threatening aspect, most American investors thank providence for the Atlantic and President Monroe, and a minority buy so-called "war stocks." Those who can see a little further than their colleagues, however, are aware that a decisive trial of strength between the League and a potential aggressor, whatever its outcome, may affect American business in a variety of ways. Its possibility, in itself, has had striking repercussions in the commodity markets—especially those of wheat and cotton—this week. The prospect that substantial amounts of European capital may seek sanctuary in America, again, is not being overlooked, though the movement as yet is not thought to have assumed more than moderate proportions. Meanwhile, there is no evidence to suggest that the quieter tendency of markets, before their mid-week rally, was more than a normal phase in a rise which has still a good distance to go. The main economic indicators remain, on the whole, favourable. Electric power production last week was 11.9 per cent. greater than in the corresponding week of 1934. The Iron Age puts steel mill activity at 52 per cent., against 52.5 per cent. last week. The pig-iron market has tended to improve on renewed fears of a bituminous coal strike, but opinion is divided on the possibility of averting "direct action." The customary change-over by motor-car manufacturers to new models—a feature which recurs each autumn with the falling leaf—is reported to be encountering certain difficulties. When these are overcome, an increased demand for steel is expected. The most prominent group in this week's market revival was railroad stocks, which improved by anything up to 3 points on Wednesday. Among industrial shares, motors, steels and chemical counters were chiefly in demand. The downward tendency of Government bond quotations, early in the week, was a subject of unfavourable comment, on the ground that the banks were tending to show increased reluctance to add to their large holdings of Treasury issues. This phenomenon goes *pari passu* with a rise in the banks' excess reserves, and where the financial institutions must buy Government paper willy nilly, they are showing a marked preference for short-term maturities. It is announced that, out of the \$1,250 millions of "called" Fourth Liberty Bonds, some \$759 millions have been converted in the first fortnight, including \$331 millions converted into bonds and \$428 millions into notes. The Treasury has made no comment on these figures, but the market regards them as evidence of a slightly lagging tendency which may, however, be corrected in due course.

* Two-Hour Session.

PARIS

The absence of a settlement, or even the prospect of one, at Geneva has thrown a shadow over dealings on the Bourse this week. On Monday losses ranging up to one point were common among Rentes, and all banking shares (except Bank of France) were lower. Industrial share dealers, finding their "books" unduly heavy, marked down quotations on an appreciable scale. The recurrence of a Dutch guildler "scare" also had a depressing effect. Although the latter had ceased to be operative by the middle of the week, Wednesday's markets were even more uncertain than those of earlier sessions. Suez Canal was particularly weak, despite a further improvement in traffic figures. Rentes gave further ground, the market being affected by a press agency report that the Italian Treasury had acquired 500 million francs of these securities and Treasury bonds by requisitioning the holdings of its nationals. It was subsequently declared, however, that if the question of a sale should arise, the necessary operations would be carried out without recourse to the Bourse.

BERLIN

Although a certain amount of foreign buying of chemical and public utility issues was reported last week, the share market in general was dull and reactionary. Temporary rises were recorded in lignite, shipping and a number of textile issues, but steel, engineering and electrical shares, as a rule, were one to two points lower. The paper and pulp group of companies were particularly weak. On Monday the market opened with a further decline. On Tuesday, however, a firmer tendency supervened. Although declines occurred in textile share prices, various steel and electrical shares were marked higher. The bond market had a weaker tone, Reichsmark bonds and municipal issues being sold, while certificated and converted dollar bonds were irregular. On Wednesday the Bourse became more depressed, with a substantial setback in prices all round.

AMSTERDAM

The raising of the Dutch Bank rate to 6 per cent. strengthened the bond market, but caused an inevitable setback in shares like Royal Dutch, which had been bought as a hedge against guildler devaluation. The Speech from the Throne, with its somewhat gloomy tenor, generated little enthusiasm in the share market, where almost all equities were marked down. A "deflationary" Budget checked sentiment still further in mid-week. Philips' Lamps showed a fresh decline, on the further postponement of the dividend declaration. Ford of Holland were one of the few exceptions to the prevailing trend. Rubber and shares were quiet, sugar shares lost fresh ground, and shipping shares were weak. Government bonds made a

OTARD'S

CAPITAL ISSUES

A TENTATIVE "re-opening" of the new capital market has been effected this week, but a resumption of activity on any considerable scale is unlikely so long as the international situation remains clouded. A profitable conversion operation is represented by the issue of 2 per cent. guaranteed debenture stock, with a life of 12 to 16 years, by the *African Railway Finance Company*, charged on "B" preference shares in Tanganyika Concessions, the parent company. The issue is fully guaranteed by the Treasury, and replaces a 5 per cent. stock. The offer, at 98½, is of a type much sought after by trustees, and the price fully reflects this condition. A company of manufacturing chemists, *Maclean's, Ltd.*, has issued 6 per cent. redeemable cumulative preference shares at a premium of 5 per cent. The offer is of the familiar "proprietary product" type, with large and rapidly increasing profit figures, comparatively small net fixed assets in relation to total capital and, consequently, a large goodwill element in the purchase consideration. In fact, out of a total of £1,400,000 under the latter heading, some £1,163,557 is attributable to goodwill and trade marks. Next week, a debenture stock issue will be made by *Crown Flour Mills*, which has acquired the capital of a concern in the State of Oregon. The advertisements "for public information" of the week include particulars relating to a Melbourne company controlling a Fijian gold mining enterprise, and a well-established British engineering concern manufacturing components which are in wide demand from the aircraft industry.

LONDON ACTIVE SECURITY PRICES AND YIELDS

NOTE—Shares with a New York Quotation or with definite American interest are distinguished by italics

In calculating yields on fixed interest stocks quoted below allowance is made for interest accrued since the last date of payment, less income tax at the standard rate. Where stocks are definitely redeemable at a certain date the yield includes any profit or loss on redemption; where stocks are redeemable at or before a certain date the final date of repayment is taken when the stock stands at a discount and the earliest date when the quotation is above par. The return on ordinary stocks and shares is calculated by reference to the latest dividends, account being taken of any enhancement or reduction of interim dividends. Allowance is made for accrued dividends in calculating the yield on "cum div." shares.

Incorporated September, 1935, to acquire share capital of Crown Mills (Oregon, U.S.A.), milling all grades of flour. Net assets (sterling equivalent) of vendor, £379,459. Shares acquired for £376,700, £156,800 cash and £219,900 in "A" and "B" ordinary shares. Profits (sterling equivalent) years to March 31st: 1933, £17,031; 1934, £12,122; 1935, £28,776. Stock secured on shares acquired, redeemable between 1939 and 1966 by sinking fund, or from 1939 at £101 per cent. on three months' notice. List opens next Monday.

BY STOCK EXCHANGE INTRODUCTION

Emperor Mines, Ltd.—Issued capital: 2,000,000 10s. (Aust.) shares. Formed July, 1935, to acquire 100,000 £1 shares in Emperor Gold Mining and mining leases in Fiji for £A.300,000 cash and 600,000 10s. shares, together with option over 350,000 shares at par for eighteen months from September 15, 1936.

H. M. Hobson (Aircraft and Motor) Components, Ltd.—Issued capital 600,000 5s. shares. Incorporated August, 1935, to acquire businesses and certain assets of H. M. Hobson, Ltd., Floats, Ltd., and Accuracy Works, Ltd., for £118,750 in 5s. shares. Total net assets, £48,117; patents, designs and goodwill represented by £70,633. Combined profits of three companies before interest and depreciation: 1932, £14,791; 1933, £19,267; 1934, £30,003; half year to June 30, 1935, £21,885. Messrs J. W. Nicholson and Sons subscribe for 125,000 5s. shares at 8s. per share.

PRIVATE PLACING

United Kingdom Gas Corporation, Ltd.—This corporation are placing through Messrs Haes and Sons £400,000 3½ per cent. debenture stock at par, redeemable October 1, 1960, at 102, and 100,000 4½ per cent. £1 preferred ordinary shares at 21s.

BY TENDER

Liverpool Corporation Bills.—Tenders will be received at Bank of England, London, on September 25th, for Liverpool Corporation Bills, £1,000,000, to be issued under Liverpool Corporation Act, 1921. The bills will be in amounts of £1,000, £5,000, or £10,000, and will be dated September 30, 1935, and will be payable on September 30, 1936.

ISSUES TO SHAREHOLDERS ONLY

Scottish Power Company, Ltd.—The directors will offer as rights to the ordinary shareholders registered September 7, 1935, one ordinary share for every six ordinary shares at 32s. per share, involving the issue of 538,333 new shares.

Welshpool Lighting and Power.—The Severn Valley Gas Corporation, Ltd., offers to acquire the shares of Welshpool Lighting and Power in exchange for cash or shares of the Corporation, on the basis for every four shares of £25 nominal, or every ten shares of £10 nominal, or every 50 shares of £2 nominal of the Welshpool Company £135 in cash or 120 ordinary shares of £1 of the Corporation, together with £1 10s. cash. Fractions will be paid at the rate of £1 2s. 6d. for each ordinary share of the Corporation.

CONVERSIONS AND REPAYMENTS

Anglo-Spanish Construction.—The board has decided to make a further repayment on September 25th of 5 per cent. on the 6 per cent. registered debentures.

John Brown and Company, Ltd.—Holders of John Brown and Company's 6 per cent. first debentures, which are due to be redeemed on April 1, 1936, have been notified of an offer of immediate redemption, at the rate of £106 4s. in respect of each £100 debenture.

John I. Jacobs and Company, Ltd.—In order to bring the paid-up share capital into conformity (as nearly as practicable) with the true values of the assets, it is proposed to write off £160,000 of such capital, amounting to 8s. on each issued £1 ordinary share.

City of Amsterdam 5½ per cent. Sterling Loan of 1924.—The outstanding bonds of this loan will be redeemed at par, plus accrued interest, on October 1, 1935.

NEW FIXED TRUSTS

British General Fixed Trust Series "B."—Units consist of shares in 27 industrial companies, with alternative list of ten industrial shares and all trustee securities for replacement of eliminated securities, if considered expedient by managers. Trust is cumulative, having 20 years' life, during which provision for management is made. Service charge less than ½ of 1 per cent. per annum during full life. Managers guarantee repurchase not lower than net break-up price. Trustee, General Accident Fire and Life Assurance Corporation.

Provident Investors Trust.—A new fixed trust, sponsored by Dawnay Day interests, is to be launched shortly under this name.

FORTHCOMING ISSUES

The Central Provinces Manganese Ore Company, Ltd.—The board will shortly offer further 100,000 shares of 10s. at a premium of 10s. per share to shareholders in proportion of one new share for every ten shares. Shares to rank for final dividend for 1935.

Ruberoid Company, Ltd.—An issue is expected next week of 300,000 5½ per cent. redeemable cumulative preference shares £1 at 20s. 6d.

OTHER RESULTS OF ISSUES

Reich Treasury Bonds, 1935.—Owing to oversubscription 88 per cent. of the Rm. 500,000,000 (£41,666,000) 4½ per cent. Reich Treasury bonds, 1935, will be allocated.

South Essex Waterworks.—In response to the offer for sale by tender of £150,000 ordinary 5 per cent. maximum stock, bids were received for an amount heavily in excess of the amount offered.

United Kingdom Gas Corporation.—The United Kingdom's Gas Corporation's offer to stockholders of Scarborough Gas to purchase their stocks has been accepted to the extent of 77.3 per cent. of 1867 preference stock, 91 per cent. of consolidated ordinary stock and 94.5 per cent. of new ordinary stock. The corporation's offer to holders of consolidated ordinary stock of Aylesbury Gas Company has been accepted to the extent of 87.96 per cent.

CALLS DUE SEPTEMBER 23 TO SEPTEMBER 28, 1935

The grand total of calls falling due in September, 1935, is £16,099,085, which compares with £4,766,761 which fell due in September, 1934.

COMPANY MEETINGS, &c.

COMMONWEALTH MINING AND FINANCE, LIMITED

POTENTIAL VALUE OF COMPANY'S PROPERTIES

The annual general meeting of Commonwealth Mining and Finance, Limited, was held, on the 17th instant, in London.

Colonel Sir W. R. Campion, K.C.M.G., D.S.O. (the chairman), said that an examination of the cash position of the company showed that they had a net total of £328,924 cash in hand. During the last half of the year under review, so much attention had been focussed on the discovery and subsequent developments at Yellowdine that it was possible that the company's holdings in other parts of the State and in Northern Territory might have been overlooked, or at least given less attention than was due to them. That was an attitude very easy to adopt, for the widths of the Yellowdine ore bodies and the concentration of their gold content were so unusually great that they were apt to overshadow the results which were being achieved by developments on their other properties. It was important, however, that those latter should be seen in their proper perspective and it should be realised that the year's work on their five original mines had provided ample evidence that in them they had potential producers of great tonnages of payable, and in some cases decidedly rich ore.

All the mines were now at an extremely interesting stage of development, and in view of satisfactory developments they had not hesitated to exercise their options on the Aladdin, Atlas and Hercules properties. A great deal of effective and informative work had been done, the value of which would be more apparent when the full development stage was reached.

With regard to Yellowdine, he would like clearly to impress the fact that they still held the controlling interest in the property, and there were good reasons to believe, having regard to the results already achieved, that that mine would rapidly become one of the most important in Australia. It was not unreasonable to suppose that the ore reserves at Yellowdine had been considerably augmented and that their value might now be assumed to be approaching £2,000,000 sterling.

MANAGING DIRECTOR'S VIEWS

Mr Claude de Bernales (managing director), seconding the resolution, said that there was growing evidence that the Aladdin mine might eventually develop into one of those most attractive types of gold mine, namely, a producer of medium-grade ore on a large scale. The results of development work on the Atlas gold mines indicated somewhat similar possibilities to those shown in the Aladdin property. The general outlook at the Hercules mine was particularly satisfactory. Work at the Phoenix gold mines had been directed towards restoring the old shafts and workings to good condition in order that a full comprehensive sampling of the mine could be made.

Regarding the company's substantial interest in the Yellowdine mine, he would like to express his great pleasure that the expectations he had formed of that truly wonderful property had been realised to the fullest by the development work carried out, and nobody could contemplate the future other than with the greatest satisfaction and happy anticipation. The treatment plant now under order should be ready for operating by April next year. The recent developments at the 100-ft. level could reasonably be accepted as earmarking the mine as a great property.

A cable just received from the mine management informed them of a most valuable new development in the property. At a point 126 ft. north in the north drive at the 50 ft. level from No. 5 shaft a crosscut had been put out and at 18 ft. an ore body had been encountered which had already been driven on north for a distance of 53 ft. and ore was still in the face. Over a full width of 6 ft. the assay in gold values per ton of that drive were from 1 to 18 ft., average 1 oz. 15 dwts.; from 18 to 29 ft., nil, greenstone; from 29 to 53 ft., average 2 ozs. 5 dwts. That continuation of high gold values and substantial size of ore body as they drove north was exceedingly encouraging and satisfactory, and augured well for the future of the mine and for its capabilities of returning handsome dividends to those interested in its welfare. He thought they were all justified in congratulating themselves on that wonderful result.

They were all entitled to be very happy with the position of the company, not only on account of its excellent liquid cash resources, but because of the favourable results which had attended the major portion of their efforts.

The report and accounts were unanimously adopted.

GROSVENOR HOUSE (PARK LANE), LIMITED

SUCCESS OF THE NEW BALLROOM

The seventh ordinary general meeting of Grosvenor House (Park Lane), Limited, was held, on the 16th instant, at Grosvenor House, Park Lane, London, W.

Mr A. O. Edwards (chairman of the company), who presided, said that the net profit for the year of £64,114 compared with £52,393 last year. The directors were of opinion that to clear the balance sheet of all intangible assets was the best policy in the interests of the company, and regarded the recommendation to pay a final dividend of 2½ per cent. as well justified.

Their bold venture of constructing a new ballroom had met with success. Grosvenor House had now the largest hotel ballroom in Europe, of which he had heard nothing but praise. Lettings for the past year had been good, and those for the forthcoming year encouraged him to have every confidence in the future of that side of the business.

Regarding the hotel rooms, income for the first six months had shown an encouraging increase, but to the board's disappointment that progress had by no means been maintained during the second six months. The great expectations held for the period of the Silver Jubilee had not been altogether fulfilled so far as the luxury trades were concerned.

The better trading conditions in Great Britain had helped Grosvenor House, which was now thoroughly established throughout the world. In that connection he would like to protest against the very small appropriation of £4,000 which the British Government made to the "Travel and Industrial Development Association of Great Britain and Ireland," which existed in order to make known the attractions of Great Britain as a holiday and trade centre. Professor F. W. Ogilvie, dealing with the tourist movement purely from an economic point of view, estimated that the visitors to Great Britain last year had represented an income to this country of no less than £25,500,000. He, the speaker, thought it would be good politics as well as good economics for the Government to spend a little more money on organisations designed to encourage travel, especially as visitors from abroad were realising more than ever that London was the perfect holiday centre.

The report and accounts were unanimously adopted.

THE ANGLO-SOUTH AMERICAN BANK, LTD., has received telegraphic advice from the Madrid Branch that the gold surcharge for the payment of Spanish Customs duties has been fixed for the period September 11th to 20th at 138.29 per cent. The previous rate was fixed as from September 1st at 137.75 per cent.

CENTRAL AND SOUTH AMERICAN EXCHANGE RATES

THE ANGLO-SOUTH AMERICAN BANK, LTD., issues the following details relative to quotations for certain of the South and Central American exchanges. All these exchanges, with the exception of that of Bolivia, are related to the United States dollar, and the approximate sterling rates may be obtained by applying the dollar-sterling exchange rate:—

Bolivia.*	Official market: Sight rate, 20-26 bolivianos per £ sterling on July 19, 1935. Export selling rate 80 bolivianos per £.
Colombia.*	Sight rate, 180 pesos per 100 United States dollars on September 14, 1935. This rate applies to holders of permits buying in the "open" market.
Ecuador.*	"Free" market sight rate on September 2nd, 10-50 sucres per United States dollar.
Guatemala.	Sight rate on New York is maintained at 1 quetzal per United States dollar, but a commission of 1 per cent. is charged by the Banco Central for the sale of drafts.
Nicaragua.*	Official selling rate was established at 110 cordobas per 100 United States dollars on November 26, 1934.
Salvador.	Sight rate on September 6, 1935, 2.51 colones per United States dollar.
Venezuela.	Sight rate on New York is at present maintained at 3.89 bolivares per United States dollar.

* Exchange controls are operative in these countries.

REPORTS AND NOTICES

APOLLINARIS AND PRESTA.—Holders of 5 per cent. irredeemable debenture stock and 5 per cent. debenture deferred interest certificates are informed that the payment of interest must be deferred until the results of the present year's trading are known.

BANK OF ENGLAND.—At the half-yearly Court of the Bank of England, held September 19th, Mr. Montagu Norman announced that the profits for the six months to August 31st amounted to £675,704. This compares with £675,572 in the previous half-year and £676,876 in the corresponding period of 1934. The usual half-yearly dividend of 6 per cent. was declared payable on October 5th.

BRITISH INDUSTRIES FIXED TRUST—FIRST PORTFOLIO.—The trustees announce an income distribution of 5.6591 pence per sub-unit, free of income tax, for the half-year ended August 31, 1935. Dividend warrants will be posted on September 28th to certificate holders registered on August 31st.

BRITISH ROPES, LTD.—This company paid a half-year's dividend on the 6 per cent. cumulative preference shares on July 1st in respect of the period from January 1st to June 30, 1935, and the directors have declared a dividend on 7 per cent. preferred ordinary shares for the same period payable on October 1st. It is proposed to deal with the question of dividend on the ordinary share capital when the accounts for the completed year are out.

CENTRAL ARGENTINE RAILWAY.—The directors have decided to pay the balance of the dividend declared in November, 1933, on the 4½ per cent. preference stock. Although the full total was originally declared, it was payable only when sufficient funds were available in England.

CORDOBA CENTRAL RAILWAY COMPANY, LTD.—The board has decided to postpone payment of the half-year's instalments of interest on the company's first debenture stock which fell due on October 1, 1934, and April 1, 1935, as well as of the further half-year's instalment of such interest which falls due on October 1, 1935. Although for the year ended June 30, 1935, there was a small increase in the gross receipts in Argentine currency, and some decrease in expenses, the exchange loss on remittances was much greater than in the previous year.

E. W. TARRY AND COMPANY.—This company announces a dividend of 10½ per cent. on the £150,000 6 per cent. cumulative preference capital. This payment represents 1½ years' arrears of dividend which had been paid to September 30, 1930. No dividend has been paid on the £150,000 ordinary capital since 1929.

INTER-STATE ROYALTY.—Quarterly of 28 cents per "A" share in Inter-State Royalty Corporation and of 16 cents per "A" share in Second Inter-State Royalty Corporation, payable October 1st to holders on record as at September 15th.

LONDON TIN CORPORATION, LTD.—The directors have decided to postpone consideration of any further dividend on the preference shares until the accounts to April 30, 1936, are available.

PLATT BROTHERS (HOLDINGS).—The directors have decided to pay on September 30th arrears of dividend in respect of the 4½ per cent. preference shares for the year ended September 30, 1934.

THE RIO NEGRO (ARGENTINA) LAND.—The accounts for year ended June 30, 1935, show a profit of £9,482. Adding the balance of £7,024 brought forward, there is a balance of £16,506 to the credit of revenue account. The board recommend a dividend of 3 per cent., less income tax, which would absorb £9,000, leaving a balance of £7,506 to be carried forward.

SECOND BRITISH FIXED TRUST.—Coupon No. 6 (payable September 16, 1935), 6½d. per sub-unit, free of tax.

Lord Kennet has accepted a seat on the board of the Equity and Law Life Assurance Society.

Mr Stuart Colquhoun Sheppard has been elected chairman of the Rio de Janeiro Flour Mills and Granaries in place of Mr A. G. Weigall, deceased, and Mr Richard Stewart Nosworthy has been elected to a seat on the board.

BANKS

THE YOKOHAMA SPECIE BANK, LTD.—The accounts for the half-year ended June 30, 1935, show net profit for the past half-year of Yen 16,153,102.20, including Yen 8,941,325.02 brought forward from the preceding half-year. The amount was distributed as follows:—To reserve fund, Yen 1,650,000; dividend at 10 per cent. per annum, Yen 5,000,000; balance carried forward, Yen 9,503,102.20. It has been possible not only to maintain the dividend at 10 per cent. per annum, but to place a further sum of Yen 1,650,000 to reserve, so bringing this fund to Yen 127,450,000 and to carry forward an amount of Yen 9,503,102.20.

MISCELLANEOUS

SOUTH AFRICAN TORBANITE MINING AND REFINING COMPANY, LTD.—An agreement has been ratified between this company and the South African Motor Trade Association, Ltd., for the distribution of the total output of this company's petrol.

LEVER BROTHERS, LTD.—Lever Brothers, Ltd., have won a long-drawn-out patent suit. The case is expected to go before the Supreme Court for a final disposition. The plaintiffs asked for \$5,000,000 damages, alleging infringement of their Lamont patent for the manufacture of inflated soap granules in Lever Brothers' product, Rinso, which competes with the plaintiffs' soaps, Supersuds and Ivory Snow. Judge Slick ruled that Lever Brothers' process was a reasonable improvement on the Lamont patent and does not infringe the plaintiffs' rights. The \$5,000,000 requested was the plaintiffs' estimate of Lever Brothers' profits from Rinso in the seven years prior to 1934.

(i) Nine months.

(v) Fifteen months.

COMMERCE AND TRADE

SURVEY OF COMMODITY MARKETS

In striking contrast to conditions on the Stock Exchange, where the uncertainties of the political outlook are reflected in an absence of business and a weakening of quotations, the commodity markets presented a picture of considerable activity during the past week. As we point out in a Note of the Week, the scramble for certain crude foodstuffs and raw materials has brought about a substantial upward movement of quotations. The rise in grain prices continued this week, when Liverpool wheat futures touched the highest point for five years. The consequent advance in the price of flour has led to the decision to raise the price of the quarter loaf in London from 7½d. to 8d. on Monday next.

The persistent scarcity of tin is reflected in a further increase in prices and a decrease in United Kingdom stocks. An active demand for copper this week led to a renewed spurt in the price of this metal, while a number of other non-ferrous metals shared in the advance. Among textile raw materials, cotton and hemp were dearer, but certain descriptions of wool and jute were marked down in price. The weakness of the guilder has led to fear of devaluation and this, coupled with a certain pessimism regarding the outcome of the meeting of the International Rubber Regulation Committee next Tuesday, had a depressing effect upon the market in rubber.

Competition at the Mincing Lane tea auctions was again active, and the upward movement of quotations continued. Raw sugar also shows a rise on the week, but coffee and cocoa were practically unchanged in price. Colonial butter eased in price on a rather quiet demand, but quotations for both bacon and cheese on the London Provision Exchange continued steady. Loadings of potatoes were fairly heavy and, with demand only moderate, stocks rose and prices showed a weaker tendency. Meat and eggs are practically unchanged in price.

The gradual upward movement in the prices of primary products in the United States continued. Moody's index of the dollar prices of staple commodities (December 31, 1931 = 100) stood at 171.6 on Wednesday last, against 170.1 a week earlier, 166.9 a month ago and 151.6 on the corresponding day last year.

COAL

SHEFFIELD.—The export position continues, as before, with a scarcity of particular kinds of coal. Inland demand for manufacturing fuel is strong and prices are firm. Blast-furnace coke is selling more freely than formerly, with an increasing output. More overseas inquiries for coal are coming in for forward delivery, but owing to the uncertainty of supplies in the future, business is difficult to negotiate. The house-coal market is comparatively brisk.

Quotations: Yorkshire Association hards, 18s. to 18s. 6d.; washed trebles, 16s. 6d. to 17s.; screened gas coal, 16s. 6d. to 18s.; washed steam smalls, 13s. 3d. to 13s. 9d.; Derbyshire best hards, 17s. 6d. to 18s. (all f.o.b.); Yorkshire best house, 20s. to 22s. at pits; best Derbyshire, 19s. to 21s. at pits; furnace coke, 13s. 6d. at ovens.

NEWCASTLE-ON-TYNE.—There is a steady trade in Northumberland screened steam coals, inquiries being on a large scale for both foreign and home account. Graded steams are also in fairly good demand and smalls are being cleared without difficulty. The Durham export market remains quiet, there being little fresh trade in coking or gas coals, and bunker requirements show little improvement. But the improvement in the local demand for industrial fuel continues and enables production to be maintained at last year's level. Prime brands of foundry coke are firm, but ordinary sorts are offered.

Current f.o.b. prices for export: NORTHUMBERLAND—D.C.B. screened, 14s. 3d.; smalls, 11s.; Howards, Bentinck, Newbiggin screened, 14s.; smalls, 10s. 6d.; Tyne prime large, 13s. 6d.; smalls, 11s.; Hartley Main large, 13s. 6d.; smalls, 11s. 6d.; Lambton/South Hetton screened steam, 15s. 2d.; smalls, 12s. 6d.; Wear special gas, 15s.; Holmside, Ryhope, Boldon unscreened gas, 14s. 6d.; second-class gas, 13s. 2d.; coking unscreened and/or smalls, 13s. 2d.; prime unscreened bunkers, 13s. 9d.; second-class unscreened bunkers, 13s. 3d.; prime foundry coke, 18s. 6d.; Newcastle and District gas coke, 20s.

GLASGOW.—Though short-time working is still the rule in some districts, the general position is fairly satisfactory. Last week's shipments, at 288,000 tons, showed a considerable improvement. Scandinavian business is satisfactory, but Italy, France and other European markets remain poor. The London trade in nuts is opening up, and in view of the curtailment of supplies, due to short-time working, prices for these are strong as a rule, the smaller sizes in particular being tightly held. Industrial business is very well maintained, and as household trade is now increasing, prospects in the home market are quite bright.

Current export prices: LANARKSHIRE.—Ell best, 14s. 6d.-15s.; splint prime, 17s. 6d.; splint second, 15s.-15s. 6d.; navigation, screened, 14s. 9d.-15s.; navigation, unscreened, 13s. 6d.; Hartley, 16s.; steam, 13s.-13s. 6d.; trebles, 13s. 6d.-14s.; doubles, 13s. 6d.; singles, 12s. 9d.; pearls, 11s. 3d.-11s. 6d.; dross, 10s. FIVE.—Best unscreened navigation, 12s. 9d.-13s.; unscreened navigation, 12s. 6d.-12s. 9d.; first-class steam, 13s. 6d.-14s.; third-class steam, 12s. 3d.-13s.; trebles, 13s. 6d.-16s. 6d.; doubles, 13s. 6d.-14s. 6d.; singles, 12s. 9d.-13s.; pearls, 11s.-11s. 6d. LOTHIAN.—Best splint, 14s. 6d.; prime steam, 13s. 6d.-13s. 9d.; secondary steam, 12s. 6d.-12s. 9d.; unscreened navigation, 12s. 9d.; trebles, 13s. 9d.-14s. 3d.; doubles, 13s. 3d.-13s. 6d.; singles, 12s. 9d.-13s.; pearls, 11s. Ayrshire.—Best unscreened navigation, 14s. 3d.; steam, 12s. 6d.-12s. 9d.; trebles, 14s.; doubles, 13s.-13s. 6d.; singles, 13s. 6d.; pearls, 13s.; dross, 11s. 6d.

CARDIFF.—Business at South Wales ports has suffered considerably this week from the gales. Movements of a large number of vessels have been impeded, and only just over 40 berths have been occupied at the docks during the earlier days of the week. Colliery stems have consequently been disorganised, and work at some of the pits interrupted. Last week shipments in the foreign and coastwise trades totalled only 340,700 tons compared with 354,500 tons the previous week, and 438,730 tons in the corresponding period last year. Foreign demand shows no sign of expansion; on the contrary, shipments to Italy have further declined, and the Canadian anthracite season is rapidly drawing to its close.

Prices show no change, and the following may be taken as the current approximate quotations: Best Admiralties, 19s. 6d.; seconds, 18s. 9d. to 19s. 3d.; best dross, 18s. 9d. to 19s.; Black Veins, 18s. 3d. to 18s. 6d.; Western Valleys, 17s. 9d. to 18s.; Eastern Valleys, 17s. 3d. to 17s. 7½d.; best small steams (washed), 13s. to 13s. 6d.; coking smalls, 13s. 6d. to 14s.; seconds small steams, 12s. 6d. to 13s.; anthracite best large, 36s. to 40s.; Red Vein large, 22s. to 27s.; machine-made cobbles, 35s. to 51s.; stove nuts, 34s. to 49s.; French nuts, 35s. to 51s.; rubbly culm, 10s. 6d. to 12s.; special foundry coke, 37s. 6d. to 40s.; patent fuel (Crown), 21s.; pitwood, ex ship, Portuguese, 23s., French, 24s. 6d.

IRON AND STEEL

MIDDLESBROUGH.—The pig-iron market is very steady, with prices firm. There is now very little surplus foundry pig iron for sale, demand from local foundries and from Scotland absorbing supplies. Although small quantities continue to be exported, makers have no need to press for overseas business. Hematite pig iron continues to meet with a steady demand from home consumers. A further small parcel of about 600 tons has been shipped to Italy by special arrangement, but further business could be done with consumers there if the difficulty concerning financial arrangements could be overcome. The official minimum prices to home consumers are firmly adhered to, being 67s. 6d. per ton for No. 3 foundry pig iron and 71s. per ton for No. 1 East Coast hematite delivered in the Middlesbrough area. Total shipments of all classes of pig iron from the Tees during the first 17 days of September amounted to 6,701 tons, as compared with 6,391 tons for the same period in August.

Steel departments are very busy, and manufacturers have good orders on their books for all classes of semi-finished and finished steel, with the exception of rails. An order for a 7,000-ton vessel was placed during the past week by Cardiff shipowners with West Hartlepool shipbuilders. This will benefit the plate mills there. Heavy steel melting scrap is changing hands at 52s. 6d. per ton delivered at the works, but merchants are not keen to commit themselves too far ahead at this price.

Best Bilbao rubio ore is nominally 17s. 6d. per ton c.i.f. Tees. Good Durham blast-furnace coke is quoted at 19s. per ton delivered works, but could probably be obtained at a slightly lower figure.

SHEFFIELD.—The Sheffield steel industry is experiencing none of the quietude reported in certain departments in other centres of the trade. Production of basic semi-steel can scarcely keep pace with consumption and the demand for acid steel increases steadily. Exports of iron and steel manufactures last month were up a little, but foreign business continues disappointing. Sheffield appears to have an advantage over other districts in the possession of a number of valuable special products of steel, some of these being monopolies, or nearly so. The development of new industries up and down the country, too, has brought a lot of business to Sheffield for machine knives, steel parts and cutters of many kinds. This addition to local trade represents in the aggregate a considerable amount of work and turnover. The autumn trade is now in full swing and there are excellent winter prospects. The tool sections continue busy, but business in electro-plate and cutlery is relatively quiet, especially in overseas markets.

GLASGOW.—Conditions continue to improve in this district and practically all branches are busy. Steelmakers have well-filled order books and new business is on a gratifying scale despite the small tonnage from the shipyards. The demand of the various branches of engineering and tubemakers is substantial and has increased in volume within recent weeks. It is reported this week that Messrs Lithgows, Ltd., of Port Glasgow, have received orders for two cargo vessels from the Hain Steamship Company, Ltd., of London, and that Messrs David Rowan and Company, Ltd., of Glasgow, will supply the propelling machinery for these vessels. The number of mills operating in the sheet trade is considerable. These are largely employed on sheets for the home trade, which continues to expand. There is some improvement discernible in export business both in black and galvanised sheets, but this branch is still unsatisfactory. Steel bar re-rollers are all busy and a steady business is maintained.

JOHANNESBURG CONSOLIDATED INVESTMENT COMPANY, LIMITED.

REPORT OF DIRECTORS.—To be submitted to the Shareholders at a Meeting to be held in the Board Room, Johannesburg Consolidated Investment Company, Limited, Consolidated Building, Fox Street, Johannesburg, on Tuesday, the 26th November, 1935, at 11 o'clock in the forenoon.

ACCOUNTS.—1. The Company's Balance Sheet as at 30th June, 1935, and Profit and Loss Account for the year ended on that date, are submitted herewith.

PROFIT AND LOSS.—2. After making provision for Income Tax and for all charges, including the net amount required to adjust the values of quoted securities to cost or market value, whichever was the lower, at 30th June last, and to provide where considered necessary for possible loss in respect of unquoted securities and other assets, the profit for the year amounted to ... £1,142,030 12 5 To which is added the balance brought forward from the preceding year ... 168,642 15 5

Giving an available balance of ... £1,310,673 7 10 As the profit for the year again includes a substantial amount arising from share dealings, the Directors decided to transfer to Reserve Fund the sum of ... £350,000 0 0 On 10th July the Directors declared a Dividend of 5s. and a Bonus of 1s. per share, both less United Kingdom Income Tax. The Dividend and Bonus are payable on and after 19th September, 1935, to Shareholders registered on the Company's books at 31st July, 1935, and the gross amount absorbed is ... 790,000 0 0

Leaving a balance to be carried forward amounting to ... £170,673 7 10

RESERVE FUND.—3. With the addition of the amount of £350,000 transferred from Profit and Loss Account the Reserve Fund now stands at £2,300,000.

VALUE OF SHAREHOLDINGS.—4. In cases where market quotations were available the Company's shareholdings appear in the books at cost or market value, whichever was the lower, at 30th June, 1935. Unquoted securities have been valued by the Directors on a conservative basis and in no case above cost. In aggregate the market value of the shareholdings shows a large surplus over the book value. The strong financial position of the Company has been maintained.

GOLD MINING INTERESTS.—5. Further changes in the basis of taxation of the gold mines have been made and a surtax of 10 per cent. on profits has been introduced. The position with regard to taxation is unsatisfactory and disturbing, but it is gratifying to note that the Government has promised to set up a Departmental Committee of Enquiry.

The periodical reports and accounts issued by the Gold Mining Companies of the Group contain full information regarding operations. The Group's production of gold for the year ended 31st December, 1934, amounted to 2,657,209 fine ounces, as compared with 2,998,804 fine ounces for the year ended 31st December, 1935.

The following is a comparison of some of the principal details in the reports and accounts of the Gold Mining Companies:—

	Government Gold Mining Areas (M) Consol. dated, Ltd.	New State Areas Ltd.	Langlaagte Estates and G.M. Co., Ltd.	Randfontein Estates G.M. Co., Ltd.	Van Ryn Deep, Ltd.	Witwatersrand G.M. Co., Ltd.	TOTALS AND AVERAGES

Stopping width (inches)	57	48	42	43	48	57	...

OTHER GOLD MINING INTERESTS.—The Company has recently obtained from the Government the lease of a large area of ground to the south of the Durban Roadport Deep, Limited. The area is a promising one and boring will be carried out as soon as possible in order to ascertain whether the reefs lie at a workable depth. If the results of boring are satisfactory shaft sinking and development will then be proceeded with.

At the property of Randfontein Gold Mining Company Limited, steady progress is being made. In addition to the good values being obtained in development generally, the satisfactory values which are being disclosed in the Main Reef are also a pleasing feature. This reef was not explored by the Companies which formerly held this area, and the values found, together with the considerable width of the reef, augur well for the future of this mine.

Both Vogelstruisbult Gold Mining Areas, Limited, and East Daggafontein Mines, Limited, are making excellent progress, and the development so far accomplished is of an encouraging nature.

Exploration in the Murchison goldfield is proceeding. The reefs are irregular in character and, though good values have been found, further work is necessary before it can be decided whether they are sufficiently extensive to justify the equipment of a mine.

DIAMONDS.—6. The diamond trade, which in 1934 showed some signs of improvement, has made a decided advance in 1935.

The reorganization scheme of marketing which came into operation at the

beginning of 1934 has worked smoothly and satisfactorily, and is obviously tending to inspire confidence in the trade. The improvement has also been assisted by the renewal of the contracts with outside producers and by increasing confidence and freer spending in many countries, including America. It is well known that the first signs of improving times generally appear in the diamond trade, and it is to be hoped that the progress already made will continue and develop.

COPPER.—7. During the early part of this year an agreement between copper producers was arranged which had the promise of helping the price of copper materially and generally stabilizing the position. The immediate effect of this agreement was to bring about a hardening in price; then came the decision of the Supreme Court of the United States that the Codes which had been established in that country were illegal. As it was under the Copper Code that the price of copper had been stabilized in America, this decision led to a considerable amount of uncertainty as to what would happen there, resulting in realizations and a fall in price. At the moment it is uncertain what can be done, but the need for restriction of output and the regulation of the market is so fully realized by all copper producers that there is every hope that some way out of the difficulty will be found and that the work of the Conference held this Spring will prove not to have been in vain.

In the meantime, work goes on with increasing efficiency and entirely satisfactory results from the technical point of view, in the two Northern Rhodesian mines in which the Company is interested. N'kana is an established mine, and Mufulira is now a regular producer with a most promising future.

PLATINUM.—8. The market for platinum has been steady at a somewhat low level as regards price. The Rustenburg Platinum Mines, Limited, have worked regularly. The copper ore is now becoming exhausted, and it will be necessary to turn more and more to the working of sulphide ore. Certain metallurgical changes will be necessary, but no difficulty is anticipated. What is needed is a higher price and an increased demand, conditions which can only be brought about by a general return to prosperity throughout the world.

COAL.—9. Dividends were paid by Consolidated Collieries, Limited, and New Springs Colliery, Limited. The position of The Natal Cambrian Collieries, Limited, continues to show improvement.

SOUTH AFRICAN BREWERIES, LIMITED.—10. The profits of The South African Breweries, Limited, for the year ended 31st March, 1935, show a considerable increase over the profits of the preceding year, and the dividend on the ordinary shares was increased to 17½ per cent., free of income tax, as compared with 15 per cent., free of income tax, for the previous financial year. Further desirable interests have been acquired, the full effects of which have not yet been reflected in the accounts.

SOUTH AFRICAN CARBIDE AND BY-PRODUCTS CO., LTD.—11. The demand for carbide continues to expand and the enlarged plant of South African Carbide and By-Products Co., Ltd., places the Company in a position to take advantage thereof.

ESTATES AND TOWN PROPERTIES.—12. There has been a considerable demand for stands on the Company's residential estates, and satisfactory sales have to be recorded.

ARTICLES OF ASSOCIATION.—13. As will be seen from the notice which accompanies this Report, Special General Meetings have been called at which the Shareholders will be asked to adopt new Articles of Association.

The present Articles are substantially in the same form as when the Company was incorporated, and it will be appreciated therefore that considerable alterations are now necessary to bring them into line with modern requirements.

STAFF PENSION FUNDS.—14. Arrangements are practically completed for the establishment of Pension Funds for the office staffs in Johannesburg and London, for which the sum of £100,000 was allocated last year.

CONSULTING ENGINEER.—15. Mr. Kenneth Richardson, the Assistant Consulting Engineer of the Company, has been appointed Joint Consulting Engineer with Mr. G. H. Beatty in South Africa.

DIRECTORS.—16. In terms of the Company's Articles of Association the four following Directors retire by rotation, and being eligible offer themselves for re-election: viz., Sir Robert N. Kotzé, M.P., Sir Reginald A. Blankenberg, K.B.E., and Messrs. F. L. Johnson and J. H. Crosby.

ELECTION OF AUDITORS.—17. Messrs. S. Thomson and F. Dix, the Auditors of the Company in Johannesburg, and Messrs. Kemp, Chatteris, Nichols, Sendell & Co. the Auditors in London, retire from office and offer themselves for re-election.

By Order of the Board,

19th September, 1935.

A. W. CHRISTIE, } Secretaries.

A. W. CHRISTIE, Secretary.

We report to the Shareholders that we have audited the accounts of the Johannesburg Office of the Johannesburg Consolidated Investment Company, Limited, dated 30th June, 1935, and have obtained all the information and explanations we have required. The Balance Sheet of the Johannesburg Office of the Company is, in our opinion, properly drawn up so as to exhibit a true and correct view of the state of the Company's affairs in Johannesburg according to the best of our information and the explanations given to us, and as shown by the books of the Company in Johannesburg. We have also verified the securities in South Africa. The Company has kept proper books and records.

SAM'L THOMSON, Chartered Accountant. } Auditors.
FRANCIS DIX, Incorporated Accountant. }

Johannesburg, 6th July, 1935.

CARDIFF.—Slightly more active conditions in the tinplate trade were reported on the Swansea Metal Exchange on Tuesday. There were more foreign inquiries and sales were more numerous. There was a slight improvement also in the market for galvanised sheets. Prices, however, remain unaltered, with tinplates ruling at the scheduled c.i.f. scale based on 18s. 2d. per box f.o.b., galvanised sheets at £11 5s. per ton, and steel bars at £5 5s. per ton. Shipments of tinplates at Swansea last week totalled 32,356 boxes, as against 63,466 boxes the previous week and 105,993 boxes a year ago, and stocks were reduced from 61,391 to 44,319 boxes.

OTHER METALS

COPPER.—The undertone of the market has been firm, the principal stimulus coming from the United States. Towards the end of last week, American deliveries were heavy in anticipation of the increase in the domestic price (from 8½ to 9 cents per lb.) which was made effective on Monday. American sales reached the high level of 38,000 short tons during the first half of September, but since consumers in that country are well supplied with stocks, demand is likely to show some slackening in consequence of the increase of the domestic price. In the circumstances, it would not be surprising if export pressure from the American customs smelters, which had almost disappeared in recent weeks, again made itself felt. All things considered, the optimistic forecasts for the immediate future contained in many broker's circulars appear to be somewhat exaggerated. The unofficial statistics registered a reduction of almost 20,000 short tons to 549,830 short tons in world stocks, during August. This is encouraging, but it must be remembered that this figure does not include stocks in consumers' hands. These must have risen sharply last month in consequence of the high level of deliveries. The warehouse stocks of the London Metal Exchange have also risen by no less than 3,051 tons during the past week, thus reaching a new high level of 89,908 tons—compared with 56,047 tons at the end of 1934 and only 32,266 tons a year earlier.

Sales on the London Metal Exchange: 5,300 tons on Monday, against 1,800 tons last week; 3,750 tons on Tuesday, against 1,150 tons last week; 2,500 tons on Wednesday, against 2,450 tons last week. Domestic spot was quoted at 8-37½ cents per lb. in New York on Wednesday, against 8-02½ cents a week ago and 7-97½ cents a month ago. Wednesday's official closing price for standard cash in London was £34 10s. to £34 11s. 3d., compared with £33 13s. 9d. to £33 15s. a week ago. Stocks of refined copper in British official warehouses at the end of last week, at 78,449 tons, show an increase of 3,026 tons, while stocks of rough copper, at 11,459 tons, show a rise of 25 tons on the week.

LEAD AND SPLICER.—Quotations for both these metals advanced during the past week, although there were no new developments in either market. The statistical position continues healthy, thus demonstrating that the improvement in prices since the beginning of the year was justified. Spelter still seems rather cheap relatively to lead, but it appears that the negotiations for the renewal of the Zinc Cartel have encountered certain obstacles. It is not possible yet to assess the effects of the introduction of the new British duties since they came into operation at a time when unsettled political conditions induced consumers to exercise caution.

Sales of lead on the London Metal Exchange: 1,550 tons on Monday, against 800 tons last week; 1,100 tons on Tuesday, against 150 tons last week; 1,950 tons on Wednesday, against 700 tons last week. The New York quotation on Wednesday was 4-35 cents per lb., against 4-35 cents a week ago and 4-30 cents a month ago. The official closing quotation in London for soft foreign for shipment during the current month was £16 10s. per ton, compared with £15 13s. 9d. a week ago.

Sales of spelter on the London Metal Exchange: 600 tons on Monday, against 200 tons last week; 525 tons on Tuesday, against 10 tons last week; 1,425 tons on Wednesday, against 200 tons last week. Wednesday's quotation in East St. Louis was 4-75 cents per lb., against 4-60 cents the week before and 4-60 cents a month earlier. Wednesday's official closing quotation in London for "good ordinary brands" for shipment during the current month was £15 10s. per ton, against £15 2s. 6d. last week.

TIN.—The sharp rise in prices during the past week and the further fall in British warehouse stocks to 1,107 tons afford further evidence of the scarcity of tin. Demand is only moderate, since buyers are tending to wait for an increase in supply and a decline in prices. In the United States the activity of tin consuming industries (mainly

We report to the Shareholders that we have audited the Accounts of the London Office of the Johannesburg Consolidated Investment Company, Limited, dated the 30th June, 1935, and have obtained all the information and explanations we have required. The Audited Accounts of the Johannesburg Office have been properly incorporated in the above Balance Sheet and Profit and Loss Account, and, in our opinion, the Balance Sheet is properly drawn up so as to exhibit a true and correct view of the state of the Company's affairs according to the best of our information and the explanations given to us and as shown by the books of the Company. We have also verified the securities in London. The Company has kept proper books and records.

London, 1st August, 1935.

Dr.	PROFIT AND LOSS ACCOUNT for the year ended 30th June, 1935.	Cr.
By Profits realised on Stocks and Shares, Dividends, and Sundry Revenue, less provision for Income Tax and amounts written off	£ 1,179,016 18 7	£ 1,179,016 18 7
By Balance brought down	£ 1,142,030 12 5	£ 1,142,030 12 5
By Balance of Profit and Loss Account at 30th June, 1934	£ 168,642 15 5	£ 168,642 15 5
	£ 1,310,673 7 10	£ 1,310,673 7 10

the tinplate industry) has shown a considerable contraction recently and no significant increase appears probable in the immediate future.

Sales of tin on the London Metal Exchange: 245 tons on Monday, against 265 tons last week; 245 tons on Tuesday, against 215 tons last week; 290 tons on Wednesday, against 325 tons last week. The New York quotation on Wednesday was 49-25 cents per lb., against 48-60 cents a week ago and 51-00 cents a month ago. Wednesday's official closing quotation in London for standard cash was £226 17s. 6d. to £227 2s. 6d. per ton, compared with £219 to £219 5s. last week. Stocks of tin in London and Liverpool at the end of last week totalled 1,107 tons, a decrease of 56 tons on the week.

OTHER NON-FERROUS METALS.—Among other non-ferrous metals, aluminium ingots and bars for home delivery were again quoted at £100 per ton. Nickel, for home and export, at £200 to £205 per ton, remains unchanged. Quicksilver, on the spot, was firm at £11.15s. per flask of 76 lbs., as compared with £11 7s. 6d. to £11 10s. per flask a week earlier. Chinese antimony was quoted at £69 to £70 per ton ex warehouse, this price being unchanged on the week. Chinese wolfram for September-October shipment was quoted at 31s. to 33s. per unit c.i.f., against 32s. to 33s. last week. Platinum (refined) at £7 10s. per ounce, was 10s. dearer on the week.

TEXTILES

COTTON.—Manchester. — Following a period of comparative steadiness in raw cotton prices, quotations advanced on Wednesday due to extensive covering by Bombay and Continental interests. There was a scarcity of contracts in Liverpool and with practically no selling operations, prices stiffened. Cables received from New York have expressed a fear regarding the war scare. The movement in prices, however, has been contrary to the period immediately preceding the outbreak of the European war in 1914, for on that occasion prices slumped, but later advanced. Operators to-day seem to expect that an outbreak of hostilities by a European power would cause prices to rise. News from the American cotton belt has been mixed. Most traders, however, believe that the ultimate crop will be around 12,000,000 bales, which would be equal to the probable world consumption during the current season.

There has been more activity in the cloth section and the larger demand has been well maintained. A feature of interest has been the improvement in the turnover for India, freer operations taking place for Karachi, Calcutta and the up-country districts. There has also been more demand for Rangoon. Useful support has been given by South and West Africa and South America. There has not been much activity in home trade fabrics. American and Egyptian yarns have been sold more freely. It is estimated that during the past fortnight the turnover as compared with actual production has been larger than at any time this year.

EGYPTIAN COTTON YARN PRICES SCHEME.—A scheme for controlling prices and production by means of a pool and quota system in the Egyptian spinning section of the Lancashire cotton industry has been adopted by the special committee appointed by the Master Cotton Spinners' Federation. The proposals have been circulated to spinners, and it is expected that they will appear in the Press by the time these lines are in print. The scheme affects 18,000,000 spindles comprising roughly 200 mills. A mass meeting of all firms interested will be held in Manchester on September 27th. The leaders hope that the proposals will be

Cloth orders are small, but inquiries are made for fair quantities.

MILK.—Under the new contracts, the provisions of which come into force on October 1st, the farmers in Great Britain are to receive 5d. per dozen gallons more for their milk than during the past twelve months. The implications of this decision and the threat of the distributors not to sign the contracts are discussed in a Note of the Week. Information regarding the operation of the scheme

The Full Report and Accounts (with Plans of Workings) may be obtained from the London Secretaries, A. MOIR & CO., No. 1 London Wall Buildings, London, E.C.2.

SUGAR.—In New York, an upward spurt of quotations was recorded at the end of last week, but the rise was not fully held.

Prices are, however, still above those ruling a week ago. In London, raw sugar was a steady market, quotations for futures showing a rise on the week. The spot price in New York on Wednesday was 3.47 cents per lb., as compared with 3.45 cents per lb. last week and 3.45 cents per lb. a month ago. Wednesday's sales of raw sugar in London included "December delivery" at 4s. 5d. to 4s. 6½d., against 4s. 3½d. last week. The movements of raw sugar at public warehouses in London and Liverpool last week were as follows: Imports, 16,544 tons, against 26,371 in the previous week and 2,454 in the same week of last year; deliveries, 14,266 tons, against 14,190 and 15,119 tons respectively; stocks, 149,253 tons, against 146,975 and 124,198 tons respectively.

TEA.—The following table shows the average prices (compiled by the Tea Brokers' Association) of tea sold at Mincing Lane on Garden Account in recent weeks:—

market was again strong and the recent upward movement of quotations was continued.

VEGETABLES.—The Fruitgrower's Covent Garden correspondent states that tomatoes have not been selling too well recently, prices having declined. Cucumbers have also been a slow sale, with quotations easier. Mushrooms are a shade lower in price this week. Celery is now arriving and is in good condition. Cabbage and marrows have been firm in price. The London markets have been liberally supplied with potatoes and, with demand remaining quiet, stocks have accumulated. Demand has been concentrated on the best samples, prices for other grades being frequently lower on the week. But at the Borough Market on Tuesday, King Edward were again quoted at 5s. 6d. to 6s. 6d. per cwt., ex market.

MISCELLANEOUS COMMODITIES

VEGETABLE OILS AND OILSEEDS.—A sharp rise in linseed following the excitement in grain markets brought business practically to a standstill. Earlier, in a firm market, up to £9 10s. had been paid for Plate, October shipment to Hull, and £11 16s. 3d. for Calcutta November-December. Forward positions generally are at a premium over September, but demand has been restricted and crushers' purchases confined to near seed. Shipments from the river Plate are at a moderate level and the statistical position remains satisfactory, available supplies being considered equal to requirements until the new Plate seed comes along. The quantity afloat for Europe is now 125,400 tons (including 3,000 tons from

India), 4,600 tons more than last week; and for the United States and Canada 33,100 tons, against 37,000 tons a year ago. Trade in cottonseed is desultory. For new crop Egyptian, November loading, £6 5s. and December, £6 2s. 6d. have been paid at Hull.

Linseed oil had been in good demand before a sharp advance in prices caused buyers to hold back. In sympathy with seed raw oil has advanced to £24 delivery per ton naked ex Hull for September-December and January-April. Cotton oil is quiet but steady. Egyptian crude ex Hull is quoted £25 and refined £27 per ton. Oilcakes are in improving demand and "linseeds" are dearer.

RUBBER.—The unfavourable political outlook and fears of a devaluation of the Dutch guilder, coupled with some pessimism

regarding the outcome of the meeting of the International Rubber Regulation Committee next week, have exerted a depressing effect upon the market. Prices, both in this country and the United States, are again lower on the week. The spot price in New York on Wednesday last was 11½ cents per lb., compared with 11½ cents per lb. a week ago and 11½ cents a month earlier. Wednesday's official closing price for standard ribbed smoked sheet in London was 5½d. per lb., as against 5½d. on the corresponding day last week. In forward positions, business has been done at 5½d. to 5½d. for October-December, 1935, as against 5½d. to 5½d. a week ago. Stocks in London and Liverpool at the end of last week totalled 178,012 tons, against 177,258 tons a week earlier. A year ago stocks amounted to 110,502 tons.

WHOLESALE COMMODITY PRICES

ABYSSINIA— AND THE MARKETS

What has your daily paper done to keep you abreast of the developments at Geneva and their effect, now and in the future, on the markets?

Has it helped you in framing your investment policy?

Has it told you what significant stages to look for in the gradual unfolding of the League machinery?

Perhaps your paper has been too much occupied in pleading its own case—pro-League—anti-League—or whatever it may be—that it has scarcely bothered to help you understand the day-to-day facts at all.

Perhaps it is so occupied with the ultimate political significance of this crisis of League principles that it has considered the financial and market angle *infra dig*.

Perhaps the financial pages that you read have just never bothered about it—have never even taken the trouble to tell you how the machinery of the League works in a case like this, still less attempted to relate it to the market position.

You would not have suffered these drawbacks if you had been reading

THE FINANCIAL NEWS

Ask the "F.N." readers amongst your friends and they will tell you.

THE FINANCIAL NEWS has dealt day after day, in its leading articles and investment notes, with the latest Italo-Abyssinian developments—what they mean, where they lead, how the market is taking them, what effect they should have on gilt-edged values, industrials, gold mines. . . .

THE FINANCIAL NEWS has no political axe to grind. In this matter, as in others, its sole aim is to help and advise the investor and business man, and to watch over the interests of the business and financial community.

Try it now and find out for yourself

THE FINANCIAL NEWS

On sale at all railway bookstalls and good
newsagents everywhere.

A SELF-BINDER FOR The Economist

Week by week you keep your copies of "The Economist," and ultimately you either file them or bind them. Doubtless you are accustomed to the annoyance which attaches to the ordinary binder—the difficulty of reading half the left-hand page and the unwieldiness of the device generally.

We are able to offer our readers a binder which overcomes these irksome difficulties and is, in our opinion, the most efficient contrivance for the purpose we have yet seen.

It holds three months' issues and index, it has no wires, clips or metal contrivances, and each issue can be bound up in an instant in such a way that it can be read as easily as a well-bound book.

(IN FULL CLOTH, LETTERED ON SPINE AND FRONT)

THE LEAGUE GOES AHEAD

AFTER so many and varied vicissitudes, the initiative in the Italo-Ethiopian dispute has once more reverted to the full Council of the League. Last Saturday the Italian Council of Ministers continued their adjourned session. They decided that the proposals for "assistance" to Abyssinia contained in the report of the League Committee of Five were "unacceptable"; and, though on Sunday Baron Aloisi proffered certain reasons for their unacceptability to the Chairman of the Committee, Señor de Madariaga, his hints of a basis on which Signor Mussolini might be prepared once more to discuss a pacific solution of the dispute were on Monday characterised by the Italian Government as "unofficial." On Sunday also, on the other hand, the State Council of Ethiopia decided to accept the Committee's proposals as a basis for negotiations. There was thus nothing to be gained by withholding the Committee's report from public scrutiny; and on Monday it was duly published, together with an agreed version of the notes which Señor de Madariaga had made of Baron Aloisi's verbal objections to it.

The official text of the report of the Committee of Five contains no surprises; for its terms had been fairly comprehensively anticipated. There are, however, many observers, both at Geneva and in the world at large, who think the report goes too far in advocating so drastic a version of League "assistance" in developing a sovereign State-Member of the League. It is reported that the Russian representative, M. Litvinov, and one or two representatives of the smaller Powers on the Council, have been unfavourably impressed by the extent to which the Committee in its Charter of Assistance recommended control under League auspices over gendarmerie, police, Budget, economic exploitation, etc., in Abyssinia. These critics affect to see in all this not only a derogation from that sacred principle of national sovereignty which is both the basic principle and weakness of the League itself, but something more sinister—the cloaking of capitalist or imperialist aggrandisement beneath the mantle of the League. Now, although Italy has outraged the moral opinion of the world in her behaviour and avowed pretensions over Ethiopian

independence, and although Mussolini's Italy insisted on Ethiopia's entry into the League in 1923 in the face of British doubts and opposition, it is necessary to hold fast a sense of proportion. After over ten years of League membership, Ethiopia has not been able, of her own strength, to achieve such progress towards the standards of Western civilisation as would justify any complacency on the part of the League. Indeed, not only has the League—the League, be it noted, and not any Great Power, as the Italian dictator arrogantly contends this week—the right to examine Ethiopia's continued eligibility for League membership; but the Ethiopian Emperor himself has admitted, on earlier occasions than the present, his need of truly international assistance in the great and clamant task of developing, both socially and economically, his backward country. The Committee of Five, in short, have acted well within the framework of the League's rightful concerns, and the terms of their report are adequate to the occasion.

When all this is said, however, the "observations" of Baron Aloisi in rejection of the Committee's report reveal—with grim and stark finality—the gulf of contrast between Mussolini's contentions and the position of the League. Indeed, the agreed version of these Italian observations, as now published, abundantly demonstrates not only that the Italian dictator persists in his obduracy and remains inflexible in his claims and designs against Abyssinia, but that he has even stiffened an already rigid attitude. The order to conjure the palest ghost of an Abyssinian "threat" to Italy suggest a state of mind bordering on hysteria. Not only did Baron Aloisi reiterate the unwarrantable claim that Italy has the right unilaterally to expel Ethiopia from League membership and protection. He went on to arrogate to Italy the right to "rescue" non-Amharic tracts of Abyssinia from the Emperor's rule. He described Ethiopia as a country where "conditions of barbarism are accompanied by a powerful modern armament"—this of a country which cannot even yet, by reason of the Great Powers' desire not to ruffle Italian susceptibilities, obtain the means for legitimate self-defence, and where

each soldier has on the average but four rounds of dubious ammunition! He said Italy saw in Ethiopia "her special and most dangerous enemy"; and that international supervision of Ethiopian civil and military administration, as proposed by the League Committee, could answer neither Italy's aims nor those of the League. He declared that Italy had always opposed the cession to Ethiopia of an outlet to the sea; and that he must now oppose the Franco-British offer to "facilitate territorial adjustments between Italy and Ethiopia" by granting the latter an outlet to the sea in their own territories, for that would make of Ethiopia "a maritime Power, thus heightening the real threat that she constitutes to Italy." This travesty of a "case" can only be taken as calculated effrontery to the collective intelligence of the world, or else as the product of persecution mania. There is none so blind as he who will not see; and it is more charitable to the Duce to conclude that the "reasons" for the Italian Government's rejection of the League Committee's report are due to the latter cause.

What happens now? The full League Council is now once more charged with the handling of the dispute; and on Thursday morning they decided to proceed, under s. 4 of Art. XV of the Covenant, to appoint a Committee of the whole Council—excluding, of course, Italy—whose duty it will be, either unanimously or by majority vote, to "make and publish a report containing a statement of the facts of the dispute and the recommendations which are deemed just and proper in regard thereto." There is no reason whatever, in view of the long tale of Italian intransigence throughout this dispute, and in the face of the Duce's latest declarations, why the Council's report should take more than two or three days to prepare. What its recommendations for a settlement should contain is surely evident already. Perhaps one, or at the most two, of the States on the Council might abstain from voting; and the report would still be unanimous. Then it will be for the dictator of Italy to decide if he will automatically commit an act of war against all Members of the League by defying the Council's recommendations and declaring his war on Abyssinia, and thus challenge the League as a whole to proceed to the most rigorous sanctions envisaged in Art. XVI of the Covenant. If there is no unanimity on the Council—though, given a continuation of the bold and firm British lead at Geneva, we think it is possible of achievement—each country is free to take its own measures to maintain "right and justice." There remains now only one thing which the Council should forthwith, and without question, agree to do. That is, to accede to the Ethiopian Emperor's urgent request on Wednesday that the League should send a commission to the Ethiopian frontiers to ensure that the Abyssinian troops keep well within them, and that no act of aggression against Italy takes place. In fact, Mussolini must be made to keep the peace, until he himself decides wantonly to break it. This is the least that the Council, in common decency, can do for a League Member who has strictly and uncomplainingly observed all the requirements of diplomatic decency, in the face of severe provocation.

But suppose the Council, as it should do, rapidly and even unanimously draws up both report and recommendations; and suppose Italy, inflamed with hysteria, flouts the Council and makes war on Abyssinia; what then? Then comes the inevitable and crucial test of the League; the test, not of the League's judicial procedure or administrative machinery, but of its *capacity to perform* what it has itself decided. The League is a cumbersome apparatus, true enough; but if that cumbrousness cannot be transformed into effective execution, then the Powers of the world—Great and Small alike—will be driven helter-skelter to makeshift alliances and perilous expedients in a vain search for peace and national security. The world after the indecorous interment of the League will have to "try again." It is scarcely credible that the world will find a better way of peace than that of the League. It is altogether beyond belief that the scourge of aggressive warfare can be eradicated along any other path.

The next, and most fateful, move is thus with the Council of the League. Will it be checkmate to Italy, or stalemate for the world? It can only be one or the other. And for the sake of the world we trust it will be the first.

A DEFENCE LOAN?

ON the main issue of foreign policy—the question for what purpose Great Britain's armed forces should be used—the principal political parties are more united than for a very long time. On the question whether those forces should or should not be increased, there is more room for serious disagreement. In a speech at Kelso on Saturday last Mr Neville Chamberlain advocated a substantial measure of rearmament by this country. He maintained that "our defence forces have fallen to a dangerously low level"; and he urged a strengthening of those forces on the grounds both that we must maintain our "self-respect" and power of self-defence, and that we must be able to fulfil our obligations in the system of collective security. The present state of our arms, in Mr Chamberlain's opinion, has "shaken the confidence of our friends in our ability to carry out our obligations." Some surprise will no doubt be felt that Mr Chamberlain should have chosen this precise moment to proclaim to the world the ineffectiveness of Great Britain's armed forces. It is also questionable whether he expressed the matter altogether justly. There is more than a little ground for thinking that if our friends have underrated, and our possible foes have pooh-pooh'd, the value of Britain's support, it is because both have doubted our will to act decisively rather than the efficiency of the weapons at our command. Signor Mussolini, at all events, has left no doubt that in his opinion it is not material armaments that are changing the balance of power, but the fact that British character has become soft and British leadership effete.

Two questions are involved in this proposal which must be kept distinct. The first is whether we need to re-arm and if so on what scale; and, secondly, whether it is desirable that any re-armament that may be necessary should be carried out by means of a special loan or should be paid for, in accordance with Britain's almost unbroken tradition, out of revenue.

It is vital to realise that a precise answer to the first and more important of these questions cannot at this moment be given; for it must to a large extent depend on the outcome of the present crisis. Nevertheless, it is probable that next week's Conservative Conference will endorse Mr Chamberlain's plea for a greatly increased expenditure on the Navy and the Air Force; and that while the Labour Party at Brighton is discussing the ethics of rearmament, the Conservatives at Bournemouth will be recommending the immediate financing of it by the fashionable expedient of the moment—viz. a national defence loan of £150 to £250 millions. Let us briefly consider, however, the state of our defence forces. Protestations like Mr Chamberlain's remark that "we have tried unilateral disarmament in the hope that other countries would follow" are not wholly unfounded. But they are apt nevertheless to strike many other nations besides Germany as somewhat hypocritical. After the Armistice and the sinking of the German fleet, the Navy was reduced considerably; and it has still not been built up to the maximum strength agreed upon at Washington. Moreover, it has grown more and more out of date with the passing of the last seventeen years. The great majority of our existing capital ships date from the war or immediate post-war period; and if no change in the naval treaties were made after 1936 we should expect to begin replacing the Navy from top to bottom in the coming decade. But although we have not seriously begun our naval replacement programme, the Navy remains as powerful as any in the world and more powerful than any in Europe. In capital ships alone, despite obsolescence, we remain overwhelmingly more powerful than any European nation; though in destroyers, submarines and naval aircraft the position is not so strong. Our Air Force, as a whole, like the Navy, was radically diminished after the war, and no attempt was made to attain a one-Power standard even in relation to European nations. Last spring, however, an expansion was undertaken designed to maintain our air strength at least on a level with Germany's.

If no fresh challenge is forthcoming and nothing is done in the way of limitation, it looks as though Great Britain may find itself in the position of having to rebuild the Navy over a series of years on the scale of the Washington and London Treaties (though this scale may be increased if the

United States abandon all idea of limitation of size or if Japan builds on a wildly lavish scale), and of creating a one-Power standard Air Force, which on present indications seems likely to mean some 1,500 front-line machines.

Though we shall happily be spared any necessity to inflate our land forces, these two tasks will impose a very heavy burden. It will be greater still if some war-minded country throws all discretion to the winds. It may be very much less if elementary common sense—stimulated possibly by economic pressure—begins to make itself felt.

Which of these will happen depends—as we have said—on the issue of the present crisis. If the League succeeds, whether by the threat or the use of collective force, in effecting an agreed settlement, two things will have been decisively demonstrated: first, that collective security can work; and, secondly, that Britain's present forces are not in present conditions inadequate to fulfil her *collective* obligations. The problem would then once more become that of supplementing collective security with a collective limitation of armaments. A beginning has already been made in this direction by the Anglo-German naval agreement of last summer.

If, on the other hand, the League fails in the present crisis, faith in the collective system will vanish, and the only hope of preventing an unlimited scramble for armaments will be that economic exhaustion will induce the nations to impose some maximum—albeit a very high one—on these competitive programmes.

For Great Britain, as for other countries, therefore, the moment for decision has not arrived; and at such a moment it would be folly to launch out on a programme that would be regarded as a challenge by the suspicious and a confession of despair by those who are seeking to establish the rule of international law.

In any case, however, it is improbable that we shall escape without any measure of rearmament. The question, therefore, remains whether it is wise and proper that at this stage in our history we should proceed by way of loan. Our answer is emphatically: No. It is true that all the arguments in favour of loans for public works have been and will be brought forward in favour of this plan. And it is, indeed, true that in present conditions the raising of such a loan would have some inflationary effects—though, of course, the spending of it would be spread over many years, while its effect on particular depressed industries would be no greater than if the expenditure were made out of revenue.

Against the argument for an inflationary armament loan there are two arguments which in our view are decisive. The first is that loan expenditure designed to stimulate recovery should be expended on social assets, such as better housing, which are desirable in themselves and will remain of lasting benefit to the nation. An armaments loan is "dead weight" debt in the fullest sense of the term. Unlike earning assets, such as roads and houses or amenities which add to social wealth and rateable value, an armaments loan will contribute nothing whatever towards its amortisation and interest charges. The second and final argument is political. If Great Britain gives the lead in renewing its armaments by loans of which no one at the moment feels the burden, our example will be copied all over the world. And if once the nations get it into their heads that we can get these pretty toys for nothing, and that such expenditure can incidentally make unemployment disappear as if by magic, we may as well throw in our hand at once and abandon hope of saving the world from destruction. We sincerely hope that whatever the measure of rearmament—if any—to which we are driven, we shall have the courage to meet it out of the tax revenue of the country and not attempt to disguise the burden which the nation is condemned to bear.

AMERICAN RECOVERY

FOR some months the business news coming from the United States has been almost uniformly favourable. Our New York correspondent has reported the developments as they occur, and there has rarely been a week since the early summer when there was not some news of industrial revival. Wall Street, that sensitive indicator both of indus-

trial prospects and of business psychology, started rising in April and, brief hesitations apart, has been rising ever since, and is now well above the highest level touched in 1933 or 1934. There has been a pause in the last week or two, as is only natural and healthy after so long-continued and so rapid a rise, but the underlying sentiment is still definitely optimistic.

There have been several previous periods of optimism since 1929—rearguard actions in the declining years 1930-32 and "false starts" in the years of slow recovery since 1933. But there have been none which have lasted so long as the present improvement. Hitherto, no upward movement has continued for more than four months without a definite reversal of trend. But on this occasion the improvement has been maintained for at least six months, and there is no sign of a drastic setback in the immediate future. Moreover, there are several elements in the present situation which give promise of more soundly based and less speculative advance than at any time since the depression began. Still it is only necessary to glance at the statistical data of industrial activity to realise how unequal has been the extent of recovery. For example, car-loadings on the railways—an index which has in the past, as have the similar figures in Great Britain, served as a comprehensive guide to industrial activity—have been disappointingly stagnant. To some extent, however, this is due to smaller movements of grain and livestock, which must not be taken as indications of adversity. But the combined index of car-loadings is less than two-thirds of the average level of 1923-25. Electric power production, on the other hand, is higher than ever before. Indeed, it is running in excess of the computed normal, and in August was more than 10 per cent. above the same month of last year. Of the two indices there can be no doubt that electric power production is the surer guide to the movement of general activity; for the railways are affected, in the United States as elsewhere, by the very rapid development of other forms of transport.

This fact is also shown in the continued strength of the demand for automobiles. The motor industry has had a surprisingly favourable record throughout the depression years, indicating perhaps that it now ranks almost as a consumer's necessity. But that has not prevented it from leading the way in recovery. Production has been very high since the beginning of the year, and although there has been some slackening in recent months in preparation for the opening of the new season, there is every indication that next year will exceed this year. Moreover, it is most significant, and most useful as a corrector of the railway loading figures, to observe that the demand for commercial vehicles appears to be outstripping that for passenger cars. In June, for example, registrations of new passenger cars were 25 per cent., those of new commercial vehicles nearly 44 per cent., better than in June, 1934. The steel industry has benefited from this continued activity of the motor industry, and production this year has never fallen below 37 per cent. of capacity (except at holiday time), although last year the figure fell at times below 20 per cent. At the

beginning of August production was still running at over 45 per cent., compared with only 25 per cent. at the same time last year.

It would be wrong, however, to give the impression that these facts are typical of the whole of industry. The textile industries are not nearly so happy. In cotton spinning, for example, the activity of the mills is only a shade greater than twelve months ago, though wool and rayon are both more active. In general, however, consumers' demand is holding up well, as is shown by the figures of retail sales. The Federal Reserve Board's index of department store sales, for example, stood at 80 in July (1923-25 = 100), compared with 73 in July, 1934. There seems to have been little rise in retail prices, other than those of food, in the last twelve months, so that the increase in total sales almost certainly reflects an increase in sales by volume. The chart below, based on Federal Reserve indices, shows the main lines of industrial development in America since March of 1933:—

U.S.A. INDUSTRIAL PRODUCTION AND EMPLOYMENT

It is not in the field of consumers' goods, however, that the greatest encouragement is to be found. Throughout the depression the greatest inertia has been shown by the durable goods industries. But in recent months there has been a distinct stirring of dry bones in the construction industry. This is not fully revealed in the index of contracts awarded, for this includes the Public Works programme, which is now in the stage of actual construction rather than of awarding contracts. But privately financed construction is beginning to increase rapidly, and the index of contracts for residential building is double its last year's figure. Residential building in the United States depends almost entirely upon the state of the mortgage market. So long as the mortgage institutions were being forced by the financial crisis to contract, foreclosures were common, rents were depressed and new construction did not pay. A revival of construction had to wait upon an increase in rents for existing houses and a revival of mortgage lending. Both these have now occurred. Rents are about 12 per cent. higher than at the beginning of 1934, while mortgage lending by 47 leading life insurance companies in 1935 has been at the rate of about \$3 millions a week, compared with less than \$700,000 a week in 1934 or 1933. Building costs, after a rise of some 25 per cent. as a result of N.R.A., have been declining for the past twelve months. In view of the part played by building in the British recovery, both as cause and as symptom, the significance of these facts can hardly be exaggerated.

In this industrial revival, the farmer is not being neglected. Except for fruit and market garden produce, his prices are all higher than last year and his income, including the payments he receives from the Government for restricting production, was about 13 per cent. greater in the first half of 1935 than in the first half of 1934. This calculation is confirmed by an increase amounting to

almost 20 per cent. in the sales of the two great mail order businesses.

This brief survey will have indicated the widespread character of the current upward movement. Unfortunately it is impossible to assess statistically, even with the wealth of figures available in the United States, the prospects for the continuance of the movement. Any temptation to indulge in excessive optimism can be sobered in a moment by the reflection that there are still some ten million unemployed in the United States. Even in this direction some progress has been made, and the Trade Union percentage of unemployment among their members has been brought down from an average of 24.3 in 1933 to 18.3 in June, 1935. It can at least be said in the present movement's favour that it is fairly evenly spread both between different industries and different areas. The capital goods industries are for the first time getting their fair share of the improvement. As for geographical distribution, out of fifty trading areas in the country, in only two was there no increase in the total of bank debits (cheques drawn) between July, 1934, and July, 1935, and in those two there was no recession.

Another favourable point is that the improvement is not proceeding too fast. Indeed, the chief danger is lest it should accelerate too rapidly and open the door, as it was opened in 1933, to excessive speculation and the inevitable collapse that would follow. Money is not only plentiful in the United States, but excessively plentiful. According to the latest available figures, the member banks are using only half of the cash balances they hold. Of a total of \$5,100 millions on July 31st, no less than \$2,513 millions were "excess"—that is, held in excess of the reserves required to be held against deposit liabilities. With this enormous pressure of unused money, member bank deposits are increasing very rapidly—at the rate, over the last twelve months, of 20 per cent. per annum. Moreover, bank debits are increasing even more rapidly, so that both the volume of money and its average velocity are rising. For the moment, this is all to the good; indeed, industrial recovery would be impossible without some degree of monetary expansion. But in the long run (which is not so long as to be dismissed from the mind) there is more cause for alarm. The potential volume of money is almost unlimited. The Federal Reserve authorities have never yet been able to control an expansion of credit. Even with the new weapon of an increase in minimum reserve ratios in their hands, will they have the political courage to use it, especially since the Treasury must finance an enormous deficit and re-finance the constantly recurring maturities of its very large short-term debt? These are some of the doubts and queries that beset the prophet who attempts to look more than a few weeks into the future. But for the moment they are but doubts and queries, and if the pace does not become too hot, there would seem to be no reason for quarrelling with the sober optimism which is now beginning to spread over the American scene.

SAFETY ON THE RAILWAYS

DURING the past year there have been three serious railway accidents at Winwick Junction, King's Langley and Welwyn Garden City, directly due to the failure of signalmen to carry out the rules of "block working." A fourth disaster, at Glasgow, though directly due to a driver's error, revealed certain weaknesses in the local application of the block regulations.

The block system was made compulsory by law about fifty years ago. Briefly it operates as follows:—Take first three successive signal boxes, A, B and C, on a double line consisting of an up and a down track. Consider the equipment of box B. There are the levers working the signals for each direction, and also a shelf of bells and block instruments. The signalman in charge has two bells and two keys for bell communication between him and A and C, and also four block instruments—down line from A, down line to C, up line from C, up line to A. Each instrument has a needle, which can be made to point to "line closed," "line clear," or "train on line." The block in-

struments for the down line from A and up line from C have switches, by which he controls both his own needles for those instruments and the corresponding needles in the other boxes. The needles on his two remaining instruments are controlled, respectively, by switches in A and C boxes.

The simplest way to see how it works is to imagine oneself in box B during the passage of a down express from A to C. The first intimation of its approach is four beats on the bell worked by signalman A. That means: "Is line clear for an express train?" If B knows the line is clear to his box, he repeats the four bells on his bell key to A and then turns his switch so that both his down needle from A and A's down needle to B indicate "line clear." This is A's authority to lower his signals. Later on B gets two bells from A. This means: "Train entering section" (i.e. passing A on the way to B). B repeats two bells and switches both needles to "train on line." He immediately sends four bells to C. C in turn acknowledges and puts his own down needle from B, and B's down needle to C, to "line clear." So soon as B is given "line clear" in this way, he lowers his signals and waits for the train. As the train passes him, he sends C two bells, and C acknowledges and switches his and B's needle to "train on line." At the same time B sends a different bell signal to A—"train out of section"—and switches his own down needle from A, and A's down needle to B, back to "line closed." Finally, he receives "train out of section" from C, and his down needle to C is restored by C to "line closed."

Only after "line clear" has been given may the signals be lowered for a train. Only after "train out of section" has been given for the first train may "line clear" be asked for or given for a second train. If these simple rules are followed implicitly, it is only possible for one train at a time to be in the section between two adjacent signal boxes.

How does this work in practice? On balance, very well, but the reports on these four accidents suggest the existence of certain dangers. We have seen that even the smallest box on a double line contains two bells and keys and four block instruments. When there are four tracks, eight instruments are needed—and this is so at King's Langley and Winwick Junction. At Welwyn Garden City there were four main tracks and two single branch lines, necessitating eight needles for the main lines, and further needles for the branch lines. Also at Hatfield, to the immediate south of Welwyn, the up and down tracks were controlled by different signal boxes, so that Welwyn Garden City had to have a separate bell for each up and each down track, instead of one bell for a pair of up and down tracks. Altogether this box had eleven bells, and the signalman in charge had to be able to identify by its tone each separate bell. Furthermore most signalmen have further duties besides the signalling of trains. They have telephones to answer and telegraph instruments to operate—often on general traffic messages. It is a serious thought that at Winwick Junction the attention of the signalman's booking boy was called to the telephone just before the accident to take particulars of alterations in future excursion train running; while at Welwyn, where the signalman was alone, he had, at what turned out to be a critical moment, to transmit a telephone inquiry about a lost parcel.

Let us see how things can go wrong. First a signalman can lower his signals before receiving "line clear." Next a signalman can give "out of section" for a train and accept a following train, before the first train has reached him. This definitely happened at Winwick Junction. King's Langley provided a variant upon this irregularity. A train broke down in the section, and the signalman in advance telephoned the signalman in rear and said "Haven't I cleared it?" On being told "No," he assumed that the train had passed him unnoticed, and promptly gave "out of section" and accepted the following train. This inevitably ran into the broken-down train.

At Welwyn Garden City there is no doubt that a down train was similarly cleared before it reached the signalman, and the next down train was accepted from Hatfield so that it ran into the first train. There is also no doubt that possibly because of the lost parcel inquiry the signalman delayed signalling through the first train, and the resulting check to it was a primary cause of the accident. As it happened, there was an up train passing at the time, and

the signalman had to give "out of section" for it to Welwyn North. It is possible that, by mistake, he gave "out of section" on the down line bell and instrument back to Hatfield, and when Hatfield promptly offered the next down train he unfortunately accepted it.

If this was the true sequence of events, it shows that a signalman surrounded by a multitude of block instruments and bells must keep a very clear head, and to the layman it would appear fatally easy to clear the wrong instrument. Also when a signalman is dealing with four tracks and perhaps as many as eight trains (four in advance and four in rear) it appears easy to think that a train has passed unnoticed and to clear it to the box in rear when it has not gone through at all.

It is necessary to keep a sense of proportion and to remember the vast number of trains which run safely, but there is equally a case for inquiring whether it should not be made compulsory by law to strengthen the block system in certain ways. These ways might include:—

(1) The adoption of electrical devices designed to ensure the proper adoption of the block system. These should include the interlocking of block instruments and signal levers, so that a train could only be signalled forward after "line clear" had been given specifically for that train, while "line clear" could only be given after the signals had been replaced behind the previous train. The improper clearing of trains before they had arrived can only be prevented by continuous track circuiting, by which the train automatically maintains the instruments at "train on line." Their universal adoption would be slow and costly, but there is a strong case for compelling their adoption on routes where the risk of failure is greatest—that is on routes consisting of four or more tracks carrying fast intensive traffic. If continuous track circuiting is deemed impracticable, cheaper devices exist whereby "line clear" for a second train can only be given after the first train has passed over a treadle or short length of track circuit at the end of each section.

(2) There is an obvious psychological danger in telephone conversations between signalmen about whether a train has cleared or not. As the Welwyn and King's Langley reports say, such conversations must take a precise form, and a written record must be kept of them. They should refer to a specific train, and not simply to "the last train."

(3) Bells should be provided with indicators, and a signalman should not have to distinguish between eight or more different tones. Block instruments should be grouped on the instrument shelf in the way best calculated to avoid confusion. It is a question whether it is wise to mount two separate needles (referring to two separate sections) and also a bell-key in the same casing, as is done at Welwyn and elsewhere. Separate telephone circuits, operated by the station staff, should be provided for all matters not connected with the actual signalling of trains.

(4) Merit rather than seniority should govern the selection and promotion of signalmen. The Welwyn inquiry disclosed certain weaknesses in this direction.

Most of these suggestions are based upon the official reports of these accidents, and one or two, though of importance, are hardly matters for legislation, but rather for the strengthening of the companies' own rules. There is a distinct case for revising legislation passed fifty years ago,

when most of the modern electric devices such as track-circuiting had hardly been invented. The question of cost and the economic position of the railways must obviously be considered; but at least there is need for thorough investigation by a competent body with power to make detailed recommendations. Then the Government and public opinion must decide how extensively and how quickly these recommendations are given the force of law.

LOAN EXPENDITURE IN JAPAN

(BY A CORRESPONDENT)

MORE than any other country Japan has carried into practice the principle of promoting prosperity by loan-financed Government expenditure. From the Budget of 1913-14 to that of the current fiscal year expenditure has risen—in nominal yen figures—by 845 per cent. The official figures are rather lower, but have been corrected here by adding, after 1934, the Post Office Budget which was then separated from the ordinary Budget. Reducing nominal figures to the purchasing values of 1913-14, the increase of State expenditure amounts still to 186 per cent. On the same basis, State revenue has risen by only 80 per cent. The difference, as is well known, has been met by loans, with the result that by the end of the past fiscal year the internal debt had risen to some 8,000 million yen (1914, 1,036 millions; 1932, 4,942 millions). The external debt amounted to 1,403 million yen (1914, 1,525 millions). It will be noticed that the greater part of the increase in the debt has come in the last few years, during which, following the depression of 1931, a deflationary policy of loan expenditure has been pursued. Japan is now beginning to realise that the capacity of the money market to absorb loans is not unlimited, and that it depends to a dangerous degree upon the continuation of the present boom in that section of industry which has benefited most from the great increase of exports and of Government orders for armament purposes. Mr Takahashi, the veteran Minister of Finance, is essentially a "sound finance" man. He is said to be anxious to return to more orthodox methods at the earliest opportunity. An examination of present expenditure and revenue, however, shows that it will be very hard to correct the balance by changes on either side of the Budget.

The political situation appears to provide little chance of a cut in defence expenditure. The service Budgets have risen between 1913-14 and 1935-36 by 433 per cent., calculated in the purchasing power of the currency in the former period. Their share of total expenditure has risen from 33 per cent. in 1913-14 to 47 per cent. of the current Budget. Moreover, 22 per cent. of total expenditure is now needed for the service of the national debt. Even if it should be possible in coming years to reduce defence expenditure, so many urgent claims, such as agricultural relief, education, public health, and relief for bankrupt municipalities, have accumulated that any funds set free could hardly be utilised for improving the Budget balance.

Together, the defence Budget and debt service require an amount which exceeds the total revenue of the State by 13 per cent. If both items are really to be taken as inflexible, an improvement of the Budget position would seem to depend on the possibility of raising national revenue. It is often said that Japan's natural resources have increased so substantially that the State could at any time increase its revenue. The report on economic conditions in Japan recently published by the Department of Overseas Trade maintains that "a country which is rapidly increasing production can more safely depart from financial orthodoxy than one where production is stationary." At first glance, there is considerable evidence in support of this argument. Between 1914 and the current year Japan's population has increased by 30 per cent.; railroad mileage by 100 per cent.; goods traffic by 100 per cent.; passenger traffic by 400 per cent.; the value of industrial production by 600 per cent.; the value of foreign trade by 300 per cent.; consumption of electricity by 2,000 per cent.; bank deposits and bank clearings by 600 per cent.; post office savings deposits by 1,300 per cent.; and insurance policies held by 900 per cent. Rice crops, however, increased by only 20 per cent.

The foregoing list, however, is misleading. So is the generalisation that Japan's industrial production is steadily

rising. Prosperity is, in fact, strictly limited to a small group of industries such as iron and steel, chemicals, and textiles. Even in these industries only the large modernised concerns are flourishing. The vast mass of small and medium concerns, which supply some 50 per cent. of Japan's export goods, are eking out a precarious living in the face of terrific competition. All industries working for home consumption, as well as the whole of agriculture—still by far the greatest industry in the country—are in the grip of stern deflation, with falling wages and prices. The surest sign that prosperity is not general is the fact that since 1931-32, when revenue was at a low record, the proceeds of indirect taxes and monopolies have risen by less than 6 per cent., which in actual fact represents a decline, because the devaluation of the yen, which was accompanied by some depreciation in its internal commodity value, came between the two periods. It is true that revenue from direct taxes, excluding the new excess profit tax, has nearly doubled since 1931-32. But apart from the fact that this figure is seriously disputed, the increase seems to be due chiefly to a change in the methods of tax collection. It has been stated in Parliament that the present collecting methods "border on violence." In any case, opportunities in that direction seem to have been exhausted.

Direct taxes, which together amount to 30 per cent. of ordinary revenue, and meet only 19 per cent. of total Budget expenditure, consist of income tax, land tax, business profit tax, and various less important capital taxes. Of these, income tax is the largest single item. The tax-free income amounts to only 100 yen (some £6 at present rates) per month; yet even in the comparatively prosperous city of Tokyo, with 5½ million inhabitants, only 133,000 persons are paying income tax. They are paying an average of only 200 yen a year. National figures are not available, but are admitted to be far below that average. In the current fiscal year a new excess profits tax has been added. It is estimated to apply to about 10,000 taxpayers, and to bring in some 30 million yen, less than one-sixth of the income tax yield. The incidence of direct taxes is modified by the custom of granting tax exemption, as a form of subsidy, to certain industries of national importance. As these grants are likely to be increased with growing trade difficulties, they will further worsen revenue prospects.

Indirect taxes amount to 26 per cent. of ordinary revenue. There is a tax on rice wine, beer and spirits; a rather high tax on sugar; and a consumption tax on all non-cotton yarn and fabrics. Together with Customs revenue, which amounts to 9 per cent. of revenue and may also be regarded as a kind of indirect taxation, these items bring in considerably more than all direct taxes. If the proceeds of these taxes, as has been shown, have hardly increased during the last four years, during which Japan experienced the greatest expansion of production and exports, they cannot be expected to increase in the near future, because wages are falling and exports are no longer expanding.

More than one-fourth of State revenue is derived from the profits of Government undertakings and monopolies. It is typical of the attitude of the State that the railways, as a strategic asset, are allowed to use their substantial profits entirely for expansion and replacement without contributing to the Budget. Income is received, however, from the tobacco, salt and camphor monopolies; from the post office and forestry administration, etc. Unless the railway policy is reversed, which is improbable, there is no opportunity in this field for increasing revenue. The only conceivable way in which future deficits could be covered, or at least reduced, by revenue would be a radical reform of the present system of taxation. This would presuppose a fairer distribution of burdens; in particular, the cessation of the policy of tax exemption which, for example, leaves the entire iron industry, in spite of its high profits, completely tax free. But the powers of Japanese Governments are restricted. Mr Takahashi seems to have taken the correct measure of present possibilities when he stated, a short time ago, that a thorough tax reform was urgently needed but impossible to achieve in the near future. And even if reform were possible, a rapid extinction of the present huge deficit might overwhelm the Japanese economy in a general deflationary collapse. The next two years of Japanese economic policy will consequently be highly interesting and significant.

NOTES OF THE WEEK

American Preparations for an Embargo.—Last Saturday the State Department at Washington announced that an Office of Arms and Munitions control had been set up as a branch of the Department's own organisation. And it is declared that this new piece of American administrative machinery could begin to operate efficiently within fifteen minutes of the issue of a Presidential proclamation on the outbreak of war between two or more foreign countries. This administrative action has been taken to implement the "neutrality resolution" passed by Congress before it went into recess. Before 1917, the main concern of Americans in the event of a war in which the United States was neutral, had been to uphold the traditional right of neutrals to trade with belligerents in all commodities—with the sole exception of arms and munitions in an area where one of the belligerents had established an effective blockade. The course of events in 1914-18 convinced most Americans that, under present conditions, this traditional American policy threatens to involve the United States in becoming a belligerent herself sooner or later. In other words, in order that some American citizens may enjoy the benefit of a commercial windfall, the whole American body politic has nowadays to be placed in jeopardy of being drawn into other people's wars—with the immense loss of life, as well as wealth, which this consequence may entail. On this showing, American opinion has declared itself decidedly in favour of sacrificing neutral trading profits to the maintenance of neutrality itself; and it has made up its mind that this can only be done by making it incumbent on the President to prohibit American trade with both belligerents in all compromising commodities. The crux, of course, is to decide what the list of these commodities is to be; and in the "neutrality resolution" Congress has given the President very wide discretion on this point. Are the "implementations of war" on which there is to be an export embargo to be interpreted in a wider or a narrower sense? There are indications that President Roosevelt intends to interpret the term in the broad sense of all commodities that would help to make it possible for a belligerent to carry on hostilities; and, if the experience of 1914-18 is to be a guide, this is certainly the logical way of giving effect to the American people's intentions. For the moment, he has only banned exports of weapons, flame-throwers, etc. If the United States now does take the comprehensive view of what "implementations of war" are to mean, this will enormously ease the League's task of taking economic sanctions against an aggressor; for it will relieve the League Powers of the nightmare that they might be compelled to impose a blockade on American goods and American ships.

The Memel Elections.—There has been on the whole an improvement in the situation with regard to the momentous elections in the Memelland which are to take place on Sunday, September 29th. Undoubtedly the representations which have been made, at Geneva as well as at Kovno, by the guarantor Powers have been both sincere and emphatic; and the latest news of the preparations for polling day is distinctly better than the earlier rumours. The number of Memellanders who have been actually deprived of Lithuanian citizenship so far appears not to be more than twenty. A larger number, however, appear to have been disfranchised without having lost their citizenship; and it is said that these disqualified citizens will not learn that they have forfeited their vote until they present themselves on Sunday at the polling booths. In this category, again, the numbers are said not to be large—that is, not to include the ordinary members of the allegedly subversive German political organisations, but only the leaders and organisers. What is more serious is that all these leaders will probably be debarred from offering themselves as candidates. From the Lithuanian point of view this veto is natural enough. No Government would care to see persons who were frankly working to shake off its authority being returned as members of a parliamentary body which is the legislature of the separatists' *terra irredenta*. At the same time, a "tame" diet in which the German members in-

cluded none of the genuine leaders of the German community in Memel would be worse than useless. Its installation would simply be a signal to the German irredentists to abandon parliamentary methods altogether and to turn all their energies to "direct action." It now becomes incumbent on the observers sent by the guarantor Powers to see that the elections enable the population of the Memelland to express its wishes in fact as well as in form. Meanwhile the Nazi press in Germany is rather naively showing annoyance at the steps to this end which the guarantor Powers have been taking; and this German reaction, perverse though it is, may be of good augury as an indication that the guarantor Powers and the Lithuanian Government, between them, may be going to deprive the Third Reich and the German Memellanders of the substance of their grievance. In Poland, again, there has been a distinct change of tone from *désintéressement* in Memel towards a concern for the avoidance of anything in the nature of a *Putsch*. Second thoughts at Warsaw will not have escaped observation in Berlin.

Danzig, Geneva and Warsaw.—At least one of the affairs that were taken in hand by the League Council last May has been satisfactorily settled this week. On Monday, Mr Eden reported to the Council on the petitions from certain sections of the population of Danzig in which it had been complained that the present Nazi Senate of Danzig had been trespassing beyond the bounds of the constitution in its treatment of the non-Nazi citizens of the Free City. Mr Eden's report, which found that the complaints were substantially justified, was approved by the Council. The President of the Danzig Senate, Herr Greiser, thereupon intimated that the Senate proposed to bring its actions into conformity with the constitution for the future. Mr Eden began by pointing out that this was no question of Danzig's external relations, but a matter between two sections of the population of the Free City; and he submitted that the Danzig Senate ought not to have made it necessary for the High Commissioner to bring an internal question to Geneva for settlement. The High Commissioner himself, Mr Lester (Irish Free State), made the point that the citizens of Danzig whose constitutionally assured rights were being overridden were not Poles, but were people of German culture; and he reminded the Council that, in the elections which were held in Danzig a few months ago on the issue of altering the constitution in a Nazi direction, more than 40 per cent. of the electors declared their opposition to constitutional change. We may add, for our part, that this 40 per cent. probably represents much less than the total proportion of the Danzig electorate which is actually opposed to a policy of Nazification; for the elections had been preceded and accompanied by an intensive Nazi campaign of propaganda and intimidation. Evidently it is recognised, both by the Nazi Senate of Danzig and by the Nazi Government of the Third Reich, that the recent attempts to Nazify Danzig by non-constitutional methods are indefensible. This may also go some way to explain why the Danzig Senate agreed on Tuesday to settle their outstanding economic dispute with Warsaw. Under the new agreement the Danzig Senate agrees to make the necessary foreign exchange available against Danzig gulden, and also to restore Danzig-Polish trade to its normal proportions; and Poland agrees to restore the transit trade through Danzig, which has been severely curtailed to the advantage of Gdynia. In fact, both the political and economic news this week from Danzig is very encouraging.

France's Budget Spiral.—France's 1936 Budget estimates, published this week, illustrate once again the depths of the deflationary spiral in which she has become involved. Ever since 1932, when the deflationary descent began, the Budget has been balanced on successively lower levels. Each year a new reduction of expenditure has been made, only to be followed by a new reduction in revenue. Total

expenditure has now reached the level of 40,000 million francs, compared with 53,500 millions in 1930-31. It is estimated that at this level expenditure will be just covered by revenue. The deflationary situation has so far been taken into account this time as to estimate revenue not on the basis of recent figures, but at a level 20 per cent. below them. This is regarded by the Finance Minister as rendering his Budget a "sincere" one; and it should certainly help to stave off the appearance of a new deficit as long as economic activity remains merely stagnant and does not relapse further. Despite this "sincerity," however, the Minister has prepared a "loan Budget" which somewhat mitigates the austere outlines of France's present financial policy. The "loan Budget" amounts to 6,600 million francs, of which 6,230 millions is to be spent on "national defence." Some 1,000 millions will be required for the expansion of the Air Force alone. It is true that the 1936 "loan Budget" is smaller than the 1935 one, which amounted to 10,500 millions. Nevertheless, France has clearly moved a few steps towards the policy of financing re-armament by inflationary borrowing by means of which Germany and Italy have escaped the worst deflationary rigours of the contemporary gold standard. It seems likely that France's "defence loan" policy has to some extent cancelled the depressing effects of the recent Budget cuts and so prevented the present industrial decline from degenerating into a collapse. Expenditure on armaments out of loans seems to be the only form of economic stimulus which the nations can now nerve themselves to take! But France is unfortunately not in a position to take any stimulus at all. For the more effective the stimulus becomes, the more impossible will it be to maintain the franc's present gold parity—unless by a miracle world commodity prices should continue their present rise sufficiently to offset the overvaluation of the franc.

* * *

Nutrition and Agriculture.—It has taken a long time for the world's producers of foodstuffs to realise that, if only consumers were given a chance to achieve the nutritional standards established by experts, both a burdensome plenty and a crushing poverty might disappear. On September 19th the Second Committee of the League Assembly at Geneva discussed a proposition by Mr Bruce, on behalf of the Australian Government, which was supported by eleven other Governments, including the British. Briefly, Mr Bruce's plan is "to marry health and agriculture"; to eradicate both malnutrition on the one hand and the depression in world agriculture on the other, by increasing the consumption of foodstuffs per head. "In the less developed countries," said Mr Bruce, "the great masses are living on a bare subsistence level. . . . Even in the most advanced countries there is a stratum of people which is unable to obtain adequate nourishment." Mr Bruce asked why adequate nutrition, especially for mothers and children, should wait upon the slow progress of economic recovery in a world where each country tried desperately to make self-sufficiency in foodstuffs "pay"—at the cost of falling consumption. He pointed to the great gulf fixed between producers' prices and retail prices; and he cogently urged that the millions of pounds now spent in the world on bonuses, subsidies and other forms of assistance to agriculture—only to keep prices at levels which retard consumption—might be better spent in bringing about greater consumption of agricultural products, and in particular of milk and dairy products, fruit and vegetables, eggs and meat. Lord de la Warr, Parliamentary Secretary to the Ministry of Agriculture, confessed to grave scepticism about those Government measures which set out to solve the problem of "poverty amid plenty" by abolishing plenty. "It was not sufficient," however, "merely to resist a policy of restriction. Something more positive was needed." It might have to be deliberate action to increase consumption. An example of the form such action might take is afforded by the recent experiment of the Potato Marketing Board at Bishop Auckland, on which a report has just been issued. The report shows that the opportunity given to the unemployed to fetch potatoes from a special depot at a price of 4d. instead of 7d. a stone resulted in a total increase of consumption in the whole area

of 69 per cent. This is most interesting; but as Sir John Orr pointed out at the recent British Association meeting (see the *Economist*, September 14th, page 507), and as *The Times* confirmed on September 18th, not even the transfer of all distributive and retail functions to the Marketing Boards in this country would enable the retail prices of foodstuffs to be reduced to levels which would permit those with the lowest incomes to obtain the right kind of food. In the end, if the present "surplus" foodstuffs are to be conveyed to those who need them, subsidies to consumers may be necessary; and it would be ridiculous to propose that the subsidies should be paid for by consumption taxes levied on those very foodstuffs. Even when restriction is abandoned and marketing improved, Governments will have to face this issue.

* * *

The Milk War.—The milk dispute has been provisionally settled. Last Friday the Minister of Agriculture decided to refer the distributors' complaint to an investigating committee under the terms of the Agricultural Marketing Act. The Committee consists of Sir Percy Greenaway, Mr C. J. C. Palmour, Sir Arthur Pugh, and Professor W. R. Scott. It will not, of course, be able to report before October 1st, when the new milk contract comes into force. But the Milk Marketing Board at once consented to accept the Committee's findings retrospectively; and agreement on these lines was reached on Thursday. Until the Committee reports, the prescribed contract will be endorsed with supplementary conditions. Meanwhile the verbal controversy over the rights and wrongs of the producers' and distributors' earnings continues in full blast. During the week the National Farmers' Union and the Central Landowners' Association have rallied, not unexpectedly, to the support of the Milk Board; and some sections of the co-operative movement, rather more unexpectedly, to that of the distributors. The producers continue to maintain that the retail price should remain unchanged and the distributors' margin be reduced, and the distributors to retort that the retail price should be reduced and their own margin be left unchanged. Mr A. V. Alexander, Secretary of the Parliamentary Committee of the Co-operative Congress, urges that the retail price should be reduced and that the cost of the reduction should be shared between the distributors and producers. This is a much more moderate and defensible proposal. Nothing that has been said by either side this week has altered our opinion that both the retail and wholesale prices should be reduced—the one in order to increase consumption, the other in order to stop the present indefinite increase in production. Ultimately there can be only two possible solutions of the problem: either a subsidy to consumers of liquid milk, or else a curtailment of production. Meanwhile the public is not likely to acquiesce very long in the spectacle of an essential service being conducted by two warring private monopolies.

* * *

Rising Wages.—Increasing prosperity in various industries in this country has stimulated many demands from trade unions for higher wages during the past year. To a great extent, these demands have been successful, especially in the industries enjoying the largest measure of recovery—building and engineering. In the first eight months of this year, increases in wages affecting over two million workers and involving an increase in the annual wage outlay of over £8,000,000 were recorded by the Ministry of Labour. They included wage increases in the textile, iron and steel manufacture, building and engineering branches of industry. Rates for building craftsmen and labourers in almost all districts were increased by 1d. per hour in July, with the promise of a further increase of the same amount in January, 1936. All male workers over 21 in engineering shops secured a rise of 1s. per week in May, and a further rise of 1s. in July. At the time of the negotiations, the unions concerned asked for an increase of 2d. per hour, which would have cost approximately £10 millions, as against the £2,000,000 actually conceded; and the reiteration of this demand is to be discussed very shortly at a joint conference of the metal trade and engineering trade

unions in York. Other unions are also renewing their campaigns for higher wages, but are likely to meet with less success. The three railway unions and the railway shopmen have decided to press for restoration of the remaining 2½ per cent. of the 10 per cent. wage cut imposed in 1931, and for the renewal of the variations in overtime, night and Sunday wage rates. These changes would affect about 580,000 men and involve an additional cost to the companies of approximately £3½ millions. Recent railway returns, however, do not afford very solid ground on which to base arguments for such an increase. Shipyard workers have recently asked for an increase of 2d. an hour for time-workers, and equivalent increases for piece-workers. The request has been unanimously refused by the Shipbuilding Employers' Federation on the grounds, first, that the claim for an increase was based only on hopes of future prosperity in the industry, and secondly, that the recent slight increase in the cost of living is far more than counteracted by the fall since 1930, when current rates were fixed. Lastly the miners, on whom the burden of depression has weighed longest and heaviest, are preparing a fresh onslaught to improve their lamentably low standards of living. This month, at Margate, the T.U.C. gave them moral support, which has now been implemented by an order from the General Council to the General Purposes Committee to "stand by" for consultation with the Mineowners' Federation over two questions: first, the proposed increase of 2s. per day for all mine workers and secondly, the demand for a more exacting "assessment" of the companies' profits in order to determine the need for changes in wage rates. Certain injustices have been virtually recognised by the employers themselves, so that some compromise in this matter should be fairly easily reached. It would certainly do much to improve the atmosphere in which the negotiations on other questions must be carried on. It will be remembered that the arbitrators in the South Wales wages dispute last year stated that the outlook for the coal trade was too uncertain to justify the imposition of any great variation in the charges on colliery undertakings. Since then no substantial improvement can be recorded to justify increases in wage rates. Although in the coal-mining industry they are admittedly low, any increase at this stage without an equivalent "set-off" to the companies would only prejudice the slow revival now discernible in the industry.

* * *

Mr Bennett and His Rivals.—The fun grows faster and more furious in the Canadian election campaign. Mr Bennett, speaking at Vancouver on Monday, announced that he had nearly been kidnapped by Communists last July, when, he tells us, a plot to set up a Soviet Government in Ottawa had been discovered. Despite this, however, and despite the efforts of Mr Aberhart, who, in the words of *The Times* correspondent, "grateful for the recent loan from Ottawa, is trying to prevent his Party from opposing Mr Bennett," there will, in fact, be three candidates, representing the Liberals, the C.C.F. (Farmer-Labour), and the Social Credit League, competing with the Prime Minister in West Calgary. His election must certainly be accounted doubtful. The most significant change in the whole situation in the last few weeks has been the advance of Mr Stevens's Reconstruction Party, which is said to be winning the allegiance of a great many younger voters. In the Prairie Provinces the Social Credit League and the Reconstruction Party are both likely to gain considerably at the expense of the Conservatives and Liberals. In British Columbia the issue seems to be mainly between the C.C.F. and the Liberals; while the industrial East does not yet appear to be as disillusioned as the rest of Canada with the two traditional parties. At the moment Mr Bennett is exploiting the high protectionist appeal to the full, and hoping to placate the farmers meanwhile by the present high price of wheat engineered by the Government. Mr Mackenzie King, conscious of the inroads of the various radical parties in the Prairie Provinces, is shifting the burden of his hopes towards the industrial East, and, consequently, denouncing Mr Bennett's high tariffs with slightly diminished ardour. He has also decided definitely in favour of State control—as opposed to independent bank-

ing control—over the Bank of Canada. On the issue of foreign policy, both Mr King and Mr Bennett are apparently explaining that while, on the one hand, the League of Nations must be preserved, no Canadian citizen, on the other, must ever be asked to take part in the imposition of sanctions. It seems a pity that the reformist forces in Canada have become so hopelessly divided, since the fervent desire of the mass of Canadian citizens for far-reaching economic and social reforms is now clear beyond all doubt. Yet, acute as the Opposition's dissensions are, nothing but magic—not even a 20 per cent. rise in wheat prices—can now save the Conservatives from defeat. And a clear victory for the Liberals on October 14th still seems the most probable outcome.

* * *

Australian Recovery Continues.—In company with the rest of the sterling area, Australia continues her gradual but steady recovery. The new Budget figures, now published, mark a further step forward. Total revenue in 1934-35 was £76,252,000 and total expenditure £75,541,000; leaving a surplus of £711,000, compared with an estimate of £14,000. Revenue exceeded the estimate by £4,059,000, the principal increases being in receipts from Customs and Excise, sales tax and income tax. These increases were due to the general revival in economic activity, stimulated in particular by the high wool prices obtained in the previous season. Last season wool prices were lower; but they have now recovered once more, in company with butter and wheat prices. Exports decreased slightly in 1934-35, and imports increased; and the export surplus accordingly fell from £37,000,000 to £16,000,000. The latter figure is insufficient to cover Australia's foreign interest obligations. Year-to-year variations in the export surplus are inevitable, however, and Australian holdings in London are fully sufficient to meet present requirements. Of last year's Budget surplus of £711,000, £500,000 is to be devoted to non-recurring grants to States and £211,000 to reduction of past deficits. Revenue for 1935-36 is estimated at £77,190,000 and expenditure at £77,173,000. Expenditure includes £4,160,000 for defence equipment. Further taxation relief is provided, including a reduction from 6s. to 5s. in the special property tax rates, further exemption from sales tax, and certain reductions in primage and Excise duties. The budgetary picture is certainly a bright one. But it must not be forgotten that unemployment is still at an extraordinarily high level in Australia. True, it has fallen from 30 per cent. in 1932 to 16 per cent. to-day. But at 16 per cent. it remains a formidable challenge. In Australia, as in Great Britain and the United States, though production is rising, unemployment obstinately persists. In all three countries it is still the dominating economic, social and political problem.

* * *

Lancashire's Looms.—We have heard very much lately of Lancashire's redundant spindles; and the reorganisation of the cotton trade has become identified with reorganisation of its spinning section alone. But, besides redundant spindles, there are redundant looms in Lancashire, and the weaving side of the cotton industry has been hard pressed for years. The recent decision, therefore, of the employers' association in the manufacturing section of the industry to elaborate some method of improving the selling prices of cloth is scarcely surprising. No definite proposals have been submitted to the section as a whole by the central organisation, but the different district associations, which cover the whole of the manufacturing area of Lancashire, have been asked to discuss the question and put forward suggestions. Owing to the diversity of the

trade and the multiplicity of manufacturers, it would seem impossible for this branch of the textile trade to obtain unanimity on any selling policy. Enough trouble has been encountered in the spinning sections, where control can be far more easily achieved. It is considered probable therefore that the principal move will be to deal with redundant looms; and when the Central Committee of the Cotton Spinners' and Manufacturers' Association hold their next meeting it is expected that a special Drafting Committee will be set up to examine the problem. So far the manufacturing section has taken no step to deal with the question of surplus machinery. The redundancy proposals in the spinning and finishing sections, however, are rather forcing the issue, for it is feared that unless manufacturers get rid of the surplus capacity, they will be forced into an uneconomic position when they have to adjust their selling prices. They may very soon find themselves sandwiched between the spinning and finishing sections, which will be able, together, to combat any attempt on the part of traders to reduce prices. If the spinners and finishers are able to resist any attack on their prices, buyers will then be forced to exert pressure on the cloth manufacturers, who, by reason of the large amount of surplus machinery, will be placed in a relatively weak position. It is estimated that of the 500,000 looms in existence to-day, fully 150,000 can be considered as redundant. The prospective capacity of the industry might be as low as 300,000 looms, which compares with 800,000 looms in existence in 1914. It will be interesting to observe whether this *démarche* by the weaving section of the industry will force upon the spinners, finishers and merchants the need to reorganise the cotton industry as a whole, and not in segments.

War Risks.—Since 1918 insurance contracts on cargo have usually included war risks. But it has been the general rule for underwriters to protect themselves against a sudden change in conditions with a clause entitling them to cancel war risks on giving ten days' notice. On September 16th, Lloyd's underwriters and the companies gave this notice; their example was followed by most foreign markets, and from September 26th onwards the risk is covered only by special agreement between clients and underwriters. On Wednesday last, after much discussion, Lloyd's underwriters announced a scale of rates which they proposed to charge for the war risk until further notice. The rates are naturally highest in the Mediterranean, 5s. per cent. being quoted for Mediterranean shipments except to or from Italian ports, 1s. 6d. per cent. for Indian and Eastern shipments via the Cape, 1s. per cent. for South and West African shipments, and 3d. per cent. for shipments to and from the Continent. These rates are revocable at a moment's notice, and many merchants have protected themselves by taking out cover for three months at a fixed rate on Mediterranean shipments, the rates varying from 10s. to 20s. per cent. In the event of serious developments, these covers will prove a good thing for the merchants, as they will save them from paying the much higher rates that may be anticipated. Several shipping companies which normally use the Suez Canal are diverting their boats to the Cape, giving as their reason the laudable desire to save their shippers from paying very high war rates on their cargo. But it seems doubtful whether $\frac{1}{4}$ or $\frac{1}{2}$ per cent. insurance rate is really enough to justify the change. A German fleet is being covered against war risks for several months ahead in the London market—a gratifying sign of the Germans' confidence in the immediate future of Anglo-German relations.

Sterling and International Prices.—The advance in wholesale prices has continued during the past fortnight, and in some respects has become more rapid and widespread. The advance is partly due to technical reasons connected with specific commodities. Wheat has risen owing to drought in the Argentine, and to the fixation by the Canadian Government of a new selling price. Cotton is higher because of the reduction in the American crop estimate shown by the latest official crop forecast. Tin has

advanced under the influence of a shortage of supplies, while there has been heavier buying of lead. The rise in rubber is due to the reduction in the export quota. At the same time, the possibility of war has undoubtedly stimulated the buying of commodities, partly because of the uncertainty attaching to the stability of the leading currencies. British wholesale prices have risen during the fortnight, by 2.1 per cent. for all commodities, to the highest point for the year, while primary products have risen by 3.2 per cent. to a new record for the year. In the United States primary products have advanced by 3.6 per cent., but the Irving Fisher general index number is practically unchanged. There has been some advance in Continental wholesale prices, which naturally enough is most pronounced in Italy.

Details of the group indices comprising the complete *Economist* index number on the date of our suspension of the gold standard and for recent dates are given below:—

"ECONOMIST" INDEX
(1927 = 100)

	Sept. 18, 1931	Aug. 28, 1935	Sept. 11, 1935	Sept. 25, 1935
Cereals and meat	64.5	69.0	69.6	71.7
Other foods	62.2	58.0	59.0	60.6
Textiles	43.7	56.4	57.3	58.2
Minerals	67.4	81.0	80.7	82.0
Miscellaneous	65.8	74.4	74.9	76.0
Complete index...	60.4	67.9	68.4	69.9
1913 = 100	83.1	93.4	94.2	96.1
1924 = 100	52.2	58.6	59.1	60.4

In the cereals and meat group there was a general advance in grain, mutton and bacon, but beef prices were lower. Among other foodstuffs there were increases in tea, butter and cheese. In the textiles group cotton, hemp and jute were higher, but there was some reaction in wool. All non-ferrous metal prices advanced. Among miscellaneous materials there were increases in rubber, leather, linseed oil and tallow, but a slight reduction in hides.

Rubber Under Control.—Growing dissatisfaction among those with a stake in the industry who had hoped for quick results apparently prompted the International Rubber Regulation Committee to tighten the screw of restriction at their meeting last Tuesday. Contrary to general expectations, the Committee decided to reduce export quotas for the last quarter of 1935 from 65 per cent. of allotted tonnages, at which level they had been fixed on

March 26th, to 60 per cent. The implications of this decision for the investor are discussed on page 617. While it is true that the reduction in stocks since the inauguration of the new restriction scheme has so far been very small, it must not be forgotten that prices, though somewhat lower than a year ago, are still three times as high as they were three years ago. Moreover, the decline in world consumption from 511,286 tons in the first half of 1934 to 475,285 tons during January-June this year is probably not entirely unconnected with the sharp rise in prices. Further, the relatively small reduction in the stocks afloat and those held in Singapore and Penang, in the United Kingdom and

in the United States, from 678,731 tons at the end of May, 1934, to 653,187 tons at the end of August, 1935, is not only due to the disappointing level of world consumption, but also in part to the failure of the control of "native" rubber shipments from the Dutch East Indies. It is to be hoped that the Committee's decision does not portend a race between restriction and consumption. As we pointed out in a leading article in the *Economist* of September 8th last year, the equating of production with consumption might be most profitably achieved for the industry as a whole by a price policy aimed at increasing consumption to the potential level of production.

OVERSEAS CORRESPONDENCE

From our Correspondents in each centre

UNITED STATES

PUBLIC WORKS AND RELIEF

THE business news continues excellent. Car loadings are seasonally at the highest level so far this year, and steel operations have virtually regained the best figures reported last spring.

The controversy between Mr Ickes, the Public Works Administrator, and Mr Hopkins, Works Progress Administrator, has been referred to the President, who has decided in favour of the latter. There was in reality little option. Public works have been given a thorough test over many months, and have shown little capacity to affect the problem of relief. On the other hand, work relief, under various initials beginning with the C.W.A. and now known as W.P.A. (in contrast with P.W.A., the Public Works Administration), has at least the merit of reaching the needy, even if the projects on which they are employed are of less intrinsic merit. The problem, after all, is one of simple arithmetic. There are 3,500,000 or 5,000,000 persons now theoretically transferred to local agencies, and the aggregate sum available is just under \$5,000 millions, from which must be deducted certain earmarked sums, but to which may be added extra funds from the States. Division gives a *per capita* sum which precludes any considerable expenditure on material or machinery; while prevailing wage controversies have shown that it is impossible to keep labour costs, on projects requiring any skill, down to the indicated *per capita* allowance.

Last winter, in New Jersey, one person in seven was dependent on relief. The New Jersey Relief Administration has conducted a survey of 10,000 families out of a total of about 165,000 on relief in that State. Of these, 40 per cent. are native white, 34 per cent. foreign-born white and 26 per cent. negro. The last group is five times as numerous as its proportion to the total population. In the typical case unemployment has been continuous for two years or more. Of the total about one-fifth are classed as economically incapable of self-support at any future time, partly from old age or illness, but more commonly from the fact that the "family" consists of a woman with young children, the father being dead, in prison or absent.

Realisation of the gravity of the problem seems to be increasing in official circles. At the past week's regular Press conference the President forecast that, if production returned to the levels of 1929, only 80 per cent. of the workers then employed would find re-employment. And current production is far from the level of 1929.

The present figure is as debatable as ever. Officially there are about 5,000,000. But the Federation of Labour estimates 11,000,000; the National Industrial Conference Board 10,015,000; and the Alexander Hamilton Institute 13,019,000—all for July, 1935. This disparity is not only wide in itself, but difficult to reconcile with the official 5,000,000; even more disconcerting is the fact that each of these three calculations shows an increase since October, 1933. Still more astonishing, that although the Federal Reserve Board's index of production rose from 75 in

November, 1934, to 90 in February, 1935, the employment figures showed no increase whatever.

The popular explanation is that these data are evidence of "technological unemployment"; but supporting evidence from the other side is lacking. The machinery companies, which might be regarded as the producers of technological unemployment, were extremely inactive during the depression and, while far busier in recent months, have not yet reached the levels of output characteristic of the '20's.

PROFITS RISING

The tabulations of corporate profits stand in contrast with the employment figures. The following table was compiled by the Federal Reserve Bank of New York:—

CORPORATE NET PROFITS (First six months, \$000,000)

	1933	1934	1935
Automobiles	45.5	69.9	99.0
Auto accessories	0.6	19.5	31.8
Aviation	1.2	-0.3	0.5
Building supplies	-4.0	2.7	3.9
Chemicals and drugs	31.0	50.8	50.0
Clothing and textiles	1.6	2.0	1.3
Coal and coke	-2.4	2.2	1.2
Electrical equipment	-2.1	10.4	19.1
Food and food products	61.7	65.9	51.9
Household equipment	10.0	16.1	15.7
Leather and shoes	5.4	7.1	5.5
Machinery and tools	-6.7	4.1	6.9
Metals and mining (ex. coal)	6.1	26.1	26.3
Motion pictures and amusement	-4.5	3.4	5.1
Office equipment	1.6	7.1	7.3
Oil	-32.3	24.9	32.1
Papers and paper products	0.5	1.4	1.8
Printing and publishing	2.3	5.9	6.9
Railroad equipment	-3.9	1.6	0.9
Rubber and tyres	-3.3	4.1	4.6
Shipping	0.2	-0.5	-0.9
Steel	-50.9	14.7	19.0
Stores	4.9	15.6	16.5
Tobacco	0.5	1.7	1.3
Miscellaneous	13.9	24.3	29.9
Total 388 industrial companies ...	77.0	380.7	437.6
149 Class I railroads	-101.2	-23.2	-62.0
59 Telephone companies	85.3	96.9	93.7
66 Public utility companies ...	131.2	125.5	124.9

It is somewhat surprising to note that consumers' trades' earnings compare unfavourably with those of other trades. Such important groups as clothing, food, household equipment, leather and shoes, tobacco and public utilities show earnings for the first six months of 1935 actually lower than in the first six months of 1934; several other groups in that category, such as stores and rubber and tyres, show only negligible increases. Indeed, of the industries, show only negligible increases. The cause of the lower earnings of the consumer goods industries is not entirely clear. In some instances it probably reflects lower inventory profits; with the utilities it is partly lower rates applied against increased volume. With the rail trade it is higher costs against about the same traffic.

But there can be little doubt that a major factor is increased taxes, particularly local taxes, but including the widening processing taxes. The increased local taxes are, of course, attributable directly to the relief problem.

Nevertheless none of the Federal expenditure for unemployment relief is met out of taxation. In many localities only a part of the local relief expenditure is covered by taxation; and in his recent defence of the Administration Tax Bill passed at the last session of Congress, the President asserted that it was impossible to widen the base of Federal taxation because of the present high levels of consumption taxes, which bore most heavily upon the average family.

NEW YORK, September 16.

FRANCE

A BALANCED BUDGET AND "LOAN BUDGET"

THE Budget for 1936 has been approved by the Cabinet. The figures are as follows:—

	Frs.
Revenue	40,019,347,606
Expenditure	40,010,194,522
Estimated surplus	9,153,084

Expenditure exceeded 53,500 millions in 1930-31, and the new Budget would have reached 48,000 millions, despite the economies effected between 1932 and 1934, if the recent decree-laws had not made still further cuts in expenditure. The saving in the ordinary Budget due to these cuts was nearly 8,000 millions. This, however, does not cover the whole of France's public expenditure. An extraordinary Budget is also provided, which will include various non-recurrent items of expenditure, which have till now been charged to the Treasury and financed by loans. This second Budget, amounting to over 6,000 millions, mostly consists of military expenditure and additions to the Air Force, but also of expenditure on public works, etc. The total of this exceptional expenditure, however, reached 10,000 millions in 1935. If, therefore, one takes into account the 3,500 millions of debt amortisation, which will be effected in 1936, the new loans to be issued will not increase the public debt by much more than 2,500 millions.

The official declaration accompanying the Budget emphasises its "sincerity." By this is meant that full parliamentary control will be secured, that the inclination of certain deputies toward generous expenditure will be restrained, and that confidence will be given to rentiers. The figures have been drawn up after a very close examination of public expenditure in each department. The revenue estimates also have been given the most scrupulous criticism. Whereas receipts for the first seven months of 1935 showed a deficit of 14 per cent. on the 1935 estimates, the 1936 estimates have been lowered by 17 per cent. in comparison with the former. For both direct and indirect taxation new methods of estimation have been used, based on 1934 and the first six months of 1935.

DEFLATION AND CHEAP MONEY

The Government regards its financial and economic policy as aiming at the mean between budgetary prodigality and excessive parsimony. The need to issue loans makes it necessary to balance the Budget. But this policy of reducing expenditure to the low level of revenue is regarded by the Government as not necessarily a policy of deflation, which would entail credit restriction. Budgetary deflation is to be supplemented by a cheap money policy. It is still hoped that tax reductions will permit of such a lowering of French prices as will adjust them to international prices—which are now rising.

A quite small economic recovery would stabilise fiscal receipts at about 40,000 millions a year. On the other hand, the estimate of 6,600 millions for the "loan" Budget will probably be exceeded owing to new emergency expenditure. The railways' borrowing needs have been reduced by 50 per cent.; but the Government does not explain how this deficit is to be met.

French tourist receipts reached 4,000 millions in 1934, against 2,000 millions in 1933, and 12,000 millions in the

best post-war year. This improvement, however, has been offset by the expenditure in foreign countries of French tourists favoured by the high value of the franc. In order to protect the tourist industry, which is protesting vigorously against restrictions on persons wishing to visit France, the Government is to impose a special tax on French tourists visiting foreign countries. This decree will not apply to persons travelling on public missions, or residing abroad or travelling on business; and it will not take effect until diplomatic negotiations have failed to obtain the suppression of the foreign restrictions.

Officially recorded unemployment in France fell by 3,684 to 377,499 in the week ended September 14. It was 326,127 a year ago.

PARIS, September 26.

GERMANY

ABYSSINIA AND MEMEL

ALTHOUGH Germany professes not to be concerned with the Abyssinian question, events in Geneva, Rome, London and Paris are being watched with very great interest. In the Press, which never ventures to transcend official instructions, the merits of the dispute have so far been ignored. No opinion is expressed concerning the rights and wrongs of Italian policy; and in consequence the whole proceedings of the League of Nations and the leadership of Great Britain are both persistently condemned and derided. This attitude expresses rather than denies the fact that Germany is very much interested. In the event of sanctions against Italy she might even be directly involved. She would have either to participate or to abstain; and the continuation of her trade relations with Italy if she abstained would probably lead to unpleasant incidents, should sanctions go beyond the passive stage.

More important is the so far unforeseen reaction of the dispute on international policy. In spite of Herr Hitler's repudiation at Nürnberg of diplomatic "combinations," it is plain that any at present conceivable solution of the Abyssinian question must affect international events in ways that will concern Germany. It seems, indeed, that Germany's position must be strengthened. Germany regards herself as being permanently opposed by the Great Powers of Western Europe acting more or less solidly together; and she is unfriendly to the League, considering it as at best a useless machine for handling diplomatic issues, and as at worst an organisation designed merely to protect the *status quo* established by the Peace Treaty. Germany claims that the League would never dare to fulfil its obligations at the cost of any Western Great Power. Should the League fail to prevent war between Italy and Abyssinia owing to a reluctance to take sufficiently drastic action, this last German thesis would be confirmed. Should it succeed by such means, a result might easily be the permanent alienation of Italy from Great Britain and perhaps from France; and with this the new international "combinations," even if not designed, would come into being automatically. It is an old notion of Herr Hitler, temporarily confounded by the recent struggle for Austria, that Italy could be counted on for an attack upon France; and it is a new notion of some Germans that should France fail Great Britain in the present issue, the British Government, if only in order to facilitate the release of naval forces from North Europe, might turn towards Berlin.

The present undue prominence of the Memel question is the outcome of such considerations. The electoral rights of a few German-speakers in Memel are not sufficient ground for a German action against Lithuania which might embroil all Europe. Indeed, there seems to be no foundation for foreign stories that Germany has any immediate plans of action. But in expanding this grievance inordinately, and simultaneously conducting an agitation against Latvia, on even more meagre grounds, the German Press is certainly not without official inspiration. These questions will probably not become dangerous if diplomatic solidarity in West Europe is maintained; but with discord

between the Western Powers opportunity for easy adventures in Baltic lands would be given, and should it be taken, a conflict between Germany and Russia would come into sight. The German Press represents Moscow as the instigator of Kovno, and regards all three Baltic States as Russia's vassals. Indeed, Herr Hitler, expounding his plan for conquering "new land and soil," describes the frontier states which are to deliver up this "land and soil" as subject-states of Russia.

RECORD STEEL OUTPUT

The industrial position is little changed. Coal production in the first eight months was 91,360,000 tons, against 80,864,700 tons in the same months of 1934. Since March, 1935, the Saar output has been included. Ruhr coal sales increased slightly in August. The Stahlwerksverband's report for August states that business in semi-products and most rolling-mill products was stable, and that export business in tubes was increasingly active. Ingot steel output in August was 1,495,900 tons, against 1,448,400 tons in July. Steel production is therefore now at the rate of nearly 18 million tons a year, and is well above the 16,300,000 tons of 1927, the best post-war year.

According to data published by the Reich Bureau of Statistics, the nominal national income from all sources in 1934 was Rm. 65,707 millions, as against Rm. 59,762 millions in 1933, Rm. 56,938 millions (recent lowest) in 1932 and Rm. 74,812 millions (recent highest) in 1929. On the basis of the cost-of-living index of 1928, the real national income was: 1934, Rm. 65,475 millions; 1933, Rm. 59,930 millions; 1932, Rm. 56,708 millions; 1929, Rm. 72,348 millions. In 1934, the nominal income from agriculture and forestry increased most and recovered to above the level of 1930. The nominal income from wages and salaries in 1934 was Rm. 29,503 millions, as against Rm. 25,980 millions in 1933, and Rm. 43,045 millions in 1929.

The advance of meat prices in Berlin has ceased. The prices of most sorts of sausages have been decreed to be not higher than those of March. "Work books" for employees in agriculture, fisheries, mining, textiles, public utilities, domestic service and some other branches will be issued on October 1. Retail shopkeepers have been forbidden to embark on the sale of goods other than those included in their customary trade.

Last week money again became plentiful. On Friday the Discont-Kompagnie reduced its rate for day deposits from 2½ to 2 per cent. This week day-loans in the market are quoted at 3-3½ per cent. The demand for Reich Treasury bills and Treasury bonds has revived; but the circulation of Golddiscount Bank promissory notes seems to have declined in consequence of non-prolongation, due to the need of cash by the banks for advance payments on account of the Rm. 500 millions Reich loan. The commercial banks' balance sheets for August 31st show a decline in deposits and an increase in loans, the latter being attributed partly to harvesting needs, partly to an increased demand by industry. The official balance of foreign payments, which usually appears in June, has this year not been published. For the item "Shipping," the Verband Deutscher Reeder has compiled its own statistics, which show the active balance in 1934 at Rm. 233 millions, as against a lowest recent figure of Rm. 193 millions in 1933 and a highest recent figure of Rm. 545 millions in 1929.

The "New Plan" for improving the balance of payments, in so far as this is determined by foreign trade, celebrated its anniversary on September 24th. Technically, the plan is now working smoothly at the cost of much bureaucratic elaboration. The currency reserves slightly increased during the twelve months, but no substantial improvement in the balance of payments has ensued, and it seems that none is officially desired. The chief change in the plan in the past year was the requirement of official permission for all imports from certain countries and for certain important groups of imports from all other countries. In so far as foreign raw materials are concerned, the plan has been made workable by internal rationing and by the regulation of prices and stocks.

BERLIN, September 25.

AUSTRIA

EFFORTS TO EXPAND EXPORTS

THE foreign exchange side of Austria's economic problem can already be regarded as solved. The deficit in the balance of trade has been so greatly reduced that it is covered by other items and does not constitute any danger. This improvement, which has taken place in the last two years, has been chiefly due to an increase in exports. During the last few months, however, the increase has been slowing down, and the chief task of the Austrian commercial policy is to revive it. It is largely due to the initiative of the Minister of Commerce, Herr Stockinger, that the foreign tourist receipts have increased by 42 per cent. this year, and that English tourist traffic to Austria was 80 per cent. higher in August. The import surplus is now covered by tourist receipts. The same policy is to play an important rôle in the trade-treaty negotiations which have just begun with Czechoslovakia.

Among exporters to Austria, Czechoslovakia takes the second place, among importers from Austria the fourth. The balance of trade with that country is very unfavourable to Austria:—

	January to July	1934	1935
	In millions of schillings		
Imports from Czechoslovakia	85.7	81.3	
Exports to Czechoslovakia	37.5	35.1	

On the other hand, there is a heavy tourist traffic from Czechoslovakia to Austria. Also at the moment rumours that the Czech crown is again to be devalued are leading to a flight of capital from Czechoslovakia to Austria.

There are also to be negotiations with Poland. These will be of interest, because the present Austro-Polish treaty is perhaps the only open preference agreement in Central Europe, and because it has meant no improvement at all for Austria. In the first seven months of the year the import surplus with Poland has increased from 35.5 to 38.1 million schillings. Austria's biggest import from Czechoslovakia and Poland is coal. If this were bought in larger quantities from Germany, it would certainly be possible to export more to Germany.

All these efforts to increase exports by means of commercial negotiations are, however, regarded by Austrian industrialists as insufficient, so long as they are not supplemented by internal assistance to the export trade. The subsidies given to the export trade in Germany have been felt seriously by Austrian industry, and it is claimed that Austria must resort to similar steps. The Industrial Association has elaborated a programme which includes the grant of export bounties.

VIENNA, September 21.

HOLLAND

INTENSIFIED CRITICISM OF THE GOVERNMENT

THE internal political situation is commanding even more attention than the international crisis. The 1936 Budget, introduced into Parliament last week, has provoked considerable protest from many quarters. With expenditure estimated at 710 million guilders and revenue at 601 million

The British and Polish Trade Bank A.G., Danzig

Paid-up Capital and Reserves: D. Gulden 5,378,542

Chairman: Dr. Roman Górecki.

Vice-Chairman: Sir William Grenfell Max-Muller, G.B.E., K.C.M.G.

Joint Managers: Wacław Kondorski and Philip Frederick Rann.

Assistant Manager: Aleksander Kowalski.

The Bank was formed to facilitate Exports and Imports from and to Poland, including Danzig.

INQUIRIES SOLICITED.

guilders, the Budget shows a deficit of 109 million guilders; and this will be increased to 119 million guilders by reductions in certain Excise taxation. The retrenchment scheme already submitted to Parliament covers 76.9 million guilders of this deficit. In addition, 15.9 million guilders is to be saved by further economies (mostly postponements of expenditure); and 26.2 million guilders are to be met by new taxation. An increase of 20 per cent. on the turnover taxes will provide 12 million guilders.

The criticism most generally levelled against the Government is that the economic problem cannot be solved by increases in taxation; for, although the Budget has been balanced on paper, it will prove unbalanced in practice. Besides the deficit on the current fiscal year, amounting to 75 million guilders, is still uncovered. The previous Colijn Government always declared that the utmost limit of taxation had been reached; recovery depended on further retrenchments and "readjustment"; and reductions in taxation were held in prospect. The present Colijn Government, however, proposes to increase taxation to the tune of 26 million guilders. The increase in the turnover tax in particular has encountered violent criticism, on the ground that it strikes a direct blow at commerce and industry. The much-vaunted ideal of "readjustment"—i.e. deflation—is farther than ever from realisation, now that the constant increases in the Excise duties on wheat, etc., have involved another rise in the price of bread. Other primary necessities, too, have advanced in price, so that there are no signs yet of the much-desired drop in the cost of living, with the result that wage cuts are difficult, if not impossible.

The Netherlands Union of Employers has issued the following observations:—

In the Speech from the Throne we fail to find any programme of reconstruction to be pursued by the Government in the near future. We are extremely sceptical about the possibility of providing employment for tens of thousands by the means proposed by the Government. The fostering of industrialisation, that is to say the stimulation of industrial activity, is very welcome as a means of combating the problem of unemployment, but to achieve this it is necessary that costs and charges in the Netherlands should be brought down to a lower level, and the Speech from the Throne evades this subject completely. . . . The additional taxation proposed strikes one as being decidedly dangerous. . . . The increase in the turnover tax, in particular, is a great disappointment. Apparently it has not been realised what a grave handicap has thereby been placed upon trade and industry. . . .

"CONTROLLED DEVALUATION OR UNCONTROLLED INFLATION"

The Roman Catholic Association of Employers express themselves in still stronger terms:—

The advocates of an active policy of increasing prosperity cannot possibly be satisfied as long as there is no certainty about the fundamental factors of that policy, viz., the level of prices and costs. Through the lack of any certainty whether business will be remunerative or not, the monetary problem remains a leaden burden (or rather a golden one) upon the nation. The Speech from the Throne cautiously evades any reference to the policy of "readjustment." But it is only too clear that the old criticism of the Government is still justified, viz., that they are directing their energies primarily towards achieving a balanced budget, and leaving national prosperity to play a secondary part in their considerations. An example of this is the increases in taxation, which have been introduced in lieu of the tax reductions which had been held in prospect before. . . . The dilemma between acceptance or rejection of a controlled and voluntary devaluation may soon become a choice between "controlled devaluation or uncontrolled inflation."

The guilder crisis is solely attributable to the fact that the Government is defending the guilder by word of mouth and by manipulation of the bank rate, and is failing to take the measures requisite for instilling confidence anew into the Dutch economic system.

In these circumstances, further internal political developments are being eagerly awaited, more especially as the balance of trade has depreciated materially in the last three months.

The following table shows imports and exports month by month during the years 1933, 1934 and 1935:—

	IMPORTS			EXPORTS		
	(In millions of guilders)					
	1933	1934	1935	1933	1934	1935
January	95	100	76	58	56	55
February	86	81	70	55	51	51
March	99	94	80	65	61	54
April	89	85	78	54	54	50
May	97	87	78	61	57	58
June	97	89	73	62	59	51
July	104	86	76	56	58	54
August	105	87	76	62	69	61
September	111	78		74	69	
October	109	87		74	69	
November	109	88		63	60	
December	108	75		52	56	

Yesterday afternoon the Second Chamber resumed the debate on the Retrenchment Bill for the first time since last July; and Dr. Colijn, the Prime Minister, was the first to address the House. He stated that, despite the wish of the Government to maintain the gold parity of the guilder, it would be difficult to avoid devaluation if the Dutch public resorted to flights into foreign currencies. If they refrained from this, and if they kept calm, the Government believed that it would prove possible to avert devaluation unless unforeseen circumstances occurred. Referring to the repeatedly urged dilemma between "consistent deflation"—i.e. a reduction in all interest charges—or devaluation, Dr. Colijn said that consistent deflation would involve too serious a shock to monetary confidence, and would entail a flight of capital and consequently devaluation. The Minister of Finance subsequently stated that if it came to a choice between devaluation or destruction of the credit system, he would choose the former.

AMSTERDAM, September 25.

SWEDEN

RECORD EMPLOYMENT FIGURES

LAST year's pronounced improvement in Swedish economic conditions persisted during the first four months of 1935, but towards the middle of the year there was a slight slackening in the pace of recovery. This slackening became more noticeable in August and September, when the political unrest in the world grew worse, and the decline of prices for some Swedish staple articles, particularly timber products, was accentuated. Industrial production has, on the whole, been satisfactory, though there has been a slight slackening in some export industries. Employment has been steadily improving, with peak figures in August. Foreign trade has increased both in volume and in value; but the increase has been largely due to an expansion of imports. The cost of living remained stable in August, while wholesale prices for domestic goods rose slightly.

The foreign trade figures for the first eight months of the year are as follows:—

	1934	January–August 1935 (In million kronor)	
Imports	821.9	910.3	+ 88.4
Exports	794.3	801.0	+ 6.7
Total	1,616.2	1,711.3	+ 95.1

Raw materials accounted very largely for the marked increase in imports. Exports of sulphate pulp have been satisfactory, despite low prices, and at the end of July the current year's production was practically sold. On account of low prices and special conditions on the British timber market, total timber exports in the first eight months of 1935 have been far below those of last year, both in volume and in value.

Swedish employment figures in 1935 are better than for many years. The Social Board's employment index in August reached 3.71 (3 = average good employment, 5 = very good), which is the highest index figure recorded

since 1920. Employment was best in the building and mining industries.

Production in the iron industry is on a satisfactory scale, and output is being well absorbed by the domestic building market. Owing to an exceptional abundance of money and a shortage of other investment possibilities for insurance companies and savings banks, the building industry has displayed an almost unprecedented activity.

FARMERS AND BRITISH BACON QUOTA

According to harvest reports from the main farming districts, the current year's crops, although slightly below last year's figures, can be considered as fairly good. But alarm has been caused among pig breeders by the forthcoming 12.5 per cent. reduction in the British bacon import quota, which will hit the Swedish pig-breeding industry and cause a fall in bacon prices on the domestic market.

Great easiness still prevails in the money market, and a marked shortage of suitable investment possibilities is embarrassing the savings banks and insurance companies. At the same time, the joint-stock banks have found it difficult to find employment for their abnormally high cash holdings; and this explains the exceptionally low rates for three-month Treasury bills, which were recently allotted at the low rate of 0.349 per cent. Deposits at the joint-stock banks fluctuated during the period January–August, 1935, between 3,600 and 3,700 million kronor. There was a marked credit expansion up till May, after which a falling off in advances occurred. The Bank of Sweden's gold reserve has steadily risen from 351 million kronor (gold kronor) on January 1st to 363 million kronor on September 14th. On August 31st the Bank of Sweden's and the 28 Swedish joint-stock banks' foreign currency reserve and foreign bond holdings reached the peak figure of 838 million kronor, after a steady rise throughout the year.

After having been well supported, with a considerable turnover in January, stock market prices declined during February and March. A new rise set in, however, at the beginning of April, and lasted until the first days of August. During the later part of August and in September the trend was again downward.

STOCKHOLM, September 21.

ARGENTINA

EXPORTS LOWER IN AUGUST

EXPORTS for August showed a marked decline, both in tonnage and value, and for the first time this year the monthly figure was below that of the corresponding month last year. But the figures for the first eight months of 1935 are still well above those for the same period of 1934.

The following are the quantities exported and average prices obtained during the first eight months of 1934 and 1935:—

	Quantities (tons)		Prices	
	1934	1935	1934	1935
Pastoral products:				
Chilled beef	228,781	227,504	368.32	374.65
Frozen beef	22,005	19,585	239.94	246.78
Frozen mutton	33,828	34,203	377.34	453.40
Unwashed wool	76,602	94,506	1,138.39	788.61
Agricultural products:				
Wheat	3,331,682	3,127,896	60.32	67.51
Maize	3,843,723	4,415,645	51.72	46.56
Linseed	964,665	1,275,813	124.96	118.43
Barley	493,261	382,109	45.58	56.97
Oats	275,296	342,797	41.48	53.01

The total quantities exported in the first eight months of 1934 and 1935 were as follows:—

	Tons		Increase or Decrease	
	1934	1935	Per cent.	
Pastoral products	744,909	792,888	+6.4	
Agricultural products	9,484,463	10,337,886	+9.0	
Total	10,611,969	11,460,450	+8.0	

The value, in pesos, of exports in the first eight months of 1934 and 1935 was as follows:—

			Increase or Decrease
	1934	1935	Per cent.
Pastoral products	325,998,485	337,630,702	+3.6
Agricultural products	603,577,678	679,068,289	+12.5
Total	981,930,475	1,065,750,231	+8.5

The increase or decrease of average prices for the chief commodities in the first eight months of 1935, compared with similar period of 1934, was as follows:—

	Per cent.		Per cent.
	1934	1935	
Chilled beef	+1.7	Butter	+34.6
Frozen beef	+2.9	Wheat	+11.9
Frozen mutton	+20.2	Maize	+10.0
Salted cowhides	+1.9	Linseed	—5.2
Unwashed sheepskins	—27.6	Oats	+27.8
Unwashed wool	—30.7	Barley	+25.0

Maize and linseed shipments show a marked improvement, but wheat exports are below those of last year. Wool shipments show a satisfactory increase in tonnage, but, owing to a large falling off in price, the value is below that of the previous year.

The decree imposing strict regulations on those employed in transmitting news has now been repealed, and new regulations issued which in no way curtail the freedom of the Press. The first debate on the question of the Transport Co-ordination Bill took place on September 11th, and the scheme, as was expected, was opposed by the Socialist Party who considered that the matter had been insufficiently studied.

In the foreign exchange market, despite the falling off in exports, the "free" rate continues to improve. This is, undoubtedly, due to the operations of the exchange equalisation fund. With the exceedingly poor prospects for next year's wheat crop, due to the recent drought, it is difficult to foretell what trend the exchange rate will take.

TERMINAL GRAIN ELEVATORS PROPOSED

The special committee which have been studying the advisability of building grain elevators in the Argentine have now issued their report. They conclude that the construction of terminal elevators should be begun as soon as possible. The cost of these elevators would be about \$60 millions. It would appear that, if the full benefit of the elevators is to be obtained, terminal elevators alone will not be sufficient and that, in consequence, country elevators will eventually have to be constructed.

Although further rains have fallen during the last week, they have come too late to assist the wheat crop to any great extent. Linseed has, however, been sown in some districts and heavy maize sowings are expected. Added to the disastrous effects of the drought in certain zones of Argentina, the Province of Santa Fé is now threatened with an invasion of locusts which would be disastrous to the young crops.

World Economic Survey

Fourth 1934-35 Year

6/- paper - - 310 pages - - cloth 7/6

Reviews economic events from the beginning of August 1934 to the end of July 1935.

The persistence of national recoveries is contrasted with the recurring threats to international economic equilibrium during the year under review.

BOOKS AND PUBLICATIONS

SANCTIONS

THE Information Department of the Royal Institute of International Affairs already has many enlightened and enlightening publications to its credit. The latest publication* is a particularly ambitious and comprehensive study of the vexed question of the day—sanctions. The result is a very able piece of exposition. It is encouraging to note that the present memorandum is based on the work of a study group at Chatham House, whose complete report is to be published early next year. In this small memorandum we have sanctions treated for the first time "from the ground up": their nature and purpose, their place within the League framework, the comparative feasibility and efficacy of the various kinds of collective sanctions in restraining or arresting forcible aggression, and their manifold methods of application.

The study begins by warning us against facile comparisons between the sanctions of national legal systems, within a well-defined *corpus juris*, and the measures envisaged in the Covenant of the League for the restraint of an aggressor in the international sphere. The word "sanctions" does not occur in the Covenant; but it is provided that certain measures are to be collectively taken in restraint of aggression; and the initiation of such measures by the essential collective action constitutes international "sanctions." Thus, the Covenant envisages both precautionary measures in case of war or a threat of war (Arts. X and XI) and sanctions against a wrongdoer, potential or actual (Arts. X, XI, XIII, XV, XVI and XVII). Art. XVI is the only article which prescribes definite measures to be applied against a State which has, by resorting to war in violation of its engagements under the Covenant, proved itself a transgressor. The other articles charge the Council with the duty of determining the nature of a dispute and of making recommendations. Unanimity is not required under Art. XV for a report and recommendations by the Council in the event of the non-settlement of a dispute; and non-compliance with such report or recommendations would automatically lay the dissident disputant open to "legal" sanctions by even a majority of League Members under Art. XV, s. 7; for under that section, if the Council's report is not unanimous, League Members reserve to themselves "the right to take such action as they shall consider necessary for the maintenance of right and justice." It is clear from the examination of the legal bases of sanctions with which the study opens that collectivity and effective co-operation are the conditions precedent of any League decision on an act of aggression, an aggressor, and the measures to be adopted; for every State Member has the right to decide for itself, before applying the measures envisaged, whether the specific conditions upon which its League obligations depend have been fulfilled.

De jure semper disputandum. On the less pedantically legal side, however, the study usefully reminds us that, although "the unilateral action of the defaulting State cannot create a state of war" with all Members of the League, the other Members are automatically free to commit acts of war against it independently of the League "sanctions" laid down in Art. XVI. And this enables them legally to claim and exercise, in relation to other League Members, belligerent rights including that of "visit and search," if they decide to enforce their right of blockading the defaulting State Member.

Of greater interest to readers of this review will be the long section on the character of sanctions. It is there clearly shown that purely financial measures, e.g. preventing all credits, loans and financial resources from reaching a defaulting State, are likely, by themselves, to prove too tardy or too difficult of application to be effective. The embargo on the export of certain raw materials essential for war purposes is much more effective, provided the "ring" can be made comprehensive and the absence of leakages can be guaranteed. Most effective of the economic sanctions

appears the embargo on all imports from a defaulting State. This is easy to apply through the Customs administration; it need not be imposed by all other countries in order to cause the defaulting State serious and immediate difficulties; and it inflicts less hardship on domestic importers than an embargo on exports inflicts upon domestic exporters. But more effective still is the complete international boycott, which means the prevention of all social and economic intercourse with the defaulting State, on the lines envisaged under Art. XVI of the Covenant. All economic sanctions, however, depend for their efficacy on a greater or lesser degree of universality, and their imposition may entail military action. Military action of a blockading kind seems the only really effective sanction to arrest aggression; but it is pointed out that the military sanction needs concerted preparations and should be capable of immediate application. Indeed, the latter considerations apply to all sanctions, if they are to prove speedily effective.

It was high time such a valuable study was made available in English, and the present publication is most opportune.

SHORTER NOTICE

"Controlling Depressions." By Paul H. Douglas. Allen and Unwin. 281 pages. 7s. 6d.

Professor Douglas starts his inquiry into the trade cycle with the sensible reflection that the modern economic system, in its monetary aspect, is not something which is naturally in equilibrium and only unbalanced by exceptional factors, but something which will never be in equilibrium unless it is deliberately kept there. In the nature of things, it is subject to the cumulative diseases of deflation or inflation. What was it that infected it with deflation in 1929? Professor Douglas is yet another of the many critics who think that the failure of money wages to rise between 1924 and 1929 in America caused an artificial profit boom. This huge concentration of purchasing power in a few hands meant that labour and capital had to be transferred wholesale to a few luxury industries. The transfer proved too difficult; and when the resulting deflationary tendencies developed, monopolistic practices prevented the fall in prices that might have stimulated demand once more.

Professor Douglas would attack the trouble on two main fronts. First, he would hold a public works programme and an unbalanced Budget in readiness as instruments of monetary policy; and at the same time bring the principal credit institutions under public control. Secondly, he would get rid of monopolistic practices by the rather surprising method of socialising the offending industries—and presumably running them as competitive trusts. As a whole, Professor Douglas's book is a clear and intelligent exposition of the policy of stabilising the general price level and of averting the danger of a profit inflation by redistributive taxation.

MONEY AND BANKING

A FLIGHT INTO DOLLARS?

A DECIDED change has come over the foreign exchange markets since the end of August, the dominant features in which are now the definite strength of the dollar and a steady drain of gold to New York from London, Paris, Amsterdam and other centres. Actual exchange fluctuations appear comparatively limited. The pound has only depreciated in the last month from \$4.96½ to just under \$4.92, while the Paris-New York exchange has moved from Frs. 15.12½ to Frs. 15.18 to the dollar, at the worst. This last rate, however, represents the export gold point, and hence gold has flowed from Paris to New York. Moreover there has lately been a further scare in Amsterdam which has led Dr. Colijn to hint that the Dutch Government might not be able to keep Holland indefinitely on the gold standard. All these signposts point to a growing sense of *malaise* which is spreading throughout the world.

The root cause of this uncertainty is easy to detect. It is the super-imposition of a war scare upon the already sensitive monetary and economic situation of the world, as it existed a few weeks ago. At the end of August, just before fears of war became gravely insistent, exchange dealers were anticipating a normal seasonal strengthening of the dollar as a result of the usual autumn crop payments. Sterling at that time was relatively strong, but its strength largely arose from heavy official American silver purchases in London. These have since ceased, and simultaneously the autumn purchases of dollars have begun. Hence, quite apart from any fear of war in Europe, some weakening of sterling would have been natural.

But the *gold bloc* currencies have been in a worse situation. The future of these currencies and the internal economic positions of France, Holland and Switzerland have been the causes of doubts and fears all through the summer. The situation of these countries has in no way been improved by the Italo-Abyssinian crisis. On the contrary, any threat of serious international disturbance can only have weakened it. It must not be forgotten that, in effect, the Banque de France is the only central bank in Europe which is prepared to ship gold freely. The Bank of England need not, and does not, ship gold at all; and the British Exchange Equalisation Account only buys and sells gold in Paris. The Dutch and Swiss central banks only ship gold to other central banks in the *gold bloc*—that is, in practice, to the Banque de France. The result is that any drain of gold from Europe falls naturally upon the Banque de France, and this means that the franc occupies the position of the fulcrum which has to bear any leverage exerted by the dollar. The principal source of relief to the franc arises from shipments of private hoards of gold from Amsterdam and elsewhere, and, more important, from such purchases of new and hoarded gold as are made on American account in the London bullion market.

To sum up this preliminary survey, the threat of war has fallen upon the exchange markets at a time when they were ill-equipped to bear it. Sterling was beginning to feel the seasonal pressure from America, and the *gold bloc* currencies hardly commanded confidence in the world. Moreover, for all the years of the depression there have been in existence excessive supplies of floating money, whose owners have by now become accustomed to move it without warning from one centre to another, solely in search of safety. The international situation has latterly made the United States appear the safest centre in which to hold funds; it is scarcely surprising, therefore, that the dollar has strengthened, or that gold has gone to the United States. On this showing alone, wider exchange fluctuations and heavier gold movements than actually took place might easily have occurred.

There are several reasons which have turned New York into the chief magnet for the world's floating funds. First and foremost there is its political and geographical remoteness from any threatened conflict. Whatever happens in Africa or Europe, America will surely remain immune.

Next, the improvement in American business has made American securities appear more attractive just at a time when British and Continental securities were hesitant or falling heavily. A third point is that a few years ago, when the position of the dollar was open to doubt, a certain amount of American "panic" money was lodged in London. To some extent this took the form of actual gold, for British securities with their low yield were unattractive, especially as Americans had to take into account the need to "hedge" against possible falls in the sterling exchange. The prevailing fear of war makes the future of sterling seem less assured than that of the dollar, with the result that these American funds have lately been going home. The view has been expressed in the City that this repatriation of American money had just as important an effect upon the exchange as any flight of European money to New York. Certainly there is no evidence of any flight of British capital; nor has there been any sudden and substantial demand by the British investor for American securities, though it is evident that this demand has latterly been on the increase.

The total size of the United States gold imports since the end of August is to some extent a matter of conjecture; the more so as it is not always possible to distinguish between gold "engaged for shipment" and gold actually "arrived" in America. Actual exports of gold bullion from Great Britain to the United States for the four weeks ended September 26th are returned at £12.3 millions; and £8.6 millions of this gold went during the last of these weeks. It is very likely that shipments have recently been accelerated through fear of a rise in insurance rates. An unofficial source states that shipments engaged between September 1st and September 25th amounted to \$45 millions from Great Britain, \$63 millions from France, and \$37 millions from Holland, making a total of \$145 millions, or nearly £30 millions, from these three countries alone. These totals appear large, but it must not be forgotten that foreign hoards in London alone probably exceed £200 millions. This suggests that, proportionately, the amount of gold which has lately gone to America is still on a fairly small scale.

