GOLD MARKET

Messrs. Samuel Montagu and Company write on August 5, 1936 :—
The Bank of England gold reserve against notes amounted to £239,941,219 on the 29th ulto., as compared with £235,767,025 on the previous Wednesday. Purchases of bar gold as announced by the Bank during the week amounted to £3,019,208. In the open market about £1,300,000 of bar gold was disposed of at the daily fixing; there has been little movement in the price, which to-day was fixed on dollar parity. Although demand was more general, further special buying was also in evidence and other operations of a special nature are indicated by the import of £9,800,000 of gold from France as shown in the figures given below.

The s.s. "Strathnaver," which sailed from Bombay on the 1st inst., carries gold to the value of about £529,000 consigned to London.

SILVER MARKET

The market has been quiet and prices have shown only small variations. Indian demand was more in evidence at the present level of prices, at which there was also some inquiry for American trade requirements. Speculators have resold, but sales on China account continue to furnish the main supplies.

The tone of the market appears steady at about the present level, from which no wide departure is anticipated in the near future.

Quotations for gold and silver are shown below :—						
1936	Price of Gold per Fine Ounce	Equivalent Value of £ sterling	Price of Bar Silver in London per ounce standard		Price of Silver New York per ounce -999 fine

BRITISH INDUSTRIES—FOURTH PORTFOLIO.—A second half-yearly income distribution of 8½d. per sub-unit, free of income tax, representing income received during the six months ended July 10, 1936, is announced.

NATIONAL GAS AND OIL ENGINE.—An interim dividend of 2½ per cent on the arrears of preference shares for the six months ended December 31, 1935, is announced.

FRANK MASON AND COMPANY.—A dividend at the rate of 7½ per cent. per annum for the eight months ended March 31, 1934, on account of arrears, is declared on the 7½ per cent. cumulative participating preference shares.

BURMA CORPORATION.—Final dividend for the year to June 30th, 6 annas on the Rs.9 ordinary shares, payable September 28th, free of Indian and British income taxes. This makes a total of 12 annas (8½ per cent.) per share, tax free, against 7½ annas (4½ per cent.). London shareholders will be paid at rate of 1s. 6d. per rupee.

REPORTS AND NOTICES

MINES

WITWATERSRAND NIGEL, LTD.—The report for the quarter ended June 30, 1936, shows that the total footage advanced in all sections during the quarter was 5,565 feet; on reef, 3,652 feet; sampled 4,127 feet, of which 160 feet was payable, averaging 8,007 dwts. over 30,397 inches, equivalent to 243 inch-dwts. In No. 4 winze workings, 110 payable feet averaged 9,088 dwts. over 29,577 inches, equal to 269 inch-dwts. In No. 1 Shaft workings a payable shoot was intersected by the North Drive Return Drive on the 6th level, and up to the end of the quarter 50 payable feet averaged 5.8 dwts. over 32.2 inches, equivalent to 186 inch-dwts. It has been decided to extend the exploration of the Houtpoort area towards the boundary of Rensburg Township on the dip below the present 7th Level.

MISCELLANEOUS

KELSALL AND KEMP, LTD.—The net profit to June 30, 1936, is £44,533, an increase of £24,154 over the figure for the preceding year.

CARDIFF.—With the collieries idle till Wednesday night little business has been passing on the Cardiff Exchange, and the output for the whole week is hardly likely to exceed 50 per cent. of normal. Shipments were resumed on Tuesday, and it is hoped that the heavy stocks on the sidings may be appreciably reduced by the suspension of work at the collieries. The new scheme for the centralised control of sales came into force from August 1st, but the staff of the new Board has not yet been organised and temporarily the collieries have been granted formal permits for their current commitments. Apparently contracts concluded during July have been much heavier than in previous years, and as all contracts are excluded from the scope of the Control Board if concluded before July 31st the new regime cannot become really effective till the New Year. There has been no change in prices.

IRON AND STEEL

MIDDLESBROUGH.—Shipments of all classes of pig iron from the Tees during July amounted to 8,624 tons, against 8,678 tons during the previous month; shipments of manufactured steel amounted to approximately 44,000 tons, of which roughly 28,000 tons went to foreign destinations. Production in this area again shows a considerable increase, the output during the first six months of 1936 being a record. Pig iron producers are well sold for the next few months, and prices are maintained to home consumers for No. 3 Cleveland Foundry Pig Iron at 75s. per ton delivered locally, whilst East Coast Hematite is based on No. 1 grade at 85s. 6d. per ton delivered in this area with the rebate of 5s.

Steel production continues unabated. Coke is in good demand with the supply rather better, and makers are now asking 24s. 6d. to 25s. per ton for good Durham blast furnace coke delivered to the furnaces. Whilst foreign ore business is restricted on account of the troubles in Spain, the total quantity of foreign ore imported into the Tees during July was 213,000 tons, against 152,000 tons during June. Heavy steel melting scrap is quoted at 57s. 6d. but makers are well provided with supplies as a result of importations of this material from abroad.

SHEFFIELD.—Despite the holidays there has been a fair volume of business this week, consumers being anxious to supplement supplies. Makers of foundry pig are heavily committed under contract and have little for disposal on the market. Forge demand shows a steady increase, consumers displaying a greater readiness to buy forward. Hematite is in heavy request, but the majority of makers are fully booked and are not in a position to accept further business at present. Any small lots which come on offer are eagerly taken up. The finished iron position is showing steady improvement, although crown bars still lag behind common and marked bars. Demand for basic steel billets can only just be satisfied, and acid qualities are coming into greater prominence. Business in structural steel is good, and there is an insistent demand for wire rods and stainless steel sheets. There is a steady demand for iron and steel scrap. Heavy basic steel for melting sells at around 57s. 6d. for large parcels, and for foundry cast iron up to 67s. 6d. is readily paid. Steelworks heavy cast iron is dull at 54s. Production of steel ingots and castings in the Sheffield area in the half year ended June exceeded that of the corresponding period of 1935 by 107,300 tons. The June output was 130,400 tons, an increase of 23,700 tons on June last year.

GLASGOW.—A very high rate of production is being maintained in almost all branches. Not only are makers working to capacity but demands from users are on the increase and this is likely to continue on account of the large amount of work on hand in many of the leading industries. Clyde shipbuilders have received further contracts, Lanarkshire wagon builders and structural engineers, machinery and boiler makers and locomotive builders in Glasgow and district have also booked very considerable orders. For tube makers the position is not quite so satisfactory and tonnage on hand is small. Price of black sheets for export has been increased by 5s. per ton to £10 basis for 24G. for all markets except Canada, which is separately arranged.

CARDIFF.—Owing to the holidays there was no meeting of the Swansea Metal Exchange on Tuesday, and the general position in the various branches of the iron and steel industry is unchanged. The production of steel in South Wales in June showed a greater percentage increase over the corresponding month last year than that of the country as a whole, and for the first half of the year the output at 1,153,300 tons is the largest recorded since 1929. The blast furnaces have also been producing larger outputs, and the production of 330,600 tons for the first half of the year compares with 278,800 tons for the corresponding period last year. Shipments of tinplates at Swansea last week totalled 64,804 boxes as against 82,222 boxes the previous week, and 91,373 boxes a year ago.

OTHER METALS

COPPER.—Despite the higher quota, operative from August 1st, which will increase supplies by 3,330 tons a month, the market has maintained its strength. On Tuesday, the standard cash quotation, at £38 1s. 3d. per ton, reached the highest level for over three years. In the U.S.A., the market has become very quiet after the abnormally high level of deliveries during July. Some easiness may become apparent before long in this country also, since consumption may be expected to show a seasonal decline. But the technical position is too strong to justify more than a fractional price decline.

Sales on the London Metal Exchange: 2,350 tons on Tuesday, against 1,500 tons last week; 1,350 tons on Wednesday, against 1,900 last week. Domestic spot was quoted at 9-27½ cents per lb. in New York on Wednesday, against 9-27½ cents a week ago and 8-95 cents a month ago. Wednesday's official closing price for standard cash in London was £38 to £38 1s. 3d., compared with £37 18s. 9d. to £38 a week ago. Stocks of refined copper in British official warehouses at the end of last week, at 53,550 tons, show an increase of 11 tons, while stocks of rough copper, at 3,286 tons, show an increase of 31 tons on the week.

LEAD AND SPLICER.—Despite certain fluctuations, lead prices show no net change on the week. Spelter eased somewhat, owing to rumours of a breakdown in the Cartel discussions, but, until Wednesday, showed remarkable steadiness at the lower level. The position regarding spelter is discussed in a Note of the Week.

Sales of lead on the London Metal Exchange: 1,200 tons on Tuesday, against 1,300 tons last week; 1,050 tons on Wednesday, against 550 tons last week. The New York quotation on Wednesday was 4-60 cents per lb., against 4-60 cents a week ago and 4-60 cents a month ago. The official closing quotation in London for soft foreign for shipment during the current month was £16 8s. 9d. per ton, compared with £16 8s. 9d. a week ago.

Sales of spelter on the London Metal Exchange: 750 tons on Tuesday, against 900 tons last week; 175 tons on Wednesday, against 800 tons last week. Wednesday's quotation in East St. Louis was 4-80 cents per lb., against 4-80 cents the week before and 4-75 cents a month earlier.

Wednesday's official closing quotation in London for "food ordinary brands" for shipment during the current month was £13 1s. 6d. per ton, against £14 1s. 3d. last week.

TIN.—Prices have fluctuated within narrow limits. The Siamese problem remains unsolved and no new endeavours to resume negotiations have been made this week; nevertheless, London metal market circles remain confident that there are still possibilities of the continuance of the tin scheme on a reasonable basis. The total visible supply of tin, according to A. Strauss and Company, showed only the small increase of 136 tons to 15,108 tons in July. The market had expected an increase of between 1,500 and 2,000 tons, but American deliveries reached the very high level of 7,120 tons, or 1,830 tons more than in July last year. World deliveries last month totalled 10,355 tons, or 412 tons less than in June, while new supplies fell by 58 tons to 10,022 tons. Since American deliveries are likely to show a sharp decline in August, while the higher quotas for the third quarter of the year will become apparent in the August statistics, the visible supply should show a large increase by the end of this month.

Sales of tin on the London Metal Exchange: 80 tons on Tuesday, against 425 tons last week; 290 tons on Wednesday, against 400 last week. The New York quotation on Wednesday was 42-75 cents per lb., against 43-12½ cents a week ago and 43-50 cents a month ago. Wednesday's official closing quotation in London for standard cash was £184 5s. to £184 15s. per ton, compared with £184 to £184 10s. a week ago. Stocks of tin in London and Liverpool at the end of last week totalled 595 tons, an increase of 30 tons on the week.

OTHER NON-FERROUS METALS.—Among other non-ferrous metals, aluminium ingots and bars for home delivery were again quoted at £100 per ton, and rolling billets at £102 per ton. Nickel, for home and export, at £200 to £205 per ton, remains unchanged. Quicksilver, on the spot, was quoted at £12 3s. to £12 3s. 6d. per flask of 76 lb., as against £11 19s. to £11 19s. 6d. last week. Chinese antimony was quoted at £53 to £54 per ton ex warehouse, duty paid, the same as last week. Chinese wolfram for "August-September" shipment was quoted at 25s. 6d. to 26s. per unit, c.i.f., as against 26s. 6d. to 27s. for "July-August" last week. Platinum (refined) was quoted at £8 10s. per ounce against £8 per ounce last week.

TEXTILES

COTTON.—Manchester.—A feature of the market has been the further decline in raw material rates, American cotton being nearly 4d. per lb. lower than in the middle of July. Business has been somewhat restricted as a result of the holidays. Considerable interest has been taken in the United States Government estimate of the crop due to be published to-day (Saturday). Whereas a month ago on the area under cultivation of 30,621,000 acres a yield of 11½ million bales was anticipated, it is now believed that the probable output will be about 12,300,000 bales. Conditions have not been favourable for a healthy export business in piece goods, and the attitude of buyers has been affected by uncertainty as to future raw cotton prices. Although a fair amount of inquiry has come through for India, sales of more than retail lots have been few and far between. A little more activity has been reported in fancies for Java. Some manufacturers of bleachers have had opportunities of selling for Egypt, but not much has been done. Useful lines have been reported in heavy shirtings and prints for West Africa. The undercurrent of demand for South America has kept up fairly well, there being steady buying in finishing styles. Some makers have met with moderate support from the Dominions. Advices from the home trade have been rather less favourable. The unseasonable weather is having an adverse effect upon clearances in summer materials. There has not been any general activity in the yarn market. Quotations have been somewhat irregular when tested.

WOOL.—Bradford.—Since the close of the recent London Colonial auctions, very sound conditions have prevailed. Stocks of old wool have almost disappeared, the carry-over in New Zealand being only 29,500 bales. There are certain to be some shipments to London for sale at the September and November series, which implies a still further reduction in stocks. Since London closed there have been considerable sales in Bradford of medium and coarse crossbreds for export to the Continent, and the tops and noils. For a holiday period mills are running fairly well, although Commission combers are busy getting all deliveries of tops made before closed. Most mills outside the city will be running as usual.

GRAIN MARKETS

WHEAT.—The steep rise in the price of wheat has continued. The Canadian crop has ripened prematurely and the yield is light. But it appears that recent estimates of the United States crop have been unduly pessimistic. A private estimate now places the aggregate yield of the suffice for domestic needs. Meanwhile, the situation in Argentina is and for Australia are rather low.

On Wednesday last, "September" futures were quoted in Chicago at 113½ cents per bushel, against 108½ cents the week before and 105½ cents a month ago. Quotations in London, Wednesday: No. 1 Northern Manitoba, ex ship, 41s. 9d. per 496 lbs., against 38s. a week ago; No. 2 to the Corn Trade News, total shipments of wheat and flour last week totalled 1,238,000 quarters, against 983,000 in the previous week and 811,000 quarters in the corresponding week a year ago.

FLOUR.—Both home-milled and imported flour have again advance in sympathy with wheat. Wednesday's London quotations (excluding quota payments) were: Straight run, delivered Home Counties, 34s. 6d. per 280 lbs., against 31s. a week ago; delivered inner London, 34s., as compared with 30s. 6d. a week ago. Manitoba patents, ex store, 31s. 6d. to 33s., against 28s. 6d. to 29s. 9d. a week ago. Australian, ex store, 22s. 6d. to 27s., against 24s. 6d. a week ago.

BARLEY.—Rains in Europe and drought in North America have adversely affected supplies, and prices of imported descriptions are firm. Prices for English are nominal. The yield from the home crop promises to be satisfactory, but a spell of warm, dry weather is now urgently needed. "October" futures were quoted at 61 cents per bushel in Winnipeg on Wednesday, against 53 cents a week ago and 45 cents a month ago. Quotations per 448 lbs. in London on Wednesday were: "English feed" at farm, 25s., as against 25s. a week ago; "English malting," at farm, not quoted.

OATS.—Supplies of native oats are small and prices are firm. Meanwhile, quotations in North America have again recorded a sharp advance in sympathy with other grains. On Wednesday, "September" futures were quoted at 42½ cents a bushel in Chicago, against 38½ cents a week ago and 37½ cents last month. Quotations in London, Wednesday: "English Black," at farm, 20s. 6d. per 336 lbs., against 20s. 6d. a week ago; "English White," at farm, 20s. 6d., against 20s. 6d. a week earlier.

MAIZE.—Despite some improvement in the weather in Argentina prices have risen sharply in response to the crop situation in North America. "September" futures were quoted on Wednesday at 106½ cents per bushel in Chicago, against 94 cents a week ago; and 79½ cents last month. Quotations in London, Wednesday: "Plate," landed, 26s. per 480 lbs., compared with 23s. 6d. a week ago; "Plate," ex ship, 25s., as against 22s. 6d. a week ago; "Plate," "August," 24s., as against 21s. 9d. a week ago; yellow maize meal, ex wharf, was quoted at £6 10s. to £6 12s. 6d. per ton, as against £6 1s. 3d. last week.

AMERICAN WHEAT MARKETS.—The following table shows wheat quotations for selected weeks in 1934-36:—

NEAREST FUTURE	Jan. 3, 1934	Jan. 2, 1935	Aug. 7, 1935	Dec. 31, 1935	July 29, 1936	Aug. 5, 1936
Winnipeg (No. 1, Manitoba) —Cents per 60 lb.	65½	82½	84½	84½	98	107½
Chicago (No. 2 Winter) —Cents per 60 lb.	84½	98½	90½	75½	108½	113½

The visible supply of wheat in Canada amounts to 70,348,000 bushels against 72,693,000 bushels last week, and 125,984,000 bushels in the corresponding week last year.

SALES AND PRICES OF BRITISH CEREALS.—The following table gives the estimated sale of home-grown wheat during the harvest years 1932-33 to 1935-36:—

	1932-1933	1933-1934	1934-1935	1935-1936
Estimated sales of home-grown wheat—	Cwts.	Cwts.	Cwts.	Cwts.
1 week to August 1	15,157	102,879	57,403	49,950
46 weeks to August 1	8,608,963	10,950,321	13,279,930	13,218,133
Average price of English wheat per cwt.	s. d. 6 10	s. d. 5 0	s. d. 5 4	s. d. 7 4

The following is a statement showing the quantities sold and the average price of British cereals in the past two weeks, and for the corresponding week in each of the years from 1932 to 1935:—

Week ended	QUANTITIES SOLD			AVERAGE PRICE PER CWT.		
	Wheat	Barley	Oats	Wheat	Barley	Oats
July 30, 1932	Cwts. 29,662	Cwts. 3,017	Cwts. 3,560	s. d. 6 5	s. d. 6 8	s. d. 7 6
July 29, 1933	15,157	8,797	6,174	6 10	6 9	5 11
August 4, 1934	102,879	4,314	16,563	5 0	8 5	6 4
August 3, 1935	57,403	5,356	10,724	5 4	6 7	7 0
July 25, 1936	40,866	2,132	9,931	7 2	5 10	6 6
August 1, 1936	43,950	3,112	10,052	7 4	6 10	6 8

OTHER FOODS

BACON.—The market remains firm. The official quotations (per cwt. for No. 1 Sizable) which formed the basis for dealings on the London Provision Exchange this week were: English, 94s. to 96s.; Canadian, 87s.; Danish, 96s.; as against 94s. to 96s., 87s., and 96s. last week. Arrivals in London last week included Danish, 15,830 bales; Canadian, 4,252; Dutch, 2,595; Lithuanian, 1,712; and Polish, 2,740, as against 14,279, 4,464, 2,275, 1,728, and 2,395, respectively, in the previous week.

BUTTER.—Demand has been rather quiet and prices are a shade easier on the week. Quotations (per cwt.) on the London Provision Exchange on Wednesday were: New Zealand, finest salted, 116s.; Australian, choicest salted, 115s.; Danish, 125s. to 128s., compared with 116s. to 117s., 116s., and 127s. to 128s., respectively, a week ago.

BASIC PIG PRICE.—The Pigs Marketing Board announced this week that in accordance with the provisions of the present contract, the ascertained price of green Wiltshire style bacon is 90s. 8d. per cwt. and the ascertained value of offals is 8s. 8d. The ascertained cost of feeding stuffs, as certified by the Ministry of Agriculture and Fisheries, is 7s. 10d. per cwt. In accordance with the price schedule embodied in the contract, the price of the Class I, grade C pig, for the month of August is 11s. 6d. per score, against 11s. 4d. in July and 11s. 4d. in the same month of last year. The curers will also pay to the Pigs Marketing Board 2d. per score on every pig delivered and accepted during this year, to form a pool out of which will be paid the bonus on pigs delivered during the first four months of the year, in accordance with the 1936 Bonus Scheme.

CHEESE.—Cheese was again a quiet market with prices showing little change. Quotations (per cwt.) on the London Provision Exchange on Wednesday were as follows: English, factory, 58s. to 60s.; Canadian, finest coloured, 64s. to 65s.; and New Zealand, finest coloured, 61s. 6d. to 62s., against 58s., 64s. to 65s., and 61s. 6d., respectively, a week ago.

COCOA.—The spot quotation in New York on Wednesday was 64 cents per lb., as against 64½ cents per lb. last week. In London, on Wednesday

last, good fermented new crop, "October-December," was quoted 28s. 3d. per 250 kilos., c.i.f. Continent, against 28s. 3d. a week ago. Last week's movements of cocoa in London were as follows: Landed, 6,111 bags; delivered for home consumption, 11,587 bags; exported, 357 bags; stocks, 162,778 bags, against 161,358 bags a year ago.

COFFEE.—The London market remains quietly steady; the New York spot market has displayed a firmer tone this week. On Wednesday, Rio No. 7 (cash) was quoted at 8 cents per lb. in New York, as compared with 7½ cents per lb. last week and 6½ cents per lb. a month ago. Movements of coffee in London last week were as follows: Brazilian, landed, 243 cwt. delivered for home consumption, 187 cwt.; exported, nil; stocks, 10,211 cwt., against 15,537 bags a year ago. Central and South American, landed, 573 cwt.; delivered for home consumption, 1,854 cwt.; exported, 1,111 cwt.; stocks, 101,378 cwt., against 150,813 packages last year. Other kinds, landed, 825 cwt.; delivered for home consumption, 3,551 cwt.; exported, 1,031 cwt.; stocks, 145,933 cwt., against 170,285 packages last year.

EGGS.—Eggs remained in fair demand with prices steady to the turn dearer. At Smithfield, on Wednesday, English (ordinary packing, Grade I, about 15-15½ lb.) realised 14s. 6d. to 15s. 3d. per 120, as against 14s. 6d. to 15s. last week, while Danish (15½ lb.) made 10s. 3d. to 10s. 6d. per 120, as against 10s. 3d. to 10s. 6d. last week.

FRUIT.—Business was moderately good last week and prices at Covent Garden were well maintained. According to *The Fruitgrower*, English green apples are plentiful, though small in size. Dessert apples, too, are rather undersized. Demand for Australian and New Zealand apples has been moderate. Pears are selling well, especially French and Italian varieties. Supplies of cherries and of English black and red currants are practically exhausted. Loganberries and raspberries are in fair demand with prices steady. The plum trade is active and prices are well maintained. More hothouse grapes are on sale and prices have eased. Orange prices remain firm, whilst ample quantities of lemons and grapefruit are available.

MEAT.—Business at Smithfield Market has been moderate following the holidays, with prices about steady. On Wednesday last, Argentine chilled hindquarters were quoted at 3s. 10d. to 4s. 4d. per 8 lbs., as compared with 3s. 8d. to 4s. 2d. a week ago. New Zealand frozen mutton was 3s. to 3s. 8d. per 8 lbs., against 3s. to 3s. 8d. as week ago. According to the Smithfield Market official report, supplies during last week amounted to 8,415 tons, a decrease of 27 tons on the corresponding week last year. Beef and veal accounted for 4,782 tons, mutton and lamb 2,529 tons, and pork and bacon 655 tons, as compared with 4,897, 2,606, and 513 tons, respectively, in the same week of 1935.

PEPPER.—Wednesday's spot price for black Lampong (in bond) was 2½d. per lb., against 2½d. a week ago. Movements of pepper in London during the past week were as follows: Black, landed, 5 tons; delivered, 2 tons; stocks, 1,756 tons, against 1,792 tons a year ago. White, landed, 39 tons; delivered, 20 tons; stocks, 12,265 tons, against 18,357 tons a year ago.

RICE.—The London market continues steady. The spot price of Burma No. 2, cleaned, new crop, was 8s. 6d. per cwt. ex warehouse on Wednesday, as compared with 8s. 6d. per cwt. a week ago. "August-September" in singles to Continent and U.K. was quoted at 7s. 10½d. per cwt., against 7s. 9d. last week. Movements in London during the past week were as follows: Landed, 655 tons; delivered, 306 tons; stocks, 2,308 tons, against 10,316 tons a year ago.

SUGAR.—Prices in London have been well maintained following the recent improvement, while the New York market remains steady. The spot price in New York on Wednesday was 3-65 cents per lb. as compared with 3-65 cents per lb. last week and 3-70 cents per lb. a month ago. Wednesday's sales of raw sugar in London included December delivery at 4s. 5½d., against 4s. 5d. to 4s. 5½d. a week ago. The movements of raw sugar at public warehouses in London and Liverpool last week were as follows: Imports, 8,220 tons, against 18,687 tons last week and 24,137 tons in the same week of last year; deliveries, 25,152 tons, against 14,187 tons last week and 16,389 tons last year; stocks, 116,612 tons, against 133,544 tons last week and 141,980 tons last year.

TEA.—The following table shows the average prices (compiled by the Tea Brokers' Association) of tea sold in Mincing Lane on Garden Account in recent weeks:—

Week ending	Northern India	Southern India	Ceylon	Java	Sumatra	Africa	Total
Aug. 1, 1935	d. 11-36	d. 11-26	d. 13-37	d. 9-52	d. 8-46	d. 10-29	d. 11-81
June 25, 1936	12-20	12-26	12-98	10-26	9-95	11-21	12-18
July 2, "	12-19	12-10	13-04	10-33	9-89	11-26	12-22
July 9, "	12-15	12-11	13-06	10-42	10-01	11-32	12-23
July 16, "	12-27	12-17	13-35	10-34	10-09	11-51	12-41
July 23, "	12-11	12-01	12-93	10-22	9-88	11-44	12-32
July 30, "	12-05	11-81	12-81	10-32	9-84	11-13	12-18

No auctions have been held at Mincing Lane this week, but the market will reopen on Monday next.

VEGETABLES.—Prices for most vegetables showed some improvement on the week, says *The Fruitgrower's* report. Tomato prices have been maintained, whilst cucumbers have hardened. Mushrooms, cabbages and vegetable marrows were plentiful and prices fell slightly. Prices for runner beans, green peas and onions were firmer on rather short supplies. The recent wet weather has accounted for a certain percentage of blight in potatoes, and, with supplies moderate, prices have been about steady. At the London Borough Market on Tuesday, King Edward made 5s. 6d. to 6s. 6d. per cwt., against 6s. to 7s. per cwt. last week.

MISCELLANEOUS COMMODITIES

VEGETABLE OILS AND OILSEEDS.—In common with grains, linseed has been subject to abnormal influences, and in the space of a week advanced rapidly, by 20s. per ton, to the highest level for some years. Continued great heat and want of moisture have had a serious retarding effect upon late-sown linseed, especially in North America; unless copious rains come soon, it seems problematical whether even the modest estimate of 200,000 tons yield will be realised. It is, however, now clear that American crushers will have to supplement domestic supplies by increased purchases abroad, and actual business in Indian and late Plate linseed is reported on American account. The result was a hardening of prices. Apart from the American factor, the linseed position was already tight. Owing to the smaller crop in Argentina, supplies have all along been on the short side, and Argentina and India have an exportable surplus of only just over half a million tons, as against 732,000 tons actually shipped in the remainder of 1935. Under ordinary conditions this might prove sufficient to cover crushers'

requirements until the new Argentine crop is harvested, but with America likely to import more, the position is changed. At the same time, attractive prices may induce Indian shippers to export more than expected, as has happened before. Linsed oil has advanced rapidly in sympathy with seed to the highest level of the year, and for August delivery, ex Hull, is now quoted £28 per ton (naked).

The situation in North America and the prospect of a shortage of feeding stuffs and fats have caused cottonseed and cotton oil to become considerably firmer, and the highest prices for years have been paid for English-produced cotton oil for export.

POTASH.—Production of potash salts in the United States, according to the U.S. Bureau of Mines, totalled 357,974 short tons in 1935. This represents a pure K₂O content of 193,793 short tons, against only 144,342 short tons in 1934. Consumption in the U.S.A. last year amounted to 930,893

short tons of potash salts (420,000 tons of K₂O), an increase of 37 per cent. in the weight of the salts and of 57 per cent. in the weight of the K₂O content. The chief sources of domestic production were in California and New Mexico.

RUBBER.—The market has displayed a dull tone over the holiday period and prices are easier. The spot price in New York on Wednesday was 16½ cents per lb., compared with 16½ cents per lb. a week ago and 16½ cents a month earlier. Wednesday's official buyers' price for standard ribbed smoked sheet on the spot in London was 7½d. per lb., as against 7½d. on the corresponding day a week ago. In forward positions, business has been done at 7½d. to 7½d. for "October-December" shipment, as against 7½d. to 7½d. a week ago. Stocks in London and Liverpool at the end of last week totalled 113,312 tons, against 114,376 tons a week earlier. A year ago stocks amounted to 173,898 tons.

indefatigably set himself to secure a general agreement between Britain, France, Belgium, Portugal, Sweden, Germany, Italy and Russia to "keep the ring" in Spain, to keep it absolutely and effectively, and not to permit interested intervention in accordance with the political sympathies of other Powers, either through private persons or organisations. In this commendable task, M. Blum has had to withstand a powerful section of the Popular Front in his own country. French Government supporters, seeing repeated supplies of aircraft and goods sent from Italy to Spanish Morocco (another 21 Italian aeroplanes were reported to have arrived there on Sunday), and noting the "delayed action" of Signor Mussolini in translating an acceptance of M. Blum's proposal "in principle" into practice, are for immediate and timely assistance of all kinds to the Spanish Government. The reported departure from London on Thursday of aeroplanes destined for both sides in Spain may encourage the French Popular Front's demands. Last Saturday, pending the receipt of replies from those Powers (Italy, Germany and Portugal) whose attitude gives most cause for anxiety, M. Blum and his colleagues took the further positive step of prohibiting the export from France to Spain of all war materials, from private as well as from public sources, and including, provisionally, even civil aeroplanes. While this French action gives the legitimate Government of Spain much shorter measure than the plenitude of its rights under international law, it may perhaps be argued that, with a civil war raging all over the country, it is to Spain's interest, as well as to that of Europe, that the fire should not be fed by an inflow of munitions which might pass from one hand to another in the chances and changes of a fluctuating struggle—which ever the party to which they had originally been consigned. But the obstinately delayed reply of Signor Mussolini has led the Socialists and Communists in France to face M. Blum with a joint demand for a time-limit to his proposals, after which France might be free to help the Spanish Government.

He may therefore fairly ask that Italy, Germany and Portugal shall give replies which will be as satisfactory as those already received from Belgium, the United Kingdom and Russia. Russia has now agreed to the proposal unconditionally. Of the three Powers in question, both Italy and Germany have admittedly received serious provocation—against which they have quite legitimately lodged strong protests at Madrid—in the killing of several of their nationals. The German Government, in advance of its reply to France, has already (so it is reported) given official assurances in London that no war materials either have been sent or will be sent to the Spanish rebels, to the knowledge of the German Government. On the other hand, Signor Mussolini has parried M. Blum's proposal by making the very counter-move with which, in April, he eluded the League Council's request to him to treat for peace with Abyssinia. He has accepted "in principle," and at the same time attached conditions which are calculated to make any fulfilment impossible. He has stipulated that "non-intervention" must include abstention, not merely from sending war supplies, but from expressions of sympathy. This reply is disingenuous—besides being impertinent on the part of a Government which has already been caught red-handed in the act of supplying the Spanish rebels with military aeroplanes and pilots drawn from its own air force.

Portugal's attitude appears to depend on the situation on her frontiers; in that case the Spanish Government's own suggestion of an international naval and air force to prevent filibustering has much to commend it. In any case, it will be nothing short of an international scandal—and a very costly one, at that, to the British—if the democratic Powers ensure the collapse of the Spanish Government's authority by allowing interested foreign parties to assist the rebels, while the democratic Powers themselves refuse help to either side. Such a stultification of foreign policy, of international right, and of good sense alike, would go a long way to ensure the collapse of more than Spanish democracy. It would go far to render the position of Great Britain—in Europe, in the Mediterranean and in the Empire—strategically untenable. We trust that those still responsible for the direction of British foreign policy have by now learned what British inaction over Continental events—as far away as Abyssinia or as near as Gibraltar—may cost the British people.

MONEY AND RECOVERY

THERE are few more hotly disputed issues than the influence of monetary policy on business activity. Yet there is none which deserves more dispassionate consideration; and it may therefore be hoped that the all-important lessons of the last seven years of depression and recovery will be most carefully studied. Almost every observer of economic affairs probably regards monetary policy, in the widest sense, as more important than he did seven years ago; and this impression will probably be strengthened by perusal of a new and extremely interesting Review published by the League of Nations.* This Review prompts the reflection that, if unanimity is yet far away, our knowledge and comprehension of monetary phenomena are at least advancing.

The most obvious and significant fact which emerges from the Review is that no single major country has overcome the great depression without undertaking a policy of monetary expansion of one kind or another. Of the six major capitalist countries, four, Great Britain, the United States, Germany and Japan, embarked on expansionist policies between 1931 and 1935; and two, France and Holland, did not. The percentage changes in industrial production in these six countries between February, 1933, and February, 1936, are given by the Review as follows:—

	%		%
Germany ...	+ 79.2	U.K. ...	+ 35.2
U.S. ...	+ 49.2	France ...	- 3.9
Japan ...	+ 38.7	Holland ...	- 8.3

Moreover, the only two major countries in which no recovery has yet taken place to-day, Holland and Switzerland, are the only two in which no determined effort at monetary expansion has been made.

It is also true that in every one of the countries which have overcome depression, recovery did not begin, if we discard the hardly discernible "false starts" of early 1931 and late 1932, until expansionist policies had already been undertaken. It is, of course, open to anyone to maintain that recovery would have come without positive expansionist policies if only the countries concerned had waited long enough. In fact, however, it never did; and Holland and Switzerland are waiting still.

When one examines the actual expansionist policies adopted, one finds that they have been markedly different in different cases; or rather they fall, as the League Review shows, into two main types. The first of these is "banking policy," under which head the Review discusses Great Britain, Sweden, South Africa, Australia and Canada; and "deficit financing" under which it discusses the United States, Germany, Japan and Chile. By an expansionist "banking policy," the Review means, in general, increases in the volume of bank deposits and reductions in the rate of interest. Great Britain is rightly taken as the classical case of recovery by banking policy. It is pointed out that the influx of gold after 1931 and the open-market purchases made by the Bank of England in 1932 and 1933 expanded the commercial banks' cash reserves and so forced the banks to buy Government securities and thus to lower the long-term rate of interest. How far the housing boom in this country was stimulated by cheap money and how far by cheap food, is, of course, disputable, but few will deny that cheap money was an indispensable condition. Seen in the retrospect of five years, and in the whole context sketched by this Review, perhaps the most significant feature of British recovery is that it followed an expansionist banking policy entirely unaccompanied by any species of "deficit financing."

In Germany, Japan, the United States and Chile, on the other hand, "deficit financing" was almost certainly the major factor. In Germany credit creation was little more than the servant of re-armament; and in the United States (after the initial "psychological" recovery of 1933), Japan and Chile there is evidence that Government spending was the most positive and persistent factor in increasing demand. In a large number of countries, in fact, where psychological conditions were for one reason or another unfavourable, it has been found necessary for the authorities not merely to expand the stock of money but actually to see that it is spent. This is a significant

* "Money and Banking 1935-36. Volume I. Monetary Review." Economic Intelligence Service. League of Nations. London: George Allen and Unwin.

lesson, some of the implications of which the present League Review seems to ignore. For the Review is much preoccupied with the measurement of the "volume" and "velocity" of circulation of money. But surely the relevant factor is neither "volume" nor even "velocity" (which in any case is a very artificial conception), but what may be called the stream of effective demand, i.e. the total stream of money spent on finished goods. It is really this stream which policy seeks to stimulate or diminish; and the whole discussion would be greatly clarified if it were realised that alterations in gold parities, money volume and interest rates are only effective in so far as they affect total demand. They may succeed in this, as in Great Britain, where the War Loan conversion and other factors led to a growth of "confidence" by stimulating investment in durable goods; but it may prove necessary, as in the United States and elsewhere, for the Government to stimulate demand directly by public works and deficit financing.

Such financing, however, if it is to increase effective demand, must be accomplished by the creation of credit and not by the borrowing of existing savings. This is very clearly brought out by the Review. Why, it asks, did the persistent Budget deficits in the deflationary gold bloc between 1932 and 1935 have no reflationary effect, while similar deficits had a pronounced reflationary effect in Germany, the United States and Japan? The main answer, apart from psychological factors, is of course that in the three latter countries deficits were financed by credit creation, while in the gold bloc they were not. Indeed, the position can be emphasised even more clearly by examination of the history of France since the summer of 1935. In July and August, 1935, the exigencies of armament finance in France made it impossible for the Treasury to carry on any longer without large indirect advances from the Central Bank to the State. At once, despite a very high interest rate and even great business pessimism, production began to increase and prices to rise. Government expenditure without credit expansion, in fact, may be just as ineffective in stimulating effective demand as credit expansion without Government expenditure.

Why, in turn, was it that in the deflationary period the gold bloc's Budget deficits were not financed by new credit? Because, at the existing exchange rates, an increase in the effective stream of money must have increased the disequilibrium between internal and external costs; and it was consequently the deliberate policy of the Governments concerned to reduce costs rather than increase demand. This, if practicable, might have been a successful policy. But it is perhaps the most important single lesson of the Great Depression that not one industrial country has overcome disequilibrium by reducing costs alone, partly owing to the depressing psychological effects of deflationary campaigns. It would have added to the value of the League's Review if it had emphasised the fact that not even the German, Italian and Japanese Governments, with all the apparatus of oppression at their command, were able to achieve recovery by deflation. Since the majority of money costs were in practice irreducible, effective demand had to be increased; and this could only be done in the first instance, where a currency was overvalued, by the alteration of the exchange rate or the imposition of exchange restrictions.

In short, monetary ease and low interest rates have been shown to be the indispensable conditions of recovery in a world where sweeping reductions of costs are in practice impossible. But they are only the conditions. The actual stimulus to spending or investment may come from favourable psychological conditions, such as an access of business confidence or a general belief that prices are going to rise. It may be, however, that the effective stream of money, as opposed to the total stock, has to be directly stimulated by further Government action. This action again may take many forms, such as the execution of public works or the financing of deficits; and the exact form it should take must clearly be determined by circumstances. The most important of these circumstances is the general economic background; for it is evident that if the economic structure has become for any reason badly out of balance, monetary or financial policy alone cannot be relied upon to effect the necessary adjustments. Some-

7, CHANCERY LANE, LONDON

thing, however, will have been learned from the experience of the Great Depression if the hopelessness of merely trying to reduce costs is recognised, and if those responsible for monetary policy take as their primary objective the stimulation of the effective stream of money demand and the level of employment, rather than mere alterations of the quantity of money, gold parities or rates of exchange.

OVERCROWDING

THE Housing Act of 1935, which embodied the Government's measures for remedying overcrowding, laid upon local authorities the duty of surveying the extent of overcrowding in their districts and of reporting the results of their survey to the Minister of Health. This survey has been pushed forward with commendable promptitude and the Report of conditions in England and Wales* was published before the end of July. A preliminary notice of it appeared in the *Economist* of August 1st. The peculiar value of this Report lies in the fact that it gives figures not only for overcrowded dwellings, but for all other working-class dwellings as well. No less than 8,924,523 dwellings were inspected and information on the relation between number of inhabitants and number of rooms is tabulated for all these dwellings. The information is given not only in the aggregate but also separately for each housing authority in the country. The result can truly be described as a Domesday Book of working-class housing.

The figures of overcrowded families given in the Report can only be understood with reference to the standard of overcrowding laid down in the Act. That standard is complicated. There is a basic table showing the "permitted number" of inhabitants for dwellings with varying numbers of rooms. But the table is modified by a requirement for separation of the sexes (assumed to be satisfied in all dwellings of two or more rooms), and by the fact that children of under ten are counted as half a person, and babies under one year old entirely ignored. Finally, there is a second table which reduces the "permitted number" where the rooms are small.† Any dwelling which contains more than the "permitted number" of persons is overcrowded.

It is difficult to obtain an exact idea of the meaning of a complicated definition such as this, and a few examples will assist. They will best serve the purpose of clarification if they are examples of what does not constitute overcrowding. A small family of father, mother and one child under

* Report on the Overcrowding Survey in England and Wales, 1936. H.M. Stationery Office. 157 pages. 8s.

† The Note on page 217 of the *Economist* of August 1st was partly in error on this point. The "permitted number" is reduced where rooms are unduly small, but it is not, as was stated, increased where the rooms are unusually large.

ten can live in two rooms, one of 90 square feet (say 10 feet by 9 feet) and one of 70 square feet (say 10 feet by 7 feet) without being overcrowded. If they have a second child between the ages of one and ten, the second room must also be of 90 square feet. A family of two parents, two adolescent children, two younger children and a baby can live, without being counted as overcrowded, in three rooms, one of 110 square feet and two of 90 square feet each. The same accommodation is considered adequate for two parents and as many as seven children, provided none of them is over ten, and one of them is less than a year old. To take an admittedly extreme case, a single adult with eight children under ten and twin babies less than a year old could inhabit the same three rooms without being overcrowded. Moreover, the dimensions of the rooms should be visualised. Even a room of 110 square feet would be accounted a small room in most middle-class households.

Criticism of this standard can legitimately be countered by the reminder that it is a pioneer attempt, a first step to be followed by others. But even when this is borne in mind, it is clear that any family which falls below this standard must be very badly overcrowded; it is a measure not so much of overcrowding as of severe overcrowding. The standard can also be criticised from another angle. The Survey revealed that 341,554 families are overcrowded on the statutory definition. But it also showed that 283,844 more families are on the verge. These are the families whose number of "persons" is exactly equal to the "permitted number" of the dwelling in which they live. If one child in one of these families were to pass its first or tenth birthday, or if one room were to be a few square feet smaller, that family would be overcrowded. There are no less than 623,429 families who are below the "permitted number" only by half a unit. Wherever the line of definition is drawn, there are bound to be many families who will just escape being overcrowded. But when the line is drawn in such a way that almost as many are on the verge as actually below, it becomes rather absurd. Sociological frontiers, like political frontiers, should be drawn so as to leave whole districts or sections on one side or the other; they should not describe an intricate zig-zag through categories which to the onlooker are homogeneous. It is stated in the Report that if the standard laid down (for another purpose) in the Housing Act of 1930—which may be roughly defined as a bedroom plus living accommodation for every two "persons"—had been adopted, the number of overcrowded families would have been 853,000. This figure may be taken as a truer measure of the problem, and the improvement of the conditions of the 341,000 now defined as overcrowded can only be regarded as a first step.

Overcrowding is not evenly spread over the whole country. On the contrary, there are two large areas and one small area, where it is much worse than elsewhere. These are London (especially the East End), Northumberland and Durham, and Caernarvonshire and Anglesey. These are the only areas where overcrowded families (on the statutory definition) are more than 6 per cent. of all families. In these areas the percentages are: London, 7.0; Northumberland, 11.2; Durham, 12.0; Caernarvonshire, 6.2; Anglesey, 9.5 per cent. In searching for the cause of this geographical concentration, one interesting fact emerges. In the country as a whole, the largest single category of overcrowded families is those of 5½ and 6 "units." But in each of the three worst areas (except Caernarvonshire) the largest single group is families of 3½ and 4 "units." This suggests very strongly that the cause of the peculiar overcrowding in these areas is the smaller average size of dwellings. In London, small dwellings may be due to the mere size of the city and the inability of the population to spread itself more widely. In the other two areas it must presumably be due to local custom in erecting smaller dwellings. This is certainly true of the indigenous "Tyneside flat." These three areas contain 39 per cent. of all the overcrowded families.

Another fact which emerges very clearly from the survey is the extent to which overcrowding is due to the large family. It has already been mentioned that the largest single group of overcrowded families consists of those of 5½ and 6 "units" (i.e. two parents with from four to eight children over one year old). The same fact can be strikingly illustrated in another way. The size of the

average "uncrowded" family is 3.11 "units." The size of the average "overcrowded" family is 5.60 "units." This means that the average overcrowded family has about 2½ times as many children as the average uncrowded family. These figures of average size enable us to compile some impressive aggregates. A total of 341,000 overcrowded families with an average size of 5.60 "units," means 2,413,600 overcrowded "units." If we make the further reasonable assumptions that each family contains, on the average, two adults and children, and that children, on the average count as two-thirds of a "unit," we arrive at the figure of 1,841,400 overcrowded children. A similar calculation for uncrowded families enables us to conclude that 11½ per cent. of the children in the country are overcrowded. This is on the statutory definition of overcrowding. If the standard of the Act of 1930 were adopted the figure of 11½ per cent. would be more than doubled. By any satisfactory test of overcrowding, at least a quarter of the nation's children are deprived of sufficient housing space for their normal development.

The Survey having been made, the Act calls upon the local authorities to estimate how many new houses will be needed to remedy overcrowding, and to draw up plans for providing these houses, unless there is reason to believe that they will be provided by private enterprise. Clearly 341,000 new houses are not required for 341,000 overcrowded families. The Report makes a tentative estimate of 200,000, or of 500,000 if the standard of the Act of 1930 were adopted. (The *Economist*, in estimating the demand for houses in March, 1934, gave a "lower limit" of 200,000 and an "upper limit" of 800,000.) When it is borne in mind that there are still 150,000 houses to be built on slum clearance programmes already adopted, and that only 81,000 Class "C" houses were built in the last six months, it will be seen that the task is sufficient to require the utmost energy on the part of local authorities for some time to come.

It is impossible, however, to read the Report without doubting whether the provision of houses by itself will remedy the situation. Overcrowding does not appear, in the main, to be due to a shortage of houses. That may be true to some extent in London, but in the whole country 46 per cent. of all families have more than double the minimum standard. Moreover, when the new houses have been provided, will the large overcrowded family be able to afford them, or will the prohibition of overcrowding merely compel the large family to increase its expenditure on rent at the expense of food? At present the overcrowded family is not only 80 per cent. larger than the uncrowded family, but it can only afford a dwelling 38 per cent. smaller. The Report shows that overcrowding is perceptibly worse in municipally-owned than in privately-owned houses, a fact which is attributed to the preference given by local authorities to large families. But this means that the provision of standard "Council houses" for overcrowded families would accentuate rather than solve the problem. Oversize houses, on the other hand, would be more expensive. The conclusion would seem to be inescapable that provision of houses alone will not abolish overcrowding unless at the same time either the large family is given a larger income out of which to afford an adequate dwelling, or else it is enabled, by means of differential renting, to get more space for the rent shilling than its less congested neighbours. This is an aspect of the problem which neither the Government nor public opinion has yet resolutely faced.

BRITAIN'S FISHING INDUSTRY

ALTHOUGH the fishing industry falls within the category of depressed trades owing to loss of markets at home and abroad, it is still an important constituent in Britain's national economy. Of all the major foodstuffs consumed in this country fish is the only one in which home production is more than sufficient to satisfy domestic needs. The industry falls mainly into two sections—concerned respectively with "demersal" and "pelagic" fish. Cutting across this classification is the division between inshore and deep-sea fisheries. Inshore fishing, a survival from more

primitive times, is carried on from small boats by fishermen inhabiting the many small villages scattered around the coasts of our islands. Of minor economic importance today, it is often combined with semi-agricultural pursuits. Shellfish are the principal product of the inshore fisheries, whose only advantage over the deep-sea fisheries is the superior freshness of their product.

Pelagic fish—of which the herring is by far the most important representative—are those generally found near the surface of the sea and caught by drift nets. Since herrings only come together in shoals for spawning, drifting is seasonal in character. Spawning, however, occurs at different times in different latitudes. Herring fishing begins off the west coast of Scotland towards the end of May, proceeds clockwise round the coast, and ends off Cornwall about Christmas time. For the remainder of the year practically no herrings are landed by British drifters, though it has been suggested that the period of winter fishing could profitably be extended. Owing to the perishability of their product the drifters are seldom away from port for longer than twenty-four hours. On arrival, the herrings are sold by auction for resale fresh, or for kippering, curing or canning. This branch of the fishing industry now employs some 15,000 men, most of whom are entirely dependent on it. The typical drifter is propelled by steam engine or petrol motor. Few sailing vessels are now used, but much of the tonnage in this branch—especially in Scotland—can be classed as obsolete.

The herring industry has recently been acutely depressed. The decline in its fortunes finds reflection in many ways—in the low price of the product, the poor returns accruing to the fishermen, a decline in numbers employed, and, inevitably, in the existence of obsolete equipment and surplus capacity. Production was expanded during the war, but, as the accompanying table shows, the demand has subsequently suffered a progressive decline:—

* Figures of British takings relate to Great Britain; those of imports and exports to the United Kingdom.

† Trade figures for 1935 are not strictly comparable with those for earlier years.

Although some herrings are imported into this country, a large proportion of the British catch is sold in markets overseas. The drastic contraction of some of these markets—especially Russia and Germany—is mainly responsible for the severe depression in the industry. Owing to poverty on the Continent, tariff barriers, currency difficulties and increasing competition from other exporting countries, the volume of British exports in 1935 was only about 38 per cent. of the 1913 level, the average value per cwt. being only slightly above the pre-war figure. Home demand has also declined. Various reasons have been advanced for the herring's loss of popularity, including unpleasant odour during cooking; its abundance of bones; its unsuitability for the fried fish trade; the seasonal character of supplies and the competition of white fish. Whatever the reason, the estimated consumption of herrings in Great Britain has fallen from about 13 lbs. per head per annum immediately before the war to about 8 lbs. at present.

The severity of depression in the industry caused the Government to take action in 1933 by setting up the Sea-Fish Commission, under the Sea-Fishing Industry Act, to suggest means of reorganisation. The drastic recommendations proposed two years ago by the Commission in its report on the herring industry* were not fully implemented in the Herring Industry Act, passed in the spring of 1935. The Act, however, set up a Herring Industry Board (whose activities have already been discussed in these columns) charged with the task of drafting a comprehensive scheme. This scheme secured the approval of Parliament and came into force on June 1, 1935. The Board may conceivably be able to stimulate home consumption; but it is upon the expansion of exports that the salvation of the industry depends and, here, unilateral action will not suffice. Limitation of imports would be of little use, since imports are not directly competitive with home supplies.

The more important branch of the deep-sea fisheries—judged both by the value of the catch and the numbers employed—is concerned with white or demersal fish, which are generally found near the bottom of the sea. The principal varieties of white fish are cod, haddock, hake, plaice, sole, skate and ray. All may be caught in one of three ways—by trawls, seines or lines. By far the largest part is obtained by trawling—especially steam trawling—which now produces about 90 per cent. of British landings of white fish. The seine is a drag-net with long wings set in a semi-circle, which is hauled by lines at each end from an anchored vessel. Where "lining" is employed, the lines may vary from hand lines with but few hooks to "great" lines with many hundreds. White fish is less perishable than herrings, and steam trawlers may, therefore, leave their home ports for days at a time. The fish are generally sold by public auction to wholesale merchants. Billingsgate, incidentally, now handles almost one-quarter of the total white fish landed in Great Britain.

The impact of depression has been less severe on this branch than on the herring industry. Earnings reached a post-war peak in 1929, but fell sharply in the following three years. A subsequent improvement has restored prices to well above pre-war levels. Imports showed a rising trend after the war, but British landings were roughly stationary until 1926, when considerable expansion followed the discovery of new fishing grounds. In consequence, partly, of a change-over of demand from herrings, white fish consumption gradually expanded until 1931, and increased supplies were absorbed with little effect on prices. The average value per cwt. dropped sharply in the depression years, but the problems of the industry were not complicated, as in the case of herrings, by dependence on contracting foreign markets.

The onset of the slump led the Government to pass measures for the control of white fish supplies. The Sea-Fishing Industry Act of 1933 provided for the regulation of foreign landings, for the restriction of fishing in northern waters, and for the conservation of stocks. In view of the weaknesses in the organisation of the white fish industry and the existence of surplus capacity, the Sea-Fish Commission in its report*, published last March, recommended the appointment of a Development Commission. This body, which would be independent of the industry, would be entrusted with the drawing up of a comprehensive scheme of reorganisation in consultation with existing organisations. No Government action has, however, been taken, and none is apparently contemplated in the near future.

INSIDE SPAIN

We have received the following message, dispatched by our correspondent in Madrid on August 9th, describing the course of the Spanish revolt:

THIS struggle between the two Spains had to come sooner or later. The cost is going to be terrible whatever the outcome; but at least the air will be cleared, and there will not always be the eternal menace of storm on the horizon. The movement had apparently been prepared for August or September, but the murder of Don José Calvo Sotelo, the Conservative leader, who would doubtless have been the figurehead, precipitated events.

The fourth week of the military rebellion has been entered, as this is written. Seen from Madrid, time seems to be on the side of the Government. The splendid way in which the citizens of Madrid rushed to arms was a fine page in the history of democracy. But they had little training or organisation. Each day that passes permits reorganisation and military training of these militias. These forces form the backbone of the Government forces. Not that large sectors of the loyal regiments and the police are not fighting lustily for the Republic. But even among loyal forces there has been treason and sabotage by officers who had been trusted. The civilian militias have little military experience, but the Government can trust leaders and men to the very utmost.

The display of organisation, the use of uniforms and the other typical features of mass movements are much more in evidence on the side of the Government supporters than among the rebels. As far as Madrid is concerned, discipline has been excellent. In the early days, when almost every working man in Madrid had a rifle in hand, the jewellers' shops were open as usual, with their windows full of valuables, without the slightest attempt at theft being registered. Nor during that time did I see a single drunken man, although these armed men could have free drinks in any bar or café. To-day all this is organised. Sentries guard restaurants and cafés and prevent more than the regular number of militiamen supplied with food by each establishment from entering. In smart hotels these working men in blue jeans sit in the dining-room and eat with grave solemnity and excellent manners. They take the food that is given them and the one glass of wine allowed without any comment or protest. One veteran newspaper correspondent, who has covered almost every big story in the last thirty years and who is decidedly Right Wing in sympathies, told me he had never met such a likeable and courteous people.

This does not, of course, exclude violence and cruelty in moments of battle or of passion. An armed mob which will pass a jeweller's shop with indifference may react very violently against a church, because of the close political connection between the clericals and the conservatives.

So far Madrid has never been in serious danger of capture by the rebels. Your correspondent has in the last fortnight motored many hundreds of miles over the mountains which form the fighting line and has never seen any suggestion of a real decisive push. The militiamen and the other loyal forces have always been able to hold the rebels without undue effort or loss, and this although at the beginning at least the rebels had much better material and equipment.

* Sea-Fish Commission for the United Kingdom. Second Report: The White Fish Industry. Cmd. 5130. H.M. Stationery Office. Price, 2s. net.

The Government is itself considerably to blame for the poor Press which it appears to have had abroad, at least during the first two weeks. It does nothing to help or inform the foreign Press, and from the first established a censorship so restrictive and so unreasonable as to make it virtually impossible for responsible correspondents to fulfil their mission.

There appears to be a good deal of doubt abroad about the exact strength of the present Government of Don José Giral. These doubts are not justified. The Government has authority and is running things without having to ask the permission of outside forces. It is only natural that in moments such as these the labour forces should play an enormous rôle. Without them the Government would have been lost in a few hours; for the supporters of the non-Socialist Republican parties are not numerous nor are they well enough organised to have made any stand against the *pronunciamiento*. But with the enemy still on the doorstep all forces are united from Republicans to Anarchists. When the danger passes, it is possible that the unity also will cease; but it is very premature to speculate on this for the moment with the fight still going on.

Take the case of the militias. The great part of these are organised by the Socialists and the Communists. But they are all under the control and the direct orders of the War Ministry. Socialist and Communist leaders are constantly visiting the various fronts and keeping in contact with their men. They report back complaints or suggestions or demands for supplies to the Government authorities. There is thus a constant liaison. The fact that they have organisations all over Spain who report constantly gives the proletarian parties an efficient service of information which likewise is placed at the service of the Government.

What remains to be seen is whether or not the Republicans have been convinced by present events that complete confidence can be placed in the people as a whole. Even after the February elections the Republicans never showed signs of understanding the importance of this. Instead of pushing briskly forward with a substantial programme of practical social and agrarian reform and of dismantling the old form of State, they hesitated and marked time. If they secure victory over the rebels and fail to take a decisive lead in rebuilding the State on very different lines, they will inevitably find themselves shouldered out. But for this they will have no one but themselves to blame.

The Government has already taken over the railways and other industries. It has made it very clear that these measures are temporary. But the situation will never return to that before July 18th, no matter what happens. Much depends on how long the battle goes on. The longer the struggle the greater will be the economic damage. Nevertheless, if one might venture a prophecy in these difficult moments, it is that the economic collapse may not be quite so terrible as might appear on the surface. Spain's economic strength lies in her agriculture, and agricultural nations can stand internal convulsions with a stolidity of which more delicately organised economies are quite incapable. The basic wealth of Spain and her low population give her all the possibilities of a relatively quick convalescence.

It is rather unfortunate that this decisive clash between the two Spains should have taken place at a moment when all Europe is keyed up to great tension on the issue of Fascism. The Spanish rebels are people fighting for ideals; but it is really difficult to see that their ideals have much, if anything, to do with Fascism. Here in Spain we are witnessing a combination of the military, aristocratic and clerical classes fighting to keep the control of the nation which was slipping from their hands but which they had exercised for many centuries. In their day they led Spain to great deeds. But times change and they have failed to move with them. Spain differs from most of her neighbours in Western Europe in that she never really entered the phase of industrial development in the nineteenth century. The middle class with business instincts and responsibilities is of scant strength outside Barcelona and Bilbao. The villages remained medieval until General Primo de Rivera threw the great network of roads across the land and the cinema and radio followed. All these factors abruptly opened the

NOTES OF THE WEEK

An Anglo-Egyptian Treaty.—In Alexandria on Wednesday evening the Draft Treaty of Alliance between Great Britain and Egypt was initiated by the two sets of representatives; and the Egyptian Prime Minister and leader of the Wafd, Nahas Pasha, announced that he gladly accepted the British Government's invitation to go to London with the Egyptian delegation for the signature of the Treaty. Thus ends a long train of interrupted negotiations which began immediately after the last war, when the Wafd demanded the cessation of the British Protectorate declared in December, 1914. The Treaty now regulates the points at issue in 1923, 1927 and 1930: Egypt's right to her own defence forces; the safeguarding of Egypt and of British Imperial communications; and Egyptian participation in the condominium over the Sudan. There is now a clear path before Egypt to apply for membership of the League of Nations; and it may be that before long a fully sovereign Egypt, now responsible for her own defences, will elect to follow Turkish (and not German or Italian) precedent, and invite the Powers who enjoy extraterritorial rights, under the Capitulation Treaties extracted from the Sultan, to consider, in conclave with Egypt, the possibility of their extinction. The new Egypt, with her predominantly Wafdist Government, should soon be able to convince foreign observers of her ability to maintain law and order and to dispense impartial justice for all comers. In any case, the ceremony at Alexandria on Wednesday, in Nahas Pasha's words, "Not only opens between both countries an era of sincere good friendship, but also offers to a world undermined by a grave crisis a salutary example."

Politics and Coal.—The future of an industry on which the livelihood of 750,000 men depends is bound to be a political issue, particularly when a great number of those men believe themselves to be unfairly treated. The Labour Party's conception of the industry's future is set out in a detailed socialisation plan published last week.* In essence the plan is for a public utility corporation, appointed by the Minister of Mines from among persons competent to conduct the industry, and including workers' representatives. Compensation would be payable to existing proprietors on the basis of "the net maintainable revenues of the undertakings concerned," and it might take the form of terminable annuities or redeemable stock. The corporation would then be "responsible for the effective direction and control of the industry on a self-supporting basis, subject to any limitations or Ministerial checks which may be laid down by Statute"; and it would have power to operate hydrogenation and other "coal treatment" plant. Royalties would be publicly owned, and the cost borne by the State; i.e. the industry would to this extent be subsidised. Finally, there would be a single sales organisation for the whole industry; and research and safety would be within the charge of the corporation. The plan illustrates the tendency of the Labour Party and the trade unions to think in terms of public utility boards rather than bureaucratic "nationalisation" plans. It is doubtful, however, whether Parliament will accept so far-reaching a plan as this for some time to come. The movement of public opinion will very largely depend on the attitude of the mine-owners themselves. At present there is a widespread feeling that neither the public nor the miners obtained an altogether fair deal in the negotiations of last winter. As a result of those negotiations, it will be recalled, the miners received an advance in wages averaging 9d. a shift, and the public "voluntarily" accepted a rise of 1s. a ton in the price of most types of coal. The quarterly ascertainment for the first three months of 1936 shows, however, that whereas wages per shift rose on the average from 9s. 2½d. in the first quarter of 1935 to 9s. 11½d. in the first quarter of 1936, profits per ton were more than doubled. The owners, in fact, were better off than before as a result of the transaction. Since then the

* "Coal: The Labour Plan." 31 pages. 3d. The National Council of Labour.

central selling schemes, which should improve their position still further, have been introduced. The public will certainly demand at least some measure of reorganisation in return; and the least of these should be the compulsory amalgamation provisions dropped with the Government's Bill last spring.

A Trading Estate on the Tyne.—The first fruit of the Government's decision to organise "trading estates" in the distressed areas was announced this week. An estate of 700 acres is to be provided in the Team Valley, on the south of the Tyne, about five miles from Newcastle. The estate adjoins the L.N.E.R. main line and the Great North Road; it is situated in attractive country; and it is to be provided with ample supplies of power and other necessary equipment. There is some evidence, particularly in the reports of the Special Area Commissioners, that one reason for the unpopularity of these areas among business men is not so much the underlying economic conditions as the desire of many company directors (and their wives) to live in the West of London. For, as the sponsors of the new estate point out, there is actually a potential market of 16,500,000 persons living within 125 miles of Newcastle, or 500,000 more than those within 100 miles of London. (The argument is plain, though the comparison is a little forced, since extension to 125 miles would bring Birmingham into the London orbit.) So far, however, the Northern market has not been exploited. Instead, depression has bred depression; for, in business as in love, it seems that nothing fails like failure. There is consequently hope that if a movement of new factories into the areas is started it will gradually gather momentum. And fortunately a revival in iron, steel, shipbuilding and coal has already begun on the North-East Coast, which might provide the foundation for the development of local consumers'-goods trades. Although, therefore, the new trading estate is in itself, like the appointment of the Special Area Commissioners and the provision of cheap finance, no more than a tentative move, it is at least one move further in the right direction. The Government should spare no pains, however, to grant preference in re-armament orders to the distressed areas. And if the response of industrialists to the new trading estates is disappointing, the question of licensing new factories may have to be reconsidered.

A New Polish Move?—The German Government has subjected the Polish-German Pact of February, 1934, to many vicissitudes during the last two years. The Pact was concluded by Colonel Beck on the Polish side, with the late Marshal Pilsudski's approval, ostensibly because the French political leaders at that time showed an unmistakable disinclination to support Polish protests and complaints at the re-armament of Germany in contravention of the Treaty of Versailles. Marshal Pilsudski and Colonel Beck thereupon decided it would be better to make peace with Germany while they were in the way with her; and Herr Hitler, intent at that time on re-armament, and fearing embroilments with the Greater Powers, could afford to forgo any forcible alteration of the German-Polish frontiers for ten years. Since then, however, Marshal Pilsudski has died; his military cloak has fallen on the young and Francophile General Rydz-Smigly, who has espoused the cause of the peasants; but Colonel Beck has remained Foreign Minister. Meanwhile, the Nazi Government has proceeded from one unilateral and forcible *fait accompli* to another: the creation of a very large air force; conscription; a Baltic and North Sea navy; and the military reoccupation and refortification of Germany's western frontier. These things could not but alarm Poland; and the latest proof of Nazi "activism" in Danzig, a settlement of which Mr Eden, the League *rapporteur* on Danzig, preferred to leave to Colonel Beck, has convinced Poland that her position in an Eastern Europe for which the Nazis have free hands is

likely to be invidious. Colonel Beck declined to enter into the Eastern Locarno with Russia, the Baltic States and Czechoslovakia, when the Nazi Government refused to consider it; and the consequent failure of the Eastern Locarno negotiations left Germany almost in control of Polish foreign policy. The recent settlement of the Austrian question between Herr Hitler and Signor Mussolini, and the dangerous possibilities in Memel and Czechoslovakia, only served to accentuate Polish discomfort. Now last week-end came a surprise. General Rydz-Smigly has invited the French General Gamelin to Warsaw; and Colonel Beck is interrupting his holiday to return thither. The French Ambassador to Warsaw has returned to the Quai d'Orsay; and General Gamelin has been closeted there with M. Delbos, the Foreign Minister. The semi-official Polish Press has been talking of Poland's "faithful ally" and of the "sacrifices" which France has always known how to make for the civilisation to which Poland and France both belong. It has even been reported that General Gamelin may confer a Marshal's baton on General Rydz-Smigly; which would reconsecrate the Franco-Polish military alliance at the same time as it made General Rydz-Smigly's claims to the reversion of Marshal Pilsudski even more commendable in Polish eyes. What are we about to witness in Warsaw: a radical reorientation of Polish foreign policy? If so, it will mean the eclipse of Colonel Beck—who has always been more than a trifle Franco-phobe—and a reshuffling of the diplomatic and strategical hands in Eastern Europe. We may even see Poland and Russia brought to an understanding by the mediatory offices of France.

