1931, falling interest rates and industrial recovery united the two groups in common course, but the recent contrapuntal movement, evident in the following table of price and yield indices, represents a new phenomenon:—

ACTUARIES' INVESTMENT INDEX

	Price Index. (Dec. 31, 1928 = 100)						
	Dec. 29, 1931	Dec. 28, 1932	Sept. 19, 1933	Dec. 27, 1933	Sept. 25, 1934	Dec. 31, 1934	Sept. 24, 1935
Bank and Discount Company shares	68.2	96.0	101.1	104.3	112.3	114.2	111.0
Industrial shares	44.9	52.0	64.6	69.6	72.7	73.9	74.2
Average Yields (per cent.)							
Bank and Discount Company shares	7.43	4.93	4.64	4.49	4.18	4.11	4.22
Industrial shares	7.83	4.38	3.79	3.47	3.65	3.67	3.85

Clearly the equity interest in bank shares is insufficient, at this stage, to offset their traditional relationship with the general level of fixed-interest securities. To that extent, the banks control the destiny of their own share levels. Since 1931, the expansion of banking resources has been associated not with advances, which are well below the level of that year but with a startling expansion of "investments." Taking the June figures of the eleven clearing banks, investments have more than doubled during the four years, and the proportion of total assets which they represent has increased from 15.4 to 28.8 per cent. That these proportions, abnormal as they are, do not spell control of the market, however, is apparent from its recent behaviour, and the banks have yet to find any alternative remunerative employment for this part of their resources. It is hardly to be conceived, therefore, that a sudden change in their investment policy is in prospect, and that any further decline in gilt-edged values, so long as it is not of overwhelming dimensions, cannot be met from their careful husbandry of recent investment profits.

Since recovery on its present scale finds only limited reflection in the level of earning assets, there seems no present guarantee of a vigorous expansion to come. The return on bills and call money, for example, has been more secure in recent months, but it remains buttressed at a relatively low level. More significant, however, is the fact that the growth in advances is still remarkably slow in relation to the general level of business activity. The omens, therefore, do not suggest that the interest factor will be greatly offset by an improving earnings equity in the determination of bank share levels. Unless the demand for advances shows considerable expansion

in the near future—a movement which might presuppose some adjustment of rates—there seems little doubt that bank shares will remain faithful satellites in the gilt-edged orbit. At a time when the continuance of low yields from Government stocks is less obviously assured, the occasion may be opportune for a closer examination of investment policy as regards "money" shares.

The following composite table of British and Overseas bank shares and yields may suggest the basis for such a review. It will be observed, firstly, that the valuation of the uncalled capital risk on the partly-paid shares of institutions in this country is of the order of one-half of one per cent. on the basic yield. The margin is not inherently unreasonable, but it offers the prospect of increased return to those investors who would offset the risk involved by reference to the present financial stability of the domestic banking system. Less conservative investors may observe, secondly, that the shares of certain Dominion institutions, fairly situated as regards world recovery, offer a reasonable current yield, and possibly, scope for relatively greater advance than those at home. It would be unwise, however, to ignore the need for close supervision in the light of changing economic conditions abroad, and of their greater sensitiveness to any threat of world political disturbance.

CONTROL

Control implies the ability
to deal with the unexpected
without mishap. Control
the future. Guard against the
unexpected. Your dependants
rely on you to protect their
future welfare. . . . The most
effective method of making this
provision is by a Life Assurance
Policy. . . .

There is a contingent liability ranking after deposits and all other liabilities under a guarantee in respect of assets taken over by a third party, at £7,500,000, the value of which cannot at present be ascertained. The bank has undertaken to apply one-half of its profits after meeting the dividend on the preference shares on account of its eventual liability under the guarantee.		Bank premises and office furniture at cost, less amounts written off	456,884
		Suspense account—	
		Depreciation of capital employed abroad	2,033,593
		Bills for collection per contra	4,219,417
		Certain of the above assets have been lodged with other parties on which a lien exists to the amount of £167,750.	
		Exchange restrictions are in force in countries where a large part of the net assets of the bank is situated. These net assets have been valued at free market rates except in the case of Chile, where the official rate, which is higher, has been used.	
	38,519,012		38,519,012

The report of the directors states that the net profit to June 30, 1934, amounts to £60,783, to which must be added the amount of £158,962 brought forward from last year,

making a total of £219,745. Out of this total the directors have applied to legal reserves in Chile, Ecuador and Peru the sum of £3,063, and have transferred to contingency account £57,720, leaving £158,962 to be carried forward.

ANGLO-INTERNATIONAL BANK, LIMITED

The directors report for the year ended December 31, 1934, shows that the losses incurred in the collection of assets during the year have been charged to profit and loss account, which closes with a debit balance made up as follows: Net losses on realisation of assets and sundry provisions amounted to £256,266, to which have been added the expenses in connection with the liquidation of foreign branches amounting to £7,603, making a total charge to profit and loss account of £263,869. From this sum has been deducted the profit for the year which, excluding profit on investments and before making provision for doubtful debts but after allowing for directors' fees, amounts to £8,411, leaving a debit balance of £255,458, which has been carried to the balance sheet. In view of the conditions which still prevail in the countries where the bank's assets are principally situated, the extent to which further losses will be incurred cannot be estimated with any reasonable degree of certainty.

BALANCE SHEET—December 31, 1934

LIABILITIES	£	ASSETS	£
Share capital issued: 1,960,000 shares of £1 each, fully paid	1,960,000	Cash with bankers in London and cash in hand	39,468

BANK OF LONDON & SOUTH AMERICA, LTD.