Whether or not any steps to minimise exchange fluctuations have been taken by the British, French and American authorities in co-operation has not been disclosed. It is common knowledge that the British Exchange Equalisation Account has large holdings of ear-marked gold in Paris. It would be simple to sell this gold to the Banque de France for francs, and then to sell the francs for dollars, which finally would be offered for pounds in the market in order to support sterling. This action would weaken the franc against the dollar, and would add to the gold efflux from France; but in return the Banque de France would gain gold from the British Exchange Equalisation Account. The net result would be that, like the *gold bloc* countries, we would be using Paris and the Banque de France as a channel for shipping gold to the United States.

The outlook for the exchanges obviously depends on how the Italo-Abyssinian dispute develops. If at the last moment a peaceful settlement is reached, or if it becomes abundantly clear that Italy cannot resist, in the economic or military sense, the combined pressure of the rest of the world for more than a few weeks or months, then there may well be a sharp reaction in favour of the pound and franc. The fall in British security prices has appeared severe, in face of the continued improvement in trade; and they may well hold out a temptation to those who have at the moment taken their money to New York. The seasonal buying of dollars is also reported as well below normal, and the United States may even have to import wheat. Again, official American silver purchases may at any time be renewed. In theory, the more gold the United States imports the more silver the Treasury has to buy in order to

* *Sanctions.* Information Dept. Papers, No. 17, Royal Institute of International Affairs. 64 pages. 2s. net.

get closer to the statutory 3:1 ratio of gold to silver in the reserves.

On the other hand, it is impossible to rely upon the return to London of the American funds which have just been repatriated. They came to London through mistrust of the dollar, and they have gone back through mistrust of sterling. For them to return yet once more to London there must be a recrudescence of doubt in the dollar, as well as a restoration of confidence in sterling; and at present there seems little likelihood of the doubt. All that can be said is that the departure of this money is no serious loss to London.

Again we have taken the most hopeful view of the international situation—either peace, or rapidly successful pressure to arrest aggression. If matters drag on too long, the exchange uncertainty will continue, and will become aggravated—the more so if the internal financial stability of the gold bloc countries cannot be maintained, or if abnormal expenditure in Great Britain necessitates the raising of loans or a rise in the long-term rate of interest. Our own opinion is that this is too pessimistic a view to take; but it would be rash to ignore it. Taking everything into consideration we conclude that the stage was set a few weeks ago for a natural weakening of the dollar, quite apart from any fears of international upsets. Seasonal influences, gold bloc weaknesses, and the cessation of American silver purchases would have been sufficient by themselves. Then came the war scare, which intensified the pressure upon the pound and gold bloc currencies. Whether or not this abnormal pressure will be relieved, with a consequent rebound in the pound and franc, is the main question of the immediate future.

FINANCIAL NOTES

Guilder Uncertainties.—The outlook for the guilder remains very obscure. A week ago, our Dutch correspondent writes, there was a sharp rally. This began with the weakening of sterling, and led to heavy Dutch sales of British securities and a withdrawal of Dutch funds from London. These movements of funds also caused an improvement in the guilder against the French franc and dollar, with the result that the exchange rates came within the export gold point. This put an end to Dutch gold losses and also enabled the Netherlands Bank to cover some of its previous sales of francs. This week, however, there has been a turn the other way. Dr. Colijn's speech indicating that his Government might in the end be driven to abandon the gold standard had a serious effect, while the indecisive attitude of the Catholic opposition towards devaluation added to the markets' doubts. The gold outflow has therefore begun again, and three months' guilders have weakened in London from 22 to 30 cents discount. The position of the Netherlands Bank remains strong, but its recent gold losses have been largely accompanied by an expansion in its loans and discounts, suggesting that the banking system is having to make good its losses of funds by obtaining increased accommodation from the central bank. The contraction in the note issue has by no means equalled the Bank's gold losses.

The Foreign Exchanges.—The London market has experienced a difficult week, and movements have been very uncertain. The two chief trends are the renewed weakness of the guilder and the continued demand for dollars. Holland was still shipping gold as late as last Thursday, and on that day three months' guilders were quoted in a narrow market at 31 cents discount. There was, however, little actual selling. Three months' Swiss francs were quoted at 39 centimes discount in an equally narrow market, while three months' lire stand at Lit. 6 discount, with dealings practically impossible. As regards the demand for dollars, spot sterling was quoted on Thursday afternoon at \$4.91½ and French francs at Frs. 74½ to the pound. Definite commercial buying as well as transfers of funds were noticeable. The British Control intervened heavily in Paris in support of sterling at the end of last

week, and it is unofficially believed in London that it sold as much as Frs. 300 millions. There have been heavy gold shipments from Paris to New York, but after allowing for the gold influx from Holland and Italy, and for British Control sales of gold to the Banque de France, it is doubtful if France has lost much gold on balance.

The Money Market.—Conditions remain very easy. The Stock Exchange is taking very little money, the more so as jobbers are trying to reduce the amount of stock on their books. In consequence there are ample funds available for the discount market, and very little calling was in evidence last Thursday. The banks are buyers of Treasury bills of all dates up to mid-December at their minimum rate of ½ per cent.

	Sept. 5, 1935	Sept. 12, 1935	Sept. 19, 1935	Sept. 26, 1935
Bank rate.....	2	2	2	2
Clearing banks' deposit rate ...	1	1	1	1
Short Loan rate:—				
Clearing banks.....	1-1	1-1	1-1	1-1
Others.....	1-1	1-1	1	1
Discount rates:—				
Treasury bills	1	1	1-1½	1
Three months' bank bills	1-1	1-1	1-1	1

Last week's Treasury bill tender rate averaged 10s. 6.58d. per cent., against 10s. 7.02d. per cent. the week before. £45 millions of bills were allotted against maturities of £40 millions. This raises the total of tender bills outstanding to £540 millions, against £520 millions at the end of July.

The Bank Return.—The note circulation is practically unchanged since a week ago, and in the absence of any appreciable gold movements there is no alteration in the reserve. Since a year ago the note circulation has increased by £21.2 millions.

Only minor changes have occurred in the banking department.

New York Money and Banking.—Money in Wall Street remains very easy. During the week ended September 18th New York member banks' loans to brokers were reduced from \$903 to \$872 millions. Other loans made against securities rose from \$718 to \$719 millions. The provisions of the new Banking Act are now taking effect. Mr. Marriner S. Eccles, who hitherto has been Governor of the Federal Reserve Board, has been appointed by President Roosevelt to be chairman of the new "Board of Governors of the Federal Reserve System." This appointment only indicates a change of title, in accordance with the terms of the Banking Act. Certain banks have also taken advantage of the provisions of the new Act to withdraw from the Federal Deposit Insurance scheme. The withdrawals include eight mutual savings banks with total deposits of \$89.2 millions, and twenty-six commercial banks with deposits of \$118.0 millions. The number of accounts affected is 474,627, of which 465,596 are fully insured. The main development in New York has been the heavy influx of gold, estimates of which are given in the leading article on the preceding page. Silver imports for the week ended September 13th were \$5,135,000, of which \$1,902,000 came from Mexico and only \$1,914,000 from England. Imports from England are far below the level of August.

THE STOCK EXCHANGE

CANADIAN NEWSPRINT FINANCE

THE effects of economic depression from which Canadian industry is slowly recovering have been severe on her largest manufacturing industry and her second staple export—pulp and paper production. In a quarter of a century the industry's growth has been prodigious, but the very scale of its expansion in post-war years has involved it in troubles compared with which the normal depression difficulties of "heavy" industries seem of a minor order.

Nearly ten years ago the Canadian mills displaced those of the United States from their supreme position in newsprint production. Between 1926 and 1929 production rose by 44 per cent. and capacity by 48 per cent. When the crash came in America, however, the industry, being dependent upon the American market for 87 per cent. of its exports, was virtually forced into bankruptcy. The wide fluctuations of the last decade are illustrated in the following table:—

	Canada		United States		World Production
	Production	Exports	Production	Imports from Canada	
	Tons	Tons	Tons	Tons	Tons
1926	1,889,208	1,731,988	1,677,484	...	7,304,000
1929	2,725,331	2,515,495	1,386,564	1,533,000	6,275,000
1932	1,919,205	1,776,764	1,009,000	1,545,000	6,421,000
1933	2,021,965	1,838,105	946,000	1,956,000	7,342,000
1934	2,569,000	2,399,624	957,000	...	...
7 months to July 1934	1,471,522	(c)	566,982	(a)	...
1935	1,519,160	(c)	634,595	(a)	...

(a) All imports to U.S.A., 6 months to June: 1,062,703 short tons 1934, and 1,100,124 short tons 1935. (b) 1927 estimate, 6,420,000 tons. (c) Value of exports, all paper, chiefly newsprint, 6 months to June: 1934, \$41,103,000; 1935, \$42,741,000.

The sharp reduction in exports and prices, however, is but part of the disaster which has threatened the industry during the last five years. A large part of its issued capital is necessarily invested in "fixed" assets. In such an industry, so long as some small return can be secured on fixed charges, depression is more likely to produce a regime of price-cutting than of reduced output capacity. In fact, newsprint prices fell from 86.5 in 1929 to 54.0 in 1934-35 (1926=100) as individual producers strove to maintain their share of a reduced market. Under such conditions, the unfortunate effect of the industry's "high geared" capital structures adopted during the years of expansion from 1925 to 1929 became plainly evident. A relatively small contraction in output would have been sufficient to wipe out common stock earnings; the actual reduction left few prior charges unscathed. What efforts were possible to correct this over-expansion when conditions of depression became established? In the autumn of 1930 a merger of the Eastern Canada mills was canvassed, including Abitibi, Canada Power and Paper, St. Lawrence, and the Canadian mills of International Paper and Power. The suggestions, however, were doomed to failure, for although the necessary elimination of surplus capacity might have improved the profits of the group, the latter could not guarantee the prior charge services of the constituent companies, operating and closed down. As an alternative, it was suggested that falling prices, say to \$40 per ton, would eventually drive the United States mills out of business, and the resultant transfer of demand would ensure rising prices and an adequate operating ratio. Such expectations were bound to be falsified. In the event, the industry lapsed into a species of monopolistic competition. In 1931 six concerns, each representing a cluster of companies, controlled about 80 per cent. of capacity, but despite various interlocking interests and directorates, their joint power was not effective. The Canadian Newsprint Institute, despite some earlier success in strengthening the price structure, had failed in its purpose by 1930. Left to themselves, the position of the companies rapidly

deteriorated. Price Brothers became bankrupt, Abitibi and the Backus-Brooks group were in receivership, while Canada Power and Paper and Donnacona were severely re-organised. It was not, indeed, until the advent of N.R.A. that the possibility of stronger organisation became feasible. Although price-fixing was never practicable (owing, largely, to the opposition of powerful newspaper groups), the Canadian producers were induced to prevent underselling, and to establish the Newsprint Export Manufacturers' Association to co-operate with the Code Authority. The 1934 price was by this means stabilised at \$40 per ton (New York delivered), and some pooling of tonnage was arranged. In November, Mr. Bennett declared that exports would be subjected to Federal control, in order to achieve higher prices, if the provincial Governments made a formal request. Mr. Taschereau, Premier of Quebec, had already taken measures to that end when St. Lawrence Paper entered into new contracts at the 1934 price at a time when 1935 increases were under consideration. American consumers, however, had the last word, and the move towards higher prices was performed abandoned.

On its recent record, therefore, the industry has proved itself incapable of effecting and maintaining a higher price policy. It is not clear whether the omens favour higher expectations for the future. Mr. A. E. Forsey, in a recent issue of the *Canadian Journal of Economics*, has drawn attention to a peculiar feature relating to newsprint contracts. It appears that every contract contains a provision that the price shall not exceed that charged to any customer by any mill with a capacity of over 100,000 tons. Bad judgment or the indiscretion of one salesman can therefore involve the industry in a grotesque form of competition. Mutual confidence has been dissipated, either by individualist or opportunist policies, and the larger mills have been reluctant to enter into tonnage pooling agreements.

The impact of these conditions on earning power may be inferred from the following survey of leading company results:—

(Results in \$'000)					
Company	1926	1929	1933	1934	Current Quotations

(a) Controlled by International Paper and Power Co. (b) Controlled by International Paper and Power Co. (c) Controlled by International Paper and Power Co. (d) Results shown under preceding year. (e) No provision for depreciation and bond interest in default since June, 1932. (f) Loss for 10 months to December, 1932, \$57,910 before interest, depreciation and depletion. † Not consolidated figures. ‡ Predecessor company, year to December 31. § Period September, 1932, to December, 1933. †† Net profit and \$72,662 profit on sale of securities applied to depreciation.

The figures suggest that the relief derived from expanding output during 1934 was severely restricted by low selling prices. Only Consolidated Paper covered its interest payments last year. Abitibi bonds have been in default since, June 1932, and those of Price Brothers since August, 1932. The Canadian markets showed some inclination during 1934 to budget for a fairly substantial measure of recovery, but increased output, although satisfactory enough, has proved less impressive when translated into dollars. Recent quotations have tended to reflect the view that a further substantial increase in production during the current year may be achieved, but that, in the meantime, an effective price-raising policy can be ruled out. Though even partially covered bonds command a not ungenerous market valuation, the loss sustained, since 1924, by holders of preferred and common stocks has been enormous. Present quotations represent little more than option money on reconstruction possibilities.

The industry, clearly, has made but slight progress towards the setting of its own house in order. Is it likely to be saved, *malgré lui*, by a healthy revival in consumption? The world's production (though not that of Canada) has now largely regained the level of 1929. The problem of excessive capacity and unremunerative prices, however, would remain even if "peak" output were fully restored. Last year's rapid advance in American imports has been maintained, if not improved, this year, despite the disappointing trend of United States production. American publishers strongly favour Canadian newsprint, although they exert preferences among the available makes, and the recovery phase in the United States has already brought an increase in newspaper size, as measured by advertising lineage. Canadian newsprint is likely to remain on the United States free list following the investigation into the possibility of American self-sufficiency, for although available resources are claimed to be sufficient for such a policy, considerations of reciprocal trade have so far prevailed.

Nevertheless, it would appear unwise unduly to discount the extent of United States competition. She has it within her power considerably to enlarge her capacity, irrespective of Federal assistance. For Canada, therefore, the problem turns upon the reduction of high fixed costs, the development of other markets, and some effective measure of concerted action within the industry. The average improvement in operations during 1934, to some 80 per cent. of capacity, obscures the fact that individual mills operated between 36 per cent. and 100 per cent. of capacity. Vigorous financial reorganisation—on the lines followed, for example, by Consolidated Paper—may reduce bond interest, but until operations and prices are increased a return to adequate profitability may be delayed. Joint provincial action to raise prices, however, may be as difficult to bring about, and as unsatisfactory when achieved, as the industry's internal search for financial salvation has been hitherto.

The prospects of substantially increased consumption over the next decade are therefore clouded by an intractable technical and financial problem. Meanwhile, Canada is "giving away" her timber and her mills, and cutting farther into her forests. That a large increase in world demand is possible is beyond question. Figures computed by the Royal Bank of Canada show that whereas *per capita* consumption in 1934 amounted to 57.5 lbs. and 48.0 lbs. in Great Britain and the United States respectively, the calculations for France, Scandinavia, Japan, Germany, Italy and Russia were all lower than 20 lbs. per head. For the moment, however, long-term potentialities must yield place to urgent contemporary financial problems. The industry, it must be concluded, offers little scope, under its present auspices, for the long-term investor, and not much more for the speculator. Short-term operations may offer possibilities to those in close contact with Canadian sources of information regarding current events. Until the industry has reorganised itself, however, its resumption of due investment status will be tardy. The market would be more favourably impressed if a reconstruction scheme like that of Price Brothers, whose negotiations have dragged on for a couple of years, could be brought to a successful conclusion. The industry lacks a *deus ex machina*—or suffers from over-supply of candidates for that position.

INVESTMENT NOTES

Markets—A Suspended Crisis?—One verdict only is relevant to the behaviour of the security markets during the past few days. For the investor their condition is much less satisfactory than it appears on the surface; for the speculator it is potentially dangerous. Last Friday, September 20th, the markets looked over the edge of a precipice and, for a moment, lost their nerve. Gilt-edged stocks declined during that day by as much as 1½ points, and for a time British Government credit was near a 3½ per cent. basis. Industrial shares showed declines of 2s. 6d. to 5s., and dealing quotations were significantly widened. Wall Street was similarly depressed, a wave of selling reducing the prices of leading market stocks by anything up to three points, and European bourses showed a similar sharp reaction. At the beginning of this week, however, the market returned to its former attitude of dogged persistence in the belief that the Italo-Abyssinian dispute would be settled by peaceful means, and quotations showed a recovery scarcely less impressive than the decline which preceded it. On Thursday even the incidence of an uncomfortable settlement failed to affect the firm tone of markets generally. The following table shows the extent of fluctuations in representative securities during the past few days:—

PRICES OF BRITISH SECURITIES

S. Malayan Tin (5/-)	16/10½	14/7½	14/6	15/-

The week's developments suggest two conclusions. In the first place, dealers and "shops" are revealing a marked disinclination to carry any considerable volume of stocks, and quotations, consequently, are liable to move within wide limits on every change in popular sentiment. In the second place, the attitude of the market towards the outcome of the League's present deliberations is definitely more optimistic than that of quarters which, being nearer to the heart of political affairs, are better able to judge of the balance of probabilities. The markets, indeed, do not appear wholly to have overcome their tacit resentment of the intrusion of a gratuitous political crisis into a domestic investment environment which, backed by uninterrupted industrial "recovery," appeared in every way promising. If war clouds were removed, fundamentally bullish factors would doubtless reassert themselves. The imposition, however, by the League of any form of "sanctions" (except those which were purely derisory), or even the establishment of a direct breach with Italy, might find the markets mentally unprepared for a far-reaching reorientation of their outlook, and technically vulnerable even to a moderate amount of liquidation. In these conditions, there may be much to be said for a policy of caution on the part of substantial investors. If, after all, fear proves a foolish prophet, investors will have lost little, in the meantime, by such an attitude. If the ultimate outcome is less happy, optimism may have been dearly purchased.

Argentine Transport Legislation.—News has been received this week to the effect that the Argentine Government has presented to Congress a Bill to unify the laws affecting the railways and to facilitate their working by the companies concerned. A feature of the Bill is stated to be that it authorises the amalgamation of certain groups of lines with other means of transport in order to avoid competition. As we go to press we are informed that a Bill providing for the co-ordination of the B.A. Great Southern and the B.A. Western railways has been passed by the Chamber of Deputies by a majority of 27. The Chamber is also reported to have approved the first reading of a Bill for the co-ordination of road and rail transport and approved the construction of an air port at Buenos Aires. The general position in regard to transport legislation in Argentina (writes a correspondent) is obscure, owing partly to the wide extent of the preliminary investigations undertaken by Government Committees and the controversial nature of their reports, but chiefly to a certain dilatoriness on the part of the Chamber of Deputies. Some few months ago a measure was brought forward for the complete co-ordination of transport facilities in the Municipality of Buenos Aires, but at about the same time a Bill was also drafted based on the report of a committee appointed some two years ago to investigate transport conditions throughout the country. This measure—which is separate from the Bill dealing with traffic in the City of Buenos Aires—has been modified and remodelled, but decisive action by the Chamber has hitherto been repeatedly postponed. The Bill, whose first reading has now been approved, doubtless relates to the recommendations of the Government Board issued in April last, which suggested, *inter alia*, that steps should be taken to lessen the losses of the railways by permitting, for instance, remittances to be effected at preferential rates of exchange, as well as more economical working and the abolition of obsolete regulations. Regulations affecting working hours and transfers of surplus employees between the companies have already been decreed, but the Labour leaders are opposing the new rules, and this may lead to labour troubles before long.

Rubber Shares and the "Quota."—We deal on page 606 of this issue with the unexpected decision of the International Rubber Committee to reduce the export quota under the restriction scheme from 65 to 60 per cent. for the last quarter of this year. The announcement induced a professional marking up of share values, as the following table reveals:—

Company	Share Denomination	Prices				Present Yield on Last Dividend (%)
		Highest, 1935	Lowest, 1935	Sept. 20, 1935	Sept. 26, 1935	
Allied Sumatra	£1	17/1½	11/3	12/6	13/3	£ s. d. 3 17 3
Anglo-Dutch	£1	25/3	18/3	19/9	21/6	3 15 3
Anglo-Java	1/-	1/0½	-7½	-9	-9	3 6 9
E. Asiatic	2/-	2/9½	1/10	1/10½	2/1½	4 14 0
Grand Central	£1	19/6	14/6	15/-	15/-	5 6 9
Gula Kalumpung	£1	25/-	18/6	20/-	20/-	5 0 0
Linggi	2/-	20/7½	15/6	16/3	16/3	Nil
Merimau Pegoh	£1	3/6	2/6	2/7½	2/9	5 9 0
Tanjong Malim	£1	29/7½	21/9	23/9	23/9	4 4 0
U. Serdang	2/-	3/10½	2/7½	3/-	3/1½	3 17 0

The Committee's decision, coming after its change of mind in March, when percentages for the second and succeeding quarters of 1935 were revised downwards, may suggest to rubber company shareholders that the Committee is following a somewhat opportunist policy and that, perhaps unwittingly, it is being driven by events to a standpoint approximating rather more closely to that of the Tin Committee than the more moderate viewpoint of the Tea Committee. Presumably, the authorities regard the necessity of reducing visible rubber stocks (i.e. of bringing current production below visible absorption), as of greater immediate moment than the encouragement of consumption itself. Even if this policy tends still further to widen the margin between "allowable" and "actual" rubber shipments from Dutch native areas, it may nevertheless succeed

The Distinctive System

of

The Scottish Provident Institution

Under the Distinctive System the premiums are so moderate that, at early and middle ages, the annual sum charged elsewhere for a Whole Life Assurance of £1,000, with profits, will here secure from the first as much as £1,300 or thereby with right to bonuses.

in its immediate purpose, by enforcing a more than compensatory reduction in those areas where the Committee's writ runs. Nevertheless, it is not without serious future danger for holders of rubber shares. At 60 per cent. production, a much higher price than 6d. per pound will be necessary to support anything like the present market prices of rubber shares. With every "cut" in output, with its accompanying rise in working costs per pound, the temptation to aim at a greatly increased price level becomes stronger. Almost involuntarily, the industry may be forced into a position differing only in degree from that which now obtains in the tin industry, in which prices are maintained at twice or thrice the cost of production, while a large part of the industry's productive capacity is condemned to indefinite idleness. Past experience, however, has suggested that the long-term trend of rubber consumption is very sensitive to price factors. For this reason we should regard every penny increase in the price, above 6d., not as a bull point but a progressively increasing bear point for shareholders, since it would tend to the establishment of a vicious circle from which the industry would find it increasingly difficult to extricate itself.

Copper Share Outlook.—The raising of the domestic copper price in the United States last week to the former Code figure of 9c. per lb. has provided the cue for considerable activity in the London market. The connection, of course, is indirect, inasmuch as the stronger trend of the American domestic market tends to ease any pressure which may arise upon the export trade. Domestic improvement in the United States is therefore regarded as a bull point for the European restriction scheme. In addition, copper has shared, with other non-ferrous metals, an active demand for war purposes, although industrial requirements continue on a substantial scale. Notwithstanding the recurrence of profit-taking in the copper market during recent sessions, the metal is standing at a high level for the year. As an additional fillip to shareholders, Rhokana Corporation has announced this week a first dividend of 12½ per cent., less tax, on the ordinary and "A" ordinary shares. It is stated that substantial amounts have been added to the reserve funds, which for the year to June, 1934, absorbed £112,486. The statement covering the latest year, issued in July, showed estimated revenue, subject to tax, and after debenture interest, depreciation and development of £325,000, apparently comparing with £391,937 for the previous year. Following the preference share issue of December, 1934, however, some £26,562 will be required from the former sum for preference dividends, leaving a balance of £298,438 available for the ordinary capital, equivalent to 12.2 per cent. These approximate calculations, based on the preliminary statement, suggest that the dividend is covered by current earnings. The Roan Antelope quarterly reports show that estimated profits, on the same basis, totalled £330,647 for the year to

June last, against £389,564 during the previous year, thus reflecting low prices during the early period of the financial year. The indicated earnings subject to tax represent 21.2 per cent. on the ordinary capital, against 25 per cent. in the previous year. The market may be on more confident ground, this year, in anticipating a maiden dividend from this concern, which was deterred last year from a dividend distribution owing to the low copper price then prevailing. On a short view, the outlook for Rhodesian copper shares appears more favourable than for some time past, but speculative investors may feel inclined to lay greater stress upon a further expansion in industrial demand than upon an artificial stimulus based on "war prospects."

* * *

Fixed Trust Developments.—Of the making of fixed trusts there is no end. Management salesmanship, with each successive formation, seeks to outvie the efforts of earlier competitors. This procedure has both advantages and disadvantages. So far as innovation is pursued, not for its own sake, but to give substantial benefit to certificate holders, competition will undoubtedly work for good. Already improvement has been far-reaching. For example, the separation of yield figures into income and bonus items is undoubtedly an advance. Further, the majority of the trusts are now committed to the repurchase of sub-units at net break-up value, thus assuring a ready market to their clientèle who wish to dispose of their holdings. A more recent innovation provides for the extension or transmutation of the trust after the expiration of the trust period, by virtue of which sub-unit holders may exchange their certificates for, say, shares in a managed investment trust. This provision might avoid the undesirable liquidation of underlying securities whose record and prospects suggested impressive equity possibilities, although it might involve problems of management capacity which are not in question at the moment. These developments and others of similar character are adopted in the latest fixed trust formation, "Keystone Certificates," which breaks new ground in offering instalment purchase facilities for its sub-units. In addition the managers offer certificate holders an equal participation in management profits. These profits are defined as those remaining "after charging all the expenses of the managers in operating the trust, including income-tax, and after making due provision for the proper maintenance of the trust," and will be certified by the auditors of the management company. The value of this right, it would appear, rests upon the management expenses which are involved in operating the trust, and also upon the initial loading charge which is made. In the case of "Keystone Certificates" the loading charge amounts to 8 per cent., covering a trust period of ten years. This compares with charges ranging from 5 to 7 per cent. for the majority of existing trusts, whose life is usually twenty years, and of 6 to 10 per cent. for ten-year trusts. On an annual basis, therefore, the income available for participation would appear to be derived from a charge which exceeds that of a number of fixed trusts, although the management of the larger portfolio will presumably tend to increase expenses. Such participation provisions represent an interesting "selling point," but the security of the sub-unit holder is none the less closely connected with the original choice of the portfolio, and with safeguards for sale and continuity of management.

* * *

Actuaries' Investment Index.—The latest calculations of the Actuaries' Investment Index reveal the effects of the market's realisation, a month ago, that the Italo-Abyssinian dispute might wear a more serious aspect if conciliation, eventually, were to prove ineffective. The month's movements, somewhat surprisingly, have been of least effect upon "irredeemable" gilt-edged issues. A proper interpretation of the latest figure for 2½ per cent. "Consols," however, which is calculated at 147.4 on Tuesday's prices compared with 147.9 a month ago, could not disregard the striking recovery which began after a threatened

débâcle on Friday of last week. The aggregate figure for 158 ordinary shares, on the other hand, has fallen during the period to 74.2, against 76.4 last month, and compares with 72.7 a year ago. The yield figures are calculated at 3.95, 3.91 and 3.65 per cent., respectively. The following table sets out some significant changes of the month in the fixed interest and ordinary share indices:—

Group (and No. of Securities)	Prices (Dec. 31, 1928 = 100)			Yields (%)		
	Year Ago (Sept. 25, 1934)	Month Ago (Aug. 27, 1935)	This Week (Sept. 24, 1935)	Year Ago (Sept. 25, 1934)	Month Ago (Aug. 27, 1935)	This Week (Sept. 24, 1935)
Fixed Interest						
2½% "Consols".....	144.9	147.9	147.4	3.08	3.02	3.02
Misc. indus. debenture (13) ..	122.7	126.1	125.2	4.10	3.85	3.88
Do. preference (44) ..	117.1	120.2	117.8	4.35	4.28	4.36
Ordinary						
Banks and discount cos. (12) ..	112.3	115.5	111.0	4.18	4.06	4.22
Coal (6) ..	89.2	89.5	84.7	4.17	4.16	4.52
Electric light and power (16) ..	131.0	131.4	126.7	3.80	3.87	4.03
Iron and steel (8) ..	52.2	63.4	63.7	1.26	3.21	3.34
Home rails (4) ..	78.3	62.0	60.3	1.49	1.64	1.65
Stores and catering (15) ..	81.9	81.7	77.1	4.05	4.13	4.06
Breweries and distill. (19) ..	113.7	130.6	126.7	3.88	4.24	4.36

Iron and steel shares have the sole distinction of an advance during the month, and together with breweries they maintain a substantial premium over last year's levels. In the fixed interest section, it is perhaps significant that preference shares have shown the greatest fall, on consideration of the possible effects of firmer interest rates and the potential industrial repercussions of a threat to peace. Interest factors have clearly affected bank and electric power shares. Coal issues have been depressed on wage developments, and home rails have experienced a depressing set of coal and merchandise traffics in recent weeks. Broadly, the month's movements suggest that the market has taken reasonable, but decidedly modest, steps to discount the possibility of untoward events beyond, and this side of, Suez.

COMPANY NOTES

Shipping Companies.—During this year the market has written up shipping shares to levels very considerably higher than those of 1934. Various factors have contributed to the improvement, including the British Government's £2,000,000 subsidy to tramp shipping for the calendar year 1935, the subsequent agreements for minimum freight rates on the River Plate, St. Lawrence and Australian routes, and the appearance of more than one market review seeking bargains in one of the still depressed industries which includes concerns of the highest standing. It may be questioned, however, whether the improvement in shipping conditions equals the rise in share prices. Conditions are admittedly better. International trade has increased slightly, and the tonnage laid up at United Kingdom ports at July 1st had fallen to some 588,000 tons net, compared with 1,042,000 tons a year before. General freight levels, however, have failed to rise, and, as the recent speech of the Hon. A. Shaw demonstrated, the evils of foreign subsidised competition are undiminished. Even the fall in laid-up tonnage reflects continued sales and scrapping rather than any substantially greater activity on voyages. The earnings prospect, therefore, is only for quite a modest improvement on 1934—an impression confirmed by the consensus of chairmen's speeches. It should, consequently, be borne in mind that 1934, though an improvement both on 1933 and on the disastrous results of 1932, was still a year of extremely meagre profits (as the accompanying table suggests), not nearly sufficing in the case of the average tramp-owning concern to cover depreciation and barely sufficing even in the case of liner companies. Since the first care of a shipowner must be to put aside depreciation funds to replace his obsolescent vessels, it is inevitable that, even when appreciable recovery does set in, a very conservative dividend policy will be necessary—unless a permanent reduction of tonnage is intended. Discounting of vigorous recovery is therefore unwise. Moderate hopes, however, may be held. The Government's subsidy and normal shipping policy has put pressure on the industry to

co-ordinate its operations to some effect, as the minimum freight agreements are demonstrating. The tanker section, which had already worked out its own scheme before the Government took action, is now considered to be earning full depreciation plus a return on capital even for ships laid up and receiving the compensation rates. The conference to be held this winter in an attempt to agree on international measures for stabilising freight rates may conceivably produce better conditions. Meanwhile the general rising trend of shipping companies' liquid assets over recent years

* Earnings returned on a different basis owing to Atlantic assets having been made over to Cunard-White Star. † After transfer of approximately £100,000 from reserve each year. § Tax free.

demonstrates that they will in general be able to take early advantage of improved conditions. The broad conclusion appears to be that the shipping industry is making progress in adjusting itself to very difficult conditions, partly by reducing costs, and ridding itself of obsolete tonnage, and partly by seeking local or international agreements; but that, despite the slightly improving tendency, the conditions themselves still preclude any but the most meagre profits. The effects of warfare on a considerable scale might be "favourable," but are incalculable at present.

* * *

United Steel Companies.—Future historians will be unable to trace the unfortunate circumstances which surrounded the early years of this large steel merger from the most careful examination of its impressive subsequent annual reports. The market may profess disappointment regarding the 7 per cent. dividend paid for the latest year to June last, but the accounts are a study in the economics of prudent reserve policy. Strict comparability with the preceding year is vitiated by the incidence of taxation, but the directors' report indicates that the combined trading profit of the group, before interest, depreciation and income tax, was approximately £150,000 higher. The amount earned for the ordinary shares has advanced from £497,680 to £534,205, for although provision for income tax charges and reserves are nearly £60,000 lower at £244,198, the first provision for debenture redemption and increased welfare provisions have approximately offset the saving. Earnings on this basis are calculated at 10.4 per cent. In addition £275,000 allocated to central depreciation reserve, transfers of £100,000 from revenue and £200,000 directly from an exceptional credit have been made to general reserve, while the balance carried forward is some £75,000 higher at £521,305. Such moderation may not be entirely to the market's taste, but as a principal factor in long-term

General reserve	...	...	100,000
Carried forward	230,380	446,037	521,305

§ Not strictly comparable with £1,191,665 for previous year, owing to incidence of taxation. Combined trading profit of company and subsidiaries approximately £150,000 higher than for 1933-34. † Less reserve for losses of subsidiary companies. ‡ Of which £153,638 directly charged, and £150,000 provided for taxation reserve in 1933-34; net charge in 1934-35, £24,198, after transfer of £118,500 from taxation reserve, plus £220,000 provided for taxation reserve.

The balance sheet is appreciably clearer as a result of the consolidation of the group's loan capital. In a full year some £34,115 will be saved in interest by the substitution of the parent company's 4 per cent. stock for a fixed loan and the debentures of the Appleby and Frodingham concerns. At the same time, reductions have been effected in subsidiary companies' current and advance accounts, accompanied by an increase in shareholdings in subsidiaries from £1,393,736 to £3,838,025. Fixed assets of £10,107,000, including properties of the parent concern and the par value of its subsidiary interests and advances, are covered by depreciation and other reserves totalling £1,914,000. The balance sheet position, by all tokens, must be accounted satisfactory. Investors, however, whose speculative appetites have been appeased by the rise in the £1 ordinary shares from 21s. 6d. in May last year, to the current level of 32s. ex dividend, may regard the latest accounts as the sign for a revaluation of long-run prospects. The earnings position is undoubtedly favourable, but the geometric increase which in earlier years resulted from the "high geared" technical basis of the industry, has spent much of its force owing to the approach towards capacity production. Since the ordinary shares are themselves definitely "low geared," a spectacular future advance in earnings is difficult to envisage. The long-term prospects of the company, internally efficient and quick to benefit from the higher prices now prevailing, apparently justify the present equity valuation on a 4½ per cent. basis, granted the maintenance of domestic recovery conditions.

* * *

Harrisons and Crosfield Report.—Although the directors of Harrisons and Crosfield describe the profits for the year to June 30th last (which are the highest for five years) as "satisfactory in face of the continuing difficulties which handicap international trading," shareholders may feel a little disappointment that the improvement in earning power, so conspicuous in the preceding two years, has been checked by conditions outside the company's control. The enhanced yield from the company's rubber interests, in a period broadly corresponding to the first year of restriction, has been largely negated by decreased income from its tea shareholdings—and, possibly, by somewhat

lower returns from its general Eastern business. Results for the last three years are shown below:—

	Years to June 30		
	1933	1934	1935
Profit on working*	214,339	261,504	268,284
Directors' remuneration	15,000	†	†
Preference dividend	37,800	37,800	37,800
Preferred ordinary dividend	100,000	100,000	100,000
Total deferred ordinary dividend	38,666	77,333	81,022
Total dividend on management shares	2,500	41,166	43,011
Deferred { Earned (%)	13.5	20.9	20.8
Ordinary { Paid (%)	10	20	20
Total carried forward	129,351	134,556	141,007

* After providing for bad and doubtful debts, depreciation and income tax. † Directors drew £12,500 in 1934 and £15,000 in 1935, but refunded these amounts, paid on account, in view of amended Article 92 of company's articles, which relates such refunds to the amounts paid on management shares.

That results have not entirely fulfilled the board's legitimate expectations may be inferred, *inter alia*, from the tendency of net liquid assets to increase. A year ago the directors commented favourably on the company's progress, which had enabled "more of its resources to be employed in the business." As this year's 20 per cent. deferred ordinary dividend absorbs practically the whole of the year's surplus earnings, the market price of the stock would be vulnerable to any setback in profits. Much, therefore, depends on the incipient recovery in tea prices, and on the degree of success which attends the increasingly Spartan policy of the International Rubber Committee, which we discuss on pages 606 and 617 of this issue. The balance-sheet position, however, remains as satisfactory as ever. Despite the decline in market quotations, the valuation of the company's investments, last June, exceeded the £1,199,257 (an increase of £97,478) at which they appeared in the balance sheet, leaving intact the special reserve of £350,000 held against them. The present price of the £1 units of deferred ordinary stock is 122s. 6d. Under the company's articles of association, holders are entitled to subscribe at par for new shares equivalent to one-half of the amount by which a given dividend exceeds 10 per cent., less income tax (at 4s.). In the present instance the amount of such par subscription will be £4 per £100 of stock. The net price, *ex final dividend and "rights,"* is therefore £5 16s. 3d., and the yield, on a 20 per cent. dividend, is £3 9s. per cent.

"Gas Holding Companies."—In a leading article under this title, in the *Economist* of August 24th last (page 380), we contrasted *inter alia*, the figures of capitalisation, output, costs of acquisition, etc., of three large companies recently formed in Great Britain to hold the shares of operating companies in the gas industry. It has been suggested, in quarters concerned with the movement in certain of its main aspects, that our methods of numerical comparison, though in conformity with the definitions stated in the article, tended to stress disparities which different methods of computation would have thrown into less sharp relief. We may, therefore, for purposes of illustration, mention certain alternative bases of calculation which have been suggested and leave our readers to draw their own conclusions. For example, our "cost of acquisition" figures assumed that compensation to directors in subsidiary companies was a species of holding company "formation expense" which would be written off either from share premiums (as in the case of South-Eastern Gas and Severn Valley Gas) or from revenue. It may, however, be argued that costs of this nature represent a productive capital item, since the holding companies, indirectly, will receive all future directors' fees, and that these, if obtained, say, on a six to seven years' purchase basis, may be a profitable "investment." On our original assumption, "cost of acquisition and formation" items, expressed as a proportion of total issued share capital, came out at 5.9 per cent. in the case of the South-Eastern Gas Corporation (as at March last), 8.2 per cent. in that of the Severn Valley Gas Corporation, and 11.4 per cent. in that of the South-Western Gas and Water Corporation. If, however, compensation to directors is excluded from preliminary

expenses, properly so-called, the latter items are reduced to 1.7, 2.0 and 4.1 per cent. of the issued share capitals of the respective companies. If debenture capital is included with share capital (without allowance for capital duty which may have been paid on any proportion of the total which, though "authorised," is not yet issued), the percentages are 1.4 per cent. for the South-Eastern and 3.2 per cent. for the South-Western company. The latter company's percentage would be further reduced if allowance were made for the duty paid on approximately £1,000,000 of authorised capital which had not been issued at the date of the last accounts. Calculations as regards the purely "gas" assets of the last-named company, in any case, are somewhat difficult owing to the fact that the company has also acquired two water concerns. The cost of the latter's acquisition was £112,906. If adjustments be made for the proportions of share capital thus represented, the total capital per million cubic feet of annual "make" of the gas subsidiaries would appear to be reduced from £1,160 to £961. These figures do not include any adjustment for holding of cash or "additional" investments. It will be seen that the adoption of these suggestions does not upset the main conclusions, from the purely investment aspect, suggested in our article. As regards more technical matters, such as the effects of acquisition of subsidiary companies which may not, in every case, be equally numerous or geographically compact, and may not have reached identical stages of development, we are content to leave the ultimate verdict to those most familiar with the industry—and to the lessons of experience.

Other Company Results.—Our usual summary of profit and loss accounts on page 637 includes the results of 19 additional concerns. In the iron and steel group progress is well maintained by *Manvers Main Collieries*, whose profits have advanced from £84,897 to £103,784, and comfortably provide for the increased dividend of 4½ per cent. These figures are closely paralleled by *Sheepbridge Coal and Iron* with an increase from £85,870 to £105,085, the dividend being raised from 5 to 6½ per cent. In the Stores group, the full report of *Prices Tailors* confirms the impressive expansion in earnings announced some time ago, but *Selfridge Provincial Stores* profits show little advance at £107,371, and the dividend remains at 2½ per cent. Reports from *City and International Trust* and *C.L.R.P. Investment* reveal a moderate increase in profits, and among the more specialised financial concerns, *Brick Investments* reports net profits of £22,519 for the latest year, against £24,693 for the previous fifteen months. In this week's dividend list chief interest attaches to the *Austin Motor* declaration of 50 per cent. The market optimists professed disappointment with the result, which is equivalent to 200 per cent. on the former capital, compared with a 100 per cent. payment in the previous year. The directors of *Electric and Musical Industries* announce a dividend of 12½ per cent. against 10 per cent. Profits amount to £451,002 (against £420,710) and profits on investment sales amount to £114,544. The figures are apparently struck before tax, but after administration and general expenses. *Ideal Building and Land Development* has reduced the interim dividend from 5 to 4 per cent. The directors refer to increased competition, and to the possibility of employing resources in non-residential building.

Company Meetings of the Week.—On later pages of this issue will be found the reports of the following company meetings:—Second Alliance Trust, Industrial Finance and Investment, Gold Exploration and Finance Company of Australia, Gold Mines of Kalgoorlie, Great Boulder Mining and Finance, Eastwoods, and Prices Tailors. The chairman of the Second Alliance Trust declared that the appreciation in the value of the company's security holdings over the past year had been greater than that in security prices as a whole. Shareholders in Industrial Finance and Investment learned that a reduction of nearly £200,000 had been effected in loans in countries practising exchange restriction. Mr L. C. M. S. Amery informed shareholders in Gold Exploration and Finance of Australia of the progress made by the company's interests, particularly the Triton, Central

Norseman, East Bendigo, and Gold Mines of Kalgoorlie properties. At the meeting of the last-named the chairman declared that revenue from small-scale operations would largely assist in the financing of the major programme of development. Mr Claude de Bernales, presiding at the Great Boulder Mining and Finance meeting, declared that the company controlled, or had options over, 2,764 acres, apart from its interest in Yellowdine. The chairman of Eastwoods stated that, for the first time since the war, all the company's works had been run to capacity. At the meeting of Prices Tailors, the chairman recorded an increase from 244 to 267 in the number of depôts.

THE WEEK IN THE MARKETS

THE LONDON STOCK EXCHANGE

SETTLING DAYS
TICKET OCTOBER 8 | ACCOUNT OCTOBER 10

It may, perhaps, be doubted if those "diplomatic circles," whose every hint has been examined this week by an anxious world, would have shared the market's more cheerful interpretation of the course of events. Technically, conditions were "set fair" for recovery on really favourable developments. This week's movements, however, have suggested a willingness to make bricks without adequate diplomatic straw, and to build expectations upon the trustful assumption that the representatives of the Powers mean less than they say, and that serious disturbance is "unthinkable." Whether this attitude is a really satisfactory investment hypothesis at a time when the real differences in the dispute have shown no sign of narrowing, may well be questioned.

Its effects, however, were very evident in the gilt-edged markets. Although business was not active, successive days showed a continuation of the more confident tendency which set in on Monday after open distress at the end of last week. Foreign selling was quenched, and the bears appeared to seek protection. Irredeemable stocks led the advance. "Old Consols" advanced by nearly a point a day during the first half of the week, while War Loan and Victory Bonds were well supported. An easier tendency set in on Thursday. African Railway Finance scrip opened at 2 discount, following the substantial under-subscription. India stocks got into stride with gilt-edged, but Dominion issues were less impressive and did not find a steadier course until mid-week.

In the foreign bond list, Brazilian Funding issues met a better demand after a certain amount of early selling. Austrian issues derived support from the more confident view of the European aspects of the Italo-Abyssinian problem, and other European issues became firmer in mid-week trading. Purchasers were also in evidence for Sino-Japanese bonds.

The gilt-edged recovery assisted the market in home rail prior charges, which had suffered rather considerably in previous weeks, and demand for preference issues, marginal and covered, tended to expand. There were no great expectations for the traffics, and consequently little disappointment when they were published. In the foreign market, Argentine issues became more active on the reported approval, in principle, of the Argentine Co-ordination Bill (discussed on page 617).

The industrial markets were in confident fettle this week, although attention was largely directed to those speculative favourites which had been most affected by the recent unsettlement. Aviation issues returned to favour, Rolls-Royce in particular responding to news of a large export order. Iron and steel issues returned to the centre of the stage, and were cheered by the United Steel profits, set out on page 619. Among motor shares, Austin were in good demand, but the effective doubling of the dividend disappointed the more optimistic speculators. Good support was accorded to Standard, Ford, and Leyland. The better trend in the gilt-edged market assisted electricity supply shares, while buyers reappeared for leading equip-

ment issues after displaying coolness in recent weeks. Textile shares became firm without finding impressive form, although in the rayon group Courtaulds attracted bargain hunters at Monday's low level. Stores shares were not among this week's active groups. Among provision issues, United Dairies recovered on Thursday's settlement of the contract dispute, while *arbitrageurs* supported the Unilever issues. Brewery shares were firmer, although they lacked impressive support from their traditional provincial friends. Improvement in the tobacco group was well spread among the leaders. Miscellaneous industrial leaders were more actively supported, and chemical, building, rubber manufacturing and milling issues made steady progress during the week. Moderate support induced a firmer tone among bank and insurance shares.

Although the oil share market was disinclined to broaden to any considerable extent, the firmer support for leading issues was evident throughout the week. The rubber share market was stimulated by the largely unexpected decision of the International Committee to tighten the screw in the last quarter of the year. We discuss some implications of the decision in a Note on page 617. Buyers were attracted by hope of a confident recovery in the price of the commodity. Mid-week events suggested, however, that such prospects might have more relevance to the long than to the short period, and initial share advances were not held.

The Kafir market was in distinctly better spirits this week, and the leading investment issues found an appreciable measure of "shop" support. Speculative issues, including Marievale, also quickly responded to the improved tone. East African issues tended to improve, and conditions in the "Jungle" and among Westralian issues became more confident. Copper shares improved steadily, in the light of factors discussed on page 617, and miscellaneous base metal and tin issues were rather firmer.

FOREIGN STOCK EXCHANGES

NEW YORK

CONFIDENCE in America's "insulated isolation" from European troubles was rudely shaken on Friday of last week, when, on a war scare, leading issues dropped from 1 to 3 points. Liquidation was of both home and foreign origin—but chiefly of the former, for the course of the exchanges registered a contemporaneous flow of funds towards America. The movement lasted only a few hours, but left an unpleasant reminder of the vulnerability of the market after half a year's almost uninterrupted rise. Dealings, indeed, did not regain their stride this week, though quotations were distinctly firm. The volume of business was much reduced, the daily total of "shares traded" remaining around the million mark. The whole market, indeed, was in a waiting mood, ready most to discount what it most desired but unsure of its own judgment. Railroad stocks made sporadic and fractional advances. Metal, motor and aviation shares were also prominent. The bond market was barely steady. So far, conversions of "called" Fourth Liberty 4½ per cent. bonds have aggregated only \$800 millions, or about half the desired total. Industrial activity shows no fundamental change. Employment in manufacturing industries increased slightly during August, but the outbreak of the long-threatened trouble in the bituminous coal industry is a bear point. The *Iron Age* puts steel mill output at 51.5 per cent. of capacity this week against 52 per cent. last week, the decline being attributed to further delay among the automobile manufacturers in putting new models into production. The appointment of Mr James M. Landis as the new chairman of the Securities and Exchange Commission, has evoked neither enthusiasm nor apprehension in Wall Street. The new chairman has shown an aptitude to profit by his experience as a member of the Commission, and under his leadership no far-reaching change in general policy is expected.

* Two-Hour Session.

PARIS

The Bourse was depressed at the end of last week, only rentes resisting the general tendency. A more cheerful tone prevailed, however, on Monday, thanks mainly to favourable constructions placed on the phraseology of Italy's latest "No." Bears also hastened to cover on the Finance Minister's statement that the Budget for 1936 provided for a further significant reduction in expenditure. Rentes were a full point better. Bank shares also showed improvement, and Suez Canal, which had suffered severely in the previous week, staged a strong rally. The turn for the better was maintained on subsequent days, though the best prices were not fully held in mid-week.

BERLIN

An unbroken decline in prices was registered last week. All classes of shares in the domestic list, and both shares and bonds in the foreign list were heavily sold. The decline, however, was somewhat retarded by supporting purchases made by the banks, and certain textile shares, in particular, were in demand, against the general trend. On Saturday a partial recovery occurred on a more optimistic interpretation of Abyssinian possibilities, but the tone at the beginning of this week was irregular. Textile shares remained relatively firm, but other leading industrial counters, particularly electrical shares, continued to lose ground. The tone on Tuesday was again dull. The market for domestic bonds was reactionary, Reich and municipal conversion loans being marked down. Among dollar bonds, public loans dropped a couple of points. On Wednesday, however, firmer conditions prevailed, although price movements were narrow. The electrical group showed a fair recovery, but shipping shares were easier.

AMSTERDAM

The course of Stock Exchange dealings was dominated by international political uncertainties. On Friday of last week liquidation occurred on a large scale. Philips Lamps, which declined by 12 per cent. during the day, showed at one time a loss of as much as 40 per cent. as compared with the price prevailing a few weeks earlier, though the fall was accentuated by specially bearish factors in the company's dividend outlook. On Monday, the Bourse opened more optimistically, but became less assured before the close of business. In mid-week, the domestic political situation, in its turn, became an unsettling factor. Government bonds showed wide movements. Buying of domestic equities, as a "hedge" against the guilder, was sharp but sporadic. The decision to reduce the rubber export percentage caused an initial buying of rubber shares, but the movement quickly lost its impetus.

CANADA

The Canadian stock markets, after showing considerable liveliness and strength during the first half of August, fell into a sluggish and reactionary condition about the middle of the month. Business uncertainty created by the Federal election campaign was increased by the evidence of widespread radical discontent revealed by the triumph of the Social Credit party in the Alberta provincial election. The latest western crop reports, further, were not encouraging as regards prospects of an improvement in western business during the winter. After the first week of September, however, an upward movement in New York brought a sympathetic response in Canada. The bond market was depressed, however, by the Social Credit victory in Alberta, all bonds connected with that Province falling sharply. The market, however, was little affected by Mr Bennett's announcement that his Government, if returned to power, would embark upon a nation-wide refunding operation for all Dominion, provincial, municipal and State railway bonds. The mining market has been fairly brisk, base metal stocks being active and firm.

CAPITAL ISSUES

PREVAILING conditions remain inclement for new borrowers. The trustee issue made last week on behalf of the African Railway Finance Company appeared at an unfortunate moment, and underwriters were left with 97 per cent. A prospectus offer was made this week by the *Ruberoide Company*, whose redeemable cumulative preference shares are covered satisfactorily by profits. The week's announcements "for public information" relate to a debenture issue by *Selfridge and Company*, a placing on behalf of a warehousing company, and a Western Australian gold mining proposition. The debenture issue of *Crown Flour Mills*, made this week, was summarised in last week's *Economist*.

PUBLIC OFFER

The Ruberoide Company, Ltd.—Issue of 300,000 5½ per cent. redeemable cumulative £1 preference shares at 20s. 6d. Acquires assets of Diorebur, Ltd., manufacturers of roofing and other building materials, amounting to £200,152, for £550,000, of which £250,100 cash and balance in £1 ordinary shares. Goodwill, £349,848, less value of profits to date, estimated £32,000. Profits, after depreciation: 1932, £51,237; 1933, £61,108; 1934, £55,300. Proceeds of issue for £250,000 loan repayment in connection with cash consideration and £32,500 additional working capital. Redeemable by sinking fund from 1937 at 22s., or from September, 1938, on three months' notice at 22s. 6d. List closed 10.15 a.m. September 26th.

BY STOCK EXCHANGE INTRODUCTION

Grattan Warehouses, Ltd.—Issued capital, 250,000 5 per cent. cumulative redeemable £1 preference and 1,000,000 5s. ordinary shares. Acquires mail-order warehouse business founded 1912, owns all the issued capital of George Lodge and Company, and will acquire issued capital of F. Bessant and Company, Ltd., and J. E. York, Ltd., from proceeds of 250,000 preference share issue which Shaw Loeb and Company will subscribe for at 21s.. Average combined profits last three financial periods, £82,275. Assets valued £87,735.

Imperial Gold Mines, Ltd.—Issued capital, 800,000 5s. shares. Formed March, 1935, to acquire the Imperial Mining Company of Kalgoorlie. Purchase price £193,125, of which £3,125 cash and £190,000 in 800,000 5s. shares, 4s. 9d. paid up. The 3d. per share liability has been paid. Working capital, £43,000.

Selfridge and Company, Ltd.—Issue of £750,000 (part of £1,000,000 authorised) 4 per cent. first mortgage debenture stock. Redeemable by sinking fund by October, 1965, or on six months' notice at £105 before October 1, 1945, at £102 between 1945 and September 30, 1955, and thereafter at par. Issue provides funds for repayment of mortgages and of £221,400 5 per cent. first debentures and for general purposes. Secured by specific charge on main block of Oxford Street store. Prudential Assurance Company, Ltd., will subscribe for £750,000 stock at 97½ and for balance of £250,000 at that price on April 1, 1936.

BY TENDER

Chester United Gas.—This company is offering for sale by tender of not exceeding £40,000 4 per cent. preference stock at a minimum price of £100 per cent. Issue for increasing the capacity of plant, to repay bank overdraft, and general purposes. Tenders must be sent in to reach the company not later than October 4th.

ISSUE TO SHAREHOLDERS ONLY

Nanwa Gold Mines.—1,002,892 shares of 1s. are offered to shareholders registered on September 9th at par in proportion of one new for every three shares held.

LONDON ACTIVE SECURITY PRICES AND YIELDS

NOTE—Shares with a New York Quotation or with definite American interest are distinguished by italics

In calculating yields on fixed interest stocks quoted below allowance is made for interest accrued since the last date of payment, less income tax at the standard rate. Where stocks are definitely redeemable at a certain date the yield includes any profit or loss on redemption; where stocks are redeemable at or before a certain date the final date of repayment is taken when the stock stands at a discount and the earliest date when the quotation is above par. The return on ordinary stocks and shares is calculated by reference to the latest dividends, account being taken of any enhancement or reduction of interim dividends. Allowance is made for accrued dividends in calculating the yield on "cum div." shares.

receive from the company up to the date of redemption, less a discount for the prompt cash payment at the rate of 2½ per cent. per annum.

Burton-upon-Trent Corporation.—This corporation intends to repay its 3 per cent. stock, 1913-43, at par, with accrued interest, on and after October 31, 1935.

Canadian General Electric Company.—The Canadian General Electric Company intends to repay its 7 per cent. preference stock at 115 per cent. and of replacing it by a 5 per cent. issue. Stock outstanding \$8,557,750.

FIXED TRUST

"Keystone" Profit-Sharing Certificates.—British Keystone Securities Trust announces issue of above certificates. Underlying securities consist of shares in 53 industrial concerns. Trustee: Midland Bank Executor and Trustee Company, Ltd. Managers undertake to repurchase at net break-up value, provide reserve for continuity of management, and have power of elimination and distribution of cash proceeds. Bonus shares sold and distributed in cash. Trust period, ten years; management charge, 8 per cent. Certificate holders participate as to 50 per cent. in managers' profits.

OFFER ABROAD

Canadian Conversion Loan.—Issue of \$135,000,000, \$45,000,000 in one-year 1½ per cent. bonds on basis which will yield 1.9 per cent., and \$90,000,000 of three-year bonds on a 2 per cent. basis, yielding 2½ per cent. Purpose to repay \$25,000,000 of 4 per cent. 3-year bonds, maturing October 15th, and \$89,000,000 of 3½ per cent. 2-year bonds, maturing on the same date.

FORTHCOMING ISSUE

Easterns, Ltd.—Meeting October 11, 1935, to consider increase in capital by issue, as soon as possible, of 135,000 redeemable 6 per cent. cumulative preference shares £1.

OTHER RESULTS OF ISSUES

Severn Valley Gas Corporation.—The offer to shareholders of Welshpool Lighting and Power has been accepted by holders of a substantial majority of the issued share capital of that company.

African Railway Finance Company.—Underwriters have had to take up about 97 per cent.

The Sussex Brick Company, Ltd.—The recent issue of 120,000 new 8 per cent. cumulative preferred ordinary shares and 280,000 new deferred shares was oversubscribed.

Liverpool Corporation Bills.—Tenders for £1,000,000 twelve-months' bills. The total amount applied for was £2,480,000. Amount allotted, £1,000,000. Tenders at £99 receive about 4 per cent.; above in full. Average rate per cent. per annum, 18s. 1.10d.

OIL OUTPUTS

ANGLO-EQUADORIAN OILFIELDS, LTD.—The production for August is cabled as 17,394 tons.

ANGLO-IRANIAN OIL COMPANY, LTD.—Production in Iran for the month of August amounted to 662,000 tons, making a total of 4,928,000 tons for the first eight months of 1935.

THE ATTOCK OIL COMPANY, LTD.—Production for August: 5,980 barrels.

THE BRITISH BURMAH PETROLEUM COMPANY, LTD.—A cablegram has been received from Burma reporting the production of crude oil by this company for the month of August as 28,563 barrels.

BRITISH CONTROLLED OILFIELDS, LTD.—Production for week ended September 7th: Venezuela, 14,808 barrels; Trinidad, 31,575 barrels; total, 46,383 barrels. Production for the week ended September 14th: Venezuela, 15,259 barrels; Trinidad, 30,408 barrels; total, 45,667 barrels. Production for August: Venezuela, 69,356 barrels; Trinidad, 148,158 barrels; total, 217,514 barrels. Shipments for August: Venezuela, 57,755 barrels; Trinidad, 133,153 barrels; total, 190,908 barrels. Production for the week ended September 21st: Venezuela, 15,483 barrels; Trinidad, 29,233 barrels; total, 44,716 barrels.

DACIA ROMANO PETROLEUM SYNDICATE, LTD.—Gross production for August: Dacia, 3,692 tons; Perimeter X: 4,792 tons; Star-naphtha: 623 tons.

LOBITOS OILFIELDS, LTD.—The production of the Peruvian Company for August is cabled as 24,361 tons.

THE MEXICAN EAGLE OIL COMPANY, LTD.—Production for the week ended August 17, 1935, was 441,000 barrels. Production for the week ended August 24, 1935, was 446,000 barrels. Production for the week ended August 31, 1935, was 451,000 barrels. Production for the week ended September 7, 1935, was 435,000 barrels. Production for the week ended September 14, 1935, was 465,000 barrels.

COMPANY MEETINGS, &c.

SECOND ALLIANCE TRUST COMPANY, LIMITED

INCREASED NET REVENUE—FAVOURABLE CAPITAL POSITION

MR JAMES PRAIN'S REVIEW

The annual ordinary general meeting of the Second Alliance Trust Company, Limited, was held, on the 20th instant, in the company's office, Meadow House, 64 Reform Street, Dundee.

Mr James Prain presided, and after formal evidence of the proper calling of the meeting had been submitted, the Assistant Secretary read the auditors' report to the shareholders.

The Chairman, in moving the adoption of the annual report, said:—I have now to move the adoption of the directors' report and accounts for the past year, which have been in your hands for the statutory period and with which you have no doubt familiarised yourselves. I think you will agree that they make a satisfactory showing.

INCREASED REVENUE—IMPROVED CAPITAL POSITION

Last year I pointed out to you the considerable influence which the dollar rate of exchange has in some years on our revenue. In 1933 we showed an exchange profit of no less than £13,800, while last year there was still a profit of £875. This year there is an actual loss of £729, yet after deducting interest on borrowed money we show an increase on net revenue over last year of £7,633.

The capital position is also satisfactory. We have made the usual valuation of our bond and stock investments at the closing date of our year, July 31st, and this shows a very satisfactory improvement on last year's figures. It is true that there has been a general appreciation in market values during the year, but I think it will be found that our appreciation is fully greater than that shown by securities as a whole. I see from the *Bankers' Magazine* that their index, which includes 365 representative securities, shows at July, 1935, a rise in value for the year of 3.9 per cent., whereas we show, you will observe, an appreciation of fully 7½ per cent.

MARKET VALUES AND REVENUE

This is, of course, so far as it goes, a testimony to the quality of our company's investments, but personally I am not much concerned with these market values which are here to-day and may be gone to-morrow. I prefer to look upon our revenue showing as the cardinal feature, and I may point out that the figures before you show earnings equivalent to 22.28 per cent. on our ordinary capital. After all, the earning of revenue is the business of an investment company, and if we keep our attention fixed on that object we shall, I am sure, not only take the best course to obtain immediate revenue, but we shall adopt the surest method of supporting our capital position.

And this is true not only because we shall thereby obtain surplus revenue to regularly buttress our reserves, but also because investments chosen with a single eye to the revenue they may be expected to produce are much more likely to stand the test of time than those chosen because for a variety of reasons we believe or guess they will show a rise in the stock markets. In other words, revenue should be our main manufacture, capital appreciation its by-product.

With regard to the small part of our funds still remaining in the mortgage business, I shall not trouble you with any detailed account of our troubles. You will understand that we are doing all we can to speed up the difficult process of liquidation, subject to the preservation of your interests, and that, on the other hand, it is quite impossible in present circumstances to place any reliable valuation on the remaining assets we have in the mortgage business. We may be thankful that the process of liquidation was started in good time to save the company from serious difficulty.

ENCOURAGING TRADE FIGURES

With regard to the future, I do not propose to indulge in what has been called "that gratuitous form of error"—prophecy, but recent trade and other figures enable us to enjoy that sound stimulus to human endeavour—hope. The figures for our internal trade are very encouraging. The monthly return of retail trade published in the *Board of Trade Journal* shows that the money value of sales for July, 1935, increased by 6.7 per cent., against value of sales for July, 1934, following an average rise to the end of June of 4.6 per cent., and the improvement has been general, sales having risen in every district from April onwards.

The statistics of the country's external trade are equally satisfactory, notwithstanding the failure of international trade as a whole to make real recovery. The volume of the latter measured

in gold values is still falling, though measured in sterling—which has itself depreciated against gold—the position shows a slight improvement. Britain's own external trade, however, has made a substantial advance. Our foreign trade returns show an increase for the seven months to July 31st last of 7.5 per cent. in exports, and of .2 per cent. in imports against the same period in 1934. July itself showed an increase of 8.2 per cent. in exports and 6.5 per cent. in imports—a very healthy position indeed. The August figures for our external trade have now been issued, and with an increase in exports of 10.4 per cent. over August, 1934, make a still better showing. Now, we are, of course, interested in many companies for whom these excellent figures of the immediate past indicate improvement, and we may justifiably hope that they will be reflected in the results which these concerns may provide us in the immediate future.

BRITAIN'S OVERSEA INVESTMENT INTERESTS

I should also like to refer to some figures which have just been given with regard to Britain's overseas investment interests in the customary annual article which Sir Robert Kindersley contributes to the *Economic Journal*. He includes in our overseas investments foreign and Colonial loans and the shares and obligations of British companies registered in the United Kingdom, but operating abroad, and, of course, in foreign and Colonial companies both registered and operating abroad.

The income from these sources received in this country he shows to have amounted to about £231,000,000 in 1929, and to have sunk to £149,000,000 in 1933. The figure, however, for 1934 showed an advance for the first time since the depression set in to over £158,000,000, and he adds the observation—based on the estimates compiled by the *Economist*—that that year provided many of the companies involved with an opportunity to improve their financial structure, of which they took advantage, with the result that the proportion of profit placed to reserve during the year rose very sharply.

PROSPECT OF FURTHER IMPROVEMENT

It would also appear from Sir Robert's discussions of the factors responsible for the rise that the outlook for still further improvement is better than for some time past. Income from foreign Government and municipal bonds is unlikely to suffer further serious loss through default, and there is hope for an improvement as a result for at least partial resumption of payments—for instance, take the case of Chile. The operation of restriction schemes in various commodities may afford a higher level of earnings for a large number of British companies operating abroad, and so on. We must not, of course, expect that without a real increase in trade throughout the world and a general advance in world prices we can see anything like a return to pre-depression figures, but the point is that the outlook is for further improvement rather than for a renewal of the decline.

I have mentioned these various matters because they appear to me to bear generally on the interests of this company. There will, of course, be offsets and dangers. Perhaps the greatest of the dangers is involved in the international political outlook, but at least we have these encouraging figures to stimulate our hopes and continue our efforts in your interests.

DIVIDEND MAINTAINED

As to the actual results which we may be able to lay before you next year, it is too early to make any promises. Meantime, your directors are very glad to be able not only to recommend the maintenance of last year's dividend of 18 per cent. but to put a sum to the credit of contingent fund which tends to become exhausted through the discharge of its function of writing off the losses and depreciations which in common with our neighbours we have suffered during the years of depression.

I have once more to acknowledge the valuable assistance of our staff, and shall now conclude by moving that the directors' report and accounts for the year ended July 31, 1935, be adopted and approved, and that the final dividends be declared at the rates therein recommended on £700,000 preference stock at the preferential rate of 4½ per cent. per annum, and on £350,000 ordinary stock at the rate of 18 per cent. per annum, all subject to income tax.

The report and accounts were adopted, and resolutions declaring dividends, re-electing the retiring director, and appointing auditors were unanimously passed.

The report was unanimously adopted.

GOVERNMENT RETURNS, &c.

NATIONAL ACCOUNTS

The total ordinary revenue for the week ended September 21, 1935, amounted to £13,904,000, against ordinary expenditure of £7,526,000. After allowing for a decrease in Exchequer Balances of £236,298, the operations for the week, as shown below, decreased the gross National Debt by £6,400,000 to approximately £7,959 millions.*

CENTRAL AND SOUTH AMERICAN EXCHANGE RATES

THE ANGLO-SOUTH AMERICAN BANK, LTD., issues the following details relative to quotations for certain of the South and Central American exchanges. All these exchanges, with the exception of that of Bolivia, are related to the United States dollar, and the approximate sterling rates may be obtained by applying the dollar-sterling exchange rate:—

Bolivia.*	Official market: Sight rate, 20.26 bolivianos per £ sterling on August 22, 1935. Export selling rate 80 bolivianos per £.
Colombia.*	Sight rate, 176½ pesos per 100 United States dollars on September 18, 1935. This rate applies to holders of permits buying in the "open" market.
Ecuador.*	"Free" market sight rate on September 2nd, 10.50 sucres per United States dollar.
Guatemala.	Sight rate on New York is maintained at 1 quetzal per United States dollar, but a commission of 1 per cent. is charged by the Banco Central for the sale of drafts.
Nicaragua.*	Official selling rate was established at 110 cordobas per 100 United States dollars on November 26, 1934.
Salvador.	Sight rate on September 6, 1935, 2.51 colones per United States dollar.
Venezuela.	Sight rate on New York was maintained in July last at 3.90½ bolívares per United States dollar.

* Exchange controls are operative in these countries.

GOLD MARKET

Messrs Samuel Montagu and Company write on September 25, 1935, as follows:—

The Bank of England gold reserve against notes amounted to £193,477,708 on the 18th inst., as compared with £193,402,325 on the previous Wednesday. During the week the Bank announced the purchase of £94,866 in bar gold. At the daily fixing about £1,600,000 of bar gold changed hands during the week, but the open market has been active and considerable business was transacted afterwards.

The appreciation of the dollar in terms of European currencies, due to the political situation and seasonal causes, caused a movement of gold to the United States of America, large amounts having been shipped from France and Holland as well as from this country; the amounts shipped or engaged to be shipped during the past week are estimated to be £9,000,000 from Great Britain, £8,000,000 from France and £3,000,000 from Holland.

Quotations during the week:—

September 19	Per fine ounce	Equivalent value, of £ sterling
" 20	141s. 0d.	12s. 0.60d.
" 21	141s. 4d.	12s. 0.26d.
" 22	141s. 5d.	12s. 0.18d.
" 23	141s. 6d.	12s. 0.09d.
" 24	141s. 6d.	12s. 0.09d.
" 25	141s. 1d.	12s. 0.52d.
Average	141s. 3.67d.	12s. 0.29d.
September 26	141s. 3½d.	12s. 0.30d.

The s.s. "Naldera," which sailed from Bombay on the 21st inst. carries gold to the value of about £566,000, of which £540,000 is consigned to London and £26,000 to New York.

SILVER MARKET

The market continued to show a steady tone during the past week and prices showed only small variations.

There have been no fresh features, China has sold moderately, whilst speculators and the Indian Bazaars have both bought and sold, although the latter have perhaps been more inclined to buy.

Purchases for account of the American Treasury have been more in evidence; possibly influenced by the firmness of the dollar, the limit at which they were willing to buy was raised and appreciable amounts of cash silver were acquired yesterday at the price of 29½d.; to-day, however, with the exchange moving in favour of sterling, the limit reverted to 29½d.

There is no change in the immediate outlook, the market at the present level having a steady appearance with a good undertone.

Quotations during the week:—

IN LONDON		IN NEW YORK	
Bar silver per oz. std.	Cash Two Months' delivery	Ounce	Cents per

† Free of income tax.

(t) Latest dividend paid on a larger capital.
(s) Also spec bonus 300 per cent. Dividend this year absorbed £311,230 against £160,000 a year ago.

ASSOCIATED FISHERIES LTD.—The directors have declared on account of the year to February 28, 1936, an interim dividend of 5 per cent. (3d. per share) on the deferred ordinary shares, and an interim additional dividend of 965 per cent. (1.157d. per share) on the 7½ per cent. cumulative participating preferred ordinary shares, both payable, on the 7th inst. The transfer registers of the company will be closed from 10 a.m. on September 28th to September 30th, both days inclusive.

AUSTIN MOTOR COMPANY, LTD.—The directors recommend the payment of the following dividends and cash bonus for the year ending July 31, 1935: Cash shown in following dividends, 20 per cent. on preferred ordinary shares, less income tax at 4s. 6d. gross amounts, 25 per cent. on ordinary and "A" ordinary shares, less income tax at 4s. 6d. in £, £155,615; 25 per cent. cash bonus on ordinary and "A" ordinary shares, less income tax at 4s. 6d. in £, £155,615; total, £311,230. Annual general meeting, October 14, and, if approved, the dividend warrants will be paid on October 31st. The transfer books relating to the preferred ordinary, ordinary and "A" ordinary shares

will be closed from October 7 to 19, 1935, both days inclusive. The total payments of dividend interest, preference and ordinary dividends and bonus for the year to July 31, 1935, will amount to £611,150 gross.

AMALGAMATED FIXED TRUST CERTIFICATES.—Williams Deacon's Bank announces that third income distribution, covering period from March 18 to September 15, 1935, will be paid to holders registered September 15th at rate of 5.1790d. net per sub-unit on October 15th (against 5.3604d.).

BRITISH ALUMINIUM.—This company has decided to await the full year's trading results before consideration of the payment of a dividend on the £2,000,000 ordinary share capital. No interim dividends have been paid since 4 per cent. was declared in 1930. The final dividend then was 6 per cent. For the whole of 1934 a distribution of 7½ per cent. was made, compared with 5 per cent. for the previous three years. Payment of the half-yearly dividend on the 6 per cent. preference shares will be made on October 1.

CHOSEN CORPORATION, LTD. (Change of Dividend Dates).—As Nurupi Company, from which almost whole of company's revenue is derived, makes up its accounts half-yearly to March 31st and September 30th, and semi-annual meetings are held in Japan, at which dividends are declared, the board have decided in future to pay dividends half-yearly instead of quarterly. Next dividend will be declared in respect of period ending September 30, 1935.

GENERAL ACCIDENT, FIRE AND LIFE ASSURANCE CORPORATION, LTD.—The directors have declared an interim dividend (on account of the year ending December 31, 1935) of 2½ per cent. on the preference shares and of 7s. per share, compared with 6s. last year, on the ordinary shares, both subject to income tax and payable on November 1,

REPORTS AND NOTICES

RAILWAYS

BENGUELA RAILWAY COMPANY.—Railway results for the second quarter of 1935: Gross railway receipts, Escudos, 7,689,000.00; net railway receipts, Escudos, 2,589,000.00.

MISCELLANEOUS

BELFAST OMNIBUS TRANSFER.—A meeting of shareholders of Belfast Omnibus Company, Ltd., is called for September 25th, to confirm the action of the directors in entering into a provisional contract with the Northern Ireland Transport Board for the transfer of the company's undertaking to the Board. The company is to receive by way of compensation £146,887 Northern Ireland Transport "A 1" stock, bearing interest at 4 per cent., and £271,250 Northern Ireland Transport "B" stock, bearing interest at varying rates. The company will be entitled to retain the benefit of its trading for the period from October 1, 1934, to September 30, 1935. Resolution passed unanimously.

SOUTHERN AREAS ELECTRIC CORPORATION.—At an extraordinary meeting of the Southern Areas Electric Corporation, held in London September 20th, proposals (1) to increase the number of directors from seven to eleven, and (2) to appoint four additional directors, were heavily defeated.

CABLE AND WIRELESS (AUGUST TRAFFIC INDEX).—Cable and Wireless traffic index for August is 67.1, against 66.7 in July and 70.7 in August, 1934.

IMPERIAL CHEMICAL INDUSTRIES (PLASTICS AGREEMENT).—A ten-year contract between Imperial Chemical Industries and Toledo Synthetic Products, Toledo, U.S.A., has been signed. These concerns have contracted to exchange all technical, commercial and other information relating to the agreement products and processes. They have agreed also to grant each other free licences under their patents which already exist or which they may secure during the life of the contract.

HALL'S OXFORD BREWERY.—Ind Coope and Allsopp, Ltd., offers to acquire preference shares of this company on following terms: (1) Nine fully-paid 6½ per cent. cumulative preference shares of £1 of Ind Coope in exchange for every two 5½ per cent. cumulative preference shares of this company; (2) payment of 16s. in place of half-share fractions. To prevent loss of interest Ind Coope will pay in cash 4½d. per share purchased. Offer conditional on its being accepted by 90 per cent. of holders of preference shares of this company.

AMERICAN STEEL MERGER COMPLETED.—The merger of the Republic Steel Corporation and the Corrigan McKinney Steel Company, under a plan of acquisition of Corrigan McKinney, became effective September 26th, with the completion of final legal and financial details.

PROVIDENT INVESTORS TRUST.—Martins Bank, Ltd., will be the trustee in the new Provident Investors Trust, to be launched shortly by Dawnay Day interests, with a portfolio consisting of shares in thirty companies supplying household necessities. The trust will be strictly cumulative, and all capital bonuses will be retained.

TRUST OF INSURANCE SHARES, LTD.—Insurance unit certificates are now available to investors either in "bearer" or in "registered" form. The managers now undertake at any time, if desired by a certificate holder, to purchase his units at the net realised or realisable value on the Stock Exchange of the underlying securities. The managers have now made arrangements whereby the half-yearly dividend may be regularly invested in additional units. The requisite forms can be supplied on request. The trust is changing its address on October 1st to 29 and 30 Cornhill, E.C.3. Telephone: Mansion House 3326 (4 lines).

(a) After writing off £5

213,000 tons being some 75,000 tons below the previous month's figure. These delayed shipments have had an upsetting effect on the market generally, and a week or two may elapse before arrears are completed. In the meantime, demand is now showing an improving trend. Most classes of screened coal are strongly held, and nuts are showing an upward trend. London trade in nuts is increasing.

Prices all round are firm, with export rates as follows, f.o.b. district ports:—LANARKSHIRE.—Ell best, 14s. 6d.—15s.; splint best, 17s. 6d.; splint second, 15s.—15s. 6d.; navigation, screened, 14s. 9d.—15s.; navigation, unscreened, 13s. 6d.; Hartley, 16s.; steam, 13s.—13s. 6d.; trebles, 13s. 6d.—14s.; doubles, 13s. 6d.; singles, 12s. 9d.—13s.; pearls, 11s. 3d.—11s. 6d.; dross, 10s.. FIFE.—Best unscreened navigation, 12s. 6d.—12s. 9d.; unscreened navigation, 12s. 3d.—12s. 6d.; first-class steam, 13s. 6d.—14s.; third-class steam, 12s. 3d.—13s.; trebles, 13s. 6d.—16s. 9d.; doubles, 13s. 6d.—14s. 6d.; singles, 12s. 9d.—13s.; pearls, 11s.—11s. 6d. LOTHIAN.—Best splint, 14s. 6d.; prime steam, 13s.—13s. 3d.; secondary steam, 12s.—12s. 6d.; unscreened navigation, 12s. 9d.—13s.; trebles, 14s.—14s. 6d.; doubles, 13s. 6d.; singles, 12s. 9d.—13s.; pearls, 11s. AYRSHIRE.—Best unscreened navigation, 14s. 6d.; steam, 12s. 6d.—12s. 9d.; trebles, 14s.; doubles, 13s.—13s. 6d.; singles, 13s. 6d.; pearls, 13s.; dross, 11s. 6d.

CARDIFF.—With the abatement of the recent gales there was a considerable improvement during the week-end in the supply of tonnage at South Wales docks, and loading operations were consequently fairly active during the earlier part of the present week. According to the returns of the Great Western Railway Company, shipments in the foreign and coastwise trades totalled last week only 272,000 tons, compared with 340,700 tons the previous week, and 431,932 tons in the corresponding week last year; but with weather conditions normal, it is hoped that this week's figures will be much more favourable. Current business has included a contract for 24,000 tons for bunker coals placed by a Lisbon shipping company, and inquiries by the Egyptian State Railways for an additional 120,000 tons, and by the Palestine Government Railway for 12,000 tons. In other respects the market has been featureless, and quotations are nominally unchanged. For the last quarter of the year the price of French pitwood under the barter deal of June, 1934, has been fixed at 24s. 3d. c.i.f., compared with 24s. 6d. for the September quarter. For Portuguese timber the current quotation is 23s. ex ship. In view of the national agitation for a flat 2s. per shift increase in the wages of miners, the South Wales Miners' Federation has temporarily suspended official relations with the colliery owners under the Conciliation Board Agreement, and have accordingly withdrawn its recent application for a local increase pending the result of the national movement.

Current approximate quotations:—Best Admiralties, 19s. 6d.; seconds, 18s. 9d. to 19s. 6d.; best drys, 18s. 9d. to 19s.; Black Veins, 18s. 3d. to 18s. 6d.; Western Valleys, 17s. 9d. to 18s.; Eastern Valleys, 17s. 3d. to 17s. 7½d.; best small steams (washed), 13s. to 13s. 6d.; seconds, 12s. 6d. to 13s.; coking smalls, 13s. 6d. to 14s.; anthracite, best large, 36s. to 40s.; Red Vein, large, 22s. to 27s.; machine-made cobbles, 35s. to 51s.; French nuts, 35s. to 51s.; stove nuts, 34s. to 49s.; rubby culm, 10s. 6d. to 12s.; special foundry coke, 37s. 6d. to 40s.; patent fuel (Crown), 21s.; pitwood, ex ship, French, 24s. 6d.; Portuguese, 23s.

IRON AND STEEL

MIDDLESBROUGH.—There is no outstanding change in the iron market position this week. Production of iron and steel is maintained and further inquiries are being received. Home demand is fully absorbing the production of both Cleveland foundry pig iron and East Coast hematite, and minimum prices are being strictly adhered to, as follows: 67s. 6d. per ton delivered Middlesbrough for No. 3 Cleveland foundry pig iron; 71s. per ton delivered Middlesbrough for No. 1 East Coast hematite. Export trade is still quiet, although it is reported that merchants here have received payment against iron shipped to Italy some months ago, and it is expected that this will enable further sales to be arranged.

The steelworks are very busy both on small material and on heavy constructional steel. Semi-finished material is also in good request. Specifications for shipyard work are coming through slowly, however, and the rail departments are still quiet.

New business in foreign ore is not very active. Works are receiving deliveries against contracts made some time ago. For Mediterranean ores the market is inclined to stiffen in sympathy with the firmer tendency of freights, but best Bilbao rubio is nominally 17s. 6d. per ton c.i.f. Middlesbrough. Good Durham blast-furnace coke is in good supply, although producers are quoting 19s. per ton delivered at the furnaces. Heavy steel melting scrap is unchanged at 52s. 6d. per ton delivered works.

WORKINGTON.—Business continues steady in the North-West Coast hematite pig-iron trade. A very slight diminution of the volume of forward buying has taken place, and as far as the iron that goes to the spill-over is concerned, makers possess orders to keep them occupied for twelve months to come. It is largely the Midland and South Walian users who take the iron that the steelworks at Workington and Barrow do not require, but there is a steady if slight Scottish and Continental demand to satisfy. The further forward buying is stated to have been stimulated by the apprehension that prices may be advanced again. At present, however, quotations remain at the agreed minimum, Bessemer mixed numbers being quoted at £3 15s. per ton at Glasgow; £4 1s. at Manchester; £4 4s. 6d. at Birmingham; and £4 6s. at Sheffield, with low-phosphorus iron an additional 2s. 6d. to 5s. per ton. There is a good market for refined iron, and also for malleable iron at £5 18s. per ton delivered at Birmingham, and for ferro-manganese

at from £10 15s. to £11 5s. per ton home. Steelmakers, already well off for orders, are booking new business, and the expectation is that operations on the present scale can be maintained until early next year. Workington is rolling rails, billets, bars and slabs, and Barrow is on rails, hoops and strip. Native ore is in steady local request. Needs of Scottish, East Coast and South Walian smelters represent a very meagre tonnage.

GLASGOW.—All branches of the iron and steel industry are busy, and the amount of work on hand is sufficient to ensure continuous employment for some time to come. During the present week the tonnage booked by steelmakers shows some slight falling off compared with recent weeks, but in the present state of the order books this does not cause anxiety. Demand for semis and re-rolled bars is steady. Sheetmakers, who recently put a few more mills into operation, are still finding employment for the increased number. Tube makers are fully employed. During the week substantial orders have been placed with machinery makers and boiler makers, and in all the heavy engineering trades full-time working is general. There is a large amount of ship-repair work being carried out at Clyde yards this week.

CARDIFF.—Conditions in the South Wales tinplate trade have improved slightly during the past week. On the Swansea Metal Exchange on Tuesday it was reported that inquiries were more active and that these affected galvanised sheets as well as tinplates. Quotations, however, were nominally unchanged for steel bars as well as for plates and sheets. Shipments of tinplates at Swansea last week were seriously hampered by the tonnage position and totalled only 35,290 boxes, compared with 92,356 boxes the previous week, and 181,862 boxes in the corresponding week last year. Stocks consequently increased from 44,319 boxes to 92,921 boxes.

OTHER METALS

COPPER.—Little change has taken place in the tendency of the market this week, although prices have recorded a further modest rise. British warehouse stocks rose by an additional 672 tons last week, to the record level of 90,580 tons. The market is at present largely under the influence of changes in the international political situation, for copper is the chief non-ferrous metal used for war purposes. Any increase in armaments will therefore tend to bring about a rise in the price of copper.

Sales on the London Metal Exchange: 2,400 tons on Monday, against 5,300 tons last week; 3,250 tons on Tuesday, against 3,750 tons last week; 2,250 tons on Wednesday, against 2,500 tons last week. Domestic spot was quoted at 8.45 cents per lb. in New York on Wednesday, against 8.37½ cents a week ago and 8.02½ cents a month ago. Wednesday's official closing price for standard cash in London was £34 16s. 3d. to £34 17s. 6d., compared with £34 10s. to £34 11s. 3d. a week ago. Stocks of refined copper in British official warehouses at the end of last week, at 79,171 tons, show an increase of 722 tons, while stocks of rough copper, at 11,409 tons, show a decrease of 50 tons on the week.

LEAD AND SELLER.—Both metals scored a fresh advance this week. Although the recent change in import duties has improved the position, supplies of lead remain rather small. Moreover, production has recently been running at a low level and there has been a strike in Mexico, so that supplies are unlikely to show an immediate increase; consumers' demand remains satisfactory. Spelter is also benefiting from a better demand, but the relatively high production prevents a sharp upward movement of prices. Spelter is therefore considerably cheaper than lead at the present time.

Sales of lead on the London Metal Exchange: 1,600 tons on Monday, against 1,550 tons last week; 1,500 tons on Tuesday, against 11,100 tons last week; 1,600 tons on Wednesday, against 1,950 tons last week. The New York quotation on Wednesday was 4.50 cents per lb., against 4.35 cents a week ago and 4.35 cents a month ago. The official closing quotation in London for soft foreign for shipment during the current month was £17 3s. 9d. per ton, compared with £16 10s. a week ago.

Sales of spelter on the London Metal Exchange: 350 tons on Monday, against 600 tons last week; 1,150 tons on Tuesday, against 525 tons last week; 1,200 tons on Wednesday, against 1,425 tons last week. Wednesday's quotation in East St. Louis was 4.75 cents per lb., against 4.75 cents the week before and 4.60 cents a month earlier. Wednesday's official closing quotation in London for "good ordinary brands" for shipment during the current month was £15 18s. 9d. per ton, against £15 10s. last week.

TIN.—After a setback on Monday and Tuesday, prices recovered on Wednesday and closed higher on the week. Supplies remain finding sufficient labour to enable them to increase their output quickly, to the permitted quota of 65 per cent. The increased fore be tardy in making their appearance on the market. The immediate outlook is uncertain.

Sales of tin on the London Metal Exchange: 250 tons on Monday, against 245 tons last week; 200 tons on Tuesday, against 245 tons last week; 240 tons on Wednesday, against 290 tons last week. The New York quotation on Wednesday was 49.50 cents per lb., against 49.25 cents a week ago and 49.15 cents a month ago. Wednesday's official closing quotation in London for standard cash was £227 to £230 per ton, compared with £226 17s. 6d. to £227 2s. 6d. last week. Stocks of tin in London and Liverpool at the end of last week totalled 836 tons, a decrease of 271 tons on the week.

OTHER NON-FERROUS METALS.—Among other non-ferrous metals, aluminium ingots and bars for home delivery were again quoted at £100 per ton. Nickel, for home and export, at £200 to

£205 per ton, remains unchanged. Quicksilver, on the spot, was steady at £11 15s. per flask of 76 lbs. Chinese antimony was quoted at £68 per ton ex warehouse, duty paid, against £69 to £70 a week earlier. Chinese wolfram for September-October shipment was quoted at 33s. to 34s. per unit c.i.f., against 31s. to 33s. last week. Platinum (refined) at £7 10s. per ounce, was unchanged on the week.

TEXTILES

COTTON.—Manchester.—Trading has continued rather more active. The hardening tendency in raw material prices at the end of last week forced out more inquiry in yarn and cloth. Although the upward movement has been checked during the last few days the undercurrent of demand remains healthier. Raw cotton markets have been more or less dominated by the Italo-Abyssinian dispute. On one or two occasions there has been heavy covering by Bombay and Continental interests. The future course of prices is very uncertain, but it is probable that any pronounced downward movement will be prevented by the shortage of contracts in Liverpool. On the other hand there is a likelihood of hedge selling on a freer scale before very long.

COTTON PRICES

	1935					Corresponding Date	
	Sept. 4	Sept. 11	Sept. 18	Sept. 25		1933	1934

36-in. ditto, 87½ yds., 16 by 15, 82 lb. per lb.	9	1	9	9	9	10	1

There has been a persistent demand in cloth for the outlets abroad and an encouraging business has been done. Better advances have been received from India and the freer operations for that market have been maintained. A substantial business is still pending. The turnover for China has again been within narrow limits, but fancies have attracted rather more attention for Singapore. Slightly more business has been done with Egypt. Exports to West Africa at the present time are on a large scale and further buying has been in evidence. Inquiry in home trade fabrics has broadened somewhat and a better turnover has taken place in dress materials, poplins and over-all cloths. American yarn quotations have been more firmly held. Some spinners have sold more freely than for several months back. Producers, however, still find it difficult to secure more remunerative prices. A slightly improved inquiry has come through in Egyptian qualities with business patchy.

GRAIN MARKETS

WHEAT.—The gradual upward trend of prices on American markets has continued this week, but quotations in London closed on Wednesday a shade lower on the week. Trading in both countries has been irregular and prices have tended to fluctuate in accordance with changes in the political outlook. Any improvement in the position at Geneva tends to make sellers less anxious to hold, and thus produces an easier tendency in the market.

According to the *Corn Trade News*, total arrivals of wheat and flour at principal ports of Europe during the past week were 489,000 quarters, against 1,085,000 quarters in the preceding week. On Wednesday last, "September" futures were quoted in Chicago at 98½ cents per bushel, against 97 cents the week before and 87½ cents a month ago. Quotations in London, Wednesday: No. 1 Northern Manitoba, Vancouver, ex ship, 37s. 3d. per 496 lbs., against 37s. 6d. a week ago; No. 2 Northern Manitoba, Vancouver, ex ship, 36s., against 36s. 6d. a week ago.

FLOUR.—A further rise of 1s. per sack was recorded this week. Shipments from North America in the past week totalled 129,000 sacks, compared with 77,000 in the previous week. Wednesday's London quotations (excluding quota payments) were: Straight run, delivered country, 30s. 6d. per 280 lbs., against 29s. 6d. a week ago; delivered London, 29s. 6d., as compared with 28s. 6d. a week ago. Manitoba patents, ex store, 28s. 9d. to 30s. 3d., against 28s. 6d. to 30s. a week ago. Australian, ex store, 22s. 9d. to 23s., against 22s. 6d. a week ago.

BARLEY.—Trading in both imported and English barley continues active, although quotations show little alteration this week. "October" futures were quoted at 36½ cents per bushel in Winnipeg on Wednesday, against 37 cents last week and 34½ cents a month ago. Quotations per 448 lbs. in London on Wednesday were: "English feed" (new) at farm, 23s. to 24s., as against 22s. to 24s. last week; "English malting" (new) at farm, 30s. to 56s., against 30s. to 56s. a week ago.

OATS.—A fair demand for home-grown oats has been in evidence this week, but imported descriptions have been a quiet market. The upward movement of prices in Chicago has continued. On Wednesday, "September" futures were quoted at 29½ cents per bushel in Chicago, against 28½ cents a week ago and 25½ cents last month. Quotations in London, Wednesday: "English Black" (old), at farm, 22s. per 336 lbs., against 22s. a week ago; "English White" (old), at farm, 22s., against 22s. last week; "Chilean White," landed, 27s. per 320 lbs., against 27s. a week earlier.

MAIZE.—Demand for Plate maize, although still active, has eased off a little and prices in London are a shade lower on the week. Chicago quotations show a further advance. "September" futures were quoted on Wednesday at 84 cents per bushel in Chicago, against 81½ cents a week ago and 70½ cents last month. Quotations in London, Wednesday: "Plate," landed, 18s. 6d. per 480 lbs., compared with 18s. 9d. a week ago; "Plate," ex ship (new), 17s. 6d., as against 17s. 9d. a week ago; "Plate," "September," 17s. 6d., against 17s. 9d. a week ago. Yellow maize meal, ex wharf, was quoted at £5 to £5 2s. 6d. per ton, against £5 a week ago.

COMPARATIVE AVERAGES OF GRAIN.—The following table gives the estimated sale of home-grown wheat during the harvest years 1932-33 to 1935-36:—

	1932-1933	1933-1934	1934-1935	1935-1936
Estimated sales of home-grown wheat—	Cwts.	Cwts.	Cwts.	Cwts.
1 week to September 21.....	188,043	434,992	599,600	589,614
3 weeks to September 21.....	439,839	1,202,369	1,578,420	1,445,601
Average price of English wheat per cwt.	s. d. 5 8	s. d. 4 10	s. d. 5 1	s. d. 5 0

The following is a statement showing the quantities sold and the average price of British corn in the past two weeks, and for the corresponding week in each of the years from 1931 to 1934:—

Week ended	QUANTITIES SOLD			AVERAGE PRICE PER CWT.		
	Wheat	Barley	Oats	Wheat	Barley	Oats
Sept. 19, 1931.....	Cwts. 52,388	Cwts. 151,358	Cwts. 24,468	s. d. 4 8	s. d. 9 9	s. d. 5 7

AMERICAN WHEAT MARKETS.—The following table shows wheat quotations in recent weeks, with comparative figures for 1933 and 1934:—

NEAREST FUTURE	Jan. 4, 1933	Jan. 3, 1934	Sept. 26, 1934	Jan. 2, 1935	Sept. 18, 1935	Sept. 25, 1935
Winnipeg (No. 1, Manitoba) —Cents per 60 lb.	46½	65½	81½	82½	92½	91½
Chicago (No. 2 Winter) —Cents per 60 lb.	46½	84½	104½	98½	97	99½

OTHER FOODS

BACON.—Bacon has been in active demand during the past week. Prices were marked up last Friday, and there has subsequently been a firm tendency. The official quotations (per cwt. for No. 1 Sizable) which formed the basis for dealings on the London Provision Exchange this week were: English, 83s. to 87s.; Canadian, 79s.; Danish, 85s., against 81s. to 85s., 76s. and 83s. last-week. Arrivals in London last week included Danish, 14,933 bales; Canadian, 2,318; Dutch, 2,606; Lithuanian, 1,420; Polish, 3,670; against 15,350, 2,830, 2,871, 1,471 and 3,938 cwts., respectively, in the previous week.

BUTTER.—The market has been very firm during the past few days. Colonial descriptions have recovered from the easier tendency evident a week ago, while Danish has scored a further rise.

Quotations (per cwt.) on the London Provision Exchange on Wednesday were: New Zealand, finest salted, 114s. to 115s.; Australian, choicest salted, 114s. to 115s.; Danish, 130s.; compared with 108s. to 109s., 108s. to 109s. and 128s., respectively, last week.

CHEESE.—After a firm opening on Monday, trading was rather quiet on Wednesday, but Canadian and New Zealand descriptions are higher on the week. Quotations (per cwt.) on the London Provision Exchange on Wednesday were as follows: English, finest farmers', 59s. to 68s.; Canadian, finest coloured (new), 58s.; New Zealand, finest coloured, 57s. 6d. to 58s., as against 59s. to 68s., 55s. to 56s. and 54s. 6d., respectively, last week.

COCOA.—The "spot" quotation in New York on Wednesday was 5½ cents per lb., against 5½ cents per lb. last week. On the London market, Accras were quiet. On Wednesday last good fermented new crop, "October-December," was quoted 22s. 4½d. per 250 kilos, c.i.f. Continent, against 22s. 6d. last week. Last week's movements of cocoa in London were as follows: Landed, 15,423 bags; delivered, for home consumption, 5,607 bags; exported, 1,378 bags; stocks, 142,291 bags, against 217,186 bags a year ago.

COFFEE.—On the New York spot market, conditions have been steady, with Rio unchanged and Santos a little dearer on the week. Trading in London has been quiet. In New York on Wednesday, Rio No. 7 (cash) was quoted at 6½ cents per lb., as compared with 6½ cents per lb. last week and 6½ cents per lb. a month ago. Movements of coffee in London last week were as follows: Brazilian, landed, 237 cwt.; delivered, for home consumption, 55 cwt.; exported, 29 cwt.; stocks, 13,669 cwt., against 27,858 packages a year ago. Central and other South American, landed, 460 cwt.; delivered, for home consumption, 2,603 cwt.; exported, 1,738 cwt.; stocks, 123,898 cwt., against 93,450 packages last year. Other kinds, landed, 830 cwt.; delivered, for home consumption, 3,823 cwt.; exported, 2,022 cwt.; stocks, 141,841 cwt., against 88,524 packages last year.

EGGS.—No new features have been in evidence this week. The market has been steady, with prices showing little alteration from those ruling a week ago. At Smithfield Market on Wednesday, English (ordinary packing, Grade I, about 15-15½ lb.) realised 15s. 6d. to 16s. per 120, against 15s. 6d. to 16s. 6d. a week earlier, while Danish (15½ lb.) made 11s. to 11s. 9d. per 120, against 11s. to 11s. 9d. last week.

FRUIT.—The recent gales have caused the markets to be flooded with fallen fruit, which has had to be sold without delay at low prices. Some growers have suffered heavy losses in consequence. Trade in English apples, pears and plums, says *The Fruitgrower*, has been largely governed by this factor, but as the fallen fruit is being cleared, the market is becoming more steady. Blackberries have been a firmer market, while cob nuts are higher in price. Some improvement has also been shown by hothouse grapes. Some Bulgarian Muscat grapes are arriving. Italian peaches are now finished, and English are firmer. Oranges have not been quite so good a market, but prices of grapefruit are well maintained, and lemons continue very dear.

MEAT.—Beef has encountered a rather slow demand, and prices are a shade easier. Mutton and lamb have, however, met a moderate trade, and are a little dearer on the week. Demand for veal and pork has improved. On Wednesday last, Argentine chilled hind-quarters were quoted at 3s. 9d. to 4s. 2d. per 8 lbs., as compared with 4s. to 4s. 4d. last week. New Zealand frozen mutton was 3s. to 3s. 6d. per 8 lbs., against 2s. 10d. to 3s. 6d. a week ago. According to the Smithfield Market official report, supplies during last week amounted to 9,065 tons, an increase of 457 tons on the corresponding week last year. Beef and veal accounted for 4,640 tons, mutton and lamb, 2,623 tons, and pork and bacon 1,074 tons, as compared with 4,357, 2,568 and 975 tons, respectively, in the same week of 1934.

PEPPER.—Wednesday's spot price for Lampung (in bond) was 3½d. per lb., against 2½d. last week. Movements of pepper in London during the past week were as follows: Black, landed, nil tons; delivered, 44 tons; stocks, 1,580 tons, against 296 tons a year ago. White, landed, nil; delivered, 252 tons; stocks, 17,114 tons, against 7,306 tons a year ago.

MILK.—The dispute between the Milk Marketing Board and the Central Milk Distributive Committee has continued this week but, as we go to press, agreement is in sight. The dispute, which is further discussed in a Note of the Week, arose over the refusal of the distributors to sign the new contract, giving the producer an extra 5d. per dozen gallons (without any increase in the retail price) during the coming year. The matter was referred by the Minister of Agriculture last Friday to a committee of investigation, under the Agricultural Marketing Acts. This committee cannot meet before the new contract is due to come into force, but the Milk Board have now agreed that any alteration in prices, made as a result of the findings of the committee, shall apply to all contracts retrospectively. It is now unlikely that there will be any stoppage of supplies on October 1st.

RICE.—Prices have continued to rise this week. The spot price of Burma No. 2, cleaned, was 9s. 1½d. per cwt. on Wednesday, as compared with 8s. 9d. per cwt. a week ago, while the forward quotation, at 8s. 7½d. per cwt., shows a rise of 6d. on the week. Movements in London during the past week were as follows: Landed, 311 tons; delivered, 252 tons; stocks, 9,004 tons, against 3,196 tons a year ago.

SUGAR.—Spot quotations for raw sugar on the New York market have advanced this week, although a slight reaction took place on Wednesday. The London market has been quiet, with prices showing little change. The spot price in New York on Wednesday was 3.57 cents per lb., as compared with 3.47 cents per lb. last

week and 3.50 cents per lb. a month ago. Wednesday's sales of raw sugar in London included "December delivery" at 4s. 6½d. to 4s. 7d., against 4s. 5d. to 4s. 6½d. last week. The movements of raw sugar at public warehouses in London and Liverpool last week were as follows: Imports, 15,457 tons, against 16,544 in the previous week and 15,638 in the same week of last year; deliveries, 14,148 tons, against 14,266 and 15,046 tons respectively; stocks, 150,562 tons, against 149,253 and 124,790 tons respectively.

TEA.—The following table shows the average prices (compiled by the Tea Brokers' Association) of tea sold at Mincing Lane on Garden Account in recent weeks:—

Week ending	Northern India	Southern India	Ceylon	Java	Sumatra	Africa	Total
Sept. 20, 1934	12-25	10-67	12-01	9-20	8-70	10-26	11-72
Aug. 22, 1935	15-15	10-65	12-82	9-88	8-57	9-60	13-01
Aug. 29, "	17-28	10-76	13-08	9-99	8-44	10-09	14-12
Sept. 4, "	16-80	11-04	13-32	10-07	8-91	10-07	14-29
Sept. 11, "	17-17	11-54	14-06	10-50	9-30	10-73	14-74
Sept. 18, "	17-52	11-92	14-54	10-77	9-79	10-82	15-31

The quantities catalogued for this week's auctions comprised 48,501 packages of Indian and 23,563 packages of Ceylon tea. On the whole, the rising trend recorded in recent weeks was continued. The Indian auctions on Monday had a strong tone, but the market was rather quieter on Wednesday. The Ceylon grades met with active competition on Tuesday and quotations recorded a fresh advance.

VEGETABLES.—Business in the vegetable section at Covent Garden has not been quite so active as recently, and prices are frequently lower. According to *The Fruitgrower*, demand for tomatoes has eased off during the past week and, with heavier arrivals of Jersey outdoor, prices have declined. Cucumbers have been a slow trade, and are consequently cheaper. On the other hand, mushrooms have recovered in price. Best samples of green peas and scarlet runners are firm in price, while marrows are steady. Supplies of potatoes at the London markets have continued heavy and, with demand only moderate, lower prices have been accepted for any samples showing scab. Quotations for good quality potatoes are, however, well maintained and, at the London Borough Market on Tuesday, King Edward again realised from 5s. 6d. to 6s. 6d. per cwt.

MISCELLANEOUS COMMODITIES

VEGETABLE OILS AND OLSEEDS.—Linseed and linseed oil have been very excited markets and prices have advanced almost consistently day by day. The advance in Buenos Aires options influenced by political events in Europe, coupled with adverse reports of the new crop in Argentina and the rise in grains have been the main factors. Buyers, however, hesitate to follow, although a fair business in Plate to Hull was done around £10 10s. for October, and £10 12s. 6d. for November, loading. Interest in Indian linseed has also been aroused and up to £12 7s. 6d. for Calcutta October and £12 10s. for November have been paid. Shipments from the River Plate are rather heavier. The quantity now on passage to Europe is 128,500 tons (including 4,300 tons from India), 3,100 tons advance on the week. That afloat for the United States and Canada is 32,900 tons against 30,200 tons a year ago. Trade in cottonseed is active at the lower prices and black Egyptian to Hull has been sold at £6 5s. September loading, £6 3s. 9d. October to £6 December-March.

Linseed oil has been rapidly rising in sympathy with seed and a fair demand from consumers. Prices have advanced £2 per ton in a week and £4 since the beginning of the month. The current quotation ex Hull mill for September and October-December deliveries is £26 5s. per ton, naked, and for January-April, £26 10s. Cotton oil is quiet but steady. Egyptian crude ex Hull is held for £25 and refined for £27 per ton spot. Demand for oilcakes continues to improve and prices are steady.

FURS.—On Tuesday next the autumn series of fur auctions will open in London with the sales of the Hudson's Bay Company. These will be followed by Lamson and Innings' Chinese and Australian sales and, later, by auctions of silver foxes. The series, which will last for three or four weeks, will close with the sale of Russian and American furs. The offerings will be of moderate proportions and the quality only average, for the bulk of the supply consists of furs which were unsold at earlier auctions this year. In the circumstances, it seems probable that prices will be generally below those realised at the spring and summer sales—especially in view of the fact that it is now too late for furriers and manufacturers to cover their requirements for the winter season. Moreover, they will certainly prefer the new supply, which will be marketed at the January and spring sales, for their next year's selections. The tendency on the open market has also been easier in recent weeks; although good sales have been made in London, exports to Italy have suffered a decline in consequence of the unsatisfactory operation of the Anglo-Italian clearing agreement.

TIMBER.—Imports of building and joinery woods from European and Canadian sources were moderate in August and supplies during the first eight months of the present year have been well below last year's level. Heavier supplies at the beginning of the year caused nervousness among importers, who have been purchasing cautiously on a falling market. But demand from the building trades has increased this year and, with dock stocks lower, the market would seem favourable for a re-stocking movement. Prices have been low recently, for the Continent has been a poor buyer and the weight of unsold wood in the hands of Finnish and Swedish shippers is known to be heavy. The latter have shown a disposition to hold for better prices, while importers should now be buying more for close-navigation stocks. It remains to be seen which side will give way.

shipbuilding woods are in increasing demand. The hardwood rket generally is steady. August imports were not heavy, but eight months' receipts are well up on last year. Meanwhile, stocks are moderate and demand is better. Plywood imports this year have risen to a record level—a fact which reflects the upward movement of business activity.

RUBBER.—The event of the week was the unexpected decision of the International Rubber Regulation Committee to reduce the export quotas for the last quarter of the current year. On March 26th last, the permissible export quota for the October-December quarter was fixed at 65 per cent. of the basic quotas. As a result of Tuesday's meeting of the Committee, which is further discussed

in a Note of the Week, this percentage has been reduced to 60. The market responded to the announcement of this decision with a sharp advance in quotations. Subsequently, however, profit-taking took place, and prices closed below the best. The spot price in New York on Wednesday last was 11½ cents per lb., compared with 11½ cents per lb. a week ago and 11½ cents a month earlier. Wednesday's official closing price for standard ribbed smoked sheet in London was 5½d. per lb., as against 5½d. on the corresponding day last week. In forward positions, business has been done at 5½d. to 6d. for January to March shipment, as against 5½d. to 5½d. a week ago. Stocks in London and Liverpool at the end of last week totalled 177,733 tons, against 178,012 tons a week earlier. A year ago stocks amounted to 112,952 tons.

WHOLESALE COMMODITY PRICES

UNITED KINGDOM

The prices in the following are revised with the assistance of an eminent firm in each department.

LONDON, September 25th				POTATOES—				WOOL—				CEREALS AND MEAT

ZERO HOUR

THIS week the shadow of war has been rapidly approaching; and as these words are written it appears that the reality itself has actually arrived. Although the rains have not yet ceased entirely in Abyssinia, the Negus notified the Council at Geneva on Wednesday that the Italians had advanced into Abyssinian territory at the point where the Eritrean frontier adjoins French Somaliland. This is, of course, the spot from which a move designed to cut the Djibuti-Addis Ababa railway would naturally start. The Italians have claimed that this is an area where the frontier is undemarcated, and that the move is therefore not an invasion of Abyssinian territory. But the point is not of great importance; for everything which happened in Italy this week made it clear that it was only a matter of hours before action was taken. For example, in his short but flamboyant speech to the 20 million persons who were mobilised on Wednesday to demonstrate Italian solidarity, the Duce declared that "for many months the wheel of destiny under the impulse of our calm determination moves towards a goal. In this last hour the rhythm has become faster and cannot now be stopped." Nor does Signor Mussolini appear to be seriously concerned to prove Abyssinia the aggressor; for we must assume that the draftsman of the *communiqué* issued after last Saturday's meeting of the Italian Cabinet was speaking ironically when he wrote these words:—

The announcement made by the Negus at Geneva that he had ordered his troops to withdraw 30 kilometres cannot be taken quite seriously by the Italian Government or by any Government worthy of the name. Such an expedient has a strategic objective and not a pacific scope—to mask better the preparations in the interior and to take up a stronger line on more solid positions. In view of this situation departures of our divisions have in the last few days been notably accelerated.

War fever is, alas, so blinding in its effects that such statements as this may conceivably be taken in Italy at face value. Elsewhere it will remain on record as an unusually flagrant example of the wolf accusing the lamb of muddying the water. Apparently, however, the "defensive offensive" is still to be the *mot d'ordre*. On Wednesday, after

explaining that "in that part of the world there are no frontiers" the official Italian spokesman stated:—

There had been movements of troops within the last few days; but they had been taken for purely defensive purposes, in order to assume better positions. They had been provoked by the threatening attitude of the Abyssinians, who had not returned to the 30 kilometres that they had claimed. On the contrary, in some places they were in full view of the Italian advanced posts.

On Thursday, however, all pretence was dropped. Though news is inevitably uncertain and unreliable at such a moment, there seems no doubt that Adowa has been bombed and that the Italian advance has begun. In face of these events, it is clearly high time for the nations to cease hypothetical disputations, to put what interpretation they may on the Duce's declaration and to decide as quickly as possible what action they can take to prevent, or avert the consequences of, aggression—in other words, to decide what sanctions to put into effect.

The exhortations of the Italian dictator to the people of Italy were couched in bold, and even bombastic, terms. But evidently the Duce was anxious to impress upon his 20 million hearers that any action the League might take would not be of a vital character or disastrous to the ambitions of Italy. Indeed, he appealed to the "true" peoples of France and Britain to remember their collaboration with Italy in the last war; and he refused to believe that either Power would galvanise the League into activity in imposing sanctions against Italy. Secondly, the Duce made it abundantly plain that he would not take economic sanctions as a *casus belli*; and that he was not, on his side, willing to extend the conflict to Europe.

To sanctions of an economic character we will reply with our discipline, with our sobriety, and with our spirit of sacrifice. To sanctions of a military character we will reply with orders of a military character. To acts of war we will reply with acts of war. . . . We will do everything possible to avoid a colonial conflict assuming the character and bearing of a European conflict.

Now, this is nothing but an open invitation to those in France and this country who are content to argue on these

lines: "What are the Abyssinians, anyway? Our interests are not involved. Let Mussolini have his colonial fling, as long as he leaves Europe quiet. The League is ineffective, in any case." Those who so argue are negligible in this country; for, as Sir Samuel Hoare pointed out to the French Government, the British public takes this as the test of League principles. But they are not negligible in France, where, over and above a natural unwillingness to destroy a newly-fledged Italo-French *entente*, useful against German aggression in Europe, there exists the notorious venality of the Paris Press. Signor Mussolini, we may presume, hoped to intensify, by his speech, the timidity of French and British waverers who would finally paralyse the League, and so deliver over every small nation to the rule of might and forcible aggression.

Will the nations succumb to the soft words of the Italian dictator, or will they stand fast to the declarations so proudly proclaimed from the rostrum at Geneva? Clearly the world's hope of future peace largely depends upon the answer given; and on Britain and France rests the chief responsibility for deciding what the answer is to be. Are the members of the League able and willing to impose effective restraint upon Italy, and, if so, what are the measures that will constitute effective restraint? These measures, in the first place, should be economic in character—as foreseen in Article XVI of the Covenant; but for the reasons set out in a later article in this issue they should be immediate and drastic. Economic sanctions of sufficiently drastic a nature to be speedily effective in arresting aggression may well necessitate, before long, measures of blockade; and Signor Mussolini may elect to take this as an "act of war" by one or more League members. All the more necessary, therefore, that the discussions between the French and British naval and air staffs should be pressed forward; and that the Council at Geneva should proceed at once to call upon both Italy and Abyssinia not to advance one step beyond determined limits. Meanwhile, the Council should forthwith examine and co-ordinate proposals for the collective imposition of the most stringent economic sanctions against Italy, if she fails to comply with the Council's requirements.

None would attempt to belittle the magnitude of the risks and of the responsibilities involved in these measures. But the issues for Europe and the world are of a commensurate magnitude. We believe that the people of France, and those of this country, will unhesitatingly support Governments who, without lightheartedness but without fear, accept those risks and responsibilities which are the lot of every true and clear-sighted statesman. Democracies cannot afford to be more hesitant in action and more afraid of responsibilities, however onerous they may prove, than dictators.

THE MIXTURE—AS BEFORE

IN accordance with long-established custom, the dinner given, last Tuesday, by the Lord Mayor of London to the Chancellor of the Exchequer and representatives of the banking and financial interests of "the City" enabled Mr Chamberlain, as the Government's mouthpiece, to restate the Cabinet's considered views on far-reaching questions of trade recovery, currency stabilisation, and international trade. The threatening political situation, inevitably, ran like a dark thread through Mr Chamberlain's discourse, and no one to-day ventures to assess the future without weighing the possible effects of sinister developments abroad. If, however, we leave these contingencies out of account, the state of trade and industry is not unpromising. During the past summer unemployment in Great Britain has continued to decline, against the normal seasonal trend. The total of insured workers unemployed in Great Britain in August was 200,000 less than a year earlier, and the present total of 10,424,000 in employment is the highest on the Ministry of Labour's records. The value of British exports for the first eight months of this year was 9 per cent. higher than in 1934. Retail sales in August were 4.7 per cent. above last year's level. During the past year, total note circulation has risen

by 5½ per cent., bank clearings by 10 per cent., and even bank advances, which have been among the last of the traditional revival indicators to move, have risen by £9 millions since August of last year. As a corollary of all this, the national revenue is buoyant. Customs duties for the first six months of the financial year are running well above anticipation, and the behaviour of old-established stalwarts of the revenue, like beer and tobacco, is "entirely satisfactory" to the Chancellor.

The national reaction to this tale of achievement is aptly typified by the recent attitude of investors on the Stock Exchange, who have doggedly refused to sell industrial securities on a widespread scale. To them the Abyssinian dispute has appeared as a gratuitously distracting influence in a wholly favourable market environment. A similar sense of disappointment forms the ground-bass of much of Mr Chamberlain's theme. Emphasis on domestic revival in a "policy-speech" is, of course, inevitable, seeing that, before the next "Bankers' Dinner," the Government must needs appeal to the country for a renewal of its mandate. Are we, then, justified in assuming that, international complications apart, the trade barometer is really standing at set fair? So far a fortunate conjuncture of the economic planets has accompanied every stage of Britain's progress from the depths of depression. She abandoned the gold standard and adopted a moderate tariff policy at a time when world prices of food and raw materials were falling. Depression itself has redistributed the national income along lines favourable to enhanced spending. Wage rates have declined much less rapidly than costs of living, and the impact of reduced total income has fallen mainly on company profits and reserves and on the "saving" classes of the population generally. To the impetus which these developments were bound, sooner or later, to give to the consuming trades has been super-added a growing volume of "replacement" demand for capital goods, stimulated both by tariff policy and by low interest rates. In particular, a stimulus has been given to new residential building, though not very markedly, as yet, to industrial building.

Can it be confidently assumed that this happy sequence of cause and effect will be indefinitely maintained? Once the readjustment of the national economy in favour of home consumption has been completed, may not a further expansion in domestic demand be dependent on an expansion in capital investment on the one hand and in foreign trade on the other? Mr Chamberlain clearly showed that he was alive to the need of expansion in these directions, while the Governor of the Bank and Lord Plender were both positive in the view that the condition of further recovery was renewed progress in international trade. What are the prospects in these directions? Expanding investment is bound up with many factors. One of them is the persistence or otherwise of cheap money. Another is the extent to which enhanced demand for non-residential building construction and re-housing activity under the Government's schemes may suffice to offset any possible slackening in the demand for medium-sized owner-purchased houses in the near future.

Progress in international trade presupposes an advance in a direction where improvement has hitherto been least conspicuous. Mr Chamberlain has been at pains, this week, to claim a place among those who believe that "efforts to promote the flow of goods and services throughout the nations of the world" are essential to the permanence of recovery. Some of his hearers may have been pleasantly surprised to find the Government's warmest protagonist of tariffs and price-raising schemes declaring that the main principle of British policy is "rather to increase consumption than to restrict production." Here, indeed, is Saul among the prophets, and Daniel come to judgment! A closer analysis of the Chancellor's interpretation of "measures to increase consumption," however, suggests only too clearly that the Government still interprets this objective in terms of action by other nations while Great Britain maintains full freedom to "regulate the . . . British market for foodstuffs in the interests of food producers generally," and to "adapt her policy in regard to price-levels and cheap money to her own domestic requirements."

In short, Mr Chamberlain has made a welcome step forward in his definition of the Government's economic

objectives. As regards the means for their attainment, however, he still falls back on the old formulas. He gives his blessing to the recommendations of the Economic Committee of the League and other bodies in favour of the lowering of barriers to international trade. When it comes to the point, however, it is clear where his sympathies lie. The Economic Committee's memorandum contained a suggestion that measures for promoting trade freedom should be taken by a group of countries sufficiently numerous to constitute an influential joint market for each other's products—i.e. a species of low tariff club. The resolution moved, however, by the British delegate, Dr. Burgin, Parliamentary Secretary to the Board of Trade, and carried by the Second Committee of the Assembly, recommended bilateral agreements, backed by the most-favoured-nation clause. On this matter we find ourselves, for once, in agreement, not with Mr Chamberlain and the Government, but with Mr Amery, hitherto regarded as the arch-apostle of high protectionism. The latter, at the International Parliamentary Commercial Conference in London on Thursday, moved the following resolution:—

This conference considers that the unconditional most-favoured-nation clause has, under modern conditions, become an obstacle to the development of mutual trade between nations and to the economic recovery of the world, and should be modified; in particular that it should not, in future, apply as against States which are prepared to establish a system of mutual economic co-operation on a regional or historical and political basis.

Finally, it is clear that in Mr Chamberlain's view there is no prospect whatever of a re-tying of sterling to gold in the near future. His answer to the advocacy of stabilisation by M. Bonnet, the French Minister of Commerce, before the League Assembly, is categorical. In the present tense condition of European affairs even the most tentative approach to stabilisation is "quite unthinkable." We discuss this point in a later Note.

The Government, in short, has no new contribution to make to the problem of facilitating recovery in international trade, either by way of currency measures—where it may claim, not unjustly, to be governed by *force majeure*—or by way of commercial treaty negotiation on a broad basis—where the will to act, if it were present, might find an easier way. Its policy is "the mixture—as before." For the time being, then, an early and far-reaching advance in international trade must be reluctantly ruled out. The domestic horoscope remains more promising as regards the immediate future. It is clear, however, that, if foreign trade activity continues to flag, the home market in itself does not offer any guarantee of continuous recovery for an indefinite period. We need not labour the consequences of any injection of a new element of European political embitterment in the outlook. An armaments "boom" would unbalance Britain's Budget, increase, in all probability, her national debt, and purchase an immediate accession of activity in a limited range of industries at the cost of a certain ultimate recession in the entire body economic.

A QUARTER'S NEW CAPITAL

THE "new capital" market in London is an important indicator of the country's economic pulse. But not all the "new issues" to the public represent strictly new capital; they generally, in fact, represent a transfer to the long-term investing public of concerns and securities formerly held in private hands. Even then, however, the payments made by the public for the "transfer" are available for fresh investment; and the capital market is thus kept in funds.

In this article we publish the figures of new capital issues on Government and private account during the last quarter, issues for purely "conversion" purposes being excluded. The third quarter is always the slackest in the new capital market. This year it has been no exception, for £57 millions out of the £64 millions raised in the quarter were issued in July; and of these £57 millions no less than £31 millions were raised for the London Electric Transport Finance Corporation, which was formed to issue 2½ per cent. 1950-55 debenture stock at 97, under Treasury guarantee, for the

new London transport electrification scheme. Apart from this one large issue, the amount of new capital raised in the quarter was below the corresponding figures in 1935 and 1933.

The distribution of the total sums raised in recent years among the different classes of borrowers is shown below:—

NEW CAPITAL ISSUES: CLASSES OF BORROWERS
(£ millions)

	Total	British Government	Foreign and Colonial Govt.	British Colonial and Foreign Corps.	Foreign Railways	Mines, Finance, and Exploration	Rubber and Oil	Balance (Mainly Home Industry)
Whole year 1928	369.0	83.8	58.1	26.4	3.1	49.7	8.7	141.2
" " 1929	285.2	65.4	30.0	12.1	7.8	41.5	6.4	122.0
" " 1930	267.8	65.6	70.3	44.7	7.6	11.5	9.3	58.8
" " 1931	102.1	10.7	32.2	8.0	2.9	12.2	0.2	35.9
" " 1932	188.9	102.8	23.8	28.9	Nil	2.7	0.8	29.9
" " 1933	244.8	150.8	29.4	24.6	Nil	6.1	0.2	39.7
" " 1934	169.1	44.1	8.4	36.1	Nil	23.9	1.9	54.7
1934—1st quarter	20.1	1.3	1.5	5.7	Nil	3.1	0.2	8.8
2nd "	76.8	41.6	6.9	6.3	Nil	7.0	0.1	14.9
3rd "	28.5	Dr. 0.8	Nil	4.0	Nil	7.1	0.1	16.8
4th "	43.7	1.4	Nil	20.1	Nil	6.7	0.8	14.7
Total 1934	169.1	44.1	8.4	36.1	Nil	23.9	1.9	54.7
1935—1st quarter	27.3	3.0	Nil	3.1	Nil	4.1	0.1	17.0
2nd quarter	38.0	Dr. 0.6	Nil	12.9	Nil	3.0	0.1	23.1
3rd quarter	64.2	Dr. 0.7	1.7	32.9	Nil	15.5	Nil	14.8

Again the British Government has paid out more than it borrowed during the quarter, our figures showing a net deficit between new purchases and encashments of Savings Certificates. The Trinidad Government accounts for the entry under Foreign and Colonial Government borrowing; foreign railway companies and rubber and oil concerns are still absentees from the market; and the amount raised for "mainly home industry," at £14.8 millions, is two millions less than in the third quarter of 1934, though it is £11½ millions more than in that of 1933.

The geographical distribution of borrowings in the first nine months of this year is as follows:—

DESTINATION OF NEW CAPITAL

	First Nine Months					
	1913	1931	1932	1933	1934	1935
United Kingdom—Government	Nil	12,550,000	101,639,200	150,813,800	42,650,000	1,800,000
Other	25,595,200	38,146,900	43,514,100	46,550,400	57,389,300	117,974,000
	25,595,200	50,696,900	145,153,300	197,364,000	100,039,300	119,774,000
British Possessions—Government	20,003,800	30,571,600	18,041,200	21,968,800	8,481,200	1,670,000
Other	36,944,200	7,872,800	1,453,500	2,434,900	15,521,700	7,800,900
	56,948,000	38,444,400	17,494,700	24,403,700	23,982,900	9,470,900
Foreign countries—Government	24,021,500	1,740,000	Nil	5,298,600	Nil	Nil
Other	43,756,700	7,383,900	27,000	36,600	1,403,000	256,000
	67,778,200	9,123,900	27,000	5,335,200	1,403,000	256,000
Grand total	150,321,400	98,265,200	162,674,800	227,103,600	125,425,200	129,500,900

While British Government borrowing has now fallen to the lowest nine months' total for very many years, the total of new domestic borrowing on behalf of "commercial, municipal and public bodies" is actually more than that of the year 1929. Borrowing by Governments and other entities in British possessions was the lowest nine months' total for this category since long before the war; and foreign borrowing stands at almost as derisory a level as in 1932.

The next table shows the borrowers in their various categories, together with the amounts raised by them in the different periods of this year and last:—

ANALYSIS OF NEW CAPITAL APPLICATIONS

Description	First Half- Year, 1935	Third Quarter, 1935	Total Nine Months to September 30	
			1934	1935
British Government Loans	£ 2,500,000	Dr. 700,000	£ 42,650,000	£ 1,800,000

Gas and water	2,726,600	62,600	Nil	2,789,200
Hotels, theatres and entertainments	317,400	955,400	1,027,800	1,272,800
Patents and proprietary articles ..	1,065,000	195,000	3,896,800	1,260,000
Docks, harbours and shipping	Nil	Nil	Nil	Nil
Banks and insurance	1,529,400	Nil	Nil	1,529,400
Manufacturing and miscellaneous ..	19,285,700	6,502,400	12,627,300	25,788,100
Total	65,300,200	64,200,700	125,425,200	129,500,900

Apart from the Treasury-guaranteed issue mentioned above, almost the same amount has been borrowed so far this year for British public boards, corporations and municipalities; but Dundee, Lowestoft and West Bromwich in July together account for the extra £1.8 millions borrowed last quarter, over and above the London Electric Transport Finance total of £31 millions. Australian gold mines, and those of South Africa, India and Bolivia, account for the entries last quarter under the three mining categories. Property companies, investment trusts and holding companies are going merrily ahead. This expansion during the depression reflects to a certain extent the cultivation of new fields for investment of a "fixed-interest" and "realisable security" type. Provincial electric light and power and automobile concerns have been borrowing a little more than a year ago and than in the first half of this year; and in the manufacturing and miscellaneous section, aircraft manufacture and engineering account for £2 millions. Other borrowing in the last category was principally for publishing, building and domestic equipment, chemical and patent food concerns.

The distribution of the new capital raised this year among the various categories is as follows:—

NATURE OF BORROWING

	Debtures, Bonds, etc.	Preference Shares	Ordinary Shares	Total
Year 1930	230,354,800	15,834,600	22,090,100	268,279,500
" 1931	74,935,600	6,911,900	20,296,800	102,144,300

It is evident that the "come-back" staged by the equity share is being well consolidated; that the debenture is definitely a star on the wane—as is to be expected when "recovery" has once proceeded on its course; and that issuing houses are having increased recourse to the preference share as a channel for public participation in established businesses, whose control, through the ordinary shares, is retained largely in "inside" hands.

Borrowers are still entering the capital market by the circuitous route of a "Stock Exchange introduction."

3rd quarter	6,841,800	2,212,500	Nil	9,054,300
Total	32,176,000	4,229,500	519,400	36,924,900

Borrowings by this method for British domestic purposes, despite the overclouding of the new issue market by fears of international conflicts, were at virtually the same level as those of the third quarter during the last two years; they are very much higher so far this year than in the first nine months of the last two years, the total this year being already more than the full year's totals in 1934 or 1933.

The process of converting former issues of fixed-interest stocks to new stocks at lower rates of interest continues.

TOTAL OF CONVERSION OPERATIONS

Period	Total Conversions	Period	Total Conversions
Whole year 1928	£ 324,041,983	Whole year 1932	£ 2,510,774,302(a)
Whole year 1929	203,525,540	Whole year 1933	223,141,000(b)
Whole year 1930	187,088,084	Whole year 1934	241,871,600(c)
Whole year 1931	12,246,375	First nine months 1935	125,950,921

(a) Includes British Government conversions of £2,478,967,382.
(b) Includes British Government conversions of £50,757,000.
(c) Includes British Government conversions of £105,000,000.

Of the nine months' total, £55 millions was for conversions by the Governments of India, Australia and New Zealand; Argentina raised £2.9 millions for conversion; and the City of Bergen £922,000. British corporations, municipalities and public boards have this year issued £24½ millions for conversion. Thus, the broad category of industry as a whole, including foreign industrial and commercial concerns, has this year reduced the charge on about £43 millions of fixed-interest capital. This is about £10 millions more than during the first nine months of last year.

The following table shows the principal issues of the last quarter, with their issue prices and latest quotations:—

PRINCIPAL ISSUES OF THE QUARTER

Month of Issue, 1935	Name and Description	Nominal Amount	Issue Price	Price, Oct. 2, 1935
July	New Zealand 3% Ins. Stk., 1932-35	8,000,000†	98½	98-98
July	Yorkshire Electric Power, 3½% Deb. Stk., 1935-65	1,000,000	par	101½-103½
July	India 3% Stk., 1949-52	10,000,000†	98	98½-99½
July	London Electric Transport 2½% Guar. Deb., 1930-55	32,000,000	97	93-95
July	Hawker Siddeley Aircraft 5% Cum. Pref. £1	250,000	15½	22½-23½
July	West London Property 4% Deb. Stk.	1,000,000	par	19½-20½
July	Cables Investment Trust 3½% Deb. Stk.	1,000,000	par	98½
July	Do. 4½% Red. Cum. Pref. £10	3,000,000	99	98½-99½
July	Australia 3% Stk., 1939-41	2,000,000	104	10½-10½
July	West Bromwich 3%, 1934-56	13,469,981†	par	98½-100
July	Dundee Corporation 3%, 1936-58	800,000	par	98-100
July	Brigg's Motor Bodies Ord. £1	1,000,000	25½	27½
August	Do. 4½% Deb. Stk.	400,000	103	98-102
September	Trinidad 3% Stk., 1965-70	1,000,000	par	98-99
September	African Railway Finance 2nd Deb., 1947-51	1,670,000	98½	97-99

The uncertainty overhanging the Stock Exchange is evident in a general recession to a discount of current quotations for these latest issues, as compared with their issue price. This serves to point the moral; which is that, so long as the fear of war and of grave interruptions of trading relations, markets and sources of supply prevails in the City, the market for issues of new long-term capital must be dull and hesitant. To no other reason is the striking and abnormal lack of August and September new issues ascribable. In these circumstances, the Treasury advisers of the London Electric Transport Finance Company showed themselves shrewd or lucky prognosticators when they decided to raise the whole £31 millions last July. The "going" was then still good. For the immediate future during the last quarter of the year, the "going" in the new capital market seems likely to be heavy and uneven.

IRON ORE SUPPLIES

(BY A CORRESPONDENT)

THE consumption of iron ore in Great Britain is regulated by the demand for pig iron. This in turn is largely dependent on the production of steel, and the relative attractions to the steel producer of pig iron and scrap, as raw materials. Certain limits to the proportion of scrap used in the manufacture of steel are set by the technical requirements of the process adopted. Thus, in the electric process, very little pig iron is used, while for acid Bessemer steel the consumption of pig iron is normally 18-20 cwts. per ton of steel produced, and that of scrap only 2-5 cwts. Steel manufactured by the open hearth process constitutes about 95 per cent. of the total British output and in this case there is a greater degree of flexibility. The relative quantities of scrap and pig iron consumed are determined largely by the prices of the two commodities.

The quantity of pig iron used in the manufacture of all qualities of steel in the United Kingdom declined from 9.99 cwts. per ton of steel in 1930 to 8.38 cwts. in 1932, increasing again to 8.47 cwts. in 1933; while the quantity of scrap consumed increased from 11.12 cwts. to 12.86 cwts. in 1932, and 12.93 cwts. in 1933. The reason for these variations must be sought in the depression in the engineering and shipping industries which threw large quantities of machinery on to the scrap market, with the result that the price of scrap declined to about 50 per cent. of that of pig iron. Since then, however, quotations for scrap have registered a sharp rise, and the proportion of pig iron used in the manufacture of steel has risen again. Thus, production of pig iron rose by 44.5 per cent. between 1933 and 1934, as compared with a rise of only 26.0 per cent. in the output of steel.

The 1934 production of pig iron required the consumption of 14,940,000 tons of iron ore, or 2.5 tons of ore per ton

of pig iron. The latter figure varies with changes in the proportions of home-produced and imported ore consumed, the average metal content of the home-produced ore being 30 per cent., and that of imported ore somewhat over 50 per cent. British production of iron ore in 1934 amounted to 10,584,389 tons, of which a negligible amount was exported, while imports totalled 4,358,896 tons. On the basis of metal content, home production supplied about 60 per cent. of consumption and imports 40 per cent. in that year.

During the depression, when the demand for ore fell to just over 9 million tons, there was a tendency to curtail imports rather than home production, and the proportion of consumption supplied by the latter reached 78 per cent. An upper limit to this figure is, however, set by the fact that production in this country—with the exception of that in Cumberland and Lancashire which amounts to only about 8 per cent. of the total—consists of phosphoric ore which is useful only for making basic steel; the bulk of the requirements of non-phosphoric or hematite ore needed for making acid steel has to be imported. So long as acid steel is considered essential for certain purposes, we cannot entirely dispense with imports of ore.

The bulk of the home production of ore consists of inferior oolite which is obtained from South Lincolnshire, Northamptonshire and Rutland, and has a metal content of about 32 per cent.; of Lower Lias ironstone, with a metal content of 22 per cent., from Frodingham, North Lincolnshire; and of Middle Lias ironstone from South Lincolnshire, Leicester, Northamptonshire and Oxford, with a metal content of 26 per cent., and from Cleveland, North Yorkshire, with a metal content of 29 per cent. Owing to the gradual exhaustion of deposits, the output of the Cleveland district has declined considerably since the War, from 6 million tons or 48 per cent. of the total production in 1913 to 1,640,000 or 15.5 per cent. in 1934. On the other hand, production in Lincolnshire and the neighbouring counties increased from 41 per cent. of the total in 1913 to 75 per cent. (7,840,000 tons) in 1934. Further impetus has recently been given to production in this district by developments at Corby, where preparations were begun in 1932 for the production of basic Bessemer steel, supplies of which had previously been imported. Of the remainder, 8 per cent. consisted of hematite ore from Cumberland and Lancashire, with a metal content of 53 per cent.; while the remaining 2 per cent. consisted of coal measure ironstones, principally from the North Staffordshire coalfield, and of iron ore from the Llanharry mine, Glamorgan. Our principal ore reserves are in Northamptonshire and Huntingdonshire. The reserves of coal measure ironstones in Staffordshire, Derby and Nottinghamshire are also considerable, but any substantial increase in production from these sources is improbable owing to high production costs.

In spite of the high proportion of home-produced ore consumed by British blast furnaces, imports of iron ore into this country are exceeded only by those of Belgium and Germany. The main sources of imports into this country

are Spain, North Africa, Sweden and Norway. The proportion supplied by each of these sources varies considerably from year to year; but in 1933, of the total imports of 2,707,023 tons (including 7,682 tons of manganiferous ore imported chiefly from Egypt) Spain supplied 32 per cent., North Africa (Tunis, Algeria and Spanish North Africa) 35 per cent., Sweden 12 per cent., and Norway 10 per cent. The British Empire supplied only 1.5 per cent., most of which came from Sierra Leone and Newfoundland.

The total Spanish production of iron ore was 1,970,000 metric tons in 1934 against 1,815,000 metric tons in 1933. During the past few years the North African mines have been more than usually dependent on the British market. Thus exports from Algeria to Great Britain in 1934 amounted to 949,000 metric tons, or 70 per cent. of the total, and those to Germany to only 184,000 metric tons, or 13.5 per cent., while similar conditions prevailed in Tunis. Sweden has not been so preponderantly dependent as Spain and North Africa on the British market. An agreement between the Swedish ore producers and the German smelters, under which the latter agreed to base their purchases of Swedish ore on the volume of the German crude steel output, has resulted in a considerable increase of German imports of Swedish ore, from 2,257,000 metric tons in 1933 to 4,965,000 metric tons in 1934. Total Swedish exports rose from 3,150,000 metric tons in 1933 to 6,860,000 metric tons in 1934, so that in 1934 shipments to Germany represented about 73 per cent. of the total.

The sources of supply of the other principal European iron ore producing companies may also be examined briefly. Since the war the important mines of Lorraine were transferred from Germany to France, and France has become the largest producer of iron ore. Production in 1934 amounted to 31,900,000 metric tons, against 30,410,000 metric tons in 1933, the latter figure being about 34 per cent. of world production in 1933. Only about 5 per cent. of this production, however, has a phosphoric content of less than 1.7 per cent., which probably explains the fact that imports in 1934 amounted to 940,800 metric tons. Exports in 1934 were 12,641,380 metric tons, and went principally to Belgium, Germany and Holland.

Germany is normally the largest importer of iron ore, though during the last few years imports have been on a very reduced scale. Even in 1913, before Lorraine was transferred to France and Luxemburg seceded from the economic union with Germany, German imports of iron ore amounted to 14,019,000 metric tons. The majority of the deposits left to Germany since the war consist of very low-grade ore, which must for the most part be mixed with higher grade ore before treatment. Efforts to develop the German mines, which have recently been intensified, cannot therefore progress very far towards self-sufficiency. In 1934, German imports of ore amounted to 8,265,000 metric tons, of which 56.9 per cent. were obtained from Sweden, 19.5 per cent. from France and 7.7 per cent. from Spain.

During the last few years Belgium has been the largest importer of iron ore, imports into Belgium and Luxemburg in 1934 amounting to 10,260,500 metric tons, of which 9,861,700 metric tons, or 96 per cent., were obtained from France. At the present time, however, producers in Sweden, Spain and North Africa are primarily dependent on the British and German markets. These are still expanding. Thus, German imports of iron ore increased from 4,583,592 metric tons in the first seven months of 1933 to 8,075,261 metric tons in January-July, 1935. It appears, therefore, that the improvement which took place in the fortunes of the majority of iron ore producers during 1934 is likely to continue during the remaining months of 1935.

SANCTIONS

THE League Council has this week, in Committee of Thirteen, been drafting its report on the Italo-Ethiopian dispute and its recommendations for a settlement without resort to war. The report will be mere colourless chronology; but the Council's recommendations, which must be made under Article XV by reason of Abyssinia's appeal to the League under that Article, are another matter. The Council does not require unanimity for its recommendations; although, if they are only by majority vote, League Members are

free to take "such action as they consider necessary" to maintain "right and justice." But if the Council's report is unanimous, and if Abyssinia accepts it, Italy cannot go to war with Abyssinia without violating Section 6 of Article XV. If she goes to war before the report of the Council has been drawn up, she tears up Article XII, under which she has agreed "in no case to resort to war until three months after the . . . report by the Council." And in either of these cases of aggression by Italy, Article XVI, the famous "sanctions Article," comes automatically into force. This Article begins with the following provisions:—

"Should any Member of the League resort to war in disregard of its covenants under Articles XII . . . or XV, it shall *ipso facto* [i.e. automatically] be deemed to have committed an act of war against all other Members of the League, which hereby undertake immediately to subject it to the severance of all trade or financial relations, the prohibition of all intercourse between their nationals and the nationals of the covenant-breaking State, and the prevention of all financial, commercial or personal intercourse between the nationals of the covenant-breaking State and the nationals of any other State, whether a Member of the League or not."

Other sections of this Article provide for mutual financial and military assistance as between the States-Members of the League, by reason of the unequal incidence of the burdens of these "sanctions" under Article XVI, and of the potential dangers to which certain States involved in the imposition of military "sanctions" may be exposed. It is also laid down in that Article that the League Council shall "recommend to the several Governments concerned what effective military, naval or air force the Members of the League shall severally contribute to the armed forces to be used to protect the covenants of the League." Thus, on the face of it, Article XVI seems to arouse little doubt of the intentions of the framers of the Covenant. The aggressor is to be restrained, at first by the immediate and automatic imposition of a complete economic boycott; but subsequently, if the Council Members all agree, by all the strength or forces at the command of the League.

But what is "resort to war"? Who decides if the covenants of the League have been broken? Who, then, is the aggressor? And then, again, are all the measures envisaged in Article XVI to be applied at once, simultaneously, or *seriatim*; in full force, or by slow degrees? What dangers are evoked by the prevention of personal and commercial intercourse between nationals of the covenant-breaking State and those of a State not a Member of the League? How are the concerted action and co-ordination of the League Members' separate endeavours to be secured and regulated? Does the automatic commission of an "act of war" by a covenant-breaking State imply that all the League Members are henceforth in a "state of war" with the defaulting State?

It is easy to answer some of these questions; most difficult to give a clear reply to others. Obviously, no general "state of war" (in the sense that a general war between the aggressor and all the League Members has been declared or broken out) is at once created by a State which breaks its League covenants by making war on a League Member. The other League Members, however, are automatically "legally" free (i.e. without themselves infringing the Covenant) to commit acts of war against the defaulter, if they wish to do so. And as all the sanctions provided in Article XVI might well be taken as acts of war by the aggressor, Article XVI itself thus legalises them.

Secondly, it is *not* possible for the Council, as if it were a sovereign judicial body set over the States of the League, simply to declare that a breach of the Covenant has been committed and so to call on the League to apply sanctions.

"It is the duty of each Member of the League to decide for itself whether a breach of the Covenant has been committed. The fulfilment of their duties under Art. XVI is required from Members of the League by the express term of the Covenant and they cannot neglect them without breach of their treaty obligations."*

Thus no League Member can plead the bad faith of another League Member, and so absolve itself from its duty to decide if a breach of the Covenant has occurred. The duty is "joint and several," not "joint" alone. Therefore

* Assembly Resolution, Oct. 1921.

each individual Member must decide honestly; and if in the affirmative, *must* automatically proceed to apply the economic measures of restraint which it has agreed automatically to impose in these circumstances.*

Thirdly, "resort to war"—as Sir John Fischer-Williams has shown,† as the League's Blockade Committee reported in 1921, and as the League Council confirmed in their Note to the Governments of Bolivia and Paraguay on September 27, 1932—is to be taken as "resort to armed force" or as "armed action" undertaken against a State Member of the League, rather than as resort to a legal declaration of war. The following citation is apt: "The Covenant cannot 'achieve security' for Members of the League if it allows other States, and particularly Member States, to invade their territory, bombard their towns and give battle to their troops without violating the obligations which it imposes."‡

Fourthly, however, the League Council provides the only obvious and effective medium for the co-ordination of economic and, if necessary, military measures for restraint of aggression. It should therefore proceed at once, on the report of aggression, to consider how the collective imposition of sanctions under Article XVI, once the States-Members are agreed that a breach of the Covenant has occurred, can be made most effective. It is clearly the Council which should at once decide how the "sanctions" of Article XVI are to be applied; the precise date when, how far, and by what stages they should be imposed. Such, in effect, were the main interpretative recommendations of the International Blockade Committee of 1921, which formed the basis of the Assembly's "resolution regarding Article XVI" adopted by them on October 4, 1921. These interpretative resolutions are not binding on Members of the League; but they were then accepted by the Council as "rules for guidance which the Assembly recommends, as a provisional measure, to the Council and to the Members of the League in connection with the application of Article XVI."

The Council Members could, if they desired, now

NOTES OF THE WEEK

Labour Decides.—The overwhelming vote in favour of sanctions at the Labour Conference on Wednesday demonstrated how very largely personal is the much-advertised "split" in the Party. A majority of 2,168,000 to 102,000, or over 20 to 1, was recorded in support of the League Covenant. Dr. Hugh Dalton, who proposed the resolution embodying the official Party policy, made a clear, crushing and unanswerable case.

Sanctions (he said) do not necessarily mean war. On the other hand the scrapping of sanctions as a reserve force behind international law certainly means war—war soon and in a far more terrible form than even a war between Italy and Abyssinia. A threat of sanctions may be enough to prevent war. . . . But if Mussolini is so lunatic as to resist the united League of Nations by force, let it be so. He will order the firing of the first shot and he will take the consequences of that order.

That this was the opinion of the vast majority of the delegates, was proved by the final vote. Before the vote was taken, however, there was a long and dramatic debate in which the picturesque personalities of the minority spokesmen did something to conceal the numerical weakness of their supporters. Sir Stafford Cripps, most of whose adherents appeared to be in the public gallery, argued that he had changed his mind about the League because he had only recently come to the conclusion that it was a League of sated imperialist Powers—an "international burglars'

proceed along many lines. They could, by unanimous vote, "recommend" (i.e. call upon) both Italy and Abyssinia to respect a neutral zone determined by the Council. They could dispatch a League commission to inspect and supervise the disputed frontiers and see that no aggression took place; or, if it did, who was the aggressor. If the Council was too late to prevent Italian invasion of Ethiopian territory, they could at once set out to determine that fact, to decide that a breach of the Covenant had been committed by Italy, and declare Italy the aggressor. That opens the way to the final consideration: the efficacy of "sanctions."

Nothing emerges with greater clarity from an examination of the implications of this legal term than the need, at the outset, for two things. First, economic "pin-prick" sanctions—as, for example, stopping credits to an almost insolvent aggressor State—provide no restraint. Economic sanctions must be either of a definitely drastic or of a "delayed-action" kind; and the latter will, we fear, prove ineffective in arresting aggression and war. Even the most drastic purely economic sanctions—the economic boycott under Article XVI of an aggressor State, or embargoes on both exports to, and imports from, the aggressor State—will only exert their pressure gradually. Stocks must become depleted; credit or gold resources exhausted; and most non-Members of the League may insist on their rights of trade with the aggressor.

This last consideration points to the second necessity. Behind the ability and the will to impose such economic sanctions as may prove, in time, an effective restraint on the aggressor, there must be the ability and the will to meet with collective military measures the possible recourse by a desperate aggressor to an attack on one or more of the States imposing economic sanctions. Here arises the relevance of the British request to the French Government this last week. Moreover, as the covenant-breaker has *ipso facto* committed an act of war against all Members of the League, the Members are free to declare a blockade of the covenant-breaking State, and it is up to that State to decide whether it will take the blockade as a *casus belli* against one or more of the League Members. In any case, if that blockade is effective, then in international law the Members of the League can publish a list of contraband and legally exercise the right of "visit and search" over "neutral" (i.e. non-League States') ships suspected of carrying goods to and from the defaulting State-Member.

leaving the Government on a side issue. It might yet prove to be the most important issue in the world.

* * *

Gold and Tariffs.—Further evidence has been forthcoming in the past week of the desire of certain Continental nations that Great Britain should return to gold. But British opinion, at any rate as represented by Government spokesmen, appears to be growing less, rather than more, inclined to tie up sterling in any foreseeable future. In the Assembly of the League, Dr. Burgin, for Great Britain, spoke in reply to the French delegates' plea for tariff reductions and exchange stabilisation. He welcomed the opportunity for a move towards more liberal commercial policies; but he reiterated British adherence to the most-favoured-nation clause, and offered little hope of any substantial tariff concessions. The official "remarks" of the League Economic Committee gave a definite blessing to multi-lateral agreements of the "low-tariff-club" order; but Dr. Burgin remained obstinately bilateral. The "message" sent by Mr Cordell Hull, United States Secretary of State, on the subject of the Committee's recommendation, also seemed to favour bilateral agreements and the most-favoured-nation clause. We are most grateful, however, for the general welcome which Mr Hull gives to the movement towards more liberal commercial policies; and we trust that something tangible may before long emerge from so many excellent sentiments. On the monetary issue, Dr. Burgin merely pointed out that Great Britain now attaches the greatest importance to cheap money as a cure for industrial depression. The Assembly accordingly adopted the following resolution, drafted by Great Britain:—

The Assembly notes the inimical effects on international trade of arbitrary restrictions, notes also the desire of a return to the international gold standard, and considers that effective steps might first be taken to facilitate the exchange of goods, also that as many countries as possible might conclude bilateral agreements towards a more liberal economic policy. Such agreements, if thought necessary, should have a proviso that if the rate of exchange between the two countries varies greatly, there should be power to vary the agreement at short notice.

Similarly, Mr Chamberlain, on Tuesday, both at the "Bankers' Dinner" and at the International Parliamentary Commercial Conference, argued that the fixing of sterling in terms of gold was for the moment "unthinkable." His reasons for rejection, it is true, seem to have altered a little since the time when a rise in commodity prices was given as the principal pre-requisite of a return to gold. Mr Chamberlain's chief objection now is that such a return might compel this country to deflate once more and so sacrifice all the gains of the last four years. Here, however, he is without doubt faithfully reflecting British opinion, which would rather make the adjustments necessitated by gold losses through exchange movements than through deflation. Stable exchanges are, however, necessary if there are to be agreements leading to more international trade. The crucial question is whether nations are prepared to make sufficiently drastic changes of tariff policy to bring stabilisation within the range of practical politics. It will not escape notice here that, while M. Bonnet was this week advocating freer trade at Geneva, the French Government, impelled by the deflationary situation at home, was issuing a whole series of further quota restrictions.

* * *

The British Note.—The British Note in reply to the French Government's inquiry about the British attitude towards the League was published last Monday. It has served the secondary purpose of answering the Italian Cabinet's *communiqué* of last Saturday—though it had actually been drafted, approved and dispatched before the Italian Cabinet met. The Italians have, of course, professed all along to believe that the alleged British concern for the Covenant and for the principles embodied in it was simply in the present case a specious cloak for the pursuit of selfish British Imperial interests in East Africa, with which the ambitions of Italy might conceivably clash. The Italian *communiqué* is virtually an offer to compound with Great Britain over these supposed local British interests, if only

the British Government will stop beating Italy with the handy League of Nations stick. The true answer has been given by Sir Samuel Hoare in one of the re-affirmations, in his Note, of the points which he made in his Geneva speech. The Foreign Secretary has once again made it clear what the real basis of British policy is: the ideas embodied in the Covenant, and in particular the aspiration to establish the rule of law in international affairs. And His Majesty's Opposition will certainly not dispute Sir Samuel Hoare's contention that the support of the League by His Majesty's present Government is a national policy which would be supported at least as strongly by any alternative administration. Sir Samuel Hoare is speaking for the whole nation when he says that "the League stands, and this country stands with it, for the collective maintenance of the Covenant in its entirety, and particularly for steady and collective resistance to all acts of unprovoked aggression." The provisos that the risks involved in carrying out the Covenant must be taken collectively; that the nature of the appropriate League action may vary according to circumstances; and that "elasticity is a part of security" are all points which will be appreciated by reasonable opinion in France. There can have been few Frenchmen who really expected us to say that, in Europe, we should always interpret the Covenant, *à priori*, in accordance with a French conception of French national interests. In Europe, just as in Africa, the Covenant must be applied—according to the circumstances and the merits of each particular concrete case arising—for the unvarying general purpose of "establishing the rule of law" and "collectively resisting unprovoked aggression." This is the fundamental French as well as British interest; and it is an interest which neither nation need be ashamed of avowing.

* * *

The Memel Elections.—As we go to press, the tellers of the votes cast in the Memel election are still at work on their colossal task. It is a relief, however, to record that the dominant note in the electoral proceedings has been farcical rather than atrocious. There has been only one breach of the peace; and in this minor disorder—in which the assailants were German voters and the victims of aggression were the Lithuanian police—the provocation which caused the explosion of temper was not any cynical denial of electoral rights, but the boredom of having to stand in a queue through the livelong day while the voters at the head of the queue each struggled in turn with his or her tome of 187 printed sheets. The Government at Kovno had chosen to introduce a voting mechanism which would tax the professional skill of an expert official in the postal sorting office of one of the world's great cities. The authorities responsible for the conduct of elections in this country would not dream of trying to impose a voting system of this fantastic cumbrousness on the British public, and they would never hear the last of it if they did! But we would suggest that the Lithuanian Government's ineptitude is, at any rate, an undesigned evidence of good faith; for a Government which turns the act of polling into an intelligence test is giving a notable electoral advantage to the educated minority of the electorate; and in the Memelland this educated minority is composed almost entirely of urban German voters. To tear the right 29 sheets out of the 187, and to remember which bundle was to be placed in an envelope and which in an incinerator, is an intelligence test in which we should expect the poor Lithuanian peasant to come off badly and the German *bürger* to excel. In the actual circumstances, we can see nothing more sinister in the Lithuanian authorities' provisions than the *naïveté* of a half-fledged national State which has made up its mind to "lick creation" in the Democratic character of its electoral methods. With Herr Hitler in the offing at Königsberg, and with the results of the polling still to be announced, it may be premature to take an altogether light-hearted view. But, after all, the representatives of the French, British and Italian Governments have been on the spot to make sure that the comedy does not turn into a tragedy. Whatever the vote may prove to have been, Dr. Göbbels will have a pretty problem in propaganda if he is to paint these proceedings at Memel in the lurid colours which are evidently the German order of the day.

General Gömbös's Excursion.—We sincerely hope that it was an excursion, and not an alarm, that carried the Hungarian Prime Minister, General Gömbös, to Germany by a German aeroplane last week. The official "excursionist" version is that the Hungarian General flew to share the fun of a hunting party which was being provided by the German General Göring for some Polish generals and diplomatists. But an unofficial version of the story declares that the air was the object as well as the medium of the Hungarian Prime Minister's visit. Only the night before General Gömbös left for Berlin, an official of the German Air Ministry, General Milch, had arrived in Budapest *via* Warsaw; and this tour is said to have been the outcome of secret German-Polish conversations. In fact, it is alleged that what is really on foot is the negotiation of some kind of air convention between Germany, Poland and Hungary as a retort to the recent understanding between the Soviet Union, Czechoslovakia and Roumania. Unfortunately, this explanation is not unconvincing. Both Czechoslovakia and the Soviet Union have been profoundly alarmed at the Third Reich's almost open avowal of aggressive intentions eastwards; they have begun to discuss ways and means of joint defence; and latterly Roumania has shown signs of taking a hand. Undoubtedly an air understanding between these three countries might open the way for Russian air power to operate from a Bohemian base; and here already we see the vicious circle of insecurity closing in upon its victims. For an arrangement which may be designed, *bona fide*, to restore security to Czechoslovakia and Russia in face of a potential German threat may at the same time genuinely threaten the security of Germany and her friends. In fact, in this re-grouping of the countries of Eastern Europe into two rival armed camps we see the line-up for the next war which lies in wait for Europe if the League system of collective security fails to vindicate itself in the test case of Italy and Abyssinia. If, to-morrow, the Covenant does prove itself effective in Africa, then we may look forward, with some confidence, to seeing the clouds now gathering over Central and Eastern Europe begin to disperse. But if the League is proved impotent to arrest Italian aggression, then we are on the eve of a new constellation of power in Central and Eastern Europe. In this new alignment, it is already evident that Germany and Russia will be the antagonists, and that their henchmen will consist of the former Central European satellites of France and Italy. The Little Entente and the Balkan Entente will gravitate away from France towards Russia, Poland away from France towards Germany, and Hungary and Austria away from Italy towards Germany. Italy will be exhausted by her African adventure, France paralysed by the breakdown of the Stresa front, and Great Britain once again in full flight from Continental complications. These are the penalties for a failure of the League.