The New German Ambassador.—Herr von Hoesch's successor as German Ambassador at the Court of St. James's is to be Herr Hitler's personal Ambassador-at-Large, Herr von Ribbentrop. This appointment may signify that the Führer still holds to his hitherto steadily maintained foreign policy of making friendly relations with this country his first object; and this, despite all temptations to take England at Signor Mussolini's valuation, and to draw the Mussolinian conclusion that the Third Reich would be better advised to look for its chief friend towards Italy. Herr von Ribbentrop headed the German delegation to London which signed the Anglo-German naval agreement on Waterloo Day, 1935. The German policy of which this treaty is an instrument is not necessarily directed against France. We may even conjecture that Herr von Ribbentrop is in agreement with his master in hoping to find, through an Anglo-German understanding, a road towards a Franco-German one. If Franco-German relations did improve to that extent, we could even imagine Herr Hitler—with Herr von Ribbentrop at his elbow—next seeking, in concert with M. Blum, to close the breach between England and Italy. In the less radical, and probably more characteristic, mood of which Herr von Ribbentrop is probably a convinced exponent, Herr Hitler wants peace and not war between the Fascist and the Parliamentary-Democratic pair of Great Powers in Europe. Unluckily, there is another side to the picture. Herr von Ribbentrop—again faithfully reflecting his master—displays an aversion towards Russia which seems to be as implacable as his friendliness towards England is persistent. The "message" (in the American sense) which Herr von Ribbentrop may be expected to go on delivering in this country is that the Third Reich is marked out by destiny to be the saviour of Europe from Communism; and that, if and when the time comes for repelling a mighty wave of Russian aggression, the English (now assured of Germany's good-will) will surely not be so blind and so perverse as to refuse to give Germany a "free hand" for fighting Europe's battle. This "message" may, perhaps, be easy to put over in some rather narrow social circles in this country whose members do not see how very far British interests in Europe extend. But to convert public opinion in a measure that might produce practical results will be a much stiffer job. The new Ambassador has at least four qualifications for undertaking that job. He is energetic; he has the will to succeed; he is a fluent speaker of English; and his knowledge of the British Commonwealth is not confined to Great Britain,

for, as a young man before the war, he went into shirt-sleeves in Canada for the fun of it, and "made good." We may wish Herr von Ribbentrop well, without necessarily agreeing with the whole of what we take his policy to be.

A Japanese Ballon d'Essai.—During the last few days there has been a noticeable change of tone towards this country in some of the organs of the Japanese Press. The rather petulant bursts of anti-British feeling which punctuated Sir Frederick Leith Ross's mission in the Far East have been replaced by suggestions for a revival of the former Anglo-Japanese friendship. Such proposals should be carefully and sympathetically considered in a world of heavily armed Powers, all increasing the burden of their armaments as hard as they can. A genuine Anglo-Japanese *détente* would be a boon to the whole world. At the same time, when A makes a proposal to B, the first point on which A's terms ought to be scrutinised is whether they are arranged at the expense of some third and fourth party. Where A and B are Japan and Great Britain, C and D are China and Russia. We have therefore to look closely into the nature of "the territorial integrity of China," which the Japanese are now offering to respect—in addition to leaving the door open in China for British trade. It turns out that the integrity of China, as the Japanese conceive it, is something which might be called "vestigial." It is the residue left when an official recognition has been given by the British Government to "the sovereign independent State of Manchukuo," and also to Japanese "interests" in Northern China inside the Great Wall. It looks as though the Japanese expect us to give them a free hand in as much of China as they can deal with at the moment—and perhaps a free hand towards Russia as well—in exchange for an uncovenanted Japanese undertaking to respect our British commercial interests in the Yangtse Basin. The Japanese should be given to understand clearly, and without delay, that this is not the kind of bargain British public opinion will be willing to conclude. We recognise that Japan has real international anxieties and grievances; but these lie, not in our refusal to recognise the fruits of her treaty-breaking aggression in Eastern Asia, but in the exclusion of Japanese goods—by quota still more drastically than by tariff—from the markets of the world. For our part, we are confirmed by every fresh development in the arena of international politics in our conviction that the measures taken by His Majesty's present Government in the United Kingdom to turn the non-self-governing parts of the British Empire into a close preserve for United Kingdom goods are as impolitic as they are unjustifiable; and we would gladly seek an agreement with the Japanese on the lines of reopening the Crown Colonies to Japanese trade in return for a real relaxation of the Japanese grip upon China. Unhappily, our own Government seem at present no more in the mood for a bargain on this basis than are the Japanese Government.

War Clouds over Kwangsi.—The military and political situation in the South-West Chinese province of Kwangsi is still obscure—reports of heavy fighting being countered by other reports that the Kwangsi militarists are bargaining with Nanking over the price at which they shall be sent (rather fabulously *de luxe*) on "official missions abroad." However stiff the price, it is likely to cost China less treasure and less blood than a military campaign. But, whether the issue is decided by the crude imported European method of fisticuffs or by the more refined traditional Chinese method of a face-saving bargain, the decision seems likely to have a considerable effect on the destinies of the Far East. What is at stake behind the scenes is whether the southern seaboard of China shall at last be politically reunited with the Yangtse valley under an effective Central Government; or whether Canton shall continue to bicker with Nanking while the Japanese continue to dig themselves in round Peking and Tientsin. The backwoods province of Kwangsi is the military key to the command of the Far South of China; because this is the local nursery of soldiers from which the richer and more progressive sister-province of Kwangtung draws its mercenaries. It

is the combination of Kwangsi brawn and Kwangtung wits that has defeated the efforts of the Central Government to bring the South to heel. If once Kwangsi were effectively under the control of Chiang Kai-shek, then the Kwangtung problem would probably solve itself. In the modern history of China, Kwangsi—remote as it is—has already played a historic part as the home province of the founder of the Taiping: a politico-religious movement which would have swept on in its day from Nanking to Peking if the Manchu Imperial Government had not commissioned General Gordon to stem the tide. To-day, once again, Kwangsi promises—or threatens—to make its fighting powers felt in the Far Eastern area.

Britain and Argentina.—The "Roca" Agreement between Great Britain and Argentina has, after all, had to be formally denounced. On May 7th this year, it became terminable at any time after November 7th on six months' notice. The two Governments agreed, however, to reduce the period of notice eventually to three months; and the notice given by the British Government on Friday, August 7th, consequently takes effect on November 7th. The negotiations, which have so far failed to provide agreement, will be continued in the interval, and the Argentine Foreign Minister will shortly come to London. The chief question at issue is naturally the proposed levy on Argentine beef, and the proposed tightening of the quota. It has been argued in protectionist circles in this country that the Argentine farmer alone will pay the levy, since Argentina has no power to sell her beef elsewhere. But even if this were true, Argentina indubitably has power to decide the conditions under which the British-owned railways and other commercial enterprises operate—and make profits—in Argentina. And while Argentine beef-producers are not popular with nationalistically-minded British farmers and politicians, it must be remembered that British railway shareholders are not very popular either with certain likewise nationalistically-minded Argentine traders and politicians. If the interests of the British consumer, the British exporter, and the British shareholder are to be fairly treated, those of the Argentine trader must also be fairly admitted. We consider it the duty of the British Government to negotiate a new agreement at least as liberal as the expiring "Roca" treaty.

The N.U.R. Accepts.—As we surmised last week, the award of the National Railway Wages Tribunal—which substituted $1\frac{1}{4}$ per cent. for the present $2\frac{1}{2}$ per cent. reduction in railway wages, and increased overtime rates for the "conciliation grades" from time-and-one-eighth to time-and-a-quarter—had a rough passage at last Tuesday's delegate conference of the National Union of Railwaymen. The conference was actually in session for nearly eight hours, and a section of opinion voiced proposals for strike action. Ultimately, however, fifty-three representatives against twenty-six took the view that it would be unwise to bring down the new Tribunal at its first fence. The executive were authorised to accept the terms on the understanding that they would press for the restoration of the remaining $1\frac{1}{4}$ per cent., and variations in the pay for night duty and Sunday work, as soon as the companies' revenue figures for 1936 were available. At a subsequent session it was decided, further, to press for a minimum adult weekly wage of 50s. In other words, the Tribunal has secured the railways a breathing-space, but its open invitation to the men to re-open the question next March has been readily accepted. On Wednesday, the Tribunal's finding was adopted by the Railway Clerks' Association—a more or less foregone conclusion, since the Association had virtually accepted the slightly less favourable terms offered by the railway companies. The Associated Society of Locomotive Engineers and Firemen is apparently persevering with its larger claim for a six-hour day, 14 days' paid holiday each year, etc., which has reached only a preliminary stage of negotiation and, under present conditions, has no hope whatever of succeeding. For the time, however, the drivers may well be content to take the bird-in-hand which their colleagues of the N.U.R. have netted.

Rates will be quoted on application.

Home railway securities have been active on the Stock Exchange this week, but the second thoughts of investors may be less favourable. A significant part of the fruits of contemporary traffic recovery would appear already to be effectively mortgaged for further wages concessions and for increased costs next year, when the companies' long-term coal contracts expire.

The Toll of the Road.—The Minister of Transport is keeping up his campaign for greater safety on the roads. The need for this campaign is undeniable. The figures of accidents on the roads, both by their absolute magnitude and by the comparison they make with other countries, are an indictment of the carelessness of the nation that permits them. Already this year, with only just over seven months elapsed, 3,676 persons have been killed as a result of road accidents, while the number of injuries is 132,681. The number of fatal accidents in Great Britain, as we pointed out in a leading article last week, is more than twice as large, relatively to the number of cars on the road, as in the United States. The safety campaign has been attended hitherto with a considerable measure of success. Total accidents have, it is true, increased (comparing the first 32 weeks of 1936 with the corresponding period of 1935) by 1.8 per cent. But the number of motor vehicles on the roads at the end of May was 7.9 per cent. greater than it had been twelve months previously. The number of accidents per 1,000 cars is therefore declining. Moreover, fatal accidents have been reduced by 1.9 per cent., and accidents of all kinds to pedestrians by an equal proportion. The number of pedestrians killed is 5.4 per cent. lower. But the magnitude of the figures leaves no room for complacency. In a broadcast on Tuesday evening Mr Hore-Belisha pointed out that three counties and seven towns accounted for the greater part of the increase in accidents. Stricter control in these localities can doubtless accomplish much. There is also room for much more stringent application of the legal penalties for dangerous driving. But the fundamental reason for Great Britain's shockingly bad accident record is the state of the roads. To construct a really adequate highway system would undoubtedly cost a lot of money, perhaps as much as a small war. But the annual casualties on the road are now greater than the total casualties of the British Army during the whole Boer War, and to save life is at least as economic an object as to waste it in conquest.

Banning the Horse.—Travellers by bus, tram, taxi or private car have long been familiar with the sight of numerous horse-drawn vans in the central thoroughfares of all our big cities. These slow and cumbrous vehicles may be on the move—generally proceeding in order of line from or to a railway goods depot—or they may be stationary, picking up or delivering goods. Under either condition, they undoubtedly tend to increase the congestion in our principal streets and to minimise the advantages of quick surface travel which the motor vehicle offers. Mr Hore-Belisha, Minister of Transport, has taken a fresh initiative to improve this state of affairs. He announced on Friday of last week that, in the West End of London, most of Regent Street and Bond Street, and all of Haymarket, New Oxford Street and High Holborn would be prohibited to vehicles drawn by horses ("or other

animals") (perhaps Mr Hore-Belisha feared that one day the ox-cart might again be seen in Oxford Street!) or propelled by hand. Only the local authority's vehicles for tending the surface of these streets, and vehicles proceeding to premises situated in them, are exempt. The regulations are to apply between noon and 7 p.m. on weekdays and between noon and 3 p.m. on Saturdays. They are a welcome, if modest, development; but if they show any success they may only do so at the cost of congestion elsewhere. By this slimming process, the adipose tissue of traffic may merely be removed to another place. As we pointed out in the article "Juggernaut" in our issue last week, the congestion in all our city streets grows each year with the rapidly advancing number of motor vehicles. It must needs be seriously and comprehensively tackled in the none too distant future. Possibly a general ban on the poor patient horse may be followed by the prohibition of private cars in the centre of our cities, if the interests of reasonably speedy public transport are to be adequately served.

Wheat Harvests and Markets.—The United States wheat crop this season, at 632,745,000 bushels, is barely more than that required for domestic uses. Moreover, the Secretary of Agriculture is known to favour a "normal reserve" of 100 million bushels; the maize crop, important both for human consumption and fodder, is at its lowest since 1887, at 1,439 million bushels, against 2,500 millions in recent years; other fodder crops are very poor; and a proportion of the U.S. wheat supply will be unfit for milling. Again, the Canadian wheat harvest this season is now estimated at only 197 million bushels, and the Canadian stocks carried over from former years have been reduced from 214 million bushels at this time last year to about 125 millions, of which 20 millions are already in bond in U.S.A. Canada's wheat stocks and harvest together are expected to leave anything up to 200 million bushels available for export in the current 1936-37 crop year. This is, roughly, the amount exported from Canada in 1935-36 to all other markets, so that Canada's wheat surplus, of six years' duration, may be wiped out by next July. But this year the U.S.A. will almost certainly take a good deal, perhaps the bulk, of the Canadian supply available for export. How much the U.S.A. will need depends on the Department of Agriculture's ability to keep up the "normal reserve" of 100 million bushels and on the scarcity of maize and other fodder crops in the U.S.A. Further, the fodder crops have been disappointing in Canada, too, and Canada may have to use all her unmillable wheat, and even more besides, for fodder. Estimates of the end-year Argentine harvest are so far not encouraging; though the Australian harvest may make a satisfactory showing. The Danubian and Russian harvests are likely to prove very poor. On the importing countries' side, crop failure is general, for most of these are European countries. Thus, increased demand will meet with a short supply; and the moot point, from the wheat market's as well as from the bread-consumer's viewpoint, is: How far will reserve stocks available for export ("carry-over") act as a buffer? Consequently, the relative co-incidence, month by month, of the various importing countries' needs with the availability of the various exporting countries' stocks will be the decisive factor in the principal wheat markets; and for that reason the Argentine and Australian harvests may prove crucial. The price of Manitoba wheat, c.i.f. British ports, has fluctuated during the past week about 37s. 6d. per quarter of 480 lbs. and on Monday the Wheat Commission announced a reduction in the levy per sack of flour, on account of the subsidy to registered wheat growers, from 3s. to 2s. The ruling price per sack is now 36s., inclusive of the 2s. levy payment, compared with 38s. 6d. a week ago, when the levy payment stood at 3s. per sack. Yet the price of the quarter loaf is to be raised once more from 8d. to 8½d., compared with 7½d. three weeks ago, as from next Monday. This further rise in the cost of a prime necessity will bear heavily on the unemployed and the low-earning classes.

* * *

Iron and Steel in July.—Activity in the iron and steel industry remained at a high level last month. On July 31st there were 110 furnaces in blast in the United

Kingdom, three having been blown in and five put out of operation during the month. The month's output of pig iron amounted to 661,100 tons, against 644,100 tons in June and 547,300 tons in the same month last year. Production of steel ingots and castings totalled 974,100 tons, compared with 965,900 tons in June and 803,300 tons in July, 1935. The increased output in July, compared with June, was, however, entirely due to the difference in the number of working days. On a daily average basis, the output of pig iron showed a decline of about 1 per cent. and that of steel a reduction of some 8 per cent. compared with June. A seasonal decline is, however, normal in July. Meanwhile, the strength of demand for all classes of iron and steel has led to the curtailment of August holidays in some districts, where works are operating at capacity. The position in pig iron is a little easier, and a slight seasonal reduction in orders has become apparent in the finished steel section. But demand for semi-finished steel is still expanding, and many producers are in arrears with deliveries. The requirements of the home market leave little material available for export.

* * *

Shipping Freight Index.—As measured by our monthly index, the general level of whole cargo shipping freights rose by 2.0 per cent. during July, following a rise of 2.0 per cent. in June. The current figure of 92.4 compares with 83.0 in July, 1935, and 85.3 in July, 1934. Details of the index number are as follows:—

	Average, 1913	July, 1935	May, 1936	June, 1936	July, 1936
European waters	110.0	91.7	88.0	93.3	96.1
North America	113.1	79.5	89.0	89.6	89.8
South America	123.4	82.5	85.2	92.1	87.8
India	106.3	83.4	92.5	91.2	93.4
Far East and Pacific	117.4	73.6	85.6	84.7	90.5
Australia	127.9	87.2	92.6	92.6	94.4
Total	116.3	83.0	88.8	90.6	92.4

There has been little change in shipping conditions. Rates are mainly unaltered, but Hull and Newport report a slightly firmer tendency. Movements of the various sections are as follows:—

	Index No.	Inc. or Dec. Points		Index No.	Inc. or Dec. Points
Home trade	85.5	+ 1.3	South America:—		
Bay—outwards	116.3	+ 6.2	Outwards	66.9	— 9.4
Bay—homewards	122.6	+ 19.4	Homewards	108.7	+ 0.7
Mediterranean:—			India—outwards	77.9	+ 0.7
Outwards	82.5	— 1.0	India—homewards	109.0	+ 4.8
Homewards	96.3	+ 1.8	Far East, etc.	90.5	+ 5.8
North America	89.8	+ 0.2	Australia	94.4	+ 1.8

Expressed as a percentage of the average for 1913, the complete figure of our index number for July is 79.4, compared with 77.8 for June and 71.3 for July, 1935.

* * *

American Cotton Crop.—The first cotton crop estimate for this season published by the United States Government at the end of last week was distinctly bearish, and on Monday the spot quotation in Liverpool was reduced 25 points, equal to ¼d. per lb. The report gave the condition as 72.3 per cent., against 73.6 per cent. a year ago, and the yield per acre 199.7 lb., against 198.3 lb. a year ago and 186.3 lb. for last season's crop. The estimate of the growth of 12,481,000 bales, writes our Manchester correspondent, compared with an output for last season of 10,638,000 bales, and is about 300,000 bales more than expected. Indications point to better yields in all States except Virginia, North and South Carolina and Oklahoma. The officials of the Crop Reporting Board have made allowance as in the past for probable loss due to boll weevil on the basis of reports received. These reports indicate that loss from this source will be less than average. Since the statistics were published there has been some recovery in prices, and quotations in Liverpool are now only a few points below the figures existing at the end of last week. World consumption of American cotton at the present time is about 12,500,000 bales per annum, so that indicated supplies are roughly parallel with world requirements.

UNITED STATES

THE DROUGHT AND THE RISE IN PRICES

In the past two months the recurrence of drought has caused a sensational advance in the wholesale prices of a large number of foodstuffs. In the early part of the year, and indeed from the spring of 1935, there was a general sagging tendency in agricultural prices as the effects of the drought of 1934 receded; and there was a disposition to expect average or even larger crops, on the supposition that after several successive years of deficient rainfall, 1936 would bring normal rain. This expectation was pretty well borne out through May. June, however, was decidedly dry, and in July it became apparent that the drought of 1936 was comparable to the historical drought of 1934, and exceeded the drought of 1930. Apart from these conspicuous years, there are areas in the West that have not "made a crop" for five years, and in instances for seven years.

Rainfall in early August would salvage much of the maize crop and would revive the pastures. But absence of prompt and considerable rains would reduce the already small maize harvest, and, coming too late for pastures, bear heavily upon the livestock and dairy industries. The great maize crop is not sold direct to the urban consumer, but reaches him mostly in the form of maize-fed hogs. Although so far less severe, the drought of 1936 has extended over a wider area than that of 1934, and has already affected more individual farms and a greater variety of farm crops.

So far, the consensus of opinion seems to be that farm income in the aggregate has not been adversely affected. Such a conclusion should be accepted with some reservations. In certain districts the crops have been so ruined that the advance in prices means nothing. In livestock and dairy farming the rise in the costs of animal feeds is borne initially by livestock raisers and dairymen, who recoup from the consumer, provided the increase in prices is not accompanied by too great a curtailment of consumption. Certainly, urban consumer income is more capable of supporting higher food prices than in 1934; nevertheless the consequences of higher food prices cannot yet be stated with any finality. As yet, the rise in agricultural prices has been reflected only slightly in the Bureau of Labour Statistics Index; in fact, the rather wide swings of agricultural prices over the past two years are scarcely traceable. Changes in different prices have been as follows:—

PRICES OF REPRESENTATIVE COMMODITIES (Cents per unit)

	June 1, 1935	June 1, 1936	Aug. 1, 1936
<i>Agricultural</i>			
Wheat	94.75	88.13	117.25
Maize	84.00	60.13	110.00
Oats	38.25	27.88	43.50
Rye	53.88	56.38	86.00
Butter	24.75	27.50	35.25
Eggs	24.75	21.50	25.00
Cattle	10.50	8.00	8.25
Hogs	9.75	9.75	9.95
Cotton	11.55	11.79	12.89
Wool	60.39	76.99	78.28
Hides	9.50	11.00	11.00
Cottonseed Oil	9.80	8.75	10.02
Flaxseed	161.00	169.00	214.25
Lard	13.38	9.90	11.90
<i>Industrial</i>			
Copper	9.00	9.50	9.75
Lead	4.25	4.60	4.60
Zinc	4.30	4.90	4.80
Tin	51.35	44.50	42.75
Rubber	12.18	15.62	16.44
Scrap Steel	12.00	14.00	15.00
<i>Miscellaneous</i>			
Sugar	2.17	2.82	2.75
Cocoa	4.75	5.75	6.30
Coffee	6.88	7.13	8.25
Silk	1.41	1.44	1.67

Not only did the second quarter lack the seasonal recession in business activity, but activity in July was so well maintained as to make it possible that it reached a new high for the recovery. Last week's data showed that the general level of the production index averaged for the first half of 1936 somewhat more than 10 per cent. above the first half of 1935; but even more significant was the relative shift of the economy into the heavier industries exemplified by steel and non-ferrous metals production. As would be expected, this is showing a marked influence on railway freight-car loadings. Whereas during the period of the consumer goods recovery freight-car loadings hardly kept pace with the production index, in the present phase they show a relatively greater increase over last year than the production index. In fact, they are something over 20 per cent. above the corresponding figures of 1935. At the same time, the general reduction of Eastern passenger fares to a flat rate of 2 cents a mile has been accompanied by heavy vacation travel.

A RAILWAY RECOVERY

The result is that railway gross revenues have risen sharply in the last two months, and it is anticipated that the net income for July may show a rather spectacular increase in comparison with July, 1935—perhaps as much as 40 per cent. This sudden rise in railway freight traffic has occasioned talk of a possible car shortage this autumn—not so much because the movement is great as because it has come suddenly after a long period in which worn-out rolling stock has not been replaced.

As would be expected, the increase in corporate profits has far surpassed the increase in production. A tabulation by the National City Bank shows that the combined net profits of 285 industrial corporations for the first half of 1936 amounted to \$554 millions, compared with \$341 millions for the first half of 1935, an increase of 62.6 per cent. Comparison of the second quarters only returned \$311 millions compared with \$179 millions. It is not unlikely that the second half-year will show less conspicuous contrasts, for the last half of 1935 brought a marked upturn in activity and earnings.

It is difficult to avoid the opinion that the remarkable maintenance of activity in June and July reflects the actual cashing of something above \$1,100 millions of the Bonus bonds; but the influence of such a disbursement extends far beyond the initial transactions. Conversely, the period of the drought has coincided with large agricultural benefit payments, both under the old A.A.A. contracts and under the new Soil Conservation Contracts, not to mention the cumulative effects of the W.P.A. undertakings. It has taken a great deal of water to "prime the pump," but there can be no doubt that the pump is now flowing. Caution springs from a restless questioning whether this particular pump is one that requires perpetual priming.

NEW YORK, August 3.

FRANCE

RESTORING PURCHASING POWER

M. SPINASSE, the Minister of National Economy, expounded, in a recent speech delivered at Tulle, the main lines of the French New Deal. The first action of the new Government was to increase the wages of the workers. This was the first response to a social necessity, following many years of deflation, but it was also a technical withdrawal from the economic policies of former Governments. Its object was to increase the purchasing power of the masses in order to create new possibilities of consumption and to stimulate economic recovery. The main preoccupation of the Government would now be, M. Spinasse said, to maintain this increase of purchasing power by safeguarding the new margin existing between wages and prices, and so to put a brake on the rise of prices which the rise of wages

would tend to provoke. If, on the other hand, the new social charges should endanger the position of small businesses, the Minister said, the Government would come to their aid, as it has already done, by lowering the rate of interest, by increasing credit facilities and by alleviating tax burdens in a vast programme of tax reform to be undertaken in the autumn. New efforts would be made at the same time to ease the circulation of capital in the long-term and middle-term markets. Negotiations have already begun with the Caisse des Dépôts and the Crédit Foncier on this subject.

The Minister of Economy thus believes that—as at the beginning of the Roosevelt New Deal—the maintenance of the increased purchasing capacity of the workers, through a maintenance of prices, is more urgent than the restoration of the profit margin to industry and trade. This point of view is rejected by the Opposition and those who have suffered from the social laws. These persist in objecting that French prices are too high—all the more so since the new social legislation. They point out that the Roosevelt experiment was preceded by the devaluation of the dollar, which restored profit margins by adjusting prices to costs.

DEVALUATION PROSPECTS

This explains why the comments of London financial papers on the prospect of French devaluation have provoked the keenest interest in Paris financial circles. The French Government does not deny that the franc is too dear. Moreover, M. Blum, at the American Club, and more recently M. Vincent Auriol before the Chamber, emphasised the necessity of a revival of international business. But the Government maintains that there can be no question of an isolated devaluation, but only an international "alignment" of currencies, and—like the financial press—it regrets that its proposals for international collaboration do not win more accord.

Such already was the attitude of the Government to the problem when it took power in June. It is all the more its attitude now that Parliament has given it new technical means to develop its experiment. The problem of the franc is no more a financial or economic one, but a political one. And politics has reasons which economics does not know. Devaluation is still unpopular in the country, and the Popular Front, under the lead of the Communists, has condemned it. The present leaders of the main Left parties and trade union organisations have a political, if not a personal, interest in persevering with an experiment which was undoubtedly authorised by the country at the elections, but is also supposed to be justified by the "bankruptcy" of capitalism and its policy of *laissez faire*.

The Popular Front may thus be forced to impose an embargo on gold exports. It may have to increase its borrowings from the Bank of France. But, as long as the Government is not upset by a wave of national disillusion, the chances of devaluation must be estimated with great caution. May not such disillusion be precipitated by a rise of prices going beyond the control of the Government? "The effects of a rise in prices would be serious," M. Spinasse said, "if the rise absorbed new resources from a reflux of hoarded funds." The Government has seen the danger. Its desire to obtain the "Wheat Office" vote rapidly thus appears to be dictated by the need to stem the rise of wheat and bread prices, which has already begun and might have serious repercussions on the cost of living.

With the same motive the Government has passed laws against speculation and an excessive rise of prices. The struggle has thus begun between the Government and the rise of prices which its social measures have started.

The Statistique Générale de la France has just published its monthly figures of industrial production in June (1913 = 100). June was the month of the great strikes:—

	June, 1935	April, 1936	May, 1936	June, 1936
General index	93	102	102	98
Engineering	95	101	102	102
Iron and steel.....	80	88	92	80
Textiles	64	68	67	60
Mines	101	103	103	100
Building (adjusted figures) ...	64	71	71	69
Leather (" ")	91	103	107	107
Paper (" ")	132	155	161	164
Rubber (" ")	767	990	985	980
Motors (" ")	421	465	464	425

In the same month, 12,673 motor cars and 1,514 lorries were put on the road, compared with 16,987 and 2,002, respectively, in May. The figures for the cotton industry are as follows:—

	March, 1936	April, 1936	May, 1936	June, 1936
Spinning (average per spindle in kilograms):—				
Production.....	1,768	1,698	1,581	1,348
Deliveries	1,788	1,733	1,638	1,440
Stocks.....	1,788	1,763	1,717	1,652
Unfulfilled orders	5,356	5,639	5,856	5,557
Weaving (average per loom, in pieces of 100 metres):—				
Production.....	5.58	5.16	5.49	5.08
Deliveries	5.62	5.08	5.68	6.05
Stocks.....	7.87	8.14	8.14	7.50
Unfulfilled orders.....	24.97	25.96	26.98	25.32

The figure of bankruptcies in July was 619, against 720 in June, and 793 in May. Bankruptcies and judicial liquidations were 841, against 987 in June, and 1,116 in May.

PARIS, August 13.

GERMANY

PROPAGANDA SUPPORT FOR SPANISH REBELS

THE share market last week had the heaviest setback of the year, and leading industrials dropped by as much as seven points. Although after the six months' advance a reaction was due, the main cause of the heavy selling and of the absence of buyers was the international situation. The public remembered that a dispute over who should rule Spain precipitated the war of 1870, and it regarded the French neutrality initiative as a mere expression of the general distrust. That—at least in so far as Germany is concerned—is the atmosphere surrounding the French move. Germany cannot be neutral, even if she agrees not to intervene materially and keeps her agreement. She has committed herself uncompromisingly to at least moral and propaganda support of the Spanish military revolt, and she conducts her anti-Madrid campaign with the partiality and violence of a country that is itself at war. The public is given little news except of atrocities committed by the forces of the Spanish Government. The official agency even circulates stories of specific outrages which have not yet been, but, it is predicted, are about to be, committed.

This agitation is necessarily also anti-French and anti-Russian. The public is kept copiously informed of financial and military help alleged to be reaching Madrid from Paris and Moscow, and has hardly any notion that the opposite camp is bringing identical charges against Rome and Berlin. The French non-intervention plan is therefore presented as a sham; and not only Russia but also some other supposedly anti-German Governments are shown as determined on intervention against the revolt even if they pledge themselves to neutrality. In such an atmosphere it may be feared that an agreement not to intervene will at best avail little, and at worst will supplement the present mutual charges of violating neutrality with new mutual charges of violating express undertakings. This prospect is all the less pleasant because, although the public here is given a rosy picture of the successes of the revolt, impartial authorities do not expect a speedy military decision; and many doubt the theory that a defeat of the Madrid Government would ensure the permanent establishment of an orderly Fascist or military Government. The prevailing view is that the Spanish problem, and the international problems arising thereout, have come to stay.

The cost-of-living index for July was 125.3, against 124.5 for June. In Berlin the Olympic Games have sent up the retail prices of certain kinds of goods; and the system of administrative fining for excessive retail charges has again been adopted. The harvest reports are much less satisfactory than the earlier "crop condition" returns, which were extremely good. Bad weather in July, aggravated by the shortage of agricultural labour, resulted in declines of the estimated yield, except in the case of winter barley and oats, which increased slightly. The new estimate of

the total yield of cereals is 570,000 tons, or 2.4 per cent. lower than the estimate of July 1st.

The three official measures taken for increasing the supply of voluntary or compulsory labour to farmers have not entirely succeeded. The Nazi Party has begun a justifiable agitation against the unsatisfactory living conditions of wage-earners on the land; and there is a discussion about the compulsory allocation of workers to particular districts. A local shortage of labour prevails in some heavy and finishing industries.

The total of unemployment declined in July by 144,000 to 1,170,000, as against 1,754,000 in July, 1935. The greatest improvement was in districts where the absolute number of unemployed is still high. The view is officially expressed that the present total of unemployed hardly exceeds the normal labour reserve, and it is lower than the 1929 figure. Only 141,000 unemployed now draw insurance pay. Some 522,000 receive non-insurance "crisis" allowances at Reich and municipal cost, and 184,000 municipal charity relief, which is a repayable debt.

INCREASED RETAIL TURNOVER

Retail trade turnover in the first half-year was 10 per cent. higher than in 1934, and 27 per cent. higher than in 1933. The improvement has been irregular. The increases in sales of furniture and motor cars, both favoured by Reich subsidy or tax measures, are very great; while the increase in products of family consumption barely corresponds to the price rise. The turnover of the department stores is still some 7 per cent. below that of the worst depression period, but it is slowly recovering. Electricity consumption in the first half-year was 13 per cent. above that of 1935. The numbers of sanctioned house-building plans and of completed dwellings in the first half-year were respectively 44 and 67 per cent. higher than in 1935. The Finance Ministry has raised its limit for Reich guarantees for the construction of small dwellings from Rm. 250 millions to Rm. 400 millions. According to the Railway Corporation's report for the first half-year, receipts as compared with 1935 rose 10 per cent., but operating expenditure only 2.9 per cent. Formally, the corporation is again paying its way.

The steel market is still active, and the latest Syndicate report states that satisfactory working is ensured for the next few months. Imports of iron, steel and rolling-mill materials since March have been rising, but exports in the last months have been irregular at below the highest recent figure. The net export has therefore fallen. The foundation of the international thin sheets syndicate has made necessary the creation of a German export organisation. The existing *Deutscher Feinblechverband* regulates only home sales. So far twenty firms have joined the new export syndicate, but there are still outsiders whose exports, if any, would, according to the International Cartel agreement, count as part of the German quota.

Exports of machinery are increasing. The total for the first half-year was 157,275 tons, which averages 26,200 tons monthly, as against 21,000 tons in 1935 and 1934.

The new German-Lithuanian commercial agreement has caused satisfaction, and it may improve political relations. An increase in exports of German manufactured goods, which fell to one-third in consequence of the dispute, is guaranteed. In principle this agreement follows the agreement with Poland; for Germany will take as much Lithuanian goods as Lithuania takes German goods.

Money rates last week declined; but in consequence of tax payments there was an increased demand early this week. The Gold Discount Bank's return for July 31st reflects the heavy money market pressure caused by the Reich Loan flotation. The Reichsbank's return for the first week of August shows repayments in the first week of August of 41 per cent. of July month-end credits, which is relatively satisfactory, though slightly smaller than a year ago. As compared with a year ago, however, the Reichsbank's return is heavily swollen. Discounts are Rm. 4,519 millions against Rm. 3,640 millions; "circulation" Rm. 4,301 millions against Rm. 3,740 millions; and total circulation of all currency Rm. 6,251 millions against Rm. 5,763 millions.

BERLIN, August 11.

GIVE HER AN INCOME FOR LIFE

The Widow's Pension Policy provides an income in the event of your death before or after retirement age. If you provide your widow with an Income by means of this policy you can say with certainty that the financial future of your family is secure. To provide an adequate income by means of the interest on a capital sum would require a greater amount than the average man can accumulate, but by means of the Widow's Pension Policy you can assure quite a substantial Income for a moderate outlay. If at 60 or 65 you feel the protection is no longer required you are assured of the return of the greater part of your premiums. Here is a simple means whereby you can make sure that your widow will never want. Obtain a detailed illustration showing benefits and cost applicable to your own case by quoting your age next birthday to the

LEGAL & GENERAL ASSURANCE SOCIETY LTD.

SANCTIONS AND PLANNING

THE end of sanctions has not meant any departure from the centralised economic planning which, if not created, was emphasised by the Abyssinian war. No change has been made, for instance, in the wool, cocoons and wheat monopolies held by Public State Agencies. The price of wheat was fixed on a basis of 1,080 lire per ton, which in an average year is a remunerative price for farmers. It appears that the present year's yield is under the average, owing to bad spring and summer weather. Since public elevators are as yet insufficient, wheat is left with the farmers, who receive a premium of 10 lire per ton for each month that well-conditioned wheat remains deposited in their granaries. The only relevant change in price policy is the reduction in the retail price of petrol, following a corresponding reduction of the sales taxes on all mineral oil products.

The newspapers are inviting motor-car owners to utilise the reduction, so that the State revenue may profit by it and the Treasury be encouraged to further reductions.

The most significant aftermath of the Abyssinian war is in social legislation. A clear trend towards a compulsory raising of the workers' standard of living is noticeable. When in October, 1934, during the drive against unemployment, weekly hours of labour were reduced from 48 to 40, a special allowance was granted to those with a large family, in order to indemnify workers whose total weekly wages were thus reduced. A fund was constituted which draws its main revenue from a contribution by men (and their employers) who continue to work for more than 40 hours weekly. By a recent decree, the family allowance is extended to all industrial workers, whatever their hours of labour; 4 lire weekly is the allowance for each child of less than 14 years of age. In 1935 allowances up to a total of 164 million lire were distributed. Now the amount is

estimated at 344 millions yearly, of which 215 will be paid by employers, 86 by men and 43 by the Exchequer.

More important are the new collective labour agreements, which are being made public. On July 24th the building employers' and employees' Federations agreed upon an increase of 10 per cent. on the present general level of wages. The new agreement also modified many other points in the labour code; for instance, bonuses on dismissal, paid holidays, piece-work, premiums, etc. The agreement was stated by the press to cover 26,000 employers and more than 800,000 men; it relates not only to the building industry proper, but also to public works and similar occupations. On July 31st a similar agreement was reached between employers and employees in the iron, steel and engineering industries. A rise in wages of 10 per cent. was also accepted, with several other changes. Agreements in other industries are under consideration.

THE END OF DEFLATION

What is most significant is the spirit of those wages increases. The first official announcement (by the Federations) of the building agreement stated that the increase was granted so as to make current wages better related to the power to purchase normal necessities of life; and the *Turin Stampa*, in its comments, observed that the "corporative" system had thus taken account of the change in the cost of living. This appeared to mark the starting-point of a general increase in wages and salaries, even of public employees, and a revision of the deflationary policy begun in 1930 and accentuated in 1934 by reductions of wages and salaries. Rumours, however, have been widely current, if not of a thorough reversal of policy, at least of a generalisation of the 10 per cent. increase in wages and salaries. These rumours, however, have been explicitly denied by Signor Cianetti, President of the industrial employees' confederation, in a speech in Genoa on July 30th. The "anti-inflationist policy" of the regime should not be reversed, he said. The workers were not aiming at inflation; they were convinced that a "fixed monetary standard" was the best guarantee of their standard of living. Therefore they did not ask for a hasty general increase in wages. They asked only for a participation in the improvement of industrial conditions.

According to the speech of the most representative figure among the workers, the industrial workers are anxious that their demands for an improvement in conditions should not be deemed a precedent for corresponding changes in other fields: i.e. rises in rents, interest rates, and price levels. Their aim is to share industrial profits equitably with the employers. This is, from their point of view, good policy. Certain questions, however, emerge. Is there a sufficient margin of profits for carrying out the wage-raising policy? If not, will not prices be bound to rise? Already, many wine growers, who were unable to sell wine at remunerative prices because of bad markets in industrial districts, hope that wine prices will rise in consequence of the increase in the purchasing power of the working classes, their best customers. How will it be possible to discriminate between workers in firms making profits and firms making losses? Such discrimination in the same category is surely contrary to the policy of the employees' unions; and it is difficult to imagine how it could fit into a "corporative" system. If, then, the aim of the current changes is to adjust money wages to the cost of living, how will it be possible not to extend the changes to all workers?

TURIN, August 4.

HOLLAND

UNEMPLOYMENT STILL INCREASING

OPINIONS have lately been rather divergent about the state of trade and industry in the Netherlands. The *Economisch Statistisch Maandbericht* concludes from a minute examination of the available data that the downward trend is being arrested. If imports of raw materials are taken as a guide, industrial activity has been slowly increasing for about a year. Although this may partly be due to the formation of

stocks, prompted by expectations of devaluation, the enhanced prices of raw materials, political tension, and so on, the fairly consistent nature of the increase is nevertheless satisfactory.

Unemployment, however, is still increasing. In the middle of June, 1936, the number of registered unemployed was 388,000, compared with 350,000 in July, 1935, and 292,000 in July, 1934. Exports during the first half of 1936 did not increase, but the constant decline shown ever since 1930 has come to a standstill. According to the trade returns of the Central Statistical Bureau, imports and exports in recent years, quarter by quarter, have been as follows:—

	Imports				Exports			
	(In million guilders)							
	1933	1934	1935	1936	1933	1934	1935	1936
1st quarter ...	279	276	226	233	178	168	160	156
2nd quarter ...	283	261	229	233	178	171	159	163
3rd quarter ...	321	251	228	...	192	196	174	...
4th quarter ...	326	250	253	...	178	177	182	...

	(In thousand tons)									
	...	1933	1934	1935	1936	...	1933	1934	1935	1936
1st quarter ...	...	5,536	4,652	4,522	...	...	3,212	2,948	3,145	...
2nd quarter ...	...	5,652	5,068	4,832	...	...	3,369	3,023	3,084	...
3rd quarter ...	...	5,995	5,401	...	...	...	3,532	3,118	...	...
4th quarter ...	...	5,554	5,316	...	...	...	3,211	3,360	...	...

The import surplus rose from 136 million guilders in the first half of 1935 to 148 million guilders in the first half of 1936.

The improvement in exports is mostly attributable to increases in exports of foodstuffs, principally to Great Britain, to which larger quantities of butter, condensed milk, strawberry pulp, potatoes and fresh vegetables were exported. Imports into Holland from Great Britain increased from 698,000 tons in the first half of 1935 to 708,000 tons in the first half of 1936, and the value increased from 43 million guilders to 44 million guilders. Exports to Great Britain were, however, larger in the first half of this year, with 598,000 tons, valued at 70 million guilders, compared with 513,000 tons, valued at 64 million guilders. More cocoa beans, cattle food, coal, saltpetre and fertilisers were imported from Great Britain.

EFFECTS OF THE RISE IN PRICES

The advance in prices which, especially in the last month, has affected various raw materials including grain, is being welcomed in some quarters in Holland as being the means of enabling the "readjustment" of Dutch costs to world prices to be accomplished from abroad instead of being forced on Holland's internal economy. It is argued that the enhanced prices should result in a steep advance in the cost of living in foreign countries, involving higher wages there, whereas in Holland itself the simple abolition of the prevailing emergency regulations and levies would prevent the cost of living from going up, so that wages would remain unchanged here.

The *Economisch Statistisch Maandbericht* makes the following comment:—

The present trend of advancing prices for raw materials does not alleviate the export problem much as long as the prices of manufactured articles do not participate in the rise, because, in view of the small margin between the cost of production and the selling price and the already intense rationalisation, additional expenditure on raw materials has wholly, or in part, to be absorbed by wage reductions. On the other hand, the improved circumstances in the countries supplying the raw materials, due to the rise in prices, should enable them to import on a larger scale, and this may prove of some benefit to our exporting trades.

The improvement on the Amsterdam Stock Exchange at the beginning of July, comprising an advance in State and municipal loans as well as in mortgage bonds, has lately weakened. The insistent pressure on the French franc has a discouraging influence on the Amsterdam exchange and capital markets. This is unfortunate, because numerous Dutch municipalities are being faced with the necessity of shortly marketing a conversion loan.

AMSTERDAM, August 7.

SWEDEN

A GENERAL ELECTION IN SEPTEMBER

THE election of 230 M.P.s to the Second Chamber of the Riksdag for a new four-years' period will take place on September 20th. The now dissolved Chamber was composed of 102 Social-Democrats, 56 Conservatives, 37 Farmers Unionists, 25 Liberals (People's Party), 8 Left Socialists (in fact, Right-wing Communists) and 2 Communists. Political interest at the moment is absorbed by the question whether there will be an absolute Socialist majority in the Riksdag. Should the election result in a Socialist majority this might affect events not only in this country but also in the other Scandinavian States. A Socialist Government, supported by a Socialist majority, would probably follow a far less moderate course than the late Socialist Cabinet did. The main points on which the Conservatives and Liberals are attacking the Socialists are the proposals to nationalise industries and banks and the alleged failure of the late Cabinet to settle the question of national defence.

Meanwhile economic expansion in Sweden continues, despite political uncertainty at home and abroad. The Swedish boom is only very slightly dependent on the armament industry, and certainly not on Swedish armaments. The main impetus comes from the briskness of building activity and increased foreign demand for certain staple exports, particularly for pulp. For the first half-year 1936 the total value of Swedish imports was Kr. 755.6 millions, compared with Kr. 675.6 millions in the previous year; and exports were Kr. 657.6 millions, compared with Kr. 571.2 millions. There was an increase in the value of imports from Great Britain from Kr. 110.9 millions in January-May, 1935, to Kr. 116.4 millions in January-May, 1936. Exports to Great Britain increased from Kr. 112.2 millions to Kr. 126.5 millions.

UNEMPLOYMENT STILL FALLING

The number of unemployed fell in June from 35,000 to 25,500 compared with 51,000 in June, 1935. Building activity is still requiring more hands, and the earlier reported demand for agricultural workers has not diminished.

The banking situation in June revealed an unseasonal contraction of the surplus of advances over deposits, due to a reduction in the volume of home bills. This has naturally caused greater monetary ease and considerable increases in the joint-stock banks' cash holdings. The Bank of Sweden's gold purchases continued in June, and the Bank and the joint-stock banks' total holdings in foreign currencies, foreign securities and gold rose to Kr. 1,593 millions at the turn of the half-year.

The Stock Exchange was extremely firm during the first part of July, and the share index rose from 152 to 162. During the latter part of July selling orders from abroad and an "over-bought" market caused a reaction, and the share index fell to 159.

STOCKHOLM, August 10.

HUNGARY

A BALANCED BUDGET IN SIGHT

THE Budget deficit for the financial year ended June, 1936, amounted to 18 million pengő, as against a cash deficit of 42.6 million pengő in 1934-35. Budget receipts have yielded 7.3 per cent. more than the estimates, and there is every reason to believe that the upward trend of the State's revenues will continue in the present financial year. Thus budgetary equilibrium is within sight once more after a period of seven years of uninterrupted deficits. The 1935-36 results compare as follows with those for the four previous years:—

	Expenditure	Revenue	Deficit
	(In millions of pengő)		
1931-32	922.3	798.1	124.2
1932-33	803.7	715.8	87.9
1933-34	803.4	765.2	38.2
1934-35	812.3	769.7	42.6
1935-36	829.7	811.7	18.0

The above figures include the losses of the State enterprises, which are almost solely responsible for the deficits in the last three years. The estimates for the current budgetary year forecast a deficit of 75.6 million pengő. But receipts are estimated on a very conservative basis at 771.6 million, and on the expenditure side full service of the State debts is provided for. As actual disbursements for the debt service were 56 million pengő in the financial year just ended, as against 86.8 million provided for in the estimates, the current Budget possesses large reserves on both sides. It is significant that for the first time since 1930 there has been no actual borrowing of cash on the internal market, as distinct from the Foreign Credits Cash Office and apart from advances from the National Bank under the Agricultural Debt Relief Scheme as arranged in October, 1933. The fact that the market has not had to provide cash to cover the deficits on the public enterprises this year has somewhat eased the rigidity from which the financial mechanism of the country has long been suffering.

The appreciable improvement over last year is due to the increased receipts from indirect taxes and better results on the State enterprises, especially on the State railways. The deficit on the railways was reduced from 58.3 million to 41.5 million pengő, and the Post Office produced a surplus of 13.9 million pengő. The State iron works, though their volume of business has considerably increased, disclosed about the same deficit of 11 million pengő, as in the previous years. A very important public burden which is not included in the ordinary Budget is the Agricultural Relief Fund, which is fed out of taxation, and this year adds 51 million pengő (as against 49.5 million pengő) to the total loan bill.

GOOD CROPS AND REVIVING TRADE

Official estimates forecast a wheat crop of 24 million quintals, and almost 8 million quintals of rye. Agreements have been concluded with Italy, Austria, Switzerland, Holland and Belgium for the placing of this year's exportable surplus of wheat, which may amount to some 8 million quintals or more. It is almost certain that Hungary will not be compelled to import more maize this year as the crops promise to be good.

The present revival in business is continuing. Internal consumption and production in the heavy industries are steadily advancing, and industrial employment is rising in all branches. Foreign trade figures for the first six months were as follows:—

	January-June	
	1935	1936
	(In million pengő)	
Imports	173.3	219.6
Exports	192.4	216.1

Imports in volume for the six months to June 30th last reached the highest figure recorded for any first half-year since 1931. The volume of exports are slightly less than they were for the same period in 1935, and are only a trifle above the lowest recorded in January-June, 1933. Trade with Austria continues to decline, and there has been a further big increase in trade with Germany.

BUDAPEST, August 2.

JAPAN

FAR-REACHING SOCIAL REFORM PROPOSALS

EARLY in July various Cabinet Councils were held to formulate a programme of "national reform," which is the avowed object of the present Government formed after the February insurrection. The most conspicuous among the plans are taxation reform, the nationalisation of the electric power industry, the development of fuel resources and other measures for ensuring raw material supplies, the extension of the school-leaving age, and the establishment of a Ministry of Health. The taxation proposal is apparently of the "soak-the-rich" character; although the details are still unknown, it is certain that income tax on higher incomes will be raised by 30 to 50 per cent.; death duties on big estates will be more than doubled; and a new 1 per cent. property tax will be imposed. The plan for the

nationalisation of the electric power industry aims at the complete socialisation of the wholesale transmission of electric current, leaving the retail supply to private companies.

Japan's foreign trade continues to display a much greater buoyancy on the import than on the export side. In each of the six months of this year imports have been substantially larger than in the corresponding month of last year, whereas exports have been not much larger. Comparisons of the value figures for June and for the first six months of this year and last are set out below:—

(000's omitted)				
MONTH OF JUNE				
	1935	1936	Increase in 1936	
	Yen	Yen	Yen	%
Imports	195,060	229,213	34,153	17.5
Exports	191,485	208,491	17,006	8.9
Total	386,545	437,704	51,159	13.2
Import surplus	3,575	20,722	17,147	479.6

FIRST SIX MONTHS				
	1935	1936	Increase in 1936	
	Yen	Yen	Yen	%
Imports	1,344,239	1,489,731	145,492	10.8
Exports	1,173,429	1,218,000	44,571	3.8
Total	2,517,668	2,707,731	190,063	7.5
Import surplus	170,810	271,731	100,921	59.1

The growth in imports is mainly accounted for by raw materials; textile materials alone represented more than two-thirds of the total increase. In particular, larger shipments of raw wool and waste from Australia reflect the effects of forestalling in anticipation of the trade war with that country. On the export side, a marked contraction has occurred in cotton piece-goods and raw silk, while lesser exports such as refined sugar, fish oils, vegetable oils, rayon yarn, woollen and worsted tissues, iron and steel, and machinery and parts show notable increases.

There is some improvement in other home trade statistics for last month. The Bank of Japan's wholesale index number for June registered an advance of 0.6 per cent. on the month to 193.6, the highest of the year. The price index for the month of June of all shares listed on the Tokyo Stock Exchange moved up by 3.1 points to 130.9, as against 127.8 a month earlier. Output of cotton yarn during June totalled 123,409,000 lbs. over May; and rayon yarn production during last month amounted to 21,867,000 lbs., or 122,000 lbs. larger than in the preceding month.

POOR CROP YIELDS

The Department of Agriculture and Forestry's forecasts of the wheat and allied grain crops for the country, excluding Hokkaido, placed the year's wheat crop at 8,803,000 koku, a decrease of 6.5 per cent. upon the actual yield of last year. The estimates for the barley and rye crops, at 6,285,000 koku and 5,817,000 koku respectively, also decreased by 13.4 per cent. and 10.5 per cent.

The growth of Japanese population last year surpassed the peak figure of 1,007,868 in 1932, after falling far short of the one million mark in the two intervening years. According to the recently published report of the Bureau of Statistics, the natural increase in 1935 was 1,028,623, or 14.85 per 1,000 of the population. The number of births and deaths were 2,190,681, or 31.63 per 1,000, and 1,162,058, or 16.78 per 1,000, respectively. In 1934 the natural increase was 809,224, or 11.87 per 1,000, the birth-rate and death-rate being 29.97 and 18.10. The increase in 1935 is thus accounted for by a higher birth-rate and a lower death-rate.

TOKYO, July 11.

NEW ZEALAND

LABOUR'S "NEW DEAL"

[The New Zealand Budget was discussed on page 264 of our last week's issue.]

THE first course in the feast of legislation promised by the new Labour Government has proved somewhat strong meat. The country is now wondering how it is to be digested and what will next appear on the board. The first legislation was for factories, shops and offices. It was to come into effect on July 1st. This set maximum hours at 40 per week and fixed minimum wages for juveniles. It is anticipated that these rates will improve conditions for

some, but will throw others out of employment, despite the provision that any employer discharging employees on account of the legislation may be penalised, and despite the Government's threat to enforce this provision. The Arbitration Court is very busy, and is likely to remain so for some time to come. It has mainly been occupied with hours of work, and in two important cases affecting the footwear and the timber industries, which are accepted as precedents for future decisions, it has declared a forty-hour week.

The Prime Minister has announced that all public service wages and salaries will be restored to 1931 levels from July 1st, and has appealed to private employers to make similar restorations. Higher wages and shorter hours appear likely to increase costs considerably. Manufacturers estimate the increases will be from 10 to 20 per cent.; and prices are tending to rise. Factories competing with imports are appealing for higher tariff protection; retailers are asking for some regulation of competition from chain stores; and the Government are threatening to control prices.

THE INCREASE IN EXPORTS

Exports for the year ending in April were about £NZ52 millions, compared with £NZ43½ millions the year before. The increase in export proceeds has stimulated public expenditure; and business activity has increased. If the increase in expenditure, which must be augmented by the Government's public works programme, is greater than the increase in costs and internal prices, the expansion of business and the absorption of the unemployed should continue.

The Government have also taken powers to do a great many things; but it is not yet clear how these powers will be used. They have brought the Reserve Bank, railways, transport, export marketing, State advances, etc., under direct political control; have resumed railway and public works previously abandoned; and have promised more liberal State advances and a more effective transport policy.

The Reserve Bank's report for 1935-36 has been published, and discusses at length the possibilities of developing a discount market in the Dominion. The discount rate has been reduced to 2½ per cent., but no discount business has yet been recorded, nor has the Bank made any advances. Its reserve ratio (gold plus exchange to notes plus sight liabilities) has never been below 96 per cent.; while at the end of March the trading banks held cash in New Zealand and funds in London amounting to 86 per cent. of their sight liabilities, or 40 per cent. of their sight and time liabilities combined. At the end of April net funds held abroad by the Reserve Bank and the trading banks on New Zealand account totalled £NZ45½ millions, or £NZ1,000,000 less than the figure a year before.

CHRISTCHURCH, July 20.

LETTER TO THE EDITOR

THE "BLACK-COATED" UNEMPLOYMENT

TO THE EDITOR OF THE ECONOMIST

SIR,—The Government's new Unemployment Assistance Regulations have been accepted, but the Unemployment Statutory Committee's strong recommendation that State insurance should be extended to "black-coated" workers whose incomes do not exceed £400 a year has not been considered. It is estimated that about 400,000 people would have benefited had Parliament accepted the recommendation.

To thousands of middle-class workers the proposed reform would have meant a sense of emancipation from the terrors of complete penury, for this tragedy of the post-war world has crashed into the comfort of the middle-class home. The sense of security has gone, and in its place are doubts, anxieties and awakened apprehension of pending crisis. In recent years scarcely any section of the community has been harder hit by unemployment than the black-coated workers. Their sufferings seldom come to light, except through the coroner's court, when help is too late. So accustomed, however, is the public to the everyday horrors of unemployment that these "minor" tragedies attract little notice in the newspapers. In any case, professional folk, in the hour of adversity, have been overlooked in every Government measure of relief. Yet they have been terribly hit by amalgamations, "rationalisation," and victims sink in an unavailing struggle against conditions for which they have not the slightest responsibility.

After paying income and other taxes for years, besides contributing the larger part of their employees' insurance premiums, the professional and employing classes have no call upon any State-aided "dole," but are faced with utter destitution should

they perchance fall on evil days. Is this equitable in view of the benefits provided for their employees, who for smaller premiums are protected and sheltered by the State against precisely the same vicissitudes to which they also are exposed? Again, the appeals which appear in the newspapers for folk in distress are almost without exception made on behalf of those who have never ascended very far on the social ladder. Philanthropists seldom champion the cause of those who have fallen from a higher sphere. The adage that poverty and hunger have many learned disciples seems to be unknown to those who organise our charities. A man or woman earning £400 a year is just as liable to become unemployed as one earning £200.

Let me briefly outline my own position, which is probably typical of many others. For years I have paid income and other taxes, besides premiums for employees under the Insurance Acts, but I am entitled to no consideration for my payments. Five years ago I had the misfortune to suffer heavy losses through the fraudulent failure of a stockbroker, which deprived me of all my resources. To-day I am penniless, and at times during the past few weeks we have been actually without food. Owing to arrears of rent (a comparatively small sum), ejection and distraint upon what remains of a once comfortable home are only a matter of days. In addition, my wife is desperately ill, and I am quite unable to procure for her, not only the medical attention she needs, but even the common necessities of life. For the past two years she has been attending one of the large special hospitals, but is now too frail to make the journey. The foregoing are just facts.

I have no wish to harrow the feelings of my readers, but the physical sensations of hunger cannot readily be imagined by those who have never known what it is to be more than sharp set.

One must have starved, if only for a day or two, to realise what the sensations of hunger are. And starvation not only saps a man's physical strength; it also makes an equal attack on his morals. Conscience too frequently fights a losing battle against stomach. It is easy to be honest when one is only a little hungry; but a few days of starvation play strange tricks with the moral sense. Doubtful subterfuges, which would be anathema to the well-fed man, seem not to be to the half-starved. One must get money, which means food and shelter, especially if loved ones are ill and suffering at home. Here is a psychological study for the well-fed moralist who has never known the urge of starvation. Truly, "man's inhumanity to man makes countless thousands mourn." Cannot a more equal distribution of work and wealth be devised?

At any rate, there is surely a pressing need for a Government Unemployment Insurance scheme—which must be compulsory—to cover the professional and employing classes. Is it too much to ask that part of the contributions they are called upon to make to their employees' unemployment insurance should be placed to their own credit? Or, if that be financially unsound, could not a proportion of income-tax payments be calculated as premiums against a rainy day, so that in an hour of difficulty they would not be completely penniless?

Yours, etc.,

London, N.W. A VICTIM

BOOKS AND PUBLICATIONS

THE BALKAN DILEMMA

SUCH recent events as the successful journey of Dr. Schacht through Central and South-East Europe have revealed the peculiar economic difficulties of the Balkan countries. This book,* specially prepared for, and with the assistance of, the Information Department of the Royal Institute of International Affairs, is consequently timely. It aims at describing the background of recent events. Although no economic unit, Albania, Bulgaria, Greece, Roumania and Yugoslavia share certain characteristics which justify a concise joint review. The first part of the book describes the period from 1919 to 1931, that is to say, up to the financial crisis in Central Europe begun by the collapse of the Kreditanstalt in Vienna. The second part describes the crisis of 1931-32 and subsequent events.

The five Balkan countries, of which Roumania and Yugoslavia are the chief in size and population, cover an area of rather more than two and a half times that of the British Isles. They experienced between 1920 and 1933 a 25 per cent. increase in population to 47.3 millions. Except Greece, the Balkan States are entirely agricultural. Of the total number of occupied persons the percentage employed in agriculture ranges from 53.7 in Greece to 82.0 in Yugoslavia. Even in Greece the percentage of persons working in industry amounts to only 15.9 per cent. The dominant industries are the petroleum industry in Roumania, tobacco in Greece and Bulgaria, timber in Yugoslavia and Roumania.

Directly after the Great War, in all these countries except Albania, agrarian reforms overthrew the still existing feudal system. Roumania reduced the percentage of land occupied by large estates from 40 per cent. to 10 per cent. Yugoslavia decreed the abolition of feudal rights and the partition of large estates. Bulgaria limited the land owned by one person to 35 hectares. The average size of the holdings is still very small, ranging from 3.6 hectares in Greece to 10 hectares in Roumania. Cultivation methods are backward; even wooden ploughs are frequently to be seen. It is not surprising that the Balkan States were hardest hit by the agricultural crisis. Their backward agriculture was entirely unable to compete with Canada, Australia or South America.

Between 1919 and 1931 the continuous influx of foreign capital enabled the different currencies to be stabilised and the Budgets to be balanced. The crisis, however, reduced export surpluses and rendered impossible all foreign borrowing. Budget deficits reappeared, and exchange restrictions were followed by clearing and com-

pensation agreements. Economic policy then began to be aimed at a rapid industrialisation. Hitherto this has only been successful in so far as it has enlarged the textile industry, which produces poor qualities at high prices.

It is here that the dilemma of the Balkan States arises. Final recovery depends on circumstances outside their control, e.g. a rise in the general level of world agricultural prices, a relaxation of trade and exchange restrictions, and a reopening of the foreign capital market. On the other hand, remission or lowering of interest on foreign debts seems to be necessary for recovery, though this solution may prevent new borrowing. The author states that without foreign capital the rate of economic development must be very slow. Yet if the Nazis' trade policy is successful in the end, the rate of industrialisation might gain momentum, because Germany exports mostly those capital goods which are the basic material for industrialisation.

SHORTER NOTICES

"The Economic Development of South Africa." By M. H. De Koch. P. S. King and Son. 125 pages. 7s. 6d.

In his latest book Dr. De Koch has succeeded in placing within the reach of the general reader a comprehensive survey of the salient points in South Africa's economy. In this respect he has made good the defect of his earlier and more elaborate work, "The Economic History of South Africa." In the brief compass of the present volume the reader will find a wealth of facts—even if he regrets at times that they are not more elaborated.

Dr. De Koch has adopted the historical method and has traced the economic development of South Africa from the discovery of the Cape to the present day. With an admirable sense of proportion, however, he has devoted only about the same space to the first 250 years of his period as to the 25 years since the founding of the Union in 1910. In the early days of Dutch and British rule, the Cape was of little importance except in the economy of the Far East. Even after the Great Trek into the interior in 1836, when a vast further area of South Africa was colonised by the white man, his representatives remained few and depended on an un-bountiful soil. Dr. De Koch brings out to the full the revolution which was caused by the discovery of diamonds and gold at the end of the nineteenth century. This is a familiar story; but he has much light to throw too on how the new prosperity thus found was reflected in the condition of agriculture, and even led to the beginning of general industrial development.

The book, moreover, is thoroughly up to date. About one-fifth of the whole is devoted to the period since the Union's abandonment of the gold standard at the end of 1932. Topical subjects of a controversial nature are treated in this section with admirable impartiality. The author is obviously thoroughly familiar with the present situation in the gold-mining industry, and his sketch of its prospects will be read with especial interest.

"The Social Services, a Historical Survey." By W. Hardy Wickwar. (London) Cobden-Sanderson. 268 pages. 10s. 6d.

This book is intended to be a comprehensive and general narrative of the development of the social services. On the historical side it is in many ways admirable. The various steps by which poor law, public health, education and social insurance have reached their present position are fully described, and many illustrations and references are gathered together which throw fresh light on some of the problems.

Except on poor relief, the history of the social services has been the gradual encroachment of the State and local authorities into spheres previously dominated by charity organisations and individual initiative. As soon as public opinion makes Government action possible, private charity is apt to become a reactionary element and more of a hindrance than a help to any further improvement in the services. This is implicitly brought out by Mr Wickwar; but nevertheless his tendency is often to over-emphasise the rôle of the voluntary services to-day. At the same time too little attention is given to the pioneer work of many local authorities in the provision of houses and other municipal services, and in educational and social experiments.

The section on finance is the least satisfactory in the book. No full details are given of how the burden of the social services is divided between the various authorities, and the lump sums given on page 230 require further analysis. Finance is usually the rock on which new schemes for social betterment are sunk, and it is therefore essential to be quite clear about ways and means.

"Monetary Reform in Theory and Practice." By Paul Einzig. 336 pages. 12s. 6d.

Nobody living, perhaps, has read all that Dr. Einzig has written. But those who read him regularly must be perpetually astonished that one who writes so much can write on the whole so well. His new book contains his customary foibles: prejudice, repetition and occasional superficiality. But it is a remarkably readable, and on the whole a reasonably reliable, summary of the recent development of monetary reform in theory and practice. Anyone who wants a comprehensive introduction to the subject, that can be read without knowledge and without effort, could do very much worse than start with this book.

Dr. Einzig is against the rigid gold standard of pre-war days, and he is also against the extreme inflationism of the Social Credit kind. He is consequently inclined to favour cheap money and movable gold parities; and to these he adds his own pet project, exchange clearing. Dr. Einzig's advocacy of monetary reform might be even more persuasive if it were not for his obvious temperamental predilection for "regulation" in all forms.

"Die Britischen Investment Trusts." By Hanns Linhardt. Industrieverlag Spaeth and Linde, Berlin, 1935. 522 pages. Rm. 10.

This work is the result of several years' research, conducted on a scale which few British writers have accorded to the investment trust movement. It has involved the collection of scattered balance sheets and reports, chairmen's speeches and similar publications and, at a later stage, the still heavier work of presenting the results on a comparable basis. In addition, personal investigations were made into the position of several leading British and Scottish investment trusts.

Books of that type, of course, have no "results" which can be traced in one or two sentences. Their value lies in detailed description. The present book is most carefully written and covers all fields of the investment trust business. Sometimes a certain restriction would have made it easier reading. The long theoretical discussion on foreign *versus* domestic investment does not offer any striking new conclusion, and the methods of presenting the mutual connections of investment trust companies are rather complicated. But as a whole the task of giving a picture of the movement's development up to 1928, with a closing chapter on the changes after the crisis, is admirably handled. Apart from the questions which normally absorb the interest of students of investment trusts—such as capitalisation and distribution of investments—the book deals at considerable length with special problems like the formation of groups and the differences in capital structure and policy between the trusts based on the different age of the companies concerned.

The book closes with some rather pessimistic remarks on the future of investment trusts in a world preoccupied with autarky and debt cancellation.

MONEY AND BANKING

AMERICA'S BALANCE OF PAYMENTS

The preliminary figures of the United States Balance of International Payments for 1935 were issued some three months ago, and the Department of Commerce has now published the usual detailed study.* An analysis of the figures it contains must perforce be preceded, as in former years, by an expression of admiration for the ingenuity and persistence with which these figures are compiled.

The following table summarises the American balance of payments in the last two years and also in 1929. Purchases and sales of silver are included in the report as a separate item following upon gold movements and silver movements. In our table, however, following the custom of previous years, we have included silver with other merchandise. It is true that there is a large monetary element in American imports of silver, but silver is not yet money, and it seems more logical to classify it as merchandise.