The profit for the year ended September 30th last, after deducting all expenses and charges, and after providing for bad and doubtful debts, amounts to £276,331. To this sum has to be added £193,430 brought forward from last year, making a total of £469,761. From this unappropriated

balance the directors recommend the following distribution: To dividend of 3 per cent., payable December 17, 1934, subject to income tax, £106,200; to contingency reserve, £200,000; to profit and loss carried forward, £163,561—£469,761. Fluctuating exchanges are responsible for a depreciation in the bank's capital employed abroad, at the official rates ruling on September 30th last, of £913,065, which is covered by contingency reserve.

BALANCE SHEET—September 30, 1934

In countries where exchange restrictions are in force conversions have been made at the official rates ruling on September 30, 1934.

Over a
Century of
Banking
Experience

One hundred and eighteen years ago, when the Bank of New South Wales first commenced business in Sydney, the term "New South Wales" represented in effect, all that is covered today by the geographical name "Australasia."

This Bank, the oldest and largest in that country, under steady expansion, now has 740 Branches distributed throughout the whole of Australia, Tasmania, New Zealand and the Pacific Islands.

THE BRITISH BANK OF SOUTH AMERICA, LTD.

The report for the financial year ended December 31st last shows that the gross profits, after allowing for rebate of interest on current bills and drafts, for interest on deposits, and after making provision for bad and doubtful debts other than provided for out of contingencies account, amount to £175,804; this, with the balance of £119,096 brought forward from the previous year, makes £294,900. After deducting all charges at the head office and branches, including directors' remuneration, Government taxes in Brazil, etc., amounting to £125,156, there remains available the sum of £169,744. The directors now recommend that a dividend for the year of 4s. per share, or 2 per cent., amounting to £20,000, be now declared, payable on May 24, 1935, subject to income tax, on the paid-up capital of the bank of £1,000,000. After paying this dividend, there will remain the sum of £149,744, of which the directors propose to transfer the sum of £30,000 to contingencies account and to carry forward the balance of £119,744.

BALANCE SHEET—December 31, 1934

Brazilian currency has been taken at the official rate of exchange ruling on the above date, except in the case of the net profits of the Branches which have been brought in at the free rate.

HAMBROS BANK LIMITED

According to the report of the directors for the year ending March 31, 1935, after payment of all expenses, making provision for rebate on bills discounted, bad and doubtful debts, and income tax, the accounts show a profit of £14,892, and adding the directors' remuneration of £14,892, and adding the balance brought forward from last year of £92,270, there remains an available total of £402,291. After transferring £150,000 to contingency reserve account and allowing the sum of £30,375 for interim dividend on the £10 shares and £9,300 for interim dividend on the £1 "A" shares paid on October 31, 1934, the directors now recommend the payment of a further dividend of 11½ per cent., less income tax, on the £10 shares, making a total of 18 per cent. for the year, less income tax, and a further dividend of 3 per cent., less income tax, on the £1 "A" shares, making a total of 6 per cent. for the year, less income tax, and that the balance of £94,191 be carried forward.

BALANCE SHEET—March 31, 1935.

THE IMPERIAL BANK OF IRAN

The profits for the year ended March 20th last, after making provision for expenses of management, general charges in London and at chief office and branches, income tax, and bad and doubtful debts, amount to £75,760, to which has to be added £49,058 brought forward from last account, making a total of £124,818. The assets and liabilities of the branches in Iran have been converted at the rate of exchange of Rials 66 per £ sterling, being the rate on March 20, 1935. The rate last year was Rials 77. The directors now recommend payment of a final dividend of 7s. per share, and a bonus of 2s. per share, making with the interim dividend of 4s. per share a total for the year of 13s., free of income tax. It is also proposed to add £10,000 to reserve, which is thereby increased to £730,000, and to carry forward £49,818.

BALANCE SHEET—March 20, 1935

SWISS BANK CORPORATION

After deduction of expenses and taxes, and making provision for bad and doubtful debts, etc., the net profit for

the year ended December 31, 1934, amounts to £289,572, which together with the amount carried forward from last year, viz. £44,026, makes a total of £333,598. The Board propose to pay a dividend of 4½ per cent. on the paid-up capital, which will absorb £238,000, and to carry forward £45,598.

COMPLETE BANKING SERVICE

Our New
Information Service

The Intelligence Branch of the *Economist* has now been enlarged to meet the growing demand for economic and statistical information. The Department has been able to secure the services of a number of experts, and is prepared to supply information and reports on any branch of industry and finance as well as on international relations at a fee proportionate to the work involved.

Enquiries should be addressed to the

Intelligence Branch
THE ECONOMIST
8 Bouverie Street, London, E.C.4

A SELF-BINDER
FOR
The Economist

Week by week you keep your copies of "The Economist," and ultimately you either file them or bind them. Doubtless you are accustomed to the annoyance which attaches to the ordinary binder—the difficulty of reading half the left-hand page and the unwieldiness of the device generally.

We are able to offer our readers a binder which overcomes these irksome difficulties and is, in our opinion, the most efficient contrivance for the purpose we have yet seen.

It holds three months' issues and index, it has no wires, clips or metal contrivances, and each issue can be bound up in an instant in such a way that it can be read as easily as a well-bound book.

(IN FULL CLOTH, LETTERED ON SPINE AND FRONT)