Italian Foreign Trade.—In view of the possible importance which may attach, in the development of the international crisis, to the details of Italy's foreign trade, we give below a table showing Italian imports and exports from and to the twelve most important foreign countries in the last two complete years and in the first halves of 1934 and 1935:—

ITALIAN FOREIGN TRADE
(Million lire)

Countries	Italian Imports				Italian Exports			
	1933	1934	1st half 1934	1st half 1935	1933	1934	1st half 1934	1st half 1935

THE BRITISH LINEN BANK

Incorporated by Royal Charter, 1746

Head Office: 38 St. Andrew Square, Edinburgh

OVER 200 BRANCHES IN SCOTLAND

LONDON OFFICES:

City Office: 38 Threadneedle Street, E.C.2
West End Branch: 198 Piccadilly, W.1

The largest volume of trade, both inwards and outwards, it will be seen, is with Germany. Moreover, trade with Germany has been increasing since 1933, doubtless due in part to the workings of clearing agreements. The only other country from which Italy buys more than 10 per cent. of her total imports is the United States. Great Britain comes third in the list of imports, but the figures have been declining. On the export side, Great Britain is second only to Germany, although here again trade has been declining. In 1933, the United States held third place, but in 1934, and so far in 1935, it has been lost to Switzerland. France is fourth in order of imports and fifth in order of exports. It will also be noticed that Italy has a passive balance of trade (i.e. a net excess of imports) with each of the countries in the table except Switzerland.

—And her Financial Position.—The latest official figures throw a most significant light on Italy's economic and financial position. The assets of the Bank of Italy are steadily dwindling and its liabilities steadily growing. The Bank's gold reserve, which was 7,092 millions at the end of December, 1933, had fallen to 5,057 millions on August 10, 1935. Since then it has been rapidly and continually falling, and on September 20th had shrunk to 4,334 millions. "Foreign bills and balances abroad," which appear to have been replenished at the expense of the gold reserve in August, has fallen subsequently from 438 millions on August 31st to 418 millions on September 20th. Meanwhile, liabilities have risen equally steadily. Between August 20th and September 20th discounts rose from 3,622 millions to 4,420 millions, advances from 1,900 millions to 2,630 millions, and notes in circulation from 13,941 to 14,917 millions. It will be remembered that in the last week of July the statutory requirement of a 40 per cent. metallic cover for the note issue and sight liabilities was "temporarily suspended." The ratio had fallen to 36 per cent. by August 20th, and on September 20th it stood at 29.46 per cent. Meanwhile, the wholesale price index (September 18, 1931 = 100) has risen from 85.5 on February 13th to 103.4 on September 25th, and the official cost-of-living index (1927 = 100) from 69.7 in January to 72.0 in July—the latest figure available. The rapid shrinkage of the Bank's gold and foreign exchange reserve naturally raises the question what other foreign assets Italy can find. By a decree of August 28th it was made compulsory for Italians living abroad to cede to the Bank against cash or bonds all credits or securities held in foreign countries. The exact amount of such securities is not known, but it is certainly considerable. The Governor of the Bank of Italy, in his report on March 30th, estimated the total of investments made abroad by Italians between 1928 and May, 1934, at 6,000 millions (about £100,000,000). An estimate recently made by the Italian Commercial Counsellor in Washington suggests that the total value of securities held by Italians in the United States is about 140 million lire. The most reliable figures available of Italy's balance of payments also show that Italy's interest and dividend receipts from abroad are normally exceeded by her out payments to an amount of about 1,000 million lire. In any case, the figure is a negligible one in comparison with that of tourist expenditure and emigrants' remittances. In 1930, the last

year for which figures are available, Italy's balance of foreign payments may be summarised as follows:—

IN PAYMENTS		OUT PAYMENTS	
Exports	12,119	Imports	17,350
Shipping	1,450*	Interest and dividends	
Emigrants' remittances	2,000*	(net)	975*
Tourist expenditure	2,150*		

* Approximate

The general inference seems to be that Italy cannot pay for heavy and sustained imports in any other way than by exports, emigrants' remittances and tourist expenditure.

See-Saw Politics in Spain.—The President of the Spanish Republic has now taken a hand to end the deadlock in political opinion which has paralysed the various successive Governments headed by Señor Lerroux. Just before the reassembly of the Cortes (September 24th) the Minister of Marine, Señor Royo Villanova, who is opposed to demands for Catalan autonomy, resigned in protest against resumption by the Catalan Government of control over the local public services. His colleague of the Agrarian Party, Señor Martínez Velasco, followed suit. Then it was discovered that the ex-Minister of Marine had made a special agreement which excluded the two major Catalan ports of Barcelona and Tarragona, whose transfer to the Generalitat evoked alarming prospects for Señor Villanova. On this flimsy pretext, the President initiated consultations for a new Cabinet. Having a shrewd idea that the tide of opinion in the bigger towns was once more flowing to the Left, the President was no doubt hoping to broaden the basis of the present coalition. But his main object was to replace Señor Lerroux himself, who has made many enemies on the Left, by some political figure more adapted to the President's own declared "policy of appeasement." After five days of crisis the outgoing Minister of Finance, Señor Chapaprieta, a henchman of Don Santiago Alba, the Speaker and former Liberal Minister under the Monarchy, managed to form a Cabinet—including Señor de Velasco. The only change of complexion is the inclusion of a representative of the Catalan *Lliga* (the party of Señor Cambo), which has twenty-four members in the Chamber. That means that the President has been disappointed in his hopes of a "National" Government which would include members of the Left. The principal task of the new Cabinet is to stop the rot in the public finances. There is a considerable deficit in the Budget, which it is proposed to meet by stringent economies, including the elimination of three "redundant" Ministries (Agriculture, Industry and Commerce, for example, being now fused into one, as also Public Works and Communications) and several under-secretariats. But one can hardly believe that Señor Chapaprieta will be spared political convulsions so as to start "all square" with the beginning of the next financial year in January; for the question of constitutional reform and new elections is no nearer solution. Señor Gil Robles, as Minister of War, has entrenched the Catholic parties; but the country is restive under the threat of "Fascism." As the crisis between Italy and the League comes to a head, there is much the same sharp cleavage as was seen during the war between a powerful section on the Right, which is pro-Fascist, and the mass of the politically literate population staunchly upholding Señor de Madariaga and a League policy at Geneva.

Dissolution in Denmark.—The Danish farmers' attempt to force the Government's hand has resulted in the dissolution of the Lower Chamber. The farmers want a further devaluation of the krone from 22.40 to 30 to the pound sterling, and have attempted to enforce it by withholding their sterling credits. As soon as the new session started, therefore, M. Stauning, the Socialist Prime Minister, announced that there would be a dissolution and general election in order that the country might decide the issue raised by the farmers. The election will be held on October 22nd. There seems little reason to believe that the dissident farmers will muster enough support even to deprive the present Socialist-Radical Government of its slender majority. On the whole, despite the British bacon quota, Denmark has benefited greatly from the Govern-

ment's policy of attaching the currency to sterling. The Finance Minister this week was able to show a surplus of Kr. 18,000,000 on the 1934-35 Budget. Cheap money and the trade agreement with Great Britain have served Denmark well in the last few years; and employment has revived under the influence of local building activity. A big turnover of votes against the Government consequently seems unlikely.

A Commodity "Scramble."—During a period of uncertainty, when rumours hold the field, commodity and security markets are swayed by mass psychology. Thus, anxiety over the possible consequences of the Italo-Ethiopian dispute has given rise to a scramble for some of the leading primary products by manufacturers. Consumers suddenly discovered that their stocks had been allowed to fall to a low level, and they decided, as a precautionary measure, to lay in supplies for all contingencies. Speculators, taking advantage of the re-stocking movement, entered the commodity markets, thus accentuating the upward movement of prices. The rise in the quotations of some of the leading commodities since the middle of August is shown below:—

PRICES OF IMPORTANT COMMODITIES

	August 14	September 25	October 3	Percentage rise since August 14
Copper, standard cash, per ton	£ 31 17 6	£ 34 16 3	£ 35 5 0	10.6
Tin, standard cash, per ton	211 0 0	227 0 0	225 0 0	6.6
Lead, soft foreign, per ton	15 15 0	17 3 9	17 17 6	13.5
Spelter, G.O.B., per ton	14 6 3	15 18 9	16 10 0	15.3
Wheat, Liverpool futures, per 100 lbs.	5 1 1/2	6 7 1/2	7 0 1/2	37.0
Linseed oil, per ton	21 10 0	25 0 0	27 0 0	25.6
Cotton, American futures, per lb.	5.85	5.86	6.00	2.6
Rubber, smoked sheet, per lb.	5 1/2	5 1/2	5 1/2	—

With the exception of rubber, all the commodities enumerated above experienced a sharp rise in prices during the past six weeks. The upward movement was accelerated on Thursday by the news of the advance of Italian troops into Ethiopia. In the case of a number of commodities, a moderate increase in prices was justified. For example, the short wheat crop in a number of important exporting countries has brought about a reduction in world supplies of this cereal. Similarly, the increase in the price of linseed oil is partly due to the expectation of a short crop in Argentina. The statistical position of non-ferrous metals is also better than a year ago. But there can be no doubt that the greater part of the rise in prices is due to a re-stocking movement, the end of which cannot be prophesied. Unlike the position in 1914, the world's available supplies to-day are much greater than the volume of potential demand.

Revenue and Expenditure.—The revenue and expenditure figures for the half-year, which are given in full on page 653, show that we have been distinctly lucky in the moment at which we have incurred heavier expenditure for defence. Thanks to the general expansion in trade and production in the sterling countries, revenue has increased in the half-year by almost as much as expenditure. Otherwise the Budgetary position would be once more becoming shaky. Total ordinary revenue for the half-year was £286,899,959, compared with £273,833,086 in 1934; and total ordinary expenditure was £346,347,079, compared with £328,526,930 in 1934. Revenue has thus increased by £13,016,873 and expenditure by £17,820,149; and the normal half-yearly deficit has risen from £54,643,844 to £59,447,120. Some part of the increase in revenue cannot be depended upon to continue for the second half-year. Income tax, which is mostly collected in the second half-year, is up by nearly £2,000,000, though surtax is more than correspondingly down; and death duties, which appear to include the recent £3,500,000 payment on the Woolavington estate, are up by over £6,000,000. Since income tax this year, however, has been paid at 4s. 6d. in the £ compared with 5s. last year, the increase is striking evidence of the rise in industrial profits. "Miscellaneous receipts"

THE REVENUE

I.—An Account of the TOTAL REVENUE of the UNITED KINGDOM, in the undermentioned periods of the Year ending March 31, 1936, as compared with the corresponding periods of the preceding year.

Net Increase	80,740,000

* Includes £50,000 the proceeds of which were not carried to the Exchequer within the period of the account.

—another fickle and fluctuating source of revenue—also increased by nearly £3,000,000. Much more reassuring is the rise in Customs receipts of nearly £4,000,000 and in Excise of £1,600,000. These are indubitably due to better trade, and should be maintained in the next six months. On the expenditure side interest on the national debt was lower by about £1,000,000 at £105,826,395; a figure which gives promise that the estimate of £224,000,000 for the year will again prove excessive—unless unforeseen events should raise interest rates substantially. Supply services, on the other hand, increased heavily from £217,542,319 to £236,466,099. Of this £5,525,000 is attributable to defence items and £13,398,780 to the remainder. Defence, at first sight, appears to be showing no sign of exceeding the estimates, which (supplementaries included) provide for an increase of £15,874,000 in the year. Whether the accounts, however, have as yet taken the full impact of inevitable increases in expenditure may be doubted. Of the remaining increase £1,200,000 is due to the enhanced rate of unemployment benefit. The returns do not analyse the rest of the increase in full; but it is believed to be in part due to the breakdown of the new unemployment relief system. In general, therefore, we are spending more both on unemployment and on armaments. And, so far, an increase in revenue, partly due to reviving trade and partly to human mortality, has been fortunately sufficient to foot the bill.

* * *

The Building Boom.—The unprecedented expansion of building activity in this country since 1933, which has played so large a part in British trade recovery, is a two-edged weapon; for any faltering tendency in the building trade without a compensating movement in other directions, might well be the harbinger of general recession. The chart below shows changes in the relationship between the volume of construction and general business activity during the past ten years. The general trend of economic activity in this country is represented by the annual figures of our new Index of Business Activity, published in the monthly Trade Supplement to the *Economist*. The index of building activity, which is one of the components of the complete Index, is based on a twelve-month moving average of the value of building plans passed by 146 local authorities, adjusted for changes in building costs.

It will be seen that the volume of construction continued to rise between 1929 and 1930, but followed the downward movement of general business activity in 1931 and 1932. Both indices began to rise in 1933, but the volume of construction has since shot far ahead of general business activity. The enormous expansion in building activity in 1933 is largely due to the increase in the construction of dwelling-houses by private enterprise. The speed of the upward movement has been maintained during the past year by a rapid recovery in other forms of construction. Building by private enterprise, significantly, increased throughout the depression, the number of houses completed in England and Wales without State assistance rising from 64,740 in 1928-29 to 143,437 in 1932-33. In the following year the number of houses completed without State assistance rose to 209,836, and in the year ended March, 1935, it reached 291,983. The spurt in unassisted dwelling-house construction in 1933 is undoubtedly due to the coincidence of a rise in real wages with a decline in building costs and a reduction in interest rates made effective by the building societies. The future trend of this form of construction, which gave rise to the boom, will be largely influenced by the interaction of these three variables.

UNITED STATES

HUGE INCREASE IN IMPORTS

THE August foreign trade figures again illustrate the remarkable change which has occurred in the United States balance of trade. Merchandise exports, at \$172 millions, were almost identical with those of 1934; but imports at \$170 millions were \$50 millions greater than in August, 1934. It is true that the August, 1934, import figures were unusually low, reflecting the slump in the summer of that year; while the August imports were at about the average monthly rate so far in 1935. Nevertheless, in the first eight months of 1934 the United States had accumulated an active balance of \$260 millions on merchandise account; and this year the eight months' balance is active by only \$27 millions. Curiously enough, the eight months' exports were identical in both years—\$1,370 millions; the change has come in our imports, which have risen by \$230 millions.

The detailed figures are available through July, and these are adequate to show the main forces at work. The Department of Commerce reports imports under nine major classifications as follows.

IMPORTS FOR CONSUMPTION BY MERCHANDISE GROUPS FOR SEVEN MONTHS ENDING (\$000,000)

	July, 1934	July, 1935
Animals and animal products, edible	28	44
Animals and animal products, inedible	74	85
Vegetable food products, and beverages	259	350
Vegetable products, inedible	132	164
Textile fibres and manufactures	147	160
Wood and paper	101	108
Non-metallic minerals	48	55
Metals and manufactures	79	98
Machinery and vehicles	8	8
Chemicals and related products	42	42
Miscellaneous	38	45

The largest increase was in vegetable foods; and in this group the largest single element was sugar. The character of this increase in imports gives no assurance that it represents a permanent change in the trade balance. That most groups showed some increase is an argument in that direction; but the fact that most of the increase occurred in foods suggests impermanence.

Against an active merchandise balance in August of \$2 millions, gold imports were \$45 millions, and silver imports \$49 millions. For the eight months, merchandise exports exceeded imports by \$27 millions, but net silver imports

were \$136 millions and net gold imports were \$866 millions. That is, with a merchandise balance almost exactly in equilibrium, the United States has in eight months imported \$1,000 millions of precious metals—slightly more than in the first eight months of last year, when more gold and less silver was imported. Imports of gold and silver this year are almost equal to total merchandise imports—the latter having amounted to \$1,342 millions for the eight months. It is impossible to account for this except on the assumption of a continuous flow of capital into this country, not necessarily of a magnitude precisely equal to the movement of the metals, but much larger than is commonly supposed.

THE RISE IN COMMODITY PRICES

American commodity prices have reached new high levels. Moody's index of 15 speculative commodities, which was below 80 in early 1933, has passed 170, an advance of well over 100 per cent. Furthermore, this index understates the actual advance in these primary commodities. Of the 15 commodities, five of the most important carry processing taxes—wheat 30 cents a bushel, cotton 4.2 cents, hogs \$2.25 a hundredweight, maize 5 cents a bushel, and sugar $\frac{1}{2}$ cent a pound. Except for the small tax on maize (which reaches the consumer as a cumulation on the hog tax), these are substantial excises paid by the intermediate or ultimate consumer as an element of his cost price.

The fact that an index of primary commodity prices has risen by more than 100 per cent. in two years suggests comparison with the price advance in the Bureau of Labour Statistics index from 1914 to 1920, which at its peak was about 150 per cent., distributed over about five years. It also stands in contrast with the recent rise in the B.L.S. index of about 30 per cent. In short, whereas in 1914-20 there was a general rise in prices, in the current advance there has been a great rise in a comparatively few commodities, while prices in general have remained firm rather than rising; and most of the advance in the B.L.S. index can probably be attributed to the exceptional advances in these basic commodities. However, the lifting of so comprehensive an index by 30 per cent. is an economic phenomenon of the first importance.

Qualitatively, the current advance differs radically from that of 1914-20. The war advance was attributable to intensity of demand; the current price movement is essentially a consequence of limitation of supply. Supply has been reduced in three principal ways: (1) By Governmental withdrawal of a surplus, as exemplified by cotton loans and purchases; (2) by systematic limitation of production under Governmental auspices, as in certain agricultural commodities, oil, etc.; and (3) by a succession of three unfavourable weather seasons. Obviously, demand has played some part in the price rise; but it is demand acting on a limited rather than a "normal" supply.

Prices have thus risen extensively in the past two years and a half; and such a rise in prices was the stated objective of American monetary policy. In furtherance of this objective, the dollar was depreciated 40 per cent. and bank deposits have been increased by about 50 per cent. The depreciation of the dollar certainly influenced the prices of commodities entering actually or potentially into international trade; but its effect is obscured, as the monetary influence operated in the presence of limitations of supply—for example, in tin and rubber among imported commodities and cotton among exported commodities. As for the increase in the quantity of money, the influence on prices is even more obscure, for the increase in deposits has been accompanied by a less than proportionate increase in the turnover of money. Debits to individual accounts amounted to \$22,628 millions in April, 1933, and to \$30,375 millions in August, 1935, which is rather less of an increase than the gain in demand deposits. The increase in deposits is, of course, due partly to metallic imports and partly to deficit financing.

BUSINESS STILL GOOD

Business news continues favourable, showing little net change from week to week or month to month. Steel production is just under 50 per cent.—a level which it has maintained since the first of the year with remarkably little variation except for the brief, sharp decline at mid-year. Automobile production has fallen abruptly, as would be

TRADING ABROAD

The existence of restrictions in a given country may temporarily prohibit dealings in forward exchange, but up-to-date information on this and on all points bearing on Forward Exchange generally may be obtained through any branch of the Westminster Bank. For any who may be unfamiliar with the facility, a very brief outline entitled *Forward Exchange* is always available at its counters

WESTMINSTER BANK LIMITED

HEAD OFFICE: 41 LOTHBURY, LONDON, E.C.2

expected as a prelude to the introduction of new models in November. Residential building contracts, however, are running at almost double the average figure of 1933 and 1934. The rapidity with which residential building activity developed in the second quarter of 1935 is one of the outstanding features of the year. From a few localities there are now coming reports of industrial building. In comparison with the building activity of the 'twenties, these levels are low; but compared with the complete stagnation in private building (exclusive of Government projects) in 1932-3-4 the present levels seem high.

Indeed, a shortage of building labour is reported in some localities; and this echoes a rumour from a number of other trades or industries. In the years following 1929 few apprentices entered any craft requiring skill or training; while the older hands were reduced by death, removal, or shift of occupation. Hence there is no inconsistency in the paradoxical reports of rather widespread local shortages of specific skilled labour and the almost undiminished number of the unemployed.

NEW YORK, September 24.

FRANCE

REVENUE AGAIN FALLING

FISCAL receipts for August were Frs. 2,580 millions, of which Frs. 2,405 millions were ordinary receipts. In comparison with the estimates, the deficit was Frs. 423 millions, which is very much higher than the monthly average deficits of 1934 and 1935 (with the exception of the fourth quarter of 1934, when it was Frs. 499 millions). Though lower in absolute figures than the July, 1935, deficit, which was Frs. 484 millions, the August deficit is nevertheless 18 per cent. of the estimates, against 15.4 per cent. in July.

For the first eight months of the year the revenue results are as follows (ooo's omitted), in comparison with 1934:—

Direct taxes	4,274,000	— 1,018,000
Registration and stamp duties	3,507,000	— 117,000
Luxury tax	187,000	— 254,000
Alcohol and powder	1,994,000	+ 821,000
Custom and indirect taxes	10,056,000	— 1,052,000
Estate	112,000	+ 13,000
Total	20,141,000	— 1,607,000

The deficit in comparison with the estimates (direct taxation excluded) reaches Frs. 2,969 millions. These figures show that the Minister of Finance was not unduly pessimistic in estimating the 1936 Budget receipts at 17 per cent. below the 1935 estimate.

M. Laval and M. Rénier, Minister of Finance, will appear before the Finance Committee of the Chamber on

October 8. Since the original Budget total was Frs. 47,500 millions, the Government had to find Frs. 7,500 millions of economies, or rather Frs. 9,000 millions, if one takes into account certain new charges, as, for instance, the Frs. 712 millions of interest on the new (1935) public indebtedness. But the economies made by decree-laws brought only Frs. 5,150 millions; for Frs. 2,300 millions of military expenditure was transferred from the Ordinary to the Extraordinary Budget. And the resulting Budget, Ordinary or Extraordinary, takes no account of such items of expenditure as the financing of the ex-soldiers' pension deficit and the special advances for the railway deficit. To this the Minister of Finance will reply that the "sincerity" of the estimates and the presentation of a Frs. 40,000 millions Budget were inspired by the wish to introduce new tax reductions as soon as economic recovery makes itself felt in the fiscal receipts. The Budget and the estimates are, of course, ultimately dependent on this economic recovery.

THE MATCH MONOPOLY

A decree-law has just transferred the charge of the Match Monopoly to the Caisse d'Amortissement, which already manages the Tobacco Monopoly. The net annual yield of this monopoly, nearly Frs. 200 millions, will be applied by this department to a supplementary portion (Frs. 231 millions) of the amortisation of the public debt; and the Ordinary Budget will be relieved of this charge. As a consequence of these decisions, the Government has decided to denounce the agreement made with the Swedish Match Company in 1927, which was renewed for five years in 1932. The match production concerned will thus be handed over to French industry.

"The lowering of the rate of interest, in order that the whole French economy may benefit from the recovery of the public finances, the revalorisation of farmers' products in order to increase the purchasing power of the most important class of the French people, and commercial agreements for the revival of international business," is the Government's economic programme, as defined by M. Marcel Régnier, the Finance Minister, in his speech last Sunday. A rise from Frs. 60 to Frs. 86 a quintal in the price of wheat, an appreciable rise in the price of wine products and also in the livestock markets, should have perceptible results on farmers' orders to industry; and these orders, added to those resulting from public works and military expenditure, should make themselves felt in industrial recovery.

A TRADE UNION AMALGAMATION

This hypothetical recovery, however, is being hampered by external events which have an immediate effect on a nervous public opinion and on a Stock Exchange where daily rumours about the Abyssinia or the Memel questions are most disturbing. Considerable importance is also attached to the new formal union of the Socialist C.G.T. (General Confederation of Labour), the members of which are principally civil servants, and the C.G.T.U. (Communist Labour Federation), which chiefly includes manual workers. This association, which follows the recent amalgamation of the Socialist and Communist Parties (Popular Front), is faced by the Nationalist Associations of the Right, the Croix de Feu and the Volontaires Nationaux, the farmer supporters of M. Dorgères, the Taxpayers' Association, etc.; and the activity of these organisations, which are preparing for the spring elections to the Chamber, is not favourable to a revival of business in a country which is clamouring for peace and employment. It is to be noticed, however, that the first consequence of the creation of the "Agricultural Front" might be to transfer votes from the Radicals to the Popular Front. This explains the efforts made by the latter in its so-called "Agricultural Congress of Limoges," to capture the sympathies of the farmers, and at the same time the Government's new decree-laws are extending the assistance given by the "Crédit Agricole" to the farmer.

No doubt British public opinion will notice that the speech of M. Germain-Martin, the former French Finance Minister, at the International Parliamentary Commercial Conference, took account of British insistence on the financial, commercial and political obstacles to a quick stabilisation of currencies. M. Germain-Martin pointed out that

an agreement between the pound, dollar and franc might be insufficient, since it might be upset by a new devaluation of the Reichsmark or the lira. As a whole, M. Germain-Martin's speech appears as a faithful expression of present French opinion, which has moved lately in the direction of British ideas. It seems that if a return to the gold standard is still considered as a first condition of a financial and economic recovery, the mystical belief that such a recovery must be preceded by stabilisation has lost some of its strength. It is hoped that the French budgetary deflation, and the signs of rising international prices, may favour an internal recovery without creating new obstacles to French commercial negotiations.

Production in French coal mines during August, 1935, totalled 3,769,119 tons in twenty-six working days, against 3,833,594 in July (twenty-seven working days) and 3,918,839 tons in August, 1934 (twenty-six working days). The average daily production was therefore 144,966 tons, against 141,985 tons in July and 150,725 tons in August. The number of men employed was 224,197 at the end of August, against 225,505 at the end of July and 233,606 at the end of August, 1934. The production of coke in the coke plants of the coal mines was 316,174 tons in August, against 318,218 tons in July and 343,058 tons in August, 1934.

The reorganisation of the liquidated Citroën company has been accomplished by the issue of Frs. 60 millions of new capital increase and the appointment of a new board, of which M. Michelin, of the Michelin Tyre Company (a principal creditor of Citroën) becomes president, assisted by M. Aubrun, representing Lazard Frères, and M. Wibratte, of the Banque de Paris et des Pays-Bas.

PARIS, October 3.

GERMANY

FOOD SCARCITY MORE ACUTE

THE shortage of foodstuffs last week and early this week became serious. It was impossible to purchase butter, lard, margarine, pork or bacon. Food queues outside the retail shops were seen for the first time. At the moment of writing, favoured customers in the better parts of the City can get small doles of butter; but for a couple of days none was to be had by anyone. The first official method of meeting the emergency was to keep the facts out of the newspapers; and although yesterday's journals advertised the alleged plight of Russia under the heading "Soviet shops without goods," they suppressed the fact that shops round the corner were in fact without goods.

Official Press measures, though usually effective in preventing publicity for minor, localised events, naturally fail to prevent general knowledge of facts within the individual's personal experience; and the food shortage is as well known as if it were fully reported. Indeed, it is too much known, for the suppression of publicity has fostered alarmism, and citizens who in reality only know that they and their neighbours cannot buy food, conclude precipitately that the whole Reich is hungry. This alarmism tends to aggravate the shortage by strengthening the motives of interests that are withholding goods from the market in the hope of extra profits. First among these are the farmers. The farmers are thoroughly dissatisfied with the State price-fixing systems, in particular with the refusal of a sufficient rise in price to compensate them for the small crops of 1934. The withholding of goods from the market by farmers was admittedly one cause of the recent famine in eggs; indeed, special measures had to be taken to check excessive consumption on the farms in consequence of discontent with prices. To-day farmers are keeping back other foodstuffs, claiming that prices, though very much higher than in the world-market, are insufficient. Dealers, afraid to pay more than the official prices, sometimes induce farmers to sell by simultaneously buying from them unmarketable produce or pure rubbish at fancy prices. This, if it somewhat increases the supply, tends to make goods still dearer to the consumer.

position in many respects is considered to be similar to Italy's. Sir Samuel Hoare's reference in his Geneva declaration to "the distribution of colonial raw materials" did not pass unnoticed here, and it has raised hopes that courageous and enlightened statesmanship still exists in Europe—even if it has not yet gone beyond a rhetorical gesture.

The Polish position is felt to be such that a definite public statement on foreign policy could not be made without running serious risk of offending either France, Germany or Soviet Russia, to say nothing of Czechoslovakia, Roumania or the Baltic States. The general observation might be made, however, that if Italy definitely entered the revisionist camp—or were forced into it—Poland would be likely to follow.

The General Election for the first Sejm and Senate under the new Constitution took place last month, and the No-party Parliament of 206 Deputies and 96 Senators will assemble shortly. The elections were somewhat of a farce, but it is too early yet to condemn the experiment in "controlled democracy" as a failure. The response of the public to the apparent loss of their political rights has been curiously apathetic—the Poles having always been willing fighters in the cause of other people's political independence. But it is generally felt that the present period is one of transition, and that this is not the time to "rock the boat." A reconstruction of the Cabinet is imminent, and a new programme for "combatting the financial and economic crisis" is understood to be in preparation. The first point of attack is expected to be the Budget deficit, which now amounts to nearly 30,000,000 zlotys a month.

GOLD LOSSES AND MONETARY POLICY

The depletion of the foreign exchange reserve made it necessary last month for the Bank of Poland to sell gold in order to meet external debt commitments, which are unusually heavy at this season. The Bank's statement covering the period September 10-20 showed a decline in the gold stock from 512,000,000 to 488,000,000 zlotys. The gold "cover" at 47 per cent. is still 17 per cent. above the legal minimum, but the bank-note circulation is exceptionally low at 931,000,000 zlotys for a nation of 34,000,000. The new financial programme is understood to contemplate an increase in bank-note circulation and a moderate expansion in credit operations, so that the gold loss comes at an inconvenient time. It is hoped, however, that the foreign exchange reserve will be built up in the meantime so that further sales of gold for external debt payments will not be necessary next spring when the "heavy season" comes around again. There has been a considerable repatriation of Polish bonds from the United States during recent years.

The preliminary crop figures are as follows:—

	Year 1935	Yearly Average, 1930-34
	(Yield in Millions of Metric Quintals)	
Wheat	20.0	20.2
Rye	63.9	64.6
Barley	14.3	14.5
Oats	25.7	24.6
Potatoes	293.9	307.3

The Government seems to be unpleasantly embarrassed by the collapse of its plan to combine "fair profits" and "fair prices" with an adequate supply. While not admitting that there is any crisis, it has found scapegoats and has dismissed two directors of the Reich Board for Animals and Animal Products. Inquiries designed to discover the offenders in other food trades are under way; and there is vigorous Party propaganda against "the bureaucrats" who, now that Jews are excluded from the trade in foodstuffs, are the obvious victims. The Berlin Police President has paid surprise visits to the butchers' shops, and discovered, what the public already knew, that stocks of pork were being kept out of the market. The rationing of pig slaughtering has been decreed; and it is understood that measures to increase imports of meat and butter immediately are being taken. Reassuring facts of this kind appear in newspapers which do not mention the prime fact of the shortage; and the same newspapers are allowed to affirm that the housewives by asking for butter are among the culprits, and simultaneously to argue that a food shortage due to increased prosperity caused by State schemes is no misfortune. In general, the food position and the official attitude to it are very like those prevailing in Russia, as is natural in view of the general uncritical imitation by Germany of Soviet methods.

The half-yearly reports of the commercial banks state that business has this year developed satisfactorily. This information, though no figures were given, induced an advance of bank shares on last week's Bourse. Borrowing from the banks seems to be still increasing, possibly owing to the decline in the liquidity of industry caused by the recent Reich loans. Money for the September monthly and quarterly settlements was in heavy demand. The day-loan rate last week rose $\frac{1}{2}$ per cent. above the rate of the corresponding period of August. On September 27th, the market discount rate, which had been 3 per cent. since May, was advanced to $3\frac{1}{4}$ per cent.

ECONOMIC RELATIONS WITH RUSSIA

It is announced that Russia has repaid the last Rm. 10 millions instalment of the German bank syndicates' Rm. 140 millions credit of 1933. Originally repayment was due in September, 1934, but the account was prolonged for a year. Some progress has been made in executing the Russo-German agreement of April 9th. Substantial German export deals are under negotiation; and it is expected that Russian orders to nearly the full agreed sum of Rm. 200 millions will be placed before the end of this year. Prominence is also being given to Russia's appearance as an exporter of pig iron to Sweden, more than half of whose demand Germany normally satisfies. There were earlier reports of Russian sales or offers of iron or steel to Estonia, Turkey, Persia, Egypt and Palestine; and the Soviet Trade Mission journal published here indicates that Russia is making special preparations to adapt her iron industry to this class of export.

The official report for August on intensity of occupation in industry shows that 66.1 per cent. of possible working-places were occupied, as against 65.9 per cent. in July. Contrary to the recent rule, the consumption-goods trades this time shared in the advance. Textiles, however, continued to decline. The retail trade turnover in August was 2 per cent. above that of August, 1934. In view of the rise in prices, this means a decline in quantity. In particular, sales of clothing and footwear diminished.

BERLIN, October 1.

POLAND

PUBLIC OPINION AND ITALY

THE Polish delegates do not appear to have signed any blank cheques at Geneva, and the position this country will take, if and when the League decides to move against Italy, is by no means certain. Signor Mussolini, in a recent interview given to a Warsaw newspaper, praised the attitude of Colonel Beck, the Polish Foreign Minister, at Geneva, and significantly referred to "the solid basis for friendship between Poland and Italy." Signor Mussolini is no doubt aware that Poland, too, is increasingly feeling the need of outlets for her surplus population, and her

This year's yield is lower than had been expected, and grain prices have risen appreciably since the publication of the figures. All agricultural prices, in fact, have risen during the past month, partly because of war fears, but mainly because of a shortage of pigs. Polish preserved meats, especially hams, are finding a ready market in Great Britain and the United States, and this trade could be greatly extended if adequate supplies were available.

The foreign trade returns for August valued exports at 77,000,000 and imports at 72,000,000 zlotys. A new commercial treaty with Germany, containing the most-favoured-nation clause, is expected to be signed in the near future. Germany is indebted to Poland to an amount of £2,000,000 or more for the supply of goods and transit traffic across Polish territory, and there does not seem to be much prospect of collecting this in cash. Nor does the agreement initialled on September 21st between Poland and Danzig, for the liquidation of the recent dispute, hold out the promise of an early settlement in cash of Polish claims against the Free City.

Disappointment is felt, but not yet publicly expressed, at the outcome of the coal marketing agreement concluded with the United Kingdom last December. The decline in United Kingdom coal exports this year has diminished the amount which Poland under the agreement is permitted to export, and the increase in prices expected to compensate adequately for the decrease in the quantity exported has not materialised. Orders for the Italian market are being held up pending the conclusion of a clearing agreement.

WARSAW, October 1.

JAPAN

BETTER AGRICULTURAL PROSPECTS

At this time of year the agricultural situation comes into the centre of the picture. Though, owing to the unfavourable weather conditions prevailing during recent weeks, the growth of the rice crop has been retarded in north-eastern provinces and Hokkaido, the situation this year is nothing like so bad as it was a year ago. In most other districts of the country the crop will be, it is estimated, about or even above the average. The ultimate yield of wheat is a little less than what was expected, but the loss will be more than compensated for by the higher price. Reflecting a sharp recovery in raw silk prices, summer and autumn cocoons which are now arriving at the markets are quoted at 4.30 yen per kamme on an average, which is nearly twice as high as a year earlier. The agricultural situation is thus rather reassuring, if not cheerful.

According to the tentative estimates of the balance of international payments in 1934, lately published by the Treasury, Japan had a credit balance of 73.2 million yen in her international transactions, as against 33.9 million yen in 1933. While the excess of merchandise imports and net Government payments made abroad totalled 247.7 million yen, or 49 million yen more than in 1933, the official estimate of invisible exports was put at 320.9 million yen, or was 88.3 million yen larger. The increase in income is rather evenly distributed over all items. Invisible items, on balance, are set out below in comparison with the preceding year:—

OFFICIAL CALCULATION OF BALANCE OF PAYMENTS

(In million yen)			
Debit		1933	1934
Excess of merchandise imports and silver bullion and specie.....		77.9	129.3
Net Government payments made abroad		120.8	118.4
Total		198.7	247.7
Credit			
Net income from overseas investments and business		51.5	88.0
Net national shipping income		126.0	157.5
Net receipts from other sources		55.1	75.4
Total		232.6	320.9
Excess of income over expenditure		33.9	73.2

As for capital movements, net Japanese investments abroad last year were 146.5 million yen, most of which was directed to Manchukuo, while foreign withdrawal of capital amounted, on balance, to 63.6 million yen.

The earnings statements of all the big Japanese joint-stock banks, covering the June half-year, have now appeared, and they are more disappointing than six months ago. The combined net profits of the six leading banks in the first half of this year totalled 28,162,000 yen, as compared with 28,806,000 yen in the preceding half-year and 30,819,000 yen in the corresponding half of 1934. The records of individual banks, however, are by no means uniform; Sumitomo, Mitsubishi and Dai-ichi disclosed considerable decreases, while Yasuda revealed a marked increase and Mitsui and Sanwa remained practically unchanged. But in every case dividends were maintained.

EXPORT INCREASE SLACKENING

According to preliminary figures of Japanese foreign trade, our exports last month maintained the recent characteristic of being larger than in the corresponding month of the previous year. But, at 213,623,000 yen, they were only 4,015,000 yen, or a little less than 2 per cent., more than in August, 1934. The increase is mainly accounted for by raw silk, which was up by 8.4 million yen, while cotton piece-goods, by far the most important single item, fell by 6 million yen. Imports, on the other hand, at 170,964,000 yen, decreased by 11,976,000 yen, or 6½ per cent.; and imports of raw cotton again substantially declined. The active balance of trade for the month is 42,659,000 yen against 26,668,000 yen last year. For the eight months of 1935 the excess of imports over exports is 111,078,000 yen, which is 7,459,000 yen less than for the corresponding period of 1934.

After the downward trend of the last five consecutive months, commodity prices have definitely turned upwards. The Bank of Japan's wholesale index number for August rose 1½ per cent. in the month. Security prices continue to appreciate. The aggregate value of all shares listed at the Tokyo Stock Exchange on September 1st was up by 341.6 million yen, or 5½ per cent., against a month earlier. Textile production, on the other hand, was again smaller. Output of cotton yarn during August totalled 112,862,000 lbs., a decrease of 368,000 lbs. over July, and rayon yarn production during last month amounted to 17,819,000 lbs., or 725,000 lbs. less than in the preceding month.

TOKYO, September 12.

CANADA

NEW SOCIAL CREDIT MOVES

THE Federal election campaign is now in full blast, and with five rival parties in the field the country is being subjected to an unparalleled deluge of oratory and propaganda. The confusion of voices and issues has lately been increased by the decision of the Social Credit Party, flushed with its victory in the Alberta election, to invade the Federal arena. It will nominate candidates for practically all the seventeen Federal seats in Alberta and for others in adjacent Western Provinces. Its entry into the contest impairs the prospects of Liberal gains in the West; and the earlier confidence of the Liberal Party that it would roll up a commanding majority on October 14th has been greatly modified in recent weeks, not only by this development, but by the evidence of the formidable strength of the new Reconstruction Party. Mr Stevens has been gaining ground steadily at the expense of the three older parties, the Liberals, the Conservatives and the C.C.F. He has probably made his greatest inroads upon the Conservatives; but he has induced several prominent Liberals to run as his candidates, and with their help has been accumulating support in Liberal strongholds like Nova Scotia and Western Ontario. He is also attracting some of the Labour and Radical votes, which seemed destined to go to the C.C.F.

Mr Bennett, in the four broadcasts with which he opened his campaign, based his appeal for a new mandate on the records of his Government, and particularly upon its tariff policy, which he claimed had saved the country from an industrial debacle. He pledged himself to continue the reformation of the capitalist system in Canada on sane and progressive lines. He even undertook that, if returned, he would lessen the national debt burden by a comprehensive refunding of the Federal, Provincial, Municipal and State railway debts, and that he would devise measures for withdrawing from the labour market some 125,000 workers over 60 years of age, and take other steps to fulfil the pledge which he had made in 1930 to end unemployment. He disappointed the advocates of a railway merger, however, by evading any commitment about it and announcing that he proposed to instruct the National Economic Council, whose creation was authorised by Parliament last session, to study the whole transport problem. If it reported in favour of a merger, Mr Bennett said, the verdict of the people would be sought. But since the Economic Council does not yet exist, this move is regarded merely as the indefinite postponement of any solution of the railway problem.

Mr Bennett has now gone to the West, and he is being followed there by Mr Mackenzie King who, in a general arraignment of the Bennett Ministry, is laying chief stress upon the evil effects of its high tariff policy, and is promising to take prompt measures for a lowering of duties and removal of "tariff excrescences." In his later speeches he has been less emphatic in his pronouncements on the tariff, but his Western supporters will insist upon explicit declarations in favour of drastic reductions when he reaches the Prairies. He has also been making great play with Mr Bennett's dictatorial tendencies and insisting that a Liberal victory is needed for the restoration of proper Parliamentary control over Government. Mr H. H. Stevens continues to inveigh against the selfishness of "big interests," and the general tone of his speeches is not markedly different from those of the Co-operative Commonwealth Federation (farmer-labour) leaders.

The Social Credit Ministry of Mr Aberhart, when it assumed power, inherited a difficult legacy from its predecessor in the shape of an almost bare Treasury and pressing financial obligations. So Mr Aberhart repaired to Ottawa in suppliant guise and asked the Bennett Ministry for a loan of 18 million dollars to meet the obligations of the Province up till next March. Mr Bennett received him sympathetically and agreed to advance the Alberta Government 2½ million dollars, a sum just sufficient to tide over their difficulties till October 14th, the date of the Federal election. On his way homeward Mr Aberhart stopped at Detroit to confer with Father Coughlin, and in interviews he has reiterated his intention of persevering with his Social Credit experiment, in whose evolution Major C. H. Douglas is expected to assist.

RECOVERY IN THE WHEAT MARKET

The Bureau of Statistics has published its first provisional estimate of the principal field crops of Canada for 1935; and the data, with the figures for 1934 given in brackets, are as follows:—

Fall wheat, 13,267,000 bushels (6,724,000); spring wheat, 277,274,000 (269,125,000); all wheat, 290,541,000 (275,849,000); oats, 449,297,000 (321,120,000); barley, 94,550,000 (63,742,000); fall rye, 11,934,000 (4,305,000); spring rye, 2,320,300 (1,118,000); flaxseed, 1,636,100 (910,400).

The yields per acre are given as follows:—

Fall wheat, 23.9 (15.8); spring wheat, 11.8 (11.4); all wheat, 12.0 (11.5); oats, 31.9 (23.4); barley, 24.3 (17.6); fall rye, 17.7 (7.3); spring rye, 16.0 (7.6); all rye, 17.4 (7.4); flaxseed, 7.6 (4.0).

The yield of the wheat crop of the Prairie Provinces is placed at 272 million bushels, as compared with 263 million bushels in 1934, but it is added that the former figure includes 16 million bushels of durum wheat and about 60 million bushels of ordinary wheat so badly shrunk by rust and frost as to be useless for milling purposes. Since

the Government fixed the price of wheat at 87½ cents (No. 1 Northern) there has been a remarkable revival of activity in the wheat market and prices have climbed steadily upward till they are now several cents above the fixed price. Export demand has been strong, and in the week ending September 14th export sales in Winnipeg exceeded 5 million bushels, the largest figure for a long time.

Business conditions are still adversely affected by the distracting election campaign and the uncertainty about tariff and other policies created by it, while lumbering and other industries on the Pacific Coast are being hard hit by the trade war now in progress with Japan. But wholesale and retail trade has received a stimulus from the seasonal buying which invariably follows the arrival of cool autumn weather. So the general business index of the Bureau of Statistics has been maintained at a satisfactory level and after falling sharply from 103.3 for the week ending August 24th to 98.7 for the week ending August 31st, it rose in the first week of September to 102.4.

The trade returns for August, compared with August, 1934, are as follows:—

	August, 1934	August, 1935
	\$	\$
Imports	43,507,331	49,653,986
Exports	55,847,064	71,699,760

The yield of the Federal revenues for August was disappointing. The aggregate return from the chief sources of taxation was only \$23,073,661, compared with \$23,307,777 for August, 1934. For the first five months of the fiscal year the total revenue collected is \$153,450,277, compared with \$141,215,848.

TRADE NEGOTIATIONS WITH WASHINGTON

Mr Bennett has made public the general proposals made by the Canadian Government to the United States as the basis for a trade agreement. The proposals are of four kinds:—

- (1) A mutual undertaking to maintain during the lifetime of any agreement reached the unrestricted free entry of any commodities now on the free list of either country;
- (2) The mutual concession of most-favoured-nation treatment which would mean the extension to the United States of Canada's intermediate tariff, involving reductions in the present rates of duty on some 700 tariff items and also a number of further reductions below the intermediate tariff rates;
- (3) The reduction by 50 per cent. of the existing American rates of duty on a specified number of natural products, including lumber, fish, potatoes, milk, cream, live cattle and certain minerals;
- (4) The reduction of the present American rates on a number of partly or wholly manufactured Canadian products.

The Canadian trade and tariff experts who have been in Washington have now returned; and, while some progress is reported to have been made in the negotiations, it is considered unlikely that an agreement can be concluded before polling day. The suspicion prevails that the Americans will stave off any final bargain until they see what sort of Ministry is in power at Ottawa after October 14th.

OTTAWA, September 21.

THE INTERNATIONAL MONEY MARKETS

By John T. Madden and Marcus Nadler

Everyone who wants to find out the truth about the working of the money markets and the collapse of the world's monetary systems should read this interesting book. It describes the developments and upheavals in modern finance and the causes which have led up to the existing conditions of the financial world. The currency and banking legislation enacted in America and other countries is also described. The book will be found of great value to students and others concerned with the subject. **21/- NET**

BOOKS AND PUBLICATIONS

AN ICONOCLAST

PROFESSOR CASSEL has always been something of an iconoclast in economics. And in this short, readable and witty volume* it is with the air of a prophet smashing the images of false gods that he sweeps away, or endeavours to sweep away, those economic conceptions that he considers antiquated and fallacious. The general idea behind these seven essays is that anything which is not quantitatively measurable should not be tolerated in economics.

It is questionable whether Professor Cassel's desire for absolute clarity, so highly laudable in itself, does not sometimes drive him into simplifications so simple as to be actually incorrect. He seems at times, for instance, to fall into the egregious philosophical fallacy of thinking that nothing is real which cannot be measured in units. For when he says a thing must be "quantitative" he means that it must be thus measurable, not merely that it must admit of less or more. This does not perhaps impair his ferocious criticism of the Austrian conception of an "average period of production," which, he says, "with all the many imaginary constructions that have been built upon it, should be entirely eradicated from economic science." Nor does it greatly affect his attack on the idea of an "absolute value of money" or his description of "marginal productivity" as a "phantom."

But it seriously undermines his attempt to expel from economics any account of desire or need or sacrifice. Professor Cassel is infuriated by the persistence with which these conceptions—"mystical," as he contemptuously calls them—continue to crop up, despite his life-long efforts to dispatch them. May not the explanation, however, of this persistence perhaps be that needs and desires are real things after all and also of some importance in economics? The classical economists believed economics to be concerned with "wealth"; and the plain man certainly expects that the satisfaction of material wants should be its ultimate consideration. There is some danger that if Professor Cassel and his school insist on maintaining that economics has no concern with such things, and is merely a system of simultaneous equations, the plain man will justifiably retort that in that case it has nothing to do with him.

In surveying the monetary controversies of the last few years, Professor Cassel lends the weight of his authority to the objective of stabilising the general level of wholesale prices, as the best attainable guide to practical policy. He advocates stable prices *plus* rising wages; and ridicules the idea that price stabilisation must lead to disguised "inflation." He also points out most convincingly that, as far as the economic system is concerned, enough purchasing power should normally be generated by the production process itself to enable the goods produced to be remuneratively sold. And he shows how technological progress normally leads, not to increasing unemployment, but to transfers of labour and generally expanding consumption. This argument in particular is illustrated by statistical examples taken from British experience. Professor Cassel recognises the danger of deflation, however; but argues that a monetary disturbance must be met by a monetary, and not an economic, remedy.

Professor Cassel seems perhaps to underrate the possibility of a discrepancy between savings and investment, in the sense in which Mr Keynes has used those terms, and consequently to ignore the risk of such a discrepancy being itself the cause of monetary deflation or inflation. No doubt deflation cannot take place without a reduction in the effective supply of money. But may not such a reduction be occasioned by both monetary and non-monetary causes? In his contention that the trade cycle is merely an "oscillation" and not really a cycle, Professor Cassel also seems to neglect the statistical argument advanced by Professor D. H. Macgregor in his book "Enterprise, Purpose and Profit." In general, however, Professor Cassel supports English economic opinion in regarding cheap and plentiful money as the surest remedy for depression.

SHORTER NOTICE

"Industrial Organisation in India." By P. S. Lokanathan. Allen and Unwin. 391 pages. 15s.

This volume presents the results of much the most detailed and scientific study of Indian industrial organisation and finance that has yet been undertaken. Dr. Lokanathan has not only investigated his subject at first hand in India, but is also well acquainted with Western theory and practice in this sphere. The importance and wide influence of the "managing agent" system is naturally emphasised, and a most enlightening analysis is given of the functions, methods and results of that system. The author also discusses the relations of Indian industrial enterprises and financial institutions in general with the problems connected with the localisation and size of industrial concerns and units; and concludes with an excellent summary of available evidence about the efficiency of Indian industrial workers.

Dr. Lokanathan points out that certain very important aspects of his subject—such as the methods of promoting industrial concerns in India, and a number of defects in accepted ideas and practices in the sphere of industrial finance (including the widespread under-capitalisation of industrial concerns, and the tendency to depend upon short-term deposits for long-term purposes)—have hitherto been almost entirely neglected, and he produces many facts and figures not hitherto made available in support of his views and arguments. In particular, attention is called to the necessity for distinguishing between the merits and defects of the managing system *per se*, and of the entrepreneurs who actually work the system. It is suggested that certain defects due primarily to weaknesses in industrial leadership have been erroneously attributed to the system. Dr. Lokanathan's conclusion with regard to the managing agent system is that what is required is not (as has sometimes been suggested) that the whole system should be scrapped, but that it should be reformed—partly by legislation, but largely by enlightened internal reorganisation. He advocates, in particular, the establishment of supervisory boards of control, and of an association of managing agents which should set up professional standards or principles to which its members should be obliged to adhere.

The whole study shows a refreshing objectivity and impartiality, and the remedies suggested reveal a keen sense of proportion.

MONEY AND BANKING

THE STABILITY OF THE DOLLAR

THE drain of gold to the United States continues, and there is no doubt that at the moment the dollar is regarded as the safest of the world's currencies. From the international standpoint it is easy to appreciate this view, for the United States is not in the least likely to become involved directly in the Italo-Abyssinian dispute. The flight to the dollar, however, raises a different question which has lately been in abeyance. How far can the internal stability of the dollar be taken for granted?

Before answering this question it is necessary to have regard to the present-day monetary and banking structure of the United States. Considerable light is thrown upon this by a series of tables published in the July issue of the Federal Reserve Bulletin and relating to June 29, 1935. Broadly speaking, the basis of the monetary structure of the United States is the Treasury holdings of gold and silver. On the date in question gold stocks amounted to \$9,115 millions. Of these \$2,795 millions were segregated in the Treasury (mainly in the Stabilisation Fund), while gold certificates were issued, dollar for dollar, against the remaining \$6,320 millions. Silver bullion and standard silver dollars disclosed in the returns amounted to \$870 millions, the bulk of which was employed as backing to \$810 millions of silver certificates. \$32 millions of standard silver dollars and \$313 millions of subsidiary silver coinage were also in circulation. This makes a gross total of \$1,183 millions of silver coin and bullion.

Neglecting reserves of gold and silver held by the Treasury and also coin in circulation, we are brought next to the \$6,320 millions of gold certificates and \$810 millions of silver certificates. At once an important contrast arises. \$6,203 millions of the gold certificates were held by the Federal Reserve System, and only \$117 millions were in circulation: whereas \$701 millions of the \$810 millions of silver certificates were in circulation. Thus the banking structure depends on gold certificates, while silver certificates were used almost entirely as a medium of circulation.

We come next to the Federal Reserve or central banking structure. As it stood last June, its cash basis consisted of \$6,180 millions of gold certificates and \$223 millions of other cash, including \$108 millions of silver certificates. This made total cash of \$6,403 millions. Its earning assets amounted to \$2,480 millions, of which \$2,433 millions were Government securities. On the other side of the account, Federal Reserve notes in circulation, which form over half the total currency circulation, amounted to \$3,222 millions, and member bank reserve balances totalled \$4,979 millions. The ratio of cash to notes and member bank reserves was 78.2 per cent., while notes in circulation alone were backed by cash nearly twice over.

The final storey in the banking structure is that represented by the commercial banks. Considering member banks alone, their reserve balances at the Reserve Banks equalled \$4,979 millions, to which must be added some \$300 or \$400 millions of till-money. Deposits totalled \$31,003 millions, so that the ratio of cash to deposits was about 17 per cent. Excess reserves were computed at \$2,438 millions, which equals 7.8 per cent. of deposits. Legal reserves and till-money were not quite 10 per cent. of deposits.

Member banks' loans and investments totalled \$28,794 millions. Loans were \$10,420 millions, or 33.6 per cent. of deposits. Loans secured by stocks and bonds were \$3,121 millions (10.0 per cent.) and loans against real estate were \$2,278 millions (7.3 per cent.). Investments totalled \$16,815 millions, or 54.3 per cent. of deposits, those in Government securities being \$9,870 millions, or 31.8 per cent. of deposits.

This completes the broad picture of the monetary and banking structure as it existed at the end of last June. It should be emphasised that these statistics represent aggregate figures for all banks, and reveal nothing as to the relative strength or weakness of different Federal Reserve areas or individual banks. Complete details for a date

later than June are not available, but the Reserve Bank statement for September 18th shows that gold certificates held by the Reserve Banks have risen from \$6,203 to \$6,551 millions, Federal Reserve notes from \$3,222 to \$3,427 millions, and member bank reserves from \$4,979 to \$5,136 millions. These movements arise mainly from the gold influx since June 29th, and show that its effect is to swell member bank reserves and the Reserve Banks' holdings of gold certificates. Had it not been for the expansion in the note circulation, presumably due to the revival in business, the increase in member bank reserves would have been still greater. "Other cash" held by the Reserve Banks, which includes silver certificates not in circulation, fell from \$223 to \$218 millions. The heavy silver imports of the past quarter are thus not going to swell the cash reserves of the Federal Reserve system, although payment for them by the Treasury with funds that have not been raised by taxation obviously contributes to monetary ease.

The first impression is that the currency position is thoroughly sound. Gold and silver certificates have a 100 per cent. metallic backing, while the Federal Reserve notes, which are the most important of the various note issues, are adequately backed by gold certificates, which in turn are fully backed by gold. Nor is there any weakness in the condition of the Federal Reserve Banks as a whole. Their latest ratio of total reserves to deposits and notes is returned at 75.2 per cent., which is three times the minimum ratio of 25 per cent. which is to-day regarded as suitable for central banks.

A statistical presentation of the position does not sufficiently take into account the differences between British and American practice. For example, the difference between the American cash ratio of 17 per cent. and the British ratio of 10 per cent. may not seem excessive, in view of the difference between a centralised and a diffused system. Moreover, the legal minimum ratios are admittedly on the low side. But the fact remains that the American banks have never, until the present, kept any reserves above the legal minimum, knowing that they could always borrow from the Reserve Banks. The present total of member bank reserves is more than twice, and after deducting borrowings from the Reserve, nearly four times, the figure of June, 1929. Similarly, the ratio of member banks' holdings of Government securities to total deposits, though it is no higher than the British figure, is three times the 1929 figure.

The American authorities, like the British authorities, hold substantial reserves with which to meet pressure on the dollar. The gold reserves of the General Fund and the Stabilisation Fund alone amounted last June to \$2,639 millions, and this gold can presumably be used either to offset a drain of funds to foreign countries or an internal withdrawal of funds from the banking system. The American silver acquisitions since the passing of the 1934 Act have had little influence upon the general banking position. So far as the silver is being used at all, it is being used as the backing to silver certificates, most of which are in circulation, and comparatively few of which are held by the Reserve Banks. In particular, the heavy silver purchases of July and August do not appear to have had the smallest effect. Whatever may have been the original motives behind the new policy, all it has so far done is to raise and support the price of silver, to the benefit of American silver interests and to the confusion of the Far East. This appears a lamentably small result in exchange for the damage caused to Chinese interests.

The internal outlook for the dollar obviously depends upon other factors besides the technical condition of the banking system considered in the aggregate, and these include the state of the national finances. But the banking situation by itself shows that reserves of cash, in every sense of the term, are lying unemployed and sterilised all along the line. This obviously leaves room for a big credit expansion so soon as a new demand arises of a type which bankers are willing to satisfy.

The willingness of bankers to lend may be tempered by the strict Governmental control over them, but the fact that the American system consists of thousands of independent banks suggests that in the aggregate there may be no great reluctance. As regards the future demand for bank credit, it is easy to detect several possibilities. Trade is recovering and stock market activity is growing, and while both movements are in their infancy the boom of 1927-29 shows how rapidly easy money can cause a top-heavy situation to develop. Over and above this there is the prospect of the continual growth in the National Debt, which may force both the Reserve Banks and the member banks to add more and more to their holdings of Government securities, which already are approaching the limits of prudence. Nor must it be overlooked that the Administration has increased its control over the banking system in the last few years, both through the Deposit Insurance system and by the activities of the Reconstruction Finance Corporation. Finally, if the inflation of credit and the rate of recovery in trade and prices is not sufficient to satisfy Congress, there is always the danger that Congress may force the further devaluation of the dollar from 59.06 per cent. to the lower statutory limit of 50 per cent. of its former parity.

The dollar is thus immune from external attack, and there would seem to be little risk of another internal "liquidity crisis" such as came to a head in March, 1933. Indeed, the major danger arises not from too little liquidity but from too much. The long-term outlook, however, depends upon the future course of politics, Government borrowing, the possibility of a "prosperity boom," and even upon the risk of a fresh devaluation of the dollar. These dangers make it well to reserve judgment on the permanence of the present impressive appearance of stability.

FINANCIAL NOTES

Lithuanian Exchange Control.—On October 1st, the Lithuanian Government announced that henceforward all dealings in foreign exchange would be subject to official control. The exact terms of the decree are not yet available, and there is no news yet that any permits have so far been granted. It is understood that a Foreign Exchange Control Commission will be set up, and that it may operate on the lines of the Latvian system of control. This provides for the concentration of all receipts of foreign exchange in the hands of the Commission and also for the licensing of all imports. Some attempt is made to discriminate between essential and non-essential imports, but traders have to discover through experience how the discrimination works in practice. A paradoxical situation has recently been developing in Lithuania, for while the trade balance has been active there has been a steady drain on the foreign exchange reserves. One explanation may be that in the absence of any clearing agreement delays are occurring in recovering payments for exports to Germany, but it is also estimated that Jewish emigration to Palestine has led to an exportation of lita 10 millions of capital. The budget situation is poor, and there is some peasant agitation for higher prices and currency devaluation. Finally, there is the Memel controversy. In these circumstances the Government may have felt bound to take precautions, but the active trade balance suggests that they may be directed more against the capital movements than against imports.

The Foreign Exchanges.—The demand for dollars has continued and by Wednesday sterling had weakened to \$4.078. The British Control then intervened and sold French francs for pounds in large quantities. This had the dual effect of pulling sterling up against the franc and on Thursday afternoon, and sending the Paris-New York cross-rate to Frs. 15.19½, or to beyond the export gold point. Further gold shipments from France to New York were at once arranged, and it is understood that available steamers are fully booked up and that all the finance available to cover gold withdrawals from the Banque de France has for the moment been used up. In effect gold is available from the British Control's holdings via Paris to New York.

The pound is being held against the franc at Frs. 74.47. There are no London dealings in lire at the official pegged rate of Lit. 60.50, but "black market" quotations of Lit. 65-75 are reported in London, and Lit. 85 in Italy. The view is held in the City that the lira will be openly quoted at over Lit. 100 to the pound by Christmas, while "registered lire" on the German model may be introduced.

The Money Market.—This week the market has been upset by the vagaries of the calendar. June 30th was a Sunday, and so there were no Treasury bill maturities to put the market in funds on Monday, September 30th. The market, however, had concentrated its application for fresh Treasury bills to be paid for this week on bills issued and paid for last Monday, so that the market could secure bills maturing on December 31st. The result was a slight temporary shortage of money, accentuated to a small extent by some calling of loans to provide funds for the repayment of a maturing Australian long-term loan.

	Sept. 12, 1935	Sept. 19, 1935	Sept. 26, 1935	Oct. 3, 1935
Bank rate.....	2	2	2	2
Clearing banks' deposit rate ...	1	1	1	1
Short Loan rate:—				
Clearing banks.....	1-1	1-1	1-1	1-1
Others.....	1-1	1	1	1
Discount rates:—				
Treasury bills.....	1	1-12	1	nom.
Three months' bank bills....	1-1	1-1	1	1-1

Since then the market has been completely idle. Bill brokers had no bills to pay for, and so were unwilling to sell bills held by them. The banks are now prepared to buy Treasury bills maturing up to the middle of December. They refuse to buy "hot" Treasury bills, their object being to deter excessive application by stags, which in the past have weakened the rate.

The Bank Return.—Currency requirements by the public over the end of the month have raised the note circulation by £3.8 millions. Together with the Treasury bill payments, they have also reduced bankers' deposits.

In the banking department, the rise in public deposits is explained by Monday's heavy Treasury bill payments. The increase in discounts and advances is unconnected with the London money market.

New York Money and Banking.—During the week ended September 25th New York member banks' loans to brokers were reduced from \$872 to \$856 millions. Other loans against securities increased from \$719 to \$728 millions. Gold imports remain unabated. According to one estimate total engagements for September 25th included \$19.7 millions from the United States, \$18.2 millions from France, \$6.3 millions from England and \$6.0 millions from India. Imports for the following week so far announced include \$35.8 millions from France, \$44.6 millions from England, \$23.7 millions from Holland and \$44.6 millions from India. Silver imports for the week ended September 20th were \$16.0 millions, of which \$14.3 millions came from England. The United States is thus beginning to buy again in the London market and this will help to support sterling.

THE STOCK EXCHANGE

COMPANY LAW REFORM

It is now seven years since British Company Law received its last comprehensive overhaul, for which investors had been waiting for nearly a quarter of a century. How far have the results justified the complaints of those who, like ourselves, criticised the Companies Acts of 1928 and 1929 as excellent in intention, but lacking the complete courage of their convictions? An ideal body of law which would encourage all sound enterprises throughout their career and stifle all dishonest ventures at birth will never be enacted, but at least the law may be expected to keep abreast of its time. The Act of 1928 (that of 1929 was a consolidating measure) was unfortunate in the period of its conception; for, though it was enacted at the height of a speculative boom, it was based mainly upon an experience which ended two or three years earlier. It would be unjust, therefore, to lay at the door of its draughtsmen all responsibility for the fact that there have been crowded into the succeeding years more company "scandals" and *causes célèbres* than in any similar period in living memory. The Hatry case developed before the latest Act was well on the Statute Book and did not primarily turn on questions of company law. The Royal Mail Steam Packet Company, whose failure shook the faith of investors in the virtues of published company statements, was, in fact, incorporated under Royal Charter, and the provisions of the Companies Act, consequently, did not apply to it. Nevertheless, the last quinquennium has revealed sufficient gaps in the armour of the law to leave investors far from happy over the prospect of no further amendment for a considerable time ahead, which appears to be suggested by recent replies by the President and the Parliamentary Secretary to the Board of Trade in the House of Commons. Along what lines have the deficiencies of the Act been most strikingly apparent?

Undoubtedly, the sections of the Act on which most criticism from responsible quarters has centred are those relating to holding companies. The expansion of the "group system" of company finance has been a leading feature of the history of recent years. Nowadays, the typical structure in large-scale industry tends to consist of a central holding, or parent company, controlling a planetary system of operating satellites or subsidiary companies. The system, in modern industrial conditions, is legitimate and even indispensable. There are many reasons why an expanding business which is buying up competing companies or launching out into new fields of production may divide its personality amongst a number of subsidiaries. Unfortunately, *corruptio optimi pessima*. Astute and unscrupulous financiers have been quick to see the potentialities of the group system as a source of wealth, not for innocent investors, but for themselves. The device which came into favour in 1928 was to obtain control of a reputable company possessing substantial cash resources. These resources were then used to buy control of another company in the same line of business, thus giving the directors of the first company control of the cash resources of the second. These, in turn, were used either to buy up new businesses, or, if necessary, to support the market in the shares of the first company. Thus the process continued. On the basis of a very small capital of their own, the promoters were able to gain control of a whole group of allied businesses. The public was lured in by all the old devices of market manipulation and glowing prospectuses and progress reports, and by the magic of the new word "rationalisation." The cash resources of each newly acquired company were squandered in buying up shares in yet further companies at inflated prices. When the market turned adverse and the public would no longer buy, the group collapsed, leaving a wreckage of once-prosperous businesses, denuded of working capital and crippled by debts.

It may be true that men cannot be made either moral or prudent by Act of Parliament. It is no less true, however, that, but for certain definite weaknesses in the Company Law, the 1928 bubble would never have swollen to gargantuan dimensions, but would have been pricked earlier. The law prescribes that a company must at least once a year lay before its shareholders a balance sheet setting forth its assets and liabilities on a selected day, and the clauses of the 1929 Act insist upon a much ampler classification of assets and liabilities than was formerly required. Shareholdings in and loans to subsidiary companies must now be separately stated, as must amounts owing by subsidiaries. "Fixed" and "floating" assets must be separated, and the method of valuation of the former indicated. "Goodwill," patents and trade marks must be given under a separate heading. Investments in subsidiary companies can no longer be merged in one single "portmanteau" item, along with other, and more easily realisable, investments. Fixed plant, current assets and goodwill can no longer be lumped together. The 1929 Act, however, stopped short of pursuing the holding company question to its logical conclusion—namely, that the parent company and its subsidiaries are a single enterprise in everything except legal form, and should therefore have a consolidated balance sheet. Under the new regime, as under the old, subsidiaries can be organised as private companies, which need not issue accounts at all, or as public companies issuing their balance sheets at different dates. The cash holding of every member of a group can, in case of need, have its window "dressed" successively. The stage army (to vary the metaphor) can march round without ever appearing in view of the audience as a whole.

The case for consolidated balance sheets does not, of course, rest entirely on the danger of unscrupulous exploitation of the present system. It is sound common sense that the law, which requires a "unitary" company to publish an intelligible balance sheet, should make the same requirement of a company which chooses, for its own convenience, to organise its departments as subsidiary companies.

A further source of abuse of the present company law, in the last few years, has been the inadequacy of its provisions on the subject of profits disclosure. Before 1929, it was not even necessary for directors to submit a profit and loss account. To-day, such an account must be laid before the shareholders in general meeting, though it need not be sent to them with the balance sheet. The law, however, gives no definition of either "profit" or "loss," and makes no provision for certification of the profit-and-loss account, as such, by the auditors. While there may be some doubt as to the precise obligations of directors in the matter, it is quite certain that they are not bound to disclose the true profit earned by any company in any given year. The Royal Mail case turned on the fact that in seven years that company had distributed in dividends over £5,000,000, derived not from current profits, but from non-recurring items of revenue and undisclosed transfers of hidden reserves. Though Lord Kylsant was acquitted of the charge of issuing a fraudulent balance sheet—his conviction was on the charge of publishing a debenture prospectus in which these transfers from reserves were not disclosed—it is clear that directors would now run great risks in including as profit unspecified transfers from reserves without drawing obvious attention to their inclusion. But there is nothing whatever to prevent them from including as profit in the profit-and-loss account of a holding company dividends paid by subsidiaries out of reserves. All that the law requires is that the directors shall state how the aggregate profits and losses of subsidiaries have been dealt with in the accounts of the parent company and, in particular, to what extent provision for the losses of a subsidiary has

been made in the accounts either of the subsidiary, or of the parent, and to what extent losses of a subsidiary have been taken into account by the directors of the parent company in arriving at its profits or losses. It is not necessary to specify the actual amounts of the profits or losses of any subsidiary.

This weakness of the law gives quite gratuitous support to obscurantist company directors. Several bodies representative of accountants and traders, including the Association of British Chambers of Commerce, have felt so strongly on the matter that they have appointed committees to draw up recommendations for the improvement of the law. The Society of Incorporated Accountants and Auditors has urged that amending legislation should be considered by a Departmental Committee and that it should include provisions requiring (a) that the profit-and-loss account should show the true balance of profit for the period; (b) that debits or credits which are abnormal in character and reserves from previous periods, no longer required, should be stated separately; (c) that "free reserves," but not reserves against losses or expenses not yet definitely ascertainable, should be disclosed in the balance; and (d) that the total profits or losses of subsidiary or sub-subsidiary companies (the framers of the 1929 Act, incidentally, forgot all about sub-subsidiary companies) should be stated in the accounts of the holding company in so far as they had not been brought into the profit-and-loss account of the holding company.

In some respects these requirements are more drastic than all reformers would care to insist upon. That credits to profit-and-loss account representing transfers from previously accumulated reserves or such "special" items as profits on sales of securities should be separately stated will only be disputed by the frankly obscurantist type of mind. But should one insist on disclosure of the opposite process? Is it necessary that appropriations to reserves out of the year's profits should be compulsorily disclosed? The profit for the year shown in the profit-and-loss account must certainly be no greater than the "true" profit, but may it not be less? Similarly with subsidiaries: where the profit brought into the holding company's profit-and-loss account is greater than the true profit earned by the subsidiaries in the relevant period the excess should certainly be disclosed. Must a deficit be also disclosed? Again, insistence on disclosure of "free reserves" in a balance sheet raises similar questions of expediency. It would clearly be difficult, if not impossible, to devise a satisfactory definition of "free" in this connection. The principles upon which the amount of legitimate reserves against "contingencies" should be calculated have never yet been clearly defined.

Whatever the difficulties of precise definition, however, one thing is clear. In all company accounts the proper bias should always be towards greater and not less publicity. Arguments for suppression usually spring either from interested motives or from exaggerated fears. We should not demand less, however, as a first instalment, than an amendment of the law relating to profit-and-loss accounts which would ensure, broadly, that dividends were not paid in excess of current profits without disclosure of the amount and sources of the excess.

There are numerous other directions in which the Company Law stands in need of amendment. Provision, for instance, should be made for the immediate disclosure of changes in the directorate of a public company, so that resignations of directors, arising from serious disagreements on policy, may not be suppressed from the shareholders for months after they have taken place. Another much-needed reform is that the directors of a company should be required to state the aggregate amount of their remuneration, including that of managing directors and that paid by subsidiaries. The 1929 Act does not require the salaries of managing directors to be included in the returns of directors' fees, except on the demand of shareholders controlling not less than 25 per cent. of the voting power of the company—which is a Utopian requirement in most cases. Reference to published company reports suggests that, since the passing of the Act, the number of managing directors deemed indispensable to the effective conduct of the nation's business has shown a most remarkable increase. Finally, the time has certainly come for the abrogation of the troublesome and useless provision, now evaded on

wholesale lines by the conversion of shares into stock, that the shares of a company must each bear an identifying number.

Despite the urgency of many of these suggestions, the reform of the clauses relating to balance-sheet and profit-and-loss publication transcends them all in importance. The need for an amending Act is urgent. It is true that the great majority of British companies are honestly run, and that directors ought to be free from unnecessary legal restrictions to conduct their businesses as they deem best. These two truths, however, afford no excuse for inaction where the need for action has been conclusively demonstrated.

INVESTMENT NOTES

Course of Share Values.—In the past month, the course of share values has followed an opposite course in London and New York, for reasons which need little explanation. Wall Street has been able to concentrate its attention mainly on domestic economic revival, while London has been continuously overshadowed by European war clouds. The chart shown on this page is significant, as regards the latest phase of the "British" curve, as a record of our resistance to an increasingly threatening environment. The check to the upward movement in July was a normal technical development after an upward trend of longer uninterrupted duration than any of its predecessors since revival began. In August the rising tendency

American: "Standard Statistics" Index of 50 Common Stocks

was resumed—again in a "normal" fashion—but in the middle of the month the market became aware, at long last, that it had underestimated the dangers of European political complications. The succeeding decline, however, merely cancelled out the month's earlier rise, and throughout September—apart from a spasm of fear on "Black Friday," September 20th—the market obstinately refused to believe that the worst could come to the worst. This week's events have brought a clearer realisation of possibilities. Undoubtedly, the technical position is good in the sense that there is still a considerable amount of money awaiting investment. In another sense, however, the position is vulnerable to the point of danger. Signor Mussolini's speech and actions this week leave the market with no illusions, and if a strongly downward tendency develops, it is unlikely that professional quarters will be willing to take in any large amounts of stock. Much may depend on the nature of any sanctions which may be applied. "Weak" sanctions might make a dull market, but "strong" sanctions would have a much more far-reaching effect. Gilt-edged securities have difficulties peculiar to themselves, inasmuch as increased British expenditure on

armaments, which now appears inevitable in any case, may well involve either the abandonment of all hopes of lower taxation, or the issue of new Government loans, or both. As regards industrial shares, the computations of the Actuaries' Investment Index show the extent of the decline from the middle of August up to Tuesday last, before the reaction on the Duce's speech. The total index of 158 ordinary shares (December 31, 1928 = 100) has fallen from 79.4 to 74.3, while the average yield figure has risen from 3.77 per cent. to 3.95 per cent. Indices for separate groups of securities are given below:—

Group (and No. of Securities)	Prices (Dec. 31, 1928 = 100)			Yields (%)		
	Mid-August (Aug. 13)	Week Ago (Sept. 24)	This Week (Oct. 1)	Mid-August (Aug. 13)	Week Ago (Sept. 24)	This Week (Oct. 1)
Banks and Discount Cos. (12)	117.8	111.0	111.5	3.98	4.22	4.21
Building Materials (4)	95.1	87.6	88.7	4.26	4.63	4.57
Elec. Light & Power (16)	135.2	126.7	127.5	3.77	4.03	4.00
Motors (5)	58.4	52.2	50.7	4.47	5.02	5.24
Oil (5)	72.0	62.5	61.8	4.36	3.59	3.61
Home Rails (4)	69.9	60.3	59.1	1.52	1.65	1.69
Breweries & Distill. (19)	135.2	126.7	127.3	4.08	4.36	4.34

Though Wall Street cannot be wholly unaffected by happenings in Europe, any significant recession in London or on the Continental bourses will almost inevitably enhance the appeal to investors on this side of a market removed by some thousands of miles from the storm centre and backed by a strong and hitherto persistent "recovery" movement of its own.

Argentine Railway Position.—The decisions of the boards of Buenos Aires Western and Buenos Aires Great Southern Railways to halve the dividends on their respective 4½ per cent. and 6 per cent. preference stocks for the year to June last came as a shock to the market on Wednesday. The boards, it is stated, are of opinion that higher distributions could not be justified, having regard to the earnings of the past year, and to the general situation. Those responsible for this prudent, though disappointing, decision may, ultimately, deserve well of the stockholders, for full payment would have made further inroads into resources depleted by last year's full payments and exchange losses. Since the partial restoration of wage cuts was effected in January, it would appear that increased wage costs may be largely responsible for the less hopeful "general situation," and further claims have recently been reported. An additional adverse factor, however, may be found in the recent course of peso traffic receipts, and the unpromising wheat haulage prospect. The most favourable development ahead is clearly the prospect of effective transport co-ordination in the Argentine. Latest advices state that the Chamber of Deputies has accepted a majority report upon the Co-ordination Bill drafted by the Committee of Communications and Transport. A separate Bill to deal with transport problems in the City of Buenos Aires alone has also passed its first reading. Yet a third legislative proposal is before Congress which is intended to effect co-operation between the railway companies by authorising more economical working and amalgamations between railways and other transport undertakings. Whilst the proposals will not again come up for consideration until Congress reassembles in May next year—unless a Special Session be called—demonstrations of hostility on the part of labour interests have already occurred. It is understood that the unions have addressed to the Director-General of Railways a memorandum opposing the new Government regulations affecting working hours and conditions, due to take effect on November 1st next. The nature of these objections may be more readily appreciated than the labour attitude towards the new transport Bills. The proposed legislation has been far from hastily drawn up, and it is generally conceded that comprehensive regulation of Argentine transport services is long overdue, having regard to the financial circumstances of the British railway companies and their importance in Argentine's economy.

Home Railway Prospects.—The end of the third quarter of the home railway year finds the market deflated and dispirited. The trend of traffic receipts during the summer period of heavy passenger movement was encouraging, but the figures published during September have revealed a steady deterioration. In the latest week, indeed, the four lines together show a "loss" of £86,000—though the London and North Eastern's contribution of £67,000 may be partly a statistical accident, due to the taking in of a number of "differences" in the 1934 figures for earlier weeks. The accompanying table shows, for each railway and for each of the three main classes of traffic, a comparison of the receipts for the first nine months of 1935 with the receipts during the same period of 1934:—

(£'000)						
1935 compared with 1934	Great Western	London Midland and Scottish	London and North Eastern	Southern	Four Companies	
PASSENGER TRAFFIC:						
First half-year	+ 74	+ 277	+ 196	+ 145	+ 692	
4 weeks 27-30	- 7	+ 49	+ 32	+ 71	+ 145	
4 weeks 31-34	- 61	+ 66	+ 70	+ 83	+ 280

4 weeks 31-34	- 15	- 10	- 25	- 7	- 57	
5 weeks 35-39	- 59	- 8	- 59	- 3	- 115	
Third Quarter	- 64	- 6	- 109	- 21	- 200	
ALL TRAFFIC:						
First half-year	+ 78	+ 289	- 26	+ 8	+ 359	
4 weeks 27-30	+ 30	+ 99	+ 66	+ 60	+ 255	
4 weeks 31-34	+ 38	+ 54	+ 58	+ 59	+ 209	
5 weeks 35-39	- 55	+ 41	- 132	- 7	- 153	
Third Quarter	+ 13	+ 194	- 8	+ 112	+ 311	

The passenger receipts, on the whole, make a favourable comparison. For the four railways combined, and for the Southern and Great Western, the gain in the third quarter has been more than half that of the first two quarters. This impression, however, is largely destroyed by an examination of the results of the three monthly periods within the third quarter. July and August were excellent months for passenger travel (except for July on the Great Western), but September has been disappointing and the receipts on the two largest lines have actually been running below last year. Goods traffic has been patchy. The coal and coke figures are definitely disappointing. Taking all traffics together, for the last quarter, the Southern has made a large increase on last year, in spite of its poor merchandise record. The L.M.S. has also done proportionately better in the third than in the first two quarters. In the case of the G.W.R. the improvement is at a lower rate, but it is still an improvement. Only the L.N.E.R., which most needs additional revenue, has failed to get it. But in every case the monthly figures tell a different story. Except on the Great Western, August made a worse showing than July, and in every case September made a much worse showing than August. So far, earnings for the second half-year are running at the rate of about 1½ per cent. on L.M.S. 1923 preference, 2½ per cent. on L.N.E. first preference, 1 per cent. on Great Western ordinary, and 4 per cent. on Southern preferred ordinary. In view of the present trend of traffic receipts, however, these "earnings margins" may not necessarily obtain by the year-end. Whatever the attitude of the managements towards pressure from the unions for increased wages, it is unlikely that the market will regain its popularity in the immediate future. Even London Transport "C" stockholders, whose final dividend, announced as we go to press, is 2½ per cent. (together with one-half per cent. in respect of 1933-34) may have to await the promised accounts before a new favourable turn occurs in the market.

Chilean Bond Prospects.—The brief review of Chile's finances in our issue of September 21st indicated the steady improvement of the country's budgetary position under the present Government. On September 9th the Minister of Finance was able to lay before the Parliamentary Mixed Budget Committee a review of the situation, in the course of which he claimed a succession of four balanced Budgets since the worst period of the crisis, when the Government took over. His firm declarations in favour of a balanced Budget policy encourage the hope that stability will be maintained despite the temptations of returning relative prosperity. Investors, however, should not confuse such improvement with hopes of any substantial payments on Chilean bonds. The Minister's statement gives the direct foreign currency debt at December 31, 1934, as the equivalent of 2,743,857,721 old pesos (i.e. pesos of 6d. gold), to which must be added the indirect guaranteed external debt of 1,123,545,886 old pesos, making some 4,000 millions in all. Taking a rough rate of 7½ per cent. on this total to cover full interest and amortisation, the service requirement would be 300,000,000 old pesos. As, however, the peso is now linked to sterling at 1½d. per peso instead of 6d., the cost of meeting the full service in sterling and dollars (not gold) would be some 1,200,000,000 pesos. This is approximately equal to the entire anticipated revenue of the State for 1935 (1,225,000,000 pesos). Under Law No. 5580 of January 31, 1935, the liability for the debt service is removed from the Budget and made over to the Caja Autonoma de Amortizacion, which office is to meet debt service to the extent of its receipts from the State's share in nitrate profits plus the copper tax. The summary calculation made above, however, indicates the proportions of the matter. At present it is not possible to estimate what payments will actually be made under Law 5580. But it is evident that they can only be a small fraction of the nominal amounts due.

Industrial Profits in September.—We received 77 company reports last month, showing an aggregate rise in profits of 9.28 per cent. by comparison with the previous year. Figures for recent months are shown below:—

Reports published in	No. of Companies	Rise or Fall in Profits*	Reports published in	No. of Companies	Rise or Fall in Profits*
1934—			1935—		
August	30	+35.47	March	261	+22.54
September....	89	+40.63	April	242	+16.49
October	165	+49.70	May	244	+11.07
November ...	143	+33.97	June	191	+21.72
December....	159	+25.09	July	232	+13.44
1935—			August	38	+5.93
January	111	+14.15	September...	77	+9.28
February....	218	+8.43			

* After payment of debenture interest.

The reports of the month disclosed net profits of £6,257,611, as compared with £5,726,074 in the preceding year. The principal feature in a fairly quiet month is provided by the iron, coal and steel group. Twelve concerns, including United Steel, Staveley, Sheepbridge, Manvers Main and Thos. W. Ward, report an increase in net profits from £1,542,651 to £1,866,131. Shops and stores also record a substantial advance on the previous year's profits. Obstinate depression still afflicts textile earnings, Calico Printers Association being responsible for a heavy fall in this section. The remaining groups bear witness to the wider spread of profits recovery, although recent increases are tending to lose the spectacular proportions of a year ago.

COMPANY NOTES

Tobacco Companies.—During most of the post-war decade the tobacco manufacturing industry enjoyed advantages which are seldom found in combination—stability and vigorously expanding prosperity. The well-established organisation of the Imperial-British American group had built solidly enough to give firmness to the entire trade. A world-wide leaf-buying organisation fed the industry with unfailing supplies, while an equally sound distribution system disposed of the product as fast as it was turned out.

Further, the general conditions of the industry's market were singularly favourable to high earnings. Cigarette consumption was rising fast both at home and abroad (between the Census years of 1924 and 1930 home cigarette consumption rose by over 45 per cent. and exports by over 110 per cent.), while the mechanical equipment of the

industry was being steadily improved to reduce manufacturing costs. Above all, though the average selling price of cigarettes was not reduced by much more than the small reduction in the duty, the average cost of raw leaf tobacco fell from nearly 1s. 9d. per lb. in 1924 to 1s. 2½d. in 1930 and to below 1s. during a great part of the depression. Profits therefore came easily to the manufacturers. It may be

Vauxhall

questioned, however, whether such extremely favourable conditions are likely to be maintained. The total output of the industry, both for the home and the export markets, is likely to expand further with reviving prosperity and with the continued replacement of a non-smoking generation of women by a smoking generation. Even in 1934 the British output of manufactured tobacco exceeded the previous record of 1930; and 1935 is running ahead of 1934. The price of raw leaf, however, is no longer falling. For the first eight months of 1935 the average import price has been about 1s. 3d. per lb., against 1s. 0½d. for the first eight months of 1934. As manufacturers normally hold two or three years' stocks maturing, the rise in price when averaged over the stock will not immediately be serious; but if the rising trend continues it must become an important cost factor tending to offset the continued improvement in plant. Rising consumption has to some extent eased the pressure of competition, illustrated by the coupon war which lasted through the worst of the depression and until December, 1933. But it is unlikely that manufacturers will be able to pass on much of the higher leaf cost in the form of higher prices to the public. The general prospect, therefore, appears to be for fairly stable conditions and not for a continuation of the brilliant trend of earnings during the 'twenties. Within these general conditions, however, there may be room for individual companies to advance. The rise of Carreras during the 'twenties and of Gallahers during the 'thirties illustrates a characteristic of the tobacco industry, in which special ability in selling or in detecting new possibilities of improvement may be rewarded by a rapidly expanding share of the market. Profits do not fluctuate sharply, but among the smaller companies the prosperity of the successful seems to be secured, to some extent, at the expense of the more stable concerns. Such a concern as Cohen, Weenen, which is largely interested in pipe tobacco, does not benefit from the expanding cigarette market to the same extent as companies predominant in the cigarette trade.

The Brewery Prospect.—During the last few weeks the brewery share market has, on balance, lost much of the impetus which was inspired by the declaration of increased dividends by Guinness and Watney at the end of July. Closer study of the July output figures, which reached a "high" for recent years at 1,691,784 standard barrels, prompted the expectation of even better returns for August. Although the actual return showed a seasonal decline to 1,550,000 standard barrels, the latest figures suggest that the trend of consumption is rising compared with the year before the "penny off the pint" Budget—1933—if monthly variations are smoothed out. For the first seven months of 1935 the increase is of the order of 6½ per cent. Climatic factors have, on the whole, been favourable, for a warm holiday season followed by a cold spring, but greater benefit has been derived from further industrial recovery, especially in the iron and steel trades, whose workers are traditionally influential customers. In the following table we set out some recent profits figures and a selection of companies whose reports are due early in November:—

* All to June 30th. † All to September 30th. ‡ For ordinary read deferred.
 (a) Year to June 30th. (b) Profits for fifteen months to September, 1934, reduced to twelve months basis. (c) Free of income tax. (d) 18½ per cent. actual shown as annual equivalent. (e) And 50 per cent. capital bonus. (f) Including 2½ per cent. free of tax. (g) And 100 per cent. capital bonus. (h) Based on last annual dividend.

Increased interim dividends have already been paid by Bristol Brewery Georges, Wolverhampton (both after

allowance for last year's capital bonus), and Anells, with third the tax-free 6 per cent. payment of Mitchells and Butlers inflated 1 per cent. higher than the conventional rate which prevailed from 1925 to 1932. Brewery profits, clearly, are still in the recovery phase, but the longer outlook is much more quite so clear. Previous expansion after fiscal favours has been postponed rather than reversed the long-term trend towards declining beer consumption. So far it has been offset by of internal technical economies, whose scope is not exhausted but may be narrowing. Reconstruction of licensed premises, again, may need to be expected if custom is to be re-attracted from modern competitors.

Electric and Musical Industries.—The directors of this premier music-making concern deserve congratulation on their defeat of the calendar by three clear days in making their results for the year to September 30th last available, in preliminary form, on September 27th. The dividend has been increased by the addition of a 2½ per cent. bonus to the previous year's 10 per cent. distribution. The profit for the year, subject to audit, amounts to £451,002, and there is a further profit on investments realised amounting to £114,544, which presumably may be regarded as windfall to reserves. The announcement is silent as to the point at which the latest figure for working profit has been struck, but on the assumption that general expenses, depreciation and fees have been deducted, it would compare with £420,710 for 1933-34. Calculated "before tax" the profits for the latest year, apart from the windfall, appear equivalent to slightly over 14½ per cent. on the reconstituted ordinary capital. The rapid recovery in earning power, after the merger had survived two unhappy years which necessitated a drastic writing down of investments and other assets in 1934, testified to successful exploitation of the radio market, to which the company brings ample technical knowledge and resources. This policy has been extended to household appliances, and to television, the latter in conjunction with Marconi's Wireless Telegraph. The ordinary shares, at 24s. 4½d., yield 5 8s. per cent., after allowance for the dividend, and occupy a prominent place in an expanding but competitive industry.

United Steel Meeting.—The annual speeches of Mr W. Benton Jones to shareholders of United Steel Companies invariably provide an authoritative review of the industry's progress and prospects, in relation to the company's own position. At this week's meeting the chairman demonstrated that Great Britain had regained the 1929 level of steel production, well in advance of Western Europe and of the United States. This achievement, however, was due to the expansion of demand in a sheltered home market, for the expansion both of imports and exports from the trough of 1932-33 has been very limited. A significant passage in the speech suggested that the increase in total production for the year to June last had been supplied from fuller employment in districts where the company does not operate. The peak level at which the company had operated in the previous twelve months had nevertheless been maintained with a comfortable margin. Shareholders may find some difficulty in interpreting these statements. If an increase in operating profits by some £150,000 was not derived from higher selling prices, what proportion can be attributed to higher output and what to internal economies? An upward limit to the latter, particularly in the case of an already efficient company, may be reached sooner rather than later. The projected three-year programme of capital extensions, however, should ensure that the company's position in the industry will be well maintained. If, however, it obtains something less than a proportionate share of the industry's expansion of output—and demand is now remaining at a record level—shareholders might be unwise to budget for a return to the substantial advances in profits, which, until the latest year, have characterised the company's annual progress. Such evidence as is available, coupled with the growing use of scrap and the company's own modernisation programme, may tend to confirm the board in its policy of financial conservatism.

Baird Television Reorganisation.—A reorganisation of the highly complicated capital structure of Baird Television has long been overdue. During the last six months there have been persistent and wide anomalies in the prices of the different classes of capital, and the market has been erratic and artificial. The new scheme, therefore, would have been very welcome had it dealt equally with the claims of each class of shareholder. The company has a capital of £875,000 in 5s. shares, consisting of 200,000 "A" ordinary, 2,100,000 preferred ordinary, and 1,200,000 deferred ordinary shares. The first class receives one-half of the equity. From the other half the preferred shares receive a 10 per cent. non-cumulative dividend, and the remainder is divided between them and the deferred shares in the ratio of forty to sixty. The new scheme proposes to consolidate the whole capital into ordinary 5s. shares. For every hundred of their old shares, the three classes of shareholder receive 875, 42 and 72 new ordinary shares respectively. The effect of this, broadly, is to retain to the "A" ordinary shareholders one-half of the equity and to divide the other half equally between the preferred and deferred shareholders. The relevance of this proposal obviously depends upon the level of profits which may reasonably be expected. The following table compares the participation of the three classes under the present and proposed arrangements:—

Profits	"A" Ordinary		Preferred		Deferred	
	Old	New	Old	New	Old	New
£	(%)	(%)	(%)	(%)	(%)	(%)
25,000	25	25	24	12	Nil	2.1
50,000	50	50	4.8	2.4	Nil	4.2
100,000	100	100	9.5	4.8	Nil	8.3
150,000	150	150	11.7	7.1	4.5	12.5
200,000	200	200	13.6	9.5	9.5	16.7
500,000	500	500	25.1	23.8	39.5	41.7
750,000	750	750	34.6	35.7	64.5	62.5

Of the unsatisfactory nature of the scheme, from the preferred shareholders' point of view, there can be no question. If profits were less than £105,000—and the present market valuation of the "A" shares, on a 7½ per cent. yield basis, envisages a profit of £82,500—they would lose one-half of their income. Their loss decreases as profits increase, until at £630,000 they would receive the same under the new as under the old dispensation. The deferred shareholders, of course, stand to gain substantially in the lower profit region, and would lose only if the profit exceeded £630,000. If the scheme succeeds, the board proposes to increase the capital to £3,750,000 by the issue of more ordinary shares, thus tending to defer the possibility of high percentage earnings. The preferred shareholders, no doubt, will hasten to organise opposition to the scheme. Their task, however, is by no means eased by the fact that 60 per cent. of the deferred capital, and 32 per cent. of the "A" ordinary, is—or at any rate was at the beginning of July—controlled by the Gaumont-British group through International Acoustic Films, Limited, which is now in voluntary liquidation.

A Cable Amalgamation.—News has been published this week of an amalgamation of the submarine cable interests of Telegraph Construction and Maintenance Company and Siemens Brothers, which promises to place this business on a more profitable basis in future. The development of overseas wireless services has greatly reduced world demand for submarine cables in recent years, and reasonable profit margins have been difficult to secure. The concentration of output at one factory, it is anticipated, will ensure profitable production for many years. To give effect to the amalgamation, the new concern, Submarine Cables, Ltd., with £220,000 capital shared by the two companies, will lease the specialised works of Telegraph Construction at East Greenwich. Recent technical progress suggests that, so far from being a dying medium of communication, the modern submarine cable offers some advantages by way of reliability and secrecy over wireless transmission. The new company will take over a reorganised works, and will be the sole producer in the British Empire. It would appear, therefore, that the unification of the submarine cable business may sensibly im-

prove the prospects for a resumption of dividends by Telegraph Construction, granted a continuation of the steady improvement in demand.

Some Reports and Notices.—This week's company announcements, on the whole, have been favourable, but their significance for the Stock Exchange has inevitably been eclipsed by the continued deferment of hope regarding the prospect of peace in Abyssinia and elsewhere. The Murex final dividend of 10 per cent., together with a 2½ per cent. share bonus, stirred the market, but speculators were prompt to take their profits. In addition, the oil share market was pleasantly surprised by the 5 per cent. increase in the Trinidad Leaseholds dividend to 17½ per cent., and the shares provided a feature in Tuesday's quiet trading. The Rover profit figures came up to expectations. A further sharp advance in working profits from £133,938 to £214,739 is reported, and the net balance, together with surplus reserves, has restored the profit and loss account in credit, after carrying forward heavy debit balances for some years. The statement of the Dunlop directors, explaining their decision not to pay an interim dividend for 1935, was not warmly received, for it referred to the adverse effect of rising raw material costs upon current profits, and to the difficulty of immediate adjustment of the prices of manufactured goods to offset reduced profit margins. The apparent determination of the Rubber Restriction Committee to secure a higher price has suggested the possibility that the time lag may be somewhat prolonged on a rising commodity market, and the shares have been a weak feature. The market, however, was not disappointed with the Roan Antelope Copper Mines maiden dividend of 20 per cent. Although equivalent to a very modest yield at the prevailing quotation, the dividend may prove substantially below the level of current earnings, owing to the substantial rise in copper prices since the end of the company's financial years. Among other dividend announcements, those of Gallaher and Joseph Lucas are unchanged.

Other Company Results.—Our table of profit and loss accounts on page 685 includes results from 24 additional concerns, which reveal a steady expansion in earning power, although there are few of the representative market leaders in the list. In the engineering group, Vulcan Foundry reports a considerable expansion of output, and profits have increased, despite competitive contracting, from £17,358 to £52,422. The sluggish condition of the shipbuilding industry has limited the expansion of Parsons Marine Steam Turbine profits, which have advanced from £11,124 to £12,271. Plantation concerns make the largest numerical contribution to this week's list and present a rather mixed appearance. The Malayalam Plantations report reveals that lower prices for a restricted tea crop are largely responsible for a fall in net profits from £148,676 to £100,072. Among the rubber concerns the trend is towards improvement, although there are small reductions in profits in certain cases. In the Finance and Land group, Argentine Land and Investment shows a small improvement in land sales and investment income. The slightly increased net profits of Trafford Park Estates arise from differences in internal adjustments in respect of reserves and underwriting costs, and total rent and dividend income shows a slight fall. Among the miscellaneous industrial concerns, Herrburger, Brooks, the piano manufacturers, report substantial progress, and the dividend has been raised from 7 to 10 per cent. We discuss the continued progress of Rover and some dividend announcements of the week in an earlier Note on this page.

Company Meetings of the Week.—On later pages of this issue will be found the reports of the following company meetings: Manila Railway (1906), Anglo-Siam Corporation, City and International Trust, E. W. Tarry and Company, D. Gestetner, Kirklees, Gaumont-British Picture Corporation, Southern Cross Gold Development and West Spaarwater, Ltd. Mr Kiek, chairman of City and International Trust, said that in the supervision of their widely distributed holdings the directors were striving to improve the "grading." The chairman of Kirklees, Limited, attributed the progress of the company to its policy of specialisation and constant improvement of manufacturing methods. The chairman of Gestetner announced a record profit for the company. The chairman of E. W. Tarry and Company reported a year of comparatively good trade with encouraging prospects. Mr Mark Ostrer, of Gaumont-British, said that the company was expanding rapidly in all parts of the world, and had made a very successful entry into the American field. The chairman of Southern Cross Gold Development said the engineers were highly optimistic about the prospects of the Fraser group, and emphasised the directors' confidence in the Southern Cross property. The chairman of the Anglo-Siam Corporation reported a small increase in profits as a result of a larger turnover in general trade, but the teak branch of the corporation's business shows a negligible return. At the meeting of the Manila Railway the shareholders agreed to the board's proposal to sell the company's holdings of Southern Lines bonds of the subsidiary, Manila Railroad. Mr Marks, of West Spaarwater, reported that the sinking and equipment of the first vertical shaft was about to be undertaken.

THE WEEK IN THE MARKETS THE LONDON STOCK EXCHANGE

SETTLING DAYS

TICKET
OCTOBER 8

ACCOUNT
OCTOBER 10

THE market has been tested this week as severely as at any time since 1931. Early in the week the realisation spread abroad that earlier hopes of a peaceful outcome of the Italo-Abyssinian dispute had been too long deferred, and the market proceeded quietly to consolidate its position, without any semblance of panic, in resignation to the Duce's categorical imperative. The grave news of Thursday's hostilities proved that the market's recent steady preparations had been well-founded, and a further general fall in every section was inevitable.

The gilt-edged market was entirely friendless this week. Some assistance was expected from the Chancellor's speech on Tuesday evening, but his linking of a buoyant revenue with increased armament expenditure left dealers with an inescapable conclusion regarding Budget prospects. Quotations consequently suffered a renewed fall, "Old Consols" and Local Loans inevitably suffering most. Sales, although persistent, were not heavy, but dealers were very averse from taking a position while the shadow of a major crisis continues to darken the market. India stocks showed sympathetic weakness, but in addition the reverse suffered by the Mohmand punitive expedition depressed quotations early in the week.

In the foreign bond market, European issues were thoroughly uneasy. Austrian, Italian and German bonds fell steadily throughout the week, and Egyptian and French issues weakened. Brazilian issues opened in fairly confident style, assisted by coupon payments, but support dwindled later, despite the legislative approval of the agreement for unfreezing debts. San Paulo coffee issues lacked support, and no interest was taken in Argentine bonds. Some selling of Japanese issues led to a general decline, but Chinese bonds remained relatively steady.

No optimists were abroad in the home rail market this week, and the dismal traffics (analysed on page 666) and wages factors in the mining and railway industries reinforced a persistent sagging tendency on earlier days. Preference stocks, covered and marginal, were also affected, but the fall stopped short of the debentures. London

Transport stocks held firm, in anticipation of the final dividend noted on page 666.

The Argentine rail market was severely tried by the halving of the second preference dividends by B.A. Great Southern and B.A. Western (discussed on page 666). These stocks fell $1\frac{1}{2}$ and $3\frac{1}{2}$ points, and sympathetic movements were common to the prior charges and ordinary stocks. American rails fell appreciably in reflection of Wall Street's concern for their financial position.

The industrial markets were depressed and uneasy. Industrial news was not unfavourable in certain respects, but the developments in the international situation, coinciding with the closing days of the account clearly demanded a cautious attitude both from investors and dealers. Even the "armaments risk" favourites, such as iron and steel and aviation issues (apart from Tube Investments, which responded to the dividend and bonus) were dogged by the same uneasiness. Motor shares, coincident with the announcement of new models, suffered from neglect, and brewery shares, in the face of favourable output figures and impending dividends, were marked down. Leading tobacco issues lost the turn on successive days. Apart from Telegraph Construction, which advanced on amalgamation news (see page 669), electrical equipment shares sustained fractional losses, and lower prices were quoted for supply shares. Almost without exception the leading textile, stores and provision shares ruled lower. The miscellaneous leaders were similarly depressed. Dunlop were steadily realised, on considerations suggested by last week's announcement (see page 669). The building issues lacked confidence, and Imperial Chemical, British Oxygen, and Murex could not resist the market movement.

The oil share market was temporarily stirred from endemic quiescence by the surprising increase in the Trinidad Leaseholds dividend to $17\frac{1}{2}$ per cent. As a market factor, however, this proved of little account, compared with the increased October "allowables" in California, and fears of selling on French account.

The weaker course of rubber in Mincing Lane reinforced the cheerless condition of the share market, and a limited volume of selling, as in the past, proved sufficient to depress quotations. Tea shares opened idly, to close distinctly weak owing to unsupported selling on Wednesday.

It was left to the mining markets to show a firm front on Monday, but the tone could not be maintained, despite some early support from the Cape and satisfactory, if unexciting, mining returns. Demand at home was at low ebb, and Paris offered no assistance. In mid-week dealings the falls became disproportionately severe, owing to dealers' caution, and a general relapse affected West African and Australian counters. Base metal issues became easier, and copper shares were dull, despite activity in the metal markets.

FOREIGN STOCK EXCHANGES

NEW YORK

WAIT and see continued to be Wall Street's watchword at the close of last week and the beginning of this. Movements became more erratic as the certainty of war in Abyssinia increased, and on Wednesday leading issues fell from one to three points. Public utilities and industrials were generally lower, but mines and oils were steadier. Railways were weak, and New York Central stocks and bonds fell sharply. Concern over the domestic railway situation added to the confusion. Treasury bonds were weaker and little progress was made during the week in conversions of the Fourth Liberties, which fell to a new "low." Not even Mr Sloan's claim that recovery now outweighs deflation could buttress the sagging market. Senator King declared that he does not anticipate any change in the Silver Purchase Act in the next Congress; yet in the price paid for quietness among the silver senators must be included a drop of 72 per cent. in American exports to China in the year to the end of August. New issues in September were slightly lower than in August, but it is reported that \$1,000,000,000 new financing issues are being negotiated and \$250 millions have already been registered. The *Iron Age* puts steel mill output at 52.5 per cent. of capacity this week, against 51.5 per cent. last week, due in part to increased demand from automobile manufacturers, which will not reach full force, however, for another two weeks. Power output was 12.6 per cent. over the corresponding week last year. The Federal Trade Commission has registered a complaint against the National Electrical Manufacturers' Association for combination in restraint of trade, and the Associated Gas and Electric has been buying properties in Virginia and Maryland to obtain a connected system and fulfil the requirements of the new Holding Company law.

INTRODUCING

THE NEW PROFIT-SHARING FIXED TRUST INVESTMENT

"KEYSTONE CERTIFICATES"

A comprehensive investment on IMPROVED FIXED TRUST PRINCIPLES embodying the following SPECIAL FEATURES:—

THE INVESTOR acquires an interest in the stocks or shares of over 50 PROSPEROUS COMPANIES.

THE INVESTOR at the present price of 18/6 per Sub-Unit and based on last dividends, obtains a GROSS YIELD of over

5%

exclusive of non-recurring Bonuses and Rights which last year amounted to a further £2 7s 0d per cent., furthermore

A HOLDER OF "KEYSTONE CERTIFICATES" ALSO PARTICIPATES (*pro rata* to his holding) **IN 50% OF THE PROFITS OF THE MANAGERS.**

THE INVESTOR may purchase "KEYSTONE CERTIFICATES" and PAY BY INSTALLMENTS thus enabling the investor to take advantage of low prices even if immediate funds are not available.

THE MANAGERS undertake to REPURCHASE "KEYSTONE CERTIFICATES" at any time on the basis of LONDON STOCK EXCHANGE PRICES of Underlying Security.

THE MANAGERS will set aside sufficient FUNDS to ensure the full life of the TRUST.

Trustees:

MIDLAND BANK EXECUTOR & TRUSTEE CO. LTD. acts as TRUSTEE for all CERTIFICATES, and is responsible for the safe keeping of all SECURITIES and for receiving and DISTRIBUTING DIVIDENDS and BONUSES.

How to Purchase and Sell Sub-Units:

Subject to a minimum of 20 Sub-Units (approximately £20) "KEYSTONE CERTIFICATES" may be purchased through any Bank Manager or Broker or direct from the Managers, whose address is given below.

How to obtain more Information:

Interested members of the public should ask any Broker or Bank Manager for Booklet and Application Forms, or send a postcard or telephone direct to the

Managers:

BRITISH KEYSTONE SECURITIES TRUST LIMITED

24, THROGMORTON STREET
LONDON, E.C. 2

Telegraph: "Keycerts Stock, London"
Telephone: London Wall 3331 & 4859

LONDON ACTIVE SECURITY PRICES AND YIELDS

NOTE—Shares with a New York Quotation or with definite American interest are distinguished by italics

In calculating yields on fixed interest stocks quoted below allowance is made for interest accrued since the last date of payment, less income tax at the standard rate. Where stocks are definitely redeemable at a certain date the yield includes any profit or loss on redemption; where stocks are redeemable at or before a certain date the yield is calculated on the basis of the date of redemption taken when the stock stands at a discount and the earliest date when the quotation is above par. The return on ordinary stocks and shares is calculated by reference to the latest dividends, account being taken of any enhancement or reduction of interim dividends. Allowance is made for accrued dividends in calculating the yield on "cum div." shares.

PARIS

Abyssinia and Mamel cast their shadows over the Bourse on Monday, and neither Renten nor Bank shares were able to resist the general downward tendency. Renten fell a full point and the Banque de France share reached the lowest figure for some time. Suez Canal reacted from last week's rally and were considerably weaker. The volume of business continues to be small, and a slight recovery toward the middle of the week was swamped by pessimistic second thoughts. The outlook was not improved by the outbreak of Mussolini's war, nor by the increasing sign of domestic difficulties.

BERLIN

The share market last week was dull. At first, prices moved irregularly, steel and electrical issues being offered, while certain textiles advanced. The resumption of dividend payments by Hoesch brought support to the steel market in the middle of the week, and special activity developed in the engineering section. Commercial banks tended to improve and foreign issues, apart from Italians, recovered. The new week opened with little change in prices. On Tuesday, however, the market was very weak, some of the higher-priced shares losing 3 to 4 points. Further selling was reported in mid-week, Farbenindustrie and the electrical group recording substantial falls. Reichsmark bonds were slightly lower and dollar bonds irregular, but there was little trading.

course until the mid-week, when there was a slight reaction. The Italo-Abyssinian crisis exercised its depressing influence, as in other centres, and with few exceptions business has been dull. Philips' Lamps continued their fall until mid-week, when they recovered 5 points on the favourable dividend. Rubber shares were still dull in spite of the increased export duty on native rubber, but tin shares joined in the upward movement of commodity prices.

COMPANY MEETINGS, &c.

THE ANGLO-SIAM CORPORATION, LIMITED

GRATIFYING INCREASE IN PROFITS

APPRECIATION OF STERLING INVESTMENTS

MR W. GREAVES'S REVIEW

The thirty-eighth annual ordinary general meeting of the Anglo-Siam Corporation, Limited, was held, on the 1st instant, at 5 St. Helen's Place, London, E.C.

Mr William Greaves presided in the absence, through illness, of Mr J. M. Ryrie, the chairman of the corporation.

In reviewing the conditions for the past year of the various countries with which the corporation's trade is carried on, Mr Greaves mentioned that, although Siam has marketed a record quantity of rice, the total value of the exports was not so satisfactory at ticals 46½ per ton when compared with ticals 123½ per ton in 1929. Tin and rubber figured increasingly in the exports from Siam, but teak, which at one time was second on the list, now amounted to a total export of £400,000 only.

With the advent of the rubber restriction scheme a distinct improvement had taken place in Malaya, as evidenced by the marked expansion of both imports and exports.

Dealing with the accounts, Mr Greaves pointed out that there had been a gratifying, if small, increase in the profits as the result of a larger turnover in general trading. Prices of teak, however, continued at a low level, and this important branch of the corporation's business again showed a negligible return. Apart from the investments depreciation fund, there was a substantial appreciation in the value of the corporation's sterling investments at March 30th last as compared with the book costs.

RUBBER PROSPECTS

As regarded the Siam-Malay Rubber Company, Limited, in which the corporation had invested £52,678, arrangements had been concluded to amalgamate this company's estate—known as the Glencoe Estate—with the estates belonging to the Sedenak Rubber Estates, Limited, and the Pontian (Malay) Rubber Company, Limited.

The amalgamation would be conducted in the name of the Sedenak Rubber Estates, Limited, and in exchange for the holding of 45,195 shares of \$10 each in the Siam-Malay Rubber Company, Limited, the corporation had been allotted 48,423 fully-paid shares of £1 each in the Sedenak Rubber Estates, Limited.

The corporation's Singapore branch would continue to act as the Eastern agents of the amalgamated company, the management in London being in the capable hands of Messrs Yule, Catto and Company, Limited.

The soundness of the financial position in Siam was brought out in the financial adviser's report on the Budget for 1934-35, but as a successor to Mr James Baxter, who had resigned the post of financial adviser, had not been announced there might be some delay in the issue of another report.

OUTLOOK FOR THE CURRENT YEAR

As regarded the outlook for the current year, Mr Greaves mentioned that the monsoon in India had given good rains and crop prospects were encouraging, while the bright spot in the trade of Siam at the moment was the marketing of a good crop of rice at a much-needed improvement in price. Unfortunately, there had recently been several Chinese bank failures in the Far East, as a result of which some important rice mills in Bangkok had failed.

Commenting on the particular handicaps applying to Siam teak, Mr Greaves remarked that there was as yet no sign of these adverse factors being offset by better market conditions, and he could hold out no hope of this side of the corporation's business making any substantial contribution to profits in the near future.

In Malaya the improved conditions which had set in last year had not been maintained owing to the recent fall in the price of rubber and other produce, but he hoped the present position would prove to be no more than a temporary setback.

The directors' report and statement of accounts for the year ended March 31, 1935, were adopted, and final dividends of 3½ per cent. on the preference shares and 5 per cent. on the ordinary shares were declared, making a total distribution of 8½ per cent., less tax, on the ordinary shares for the year.

Mr J. M. Ryrie was re-elected a director and Messrs Turquand, Youngs and Company were appointed auditors for the current year.

CITY AND INTERNATIONAL TRUST, LIMITED

INCREASED PROFIT

The meeting of the City and International Trust, Limited, was held, on the 1st instant, at Winchester House, London.

Mr Louis H. Kiek (chairman and managing director) presided, and in moving the adoption of the report and accounts said: It is a source of the greatest satisfaction that the improved revenue from our substantial holdings in the United Kingdom and elsewhere has more than made up for reductions and defaults inflicted upon us from some other quarters.

There is a net profit of £43,800, or an increase of 14½ per cent. on 1933-4. Last year's carry forward of £31,100 brings this figure to £74,900, and after payment of 5 per cent. dividend on the £600,000 of preferred stock there remains £44,900 to be dealt with.

We recommend payment of a dividend of 2½ per cent. on the £400,000 of ordinary stock, which will leave £34,900 to be carried forward.

Encouraging as may be the growing evidence that at long last the shrinkage in trust companies' revenue appears to have been arrested, let us not forget—and recent events surely do not allow us to forget—that we have a good deal of ground still to recover before we can hope to attain adequate results. After eliminating all sources of income of a non-recurring character, we have in the past year earned practically £4 11s. 6d. per cent. on the total book value of our investments, and after allowing for debenture and loan interest £4 18s. per cent. on our combined preferred and ordinary capital. If you will bear in mind that our dividend and interest earners at present still have to carry a fairly heavy burden of non-revenue producers, you will, I trust, derive, as we do, some encouragement for the future from this relatively satisfactory earning power under difficult conditions. Calculated on book value, our British and Dominion holdings yielded us within a fraction of 5 per cent.; Central Europe, moratoria and currency troubles notwithstanding, 5½ per cent.; our Latin American securities only 2½ per cent.; and holdings in the United States and all other countries 3½ per cent. In the supervision of these widely distributed holdings we are constantly striving to improve the "grading" in order to attain, as far as practicable, improved security and increased protection of revenue.

The report and accounts were unanimously adopted.

D. GESTETNER, LIMITED

RECORD PROFITS — BONUS SHARE DISTRIBUTION

The ordinary general meeting of D. Gestetner, Limited, was held, on the 27th ultimo, at the company's registered office, Fawley Road, Tottenham Hale, London, N.17, Mr Sigmund Gestetner (the chairman and managing director) presiding.

The Chairman, in the course of his speech, said: The profit for the twelve months just ended marks a new high record in the history of this company, and it is one of which I think we can all be justifiably proud.

After careful consideration of all the factors, we have come to the conclusion that the interests of our shareholders can best be served by a further distribution of bonus shares, and we accordingly recommend to you a capital bonus in the proportion of one new ordinary share in eight. I would especially direct your attention to the fact that the whole of the sum now being distributed as a capital bonus was earned during the year covered by these accounts.

Our research departments at the works have again been successful in effecting important improvements. During the year models, which we are glad to be able to report are finding a satisfactory market.

A number of shareholders have asked me to say something regarding the outlook for the future, but I am not going to be beguiled into making forecasts. I will, however, say this: the whole Gestetner organisation enters into the new year full of expectation and hope—expectation that we shall equal the result achieved last year—hope that we shall beat it.

I may refer, in passing, to the decision we arrived at last year to publish figures of net profits half-yearly. We felt that it was desirable that shareholders should be informed of the progress of the company at more frequent intervals, and our decision has, I understand, been much appreciated. So you will have six months' figures before you next March, and you will then be able to judge whether the little note of optimism, which perhaps has found its way into my speech, has been justified or not.

In conclusion, I feel that it will be your wish that I should record our thanks to our staff at home and abroad.

The report and accounts were unanimously adopted.

GAUMONT-BRITISH PICTURE CORPORATION, LIMITED

OUTSTANDING PRODUCTIONS

The eighth annual general meeting of Gaumont-British Picture Corporation, Ltd., was held, on the 27th ult., at Film House, Wardour Street, London, W., Mr Mark Ostrer (the chairman and managing director) presiding.

The Chairman, in the course of his speech, said that the total net profit for the year, including income from investments, was higher than the profit for the previous year by £28,268, at £720,483. The directors recommended a final dividend of 4 per cent. on the two classes of ordinary shares, making 7 per cent. for the year. That the popularity of their news reel, "The Gaumont-British News" was on the upward grade, was borne out by the fact that it was supplied twice weekly to 1,500 theatres. Their studio at Shepherd's Bush had been responsible for the creation of some really outstanding British pictures.

Amongst those films was, perhaps, the most remarkable production of any year, "The Thirty-Nine Steps," which was now completing the truly remarkable run of five continuous months' record business in the West End of London, while the reception accorded the film in New York had been equally enthusiastic.

Its production had been followed by others of an equally high standard, as to which the board felt sure that their reception would be sufficiently enthusiastic to mark them as outstanding successes of 1935.

Abroad, they entered the American field at the beginning of this year's selling season fully organised and equipped with product calculated to make a successful appeal to the American public, and through their New York headquarters they were now selling in America a full programme of their pictures known across the Atlantic as "The Sixteen Star-Spangled Specials." The company's business throughout the other parts of the world had been expanding in a most satisfactory manner.

After the directors had been congratulated on their foresight in taking an interest in Baird Television, the report was unanimously adopted.

The meeting terminated with a cordial vote of thanks to the chairman and directors.

E. W. TARRY AND COMPANY, LIMITED

INCREASED TURNOVER AND PROFITS

The annual general meeting of this company was held on the 27th ultimo, at Southern House, Cannon Street, London.

Sir J. Fortesque Flannery, Bt., D.L. (the chairman), in the course of his speech, said that the hopes he expressed a year ago as to the company's prospects had been fulfilled and he was able to report upon a year of comparatively good trade. As a result of the continued high price of gold, their branches more closely connected with the gold mining industry—especially Johannesburg—had been very busy, and had shown still better results than last year.

The diamond mines at Kimberley had been out of operation for over three years, so that good business at their branch in that town could hardly have been looked for, but it was expected that a factory for the chilling of meat, principally for export, would be established within a short period, the Government having patriotically voted £20,000 towards the cost, and, as Kimberley was the centre of a large livestock farming area, and was geographically well situated to handle this trade, the future prospects were more encouraging. The company's branches in Northern Rhodesia had done a larger business with increased profits.

The gross profit for the past year—reflecting a greater turnover—was £112,940, and showed the very satisfactory increase of £30,160 on that of the previous year. The net profit was £37,493, compared with £18,898 in the preceding year—a most gratifying result. A dividend of 1½ per cent. on the preference shares was paid on January 1st last, and it was proposed to pay a further 10½ per cent. next week. This would dispose of the arrears up to June, 1932, and, with business continuing as at present, he hoped they would soon be in a position to reduce the arrears still further. The directors, however, were not unmindful of the ordinary shareholders, and it would be their aim to build up when possible a substantial reserve account. With this object they were making a first contribution of £15,000 towards the restoration of the reserve.

The company's sales for the first five months of the current year were somewhat larger than those of the corresponding months of last year, and there appeared to be every prospect of a good result at the end of their financial year on March 31st next.

The report and accounts were unanimously adopted.

SOUTHERN CROSS GOLD DEVELOPMENT LIMITED

PROGRESS OF OPERATIONS

The first ordinary general meeting of Southern Cross Gold Development Limited, was held, on the 27th ultimo, at River Plate House, London.

Mr Claude A. de Bernales, who presided owing to the illness of the chairman, Mr John Waddington, said that revenue receivable by the company for the period under review amounted to £3,363, and, after charging London and Adelaide expenses and providing for Australian taxes on interest receivable, there remained a net debit balance of £3,516 to be carried forward.

The total cash resources of the company at the date of the accounts amounted to £77,554 sterling. Shares under option until March 31, 1936, should, when exercised, provide an additional £118,585, so that the company would be well situated financially to ensure its subsidiary completing its already decided policy of development, and funds would be available to erect the treatment plant when called for. The directors had decided to extend the period during which the option to subscribe for shares in the capital of the company as conferred by the outstanding option certificates to bearer could be exercised from September 30, 1935, to March 31, 1936.

Operations to March 31 last had consisted chiefly in the erection of machinery and subsequent dewatering of the property. Good progress had been made in all directions, and the bulk of the reconditioning work was now well advanced. The sinking of the main shaft from 238 ft. to 500 ft. was in hand, and at the 21st inst. the depth of the shaft was 331 ft.

An underground diamond drill bore at a point 474 ft. from the main west crosscut at the 224 ft. level of Fraser's main shaft had passed through 6 ft. of lode of an estimated average value of 8 dwts. per ton, which was considered to be a most important development. Fraser's lode could be traced by shafts and other openings for a lineal distance of at least 7,000 ft. The engineers were highly optimistic as to the prospects of the Fraser Group. He again emphasised the directors' confidence in the prospects of the Southern Cross property, and they had every reason to believe that their hopes would ultimately be realised.

The report was unanimously adopted.

MANILA RAILWAY COMPANY (1906), LIMITED

DIRECTORS' SCHEME APPROVED

The twenty-eighth ordinary general meeting of the Manila Railway Company (1906), Limited, was held, on the 3rd instant, at Winchester House, Old Broad Street, London.

Lt.-Col. C. A. Reid-Scott, D.S.O. (the chairman), said that income from the investments in the Manila Railroad Company showed that the interest on the refunding mortgage bonds had been paid in United States dollars, producing £133,832, as compared with £129,747, while the interest on the Southern Lines bonds had been paid in Swiss francs, producing in sterling £111,749, as compared with £104,672. Had the interest on the Southern Lines bonds been collected at New York it would have produced in sterling only £66,659. There was a balance of revenue of £43,951, including the amount of £11,014 for accrued interest on the Southern Lines bonds which would be received on November 1st next. Deducting that sum, there was left £32,937, from which the directors recommended that a dividend of 3 per cent., less tax, should be paid on the preference shares.

Regarding the operation of the Manila Railroad Company, the gross income from 1934 had been 1,922,758 pesos, and deducting interest on funded debt, exchange expenses, etc., there was a loss of 1,115,650 pesos comparing with a surplus of 21,431 pesos. If the operation of the Northern Lines and the Southern Lines for 1934 were segregated, the net income for the Northern Lines had amounted to 1,062,938 pesos, as against a net loss of the Southern Lines of 2,218,589 pesos, while the figures for the four months to April last showed that the net loss on the combined lines was 154,803 pesos, compared with a corresponding profit of 1,096,903 pesos for 1934.

The report and accounts were unanimously adopted.

At the meetings which followed to consider the proposals of the board for the sale of the company's holding of Southern Lines gold bonds of the Manila Railroad Company, the scheme was approved by a large majority at the extraordinary general meeting, and was carried both on a show of hands and on a poll at the meeting of the holders of the 5 per cent. debentures. Meetings of the holders of the "A" and "B" debentures were adjourned until October 24th in the absence of a quorum.

COMMERCE AND TRADE

SURVEY OF COMMODITY MARKETS

THE gradual deterioration in the international situation this week has been accompanied, *pari passu*, by a further rise in commodity prices, culminating on Thursday, when, with few exceptions, quotations recorded a substantial advance. The war scare, while making holders of commodities more reluctant to sell, has prompted consumers to cover their requirements, and has given the cue to speculators who have been frightened out of the stock markets. These tendencies have been reflected in the Liverpool and Chicago wheat markets, where a fresh rise in quotations has taken place. The market in vegetable oils and oilseeds displayed a similar movement, the jump in prices on Thursday being considerable.

As might have been expected, business in metals has continued active, copper, lead and spelter all being dearer than a week ago. Tin is becoming increasingly scarce and the price of this metal continued its recent rise during the early part of the week. On Wednesday, however, an announcement that an emergency meeting of the International Tin Committee had been called for Thursday took the market by surprise; the prospect of a further increase in production quotas, coupled with heavy selling in the Straits at declining prices, produced a setback here. By way of contrast to the general tendency, the rubber market has continued to wear a listless air and quotations have weakened. Among textile raw materials cotton, wool and hemp have been firmer; jute has been easier and silk remained unchanged in price.

Prices of foodstuffs in general have continued their recent rise. On the London Provision Exchange bacon, butter and cheese have again been marked up this week. At the Mincing Lane tea auctions competition has been active, with recent prices well maintained, while raw sugar has scored a further modest rise. Eggs and meat are practically unchanged in price on the week, but many descriptions of fruit and vegetables, supplies of which continue heavy, were cheaper than a week ago.

In the United States, primary products have again risen in price. The upward movement is reflected in Moody's index of the dollar prices of staple commodities (December, 1931 = 100) which reached 173.6 on Wednesday, compared with 173.1 a week earlier and 165.0 a month ago. On the corresponding day last year the index stood at 145.6.

COAL

SHEFFIELD.—Conditions in the export section are unchanged. Supplies are more plentiful, but demand for prompt shipment is quiet although improving, and recent returns disclose a reduction in exports. Hopes are entertained of increased business henceforward. On inland account, deliveries and inquiries for best steams are broadening, and the same may be said of all descriptions of fuel for manufacturing industry. Gas coal is moving more freely. Trade in house coal has increased and winter prices are now in force. There is a good demand for furnace coke with abundant supplies.

Quotations: Best hards, 18s. to 18s. 6d.; Derbyshire do., 17s. 6d. to 18s.; washed trebles, 17s. to 17s. 6d.; screened gas coal, 16s. 6d. to 18s.; best slacks, 10s. 9d. to 11s. (all f.o.b.); best Yorkshire house, 20s. to 22s.; best Derbyshire do., 19s. to 21s. (at pits); furnace coke, 13s. to 13s. 6d. (at ovens).

NEWCASTLE-ON-TYNE.—Prices of large screened steam coals remain firm and prospects for the next few months are bright. Inquiry is good, the latest being from the Swedish State Railways for 84,500 tons, October–December shipment. Steam smalls are cleared readily, and sized nuts are in better demand with the approach of winter. There is a little more activity in Durham gas coals, but the general position in this coalfield is much the same, there being abundant supplies of unscreened coking and bunkers. Prime brands of coke are firm and almost unobtainable, but ordinary makes are freely offered.

Current f.o.b. prices for export: NORTHUMBERLAND—D.C.B. screened, 15s.; smalls, 11s.; Howards, Bentinck, Newbiggin screened, 14s. 3d.; smalls, 10s. 6d.; Tyne prime large, 13s. 9d.; smalls, 11s.; Hartley Main large, 13s. 9d.; smalls, 11s. DURHAM—Lambton/South Hetton screened steam, 15s. 2d.; smalls, 12s. 6d.; Wear special gas, 15s.; Holmside, Ryhope, Boldon unscreened gas, 14s. 6d.; second-class gas, 13s. 2d.; coking unscreened and/or smalls, 13s. 2d.; prime unscreened bunkers, 13s. 9d.; second-class unscreened bunkers, 13s. 3d.; prime foundry coke, 18s. 6d.; Newcastle and district gas coke, 20s.

GLASGOW.—There has been a fair recovery in the rate of shipments, and the market generally remains steady in tone, with

nuts usually better placed than large coal. The freight position continues to be a source of some worry, there being still a shortage of boats in certain trades, and a stiffening of rates has affected the calculations of exporters working on a c.i.f. basis. Fifeshire remains the busiest district, and some short-time working is the rule in most districts. Prices generally are fairly firm.

Export prices (f.o.b. district ports): LANARKSHIRE—Ell best, 14s. 6d.-15s.; splint best, 17s. 6d.; splint second, 15s.-15s. 6d.; navigation, screened, 14s. 9d.-15s.; navigation, unscreened, 13s. 6d.; Hartley, 16s.; steam, 13s.-13s. 6d.; trebles, 13s. 6d.-14s.; doubles, 13s.-13s. 3d.; singles, 12s. 9d.-13s.; pearls, 11s. 3d.-11s. 6d.; dross, 10s. FIFE—Best unscreened navigation, 12s. 6d.-12s. 9d.; unscreened navigation, 12s. 3d.-12s. 6d.; first-class steam, 13s. 6d.-14s.; third-class steam, 12s. 3d.-13s.; trebles, 13s. 6d.-16s. 9d.; doubles, 13s. 6d.-14s. 6d.; singles, 12s. 9d.-13s.; pearls, 11s.-11s. 6d. LOTHIANs—Best splint, 14s. 6d.; prime steam, 13s.-13s. 3d.; secondary steam, 12s.-12s. 6d.; unscreened navigation, 12s. 9d.-13s.; trebles, 14s.-14s. 6d.; doubles, 14s.; singles, 12s. 9d.-13s.; pearls, 11s. Ayrshire—Best unscreened navigation, 14s. 6d.; steam, 12s. 6d.-12s. 9d.; trebles, 14s.; doubles, 13s.-13s. 6d.; singles, 13s. 6d.; pearls, 13s.; dross, 11s. 6d.

CARDIFF.—The colliery owners and the workmen in the South Wales coalfield have withdrawn their applications for a review of the minimum and subsistence wages, and, subject to the result of the national agitation for an increase of 2s. per shift, local rates will thus continue in force for another twelve months. Non-unionist stoppages at two colliery groups employing over 14,000 workmen have been in progress since Monday, and it is feared that, although the men are expected to report to the colliery companies in the course of the next day or two that they are ready to resume work, many pits will remain closed pending an improvement in trade. Conditions at the South Wales ports this week have been almost featureless. It appears that a considerable part of the arrears owing to South Wales exporters in respect of deliveries up to the end of last March has been liquidated by the Italian Government, but differences over payment conditions for current supplies continue, and shipments to Italy remain below the normal average. The Egyptian State Railways are expected to place a contract for 280,000 tons of large and small coals at an early date. Quotations for practically all classes are unchanged. In the pitwood trade, Portuguese timber eased under the influence of a temporary surplus, and was quoted on Wednesday at 21s. 6d., ex ship, which compares with the fixed price of 24s. 3d. for French wood under the coal-pitwood barter agreement. Shipments in the foreign and coastwise trades of the South Wales docks last week totalled 401,100 tons, compared with 272,100 tons the previous week, and 451,370 tons in the corresponding week last year; while for the whole of September exports to foreign destinations were 1,127,063 tons as against 1,271,000 tons the previous month, and 1,373,000 tons in the corresponding month last year. Shipments to Italy at 71,180 tons were 43,000 tons less than in August, and 127,000 tons less than in September, 1934.

Current approximate quotations: Best Admiralties, 19s. 6d.; seconds, 18s. 9d. to 18s. 3d.; best drys, 18s. 9d. to 19s.; Black Veins, 18s. 3d. to 19s. 6d.; Western Valleys, 17s. 9d. to 18s.; Eastern Valleys, 17s. 3d. to 17s. 7½d.; best small steams (washed), 13s. to 13s. 6d.; seconds, 12s. 6d. to 13s.; coking smalls (washed), to 14s.; anthracite best large, 36s. to 40s.; coking smalls, 13s. 6d. to 27s.; machine-made cobbles, 35s. to 51s.; French nuts, 35s. to 51s.; stove nuts, 34s. to 49s.; rubble to 51s.; French nuts, 35s. special foundry coke, 37s. 6d. to 40s.; patent fuel (Crown), 21s.; pitwood, ex ship, 24s. 3d. French, 21s. 6d. Portuguese

IRON AND STEEL

MIDDLESBROUGH.—Total shipments of pig iron and manufactured iron and steel from the Tees during the month of September amounted to 44,486 tons as compared with 50,028 tons during August. Shipments of pig iron to Scotland were fully maintained, the quantity shipped to that destination during September being 5,160 tons against 5,010 tons during August. The quantity of manufactured steel shipped to foreign destinations during September was 19,340 tons, as compared with 26,831 tons during August. The chief customers for steel during the past month were Denmark, India, Northern Rhodesia, Russia and South Africa.

At the end of September there were 26 furnaces in blast in this area, as follows:—Three on Cleveland foundry iron, 10 on hematite iron, and 13 on the manufacture of other kinds. The iron market remains active. Although most buyers have covered their requirements for some time ahead, transactions covering small lots are being made from day to day. The orders which makers are fulfilling are chiefly from home users. Prices are maintained at the fixed minimum bases of 67s. 6d. per ton for No. 3 Cleveland foundry pig iron and 71s. per ton for No. 1 East Coast hematite, all delivered locally. Export business is dull and difficult to negotiate. Steel producers continue to expand.

Steel producers continue to experience a heavy demand for semi-manufactured steel, whilst orders for constructional steel for all purposes are keeping the works well employed. The local plate mills are expecting to derive some benefit from the orders placed with Tyne shipyards this week for two tankers and three other vessels.

Heavy steel melting scrap is in good demand, and works are paying 52s. 6d. per ton delivered. Best Bilbao rubio is inclined to be firmer on account of the higher freight asked by shipowners from the Bay. Good Durham blast furnace coke is offered by makers at 19s. per ton delivered at the furnaces, but it is understood that this price could be shaded.

SHEFFIELD.—Open-hearth basic steel plants can scarcely keep pace with demand, and United Steel Companies at their Templeborough plant have found it necessary to put two additional furnaces into commission. There are 14 sixty-ton furnaces at work, except when one of them needs repair. Many firms have full order books for steel required for armaments, aircraft, electrical machinery, and automobiles. Requirements of general engineering are fairly good. Overseas business continues to expand, but very slowly, and is quiet with several foreign countries. The local position is affected adversely by the development of steel production in Russia, Japan, Spain, South Africa and India. Unemployment figures are steady. Favourable reports are received from tool makers, especially engineers' small tools, but inland competition is keen, owing to the increase of the productive capacity of the trade. The plate and cutlery industries are experiencing some seasonal revival, but there is a good deal of slackness in this section.

GLASGOW.—Conditions in the West of Scotland remain satisfactory. The current level of activity is likely to be maintained in many branches for some months. Steel makers experience a good demand for almost all sections, and the tonnage placed during the last week is encouraging. In the sheet trade, home users are absorbing a very large tonnage. Mills are kept fully employed, mainly on home business. Export demand maintained at about recent levels for both black and galvanised sheets. Tube makers are very busy, and full time working at the plants is general. Carriage and wagon builders in the Motherwell district have secured further orders which will provide considerable employment in the district. Re-rollers of steel bars are benefiting from the restriction of foreign imports and employment is more plentiful. As regards Clyde shipbuilding, the orders recently placed for motor tankers will provide work for a large number of men for many months in the various districts.

CARDIFF.—The recent improvement in the condition of the tin-plate trade is being maintained. Last week the deliveries from works to warehouses totalled 90,079 boxes, compared with 83,892 boxes the previous week, and the shipments 95,271 boxes, compared with 35,290 boxes. Prices, however, are unchanged, although there has been a sharp rise during the past few days in the cost of tin. Galvanised sheets are very quiet, and foreign inquiries continue very slack. Sheets are quoted at £11 5s. per ton f.o.b., and steel bars are unaltered at £5 5s. per ton delivered.

OTHER METALS

COPPER.—Prices continued to rise this week and, for the first time since 1933, passed the £35 mark on Tuesday. Although liquidation has been heavy, the supply was easily absorbed, and turnover has therefore remained at a high level. The United States market has become more normal. American sales, which amounted to 85,100 short tons last month, will probably show a decline in October, unless political developments generate a fresh buying wave. The American export quota of 8,000 tons does not seem to wave. The American exporters in that country, for shipments again exceeded 25,000 tons during August. As soon as the market settles down again this violation of the agreement by United States shippers might lead to serious difficulties. Meanwhile, Italy has raised the restrictions on imports of copper. It is doubtful, however, whether this step will lead to any significant increase in exports to Italy, for London and American merchants have been exercising caution and generally ask for payment before shipment or against documents. Unless Italy is prepared to buy on these terms she will have difficulty in securing the additional supplies of copper which she needs. In France it is proposed to use more aluminium in place of copper for high-tension electric cables. A similar proposal in 1929 met with considerable success, and the new project may, therefore, be worth consideration.

Sales on the London Metal Exchange: 1,950 tons on Monday, against 2,400 tons last week; 3,500 tons on Tuesday, against 3,250 tons last week; 3,450 tons on Wednesday, as against 2,250 tons last week. Domestic spot was quoted at 8-52½ cents per lb. in last week. New York on Wednesday, against 8-45 cents a week ago and 7-92½ cents a month ago. Wednesday's official closing price for standard cash in London was £35 to £35 1s. 3d., compared with £34 16s. 3d. to £34 17s. 6d. a week ago. Stocks of refined copper in British official warehouses at the end of last week, at 79,181 tons, show an increase of 10 tons, while stocks of rough copper, at 11,484 tons, show an increase of 75 tons on the week.

LEAD AND SVELTER.—Both markets recorded a further improvement as a result of the strength of demand. According to the American Bureau of Metal Statistics, world output of lead fell by 1,900 short tons to 126,700 short tons in August. On the other hand, world production of spelter, according to the same authority, rose by 3,300 to 122,200 short tons. The trend of recent months was therefore continued. If the expansion of spelter production and the contraction of lead production continue, there is little prospect that the prices of the two metals will move closer together in the near future.

Sales of lead on the London Metal Exchange: 1,400 tons on Tuesday, against 1,600 tons last week; 1,850 tons on Tuesday, against 1,500 tons last week; 750 tons on Wednesday, against 1,600 tons last week. The New York quotation on Wednesday was 4:50 cents per lb., against 4:50 cents a week ago and 4:35 cents a month ago. The official closing quotation in London for soft foreign for shipment during the current month was £17 10s. per ton, compared with £17 3s. 9d. a week ago.

Sales of spelter on the London Metal Exchange: 900 tons on Monday, against 350 tons last week; 700 tons on Tuesday, against 1,150 tons last week; 1,600 tons on Wednesday, against 1,200 tons last week. Wednesday's quotation in East St. Louis was 4-75

cents per lb., against 4.75 cents the week before and 4.60 cents a month earlier. Wednesday's official closing quotation in London for "good ordinary brands" for shipment during the current month was £16 16s. 3d. per ton, against £15 18s. 9d. last week.

TIN.—The tin position continues delicate. British warehouse stocks had fallen to less than 600 tons last week-end, while, according to Messrs. A. Strauss and Company, world stocks declined by no less than 2,583 tons, to 11,635 tons, during September. This is the lowest stock figure for many years. All principal producing countries are now behind-hand with their exports. Although a considerable increase was expected in September, actual exports decreased by 1,461 tons to 7,699 tons. At the same time, deliveries were maintained at the high level of 9,000 tons. It was not surprising, therefore, that tin prices recorded a sharp rise in the early part of the period under review, at one time touching £233 per ton. Subsequently, however, a slump took place and, at the close on Wednesday, prices were £4 lower on the week. This decline was due to the announcement that a special meeting of the International Tin Committee had been convened for Thursday, and to the anticipation that production quotas would then be further increased. Whether such an increase would be effective in removing the existing scarcity in a short time is, however, doubtful; for most of the producing countries had difficulty in finding sufficient labour to increase their output rapidly to the 65 per cent. level. The decision of the Committee has not been made public up to the moment of going to press.

Sales of tin on the London Metal Exchange : 200 tons on Monday against 250 tons last week; 210 tons on Tuesday, against 200 tons last week; 360 tons on Wednesday, against 240 tons last week. The New York quotation on Wednesday was 49-1½ cents per lb., against 49-50 cents a week ago and 48-85 cents a month ago. Wednesday's official closing quotation in London for standard cash was £23 to £225 per ton, compared with £27 to £30 last week. Stocks of tin in London and Liverpool at the end of last week totalled 587 tons, a decrease of 249 tons on the week.

OTHER NON-FERROUS METALS.—Among other non-ferrous metals, aluminium ingots and bars for home delivery were again quoted at £100 per ton. Nickel, for home and export, at £200 to £205 per ton, remains unchanged. Quicksilver, on the spot, was unchanged at £11 15s. per flask of 76 lbs. Chinese antimony was quoted at £68 per ton ex warehouse, duty paid, the same as a week earlier. Chinese wolfram for October–November shipment was again quoted at 33s. to 34s. per unit c.i.f. Platinum (refined) at £7 10s. per ounce, was unchanged on the week.

TEXTILES

COTTON.—**Manchester.**— Conditions in the market have been rather quieter, but demand for yarn and piece-goods has been stimulated by the rising tendency of raw cotton prices. There has been increased activity in the cotton futures market in Liverpool at advancing prices, and there has continued a healthy demand for actual cotton, especially American and Peruvian descriptions. The tight spot position is a factor of importance. Stocks on this side are very small and spinners experience difficulty in obtaining suitable qualities. The American Government Bureau report will be published next Tuesday and the opinion is gaining ground that the crop estimate will be rather smaller than a month ago, when it was 11,489,000 bales. There has been more interest in the Egyptian staple, it being recognised that if there is any trouble in the Mediterranean, prices may advance rather sharply.

Although the general inquiry in piece-goods for abroad has been fairly well maintained, actual sales have been rather smaller. Some moderate lines have again been put through for India, chiefly in mulls and bleached shirtings for Karachi and fancies for Bombay and the up-country markets, with a slight improvement in demand for dhooties for Calcutta. Scattered transactions have been reported in fancies for China and the minor outlets of the Far East. Some manufacturers of finishing qualities have done rather better in South America, and there has been increased activity in sheetings for South Africa and the home trade. Yarn quotations have risen.

BARCLAYS BANK

LIMITED
HEAD OFFICE: 54, Lombard St., London, E.C.3
and over 2,000 Branches in England and Wales

TRUSTEE DEPARTMENT

CHIEF OFFICE : 37, King William St., London, E.C.4

The Bank has power to act as EXECUTOR and TRUSTEE under Wills and Settlements, and as Trustee for Debenture Holders. A Pamphlet stating terms and conditions for transacting business may be obtained from the Manager of the Trustee Department, or from the Manager of any Branch of the Bank.

AGENTS IN CANADA:

BARCLAYS TRUST COMPANY OF CANADA
MONTREAL

shipment, and £10 10s. for new crop, January-February. More interest has been shown in Indian varieties, which remain firm. The quantity now afloat for Europe is 121,300 tons (including 4,100 tons from India), 7,200 tons less than last week; and for the United States and Canada 25,800 tons, against 40,300 tons a year ago. A fair trade is reported in Egyptian cottonseed, January-March, Hull, around £6 to £6 2s. 6d.

Linseed oil is in fair demand. After some reaction at the close of last week prices are again firm and advancing. The current price of raw oil ex Hull mill for October delivery is £26 5s., and for November-December £26 10s., with later positions at a premium. Cotton oil is scarce and firm. Late quotations ex Hull are maintained, with Egyptian crude at £25 and refined at £27 per ton, naked. Oilcakes are in improved demand and firm.

RUBBER.—The tone of the rubber market during the past week has offered a striking contrast to that of the majority of commodity markets. A listless feeling has been in evidence and quotations again sagged, despite last week's decision of the International Committee to cut the export quotas for the present quarter. The spot price in New York on Wednesday last was 11½ cents per lb. compared with 11½ cents per lb. a week ago and 11½ cents a month earlier. Wednesday's official closing price for standard ribbed smoked sheet in London was 5½d. per lb., as against 5½d. on the corresponding day last week. In forward positions, business has been done at 5½d. to 5½d. for January to March shipment, as against 5½d. to 6d. a week ago. Stocks in London and Liverpool at the end of last week totalled 176,958 tons, against 177,753 tons a week earlier. A year ago stocks amounted to 113,507 tons.

WHOLESALE COMMODITY PRICES UNITED KINGDOM

The prices in the following are revised with the assistance of an eminent firm in each department.

LONDON, October 2nd				CEREALS AND MEAT			
GRAIN, Etc.—				POTATOES—

OVER THE RUBICON

SIGNOR MUSSOLINI, faithful to Cæsarian precedent, has crossed the Rubicon. In this case, it is a small stream on the frontier between Ethiopia and Eritrea which has been crossed by the Italian armies. But the effect is the same: a dictator has flouted all his commitments. For, by his action, the Duce has broken his solemn engagements under the Covenant of the League of Nations, the Pact of Paris which outlawed war as "an instrument of national policy," and the 1928 Treaty of Amity between Italy and Ethiopia. "With, without, or against Geneva"—to quote his own words—the Italian dictator has launched his long heralded offensive, and by so doing has outraged the public opinion of the world.

Whether his armies will have an easy "walk over" in Abyssinia, as the Italian people have been led to believe, remains to be seen. The Italian news from the seat of war is naturally heavily censored; while the reports from Addis Ababa, whose means of communication with the various fronts are very primitive, are inevitably meagre. All we know

think that they will, at the outset, consist of (1) raising the arms embargo so far as Abyssinia is concerned, (2) restricting some, if not all, of Italy's exports to foreign countries, (3) prohibiting exports to Italy of certain materials needed for armaments, and (4) placing a complete embargo on Italian borrowing from abroad. It is possible also that this programme may be completed by the withdrawal of ambassadors from Italy.

These measures, though they cannot in any way be described as innocuous, are nevertheless of a "mild" character, and certainly will not bring the war to a very speedy end. Although Italy is already finding the greatest difficulty in raising financial resources abroad, experience has shown how difficult it is to prevent a great country from securing its minimum needs by hook or by crook. In an article on a later page, it is shown that Italy could obtain the wherewithal to pay for the coal she must import from the proceeds of the goods which she sells to Germany, Austria and the United States—three countries which will not take part in economic sanctions. The stopping of Italian exports will undoubtedly prevent her from buying many of the things she normally imports. But Signor Mussolini has already gone far towards making Italy self-sufficient; and though these schemes will cause the Italian people inconvenience, which may ultimately develop into distress, we cannot assume that they will quickly bring her to her knees. Nor will the prohibition on the export of war materials to Italy have any effect for a considerable time. It may be assumed that Italy already possesses ample munitions in East Africa for carrying on the campaign until next spring, by which time she may expect to have attained her initial objectives. Finally, lifting the embargo on arms to Abyssinia will come too late in the day to affect the issue—at least as far as the current winter campaign is concerned. It must be assumed, therefore, that those who advocate this programme, cannot be looking for any quick result, unless such a result is to be caused by psychological tension inside Italy.

And yet speed is vital. At the moment the League is united. No one can say that it will be six months hence. If, at a moment when a flagrant breach of the Covenant has been made, the members of the League are unwilling to take more than "mild" action, it is almost unthinkable that some moment will occur during the campaign when they will all agree to take sterner measures. It is much more likely that many of them will find reasons for abandoning even the moderate stand they have now taken. Again, a reasonable solution of the Abyssinian problem has been drawn up, and it might be applied to-day. It would be much more difficult to bring it into effect six months hence if at that time there were no effective government in Ethiopia, but only a number of guerilla chiefs maintaining scattered, if effective, resistance. Finally, a method which permits war with all its suffering to drag on, and seeks to attain peace by the slow torture of economic pressure on the Italian people, is hardly one which can recommend itself to the League of Nations.

On the other hand, strong sanctions, amounting to a blockade and the severance of communications between Italy and Africa would be decisive. If the chief members of the League were prepared for this step—and there are many precedents for "pacific blockade" in international history—the results of such a step would not be in doubt for a moment.

In contrast with the method of slow pressure which is likely to combine the minimum of effectiveness with the maximum of illwill, this step would establish the prestige of the League and ensure the maintenance of peace more decisively than any other. By so doing, it would confer the greatest security on France and other countries that the world has in its power to offer. Action on these lines would ensure peace in Europe for a generation. It constitutes our only hope of arresting the armaments race upon which we have all recently embarked.

In his short speech to the Assembly on Thursday, Mr Eden declared, on behalf of His Majesty's Government, "our willingness to take our full part" in whatever action the League of Nations may collectively determine. He added that, since it is our duty so to fulfil our obligations, "such action should be prompt." But effectiveness is every whit as essential as promptitude.

PARTIES AND THE ELECTION

NORMALLY, as a general election approaches, political parties become more and more convinced of their own infallibility and the sinfulness of their opponents. Catchwords invade the scene, and common sense retires. Last week's Conservative and Labour Conferences, however, left exactly the opposite impression. The speeches of the leaders at least were marked by a moderation which, on some fundamental issues, implied an undercurrent of agreement between the two Parties. This was, of course, in the main due to the irruption of an ominous international crisis which for the moment overshadows every single domestic issue. The truth is that the basic agreement of all parties on foreign policy which existed from 1919 to 1931, but was shattered by the episode of Manchuria and Sir John Simon's Foreign Secretaryship, has now been restored.

The rumour that the Government has decided on an election in November is accordingly all the more surprising. Now that the two principal parties in the State are in agreement on the Government's sanctions policy, it is absurd to pretend that an election is necessary to secure a popular mandate for that policy. A November election, if fought on foreign issues, would be dangerous; and, if not fought on foreign issues, would be unnecessary. In these circumstances a final decision to hold the election in November would be widely interpreted as a discreditable and unpatriotic attempt to exploit national unity for party purposes.

Fundamental disagreement on foreign policy is clearly most dangerous to the working of democratic Government. And the speeches of Mr Baldwin and the Labour leaders at last week's Conferences showed that no such conflict now in fact exists. The positive contentions of both sets of speeches were the same: that the best practical hope of peace lies in the preservation of a system of collective security. They differed principally in that Mr Baldwin had to defend himself against the isolationists, and Mr Bevin and Mr Morrison against the pacifists. Addressing the isolationists, Mr Baldwin spoke plainly:—

I believe isolation to be dangerous on national and imperial grounds. I believe it, in short, to be impossible.

He then specifically referred to the Labour Party's vote in favour of sanctions, and remarked that he "rejoiced in the fact that that resolution was passed."

Naturally, speaking at an official Conservative gathering, Mr Baldwin had to undertake that Great Britain's Navy and Air Force would not be allowed to become inferior to those of any other nation. But he was much more restrained than Mr Churchill and, it is to be feared, than Mr Chamberlain. A resolution had originally been moved by Sir Edward Grigg calling for both a strengthening of our air defence forces, and for a renewed attempt to secure agreed disarmament. In response to Mr Churchill, however, and with the approval of Mr Chamberlain, a new resolution was adopted which watered down the disarmament clause and pledged the conference to "support any safety, however great the sacrifice may be." Mr Chamberlain, in contrast to Mr Baldwin, spoke as if he did not mind what happened to disarmament and collective security, so long as Great Britain's Navy and Air Force were substantially expanded. It is certainly a regrettable departure from British tradition that the Chancellor of the Exchequer should himself be the foremost advocate of increased expenditure on armaments. And it certainly will not help to promote national agreement on foreign policy if collective security is to be used as an excuse for unilateral re-armament by Great Britain. If the Government went to the country on such a hypocritical cry as this, they would deserve humiliating defeat.

Last week's Conferences, however, were merely concerned with foreign policy. In the debates on domestic issues some of the currents which are running towards the general election could be discerned. Mr Baldwin's liberal attitude, as it happened, extended to domestic issues also; and he went out of his way to emphasise the crucial importance of a strong and independent trade union movement in preserving democracy in a great industrial State. "A free trade unionism," he said, "is a bulwark of popular liberty." The Conference, as a whole, however, having temporarily forgotten re-armament, was thinking

of the two internal issues which are likely to be most important at the election: agriculture and the distressed areas.

The change which has come over Mr Elliot's attitude to agricultural policy since the crude protectionism of two years ago is one of the most significant features in the liberalisation which the Government seems to have undergone in the last eighteen months. Two years ago Mr Elliot argued that international trade had become unnecessary in the modern world; that "self-sufficiency" was a marvelous new economic system made possible by scientific invention; and that the "regulation" of industrial and agricultural production in the interests of the producers would at once solve all our difficulties. This week his tune was very different. It would be a grave responsibility, he said, for any Minister of Agriculture seriously to reduce our food imports "because that would throw men out of employment at home and the increased consumption of food would not be secured." Moreover, we must not raise the price of food out of the reach of the housewife by artificial means." On the contrary:—

The people of this country can undoubtedly consume far larger quantities of foodstuffs than they are getting at present, but to do that, we must have purchasing power and employment. Therefore agriculture is bound up with the prosperity of the country as a whole.

Finally, Mr Elliot mentioned Mr S. M. Bruce's call for a policy that would "marry health and agriculture" and Sir John Orr's desire for an increased consumption of health-giving foods; and he gave an undertaking that Conservative policy was now evolving along these lines.

The emergence of the idea of a "national food policy" in British politics is an event of the first importance. Its origin in the last two years has been most curious. On the one hand, the widespread criticisms of Mr Elliot's own policy of restricting food supplies, and, on the other, the scientific controversy about "nutrition" standards, have propagated the idea that the food consumption of the mass of the people is too low and ought to be increased. There is perhaps some irony in the implication that this "problem" never existed before; and already a tendency is observable to imagine that health and agriculture can be "married," and the surplus foodstuffs conveyed to necessitous consumers, by some unexplained economic wizardry. Neither the Conservative nor Labour Conference showed much disposition to face the issue honestly. Yet the fact is that the two problems can only be solved if adequate purchasing power is put into the hands of the consumers who now lack it. And this can only be done in two ways: by a direct consumers' subsidy out of the Budget, or by the provision of increased employment through normal economic revival. The second will not be possible until the two parties embark on more liberal fiscal policies than either of them last week showed much inclination to adopt. The first can only be effective if the suggested consumers' subsidy is financed out of taxation on less necessitous classes, and not, as Mr Elliot still disquietingly hints, out of taxation on imported food.