BALANCE OF INTERNATIONAL PAYMENTS OF THE UNITED STATES (\$ Millions)

* Including silver.

† Including miscellaneous capital items.

The inclusion of silver has the effect of making the balance of merchandise trade negative. This is the first time this has occurred since the war. We pointed out last year that the positive balance of trade (excluding silver) was the largest in proportion to total trade since the war, and drew the conclusion that this was the normal effect of a depreciation of the currency. This year's figures do not bear out this theory, although the positive balance of trade (excluding silver) is still considerable.

Among the service items, it is interesting to notice that immigrant remittances continue to fall, in spite of the returning tide of prosperity. The largest decline in immigrant remittances between 1934 and 1935 was in remittances to Italy—a significant commentary upon the much-publicised efforts to collect funds for the Abyssinian war among Italo-Americans.

A special study has been made this year of the tourist account, mainly by means of questionnaires addressed to American tourists. Total expenditure by tourists is again rising rapidly, but it is estimated that two-thirds of the total is spent in the North American region. Some interesting estimates are given of tourists' expenditures in Europe. Total expenditure varies from \$747 for the average first-class passenger to \$220 for the average third-class passenger (in addition to expenditure on board ship, which is \$514 and \$186 respectively).

* "The Balance of International Payments of the United States in 1935." By Amos E. Taylor. Department of Commerce, Trade Information Bulletin, No. 833. (Washington) Government Printing Office. 86 pages. 10 cents.

The figures for interest and dividend payments by the United States to foreigners are based on the results of a special census of foreign investments in America. The resulting figures of the capital value of these investments at December 31, 1935, are shown in the next table.

FOREIGN INVESTMENTS IN THE UNITED STATES (\$ millions)

	Direct Investments	Common Stocks	Preferred Stocks	Bonds	Other Investments	Total
Canada	322	408	66	49	161	1,006
Great Britain	362	372	146	91	403	1,374
France	14	142	19	53	54	282
Netherlands	249	196	13	220	106	784
Switzerland	13	214	32	65	75	399
Rest of Europe	62	350	30	87	123	652
Latin America	5	19	3	8	43	88
Other countries	18	314	20	34	109	495
Total	1,045	2,015	329	607	1,039	5,035

"Other Investments" are stated to consist largely of trust accounts, the net equity of insurance companies and mortgages.

The result of these various current items is to produce a net debit balance on current account of \$128 millions. This result is, perhaps, a little less astonishing when it is recalled that imports of silver amount to \$336 millions. But there can hardly be any modification of astonishment at the capital account in the first table. America, the richest country in the world, has once more imported capital to the enormous amount of \$1,537 millions. The bulk of this is on short-term account. Foreigners increased their deposits in American banks during 1935 by no less than \$560 millions. On the other hand, American deposits abroad were reduced by \$210 millions. There was, therefore, both an inflow of foreign money and a return of American money, largely from Germany. Much the same picture is presented by the long-term capital market. On balance, Americans sold more foreign securities than they bought in 1935. There was a sharp increase both in purchases and in sales of American securities by foreigners during the year, but while purchases increased from \$480 millions to \$1,305 millions, sales increased from \$480 millions only to \$970 millions. Both American and foreign capital was, therefore, on balance, flowing into the country.

This extraordinary capital account could not be accommodated without a very large import of gold, amounting to \$1,739 millions, much the largest figure ever recorded. The American balance of payments thus seems to be as far as ever from normality. It is not entirely fair to blame American policy for this. It has already been pointed out that the devaluation of the dollar has not resulted in a large positive balance of merchandise trade. Indeed, if silver is included, there is a negative balance, both on merchandise account and on the current account as a whole. America is clearly not inconveniencing her neighbours by her current transactions. Nor can the capital inflow be entirely blamed upon Americans, for the larger part of it is European money seeking either refuge or profit in New York. It is true that the sale of American investments, both long-term and short-term, in foreign countries without any adequate provision of new capital imposes a strain on the rest of the world, but this item would not be enough in itself to upset the whole balance of payments.

The explanation of the enormous gold flow to America is to be found in the unsettled politics and economics of a crazy world rather than in the economic policies of America herself. But the results are the same, whatever the cause. And the one conclusion which emerges from these figures with the most startling clarity is the utter impossibility of restoring the orthodox international gold standard in present conditions.

FINANCIAL NOTES

Franco-Italian Clearing Agreement.—It is announced in Milan that a new Trade Agreement has been signed between Italy and France, setting up a "two-way" clearing scheme. Imports of French goods into Italy will be controlled so as to equal approximately 90 per cent. of Italy's exports to France. Payment will be made into special clearing accounts in both countries, and the surplus of approximately 10 per cent. will be applied to the liquidation of outstanding trade debts due by Italy to French firms. To assess the implications of the new scheme, it may be pointed out that these outstanding trade debts to France amount to about Frs. 300 millions, while on the basis of the trade returns for the first half of 1935 France imported rather more than Frs. 400 millions of goods from Italy and exported about Frs. 500 millions. Hence not only is the balance of trade to be reversed so as to give Italy an export surplus, but unless trade in both directions undergoes a considerable expansion it will take the best part of eight years to complete the liquidation of France's outstanding commercial debts. Italy, therefore, has managed to conclude an agreement greatly to her advantage, and the question will naturally be asked whether the French Government has been at all influenced by political considerations. These concessions by the French may well make Italy all the more disinclined to admit the British Government's contention that outstanding debts must take precedence over new trade. The City is not entirely unanimous on this fundamental point of principle, for realisation that commerce depends upon the sanctity of contracts and the prompt payment of debts is tempered by the fear that unless a compromise is reached Great Britain may never recover the export trade lost through the imposition of sanctions. This, however, is a short-sighted view, for there is little merit in shipping goods to countries where doubt exists whether the goods will be paid for. We trust that the Government will adhere to its insistence on thoroughly satisfactory treatment of outstanding British creditors.

July Clearing Bank Averages.—The main movements between June and July were an increase of £14.6 millions in deposits offset by one of £19.5 millions in discounts. During June the total tender issue of Treasury bills was rapidly increasing, both because of a reduction in the tap issue and also because of an expansion in the total floating debt. Thus, on balance, the Government was placing fresh Treasury bills with the banks and disbursing the proceeds, and this explains the rise in the banks' discounts and deposits.

(In £ millions)

	July, 1935 (a)	June, 1936 (a)	July, 1936 (a)	May, 1936 (b)	June, 1936 (b)	July, 1936 (b)

(a) Excludes District Bank.

(b) Includes District Bank.

Cash was practically unchanged between June and July, so that the Bank of England gold purchases have served their purpose of maintaining the supply of joint-stock bank cash in face of the expansion in the note circulation. There is a further satisfactory increase of £6.1 millions in advances, while investments are reduced by £2.9 millions. Call and short loans are very little changed, so that apparently the discount market is taking few of the extra Treasury bills. Acceptances, etc., are very little higher than a year ago.

The Foreign Exchanges.—The London market has been very quiet. Francs lost ground over the week-end, mainly because of the Spanish news. The New York-Paris cross-rate depreciated to the gold export point, and it was reported in New York that \$1,550,000 of gold had been engaged on August 7th for shipment from Paris, this being the first engagement since June 19th. Early this week, the franc rallied, but it was a little weaker on Thursday, when the New York cross-rate again relapsed to the gold point of Frs. 15.18½, while the three months' rate in London widened from Frs. 2½ to Frs. 3¼ discount. This latest weakness possesses little significance, because Paris is closed next Monday, and certain operators have been selling francs in order to balance their books in advance of the holiday. No intervention by the British Control has been necessary. The Banque de France's return for August 7th showed little change in the Banque's gold holdings, but a further transfer of Frs. 900 millions of the Government's indebtedness from rediscounts to provisional advances. Possibly, as the Treasury bills held by the Banque mature, they are being replaced by provisional advances. It is announced that the Anglo-Spanish clearing procedure is no longer functioning in Spain. Money due to Spanish creditors must still be paid into the special sterling account at the Bank of England, but for the time being it will be held there in suspense.

The Money Market.—Conditions have again been very comfortable, and the return of currency from circulation after the August bank holiday has replenished the banks' cash. Nevertheless, several banks called a moderate amount from the market on Wednesday, and there was some demand for loans on most afternoons. The banks were not keen buyers of bills.

	July 23, 1936	July 30, 1936	Aug. 6, 1936	Aug. 13, 1936
Bank rate	2	2	2	2
Clearing banks' deposit rate ..	½	½	½	½
Short loan rate:—				
Clearing banks	1½-1*	1½-1*	1½-1*	1½-1*
Others	½	½	½	½
Discount rates:—				
Treasury bills	½	½	½	½
Three months' bank bills	1½	1½-1½	1½-1½	1½-1½

* Loans against Treasury bills and other approved bills and British Government securities within six months of maturity; 1 per cent. Treasury Bonds and other gilt-edged stocks within six months of maturity; and other collateral, respectively.

Last week's issue of Treasury bills by tender went at an average rate of 10s. 6.04d. per cent. £45 millions of bills were allotted against maturities of the same amount, so that for the second week in succession the total tender issue is unchanged at £630 millions.

The Bank Return.—This week the Bank has bought no gold, and so the gold stocks are unchanged. The Customs returns, however, record a gold importation from France of £13.4 millions, and this probably represents gold previously bought by the Bank from the Exchange Equalisation Account. Total imports from France since June 10th are now £43.8 millions, and so are in excess of the Bank's gold purchases of £34.5 millions during the same period:—

BANK OF ENGLAND					
	Aug. 14, 1935	July 22, 1936	July 29, 1936	Aug. 5, 1936	Aug. 12, 1936
	£ mill.	£ mill.	£ mill.	£ mill.	£ mill.
Issue Department:—					
Gold	192.8	235.8	239.9	243.0	243.0
Note circulation	405.5	443.6	448.6	454.4	450.3
Banking Department:—					
Reserve	47.8	53.1	52.4	49.6	53.7
Public deposits	16.7	19.9	42.3	17.6	17.4
Bankers' deposits	86.3	98.2	75.2	92.7	98.0
Other deposits	37.0	38.5	39.4	38.5	38.0
Government securities ..	82.0	95.8	96.4	89.9	89.6
Discounts and advances ..	15.2	6.5	7.1	8.9	8.9
Other securities	13.2	19.4	19.1	18.5	19.3
Proportion	34.1%	33.9%	33.3%	33.3%	35.0%

The note circulation has been reduced during the past week by £4.1 millions. This contraction is rather low for the second week of August, and so the return of holiday currency may have been offset to a small extent by further French hoarding.

THE STOCK EXCHANGE

THE FIXED TRUST REPORT

THE Report of the Departmental Committee of the Board of Trade, appointed "to inquire into the subject of fixed trusts in all its aspects," marks the end of the first formative phase of a movement which, in a mere five years, has attracted some £50 millions from the investor through the agency of nearly seventy trusts. The last twelve months have been crowded with discussion, inquiry and criticism. The Committee's appointment itself followed a prolonged inquiry by a sub-committee of the London Stock Exchange, which last December reached the conclusion that Stock Exchange "recognition" could not be afforded to the movement, in the absence of legislation. The sub-committee, however, produced draft rules whose influence has proved far-reaching. These rules were freely adopted as a basis for the constitution of the representative Association of Fixed and Flexible Trust Managers, formed four months ago, and their effect is traceable, at many points, in the Departmental Committee's Report this week. Since the Committee's deliberations began in March, they have been made more complex and urgent by the rapid emergence of new unit trusts, and by the trend of the movement towards full "flexibility." New problems of managerial ability, financial sufficiency and "duplication" of underlying investments have arisen. These were the subject of special analysis in a survey of the movement (published with the *Economist* of March 7th last), to which the Departmental Committee pays tribute in the opening section of its Report.

What, then, is the Committee's verdict? The main recommendations of the Report are summarised in an adjoining column. It will be seen that, though regulative, they are in no sense restrictive. The Committee has decided, first, that the movement ought to continue, and, secondly, that it would be both inadvisable and impracticable to set up a licensing authority to control its future progress in detail.

The Report suggests no limitation of numbers, size or scope of unit trusts; it even envisages the extension of the unit principle to other fields, including property investment. The proposed legislation would, indeed, constitute a virtual Magna Carta for the movement and expunge every suggestion of a bar sinister. It would place the movement squarely within the field of recognised media designed mainly for the small investor.

Without endowing the trusts with a corporate personality, the Committee proposes that they should be regulated by a special statute which would start from the same fundamental assumptions as, and borrow its main lines of procedure from, the Companies Act. The trusts will be required, first, to file evidence of proper constitution, just as a limited company files its memorandum and articles of association. No limitations are suggested on the conduct of investment business. The managers' control of the ordinary administration of the trust's funds remains, very properly, unprejudiced. Under the regime suggested by the Committee, the trusts will continue to enjoy the substantial benefits of public advertisement, and the managers will secure reasonable jobbing profits.

The leaders of the movement would be grudging indeed if they failed to acknowledge the advantages which this recognition of status provides, for it secures the right of sound managements to conduct all the business they can obtain. The principal safeguards which the Committee introduces are all in the direction of fuller publicity. They deal with questions of managerial qualification and income, and are designed, above all, to protect the investor from men of straw. They presuppose that the case for the unlimited extension and development of the unit trust, as such, has been made out. Here, we may be permitted to say, the Committee appears to have reached a fundamental conclusion *per saltum* rather than *per argumentum*. The unit trust, the Committee declares, offers a new form of investment, and therefore it should continue. This decision comes somewhat abruptly in the Report after a

formidable list of criticisms, many of which, it must be admitted, are not entirely answered in subsequent sections. And some of them, inevitably, will continue to be relevant, even under a new regime.

For example, the experience of unit trust investors, managers and trustees alike has so far been limited to the recovery phase of a single economic cycle. None can say precisely what experience is in store for the movement when markets begin to fall. To rely entirely on a policy of *solvitur ambulando*, in these circumstances, may be carrying confidence to the point of hazard.

The Committee, again, has been unable to frame legislative proposals governing the technical market operations of the trusts. Control of unit price-fixing is judged impracticable, although the possible check by way of Stock Exchange dealings (for which detailed transfer provisions are introduced) is stressed. The investor's main safeguard against inflated prices, however, is to rest upon competition and publication of the management company's income in full detail. The form of accounts suggested in this connection seem wholly admirable. These accounts, however, will be available to unit holders on application only. Is there any reason why they should not be regularly circulated to all unit holders? The problems of re-purchase of sub-units and the dual nature of the manager's operations—for he is both a profit-making *entrepreneur* on his own behalf and a confidential investment expert on his clients'—are regarded by the Committee as matters suitable for internal regulation rather than legislation. Here, again, safeguards depend mainly on full publicity and the unit-holder's voting rights.

The proposed control of advertisements—designed, clearly, to the same end—suggests an interesting point in law, which might not be wholly effective in practice. It is recommended that advertising matter, apart from "treating" announcements of strictly limited content, shall contain the fullest information. Preliminary advertisements may "describe and commend" the class of investment without giving detailed information. But as "sales approaches" and creators of atmosphere these announcements may be highly effective. There will be nothing to prevent an unscrupulous individual from relying mainly on the impression they produce, and following them up by a voluminous booklet whose contents may overpower the small investor by their sheer bulk. There are two other recommendations, finally, whose practical utility may be open to argument. To insist on a £20,000 deposit from every unit trust will protect the public from the man of straw, but will afford no reliable bulwark against malpractice. Secondly, the extension of the unit principle of investment to, say, real property would raise very difficult problems of "liquidity" and of proper valuation.

These, however, are matters of detail. The crux of the Report is that it brings the trusts broadly into line with companies for registration and taxation purposes, insists on full disclosure, and, generally, provides both a charter and a constitution for the movement. The Association of Fixed and Flexible Trust Managers is welcomed as assisting in the development of high standards of conduct. Contrary to some forecasts, however, it is considered that the time is not ripe for compelling all trusts to adhere to an association invested with statutory powers. The recommendations of the Committee may be said fairly to represent the optimum which can be achieved by legislative intervention alone. But it recognises that there are investment dangers which cannot be eliminated by legislation; and its proposals still leave scope for internal improvement in trust administration. The Committee has doubtless been wise to recognise the limitations of its task. For the investor, under any regime the obligation *caveat emptor* is inescapable. And for those who manage the unit trusts, the converse motto may well be *cavendo tutus*—"safe by taking care."

SUMMARY OF THE COMMITTEE'S RECOMMENDATIONS

THE Committee adopts the term "Unit Trust" instead of "Fixed Trust," and suggests that in any legislation the definition of a Unit Trust should be framed to include any trust or association (other than a duly incorporated company) formed to acquire and hold or deal in stocks, shares, securities or other property or rights in which the public is invited or allowed to acquire a participation, by whatever name called. But it should exclude: (a) a trust created solely for charitable purposes; or (b) to secure debentures or other similar securities; or (c) any trust or association where offers of participation are limited to finance houses or persons whose ordinary business it is to deal in property of the class to be acquired or dealt in by the trust or association; and the Committee recommends that the Board of Trade should have power to exempt any trust or association formed to acquire and hold a block of securities in a single company, solely for the purpose of facilitating dealing in such securities on the Stock Exchange.

The Committee declares that the Unit Trust, properly conducted, appears to offer the small investor facilities, which he did not previously enjoy, for acquiring a particular type of investment. It accordingly comes to the conclusion that the Unit Trust movement is one which should be controlled but not prohibited. There are dangers, however, incident to the Unit Trust movement which cannot be eliminated by legislation. The Committee considered whether it would be feasible to set up an authority without whose licence Unit Trusts could not be formed or enlarged, and in whom would be vested wide powers to deal with those possibilities which could be controlled in advance by legislation. Such a body, however, was thought inadvisable, because its existence might easily create a false sense of security, and impracticable because the discretion to be vested in the licensing authority would have to be wide and indefinite.

REGISTRATION

The Committee therefore proposes that the movement shall be regulated along the following lines:—

Registration.—Every Unit Trust shall be registered and the Managers of any new Trust shall file with the Registrar certain documents and information relating to the constitution and management of the Trust before proceeding to sell participation in such Trust. In the case of existing Trusts the obligation should be to file the documents and information within, say, three months of the Act coming into force. The file should be open to inspection by the public on payment of a small fee and the documents to be filed in the first instance should include:—(1) A copy of the deed or other instrument constituting the Trust; (2) The names and addresses of the Management Company and of the promoters of the Trust, and the names, addresses and descriptions of the Directors and Secretary of the Management Company; (3) Copies of all agreements between the Management Company or promoters and the Trustee Company. If any such agreement be oral a memorandum thereof certified as correct by the Management Company and the Trustee Company should be filed; (4) A copy of the statement giving the information required by Appendix II to the report relating to managers' and trustees' rights and duties, etc.]

Status of Management Company.—The management of Unit Trusts should be limited to incorporated bodies and so far as is consonant with the provisions of Commercial Treaties, such bodies should be incorporated in the United Kingdom.

Deposit.—It should be obligatory on the Management Companies in respect of each Unit Trust which they manage to deposit a substantial sum of money with the Paymaster General (the Committee suggests £20,000). Exemption should extend only to Trusts which close within, say, three months of the publication of the Committee's Report and remain closed.

Status of Trustees.—A Trustee of a Unit Trust must be a corporation constituted under the law of the United Kingdom and having a place of business there and empowered by its constitution to undertake trust business. It must have an issued capital of not less than £500,000, of which not less than £250,000 shall have been paid up in cash.

ACCOUNTS

Details of Accounts.—The following Accounts should be filed with the Registrar, and a copy supplied gratis by the Management Company to the unit holder on application. In cases where a Management Company is carrying on other business the record of all transactions in connection with the management of the Trust should be kept separate.

(A) Management Company's Accounts.

(1) Every Management Company shall file with the Registrar a copy of every Balance Sheet and Profit and Loss Account required to be prepared under Section 123 of the Companies Act, 1929, and also a Unit (or Sub-unit) Dealings Account in respect of each Trust for the period covered by the Profit and Loss Account.

(2) The Balance Sheet shall show, in addition to the information required by the Companies Act, the following information certified by professional accountants:—

(a) The amount reserved in respect of the services to be rendered and expenses to be incurred throughout the unexpired periods of the various Trusts and the proportion thereof deposited with the Trustees; (b) the amount due to and by the Management Company in respect of the sales and repurchases of units (or sub-units); (c) the amount due by the Management Company against delivery of securities purchased for inclusion in the Trusts; (d) the amount of the Deposit with the Paymaster General.

(3) The Profit and Loss Account shall show the following information under separate headings, certified by professional accountants:—(a) The balances from the Unit (or Sub-unit) Dealings Account; (b) amounts transferred to or from the reserve in respect of the services to be rendered and expenses to be incurred throughout the unexpired periods of the various Trusts; (c) income distributions from units (or sub-units) in hand; (d) directors' remuneration as required by Section 128 of the Companies Act, 1929; (f) trustees' remuneration.

(4) The Unit (Sub-unit) Dealings Account, which shall be certified by professional accountants, shall show, as to both values and the number of units (or sub-units) represented thereby: (a) Units (or sub-units) in hand at the beginning and end of the period; (b) purchases and sales of underlying securities; (c) sales and repurchases of units (or sub-units); (d) agents' commission on sales and repurchases of units (or sub-units); (e) share of commission and brokerage received by the Managers; (f) the amount included in the sales of units (or sub-units) in respect of loading and service charge.

(B) Accounts of the Trust.

(1) The Trustee Company shall cause to be prepared at least once in each half-year an account in respect of the period under review. A copy shall be filed with the Registrar.

(2) The account shall be certified by professional accountants:—(a) The first part shall show (i) the full amount of all cash dividends interest and bonuses for the half-year or other period in respect of each of the underlying securities, showing the gross amount before deduction of tax and the amount of tax deducted; (ii) any other distribution showing the source from which it arose and whether in the nature of income or capital; (iii) the amount of all deductions and charges in respect of remuneration or expenses of the Trustees and Managers and whether paid out of capital or income; and (iv) the net amount proposed to be distributed in respect of each unit (or sub-unit) distinguishing between capital and income. (b) The second part shall show the investments or other assets included in the portfolio as at the end of the period and shall give in respect of each item, the nominal amount of the security and the market value. (c) The third part shall give details of the cash investments and any other assets held by the Trustee Company in respect of services to be rendered and expenses to be incurred throughout the unexpired periods of the various trusts, and the trustee company shall certify that such amounts are held by it free of all charges or, if there are any charges, shall certify what such charges are and whether, in the opinion of the Trustee Company, such amounts are adequate, and also particulars of the transactions during the half-year or other period in respect of both capital and income.

ADMINISTRATION, ETC.

Indemnities of Trustees and Managers.—Indemnities should not relieve Trustees of the consequences of their own negligence and should be expressly disclosed in documents offering units for sale. A provision similar to Section 152 of the Companies Act, 1929, should apply to Managers.

Trust Deeds.—Certain provisions (outlined in an Appendix) should be compulsory, and in their absence trust deeds should be null and void. All units and sub-units should be transferable.

Winding Up of a Unit Trust.—The Court should be given power, if it is satisfied on application by any person interested, to order the Trust to be wound up and to appoint a Liquidator. It should be provided that Unit Trusts should be wound up under provisions analogous to those contained in Part X of the Companies Act, 1929. For the purpose of such winding up, Directors of the Management Company should have the same responsibilities and liabilities as directors of a company which is being wound up compulsorily.

Independence.—Managers and Trustees should be independent of one another, and where there is any community of interest or where any of the directors of one company are directors of the other, this should be disclosed in all particulars issued.

PUBLICITY

Advertisements, etc.—(1) The issue of any advertisement, circular or pamphlet (not being circulars of an informative character to existing unit holders), the subject matter of which exceeds the limitations set out below, should be regarded as constituting an offer for sale and should be made illegal unless it gives all the information specified in Appendix II [see *Registration*, above]. (2) Where an advertisement, circular or pamphlet is intended merely to call the attention of the public to the existence of a Unit Trust, it should be permissible to publish such advertisement without this being regarded as constituting an offer for sale, provided that the scope of such advertisement, circular or pamphlet is limited: (a) to stating the name and the type of the Trust; (b) to stating the name and address of the Management Company; (c) to describing and commending the class of investment authorised; (d) to indicating the minimum amount which can be invested; and (e) to stating that full information can be obtained at a given address. (3) It should be made illegal to issue or advertise any form of application for a unit, unless the form is accompanied by all particulars under Appendix II. (4) If any unit (or sub-unit) in any Unit Trust is bought from or sold to the Management Company or any company controlled by it, the Management Company should be responsible for sending forthwith: (a) to the buyer or seller a contract note complying with certain specified requirements; and (b) to the buyer a pamphlet or document giving all information required under Appendix II. (5) It should be made compulsory to file with the Registrar within, say, 14 days of the original registration of the Trust and before any unit has been sold, a copy of the circular or other document intended to be used by the Trust to give to the public the information called for. (6) It should be made compulsory to file with the Registrar copies of all circulars, pamphlets or other documents to which paragraphs (1) and (3), above, apply.

FISCAL AND OTHER PROVISIONS

Taxation.—In all settlements of a Unit Trust settlement duty (5s. in £100) should be exigible on the first presentation of the Trust Deed and further duty should be paid as and when further property is brought into the settlement. Subsequent transfer of units (or sub-units) should attract stamp duty, provision being made for Managers to be repaid the duty where the Managers and Trustees jointly certify that specified units (or sub-units) have been cancelled and that the underlying securities have been sold within two months of the transfer of the specified certificates to the Managers. Bearer certificates should be dutiable like bearer shares. Contract notes in respect of the purchase or sale of units (or sub-units) should for the purposes of stamp duty be deemed to be contract notes within the meaning of the Finance (1909-1910) Act, 1910. A written instrument of transfer should be required as is the case under Section 63 of the Companies Act, 1929, in connection with the transfer of shares.

Nomenclature.—Names of Unit Trusts should be subject to restrictions similar to those imposed on companies registered under the Companies Acts, except for Unit Trusts in existence before the publication of the Committee's report. No name should be allowed which includes the words "Fixed" and "Trust" in conjunction.

Provisions Regarding Auditors.—No person should be allowed to act as auditor of any Unit Trust if he, or any partner of his, is a director or officer (other than auditor) of, or shareholder or otherwise interested, in the Management Company; and (b) no corporation should be allowed to act as auditor. No person or firm should be appointed auditor to whom the Trustee objects, and the Trustee and the holders of a specified number of units (or sub-units), say, a majority of the units issued, should have power to remove an auditor and appoint a fresh auditor. At meetings of unit (and sub-unit) holders, one of the powers should be to remove an auditor and appoint another by a resolution passed by three-quarters majority of the votes of those voting.

A NEW TRUST

has been added to the
"15 MOORGATE" GROUP
of Fixed and Flexible Trusts.

INVESTORS FLEXIBLE TRUST, the latest addition to this well-known Group, provides a fully flexible investment within a range of over 300 leading industrial and commercial undertakings, and on the initial portfolio, shows a yield estimated at 4½%.

The "15 Moorgate" Group now consists of the following Trusts:

Name of Trust	Gross Annual Yield
INVESTORS FLEXIBLE TRUST Trustees: Midland Bank Executor and Trustee Company Limited Bankers: Midland Bank Limited	4½%
INVESTORS GENERAL FIXED TRUST (over subscribed) Trustees: Royal Exchange Assurance Bankers: Barclays Bank Limited	4½%
INVESTORS SECOND GENERAL TRUST... Trustees: Royal Exchange Assurance Bankers: Barclays Bank Limited	5½%
INVESTORS GAS AND ELECTRIC TRUST Trustees: Royal Exchange Assurance Bankers: Barclays Bank Limited	3½%
INVESTORS GOLD SHARE TRUST ... Trustees: Royal Exchange Assurance Bankers: Barclays Bank Limited	7½%
PROVIDENT INVESTORS TRUST ... Trustee and Banker: Martins Bank Limited	4½%
SECURITY FIRST TRUST ... Bankers & Custodian Trustees of the underlying securities: Lloyds Bank Limited	5½%
HUNDRED SECURITIES TRUST ... Bankers & Custodian Trustees of the underlying securities: Lloyds Bank Limited	4½%

*This is the estimated Gross Annual Yield based only on the cash dividends paid in the past year on the securities contained in the Unit or Initial Portfolio. This does not include capital bonuses or sales of rights.

It has always been the policy of the Managers so to constitute the Trusts of the "15 Moorgate" Group as to provide a varied selection of investments which, in their respective fields, offer the best possible yield and prospect of appreciation consistent with security of capital. It has also been the policy of the Managers to incorporate in the constitutions of their Trusts every possible measure to safeguard the interests of investors.

Applications for sub-units will only be accepted on the basis of the descriptive booklets obtainable free from the Managers,
INVESTORS SPECIALISED FIXED TRUSTS LTD.
or SECURITY TRUST MANAGERS LTD.

INFORMATION AS TO INCOME

Income Distributions.—Any Income Distribution Warrant should be accompanied by a statement showing clearly:—
(a) in respect of each of the underlying securities in the Trust or, in the case of Trusts with fixed investments, in the unit:—
(i) the nominal amount and description of each security held, (ii) the date of payment of dividends since the last Income Distribution, (iii) the amount of gross dividend from each security, (iv) the amount of Dominion Income Tax relief, (v) the amount of United Kingdom Income Tax deducted, (vi) the net amount of dividend, (vii) the amount of cash bonuses received and cash realised by the sale of bonus rights or shares included in the Distribution; (b) the amount in respect of the total of (vi) and (vii) above accruing to the Trust or, in the case of Trusts with fixed investments, in respect of each unit; (c) the amount of all deductions or charges (if any) in respect of the remuneration or expenses of the Trustee Company and Management Company; (d) the amount to be distributed on each unit (or sub-unit) and the amount due to the unit (or sub-unit) holder showing separately—(i) the net income from dividends; (ii) proceeds of sale of bonus rights, etc. and equalisation fund repayment. Particulars are specified in the case of Unit Trusts based on property other than stocks or shares. Management Companies, their directors, and anyone who has authorised the issue of an advertisement offering units or sub-units for sale, shall be liable to compensate persons who acquire units (or sub-units) on faith of the advertisement for any damage sustained by them as the result of untrue statements therein.

MEETINGS AND VOTING RIGHTS

Meetings of Unit Holders.—The Trustee or a given proportion by value of holders of units (or sub-units), say one-tenth, should have power to call or require the Managers to call a meeting at which each unit (and sub-unit) holder should have one vote per unit (or sub-unit) held, and that for this purpose a unit (or sub-unit) holder should have the right to obtain from the Trustees or Managers upon payment of a reasonable fee a list of the names and addresses of registered holders and in the case of bearer certificates the names and addresses of the persons to whom the last coupons were paid. Provision should be made for the use of proxies at meetings of unit (and sub-unit) holders. Provided not less than 21 days' notice has been given of intention to propose such a resolution, any meeting of holders of units (or sub-units) at which not less than 25 per cent. of the units (or sub-units) are represented in person or by proxy should (notwithstanding any provisions of the Trust Deed or other document constituting the Trust) have power by a resolution passed by a three-quarters majority of the votes cast at such meeting to (a) remove a Trustee or Manager; (b) appoint a new Trustee or Manager; (c) remove the Auditors and appoint new Auditors; (d) authorise one or more holders of units (or sub-units) on behalf of all such holders to make an application to the Board of Trade to institute an investigation; (e) give directions to those controlling the voting power on the underlying securities, how such voting power is to be utilised either generally or in specific cases; (f) appoint a committee and define its constitution and powers (including powers to institute on behalf of all holders of units (or sub-units) legal proceedings) and provide for payment of its cost and expenses out of the trust property or the income thereof; (g) remove all or any of the members of such committee and appoint others in their place, or provide for the termination of such committee.

Voting Rights.—It should be stated by whom the exercise of voting rights should be controlled and what, if any, right a unit (or sub-unit) holder will have to control the exercise of such voting power. There should be provision to give a holder or holders of an appreciable quantity of units (or sub-units) the right to direct how the votes attaching to his holding be exercised. The Board of Trade should similarly be given power, on the application of, say, holders of one-tenth of the units (or sub-units) issued to appoint an Inspector to investigate the conduct of a Trust.

Penalties, etc.—Similar provision to Section 153 of the Companies Act, 1929, should be made applicable to Unit Trusts. It should be made a criminal offence to go from house to house offering for sale units (or sub-units) of a Unit Trust. The Managers should be required to furnish a copy of the Trust Deed on payment of a reasonable sum (not exceeding 2s. 6d.) to each applicant. Penalties equally substantial with those of Section 362 of the Companies Act, 1929, should be imposed in the case of false statements made in any documents relating to Unit Trusts. Other suitable penalties should be imposed in the case of other breaches of such statutory requirements as may be adopted.

INVESTMENT NOTES

Slump in Paris.—Although hopes of an improvement in the international situation produced a better tone on the Paris Bourse in the middle of this week, the more deep-seated anxieties of investors over the French financial outlook have not been allayed. It may be questioned, however, whether the recent fall in prices, which we discussed in a Note last week, has not been overdone. Our Paris Correspondent points out that the market capitalisation of certain enterprises of the highest standing now scarcely exceeds the total of their reserves, and dividend yields are frequently over 10 per cent. Of the Government's "New Deal" measures, it is computed by some experts that a forty-hour week will raise the wage-bill of French industrialists by nearly 15 per cent., while payment for holidays will cost, approximately, an additional 3 per cent. The most formidable item is that of direct wage increases. The "Matignon Accords" of June 7 provided for a maximum rise of 12 per cent., but the insertion of a minimum wage clause raised the effective figure to 20 per cent. in many instances. Subsequently, the Minister of Commerce mentioned a figure of 24 per cent. to the Chamber—exclusive of the forty-hour week. The effect on profits and dividends, however, depends on the widely varying proportion which wages bear to the total cost of individual products. In the electrical construction industry the ratio is estimated at about 32 per cent., in the automobile industry at 23 per cent., in building at 40 per cent., and in coal-mining at 62 per cent. Allowing for the varying incidence of other costs, such as transport, power, bank charges, taxes, etc., it is estimated that the increase in total costs will range approximately between 20 and 35 per cent. The ability of French companies to offset part or the whole by higher selling prices may be limited immediately by the action of the committees set up by the Government to decide the maximum permissible increase of prices, and ultimately by the ability of the consuming public to pay more. The Government appears to be staking everything on a revival in economic activity, and to tide over the interim it has arranged for special financial facilities, particularly to medium and small-sized enterprises, and advances to the export trades and other industries, like building, which are handicapped by long-term contracts. The attitude of the Bourse, however, suggests that many investors fear that the difficulties of industry and trade will not be merely transitory, and that wider credit facilities will lead only to an increase of industrial indebtedness. M. Blum's social measures, admittedly, may increase the spending-power of the wage-earners, but two-thirds of French consumers are farmers, rentiers, and business men, or are engaged in industries of expertise, art and luxury. These sections of the population are demanding a reduction of taxation, but the prudent Minister of Finance is unwilling to produce any far-reaching plan of taxation reform until the autumn. Whether a measure of currency alignment—to which non-French observers would give the grosser name of devaluation—will come in the future, with or without some international monetary understanding, is a matter on which, apparently, French investors have not yet clearly made up their mind. It is everywhere believed in France that the Cabinet has been converted in principle, but the way, for the present, is barred by the Communists. If devaluation were really believed imminent, ordinary share prices should be rising and not falling. Undoubtedly, sooner or later, a substantial recovery in ordinary share values is indicated.

Iron and Steel Conditions.—In view of the continuing boom in iron and steel shares, and the economic controversies which have ranged round certain price, tariff and organisational aspects of the present prosperity of the steel industry, special interest attaches to the broad survey of contemporary conditions given by Mr Clive Cookson to shareholders of the Consett Iron Company last Tuesday. The company is a North-East Coast enterprise, with a

range of activities which includes coal mining, iron smelting, steelmaking, and the production of coke, by-products, lime and bricks. The beneficial effect of improved demand has been brought home to Consett Iron shareholders by a rise in the company's trading profit, after taxation, from under £42,000 in 1932-33 to over £470,000 in 1935-36. Mr Cookson, at the outset, duly burned incense to the tariff, to the industry's agreement with the Continental Steel Cartel and to "a genuine increase in demand." He pointed out that the North-East Coast, with a production last year of 1,723,000 tons of pig iron and 2,061,000 tons of steel ingots and castings, now occupies first place in the steel-producing areas of the country. It is clear, however, that the chairman of Consett Iron is not wholly satisfied with prospects on the coal side of the company's business. Though the company is using more coal in its coke ovens, it has not been able to maintain an output equal to that of the preceding year. It is feared, moreover, that the results of the new coal-selling schemes may be prejudicial to the company's general interests—which are those of a coal consumer rather than a producer. Its coke production, however, is increasing, and twenty additional ovens started operations as recently as the middle of last June. The setting up of an International Coke Convention should assist the company in its export trade. From the tenor of Mr Cookson's remarks on the steel trade in general, however, it may well be that expectations of a further considerable increase in profits, on the lines discounted by many steel share prices to-day, are definitely over-optimistic. While most of the company's departments are benefiting from an increased volume of trade, rises in raw materials, wages and other costs are in progress, and the prices of finished materials have not advanced with equal step. The inference applies to many iron and steel shares besides those of Consett. "I am afraid . . . its effects are not sufficiently kept in mind by the public."

Industrial Profits in July.—The expansion in industrial profits which, during recent months, has been proceeding more slowly than in 1935, was more impressive last month. An increase of 15.69 per cent. compares with 13.5 per cent. in June and 13.44 per cent. for a similar, though not identical, sample of companies in July, 1935. Figures for recent months are set out below:—

Reports published in	No. of Companies	Rise in Profits*	Reports published in	No. of Companies	Rise in Profits*
1935—			1935—		
March ...	261	22.54	December ...	159	12.27
April ...	242	16.49	1936—		
May ...	244	11.07	January ...	128	13.66
June ...	191	21.72	February ...	205	9.00
July ...	232	13.44	March ...	236	17.39
August ...	38	5.93	April ...	254	9.41
September ...	77	9.28	May ...	269	9.41
October ...	166	29.19	June ...	214	13.50
November ...	160	17.47	July ...	228	15.69

* After payment of debenture interest.

Last month's reports disclose net profits of £14,337,131, compared with £12,393,128 in the preceding year. The iron, coal and steel group has contributed generously to the month's increase. Fourteen companies in this group reported net profits of £2,067,246, compared with £1,462,271 for the previous year. Building materials concerns, brewery companies and miscellaneous undertakings reported a substantial increase in profits. As many as 86 reports came from plantation companies. Of these 34 tea growers increased their profits from £235,652 to £630,419, but 52 rubber companies showed a fall in profits of £87,539 to £486,991.

Actuaries' Investment Index.—An all-round increase of share prices in practically every section of the market raised the Actuaries' Investment Index for 178 industrial equities to 85.7 on Tuesday of this week, compared with 85.1 last week and 83.5 a month ago (December 31, 1928 = 100). The yield this week is 3.68 per cent., against 3.69

Breweries and distilleries (21)	146.5	149.2	150.6	3.97	3.93	3.91

Home Rails have improved rapidly under the influence of the wages settlement, which was correctly anticipated on Tuesday, and on the recent revival in heavy goods traffics. Electric supply, cotton, brewery, building material and oil shares have all improved more than the average. The increase in share prices reflects continued good business reports, and the rise in commodity prices which seems to be becoming more pronounced.

COMPANY NOTES

Hotel Companies.—When we last reviewed the hotel industry (August 31, 1935, page 434) we suggested that though hotel shares had certain recovery possibilities, the industry as a whole appeared to be suffering from "excessive capacity" which was independent of cyclical

§ After normal pref. div.

† Tax free.

influences. Recovery has now progressed far enough to confirm that view. Even the combination of undoubted recovery, amounting in London to prosperity, and of the Jubilee year, left profits still below normal. Hotel chairmen complain chiefly of competition from new residential flats and of anomalies in the licensing system. The flats

attract visitors who intend to stay more than a few nights, while the second factor interferes with their restaurant business. The accounts of the principal companies also show that competition is forcing hotels to embark upon substantial new expenditure for maintaining their equipment at the most modern standard. At first, this involved such improvements as running water, bathrooms to each bedroom, and telephones throughout. In the future, the luxury hotels may have to provide noise insulation and air-conditioning equipment. The accompanying table shows however, that hotels catering for non-luxury visitors have been able to maintain profits. Thus Strand Hotel has disclosed consistent earnings throughout the depression (after various accounting adjustments), and Cranston London Hotels have paid a dividend each year, though for 1935-36 the distribution was not earned. Similarly, the experience of Trust Houses and People's Refreshment House Association shows that the growth of motoring, which has affected the London hotels, has produced corresponding benefits in the country. Apart from these special exceptions, however, the hotel industry is passing through a difficult phase, involving both unlet rooms and reduced prices. It is probable that the current influx of American tourists, and the presumed increase in London visitors during next Coronation year, will ease the letting position, but it is questionable whether prices will recover the 1929 level. On present indications, a moderate recovery may result, sufficient to eliminate the losses of recent years, but unlikely to achieve positive prosperity.

Mosul Oil Fields Deal.—The control of Mosul Oil Fields has passed to its big rival—or big brother—the Iraq Petroleum Company. This consolidates an oil venture which might have involved economic or political difficulties in the future. Mosul Oil Fields was formed in 1932 to acquire all the shares of the B.O.D. Company, which in turn had been formed to acquire from the Iraq Government a concession of 45,000 square miles west of the Tigris, an area outside the concession of the Iraq Petroleum Company, which is east of the Tigris. Analysis of the interests in Mosul Oil Fields reveals that Italian and German groups had participations, while Lord Inverforth was also interested. Lord Glenconner, of C. Tennant and Sons, and Viscount Goschen, who is chairman of the company, remain on the re-constituted board. Naturally, there was rivalry between this company and the Iraq Petroleum Company, which has a capital of £6,500,000, owned jointly by Royal Dutch-Shell, Anglo-Iranian, Standard Oil, and French interests, with a minority interest (5 per cent.) held by Mr Gulbenkian. Mosul Oil Fields, with a capital of £1,669,289, required finance, and last year its Italian shareholders came to the rescue, paid part of the company's dead rents, and obtained a majority on the board. Management control, however, under the terms of the concession, remained in British hands. Options on Mosul Oil Fields shares have been outstanding to the Italian group, the Egyptian Government, a Dutch group and a German group, but the German group failed to keep its options alive in March, 1935. The Italian group has now disposed of its interest, which has passed, with other of the options, to the Iraq Petroleum Company. The latter is probably best equipped to provide the capital which Mosul Oil Fields requires. The eight Italian representatives have resigned from the board, and six new directors, representing the new controlling interests, have taken their seats. Apart from possible political questions, it might have led to some difficulties between the Mosul and Iraq companies if the Italian directors had insisted on a development policy involving, say, the construction of a railway to carry the oil from the Mosul fields, to the detriment of the Iraq Petroleum Company and its pipe-line.

Brewery Profits.—We referred last week (page 276) to the continued recovery phase of brewery profits. The report of Friary Holroyd and Healy's Breweries, published since we wrote, confirms the good impression of earlier reports. Total profits, including rent and interest, have

increased from £238,253 to £266,388; the dividend is raised from 11 to 13 per cent., and is comfortably covered by earnings of 21.6 per cent., compared with 19.6 per cent. for the preceding year. These satisfactory results are further analysed below:—

	Years to June 30		
	1934	1935	1936
Trading Profits	178,081	195,062	221,746
Rent and interest	50,989	43,191	44,642
Total income	229,070	238,253	266,388
Expenses, repairs, fees, etc.	96,401	103,225	112,863
Debiture interest	9,335	9,535	16,763
Preference dividend	20,936	20,936	20,936

Paid %	10	11	13
Reserve	40,000	40,000	40,000
Carried forward	26,440	26,782½	26,619

† Including credits for income tax, £954 in 1935 and £1,029 in 1936.

Investors may be the more impressed by this scale of progress, since the company's area in the residential and agricultural districts of the South does not afford the larger recovery possibilities of the Northern industrial areas. But it has its own special equity in increased tourist traffic, for which suitable alterations to licensed premises are being made. The company has effected a consolidation of its bank and debenture debt, and is adequately financed for development. The problem of satisfactory accommodation, however, is common to all tied-house brewing companies. At this week's meeting of Watney Combe Reid and Company, Colonel O. P. Serocold showed that public refreshment houses must keep pace with the wider improvement in social conditions. Special factors like new housing schemes and street widening involve the companies, particularly in the London area, in continuous renovation and rebuilding. And since the industry has now extended its interests into the catering trade proper, the capital cost of keeping abreast of the times is correspondingly heavier. In the Metropolitan area, moreover, the economies obtainable from merging smaller brewing undertakings have already been largely won. The new Guinness brewery at Park Royal, however, may in time point the way to most impressive possibilities for reduced costs. Shareholders last Saturday learned that the new buildings are now approaching completion, and that experimental brewing has been carried out. The market remains convinced that higher brewing efficiency and the elimination of transport costs will find their reflection in the Guinness profit and loss accounts of the near future.

Stores Dividends and Prospects.—The season for store interim dividends has opened satisfactorily with the announcements of the Harrods group distributions. The parent concern maintains the 5 per cent. rate paid last year (which was followed by a final distribution of 11 per cent.), while D. H. Evans has declared the now customary 15 per cent. distribution. The other large subsidiary, Dickens & Jones, however, has increased its interim payment from 4 per cent. to 5 per cent., and has no doubt profited appreciably from the brighter trading prospects to which Sir Woodman Burbidge referred at the meeting in March. But the season has not, on the whole, fulfilled earlier expectations. The period of public mourning at the beginning of the retailing year and adverse weather conditions during the greater part of the summer have restricted purchases of fashion and holiday goods. The percentage advance in retail sales amounts to 6.4 per cent. for the period February-June, compared with 4.6 per cent. for the corresponding period of 1935, but for Central and West End London, however, the corresponding percentages are 2.9 per cent. and 1.1 per cent. It would seem, therefore, that much of the advance in reported retail trade turnover must be attributed to increases in foodstuffs, which form some 52 per cent. of the total. This movement, which is attributable both to increased volume and prices, confers

relatively small benefit on the large London stores. The investor, indeed, may ask whether the further recovery which the latter undertakings should enjoy, may not be tempered, to some extent, by the effect of rising prices. Where conditions allow an immediate "mark-up" to compensate for increased re-stocking costs, companies may reap an adventitious profit on existing stocks. But competitive conditions among London stores cannot permit such immediate adjustments on all lines, and on some goods there may even be a temporary reduction in margins. Yields of a few shillings under 4 per cent. on such representative equities as Harrods and John Barker thus appear to value the recovery elements in increased purchasing power with suitable moderation.

Slump in Philips Lamps.—The Amsterdam Stock Exchange has been puzzled and disquieted by an extensive fall in the ordinary shares of N.V. Philips' Gloeilampen-fabrieken, one of the most active of Dutch market leaders. In 1935 the shares touched a high price of 274 per cent., and they opened at 231½ this year. By the end of April the quotation had fallen to 170½, and at the end of June it was nearly 173, after having recovered to 188½ towards the end of May. By the end of July, however, it had further fallen to a low point of 155, and the latest price is no better than 159½. On a dividend for the year to April, 1935, of 11 per cent. the yield is as high as 7 per cent., which appears to discount a considerable reduction in future dividends. In fact, it is understood in Amsterdam that fairly regular selling orders have come from a particular quarter, but there have been no suggestions of a decidedly unfavourable turn in trading results. Last March the management declared, indeed, that they were not themselves aware of any reason for the weak market tendency. The company's report for the year which closed last April is expected shortly, and some idea of its tenor may possibly be gleaned from a report of the East Brabant Chamber of Commerce, which declared that although the company, last year, had again to resort to decentralisation of production and increased manufacture abroad of metal filament lamps and wireless apparatus (to circumvent the protective measures of foreign countries), it had been found possible to introduce several new products, after extensive experimental work. Consequently, turnover had not been lower in 1935 than in 1934, and the results achieved were not unsatisfactory. Recently the Government of the Netherlands has prolonged its quota restrictions on the import of competitive metal filament lamps of foreign manufacture, subject to a 5 per cent. reduction in internal selling prices. On the whole, it would seem that the handicaps which the company suffers—as a producer whose main costs are in gold guilders while its market is international—have been accentuated rather than eased since the end of the financial year. Delay has occurred in remittances from certain countries with depreciated currencies and exchange restrictions. The company recently announced a reduction in salaries of 10 per cent., of which 5 per cent. is to take effect in September and another 5 per cent. in January. These indications in themselves, however, do not fully explain the depreciation in the shares. It remains to be seen whether profitability has been so far affected that a sharp reduction in the ordinary dividend will be found necessary.

Further Cinema News.—Last week, National Provincial Cinemas (a constituent company in the Union Cinema group which was floated in August last year) announced a first dividend at the rate of 15.658 per cent. for its initial trading period to March 31st last. The report, published this week, shows that this rate of payment involves a generous distribution of profits, for of £19,062 available for the ordinary dividend, only £794 is carried forward after its payment. In fact, however, these results are an inadequate guide to regular earnings prospects, for they arise from cinema profits and revenue from subsidiaries covering widely different periods. The balance sheet reveals certain features which call for separate comment. The rapid financial development of the company has involved the issue of £350,000 debentures as collateral, although no amounts were due to the bank at the date of the balance sheet. An existing mortgage loan appears at £152,213 in the balance sheet. In addition, the company has guaranteed jointly with two other companies (presumably Union Cinema and Oxford & Berkshire Cinemas) and severally a debenture securing £772,000 advanced to an associated company (presumably Union Cinema) by the bank. A liability of this sort would appear, *prima facie*, somewhat inappropriate, and possibly onerous, for a young concern whose total assets are, in fact, only £25,000 greater than the sum guaranteed. Elsewhere, spokesmen for the cinema industry view the prospect with optimism. Mr John Maxwell, in his speech at the Associated British Picture Corporation meeting on Thursday, expressed his "Extreme confidence" in the prospect of increased profits from the Corporation's important cinema department. And whereas, last year, he uttered a grave warning against the "frenzied finance" of film production, Mr Maxwell now sees improvement even in this essentially speculative business. It is clear that the cinema industry, like other suppliers of "consumption goods," is now experiencing the benefit of increased purchasing power, particularly in areas devoted to "heavy industry." For the investor, however, it must remain a medium for discriminating and speculative operations.

Fairbairn Lawson Reorganisation.—Two salvage schemes have been proposed this week for consideration. The first, which affects security holders of Fairbairn Lawson Combe Barbour, is a draconian affair, but although the total weight to be borne is heavy in the extreme, its disposition between various classes of capital appears broadly to challenge no principles of equity. The total share capital amounts to £1,194,800 (of which £300,000 is in 5 per cent. £1 preference shares and £894,800 in ordinary shares), but no less than £1,213,258 falls to be provided for accumulated losses, accrued interest, and excessive book value of the fixed assets. The preference shareholders are to forgo arrears of dividend (since 1925) together with 18s. 6d. on each share. In respect of every 100 preference shares, the holder will receive 100 is. preferred ordinary shares (ranking for a non-cumulative preferential dividend of 1s. per share per annum) and the right to repayment of £1 in a winding-up, and in addition 50 is. ordinary shares. The ordinary shareholders lose 19s. in capital, receive an equal number of new ordinary shares of 1s., and retain 77 per cent. of the equity. These proposals should be acceptable, particularly to the ordinary shareholders, for it might be maintained that if preference shareholders are to lose their cumulative rights and arrears, they should be entitled to a somewhat greater share in the equity. In view of the sacrifices of prior creditors, however, it would be unfair to press this reservation too far. Holders of the two debentures and note issues forgo their interest arrears. The banking creditor accepts a lower rate on the company's overdraft; the 4 per cent. debenture holders are invited to accept 3 per cent. in fixed interest, with an additional 2 per cent. contingent upon profits. Finally, the unsecured noteholders forgo one-quarter of their capital, and by the offer of 10 per cent. non-cumulative preference shares should, on paper, maintain their income rights, providing that profits suffice. The board professes optimism regarding the earnings outlook, which may to some extent relieve the impression, from the latest accounts, that the scheme,

though fair in essentials, may be somewhat premature in relation to earnings recovery. The balance of £19,612 shown for the latest year would not fully cover the minimum charges for bank and debenture interest. Schemes of this order might well be supplemented by a cautious estimate of future profits.

Lennards Scheme.—Another scheme of reorganisation, published this week, applies to shareholders in Lennards, Limited. In this case the first preference shareholders receive a meagre slice of the equity in return for a capital "cut" of 13s. in the £, and the second preference holders receive no equity rights. But the ordinary shareholders, on whose shares nothing has been earned since 1929, will receive five 6 per cent. non-cumulative preferred ordinary shares and three deferred ordinary of 1s. for every five existing shares. Of the equity, 5 per cent. will go to first preference shareholders, 30 per cent. to existing ordinary shareholders, 15 per cent. to the property-owning subsidiary, and 50 per cent. to Sir Walter Forrest. The latter allotment is in consideration of Sir Walter's underwriting £50,000 5 per cent. debentures. Sir Walter also becomes chairman with power to appoint a new board. The scheme, altogether, metes out hard treatment to preference shareholders who may well be disposed toward collective action against it, despite the handicap imposed on them by the fact that, under the company's articles, all classes of shares rank *pari passu* in a liquidation. Recent reconstruction schemes, successful and otherwise, have gone far to establish a "code of equitable sacrifice" for preference shareholders, with which certain features of the present scheme can scarcely be reconciled.

Tea Company Results.—Tea shares remain completely friendless, and their movements in the past few months have sadly disappointed the high expectations entertained in the early part of the year. Two primary factors contributed to the optimism prevailing at that time. First, the International Tea Committee's decision to maintain export quotas unchanged for the season at 82½ per cent. of standard suggested a more vigorous application of the restriction screw than had been anticipated. Secondly, a steady improvement in the statistical position promised further help for tea prices during the year. These indications, unfortunately, have been largely falsified. Stocks continued slowly to decline, but prices were sluggish owing to poor demand at auctions. Undoubtedly, the increased tea duty imposed by the Budget came as a blow to an industry which still required careful nursing, and it upset calculations of profit for the remainder of the year. The subsequent course of prices is in sharp distinction to the experience at last year's new season auctions. Eager demand at the latter produced sharp rises in profits, during the second half of the year, for the majority of companies. The improvement in dividends can be judged from the following table:—

Company and Share Denomination*	Average Tea Price		Ord. Div. %		Present Share Price	Yield on latest Div.	Id. per lb. % on Ord. Cap.
	1934	1935	1934	1935			
Brahmapootra (£5)	11-01	11-98	12-5	20-0	£16½	6-1	8-5
Budla Beta	14-56	...	4-0	7-0	35/-	4-0	2-7

Chubwa	10-60	12-29	10-0	12-5	46/3	5-1	8-3
Chulsa	10-70	11-72	8-0	12-0	46/3	5-2	5-4
Deundi (10/-)	10-75	11-79	12-5	15-0	23/9	6-3	5-9
Dooars	11-14	12-59	7-5	15-0	43/9	6-8	5-5
Doom Dooma	11-74	13-44	2-5	7-5	46/3	6-5	5-8
Jhazlie	11-20	12-91	5-0	10-0	28/9	5-2	3-3
Jorehaut	11-28	12-38	7-0	8-0	41/3	4-9	5-7
Lunava	11-46	12-30	5-0	5-0	35/7½	4-5	8-6
Nedem	7-59	8-19	Nil	2-5	13/1½	3-8	2-6
Sumatra Tea							

* All £1 unless otherwise stated.

Although no liquidation pressure has yet been experienced in the tea market, investors may find many of the yields, based on last year's relatively good dividends, somewhat low. Current share quotations, indeed, do not appear to undervalue prospects for some time to come. And since most companies show a "high-gear" response to

changes in prices, share values may be vulnerable to a continuance of this week's disappointing trend in Mincing Lane.

—And the Restriction Outlook.—Under present conditions, indeed, investors may feel rather less confident about tea shares than the International Tea Committee feels about restriction. The Committee's third Report, covering the year to March last, suggests that its judgment was sound in fixing the quota at 82½ per cent. for 1935-36, stresses the increased absorption of supplies during the year, and refers, with disappointment tinged with hope, to the effects of the inopportune increase in the tea duty. The report for the previous year stressed the threat of excess productive capacity over the next few years, but on this occasion it refers in more general terms to the need for a large increase in consumption. The Committee's own estimate of a gap of 315 million pounds between demand and potential production in 1938—the last year of its mandate—contrasts unfavourably with an actual world absorption of 874 million pounds for 1935. The Committee is also faced with a problem of "outside" areas, particularly in Africa, where agreements to limit planted areas have been reached, but India's land tea trade has now been brought under control. But the Committee's main problem—and main endeavour—is to increase tea consumption, by suitable propaganda. This factor, more than any, gives the scheme its inflexible character, for since production licences must be issued some time in advance, the Committee is forced to legislate on a broad long-term view. Until consumption shows some sign of filling the gap created by potential output, satisfactory auctions cannot be expected, for the Committee is unlikely to turn the screw tighter and thus aggravate its own problem. Indeed, it may be necessary to increase releases, despite adverse price movements, as the first term of restriction approaches its end. Both on the short- and long-term view, the prospect is far from clear for tea company profits and shares.

Other Company Results.—Nine additional companies figure in our table of company profits on page 332. The *Empress Brewery* figures closely compare with those of the previous year. *Henry Briggs Son and Company* show a significant rise in profits at £63,471, compared with £48,913 for the previous year. This is the peak rate of earnings during the last seven years, and the company's reputation as one of the best profit-earners in the coal industry will undoubtedly be enhanced by these results. The dividend, maintained at the previous rate of 7½ per cent., has been earned with a generous margin. *Prye Rubber* has maintained its earnings, thanks to the improvement in the copra market, but the *Kepitigalla* results are disappointing. In the trust group, *Third Scottish American* reports increased profits and pays 18 per cent. on the ordinary capital, compared with 17 per cent., but the net revenue of *Compass Investment Trust* has not been fully maintained. This week's dividend declarations have, perhaps, been of greater interest to the market than other company news. The doubled *Triple** distribution (including dividend and bonus each of 30 per cent.) was well anticipated and warmly received. The directors of *Hadfields* have declared an interim dividend of 3½ per cent. The net profits statement of *International Nickel* shows an advance of \$683,399 to \$9,070,186 for the second quarter.

THE WEEK IN THE MARKETS

THE STOCK EXCHANGE

SETTLING DAYS

TICKET
AUGUST 25

ACCOUNT
AUGUST 27

CHEERFUL conditions have prevailed in the markets during the week for a very varied set of reasons. The underlying cause is doubtless the continued reports of good trading in

LONDON INDUSTRIAL FINANCE TRUST LIMITED

FARLEIGH HOUSE · LAWRENCE LANE
CHEAPSIDE · LONDON · E.C.2
TELEPHONE NATIONAL 1171

many industries, the growing rise in commodity prices, the non-appearance of the feared drop in building activity, and the recent expansion of the credit base by the Bank's purchases of gold. Less solid justification for the bidding up of prices is provided by anticipations that the Spanish troubles will be localised, by the appointment of the new German Ambassador, and by the apparently irrepressible hope that after all the franc has seen the worst of its troubles.

Gilt-edged securities were particularly firm in mid-week, with an improvement (the first) in Funding 2½ per cent., Old Consols, and 2½ per cent. Conversion. Australians were prominent among Dominion issues, while India stocks have been neglected. There was a good investment demand for Home Corporation issues and prices rose in many instances. Foreign bonds were inclined to be weak at the opening of the new account, but operators were willingly soothed by the course of events in Spain, and by the appointment of Herr von Ribbentrop to London, and prices hardened later although business was small. German and Spanish bonds improved, and even French railway bonds recovered from their depression. Japanese issues were supported on the feelers put out in the Japanese press for Anglo-Japanese co-operation.

Home rails improved steadily at the beginning of the week on last week's good traffic, and in the hope that the N.U.R. would accept the wages award made by the Tribunal. The award was duly accepted, but a bout of profit-taking, and the influence of less satisfactory traffic, left the markets lower in mid-week. Argentine rails benefited from rising wheat prices, but suffered slightly from the antagonistic attitude shown in the Senate debate on the Transport Co-ordination Bills. Cordoba debentures improved on the renewed reports of negotiations for purchase of the line by the Argentine Government.

In the industrial share markets a further general advance in quotations has put numerous shares at new high levels, and the volume of business has been increasing. The iron and steel section attracted new support on the rising output figures, and T. W. Ward were prominent on hopes of increased earnings. B.S.A. rose in anticipation of the reorganisation scheme. Coal shares were firmer in hope of an early settlement of the Welsh labour troubles. Aviation shares have been relatively quiet, but the motor section has been active, with Leylands prominent on reports of orders obtained, and on the generally improved demand for commercial vehicles. Electric equipment issues were again one of the brightest sections of the market, and Associated Electrical Industries gained further ground on the meeting. Electricity Supply shares improved on the steadily rising electricity output.

In the textile section most prices have regained the ground lost last week, and the tone is generally firm. O.K. Bazaars were prominent in the Stores group, where the tone was firm, on dividend hopes. Breweries continued to receive support from the provinces, and the record cigarette consumption figures stimulated a good demand for tobaccos, where Imperial Tobacco reached a new high record. Business in the miscellaneous industrials section has been equally cheerful, and in spite of some profit-taking many prices have risen. Triplex Glass broke into new high ground on the bonus declaration, which was more than had been anticipated, and building material issues, particularly cement shares, were strong, together with along many miscellaneous engineering shares.

The oil shares market opened the new account quietly, but activity increased later in the week on the acquisition of control of Mosul Oil Fields by the Iraq Petroleum Company, on the settlement of the strike on the Mexican Eagle field, and on a reduction in stocks in the United States. There was a good continental demand for Royal Dutch and Shell Bearer, and in mid-week Apex was prominent among Trinidad

(Continued on page 322)

LONDON ACTIVE SECURITY PRICES AND YIELDS

In calculating yields on fixed interest stocks quoted below allowance is made for interest accrued since the last date of payment, less income tax at the standard rate. Where stocks are definitely redeemable at a certain date the yield includes any profit or loss on redemption; where stocks are redeemable at or before a certain date the final date of redemption is taken when the stock stands at a discount and the earliest date when the quotation is above par. The return on ordinary stocks and shares is calculated by reference to the latest dividends, account being taken of any enhancement or reduction of interim dividends. Allowance is made for accrued dividends in calculating the yield on "cum. div." shares.

issues. The rubber shares market was as dull as usual most of the week, but showed signs of a slight revival of interest as the commodity price improved. Interest in the tea shares market was negligible and prices tended to sag.

The Kaffir market has not been very active, but prices have been firm, with some improvements in the finance descriptions, and a fair demand has come from the Cape. Far Western issues were supported, but Western Reefs were depressed by the new capital proposals. Signs of an increased interest in West Africans were evident, although the improvement has not gone very far as yet. Rhodesian copper issues have been active, in spite of a fall in the commodity price, and most shares reached higher levels. Tin issues improved in mid-week as confidence increased in a successful renewal of the restriction scheme in spite of Siam's obstructionism.

AMERICAN STOCK EXCHANGES

NEW YORK

DURING the first half of this week Wall Street has been consolidating the substantial gains which were registered at the end of the previous week under the stimulus of the continuing excellence of business reports. The reaction of this week was slight, the turnover shrank as switching operations levelled up prices, and in mid-week the advance in prices was resumed under professional support. Mr. Sloan's gloomy anticipations, and expression of the lack of confidence felt by General Motors, played a small part in the irregularity of the early days of this week, but his opinions are not generally shared, and do not seem likely to be infectious. The estimate of *Iron Age* that steel mill activity this week is 71 per cent. of capacity, compared with 72 per cent. last week, and their forecast of very promising conditions in the autumn, encouraged strength in the steel group in mid-week. Railroad securities moved up, and Allied Chemical jumped 11 points. The principal laggard was the Utility section, which is once again showing nervousness over the President's zeal for control of the Power Trust. For the moment, the effects of the drought, and the purport of labour troubles, seem to be ignored. Business reports continue their past trend. Electricity output for the week ended August 8th was 14.3 per cent. up on the corresponding week of last year; automobile output is decreasing as the works shut down for change-over of models, but it is anticipated that next season's production will be very high. Freight car load-

ings are increasing, against the usual seasonal downward trend. The price of scrap steel is rising sharply.

CAPITAL ISSUES

ONE industrial issue has defied the August tradition this week, for *John Groves and Sons* have offered 5 per cent. £1 preference and £1 ordinary shares, commendably at par. The company carries on a "family" brewing business established in Weymouth in 1840. The consideration, which is payable in cash, is less than the valuation of the net assets—a rather unusual feature in recent weeks. In view of the relatively wide profits fluctuations during the past four years—earnings have increased by 50 per cent.—the shares are a fair, though not "gilt-edged," brewery investment. Market "introductions" have been limited to the securities of *Worthington-Simpson* and *Olds Discount Company*.

ISSUES OF THE WEEK

January 1 to August 8, 1936, including conversions, Old Basis, £297,477,998.
January 1 to August 8, 1936, excluding conversions, Old Basis, £120,093,911.
January 1 to August 8, 1936, including conversions, New Basis, £311,797,553.
January 1 to August 8, 1936, excluding conversions, New Basis, £218,053,490.

National Savings Certificates, Net receipts week ended August 8, 1936, nil.