The connection between agriculture and the distressed areas was explicitly recognised in Mr Elliot's remark that if we could put another 1,000,000 men to work we should enormously expand the demand for British agricultural produce. And the Labour Conference's decision to support the miners' campaign for better wages was yet another reminder of the plight of our exporting areas. But both the Conservative and Labour Parties are still apparently hoping that, without any substantial revival of our export trade, some magical solution of the problem of the distressed areas can be found. Something to alleviate the present distress can doubtless be done by relief action; and the Government's response to Mr P. Malcolm Stewart's report and Mr Bevin's offer to co-operate in carrying it out will, consequently, be awaited with interest. But whatever palliatives may be adopted, it is clear that the real issue is not being faced, and that the spectre of the distressed areas will still be here to haunt all parties when the general election comes.

It would unquestionably be disastrous if that election were to be fought on an issue of foreign policy. At the East Fulham by-election, two years ago, it looked as if the

7, CHANCERY LANE, LONDON

menace of war might prove electorally advantageous to the Labour Party. Last spring, on the other hand, the re-armament of Germany seemed to be provoking a reaction of feeling in favour of the National Government. Now we have happily reached a situation in which party dissension on foreign policy is substantially at an end. Do the Government really intend to jeopardise this piece of national good fortune, to improvise an unnecessary election, and to drag down the League of Nations once more into the dust of party conflict? To do so would certainly be inconsistent with the spirit of Mr Baldwin's speech last week. The issues which really divide us in this country to-day are internal: the distressed areas, unemployment assistance, and the future of agriculture and the coal industry—on all of which, incidentally, the Government's policy has lately become more liberal. On these issues alone can an honest election be held. And it should not be held on any account until the international crisis has subsided.

ITALY'S ECONOMIC VULNERABILITY

ARTICLE SIXTEEN of the Covenant of the League of Nations, which was put into effect against Italy by the decision of the Council on Monday, imposes upon Members who endorse that decision the obligation to undertake "the severance of all trade or financial relations, the prohibition of all intercourse between their nationals and the nationals of the Covenant-breaking State." That these so-called "economic sanctions" were not intended by the framers of the Covenant to be either exclusive of, or alternative to, the use of armed force is clearly implied by other sentences in the same Article. But it is clear, on grounds both of law and of policy, that economic and financial measures will in any case be the sanction of first resort, whether or not they are backed up, or followed, by the use of armed force. Whether that armed force will later be necessary depends upon whether the economic and financial sanctions can by themselves be effective in restraining the Covenant-breaker. It will accordingly be useful to inquire how far Italy can be expected to be vulnerable to purely economic pressure.

The problem of economic sanctions is undeniably complicated by the fact that there are nations outside the League. In the case of Italy, the two extra-League powers of which notice must be taken are the United States and Germany, since Italian trade with Japan and Brazil is very small. The American President has prohibited the export of munitions to the belligerents. He has further denied in advance any protection to American citizens trading with Italy if they should be restrained by the League powers. Short of such restraint, however, which would involve a blockade, which in turn might be regarded by Italy as an act of war, trade between Italy and the United States will continue. Germany is unlikely to join in a League-imposed

policy of economic sanctions. Even if sanctions pass over into a definitely military phase, it may be impossible to prevent trade between Italy and Germany because of the geography and politics of Austria, which divides them. Some doubts have been expressed about the attitude of Switzerland to sanctions. Speaking in the Assembly on Thursday, the Swiss delegate said that Switzerland could not be a party to such sanctions as would endanger her neutrality. But he was careful to draw a distinction between military and economic sanctions and to emphasise Switzerland's solidarity with the other members of the League. In view of this declaration, Swiss participation in economic sanctions may be assumed, at least for the time being. On the other hand, Austria and Hungary have declared their inability to take any part in applying sanctions. In the preliminary period, then, when the League is applying economic sanctions, but has not yet decided to use armed force (in the sense of blockade), Italy, will in all probability be free to trade with the United States, Germany, Austria and Hungary.

These loopholes in the wall of a League embargo are important in the particular case of Italy. Italian trade with the four countries named made up 33.8 per cent. of Italy's imports and 28.3 per cent. of Italy's exports in the first six months of the present year. The loophole is consequently a large one. Before we can decide how important it is, however, it is necessary to analyse Italian foreign trade in rather more detail. The following table shows Italy's imports in 1934 of thirteen materials from the six most important countries:—

CHIEF IMPORTS INTO ITALY: 1934
(in million lire)

Commodity	Switzerland	Germany	Austria	France	United Kingdom	U.S.A.	Total (all countries)
Wheat	...	...	...	7.2	...	89.4	185.6
Cotton and cotton goods	12.0	25.0	2.6	12.8	11.0	454.9	790.6
Wool and woollen goods	5.7	28.4	4.2	34.3	100.7	2.3	615.6
Iron and steel goods	14.8	85.5	15.6	89.7	22.6	41.8	362.2
Machinery	33.6	136.1	5.9	19.6	40.0	43.1	371.0
Coal	...	360.1	...	13.9*	297.7	4.1	775.5
Mineral oils and by-products	...	2.2	...	8.8	1.4	62.5	297.7
Wood and timber	0.3	2.1	54.1	3.5	...	40.1	271.8
Hides and skins ...	1.0	42.3	1.8	25.1	48.3	22.1	319.6
Copper	5.3	18.3	...	3.6	5.3	39.8	156.1
Other non-ferrous metals	2.4	8.7	2.0	1.7	15.4	7.4	100.2
Of which nickel..	1.1	2.0	...	0.6	8.2	5.2	22.0
Of which tin.....	...	0.8	...	0.3	6.5	0.8	54.4

Other important sources of supply (million lire) :—

Wheat.—Hungary, 28·6; *Cotton*.—Egypt, 138·8; Br. India and Ceylon, 108·6. *Wool*.—Argentina, 82·4; S. Africa, 56·3; Australia. *Iron and steel*.—Belgium, 31·3. *Coal*.—Poland*, 71·4; Holland*, 17·7; U.S.S.R., 45·5. *Mineral oils and by-products*.—Roumania, 78·2; U.S.S.R., 53·6. *Wood and timber*.—Yugoslavia, 101·1; U.S.S.R. 34·5. *Tin*.—Malaya. *Copper*.—Chile, Portuguese Africa.

* Including coke.

In the case of cotton, which is the largest single import, it will be seen that nearly 58 per cent. comes from the United States, and almost all the remainder from Egypt or India. Germany supplies 46½ per cent. of the coal, Great Britain 38½ per cent. (though this proportion has fallen to 34 per cent. in 1935). In iron and steel, France is the largest supplier, with nearly 25 per cent., but Germany sends 24½ per cent., Austria 4.3 per cent. and the United States 11½ per cent., making over 40 per cent. for the powers who will not impose economic sanctions. In machinery, over 66 per cent. comes from these latter countries; and in copper 38 per cent. The United States supplies 21 per cent. of the oil and Russia and Roumania between them nearly 30 per cent. Only in wool have the League powers an overwhelming superiority.

These facts suggest that the cutting off of Italy's supplies by the League, though it would, of course, be highly inconvenient, would hardly be crippling. Moreover, the question of stocks has to be taken into account. A table in the *Economist* of August 24th gave Italian imports of important materials in the last three complete years and in the first five months of 1934 and 1935. Several commodities have been imported in larger quantities recently, especially the non-ferrous metals. Coal imports were 34 per cent. higher in 1934 than in 1933 and 30 per cent. higher in the first five months of 1935 than in the corresponding period

of 1934. These increased imports may, or may not, still be available in the form of stocks in Italy, but there is nothing to suggest that, in general, stocks are very high.

These considerations suggest that a more fruitful approach to the question of economic sanctions can be found through cutting off Italy's *exports* rather than her *imports*. The following table shows the destination of the more important of those exports:—

CHIEF EXPORTS FROM ITALY: 1934
(in million lire)

Commodity	Switzerland	Germany	Austria	France	U.K.	U.S.A.	Total (all countries)
Cheese	11.4	1.8	1.1	26.9	20.3	77.6	152.4
Rice	9.5	36.8		12.9	0.2	0.6	120.0
Citrus fruit	20.4	81.2	19.8	10.5	60.5	4.7	278.9
Dried fruit	7.3	93.6	5.4	15.3	14.8	5.1	174.0
Wine & vermouth	53.9	21.8	3.6	3.6	6.4	27.0	146.1
Kaw silk	17.4	34.9	3.6				55.9
Artificial silk	43.8	117.1	13.8	12.9	5.8	1.8	97.2
Hemp	8.7	42.2	4.8	21.1	64.2	21.9	557.3
Cotton goods	5.0	6.8	1.0	3.6	23.5	2.3	128.6
Woolen goods ...	1.6	11.6	3.3		10.0		492.7
				5.6	1.1	25.7	255.9

Other important markets (million lire) :—

Rice: Netherlands, 12·9; Jugoslavia, 10·4. *Citrus fruits*: Czechoslovakia, 18·1; Hungary, 13·1. *Artificial silk*: Hungary, 31·0; Netherlands, 28·9; British India, 26·2; Spain, 22·8. *Hemp*: Belgium, 21·2; Spain, 11·4. *Cotton goods*: Argentina, 88·4; Jugoslavia, 77·7; Roumania, 53·2; Egypt, 43·6; Greece, 18·2. *Woolen goods*: British India, 33·1; Hungary, 18·8. *Tobacco*: Poland, 26·8. *Machinery and scientific instruments*: U.S.S.R., 48·3.

Two facts may be noted about these exports. First, none of them can be regarded as essential by its recipients. And secondly, no one country takes a large proportion of the total Italian export. The only large exception to this statement is in the case of citrus and dried fruit, of which, taken together, Germany absorbs 38½ per cent. Let us suppose that the League powers refuse to buy any goods from Italy. She would presumably still be able to sell to Germany, America, Austria and Hungary. But it is safe to assume that these four countries would be unwilling to take any larger quantities of Italian goods than at present. In the first six months of this year, Italy sold to these countries 688.3 million lire of goods. But in the same period she bought from them 1,299.0 million lire of goods. Unless she had other resources to draw upon, she would thus not even be able to keep up her present rate of imports from these four countries, still less increase her purchases to replace the goods denied her by the League powers.

What other resources are available? They can take three forms: first, reserves of foreign currencies; second, the proceeds of invisible exports; and third, the proceeds of loans. As for foreign exchange reserves, Italy's currency difficulties have already largely reduced these. It was reported some weeks ago that the Italian Treasury had acquired 500 million francs (say, 400 million lire) of French Government securities by requisitioning the holdings of Italian nationals. But even if the report is true, the amount is not large. In the United States, it has been estimated that Italy has assets amounting to some \$400 millions (5,000 million lire), but very few of these assets are realisable, the liquid assets being very small. In Great Britain, Italy's available resources are very small. Moreover, financial sanctions would presumably impound any assets in London and Paris, so far as they could be identified. Italy's two great invisible exports are her tourist traffic and her emigrants' remittances. With war a possibility, tourist traffic will come to a standstill without the need for action on the part of the League. Emigrants' remittances amounted to 2,000 million lire in 1930. The greater part comes from the United States, and these were estimated by the United States Department of Commerce to have fallen to \$16,500,000 (say 200 million lire) in 1934. As for loans, it has been reported in recent weeks that Italy has been obtaining some accommodation in Paris. But this should cease with the application of sanctions and it may safely be assumed that there is no other country which would grant loans to Italy. An Italian loan in the United States would fall under the ban of the Johnson Act.

From the incomplete data thus available it may be concluded that Italy might, with some difficulty, be able to keep up her present rate of importation from the four "non-conformist" countries, but that she could not

increase it. In other words, the stoppage of *exports* from Italy promises to be a surer way of cutting off her supplies of raw materials than the stoppage of her imports from the League powers alone. Unfortunately, there is no evidence from experience of the degree of paralysis which such stoppage would cause. That its effect in the long run would be very large cannot be denied. But in the long run Abyssinian independence, the League of Nations and the system of collective security may all be dead.

A QUARTER'S INDUSTRIAL PROFITS

INDUSTRIAL profits—acid test of “recovery,” yardstick of management and fountain of dividends—are still being carried on the tide of recovery which started almost exactly two years ago. Our analysis, for the quarter just ended, covers the reports of 345 companies, made up to dates ranging, for the most part, between April and July last, and shows a total increase of 12½ per cent. in earnings:—

NET PROFITS (AFTER PAYMENT OF DEBENTURE INTEREST, ETC.)

	No. of Companies	Reports published in		Increase (+)	
	1934	1933	1934	£	%
Third quarter ...	318	13,425,013	17,139,932	+ 3,714,919	+27·7
Fourth quarter ...	468	21,520,526	28,611,449	+ 7,090,923	+32·9
	1935	1934	1935		
First quarter	592	58,577,585	67,137,496	+ 8,559,911	+14·6
Second quarter ...	694	67,975,150	80,076,325	+12,101,175	+17·8
Third quarter ...	345	20,026,208	22,471,189	+ 2,444,981	+12·2

At a first glance, comparison of the latest percentage figures with those of earlier quarters appears to suggest that, although the upward movement in earnings is still healthy and vigorous, it is losing momentum. This impression, however, is subject to two qualifications. First, the September quarter's returns are invariably the least numerous and therefore the least representative of any quarter in the year. The reports which we received during the past three months cover, in fact, only 16½ per cent. of the companies and 11½ per cent. of the total profits included in our analyses for the last twelve months. Secondly, the maintenance of any given *percentage* increase involves a "geometric" rise in profits, which investors do not normally expect even of the strongest recovery movement. As our next table shows, the revival in earnings has now been proceeding, without serious setback, for the last eight quarters:—

PERCENTAGE COMPARISON WITH PRECEDING YEAR

	1929-30	1930-31	1931-32	1932-33	1933-34	1934-35	1935-36
Third quarter	+ 3.0	- 6.4	- 35.5	- 28.6	- 5.5	+ 27.7	+ 12.2
Fourth quarter	+ 1.4	- 18.1	- 53.9	- 2.9	+ 30.3	+ 32.9	...
First quarter	+ 1.9	- 10.6	- 14.3	- 8.9	+ 5.3	+ 14.6	...
Second quarter	+ 8.6	- 19.4	- 21.8	+ 3.3	+ 18.2	+ 17.8	...
Year ending June 30	+ 3.7	- 14.7	- 26.5	- 6.7	+ 12.1	+ 19.5	...

If the 345 companies, which reported in the last three months, had shown the same percentage increase in 1934 as the 318 companies which actually reported in the corresponding quarter of last year, their total earnings would have registered a rise of £4.35 millions for 1934, with a further rise of £2.44 millions in 1935. It would appear, therefore, that a certain slackening of the upward movement is, in fact, being recorded, of which the Treasury, the Stock Exchange and other authorities directly interested in industry earning power may well take note. There is no sign, however, of any serious check to revival, or any early substitution of "minus" signs for "plus" signs in our quarterly tables. Incidentally, the downward phase of profits during the depression of 1930-33 was continuous for the best part of three years, whereas the recovery phase has lasted, as yet, for less than two.

**CHRISTIANIA BANK
OG KREDITKASSE
OSLO**

Established 1848

Paid-up Capital and Reserve Funds,
Kr. 40.000.000.—.

Oldest Norwegian Private Joint Stock Bank.
Direct correspondents throughout the country.
Offering complete services to banks and firms
doing business on Norway.

Correspondence invited

In the next table we give a summary of the results recorded by various industrial groups in the last three months:—

NET PROFITS (AFTER PAYMENT OF DEBENTURE INTEREST,
ETC.)

	No. of Reports	Reports published in Quarter ended Sept. 30		Increase	Decrease

Total	345	20,026,208	22,471,189	2,444,981	12·2	...

The figures are an apt commentary on the unequal distribution of recovery through the length and breadth of British industry. If groups showing the results of less than five companies be omitted, as being insufficiently comprehensive to be representative, it would appear that out of twelve groups in the table, ten have achieved higher profits in the latest financial year. The palm goes to the rubber plantation industry, where the rise in the price of the commodity, following the inception of output restriction last year, has increased the earnings of 59 companies two and a half times over, though the prospect of a further rise is not, unfortunately, encouraging at the moment. Increases of more normal dimensions have been secured (a) by companies in "capital-producing" industries like iron and steel; (b) by "consumption trades" like food, confectionery and brewing; (c) by the retail trades, where an increase of nearly 19 per cent. in the profits of "shops and stores" is particularly gratifying; (d) by investment trusts, whose results usually follow those of industry, at home and abroad, with a time lag of about twelve months; and (e) by the composite residual group of "miscellaneous" companies, where the percentage increase is twice the average for the whole 345 companies. The only frankly disappointing results in the table are those of the tea plantation industry,

in which a restriction scheme, temperately administered, has failed to maintain the price level initially established, and the textile trades, where an improved tendency among the smaller artificial silk concerns has been more than offset by lower earnings in the wool textile and finishing trades.

How far is the "pull" of a few large companies likely to distort the aggregate figures? An approximate answer is suggested by the next table:—

Company	Profits, 1933	Profits, 1934
Distillers.....	£ 2,140,622	2,212,133
Arthur Guinness.....	1,745,174	2,013,209
Watney, Combe, Reid.....	989,867	1,044,122
United Steel Companies.....	947,680	1,115,305
International Tea Stores.....	645,860	755,315*
Debenhams.....	439,740	508,001
General Electric.....	803,452	1,076,928
Total (7 companies).....	7,722,395	8,724,013

* On larger capital.

It will be seen that seven large companies alone accounted for nearly two-fifths of the aggregate profits for 1935 of the 345 concerns which reported during the past quarter. Their percentage increase in earnings was 11.3, against 12.2 for the whole quarter's sample. The element of "distortion," therefore, is inconsiderable.

Our next table shows how aggregate profits have been distributed between dividends and reserves, etc., in recent quarters:—

	Net Profits after payment of Debenture Interest	Ordinary Dividend	Preference Dividend	To Reserve, etc.
1934				
Third quarter ..	£ 17,139,932	£ 9,738,898	56.8	4,228,115
Fourth quarter ..	28,611,449	17,149,005	59.9	5,600,522
1935				
First quarter ...	67,137,496	40,175,817	59.8	13,968,058
Second quarter ..	80,076,325	41,418,843	51.7	20,376,163
Third quarter ..	22,471,189	11,596,410	51.6	5,349,416

The figures strongly suggest that, with every rise in profits, dividend policy is becoming increasingly conservative. This is a characteristic phenomenon of a recovery which has become well established. It is the function of a sound policy of profit distribution to ensure that, in good and bad times alike, the income of shareholders fluctuates between narrower limits than earnings. In periods of revival, moreover, opportunities for the profitable employment of increased liquid capital are proportionately increased. The analysis of profits distribution by industrial groups, given on page 732 of this issue, shows, naturally, wide variation between different industries. Groups like iron and steel, which have achieved prosperity after accumulating arrears of depreciation, etc., during years of extreme depression, are tending, quite properly, to be relatively generous in their reserve policy. At the other end of the scale, the tea and textile companies, whose earnings have fallen this year, have tempered the wind to the lamb by drawing on past profits for grants-in-aid of dividends.

The next table shows the ratio of net profits and of reserve allocations to total ordinary and preference capital:—

	No. of Companies	Total Ordinary and Preference Capital	Net Profits after Payment of Debenture Interest	Carried to Reserve, etc.
1934				
Third quarter	318	£ 264,076,256	£ 17,139,932	6.5
Fourth quarter	468	401,504,146	28,611,449	7.1
1935				
First quarter	592	754,001,613	67,137,496	8.9
Second quarter	694	980,620,210	80,076,325	8.3
Third quarter	345	286,270,471	22,471,189	7.8

Earnings in the latest quarter bear a lower ratio to total ordinary and preference capital than those of the two preceding quarters, but are appreciably higher than those of the September quarter of 1934. The latest "reserve ratio," however, is fully up to the high standard of the two earlier quarters. It would appear, on the basis of this year's results, that "savings" (i.e. additions to effective working capital), through the medium of company reserves, are running at a rate equivalent to nearly 2 per cent. of existing share capital. In the third quarter of 1929, net profits were 11.2 per cent. and reserve appropriations 2.3 per cent. of total capital, while in the same quarter of 1932, which registered the low-water mark of depression, the corresponding percentages were 4.2 and 0.1 respectively. That the fruits of recovery are being equitably distributed between shareholders and "the business," is suggested by the next table, which shows the rates paid, since 1932, on various forms of capital:—

	On Debenture Capital				On Preference Capital				On Ordinary Capital			
	1932	1933	1934	1935	1932	1933	1934	1935	1932	1933	1934	1935
1st quarter	4.80	4.77	4.73	4.64	4.9	5.0	4.9	5.1	5.1	7.5	7.5	8.3
2nd "	5.01	4.97	4.75	4.75	4.9	4.9	5.2	5.7	5.7	5.0	5.7	6.7
3rd "	5.09	4.94	4.88	4.67	3.6	4.4	4.1	4.9	4.3	5.3	6.0	6.7
4th "	5.16	5.04	4.93	...	3.6	3.2	3.7	...	4.9	5.2	6.8	...
Year	5.01	4.99	4.82	...	4.2	4.6	4.8	...	5.9	5.8	6.5	...

The popular view that fixed interest stockholders as a whole are receiving a lower return on their capital to-day than before the fall in general interest rates, is not borne out by these figures. The process of repayment and conversion has certainly reduced the average rate of interest paid on debenture capital, by "third quarter" companies since 1932, from 5.09 per cent. to 4.67 per cent. During the same period, however, the average "third quarter" return on preference capital has increased from 3.6 per cent. to 4.9 per cent. This tendency is due partly to recent issues of relatively high-yielding preference capital by companies whose equity control has been retained in inside hands, but mainly to the fact that higher profits have brought many "depressed" preference shares back into the earnings zone. On the whole, fixed-interest stockholders as a class, would appear to be, if anything, in a more favourable income position to-day than three years ago. Reference to the table on page 732, in which interest and dividend rates for each industrial group are separately shown, reveals that the 345 companies included in the present analysis have a total debenture capital of £84 millions, and a total preference capital of £112 millions, the ratio of debenture to preference capital thus being 1:1.33. The much larger sample of 2,072 companies, whose results were discussed in our last review (see the *Economist*, July 13, 1935, page 60), had debentures of £555 millions, against a preference capital of £882 millions—i.e. a ratio of 1:1.59. Of the improved position of equity shareholders there is no question. The latest "third quarter" ordinary dividend rate of 6.7 per cent. compares with 6.0 per cent. a year ago and only 4.3 per cent. in 1932.

The conclusions which may be drawn from the present survey are threefold. Making due allowance for an inevitably lean quarter, it would appear that profits may be entering a secondary stage of revival, during which the pace of their increase, both absolute and relative, while retaining much of its strength and direction, may be losing some of its momentum. Though both dividend and reserve allocations are on a rising scale, company "saving" is tending to increase more rapidly than "spending." This, again, is a characteristic sign of a revival which has become well established. Finally, there is reason to believe that the increased benefits accruing to the equity shareholder are not being financed, over the whole range of industry, even in part at the expense of the fixed-interest holder. A moderate reduction in average income on debenture capital has been more than offset by a higher percentage rise in the return on a larger volume of preference capital.

STRATEGY IN ABYSSINIA

THIS week, there has been a great increase in the likelihood that the non-military kind of pressure which is prescribed in the Covenant will be brought into play in the hope of stopping Italian aggression and restoring peace in East Africa with justice and honour. If economic sanctions prove effective, the success of the experiment may well change the whole future complexion of international relations. At the same time, at a moment when the aggressor has actually taken his plunge into war, it is impossible to leave the military factor out of our reckoning.

Is it likely that Abyssinia will be overrun this autumn with the ease and rapidity with which the considerably larger area of Manchuria was overrun by the Japanese Army in the autumn of 1931? From a military point of view, Italy's military task may be compared more usefully with that of France in Morocco. The Abyssinians, though not more warlike than the Berbers of the Atlas and the Rif, are more united, better organised and better led, and their country is an even finer natural fastness. The distance from Naples to Massawa is about twice, and to Mogadisho about three times, as great as from Marseilles to Casablanca. The area of Abyssinia is between three and four times as great as that of Morocco, and almost as large a proportion of this greater area is covered by mountains. Moreover, the lowlands which lie between the Abyssinian mountains and the Danakil and Somali coasts are either desert or semi-desert—in contrast to the lowlands between the Atlantic coast of Morocco and the Atlas, which are a fertile, well-watered country with a European climate.

ABYSSINIA

Finally, the Abyssinian highlands are still more intractable for mechanical transport than the Moroccan highlands, since the river valleys which intersect the Abyssinian Plateau are precipitous-sided cañons. The significance of these facts is obvious, for the French have taken a quarter of a century to complete the subjugation of the Moroccan tribesmen—and this when the Emperor of Morocco was already a French protégé, so that the tribes were officially in rebellion against their own lawful sovereign.

So much for the main politico-geographical features. Among points of detail in the strategical situation, the first is that none of the theatres of war is on open steppe-country, like North-Western Manchuria or Northern Arabia, in which aeroplanes and armoured cars naturally have the upper hand over cameliers or horsemen. Though the Danakil desert is open, it is less a likely scene of operations than an inferno to be crossed by any Italian force advancing from Assab against Dessie. On the other hand, the bush-covered, nullah-scored semi-desert of the Ogaden affords good cover for guerillas and presents considerable obstacles to the passage of artillery and tanks.

The crucial region, however, lies not in any of these lowland fringes of the Abyssinian Plateau, but on the Plateau itself. Strategically, as well as politically and racially, the Plateau is the heart of the Ethiopian Empire. Its northern end is within striking distance (without any intervening desert) of Massawa; best of all the ports or roadsteads on the coasts of Italian East Africa. Indeed,

the main strength of Italy's striking force appears to be concentrated on this front. What is the nature of the *terrain*—about 350 miles deep as the crow flies—lying between the present front line from Adowa to Adigrat, and Addis Ababa?

On the whole, the lie of the land is as unfavourable as could be to any European army employing artillery, tanks and mechanical transport. The physical relief of the country can be compared most aptly with one of those contraptions—consisting of paving stones set on edge, one behind the other, with open slots left between—which are sometimes erected in this country to prevent cattle from straying along a human thoroughfare. On the Abyssinian Plateau, lines of mountains alternate with cañons, both running approximately east and west, i.e. at right angles to the Italian line of advance. The Mareb cañon, which constitutes the frontier between Eritrea and Abyssinia, and the line of hills to the south of it which screen Adowa and Adigrat, are the first and the smallest of the obstacles in the series. South of the Mareb cañon comes the Oakesse cañon, with tributary cañons ramifying, fanwise, to the east. South of the Oakesse come the terrific mountain *massif* of Semyen and the hardly less formidable mountains round Debra Tabor and Magdalla. Then comes the Blue Nile cañon, which makes two slots instead of one, thanks to its hair-pin bend. Then come the mountains of Shoa. Only when these have been crossed can an invader catch his first glimpse of Addis Ababa as he descends into the valley of the Awash.

The truth probably is that no European army could, or would, attempt to advance across this country on a broad front. For practical purposes, its pathway narrows down to two corridors. One runs south-westwards at the western foot of the Plateau, the other due south—down longitude 39 east of Greenwich—above the brow of the steep eastern escarpment. Of these routes, the western, which skirts the frontier of the Anglo-Egyptian Sudan, may again be left out of account. It runs through trackless tropical forest and jungle, and in the end leads nowhere. We are thus left with the eastern corridor running from Adigrat to Addis Ababa via Makalle, Magdalla, Dessie and Ankober (see the attached map of Abyssinia). The average breadth of this corridor cannot be much greater than fifty miles, and at a number of points it reduces itself to a single pass. Any army advancing southward along this hog's back which swerved a few miles to the east, would drop over the escarpment of the Plateau into the burning fiery furnace of the Danakil Desert. If it swerved a few miles to the west, it would trip itself up in the cañons into which the rivers plunge, a short distance below their springs on the Plateau's extreme eastern verge.

The importance may now be appreciated of the Abyssinian headquarters at Dessie, the central position from which the Abyssinian forces can take best advantage of their possession of the interior lines. Dessie is the point where the routes from Adigrat to Addis Ababa and from Assab to Addis Ababa converge. An Abyssinian force established here can block both these routes at once. At the same time it can reinforce Harrar—the second city of Ethiopia, which lies about two hundred miles south-west of Dessie, in the mountain-range on the opposite side of the open valley of the Awash.

This brief review of Abyssinia's military geography suggests first that the task of any invading force must necessarily be arduous, formidable and, probably, prolonged; and secondly, that the advantages of the employment of modern weapons of warfare may be at a discount. It is clear that analogy with the time-table, say, of the Japanese advance in Manchuria, will be dangerously misleading.

THE LEAGUE AND ITALY

A full summary of the *Italo-Ethiopian dispute up to the failure of the Conciliation Committee on September 4th last, together with the chief provisions of the Covenant, will be found in the ECONOMIST of September 7th last, page 460.*

THE *Italo-Ethiopian dispute* originated in November, 1934, in an affray at the wells of Walwal. A Committee of Conciliation under the *Italo-Ethiopian Treaty of 1928* unanimously

agreed last month that responsibility for the affray could not be allotted. Ethiopia appealed to the League on January 3, 1935, under Article XI, and she appealed under Article XV on March 17th. September 4, 1935, has been accepted by the Council (sitting as Committee of Thirteen, minus the Italian delegate) as the date when the appeal under Article XV became effective. As tripartite negotiations between Italy, France and Great Britain in Paris in August, under the terms of the 1906 Treaty between those Powers, had proved abortive, the League Council set up a Committee of Five in September to draw up a basis for a settlement. This Committee reported in favour of League "assistance" for the development of Ethiopia; but on September 21st the Italian Government rejected their report as a basis of discussion, and the League Council again had to handle the dispute directly, this time under Article XV. The Council went into Committee of Thirteen to draw up its report and recommendations as envisaged under Article XV, but on October 2nd, before these were ready, Italian troops entered Ethiopian territory and began an attack on Adowa.

THE REPORT OF THE COMMITTEE OF THIRTEEN

The Council's report and recommendations under Article XV were thus circumvented—but only by Italian violation of Article XII, whereby all disputants agree not to resort to war until three months after the report by the Council under Article XV. Nevertheless, the Council reported on October 5th. The report of the Council (as a Committee of Thirteen) is in two parts. Part I, s. 1, sets out the events at Walwal and the conciliation procedure, and s. 2 describes the chronological sequence of events since the Conciliation Committee's report. Part II sets out the terms of the treaties and agreements by which the relations between Italy and Ethiopia, as well as with other affected Powers, are governed; describes Ethiopia's entry into the League and the terms on which it was made; and compares the conduct of the two disputants throughout the dispute.

In Part II, the Committee conclude that Ethiopia enjoys the rights and is bound by the obligations of all League Members; and that the Covenant, Kellogg Pact, Italo-Ethiopian Treaty of 1928, and the Optional Clause of the Hague Court Statute (accepted by Ethiopia) are for both disputants "solemn undertakings which exclude resort to arms for the settlement of disputes between the two countries." The Council alone, say the Committee, are competent to examine any question of Ethiopia's fulfilment of her League obligations, and to make recommendations to the Abyssinian Government. The Committee summarise Italy's contentions under three heads: (1) Insecurity of Italian frontiers; (2) Non-fulfilment by Ethiopia of League obligations (slavery, arms traffic); and (3) Internal situation in Ethiopia which precludes fulfilment of her treaties with foreigners, and makes it impossible to satisfy Italy's economic interests.

The report admits that "searching and impartial inquiry" into the facts adduced by Italy against Ethiopia would be necessary, but adds that "the events which have taken place while this report was being drafted by the Committee (of Thirteen) make it impossible for the Council now to consider the possibility of such an inquiry." But the Council (Committee of Thirteen) go on to point out that certain facts can be established in connection with the Italian "case." In respect of frontiers, the adequate settlement of such problems, by diplomatic methods and without recourse to the Council, by France and Great Britain, who also have common frontiers with Ethiopia, is adduced. "Incidents and raids along the frontier of Ethiopia were not in the nature of aggression sought for or encouraged by the Central Government." In respect of Ethiopia's League obligations, "there is no reason to believe that the Abyssinian Government deliberately or systematically violated" the "essential provisions" of the 1930 Treaty with France, the United Kingdom and Italy, regulating the arms traffic. As to the internal situation of Ethiopia, the Council observe that the Governments which supported Ethiopia's entry into the League in 1923 [the Italian Government strongly supported it, and the British opposed it] were aware of Ethiopia's internal conditions. Indeed, they urged that her entry into the League—

would not only afford her further guarantee for the maintenance of her territorial integrity and independence, but would help her to reach a higher level of civilisation. There does not appear to be more disorder and insecurity in Ethiopia to-day than was the case in 1923. On the contrary, the country is better organised and the central authority is better obeyed.

The Council remark that Italy, whatever her grievances, made no attempt to submit them to the organs of the League until September 4th last. Ethiopia recognised her need for

external co-operation in her own development by appealing to the League for it on September 11th; and the Committee of Five took this appeal into consideration in drawing up their scheme of assistance for Ethiopia, which Italy had rejected. The Council, in noting the Italian delegate's contention that the Committee of Five did not meet Italy's claims, point out that "the Committee of Five's plan had necessarily to be based upon the principles of the Covenant, of the Pact of Paris, and also of the treaties which Italy had concluded with Abyssinia, more particularly the Treaty of Amity of 1928. Any solution of the problem of Italo-Ethiopian relations had to be founded on the respect due to the independence, territorial integrity, and security of all the States-Members of the League." And the Council observe that, whereas Ethiopia's first appeal to the Council was made on December 14, 1934, "the Italian Government opposed the consideration of the question by the Council on the ground that the only appropriate procedure was that provided for in the Italo-Abyssinian Treaty of 1928." Not until September 4th last was the Italian Memorandum laid on the Council table. "Throughout the whole of that period, moreover, the dispatch of Italian troops to East Africa was proceeding. . . . From the outset of the dispute the Abyssinian Government has sought a settlement by passive means." And only when the Walwal dispute had been unanimously settled by arbitration, to the effect that responsibility could be assigned to neither disputant, did the Italian Government submit a detailed Memorandum to the Council, claiming that the dispute was not amenable to the means provided in the League Covenant, and that Italy reserved to herself complete liberty of action to safeguard Italian interests and to treat Ethiopia as undeserving of all confidence.

"Such are the circumstances," say the Council, "in which hostilities have broken out between Abyssinia and Italy."

The Council, further, decided on its "recommendations" under Article XV in private meeting on October 5th. These were:—

For the time being, the only recommendation which it makes is that any violation of the Covenant should immediately be brought to an end. The Council reserves the right to make subsequently such other recommendations as it may consider advisable.

Thus, the question whether Italy had violated Article XII of the Covenant, and so led to the automatic functioning of Article XVI ("sanctions") was left to be determined. The Ethiopian Government invoked Article XVI ("sanctions") on October 5th.

THE COMMITTEE OF SIX

On the same day, therefore, the Council set up a Committee of Six "to study the situation and report to the Council so as to enable it to take decisions with full knowledge of the matters involved." This Committee reported on October 7th, in terms containing the following:—

Without prejudice to the other limitations to their right to have recourse to war, the members of the League are not entitled, without having first complied with the provisions of Articles XII, XIII and XV, to seek a remedy by war for grievances they consider they have against other members of the League. The adoption by a State of measures of security on its own territory and within the limit of its international agreements does not authorise another State to consider itself free from its obligations under the Covenant. . . .

It is not necessary that war should have been formally declared for Article XVI to be applicable.

The Committee have come to the conclusion that the Italian Government has resorted to war in disregard of its covenants under Article XII of the Covenant of the League of Nations.

By a unanimous vote of those entitled to express their views—in which Ethiopia concurred and from which Italy dissented—the Council adopted this finding of its Committee of Six on October 7th.

Thus, Italy has committed an "act of war" against all members who concur in the Council's report. Such members have agreed under Art. XVI to sever all economic, financial and personal connection with her nationals. The League Assembly was convened for October 9th, so that non-Council members should join with the Council in deciding what action the League as a whole should take. Only Austria and Hungary dissociated themselves from the Council's report. The Assembly then decided to set up a coordinating Committee of the full Assembly to determine the nature and extent of the measures of restraint upon Italy, to which League members—save Austria, Hungary and possibly Albania—were now committed.

NOTES OF THE WEEK

President Roosevelt's Proclamation.—History has been made by President Roosevelt's proclamation—issued just before midnight last Saturday—as well as by the League Council's decision on Monday. The proclamation is of momentous importance in two ways. In the first place, it is the earliest official declaration, on the part of any national or international public authority, that a state of war exists between Italy and Abyssinia. In the second place, it has assured the States Members of the League, in advance, that they will have no American complications to fear when they now set themselves to bring this state of war to an end by putting the League Covenant into execution. The proclamation fulfils the duty laid upon the President by the joint resolution of Congress which was passed on August 31st. It gives a list of arms, ammunition and articles of war which may not be supplied by American citizens to either belligerent. An American citizen who now attempted to trade in any of these articles with either Italy or Abyssinia would be committing an offence for which he would be punishable under United States law; and the Administration is taking energetic measures to see that the law is kept. If this were all it would, of course, be disappointing; for the list, as far as it goes, is conservative in the sense that it does not take account of the fact that—in "*la guerre totale*" as waged by a totalitarian State—all commodities, on a realistic view, are articles of war. The prohibition of aircraft and their parts, without limitation to aircraft which are technically intended for military purposes, is the only item in the list itself in which this new state of affairs is taken into account. The great surprise, however—and it is an immensely welcome surprise—is contained in the preamble to the proclamation, the second paragraph of which runs as follows:—

In these specific circumstances [i.e. the existence of a state of war between Italy and Abyssinia], I desire it to be understood that any of our people who voluntarily engage in transactions of any character with either of the belligerents do so at their own risk. [Italics ours.]

For the purposes of this war, the United States has thus waived the "neutral rights" which it might still have claimed as a non-member of the League. It has taken this step on its own initiative. And it has thereby immensely facilitated the task, to which States Members have been committed since Monday evening, of carrying out their obligations against Italy under Article XVI. The proclamation, taken together with the preamble, reconciles two desires which might have seemed mutually incompatible—in spite of the fact that a great majority of the American people entertains them both at once. The first American desire is to avoid all possibility of the United States becoming involved in hostilities; the second is to see aggressive warfare restrained and frustrated. The President has taken action which may well fulfil both these desires simultaneously.

The French Reply to the British Inquiry.—The French Government's reply to the British Government's inquiry of September 24th was made public on Monday. It is fortunate for the prospects of Franco-British collaboration in the organisation of collective security that this time it has been the British Government that has taken the initiative in raising the question of mutual military, naval and air assistance at a time when an aggressive breach of the peace is being threatened by some third party. Perhaps the British Government will demur somewhat to the French formulation of its own question. We did not ask the French what they would do if we were attacked by Italy while we were "making the necessary preparations to" the fulfilment of our obligations under Article XVI of the Covenant. We asked them what they would do if we were attacked—simply because we had announced our intention to act up to the Covenant—before any question of preparing to take sanctions under the Covenant arose. The French, in their reply, agree to assist us, but make three conditions. The undertaking must be reciprocal, it must apply to any unprovoked attack, whether by land, sea or air, on the Power which is preparing to implement the

Covenant. And finally, the mutual support must cover instances where a non-League Power is involved as "aggressor." The French Government also emphasise the need for co-ordination for these purposes. This matter by now has become academic in regard to the present crisis, since Article XVI is now already in play in the Italo-Abyssinian conflict. But it is a matter of great intrinsic importance, because any intending aggressor is always likely enough to try to get in his own blow first. In the nature of the case he holds the initiative in the first chapter of the story; for it is he who, *ex hypothesi*, is taking the action which sets the Covenant working. Any collective constitutional procedure is likely to take a certain time to catch up with an aggressive war-lord's first pounce. The French reply marks a valuable step forward towards reaching a precise solution of this practical problem. Nor can we have any quarrel with the French stipulation that an aggressor who is not a member of the League is to be dealt with (as the Covenant itself prescribes) on the same footing as a member; or with the other stipulation that any arrangement for mutual assistance in the preliminary period shall apply to the Locarno Pact as well as to the League Covenant. If this exchange of views leads to an Anglo-French understanding, the effect of which is to define and to reduce to practical terms the steps which each will take to secure the honouring of treaty obligations, this may be another foundation-stone laid in the structure of collective European security.

The Memel Result.—The elections which were held in the Memel territory on September 29th have resulted in giving the Germans a majority of 24 out of 29 seats in the Memelland Diet. By the terms of the Memel Statute, this majority will give them control of the local Government. The election results show that the Lithuanian Government has made up its mind to play fair and to take pains to avoid giving any legitimate grievance to Germany. This happy change for the better in Lithuanian policy is presumably due in part to the representations of the three guarantors of the Memel Statute. We may also suspect that Lithuania's Latvian and Estonian associates in the Baltic entente will have been using their influence in the same direction. By the terms of the Baltic Pact, Lithuanian disputes with Germany over Memel and with Poland over Vilna are implicitly but definitely excluded from the scope of the agreement. Yet, in spite of this safeguard, the Latvians and Estonians must desire to see Lithuania become a less embarrassing associate than she has sometimes been hitherto. If the Memelland does henceforth enjoy a genuine autonomy under an administration representing the majority of the population, there seems to be no reason why such an arrangement should not work. The German Memellanders' grievances will become very much attenuated the moment they become masters in their own house and are assured that their local liberties and their German culture are not going to be stamped upon by the Government at Kovno in violation of both equity and treaty rights. As for the Lithuanian-speaking Protestant peasantry of the Memelland countryside, they are unwilling—as the election results have shown once again—to be simply merged in a Lithuanian national State in which they would find themselves culturally alien. In culture, they belong, like their German neighbours in the city of Memel, to the world of German Protestantism. On the other hand, if they were re-annexed to Germany their mother-tongue might be imperilled. Assuredly, the present regime of local autonomy is just what meets their case. May we not hope that a good understanding between German and Lithuanian-speaking Memellanders in a genuinely autonomous Memelland may open the way for an equally good understanding between Lithuania and the Third Reich?

Mr Lansbury Resigns.—Mr Lansbury resigned his position as Leader of the Parliamentary Labour Party at a meeting of the Party on Tuesday. A resolution was carried asking him to reconsider his position, but he felt

himself unable to do so. Mr Attlee, the deputy-Leader and an experienced and indefatigable Parliamentarian, was elected to succeed him for the remainder of the present session. Public opinion, which has already shown unanimous respect for Mr Lansbury's pacifist convictions, will certainly approve the course he has now taken. The continuance as leader of one who disagrees with his Party on a fundamental issue could not fail to be embarrassing to the Party, disturbing to Parliament and confusing to the public. Nevertheless, Mr Lansbury's position as a general supporter of the Labour Party and a crusader for the ideal of peace will be enhanced by his resignation.

* * *

Canadian Election Prospects.—The Canadian General Election, to be held on Monday, has aroused a remarkable degree of public interest. The record number of 892 candidates have been nominated for 245 seats. Party candidates are as follows: Liberals, 242; Conservatives, 231; Reconstruction Party, 173; Co-operative Commonwealth Federation (farmer-labour), 118; Social Credit, 46. Mr Bennett and Mr Mackenzie King both have four opponents, and four-cornered fights are common throughout the Dominion. Our Ottawa correspondent telegraphs that Mr Bennett is fighting the Conservatives' battle almost single-handed. He represents his Government as having proved themselves the saviours of Canadian industry, the architects of the Ottawa Agreements and the most zealous reformers of the capitalist system. His speeches, our correspondent reports, have undoubtedly heartened the Conservatives and recaptured a certain number of deserters from the cause. But the counter-attacks resulting from them have found Mr Bennett without any effective lieutenants. His high tariff policy is very unpopular with primary producers and importers, though the rising price of wheat is at the moment helping him in the West. The Liberals, after losing ground in the early stages of the campaign, are now recovering, partly as a result of the threat of European war, which is being exploited unrestrainedly in Quebec, and partly because of the desire of business leaders who are normally Conservative to see a strong majority Government in power. Liberal criticism of Mr Bennett concentrates on his mis-handling of unemployment and his high tariff policy, which is being denounced more vehemently in the West than in the East. The Liberals are also promising to revise the Ottawa Agreements. Mr H. H. Stevens's Reconstructionists declare that both Liberals and Conservatives are hopelessly subservient to Big Business, but they still reject the Socialist remedies advocated by the C.C.F. The C.C.F. has lost ground owing to the emergence of the Social Credit and Reconstruction Parties. Social Credit dominates Alberta, and is threatening Liberal seats in Saskatchewan. Early this week, our correspondent reports, experts were estimating the probable results as follows:—Liberals, 135 seats; Conservatives, 50; Reconstructionists, 30; Social Credit 20; C.C.F., 10. This would give the Liberals a clear majority over all other parties.

* * *

The Conspiracy in Bulgaria.—On October 2nd a state of emergency was proclaimed in Bulgaria; the detection of a conspiracy was announced; and a number of arrests were made. The persons whom the Government accuses of treasonable conduct are a mixed company: politically-minded military officers; peasants of Stamboliski's Agrarian school; Fascists; brigands; and Pan-Yugoslavists. Several of those named have actually been on opposite sides in some of the previous alarms and excursions in post-war Bulgaria. Their common aim now (it is alleged, or at any rate hinted) is to overthrow the dynasty and to carry out the *Anschluss* of Bulgaria to Yugoslavia. Two of the ringleaders, Colonel Velchev and Brigand Uzunov, are reported to have entered Bulgaria from Yugoslavia a few days ago in order to carry out their nefarious intentions. For a moment it looked as if this Bulgarian sensation might have unfortunate effects upon Bulgar-Yugoslav relations, which have been improving so notably and so auspiciously during the past eighteen months. But this complication seems to have been already averted by the good sense of both the peoples and Governments concerned.

On October 4th, the Bulgarian Minister for Foreign Affairs, who was on his way home to Sofia from the session of the League Assembly at Geneva, broke his journey at Belgrade to have a talk with the Prime Minister of Yugoslavia. He afterwards informed the Yugoslav Press that the plot had been organised in Bulgarian territory, and that it had no connection with any other country. He took the same occasion to recall a conversation which he had once had with the late King Alexander, in which the King of Yugoslavia expressed his conviction that the understanding between the two countries was a genuine expression of the national will in both. This statesmanlike action on the Bulgarian Foreign Minister's part will doubtless have allayed any resentment that may have been aroused in Yugoslavia by the suggestion that the alleged abortive plot in Bulgaria was hatched on Yugoslav soil. With the miracle of the Græco-Turkish *entente* before our eyes, we may look forward to seeing Bulgar-Yugoslav friendship completed and confirmed.

* * *

Mr Keynes and Exchange Stabilisation.—In this month's issue of *Lloyds Bank Monthly Review* Mr Keynes joins the discussion on exchange stabilisation in which Sir Arthur Salter, Sir Josiah Stamp and others have already taken part. Like these other writers, Mr Keynes thinks that stabilisation must come in successive stages. First it is necessary to discover *de facto* rates which are in "reasonable equilibrium." The ascertainment of this equilibrium would depend not on any calculations based on index numbers and "purchasing power parities," but on the ability of a country to maintain a given rate "without undue strain" and without excessive gold movements. Mr Keynes makes it plain that, in fact, he would not regard any *de facto* stabilisation as possible until emergency exchange restrictions had been removed and until the gold *bloc* currencies had been effectively devalued. Supposing this had been achieved, however, and tested in a short experimental period, stabilisation of the rates would raise two main problems: first the handling of short-term disturbances, and secondly the adjustment of national economies to "persistent" economic changes. For the correction of short-term fluctuations Mr Keynes assumes that alterations in Bank rate and the volume of credit must not be made. He consequently proposes four technical weapons:—

- (1) The widening of the gold points.
- (2) Dealings by central banks in forward exchange, designed to establish what might be called an external as well as an internal bank rate.
- (3) The monopolising of all gold supplies by central banks.
- (4) "A strict though not pedantic" control of the rate of new foreign lending.

Adjustments to meet violent or deep-seated changes should, in Mr Keynes's opinion, be made by alterations in the gold parities of currencies (one can scarcely imagine "alterations" upwards!). But each country should commit itself to maintain short-term stability, to refrain from alterations except in emergencies, and to submit to some "test" before alterations were made. The mere enumeration of Mr Keynes's suggestions illustrates with melancholy emphasis how very difficult any progress towards more stable exchanges is likely to be in the political world of to-day. English opinion will certainly support Mr Keynes in requiring, first, that an experimental period of *de facto* stabilisation should precede any more ambitious programme; and secondly, that neither short-term nor long-term adjustments should be left to be made by alterations in cost levels. Any general advance towards stabilisation seems at the moment to depend on the extent to which existing gold parities are to be regarded by the nations as sacrosanct.

Congestion in the Suez Canal.—The gradual recovery of world economic activity since 1932 has been accompanied by an expansion of the volume of traffic passing through the Suez Canal. In 1934 the net tonnage of vessels passing through the famous toll-gates was higher than in 1930, but the increase in traffic receipts was less marked owing to the reduction in charges. This improve-

ment, however, was not maintained during the first quarter of 1935, when both tonnage and receipts showed a reduction on the corresponding period of 1934. This feature is clearly revealed by the following summary of the traffic returns, which will in future be regularly brought up to date in the statistical section of the *Economist*:—

SUEZ CANAL TRAFFIC						
	Number of Vessels*	Net tonnage* (In thousands)		Receipts (In thousand francs)		
		British	Total	Goods*	Passengers*	Total (Incl. Miscellaneous Receipts)
1930	5,761	17,600	31,609	1,023,013	13,834	1,044,107
1931	5,366	16,624	30,028	917,836	12,231	936,499
1932	5,032	15,721	28,340	783,498	11,814	800,142
1933	5,423	16,733	30,677	840,135	11,434	856,508
1934	5,663	17,238	31,751	843,837	11,803	860,757
1934. January	497	1,482	2,726	77,188	994	80,324
February	437	1,250	2,379	65,903	788	66,918
March	480	1,402	2,732	75,591	1,355	77,268
April	508	1,416	2,894	74,964	1,331	76,668
May	494	1,219	2,617	72,087	849	73,172
June	412	1,192	2,516	61,312	745	62,223
July	437	1,243	2,698	64,457	700	65,571
August	463	1,241	2,636	6,611	...	67,800†
September	468	1,482	2,726	73,085	1,025	76,027
1935. January	487	1,250	2,379	63,497	1,475	65,154

* Excluding small vessels and local traffic.
† Provisional; excluding miscellaneous receipts.

After the second quarter of this year the unfavourable trend of the traffic returns was arrested by the Italian adventure in Ethiopia, which necessitated heavy shipments of men and machinery. The net tonnage of Italian vessels passing through the Canal increased from 167,000 tons in January to 533,000 tons in July, and receipts from goods and passengers have recently shown an appreciable increase over last year. In recent weeks the traffic has grown to such an extent that frequent congestion and delay have ensued. Truly, it is an ill wind that blows nobody any good! What will be the bill for the return journey, and who will pay it?

* * *

The Englishman's Bacon.—Hard on the heels of the milk dispute comes the news of a breakdown in the negotiations regarding the 1936 contract for bacon pigs. Under the Pigs and Bacon Marketing Schemes, bacon pigs are sold on contracts between feeders and curers, the terms of which are negotiated annually by the Pigs and Bacon Boards. The price paid by the curers now varies in accordance with fluctuations in the price of feeding stuffs on the one hand and of bacon and offals on the other. It is unfortunate that the present discussions are taking place at a time when the basic pig price has fallen to 10s. 2d. per score lbs.—the lowest level touched this year. The pig feeders are complaining that production is unremunerative at this figure, and the Pigs Marketing Board has therefore refused to agree to the continuance of the present contract terms. The main point at issue is the price which curers shall pay for pigs when the wholesale price of bacon falls below 90s. a hundredweight. The recent decline in quotations was partly traceable to a temporary increase in imports of bacon from Denmark. The Minister of Agriculture is now reported to have given an assurance of stricter enforcement of the quota arrangements, in order that the wholesale price of bacon shall not fall below the 90s. level. In other words, the consumers—whose interests are unrepresented in this annual tug-of-war between the two Boards—must foot the bill. All this lends point to a letter from Mr A. P. McDougall, published by *The Times* on Monday. Mr McDougall concludes that two years of "rationalisation" under the Pigs Marketing Board have done practically nothing for the British farmer, but have successfully bled the home consumer. Indeed, the main benefit of higher prices paid for a smaller supply of bacon has accrued to the Danish producer! We trust that the

new Bacon Development Board will achieve its task of squaring the circle by so reorganising bacon production in this country as to reconcile an adequate return to the producer with a reasonable price to the consumer.

Employment in September.—The view expressed in our Trade Supplement a fortnight ago that business activity had apparently been "marking time" for some weeks is confirmed by the latest employment returns published by the Ministry of Labour. Although the number of insured workers (aged 16-64) in employment on September 23rd at 10,435,000 shows an increase of 11,000 over the total for the previous month, the number of registered unemployed has actually increased by 10,646. A reduction in the number of workers "temporarily stopped" has been more than counterbalanced by an increase in the "wholly unemployed," the numbers on the registers of employment exchanges in Great Britain having thus risen from 1,947,964 to 1,958,610. During the past year employment among insured workpeople has increased by 192,000, while the numbers unemployed have fallen by 123,377. Unfortunately, unemployment among boys and girls has shown an opposite tendency.

INSURED PERSONS UNEMPLOYED IN GREAT BRITAIN

	Sept. 24, 1934	Aug. 26, 1935	Sept. 23, 1935
Coal mining	258,785	256,489	243,105
Woolen and worsted	40,340	29,229	23,453
Cotton	113,695	98,904	97,501
Hosiery	13,440	11,771	9,019
Boot and shoe manufacture	24,543	21,333	18,945
Motor vehicles, cycles and aircraft...	30,400	24,725	23,186
Building	150,541	130,994	138,790
Public works contracting	120,679	121,439	124,719
Shipbuilding and ship repairing	70,607	61,500	63,833
General engineering	74,410	61,668	63,681
Hotel and boarding house service....	57,061	48,871	59,459
Distributive trades	212,356	199,765	207,845
All persons registered	2,081,987	1,947,964	1,958,610

Apart from public works contracting and hotel and boarding house service, all the enumerated groups shared in the improvement of the past year. Between August and September unemployment declined in such important industries as coal-mining, textiles, footwear, iron and steel, metal goods' manufacture, and the motor vehicle, cycle and aircraft industry, but increased in hotel and boarding house service, the distributive trades and important capital equipment industries such as building and public works contracting, shipbuilding and ship-repairing, and general engineering. Much of the increase, however, is seasonal. Geographically, the most significant movements of the month were a considerable increase in unemployment in Wales, Southern England and Scotland, and a substantial decrease in the Midlands and the North-East.

* * *

A Change in "Tin" Policy.—On Thursday last week, the International Tin Committee decided to recommend to the signatory Governments that the production of tin should be increased from 65 to 70 per cent. of the standard tonnages, with retrospective effect from July 1st. As the quota of the original signatory countries—British Malaya, Bolivia, the Dutch East Indies and Nigeria—now exceeds 65 per cent., the other members of the restriction scheme will also be permitted to increase

production. The output quotas of the four original signatory countries had previously been increased from 50 to 65 per cent. of the standard tonnages on August 10th. The Committee has thus given further proof of the adoption of a more moderate policy. Available supplies of tin have been at a low level for many weeks, and "spot" tin commanded an appreciable premium over "three months" tin. The "squeeze" was intensified by the restocking movement set in motion by the war scare. The decision of the Committee to ease the situation by a further increase in quotas was, therefore, a wise one. Nor need they regret the change in policy, for, after an initial decline from £224 17s. 6d. to £221 10s. per ton on Friday last week, the quotation for spot tin rose to £229 7s. 6d. per ton last Wednesday. Although "spot" tin still commands a premium of about £10 per ton over "three months" tin, the divergence may become smaller when increased supplies come on to the market.

* * *

Retail Sales in August.—Retail trade is slowly, but steadily, making headway. The latest returns, published in the *Board of Trade Journal*, reveal a seasonal decline in the money value of sales between July and August, but an increase of 4.7 per cent. as compared with August last year. The value of retail sales has risen by about 10 per cent. during the last three years, but unfortunately the absence of statistics precludes a comparison with the pre-depression year:—

INDEX OF VALUE OF RETAIL SALES, GREAT BRITAIN
(Average Daily Sales in 1933 = 100)

Period	Food	Other Merchandise	Total
1932	102	99	101
1933	100	100	100
1934	103	103	103
1934—July	98	107	102
August	100	79	90
September	101	92	97
October	102	109	105
November	106	110	108
December	121	148	134
1935—January	102	108	105
February	106	83	95
March	107	92	100
April	110	112	111
May	110	112	110
June	110	108	109
July	105	113	109
August	107	81	94

With the exception of Central and West End London, all the other districts experienced an increase in sales over August, 1934, varying from 3.2 per cent. in Scotland to 6.9 per cent. in South England. Sales of food and perishable articles, amounting to 56 per cent. of the total sales reported, rose by 7.1 per cent. as compared with August, 1934. On the other hand, sales of other merchandise increased by only 1.9 per cent. during this period. The relatively small increase in sales of merchandise other than food and perishable articles is due to a reduction in the turnover of piece-goods, women's wear and sports and travel equipment. The money value (at cost) of stocks at the end of August was only 0.8 per cent. higher than a year ago. The outlook for retail trade is still regarded as encouraging.

* * *

Sterling and International Prices.—The advance in sterling prices has continued during the past fortnight. Indeed, so rapid has the rise been that the *Economist* complete British index is now four points higher than a month ago and six points higher than two months ago—after over two years of comparative stability. In the past fortnight the British complete index has risen by 1.9 per cent., while primary products alone have risen by 2.4 per cent. In the United States, wheat, cotton, non-ferrous metals and rubber are all higher than a fortnight ago, but there has been a heavy seasonal fall in maize and bacon. This is due to the fact that the new maize crop, which is of normal dimensions, is now coming on the market in place of last year's crop, which was extremely small. As a result of these diverse movements, the primary products index number has fallen by 1.5 per cent., while the general Irving Fisher index number is practically unchanged. Continental wholesale prices continue to advance,

and there is no doubt that the general world trend remains upwards.

Details of the group indices comprising the complete *Economist* index number on the date of our suspension of the gold standard and for recent dates are given below:—

"ECONOMIST" INDEX (1927 = 100)				
	Sept. 18, 1931	Sept. 11, 1935	Sept. 25, 1935	Oct. 9, 1935
Cereals and meat	64.5	69.6	71.7	72.8
Other foods	62.2	59.0	60.6	61.5
Textiles	43.7	57.3	58.2	59.8
Minerals	67.4	80.7	82.0	83.7
Miscellaneous	65.8	74.9	76.0	77.6
Complete index...	60.4	68.4	69.9	71.2
1913 = 100	83.1	94.2	96.1	98.0
1924 = 100	52.2	59.1	60.4	61.5

Grain prices were higher than a fortnight ago, with the exception of barley. Meat and bacon prices also advanced, with the exception of English mutton. Among other foods, tea, coffee and cheese rose in price, but there was a reduction in coco-oil. There was a general advance in textile prices, which was most marked in the case of hemp. Non-ferrous metal prices continued to rise. Among miscellaneous materials, leather, linseed oil, tallow, rubber and soda crystals were all dearer, but there was a slight reduction in the price of hides.

* * *

Co-operative Trade Improving.—The directors of the Co-operative Wholesale Society express the view that "the industrial recovery continues"; but they emphasise the fact that "higher prices rather than greater quantities of goods sold" have been largely responsible for the 6 per cent. increase in the value of co-operative trade during the half-year ending July 13th, as compared with the corresponding period of 1934. Total sales amounted to £45,985,617, of which £15,608,913 were from the co-operative factories and works. The latter was an advance of 9½ per cent., which is regarded as a justification of the new policy, inaugurated early in the year, of giving the society members an additional trade dividend of 3d. in the £ on purchases of C.W.S. productions, to supplement the usual dividend of 4d. in the £ on general trade. A repetition of this distribution will be recommended to the delegates at the meetings to be held in the various districts this month. Greater values of trade have been recorded at each of the three distributing centres, the increases being 6½ per cent. at Manchester, 4½ per cent. at Newcastle-on-Tyne and 7½ per cent. in the London area; the accelerated rate of progress thus continues in the South as compared with the North. Three quarters of the turnover was in the grocery departments. During the half-year the sales of tea were

31,878,649 lbs. at a value of £2,428,915. Coffee still shows a downward trend, the sales having been only £67,745—a falling-off of 6 per cent. There were substantial increases in the output of the C.W.S. biscuit and preserve works, the lard refinery, and the flour mills; the output of the eight flour mills was £3,863,193. The margarine trade has continued its decline from £512,612 in the last half of 1932 to £306,042 in the first six months of the present year. On the other hand, the supplies of butter through the society's own butter factories in Somerset and elsewhere were just over £1,000,000—an advance of 10 per cent. as between the first half of 1934 and 1935. The opening of the new garment, clothing and furniture factories has increased the turnover of those sections by 25 per cent., 4 per cent. and 15 per cent. respectively, and the output of the woollen mills has risen to £426,932. The steady improvement in the position is shown in the expansion of deposits and withdrawals in the C.W.S. Bank during the half-year, which together

reached £334,174,638. The upward trend of co-operative trade and the lessened unemployment among trade unionists has increased the bank's business. Owing to amalgamations, several co-operative bank accounts have been closed, and there are now only 898 societies with current accounts, as compared with over a thousand three or four years ago. Trade union accounts have risen to 9,975; and 17,391 current accounts are now being operated for private individuals as against 15,518 at the beginning of 1934. Two agricultural societies in Warwickshire and Lancashire are applying for membership of the C.W.S., which is closely watching the working of the Milk, Pig and Bacon Boards. The value of the milk products in co-operative creameries was £72,853; supplies from its bacon factories were £433,624; and 21 acres of freehold land at Great Warley in Essex have been acquired for development of the creamery enterprises. Thus, co-operative trading in this country is making big strides forward.

OVERSEAS CORRESPONDENCE

From our Correspondents in each centre

FRANCE

PUBLIC OPINION AND ITALY

AFTER having been seriously unsettled by the Abyssinian conflict rentes have again risen on the general assumption that the scope of the dispute will not become widened, and that a pacific solution will now be found at Geneva. Public opinion, however, is perplexed by the League verdict against Italy as an aggressor and the preparation of economic sanctions. The French people are certainly attached to the League, but above all to the maintenance of peace. And they are surprised by the tenacity with which the procedure of Geneva is being applied. If the peaceful intentions of Great Britain are not doubted in Paris, it is feared, nevertheless, that economic sanctions may provoke accidentally a serious conflict, which would complicate the situation and have disturbing effects on Germany. It is evident that France places its desire for peace and its necessarily equal attachment to Great Britain and Italy above any other consideration whatever. This fact is determining the policy of M. Laval, and he is supported by the whole Cabinet and the whole country.

It is no secret that the restoration of the internal financial and economic situation is encountering serious difficulties. But the situation has become, on the whole, better in the last few months. The coming Senatorial elections will certainly not result in any serious changes in internal policy. The Radical-Socialists, who hold the key of the situation, will not take any very violent initiative.

HEAVY BORROWING BY THE TREASURY

M. Rénier, Minister of Finance, has been examined by the Finance Committee of the Chamber. M. Laval will be examined when he returns from Geneva. The political question of the decree laws has thus not been raised. The Minister of Finance declared that since the Government came to power it had borrowed 5,000 million francs for the various needs of the Treasury, of which 3,500 millions was secured by the issue of Treasury bonds on the money market. The rest was obtained from the Bank of France by the rediscounting of bonds. Thus, 14,000 millions of these bonds have already been issued, whilst the authorised maximum is 15,000 millions. The burden on the Treasury is heavy, but the means to support it for many weeks have been arranged—even if no amelioration of the situation occurs. Fiscal receipts for September show some improvement.

A close examination of the Budget Bill seems to show that, if revenue has been conservatively calculated, expenditure has again been under-estimated. The resources of the Loterie Nationale will not be sufficient to cover ex-Servicemen's pensions; no provision seems to have been

made for the reimbursement of the 1921 Crédit National bonds (486 millions); and the same may be said of the P.T.T. loans. If these sums, and the railway deficit, are taken into account and added to the 6,000 millions of the Extraordinary Budget, the whole amount to be covered by loans will reach nearly 11,000 millions. Considerable as this figure may appear, it is at least an improvement on the preceding Budget, which necessitated loans for 2,000 millions a month.

The heaviness of current borrowing explains the efforts of the Government to provoke a revival of business, which would result in an increase of fiscal receipts. The Bank of France has therefore agreed to increase the rate of its advances to the wheat producers from 45 to 50 francs per quintal, on wheat stocked by co-operatives, and from 35 to 40 francs per quintal to individual farmers. This procedure has already raised the price of wheat from 60 to 86 francs per quintal, and it seems that the increase in the purchasing power of the farmers has begun to provoke a certain recrudescence of orders to certain branches of industry. Moreover, this measure should alleviate discontent in rural areas.

At the same time, unemployment is steadily decreasing. Nevertheless, after a new drop of 3,552 last week the total, at 373,446, is still 50,000 higher than a year ago.

A new decree, submitted by the Minister of Labour, has just raised the expenditure of the State on the Public Works programme from 2,984 million francs to 4,241 millions. The original six-year programme will be completed in three years. The Minister for Public Works revealed in a speech this week that these Works had already mobilised 20,000 workers, and that from November onwards they would employ 8,000 more.

PARIS, October 10.

GERMANY

ATTITUDE TO ABYSSINIAN WAR

THE outbreak of war in Abyssinia had little visible effect on business conditions. In the credit market no nervousness was shown, and although rentes were slightly weaker, shares, which had been declining since the dispute became acute, recovered on the first four days of hostilities. Owing to the prospect of a growing demand for tonnage, and to the belief that the earning-power of German vessels would increase should economic sanctions be imposed, there was buying of shipping shares. The advance in industrial shares seems to have been due to expectations of a world price-rise and of intensified rearmament. The meaning of the announcement that Germany is neutral, which was

expected in view of the earlier official reserve and of the Press impartiality during the whole course of the controversy, is not clear. While the announcement certainly promises military neutrality in the immediate Italo-Abyssinian war, it implies nothing about Germany's attitude towards wider international complications. In the event of economic sanctions, Germany could hardly pursue even a passive, much less an active, policy without favouring either the League or Italy. This circumstance threatens her with a dilemma in view of her visible reluctance to embarrass Great Britain and of her interest nevertheless in regaining Italian friendship should Italy be alienated from Great Britain and France. It is, therefore, probable that the Reich government will give no indication of its intentions until after the nature of the League's measures has been made clear.

The scarcity of necessary foods which continues in Berlin is, in the main, confined to pork, lard, butter, and margarine. As far as can be ascertained, a similar scarcity prevails throughout the country, but the Press, although giving publicity to official exculpations and to proposed remedies, does not venture to report the food shortage itself. It is officially argued that there is an antithesis between the interests of "work-creation" and of the national food supply, and that the latter must give way; that consumers show unreason in demanding scarce commodities; and even that the main cause of the trouble is hoarding by housewives in unfounded fear about future supply.

In general, hoarding is precluded by the circumstance that there is nothing to hoard. Supplies sufficient for a single day cannot be purchased. The butter famine, when not, in the above senses denied, is officially attributed to the failure of the fodder-crop in 1934. This hardly agrees with the statistics which show home butter production in 1934 to have been the same as in 1933, and in 1935, as estimated, considerably higher. Consumption increased very much in 1925-1930, but has since changed little. A main cause is the artificial restriction of imports, which last year were only 61,000 tons against over 130,000 tons in 1929 and 1930. The ratio of butter imports to consumption has consequently fallen to one half. This year so far imports have been larger than last year and according to a Danish official statement there will be a further increase of Denmark's deliveries (also of eggs and cheese) in the next half-year, after which a new German-Danish trade agreement will be concluded.

AN ATTACK ON "PLANNING"

The food question is primarily a question of State policy, in which "planning," which involves the regulation of production and imports and also price-determination, is the main factor. Although incomplete in scope, German planning has materially influenced home output both as regards sorts and quantities, and (owing to the simultaneous limiting of the profit-margins of traders) has also affected distribution. As the Nazi Government has declared for planning in principle and has executed it in practice, it sometimes finds it necessary to explain why deterioration in the national food supply has occurred since it attained power in 1933. Sometimes the shortage of foreign exchange is cited. This shortage, however, is largely a consequence of planning and price-regulation. In his speech at the Harvest Festival Herr Hitler emphasised the necessity and the benefits of Governmental *Planwirtschaft* (a word coined by the Social-Democrats during their abortive Socialisation measures of fourteen years ago). Herr Hitler pronounced for unitary regulation from above, and declared in particular that the State must regulate and guarantee prices. The price-regulation part of this programme was entrusted in 1934 to Dr. Goerdeler as Price-Commissar. The Commissar's measures had little success, and his power over food supply and prices was this year transferred to the Ministry concerned. Apparently, on the basis of his experience, Dr. Goerdeler has now delivered himself of sharp criticism of "planning" in theory and practice:—

All such attempts have invariably increased and aggravated the consequences of defective estimates (in a free economy). If one thousand directors of business concerns engaged in a branch of production are allowed a free hand, the result is a certain degree of equilibrium. . . . If I,

however, operating from a single position of authority, instruct the thousand directors as to what and how much they are to produce, and if from this position of authority mistakes are made, then the equilibrium is not attained. . . . The mistakes, however, cannot be avoided. A nearly divine insight would be needed if the whole domain of trade were to be judiciously regulated in advance for even a single nation.

Money became easier last week. The day-loan rate early this week was 3-3½ per cent. A reduction of the market discount-rate from 3½ to the former 3 per cent. is expected. The first subscription to the Treasury bonds Reich loan had no effect on the market, the commercial banks having paid in the whole sum in advance. The Reichsbank's return for September 30th shows, however, that the advance payments imposed a considerable strain, credits having increased during the week by Rm. 577 millions, as against Rm. 498 millions in the same week of 1934, and circulation (including the Rentenbank issue) by Rm. 409 millions, against Rm. 351 millions.

BERLIN, October 9.

DENMARK

GENERAL ELECTION ON OCTOBER 22

The ordinary session of the Rigsdag began as usual on October 1, but a few hours afterwards both Houses were dissolved and a general election will take place on October 22nd. The main reason for the dissolution is a disagreement between the Government and the Opposition (which has a majority in the Landsting) about the prolongation of the Exchange Control Law, which expires on December 31st.

During the short Rigsdag session there was time for the Minister of Finance to introduce the 1936-37 Budget, from which the following figures may be given:—

(Million kroner)	
Revenue—	
Income tax, customs and excise, etc.	425
State lottery	3
Other revenue	3.3
Total revenue	431.3
Expenditure—	
H.M. The King	1
Foreign Office	6.3
Ministry of Agriculture	11.1
Ministry of Social Affairs	141.0
Ministry of Defence	54.7
Interest (net)	9.1
Total expenditure	429.1
Surplus	2.2

The audited accounts for the year 1934-35 reveal a surplus of 18.2 million kroner, and the surplus for the present year (1935-36) is estimated at 12 million kroner, against the original surplus of 1.3 million kroner.

The distribution of import licences for the last four months of 1935 has caused much disappointment among importers, and the heavy reductions imposed have surpassed the worst expectations, especially in certain lines such as iron, cloth, fruit and timber. It is the avowed policy of the National Bank, however, to improve the foreign exchange situation of the country and to damp down the building boom, which the Bank regards as dangerous to the economic life of the country. From this point of view it is quite understandable that the Bank should use its power through the Exchange Control Office. The state-improvement in the foreign exchange position of about 4½ million kroner, and this in spite of the farmers' "Exchange Strike," which has had no influence at all on the Bank. Unemployment, however, remains at about 15 per cent.

According to the accounts of the National Bank, which were closed as at July 31st, the net profit for the year was only 1,973,005.22 kroner (the two previous years' profits were 7.5 and 4.5 million kroner). Moreover, 11 million kroner have been transferred from the reserves to write down the bond holdings to their present value. The bond holdings are now down to 121.7 million kroner, against

145.3 million kroner last year. Gold stocks have gone down to 118 million gold kroner, against 133 million gold kroner last year, as the 15.1 million gold kroner which in August, 1934, were deposited with the Bank of International Settlements at Basle have been used for the repayment of a loan of 20 million Swiss francs taken up in 1932.

Conversations have recently begun between the Government and the United Steamship Company, Limited, on the question of a continuation of the Scandinavian American Line (Copenhagen-New York). At present the service is maintained by one liner, which is now twenty years old, and the company claims that it is unable to continue unless two new liners are built and subsidies granted under some form to maintain the service, which is considered necessary from the point of view of national prestige. Many Danish shipowners, however, are on principle opposed to Government subsidies.

INCREASE IN IMPORTS AND EXPORTS

The foreign trade returns for the first eight months of the present year show an increase in both imports and exports, viz.:—

	(In million kroner)	
	Jan.-Aug., 1934	Jan.-Aug., 1935
Imports	834.2	851.0
Exports	778.8	815.3

Exports of bacon and other meat products have fallen by about 17 million kroner; while exports of butter, milk, cream and cheese have risen by about 13 million kroner, vegetable oil products and the like by about 10 million kroner, and ships by no less than 16 million kroner. Imports of feeding stuff have increased by 3 million kroner and paper by 2 million kroner. At present Danish wharves have new shipping aggregating about 100,000 tons under construction. The rising prices of commodities during the last month have specially favoured Denmark's exports.

A surprising speculation has recently been apparent in steamship shares, reminiscent of the Great War; and the day of Mussolini's first attack on Adowa witnessed a veritable boom in shipping shares on the Stock Exchange. The National Bank, however, has issued a warning against any undue speculation and tightened its conditions of loans against collateral.

COPENHAGEN, October 8.

JUGOSLAVIA

THE GOVERNMENT AND POLITICAL REFORM

POLITICAL life, in spite of many alarms and excursions, is showing little definite change. Having to some extent met the most pressing need for more political and civic freedom, Dr. Stojadinovic appears to be concentrating on the building up of the new Government Party, the Yugoslav Radical Union, a combination of the former Serbian Radicals, the Slovenian Clericals and Bosnian Mohammedans. A certain fear is therefore felt among the Opposition that, preoccupied with this task, he may indefinitely postpone the further measures necessary for a full restoration of normal democracy in Yugoslavia: the election law, the Press law, and other laws dealing with political and civic liberties. Some of the Opposition, in fact, already profess to notice a slowing down of the reforming efforts of the new Government and the appearance of more conservative tendencies. Such tendencies are, of course, favoured by the development of the European situation and the excesses of some of the more extreme Croats, with whom the consciousness of somewhat greater freedom after accumulated repression is running riot. Among more moderate Croats, however, the feeling is gaining ground that, just as in the past the Serbs could not enforce their solution of the Croat problem on the Croats, so now the Croats cannot enforce their solution on the Serbs; but that the remedy lies in mutual accommodation and agreement. This is, in fact, gradually bringing the Croats nearer to the Serbian Opposition, and although Dr. Macek keeps a guarded silence, forced on him perhaps for tactical reasons, the prospects of a working agreement appear to be brighter than for some time.

Economic activity is marking time and is on the balance approximately where it was last year at this time. The harvest has throughout been only middling, and there will be less than the normal quantities for export. The export of fodder, has, in fact, been prohibited by the Government. On the other hand, there has been a greater demand for timber and for ores, while foodstuffs are also fetching better prices in view of the increased requirements of Italy. Trade statistics show, therefore, small changes as compared with last year.

	1934		1935	
	Exports	Imports	Exports	Imports
July	Tons 273,500	Mill. dinars 293.3	Tons 277,900	Mill. dinars 305.8
August	332,400	366.6	297,200	310.3
Eight months...	2,165,400	2,249.5	2,155,700	2,391.1
Balance		567,500		584,200
		2,302.6		2,323.2
		-53.1		+67.9

HIGHER PRICES AND LOWER WAGES

The rise of prices is likely to hit the salaried and wage-earning classes fairly hard this winter, especially in view of the cut of 7 per cent. in Government salaries and wages coming into force on October 1st. The average wage has also dropped to 21.56 dinars a day, as against 23.33 in 1933 and 26.56 in 1930. These cuts, which have been received with displeasure by State officials, have been made necessary by the state of the Treasury. Receipts for the first four months of the Budgetary year 1935-36, it is true, compare quite favourably with those of the preceding year, being 2,129 million dinars, as against 2,108. On the other hand, the increased expenditure during the elections, the lowering of many taxes and impositions, cheaper railway fares and freights, together with a more modest harvest and the uncertainties of the European situation are putting a strain on the Treasury.

One of the most harassing problems for the Government is that of peasants' debts. Its difficulty may be seen from the fact that Government after Government has postponed a radical solution, merely introducing or prolonging temporary measures. Officially, these debts weigh on 32 per cent. of the peasants; but in reality the percentage is considerably higher. The chief difficulty is that the debts were contracted under greatly varying conditions, at different times and for a great variety of purposes. In some cases, owing to usurious rates, the peasants have repaid the moneylender more than twice the original amount without any appreciable change in the size of the debt. In others the money was lent under fair conditions, squandered by the borrower, and the lender was therefore victimised. The whole problem weighs like a heavy blanket on Yugoslavia's economic life.

BELGRADE, October 4.

ARGENTINA

RAILWAY PROFITS AND LOSSES

ALTHOUGH there has been a steady increase in gross railway profits since 1932-33, net profits show an equally steady decline owing to heavy exchange losses. The actual figures for 1934-35 are as follows:—Capital, \$3,460 millions; gross profit, \$105 millions; exchange loss, \$57 millions; net profit, \$48 millions; yield, 1.39 per cent.

According to figures recently made public by the Ministry of Finance, the 1934 Budget shows a deficit of only \$200,000. Certain items of unproductive expenditure, how-

BRITANNIC ASSURANCE COMPANY LIMITED

Funds : : : : £24,000,000
All classes of Life, Fire, Accident,
Motor and General Insurances transacted

Chief Office: BROAD STREET CORNER, BIRMINGHAM

ever, seem to have been paid for by loans. For example, \$866,400 of the expenditure on armaments was covered by loan issues. Nevertheless, revenue for 1934 exceeded the budgeted figure by some \$31 millions, chiefly owing to a marked improvement in Customs and ports revenue. This improvement has been continued in the present year, and the latest figures show that for the first eight months of 1935 Customs and port revenue was up by over \$20 millions, or nearly 11 per cent. above the figure for the corresponding period last year. The Ministry of Finance, in a recent report, states that the National Debt increased during 1934 by some \$66 millions, but that this was more than counterbalanced by the execution of public works to a total of \$119,100,000.

Recent statistics published by the Ministry of Agriculture show that Argentine sowings of grain and linseed are down by 3,238,700 hectares, or 23.1 per cent., compared with last year. The area sown with wheat is down by 1,913,000 hectares. Apart from the reduction in area sown, the actual crops are not expected to give good yields owing to the continuance of bad weather and the ravages of locusts. The following are figures showing the area sown during previous years as compared with this year:—

AREA SOWN IN HECTARES					
	Wheat	Linseed	Oats	Barley	Rye
Av. 10 years....	8,063,789	2,957,711	1,419,909	569,338	515,203
1934-5	7,613,000	3,279,000	1,428,000	815,000	863,600
1935-6	5,700,000	2,480,000	1,160,000	780,000	650,000

During the past week, partly as a result of the European situation and partly because of poor crop prospects, grain prices have soared. Wheat exceeded \$9 per 100 kilos, linseed went up to \$14.70 and maize to over \$5. There has since been a certain amount of profit taking, but prices are still high. The exportable surplus of wheat and linseed is very low.

INCREASE IN EXPORT SURPLUS

The following figures show the balance of trade for the first eight months of 1935 as compared with that for a similar period of 1934:—

IMPORTS AND EXPORTS FOR FIRST EIGHT MONTHS (in pesos)		
	1934	1935
Imports	700,318,646	778,764,840
Exports	981,930,475	1,065,750,231
Export surplus.....	281,611,829	286,985,391

ARGENTINE IMPORTS ACCORDING TO COUNTRY OF ORIGIN, FOR FIRST EIGHT MONTHS (in pesos)				
	1934	1935	1934	1935
United Kingdom	146,060,302	159,105,186	23.0	22.0
United States ...	96,112,798	105,648,124	15.1	14.6
Germany	66,146,286	62,699,533	10.4	8.7
Belgium	29,858,090	46,046,316	4.7	6.4
Brazil	29,723,257	33,044,268	4.7	4.6
Italy	46,719,440	32,808,154	7.4	4.5
France	33,476,143	31,449,866	5.3	4.4
Japan.....	12,785,236	31,007,950	2.0	4.3

Imports in August amounted to over \$110 millions, the highest figure since March, 1931. All classes of imports show an increase over last year, except foodstuffs, tobacco and rubber. The largest percentage increase registered is in the machinery section, and the greatest improvement in tonnage and value is in fuel and lubricants. Great Britain continues to hold her position as top of the list of countries exporting to Argentina, but her percentage of the total shows a small reduction, due possibly to the competition of Japanese textiles.

Several very important Bills have been approved by the Chamber of Deputies, including the 1936 Budget. The first of these Bills provides that the Government may authorise the transference of concessions, fusion of companies, traffic pools, suspension of services, etc. The second Bill, known as the City Transport Co-ordination Bill, provides for the formation of a corporation in which will be merged all passenger services in the city of Buenos Aires. It is regarded as almost certain that neither of the above Bills will be enacted this year.

BUENOS AIRES, October 1.

AUSTRALIA

THE NEW BUDGET

THE Commonwealth Budget has been received somewhat critically in business circles. Reductions in taxation under various headings are proposed to the extent of £510,000; but after giving effect to this, the total Commonwealth tax revenue for 1935-36 is estimated at £59,050,000, which compares with £56,146,036 for 1932-33, showing an increase of nearly £4,000,000 at an interval of three years. The total Commonwealth revenue under all heads for 1935-36 is finally estimated at £77,190,000 and expenditure at £77,173,000, leaving an estimated surplus of £17,000.

The official defence of the scale of expenditure is that the various items are inescapable. The Government is also still raising loan money for public expenditure, as a result of which the public debts of the Commonwealth and States have risen to a total of £1,242,115,000 at June 30, 1935, against £1,187,828,000 at three years previously.

After the substantial increase in bank advances in Australia during the past twelve months there is now a tightening tendency, as although prospects for the 1935-36 export season are favourable, the effect of the reaction in the total value of exports during 1934-35 from the high level of the preceding season is now being felt. Commonwealth Government securities have eased, and yields on those with the longer terms ranging up to 1961 are now slightly over 4 per cent.

AN INSURANCE RECOVERY

The last published reports of life insurance companies with head offices in Australia and New Zealand, relating mainly to 1934 transactions, show that as regards new business the decline which took place a few years ago has been largely recovered. The field of operations of the leading companies includes the United Kingdom and some other parts of the Empire. In 1929 the aggregate new business in the ordinary department was approximately £54 millions, from which it fell to £50 millions in 1930 and £39 millions in 1931. Then followed a recovery to £40 millions in 1932, £44 millions in 1933, and £51 millions in 1934. The total ordinary department premiums have risen to £16,349,699 for 1934, against £15,813,269 for 1933 and £15,352,536 for 1932, the total increase in two years being nearly £1,000,000. The interest yield on the ordinary department funds, before deducting taxation, was 4.70 per cent for 1934, against 4.84 for 1933, having followed the general tendency to lower rates in recent years. Against this the effect of the reductions in taxation on life insurance business is shown in the 1934 figures, the total taxation of all kinds in the ordinary department being £608,442, against £1,380,712 for 1933 and £1,552,364 for 1932.

MELBOURNE, September 24.

IRISH FREE STATE

GREAT BRITAIN AND THE ECONOMIC WAR

IN a recent speech on the Statute of Westminster, Mr Thomas reaffirmed his refusal to separate the economic and political issues in the Anglo-Irish dispute. That the misunderstanding over the land annuities could be easily settled he admitted, but he refused to explore the avenues to peace on this matter unless an attempt was made to settle also the major political issues that have arisen. This attitude is most unfortunate, because, whereas both countries have much to gain from the immediate termination of the "economic war," neither can hope to gain anything by a new discussion of the political controversy at the present time. In the case of the economic war, every consideration weighs on the side of an early settlement, while

on the political front both parties will probably find that delay will make peace easier in the end. A premature reopening of conversations might lead to an even more complete impasse.

The fact is that the conditions of a permanent political settlement are not present in the existing situation. Mr de Valera has no intention of proclaiming an independent republic for the Free State area, and the inclusion of Northern Ireland in an all-Ireland State, whatever it might be called, is out of the question while Ulster Unionism remains in its present mood. No politician in the Free State could carry the country to ratify any arrangement with Great Britain which involved both the partition of Ireland and the maintenance of the Imperial connection, and it would therefore appear that the existing situation (which is admittedly unsatisfactory) is the only alternative to a final rupture between the Free State and the Empire. The lesson of recent South African history is that time has a wonderful healing effect, and that the exercise of patience enables even the most difficult problems of status and of internal organisation to become soluble. It is probable that the next generation of Irishmen, North and South, will be more reasonable than those now living, who have had their tempers inflamed by revolution and bloodshed.

"THE UNJUST STEWARD"

The very remoteness of the political settlement emphasises the need for reopening the economic and financial dispute. In view of the fall of agricultural prices and of the partial closing of the British market to Irish farm products, a very good case could be made for remitting the annuities on the ground of the Free State's incapacity to pay. Great Britain has excused the payment of her own debt to the United States on this ground, and the British Government could not with decency adopt the rule of the unjust steward by refusing to allow the same accommodation to her debtors that she is demanding from her creditors.

The settlement of the economic war will not restore the conditions which prevailed before it began, as the Free State has definitely embarked on the policy of self-sufficiency. All that the economic war is doing is to increase the pace of the progress in that direction. Indeed, the pace has become embarrassingly rapid in some respects, and even the most ardent enthusiast for a self-sufficient country does not like to be rushed along towards his objective at breakneck speed. The termination of the economic war would enable the Irish Government to choose the rate at which it would proceed, but no change would take place in the direction of its policy. The industrial tariff would certainly not be lowered, and it is improbable that the protection of wheat, beet, butter and feeding stuffs would be discontinued. The present Government is committed to a policy of redistribution of the national income in favour of primary producers and the poor at the expense of the possessors of fixed incomes; and the measures of self-sufficiency in industry and agriculture are part of the machinery for carrying this policy into effect.

LIVING ON CAPITAL?

The very rapidity with which the transition is being at present accomplished is having the effect of increasing imports temporarily. Large quantities of capital goods are necessarily being imported, while many of the new industries have to obtain their raw material from abroad. The resulting adverse balance of trade is financed partly by invisible exports and partly by the realisation of some of the country's external assets. There is no doubt that the Free State is, for the time being at least, maintaining its standard of living by the repatriation of its outside investments. How long this condition of affairs will remain necessary remains to be seen; but there is no reason why it should not continue for many years, as the creditor position of the country is extraordinarily strong. But the process is debilitating, and can be justified only if the new investment at home proves at least as productive as the investment relinquished abroad.

DUBLIN, October 1.

LETTER TO THE EDITOR

COMPANY LAW REFORM

TO THE EDITOR OF THE ECONOMIST

SIR,—One or two comments seem to be called for on the admirable article in the current issue on Company Law Reform. The writer says that "provision . . . should be made for the immediate disclosure of changes in the directorate of a public company." This would seem to have been covered by Section 144 (2) of the Act of 1929 which provides for the registration of a return containing particulars of any change among a company's directors within fourteen days of the happening thereof.

In the second place it is suggested that the writer would have done well to transfer some of the emphasis he gives to the Consolidated Balance Sheet to a form of Consolidated Revenue Statement. At its best a balance sheet is a set of figures (to call them "values" would be a misnomer) drawn up on highly conventionalised lines. The information which the investing public really requires is the aggregate of the earnings, less losses of the group for the period which the accounts cover, together with the assurance that adequate provision has been made for the wastage of the assets, and the indication of any abnormal expenditure or income which has affected the accounts.—Yours faithfully,

E. KENNETH WRIGHT.

"The Wainhouse," The Chine,
Grange Park, N.21.
7th October, 1935.

[The Act of 1929 does not ensure publicity for changes in directorates, since investors may long remain ignorant of additions to files at Bush House. The uses of a consolidated revenue account are manifold. We fully agree with our correspondent's suggestion, but regard a joint balance sheet as indispensable, e.g. as a guide to a group's liquid assets position.—ED. Econ.]

BOOKS AND PUBLICATIONS

COLLECTIVE SECURITY AND THE AIR

DISCUSSION of international politics is dominated at the present moment by one supreme issue—the application of Sanctions. Yet it is important to realise that, even if the League succeeds—and still more if success is in dispute—the general problem of peace organisation remains, presented perhaps even more acutely than ever before. To this problem Mr Griffin's book on air policy is a valuable contribution.

If there are any who still doubt the significance of modern air armaments for war, or hesitate to take seriously the two proposals to internationalise civil aviation and to establish an international air police force, Mr Griffin will surely convert them. His book is a sincere and passionate plea for these two proposals. It is brilliantly argued, well documented and devastatingly thorough. Even those who remain sceptical must admit the great strength of his case.

The general line of the argument is familiar. There is no direct defence against air attack—"the bomber will always get through"—there never can be an adequate force of interceptor 'planes. The possibility of retaliation, no great comfort to civilian populations, is questionable, and in any case can never be sufficiently certain to deter the aggressor. This is also the fundamental, vital weakness of the "Air Locarno" proposals. It is highly improbable, Mr Griffin points out, that any Government would involve itself in a retaliatory war on behalf of a State which had already been crushed by swift and overwhelming air attack. While Cabinets and Councils talk of aggression, the speed of the air gives victory to the Power which strikes the first blow. The inescapable conclusion, therefore, is that national air forces should be abolished. But this is impossible unless the problem of civil aviation is also tackled. Hence the need for internationalising civil aviation.

Mr Griffin then puts forward his plan of "World Airways," already published elsewhere, and proceeds to elaborate the details and reply to criticism. He admits that it is possible that an aggressor State might seize the internationally-owned civil aircraft in its territory and convert it to military uses. His answer is that to deal with such an eventuality and to give security there must be an international air police force. He accepts in the main the scheme for such a force published by Mr Noel Baker. In a discussion of this and the civil aviation proposals, he makes considerable use of the records of the Disarmament Conference.

In spite of the author's enthusiasm it is difficult at some points in the book to avoid a feeling of depression. One is conscious of the urgency of Mr Griffin's proposals and of the lack of any real alternative. But there are serious obstacles which Mr Griffin weighs a little too lightly. Of these perhaps the most formidable is the interconnection of all disarmament. The existence of the air arm has strengthened some countries and weakened others. Will those countries who are now stronger agree to the abolition of air forces alone? Can they be given sufficient security by an international air police force?

Mr Griffin very sensibly prints in an appendix some of the documents from the Air and General Commissions of the Disarmament Conference in 1932-33. He writes about them:—

They show, I believe, two things: First, that the internationalisation of air power came in 1933 much nearer to political realisation than most people had any chance of knowing—and that great chance may come again. Secondly, that the creative technical work is largely done.

If that chance is to be recaptured, there is not much time to lose.

SHORTER NOTICE

"The Great Crisis and its Political Consequences." By E. Varga. (London) Modern Books, Ltd.

Professor Varga of Moscow reviews in this book the economic problems raised by the world crisis. Unfortunately the detail of Marxist analysis is clouded with rival dogmas and varying interpretations. The theory of value has justly been claimed to be the centre of Marx's economic categories. Yet the priests of Marxism are in schism on this important issue. Recent British communists have accused their "capitalist" critics of ignorance for supposing that "value" in Marx's terminology should be equal to price. This followed from the fact that the "value" of a good depended on the proportion of variable capital (=wages) used in its production, and this of course might be different in goods of the same price. But the capitalist critic, having painfully learnt this elementary doctrine, finds Professor Varga quoting Marx himself, in the opposite sense!

In a word, Marxist theory appears to contain at least as many contradictions as it alleges against capitalism. The descriptive account in this book, however, of the main features of the economic crisis is not uninteresting. The later chapters contain a vigorous condemnation of imperialist designs in China; but Professor Varga weakens the force of the condemnation by making it appear that soldiers fighting on the side of Communism have an exclusive claim to heroism. If this is Marxism, it is not coherent or satisfactory as a system; and if it is propaganda, it is written in language too intellectual to make a wide appeal. The book as a whole is a provoking mixture of illuminating observations and unsound arguments.

MONEY AND BANKING

EMPIRE CENTRAL BANKS

THE stability of the British Empire has been an accepted fact for so many years that it is difficult to remember that it is of comparatively modern growth and that the economic and financial relations of its constituent parts are only now being worked out. For example, the past year has witnessed the opening of central banks in New Zealand, Canada and India, while it is only very recently that the Commonwealth Bank of Australia has completed its transition from a commercial to a central bank. Even the South African Reserve Bank, which is the *doyen* of the Empire central banks, was founded several years after the war.

The simultaneous foundation of central banks in two Dominions and India, to which we refer in the autumn Banking Supplement of the *Economist*, published with this issue, is the main Empire banking event of the year. The first question is: If these Dominions have existed so far without central banks, why has it become necessary to make the change? This question cannot be summarily dismissed. The Irish Free State still has no central bank, and the consensus of banking opinion would probably be that the existing structure of Irish banking and its close link with England and Ulster render the foundation of a central bank undesirable. The institution of the Bank of Canada evoked keen opposition from the commercial banks, who predicted that the partial loss of their right of note issue, with the profits accruing therefrom, would force them to close down their more unremunerative branches. Nor is the future of the Bank of Canada in its present form assured, for Mr Mackenzie King has declared in favour of its formal nationalisation in his election programme. The New Zealand Reserve Bank also found itself launched on troubled waters, for its first major decision was upon the future of the rate of exchange upon London, which had become in New Zealand a matter of political controversy. Finally, the Indian Reserve Bank has before it the numerous problems which will arise out of the impending change in the system of Government.

Moreover, it may be conceded that so far either the Dominions have escaped an acute monetary crisis or that if difficulty has arisen it has been due to general economic or political causes unconnected with the absence of a central bank. The Dominions, too, had evolved a successful currency and credit system for themselves, operated partly by their Governments and partly by their commercial banks. Nevertheless, the completion of the chain of Empire reserve banks marks a definite move forward in the history of the Empire and fills up a number of gaps. First and foremost, the machinery for the supply and distribution of credit was indefinite and incomplete. To some extent it was bound up with the general machinery of Government finance, and quite apart from any question of private or public ownership, the function of the central bank should be separate from those commonly performed by the Treasury. Next, there is the absence of a money market in most of the Dominions. This was frequently brought forward as an argument against the establishment of a central bank, for it was urged that without a money market a central bank would be deprived of its normal instruments of control. Alterations in its rediscount rate would be an empty gesture, while it could not "intervene in the open market" if no such market existed. This argument cuts both ways, for the foundation of the central bank should help to create a money market, which in many ways would be very beneficial. Within recent years the Federal Government of Australia has obtained temporary finance through the issue of Treasury bills. In new and relatively undeveloped money markets, Treasury bills may provide a useful outlet for short-term funds, though in the absence of limitations of time and amount the practice may be open to abuse.

There is undoubted scope for the right kind of money market in all the Dominions. To a large extent they are primary producers, which means that there is a strong seasonal ebb and flow of credit. Here is an obvious function which a well-organised banking system and discount

market could perform. There is no necessity for a slavish imitation of the London discount market, and it does not even follow that three months is the most suitable tenor for internal Dominion bills. These are technical questions which the Dominions must solve for themselves, and on which the new central banks could give a valuable lead.

The most important consequence of the completion of the chain of Empire central banks is, however, the co-ordination of Empire monetary policy and technique. The wrong kind of stress must not be laid upon such an objective. The different central banks have been founded independently, and their constitutions rightly differ in important details. Also the chain has been completed at a time when the economic affairs of the world are in a state of flux, and when sterling itself is unstabilised. For these reasons alone, it would be wrong to make the Dominion central banks conform to a rigid pattern or even to insist that existing Empire exchange rates should be regarded as sacrosanct.

Still, there already exists a certain similarity between the different central banks. With the exception of the Indian Reserve Bank, where special conditions existed, all have shaken themselves free of the fetish of a 40 per cent. minimum gold reserve. Three out of the five allow sterling as well as gold to rank as part of their reserves. In most of the Dominion central banks there either have been or exist to-day close personal connections with the Bank of England. Both the Governor of the New Zealand Reserve Bank and the Deputy-Governor of the Bank of Canada had held important posts in the Bank of England immediately before their appointment. There is no suggestion that they will be unduly biased by this fact. Still, these personal links will make it easier to evolve a common body of Empire monetary technique and doctrine, which should contribute to the strengthening of the Empire.

There are one or two facts which need attention at once. The Dominion central banks' powers of control are not only weakened by the absence of money markets, but by the easy money conditions now prevalent throughout the Empire. In most Dominions the commercial banks are obliged to maintain minimum balances with their reserve banks, but to-day they are so replete with funds that their balances are far in excess of the minimum. They are also carrying substantial balances on their own account in London, dating from before the foundation of the Empire Reserve Banks. It may be argued as logical and desirable that these funds should be concentrated in the Reserve Banks' hands, the commercial banks receiving in exchange local cash resources which could be used for the development of bill markets in the Dominions. Such a development would give the central banks more direct control over the exchanges and would also add to their powers of control at home. To achieve these objectives the Reserve Banks might be prepared to render it worth the while of the commercial banks to hand over the necessary balances, by offering them the possibility of earning higher interest rates at home than were obtainable outside.

The establishment of a chain of Empire central banks should, in the long run, have a helpful bearing on the development of Empire economic policy on the broadest lines. Both at Ottawa and at the World Economic Conference there was a spontaneous expression of opinion from Great Britain and the Dominions in favour of closer economic co-ordination. Naturally such co-ordination must be tempered by elasticity and freedom of action on the part of the Dominions. The risk of internal political pressure to induce independent action on the part of one or more members of the Empire, however, would be greatly lessened—though it could never be removed—by the growth of an Empire central banking system, inspired by common, though elastic, canons of monetary technique. The most enduring contribution of the new central banks to the Empire may be the establishment of a body of economic doctrine to serve as a guide to British and Dominion statesmen alike.

FINANCIAL NOTES

September Clearing Bank Averages.—The main changes in the accounts of the nine English clearing banks between August and September were an increase in deposits to a new high record of £1,986.6 millions, a reduction in cash from £210.2 to £204.7 millions, and an increase in discounts from £285.2 to £297.7 millions. Investments were slightly higher, and there was a small reduction in advances.

The key to the movements is the expansion in the tender issue of Treasury bills from £505 millions on August 3rd to £540 millions on September 28th. The banks have taken up a large proportion of these new bills and that has both added to their deposits and absorbed part of their surplus cash. Lloyds Bank in particular has reduced its cash ratio from 12.0 per cent. in August to 10.7 per cent. in September, and the contraction of £5.5 millions in bank cash was mainly confined to that bank. During the past few weeks the Exchange Equalisation Account must have been taking up additional bills to replace its gold losses, but the floating debt has been steadily increasing, and so the tender issue of Treasury bills has continued to expand. The general impression of the September returns is that Government expenditure and borrowing are beginning to absorb surplus short-term funds.

The Foreign Exchanges.—Up to the middle of this week the demand for dollars persisted, and from Wednesday to Friday of last week the British Control was selling francs at the rate of about Frs. 250 millions a day. The pressure was less intense this week, and on Wednesday New York came in as a buyer of sterling. It is conceivable that some operators had oversold sterling and were driven to cover, while it is also reported that the United States has been buying silver privately in London. A third but more doubtful explanation is that the American authorities have been stemming the gold influx by buying sterling. As a

result of this change, spot sterling rallied from \$4.89½ to \$4.90½ and from Frs. 74½ to Frs. 74½, and the British Control promptly ceased its intervention. The Paris-New York cross rate has also strengthened from Frs. 15.19 to Frs. 15.17½. This last rate is just inside the export gold point of Frs. 15.17½, and has presented shippers of gold with the nice problem of whether or not to cancel shipments already arranged. No cancellations are so far reported, and the City holds that the pressure in favour of the dollar is not yet at an end. United States gold imports for September are returned at \$156.8 millions, including \$40.4 millions from France, \$37.1 millions from England and \$37.7 millions from Holland. British gold exports to the United States for the week ended October 3rd are returned at £4.8 millions.

The Money Market.—Money was a little less plentiful this week, and clearing bank calling was in evidence on Wednesday and Thursday. Their September returns showed that the clearing banks have now been able to invest much of their surplus cash in bills, while the Bank return reveals a substantial absorption of funds in public deposits. Even so, there was no difficulty in obtaining funds, but the general tone of the market is a shade firmer.

Last week's Treasury bills went at an average rate of 12s. 8.05d. per cent., against 10s. 6.87d. per cent. the week before. The rise in the rate is due to the fact that bills maturing in January are now being issued, and January is not a useful maturity. Only £44.0 millions of bills were allotted out of the original offer of £45.0 millions. This week the clearing banks bought bills dated the end of November and bills maturing at any date in December at ½ per cent., but they are not yet buying January bills. Hot Treasury bills were offered freely at ½ per cent. and over, but there were very few buyers.

The Bank Return.—The only significant movements are a further increase of £10.5 millions in public deposits, which now stand at the high level of £35.0 millions; and an offsetting contraction of £5.8 millions in bankers' deposits, which are now down to £75.1 millions. Judged by recent experience, this last is a very low figure, and amply explains the firmer tendency of the money market.

Most of the increase in public deposits is due to an excess of Treasury bill payments over maturities. Both payments and maturities were light during the latter part of last week, but there were no maturities on Monday, and fairly heavy payments during the early part of this week. Current indications are that by next week funds should have moved back from public to bankers' deposits, especially as the Government has no need to accumulate funds at present. The heavy operations of the Exchange Equalisation Account may also be a partial explanation, but this is more open to doubt.

THE STOCK EXCHANGE

WOOL TEXTILE SHARES

Wool textile shares, as a group, rarely engage the active interest of the London Stock Exchange. Although the industry is the oldest of British textiles, its historical development and technical division of labour have combined to restrict the capitalisation of its representative concerns. A wool textile company with a share capital of over a million is uncommon. Nevertheless, the experience of certain leading concerns during depression is reassuring from the viewpoint of stability of earnings. Wool textiles are less dependent than cotton upon export markets, and the sharp reduction in overseas trade since 1929 has not prevented the majority of cloth manufacturers—though not the knitters and hosiers—from earning "bread and butter" profits in the home market. Here considerations of "quality" gave producers sound protection against imports of coarse tissues, even before the imposition of the tariff.

The first thing the investor desires to know, in assessing the prospects of any company, is the extent to which fluctuations in wool prices are likely to affect the value of its stock-in-trade. In the spinning section, the "inventory risk" is capable, on occasion, of wiping out a whole year's profit. Between April, 1934, and April, 1935, the average price of raw Queensland scoured super combing wool fell from 31.7d. to 22.8d. per lb. The net profits of Patons and Baldwins, the leading spinning concern, were reduced from £514,908 to £363,233. The combing companies may be affected by changes in general activity in the industry, but as their business is largely on a commission basis, they escape both the disadvantages and the benefits (if any) of changes in wool prices. The leading manufacturing concerns stand between these two extremes. Their stocks move in conformity with wool prices, but a large proportion of the price of their finished goods represents value added during manufacture.

At the moment, however, all the factors in the industry appear to be pointing towards a period of increased profitability. Home demand is well maintained in all sections, and the raw wool position is moving favourably for spinning profits. Wool supplies are likely to be smaller this season than last, owing to substantial reduction in the Australian and South African carry-over and a smaller Australian clip. Australia is predominantly a merino producer, and since a stronger demand for botany cloths is expected, merino prices may continue to rise. Moreover, re-stocking, if it were affected by "sanctions" or the threat of war arising out of the Italo-Abyssinian crisis, might degenerate into a short-sighted and damaging scramble. A temperate rise would help the spinning section, but past history is eloquent of the danger to these interests of any inflated buying movement.

The present tendency of raw wool prices, however, has important implications within the manufacturing industry. On the woollen side, for example, the relative cheapness of crossbred wools, and the sustained popularity of tweed fabrics, continue to bring steady employment to the mills. Ultimate benefit may also be derived from improving conditions in the United States, where demand has been stimulated by Government contracting and by expansion in the automobile furnishing and dress goods markets. On the worsted side, however, the effect of the recent rise is more debatable. Low prices have helped to "popularise" the better quality cloths. A substantial rise in merino quotations might compel manufacturers to resort to cheaper wools, since cloth prices are incapable of rapid adjustment. On a short view, however, both spinners and manufacturers may be justified in budgeting for a prosperous "worsted" season, in view, particularly, of the recent increase in inquiries from Dominion markets for medium-weight suitings.

What progress has the industry as a whole been making recently? The following table throws light on the answer:—

Year	Average Prices (per lb.)			Employment			Trade	
	Raw Wool*	Merino Tops 64's	Worsted Yarn, 2-48's	Nos. Insured	Per-centage Unemployed	Index of Wages†	Net Imports, Yarns and Manufactures	British Exports, Yarns and Manufactures

* Queensland scoured super combing. † Board of Trade Index, 1930=100.

Although the average price figures for this year show an appreciable decline, a fair improvement has, in fact, occurred from the lower levels prevailing earlier in the year, and the trend is still rising. The steady decline in the number of insured workers has been due mainly to the loss of export business during the last decade, but partly to recent elimination of redundant capacity, particularly in the combing section. The formation of Woolcombers' Mutual Association in 1933 has had a marked influence in this direction. More than 90 per cent. of the combing capacity to which the scheme relates is represented by commission and top-making combers who are parties to it. The Association's activities have already strengthened combing rates, and this section is well placed to take advantage of increased turnover.

There are, naturally, many uncertain features in the wool textile outlook. The partial supersession of wool by artificial silk has started a long-period movement, whose ultimate effects cannot, as yet, be assessed. This applies particularly to the recent remission of excise duty on staple fibre and the contemporaneous price reduction by Courtaulds. On the whole, this new raw material may turn out to be a "bull-point" for the investor. "Fibro" has been adapted for use on standard worsted machinery. Its increased employment in mixed wool tissues, of light and general weights, may be expected if technical details of dyeing and finishing can be satisfactorily arranged. Wholesale displacement of wool, however, is unlikely.

Investors, on this showing, may budget for a moderate rise in wool textile profits—always provided that the industry does not suffer unduly as a result of any sanctions that may be imposed upon Italy. The table on the next page sets out the profits of representative companies in the three main divisions of the industry in recent years, and the present prices and yields of their share and debenture capital.

Steady progress has been achieved by Woolcombers, whose recent dividends have been well inside earnings. Wider profit variations, naturally, are revealed in the spinning section. The chairman of Illingworth, Morris, however, has expressed fair optimism regarding the current year, given a fairly regular price for wool. Similar considerations were voiced at the Patons and Baldwins meeting in July, and shareholders were advised not to fear current prospects if values were maintained. A restoration of earning power to the 1933-34 level might justify the present quotation for the shares. Within the manufacturing section investment must largely be guided by individual choice, assisted by a closer contact with the industry than is possible to the average investor. Few of the manufac-

(a) Including preference shares. * Year to May 31st. † Dividend paid to March, 1931. ‡ After provision for exchange losses and, in 1934, for fall in wool values. † Free of income tax. (b) Year to December 31st. (c) Six months to June 30th. (d) Actual for six months. (e) "A" ordinary shares. (f) Yield worked on 2½ per cent. basis. (f) 2½ per cent. tax free and 7½ per cent. less tax.

turing concerns have an impressive profits record during recent years, and this section of the market suffers from a certain lack of general investment interest. Preference share yields are uniformly high, and may appeal to the more speculative investor. Preference shareholders in William Hollins have this week agreed to the return of 15s. per £1 share, on the reasonable argument that the concern has too large a working capital for profitable employment for investment or productive purposes.

The equity shares in the list, however, have yet to come into their own. A substantial revival of trading—and more adequate profit margins—may be essential in many cases before dividends become practical politics. The yield on Salts (Salthaire) shares takes full account of the enormous gearing of the equity counters, small preferred and ordinary issues of £60,000 each ranking after as much as £1,600,000 of debenture and preference capital. Discrimination is obviously necessary to investors anxious to participate in possible recovery in the industry. They may be well advised to confine their attention to the concerns least exposed to raw wool fluctuations. In the spinning section, above all, they should be prepared for prompt action if and when a decline in values is threatened.

INVESTMENT NOTES

Markets and Sanctions.—The reaction of the security markets to trend of events at Geneva continues to display all the characteristic signs of a dogged rearguard action. Having been compelled to abandon their original thesis of non-interference by the League, markets have fallen back on the view that sanctions will be sufficiently "mild" to leave Italo-Abyssinian hostilities effectively alised." How far this outward expression of a

"fortnightly complex" (the average Stock Exchange Account lasts 14 days) squares with possibilities, either on a short or a long view, we leave our readers to judge, in the light of the facts disclosed in earlier articles of this issue. Technically, markets remain "narrow," and day-to-day price movements are correspondingly exaggerated. So far as domestic factors are concerned, an early general election, with "defence" as its keynote, might be a "bull point" for armament shares, but scarcely for gilt-edged securities. As regards the incidence of possible "sanctions" in the European dispute, our analysis on page 693 suggests that the direct consequences of a severance of commercial relations with Italy would be confined mainly to trades of secondary investment interest, with the important exception of the coal industry. South Wales has already suffered some contraction of its export markets, and for most of this year has had difficulty in securing payment for the exports which it has made to Italy. A complete closing of the Italian market, however, might have an appreciable effect on the great exporting companies of South Wales, including Powell Duffryn and Ocean Coal and Wilsons. In the anthracite section, the loss of Italian trade would be relatively less serious. In 1934 Italy took 8.2 per cent. of our anthracite exports. The Amalgamated Anthracite Collieries, however, can ill afford to lose any substantial block of business, particularly in a market which absorbs certain low-grade qualities not easily placed elsewhere. The only other export in which Italy accounts for a considerable percentage of our market is raw wool, which concerns the investor indirectly, on lines discussed in our leading article on page 711. As regards imports from Italy, no major British company would be directly affected, though our dependence on Italy for 75 per cent. of citrus fruit imports (excluding oranges) might present special problems to such companies as Kia Ora, Ltd. (which owns properties in Messina) and, possibly, Idris, Ltd. The exclusion of our large import of Italian gloves might be a matter of interest to Dent, Allcroft and Company, whose fortunes have already begun to revive since the imposition of the tariff. Buttons, Ltd., again, might find some advantage in the absence of Italian buttons from our market. Among "invisible" traders with Italy, the shipping lines with Mediterranean routes would suffer some inconvenience, though the handicap imposed on subsidised Italian competition might compensate them. Imperial Airways might well suffer both inconvenience and expense through the diversion of routes, and International Sleeping car would feel the loss of a favourite tourist country. Outside these companies and groups it is difficult to foresee any important direct effects of sanctions on individual investments.

Wall Street and Throgmorton Street.—During the past fortnight Wall Street has been hesitant and has not yet recovered the levels which prevailed before the sudden realisation of the gravity of the European crisis brought a sharp reaction. It would be premature, however, to assume that the upward tendency has run its course. Should it be resumed, especially if European markets are still suffering from nervousness, American shares will undoubtedly exercise a strong attraction for the British investor. There are, of course, many British investors, both individual and corporate, whom long experience has made equally at home in Wall Street and Throgmorton Street. Those who have not enjoyed this experience may find profitable interest in an article by Sir William Wiseman in the Supplement on "American Finance and Industry" which is to be published by the *Financial News* next Monday. Sir William, an English-born partner in Kuhn, Loeb and Company, who has had experience in both cities, is well qualified to draw distinctions. He points out that the origins of the two Stock Exchanges were very similar. Both found their *raison d'être* in a rapid growth in the supply of negotiable instruments of a national debt. Both were originally merely sections of an Exchange mainly devoted to trading in commodities. Both after their severance from the parent body conducted their business in the open air, with recourse in inclement weather to the hospitality of a neighbouring coffee house. There, however, the resemblance ends. The London Stock Exchange is still a great cosmopolitan market

This question is of increasing interest to investors.

Since the Great Depression American finance and industry have been completely transformed. Great and apparently impregnable businesses have disappeared into dust or obscurity. New industries, new enterprisers have arisen in many parts of America.

There is great need for a complete and objective survey of American finance and industry—nothing except a number of miscellaneous and unrelated estimates has been available since the Great Depression.

On October 14 THE FINANCIAL NEWS will publish a sixty-page Supplement which will analyse and set in clear perspective all that has happened to American industry and finance since the Great Depression.

THE FINANCIAL NEWS sent its own Representatives to the United States and, in close co-operation with leaders of American finance and industry such as Mr. Myron Taylor, Chairman, United States Steel Corporation, Mr. Charles Gay, President of the New York Stock Exchange, Dr. Harold Moulton, President of the Brookings Institution, Mr. Lewine, President of the Commodity Exchanges of the U.S.A., and Sir William Wiseman, of Kuhn, Loeb and Company, have produced the most complete and authoritative Survey of American affairs which has ever been published by an English newspaper.

Written in non-technical language, amply illustrated and containing all the facts about American industries and companies required by the investor, it will be on sale in all parts of Great Britain on October 14.

60 PAGES FOR 2d.

THE FINANCIAL NEWS

place, mainly devoted, whatever its detractors may say, to the business of investment. The New York Stock Exchange is almost exclusively concerned with the domestic affairs of the United States, and speculation has always been much more evident there than in London. Even to-day, in spite of depression and Securities Acts, the capital profit is still as completely monarch in Wall Street as the income yield is in Throgmorton Street. Though the *Financial News* supplement contains a wealth of other material, both on the details of investment in Wall Street and on the broader subject of American industry, investors need not go far beyond Sir William Wiseman's article to find the key to essential differences in the outlook of the two greatest Stock Exchanges in the world.

Rand Possibilities.—The views recently expressed by Dr. Pirow regarding the extension of Rand mining to about 10,000 feet, with a consequent increase in reserves put at £280 millions, raise difficult technical questions. The main problem to be solved is that of ventilation. To prevent phthisis, "wet mining" has been generally adopted, but as greater depths and temperatures are attained, it is clear that a high degree of humidity at a temperature approaching blood heat may presently reach the limit of human endurance. The surface refrigerating plant at Robinson Deep should shortly provide valuable information on this subject. It is hoped that a reduction of temperature will quickly be attained in those areas which approach critical conditions in the summer, with a resulting setback of some 1,500 feet in depth. Apart from "wet mining," however, it is possible that methods may eventually be evolved to drill "dry," and to filter the greater part of the dust from the air. While this may be possible with machine drills in development faces, it is difficult at the moment to see how such appliances could be used with mobile jack-hammers in stoping. In this respect research may enable the Rand gradually to be exploited to considerably greater depths. Scientific methods have certainly been of valuable assistance to West Witwatersrand Areas, where thorough geophysical and magneto-metrical surveys have been carried out, indicating the presence of the Main Reef Series in depth throughout the area. These conclusions have been confirmed by boreholes, many of which have given satisfactory values, although this is of secondary importance. The ground controlled may be sufficient to contain at least six separate mines. The first of these, Venterspost, has started operations, and is sinking a shaft through difficult water-bearing rock. Another subsidiary, taking in the Libanon farm, may be formed quite shortly. Both for developing concerns and established producers, however, the excess profits taxation is a most unsatisfactory and complicated arrangement, although expectations are general that it will be modified well before the new concerns are ready to produce. It would be rash to anticipate the findings of the Commission appointed to make recommendations to the Government regarding future taxation. It has been suggested in some quarters that the new basis should be a flat rate of 35 per cent. of the profits of all mines. In this event, and if the mines increase their grade to the value of their ore reserves, the Government's share of profits should meet their taxation requirements. On the other hand, such an arrangement would hardly be palatable to certain mining groups which have been able to work a lower grade of ore advantageously, and any new taxation legislation may be followed by certain adjustments in the miners' wages.

Actuaries' Investment Index.—The reaction in ordinary shares which set in a month ago has continued during the latest week. The course of the Actuaries' Index of 158 ordinary shares, however, suggests that the decline is due to market precaution, and not to any real change of view as regards the "mildness," or otherwise, of sanctions. The index figure, based on Tuesday's quotations, has declined to 73.9, compared with 74.3 a week ago and 76.5 a month ago, the corresponding yield figures

being 3.94, 3.95 and 3.83 per cent. respectively. Movements among component groups are illustrated below:—

Group (and No. of Securities)	Prices (Dec. 31, 1928 = 100)			Yields (%)		
	Month Ago (Sept. 10)	Last Week (Oct. 1)	This Week (Oct. 8)	Month Ago (Sept. 10)	Last Week (Oct. 1)	This Week (Oct. 8)
<i>Lower this week:</i>						
Insurance Cos. (24).....	118.9	117.9	115.8	3.53	3.59	3.64
Building Materials (4).....	91.5	88.7	86.7	4.43	4.57	4.68
Elec. Light & Power (16).....	131.4	127.5	126.2	3.87	4.00	4.04
Electric Supplies (8).....	118.2	118.7	117.3	4.35	4.32	4.37
Breweries & Distill. (19).....	130.9	127.3	125.1	4.22	4.34	4.40
<i>Higher this week:</i>						
Iron and Steel (8).....	65.8	64.3	66.5	3.12	3.34	3.29
Oil (5).....	65.6	61.8	63.4	3.47	3.61	3.51

While a wide range of industrial equities show the effects of the market's resignation to the prospective results of League intervention in the present Italian campaign, interest and activity are still largely confined to the armaments and aviation groups on "re-armament" talk.

COMPANY NOTES

Motor Companies.—Publicity for motor shares associated with the annual Show, which opens this year on October 17th, has an eminently favourable setting in 1935. The salient features of the industry are now tolerably well known to investors. Within a vigorous general expansion of the industry the fortunes of individual concerns fluctuate widely from year to year, according to the success of the

latest models. It is notoriously unsafe, therefore, to argue from the general prosperity of the trade to the presumed prosperity of any given company. Some further observations, however, may be added to this well-known thesis. The industry can be divided into two classes of concerns, the popular makers, and the specialists. The popular makers have in the past led the movement to lower prices

and lower running costs. They have long been aware of the remarkable elasticity of demand for private cars and the surprisingly rapid extension of the total market resulting from lower costs and expenses. Realising that "running costs" for the small motorist include the invisible costs of "troublesomeness," the popular makers have aimed at trouble-free running and maintenance as well as low prices. They have not, however, made refinement a first object, though many popular models have in the course of their development achieved a considerable degree of refinement as an incidental. The "specialist" makers include most of those outside the popular leaders. In their varying classes they each make refinement an object of importance. It would seem that manufacturers who have definitely established themselves in one class or the other enjoy a relative stability, though they cannot altogether escape the fluctuations inherent in the trade. There remain, however, certain manufacturers who are apparently undecided whether to aim at specialisation or "popularisation." It is in this class that fluctuations are most severe. With neither the turnover to allow of really popular prices nor the goodwill attaching to a name famous for quality, the "undecided" concerns are thrown back on a gambling chance on the year's model. The larger concerns can afford to give the smaller manufacturers a year's start on any successful idea. It follows, therefore, that a single year's success may not spell permanent prosperity to an "undecided" maker. It is thus incumbent on investors to decide (or to seek advice) in what class to place any individual motor company which may interest them. Even the popular manufacturer will not be proof against fluctuations. As the industry, however, has prudently adopted a conservative dividend policy, both he and the established specialist can, normally, be counted on not to alter dividends very considerably from year to year. The "undecided" manufacturer, on the other hand, may jump in one season from a five-figure profit to a six-figure loss, or vice versa. The evidence of profits in the annexed table suggests that the remarkable expansion in the total market for British cars is allowing some general improvement in profits, which may well continue for some time ahead. But any check to expansion would rapidly discover the weaker units. There would appear to be room for further amalgamations, especially among the "undecided" makers, to promote strength and turnover. Practicable schemes of amalgamation, however, have hitherto been slow to take shape.

★ ★ ★

Joseph Lucas' Profits.—The latest results of this important motor accessories concern are not at first sight impressive in view of the record activity in the motor industry during the past year. An expansion of little over £6,000 to £266,168 in disclosed profits, however, may not be a wholly reliable indicator of the effective progress which has been made during the year, since the figures are struck after undisclosed provision for contingencies. Nevertheless, the recent rate of progress has certainly slowed down, despite the increased activity of the motor trade. A slight increase in the reserve allocation leaves no room for increase in the dividend. The recent course of profits is analysed below:—

	Year to August 31,		
	1933	1934	1935
Profit after depreciation, taxation and contingencies.....	251,627	259,882	266,168
Staff funds.....	10,000	10,000	10,000
Directors' fees and remuneration	3,200	2,500	2,500
"A" and "B" preference dividends.....	10,387	10,561	10,734
Ordinary shares—			
Earned.....	228,040	236,821	242,934
Paid.....	182,869	189,739	189,933
Earned %.....	31.2†	15.6	16.0
Paid %.....	25†	12½	12½
Reserve.....	50,000†	50,000	56,007
Carried forward.....	64,278	77,383§	74,377

† On half present capital, before capital bonus of 100 per cent. at end of year. ‡ £281,407 credited direct to reserve from surplus on realisation of investments in subsidiaries. § After crediting £16,023 surplus on realisation of Government securities.

The balance sheet shows significant changes. Stocks have again risen substantially, evidently financed from sales of gilt-edged holdings. Further extensions have been made to properties and plant, and the balance sheet exhibits its customary strength. Investors may regard the latest profits as a corroboration of the main argument of the preceding Note. A willingness to reduce profit margins, however, should tend to stabilise the company's position in the industry. The £1 ordinary shares, at a current quotation of 61s. 3d. xd, offer an "investment" yield of £4 1s. 6d. per cent., in keeping with this situation.

★ ★ ★

Austin Motor Results.—The Austin Motor Company is the leading "popular" car manufacturer in whose equity capital the share market has a substantial interest. The company's profit for the year to July 31st last, shows a decline from £1,505,212 to £1,469,144, in a period during which it produced and sold 23 per cent. more vehicles in the home market and 30 per cent. more in the export market. This result has obvious relevance to the conditions described in an earlier Note. The company has fully maintained its position in an expanding market, but only at the expense of a significant reduction in its profit margin. The explanation is, apparently, twofold. In the first place, raw material prices have tended to rise under the tariff. In the second, the company decided, a year ago, to make moderate reductions in its selling prices and simultaneously to provide purchasers with an improved product. This policy has paid the industry well in the past, but its re-emergence at this moment may be as much a symbol of renewed intensity of competition as of deliberate policy. The company's results for the last three years are summarised below:—

	Years to July 31,		
	1933	1934	1935
Ordinary capital.....	150,000	150,000	622,459*
Profit.....	1,188,440	1,505,212	1,469,144
Income tax.....	125,000	160,000	150,000
Maintenance and depreciation.....	482,387	626,932	628,596
Debtenture service.....	71,255	55,000	64,625
Directors' fees.....	3,000	2,000	2,000
7% preference.....	13,125	13,344	13,562
6% preference.....	60,000	60,000	60,000
20% preferred ordinary.....	112,500	116,250	116,250

Ordinary—			
Earned.....	321,173	471,686	434,111
Paid.....	112,500	116,250	241,202
Earned (%).....	285.5	405.8	90.0†
Paid (%).....	100	100†	50‡

To capital reserve.....	70,396	50,000	...
To general reserve.....	100,000	300,000	185,000
Total carried forward.....	357,497	362,933	370,842

* Including £472,459 in "A" ordinary shares, distributed as capital bonus. † Plus capital bonus of 300 per cent. in "A" ordinary. ‡ Equivalent to 360.0 per cent. and 200 per cent., respectively, on capital before bonus.

Although the quadrupling of the company's high-g geared ordinary capital last year has been, as was expected, the signal for a considerable upward adjustment of dividends, the financial policy is still conservative. Though the company has spent £344,122 on new plant, equipment and

LONDON
Lombard St.

buildings in the last twelve months, this year's allowance out of revenue for maintenance and depreciation is equivalent to no less than 22 per cent. of the total balance sheet valuation of fixed assets. Despite last year's bonus issue, total reserves and "carry-forward" still exceed total paid-up ordinary capital by £263,383. It should be well within the directors' capacity to reconcile the maintenance of future 50 per cent. dividends with continued financial prudence. Investors, however, obviously cannot take figures of increased sales, either by the company or the industry generally, at their full face value under current conditions. This applies particularly to returns for short periods, such as the eight weeks to September 28th, during which, according to the Austin report, home market sales have increased by a further 62 per cent. and exports by 118 per cent. Encouraging as these figures are, after all qualifications, the yield of £5 17s. 6d. per cent. on the 5s. ordinary shares at their present price of 45s., appears to pay no more than due regard to conditions in the industry.

Murex Progress.—The full report of this welding and alloy concern, which also has valuable patent rights relating to ore concentration and separation, will be received as favourably as the recent dividend and bonus announcement. Evidence of substantial progress is everywhere apparent. Trading profits have risen sharply from £123,867 to £190,391, and net earnings show a corresponding increase. Profits expansion is thus still in the geometric stage, and the report refers to a substantial and profitable increase in business during the year. For a period of industrial progress, coupled with increased armaments and mining activity, it would be surprising if results were otherwise. The generous scale of the increased profits, however, is certainly impressive. As a result of the 100 per cent. share bonus in January last, and of further cash issues, the rate of dividend is reduced from 35 to 20 per cent., but the amount distributed shows an increase from £58,419 to £83,698, as the following table reveals:—

	Years to June 30,		
	1933	1934	1935
Trading profit	69,583	123,867	190,391
Other income	9,138	32,945	39,002
Total profit	78,721	156,812	229,393
Expenses and fees	10,044	9,620	11,712
Depreciation and obsolescence ..	5,265	20,567	22,421
Taxation	8,000	25,190	38,000
Other provisions	...	36,000†	14,000‡
Preference dividends	3,500	3,500	3,500
Ordinary shares—			
Earned	51,912	64,935	139,760
Paid	41,966	58,419	83,698
Earned %	37.1	38.9	33.4
Paid %	30	35	20a
General reserve	...	...	40,000
Carried forward	44,150	50,666	77,730†

† To staff pensions fund. § To investment reserve. ‡ After crediting £14,000 refund by Murex Welding Processes towards staff pensions fund. (a) 100 per cent. capital bonus declared January, 1935, on £270,000 capital, and 2½ per cent. capital bonus with final dividend.

The expansion in the company's trading opportunities and responsibilities may have suggested the desirability of a conservative cash distribution, tempered for shareholders by a modest scrip distribution. The cash and current position revealed by the balance sheet is strong enough to provide for a further generous expansion in a business which, either for armaments or peace, seems destined to achieve increasing industrial importance. At 6½% cum rights, the £1 ordinary shares yield nearly £3 5s. per cent., which may discount future prospects fairly reasonably.

Central Argentine Railway.—The early publication of the Central Argentine results for the year to June last will do nothing to reassure a market which, last week, was dismayed by the halving of second preference dividends by B.A. Great Southern and B.A. Western. Briefly, the operating profit of the Central Argentine has been divided between exchange differences and interest requirements,

leaving only a slight increase in the amount earned for the preference stocks. Sterling traffics show a small decline at £9,865,160 owing to a sharp reduction in Government traffic collections, for general traffics are some £539,312 higher. The increase in total income, which results from a reduction in operating expenses by some £50,000, is more than swallowed by the further advance in the provision for exchange differences, although in the absence of the special allocation in the previous year for writing down "C" certificates of the Convention Trust to par, net revenue has risen from £51,866 to £175,362. The course of recent profits is set out below:—

	Years to June 30,		
	1933	1934	1935
Gross receipts	9,749,195	9,870,864	9,865,160
Working expenses	7,849,021	7,210,962	7,158,446
Operating income	1,900,174	2,659,902	2,706,714
Other income	4,665	23,522	33,592
Total income	1,904,839	2,683,424	2,740,306
Exchange differences	365,479	1,004,819	1,228,623
Debiture, note and general interest and Western annuity ..	1,199,130	1,319,834	1,336,321†
Provision for writing down "C" certificates in U.K. and Argentine Trust to par	...	306,906	...
Net revenue	340,230	51,866	175,362
4½ per cent. preference dividend ..	436,307	...	...
Carried forward	446,520	498,385	673,747

† Includes £8,322 income tax account.

Stockholders will undoubtedly be disappointed by the realisation that a modest recovery of \$5,873,850 in peso receipts to a total of \$108,351,350 for the year has disappeared in the course of transit owing to the heavy depreciation of the peso, and there is clearly little hope of recovery, so far as they are concerned, while provision is required on this enormous scale. The board has made smaller provision for renewals, which on a par basis have cost £314,096, compared with £600,000 for 1933-34. The traffic returns show a fair increase in maize freights, despite the withholding of supplies by farmers, but wheat has fallen abruptly by as much as 38.2 per cent. to £847.158. The effects of the reduced wheat area and sustained drought on the company's current business and on Argentine economic conditions in general suggest that present prospects are not auspicious. Such relief which may be derived from transport co-ordination, revision of regulations and, possibly, the granting of special exchange facilities to the railways may be eventual rather than imminent.

Trinidad Leaseholds.—The oil share market was satisfied with the results of Trinidad Leaseholds for the year ending June 30, 1935. Trading profits increased by 28 per cent. and the amount available for the ordinary shares by 46 per cent. The final dividend was increased from 7½ per cent. to 12½ per cent., making 17½ per cent. for the year, as against 12½ per cent. for the previous year. The directors attribute the improvement in results to a greater volume of sales, a decline in unit operating costs and a slight improvement in sale prices. The company is probably beginning to derive full benefit from the expansion of its distributing organisation in Great Britain, though in its last financial year it enjoyed the benefit of the penny rise in the price of petrol for two months only. Profits have now fully recovered from the set-back experienced in 1933-34:—

	Years to June 30,		
	1933	1934	1935
Total profit	521,187	443,650	570,431
Expenses and directors' remuneration	26,640	28,391	31,745
Depreciation	242,799	235,756	243,552
Taxes	55,000	15,000	55,000
Earned for dividend	196,748	184,503	240,134
Earned (%)	15.0	12.5	18.3
Paid (%)	15.0	12.5	17.5
To reserve	Nil	Nil	10,000
Carried forward	68,992*	69,550	70,161

* After bringing in £4,979 reserve in respect of claim against subsidiary company no longer required.

The company's balance sheet shows an improvement in the financial position. The surplus of current assets over current liabilities is £1,138,000, as compared with £888,000 in the previous year, cash having risen from £63,000 to £542,000. At the present price of 3¼, the shares yield £5 2s. per cent. on a 17½ per cent. dividend.

Leach's Argentine Estates.—The Scheme to cover the settlement of preference dividend arrears by this company, submitted with the report to March last, appears sound and equitable. The sums unpaid amount to £244,125 net, which will be reduced to £210,025 by a payment of 8.8 per cent. out of the latest profits. In return for the cancellation of arrears, preference shareholders are to receive registered funding certificates bearing cumulative interest at 5 per cent., ranking before the preference dividend, and redeemable by appropriation of 15 per cent. of surplus profits, after preference dividends have been paid. At the same time advances and debentures amounting to £266,833 are to be satisfied by an issue of registered notes and advances of \$557,455 (paper pesos) in the Argentine will be extended. Profits remaining after the funding certificate redemption allocation will be applied towards a 6 per cent. non-cumulative ordinary dividend. Of the balance 15 per cent. will be devoted to redemption of registered notes, and the remainder distributed to preference, ordinary and deferred stockholders in the respective proportions of 25, 50 and 25 per cent. The directors recognise that any forecast of trading results, or of the course of the Argentine exchange, is impossible. On the basis of present rates, however, the current year's profits should be sufficient for the fixed preference dividend and an ordinary dividend. In view of the final amortisation of the debentures in 1936, the residual participation rights attaching to the preference shares may become operative if present conditions are maintained.

Base Metal Share Prospects.—While the market's interest in industrial equities—outside the armaments range—and even gold shares remains under the baneful influence of political factors which are none of its seeking, the continued strength of base metals is a more natural reflection of current war reports. The prospect for copper was

outlined in our issue of September 28th, but lead and spelter have also been actively supported on similar considerations. Tin shares have also responded to the further increase in production which was decided at last week's meeting of the International Committee. For the first time for many years, the prices of silver, lead and zinc have substantially improved, and are not, as so often in the past, moving in counterpoint. With the lower level of silver dealings obligingly pegged by the

To PROFESSIONAL MEN!

Lifting a burden from your shoulders

OF all men, the professional man is least protected against the vicissitudes of life. Dependent entirely on his own efforts, he has no established organisation upon which to lean in time of trouble; no understudy can take his place for long; no goodwill exists but that created by his own personality. Protection for himself and his family against all eventualities is, therefore, of paramount importance, and full and adequate protection is offered by the

"TRIPLE INCOME" PLAN

which provides

1. AN INCOME ON RETIREMENT

2. AN INCOME FOR DEPENDANTS

3. AN INCOME DURING DISABLEMENT

The "Triple Income" Plan is a very real contribution to the solving of a problem which rests heavily on the shoulders of professional people. It is designed to meet special requirements and individual needs. Full particulars, examples of its operation and cost will be gladly sent on request.

LEGAL & GENERAL ASSURANCE SOCIETY LTD.

Head Office: 10 FLEET STREET, LONDON, E.C.4.
Established 1836 Assets exceed £33,000,000
General Manager: W. A. WORKMAN, F.I.A.

American Treasury, the bugbear of unremunerative "by-product" silver output is temporarily removed for that majority of base metal concerns whose ores consist of silver-lead-zinc associates. It is, of course, a dangerous policy to base even a speculative investment programme on the purely sentimental reactions of war rumours. If, at this late stage, the Italo-Abyssinian question were to be promptly settled, the subsequent course of demand might reveal that industrial consumers had somewhat anticipated their requirements in recent weeks, and a temporary subsidising of purchasing might occur as a natural consequence. Meanwhile, however, the market is impressed by the long-term industrial prospects, assisted by the assumption that, whether war is an imminent factor or not, prevailing political conditions will in any case encourage some considerable expansion in arms. The present scale of consumption of lead and zinc, in relation to available reserves, suggests the likelihood of a firm long-period trend in prices. An improvement in the profits of representative concerns producing these metals, which are given in the accompanying table, would certainly be assisted by the appreciable cost reductions which have been secured in recent years. It would be wise, however, to recognise three points: a political risk attaches to certain issues in the table; the Australian concerns have received appreciable benefit from the depreciation of the exchange; and, finally, the development in certain sections of the Burma Corporation property has proved less auspicious than originally anticipated.

Other Company Results.—Our table of summarised profit and loss accounts on page 734 shows the results of 34 additional companies. Among these, *Leach's Argentine Estates* (whose preference funding scheme is discussed on this page), has secured a moderate profits recovery from £97,570 to £107,891. It has been something of a motoring week, for in addition to companies discussed in earlier Notes, the report of S.S. Cars has also been published, showing profits of £27,895, which cover the 10 per cent.

dividend adequately, while *Henlys'* profits are slightly higher at £42,916. Further recovery in the engineering trades is illustrated by the *Kayser Ellison* and *Ransome and Marles* reports. This week's plantation results are mainly from smaller concerns, and show a rather divergent trend, although *Lanka Plantations* has increased its net profit from £12,343 to £13,137. In the shipping group, *Manchester Liners* have earned higher profits, and the investment trust trend is still upward. The net earnings of *Robinson and Cleaver* show a sharp fall from £24,115 to £10,321. In the miscellaneous group, such widely differing concerns as *Clyde Paper*, *Genatosan, H. and M. Rayne* and *Steel Ceilings* have achieved satisfactory trading results, while "*The Times*" *Publishing Company* reports a substantial increase in profits from £74,741 to £132,855, the ordinary dividend being doubled. Among the less fortunate, however, *Brown, Hopwood and Gilbert*, and *Burt, Boulton and Haywood* show falling earning power, which in the case of the latter has resulted in a loss for the year. Among the week's dividends, the 50 per cent. distribution of *O.K. Bazaars* has stimulated the market, but the maintenance of the *Burmah Oil* interim at 3½ per cent. has disappointed some optimists. A further full year's payment on *British Celanese* first preference shares, announced on Thursday, meets these dividends up to April, 1934. *United Dairies* have maintained the final dividend of 7½ per cent., making 12½ per cent. on a larger capital.

* * *

Company Meetings of the Week.—On later pages of this issue will be found the reports of the following companies:—Tali Ayer Rubber Estates, Malayalam Plantations, Bajoe Kidoel Rubber and Produce, Southern Kinta Consolidated, Goode Durrant and Murray, and Herrburger, Brooks. The present price level of rubber is definitely too low, according to Mr Miller, chairman of Bajoe Kidoel Rubber and Produce Company, who announced a year's result which might be considered satisfactory in the circumstances. The same argument was advanced by Mr Maguire of Tali Ayer Rubber Estates, who said that in the twelve months to end June, 1936, world stocks may be reduced by 100,000 tons. Mr John Howeson, of Southern Kinta Consolidated, said that the demand for tin continued to increase, and that no company was better equipped to take advantage of more settled conditions in the industry. Addressing Malayalam Plantations shareholders, Mr H. J. Welch reviewed the prospects of rubber and tea market movements, and declared them favourable. The chairman of Goode Durrant and Murray described the advantages of the company's close collaboration with D. and W. Murray. The chairman of Herrburger, Brooks ascribed the increase in profits to expansion of business and to economies which had been effected.

THE WEEK IN THE MARKETS

THE LONDON STOCK EXCHANGE

SETTLING DAYS	
TICKET OCTOBER 22	ACCOUNT OCTOBER 24

The market this week has, on the whole, retained its composure regarding the international situation, and having been convinced that the majority of the League powers mean business, is still confident that this does not imply big business. The first day of the new account, on this reasoning, was the most confident for some weeks, and although second thoughts tempered the advance for a time, the reservations by Austria and Hungary at the Assembly were interpreted in bullish fashion by a market which would willingly hear the last of "sanctions" and war.

Gilt-edged securities opened the new account in the same confident fashion which marked the closing stages of the previous week, and after a pause on Tuesday, resumed

their tentative advance. The undated stocks proved most sensitive in the list, and were not disturbed by renewed canvassing of a November general election. Some investment support was given to the Dominion group, but business tended to become quieter when interest revived in the gilt-edged market.

The foreign bond market made somewhat irregular progress. Brazilian issues, which opened in fair style, became unsettled on a proposed Budget amendment striking out the debt service appropriation and were slow to recover. Argentine bonds remained dull. The German bond market became more confident on news of higher payments on the dollar tranches of the "Dawes" and "Young" issues, but other European issues were little more settled than in recent weeks. Chinese bonds continued firm, and were joined later in the week by Japanese issues, which responded to the South Manchuria repayment.

The home rail market was in more cheerful mood this week. The bears were driven out and there was some scouring of the market for cheap stock. Prior charges were consistently firm, and although equities and marginal preference issues were checked on Tuesday, the traffics brought fresh support. Quiet conditions ruled in the Argentine rail market, and prices tended to sag further. The early publication of the Central Argentine accounts, discussed on page 716, with their depressing record of provision for exchange differences in recent years, resulted in a further weakening of support. American rails were still uncertain this week, and a falling tendency prevailed.

The narrowness of this week's markets was illustrated by the course of industrial shares. The general upward movement on Monday resulted from fairly moderate expansion of demand, but induced a prompt willingness to take profits. The market's interpretation of the week's events at Geneva was broadly to its liking, and in consequence the tone showed cautious improvement after more hesitant conditions on Tuesday. Aviation and steel issues opened firmly, continued moderately active, and were well supported on Thursday. Coal shares were moderately supported, despite the "sanctions" argument outlined on page 712. Motor shares, prominent in this week's industrial and company news, gave good account of themselves, without responding markedly to the August registrations. Brewery issues opened with a general improvement, but displayed no real drive later in the week. Tobacco issues, on the other hand, displayed a somewhat firmer tone after an easier interlude. Woollen textile issues, whose prospects are discussed in a Leading Article on page 711, showed steady fractional improvement, but leading rayon shares failed to maintain their initial promise. Miscellaneous industrial leaders reflected the market tone fairly faithfully. A number of strong features emerged from Monday's dealings among oxygen, chemical, asbestos and metal shares, and building issues were confidently supported. Although dealings were inclined to hang fire on Tuesday, a quiet revival of interest marked succeeding days.

The oil share market opened fairly cheerfully, and business in the leading issues was more active than for some time. Interim dividends, in fact and prospect, influenced the course of quotations, for the market entertained hopes of resumed "Shell" payments, and showed disappointment with the *Burmah* announcement.

Rubber shares had their day on Tuesday, on the announcement that the Dutch authorities had decided to purchase export coupons from estate producers totalling 20,000 tons. This step to check the excess of native exports, which had exercised the market's concern recently, was received favourably in Mincing Lane and the Stock Exchange, but the stimulus proved somewhat short-lived. Tea shares were firm initially, but tended to lose drive in mid-week.

Conditions in the mining markets were more cheerful this week. After attracting increased attention at the end of the previous week, "Kaffirs" opened in brighter style, and although activity tended to taper off, the tone remained firm until Thursday, when selling from the Cape induced a dull tendency. Development news was good, and while West Witwatersrand were in prominent demand other new concerns were also supported. Established producers and finance shares were in better demand early

in the week, and received less support from mid-week. "Jungle" and Australian issues, however, maintained a firm front. Copper shares were sold by profit-takers when the metal reacted on Tuesday, but tin and base metal shares were well supported throughout the week.

FOREIGN STOCK EXCHANGES

NEW YORK

TOWARDS the end of last week Wall Street overcame its pessimism, and decided that the troubles with Italy might not last long, and that in any case foreign investors would turn to America for at least temporary refuge. A steady rise all round the market was led by securities likely to benefit from war; aviation and copper shares were particularly strong, and were followed by motors and accessories, steel and rubber. Treasury issues and bonds were strong. The rise was maintained this week, but although turnover fell in mid-week and the market became more uncertain, copper continued strong and the domestic copper price was raised. The present hesitancy shows that the League crisis continues to overshadow the market, although the President's war embargo seemed to pass almost unnoticed. The strike in the soft coal industry has reduced car-loadings and railways have been weak. The hard coal industry is working for an increase of 150 per cent. in the tariff on Russian coal. Business reports continue to be good. Power output in the week ended October 5th was 12.3 per cent. higher than a year ago, mainly due to increased industrial activity in the Central States. The Securities and Exchange Commission has issued rules for the registration of holding companies, but there can be little progress until the Supreme Court has passed on the Act. The New York Central Railroad is quarrelling with the Reconstruction Finance Corporation about short-term debt conversion. The United States Rubber Company is consolidating its European and English operations. The "Iron Age" estimates steel mill activity at 52 per cent. of capacity, compared with 52.5 per cent. last week. Demand from the automobile industry has increased, but motor stocks are hesitant owing to rumours that prices of Ford's new models will be cut by 10 per cent.

* Two-Hour Session.

PARIS

The Bourse interprets Geneva's delay in dealing with the Abyssinian dispute as good news for investors, if not for the League, and accordingly prices recovered at the end of last week. "Surely the bitterness of death is past," said the Bourse, and hoped into this week that the struggle would be "localised." Rentes and banking shares were strong, and even Suez Canal shares gained after the directors had decided that the canal could not be closed for political reasons. The rise spread to international and foreign securities, particularly German "Young" Loan. Copper was strong on war rumours. But as Geneva became firmer toward the middle of this week, and sanctions became a probability rather than a possibility, the Bourse changed its tone and prices started to sag. Mines, foreign and international securities, rentes and banking shares all

(Continued on page 722)

IN calculating yields on fixed interest stocks quoted below allowance is made for interest accrued since the last date of payment, less income tax at the standard rate. Where stocks are definitely redeemable, the period of the yield includes the period to redemption; where stocks are redeemable at or before a certain date the final date of repayment is taken when the stock stands at any subsequent date when the quotation is above par. The return on ordinary stocks and shares is calculated by reference to the latest dividends, account being taken of any enhancement or reduction of interim dividends. Allowance is made for accrued dividends in calculating the yield on "cum div." shares.

BERLIN

After a sharp decline in the first half of last week, the share market recovered; electricals, chemicals and, later, steel shares rose several points, and shipping shares were particularly strong. Reichsbank shares remained weak, but commercial bank securities advanced. Italian securities were weak. The new week opened with a further recovery, with shipping shares still firm, but on Tuesday after an irregular opening the market weakened. Young Loan declined last week to 101, but was firmer this week. Other bonds were predominantly lower, but declines were small. Certificated dollar issues of the States and banks were weaker; other dollar bonds irregular. Wednesday opened with general losses, but there was an improvement later which left the position substantially unchanged. The official index number of share prices (1924-26 = 100) for September was 92.68, against 95.48 for August; the index number of bond prices was 95.14, against 95.35.

AMSTERDAM

The Bourse at the end of last week decided to make the best of the international crisis, and many prices recovered sharply. Rising commodity prices, particularly for Java sugar, increased interest in commodity shares. Rubber, oil, and shipping shares were strong, and activity continued into this week with tin and tea shares making marked gains. Uncertainty developed at the middle of the week, with speculative activity still centred on American issues and on commodity shares. Industrial shares were weak and Government issues dull. Business seems largely confined to finding a refuge from the crisis in American issues or sharing in the profits of war.

CAPITAL ISSUES

In the present state of markets, new borrowers have been largely forced to exercise their patience. This week, however, two issues have appeared despite the inclement conditions. The *International Power and Paper Company of Newfoundland* has taken the opportunity to issue a 3 per cent. debenture stock backed by Treasury guarantee, in replacement of an existing 4½ per cent. issue which has been called for January next. Since the issue is thus secured, and is of trustee ranking, the company's falling profits in recent years are irrelevant to its security. Although the cash price is £97 per cent. the stock's attractions as an under-par fixed-date issue are partially tempered by a full life of 28 years. The mixed issue of *Wood, Rozelaar and Wilkes* is somewhat small, and aggregate profits of the vendor concerns are below the peak level of 1933. The earnings cover, however, may improve if the directors' anticipations regarding recent extensions of business are fulfilled. Statements for information only have been published by *Morton Sundour Fabrics*, *Rugby Portland Cement* (whose recent profits have risen sharply) and *Peglers, Limited*, a plumbing supply concern with an expanding profits record.

PUBLIC OFFER

Wood, Rozelaar and Wilkes, Ltd.—Issue of 260,000 6 per cent. cumulative 10s. preference and 40,000 10s. ordinary shares at par. Acquires two old-established printing and box-making businesses for £160,000, payable £80,000 in cash and £80,000 in 10s. ordinary shares. Combined net assets acquired £142,912, the balance, £17,088, being for goodwill. Net assets, including proceeds of present issue, £179,912. Combined net profits, after depreciation, years ended March 31: 1933, £19,349; 1934, £15,214; 1935, £16,622. List closed at 1.30 p.m. October 9th.

BY STOCK EXCHANGE INTRODUCTION

Morton Sundour Fabrics, Ltd.—Issued capital, 300,000 5 per cent. first cumulative £1 preference, 210,000 5 per cent. second cumulative £1 preference, and 600,000 1s. ordinary shares. Established 1914 and manufactures textile fabrics, etc. Total assets, £842,154. Net profits to June 30, 1935, £9,751, from which half-year's first preference dividend was paid. Goodwill written down to £100. The company must maintain reserve of £60,000 for securing dividend on the 5 per cent. first preference shares.

Rugby Portland Cement Company, Ltd.—Issued share capital, 100,000 6 per cent. cumulative £1 preference and 600,000 5s. ordinary shares. Combined profits of companies acquired before depreciation and income tax: 1933, £5,300; 1934, £10,609; half-year to June 30, 1935, £19,519 (after providing £2,901 for depreciation). Total assets, £191,351. For 559,920 ordinary 5s. shares at 6s. per share payable in full immediately after permission to deal has been granted.

Total net assets, June 30, 1935, including £167,976 proceeds of ordinary shares to be issued, £298,099. Permission to deal was granted October 9th. Dealings commenced at 7s. 9d.—8s. 1½d.

Peglers, Ltd.—Issued share capital 78,000 5½ per cent. cumulative £1 preference, 160,000 5s. "B" ordinary, and 288,000 5s. "A" ordinary shares. Incorporated March 5, 1914, to acquire business of brassfounders, etc. Total assets, March 31, 1935, £314,213 including £25,000 goodwill. Profits after depreciation, years ended March 31: 1933, £25,671; 1934, £42,456; 1935, £57,621.

PRIVATE PLACINGS

Lancashire Electric Light and Power.—The directors have placed privately 46,975 ordinary shares of £1 each.

Star Brewery, Bournemouth.—The directors have placed privately 25,000 5 per cent. cumulative preference shares of 20s. each. The new issue has been made to provide funds for the expansion of the company's business.

ISSUES TO SHAREHOLDERS ONLY

Scottish Mortgage and Trust.—Issue of £150,000 3½ per cent. debenture stock, 1980-85, at par, to rank *pari passu* with existing debentures and debenture stocks.

House Property and Investment.—Issue of 100,000 "B" 6 per cent. cumulative preference shares £1 at 25s., to repay existing mortgages and other charges.

Kirkstall Brewery Company.—Issue of 55,000 5 per cent. cumulative preference shares £1 at par to present holders of preference or ordinary shares, debenture and noteholders and loan creditors. List closes October 25th.

Associated Fisheries, Ltd.—Issue of 160,000 deferred ordinary shares 5s. each to shareholders on register September 30th in proportion of eight deferred ordinary 5s. shares at 10s. per share in respect of every 27 deferred ordinary shares held. Proceeds to pay off all money borrowed by subsidiary companies and to finance further extensions.

CONVERSIONS AND REPAYMENTS

Monte Video Waterworks.—Holders of £250,000 6 per cent. 5-year notes, maturing November 1, 1935, have the right to receive in exchange for present holding new registered 5 per cent. notes for five years, ending November 1, 1940.

Northern American Trust, Ltd.—Issue of £67,810 3 per cent. redeemable debenture stock (1965-75) at 90 per cent., which will be utilised in the redemption of terminable debentures.

Third Scottish American Trust, Ltd.—Issue of £40,180 3 per cent. redeemable debenture stock (1965-75) at 90 per cent., which will be utilised in the redemption of terminable debentures.

Woolcombers, Ltd.—This company will convert all preference and ordinary shares into stock of the same classes. Meeting October 14th.

Anglo-Ceylon and General Estates.—This company will redeem £250,000 6 per cent. first debenture stock on April 4, 1936, at 103 by issuing £250,000 4½ per cent. debenture stock at par. The £3 difference, together with 15s. per cent., less tax, for interest will be paid to holders in cash on April 4, 1936.

Falkirk Iron.—All outstanding 6 per cent. debentures will be redeemed at par on January 1, 1936.

Selfridge and Company.—This company will redeem its £221,400 5 per cent. first mortgage debentures on April 1, 1936.

International Power and Paper Company of Newfoundland, Ltd.—Issue of £1,877,600 3 per cent. guaranteed "A" stock on January 15, 1936, to provide for mortgage debenture stock at 97 per cent. to provide for redemption of existing 4½ per cent. "A" stock on January 15, 1936. Guaranteed as to principal and interest by British Government. Sinking fund commencing in 1936 is calculated to redeem whole of the stock on or before July 15, 1973, or at par from January 15, 1955, on three months' notice. Profits before interest or depreciation, years: 1932, £2,481,543; 1933, £1,842,200; 1934, £1,644,543. No dividends have yet been paid.

South Manchurian Railway 4½ per cent. Bonds.—The Japanese Government will redeem the outstanding South Manchurian Railway Company 4½ per cent. sterling bonds on January 1, 1936.

William Hollins and Company, Limited.—At a separate class meeting of 5 per cent. cumulative preference shareholders and at a subsequent extraordinary meeting held October 10th, resolutions authorising the repayment of 15s. in cash in respect of each issued £1 preference share and the resultant reorganisation of the capital were passed unanimously at both meetings.

FIXED TRUST

Trust of Bank and Insurance Shares.—The formation of this trust is announced by Trust of Insurance Shares, Ltd. It will have a permitted range of investment in 24 bank, 8 discount company and 25 insurance shares. Uncalled liabilities will

be covered by insurance or holdings of trustee securities. Trust period, 21 years. Loading charge 5 per cent. included in price of units, and annual management charge of ½ of 1 per cent. on mean market value of portfolio. Not more than 7½ per cent. of funds of trust may be held in one company, and not more than 5 per cent. of issued share capital of any company. Proportion of insurance shares not to fall below 35 per cent. Managers undertake to repurchase units at net realisable value.

FORTHCOMING ISSUES

Colonial Gas Association.—This association intends to offer to holders early in November 115,000 ordinary shares at par (sterling) on basis of one share for every eight preference and ordinary shares combined.

North Ashanti Mining Company, Ltd.—The programme is being prepared of operations on Nyafoman No. 2 concession in readiness for the formation of Ashanti-Wallis (Banket) Goldfields, Ltd., which it is proposed to issue as soon as the general market conditions are suitable.

Follis Metals, Ltd.—An issue of capital is expected to be made by this company.

Talbot Alluvials, Ltd.—A meeting will be held on October 18th to consider an offer to shareholders of 300,000 new 5s. shares (English currency) at par in proportion of one new share for each two held.

Norvic Shoe Company.—An issue of preferred ordinary and 5 per cent. preference shares is expected to be made by this company.

Aircraft Industries Corporation, Ltd.—Formed with an authorised capital of £150,000. The company has already made an arrangement to make three public issues as soon as the present political situation is clearer.

OTHER RESULTS OF ISSUES

Zurich Loan.—City of Zurich 4½ per cent. six-year loan at 98½ per cent. was only half subscribed for.

CALLS DUE OCTOBER 14 TO OCTOBER 19, 1935

The grand total of calls falling due in October, 1935, is £10,514,679 which compares with £3,366,662 which fell due in October, 1934.

COMPANY MEETINGS, &c.

MALAYALAM PLANTATIONS, LIMITED

TEA AND RUBBER OUTLOOK

The annual meeting of the Malayalam Plantations, Limited, was held, on the 10th instant, at 19 Fenchurch Street, London.

Mr H. J. Welch (the chairman) said that it appeared probable that prices for low and low medium types of teas would advance still further in the near future. The present high stocks were unnecessary and undesirable from the point of view of consumers, as tea now reached them at an average of seven to eight months after its arrival in this country. It would be beneficial to producers, distributors and consumers alike if the bonded stock could be further reduced by about 50 million lbs. The preferential duty applicable to Empire-grown teas was displacing them in foreign markets and it should be removed or materially reduced.

RUBBER STOCKS

In relation to rubber, "visible" stocks had fallen during the past eight months of the year by 47,000 tons, and, he estimated, would fall by a further 50,000 tons at least during the remainder of the year. "Invisible" stocks also, he thought, had been reduced, but total stocks were still excessive. Actual absorption had not, in his opinion, declined this year. If apparent absorption for this year proved equal to that of 1934, the total reduction of "visible" stocks during the year would exceed 125,000 tons, but on a conservatively low estimate of absorption for the last four months they should be reduced by at least 97,000 tons. The total absorption this year by the United States was expected to be a record and to exceed their previous highest figure attained in 1929. Rubber goods manufacturers in this and several other countries were maintaining a high standard of activity.

The International Regulation Committee had shown its capacity to control supplies and achieve the very desirable reduction of surplus stocks. It was, however, in increasing consumption that the great hopes of the industry must lie, and in relation to this he was optimistic.

The fall in the company's profits and dividend was more than accounted for by the fall of the selling price of its teas. By transfers from the reserve accounts and of £17,384 from revenue the balance of the buildings, machinery and plant account had now been written down to £1.

THE COMPANY'S ESTATES

The company possessed 32 square miles of planted tea, 28 square miles of planted rubber and 50 square miles of reserve lands. Practically the whole of the tea would reach maturity this year and the whole of the rubber by the end of 1938. The issued capital of the company was equal to £45 per planted acre, but, if net surplus assets were deducted, the planted areas, buildings and equipment equalled only £39 per planted acre net. This was considerably below their replacement value. After paying the dividend proposed of 5 per cent. the carry-forward would be increased to £98,222.

Plantation companies in India were in a favourable position owing to the comparatively large markets for local consumption of tea and rubber. New rubber factories had been, or were being, started by Indians and Europeans, and the company was securing its fair share of local sales without export licences. The new national quotas for rubber export from India which had been agreed upon would benefit the company. Each rd. per lb. profit on tea this year would equal £40,000, or 2.2 per cent. upon the company's capital, and each rd. per lb. profit on rubber about £24,000, or 1.3 per cent. upon such capital. In view of the better tea and rubber prices, it was gratifying to know that about three-fourths of the tea crop and two-thirds of the rubber crop for the present financial year of the company had yet to be realised.

They had budgeted to produce in the current year 9,630,000 lbs. of tea at a lower cost than last year, and 5,655,000 lbs. of rubber at an increased cost of approximately ½d. per lb., but still comparing very favourably with the average cost in Ceylon and Malaya. The company's standard assessment of rubber for 1935 was 5,935,000 lbs, and they are now expected to be permitted to export about 3,950,000.

The report was unanimously adopted, and a dividend of 5 per cent., less income tax, was declared.

A hearty vote of thanks was accorded to the chairman and directors, as well as to the agents and staff in the East, and the proceedings terminated.

TALI AYER RUBBER ESTATES, LIMITED

STRONG FINANCIAL POSITION

The twenty-fourth annual general meeting of the Tali Ayer Rubber Estates, Limited, was held, on the 9th instant, at the registered offices of the company, 85 Gracechurch Street, London. Mr F. E. Maguire (the chairman) presiding.

The Chairman, in the course of his speech, said: The profit earned during the year was £11,450 3s. 8d., which compares with £13,031 2s. 1d. for 1933-34. We recommend the payment of a dividend of 4 per cent., which will absorb the sum of £12,000 and leave us with a balance on revenue account of £50,457 12s. 9d., which will be carried forward to the next year's accounts.

The company is in a very strong position financially. In addition to the reserve of £7,500 and the substantial carry-forward, there is an appreciation on the gilt-edged securities, which at the date of the balance sheet amounted to £18,882.

This appreciation, I might remind you, is the result of our having sold a substantial proportion of our holdings in Government stocks in April, 1933. The profit on these sales was deducted from the book cost of the remainder, which, therefore, stand in our books at the low figure of £17,223 18s. 2d.

REGULATION SCHEME AND COSTS

You will no doubt wish me to say something about the working of the rubber regulation scheme, which has now been in force for sixteen months, and I cannot do better than repeat what I have already said this morning when addressing the shareholders of the Rubana Rubber Estates.

The state of the rubber market during the last few months has been very disappointing, and to-day's price of 5½d. cannot be looked upon as at all satisfactory to producers.

A year ago the price was 6½d., but at that time the export cut was 20 per cent., whereas to-day it is 40 per cent., so that the fall in profit is greater than the fall in price.

I am rather afraid that shareholders do not always realise the effect of restriction upon costs and forget that a large proportion of a rubber company's expenditure consists of fixed charges, which include such items as staff salaries, rent and cultivation. As this expenditure has to be spread over the total crop, it is obvious that the cost per pound becomes higher each time the exportable percentage is lowered, so that an increased price is necessary before we can even keep level.

For example, if a company had produced a full crop of rubber at an all-in cost of 4d. per pound and half that had represented fixed charges, then, with a cut of 35 per cent., which was the rate from July to September, that all-in cost of 4d. per pound would have been increased by slightly over 1d., and the further cut of 5 per cent. which has recently been announced would mean an increase of another ½d., bringing the all-in cost on the reduced crop up to just over 5½d. per pound.

WORLD STOCKS OF RUBBER

For this reason to-day's price is, as I have said, most disappointing, but it is to be hoped that when the increased cut is reflected in a substantial reduction of world stocks the price will rise to a level which will allow a reasonable profit to the producer.

You have no doubt seen various forecasts of the reduction in world stocks that will be effected during the 12 months from July, 1935, to June, 1936. Based on a cut of 35 per cent., those forecasts ranged from 100,000 to 200,000 tons. As we do not know how much rubber the world will consume during the period present conditions, even after allowing for the maintenance of the further cut of 5 per cent. from October onwards, it looks as if the total reduction for the 12 months in question will be nearer the lower figure than the higher.

Even so, such a quantity would represent a very substantial inroad upon world stocks, and I think that, if such progress were objects of the regulation scheme, which was to reduce world stocks to a normal figure, the attainment of the second object—the maintenance of a fair and equitable price to efficient producers—should follow as a natural consequence.

The regulation scheme is working more slowly than we expected, but it is working none the less effectively. Looking back at what happened when the Stevenson scheme was in operation, I cannot help feeling that in times to come we may be grateful for that very slowness which we now find so irksome.

The report and accounts were unanimously adopted, and, the formal business having been transacted, a vote of thanks to the chairman, directors and staff terminated the proceedings.

BAJOE KIDOEL RUBBER AND PRODUCE COMPANY, LIMITED

DIVIDEND OF 5 PER CENT.

The annual general meeting of this company was held, on the 8th instant, at 19 Fenchurch Street, London.

Mr H. Eric Miller, the Chairman, said that the standard production assigned to the Java Estates for 1935 was 1,825,184 lbs., and to the Celebes Estates 490,375 lbs. The aggregate standard was thus 2,315,559 lbs., of which about 1,400,000 lbs. would be exportable in the year ending March 31st next, subject to any variation in the exportable percentage of the 1936 standard production. With cuts of this magnitude in force the present price level was definitely too low, especially for companies operating in the Netherlands East Indies.

In the acreage statement appended to the report were set out approximate figures showing the area in process of rejuvenation on each of the three Java estates, aggregating 2,152 acres. Apart from these areas they had a considerable acreage carrying fully-mature rubber in which the interplanted coffee bushes were so heavily over-shadowed that only very small coffee crops could be looked for, even in a favourable season, and it had been decided to eliminate the coffee from about 1,750 acres of mature rubber on the Java estates.

The estate managers had made renewed efforts to reduce cost of production further, but weather conditions at blossom time were very unfavourable both in 1933 and 1934, and on this account the 1935-36 crop of coffee was estimated at 20,500 piculs (against 24,600 piculs last season and 33,000 piculs the year before that) on which they could not avoid booking a loss.

The credit balance in profit and loss account for the year enabled them to pay a dividend of 5 per cent. and to increase the carry forward slightly: a result which under all the circumstances might be considered satisfactory.

They had just been advised by cable that the Netherlands East Indies Government proposed to purchase and cancel some 20,000 tons of export licences valid during the October-December quarter from estates at 27 cents per kilogramme in Java and 29 cents per kilogramme in Sumatra, thus removing all doubt as to their ability to conform to the terms of the International Agreement.

The report was adopted.

SOUTHERN KINTA CONSOLIDATED LIMITED
SATISFACTORY RESULTS OF CONSOLIDATION

The first ordinary general meeting of Southern Kinta Consolidated, Limited, was held, on the 8th instant, in London.

Mr John Howeson, the chairman, who presided, in moving the adoption of the report and accounts, said although the results under review covered a period of 14½ months, they did not reflect 14½ months' working of the six dredging enterprises now merged within the structure of their company. It was not until five months of the period had elapsed that the merger with the Southern Kampar, Kampar Malaya and Kinta Dredging companies was arranged, and the company itself adopted the more appropriate style of Southern Kinta Consolidated, Limited, Changkat Tin Dredging, Limited, having been subsequently absorbed.

No time was then lost in pursuing what might be considered possibly the greatest of the many benefits attending upon a consolidation of that nature—the ability to produce the combined quotas with the most efficient plant and from the most suitable ground. From February to July of the current year the whole of their permitted output had been produced by the Southern Kampar and Kampar Malaya plants.

The profit and loss account showed a credit of £154,448, a very satisfactory figure in the circumstances, and the fact that they had every reason to expect still better results during the current year had influenced the board in recommending a final dividend which would leave only £5,391 to be carried forward and in deciding upon an increased first interim dividend.

Regarding the prospects of the metal, the demand for tin continued to show a healthy upward trend, and consumers showed no disposition to quarrel with the present not unsatisfactory price level. They had, however, to remember that the consumption of tin was still at least 80,000 tons a year behind the existing output capacity of the mines, and the continued control of producing was therefore indispensable to the welfare of the industry.

Subject to that, they might view the future of the industry with every confidence. No company was better equipped to take advantage of more settled conditions.

The report and accounts were unanimously adopted, and the final dividend of 5 per cent., making 15 per cent. for the year, approved.

HERRBURGER, BROOKS, LIMITED

RETURN OF CAPITAL FORESHADOWED

The fifteenth annual general meeting of Herrburger, Brooks, Limited, was held, on the 10th instant, at the Euston Hotel, London.

Mr Louis Sterling (the chairman) said that the balance sheet had undergone a considerable change during the year and reflected a healthy state of affairs. The directors had always considered it advisable to adopt very conservative methods with regard to their financial resources, and, in order to keep the assets as liquid as possible and be in a position to provide for all eventualities, had from time to time built up large holdings capable of being immediately turned into cash. As a consequence at June 30, 1934, the sum of no less than £170,941 appeared in the balance sheet as "Investments in Government Securities," valued at the actual cost of such investments. Low money rates had had the effect of increasing the value of these investments, but in the rather uncertain state of affairs, not only domestic but international, some concern was felt as to whether the high price of these Government securities would be maintained and the possibility of a drop in value became apparent. The directors felt, therefore, that in all the circumstances it was their duty to consolidate these cash resources, and during the year the Government securities were sold. As it had since transpired, a favourable moment was used for the sale, as the values of the securities had since shown an appreciable decrease. As a result of the sale a profit of £13,682 was brought into account this year. Even after the payments to the Shenstone Trust and Bansall and Sons no less than £165,546 remained in the balance sheet as cash held, of which £150,000 was on deposit account at the company's bankers. The rate of interest earned on this deposit was small, and as the amount of capital represented by cash was considerably in excess of any likely requirements for the next few years, the directors considered that it was right that a portion of this cash should be returned to the shareholders.

As a consequence, steps were being taken to effect repayment of 5s. per share and reduce the capital of the company accordingly. The nominal value of the shares would thus be reduced from 20s. to 15s. without, however, affecting the earning capacity of the company. An application to the Courts would be necessary, but it was hoped to effect the repayment before the end of 1935.

It was pleasing to note that the improvement of trade referred to last year had been maintained, and an increase in net profits of nearly £6,000 had been obtained. This increase, however, was not wholly due to increased trading, but also partly to the economies effected by the working directors. In view of the profit on the sale of Government securities, the directors thought that in the special circumstances it was due to the shareholders that almost the whole of the trading profit should be passed to them, and therefore a final dividend of 7 per cent., less tax, was proposed, making 10 per cent. for the year. The final dividend would absorb £19,600, and the balance carried forward would amount to £21,019.

As to the future, up to now trade had shown an improvement on last year's figures, but with the general world unrest it would be foolish to endeavour to anticipate what was likely to happen from now onwards. Under normal conditions it was confidently anticipated that the increasing and returning popularity of the piano would result in further gradual but progressive improvement in the trade, in which case the company should obtain its share.

The report was unanimously adopted.

OFFER TO NEW READERS

Any reader who makes his first acquaintance with this Journal with this week's issue is invited to fill up the attached:

To Publisher, "Economist Newspaper Ltd.,"

8 Bouverie Street, E.C.4.

In order to test the value of your publication I should like you to forward this to me by post for the next four weeks. If I then decide to become a subscriber, it is understood that there will be no charge for the copies thus received, but otherwise I shall be willing to pay 4s. to cover their cost.

GOODE, DURRANT AND MURRAY, LIMITED

GREATLY IMPROVED RESULTS

The thirty-seventh ordinary general meeting of Goode, Durrant and Murray, Limited, was held, on the 10th instant, at Winchester House, London.

Mr William E. Pennick (the chairman) said the year under review had been one of considerable difficulty to most wholesale merchants in Australia, and particularly to those whose chief interests lay in the agricultural and pastoral States of South and Western Australia. At their meeting in April last the attitude of the board regarding the prospects for the year was as a whole one of restrained optimism, but the cheerful promise of the first six months was not fulfilled in the second half of the year.

For the period with which they were dealing, the Australian income from the export of wool had been estimated at £18,000,000 less than in the year ended June, 1934, although a much greater quantity was exported. In spite of this, it was generally recognised that the actual position of the farmers and pastoralists had improved to some extent during the past two years, but the accumulation and dead weight of those debts which were of a preferential character had not yet permitted any material benefit to be passed on to the country storekeepers and to the wholesale merchants.

The amalgamation of those parts of the business of D. and W. Murray, Limited, previously carried on in Adelaide and Perth, had now been consolidated, and the general position disclosed by the balance sheet showed some of the advantages which had accrued.

The balance sheet showed that, whereas last year the liabilities, exclusive of the notes, were covered three times by liquid assets, this year the liabilities, at £185,000, were covered by £800,000 of liquid assets, or nearly 4½ times. A year ago the bank overdraft stood at £158,886, but this had been reduced to £7,694.

The profit for the year, £1,878, was the first credit balance shown since 1930, and although not up to expectations it did mark a turning point in the company's fortunes, and was over £40,000 better than last year.

With regard to the future, the board felt confident of ultimate success, but in the present unsettled state of world affairs it would be unwise to prophesy. The wool sales for the current year had shown a satisfactory rise in prices, but the clip for the season was expected to be lower than in previous years. Wheat was showing an extraordinary rise in price, but that was largely owing to the abnormal conditions of war and rumours of war existing to-day. The report and accounts were unanimously adopted.

GOVERNMENT RETURNS, &c.

NATIONAL ACCOUNTS

The total ordinary revenue for the week ended October 5, 1935, amounted to £14,480,000, against ordinary expenditure of £26,096,000. After allowing for a decrease in Exchequer Balances of £2,551,528, the operations for the week, as shown below, increased the gross National Debt by £9,215,000 to approximately £7,975 millions.*

pared with \$639,395,000. On September 30th, the capital of the bank consisted of \$50,000,000 preferred stock and \$100,270,000 common stock and \$50,000,000 surplus, unchanged from June 29, 1935. Undivided profits on September 30th were \$18,947,000 as compared with \$20,851,000 on June 29th. Semi-annual preferred and common dividends amounting to \$6,083,333.80 were paid to shareholders on August 1, 1935.

MISCELLANEOUS

EDMUNDSONS ELECTRICITY CORPORATION, LTD.—The results of operations of the Edmundson group of companies during August, 1935, as compared with August, 1934, show an increase of 18 per cent. of units sold. September, 1935, results as compared with September, 1934, show an increase of 18 per cent. of units sold.

GERRARD INDUSTRIES, LTD.—This company has acquired 45,320 shares of £1 in Technicolor, Ltd.; 20,000 were paid for in cash at a premium of 4 per cent. and 25,320 were received in consideration of the surrender to London Film Productions for cancellation of twenty 6 per cent. convertible cumulative income debentures previously given to this company by London Film Productions, Ltd., in exchange for 100,000 shares in Colourgravure, Ltd. The surrendered debentures were compulsorily convertible into 100,000 deferred ordinary shares in London Film Productions, Ltd., on November 9, 1939.

ROLLS-ROYCE LIMITED.—Rolls-Royce, Ltd., have received an order from the Yugoslavia Government to the value of nearly £250,000. The engines will be fitted into aircraft for service in the Yugoslavia air force. The directors at their board meeting on October 4th decided to pay an interim dividend of 5 per cent. on account of the present financial year, to be paid on November 4, 1935.

ARGENTINE NAVIGATION COMPANY MIHANOVICH LTD.—Gross takings and those of the associated concern, Cia Uruguaya de Navegacion, Ltd., together amounted to Arg. Paper \$2,539,284 for the month of August, and following is a comparison with previous figures. Gross takings, both companies: August, 1935, Arg. Paper \$2,539,284; August, 1934, \$2,131,185; increase \$408,099—19.1 per cent. January–August, 1935, \$20,028,107; aggregate, January–August, 1934, \$17,150,273; increase, \$2,877,834—16.8 per cent.

WARD OF COLEMAN STREET (ELECTION OF COMMON COUNCIL-MAN).—At a ward mote for the election of a common councilman for the Ward of Coleman Street, in place of Colonel R. W. Eaton, who was recently elected alderman, Mr W. G. Hislop was unanimously elected. Mr Hislop has been in business in the ward for over thirty years and is a member of the firm of A. Moir and Company, who act as London secretaries of the Central Mining-Rand Mines group of companies. He is a past president of the Chartered Institute of Secretaries; member of the British National Committee of the International Chamber of Commerce; president of the United Wards Club of the City of London; and a member of the council of the City Livery Club.

LEACH'S ARGENTINE ESTATES, LTD.—A scheme of reconstruction provides for the issue to preference shareholders of £210,000 5 per cent. cumulative funding certificates in satisfaction of arrears of dividend amounting to £210,025 on the basis of 42 of funding certificates for every 100 preference shares. Redeemable by a redemption fund of 15 per cent. of surplus profits after paying certificate interest and preference dividend commencing in year ending March 31, 1937. The company proposes to issue £246,833 5 per cent. cumulative registered notes in satisfaction of advances due, and will give an undertaking that no mortgage or charge upon its fixed assets will be created without consent of noteholders.

-----------------	--------------------------	----------------------------	--

in some cases business continues to be handicapped by a scarcity of boats. Italian trade remains at a standstill. Scandinavian business is maintained and collieries are also benefiting from an expanding Irish trade. There has been a reduction in short-time working throughout the industry.

Current export prices, f.o.b. district ports: LANARKSHIRE.—Ell best, 14s. 6d.—15s.; splint best, 17s.—17s. 6d.; splint second, 15s.—15s. 6d.; navigation, screened, 14s. 9d.—15s.; navigation, unscreened, 13s. 6d.; Hartley, 16s.; steam, 13s.—13s. 6d.; trebles, 13s. 8d.—13d. 9d.; doubles, 13s. 3d.—13s. 6d.; singles, 12s. 6d.—12s. 9d.; pearls, 11s. 3d.—11s. 6d.; dross, 10s. CARDIFF.—The non-unionist stoppages at two important groups of collieries employing approximately 15,000 workmen have terminated, and operations have been resumed at all the collieries affected. Shipments from South Wales ports last week totalled 380,300 tons, compared with 401,100 tons the previous week, and 407,940 tons in the corresponding week last year. The tonnage position this week has been comparatively good, and in spite of the diminished trade with Italy, exports to the Bay and Mediterranean markets show an improvement. Early in the week intimations were received by local exporters of the acceptance of their tenders for increased supplies to the Egyptian State Railways, but since those tenders were invited, the freight rate for Alexandria has increased by from 2s. 6d. to 3s. per ton, and it has been mutually agreed to make amended offers. Partly owing to the requisition by the Italian Government of Italian owned vessels, and by the British Government of a fairly considerable number of British owned vessels, freights generally are better in the outward market than they have been for some years past. F.o.b. prices, however, are unaltered, and with few exceptions are ruling at the scheduled minimum figures. The question of raising the average inland price level continues to receive the attention of the Central Council, and it is possible that the present system of allocation for inland supplies may be amended in the near future with a view to facilitating the achievement of this object.

IRON AND STEEL

LONDON.—The official report of the London Iron and Steel Exchange draws attention to an increase in business in the iron and steel markets. In several departments producers are extending the periods in which they can give delivery. The pig iron market is in a particularly strong position, and in some cases contracts have been placed for delivery over the first quarter of next year. As stocks in makers' hands have been reduced to comparatively small proportions, there is some reluctance on their part to enter into further far forward commitments. The situation in the semi-finished steel department is satisfactory and many of the producing works have important running contracts and are operating at capacity. New business is active and there is considerable pressure on the part of consumers to obtain delivery. In the finished steel section some irregularity is noticeable in the volume of new business, due partly to the fact that important users have covered their requirements for some time ahead. Specifications are reaching the works on a satisfactory scale, however, and the general tendency is for the demand to expand.

MIDDLESBROUGH.—Requirements of pig iron by home consumers are heavy, and deliveries of Cleveland foundry pig iron and hematite pig iron are well maintained. Forward purchases are taking place, and it is reported that in some cases foundries are purchasing for delivery during the first quarter of next year. Prices are maintained at 67s. 6d. per ton for Cleveland No. 3 foundry pig iron, and at 71s. per ton for No. 1 East Coast hematite, delivered locally. The unsettled international position, and the difficulties of obtaining payment, are restricting export trade.

The steel departments continue to be very busy, and semi-manufactured steel is in good request. Requirements in connection with the re-armament programme are expected to increase the demand for steel locally.

Business in foreign ore is almost suspended, except where buyers are covered under existing contracts. There has been an increase in the freights from the Mediterranean ore ports and from the Bay.

Good Durham blast furnace coke is offered at 19s. per ton delivered works. Heavy melting steel scrap is in increased demand, and the price is firmly maintained at 52s. 6d. per ton, delivered works.

SHEFFIELD.—Conditions in the local steel trade do not change much, except that the manufacture of armaments is bringing additional work to numerous factories. Non-corrosive and other special alloy steels are being used extensively in modern ships of war and munitions generally. This tendency benefits Sheffield

more than any other centre. Nevertheless, more attention is being paid to the manufacture of alloy steels on the North-East Coast, whereby Sheffield monopoly is becoming confined to certain special lines. The price of stainless steel, suitable for cutting purposes, has been reduced to rather more than a fourth of what it was when first introduced nearly twenty years ago, and now is cheaper than the non-stainless steel formerly used by cutlers.

All the large steel firms are working to capacity. Business is less brisk at the smaller firms, but all the rolling mills and forgesserving the finished trade are fully employed. A few good overseas orders are on hand, and the export outlook is rather better. Trade in wrought iron is maintained at former levels, but there is no rush of orders in this department. Work from the building trade continues on a heavy scale and the iron foundries are busy on fireplaces and various building castings. All the tool shops are well employed. Engineers report fairly good order books. The seasonal trade in cutlery and plated goods develops but slowly. The latest unemployment returns show some increase, but a fair number of unemployed miners have been absorbed during the last month.

GLASGOW.—Steelmakers in this area are very busy. Orders from users of almost every class of material are on a large scale, and at some plants manufacturers are finding difficulty in meeting requirements for delivery. Demand for shipbuilding material is still on a small scale, but an early improvement in this branch is looked for as a result of the important orders placed with Clyde yards within the past week or two. Local makers of semis are also fully employed and have a considerable amount of work on hand. Sheetmakers find orders from home consumers still increasing, and the tonnage required is sufficient to keep employed a large proportion of the mills and of the galvanising plant. Export trade is still unsatisfactory, but shows some increase this week. Manufacturing trades in this district are all busy, and full time working is general.

CARDIFF.—Comparatively quiet conditions prevail in the tinplate trade. Last week deliveries to dock warehouses were less than in the previous and corresponding weeks, while shipments from Swansea were nearly 14,000 boxes lower than in the previous week, but about 8,000 boxes more than a year ago. Scheduled c.i.f. prices are unchanged on the basis of 18s. 2d. per box f.o.b. Galvanised sheets have also been featureless with prices unchanged at £11 5s. per ton, while steel sheet and tinplate bars are unaltered at £5 5s. per ton delivered. The President of the Board of Trade has arranged to receive a public deputation on October 23rd in connection with the projected scheme of Messrs. Richard Thomas and Company to erect a tinplate mill at Redbourn.

OTHER METALS

COPPER.—Despite a substantial volume of liquidation, the London market was again firm during the past week, and the quotation for standard cash at one time exceeded £36 per ton—the highest since 1933. In the United States, the domestic price was raised by a further ½ cent to 9½ cents per lb.—a higher level than at any time since July, 1931. The principal reason for the upward movement was, of course, the war scare. After a bout of profit-taking on Tuesday, the rise was resumed on Wednesday and, in the absence of any clarification of the political outlook, a further advance seems probable. But leading copper restrictionists are watching the rise with some anxiety, and it is learned on excellent authority that, in the event of a further jump in prices, measures would probably be taken to increase production and to check the upward movement. Early this week a rumour was circulating to the effect that a world copper conference was to be held immediately to deal with an Italian order, amounting to approximately 60,000 tons, for delivery in 1936. The new Italian import monopoly certainly invited tenders for the supply of copper to cover its requirements next year, while Italy's imports during the past three years have averaged approximately 60,000 tons per annum. But Rhodesian companies have heard nothing about such a conference, and it is reported from Rome that Italy does not want to import the whole year. It would appear, therefore, that there was very little basis for the rumour or for the alarm which it appears to have occasioned in some quarters.

Sales on the London Metal Exchange: 6,500 tons on Monday, against 1,950 tons last week; 5,700 tons on Tuesday, against 3,500 tons last week; 3,400 tons on Wednesday, against 3,450 tons last week. Domestic spot was quoted at 8-72½ cents per lb. in New York on Wednesday, against 8-52½ cents a week ago and standard cash in London was £35 16s. 3d. to £35 17s. 6d., compared with £35 to £35 1s. 3d. a week ago. Stocks of refined copper in British official warehouses at the end of last week, at 81,208 tons, show an increase of 2,027 tons, while stocks of rough copper, at 11,434 tons, show a decrease of 50 tons on the week.

LEAD AND SPELTER.—Prices for both metals registered a substantial speculative increase. The important position of lead in the armament industry—it is used for munitions and in batteries for tanks, aeroplanes, etc.—combined with a scarcity of supplies, pushed up the price of this metal. At one time the quotation touched £19 15s. a ton—the highest since 1930. In view of the fact that lead production has experienced a decline, this rise in prices seems to be more healthy than that which has taken place in connection with other non-ferrous metals. Spelter also received a substantial measure of support from speculative purchasers. This was due not only to the position of spelter in the armaments industry, but also to the consideration that the metal must be regarded as cheap at the present price level.

Sales of lead on the London Metal Exchange: 2,400 tons on Monday, against 1,400 tons last week; 3,200 tons on Tuesday, against 1,850 tons last week; 1,700 tons on Wednesday, against 750

tons last week. The New York quotation on Wednesday was 4-60 cents per lb., against 4-50 cents a week ago and 4-35 cents a month ago. The official closing quotation in London for soft foreign for shipment during the current month was £19 2s. 6d. per ton, compared with £17 10s. a week ago.

Sales of spelter on the London Metal Exchange: 2,400 tons on Monday, against 900 tons last week; 1,000 tons on Tuesday, against 700 tons last week; 1,600 tons on Wednesday, against 1,600 tons last week. Wednesday's quotation in East St. Louis was 4-85 cents per lb., against 4-75 cents the week before and 4-60 cents a month earlier. Wednesday's official closing quotation in London for "good ordinary brands" for shipment during the current month was £16 15s. per ton, against £16 6s. 3d. last week.

TIN.—Following the unexpected decision of the Tin Committee not only to raise production quotas from 65 to 70 per cent., but to make the increase retrospective, prices slumped on Friday of last week. But a recovery set in later. The agreement with the "new-comers" to the tin scheme (who have fixed quotas) permits of a certain increase in their outputs when the quotas of the "signatory" countries are raised above 65 per cent.; hence last week's quota increase will lead to a slightly greater rise in production than former 5 per cent. increases in the quota. Nevertheless, the price rose by no less than £7 15s. between Friday and Wednesday—a fact which affords fresh evidence of the severity of the present "squeeze." It is clear that some time must elapse before the increase in the quota has a tangible effect upon available supplies. The position of this metal is further discussed in a Note of the Week.

Sales of tin on the London Metal Exchange: 425 tons on Monday, against 200 tons last week; 375 tons on Tuesday, against 210 tons last week; 345 tons on Wednesday, against 360 tons last week. The New York quotation on Wednesday was 51-25 cents per lb., against 49-12½ cents a week ago and 48-60 cents a month ago. Wednesday's official closing quotation in London for standard cash was £229 5s. to £229 10s. per ton, compared with £223 to £225 last week. Stocks of tin in London and Liverpool at the end of last week totalled 678 tons, an increase of 91 tons on the week.

OTHER NON-FERROUS METALS.—Among other non-ferrous metals, aluminium ingots and bars for home delivery were again quoted at £100 per ton. Nickel, for home and export, at £200 to £205 per ton, remains unchanged. Quicksilver, on the spot, was quoted at £12 to £12 2s. per flask of 76 lbs., as against £11 15s. per flask last week. Chinese antimony was quoted at £69 per ton ex warehouse, duty paid, as against £68 last week. Chinese wolfram for October–November shipment was quoted at 33s. 6d. to 34s. 6d. per unit, c.i.f., as against 33s. to 34s. per unit last week. Platinum (refined) at £7 10s. per ounce, was unchanged on the week.

TEXTILES

COTTON.—Manchester.—Demand has shown some expansion, and more orders have been forced out for yarn and piece-goods, chiefly as a result of the further upward movement in raw cotton prices. Bearish crop statistics, however, from the United States and Egypt have brought an easier tendency in New York, Liverpool and Alexandria. Demand for raw cotton has continued active, most of the buying being in American, Egyptian and Peruvian qualities. The opinion is generally held that prices are not likely to fall appreciably in the near future.

Inquiry for cloth for foreign outlets has broadened. There has been rather more activity in a variety of goods for India, a feature of interest being the improved inquiry for Calcutta, but most offers have been unworkable. Useful lines have been booked in light whites for Karachi and dyed fancies for Bombay and the up-country markets. Some manufacturers have met with increased support from South America, the Dominions and the Crown Colonies. Certain home trade buyers have displayed more interest in prices. Some makers of drills, sheetings and heavy materials have more work to go on with than a month ago. The yarn market has continued firmer. Spinners of coarse American counts have again sold freely and some firms that could give delivery out of stocks a month ago now require three to four weeks for the completion of contracts. An increased demand has also been experienced for Egyptian qualities.

BEARISH COTTON STATISTICS.—At the beginning of this week the Governments of the United States and Egypt published important statistics relating to the cotton crops in those countries. It was announced from Washington that the Department of Agriculture estimated the growth for this season at 11,464,000 bales against 11,489,000 bales a month ago. The total was slightly

larger than expected. The condition was given as 64-0 per cent. against 64-5 per cent. a month ago, the yield per acre being 191-5 lb. as compared with 192-0 lb. at the beginning of September. So far this season 4,230,000 bales have been ginned against 4,958,000 bales a year ago, the smaller amount being due to the crop being late. The crop of last season was 9,636,000 bales. Favourable picking and ginning weather in the latter part of September about offset the effects of the heavy rains and storms experienced in the south-eastern States early in September. In Texas and Oklahoma, which are the two most important producing States, the crop has shown little recovery from a late start, there being an increasing menace of frost damage. This year's crop in Egypt has been estimated by the Government at 8,255,000 cantars, against a total crop for last season of 7,378,000 cantars.

GRAIN MARKETS

WHEAT.—The sharp rise in wheat prices in recent weeks, due partly to an improvement in the international wheat situation and partly to the war scare which affected most commodities, has been followed by the inevitable reaction. Wednesday's quotations in Liverpool, Chicago and Winnipeg were all lower than a week ago. The downward movement was probably accentuated by the news that the drought in Argentina had at last broken.

According to the *Corn Trade News*, total arrivals of wheat and flour at principal ports of Europe during the past week were 1,005,000 quarters, against 767,000 quarters in the preceding week. On Wednesday last, "December" futures were quoted in Chicago at 104½ cents per bushel, against 106½ cents the week before and 93½ cents a month ago. Quotations in London, Wednesday: No. 1 Northern Manitoba, Vancouver, ex ship, 38s. per 496 lbs., against 36s. 9d. a week ago; No. 2 Northern Manitoba, Vancouver, ex ship, 36s. 9d., against 35s. 9d. a week ago.

FLOUR.—Business in flour was fairly active at higher prices early in the week, but subsequently demand was less brisk. Shipments from North America in the past week totalled 79,000 sacks, compared with 87,000 in the previous week. Wednesday's London quotations (excluding quota payments) were: Straight run, delivered country, 30s. 6d. per 280 lbs., against 29s. 6d. a week ago; delivered London, 29s. 6d., as compared with 28s. 6d. a week ago. Manitoba patents, ex store, 29s. to 30s. 6d., against 28s. 6d. to 30s. a week ago. Australian, ex store, 23s. 6d., against 22s. 9d. a week ago.

BARLEY.—There was a strong demand for feeding barley—especially Russian descriptions—at rising prices. "October" futures were quoted at 34½ cents per bushel in Winnipeg on Wednesday, against 37½ cents last week and 35½ cents a month ago. Quotations per 448 lbs. in London on Wednesday were: "English feed" (new) at farm, 23s. to 24s., as against 23s. to 24s. last week; "English malting" (new) at farm, 30s. to 56s., against 30s. to 56s. a week ago.

OATS.—The market in oats was also active, and quotations showed a firm tendency. On Wednesday, "December" futures were quoted at 28½ cents per bushel in Chicago, against 29½ cents a week ago and 26½ cents last month. Quotations in London, Wednesday: "English Black" (old), at farm, 22s. per 336 lbs., against 22s. a week ago; "English White" (old), at farm, 22s., against 22s. last week; "Chilean White," landed, 27s. 9d. per 320 lbs., against 27s. a week earlier.

MAIZE.—Heavy purchases of Argentine maize during the past week gave rise to an increase in quotations. "December" futures were quoted on Wednesday at 61½ cents per bushel in Chicago, against 61½ cents a week ago and 57 cents last month. Quotations in London, Wednesday: "Plate," landed, 19s. per 480 lbs., compared with 18s. 3d. a week ago; "Plate," ex ship (new), 18s. as against 17s. 3d. a week ago; "Plate," "October," 18s., against 17s. 3d. a week ago. Yellow maize meal, ex wharf, was quoted at £5 2s. 6d. to £5 5s. per ton, against £5 a week ago.

COMPARATIVE AVERAGES OF GRAIN.—The following table gives the estimated sale of home-grown wheat during the harvest years 1932–33 to 1935–36:—

	1932–1933	1933–1934	1934–1935	1935–1936
Estimated sales of home-grown wheat—				
1 week to October 5.....	Cwts. 333,392	Cwts. 392,971	Cwts. 547,666	Cwts. 508,203
5 weeks to October 5.....	1,063,724	2,045,802	2,774,732	2,419,036
Average price of English wheat per cwt.	s. d. 5 8	s. d. 4 11	s. d. 5 1	s. d. 5 6

The following is a statement showing the quantities sold and the average price of British corn in the past two weeks, and for the corresponding week in each of the years from 1931 to 1934:—

Week ended	QUANTITIES SOLD			AVERAGE PRICE PER CWT.		
	Wheat	Barley	Oats	Wheat	Barley	Oats
	Cwts.	Cwts.	Cwts.	s. d.	s. d.	s. d.
Oct. 3, 1931.....	81,910	390,676	38,956	4 10	9 3	5 9

ANGLO-AUSTRIAN TRADE

Influential men in Great Britain and Austria are at work to promote the trade between the two countries.

The NEUE FREIE PRESSE of Vienna

as the leading Central European newspaper is an important factor in these efforts:

BRITISH SUBSCRIBERS find in it full information on financial and commercial activities in Austria, Bulgaria, Czechoslovakia, Hungary, Yugoslavia, Roumania, etc. Special Subjects are dealt with by experts in the sections "European Economics," "Insurance," "Engineering," etc. Monthly subscription 8s. 2d.

BRITISH and AUSTRIAN ENQUIRERS are given advice and assistance in examining market possibilities, finding agents or sources of supply in both countries.

BRITISH ADVERTISERS will find a good response when using the NEUE FREIE PRESSE. It is the right medium for approaching influential business men and the wealthy classes. The considerable circulation in Central Europe outside Austria is an additional benefit for many advertisers and proves the prestige and influence of the paper.

THE LEAGUE IN ACTION

A FORTNIGHT ago Signor Mussolini launched his offensive against Abyssinia. A week later the Assembly of the League endorsed, by 50 votes to 2, the Council's report that Italy had resorted to war in defiance of Article XII of the Covenant. This decision placed upon the members of the Assembly the duty of imposing on Italy the automatic sanctions provided in Article XVI. In the second week of the war, while Signor Mussolini's armies have been consolidating their position on the heights round Adowa and preparing a new advance, the League has been engaged in trying to set in motion its untried and cumbersome machinery for restraining an aggressor.

These efforts have given the impression of clumsiness and absence of any unity of idea in the League's procedure—an impression which is almost inevitably created by any discussion of definite action in a public meeting. But when it is remembered that the League enters upon this contest without plan, without either an economic or a military general staff, and without any experience of the kind of co-operation now being attempted, the wonder is not that progress has been slow, but that so much has been accomplished in a week. The credit for the results achieved, and for those now in sight, must go chiefly to Mr Eden, on whose persistence at Geneva, in face of the "ca' canny" policy of France, everything has depended. Apart from the French Government's prevarications—manœuvres which, significantly enough, have not been endorsed by the French High Command, nor apparently by the French permanent officials at Geneva—the smaller Powers of the League, including all France's European allies, have been solidly behind Mr Eden.

The formulation of the League's plan of campaign began on Friday of last week, when the Committee of the whole Assembly decided to advise members to impose an embargo on the shipment to Italy of arms and implements of war and to raise the embargo in the case of Abyssinia. The second step was taken on Monday, when the Committee of Eighteen proposed, and the Co-ordinating Committee of the whole Assembly accepted, the prohibition of financial transactions between League members and Italy. The details of these resolutions are set forth on page 747 of this issue. The League resolution prohibits both the raising of

loans, credits or new capital in League countries by the Italian Government or by private Italian corporations or other persons or by intermediaries; and also the continuation of existing credit contracts. These measures would prevent any kind of new credit accommodation to Italy, as well as the continuation of existing contractual credit accommodation; but they would not prevent the transfer of existing Italian securities to foreign accounts, which are, in effect, sales of Italian assets. Here is a loophole whereby Italy might raise funds in League countries.

To reach agreement even on such comparatively simple matters as these within the space of three or four days, and in a situation where everything had to be improvised, was fairly rapid progress. Whether these or other sanctions will have any effect or not, and if so after what delay, depends, however, not upon Geneva's action but upon the rapidity with which the countries put these recommendations into practice. So far some dozen countries—including both Great Britain and France—have given effect to the resolution on trading in arms. The Committee urged that the credit regulations should take effect forthwith. There is as yet no means of knowing whether individual countries will consider it necessary to legislate or take other special action on them. The Committee of Eighteen's sub-committee of jurists has simply reminded all the 50 members who are pledged to sanctions that they are each bound to take steps to put these measures into effect "with all requisite rapidity."

It must be admitted, however, that these two decisions are not in themselves of great importance. The lifting of the embargo on the sale of arms to Abyssinia comes too late in the day seriously to affect that country's power of resistance during the present winter campaign. Moreover, it is not the task of the League to prevent Italy's aggression from being successful by stiffening Abyssinia and enabling the Negus to win the war. That would be highly undesirable, not only as a method of establishing world peace but also for its possible effects on the relations between the coloured and white races in Africa and elsewhere. It is the task of the League itself to restrain the aggressor. Nor will a credit embargo greatly affect the situation. For there is hardly any country in the world at the present

moment where Italy could raise a loan. This sanction, when all is said, does little more than put into categorical form an embargo which has already been established by Italy's own actions.

The third and fourth sanctions, to which the League next turned its attention, are very much more significant. They are, respectively, a proposal to stop all imports from Italy; and another to prohibit the export to Italy of certain materials useful for war purposes. For reasons which we elaborated last week, even these sanctions are not likely to be very rapid in their effect; and the Italian Government has defiantly replied with the announcement that if these sanctions are imposed, Italy will boycott British and other goods. But though they will not be immediate in their effect, these devices will begin to exercise pressure on the Italian people. They will mean that the countries co-operating at Geneva will definitely have passed from words to deeds. The proposals in their broadest form have been laid on the table by the British delegate (they are printed in full on page 747 of this issue); and it is anticipated that they will be approved either on Saturday or Sunday. The discussion over the advisability of their immediate imposition has revealed, perhaps for the first time, the extremely complicated issues raised by such economic sanctions. The two most important of these issues are: whether the countries imposing sanctions must legislate to regularise a situation which necessarily upsets their treaty relations with Italy, and, owing to the most-favoured-nation clause, introduces complications into their treaty relations with other countries; and, secondly, whether, and if so in what form, "compensation" should be given to those countries who suffer more severely than others from the rupture of economic relations with Italy.

It remains to add that all these proceedings, and, in particular, the preparation of the economic sanctions, have taken place in the face of delaying tactics on the part of France's delegate. In the latter half of the week the League was pressed to postpone its decisions for some days in order that M. Laval might make yet one more effort to secure peace by his own mediation. The attempt quickly failed. Apparently the minimum terms offered by Italy were that the greater part of Abyssinia should be handed over to Italy for administration under mandate; and that the small upland territory which was to be left to the present Emperor should be placed under a League mandate in respect of which Italy would have the predominant voice. These suggestions are, of course, quite unacceptable. Indeed, no terms can be considered by the League which do not involve the withdrawal of the Italian troops from Abyssinian territory. Clearly, the gulf between the pretensions of Signor Mussolini and the principles of the Covenant is at present quite unbridgeable.

Accordingly, the proceedings of the week have given rise to some sharp exchanges between the British and French Governments. As early as last Monday the Members of the Assembly reaffirmed the phrase in Article XVI, in which States Members declare that they will "mutually support one another in resisting any special measures aimed at one of their number by the Covenant-breaking State." This seemed to the British Government to make France's position clear. But when they asked the French Government to confirm that French concurrence with this decision meant France would support Great Britain if the latter were attacked in the Mediterranean, the reply given was evasive. It was followed by the suggestion that, if Great Britain would withdraw her naval reinforcements from the Mediterranean simultaneously with the withdrawal of Italian troops from Libya, it would greatly help to create a favourable atmosphere for M. Laval's fresh effort at mediation. This preposterous request—which implies that there is a private quarrel raging between England and Italy, and that by its fleet movements this country has acted provocatively—has naturally been answered with an emphatic "No." Further, the occasion has been seized by the British Government to ask France, bluntly and frankly, whether she intends to act up to her obligations under the Covenant fully and wholeheartedly, or not. The answer will be eagerly awaited; for the time has come when members of the League must know, once and for all, whether France is prepared to back the League not by words only, but by deeds.

To a British observer it is incredible that there can be any but one answer. It is true that France was urged by successive British statesmen to make friends with Italy; that France had reason to doubt—until recent months—the genuineness of our active support of the League; and that for internal reasons certain British statesmen had decried the efficiency of the British Navy and of our military forces generally. It must also be remembered that France has, for a decade and a half, thought of the League purely as an additional form of defence for herself against Germany, and has not taken seriously the possibility of League action farther afield. But what the League can or cannot do in the present dispute is the touchstone of its effectiveness in any future dispute. If its procedure is so slow that territory in Africa is ravished by an invading army before decisions are reached, what ground is there for thinking that it will act more speedily in Europe? If it is prepared to compromise with a successful aggressor at the expense of one of its smaller members, what hope is there that it will be more steadfast for justice in other cases? To be precise, if the League cannot effectively restrain Italy, what are the chances that it could deal more effectively with Germany? When all unessentials have been stripped away, this is how the problem presents itself to a third party. Presumably M. Laval knows the answer.

THE END OF MR BENNETT

MR BENNETT has departed from the Canadian scene and taken his party with him. In Monday's General Election the sweeping Conservative victory of five years ago was dramatically reversed, and Mr Mackenzie King's Liberals gained once more not only a clear majority over all parties, but the biggest majority in Canadian history. The result of the election, compared with that of 1930, was as follows:—

	1930	1935
Liberals	87	174
Conservatives	138	42
C.C.F.	3	9
Reconstruction	0	1
Social Credit	0	17

In the Maritime Provinces the Conservatives have almost disappeared, and they have only five seats left in Quebec. Even in their traditional stronghold of Ontario they lost 33 seats, though they still retain some footing here as well as a few seats in British Columbia. The new "splinter parties," it will be observed—the Co-operative Commonwealth Federation (farmer-labour), Mr H. H. Stevens's "Reconstructionists," and the Social Credit League—have hardly succeeded in making a scratch on the traditional surface of Canadian politics. Historic party allegiances, combined with the swing of the pendulum after five years of depression, have duly carried the Liberals to their long-expected victory.

In 1930, after one year of depression and unemployment, Mr Bennett attained power, little knowing that he and his Government had three years of ever increasing difficulty to face. The only cure he had to offer to relieve all troubles was higher and higher protection. During the election he had urged this far from original panacea as a certain guarantee not merely of high profits, but of high wages and employment also. Accordingly, not long after the election, a new, comprehensive and drastically high tariff was bestowed upon Canadian industry.

Immediately afterwards Mr Bennett launched forth on to the inter-Imperial stage. An Imperial Conference was due to be held in London at the end of the year. At its opening Mr Bennett made a sensational offer: he would grant a ten per cent. preference to British imports into Canada if Great Britain, in return, would impose a duty on her own imports of foreign wheat. It soon appeared, however, that Mr Bennett's preference was to be granted not by the lowering of tariffs on British goods, but by the raising of those on foreign goods. As Canada's tariff on British goods was already in many cases prohibitive, Mr Bennett's offer was regarded with much scepticism by the other delegates to the Conference. In the end the Conference turned to mere constitutional matters, and Mr Bennett returned empty handed.

EUROPEAN REPRESENTATIVE'S OFFICE:

8 KING WILLIAM STREET, LONDON, E.C.4

On his return he discovered that, despite his sky-high tariff, depression had actually deepened during his absence. Not only were agricultural prices falling—which could be attributed to the unneighbourly refusal of the British to tax foreign wheat—but industrial profits and employment were shrinking steadily and fast, and Budget deficits and public debts, Federal and Provincial, were obstinately growing. This process continued unabated throughout 1931, at the end of which a new Government appeared in Great Britain. And that Government, as luck would have it, believed in Imperial Preference. It was accordingly arranged that a new Imperial Conference—this time an economic one—should be held in July, 1932, and held appropriately enough in Ottawa, the political home of Canada's Prime Minister and great Imperial Statesman. The Conference was preceded by several months of preliminary oratory on both sides of the Atlantic. It would meet, the British Ministers assured their audiences, "in no bargaining spirit." It would be concerned, Mr Bennett echoed, not with sordid commercial gain, but with the cementing of Imperial friendship. Finally the Conference opened in a burst of oratory that must have severely taxed even the vocal powers of a statesman accustomed to address the Canadian House of Commons for five hours at a time.

The British delegates—Mr Baldwin, Mr Chamberlain, Mr Runciman, Mr Thomas, Lord Hailsham and Mr Elliot—were committed, before they arrived, to the "success" of the Conference on any terms. They had told their supporters that it would succeed, and therefore succeed it must. In these circumstances Mr Bennett's task was easy. He asked for a duty on foreign wheat imports into Great Britain, and he got it; though everyone knew that, since the Empire was a net exporter of wheat, a British duty on foreign wheat could do little to assist the Canadian farmers. He asked for quotas on other British food imports, and he got these too. In return he offered a few trivial tariff reductions, and a hypothetical series of further reductions to be made by a "non-political" tariff board. His offer was accepted by the British delegation.

When Mr Baldwin's team had sailed for home, the reductions in the Canadian tariff proved so slight as to leave it in most cases well above the level at which Mr Bennett found it in 1930. And this was not all. For the Tariff Board soon discovered that the formula of "competitive production costs," according to which Canadian tariffs were to be adjusted, could not be calculated in practice; and, finally, it transpired that the Minister of National Revenue had the power to fix arbitrary valuations for duty purposes on goods imported into Canada under British preference.

The principal result of Ottawa, in fact, has been to divert a certain small proportion of the Empire's overseas trade from foreign to inter-Imperial channels. Of all parts of the Empire, Canada has undoubtedly benefited most by the diversion. This advantage, however, was not sufficient to halt the downward slide of Canada's economy, and the depression continued to deepen until the time of Mr Roose-

velt's devaluation of the dollar. With America's recovery came steady recovery in Canada. It came too late, however, to prevent a series of by-elections being lost by Mr Bennett to the Liberals. Worse still, in January, 1934, Mr H. H. Stevens, Mr Bennett's Minister of Trade, made a speech attacking certain "unfair and unethical practices of Canadian business." Mr Bennett expressed disapproval of the speech; but Mr Stevens was supported by large sections of public opinion, and Mr Bennett eventually had to appoint a Committee to inquire into the alleged malpractices. The Committee, later converted into a Royal Commission, revealed shocking conditions of labour in various important industries. In July, 1934, Mr Stevens specifically charged certain business interests with "indefensible wage-cutting, stock-watering and other unethical practices." Mr Bennett again protested, and Mr Stevens, rather than retract, resigned from the Cabinet and subsequently formed his own "Reconstruction Party."

By the end of 1934 the Conservative's electoral fortunes had fallen extremely low. And in January of this year Mr Bennett, after trying in vain to persuade Mr King to form a National Government, suddenly announced a remarkable political conversion. "Any attempt to operate capitalism, under the old system," he declared in a broadcast speech, "is doomed to failure owing to the low scale of wages in comparison with profits and interest." A New Deal of expanding social services was thereupon promised; and some rudimentary reforms were subsequently passed through Parliament. Despite this death-bed repentance, however, despite the artificial raising of the price of wheat a month before the election, and despite the indefatigable audacity of his election campaign, Mr Bennett has fallen, at last, and brought down the Conservative Party with him.

Now that Mr McKenzie King is with us once more, with the largest Liberal representation in Canadian history, it is pertinent to ask what his policy is likely to be. Its main plank will clearly be the liberalisation of Canada's tariff and, in particular, the revision of the Ottawa Agreements. And for this appearance at length of at least one free trade Government the world as a whole may be truly, and indeed greedily, grateful. Mr King's victory this week may well be the signal for the re-orientation of Imperial economic policy away from the "closed door" programme so fatally initiated at Ottawa. He has already declared his sympathy with the original objective laid down by Mr Baldwin for Ottawa: the expansion of inter-Imperial trade rather than the contraction of the Empire's trade with the outside world. Much in future world history may hang on the issue of this choice.

Apart from fiscal policy, however, and his decision to nationalise the Bank of Canada, Mr King has not been lavish with promises. In this he is lucky; and if the present rise in wheat prices and the general revival in America continue, the prospects before his Government should be reasonably bright. What will happen five years hence, nobody of course can predict. But we shall be very surprised if the present election does not prove to be, without reprieve, the end of Mr R. B. Bennett.

RISING COMMODITY PRICES

THE Italo-Ethiopian dispute has prompted investors to seek safety in "liquidity" and manufacturers to increase their supplies of primary products. The recent sharp rise in the prices of important industrial raw materials and crude foodstuffs is, to that extent, the outward and visible sign of a widespread "re-stocking" movement, accentuated by the inevitable co-operation of speculative operators. A rise in prices of the magnitude of recent weeks must necessarily have important repercussions both on manufacturing costs and on the purchasing power of primary producers. Every sustained rise in the prices of crude materials, further, tends, *pro tanto*, to relieve the difficulties of the gold bloc countries. Will the present rise continue?

It is necessary, at the outset, to distinguish, in any causal analysis, between short-term psychological factors and changes in underlying conditions of supply and demand. Moreover, as the majority of primary products are subject to international arbitrage, it is of interest to examine variations in commodity prices in terms of gold. Recent experience suggests that a rise in commodity prices, generated by psychological factors only, has been invariably followed by a setback, which has caused inconvenience to consumers who have bought at high price levels and brought disappointment to producers. On a superficial view, the rise in the prices of primary products in recent weeks does not differ from previous spurts due to short-lived "re-stocking" movements. Closer analysis reveals, however, that these changes in *sterling* prices have usually been accompanied by a decline in the gold value of sterling, and as the upward surge of prices has frequently exceeded the decline in the gold value of sterling, each of these movements has been followed by a partial setback. Thus, our index of the sterling prices of primary products (September 18, 1931 = 100) rose from 103.5 on July 27, 1932, to 112.3 on October 19th, only to decline again to 107.7 by January 25, 1933. During the same period, our index of the sterling price of gold (September 18, 1931 = 100) rose from 136.9 to 143.8, and subsequently declined to 142.6. Similar movements took place in 1933 and in 1934. In general, the trend of our index of the sterling prices of primary products before the latest upward movement followed fairly closely, though, of course, inversely, the gradual decline in the gold value of sterling. Thus, a rise of 20.8 per cent. in our index of primary products between July 27, 1932, and July 17, 1935, was accompanied by a fall of 21.3 per cent. in the gold price of sterling.

† On October 14th the cash price of tin rose to £248 per ton.

The latest rise in the prices of important primary products, however, contrary to precedent, has not been accompanied by any significant change in the relationship between sterling and gold. A rise of 8.2 per cent. in our index of the sterling prices of primary products, for example, between July 17th and October 9th syn-

chronised with a fall of only 0.5 per cent. in the gold price of sterling. Similarly, Moody's index of the dollar prices (i.e. the "gold" prices) of staple commodities rose by 10 per cent. between July 17th and October 9th. Such an increase is the more significant since it is not explainable solely by the war "scare."

There is reason to believe, indeed, that the movements in the table above have been due, in part at least, to improvement in underlying conditions of supply and demand. Apart altogether from "war-forestalling" purchases, demand for primary products has recently tended to expand with the gradual revival of world economic activity, which has reduced the burden of visible stocks. Between August 14th and October 14th, for example, quotations for wheat at Liverpool (December futures) rose by about 28 per cent. to the highest level registered since September, 1930. Demand for wheat, the staple alike of combatants and non-combatants, is likely to be disturbed by any threat to peaceful international relations. It is now clear, however, that, in any case, this year's crops will probably fall short of the world's requirements. The wheat surplus, consequently, should be further reduced during the 1935-36 season. The sharp rise in the price of linseed oil is partly a reflection of prolonged drought in Argentina. World stocks of raw sugar, again, have been reduced considerably by the curtailment of production in Cuba and Java. According to Messrs C. Czarnikow, Ltd., the world's visible supplies of raw sugar declined from 7,415,000 tons on August 1, 1933, to 6,853,000 tons in 1934 and 5,487,000 tons on the corresponding date in 1935. As a result of a restriction scheme, tea is also dearer than a year ago.

The rise in the price of rubber during the past two years is also due largely to organised "restriction." Although extravagant hopes of "shilling rubber" have been disappointed, it is only three years since rubber was selling below 2d. per lb. The absence of an improvement in raw cotton prices, on the other hand, reflects, partly, a change in the loan policy of the United States, which will probably lead to increased exports, and partly a rapid increase in cotton production outside the United States. The majority of non-ferrous metals are substantially dearer than a year ago, and many have risen substantially in recent weeks. Here the influence of "armaments" demand, actual or potential, is clearly discernible. In the case of tin, where a "squeeze" has developed, despite recent upward adjustments of the production quota, available supplies have become dangerously attenuated.

In general, the facts cited in this article appear to suggest that at least three distinct forces have united to bring about the present upward movement in prices. The first is a recovery in world trade activity, which, though unequally distributed, is perceptible and persistent. The second is a desire to replenish consumers' stocks, which in some instances had been allowed to run low. The third reason is wholly "abnormal," since not even the furthest-sighted market operator could have foreseen, a few months ago, the implications of a dispute between a great European Power and the League of Nations. If current fears of war's incendiary proclivities are happily disproved, a certain reaction may be inevitable, after a species of commodity "scramble." As the latter, however, has been a powerful but not a unique factor, its disappearance would not necessarily restore the *status quo*.

BRITISH MOTOR CARS

THE annual exhibition organised by the Society of Motor Manufacturers and Traders opened in London on Thursday, October 17, under encouraging auspices. The British private car industry is looking back on a most successful year, in which production, exports and home sales have all established new records; and the increase in the number of cars in use in Great Britain and Northern Ireland, from 1,333,050 to 1,493,000, has been the largest ever recorded. Recent progress is shown in the following table.

PRIVATE CARS—PRODUCTION AND SALES

Year ended September	New Registrations		Net Imports	Exports	Total British Production
	Great Britain	Northern Ireland			
1929.....	167,517	2,852	21,871	32,915	181,413
1930.....	153,855	2,805	12,048	26,388	170,800
1931.....	141,392	2,820	4,731	18,816	158,297
1932.....	143,053	2,821	1,999	25,354	169,229
1933.....	178,574	3,472	3,780	41,358	219,624
1934.....	215,526	3,984	9,629	45,114	254,995
1935*.....	260,000	5,000	13,700	50,000	301,300

* Figures partly estimated.

Despite last year's remarkable increase in total production, the experience of individual manufacturers has been anything but uniform. No official figures are available, but it is clear that Morris has regained the premier output position, with a total production figure probably in excess of 100,000 units, of which two-fifths came within the 8-h.p. class. The Austin figures (which are probably of the order of four-fifths of the Morris total) show an increase of 23 per cent. in home sales and 30 per cent. in export sales, compared with total figures for the whole industry of 21 per cent. and 11 per cent. respectively. These two concerns alone are now, apparently, responsible for about half the total British output. Altogether, in the 1933-34 season it is estimated that six large British manufacturing groups supplied 74 per cent. of the home market.

The larger firms continue to maintain, and even extend, the range of their models, in order to insure against the vagaries of demand. The six leading manufacturing groups will begin the new season with 45 models in production. Frequent changing of models is a further source of expense, but is inevitable since, in any given year, spectacular success is not infrequently scored by firms which have made the most striking changes. In the long run, the cost of these changes must necessarily be passed on to the public, since unsuccessful must be carried by successful models. If demand could be forecast at all accurately, reductions in selling prices would certainly be possible. During the last two seasons reductions have been confined largely to the higher-powered cars, under the stimulus of American competition (which indirectly affects the market for medium-sized cars), and have scarcely affected small cars up to 10 h.p. The small car buyer, who accounts for over 60 per cent. of the total demand, requires cheap motoring first and foremost. Though it may be claimed that reductions are unnecessary in present conditions of expanding demand, the extent to which the small car market might be increased by such a policy remains unknown. The public is becoming increasingly "road-minded," partly as a result of rehousing and dispersion of the population from town centres. Some of the 4,000,000 additional users of pedal cycles since 1929 might be potential car owners on a further reduction in motor taxation. The industry, however, is unlikely to tackle the question of reducing the gap between the production costs of popular models and their selling prices to the public so long as the present expansion of sales continues.

The growth of car imports, which began in March, 1934, seems likely to be checked by the transfer of the manufacture of the 30-h.p. Ford V.8 and the new 22-h.p. Ford V.8 from Canada to Dagenham. New registrations of 30-h.p. cars during the year have been approximately 6,000. The great majority are Ford V.8's, whose manufacture in this country will seriously affect the import figures, which totalled 13,700 last year. The trend of imports in recent years has been as follows:—

CAR IMPORTS

Year ended September	Complete Cars	Chassis for Cars	Total (Cars and Chassis)	Average Declared Value of Complete Car
1929.....	13,576	8,295	21,871	£ 187
1930.....	6,127	5,921	12,048	202
1931.....	3,655	1,076	4,731	181
1932.....	1,565	434	1,999	238
1933.....	3,016	784	3,780	189
1934.....	8,988	641	9,629	157
1935*.....	12,650	1,050	13,700	155

* Figures partly estimated.

The most important effect of the American export campaign has been to awaken home manufacturers to the existence of an unsatisfied demand for cheap large cars and to stimulate them to produce competitive cars. It has frequently been claimed that the horse-power tax, which effectively protects the greater part of the home market against competition, has prevented British manufacturers from making suitable export models owing to the alleged absence of a domestic market from which to build up sales. The 25 per cent. reduction of tax last January should, *per contra*, facilitate wider development of the export trade—though events must be left to show how far this expectation is likely to be fulfilled.

At present, undoubtedly, exports are the least satisfactory feature in the picture. Their recent trend is shown below:—

CAR EXPORTS

Year ended September	British Exports				Average Declared Value of Complete Car	British Exports as Percentage of World Total
	Complete Cars	Chassis	Total Cars and Chassis	Percentage to Empire		
1929.....	23,418	9,497	32,915	90.0	£ 183	6.5
1930.....	20,453	5,935	26,388	89.9	185	8.4
1931.....	16,877	1,939	18,816	87.2	162	11.2
1932.....	22,124	3,230	25,354	73.7	133	23.2
1933.....	34,389	6,959	41,358	63.4	126	27.3
1934.....	34,956	10,158	45,114	78.5	136	17.9
1935*.....	42,000	8,000	50,000	76.8	127	15.6

* Figures partly estimated.

Since the American export campaign began, there has been a substantial recovery in world demand. Only a small share, however, has accrued to the benefit of the British industry. The success of the American car has been common to all markets, including the Dutch and Belgian, no less than the Argentine and South African. On the long view, nevertheless, there may be increasing scope for the cheap British small car, as income strata are reached, in importing countries, where only the cheapest motoring is possible. The present loss of ground, indeed, may be due mainly to the fact that certain manufacturers have been working to capacity to supply the home market.

A rapidly developing side-line of the motor industry proper is the manufacture of motor boats. Pleasure craft of this type are becoming increasingly popular. Some 10,000 motor boats are estimated to be in use, and their number is said to be increasing at the rate of about 10 per cent. per annum. Exact information is, however, unobtainable, since there is no general licensing system.

Owing to differences in the composition of exports between one year and another, it is difficult to say to what extent there has been a real fall in prices in the motor-car trade. There is evidence, however, of an appreciable reduction in labour costs during the past year. Unless this has been swallowed by higher raw material costs it should leave room for some shading of prices. This may appear difficult to reconcile with the lower profit figures declared, e.g. by Austin. It is not unusual, however, for manufacturers to charge considerable new capital expenditure against current income.

During the past year private car production has increased by 18 per cent. and commercial vehicle production by 9 per cent. There has been concurrently an increase in motor-cycle and aircraft construction. The mean rate of unemployment among workers engaged in motor vehicle and aircraft construction and repair, nevertheless, has been as high as 8.9 per cent., against 10.6 per cent. in the previous year. Unless an unparalleled increase has occurred in the number of registered workpeople (which cannot be definitely ascertained until the Ministry of Labour publishes its annual figures, but appears unlikely from other evidence), there would appear to have been a substantial increase in the output per worker employed. The industry would be well advised to pass on "economies" to the public, to encourage the largest possible increase in the motoring population. The demand for motor cars is probably more elastic than for the products of almost any other industry. There are undoubtedly sections of the community who would be willing to buy cars if the prices of the cheaper models were only a little reduced. The industry has a great opportunity.

EUROPE AND AFRICA

This week the representatives of fifty nations at Geneva have been considering how best to give practical effect to the letter and spirit of the League Covenant against a Covenant-breaking Power. That much, at least, we owe to our plighted word. But at such a time it is not only legitimate but also reasonable, wise and right that we should explore and implement, with equal vigour and determination, those other complementary provisions of the Covenant which are not coercive but constructive. It was, indeed, the supreme merit of the Foreign Secretary's historic speech in the Assembly that he opened the safety-valve besides putting on the brake.

If resistance to aggression were the only way in which it was possible for Great Britain and France to perform their duty under the Covenant, the duty would remain, but the prospect would be grim. Fortunately, however, in this case, the two League Powers that have the principal responsibility under Article XVI of the Covenant have also the principal opportunity under Article XIX. For, as it happens, the challenge to the Covenant has been delivered in Africa and not in Europe; and in Africa Great Britain and France, between them, at present hold the lion's share of the assets—economic and political, material and spiritual—in which Italy claims a share for herself. For implementing, in Africa, the constructive side of the Covenant the French and British peoples hold the initiative; and the firmer their stand in defence of Abyssinia, the more active their statesmanship ought to be in promoting the effective application of Article XIX to tropical Africa as a whole.

What are the principles that ought to govern the relations between Africa and Europe? The first is that, while there are obvious possibilities in Africa for a gross abuse of European power, there is also a legitimate task in Africa which Europeans can perform to the mutual advantage of the inhabitants of the two continents. This right relation between Europe and Africa consists in the fulfilment of "the dual mandate": a phrase coined by Lord Lugard and expounded in his book which bears that title. We Europeans have, in Africa, a twofold duty. On the one hand, in virtue of our more advanced civilisation, we are our African brothers' keepers, and it is our duty both to educate these African wards and to protect them against exploitation and oppression. At the same time, it is our duty to see that the backwardness of the African peoples does not prevent the material resources of Africa from being developed for the benefit of the world as a whole.

This general conception of what the relations between Europe and Africa ought to be happens to have been given its classic expression by one of the English pioneers in the opening up of Africa; but the conception itself is certainly not peculiar to Lord Lugard and his countrymen. It has presided, all the time, over the opening up of Africa by European enterprise ever since the beginning of the movement in the 'eighties of last century. This was the idea that inspired a series of international conventions for the suppression of the slave trade and slavery in Africa; for the regulation of the arms traffic and the liquor traffic; and for the maintenance of free trade. It was the idea for which King Leopold professed to work when he persuaded Europe to let him found the Congo Free State; and it was the idea to which Gordon whole-heartedly devoted himself both on the Congo and on the Nile. The same idea prevailed upon the victorious Powers in the Great War to hold and administer under mandate the territories which they had conquered by force of arms from their German adversaries. No doubt this principle of "the dual mandate" has often been eclipsed, and sometimes cynically abused for improper purposes. But it has never ceased to live; and, now or never, its hour of fulfilment has come.

At this point some critics may ask what further fulfilment is needed? Are not the British, French and Belgian Colonial administrations actually carrying out Europe's dual mandate in Africa very creditably, as it is? What is wrong with the present state of affairs? This question brings us to the heart of the present crisis. What is turn-

ing Italy savage is the fact that to-day this European mandate in Africa is almost entirely monopolised by three or four privileged European "colonial Powers." Here is the "injustice" which Signor Mussolini has proclaimed and Sir Samuel Hoare has admitted. At Geneva, the other day, Sir Samuel Hoare took a great step forward when he offered, on this country's behalf, to discuss practical ways of relaxing the monopoly so far as access to raw materials was concerned. We do not wish to minimise the importance of this offer or the urgency of following it up. But there is also perhaps a risk of making a false start if we try to solve the problem in exclusively economic terms. Suppose that not only the sources of supply but also the markets in the whole of tropical Africa were thrown open to Italian and German and Polish economic enterprise to-morrow as fully as they are open to British and French and Belgian enterprise, would that entirely remove the present grievance of the non-colonial European Powers? Manifestly not; for, to do the non-colonial Powers justice, we must recognise that the European assets in Africa in which they want a share are political as well as material. They want to be taken into partnership with ourselves in administering the European mandate in Africa in all its aspects. The practical problem which we have to solve is how to find a way of satisfying this demand without prejudice to that European trusteeship for the native Africans which, like the control of African economic assets, is at present mainly in British, French and Belgian hands.

Our duty towards the native Africans is clearly the paramount obligation of "the dual mandate." To take the extreme case which is causing the present international crisis, it would be preposterous for Italy to obtain the larger participation in the European mandate, to which she is in principle entitled, by wantonly attacking and conquering the independent African Empire of Ethiopia.

Nor is it admissible to transfer African populations which are already under European rule from one national European administration to another just for the sake of remedying the present inequality of colonial opportunity as between the European Powers. There is something to be said for handing back—under mandate—the ex-German colonies in Africa to their former German rulers; but little or nothing to be said for handing over, let us say, the Anglo-Egyptian Sudan to Italy or the French Congo to Poland. With the possible exception of the ex-German colonies, which are a special case, it would assuredly be wrong to force a change of rulers upon African populations for European convenience.

But this does not mean that nothing effective can be done in Africa to satisfy the legitimate political, as well as material and economic, demands of the European Powers that at present have either no share, or only a derisory share, in the administration of Europe's African mandate. There are two big things that could be done to give the whole of Europe a genuine share in this common African task. In the first place, without prejudice to existing sovereignties, the whole of tropical Africa—from Atlantic to Indian Ocean and from Sahara to Kalahari—could be placed under a mandatory regime. The League Council's Committee of Five proposed that a measure of supervision should be voluntarily accepted by the independent African State of Abyssinia; and the Emperor of Abyssinia agreed. If this system is practical politics in an independent African State, it is surely practical, *a fortiori*, in British and French and Belgian and Portuguese colonies and protectorates. This is one thing that can be done. The other is to apply, throughout tropical Africa, our Indian expedient of dyarchy. If it is our duty to be conservative in contemplating changes of regime which might adversely affect the personal welfare of the native peoples of Africa, it is equally our duty to be radical in taking steps to pool the material resources of Africa for the legitimate benefit of Europe as a whole. Let us make a separation, in African administration, between the human and the economic side; and let us throw open the economic services, throughout tropical Africa, to citizens of all European countries without national distinction. Here are two proposals which may have been Utopian yesterday, but are surely more practical to-day than a policy of sitting on the safety-valve till we have produced an explosion.

THE LEAGUE'S SANCTIONS

THE ARMS EMBARGO

The Sub-Committee of Military Experts on the embargo of exports of arms and munitions to Italy, who were appointed to revise the list of arms and war material attached to "Proposal No. 1" of the Assembly Committee, issued their report with a revised list of these goods on Wednesday. The new list is as follows:—

Category I

(1) Rifles and carbines and their barrels. (2) Machine-guns, automatic rifles and machine pistols of all calibres and their barrels. (3) Guns, howitzers, and mortars of all calibres, their mountings, barrels and recoil mechanisms. (4) Ammunition for the arms enumerated under (1) and (2) above; filled and unfilled projectiles for the arms enumerated under (3) above and prepared propellant charges for these arms. (5) Grenades, bombs, torpedoes and mines, filled or unfilled, and apparatus for their use or discharge. (6) Tanks, armoured vehicles and armoured trains. Armour of all kinds.

Category II

Vessels of war of all kinds, including aircraft carriers and submarines.

Category III

(1) Aircraft assembled or dismantled, both heavier and lighter than air and their propellers or airscrews, fuselages, aerial gun mounts and frames, hulls, tail units and undercarriage units. (2) Aircraft engines.

Category IV

Revolvers and automatic pistols of a weight in excess of 1 lb. 6 oz. (630 grammes) and ammunition therefor.

Category V

(1) Flame throwers and all other projectors used for chemical or incendiary warfare. (2) Mustard gas, Lewisite, ethyldichlorarsine, methyldichlorarsine and all other products destined for chemical or incendiary warfare. (3) Powder for war purposes and explosives.

FINANCIAL MEASURES

The report of the financial sub-committee, which was accepted by the Committee of the States of the Assembly, is as follows:—

With a view to facilitating for the Governments of the Members of the League of Nations the execution of their obligations under Article XVI of the Covenant, the following measures should be taken forthwith:—

The Governments of the Members of the League of Nations will forthwith take all measures necessary to render impossible the following operations:—

(1) All loans to or for the Italian Government and all subscriptions to loans issued in Italy or elsewhere by or for the Italian Government;

(2) All banking or other credits to or for the Italian Government and any further execution by advance, overdraft, or otherwise of existing contracts to lend directly or indirectly to the Italian Government;

(3) All loans to or for any public authority, person, or corporation in Italian territory and all subscriptions to such loans issued in Italy or elsewhere;

(4) All banking or other credits to or for any public authority, person, or corporation in Italian territory and any further execution by advance, overdraft, or otherwise of existing contracts to lend directly or indirectly to such authority, person, or corporation;

(5) All issues of shares or other capital flotations for any public authority, person, or corporation in Italian territory, and all subscriptions to such issues of shares or capital flotations in Italy or elsewhere.

(6) The Governments will take all measures necessary to render impossible the transactions mentioned in paragraphs (1) to (5) whether effected directly or through intermediaries of whatsoever nationality.

The Governments are invited to put into operation at once such of the measures recommended as can be enforced without fresh legislation and to take all practicable steps to secure that the measures recommended are completely put into operation by October 31, 1935. Any Governments which find it impossible to secure the requisite legislation by that date are requested to inform the Committee, through the Secretary-General, of the date by which they expect to be able to do so.

Each Government is requested to inform the committee, through the Secretary-General, within the shortest possible time of the measures which it has taken in conformity with the above provisions.

THE BRITISH PROPOSAL

The text of the British proposal on Wednesday for a general embargo on all imports from Italy is as follows:—

The Governments of the Members of the League of Nations will prohibit the importation into their territories of all goods (other than gold or silver bullion and coin) consigned from or grown, produced, or manufactured in Italy or Italian possessions, from whatever place arriving.

Goods grown or produced in Italy or Italian possessions which have been subjected to some process in another country, and goods manufactured partly in Italy or Italian possessions and partly in another country, will be considered as falling within the scope of the prohibition unless 25 per cent. or more of the value of the goods at the time that they left the place from which they were last consigned is attributable to processes undergone since the goods last left Italy or Italian possessions.

Goods the subject of existing contracts will not be excepted from the prohibition.

Goods *en route* at the time of imposition of the prohibition will be excepted from its operation. In giving effect to this provision Governments may, for convenience of administration, fix an appropriate date having regard to the normal time necessary for transport from Italy, after which goods will become subject to the prohibition.

Personal belongings of travellers from Italy or Italian possessions may also be excepted from its operation.

NOTES OF THE WEEK

Rushing the Election.—There is now little doubt that the General Election is to be held on November 14th—eight days after the Royal Wedding and three days after Armistice Day. The news of the Government's haste has come as a shock to those anxious to maintain national unity of opinion in support of British efforts at Geneva; and Mr Chamberlain's apologetic speech on Monday has done nothing to dispel this impression. The contention that the Government needs a national mandate for its sanctions policy is frankly absurd. When the Government and the Opposition are agreed on essentials, the way to secure a national mandate is to summon Parliament, not to dissolve it. The proceedings at Westminster next week could have been a great demonstration of the solidarity of British opinion; they could have been an object lesson at once of the common sense and determination of a free democracy in face of one of the great crises of the world; Parliament could by its example have invited the democracy of France to stage a similar demonstration in favour of international law and the rights of small nations. In short, next Tuesday could have been a landmark in Parliamentary history. Instead of all this, Parliament is to meet under

sentence of death; and far from presenting a picture of national solidarity, the speakers will inevitably be forced into party apologetics. It was not thus that the Government behaved in the crisis of the Great War. Moreover, in the present instance the argument for seeking a fresh League policy mandate is particularly threadbare, since it is generally realised on all sides that the election will certainly end in the loss of many Government seats. If, on the other hand, the Government wants a mandate not for sanctions, but for rearmament, then it is a gratuitous confusion of the public mind to hold an election while the struggle to uphold the League is still continuing. The Government will only have itself to thank if it is accused of trying to steal the peace vote for rearmament. Indeed, after Mr Chamberlain's speech, the Opposition may be forced into the position of representing the Government as the protagonist of rearmament *par excellence*. Vital issues will be confused, and the public prevented from expressing a clear and calm judgment. For the real question is not whether we rearm or do not rearm; but whether our armaments are to be determined in accordance with a collective agreement and on the basis of our collective

responsibility, or whether we unilaterally increase them on a scale which we shall now proceed to determine for ourselves. If the Government adopt the latter alternative, they will be acting contrary to the spirit of the very League policy on which they appear to be relying in order to win a dubious electoral victory.

* * *

The South Wales Miners' Strike.—The "stay in" strike of 68 miners at the Nine Mile Point Colliery, Monmouthshire, spread to a great part of the South Wales coalfields this week. The strike began as a protest against the introduction of imported non-union labour at the Nine Mile Point Colliery during the recent strike against non-unionism. By Wednesday, about 1,400 men in the pits, and about 6,500 men altogether, were on strike. The South Wales Miners' Federation issued a statement describing the importation of non-union labour as a "definite challenge to the authority of the South Wales Miners' Federation," and demanding that the imported labour should be dismissed before negotiations were begun. Captain Crookshank, Minister for Mines, offered his services as mediator early in the week, but found that the colliery owners refused to negotiate while the men remained below ground. A delegate conference of the South Wales Miners' Federation, summoned on Wednesday, was not prepared to assume the responsibility for calling a general district stoppage, and eventually it was agreed that the union and the employees should negotiate on the issue and that the strike should be called off. This, however, has not satisfied all the strikers, some of whom are still refusing to leave the pit. The union issue is, of course, one which always raises the strongest feelings, and there is no doubt about the strength or extent of the resentment felt by the miners in this instance. To some extent, of course, it is symptomatic of the general bitterness about the wage issue apparent throughout the coalfields. This week's meeting of the Federation Executive, which opened on Thursday and adjourned, will consequently be watched with anxiety.

* * *

The Abyssinian Campaign.—As the days pass, it becomes more and more obvious that the Italian advances into Abyssinia—from Eritrea in the north-east and from Somaliland in the south-east—have hitherto encountered no planned and sustained resistance. In the north-east, General de Bono has made a triumphal entry into Adowa and unveiled a memorial to the Italians who fell in 1896; and the Italians have extended their front towards the Sudan by taking the "holy city" of Aksum. The Ethiopian Emperor has announced that neither here nor at Adowa was any military defence offered; Abyssinia's tactics, so he informed foreign journalists, were to retire to the natural mountain fastnesses while harrying the slowly advancing enemy, and to offer organised resistance only in these apt theatres of guerilla warfare. The most disturbing element in the situation, from the Abyssinian viewpoint, is the defection of Ras Gugsa, the Emperor's son-in-law, with an undetermined number of his followers, to the Italian side in the Adigrat sector. He was to have stemmed the advance of the Italian left-wing towards the strategic centre of Makalle, of which he was Governor; and his treachery has necessitated the rapid reinforcement of that sector by its new commander-in-chief, Ras Seyyum, the uncle of Gugsa. Rumours persist, from Italian sources, that more Abyssinian chieftains will desert in the Tigré province, and that Gugsa is to be proclaimed "puppet Emperor" of a new State under Italian tutelage, *à la Japonais*; but there is no evidence that this is even a likely development. At present the Italians are merely consolidating their strategical advance in the north-east, and combining reconnaissance forays with a gradual advance over the desert of the Ogaden in the south-east. Trial of the issue by open combat has yet to be begun.

* * *

Tension in France.—The internal situation in France is the key to the puzzle of French hesitancy at Geneva. Although the Socialists and Communists have contrived to form a common front, the only effective coalition of the Left is that which also embraces the

Radical-Socialists; and this Front Populaire is still more difficult to hold together. All parties of the Left have certain extremely important aims in common. They are all alike concerned to save France from being captured by the Fascist "private armies" of the Croix de Feu and the more extreme Solidarité Française; while in the field of foreign affairs they all want to make the League of Nations genuinely effective in stopping Italian aggression against Abyssinia. On the question of constructive domestic policy, however, the Socialist and the Radical-Socialist (i.e. Liberal) wing of this rather nebulous Front Populaire are poles apart; and the cleavage on this point is a formidable obstacle to practical co-operation. The question whether France can continue to carry on at home upon the basis of M. Laval's decree laws—and, if she cannot, what the alternative is to be—is an issue which cannot be evaded. In our own country there is to-day a virtually nation-wide agreement, transcending party differences, on two points: the nation is determined to abide by its traditional system of parliamentary constitutional government at home, and at the same time it means to do its utmost to make the League of Nations a living reality in the international field. To translate the French situation into English terms, we must imagine the relative strengths of the Baldwinite and the Ameryite wings of the Conservative Party inverted; and must then do our magnified Mr Amery the injustice of crediting him with a readiness to use Sir Oswald Mosley's methods. We must frankly face the fact that a disturbingly large section of the French Right is Fascist on the home front, and therefore, quite consistently, pro-Mussolini, anti-League, and anti-British in its attitude to French foreign policy. Moreover, it can make two popular appeals: on the home front to the discredit into which parliamentary institutions in France have latterly fallen; in foreign affairs, to the French nation's obsession with the supposed peril from Germany. The danger is that M. Laval, through the acrobatic postures by which he is trying to maintain his own perilous position, may play Dr. Brüning's rôle of preparing the advent of a French Hitler. On this analogy, he may flinch from the reassembly of the Chamber, which is due to take place early next month. But it is to be hoped that the Chamber will insist upon meeting. The Chamber has the right and duty and power to clear the thickening air.

* * *

The Coup d'Etat in Greece.—The abrupt change of regime which occurred in Greece on October 10th will not affect Greek policy at Geneva, nor the good relations of Greece with Turkey and her other Balkan neighbours. At the same time, it is a matter of regret for foreign well-wishers of Greece who are absolutely neutral in regard to the eminently domestic issue: Republic *versus* Monarchy. It seems extremely regrettable that M. Tsaldaris's Government should have been overthrown, before the holding of the plebiscite, by a junta of naval and military officers under the leadership of General Kondylis, who was actually the Minister for War in M. Tsaldaris's own Cabinet. M. Tsaldaris's policy would appear to have been as statesman-like as it was honourable. He is a convinced royalist himself; and he was already in office as Prime Minister at the time of the indefensible armed outbreak of the Venizelists a few months ago. Thus, he neither had, nor has, any personal motive for being unduly partial to republicanism. His whole concern has been to ensure, if possible, that the expression of the Greek national will shall be both genuine and definitive. The pretext on which the Venizelists sought to excuse their armed outbreak was that a restoration of the Monarchy was being plotted, clandestinely, by the anti-Venizelist Government in office. M. Tsaldaris has so admirably kept his head—both during the insurrection and since its suppression—that he has set himself to disprove the Venizelist contention. The points on which he insisted were that the constitutional issue should be settled by a plebiscite; that this plebiscite should not be held until tempers, on both sides, had had time to cool down; and that, meanwhile, the pre-insurrection constitutional *status quo* should be maintained. If only M. Tsaldaris had been allowed by his military and naval fellow-monarchists to

carry this admirable programme out it might have been prophesied with some assurance that the forthcoming plebiscite would have put an end to a twenty-years-long stasis. This would have far transcended whatever the difference may be between Republic and Monarchy, on their merits, as ideal constitutions for Greece. M. Tsaldaris's supplanters have not had the face to cancel the plebiscite. They have, however, proclaimed Greece a monarchy again in advance, as from the date of their own seizure of power. This is surely not the way to secure that domestic peace and reconciliation which they profess to desire. And it has not, apparently, commended itself to ex-King George of Greece.

* * *

British Trade with Italy.—In an article on "Italy's Economic Vulnerability" last week we gave tables showing the proportions of Italy's import and export trade with certain important countries. It appears likely that British exports to Italy will be seriously reduced, whether by a League embargo on exports to Italy or the exhaustion of Italy's ability to buy through a stoppage of her exports. In this connection, relevance attaches to the following table, showing, for 1933 and the first nine months of 1935, Britain's chief exports to Italy as a percentage of her total exports of the same commodities:—

BRITISH EXPORTS TO ITALY

Commodity	Year 1933		Jan.-Sept., 1935	
	British Exports to Italy	Proportion of Exports to Italy to Total	British Exports to Italy	Proportion of Exports to Italy to Total
Food, Drink and Tobacco—	£'000	%	£'000	%
Herrings	175	8.7	23	1.9
Raw Materials and Semi-Manufactured Goods—				
Coal	3,841	12.2	2,516	10.7
Wool, raw and noils	641	12.1	445	7.5
Manufactures—				
Coke	251	9.4	90	4.3
Cotton yarns and piece-goods	128	0.3	68	0.2
Machinery	653	2.4	623	2.2
Iron and steel and manufactures	224	0.75	196	0.7
Non-ferrous metals and manufactures	237	1.95	240	2.3
Vehicles	329	1.5	204	1.0
Woolen and worsted goods	475	1.85	386	1.7

This table includes almost all categories in which exports to Italy exceed 5 per cent. of the total. Two small trades, raw cotton and steel scrap, are omitted because of the lack of recent figures, but in 1933 Italy took 6.7 per cent. and 10.0 per cent. respectively of our total exports of these commodities. The table suggests that coal is the only large industry likely to be substantially affected. Italy's coal purchases come largely from South Wales, of whose export trade they have composed more than a quarter in recent years. Italy also takes a substantial proportion of our exports of raw textiles and textile waste and of steel scrap; but these trades are neither of great national importance, nor vitally interested in export trade. Coke is the only manufactured product of which more than a tiny fraction is exported to Italy.

* * *

Far Eastern Frontier Incidents.—Last week-end there were reciprocal accusations of violations of the frontier between the Soviet Union and "Manchukuo." On the Russian side it was alleged that about 50 Japanese and "Manchukuo" troops had violated Soviet territory near the confluence of the Amur with the Ussuri. On the "Manchukuo" side, it was alleged that about 50 Russian troops had violated "Manchukuo" territory at a different point, higher up the Amur. The Soviet Ambassador has made prompt and rather emphatic representations in Tokyo; and he has accompanied his protest with a constructive proposal for the establishment of a Russo-Manchu-Japanese mixed frontier commission, for the purpose of guarding against the recurrence of such incidents, or disposing of them if they do recur. The Japanese Government is reported to have replied that it has no official information about the incidents; while, in the matter of the proposed commission, Mr Hirota is said to have suggested that a delimitation of the frontier between "Manchukuo" and

the Soviet Union should be part of its duties. In the present tense international situation, this news from the Far East has made a doubly unpleasant impression. First, such mutual accusations are common form (as we know from experience much nearer home, in Europe) on frontiers where all is not well. Secondly, the Japanese are famous for timing their own strokes to coincide to a nicety with their neighbours' embarrassments. This sudden recrudescence of alarming reports from the Far East may have some connection with the events of the last few days in East Africa and at Geneva. Granting, for the sake of argument, however, that Japan may be tempted to take the present opportunity for making another forward move, she is less likely to choose Russia for the target than to choose China. The policy of the aggressive powers—at least in these early stages—is to hit the weak and not the strong, and the Soviet Government has undoubtedly used the last four years to good effect in making itself militarily and aerially very strong indeed in the Far East. In the course of the next few weeks or months, the proclamation of a Japanese Monroe Doctrine over Eastern Asia, which was tentatively made last year, may possibly be re-proclaimed in stronger terms. That this is more than a possibility is shown by the meeting of the chief Japanese officers stationed in China and "Manchukuo" at Dairen at the beginning of the week. Major-General Okamura had been sent thither on a mission to expound the views of the General Staff, which, it is reported, the Japanese Foreign Office had endorsed. What these views may be we can only surmise; but it looks as if the General Staff were again about to call a Japanese tune in China.

* * *

The Nation's Health.—With certain grave exceptions, —the chief of which are the high level of maternal mortality and the continued increase in deaths from cancer—the Report of the Chief Medical Officer of the Ministry of Health* suggests a general improvement in the health of the people. It is also eloquent of an increasing appreciation on the part of the Ministry and of local authorities of their responsibilities, not only in the detection and analysis of disease, but in the removal of the causes leading to ill-health. The rate of infant mortality is lower than ever before, while deaths from tuberculosis have declined steadily from an average for the years 1921-30 of 1,012 deaths per million of the population to 764 in 1934. The number of fatal cases of the other two most important infectious diseases, measles and diphtheria, increased considerably compared with 1933. In the latter case, however, there appears to be a fairly regular cycle, which is at the moment on the up-grade. The increase cannot, therefore, be put down to any deterioration in general health. The death rate from influenza last year was very much lower than in recent periods. The maternal death rate per 1,000 total births was 5.61 in 1934, compared with 5.69 in 1933 and 5.39 in 1928. As regards this question, which is engaging the serious attention of the authorities, an analysis of about 80 per cent. of the 1934 deaths revealed that, in 29 per cent. of the cases on which an opinion was given, absence or inadequacy of ante-natal care was reported. In 19 per cent. there was absence of adequate attendance, medical aid or ordinary equipment, but in only 5 per cent. of the cases was the unsatisfactory home condition or general health of the patient given as a contributory factor. The provisional conclusion would seem to be that, whatever the effect of under-nourishment on a mother's powers of resistance to infection, a rise in the standard of living will not of itself do away with the present high rate of maternal mortality. The Report, for the rest, testifies to the Ministry's recognition that not the least important of its duties is to assure to the nation a pure, adequate and balanced dietary. As regards purity alone, it is clear that much remains to be done. "Meat inspection throughout the country remains as unstandardised as ever, varying from a thorough examination of every carcass in some districts to almost nothing in others." In spite of the increase in the number of milk producers with licences for

* On the State of the Public Health: Annual Report of the Chief Medical Officer of the Ministry of Health for the year 1934. H.M. Stationery Office. 3s. net.

tuberculin-tested milk, "the amount of tuberculin infection in herds has not been materially reduced." Little real progress can be made in this or any other direction until the nation demands from local authorities whole-hearted co-operation in the carrying out of the Ministry of Health's suggestions, for health, like charity, begins at home.

Overseas Trade in September.—The overseas trade figures for September, though moderately encouraging, show a slight reversal of recent tendencies. On the basis of average daily figures, total imports are higher than in either July or August, and are somewhat above the level of a year ago; while exports, though higher than in September, 1934, are lower than in any previous month this year.

OVERSEAS TRADE IN SEPTEMBER
(000's omitted)

	1933	1934	1935	Change between 1934 and 1935	
Imports	£ 57,727	£ 57,913	£ 60,831	+ 2,917	+ 5.0
British Exports	32,252	33,957	34,098	+ 141	+ 0.4
Re-exports	3,404	3,250	3,811	+ 561	+ 17.3
Total exports	35,656	37,207	37,909	+ 702	+ 1.9
Excess of imports over exports	21,071	20,706	22,922	+ 2,215	+ 10.7
Transshipments under bond	2,033	1,858	2,046	+ 187	+ 10.0

The increase in imports (due mainly to larger purchases of dairy produce, non-ferrous metals and oils) contrasts with a net decrease in the first eight months of the year. The rise in re-exports, as compared with a year ago, is due entirely to an increase of £620,000 in sales of imported non-ferrous metals to the Soviet Union.

OVERSEAS TRADE—FIRST NINE MONTHS
(000's omitted)

	1933	1934	1935	Change between 1934 and 1935	
Imports	£ 487,639	£ 539,905	£ 539,488	+ 2,583	+ 0.5
British exports	288,416	289,048	311,796	+ 22,748	+ 7.9
Re-exports	37,162	39,674	40,554	+ 880	+ 2.2
Total exports	305,578	328,722	352,350	+ 23,628	+ 7.2
Excess of imports over exports	182,061	208,183	187,138	- 21,045	- 10.5
Transshipments under bond	17,624	17,504	17,975	+ 471	+ 2.7

Recovery, as measured by exports, has been maintained, but only maintained. The expansion of imports occurs mainly in so-called manufactured articles. Some of these, e.g. non-ferrous metals, may have rearmament associations; otherwise, the rise is a welcome sign of increased domestic prosperity. With nine months gone, the visible balance is, officially, £21 millions more "favourable" than at this time last year. The practical significance of the change, however, in a world of blocked currencies, is doubtful.

Volume of Trade.—The following tables give details of trade in September in the most important commodities:—

RETAINED IMPORTS
Month of September

Item and Measure	1933	1934	1935
Wheat	10,611	9,521	7,287
Beef and veal	1,086	1,129	953
Mutton and lamb	575	474	413
Sugar (unrefined)	1,851	3,125	3,651
Iron ore and scrap	125	403	468
Wood and timber, soft sawn:—			
Planned or dressed*	938	714	684
Other than planned or dressed	83	99	99
Raw cotton	984	713	569
Sheep's and lambs' wool	181	157	225
Raw silk and waste	509	438	401
Flax, hemp and jute*	16,586	15,982	12,653
Crude petroleum	32,051	42,891	48,137
Hides, wet and dry	117	93	150
Wood pulp	163	161	176
Rubber	100	259	256
Unwrought copper*	9,840	20,654	25,639
Pig lead	20,636	22,844	18,641
Tin:—			
Ore and concentrates	943	1,467	3,728
Blocks, ingots, slabs and bars	149	681	283
Iron and steel manufactures	89,207	89,349	89,063
Machinery	3,538	5,380	5,576

* Total imports.

There has been a marked decline in imports of wheat, mainly from Australia and Argentina. The reduction in

imports of beef and mutton has been accompanied by a downward movement of prices. An abnormal feature of the returns was an increase of as much as £1.1 millions (62 per cent.) in imports of tobacco as compared with a year ago. Purchases of heavy industrial materials such as non-ferrous metals, iron and steel manufactures and machinery continued to increase, though somewhat erratically. The increase in imports of machinery consisted mainly of tractors for agriculture. Imports of cotton further declined, but wool imports were substantially higher. Figures of exports of representative British finished products are given in the next table:—

BRITISH EXPORTS
Month of September

Item and Measure	1933	1934	1935
Coal	3,418	3,541	2,929
Iron and steel scrap	17,157	19,898	9,920
Pig iron and ferro-alloys	8,475	9,343	12,914
Railway materials	8,386	23,741	20,441
Total iron and steel manufactures	157	198	187
Textile machinery	3,924	5,388	5,191
Total machinery	24,872	27,197	29,564
Cotton yarns	11,684	9,509	10,123
Cotton piece-goods	163	178	150
Wool tops	3,727	2,842	3,717
Woolen tissues	3,438	2,580	2,482
Worsted tissues	5,683	6,327	6,419
Linen piece-goods	2,893	2,518	3,057
Leather boots and shoes	42,843	44,285	32,918
Paper and cardboard	33,181	17,820	21,254
Locomotives (complete and parts)	326	290	332
Motor vehicles and chassis	106*	767	1,298
	2,470	5,091	5,723

* Complete only.

Half the decrease in our exports of coal was accounted for by the reduction in our sales to Italy in the past month. On the whole, Empire markets for iron and steel manufactures, machinery, electrical goods and vehicles continued to expand. Exports of textiles other than cotton piece goods were well maintained.

Absorbing the Milk Surplus.—Since the inauguration of the Milk Marketing Scheme for England and Wales milk production in this country has steadily increased. As we have repeatedly pointed out, however, the consumption of liquid milk has been held in check by the maintenance of prices—with the inevitable consequence that increasing quantities have had to be utilised for manufacturing purposes. A further stimulus to production was afforded by the Milk Act of 1934, which provided for a guaranteed price of 5d. a gallon from April to September and of 6d. a gallon from October to March for milk sold for manufacturing purposes. How has the growing "surplus" thus called forth been absorbed? The following table, based on returns issued by the Board, supplies the answer:—

UTILISATION OF MILK FOR MANUFACTURE IN ENGLAND AND WALES
(000 Gallons)

	1934		1935			Percent. of Total in August
	January	August	January	July	August	
Cheese	3,482	4,890	5,698	10,435	9,685	25.1
Butter	2,610	3,736	4,748	9,155	9,740	26.3
Condensed milk	1,828	4,420	3,820	6,235	5,380	20.8
Fresh cream	2,196	3,318	2,838	5,720	5,200	20.3
Tinned cream	269	725	536	816	589	2.3
Milk powder	472	798	667	1,328	846	3.3
Other manufactures	347	236	222	340	230	0.9
Total	11,204	18,123	18,537	34,029	25,620	100
Per cent. of total contract sales	21	29	29	42	36	...

Although the quantity of milk manufactured has substantially increased over the period covered by the figures, the proportions utilised by the different outlets have been by no means constant. Cheese production has hitherto been the main outlet, but its relative importance has declined during the present year owing to the substantial increase in the output of factory butter. Factory butter has been rapidly displacing farm butter, for the creameries have been enabled to purchase milk more cheaply than many farm butter-makers could produce it. In the cheese market a similar tendency has been evident, but since much of the factory cheese produced in recent months has been of poor quality,

the Board is endeavouring to encourage the farmhouse cheesemakers by offering them more favourable terms in the new contracts. The quantity of milk used in the manufacture of fresh cream and condensed milk has shown considerable expansion since the scheme came into force. Price reductions in recent months have given a fillip to sales of fresh cream, whilst overseas markets have absorbed increasing quantities of condensed milk. Unless some amendments are introduced into the Milk Marketing Scheme, it seems probable that the milk year now commencing will witness a further expansion in the output of milk products in this country—accompanied, probably, by a renewed agitation for the partial exclusion of dairy produce from overseas.

Iron and Steel Production.—The expansion of production in the iron and steel industry continued during the past month. The returns of the British Iron and Steel Federation for September reveal a substantial increase in the output of iron and steel over the corresponding month a year ago. Production of steel last month was higher than in September, 1929, and the output in the first nine months of 1935 was only 68,000 tons less than during the corresponding period in the pre-depression year:—

(In thousands of tons)

Period	Production		Foreign Trade	
	Pig Iron	Steel Ingots and Castings	Total Imports	British Exports
1913—Monthly Average	855.0	638.6	185.9	414.1
1929 " "	632.4	803.0	235.2	364.9
1932 " "	297.8	438.5	132.7	157.4
1933 " "	344.7	585.3	80.9	160.2
1934 " "	498.2	738.3	113.9	187.8
1934—August	503.3	667.0	102.2	193.4
September	500.3	734.7	89.5	198.0
October	527.1	812.0	120.2	220.9
November	513.5	654.5	114.5	186.8
December	521.2	757.8	130.5	181.2
1935—January	483.1	769.5	103.3	172.9
February	554.2	841.9	126.0	175.8
March	526.3	808.7	62.7	210.9
April	558.9	853.3	86.4	213.9
May	529.3	770.0	98.2	195.1
June	547.3	803.3	90.2	205.7
July	543.4	759.9	74.3	202.5
August	529.6	855.9	89.3	187.2
September				

The bulk of the increased production continues to be absorbed by the home market. The output of finished steel, recorded in the *Statistical Bulletin* of the British Iron and Steel Federation, rose from 520,000 tons in July, 1934, to 588,100 tons last July. Nearly half of the increase was due to a growing demand for sections, girders, joists and beams, rounds, squares and flats. Production of plates, wire rods, galvanised sheets and of hot rolled hoop and strip in July was also appreciably higher than a year ago, but the output of nails showed a decline. Imports of iron and steel materials in September were little changed as compared with a year ago, but exports were lower, largely owing to a sharp drop in exports to China from 18,963 tons to 2,465 tons. Home prospects remain encouraging.

Shipping Freight Index.—As measured by our monthly index number, the general level of whole cargo shipping freights rose by 5.4 per cent. during September, following a fall of 1.0 per cent. during August. The current figure of 86.6 compares with 89.9 in September last year and 83.3 in September, 1933. Details of the index number are as follows:—

(1898-1913 = 100)

	Average, 1913	September, 1934	July, 1935	August, 1935	September, 1935
European waters	110.0	90.3	91.7	88.5	92.8
North America	123.4	82.8	79.5	78.2	78.7
South America	106.3	98.6	83.4	82.3	82.3
India	117.4	93.5	73.6	77.7	90.4
Far East and Pacific	127.9	95.3	87.2	82.8	86.4
Australia					
	116.3	89.9	83.0	82.1	86.6

Hull reports that rates are steady. At Liverpool there was fair activity homewards from the River Plate at the end of

Family provision scheme

A scheme to secure a Capital Sum payable at death and a regular income over a period of years for dependants in the event of early death, at a cost which is little more than that of ordinary life assurance. It is readily adaptable, and rates will be quoted on application for policies to suit the needs of each individual.

EQUITY & LAW LIFE ASSURANCE SOCIETY

18 Lincoln's Inn Fields, W. C. 2
Established 1844 Funds exceed £20,000,000

September and there was some enquiry for cargo space from Australia to Europe at fixed rates. Newcastle reports that chartering for West Italy is practically at a standstill, though other directions are fairly steady and the Baltic is firm. Demand has fallen off at Cardiff and Newport. Swansea, however, reports a better enquiry for the North of France and rates have hardened. At Glasgow demand is chiefly confined to the Baltic section. Movements of the various sections are as follows:—

	Index No.	Inc. or Dec. Points		Index No.	Inc. or Dec. Points
Home trade	87.7	+4.6	South America—		
Bay—outwards	113.8	+1.9	Outwards	64.2	+0.2
Bay—homewards	87.1	+4.8	Homewards	100.4	-0.2
Mediterranean—			India—outwards	80.0	-1.4
Outwards	100.4	+8.6	India—homewards	97.7	+12.5
Homewards	79.9	+0.8	Far East, etc.	90.4	+12.7
North America	78.7	+0.5	Australia	86.4	+3.6

Expressed as a percentage of the average for 1913, the complete figure of our index number for September is 74.4 compared with 70.6 for August and 77.3 for September, 1934.

Coal Mining Results.—In contrast to iron and steel, the coal trade has as yet made little headway. Though the Mines Department statistics for the second quarter of 1935 compare favourably with the corresponding figures for 1934, the increases in production and profits per ton are almost negligible.

Period	Tonnage Disposable (Mill.)	Costs per Ton		Proceeds per Ton	Profit per Ton	Output per Manshift	Earnings per Manshift

The slight increase in the commercially disposable output between April-June, 1934, and the second quarter of 1935

is due to an improvement in home consumption. The quantity exported and shipped for the use of steamers actually declined by 0.9 million tons. Total proceeds in the second quarter of 1935 amounted to £31.5 millions, compared with £34.7 millions in the preceding quarter and £30.9 millions in the corresponding quarter of 1934, but costs of production were £31.4 millions, against £32.9 millions and £30.8 millions respectively. The "profit"

was thus £0.13 million, as compared with £1.8 millions and £0.12 million respectively. Four of the eight districts shown separately in the return, however, including Northumberland, Durham, South Wales, and Lancashire, Cheshire and North Staffordshire, showed a loss in the second quarter of 1935. The increase in the output per man-shift suggests that mechanisation has made further progress.

From our Correspondents in each centre

UNITED STATES

EMPLOYMENT AND WAGES

THE August business indices of the Federal Reserve Board show only minor changes from July, but are considerably above those of August, 1934, which measured almost the bottom of the summer slump of that year:—

FEDERAL RESERVE BOARD BUSINESS INDICES 1923-25 = 100. (Adjusted for seasonal)			
	Aug., 1934	July, 1935	Aug., 1935
Industrial production—total	73	86	86
Manufactures	72	86	87
Minerals	80	84	81
Construction contracts—total ..	27	35	37
Residential	10	25	23
All other	40	43	48
Factory employment	79.3	80.4	81.6
Factory pay-rolls	62.2	65.3	69.7
Freight car loadings	59	58	60
Department store sales	77	80	79

Residential building is more than double the figure of a year ago, and pay-rolls are about 10 per cent. higher, although employment is little greater. The increase in residential building has led to a substantial rise in the prices of building materials. The increase in pay-rolls is especially interesting in view of the widespread apprehension that the abolition of N.R.A. presaged wage cuts and an increase in unemployment:—

PAY-ROLL AND EMPLOYMENT DATA 1923-25 = 100

	May, 1935	Aug., 1935
Factory employment	81	81.6
Factory pay-rolls	69	69.7

From these data, both employment and pay-rolls, after a slight sag during the early summer, had by August exceeded the last month in which N.R.A. was in force. In fact, despite the unemployment, the demand for skilled labour appears to be steadily pushing up wages. Though the cost of living has also risen, real wages, as calculated by the National Industrial Conference Board, are now a shade higher than in the base year, 1923; hourly wages, on the same computation, are much higher, but are compensated by the shortening of the working week. This same computation shows something like a 10 per cent. increase in weekly real wages in the past year, the combined result of an increase in hourly wages and an increase in average hours worked. The combination of these two has more than offset an increase in the cost of living computed at about 4 per cent.

During the first eight months of 1935 the stability of the production and price indices was remarkable, especially in contrast with the violent fluctuations of the previous two years:—

F.R.B. INDEX OF INDUSTRIAL PRODUCTION

	1933	1934	1935
January	65	78	91
February	63	81	89
March	59	84	88
April	66	86	86
May	78	86	85
June	91	84	86
July	100	76	86
August	91	73	86
Average	77	81	87

The same feature is seen in the price index:—

B.L.S. PRICE INDEX

	1933	1934	1935
January	61	72	79
February	60	74	80
March	60	74	79
April	60	73	80
May	63	74	80
June	65	75	80
July	69	75	79
August	70	76	80.5
Average	63	74	80

The first eight months of 1934 brought a rather strong increase in commodity prices, accompanied by an upturn in production, followed by a sharp decline. In 1935, on the other hand, both prices and production have held a level line.

Whether one attributes the recovery to the increased demand for automobiles or the increased demand for automobiles to the recovery, the automobile industry has been the most conspicuous element of the recovery. The following sub-index of the Federal Reserve Board emphasises this. In this table, as in others, seasonal variations have been corrected:—

AUTOMOBILE PRODUCTION

	1933	1934	1935
January	48	56	104
February	33	71	103
March	27	78	106
April	44	85	110
May	51	78	86
June	56	82	100
July	70	78	95
August	61	61	64
Average	50	74	96

While steel production is to some extent dependent on the motor output, its operations have been lower because of the small demand for its heavier products:—

PRODUCTION OF IRON AND STEEL

	1933	1934	1935
January	30	56	80
February	31	63	80
March	22	66	72
April	35	76	67
May	49	84	66
June	72	85	66
July	100	47	69
August	80	38	81
Average	41	64	73

The following table shows production of a typical consumers' good:—

BOOT AND SHOE PRODUCTION

	1933	1934	1935
January	93	101	114
February	102	116	116
March	93	118	117
April	107	130	123
May	129	133	121
June	131	109	107
July	131	107	115
August	110	104	*
Average	112	115	116†

* Not available.

† Seven months.

Finally, as a contrast to the series given above, the residential building data illustrates a belated recovery:—

RESIDENTIAL BUILDING

	1933	1934	1935
January	8	12	12
February	8	12	14
March	8	11	16
April	10	12	18
May	11	11	21
June	13	12	24
July	13	12	25
August	12	10	23
Average	11	12	19

The contrast between residential building and shoes, for example, is especially marked. Non-residential building has followed a fitful, even erratic, course. Owing to public works expenditures, it was at no time so depressed as residential building, and the trend of recovery is less distinct owing to the continued presence of public works.

NON-RESIDENTIAL BUILDING

	1933	1934	1935
January	33	80	39
February	27	70	39
March	18	51	35
April	17	48	33
May	20	38	32
June	23	38	36
July	28	39	43
August	33	40	48
Average	25	51	38

The sudden appearance of very high figures in early 1934 is, of course, public works; but in 1935 there has been some increase in industrial building. It is estimated that upwards of 40 million persons, say one-third of our population, receive all or a substantial part of their income directly from the Federal Treasury, including Federal workers, the unemployed, and farmers receiving benefit payments.

The net impression given by the data above is that production in the first eight months of 1935 has been maintained on a level substantially higher and more regular than that reported in the first eight months of 1934; but that, except in residential building, which has risen smartly, the trend of these eight months has been more distinguished for horizontal regularity than by any pronounced tendency to rise or fall.

RIISING COMMODITY PRICES

Primary commodities showed another remarkable advance in September, and the price indices are in new high ground; although, on the whole, the year to date has experienced a greater degree of price stability than any recent year:—

PRICES OF REPRESENTATIVE PRIMARY COMMODITIES

	Oct. 1, 1934	Jan. 2, 1935	July 1, 1935	Oct. 1, 1935
Wheat	106.75	105.50	99.50	125.75
Maize	79.25	91.75	82.75	81.50
Oats	54.50	56.88	39.75	33.38
Rye	74.00	77.50	54.88	53.50
Hogs	6.00	7.35	8.90	10.15
Cattle	8.05	8.15	10.00	10.45
Butter	26.00	32.75	23.75	26.75
Eggs	22.25	29.00	24.75	26.00
Cotton	12.50	12.85	12.15	11.05
Wool	65.35	63.93	64.48	70.81
Silk	1.23	1.46	1.42	2.00
Hides	7.25	9.00	10.00	11.00
Lard	9.15	12.75	13.60	14.75
Cottonseed oil ..	8.00	10.80	9.80	10.25
Flaxseed	190.00	197.75	160.50	179.00
Sugar	2.08	1.75	2.39	2.70
Coffee	9.38	9.62	6.50	6.75
Cocoa	4.60	5.25	4.60	5.05
Rubber	14.28	13.74	12.38	11.82
Copper	9.00	9.00	8.00	9.00
Lead	3.60	3.70	4.00	4.50
Zinc	3.95	3.75	4.30	4.75
Tin	50.95	50.75	51.75	50.12
Scrap steel	10.25	13.25	12.00	13.75
Silver	50.00	55.00	69.75	65.38

Domestic commodities have been stronger than imported and exported commodities. It is not easy to determine the effects of "war buying," if any. The price quoted for copper is a domestic price, and only recently has the export price risen to the domestic price. Neither lead nor zinc are

exported, and they have risen materially; scrap steel is exported in volume, and it too has risen.

Such data for September business as has been published is uniformly good, but not very different from that of August. There was almost a complete absence of the so-called "summer let-down," and a corresponding absence of any conspicuous autumn pick-up. In virtually all lines activity is substantially higher than a year ago; but this comparison is blunted by the fact that the summer months of 1934 experienced a rather severe recession. Broadly speaking, one can say that after a summer which maintained practically the spring levels of industry and trade, the autumn to date is equalling or surpassing the spring. From virtually all sections of the country, and widely diverse industries, one hears murmurs of a shortage of skilled craftsmen—or, if not a shortage, at least a narrow margin between present available skilled labour and a shortage.

NEW YORK, October 8.

FRANCE

SUNDAY'S SENATORIAL ELECTIONS

THE poll for the re-election of a third of the Senate will take place on Sunday. M. Laval is a candidate in Aubervilliers and Clermont-Ferrand. On the eve of this election and of the Radical-Socialist Congress internal politics seem relatively calm. Various speeches by Radical-Socialists show that that party sympathises for electoral purposes with the Popular Front (Socialists and Communists), though it is not in favour of overthrowing the Laval Cabinet. In foreign policy the Radical-Socialists are opposed to any sort of war whatever. In internal politics they are opposed to the political "leagues," including the "Farmers' Front," against which they intend to organise a "Republican Farmers' Front." Finally, instead of accepting the Popular Front's claim for political discussion on the decree-laws before any examination of the Budget, the Radical-Socialists have begun to study the Budget Bill. Predictions of the circumstances of the reassembly of Parliament, which will take place on or about November 20th, are thus still favourable to the Cabinet.

The City of Paris is issuing a 720 million franc loan bearing 5 per cent. interest and redeemable within thirty-nine years by annual drawing or buying on the market. The offer of 1,000 francs bonds was made at 967.50, with a premium. This money is required for the financing of public works and notably for the extension of the Metro to the suburbs. The yield of the issue is 5.05 per cent., against 5.50 per cent. for the last City of Paris loan (5 per cent. issued at 900 francs in December, 1934) and 5.9 per cent. for the last State loan (P.T.T. 5 per cent. issued at 910 in May, 1935). The present loan has been easily sold by the banks. It is to be noticed that ordinary 5 per cent. loans, which are affected by the 10 per cent. cut made in the July decree-laws, are quoted at about 880, in effect practically at par.

The public debt on January 1, 1935, was 322,380,241,299 francs, against 303,537,033,212 francs on January 1, 1934. Of this increase of more than 18,000 millions during 1934, the various items were as follows:—

	1934 Fr.	1935 Fr.	Difference Fr.
"Perpetual" debt	52,133,992	51,640,087	- 493,906
Redeemable debt	185,456,702	196,192,293	+ 10,735,591
Medium and short-term debt	16,522,774	24,639,396	+ 8,116,622
Floating debt	49,423,565	49,908,465	+ 484,901
Total	303,537,033	322,380,241	+ 18,843,208

The interest charge has increased at the same time from 15,099 million francs to 16,075 millions.

DECLINING BANK DEPOSITS

The Big Four banks' deposits at the end of July show a new decline of 500 million francs, which must be added to the 1,500 millions decline in the first six months of the year.

	Dec. 31, 1934 Fr.	June 30, 1935 Fr.	July 31, 1935 Fr.
Crédit Lyonnais ...	11,801,200,937	11,301,289,892	11,048,700,821
Société Générale ...	9,922,216,562	9,418,144,900	9,240,595,994
Comptoir d'Escompte	7,602,206,331	7,172,221,922	7,099,468,983
Crédit Industriel et Commercial.....	1,436,342,555	1,463,922,132	1,415,011,342

Total 30,761,966,387 29,335,578,846 28,803,777,140

The fall in deposits is causing no anxiety to the banks, since their liquidity is adequate. But the desire to maintain this liquidity is preventing the banks investing their funds in State loans.

In the past the "thirty days advances on two years maturity bonds" greatly unbalanced the flexibility of the day-to-day loan market, which is the base of the whole money market. These loans now are made against National Defence bonds and Treasury bonds instead of Bank of France deposits. This innovation has greatly facilitated subscription to short-term State bonds.

The Statistique Générale has just published its August figures showing industrial production in France (1913 = 100):—

	August, 1934	June, 1935	July, 1935	August, 1935
General index	97	93	93	93
Engineering	100	95	95	96
Iron and steel.....	81	80	80	79
Textiles	55	64	67	68
Mines	101	101	98	98
Building (adjusted figures)	81	64	65	66
Leather (" ")	96	91	93	93
Paper (" ")	149	132	129	127
Rubber (" ")	856	767	760	761
Motors (" ")	468	421	412	405

In the motor industry 8,760 automobiles and 1,507 lorries were put on the road in August, compared with 13,187 and 1,536 in July. The figures for the cotton industry are as follows:—

	May, 1935	June, 1935	July, 1935	August, 1935
Spinning (average per spindle in kilograms):				
Production.....	1,442	1,408	1,536	1,520
Deliveries.....	1,486	1,443	1,533	1,563
Stocks.....	2,148	2,145	2,117	2,041
Unfulfilled orders	4,690	4,477	4,353	4,160
Weaving (average per loom in pieces of 100 metres):				
Production.....	4.28	4.26	4.69	4.58
Deliveries.....	4.36	4.44	4.75	5.17
Stocks.....	9.89	8.32	9.89	9.25
Unfulfilled orders	14.91	16.96	16.41	13.59

The figure of bankruptcies in September is 457, compared with 722 in August and 1,098 in July.

The index of wholesale prices in September shows a further advance at 345, against 343 in August and 334 in July. The rise is particularly marked for food products. Retail prices (13 articles, 1914 = 100) are steady at 401, against 397 in August, 1935, and 467 in September, 1934.

PARIS, October 17.

GERMANY

GENEVA, SANCTIONS AND AUSTRIA

THE proceedings so far at Geneva have made a strong impression on the German public and Press, which had professed to believe that the League would never act on a contentious issue, or that if it did act it would not venture to oppose any of the Great Powers in whose interests it was alleged to have been created. Indeed, so long as the Geneva decisions are not complete some scepticism will prevail and a breakdown is still being predicted. As, independently of its alleged political bias, the League is obnoxious to Nazi Germans as a form of international democracy or parliamentarism, its clear and relatively rapid decisions are naturally attributed to British "dictatorship"—"the League is now a British vassal"—although it was clear that if anything was to be done a Great Power must lead.

The German attitude towards the Abyssinian war itself and towards the dispute between Italy and the League is still non-partisan. The violent Press attacks now being

made on France on the alleged ground that she is playing a double game or deliberately impeding Great Britain, proceed not from any desire for the success of the League but from Germany's permanently hostile attitude towards France. The only important official utterance is that of Dr. Frick, the Reich Minister of the Interior, who, speaking at Saarbrücken, asserted that the League had in no wise pursued its professed policy of furthering peace and reconciliation between the nations, and was, on the contrary, a cause, and a provoker, of wars. Being a mere echo of Italian assertions, this judgment might be taken to imply anti-League sentiment on the Abyssinian issue. It is inconsistent, however, with the reserve shown by more responsible Ministers, and was probably merely meant as a demonstration on the second anniversary of Germany's withdrawal from the League.

The motives given by Austria for not participating in sanctions have not simplified Germany's diplomatic position. If the alienation of Italy from Great Britain and France is to become complete, it would obviously be to Germany's advantage to throw her influence and her resources against the League, and this she could easily do without formal partisanship. But Austria's representative at Geneva virtually affirmed the existence of a permanent anti-German understanding between Vienna and Rome. It is inferred from this that any attempt to draw Italy into a German group for general diplomatic purposes would fail; and that as Great Britain, alone among the interested Powers, has shown clear decision and resolution it would be inadvisable to cross her. Such a policy would require that Germany should segregate herself from Italy.

In any event, effective German neutrality is hardly practicable. Should sanctions be maintained, Germany's commercial policy must inevitably favour either Italy or the League. The maintenance of normal trade relations with Italy, the correct course if Germany is entirely neutral and disinterested, would in effect operate against the League, all the more if Germany, as might be expected, delivered to Italy in increased quantities those goods which the League countries withheld. On the other hand, any trade restrictions likely to embarrass Italy would in effect involve support of the League. It is believed in competent quarters, however, that this dilemma may soon disappear. Commercial and financial sanctions, it is explained, will not terminate the war within visible time; and as the League and Great Britain will not be willing to sit down and watch passively the ineffectiveness of their peaceful measures, they will have to use, or threaten, force as the only alternative to abandoning the whole undertaking against Italy. In that event Germany would be able to maintain a really effective neutrality.

THE FOOD SCARCITY

Further measures, in part punitive, have been taken to ensure a better or cheaper food supply. The slaughtering and meat distribution trades have been once more minutely regulated. Margarine this week reappeared in the market, but butter and pork are still hardly to be had. As according to a new official explanation the only remedy lies in increasing home production, it may be expected that the food shortage will last some time. The price regulations are still imperfectly observed or are evaded by various easy expedients; and in consequence the richer consumers can purchase products of which there is supposed to be no local supply at all.

The number of unemployed at the end of September is returned at 1,714,000, having increased during the month by 8,000. In September, 1934, unemployment declined by 116,000. The increase this September is attributed to the discharge of emergency works employees. The number of these fell from a maximum of 631,000 in March, 1934, to 155,000 at the end of August this year. When the present Government took office there were only 24,000 emergency workers; but the number was intentionally increased by official, financial and other measures, and therefore rose it correspondingly contributed. The decline since March 1934, was due to official restrictions on the system. The Reich Unemployment Board has now again increased facilities, and the number will probably increase during the winter.

Industrial reports are in general favourable. The Steel Trust reports the production of pig iron at 1,327,000 tons and of steel at 1,452,000 tons in the third quarter of the year, against 1,133,654 tons and 1,265,523 tons respectively in the preceding quarter. The Trust's steel output is the highest attained for many years. Machinery exports have somewhat increased. Orders in the cotton-weaving industry in September were unsatisfactory. The cotton-spinning trade reports that the difficulty of obtaining raw material has been overcome. Stocks of manufactured textiles and of some other sorts of consumption goods have increased, and wholesale and retail business in consumption goods is generally dull.

Money last week became more plentiful. The market discount rate was reduced from 3½ to 3 per cent. Day money this week is obtainable at 3-3¼ per cent. There has been some demand for Reich short-term securities, but little for the promissory notes of the Gold Discount Bank, and the market is not as fluid as it was before the issue of the two Reich loans. Subscription to the second Savings Bank loan has proceeded less rapidly than the Treasury bonds issue, and still imposes a certain strain on the market.

The Reichsbank's return for the first week of October shows that 42 per cent. of September month-end credits has been repaid. This movement, and the decline of the total circulation to Rm. 6,093 millions, are about normal. At present one quarter of the circulation (Rm. 1,546 millions) consists of token coins. The gold reserve has slightly decreased, owing mainly to deliveries to industry, with the aim of maintaining the jewellery export. From the viewpoint of the exchange balance this export is highly profitable.

The changes in the structure of the trade balance in consequence of the foreign debt crisis, the exchange control and the New Plan are shown anew in a report of the Konjunkturstudien. Whereas in 1931, the year of the largest active trade balance, the export surpluses with those countries with which at present clearing or payment agreements exist, totalled Rm. 3,036 millions, the total fell in 1934 to Rm. 503 millions, and in the first half of 1935 to Rm. 27 millions. With the non-agreement countries, the trade balance in 1931 was Rm. 164 millions passive; in 1934 Rm. 787 millions passive; and in the first half of 1935 Rm. 192 millions passive.

BERLIN, October 16.

ITALY

PRODUCTION AND EMPLOYMENT

STATISTICS concerning production, employment, prices, the cost of living and consumption would be more interesting if it were possible to have up-to-date figures. A lag of a few months, however, is now usual. Indices of production (yearly or monthly averages; average for 1929 = 100) are as follows:—

	Textiles	Iron and Steel and Engineering	Paper	Building	Elec- tricity and Gas	General Index
1929 ...	101.7	104.6	107.8	139.6	106.5	109.1
1932 ...	64.4	70.7	103	78.9	110.3	73
1934 ...	73.6	76.7	120.5	136	125.5	88.3
1934— July	73.6	78.5	126.2	162.7	132.4	91.7
1935—						
May	94.3	100.8	153.5	186.5	135.8	113.6
June	72.5	99.2	146.8	182	149.9	102.1
July	52.4	106.3	149.9	180.4	143.8	92.9

The indices for 1935 are generally and markedly better than those for past years. The exception of the textile industry is due to the influence of the crisis in the silk (spinning) industry, which is very depressed owing to the high prices of cocoons and the suspension of imports of cheap foreign cocoons. Accordingly, the silk production index fell in July as low as 9.5, against 50.6 and 103 in the same month of 1934 and 1930 respectively.

Rayon production, on the other hand, is buoyant. The index was 261.5 in July, 1935, against 189.7 in July, 1934, and 121 in 1930. In the iron and steel group activity is general; and copper and quicksilver are the only exceptions (52.3 and 50.5, respectively, for July, 1935). A pro-

duction record was achieved by aluminium, the index of which rose in July to 525.5. The two most representative indices are, however, those for electricity and gas, which supply energy to all industries; and these both show a high degree of activity. The drop in July, compared with June, is almost wholly attributable to the textile group.

It is not surprising, in face of the production figures, that the number of unemployed in August was 238,235 less than in August, 1934. The only mystery in the unemployment statistics is that there are still 628,335 unemployed. A relatively small number of these can be considered as true unemployed, perhaps not many more than the 104,043 men who at the end of May were in receipt of unemployment benefit. The most general complaint among employers is that men, however urgently required, are not forthcoming. Employed men are also being more fully utilised. From June to July the percentage of men employed for less than 40 hours and from 40 to 45 hours weekly decreased, respectively, from 34.1 to 27.1 and from 44.2 to 40.2.

PRICES RISING

The working classes are being affected at once by increased employment and by rising prices. Wholesale prices are rising fast. The Milan Council of Economics' general wholesale price index is 339.5 (1913 = 100) for the fourth week in September, against the low point of 272.9 reached in July, 1934. Retail prices are rising more slowly. The national cost-of-living index was 71.6 in July, 1935, against 68.76 in July, 1934. Industrial wages in June, 1935, stood at 83, against 82.50 in June, 1934 (average for 1930 = 100). In agriculture the wage index was unchanged. As since 1930 the cost-of-living index has fallen by 21 per cent., it may be concluded that industrial employees are slightly better off.

An interesting sidelight on the condition of the working classes is given by the systematic inquiry conducted by the Milan Retailers' Federation on the sales of 58 retail shops. The sales index (January, 1934 = 100) was as follows:—

	1934	1935
April	101.8	95.8
May	100.8	94.1
June.....	99.2	90.7
July	86.6	76.5
August.....	72.8	64.3

The statistics of commodities taxed in the 92 most important Italian cities are perhaps more representative. There is a decrease between the first seven months of 1934 and of 1935 in the consumption of wine (4,871,742 hectolitres, against 5,201,845), but no appreciable change in consumption of fresh meat. Consumption of salted meat increased from 9,410 to 10,185 tons, lard from 5,973 to 6,480 tons, and salted fish from 10,664 to 11,662 tons. Cheese consumption increased also from 33,584 to 36,158 tons.

Subscriptions to the new 5 per cent. Consols, issued at 95, are as yet not open to the general public, but only to public institutions and banks. The issue is not really a new one, and nobody is being asked to pay 95 lire for a security which can be easily bought at a lower price. The issue is another name given to an offer of a gigantic conversion of the existing 61,000 million lire 3½ per cent. redeemable stock into a 5 per cent. consolidated stock. By paying 15 lire cash and surrendering the 3½ per cent. redeemable bearer is entitled to receive a new 5 per cent. Consol guaranteed for 20 years against future conversions. As the offer is attractive (additional interest of 1½ per cent., against a capital payment of 15 lire) and as Italian savers do not attach much importance to the redemption value of the present 3½ per cent. stock, it is probable that the conversion will be a success. If all holders accept, the Treasury will receive 9,000 million lire, a sum which will go towards defraying extraordinary war expenditure. From the market point of view, the conversion will require some aid, as nobody thinks that 9,000 million lire are to-day available or can become available in a few months. Nor does the Treasury need the whole sum at once. The banks and the Treasury will undoubtedly strive to ease payments so that subscribers are not forced to have recourse to Bank of Italy advances. In fact, subscriptions ought to be used to reduce the amount of notes issued, which in recent years has been increasing at a disquieting rate. Between June 30th and September 20th, the Bank of Italy's notes were increased from 13,028,600 million to 14,917,200 million lire. As soon

as payments for conversion are made to the Bank, the amount of notes issued ought to decrease. The ideal circulation, i.e. that circulation which could be regarded as in equilibrium with the foreign exchange rate, can be said to be roughly between 11,000 and 13,000 million lire. The regulation of the note issue is strictly dependent on the success of the conversion.

TURIN, October 9.

SWITZERLAND

SOCIALISTS AND COMING GENERAL ELECTION

ACTIVITY is great in Swiss political circles in anticipation of the coming Parliamentary election. Little change is expected in the composition of the Council of States—or first Chamber of Parliament—in which each Canton has two representatives, and which has a more or less Conservative character. The struggle is concentrated on the National Council—or Second Chamber of Parliament—which is elected on the proportional principle, each Canton being entitled to one deputy in 20,000 inhabitants.

The Socialist Party hopes to conquer a larger number of seats in the National Council and possibly to outnumber the Radical Party, which is the most powerful and has had a majority in the Government since 1848. The House at present consists of 52 Radicals, 44 Roman Catholic Conservatives, 30 Peasants, 10 Liberals, 49 Socialists and 3 Communists. Dissensions among the bourgeois parties and the creation of new political groups in German-speaking Switzerland may result in Socialist progress in that region, but it is rather unlikely that the Socialists will secure more than 54 to 56 seats. The Radicals—though they are a Left Wing party—have flatly refused to ally themselves with the Socialists.

BALANCING THE BUDGET

Recovery from the economic crisis and the restoration of Federal finances are the avowed policies of all the parties. The Socialists are mainly insisting on the necessity of balancing the Federal Budget by new taxes and not cuts in expenditure. The bourgeois parties, on the other hand, are advocating a general reduction in State expenditure. According to the latest estimates the Federal deficit for the current year is likely to exceed 50 million francs, while the deficit of the Federal railways will be over 45 millions. There is a growing feeling here that the Government lacks the resource required to tackle the problems resulting from the crisis.

In a recent statement in Parliament, Federal Councillor Meyer, chief of the Federal Finance Department, outlined the financial programme he intends to submit to the new Parliament. He proposes to make a total saving of about 24 million francs by further reductions in State salaries and wages and by a 10 per cent. cut in all State subsidies. He also intends to obtain nearly 42 million francs by further increases in Customs duties, by the levying of a tax on bank deposits and by an increase in the "Crisis Tax."

GENEVA, October 13.

BOOKS AND PUBLICATIONS

BACK TO THE LAND?

AGRICULTURAL policy continues to excite a surprising volume of discussion, frequently on a very high plane of argument and disinterestedness. Two books* recently published deserve wide reading. Both are brief and clear, moderate and yet definite, and both reach the same conclusion.

Lord Astor and Mr Seebohm Rowntree had each, in earlier independent inquiries, favoured a rapid extension of smallholding settlement. But being troubled by doubts they

LETTER TO THE EDITOR

CONSUMERS' PURCHASING POWER

TO THE EDITOR OF THE ECONOMIST

SIR,—May I, as a monetary heretic, comment on your leading article last week?

You state, rightly I think, that the two problems of agriculture and the distressed areas can only be solved if adequate purchasing power is put into the hands of the consumers who now lack it. This can only be done, you suggest, either by following the beaten track of "more liberal fiscal policies"—a remedy which presupposes an economic "disarmament," as unobtainable under present world conditions, I venture to suggest, as the other kind—or by means of a direct consumers' subsidy out of the Budget.

It is clear from your following remarks that you are not prepared to look outside the field of orthodoxy. I am one of those who, without being a Douglasite or a Socialist in the party sense, am convinced that the nineteenth-century trend of production and trade has to be reversed, that home development and not loan-built foreign trade is the way out of the economic trough. Not selfishness but science, which has created present-day plenty (actual and potential) dictates the new economic nationalism. Mr G. D. H. Cole, in his book on "Principles of Economic Planning," argues that a clear idea of what monetary policy ought to be in the new conditions of abundance must take precedence of theorising on the basis of the scarcity-economics of the text-books. Is it not about time the authorities explored, without preconceived antagonism, the suggestion of social dividends based on the actual figures of national productivity?

Many of us to-day are won over to the idea that production for social needs rather than private profit is inevitable. But that requires first of all a clear definition of the area of your community. When you, Sir, support the traditional liberal economics, you seem to overlook its essential characteristic—the fact that it takes the world for its province. Indeed, the orthodox economic theory, derived from nineteenth-century practice, has no meaning except on that basis. But, on the other hand, such a "world" economic system is only conceivable on the assumption that its author and begotter, Great Britain, continues to rule the roost. It was, after all, Britain's political sway, expressed in her predominant sea power, that made possible such a rich harvest of profits for capitalists. Yet this question of area is all-important. The forms assumed by an economy based on the profit-motive in a compact, virtually self-supporting unit such as the U.S.A. will be entirely different from "capitalist" expedients tried out in countries whose production is organised for a world market which no longer exists. Britain's capitalists may still be comparatively wealthy; her privileged position as patentee of modern capitalism has gone for ever. And the unit of economic organisation henceforth, as Mr Walter Elliot alone of our political leaders seems to appreciate, is willy-nilly the nation (or compact bloc of nations). The question then arises whether the old wine can be pressed into the new bottles without producing a ferment of Fascism and/or revolutionary Communism induced by ever-increasing unemployment and suffering.

I am, Sir,
Yours, etc.,
W. HORSFALL CARTER.

Savile Club,
Brook Street, W.1.

[In speaking of "consumers' subsidies out of the Budget," we had in mind nothing more than an extension of the system by which education, health services, free meals for school-children, etc., are financed out of taxation on higher incomes. We do not accept the view that either the progressive creation of new money, or the possession of a political Empire, is necessary to the continuance of the present economic order.—Ed. Econ.]

organised a small Committee of Enquiry, which included, among others, Mr H. D. Henderson (who has drafted the Report), Sir Robert Greig and Sir Frederick Keeble. The Report will gain considerably in weight from the fact that its conclusions are the reverse of those previously held by its sponsors. The Enquiry sets out to answer two questions: first, whether a large increase in the agricultural population was practicable; and second, whether smallholdings in particular might be established with advantage on a much larger scale. Both questions are answered substantially in the negative.

The Report ascribes the depression of world agriculture to three causes—the slowing-down in the increase in population, the rapid advance of agricultural technique, and the agrarian protectionism of Continental Europe. All three

are likely to continue. Agriculture, therefore, will be a depressed industry in the world as a whole. To make it prosperous, nevertheless, in Great Britain would involve either a reduction of imports or an increase in consumption. Both these possibilities are thoroughly explored. Certain foods—vegetables, fruits, eggs and poultry—which are particularly suitable for smallholdings in this country are not vital industries of the countries from which we have bought them in the past. But imports of these commodities have already been cut down since 1931 as much as is prudent, without, however, inducing any increase in the agricultural population. To reduce the imports of staple foodstuffs would still further ruin the export trades; it would be "to turn round upon one of the basic principles to which we owe our progress in the past. . . . It would be in glaring conflict with the main needs of the economic situation." It would involve both a higher cost of living and an aggravation of unemployment. The Enquiry also examines, and rejects, the argument that a greater production of foodstuffs at home is necessary for security in time of war. Wheat is the chief case in point, and supplies of wheat could be very much more cheaply assured by storing a year's supply.

The possibilities of increased consumption are more significant. Consumption will naturally increase as the standard of living rises, but it is likely that agricultural efficiency will increase still faster. A national Nutrition policy is both desirable and probable, but Budgetary considerations will probably limit it to the provision of "protective foodstuffs" for children and for "persons suffering palpably from malnutrition." Even if the consumption of one-fifth of the population were increased by 20 per cent., the total consumption of food would increase only by 4 per cent. The answer given to the first question is, then, the pessimistic one that an increase in the agricultural population would be difficult to secure without a restriction of food imports and would be most uneconomic if it were so secured. This conclusion assumes a more modest margin of potential demand than that which has been accepted by some other recent investigations on this subject.

But this analysis of consumption and of agricultural technique does not in any case dispose of the argument for small holdings, for there might be a case for increasing the number of small producers, even if the total population engaged in agriculture did not increase. This second question is dealt with at greater length in the book by Mr Orwin and Mr Darke, who are more concerned with the technique of agriculture and the place that smallholdings fill in it. They point out that the history of smallholdings is one of small results from large hopes. There is an unmistakable tendency for the numbers both of small and of large holdings to fall; the only size which is increasing is that between 50 and 150 acres. There are sound economic reasons for this. The small farmer works on too small a scale to reap the economies of recent technical advances, while the large farmer is handicapped by his rigid wage costs. The family farm (largely supported, be it said, by the milk market, a reed which is already bending) has established itself as the most economic unit. If the smallholder is to survive in competition he must accept a lower standard of living.

Smallholdings are not utterly condemned. They will remain as the bottom rung of the ladder for farm labourers. There is also a very strong case for allotments and even for subsidised subsistence homesteads. But no substantial body of the industrial unemployed can be made to support themselves on the land. Much, however, will be accomplished if the trend to the town is stopped by a wise agricultural policy; for this migration has for long been a cause of urban unemployment. Moreover, the change in the quality and character of our agricultural production will give increased employment in ancillary occupations—canning, transport and the like. All this means "back to the countryside," if not "back to the land."

In any case, we may well refuse, with the Astor-Rowntree Committee, to be depressed by the result at which they have arrived. For the troubles of agriculture have their source in the disappearance of those twin nineteenth-century bogeys, the law of diminishing returns in agriculture, and the Malthusian law of population. "We cannot admit that the removal of these age-long obstacles to progress should be greeted with a sour look, merely because it has the incidental result of increasing the difficulty of settling men upon the land."

SHORTER NOTICE

"On Economic Planning." Edited by Mary Van Kleeck and Mary L. Fledderus. (New York) Friede. \$3.00.

The question set for the conference at which these papers were delivered was "What kind of economic planning can end unemployment, establish security and raise standards of living in proportion to productive capacity?" The authors first define the problem; then Mr Valerian Ossinsky contributes a rosy picture of the well-ordered progress of the second five-year plan in the U.S.S.R.; there follows a series of attacks on the recovery programmes of President Roosevelt—this part of the book loses some point by overlapping; finally, "the need for a workers' and technicians' plan" is demonstrated by quotations from the Communist Manifesto.

The contributors are not perhaps to blame if they found criticism of N.I.R.A. easier than suggestions for a different policy. Section 7A of the N.I.R.A., which gave employees the right to organise and bargain collectively through representatives of their own choosing, is shown to have brought "sad disillusionment to those who saw in it a high promise of labour betterment." The suggestion for self-government for industry is rejected as leading to all the evils familiar to Americans in the great trusts and combines. The diagnosis of over-production and therefore the remedy of curtailing supplies, is also easily disposed of. Miss Kleeck, on the contrary, urges the need for increasing productive output and raising the standard of living, as far as is compatible with the maintenance of circulating capital.

The book does not tell us what political force or administrative staff is to direct America in its ideal planning. Secondly, it is rather airily implied that a proletarian dictatorship (if *per impossible* it were to arrive) would solve economic problems automatically. America is not Russia, and the problem of the allocation of resources there requires vast expert work. This work might be undertaken by social workers whatever their view of the future. Problems that are being practically experimented upon by the Tennessee Valley Authority are given no hearing by these intransigent writers, and their chief merit is their capacity to expose some of the follies of over-production theories, and their energy in flogging that, by now, highly dead horse—the burning of coffee in Brazil.

MONEY AND BANKING

HOLLAND AND THE GOLD DRAIN

(BY OUR AMSTERDAM CORRESPONDENT)

HOLLAND'S position within the gold *bloc* has seemed in jeopardy during recent months. The outward gold drain has been extremely heavy; and the protagonists of deflation and devaluation have been calling Holland's political stability in question. On Wednesday of this week, however, the Bank rate was reduced from 6 to 5 per cent., and the private discount rate from 5½ to 4½ per cent.; while the stock and money markets took on a favourable aspect. Does this herald better times for Holland? Is she out of the wood yet? What underlying forces are at work in her financial system? Has the gold drain now ended? These are the questions on every observer's lips.

Until last June, external factors were mostly responsible for the export of gold from Holland. Among such factors were the failure of the 1933 World Economic Conference, the devaluation of the dollar, successive Government crises in France, and, last but not least, the devaluation of the belga on April 1st of this year. These factors have caused a gradual withdrawal of foreign capital from the Netherlands, which, since the end of 1933, has caused a continual weakening of the position of the Netherlands Bank. In 1933 the Bank's average holding of gold was 1,000 million guilders, but by the spring of 1935 it had dropped to 813 millions. The biggest drain of gold, however, set in after the devaluation of the belga. Then a considerable flight of capital from the guilder took place. This was later intensified by many internal causes, e.g. the resignation of the Minister of Economic Affairs, Dr. Steenberghe, owing to his convictions on devaluation, in June; and, in July, the cabinet crisis caused by the resignation of Dr. Colijn, which brought internal tension almost to breaking point. The following table aptly illustrates the course of events:—

POSITION OF NETHERLANDS BANK
(In million guilders)

	Sept., 1931	Jan. 2, 1934	Mar. 26, 1935	June 10, 1935	July 22, 1935	Sept. 30, 1935
Gold	665	923	813	618	688	536
Immediately realisable assets in foreign gold currencies ..	298	13	6	4	3	4
Loans and internal bills dis- counted	137	179	154	214	159	278
Note circulation	944	940	848	833	812	819
Balances on current account ..	168	206	121	41	62	42

In September, 1931, i.e. before the depreciation of sterling, the Netherlands Bank held, in addition to 665 million guilders of gold, foreign exchange in gold-covered currencies to the value of 298 million guilders. Actually, therefore, the gold reserve and foreign exchange at the end of September, 1935, compared with September, 1931, had fallen by 129 *plus* 294 millions, or 423 million guilders in all. On the other hand, the note circulation fell by only 125 million guilders, while loans and bills discounted rose by 141 millions. Compared even with March of this year the present situation shows a serious deterioration, the effects of which have been widely felt.

The prolonged flight of capital from the Netherlands caused a scarcity of funds on the money market. The rate for prolongation money rose, and it was necessary, despite high official discount rates, to have recourse to the Netherlands Bank. Accordingly, balances on current account with the Bank declined, while credits outstanding increased, so that the technical position of the Bank was constantly deteriorating. Thus, the situation is now such that every further efflux of gold leads to further expansion of the credit position of the bank. Although at the end of last June and the beginning of July the Netherlands Bank experienced some relief, the situation since then has been aggravated; and the improvement in the last week is too recent to admit of ready optimism. In these circum-

stances, the position of the Dutch commercial banking system is obviously of great importance. The Dutch private banks are primarily deposit banks, like the English "Big Five," and are not engaged in industrial financing. They thus escaped the most disastrous effects of the depression, and ample reserves served to offset their frozen credits in Germany. Consequently, apart from the troubles of a few small local banks, the Netherlands have been saved from grave banking difficulties. In view of the flight of capital the big banks, however, are now mindful of their liquidity, and they are temporising with applications for prolongation funds; indeed, some of them have resorted temporarily to rediscounting at the Netherlands Bank. It is clear, however, that the Dutch private banks are sound and liquid. This is confirmed by the reorganisation which a couple of the banks operating in the Dutch East Indies had recently to undergo in consequence of losses sustained there. The reorganisation has not been prejudicial to their liquidity, and it was effected without recourse to the Netherlands Bank.

The gold drain is therefore rather the exact reflection of Holland's exchange difficulties than of any weakness in her internal banking structure. The Netherlands Bank, despite all difficulties, has been releasing gold freely as soon as the rates of exchange have moved beyond the gold export point. The Bank releases gold at the price of 1,653.44 guilders per kilogramme for fine bars and at a corresponding rate for gold coin. No gold is issued for internal purposes; the stock is thus entirely reserved for the maintenance of the exchange rates. The Netherlands Bank issues gold for export only to those countries which, in their turn, release gold for the Netherlands when the rates of exchange warrant their doing so. It is difficult, however, to determine what gold is imported and exported on account of private parties. This can only be approximately computed. The official returns of the Central Statistical Bureau at The Hague show that the total exports of gold and silver in the eight months January to August, 1935, were:—

(In million guilders)

Exports	408.0
Imports	126.5
Export surplus	281.5

The stock of gold of the Netherlands Bank was 842 millions on January 1st of this year and 591 millions on August 31st. If we compare the export surplus of gold and silver of 281.5 millions with the 251 millions by which the stocks of the Netherlands Bank have been depleted, we find that there is a difference of 30 million guilders, and this is a rough indication of what has been exported on account of third parties. In addition, however, there is the possibility that private banks have purchased gold on the London market and deposited it there. Transactions of that kind are naturally not recorded in the foreign trade statistics.

As pointed out above, the heavy exports of gold have indirectly caused a steep advance in money rates. The course of rates will be seen from the following table:—

	1935	Official Discount	Private Discount	Prolongation Rate
Average—		%	%	%
January		2.50	0.51	1.00
February		2.50	0.56	1.00
March		2.50	0.61	1.00
April		4.07	3.57	3.23
May		4.24	3.81	2.95
June		4.87	4.39	3.82
July		4.00	3.12	2.77
August		5.06	4.78	4.74
September		5.47	...	5.64

The prolongation rate at one time reached 6½ per cent., and even at that rate no funds were forthcoming on several days. The high money rates have exerted their influence on the investment market in particular. The reaction there came to a halt a fortnight ago, but the recent recovery

may, again, be evanescent. The 4 per cent. Netherlands State Loan dropped from above par to about 91 before rising to 95. The 3½ per cent. State Loan, which, too, had passed the 100 mark, is now quoted just over 90.

The introduction of the State Budget for 1936, too, failed to reassure the gilt-edged market and so to lower interest rates. The total budgetary deficit is a matter of 119 million guilders, which has only been balanced on paper; and, in addition, no scheme has yet been advanced for covering the deficit of 72 millions of 1935. State revenue is constantly on the decline, while expenditure still continues to increase. Thus, the balancing of the Budget becomes continuously more difficult. The national debt has moved as follows in recent years:—

('000 guilders)

January 1—		January 1—	
1929	2,585,786	1933	2,475,282
1930	2,461,752	1934	2,722,844
1931	2,387,798	1935	2,701,103
1932	2,338,471		

The floating debt amounted to 730 million guilders last September, against which there are several claims on the Netherlands Indies and for credits extended abroad, totalling about 360 million guilders. Moreover, the financing of the floating debt, owing to high money rates, has to be effected at constantly higher rates of interest; and, at the same time, the marketing of Exchequer bonds has become more difficult on each successive occasion. Consequently, the Minister of Finance has already had to have recourse to the Netherlands Bank by placing with it directly a large block of Exchequer bonds.

In view of all these circumstances, it is evident that, if the present reversal of the upward trend in money rates proves only temporary, grave difficulties must beset Holland. The drain of gold, too, will have to be arrested; for it is clear that the Netherlands Bank cannot withstand a further drain of large dimensions on its gold stock. If, therefore, the export of their capital on the part of Dutch citizens does not cease, it is clear that the Colijn Government will in due course have no alternative but devaluation. Nothing but a revival of confidence in the policy of the Government can bring deliverance from threatened dangers and a change for the better. The great problem in the domestic affairs of the country consists in reducing the cost of living and in bringing about a permanent improvement in the gap between costs and prices—between the burden of taxation and the power to bear it. Something more than the support of individual distressed industries is needed from the Government to solve these problems.

FINANCIAL NOTES

The City and Sanctions.—So far the City has accepted very calmly the list of financial sanctions against Italy which has been adopted by the League Assembly. There is no suggestion yet of extending them to cover Italian dealings in securities, and as is shown in an Investment Note on page 763, the Stock Exchange has not yet had to consider taking any action. As far as banking business is concerned, the sanctions do not prohibit exchange dealings or the remittance of funds to or from Italy. Such remittances are proceeding in the normal way, and are only subject to such restrictions as are imposed by Italy. Italian balances in London remain quite free. The sanctions, however, do prohibit the opening of further bank credits or the extension of overdraft or other facilities on behalf of Italy, but here it is largely a case of locking an already empty stable. For some time past most London banks have been reducing their Italian credit lines as quickly as they can, and have also been refusing to open fresh credits; and they have done this as a matter of banking prudence, for the reason that Italy's credit has been steadily deteriorating. London acceptors have also experienced delays in receiving the sterling needed to place them in funds against their maturities. All the League Assembly has done is to lend its force to a policy which was adopted in the City of London a considerable time ago. If an embargo is placed upon Italian assets in London or upon the remittance of funds, then the City will carry it into practice.

Sweden's Balance of Payments.—Sweden is one of the most fortunate members of the "sterling area." The official figures of her balance of payments in 1934, now available, show that, on trading and "services" account, she still enjoys a net surplus of income from abroad:—

SWEDEN'S BALANCE OF PAYMENTS
(in million Kronor)

INCOME FROM ABROAD	PAYMENTS TO ABROAD
(1) Exports of goods (f.o.b.)	(1) Imports of goods (c.i.f.)
(2) Bullion and gold coin	(2) Bullion and gold coin
(3) Interest and dividends	(3) Interest and dividends
(4) Freight	(4) Payments by Swedish vessels in foreign ports
(5) Emigrants' remittances to Sweden	(5) Expenditure by Swedish tourists abroad
(6) Expenditure by foreign tourists in Sweden	(6) Other payments
(7) Other income items	(7) Reparation of Swedish securities
(8) Exports of Swedish securities	(8) Swedish purchases of foreign securities
(9) Exports of foreign securities from Sweden	(9) Net decrease in Swedish short- term debt abroad
(10) Net increase in Swedish short- term debts abroad	(10) Net increase in Swedish short- term assets abroad
(11) Net decrease in Swedish short- term assets abroad	(11) Swedish capital issues for abroad
(12) Redemption of Swedish assets abroad	
(13) Balance due to incomplete in- formation	
Total	Total

By a coincidence, imports and exports were exactly equal last year, whereas in 1933 there was an import surplus of Kr. 15 millions. The amount of exports to Great Britain last year amounted to Kr. 324 millions. Two-thirds of Sweden's long-term investments abroad are in American dollars, so item (3) on the income side was abnormally low in 1934, following the devaluation of the dollar. Great Britain paid Kr. 70 millions of the Kr. 240 millions which Sweden received from abroad for her shipping services under item (4). In item (7) on the income side are included commissions, payments for transit, transport, etc. On the expenditure side, imports from Great Britain amounted to Kr. 254 millions out of the Kr. 1,319 millions under item (1). Item (4) is for dues, bunkers, etc., in foreign ports; item (6) includes commissions, amounts taken by emigrants, etc. There is an increase of Kr. 105 millions over the 1933 figure for item (8), mainly due to increased Scandinavian loans floated in Stockholm. Item (9) is much higher than in 1933; Kr. 80 millions of it is due to a reduction in credits raised abroad by Swedish exporters with a view to the avoidance of exchange losses. Though raised in earlier years, such loans have now been taken into the accounts for the first time. Item (10) is much below the Kr. 400 million figure in 1933, when the Riksbank was making heavy purchases of foreign currencies. The figures for commodity trade and "services" together (items 1, 3-7 on the income side; and 1 and 3-6 on the payments side) show that Sweden still has a net income on foreign trading account of Kr. 206 millions, against Kr. 212 millions in 1933. The prospects for 1935, according to our Stockholm correspondent, are not so satisfactory, for Sweden's rapid domestic recovery has sharply increased imports, while the general hindrances to industrial exports have held back her exports.