PUBLIC OFFER

Groves (John) and Sons.—Issue of 200,000 5 per cent. cumulative £1 preference and 150,000 £1 ordinary shares at par. Acquires Weymouth brewing business and its subsidiary. Net assets, £713,328, purchased for £690,000 cash. Profits, before depreciation and debenture interest: 1933, £32,433; 1934, £39,915; 1935, £45,341.

BY STOCK EXCHANGE INTRODUCTION

Olds Discount Company, Ltd.—Issued capital, 65,000 7 per cent. cumulative £1 preference shares; 640,000 10s. ordinary shares. Hire purchase finance business incorporated 1926. Profits, after bank and other interest: 1933, £7,160; 1934, £8,544; 1935, £13,084. Total assets, £191,857 of which debtors (net) £181,973. Bank loan, £64,683.

Worthington-Simpson.—Issued capital, £98,768 6 per cent. cumulative £1 preference shares; 640,000 10s. ordinary shares; £98,750 4½ per cent. mortgage debentures, secured by first charge, redeemable 1948 at par, or earlier at 102 on three months' notice. Manufacturing engineers; net assets, £410,498. Profits, after depreciation, before debenture interest: 1933, £12,166; 1934, £18,804; 1935, £35,966; six months to June 30, 1936, £23,300. Has benefit of agreements with Worthington Pump and Machinery Corp. (U.S.A.), who sell 480,000 10s. ordinary shares to Cazenove Akroyds and Greenwood at 10s. 6d.

The Fyde Water Board.—Particulars of issue of £250,000 3 per cent. stock, 1951. Stock sold to Grieveson, Grant and Company at £98 15s. per cent. net. Secured upon the revenues of the Board and ranks *pari passu*. Proceeds for conversion of short-term loans.

COMPANY MEETINGS, &c.

WATNEY COMBE REID AND COMPANY, LIMITED

SATISFACTORY RESULTS

The annual general meeting of this company was held, on the 10th instant, at the Windsor Castle Restaurant, London, Colonel O. P. Serocold, C.M.G., chairman of the company, presiding.

The secretary (Mr H. S. King) having read the notice convening the meeting and the report of the auditors,

The Chairman, in the course of his speech, said: The upward tendency of trade to which I referred last year has, I am glad to say, been maintained, and, although the improvement is slow, I believe it does definitely reflect the improved purchasing power of the people generally; but we cannot rely solely upon this extra purchasing power of our customers. We have to keep pace as well as we can with the demand for better houses.

With regard to the important matter of the rebuilding and reconditioning of public-houses, it is very difficult to put a definite limit on our expenditure, especially as circumstances beyond our control involving further outlays for this purpose are constantly arising.

Then there are public improvements on a scale hitherto undreamt of, with all the schemes for slum clearance, abolition of overcrowding, and street widenings. These factors combined impose upon us a formidable programme, and it is indeed fortunate that the finances of our company enable us to meet the bill.

I wish to make it plain to the shareholders that these conditions are not ephemeral; we have to face the fact that as years go on licensed houses must be rebuilt, even though the surrounding neighbourhoods have not altered very much. As I have told the shareholders in previous years, all this money can be found only in two ways: Firstly, out of revenue year by year; or, secondly, by raising fresh capital. Without hesitation we prefer that the means should be provided out of revenue.

The subject of malting barley continues to be one which calls for the close attention of the brewing trade. Twelve months ago the position was that the application which had been made some time before by the National Farmers' Union for an increased import duty on malting barley was still under the consideration of the Import Duties Advisory Committee, who had before them the considered objections of the brewers to such a proposal. It will be remembered that when the beer duty was reduced by the equivalent of a penny a pint in April, 1933, the Brewers' Society gave an undertaking to the Chancellor of the Exchequer that in order to give the maximum assistance to British agriculture the society would recommend all brewers to increase as far as possible the proportion of home-grown barley in the brewing of all classes of beer.

That undertaking has been constantly in the minds of brewers ever since, and there is not the slightest doubt that brewers all over the country have faithfully carried it out. That is proved by figures, covering practically the whole brewing trade, which were collected for two years at the request of the Chancellor of the Exchequer, and for the third year at the request of the Import Duties Advisory Committee.

In May last the Import Duties Advisory Committee announced their decision that as the Brewers' Society had expressed the intention of its members collectively to make every effort to purchase in each year ending in June a minimum quantity of home-grown barley amounting to 7,500,000 cwt.—provided there was a sufficiency of home-grown malting barley—and to increase their purchases *pari passu* with any increase in the production of beer as officially recorded in standard barrelage, the Committee will regard the application for an increased duty on malting barley as in suspense. I believe the country are behind the Advisory Committee in its decision.

I have already mentioned that the upward trade tendency has been maintained, and you will notice that our profit on trading account is £69,736 larger than last year. There is a sum of £1,114,291 5s. 5d. with which we have to deal. Your directors recommend that this balance should be applied as follows: To property improvement and contingency reserve, £350,000; final dividend of 2 per cent. on the preferred ordinary stock, £63,708; final dividend of 9 per cent. and a bonus dividend of 3 per cent., making, with the interim dividend paid in February last, 18 per cent. for the year, on the deferred ordinary stock, which will require £382,249. This absorbs £795,957, leaving an amount of £318,330 17s. 5d. to be carried forward.

The report and accounts were unanimously adopted.

ASSOCIATED BRITISH PICTURE CORPORATION, LIMITED

PROPOSED SHARE ISSUE

The annual general meeting of this company was held, on the 13th instant, at Winchester House, London.

Mr John Maxwell (the Chairman) said that he thought it would be agreed that the figures of the profit and loss account were highly satisfactory. The trading profit at £926,482 showed an increase of almost £270,000 over last year's figure, mainly accounted for by the very good results produced by the company's cinemas. To some extent that represented an improvement in trading conditions throughout the country; it was probably true also that the general standard of screen entertainment had improved and that the public were resorting in greater numbers to the cinema.

The available balance was £570,269, and in proposing that the dividend should be at the rate of 7½ per cent. actual, less tax, making 12½ per cent. for the year, the directors felt that they were continuing along the conservative lines of past years, at the same time providing a satisfactory return to shareholders and building up still further a strong and healthy position in regard to reserves. The improvement in the liquid position of the undertaking was reflected by an increase from £180,000 to £648,000 in the surplus of liquid assets.

The outlook in the cinema department of the business was satisfactory, and the returns they had received for the first four months of the current year showed a considerable improvement even over the very satisfactory figures of the year under review. He therefore looked forward with extreme confidence to their being able to submit to the shareholders at the annual meeting next year an even better picture than they had been able to give on the present occasion.

With regard to the matter of the 1,800,000 shares which at present remained unissued, the directors had given a good deal of thought to the position in general and had now decided that the present time would be appropriate for the issue of those shares. They propose, therefore, to offer them at an early date to the existing ordinary shareholders for subscription on bonus terms.

The report was unanimously adopted.

GOVERNMENT RETURNS, &c.

NATIONAL ACCOUNTS

The total ordinary revenue for the week ended August 8, 1936, amounted to £12,061,000, against ordinary expenditure of £11,528,000. After allowing for an increase in Exchequer Balances of £192,552, the operations for the week, as shown below, decreased the gross National Debt by £115,000 to approximately £7,993 millions.*

France, shown in the figures below, was presumably for a special account.

Gold shipments from Bombay last week amounted to about £581,000. The s.s. "Ranchi" carries £424,000 consigned to London, and the s.s. "President Harrison" £157,000 consigned to New York.

SILVER MARKET

The market has maintained a quietly steady tone, and prices have moved only within narrow limits. There has been further buying for American trade requirements, and this, with demand from the Indian Bazaars, offset sales on China account and resales by speculators. There is no change in the outlook, the market showing a steady undertone at the present level of prices.

Quotations for gold and silver are shown below:—

1936	Price of Gold per Fine Ounce	Equivalent Value of £ sterling	Price of Bar Silver in London per ounce standard		Price of Silver New York per ounce -999 fine	1936 Cents
			Cash	Two Months

COMMERCE AND TRADE

SURVEY OF COMMODITY MARKETS

AFTER exhibiting a strong tone in recent weeks, several of the principal commodity markets have now suffered a reaction. Prominent in this movement—which, however, has not been general—were wheat and cotton, each of which forms the subject of a Note of the Week. The Washington Government's forecast of the yield of the American cotton crop was some 300,000 bales in excess of market anticipations, and thus exerted a bearish influence on prices. Other textile fibres were either unchanged in price or dearer than in the previous week. Wheat has been affected by profit-taking sales, encouraged by reports that the yield in some parts of Canada is higher than anticipated; but little actual change in the statistical position of the commodity is indicated. Other cereals showed an easier tendency in sympathy with wheat and oilseeds and reacted slightly for the same reason, despite crop reports which fully confirm market expectations of the damage done by the drought in North America.

Copper remains the bright spot of the metal market, the cash quotation being again higher, notwithstanding the recent increase in production quotas. Tin prices have fluctuated widely, the market being under the influence of reports regarding Siam's future association with the restriction scheme. Meanwhile, business in iron and steel shows only a slight seasonal slackening, and it is reported that August holidays have been curtailed in some producing areas. The rubber market was again dull, but quotations were well maintained.

Supplies of bacon remain inadequate, and the Board of Trade has announced a further relaxation of the import quotas. Other provisions were also firm in price. At the public tea auctions, which were resumed in Mincing Lane this week, quotations were somewhat irregular, but the market in sugar was steady. Other foodstuffs show little general change as compared with last week.

In the United States, the upward trend in the price of primary products has continued, though at a more moderate rate. Moody's daily index of the dollar prices of staple commodities (December 31, 1931 = 100) stood at 184.5 on Wednesday last, against 183.0 a week earlier, 177.8 a month ago and 165.1 on the corresponding day last year.

COAL

SHEFFIELD.—The demand for industrial fuel remains firm and, except in washed smalls and singles, supplies tend to become a little more plentiful. Coking fuels are still in heavy request and the incessant demand for coking smalls, and the busy state of the coke works, leave very little free coal. Export trade does not show any increase and inquiries from Italy for supplies of coal have been turned down by Hull until long-overdue accounts have been settled. The demand for furnace coke remains strong and there

has been an increase of 3s. per ton—the second rise in price within a month—making the quotation 24s. per ton at ovens for inland.

NEWCASTLE-ON-TYNE.—Continued firmness of Northumberland steams, seldom experienced in August, is the feature of the North-East coal market. These collieries are now certain of working regularly until the autumn, and from this period until the spring of next year they are more than fully sold. Durham steams, along with prime classes of bunkers, are a steady market. Good class coking coal is in active demand from home users, but there is little new trade on the export side. Coke of all classes continues to be firm.

CARDIFF.—Conditions of aggravated inactivity have prevailed during the past week. The scarcity of new business has been general, and a great deal of time has been lost at the collieries. Shipments in the cargo in coastwise trades last week totalled only 215,230 tons compared with 357,090 tons the previous week, and 243,102 tons in the corresponding holiday period last year; in view of so relatively small a volume of trade the congestion on the sidings is as great as ever, and the difficulty of finding empty wagons is increasing. There is practically no shipment of coal either to Spain or to Italy, and deliveries to France also are unsatisfactory. Prices are un-very firm. Coke is also strong and there is a fairly steady market for patent fuel. The miners have decided to exercise their right under the wages agreement to apply for a revision of wage conditions, and have notified the owners of an application to increase the minimum on the basis rates from 25 per cent. to 30 per cent. It is practically certain, however, that the audit for the three months ended July will again show a deficit.

IRON AND STEEL

LONDON.—In view of the strong demand for all descriptions of iron and steel the usual August holidays have been curtailed in a number of producing districts, and works are operating at capacity, says the official report of the London Iron and Steel Exchange. The requirements of the home trade leave little surplus for export in any department, but recently many overseas markets have developed considerable activity. An interesting feature is an advance in the export prices of the Continental Steel Cartel, following the increase in the British steelmakers' quotations for overseas destinations. Home demand for pig iron continues to absorb practically all the iron produced, and owing to the curtailment of holidays, makers have had little opportunity to overtake arrears in deliveries against contracts. The position, however, has become somewhat easier than it was a few weeks ago and consumers are now receiving their supplies more regularly. A few contracts have been accepted lately for delivery over the first quarter of 1937, but producers are disinclined to commit themselves so far ahead. Demand for semi-finished steel appears to be expanding, and some consumers are displaying nervousness regarding future supplies. Many works are behind in deliveries, although plants manufacturing this class of steel are operating at capacity. In the finished steel section a slight seasonal relaxation in new business is noticeable. There is no decline in the quantities passing into consumption, however, and most of the producing works are finding it difficult to meet their customers' requirements.

MIDDLESBROUGH.—Although a few small parcels of pig iron have been shipped abroad recently, there is a big demand from home users and local foundries, and makers have no difficulty in disposing of their output. Prices are unchanged, with No. 3 Cleveland foundry pig iron quoted at 75s. per ton delivered locally and No. 1 East Coast Hematite 85s. 6d. per ton with the rebate of 5s. Both semi-manufactured and manufactured steel continue in demand. Local engineering contractors have secured a contract for 25 steel oil storage tanks for Singapore, for which approximately 8,000 tons of steel plates will be required and which will be manufactured locally. Further shipbuilding orders have been placed, a 9,000 ton steamer having been ordered from Tyne shipbuilders, whilst a smaller vessel will be

built by a Tees yard. The export price of ship plates, steel bars, and joists, has been advanced by 10s. per ton. Good Durham blast furnace coke can now be obtained at 24s. 6d. per ton delivered furnaces. New business in iron ore is chiefly for forward delivery. Arrivals of iron ore from Spanish ports are few owing to the difficulties there. Heavy steel melting scrap is 57s. 6d. per ton delivered at the works. Next week is the local holiday week and there will be no market on this account. It is expected that some of the foundries will close down for the week, but some of the steel-works will continue operations throughout this period.

SHEFFIELD.—Though some slackness is visible in the iron and steel market, August being a holiday month, there is no great falling off in business, and consumers are anxious to place orders. Producers, however, are in many cases fully booked for some time ahead. Any parcels of pig-iron on offer are immediately taken up. The demand for forge is increasing, though foundry and basic continue to be in greater request. Both East and West Coast hematite is in active demand and actual business is on a fairly substantial scale. In finished iron, common and marked bars are the best features. Business in crown iron shows an increase compared with the first quarter of the year, but much more could easily be handled. The pressure for basic steel billets continues and although the demand for acid billets is considerable, the urgency is not so great as in basic qualities. Strip, bar and rod requirements remain firm. Orders for railway material are numerous and there is considerable activity in structural, manganese, and high speed tool steels.

GLASGOW.—There is practically no change in the situation this week. Steelmakers, makers of semis, re-rollers, etc., are all working to capacity and in every branch work at present on hand is sufficient to ensure steady employment for some months to come. Users of steel material are finding it necessary to place their orders well ahead of actual manufacturing requirements to ensure supplies adequate for their own commitments. The bulk of the steel business placed is on home account, but several overseas markets are showing more interest and enquiries are much more numerous, while the volume of business actually done is rather greater. While no outstanding shipbuilding contracts are reported for Clyde yards, smaller vessels have been secured. The improvement in the steel structural business is maintained and most of the firms in this particular branch have been able to find employment for more workers.

CARDIFF.—Trade has been fairly active since the holidays. The recent improved level of production in the tinplate and sheet branches is maintained, and a feature has been a further slight expansion in the home market for sheets. The blastfurnaces of the steelworks are operating almost up to capacity. Prices are unaltered, and are ruling at 18s. 9d. per box. f.o.b. for tinplates, £11 15s. per ton f.o.b. for galvanised sheets, and £9 per ton for tinplate bars. Shipments of tinplates at Swansea last week totalled 45,020 boxes compared with 85,242 boxes in the corresponding week last year, and stocks stand at 94,806 boxes as against 17,945 boxes a year ago.

OTHER METALS

COPPER.—Despite the recent increase in the quotas, prices have hardened further, the cash quotation rising on Tuesday to a new high level for the year at £38 11s. 3d. There was a reaction on Wednesday to £38 7s. 6d., but it is generally believed that the decline is temporary, since Continental demand is good. Copper consumption in the United Kingdom during the second quarter of the year, according to the preliminary figures of the British Metal Corporation, amounted to 66,000 tons, against 60,000 tons in the previous quarter, and 65,000 in the second quarter of 1935. The New York export quotation has been advanced during the week, and rumours have been current that the United States domestic quotation may shortly be raised to 10 cents per lb. The market position provides no justification for such a rise, but definite forecasts are impossible since the matter is a question of policy on the part of the American producers.

Sales on the London Metal Exchange, 1,500 tons on Monday; 2,100 tons on Tuesday, against 2,350 tons last week; 975 tons on Wednesday, against 1,350 tons last week. Domestic spot was quoted at 9.40 cents per lb. in New York on Wednesday, against 9.27½ cents a week ago and 9.02½ cents a month ago. Wednesday's official closing price for standard cash in London was £38 7s. 6d. to £38 8s. 9d., compared with £38 to £38 1s. 3d. a week ago. Stocks of refined copper in British official warehouses at the end of last week, at 52,692 tons, show a decrease of 858 tons, while stocks of rough copper, at 3,056 tons, show a decrease of 230 tons on the week.

LEAD AND SELLER.—Lead prices again advanced in response to a good demand, and the sound technical and statistical position of the market. Although quotations closed on Wednesday below the week's best, there was a net gain of 3s. 9d. on the week. Spelter was again lower in consequence of the reported breakdown in the cartel negotiations, discussed in a Note of the Week. The bull account in spelter has now been liquidated so that there is no new immediate danger to the market, even if the cartel negotiations are finally abandoned. But uncertainty will continue to hang over the market until some official pronouncement is received.

Sales of lead on the London Metal Exchange: 2,250 tons on Monday; 550 tons on Tuesday, against 1,200 tons last week; 1,175 tons on Wednesday, against 1,050 tons last week. The New York quotation on Wednesday was 4.60 cents per lb., against 4.60 cents a week ago and 4.60 cents a month ago. The official closing quotation in London for soft foreign shipment during the current month was £16 12s. 6d. per ton, compared with £16 8s. 9d. a week ago.

Sales of spelter on the London Metal Exchange: 500 tons on Monday; 675 tons on Tuesday, against 750 tons last week; 200 tons on Wednesday, against 175 tons last week. Wednesday's quotation in East St. Louis was 4.80 cents per lb., against 4.80 cents the week before and 4.75 cents a month earlier. Wednesday's official closing quotation in London for "good ordinary brands" for shipment during the current month was £13 7s. 6d. per ton, against £13 17s. 6d. last week.

TIN.—Prices show practically no net change on the week, despite wide fluctuations. Uncertainty concerning the future of the restriction scheme is the feature of the market at the present time. The announcement this week that the next meeting of the International Tin Committee has been postponed from September 4th to September 18th had a favourable effect upon prices, since it was anticipated that the postponement related to the discussions with Siam. But it was subsequently learned that the difference between Siam and the International Committee is more than a question of the size of Siam's quota. It appears that the four signatory countries are anxious that Siam shall become a signatory, too: i.e. that future co-operation shall be on the basis of a fixed standard tonnage and the usual variable quarterly quotas. Siam, on the other hand, is demanding a flat rate of production, which would guarantee its tin industry a high level of exports, even when the market was weak. This difference, which is one of principle, will not be easy to solve. No progress towards the renewal of negotiations between Siam and the I.T.C. appears to have been made.

Sales of tin on the London Metal Exchange: 85 tons on Monday; 250 tons on Tuesday, against 80 tons last week; 275 tons on Wednesday, against 290 tons last week. The New York quotation on Wednesday was 41.37½ cents per lb., against 42.75 cents a week ago and 44.12½ cents a month ago. Wednesday's official closing quotation in London for standard cash was £184 5s. to £184 7s. 6d. per ton, compared with £184 5s. to £184 15s. a week ago. Stocks of tin in London and Liverpool at the end of last week totalled 610 tons, an increase of 15 tons on the week.

OTHER NON-FERROUS METALS.—Among other non-ferrous metals, aluminium ingots and bars for home delivery were again quoted at £100 per ton, and rolling billets at £102 per ton. Nickel, for home and export, at £200 to £205 per ton, remains unchanged. Quicksilver, on the spot, was quoted at £12 3s. to £12 3s. 6d. per flask of 76 lbs., the same as last week. Chinese antimony was quoted at £52 to £53 per ton ex warehouse, duty paid, as against £53 to £54 per ton last week. Chinese wolfram for "August-September" shipment was quoted at 25s. to 26s. per unit c.i.f., against 25s. 6d. to 26s. a week ago. Platinum (refined) was quoted at £8 10s. per ounce the same as last week.

TEXTILES

COTTON.—Manchester.—Trading conditions during the past week have been upset by the bearish American Government crop estimate discussed in a Note of the Week. More uncertainty has prevailed as to the future level of prices. The crop forecast of 12,481,000 bales is about 300,000 bales more than expected. The report resulted in a rather sharp fall in prices in Liverpool at the beginning of the week, but since then a substantial part of the decline has been recovered. It is recognised that the final output of cotton will depend upon the weather in the belt during the next two months.

Business in piece-goods has been disturbed by the unsettled raw cotton situation. Sales have been generally unimportant and leading buyers cautious. Demand for India continues disappointing and transactions of more than retail dimensions have been of rare occurrence. To an increasing extent the natives are being supplied by Japan and the home mills. Fancies have attracted a fair amount of attention for Java and Singapore. Only scattered transactions have been put through for Egypt and the Near East. Some moderate lots have been booked for West Africa in heavy shirtings and coloured goods. There has been some falling off in the demand for South America. Irregular buying has taken place for the Dominions, especially Australia and South Africa. A little more activity has shown itself in standard cloths for the home trade. The yarn market has been rather irregular. Only a restricted business has been done, but a fair demand has been experienced in coarse American counts. No increased activity in Egyptian qualities has shown itself.

COTTON TRADE WAGES.—A joint meeting was held in Manchester on Wednesday between the Lancashire cotton spinning employers and representatives of the trade unions, to consider an application from the workpeople for an increase in wages of 14 per cent., bringing the list rates back to the level existing before the 1932 reductions. After the trade union officials had explained the reasons for the demand the employers promised to give a reply at a later date. It is understood that the leaders of the operatives contended that during the last six months there had been an improvement in trade and at the same time an increase in the cost of living; and that in view of the low earnings of many of their members the request for an increase was justified. In trade circles the opinion is held that the present time is inopportune for any increase in costs of production as the industry is still in a depressed condition and spinners find it exceedingly difficult to secure prices for yarn which show any profit at all, after allowance has been made for adequate depreciation of machinery and plant. It is probable, however, that if the workers' demand is pressed they will be able to obtain some concession. The conciliation machinery set up in 1932 has been abandoned by the trade unions, so negotiations will have to be carried on by the representatives of the two sides.

JUTE.—Dundee.—Raw jute prices advanced about 20s. to 30s. per ton, according to grade, on the advice from Calcutta that the mills in the Indian Jute Mills' Association had increased their working period from 50 to 54 hours per week. The negotiations for an agreement with the non-member mills in regard to working hours on the basis of 50 hours for the Associated Mills and 54 for non-members have apparently broken down. The "outside" mills are now all working 54 hours per week in any case, having reduced from 108 and even 120 hours per week, owing to the difficulty finding an outlet for their goods because the Associated Mills had reduced their prices to such low levels. The difficulty in the way of an agreement between the two parties is said to be the inability of the "outside" mills to agree amongst themselves.

The price of Daisee-£ rose to £17 12s. 6d., paid for the full group, and £18 quoted for good single marks, with fours at £16 12s. 6d., but this week there has been a decline to £17 paid for the group of assortment and £16 quoted for fours, October/November. A good deal of covering in has been done by "bear" sellers at the higher prices, but spinners have shown little interest. The rise in raw jute quotations brought out a considerable business in jute yarns, the hessian descriptions being sold at from 1s. 9½d. to 1s. 10½d. for common 8 lb. cops, and 1s. 10½d. to 1s. 11½d. for 8 lb. spools. Quotations are often higher now, but 1s. 10½d. and 1s. 11½d. are the best rates obtainable. Twist is very steady at 3½d. lowest for 3-ply 8 lb., after 3½d. accepted, and sacking yarns are firm at 2½d. for 24 lb. weft and 3½d. for 8 lb. chains. The finer yarns have ruled quiet and about unchanged, but carpet yarns have been fairly freely dealt in at from 3d. to 3½d. for 14 lb. warp. Jute cloth buyers have been slow to purchase, but manufacturers have been able to obtain a slight advance in their terms. The lowest rates are now 2½d. for 10 oz. 40 in. and 1½d. for 8 oz., which

consumers are reluctant to pay. Linoleum hessians are quiet, but steady and a quiet demand prevails for heavy goods. The Calcutta goods market improved slightly, but prices have again weakened this week. On the whole there is little material change over the past month.

GRAIN MARKETS

WHEAT.—After the steep upward movement of recent weeks, wheat prices have suffered a reaction and business has been less active. Although the statistical position has undergone little change, profit-taking has been in evidence this week. The *Corn Trade News* estimates total Canadian production (spring and winter wheat) at 197 million bushels, the smallest since 1919, when the crop was returned at 192 million bushels. The total output in the United States is officially put at 632½ million bushels, against 623 bushels finally returned last year. We comment upon the outlook in a Note of the Week.

On Wednesday last, "September" futures were quoted in Chicago at 110½ cents per bushel, against 113½ cents the week before and 104½ cents a month ago. Quotations in London, Wednesday: No. 1 Northern Manitoba, ex ship, 39s. 6d. per 496 lbs., against 41s. 9d. a week ago; No. 2 Northern Manitoba, ex ship, 39s. 3d., against 41s. 3d. a week ago. According to the *Corn Trade News*, total shipments of wheat and flour last week totalled 1,231,000 quarters, against 1,283,000 in the previous week and 800,000 quarters in the corresponding week a year ago.

FLOUR.—Demand has turned quiet this week and the market has displayed an easier tendency. Wednesday's London quotations (excluding quota payments) were: Straight run, delivered Home Counties, 34s. per 280 lbs., against 34s. 6d. a week ago; delivered inner London, 33s. 6d., as compared with 34s. a week ago. Manitoba patents, ex store, 30s. 9d. to 32s. 3d., against 31s. 6d. to 33s. a week ago. Australian, ex store, 27s. 6d. to 28s., against 22s. 6d. to 27s. a week ago.

BARLEY.—The advance in prices has been well maintained. "October" futures were quoted at 64½ cents per bushel in Winnipeg on Wednesday, against 61 cents a week ago and 49½ cents a month ago. Quotations per 448 lbs. in London on Wednesday were: "English feed" at farm, 25s., as against 25s. a week ago; "English malting," at farm, not quoted.

OATS.—The market has shown no new features this week. On Wednesday, "September" futures were quoted at 42½ cents a bushel in Chicago, against 42½ cents a week ago and 38½ cents last month. Quotations in London, Wednesday: "English Black," at farm, 20s. 6d. per 336 lbs., against 20s. 6d. a week ago; "English White," at farm, 20s. 6d.; against 20s. 6d. a week earlier.

MAIZE.—The upward movement of prices in London slackened this week. But in view of the sound statistical position any reaction seems likely to be of moderate dimensions. "September" futures were quoted on Wednesday at 106½ cents per bushel in Chicago, against 106½ cents a week ago; and 83 cents last month. Quotations in London, Wednesday: "Plate," landed, 26s. 3d. per 480 lbs., compared with 26s. a week ago; "Plate," ex ship, 24s. 6d., as against 25s. a week ago; "Plate," "August," 23s. 9d., as against 24s. a week ago; yellow maize meal, ex wharf, was quoted at £6 10s. to £6 15s. per ton, as against £6 10s. to £6 12s. 6d. last week.

AMERICAN WHEAT MARKETS.—The following table shows wheat quotations for selected weeks in 1934-35:

NEAREST FUTURE	Jan. 3, 1934	Jan. 2, 1935	Aug. 14, 1935	Dec. 31, 1935	Aug. 5, 1936	Aug. 12, 1936
Winnipeg (No. 1, Manitoba)						
—Cents per 60 lb.	65½	82½	82	84½	107½	100½
Chicago (No. 2, Winter)						
—Cents per 60 lb.	84½	98½	86½	75½	113½	110½

The visible supply of wheat in Canada amounts to 66,029,000 bushels against 70,348,000 bushels last week, and 125,984,000 bushels in the corresponding week last year.

SALES AND PRICES OF BRITISH CEREALS.—The following table gives the estimated sale of home-grown wheat during the harvest years 1932-33 to 1935-36:

	1932-1933	1933-1934	1934-1935	1935-1936
Estimated sales of home-grown wheat—				
1 week to August 8	24,053	85,463	46,782	37,575
49 weeks to August 8	8,631,016	11,035,784	13,326,712	13,255,708
Average price of English wheat per cwt.	s. d. 6 8	s. d. 5 0	s. d. 5 4	s. d. 7 6

The following is a statement showing the quantities sold and the average price of British cereals in the past two weeks, and for the corresponding week in each of the years from 1932 to 1935:

Week ended	QUANTITIES SOLD			AVERAGE PRICE PER CWT.		
	Wheat	Barley	Oats	Wheat	Barley	Oats
August 8, 1932.....	Cwts. 26,830	Cwts. 1,786	Cwts. 4,088	s. d. 6 7	s. d. 6 8	s. d. 7 10
August 5, 1933.....	24,053	6,061	17,447	6 8	7 1	5 10
August 11, 1934.....	85,463	3,305	16,502	5 0	8 2	6 7
August 10, 1935.....	46,782	3,883	22,240	5 4	6 7	6 8
August 1, 1936.....	43,950	3,112	10,052	7 4	6 10	6 8
August 8, 1936.....	37,575	2,532	7,506	7 6	7 3	6 6

OTHER FOODS

BACON.—The market has recently been firm on insufficient supplies and the Board of Trade announced an arrangement last week-end for the importation of an additional 8,000 cwt., spread over this week and next. The official quotations (per cwt. for No. 1 Sizable) which formed the basis for dealings on the London Provision Exchange this week were: English, 99s.; Canadian, 93s.; Danish, 100s.; as against 94s. to 96s., 87s., and 96s. last week. Arrivals in London last week included Danish, 14,496 bales;

Canadian, 4,035; Dutch, 2,570; Lithuanian, 1,703, and Polish, 2,477, as against 15,830, 4,252, 2,595, 1,712 and 2,740 respectively, in the previous week.

BUTTER.—Market conditions are firmer and prices are higher on the week. Quotations (per cwt.) on the London Provision Exchange on Wednesday were: New Zealand, finest salted, 118s. to 119s.; Australian, choicest salted, 117s. to 118s.; Danish, 126s. to 128s., compared with 116s., 115s. and 125s. to 128s. respectively, a week ago.

CHEESE.—Cheese met with an improved demand and prices have hardened. Quotations (per cwt.) on the London Provision Exchange on Wednesday were as follows: English, finest farmers, 70s. to 74s.; Canadian, finest coloured, 66s.; and New Zealand, finest coloured, 65s., against 70s. to 74s., 64s. to 65s., and 61s. 6d. to 62s., respectively, a week ago.

COCOA.—Firm conditions have been obtained in the cocoa markets this week. The spot quotation in New York on Wednesday was 6½ cents per lb., as against 6½ cents per lb. last week. In London, on Wednesday last, good fermented new crop, "October-December," was quoted 28s. 7½d. per 250 kilos., c.i.f. Continent, against 28s. 3d. a week ago. Last week's movements of cocoa in London were as follows: Landed, 541 bags; delivered for home consumption, 1,768 bags; exported, 1,072 bags; stocks, 160,479 bags, against 155,780 bags a year ago.

COFFEE.—The London market continues quiet; the New York spot market is steady with prices unchanged. On Wednesday, Rio No. 7 (cash) was quoted at 8 cents per lb. in New York, as compared with 8 cents per lb. last week and 7½ cents per lb. a month ago. Movements of coffee in London last week were as follows: Brazilian, landed, 297 cwt., delivered for home consumption, 76 cwt.; exports, nil; stocks, 10,432 cwt., against 15,185 bags a year ago. Central and South American, landed, 108 cwt.; delivered for home consumption, 1,827 cwt.; exported, 1,310 cwt.; stocks, 98,349 cwt., against 148,449 packages last year. Other kinds, landed, 943 cwt.; delivered for home consumption, 2,760 cwt.; exported, 608 cwt.; stocks, 143,508 cwt., against 166,215 packages last year.

EGGS.—The egg market has displayed a firmer tone this week and prices have risen. At Smithfield, on Wednesday, English (ordinary packing, Grade I, about 15-15½ lb.) realised 15s. to 15s. 6d. per 120, as against 14s. 6d. to 15s. 3d. last week, while Danish (15½ lb.) made 10s. 6d. to 10s. 9d. per 120, as against 10s. 3d. to 10s. 6d. last week.

FRUIT.—Business has been well maintained throughout the week but prices generally are lower, on plentiful supplies. According to *The Fruitgrower*, English apples are much in evidence, but the market for Australian and New Zealand apples is restricted. Demand for pears is not so good and prices have eased. Supplies of English plums are increasing and prices are falling. Italian greenhouses, too, are cheaper. Black-currant, raspberry and loganberry prices are firm. Peach and nectarine prices are slightly higher. Demand for oranges is good, but the lemon trade is only moderate, with prices lower. Quotations for grapes are easier this week.

MEAT.—Business at Smithfield Market has been quiet, with prices showing little change. On Wednesday last, Argentine chilled hind-quarters were quoted at 3s. 10d. to 4s. 4d. per 8 lbs., as compared with 3s. 10d. to 4s. 4d. a week ago. New Zealand frozen mutton was 3s. to 3s. 8d. per 8 lbs., against 3s. to 3s. 8d. a week ago. According to the Smithfield Market official report, supplies during last week amounted to 7,705 tons, an increase of 817 tons on the corresponding week last year. Beef and veal accounted for 4,318 tons, mutton and lamb 2,490 tons, and pork and bacon 534 tons, as compared with 3,817, 2,349, and 411 tons, respectively, in the same week of 1935.

PEPPER.—Wednesday's spot price for black Lampung (in bond) was 2½d. per lb., against 2½d. a week ago. Movements of pepper in London during the past week were as follows: Black, landed, nil; delivered, 7 tons; stocks, 1,749 tons, against 1,767 tons a year ago. White, landed, 4 tons; delivered, 74 tons; stocks, 12,195 tons, against 18,277 tons a year ago.

RICE.—Firm conditions have been obtained in the London market and prices have improved. The spot price of Burma No. 2, cleaned, new crop, was 9s. per cwt. ex warehouse on Wednesday, as compared with 8s. 6d. per cwt. a week ago. "August-September" in singles to Continent and U.K. was quoted at 8s. 1½d. per cwt., against 7s. 10½d. last week. Movements in London during the past week were as follows: Landed, 596 tons; delivered, 277 tons; stocks, 2,627 tons, against 10,031 tons a year ago.

SUGAR.—Both the London and New York markets have been quiet, with prices unchanged. The spot price in New York on Wednesday was 3-65 cents per lb., as compared with 3-65 cents per lb. last week and 3-70 cents per lb. a month ago. Wednesday's sales of raw sugar in London included December delivery at 4s. 5½d., against 4s. 5½d. a week ago. The movements of raw sugar at public warehouses in London and Liverpool last week were as follows: Imports, 11,467 tons, against 8,220 tons last week and 9,858 tons in the same week of last year; deliveries, 14,465 tons, against 25,152 tons last week and 7,931 tons last year; stocks, 113,614 tons, against 116,612 tons last week and 143,907 tons last year.

TEA.—The quantities catalogued for the public auctions which were resumed in Mincing Lane this week comprised 29,205 packages of Indian and 24,197 packages of Ceylon tea. The tone generally was good, but some irregularity was apparent both in Indian and Ceylon descriptions.

VEGETABLES.—Supplies of vegetables have been plentiful this week, says *The Fruitgrower's* report. Tomato prices are well maintained, but cucumbers have eased. Cabbages and marrows are much cheaper. Runner beans, though very abundant, are fetching good prices. All imported onions are, however, easier. Outdoor mushrooms have declined in price. Business in potatoes at the various London markets has been moderate, with prices steady. At the London Borough Market on Tuesday, King Edward made 5s. 6d. to 6s. 6d. per cwt., the same as last week.

MISCELLANEOUS COMMODITIES

VEGETABLE OILS AND OILSEEDS.—After a period of excitement and rising prices, oilseeds have taken an easier turn. Linseed, on expectations of a considerable reduction in the yield in the United States in consequence of drought, had remained firm, but with easy conditions in wheat prices declined in spite of an official crop report which fully confirmed market ideas as to deterioration. This report gave the condition on August 1st, at 31-6 per cent. of normal—comparing with 55-8 per cent.

a month before and 71-85 a year ago; and an estimated yield around six million bushels as against 9,480,000 bushels on July 1st. Thus a probable output of 237,000 tons a month before has been reduced by one-third, so that 150,000 to 160,000 tons is all that is expected. The reduction and the probable extent of the U.S. call on foreign sources to make up the deficiency had already been discounted.

Shipments from Argentina are not so large, but the quantity on passage to Europe has been increased to 160,800 tons, including 41,100 tons from India. The available exportable surplus in Argentina has been reduced to 392,000 tons, which with 68,000 tons expected from India gives a total of 460,000 tons, as against 702,000 tons actually shipped in the remainder of 1935. A fair business in Calcutta to Hull and from the Plate to the Continent was done last week to cover immediate wants. Linseed oil has also eased, and raw oil for August and September-December delivery has declined to £27 per ton (naked) ex Hull. Cotton seed is quieter

following the American Bureau report of the cotton crop. Oil on spot is scarce and quotations are maintained. Business in new seed oil has not yet commenced. Shipment of the new Egyptian cottonseed is expected to begin early in September.

RUBBER.—During the past week the market has again had a dull tone. Quotations in New York are a shade easier, but London rates are practically unchanged on the week. The spot price in New York on Wednesday was 16½ cents per lb., compared with 16½ cents per lb. a week ago and 16½ cents a month earlier. Wednesday's official buyers' price for standard ribbed smoked sheet on the spot in London was 7½d. per lb., as against 7½d. on the corresponding day a week ago. In forward positions, business has been done at 7½d. for "October-December" shipment, as against 7½d. to 7½d. a week ago. Stocks in London and Liverpool at the end of last week totalled 112,243 tons, against 113,312 tons a week earlier. A year ago stocks amounted to 175,201 tons.

SPAIN—AND BRITAIN

Yet another week of barbarous hostilities has passed in Spain; and still the only certainty is that the struggle will be bitter and protracted. At the end of last week the rebel General Franco's southern force, supported by thousands of black troops transported from Spanish Morocco, captured Badajoz; and the victory was celebrated by the wholesale execution of about 2,000 of its defenders. This has roused the passions of the Spanish Government's supporters, and they have also begun to execute prisoners.

The civil war in Spain has thus given Spain's Moorish subject population on the African side of the Straits of Gibraltar an unlooked-for opportunity to take revenge upon its European masters. The massacre of the citizens of Badajoz at the hands of Moroccan mercenaries in 1936 of a swift and terrible retort to the overthrow of the Rifi is a far greater portent than the annihilating defeat which Abd-al-Karim had previously inflicted, in 1921, upon a Spanish army under the command of the unfortunate General Silvestre; for fifteen years ago it was at any rate on Moroccan ground that the Spaniards suffered their defeat by the Moors, whereas to-day we see Moors massacring Spaniards in Spain itself.

In other parts of the battle area, rebel warships have been co-operating with the rebel land forces in Guipuzcoa in an attack on San Sebastian, with the aim of securing a seaport in the north; but so far without avail. Asturias is still in the hands of the miners' associations; the Government forces have extended their front from Catalonia until Saragossa, the arsenal stronghold of the rebel General Mola's northern forces, is almost surrounded; and in the south-east the Government's levies have pushed forward in Teruel and southward from Valencia. Stories of pressure on Madrid and of food shortage in the capital are apparently exaggerated.

Meanwhile, every day that passes, even if it brings news of rebel progress, also brings evidence of the lack of popular support for the rebels in the districts they command; sabotage and guerrilla warfare in their rear are

evidently taking place; and the report that the white rebel officers have to disarm their own black troops except during action itself emphasises the strategical disadvantages of small numbers and a hostile terrain under which they are conducting their criminally reckless campaign. It is a savage tragedy which they have staged in their motherland; and their own acts have ensured that a revolt which has quickly become a civil war will be contested, to the point of extermination, with the utmost brutality on both sides.

This week, however, even the most unimaginative and indifferent foreign observer must have been made aware of the extreme gravity of the issue which the Spanish rebellion has raised for Europe as a whole. During the week British, French, Italian and German aeroplanes—the British machines were civil craft capable of rapid conversion for bombing purposes—have been arriving in Spain upon one pretext or another; and this despite British, French and German official declarations that the transactions were frowned upon. As we write, there is still no reply from Signor Mussolini to the French Government's proposal for an effective agreement among the chief European Powers concerned to abstain from active assistance to either side in Spain. The British, French, Russian, Polish, Swedish, Belgian and Portuguese governments have agreed to it; but the German Government has suspended its reply in order to force the Spanish Government to lift its naval blockade in certain waters.

On this point it is high time some plain speaking took place—to the British as much as to the Italian, French and German Governments. As we pointed out in our leading article a fortnight ago, so long as none of the countries concerned officially recognises the rebels in Spain as belligerents, all those States are legally bound not to lend the rebels any aid or succour—unless they are prepared to levy war on the Spanish Government itself. "Rebels, as outlaws, have no rights." If, therefore, the objective of all these Powers is an agreement to lend no aid to either side it is, in effect, a voluntary undertaking

by the democratic Powers to refrain from lending perfectly proper aid to a friendly and constitutionally appointed Government—for the sake of European peace. This is a very great surrender by the Western Powers. It means taking the risk of a further encroachment of the dictatorships which, if they continue to extend and to combine, may become an increasing menace to freedom everywhere. But it also means a possible menace to vital French and British interests.

Such a self-denying ordinance could, therefore, only possibly be justified on the assumption that the embargo on aid to either side is completely effective; and also that it is comprehensive. For the Abyssinian story—as well as the experience of the past month—clearly shows that petrol and coal supplies may turn the scale as effectively as guns or bombing planes. What is the chance that any effective list of warlike stores will be agreed upon by the Powers concerned? The experience of the League's Sanctions Committee is still too painfully fresh in our minds to warrant sanguine expectancy that a complete ring can be maintained around Spanish territory without an effective blockade. Even in international law, a declaration of blockade does not suffice; to be legally binding a blockade must be effective.

Yet the attitude of the Powers at the end of this week is hardly in keeping with absolute neutrality—still less with friendliness to the properly constituted Government of Spain. Germany has entered an emphatic protest against the searching of a German vessel by a Spanish Government cruiser, has ordered her warships to take even forcible steps to prevent similar action in future, and is apparently to demand an indemnity—and this in spite of the fact that the Spanish Government, as it was obviously entitled to do, had declared a blockade of certain waters and was engaged in enforcing it. It would be strange doctrine to deny a Government the right to enforce a blockade against rebels seeking to overthrow its authority, unless and until other Governments choose to regard these rebels as "belligerents"!

Sir Samuel Hoare, on the other hand, has announced the British Government's decision to ban the export to Spain of all forms of arms and munitions contained in the Arms Export Prohibition Order (1931). This includes civil aircraft, whether flown to Spain or sent whole or in part by ship. Exporters must even satisfy themselves that such exports are not going to other countries which might tranship them to Spain. While this might have been suitable action as part of an agreed international neutrality plan, it has, in fact, an anti-Government bias so long as the Fascist powers continue to allow their nationals to send aid to the rebel forces.

Nevertheless, it remains true that our interest—no less than our duty as a democratic Power—incline us to the side of the Spanish Government. Indeed, even those who are most afraid of the "red" complexion of that Government's supporters must realise that the more they are denied sympathy and support by other democratic countries, the more "red" the anti-Fascist forces are likely to become.

But perhaps the consideration most likely to appeal to Mr Baldwin and his colleagues is the strategical situation in the Western Mediterranean and the traditional attitude this country has long adopted towards the ambitions of Germany and Italy in that region. Some highly relevant facts in this connection are recalled in a Note on page 343. Conservative and Liberal statesmen in the past have not hesitated to assert the predominance of British and French interests in Spain and in the African littoral. And, on Wednesday, the compelling voice of General Smuts from South Africa urged these considerations on the British Government.

We see nothing hypocritical in a stout defence of our own interests when they coincide with duty and good sense. Unless the British Government show without delay that they are prepared to act, together with the French and other Governments, in upholding the international rights of democratically elected Governments, the success of the rebels' violence in Spain may prove merely a prelude to the forcible successes of dictatorships throughout the length and breadth of that Continent to which we ourselves are indissolubly joined.

THE PRESIDENTIAL CAMPAIGN

SINCE the Presidential campaign opened with the party conventions and the acceptance speeches of candidates, Mr Landon and Mr Roosevelt, the war between the parties has been a series of skirmishes, and the candidates themselves have more or less retired from direct action. President Roosevelt is waiting for the first rush of Republican zeal to exhaust itself, and Governor Landon is hoping that the Republican turn of the tide will continue right up to the election and carry him to the White House without any open aggression on his part. Practically all the "straw" votes so far taken suggest that at present the parties are more nearly equal than at any time since the Democrats were returned to power, and that if the election were held now Governor Landon might even obtain a majority in the electoral college, if not in the popular vote. It is more significant that the borderline States which are at present inclined to be Republican are those with the largest electoral vote, and that a slight swing of one of these States towards the Democrats would give Mr Roosevelt victory, while a swing in all of them would produce a Roosevelt landslide. It seems reasonable tactics therefore for Mr Roosevelt to hold back his main attack with the aim of converting some or all of these States on the eve of the election; and Mr Landon is probably playing his best hand by trying to antagonise nobody, and hoping that his opponents will make a serious mistake.

Mr Landon's acceptance speech added nothing to the country's knowledge of the man, or his programme. The compromise platform drawn up by the Republican Convention made it difficult to see whether the Progressives had really defeated the Old Guard, or whether the old policies were merely disguising themselves in Progressive clothing for the sake of the election. The candidate's own statements on the constitutional amendment, the civil service and the gold standard suggested that he was determined to control his own destiny. But the only additional clarification of his policies was drawn from him by the Socialist candidate, Mr Norman Thomas. The Governor had said that he favoured the right of labour to organise without interference from any body. This, in fact, was the formula generally used by the industrialists to prevent labour organisers from coming into any industry or factory from the outside, and to buttress the company-controlled union. It was only when challenged that the Governor stood up for the right of labour to organise itself.

President Roosevelt, on the other hand, made one of his most effective speeches in acceptance of his party's nomination. He declared that the American Revolution was fought to win freedom from political autocracy; that in the subsequent years economic royalists had carved out for themselves new dynasties, and that the organised power of the Government must be used to protect citizens from the new economic tyranny. This attitude has naturally been attacked on the ground that it spells an end to political and economic liberty, and that the true remedy for economic tyranny is for the Government not to enhance its own power but to restore the rules of free, small-scale, competition, and merely hold the ring. This is a difficult argument to maintain, since it has yet to be proved that Government control can be fully removed from industry in existing circumstances in the United States. Any programme formed along these lines automatically becomes suspect as a mere attempt to avoid effective Government regulation of industry, rather than a serious alternative. This is doubtless why many American observers feel that although the Republican Party profess an equal desire to that of the Democratic Party to prevent economic abuses, the spirit is not in them; whereas, however numerous the mistakes that may have been made by President Roosevelt, he really understands the problem of the day, and is emotionally as well as intellectually determined to find the solution. Many seem to expect that, however sincere Governor Landon may be, if he were returned as President, control of his policies would rapidly be taken over by the Eastern Old Guard. His voice, they say, may be Jacob's voice, but the hands are the hands of Esau.

Vice-President Garner, another Democratic candidate for re-election, has so far been silent, but his counterpart on the Republican side, Colonel Knox, is waving the firebrand

of Old-Guard Republicanism, and obviously enjoying his attacks on the New Deal. This is a convenient division of labour, which leaves Mr Landon free to express his sympathies with many of the New Deal's functions—though not, of course, with the manner in which they are implemented by the Democrats.

In the political field there are two other items of major relevance to the outcome of the election. The more important is the Trade Union quarrel and the emergence of Mr John L. Lewis as the pro-Roosevelt leader of an aggressive industrial unionism. But the more irresponsible Lemke-Coughlin-Smith-Townsend combination—whose policies include inflation, pensions for practically everybody, the wealth shared, every man a king, and no truck with Communism—may have a decisive effect in a few States if it succeeds in tilting the electoral scale away from one major Party toward the other. The Republicans hope that the Democrats will suffer more than themselves; but it remains to be proved whether those who now shout for this new Union Party will desert their old allegiances when the time comes to vote.

It is difficult to tell which party will benefit from the chief economic developments of this year: the drought and business recovery. The drought, like the floods earlier in the year, provides an excellent example of the necessity to prevent disaster and starvation by Government intervention, whether by civil engineering works, reforestation, and soil erosion control, or by regulation of production and prices. This obviously puts the Republicans at a disadvantage, since they feel that they too must advocate relief for the farmers if they wish to win the farming vote. Any attempt on their part to assert that the responsibility should be shouldered by the separate States is countered by the Democrats with a reference to Kansas, and a suggestion that the policies preached for Washington should be practised at Topeka.

The rôle of business recovery is difficult to estimate. Normally, a prosperous America tends to be Republican, and the easing of the economic strain of depression should proportionately weaken the force of the New Deal arguments. But the erratic unemployment statistics suggest that recovery has not yet been accompanied by a parallel increase of employment. Many millions of voters are still dependent upon Federal relief, and the switch-over to Republicanism may not occur by November. Many of the business men who supported Roosevelt in 1932 under the panic effect of the depression have, of course, already returned to their natural faiths. But doubtless the President will do everything possible to base his election, not merely on the claim that he has induced a business recovery, but that he has also controlled recovery so as to promote economic reform, and that a reversion to the old Republican faith would be a return to the disastrous regime which culminated in the Great Depression.

There remains one other possible influence. Should political developments in Spain embroil Europe in growing difficulties, there would develop a struggle in America between the desire to trade and the desire to avoid entangle-

ment with the European Powers. Even if this complication does not arise, the campaign has all the signs of growing fierceness. The outcome of the election is clearly by no means as certain as it appeared six months ago. Landon has great hopes; but the President still has the odds.

MOVEMENTS IN FOREIGN TRADE

FOREIGN trade has for long been the weakest link in the chain of British recovery. The total of imports, it is true, has been well maintained, but the measures which have been taken to divert the purchases of the British market from one group of countries to another have had serious effects, and can hardly fail to have still further effects in the future, on the volume and character of our exports. The failure of exports to recover to their pre-depression level is responsible, directly or indirectly, for the great mass of abnormal unemployment in the country, especially in the depressed areas. In recent months this weak link in the chain has appeared to be weakening still further, for the previous rate of recovery in exports, inadequate though it was, has very perceptibly slowed down. The July figures (analysed in a separate Note on page 346) show large increases both in the total of exports and also in some of the commodities which have been most conspicuously lagging behind. It is to be hoped that this heralds a change in the trend, but it would be foolhardy to base any conclusions on a single month's figures.

The table below gives particulars of imports from, and of exports to, European countries and their extra-European dependencies in the first six months of recent years:—

TRADE WITH EUROPEAN COUNTRIES

* Including Dependencies.

The most notable feature of this table is the drastic reduction in trade with Italy. Imports have almost disappeared, while exports have been cut down to less than 6 per cent. of their 1935 value. If Italy is left out of account, total imports from Europe have increased from £115,164,000 to £130,098,000, while exports have fallen from £68,017,000 to £66,012,000. The increase in imports is fairly general, only Russia and Greece having failed to benefit from it. Imports from Finland and Roumania were actually higher in the first half of 1936 than in the same period of 1929, while the small countries included in "Other European Countries" are now selling us almost twice as much as seven years ago. The largest increases under this head are shown by Lithuania, Hungary and Yugoslavia. There is rather greater variety of experience in exports to European countries. Most countries show declines, but the Scandinavian and Baltic countries are conspicuous exceptions. The second table shows figures of trade with foreign countries outside Europe:—

Total	200,177	88,627	96,417	105,333	85,204	35,139	38,150	40,521

* Including Dependencies.

Much the same changes are evident here as in European trade. Imports show a considerable increase, while exports are very little better than a year ago. Particularly noticeable, on both sides of the account, is the increased volume of trade with the United States; the total of imports and exports, which was £47,590,000 in the first half of 1935, has increased to £57,427,000 this year. Moreover, the proportionate increase has been greater in our exports to than in our imports from the United States. In the case of Argentina, however, which is the second most important country in the table, our imports are lower by £1,353,000, while our exports are higher by £198,000. In view of the fate of the Roca Agreement, and the apparent difficulty in producing an acceptable substitute, it is extremely unlikely that our trade with Argentina will continue to show this contrast to the trend of our trade as a whole.

The next table gives details of our trade with the Dominions and Colonies:—

TRADE WITH BRITISH COUNTRIES—FIRST HALF-YEAR
(000's omitted)

From or to	Imports				British Exports			
	1929	1933	1935	1936	1929	1933	1935	1936
Irish Free State	£ 19,480	£ 8,140	£ 8,417	£ 9,144	£ 17,212	£ 9,119	£ 9,921	£ 10,309
West Africa	6,963	3,746	4,624	6,052	5,832	3,134	4,016	4,902
South Africa	12,959	7,839	6,447	7,213	16,244	10,567	15,748	17,968
India and Ceylon	38,155	18,876	23,147	28,922	43,250	17,476	20,235	18,307
Straits Settlements	6,171	1,789	4,047	2,904	6,499	2,118	3,039	2,925
Australia	32,853	25,374	30,085	32,259	25,241	9,991	13,402	14,778
New Zealand	32,709	22,212	23,042	26,151	9,551	4,351	5,935	6,928
Canada	21,686	20,414	24,139	31,884	17,903	7,204	9,537	10,740
West Indies	2,862	2,743	3,596	3,978	2,251	2,222	2,147	2,308
Other Possessions	18,244	12,518	16,310	17,768	14,815	11,159	11,836	11,923
Total	190,082	124,231	143,864	167,273	158,898	77,341	95,866	101,118
Excluding the Irish Free State	170,582	116,091	135,447	158,129	141,686	68,222	85,945	90,809

Here there is substantial progress on both sides. Imports are higher by £23,409,000, or 16.3 per cent., while exports

are £5,252,000, or 5.5 per cent., higher. Malaya has both bought and sold less, while lower exports of cotton goods from Lancashire to India have resulted in a reduction of India's total imports of British goods. With these exceptions, every exchange of trade shows an increase.

These tables shed a certain amount of light on the movement of British trade. In particular, it is possible to derive from them some conclusions about the causes of the recent hesitation of British exports. But the tables as they stand are not best adapted for this sort of comparison, for only the British countries enjoy a substantial uniformity of currency conditions. The other two lists include depreciated currencies, gold bloc currencies and countries with restricted currencies. Accordingly, we have made a separate arrangement of the figures of British exports for the first six months of 1935 and 1936, dividing the countries of the world according to the nature of their currencies. The first group consists of the gold bloc—France, the Netherlands and Switzerland, together with the colonial dependencies of the first two. The second group consists of all countries with devalued or depreciated, and substantially unrestricted, currencies. It therefore includes the whole British Empire, the sterling bloc, and such foreign countries as the United States and Japan. The third group consists of those European countries which have chosen to restrict currency transactions rather than devalue their currencies. Lastly, Latin America is considered as being *sui generis*, since most of its currencies are both depreciated and restricted. The results of this rearrangement are shown below:—

BRITISH EXPORTS, 1935-36

	First 6 months		Change
	1935 (£'000)	1936 (£'000)	
Gold bloc	19,536	19,547	+ 0.1
Depreciated and devalued:—			
(a) British countries	95,866	101,118	+ 5.5
(b) Other countries	36,372	38,506	+ 5.9
European restricted countries	25,886	20,026	- 29.3
Latin America	14,379	14,492	+ 0.8

This table suggests that the cause of the recent failure of British exports to advance as rapidly as before is to be found in the circumstances of our customers rather than, as has been suggested, in any such rise in British costs as would make the pound sterling overvalued. For if there had been such a rise it would presumably have made the pound overvalued relatively to such currencies as the dollar and the belga as well as to other currencies. But exports to the countries in the "depreciated and devalued" group have increased, whether those countries are members of the sterling bloc or not. It is interesting to notice that the ratio of increase in exports to the non-British countries in this group is slightly higher than to the Empire. The only decline, and that a large one, is to the European restricted countries. Most of this, of course, is accounted for by the fall in trade with Italy, but even if Italy is left out of account, British exports to these countries show a decline. The last table sets out the course of our re-export trade:—

RE-EXPORTS—FIRST HALF-YEAR

To	(000's omitted)			
	1929	1933	1935	1936
Soviet Union	£ 1,064	£ 475	£ 2,539	£ 5,785
Germany	14,258	5,112	4,248	3,874
Netherlands*	2,424	1,065	1,270	975
Belgium	5,462	2,547	2,763	2,527
United States*	11,207	4,611	3,943	4,688
Other foreign countries	9,111	3,515	3,641	4,724
Irish Free State	5,950	3,161	5,257	4,725
Other British countries	4,941	2,190	2,340	2,369
Total	60,562	25,208	28,844	32,407

* Including Dependencies.

The degree of recovery shown is encouraging and surprising, in view of the continued trend in the world towards purely bilateral trade. Compared with the 1929 figures, however, this section of our trade is still very depressed.

THE OUTLOOK FOR COPPER

It is a sign of a healthy market when rising prices march *pari passu* with increased production. The standard cash quotation for copper stood at £37 18s. 9d. on Thursday, August 20th, compared with an average of £37 5s. 1d. for July and £34 14s. 11d. for last January. The latest increase, which recently carried the quotation to the highest level for over three years, occurred after an announcement that the production quota of the three countries—Chile, the Belgian Congo and Rhodesia—which co-operate in the International Copper Scheme, was to be increased, as from August 1st, from 70 to 75 per cent. The decision was taken deliberately, in order to check any unduly rapid advance in copper prices, to discourage speculation and to ensure adequate world supplies.

It is clear that, although the average price of copper for 1936 will exceed £35, against a little under £32 in 1935, it will be less than half the average of nearly £75 10s., realised in 1929. The contemporary willingness of those concerned to increase production can therefore be regarded as an explicit and convincing recognition of the far-reaching internal change which has occurred in the industry during the last six or seven years. With the causes of this change we have already dealt in earlier issues of the *Economist*. On May 19, 1934, for example, we showed that the potential world output of copper had doubled, since the pre-war years, as a result of the rationalisation of mining and refining and the development of new producing countries. The position was complicated by the retirement of the United States behind a prohibitive 4 cent tariff wall, and by the simultaneous advance of "low cost" areas in Rhodesia, the Belgian Congo, Canada and Chile. A producer's war was postponed, if not altogether obviated, by the putting into force, on June 1, 1935, of an international scheme.

The results of this scheme can now be judged in the light of nearly fifteen months' experience. The verdict on its working has undoubtedly been favourable. Unlike earlier schemes, for which the "high cost" producers of the United States were wholly or mainly responsible, it has been shown to be less concerned with the raising of prices than the stimulation of consumption.

Although Canada did not adhere to the scheme, her important copper producers—International Nickel and Noranda—have maintained a friendly attitude. In the first five months of 1936, Canada's copper output was no more than 87,108 short tons, against 89,698 short tons in the corresponding months of 1935, although the nickel output of the Dominion showed an advance of over 32 per cent. in the same period. In view of the intimate connection between the production of the two metals in Canada, it would appear that the leading Canadian producer, International Nickel, has been mining ores with a considerably lower copper content this year than last.

The statistical position of the industry in 1928-29 and the last four years is set out in the following table:—

PRODUCTION, CONSUMPTION AND PRICES OF COPPER
(In thousands of long tons)

Family provision scheme

A scheme to secure a Capital Sum payable at death and a regular income over a period of years for dependants in the event of early death, at a cost which is little more than that of ordinary life assurance. It is readily adaptable, and rates will be quoted on application for policies to suit the needs of each individual.

EQUITY & LAW LIFE ASSURANCE SOCIETY

18 Lincoln's Inn Fields, W.C.2
Established 1844 Funds exceed £23,000,000

Despite the restriction scheme, the world's output of copper rose significantly in 1935. In Rhodesia, the Belgian Congo and Chile the curtailment of output effected in the last seven months of the year was not sufficient to compensate for the increase registered during the preceding five months. Although these three countries will show a moderate reduction in their total output for the current year, a calculation based on the published quota figures suggests that their combined output will exceed 435,000 tons, against 518,000 tons in 1935. The total will be increased if, as is possible, there is a further raising of quotas before the end of the year. Altogether, however, there is a strong presumption that rising production in non-restricting areas will more than offset the moderate decline in the restricting countries, and that world supplies in 1936 will be little lower than in 1935.

In spite of—or, perhaps, because of—the liberal way in which restriction has been operated, confidence in the outlook for the metal has steadily strengthened. At the same time, the statistical position has improved. As our table shows, last year's consumption, outside the United States, was 133,000 tons higher than in the preceding year and exceeded production in 1935 by 95,000 tons. In the present year, production outside the United States has been practically stationary, while consumption has further advanced by about 10 per cent. Copper stocks, consequently, have declined. The total stocks in warehouses recognised by the London Metal Exchange—the only "visible" and "free" stocks in existence outside the United States—totalled 78,798 tons when the scheme was inaugurated on June 1, 1935. Four months later they had risen to 92,642 tons, but at the end of last week they were no more than 54,505 tons, including 51,600 tons of refined and only 2,905 tons of rough. A comparative scarcity of rough copper has thus already developed, and may be an additional inducement to producers to increase their supplies.

The policy pursued by certain important producers in the United States, however, has been more equivocal. The effort to secure the highest possible price, at any cost, which wrought destruction upon Copper Exporters, Incorporated, has never been really abandoned. The old game of cat and mouse between producers and consumers still goes on, and sales of copper show disturbingly wide fluctuations from one month to another. The domestic price of copper has already been raised this year, first to 9.25 cents, and subsequently to 9.75 cents a pound. Any further increase, say to 10 cents, would accentuate the existing tendency to hand-to-mouth buying by consumers. It is significant that copper consumption in America, last year, was still more than 50 per cent. below the level of the boom years, though the rest of the world consumed 28 per cent. more copper last year than in 1928-29.

At the moment, there are indications of a difference of opinion between the supporters of higher prices (the Anaconda and Phelps-Dodge groups) and Kennecott (i.e. the Guggenheim group). It is reported that Kennecott intends to increase its production, from September 1st next,

in order to check an unhealthy increase in the American domestic price. Such action would be welcome, but it is doubtful how much can be read into it. The Guggenheim group refused at first to co-operate when Anaconda and Phelps-Dodge increased their prices last February. It came into line, however, two months later, and raised no objection when the price was subsequently increased to 9.75 cents. Whether it will hold out in the present instance, therefore, is uncertain.

Fortunately for the successful working of the international scheme, the American copper market is now so largely insulated from the rest of the world that no untoward developments inside it can seriously threaten the general position, so long as present arrangements endure. American exports of copper now consist chiefly of metal treated by American Customs smelters from foreign ore. It was agreed last year that exports of domestic metal should not exceed 8,000 tons a month, and this agreement might be valuable if unduly high domestic prices induced something of a "buyers' strike" in America.

HOW TO RUN THE RADIO

The Ullswater Committee on the future of broadcasting in Great Britain reported last March. The Government announced its intentions in July, but the necessary legislation has not yet been passed through Parliament. The brief period between the time when the subject of radio control ceased to be sub judice and the time when, for ten more years, it becomes chose jugée, has thus not entirely elapsed. It can still be regarded as a matter of Urgent Public Importance—the more so on the eve of the radio industry's annual exhibition. We are, therefore, going over to our Radio Correspondent for a short talk on "How to Run the Radio."

THERE are usually considered to be two alternative systems of controlling, or not controlling, radio broadcasting. On the one hand there is the British system of complete monopoly. One says "British," although it is almost universal in Europe, because it is in Great Britain that it has found its highest expression. The results of that system we know. Everything is in the best of taste. Indecorum is unthinkable. The programmes are arranged as a whole by men of enlightened purpose and clear perception. One hour of Music Hall is duly balanced by twenty minutes of elementary Spanish. The public is not allowed to satiate itself on the banalities of Bach or Beethoven without a compensating admixture of the more up-to-date composers, such as Honegger or Bartók. News is dispensed, not to interest the many, but to inform the cultured few. Above all, the supreme purpose of a broadcasting system is served: the Sabbath is not desecrated. But this system, with all its advantages, suffers from a few defects. Art should be its own reward. Unfortunately, humiliating though it may be, broadcasting costs money. Since ideals are not to be chaffered in the market place, a system such as we have been describing needs to be financed by a compulsory licence duty levied on listeners, who assume (wrongly, of course, but not unnaturally) that they are entitled to some say in what they are to hear.