The Foreign Exchanges.—Sterling has become definitely stronger during the week, and was quoted on Thursday last at \$4.92 and Frs. 74½, against \$4.90½ and Frs. 74½ the week before. The New York-Paris cross-rate has been steady at Frs. 15.17½, or about the export gold point, during the whole of the week. Owing to the recovery in the pound, the British Control has not had to intervene directly in the foreign exchange market, but it is believed that the heavy gold sales made in London early in the week could be traced back to the Control, and that these were also a cause of the recovery in the pound. The main improvement, however, occurred on Thursday, and this is attributed to American silver purchases in New York, inspired by the drop of ½d. per ounce in the London price of silver. Meanwhile the British Control has made a good book profit on its previous purchases of sterling at rates of Frs. 74½ and Frs. 74½. In the forward market, three months' dollars have been steady at 1½ cents premium, while three months' francs eased on Thursday from 75 centimes to Frs. 1.00 discount. Three months' guilders are unchanged at cents 14½ discount, while three months' Swiss francs have eased from 25 to 27 centimes discount, and were offered on Thursday at the higher of these rates.

The Money Market.—The accumulation of funds in public deposits at the Bank, referred to below, has made money distinctly less abundant, and for the first time for many weeks there was calling by the clearing banks for making-up purposes on the first four days of this week. The clearing banks have also been very reluctant to buy bills, and this has increased the demand for loans, as bill-brokers are having to carry more bills themselves. Hence there has been a good demand for money on every afternoon of this week.

	Sept. 26, 1935	Oct. 3, 1935	Oct. 10, 1935	Oct. 17, 1935

Treasury bills.....	1	nom.	1-1	1
Three months' bank bills	1	1-1	1-1	1-1

Last week's Treasury bill tender rate was 12s. 1.82d. per cent., against 12s. 8.05d. per cent. the week before. Only £41 millions of bills were allotted out of the original offer of £45 millions, and this week's tender is cut down to a maximum of £40 millions. Hot Treasury bills were dealt in among bill-brokers at $\frac{9}{16}$ per cent., but the banks are not yet buying January bills, and only bought a very few December bills at $\frac{1}{2}$ per cent. Three months' bank bills are quoted at $\frac{5}{8}$ - $\frac{1}{2}$ per cent.

The Bank Return.—This week there has only been a small reduction in public deposits, which remain at a very high figure. Theoretically it is possible that discrepancies in the dates of Treasury bill payments and maturities have been inflating public deposits in the middle of each week, and that if the Bank return were made up at the end of each week it would reveal a different position. This does not entirely explain, however, the steady increase in public deposits (and consequent contraction in bankers' deposits) since the beginning of September :—

BANK OF ENGLAND

Proportion.....	47.2%	38.5%	36.0%	34.9%	36.9%

Another explanation which is theoretically possible is that part of the sterling received by the Exchange Equalisation Account in payment for its sales of gold or *devisen* has been lodged in the Bank of England instead of being invested in Treasury bills. Once again, it is impossible to prove or disprove this theory. The fact remains that for some unknown reason the Government is at the moment accumulating cash while bankers' deposits are being depleted.

New York Money and Banking.—During the week ended October 9th New York member banks' loans to brokers were reduced from \$879 to \$825 millions. The latest return represents a definite drop below those for September, which at one time ran up to above \$900 millions. Other loans by member banks against securities remained unchanged during the week at \$742 millions. Gold continues to arrive in large quantities. Actual arrivals for the week ended October 9th included \$19.8 millions from France, \$11.4 millions from Holland, and \$9.9 millions from England. Imports so far reported between October 12th and 17th were considerably heavier, for they included \$68.4 millions from France and \$25.8 millions from England. Imports from Holland were negligible. Engagements for shipment reported on October 12th and 16th were \$14.9 millions from France and \$10.7 from

England. Total engagements from September 9th up to October 12th are estimated at \$350.8 millions. This includes \$173.3 millions from France, \$90.5 millions from England and \$55.5 millions from Holland. At the week-end it was reported that the rally in Paris exchange to within the export gold point had led to some cancellations of shipments, but to judge from the returns cited above these appear to have been inconsiderable, and the gold influx is obviously continuing.

The American Gold Influx.—In discussing the recent huge gold influx into the United States, our New York correspondent points out that this is no isolated movement inspired solely by the war atmosphere in Europe, but is the continuance of a major movement of capital which has been in progress during the past year. Details of American gold imports are given below :—

* Export.

† Provisional figure.

Over the past twelve months American gold stocks have risen by about \$1,200 millions. According to our correspondent, the American view is that most of this gold has not come out of the monetary gold stocks of other countries, but instead represents new gold and also a certain transference of gold previously hoarded in Europe. Over the first half of 1935 there was an active trade balance of only \$29 millions, much more than offset by gold imports of \$802 millions and silver imports of \$79 millions. The Department of Commerce estimates that there was a net influx of \$100 millions of long-term funds and \$560 millions of short-term funds. These calculations leave a wide discrepancy, and it is impossible to distinguish between the repatriation of American funds and an influx of foreign-owned money. Meanwhile the rising trend of imports suggests that the dollar is no longer undervalued, at least in terms of typical commodities.

Anglo-South American Bank.—The accounts of this bank for the year ended June 30, 1935, show that international banking business in South America is still very difficult and unremunerative. Any benefit from the improvement in trade has been offset by further exchange depreciation and by extended legislation for the protection of debtors. In consequence, gross profits have fallen from £976,000 in 1933-34 to £912,000 in 1934-35, and while some reduction has been made in expenses, net profits are reduced from £60,782 to £37,019. The whole of the net profits are transferred to legal reserves and contingencies, and there is no question of any dividend. The balance sheet shows a general contraction in both liabilities and assets, coupled with an increase of £815,000 in the suspense account covering depreciation of capital employed abroad. The report states, however, that this year the bank's Chilean assets and liabilities have been converted into sterling at the export draft rate of 118.25 pesos to the pound, whereas last year the official rate of 49 pesos, then current, was employed. The effect of this is to reduce the sterling value of these items by more than half, and it is probable that an equally conservative exchange valuation has been applied to the remainder of the bank's foreign assets. This explains the increase of £815,000 in the suspense account, and while this is equivalent to a loss, it should be a non-recurring item. An equally important point is that this year's balance sheet has taken full account of exchange depreciation, and in that respect is a sounder document. The stability of the bank is well assured, for against deposits of £22,796,000 it holds cash totalling £6,100,000, giving a cash ratio of 26.8 per cent. The real difficulty is that the depressed state of South America's international trade makes it difficult for the bank to do much more than earn its expenses.

THE STOCK EXCHANGE

AMERICAN RAILROADS

Of all important groups of American securities, railroad stocks, having lost much during depression, have regained least in "recovery." The Standard Statistics weekly indices show representative industrial equities at 100 per cent., utilities at 82 per cent. and railroads at only 35 per cent. of the level, not of the boom year 1929, but of a more "normal" year, 1926. In earlier market revivals, railroad stocks have usually been well to the fore. What is holding them back to-day?

Comparison with 1926 is, perhaps, invidious for the railways. Traffic receipts for that year were, in fact, the highest in history. A fairer idea of the effect of depression may be gathered from a contrast of last year's figures with those of 1929. During that quinquennium the four British group railways showed a loss of 17 per cent. in operating revenue, of 15 per cent. in operating expenses, and of 31 per cent. in net revenue (including miscellaneous receipts, etc.). That the incidence of reduced traffic has been far more severe on the American railroads as a whole may be gathered from the following detailed table :—

AMERICAN RAILROADS, 1929 AND 1934			
	1929	1934	Change,
	Per cent.	Per cent.	Per cent.
Return on property investment	4.84	1.78	...
Ratio of debt to capital	55.9	55.7	...
	Mill. \$	Mill. \$	
Cash dividends paid	490.1	132.8	-72.7
Taxes paid	396.7	239.5	-39.6
Total operating revenues	6,280	3,271	-47.9
Total operating expenses.....	4,506	2,442	-45.8
	Per cent.	Per cent.	
Operating ratio	71.8	74.6	...
	Mill. \$	Mill. \$	
Capital expenditure.....	853.7	212.7	-75.1
	Mill.	Mill.	
Revenue ton-miles	447,322	269,006	-39.8
Revenue passenger-miles	31,074	18,036	-42.0
	Per cent.	Per cent.	
Freight cars awaiting repair	6.0	14.6	...
Locomotives awaiting repair	16.3	32.6	...
Average number of employees.....	1,660,850	1,008,995	-39.3
Average annual earnings per employee	\$1,744	\$1,506	-13.6

In brief, the volume of traffic has been reduced by approximately 40 per cent., and the labour force has fallen in about the same proportion. Operating revenues have dropped by approximately \$3,000 millions, and operating expenses by \$2,000 millions. The total "return on property investment" has declined from 4.84 per cent. to 1.78 per cent., and total cash dividends have fallen to little more than one-fourth of the 1929 figure.

Trade depression, road and water competition, and reduced national purchasing power have played leading rôles in reducing railway net income. Congress has also played its part. Railroad baiting is popular in most American States, and as soon as one legislative hurdle is overcome a new one appears. The Railroad Pension Law, declared unconstitutional on May 6th last, was replaced a few weeks ago by a second Railroad Pension Law, to be financed by a new tax on the railways for which a complementary law provides. The new legislation, like the old, will inevitably be contested, and may be found equally unconstitutional. From March 1st next a tax equivalent to 7 per cent. of pay-rolls is to be levied, half being found by the railways and half by the workers. On 1934 wages the yield would be \$122,500,000.

The action of Congress, however, has not been wholly inimical to the railroads, though some of its favours may have been dictated by political expediency rather than tenderness. Before adjourning at the end of August, Congress, at long last, passed a Motor Carrier Act, placing the control of inter-State road transport under a new division of the Interstate Commerce Commission. Certain of its provisions, relating to the filing of road rates, came into

force on October 1st. The law, indeed, carries regulation of hauliers by road, in some respects, further than ever before, since the strict system of regulation hitherto in force has applied only to transport within State boundaries. The new regime should be in full working order during 1936, and should bring considerable relief to the railroads' finances. Its objects, as in Great Britain and other countries, will be, first to secure some measure of stability, and subsequently to eliminate, gradually, the irresponsible rate-cutting operator with low wages and unsatisfactory conditions of employment.

In other respects, the last session of Congress was not unfruitful of helpful transport legislation, though unfortunately it did not witness the passage of overdue measures to regulate carriers by water, along the lines strongly advocated by the Co-ordinator of Transportation, Commissioner J. B. Eastman. Nevertheless, the revision of the Federal Bankruptcy Act has paved the way for substantial progress in the financial reorganisation of some of the largest railroads, such as Chicago, Milwaukee, St. Paul and Pacific, Missouri Pacific and Chicago and North-Western. On the other hand, Congress has refused to support bills sponsored by the railway unions, which sought to control the length of trains, the numbers of their crews, the inspection of signals and track, etc., and to enforce a six-hour day. The railroads have thus been saved, for the time being at least, from the necessity of additional expenditure running into many million dollars.

Investors who desire to estimate the income prospects of the railroads this year, on the basis of available figures, would do well to bear two additional facts in mind. In the first place, the final restoration of the remainder of the temporary 10 per cent. deduction from salaries and wages was made on April 1st last. Wages rates are thus officially at their maximum pre-depression level—indeed, present hourly wage rates have been estimated to be approximately 175 per cent. above those prevailing before the war and about 3.5 per cent. higher than those of 1929. In fact, total labour expenditure continues to be well below the pre-depression level, in view of the considerable decline in total employees and the prevalence of short time.

A second point of importance for investors is the decision of the Interstate Commerce Commission, after a long-drawn-out hearing, to allow an increase of rates. The so-called "Emergency Charges" came into effect during April and will expire at the end of June, 1936. The railroads, in fact, asked for an increase estimated to yield additional revenue of \$170 millions, but the Commission granted them only about \$85 millions by way of an increment equivalent to about 7 per cent. on existing rates, though not a flat increase. The decision has not apparently been very effective in increasing earnings so far. For the first seven months of this year the return on property investment was only 1.69 per cent., as compared with virtually 2 per cent. for the same months of 1934. During August, however, car-loadings began to pick up, and continued to improve during September. For the country as a whole, the first nine months' figures for this year will probably run close to those of last year. For the investor, however, such generalisations may be misleading. He is interested, not in all the Class I railroads, but in comparatively few financially strong lines.

Between individual companies there is a wide variety of experience—even as regards railways serving similar territories. This makes any forecasting of financial results for separate companies over the whole year difficult and untrustworthy. The disparity of current traffic trends is well brought out by the table on the next page.

Even in April last individual lines in similar areas showed almost inexplicable variations both in comparative gross receipts and in the amounts of gross revenue retained as net earnings. The Atchison, for example, retained only

1935 COMPARED WITH 1934
(Thousand \$)

Company	April Earnings		August Earnings	
	Gross	Net	Gross	Net
Western Lines				
Atchison	+ 834	+ 93	+ 118	- 358
Chicago, Milwaukee	+ 347	+ 4	- 138	- 1,090
Great Northern	+ 866	+ 1,330	+ 1,082	+ 1,087
Missouri Pacific	+ 46	- 288	- 47	+ 11
Northern Pacific	+ 363	+ 53	- 609	- 390
Southern Line				
Southern	- 12	- 224	+ 557	+ 539
Eastern Trunk Lines				
Baltimore and Ohio	- 125	- 168	+ 623	+ 150
New York Central	+ 240	- 105	+ 927	+ 467

\$93,000 of an April gross increase of \$834,000, while the Great Northern recorded a net gain of \$1,330,000 against a gross increase of \$866,000. Similar divergences are characteristic, also, of the August returns—the latest available. Monthly net figures, in short, may be seriously misleading, since they may reflect, in greater or less degree, exceptional outgoings for new rolling stock, track renewal work or tax payments.

A truer impression may be obtained from the figures for the first half of 1935 as a whole, supplemented by such later returns as are available. During that period Class I railroads together had a net deficit of about \$62 millions, as compared with about \$23 millions in 1934. The large American railroads which had net income left over after earning their fixed charges can be counted on the fingers of two hands. First and foremost come the two coal roads, the *Chesapeake and Ohio* and the *Norfolk and Western*; the former almost retained its net earnings of 1934 with \$13,487,586 net income this year, while the *Norfolk and Western* dropped only from about \$10,600,000 to just under \$10,000,000. The effect of the short-lived coal strike on the fortunes of both these systems can, happily, be regarded as negligible.

The *Pennsylvania*, for the first half of 1935, had net income (after charges) of \$9,700,000, nearly \$2,000,000 below 1934. It is too early, however, as yet to measure the financial effect on this great system of its large electrification scheme to Washington. The *Louisville and Nashville* continues to do well under adverse circumstances, thanks largely to its diversified traffic. Though it is not retaining its 1934 position it is covering its fixed charges with a considerable surplus. The *Union Pacific*, similarly, remains strong. Its competitor, the *Atchison*, has recently recorded increases in gross, but not in net operating income. In the east the *Reading*, whose interests are so closely linked to coal, notably anthracite, succeeded in retaining a large net income, though the total was slightly lower than in 1934. Among railroads which did not earn fixed charges, the *Southern Pacific*, the *Great Northern* and the *New York Central* have been attracting considerable attention from the American investor. These lines would derive noteworthy advantage from any continued improvement in American trade and production.

The current position of leading stocks mentioned in preceding paragraphs is indicated in the table which follows:—

Company	Income after Fixed Charges		Net Operating Income for First Eight Months		Stock (and 1934 Dividend)	Prices of 1935	
	1929	1934	1934	1935		Highest to Oct. 4	Latest
Chesapeake and Ohio	(\$'000) 32,192	28,062	24,085	23,524	Com. (\$2.80)	47½	44½
Norfolk and Western	41,907	20,280	14,772	15,099	Com. (\$10.00)	193	187½

Great Northern	25,669	Dr 1,074	6,139	10,366	Com. (\$3.00)	434	344½
New York Central	78,277	Dr 7,882	21,314	20,251	Com. (Nil)	21½	18½
					Pref. (Nil)	27½	25½
					Com. (Nil)	27½	22½

American trading conditions are notoriously liable to rapid change. Forecasting of the results of large railroads is proportionately difficult. The weight of contemporary evidence, however, appears to suggest that a policy of selective investment in American railroads may legitimately take account of the possibility, during forthcoming autumn and early winter months, of an improvement in the position of the stronger railroads. In particular, favourable consideration may be extended to those lines which, during the last year or two, have been steadily reducing arrears of maintenance which accrued during the earlier years of depression.

INVESTMENT NOTES

East and West.—While the British Government has been steering a straight course, in heavy weather, at Geneva, the London Stock Exchange has been rather uneasily becalmed, with a drift, on the whole, towards lower prices. So far as markets have any policy at all, their predilections are towards mild sanctions as the next best thing to none at all. Domestically, preparations for a General Election are always a bear point while they last, but the "House" is already discounting the return of a National Government with a strong majority drawn predominantly from the party which the Stock Exchange likes best. The possibility that the authorities of the "House" may be required to co-operate in the implementation of financial measures against Italy, is causing little or no concern. It is argued, indeed, that developments so far merely give formal recognition to a situation in Lombard Street which has effectively existed for some weeks. The Stock Exchange Committee and members would doubtless be prepared to make all necessary arrangements on the receipt of any request from high quarters designed to limit the disposal and transfer of Italian assets. There is no indication as yet, however, that such co-operation has been or is likely to be invited. The Stock Exchange itself would regard any measures savouring of the impounding of the property of foreign nationals as standing on altogether a different footing from the limitation of trading and credit facilities by common League action. It is doubted, further, whether any substantial volume of Italian-owned securities is domiciled in London. Meanwhile, though the East continues to provide little that is grateful to the Stock Exchange, a small crumb of good news has come from the West. Mr Mackenzie King's success in the Canadian Elections has been regarded as a check to possibly dangerous "experimentalism" in at least one British Dominion. The new Premier may have his own ideas regarding the nationalisation of central banking, but his regime, the City hopes, may be associated with some sort of a check to the process of debt creation. His hostility to the merging of the Canadian Pacific with the Canadian National railway system (as opposed to possible joint working of the two separate systems) is on all fours with London's view. Stock Exchange congratulations have taken the most appropriate form of a rescission of the ban on official quotation of Vancouver bonds, which had been maintained since the end of January despite the refusal of the Premier of British Columbia to countenance the desire of Vancouver's mayor to effect enforced "conversion." Possibly, the authorities of the "House," with a fine sense of the dramatic, regarded Mayor McGeer's defeat in his candidature for a seat in the Dominion Parliament as an excellent opportunity to bury the hatchet.

Chronique de Défaut.—Bondholders have learned, with great regret, that Roumania has already defaulted on her agreement of July last year regarding the 4½ per cent. loan of 1913 and the 4 per cent. Consolidation loan of 1922 October coupons. The provision of 35 per cent. of the coupons has been effected by the Ministry of Finance at the National Bank in lei. The Bank, however, declares that it has insufficient foreign exchange to effect the

A NEW UNIT

IN
ADDITION TO THE
COMMODITY SERIES OF THE TRUST, WHICH HAS BEEN WELL KNOWN
FOR MORE THAN TWELVE MONTHS, THE MANAGERS HAVE NOW
FORMED A NEW UNIT, TO BE KNOWN AS

The Industrial Series (Series B)

£5·9·0%

IS THE YIELD, AT A PRICE OF 18½, EXCLUSIVE OF ALL BONUSSES,
SALES OF RIGHTS, ETC. THIS HIGH YIELD, CAUSED BY RECENT
STOCK EXCHANGE PRICE MOVEMENTS, IS NOT LIKELY TO BE
AVAILABLE FOR LONG.

BOTH SERIES OF THE TRUST ARE CUMULATIVE

Special features, not common to Fixed Trusts in general, include the provision of an alternative panel of securities in each Series, from which panel may be selected one or more securities to replace the securities at present in the portfolio, should circumstances render this course advisable.

THE PORTFOLIO OF THE INDUSTRIAL SERIES CONTAINS THE FOLLOWING 27 SECURITIES:

Callenders Cable Co.	Amalgamated Press Ltd.	Crown Mines Ltd.	Apex (Trinidad) Oil Co. Ltd.
Thos. Tilling Ltd.	British Plaster Board Ltd.	Richard Thomas & Co. Ltd.	Harrods Ltd.
Metropolitan Housing Corporation Ltd.		City of London Real Property Co. Ltd.	
Goodlass Wall & Lead Industries Ltd.		Government Gold Mining Areas Ltd.	
Imperial Continental Gas Association		Shell Transport & Trading Co. Ltd.	
London Brick Co. & Folders Ltd.		International Tea Co.'s Stores Ltd.	
British-American Tobacco Co. Ltd.		Imperial Chemical Industries Ltd.	
Lever Bros. Ltd.	Southern Railway Co.	Austin Motor Co. Ltd.	Powell Duffryn Ltd.
Ever Ready Co. Ltd.	Allied Ironfounders Ltd.	Harrisons & Crosfield Ltd.	Beecham's Pills Ltd.
		Carreras Ltd.	

For further details concerning the Industrial Series, also all particulars of the portfolio of the Commodity Series, the alternative panels, and all other information, please apply to your Stockbroker, or direct to the Managers, for booklet D.27.

transfer. This plea has been criticised in London—the more so since coupons due in Berlin have been paid, in apparent disregard of the “most-favoured-nation” intention of Article 5 of the 1934 Agreement. If reports are correct that the proceeds of increased wheat sales by Roumania to this country have been applied towards increased imports from Germany, discrimination would appear to have been aggravated. Meanwhile, the Greek Government continues to offer 35 per cent. payments on its coupons as they fall due, notwithstanding the fact that the agreed payments at that rate expired on March 31st of this year. The bondholders’ representatives have repeatedly declared that Greece is in a position to make larger payments, and they maintain their recommendation that holders should not cash their coupons in the absence of an improved offer. Whether recent political changes in Greece will assist a resumption of negotiations is not clear at the moment.

Rubber and Tea Problems.—The speeches of Mr H. Eric Miller at the annual meetings of Harrisons & Crosfield are invariably regarded by a wide circle of investors as among the most authoritative of pronouncements on rubber and tea prospects, due allowance being made for the warmth of the speaker’s convictions of the basic merits of a restriction policy. At present, the outlook for both industries is a little clouded, despite the upward tendency of prices which both have experienced in the last few weeks or days. The rubber restriction scheme is junior to that of the tea industry by a year, but both have shown much the same traits. An initial “psychological” spurt in prices has been followed in both cases by a period of disappointment, with a tendency for quotations to settle at a level sufficient to enable the best situated producers to pay their way, but not to earn the profits which are regarded, rightly or wrongly, as appropriate to “speculative” industries. So far as tea prospects are concerned, Mr Miller is a qualified optimist. He believes that the willingness of “out-markets” to take larger quantities of tea from the East has relieved the statistical position in London; that good quality teas are coming into their own again; and that greater prosperity at home will afford the buying public an opportunity to give practical effect to its growing realisation that the cheapest tea is not the most economical. The chairman of Harrisons & Crosfield, however, sees no prospect that the industry will be able to stand on its own feet, without restriction, after 1938, when the present agreement expires. So far as the rubber industry is concerned, Mr Miller, while disclaiming any intention, as a member of the International Committee, of speaking out of school, recognised that the application of export regulating machinery at short notice had “presented certain difficulties.” This week’s news from Amsterdam has shown clearly what these difficulties were. In order to check exports of native-produced rubber, which have been running this year from 20,000 to 25,000 tons above their quota, the Dutch Government has imposed an export tax which, on Wednesday last, was raised to 24 guilders per 100 kilogrammes dry weight. At this figure, which is equivalent to approximately 4d. per pound, it is questionable whether the return to many native growers has not been forced down below subsistence level. Presumably, the authorities have considered both the question of the equity of this differential tax, as between native and “estate” producers, and the possibility of unfavourable social consequences, in native areas, if it is unduly prolonged. Recognition that, at all events, action on these lines has reached its limit, appears to be implicit in the further decision of the Dutch authorities, announced last week, to purchase up to 20,000 tons of export licences from estate growers. It may be regretted that Mr Miller did not feel himself at liberty to discuss this aspect of the rubber position at any length. His analysis, indeed, was largely confined to a somewhat emphatic condemnation of the rubber speculator, a denial of the suitability of joint marketing of the crop of all companies domiciled in the United Kingdom, and an optimistic review of consumption possibilities on the longer view. Investors might, perhaps, have been interested in an esti-

mate from so high a quarter of the possibility either of an early rise in the price of rubber to 7d. or 8d., or a relaxation of quota restrictions—for the present combination of severe regulation and a price of around 6d. does not hold out possibilities of handsome dividends for shareholders.

Oil and Politics.—The proposal from the major companies to increase the “allowable” output has brought a surprise move in the Californian oil “war.” Having failed to bring the independent producers into a restriction scheme, the major companies are now attempting to frighten them into submission with the threat of a flood of crude oil and distressed prices in the gasoline markets. California is now producing substantially in excess of the “allowable” output, although Oklahoma and Texas, the other two important oil States, are keeping within their quotas, as shown below:—

Crude Oil Production (barrels daily)	Week ended October 5th	Difference on October Allowable
Oklahoma	475,450	— 17,450
Texas	1,021,000	— 4,500
California	627,500	+ 129,800
Total United States	2,719,600	+ 165,400

In spite of the over-production of crude oil in California, the increase in consumption has prevented any deterioration in the American oil situation as a whole. For the two months ending September, stocks of crude oil declined by 7½ million barrels to approximately 300 million barrels, and gasoline stocks by 6 million barrels to 48 million barrels. Even in California, where it is estimated that 7 million barrels of crude oil have been over-produced since the breakdown of the cartel, stocks have not increased appreciably. The over-production of oil in America may be a vital factor in the application of economic sanctions against Italy by members of the League. If exports of oil are cut off by the League members, only America remains as a potential source of supply. Even if the major exporting companies in America acted in harmony with the League members, a number of independent companies would be pleased to sell oil to Italy if they could receive payment. This emphasises the importance of an embargo on Italian exports, for the availability of exchange will be the deciding factor in the sale of American oil. If the report is true that Italy does not hold more than two or three months’ supply of oil in storage, the question of an oil “sanction” becomes all-important.

Insurance Share Index.—The waning tendency recently evident in the gilt-edged market has inevitably affected all faithful satellites of the fixed-interest group. The latest calculation of our insurance share index thus shows a moderate fall during the latest quarter, but the general level is well above the 1934 average. The details of the index are given in the following table, which shows the course of an investment of £1,000, in 1913, in the ordinary shares of each of twenty-four leading insurance companies, and the corresponding average values:—

	1929	1931	1933	1934	Mar. 29, 1935	June 28, 1935	Sept. 30, 1935
Alliance	1,675	1,475	1,979	2,208	2,295	2,289	2,247
Atlas	3,532	2,869	3,182	3,452	3,428	3,746	3,619
Calcedonian	5,700	4,041	4,655	4,820	4,780	5,284	5,158
Commercial Union	4,545	3,540	3,918	4,449	4,571	4,517	4,351
Employers Liability	2,725	2,088	2,162	2,355	2,162	2,252	2,252
Equity & Law	2,069	1,866	2,784	3,733	4,419	4,419	4,464
General Accident	8,133	7,189	9,114	10,165	10,799	12,266	12,266

London & Lancashire	4,548	3,731	4,409	4,673	4,848	5,116	4,923
London Assurance	2,128	1,653	2,280	2,687	2,814	2,959	2,911
Nth. Brit. & Mercantile	4,514	3,857	4,866	4,984	5,414	6,051	5,860
Northern	1,945	1,700	2,078	2,149	2,209	2,418	2,328
Phoenix	2,011	1,569	1,945	1,970	2,030	2,063	2,063
Prudential	2,163	2,027	2,740	3,195	3,213	3,501	3,281
Royal Exchange	3,227	2,772	3,664	4,204	4,621	4,990	4,744
Royal	2,882	2,460	2,656	2,828	2,993	3,054	3,054
Scottish Life	2,680	2,352	3,174	3,708	4,270	4,270	4,270
Scott. Union & National	5,213	3,928	4,365	4,732	4,806	5,102	4,880
Sun Fire	2,853	2,347	2,889	3,088	3,156	3,378	3,244
Sun Life	2,237	2,023	2,349	2,632	2,871	3,174	2,922
Yorkshire	3,041	2,441	3,212	3,401	3,298	3,504	3,298
Average	3,406	2,840	3,535	4,025	4,228	4,522	4,379

The figures are based on the mean of the highest and lowest prices in each year, except for the quarterly quotations during 1935, which are based on middle market prices on the respective dates. In all cases where an issue of bonus shares has been offered it has been assumed that the rights have been sold, and the proceeds utilised to purchase an additional holding in the original shares. It will be seen that seventeen shares have fallen during the third quarter, while five have been stationary. The average decline in the period, amounting to just over 3 per cent., may be regarded as modest in view of disturbed market conditions.

Actuaries' Investment Index.—The latest calculation of the Actuaries' Index shows the widest movement for some weeks. The average level of 158 industrial shares, based on December 31, 1928, prices, has recovered to 75.2, compared with 73.9 a week ago, and the movement has virtually restored the index to the figure of 75.4 registered a month ago. The corresponding yield figures are 3.91, 3.94 and 3.89 per cent. respectively. The following selection of component indices illustrates the general character of the improvement:—

Group (and No. of Securities)	Prices (Dec. 31, 1928 = 100)			Yields (%)		
	Month Ago (Sept. 17)	Last Week (Oct. 8)	This Week (Oct. 15)	Month Ago (Sept. 17)	Last Week (Oct. 8)	This Week (Oct. 15)
Building Materials (4)	90.1	86.7	89.5	4.50	4.68	4.54
Cotton (6)	40.4	38.3	43.3	2.27	2.32	2.28
Electric Light and Power (16)	128.5	126.2	127.4	3.96	4.04	4.00
Electric Light and Power (16)	52.6	50.5	52.4	4.95	4.14	4.00
Motors (5)	14.3	13.7	16.0	...	...	...
Shipping (3)	128.7	125.1	127.2	4.29	4.40	4.34
Breweries and Distilleries (19)	68.8	67.2	68.0	4.05	4.15	4.11
Miscellaneous (52)	...	...	...	...	...	...

The more favourable interpretation of political factors may be inferred from the diffused nature of the improvement. Motor shares, however, have benefited from “Show” publicity and company news, while the shipping group has been supported on recent advances in freight rates.

COMPANY NOTES

Commercial Motor Companies.—The movement of commercial motor manufacturers’ profits, of which a representative selection is given in the annexed table, suggests that the trade is particularly sensitive to the influences of the business cycle. It is probable, however, that both the boom profits of the late ‘twenties and the losses of the early ‘thirties were exaggerated by circumstances peculiar to the commercial motor industry. In the late ‘twenties realisation of the potentialities of road transport was relatively recent. Vehicles were being placed on the road at an abnormal rate, enhanced, in the case of passenger vehicles, by the knowledge that the Road Traffic Act of 1930 would close the way to new entrants. The passing of the Act was naturally followed by a lull in passenger vehicles. Simultaneously the goods vehicle business was beginning to feel the effects of depression. It soon passed into an acuter phase, when the first anticipations of the 1933 Road and Rail Traffic Act combined with the rise of the Diesel engine to postpone purchases until buying policy had become clearer. Meanwhile, the Diesel manufacturers were added as a new competitor on the heavy side of the trade, while the rapidly growing light and medium side was being catered for more and more by competitors among the “private car” manufacturers, such as Ford and Morris. In these difficult conditions the manufacturers were condemned to incur considerable expenses in re-designing their models. The chief reason for holding hopes of better profits in the commercial motor business now is not that conditions are particularly favourable, but that the particularly unfavourable conditions of the recent past seem to be fading. Stability of legislative conditions is assured for some time to come. New models have been evolved, and the change-over to the Diesel engine for the heavier vehicles is more or less accomplished. Trade revival is helping in some degree

and exports are improving. So far, however, the revival has affected light and medium vehicles (in which the “private” manufacturers compete) more than the true type of heavy commercial vehicles. Moreover, it is now a characteristic of the commercial vehicle market, and particularly of the ‘bus section of it, that a period of abnormally active sales, such as occurred in the late ‘twenties,

EXECUTOR AND TRUSTEE BUSINESS CONDUCTED

COMMERCIAL SERVICE

The Bank has over 370 Branches in Africa, and Agents and Correspondents throughout the world. The closest touch with Trade and Industrial conditions is maintained, with special attention to Commercial and Credit Intelligence. This service is available to Exporters, Importers and others wishing to develop trade with South, East and Central Africa.

THE STANDARD BANK MONTHLY REVIEW is sent post free on application. It gives the latest information on all South, East and Central African matters of Trade and Commercial Interest.

leaves a long and marked legacy of subnormal sales. This is due to the relative lack of a second-hand market. It is probable, however, that some time in the next year or two a high proportion of the exceptional 1928-29 purchases will begin to reach the end of their re-engined life, and a second wave of orders would be expected. Given a continuation of general recovery, better profits may reasonably be expected for manufacturers. Investors who lack inside knowledge, however, may choose to confine their attention to the leading concerns, such as Leyland, Associated Equipment, and Dennis.

* * *

Armament Companies.—The market's preoccupation with armament shares, which has driven down the yields obtainable on the leaders to the 2 per cent. level, clearly shows more confidence in the prospects of a new "defence" policy—reiterated this week by the Chancellor of the Exchequer—than fear of any adverse eventual recommendation by the Royal Commission which is now studying the industry. Some of the evidence already heard by the Commission, however, is of tangible current interest to investors. The statement put in by the Union of Democratic Control, for example, contains many important contentions regarding the financial organisation and commercial interests of the companies in the industry. Much of the financial description, it is true, is founded upon presumption. The burden of suggestion, however, seeks to establish a more closely integrated financial structure in certain units than is generally known. The statement declares that only three firms manufacture armour plate and heavy ordnance steel: English Steel Corporation, which is indirectly controlled, according to the Union, by Vickers; William Beardmore, which is stated to be closely linked with Vickers; and Thomas Firth and John Brown, in which English Steel holds a moiety. Hadfields are stated to be the most important shell firm, and it is declared that these concerns are largely associated by financial ties and common supply of raw materials. Small arms are manufactured by Vickers, B.S.A. and Projectile and Engineering. The list of firms interested in naval construction includes Vickers-Armstrongs, John Brown, Swan Hunter and Wigham Richardson, and Cammell Laird. The first controls English Steel, which took over the Vickers and Cammell Laird armament and high-speed steel interests. It may be noted that, according to the statement, Harland and Wolff and R. and W. Hawthorn Leslie build large warships "on occasion," but their naval shipbuilding is described as small in comparison with their ordinary work. Among those concerns which have considerable non-armaments interests, in addition to certain companies already cited, Babcock and Wilcox equips a large proportion of the mercantile and naval fleets of the world with boilers. This brief summary of the Union's evidence suggests that the field for armaments investment is narrower than is sometimes supposed, and that certain interests outside the recognised leaders may have a distinctly limited "arms equity" in present circumstances.

* * *

Shipping Shares.—The market for shipping shares, a laggard in recovery, has recently reflected the hardening of freight rates on many cargo routes. The advance, which has been substantial in some instances, has been due partly to gradual reduction of the world's "surplus" tonnage and partly to increased demand and rising prices for many commodities. Disturbed international relations have induced consumers in certain cases to anticipate their normal requirements, particularly on Mediterranean and Suez routes, while the Italo-Abyssinian dispute has itself entailed some diversion of tonnage. Substantial progress towards co-operation has also been effected by the shipping industry. For example, differentials have recently been fixed between tramp and liner rates in the Plate trade, which should ensure the observance of minimum rates on the homeward route. In the Australian trade, minimum scales were raised last week to establish conformity with the effective rates now prevailing. These movements may

gratify patient shipping shareholders, but they reflect, so far, only the first phase of recovery. The latest calculation of our shipping freight index shows an improvement from 82.1 for August to 86.6 for September (1898-1913 = 100), but the latter figure remains below that of 89.9 recorded for September, 1934. In September, 1929, the index stood at 110.9. The full £2 millions of the Government subsidy, incidentally, will be payable if average rates this year are below 93 per cent. of the 1929 average. Under present conditions, clearly, investment interest may best be confined to concerns which can claim a reasonable dividend record during depression. The recent trend of shipping earnings is illustrated below:—

While recent freight increases have provided encouragement for speculative operations, the scope for the conservative investor is still narrow.

* * *

Anglo-Chilean Debenture Scheme—and Lautaro.—The most interesting feature of the scheme for modifying the interest and sinking fund rights of the Anglo-Chilean Nitrate Corporation's 7 per cent. first mortgage debentures lies outside the scheme itself. In an explanatory circular the directors state that the profits available for distribution in each financial year are expected to be "at least sufficient" to provide the revised 5 per cent. service on the stock. This is the first substantial evidence the investor has had of the profits which the nitrate companies may expect from the new nitrate production and sales system in Chile. The 5 per cent. service on the £2,979,178 of outstanding stock will cost just under £150,000 a year. Anglo-Chilean now draws much the greater part of its revenues from its dividend receivable from the Chilean Nitrate and Iodine Sales Corporation, in which the profits of the entire Chilean nitrate industry are centralised. In addition, there is a certain revenue from the Corporation's railway and by-products. Consequently, if the greater part of the £150,000 a year is to come from the Anglo-Chilean share of 26.77363 per cent. in the Sales Corporation's surplus profits, the total surplus profits anticipated must be at least some £500,000 to £550,000 per annum. On the Lautaro Company's share of 36.9731 per cent. in surplus profits, the Lautaro income would be some £200,000. The Anglo-Chilean scheme itself appears equitable. The first debentures, of which just under £3,000,000 are outstanding, rank ahead of £12,700,000 twenty-year 7 per cent. debentures and £16,965,000 7 per cent. secured bonds taken over from Cosach. No settlement is yet offered to these junior issues, so that the offer of 4½ per cent. interest plus ½ per cent. sinking fund, together with 50 per cent. of any surplus profit as additional sinking fund, appears to allow adequately for the sterling debentures' first charge. In pricing the stock at about 48½ the market is valuing it on a 9½ per cent. yield basis.

Canadian Pacific Position.—The recent figures of the Canadian Pacific system raise many perplexities for stockholders. Gross receipts have shown truly remarkable progress during the last two weeks. Up to September 21st the total traffics were some \$240,000 short of the previous year's level. The next return, for the nine days to September 30th, showed a prodigious increase of \$1,380,000 over the same nine days of 1934. In the subsequent week the increase was as much as \$711,000. In little over a fortnight, therefore, the traffic position has been outwardly transformed, an aggregate increase of \$1,851,000 for the period to October 7th affording striking contrast with a deficit, at the end of March, of some \$1,048,000. The following table, however, suggests a need for cautious interpretation:—

(\$000's)

Period	Gross Receipts				Net Receipts			
	Total		Cumulative Total		Total		Cumulative Total	
	1934	1935	1934	1935	1934	1935	1934	1935
January-March	27,487	26,439	27,487	26,439	3,226	2,101	3,226	2,101
April-June	29,723	30,061	57,211	56,529	4,829	5,961	8,054	6,062
July	10,717	11,130	67,928	67,659	1,511	1,526	9,566	7,583
August	10,930	10,937	78,858	78,595	1,070	508	10,637	8,096
Week to September 7 ..	2,751	2,460	81,609	81,055	...	...	...	...
" " 14 ..	2,942	2,949	84,551	84,004	...	...	...	...
" " 21 ..	2,918	3,225	87,469	87,229	...	...	...	...
Nine days to Sept. 30 ..	3,431	4,811	90,900	92,040	...	...	...	...
Week to October 7 ...	2,605	3,316	93,505	95,356	...	...	...	...

The relation of net to gross receipts is difficult to trace month by month. The figures seem to suggest that the improved course of earnings has been accompanied by increased maintenance provision. It might be somewhat optimistic to budget for continued traffic increases on the recent scale. The wheat crop is smaller in volume than a year ago. Any liberation of "pool" policy which may be effected by the new Liberal Government will probably be gradual, and will hardly help this year's traffics. Investors may also be reminded that the Canadian Pacific has American skeletons in its cupboard. In particular, the Minneapolis, St. Paul ("Soo") line has continued to suffer badly from depression. Possibly, further C.P.R. allocations for losses in respect of controlled United States lines (which cost \$4,000,000 in each of the last two years) might be charged to revenue, rather than surplus, if improvement on the Canadian system were sustained.

* * *

Ranks' Report.—The directors of this flour-milling holding company, registered as recently as November, 1933, provide little information in their annual report. Shareholders are merely informed that for the year to June last the dividend income from Joseph Rank, Ltd. (the operating company), amounted to £748,852, leaving undistributed "a substantial amount, which the directors consider to be a sufficient reserve, out of the profits for the year." Substantially, therefore, the profit-and-loss account consists of gross dividends and income-tax items, while the balance sheet, totalling £7,743,453, comprises three asset items, the largest of which is an entry of £7,295,593, representing the cost of shares in Joseph Rank. The accounts, drafted on the narrowest holding company lines, afford no basis for an investment appraisal of the concern, since essential information regarding the position of the operating group is withheld. So far as the formal figures are concerned, the holding company received £749,952 in dividends and other income for the year to June 29th last, compared with £478,389 for the preceding 7½ months, equivalent to approximately £765,000 in a full year. Whether these figures imply a stationary earnings experience for the operating group one cannot say, for the directors' report is silent as to trading conditions. The dividend is maintained at 15 per cent. per annum, and a rather higher balance of £54,139 is carried forward. Though the group appears to have been conservative in its profits distribution, it is impossible to place a firm valuation on the shares in the absence of knowledge of group profits. The 5s. shares stand at 17s. 3d., to yield £4 10s. per cent.

* * *

Witwatersrand Nigel.—The second report of this Far Eastern Rand concern shows that considerable progress was made during the year to June last. Two shafts have been sunk to intersect the Nigel Reef Horizon at about 600 feet, and early development work on the Reef shows average values of 1.46 dwts. over 23.3 inches. The development on the Upper Leader shows 653 feet of payable ore, averaging 10.30 dwts. over 32.2 inches. The consulting engineer's report regards these latter developments as indicating payable ore-shoots in this area. There is evidence of considerable faulting, but more development is necessary before the potentialities of the area can be assessed. Meanwhile, the company is well supplied with resources for further development. Excluding £27,500 resulting from the recent share issue, the net cash holding at the end of June was £179,685.

ELECTRICAL ENERGY for
Power, Heating and all Industrial Purposes
on the North - East Coast

NORTH-EASTERN ELECTRIC SUPPLY Co. Ltd.
Carlisle House, NEWCASTLE-UPON-TYNE
SITES FOR WORKS Apply to above address for particulars

Substantial progress has been made in the installation of permanent works underground, and in winding, compressor and other surface equipment. The 5s. shares are quoted around 10s. 6d.

* * *

Other Company Results.—The weekly summary table of profit and loss accounts on page 783 shows the results of 41 additional companies from a wide range of industries. The increase in the profits of *Seager, Evans* is a tribute to the continued enterprise of this distilling firm in offering its products directly to the public in forms which follow the trend of fashion. *Lambert Brothers*, the coal factors, have also secured a gratifying increase in profits from £16,495 to £42,142, in spite of the continued difficulties of the coal trade. *Sneyd Collieries* has also succeeded in doubling its rate of profit. The companies in the rubber group nearly all show improved results, some of them, such as *Jabi, Morib, Parit-Bruas* and *Karmen*, having secured substantial increases. Only *Strathisla (Perak)* is an exception to the rule, its profits having fallen from £10,028 to £6,634. Another overseas commodity producer is *Ste. Madeleine Sugar*, which has also increased its profits. Among the miscellaneous companies, the most interesting results are connected with the building trades. *François Cementation* shows recovery from a loss of £9,012 to a profit of £9,178, but *Venesta*, the makers of plywood, reveals only a very moderate net rise. *John Delaney*, whose interests are in lime, also show an increase. *General Theatre Corporation* has secured an increase in net profit of £21,042, but since no provision has to be made for debenture stock sinking fund, under the scheme of arrangement recently approved, the net profit has risen by a much larger amount, a net loss of £27,015 being converted into a profit of £67,851. *Erinoid*, which makes casein products, has had a setback, profits falling from £45,159 to £35,008. *Serck Radiators* has shared in the activity of the motor trade, for its profits have increased from £20,624 to £27,819. The profits of *Prices Trust* amount to £87,955, and an ordinary dividend of 15 per cent. is recommended. *Imperial Airways* announce profits of £133,769 after providing £192,960 for obsolescence, and the 6 per cent. dividend is supplemented by a bonus of 1 per cent.

Company Meetings of the Week.—On later pages of this issue will be found the reports of the following company meetings:—Central Argentine Railway, Trinidad Leaseholds, Leach's Argentine Estates, Anglo-Continental Guano Works, Harrisons and Crosfield, Chungloon Rubber Estate, and Java Produce Company. The chairman of Central Argentine Railway, commenting upon exchange difficulties and unfair State competition, said that all the railways asked for was a square deal, which they were not getting to-day. The chairman of Trinidad Leaseholds said that during the year there had been an all-round increase of efficiency and reduction of costs. Chungloon Rubber Estate finds that increase in rubber prices has more than offset the increase in costs due to restriction. The chairman of Harrisons and Crosfield said the actual rubber position seemed to him stronger than was generally recognised, and argued for an extension of the tea agreement beyond 1938. Leach's Argentine Estates, according to the chairman, are now selling from current production instead of drawing on

OFFER TO NEW READERS

Any reader who makes his first acquaintance with this Journal with this week's issue is invited to fill up the attached:

To Publisher, "Economist Newspaper Ltd.,"

8 Bouverie Street, E.C.4.

In order to test the value of your publication I should like you to forward this to me by post for the next four weeks. If I then decide to become a subscriber, it is understood that there will be no charge for the copies thus received, but otherwise I shall be willing to pay 4s. to cover their cost.

.....

stocks. The chairman of Anglo-Continental Guano Works declared that fertiliser business had been well maintained. Mr Llewellyn, chairman of Java Produce Company, said that the early months of the rubber restriction scheme had an effect more sentimental than economic and restriction should only be a temporary expedient to tide over short periods of over-production.

THE WEEK IN THE MARKETS

THE LONDON STOCK EXCHANGE

SETTLING DAYS
TICKET | ACCOUNT
OCTOBER 22 | OCTOBER 24

THE market has shown little disposition towards movement from the "mild sanctions—safe election" position this week, and the small downward changes in prices can be attributed largely to the small volume of business and to the end of a quietly uneasy account. The "House," indeed, has shown considerable indifference to the demand of the British delegate for stronger sanctions, and little more interest in general election prophecies, whose outcome is awaited with composure.

Nor did Mr Chamberlain's further warning regarding armament policy take more than temporary toll in the gilt-edged market, which gradually acquired a firmer tone, despite an evident paucity of business. War Loan provided an active feature, in anticipation of the half-year's interest deduction. The irredeemable issues, however, showed only a fractional improvement, and were a shade easier on Thursday.

The election results were signalled by a firmer tone in the Canadian list, and by the restoration of Vancouver bonds in dealers' lists, but quotations, although lowered, remained largely nominal. Other Dominion and Indian issues were quiet.

In the foreign bond market, Brazilian issues recovered from early weakness on an indefinite statement from the Finance Minister regarding economic reconstruction. Argentine issues were quite firm, and Far Eastern issues, after an easier interlude, regained their stride. European issues were poor without exception, Roumanian bonds in particular reacting to the unsatisfactory debt position (see page 762).

This week's disturbances on the South Wales coalfield were of more concern to the home rail market than a batch of mildly satisfactory traffics. Losses among the ordinary stocks were fractional, and prior charges ruled dull and recessionary. The market is now resigned to the view that rating relief cannot affect this year's figures. It is understood that the appeal in the Southern Railway case, which was expected to be heard next week, may be postponed, possibly by as much as a month. Argentine rails continued friendless, showing no marked changes in anticipation of the forthcoming accounts. Brazilian stocks also tended to seek lower levels, but American rails, whose prospects are discussed in a leading article on page 761, were adjusted to Wall Street's higher levels.

The industrial markets opened in fairly confident vein, but without any perceptible increase in public encouragement. Later in the week movements became rather undecided, and the approaching end of the account exerted a fuller influence. In contrast, trans-Atlantic issues were well supported on the renewed progress on Wall Street. Iron and steel issues, recently the most active domestic group, reacted on intermittent profit-taking, and coal shares showed nervousness. The aviation group lacked its long-sustained impetus, and no general movements were seen among motor shares, the Austin speech, which confirmed the reduced profit-margin hypothesis suggested in last week's *Economist*, tending to offset this week's Motor Show publicity. Standard fluctuated rather widely before the 20 per cent. dividend announcement.

A number of industrial groups followed the common course of the market. Electrical equipment issues, for example, lost their early firmness, and in an easier textile group Courtaulds only rallied on Thursday. Provision shares made but limited response to higher commodity prices. A slight rally occurred in mid-week among brewery

shares, but the tobacco leaders were rather neglected. No regular trend was apparent among miscellaneous issues. The leaders lost ground on Monday, together with the building supply shares, and despite a partial mid-week rally in the latter group, the market as a whole lacked drive. Shipping shares responded to recent advances in freight rates, discussed on page 766, but the movement was largely speculative. The bank share list showed improvements among Canadian institutions, following the election results.

The oil share market opened quietly, but a later rally developed into more active mid-week conditions. The market received the latest excess production figures from California (discussed on page 764) without comment, but selling from Continental centres checked the incipient rise.

Rubber shares fluctuated considerably. A firm opening signalled the market's satisfaction with Dutch native policy and the restoration of sixpenny rubber. After a pause for profit-taking, there was a good mid-week response to the further raising of the Dutch native export duty. Tea shares commenced in fair style, but subsequently share levels, except for Ceylon issues, tended to recede.

The mining markets reverted to hesitant mood this week. Opening support for developing and producing concerns tended to wane, and the market drifted. Finance issues also moved lower. East African issues provided the week's feature and were well supported on Wednesday. The "Jungle" and Westralian groups, however, lost their early leeway. Base metal issues were weaker in conformity with declining metal prices.

FOREIGN STOCK EXCHANGES

NEW YORK

WHILE the Secretary of the U.S. Treasury says in Paris that there is no concern in America over the present flight of gold to the States, Wall Street has found the powder barrel under its own feet more exciting than the explosive situation in Europe. As American gold reserves cross the \$9,500 millions mark, and bankers' excess reserves swell, Mr Gay, President of the New York Stock Exchange, points to the danger of credit inflation and a stock market boom which, in theory at least, could outshadow any 1929 boom. The

Chairman of the Securities and Exchange Commission agrees with this warning, and Wall Street is acting accordingly. There has been an all-round rise in a broadening market, which continues to be firm in spite of profit taking. Motors and motor accessories, amusements and farm implements have been prominent, and even railway shares have begun to think a little better of themselves. The Dow Jones index reached a new post-depression high of 135.03. The Federal Government has been so much concerned in the last two years to manage currency and expand the credit base that, with all the good intentions in the world, it will be difficult to reverse its policy with any speed, should inflation psychology begin to spread. The bond market is firm. The Fourth Liberty refunding offer is now closed and it is announced that about \$1,000 millions were refunded and \$250 millions cashed. This marks the end of an \$8,200 millions two-year programme of refunding. There are continued skirmishes with the New Deal legislation. The State of Georgia has filed suit against the Bankhead Cotton Control Act; vulnerable utility holding companies are slowly conforming with the conditions of the Holding Company Act; the A.A.A. proposes to hold a referendum among farmers on its agricultural restriction programme of paying subsidies for not producing. The reduced production of foodstuffs is leading to high prices which are very much criticised in the Eastern industrial States. In general business, reports continue to be good. Automobile output increased slightly, but the rate of steel mill production is held back by lack of railroad orders and declining tinplate production.

THE COMING BOOM IN AMERICAN MOTORS

By L. L. B. Angus

Send cheque for 4/- to:—

BROOKMIRE CORPORATION, 351 FIFTH AVENUE, NEW YORK

LONDON ACTIVE SECURITY PRICES AND YIELDS

Note—Shares with a New York Quotation or with definite American interest are distinguished by italics

In calculating yields on fixed interest stocks quoted below allowance is made for interest accrued since the last date of payment, less income tax at the standard rate. Where stocks are definitely redeemable at a certain date the yield includes any premium or loss on redemption; where stocks are redeemable at or before a certain date the final date of repayment is taken when the stock stands at a discount and the earliest date when the quotation is above par. The return on ordinary stocks and shares is calculated by reference to the latest dividends, account being taken of any enhancement or reduction of interim dividends. Allowance is made for accrued dividends in calculating the yield on "cum div." shares.

|| Columbus Day.

PARIS

Prices on the Bourse have spent the week see-sawing rather aimlessly, encouraged at one time by the firmness of Wall Street, discouraged at another by the outlook at Geneva, which is strangling speculative activity. The fortnightly account closed on Tuesday with a slightly more favourable tendency which was forgotten next day. Mining shares, which were strong at the end of last week, were unable to maintain their position this week. Rentes, banking shares and Suez Canal shared in the general lack of direction. In general, there were no movements of any importance, and the Bourse continues to pray for a sign.

	Oct. 9, 1935	Oct. 14, 1935	Oct. 16, 1935		Oct. 9, 1935	Oct. 14, 1935	Oct. 16, 1935

BERLIN

Last week's share market was inactive, and the number of companies with quotations was the lowest of the year. Foreign buying with blocked marks was reported. The tendency was irregular, gains, however, exceeding losses. The commercial banks were slightly weaker, but Reichsbank recovered. Stahlverein and some other steels, Siemens and Halske, and Farbenindustrie rose; Mannesmann, Harpener Coal and Deutsche Erdoel fell. Potash shares and shipping shares had hardly any market. The new week opened with a general decline and Tuesday was irregular with a firmer tendency, and a slight rise in the shipping and some other groups. Reich loans were firmer, and in the bonds list slight gains predominated. Among certificated dollar bonds state issues advanced, but bank issues reacted. On Wednesday the market was generally weaker, but shipping shares held their position.

AMSTERDAM

Last week's interest in commodity issues collapsed towards the end of the week, and the Bourse became stagnant in most sections. The rise on Wall Street had no influence on Amsterdam prices. Conditions improved this week with sugar and rubber issues leading as a result of increased prices and larger sales for Java sugar, and the adoption of the Dutch Indies Government's plan to buy up export licences while increasing still further the tax on native rubber. Tobacco shares and Dutch Indian banks were strong, and the bond market was firm. On the whole, industrial shares were dull and oil shares fell during the week.

	Oct. 9, 1935	Oct. 14, 1935	Oct. 16, 1935		Oct. 9, 1935	Oct. 14, 1935	Oct. 16, 1935

CAPITAL ISSUES

THE new issue market remains quiescent. The only public issue of the week, on behalf of *Easterns, Limited*, is a 6 per cent. redeemable £1 preference offer at 1s. 3d. premium. The shares rank after an existing 6½ per cent.

issue, and carry a deferred redemption risk, being redeemable at any time from 1945 at 22s. subject to repayment of the prior issue. The profits record set out for three years shows a marked expansion during the latest year, which covers the shares with a reasonable margin. The amount of the issue, however, is small, and the total issued capital of £369,184 is divided among three classes of shares. Statements "for information" have been published by *The Light Production Company*, an engine components concern with an expanding profits record, *Bearmans, Limited*, an established drapery and furnishing business, and *Great Northern Investment Trust*, which has placed a line of 3½ per cent. debenture stock at 99 per cent.

PUBLIC OFFER

Easterns, Ltd.—Issue of 135,000 redeemable 6 per cent. cumulative £1 preference shares at 21s. 3d. Rank after 115,000 6½ per cent. redeemable £1 preference shares in issue, and after their redemption, present issue redeemable on three months' notice at 2s. premium. Furnishing and drapery business in London districts, with net assets £372,617. Net profits after depreciation, years to August 31st: 1933, £23,534; 1934, £23,905; 1935, £34,791. Proceeds for repayment of bank loans £45,000, and for working capital. Lists closed 9.5 a.m. October 17th. Over-subscribed.

BY STOCK EXCHANGE INTRODUCTION

Bearmans, Ltd.—Issued capital 50,000 £1 ordinary shares. Cumulative £1 preference and 70,000 £1 ordinary shares. Incorporated September, 1935, to acquire retail drapery business founded in 1898. Total net assets £122,464 acquired for £120,000, £15,000 cash and £105,000 in ordinary and preference shares. Profits, after depreciation and income tax, years ending February 19th: 1933, £15,133; 1934, £16,311; 1935, £16,545.

Great Northern Investment Trust, Ltd.—Particulars of issue of £100,000 3½ per cent. debenture stock at 99 per cent. Redeemable at par October 1, 1967, or after October 1, 1957, on three months' notice. Ranks *pari passu* with existing £1,213,360 5 per cent. debenture stock.

The Light Production Company, Ltd.—Issued capital 10,000 shares. Incorporated April, 1919, and became public company July, 1935. Manufactures engine components for aircraft, motors, etc. Total assets April 30th, 1935, £67,449. Net profits, before British income tax and depreciation, years

ended April 30th: 1933, £11,703; 1934, £13,488; 1935, £18,297. Ordinary dividends 30 per cent. and 50 per cent. share bonus 1933-34, and 35 per cent. and 100 per cent. share bonus 1934-35.

PRIVATE PLACING

Scottish Power Company.—This company has placed privately 31,667 ordinary shares £1.

BONUS ISSUE

Union Cinema Company.—This company proposes to distribute a bonus share of one in twenty, requiring £5,471 of the capital reserve of £37,972.

ISSUES TO SHAREHOLDERS ONLY

Central Provinces Manganese Ore.—100,000 shares 10s. are offered to shareholders as on October 2nd at 20s. per share in proportion of one new share for every complete ten shares held. The new shares will rank equally with the existing shares for any final dividend which may be declared in respect of 1935.

Singapore Traction.—A further £100,000 5 per cent. convertible debenture stock was offered at par to the debenture stockholders.

Upsons, Ltd.—212,500 new ordinary shares £1, ranking for dividend and in all other respects *pari passu* with existing ordinary shares, are offered at £1 2s. to existing holders in proportion of one share for each two ordinary shares held.

West Springs, Ltd.—The directors estimate they will require the capital sum of £385,000 for development, and propose to raise a proportion of it by an offer of new shares to shareholders registered on October 31st. Up to November 21st they can subscribe for 89,650 new shares at 32s. 6d. (South African currency) in proportion of one for each 20 held. The Anglo-American Corporation of South Africa will underwrite the issue free of cash commission, and will subscribe for 17,350 new shares at 32s. 6d. (South African currency).

CONVERSIONS AND REPAYMENTS

Newfoundland Power and Paper Company, Ltd., 4½ per cent. "A" Mortgage Debenture Stock.—The balance outstanding of this stock will be redeemed on January 15, 1936.

Compania Salitrera Anglo-Chilena.—This company proposes to modify the rights of the holders of the £2,979,178 7 per cent. debenture stock. It is proposed to extend the date of maturity of the debentures from January 1, 1950, to January 1, 1961. All arrears of interest and sinking fund payments are to be waived and the interest reduced to 4½ per cent., payable yearly instead of half-yearly.

State of San Paulo 7 per Cent. Coffee Realisation Loan, 1930.—Bonds of this loan for £320,200 nominal of the sterling issue and \$875,000 nominal of the U.S.A. dollar issue have been purchased and cancelled completing redemption requirements for the first half of the year ending March 31, 1936.

Cinzano, Ltd.—The directors recommend that the "A" and "B" ordinary shares 15s. be converted into three shares of 5s. each. It is proposed also to convert the 336,407 unissued "A" ordinary shares in the same way.

OFFERS ABROAD

Anaconda Copper Mining Company.—This company issued on October 15th £35,000,000 4½ per cent. debentures at 98½.

Argentine Internal Loan.—The Argentine Government has issued, through the Bemberg financial consortium, an internal loan of 50,000,000 pesos of 4½ per cent. bonds at 86.7 per cent. for public works.

Cork Corporation.—Issue of £400,000 in 4 per cent. stock at 98, redeemable at par within 40 years. Proceeds for housing and cost of erection of the New City Hall and a new School of Commerce.

FORTHCOMING ISSUES

Weyburn Engineering Company, Ltd.—Lists will open on Tuesday next for an issue of 120,000 6 per cent. cumulative 10s. preference shares at par, and 160,000 5s. ordinary shares at 6s. 3d. The prospectus will show that the company acquires an established precision engineering business, supplying components to motor and aviation concerns, paying the principal vendor £52,000 in cash, and discharging debentures and loans of £15,846. Profits after depreciation for years to October 31st: 1933, £6,129; 1934, £11,112; 8 months to June 30, 1935, £9,130, equivalent to approximately 22 per cent. per annum on the issued ordinary shares.

OTARD'S
ESTABD 1795

THE BRANDY WITH A PEDIGREE

Alpha Cement Company, Ltd.—A meeting will be held on October 22nd at Winchester House, London, to consider an immediate issue to shareholders at par of 200,000 5½ per cent. cumulative preference shares £1 and 48,500 ordinary shares at 30s.

International Rubber Powder Company.—It is proposed to offer shareholders in the Rubber Powder Company shares in this new company in the proportion of 1½ new 2s. shares for each 1s. share now held. In addition, 750,000 2s. ordinary shares will be offered for public subscription.

Klerksdorp Consolidated Goldfields, Limited.—1,500,000 shares of 5s. will be offered for public subscription in a subsidiary company entitled Dominion Reefs (Klerksdorp), Ltd. Shareholders in Klerksdorp Consolidated Goldfields will receive preferential consideration in allotment.

McDougalls Trust, Ltd.—It is understood that arrangements are being made for the introduction to the market of a line of £1 ordinary shares in McDougalls Trust, Limited.

Norvic Shoe Company.—An issue is expected early in November of 150,000 5 per cent. preference shares £1 and 150,000 preferred ordinary shares £1. It is expected that both classes will be issued at a premium.

OTHER RESULTS OF ISSUES

Monte Video Waterworks.—The conversion list closed October 11th for issue £250,000 5 per cent. registered notes.

Wood Rozelaar and Wilkes.—Underwriters of the preference shares will have to take up 57 per cent. The directors agreed to subscribe for any ordinary shares not taken by the public.

International Power and Paper Company of Newfoundland, Ltd.—The list for cash applications for the issue of £1,877,600 3 per cent. guaranteed "A" mortgage debenture stock, 1955-73, was closed at 10.5 a.m. October 11th.

CALLS DUE OCTOBER 21 TO OCTOBER 26, 1935

The grand total of calls in October, 1935, is £10,514,679, which compares with £3,366,662 in October, 1934.

COMPANY MEETINGS, &c.

HARRISONS AND CROSFIELD, LIMITED

THE TEA AND RUBBER POSITION

Mr Eric Miller's speech at the annual meeting of Harrisons and Crosfield, Limited, held on the 15th instant, included a comprehensive review of the tea and rubber industries, prefaced as usual by his comments on the company's balance sheet, which shows an increase in the already strong liquid position. The carry-forward now exceeds the amount required to pay a full year's dividends on both the 6 per cent. preference and the 10 per cent. preferred ordinary stock.

Speaking about tea, he said:—The first half of 1935 was disappointing, but with smaller arrivals in the United Kingdom, where deliveries were keeping up well, the stock figures were 10 million lbs. less at the end of August than at the same date in 1934. During September buyers wakened up to the fact that the stock position had improved, and under more active buying the price of clean common tea had risen by the end of that month to 11½d. A very satisfactory feature of the changed position is that good quality teas are coming into their own again and show a relatively greater improvement; since the new season's Indian crop came to auction practically all the gardens producing fine tea are realising from 4d. to 6d. per lb. more than their corresponding average a year ago, when, as I told you last year, there was too small a premium being paid for quality teas as against common.

The greater prosperity which this country has enjoyed during the past twelve months has enabled people to spend a little more freely and to indulge their fancy for a somewhat higher grade of tea, because the public are beginning to realise that the cheapest tea is not the most economical. The advertising which has been done by the Propaganda Department of the International Committee in this direction has undoubtedly helped. They are extending this propaganda over a wide field, and it is being very wisely co-ordinated in favour of tea in general rather than tea from any particular country. With the exception of Japan tea and fancy grades of China, the tea we drink with so much enjoyment is a scientific blend of many different growths from different countries, and it is no disadvantage to any one producing country or estate that propaganda on their behalf should be done under the all-embracing name of tea. The potential producing capacity of the existing gardens is well ahead of current world consumption. Co-operative efforts to expand consumption are a main plank in the functions of the International Tea Committee, but the present agreement runs only till 1938, and as the industry cannot, even in the best event, hope to be able to dispense with regulation of exports by that time, it is essential in the interests of all concerned that the agreement should be continued for a further period thereafter.

THE RUBBER INDUSTRY

He then turned to the rubber industry, and stated that any opinion he expressed must not be taken as representing the views of the International Rubber Regulation Committee. He compared price movements under the present international scheme with those that followed the introduction of the Stevenson scheme, and examining the stock position in general, not merely the London and Liverpool figures at which speculators looked mainly, he estimated that world stocks had declined by over 40,000 tons between June 1, 1934, and August 31, 1935, whilst invisible stocks in the hands of manufacturers had also declined appreciably. As United Kingdom stocks would have to be drawn on to meet immediate demand from any quarter, the actual position seemed to him stronger than was generally recognised.

Continuing, he said:—The raising of the price of rubber to a fair and equitable level which will be reasonably remunerative to efficient producers and maintaining it there, as laid down in the International Agreement, may be slow so long as surplus stocks are heavy, but adjustment of supply to demand is the only effective means whereby this object can be safely attained.

This adjustment of supply to demand when carried out by open agreement on a basis which all who run may read, is sometimes referred to as an organised attempt to create scarcity and condemned off-hand on that score, but in the case of the rubber plantation industry the exact converse is true, the regulation of exports having as one of its principal objects the maintenance in efficient working order of the trees which are at present surplus to requirements, but whose product will, we hope and believe, be required at some not too distant date to satisfy the world's increasing consumption of our most useful raw material.

The report and accounts were unanimously adopted.

CENTRAL ARGENTINE RAILWAY, LIMITED

ATTITUDE OF THE GOVERNMENT

The ordinary general meeting of the Central Argentine Railway, Limited, was held, on the 17th instant, at River Plate House, London.

Mr W. Howard-Williams, C.B.E. (the chairman), said that what had once again most adversely affected them, as indeed all the railways and other Anglo-Argentine public utility companies, was the item of exchange differences, which had increased beyond last year's high figure.

He wanted to remind his friends in Argentina of facts material to themselves and to the company. There was not a thinking Argentine who would not admit that the wealth of his country was directly due to the railways constructed there by British capital long before the country had had the means to build railways, and that capital had gone into the country whatever the ruling conditions had been, and always with confidence that it would ever enjoy the protection and guarantees of the Argentine Constitution, and on the face of which £277,000,000 had been expended in constructing and equipping the large mileage which served the country. He was sorry to say that the railway problem in Argentina was not being tackled by the authorities in the broad-minded spirit to which they felt they were entitled. It had been publicly announced that the State railways would reach the Federal capital, not with the sole view of obtaining a greater return on the capital already invested in those lines, but as a means of bringing about an adequate reduction in transport tariffs. That could have but one meaning, that all the railways running into Buenos Aires from Cordoba and the North were going to be faced with still further competition. It was unpleasant to have to place on record, as he was frankly doing, that evidence of premeditated antagonism towards foreign capital, the liberal provision of which had made Argentina what it was to-day.

In view of the seriousness of the situation, the board had asked him to go out to the Argentine forthwith. In spite of everything, he would arrive in Argentina with unshaken faith as to its future, because he believed that the Argentines themselves could not fail to realise that their country could not progress without the consistent aid of the railways. All the railways asked was that they should have a square deal, and they were not having that to-day.

The report was unanimously adopted.

ANGLO-CONTINENTAL GUANO WORKS, LIMITED

ANOTHER SUCCESSFUL YEAR

The eighteenth ordinary general meeting of the Anglo-Continental Guano Works, Limited, was held, on the 15th instant, at Southern House, London.

Sir Archibald Mitchelson, Bt. (the chairman), in the course of his address, said: We have again had a satisfactory year, having regard to the continuing difficulties attaching to the agricultural industry. The benefit arising from the wheat subsidy has been offset, to some extent, by disappointment in the dairying industry, uncertainty among sugar beet growers, the low prices of other farm products, and the low values of livestock. Nevertheless, our fertiliser business has been well maintained.

Alterations to our Silvertown acid plant have given us an increased production at a lower cost. Our Broadfield Superphosphate plant continues to produce, at a minimum cost of working, an excellent superphosphate, dry and free-running, with which our buyers are perfectly satisfied. Taken as a whole, the complete fertilisers in which our group of companies specialises, containing Guano and other organic materials, have not only held their own but have increased in output in face of unusually keen competition.

The accounts show a net profit of £72,937, or a little in excess of that of the previous year. It is proposed to pay a dividend of 7½ per cent., less tax, on the ordinary capital; to transfer to debenture redemption sinking fund £3,750; to depreciation reserve (making this up to £35,000) £5,000; and to reserve fund (raising it to £60,000) £5,000. There remains £42,932 to be carried forward, against £37,245 brought in.

Our investments have further improved in value. Our controlling interest in Genatosan, Limited, continues to yield very pleasing results. That company has had another year of great success, the profits being substantially in excess of those of the previous year. The ordinary dividend of 35 per cent. has been again repeated and the financial position further strengthened. The market value of this investment is not very far short of the total amount at which our investments stand in the books. The current year has started quite well, and I hope the results will again be of a satisfactory nature.

The report was unanimously adopted.

LEACH'S ARGENTINE ESTATES, LIMITED

A GREATLY IMPROVED POSITION

The twenty-third ordinary general meeting of Leach's Argentine Estates, Limited, was held, on the 11th instant, in London.

Mr Ambrose Alexander, the chairman, who presided and moved the adoption of the report and accounts, first dealt in detail with the balance sheet. There was a profit on trading, he said, of £195,478—an increase of £13,158—and a net profit of £107,890, of which £44,000 had been allocated to a dividend of 8.8 per cent. on the preference shares, the balance of £63,890 being transferred to general reserve.

He hoped shareholders would agree that the increased trading figures for the year ended March 31, 1935, were satisfactory, especially so as they followed improved results last year.

The trading profit, which in 1931 was £97,979, had been increased to £182,320 in 1934, while the company's financial indebtedness had been gradually reduced from £893,195 at March 31, 1932, to £588,249 at March 31, 1935.

The sugar trading account again showed satisfactory results, being yet a further improvement on the previous figures. Their surplus stocks of sugar had been reduced by a further 3,262 tons as at May 31, 1935, a week prior to the commencement of this season's milling. The company's monthly quota sales had been regularly absorbed by the market at satisfactory prices, and the company, having reduced its surplus stocks of sugar, was now in the happy position of selling out of current production instead of drawing on accumulated stocks.

The subsidiary businesses of the company continued to show good results.

As to the scheme recommended for the settlement of the arrears of the preference dividend and the issue of notes, after many years of great difficulties he need hardly say how glad the directors were to submit a scheme which should place all classes of shareholders in a position to participate in the profits of the company.

The report and accounts were unanimously adopted, and the chairman announced that in respect of the scheme the board had already received proxies in favour representing 57 per cent. of the preference shares, 86 per cent. of the ordinary shares, 46 per cent. of the deferred shares, and for the extraordinary general meeting 66 per cent.

JAVA PRODUCE COMPANY (1932), LIMITED

MR LLEWELLYN ON RESTRICTION

The third ordinary general meeting of this company was held, on the 16th instant, at 58 Mark Lane, London, Mr G. R. P. Llewellyn (the chairman) presiding.

The Chairman, in the course of his speech, said: The profit on rubber amounted to £9,238, the cost of production having been 3.8d., and the average sale price 5.3d. On coffee there was a loss of £1,570, the cost of production having been, at Exch. F.7.30, 34s. 2½d., and the sale price 30s. 5d. per cwt.

You will have noted in the report that in the trading account the florin has this year been converted at the average rate realised over the financial year and not, as previously, at F.12 to the £. As a result of this change one must be careful in comparing figures in this report and in that of last year.

So far as companies producing rubber in the Dutch East Indies are concerned, the most that can be said for the restriction scheme is that, without it, things would probably have been even worse than they have been up to now. As I foretold in my speeches in 1933 and 1934, costs of production were bound to rise as soon as the price of rubber improved at all.

The early months of the restriction scheme had an effect, in the nature of things, more sentimental than economic. Hope told too flattering a tale. Restriction, after all, should only be a temporary expedient to tide over short periods of over-production. Only the prospect of new or increased demands for rubber on a very large scale can justify rubber growers in continuing as they are doing. The rubber industry has mainly grown upon the wheels of the motor-car industry. It is a healthy sign that whereas fifteen years ago the motor-car industry absorbed 75 per cent. of the world's output of rubber, it now only absorbs about 50 per cent. Moreover, in the past four years of world economic depression, the actual consumption of rubber (after deduction of stocks) has increased by about 6 per cent., so that given a return to international prosperity and with the prospect of an increase of new uses for rubber, it is reasonable to hope that consumption may increase considerably in the course of the next five or ten years.

The report and accounts were unanimously adopted.

CHUNGLOON RUBBER ESTATE (1932), LIMITED

STRONG FINANCIAL POSITION DISCLOSED

A FIRST CLASS ECONOMIC UNIT

MR E. B. RIDSDDEL'S SPEECH

The third ordinary general meeting of the members of the Chungloon Rubber Estate (1932), Limited, was held, on Thursday the 17th instant, at the registered offices of the company, 411/419 Salisbury House, London Wall, London, E.C., Mr E. B. Ridsdel presiding.

The representative of the secretaries and commercial agents (Messrs. E. B. Ridsdel and Company, Limited), having read the notice convening the meeting and the report of the auditors,

The Chairman said: Gentlemen, the report and accounts having been in your hands for the requisite period, with your permission I propose to take them as read. From the report it will be seen that during the year we harvested a crop of 234,985 lbs., compared with 257,061 lbs. during the previous year, and that the net sale price realised was a little over 5½d. per lb., compared with 3½d. per lb. for the year to March 31, 1934. The decreased crop under Restriction, coupled with the increased wages we have had to pay, has, of course, affected our cost of production. On the other hand, the better selling price obtained has more than offset the increase in cost.

RESULT OF YEAR'S OPERATIONS

As will be seen from the accounts, the profit earned, after allowing for depreciation and other charges, amounts to £1,778 16s. 8d., to which we have to add the balance brought forward from last year, namely £934 11s. 4d., making a total of £2,213 8s. From this sum there falls to be deducted £626 18s. 9d. in respect of the interim dividend of 2½ per cent. paid on January 31st last, and we are, therefore, left with a balance of £2,086 9s. 3d. to deal with. Out of this sum, it gives us pleasure to recommend the payment of a final dividend of 2½ per cent., making 5 per cent., less tax, for the year, which will absorb £626 18s. 9d., leaving a balance of £1,459 10s. 6d. to be carried forward.

Turning to the balance sheet, it will be observed that our financial position is sound. Cash in hand, War Loan investment, debtors and rubber stocks total £5,197 8s. 7d., and, if from this figure we deduct the amount due creditors in London and the East, namely £494 15s. 4d., it will be seen that the net liquid assets of the company, after allowing for the interim dividend paid in January last of £626 18s. 9d., amount to £4,702 13s. 3d., or approximately 20 per cent. of the issued capital of the company.

Other items in the balance sheet show little change and do not call for special comment.

CONDITION OF ESTATE

As regards the condition of the estate, I paid a visit to the property last month and I am pleased to tell you that I was very satisfied with all I saw. The planted area, namely, 817.66 acres, is perhaps on the small side, but later on it may be possible to purchase about 100 acres adjacent to the company's property, which is planted with first-class rubber, and if this can be done we will then have a really first-class economic unit.

Working costs are satisfactory; in fact, for the month of August last—the last month for which we have received accounts from the East—the f.o.b. cost, after charging all general expenses incurred, only amounted to 3.15d. per lb.

The assessment granted the company, namely, 277.845 lbs., is well within our capacity to produce, but as output is now restricted to 65 per cent. of assessment granted, we are taking advantage of the opportunity offered us to rest certain areas, the benefit of which will be reflected in the future yielding capacity of the estate.

THE OUTLOOK

As regards the future, everything depends on the selling price of the commodity. There is not much more that I can tell you, but before formally moving the adoption of the report and accounts, I would like to express on behalf of the board, and on your behalf if I may, our thanks to all concerned in the East for the attention given to estate affairs during the past year.

I now propose:—"That the directors' report and statement of accounts for year ended March 31, 1935, together with the auditors' report thereon, be and they are hereby approved and adopted." I will ask Mr Martin to second this resolution, but, before putting it to the meeting, I shall be pleased to answer to the best of my ability any questions you may care to put to me.

Mr W. Egerton Martin, J.P., seconded the resolution, and it was carried unanimously without question or comment.

The dividend as recommended was approved; the retiring director, Mr R. de la Bere, was re-elected; the auditors, Messrs Fitzpatrick, Graham and Company, were reappointed; and the proceedings terminated with a vote of thanks to the chairman and also to the staff in the East.

TRINIDAD LEASEHOLDS, LIMITED

SATISFACTORY RESULTS—IMPROVED FINANCIAL POSITION

The 22nd ordinary general meeting of Trinidad Leaseholds, Limited, was held, on the 16th instant, in London.

Mr A. W. Rogers (the chairman) said that the features of the accounts were the satisfactory trading results of the year and the substantial improvement in the financial position of the company. The oil profits and other revenue amounted to £549,492, an increase of £118,813 over the previous year. A feature of the oil business in the past year or two had been the raising of the quality of products sold—particularly petrol—and that process continued to operate. In order to maintain their position in that very competitive business, they had to prepare to meet altered conditions and higher demands. Their business continued to be progressive.

The year had been one of steady progress on all fields, the general effect of which was noticeable in an all-round increase in efficiency and reduction in costs. The organisation was sound and effective, and a high level of efficiency had been attained. In the early part of this year he visited the fields in Trinidad and was greatly impressed by the notable technical advances which had been made in all sections of the work. The volume of sales showed an increase from 6,678,505 barrels to 7,364,792 barrels. Average realisation was slightly improved. Sales of Regent Spirits in the United Kingdom market had again expanded in conformity with the growth of the motor industry.

It was extremely disappointing that he had once again to inform shareholders that, despite the resolution unanimously passed by the Trinidad Legislative Council urging the Home Government to grant a preference to Empire-produced oil products, no assistance of the kind had been granted. It seemed to him essential, in view of the importance of petroleum and its derivatives to the United Kingdom, both in times of war and in the everyday needs of its people, that every encouragement should be given by the Government to the search for new sources of supply within the bounds of the Empire.

The results for the current year had so far been satisfactory.

The report was adopted, and a final dividend of 12½ per cent. approved.

GOVERNMENT RETURNS, &c.

NATIONAL ACCOUNTS

The total ordinary revenue for the week ended October 12, 1935, amounted to £12,009,000, against ordinary expenditure of £8,808,000. After allowing for a decrease in Exchequer Balances of £547,051, the operations for the week, as shown below, decreased the gross National Debt by £3,670,000 to approximately £7,971 millions.*

(000's omitted)

Treasury Bills	— 434
Public Department Advances	— 2,600
National Savings Certificates	— 100
P.O. and Teleg. capital expenditure	— 300
Road Fund temporary advances	— 200
N. Atlantic shipping issues	— 36
	— 3,670

* Including £375 millions on Account of Exchange Equalisation Fund and Borrowing for Statutory Sinking Fund.

A complete analysis of the approximate position of the National Debt on September 30, 1935, appeared in the *Economist* for October 5th.

* Includes £4,000, the proceeds of which were not carried to the Exchequer within the period of the Account.

TREASURY BILLS BY PUBLIC TENDER

Tenders for £45,000,000 Treasury bills were opened on October 11, 1935, and the total amount applied for was £60,300,000. Tenders were accepted for Treasury bills at three months dated Monday to Friday, at £99 16s. 11d., about 74 per cent., and above in full; Saturday at £99 17s. 0d., and above in full. The average rate

per cent. was 12s. 1-82d. The amount allotted was £41,000,000. The following table shows the weekly record at various dates:—

Date	Amount Offered	Total Applications	Amount Allotted	Average Rate %
1933				
January 6	45,000,000	73,830,000	45,000,000	0 16 10-84

THE ANGLO-SOUTH AMERICAN BANK, LTD., has received telegraphic advice from the Madrid Branch that the gold surcharge for the payment of Spanish Customs duties has been fixed for the period October 11th to 20th at 138.61 per cent. The previous rate was fixed as from October 1st at 138.88 per cent.

CENTRAL AND SOUTH AMERICAN EXCHANGE RATES

THE ANGLO-SOUTH AMERICAN BANK, LTD., issues the following details relative to quotations for certain of the South and Central American exchanges. All these exchanges, with the exception of that of Bolivia, are related to the United States dollar, and the approximate sterling rates may be obtained by applying the dollar-sterling exchange rate:—

Bolivia.* Official market: Sight rate, 20.26 bolivianos per £ sterling on August 22, 1935. Export selling rate 80 bolivianos per £.

Colombia.* Sight rate, 171½ pesos per 100 United States dollars on October 9, 1935. This rate applies to holders of permits buying in the "open" market.

Ecuador.* "Free" market sight rate on September 2nd, 10.50 sucres per United States dollar.

Guatemala. Sight rate on New York is maintained at 1 quetzal per United States dollar, but a commission of 1 per cent. is charged by the Banco Central for the sale of drafts.

Nicaragua.* Official selling rate was established at 110 cordobas per 100 United States dollars on November 26, 1934.

Salvador. Sight rate on September 27, 1935, 2.51 colones per United States dollar.

Venezuela. Sight rate on New York was maintained in August at 3.90½ bolívares per United States dollar.

* Exchange controls are operative in these countries.

GOLD MARKET

Messrs Samuel Montagu and Company write on October 16, 1935, as follows:—

The Bank of England gold reserve against notes amounted to £193,673,266 on the 9th instant, as compared with £193,642,833 on the previous Wednesday.

In the open market the total amount which changed hands at the daily fixing during the week was about £2,800,000, most of which was taken for the United States of America, prices having been ruled at about dollar parity. Shipments of gold from France to New York have tended to diminish.

Quotations during the week:—

	Per fine ounce	Equivalent value
October 10	141s. 9d.	11s. 11.84d.
" 11	141s. 9½d.	11s. 11.80d.
" 12	141s. 9d.	11s. 11.84d.
" 14	141s. 9½d.	11s. 11.80d.
" 15	141s. 9d.	11s. 11.84d.
" 16	141s. 9½d.	11s. 11.80d.
Average	141s. 7½d.	11s. 11.96d.
October 17	141s. 8.92d.	11s. 11.85d.
The s.s. "Viceroy of India," which sailed from Bombay on the 12th instant, carries gold to the value of about £112,000 consigned to London.	141s. 6d.	12s. 0.09d.

SILVER MARKET

Until to-day, when the forward quotation eased ½d., prices for cash and 29½d. for two months' delivery.

There have been no new features, purchases for the American Treasury still being the chief support, but there has been buying by the Indian Bazaars, although the same quarter also made

re-sales; there were further offerings from China and some selling by speculators to liquidate bull commitments.

The market has been rather quiet, but the tone is quite steady and no change of importance is anticipated in the near future.

Quotations during the week:—

IN LONDON			IN NEW YORK		
	Cash	Two Months'		Ounce	999 fine
October 10	29½d.	29½d.	October 9	65½	
" 11	29½d.	29½d.	" 10	65½	
" 12	29½d.	29½d.	" 11	65½	
" 14	29½d.	29½d.	" 12	65½	
" 15	29½d.	29½d.	" 14	65½	
" 16	29½d.	29½d.	" 15	65½	
Average	29.375d.	29.427d.			
October 17	29½	29½			

The highest rate of exchange on New York recorded during the period from the 10th instant to the 16th instant was \$4.91½ and the lowest \$4.90.

Stocks in Shanghai on the 12th instant consisted of about 281,000,000 dollars and 39,600,000 ounces in bar silver, as compared with about 280,000,000 dollars and 40,200,000 ounces in bar silver on the 5th instant.

NOTICE
Mr Jerome William John Leven, late Eastern secretary of Atlas Assurance Company, Ltd., at Calcutta, has been appointed assistant secretary at the head office.

REPORTS AND NOTICES

Mr Cyril H. Kleinwort and Mr J. C. Scott have been appointed directors of the North British and Mercantile Insurance Company.

The Trustees Corporation, Ltd., announce that Mr William Heathcote Tatham has been appointed a director.

Mr Geoffrey J. Joel, M.C., has been appointed a director of the Johannesburg Consolidated Investment Company, Ltd.

The Hon. Arthur M. Asquith, D.S.O., has been elected a director of the Rio de Janeiro City Improvements Company, Ltd.

Bank of New South Wales, London, have received a telegram from Sydney dated October 4, 1935, to the effect that George Roland Love has been appointed director on the Sydney board, in place of Charles Binnie resigned.

The board of directors of Herbert Morris, Ltd., have appointed Mr F. M. Morris as vice-chairman and managing director. They have also appointed Mr George Macbriar and Mr H. G. Purnell as directors of the company.

BANKS

CHEMICAL BANK AND TRUST COMPANY, NEW YORK.—The balance sheet, dated September 30, 1935, shows assets totalling \$574,111,764, the chief items being cash and due from banks, \$131,027,010; U.S. Government obligations, \$189,853,709; State and municipal bonds, \$29,519,571; loans and discounts, \$92,628,018. Capital, surplus and undivided profits stand at \$69,606,666, and deposits amount to \$486,384,381.

MINES

THE ASSOCIATED NORTHERN BLOCKS (W. A.), LTD.—At the extraordinary general meeting held October 11th, Mr E. J. Morris presiding, resolutions for voluntary liquidation were passed, and Edward H. Fenson, F.C.I.S., of 39/41 New Broad Street, E.C.2, was appointed liquidator. In exchange for their present holdings, shareholders will shortly receive an equivalent number of fully-paid shares of 5s. each in Great Boulder Mining and Finance, Ltd.

MISCELLANEOUS

GENERAL THEATRE CORPORATION, LTD.—This company secured a profit of £214,977 for the year to March 31, 1935, as compared with £193,934 for the year ended March 31, 1934. After deducting income tax, reserve for amortisation and depreciation and debenture interest, a balance of £67,851 is carried forward. No provision has been made for the debenture stock sinking fund for 1934, suspended in accordance with the arrangement. Messrs C. M. and M. Woolf have resigned from the board. It is not proposed to fill these vacancies. The meeting will be held at Film House, 142-150 Wardour Street, London, W.1, on October 28th at 12.15 p.m.

THE NORTH AMERICAN COMPANY.—The electric output of subsidiaries of the North American company for the third quarter of 1935 was greater than for any three-months' period in the history of the company's present subsidiaries, and showed an increase of approximately 14 per cent. compared with the third quarter of 1934. For the twelve months ended September 30, 1935, there was an increase of approximately 8 per cent. compared with the corresponding period ended September 30, 1934, and an increase of about 1 per cent. over the previous twelve-months' record for the period embracing the last half of 1929 and the first half of 1930. The highest weekly output in the history of the company's present subsidiaries was recorded for the week ended October 3, 1935.

COMMERCE AND TRADE

SURVEY OF COMMODITY MARKETS

THERE are signs of a lull in the re-stocking movement which set in a few weeks ago and was accompanied by a sharp rise in the prices of important primary products. The nature and implications of the re-stocking movement are discussed in a leading article. Quotations for a number of leading primary products have tended to decline this week, an indication that manufacturers are not anxious to continue increasing their stocks for the time being.

For example, Wednesday's quotations for copper, lead, spelter and tin were all lower than on the corresponding day last week. The "squeeze" in the tin market this week was worse than ever. The cash price rose to over £240 per ton before it declined again on rumours that production quotas might be increased further at the meeting of the International Tin Committee next Tuesday.

The tendency of wheat prices was also easier owing to Canadian selling pressure and reports of an improvement in Argentina's crop prospects. Moreover, fears that the change of the Canadian Government may portend a change in Canada's wheat policy led to heavy liquidation and a decline in prices in Chicago. Quotations for linseed were marked down in sympathy with the decline in wheat prices.

Among textile raw materials, American cotton was marked down in price, but the market in wool remained firm. The gradual improvement in the international raw sugar position is reflected in a further slight rise in prices. Rubber was also dearer than a week ago, partly as a result of the determined attempt by the Government of the Dutch East Indies to keep exports within the quota and partly because of an expansion in demand.

The trend of quotations for primary products in the United States was downwards. Moody's index of the dollar prices of stable commodities (December 31, 1931 = 100) to 173.2 on Wednesday last, against 175.3 a week earlier and 171.1 a month ago. On the corresponding day last year the index stood at 145.6.

COAL

SHEFFIELD.—A new pooling arrangement for the export trade in South Yorkshire will come into operation at the end of October. It provides that coalowners who have not used the whole of their export quota at the end of each month shall pass from 25 to 50 per cent. of it into a pool. Exporting owners who cannot provide sufficient coal to meet orders may ask for an allotment from the pool. There will be a charge of sixpence a ton on the coal supplied from the pool. The export situation is unchanged, the prompt demand being quiet and steady. Inland trade is brisk in all sections and prices firm. Demand for foundry coke is expanding week by week.

Quotations: Association hards, 18s. to 18s. 6d.; washed trebles, 17s. to 17s. 6d.; screened gas coal, 18s. 6d. to 19s.; rough slacks, 11s. to 11s. 3d.; Derbyshire hards, 17s. to 17s. 6d. (all f.o.b.); Yorkshire best house, 20s. to 22s.; Derbyshire best house, 19s. to 21s. (all at pits); blast-furnace coke, 13s. 6d. (at ovens).

NEWCASTLE-ON-TYNE.—Northumberland screened steam coal prices remain firm under a steady demand from Scandinavia and English coasting ports. Sized steam coals are moving freely and a steady trade in these grades appears to be assured for the winter months. In the Durham section there is a little more activity in gas coals, but collieries in the northern part of this coalfield, who have been accustomed to supplying large quantities of coking coal to Italy, are now having to face considerable loss of business. Prime brands of patent oven coke are firm.

Current f.o.b. prices for export: **NORTHUMBERLAND.**—D.C.B. screened, 15s. 6d.; smalls, 12s. 6d.; Howards, Bentinck, Newbiggin, screened, 14s. 6d.; smalls, 11s.; Tyne Prime, large, 14s.; smalls, 11s. 6d.; Hartley Main, large, 14s. 6d.; smalls, 12s.; **DURHAM.**—Lambton/South Hetton screened steam, 15s. 2d.; smalls, 12s. 6d.; Wear Special gas, 15s.; Holmside, Ryhope, Boldon, unscreened gas, 14s. 6d.; second-class gas, 13s. 2d.; coking, unscreened and/or smalls, 13s. 2d.; Prime unscreened bunkers, 13s. 9d.; second-class unscreened bunkers, 13s. 3d.; Prime foundry coke, 20s. 6d.; Newcastle and District gas coke, 20s.

GLASGOW.—Business is moving very steadily in the Scottish trade. Last week's shipments, at 282,000 tons, show a rise of 21,000 tons on the week. The Scandinavian markets remain prominent. Some business has also been done with Spain and South America. Some difficulties continue to be experienced by shippers owing to the rise in freight rates. Home trade remains brisk both in respect of household and industrial demand, and business with Ireland and the South of England is improving.

Current export prices f.o.b. district ports: **LANARKSHIRE.**—Ell best, 14s. 6d.-15s.; splint best, 17s.-17s. 6d.; splint second, 15s.-15s. 6d.; navigation, screened, 14s. 9d.-15s.; navigation, unscreened, 13s. 6d.; Hartley, 16s.; steam, 13s.-13s. 6d.; trebles, 14s.; doubles, 13s. 3d.-13s. 6d.; singles, 12s. 6d.-12s. 9d.; pearls,

11s. 3d.-11s. 6d.; dross, 10s. 6d. **FIFE.**—Best unscreened navigation, 12s. 9d.-13s. 3d.; unscreened navigation, 12s. 6d.; first-class steam, 14s. 6d.; third-class steam, 13s.-13s. 6d.; trebles, 15s. 6d.-17s.; doubles, 14s.-15s.; singles, 13s.; pearls, 11s. 9d. **LOTHIANS.**—Best splint, 14s. 6d.; prime steam, 12s. 6d.-13s. 6d.; secondary steam, 11s. 6d.-12s.; unscreened navigation, 12s. 9d.-13s.; trebles, 15s.-15s. 3d.; doubles, 14s.-14s. 3d.; singles, 13s.-13s. 3d.; pearls, 11s.-11s. 3d. **AYRSHIRE.**—Best unscreened navigation, 14s. 6d.; steam, 13s.; trebles, 14s. 6d.; doubles, 13s. 9d.-14s.; singles, 13s. 6d.; pearls, 13s.; dross, 12s.

CARDIFF.—Trade conditions show little change. Shipments in the foreign and coastwise trades last week totalled 362,800 tons, compared with 360,300 tons the previous week, and 399,284 tons in the corresponding week last year. During the past few days tonnage supplies at the docks have been comparatively scarce, and with freight rates also decidedly firmer it is feared that this week's volume of trade will be below the average. The Egyptian State Railways have placed contracts for 400,000 tons at an f.o.b. price of 18s. 9d. per ton Cardiff or Newport. Quotations continue to adhere closely to the minimum schedules; for patent fuel they are steady; while pitwood is ruling firmly at 21s. 6d. for Portuguese supplies.

Current approximate quotations: Best Admiralties, 19s. 6d.; seconds, 18s. 9d. to 19s. 3d.; best drys, 18s. 9d. to 19s.; Western Valleys, 17s. 9d. to 18s.; Eastern Valleys, 17s. 3d. to 17s. 7½d.; best small steams (washed), 13s. to 13s. 6d.; coking smalls, 13s. 6d. to 14s.; second steams, 12s. 6d. to 13s.; anthracite, best large, 36s. to 40s.; Red Vein, large, 22s. to 27s.; machine-made cobbles, 35s. to 51s.; French nuts, 35s. to 51s.; stove nuts, 34s. to 50s.; rubbly culm, 10s. 6d. to 12s.; special foundry coke, 37s. 6d. to 40s.; patent fuel (Crown), 21s.; pitwood, ex ship, French 24s. 3d., Portuguese 21s. 6d.

IRON AND STEEL

LONDON.—The official report of the London Iron and Steel Exchange indicates that markets are active, and that demand in most branches shows a tendency to expand. Deliveries to consuming industries are heavy, and consumers are showing a disposition to buy forward; but in several sections of the market producers are reluctant to increase their already large forward commitments. Stocks of pig iron at blast furnaces are not heavy. A feature of the position in the semi-finished steel department is the pressure from consumers to secure delivery. Most consumers are working at a high rate, and although many of them have contracts extending for some months ahead, their requirements of supplementary tonnages amount to a heavy total. In most sections of the finished steel market a good volume of business is passing. Substantial deliveries are being made of ship-plates and sections, and most of the heavy steel works have sufficient orders on their books to keep them well employed for several months.

MIDDLESBROUGH.—Home demand for pig iron and steel continues active. Whilst there is little surplus pig iron available for export, the opportunities of doing business for shipment abroad are becoming fewer owing to the difficulties of payment, quotas, etc. Some fairly big shipments of steel are, however, being made to the Colonies. Whilst the total output of semi-finished and finished steel continues to increase, makers are having difficulty in some cases in meeting the demand for early delivery. In some instances deliveries of semi-manufactured steel are in arrears.

Pig iron prices are unchanged, Cleveland No. 3 foundry iron being 67s. 6d. per ton and No. 1 East Coast hematite 71s. per ton delivered in the Middlesbrough area. Foreign ore under existing contracts is coming in fairly regularly, but, owing to the uncertain freight position, sellers are unable to quote for new business. Good Durham blast furnace coke is freely obtainable, and is quoted at 18s. 6d. to 19s. per ton delivered at the furnaces. Buyers are offering 52s. 6d. per ton for heavy steel melting scrap, for which there is a good demand with merchants not inclined to sell far ahead at this figure.

SHEFFIELD.—Sheffield products did not fare too well in the export markets in September. Iron and steel and their manufactures were down 15,000 tons on August, and 11,000 tons on September last year. The losses were chiefly in railway steel, rolling stock, special steels, tinplates and ferro-alloys, these being offset by gains in electrical apparatus and machinery. Tools also did well. The local situation is as strong as ever, and Sunday working has been introduced in the armament departments. Orders for tool steels have been quieter for several months. The open-hearth steel plants are running to capacity; the demand for billets is not easy to meet, and complaints of arrears of delivery are heard. Full time working in the Lincolnshire furnaces and mills are also on full time. Favourable reports come from the tool and wire factories. Cutlery and plate mechanics is causing some inconvenience at some of the engineering shops.

GLASGOW.—There is increased activity at the steel works in the West of Scotland. Works are very busy, and are finding it difficult to give the delivery required by consumers. Tonnage on the books for practically all sections is large, and the outlook as regards the heavy trades is satisfactory. Makers of semis are also finding difficulty in meeting the demand in some branches, and on the whole they are comfortably off as regards work for the immediate future. There has been a better export business in galvanised sheets, largely for India, and home demand both for black and galvanised is maintained at the recent high levels. Tube makers are fully employed at most of the plants. The position continues to improve in regard to re-rolled steel bars and a good steady business is being done in the West of Scotland.

CARDIFF.—On the Swansea Metal Exchange on Tuesday it was reported that limitations have been placed temporarily by the Central Committee of the International Cartel on exports of British tinplates in order that other members of the Cartel may secure their allotted shares of the total world trade. A similar procedure was adopted last year. It was also stated that the scheduled c.i.f. prices have been amended to conform with an increase in the f.o.b. price from 18s. 2d. to 18s. 9d. per basis box, presumably because of the rise in the price of tin. Inquiries by the inland trade were moderately active. Galvanised sheets are unaltered at £11 5s. per ton f.o.b., and tinplate bars at £5 5s. per ton delivered locally. Shipments at Swansea last week totalled 102,063 boxes, compared with 71,437 boxes the previous week, and 108,063 boxes in the corresponding week last year. Stocks in warehouse at Swansea have fallen to 67,187 boxes, as against 105,695 boxes in the corresponding week of 1934.

OTHER METALS

COPPER.—The market experienced a setback both on Monday and Wednesday, which brought the cash price below the £35 level. The reaction was caused by a heavy volume of liquidation traceable to the belief that the war danger is now definitely confined to East Africa. An improvement in the technical position of the market has resulted, leading certain observers to the conclusion that a further rise is likely. Whether or not this view is justifiable remains to be seen, but it must be remembered that European and American consumers are now well supplied with copper and might be inclined to restrict their purchases for a while. At the moment, the situation of the market resembles that which obtained shortly after the Schechter judgment and much depends upon what decisions are taken at Geneva. If it were decided to place an embargo upon exports of copper to Italy, there might be a further setback instead of a rise. According to the unofficial statistics, world stocks showed a further decline of 18,000 short tons during September to 531,600 short tons at the end of the month. This movement took place although world primary production rose by no less than 5,000 tons to 121,500 short tons.

Sales on the London Metal Exchange: 2,750 tons on Monday, against 6,500 tons last week; 2,450 tons on Tuesday, against 5,700 tons last week; 4,450 tons on Wednesday, against 3,400 tons last week. Domestic spot was quoted at 8-52½ cents per lb. in New York on Wednesday, against 8-72½ cents a week ago and 8-37½ cents a month ago. Wednesday's official closing price for standard cash in London was £34 17s. 6d. to £34 18s. 9d., compared with £35 16s. 3d. to £35 17s. 6d. a week ago. Stocks of refined copper in British official warehouses at the end of last week, at 80,793 tons, show a decrease of 415 tons, while stocks of rough copper, at 11,384 tons, show a decrease of 50 tons on the week.

LEAD AND SPELTER.—Profit-taking and a temporary decline in consumers' demand were responsible for a reaction in both lead and spelter this week. At the close on Wednesday lead was £1 7s. 6d. below the week's best, while spelter lost exactly £1. But the statistical position of lead remains good and a further rise in this metal is quite possible—especially since production shows no signs of an early increase. According to the latest statistics of the Metallgesellschaft, the position of spelter has also improved. World production registered a decline of 315 metric tons to 109,810 metric tons in August. The daily rate of production (at 3,542 tons) was the lowest this year. In America, stocks of spelter fell by 6,129 short tons during September to 106,316 short tons—the lowest level reached this year. Deliveries in America rose during the same period by 3,017 to 42,217 short tons—the highest figure for the year.

Sales of lead on the London Metal Exchange: 1,350 tons on Monday, against 2,400 tons last week; 1,250 tons on Tuesday, against 3,200 tons last week; 1,150 tons on Wednesday, against 1,700 tons last week. The New York quotation on Wednesday was 4-50 cents per lb., against 4-60 cents a week ago and 4-35 cents a month ago. The official closing quotation in London for soft foreign for shipment during the current month was £18 2s. 6d. per ton, compared with £19 2s. 6d. a week ago.

Sales of spelter on the London Metal Exchange: 700 tons on Monday, against 2,400 tons last week; 800 tons on Tuesday, against 1,000 tons last week; 475 tons on Wednesday, against 1,600 tons last week. Wednesday's quotation in East St. Louis was 4-85 cents per lb., against 4-85 cents the week before and 4-75 cents a month earlier. Wednesday's official closing quotation in London for "good ordinary brands" for shipment during the current month was £16 2s. 6d. per ton, against £16 15s. last week.

TIN.—The sole remaining advantage of the restriction scheme—stability of prices—has now been lost. The fluctuations of the cash price during the past week have covered a range of no less than £20. While the "backwardation" at one time amounted to a similar figure, but on Wednesday the "backwardation" declined to £11 figure. The market "squeeze" reached its most acute point per ton. At the end of last week British warehouse stocks this week. At the end of last week the lowest total in many years. Although consumption in America declined considerably during the past fortnight, the market situation there has also become alarming and shipments from Malaya are mainly directed to the United States. Clear evidence of the labour shortage in Bolivia is contained in Mr. J. Blum's estimate that shipments from that country during September amounted to only 1,377 tons, against 1,990 tons in August. Exports of ore from Nigeria are also behind schedule, since dredging operations are being handicapped by the dry season. But stocks at Arnhem (Holland) have reached a fair level, and it is

anticipated that these will be shipped to this country. A further increase in production quotas is expected as a result of the meeting of the International Committee next Tuesday. Whether or not such an increase would have sufficient psychological effect to exercise a continuous pressure on prices depends on the size of the bear account in the market. It is possible that substantial quantities of forward tin were sold in anticipation of lower prices after the increase in the quota to 65 per cent. on August 9th. These sales must be settled early next month, when supplies may still be scarce.

Sales of tin on the London Metal Exchange: 450 tons on Monday, against 425 tons last week; 235 tons on Tuesday, against 375 tons last week; 475 tons on Wednesday, against 345 tons last week. The New York quotation on Wednesday was 51.50 cents per lb., against 51.25 cents a week ago and 49.25 cents a month ago. Wednesday's official closing quotation in London for standard cash was £228 to £229 per ton, compared with £229 5s. to £229 10s. last week. Stocks of tin in London and Liverpool at the end of last week totalled 431 tons, a decrease of 247 tons on the week.

OTHER NON-FERROUS METALS.—Among other non-ferrous metals, aluminium ingots and bars for home delivery were again quoted at £100 per ton. Nickel, for home and export, at £200 to £205 per ton, remains unchanged. Quicksilver, on the spot, was quoted at £12 to £12 2s. 6d. per flask of 76 lbs., as against £12 to £12 2s. per flask last week. Chinese antimony was quoted at £75 to £76 per ton ex warehouse, duty paid, as against £69 last week. Chinese wolfram for October-November shipment was quoted at 35s. to 36s. per unit, c.i.f., as against 33s. 6d. to 34s. 6d. per unit last week. Platinum (refined) at £7 10s. per ounce, was unchanged on the week.

TEXTILES

COTTON.—Manchester. —The market has continued more active, and numerous spinners and manufacturers have booked orders freely. The bulk of the demand has been for coarse and heavy cloths, but in other sections inquiry has tended to broaden. There is some uncertainty concerning the effect upon international trade of the embargoes which are now being placed by the League of Nations on Italy, but Lancashire is not likely to suffer to any particular extent. There has been a slightly easier movement in raw cotton prices. This is the time of the year when farmers are expected to put out hedges, and on the whole this selling pressure is being well absorbed as a result of the larger trade demand. The crop in the United States will probably be 11,500,000 bales, but it is believed that world consumption will be fully equal to that amount. Latest weather advices from the belt have been rather better, but plants are late and there is a danger of frost having an adverse influence upon yield.

A better feeling has continued to prevail in the cloth market. Inquiry for India has definitely increased and in one way and another a more encouraging turnover has taken place in a variety of goods, especially light bleaching descriptions and prints. A few fancies have been booked for China and the minor outlets of the Far East. A steady business has been done for the Dominions and the Crown Colonies. A feature of importance has been the freer buying of heavy goods for the home trade. Makers of sheetings, twills, drills and similar cloths have extended their order lists. Some contracts are pending in the market which must be associated with war requirements. Spinners of American yarns have had another encouraging week, there being a considerable business, especially in coarse counts. Inquiry for medium and fine numbers has increased. The improved demand for Egyptian qualities has been maintained and this section is more favourably situated than two or three weeks ago.

WOOL.—Bradford. —Healthy progress can be reported in the wool trade since the close of the London sales a fortnight ago. Australia has responded to the increased call for the raw material on the part of Japan and the home trade, and the slight rise in prices has done much to create confidence throughout the industry. There is every prospect of the demand for wool continuing, at least up to the end of the year. There is some concern throughout the

home trade regarding future supplies. Stocks in the West Riding are very light. Insurance rates have been trebled, but that is not a serious matter, provided there is no interference with the arrival of cargoes.

South African wool sales are proceeding satisfactorily, with an excellent demand at all centres. So far French buyers have been the most active, and it is significant that the bulk of their purchases are for the home trade. Continental customers of French houses are doing practically nothing on account of the uncertain international situation, the result being that French buying brokers are now concentrating upon Bradford, competing very keenly with old firms, who for many years have specialised in the Cape wool trade. Prices at the Cape are fully equal to the best in Australia, and stocks in this country are very light. Machinery continues to be well employed, and the outlook is good.

JUTE.—Dundee. —Prices of jute goods are very firm as the result of a very good business having been done during the past two weeks. Spinners and manufacturers are comfortably situated with orders for delivery a good distance ahead, and many good inquiries are still coming in. An occasional slight weakness displayed by the raw material and Calcutta goods is now causing buyers to act with caution. Prices of the fibre are generally £2 dearer than they were a fortnight ago, the advance bringing out a considerable trade. Prices of finished materials have risen in sympathy. Included in the business done is an order for one million sand bags for export, over one million yards of linoleum hessians and another for half a million medium-sized bags, also for export. The vexed question as to the future action on the part of the Indian Jute Mills' Association has been forgotten recently, but the matter still remains a source of uncertainty.

Daisee-2/3 was advanced to £18 10s. for full group, but has since reverted to £18 5s., with fours at from £17 5s., Tossa-2/3 quoted at £19 2s. 6d. and fours at 20s. less. Good quality fibre is rather scarce this season and high prices are demanded for the higher grades. Good First Marks are named at £22 2s. 6d. and good Lightnings at from £20 5s., with Hearts at from £19 5s. for SCC-H to £19 7s. 6d. for Ram-D/E, all October-November.

Jute yarns have been heavily bought and the price of common 8 lb. cops has been raised to 2s. 1d. and 8 lb. spools to 2s. 2d. Buyers are not keen to pay these prices, and the position is quiet now, but not before spinners have been able to consolidate their order books for some months ahead. Twist is very firm and dearer at 3½d. for 3 ply 8 lb., and sacking yarns rule from 2½d. for 24 lb. weft and 3½d. for 8 lb. chains. Rove was raised to £19 for 48 lb. and £15 for 200 lb., while the Rio yarns are also quotably dearer, but quiet. Carpet 14 lb. warp is now lowest at 3½d.

The quoted rates for jute cloth are all higher, with manufacturers unable to give delivery reasonably early. Many good orders have been placed and there are indications that more will follow. For 10 oz. 40 in., 2½d. is now the lowest price, and for 8 oz., 2½d. has been paid. Tenders for the supply of 4,200,000 sand bags for the British War Office are now in the hands of the authorities and the placing of these is hourly anticipated. Linoleum hessians are very firm and tending dearer, after a large business done, while heavy goods are in quite moderate demand.

Calcutta goods have wavered slightly after a good advance. The present rates are 18s. 9d. for 10 oz. 40 in. and 15s. 6d. for 8 oz., October, 18s. 8d. and 15s. 4d. November-December and 18s. 7d. and 15s. 2d. January-March, with Liverpool twills at 50s. 4½d. and "B" twills at 44s. 3d., October-March.

GRAIN MARKETS

WHEAT.—The tendency of prices on the wheat markets was a little easier during the last few days as a result of Canadian selling pressure and reports of an improvement in Argentina's crop prospects. Fears that the change of the Canadian Government may involve a change in Canada's wheat policy prompted a wave of liquidation in Chicago.

According to the *Corn Trade News*, total arrivals of wheat and flour at principal ports of Europe during the past week were 919,000 quarters, against 1,005,000 quarters in the preceding week. On Wednesday last, "December" futures were quoted in Chicago at 100½ cents per bushel, against 104½ cents the week before and 98½ cents a month ago. Quotations in London, Wednesday: against 38s. a week ago; No. 2 Northern Manitoba, Vancouver, ex ship, 35s. 9d., against 36s. 9d. a week ago.

FLOUR.—Wednesday's London quotations (excluding quota payments) were: Straight run, delivered country, 30s. per 280 lbs., against 30s. 6d. a week ago; delivered London, 29s., as compared with 29s. 6d. a week ago. Manitoba patents, ex store, 28s. 6d. to 30s., against 29s. to 30s. 6d. a week ago. Australian, ex store, 30s. 6d., against 23s. 6d. a week ago.

BARLEY.—Business in imported barley has tended to fall off and prices showed an easier tendency. Home demand for English 33½ cents per bushel in Winnipeg on Wednesday, against 34½ cents last week and 37 cents a month ago. Quotations per 448 lbs. in 23s. to 24s., as against 23s. to 24s. last week; "English malting" (new) at farm, 30s. to 56s., against 30s. to 56s. a week ago.

OATS.—On Wednesday, "December" futures were quoted at 27½ cents per bushel in Chicago, against 28½ cents a week ago and 28½ cents last month. Quotations in London, Wednesday: week ago, "English White" (old), at farm, 22s. per 336 lbs., against 22s. last week; "Chilean White" (old), at farm, 22s., against 22s. 27s. 9d. a week earlier.

MAIZE.—Although demand for maize by the principal European importing countries has been well maintained, prices have tended to sag. Shipments from Argentina, which is at present the principal source of imports, showed a heavy increase last week. "December" futures were quoted on Wednesday at 60½ cents per bushel in Chicago, against 61½ cents a week ago and 58½ cents last month. Quotations in London, Wednesday: "Plate," landed, 18s. 9d. per 480 lbs., compared with 19s. a week ago; "Plate," ex ship (new), 17s. 9d., as against 18s. a week ago; "Plate," "October," 17s. 9d., against 18s. a week ago. Yellow maize meal, ex wharf, was quoted at £5 2s. 6d. per ton, against £5 2s. 6d. to £5 5s. a week ago.

COMPARATIVE AVERAGES OF GRAIN.—The following table gives the estimated sale of home-grown wheat during the harvest years 1932-33 to 1935-36:—

	1932-1933	1933-1934	1934-1935	1935-1936
Estimated sales of home-grown wheat—	Cwts.	Cwts.	Cwts.	Cwts.
1 week to October 12	360,142	317,238	426,155	495,987
6 weeks to October 12.....	1,423,866	2,363,040	3,200,887	2,915,023
Average price of English wheat per cwt.	s. d. 5 8	s. d. 4 10	s. d. 5 0	s. d. 5 11

The following is a statement showing the quantities sold and the average price of British corn in the past two weeks, and for the corresponding week in each of the years from 1931 to 1934:—

Week ended	QUANTITIES SOLD			AVERAGE PRICE PER CWT.		
	Wheat	Barley	Oats	Wheat	Barley	Oats
Oct. 10, 1931.....	Cwts. 68,580	Cwts. 354,479	Cwts. 52,639	s. d. 5 4	s. d. 9 3	s. d. 6 2

Oct. 12, 1935.....	495,987	587,548	58,078	5 11	9 7	6 3

AMERICAN WHEAT MARKETS.—The following table shows wheat quotations in recent weeks, with comparative figures for 1933 and 1934:—

NEAREST FUTURE	Jan. 4, 1933	Jan. 3, 1934	Oct. 17, 1934	Jan. 2, 1935	Oct. 9, 1935	Oct. 16, 1935
Winnipeg (No. 1, Manitoba) —Cents per 60 lb.	46½	65½	78½	82½	92½	88½
Chicago (No. 2 Winter) —Cents per 60 lb.	46½	84½	100½	98½	104½	100½

The visible supply of wheat in Canada amounts to 141,499,000 bushels, against 138,987,000 bushels last week and 111,312,000 bushels in the corresponding week of last year.

OTHER FOODS

BACON.—The recovery of bacon prices continues. With an active demand and moderate supplies, prices have shown a further rise this week. The official quotations (per cwt. for No. 1 Sizable) which formed the basis for dealings on the London Provision Exchange this week were: English, 94s. to 96s.; Canadian, 90s.; Danish, 95s., against 88s. to 91s., 84s. and 89s. last week. Arrivals in London last week included Danish, 13,037 bales; Canadian, 1,824; Dutch, 2,014; Lithuanian, 1,509; Polish, 3,225; against 16,262, 1,825, 2,326, 1,394 and 3,635 bales, respectively, in the previous week.

BUTTER.—Supplies of butter have been rather short, and prices have again been marked up this week. Quotations (per cwt.) on the London Provision Exchange on Wednesday were: New Zealand, finest salted, 127s.; Australian, choicest salted, 127s.; Danish, 134s.; compared with 123s., 122s. and 130s., respectively, last week.

CHEESE.—Demand for English has continued active, but Colonial descriptions have encountered a quiet trade at slightly easier rates. Quotations (per cwt.) on the London Provision Exchange on Wednesday were as follows: English, finest farmers', 60s. to 70s.; Canadian, finest coloured (new), 61s. to 62s.; New Zealand, finest coloured, 61s. to 61s. 6d., as against 60s. to 70s., 62s. and 62s., respectively, last week.

COCOA.—The "spot" quotation in New York on Wednesday was 5½ cents per lb., as against 5½ cents per lb. last week. On the London market, Accras have been in quiet demand. On Wednesday last, good fermented new crop, "October-December," was quoted 22s. 4½d. per 250 kilos. c.i.f. Continent, against 22s. 6d. last week. Last week's movements of cocoa in London were as follows: Landed, 1,363 bags; delivered, for home consumption, 6,119 bags; exported, 315 bags; stocks 130,503 bags, against 189,572 bags a year ago.

COFFEE.—The spot markets have been quietly steady, with prices generally unchanged. In New York on Wednesday, Rio No. 7 (cash) was quoted at 6½ cents per lb., as compared with 6½ cents per lb. last week and 6½ cents per lb. a month ago. Movements of coffee in London last week were as follows: Brazilian, landed, nil; delivered, for home consumption, 85 cwt.; exported, nil; stocks, 13,119 cwt., against 27,592 packages a year ago. Central and other South American, landed, 119 cwt.; delivered, for home consumption, 1,966 cwt.; exported, 6,291 cwt.; stocks, 106,840 cwt., against 87,852 packages last year. Other kinds, landed, 1,192 cwt.;

delivered, for home consumption, 3,700 cwt.; exported, 954 cwt.; stocks, 128,988 cwt., against 81,129 packages last year.

EGGS.—With shorter supplies and an active demand, prices have registered a seasonal advance. At Smithfield Market on Wednesday, English (ordinary packing, Grade I, about 15-15½ lb.) realised 16s. 3d. to 16s. 9d. per 120, against 15s. 6d. to 16s. a week earlier, while Danish (15½ lb.) made 14s. to 14s. 6d. per 120, against 13s. to 13s. 6d. last week.

FRUIT.—Supplies in general remain moderate, and quotations at Covent Garden are inclined to be firmer. *The Fruitgrower* states that the spell of mild weather has resulted in an improved demand for citrous fruit, dessert apples and pears. British Columbian apples are increasing in quantity, and encounter a steady demand; Nova Scotian barrels are somewhat easier on heavier arrivals. Pears are required for at firm rates. Hothouse grapes have encountered a slow demand at easier rates, large supplies of cold house grapes being still available. Melons and peaches show little variation in price. Blackberries continue to sell well, but cob nuts are a point easier. Oranges have been in better demand at advancing prices. Lemons continue very dear, but grape fruit are easier, the market being well supplied.

MEAT.—Trading at Smithfield Market has been slow this week, with prices showing a sagging tendency. On Wednesday last, Argentine chilled hindquarters were quoted at 3s. 11d. to 4s. 4d. per 8 lbs., as compared with 4s. 2d. to 4s. 6d. last week. New Zealand frozen mutton was 3s. 2d. to 3s. 8d. per 8 lbs., against 3s. 2d. to 3s. 6d. a week ago. According to the Smithfield Market official report, supplies during last week amounted to 9,726 tons a decrease of 21 tons on the corresponding week last year. Beef and veal accounted for 4,695 tons, mutton and lamb, 2,921 tons, and pork and bacon 1,326 tons, as compared with 4,758, 2,655 and 1,360 tons, respectively, in the same week of 1934.

MILK.—Information relative to the operation of the Milk Marketing Scheme during September, as issued by the Milk Marketing Board, is given in the following table, together with comparable statistics for earlier months:—

	Sept., 1934	June, 1935	July, 1935	August, 1935	Sept., 1935
Regional pool prices* (per gallon)	d.	d.	d.	d.	d.
Northern	10½	9½	10	10	12½
North-Western	10½	9½	9½	10	12½

For liquid consumption	43-42	46-00	46-83	45-03	46-01
For manufacturing	15-70	39-90	34-03	25-62	20-05

* On account to the nearest farthing. † 13d. per gallon in the South-eastern Region.

PEPPER.—Wednesday's spot price for Lampong (in bond) was 3½d. per lb., against 3½d. last week. Movements of pepper in London during the past week were as follows: Black, landed, 10 tons; delivered, 22 tons; stocks, 1,533 tons, against 432 tons a year ago. White, landed, nil; delivered, 273 tons; stocks, 16,110 tons, against 8,412 tons a year ago.

RICE.—The spot price of Burma No. 2, cleaned, was 9s. 9d. per cwt. on Wednesday, as compared with 9s. 10½d. per cwt. a week ago, while the forward quotation, at 8s. 9d. per cwt., remains unchanged on the week. Movements in London during the past week were as follows: Landed, nil; delivered, 335 tons; stocks, 7,903 tons, against 4,145 tons a year ago.

SUGAR.—After declining 10 points at the end of last week, the spot price of raw sugar in New York has shown a firmer tendency. London prices have advanced. The spot price in New York on Wednesday was 3.60 cents per lb., as compared with 3.68 cents per lb. last week and 3.47 cents per lb. a month ago. Wednesday's sales of raw sugar in London included "December delivery" at 5s. to 5s. 0½d., against 4s. 10½d. to 4s. 10½d. last week. The movements of raw sugar at public warehouses in London and Liverpool last week were as follows: Imports, 3,692 tons, against 23,605 in the previous week and 14,969 tons in the same week of last year; deliveries, 14,985 tons, against 12,883 and 14,496 tons respectively; stocks, 154,964 tons, against 166,257 and 122,972 tons respectively.

MUTUAL LIFE ASSURANCE

In an old-established office paying high bonuses is one of the most attractive investments now available to the public

TEA.—The following table shows the average prices (compiled by the Tea Brokers' Association) of tea sold at Mincing Lane on Garden account in recent weeks:—

Week ending	Northern India	Southern India	Ceylon	Java	Sumatra	Africa	Total
Oct. 11, 1934	13-10	11-48	14-20	10-00	9-52	10-98	12-94
Sept. 11, 1935	17-17	11-54	14-06	10-50	9-30	10-73	14-74
Sept. 18, "	17-52	11-92	14-56	10-77	9-79	10-82	15-31
Sept. 25, "	16-42	12-37	15-48	11-27	9-90	11-45	15-18
Oct. 3, "	16-20	12-53	15-82	12-60	10-17	11-70	15-20
Oct. 10, "	15-63	12-87	16-95	12-74	10-88	11-90	15-42

The quantities catalogued for this week's auctions comprised 51,322 packages of Indian and 20,812 packages of Ceylon tea. Competition was not quite so active, but prices for the better grades showed little change. Medium and low medium sorts, however, showed irregularity, with quotations a shade easier on the week.

VEGETABLES.—On account of the milder weather, states *The Fruitgrower*, the demand for tomatoes at Covent Garden has improved this week. Cucumbers, lettuce and mushrooms have also been in better request. Green peas are now in limited supply, while runner beans are firm for the best samples. Cabbage and cauliflower have an easier tendency. Supplies of potatoes at the London markets have been moderate, and have met a steady demand. Best King Edward ranged from 5s. 6d. to 7s. per cwt. at the Borough Market on Tuesday, against 5s. 6d. to 6s. 6d. a week earlier.

MISCELLANEOUS COMMODITIES

VEGETABLE OILS AND OLSEEDS.—The excitement in commodity markets has subsided, and in sympathy with wheat, linseed has declined some shillings per ton. An additional factor is the favourable reports regarding the new Argentine crop. Provided weather conditions continue good, the crop is likely to give a much better yield than was anticipated a month ago. However, in view of the fact that the area under linseed is 25 per cent. less than a year ago, a reduced production appears inevitable. In the meantime, there is a substantial unsold balance of old crop available for export which, with what is expected to be shipped from India, gives a total of 465,000 tons, as against 297,000 tons actually shipped in the remainder of last year. Shipments from Argentina are heavier. The quantity now afloat for Europe is 130,200 tons (including 4,700 tons from India), 1,500 tons more than last week; and for the United States 27,600 tons, against 50,900 tons a year ago. Demand for Egyptian cottonseed is active and a good business to Hull is reported at prices rising to £6 15s. for new crop, October loading.

Linseed oil is somewhat easier in sympathy with seed, but demand continues satisfactory. The current price of raw oil ex Hull mill for October-December delivery is £26 12s. 6d., and for January-April, £26 15s. per ton, naked. Refined cotton oil is in good demand for export and dearer. Egyptian crude is held for

£26 and refined for £29 per ton ex Hull. Other edible oils are firmer. Oilseeds are in improved request and firm.

FURS.—The London silver fox auctions closed firm, with prices from 10 to 15 per cent. above those ruling at the previous auction and in the open market. The rise was surprising in view of the fact that the supply consisted mostly of skins withdrawn or unsold at earlier auctions this year. But the firm tone was not maintained at the auction of Australian furs which followed. Australian red foxes, wallaby and ringtail were unchanged in price. The supply of opossum was confined to a limited quantity of New Zealand and Tasmanian skins of medium quality, so that prices were unrepresentative and not comparable with those ruling at the spring series. The opening of the Russian auction, which we shall discuss in detail next week, was easy. The attendance has become even more sparse than at the commencement of the series. Visitors

consist mainly of London and American merchants, the Continent being scarcely represented.

RUBBER.—The past week witnessed an appreciable rise in prices, due partly to the efforts of the Government of the Dutch East Indies to keep exports within the quota and to an improvement in demand. The spot price in New York on Wednesday last was 12½ cents per lb., compared with 12½ cents per lb. a week ago and 11½ cents a month earlier. Wednesday's official closing price for standard ribbed smoked sheet in London was 6½d. per lb., as against 5½d. on the corresponding day last week. In forward positions, business has been done at 6½d. to 6¾d. for January to March shipment, as against 6½d. to 6¾d. a week ago. Stocks in London and Liverpool at the end of last week totalled 176,544 tons, against 177,381 tons a week earlier. A year ago stocks amounted to 114,735 tons.

A SELF-BINDER FOR The Economist

Week by week you keep your copies of "The Economist," and ultimately you either file them or bind them. Doubtless you are accustomed to the annoyance which attaches to the ordinary binder—the difficulty of reading half the left-hand page and the unwieldiness of the device generally.

We are able to offer our readers a binder which overcomes these irksome difficulties and is, in our opinion, the most efficient contrivance for the purpose we have yet seen.

It holds three months' issues and index, it has no wires, clips or metal contrivances, and each issue can be bound up in an instant in such a way that it can be read as easily as a well-bound book.

THE FINANCIAL NEWS

Special articles due to appear next week on the Leader Page of THE FINANCIAL NEWS are as follows:

MONDAY, OCTOBER 21—ROOSEVELT AND SILVER. In the last few months, important fresh developments have been taking place in President Roosevelt's Silver Policy. Faced with the necessity of buying large amounts of precious metals abroad in order to prevent an unwarranted rise in the Dollar, the American Government has had to leave silver and buy large amounts of gold. The silver reserve programme is consequently further behind-hand than ever.

TUESDAY, OCTOBER 22—"Minotaur," whose article on the BRIGHTER PROSPECTS FOR TIN SHARES a fortnight ago was the signal for a revival in the tin share market, this week provides a third instalment on this group of mining shares, taking as his subject SOUTHERN KINTA and KAMUNTING.

WEDNESDAY AND THURSDAY, OCTOBER 23 and 24—THE BREWERY INDUSTRY. Brewery shares are par excellence the concern of the long-term investor. The long-term factors and influences, therefore, are those which require investigation and analysis from the investment point of view. These articles set out to give the investor the background against which he can assess the prospects for Brewery Shares over a period of years. They deal with the questions of fundamental importance, such as the trend of beer consumption in the areas where population is expanding and the way in which the Brewery Companies have employed an intensive rationalisation in order to maintain efficiency and earning power in the face of the decline in consumption.

FRIDAY, OCTOBER 25—FINANCING THE DEVELOPMENT OF NEW INVENTIONS AND PATENTS, by O. W. Roskill. A survey of the means and facilities at present existing for financing new developments of this type and the procedure generally adopted.

THE LEAGUE STAYS ITS HAND

THE League Committee has this week put the final touches to the first set of economic sanctions against Italy. The scheme, however, has not been brought into operation forthwith, for mysterious forces have apparently come at the last moment into play. The Committee has adjourned until October 31st with a request to all Governments participating in sanctions that they shall indicate in the meantime by what date they can take the necessary steps to put them into effect. Only on its reassembly will the Committee name the day on which the economic screw will be given its first twist.

The cause of this change of tactics is not far to seek. At the end of last week a number of events revealed the fact that M. Laval—who was triumphantly elected to the Senate on Sunday by two constituencies—was making one more attempt at conciliation; and it was evident that the delay at Geneva was designed to give him a free run until the end of the month. This new effort was inaugurated by yet one more visit of Sir Eric Drummond to Signor Mussolini, the purpose of which was to assure the Duce that England was not planning any hostile act, and that she had no intention to go beyond the common policy that might be decided upon by the League. The visit appears to have produced a relaxation of the diplomatic tension, which has been evident in the modification of attacks on England in the Italian Press.

At present, we have no means of judging whether there is any hope of an acceptable settlement. It cannot be said that expectations on this score run very high, either in Paris or in London. Certainly, the terms which M. Laval was rumoured, at one time on Thursday, to have conveyed to Sir George Clerk from Signor Mussolini were as far as ever from the ideas of Geneva. All that can be positively asserted is that negotiations are in progress through the old diplomatic channels, and that these negotiations have induced the British Government to acquiesce in the slowing down of the League's machinery.

As a result of these obscure events, Parliament met on Tuesday for its much-heralded debate on the international situation in an atmosphere of uncertainty and suspense. Textually, the positive declarations made in Sir Samuel Hoare's opening speech on Britain's obligations towards the League closely followed those of his famous statement at Geneva six weeks ago. But somehow the tone of Tuesday's utterance contrived to be much less convincing than that of the Geneva speech. While the statement before the Assembly was regarded—and rightly regarded—as a definite invitation to the rest of the world to line up boldly with Great Britain in strict execution of our obligations under the Covenant, the Foreign Secretary now talks of recent events as an experiment which, if successful, will be looked back upon as one of the world's greatest achievements for peace. In the light of the hesitations that have occurred at Geneva, and of the half-hearted support that has been given by certain members of the League during the course of the last few weeks, this lack of conviction seems ominous. The House had clearly expected a more robust call to the nations to perform the task to which they had set their hands, and the speakers from the Opposition benches did not hesitate to express their misgivings. The change of tone has been welcomed in Italy, has been noted with profound disappointment in Addis Ababa, and has been widely regarded in other countries as an indication that Great Britain has weakened. This impression has not been entirely dissipated by the emphatic statements of Mr Eden on Wednesday, such as that in which he declared that: "If the League fails now, we shall have shattered for a generation, and may be more, the hopes which mankind has placed in this new endeavour to avoid war"; or by the much milder statement of Mr Baldwin that the League had done better in tremendously difficult circumstances than was expected when it entered upon its labours.

What definite ground is there for thinking that our tactics have changed? Formally, the Government are sticking to

ALEXANDRIA WATER COMPANY, LIMITED

ALEXANDRIA—EGYPT

INTERIM DIVIDEND

NOTICE IS HEREBY GIVEN that an Interim Dividend of FOUR SHILLINGS per £5 share on Coupon No. 84 will be paid without deduction of British Income Tax on and after 15th October, 1935, at the National Bank of Egypt, in Alexandria at Rue Toussoun, or in London at 6 King William Street, E.C.4.

Dated, Alexandria, Egypt, the 1st October, 1935.
By Order of the Board,
K. B. WOODD SMITH,
Managing Director.

CITY OF OSAKA

their guns. The Foreign Secretary has categorically stated that any settlement of the Italo-Ethiopian dispute must be acceptable alike to the League, to Abyssinia, and to Italy. Moreover, Sir Samuel Hoare, the Prime Minister and Mr Eden were all at pains to remark that our hopes and our policy alike would in future have to be based on the principle of collective security.

"Looking to the future," said Mr Baldwin, "I tremble to think of what may be the fate of Europe if some form of collective security is not devised, and for that reason I wish to repeat . . . what I said at Worcester last Saturday, and that is this: that even if we find after trying to the utmost to work the League as it is, that it fails to fulfil our hopes and expectation, I shall not give up the struggle because of that."

Further, most of the Government speakers expressed their belief that purely economic sanctions would "ultimately" prove effective in materially shortening the duration of the war. So far, so good.

But against these formal asseverations of loyalty to the League Covenant must be set the unequivocal declarations of the Government's spokesmen that military sanctions had never been envisaged or discussed; and that the unanimity essential for anything more than economic sanctions had not existed, did not exist and—according to the first version of the Foreign Secretary's speech, which seems to have been modified later—would not exist in the future. This reduces almost to zero, if it does not actually eliminate, any probability that the Government would be prepared, if economic sanctions proved ineffective, to propose to the League the sanction of a blockade of Italy. The abandonment of the thesis that the League's will must prevail even if, in the last resort, it requires the use of force, is responsible for the impression—particularly in Italy and France—that we have weakened. We have said, in effect: "Our money is on economic sanctions; we hope they will not cause trouble and we shall take no further risks."

To many, the mild detachment of these utterances on Tuesday and Wednesday will seem the more surprising, in that they follow so rapidly upon the French reply to our inquiry whether France would render us "mutual assistance" in the event of our being attacked in the Mediterranean. The French answer, so Sir Samuel Hoare informed the House, was "Yes"; though it has yet to be disclosed whether this answer was hedged about with qualifications and conditions, and if so what these conditions were. The answer, however, would seem to have ensured Anglo-French solidarity in the last resort if a crisis should develop, and to that extent it should have strengthened the confidence of the League in defence of its covenants. But no sooner was the answer received than the British Cabinet—presumably as a *quid pro quo*—set out to smooth down and reassure Signor Mussolini. It appears, as we go to press, that Mussolini has "authorised M. Laval" to inform the world that he has ordered the withdrawal of one division of troops from Libya. And it is being widely anticipated on the Continent that announcements of British fleet movements will follow.

Now there is no logical connection between the disposition of Italian troops and the movements of our fleet in the Mediterranean—especially as Italy is waging a war in East Africa, while we are concerned only to guard against all the eventualities of so strained a situation. But if Mr Eden's confidence that an agreement for a settlement acceptable to the League, to Abyssinia and to Italy may be reached before the end of this month, is justified by events, then clearly anything calculated to relax the tension between Italy and the Members of the League would be both right and prudent. Nevertheless, let the Government not mistake the feeling in this country. If no agreement be forthcoming by October 31st, the verdict of the country—then and at the General Election—will be for the strengthening of the League's action to arrest Italian aggression. The most drastic of economic sanctions will have to be imposed without further procrastination. For there is only one cardinal principle on which the British people desire that their Government's foreign policy should be founded. That is, that Mussolini's war, condemned by 51 nations of the world, should be stopped by the League. At that object alone, both the present temporisation and the action which has been suspended, should be aimed.

THE MINERS' CASE

THE Mineworkers' Federation of Great Britain decided last week that a ballot should be held to determine whether or not the demand for a wage increase of 2s. a day should be supported by a national strike. On Monday of this week representatives of the Federation were in consultation with the Ministry of Mines; but two days later, in a letter to the Federation, the owners reiterated their refusal to take part in national negotiations. On Thursday, however, the Minister of Mines met both owners and miners in turn. Thus the plight of the miners, quiescent but not contented since 1926, has once more been forced on the attention of the public. The sense of injustice in the coalfields is so keen, and the threatened conflict likely to be so grave, that it is worth inquiring carefully into the basis of the miners' case.

Immediately after the war, for various temporary reasons, the coal mines were comparatively prosperous. Production and employment were as high as they had ever been, and profits were probably higher. Money wages in 1921 were on the average 100 per cent. higher than in 1914; but the cost of living had risen in substantially the same proportion. And miners' real wages could not have been called high in relation to the income structure of the country as a whole even in 1920 and 1921. From 1921 onwards, with a brief respite in 1923 due to the invasion of the Ruhr, deep and persistent depression, caused by international changes which are well known, invaded the British coalfields. Since then coal mining has been far the most important of all our declining industries. In conditions which had in any case reduced its potential market overseas, it bore the brunt, successively, of deflation necessitated by the return to the gold standard in 1925, of the persistent overvaluation of sterling that followed, and finally of the great depression and collapse of world trade after 1929. As a result, despite very great reductions in costs, due partly to wage cuts and partly to mechanisation, profitability has never been restored and employment has steadily fallen. There were 600,000 fewer coal miners employed in the summer of 1934 than in the summer of 1923; and ever since 1926 the miner, together with the agricultural labourer, has been indisputably the lowest-paid worker in the country.

In its efforts to save the individual miner from the effects of the industry's decline, the Mineworkers' Federation has been fighting on three main fronts: wages, hours and national negotiations. The story of the latter two struggles is quickly told. The principle of national negotiation between owners and miners was accepted after the war, after the release of the industry from Government control. National negotiations were continued until the autumn of 1926, when, at the tail end of that year's stoppage, the owners' Association refused to meet the Federation any longer, on the ground that wage disputes could best be locally determined. This attitude has been maintained by the Association ever since.

The story of hours worked in the industry is also simple. The working day was reduced to seven hours as a result of the Sankey Report in 1919 from the eight hours which had been worked since the Act of 1908. In the middle of the 1926 stoppage, however, an Act was passed permitting the reimposition of the eight-hour day. Finally, the Labour Government, by the Coal Mines Act of 1930, compromised on a 7½-hour day, eventually modified by the "spread-over" clause introduced by the House of Lords, which permitted a 90-hour fortnight. The 7½-hour day remains in force.

The story of the decline in wages, which is summarised in its main bearings in the accompanying table, is very much more complicated:—

(Last quarter's figures in each case)							
	1914	1921	1922	1925	1927	1931	1935*
Cash earnings per man-shift	6/6	12/8	9/5	10/5	9/7	9/2	9/3
Cost of living (July 1914 = 100)	100	203	180	176	169	146	145
Output per man-shift (cwt.)	17.73	18.10	18.3	16.0	20.82	21.86	23.10
Proceeds per ton	23/-	18/6	16/0	13/10	14/1	13/3	13/3
Net costs per ton	22/8½	17/-	14/5	14/10	13/6	13/2	13/2
Profit per ton, or loss	+ 3½d.	+ 1/6	+ 1/7	- 1/-	+ 7d.	+ 1d.	+ 1d.

* Quarter ending September 30th.

Broadly, the story is one of steadily declining money earnings, accompanied by steadily increasing output per manshift. Between 1921 and 1935 money earnings per manshift have declined from 12s. 8d. to 9s. 3d., while output per manshift increased from 17.73 cwt. to 23.10 cwt. At the same time, proceeds per ton, and non-wage costs, have fallen much more steeply than wages. The decline in money wages during the period has fully kept pace with the decline in the cost of living; and to-day the miners' average real wages are slightly below the 1914 level, money earnings being 42 per cent., and the cost of living 45 per cent., above the pre-war figures.

Behind this general picture lie a great many detailed changes and complications. Wages, for instance, have always been lower in the exporting districts of South Wales, Lancashire and the N.E. coast than in Yorkshire and the Midlands, which sell mainly in domestic markets. The system of wage payments has varied from time to time and from district to district. The main principle of payment, however, has remained that of the national agreement of 1921. By this agreement it was established that a minimum of, in most areas, about 85 per cent. of the net proceeds of the sale of coal should accrue to wages, and the remaining 15 per cent. to profits. When the wage payable under this agreement fell below an absolute minimum, the employers were to make it up to that minimum even if this involved losses. This system, which has undoubtedly protected the wages of the worst paid men in the most depressed periods, has, with modifications after the 1926 stoppage, remained the basis of the wage-system till the present day. Meanwhile the actual course of money earnings was upward during the recovery in profits of 1923-25, and downwards in 1926-27 as a result of the reductions imposed in the local agreements reached after the stoppages.

The Coal Mines Act of 1930, which had been intended to raise wages as well as to shorten hours by means of general rationalisation and amalgamation, unfortunately coincided with the onset of the world depression. If the Act did not raise prices and wages, however, it undoubtedly limited the extent of their fall; and if the more far-reaching provisions of the Act had been applied in practice, actual improvements might have been secured. In fact, however, there was a considerable fall of money earnings between 1927 and 1931; and since then there has been practically no recovery. It must also be remembered that much more short time is being worked to-day than before the depression, and that the fall in earnings per manshift consequently underestimates the fall in weekly earnings. The average weekly earnings of the British miner to-day are about 45s., but many thousands do not earn more than 30s. a week.

The miner's general case rests on the contention that he is receiving a real wage lower than that of 1914 and too low in relation to that paid in other industries, despite a great increase in his output; and that he has in effect been made the principal victim of the blizzard which the national economy as a whole has suffered intermittently since 1921. This sense of protracted neglect and injustice is undoubtedly the mainspring of the present strike movement. But the miners also claim to have an economic case. If it is objected—in reply to their claim—that though wages are undoubtedly low, they are shown by the quarterly ascertained to be all that the industry can pay, the miners have two retorts. First, they allege that since the system of quarterly ascertained was established, the financial structure of the industry has been so altered that the ascertained have become misleading. The suggestion is that subsidiary marketing companies buy from producing companies at an artificially low price, and that though the producing companies consequently show little or no profits, the subsidiaries continue to thrive. The whole arrangement is regarded by the miners as no more than a device to hold down wages. Their contention, as far as South Wales is concerned, was admitted to have a certain substance by the Bridgeman Arbitration Committee last year. The Government might well appoint a committee of inquiry with special powers to ascertain the validity of the miners' claim. Secondly, the miners contend that the sum available for wages could be greatly increased if the various rationalisation projects contemplated by the Coal Mines Act of 1930 were resolutely

carried out. They maintain that prices could be raised, and non-wage costs reduced, if further amalgamations could be effected, redundant pits eliminated, and organised selling undertaken. Exactly how far they are justified in this claim, nobody can say; but it is commonly admitted that the general financial and economic rationalisation of the industry in recent years has not kept pace with the actual mechanisation of individual pits. It is only too true, of course, that a strike would not assist efficiency. But to this the miners would reply that they have waited nine years for the promised rationalisation, and that patience so far seems to have availed them nothing.

Relying on these claims, and on the recent tendency for some increase in coal-mining dividends, the members of the Federation may well poll a two-thirds vote next month in favour of a national strike. It is not probable that any of them expect to gain the proposed 2s. a day rise. But they are almost certainly ready to strike for the principle of national negotiations; and it is unlikely that the promise of such negotiations alone without any increase in wages will be sufficient to avert a strike. For the Trades Union Congress and the official Labour Party have already undertaken to give their support to the movement. In these circumstances, it seems to be the duty of the Government to do all in its power to promote national negotiations, to press on much more forcibly with the reorganisation of the industry, and to ascertain meanwhile whether the existing financial position does not warrant some small increase in the existing scale of wages.

EMPIRES AND RAW MATERIALS

SINCE the British Foreign Secretary proposed at Geneva, on September 11th, an international examination of the problem of "free access to the world's raw materials," public interest in many countries has centred on the problem. True, access to the world's natural resources is generally free, except in time of war, to all comers who can pay for them—like the Ritz Hotel. But, as Sir Samuel Hoare recognised and as Sir Herbert Samuel reminded the House of Commons this week, the "dissatisfied" Great Powers of the world nurse what is, to them, a potent and dangerous grievance. They are reluctant to acquiesce in a state of affairs in which a few—a very few—Powers and Empires can say, at any time, in relation to the world's chief economic resources: "The gates are mine to open and the gates are mine to close."

Even in the present hampered condition of the world's international trade, it goes without saying that producers of raw materials in any country, Empire or dependency, must sell them or go bankrupt; that, till now, the world has, thanks to national restriction of national markets, been cumbered with a superfluity of nearly all the raw materials and foodstuffs; and that, in strictly economic terms, *markets* are more important than *resources* to the

different regions of the world, and so have different needs to fulfil and different products to offer in exchange. Nevertheless, the figures in the table on page 794 are striking enough. They give no indication of the economic profitability—or liability—which possession of these regions of the earth's surface may connote in a world which prefers to restrict international trade, and therefore restricts the production of raw materials. But they do show that, on the face of it, the "Have-not" nations' psychology is understandable, and that the "Haves" stand in a relation of quasi-trusteeship to the world as a whole.

THE HOUSING BOOM—I

THERE is an increasing consensus of opinion that the remarkable expansion of building activity during the past three years has been a major factor—indeed, the major factor—in British economic recovery. The full acceptance of this fact has coincided with an almost equally widespread belief that a collapse in building may shortly reverse the trend and initiate another cycle of depression. The truth or falsity of this prediction is of the utmost importance to all who are compelled to base their actions upon a forecast of the future. In this and a following article, accordingly, an attempt will be made to analyse the causes of the sustained activity in the industry and to discuss the factors which will determine its future course.

Several facts about the housing boom can be very briefly recorded. First, it is certainly a boom—never before have houses been built at a rate approaching that of the present time. Second, it is a housing boom and not a building boom. Judging by the figures of plans approved by local authorities, building other than residential was below the level of 1929 until the beginning of the present year and is not very much above that level even now. The building of dwelling houses, on the other hand, is running at almost double the 1929 level in value—which means more than double in volume, in view of the fall in building costs. Third, the houses built in such unparalleled numbers are not in the main those of the very cheapest class. Out of 286,050 houses built in the year 1934-35 by private enterprise without State assistance (which comprised 87 per cent. of all houses built) only 105,344 were in the cheapest class, and of these 105,344 only 33,103 were built to let.

The phenomenon to be analysed is consequently the emergence of an enormous demand for new houses on the part of the middle and lower middle classes. The increase

has been fairly well spread over the country, and was actually slower in getting under way in the prosperous South than in the depressed areas. The suddenness of its emergence can be seen from the curve of plans passed by local authorities for the construction of dwelling houses which appears in each of the three graphs at the foot of this page. The figures are shown quarterly, in the form of an index number (the average of the year 1929 being 100), and have been roughly corrected for purely seasonal fluctuations. From 1929 to the middle of 1932 the curve is almost level. With the exception of the "crisis quarter" at the end of 1931, it only once either falls to the 1929 level or exceeds it by more than 20 per cent. Suddenly, in the last quarter of 1932, the curve rises to 134. Since the middle of 1933 it has never been below 150.

What was the cause of this radical change? The charts may afford some guidance in this respect. The first compares the course of residential building with that of building costs, based on the *Economist* index, which may, on the whole, tend to exaggerate the fall in the costs of those types of house most prominent in the boom. It appears wholly out of the question that the reduction of costs can have been a major causal factor. It is impossible to suppose that demand for houses is so elastic that a 100 per cent. increase can be evoked by a 10 per cent. fall in costs.

The second chart compares building activity with the course of interest rates, to which there is a strong *prima facie* case for ascribing the boom. The rise of the building curve is certainly preceded by a fall in the yield on industrial ordinary shares and on gilt-edged securities. The buyer of a £600 to £700 house, however, does not usually hold many industrial ordinary shares and his average holding of gilt-edged is small. The curve of rates charged on mortgages by the large building societies is more relevant. Though the tendency to lengthen the term of mortgages may have slightly reduced the overall charge to borrowers for some years before 1932, the effect of this was almost certainly very small. The actual mortgage interest rate did not fall until August, 1932, and then only to 5½ per cent. It would be contrary to the whole experience of the building societies to suggest that so small a reduction in interest rates should in so few weeks have produced so substantial an increase in building. Moreover, building other than residential, which could be expected to react both more quickly and more fully to cheap money, showed virtually no increase until the beginning of 1934. In view of all these facts it seems reasonable to assign to cheap money a much smaller rôle in the causation of the boom than might be thought at first.

THE COURSE OF THE HOUSING BOOM

The third chart compares residential building with the registrations of new motor cars—an index almost completely unaffected by cheap money. The two curves (both of which are roughly corrected for seasonal fluctuations) show a remarkable similarity. Both were fairly level, though tending to decline, throughout 1930 and 1931. Both suddenly shot up well above their previous highest points in the last quarter of 1932. Although motor-car registrations appeared to hang fire in 1933 both curves have remained well above their 1929-31 level ever since. This close correlation suggests a strong presumption that the *major* cause was the same in both cases. What was this cause?

The summer of 1932 was, in fact, associated with a wave of more favourable psychology, following the War Loan conversion scheme and the Lausanne Conference. This "convalescence of confidence" released a large volume of spending power hitherto pent up by fear, but it was the confidence of the *consumer*. Residential building picked up; factory building did not. Registrations of private cars increased; those of commercial vehicles did not. The explanation is that when confidence returned to the consumer in the autumn of 1932 *he had more money to spend*. According to Mr Colin Clark's calculations,* the total of wages and salaries, which on the average of the years 1924, 1926 and 1927, was £2,207 millions, had fallen in 1932 only to £2,143 millions—a fall of £64 millions. But Mr Feavear-year has calculated† that between 1924-27 and 1932 the expenditure of the public on food, clothes, liquor and tobacco had fallen from £2,115½ millions a year to £1,797 millions, a fall of £318½ millions a year. Caution is necessary in basing precise calculations on relatively small differences between large numbers which may themselves be subject to an appreciable margin of approximation. That there has been a large increase in the "free" margin of purchasing power, however, is scarcely disputable, and the figures as they stand suggest that the wage and salary earners of the nation, after buying their food, drink, tobacco and clothes, had something like £250 millions a year *more* left over in 1932 than in 1924-27. The value of *all* the dwelling houses built in a year, even at the present rate, is probably less than £200 millions, while the value of the *total* of new private cars registered is only about £50 millions a year. The *increases* since 1932 are, of course, considerably smaller in each case.

The causation of a complicated phenomenon such as the housing boom cannot be explained by any one fact. The reduction in building costs and in interest rates and the return of confidence undoubtedly all contributed to the boom. Confidence, in particular, was perhaps more responsible than any other element for the fact that the boom started precisely when it did. But the fundamental fact, without which the others would have been futile, is almost certainly to be found in the increased purchasing power of the mass of the consuming public. And that in turn was due to the great reductions in the prices of food and clothes. In a second article an attempt will be made to apply this analysis to prospects for the future.

A FATUOUS QUOTA

(BY A CORRESPONDENT)

ADVOCATES of trade limitation by quota rather than by tariff, as applied to agricultural imports, are accustomed to contend that no other method is half so effective in raising the price obtained by the farmer. Mr Elliot is even reported to have eulogised the quota, in the House of Commons, as being "in the interests of the world quite as much as of our producers." An analysis of the operation of this beneficent principle, on the other side of the Irish Sea, may be an apt commentary on Mr Elliot's dictum.

Towards the end of 1933 the export of fat cattle from the Irish Free State was reduced from its normal annual level of about 300,000 to 150,000. Apart from the slight modification introduced by the coal-cattle pact in the spring

of 1935, the quota has since remained near that figure. The normal annual consumption of beef in the United Kingdom is about 4 million carcasses. Fresh beef (which includes the Free State contingent of fat cattle and about 300,000 "store" beasts) accounts for about 45 per cent. of the whole by weight, and chilled and frozen beef for about 55 per cent.

The decision had no material effect on prices in the United Kingdom, which at that time were below 40s. per cwt., live weight, though the reduction of available supplies by 4 per cent. may have slightly arrested a falling tendency. But the price of fat cattle in the Free State—which, in spite of the £6 tariff imposed in July, averaged 35s. per cwt. in 1932—had an average of only 25s. in 1933 and fell to less than 20s. in 1934. The contention that it is in the interests of agricultural exporting countries that supplies to the British market should be controlled clearly requires further examination.

The quota system is operated by import licences, which are sent by the British Government to the Irish Free State Ministry of Agriculture for distribution to those who have fat cattle for export. As the normal annual consumption of beef in the Irish Free State does not exceed 150,000 carcasses, the immediate effect of the British quota was to increase the home market supply by 100 per cent. The result of a 4 per cent. reduction of supplies in Great Britain may be debatable, but there is no doubt whatever about the effect of a doubling of the amounts compulsorily thrown on the Free State market. An immediate scramble for licences ensued, in which the dealers came off better than the farmers. The differential value attaching to the right of admission to the favoured market attached to the licence rather than to any particular animal. The precious documents were frequently secured by men who were neither regular cattle dealers nor farmers. If common report may be believed, the members of the new and prosperous profession of dealers in cattle licences have obtained their stock-in-trade gratis from the officials of a bewildered Department, and have put them in circulation like a novel form of paper currency. Fat cattle licences are reported to have changed hands readily for as much as £3 to £4.

Of the 150,000 fat cattle that failed to achieve licensed export in 1934, it is probable that nearly 100,000 took part in conducted tours across the Border under the guidance of experts in the smuggling profession. About 50,000 were required to follow a course of slimming exercises on bare winter pastures. Many of these, reappearing as lean and hungry "stores," may have been successful in gate-crashing their way into the British market in a subsequent season. The licence regulations for "stores" are less strict than those for fat cattle.

In March, 1934, Mr Ormsby-Gore, answering a question in the House of Commons, reported that the price of fat cattle of over 18 months in Naas (in the Irish Free State) was £7 10s. per head, while in Camlough (in Northern Ireland) it was £13 10s. The difference was the exact amount of the £6 tax. The significance of the quotation of £7 10s., however, is not quite clear. Every fair and cattle market in the Irish Free State reflects the price levels of two artificially separated national markets. The prices quoted, reported, and averaged in official statistics are, in nearly every case, a combination in some unknown proportion of the prices of licensed and unlicensed cattle. Too often farmers who have fat cattle for sale must needs buy the licences. In their work on the "Planning of Agriculture," Lord Astor and Dr. Murray have pointed out that the quota restriction on Argentine chilled meat has given the increase in the price not so much to the Argentine farmer as to the importing house. The experience of the Irish Free State differs only in degree. Quite frankly, as a measure for increasing the prices received by non-British farmers, Mr Elliot's control of supplies must be written down a dismal failure.

It is probable, indeed, that quota restriction on the export of fat cattle from the Irish Free State has inflicted more serious and permanent injury on that country's agricultural economy than the taxes originating in the annuities dispute, which are still maintained. These taxes bring in about £5,000,000 annually to the British Treasury. They are serious enough, in all conscience, to the smaller country, but tariffs, at all events, are compatible with commercial freedom. Production will be maintained, and

the necessary adjustments effected, so long as the farmer is assured that he can sell all he can produce, at some price or other. The quota restriction, however, imposes on Free State farmers the necessity of drastically reducing the output of their most economic product. There are about 120,000 holdings of 30 acres or more in the Free State. About three-fourths of the 140,000 paid farm workers are employed on these farms, and nearly three-fourths of the cattle "two years old and over" are produced on them. These are the cattle whose value has depreciated most seriously since the introduction of the quota. This section of the agricultural community is the key-stone in the arch, not only of the agricultural economy, but of the national economy as a whole. So far it has stood the strain. But suppose it collapses?

It is true that holdings of 30 acres or more represent only 33 per cent. of the total agricultural holdings by number. In a democratic age minorities, apparently, must suffer. The tariff policy of Mr Thomas and the quota policy of Mr Elliot have dove-tailed exactly into the social policy of Mr de Valera. The best land in the East Midlands of Ireland, second to none in Europe, can be bought for £5 an acre, which is about one-third of its value in 1926. It is now being acquired by the State for the settlement of "landless men." Under the guise of a tariff war with Great Britain, in short, an agrarian revolution is being carried out in the Irish Free State.

THE LEAGUE'S SANCTIONS

We published last week the texts of the League's special sub-committee's Proposals 1 and 2, defining the League's embargoes on the exports of arms, and on financial assistance, to Italy. We also published the text of the British proposal (No. 3) for a League embargo on all Italian exports. Proposals 1 and 2 were adopted by the Committee of the whole Assembly last week; and Proposal 3 was adopted on October 20th. We print below a summary of Proposals 4 and 5, comprising respectively the embargo on the export of essential raw materials to Italy and the memorandum on mutual assistance, which were also adopted on October 20th.

PROPOSAL NO. 4

(1) The following items are to be added to the list of articles on whose export or re-export to Italy an embargo has been placed under Proposal No. 1:—Transport animals, rubber, bauxite, aluminium and aluminium oxide, iron ore and scrap iron, chromium, manganese, nickel, titanium, tungsten vanadium, their ores and ferro-alloys (and also ferro-molybdenum, ferro-silicon, ferro-silicon-manganese, and ferro-silicon-manganese-aluminium), tin and tin ore.

(2) The Governments of the Members of the League will take steps to see that their exports of the above articles to

other countries than Italy will not be reconsigned on Italian account.

(3) The measures in (1) and (2) above apply to current contracts.

(4) Goods *en route* "at the time of the imposition of the prohibition" are exempted. "Each Government is requested to inform the Co-ordination Committee . . . as soon as possible and not later than October 28th, of the date on which it could be ready to bring these measures into operation. The Committee of Co-ordination will meet on October 31st for the purpose of fixing, in the light of the replies received, the date of the coming into force of the said measures."

The above proposal may be extended to cover other articles.

PROPOSAL NO. 5

"The Co-ordination Committee draws the special attention of all Governments to their obligations under para. 3 of Art. XVI of the Covenant, according to which the members of the League undertake mutually to support one another in the application of the economic and financial measures taken under this Article."

I. To this end, the Governments of League Members will:

(a) Adopt immediately measures to assure that no action taken under Art. XVI will deprive any country imposing sanctions of the advantages of most-favoured-nation treatment, under agreements between the sanctions-imposing States and Italy.

(b) Take appropriate steps to replace "within the limits of the requirements of their respective countries," imports from Italy by the import of similar products from the participating States.

(c) "Be willing, after the application of economic sanctions" to negotiate, with any participating country suffering a loss of its Italian market, for increases in its sales of goods.

(d) Abstain from claiming most-favoured-nation treatment in connection with benefits accorded under (b) and (c) above, provided they themselves have suffered no losses.

II.—With the above objects, participating Governments will, if necessary, with the help of the Sub-Committee mentioned below, and within the limits of their existing obligations, study the possibility of adopting these measures:—

(1) Increase of their imports from countries suffering loss of Italian markets by reason of the application of sanctions.

(2) In order to facilitate this increase, consider the trade advantages which non-participating League Members would obtain from the imposition of sanctions, "in order to reduce . . . imports coming from these countries."

(3) and (4) Foster trade relations with a view to making good the deficiency of trade caused by sanctions.

"They will also examine under the same conditions, the possibility of financial or other measures to supplement the commercial measures in so far as these latter may not ensure sufficient international mutual support."

III.—The Co-ordinating Committee sets up the Special Committee envisaged under II above.

NOTES OF THE WEEK

The Election Campaign.—The fear which we expressed last week that the holding of an early election would detract from the impressiveness of this week's debate on foreign affairs has proved only too well founded. With the sword suspended over their heads, it has proved utterly impossible for members to keep their thoughts from straying to the constituencies; and the sense of national unity which existed a month ago has naturally been shattered. A brave attempt has, however, been made by the Peace and Reconstruction Council to prevent the election degenerating into the usual party dog-fight by supplying a focus for moderate opinion and thus restraining the fervours of the extreme wings of the Conservative and Labour Parties. Two manifestoes, one on Peace and one on Reconstruction, have been issued by the Council this week. In that on Peace the Council "accepts the League of Nations as the basis of its policy, but considers that if it is to accomplish its purpose the League must assure to its members by collective action not only security against aggression, but satisfaction for their just needs." The specific suggestion is made that the Government should propose a five-year armaments truce, and that during the period of the truce the Disarmament Conference should

be re-convened. At the same time, Great Britain should offer to make suitable concessions if others were willing to do the same. In its manifesto on Reconstruction the Council proposes a long-range programme designed to revive international trade, combined with a short-term campaign of public works and housing development. The nationalisation of mining royalties and the revision of the constitution of the Bank of England are also recommended. The Council will endeavour to secure pledges from all parties to support a policy on these lines as an immediate political objective. Meanwhile, however, bitter criticisms of the Government's decision to hold a snap election are being made by both sections of the Opposition. The Conservative Party, Sir Herbert Samuel said at Darwen on Saturday, "did not hesitate to exploit the sincere public spirit which supported its present action" in defence of the League. Mr Baldwin, in defence of his decision, said little on Wednesday except that it is "a good thing to get it over quickly," and that the international situation—in which he foresaw a lull at the moment—might be much worse in January. It is difficult to see how there can be a breathing space for four weeks except on the assumption that League action will be delayed for that period. The

* In "The National Income, 1924-1931" (Macmillan, 1932); and "The National Income and the Theory of Production." (*Economic Journal*, June, 1933).

† In "The National Expenditure, 1932." (*Economic Journal*, March 1934).

indication of Mr Baldwin's judgment can only be given if his Cabinet on returning to power carries out even more forcefully the League policy which rallied the nation so remarkably to his support last month. Meanwhile, this week's speeches, both in Parliament and outside, suggest that the main issue at the election will be the Opposition's charge that the Government is insincere in its support of the League and secretly desires unilateral re-armament. Mr Chamberlain has tried to raise the issue of the Labour Party and the banks; but the vehicle he has chosen—a letter to the municipal electors of Birmingham—seems a little inappropriate. The municipal elections, to be held throughout the country on November 1, may afford some indication of the political temper of the people. At present, however, all the indications are that the fight for the League still dominates the public's attention.

★ ★ ★
Mr Arthur Henderson.—The death of Mr Arthur Henderson removes one of the small band of men who through their association with the work of the League of Nations have attained world-wide renown. Starting from a modest position in the trade union world on the North-East Coast, Mr Henderson won for himself a foremost place in the Labour Movement, which brought him the responsibilities of a Cabinet Minister during the War and of the chief administrative officer of the Labour Party in the decade which succeeded it. As secretary of the Party he steered Labour to its victories in 1923 and 1929. But it was not until "Uncle Arthur" became Foreign Minister in the latter year that his qualities reached their full flower. In a sphere for which he had no special training whatever, his honesty and singleness of purpose—combined, however, with strong native shrewdness and a quick sense for distinguishing the essential from the unessential—won for him the confidence and esteem of the diplomatic world of Europe. No higher compliment could have been paid to Arthur Henderson than his selection as Chairman of the Disarmament Conference; and it is in that capacity that he would most desire to be remembered. His work has appeared to fail; yet it may prove that the years of negotiation and of discussion that took place under his guidance laid the foundations of an agreement that will one day put an end to the nightmare of competitive armaments.

★ ★ ★
The War in Abyssinia.—The focus of interest in the Abyssinian war has shifted during the last week from the North-East (Adowa-Adigrat) front to the South-East—where an Italian force under General Graziani is zealously advancing across the Ogaden desert. The Italians of General de Bono (now under Marshal Badoglio) in the North-East are at present mainly engaged in road-making, perfecting their communications, and propagating disaffection by land and air among the Abyssinian natives of the Tigré province in order to cajole others to emulate Ras Gugsa's defection from the Abyssinian cause. To this end, General de Bono has proclaimed Ras Gugsa Governor of Tigré, and these Italian tactics in the North-East may prove more effective than tanks and bombs in sabotaging Ethiopian resistance. The combined strategy of the Italian armies is now apparent. It is to consolidate in the North-East before advancing slowly along the Eastern foothills of the central highlands through Makalle towards Dessie, and so to the Jibuti-Addis Ababa railway at Diredda where the highlands begin. Meanwhile, a second—and smaller—Italian force will probably penetrate Abyssinia, skirting French Somaliland, from Assab, and make for Diredda. Finally, the Southern Italian Army in the Ogaden is now hotly pressing the key-post of Gorahai in the Ogaden. If this cross-roads station falls, this Italian army will also probably press on towards Harar and Diredda. While the three Italian armies would probably advance in unison and as fast as the speed of the slowest would dictate, it now seems reasonably certain, as we anticipated in an article on "Strategy in Abyssinia" in the *Economist* of October 12th, that they are intending to effect a junction in the central valley which the railway follows in its course to Addis Ababa. The next engagements of note will therefore be a North-Eastern advance towards Makalle and (eventually) Dessie; and a

more rapid, more hotly contested advance in the South-East to Gorahai, and thence towards Harar. On the Abyssinian side, munitions now seem to be coming into the country in greater amounts, and there is no evidence that the Abyssinian resistance will crumble before the invaders of her difficult territory. And general economics as well as general geography is aiding Abyssinia. At the end of September the Italian Treasury Accounts showed a total deficit for the first quarter of the present financial year, of over £7 millions, exclusive of the East African campaign, which accounted in July, August and September for a further deficit of nearly £2½ millions. Moreover, the gold reserve of the Bank of Italy fell by another 225 million lire between September 30th and October 1st, 4,025,344,000 lire and the note circulation rose to a high record at 15,425,518,000 lire. Signor Mussolini's "gesture" is likely to be costly, both in money and men.

★ ★ ★
France and the Senatorial Election.—The elections in which one-third of the seats in the French Senate were involved last Sunday have resulted in a very slight shift towards the Left. But the balance in the Senate will continue, as before, to be held by the Radical-Socialists, whose losses have entailed no effective diminution of strength. The outstanding personal event is M. Laval's victory in both the constituencies—one Parisian and the other in his native Auvergne—for which he was standing. The polling day was subsequent to M. Laval's affirmative reply to the British Government's question about French naval support, and also subsequent to the French concurrence in the Geneva decision to include refusal of Italian exports among economic sanctions. We may perhaps take it, therefore, that the French public has approved the President of the Council's definite—if rather belated and obviously reluctant—decision fully to implement French obligations under the Covenant. It is more certain that the public approves M. Laval's determination to take the lead in continued attempts at conciliation, while participating in measures for economic coercion. None should quarrel with this aspect of French policy, as long as it is not carried to the lengths of weakening the effectiveness of sanctions or condoning Italian depredations under colour of a pacific compromise. Above all, nobody—except, perhaps, Signor Mussolini in a gambler's mood—would have wished to see M. Laval defeated on Sunday. For it is extremely doubtful whether any Ministry led by a statesman standing further to the Left than M. Laval stands could keep the Right within constitutional limits. And while it is extremely doubtful whether, in France, a Fascist *Putsch* could be successful, it is certain that any attempt at it would be a grave calamity for the world, as well as for France herself. Meanwhile, M. Laval's increased strength on the home front is reflected in the decrees, which his Government approved on Thursday, on the subject of the right of demonstration, public meetings, and the import, sale and possession of arms. In addition, the Garde Républicaine Mobile is to be increased. These measures are aimed at the Fascist private armies; and, while some of M. Laval's Radical-Socialist colleagues might have wished their cautious Prime Minister to go rather further, the decrees, even as far as they do go, are likely to have an important psychological effect as definite acts of resistance to Fascist encroachments which have too long gone unchecked.

★ ★ ★
The Change of Government in Austria.—In Europe, the test case for Italy is the way things are moving in Austria; and the man of destiny into whose hands the present trend of events in Austria is playing must surely be, not Signor Mussolini, but Herr Hitler. Italy's action in Africa is forcing the Austrian issue. Even before Italy went to war, the position of Chancellor Schuschnigg's regime in Austria was difficult enough. For it had to bear up against the simultaneous hostility of the Austrian Social-Democrats, the Austrian Nazis, and the Third Reich. But at least it could claim that it represented a coalition between Austrian Catholicism and an Austrian Fascist movement which stood for a distinctly Austrian tradition. It could also point out that the policy for which this Catholic-Heimwehr coalition stood had the backing of three out of four Euro-

pean Great Powers. Finally, the Austrian Government could claim that—in standing for the maintenance of Austrian independence against violence promoted from abroad—Austria was acting as an exponent of the principles of the League of Nations. In these circumstances the public feeling in Austria that the Schuschnigg Government was "the running dog" of Signor Mussolini was a sentiment which could be ignored. Now, however, Signor Mussolini's own action has rudely stripped the mask from the unfortunate Austrian Government's countenance. Herr Schuschnigg's Government has found itself constrained to declare for Mussolini and against the League at a moment when the Austrians under Italian rule in South Tyrol have been conscripted to fight for an Italian cause which the League has condemned. This has lighted up the traditional popular hostility in Austria towards Italy, which had been smouldering all the time. The instantaneous increase in internal tension has now compelled the momentarily dominant force in the Austrian Government to strip off another layer of *camouflage*. The reconstruction of the Austrian Government which was carried out on October 17th under threat of a *Putsch* has not only tilted the balance of power still further against the numerically strong Catholics, in favour of the numerically weak Heimwehr. More significant still, the change has expelled from office those Heimwehr leaders, first and foremost Major Fey, who have disapproved of Prince Starhemberg's out-and-out Italian orientation. The immediate practical gain which Prince Starhemberg has secured is a mandate from Herr Schuschnigg's reconstructed Government to bring all private armies—the Catholic and the non-Italophil section of the Heimwehr, as well as his own—under his own authority. One thing, however, is already certain. Signor Mussolini's action is compelling the Austrian Government to testify to the truth of almost everything that Herr Hitler has been saying about them. And this strange confession may ultimately have dire and far-reaching consequences.

★ ★ ★
Social-Democrats' Success in Denmark.—The elections to the Danish Folketing (Lower House) on Tuesday resulted in a second national endorsement of the policy pursued by the Stauning Cabinet since it came into power in 1929. The Danish people have thus shown approval of the moderate Radical-Socialist programme of the Government. Our Copenhagen correspondent reports that the Government parties gained six seats, and the distribution of seats in the new Folketing will be as follows:—

GOVERNMENT PARTIES	
Social-democrats	68 seats (+6)
Radicals	14 " (unchanged)
	82
OPPOSITION	
Left (Farmers' Party)	29 seats (—7)
Free Peoples' Party (Farmers' Dissident Party)	5 " (+2)
Conservatives	26 " (—1)
Liberals (" Retsstat ")	4 " (unchanged)
Communists	2 " "
Slesvig Party	1 " "
	67

A comparison between the results of the two previous elections and those on Tuesday reveals the continued growth of the Social-Democrat Party. The votes cast were as follows (leading Parties only):—

	1929	1932	1935
Social-Democrats	590,415	660,783	759,071
Radicals	151,718	145,135	151,497
Left	492,072	381,222	292,273
Conservatives	235,237	289,527	293,286
Communists	3,642	17,166	27,141

One of the consequences of this election will be a continuation of Denmark's present foreign policy under the leadership of Dr Munch (Radical). Further, the Exchange Control Office will be maintained as the Government's instrument for carrying out Denmark's obligations incurred under trade treaties with foreign countries. The electoral success of the Social-Democratic Government after six years of power, is most interesting. It shows that, in periods of economic recovery, continuous stable government is perfectly possible in democratic countries.

★ ★ ★
Tramp Shipping Subsidy.—The Tramp Shipping Administrative Committee, set up under the British Shipping (Assistance) Act early this year, has issued an interim report covering the first six months of the subsidy scheme. The Administrative Committee is not responsible for the actual disbursement of the subsidy, which is entrusted to a Subsidy Committee. Its duty is to organise such co-operation among shipowners as will prevent the diffusion of the subsidy, improve freight rates, and assist the competition of British shipping with foreign subsidised vessels. The Committee has some evidences of encouraging progress to report. In the River Plate trade it was able to negotiate with foreign shipowners an agreement to stabilise freight rates, and a limitation on ships going out to the Plate in ballast unfixed homewards (i.e. with no homeward charter) has lessened competition in Argentina. Similar arrangements have been made in the St. Lawrence coal-outwards grain-homewards trade and in the Australian grain trade. The Committee claims as a result of these schemes that the proportion of British ships to total tonnage engaged in these trades has increased, and that freight rates have been stabilised, thus preventing any dissipation of the subsidy. It is undeniable that freight rates, according to the Chamber of Shipping Index, have risen by 4 per cent. on the controlled routes and fallen by 5 per cent. on the uncontrolled routes. It is probable that this is at least in part due to the agreements. But the agreements themselves would probably not have been possible without a perceptible increase in the volume of trade in these markets. Indeed, as the figures in the following Note indicate, there has recently been considerable progress in reducing the gap between the supply of shipping and the demand for its services. Similarly, the Committee overstates its case by claiming for the Subsidy Act exclusively such a catholic list of benefits as the rescue of British shipping from collapse, the prevention of abnormal transference of British ships to foreign flags, increased employment of British ships, the reduction of domestic competition and the establishment of co-operation among shipowners both at home and abroad. The Committee is naturally anxious for a continuation of the subsidy which was granted for one year only. It is to be hoped, however, that the Government will first make a very thorough and discriminating enquiry. As we wrote when the Act was before Parliament, the subsidy will have been justified if it is instrumental in getting rid of the whole regime of shipping subsidies. The Committee says nothing about this, for the excellent reason that there is no progress to report. But the subsidy was intended to perform more than purely eleemosynary services to the British shipping industry, and proof that British shipowners are £2,000,000 better off than before is not in itself sufficient to justify its indefinite continuance at the taxpayers' expense.

★ ★ ★
Idle Shipping.—The gradual decline in the tonnage of laid-up shipping in Great Britain and Ireland continued during the third quarter of 1935. Nevertheless, the latest statistics of the Chamber of Shipping show that idle tonnage on October 1st was still very large, especially when compared with the position in more normal years:—

NUMBER AND TONNAGE LAID-UP							
		No. of ships	Net tons (000's)			No. of ships	Net tons (000's)
Jan. 1, 1933		760	1,971	July 1, 1934	...	421	1,042
April 1,	"	760	1,864	Oct. 1,	"	330	818
July 1,	"	793	1,958	Jan. 1, 1935	...	323	878
Oct. 1,	"	612	1,589	April 1,	"	322	706
Jan. 1, 1934		482	1,239	July 1,	"	250	586
April 1,	"	453	1,079	Oct. 1,	"	224	502

Of the total laid-up tonnage on October 1st, 213,333 net tons have been out of commission for a year or more. The

BRITANNIC ASSURANCE COMPANY LIMITED

(Established 1866)
 Annual Income : : : : £5,900,000
 Funds : : : : £25,000,000

All classes of Life, Fire, Accident,
 Motor and General Insurances transacted

Chief Office: BROAD STREET CORNER, BIRMINGHAM

total of idle ships also includes 39 tankers of 143,216 net tons. In the July-September quarter there was a reduction of 114,000 gross tons in the tonnage on the United Kingdom Register. Since laid-up tonnage decreased, in all, by 168,000 gross, the increase in the tonnage employed appears to have been only some 54,000 gross tons.

Chronic Unemployment.—It is often forgotten that the army of two million unemployed in this country is not constant; it is highly variable in its composition. Nevertheless, there is a very large nucleus, particularly of men, who may be described as "chronically unemployed." At the end of July over 361,000 men—more than a quarter of the total number registered at Employment Exchanges—had been out of work for a year or more. Among women the proportion is very much lower, at 8 per cent. The Ministry of Labour has recently made an interesting analysis of the age and distribution among industries of this section of the unemployed on July 29th of this year. Almost 25 per cent. of the chronic unemployment among men is accounted for by the coal industry; while among men who have been out of work for five years or more this proportion rises to over 30 per cent. of the total in that class. Similarly among women, the cotton industry accounts for almost 40 per cent. of those who have been out for more than a year; and for nearly 75 per cent. of those with five years or more unemployment. In the distributive trades, on the other hand, the proportions are 7.6 and 3.8 per cent. respectively for men, and 11.8 and 2.7 per cent. for women. The following table shows how the total number of (1) insured persons, (2) unemployed persons, and (3) persons unemployed for more than a year are distributed among the industries of the country:—

	Proportion of total number insured, July, 1934	Proportion of total number unemployed, July, 1935	Proportion of total number unemployed for a year or more
Men—	%	%	%
Coal mining	10.6	18.2	24.5
Public works contracting	3.0	7.6	12.7
Distributive trades	12.7	9.2	7.6
Building	9.9	8.3	5.7
Women—	%	%	%
Cotton industry	9.2	20.6	39.7
Distributive trades	20.9	12.8	11.8
Jute industry	0.6	3.6	8.0

For men, the other industries which had a more than proportionate share of long-term unemployment were shipbuilding and ship-repairing, engineering and iron and steel manufacturing. This incidence of chronic unemployment is already well known. Even more interesting is the analysis of the age distribution of this group of the unemployed. The longer the period of unemployment, the larger the proportion of older men and women. Of the 361,577 men aged 18-64 who had been out of work for a year or more, 47.6 per cent. were aged 45-64; but of the 32,500 who had been out for five years or more, 63.9 per cent. were over 45. This tendency is observable in all industries, but is least marked in the case of the distributive trades, where 6,767 (over 24 per cent. of the total) of the men who had been unemployed for more than a year were between the ages of 25 and 34. This chronic unemployment among young men in what has been, even during the depression, an expanding industry, is an indication of the blind alleys into which this industry leads many of its members. Of the young and middle-aged men in other industries, some might be re-absorbed by recovery in the export trades and by the resumption of capital development by local authorities. But the Ministry of Labour's study suggests that the 46,000 men over 60—perhaps even the 172,000 men over 45—who have been out of work for more than a year may have fallen permanently out of the industrial life of the country.

Poor Relief.—Unemployment figures do not tell the whole story of depression in Great Britain. There are also the Poor Relief figures, which rose sharply immediately the Government's tightening-up of the Unemployment Regulations began at the end of 1931. Except in the week

following the Easter and Whitsun holidays, however, the number of persons in receipt of Poor Relief (including dependants) fell continuously during the second quarter of this year from an average of 1,183,166 in March to 1,130,144 in June. This is a reduction of 25,000 since the previous June, but an increase of 404,000 compared with June, 1931. The seasonal decline is normal, due to the less urgent need for fuel and clothing in the summer; but this year it is confined to persons "ordinarily engaged in regular occupation," who numbered 511,000 in June. The number of persons not so engaged continues to increase, and amounted to 618,839 in June, compared with 589,692 in June of last year. If we take the figures at the end of the quarter, the districts which relieve the largest percentages of population show, on the whole, considerable improvement compared with last year. Liverpool is a marked exception. There has been an increase in that city of more than 5 per cent. in the numbers relieved. In any case, the magnitude of these Poor Relief totals must be set against the greatly improved unemployment figures when we talk of "domestic recovery."

America's Balance of Payments.—The United States Department of Commerce has followed its own excellent precedent by issuing an estimate of the Balance of Payments for the first half of the current year. The figures are shown in the following table, together with those for the first six months and for the whole of 1934:—

UNITED STATES BALANCE OF PAYMENTS (\$ millions)				
	Whole Year, 1934	January-June, 1934	January-June, 1935	
Merchandise trade (excluding silver)	+ 478	+ 173	+ 29	
Tourists' expenditure	- 220	- 80	- 103	
Immigrants' remittances	- 124	- 58	- 64	
Miscellaneous service items	+ 5	- 36	- 17	
Interest and dividends	+ 327	+ 160	+ 145	
Balance on current account	+ 466	+ 159	- 10	
Gold movements	- 1,217	- 920	- 802	
Silver movements	- 86	- 12	- 79	
Currency movements	- 48	- 30	- 11	
Total	- 1,351	- 962	- 892	
Long-term capital	+ 202	+ 310	+ 100	
Short-term capital	+ 184	+ 250	+ 560	
Balance on capital account	+ 386	+ 560	+ 660	
Unrecorded items	+ 499	+ 243	+ 242	

Much the most significant change is the appearance of a negative balance on current account. America's out-payments, both for tourists' expenditure and for freight services, are larger in the second than in the first half of the year. There is, therefore, some probability that the complete year will show a negative balance, for the first time since the war. The change is very largely due to the decline in the "favourable" balance of merchandise trade—a strange result for a country with an undervalued currency. It would appear that the stimulus to exports of manufactures given by undervaluation has been largely offset by the decline in agricultural exports, due to crop restriction. There has, however, also been a considerable increase in imports, mainly, it is to be presumed, of raw materials, although grain imports have also increased. Tourists' expenditures are estimated to have increased. The reduction in the net receipt of interest and dividends is due entirely to a recalculation of the payments of interest and dividends by American companies to foreign investors. The import of gold is almost as high as last year, and will probably be higher by the end of the year. This flow of gold is probably due more, in 1935, to European nervousness than to the repatriation of refugee American capital, which was the explanation in 1934. American currency policy is thus less directly responsible for the woefully lopsided appearance of the Balance of Payments than it was in 1934. But attempts to resurrect an international currency system, with more or less fixed parities of exchange, have a hazardous appearance so long as the richest country in the world is so far out of equilibrium in its external financial relations.

Tin Quota Increased Again.—Last Tuesday, the International Tin Committee decided to recommend to the original signatory Governments that the production quotas should be increased from 70 to 80 per cent. of the standard tonnages, with retrospective effect from October 1st. This is the third increase in production quotas since August 10th, when they stood at 50 per cent. of the standard tonnages. Recent market developments reflect little credit to the management of the restriction scheme. Their policy has allowed stocks to fall to a dangerously low level. At the end of last week stocks at warehouses in Liverpool and London amounted to only 462 tons, equal to about one week's consumption. The shortage of available supplies in tin has led to abnormal fluctuations in prices. On October 14th the cash price rose to £248 per ton, while "three months" tin, at £225 per ton, was £23 per ton cheaper. When last Tuesday's decision was taken, "spot" tin fell to £216 10s. and "three months" tin to £209 10s. It would seem that the price can only be maintained at about £230 per ton if the market is starved of supplies. Whether or not the latest increase in quotas was influenced by pressure from the Colonial Office, it is commendable. The provision of a "cushion" in the form of adequate stocks is the only way in which the Tin Committee can regain the market's lost confidence.

Transvaal Output in September.—The Transvaal Chamber of Mines Report for September shows output of gold at 902,333 fine ounces, compared with 929,331 fine ounces in August and 857,442 fine ounces in September, 1934. The gold produced in September, 1935, was valued at £7 per fine ounce. The following table shows the monthly production since the beginning of 1929:—

Month of	1929	1930	1931	1932	1933	1934	1935
January ...	876,452	882,801	914,576	936,784	967,457	907,641	890,875
February ...	815,294	818,188	839,937	914,012	883,145	826,368	821,246
March ...	866,529	889,370	910,998	960,035	946,863	874,112	882,309
April ...	872,121	868,606	882,337	949,796	895,037	865,822	869,956
May ...	897,598	916,213	910,279	965,644	944,604	898,418	916,035
June ...	856,029	887,867	897,750	959,011	918,633	868,129	889,028
July ...	889,601	912,652	916,843	981,160	923,671	876,094	927,803
August ...	889,601	921,081	916,425	991,322	934,714	881,861	929,331
September ...	849,553	903,176	916,024	961,501	901,799	857,442	902,333
October ...	888,690	926,561	945,113	974,965	908,888	885,627	...
November ...	861,593	884,753	906,510	978,716	898,468	878,847	...
December ...	851,134	908,492	923,353	980,618	894,186	866,037	...
Total ...	10,414,066	10,719,760	10,874,145	11,553,564	11,917,485	10,486,383	8,028,914

The following table shows the number of natives employed at the mines during the past nine months:—

	Jan., 1935	Feb., 1935	Mar., 1935	April, 1935	May, 1935	June, 1935	July, 1935	Aug., 1935	Sept., 1935

Coal mines	13,347	13,355	13,476	13,385	13,677	13,945	14,097	14,150	14,247
Total...	271,030	271,308	272,893	276,063	277,744	281,154	282,506	284,055	284,022

Sterling and International Prices.—The recent advance in world wholesale prices has for the moment been checked, and the past fortnight witnessed irregular movements. The *Economist's* complete British index number

continued to rise, but the advance was only 0.4 per cent. The British index number of primary products fell by 0.7 per cent., while in the United States primary products fell by 1.0 per cent. The Irving Fisher general index number for the United States is also fractionally lower. On the Continent, French wholesale prices are unchanged, and there were slight advances in Italy and Germany.

Details of the group indices comprising the complete *Economist* index number on the date of our suspension of the gold standard and for recent dates are given below:—

"ECONOMIST" INDEX (1927 = 100)				
	Sept. 18, 1931	Sept. 25, 1935	Oct. 9, 1935	Oct. 23, 1935
Cereals and meat	64.5	71.7	72.8	72.7
Other foods	62.2	60.6	61.5	61.9
Textiles	43.7	58.2	59.8	60.8
Minerals	67.4	82.0	83.7	82.4
Miscellaneous	65.8	76.0	77.6	78.5
Complete index...	60.4	69.9	71.2	71.5
1913 = 100	83.1	96.1	98.0	98.4
1924 = 100	52.2	60.4	61.5	61.8

In the first group there was a general decline in grain prices, with the exception of English wheat, and beef was also cheaper. There were advances in mutton and bacon. In the other food group, tea, butter and coco-oil all advanced, but there was a slight fall in cheese. There was a moderate but general increase in textile prices. In the minerals group, tinplate and house coal were dearer, but there was a reaction in all non-ferrous metal prices. In the miscellaneous group, there was a sharp rise in leather, and smaller increases in rubber, tallow and hides. Linseed oil has reacted after its previous sustained advance.

OVERSEAS CORRESPONDENCE

From our Correspondents in each centre

UNITED STATES

BUSINESS STILL GOOD

IN comparison with last year, autumn trade and production make an excellent showing. In comparison with the first half of the year they show little change. In comparison with the exuberant optimism of the summer, current actualities are somewhat disappointing. Such indices as general carloadings, steel production and retail

trade show no great change from the figures of August. The year 1935 has been distinguished for its maintenance of a volume of trade and production at a level about equal to the peaks briefly touched in 1933 and 1934, but with the summer showing almost no decline from the spring, and the autumn as yet showing no marked advance above the summer.

This condition is readily explicable from generalisations based on sources of estimated income. Farm income is estimated to be about 10 per cent. above 1934; but this

is a smaller increase than between 1933 and 1934. Furthermore, this farm income is rather well distributed, in contrast to the condition of a year ago where areas affected by the drought had little income and undamaged areas had windfall profits. Cattle and hog prices are very high, but they are high because few cattle and hogs are available for market. Wheat of milling grade is rather scarce, as much of the crop is of low grade; and while in bushels we have a crop equal to domestic needs, we shall import perhaps 25 to 50 million bushels. Not since Colonial days has the United States found itself under the necessity of importing wheat. The cotton crop is larger than a year ago, but the price is slightly lower. A 10 per cent. increase in farm income is gratifying, but it is not sensational.

Urban industrial employment probably is almost the same as a year ago. It is true that a number of estimates (e.g. the estimates of the American Federation of Labour) state industrial employment to be lower than a year ago; but assuming the accuracy of the calculation, it is probable that there has been a compensatory increase in employment in fields not covered by the sampling. The conclusion is that the number of employed is not very different from the figures of a year ago; that hourly wage rates are a little higher; that the work-week is a little longer; and the cost of living somewhat higher. The sum of these items leads to the conclusion that the dollar income of employed urban labour is a little higher than a year ago, but that much of the increase (perhaps all) has been absorbed by the higher cost of living; but this conclusion may err on the side of pessimism.

Relief payments or other forms of distribution of federal funds are not greatly changed—certainly not enough to affect general conditions to any marked extent. Synthesising these elements of our economy, one would say that farm income is higher both in money and purchasing power than a year ago; and that urban industrial income is higher in money, but not much higher in purchasing power; and that the aggregate of individual incomes is higher than a year ago, but probably by not over 10 per cent.

SMALL DEMAND FOR PRODUCERS' GOODS

It is monotonous to repeat, but it is important to remember, that the United States' economy still has a remarkably high demand for consumers' goods, but a very limited demand for producers' goods. Neither the railroads nor the utilities are in the market on the scale that has characterised former periods. Technological change has developed on the railways to a greater degree than in almost any other part of our economy, both in the type of material preferred for rolling stock and in innovations in traction power; but the earning power of the railways is small and their credit consequently poor. The utilities were extremely well equipped during the 20's, but the persistent growth of demand for electric power suggests that they may expand their facilities if their status under recent legislation becomes improved. As yet, however, they have done little in that direction.

As far as miscellaneous industry is concerned, it is only in recent months that there have been any indications that existing facilities of production were not entirely adequate. In general, industry possesses both cash and credit; but as yet its demand for producers' goods has been limited to minor installations for repairs and replacements. Such orders have brought a substantial revival in the machine and machine-tool industries, but their magnitude does not exert great influence on the economy as a whole. In fact, while in 1934 the United States passed from a distinctly consumers' goods economy to an economy which made some demands upon durable (or semi-durable) goods, such as residences, motor cars, and machinery (farm and industrial), it is still in 1935 a limited economy.

For a long time the absence of demand for producers' goods was ascribed to the Securities Act. This was partially valid. The capital markets were practically closed between the passage of the Act and its modification early this year. The changes in the Act released a great volume of capital issues, but so far they have been almost exclusively refunding operations. The absence of demand for producers' goods is the outstanding deficiency in our economy, and it seems clear that reasons outside the

Securities Act are quite specific, although diverse, for each of the three major potential sources of demand.

In contrast to the rather steady rhythm of industry and trade this year, is the continued climb in primary commodity prices. Moody's index of primary commodity prices has risen almost 24 per cent. in the past twelve months. Curiously enough, the Bureau of Labour Statistics' price index reflects little of this movement, having advanced only about 5 per cent. in the period. Since the end of 1934 Moody's index has risen 40 per cent. and the B.L.S. index about 15 per cent. However, the B.L.S. index is insensitive and the primary index is extremely sensitive. The change in relation between the two indices is almost what it was in 1930 and also in 1913.

The Supreme Court has convened, and its earliest suit will concern the processing taxes. Payments on these have nearly ceased, as company after company has obtained injunctions. The legal status of the processing taxes is complicated. Under the original Act, these taxes were not levied by Congress, but by the Secretary of Agriculture, under the discretionary powers so liberally delegated to the executive department in the legislation of 1933. This delegation of the taxing power was of extremely dubious constitutionality. The legal status of these taxes was changed in the last session of Congress, and they are now levied by the direct authority of that body. In other words, the original tax may have been unconstitutional, and the present tax constitutional, as far as source of authority is concerned. There are, of course, other objections, the principal one being that they are extremely high excise taxes on the necessities of life; and this accounts for their unpopularity. But such considerations are irrelevant to the Court.

The Federation of Labour continues, or rather is intensifying, its pre-Congress campaign for the 30-hour week. In 1913 the work-week in industry was a little over 50 hours; in the 20's about 48 hours was the standard week. In the course of the depression, largely under the spread-the-work policy, the week was reduced to about 34 hours on an average. The N.R.A. promoted the idea of the 40-hour week, but, in fact, that has rarely been attained in industry, 37 or 38 hours being more frequent. The theory of the Federation is that compulsory reduction to 30 hours would necessitate the employment of more workers; the objection is that a 30-hour week at the present weekly pay (say, a 20 per cent. increase in hourly rate) would increase costs of production and limit the demand for goods. So widespread is the resentment against the present scheme of relief, both on the part of those on relief and on the part of their employed neighbours, that any alternative suggestion would command substantial support.

NEW YORK, October 15.

FRANCE

M. LAVAL AND MR BALDWIN

MR BALDWIN's declaration this week that "the object of the League of Nations is peace and not war" exactly reflects his speech with great relief. It is hoped that this will afford M. Laval a new chance to induce Signor Mussolini to make certain concessions for a general understanding. It is also being suggested here that the trend of international prices has not for a long time been so favourable to monetary collaboration between the United States, Great Britain and France as at present. The stability of the pound since the beginning of the Abyssinian conflict is regarded here as a very favourable index for this purpose. Peace thus appears as the first condition for a renewed co-operation between the Great Powers. French commentators on Mr Baldwin's speech were very specially struck by his expressed wish to bring back to the League the nations which have withdrawn from it.

Moreover, Mr Baldwin's speech came as an unexpected blessing on the eve of the senatorial elections, which ended in a striking personal victory for M. Laval in the Puy-de-Dôme and also in the Seine, where he was the only member

of his list to be elected at the first ballot. His election was in fact rendered possible by the "trahison," as M. Blum, the Socialist leader, calls it, of members of the Popular Front, since the Front constantly denounces "the man of the decree-laws" and the "man who has allied himself with the Duce against sanctions." In general the elections have slightly favoured the Left and have shown a desire to send younger men to the Senate. The liberals have suffered the principal losses; but the electors have shown their suspicion of all extremist associations. Long farmers have even voted against the Fascist leagues, including those which claim to be working in their especial interests.

M. Laval and M. Régnier appeared before the Finance Committee of the Chamber this week to describe the situation of the Budget and the Treasury. M. Laval explained that the external situation had postponed at least until the end of the year the hope of large conversions, but he recalled that Great Britain's recovery took four years. The new decree-laws, to be published before October 31st, would bring neither important tax reductions nor new cuts. The Prime Minister argued that the decree-laws could not produce an immediate lowering of prices. Finally, he urged the Committee to examine the Budget Bill at once, so that it could be voted before December 31st. But the Left-wing members of the Committee objected that a debate on the decree-laws should be taken first, and the Radical-Socialist majority decided to adjourn its decision until Tuesday next, that is until after the Party Congress.

M. Régnier explained the great difficulties of the Treasury, which were only being overcome with the assistance of the Bank of France, the great banks and the Caisse d'Amortissement. The disclosed position of the Bank of France, he said, was "sincere," and the item "Bills discounted" contained only 2,000 million francs of Treasury bonds and 500 millions of railway bonds, that is 40 per cent. of its total, the rest being represented by commercial bills. Treasury borrowing for the last quarter of 1935 and January, 1936, would reach 3,000 million francs, and the Treasury had the necessary authorisations for borrowing these sums. The recent success of the City of Paris loan proves that the market is well prepared. For the whole of next year the Treasury will have to borrow nearly 11,000 million francs, that is 6,000 millions for the Extraordinary Budget, 1,500 millions for Algeria and the P.T.T., 1,500 millions for ex-Servicemen's pensions, the railways and various items and for the deficit of the ordinary Budget—a figure which will depend on economic activity in the country during the next few months.

REVENUE NOW 22 PER CENT. BELOW ESTIMATES

The necessity of expanding business activity, if a new deflationary bout is to be averted, is again proved by the fiscal receipts for September, which were 2,468 million francs only; involving a deficit of 523,122,900 francs, or 22 per cent., in comparison with the estimates. (This is the highest deficit in the year, and compares with 15.4 per cent. in July and 18 per cent. in August.) The official statistics are as follows:—

	September, 1935	In comparison with September, 1934
	Frs.	Frs.
Direct taxation	393,405,000	— 98,901,000
Indirect taxation	1,861,151,000	— 85,714,000
Special Receipts	16,822,400	— 9,310,700
	2,271,378,400	— 193,925,700

For the first nine months of 1935 the total deficit in comparison with the estimates amounted to 3,492,433,700 francs, and in comparison with 1934 receipts to 1,800,210,000 francs.

Total foreign trade in September shows a new contraction to 2,688,485,000 francs, against 2,871,733,000 in August. Imports were 1,508,042,000 francs, against 1,697,584,000 francs in August and 1,653,141,000 francs in September, 1934. Exports were 1,180,443,000 francs, against 1,174,149,000 francs in August and 1,518,143,000 francs in September, 1934.

Total foreign trade figures for the first three quarters of 1935 were as follows.

NATIONAL BANK OF GREECE

Established in 1841

Head Office: Athens

Branches and Agencies throughout Greece

Branches and Agencies in Egypt:

CAIRO, ALEXANDRIA, ZAGAZIG

Affiliated Bank:

HELLENIC BANK TRUST COMPANY,

51 Maiden Lane, NEW YORK

Capital paid up and Reserves Drs. 1,205,000,000

	('000 omitted)		
	First Nine Months of 1934	First Nine Months of 1935	Difference
	Frs.	Frs.	Frs.
Imports:—			
Foodstuffs	5,578,569	4,553,419	— 1,025,105
Raw materials	8,811,918	8,349,530	— 462,388
Manufactured goods.....	3,241,232	2,649,292	— 591,940
Totals	17,631,719	15,552,241	— 2,079,478
Exports:—			
Foodstuffs	1,734,213	1,777,163	+ 42,950
Raw materials	3,865,386	3,137,030	— 728,356
Manufactured goods.....	7,481,070	6,499,912	— 981,158
Total	13,080,669	11,414,105	— 1,666,564

These figures pointedly illustrate the general contraction still continuing in French economic activity.

PARIS, October 24.

GERMANY

WAR AND BUSINESS

INDUSTRY and trade continue to be almost unaffected by the international unrest. The prices of textiles, raw materials, hides, and rubber have again risen, while non-ferrous metals have declined. Share fluctuations are within narrow limits, and credit conditions are unchanged. It is still believed that a prolonged war, even if localised, would accelerate the recovery in world prices. A certain banking journal, indeed, predicts that the war, independently of price movements, will re-animate trade, even in remote countries. It is declared that if the economic sanctions come into full force, which is doubted, German trade with Italy will not materially weaken them, since no great increase of Germany's exports is likely. It would hardly be possible suddenly to increase exports of iron and steel. The present large output of iron and steel is being absorbed mainly by domestic undertakings; and, in addition to the technical difficulties facing a sudden increase in production, there is the difficulty of importing the necessary raw materials.

Some of the more important commodities on the League embargo list are not produced in Germany, or are produced in quantities insufficient for home consumption. Coal, chemicals, and some other goods could, no doubt, be exported in much increased quantities; but no credit will be given to Italian buyers, and Italy could not pay with goods needed by Germany. These circumstances probably accord with German policy; for while there is no wish to antagonise Italy, there is also no desire to appear as an impediment to League policy, even though no formal complaint could be made against any purely commercial consequences of Germany's neutrality. On the basis, however, of the past week's events, it is conjectured that these questions may never arise; for the postponement of sanctions, the reported Franco-Italian negotiations for a settlement at Abyssinia's expense, and the speech in Parliament of Sir Samuel Hoare

are regarded as signs of the weakening of the League, which many Germans expected.

A substantial export surplus in September has very nearly balanced the foreign trade account for the first three-quarters of the year. The import surplus this year is down to Rm. 29 millions, as against Rm. 265 millions in the same part of 1934. The September export surplus of Rm. 55 millions is the largest since October, 1933:—

	Aug.	Sept.	Jan.- Sept.
	(Millions of Marks)		
Imports—			
Livestock	3.3	2.6	27.1
Foodstuffs	64.8	69.8	703.8
Raw and half-manufactured materials	209.7	205.5	1,924.8
Manufactured goods	39.8	40.0	437.2
Totals	317.6	317.9	3,092.9
Exports—			
Livestock	0.1	0.2	1.9
Foodstuffs	5.6	6.4	52.2
Raw and half-manufactured materials	61.0	66.8	551.9
Manufactured goods	300.9	299.6	2,456.0
Totals	367.6	373.0	3,062.0

Total imports in September were unchanged. An increase in foodstuffs (eggs, butter, meat and lard) was counterbalanced by a decline in raw materials. As in September, 1934, but in less degree, exports increased; but whereas last year the increase fell to manufactured goods, this year manufactures were practically unchanged, while raw material exports rose. Among countries taking more goods were Great Britain, Italy, Belgium and Denmark.

FOOD SHORTAGE CONTINUING

The shortage of butter and pork continues; but the negotiations with Denmark for increased deliveries as against increased German exports have been successful. The German vegetable harvest is described as below the average.

The value of industrial production in the first half of 1935 is returned at Rm. 28,000 millions, as against Rm. 24,000 millions in the same half of 1934. Consumption of electricity in August was 13 per cent. above that of August, 1934. Pig iron production in September was 1,112,600 tons, against 1,144,000 tons in August; and ingot steel 1,378,100 tons, against 1,496,000 tons. The average daily production of both declined slightly.

In consequence of repayments of Reich short-term loans and Gold Discount Bank bills, money is very plentiful. The Diskont-Kompagnie has now a uniform 1 per cent. rate for day deposits. Day loans in the market are nominally 3-3½ per cent., but, in fact, are lower. The Reichsbank's mid-October return shows a loss of Rm. 5½ millions of gold, exported, it is stated, to pay for increased raw material imports. The simultaneous increase in the German gold deposit in foreign central banks indicates that a further gold loss is expected. An official report puts the quantity of gold hoarded in the world outside the central banks in August at Rm. 4,655 millions, of which Rm. 2 millions had passed into hoards since December, 1934. The balance sheet total of the five leading banks for September 30th shows a decline of Rm. 78 millions. Deposits decreased by Rm. 80 millions. This decrease, and the fact that the banks' holdings of public loans rose very little, indicates that private subscribers have already taken up the greater part of the Reich Treasury bond issue of Rm. 500 millions.

The German Labour Front, which replaced the trades unions and employers' associations, and which later incorporated the Organisation of Business and the Nourishment Corporation, declares its assets at Rm. 250 millions. This sum includes the expropriated property of the trades unions, the realisation of which presented considerable difficulties. It is claimed that the administration of the F. it, in so far as it concerns former trades union functions, has been much cheapened, and that the workers' average contribution is only Rm. 1.52 monthly, as against Rm. 3.50 formerly paid by trades union members. Labour Front expenditure and revenue have balanced since July 1.

BERLIN, October 24.

HOLLAND

UNEMPLOYMENT STILL INCREASING

ALTHOUGH some relaxation of the economic tension has become perceptible as a result of the rise in commodity prices and the fall in the bank rate, the financial and economic situation of the Netherlands still remains critical. The number of unemployed is still increasing, and the revenue continues to decline. In September, revenue yielded about 30 million guilders, or 3,161,976 guilders below the estimate. For the first nine months of the year arrears aggregated 24,992,026 guilders. Import duties and turnover tax in particular have yielded 8,013,362 and 16,734,760 guilders respectively below the estimates. The Government has now submitted to the Second Chamber a Bill providing for the prevention of unreasonable foreclosure of mortgages. The Bill aims at giving emergency assistance to mortgagors who have regularly fulfilled their financial commitments.

Exports are still declining. The figures for September and the first nine months of the year (excluding gold and silver) are as follows:—

	(Value in million guilders)			
	September 1934	1935	Jan.-Sept. 1934	1935
Imports	78	76	788	683
Exports	69	59	534	493
Percentage of imports covered by exports	88.4	78.2	67.8	72.2
				80.6

Imports of gold and silver in September, 1935, amounted to 9,548,649 guilders, and exports to 64,110,893 guilders. In the third quarter of the year Dutch foreign trade has made a decidedly worse showing than in the two preceding quarters. Exports in the third quarter were 21 million guilders less than in the corresponding period of last year, whilst the increase in the exports in the third quarter, as compared with the second quarter, was this year only 15 millions, as against 24 millions last year. Dutch imports and exports, quarter by quarter, are shown in the following table, with comparisons in recent years:—

	Imports							
	(In million guilders)							
	1932	1933	1934	1935	1932	1933	1934	1935
First quarter...	356	279	276	226	218	178	168	160
Second quarter	320	283	261	229	200	178	171	159
Third quarter	293	321	251	228	207	192	195	174
Fourth quarter	330	326	250	...	221	178	177	...
	(In thousand tons)							
First quarter...	5,181	5,536	4,650	...	3,032	3,212	2,948	...
Second quarter	5,765	5,622	5,069	...	3,215	3,369	3,023	...
Third quarter	6,781	5,994	5,401	...	3,424	3,532	3,118	...
Fourth quarter	6,254	5,553	...	...	3,097	3,211	...	...

Of great significance to the Netherlands is the recent advance in the prices of the various colonial products, such as tea, tin, and last, but not least, sugar. Attention in the Netherlands has been focussed in particular upon the course of sugar prices. The Nivas organisation, which has the monopoly of the sale of Java sugar, has been in a position to raise its selling prices on several occasions, and substantial sales have been effected at the enhanced prices. It is true that the prevailing prices are not yet sufficient to cover the cost of production of the majority of the Java sugar works, but satisfaction is felt that the extensive old stocks of sugar are being sold at higher prices, especially as the big stocks in the hands of the various sugar companies have been written down to a very low value. The sales of the Nivas organisation so far this month have aggregated about 140,000 tons, compared with 100,000 tons in September and 23,500 tons in August. In view of the increase in sales during recent weeks, exports of Java sugar in the first ten months of 1935 will certainly exceed those in the corresponding ten months of 1934.

The advance in the price of other items of colonial produce, such as tin, tea, fibre, etc., is also of the greatest importance for the Netherlands Indies, and an improvement in the economic situation of the Colonies is bound to improve conditions at home, in view of the large amount of Dutch capital invested in the colonial plantations.

AMSTERDAM, October 22.

BELGIUM

BUDGET DIFFICULTIES OVERCOME

THE Government proposes neither to make cuts nor to impose new taxes in the forthcoming 1936 Budget. Undoubtedly the prospects for the financial year 1935 were hopeless when devaluation was effected in March. The dwindling of fiscal receipts in the first quarter of the year seemed to foreshadow a deficit for the whole year of between 850 million and 1,250 million francs. In fact, however, as a result of devaluation, the deficit for the financial year 1935 will probably be reduced to 200 million or even 160 million francs; and even this deficit is due to the fiscal results of the pre-devaluation first quarter of the year.

In the new Budget expenditure and revenue will amount to 10,300 million francs. This total is 300 millions higher than that of the previous year. But expenditure for that year was manifestly under-estimated, so that in effect the 1936 Budget is on the same level as that for 1935. The balancing of the new Budget has been made possible by reductions in expenditure due to falling unemployment. On the basis of expenditure in the first quarter of 1935 some 960 million francs had been allocated to this item for the whole year. The general improvement of the economic situation since devaluation has enabled these estimates to be reduced to 825 million francs.

Increased taxation receipts have also assisted the balancing of the Budget. The recovery in the turnover tax has been most pronounced. The yield of all indirect taxes increased from 1,230 million francs in the first quarter of 1935 to 1,445 millions in the third quarter; and the increase should amount to 860 million francs in the whole year. These estimates, of course, depend on the maintenance of economic recovery.

The economic indices point to continued moderate improvement. The devaluation "boom" is now over, as well as the reaction which followed. Since the beginning of August Belgium has entered a period of slow but sure recovery. This is evident from the increased fiscal receipts of August and September. Electrical consumption has also been rising. In June it was 9 per cent. above June, 1934, in July 12 per cent. above July, 1934, and in August 14 per cent. above August, 1934. The retail sales of the big stores remain satisfactory.

UNEMPLOYMENT FALLING

The number of unemployed workmen, which was stationary in July and August, is again declining. From a total of 170,000 unemployed two months ago the total had fallen to 161,500 by the beginning of October. The highest level reached last winter, before devaluation, was 275,000. The coming winter should cause a seasonal increase in unemployment, however; and the closing of the Brussels Exhibition on November 4th may have some adverse effects.

A large scheme of public works has been drawn up in order to accelerate the reduction in unemployment, which is one of the most important points in the Socialists' policy. Since the Government has a surplus of 3,700 million francs accruing from the revaluation of the gold reserve of the National Bank, which still totalled 12,500 millions at the time of devaluation, the financing of the public works programme will present no difficulties. This surplus, however, will not be used to balance the ordinary Budget, and the Government will not even allocate it specifically to the financing of public works. These will be paid for out of the proceeds of taxes and loans. The surplus of 3,700 million francs will, however, make it possible for the Bank to advance these loans. The Government is adopting this cautious policy, since the big available gold reserve will allow it to take the necessary measures if a danger of inflation should arise.

The size of the present gold reserve also makes it possible to face with equanimity the departure of the capital which has lately taken refuge in Belgium. The amount of this refugee capital has been estimated at about 3,000 million francs (£20 millions). At present Belgium possesses 20,000

million francs of gold (say £150 millions), inclusive of the above-mentioned surplus, but exclusive of the hidden reserve of the Central Bank.

The general economic situation of the country has manifestly improved; and the estimates, made seven months ago by the advocates of devaluation, have been almost mathematically confirmed. But the restoration of general confidence is very slow, and the long-term capital market has only become a little easier.

LOUVAIN, October 21.

HUNGARY

"MORAL OBLIGATION TO ITALY"

THE special position of Hungary made it impossible for her to join other League Member States in economic sanctions against Italy. As was explained in the Chamber of Deputies by the Minister of Foreign Affairs, M. de Kánya, Hungary felt that, owing to the valuable services rendered to Hungary's cause by Italy, Hungary was under a moral obligation to stand by Italy. On the other hand, he explained, it would be erroneous to presume that by refusing to join in economic sanctions Hungary wanted to weaken the League or the cause of peace. M. de Kánya declared that Hungary earnestly hoped that the League of Nations would be able to preserve the peace of Europe, and asserted that Hungary was anxious to co-operate to strengthen the League in settling international disputes by peaceful methods.

It is greatly regretted here that the British Press condemned Hungary's attitude. When the Treaty of Friendship was concluded with Italy in 1927, public opinion welcomed it because it was known that the traditional policy of Italy was to side with Britain. The Hungarian Government is deeply concerned about the differences which have arisen between Italy and the League, and between Italy and Britain, as Hungarian public opinion is unanimous in desiring the maintenance of the most cordial relations with Britain. The valuable assistance of Mr Eden in the peaceful settlement of the Hungarian-Yugoslav dispute has not been forgotten in Hungary; and, in spite of the differences of opinion about the application of sanctions, no nation stands as high in the esteem of the Hungarians as the British. All political parties emphatically declared that the goodwill of Great Britain is vital to Hungary, and the hope is not abandoned here that England will in the future help the just cause of Hungary.

The Financial Committee of the League, which is in close touch with the finances of Hungary and is fully aware of the extreme difficulties which would result from the loss of the Italian market, will, it is hoped, use its good offices to smooth out the present ill feelings. Austria, Germany and Italy are the principal outlets for Hungary's agricultural goods. More than 70 per cent. of Hungary's cattle exports

goes to Italy, and large amounts go to Germany and Austria. If the Italian market were lost, cattle, which is Hungary's basic export, would be practically unsaleable; because neither Austria nor Germany could increase their purchases at present.

A DIFFERENTIAL WHEAT PRICE

In the Rome Agreement in 1934 Italy agreed to buy Hungarian wheat at a price considerably above the world price, and, thanks to that agreement, it was possible to maintain not only exports at satisfactory prices, but also to ensure an internal price which enabled farmers to cover their cost of production. Wheat prices have risen from 10 to 16 pengő per metric quintal as a result of the Rome Agreement in 1934. It is true that the recent rise of wheat prices would make it both possible and advantageous to sell wheat in Austria instead of Italy, but Hungarian public opinion is fully behind the Government in believing that the Rome Agreement which helped Hungary to go through difficult times should not be violated at Italy's expense.

In the first six months of 1935 exports to Italy amounted to 27.8 million pengő, that is 14.5 per cent. of total exports. Imports amounted to 14.8 million pengő, or 8.5 per cent. of the total. No detailed figures are available for the July-September quarter, but the percentage of exports going to Italy has probably increased. Considering that there is already a large export surplus in trade with Italy, some slowing down in exports is likely, because Hungary, being in a very precarious financial position, cannot afford to sell without corresponding imports. The foreign exchange situation will certainly be adversely affected by the present position of the lira, as the amount of freely convertible currency available to pay for the services of Hungary's external debt will be diminished. The trade returns for the first nine months of 1934 and 1935 are as follows:—

	1934	1935
	(In million pengő)	
Exports	279.2	299.1
Imports	247.1	267.3
Export Surplus	32.1	31.8

The major part of Hungary's trade is with Austria, Germany and Italy, i.e. countries with no freely convertible exchanges. Many of Hungary's exports are financed with blocked pengő balances, so that the export surplus shown does not imply a corresponding amount of free exchange available for the foreign debt service.

BUDAPEST, October 21.

ARGENTINA

INCREASE IN REVENUE AND EXPENDITURE

BOTH revenue and expenditure continue to increase. General revenue was up by \$8,470,000 in September and revenue from credit operations was greater by \$8,793,000. Total expenditure was \$12,189,000 more than for September last year. The figures for the first nine months show increases, as compared with last year, of \$57,000,000 in revenue and \$50,000,000 in expenditure.

On the final day of the ordinary sessions a Bill proposing the construction of a chain of grain elevators was passed by the Senate. The cost of these elevators is estimated at some \$50,000,000, which will be taken out of the Government's exchange profit fund. It appears to be only just that the cost of these elevators should be borne by this fund as, originally, the Government's profits on exchange were intended to assist the farmers. The main object of the elevators should be to facilitate and cheapen the handling of grain and at the same time allow for better grading with a view of obtaining improved prices. The financing of grain operations will also be made easier by the use of grain warrants.

TRANSPORT CO-ORDINATION BILLS

The various Bills for co-ordinating transport throughout the Republic did not pass the Senate. The matter was referred to a committee which will study the whole question

during the coming months. During the micro-bus strike, which took place as a protest against these Transport Bills, and which lasted six days, the Anglo-Argentine Tramways Company, Ltd., carried some 1,900,000 passengers more than for the same period of last year.

The following figures show the value and quantity of exports during the first nine months of the present year, compared with those for the same period of last year.

QUANTITIES EXPORTED DURING THE FIRST NINE MONTHS OF 1934 AND 1935

	(Quantities in tons)	
	1934	1935
Chilled beef.....	256,457	257,809
Frozen beef.....	23,706	21,703
Frozen mutton.....	36,530	38,107
Salted and dried cowhides.....	90,478	99,616
Unwashed wool.....	77,942	97,042
Wheat.....	3,751,834	3,404,412
Maize.....	4,307,027	5,042,299
Linseed.....	1,058,687	1,395,859
Oats.....	322,468	359,309
Rye.....	510,073	390,088

The value of exports during first nine months of 1934 and 1935 is shown below:—

	Value (paper pesos)	Percentage
	1934	1935
Pastoral products ...	352,958,484	371,471,936
Agricultural products	688,933,040	755,128,555
		+5.2
		+9.6

The percentage increase or decrease in average prices in the first nine months of 1935 as compared with 1934 was as follows:—

Chilled beef	+ 1.2	Wheat.....	+ 12.1
Frozen beef	+ 2.9	Maize	— 13.2
Frozen mutton	+ 18.0	Linseed	— 5.1
Salted cowhides	+ 3.6	Oats.....	+ 23.8
Unwashed sheepskins	— 26.3	Barley.....	+ 21.7
Unwashed wool	— 30.5	Butter.....	+ 32.6

The quantity exported in tons during September was lower than in any previous month during the year, and both quantity and value were less than in September, 1934. The figures for the year, however, are still well above those for the same period of 1934.

BUENOS AIRES, October 15.

LETTERS TO THE EDITOR

BRITISH AND DUTCH MONETARY POLICY

TO THE EDITOR OF THE ECONOMIST

SIR,—In your very interesting survey on "A Changed Market Outlook" in your issue of September 7th you come to the conclusion that, war or no war, "the incidence of firmer interest rates may still have to be reckoned with"; and indeed the whole of your argument clearly points to the inevitability of dearer money in England in the near future.

In the face of this, your own prognosis, what interpretation is to be placed on your Note of the Week of September 21st to the effect that "British opinion regards the maintenance of a low Bank rate as of far greater importance than the fixing of exchange rates, and there is no belief here in the possibility of a lasting recovery in the gold countries without devaluation"? As you require the French, Dutch and Swiss authorities to realise these facts before any agreement can be reached, it obviously is of some importance to know what kind of monetary policy the gold countries are to expect from Britain, should they be willing—just to please British opinion, and not because they believe in its necessity or desirability—to consider devaluation. Are they, in return for such complaisance, blandly to submit to the vagaries of a sterling policy that cares neither for exchange stability with, nor apparently for the economic needs of, other countries, but will only consider the need for cheap money of British industry and British Treasury finance? And if you look forward to tighter money and higher rates of interest in Britain, does not this mean that we must expect your monetary authorities to meet this trend by depressing sterling—or allowing it to fall—lower and lower still? How can you, in such circumstances, suggest to the gold countries any agreement whatsoever?

On the same page, you somewhat scornfully comment upon Dutch financial policy and the Speech from the Throne, describing—as you say—devaluation as "impossible to consider," "without any reasons being given." But these reasons have been given not once but many times in the weighty statements made by Dr. Colijn in explaining and defending his policy; statements which have so impressed the Dutch public that the overwhelming

majority both in and out of Parliament are absolutely convinced that devaluation would not help us but might, on the contrary, make things very much worse for this country as a whole. Why is it that the British financial press generally, and even a journal of such distinction as yours, should never have troubled to reproduce Dr. Colijn's authoritative views, but persist in condemning Dutch monetary policy on the strength of arguments or comparisons with other countries which take no account of Holland's peculiar difficulties; conveniently ignore the part British policy has played, and still plays, in these difficulties; and finally suggest that our authorities—that is, men with an international reputation like Dr. Colijn and Dr. Trip—simply do not know what they are doing!

How could devaluation ever help Holland to get over the barbed-wired walls of Mr Chamberlain's and Mr Elliot's protectionism, or to jump Dr. Schacht's hurdles and pitfalls? On the other hand, devaluation would undoubtedly raise the cost of raw materials and everything else we have to import for our industries and for our living, and only part (a diminishing part!) of which we can cover by our heavily reduced exports and our equally lessened income from capital and services. In other words, it would raise the cost of living and force us, even more than we are doing now, to import part of our necessities of life by drawing on our melting capital reserves—which, by the very act of devaluation, would become still more reduced.

As for the suggestion (in your Note of the 21st ultimo) that Budgetary deflation is necessary in Holland "to support the present gold parity of the guilder," thus implying that our Budget deficit would automatically disappear with devaluation, it may be pertinent to ask if the fall of the pound saved Britain from a very drastic Budgetary deflation afterwards, or if the pound has become less vulnerable to further depreciation since the British Budget was balanced.

It is widely believed on the Continent that British monetary policy aims, before everything else, at restoring London's financial supremacy; and that the British authorities, having recognised that sterling, owing to the innate weakness of the British post-war economic structure, can never become a strong independent gold currency again, prefer a dog-in-the-manger attitude, hoping in the end to wear down the remaining gold currencies and to force the whole world on a sterling standard—manipulated, of course, for the benefit of British trade and industry. This may or may not be true, but certainly the unhelpful British attitude to the world's monetary troubles lends colour to that hypothesis, while Mr Chamberlain's latest utterance about stabilisation endangering sterling's "independence" almost seems to confirm it. But the gold currencies can hardly be expected to surrender their own independence—which they are perfectly able to defend in open contest and on equal terms by means of their very ample gold reserves—to a currency that, after four years of almost incessant drooping, has still to be supported, day by day, by what a witty Frenchman termed the "occult" operations of a £350 million Exchange Equalisation Fund of borrowed (mostly foreign-borrowed) money.

Yours truly,
J. H. COHEN STUART.

Amsterdam.

[The best answer to Mr Stuart is to refer him to the facts. He maintains that Holland's economic troubles are not mainly due to Dr. Colijn's deflationary policy, but to the "barbed-wired walls of Mr Chamberlain's and Mr Elliot's protectionism" and to "Dr. Schacht's hurdles and pitfalls." We agree with Mr Stuart in lamenting the restrictive activities of these three gentlemen. But Holland is not the only country which has to contend with them. Belgium, Denmark and Sweden, and a host of other countries which have mastered the depression by devaluing their currencies, have to contend with them also. And if Mr Stuart will turn to page 805 he will find that in Belgium, despite Dr. Schacht, Mr Elliot and Mr Chamberlain, unemployment is falling steadily and Budget revenue increasing. And on page 804 he will read that in Holland unemployment is increasing and Budget revenue falling. Nor is it true that Holland's main difficulties are "peculiar." Belgium's difficulties, before devaluation, were fundamentally the same. So are France's to-day.

In arguing that the depreciation of sterling did not save England from Budgetary deflation, Mr Stuart is guilty of a serious error of fact. The British Budget cuts of 1931 were not made *after* the abandonment of gold but *before*, in an unsuccessful attempt to avoid it. And as a result of the recovery subsequent to the depreciation of the pound the cuts have been restored, and imports have begun to increase once more. Further, in suggesting that devaluation would not relieve the Budgetary situation in Holland, Mr Stuart is flying in the face of all the evidence. He will find (page 805) that the recovery of Belgian Budget revenues after devaluation was so immediate and substantial that the deficit incurred during the first quarter of the year (before devaluation) has already been practically wiped out. In Holland (see page 804) the yield of turnover tax and import duties is still falling. Mr Stuart also maintains that devaluation would seriously raise the cost of living and the price of imported raw materials. Yet in Belgium, where many of the relevant factors are the same as in Holland, the cost of living has only risen by 6 per cent.; and such rise as there has been in the price of raw materials has not prevented a substantial industrial recovery.

The explanation of the contrast between Dutch and Belgian experience is not far to seek. The principal disadvantage of an overvalued currency is not so much that it hampers foreign trade, as that it makes for exchange tension and gold losses, which in their turn make for high Bank rates and dear money and consequently for general economic depression. A readjustment of money values reverses the whole train of causes. This has been proved up to the hilt throughout the world in the last four years.

Mr Stuart complains that the objective of British monetary policy is uncertain, and asserts that Holland intends to maintain a "strong independent gold currency," cost what it may. We can assure Mr Stuart that the primary and defined object of British monetary policy is not to maintain a "strong independent gold currency," but to increase, by means of the lowest practicable interest rates and a reasonably stable price level, the employment and consumption of the people.—Ed. Econ.]

ARMAMENTS AND HYPOCRISY

TO THE EDITOR OF THE ECONOMIST

SIR,—While I was very pleased to read the article on "Parties and the Election" in your issue of October 12th, and I fully endorse your views on the subject of unilateral rearmament, I cannot help feeling that your case is stronger than it is made out to be. I base this statement on the fact that Great Britain is still the strongest Power: is far stronger, in fact, than she pretends to be. It is a commonplace to compare each fighting service with its mightiest counterpart abroad; thus, the Territorial Army is compared with that of Germany, the Navy with that of the United States, and the Air Force with that of France. If these are taken together, Great Britain is still the strongest Power; and, further, her strength lies also in her unique strategic position. For instance, Gibraltar, Malta, the Suez Canal, Aden, Singapore, Hong Kong—all these cannot be valued in terms of aeroplanes or army corps.

Still further, Britain's authority on the Continent is vastly increased by her excellent political and strategic position. It is well-known abroad that Britain could never stand alone. Britain *versus* Germany means Britain *plus* France *versus* Germany.

I should like to point out that there is some bitter feeling on the Continent at the hypocritical attitude of Britain in ignoring these factors and in insisting continually that she is going to the dogs and has been since the Battle of Hastings. The Continent knows that Britain has never been attacked, and that she has won three major wars in the last three hundred years.

Yours faithfully,

PETER BAUER.

Gonville and Caius College, Cambridge.

BOOKS AND PUBLICATIONS

QUEEN VICTORIA AS A POLITICIAN*

In the nineteenth century radical politicians rarely, but more frequently than nowadays, from the Manchester School to Joseph Chamberlain, proclaimed republican sentiments. But the influence of the monarchy on British politics was delicately exercised; and it is hard to obtain information about it in precise form. Mr Frank Hardie's historical study courageously attempts to reach conclusions nevertheless. The published information about the period, the letters, the speeches and the biographies are ransacked and summarised by him in this book. There could be no

* "The Political Influence of Queen Victoria." By Frank Hardie. Oxford University Press. 258 pages. 8s. 6d.

better introduction, nor any more interesting review of the voluminous material available. To the story of the last forty years of the Queen's life Mr Hardie adds very little; the comedy and semi-tragedy of her relations with Disraeli and Gladstone are a familiar theme. But he brings to the narrative a sense of political reality. He is anxious to weigh, to measure and to give judgment.

Perhaps his compression might in places provoke the accusation of a slight bias. Mr Hardie makes the following comment on two of the Queen's letters of 1894:—

It certainly was awkward that the Queen's Minister possessed the confidence of the elected representatives of the nation even though they did not possess the confidence

of the Crown, and that this fact could not be allowed to escape the Royal memory.

But the second letter was written on the very day that Gladstone had tendered his resignation, so that in no real sense did the Queen's Ministers possess the confidence of the Commons. The idea that the Queen was in any sinister sense "making enquiries as to whether it was not possible for Gladstone to be replaced by Lord Salisbury" is not substantiated here.

The story of the parting with Gladstone indeed fails in some details to put in the Victorian colour of outward constitutional pedantry, personal decorum and cordiality, that perhaps gave each incident its deepest sting. The drama is also less intense where one character is supposed to be less capable of feeling, contradictory and mixed though her feelings might be, than she really was. Mr Hardie writes:—"Very different had been the Queen's parting from one of her Conservative Ministers. Then it was she who had wept . . ."—now it was Mrs Gladstone. But in recounting that last interview with the wife of the Queen's greatest Prime Minister, Mr Hardie omits Morley's account of how the Queen nearly came to break down, nor does he sketch in such slight friendly gestures as the Queen's kiss, or her offer (in a letter) of a peerage to Mr Gladstone. Mr Hardie rightly ends his chapter with the typical remark, quoted from the journal of the Queen, that Gladstone "was very clever and full of ideas," but "alas! I am sure involuntarily, he did at times a good deal of harm."

On the general issue Mr Hardie makes the following cautious observation:—

It is arguable [as an extreme example], that between 1914 and 1918 Englishmen and Germans who had no real grievances against one another, indulged in an orgy of mutual slaughter, partly at any rate because of a certain coldness in the attitude of Queen Victoria to the Emperor William II on account of the latter's treatment of his widowed mother, and partly because of a more open conflict between the Emperor and his uncle, Edward VII, which had broken out as early as 1888.

A quotation made from the Queen's letter to Lord Salisbury is very much to the point:—

As regards the political relations of the two Governments, the Queen quite agrees that that should not be affected (if possible) by these miserable personal quarrels; but the Queen much fears that, with such a hot-headed, conceited and wrong-headed young man, devoid of all feeling, this may at ANY moment become impossible.

Mr Hardie prudently draws the moral of this interesting quotation.

Taken as a whole, his book is sober and balanced. And as such it makes an important contribution to our understanding of the evolution of the British monarchy.

SHORTER NOTICES

"Stabilisation of Employment." Edited by C. F. Roos. (Bloomington, Indiana) The Principia Press, Inc. (London) Williams and Norgate, Ltd. 300 pages. 15s.

This volume consists of papers presented at the Atlantic City meeting of the American Association for the Advancement of Science in 1932. The seventeen chapters cover a wide variety of topics, ranging from "The Present Day Viewpoint of Science," by Mr C. F. Kettering, to "Actuarial Aspects of Unemployment Insurance," by Prof. H. L. Rietz. Naturally, some of the questions discussed have lost direct practical interest, though they retain their theoretical importance. Unfortunately, however, the theoretical implications of, for instance, technological unemployment or public works policy cannot be traced fully in the twenty pages or less given to each topic.

One of the facts clearly brought out by the volume is the practical difficulty of inaugurating public works schemes. To be of any use, public works must be planned over a long period. Similarly, unemployment insurance must be planned on the basis of wide experience, because the risk of unemployment cannot be deduced *a priori*.

One of the most interesting chapters is that on international capital movements. In this, Prof. Alvin Hansen argues that the depression was to some extent due to the disrupting forces

let loose by the war. "The facility with which foreign securities could be floated in the United States served to ease up and counteract the strains which developed in various parts of the world." It is interesting to note the contrast between Prof. Hansen's view that the trouble was due to the artificial propping up of the world price-level and the views of other writers, notably Prof. Fisher and Dr. Roos. Prof. Fisher contributes a very short chapter on the relation of employment to the price-level, and states that "if employment varies with price change, its variability may be reduced if price change is reduced to zero or as near zero as possible."

Dr Roos, in his chapter on securities, suggests that the Reconstruction Finance Corporation and the Federal Reserve Board should be made departments of the United States Treasury. Then "the Secretary of the Treasury might be charged with the responsibility of controlling credit and money so that a commodity price index did not vary more than one or two per cent., and removed for incompetence if the index varied more than, say, three per cent."

"Aircraft Manufacture." By R. McKinnon Wood. New Fabian Research Bureau and Gollancz. 6d.

In this pamphlet Mr McKinnon Wood describes the present structure of the aircraft industry and emphasises the small number of firms, the reliance on military demand and the wasteful gap between experiment and designing. He puts forward proposals for socialisation which he believes would increase efficiency as well as remove a vested interest in war. His short essay naturally leaves many questions unanswered and invites criticism at certain technical points. Still, it is a serious piece of work and may be commended as a first attempt on a difficult and untouched subject.

MONEY AND BANKING

MONETARY EXPANSION IN AMERICA

AN expansionist monetary policy is almost the only thread which has run consistently through the perplexing changes of the New Deal. Indeed, it is the only economic policy which Presidents Hoover and Roosevelt have in common, for it was the former who, in the spring of 1932, started a deliberate large-scale expansion of bank credit. The ultimate effects of this expansionist policy will be embodied in, and indistinguishable from, the success or failure of the Roosevelt economic policy as a whole. But the purely financial results are more easily traceable. The following table shows the salient figures relating to the Federal Reserve Banks at five crucial dates in the last six years, together with the latest figures available:—

POSITION OF FEDERAL RESERVE BANKS, 1929-1935

	July 31, 1929	Jan. 31, 1932	Jan. 31, 1933	May 31, 1933	Feb. 28, 1934	Aug. 31, 1935
Gold or gold certificates	2,924	2,976	3,256	3,520	3,886	6,482
Discounts (Member Bank borrowings).....	1,076	899	274	302	64	11
Government securities	147	746	1,763	1,890	2,432	2,432
Total reserve credit*....	1,347	1,856	2,077	2,218	2,567	2,485
Member Bank reserves	2,355	1,947	2,446	2,167	3,093	5,305
of which, excess	...	35	584	417	891	2,738
Money in circulation	4,717	5,647	5,645	5,813	5,355	5,630

* Including other small items.

The first three columns tell the story of contraction, the last three of expansion. The vital item is that of Member Bank Reserves, for it is this which forms the basis upon which the Member Banks can build. The other items illustrate the influences working upon this item. Between 1929 and February, 1934, the total of Member Bank Reserves was the resultant of conflicting forces. An increase of almost \$1,000 millions in the gold holding (which would, of course, tend to increase Member Banks' deposits with the Reserve Banks, just as, in England, it would increase Bankers' deposits at the Bank of England) had been partly offset by an increase of \$638 millions in Money in Circulation. The Reserve Banks had bought almost \$2,300 millions of securities in the open market. This had enabled the Member Banks to repay almost all their borrowings and yet have enough left over to increase their Reserves by over \$700 millions. But the scale of their operations had shrunk so much that they actually had need of less reserves than in 1929. Accordingly nearly \$900 millions of their reserves were in excess of legal requirements.

In the eighteen months between February, 1934, and August, 1935, there have been radical changes. In the first place the gold reserves of the Reserve Banks have risen from \$3,900 millions to \$6,500 millions. This is due in part to the inflow of gold from Europe. But it is also indirectly due to the revaluation of the Treasury's gold stock in January, 1934. This revaluation gave the Treasury a cash balance of over \$3,000 millions, and as this balance is spent, whether on financing the deficit or on stabilisation operations, it finds its way through the Member Banks into the Reserve Banks. In English terminology, Public Deposits, having been enormously swollen by the revaluation, are slowly being transferred to Bankers' Deposits, which are also being increased by the influx of gold. The Reserve Banks have not, on their own account, been expanding credit at all. On the other hand, they have refrained from selling any of their holdings of securities. The net result has been to raise Member Bank Reserves to more than double their 1929 level. Of these swollen Reserves, less than half are actually being used as the basis of credit.

Before enquiring into the possibilities for the future, it will be convenient to glance at the figures, for closely corresponding dates, for the Reporting Member Banks (i.e. the larger commercial banks of the country). These show clearly how the great increase in reserves has enabled the member

banks to repay the whole of their borrowings from the Reserve Banks:—

REPORTING MEMBER BANKS, 1929-1935

(\$ millions)

	July 31, 1929	Jan. 27, 1932	Feb. 1, 1933	May 31, 1933	Feb. 28, 1934	Aug. 28, 1935
Reserve with Reserve Bank..	1,707	1,482	1,994	1,624	2,271	4,129
Loans on securities	7,788	5,596	4,259	3,713	3,520	2,899
Other loans	9,270	7,259	5,907	4,772	4,665	4,446
Government securities	2,747	3,841	5,253	4,948	6,249	8,237
Other securities	2,802	3,296	3,306	2,993	2,966	2,951
Demand deposits	13,395	11,453	11,899	10,918	11,398	15,950
Time deposits	6,712	5,771	5,648	4,282	4,370	4,387
Borrowings from F.R. Bank	767	467	81	76	12	...

In spite of larger reserves, there is no sign of any increase in loans, and the banks have been forced to increase very considerably their holdings of Government securities. In the last eighteen months there has, however, been a rapid increase in demand deposits, which are now considerably higher than in 1929. This increase in deposits—even though they are demand deposits—has not resulted in a proportional increase in the amount of cheques drawn, as is shown by the following table, compiled from the Standard Statistics Company's index of bank debits. The index excludes New York City and is corrected for seasonal fluctuations:—

BANK DEBITS (1920-24=100)

	1929	1930	1931	1932	1933	1934	1935
First quarter	152	136	110	80	66*	74	83
Second quarter	148	136	109	76	64	80	88
Third quarter	159	123	99	69	73	76	90*
Fourth quarter	155	118	89	65	68	77	...

* Two months only.

It is not easy to draw a conclusion from the comparison of the bank deposit and bank debit figures. The increase in bank deposits has clearly been "created" chiefly by buying securities from the Treasury or through the expenditure by the Treasury of its "free" balance—i.e. in either case as a result of the deficit. And the evidence of the bank debit figures would seem to show that much of this Treasury expenditure, after its first disbursement in relief payments, etc., seems to get "stuck" in stagnant bank deposits. In short, the deficit plus the policy of monetary expansion is not having complete success in "priming the pump."

It does not, however, follow that it will never have any success. The Member Banks have reserves which would enable them to expand credit to more than double the 1929 peak. Moreover, there is every reason to anticipate a further increase in "excess reserves." The Treasury's "free balance" is still over \$2,500 millions and will probably continue to be drawn on. Again, there is little sign of the inflow of gold from Europe coming to an end.

The Federal Reserve system is thus hardly in a position to put a brake on expansion. In theory it could sell its holding of Government securities. But there are four practical reasons against any such course. First, the Treasury will have to continue financing the deficit for a long time to come, and it could not permit the dumping on the market of \$2,400 millions' worth of Government securities. Secondly, it is extremely doubtful whether such an amount could be sold in the existing market. Thirdly, the Reserve Banks depend entirely upon these securities for their income. And fourthly, even if they were sold, there would still be \$300 millions of excess reserves, and the market would still be out of control. In the Banking Act of 1935 the Board of Governors is given the alternative weapon of requiring an increase, up to double, of the minimum reserves of the Member Banks. It is almost certain that there would be an enormous outcry by the country banks

against any use of this weapon, and the country banker wields very potent political influence. But even if required reserves were doubled, there would still be some excess reserves left, the Member Banks would not be forced to borrow, and the market would still be out of control.

It is impossible, therefore, to come to any but one conclusion. If a vigorous demand for credit should arise, there is almost nothing to prevent a very large expansion of the American credit structure—in a word, inflation. Will such a demand arise? Monetary history would seem to show that when a given volume, or potential volume, of credit is available, it will sooner or later be used. But the position of the United States in 1935 is in many respects unique in history. Can there be an inflation in a country with ten million unemployed and with surplus capacity in every industry? Alternatively, can an inflation be avoided in a country whose monetary authorities have no means of preventing an expansion, to double its present size, of the monetary circulation? A rhetorical question is one which does not require an answer. But in this case the art of forecasting the future is to know which rhetorical question not to answer.

FINANCIAL NOTES

An Improvement in Amsterdam.—There is further evidence of at least a temporary relaxation of the recent tension in Amsterdam. During the three weeks ended October 1st the following significant changes occurred in the position of the Netherlands Bank:—

	Sept. 30th Fl. mill.	Oct. 21st Fl. mill.	Intervening Change Fl. mill.
Gold	536	591	+55
Discounts	65	52	-13
Advances	213	142	-71
Note circulation	819	784	-35
Deposits	42	43	+1

While the Bank's gold holdings have increased, there has been a definite decline in the note circulation and a still greater decrease in discounts and advances, which represents the assistance given by the Netherlands Bank to the banking system and the money market. All these changes point to easier conditions, and these are reflected in the recent downward trend of money rates. The Bank rate, which on October 15th stood at 6 per cent., has since been reduced first to 5 per cent. and now to $4\frac{1}{2}$ per cent. The market discount rate has fallen since mid-September from 6 to $3\frac{1}{2}$ per cent., and there have been equivalent reductions in short-term loan rates. The foreign exchange position is also easier. All these reductions will assist the Government in its immediate debt funding programme, which includes the issue of Fl. 35 millions of Exchequer bonds. The rising trend of world commodity prices is helping to lessen the over-valuation of the guilder, while prospects of balancing the Budget are also better than at the end of the summer. But even to-day's money rates are on the high side, while it is still impossible to say that the outlook is assured.

The Foreign Exchanges.—Conditions this week have been irregular. Political developments were regarded as favourable to sterling, and the market expected the pound to improve simultaneously with the recovery on the Stock Exchange. There has been a moderate improvement to \$4.92 since the reaction to \$4.90 $\frac{1}{2}$ on October 18th, but it was checked early in the week by commercial buying of dollars. Three months' dollars, however, have weakened from 1 $\frac{11}{16}$ to 1 $\frac{3}{8}$ cents premium. The Paris spot rate has been steady at Frs. 74 $\frac{3}{4}$, and there was no intervention either way by the British Control. Three months' francs improved to 75 centimes, but have since widened to 95 centimes discount, French politics being the main influence. Registered marks now stand at the wide discount of 52 $\frac{1}{2}$ per cent., equivalent to Rm. 25.75 to the pound. The new prohibition upon the reimportation of Reichsmark notes into Germany has also caused the rate for these to depreciate, and the final rate is Rm. 20 to the pound, offered. The Shanghai rate has fallen during the week from 17 $\frac{1}{4}$ d.

to 16 $\frac{1}{4}$ d. This movement may be due to Chinese buying of silver.

The Money Market.—There is still a fair demand for money every afternoon, and some of the clearing banks have had to call again on their making-up days. Public deposits at the Bank are still unusually large, and now appear likely to remain so until the Funding and Conversion Loan dividends are paid on November 1st.

	Oct. 3, 1935	Oct. 10, 1935	Oct. 17, 1935	Oct. 24, 1935
Bank rate.....	2	2	2	2
Clearing banks' deposit rate —	$\frac{1}{2}$	$\frac{1}{2}$	$\frac{1}{2}$	$\frac{1}{2}$
Short Loan rate:—				
Clearing banks.....	$\frac{1}{2}$ -1	$\frac{1}{2}$ -1	$\frac{1}{2}$ -1	$\frac{1}{2}$ -1
Others.....	$\frac{1}{2}$	$\frac{1}{2}$	$\frac{1}{2}$	$\frac{1}{2}$
Discount rates:—				
Treasury bills	nom.	$\frac{9}{16}$ - $\frac{1}{2}$	$\frac{9}{16}$	$\frac{9}{16}$
Three months' bank bills	$\frac{9}{16}$ - $\frac{1}{2}$	$\frac{9}{16}$ - $\frac{1}{2}$	$\frac{9}{16}$ - $\frac{1}{2}$	$\frac{9}{16}$ - $\frac{1}{2}$

Last week's Treasury bills went at an average tender rate of 12s. 10.81d. per cent., against 12s. 1.82d. per cent. the week before; £40 millions of bills were allotted against maturities of the same amount, so that the total tender issue remains unchanged at £550 millions. This week some of the banks have bought mixed parcels of December and January bills at $\frac{1}{2}$ per cent., and the banks are also buying bills maturing during the first twelve days of January at $\frac{9}{16}$ per cent. Hot Treasury bills hardened during the week from $\frac{1}{2}$ to $\frac{9}{16}$ per cent.

The Bank Return.—The note circulation usually contracts towards the end of October, for this is the mid-way date between the summer holidays and the period of Christmas buying. This explains the current week's contraction of £2.6 millions.

	Oct. 24, 1934	Oct. 2, 1935	Oct. 9, 1935	Oct. 16, 1935	Oct. 23, 1935
	£ mill.	£ mill.	£ mill.	£ mill.	£ mill.
Issue Department:—					
Gold	192.0	193.6	193.7	193.7	194.3
Note circulation	374.7	402.0	402.1	399.6	397.0
Banking Department:—					
Reserve	78.0	52.4	52.3	54.9	58.2
Public deposits.....	22.4	25.5	36.0	32.1	35.3
Bankers' deposits	100.7	80.9	75.1	78.8	78.7
Other deposits	37.6	39.1	38.6	37.8	37.1
Government securities.....	81.3	82.5	85.5	86.2	86.8
Discounts and advances..	8.2	17.3	17.6	13.7	11.4
Other securities	10.9	11.6	11.8	11.6	12.5
Proportion	48.5%	38.0%	34.9%	36.9%	38.1%

In the banking department there has been an increase of £3.2 millions in public deposits, which to some extent is due to the heavy excise payments which reach the Exchequer in the middle of each month. Bankers' deposits are practically unchanged.

New York Money and Banking.—There has been a further drop from \$825 to \$818 millions in New York member banks' loans to brokers. Other loans against securities fell from \$742 to \$736 millions. Money remains very easy, and this week's issue of \$100 millions of Treasury bills was placed at rates of 0.109 per cent. for 145-day bills and 0.177 per cent. for 273-day bills. An arrangement has been made through the Export and Import Bank to extend a credit of \$6 millions to the Government of Cuba. The credit will be used for the purchase of about 7,500,000 ounces of American silver bullion, which will be minted at Philadelphia into 10 million standard Cuban pesos. This will provide Cuba with additional currency, which is now beginning to be needed. Gold imports for the week ended October 16 included \$83.8 million from France, \$26.0 millions from England and \$4.3 millions from India. This week the gold influx has apparently been slackening. Arrivals so far reported include only \$9.1 millions from France, \$11.9 millions from England and \$2.3 millions from India. Still, new engagements for shipment consist of \$5.9 millions from France, \$30.5 millions from England, and \$2.2 millions from India, so that gold continues to come from London in appreciable quantities. The influx of gold from Holland has now ceased.

THE STOCK EXCHANGE

BREWERY SHARES

HAVE brewery shares an "election equity"? Is the market discounting, as a bull point, the prospective continuance for another four or five years of a predominantly Conservative Government? It is a matter of record that the only fiscal kindnesses which have come the industry's way since the war were associated with Mr Baldwin's Treasury regime of 1923 and Mr Chamberlain's of 1933. With increased armament expenditure on the horizon, what better insurance policy could the industry have against Exchequer acquisitiveness than the retention of office by a statesman who, two and a-half years ago, declared that the beer tax had passed the point of optimum return?

In April, 1933, when the much-discussed penny was taken off the pint, the Actuaries' Index of 19 brewery shares (December 31, 1928 = 100), stood at 70.9. It has subsequently risen by 80 per cent. to a level of 128.2. This spectacular return of popularity is not wholly a vote of thanks to Mr Chamberlain. Recent fiscal changes, by a freak of circumstance, have been so timed as to coincide with major changes in the economic cycle, and to exaggerate their effects on the industry. Lord Snowden made beer dearer, in September, 1931, when general trade recession had already left its imprint on national consumption; Mr Chamberlain made beer cheaper when recovery had just begun to gain momentum. Nature considerably provided two successive hot summers and the industry has added its own contribution by way of increased internal efficiency. As a result, brewery profits are within hailing distance of 1929, though production is still well below that year's level.

Sound brewery ordinary shares are selling on a yield basis of approximately 4 $\frac{1}{2}$ per cent. This is high enough to suggest that the market is not inclined to discount a *progressive* increase of future dividends at the rate of the last two years, but low enough to suggest that the general outlook inspires confidence. If increased taxation can be avoided, the short-term barometer certainly appears indeed to have passed from "change" to "fair." British industrial recovery continues—the rise in our "Business Activity" index this week, indeed, is the largest for some months past. Increased expenditure on armaments may give a temporary fillip to earnings in various trades whose workers are traditionally among the industry's best clients. On a longer view, however, investors can scarcely ignore various conservative tendencies which have been obscured but not eliminated by the course of recent events. Their nature may be appreciated by reference to the following table:—

	Production (Thous. Standard Barrels)	Average Specific Gravity*	Amount of Tax	Total Registered Workers (a)		Yield of Beer Taxation*	Average Divi- dends on Brewery Ordinary Shares (b)
				Drink In- dustries	Hotels, etc.		
1924	20,732	Degrees 1,043.2	Shillings 100†	108,900	289,920	£'000 81,987	Per cent. 14.5
1929	19,435	1,043.0	100†	108,530	333,700	77,151	16.4
1930	18,811	1,042.6	103†	109,530	350,870	75,698	16.6
1931	16,377	1,041.1	134†	112,470	384,290	75,211	14.8
1932	13,228	1,039.5	134†	108,080	381,930	73,725	12.0
1933	14,314	1,040.9	24†	110,490	398,780	58,855	12.0
1934	15,521	...	24†	110,200	410,040	58,693	13.6

* Year beginning April 1st of year shown. † Per standard barrel, less rebate of 20s. per bulk barrel. ‡ Per bulk barrel of specific gravity of 1,027°, plus 2s. per additional degree. (a) July of each year. (b) Based on our analyses of brewery reports published during twelve months to June of following year.

Since 1924, the total labour force of the "catering industries," as a whole, has considerably increased. Total registered workers in the "drink industries" have risen slightly, and in the "hotel, etc., trades" by no less than 42 per cent. The brewing industry, however, has not shared, *pari passu*, in this development. The reduction in taxation and increase in specific gravities of 1933 have been followed by a sizeable enhancement of beer production and brewery dividends. Output, however, has not yet returned to anything like the level of 1929. Even in the pre-depression period, between 1924 and 1929, when the level of

taxation was steady, the beer production figures and the yield of the beer tax tended, on the whole, to decline. The increased dividend-paying power of the industry in this period was largely the result of increased efficiency. During the past decade, for example, closer concentration of productive effort has reduced the number of commercially operating breweries by 44 per cent. from 2,148 to 1,197.

Recent economic and fiscal changes, indeed, would appear to have stimulated rather than checked a long-term trend towards reduced beer consumption. Though the tendency is commonly attributed to the effects of the Great War, in fact, it largely ante-dated them. In 1899, the *per capita* consumption of beer in the United Kingdom was 32.53 gallons. In 1933, in Great Britain, it was 12.05 gallons.

How far the *post-war* trend has been due to changed national habits, how far to legislative restrictions on hours of business, etc., and how far to higher taxation and "retail" prices is a moot point. Mr George B. Wilson has estimated the total national expenditure on beer at £104.7 millions (United Kingdom) in 1913, and £142.9 millions (Great Britain) in 1934. The increase corresponds fairly closely to the additional £45 millions to £50 millions received by the Exchequer from beer taxation in 1934 as compared with the pre-war years. Brewing is by no means the only trade which has enjoyed the onerous privilege of making a greatly increased contribution to national revenue since the war. The tobacco industry, in a like case, found salvation by tapping a new market, thanks to the growth of the habit of cigarette smoking among women. The distilling industry has developed a subsidiary and largely untaxed product to a point of high importance, for some 68 $\frac{1}{2}$ per cent. of its current output consists of methylated spirit and industrial alcohol, against only 27 per cent. as recently as in 1924. Neither of these "reliefs" is open to the brewing industry, but the latter enjoys one compensating advantage denied to the tobacco and spirit trades. It controls a significant part of its own retail marketing organisation, through ownership of "tied houses." If the contemporary cult of open-air life, and the steady growth of "satisfactions" competitive with beer drinking have combined with high taxation to reduce consumption of the brewers' main product, they have equally presented a growing market on the "general catering" side. And here the brewery industry finds itself strategically well placed.

If long-term losses on the swings of beer consumption can be recouped on the roundabouts of refreshment, in its broadest sense, investors may be justified in refusing to write down brewery shares as equities in a declining industry. They may be well advised, however, to allow for the probable incidence of such a development on earnings and dividend policy for some years to come. This possibility may best be illustrated by an analysis of the recent financial results of some large brewery companies shown overleaf.

Earnings have quickly responded to the increased activity of the industry since 1933, and directors have shown no reluctance to pass on the fruits of recovery to ordinary shareholders. Dividend policy, however, remains distinctly conservative. Broadly speaking, the companies shown in the table required something between a third and a fourth of their latest year's profits for the payment of fixed charges, while total outpayments, including ordinary dividends, absorbed something between three-fourths and four-fifths of the whole. The "retained" percentage was distinctly higher than that of British industry generally. It was higher, as our table shows, in the case of breweries owning numerous "tied houses"—like Ind Coope, Watney, and Mitchells and Butlers—than in that of breweries whose products are nationally marketed—like Bass and Guinness.

It is highly desirable that the industry should finance the modernisation of its properties and any change in its main activities out of its own earnings. Some of the largest

(f) Based on 22½ per cent. dividend. § Compared with £1,582,000 in preceding year.

breweries have followed such a policy for years past. It may be the best insurance policy against the future, but investors should recognise its implications. The necessity to set aside substantial sums for property developments may affect both the level of expenditure allowed before annual profits are struck, and the extent to which net earnings are really divisible.

The conclusion must be that dividend yields of 4 to 4½ per cent. on brewery shares are not unreasonable, but do not leave wide scope for future appreciation of share values. Brewery profits over the next few months, like those of other consumption trades, will be mainly a function of the continuance of general industrial recovery. On a longer view, there is still room for a further rise in earnings through increased efficiency. Although the industry has made great strides recently, both in its advertising and its internal administration, it is still carried on by a multiplicity of units, many of which have a purely local organisation and territory. Such amalgamations as those lately effected between Ind. Coope and Allsopp, and Charrington and Hoare, may advantageously be the precursors of many others. In the long run, however, the investment appeal of brewery shares will be governed by the industry's ability to adapt itself to its new environment. Those in control appear conscious both of their responsibility and their opportunity. A sound policy, however, may not be capable of being reconciled with an arithmetical increase of unlimited duration in future ordinary dividend rates.

INVESTMENT NOTES

London and New York.—The London Stock Exchange continues to underwrite a "favourable" settlement of international difficulties in a strictly Pickwickian sense—a settlement, that is, which will secure peace on any terms, in the shortest possible time, with the least application of "sanctions." Sir Samuel Hoare's speech was read in Throgmorton Street as a reinforcement, in high quarters, of such a possibility. Although the scope of current dealings remained narrow—in market phraseology, there were "more bids than business"—the prices of all equity shares, from the least to the most speculative, were marked up, and gilt-edged quotations enjoyed a strong recovery. Between Monday and Wednesday, indeed, 2½ per cent. Consols rose by as much as 2½ points and War Loan by 1½ points. New York, simultaneously, resumed its advance, which was partially interrupted at the end of last week. It remains to be seen whether events belie the markets' faith in Signor

Mussolini's willingness, at this juncture, to stop, look and listen. The persistent firmness of prices, however, is undoubtedly significant. The result of the general election has already been discounted, and it may well be that, in the absence of Italo-Abyssinian factors, the market would now have been experiencing something like boom conditions. This impression is strengthened by examination of the following table, which shows the high and low points reached in successive price advances and setbacks in London and New York:—

LONDON*			NEW YORK†		
Date (1935)	Index	Remarks	Date (1935)	Index	Remarks
Mar. 27	87.4	Lowest of year.	Mar. 15	78.6	Lowest of year.
Aug. 13	104.2	Peak before "war" years.	Aug. 14	108.9	Intermediate high.
Aug. 27	98.5	Recession.	Aug. 28	105.1	Secondary recession.
Sept. 10	100.7	Partial recovery.	Sept. 11	112.4	Advance resumed.
Sept. 20	95.6	Recession.	Sept. 20	106.6	Setback.
Sept. 27	99.1	Partial recovery.	Sept. 30	110.1	Partial recovery.
Oct. 3	95.2	Recession.	Oct. 2	105.8	Recession.
Oct. 14	99.6	Recovery.	Oct. 15	114.1	Advance resumed.
Oct. 18	97.6	Slight setback.	Oct. 18	112.8	Slight check.
Oct. 24	99.5	Recovery.	Oct. 23	117.3	Advance continues.

* "Financial News" Index of 30 Ordinary shares (1928 = 100, subsequently revised to July 1, 1935, base). † "Standard Statistics" Index of 50 common stocks (1926 = 100).

There has been a remarkably close correspondence in the timing of recent equity share movements in the two centres. Both reached their lowest points for the year in March. Both enjoyed an almost uninterrupted rise until the middle of August. Despite New York's distance from the European cockpit, her share price index, like that of London, declined in the second half of August. Thereafter, the two indices moved in the same directions at the same times; but whereas London failed to regain the mid-August "high," Wall Street broke beyond it in the first part of September and, for all its ups and downs, has continued to show a steadily rising trend. It is not unreasonable to infer that the same stimulus—faith in continued economic recovery—is operative in both centres, but that international factors are more effective as a brake in London than in New York.

Cables and Wireless Possibilities.—The market has been impressed by the Cables and Wireless traffic figure for September, which, at 75.5, reached the highest level attained since March this year. Compared with recent months a substantial improvement in receipts may be presumed, but the simple mean for the current year is only 72.3, and shows an increase compared with the corresponding period of 1934 of no more than half a point. Undue importance should not be attached to the figure for a single month, but since the latest figure shows an improvement of 5.2 compared with September, 1934, and general international trade pointers are moderately favourable, there may be ground for hoping that the slow secular uptrend since July, 1932, will be projected further. The market's interest in the concern, however, is by no means confined to the traffic position. It has been widely assumed that the recent repayment of £6,453,407 5½ per cent. preference stock may be the prelude to some more broadly conceived reorganisation plan, embracing the question of the accumulated preference dividend arrears and some substantial writing down of the "A" and "B" capital. The official view is that an equitable scheme would be very difficult to come. On this substantial ground, it would probably be unwise to anticipate any early developments. It is interesting to note, however, that, including the payment due later to a gross total of £2,080,000. Assuming that the preference arrears might be discharged by allotting a portion of the equity interest to preference stockholders. At the present approximate prices of 26 and 7½ respectively the "A" ordinary is capitalised at £5,400,000 and the "B" at £650,000. If, therefore, a new issue of equity the three classes of preference, the "A" and the "B" ordinary stockholders in the ratio of (a) the nominal

amount of arrears, (b) ruling market capitalisations, the division would roughly result in 25 per cent. allotment in satisfaction of preference arrears, with 66 per cent. to "A" ordinary holders and only 9 per cent. to "B" ordinary holders.

Baird—A Welcome Decision.—In view of the unfavourable criticism aroused by the Baird Television reorganisation scheme (to which we took objection in our issue of October 5th, page 669), shareholders will be relieved to hear that the directors have decided to abandon it. Although the scheme was prepared on expert advice, the choice of current Stock Exchange values as a basis for permanent re-allocation of rights involved a glaring anomaly between the position of the preferred and deferred shareholders. On annual profits of less than £105,000, indeed, the former would have lost one-half of their income. The board have shown every disposition to meet the wishes of important holders and of the Shareholders' Protection Association. A new scheme has been evolved which has secured the latter's unanimous approval, and details will be submitted to shareholders as quickly as possible. In the meantime, the meetings convened for next Thursday have been cancelled. It is understood that the new scheme secures the desired objective of a simplification and reduction of the existing capital structure, to clear the way for a new issue on equitable terms, without involving hardship to any single class of proprietors. If this be so, investors will congratulate the board on their reasonable attitude and the Shareholders' Protection Association on an example of fruitful intervention, which appears precisely to fulfil the objects for which the Association was formed.

New Fixed Trusts.—Of the making of new fixed trusts there is still no end. The movement increasingly reflects waves of fashion, and the latest exemplars have exceeded all their earlier competitors in their comprehensiveness. The Century, issued by the "National" group, has a portfolio of 100 securities, and it is understood that the Dawnay-Day group has a new issue in preparation with a similar number of underlying securities. In the case of British Empire Comprehensive, there are as many as 150 individual holdings. On the basis of the lists of securities which have been published by the first and third of these trusts, it is perhaps difficult to estimate the precise advantages of the latest macroscopic trend. Greater industrial and geographical diversification will undoubtedly be permitted, but the enlargement of portfolios to such dimensions may tend to reinforce the duplication of market leaders which has for some time been apparent, and to open the way for the inclusion of a range of investments with a somewhat higher speculative interest. Recent developments in the movement are tending to raise the question whether the formation of new units—not infrequently totalling three in a week—may not shortly outrun reasonable expectations of demand. Clearly, so far as successive formations offer a mere duplication of facilities, the result may be to divide a remunerative market among a number of competing managements, depriving each of any prospect of reasonable return. Doubtless the total market for fixed trust sales is capable of further expansion, but this very fact may tempt the extension of facilities on a scale which may afterwards involve a problem of "surplus capacity" within the movement.

Actuaries' Investment Index.—The latest figures of the Actuaries' Investment Index show a continued slight improvement in the market for ordinary shares as a whole. The average price index of 158 industrial ordinary shares (December 31, 1928 = 100) stood on October 22nd at 75.6, compared with 75.2 on October 15th, and with the highest figure for recent months of 79.4 on August 13th. The corresponding yield figures are 3.89, 3.91 and 3.77 per cent.

INVESTMENTS FOR THE PRUDENT

The undermentioned six fixed trusts, all of which are managed by interests under the same control, cater for most investment needs. Sub-unit holders in any of these trusts know that their capital is prudently spread over first-class dividend-paying companies in the most stable and secure industries and is thus well protected from the risks and uncertainties of the present time.

Changes in the international political situation have brought increases in bank and insurance shares, which closely follow the gilt-edged market. At the same time, the lessening of international tension and the slightly less urgent prospective demand for armaments have led to a slight weakening of iron and steel shares and their close allies, coal shares. Reports from the Motor Exhibition have kept the market for motor shares firm.

COMPANY NOTES

Motor Accessory Shares.—The motor accessory trade like the motor industry itself, appears to be attaining its commercial majority. As we pointed out in a Note a year ago, the accessory market depends not only on the total output of cars (together with aeroplanes, bicycles and kindred vehicles), but also upon the number of accessories

which the public demands on the individual vehicle. Consequently the effects of depression were mitigated in some degree by the increasing number of individual fitments which users came to expect during the period. This, however, had the effect rather of hastening the revival of the leaders than of producing a general rise in profits. The boom of the late 'twenties had multiplied the accessory manufacturers—particularly, for example, in safety glass—and the motor manufacturers, in their search for economies, were able to obtain concessions from the accessory makers even though the volume of their total orders may not have been greatly reduced. Highly competitive conditions resulted, in which the ranks of the accessory makers were

noticeably thinned. As the annexed table shows, the majority of concerns which have survived that difficult period have been amply rewarded by the subsequent revival of their profits. Not only has their competitive position been greatly strengthened by the elimination of weak sellers, but the "recovery" expansion of the motor, aeroplane and bicycle markets has exceeded expectations. It would seem unlikely that the recent rate of expansion in the most favoured section of the trade can be maintained. Thus, the Triplex company has benefited not only from the elimination of competitors but also from the rise of the saloon car with "all safety glass" equipment as standard, and from a remarkable reduction of production costs. After the rapid rise in gross profits between 1932 and 1934 there has been a levelling out in 1935. Further increases may result from the company's new products, but they are outside the motor accessory business. Moreover, the appearance of the £100 Ford four-seater may indicate the beginning of a new wave of price reductions by the leading popular manufacturers, in which the accessory makers may have to bear some share. The conclusion would appear to be that while the general prospect for the well-established accessory makers is good, it would be imprudent to measure their future possibilities by their recent rate of revival. The leaders offer a sound medium for taking an interest in the expansion of the motor industry, without having to face any serious risk on "the year's model."

B.A. Great Southern.—The moderate recovery in peso net receipts from \$36.3 millions to \$38.8 millions in the twelve months to June 30th last, will be of modest comfort to B.A. Great Southern stockholders. The apparent increase in sterling receipts, calculated at par, has purely formal significance in the light of the very heavy losses which have been sustained on remittances. The provision under this heading is nearly doubled, from £896,589 to £1,736,071. The firmer trend of the peso in the free market has brought some appreciation of currency floating assets compared with the previous year, but the total cost of exchange differences still exceeds that of the previous year by £104,988 at £1,552,722. The board is justified in halving the 6 per cent. preference dividend, for the latest year's improvement in net revenue from £301,052 to £411,367 still leaves the first preference dividend barely covered, and the 3 per cent. payment on the second preference stock almost wholly uncovered. In the absence of a transfer from contingencies, the net revenue account would have shown an adverse balance. The disappointing story of the last three years is analysed below:—

Years to June 30			
1933	1934	1935	
Operating receipts	£10,560,668	£10,516,260	£10,957,684
Operating expenses	7,417,265	7,347,472	7,571,296
Operating profit	3,143,403	3,168,788	3,386,388
Dividends, interest, and discounts received	Cr. 192,408	Cr. 206,216	Cr. 204,758
Exchange loss on remittances	264,540	896,589	1,736,071
Depreciation of currency floating assets	249,350	551,145	Cr. 183,348
Payments under working agreements	546,679	541,139	541,977
Debt interest and other fixed charges	1,060,279	1,085,079	1,085,079
Earned for dividends	1,214,962	301,052	411,367
Preference dividends	880,000	880,000	640,000
Carried forward	766,127	187,179	†28,547

† After crediting £70,000 transferred from Bahia Blanca and North Western Railway contingencies fund.

Analysis of the year's working reveals that goods traffic has provided the substantial proportion of the increased takings, with an increase of £344,350. So much was to be expected from the improved economic conditions of the past year. The effects of drought, particularly in the Northern Provinces, suggest that the current outlook for this predominant wheat line is appreciably less propitious. Passenger traffic receipts have been severely affected by road competition, particularly in Buenos Aires. Since consideration of the Transport Co-ordination Bill has been deferred by the Senate until next year, any relief from road

competition will be further delayed. The co-ordinated working with B.A. Western may bring some operating economies, but its benefits in relation to road competition and the enormous cost of exchange remittances can hardly prove substantial. It is stated that general renewals cost £242,987 net, compared with £213,120 in the previous year, but the general renewals fund has this year been credited with only £120,000, compared with £246,585 in the previous year. The 5 per cent. non-cumulative preference stock is quoted at 55½xd to yield 6 per cent., and the 6 per cent. issue at 44½xd to yield 6 15s. per cent. on a 3 per cent. payment.

B.A. Western.—This undertaking (which is closely related, on the management side, to the B.A. Great Southern) has been unable to offset the difficulties common to all Argentine railways. Both peso gross and net receipts are lower, and the rise in working expenses—which must be attributed to increased labour costs—has increased the operating ratio from 78.6 to 83.9 per cent. Translated into sterling, net receipts have fallen from £773,870 to £564,283. Remittances have cost over £179,000 more in exchange losses, and despite the improved sterling valuation of local current assets, the total exchange provision has been reduced only by £36,818. After payment of fixed charges, the result for the year is a deficit of £40,312, compared with a net surplus of £108,486 for the previous year. In consequence, the full payment on the 5 per cent. and half payment on the 4½ per cent. non-cumulative preference stocks are wholly short-earned, as the following table shows:—

Years to June 30th			
1933	1934	1935	
Operating receipts	3,546,426	3,612,117	3,513,204
Operating expenses	2,893,942	2,838,247	2,948,921
Operating profits	652,484	773,870	564,283
Rentals, dividends and other receipts	Cr. 276,081	Cr. 232,468	Cr. 246,749
Exchange loss on remittances	44,353	259,247	438,464
Depreciation of currency floating assets	98,750	88,120	Cr. 127,920
Payments under working agreements	74,218	66,717	70,027
Debt interest	483,774	483,774	470,773
Earned for dividends	227,470	108,486	Dr. 40,312
Preference dividends	129,855	129,855	72,428
Carried forward	189,542	168,173	55,433

These poor results, in comparison with the B.A. Great Southern, must be largely attributed to a fall of 7.4 per cent. in goods traffic receipts. Wheat tonnage proved disappointing, but the shorter average haul—despite the larger total goods tonnage handled—also reduced receipts. On cereals alone, the fall in revenue was as much as 15 per cent., for the increased movement of maize and rye fell far short of recouping a severe loss on wheat. During the year renewals expenditure has been kept as low as £81,096, and the renewal fund, which shows a balance of £2,993,313, has not been supplemented during the past year. In view of the reduced current wheat crop, and the loss of tonnage which last year resulted from increased Bahia Blanca shipments, the present prospect is only re-

lied by the co-ordination of working with the Great Southern system, whose fruits, in any event, are likely to mature only gradually. The 5 per cent. non-cumulative preference stock is quoted at 62xd to yield 8 rs. 4d. per cent., and the 4½ per cent. non-cumulative preference stock at 42½xd yields 5 5s. 11d. per cent. on the latest half-payment.

B.A. and Pacific.—Although this system showed an increase of £395,991 in gross receipts, operating expenses were only £28,893 higher at £4,670,779. After the substantial savings which have been effected in recent years, the moving of an additional 120,000 tons at a relatively slight increase in costs is commendable. As a result, operating profits have advanced from £1,202,087 to £1,569,185, while the deficit on net revenue account has been substantially reduced from £1,254,379 to £830,668. The resultant debit carried forward now amounts to £3,295,551, compared with a balance of £2,251,665 on general reserve and with total reserves including specific provisions of £3,149,711. With the exception of the first debentures of the company and of its two associates, Argentine Great Western and Villa Maria, debenture interest, although charged, has not been paid since December, 1931, under the 1932 Scheme. The gross and net revenue position is analysed below:—

Years to June 30th			
1933	1934	1935	
Operating receipts	5,827,691	5,843,973	6,239,964

† £664,719 in respect of remittances and £502,545 for depreciation of currency floating assets, less £317,047 in respect of previous years charged to general reserve. * Including interest on arrears except first debenture stocks met on due dates.

In common with other Argentine systems, wheat and fruit traffics have proved very disappointing, but maize, other cereals and, in particular, wine show satisfactory improvement. Stockholders may ask, however, whether increased maintenance charges will not be called for in the future. There is now evidently little scope, to judge from the General Manager's report, for retrenchment without affecting the standard of maintenance, for labour conditions make it difficult to adjust staff to practical requirements. The fruit industry is progressing in the company's zone, but quality and yield must be greatly improved before it becomes of substantial importance to traffic receipts. The 4 per cent. first debenture stock is quoted at 64½, to yield 6 6s. 3d. per cent., allowing for accrued interest.

Imperial Airways Position.—The full accounts of the leading Empire air service for the year to March last show a considerable advance in disclosed revenues. Before charging the provision of £50,000 for staff welfare, the amount earned for the ordinary shares has increased from £51,071 to £97,519. As in previous years, the amount received in respect of Government subsidies is not disclosed, but evidently the improvement is in large part due to increased traffics, which for the eleven months to

February last rose by nearly 20 per cent. to £1,412,000. An analysis of the recent results is given below:—

	Years to March 31,		
	1933	1934	1935
	£	£	£
Balance from trading account after crediting subsidies	266,150	314,661	366,446

† Includes £2,500 in 1933 and 1934 and £6,250 in 1935 for writing off consideration for waiving Air Ministry claims for repayment of subsidy; also £10,000 in 1933 and 1934 and £15,000 in 1935 written off cost of interests in African route. ‡ After crediting £31,593, recoveries on claims not attributable to the year.

The Government have now informed the directors that the company will continue to be the Government's chosen instrument for the operation and development of Empire air routes, and that all first-class mails to the Dominions will be carried by present routes. A long-term agreement to give effect to these proposals is under discussion. The future of the company may thus be settled satisfactorily to investors. Calculations of subsidy expectations in the current year may lose something of their force in the light of this announcement, but it is not without interest that those amounts receivable, which can be controlled from official sources, show a fall from £481,000 to £395,000 for the current year. Since the balance after working expenses amounted to £366,446 in the latest year, while eleven months' traffics amounted to £1,412,000, it is possible to offer some tentative estimates of working experience. If the March traffics are taken at £130,000, and if the company received the whole of the subsidy payments shown in the last Estimates at £561,000, the total revenue would amount to £2,103,000, and operating expenses to £1,736,554. A repetition of last year's traffic increases may be required to offset the reduction in subsidy payments, for the real operating ratio, so far as these tentative estimates can be relied upon, is of the order of 113 per cent. The increase in receipts for the June quarter, it may be noted, amounted to £77,939, equivalent to 20.7 per cent., on the corresponding quarter of 1934. The accounts, which are very informative on all points except the subsidy, are supplemented by a consolidated statement, and by a helpful annotated comparison with the previous year. The current position has again been considerably strengthened by the improved trading results and obsolescence provision. The £1 ordinary shares are quoted at 48s. 1½d. ex dividend, yielding the comparatively low return of £2 18s. 2d. per cent. on the 7 per cent. distribution.

United Dairies Results.—Owing to the inclusion of 15 months' profits from the engineering and utensil subsidiaries in the revenues of this premier dairying concern, the total profits of £652,904 are not strictly comparable with £627,114 recorded for the previous year. The report, however, specifically refers to the increase of 12.7 million gallons in the quantity of milk handled. The market's concern, a few weeks ago, was clearly not aroused by the prospect of these latest results. Although it has always been assumed that the engineering and utensil sections contribute an appreciable share of profits, the absence of the necessary information permits no inference as to the course of dairying profits, as such, on the increased turnover. The amount earned for the ordinary capital after last year's bonus issue is £435,918, compared with £405,487 for the previous year, and the percentage

earnings, as the following table shows, are very slightly lower:—

	Years to June 30,		
	1933	1934	1935
	£	£	£
Dividends and interest received..	493,274	510,781	540,224

Reserve

Carried forward

† Includes £17,121 from profit on sale of temporary investments in 1933 and £7,761 in 1934. ‡ And capital bonus of 10 per cent. requiring capitalisation of £224,000 from reserve. § After writing off £3,079 issue expenses.

During the year as much as £192,569 was spent upon plant extensions to cope with increased business, and a profit of £15,831 from the sale of redundant properties has been utilised to reduce book values. The balance sheet reflects, as usual, a strong position, but since shares in, and net advances to, subsidiary concerns amount to £4,210,137 out of total assets of £7,283,031, and apparently provide £540,224 towards total income of £652,904, the advantage of consolidated statements for both sections of the accounts would be appreciable. The £1 ordinary stock units, which fell as low as 58s. during the recent contract dispute, have since recovered to 61s. 6d., at which they yield £4 1s. 3d. per cent. It may be remembered, however, that the Committee which was appointed to consider the new contract terms has yet to report to the Minister of Agriculture, and the possibility that profit margins may be reduced on the current year's milk business cannot, at this stage, be ignored.

British Celanese.—The report of British Celanese for the year to June 29th last is slightly disappointing. The higher earnings level established a year ago has not been fully maintained, for trading profit shows a decline of 9 per cent. at £2,350,491. Only one year's depreciation, however, requires to be written off this year, whereas twelve months ago the company had three years' arrears to clear off:—

	Year to July 1, 1933	Year to June 30, 1934	Year to June 29, 1935
Balance of trading account ...	1,685,550	2,593,028*	2,350,491

Total carried forward	252,463	59,554	152,192

* Including dividends receivable from subsidiary companies. † "General sales and administrative expenses, royalties, Excise Duty, adjustments of stock values, etc." ‡ Proportion of last three years' research and advertising expenditure, and year's additions to patent rights, written off. || Income tax provision written back of £13,602 income tax written back, and £175,951 surplus on realisation of investments. ¶ Expenses of mortgage debenture issue, reserve, £8,068; depreciation for three years ended July 1, 1933, £727,478. § Underwriting commission on debenture stock issue written off. ** 1933-34, half-year's dividend to April, 1931; 1934-35, 3 years' dividends to April, 1934, including one year's payment announced since date of accounts.

It is stated that the reduction of the Excise Duty from 1s. to 6d. per lb. involved a large loss on stocks, but the record level of production brought a substantial increase in net profits, despite this exceptional adverse factor. The directors regard prospects for future profits as "very favourable," in the absence of a setback in national trade, and estimate profits for the first quarter of the present year at approximately 70 per cent. above those of the corresponding months of last year. Shareholders, however, will be reluctant to budget for the continuance of anything like this high ratio of increase through the year. Immediate attention centres rather on the company's plans for capital reconstruction which, after the re-establishment of a satisfactory earnings basis, should not now be long delayed. The position as regards depreciation has been cleared up, and various payments on the First Preference shares have brought the arrears up to April, 1934. When the latter have been paid off, presumably in the next few months, five years of arrears, totalling £1,593,750, will remain on the Second Preference shares. The possibility has been canvassed of a funding scheme based on the issue of ordinary shares to Second Preference shareholders—accompanied, possibly, by an invitation to the latter to accept some modification of their rights to 25 per cent. of surplus profits up to a maximum dividend of 10 per cent. A thorough-going clean up of the balance sheet, however, would involve further readjustment, for it is inconceivable that the company will desire permanently to carry among its assets goodwill, patents and patent rights valued at £1,913,118 and commutation of royalties valued at £1,100,558. Until these arrangements have been settled, investors will be unable to put any firm valuation on the 10s. Ordinary shares, which are at present quoted at 12s. 3d. The Second Preference shares, at 21s. 10½d., are the more interesting speculative counter. A moderate increase in earnings might make their preferential prospects attractive. For the moment, however, any rights which might accrue to them as a result of the treatment of their arrears in a reconstruction, must be regarded only as a species of deferred equity.

Other Company Results.—The results of thirty-four additional concerns are published in summarised form in our usual table on page 833 of this issue. The appearance of a number of important results this week marks the commencement of the seasonal output of large reports during coming weeks. The latest announcements have been favourably received by the market. *Standard Motor* profits, for example, have stimulated provincial purchasing of the shares at new high levels, on the increase from £106,795 to £157,546. Similarly, *Prices Trust*, which holds the equity interest of the well-known tailoring business, publishes a maiden profit of £87,955, and pays 15 per cent. on the ordinary shares. The recent progress of *New Hudson* has now cleared the debit balance at profit and loss. The latest profits amount to £18,025, compared with £17,165, and the modest but reassuring credit of £2,090 goes forward. The latest rubber results continue to display a certain irregularity. Among the larger concerns, *Eastern Sumatra* and *K.M.S. (Malay States)* show a satisfactory improvement, but some of the smaller companies have apparently been unable to offset the effects of reduced output. Among the miscellaneous concerns, *British and Colonial Furniture* shows a substantial increase in earnings, and pays a 10 per cent. dividend. *Tecalemit*, a concern made public as recently as October, 1934, reports net profits of £53,687 for the period to July 31st last, covering the 14 per cent. dividend with a substantial margin. Only slight improvement is disclosed by the *D. and W. Murray* report, which shows that a loss of £8,923 has been converted into a small profit of £3,873, leaving the heavy debit of £279,459 to go forward.

MINING NOTES

Rhokana Corporation.—The past year will rank as an eventful period in the history of this important Northern Rhodesian copper producer. The electrolytic refinery came into operation early in the year, and later in the period the

restriction scheme was drawn up by the principal producers. On the financial side, the company's capital structure was changed by an issue of 1,500,000 preference shares, the expenses of which, together with provision for debenture redemption—totalling £111,180—have been written off from general reserve. Production in the latest year amounted to 69,230 long tons, as compared with 62,180 tons in the preceding year, and costs were slightly lower at £22.2 per ton. The fact that the profit, at £481,290, fell somewhat below the earnings of 1933-34 is attributable to difference between stock valuations. The preference dividend for the broken period absorbed £26,560, and the initial distribution of 12½ per cent. on the ordinary shares required £305,290. After allocating £150,000 to general reserve, a balance of £287,620 is carried forward, against £429,910 brought in. Capital expenditure for the year totalled £693,700. The company's various properties have been written down to a nominal figure, while its holding of 2,758,600 shares in Mufulira is entered at £1,007,730. The first year's operations on the part of this undertaking are expected to show a loss, but ultimately a good return is "confidently expected." On the basis of the maiden dividend, Rhokana £1 shares at a current quotation of just over £5 ex-dividend give a yield of about 2½ per cent. The market is thus making evident allowance for the improved results anticipated in the future.

Consolidated African Selection.—Last year's results, writes our mining correspondent, show a small decrease in revenue, accompanied by a higher total dividend, owing to a reduction in general expenditure. The income from diamonds, trading, etc., amounted to £261,070, as against £268,950. No provision has been required for debenture premiums, owing to the recent redemption, and the present accounts are relieved of issue expenses, which absorbed £15,200 out of the 1933-34 profits. A whole year's preference dividend, however, required £16,300, compared with £7,640, and £7,500 was set aside towards the preference redemption reserve. Taxation at £58,600 absorbed more than double the previous year's amount. The allocation to general reserve was unchanged at £25,000. The balance dividend of 40 per cent. makes a total of 65 per cent., against 60 per cent., but the balance carried forward has been reduced from £32,210 to £15,650. The directors describe the position on the Gold Coast as satisfactory, and mention that prospecting work in Sierra Leone has "indicated the existence of further large payable deposits of diamonds of good quality." Additional plant will shortly be in operation, permitting the company to raise its output to a level "more commensurable with the extent of the known reserves." The cash position is good, current assets totalling £382,840, against current liabilities of £199,000, including the final dividend. On the basis of last year's distributions the indicated yield is just under 6 per cent. With the prospects of a further expansion in the rate, this return may be regarded as adequate.

Cam and Motor.—A further expansion occurred in the latest results of this concern, which is the most important gold producer in Rhodesia. Unfortunately, the company continues its practice of setting out net receipts from the gold premium as a supplementary item in the profit-and-loss account. Thus the table of operating results may lead to erroneous conclusions. According to the manager's report, the net working profits of the mine amounted to £150,700, or 9s. 9d. per ton, in place of £156,280, and 10s. 2d., previously, reflecting the crushing of a slightly increased tonnage, since the improved recovery was offset by an advance in the costs. The available surplus for 1934-35 amounted to £329,180, compared with £248,650, and the dividends totalled 7s. per share, against 6s. Once again £50,000 was transferred to reserve, increasing the fund to £100,000. This appropriation appears necessary in view of the deficiency of £106,500 in cash assets on June 30th. Despite

the favourable developments at depth, the value of the ore reserves is 1s. per ton lower at 39s., the tonnage being 29,000 tons higher at 1,233,000 tons. On last year's dividends the shares yield 9 per cent.

Company Meetings of the Week.—On later pages of this issue will be found the reports of the following companies:—Anglo-South American Bank, El Oro Mining and Railway, John Delaney, Tangoel Rubber Estates, Seager Evans and Company, and Morkwa. The chairman of Anglo-South American Bank, after explaining the difficulties with which the Bank is faced, said that he could see little in the world situation to encourage anybody who is prepared to look facts in the face. Mr Ernest T. Thornton-Smith, of Seager Evans and Company, said that the directors looked forward with considerable confidence to the future; sales of the company's gin had greatly increased. The chairman of El Oro Mining and Railway Company reported the best results for many years. The price of silver is most important to the company, and he expected the United States Silver Senators to keep up their agitation. The chairman of Tangoel Rubber Estates estimated that, with the present price of rubber, the company should be able to obtain satisfactory results. At the meeting of Morkwa, Ltd., the chairman drew attention to the great improvement in the company's cash position in the last two years and reported favourably on the exploitation of the properties in West Africa. The chairman of John Delaney reported an uneventful year, the chief event of which had been the renewal of an important contract for the supply of lime at a slightly higher price.

THE WEEK IN THE MARKETS THE LONDON STOCK EXCHANGE

SETTLING DAYS
TICKET NOVEMBER 5 | ACCOUNT NOVEMBER 7

The market's whole attention has been concentrated upon St. Stephen's this week, and it has not been disappointed. The Foreign Secretary's declaration against military sanctions and his elaboration of the meaning of "collective" action marked the turning point of the market's mild apprehensions regarding international politics, including in particular the recent diplomatic strain between Great Britain and Italy. Hopefulness developed into assurance as the general election had no effect on a market which can perhaps afford to count upon the return of a Government of predominant "House" complexion.

During the previous week operations in the gilt-edged market had been largely restricted to War Loan, pending the deduction of interest. This week's movements, however, were appreciably more buoyant. War Loan operation was in half-gallop, with the speculative operators busy in the "irredeemable" group. Dated stocks showed sound improvement, the Conversions advancing on Wednesday as much as three-quarters of a point. India stocks appreciated in sympathy with gilt-edged, and in a firm well supported.

In the European bond list, where "nerves" have been very evident in recent weeks, the improvement in the international situation brought renewed support for Austrian issues—the 7 per cent. loan reaching 87 in end-week dealings—and other depressed Central European issues were slightly more confident. The principal feature elsewhere was provided by the continued strength of Japanese bonds, which appreciated steadily by one point each day. The tone in the South American market was good, but rises tended to be fractional and somewhat irregular.

The temporary alleviation of the South Wales coal troubles brought early support to the Home Rail market, which was further stimulated in mid-week dealings by a batch of reasonably good traffics. The postponement of the

appeal in the Southern rating case to mid-November can now be regarded as authoritative. Although business was never more than moderately active, both ordinary and prior charge stocks moved to slightly higher levels. The Argentine rail market professed to find the latest results (discussed on pages 814 and 815) better than its gloomiest anticipations and prices were generally marked up. Further encouragement was derived from the week's traffic returns—despite their apparent irrelevance in view of the exchange position. A special rise in Antofagasta issues marked the decision to pay 2½ per cent. on the 5 per cent. preference stock, which surprised a market which had gone dividendless since 1932.

In the industrial market, the momentum steadily increased throughout the week. The market could not have expected more favourable confirmation of its own construction of international developments than Tuesday's statements from Westminster, and the quickening of professional interest was promptly followed by a confident volume of public support. Wall Street's influence, which provided most of the interest on Monday, tended to lose importance amid the general advance. An opening feature, however, was provided by Cables and Wireless stocks in response to the higher traffic index. Some possibilities in this group are discussed on page 812. Motor shares were active. Standard found a keen demand at strongly rising prices, while, in a strong commercial motor group, Dennis were tempted earlier in the week to discount increased dividend prospects. In the electrical market, both equipment and supply issues were in renewed demand, the former amid reports of capital bonus possibilities.

A prominent exception to the week's trend was found in the iron and steel group. Possibly some dealers inclined to the view that the recent advance discounted possibilities sufficiently far ahead. After the Prime Minister's speech, with its insistence upon increased defence provision, the market could not have been in any doubt regarding its prospects, but there was no stimulus to extend new purchasing. Aviation shares, similarly, ruled much quieter than of late.

Shares in the home consumption trades were firmer without exception. Among brewery shares the advance was general; distilling issues improved; and the leading tobacco issues were steadily supported. Provision issues, including Unilever and Tate and Lyle, responded to firm support, while United Dairies rose on the report (discussed on page 816). Textiles showed a firmer front, although British Celanese made a dull response to the report (analysed on page 817), which lacked the expected scheme to deal with the second preference arrears.

A cheerful tone suffused the miscellaneous section of the market. Business opened with modest confidence, and public support did not seem assured until mid-week. The tone became cheerful after the Foreign Secretary's speech, when building issues took the lead, and chemical, oxygen, metal and rubber shares found good support. Special activity developed in British Portland Cement on Thursday in anticipation of a new issue on bonus terms. Bank shares continued to improve slightly, and some fairly substantial investment buying was reported in the insurance share market.

Among oil shares, the account started well, and continued to improve. Short sellers promptly covered their positions, and the leading issues maintained an advance without any check. Interim dividend hopes were freely canvassed, but United States petrol movements were not without influence in a much more confident market.

The rubber share market, ever bullish so far as restriction possibilities are concerned, was further reassured this week by the publication by the Dutch East Indies Government of the financial provision for its stock-holding operations. This attempt to stem the native problem, assisted by the further increase in the export duty and by the general improvement in market sentiment, brought an appreciable influx of buying orders, which, not infrequently, were covered with some difficulty. Tea shares opened rather quietly, but certain tea cum rubber issues showed more life in mid-week dealings.

Interest in the mining markets broadened during the week, although professional activity remained an important factor. A long list of gains was established in open-

ing "Kaffir" dealings, but features were reserved for later days, when West Witwatersrand crossed the £4 mark, and other concerns in the development stage were well supported. Established producers, however, were not neglected, and both Daggafontein and Sub Nigel were prominent. The recovery spread its mantle over the East and West African markets, and Australian issues responded sympathetically rather than warmly. Buyers were attracted to the tin shares on the further increase in the quota, and the Rhokana report (discussed on page 817) was satisfactorily received by the Rhodesian copper market.

FOREIGN STOCK EXCHANGES NEW YORK

AFTER the middle of last week Wall Street paused to digest its advances, but on Saturday M. Laval's peace moves started the rise again, and the more fundamental stimulus of domestic business recovery carried prices upward to the middle of this week. Motor and motor accessory shares continued to lead the market; motor output is increasing slowly and the industry is awaiting the result of the New York Show, brought forward for the first time from Spring to November. General Motors has cut the charge to customers for financing instalment sales to 6 per cent. First-class industrials made substantial gains, and speculative issues were pushed up by increased interest from the public. Oil shares were firm in spite of increasing production which is being stored by Western producers. This week even Utility issues joined in the general rise, in expectation of a favourable decision from the Federal District Court of Baltimore in the American States Public Services Company case. This may lead to a rejection of the Public Utilities Act by the U.S. Supreme Court. The New York, New Haven and Hartford Railroad has filed a petition to reorganise under the Bankruptcy Act, because of low gross revenues and inability to raise new loans; yet railroad issues

THE COMING BOOM IN AMERICAN MOTORS

By L. L. B. Angas

Send cheque for 4/- to:—
BROOKMIRE CORPORATION, 551 FIFTH AVENUE, NEW YORK

became one of the strongest features of the day on Wednesday. Interest in the bond market was centred mainly on low-priced issues and convertible rail bonds. All signs point to an expectation of inflationary recovery as the mainspring of the stock market enthusiasm, the daily share turnover running at 2,750,000. Imports of gold continue and member banks' excess reserves are now \$2,248,000,000. Interest rates are firmer in some parts of the country, and there is a slight increase in the demand for commercial loans. Bankers' acceptances increased over \$30,000,000 in September. Business activity during the first half of October was maintained at the September level; car-loadings are 15 per cent. above last year; electricity output for last week was 11.7 per cent. over last year; and "Iron Age" reports steel mill activity as 52.5 per cent. of capacity, against 52 per cent. last week.

PARIS

The Bourse ended last week with a firmer tone. Bears were cautious, since any lessening of the tension in the Mediterranean which might occur over the week-end would cause a collapse in their position. At the beginning of this week the anticipated political developments led to an all-round increase in prices, and the bear account was largely closed. Rentes gained over one point, Suez Canal and closed. Banking shares made appreciable gains; mining shares were fairly strong and commodity shares joined with rises in commodity prices. But the usual indecision set in at mid-

week, and profit-taking led to losses in a narrow market, with business confined mainly to professional operations. The Bourse is unable to find hope in either the position of France's domestic economy or the rapid changes in the international outlook.

BERLIN

The share market last week was dull, and two-thirds of the industrials were at times unquoted. Prices of steels, chemicals and public utilities declined until Friday, but some electrical issues were firm. On Friday the market recovered, and the week closed firm. Reichsbank shares were stable, the commercial banks advanced after an initial decline, Aku rayon rose, and a special bull market developed in Westdeutscher Kaufhof (Tietz). The new week opened firmly, with gains by rayon issues, which continued to advance on Tuesday against a weakish market. Reich valorised loan rose, and in general mark bonds were steady. Among certificated dollar bonds, the State and bank issues were slightly lower. On Wednesday, all prices sagged, with the exception of Reichsbank shares, which gained over one point. The volume of business was small.

AMSTERDAM

Last week closed with a burst of activity on what were called optimistic hopes of the political situation; but since attention on the Bourse was concentrated on commodity issues, such as sugar and rubber, the optimism must have referred to "localisation" of the war, not to its termination. Industrials shared in the rise. Philips Lamps gained 7 points, and even shipping shares were buoyant. But enthusiasm fell this week, which opened with profit-taking. Shipping and industrials continued to be firm on Monday, but rubber issues were dull in spite of a large decrease in British stocks. Sir Samuel Hoare's speech was interpreted as a weakening of Britain's stand for the League, and, with receding hopes of war profits, commodity issues fell appreciably. In general, the Bourse held slight gains over a week ago, with bonds slightly higher.

CANADA

The Canadian stock markets reacted in the second half of September owing to the war scare in Europe, and stocks declined steadily. On October 3rd the Investors' Index published by the Bureau reached a low point since May, and both investors and speculators showed considerable nervousness regarding the outlook. Subsequently the tone has improved, and there is evidence of some renewal of investment buying. Trading, however, remains on a limited scale, and on the Montreal Exchange it has been running under 6,000 shares per day. Only bank stocks have shown real strength and some substantial advances have been registered. The bond market has been weak, and Government issues have been weaker following Mr Mac-scheme. The average price of seven high-grade Canadian bonds on October 8th was 107.62, as compared with 111.54 on August 31st. Mining shares have been fairly active but spasmodic. The rise in copper has brought speculative interest in copper shares. The Investors' Index of the Bureau of Statistics for the week ending October 3rd was

94.7, as compared with 95.8, 98.5 and 98.7 for the weeks ending September 26th, 19th and 12th respectively.

CAPITAL ISSUES

THE new issue market has again been quiet this week, although there are signs that the more confident trend of the market may encourage a modest revival of activity. The only public offer, on behalf of *Weyburn Engineering*, met with a favourable reception. The profits of this precision engineering concern have shown a remarkable expansion since 1931, and the cover afforded by recent earnings on the relatively small capitalisation is satisfactory, and the purchase consideration appears reasonable. The small size of the mixed issue, however, may make for a somewhat narrow market. Among this week's "introductions," the most spectacular is that of *Short Brothers* 5s. "A" ordinary and ordinary shares. Some 250,000 of the latter were acquired by Erlangers, Ltd., at 23s. 4d. (together with options on two blocks of 37,500 shares at 25s. and 27s. 6d.). Dealings commenced at 29s. 9d., but the shares were rapidly bid as high as 33s. This "introduction" thus follows the pattern of some recent examples, where the high premiums established on opening dealings have raised the question whether advertisement "for information only" and the making of a market are appropriate in such cases. The profits of *Alex. Lawrie* show a decline during the last decade, but the average for the last six years shows satisfactory cover for the preference and ordinary shares. Two other concerns with overseas interests, *Rollo Tea Estates of Ceylon* and *Port of Beira Development*, have also published particulars "for information."

PUBLIC OFFER

Weyburn Engineering Company, Ltd.—Issue of 120,000 6 per cent. cumulative 10s. preference shares at par and 160,000 5s. ordinary shares at 6s. 3d. per share. Acquires from July 1, 1935, engineering business, founded in 1913, for £52,000 payable in cash, and the discharge of debentures and bank loans amounting to £15,846, patent rights for £15,000, payable half in five years; and properties for £6,250 in 5s. ordinary shares. Profits years ended October 31st, before tax and interest: 1932, £4,067; 1933, £6,129; 1934, £11,112. Eight months to June 30, 1935, £9,130. Net assets acquired £78,394, plus £7,500 patent rights. Lists closed 9.5 a.m. October 22. Heavily oversubscribed.

BY STOCK EXCHANGE INTRODUCTION

Lawrie (Alex.) and Company, Ltd.—Issued capital, 120,000 6 per cent. cumulative £1 preference and 140,000 £1 ordinary shares. Operates merchanting and agency business established in 1878. Converted into a public company September 3, 1935. Profits, after charging all expenses other than management commission and income tax: 1932, £25,344; 1933, £36,869; 1934, £37,140; half-year to June 30, 1935, £12,760. Balance sheet, June 30, 1935, shows total assets £339,722.

West's Gas Improvement Company, Ltd.—Issued capital, 50,000 £1 ordinary; 99,805 10 per cent. participating £1 preference and 100,000 6 per cent. cumulative £1 preference shares. Business founded 1874; contractors for gas works plant, patentees of Glover-West Vertical Retort. Net profits, after all charges, years ended March 31st: 1933, £14,313; 1934, £2,396; 1935, £11,586.

Rollo Tea Estates of Ceylon, Ltd.—Issued capital, 40,000 5½ per cent. cumulative £1 preference shares and 79,088 £1 ordinary shares. Acquires from July 1, 1935, Ceylon tea estates valued at £111,559 for £111,588, payable £32,500 cash and £79,088 in fully-paid ordinary shares. Net profits, before charging depreciation and income tax, years ended June 30th: 1933, £5,389; 1934, £8,168; 1935, £12,669.

Short Brothers (Rochester and Bedford), Ltd.—Issued capital, 350,000 5s. ordinary and 250,000 5s. "A" ordinary shares. Founded 1908. Designers and manufacturers of aircraft. Converted to public company August 31, 1935, when 109,984 5s. shares were subscribed for in cash at par. Erlangers, Ltd., have since acquired 250,000 ordinary shares at 23s. 4d. per share, and have options to purchase 37,500 shares at 25s. and 37,500 shares at 27s. 6d. up to April 17, 1937. Net assets, excluding goodwill, £245,246. Profits, before charging income tax, years to August 31st: 1934, £12,467; 1935, £68,747, including £24,586 from sale of royalties, etc.

Port of Beira Development, Ltd.—Capital, 780,000 ls. "A" shares and 20,000 "B" ls. shares. Incorporated in 1922. Owns docks and quays at Beira and 90 per cent. of capital of Beira Works, Ltd. Latter earned surplus of £49,293 for year to March 31, 1935, after charging depreciation and debenture interest. Total assets of Port of Beira Development, Ltd., March 31, 1935, were £60,046.

BONUS ISSUE

London and Colonial Investment Corporation, Ltd.—This company announces a share bonus of one deferred share £1 for each complete £20 of deferred stock requiring £9,240 of reserve to rank for dividend as from October 1, 1935.

BY TENDER

West Hampshire Water Company.—Messrs A. and W. Richards offer 2,000 £10 4½ per cent. preference shares at minimum price of £12, and 1,5

LONDON ACTIVE SECURITY PRICES AND YIELDS

NOTE—Shares with a New York Quotation or with definite American interest are distinguished by italics

In calculating yields on fixed interest stocks quoted below allowance is made for interest accrued since the last date of payment, less income tax at the standard rate. Where stocks are definitely redeemable at a certain date the yield includes any profit or loss on redemption, where stocks are redeemable at or before a certain date the final date of redemption is taken when the stock stands at a discount and the earliest date when the quotation is above par. The return on ordinary stocks and shares is calculated by reference to the latest dividends account being taken of any enhancement or reduction of interim dividends. Allowance is made for accrued dividends in calculating the yield on "cum div." shares.

(Continued from page 821)

with maximum dividend of 7 per cent., at minimum price £17 5s. Net revenue year to June 30, 1935, £22,212. Available for ordinary share dividends £10,085. Revenue from water rates, etc., years to June 30th: 1933, £30,765; 1934, £33,775; 1935, £37,343.

ISSUE TO SHAREHOLDERS ONLY

Alpha Cement Company, Ltd.—Issue of 200,000 5½ per cent. cumulative preference shares £1 at par to existing preference and ordinary shareholders, the former having preferential consideration. The company is also issuing the balance of 48,500 unissued ordinary shares at 30s. per share in proportion of one new share for each 14 ordinary shares held. The new money is required for additional machinery and improvement of transport facilities.

CONVERSIONS AND REPAYMENTS

Tasmania 4 per Cent. Inscribed Stock, 1920-1940.—The whole of this stock will be repaid on December 2, 1935, at par.

Egyptian Consolidated Lands, Ltd.—With regard to non-interest-bearing debenture stock the company will on November 14, 1935, redeem at par all the balance outstanding.

Peebles Hotel-Hydropathic.—The directors have decided to reduce the capital by repaying the 3,513 issued 6 per cent. cumulative "A" preference £1 shares and 10s. per share on the 20,000 £1 ordinary shares. It is proposed to cancel the 6,487 unissued "A" shares. An extraordinary meeting will be held at Peebles on November 12th to sanction the proposals.

Kassala Cotton Company.—The Sudan Plantations Syndicate, which owns all the 250,000 £1 preference shares and 475,000 of the 1,000,000 ordinary 1s. shares, has agreed that if the ordinary shareholders will assent to the conversion of the 250,000 preference shares into 5,000,000 ordinary shares of 1s. each, ranking in all respects *pari passu* with the existing ordinary shares—making the total issued capital 6,000,000 ordinary shares 1s.—it will transfer to the holders of the 525,000 ordinary shares not owned by the syndicate, as registered on October 23, 1935, free of cost, two additional shares for every share held by them. Meeting, Winchester House, London, November 14th, at 11 a.m.

The El Oro Mining and Railway Company, Ltd.—The resolution for the conversion of the company's shares into stock, transferable in units of 5s., has been passed.

FIXED TRUSTS

British Empire Comprehensive Trust Certificates.—Managers, Fixed Trust Investments, Ltd. Trustees, Lloyds Bank, Ltd.; 150 underlying securities in unit. Trust period 20 years, with optional power to extend by three-fourths majority in meeting of certificate holders. Loading charge, 7 per cent. Power to eliminate securities in whole or part, and for re-investment on specified terms. Voting rights exercised by managers. Continuity of management provided by Escrow Fund. Managers undertake to repurchase sub-units at net realisable value.

Century Fixed Trust Certificates.—Managers, National Fixed Investment Trust, Ltd. Trustees, Midland Bank Executor and Trustee Co., Ltd. 100 underlying securities in unit. Trust period 15 years; service charge 5 per cent. Power to eliminate and distribute proceeds. Managers exercise voting rights. Escrow Fund provided for management and trustee fees. Managers undertake to repurchase sub-units at net realisable value.

FORTHCOMING ISSUES

Thrill Stores, Ltd.—It is expected that an issue of deferred shares will shortly be made to shareholders.

South African Internal Loan.—South Africa intends to raise a £10,000,000 3 per cent. internal loan in April, 1936, in order to provide for the investment of surplus funds.

Wade Potteries, Ltd.—London Industrial Finance Trust, Ltd., will shortly make an offer of 80,000 cumulative preference shares 10s. and 150,000 ordinary shares 2s. each at 4s. per share.

Sun Cycle and Fitting Co., Ltd.—The London Industrial Finance Trust, Ltd., are making underwriting arrangements for an issue on behalf of the Sun Cycle and Fitting Company, Ltd.

National Canning Company, Ltd.—It is understood that this concern is entering into an agreement with Messrs Burt, Boulton and Hawwood, Ltd., for the acquisition of that

company's fruit and vegetable canning business. Negotiations are also taking place for the acquisition of St. Martin Preserving Company, of Slough. A new issue of capital is expected to be made.

Severn Valley Gas Corporation.—Shareholders have approved a resolution increasing the authorised capital from £1,000,000 to £1,500,000 by the creation of £300,000 new 4½ per cent. £1 cumulative preference shares and £200,000 new £1 ordinary shares. The new capital, which will rank equally with existing issues is required to finance the continuance of the Corporation's policy of acquiring control of gas companies in its general area.

Irish Free State Conversion Loan.—It is understood that an announcement concerning the conversion of the first Free State National Loan will be made within the next few days. The amount to be funded will be approximately £6,500,000, and the terms of conversion are likely to be in the neighbourhood of 4 per cent.

OTHER RESULTS OF ISSUES

Cork Corporation 4 per Cent. Stock.—Issue of £395,400 4 per cent. stock at 98 was fully subscribed.

Associated Fisheries, Ltd.—The recent issue of deferred shares has been over-applied for. Underwriters have been relieved of their liability.

CALLS DUE OCTOBER 28 TO NOVEMBER 2, 1935.

The grand total of calls in October, 1935, is £10,514,879 which compares with £3,366,662 in October, 1934.

COMPANY MEETINGS, &c.

ANGLO-SOUTH AMERICAN BANK, LIMITED

POSITION AND PROSPECTS

SIR BERTRAM HORNSBY'S REVIEW

The forty-seventh annual general meeting of the Anglo-South American Bank, Limited, was held, on the 23rd instant, at Southern House, London, Sir Bertram Hornsby, C.B.E., presiding.

The Secretary (Mr C. J. Shea) having read the notice convening the meeting and the report of the auditors,

The Chairman, in the course of his speech, said:—In the course of my remarks to you a year ago I permitted myself a certain mild optimism regarding the future. I have since found cause to regret having done so, for considering the state of the world to-day, and in particular that of South and Central America, I can see but little to encourage anybody who is prepared to look facts in the face.

As explained in the directors' report, we have this year converted the figures of our business in Chile at the export draft rate of 118.25 pesos per £, as against the rate of 49 pesos—the then official rate—last year. In the course of the current year a new official rate of 96 pesos per £ has been established, but we have preferred to adopt a rate which, though not thoroughly effective, has a certain basis of reality. Further, owing to continued depreciation in the Brazilian exchange since December 31, 1934, at which date the British Bank of South America made up its accounts, we have written off the sum of £100,000 from the figure of £2,100,000 at which our shareholding in that bank previously stood.

The result of these two changes, combined with adjustments of a minor degree, is that suspense account—depreciation of capital employed abroad—has been increased from £2,033,000 to £2,848,000.

Judging from past experience it seems hardly likely that the present depreciated exchanges will recover to any substantial extent in any near future. If this be so, the best which can be hoped for is that bottom has now been reached.

There is one other matter connected with the exchanges to which I must refer. Inquiry seems to reveal that real property has not yet appreciated in value in correspondence with exchange depreciation, as in theory it should have done. It may be that in time theory will justify itself. In the meantime we cannot disregard the fact in so far as it affects the premises abroad, whether owned directly by the bank or indirectly through the Anglo-South American Real Property Company and the British Bank of South America, Limited.

LIQUID POSITION

As regards other headings of the balance sheet, comparison with last year's figures is vitiated by the conversion of the Chilean figures at the depreciated rate of exchange which I have already mentioned. I may say, however, that whereas both deposits on the one side and advances on the other show apparent important decreases, the actual currency figures show a satisfactory increase. In the same way, an apparent decrease in our holding of cash of some £1,220,000 is really represented in currency by a decrease of about £140,000 only.

The percentage of cash to deposits is at the satisfactory figure, from a liquidity point of view, of 26.76, as compared with 29.84 the previous year, the fall being due to the combined effect of the small decrease of cash just referred to and of an actual increase of deposits. Similarly, holdings in foreign banks—chiefly our shareholding in the Banco de A. Edwards y Cia., Chile—show an apparent decrease of £294,000, whereas in actual fact there is a small increase, due to our having been obliged to participate in the capital of the new Central Banks in the Argentine and in Salvador.

PROFIT AND LOSS ACCOUNT

The meagre balance of the profit and loss account is a great disappointment, the more so as the provisional figures of the first half of the year showed an improvement on those of the corresponding period of the year before. I am unable to put my finger on any one definite cause for the falling off. As I have stated on previous occasions, we are carrying a good many accounts on which prudence demands we should not take interest to profit. In addition to this, several countries have fixed maximum rates of interest which are well below what we had been charging, and indeed well below what are the proper rates if the element of risk be allowed for. Exchange continues to be under official control almost everywhere, and with this and the shrinkage of overseas

trade we are largely excluded from what was an important element of earning power.

Expenses, allowing for different rates of conversion, show no real decrease for the first time for several years. In this respect there comes a time when the limit of the scope for economy is reached if the affairs of an institution are to be conducted with any expectation of recovery. The largest item of expenditure consists of salaries—we have effected reductions both in salaries themselves and in the number of staff, and now we can do little more without detriment to the efficient running of the machine.

CHILEAN NITRATE INDUSTRY

I informed you last year that the nitrate position had been dealt with by a legal enactment of the Chilean Government, and mentioned that on certain debts of the old Cosach interest had ceased to run as from June 30, 1934. This latter fact has necessitated an addition to the footnote to the balance sheet setting out the bank's liability (ranking after deposits, etc.) as guarantor of the assets taken over from us. That liability extends not only to the £7,500,000 of capital but also to interest thereon, and this has now been specifically stated.

You will appreciate that, failing adequate banking profits, an added charge in respect of this interest may eventually be thrown on the bank's capital, and this matter is at present the object of serious examination. No payments in relief of the bank's guarantee have as yet been made on account of old debts either by the Cia. Salitrera de Tarapaca y Antofagasta or by the Lautaro Nitrate Company.

THE OUTLOOK

In conclusion, I regret I can only express the view that the outlook at the present time seems to offer but small encouragement. The whole world is passing through a period of stress and difficulty, and nowhere more than in those countries where the greater part of our business is conducted. My own view, for what it may be worth, is that we shall see no real recovery until present attempts at short cuts to prosperity have been tried out and have failed, as I think they must, and in their place we shall hear more of older-fashioned remedies. The longest way round is often the shortest way home.

The report and accounts were unanimously adopted.

EL ORO MINING AND RAILWAY COMPANY, LIMITED

SUCCESSFUL RESULTS

The thirty-sixth annual general meeting of this company was held, on the 22nd instant, at Southern House, Cannon Street, E.C. Mr J. H. M. Shaw (the chairman) presided.

The Chairman, in the course of his speech, said:—It gives your directors the liveliest satisfaction to be able again to put before you the best report for many years. You will see that at El Oro, against our receipts of £31,831, we had expenses amounting to £22,212, leaving a balance of £9,618, but it is from the operations at La Noria that we derive our very much increased income, for by interest on advances and by way of dividend, the Inversiones Company has paid us £95,920, which, after the deduction of £10,847 for Mexican taxes, leaves us a net income of £85,073 from this source.

We carry into the balance sheet £92,815, to which we have to add £3,799 brought forward, giving £96,595, out of which we have already paid the interim dividend of 6d. per share, leaving us available for distribution £67,907, which enables us to recommend a dividend of 1s. 2d. per share (less income tax).

The principal factors governing our operations are the price of silver and taxation.

As regards silver, it is the most important factor in our position, and the present price is a very satisfactory one to us. My guess for the present is that the silver party in America has such strength that they are likely to add to their past success by a further substantial advance in the price that the American Treasury will pay for silver.

As to taxation, there has been formed in Mexico a very strong consortium of the principal mining interests with a view to keeping prominently before the Mexican Government the true economics in the mining industry, and in this consortium we have borne, and will continue to bear, our share of the work. This is our best method of meeting the hard conditions forced upon us by the very high taxes we have to pay.

The report and accounts were adopted, and a resolution converting the shares of the company into stock, transferable in units of 5s., was unanimously adopted.