Another possible disadvantage is, perhaps, worthy of mention. It is just conceivable that the authorities may make mistakes. The precise balance of interests and tastes which they achieve may not be absolutely correct. The sugar coating of entertainment on the pill of education may be just a shade too thin, and the listener may switch off. It is earnestly to be hoped that some method will one day be evolved of compelling the listener to listen. In Fascist States, this has been achieved on the occasions, not too infrequent, when the Leader addresses his people. But not even there has the problem of compelling the listener, for his own good, to listen to the ordinary everyday run of broadcasts been solved. In democratic countries the solution is still in its embryo stages. When an individual item threatens to become too popular (a particular broadcaster on foreign affairs, for example, or a series of promenade concerts) it can be removed or truncated and an

innocuous programme of gramophone records put in its place. But this is a merely negative form of influence on the listener. He is still free to switch off, with or without profanity.

This being so, ideals have to be tempered with caution, and it is possible that idealistic, monopolist controllers of broadcasting may be insufficiently cautious. For example, it is said that British listeners on Sunday not only switch the B.B.C. off, but go to some foreign station whose ideals and ethics are below even the weekday standard of the B.B.C. In short, a broadcasting monopoly may defeat its own ends unless it makes some concession to popularity. The defect of the British system is that it may be perfect, but unlistened-to. The nearer its approach to perfection, the fewer listeners it has. The British system reaches its logical conclusion between 10.45 a.m. and 12.30 p.m. on Sunday, when it is entirely silent.

It is a contrast to turn to the alternative, or American, system. Here everything is freedom and popularity. The Government intervenes no more than is necessary to "police the air," to prevent interference from providing more than a background obligato. The great majority of stations (and there are several hundred) are organised for programme purposes in three "chains," known as the N.B.C., the C.B.S. and (much smaller than the other two), the M.B.S. These chains have no authority to levy licence duties. They exist by the modern miracle of selling time and air. Advertisers, politicians, people with a message or a grievance, "buy time" and have the right to broadcast pretty well what they will. The people with a message or a grievance (who include the politicians) use their time to broadcast it. The advertisers are cannier. They attach themselves to some programme that is, or is presumed to be, popular, and by paying for it acquire the right to cram its interstices with their advertising matter. The advertiser, in short, is the modern Mæcenas, and the one minute out of 15 taken by his announcement is the counterpart of the dedicatory epistle.

Much has been made of the defects of this system. It is distasteful that the last echoes of the Eroica should be disturbed by an insinuating voice saying "Beethoven's mighty notes have given you a feeling of inspiration, of uplift. Science shows that great music achieves this result by its action on the gastric juices. If you want the feeling to endure, buy yourself a bottle of Schwarzenheim's Liver Irrigant. Do it now; you will find it at the corner drug-store." But the advertiser does not mean to irritate, and if he does, it is mainly due to embryonic technique. In his Press advertising the businessman has long since abandoned the attempt to base his claims on logic. He merely prints the picture of a seductive female and says "Blinkies," and the sales of that brand of cigarette go up by leaps and bounds. Sooner or later he will come to the same technique on the radio. He will merely interject the single word "Blinkies" between the joke about the Irishman called Pat and the reminiscence about a Scotsman called Sandy. The result will, with habituation, be as little offensive to the ear as most advertisements are to the eye. The other defects of dependence on the advertiser are more serious. There is such a thing as too much popularity, too much majority rule, too little Proportional Representation. If by a "straw vote," black-faced comedians are proved to be 3.715 per cent. more popular than symphony concerts, then every advertiser will demand black-face and will refuse to be fobbed off with Beethoven. The resulting monotony is familiar to every American listener.

The American system, nevertheless, has one conspicuous advantage. The competition between the "chains" does produce a much higher level of entertainment within each category than the British system of monopoly. If you like black-faced comedians, you get the best in America. If you like symphony concerts, you get Stokowski and Toscanini, with the best orchestras in the world. If you like variety entertainments, you get them served up in such a style as to make a B.B.C. "Music Hall" sound like a smoking concert in the village institute. There may be far too much of one and far too little of the other, but each is of first-class quality. For this excellence, the competition of the chains, rather than of the advertisers, is responsible. For it is the chains, not the advertisers, that discover the pro-

grammes. Moreover, the excellence of the fare provided is greatest in the "sustaining programmes," the rare unsponsored items which the chains insert at their own expense to give the listener some relief from the advertiser.

If it comes to a choice between the two systems, the British doubtless is the better. Condemned to a dictatorship of the air, and given the liberty only to choose between Sir John Reith and Pink Pastilles, Inc., one plumps, without too much hesitation, for Sir John, Sunday programmes and all. But is it really necessary to choose? Could not the merits of both systems be combined? The supreme merit of the British system is its freedom from the advertiser. The supreme merit of the American system is the excellence of

programmes which competition between the chains induces. The solution which this Correspondent suggests is, then, quite simply Duopoly. Let the State continue to collect the licence fee. Let it, if you will, own the actual transmitting stations. But let the programmes be provided by two corporations, let us say the A.B.C. and the B.B.C., competing with each other. They should share the licence revenue, and the listener might even be permitted to distribute some very small fraction of his ten shillings, as a mark of favour, to the corporation which he considers the better.

Well, there you are. Turn it over in your minds and let me know what you think about it.

Good night, everybody, good night!

NOTES OF THE WEEK

"Spanish Morocco."—If the Spanish rebel forces to-day control the African shores of the Straits of Gibraltar, that is not the work of Spanish arms or even the result of Spanish initiative. French, and not Spanish, arms brought Abd-al-Karim to bay and forced him to capitulate in 1926. Unaided, the Spaniards had proved themselves utterly incapable—politically as well as militarily—of making their authority in Northern Morocco effective. The attempt at occupation, which they had started in 1909, had been brought to a dead end by the disaster of 1921; and there is no reason to suppose that the poor Spaniards (who had recently lost the remnants of their old empire in their war with the United States in 1898) would ever have started on this new adventure in imperialism if they had not been prompted thereto by the French and British Governments for French and British convenience. The assignment of this part of Morocco to Spain was, indeed, Great Britain's condition for assenting to the seizure of the rest of Morocco by France. In the Anglo-French Declaration of April 8, 1904—which was one of the foundation stones of the Franco-British *Entente*—it was stipulated that, "in order to secure the free passage of the Straits of Gibraltar," a defined stretch of Moroccan coast along the Mediterranean and the Atlantic was to remain unfortified; and in the third of the secret articles attached to the Declaration, it was laid down that the hinterland of this stretch of Moroccan coast should become a Spanish zone of influence on condition that Spain undertook not to alienate any of the territory that was thus to be placed under her authority. Spain duly acceded to this Anglo-French agreement; and to-day she holds her zone in Morocco in virtue of a convention of November 27, 1912, which was made, not with the Emperor of Morocco direct, but with the French Government as his attorney. This buried chapter of pre-war diplomatic history is being rapidly disinterred. We trust that the British authorities are as alive to its possibilities as the German and Italian Party diplomatists have already shown themselves to be.

The Distressed Areas.—The simultaneous success of the Government's cheap money policy, and failure of its foreign trade policy, can be seen in the simultaneous existence of great prosperity in all but the distressed areas and persistent depression in those areas. As a result, the distressed areas are now the crux—one might almost say the residue—of Great Britain's economic problem. Indeed, after a great deal of discussion, two main conclusions seem to have emerged: first, that transfer is so slow a process that the areas can only be quickly revived by either a recovery of the old staple industries or the establishment of new secondary industries; secondly, that there is no overwhelming economic reason why new industries should not go to the areas. If, therefore, the Government has given up hope of a really big revival in exports, it has a special responsibility to ensure that the new industries now springing up should be located in the distressed areas. In the first place, there is an overwhelming case for so planning the whole defence co-ordination policy as to direct both

new factories and orders where they are most needed. The concentration of defence work in the special areas will not merely reduce unemployment; it will ensure that the defence programme as a whole is carried out at the minimum real cost to the nation as a whole. For if unused labour and capital are employed, costs will not be raised in the districts which are already working near capacity on ordinary business. The danger of a possible unhealthy rise in prices and costs resulting from the defence programme will be greatly diminished if orders are given to the distressed areas. And the fortunate strategic position of those areas, particularly South Wales and Cumberland, reinforces the point. The second main line of advance must be to induce other new factories to enter the distressed districts; and the most promising method will probably be to allow the special area commissioners to develop the inducements, such as trading estates and cheap finance, which they have already begun on the basis of a special study of the problem. The Government should give the commissioners every possible facility, both financial and administrative.

* * *

Another Marketing Scheme?—A draft scheme for regulating the marketing of milk products—butter, cheese, condensed milk, cream and dried milk—has been submitted to the Minister of Agriculture by the National Association of Creamery Proprietors. If approved, the scheme would come into force early in 1937. It would be administered by a Board, representing the producers of the products concerned, which would have power to regulate sales and prices, to fix production quotas and rigidly to limit the manufacture of milk products to those registered under the scheme. The principal object of the scheme is, of course, the now-familiar one of enabling a particular body of producers to obtain a "fair" price for their product—i.e. of enabling them to combine together to raise prices. In the case of milk products, however, this object cannot be achieved by the British manufacturers acting alone; for the market is dominated by imports. About nine-tenths of the butter and three-quarters of the cheese consumed in this country come from sources overseas. If and when this proposed "marketing" scheme comes into force, therefore, we shall undoubtedly witness the spectacle of the producers' Board approaching the Government with a request for a more drastic limitation of dairy produce imports. If a marketing scheme is in operation such a claim can legally be made under the Agricultural Marketing Act of 1933; and it would, no doubt, in this case be backed up by references to the advantages of a greater degree of self-sufficiency in time of war. The poorer classes of the community, however, need have no doubt of the effect of such a limitation on their own standard of living. With a marketing scheme really designed to rationalise the marketing of an agricultural product there can be no quarrel. But this latest proposal to drive up the prices of essential foodstuffs can only be regarded as a deplorable conspiracy against the public interest.

M. Blum's Achievement.—Even those who doubt the wisdom of M. Blum's refusal to devalue the franc must acknowledge the colossal legislative achievement of his first three months of office. There have been few examples in the last few years of popular majorities, democratically elected, which have fulfilled the whole of their election promises by parliamentary methods in less than three months. In their declaration of policy on June 6th the Popular Front Government announced that they would table Bills on the following subjects:—

Collective contracts; paid holidays; a plan of public works; the nationalisation of armaments; wheat control; the raising of the school age; a reform of the Bank of France, guaranteeing the preponderance of national interests in its management; an amnesty Bill; and a modification of the Laval deflationary taxes.

There must have been few observers familiar with France's recent parliamentary history who did not at the time regard this programme with a sceptical smile. Yet M. Blum was able to claim with perfect accuracy in the Chamber on Friday that the whole programme had been fulfilled. In addition, Parliament had voted a law to prevent tax evasion and the flight of capital, a law to assist small businesses, and other lesser measures. Some of these laws have doubtless been hastily drawn up and may reveal latent difficulties as time goes on, and some may prove unwise. If any tend, however, to hamper recovery, we may rely on the Frenchman's flair for making the theoretically impossible work in practice. In any case, as a result of so remarkable a burst of legislative activity, France, which stood far behind Great Britain in social legislation three months ago, is now drawing abreast. But M. Blum's achievement is even greater than this. He has shown that the democratic spirit is alive and vigorous, at least in France, and that popular enthusiasm can be translated into positive action where resolute and realistic leadership prevails. At the moment, of course, M. Blum is engaged in a struggle with his extremists over Spain, which might conceivably end in his resignation. And in the background there still remains the shadow of the overvalued franc.

* * *

Bad Days in Palestine.—Last week saw an intensification, still being maintained, of the Arab offensive in Palestine—and this on all fronts: in the sniping of trains and motor cars; in the cutting of the oil-pipe line; in attacks on Jewish persons, property and houses; and in brushes with the armed forces of the British Crown. For example, on August 10th, at Jerusalem, two British aircraftsmen were shot when off duty—one of them fatally—and a goods train was wrecked at Ras-al-Ain. On the 11th, an Arab police sergeant was likewise shot and seriously wounded in Jerusalem; and a bus full of Jewish workers was bombed, with three casualties, near Tel-Aviv. On the 12th, fire was opened on a Jewish quarter of Tiberias; a newly-erected police station at Matikva was burnt down; and on the same day, near Beisan, a party of ten men of the York and Lancaster Regiment were caught off their guard while bathing, and lost one killed, three wounded, five rifles, a Lewis gun, and 600 rounds of ammunition. On the 13th, a military patrol train was successfully wrecked while crossing a bridge on the Haifa-Lydd line near Athlit. On the night of the 13th-14th, a concerted attack was made on the Jewish quarter at Safed, where in one house the father and one child were killed by a bomb, a second child was killed by rifle fire, and a third child was seriously wounded. On the 14th, four out of five members of a Jewish party in a motor car were killed on Mount Carmel. On the 15th, a convoy of civilian travellers, escorted by soldiers, was attacked at Lydda, while at Tiberias on the same day the synagogues were stoned and a Jewish boy was killed by a bomb. On the 16th, another convoy of travellers was ambushed near Jenin, and at Tel-Aviv a train was bombed at a level crossing—one man being killed and 12 other persons slightly wounded, while an Arab boy was injured on the train's return journey, when it was stoned at the same point by Jews, in reprisal. During the night of the 15th-16th, a party of workmen who were doing some repair work near Jaffa for the Palestine Electric Corporation were ambushed, and one workman was killed,

while another, as well as a constable, was slightly wounded. And so it goes on—with considerable success for the Arab comitadjis (to call them by the classic name that was coined for their kind in Macedonia under the pre-war Ottoman regime). Jerusalem, with searchlights sweeping the surrounding heights all night to show up the snipers, is about as safe nowadays as Salonica used to be then; and the Turks, if they were a malicious nation, would be laughing up their sleeve. The Arab Higher Committee has called a congress of delegates to discuss what their attitude shall be towards the Royal Commission; but as the Commission is not to start work until the Arab campaign of violence has subsided, the position is one of stalemate.

* * *

Sport and Politics.—This year is not the first time in history that a certain political and even authoritarian atmosphere has been allowed to permeate the scene at the Olympic Games. There was once an occasion when the Emperor Nero competed in every single event and won every single prize. The Nazi authorities did not, of course, consider it expedient to carry things to this length; indeed, such "liberalistic" ideas of athletic freedom apparently prevailed in Berlin that the fastest runners were actually allowed to win. Admittedly, the success of the affair as an Aryan race-festival was slightly marred by the spectacle of so many victorious negroes breasting the tape beneath the fluttering swastikas. To the Nazi authorities who have done so much to elevate athletic prowess to its true place of superiority over mere intelligence, this must have been an unwelcome result. It may almost have seemed that, as between Aryans and negroes, the Aryans might have come off best in an intelligence test; but, if so, the cunning Semites would of course have had to be excluded from the competition. This grave difficulty has led persons of Aryan sympathies in England to write letters to the Press suggesting that negroes should be excluded from the Olympic Games on the ground of their "physical abnormality." This abnormal capacity of the negroes to run fast is clearly a form of grossly unfair competition, like the cheapness of foreign goods in British markets; and it may be that some quota system for Olympic laurels (not carried to Neronian extremes) might prove the easiest way to save the *amour propre* of the white races. Perhaps, however, as far as the British are concerned, there is a better way. The British after all, it can be explained, do not play to win at all; nor do they dream of spending long months in arduous and expensive training. They merely play for love of the game. And so, when they lose, they do not need to storm the consulates and embassies of the victor nations. They merely explain that, in their opinion, the game is worth more than the prize.

* * *

Trial by and for the People.—The circuses and *fairs accomplis* by which Fascist regimes compensate their citizens for the lack of butter on their bread are replaced in Russia by gigantic State trials of saboteurs, broadcast throughout the Union. Just such another State trial as those of Professor Ramzin and the saboteur engineers, or of the Metropolitan-Vickers employees in Russia three years ago, opened on Wednesday. But this time it is a much more sensational affair. "Right-wing deviationism" from the Communist Party's "general line" is a perpetual object of State heresy-hunts; and for years now "deviationism" has been identified with the sharers of Trotsky's views—Zinoviev and Kamenev. These two men are already serving sentences of ten and five years' imprisonment respectively for their admitted "moral responsibility" for the murder of Kirov, leader of the Leningrad Communist Party, in December, 1934. They are now charged with conspiracy, involving Trotsky, his son, and Party—Stalin, Voroshilov, Orzhonikidze, Kaganovich and the German Nazi Secret Police, to murder the chiefs of the Kirov. Kirov fell as the first victim; and before the others could be struck down the OGPU net closed on the "deviationist" conspirators. The indictment, together with what seems highly circumstantial evidence, alleges that Trotsky—now an exile in Norway, whither he was forced to retire from Prinkipo Island when Turkey entered into close

association with the Russian Government—maintained relations with the Nazi Secret Police in Berlin through his son; and that the Secret Police provided five men, all with German names, with forged passports to enter Russia and participate in the conspiracy. The five men appear among the sixteen accused. Death is the penalty; and Zinoviev and Kamenev, who in 1934 made an abject public repentance, are now reported to have pleaded "Guilty." While there seems no reason to assume that they have been intimidated—the fatalistic psychology of Russians, and especially of Russian conspirators, is well known—this trial comes aptly for the Russian Government in domestic affairs; but it comes ineptly in the field of foreign affairs, for it may incense the Nazi Government while it chills the incipient sense of co-operation with Russia which is dimly perceptible in Poland and Great Britain. In Russia, it seems, it is still expedient that one or two men should die for "the people"—and not *pour épater le bourgeois*.

* * *

Mr Aberhart's New Plan.—After a year of deliberation Mr Aberhart, the Social Credit Premier of Alberta, has embarked on what he describes as a first step towards Social Credit. This first step, as our Canadian correspondent reports in his letter this week, consists in the issue of Government "prosperity certificates," to finance public works. The certificates are in effect promises to pay by the Government which depreciate at stated intervals; i.e., they lose validity unless stamps are bought from the Government and attached to the certificates after a certain lapse of time. The idea is that recipients of the certificates will tend to spend rather than save, and so stimulate trade, since whoever is left with the Old Maid at the critical date will have to buy the stamps. At the same time, it is hoped that the Government will be able to finance public work schemes (i.e., presumably redeem the certificates in the end, but this is not quite clear) out of the proceeds of the sale of stamps. The scheme is, of course, not Major C. H. Douglas's at all, but Silvio Gesell's plan, which has lately met with the approval of Professor Irving Fisher. It has been correctly described as a method of financing public works by a turnover tax; and for a Government which is not in a position to borrow freshly created credit from the banking system, it may have technical advantages provided that the commercial community accepts the certificates. It is in no sense a permanent monetary policy, however, but at best an expedient for getting out of depression. And its efficiency, even as such, is bound to be at the lowest in a community like Alberta, which is hardly at all self-sufficient. The Albertans cannot consume all the wheat produced in Alberta, however much money they have.

* * *

Free State By-Elections.—By-elections in Galway and Wexford have been won by Mr de Valera's candidates by very large majorities. The result has greatly strengthened the position of the Government in the Dail and in the country. These two elections were the first occasion when the Left-wing Republicans put up candidates against Mr de Valera, and the voting shows that these extremists command quite negligible support among the electorate. The Government has unquestionably received a renewed mandate to continue its social and political programme, and from the national point of view this strengthening of the Administration must be regarded as a stabilising and steadying influence. The interest of the elections to the people of Great Britain is that they indicate clearly that public opinion in the Free State is solidly behind the Government in the so-called economic war. Surely the time has come for British statesmen to make some new attempt to settle this deplorable dispute? Up to the present the official attitude has apparently been that the economic and constitutional issues cannot be discussed apart. This really amounts to postponing the settlement of a soluble problem until an insoluble one has been solved. At the moment, no settlement of the constitutional issue is possible, in view of the attitude of the Northern Ireland Government. Meanwhile, Great Britain continues to apply futile but irritating sanctions against one of its fellow members of the Commonwealth. The result of the by-elections is the Irish reply to this endeavour to attain political objectives by economic pressure.

An L.M.S. Mishap.—An alarming incident, fortunately unattended by serious consequences, occurred last week on the L.M.S. main line just north of Wolverton, Bucks. One or more wagons in a goods train became derailed. The guard at the end of the train noticed that something was wrong and promptly applied his brake, but the only result was that the train broke in half, and the first part continued on its way with the driver in ignorance that anything untoward had happened. The derailed wagons damaged and blocked all four lines of track. Fortunately, as the front part of the train passed through Wolverton, the signalman noticed what had happened and, in accordance with the rules, stopped not only the train itself, but all other traffic in both directions. Hence while serious inconvenience and delays were caused pending the repair and re-opening of the track, there was no collision of a separate train with the wreckage or any loss of life. While the signalman is to be commended for his vigilance, the incident gives ground for certain misgivings. Had the goods train been equipped with continuous brakes, the break-away would have stopped both portions automatically and much of the damage to the track would have been avoided. Also, the moment the train became overdue, all traffic in both directions would perforce have been stopped and cautioned pending inquiries. This is not the first occasion upon which accidents have been caused by faulty couplings, and the Minister of Transport's inspecting officers have previously called attention to this danger, particularly in respect of private wagons. Certain steps have already been taken by the railway companies to provide for greater strength, and these may need intensification. Short of enacting that all goods trains be equipped with continuous brakes, which would be a very costly undertaking, it is difficult to see what more could be done. It is mechanically impracticable to provide a certain means of communication between the guard and driver of a loosely-coupled goods train, whose length varies every time wagons are dropped or picked up at each successive station. Nor in the absence of a snatch can a driver, who is concentrating his attention on the road ahead, be blamed for failing to notice a break-away. The main safeguard is the vigilance of the signalmen, whose duty it is to examine each train as it passes them. On this occasion the signalman carried out his duty, and prevented an inconvenient mishap from developing into a serious accident.

* * *

Outlook for Building.—Increasing attention has recently been directed to the rôle played by building activity in British recovery. The rise in the *Economist's* index of building activity from a monthly average of 57 in 1932 to a present level of 109 (1935=100) serves to illustrate the magnitude of the boom. At present, when the continuance of this activity is questioned in some quarters, the opinions expressed monthly in the *Building Industries Survey*—published by the Building Industries National Council—merit attention. This excellent journal brings together in convenient form all available information relating to the building and allied trades. In the July issue, just published, the view is put forward that the present position of the industry remains satisfactory, a further improvement as compared with 1935 having occurred last month. Although the building plan figures for dwelling-houses for the first seven months of 1936 were rather below last year's level, activity in this section is well maintained on the basis of past plans. Total activity has advanced owing to increased industrial and commercial construction—a movement which, judging by recent plan figures, may be expected to continue *accelerando* in the near future. For plans approved for non-residential purposes in the first seven months of 1936, according to the *Ministry of Labour Gazette*, were 26 per cent. in excess of the corresponding total for last year.

BRITANNIC
ASSURANCE COMPANY LIMITED
(Established 1868)
Annual Income : : : £6,200,000
Funds : : : £26,000,000
All classes of Life, Fire, Accident,
Motor and General Insurances transacted
Chief Office: BROAD STREET CORNER, BIRMINGHAM

Thus, although public works contracting remains acutely depressed, we should agree with the *Survey* that the immediate outlook for the building trades remains favourable. All indices of building activity will certainly be watched with special interest in coming months.

Overseas Trade in July.—After some months' stagnation British exports recorded a welcome improvement last month, when they were 10 per cent. above the level of a year ago. The rising trend of imports, which has been a feature of the trade returns during the past half-year, was again evident in July, although its pace has now somewhat slackened. The rapid expansion of Britain's *entrepôt* trade is another noteworthy fact brought out in the tables below:—

OVERSEAS TRADE IN JULY
(000's omitted)

	1934	1935	1936	Change between 1935 and 1936	%
Total imports	58,028	61,764	68,731	+ 6,967	+11.3
British exports	33,230	36,443	40,086	+ 3,643	+10.0
Re-exports	4,129	4,922	5,643	+ 711	+16.8
Total exports	37,359	41,365	45,729	+ 4,364	+10.5
Excess of imports over exports ..	20,670	20,319	22,905	+ 2,586	+12.7
Transshipments under bond	1,745	2,015	2,486	+ 471	+23.4

FIRST SEVEN MONTHS' OVERSEAS TRADE
(000's omitted)

	1934	1935	1936	Change between 1935 and 1936	%
Total imports	419,872	420,442	471,173	+ 50,731	+12.3
British exports	223,049	242,874	267,966	+ 25,092	+10.3
Re-exports	33,198	32,588	37,392	+ 4,804	+14.8
Total exports	256,187	275,462	305,358	+ 29,896	+10.8
Excess of imports over exports ..	163,685	144,980	165,815	+ 20,835	+14.4
Transshipments under bond	13,639	13,784	15,242	+ 1,458	+10.7

Of the twenty principal groups of manufactured exports, only three were smaller in July than in the same month last year. In the raw materials group a fall in exports of several items, notably coal, was more than counterbalanced by a rise in other commodities. The jump in imports, although fairly widespread, is mainly a reflection of a need on the part of British industry for increasing quantities of raw materials and for specialised equipment in connection with the boom in the iron and steel industries.

Trade by Commodities.—Changes in the principal retained imports last month, compared with the July figures for the past two years, are shown in the following table:—

RETAINED IMPORTS
Month of July

Item and Measure	1934	1935	1936
Wheat	9,168	8,401	8,442
Beef and veal	1,155	1,340	1,335
Mutton and lamb	640	636	560
Sugar (unrefined)	3,238	4,099	3,445
Iron ore and scrap	356	469	616
Raw cotton	864	711	1,296
Sheep's and lambs' wool	163	420	173
Flax, hemp and jute*	15,181	32,152	14,658
Crude petroleum*	39,928	33,179	45,509
Hides, wet and dry	104	133	120
Wood pulp*	222	280	209
Rubber	275	212	17
Unwrought copper*	13,452	15,684	15,345
Pig lead	20,624	19,876	29,270
Tin			
Ore and concentrates*	2,974	4,175	4,542
Blocks, ingots, slabs and bars	708	618	223
Iron and steel manufactures	126	90	170
Machinery	5,678	6,121	9,738

* Total imports.

Among foodstuffs, entries of wheat were again higher, but imports of meat showed a decline. The fall in mutton and lamb was mainly due to a sharp drop in shipments from Australia. Increased sugar imports from Cuba and the British West Indies were more than offset by a decline in purchases from South Africa, Mauritius and San Domingo. The boom in iron and steel and engineering was again reflected in larger imports of iron ore, of machinery and of iron and steel manufactures; imports of non-ferrous metals were also higher last month. A well-distributed increase in purchases of raw cotton may be of good augury for this

depressed trade, but imports of other textile fibres declined. Movements in the principal British exports are given in a final table:—

BRITISH EXPORTS
Month of July

Item and Measure	1934	1935	1936
Coal	3,379	3,679	3,360
Iron and steel scrap	16,318	11,894	12,866
Pig iron and ferro-alloys	8,948	12,930	12,813
Railway materials	16,377	21,755	31,306
Total iron and steel manufactures	193,969	199,274	216,129
Textile machinery	7,021	5,621	5,310
Total machinery	29,571	34,813	37,100
Cotton yarns	10,283	11,935	13,305
Cotton piece-goods	170,055	170,188	176,125
Wool tops	2,566	3,987	3,730
Worsted yarns	2,798	2,909	2,465
Woolen tissues	6,683	6,477	7,882
Worsted tissues	3,223	4,107	4,727
Linen piece-goods	5,472	5,550	7,049
Leather boots and shoes	35,640	28,598	30,367
Leather	16,180	20,110	21,214
Paper and cardboard	292	331	383
Locomotives (complete and parts)	1,011	1,422	2,065
Motor vehicles and chassis	4,461	5,213	7,752

An improvement in exports of iron and steel manufactures and of machinery reverses recent trends and is an encouraging feature of the July returns. Sales of motor vehicles overseas continued to forge ahead last month. Textiles also made a good showing. A welcome improvement occurred in exports of cotton yarns and piece-goods, while continued progress was made by woollen and worsted tissues in markets abroad. Unfortunately, an otherwise favourable picture is marred by the unsatisfactory level of coal exports. Shipments of coal to Italy sank to zero last month—a factor itself more than accounting for the decline in coal exports compared with last year.

Iron and Steel Activity.—As we pointed out last week activity in the iron and steel industries was maintained at a high level in July. We may supplement the production statistics with the latest overseas trade figures:—

(In thousands of tons)

Period	Production		Foreign Trade	
	Pig Iron	Steel Ingots and Castings	Total Imports	British Exports
1933—Monthly Average	855.0	638.6	185.9	414.1
1934	632.4	803.0	235.2	364.9
1935	297.8	438.5	132.7	157.4
1936	344.7	585.3	80.9	160.2
1937	498.2	738.3	113.9	187.8
1938	535.5	820.2	96.0	197.7
1939—January	529.3	770.0	98.2	187.1
February	547.3	803.3	90.2	199.3
March	543.4	759.9	74.3	202.5
April	529.6	855.9	89.3	187.2
May	544.8	907.3	101.2	224.0
June	529.5	903.3	77.0	215.8
July	559.3	811.5	113.0	190.3
1938—January	595.5	911.7	119.9	164.8
February	584.7	938.5	123.2	187.8
March	633.6	980.1	130.3	163.4
April	629.8	984.2	120.8	177.5
May	661.0	963.0	117.5	204.1
June	644.1	965.9	110.6	173.5
July	661.1	974.1	170.3	216.1

Imports, after declining slightly in June, rose steeply last month, and were heavily in excess of last year's corresponding total. Although well distributed, the increase compared with last year was most pronounced in semi-manufactured steel. Larger imports were taken from each of the countries separately distinguished in the trade returns, the rise being most marked in the case of Canada, Germany and France. A feature of the July figures was the recovery of British exports, railway material being one of the largest items. Our best customers last month were—in order—the Union of South Africa, Canada, Denmark, British India, Australia and Argentina.

Sterling and International Prices.—The rise in British wholesale prices has for the moment been checked, for during the past fortnight the *Economist's* complete products index has fallen by 0.3 per cent. and the primary States have been irregular. The *Economist's* primary products index number has risen by 1.5 per cent., mainly as a result of advances in oats, maize and bacon, but the

complete Irving Fisher index number has fallen by 0.3 per cent. The rise in French wholesale prices has for the moment been checked, but German wholesale prices are continuing their slow advance:—

SEPTEMBER 25, 1931=100

Date	Economist Indices			U.S.A., Irving Fisher	France, Statistique Générale	Italy, Ist. di Statistica Centrale	Germany, Statistisches Reichsamt
	British Complete Index (sterling)	Primary Products (sterling)	Price of Gold (sterling)				
1932							
July 27th	99.5	103.5	84.1	136.9	88.3	91.3	88.5
1933							
July 26th	108.1	120.6	124.7	145.7	100.9	89.7	86.2

Aug. 19th	119.4	141.9	163.2	162.7	121.8	88.6	96.3

* These figures relate to August 12th.

Details of the group indices comprising the complete *Economist* index number on the date of our suspension of the gold standard and for recent dates are here given.

"ECONOMIST" INDEX
(1927 = 100)

	Sept. 18, 1931	July 22, 1936	Aug. 5, 1936	Aug. 19, 1936
Cereals and meat	64.5	74.5	77.5	77.0
Other foods	62.2	61.2	60.9	61.1
Textiles	43.7	61.0	61.9	61.4
Minerals	67.4	82.5	82.3	82.2
Miscellaneous	65.8	77.7	77.4	77.2
Complete index ..	60.4	71.7	72.4	72.1
1918 = 100	83.1	98.6	99.6	99.2
1924 = 100	52.2	61.9	62.5	62.3

In the cereals and meat group, wheat, flour, potatoes and beef are all cheaper than a fortnight ago, but bacon has again risen. Among other foods there was a fall in cocoa and advances in butter, cheese and coco-oil. Cotton is cheaper and wool unchanged. There were only minor alterations in non-ferrous metal prices. In the miscellaneous group there were small declines in linseed oil and rubber.

Improvement in Shipping Freights.—The improvement in shipping freights continues to gather headway. The River Plate market, which has led the way, continues to absorb grain-carrying tonnage (writes our Shipping Correspondent) and between the middle of July and of August, well over a hundred steamers have been "fixed" in this trade. There are now no vessels waiting for charters, and September-October vessels are in scanty supply. The Tramp Shipping Administrative Committee has announced, this week, a rise of 9d. a ton in the minimum rates for grain from Argentina and Uruguay to Europe. With wheat harvest prospects as they are, the probability is that the River Plate market will experience more or less sustained activity over the autumn and winter, while shipments from Canada are expected to be good to the end of the navigation season. A steady business continues to be done from Australia and as the Russian harvest is estimated, in some quarters, to be large enough to leave an exportable surplus of a million tons of wheat, an early revival in Black Sea business is likely to be the next development. Meanwhile, the firmness in grain freights has reacted favourably on Eastern freights for rice and soya beans, and indeed, on produce freights generally. The shipping industry may, indeed, be emerging at long last from depression. In every case, the minimum freight schemes now in operation have succeeded in maintaining schedule freights and even in securing appreciable advances for autumn tonnage. By common consent, the operation of these schemes has been shrewdly directed.

Agricultural Returns for England and Wales.—In early June each year the Ministry of Agriculture takes a census of the acreage under the various crops and the numbers of livestock on agricultural holdings above one acre in England and Wales. The 1936 returns, issued last week and summarised with comparable data for earlier years in the table below, show that in some directions British agriculture failed to hold its own this year. Thus the total arable area, after increasing in 1935 for the first time since the war, this year resumed its long-term decline. The area under cereals fell by about the same amount as in 1935; but whereas last year a sharp drop in the area under barley was partly compensated by increases in wheat and oats, this year has witnessed a 4 per cent. contraction in the wheat acreage and a partial recovery in barley (+ 3 per cent.), with oats showing little change. The fall in the wheat area was due partly to a wet autumn, which delayed sowing, and partly to the fact that some farms have recently been overcropped with this grain. An increase in the acreage under first early potatoes was more than counterbalanced by a reduction in the main crop acreage, the total area thus falling by 1.5 per cent. to the lowest level since 1931. The area under sugar beet also suffered a further slight decline:—

	1929	1931	1933	1935	1936*
Arable Land	Thous. Acres	Thous. Acres	Thous. Acres	Thous. Acres	Thous. Acres
Permanent Grass	9,948	9,582	9,250	9,398	9,113
Wheat	15,490	15,701	15,870	15,559	15,745
Oats	1,330	1,197	1,660	1,772	1,703
Barley	1,854	1,652	1,495	1,419	1,417
Potatoes	1,120	1,029	751	463	456
Sugar Beet	519	447	364	367	357
Cattle	Thousands	Thousands	Thousands	Thousands	Thousands
Sheep	5,958	6,065	6,620	6,541	6,534
Pigs	16,106	17,749	18,090	16,477	16,631
Horses	2,367	2,783	3,069	3,813	3,801
	999	939	903	874	865

* Figures for 1936 are provisional.

Despite a small increase in the dairy herd, the total number of cattle was again a little lower than in the previous year, and the pig population also registered a slight reduction. Sheep numbers show some increase, but the tractor continues to replace the horse.

British Industrial Production.—The continued expansion of Britain's industrial activity is reflected in the Board of Trade index of production, covering about 70 per cent. of British manufacture and mining, published in this week's *Board of Trade Journal*. Contrary to the normal seasonal tendency, the total index rose by 0.5 per cent. during the second quarter of 1936, to the record level of 123.6 (1930 = 100); this is 11 per cent. in excess of the corresponding figure for 1935. Manufacturing production showed a gain of 2 per cent. compared with the March quarter, and of almost 12 per cent. compared with the June quarter of 1935:—

Group	Year 1934	Year 1935	1935		1936	
			June Quarter	Dec. Quarter	March Quarter	June Quarter
1. Mines and quarries	90.8	91.7	87.3	98.1	100.5	88.4
2. Iron and steel	115.7	125.6	123.2	133.3	146.2	149.5
3. Non-ferrous metals	122.7	137.3	138.4	132.1	134.8	140.9
4. Engineering and shipbuilding ..	94.0	104.9	103.5	108.0	115.5	120.3
5. Building materials and building ..	133.4	147.0	148.5	150.2	148.8	157.2
6. Textiles	113.3	118.9	116.7	126.5	126.9	124.8
7. Chemicals, oils, etc.	104.5	116.0	115.2	122.1	126.7	121.4
8. Leather and boots and shoes ..	102.3	107.6	108.6	113.9	106.9	118.4
9. Food, drink and tobacco	121.8	132.6	(a)	(a)	(a)	(a)
10. Gas and electricity						
Total of manufacturing industries (2-10)*	108.5	116.9	115.5	124.4	126.7	129.3
Total of all groups (1-10)*	106.1	113.5	111.5	120.7	123.0	123.6

* Includes also various industries not specified above. (a) Complete information about gas production is not available in each quarter. The available data for electricity have been included in the general index.

Each of the group indices showed an improvement compared with the second quarter of 1935, the principal gains being in iron and steel (21 per cent.), engineering and shipbuilding (16 per cent.), food, drink and tobacco (9 per cent.) and textiles (7 per cent.).

UNITED STATES

"EXTRAORDINARY" BUSINESS ACTIVITY

FOR midsummer, business activity is running at an extraordinary rate. Instead of the seasonal recession, it is maintaining or surpassing the rate of the spring. Steel operations, at 70 per cent. of a capacity that has been substantially increased in recent years, are remarkably large, especially in view of the limited demand on the railways and the inactivity of non-residential building. Motor production, although now receding as the time for changing to the new models approaches, is still almost double that of a year ago; and it is predicted that the output for the year will approximate 85 per cent. of the 1929 record. A moderate improvement in weather has checked the spectacular advances in crop prices and diminished the fears expressed some days ago.

Residential building is playing no small part in the increased activity. The Federal Housing Authority reports that residential building permits issued in June amounted to \$68 millions, an increase of \$40 millions over June, 1935—which would suggest that the aggregate of this type of construction in 1936 would run to above \$500 millions. Still, as an element of our economy, residential building represents only a fraction of the influence of the motor industry in value; and the increase of motor-car production in 1936 over 1935 probably exceeds in value the increase in residential building. The latter, however, was as late as early 1935 extremely depressed, and its revival has had a diffused importance greater than the relative figures might suggest. The residential building is for the most part in individual frame dwellings, either built to the order of the purchaser or speculatively by small operators. The development of tracts by operators of magnitude, such as characterises the building activity in the vicinity of London, is of rare occurrence. On the basis of the June permits, it would appear that the average permit is for a house costing about \$7,500; and it has been stated that although F.H.A. mortgages are available for 80 per cent. of the cost, the average cash payment runs near half.

Two inferences may be drawn from these data: the average cost is rather high, and the demand consequently comes from customers of above-average incomes; and large-scale speculative building has not yet become important. These current costs should not, therefore, be compared with average quotations in the vicinity of London, for two reasons: first, that the market has not yet reached sufficient breadth to invite large-scale building and selling operations, and second, that over most of the United States (not so much geographically as demographically) the winter is so severe as to make a full basement with central heating the standard type of construction.

THE TRADE UNION DISPUTE

The dispute between the American Federation of Labour (A.F.L.), under the presidency of Mr William Green, and the Committee for Industrial Organisation (C.I.O.) of Mr John L. Lewis is likely to be of considerable significance, although its implications are not clear to the layman. The Federation is, of course, the historic organisation of "craft" unionism, but in spite of the encouragement given under the New Deal, it has not been very successful in extending its memberships beyond a comparatively small number of trades in which for years it has been strongly entrenched, for example, the building and typographical trades. Mr Lewis has formed his schismatic organisation from the nucleus of the United Mine Workers; his programme calls for the "vertical" or "industrial"

union, as contrasted with the "trade" or "craft" union. The upshot of the dispute is that some ten unions, with 1,000,000 members represented by the C.I.O., have been suspended from the A.F.L. The suspended unions include, with the United Mine Workers, such strong organisations as the Amalgamated Clothing Workers, the United Textile Workers, and the Oil Field, Gas Well and Refining Workers. That these two organisations are rivals for the hegemony of the American labour movement is obvious; but it is not at all clear how this rivalry will affect their policies. The C.I.O. is the more aggressive of the two, and it is expected that it will push energetically to organise the industries in which it has secured a foothold. The Press, however, predicts that the campaign will not be launched until after the election. The heavy purchases of steel have been attributed by some to apprehensions of a steel strike at some time in the future.

All things considered, the slowness of growth of organisations for collective bargaining over the past three years is quite remarkable. The right of collective bargaining, although confirmed by the N.R.A., was not created by it, nor did the decision of the Supreme Court invalidating the National Industrial Recovery Act in any way impair that right. Subsequently, it was reinforced by the Labour Relations Act, but this too has been comparatively little invoked. It is probably true that in instances employee organisation has been actively and successfully resisted by individual employers; but it can hardly be imagined that this is the principal reason. It would appear either that the American workman has been little attracted to organisation in general, or that the type of organisation available has not appealed strongly to him. The latter thesis seems to be the inspiration of the C.I.O.

On August 10th the Department of Agriculture released its crop estimates as of August 1st. They fully confirmed the opinion that this year's drought represents a major disaster. Some of the most serious declines are those of maize, from 2,292 million bushels in 1935 to 1,439 millions; apples, 167 million bushels to 102 millions; potatoes, 388 million bushels to 295 millions; hops, 48 million pounds to 22 millions. These examples are cited not because they are of equal importance, but to illustrate the fact that few crops (except cotton) have escaped the effects of drought. For example, the dairy farmers of New York State are asking for an increase of almost 100 per cent. in the base price of milk, because of the higher costs of maintaining their herds, although New York is not classed as one of the drought States.

NEW YORK, August 11.

FRANCE

"ALL PROMISES KEPT"

PARLIAMENT has now adjourned until the autumn. In closing the ordinary session, M. Léon Blum declared that all the promises made to the country in the Ministerial programme had been kept, "a legislative achievement," he claimed, "without parallel in the history of Parliament." This claim is justified. Indeed, certain laws, such as that requiring a declaration of capital held abroad, and those granting credit facilities to small manufacturers and traders, were additional to those in the original programme. But, on the other hand, certain efforts to go beyond the promises made to the electors by further extensions of State intervention in the economic field have been partially barred by the resistance of the Senate in defence of property rights. This affects, for instance, the Wheat Office, which maintains

the rights of private traders and small producers (under the Wheat Office control), and also the coal plan, the first draft of which was adjourned and replaced by a provisional (three months) scheme.

The country, as a whole, is calm. The civil servants are satisfied with the suppression of the Laval decree-laws which reduced their salaries; the industrial and commercial workers with their increased wages and paid holidays; and the farmers with the Ministry of Agriculture's promise of a wheat price higher than the latest free price. This has already reached 115 francs a quintal, or 30 francs more than three months ago and 50 francs more than for last year's crop. A great number of business men have already benefited by the increased purchasing power of these two large sections of the population. The heavy industries are adjusting themselves to the new charges by a rise in prices; and if small manufacturers and traders complain that their balance sheet has been upset by the new social laws they know that the banks will grant them special credit facilities. All then would be well if there was not the double spectre of a Treasury crisis and a rise in prices and the cost of living.

THE TREASURY'S TROUBLES

M. Caillaux, President of the Finance Committee of the Senate, in wishing success to the Government's policies, forewarned the Cabinet that the country was approaching an "awful financial situation" as a consequence of the increase in public expenditure and the losses that may be expected from irrecoverable advances which have been made by the Bank of France but ultimately guaranteed by the State. The danger, however, has been postponed by the 10,000 millions advance made by the Bank to the Treasury and the 3,000 millions already subscribed in one month to the "Baby Bonds" loan. On the other hand, renewals of the current issues of the Bons de la Défense have been assisted by a lowering of interest rates on the money market, which has been stimulated by the fall of Bank rate and the conviction in financial circles that the gold stock of the Bank will be protected by all methods except the traditional one of raising Bank rate.

The danger of a precipitate rise in prices may be assessed from the following table, which indicates the level of prices at the lowest point of the deflationary era (the Laval Cabinet), at the opening of the Blum experiment, and now:—

	March 30, 1935	May 30, 1936	August 1 1936
Wholesale prices:—			
General index	344	377	389
Domestic products	377	421	435
Imported products	285	299	305
Foodstuffs	342	405	421
Raw materials	346	354	361
Retail prices (Paris)	447	459	461

When interpolated on this subject, M. Spinasse, Minister of Economy, answered that the disequilibrium had undoubtedly been provoked by the dearness of the franc, but also by internal disorders in the national economy such as excessive costs of transport and taxes. The remedies of the Popular Front Government will thus be: a lowering of the rate of interest; tax reductions contained in a general reform of the fiscal system to be submitted to Parliament simultaneously with the 1937 Budget Bill (a reform which will be enthusiastically welcomed by public opinion); and a reduction of distribution costs by industrial alliances, stimulated by the State but carried out on private initiative. These would aim at keeping prices down by the creation of common sales, research and standardisation services and by specialisation in export trade. Finally, the French effort towards a solution of the monetary problem might initially take the form of an embargo on gold, accompanied by control of the exchanges and of capital movements through the supervision of the big banks. Such a procedure would perhaps be endorsed by the Communists, who are conscious of the military importance of maintaining the gold stock and wish to maintain the unity of the Popular Front.

The trade balance for July showed an import surplus of 750 million francs, against 700 millions in June, 797

millions in May and 931 millions in April. The import surplus for the first seven months of the year is thus 5,531 millions:—

	First seven months of 1935 (Fr. millions)	First seven months of 1936 (Fr. millions)
Imports:—		
Foodstuffs	3,583	4,165
Raw materials	6,611	7,569
Manufactured goods	2,126	2,070
Total	12,320	13,804
Exports:—		
Foodstuffs	1,447	1,251
Raw materials	2,476	2,311
Manufactured goods	5,135	4,711
Total	9,058	8,273
Imports surplus	3,262	5,531

The total foreign trade during these seven months was 22,076 million francs against 21,378 millions in 1935. The increase in imports was 12 per cent. and the decrease in exports 9 per cent. July exports, at 1,200 million francs, were at the lowest since the stabilisation of the franc, though this was partly due to the sanctions against Italy. A commercial agreement has just been signed with Italy, while it is believed that negotiations are to begin at once for a similar agreement with Germany.

PARIS, August 20.

GERMANY

OFFICIAL SYMPATHY FOR SPANISH REBELS

THE international situation in the past week was not regarded cheerfully by the German public; and on the Bourse stocks continued to weaken, though less owing to heavy selling than to the reluctance of buyers. The Press is flooded with stories of impending decisive victories by the Spanish rebels, who are officially favoured here. Experts, however, see almost a stalemate, and they make the comment that it is the nature of a military revolt to succeed or to fail at once; and that if, contrary to rule, neither event happens, hopes of a decision within reasonable time are likely to be disappointed.

The reservations in Germany's reply to the French non-intervention plan seems, like Italy's policy, to show a desire for delay. If the retention of a Lufthansa aeroplane would not, as it may be assumed is the case, justify Berlin in making war upon the Spanish Government, it could hardly justify her in refusing to join a neutrality agreement. The second German condition for joining is so vague that it might easily prove a further cause of delay. Literally taken, it would involve negotiations with many countries not envisaged by the Anglo-French conditional arrangement, including the United States. Although Germany may promise to prevent the delivery of war materials to either side she will certainly not observe neutrality in the widest sense. This would involve the abandonment of her officially imposed agitation in favour of the revolt. The German view is that official Russia, and at least some French Ministers, are openly agitating in favour of the Madrid Government. No doubt exists that official and Nazi Germany strongly desires the success of the revolt, and regards "Popular Fronts" anywhere with the aversion and fear of a Metetrnich or a Nicholas I.

The latest official estimate of the cereals crop is 23,260,000 tons, which, though considerably below the July estimate, is 1,200,000 tons more than in 1935. Of the 570,000 tons drop since the July estimate, 460,000 tons was due to rye. The fodder crop will be satisfactory, and the condition of sugar beet is described as "good to very good." The import of wheat will not be necessary in the crop year 1936-37. The officially returned gross earnings of agriculture (not including forestry) in 1935-36 total Rm. 8,800 millions, which is Rm. 500 millions above the figure of 1934-35 and Rm. 2,400 millions above that of

1932-33. The figure of 1928-29, Rm. 10,200 millions, has not been reached. The net income of agriculture is not given, but it seems that expenditure has of late risen less than the gross yield. It is, however, officially claimed that the total volume of agricultural production increased, because farmers themselves produced a great part of the fodder which they formerly imported.

The "work-book" system for manual, clerical and technical employees has been made compulsory from September 1st, after which it will be a punishable offence to employ anyone not in possession of a book. The work-books will contain records of the holders' occupational careers, but nothing about their efficiency or characters. The Reich Board for Labour Exchanges and Unemployment Insurance reports having advised some 700,000 persons on the choice of a career in the first quarter of 1936. Young women are, on principle, directed to a few "suitable" occupations, mainly to domestic service, and are discouraged from entering the manufacturing industries.

"CLOSED ECONOMIC CASTES"

A dispute has arisen over the principles underlying admission of aspirants to the retail trades. Independently of the general, but qualified, veto against the opening of new shops, individual persons may embark on retail trade only if they are personally "suitable." Therein political reliability plays a rôle. Persons found suitable in these senses were, however, not to be excluded from the branch of trade contemplated unless it was overcrowded. Applications (in Prussia) were decided on by the local Bürgermeister or Landrat, but the Chamber of Commerce was first to be consulted, and the Chamber was expected to consult in turn the special corporative organ of the branch in question, i.e. the Retail Trade Group. It is alleged that the Group systematically, on grounds of self-interest, used its influence to have applications rejected. The controversy illustrates the Nazi tendency towards creating and perpetuating closed economic castes. The Hereditary Farm law practically excluded outsiders from undertaking farming and tied existing farmers to the land. In a similar way freedom to develop business in certain industries is made dependent on past association with the industry in question. In this State regulation appears the theory of a "growing generation," or *Nachwuchs*, of persons who, owing to parentage or to existing employment already in a minor capacity, have a right and a duty to work as heads in the occupation in question. The tastes and the natural abilities of individuals are therefore ignored and overridden.

The heavy industries are active. Pig-iron output in July was 1,311,500 tons, against 1,241,200 tons in June. Discussing the coal situation, the chairman of the Rheinische Stahlwerke intimated his view that an international agreement may soon be reached, and remarked that the losses now being suffered in the export trade have made the situation unbearable. The number of unemployed miners on the Ruhr has fallen to some 50,000. Coal production per man and shift has continued to rise, being 1,720 kilos. in March, 1936, against 1,678 kilos. in 1934 and 943 kilos. in 1913.

The export surplus increased in July, since imports decreased and exports increased. The surplus was Rm. 49 millions, as against Rm. 11 millions in June. This result was mainly due to seasonal influences. Of late the seasonal influences have become more marked and more regular. Closely analysed, the returns seem to indicate that exports are being almost as much officially controlled as imports. The figures are as follows:—

	June	July	Jan.-July
Imports	Millions of Marks		
I. Foodstuffs	120.7	105.2	882.4
(a) Livestock	7.6	7.8	50.3
(b) Animal foodstuffs	28.1	27.4	263.1
(c) Vegetable foodstuffs	85.0	70.0	569.0
II. Industrial goods	239.4	240.5	1,574.3
(a) Raw materials	135.7	135.1	908.1
(b) Semi-manufactured	69.3	71.8	447.3
(c) Manufactured	34.4	33.6	218.9
Total	360.1	345.7	2,456.7

	June	July	Jan.-July
Exports	Millions of Marks		
I. Foodstuffs	6.1	6.5	54.2
(a) Livestock	0.2	0.1	1.6
(b) Animal foodstuffs	0.7	0.7	5.1
(c) Vegetable foodstuffs	5.2	5.7	47.5
II. Industrial goods	364.8	388.9	2,583.9
(a) Raw materials	33.7	32.3	225.3
(b) Semi-manufactured	35.8	38.2	266.5
(c) Manufactured	295.3	318.4	2,092.1
Total	370.9	395.4	2,638.1

The half-yearly return shows a decline of imports from those European countries which deliver half-finished and finished goods, among them Great Britain and France, and a heavy drop in deliveries from Russia of raw materials.

Money last week was less easy, and the day-loan rate was $\frac{1}{2}$ per cent. above that of the preceding week. This was due to a tax payment demand. This week money rates are a little lower, and there is a market for Reich Treasury bills. The Reichsbank's return for August 15th shows a substantial decline of credits, due mainly to repayments of Reich Treasury bonds towards the close of the week.

BERLIN, August 18.

SWITZERLAND

SIGNS OF RECOVERY

THE foreign trade returns for the first half of 1936 show a decrease over 1935 both in imports and exports, but the 1936 results are not as unsatisfactory as had at one time been forecast. Imports totalled 542,013,180 francs, a drop of nearly 80,500,000 francs over 1935, which was mainly due to import quotas. Exports totalled 396,210,434 francs, a drop of about 6 millions over 1935. The import surplus, which was 220 millions last year, was reduced to 145,750,000 in 1936.

The results for the four chief exporting industries are nevertheless encouraging. These industries' exports totalled 186.5 millions for the first six months, as against 178.75 millions the previous year. Exports of the watch-making industry reached 55.7 millions, compared with 48.8 millions in 1935; the market for Swiss watches has somewhat expanded, and there was a noticeable improvement in the demand for the better quality watches. Silk and cotton goods exports showed a small decrease over last year, but the machines industry's exported products rose by 3 millions.

Imports from Great Britain dropped to 33,600,012 francs from 37,719,719 francs in 1935, and exports to Great Britain rose from 35,443,683 francs in 1935 to 41,934,255 francs in 1936. Trade with the five principal countries was as follows (in millions of francs):—

	Imports from		Exports to	
	1935	1936	1935	1936
Germany	161.6	144.8	90.1	85.1
France	106.2	82.4	60.4	52.2
Great Britain	37.5	33.3	35.1	41.7
U.S.A.	32.6	29.8	20.7	23.8
Italy	47.0	28.4	38.2	29.0

The decrease in imports from and exports to Italy is due to the application of sanctions; but since the raising of sanctions trade with Italy has been more active, though far below the 1935 level.

The economic situation is more satisfactory than at the beginning of the year; and though recovery is still far away, prospects are now much more encouraging. In July imports totalled 95.3 millions, or 1.9 million more than in June; and exports totalled 66.5 millions or 0.3 million more than in June and 5.6 millions more than in June, 1935. Imports of coal and raw materials in July were much higher than in June.

The half-yearly reports of the more important Swiss banks show that commercial business, as well as the influx of foreign capital, have increased since January last. The change of Government in France resulted in a big increase in the total of French gold, banknotes and securities

deposited in the Swiss banks, while numerous houses and estates were purchased by French citizens, particularly in French-speaking Switzerland.

The Swiss Federal Council issued on June 19th a decree designed to "protect the national currency against speculation." Its object is to prohibit speculation in gold and foreign gold values which might be contrary to the interests of the country and prejudicial to its currency. The decree imposes penalties for the forward purchase or sale of gold, the granting of advances on gold and foreign exchanges, and the purchase of foreign exchanges in the forward market, when such operations are not justified by some commercial transactions. The free movement of payments and the transfer of capital abroad, so long as they do not represent speculative operations, are to continue as before, and are not subject to any restrictions. There is no question, therefore, of anything more than measures against speculation.

Payment for goods of all kinds, for securities and for the transfer of capital, etc., will proceed as formerly without the slightest difficulty. The regulations controlling the maintenance of a gold currency remain in force without restriction, when speculative activities are not concerned; nor is there any question of hindering in any way the reflux of capital which had found a refuge in Switzerland. The Federal Government's decision is by no means an innovation. The principal measures for combating speculation were already formulated in a "Gentlemen's Agreement" concluded on June 20, 1935, between the Swiss banks and the National Bank. That agreement, directed against speculation, is even more strict and precise than the recent Government's decree. According to the stipulations of the "Gentlemen's Agreement," the banks are to abstain from participating in any operation connected with "monetary speculation," i.e. with the granting of advances on gold, exchange transactions in the forward market, and advances on securities in foreign currencies. The agreement remains in force alongside the Federal decree.

GENEVA, August 15.

CHINA

A BLOODLESS REVOLUTION IN CANTON

It is now possible to review the events which led up to the bloodless revolution in Canton last month and to derive from the new order of things some hope that unification of China is within measurable distance of accomplishment. At the moment of writing the Kwangsi War Lords are still at odds with the Central Government; but it can only be a question of time before their troops are hemmed in by armies loyal to Nanking and forced to surrender. Financial embarrassment and personal jealousy were undoubtedly the motives which led the South-west Political Council to revolt against the Central Government. It is still a mystery why the Canton War Lord, Marshal Chan Chai Tong, should have committed political suicide. Although originally a usurper, having driven from office the appointee of Chiang Kai Shek, he has for five years held control of Canton with the tacit approval of the Central Government. He has never encouraged his more restless colleagues of the South-west in their antagonism against Chiang Kai Shek, and although he has clung to a state of semi-independence he has maintained comparatively friendly relations with Nanking.

Chiang Kai Shek was, however, the master of the situation. As soon as Chan Chai Tong's followers saw that Chiang was in earnest and was threatening Canton with a strong army under a Cantonese General, Yu Han Mow, the Air Force deserted to Nanking and what was left of the Navy beat a hasty retreat to Hongkong. Deserted by his supporters and dunned for large sums of money by his allies, Chan took refuge on a British gunboat and was

brought to Hongkong. He has since announced in the Press that neither he nor his subordinates will take further part in the politics of the South-west.

During the previous few days there was a considerable exodus of the wealthy classes, the wives and families of the leading officials being the first to seek shelter in Hongkong. Canton itself remained perfectly quiet during the interregnum, which only lasted over the week-end. A new set of officials soon arrived from Nanking by air, and within a few days the change-over was complete so far as Canton was concerned. General Yu has now established himself and has large forces under his command. His colleagues are all Cantonese with the exception of the Financial adviser, Mr. T. L. Soong, who is the brother of the well-known Nanking Minister, Mr. T. V. Soong, and related by marriage to Chiang Kai Shek.

FINANCIAL CHAOS

It was not long before Mr. T. L. Soong discovered that the large silver reserve reputed to be held in Canton as cover against the provincial banknote issue was seriously depleted. The accounts of all the various Government departments seem to be in chaos, and it is reported that those officials who are still in Hongkong will be called upon to explain the defalcations. It is, however, unlikely that any of the missing money will be refunded, and Mr. Soong will have to look to Nanking for funds to place the finances of the Province on a properly reorganised basis. The first aim is to bring Kwangtung into the ambit of the national currency. Kwangtung notes are at present standing at a discount of 50 to 60 per cent., and it will be an expensive matter to call in the large issues now current and substitute Central Government notes. It is hoped that the many provincial import duties, over and above the regular Customs tariff, will be abolished, but here again it is difficult to see how this source of revenue can be given up. The semi-official smuggling service will undoubtedly be stopped. This service, which was under the control of the Salt Commissioner (a brother of Chan Chai Tong), employed Government gunboats to bring merchandise from Hongkong which entered Canton without Customs examination, as ostensibly the goods were Government stores.

It will be interesting to see what attitude will be adopted under the new regime towards Government industrial undertakings. These comprise sugar refineries, cement works, chemical factories, a brewery and large textile mills, which were brought into being by the late Government under the five-year plan for the nationalisation of the means of production. Presumably the new Administration will take over the responsibility of all industrial concerns established under the late regime.

There are signs that the "New Life Movement," which Chiang Kai Shek has pushed so vigorously in the North, will receive official encouragement in Canton. Already it has been announced that the gambling monopoly will be wound up and opium smoking firmly curtailed. Good intentions abound, and while one cannot place unlimited faith in Chinese paper schemes there is some hope that what has been accomplished in the North by the Central Government, and confirmed by Sir Frederick Leith-Ross and other observers, may be repeated in the Southern provinces. But the main hope which springs from the recent change is the promise of a better governed and less harassed hinterland to Hongkong and, from the point of view of the Hongkong Government, the removal of the misunderstandings arising from relations with a semi-independent Government jealous of any suggestion as to the supremacy of Nanking.

The uncertainty and nervousness in Canton preceding the flight of Chan Chai Tong were not without effect on Hongkong. The influx of people brought about a temporary demand for house accommodation, and a certain amount of money went into the local share market. Shortly afterwards the situation in Canton eased, and with the prospect of the introduction of the Central Government currency there loomed up the possibility of the Hongkong dollar being brought down nearer the level of the national dollar. On July 23rd there was a rush to buy

sterling in Hongkong, and the rate on London, which had opened at 1s. 3½d., fell five times, to close at 1s. 2½d. There has been a slight decline since then, and with the Hongkong dollar standing at 1s. 2½d. the premium over the Shanghai dollar is under 3 per cent., as compared with about 7 per cent. a fortnight ago.

The trade returns for China, published by the Maritime Customs, show that imports for the first six months of this year totalled \$459 millions, as compared with \$545 millions for the first half of 1935. The corresponding figures for exports were \$332 and \$259 millions, and the import surplus fell from \$286 to \$126 millions. These figures do not, of course, take into account the huge quantities of goods which have been smuggled into North China during recent months. The volume of this illicit trade would undoubtedly increase the import surplus to a level very much closer to that of last year.

Hongkong trade statistics for the first half of this year show an increased turnover in local currency values although the sterling equivalent is much lower than in 1935, owing to the decline in the average rate of exchange from 2s. to 1s. 3½d. The total imports of merchandise for January to June, 1936, were \$212 millions (£13.7 millions), as compared with \$191 millions (£19.7 millions) for the first half of 1935. The respective export totals were \$163.5 millions (£10.5 millions) and \$142.7 millions (£14.6 millions).

CANADA

DROUGHT AND THE WHEAT POSITION

ALL recent reports tell a tale of the deterioration of the Western grain crops under the ravages of the drought; and the latest survey of the Bureau of Statistics states that the prairie grain harvest, which has now begun, will be "the lightest in many years." Crop experts now forecast the yield of prairie wheat at about 220 million bushels, which would be the lowest figure since the war; but coarse grains have suffered more than wheat, and as both pastures and hayfields have been burnt up, the feed problem has become very serious in the southern territory of the Prairie Provinces. The Alberta Government is asking Ottawa either to provide feed for, or move to more favoured districts, about 500,000 livestock in Southern Alberta for whom normal water supplies are vanishing and no feed is in sight. The Mackenzie King Government, which does not want to see the country denuded of stock by a wholesale slaughter of animals, has promised its co-operation.

The situation is much better in the northern parts of the Prairie country, where fair to good crop prospects remain and feed is reasonably plentiful. In Ontario the drought situation has been greatly relieved by heavy rains during the past week, though more are required in many districts. Crop prospects are reported to be good in the Maritime Provinces, Quebec, Eastern Ontario and British Columbia. The latter province is credited with one of the best crops on record.

The prices of grain have been rising steadily, and that of wheat is now well above the minimum price of 87½ cents per bushel, fixed by the Government, at which the Canadian Grain Board is instructed to buy all wheat offered by the farmers. Mr Bennett has protested against the continuance of the policy followed by the new Canadian Wheat Board under the instructions of the King Government in offering its holdings at the ruling market price, which is to-day about 92½ cents (No. 1 Northern). Mr Bennett argues that present statistical and climatic conditions justify a price of at least a dollar per bushel for Canadian wheat; and he has urged the farmers' organisations, the Western Provincial Governments and the municipalities to join forces in bringing pressure to bear upon the Government to hold wheat off the market for a price more in conformity with the world wheat situation. The Government, however, takes the view that since the

Western grain-growers have disposed of practically all their 1936 crop they will gain more by a reduction of the carry-over on July 31st to reasonable dimensions. The Board of Grain Commissioners estimates that the carry-over on July 31st will be about 125 million bushels, which would be 90 million bushels below the figure at the end of the previous crop year.

The National Employment Commission is now functioning actively, and it has fixed September 1st as the date for beginning a census of the unemployed who are on relief for the purpose of ascertaining their employability and the geographical distribution of different classes of workers. The Provinces will co-operate in this task, and when a register of the unemployed is secured they will keep it up to date by monthly revisions.

"PROSPERITY CERTIFICATES" IN ALBERTA

In Alberta the Aberhart Ministry has its plans completed for its experiment with "prosperity certificates," and they are to be put in circulation immediately and used at first in payment of labour and material on highway construction, at which the unemployed will be set to work. It remains to be seen how far the business community will be prepared to accept them as adequate currency, and although Mr Aberhart claims that many merchants have signified their willingness to handle them, a number of trade associations have refused. Mr Aberhart freely admits that these "prosperity certificates" are not "Social Credit," or even a substitute for it, but as a first step towards payment of the basic social credit dividends, which he has promised to make available within eighteen months of assuming office, his Ministry has passed an Order-in-Council authorising the Ministry of Trade and Industry to undertake in August and September a thorough registration of the citizens of Alberta.

The results of the Provincial election held in Manitoba on July 27th indicate a persistence of the tendency of Canadian voters, visible since the depression, to vote against the party in power. Moreover, this disposition was aggravated by the serious crop failure which is afflicting a large part of the province. The Liberal-Progressive Ministry of Mr Bracken, which has held power since 1922 and had 38 out of 55 seats in the late legislature, lost its clear majority.

The business outlook for the second half of 1936 has been clouded by the serious failure of the prairie grain crop; but if the present sharp upward climb in grain prices continues, the ultimate purchasing power of the prairie grain-growers may be as large as a year ago. However, the general underlying tone of business remains fairly steady, and although retail trade in the towns and cities is suffering from the absence of many residents on holiday, it is brisk at all the holiday resorts, which are benefiting from an increased influx of American tourists. The following is the movement of the general economic index of the Bureau of Statistics:—

Week ending	Car-loadings	Wholesale Prices	Bank Clearings	General Index
July 20, 1935	74.9	71.5	84.8	100.1
July 11, 1936	78.0	73.9	97.3	109.1
July 18, "	78.6	74.1	97.1	110.3

The demand for durable goods remains strong, and the mining fields of Northern Ontario and North-Western Quebec continue to pour in a stream of very profitable business to firms dealing in machinery and other supplies for mines. There have been some strikes for higher wages in different parts of the country, but on the whole Canada is at present comparatively free from labour troubles. Exports and imports in June were lower than in May, but were well above June, 1935.

The yield of the Federal revenues for June amounted to \$33,601,444, compared with \$27,034,896 in June, 1935; and for the first three months of the current fiscal year the ordinary revenues, aggregating nearly \$135,000,000, are about \$17,500,000 up. Expenditure, ordinary, special and capital, totalled \$46,022,637 in June, an increase of roughly \$4,000,000.

BOOKS AND PUBLICATIONS

THE POPULATION PROBLEM

Few divisions of economic thought have witnessed a more complete revolution in the last ten or fifteen years than the discussion of population problems. Ten years ago the discussion was theoretical and the approach neo-Malthusian. The spectre of inevitable over-population had been laid, but attention was concentrated on the "optimum population" which was usually suspected to be less than the actual population. The conclusion was almost always in favour of restricting births, at least in large classes of the people.

The new approach is most admirably illustrated by Professor Carr-Saunders' book.* The discussion is now very largely statistical; for both the sources of data and the statistical methods of handling them have greatly improved in the past decade. Talk of an "optimum" population has almost disappeared (Professor Carr-Saunders only mentions the word in an appendix). It is realised that population is going to decline, soon and fast, without there being much possibility of Man's arresting the decline, at least for many years to come. From the neo-Malthusian attitude, opinion has swung round so violently that the talk is now of race extinction.

Professor Carr-Saunders builds up his case most carefully, quoting almost all the relevant figures and opinions. The increase in world population which began in the eighteenth century he shows to have been due, almost exclusively, to a decline in the death-rate. The subsequent slowing-up of increase and the impending decline are due to a very radical decline in the birth-rate, which, after a most careful and cautious discussion, he ascribes to the growing practice of birth-control—that is, contraception as opposed to the age-old devices of limitation of marriage, abortion and infanticide. Parents, he believes, have always wanted fewer children than "nature" sends, but hitherto the only methods of limitation have been painful or repugnant. The revolutionary new fact is that the parental instinct can be, and is, satisfied when the average family is not sufficient to replace the existing population.

Professor Carr-Saunders is not very optimistic about the possibility of changing the trend. There are still many "unwanted" children and, therefore, the further spread of birth-control will produce a continued decline in the "net reproduction rate." This rate, which may be very roughly defined as the number of surviving female children born to the average woman in her lifetime, is already as low as 0.75 in England and Wales. That means that each generation will soon be only three-quarters of the one before. Measured in generations, this is a remarkably rapid rate of decline. To stop it involves nothing less than a social revolution, for the whole outlook of our society is now keyed to the small family.

"The ingenuity and enterprise of inventors and of entrepreneurs (Professor Carr-Saunders says) are exerted in the interests of the unmarried and the childless; it is the needs of the unencumbered adult that everyone tries to satisfy. Housing exhibitions show us model flats upon which every care has been lavished and in which no child could ever find a home. In the last fifteen years two million houses have been built, and there is now an Act which gives a definition of overcrowding and makes it a statutory offence. It is possible that, taking the sizes of these houses and the definition of overcrowding together, the result will be to produce a situation in which the population of these houses cannot replace themselves."

More is needed than merely larger houses. Medical attention to the pains and perils of childbirth, the removal of the advantages of wealth in educating and establishing children, cash subsidies to the large family—all these will be needed if a very rapid decline of the population is to be avoided. The only criticism of the scope of the book which can be made is that the author does not sufficiently illustrate the economic dangers of a shrinking (as opposed to a steady but smaller) population. There are still many people who would accept his prognosis of a rapid fall, and welcome it. The impression must not be given that Professor Carr-

* "World Population. Past Growth and Present Trends." By A. M. Carr-Saunders. Published under the auspices of the Royal Institute of International Affairs. Clarendon Press. 336 pages. 12s. 6d.

Saunders confines himself to Great Britain, or even to Western Europe. His field of observation is the world, and he covers it as diligently as the available statistics permit. He finds declining fertility everywhere in the white countries and also in Japan. He points out that the overseas white countries are both themselves failing to occupy their land, and also limiting immigration precisely to those stocks whose fertility has already fallen furthest. Within the white race there is a problem due to the fact that the countries of Southern and Eastern Europe still have a considerable increase to come, before decline sets in, although some of them, especially Poland and Italy, are already overcrowded. For the problems of over-populated countries such as China and India, he sees no happy solution at all.

This is a very well-written and authoritative book on a problem which will rapidly become one of the greatest in the world. For once the platitude is literally accurate: every serious student of affairs should make it his business to read it.

SHORTER NOTICE

"World Politics, 1918-1936." By R. Palme Dutt. 362 pages. Gollancz. 5s.

Mr Palme Dutt, editor of the *Labour Monthly* and a well-known Communist writer, presents in this book the orthodox Communist interpretation of the post-war international situation. Those who read his previous book, "Fascism and Social Revolution," and enjoyed its qualities, even if they disagreed with many of the arguments, will probably be disappointed in "World Politics, 1918-1936." It shows few traces of original thought, contains too much repetition of familiar slogans and is written in parts in a manner well calculated to irritate all but the most devout Stalin-Lenin Marxists.

The book is not really a history of the post-war period. It is rather a series of essays revolving round a few important contentions. One of these contentions—that there are national and imperialist rivalries and that these rivalries are at present unmistakably leading to war, would not be disputed by any intelligent observer of foreign politics. In the latter half of the book, which is by far the best, Mr Dutt analyses with considerable skill the nature of these rivalries at the present time and the foreign policies of different countries. Best of all is his incisive account of Hitler's foreign policy and the reaction to it of British Conservatism.

Mr Dutt's immediate and positive proposals, based as they are on this concrete analysis, will also be widely approved. He advocates a true collective security system which the Fascist States must be invited to join, but which must be carried through without them if they decline; and the formation of a peace bloc by France, Russia, Great Britain and the smaller Powers, whose united force would be sufficient to deter aggressors.

It is a pity that this book has the weaknesses—both of form and content—which arise directly out of the narrow and doctrinaire spirit in which it is written. And it is surprising that Mr Dutt, for whom "the popular front" is presumably an immediate objective, should take pains to emphasise by his arguments the differences between the Communist and other Left wing points of view, and to antagonise by his manner those who might otherwise be sympathetic.

MONEY AND BANKING

CAPITAL STRUCTURE OF BRITISH BANKS

DISCUSSIONS of banking problems usually range around such questions as the proper relation between cash and deposits and the nature and distribution of the banks' earning assets. Matters concerned with capital and reserves are generally taken for granted, on the implicit assumption that it is the banks' own business to see that both are adequate, and that in Great Britain they are invariably ample. The question, however, merits more detailed treatment, partly because of its historical interest and partly because it raises certain important issues.

We show, accordingly, in the two tables which follow, the capital, reserves and deposits of the "Big Five" and the three Lancashire banks. The first table is an analysis of the banks' issued capital, and gives separate totals for the various classes of shares. In the second table, the paid-up capital (including both the fully-paid shares and the amounts paid up on the partly-paid shares) is compared with the banks' disclosed reserves and deposits:—

BANKS' ISSUED CAPITAL
(£'000)

	Partly-paid Shares			Fully-paid Shares
	Callable	Paid-up	Total	
Barclays	...	...	...	15,858
Lloyds	57,492	14,373	71,865	1,437
Midland	27,255	7,173	34,428	7,075
National Provincial	34,138	8,309	42,447	1,170
Westminster	21,213	7,071	28,284	2,249
Total, "Big Five"	140,098	36,926	177,024	27,789
District	7,584	1,896	9,480	1,080
Martins	16,442	2,349	18,791	1,811
Williams Deacons	6,248	1,562	7,810	312
Grand total	170,372	42,733	213,105	30,992

CAPITAL, RESERVES AND DEPOSITS
(£ millions)

	Capital			Reserves	Paid-up Capital plus Reserves	Deposits	Ratio of Capital and Reserves to Deposits
	Callable	Paid-up	Total				
Barclays	...	...	...	...	...	...	...
Lloyds	57.5	15.9	73.4	10.2	26.1	414.2	6.3
Midland	27.3	14.2	41.5	11.5	25.7	385.6	6.1
National Provincial	34.1	9.5	43.6	8.0	17.5	308.2	5.5
Westminster	21.2	9.3	30.5	9.3	18.6	356.4	5.2
Total, "Big Five"	140.1	64.7	204.8	47.5	112.2	1,941.9	5.8
District	7.6	3.0	10.6	3.0	6.0	74.9	8.0
Martins	16.4	4.2	20.6	3.1	7.3	92.0	7.9
Williams Deacons	6.2	1.9	8.1	0.8	2.7	35.9	7.5
Grand total	170.3	73.8	244.1	54.4	128.2	2,144.7	6.0

Clearly, there is no uniformity in the capital structure of the different banks. Barclays Bank has all its issued capital in fully-paid shares, but the callable portion of the capital of the other banks considerably exceeds the amounts paid-up. The ratio of unpaid to paid-up capital varies appreciably between the different banks. The explanation of these discrepancies is purely historical. Each of the "Big Five" is an amalgamation of several large banks, each of which in its turn had absorbed a number of smaller institutions. Every amalgamation involved the creation and exchange of shares after delicate and protracted negotiations, and the results, naturally, bore the stamp of expediency rather than of perfect symmetry.

Banking capital has a twofold function. In the first place, a bank must immobilise a certain part of its resources in fixed assets such as premises. The second—and more important—function of a bank's capital is to serve as a shield to deposits, for if a bank's assets depreciate, the loss falls on the bank's capital and reserves before it descends upon deposits.

For this reason, in the early days of banking the proprietors' liability was unlimited, and depositors were "covered," legally, to the full extent of the proprietors' personal fortunes. With a few exceptions, the principle of limited liability was not extended to joint-stock banks by law until 1858, and even afterwards competition and prestige precluded many banks from giving this protection to their proprietors. In 1878, the City of Glasgow Bank failure shocked the susceptibilities of investors everywhere, for the entire fortunes of practically all the bank's stockholders were involved in its ruin. Some trustees found themselves liable, merely because the trust funds included a few City of Glasgow Bank shares, though many of them were unaware that they were even on the bank's share register. The result of this disaster was that it became practically impossible to obtain fresh banking capital, and during the next few years the majority of the banks were compelled, willy-nilly, to adopt limited liability.

It was felt, nevertheless, to be against the interest of depositors to relieve shareholders of all liability, and so the banks reorganised their capital so that their new shares carried a heavy call. This principle has persisted until to-day. There has been, however, a certain departure from the strict letter of this principle, for all the banks have, additionally, issued fully-paid shares, and the whole of Barclays' capital is in this form. In recent years, again, the market price of bank shares has been well in excess of their nominal paid-up value, and a shareholder's liability under a call may, in fact, be approximately equal merely to the amount of cash he actually paid for his shares. For example, the market price of Westminster Bank £4 shares, £1 paid, is now £4 15s., against a call liability of only £3. The original conception was that fully-paid shares should be held by the small investor, while partly-paid shares were more suitable for the wealthier classes. It is more than doubtful if bank shares are distributed on those lines to-day. Many shareholders, it may be surmised, would have great difficulty in meeting a call, and in practice the possibility of any of the big British banks even enforcing one is somewhat remote. Such a contingency could occur one may safely assume, only as the result of a major financial crisis in which Government intervention would almost certainly be forthcoming. The fate of the Anglo-South American Bank, again, suggests that, rather than inflict a call on the shareholders of a single bank, the banking world is prepared to carry out the necessary salvage work for the sake of its own prestige.

In these circumstances it is surely illogical that partly-paid banking shares should stand at an appreciably lower price level, on the Stock Exchange, than fully-paid shares. The very existence of partly-paid shares, indeed, is itself fast becoming an anachronism. The high rates of dividend declared on bank shares tend, incidentally, to confuse the issue. Few people realise that the dividend arises not only from the share capital but also from the published and unpublished reserves, which equally are the property of the shareholders, and that its ratio to total assets (which are a bank's real "working capital") is very low indeed. It is not easy, however, to see how any fundamental change can readily be made. To extinguish the shareholders' liability to a call would require the consent of every depositor. On the other hand, the amount involved is too great to permit of the issue for cash of fresh shares in substitution for the unpaid portion of the existing shares. To capitalise reserves for the purpose of extinguishing the calls would be to discriminate against the fully-paid shareholders. The banks are not in need of large amounts of new share capital, and they could not earn on it anything like the existing percentage dividend.

This last point introduces the question of the proper relation between a bank's capital and deposits. In pre-war days, the average ratio of capital and published reserves to

deposits was a little over 10 per cent., and this was regarded as an adequate cushion for depositors. The enormous expansion in deposits since 1914, due to monetary causes, has completely upset this relation, and, as our tables show, to-day the ratio for all the eight banks is only 6 per cent. For the "Big Five" it ranges from 5.2 per cent. for the Westminster to 6.3 per cent. for Barclays, while the ratios of the Lancashire banks are rather higher. It does not follow, however, that the banks are "under-capitalised," because an unknown part of these deposits consists of undisclosed reserves, contingency funds and so on, which are the property of the shareholders. The transfer of these from customers' to shareholders' "account" would make a considerable difference in the ratio.

The fact is that the British joint-stock banks have developed into quasi-national institutions, and failure could only occur in a major economic disaster. In such an event the power to call up the unpaid capital would be worthless, because the bank's shareholders would be involved in the general ruin. Hence a bank's capital, whether paid-up or callable, has in practice ceased to be an effective protection for the depositors. To proceed to argue, however, that the banks, for that reason alone, should proceed to increase their capital simply in order to abolish the call is too wide a step. On the other hand, the discrimination against the partly-paid shares on the Stock Exchange, which finds reflection in a lower price and higher dividend yield, appears to have to-day a justification which is more academic than realistic.

FINANCIAL NOTES

Banque de France Policy.—The new General Council of the Banque de France, which replaces the former Council of Regents, held its first meeting on Tuesday. The Permanent Committee consisting of the Governor, the two deputy-governors and four councillors, to which the Council may delegate all or part of its powers, was elected. M. Labeyrie, in his speech of welcome to the new councillors, stressed the duty of the Bank to assure to the full extent of its powers the stability of the franc and the lowering of interest rates for the benefit of French industry. He equally insisted on the maintenance of the Bank's traditional rules affecting discounts and advances, and while this was probably an admonition to his new colleagues, it may have been also an indirect warning to the Government against over-borrowing from the central bank. Apart from this, M. Labeyrie said little of a definite character. He, no doubt, realises that the main duty of the Bank will be to carry out and not inspire the Government's monetary policy, which cannot yet have reached its final shape, and his words were probably intended to ensure some continuity of tradition during the transition which has now taken place from the old to the new régime.

The Foreign Exchanges.—French francs have remained weak, and on Wednesday the spot rate in London rose from Frs. 76½ to Frs. 76¾. Three months' francs also weakened from around Frs. 3 to Frs. 3¼ discount. The franc is also quoted at the export gold point not only against the dollar, but against the guilder and possibly the Swiss franc, though the last rate may be just inside the gold point. A further small amount of gold has been engaged in Paris for shipment to New York, and it is thought that the French authorities have been supporting the franc by selling dollars against francs in the Paris markets. The Banque de France's return for August 14th shows a gold loss of Frs. 141 millions, but the note circulation has contracted by Frs. 548 millions. There is a further switch-over of Frs. 925 millions from Treasury Bonds re-discounted to provisional advances. Both spot dollars and gold *bloc* currencies have tended to follow the franc in these quotations against sterling. This is only natural with all the Paris cross-rates consistently at the export gold point. On balance there is little change in London spot quotations.

SKANDINAVISKA
KREDITAKTIEBOLAGET

The Money Market.—Conditions remain very comfortable, but there is still a fair afternoon demand for money. The mid-monthly excise duty payments took a certain amount of money off the market, while the absence of any Treasury Bill maturities on Monday also meant that money was less plentiful early in the week. These influences offset the further return of notes from circulation.

	July 30, 1936	Aug. 6, 1936	Aug. 13, 1936	Aug. 20, 1936
Bank rate.....	2	2	2	2
Clearing banks' deposit rate ..	½	½	½	½
Short loan rate:—				
Clearing banks	½-1*	½-1*	½-1*	½-1*
Others	½	½	½	½
Discount rates:—				
Treasury bills	½	½	½	½
Three months' bank bills	½-¾	½-¾	½-¾	½-¾

* Loans against Treasury bills and other approved bills and British Government securities within six months of maturity; 1 per cent. Treasury Bonds and other gilt-edged stocks within six months of maturity; and other collateral, respectively.

The banks have been buying Treasury Bills maturing from September onwards to early November at ½ per cent. The market's buying rate for three months' bank bills is ½-¾ per cent., but competition makes the lower rate the more effective.

The Bank Return.—This week the note circulation has been reduced by £5.9 millions, which is comparable with the parallel reduction last year. Thus there has been no further pronounced French hoarding of British currency. Nevertheless, the Bank has begun buying gold again, but its recent purchases have been much smaller than those of July. The Bank's total purchases between June 10th and August 19th amount to £44.8 millions, valued at the Bank's statutory buying price, or to about £73 millions at the current market price. Imports from France, valued at the current market price, amount to £57.2 millions during the same period, so that on the assumption that the Bank repatriates all its gold there is still some more to come.

In the banking department the week's excise duty collection and the absence of Treasury Bill maturities on Monday have caused a temporary transfer of funds from bankers' to public deposits.

THE STOCK EXCHANGE

WALL STREET PERSPECTIVE

BOOMS in Wall Street follow a fairly well-defined course. After prolonged depression, security values begin to rise. The experts, arguing conservatively in terms of meagre earnings, declare that quotations are high. Prices continue to rise. The augurs, throwing earnings criteria overboard, proclaim that quotations are bound still higher, that nothing can arrest them, that the half has not been told. Then prices fall. . . . That, briefly, was the story of 1926-29. Will history repeat itself in 1933-36?

In June, 1932, the Standard Statistics' combined index of 419 industrial, railroad and utility common stocks (1926 = 100) stood at a low depression level of 32.3. At the time of the banking crisis in March, 1933, the index was standing at 40.9. Four months later, in the sentimental false dawn which followed President Roosevelt's accession, it had risen by 104 per cent. to 83.4. A prolonged and relatively severe reaction followed, however, and it was only on the declaration of the unconstitutionality of N.R.A. in May, 1935, that the upward movement really began to make impressive headway. As recently as in April of this year, a fortnight's sharp recession cancelled, for a time, practically all the gains secured since the beginning of 1936. During this period, a market broadsheet reached London, whose author discussed seven separate possibilities and concluded his survey of six with the words: "Outlook, bearish." Prices, nevertheless, have quickly recovered, and have lately been "breaking" into new high ground (post-depressionist), with inspiring consistency. To-day the Standard Statistics' index stands at 113.2, having risen by no less than 250 per cent. from its low point of 1932, and by 62 per cent. in the last fifteen months. A few conservative people are asking, not unnaturally, whether the advice to beware when all men speak well of a market applies in the present instance.

Certainly the industrial background is favourable. Recovery started later in the United States than in Great Britain, and, as it was initiated and has been steadily punctuated by widespread Government spending, it was naturally first apparent in the consumption industries. The automobile industry, the classic bridge between the capital and consumers' goods trades, whose progress has so often been the best of all forecasting "pointers," began

rapidly to increase its output early in 1934. Production this year has been running at an average level of over 400,000 cars and trucks a month, nearly three times as high as in the first part of 1932 and within 20 to 25 per cent. of the level of the corresponding months of 1929. Meanwhile, increased activity in the capital-producing industries, heralded by revival last year in the machine tool trades, has been widely interpreted as evidence that revival is definitely established and has still some way to go. Despite the drought in the Prairie States and the election campaign, almost every economic index has continued to improve. Taking the Standard Statistics Company's figures in each case, the composite index of general industrial production (corrected for seasonal variations) has been on the average 16 per cent. higher in the first six months of 1936 than of 1935, but whereas in the capital goods industries the increase is as much as 31½ per cent., in the consumers' goods trades it is no more than 2 per cent. Steel ingot production has been, on the average, 33 per cent. higher in the first half of this year than of last, and, having resisted the normal seasonal trend, is now estimated at approximately 72 per cent. of capacity. Railway equipment production, which was still at a low ebb of depression early in 1935, has increased fourfold in the first half of this year. Even building activity—which has been a significant laggard in recovery—has recently shown at least the beginnings of revival. The value of building contracts awarded in thirty-seven States has been 77 per cent. higher in the first half of 1936 than of 1935.

It is true that employment in America has tended to increase in less than due proportion to the rise in the volume of industrial production. In the first five months of this year, for example, employment in manufacturing industries, according to the U.S. Bureau of Labour Statistics, was only about 3½ per cent. better, on the average, than in the corresponding period of 1935. The American people, however, have certainly had more to spend. The increase in the aggregate industrial payroll has been officially put at about 10 per cent., and in total farming incomes at 11 per cent., for the first half of this year, compared with last. The total mail order sales of the two largest houses in the first five months were \$297 millions against a corre-

sponding 1935 figure of \$255 millions—a rise of 16 per cent. The total advertising space taken in the newspapers of 52 cities and towns, during the same period, has been computed at 552 million "lines" against 512 millions—a rise of 8 per cent. These figures, incidentally, relate to the period before the great Veterans' Bonus "hand-out" last June.

The United States, as we pointed out in a recent leading article (see the *Economist*, August 1, 1936, page 210), has still many fundamental problems to solve. There is, however, an impressive weight of statistical evidence that the immediate outlook for American recovery is undoubtedly favourable. How far is the stockholder, as such, likely to share in its fruits? Revival has reached a stage at which the financial slack of the depression period has been taken up, and industrial profits are rising at a faster pace than industrial production itself. A compilation made by the National City Bank shows that 285 companies earned net profits (after deducting ordinary taxes and deficits) of \$554 millions in the first half of this year against \$341 millions in the first half of 1935. Thus, earnings were nearly 63 per cent. higher in the first half of this year than of last. A smaller sample of 120 companies, analysed by the service already mentioned, showed an even greater average increase, with a marked quickening of the pace in the second quarter. Whereas the rise in 1936, compared with 1935, was 52 per cent. in the first quarter, it was 72 per cent. in the second.

How far have these conditions been reflected on Wall Street? Equity share prices as a whole, we have shown, are about three-and-a-half times as high as they were at the lowest point of depression. They are still only half as high, on the average, as at the peak of 1929. But it may be equally pointless to measure a healthy subject's temperature in degrees above *rigor mortis* or below fever heat. And indices which are based on averages, in any case, obscure the wide spread which obtains, to-day, between quotations for individual shares. This feature is strikingly revealed even by a short list such as that shown at the foot of the opposite page. The equity stocks included in that list have, presumably, "recovery" possibilities, since they have, with few exceptions, been purchased by one or more of the leading American investment trusts this year. But they show unequal rises during the last few months, and their prices discount future increases in earnings in unequal degree. Present quotations represent anything between 14 and 16 years' purchase of the disclosed profits of 1935, where profits were earned.

What, then, is the immediate outlook for the market generally? Obviously, the end of the rise is not yet in sight. Although speculative activity has undoubtedly increased in recent months, the disposition of a fair section of the public is no whit behind the authorities in their efforts to prevent a large open position from developing. Develop it will inevitably, in due course, but that will not be before the election, and may well be even later. In 1928, and in other election campaigns held during a rising market, there were sharp intermediate reactions in September and October, and until the issue of the contest is much clearer than at present, the Stock Exchange is unlikely to be immune from similar movements this year.

In any case, investors will find earnings prospects rather than market psychology the best guide to policy, even on the assumption of a rising price trend for several months to come. The economic factors discussed in earlier paragraphs suggest, broadly, that the capital goods industries have more "recovery profits" in immediate prospect than the consumption trades. Market prices, however, have already partially discounted this condition. It is possible, finally, that the new tax law, which imposes surtax on company income which is undistributed in dividends, may increase the amounts paid out to shareholders in general. Whether this penalisation of corporate "saving" will be in investors' interests in the long run is doubtful. Its economic effects may, however, bear rather more heavily on the capital than the consumers' goods companies. The former, with their large fixed plant, may have to draw the line between liberality and conservatism in ploughing back profits, over and above their normal depreciation charges, more prudently than the latter. But their earnings, in the next few months, have the more attractive

basic possibilities, and their increased activity, in turn, is a bull point for the railroads, which depend largely on the heavy trades.

Wall Street, in short, may be sceptical but largely unconcerned when Mr Morgenthau prophesies an early return to balanced Budgets. For time, at the moment, is more on Wall Street's side than on President Roosevelt's.

INVESTMENT NOTES

The Rise in Equities.—Activity on the London Stock Exchange has been checked neither by the holidays nor by political alarms and excursions in South-Western Europe. Optimism among investors, against a background of favourable reports from almost every domestic industry, has proceeded so fast and so far in recent weeks that a pause for stock- and breath-taking may not be inappropriate. Between December 31, 1935 and August 18, 1936, the Actuaries' Index of 178 industrial ordinary shares (December 31, 1928=100) advanced by 7.3 per cent., from 80.8 to 86.7. The *Financial News*' Daily Index, which is based on a smaller, but somewhat more active, sample of thirty industrials, has risen in the same period by 9.0 per cent. The rise has been confined almost entirely to equity shares. During the same period, the *Financial News*' Daily Index of twenty fixed interest stocks has shown a net rise of only 0.4 per cent. The Actuaries' compilation permits of a closer analysis. It shows that, during the first seven months of this year, British Government 2½ per cent. Consols actually declined in value by 2.3 per cent. Some forty representative industrial debentures showed no material change, while 113 preference shares enjoyed an average rise of 2.2 per cent. The conclusion would appear to be that the factors in this year's advance have been *industrial*. Interest considerations have been of negligible, and even of negative, significance. Actually, the available data suggest that, so far as there has been any movement in interest rates at all, it has been upward rather than downward. On January 7 last, the average dividend yield on the 178 ordinary shares in the Actuaries' Index was 3.59 per cent. On August 18th, despite the intervening rise in Stock Exchange prices, the yield was 0.05 per cent. higher at 3.64 per cent. Thus, contrary to popular impression, the rise in equities since the beginning of this year has been mainly an adjustment in response to the increased dividends declared by British companies. Average figures may, however, convey a misleading impression, for it is common knowledge among investors that this year's activity has been largely concentrated on specialised groups of shares, whose separate movements are obscured in a general index. We have, therefore, set out in the following table the relevant figures for the seven sub-groups in the Actuaries' Index which have shown the greatest percentage rise in Stock Exchange values since the end of last year:—

Group (and No. of Securities)	Prices (Dec. 31, 1928 = 100)			Yields (%)	
	End 1935	Present (Aug. 18)	Change	End 1935*	Present
Shipping (4)	15.6	19.1	+22.8%	0.22	0.77
Oil (5)	71.2	85.7	+20.4%	3.06	3.20
Home Rails (4)	64.9	77.2	+19.0%	1.58	1.51
Iron and steel (12)	67.8	80.6	+18.8%	2.81	3.70
Coal (7)	91.5	103.6	+13.2%	4.30	3.24
Building materials (5)	92.7	104.7	+12.0%	4.27	4.64
Motors (5)	53.1	59.9	+12.8%	4.36	3.66

* Jan. 7, 1936.

The fact that shipping holds pride of place is due mainly to a modest recovery in a market where prices had fallen, in many instances, to within hailing distance of zero. The remaining six "winners" include two fuel industries (oil and coal), two agencies of transport (home rails and motors), and two capital industries (iron and steel and building materials). The Actuaries' Index, unfortunately, does not include an "armament share" sub-section, but the welcome given to recent new flotations having even the faintest re-armament flavour leaves no doubt of the

extent of contemporary speculative appetite in this group. Nevertheless, our table confirms the impression that, industrial share prices, with few exceptions, have not out-run dividends. In four of the seven sub-groups, present yields are higher than those prevailing at the beginning of this year. On the whole, investors are discounting recovery no more and no less, than they were seven or eight months ago. But the industrial boom is eight months nearer its end, whenever the end may be.

Fixed Trust Report.—Conservative financial circles, small investors, and unit trust managers themselves have all expressed their welcome to the Board of Trade Committee's Report. If the Committee have shrunk from suggesting legislation on several important technical points, it has accepted no limitation upon the scope of information which is to be required from the trusts. There are precedents enough, both from company law and Stock Exchange practice, which suggest that rules legislating upon highly technical matters can never be guaranteed against loopholes. If, however, the alternative of publicity is to be accepted as a check to the introduction of doubtful practice and apparently excessive profits from unit trust promotion, it should be made automatically available to unit holders, as the parties primarily interested. Unit trust managers have found cause for satisfaction on several points in the Report. At no point does it oppose the earning of jobbing profits, as such. They are, in fact, unavoidable, but since the manager knows when his purchases and sales are to be made and, by his advertising, can influence the market in his units, he should, on balance, profit from jobbing business. But equally, his hedging transactions against sales of units should, if well devised, also yield a profit. The discussion of price calculation, again, is inconclusive, and the problem is apparently left for the movement to solve for itself, subject to the possible check through Stock Exchange dealings (in which there are considerable technical difficulties and, probably, no great attractions for the jobbers) and to the annual publication of the managers' results. The leaders of the movement are not likely to contest this decision, at least in principle. Whether, however, they would all willingly accept the very revealing accounts which the Committee suggest is another matter. Clearly, the degree of disclosure required far exceeds the legal requirements for the revenue accounts of any other undertakings. No secret could be concealed from even the novitiate investor, and certainly none from the trust's competitors. From the first elements of cost to the detailed exposure of income from adjustments and participation in commissions, Form C of Appendix III appears to offer no loophole. Provided that publicity (and, if necessary, criticism) is effective, this statement will constitute a valuable safeguard—and also a precedent, one may hope, for fuller information from public companies' accounts. Some critics of the movement might have welcomed a firmer statement from the Committee on the question of repurchase of units under the guarantee of the managers. It is imperative that the precise legal weight of these guarantees should be investigated by the highest authority, and supported, if necessary, by legislation which should, in equity, be retrospective. Since the managers alone constitute the real market for their units, future trusts might have been required to adopt repurchase provisions, particularly since new trusts for some time past have adopted this obligation. Suggestions this week that the managers might evade the recommended deposit of £20,000 by amalgamation are clearly misconceived. This sum is suggested for each unit trust under their control, with the option of closing within three months. It is probable, indeed, that certain groups might prefer the latter alternative if the recommendation is adopted.

The Movement's Response.—Announcements published by the Association of Fixed and Flexible Trust Managers (which was summarised on page 331 of last week's *Economist*) and by individual managers have generally favoured the Report. Common to almost every case, however, is the claim that the legislative recom-

mendations of the Committee have been, in certain particulars, anticipated. It is important, in our view, that such claims should not be allowed to create the impression in the public mind that the need for legislation has been completely avoided by improvements effected by the movement itself. More than one trust may have anticipated the guiding principles of the recommendations. In a competitive and evolutionary environment, this is only to be expected. Provided, therefore, that these declarations are accepted as revealing the willingness of the trusts to introduce further changes to meet the Committee's recommendations, where legislation is not needed, no harm need arise. But it is evident that both the co-operative efforts of the movement, and the work of individual trusts who have preferred to remain outside the Association, can under present conditions cover only part of the safeguards to which the public is entitled. This is particularly true of disclosure of accounts, on which certain claims have been made this week. No details, in fact, have been published on the lines that the Committee recommends, and every unit holder has always been ignorant of the size of managers' profits. In the case of certain well established groups, including the "15 Moorgate" and Trust of Insurance, this week's announcements show that satisfactory reserve provisions have already been made in the past. The former group, whose sales are estimated at £9,000,000, has disclosed that its reserves approach £170,000, while the latter intends immediately to set up a special reserve of £60,000 to meet the deposit requirements of the three trusts in the group. Municipal and General Securities propose in future to separate brokerage from the total loading charges, and thus to leave stockbrokers to charge brokerage in the usual way. The loading charge on the open investment funds will be altered from 4 per cent., *cum* brokerage, to a net charge of 2½ per cent., except for the Foreign Bond units, where 5 per cent. will be payable. This change is intended to meet the views on the size of commissions expressed in the Report, but it might not be adaptable by groups which, unlike the Municipal and General, do not transact their business solely through stockbrokers.

New Zealand and the Investor.—The reactions of the London market to Mr Savage's rapid programme of legislation have not, so far, been significant, either for good or ill. It is true that New Zealand stocks were seriously affected by the "feeling" put out at the beginning of July, which suggested the possibility that New Zealand would seek a reduction of interest, despite the fact that there are no real opportunities for conversion, on the Australian scale, during the next decade. Sir Austin Harris, chairman of the National Bank of New Zealand, acted as the mouth-piece through which these suggestions were withdrawn, and the bonds have recovered their losses. The effects of the Government on internal conditions in New Zealand, however, were recently discussed by Sir George Elliott at the Bank of New Zealand meeting. We hope to consider Sir George's remarks at length on another occasion. For the investor, clearly, great importance attaches to the new forms of State control which have been introduced by Mr Savage. The Reserve Bank is now in complete control of credit and currency, and the private shareholders have been bought out. The bank has power to advance the full amount of estimated revenue to the Government, and may acquire unlimited amounts of long-dated New Zealand loans. The trading banks, which have hitherto derived much of their London exchange and a significant part of their profit from handling dairy produce transactions, will lose this business to the Reserve Bank, under the Primary Products Marketing Act. This Act, which is now in operation for butter and cheese, introduces guaranteed prices for dairy and other primary produce. State intervention on this scale may be successful while prices are rising, while exports are increasing, and while recovery produces a buoyant revenue. Whether, on a long view, it would encounter difficulties which might affect the Dominion's credit is open to argument. But the past history of guaranteed price schemes, and the complete backing of these particular schemes through the medium of the Reserve Bank, suggests that the Government may have awkward problems

to solve if, and when, depression returns to the shores of New Zealand. In that event, comparison of the New Zealand 5 per cent. stock, 1946, now quoted at 111, with, say, the Australian 5 per cent. stock, 1945-75, which stands at 110, might not prove so favourable to New Zealand.

Building Societies Co-operation.—It is the pleasant lot of the Building Societies' Year-Book invariably to describe the new records achieved by the movement each year. During 1935 progress was undiminished, and the year takes its rightful place in the annals of the movement. But examination of the 1936 edition of this work* suggests that interest in records has taken a minor place, recently, to the introduction of the "Code of Ethics and Procedure." Measures designed to prevent "insensate competition" have been contemplated by the leaders of the movement during the past four years, and their progress has always been controversial. Their final adoption, within recent weeks, has, unfortunately, proved highly contentious. It has, in fact, been necessary to wind up the National Association of Building Societies, and to create a smaller body to be known as the Building Societies Association. The Council of the latter body reveals three changes in personnel, but is led by the same chairman and vice-chairman. The new association is supported by societies with assets amounting to nearly £450 millions, compared with the £528 millions represented by the membership of the National Association. The number of societies which have expressed their willingness to adhere to the code is, in fact, greater, and since its provisions are written into the constitution of the new association, and their observance is obligatory, it is hoped to enlist all societies willing to subscribe to the agreement. It may, perhaps, be regretted that legal and other circumstances compelled the Council of the National Association to propose its own death-warrant. Without the provision of the "sanction" embodied in the rules of the new association, however, the "code" (which governs all aspects of mortgage policy) could not have been effected. Its introduction, although tardy, is undoubtedly to the good.

COMPANY NOTES

Radio Companies.—The opening of the Radio Exhibition at Olympia next week offers occasion for a review of an industry which, despite its great progress, has not, in the past, offered equal scope to the investor. Though the rate of expansion in the number of wireless licences is now smaller than five years ago, when maximum expansion happened to coincide with the bottom years of depression, there is nothing to suggest that the increase is likely to come to an early or sudden end. The figures for June, 1936, show a total of 7,695,500 licences against 7,119,400 for June, 1935, resulting in an expansion of 576,100 over the twelve months. For the year 1935 the increase amounted to 635,100 licences, and in the peak years increases of more than 900,000 were recorded. To offset a decline in the "natural" rate of growth, however, the trade may justifiably look forward to a considerable rise in replacement demand during coming years. Thus, for 1934 the total output of wireless receiving sets was 1,577,000, or, including radio gramophones, a total of 1,727,000 instruments. The expansion in receiving licences in force between December, 1933, and December, 1934, was 807,000. The total output for the year therefore exceeded the increase in licences in force by 920,000. The relatively small export trade, which took only 58,000 sets during the year, does not account for any part of this surplus, for net retained imports amounted to 82,000 sets. The surplus, therefore, must have been required to cover replacement demands, together with "duplication" demand (i.e. provision for more than one set to one receiving licence), increases in non-licensed receivers (probably very small) and increases in distributors' stocks. Replacement demand must have been much the greatest of these outlets, and probably

approached 50 per cent. of the total output. This percentage is somewhat higher than earlier estimates, but it seems reasonable, since the total of receiving licences in force in 1924 was 1,140,100, and all of the apparatus of that time would be completely obsolete, if not completely worn out, by 1934. There are, however, two factors which qualify this favourable replacement demand prospect. First, recent chairmen's speeches show a consensus of opinion that the trade is somewhat over-expanded at present and, despite the formation of trade associations to regulate prices, etc. in February, 1935, conditions are extremely competitive. The agreements have not broken down, but have at times seemed in some danger. The expansion of the market might adjust this situation if the trade as a whole appreciated that further expansion was

undesirable at present. It seems possible, however, that the second qualifying factor, namely the introduction of television, may begin to disturb equilibrium about the time when market expansion should be beginning to tell. At present, television is unlikely to appeal to the bulk market of the radio trade. Its attractions, however, are clearly of the kind which would command a very wide market if apparatus could be produced at a popular price, and strenuous efforts are likely to be made to reduce prices. Such disturbance will also tend to magnify the speculative feature inevitable in any industry which depends on the success of its "latest model" for the profits made by individual concerns in any given year. While it is possible that profits may rise further over the next year or more, it is not easy to foresee the longer-period outlook for any given concern.

Calico Printers' Setback.—The Association's preliminary statement of earnings for the year to June 30th is unexpectedly disappointing, despite the implicit warning in the decision, last February, to pass the interim preference dividend. After providing £128,000 for debenture interest and £379,335 for depreciation and maintenance (which is some £4,000 more than for the previous year), there remains a loss of £47,247, contrasting with profits of

£42,969 and £164,872 for the years ended in 1935 and 1934 respectively. A credit balance of £42,579 (against £39,826 brought in) is carried forward by bringing £50,000 from general reserve. The year's preference dividend is passed, but in the previous year the total requirement of £150,805 was uncovered by earnings to the extent of £107,836, and payment was made possible only by a transfer of £100,000 from reserve. Comparison with previous years appears the more unfavourable since recovery, although far from prominent in the textile trades, has not left them untouched. Between 1932 and 1934, the amounts earned for dividends ranged between £123,926 and £164,872, and these were years following the worst of the depression. An appeal to general considerations, therefore, does not throw much light on the sharp decline in earnings during the two latest years. The Association's reserve position is very strong, but evidently the directors are unwilling, in present circumstances, to draw upon them for preference dividends. The 5 per cent. preference stock, *cum* one year's arrears, stands at 10s. 6d. Investors must await publication of the full accounts in order to assess its prospects.

International Nickel and Platinum.—Stockholders of the International Nickel Co. of Canada are accustomed to assess their prospects by the trend of the nickel and copper markets. In these circumstances, they received a timely reminder recently from Mr Robert C. Stanley, the chairman, who mentioned in his quarterly letter to shareholders that the company is producing and marketing eleven different metals. Of these, platinum provides a rapidly increasing source of revenue. Five years ago, the International Nickel Co. was still an insignificant producer of platinum. The opening up of the Froid Mine, however, has increased its output so greatly that the company now supplies over 50 per cent. of the world's platinum production. In 1932, the company sold only 19,300 ounces of platinum. In the following year, sales rose to 77,198 ounces, and in 1935 they reached a peak of no less than 128,874 ounces. Since the company's platinum is produced as a by-product of nickel and copper smelting, production costs are therefore extremely low, and barely exceed 10s. per ounce. The price of the metal twelve years ago was £29 per ounce. Owing to the rapidly rising production of International Nickel, the price fell to £7 in 1934, and was maintained at that level until two months ago. There has been a sharp improvement in the demand in recent weeks, for the low price is stimulating its industrial application. The present price is £8 per ounce, disregarding an apparently abnormal mid-week "kick," and a further strengthening seems not unlikely, as world consumption, which reached the record level of 275,000 ounces in 1935, will certainly exceed 300,000 ounces this year. The company's nickel production has risen by 40 per cent. during the first four months of the current year, compared with 1935, and its platinum production is likely to have risen at the same rate. Sales of platinum by the company may therefore exceed 150,000 ounces this year. Even if last year's level is merely maintained, the company will earn an additional £130,000 per annum from the recent rise in price.

Beauharnois Difficulties.—The ill-starred power development at Beauharnois, upon the St. Lawrence river about 30 miles above Montreal, is passing through yet another crisis in its brief but inglorious career. In April, 1932, a combination of political and financial difficulties compelled the parent holding company, the Beauharnois Power Corporation, to default upon the 30 million dollar bond issue with which it had financed the earlier stages of construction. A reorganisation in the spring of 1933 provided that the remaining construction should be financed by a new issue of 5½ per cent. first mortgage bonds, to a total of \$40 millions by the Beauharnois Light, Heat and Power Company (the operating company). The original bond issue was reduced to the status of a second mortgage, with a suspension of interest payments until 1938, and with the compensation of an increase in the nominal value to \$36 million. The possession and control of the enterprise

passed from independent hands to those of Montreal Light, Heat and Power Consolidated. This reorganisation restored the Corporation to what appeared to be a satisfactory financial position. But a new danger appeared in the spring of 1935, when the provincial government of Ontario suddenly attacked the contracts for purchase of power which its predecessor in office had negotiated, on behalf of the Hydro-Electric Power Commission of Ontario, with the Beauharnois Power Corporation and other power companies of Quebec. The Provincial Government secured from the legislature authority to terminate its contracts, and the Beauharnois contract for the delivery of 250,000 25-cycle horse-power, out of a contemplated total of some 400,000-500,000 horse-power, was definitely cancelled in December, 1935. The failure of its principal purchaser at once threw the Corporation into serious difficulties. In its annual report of January, 1936, it announced that its remaining revenues would be insufficient to pay even interest upon the first mortgage bonds; and in March it proceeded to call meetings of the two groups of bondholders. These meetings have now been held. The second mortgage bondholders have twice failed to assemble a quorum. Their third meeting was fixed for August 20th, and had power to make binding decisions, but it was not expected to do more than elect a protective committee to watch over their general interests. The first mortgage bondholders, on the other hand, have already elected their protective committee, which put forward a proposal in June that the bonds should be converted into 3½ per cent. bonds of Montreal Light, Heat and Power Consolidated. Such a scheme would have made the latter company the ultimate beneficiary of any new sales of the power rejected by Ontario. The proposal has been modified by the Quebec Electricity Commission (a regulatory body) through the insertion of a provision that the original rate of 5½ per cent. shall be paid whenever the corporate income allows it. The revised scheme was approved by 73 per cent. of the holding at a meeting on August 10th; and it will become effective if it is accepted by 80 per cent. of the holding by August 28th. The future is, unfortunately, still uncertain. A change of government in Ontario might bring about a resumption of the contract; but only a severe power shortage would lead the present Government to reverse its decision. On the other hand, the change of Government in Quebec brings interesting possibilities. The new leader has promised to promote rural electrification, at low rates. But he gained his victory through denunciation of the old Liberal machine, and his policies are likely to be determined largely by the wrongs he will bring to light. His attitude towards Beauharnois will be shaped by his attitude towards the Quebec "power trust."

The Oil Position.—Although the leading oil shares have been fairly well supported this week, the market has not shown great activity. There is every indication that the leading groups are earning very satisfactory profits, but there are some features in the United States statistics which still preoccupy the market. In some respects, recent figures have been favourable. Stocks, for instance, showed a fall in June, particularly in petrol stocks, and the daily average production was below the all-time record of May. The average daily figure for May was 3,024,000 barrels, but in June the rate had fallen to 3,006,000 barrels per day. More recently, however, the rising trend has been renewed. For the week ended August 15, indeed, daily average production amounted to the new record figure of 3,070,400 barrels, compared with 2,963,000 barrels in the previous week, an increase attributable to a sharp rise in Oklahoma production. The market is, apparently, still somewhat concerned over the possible consequences of an increase in United States output of 12½ per cent. in crude oil for the first half of the year. But although stocks of gasoline are eight million barrels higher than a year ago, consumption has recently been running at exceptionally high levels, and significant inroads are being made upon the recent accumulation of refined products. It would seem that the industry can still count on a high rate of turnover, but the recent rate of United States production rules out any possibility of rising gasoline prices. This conclusion, however, should not disappoint the expecta-

tions of investors for a substantial rise in income during the current year. The financial strength of their companies has always been the envy of other industries. A leading firm of jobbers in the market has issued its annual computation of the liquid assets of the principal companies, from which the following extracts are taken:—

Balance Sheet dated 1935	Company	Liquid Assets	Current Liabilities	Surplus Liquid Assets
Dec. 31	Anglo-Iranian	14,213,706	10,500,569	3,713,137
Dec. 31	Burmah	7,292,215	2,319,260	4,972,955
Dec. 31	Canadian Eagle	3,146,914	1,321,663	1,825,251
Dec. 31	Mexican Eagle	7,440,943	2,640,383	4,800,560
Dec. 31	Royal Dutch	19,115,276	8,174,154	10,941,122
Dec. 31	Shell	15,785,684	4,670,772	11,114,912
June 30	Trinidad Leaseholds	1,654,039	674,156	979,883
Total, 15 Companies		73,883,558	32,854,516	41,029,042

The leading concerns are clearly in the strongest position to finance the present rate of turnover, and their resources are essential—as the recent Mosul Oil deal suggests—for the development of new fields.

Palestine Utility Companies.—The report of Jerusalem Electric and the dividend announcement of Palestine Electric Corporation (published recently) have unfortunately been overshadowed by continued strife in Palestine. In each case it is clear that substantial progress has been made. Jerusalem Electric shows a surplus on operating and sundry receipts amounting to £P.60,148 for the year to March, compared with £P.44,174 for the previous year. During the three years from 1932, earnings surplus to the small ordinary dividends were applied to writing off issue expenses. The latest year, therefore, is the first in which normal capital maintenance charges have become effective. A capital amortisation fund has been opened with a sum of £P.5,477, in accordance with the terms of the concession, which has at least 36 years, and, if extended, 52 years to run. The total amount expended on the undertaking now amounts to £P.470,375. In addition, some £P.15,400 is provided for plant renewals, and after payment of income tax (£P.9,875) and of the preference dividend (£P.12,206), earnings for the ordinary capital amount to £P.11,968, equivalent to 7.9 per cent. There is, accordingly, reasonable cover for the 5 per cent. ordinary dividend, although the maintenance of the general reserve transfer of £P.5,000 involves a slight draft on the balance carried forward. The corporation's recent expansion—capital additions accounted for £P.43,985 last year—has depleted its liquid resources somewhat severely, and shareholders will doubtless endorse a conservative dividend policy while extension is so rapid. The final dividend of Palestine Electric is satisfactory but not surprising. In January last, when new ordinary capital was raised, the board indicated that gross revenue for 1935 was very substantially greater than for the previous year, but declared that it would not propose a greater dividend on the ordinary and "A" ordinary shares. The maintenance of the 7½ per cent. dividend rate, therefore, must be accounted satisfactory in view of the prevailing disturbances. The corporation's high-tension mains extend over 800 kilometres and low-tension lines over 600 kilometres. While the risk of physical damage to the corporation's mains is not negligible, the present disturbances will also severely check Palestine's rapid economic development. The Palestine Electric Corporation, with its wide area of supply, would inevitably be exposed to such a setback, and it argues some confidence on the part of the board that the rate of dividend has been maintained. In common with shares of other Palestine undertakings, the two utility equities have recently been a heavy market, and may be somewhat slow to recover while serious disorder endures.

Far Western Rand Developments.—The achievement this week of a new "high" of £13½ for the 10s. shares of Witwatersrand Areas (writes our Mining Correspondent) has been the feature of the mining market. Earlier this year the shares stood at 8rs. 10½d. Behind this rise lies a story which is spectacular, even for the mining world. After unsuccessful results of earlier pioneers—who were

THE NEW "15 MOORGATE" TRUST:

INVESTORS FLEXIBLE TRUST
offers a combination of the advantages of a Fixed Trust and a managed Investment Trust with an experienced Board of Directors.

The Trust's initial portfolio contains the shares of 70 companies, selected from a permitted list of over 250 first-class companies representative of the strongest and soundest elements in British commercial, industrial and financial enterprise. Within that list the Trust is fully flexible and offers a sound investment with the possibilities of increased capital value and income yield.

4½ PER CENT. MIDLAND BANK
EXECUTOR AND TRUSTEE CO. LTD.
is the estimated gross annual yield, on the basis of dividends paid during the past twelve months on the securities forming the initial portfolio. This does not include capital bonuses or sales of rights. act as Trustees on behalf of investors, hold the assets of the Trust, and distribute the income therefrom twice annually.

Sums of from approximately £45 upwards may be invested through any Bank or Stockbroker. For free descriptive Booklet EC7, which is the basis for all purchases, apply to the Managers:—

handicapped both technically and financially—Consolidated Gold Fields acquired interests in extensive areas lying south-west of the Randfontein property. Drilling on the most easterly of these areas was satisfactory enough to warrant the flotation of the Venterspost subsidiary, in which Gold Fields received, in effect, 800,000 10s. shares, with rights to subscribe for working capital. Work on the adjoining Libanon property was followed recently by the formation of Libanon Gold Mines. The company's capital consists of 5,000,000 10s. shares, of which Gold Fields is to receive 1,000,000 shares and 2,400,000 shares are to be offered to shareholders in "West Wits" at par. Dealings in these shares are already taking place on the Johannesburg Stock Exchange at large premiums between 25s. and 30s., but transactions in London are not yet practicable. The latest spurt in "West Wits" has been prompted by the results of two boreholes in the central section of the property and the favourable indications of recent drilling. The conclusion of the company's experts is that a series of reefs exists within the main reef group. Two reefs occur on a horizon within 10 feet below a distinctive bed of green argillaceous quartzite called the "Green Bar," which has been used as a marker throughout the eastern section of the property, where it occurs from 150 to 200 feet below the main reef. According to the circular, the lower ore body—known as the "carbon leader"—promises to be economically the most important horizon in the area explored westward from borehole No. E 4. The distance from this borehole to the south-western boundary of the company's property is about 25 miles. Immediately adjoining the south-west boundary, New Central Witwatersrand Areas are drilling on the farm Gehardminnebron. The depth attained is 3,000 feet, and the reef is expected to be struck at 5,000 feet. Further south-west are properties controlled by this company and by Western Reefs. During the present year the latter company has made two issues for acquiring farms, while about two months ago the New Central Witwatersrand also raised additional capital. The most important drilling result last reported by Western Reefs was a reef at approximately 4,000 feet depth assaying 5.96 dwts over 67 inches, equal to 399 inch dwts. The activity in this section of the Transvaal, although still in the development stage, promises to open up an important extension to—and possibly a formidable rival of—the Rand.

* * *

Company Results of the Week.—We have received reports from eleven companies during the week, which are analysed on page 372. Of these, two come from brewery concerns which are controlled by Ind Coope and Allsopp—*Alton and Company* and *Strettons Derby Brewers*. The latest results are not comparable directly with those of the previous period, owing to the revised treatment of taxation. After making adjustments for this change, however, it appears that both concerns have achieved a significant increase in profits, which may provide a pointer to the parent company's profits for the year to September. *Illovo Sugar* has experienced difficult trading conditions during the past year. Profits have been reduced from £62,381 to £17,999, and the 6 per cent. dividend is not fully covered by earnings. Although reporting favourably on conditions during the past year, *William Baird*, the Scottish iron and coal masters, show a relatively moderate rise in profits from £257,287 to £268,830, but the dividend is raised from 6 to 10 per cent. *Brightside Foundry* shows an increase in net profits from £21,073 to £37,704 and pays 15 against 10 per cent. A favourable result is also revealed by *Lochgelly Iron and Coal*, whose profits are over £11,000 higher at £55,593, while the dividend is raised from 4 to 7½ per cent. A substantial recovery is reported by *Fodens*, whose results in the previous year were disappointing. The large loss of £40,978 has been converted into a small profit of £206, and while there is a debit balance of £58,032 still remaining: profit and loss, it is evident that the change-over to Diesel engine work is now producing positive results. The *Tyne-Tees Shipping* profits show an improvement of about £4,000 at £41,484, and the dividend is maintained at 5 per cent. *Ismay Industries*, the holding company formed to acquire interests in John Ismay, manufacturers of electric lamps

and domestic appliances, shows a profit of £43,945, for its first trading period of nearly 15 months. This result, however, reflects the dividends received from subsidiary companies for approximately one year. A maiden dividend of 6 per cent. is paid.

THE WEEK IN THE MARKETS

THE STOCK EXCHANGE

TICKET
AUGUST 25

ACCOUNT
AUGUST 27

THOROUGHLY quiet conditions have prevailed during the second week of the account, owing to the belated appearance of summer, the rival attractions of holidays, and the disturbed condition of Europe. There have been no price movements of outstanding significance, and the volume of business has contracted considerably from last week's levels. Gilt-edged securities were very firm on the overseas trading and revenue returns, but prices were unchanged with a small turnover. Among Dominion issues, Australian stocks were higher on the budget surplus, and the Sydney scrip improved to a premium of two points. Home corporations were fairly strong and many prices showed slight gains. Among foreign bonds, German issues recovered from their early weakness at the opening of the week, in the hope of a peaceful settlement of the Spanish revolt. French issues were weak on the internal position. Japanese bonds were adversely affected by the rising military expenditure in Japan and the expansion of the navy. Interest in Chinese issues was concentrated on Lung Hais, in hopes of a resumption of interest payments.

Home rails opened the week firmly, relapsed, recovered later in anticipation of good traffic, but in spite of the excellent return were unable to hold their gains, and reacted toward the end of the account. Early in the week there was a sharp improvement in Antofagasta stock in an otherwise quiet foreign rail market, and Argentine issues hardened slightly later under the influence of higher maize prices and better traffic.

The industrial share market has been subject to reduced interest, and prices have moved irregularly as commitments have been evened-up. In the iron and steel section prices were slightly lower in mid-week but Hurst Nelson recovered after being marked down on the dividend. Aviation shares have not attracted a great deal of attention, although Handley Page were favoured, but there have been fairly active dealings in the Motor section, with Standard prominent on the record production and on anticipated profits from manufacture of aircraft for the Government. Hilton Main were a feature in the Coal group on the final dividend announcement. An irregular tendency developed in the Electrical Equipment group. Textile shares were depressed by the poor results for the past year reported by Calico Printers, and rayon issues reacted toward the end of the account after an earlier improvement. In the shipping group P. and O. deferred gained on good trading reports, but suffered from profit-taking later. Irregular movements of little significance were the rule among miscellaneous industrials, although Triplex Glass were well supported in anticipation of the report. Building material shares did not reflect the maintained excellence of the building figures.

In the Oil share market trading was not very active, and in the general firmness of the leaders the only feature was an improvement in Shell issues on investment buying. The rubber share market continues its uneventful course, and conditions in the tea share market are not much better, although there were signs of a very slight improvement early in the week which was used as occasion for marking up prices.

The Kaffir market has been rather subdued most of the week, although a few issues have been well supported, chiefly from the Cape. West Witwatersrand touched a new high of 13½, but reacted later. New Central Wits and Western Reef issues were also prominent, and West Springs advanced sharply. The West African section lost the interest which had been shown last week, and relapsed into stagnation. Copper issues were generally weaker, but in the tin section prices in mid-week were a little firmer on the rise in the commodity price and the hopes of a renewal of the restriction scheme.

The Paris Bourse continues to be dominated by the international political position, and internal economic difficulties, but in mid-week there were signs of a slight increase in buying in many sections, Rentes excepted. On the Berlin Bourse prices have been weak in all but the Banking section. At Amsterdam business had shrunk to negligible proportions.

AMERICAN STOCK EXCHANGES

NEW YORK

From the post-depression peak reached on Tuesday of last week most prices on Wall Street drifted slowly downwards up to the middle of the current week, when there were signs of improvement. This drop in prices was accompanied by a shrinking turnover. The outstanding feature at the end of last week was the rise in copper share prices on the higher commodity price. This week the first section of the market to improve was the steel shares group which was encouraged by the rising steel-mill activity. *Iron Age* estimated activity at 72.5 per cent. of capacity against 71 per cent. for last week, in spite of the declining demand from the automobile industry, where plants are shutting down for change over to new models. Railroad shares improved, and aviation issues continued to reflect the rising military and commercial demand for planes. Utility issues were firm. There are signs of increased support for the markets from Europe, but American operators are inclined to hold their ground, on the argument that most recovery in sight for the next few months is already discounted at present prices. Company earning and dividend statements continue to be good, electricity output for the week ending August 15th was 14.3 per cent. up on the corresponding week of last year, building contracts placed in July were appreciably higher than in June, and freight car loadings are running some 24 per cent. higher than a year ago.

OFFER TO NEW READERS

Any reader who makes his first acquaintance with this journal with this week's issue is invited to fill up the attached:

To The Publisher, "The Economist Newspaper Ltd.,"

LONDON ACTIVE SECURITY PRICES AND YIELDS

In calculating yields on fixed interest stocks quoted below allowance is made for interest accrued since the last date of payment, less income tax at the standard rate. Where stocks are definitely redeemable at a certain date the yield includes any profit or loss on redemption; where stocks are redeemable at or before a certain date the final date of repayment is taken when the stock stands at a discount and the earliest date when the quotation is above par. The return on ordinary stocks and shares is calculated by reference to the latest dividends, account being taken of any enhancement or reduction of interim dividends. Allowance is made for accrued dividends in calculating the yield on "cum. div." shares.

* Two-Hour Session.

CAPITAL ISSUES

ALTHOUGH the issue of shares in *John Groves and Sons* last Friday had a prompt response, no further industrial offers have appeared this week. Trustee borrowing, however, has been resumed by an issue of 3 per cent. *Kenya* stock, dated 1956-61, at par. Of the total issue of £375,000, some £200,000 is reserved for issue in Kenya, while £75,000 has already been placed in London. The balance remaining for public subscription, therefore, was hardly sufficient to test the real position of the market, in relation to the prospective re-appearance of municipal borrowers, although the immediate success of the loan, and the recent improvement in corporation scrips, suggest that conditions will favour forthcoming operations. The present stock is well secured, although it will not enjoy a wide market. Statements "for information only" have been published by *Chambers Wharf and Cold Stores* and *McCarthy Rodway, Ltd.*

ISSUES OF THE WEEK

January 1 to August 15, 1936, including conversions, Old Basis, £299,056,992.
 January 1 to August 15, 1936, excluding conversions, Old Basis, £121,672,905.
 January 1 to August 15, 1936, including conversions, New Basis, £317,345,862.
 January 1 to August 15, 1936, excluding conversions, New Basis, £223,152,885.

National Savings Certificates, Net receipts week ended August 15, 1936, Dr. £100,000.

REPORTS AND NOTICES

The directors of Lewis's, Ltd., and its associated companies announce that they have appointed Sir Frederick Marquis, J.P., as chairman.

INSURANCE

LONDON AND SCOTTISH ASSURANCE CORPORATION, LTD.—Owing to the increasing demands upon his time, Mr Richard S. Guinness has relinquished the deputy chairmanship of the London and Scottish Assurance Corporation, Ltd., and has been succeeded by Mr Martin D.V. Holt. Mr Guinness remains a member of the board, which he joined in 1908, serving thereon as deputy-chairman 1910-1924, chairman 1924-1928, and again as deputy chairman 1928-1936. It is also announced that Lord Dunglass has joined the board of the London and Scottish Assurance Corporation, Ltd., and its Associate office, the Scottish Metropolitan Assurance Company, Ltd.

MINES

LIBANON GOLD MINING COMPANY, LTD.—West Witwatersrand Areas, Ltd., announce that Libanon Gold Mining Company, Ltd., was registered on August 4, 1936, in South Africa, with a nominal capital of 5,000,000 10s. shares, of which 2,400,000 shares will be offered at par to shareholders in West Witwatersrand Areas on the basis of two Libanon shares for each share held.

MISCELLANEOUS

BROUGHTON AND PLAS POWER COAL COMPANY.—It is proposed to reorganise capital of this company, and to amalgamate with Bersham Colliery. Lancashire Steel Corporation and Wigan Coal Corporation have agreed to provide additional working capital. Broughton capital to be reduced to £102,000 by cancelling £4 18s. per £10 share. After subdivision to 1s. shares, one out of every two of the latter to be surrendered as "A" shares.

ANGLO-NORWEGIAN HOLDINGS.—Tenders of preferred shares for redemption, at £17 10s. per share or less, have been accepted.

GERMAN 4 PER CENT. STERLING BONDS.—Coupons of German long-term loans (other than "Dawes" and "Young") due July 1st and 15th will be payable to British holders in 4 per cent. sterling bonds of the unconditionally as to principal and interest by the German Government. The coupons should be presented to the appropriate paying agent. Non-acceptance before June 30, 1938, will be deemed refusal, but acceptance invalidates any subsequent claim on the ground of discrimination.

UNILEVER, LTD.—An extraordinary general meeting of Unilever, Ltd., has been called for August 27, 1936, to create £3,500,000 7 per cent. cumulative preferred capital, of which £2,500,000 will be allotted in exchange for participating preference stock of Jurgens, Ltd. Holders of more than 90 per cent. of the latter have accepted the recent offer.

INTERNATIONAL NICKEL COMPANY.—Net profit for second quarter 1936, \$9,070,186.61, equivalent to 59 cents per common share after preferred dividend. Net profit for the first half 1936, \$17,456,974.02, compared with \$10,338,242.37 for first half 1935 (\$1.13 per share against 64 cents).

GOVERNMENT RETURNS, &c.

NATIONAL ACCOUNTS

The total ordinary revenue for the week ended August 15, 1936 amounted to £16,302,000, against ordinary expenditure of £9,463,000. After allowing for a decrease in Exchequer Balances of £379,252, the operations for the week, as shown below, decreased the gross National Debt by £7,219,000 to approximately £7,986 millions.*

COMMERCE AND TRADE

SURVEY OF COMMODITY MARKETS
Less active conditions have prevailed this week, the principal commodity markets having shown few new features. Although in most cases the tone remains good, prices in some instances have suffered a setback.

Thus, copper (whose prospects are discussed in a leading article this week), fell abruptly on the news of a probable increase in United States production after September 1st. Tin, on the other hand, weakened in the early part of the period under review, but subsequently recovered in response to the report that a Siamese representative will shortly leave for Europe to resume negotiations for the renewal of the restriction scheme.

Lead and spelter showed little net change on the week. Cotton prices continued to sag, but quotations for other textile fibres showed little alteration. The market in oilseeds and their products was much quieter and linseed prices lost ground owing to absence of buying interest. Rubber was again a dull market, but prices showed little movement throughout the week.

The damage to the North American wheat crop has now been largely discounted and, although prices rose slightly after last week's reaction, the resumption of any strong upward movement is not to be expected in the absence of new developments. Feeding grains were, however, in active demand at higher rates. Among other foodstuffs, meat was generally cheaper at Smithfield Market, but quotations for

GLASGOW.—Scottish coal output for the first six months of this year amounted to 16,084,000 tons, compared with 15,623,800 tons in the corresponding period of last year and 15,723,400 tons in 1934. No price schedules have as yet been issued by the new control committee, and business for the time being is conducted cautiously. The market is firm, and the collieries, with a substantial contract business in hand, especially on home account, are working steadily as a rule. Supplies generally are about fully absorbed, and in the case of navigation sorts and washed nuts a stringent position rules.

IRON AND STEEL

LONDON.—Considerably more activity is noticeable in the iron and steel markets than is usual when the holiday season is in full swing, says the official report of the London Iron and Steel Exchange. The volume of new business in home markets has decreased somewhat, owing to local holiday stoppages at works; but deliveries in all departments are still on a heavy scale, and inquiry on export account shows a tendency to improve. Business in pig iron is steady and a number of unexpired contracts have been renewed. In some cases consumers have bought for the first quarter of 1937, although producers are not anxious to enter into such far distant commitments. It is expected that demand, which has been affected by seasonal conditions, will increase in the early autumn, when fresh plant will probably be brought into operation to meet the requirements of the market. In the semi-finished steel department the producing concerns are operating at capacity; but are scarcely able to satisfy the demand. Some consumers have stocks in hand, but there is an active business in small parcels, whilst most users would be prepared to enter into extended contracts. There has been no relaxation in the demand for finished steel materials. The works are operating at capacity; but in many cases are behind with deliveries and are finding it difficult to accept overseas business.