JOHN DELANEY, LIMITED

SOUND POSITION—IMPROVED PROSPECTS

The tenth annual general meeting was held at 11 and 12 Pall Mall, London, S.W.1, on Monday, the 21st instant.

The notice convening the meeting and the auditors' certificate were read.

The Chairman (Mr A. Woolley-Hart), who presided, said:—

There is very little that I can add to what is set out in the report, which has been duly circulated among you.

Before making any statement or answering any questions, I will propose that the directors' report and the audited accounts and balance sheet as presented, be and they are hereby approved and adopted, and that a final dividend of 4 per cent., less tax, making, with the interim dividend of 2½ per cent., less tax, a total of 6½ per cent., less tax, for the year, be paid forthwith to the holders of ordinary shares whose names appear in the register on this date. That a sum of £1,474 15s. be written off debenture expenses and redemption account (reducing that account to £5,000), and that the balance of £2,074 11s. 8d. be carried forward to next year's accounts.

(This was seconded by Mr J. H. W. Laverick, put to the meeting by the chairman, and carried unanimously.)

On the whole it has been rather an uneventful year. The main point is that we were fortunate enough to get back a very large contract for the supply of lime, which this company has held, with few exceptions, for many years past, and at a slightly higher price.

In the coming year, assuming that all other conditions remain as at present, the further saving referred to in the report in connection with the debenture service probably will enable us to pay a slightly larger dividend, as we have a sound position, with only one item in our balance sheet that will require any special provision in the years to come, which is that in regard to debenture expenses and redemption account, which, after the reduction made this year, will stand at £5,000, as against the £6,474 15s. at which it stands in the balance sheet now before you.

You will note that we have creditors on one side for £13,359 odd, as against sundry debtors and stock amounting to £27,400 odd. We have investments, outside the business, standing at £74,300 odd, and the bank overdraft shown in the balance sheet as £21,816 has, at the date of this meeting, been reduced to £6,323 18s. 1d.

INVESTMENT IN CRAVEN COMPANY

On this item I should like to explain to you that the directors had an offer of a considerable block of shares in the Craven Company which it decided to acquire, and made further purchases amounting in all to 20,160 shares at a cost of £14,616 7s. 9d. The Craven Company, as you are no doubt aware, is one of the three companies that work together under a long-term contract. Trade fell off some years ago to so great an extent that it was deemed advisable to close one quarry and leave the others working, Craven being the quarry that was closed. Owing to the contract above referred to, the other two companies have to find the proportion of the joint earnings that is due to the Craven Company under the contract. Therefore, having made this purchase, we get back for our company (John Delaney) approximately one half of whatever the Craven Company receives annually from the other two.

A shareholder stated that the only question he had to ask was: Why, in spite of the improvement in the iron and steel trade, we did not get a greater volume of business and larger profits therefrom? The chairman replied that unfortunately for the company most of the big steel and iron firms have reorganised and reconstructed their blast-furnace and other plant, and have also adopted newer methods which have been developed during the last few years, and, as a consequence, many of them have found that a much smaller amount of fluxing stone is required than has been the case in the past, and that he was afraid that there would have to be greater improvement in trade before we were likely to see any marked improvement in revenue from these sources. He stated, also, that the big corporations, including, of course, borough and county councils in purchasing lime, tarred granite and other road-stone, etc., were the hardest and keenest of buyers, and the competition which is considered by many to be so good for trade, has been found in this industry, as also in the coal trade, to be very injurious to the interests of the basic industries of this country, and especially to the interests of all grades interested in them.

It was duly proposed, seconded, and carried unanimously, that Messrs Joshua Wortley and Sons be appointed auditors for the ensuing year at the same remuneration as last year.

SEAGER EVANS AND COMPANY, LIMITED

IMPROVED POSITION AND PROSPECTS

The thirty-seventh annual general meeting of Seager Evans and Company, Limited, was held, on the 21st instant, at Caxton Hall, London, Mr Ernest T. Thornton-Smith (the chairman) presiding.

The Chairman said that the accounts covered 16 months, and, from the point of view of comparison, had worked out to the disadvantage of the period under review inasmuch as the months immediately prior to Christmas were recognised as those in which the bulk of the yearly profits were made, while two more or less unremunerative summer periods were now included.

The Board felt justified in looking back with some satisfaction on the achievements of the past few years. The decks were cleared, and the directors looked forward with considerable confidence to the future. The large new production plant for the preparation and bottling of the company's specialities had been completed.

LARGE INCREASE IN SALES

The company's investments in subsidiary companies were made on an exceptionally conservative basis, and there was every indication of those holdings becoming an increasingly valuable asset of the company, while the investments in associated companies, standing at £12,978, were, without exception, making satisfactory progress. Despite difficult times, the company had always retained a valuable goodwill in the wine and spirit trade, as had been witnessed in a most significant way by the splendid support the company had received from the whole trade following upon the big sales promotion and sales service scheme foreshadowed at the last meeting. The response had been very gratifying, and sales were very considerably up as against the corresponding period last year. Sales of the company's famous dry gin had been tremendously increased, and the sales of Seager's cocktails were by far and away the largest of ready-to-serve cocktails in the country.

The directors were satisfied that the company was only now beginning to reap in really tangible form the benefit of a far-sighted policy, and provided there were no untoward happenings results next year would even more fully demonstrate the profit-earning possibilities of the Seager Evans group.

The report was unanimously adopted.

TANGOEL RUBBER ESTATES, LIMITED

MR WALTER HILLIERS' SPEECH

The annual ordinary general meeting of the Tangoel Rubber Estates, Limited, was held, on the 22nd instant, at the registered office, Fenchurch House, 5 Fenchurch Street, London, Mr. Walter Hilliers, chairman of the company, presiding.

The Chairman, in the course of his speech, said: We had still to deliver during the year 30 tons, the balance of the old contract, and also we had to pay a substantial amount in taxation, which taxation could not have been expected. Were it not for these items and for charging a proportion of the expenditure on the Wonokerto estate to revenue, we would have been able to show a larger profit.

Taxation matters require constant and unremitting attention and negotiations, and we think, now that these matters have been settled, we might say that we have been fairly successful on the whole.

Conditions on our small estate, Wonokerto, which is quite near our Soekokoelon estate, and which was opened up at the time and brought to its present state out of past profits, are giving every satisfaction, and as soon as the necessary increase in the standard production can be obtained, tapping can be proceeded with.

It is, of course, to be regretted that the Dutch East Indian Government has found it necessary to impose an export duty on rubber, to come into operation as from January 1st next, which has been fixed at 1 cent per half kilo, equal to about one-third of a penny per pound. This duty is progressive, as for every cent increase in price beyond 20 cents a further ¼ per cent. per half kilo will be chargeable.

I will conclude by saying that, with the present price of rubber, and in view of an improvement in the market which we all consider is overdue, we should be able to obtain satisfactory results during the current year.

I will now move: "That the directors' and auditors' reports and audited balance sheet and accounts to June 30, 1935, as circulated to the members, be taken as read, and that the same be and are hereby adopted."

Sir Edward Rosling seconded the motion, which was unanimously adopted, and the proceedings terminated with a vote of thanks to the directors and staff.

Head Office: 1 Dale Street, Liverpool, 2 | (Chief Office): 1 Cornhill, E.C.3

MORKWA, LIMITED

IMPROVED POSITION

The eighth ordinary general meeting of this company was held on the 24th instant, at Winchester House, E.C.

Mr J. M. Laird (the chairman) said:—Shareholders are to be congratulated on the greatly improved position of the company, but, as people are apt to forget, I will shortly recapitulate the changes in the last two years.

The capital has been increased to £100,000. Two years ago the company owed £6,700 to sundry creditors, and had an available cash balance of only £3. The present balance sheet shows creditors £293, while the cash in hand and at the bank is £45,440, and nearly £2,000 is invested in the shares of the Gold Coast Associated Companies, Limited, with which investment we are well satisfied, although for the moment it shows some depreciation.

The diamond properties have certainly increased in value, owing to the better demand for stones of the quality we have in our concessions, and the rent regularly received for the part let off brings in a substantial income, which will be more than doubled after the end of the second year if, as we expect they will, the lessees exercise their option to extend their lease for a further three years. Meantime, we are considering working some of the other areas with a plant of our own, and have been investigating other areas claimed to be diamondiferous.

We have deferred spending more money on the Prah River properties, since the return of the Engineer whose report is referred to in the directors' report because there is a chance that they may be included in a larger scheme of development with other important interests.

The Option Concession on the Prestea-Ashanti line of reef referred to in the report, is over an area of approximately 12 square miles, and is favourably situated for transport, being intersected by the Government Railway. Although not involving any large initial outlay, we hope this concession will be turned to advantage later on, whether by us alone or in conjunction with other important people who have acquired concessions in the same part of the Colony.

The report was unanimously adopted, and the retiring directors (Mr A. D. C. Cawood and Mr W. D. Stevens) were re-elected.

GOVERNMENT RETURNS, &c.

NATIONAL ACCOUNTS

The total ordinary revenue for the week ended October 19, 1935 amounted to £13,424,000, against ordinary expenditure of £12,474,000. After allowing for an increase in Exchequer Balances of £151,541, the operations for the week, as shown below, decreased the gross National Debt by £550,000 to approximately £7,971 millions.*

GOLD MARKET

Messrs Samuel Montagu and Company write on October 23, 1935, as follows :—

The Bank of England gold reserve against notes amounted to £93,673,266 on the 16th instant, showing no change as compared with the previous Wednesday. During the week the Bank announced the purchase of £650,636 in bar gold. In the open market the amount disposed of at the daily fixing during the week under review was about £1,800,000, most of which was taken for the United States of America.

There have been further large shipments from this country and France to New York and, according to an announcement made in New York on the 21st instant, the total amount of gold engaged in shipment to the United States of America since September 9th last amounted to \$415,200,000. This would seem to permit of an additional purchase, under the Silver Purchase Act of 1934, of silver to the extent of \$103,800,000, representing about 158,000,000 ounces at current rates.

The s.s. "Rajputana," which sailed from Bombay on the 19th instant, carried gold to the value of about £596,000, of which £17,000 is consigned to London and £79,000 to New York.

SILVER MARKET

The price for cash delivery remained unchanged throughout the week at 29 $\frac{1}{2}$ d., at which price the American Government acquired large amounts. This demand for cash, and the fact that the continued offerings on China account have been mostly for forward dates, resulted in the price for two months' silver being quoted at a discount.

The Indian Bazaars and speculators have both bought and sold to a moderate extent.

The market may be affected by movements in the dollar-sterling exchange, but the undertone is steady.

"ARMAMENT COMPANIES."—In a Company Note under this title on page 766 of last week's *Economist* it was stated, in the course of an extract from evidence before the Royal Commission on Arms, that English Steel holds a moiety in Thomas Firth and John Brown, Ltd. In fact, however, English Steel has a half-share with Thomas Firth and John Brown, Ltd., in Firth-Vickers Stainless Steels, Ltd. It is also understood that the Vickers' group interest in William Beardmore is limited to a small holding of second preference shares, taken in satisfaction of a debt.

STANDARD MOTOR COMPANY, LTD.—Record profits and the raising of the bonus by 5 per cent. are announced by this company for the year ended August 31, 1935. The net profit of £157,546 is £50,751 more than last year, when earnings reached £106,795. In 1933 the figure was £131,962. The dividend is maintained at 10 per cent., less tax, but the cash bonus is increased by 5 per cent., to 10 per cent., making a total payment of 20 per cent., compared with 15 per cent. the three previous years. This will absorb £46,500, against £34,875 in 1934. The allocation to reserve is repeated at £50,000,

bringing this fund up to £250,000. A sum of £35,000 is placed to taxation reserve, against £20,000, while £2,000 is also transferred to benevolent fund. The carry-forward of £56,612 compares with £32,566 brought in. The meeting will be held at Coventry on October 29th at 12 noon.

PRICES TRUST, LTD.—Prices Trust, Ltd., which was registered last year, to acquire the ordinary share capital of Prices Tailors, has issued its first report. Revenue for the period from October 23, 1934, to September 30th last, totalled £88,606, being the 65 per cent. dividend from Prices Tailors, and sundry receipts and transfer fees of £450. Expenses and fees account for £651, leaving a profit for the period of £87,955. The final ordinary dividend is 10 per cent., making 15 per cent. for the period. After providing for the transfer to preference dividend reserve of £5,500 and the preference dividend for the period, a balance of £13,791 is to be carried forward, out of which it is proposed to pay the preference dividend for the six months to November 15, 1935. Meeting, Winchester House E.C.2, October 24th, at 12 noon.

COMMERCE AND TRADE

SURVEY OF COMMODITY MARKETS

As the war scare has receded into the background, the desire on the part of consumers to increase their stocks of important commodities has become less acute. This factor, coupled with a certain amount of profit-taking, was mainly responsible for the setback on the principal commodity markets this week. Thus, consumers of copper, lead and spelter now have ample stocks for immediate requirements, and demand for these metals has tended to flag during the past few days. The sharp fall in the price of tin was due to the raising of production quotas from 70 to 80 per cent. of the standard tonnages, which we discuss in a Note of the Week.

The wheat markets are still under the influence of political developments, operators being somewhat nervous and price movements rather erratic. But widespread rainfall in Australia and Argentina also contributed to the easier tendency of grain prices this week. Linseed declined in price for the same reason, and other vegetable oils and oilseeds were marked down in sympathy. Movements in the prices of textile raw materials were small, cotton being a trifle dearer and flax and jute a shade cheaper than a week ago. The gradual improvement in rubber prices, which began last week, has continued, the rise being due to trade buying rather than to speculative operations.

Sugar and coffee have been marking time this week, and a slightly easier tendency has been evident at the Mincing Lane tea auctions. The seasonal advance in egg prices continues, and the spell of rather colder weather caused some improvement in the demand for meat at Smithfield Market. On the other hand, demand for provisions on the London Provision Exchange fell away this week, with the result that bacon and colonial descriptions of butter and cheese declined in price. Potatoes were also slightly cheaper as a result of heavier supplies.

In the United States, the setback in grains and metals caused a decline in the level of staple commodity prices. Thus Moody's daily index (December 31, 1931 = 100) suffered a further fall from 173.2 on October 16th to 172.2 on Wednesday last. The index stood at 172.8 a month ago and at 144.5 on the corresponding day last year.

COAL

SHEFFIELD.—Demand for steam coal is brisk, especially for inland industrial purposes. Export trade, whilst far from good, is improving. Demand on forward account is distinctly encouraging. Best steams for shipment are in limited supply. There is very little to spare of washed singles for October, and small coal is absorbed immediately on arrival at the Humber ports. Inland works are taking bigger quantities. Demand for house coal expands slowly. Blast-furnace coke is well sold ahead and moving away freely.

Quotations: Yorkshire Association hards, 18s. to 18s. 6d.; washed trebles, 17s. to 17s. 6d.; washed doubles, 16s. to 16s. 6d.; washed singles, 15s. 6d. to 16s.; washed steam smalls, 13s. 3d. to 13s. 9d.; screened gas coal, 16s. 6d. to 18s.; Derbyshire best hards, 17s. 6d. to 18s. (all f.o.b.); best Yorkshire house, 21s. and 22s.; best Derbyshire house, 19s. 6d. to 21s. (at pits); blast-furnace coke, 13s. 6d. (at ovens).

WORKINGTON.—A difficult position has been created in the Cumberland coal trade by the stoppage of Whitehaven collieries, and short of the production of Haigh and William pits, the supply is not sufficient to satisfy demand. Owners are diverting most of their output to the landsale market, and Irish demand is therefore larger than can be met. Industrial fuel is in keen request, and smalls for coking purposes are still in short supply.

Prices are firm. Best round is quoted at 21s. 6d. per ton; washed doubles, 20s.; washed singles, 18s., all f.o.b.; smalls, 14s. 6d.; best house coal, 32s. 4d.; house nuts, 30s. 8d. at station; gas coal, 27s.; local coke, 15s. 6d. to 16s. 6d. per ton.

NEWCASTLE-ON-TYNE.—The Tyne continues to show decreases in shipments owing to the cessation of Durham trade with Italy. But shipments from the port of Blyth are at a high level, owing to active conditions in the Northumberland steam section. The steam coal market is firm for all grades, there being little Northumberland coal available for the next few months. Durham prime bunkers are much firmer under a heavy demand from foreign coaling stations, but there are no signs of any improvement in gas or coking coals.

Current f.o.b. prices for export: NORTHUMBERLAND.—D.C.B. screened, 15s. 6d.; smalls, 12s. 6d.; Howards, Bentinck, Newbiggin, screened, 14s. 6d.; smalls, 11s.; Tyne Prime, large, 14s.; smalls, 11s. 6d.; Hartley Main, large, 14s. 6d.; smalls, 12s. DURHAM.—Lambton/South Hetton screened steam, 15s. 2d.; smalls, 12s. 6d.; Wear Special gas, 15s.; Holmside, Ryhope, Boldon unscreened gas, 14s. 6d.; second-class gas, 13s. 2d.; coking, unscreened and/or smalls, 13s. 2d.; Prime unscreened bunkers, 13s. 9d.; second-class unscreened bunkers, 13s. 3d.; Prime foundry coke, 20s. 6d.; Newcastle and District gas coke, 20s.

GLASGOW.—Business continues to be handicapped to some extent by a stringent freight position. There is a marked scarcity of prompt boats, and this was largely the reason for the fall of last week's shipments by 26,000 tons to 255,000 tons. The tone of the market is strong. There has been a sharp improvement in the household trade. Industrial demand is good, and with coastwise trade also broadening, most of the collieries are now busier, with good order books for some time ahead. Trade with the South of England markets is improving.

Prices are firm all round, export rates, f.o.b. district ports, being as follows: LANARKSHIRE.—Lill best, 16s.; splint best, 16s.; splint second, 14s. 6d.—15s.; navigation, screened, 14s. 9d.—15s.; navigation, unscreened, 13s. 6d.; steam, 13s.—13s. 6d.; trebles, 14s. 6d.; doubles, 13s. 6d.—13s. 9d.; singles, 12s. 9d.—13s.; pearls, 11s. 6d.; dross, 10s. 6d. FIFE.—Best unscreened navigation, 12s. 9d.—13s. 3d.; unscreened navigation, 12s. 6d.; first-class steam, 14s. 6d.; third-class steam, 13s.—13s. 6d.; trebles, 15s. 6d.—17s.; doubles, 14s.—15s.; singles, 13s. 6d.; pearls, 11s. 9d. LOTHIAN.—Best splint, 14s. 6d.; prime steam, 12s. 9d.—14s. 6d.; secondary steam, 11s. 6d.—12s. 6d.; unscreened navigation, 12s. 9d.—13s.; trebles, 15s. 9d.—16s.; doubles, 14s. 3d.—14s. 6d.; singles, 13s. 3d.—13s. 6d.; pearls, 11s. 9d. Ayrshire.—Best unscreened navigation, 14s. 9d.; steam, 13s.; trebles, 15s.—15s. 6d.; doubles, 14s. 3d.—14s. 6d.; singles, 13s. 6d.—13s. 9d.; pearls, 13s.—13s. 3d.; dross, 12s.—12s. 6d.

CARDIFF.—Normal labour conditions have been almost completely restored in the South Wales coalfield. The last of the groups of miners who have been "staying-in" underground as a protest against the employment of non-federationists reached the surface on Wednesday, and it is expected that all the strikers will have returned to work before the end of the week. The official relations between the Coalowners' Association and the South Wales Miners' Federation have not been affected at all by the recent disturbances; it remains a condition of employment that no restrictions shall be imposed by the associated owners on the freedom of the individual worker in the choice of his trade union; but it is understood that individual colliery companies have made certain minor concessions in regard to the future recognition of the trade union representatives of their employees.

On the Cardiff coal market the position is practically unchanged. The stoppages have diminished the spot supplies of sized and other special grades, and for these qualities current quotations are firmer, but for most descriptions prices are still ruling at the scheduled minimum bases. The Brazilian Central Railways are inquiring for between 50,000 and 80,000 tons for delivery over the next three months. Pitwood has been comparatively quiet and parcels are reported to have been sold at below the French official price of 23s. 6d.; but the Portuguese exporters are stated to have fixed their quota for the next four weeks at 25,000 tons, and to have raised their existing price to 23s. per ton. Coke is firm, but patent fuel quiet.

Current approximate quotations: Best Admiralties, 19s. 6d.; seconds, 18s. 9d. to 19s. 3d.; best dries, 18s. 9d. to 19s.; Black Veins, 18s. 3d. to 18s. 6d.; Western Valleys, 17s. 9d. to 18s.; Eastern Valleys, 17s. 3d. to 17s. 7½d.; best steam smalls (washed),

REPORT OF THE DIRECTORS FOR THE YEAR ENDED JUNE 29th, 1935

To be presented at the Annual General Meeting of the Company to be held at The Great Hall, Southern House, Cannon Street Station, London, E.C.4, on Thursday, October 31, 1935, at 11.30 o'clock a.m.

The Directors herewith submit the Report and Statement of Accounts for the year ended June 29, 1935.

The Balance of Trading Account for the year (after charging cost of Production including Maintenance) amounted to £2,350,491

The profit for the year, after providing for General Sales and Administrative Expenses, Royalties, Excise Duty, adjustments of Stock Values, Research and Advertising, amounted to 1,156,881

DEDUCT:—

1. Depreciation for the year ended June 29, 1935 £304,000

2. Commutation of Royalties, proportion written off 61,142

3. Debenture Charges—Interest on and Premium on Redemption of 1st Mortgage 7% Debenture Stock £49,627
Interest on and Premium on Redemption of 5½% Mortgage Debenture Stock 165,974

Balance for the year ended June 29, 1935 580,743

Brought forward as at June 30, 1934 113,804
689,942

The Directors have made the following provisions:—

(a) Underwriting Commission on 5½% Mortgage Debenture Stock, amount written off £25,000
(b) Provision for Income Tax 133,000

Amount available for distribution 531,942

DEDUCT:—

Dividends (less Income Tax) on 1st Preference Shares:—

(a) Paid for 2 years ended October 31, 1932 £217,000

(b) Declared before but paid after June 29, 1935, for half-year ended April 30, 1933 54,250

Leaving to be carried forward at June 29, 1935 £260,692

The volume of the Company's production and sales shows a large increase as compared with the previous year and constitutes a record in its history, with the result that the net profit is substantially increased, in spite of a large loss sustained on Stocks through the reduction in the rate of Excise Duty from 1s. to 6d. per lb.

It is well known that there has been a general substantial increase in the production of Artificial Silk Yarn in Great Britain during the year, and the Directors are pleased to be able to state that the Company has already obtained more than a proportionate share of this increase. It is confidently anticipated that the Company's share of this increase will be further largely augmented by reason of the increasing variety and superior quality of its products, which facts are recognised by every branch of the textile industry.

The profit-earning capacity of the Company has been largely increased, and the estimated profits for the first quarter of the current year are approximately 70% more than for the corresponding period in the previous year. The Directors consider the prospects for the future to be very favourable, provided no material setback occurs in the trade of the country.

In addition to the dividends for two years paid on the 7% First Cumulative Preference Shares during the year under review, and the half-year's dividend paid on July 31st (which, having been declared before June 29th, is included in the Accounts) a further dividend for one full year has been declared and is payable on October 31, 1935. As at the latter date, therefore, arrears on these Shares will have been extinguished up to April 30, 1934.

CAPITAL EXPENDITURE—MAINTENANCE AND DEPRECIATION.

The Buildings, Plant and Machinery have been efficiently maintained, the amount of £373,192 having been expended under this head, as compared with £332,887 for the previous year.

In addition to this maintenance expenditure, £304,000 has been allocated to Depreciation, increasing the Depreciation Reserve to £2,785,606.

Capital Expenditure for the year amounted to £505,000. Additions and extensions charged to Capital during the last four years have amounted to approximately £1,600,000. At the close of the financial year commitments in respect of further additions and extensions to the amount of £319,000 were outstanding.

FIRST MORTGAGE DEBENTURE STOCK.

The Company redeemed during the year £64,405 First Mortgage Debenture Stock in accordance with the provisions of the Trust Deed. Since the end of the financial year a further amount of £68,503 has been deposited with the Trustees on account of the current year's redemption, which, when applied, will reduce the amount of Stock outstanding to £512,162.

RESEARCH AND ADVERTISING.

The amount written off under this head for the year is £148,331, including expenditure on new patents, and the amount carried forward is £163,998.

COMMUTATION OF ROYALTIES.

£61,142 has been written off, reducing the book figure to £1,100,558.

UNDERWRITING COMMISSION ON 5½% MORTGAGE DEBENTURE STOCK.

The amount of £25,000 has been written off, leaving a balance of £50,000 to be written off.

BOARD OF DIRECTORS.

Mr. O. V. G. Hoare resigned his seat on the Board and Mr. Walter MacLachlan was elected a Director to fill the vacancy. Mr. MacLachlan retires in accordance with the Articles of Association and offers himself for re-election.

The following Directors retire by rotation and, being eligible, offer themselves for re-election:—

MR. A. CLAVEL.
DR. M. SOLLER.
MR. G. H. WHIGHAM.

AUDITORS.

The Auditors, Messrs. Thomson McLintock & Co., retire and, being eligible, offer themselves for re-election.

By Order of the Board,

W. H. POXON, Secretary.

London, October 22, 1935.

13s. to 13s. 6d.; seconds, 12s. 6d. to 13s.; coking, smalls, 13s. 6d. to 14s.; anthracite, best large, 36s. to 40s.; Red Vein, large, 22s. to 27s.; machine-made cobbles, 35s. to 51s.; French nuts, 35s. to 51s.; stove nuts, 34s. to 50s.; rubbly culm, 10s. 6d. to 12s.; special foundry coke, 37s. 6d. to 40s.; patent fuel (Crown), 21s.; pitwood, ex ship, French 24s. 3d., Portuguese 20s. 6d.

IRON AND STEEL

LONDON.—The official report of the London Iron and Steel Exchange indicates that the recent improvement in the demand for iron and steel has been maintained, and that business was active in nearly all departments. There has been a fair amount of forward contracting in pig iron, and buyers have sought to place contracts for delivery, in some cases over the first half of next year. Producers however, are well booked, and are disinclined to enter into such far forward commitments. Many of them have good tonnages of orders on their books for delivery over the first quarter of 1936. Demand for semi-finished steel appears to be taxing the productive capacity of the works, and there is a tendency for the prices of uncontrolled materials to advance. In this department consumers report that it is not easy to obtain near delivery, and many of the manufacturers are only booking forward business. The market for finished steel materials is active, and a heavy volume of business is being transacted in structural steel. The recent contracts for ships will be reflected in substantial orders for steel. Business in plates and sheets has improved considerably, and prices for the latter have been advanced owing to the firmer quotations for raw materials.

MIDDLESBROUGH.—The confident feeling in the market for iron and steel is well maintained. The actual volume of transactions is not large, owing to the fact that makers are well sold ahead. Regular deliveries to home producers are fully absorbing the output. Shipments of foundry iron to Scotland continue fairly regularly. The price for this grade is maintained on the basis of No. 3 quality at 67s. 6d. per ton delivered in the Middlesbrough area. East Coast hematite makers are also in a very comfortable position, substantial deliveries going forward to the Midlands and Sheffield areas. The price is maintained on the basis of 71s. per ton delivered locally for No. 1 East Coast hematite.

The steel makers are very well employed, demand for semi-finished steel is strong. More specifications are being received for joists and sections. Shipbuilding departments are busier, whilst the rail departments have benefited by the orders placed recently by the London Passenger Transport Board for 2,675 tons of tramway rails with Dorman Long and Company, Ltd., and 3,000 tons of tramway rails with the Skinningrove Iron and Steel Company, Ltd. Messrs W. Gray and Company, Ltd., West Hartlepool, have booked an order during the past week for a new steamer of approximately 9,000 tons, whilst the announcement that the Admiralty have placed an order on Tyneside for a new cruiser will be beneficial to the steelworks in this area.

The advance of 5s. per ton in the price of sheets was not unexpected owing to the increase in the price of spelter. Black sheets are now £11 5s. per ton for delivery to home users and £9 5s. per ton f.o.b. for shipment abroad, whilst galvanised corrugated sheets become £13 5s. per ton to home users and £11 10s. f.o.b. for shipment overseas.

Heavy steel melting scrap is in good demand with makers continuing to offer 52s. 6d. per ton. Merchants, however, are selling slowly, as they expect to realise higher prices. Foreign ore is difficult to place, and prices are purely nominal, owing to the freight position. Blast furnace coke is in good supply, and is offered at 18s. 6d. per ton delivered at the furnaces here.

SHEFFIELD.—Sheffield is busier than ever on aircraft steel, projectiles and other munitions, the plants concerned being run under severe pressure. This demand reacts to the advantage of several other departments of the steel trade, notably tools. A revival of trade in alloy tool steels is reported. The smaller makers of this material were experiencing lean times until a few weeks ago, since then, their order books have filled up, and firms are now well provided with work. A scarcity of semi-steel necessitates the open-hearth plants maintaining maximum operation. The aggregate output of the steel works in Sheffield continues to expand. In Lincolnshire, an additional steel furnace has been put into commission at the works of United Steel Companies, Ltd. These works produced half a million tons of iron and steel in the first half of the year. By the end of the year the output will exceed a million tons. Favourable reports come from makers of all descriptions of tools. The improvement in trade continues to be mainly internal. Exports are not satisfactory, although tending upwards. Seasonal trade is causing activity in cutlery, electro-plate and silver goods, the present position being a little better than a year ago.

WORKINGTON.—Almost every week the volume of business done in the North-West Coast hematite pig-iron market represents a tonnage in excess of what is being smelted by the eight furnaces in blast between Workington and Barrow. A large proportion now concerns the early or immediate needs of users. Temporarily, at all events, forward buying has ceased to be of important extent. Makers, however, have already sold their output twelve months ahead, and that period is in process of being prolonged. The Midlands has become the chief buyer of both ordinary and special iron, one reason being the close link between the United Steel Company's iron and steel works at Workington and the similar undertakings in Sheffield. South Wales ranks next in importance. The Scottish and Continental demand expands but slowly. Local consumption continues to be heavy, accounting as it does for more than half of the entire output.

Prices are firm at the agreed minimum, but if the freight of foreign ore increases, it is probable that prices will be re-adjusted. Bessemer mixed numbers are quoted at £3 15s. 0d. per ton at

Glasgow: £4 1s. 0d. at Manchester; £4 4s. 6d. at Birmingham; and £4 6s. at Sheffield, with an additional 2s. 6d. to 5s. per ton for special brands. Refined iron is in brisk demand, and malleable iron is a lively trade, at £5 15s. per ton delivered at Birmingham. Ferro, which is being smelted at Workington, commands a ready market at from £10 15s. to £11 5s. per ton home. Steelmakers have plenty of orders, and anticipate remaining in full activity for several months to come. Workington is rolling rails, billets, bars and slabs but Barrow is not rolling this week on account of the storm damage to the plant. Native ore is merely a local trade, and it stands at from 13s. 6d. to 14s. 6d. per ton.

GLASGOW.—Activity in the iron and steel trades in this district continues to expand. All manufacturers of steel are very busy, and are indeed finding it difficult to meet the urgent demands of consumers. Makers of semis are very similarly placed. At the Clyde shipyards the position has improved considerably within the past month or so, and the announcement that the Fairfield Shipbuilding Company of Govan are to build a British cruiser, valued at approximately £2,000,000, still further improves the position. It is also announced that Messrs Yarrow of Scotstoun have contracted to build boilers and machinery for three destroyers for the Yugoslav Government, the value of this contract being about £500,000. Prices of black and galvanised sheets were advanced 5s. per ton at the end of last week; but makers find demand for both increasing, and rolling mills and galvanising plant are well employed.

CARDIFF.—On the Swansea Metal Exchange on Tuesday, steady conditions were reported in the tinplate market. The mills are producing at about 52.5 per cent. of capacity, and it is expected that the present rate of output will be maintained in spite of the Cartel restrictions on new export business. Quotations are firm at the revised c.i.f. schedule based on 18s. 9d. per box for export and 18s. 4½d. for the home trade. Galvanised sheets have been increased to £11 10s. per ton, but there has been little expansion in the volume of trade. Shipments of tinplates at Swansea last week fell to 49,410 boxes, compared with 102,956 boxes the previous week, and stocks have consequently increased from 67,187 to 95,802 boxes.

OTHER METALS

COPPER.—Although prices were subject to fluctuations, the general tendency was slightly easier during the past week. Supply was not excessive, but consumers' demand was insufficient to bring about any further improvement. As has previously been pointed out, consumers have recently been buying well in excess of their immediate requirements and are now fairly well supplied for some time ahead. In the absence of any further political complications, consumers will probably draw on their stocks, so that a further rise in prices seems unlikely in the near future. On the other hand, it is suggested in some quarters that the improvement in the international position may stimulate activity in certain "peace" industries, thus affording a new ground for a rise in prices. Although it would be unwise to ignore this possibility, it seems probable that increased industrial activity is already largely discounted in the current price level.

Sales on the London Metal Exchange: 2,350 tons on Monday, against 2,750 tons last week; 1,250 tons on Tuesday, against 2,450 tons last week; 1,600 tons on Wednesday, against 4,450 tons last week. Domestic spot was quoted at 8.47½ cents per lb. in New York on Wednesday, against 8.52½ cents a week ago and 8.45 cents a month ago. Wednesday's official closing price for standard cash in London was £34 12s. 6d. to £34 13s. 9d., compared with £34 17s. 6d. to £34 18s. 9d. a week ago. Stocks of refined copper in British official warehouses at the end of last week, at 79,993 tons, show a decrease of 800 tons, while stocks of rough copper, at 10,934 tons, show a decrease of 450 tons on the week.

LEAD AND SPelter.—Although the basic position of both metals showed little change, quotations—especially in the case of lead—were easier this week. The major cause was a bout of profit-taking after the recent sharp rise, but it must also be remembered that consumers are now better supplied, although not to the same extent as in the case of copper. Hence some further fall in prices may be witnessed in the near future, although the position of both metals remains fundamentally sound.

Sales of lead on the London Metal Exchange: 1,400 tons on Monday, against 1,350 tons last week; 1,400 tons on Tuesday, against 1,250 tons last week; 1,850 tons on Wednesday, against 1,150 tons last week. The New York quotation on Wednesday was 4.50 cents per lb., against 4.50 cents a week ago and 4.50 cents a month ago. The official closing quotation in London for soft foreign for shipment during the current month was £17 11s. 3d. per ton, compared with £18 2s. 6d. a week ago.

Sales of spelter on the London Metal Exchange: 300 tons on Monday, against 700 tons last week; 450 tons on Tuesday, against 800 tons last week; 425 tons on Wednesday, against 475 tons last week. Wednesday's quotation in East St. Louis was 4.85 cents per lb., against 4.85 cents the week before and 4.75 cents a month earlier. Wednesday's official closing quotation in London for "good ordinary brands" for shipment during the current month was £16 2s. 6d. per ton, against £16 2s. 6d. last week.

TIN.—Fluctuations in this market were, of course, primarily associated with Tuesday's quota decision, discussed in a Note of the Week. Within the short period of two and a half months tin quotas have been increased in three instalments from 50 to 80 per cent. of the standard tonnages. The latest increase from 70 to 80 per cent. did not come as a surprise, for in some quarters it had even been anticipated that the quota might be raised to 100 per cent. for a short period. Some time must elapse before the higher quota can be reflected in actual supplies, for all the producing areas, with the exception of the Dutch East Indies, are behind-hand with their output, owing to the special circumstances (labour

shortage, etc.), which have been discussed in recent weeks. Nevertheless, some relief will be forthcoming in the immediate future, since it was officially stated on Friday last that considerable quantities of Dutch tin are on their way to England, and that additional supplies will follow almost immediately. This week's increase in the quotas naturally produced a setback in prices, but bears appear to have been much more cautious than after the decision of August 10th. The trend of prices in the immediate future must be dependent upon the rate at which the higher output becomes available on the London market.

Sales of tin on the London Metal Exchange: 75 tons on Monday, against 450 tons last week; 450 tons on Tuesday, against 235 tons last week; 625 tons on Wednesday, against 475 tons last week. The New York quotation on Wednesday was 50.87½ cents per lb., against 51.50 cents a week ago and 49.50 cents a month ago. Wednesday's official closing quotation in London for standard cash was £216 10s. to £217 per ton, compared with £228 to £229 last week. Stocks of tin in London and Liverpool at the end of last week totalled 362 tons, a decrease of 69 tons on the week.

OTHER NON-FERROUS METALS.—Among other non-ferrous metals, aluminium ingots and bars for home delivery were again quoted at £100 per ton. Nickel, for home and export, at £200 to £205 per ton, remains unchanged. Quicksilver, on the spot, was quoted at £12 5s. to £12 7s. 6d. per flask of 76 lbs., as against £12 to £12 2s. 6d. per flask last week. Chinese antimony was quoted at £75 to £76 per ton ex warehouse, duty paid, the same as last week. Chinese wolfram for October-November shipment was quoted at 36s. 6d. to 37s. 6d. per unit, c.i.f., as against 35s. to 36s. per unit last week. Platinum (refined) at £7 10s. per ounce, was unchanged on the week.

TEXTILES

COTTON.—Manchester. — An encouraging business has again been done in yarn and piece-goods. Most spinners and manufacturers have sold more than their output. In the circumstances there has been a tendency for engagements to be extended and delivery difficulties are increasing. There has not been any distinct change in the level of prices for American cotton. Heavy hedge selling by growers in the United States has been offset by the healthy trade demand. Weather advices from the belt continue rather better and there is a possibility of the Government crop estimate being increased at the beginning of November. Rather wide fluctuations have occurred in prices for Egyptian Sakel cotton. These changes have been largely due to diverse political news.

A big inquiry has been experienced in piece-goods for foreign outlets. An increased turnover has taken place for India in grey, bleached and printed and dyed goods. Practically nothing has been done for China, but fancies have attracted rather more attention for Hong Kong. A varied business has been put through for the Dominions, especially South Africa, and a little more buying has occurred in shirtings and prints for West Africa. Home trade demand has again been active, there being considerable buying in heavy materials, whilst there are now signs of freer operations in dress goods. Taking the weaving section as a whole, the position is distinctly healthier than a month ago. A substantial business has again been done in the yarn market. Although most of the buying has been in coarse and medium American counts certain Egyptian spinners have had a fair week.

GRAIN MARKETS

WHEAT.—During the past week large arrivals of wheat in this country, coupled with a rather dull demand, caused a continuance of the downward tendency of prices noted a week ago. An improvement in the international outlook and widespread rainfall in Southern Hemisphere producing areas have promoted a bearish sentiment. Australia's crop is now officially estimated to yield 135 million bushels, against an average of 186 million bushels in the five years 1930-1934.

According to the *Corn Trade News*, total arrivals of wheat and flour at principal ports of Europe during the past week were 1,186,000 quarters, against 919,000 quarters in the preceding week. On Wednesday last, "December" futures were quoted in Chicago at 99½ cents per bushel, against 100½ cents the week before and 98½ cents a month ago. Quotations in London, Wednesday: No. 1 Northern Manitoba, ex ship, 36s. 3d. per 496 lbs., against 36s. 9d. a week ago; No. 2 Northern Manitoba, ex ship, 35s. 3d., against 35s. 9d. a week ago.

FLOUR.—Demand continues quiet, with imported descriptions a little cheaper on the week. Shipments from North America in the last week totalled 158,000 sacks, as against 81,000 in the previous

week. Wednesday's London quotations (excluding quota payments) were: Straight run, delivered country, 30s. per 280 lbs., against 30s. a week ago; delivered London, 29s., as compared with 29s. a week ago. Manitoba patents, ex store, 28s. 6d. to 30s., against 28s. 6d. to 30s. a week ago. Australian, ex store, 23s. 6d., against 23s. 6d. a week ago.

BARLEY.—Demand for imported feeding barley has again been dull, with prices tending to sag. Supplies of good quality English barley are limited this season and prices are well maintained. "October" futures were quoted at 31½ cents per bushel in Winnipeg on Wednesday, against 33½ cents last week and 36½ cents a month ago. Quotations per 448 lbs. in London on Wednesday were: "English feed" (new) at farm, 23s. to 24s., as against 23s. to 24s. last week; "English malting" (new) at farm, 30s. to 56s., against 30s. to 56s. a week ago.

OATS.—On Wednesday, "December" futures were quoted at 26½ cents per bushel in Chicago, against 27½ cents a week ago and 28½ cents last month. Quotations in London, Wednesday: "English Black" (old), at farm, 22s. per 336 lbs., against 22s. a week ago; "English White" (old), at farm, 22s., against 22s. last week; "Chilean White," landed, 28s. per 320 lbs., against 28s. a week earlier.

MAIZE.—Trading continues quiet and prices in this country have shown a renewed tendency to sag. On the other hand, Chicago quotations are rather higher on the week. "December" futures were quoted on Wednesday at 61½ cents per bushel in Chicago, against 60½ cents a week ago and 57½ cents last month. Quotations in London, Wednesday: "Plate," landed, 18s. 3d. per 480 lbs., compared with 18s. 9d. a week ago; "Plate," ex ship (new), 17s. 3d., as against 12s. 9d. a week ago; "Plate," "October," 17s. 3d., against 17s. 9d. a week ago. Yellow maize meal, ex wharf, was quoted at £5 to £5 2s. 6d. per ton, against £5 2s. 6d. a week ago.

COMPARATIVE AVERAGES OF GRAIN.—The following table gives the estimated sale of home-grown wheat during the harvest years 1932-33 to 1935-36:—

	1932-1933	1933-1934	1934-1935	1935-1936

A SELF-BINDER FOR The Economist

Week by week you keep your copies of "The Economist," and ultimately you either file them or bind them. Doubtless you are accustomed to the annoyance which attaches to the ordinary binder—the difficulty of reading half the left-hand page and the unwieldiness of the device generally.

We are able to offer our readers a binder which overcomes these irksome difficulties and is, in our opinion, the most efficient contrivance for the purpose we have yet seen.

It holds three months' issues and index, it has no wires, clips or metal contrivances, and each issue can be bound up in an instant in such a way that it can be read as easily as a well-bound book.

(IN FULL CLOTH, LETTERED ON SPINE AND FRONT)

Price 5/- each, post free (Overseas 6/-)

The First Financial Daily Newspaper

THE FINANCIAL NEWS

is not only the oldest, but the best, daily financial newspaper in the world. Its treatment of Stock Exchange and Investment matters, the Money Market and the Exchanges, is distinguished for its independence and objectivity. In "Lex" and "Midas" it has two of the shrewdest and most knowledgeable Stock Exchange writers of the day. Its daily column "Lombard Street" is followed by bankers and foreign exchange experts with greater attention than any other feature in daily journalism dealing with money and exchanges.

THE FINANCIAL NEWS

is obtainable from all good newsagents throughout the Country—Twopence Daily.

THE SECRET OF THE BALLOT-BOX

THE Government has taken the grave responsibility of plunging the country into the vortex of a General Election in the middle of an unresolved international crisis. The party augurs have spoken; the Prime Minister has made up his mind. Parliament was dissolved on Friday, October 25th. The nation will poll on November 14th, and a new Parliament will be in session in the first week of next month.

If the first duty of any Government in its fifth year of office is to ensure its own perpetuation, then Mr Baldwin's advisers have revealed the true Machiavellian flair in timing their appeal to the country. An election this month means that candidates fighting under the Government's banner should benefit from the most striking manifestation of unity among all parties, in support of a national policy in foreign affairs, that has been witnessed since the Government took office.

Moreover, if gratitude wins elections, the Government can make a strong appeal to those who do not examine too closely into the relationship between cause and effect. Has it not put a million men into employment, raised the price of "Consols" from 49½ to 84, and restored Great Britain's prestige in the councils of the world?

Again, even its severest critics have reason to be thankful for the stability of our parliamentary system and for the steadiness of public opinion in these four years. For at a time when the stock of parliamentary institutions stood low in Europe, less on account of their alleged vice than of their indubitable inefficiency in certain countries, democracy in Britain was equal to the task of seeing the country through the severest economic depression of modern times to a haven of modest prosperity. And for this the Government may reap some of the credit.

The future historian, however, may view the Government's achievements from a somewhat different angle. Its "famous victories" were all in the domestic, and its most damaging failures in the international, sphere. It never

lacked courage, but its vision was restricted and its gait pedestrian. It transformed the national fiscal system when falling world prices masked the inevitable repercussions on the national standard of living. Of the long-term effect of its policy on the great exporting trades the Government remained oblivious until the plight of the Special Areas and the perennial troubles of the coal trade, like twin birds of ill omen, came home to roost on the eve of this month's election. Where economic tendencies were on the Government's side, its plodding genius was seen to best advantage. Its refusal to "experiment" with currency and credit, after the devaluation of the pound, went far to recreate public confidence and provide a favourable environment for a titanic War Loan conversion and a trade revival backed by cheap money. The reverse side of the medal, however, was revealed in the Treasury's maintenance of a narrowly restrictive policy in the market for new trustee issues. As a result, the benefits of low interest rates, so far as long-term borrowers were concerned, were largely confined to a limited number of authorities with "convertible" existing obligations.

Abroad, the Government's record might have been far happier for the world had it carried into its conduct of foreign affairs a tinge of the conviction revealed—to its lasting credit—in its handling of the India Bill. It lacked energy to oppose, or wisdom to regulate, German rearmament; and it must bear a substantial share of the blame for allowing ten years' anxious labour for disarmament to be brought to shipwreck. Its policies were not infrequently contradictory and self-cancelling. Mr Runciman's bilateral trade pacts, with their rigid most-favoured-nation clause, contributed little to world revival, and were irreconcilable with Mr Elliot's agricultural protectionism. The Government's bluff was frequently and successfully "called"—by Mr Bennett, for example, at Ottawa, and by Germany and Japan before the League. Not until last September did Signor Mussolini discover, to his pardonable

surprise, that the Government, for once, had the courage of its convictions—and the effect on public opinion, at home and abroad, was electrical.

On the whole, the Government's past record must be deemed a two-edged electoral weapon. It is not altogether surprising, therefore, that this time there is no request for a blank cheque, but a detailed Election Manifesto, compounded of most diverse ingredients, culled from the programmes of all parties. While fidelity to the League of Nations is re-affirmed, the failure to check the growth of the world's armaments is made the foundation for a mandate to increase Britain's own "Defence Forces." Restoration of international trade is to go hand in hand with a prosperous countryside. The Special Areas are not forgotten, but no promises are made in regard to them, except that "financial considerations will not be allowed to stand in the way of any practical and reasonable scheme"; that "ready-made factories" will be provided on a "trade estate"; and that workers who cannot be absorbed locally will be trained and transferred to other areas. The evils of overcrowding and the slums will continue to be energetically combated. Improved coal selling arrangements will be insisted upon, and mining royalties will be "unified." In its social programme, the Government includes the extension on a voluntary basis of contributory pensions to black-coated workers and other persons outside the present arrangements, the regularisation of Unemployment Assistance arrangements, the overhaul of the Means Test, the raising of the school-leaving age to fifteen (a suggestion with which we deal on a later page), and an effort to raise still further the general health of the nation. This is as comprehensive as a Woolworth counter. Gladstone would have called it Liberal; Disraeli would have muttered something about "dishing the Whigs." How far is it likely to decide the issue of this month's campaign? Alternatively, how far will the decision turn upon questions of party allegiance, mass emotion, and the "strategy" of the hustings?

Not for many years has the party position been so confused. The introduction of a general tariff has blurred the clear-cut issue which, broadly, has divided the parties of Left and Right since the beginning of this century. No party "test" of equal potency and controversy has yet emerged. The programmes of the Government and its opponents differ less in content than in emphasis. All parties stress their determination to seek peace and ensue it—with an insistence which is, perhaps, the most eloquent of all testimony to national uneasiness on that score. The Labour Party's Manifesto reads like a less detailed version of the Government's proposals for industry, agriculture, housing and education. Though it advocates the abolition of National Air Forces, it explicitly expresses its intention to maintain such defence forces as are necessary to Britain as a member of the League—and even Mr Baldwin specifically demands no more. The Labour Party's belief in "public ownership" of banking, certain key industries, and "the land" is reaffirmed, but more as a matter of habit than as a concrete election issue. And what of "the Liberal vote"? The Council of Action for Peace and Reconstruction, which is designed largely to mobilise it, as well as that of the "unattached" voter, has adopted an election strategy based, primarily, not on direct candidatures, but on the technique of the questionnaire, which is designed to commit as large a number of candidates as possible to a particular programme of measures for immediate application. It is a device for using the "free" vote to impose a policy which to a large extent cuts across party lines.

Which post-war precedent will be relevant to this month's result—the tradition that every election since 1923 has reversed the House of Commons majority established by its predecessor, or the historic fact that every administration during fourteen of the last seventeen years has drawn its voting power in the House of Commons predominantly from the Conservative Party? Will the result of 1935 fall half-way between those of 1929 and 1931? Or will the vagaries of our out-of-date and incalculable electoral system once again produce a lop-sided and unrepresentative Parliament? For good or ill, the events of the next fortnight will decide these questions.

THE FRENCH POLITICAL SCENE

OCTOBER 31, 1935, may well mark a turning-point in French politics. On that day the mandate to issue new decrees, which the Chamber and Senate conferred upon M. Laval on June 8th, expired, and the shadows of past difficulties were again thrown on the mist ahead. The gravity of the international situation; doubts about M. Laval's conduct of French policy in that crisis; the perpetual and protracted problem of dressing the next year's Budget and passing it through two Budget Commissions and two Chambers; the claims of a united peasants' front in a still predominantly agricultural, though still deflation-minded, country; the eternal insubstantiality of any Government majority in French politics; and the sorry, but unalleviated, burden of uninterrupted deflation... here is matter enough to disquiet any Prime Minister of France, even in normal times. In the last two years, however, times have not been normal in France; for the difficulties which every French Government expects to meet in both Chambers of Parliament have been immeasurably magnified by an ugly public temper which has already found violent expression in the streets of Paris. It may well be that, in the few weeks or months ahead of us before the French Chamber need meet—by December 31st, for budgetary purposes—the destinies of much more than M. Laval's Government and its policy will have been decided.

France has always had one greater enemy than Germany: her own political system. To many observers—and to very many Frenchmen—it now seems that recurrent crises within her political system bid fair to become a veritable *crise de régime*. Parliament itself, the rôle of the deputy, the deputy's individual responsibility only to his own electors, the "group system" which arises thence, these are all now in the crucible of public criticism. If this seems an over-statement, let us recall four significant facts. First, a number of anti-Parliamentarian bands have arisen, some (like the Action Française monarchist group) more than a generation old, others (like Colonel de la Rocque's Croix de Feu or the Jeunesses Patriotes) of recent origin; but all of them pledged to the overthrow of the existing Parliamentary regime as we know it. They differ widely in strength, discipline and military organisation; but together they number some 350,000 to 400,000 members; they are concentrated on Paris; and they have arms. Secondly, however, Parliament itself, and the function of the average deputy, have both fallen into grave disrepute: the former because of the endless shuffling of the group-controlled Governments, the latter owing to the sinister revelations of various financial scandals. Thirdly, as a combination of the first two factors, *la rue* has once again made a sinister re-entry on the French political scene. Last year two Prime Ministers of France, M. Chautemps and M. Daladier, were forced to resign by anti-Parliamentary riots in the streets of Paris, though they each possessed the assurance of ample majorities in the Chamber. Fourthly, and finally, owing to the general unwillingness in the Chamber to shoulder responsibility for continuous and remorseless deflationary measures in order to balance a perpetually self-disequilibrating Budget, government in France at the moment can only be carried on by emergency decrees. Thus, French democracy under the Third Republic ungracefully—and, as the *Ligues* say, disgracefully—abdicates its duties. What are the fundamental reasons for this political disintegration in France? Are we on the threshold of a great and epoch-making change in the structure of French politics?

The most obvious weakness of the whole French political system is its lack of any parties (in the Anglo-Saxon sense of the term) with strong Parliamentary discipline, programmes which bind their members, and nation-wide organisation. France, true to the Republican spirit of the Revolution, views each deputy as the representative of his constituents alone, bound to express their views and further their interests. Thus emerge the "groups" of the Chamber—which, with the exception of the Radical Socialists, Socialists and Communists, are little more than random alliances of like-minded individuals. Such groups have no "group programme"; at the most, one or two of the largest will affirm common principles at election time. Thus, they are driven to rely on opportunist tactics in

Parliament and in the constituencies. The present composition of the Chamber is roughly as follows:—

Composition of Chamber in 1935: Elected May 1-8, 1932

LEFT—		CENTRE—	
Radical-Socialists and Radicals	157	Republicans of the Left, etc.	72
(Herriot).....	129	(Lardieu group, Flandin group, and others).....	—

		Independents.....	125
			—
LEFT CENTRE—		INDETERMINATE	10
Radical Left, and others of an	62		—
undefined Left.....		Total	615

In so ill-assorted a Chamber—which nevertheless faithfully reflects the overwhelmingly Leftward orientation of France as a whole—there have been patchwork Governments, under various "individuals," of whom M. Laval (a Senator) is one, leading finally to the emergency decrees of M. Laval. For all this there is only one real cause: the dissipation of the national will among innumerable splinter-parties. Add to this the virtual impossibility (though it remains constitutionally possible) of securing the Senate's agreement to any proposal by the President for a dissolution, and deadlock becomes inevitable. In fact, Rousseau's gibe at the English for only being "really free" once every few years is to-day more true of the French. The English Prime Minister can at any time seek the verdict of the nation by asking the King for dissolution. In France, ever since the fateful *Seize-Mai*, 1877, when Marshal MacMahon dissolved a Republican Assembly for Monarchist purposes, "dissolution, which is really only an appeal to the court of last instance—the people—appeared as an attempt on the nation's rights, as represented by the Chamber." Thus has Republicanism become the worst foe of democracy.

The second main weakness of France's political structure is that very unification and centralisation which the Revolution, and Napoleon more than anyone, set out to achieve. In France, local government and most administrative services are under the control of the various Ministries, the prefects of *départements*, or the mayors of communes. The prefect is appointed or retained by every new Government; he is therefore politically "amenable." Moreover, deputies and mayors and councillors-general of the *départements* are all elected by the same electors; so that local political interests control, ultimately, both central and local government, and also many important administrative posts. Finally, the French practice is for Ministers to have their own cabinets and "advisers," at their own discretion, many of whom can exercise considerable control over the particular service for which their Minister is responsible. The Oustric and Stavisky scandals showed that the very highest responsibility was involved in more than one Ministry. In the Stavisky case the partiality of the police, and its close connection with the Government, became the

match to the powder of popular resentment which exploded against Parliament. If we add to all this the venality of most of the Paris Press, and the tradition that a deputy exists to "serve" his constituents in many little ways, observers on this side of the Channel can scarcely wonder that Parliament has fallen into such disrepute in France.

But we think it would be both rash and illogical to conclude that Fascism is about to sweep away the Third Republic and its Parliament. The political *émeutes* of February, 1934, and after were confined to Paris; and Paris has never excelled in the *bourgeois* virtues. The anti-Parliamentary factions have been incited by a rabid abuse of the freedom of the Press on the part of their leaders, by the extreme laxity of the regulations about firearms in France, and by the spectacle of successive Governments persistently toppling. Yet France, the country where peasant proprietors are four-fifths of all agriculturalists and where agricultural voters greatly outnumber industrial voters, remains solidly, almost stolidly, Republican and Parliamentary. The Constitution of 1875 may be faulty; but the tradition of Republican Revolution is, unlike that of Germany, much older. That tradition has been constantly invoked. It has proved victorious against three kings and an emperor. Always the extremism of Paris has had to give in before the shrewd perspicuity of the provincial peasants and *bourgeois*.

With half an eye on these considerations, M. Laval can afford to be firmly Parliamentary in his internal policy. The one fatal thing, at this juncture, would be to permit anti-Parliamentary factions to pursue their avowed aims of overthrowing the essential institutions of Republican France. Few, we imagine—and, certainly, no deputies among them!—would grudge him strong powers to deal with the open *menaçants* of democracy. But all is not solved when the Fascist menace is averted. Fundamentally, France's crisis is only in part an administrative crisis within a given framework of political machinery. It is much more an economic crisis. To cope with it, Parliament has so far only been able to murmur, in the words of its standing orders, its confidence "that the Government will pursue a policy *nettement Républicaine*!" Republicanism is not enough. The emergency decrees have shown that orthodox deflation, too, is no solvent for France's crisis. The task before M. Laval—indeed, before any French Government willing to shoulder the responsibility of justifying Parliament by its works—is so to combine a policy of "ordered devaluation" with a policy of administrative reform as to command overwhelming support in the country. The sands are fast running out, for a general election is due next year; and devaluation is no subject for interminable Parliamentary wrangling or for the hustings. That election will, we devoutly hope for France's sake, indemnify any Government which decides on orderly devaluation, and will confirm France's Radical and Republican temper. To-day the world, no less than France herself, can ill afford to lose that temper.

THE HOUSING BOOM—II

IN last week's *Economist* we discussed the extent and origins of the housing boom. We reached the conclusion that although falling costs of building, lower rates of interest and reviving confidence had all played their parts in its generation, the dominant factor was the great increase in the purchasing power of the mass of the population, due on the one hand to the comparative stability of wages and salaries and on the other to the great reductions in the cost of food and clothes. The boom was thus due to a real increase in the demand for houses and not primarily to any of the factors entering into the price of houses. It remains to apply this conclusion to future prospects.

The factors of smaller importance may be eliminated first. Though building costs already show a slight upward tendency, following recent increases in wages, it is unlikely that changing costs will perceptibly influence the volume of building in the immediate future. The course of interest rates is unpredictable. The tendency may be slightly upward, but the building society mortgage rate is one of the "stickiest" of interest rates and any rapid return to the pre-1932 level seems most unlikely. "Confidence" is the most elusive factor of all. Commercial opinion, however, has been remarkably unperturbed, recently, by the menaces of the international situation and the disturbing factors incident to a general election. Summing up, we may conclude that tendencies have become, on the whole, slightly adverse to a continued increase in building activity, but the change, if any, is very small. And if the argument of our first article is correct, only a major reversal of trend could materially affect the volume of building.

Attention may be confined, therefore, to the prospective demand for houses. This springs from two causes—desire for new houses and ability to finance their purchase. Wide-spread publicity by the building societies of their financial facilities may have influenced recent events under both headings, but since 1932, at least, the really decisive factor has been the great reduction in the prices of the necessities of life. Are food prices likely to rise rapidly or substantially? Disequilibrium in world agriculture is unlikely to be speedily overcome, and, although British food prices are at the mercy of agricultural protectionism, it is unlikely that any Government would be ill-advised enough to engineer a substantial increase in the price of food in general. Cheap clothes are the result of cheap textile raw materials and far-reaching technical developments in the clothing trade. Wages and salaries, on the other hand, are again on the up-grade. On balance, public ability to buy new houses does not seem to be seriously threatened.

What of desire? In the volume on Housing in the 1931 Census Reports, the Registrar-General estimates that, in 1931-41, the increase in "families" will require 771,000 more dwellings. (The "family" in this sense does not necessarily refer to any particular degree of consanguinity, but merely to a group of persons living together.) Allowing 300,000 for re-housing of slum dwellers and 100,000 for ordinary replacement, the Registrar-General reaches a total of 1,200,000. If additional houses are built to provide separate dwellings for all "families" and to restore the percentage of vacancies to the normal pre-war level, a maximum estimate of 1,700,000, or 170,000 a year, is reached. The *Economist* (March 31, 1934) made an estimate not of the prospective firm demand for houses, but of the need for houses if a certain standard of housing were to be attained, the standard being the housing of the whole population "within a generation from the present in dwellings, large, sanitary and pleasant enough to make decent living possible." In the two decades 1931-1951, this envisaged 1,020,000 houses for overtaking the existing shortage, 714,000 for the prospective increase in the number of "families," 1,000,000 for slum clearance and 3,760,000 for obsolescence, making a total (for England and Wales) of 6,594,000, or 330,000 a year.

The actual rate of construction in the four years April, 1931-March, 1935, was, on the average, 249,000 houses a year and in the last two years of the period 297,000 houses a year. This greatly exceeds the Registrar-General's figure and approaches the "ideal maximum" of the *Economist*.

Of the latter, moreover, more than half was due to replacement, and there has been no indication in the last four years of any significant increase in the numbers of houses demolished. Slum clearance is increasing, but over the four years has probably been below the Registrar-General's figure. The proportion of vacancies, though not easily ascertainable, does not seem to be increasing rapidly. None of these factors—replacement, slum clearance, increase in vacancies—has been responsible for the boom. One is driven to conclude that an unexpectedly large increase has occurred in the number of "families"—i.e. of units requiring separate dwellings. The Registrar-General estimated an increase of 771,000 "families" in ten years, but there has been an increase of nearly 1,000,000 in four. This most significant social phenomenon is explainable only by a widespread tendency for families to "split"—for married children to cease living with their parents, for mothers-in-law to set up for themselves, and for lodgers to move into flats. A movement such as this, with its roots in the social life of the people, is not likely to come to a sudden end. But the 600,000 or so "families" that have appeared since 1931 in excess of the number predictable on the basis of birth and marriage rates, represent something like 6 per cent. of the total number of families. On general grounds, we can scarcely assume the indefinite continuance of so rapid an increase.

If the social movement behind the housing boom were to decline and disappear, the normal increase in families could be accommodated in less than 100,000 houses a year—a rate of building only about one-third that of the present. Where is a continuing demand for the other 200,000 houses to come from? The most obvious answer is—from slum clearance and the abolition of overcrowding. Since present programmes do not envisage building at this rate, there is the strongest economic argument for speeding up current efforts and widening contemporary definitions both of "slums" and of "overcrowding."

There is, however, another potential string to the housing bow. In Great Britain the present rate of "replacement" is almost negligible. The demolition of a dwelling house in order that another may be erected on its site is the rarest of occurrences. This general attitude is reflected in the Registrar-General's estimate of housing requirements, which allows 10,000 houses a year for the replacement, through obsolescence, of 10,200,000 existing dwellings—an average expectancy of life of a fraction over 1,000 years! Nobody, however, would maintain that the average of housing accommodation in this country was satisfactory or even adequate. In many respects—including sanitation, amenities, and external and internal appearance—we are far inferior to many nations with a lower general standard of living. Replacement has been discouraged by successive factors: a rapidly expanding population, the post-war shortage of houses, and, finally, improved transport facilities, which have encouraged extra-urban building. These reasons are losing force today, but the rate of replacement will probably increase very slowly, since the price differential between old and new property is not nearly large enough to make demolition and rebuilding economic except in special circumstances. Official intervention to buy up old properties is undesirable, since it would tend to maintain their market value, which is the opposite of what is desired.

The outlook is, then, for a decline in building activity. The increase in "families" will probably taper off slowly. A really vigorous policy of housing for the poor could do much to fill the gap, but even at its maximum it would hardly amount to 200,000 houses a year. The other potential source of demand for houses is through obsolescence. It is not inconceivable that we are on the verge of far-reaching developments in building technique which will materially reduce costs and accelerate obsolescence and replacement. In their absence, however, it is unlikely that increased replacement demand can develop rapidly enough to maintain the present level of building. On the other hand, most of the phenomena discussed in this article are slow-moving. A sudden reduction in building activity would presuppose either a rapid increase in food prices or a collapse of confidence. And there is every reason to hope that we shall avoid both.

OUTLOOK FOR COPPER

IN the last few months, the simultaneous operation of an international restriction scheme and an expansion of demand, fostered by re-armament and a re-stocking movement on the part of consumers, has slightly improved the copper position. Prices have quickly responded, the present quotation for standard copper in London being about 40 per cent. above last year's level. Nevertheless, the price is still less than one-half that of 1929. That the present level of demand can be satisfied at such a price is a striking commentary on the far-reaching changes which have occurred, in the interim, in the structure of the copper mining industry. The foundation of these changes was laid in October, 1926, on the formation of Copper Exporters Incorporated. This Cartel was essentially a device to maintain prices at a level at which the high-cost producers of the United States could operate at an appreciable profit. When the Cartel was formed, the price of electrolytic copper in the United States (which formed the basis of world prices) was 14.40 cents per lb. By April, 1929, the price had been raised to 24.38 cents, and, not unnaturally, the use of substitutes for copper had also increased, the French Government, for example, having substituted aluminium for copper in electric cables. Nemesis quickly overtook the Cartel. The American Customs smelters, in open violation of the agreement, supplied large quantities of copper to London metal dealers, with which the London Metal Exchange prepared a counter attack on the Cartel. The latter became inoperative, and at the end of 1932 was formally dissolved. By that time the price had fallen to about 4 cents per lb.

The most lasting consequence of the Cartel's intervention was its involuntary encouragement of the development of copper deposits outside the United States, who lost her unchallenged dominance of the world market to the Belgian Congo, Canada and Northern Rhodesia. In 1934 she was credited with less than 17 per cent. of the world's mine production of copper, as compared with nearly 50 per cent. in 1929. Recent developments of world production, consumption, stocks and prices are summarised in the following table:—

	1929	1930	1931	1932	1933	1934
Smelter output:						
United States	998.8	728.6	537.2	279.0	227.2	247.2
Chile	303.2	208.0	215.7	97.5	157.5	247.7

When last we discussed these changes in the redistribution of the world's copper production (see the *Economist*, May 19, 1934) the stage appeared to be set for improvement. As it happened, however, the expected rise in prices was delayed until early this year by unfavourable developments in the United States and by lack of co-operation among producers elsewhere. In April, 1934, the United States Copper Code, which enabled producers to raise the domestic price to 9 cents per lb., came into force. The Code forbade the use by United States manufacturers of copper produced by non-members, of metal produced in excess of the sales quota, and of existing surplus stocks. As might have been expected, foreign markets were swamped by "non-Blue Eagle" copper, United States' exports of copper rising from 124,805 short tons in 1933 to 262,366 short tons in 1934. The London quotation for "standard cash" copper consequently fell from £34 per ton in the spring to less than £26 per ton in the autumn of 1934.

This renewed fall not only provoked disappointment among London shareholders, but involved the Belgian

THE BRITISH LINEN BANK

Union Minière du Haut Katanga in some difficulty. Both interests set to work to improve the situation. A Copper Shareholders' Association, formed in London, demanded an international restriction scheme. The Union Minière sounded Rhodesian producers, with London headquarters, to the same end. The outcome was a new scheme, on which we commented on April 6th last, which came into operation from June 1, 1935. Superficially, it may be argued that, in its absence, the Rhodesian copper producers could have both weathered the storm without great damage and further increased their share of the world's market by virtue of their low production costs. The adherence of the three leading concerns of Northern Rhodesia—Rhokana, Roan Antelope and Mufulira—may, however, have been influenced by the fact that all these companies, having embarked on extensive development programmes, were dependent on financial support from British investors. These companies, under the agreement, have undertaken not to produce more than 10,731 tons of copper per month, allocated as to 4,200 tons each to Rhokana and Roan Antelope and as to 2,331 tons to Mufulira. Despite temporary restriction, however, mining development is proceeding apace. In other words, the restriction scheme is regarded as a temporary expedient, which is unlikely to affect the long-term prospects of the Rhodesian copper mines.

Canada, whose copper is produced as a by-product, does not formally adhere to the scheme. In fact, her production reached a new record last year and has continued to increase from 88,571 short tons in the first six months of 1934 to 107,500 short tons in the first half of 1935. The development of the copper deposits in the Belgian Congo has been accelerated by the devaluation of the belga, prospecting for new deposits having been energetically resumed in South Katanga. Little recent development, however, has taken place in Chile, whose productive capacity was greatly extended in the post-war decade. As far as the United States is concerned, the restriction scheme provides a breathing space which may slightly strengthen the position of producers in that country. But in view of the expansion of American domestic demand, that country is unlikely to make an attempt to recover her dominance of the world's copper market. Such an effort would probably fail in any case owing to the high costs of American production.

The restriction scheme has undoubtedly contributed to the rise in the price of copper during recent months; and if the present pace of rearmament is maintained, it is possible that the restriction of supplies may result, at least temporarily, in a further jump in quotations. World statistics of the quantity of copper used for armament purposes are not available. According to the American Bureau of Metal Statistics, the consumption of copper by the United States munition industry trebled between 1932 and 1934. But, as we have previously pointed out, the restriction scheme is by no means watertight. Except in the event of an international conflagration, prices are unlikely to rise to the pre-depression level. In the first place, a sharp rise in the price of copper would not only involve an expansion of production in countries outside the restriction areas, but would be met by large-scale substitution of aluminium for copper. Although, technically, aluminium is not a perfect substitute, its potentialities have been increased by recent research. In the second place, the production of secondary copper is flourishing as never before. According to the

United States Bureau of Mines, the output of secondary copper in that country rose from 187,700 short tons in 1932 to 292,500 short tons in 1934. Some 121,300 short tons of re-treated brass, moreover, were produced in the United States in 1934, compared with 130,000 and 86,400 short tons, respectively, in 1934 and 1933. Although similar figures for the world as a whole are not available, production of secondary copper, in the United States at any rate, exceeds the current output of primary copper.

The technical position of the copper market, however, is not the sole guarantee against an unreasonable rise in prices. The fate of Copper Exporters Incorporated is not likely to be forgotten by the industry. Copper producers seem intent on stimulating consumption at a reasonably profitable level of prices. It is probable that a further rise in prices would be met by an increase of the production quotas of the restricting countries. At a meeting of the Copper Development Association last spring Sir Auckland Geddes, chairman of the Rhokana Corporation, said:—

I feel sure that I voice the firm belief of all important copper producers when I say that, although we wish to see a remunerative price for copper, no one would wish to see a startling increase in the price . . . There is no desire anywhere to force prices up to a level at which substitute metals could become competitors.

With this sentiment we entirely sympathise. The adoption of a far-sighted policy is the more commendable at a moment when an expansion of demand might be exploited by unscrupulous operators. A reasonable price objective alone in the long run can benefit producers and consumers alike.

SOUND AND FURY

Is noise really the child of the internal combustion engine, and consequently a new menace to human happiness? Or have we merely, in a neurotic age, suddenly become more sensitive to it? The average citizen who, in an age of motor cars, gramophones, loud-speakers, and propagandists innumerable, is faced in the month traditionally consecrated to the festival of gunpowder by the noisiest of all political phenomena, a General Election, may find much that is relevant—though little that is consoling—in the recent deliberations of the experts. Some jaded and sleepless city dwellers would savagely deride the idea that there is anything imaginary or, as it were, psychological about noise. Yet the report, issued by the Anti-Noise League, of the recent Conference on Noise Abatement shows that even this problem is not nearly so simple as it ought to be. The interim report of the Departmental Committee on Noise, set up by the Ministry of Transport last August, points the same moral.

To define, and still more to measure, noise is not an easy matter. When is a sound a noise? Dr. G. W. C. Kaye, of the National Physical Laboratory, speaking at the Conference on Noise Abatement, suggested the answer that a hearer calls a sound a noise whenever he happens to dislike it. And this seems as good a definition as we are likely to attain. In the task of measuring noise, Dr. Kaye claimed to have devised a more objective criterion. A "reference standard of sound," he said, had been chosen:—

This standard, which consisted of a pure note of a frequency of one thousand cycles per second, played much the same part as a standard candle did in the photometry of electric lamps. The adjustable intensity of the standard note was measured on a scale of decibels above an arbitrary zero near the threshold of hearing; the corresponding loudness was then expressed on a numerically identical scale of phons.

The decibels and phons are ingenious and doubtless, so far as they go, legitimate. But surely they measure sound and not noise? For it is clear that a sound of a given number of phons would depend, so far as its intensity of noise was concerned, on whether the hearer was listening to it or not. It is unquestionably possible that if one's attention is somehow distracted from a sound, one simply may not hear it. What is noise to one man, in fact, may be sound to a second, and silence to a third.

Against this, the confirmed sufferer from noise will vigorously protest. He will justifiably point out that it is not in the power of the individual hearer to determine whether a given sound to him shall be sound, noise or silence. There must be hundreds of thousands of luckless men and women who have tried every known device, physical and psychological, to enable them to sleep in the middle of a modern industrial town, and have reached the hard conclusion that, do what you will, a noise remains a noise. Motor-horns have now been silenced at night, it is true. But a hoot is not the only noise a motor car can make. Doors slam, self-starters revolve, engines roar, gears change, and tyres skid and squeal. And a motor-bicycle driven through London at night must, on a conservative estimate, wake up 500 weary mortals a minute. Nor is this all. In the brief intervals of the night when motor traffic is temporarily silent, there are throbbing footsteps, strident voices, broadcast and otherwise, shunting trains, and clattering horses' hooves. The last are in themselves a puzzle. What are these mysterious troops of cavalry that incessantly pass and re-pass through the middle of London at night? And then—most gratuitous of all—there are the clocks, harping with melancholy and exasperating insistence on the irretrievable passage of time.

Many a tormented Londoner, after a succession of such nights, will anxiously seek the open country, in sure and certain hope of lasting quiet. He will stop the first evening, perhaps, at an inn on a moderately main road. Here resonant voices in the bar will make him uneasy till ten o'clock. After that blessed hour, however, he will tell himself, all will be quiet. But he is wrong. At ten the voices merely transfer themselves into the road under his window; and there they gossip on, or at least one last lingering pair of them, until well after midnight. Is there then silence? No. Every ten minutes throughout the night some motor vehicle passes with a concentrated, pitiless and protracted roar that London itself could not rival. Next night the disappointed seeker after quiet will decide to leave all roads behind him, and penetrate deep into the remotest unknown country. He will find a farm at the end of a muddy lane "unsuitable for motors," and here he will lie down to rest with the thought that any amount of squalor and dirt are worth enduring for silence. And here he will find the most heart-breaking noise of all. Crickets that chirp, dogs that bark, owls that hoot, rattling windows, banging doors, the hen that has laid an egg and the cow that lost its calf, rooks, seagulls, sparrows and starlings, the cock that salutes the morning, and the fox that howls at the moon—such is the silence of the country.

Why is it, the furious and disillusioned Londoner asks, that anybody ever thought the country quiet? The answer seems to be that what philosophers say of happiness is also true of silence: you only find it when you are not looking for it. When men sought the country primarily for beauty rather than quiet, they found quiet. But now that the noise of towns has become intolerable, we go to the country with our ears positively greedy for silence, and consequently we hear every sound. To a great extent, in fact, noise is a neurotic and psychological problem. The tricks, for instance, which habit can play with our hearing of noise are in themselves most surprising. It is possible to sleep peacefully for years in a house close to some loud and incessant noise, and then, on moving where the same noise is audible but less loud, to be kept awake by the very fact that it is diminished. And, for those who sleep in trains, it is of course a common experience to wake when the train stops.

The different national attitudes to noise are one of the most curious of all the problems of acoustic psychology. Paris is far noisier than London, and Rome far noisier than Paris. To arrive in Rome—or Milan—direct from London is like walking into the parrot house at the Zoo. And the remarkable thing is that the noise of Continental cities is almost entirely determined by one thing: employment of electric horns of a particularly high and hideous note. The use of this note is entirely unnecessary, as its complete absence in England proves; and its suppression would at once abolish nine-tenths of the noise that ravages Paris and Rome. The fact that its use in London would not be

tolerated for a day, shows how remarkably different the very perception of noise may be between one people and another.

If anything else were needed to prove how subjective a thing noise is, we have only to remember that the demand for houses along a by-pass is always keen, or to observe, that where four or five electric drills are gathered together, an interested and gaping crowd will be found assembled to watch, and presumably to listen, to them. Despite all this, however, it is unquestionable that a great many noises are offensive to all but the deaf and insane, and

consequently injurious to health, wealth and happiness. The evidence of Lord Horder before the Noise Abatement Conference here confirms the conclusions of ordinary common sense. We may consequently welcome the work of the Anti-Noise League, and heartily approve the efforts of the Minister of Transport to mitigate noise on the roads. And in the midst of a General Election, and in an age of dictators, propaganda and radio-priests, we may perhaps be forgiven the uncharitable suspicion that wherever there is sound and fury, there there will be a tale told by an idiot, signifying nothing.

NOTES OF THE WEEK

"Is It Peace?"—There has been a significant bustle, and much diplomatic coming and going, in London, Paris and Rome during the last week. At the end of last week the Quai d'Orsay asked Signor Mussolini to define his terms of peace; and the unanimity of the Press in Paris and Rome at the week-end suggested that these terms were of the following kind. Italy was to acquire control—by mandate or concession—over all non-Amharic Ethiopian territories, especially those bordering on her own colonies. She was to receive Tigré as it stands; Ethiopian armaments were to be effectively controlled; and the League was to accept full responsibility for Ethiopia's fulfilment of her obligations under the Covenant. These terms certainly indicate that Signor Mussolini now presents less full-blooded claims on Abyssinia; but they are of such a nature as to stultify any belief in the League as a safeguard against international gangsterdom. H.M. Government and the French Government have, it is understood, rejected them on the ground that they are not acceptable as they stand to Abyssinia or to the League. The initiative therefore devolves on them; and this week Mr Peterson, the Foreign Office expert on Abyssinia, and M. de St. Quentin, of the Quai d'Orsay, have been in consultation, presumably on the basis of new French proposals. Meanwhile, it was announced on Tuesday that Sir Samuel Hoare would follow Mr Eden to Geneva this week, where, as he said himself on Wednesday, he would have the opportunity of exchanging views with M. Laval. The latter, in his turn, has been continuously in consultation with the British and Italian Ambassadors in Paris; and on Wednesday he had a long consultation with the Papal Nuncio, which was taken by many observers to confirm the rumour from Rome that the Pope had urged upon Signor Mussolini the desirability of a speedy peace. Thus, there is good reason for the apprehensions which have begun to be voiced lest, amid the press of so many ardent fabricators of peace, the essential prerequisites of an honourable and durable peace may be stifled, to the everlasting discredit of the League. It was, therefore, reassuring to hear the British Foreign Secretary once again declare on Wednesday:—

Our policy has always been perfectly simple—namely, loyalty to the League and readiness to help with any honourable settlement of the dispute that is acceptable to the League, Italy, and Abyssinia.

This is the policy which the Government are asking electors to endorse. The electors, faced now with Ahab's query, "Is it peace?" will reply in Jehu's words, "What peace?" The Government will not be easily forgiven if they weaken in the fulfilment of their protestations.

Italy and Sanctions.—The League Assembly's Co-ordination Committee was convoked at Geneva on Thursday evening, and the "steering committee" of Eighteen met on Thursday morning. Both had to consider the views of the various League Members who had voted for sanctions against Italy, about the date on which the various sanctions should enter into force. At present, according to the Secretariat's report, 47 States have agreed to the Co-ordination Committee's proposal No. 1 for an embargo on arms and munitions; 45 States to proposal No. 2 for an embargo on financial accommodation to Italy; and 43 to proposals

3 and 4 for embargoes on exports of certain essential materials to Italy, and on all imports from Italy, respectively. Thus, the most important States-Members have agreed to impose the entire scheme of sanctions; Austria, Hungary, Albania and the minor Latin-American countries have not yet replied; and only the dates on which the complete set of sanctions should collectively enter into force need be decided. It seems that the principal States favour November 15 for the date on which the ban on imports of Italian goods should become generally effective. The financial embargo has apparently already been put into force by 19 Governments; and the ban on the supply of arms and implements of war to Italy by 32 Governments. To these measures, Signor Mussolini replied with a fighting speech last week-end, and by a set of restrictions on the use and sale of certain foodstuffs in Italy. Imports of meat are to be limited; butchers' shops are to be shut on Tuesdays; and the Nazi example of "one-course" meals is to be copied after November 5. A much longer list of such restrictions is expected to follow; and it is stated that Italy will in future import meat, fish, etc.—of which her needs are considerable—from the States not imposing sanctions. Presumably this means Austria, Germany, Hungary, Albania, and some Latin-American States; for Switzerland has agreed not to increase her imports from, or her exports to, Italy above the normal levels. Meanwhile, the indicators of Italy's internal economic position show no sign of a halt in their downward progress. Between October 10 and 20, the gold reserve of the Bank of Italy fell by a further 88.9 million lire to 3,936.5 millions; but the note circulation reversed its recent upward trend by declining from 15,425.5 millions to 15,270.6 millions. Wholesale and retail prices are still, however, rising steeply; while Stock Exchange quotations are weak. These factors, coupled with the first effects of sanctions, may account for the absence of major military developments in the Abyssinian campaign. Will they exert eleventh-hour pressure upon the Italian dictator to modify his aims and pretensions in East Africa?

The Election Campaign.—After the Dissolution of Parliament and the issue of the Government's Manifesto (with which we deal on page 841), the campaign for the General Election started in earnest last week-end. With only 22 days between the official announcement of the date of the election and the actual polling, all parties are making an intensive oratorical effort, and the average elector cannot keep pace with more than a fraction of the speeches delivered in the constituencies. One tendency, however, which was noticeable four years ago, has become even more striking. The separate fights in the constituencies are unified into a national contest by the wireless speeches of the leaders. The daily pronouncements of Cabinet Ministers and prominent members of the Opposition Parties, up and down the country, do not receive a tithe of the attention of a broadcast talk. They tend, indeed, to be increasingly devoted to refutation of what was said on the wireless the night before. Mr Baldwin, the first of the wireless speakers, devoted the larger part of his time to two subjects—the justification for a Dissolution at this time, and the need for modernisation of the Navy if Britain was to

play her proper part in upholding collective security through the League of Nations. We deal with this part of Mr Baldwin's speech in a later note. Neither argument, of course, was allowed to go unchallenged; Mr Lloyd George took particular exception to what he called "an attempt to snatch party advantage out of the international situation." Lord Snowden proved himself in 1931 to be one of the most effective practitioners of the radio technique. This year the Liberal Party astutely gave him one of the three broadcasts allotted to them. If the Conservative Party made the protest against this arrangement attributed to them by popular report, the event must have confirmed their forebodings, for no more strongly worded attack than Lord Snowden's can ever have been made upon a Government by one of its former members. Breach of pledges, political dishonesty and financial failure were almost the least of his charges. The best compliment to the effect of the speech was the unanimity with which the Government spokesmen devoted their subsequent efforts to answering it. Whatever the merits of Lord Snowden's arguments, it is a significant tribute to the power of the wireless that one man, without office or party, can, even for a day or two, monopolise a General Election campaign. On the Stock Exchange and elsewhere, there has been a tendency, in the last few days, to rate the prospects of the Government rather less highly than a week ago. But many more words will go out "on the air" before November 14th, and the result of the election will, as usual, not be predictable until the day after the polls.

* * *

Raising the School-leaving Age.—On the eve of the election the Government has produced an educational policy. Its manifesto declares that the school-leaving age is to be raised to 15; free places at the secondary schools and State scholarships to the universities are to be increased; and facilities for technical and physical education are to be improved. But, unfortunately, these generous-looking gifts are hedged around with conditions and qualifications. The raising of the school-leaving age will be subject to exemption for those children who are required for home duties or have the opportunity of "beneficial employment." Which branches of employment are "beneficial"? Will the term rule out all blind-alley occupations, or are only unemployed children, in fact, to be kept at school? No maintenance grants are to be given. Nor are we told how soon the essential change is to be made. The other proposals in the manifesto, though progressive and welcome in themselves, cannot be called substantial or epoch-making. The Government's policy is very far from being a full realisation, even at long last, of the neglected Hadow Report. Rather it is a salutary but tardy reversal of the short-sighted parsimony recommended by the May Committee, and adopted by the National Government, in 1931.

* * *

The Government and the Miners.—The prospect of a peaceful settlement of the coal-mining dispute has not brightened in the past week. Last week the Minister of Mines informed the Mineworkers' Federation that he expected to receive an assurance from the coalowners that selling organisations with central co-ordination would be established in all coalfields by next July. To this the Federation replied that it merely amounted to an undertaking from the owners to "do eight and a half months ahead what they ought to have done five years ago." They also pointed out that even if selling economies were actually secured they would accrue to profits and not to wages in the absence of any revision of wage rates. In these circumstances the Federation declared their intention to continue the campaign for national negotiations and an increase in wages of 2s. a day. This threat, and the imminence of the election, seem to have stimulated on the part of the Government at least some desire to give assistance to the miners. Both Mr Baldwin and Mr MacDonald spoke sympathetically of their case this week; and the Government's election manifesto contained a promise to "effect the unification of coal mining royalties." "Unification" means, presumably, nationalisation, i.e. a system by which

the collieries would pay royalties to the Government and the Government pay interest on some form of newly created bonds to the old royalty owners. The change would not directly affect the cost of producing coal nor the royalty owners' incomes. It is usually stated that royalties are a merely fractional element in costs. But they are certainly not negligible in relation to wages, and they differ very considerably from one district to another. Royalties per ton in various districts in the quarter ended September 30, 1935, are given by the Ministry of Mines as follows:—

Scotland	York-shire	Durham	South Wales	North Derby and Notts	Lancashire	Great Britain
6.04d.	4.83d.	5.94d.	8.6d.	4.82d.	4.87d.	5.80d.

Total costs per ton averaged 13s. 3d. The real advantage of nationalising royalties would be to make the State the legal owner of the coal and so to put it in a stronger controlling position in enforcing reorganisation of the mines. As a means of securing more scientific development of available coal-seams, without irrational checking, interruptions and detours owing to varying surface ownerships, its long-term possibilities would be considerable. This consideration influenced the judgment of those members of the Sankey Commission in 1919 who recommended nationalisation of royalties, and of the Samuel Commission, whose unanimous recommendation in 1926 was accepted by the Conservative Government of that day. Finally, a year ago Captain Euan Wallace, in his special report on the distressed area of Tyneside and Durham, urged the "unification" of royalties. At this late hour there is unfortunately no chance whatever that the realisation of this long overdue reform will in itself satisfy the miners. Indeed, if the Government has no answer but a blank negative to the demands either for national negotiations or an increase in wages, a national stoppage, with all its disastrous consequences, seems to be highly probable.

* * *

A Naval Conference in December.—Some months ago the British Government invited the views of the American, French, Italian and Japanese Governments on the possibility of a naval conference in London in October. The conference would have, as its task, the replacement of the Washington and London Naval Agreements, which expire at the end of next year, by a new instrument of naval limitation. The Japanese replied that they would only participate if Japan was given "parity" with the fleets of Britain and the United States. This the American Government would in any case have flatly refused; witness their recent decision to lay down seven new full-sized battleships. H.M. Government therefore suggested that the conference might still usefully take place, on the basis of "qualitative" limitation of tonnages, gun calibres and types of ship, and of mutual declarations of building programmes for a number of years in advance. To that suggestion the Japanese again replied with the demand that "parity" should first be accorded to them. The matter then lapsed, until, a few weeks ago, it was announced that the French, Italian and American Governments were prepared to attend a naval conference in London in the near future. This seemed to bode no good for the Japanese; since the American Government is well known to have decided absolutely firmly on "building Japan out of the water," if necessary. On Tuesday of this week it was announced in Tokyo that the Japanese Cabinet had approved a reply accepting the invitation of H.M. Government to a naval conference in London, and naming Mr Nagai and Admiral Nagano as delegates. The reply states that the Japanese delegation may not be able to arrive in London by December 2nd, the date of the opening of the conference. On Wednesday it was announced that Australia, New Zealand and South Africa would be represented at the conference. This will be the first "naval occasion" at which the Dominions have had their own representatives. It will thus be a full-dress affair, after all. But will it accomplish an effective scheme of naval limitation in place of the expiring London and Washington Treaties? That is, in the first place, for Japan to answer.

Is the Navy Out of Date?—In his broadcast speech last Friday, Mr Baldwin spoke of the risks involved in any extreme measures that might be necessary to fulfil our League obligations, and emphasised the need of bringing our armament up-to-date. To reinforce his point he made the somewhat alarmist statement that "only three of our capital ships to-day are of post-war design." But he omitted to add that there are no other full-sized battleships in the world of post-war design at all, with the possible exception of one United States ship. Yet this is the fact. The following table shows the dates of laying down of all the battleships in the British, American and Japanese navies:—

Laid down in	Great Britain	United States	Japan
1910	...	one	...
1911	...	two	one
1912	two	two	three
1913	six	one	one
1914	two	one	two
1915	two*	three	...
1916	one*	one	...
1917	...	two	one
1918	...	...	one
1919	...	one	...
1920	...	one	...
1921	...	...	...
1922	two	...	...

* Battle-cruisers.

It is apparent, therefore, that the British "Nelson" and "Rodney," laid down in 1922, and the United States "West Virginia," laid down in 1920, are the only full-sized capital ships in the world which can be said to be of post-war design. Moreover, the "Nelson" and "Rodney," three American and two Japanese ships, alone carry 16-inch guns. And all the remaining ten British battleships and three battle-cruisers have 15-inch guns; while the remaining American and Japanese ships only carry 14-inch guns. And the British battle-cruiser "Hood" remains the most powerful single warship in the world. The French and Italian Navies have no battleships of post-war design, and none carrying 15-inch or 16-inch guns. Indeed, Italy only possesses four battleships, all of pre-war design. Germany has two "pocket battleships" which may be said to be of "post-war design." But they are of only 10,000 tons and carry 11-inch guns. It is clear from these facts that the British Navy, as far as capital ships are concerned, is more up-to-date, and, with the possible exception of the United States Navy, more powerful than any in the world; and it will remain so unless the madness of the nations leads them to embark on an orgy of building more and more powerful ships.

* * *

Gathering Clouds in France.—The compactness of M. Laval's Government is being threatened by the old enemy—the Budget. M. Laval rushed more than 300 decrees through the Council of Ministers at the Elysée on Wednesday; for on Thursday his right to promulgate new decrees, conferred by Parliament last June, expired. The latest batch of decrees brings the total well above 450; but only a few of these are aimed directly at remedying the financial crisis and effecting economies in the Budget. Many of them are necessary administrative reforms—e.g. those which tighten the control of the executive over the finances of local authorities and *départements*—which the Chamber has always refused. Here is the first danger for M. Laval when the Chamber is convoked, as it must be before December 31st. The greater danger, however, arises from the continuous tendency of falling revenue to evoke a need for ever-new Budgetary economies. The proposals of M. Régnier, M. Laval's Minister of Finance, for new "cuts" in his 1936 Budget were severely criticised in the Chamber Finance Committee on Tuesday, and some were rejected outright in favour of amendments put forward by the Left groups' representatives. M. Laval has told M. Malvy, the chairman of the Committee, that they will be held responsible for all consequences of such a move; and this has angered the Left, who already suspect M. Laval as much of pro-Fascist sympathies in internal politics as in foreign affairs.

* * *

America Replies to the League.—The United States Government's reply to the communication from the League of Nations Co-ordinating Committee was received at Geneva last Sunday. Anyone who does not shut his eyes to "the limitations of American foreign policy," to which the Secretary of State refers, will recognise in this important State paper an earnest of the undertaking, which is made therein by Mr Hull in his country's name, that the United States will "at all times not only exercise its moral influence in favour of peace throughout the world," but will "contribute in every practicable way to that end." The reply concludes with a declaration that the United States "views with sympathetic interest the individual or concerted efforts of other nations to preserve peace or to localise and shorten the duration of war"; and the whole document is as plain an indication as the Administration at Washington could have been expected to give of its intention, not only to avoid doing anything on its own part which might make difficulties for the League in the present crisis, but also to discourage American nationals from attempting to exploit the League's sanctions against Italy for their private profit. Important as is the immediate effect of this American official attitude, its significance will become still greater if ever the League Co-ordinating Committee finds it necessary to strengthen its sanctions by a full-dress blockade. In deprecating so far-reaching a step in his Wolverhampton speech on Monday, Mr Baldwin said (as he has often said before) that he would not consent to this country's participation in a League blockade unless assured of the "sympathetic support" of the United States, Japan and Germany. For the moment, a blockade is not on the League's agenda; but it is worth taking note at once of the encouraging fact that Mr Hull has already gone far to allay Mr Baldwin's misgivings. And one point on which Mr Hull's note and Mr Baldwin's speech wholly agree is their common recognition of the difficulty of localising any war under modern conditions—with the corollary that any local outbreak of war in any part of the world is now everybody's concern. "War... even threatens the existence of civilisation." If we interpret this American reply in a "maximal" sense, we believe we shall not be misinterpreting the meaning of President Roosevelt.

* * *

The New Bacon-Pig Contract.—The Pigs and Bacon Marketing Boards have at last come to terms about the 1936 bacon-pig contract, and have thus, presumably, laid their differences to rest for another year. The scheme has been in danger of breakdown for the past ten months because the pig-feeders have been complaining that production was unremunerative. Their representatives on the Pigs Board have, however, been successful in securing

certain concessions from the curers in the new contract terms. Modifications have been introduced which will slightly raise the price of the basic pig and reduce the price difference between this and inferior grades. The insurance provisions have been altered slightly, but similar arrangements to those now in force have been made for bonus payments to producers who deliver a certain proportion of their pigs in the first four months of the year, when the supply normally tends to fall short of curers' requirements. It remains to be seen whether the new contract terms will induce the feeders to offer sufficient pigs to keep the bacon factories working steadily throughout the year, as the curers desire. But whether the machinery of the scheme works well or ill, the consumer of bacon still has the uncomfortable conviction that the curers are hoping for a rise in bacon prices next year, and that to achieve this end strenuous efforts may well be made to secure a reduction of import quotas.

* * *

Retail Sales in September.—Retail sales, like other indices of business activity, showed a marked increase between August and September. The latest returns, published in the *Board of Trade Journal*, register a rise of 8.1 per cent. in the money value of sales between September, 1934, and the past month. Sales in September, 1934, in turn, rose 4.1 per cent. above those of the corresponding month in 1933. Improvement during the last two years has thus been of the order of 12½ per cent. over 1933:—

INDEX OF VALUE OF RETAIL SALES, GREAT BRITAIN
(Average Daily Sales in 1933 = 100)

Period	Food	Other Merchandise	Total
1932	102	99	101
1933	100	100	100
1934	103	103	103
1934—August	100	79	90
September	101	92	97
October	102	109	105
November	106	110	108
December	121	148	134
1935—January	102	108	105
February	106	83	95
March	107	92	100
April	110	112	111
May	110	112	110
June	110	108	109
July	105	113	109
August	107	81	94
September	110	99	104

The increase, as compared with last year, was well spread geographically, ranging from 5.1 per cent. in Scotland to 10.1 per cent. in suburban London. It was most marked in the case of food and perishable articles, but as the official statistics are not adjusted for changes in prices, it is impossible to ascertain how much of the increase of 8.6 per cent. in the money value of sales was due to higher prices. Sales of other merchandise have risen by 7.6 per cent.—in fact, with the exception of piece goods, all the commodities shown separately in the return register an increase. The expansion of turnover was most pronounced in the case of men's and boys' wear (9.7 per cent.), women's wear (9.6 per cent.), boots and shoes (8.6 per cent.), hardware (8.4 per cent.), and furnishing goods (6.2 per cent.). Significance attaches to the relatively sharp increase in expenditure on clothing. The ratio of stocks to turnover continues to decline, for the value (at cost) of the former at the end of September was 1.6 per cent. smaller than a year ago. There are no visible indications of a setback to retail trade in the near future.

* * *

Rising Food Prices.—With a General Election in the offing, the trend of food prices in this country has inevitably excited some attention. The matter was raised in the House of Commons last week by Mr Dobbie, who asked the President of the Board of Trade whether he was aware of the increase in the wholesale prices of bacon, butter

and cheese; whether he could explain the reason for the movement; and what steps he proposed to take to counteract it. In view of the importance of these three commodities in working-class budgets, it is worth while examining the question more closely. For it is known that the retail price of, for instance, Danish butter has risen markedly in the last six months. The prices in the following table are those realised for first quality produce on the London Provision Exchange:—

WHOLESALE FOOD PRICES (per cwt.)

End of	Bacon		Butter		Cheese	
	English	Danish	New Zealand.	Danish	New Zealand.	Dutch
1934—October	s. d. 92 0	s. d. 87 0	s. d. 73 0	s. d. 124 0	s. d. 54 0	s. d. 53 0
1935—January	96 0	90 0	87 0	117 0	47 0	49 0
April	90 0	86 0	77 0	97 0	46 0	39 0
August	85 0	83 0	96 0	115 0	49 6	47 0
September	87 0	85 0	115 0	130 0	58 0	73 0
October	90 0	89 0	106 0	128 0	53 0	60 0

Bacon prices, in fact, are at approximately the same level as a year ago. A slight reduction in imports this year has been roughly offset by some increase in home supplies. Early in October bacon prices rose sharply, but demand was checked and prices have subsequently fallen back. In the case of butter and cheese there has been a substantial rise since the spring. The increase was partly seasonal; but, mainly as a result of a change in the position of supplies, prices are now well above last year's level. Butter production in Denmark, Australia and New Zealand (which account for the bulk of our imports) showed a decline this season, and there has been some diversion of Danish supplies from the United Kingdom to Germany. According to the figures of the Imperial Economic Committee, there has consequently been a substantial drop in butter stocks in this country and a considerable increase in the consumption of margarine. Supplies of cheese have been similarly reduced this season, and it is reported that the sharp rise in Dutch qualities which reached its peak in September was partly traceable to speculation on war account. Although prices are now easier, they are distinctly high compared with those of six months ago.

* * *

British Shipbuilding.—In contrast to the expansion of activity in other capital equipment industries, discussed in last week's Supplement to the *Economist*, the merchant shipbuilding industry in this country has lost ground in recent months. The latest returns issued by *Lloyd's Register* reveal a decline in the tonnage of mercantile vessels under construction at the end of September, both as compared with June and with the corresponding month last year. The gross tonnage under construction in this country at the end of September was 530,554, against 560,321 at the end of June and 604,296 a year ago. Work in hand abroad also declined, from 707,091 gross tons in September, 1934, to 667,415 gross tons at the end of the past month. The British proportion of the tonnage under construction in the world declined from 46 per cent. to 44 per cent. during the past year. But the tonnage under construction in this country for registration or for sale abroad rose from 13.6 per cent. of the total in September, 1934, to 21 per cent. at the end of last month. Of the total mercantile tonnage under construction at the end of September, Germany accounted for 268,340 gross tons, Sweden for 89,000 tons, Holland for 62,645 tons, Japan for 61,305 tons, and Denmark for 54,533 tons. It is interesting to note that oil engines accounted for 41 per cent. of the horse power of the mercantile vessels under construction in this country at the end of last month, as compared with 76½ per cent. in the case of vessels under construction abroad. The immediate outlook for the British shipbuilding industry is not very encouraging, for world trade is still making heavy weather. Nevertheless, the gross tonnage commenced increased slightly, from 108,122 in the second quarter to 118,979 in the third quarter of the current year.

OVERSEAS CORRESPONDENCE

From our Correspondents in each centre

UNITED STATES

RECOVERY AND "INFLATION"

SINCE the recent speech of Mr Gay, President of the Stock Exchange, to the effect that "inflation" might be looked for as an eventuality, the conversation of Wall Street has centred on the theme of inflation more than at any time in recent months. This conversation strikes every note from forebodings of crash to adjurations to make hay while the sun shines. Autumn business, while hardly as brilliant as midsummer forecasts, is more than satisfactory, and in comparison with the autumn of 1934 extremely gratifying. Yet in the conversation of the financial district the discussion centres on the word "inflation" fully as frequently as it does upon the state of business, and it is many months since this has been the case. Yet in spite of all the talk, it is rare to encounter an individual or a corporation that is taking concrete action on the basis of inflation.

Exports of merchandise in September were valued at \$198 millions, and imports at \$162 millions, giving an active balance of \$36 millions. But September gold imports were \$157 millions, and net silver imports were \$44 millions, making total imports of the monetary metals \$201 millions, a sum substantially greater than our merchandise imports. A similar relation exists for the year to date; the nine months merchandise imports amount to \$1,503 millions; the net imports of the monetary metals totals \$1,204 millions, of which \$181 millions is silver, and \$1,023 millions gold. Merchandise exports in September were \$7 millions above those of September, 1934, but imports were \$30 millions greater. On merchandise account, our September balance was active by \$36 millions; but our total visible balance was passive by \$165 millions. For the nine months exports were \$1,568 millions and imports \$1,502 millions, giving an active balance of \$66 millions, but with net imports of the monetary metals of \$1,204 millions, our visible balance is passive to a sum just under \$1,200 millions.

LARGE INFLUX OF CAPITAL?

It is remarkable that gold and silver are not merely America's principal imports; together they are virtually equal to the total of our merchandise imports; and our merchandise trade, which formerly showed a characteristic export surplus, often of large proportions, is now (and has been for a year) practically in balance, as a consequence of an increase of imports. The cost of our metal imports is thrown upon the invisible items, and the only offset is a conjectured flow of capital into this country of very large proportions. So large are the sums indicated by this movement as to make it one of the most conspicuous economic phenomena of the year, yet from its character it does not lend itself to analysis or deduction. The silver imports of September (\$44 millions) were unusually large and offer a contradictory comment to the commonly expressed view that our "silver programme" is in abeyance. When Congress is not in session, interest in silver subsidies to the vanishing point. Something of the same sort may be said about "stabilisation." Although the financial community in general favours it, the introduction of the word "stabilisation" will evoke a variety of views. Yet the continuation of *de facto* stability between the dollar and sterling which has existed now over some 18 months is almost taken for granted.

The decision of the Supreme Court on the processing taxes is awaited with increasing interest. One of the first items on the calendar will probably be the Hoosac Mills case. The Hoosac Mills are in receivership, and the receivers recommended disallowance of the Federal Government claim for processing and flow taxes. The arguments were (a) that the object of the tax was to regulate cotton production, and that such an object was outside the power of the Federal Government; (b) that the powers exercised

by the Secretary of Agriculture represented an unconstitutional delegation of legislative power; (c) that if the processing taxes were direct taxes they were not apportioned constitutionally, while if they were excises, they were not uniform as required by the Constitution. The decision rendered in the case by the U.S. Circuit Court went almost beyond these arguments.

This line of reasoning has been followed in a considerable number of other cases which involved the bases of the agricultural benefit schemes. As the trend of court opinion became defined, collections under the processing taxes shrank to a quarter of their former amounts—a fact of importance, as the taxes are one of the largest sources of Federal revenue. Meanwhile the Secretary of Agriculture continues to make payments from a rapidly diminishing appropriation; and dispatches from Washington indicate that serious attention is being given to other and substitute forms of taxation to be imposed if the processing taxes should be invalidated. Every day it becomes clearer that agricultural subsidies are now an integral part of our political economy.

The bank statements from the end of August to the middle of October have not wholly reflected the gold movement, but they are significant:—

RESERVE BANK ITEMS
(\$000,000)

	Aug. 28, 1935	Oct. 16, 1935	Change
Monetary gold stock	9,197	9,584	+387
Member bank reserve balances	5,346	5,534	+188
Gold certificates	6,482	6,899	+417

That is, the Treasury has issued gold certificates to an amount about equal to the gold imports, but they have not yet been entirely translated into member bank reserves. The issue of gold certificates to replace the bonds formerly securing the national bank notes does not appear in these figures, although it is improbable that it has been completed. Member bank items have shown no more than the change which has now become almost conventional—an increase in net demand deposits at the rate of about \$300 millions a month.

REPORTING MEMBER BANK ITEMS
(\$000,000)

	Aug. 28, 1935	Oct. 16, 1935	Change
Total loans and investments	18,533	18,967	+434
Loans on securities	2,899	2,910	+11
Other loans	4,446	4,591	+145
United States and guaranteed securities	8,237	8,529	+292
Other securities	2,951	2,937	-14
Reserves	4,129	4,285	+156
Net demand deposits	15,952	16,376	+424

The increase in "other" loans has been a rare occurrence in recent years, and may be largely of a seasonal character. Probably more significant is the fact that the increase in deposits was reflected in a considerably larger increase in loans and investments than in excess reserves.

NEW YORK, October 22.

FRANCE

M. HERRIOT AND M. LAVAL

THE annual Congress of the Radical-Socialists closed without serious incident. The six Radical-Socialist members of the present Cabinet give it its Parliamentary support; and two Cabinets have been destroyed in the past as a result of ultimata from the Party Congress. The present Congress evaded the essential problems of the present: foreign policy and the financial decree-laws, although these are the principal subjects of the attacks made by the Opposition on the Cabinet. On foreign policy the Conference passed a resolution favourable to support of the League and

the Franco-British collaboration, of which M. Herriot was the strongest advocate.

In monetary policy the Congress declared itself favourable to "the stability of the currency on the national and international field." It urged a new reduction in taxes, and rejected "inflation," though its financial report emphasised the necessity for developing credit facilities. The most important fact of the Congress's deliberation was that concerning the Fascist Leagues, the danger of which was urged by the Left-Wing Radicals. In order to meet this attack, the Cabinet has recently published two decrees-laws completing the supervision of public assemblies and the reinforcement of penalties for the possession of prohibited arms. But the Left-Wing, led by M. Daladier, demanded further measures against the Leagues, in particular the "Croix de Feu," which has declared that it will bar the way to "the men of February 6, 1934." The Congress affirmed its confidence in its President, M. Herriot, who was re-appointed to the leadership for four more years; and the final resolution called for complementary measures against the Leagues, to be proposed and voted by Parliament on its return from the recess. The resolution ended with a declaration of sympathy for the Popular Front and the Union of the Left Parties, which has been effected in preparation for the Chamber elections of 1936.

THE END OF DECREE-LAWS

After this Congress, the political situation might be considered as cleared. But this is not entirely the case. The controversy between the Radical-Socialists and the Government is continuing in the Finance Committee of the Chamber. The Committee finally agreed to pass to the examination of the Budget Bill at once; but its Left-Wing members, without rejecting the decree-laws, are nibbling at the economies and proposing new means of raising revenue, such as the suppression of fiscal fraud, and the increase in inheritance taxes and the income tax, etc. This political uncertainty is embarrassing to the Treasury, where the situation is again delicate. The rentes are declining and the renewal of Treasury bills has become difficult. The Minister of Finance has thus had to issue recent loans at very high rates of interest: the 600 million francs of Algeria 5 per cent. bonds have been issued at 92, and 1,250 millions of railways 5½ per cent. bonds have been issued at 95.

The Laval Government has issued its last decree-laws, which are supposed to complete and correct the whole series issued since July 16th. The power of the Government to issue decree-laws ends to-day. Of 200 new decree-laws the most important concern the wheat market, the measures to be taken in Algeria against the economic crisis, the safeguarding of bondholders and stockholders, the social insurance schemes, the expansion of the State police, municipal finances, the administration of Alsace-Lorraine, the railways, etc.

The recommendations of the Committee for the reform of the Paris Stock Exchange have just been issued. The Committee proposes, in particular, the listing on the Paris Exchange of 150 or 200 prominent foreign stocks, principally from Wall Street and the London Stock Exchange.

The production of the French coal mines in September, 1935, totalled 3,787,454 tons in 25 working days, against 3,769,119 tons in August (26 working days), and 3,913,356 tons in September, 1934 (25 working days). The average daily production was therefore 151,498 tons, against 144,966 tons in August and 156,534 tons in September, 1934. The number of men employed was 223,099 at the end of September, against 224,197 at the end of August, and 232,192 at the end of September, 1934. The production of coke in the coke plants of the coal mines was 310,933 tons in September, against 316,174 tons in August, and 329,734 tons in September, 1934.

Registered unemployment in France was 415,738 in the week ending October 19th, or 5,594 more than in the preceding week.

PARIS, October 31.

[Current political alignments in France are discussed in an article on page 842, and the week's news in a Note on page 849.]

GERMANY

THE FOOD SHORTAGE AND "MANCHESTER LIBERALISM"

THE food shortage became more acute in the past week, but owing to the absence of reports in the Press the German citizens' knowledge of it is still confined to personal experience and observation. In Berlin the crowds waiting their turn outside the shops became more numerous and had to wait longer. Pork and butter could hardly be bought. After waiting in the street sometimes an hour, sometimes two hours, the customer received two ounces of butter or was turned away without any. The various "Black Bourse" operations are conducted according to Russian precedent. In the case of foodstuffs whose price is regulated, dealers, while in general observing the official prices, sell only to customers who buy free-priced goods at above market rates. Householders receive telephone messages from unknown persons that if they only . . . here follow the conditions . . . they will be supplied.

No sufficient measures have been taken to restore a normal food supply, and there is no prospect of immediate improvement. It is the traditional policy of the Nazi Party, maintained by the Nazi Government, to meet difficulties by agitation and propaganda. The Press and Ministers, so far as these have expressed themselves, assert that freedom is more important than food, and that if there is no pork, there are at least new barracks. The Reich Minister of Economy, Dr. Schacht, has recently spoken in this sense, and thereby implicitly reproached the citizens who will wait an hour for butter but not a minute for freedom. Curious is the denunciation of "Manchester Liberalism" as the cause of the food shortage, although the mere expression of this heresy has been suppressed since 1932. The same strange propaganda is being pursued in non-economic domains, even by the Reich Office of Health, which informs the public that as "Liberalism and Medicine are irreconcilable enemies," "medical Manchesterism must disappear"; and by the Minister of Propaganda, who reports that the first task of National-Socialism was the cleaning of German literature from the shameful literary legacy of the Liberal Age. It is being suggested that food cards might bring relief; but as the card system would also advertise the emergency, it would be inconsistent with the present—naturally futile—official policy of secrecy. Meatless and butterless days have been decreed in various parts of the country by local Nazi leaders. Meanwhile the Reich Nourishment Corporation calls attention to the recent rises in butter prices in Denmark, Holland and England, and draws an unfavourable contrast with Germany, where prices have remained unchanged. But the Corporation ignores the fact that one can buy butter at foreign prices but not at German ones.

The following are Berlin shop prices of October 29th in sterling at the official mean exchange of £1 = Rm. 12.23 of October 28th. The prices are those of about the best qualities. The German (metric) pound is equal to 1.1 lb. avoirdupois; the litre to 1.76 pints.

Home-produced or imported :	Prices per pound
Margarine.....	s. d.
Pig-lard	1 9½
Butter	1 11½
Cheese (German "Chester").....	2 7½
Soup-meat (beef)	2 7½
Veal steak.....	1 11½
Beef (steak)	3 7
Breakfast bacon.....	3 1½
Sugar	2 11½
Milk	0 8½
Eggs.....	0 4½ (litre)
Imported :	0 2½ (each)
Spaghetti	1 2½
Tea	11 5
Coffee	6 6½
Lemons.....	0 1½ (each)

The German official exchange rate has of course been unreal since 1931. The restriction of debt payments and of capital export alone justifies this statement. But in fact the Government's success in preventing formal depreciation of all marks has not been entirely due to this restriction, but also to various expedients for in-

fluencing the trade balance by subsidising exports. The formal depreciation of the German currency is confined to various kinds of blocked marks and to Reichsbank notes, which, in spite of the complete prohibition of export, sell abroad at around 18½ to the £. In so far, therefore, as the above prices have an international bearing, they are fictitious; and it is not possible to draw from them, or from the equally high prices of certain home-produced raw materials any conclusion about Germany's ability to compete in international trade.

WAGE REDUCTIONS AND "INFLATION PRICES"

The social consequences, however, are considerable. For whereas after 1931 wages were reduced on the ostensible ground that the mark's value must be maintained by deflation, the present prices of food are inflation prices. Even the prices of goods imported from countries with depreciated currencies and theoretically paid for with full-value marks, are mostly dearer here than abroad. The official value of the reichsmark, in fact, is yet another piece of propaganda. "During the tornado into which foreign currencies have been drawn," said the Minister of Economy yesterday, "our currency remains unshaken."

Money last week was plentiful; but there were signs of the usual increase in the month-end demand, which continued this week. Bank acceptances, Reich short-term securities, and Gold Discount-Bank promissory notes were sold. The nominal day-loan rate rose to 3½-3¾ per cent. The Reichsbank's return for October 23 shows that 90.5 per cent. of the September month-end credit increase was repaid in the first three October weeks, as against 98.4 per cent. in the same week of 1934. The Bank therefore enters November with further expanded credit. The discount portfolio total is Rm. 3,697 millions, as against Rm. 3,415 millions a year ago. There has been a further small loss of gold, the holding of which has fallen to Rm. 87½ millions.

According to an official report the stock of industrial raw materials has fallen since the end of 1934. As compared with the same period of 1934 the quantity of imports has declined by 5 per cent.; and while home output increased 10 per cent., consumption rose by 16 per cent. The volume of imports of raw materials this year is estimated at 80 per cent. of that of 1928 (1927, 111 per cent. of 1928); and home production at 101 per cent. of 1928 (1929, 106 per cent.). The value of retail trade turnover in September was 2 per cent. lower than in September, 1934; and the volume of turnover, allowing for the price-rise, was 4 per cent. lower. The percentage of working places occupied in all industry in September is returned at 66.3 per cent., as against 66.2 per cent. in August. The percentage for production-goods trades fell from 70.0 per cent. to 69.8 per cent., while that for consumption-goods trades rose from 61.4 per cent. to 61.7 per cent., a movement contrary to that of preceding months.

The report of Ruhr Coal Syndicate sales in September shows a considerable increase. The syndicate complains of Dutch and British competition in South Germany, and of the domination of British bunker coal on the Elbe. Italy imported very much more coal in the third quarter of the year than in the same period of 1934.

BERLIN, October 30.

AUSTRIA

INCREASED ORDERS FROM ITALY

THE figures which have been published by the Austrian Konjunkturinstitut and by the Federal Statistical Department for the summer months of 1935 present a picture of reviving business activity. Three factors have contributed to this revival: the far-reaching relaxation of the money market, due to the devaluation of the currency; the increase in domestic sales resulting from the Employment Campaign; and the beneficial effects of a particularly good foreign tourist season. The easiness of the money market has coincided with the return of refugee capital and the sale of considerable Austrian assets abroad. It is reported that

Sun Life Assurance Company of Canada

(Incorporated in Canada in 1865 as a Limited Company)

The Company has been rendering service to the public in Great Britain for more than 41 years by enabling prudent men and women to safeguard their own and their families' future, through comprehensive Life Assurance and Annuity plans.

Total New Business in 1934 in Great Britain and Ireland

£7,000,000

Total Assurances in force at November 15th, 1934, in Great Britain and Ireland

£67,000,000

H. O. LEACH (General Manager), 2, 3 & 4 COCKSPUR ST., LONDON, S.W.1

the holdings of "ready" money at the Credit-Anstalt-Wiener Bankverein amount to 180 million schillings, and the bank is contemplating the scarcely popular idea of forcing the lesser financial institutions to take care of their own reserves of ready money, instead of leaving them on deposit in charge of the large institutions. It cannot be said, however, that the presence of ready money has yet led to an expansion of loans and advances.

Activity in heavy industry was much greater in August than in August, 1934. The output of iron ore was 54 per cent. higher, of crude iron 65 per cent. higher, of crude steel 15 per cent. higher, and of rolled goods 8 per cent. higher. In the textile industry also the demand for war materials has resulted in an increase of orders, chiefly through the reduction of Italian orders in the Roumanian market. For this reason exports of cotton yarn have gone up by about 15 per cent., and the textile industry in Austria is now working at 100 per cent. of normal capacity. The only other trade equally active with steel and textiles is building, which, thanks to the Employment Campaign, has received during the past season orders amounting to about 350 to 400 million schillings.

The beneficial effects of the extraordinarily good foreign tourist season become clearer from week to week. Increased revenues, especially during the summer months, have swelled the foreign currency holdings of the Austrian National Bank by over 100 million schillings between April 1st and September 30th. Two-thirds of the Austrian import surplus is probably covered by revenue from foreign tourist traffic. As foreign trade again improved in August, it is calculated that the total import surplus this year will be more than 270 million schillings.

THE FALL IN UNEMPLOYMENT

In the middle of October the seasonal decline of unemployment came to an end. Since February, however, the number of unemployed receiving benefit has fallen from 337,000 to 205,000. It would be wrong to attribute this regression exclusively to improvement in trade. Other factors have influenced the statistics, including greater parsimony in paying benefit and also absorption of the unemployed by the "public security formations." Nevertheless, increased trade has played the chief part.

During the past few weeks temporary panic buying of various foodstuffs and commodities has taken place. It was a surprise to some that these hurried purchases were accompanied in some cases by price increases, but the increase in imports which was at once allowed brought a fall in prices, so that efforts made in recent years towards maintaining prices met with a temporary setback. This applies chiefly to the pig and fat market. The surprise was due to the fact that supplies of pigs are carefully regulated by a public department. Legislation has lately been passed with the object of bolstering up prices, and the prescribed "directive" and minimum prices will make themselves strongly felt when the present weakness of commodity prices gives place to a general rise. At present, however, both the wholesale price index and the cost-of-living index still remain pretty much where they were a year ago.

VIENNA, October 25.

SWEDEN

ITALIAN AGGRESSION CONDEMNED

SELDOM before has public opinion in Sweden been as unanimous as it now is in condemning Italy for her aggression against Abyssinia. The general belief in this country is that only a strong Anglo-French diplomatic solidarity can induce Signor Mussolini to abandon his present attitude. Whereas Mr Eden's resolute efforts in Geneva to strengthen the effectiveness of the League's economic pressure on Italy have won the whole-hearted approval of Sweden, M. Laval's mediatorial activity is distrusted. The Swedish public does not consider that an aggressor, who has been condemned by such an overwhelming majority of nations, should be allowed to discuss the terms on which he would consent to stop aggression. A French-Italian-British compromise at the expense of Abyssinia would, in the eyes of small countries, give the League the stamp of a Great Powers' political instrument and would alienate the Scandinavian countries from Geneva. The present situation may therefore strengthen the Swedish people's belief that a small country has to rely chiefly on the strength of its own national defences and that the protection of Scandinavian neutrality must be sought in a consolidation of the Northern bloc.

Prohibition of credit operations with Italy would only affect commercial credit facilities here, since Swedish banks ever since the beginning of the present political crisis have abstained from granting other loans to Italy. Goods at present imported from Italy can, if necessary, be found in other markets. Swedish exports to Italy consist to a large extent of chemical pulp, of which this year about 125,000 tons, most of it rayon cellulose for artificial silk, normally should have been exported to Italy. It was probably the threat that these exports might be hampered by Swedish credit prohibition that brought to Stockholm last week Signor Marinotti, general manager of the Snia Viscosa, which absorbs the bulk of the Swedish pulp supply to Italy.

FURTHER CREDIT EXPANSION

The immediate effect upon Sweden of the political uncertainty abroad has been a "flight into the krona," since Swedish exporters are anxious to get rid of their foreign balances. This has led to a strong contraction of Swedish banks' balances owned by foreign depositors and a proportionate increase in the foreign currency holdings of the Riksbank. To avoid a further repletion of its foreign currency reserve the Riksbank has recently resumed gold purchases in the open market, and its gold reserve on October 15th had risen to Kr. 379 millions. It is understood that a certain shift from sterling to dollar holdings has lately also taken place, although the Riksbank returns do not indicate transfers from one foreign currency to another. This flight into domestic currency has further accentuated the extreme easiness of the Swedish money market and has caused an increase in sight deposits and new peak figures for the joint-stock banks' cash holdings.

To a certain extent this tendency will be adjusted by the growing passivity of the foreign trade balance, which in September revealed a passive balance of Kr. 8 millions, as against an export surplus of Kr. 16 millions a year ago. The difference is mainly due to a decrease in wood exports and an increase in imports of petrol, mineral oils and textile raw materials. Sales of wooden goods to Great Britain increased in September, and total sales for the current year amounted to about 700,000 standards, with prices somewhat higher. Pulp sales showed also a slight increase with fairly good demand for sulphate pulp, but the sulphate pulp market continued to be dull. The latest harvest report reveals a better situation than was expected, especially for crops of the autumn sowings. A marked shortage of bacon has lately been noticed, since farmers have considerably reduced their pig breeding, which is not remunerative at the present price.

Employment figures improved again in September. The number of unemployed at the end of the month was 41,000, as against 41,700 in August and 78,000 in September, 1934. The share market, which was dull throughout September, recovered considerably during October, with marked gains for leading internationals. The bond market was weak.

STOCKHOLM, October 28.

ROUMANIA

THE GOVERNMENT'S CHANGE OF TACTICS

IN a recent important speech at Constantza the Prime Minister reviewed the internal political situation and sharply attacked the opposition parties. As he had so far advocated a policy of collaboration, this change of tactics caused no little surprise, and the parties attacked have not been slow in replying in the same strain. The political struggle, therefore, promises to become violent. Nevertheless, the Prime Minister's declaration that a dictatorship was not contemplated, as had been rumoured, and that the Government would be carried on as before on democratic lines is received with satisfaction. The Prime Minister also pointed to the disturbed European situation as necessitating increased expenditure on armaments. It is generally believed that the present Government is firmly established, but meanwhile martial law, which has been in force for nearly two years, has been prolonged for a further six months.

The export surplus continues to increase. For the seven months from January to July the figures are as follows, compared with last year:—

	1934		1935	
	Quantity Tons	Value Lei	Quantity Tons	Value Lei
Imports	330,478	7,220,527,000	262,660	5,940,210,000
Exports	4,859,383	7,183,134,000	4,989,879	8,008,513,000

The replacement of an import surplus of Lei 37,393,000 by an export surplus of Lei 2,068,303,000 is a testimony to the economic efforts made by Roumania. Nevertheless, the real position is far less satisfactory, as most of the surplus is obtained by clearing arrangements, and is therefore not available for the financial needs of the State.

Active negotiations have been going on with several countries during the summer months to conclude new commercial agreements corresponding to the foreign trade regulations which came into force in June. Those with Germany, Turkey and Switzerland have been successfully arranged. Considerable difficulties, however, are encountered with France. Trade with Italy during the first seven months of the year shows a balance of 873 million lei in favour of Roumania, which balance, in consequence of the regulations in Italy, has become frozen. Germany also holds a large amount of Roumanian money. The existing clearing arrangements with Austria and Hungary are considered contrary to Roumanian interests, and it has now been decided to terminate them; while the agreement with Germany, recently concluded, threatens already to become unworkable owing to the monetary situation in Germany.

FINANCIAL AGREEMENT WITH GREAT BRITAIN

The new payment agreement with Great Britain was concluded on August 3rd and has recently come into operation. It supersedes the previous agreement of February 3, 1935, and provides for the payment on or before August 15th of £100,000 as cover for the outstanding instalments of £50,000 each for May and June under the old agreement. This payment has been effected, and the payment of the old trade debts, which ceased in April last, has been resumed. The Roumanian Government further undertakes to export to the United Kingdom 50,000 tons of wheat and 30,000 tons of barley, the sterling proceeds of which must be received by the Bank of England by November 1st. Should this export not produce £270,000 the Roumanian Government will make further exports to the United Kingdom so that this figure is reached by December 1st. As from August 1, 1935, the proceeds of Roumanian exports to the United Kingdom will be allocated as follows:—

50 per cent. for the payment of Roumanian imports from the United Kingdom, 5 per cent. for commercial arrears, 30 per cent. for the requirements of the Roumanian Government, and 15 per cent. for the disposal of the National Bank of Roumania.

The instalment payable for August is fixed at £80,000. Provided that the payment of £270,000 is properly met,

the monthly instalments due from July 15, 1935, to January 15, 1936, will be limited to 5 per cent. of the value of the Roumanian exports to the United Kingdom for the preceding month. The sums already paid into the special account at the Bank of England under the old agreement, but not yet distributed, and the sums due under the present agreement will be allocated as follows: Full payment of all debts not exceeding £20; on account of larger debts payment of £20, or 20 per cent., whichever is the greater; to be followed by a further payment of 50 per cent. and a final payment of 30 per cent. on each debt. The new agreement remains in force until January 31, 1936.

BUCHAREST, October 20.

CANADA

AFTER MR BENNETT

THE General Election is now a matter of history. The Canadian voters condemned in the most emphatic manner the policies and programme of the Conservative Ministry of Mr Bennett, and responded beyond the most sanguine Liberal expectations to the appeal of Mr Mackenzie King to endow him with a majority which would leave his party free to carry out its programme. In one sense the new Parliament will be unhealthy, as the Government majority will be unwieldy, and the Opposition, composed of groups with hopelessly divergent views, too weak to be effective. Another unfortunate feature of the result is the revival of French-Canadian racial solidarity on the Liberal side so markedly that French-Canada is left virtually without representation in the Opposition. Undoubtedly the bitter memories of the unhappy conscription controversy of 1917, which still survive in Quebec, were very influential in the present utter defeat of the Conservatives in Quebec, where they only carried 5 out of 65 seats.

Mr Mackenzie King, in forming his Government, has made an effort to effect economies in administration by consolidating some departments which heretofore have had separate Ministers, and although he has still to secure legislative authority for these adjustments, he has reduced the number of his Cabinet to sixteen members, or five less than Mr. Bennett's. Again, he has departed from a hoary tradition in leaving two Provinces, Alberta and Prince Edward Island, without a Minister. And he proposes to take a step recommended as long ago as 1912 by Sir George Murray in appointing for the more important departments parliamentary secretaries, who will have a position analogous to that of under-secretaries in Britain. The Cabinet which he has constructed is thoroughly representative of all sections of the country and of all the varied shades of opinion in the Liberal Party, and it has on the whole had a good Press. He has dropped a brace of veteran Ministers who were returned; but he will have the advantage of the administrative experience of nine former colleagues, and he has brought in a judicious infusion of new blood. Two of the new Ministerial recruits have never before sat in Parliament. The banking and business community is very pleased at the return of Mr C. A. Dunning to the Ministry of Finance; and as he has also not forfeited the respect of the Western agrarians among whom he originally made his reputation, first as a co-operative leader and then as a politician, he should be one of the dominating figures of the Cabinet. There are some notorious protectionists in the Cabinet; but they are not so strong as the manufacturing interests would have liked.

Foremost among the problems left to the new Cabinet by the Bennett Ministry are unemployment and finance. There are still at least 1,250,000 Canadians getting some form or other of public relief, and the drain entailed by this is taxing to the limit the financial resources of Provincial and Municipal authorities. Only a series of timely advances by the Federal Treasury has averted default for the four Western Provinces, and such of their administrations as are politically sympathetic to the King Ministry will expect more generous succour from it than Mr Bennett pro-

vided. Mr Bennett advanced to the Social Credit Ministry of Alberta, which took over a bare Treasury, enough money to tide over its difficulties until the General Election. But Mr Aberhart, the Premier of Alberta, has estimated that he will need at least \$15 millions more to meet his obligations up to the end of the current fiscal year; and other Provinces will also want help on a smaller scale. Mr King has consequently invited the Provinces to attend a Dominion-Provincial conference at Ottawa early in November, at which the financial relations of the Provinces and the Dominion, unemployment, and other questions are to be discussed. The Liberals are pledged to abolish the unemployment relief system adopted by the Bennett Ministry and handle it through a National Unemployment Commission, which will be charged with the administration of relief and the evolution of schemes for the absorption of the unemployed. The coming conference will also review the industrial and social reform legislation of the late Ministry, whose validity was challenged by several of the Provinces on the ground that it was an invasion of their jurisdiction. It is highly probable that the constitutionality of a number of Mr Bennett's reform measures will be tested by references to the Supreme Court.

The Bennett Government has left the Federal and Provincial finances hopelessly intertwined. The Federal Budgetary position is not wholly satisfactory. While, during the first half of the current fiscal year 1935-36, Federal revenues have risen by about \$10 millions, there has, thanks partly to the social and industrial measures passed last session, been an increase of \$15 millions in expenditure. The aggregate national deficit, when the needs of the Canadian National railway system are taken into account, is therefore not likely to be smaller at the end of this fiscal year than it was in March, 1935. Plans will probably be discussed for lightening the Provincial debt burden, possibly by the method of a nation-wide refunding operation to which Mr Bennett has committed his party. Consideration of these problems can scarcely fail to bring into the foreground the thorny issue of constitutional reform.

MR KING AND THE TARIFF

The tariff is the third major problem which will demand the attention of the King Government. The Liberals are traditionally a low tariff party, and both their official platform and the utterances of their leaders during the campaign pledge them to tear down the inordinately high tariff barriers erected by the Bennett Ministry since 1930. But it happens that Liberal members have been elected for a larger number of industrial seats, interested in the preservation of some duty or other, than at any previous election; and also that the influence of the Western Wing of the party, only 32 strong out of a total of 176, will be feeble in the councils of Liberalism than in any recent Parliament. So the King Government will have to move cautiously in the matter of tariff reduction. The Liberals have all along contended that a high Protectionist Conservative Government in Canada had no chance of negotiating anything but a very trivial reciprocity bargain with the United States. And they are certain to try and enlarge the scope of the negotiations which Mr Bennett has been carrying on with the Roosevelt Administration. But the nearer a Presidential election in the United States, which is now only a year distant, comes, the smaller is the prospect of a comprehensive reciprocity because the Roosevelt

BRITAIN IN DEPRESSION

A Record of the Trade Depression Since 1929

This book is issued under the auspices of the British Association. It is a complete chronicle of the depression years, and gives an authoritative picture of the effects of the crisis on British industries. All business men and students of Economics should read it. 473 pp.

Order from a bookseller or direct (postage extra) from
PITMAN, Parker Street, Kingsway, London, W.C.2

Administration will not want to court the displeasure of agrarian and other interests now arrayed against any reciprocity pact. However, some agreement which would give better access to the American market for Canadian cattle, lumber and dairy products might be patched up since the King Ministry will be able to offer larger concessions to American manufactured products than its predecessor could.

REVISING OTTAWA

The Liberal Party has always been exceedingly critical of the Ottawa Agreements, and during the campaign Mr Bennett contended that a Liberal victory would be interpreted in the other countries of the Commonwealth as tantamount to their repudiation. But, although such a threat has been heard from Liberal lips, Mr King in his more recent speeches has been careful to say that he only proposed to revise them by friendly negotiation and bring them to a more equitable and permanent basis. The King Government will want above all things to frustrate any plans that Mr Elliot may have for diminishing Canada's share of the British market for foodstuffs. How profitable the Anglo-Canadian Ottawa Agreement has been to Canada can be gleaned from the fact that in the fiscal year ending March 31, 1934, her exports to Britain were valued at 228 million dollars, compared with 184 millions in the preceding fiscal year.

So the King Government will probably be willing to pay a price for the retention of the free preference by reduction of the duties on manufactured imports from Britain, and in doing so it would be able to fulfil its pledges to alleviate the burdens of protectionism for the primary producers. But when it comes to propose reductions in textile duties it may have trouble with some of its own supporters, as it happens that three-fourths of the Canadian textile mills are situated in constituencies now represented by Liberal members.

The Liberals, like the Conservatives, are committed to the maintenance of the Canadian National Railways as a public-owned and publicly controlled enterprise. And a substantial element of the Party is in favour of the recapitalisation of the Canadian National system for the purpose of reducing its fixed charges. One step, however, the Liberals are definitely pledged to take, namely the transfer of the now privately-owned Bank of Canada to Government ownership and control. But any Bill for this purpose is likely to encounter strong opposition from the Conservative majority in the Senate, which can hardly be obliterated during the present Parliament.

OTTAWA, October 24.

LETTERS TO THE EDITOR

THE MINERS' CASE

TO THE EDITOR OF THE ECONOMIST

SIR,—In the table with which you illustrate the article with this title in your last issue no figure is given for the year 1914 in respect of output per man-shift. The implication is that there was a steady rise during the whole period under review. That, however, is not so. You omit to say that the 1914 figure of 20.32 cwts. fell to 15.6 cwts. in 1919 and to 14.57 cwts. in 1920. Between 1922 and 1925, years omitted in your table, the figure declined from 18.02 cwts. to 17.83 cwts. in 1923 and to 17.59 cwts. in 1924. Nor, I think, do you make any reference to mechanisation of the mines as a leading cause of the recent increase of output.

This is not an attempt to justify lower earnings than the industry would like to see paid; merely the completion of your table.

Yours faithfully,

PHILIP GEE,

For the Mining Association of Great Britain.

[It is true that output per man-shift was greater in 1914 than 1919. But Mr. Gee omits to say that the shift was eight hours a day in 1914 and seven hours a day in the post-war years. We referred in our article to "very great reductions of cost, due partly to wage cuts and partly to mechanisation."—ED., *Econ.*]

BULL'S-EYES

TO THE EDITOR OF THE ECONOMIST

SIR,—Under the title "Bull's-Eyes" there is printed in your issue of July 27, 1935, a leading article whose opening paragraph refers to "the lack of imagination and elasticity of the 'expert' when faced with a new and unexpected situation," and contains the sentence: "One of the most striking examples of this woodenness of the official mind was the notorious episode of the British rifle orders placed in the United States." Mine was the official mind whose woodenness was responsible for the action which your article criticises, and I am moved to write in correction of some of the errors of fact with which it is sprinkled.

The substance of your criticism is that when the United States entered the war the American War Department did not take over and continue the enormous output of the three American factories, which were then approaching the end of their British engagement, and equip all the American troops with a new British rifle which they had been manufacturing for that Government—with the obvious advantages of celerity of supply and uniformity of ammunition with the British—as you state was urged upon it by the British Balfour Mission, which came to America on a co-ordinating task in the first month of America's participation in the war; and you find a motive for the action of the War Department in that "the head of the Ordnance Department (myself) was unfortunately a technician keenly interested in a new American rifle, which he claimed to be the best in the world." To the uninformed your criticism seems plausible enough, and I am afraid that the information required to estimate it correctly will be dull reading in comparison with somewhat dramatic charges, entertainingly made.

The Chief of Ordnance was not interested in any new rifle. The rifle with which the American troops had been armed for over ten years was the Springfield, of the model of 1903, and there was no thought of changing it, for it was believed to have no superior in the world. The supply on hand, however, together with the manufacturing capacity, was not sufficient for the equipment of the new American armies as fast as it was intended to raise them, and I at once took steps for utilising the three factories making the British rifle to make this same rifle for us; which steps were arranged for before the arrival of the Balfour Mission in America; so that no suggestion upon this point was needed from it. The Mission, however, did suggest that the machine plant for manufacturing the British rifles, which had passed—without the buildings—by modification of the contracts into the ownership of the British Government, and for which it would have no further use, should be purchased by the United States; a perfectly proper suggestion which met with American acceptance, and the plants were purchased by the Ordnance Department for 10 million dollars. This transaction had nothing to do with the decision for the American utilisation of the plants, but was regarded as the most equitable method for arranging compensation to the British Government for their use.

The Mission also urged, very strongly, that the American troops to be sent over should operate in the theatre of war with the British forces and, as appropriate to such an arrangement, that all the Americans should be armed with the American-made British rifle, firing the old model British ammunition. But a different decision as to operation was made by the American Political Government: that the American land forces should operate with the French, and the sea forces with the British; which practically nullified the importance of uniformity of the ammunition to be used by the British and by the American troops. The few American divisions which did subsequently operate, temporarily and in emergency, with the British, exchanged their superior American-made rifles for British rifles while so serving, for convenience of ammunition supply. But no American troops were at any time armed with French rifles, as erroneously stated in your article, nor was it ever suggested by anybody that they should be.

It would have been possible to arm the American troops going overseas entirely with the American-made British rifle; but there were strong reasons against such a course. It would have involved retiring some 500,000 Springfield rifles on hand, and retiring also the two Government factories, with a combined capacity of 1,500 rifles per day, either permanently or for some ten or twelve months, while the special tool and gauge equipment for making the British rifle was being substituted for their Springfield equipment; which last task would have occupied highly specialised technical capacity urgently needed for other war purposes. In addition, the Springfield type was considered the better of the two, and its ammunition very much better, being quite similar to that for which the new British rifle had been originally designed. Again, the American-made British rifle (which, by the way, came to be known in our service as the "American Enfield," in contradistinction to the old Lee-Enfield which was continued in use by the British forces in France) had very poor interchangeability of parts, a point regarded as of first degree importance by all military men. The American manufacture of the British rifle had been put into effect under such pressure for haste that the manufacturing equipment provided little interchangeability in the output of each single factory, and practically none at all as between the different factories.

For the above reasons the Springfield rifle was continued in service, and in initial supply and wartime manufacture contributed some 800,000 to the American armament. The issue of two types of ammunition to the American forces, for the Springfield and the American-Enfield rifles, was avoided by altering in manufacture the bore and chamber of the American-Enfield so that it should

use the Springfield ammunition; and at the same time such changes of the appropriate part of the equipment of the private factories were made as to produce very satisfactory interchangeability of parts in the output of all three of them.

In regard to these changes your article says: "But as so often happens, expert prejudice prevailed. Production was stopped while the machinery, jigs and gauges were changed over in the factories and adapted to the new rifle." This statement embodies the singular error of supposing that the great changes were made which would have been required for adapting the manufacturing equipment to the production of the Springfield rifle, spoken of earlier in your article as a "new American rifle" in which the Chief of Ordnance was keenly interested. Which was very far from the truth.

The changes not only gave the American troops uniformity of ammunition for the two types of rifle used by them and interchangeability of parts in the type which had lacked it, but greatly facilitated manufacture by standardising theretofore little standardised parts. For example: The best record of the three private factories, during production for the British, in the assembly of rifles had been 50 rifles per man per day. After the changes the best record was 280 per man per day, and the average was 250. And, incidentally, the cost was reduced by 25 per cent.

Your statement goes on to say: "Nothing was produced until the winter of 1917, and in the meantime millions of America's recruits were drilled with broomsticks." This ignores the continuing output of Springfields by the American Government factories; and is besides in error, in that the delivery of the "American Enfields" commenced in August, 1917, and was carried on at such a rate that, together with the contribution of Springfields by Government factories, all shortage was wiped out by January, 1918, never to reappear, or any threat of it, although recruits were called up in hundreds of thousands greater numbers than there was any possibility of transporting to Europe. The first drafts were enthusiastically called so fast that the reserve of Springfield rifles was not sufficient for their armament, even when supplemented for target practice by a further reserve of about 150,000 Krag-Jorgensen rifles, a good small-bore magazine bolt gun, which had been discarded for the model of 1903. There was not therefore, at first, a rifle for each man, although there were quite enough for training in target practice for everybody. Whence the "broomsticks" of your horrified comment; which were in reality wooden dummies with bayonets formed on them, such as are often used for training recruits in simple drill and bayonet exercise.

In your last paragraph, commencing "And now for the sequel," you give an interesting account of the way in which your National Rifle Association procured the use in this year's competition at Bisley of the American-made British rifles, come to be known with you as the "1914 pattern," of which your War Office had a certain number still in stock. This because of "the growing criticism of the Service rifle, which is no longer being manufactured." After describing the "phenomenal success" of these rifles you conclude: "And these 1914 type rifles, which have been lying in grease for nearly twenty years, are the despised and rejected weapons from Winchester and Remington whose supposed defects delayed for so long the training of America's armies." These rifles were not despised and rejected by any American authority. On the contrary, their good qualities were recognised from the beginning, and they were adopted and manufactured in enormous numbers for the American Service, with only the modification mentioned above, neither of which had anything to do with the merits of the type, but which made it a splendid gun, a worthy rival of the Springfield, although not quite its equal in the opinion of the American Service, which, after the war, retained

the Springfield and retired the "American Enfield"; although the supply of the latter had become much the greater because of the large capacity of the three private factories. And no significant delay whatever in the training of America's armies was incurred.

Most of the points mentioned in this letter are covered in the American War Department publication "America's Munitions," issued by the Government Printing Office in 1919, and in my book "Ordnance and the World War," published by Charles Scribner's Sons in 1920; save the story of the equipment of American troops with French rifles, because that particular error has never before, to my knowledge, appeared, but was left for commission by the *Economist*, seventeen years after.

The decision in this rifle matter was one of the most important taken with reference to the preparation of the American armies for participation in the great struggle. It was approved and confirmed at a conference presided over by the Secretary of War, at which were present the Chief of Staff, the President of the War College, the Commandant of Marines, General Pershing, who had already been designated to command the Expeditionary Force, and myself; and the outcome showed that there was no matter connected with the prosecution of the war in which the American forces were more adequately served than in this, the most important item of fighting material, the infantryman's rifle. The action was thoroughly vindicated by the result, and was taken under the shelter of such margin as appears from the fact that the supply of Springfield rifles on hand when the United States entered the war was more than twice as great as the total number of rifle-carrying troops which had been transported to Europe a full year later, before which time an abundant surplus had been accumulated.

It is astonishing to find so much error of fact and misconception of motive and result packed in this short editorial article of the usually careful and reliable *Economist*. The article has been republished in this city, where I am temporarily sojourning, and I am therefore handing a copy of this letter to the local Press. I request that you give the letter the same prominence in your columns that was accorded to the article to which it is a reply.

Sincerely yours,

WILLIAM CROZIER,

Major-General, U.S. Army, Retired.

C/o National City Bank of New York, Peiping.

August 22, 1935.

[We have given General Crozier's letter in full because it reveals so clearly the characteristics of the official mind. From amidst a great mass of material it emerges that the *Economist* story is substantially admitted. The factories manufacturing British 0.303 rifles were in full output when America came into the war in April, 1917. They were taken over, and production stopped while the factories were changed over to 0.300 calibre rifles. On General Crozier's own testimony, the consequent shortage of rifles was not made good until January, 1918, and in the meantime the American recruits were trained with "dummies." If ever the story is fully told, it will be found that precisely similar delays occurred in America's artillery and ammunition programme as a result of the "battle of the types." Ultimately the American War Department adopted French field and British heavy artillery. In the case of the latter, General Pershing's army was entirely supplied from British sources, and as late as October, 1918, the American representative signed a contract with the British Minister of Munitions for supplying the American army with heavy artillery in 1919, as the American programme had not matured.—ED. *Econ.*]

BOOKS AND PUBLICATIONS

JAPAN IN CRISIS *

THROUGH the barrage of Abyssinian news which fills our papers comes quietly but persistently daily word of a Japanese threat in Shanghai, a Japanese manoeuvre to sever more provinces in Northern China, a Japanese penetration into Mongolia. Japanese filtration in the Asiatic mainland continues its almost uninterrupted course, while the League struggles to arrest Italian advances into Africa. Of the League's past efforts to prohibit this Japanese subjugation of China there remain to-day only a disturbed confidence in League procedure and a pose of moral righteousness on the part of League members. In Mr Stimson's company we refuse to recognise the sham independent State that was once Manchuria; Japan may call it "Manchukuo," but we print the distasteful word in inverted commas and send our mail to the old address. It was morally unforgivable of Japan, we say, to go to war against China, because at her hand, if she chose to use it,

* "Japan in Crisis." By H. Vere Redman. George Allen and Unwin. 223 pages. 6s.

was an organisation through which she could have obtained peaceful justice.

This picture is sufficiently right to be attractive, sufficiently wrong to be dangerous. Its lines are too clear cut, its judgments too superficial. It is the great merit of Mr H. Vere Redman's "Japan in Crisis" that in a series of sixteen quiet letters and essays he blurs its lines and qualifies its judgments. Nations, he says, have their black and their white periods as well as their black and white individuals and groups; and he hopes that his letters will show something of how these qualities were distributed in the Manchurian crisis between 1931 and 1935. His hope is justified. In an unpretentious and business-like manner he pursues his purpose through a miscellany of topics: from the population problem to the limitations of the Japanese syllabary, from the views of "Suzuki," the man in the street, to the neo-nationalism of the Great Asia Federation, from a review of recent books on Japan to an analysis of comparative living standards and the rise of camp government.

When one reaches the end of this book the clear-cut lines of one's picture have disappeared, and one sees Japan's

expansion not as an unprovoked outburst of militarism but as a symptom of, and reaction to, economic and political pressure, exerted between Japan and the Western world. "Manchukuo" is a puppet State, but is not puppetry the time-honoured practice of all countries in their dealings with China? "Whether you were patriotic and called yourself 'Japan,' self-righteous and called yourself 'enlightenment,' or frankly mercenary and called yourself 'legitimate commercial interests,' you all adopted essentially the same technique, that of picking your puppet and ruling through him." The Open Door in China meant not freedom for the Chinese but freedom for the foreigner to exploit.

And Japan, we say, had in the League of Nations a peaceful method of obtaining justice. But her apologists may make what they can of the fact that it has taken the possibility of European complications to stimulate in the present British Government an active interest in the question of colonial justice and access to raw materials and markets. Some of the blame for the Manchurian incident must be laid at the door of the principal League Powers as well as to the warlike zeal of a Japanese military caste soaked in a feudal ideology.

Mr Redman suggests that Great Britain should give tacit recognition to the present situation and so induce the Nanking Government to give up its animosity as a bad job. The Japanese, he says, greatly—and naturally—prefer their own culture to ours, but they have every respect for our political "panache"; and it is on that basis that we should offer partnership in maintaining the peace of the world, recognising a Japanese Monroe Doctrine in the Far East. Mr Redman's solution may be the line of least moral resistance. But could we apply it, and, if we did, would Japan accept it? We must await the outcome of the League's present struggle before we know whether the world can find peace with flexibility and justice, or whether militarism will still seem the more efficient and seductive weapon.

SHORTER NOTICES

"La Circulation Monétaire et le Crédit," by R. G. Hawtrey, traduit par Georges Gaussel et Leonard Rist. Avec un avant-propos de Charles Rist. Recueil Sirey. 1935. xi + 646 pages.

This is a French translation of Mr R. G. Hawtrey's best-known work. In view of the economic and more especially the monetary policy of post-war France, the translation of the book is very much to be welcomed. There is still a tendency in France to confuse the concepts of depreciation, devaluation and inflation, and gold still makes a superstitious claim to some sort of absolute value.

Mr Hawtrey, in a new preface, very rightly emphasises the empirical—as opposed to the absolute—superiority of a metallic monetary standard in the present state of economic knowledge. He hopes that the steadying influence of an attachment of national currencies to a metallic anchor will one day be restored. But he justifiably points out the importance of realising that even the most universal gold standard is, in present circumstances, necessarily a managed standard. The reluctance to manage it results more often than not merely in mismanagement. The success of a second return to gold will therefore depend on the development of the factor which caused the failure of the first. That factor is the chance of excessive monetary disturbance leading to an upheaval in the value of gold in terms of other commodities.

The most interesting, not to say intriguing feature of the book, the foreword of Professor Rist, does not encourage many hopes. Indeed the small but courageous band in this country which would like to see an early stabilisation of currencies on a world-wide scale will receive it, as it received Professor Rist's contribution to a recent issue of *Lloyd's Bank Review*, with very much the same feeling as Wellington welcomed his Portuguese auxiliaries. Professor Rist still seems to find a mystical power in the precious metals which renders them the only possible measure of value. Such a view seems a little odd after the vagaries of gold and silver in the last decades. Some surprise may also be caused by Professor Rist's statement that Mr Hawtrey belongs to the "Cambridge School" and that his views are a subtle explanation and defence of the post-war monetary policy of the British Treasury.

"The Construction of Mortality and Sickness Tables—A Primer." By W. Palin Elderton and Richard C. Fippard. Third Edition. A. and C. Black, Ltd. 130 pages. 4s. 6d. net.

So many actuaries, practising to-day, made their first acquaintance with the theory and practice of mortality tabulation through "Elderton and Fippard," and so many actuaries of the future will approach the subject by the same medium, that a new edition of this primer is both inevitable and indispensable, seeing that the last revision took place in 1922. Of the original authors, one was not permitted to see the fruits of his labours, but Mr W. P. Elderton, happily, remains at the helm of a well-known insurance office, and has carried through the necessary alterations for the present edition. These consist mainly of a complete re-writing of the concluding chapter—one of the most important in the whole work—which deals with the results obtained by some of the best known extant tables. For the rest, the book remains as always, an invaluable primer combining a wealth of experience with a power to expound the most obscure considerations in the clearest terms.

MONEY AND BANKING

INSURING PAYMENT IN STERLING

TEN months ago (see the *Economist*, December 22, 1934) we described the operations of the Export Credits Guarantee Department, which, under official auspices, insures British exporters against non-payment by their foreign customers. After the conclusion of the Anglo-German Payments Agreement of November 1, 1934, the Department's scope was extended to cover the transfer into sterling of sums due to British exporters to Germany, up to 75 per cent. of the amount involved in each invoice. This insurance against "blocked payments," though necessarily experimental, was a precedent clearly destined, if successful, to have far-reaching implications for British export trade as a whole, under a regime of omnipresent currency restriction. For this reason we welcomed the new departure and expressed a hope that it might ultimately be extended to our trade with other countries besides Germany.

This desire, happily, has now been realised. Last week it was announced in the House of Commons that the time was ripe for the general extension of the scheme, and the Export Credits Guarantee Department has subsequently declared its readiness, under certain conditions, to consider applications for the insurance of the transfer into sterling of debts due by any importer in a country which may impose future restrictions. The exporter is required to give the Department an estimate of his probable shipments to a given country during the succeeding three months. The Department quotes a premium at which it will insure the transfer of 75 per cent. of the total sum specified, the risk as regards the remaining 25 per cent. being carried by the exporter. Shipment is made in due course on ordinary commercial terms, and bills are drawn in the ordinary way. If any of these bills are not met on maturity, owing to difficulties in transferring the amount due, the exporter notifies the Department. A further six months then elapse, during which the exporter is required to make all reasonable efforts to recover his debt. If at the end of that time the sum due is still "blocked" in the importer's country, the Department meets the exporter's claim, taking over in return an equivalent amount of the blocked foreign currency.

A number of indispensable conditions are attached to the scheme. This form of insurance, for example, is offered only to those exporters who already insure the solvency of their customers through the Department. Here it is necessary to draw an important distinction. An exporter desiring to insure his customers may not pick and choose. He must insure the solvency of all his foreign customers, wherever they may be, or of none of them. As regards the additional facility of transfer insurance, however, a definite choice is permitted him. Having insured his customers' solvency in, say, France, Belgium, the United States of America and Ruritania, he may elect to insure the transfer of his debts from Ruritania alone.

A second condition is designed to prevent possible abuse of the scheme's facilities. The Department may ask an applicant to furnish details of his previous trade with any country in regard to which he seeks transfer cover. It is obviously not in the Department's interest that an exporter should be encouraged to expand his shipments inordinately and rashly, particularly if he is dealing with a country whose exchange position is at all questionable. Against such an endeavour, the possession by the Department of details of the volume and value of previous transactions is an indispensable protection.

The Department, further, will grant transfer insurance only in the case of goods invoiced in sterling. If an exporter quotes in foreign currency, he must assume the entire risk himself. This condition, it may be surmised, is based on expediency rather than on principle. Not many years ago British exporters were constantly being admonished to quote prices in their customers' currency.

They can, of course, secure themselves against exchange fluctuations by a forward sale of foreign currency, but this does not overcome the transfer risk. It may be presumed that the Export Credits Guarantee Department is reluctant to assume any direct foreign currency liability, since such a step would involve it in direct intervention in the exchange market, and possibly in the necessity of holding reserves in the form of foreign currency balances.

Finally, the new facilities are subject to the general limitations which apply to all the Department's operations. It will not consider applications based on dealings in re-exports or in munitions of war. The scheme, which assumes the finance of shipments by three months' bills, in practice embraces mainly consumers' goods. Other methods have been evolved for insuring long-term payments for the execution of contracts or the supply of machinery and other capital goods. For some time past these have included the insurance of the transfer of the funds, as well as the solvency of the buyer. Thus, when the Department assisted in the Westinghouse contract for the supply of railway plant for Poland, the arrangement with the Polish Government included the passage of special legislation exempting the transfer of the money due to the contractors from any present or future exchange restrictions.

The crux of any scheme of transfer insurance is the determination of the proper premium. *Prima facie*, the problem appears to be soluble only by the expensive and unsatisfactory method of trial and error. The Export Credits Guarantee Department, however, has already, in the course of its ordinary business, accumulated valuable basic information. It has at its disposal a mass of data on the status of individual traders in any given country. It has investigated numerous past cases of delayed remittance, which inquiry has shown to be due not to a default by the importer but to difficulties in obtaining permission to remit. More recently, it has gained direct experience from its operation of the German transfer insurance scheme. Under the new arrangements, in any case, the Department will need to look ahead only for the three months' period covered by the application for insurance, plus a further three months to cover bills drawn during that time. To assess in terms of an insurance premium the absolute risk that Ruritania or Kravonia may block all remittances within the next six months may not be particularly easy. To draw up a list of all the countries of the world, graded in order of "merit," may, however, be a less formidable proposition. It may even be possible to go further and decide that Kravonia presents a risk too great to be insurable.