SHEFFIELD.—The holidays have somewhat restricted business in the iron and steel market. Any forge and foundry iron on offer is, however, readily taken up. Derbyshire makers have little opportunity of accumulating stocks, production for some time ahead being fully accounted for. Lincolnshire makers are still virtually off the market. There is little new business in West Coast hematite, producers being busy on contracts running to the end of the year. The increased prices of finished iron are unlikely seriously to affect the placing of business. Crown bars and iron strip have been increased in price by 7s. 6d. and marked bars are also dearer. Demand for basic and acid steel billets is so heavy that consumers are having to use imported material in some cases. Wire rod business continues on the up-grade. The market for strip, bright drawn steel and stainless steel sheets continues very firm. In the scrap market business remains good, though in many instances consumers are taking up only bargain lots. There is fair buying of heavy basic steel for melting at around 56s. per ton delivered. Heavy steel turnings are fetching up to 47s. 6d., and foundry cast iron is in request at up to 67s. 6d. delivered.

GLASGOW.—Work on many of the recent contracts placed with Clyde shipbuilders is now actually in progress and, as the bulk of the material is being supplied by local steelmakers, the demand for ship-building sections and plates is very heavy. Steel plants are working at high pressure to meet all the demands made on them for these and other material. Marine and other engineering concerns are also working to capacity and the output of the steel makers, the re-rollers and others is being rapidly absorbed; there are no accumulations of stocks at works. Practically every branch of the industry in Glasgow and in the West of Scotland is finding new business more plentiful, and in many establishments work on hand is sufficient to ensure regular employment for several months to come.

OTHER METALS

COPPER.—After rising to £38 15s. on Friday of last week—the highest official price for over three years—the standard cash quotation suffered a decline and closed on Wednesday at £38 2s. 6d. The fall was traceable to reports from the United States that the Kennecott group intend to expand production by 10 per cent. after September 1st in order to prevent a rise in the domestic price. The Kennecott group has been known for several years to be opposed to the price-raising policy of Anaconda and Phelps-Dodge, so that the report does not come as a surprise. Outside the United States the position is unchanged and, since the European market would not be directly affected by the increased American production, the reaction on the London market appears to have been overdone.

Sales on the London Metal Exchange, 1,800 tons on Monday, against 1,500 tons last week; 2,750 tons on Tuesday, against 2,100 tons last week; 1,000 tons on Wednesday, against 975 tons last week. Domestic spot was quoted at 9-30 cents per lb. in New York on Wednesday, against 9-40 cents a week ago and 9-22½ cents a month ago. Wednesday's official closing price for standard cash in London was £38 2s. 6d. to £38 3s. 9d., compared with £38 7s. 6d. to £38 8s. 9d. a week ago. Stocks of refined copper in British official warehouses at the end of last week, at 51,600 tons, show a decrease of 1,092 tons, while stocks of rough copper, at 2,905 tons, show a decrease of 151 tons on the week.

LEAD AND SELLER.—After appreciable fluctuations, both metals closed a shade higher on the week. World output of smelter lead, according to the *Metallgesellschaft*, declined from 128,662 metric tons in May to 122,774 metric tons in June, most of the leading producers sharing in the reduction. No news concerning the resumption of negotiations for the renewal of the zinc cartel has been received this week.

Sales of lead on the London Metal Exchange: 800 tons on Monday, against 2,250 tons last week; 1,300 tons on Tuesday, against 550 tons last week; 650 tons on Wednesday, against 1,175 tons last week. The New York quotation on Wednesday was 4-60 cents per lb., against 4-60 cents a week ago and 4-60 cents a month ago. The official closing quotation in London for soft foreign for shipment during the current month was £16 13s. 9d. per ton, compared with £16 12s. 6d. a week ago.

Sales of spelter on the London Metal Exchange: 900 tons on Monday, against 500 tons last week; 275 tons on Tuesday, against 675 tons last week; 150 tons on Wednesday, against 200 tons last week. Wednesday's quotation in East St. Louis was 4-80 cents per lb., against 4-80 cents the week before and 4-80 cents a month earlier. Wednesday's official closing quotation in London for "good ordinary brands" for shipment during the current month was £13 8s. 9d. per ton, against £13 7s. 6d. last week.

TIN.—After an early decline, quotations scored a recovery and closed on Wednesday showing little net change on the week. The main reason for the improvement was a report from Bangkok that the advisor to the Siamese Mining Department is shortly leaving for Europe to resume negotiations for the prolongation of the restriction scheme.

According to preliminary figures which have come to hand from New York, Bolivian tin exports during July totalled 3,665 tons, or 750 tons in excess of the quota. This is the first time since May, 1935, that Bolivia has

exceeded her quota and the news comes as a surprise for, according to the *Metallgesellschaft*, production of Bolivian mines in June—which means ores ready for shipment in July—totalled only 2,381 metric tons. The same authority estimates world tin-mining production at 14,112 metric tons in June, against 14,059 tons in the previous month.

Sales of tin on the London Metal Exchange: 275 tons on Monday, against 85 tons last Monday; 230 tons on Tuesday, against 250 tons last week; 335 tons on Wednesday, against 275 last week. The New York quotation on Wednesday was 42-50 cents per lb., against 41-37½ cents a week ago and 44-00 cents a month ago. Wednesday's official closing quotation in London for standard cash was £184 5s. to £184 15s. per ton, compared with £184 5s. to £184 7s. 6d. a week ago. Stocks of tin in London and Liverpool at the end of last week totalled 638 tons, an increase of 28 tons on the week.

OTHER NON-FERROUS METALS.—Among other non-ferrous metals, aluminium ingots and bars for home delivery were again quoted at £100 per ton, and rolling billets at £102 per ton. Nickel, for home and export, at £200 to £205 per ton, remains unchanged. Quicksilver, on the spot, was again quoted at £12 3s. 6d. per flask of 76 lbs. Chinese antimony was quoted at £51 to £52 per ton ex warehouse, duty paid, as against £52 to £53 per ton last week. Chinese wolfram for "August-September" shipment was quoted at 25s. 6d. to 26s. 6d. per unit c.i.f., against 25s. to 26s. a week ago. Platinum (refined) was advanced to £10 10s. per ounce, as against £8 10s. per ounce last week.

TEXTILES

COTTON.—Manchester.—The past week has not brought any expansion in business. Traders have been harassed by the wider fluctuations in raw cotton rates and a certain amount of nervousness has prevailed with regard to the situation on the Continent. Many fluctuations have occurred in raw cotton rates. The general outlook for supplies is very uncertain, and for the most part quotations are being governed by weather reports from the American belt. It is believed that the crop has deteriorated since the beginning of the month, with a probability of the Government estimate of the yield being reduced early in September. A bullish factor at the moment is the large world consumption, especially in the United States.

Inquiry in the cloth section has been fair and numerous miscellaneous sales have been arranged; but there have been no indications of buyers being prepared to place bulk lines with manufacturers. Operations for India have again been limited, buying being chiefly in light whites and fancies, the most promising outlet being Karachi. Some useful orders have been reported in fancies for China, Java and Singapore. There has been very little activity for Egypt and the Near East. The undercurrent of demand for West Africa has been well maintained, especially in printed and coloured cloths. Buying for South America has been rather patchy. Irregular operations have occurred for the Dominions, chiefly South Africa and Australia. Necessary buying has taken place in home trade fabrics, most of the demand running on standard makes. Yarns have been bought very unevenly. In one or two quarters fair weights have been booked in coarse and medium American counts. Rather more interest has been shown in Egyptian yarn prices.

COTTON YARN PRICE - FIXING.—A determined effort is now being made by spinners of Egyptian type cotton yarns to formulate a price-fixing scheme. During the last few months mills in this section have lost ground and employers are now faced with a wages demand from operatives which would be an additional over-head charge. A further expense almost immediately will be the levy next month under the Cotton Spinning Industry Act. A largely attended meeting has just been held of interested parties. It is understood that one of the chief difficulties in securing united action is the fact that wages in Oldham and other Lancashire towns outside Bolton are lower than those paid in Bolton; thus the labour cost of spinning identical counts is about 5 per cent. less in Oldham than in Bolton. The suggestion has now been made that there should be a different basis for the Bolton mills. This advantage to Oldham has been in existence for a long number of years, but in trade circles there is always a preference for Bolton yarns, owing to the generally acknowledged superior quality. A further meeting is about to be held, and there are grounds for believing that a greater spirit of compromise prevails on this important question than on previous occasions.

WOOL.—Bradford.—Although London brokers have been comparatively quiet, the holiday period has been marked by a fair amount of activity in manufacturing districts, and Bradford firms have done considerable business. Last week Russia was again in the market for scouring merinos and bought fairly heavily; topmakers turned over a larger weight of tops than they expected. Export requirements were also prominent. The result is that prices are very firm, and there is evidence that the trade is lightly stocked. Merino tops are very firm, although local spinners are not buying at all freely. The crutching sales which have just begun in New Zealand also give evidence of strength in crossbreds. Stocks are fairly large, but there is a willingness to buy. The market is very firm with a tendency, if anything, against the buyer. There seems to be considerable concern in Australia about the continued absence of Japanese competition. But, at the end of May, stocks of wool in Japan were 91 million lb., compared with 50 million lb. at the corresponding date a year ago; consequently, that country can well afford to remain out of the market until the end of the year, when supplies are more normal. The lessened buying power of Continental countries gives rise to far more concern than the absence of Japanese competition in overseas markets. In the meantime, the trade is waiting the opening of a new selling season in Sydney on August 31st.

GRAIN MARKETS

WHEAT.—The market position has undergone little change, but prices in this country have recovered slightly after last week's reaction. The absence of Russian wheat from the market has had a bullish influence but crop damage in North America has now been largely discounted. No renewal of the strong upward tendency of prices seems likely in the absence of new developments.

On Wednesday last, "September" futures were quoted in Chicago at 114½ cents per bushel, against 110½ cents the week before and 104 cents a month ago. Quotations in London, Wednesday: No. 1 Northern Manitoba, ex ship, 40s. 9d. per 496 lbs., against 39s. 6d. a week ago; No. 2 Northern Manitoba, ex ship, 40s. 3d., against 39s. 3d. a week ago. According to the *Corn Trade News*, total shipments of wheat and flour last week totalled 1,244,000 quarters, against 1,231,000 in the previous week and 845,000 quarters in the corresponding week a year ago.

FLOUR.—Prices remain steady, although business is somewhat restricted. Wednesday's London quotations (excluding quota payments) were: Straight run, delivered Home Counties, 34s. per 280 lbs., against 34s. a week ago; delivered inner London, 33s. 6d., as compared with 33s. 6d. a week ago; Manitoba patents, ex store, 30s. 6d., to 32s. against 30s. 9d. to 32s. 3d. a week ago. Australian, ex store, 27s. 6d. to 28s. 6d., against 27s. 6d. to 28s. a week ago.

BARLEY.—Imported barley has been in request owing to the advance in maize, and the market has a firm tone. The statistical position of the commodity remains sound. "October" futures were quoted at 61½ cents per bushel in Winnipeg on Wednesday, against 64½ cents a week ago and 48½ cents a month ago. Quotations per 448 lbs. in London on Wednesday were: "English feed" at farm, 27s., as against 25s. a week ago; "English malting," at farm, not quoted.

London: 5 Walbrook, E.C.4, and 45 Pall Mall, S.W.1

a week ago; "Plate," "August," 24s., as against 23s. 9d. a week ago; yellow maize meal, ex wharf, was quoted at £6 10s. to £6 15s. per ton, as against £6 10s. to £6 15s. last week.

AMERICAN WHEAT MARKETS.—The following table shows wheat quotations for selected weeks in 1934-36:—

NEAREST FUTURE	Jan. 3, 1934	Jan. 2, 1935	Aug. 21, 1935	Dec. 31, 1935	Aug. 12, 1936	Aug. 19, 1936
Winnipeg (No. 1, Manitoba)	65½	82½	87½	84½	100½	102½
—Cents per 60 lb.						
Chicago (No. 2 Winter)	84½	98½	89½	75½	110½	114½
—Cents per 60 lb.						

The visible supply of wheat in Canada amounts to 62,306,000 bushels, against 66,029,000 bushels last week, and 124,952,000 bushels in the corresponding week last year.

SALES AND PRICES OF BRITISH CEREALS.—The following table gives the estimated sale of home-grown wheat during the harvest years 1932-33 to 1935-36:—

	1932-1933	1933-1934	1934-1935	1935-1936
Estimated sales of home-grown wheat—				
1 week to August 15	Cwts. 51,828	Cwts. 71,825	Cwts. 137,807	Cwts. 14,170
50 weeks to August 15	8,682,644	11,107,609	13,464,519	13,269,878
Average price of English wheat per cwt.	s. d. 6 0	s. d. 5 1	s. d. 4 7	s. d. 7 9

The following is a statement showing the quantities sold and the average price of British cereals in the past two weeks, and for the corresponding week in each of the years from 1932 to 1935:—

Week ended	QUANTITIES SOLD			AVERAGE PRICE PER CWT.		
	Wheat	Barley	Oats	Wheat	Barley	Oats
August 13, 1932.....	Cwts. 28,217	Cwts. 1,752	Cwts. 4,466	s. d. 6 7	s. d. 9 9	s. d. 7 7
August 12, 1933.....	51,828	7,407	18,782	6 0	9 7	5 6
August 18, 1934.....	71,825	21,556	23,715	5 1	10 6	6 7
August 17, 1935.....	137,807	14,079	42,814	4 7	7 7	6 3
August 8, 1936.....	37,575	2,532	7,506	7 6	7 3	6 6
August 15, 1936.....	14,170	1,510	9,754	7 9	6 10	7 0

OTHER FOODS

BACON.—The market was active again this week, and, despite heavier imports, prices remained firm. The official quotations (per cwt. for No. 1 Sizable) which formed the basis for dealings on the London Provision Exchange this week were: English, 99s.; Canadian, 93s.; Danish, 100s., as against 99s., 93s. and 100s. last week. Arrivals in London last week included Danish, 14,449 bales; Canadian, 4,246; Dutch, 2,439; Lithuanian, 1,620, and Polish, 2,698, as against 14,496, 4,035, 2,570, 1,703 and 2,477 respectively, in the previous week.

BUTTER.—Market conditions remain firm and prices show a further increase. Quotations (per cwt.) on the London Provision Exchange on Wednesday were: New Zealand, finest salted, 122s.; Australian, choicest salted, 120s.; Danish, 128s., compared with 118s. to 119s., 117s. to 118s., 126s. to 128s., respectively, a week ago.

CHEESE.—Demand for cheese has been well maintained and prices have risen again this week. Quotations (per cwt.) on the London Provision Exchange on Wednesday were as follows: English, finest farmers, 72s. to 76s.; Canadian, finest coloured, 68s.; and New Zealand, finest coloured, 67s. to 68s., against 70s. to 74s., 66s. and 65s., respectively, a week ago.

COCOA.—Firm conditions still obtain in the cocoa markets. The spot quotation in New York on Wednesday was 6½ cents per lb., as against 6½ cents per lb. last week. In London, on Wednesday last, good fermented new crop, "October-December," was quoted 29s. 3d. per 250 kilos., c.i.f. Continent, against 28s. 7½d. a week ago. Last week's movements of cocoa in London were as follows: Landed, 5,586 bags; delivered for home consumption, 2,418 bags; exported, 268 bags; stocks, 163,379 bags, against 151,242 bags a year ago.

COFFEE.—The London market continues quiet; the New York spot market is steady with prices unchanged. On Wednesday, Rio No. 7 (cash) per lb. last week and 7½ cents per lb. a month ago. Movements of coffee for home consumption, 52 cwt.; exports, nil; stocks, 10,409 cwt., 708 cwt.; delivered for home consumption, 2,264 cwt.; exported, 1,637 cwt.; stocks, 95,154 cwt., against 144,587 packages last year. Other exports, landed, 552 cwt.; delivered for home consumption, 2,983 cwt.; exported, 2,059 cwt.; stocks, 139,019 cwt., against 161,727 packages last year.

EGGS.—Despite plentiful supplies, prices have hardened during the week, in response to an active demand. At Smithfield, on Wednesday, English (ordinary packing, Grade I, about 15-15½ lb.) realised 15s. 6d. to 16s. per 120, as against 15s. to 15s. 6d. last week, while Danish (15½ lb.) made 10s. 9d. to 11s. per 120, as against 10s. 6d. to 10s. 9d. last week.

FRUIT.—According to *The Fruitgrower's* report, business at Covent Garden has been more active this week than is usual in mid-August. Supplies continue plentiful, particularly as regards apples and plums.

and prices are well maintained, except for the lower grades. The recent rains have been detrimental to soft fruit and currant and raspberry prices are firm; cultivated blackberries are selling well. English small pears, though plentiful, are fetching good prices; Californian pears have declined, but Continental Williams are fairly steady. Large quantities of grapes are available and prices have accordingly eased. Green figs and house-grown melons are steady, but Spanish melons are cheaper. English peaches have declined in price; nectarines remain firm. Oranges, lemons and grape-fruit show rising prices on smaller supplies.

MEAT.—Demand for meat at Smithfield Market has been inactive and prices are a shade easier. On Wednesday last, Argentine chilled hind-quarters were quoted at 3s. 10d. to 4s. 2d. per 8 lbs., as compared with 3s. 10d. to 4s. 4d. a week ago. New Zealand frozen mutton was 3s. to 3s. 8d. per 8 lbs., against 3s. to 3s. 8d. a week ago. According to the Smithfield Market official report, supplies during last week amounted to 8,738 tons, an increase of 749 tons on the corresponding week last year. Beef and veal accounted for 4,808 tons, mutton and lamb 2,686 tons, and pork and bacon 710 tons, as compared with 4,055, 2,933, and 558 tons respectively, in the same week of 1935.

MILK.—Information relative to the operation of the Milk Marketing Scheme during July, as issued by the Milk Marketing Board, is given in the following table, together with comparable statistics for earlier months:

	July, 1935	April, 1936	May, 1936	June, 1936	July, 1936
Regional pool prices* (per gallon)	d.	d.	d.	d.	d.
Northern	10	11½	8½	9	9½
North-Western	9½	11½	8½	9	9½
Eastern	10½	11½	9	9½	10
East Midland	10	11½	8½	9	9½
West Midland	9½	11½	8½	9	9½
North Wales	10	11½	8½	9	9½
South Wales	10	11½	8½	9	9½
Southern	10½	11½	8½	9	10
Mid-Western	9½	11½	8½	9	9½
Far Western	9½	11½	8½	9	9½
South Eastern	10½	12½	9½	9½	10½
Liquid milk price (per gallon, all regions)	13	16	12	12	13
Manufacturing price (per gallon, average)	5-38	4-885	4-755	4-941	5-05
Total sales under contract.....	80-86	77-03	90-56	87-56	84-59
For liquid consumption.....	46-83	45-44	48-03	46-67	47-39
For manufacturing.....	34-03	31-59	42-53	40-89	37-20

* On account to the nearest farthing.

Accredited producers receive 1d. per gallon in addition to the above prices. Premiums for level deliveries and for Grade "A" or special services are paid to the producers concerned in addition to the pool price. Transport charges are payable by individual producers and are deducted from accounts.

PEPPER.—Wednesday's spot price for black Lampung (in bond) was 2½d. per lb., against 2½d. a week ago. Movements of pepper in London during the past week were as follows: Black, landed, nil; delivered, 1 ton; stocks, 1,748 tons, against 1,747 tons a year ago. White, landed, 6 tons; delivered, 47 tons; stocks, 12,154 tons, against 18,084 tons a year ago.

RICE.—Firm conditions still obtain on the London market and prices have been maintained. The spot price of Burma No. 2, cleaned, new crop, was 9s. per cwt. ex warehouse on Wednesday, as compared with 9s. per cwt. a week ago. "August-September" in singles to Continent and U.K. was quoted at 8s. 1½d. per cwt., against 8s. 1½d. last week. Movements in London during the past week were as follows: Landed, 197 tons; delivered, 452 tons; stocks, 2,372 tons, against 9,934 tons a year ago.

SUGAR.—Business in London has been quiet and prices are easier; in New York prices rose during the week-end and have since been steady at the higher level. The spot price in New York on Wednesday was 3-70 cents per lb., as compared with 3-65 cents per lb. last week and 3-70 cents per lb. a month ago. Wednesday's sales of raw sugar in London included December delivery at 4s. 4½d. to 4s. 4½d., against 4s. 5½d. a week ago. The movements of raw sugar at public warehouses in London and Liverpool last week and 20,543 tons in the same week of last year; deliveries, 19,940 tons, against 14,465 tons last week and 14,999 tons last year; stocks, 119,215 tons, against 113,614 tons last week and 149,451 tons last year.

TEA.—The following table shows the average prices (compiled by the Tea Brokers' Association) of tea sold in Mincing Lane on Garden Account in recent weeks:—

Week ending	Northern India	Southern India	Ceylon	Java	Sumatra	Africa	Total
Aug. 15, 1935.....	d. 11-84	d. 10-82	d. 12-99	d. 9-44	d. 8-61	d. 10-28	d. 11-81
July 2, 1936.....	12-19	12-10	13-04	10-33	9-89	11-26	12-22
July 9, ".....	12-15	12-11	13-06	10-42	10-01	11-32	12-23
July 16, ".....	12-27	12-07	13-35	10-34	10-09	11-51	12-41
July 23, ".....	12-11	12-01	12-93	10-22	9-88	11-44	12-32
July 30, ".....	12-05	11-81	12-81	10-32	9-84	11-13	12-18
Aug. 13, ".....	12-67	11-86	12-86	10-23	9-76	11-20	12-47

The quantities catalogued for the public auctions in Mincing Lane this week comprised 40,400 packages of Indian and 23,435 packages of Ceylon tea. At the auctions for both Indian and Ceylon teas a good tone prevailed and prices were firm.

VEGETABLES.—With the exception of tomatoes, vegetable supplies at Covent Garden have been in excess of requirements, says *The Fruitgrower*. Tomato prices are steady, but runner bean, cabbage, marrow, onion and other root vegetable prices have fallen. At the various London markets demand for potatoes has not been so active as usual, and prices show an all-round decline. There is also a considerable amount of blight on account of the wet season. At the London Borough Market on Tuesday, King Edward made 5s. to 6s. per cwt., against 5s. 6d. to 6s. 6d. last week.

MISCELLANEOUS COMMODITIES

VEGETABLE OILS AND OILSEEDS.—Much quieter conditions rule in oilseeds and their products, partly in sympathy with the easing in cereals and the unsettled political outlook. Linseed failed to respond to the reduced official estimate of the American crop yield and has, on the

In the United States, primary products were generally dearer. Thus Moody's index of the dollar price of staple commodities (December 31, 1931=100) further advanced from 185.4 to 186.2 in the week ended last Wednesday, against 185.2 a month ago and 171.1 at the same date last year.

COAL

NEWCASTLE-ON-TYNE.—Whilst the North East coal market is steady and collieries are working much better under an active home demand, export trade shows no improvement. Last week inquiry has not been so active from Scandinavia as in August, and it is thought that the higher prices asked by the "Sales Control" may be influencing business. Patent oven coke is steady, several cargoes having been sold for prompt shipment, which has improved the position.

SHEFFIELD.—Home demand for industrial coal continues steady, and some improvement is noted in household requirements. The call for small coal is on a bigger scale, and supplies are somewhat restricted. There is a good demand for coke-oven smalls, and there is also an expanding business with electricity generating plants and for brickworks. Furnace qualities of coke are becoming more difficult to obtain, and other qualities are relatively scarce. On the export market there is not much activity.

CARDIFF.—There has been a slightly better demand from South America. The inland trade is beginning to show the usual signs of seasonal expansion, but otherwise the position on the Cardiff coal market is practically unchanged. No intimation has yet been received from France of the normal autumn increase in the import quota; the civil war in Spain has virtually stopped shipments to that country; while the complete breakdown of the commercial negotiations between the Governments of the United Kingdom and Italy seems to preclude any possibility of an early resumption of business with the principal Mediterranean coal importing country. Moreover, it has been announced this week that Canada has agreed to lift the ban on imports of Russian anthracite coals, and to concede to the Soviet Union the right to export to Canada at competitive prices 250,000 tons per annum. This announcement has caused much concern to South Wales anthracite producers and representations are being made on the subject to the Ministry of Mines. During the past few days the Trinidad Cement Works are inquiring for 87,000 tons of small, 5,000 tons of breaker dust, and 2,000 tons of large coals for delivery over 1937, and the Egyptian State Railways for 9,000 metric tons of sized coals. The better classes of smalls are the only grades commanding prices above the minimum schedule, and current output of large coals continues in excess of demand.

Shipments at the South Wales ports last week totalled 352,300 tons, compared with 334,500 tons the previous week, and 340,991 tons in the corresponding week last year. So far this year shipments were nearly 1.9 million tons smaller than during the corresponding period of 1935.

IRON AND STEEL

LONDON.—The weekly report of the London Iron and Steel Exchange indicates that demand for iron and steel materials continues to expand, one of the features of the market being the pressure exercised by consumers to secure delivery. This applies to all steel materials in most common use and to many special steel products. Consumers find it difficult to place orders for anything approaching near delivery and in many cases works are behind in their deliveries against contracts.

Business in pig iron is limited, mainly by the reluctance of makers to sell far forward, for consumers would be prepared to enter into contracts beyond the first quarter of next year. Fears of a stringency of responsible for the efforts of some users to build up stocks. Export inquiry has been more active lately, but there is little surplus after home demand is satisfied and only small parcels of pig iron have been available.

In the semi-finished steel department current production is passing at once into consumption and consumers find it difficult to cover their full requirements. In this department demand has expanded since the autumn season commenced, and fears are expressed that a shortage may cause difficulties later on.

Business in finished steel continues actively, and practically all works are operating at capacity. Heavy quantities of structural steel are being produced; nevertheless, makers are hard pressed to satisfy demand.

MIDDLESBROUGH.—Demand for all classes of pig iron and steel continues heavy. Semi-finished steel producers are barely able to fulfil the requirements of re-rollers. Specifications for finished steel are coming in freely, and works can scarcely keep pace with demand. Most works are fully booked to the end of the year. Pig iron producers are doing their utmost to keep home consumers supplied with foundry and hematite iron; in the meantime, overseas inquiries are expanding, but makers are not able

to release large quantities for foreign destinations, although a parcel of 1,300 tons of pig iron was shipped to Australia last week. Shipments to Scotland have also recommenced, a cargo of about 630 tons having been sent. Prices remain unchanged.

Imports of foreign ore to the Tees have so far been maintained at approximately the same rate as last month, but there appears to be little new business. Shipments from North Spain, which have been spasmodical, will now probably cease altogether. Good Durham blast furnace coke is in good supply, but is well taken up at 24s. 6d. per ton delivered to the furnaces. Local steel makers are now taking better supplies of heavy melting scrap, and business continues to be done at 57s. 6d. per ton, delivered.

SHEFFIELD.—The iron and steel market continues strong, with every indication that activity will be maintained over the coming months. Pig iron producers are well booked, and notwithstanding the expansion of output, some of them are not willing to add heavily to their commitments. Foundry iron is particularly active, and demand for basic is good. Forge iron is an improving market. Supplies of hematite are not too easily obtainable, and there is little either of East or West Coast material on offer. It is not easy to buy forward to any extent. Demand for finished iron remains at the level of the last few weeks, business in common and market bars being more active than in Crown iron. Quotations throughout the market are firmly held. There is a good demand for basic steel billets and acid qualities are now coming into much better request. Wire rods are steady. Strip continues to be a very strong feature, and stainless steel sheet requirements are increasing week by week. There are no price changes. For heavy basic steel scrap, merchants continue to demand 57s. 6d. per ton, but consumers are disinclined to pay more than about 55s. 6d. Steel works heavy cast iron costs 55s., and foundry cast iron is steadily dealt in at around 67s. 6d. per ton.

GLASGOW.—Demand appears to be expanding continuously, and users keep pressing for deliveries which makers find it quite impossible to give. In many cases producers have already so much work on hand that they cannot accept orders for delivery within the next month or two. Whilst possibly the heaviest demand is for shipbuilding material, large tonnages are being absorbed by practically all users of steel. The improved position in the sheet trade is maintained. A very large number of the mills are operating, and output is passing quickly into consumers' hands. Export business shows some expansion, and the tonnage booked recently for overseas trade is quite considerable. Tube makers are slightly busier than they have been lately. Steel bar re-rollers are working to capacity, and have well-filled order books.

CARDIFF.—It is understood that tinplate works are now working at 65 per cent. of their allotted capacity and that prices are quite firm on a moderately active demand. Operations in the heavier branches of the iron and steel industry are relatively still more active, but there has been no material change in the sheet trade, which continues very restricted for export but fairly good for the inland trade. Prices are unaltered. At Swansea last week shipments of tinplates totalled 61,116 boxes, compared with 97,979 boxes the previous week and 92,256 boxes in the corresponding week last year, but stocks have been slightly reduced, apparently because of heavier inland deliveries.

OTHER METALS

COPPER.—Despite last week's quota decision, copper prices continued firm, and on Monday last the standard cash quotation reached £39 3s. 9d. per ton—the highest since 1932. Subsequently, however, a profit-taking reaction occurred, but prices closed on Wednesday showing a rise of 10s. on the week. The undertone continues strong and, although producers have shown that they are anxious to prevent a too-rapid price advance, it would not be surprising if quotations reached the £40 mark in the fairly near future.

Meanwhile, unofficial statistics for August make a favourable showing. World stocks fell from 432,322 to 405,576 short tons during the month, while world consumption rose from 146,042 to 155,376 short tons, thus reaching a new peak for the current year. World production in August totalled 130,813 short tons, or 8,335 short tons more than in the previous month, less than one-half of the increase being due to the higher quota of the restricting companies. The decline in stocks, although impressive, was mainly due to transfer from the visible stocks of producers to the invisible stocks of consumers. The importance of the decline as a bull point for the market must not be exaggerated.

Sales on the London Metal Exchange: 400 tons on Monday, against 1,800 tons last week; 1,700 tons on Tuesday, against 1,900 tons last week; 1,050 tons on Wednesday, against 2,200 tons last week. Domestic spot was quoted at 9-67½ cents per lb. in New York on Wednesday, against 9-55 cents a week ago and 9-35 cents a month ago. Wednesday's official closing price for standard cash in London was £38 18s. 9d. to £39, compared

Bank of New Zealand

Incorporated with Limited Liability in New Zealand by Act of the General Assembly, 29th July, 1861.

REPORT OF THE DIRECTORS

Presented at the Ordinary General Meeting of the Proprietors, held at the Head Office of the Bank, Lambton Quay, Wellington, on FRIDAY, 12th June, 1936.

The Directors submit herewith the Balance-sheet and Profit and Loss Statement of the Bank for the year ended 31st March last.

The profits, after providing for expenses of management, and for all doubtful and doubtful debts, and other contingencies, and after making provision for the annual donation to the Provident Fund, are £565,181 9

To which has to be added: Balance brought forward from last year 348,137 13 0

913,319 2 9

From which has been paid: Dividend on Preference A Shares £50,000 0 0

Interim Dividend on C Long-Term Mortgage Shares 7,031 5 0

Interim Dividend on D Long-Term Mortgage Shares 17,578 2 6

Interim Dividend on Preference B Shares 31,250 0 0

Interim Dividend on Ordinary Shares 187,500 0 0

293,359 7 6

Leaving available for distribution 619,959 15 3

This the Directors propose should be disposed of as follows:—

Dividend on C Long-Term Mortgage Shares at 8 per cent. per annum	£7,031	5	0
Dividend on D Long-Term Mortgage Shares at 7½ per cent. per annum	17,578	2	6
Dividend on Preference B Shares (making £100,000 for the year)	68,750	0	0
Dividend at rate of 5 per cent. on Ordinary Shares (making £375,000 for the year, equal to 10 per cent.)	187,500	0	0
Leaving Balance to be carried forward	399,100	7	9
	£619,959	15	3

Such dividends to be paid in New Zealand Currency.

During the year the Agency at Wellsford has been made a Branch, and Agency has been opened at Edgecumbe, Hari Hari and Papatōtōe. Onakune Branch has been converted into an Agency, and Levuka (Fiji) Branch has been closed.

GEORGE ELLIOT, Chairman.

BALANCE SHEET AT 31ST MARCH, 1936.

WHERE DOES BRITAIN STAND?

FROM the European arena this week comes renewed uproar. The armaments race has acquired fresh impetus, and has advanced a stage nearer its goal. Within the last few days, Herr Hitler's adhesion to the French plan for isolation of the Spanish conflict has been coupled with a new decree which almost doubles the effectiveness of the German army. This move is avowedly directed against Russia, and simultaneously it is announced in Berlin that, as in Italy, women and children are to be enrolled for "national defence." It is reported, with every sign of accuracy, that warlike supplies for the Spanish rebels on the Portuguese frontiers are being sent through Lisbon and the hinterland. Public opinion in France demands cessation of foreign supplies to the Spanish rebels at the same time as it calls for increased military dispositions in reply to the German Army Decree. After a State trial in Moscow, sixteen Communist leaders who shared the Left-wing views of Trotsky and opposed Stalin's policy of co-operation with "capitalist Powers," are officially exterminated. Signor Mussolini declares that the historic island of Elba is to become a Mediterranean Heligoland, fortified with heavy guns and air bases. Meanwhile, His Majesty's Government in this country, having commendably concluded a far-reaching Treaty of Amity with Egypt, have deemed the situation at the Spanish entrance to the Mediterranean important enough to warrant a meeting of the Cabinet Committee on Foreign Affairs—the first since Parliament adjourned before the outbreak of the revolt in Spain—from which, however, the Prime Minister has been absent.

In the European vortex, one movement can be clearly discerned. The Fascist Powers are advancing in the foreign field, and the two remaining democratic Great Powers of Europe—Britain and France—are so passive as to give the impression that they are in retreat. In France, a strong Government of the Popular Front, and in this country a strong "National" Government—have alike preferred to wash their hands of a friendly government in Spain—a country whose territories and foreign policy might, in the hands of rebels grateful to the twin Fascist dictatorships of Europe, render British Imperial communications

and French security a matter of Fascist benevolence. And this situation comes hard on the heels of an agreement between the two European Fascist dictators over the future of Austria, the Central European bastion for whose integrity it was recently thought that the Italian dictator would oppose his German *confrère*.

What is afoot in Europe? What miracle have Herr Hitler and Signor Mussolini wrought to secure their present initiative in European affairs? And what paralysis is it that has overtaken the great democracies of Britain and France? It is credibly reported that when, last autumn, it seemed that Britain's stout championship of the League Covenant might have forced the Duce to abandon his aggression in Ethiopia, a deputation of Italian admirals waited upon the dictator. Their submission was: "If it is your policy to proceed with an action which will precipitate war with Britain, you may be right; and, anyway, we will follow you. But we think we ought to tell you, before you irrevocably commit yourself, that if it comes to that, Italy will find herself without a fleet in 48 hours. We shall simply be blown out of the water." The Fascist dictator is reported to have replied: "Thank you, my children. And now go back to your ships and make your minds easy. I can positively assure you that the British are never going to fight, whatever I choose to do. These British are so cluttered up with their great possessions, so terrified that something will crack if they make the slightest move, that they have completely immobilised themselves. We can count them out."

Signor Mussolini was right. The secret which he knew then is now shared by Herr Hitler. At present, these two dictators, with all the civil and military forces of their totalitarian States behind them, are making the running in Europe. The policy which has given them their initiative has been that of Danton: "De l'audace; de l'audace; toujours de l'audace!" The dictators have nicely calculated the little more which they might dare to seize with impunity on each fresh occasion for their audacity. It is not their fault if their bluffs have not been called. They were not mere foolhardy gamblers. They

have shown more than a spark of genuine courage in putting their policies and their decisions to the test. It is this desperate courage in them, and its absence in the leaders of the democratic countries, which account for the ascendancy of Fascism in the European arena and the decline of democracy.

What, then, has happened to that John-Bullish quality of determination which has so often in our own history issued forth in dogged courage—and sometimes in sheer wilfulness, unlovely egotism, or even brutality? To-day we are compelled to witness the display of a spirit which accords strangely with British history and traditions. Last century, the world was pacifically conquered by British trade and British institutions. This country drew the civilised world along its own path; and most countries came to believe that our path was the right one for economic and cultural development. Then, we believed it ourselves, with courage and determination. To-day, Britain retreats from world markets; and her ideas and institutions are steadily yielding ground to political systems in which her cherished conception of individual liberty has no part.

Do we still believe in our message? Or are we like the Chinese mandarins were a century ago before their Empire foundered? Is the formula underlying our present foreign policy to be: "No action, and certainly no risks, until British territory is touched." That is the kind of formula by which great political inheritances are lost. Why, if it be so, should any Power touch British territory at Aden or Gibraltar, when the Red Sea straits can be commanded from Ethiopia, or the strait of Gibraltar from concessions in so-called "Spanish Morocco"?

The sands are running out, but there is still time for real and effective leadership in this country. We believe that the people will follow where real leaders inspire and direct them. But for that it is necessary to speak firmly and with confidence. In the present situation of Europe—a situation as gravely decisive as that of 1914—what Europe and Britain alike lack is a clear lead from the British Government. For the second time in a generation the lamps, one by one, are being extinguished. The European Powers have only one policy in common: to arm as heavily and as fast as they can. And that is not policy, but panic. It will hasten, and not prevent, the end which armaments serve. In our opinion, the situation in Europe is now grave enough to warrant consultations between representatives of all Parties in Great Britain. It is the future which matters to this country.

DEATH ON THE ROADS

SLOWLY the British public is awakening to the appalling dimensions of the daily toll of the roads. If 17 people were to be killed in a railway accident or a flying crash, there would be headlines in the newspapers and an official inquiry into causes and means of prevention. But more than 17 persons are killed, on the average, on the roads of Great Britain every day of the year. The present Minister of Transport has done a great deal in creating headlines for this daily accident roll. And the annual "Report on Fatal Accidents," which has just appeared, serves the purpose of an official inquiry, for it lists, in greater detail than ever before, the nature and causes of the formidable total of accidents.

It is as well, perhaps, to express a caution about the possibility of treating a subject such as fatal road accidents in a statistical manner. However numerous the subdivisions of descriptions, it cannot be expected that any category will be wholly uniform. For example, 150 pedestrians are listed as having been killed while "walking in carriageway, not crossing, apparently inattentive to traffic." These 150 could include children playing "tag" in the street, hikers peacefully making their way down a Devon lane and philosophers contemplating the universe in the middle of a bypass. Moreover, the ascription of any particular accident to a category is largely a matter for the judgment of the police officer making the report. Thus all motorists will be astonished to learn that in only three accidents out

of 6,289 was the absence of a red light or reflector on a pedal cycle deemed to be the "sole or main" cause of the accident.

These cautions should be borne in mind. But the statistics nevertheless contain a variety of most interesting and instructive lessons. One of the most interesting is contained in the very first table in the report, which lists the total number of fatal accidents in each of the last six years. In spite of the very rapid increase in the volume of traffic, there were fewer fatal accidents in 1935 than in any other of the six years. We may not be winning the battle, but we are at least holding the enemy at bay.

Two other preliminary points are almost platitudinous. Only 9.7 per cent. of all accidents were unconnected with mechanically-propelled vehicles. And 89.1 per cent. of all accidents were caused by the collision of a moving vehicle with another vehicle, a pedestrian or an animal. The great majority of accidents, in other words, are connected with (not necessarily caused by) motor vehicles colliding with something. Subdividing further, much the largest category (47.2 per cent. of all accidents) consists of collisions between vehicles and pedestrians. The second largest consists of "side-on or lateral" collisions between two vehicles. No other category is large enough to be worthy of extended discussion.

The next question to ask obviously is "In what conditions does a vehicle collide with another vehicle or with a pedestrian, and who is to blame?" This question the Report endeavours to answer with a bewildering wealth of detail. So far as the time of day is concerned, it shows that the worst hour on week days is between 5 and 6 p.m., but on Saturdays, Sundays and Bank Holidays it is between 10 and 11 p.m. There are secondary peaks between 7 and 9 a.m. and between 12 noon and 1 p.m. As for days, Saturday is the worst, with an average of 25 deaths, and Sunday the best, with an average of 13.9. Bank Holidays, with 20 deaths, come midway between Saturday and Sunday. Accidents are less frequent in summer than in winter. This fact, together with the peak between 10 and 11 p.m., suggests that accidents are much more likely after dark. This conclusion is not disturbed by the fact that 58 per cent. of accidents occur in daylight, for there are several more daylight hours than dark hours of heavy traffic.

Several interesting facts emerge from the analysis of persons killed. Pedestrians are almost half the total, the next largest categories being pedal cyclists and motor cyclists. These three, together with pillion riders, make up no less than 88 per cent. of all persons killed. The drivers of, and passengers in, motor cars account for only 10.5 per cent. of all deaths. Moreover, while the proportion of pedestrians to the total is falling, that of pedal cyclists is increasing. This is confirmed by an analysis of the types of vehicles involved in accidents, which shows pedal cycles as the only type registering a substantial increase in its proportion to the total.

Another possible line of inquiry relates to the personal condition of the persons involved in accidents. Among the drivers of vehicles (including pedal cyclists), some are listed as having been ill, fatigued, drunk or drugged, asleep, deaf, semi-blind or maimed, but over 98½ per cent. of them were suffering from no known physical defect and apparently in a normal condition. Among pedestrians, however, distinctions can be drawn. Some 75 per cent. of them were under 18 or over 60. Relatively to population, the incidence of accidents is more than two and a half times as great among children, and eight times as great among elderly persons, as among those between 18 and 60. Among children, the worst age group is between 5 and 7, and in all age groups except those between 18 and 20 the number of deaths among males exceeds that among females. Of pedal cyclists killed, 28.5 per cent. were under the age of 18.

The Ministry has attempted to assign to each accident a "sole or main cause." This is, of course, a hazardous business, but if the qualifications of the figures can be taken for granted, they give some valuable results. Of a total of 6,289 accidents, 1,996 are blamed on drivers of motor vehicles, 1,038 on pedal cyclists and 2,562 on pedestrians. Among motorists, much the most frequent fault is alleged to be excessive speed, with improper overtaking ("cutting-in") and "apparent inattention"

coming next. Cyclists commit suicide most frequently by "emerging or turning from one road into another road without due care" and by "losing control." Pedestrians are killed most frequently by carelessly crossing the road or by walking out from behind a stationary vehicle. Another interesting series of figures shows that 72.9 per cent. of all drivers and 83.4 per cent. of all motor cyclists killed lose their lives in accidents for which drivers of motor vehicles are "solely or mainly" responsible. Similarly, 71.9 per cent. of pedal cyclists and 82.9 per cent. of pedestrians have only themselves to blame. These figures would appear to lead to the slightly consoling conclusion that it is the person responsible for the accident who, in most cases, pays the penalty. "It must, however, be remembered," the Report drily observes, "that in the great majority of these cases the evidence of the party on whom responsibility is laid was not obtainable." *De mortuis nil nisi culpa!*

Does any firm conclusion emerge from this bewildering mass of facts? It may be suggested that one lesson may clearly be learned—namely, that the great majority of accidents arise out of the meeting of different kinds of traffic. Motorists, broadly speaking, do not slay motorists, nor cyclists cyclists. So long as the pedestrian stays on the footpath he risks neither his own life nor that of any passing driver. It is when cars get mixed up with cycles, or when pedestrians cross the carriageway, that accidents occur. The same fact is shown by the variation of accidents from day to day or from hour to hour. Sunday is the least fatal day. Saturday, and the hour between 5 and 6 p.m. on week-days, are dangerous because private and commercial traffic are then intermingled.

If this conclusion is correct, the remedy lies in the segregation of different varieties of traffic. If pedestrians and pedal cyclists could be kept apart from motor traffic, more than two-thirds of all the fatal accidents would be avoided. Complete segregation, however, is an impossible ideal. Even if every road had a footpath, pedestrians must sometimes be allowed to cross the carriageway, and there is no room for separate cycle tracks on every road and street. But segregation to the greatest possible extent seems to offer a much greater prospect of reducing the number of deaths than any regulation of speed (excessive speed was the "sole or main cause" of only 527 accidents out of 6,289) or even reconstruction of roads.

Pedestrians have no marked preference for walking in the road. But pedal cyclists exhibit a very peculiar resentment at any attempts to provide separate tracks for them. Attempted suicide being a punishable offence under the laws of England, there seems to be no reason for humouring, and every reason for opposing, this strange whim. As a correspondent to *The Times* recently expressed it, "a grievance is better than a grave." We hope that the Minister of Transport will pay to grievances no more than the minimum attention which any politician must accord, but will press on with all possible speed with his policy of building modern roads with separate tracks for different classes of vehicles.

TELEVISION

(BY A CORRESPONDENT)

THE first organised television programme in Great Britain was transmitted last Wednesday from the British Broadcasting Corporation's station at Alexandra Palace in North London, and received by an expectant and somewhat generously enthusiastic audience at the Radio Exhibition some few miles away at Olympia in West London. What are the technical features and the financial prospects of this new form of public entertainment which, after much experimental work and a full-dress official inquiry, has thus made its public debut?

To a generation accustomed to the marvels of electrical communication the development of television has often appeared to be unduly retarded. But the technician, with his special knowledge, has always insisted on the inherent difficulties of the subject, and warned us that progress would be slow. Basic problems arise in connection with

the transmission and reception of the mosaic of changing detail which makes up an acceptable representation of a moving picture. Pictorial representation may be regarded as essentially granular in structure; and, in order to transmit images by wire or by radio, separate signals indicating the relative brilliance of each elementary area must be conveyed to the receiving point, at which, by an electrical translation, a corresponding brilliancy is given to the correlated spot on the observation screen.

But the mere complexity of the signals does not constitute the whole of the difficulty of television. In addition the component signals must be transmitted in an ordered sequence. At the transmitting station the "electric eye" runs over the object to be televised in a way closely resembling the action of the human eye in reading a column of print, left to right, and line by line. At the receiving end, the illuminating spot must travel over the observational screen in an exactly synchronous manner. Moreover, since in television the pictures are moving, the whole image must be reproduced many times per second in order that the observer, by persistence of vision, experiences the illusion of continuous motion although he is really witnessing a rapid succession of snap-photographs.

Much of the controversy which has raged round the subject of television has been concerned with the question of definition and flicker in the received images. The technical problems are obviously much reduced if the number of picture-elements in the image is small and only a relatively few photographs are transmitted in a second. As far back as the autumn of 1929 the B.B.C. gave the Baird Company facilities for the experimental transmission of low-definition pictures (2,100 picture-points repeated 12½ times per second). But the public response to this feature was well-nigh negligible; for the received pictures had no value as entertainment. The result was that the Selsdon Television Committee, the recommendations of which were accepted early last year by the Postmaster-General, gave no encouragement to the continuation of such a service, and it was ultimately dropped.

It was the considered opinion of the Committee that, for a satisfactory picture, there should be details of the order of 6,000 picture-points with a minimum picture frequency of 25 per second. It was further pointed out that, for the reception of such high-definition pictures, the cathode-ray tube was usually employed, in which the pictorial delineation at the receiver was brought about by the rapid transit of a pencil of electrons over a fluorescent screen. For the transmission of such complicated signals it was realised that the ultra-short waves constituted the only available and satisfactory medium. But since, with such wavelengths, the range of a sending station is practically limited to the horizon as seen from the transmitting aerial, a number of such stations would be necessary to serve the whole country. The two systems of television developed by Baird Television, Ltd., and by Marconi-E.M.I. Television Company, Ltd., were regarded by the Committee as being sufficiently advanced to warrant their incorporation in a London station, to operate alternately under the

B.B.C. as a public service. The Technical Advisory Committee ultimately chose Alexandra Palace as the site for this station, and the visitor to Olympia this week has been able to see for himself the results of the first series of transmissions from this station.

It is quite clear from the latter part of the Report of the Selsdon Committee that its members envisaged that television would be likely ultimately to develop into an art with which would be associated an industry comparable with that which at present caters for the ordinary listener. It was, for example, suggested that there might possibly be a television patent pool, comparable with that already in existence in connection with the grouping of radio manufacturers. But so far no general move in this direction has been made. Instead there appears to be very keen rivalry between the two companies, Baird and Marconi-E.M.I., who were chosen for representation in the initial service. Not until an extended trial has been made in the matter of reception in different parts of London will it be possible to say which of the two systems gives the better results. At the moment there appears little to choose between them. The Baird system of "spot-light" scanning provides a most acceptable representation of a "close-up," but for outside "shots" the use of an intermediate film, causing a delay of 30 seconds before the picture signal is radiated, is used. The Marconi-E.M.I. system has, as its central feature, the use of the Emitron camera, which lends itself admirably to extended indoor and outdoor scenes. The pictures sent out by the two systems differ in respect of numbers of lines and picture-frequency, the Marconi-E.M.I. picture being claimed to be completely free from flicker.

Leaving the more technical aspects, we may note that, while the B.B.C. has purchased the London station equipment from the two companies concerned, and will doubtless purchase more from them (and possibly others) for the provincial stations, the bulk of the future profits in television may be expected to accrue in other ways. But it is difficult to see considerable scope for immediate large-scale turnover. The sets on view and on sale at Olympia cost about £100, so that it is clear that sales will be limited. "Servicing" is likely to be expensive with such relatively complicated apparatus.

At the first announcement of the Television Committee's proposals for the inauguration of a television service the sales of ordinary receivers dropped sharply. This was due to a misconception on the part of the public about the nature of the situation. It was not for some time that people realised that the B.B.C. sound and vision services would be conducted in parallel, and that to obtain both two types of equipment would be necessary. Recognition of that fact, however, has now become more general.

One further aspect of the television situation calls for notice, namely the possibility of large-screen demonstrations suitable for use in cinemas. The time may not be far distant when each cinema will include in its news reel the instantaneous presentation of certain special events while they are happening some distance away. In this connection the two companies mentioned above may find a serious competitor in Scopphony, Ltd., who, developing optico-mechanical methods, have paid special attention to large-scale projection. The Scopphony system has been reported on favourably by two well-known scientists. But here again the very problematical nature of the immediate future of television prompts caution. It is clear, in short, that though the ultimate possibilities of the development of television are impressive, it is most difficult, at the moment, to make any confident estimate of its financial prospects.

STATE CONTROL IN FRANCE

(BY A CORRESPONDENT)

THE sweeping democratic victory in the French General Election last spring has speedily led to an apotheosis of the State, in the economic as in the social sphere. When the French Chamber rose for the summer recess the Prime Minister, M. Léon Blum, was able to point to an extraordinary harvest of legislation in a short first session. In particular, the economic measures passed by the Chamber

have been designed to extend very widely the grip of the State on French industry, and at the same time to place upon the State and industry joint responsibility for the well-being of broad sections of the community.

This intervention by the State in important industries, however, is by no means an innovation in post-war French economic policy. It was largely owing to M. Poincaré's initiative that the State assumed for itself a certain control over such important branches of French industry as the potash, fertiliser and petroleum industries, in which it directly controls a large proportion of the total output. But M. Poincaré's reasons for State intervention in industry differed fundamentally from those of the Popular Front regime. He and his successors were dominated primarily by military considerations, particularly by the desire to assure to France adequate supplies of vital raw materials—potash, nitrates and petroleum—through State control of those industries. This period of "active" participation was followed, during the depression, by a more "passive" one, mainly associated with the name of M. Tardieu. During that period credits were placed at the disposal of the depressed industries from an apparently inexhaustible reservoir of Budget deficits, in order to prevent the collapse of certain big industrial concerns. By the middle of 1932 the State had lent more than 3,000 million francs to certain banks, shipping companies and to film concerns. To safeguard its interests, the State had gradually to take part in the running of these great concerns, but its participation was, nevertheless, involuntary. Its aim was to hand back control to private enterprise as soon as possible.

The economic legislation of the Popular Front Government, by contrast, is based on the contention that the State is in a better position than private individuals to run industrial concerns of nation-wide extent and to safeguard the interests of the majority of the community. For the leaders of the French Government the new economic laws are not emergency measures but the beginnings of a complete reform of the country's economic organisation. It is for this reason that the Senate, the guardian of the country's Conservative traditions, has been much more strenuously opposed to the Government's purely economic measures than to its equally "revolutionary" social measures.

The first and easiest step in the extension of the policy of State intervention was the nationalisation of the armaments industry, which could be justified on military as well as moral grounds. It could not, however, be immediately realised, because of the tightness of the Treasury's financial situation. The State could only expropriate armaments manufacturers by fair compensation; and considerable sums, estimated from 1,000 to 1,500 million francs, would be required to nationalise the industry. The Government, therefore, needs time to carry out this part of its plan. Closely connected with Government control of the armaments industry was the compulsory cartelisation of the aircraft industry, which M. Pierre Cot, the Air Minister, had already introduced during his former period of office.

The proposal to assume State control over coal-mining is doubtless partly due to depression in that industry. Some 65 per cent. of its costs of production are labour costs, and it has been particularly hard hit by their steep rise as a result of the recent social legislation. The main objective of the Government is to keep the price of coal low; for coal is both an important raw material of industry and an indispensable item in the budget of the mass of the people. Compulsory amalgamation of coal-mining companies has now been enacted, and the State has a determining voice in the fixing of prices. This assumption of power has already exercised a practical effect. As a result of the increase of labour costs following the new social legislation, the coal companies demanded a rise of 20 francs per ton in prices; but the Government only sanctioned an increase of 9 francs. In compensation for the consequent contraction of profits on coal output, the Government agreed to a considerable reduction in import quotas; and the new Coal Mines Bill envisages State subsidies to the central coal-selling organisation. In the new Bill the State attempts to equalise the rate of profit in the different mines; thus, in future, it will have increasingly to intervene in the financial affairs of the mining companies.

The present extent of State intervention in the national

economy of France is most clearly visible in the reorganisation of agriculture through the creation of the new Wheat Board. This organisation, with the co-operation of the agricultural co-operative societies, will buy up the greater part of the country's production of wheat and gradually dispose of it. It will control imports and exports. A uniform price throughout the country is to be fixed by the governing body at the beginning of the selling season. This system is being financed by advances from the Bank of France, which this year will amount to 3,500 to 4,000 million francs. The Senate's bitter criticism of the Bill—which went seven times to and fro between Chamber and Senate—was mainly directed against two features: the abolition of private trading in wheat and the method of fixing prices. According to the original draft of the Bill, the governing body of the Board (half of whom were producers and half representatives of consumers, millers, etc.) was to fix prices only by unanimous vote. Failing a unanimous decision, prices were to be determined by the Minister of Agriculture. In most cases, application of this rule would in practice have led to State determination of prices. The Senate has succeeded in curtailing the power of the State by the introduction of a clause in the Bill which permits of majority decisions. The Senate has also reintroduced private trading in wheat for the marketing of the harvest. M. Monnet, Minister for Agriculture, has announced that if this experiment succeeds similar organisations will be applied to other agricultural products. The State has already taken control of the production of wine in the recently promulgated Wine Act.

When the Chamber meets after the recess it will find waiting for it a number of Bills envisaging further extension of State control in industry. A Member's Bill, introduced by M. Candace and approved by the Government, demands the establishment of a central authority for the entire French mercantile marine. The French film industry is also, according to plans put forward by the National Economic Council, to be reorganised by compulsory cartelisation. Reform of the Banque de France has already been carried through; but, judging by the new Governor's address at the first meeting of the new General Council last week, M. Labeyrie is still likely to act as a brake on the Government's credit policy. Other forces are at work, however, to turn reform of the Banque into reform of French credit policy as a whole. These plans are mostly being advanced by young Socialist intellectuals, who have grouped themselves round the leader of the factory workers (Confédération Générale du Travail), M. Léon Jouhaux. The latter is not only a member of the Bank's Regency Council, but also of the Committee of Four which, with the Governor, is to determine matters of day-to-day credit and currency policy. This group views the seizure of the Banque de France by the Popular Front as the starting-point in the systematic reform of the French economic system. Nationalisation of the whole banking system will follow the State's reform of the Banque, and this in turn will involve central control of French economic policy by the new State-directed institution.

Any attempt to put these Socialist theories into practice would quickly bring their protagonists into conflict with the more Conservative elements, particularly the Radicals, in the Popular Front. They differ, however, from those of the Socialist leaders now in power on points of method rather than of ultimate aim. What is common to both is the desire to mould the French economic and social system, by a bloodless and evolutionary process, into a new form in which private initiative and profit are to give place to an economy centrally planned in the interests of the community. So far, only the first legislative stages have been achieved; and already significant economic repercussions have appeared by way of a sharp rise in the level of costs and an accentuation of the over-valuation of the franc. The coming autumn will pose the decisive question: Social reform with devaluation, or exchange controls? Further deflation is unthinkable. A regime of exchange controls in France might hinder rather than promote the Popular Front's aims. Whether M. Blum and his associates will be able, politically, to accomplish the whole process of centralised economic organisation and social reform is the question which every day becomes more crucial.

THE RETURN OF THE VANDALS

FOR 2,500 years now, Spain has been an arena in which influences and forces from Europe and North Africa have alternately swept over the country—now from this direction, now from that. And all the time, since Carthaginian and Sidonian merchant-navigators slipped across from Africa to colonise the fertile Spanish coastlands on the Mediterranean, the people of the Spanish interior have been engaged in more or less active resistance to these various intruders.

Their incursions, however, have had a more than local influence on the course of history; for the intruders, like the Carthaginians who founded Cartagena (Carthago Nova), have often used their Spanish strongholds as the base for further and often far-reaching military enterprises—as Hannibal and Hasdrubal did when they marched from Spain across into Italy in order to prevent Rome from assuming the hegemony of the Mediterranean. The European power, after years of war, ultimately annihilated the North African power, and Rome assumed her sway for a period of 700 years over the Iberian peninsula, though she, like all other conquerors of Spain, found the greatest difficulty in reducing the country to the well-ordered level of centralised administration which Gaul had accepted.

At a later date a great movement started from a different quarter. In the year 406 A.D., when Italy and the Western Roman Empire itself was hard pressed by Alaric and his Visigoths, the provincial legions were recalled from Gaul, Britain and Spain for the defence of Rome. As soon as the legions quitted the Rhine frontier, a wave of German tribes, themselves urged from the rear by Huns from the Asiatic steppes, poured over the river into Gaul. Among them came the Alans and the Vandals. The latter were an East German tribe which had already split into two sections—Asdings and Silings. The Vandal hosts, pillaging churches and villas as they went, blazed a trail of devastation across Gaul—*uno fumavit Gallia tota rogo*, says the ecclesiastical chronicler—and they repeated their dreadful progress (which has given their name its present evil meaning) in Spain. Rome asked the Visigoths to attack the "barbarians" in Spain; the Siling Vandals were annihilated; and Rome then withdrew the Visigoths and settled them in Southern France. The Alans and Asding Vandals in Spain closed their ranks; but they were defeated by the Sueves whom Rome had next incited against them, and retired to the south. There they rallied and captured the ports of Seville and Cartagena, thus beginning the assumption of sea-power which was to blockade Rome and all Italy. Under the brilliant Vandal King Gaiseric, they crossed the Straits in 429 and became Roman federates in the luxurious North African province and granary of Rome. In 433 they captured Carthage; and in 442 the almost effete Roman power was forced to recognise Gaiseric as independent king of North Africa—a recognition not even then accorded to the Visigothic and Burgundian "kings" who had seized most of Gaul and Spain. In this way the Vandals cut off maritime communications between Rome, the Eastern Empire at Constantinople, Spain, and Egypt. By so doing, they were the first enemies of Rome since the age of Hannibal to challenge successfully that precious possession of Rome: command of the great Mediterranean highway.

Three centuries later the Arabs, recruiting Moors en route, swept from Egypt and the East over North Africa and into Spain; and the Vandals, always a small tribe, who had been reduced by wars, and had mingled their blood with Romans in North Africa, mingled it again with the soldiers of the Prophet when they embraced Islam rather than perish.

Meanwhile, between the collapse of the Western Empire in the first half of the fifth century and the invasion of Spain by the Saracens in the year 711, Spain fell into the hands of the Visigoths. Gradually the first traces of feudalism—urged by the need of purely local jurisdictions—caused the local Visigothic leaders to style themselves "kings," the equivalents of the Merovingian and Carolingian barons. This early Spanish feudal separatism proved fatal against the Saracens, who swept over one region after another, defeated the Visigothic King himself, poured across the Pyrenees into France, and threatened

to change the course of history by bringing the whole of Europe under the banner of Islam. But the tide was turned back at Poitiers in the year 732, where Charlemagne's famous grandfather, Charles Martel, the great *major domo* of the last puny Merovingian monarchs—"the hammer of the Turks"—routed them in one of the fifteen decisive battles of the world.

Thereafter, Spain fell under the sway of the Caliph of Damascus; Moorish art, mathematics and science progressed much more rapidly than their stagnant Christian counterparts, under the dead hand of the Church; and for five centuries, only the little kingdoms of Leon and Aragon, immediately south of the Pyrenees, maintained the Christian and secular forces which, when Ferdinand of Aragon and Isabella of Castile united Christian Spain once more, were strong enough to drive the Moors right down to the south as far as Granada, where their architectural *chef d'œuvre*, the Alhambra, escaped assault.

All this time the Mediterranean remained the highway of that mediæval trade which, proceeding across the Asiatic land routes from China and Persia to the Syrian and Palestinian coast, was then shipped by the merchant-citizens of the Italian city-states—Genoa, Venice, Lucca, Pisa—to the Mediterranean ends of the West European highways. The Saracens had prevented Charlemagne from uniting his resuscitated West Roman Empire with that of the Empress Irene at Constantinople, and from joining Spain to it; for they controlled the Western Mediterranean from the Straits as far as Malta. (Beyond this they did not assume the offensive, for their kith and kin in the Levant found trade with Christians profitable!) But when, in the fifteenth century, Portuguese and Spanish navigators discovered direct sea routes to the New World, and to Africa, India and the Far East, Portugal and Spain became Great Powers. From that time onward the Straits dwindled in importance until a French engineer linked the Red Sea to the waters of the Mediterranean.

The long decline of Spain as a Great Power was always accompanied by outbursts of fissiparous violence, the fruit of a despotism which after the Great War and still to-day seeks to repress legitimate local aspirations for autonomy by force of arms.

In an attempt to wrest the Portuguese harbours from Britain, Napoleon compelled Spain to make war on

Portugal and tricked the old Spanish King Carlos into resigning his throne in favour of Napoleon. A Continental Power was thrusting its hand into Spain; but the English, under Wellington, organised Portuguese resistance and eventually rolled the French armies back to defeat outside the walls of Toulouse. The Spanish people were enthusiastically on the side of Wellington, who appeared to them as a deliverer not only from foreign oppression but also from the domestic exploitation by short-sighted despots. Unhappily, in 1823, Canning, Foreign Minister of England, "called the New World in to redress the balance of the Old"; he recognised the rebel Spanish colonies as independent States for the good of British traders; but he was not prepared to withstand the restored French Bourbon king's desire to march into Spain and abolish the popular constitution which an enraged populace had extorted from a Bourbon monarch. The French, under their restored Bourbon king, declared war on Spain in 1823, with the approval of the other members of the "trade union of despots": Czar Alexander and Metternich. The constitution was abolished. But the Bourbons and the Napoleons vanished from the stage in France, and the Third Republic found itself drawn ever closer towards a solidarity with Britain (who virtually commanded Portugal) and with the democratic forces of Spain. It seemed as if Western Europe, from North Africa and the Straits to Ireland and as far east as the Rhine, would prove a compact repository of democratic institutions and of Western individualistic culture.

That aspiration has been well-nigh shattered within the last few weeks. Separatism and popular resentment against centralised power—not unnaturally identified with the rule of forcible tyranny—are to-day the mainsprings of a bitter, unyielding popular resistance to a military rebellion which seeks—as sought the Romans, Bourbons, Alfonso and Primo de Rivera—to establish absolute power in the centralised administration of Spain. As in times past, so now, the approaches to the Mediterranean and the control of its trade routes are once again *en jeu* in Spain. And as then, so now, the power that rules in Spain may play a major part in European politics. Once again, in the cause of despotism, Vandals have returned from North Africa to Spain. Good Europeans may well hope they will not retrace their steps any farther.

NOTES OF THE WEEK

The Week in Spain.—Three features have marked the course of the conflict in Spain since last we wrote. First, despite Signor Mussolini's surprisingly sudden acceptance of M. Blum's "neutrality plan" at the end of last week, no ratifications have yet taken place; and this week warlike supplies for the rebels at Badajoz—including tanks, guns, and aeroplanes in parts—have been dispatched in German and Italian vessels to Lisbon and thence forwarded through Portuguese territory. (It was reported that the British Foreign Office on Wednesday instructed Sir Charles Wingfield, Ambassador at Lisbon, forthwith to urge upon the Portuguese Government the necessity of making Portuguese "agreement in principle" to M. Blum's neutrality plan immediately effective.) An Anglo-French "whip" has been sent to all the Powers who have agreed to participate, urging immediate realisation of neutrality and the establishment of a supervisory committee. Secondly, the Spanish rebels have launched desperate offensives in Guipuzcoa against Irun and the port of San Sebastian, and in the South against Málaga and Madrid. In the North they were unable to reach their objectives, despite their use of Italian Caproni bombing aeroplanes; and the battle still rages as we go to press. The Government have invested Cordoba in the South and surrounded Saragossa in the North; while General Franco's rebel force has advanced towards Madrid. By far the most important news, however, is of disaffection not only among the Moors left in the Spanish Moroccan zone, but also among those

now fighting for the rebels in Spain. Disaffection in the rebel forces seems to be increasing; and so are guerilla actions by the Spanish peasantry behind the now extended lines of rebel communications in Southern Spain. If an honest and effective international agreement to "keep the ring" could be guaranteed—say, by an international force round Spain—it would seem from this week's news that the chances of success for the rebels' criminal enterprise had notably diminished.

The Anglo-Egyptian Treaty.—In the signature of the Anglo-Egyptian Treaty in London on Wednesday we can seize, with relief, on a piece of positive action, rightly conceived and energetically carried through by both Governments. This Treaty—which ought to have followed the British unilateral declaration of February, 1922, before the end of that calendar year—is now some fourteen years overdue. It has come within an ace of being too late; but we have every expectation that, once signed and ratified, it will last. This optimistic forecast is justified because the Treaty unquestionably does minister to certain fundamental interests of both parties, without conflicting with any other interests of theirs. Egypt—lying, as she does, in a strategical position which is as temptingly eligible as it is perilously exposed—has an interest in being safeguarded against the danger of being turned into an arena

for the strife between other Powers—so long as this immunity is secured for her in a way that leaves her mistress in her own house. Egypt need suffer no loss of self-respect in accepting the protection that Great Britain offers; for the benefit of the military clauses of the alliance is mutual; and we are living in a world in which not even the greatest of Great Powers can any longer dream of providing for its security by its own unaided strength. Thanks to this Egyptian alliance, the British Empire will now be able to feel easy about one of the four weak links in the chain of maritime communications from Britain to East Africa, India, Australia, New Zealand, Malaya, Hongkong and Shanghai. Whatever has happened in the recent past, or may happen in the near future, to change the strategic situation to Great Britain's disadvantage at the Straits of Bab-el-Mandeb—or the Straits of Bizerta, or the Straits of Gibraltar, for that matter—Suez, at any rate, should henceforth be reasonably secure. Paradoxically enough, while they have done a good piece of work in the Eastern Mediterranean with one hand, His Majesty's Government seem passively intent on preventing it from being of any use by allowing the Western entrance to the Mediterranean to fall into German (and/or Italian) hands. If British foreign policy baffles the British, no wonder it confounds the foreigner.

Germany Extends Conscription.—Germany has called up more men. The new German law of August 24, 1936, raises the period of universal compulsory service in the German armed forces from twelve months to two years; and this decree was promulgated before the close of a day on which the French Government had been able to announce, with commendation of Herr Hitler's statesmanship, that Germany had now followed suit to Great Britain, Belgium, Russia and Italy in accepting the French proposals for the observation of a uniform neutrality towards the Spanish civil war. The French Press, whatever shade of domestic opinion the newspapers represent, has reflected the ominous and understandable increase of nervous tension in France which the Nazi Government's action has evoked. It is reported that the total army, conscripts and regulars, will not quite be raised from 550,000 to 900,000 men, because before this week's Decree the conscripts already served almost one year's para-military "labour training" before joining up, and because the *cadre* of officers is not yet large enough. But, as many authorities have quickly pointed out, the ostensible reason adduced by the Nazi authorities for this week's surprise—"defence" against the increased Russian Army, which in its turn was increased because of an earlier increase in the German army—bears a sinister similarity to the German refusal to cancel the German mobilisation decree in 1914 because the much slower Russian mobilisation was in train. Two days after the announcement of extended conscription, Herr Hitler made a further statement, declaring that the women and children of Germany would be enrolled in new State organisations in preparation for "national defence." In this he has copied the example of his fellow Fascist dictator. But history records many international crimes which have been committed in the sacred name of national defence. The comment of the French Prime Minister's newspaper on Wednesday was quite right: Herr Hitler's latest example of shock tactics has launched us all on a new perilous lap of the accelerating armaments race. It is a race in which all must be losers; and its grim losing-post seems this week to have come nearer.

Germany Against Russia?—The Russians, we are informed by their enemies, do not go in for sport. (With the Spartans, once upon a time, it used to be the same.) There were no Russian competitors at Berlin for the Olympic Games; and Herr Hitler has not waited long after the games were over in order to take fresh measures against what he professedly expects the Russians to do, not in sport but in earnest. For "History" (he tells us in the official comment accompanying the new German Military Service Decree) "has taught us that it is better to make great sacrifices for peace than to sink into Bolshevist

chaos." Hitler's foreign policy—proclaimed in *Mein Kampf* and studiously followed in practice ever since the publicist turned dictator—is to bury the hatchet in the West in order to have a free hand in the East—in order, in turn, to achieve a European hegemony which would enable him to dictate to Britain and France. This policy has been so persistent, and has such promising prospects of success (considering the present temper in Western countries, on which we comment elsewhere in this issue) that it would have been surprising if Hitler had allowed himself to be drawn into making a radical departure from it on account of a trifling German-Spanish incident. If Hitler had indeed made up his mind to join forces with Mussolini in putting, and keeping, the Spanish Fascists in power in Spain—in return for the concessions to Germany and Italy of naval and air bases in the Balearic Islands and in Spanish Morocco—he would have been throwing to the winds all Herr von Ribbentrop's laborious work of the last three years. For, however far our British and French reactionaries may incline towards kow-towing to Fascism, a *fait accompli* which placed the strategic keys of the Western Mediterranean in German and Italian hands could hardly have failed to make even these indulgent Western admirers of Fascism "sit up." But it now appears that the Spanish Government has merely been used by Hitler as a stalking-horse for a new move in his old campaign against Russia. On Friday the batteries of a Government-controlled German Press were suddenly swivelled round from Madrid and turned on Moscow. Russia was declared the cause of the new Conscription Decree—though it was freely reported months ago that a new Nazi *coup* would be necessary once the Olympic Games, and their attendant "good-will," had evaporated from Berlin. The anti-Russian salvo from Berlin was leading up to a new Nazi stroke. To-day, whatever their party, Englishmen can harbour few doubts what that stroke means. And when it comes, who among them still thinks that "British interests" will not involve Britain, sooner or later, in the vortex?

Stalin Wins.—Thirty hours after the end of a trial faithful to Soviet traditions—abounding in evidence for the prosecution and rendered farcical by abject pleas of "Guilty"—Zinoviev, Kamenev and their fourteen alleged accomplices were judicially shot. Another Left-wing member of the "Old Guard," Tomsy, head of the State Publishing Office, was accused during the trial and shot himself last week-end. Bukharin, the responsible editor of *Izvestia*, and Radek, its political leader-writer, have been implicated, and so has Rykov. The "purge" of Left-wing and Old-guard elements opposed to the allegedly Right-wing and *bourgeois* tendency of Stalin and the Stakhanov movement—which admits payment by results and private property—is now proceeding throughout Russia. Alone, the "onlie begetter" of the alleged conspiracy, Trotsky, remains closely guarded near Oslo by Norwegian police. No one outside Russia is in a position to prove the existence or non-existence of a conspiracy, of intimidation of the accused, or of arbitrary judicial methods; suspicion vies with prejudice as a criterion. Two things are clear. First, Stalin has won a victory for his policy of turning Soviet Russia to the Right—which neatly turns the flank of foreign *bourgeois* sympathisers with the alleged conspirators. But secondly, that so dreadful and ruthless a kind of victory was thought politically expedient, amounts to a proclamation of something rotten in the State of Russia. Trotsky's declaration that Bolshevism has ended, and that a period of internal political struggles in Russia now opens, may yet be proved right.

Strike Threat in South Wales.—All the miners in South Wales and Monmouthshire belonging to the South Wales Miners' Federation handed in strike notices on Monday. The strike is timed to begin on September 7th, and would affect 90,000 out of the 124,000 workers engaged in the coalfield. The question at issue is once more that perennial cause of bitterness the "Miners' Industrial Union," alleged to have

been founded by mineowning interests in order to weaken the Miners' Federation. It is now contended by the Federation that the management of Bedwas Colliery have been compelling workers to join the Industrial Union by methods of "intimidation and espionage." The Federation leaders stated their case at the Ministry of Mines on Monday, and the Minister saw Sir Samuel Instone, chairman of the Bedwas Navigation Colliery Company, on Wednesday. Sir Samuel is understood to have made counter-charges against the Miners' Federation, and declined to discuss the question with them. This attitude seems hardly likely to bring a settlement nearer. Indeed, it would be disastrous if the principle of "company unionism," which has done so much to embitter industrial relations and hamper the development of genuine trade unions in America, were to become a bone of contention in Great Britain. The temper of both sides, further, makes South Wales, of all areas, the least promising for experiments of this character. Moreover a strike of the whole coalfield at this moment might do serious and permanent harm to what remains of South Wales' export trade. It may, therefore, be hoped that the Ministry of Mines will investigate the allegations as soon as possible, and that the management of the Bedwas Colliery will be prepared to adopt an attitude towards the Miners' Federation at least no different from that of other employers in the district.

Charing Cross Bridge.—The plan for a bridge at Charing Cross, discussed in the *Economist* of July 4th, has now emerged in the recommendation of the London and Home Counties Traffic Advisory Committee. Briefly, the plan is to leave the railway station on the North bank, and construct a combined road and rail bridge, with improved road approaches to the Elephant and Castle in the South and Euston Road in the North. The proposed approach to Euston Road appears somewhat grandiose, since it implies the building of a new North-South thoroughfare right through the heart of London, presumably roughly on the line of Gower Street. If there is to be a bridge, however, there must be adequate approaches, though the cost would naturally be very heavy; and for this reason, apparently, the Labour representatives of the L.C.C. dissented from the recommendation. The next move now lies with the L.C.C.; and there consequently seems some danger that politics and the smoking embers of the Waterloo Bridge controversy may even yet becloud the air. One may fervently hope that this will not happen. For the great need now, for a thousand obvious reasons, is to end thirteen years' (or, rather, eighty years') controversy and build the bridge. If a decision is not reached quickly, Charing Cross Bridge will soon be neither a bridge, nor even a plan, but only a melancholy jest.

The Wheat Subsidy.—The Wheat Commission has announced its final figures for the crop year 1935-36. It will be recalled that the Wheat Act guarantees a price of 10s. per cwt., or 45s. per quarter, for a maximum quantity of 27,000,000 cwt. of home-grown wheat, the funds being raised by a levy on flour milled. The Commission finds that in 1935-36 the average price realised by British growers was 5s. 9.23d. per cwt. The deficiency payment would therefore be 4s. 2.769d. per cwt. Administrative expenses of 0.593d. per cwt. have to be deducted, leaving 4s. 2.176d. per cwt. But a total of 33,650,000 cwt. of British wheat was sold, and the deficiency payment is accordingly reduced in the proportion that this figure exceeds 27,000,000 cwt. The net result of these calculations is that the registered grower receives 3s. 4.26d. per cwt. He has already received 2s. 9d. on account, and the balance will be paid next month. The average return to the domestic wheat-grower thus works out at 9s. 1.491d. per cwt. or 41s. 0.45d. per quarter. The deficiency payment of 15s. 1d. per quarter compares with payments of 17s. in 1934-35 and 21s. 10d. per quarter in 1933-34. The wheat subsidy scheme can thus count among its technical advantages that its cost diminishes as the world price of wheat rises. In 1936-37 its cost will fall still further, as the average price

of wheat promises to be substantially above the level of the past twelve months. In anticipation of this the Wheat Commission has already reduced the levy on flour from 3s. to 2s. per sack. This year's domestic wheat harvest will also be considerably smaller than last year's, but this will not further reduce the cost of the subsidy unless the total yield falls below 27,000,000 cwt.

Progress in India.—The omens for the early establishment of the new Federal constitution in India appear on the whole to be growing more favourable. Agreement with the Princes seems nearer, and the attitude of Congress is, for the moment at any rate, growing less intransigent. The discussions with the Princes foreshadowed at the time of the publication of the new Instrument of Accession are to begin, and it is believed that few of them will delay much longer in joining the Federation. Meanwhile, Congress is preparing to take part in the forthcoming election to the new Provincial Legislatures. Congress opinion is evidently now at an historic turning point when the old anti-British sentiment can hardly maintain unity any longer, and the normal political divisions which are likely to prevail in the new India are beginning to appear. There are three issues at present tending to create disunity: the communal award, the advisability of accepting office in the new legislatures, and—most fundamental perhaps—the issue of Socialism. For the purpose of the election Congress has succeeded in composing an agreed manifesto, adopted by the all-India Committee under the presidency of Pandit Jawaharlal Nehru, which achieves unity largely by the time-honoured political device of putting in something to please all. It is at least a welcome sign, however, that Congress is taking part in the elections, and that it has not committed itself against subsequent acceptance of office. A majority is supposed to be in favour of acceptance, but Pandit Nehru, whose personal authority is great, is still opposed to it. A reform of the land tenure system, giving immediate relief to the smaller peasantry, while striving to improve the industrial workers' position, is also contained in the manifesto. Here again one may trace the influence of Pandit Nehru and his followers, who wish to prevent the Congress movement from degenerating into a mere political instrument of the richer Indian merchants and landowners. Much sympathy will be felt with Pandit Nehru's aims, but it would be encouraging if he could see his way to pursue them through the constitutional paths now being opened in India.

Retaliation in Palestine.—The most distressing feature of the situation in Palestine this week has been that the Jewish reprisals against the Arabs have suddenly begun to increase. That the Jews should hit back in the same lawless, brutal and indiscriminate fashion in which they have been hit by the Arabs for weeks past, is natural and indeed almost inevitable, failing success in the Government's efforts to suppress the Arab political banditry by the arm of the law. Now that the Jews have retaliated in earnest, we cannot criticise them alone for the breakdown of their self-restraint. Both sides have taken the law into their own hands, and it becomes harder than ever to arrive at a moderate settlement that will be more or less tolerable to both parties. There is much significance in the figures, published last week, of the casualty list from April 19th to August 15th. The total casualties (excluding accidental ones) are 1,201—205 killed, 353 (seriously) wounded in-patients, and 643 (more lightly) wounded out-patients. Of the deaths, only 17 have been incurred by the armed forces of the Crown (11 of the dead being English soldiers and policemen; six of them Arab policemen; and none of them Jewish policemen). The toll of wounded in the armed forces is, however, relatively higher, for it includes 64 of the serious cases and 95 of the slighter cases. The Jewish civilian population of Palestine has lost, during the same period, 58 killed, 98 seriously wounded and 121 slightly wounded. But the surprising and significant figures are those for the Arabs—Muslims and Christians taken together, as they should be, in consideration of the solidarity of their political

feeling against the Jews. The Arab casualties known to the authorities amount to no less than 130 deaths, 190 serious wounds, and 427 slight wounds—very nearly three-fifths of the casualty list. These figures fall considerably below reality; for the Arab snipers on the hills take pains to remove their dead and wounded, and often succeed. Happily, it was reported on Thursday that the Higher Arab Committee had met in Jerusalem—one of its members was released from a detention camp for the purpose—and had decided to telegraph the Iraqi Foreign Minister, who had already once offered his services to mediate between Arabs and the Government, to return to Palestine. This offers hope that the Arabs may call off their violent tactics to enable the Royal Commission to begin its inquiries.

Australo-Japanese Trade War.—Last May Australia introduced higher tariffs and a licence system on certain imported commodities (cotton, rayon, tobacco, motor chassis, etc.) with the avowed aim of increasing British preference, aiding domestic manufacturers and diverting trade to "good customers." The Japanese, who were the principal potential sufferers, retaliated promptly by implementing their Trade Protection Law, which had earlier been used against Canada, when she discriminated against Japanese goods. They threatened to cut their imports of Australian wool by two-thirds and to make up one-third of the difference by buying from other producers and the other third by using artificial fibre. Manchuria faithfully followed suit. Wheat, wool and flour may now be imported into Japan only under licence, and certain other Australian imports are subject to an additional duty of 50 per cent. *ad valorem*. Neither party has yet seen fit to sign a truce in this unhappy war, although both profess to be willing to negotiate. The position is the more regrettable because Japan and Australia are eminently fitted by natural endowment to do a complementary trade to their mutual benefit. Japan has a densely crowded population, very little agricultural land, and a deficiency of certain types of foodstuffs and raw materials which Australia can profitably supply. Australia has large territories suited only for pastoral and agricultural uses. Japan must live by manufacturing, Australia by producing raw materials. In past years Australia has found her Japanese trade highly profitable, and although Japanese exports to Australia have made rapid progress in recent years, her purchases from Australia have increased by a greater absolute amount, as the following table shows:—

	(Million yen)							
	Australian exports to Japan			Australian imports from Japan				Excess Japanese purchases
	Total	Wool	Wheat	Total	All Textiles	Foodstuffs	Paper	
1929.....	133	99	15	44	27	3.4	0.05	88
1931.....	113	83	22	18	13	1.9	0.16	95
1933.....	204	157	33	51	31	3.6	0.26	153

If by a good customer Australia means a customer who buys more than he sells, then Japan can justly claim to be one of Australia's very best customers. It is, of course, part of the Australian claim that Japan has adopted under-hand means to increase her sales, particularly of rayon, in Australia, and that the Japanese are undermining the Australian standard of living, taking trade away from Great Britain. Although the terms of trade are moving in Australia's favour, giving her more imports for a given quantity of exports, she complains of "unfair Japanese competition." The competitive position in the Australian import market between Japan and Great Britain is illustrated for four groups of commodities by these figures:—

	SALES IN THE AUSTRALIAN MARKET (£'000 sterling)							
	Cotton fabrics		Rayon fabrics		Pottery and porcelain		Silk tissues	
	1930	1934	1930	1934	1930	1934	1930	1934
Great Britain.....	6,092	3,239	962	705	593	273	181	32
Japan	252	457	—	854	77	139	2,372	665

The most striking point about these returns is the great reduction in the total value of sales, rather than any great increase in the Japanese figures.

Australia's Real Interests.—What are the rights and wrongs of the unfortunate Australo-Japanese controversy? Australia argues that although Japan buys more than she sells, the Australo-Japanese trade is carried in Japanese ships, financed by Japanese bankers, and organised by Japanese merchants. This comes near to the heart of the matter, which is more political and nationalistic than economic. It is true that Mr Lyons, the Commonwealth Premier, says that Australia is not acting in any unfriendly spirit, but merely desires "progressive two-way trade on an equitable basis." Two-way trade is no self-evident virtue; but even if it were it would surely imply, in the present case, that either Japan must sell more to or buy less from Australia, and neither result would really please Australia in her present mood. At the bottom of the controversy seems to be the desire to hold back the Japanese at all costs. That Australia realises this to be a difficult attitude to maintain is evident from her recently expressed desire to revive British emigration. But even British emigration cannot change the physical characteristics of the country, and in the not-too-long run Australia's tariff policy can only aggravate the very Japanese characteristics which she seems to fear. Great Britain, in turn, should be the first to recognise that her present policy of restricting imports of food supplies, in the interests of her own agriculturalists, does not make Australia's problem any the easier. High tariffs and restrictionist policies, indeed, are doing more to restrict trade and the world's standard of living than any increase in trade which would follow relaxation of discriminatory measures against the Japanese, whose right to live and do business is at least as fundamental as that of the Australians and the British. The world might well go to school again to re-learn the forgotten lesson that international trade is beneficial to all parties, not a gain for one country at the expense of another; and that its merit does not reside in trade restricted to a two-way channel.

Aftermath in Italy.—The effects on Italy of the annexation of Ethiopia are now becoming apparent. Signor Mussolini finds himself faced with popular demands, especially in the South of Italy, for the return of the Italian troops; but their precarious position in Addis Ababa and the districts they occupy necessitates the maintenance of at least 200,000 white troops, including military engineers and transport corps, in Ethiopia. A compromise has apparently been reached by a decision to repatriate the regular army from Ethiopia and to replace it with Black-shirts—a decision probably not unrelated to the possible military needs of Italy nearer home. Meanwhile the cost of living has been rising rapidly for some months, and a comprehensive series of measures to raise the workers' purchasing power has had to be introduced. These extensive and laudable measures seem, in the present state of Italy's finances and foreign trade, to constitute a real burden on Italian industry. No Budget details are now published; and the figures of internal indebtedness and savings and commercial bank deposits give little indication of Italy's financial capacities; for State Corporations like the Institute for Industrial Reconstruction are the effective purveyors of capital resources, and it is impossible to discover where their resources arise or how they are distributed. It is at least clear that the exchange problem is pressing upon Italy, for her foreign trade is largely canalised into bilateral channels with Germany, Austria and Hungary; and these countries share the same exchange problems as Italy. This may partly account for the Italian "offer" to liquidate the outstanding £2,000,000 odd, owing to British exporters, over twenty years or more. The Italian authorities are attempting to expand Italian exports, especially of textiles, to Latin America, accompanied by vigorous propaganda against Britain and British

goods. This may give Italian industrialists more, but not much more, work; for the extent to which Latin American debtor countries can materially increase their imports from any one country is limited. Finally, it is understood that the financial requirements for the commercial exploitation and garrisoning of Ethiopia have now been placed at a much higher figure than was assumed when the Duce began his war. Italy appears to be in neither an enviable nor a creditworthy position.

* * *

New Factories in 1935.—A total of 510 new factories, employing 49,750 people, were opened in 1935 (compared with 502 factories in 1934), according to the Board of Trade annual survey. The survey covers all factories employing 25 or more persons opened, closed or extended. During the year 192 factories were extended and 486 closed. The geographical distribution of the changes was as follows:—

	New Factories	No's Employed	Exten- sions	Closed
S. and S.W. England	10	1,100	11	6
Greater London	213	19,000	51	184
Wales and Monmouth	4	300	5	5
Midlands	69	7,900	27	71
Eastern Counties	26	1,800	4	11
N.W. England	121	11,350	62	139
N.E. England	45	6,650	22	55
Scotland	22	1,650	10	15
Totals	510	49,750	192	486

The survey contains "no evidence of a 'drift to the South' in the sense that new factories in the South are the result of transfer from the North, the net movement being in the opposite direction." It would be dangerous to infer, however, that the drift to the South is not a reality, in the sense that more new factories are being opened in the South than the North. Indeed, the above figures show this to be the case. There was an excess of factories opened over factories closed in South and South-west England, Greater London, and the Eastern Counties; and an excess of factories closed over factories opened in Wales and Monmouth, the Midlands, North-west England and North-east England. The chief reasons given for the location of 354 factories are analysed by the survey. Some 108 out of the total, however, are classified under "convenience of premises," which appears to be a blanket term. The next most important categories were "accessibility of raw materials" (38) and "suitability of labour" (37). Of the total of 510 new factories opened in 1935, 124 were in the clothing trades, 72 in textiles, 48 in engineering, 44 in timber, and 43 in food, drink and tobacco. This distribution between industries follows the trend of the previous year fairly closely.

* * *

"Exceptional" Railway Rates.—The extent to which traffic is now carried at exceptional rates on the railways is not widely realised. The Railway Returns for 1935, recently published by the Ministry of Transport, now bring up to date this information in respect of freight train traffic, for the first time since 1930. The particulars cover goods in Classes 1 to 21 of the General Railway Classification during one representative week, and are of special interest since they include particulars of the volume of traffic carried under the system of "agreed charges" (i.e. flat rates) introduced in the Road and Rail Traffic Act of 1933. The analysis of traffic in 1935 compares with the selected week in 1930 as follows:—

Traffic charged at	Receipts		Tonnage	
	Per cent. of Total 1930	1935	Per cent. of Total 1930	1935
Standard charges.....	40.02	30.89	23.48	16.23
Exceptional rates.....	59.98	66.09	76.52	82.70
Agreed charges	...	2.51	...	0.73
Composite rates	...	0.51	...	0.34

* Included with exceptional rates.

The figures of over 83 per cent. of tonnage carried at less than standard charges on the goods side compares with nearly 93 per cent. of passenger journeys made at reduced fares, or, excluding workmen and season-ticket holders, a

passenger figure of nearly 86 per cent. The distribution of passenger journeys and receipts is shown in the following table:—

Particulars	Per cent. of Total Passenger- receipts		Per cent. of Total Passenger- journeys	
	1930	1935	1930	1935
Passengers other than workmen or season- ticket holders:—				
At reduced fares	57.42	84.60	70.08	85.99
At standard or ordinary fares	42.58	15.40	29.92	14.01
	100.00	100.00	100.00	100.00
Passengers of all descrip- tions:—				
At reduced fares or rates	66.20	87.88	85.02	92.84
At standard or ordinary fares	33.80	12.12	14.98	7.16
	100.00	100.00	100.00	100.00

Under every heading, it will be seen, the percentage carried at reduced fares has increased. In short, the *effective* average level of railway rates has been measurably reduced, both for goods and passengers, since 1930, and this fact should be borne in mind in any comparison of total pre- and post-depression receipts.

* * *

Retail Trade in July.—Following a marked seasonal decline between May and June, the value of retail turnover rose slightly during July. The returns published in this week's *Board of Trade Journal* show an increase of 5.8 per cent. in the value of sales over July, 1935, when turnover was 6.7 per cent. higher than during the corresponding month in 1934. The improvement in sales of food and perishable articles is being well maintained; for the increase over July, 1935, amounts to 9.4 per cent. But owing to the gradual rise in prices the increase in the volume of sales was probably somewhat smaller than the advance in value. On the other hand, the expansion of sales of other merchandise appears to have slowed down in recent months, turnover in July being only 2.4 per cent. higher than a year ago. Unfavourable weather was probably mainly responsible for the disappointing turnover in a number of departments:—

INDEX OF VALUE OF RETAIL SALES, GREAT BRITAIN
(Average Daily Sales in 1933 = 100)

Period	Food	Other Merchandise	Total
1932	102	99	101
1933	100	100	100
1934	103	103	103
1935	111	108	109
1935—June	110	108	109
July	105	113	109
August	107	81	94
September	110	99	104
October	112	114	113
November	116	115	115
December	133	160	146
1936—January	115	118	116
February	116	88	102
March	117	97	108
April	121	113	117
May	116	121	118
June	119	109	114
July	115	116	115

The improvement in the value of retail sales over July, 1935, was fairly uniform in the various geographical divisions. Exclusive of Central and West End London, the increase in sales of foods and perishable articles varied only from 8.2 per cent. to 11.9 per cent. Sales of other merchandise showed smaller increases in all districts, varying from 1.4 per cent. in Suburban London to 3.3 per cent. in Wales and North England. Stocks continue to increase at a smaller rate than sales, indicating a steady improvement in efficiency. Prospects for retail trade are not unfavourable, but the trend of sales during recent months has demonstrated the importance of the weather as a factor in turnover.

UNITED STATES

CONFUSED ELECTION PROSPECTS

We are now on the threshold of the autumn, a period when expectancy looks for a marked increase of production. So far, the summer months have maintained the high levels of the past three quarters, and if the autumn should come up to expectation, it would lift business activity into decidedly higher ground. On the whole, this is the forecast of New York, and, to judge from the dispatches, of Washington. There is no convincing reason to deny it; there are, however, three questions which the autumn must answer: (1) It is now recognised that the drought is a major economic phenomenon that may have unanticipated repercussions. It is already finding reflections in reduced arloadings, and in smart rises in some food prices, notably milk, fruit and vegetables; (2) it seems that the majority of the Bonus recipients have already spent their money, and while it is recognised that windfalls of this kind have cumulative effects, many believe that the high level of summer activity is a direct reflection of the Bonus spending, and that its consequences are receding; (3) as yet it would be impossible to demonstrate that the election has had any adverse effect upon business activity, but political uncertainties are multiplying.

Instead of the traditional duel between the Democratic and Republican parties, there is now a triangular contest. The Union Party has been reinforced by the adherents of Father Coughlin, and of the Huey Long Share-the-Wealth Movement; and while it is not expected that the party will have many votes in the Electoral College, it is likely to name a number of Congressmen. Mr Lemke, the candidate of the Union Party, was the co-author of the well-known and often rejected Frazier-Lemke Bill for the assumption of farm mortgages by the Federal Reserve Banks; he finds common ground with Father Coughlin in his proposal to make the Federal debt non-interest bearing. Even more difficult to appraise are the prospects of the Townsendites, who, refusing to become affiliated with any party, although endorsed by Mr Lemke, are following the famous tactics of the Anti-Saloon League, and securing the pledges of candidates in all parties. In other words, from the standpoint of the financial community, the focus of the campaign has, since the conventions, shifted from the Presidency to Congress, and the sentiment is more perplexed than would be indicated by the monotony of the betting odds, still quoted at 8-5 on Mr Roosevelt.

VIGOROUS CONSUMERS' DEMAND

Commodity prices have continued to rise. Wheat, in the past week, was soft, but maize, rye and oats advanced. Among the metals, scrap steel has continued to rise, and there are forecasts of higher steel prices later in the year. The non-ferrous metals have not moved; but there is some expectation that copper may go to 10 cents; and both lead and zinc are in such demand that higher prices are not improbable. Retail food prices, affected by the drought, have already risen substantially; in some areas a tendency to "hoard" canned goods has been reported, on the theory that this year the vegetable and fruit pack will be small. The strength of the retail trade figures is by some connected with the expectation of higher prices.

The vigour of the demand for consumers' goods is shown in the official figures of cotton consumption—603,000 bales—the largest domestic consumption on record; following 556,000 bales in June, and comparing with 391,500 in July, 1935. Early in the year, the trade was inclined to look for a fall in cotton consumption on the basis of the well-known two-year cycle in that industry. Instead, consumption went on into new ground. One alleged reason was the removal of the 4-cent processing tax. It is also reported that rents, both residential and commercial, are rising rather widely. This is especially significant for the future of apartment house (flat) construction. So far, the

residential building recovery has been practically confined to single-family frame dwellings; and construction of that type in some localities has returned to record levels. The index of residential building has been held down by the absence of distinctly urban construction; a fact explained by the numerous vacancies in city flats, and the prevailing low rentals. It is now stated that vacancies of this sort are few, and rents have recovered sharply, at least about New York. It is understood that the same change is noted in most cities.

On August 15th, the new bank reserve requirements came into effect. Ample notice had been given, and no consequences have been noted. Actual member bank reserves on August 12th amounted to \$6,116 millions, which was \$862 millions higher than in mid-August, 1935, and practically at the figure of last December when the Reserve Banks, in conjunction with the Treasury, undertook to reduce them by shifting Treasury balances with the Reserve Banks. These Treasury balances, after having been increased on two occasions (December and March) by about \$500 millions each, are now about \$338 millions—still a relatively high figure. Currency in circulation remains extraordinarily high, at \$6,170 millions, some \$600 millions above the figure of a year ago.

It is curious that comparatively little of the currency that was hoarded during the depression returned; and once the recovery started the circulation began to mount. This summer some \$200 millions went out at the time of payment of the Bonus cheques, and this too has not yet returned. The currency in circulation is now considerably higher than at any time in the 20's.

The August Federal Reserve Bulletin contains a computation of the restoration of bank deposits in the country. In 1929, total bank deposits were \$55,000 millions. On June 30, 1933, they were about \$38,000 millions, but by March 4, 1936, they had risen \$11,000 millions, to \$49,000 millions. After deducting \$2,000 millions from the 1929 figure to represent collection items, allowing for the increase since March, and adding to the current figure \$1,000 millions of Postal Savings Deposits, and \$1,500 millions of currency, the Bulletin says: "It would appear . . . that the amount of deposits and currency now held by the general public is as large as it has been at any previous time." In fact, between March 25, 1936, and August 5th, demand deposits adjusted increased \$934 millions—approximately 7 per cent. The increase over the past 12 months is about 12 per cent. The ratio of demand deposits to time deposits appears distinctly higher than before the depression, but the debits hardly more than keep pace with the demand deposits. The turnover per \$1,000 of demand deposits has scarcely risen since 1932.

NEW YORK, August 18.

FRANCE

FOREIGN EVENTS AND THE COMMUNIST PARTY

PUBLIC opinion here was not especially disturbed by the extension to two years of German military service, since it has become accustomed in the last two years to living with an armed nation on France's Eastern frontier. The Berlin embargo on arms for Spain, however, following the adhesion of Italy to the French neutrality proposition, was welcomed as a success for French diplomacy and for peace. During the last two weeks public opinion as a whole has also been in accord with the resistance of the Government to the demand of Left extremists for support of the Spanish "Frente Popular." In the Spanish case, as in the Italo-Ethiopian conflict, France is dominated by the desire for peace and internal order. It has been disgusted by the horrors of the civil war, and it fears new excesses in the event of victory, whatever side wins. Hence there is a fervent hope of tightening the collaboration with the British

democracy designed to limit the external consequences of an eventual Fascist or Communist dictatorship and to maintain the *status quo* in the Mediterranean and in Morocco. These events have provided a new occasion for the Communist Party to preach union to the French people.

This union, *L'Humanité*, the French Communist organ, says, is a social problem the solution of which is the same as that of the economic crisis. And *L'Humanité* declares itself ready to examine "any suggestion" in order to elucidate this problem. Is this a paving of the way to devaluation? If so, the Communists might join up again with the Radicals and the economic experts, who made up their mind on the question a long time ago. Professor Rist, for instance, in the annual edition of the "Revue d'Economie Politique," argues that the recovery on the international markets is a consequence of the stability of the great currencies and of the annual 5 per cent. increase in the world gold stock. French stagnation, Professor Rist says, in such a recovering world is paradoxical, but can be explained by the Government's inclination to use Dr. Schacht's methods in a country like France which must purchase great quantities of raw materials abroad. Devaluation is thus ineluctable, and "the more this devaluation is postponed, the more an increase of purchasing power will have to come from an internal creation of money, the more costs will rise, thus enlarging the difference between French and international prices and the economic isolation of the country." It appears, accordingly, that the fear of being late in the race for re-armament with Germany, owing to a persistent economic and financial crisis, is playing a more and more important rôle in the controversy between the partisans and the opponents of devaluation. The Communists will probably not be the last to consider this aspect of the monetary problem. But, for the moment, the decision to devalue does not appear likely, since it has not yet been rendered inevitable by a rise in prices, or discontent among the masses, or a new outflow of gold.

PRICE OF BREAD AGAIN INCREASED

The price of bread was again increased by ten centimes this week. This is the third ten centimes increase in a month, and it raises the price by 20 per cent. against an increase of wages of 12 per cent. This is in accordance with the rise in wheat prices which will be supervised by the new Wheat Office. A price of 130 francs is foreseen. This rise in price is naturally welcomed by the farmers, who argue, however, that the rise following a bad crop would have been even greater if the market had remained free. The price of wheat will be fixed, after consideration of the crop results, by the Central Committee of the Wheat Office (which is composed of 51 members, that is 29 producers' delegates and 22 consumers' delegates). A "coefficient of increase" will be applied to the average price of the 1911-1913 period; and the coefficient will take into account the increase in the cost of living and the price of farm equipment.

Fiscal receipts in July reflected the social disturbances of June. The total was 3,768 millions, of which 3,369 millions were ordinary receipts:—

(Fr. '000)

Direct taxes	648,284
Indirect taxes and monopolies	2,701,316
Special receipts	19,839

Comparison with July, 1935, shows an increase of nearly 20 millions in indirect taxes and 73 millions in direct taxes, or 92 millions in all. For the first seven months of the year, the total yield of taxes was 17,817 millions, or 190 millions less than in 1935. The fall of 329 millions in direct taxes was partially compensated by an increase of 136 millions in indirect taxes.

Railway receipts are now steadily improving. They reached 208,028,000 francs during the thirtieth week of the year (to July 29th), an increase of 11,815,000 francs, or 6.03 per cent. in comparison with the same week of 1935. Loaded wagons were also better with 286,522 units, against 262,543, an increase of 9.13 per cent. in comparison with the same week of 1935.

The gross tonnage using the Suez Canal during the first

two quarters of 1936 was 22,440,000 tons and the net tonnage 16,040,000 tons, against 22,159,000 tons, and 15,864,000 tons, respectively, during the corresponding period of 1935. The North-South traffic has increased from 7,454,000 tons to 7,989,000 tons, and South-North traffic has diminished from 8,410,000 tons to 8,051,000 tons. British shipping accounted for 7,375,000 tons (45.98 per cent.), Italian for 3,352,000 tons (20.90 per cent.), German for 1,415,000 tons (8.82 per cent.), Dutch for 1,100,000 tons (6.86 per cent.), and French for 821,000 tons (5.12 per cent.).

PARIS, August 27.

GERMANY

THE RUSSO-GERMAN FEUD FARCE

THE International position on Friday, August 21st, induced a Bourse panic—not a first-class panic, but one worthy to rank with the historic Black Fridays. This panic was managed by newspapers, which had been themselves managed in turn. The present importance of the newspapers derives from the fact that they are the only Big Noises. The Reich has no bawling Parliament; the discussion of politics at public meetings is forbidden; and Ministers talk politics only at set demonstrations. Overtly, therefore, newspapers are everything. They construct the "information-basis"—usually jerry-built—of policy; they determine policy; they foreshadow policy. This is indeed not the Government by "able editors" which provoked the jibes of Carlyle. It is government, rather, by able printers' devils, who fly to the Highest Instances for news and views, elbowing aside the grocer's rival errand-boy with the apology "L'Etat c'est moi!" The same "democratic" Press flourishes in Russia, with the difference that some editors there are distinguished enough to be shot.

The Russians, say persons who have explored their country, are a talented, imaginative people with a loose grasp on reality. The Germans are an outwardly solid, inwardly whimsical, people, differing not much from the Russians. Each of them just now happens to have an overmastering *Weltanschauung* which contains very little *Welt* but a great deal of *Schau*. Chronically, by the medium of printers' devils, these almost indistinguishable countries wage eloquent warfare, which, since even philosophers need oil and gun-borders, is periodically suspended with satisfactory economic consequences. Sometimes Business, sometimes *Weltanschauung*, masters their unstable souls. When the Spanish Civil War pushed *Weltanschauung* into the forefront, the printers' devils who rule Germany at first contented themselves with relatively mild attacks on Russia. The Kremlin, it was said, had instigated and even arranged the exact day of the outbreak of hostilities. This, said captious readers, implied unexpected impartiality in the Kremlin, which must have arranged first with the Rebel generals who started the affair. When the Moscow trial began, the anti-Russian Press campaign rose to a wild fury compared with which war-time vilification was complimentary. The printers' devils informed the public that Russians were beasts, fiends and devils, who sent direct orders to Spanish Reds to drench fellow citizens with benzene and burn them to death.

For this sudden hymn of hate no explanation was available. True, on August 11, the Russian Government had reduced the age for calling up conscripts; but that was already ancient history. On the sound American principle of giving only "all the news that's fit to print," one of the obvious motives of the Moscow trial had been suppressed. An ideally wise Berlin Propaganda Ministry would probably have advertised as a proof of Russian malignity the allegation that Reich Government organs had conspired to murder Stalin. No German would have believed this childish propaganda charge, and the news would have more effectively exposed Russian methods than mere cock-and-bull tales from Madrid and Barcelona. The ferocious German Press attack was really meant as a retort to the Moscow trial, and had little connection with Spain or the armaments increase. Before the lengthening of the term of military service was announced, the printers'

devils had to run in an entirely different direction and to bring back a budget of an entirely different kind.

Compared with the congregation of German newspapers, the well-drilled soldiers of the German Army are raw recruits. About the middle of last week the vilification of Russia abated at a word of command. It was replaced by alarmist accounts of Russia's military power. These accounts were written by no lay Propaganda Minister, but plainly by calm and reasonable experts. Though decorated with the inevitable comment that Russia had resolved to impose her *Weltanschauung* on the world and to obliterate Germany's almost identical *Weltanschauung*, they were yet in general objective and correct—and all the more alarmist. Printers' devils staggered under statistics of Red soldiers, Red airmen and Red incendiary school-misses; and elaborate graphs made clear the complexities of Russia's anti-German alliance system.

The general public, who are interested in eggs and boxing, had shown no concern at the news that the Kremlin meant to burn the world to death; and it now seemed to ignore the military alarmism. But the import of the alarmism was clear to such citizens as take an interest in politics. These guessed rightly at the coming of two years' military service, and indeed the news was sent abroad before it was announced at home. In business circles, the announcement had the familiar dual effect. Business rejoiced at the promised prolongation of its hectic armaments boom, and feared simultaneously new international unrest. The minatory Press emphasis on "Germany's patience with Russia," a few odd phrases like "If war comes . . .," and the provocative message of a German to a Spanish naval commander, were the chief cause of the Bourse collapse. The German protest to Moscow became known later.

WAR THREATS AND PLANS OF AGGRESSION

On the reaction abroad to Germany's measure it is too soon to comment. The Berlin evening newspapers that appeared on the day of the announcement informed their readers, with imposing headlines, that foreign countries approved and rejoiced. As it is doubtful whether this satisfactory foreign attitude, if it was real at all, will last, and as it may rather be assumed that the prevailing international animosity against Germany will be intensified, it may be said that the increase of her armed strength seems entirely reasonable to her most reasonable citizens. The spurious propaganda war against Russia has not influenced *Weltanschauung* war plan no more seriously than reasonable Russians take Herr Hitler's plan to annex their western provinces. Armaments, it is realised, are not determined by long-term plans of aggression; for there are no such plans. If aggression occurs it is short-term, due, it may be, to an aggressive temper, but always needing an immediate grievance or excuse. The question in all countries is: Is war possible; and, if it is possible, what military combinations may have to be faced? European policy everywhere assumes that war is possible; and Germans honestly consider that they are not strong enough to oppose the combination which already formally exists. Germany has not one likely ally. Owing partly to mistakes of her own diplomacy, and in spite of the absence of real causes of conflict, she must count on Russia as member of a hostile alliance.

The new re-armament is therefore not directed against Russia alone. It would not have been undertaken, however much Russia armed, had it not been for the association between Paris, Moscow, Warsaw, Prague and other capitals. Moscow's latest armaments measure was, however, a contributory cause. The military power of Russia, the Germans knew, was already enormous. One by one the deficiencies which hampered her armies in 1914-18 had been removed. As an industrial country she had outdistanced Germany, outdistanced her in particular in branches of production, vital to war, which she did not possess at all twenty years ago. She is at least equal to Germany in applied science, and she is catching up in education. For the first time in her history, therefore, she is able to use to the full her superiority in population and natural resources. If, as is represented here by the Press propaganda, she has correspondingly progressed in military

science, she is not merely stronger than Germany, she is in an entirely different, a higher, order of strength. On grounds, therefore, of mere defence in a possible war, German re-armament seems justified. The question who started the new armaments race is here thought immaterial.

It is naturally expected here that Western countries will also "revalue" their armaments. But nobody believes that war is one inch nearer than it was a month ago. The propaganda feud is seen to be unreal. It is unreal in Russia, where the whole political interest is internal; while in Germany, where everything from hosiery to heroes is *Ersatz*, it is a substitute for policy. The two countries have nothing to fight about, and much to bargain over. Their politics are almost identical, their business needs complementary, and they mix admirably. Germans borrow Russian ideas; Russians, with a shrewd sense of values, borrow German cash. While mud is being thrown at one another's effigies in the streets, the real Russians and Germans palaver with Chinese courtesy in the Lietzenburgerstrasse about the price of oil. Poisonous tongues have not always so happily gone with pacific fists. The mild complaint of Napoleon III to Austria's Ambassador that "relations are not entirely satisfactory" was taken—it soon proved correctly—as a declaration of war. After eighty years of progress, authoritarian Governments mutually cry: "Assassin! Incendiary!"; and the result is a quota dispute.

BERLIN, August 25.

SPAIN

MADRID WELL ORGANISED AND WELL SUPPLIED

THE time factor would appear to be on the side of the Government in the civil war. It has greater resources both of money and men than the rebels. Madrid continues to be well supplied with necessities, and the military situation has been reorganised and much improved. This correspondent has travelled over three hundred miles by car during the last week, visiting the different "fronts" near Madrid, and the improved organisation and discipline were very obvious.

The newspapers *El Socialista* and *Política* have both published editorials calling for moderation and the avoidance of excesses. This warning is undoubtedly necessary. It is impossible that conditions should be normal in Madrid at an historic moment such as this, when rebel offensives are being carried out less than fifty miles from the city. But a certain extremist section of the Left-wing is doing the Republic much harm, especially in face of public opinion abroad, by its activities.

There seems to be in some British circles a rather ingenuous belief that the rebel generals, if they won, would after all be friends of Britain. No doubt they would have warm friendships with individual Britons. But, politically, such a friendship is practically impossible. At this moment

there can be no harm in recalling the incident which occurred at the end of last year when the Portuguese Minister of Foreign Affairs, Dr. Monteiro, made an official visit to Madrid on his way back from Geneva. An official banquet was given in the Ministry of Foreign Affairs at which the Premier and all the Cabinet were present—except Sr. Gil Robles and the two other Ministers of the clerical C.E.D.A. (Right) Party. Not, of course, that the clerical C.E.D.A. had not the warmest sympathy for the Portuguese Dictatorship. But it had been bruited around that Dr. Monteiro's visit was connected with a desire for a warmer collaboration between Portugal and Spain in international affairs—the question of Ethiopia was in full blast at the time—and, as it was deduced in Madrid that this would in the long run mean an approximation to British foreign policy, the C.E.D.A. Ministers ostentatiously absented themselves from the banquet.

Now Sr. Gil Robles and his friends represent the Left-wing of the Spanish Right. The Right-wing, which would take power if the present revolt succeeded, would without any doubt take an even stronger line in their foreign policy. The policy of friendship for Germany and Italy is already so deeply ingrained in Spanish Right circles that it should at least be clear to British people that they must have no illusions about the future relations between Britain and Spain if the generals triumph.

MADRID, August 24.

AUSTRIA

RAILWAY ELECTRIFICATION PROJECTS

FURTHER business improvement was observable in July; and in heavy industry in particular there was promise of a new boom. From June to July ore output increased by 18 per cent., and rolled goods output by 13 per cent. Crude steel and crude iron output, however, rose by only three or four per cent. Also encouraging was the announcement that the Ministry of Commerce and the Federal Railways were considering the continuation of the programme of electrification. A 300 million schilling credit to the Federal Railways for further electrification has been refused; but it is probable that, after the recent decisions about employment creation, electrification of railways will be continued next year between Vienna and Salzburg and most likely from Vienna to Graz and Vienna to the Hungarian frontier.

The foreign tourist traffic has also been good, and an influx of foreign exchange into the National Bank has resulted. In July the number of foreign visitors was 32 per cent. larger than last year; and during the Dentists' Congress in Vienna in the first ten days of August there were no vacant rooms at all in the Vienna hotels. Similar conditions obtained in Salzburg and at several of the places in Tyrol. In the whole period from July 1st to August 15th there was a rise of 27 million schillings in the foreign-currency holdings of the Austrian National Bank. As the 1,000-mark German visa for travel in Austria will be abolished in the last week of August, it is expected that the influx of visitors for the late summer season will be even greater.

LEAGUE DELEGATE'S "MISSION COMPLETED"

The new commercial treaties are beginning to take effect. Austria's total import surplus for the first seven months of the year was 155 million schillings, or ten millions less than for the corresponding period of last year. The trade treaty with Czechoslovakia, however, came into force only on August 1st, and the new treaty with Germany is not in force till September. The total import surplus has so far been almost wholly covered by the surplus on foreign tourist traffic, and, in spite of further repayment of debts, it appears that in the other items of the balance of payments equilibrium has been achieved this year, 1936. Last year showed a surplus in Austria's favour.

The delegate of the Finance Committee of the League, Dr. Rost van Tonningen, has retired with the explanation that, in view of the economic improvement in Austria, he regards his mission as completed. The function of the League delegate was originally to see that Austria's inter-

national creditors received their interest and capital in accordance with contractual arrangements. Payments have been continued unabated even in the most difficult months, and in view of the present recovery of the State finances, which the League delegate recorded in his last quarterly report, there can be no doubt about this matter in the immediate future. The delegate's figures showed a thoroughly favourable Budgetary situation:—

	1935	1936	1936
	(actual results)	(budget estimates)	(actual results)
(In millions of schillings)			
Expenditure.....	1,169.5	1,136.0	1,148.0
Revenue	1,101.4	1,097.5	1,129.8
Deficit			
(a) Current Financing.....	68.1	38.5	18.2
(b) Including Investments.....	95.9	59.9	35.9

During the first half-year the proceeds of direct taxation rose by 28.5 millions to 175.85 million schillings; which undoubtedly reflects business recovery.

Great changes in the direction of expenditure have taken place. The vote for national defence has risen from 27 million to 72 million schillings. The expenditure on agrarian water regulation has fallen from 30 millions to 10 millions, on road building from 53.6 millions to 31.7 millions, on productive labour creation from 12 millions to 4 millions, on volunteer labour service from 10 millions to 4 millions, on suburban allotments from 4.5 millions to 1.5 millions, and on the promotion of housing from 6.5 millions to nothing.

VIENNA, August 25.

NORWAY

FURTHER EXPANSION IN TRADE AND EMPLOYMENT

NORWAY'S foreign trade in the past seven months of 1936 shows a very favourable trend. Imports amounted in that period to 495.2 million kroner, against 446.5 million kroner in the corresponding period of 1935; and exports to 363.1 million kroner, against 320.9 million kroner in 1935. Imports thus increased by 10.9 per cent. and exports by 13.1 per cent. Among the main export products, herring and fish increased from 41.8 million kroner in 1935 to 42.9 million kroner in 1936, pulp and paper from 76.5 million kroner to 86.5 million kroner, minerals from 55.5 million kroner to 61.9 million kroner, and metals from 56.8 million kroner to 65.1 million kroner. There was an increase in exports of chemical pulp from 145,000 tons to 192,000 tons.

The official Statistical Bureau's (Det Statistiske Centralbyrås) index for industrial production in June was 124, against 122 in May and 117 in June, 1935 (first half of 1933 = 100). For the first six months of this year the average index was 119.5, compared with 110.5 in the first half of 1935. The number of unemployed also fell to 22,145 in July, against 26,228 in July, 1935. This July figure is the lowest since 1931. It is unofficially stated that 40,000 more persons have obtained employment during the year.

Conditions on the investment markets are not as favourable as they ought to be, considering the prosperous state of industry and commerce. This is partly due to the General Elections to be held on October 19th. As always, the electoral campaign is expected to cause some nervousness, and the business world is uneasy at the prospect of a Labour majority in the Storting.

Bank deposits continued to decline in the last months. On July 1st the deposits in 64 private banks were 821.9 million kroner, a decline of some 8 million kroner since January 1st. In 171 savings banks the deposits decreased in the same period by 49 million kroner to 1,561 million kroner.

The gilt-edged market is rather dull. Norwegian Government 4½ per cent. bonds have fallen to about 98 per cent., as against 101 per cent. at the beginning of the year. Industrial shares, however, are rising, thanks to the good industrial position. A remarkable boom has taken place in whaling shares, despite the dispute with Great Britain.

OSLO, August 21.

EGYPT

THE NEW TREATY AND FOREIGN INTERESTS

THE initialling of the Anglo-Egyptian Treaty has given rise to widespread uneasiness in foreign financial circles. With previous unsuccessful attempts still in mind, the present negotiations had been followed with undue scepticism right up to the last stages, and many failed to grasp the full significance of the recent changes in the Mediterranean which were making for a prompt settlement of Anglo-Egyptian differences. Having been caught unawares in the process of a recovery from the shocks of the Ethiopian affair, the reaction of these foreign financiers has been so much the more forcible, culminating in a slump in the Stock Exchange which has wiped out most of the gains secured since last June.

There is no doubt, however, that the outspoken warnings of the Minister of Finance to foreigners in his Budget speech had already set the stage for this setback. Heavy liquidations have been going on for a week, and on the day of his departure for London with the rest of the Egyptian delegation the Minister of Finance was compelled to write to the Stock Exchange authorities stating that new taxes would be imposed with the greatest moderation and that no discrimination, either in principle or in practice would be tolerated against foreigners. The comments of the Egyptian Press have been reassuring too, and it is clear that Egyptians would at present view with much displeasure any development that might induce the Powers to insist on a longer transitional period at the future conference for the abolition of the Capitulations.

Genuine apprehensions, however, are expressed in European quarters about the future employment of foreigners in various concerns. While labour has always been almost entirely Egyptian and may not meet, in its struggle for a higher standard of living, with more sympathy from the growing number of Egyptian employers than from foreigners, the case is different with the middle class unemployed youths. The latter cannot hope any longer to enter the overcrowded civil service, but on the other hand the Government cannot ignore their claims. The new powers which the State is going to obtain will be used effectively to make room for these people among foreign firms in preference to local European applicants.

With Capitulations doomed, foreign interests are falling back on a second line of defence, and hope to secure a sufficiently long period of transition, with adequate guarantees, to make future adjustments as painless as possible.

The foreign trade figures for the first half of the year show that the export surplus has contracted to very small proportions.

	1935	1936
	(January to June)	(January to June)
Exports	£E. 17,566,475	£E. 15,000,591
Re-exports	345,623	557,573
Imports	14,019,067	15,106,820

Of the fall of £E2,565,884 in exports, cotton accounts for £E1,051,919. Not much concern, however, is felt about these results, as it is confidently expected that with the rise in cotton values and the prospects of a brisk export season, the coming months will record a substantial improvement.

The new tariffs on Japanese textiles have had some striking effects on imports, as may be gathered from the following figures for pure cotton piece goods of all descriptions:—

	1935	1936
	(January to May)	(January to May)
United Kingdom	249,224	498,453
Japan	786,059	338,227
Others	183,027	201,565

With the exception of Italy, which was hit by sanctions, all countries exporting to Egypt increased their share at the expense of Japan.

ALEXANDRIA, August 19.

INDIA

ROAD AND RAIL CO-ORDINATION

THE question of road transport control was again before the recent meeting of the Transport Advisory Council held at Simla. A statement of policy has been adopted, though parts of it have not been accepted by various provincial representatives. The plans to put road and rail transport on a more equal and competitive footing follow those adopted by most countries, but some anxiety has been expressed about the proposed provision making it illegal for anyone to carry goods on any road in any motor vehicle, whether for private purposes or as a common carrier, save under the authority of a road service permit.

The Government of India intend to lay down very definite rules about the use of the Central Road Fund. The history of this fund dates from 1927, when the Indian Road Development Committee, a Committee of the Central Legislature appointed by the Government of India and presided over by Mr M. R. Jayakar, recommended that, owing to the increasing importance of roads and road transport, central revenues should make some contribution for road development in the form of an additional tax of 2 annas per gallon on petrol to be distributed to Provinces and States for road development. The Government of India accepted this recommendation, and the additional tax of 2 annas was imposed in the Finance Bill of 1929. It was subsequently increased to 2½ annas, at which it now stands. Of the receipts, previously 10 per cent. and now 15 per cent. is retained by the Government of India as a reserve for special grants for projects of peculiar importance or to help the more backward provinces, and for research and experiment. The remainder is divided annually among Provinces and States in the ratio of the consumption of petrol in each to the total consumption in India, and the sums so distributed are used for schemes of road development to be approved by the Government of India with the advice of a Standing Committee of the Central Legislature.

The Jayakar Committee felt that the fund might be applied to the development of important all-India trunk roads or feeder roads to railways, in which the Central Government might be held to have peculiar interest, thus relieving provincial revenues to some extent and leaving local Governments free to divert more money to internal road developments in the Provinces. But by 1931 provincial revenues had shrunk to such an extent that the Road Fund remained the only substantial source of revenue for development. At the same time competition by road motor transport with railways began to assume serious proportions; practically 50 per cent. of the total mileage of railways in the major provinces of India has now a metalled road running parallel, and nearly 25 per cent. of the total mileage of metalled roads in those provinces is parallel to a railway. It is proposed that, henceforth, the Provinces should only participate in the Central Road Fund if they adopt, to the satisfaction of the Government of India—adequate rules for the control of motor traffic. It is also to be laid down that a certain proportion of their share from the Fund may be spent on various types of roads, and a specified proportion is to be spent on feeder roads which will help to bring produce on to the main roads and on to the railways.

BACKWARD TRADE UNIONISM

There is little cause for satisfaction about trade unionism in this country on the basis of the note on the working of the Indian Trades Union Act during 1934-35, which has just been published. Membership of trade unions is comparatively small, and covers less than 300,000 people. The financial strength of the Unions is also insignificant. A total income of Rs. 5,28,607 means that in relation to membership financial strength is less than Rs. 2 per head. The North-Western Railway Industrial Workers' Union of Lahore reported in 1934-35 a phenomenal increase in membership from less than 250 to over 27,500; yet the total income of this Union was only Rs. 432. Such figures are most depressing.

Statistics of production of certain selected industries, published by the Department of Commercial Intelligence,

show the extent of industrial progress in India. The main figures are:—

Industry	Unit of Measure	1933-34	1934-35	1935-36
Cotton piecegoods	mil. yds.	...	3,396	3,567
Jute manufactures	tons	906,043	949,820	1,009,471
Finished steel	tons	550,696	627,358	676,691
Coal	tons	18,218	20,846	20,875
Sugar	cwts.	...	13,716,344	17,633,568
Paper	cwts.	873,160	892,013	961,985
Petrol	galls.	72,612,080	81,058,551	91,699,220
Kerosene Oil	galls.	156,909,832	169,267,410	162,420,243
Cement	tons	642,944	780,794	890,683
Matches	gross	...	16,450,336	24,239,445
Wheat flour	mds.	14,115,318	13,774,671	13,794,556
Sulphuric acid	cwts.	480,699	529,685	556,510
Sulphate of ammonia	tons	10,027	14,256	17,851

Whatever the financial position of the Indian cotton industry, there is no doubt that production still continues to increase. The production of finished steel has increased by about 125,000 tons over two years; production of matches by nearly 50 per cent. in 1935-36; production of jute manufactures by about 100,000 tons in three years; and the production of petrol by nearly 20 million gallons.

BOMBAY, August 10.

LETTER TO THE EDITOR

THE STATE AND BUSINESS RISKS

TO THE EDITOR OF THE ECONOMIST

SIR,—The distressing letter appearing in your issue for August 15th on black-coated unemployment impinges on a curiously neglected aspect of the functions that would seem appropriate to the State—especially since the war. At the present day, when hugely increased taxation and death duties have rendered the Exchequer virtually a shareholder in the country's industries, is

it not fitting, as your correspondent suggests, that the State should be prepared to shoulder an increased share of the risks as well as of the profits of trade?

Do not these considerations point to the need for some new type of insurance—of a kind that might not be commercially feasible for an ordinary insurance company depending for its revenues chiefly on premiums, but which might assume a very different aspect if conducted by the Government, whose charges for such a service would be supplemented by savings and increased contributions to the Unemployment Fund? Such an insurance might not merely assist an employer in the event of bankruptcy, but help to prevent his business from going bankrupt and his employees from being discharged.

It is not suggested that such a policy would necessarily be appropriate at times when speculation was already proceeding freely. But not the least of the scheme's merits would be that, by declining further risks in any direction where saturation began to be threatened, the Government could sound a warning. Conversely, whenever over-caution prevailed or when some huge venture was hanging fire, perhaps over a question of modernisation, because of the feeling that expectations might not, after all, be sufficiently realised to cover the additional overheads, the scheme might be brought into play to fill the gap created in our economic system by the present trend towards over-centralisation. Such a policy should go far to relax the brakes without impairing the motive power, and should therefore be free from the difficulties that have made it impracticable to subsidise moribund concerns out of the Unemployment Fund.

But, if for administrative or other reasons, it is deemed unworkable, there remain other methods of approach. Instead of offering loans at a flat rate of 3 per cent., for instance, why should not the Government offer them for a reasonable share—a quarter or a third—of the additional profits that such loans might actually effect? According to the Proceedings of the Institution of Civil Engineers (Vol. 236, pages 57 and 76), the Sheffield-Manchester electrification scheme is officially estimated to bring a return of 15½ per cent. If only a fifth of such takings were to find their way into the Treasury, it would mean that the Government's total receipts would be 6 per cent. for money advanced to the L.N.E.R. at 3 per cent. Further sums would accrue to the Unemployment Fund during the period of capital expenditure, if not beyond.—I am, Sir, yours faithfully,

99 Clifton Road,
London, S.E.
August 22.

BOOKS AND PUBLICATIONS

THE COCKPIT OF EUROPE

WHEN the pre-war Austro-Hungarian Empire was divided in 1919 into five new or enlarged States, Central Europe might have been expected never again to become "the cockpit of Europe." Yet the realised aspirations of the nationalities in the old Monarchy, and the effect of their heady nationalism on economic policies, have again rendered the Succession States a zone of contending forces. Separately or in association they have fallen into the political and economic orbits of three Great Powers—Germany, France and Italy—whose European policies themselves have been antithetical; so that to-day Central Europe as a whole is much more a potential cockpit, in one sense, than it was under the Monarchy in 1914. This time there are more local cocks, and they have bigger ones behind them.

It is strange that, since the war, no one has attempted to give English readers as comprehensive a survey of Central Europe as Mr Wickham Steed gave in 1908 with his classic "The Habsburg Monarchy." He now writes a preface to Dr. Gerhard Schacher's study,* in which he emphasises the author's contention that political fears and forces have created an economic *impasse* in that region.

Dr. Schacher describes the accumulation of combustible political material in Central Europe which now, in his opinion, makes it "the most dangerous centre of crisis in the world." Seventy million souls whose destiny is united by common economic interests are divided into five States (and their limitrophe districts) which themselves have split into the three Little Entente States—Czechoslovakia, Roumania and Yugoslavia—and the two partners with Italy in the Rome Protocols of 1934, Austria and Hungary. Looming over all of them—indeed, over Italy as well—is

the political and economic shadow of the neo-Prussian *Drang nach dem Süd-osten*, a movement now powerfully reinforced by Dr. Schacht's astute process of converting Germany's blocked-mark debts into increased German exports in Central and South-Eastern Europe.

Dr. Schacher examines somewhat cursorily the Stresa, Tardieu and Curtius-Schober (Customs Union) "plans" for economic rehabilitation of Central Europe, and he does not mention that the British Government's insistence on "most-favoured-nation" rights blocked the Stresa plan. He shows (page 34) that the Little Entente Statute of 1933 provided for mutual assistance if League obligations were not carried out; that Italy and Hungary objected to this on the same grounds as those adduced by the Nazi Government in their objection this year to the similar Franco-Soviet Pact; but that they withdrew their objections owing to the clear compatibility of the Statute with the Covenant. On the economic plane he describes the problems of surplus agrarian and industrial productive capacity in each of the five Succession States, and rightly designates the agrarian as the key problem of the region. He also has interesting chapters on the composition and distribution of State debts, credit and currency policies, and the Danubian countries' shares in world trade.

Dr. Schacher concludes as follows:—

"The recovery of Central Europe is a necessary condition of the real resolution of the political and economic crisis in the world. But it is also necessary to recognise that any such process of recovery will never be achieved by resort to force, nor by giving a free hand to the destructive forces which are alive in the heart of the Continent. . . The firm determination of a world resolved on peace to prevent under all circumstances any intrusion of these destructive forces, is the first and most important condition for the recovery process."

Mr Wickham Steed also urges this conclusion on readers of Dr. Schacher's extremely interesting study.

SHORTER NOTICES

"Economics and Technology." By Ferdinand Zweig. P. S. King. 249 pages. 10s.

The effect of technical changes on economic life is one of the oldest problems in the literature of economic science. In this book Professor Zweig, of Cracow University, is mainly concerned with the familiar issues—the reactions on employment, wages and the distribution of the national income—but he also discusses the wider, sociological topic of what may be called the dynamics of technical change.

The book begins with a rather elaborate attempt to classify different types of technical change. After distinguishing three stages in the development of technology, Professor Zweig makes another division of inventions into three groups—"Progress in Productivity," "Progress in Quality" and "Progress in Novelty." As the terms imply, by the first is meant changes which enable the same commodity to be produced at lower cost; by the second that a commodity can be improved in quality; by the third that a new and hitherto unknown good can be produced for consumption purposes. It is claimed, without any convincing arguments, that only the first of these creates technological unemployment, the second being neutral and the third creating technological employment. After a further classification of productivity inventions, which is not really followed up at all, Professor Zweig examines the effects of these on employment and the distribution of income. He deals first with the so-called "compensation" problem—i.e. whether the impact of technical change in causing unemployment is offset or compensated by further effects in creating employment. Although some valuable points are made, the argument is not always logical and suffers badly from the omission of any reference to the monetary situation—a matter which is surely vital to the question of employment.

His treatment of the effects of inventions on distribution is also weak. He tends to compare the three separate questions of the effects on money wages, on real wages and on the relative share of income obtained by labour. He dismisses in a footnote the valuable technique developed by Mr J. R. Hicks and others for handling these problems and also provides evidence that he does not understand it at all. In the last part of the book he paints a gloomy picture of the actual consequences of technical progress. It leads, he says, to monopoly and thence to autarky, it increases inequality between classes and nations, it transforms modern warfare and thus "puts into man's hands a destructive weapon which, used with barbarity and brutality, may turn out to be the very weapon by which civilisation may perish." Are these evils really necessary concomitants of technical progress?

"Public Works in Prosperity and Depression." By Arthur D. Gayer. Published by National Bureau of Economic Research, New York. Macmillan, London. 460 pages. 12s. 6d.

This book will be more useful to those interested in the scope, and methods of financing, of public works in the United States than to those concerned with the wider problem of public works as an aid to economic stability. It was prepared for the National Planning Board of the American Public Works Administration and suffers somewhat, particularly in the theoretical chapters, from its official parentage. Not that Mr Gayer is unduly biased in favour of public works; he gives full weight to the difficulties. But he confines himself to stating the main problem, without attempting to reach very definite conclusions on it. The statistical and descriptive work, which occupies most of the book, is very complete and thorough.

"From Hegel to Marx." By Sidney Hook. Gollancz. 335 pages. 10s. 6d.

This book is to be welcomed as the first serious attempt in English to provide an account of the origins of Marxism. There exists in this country at the present moment a large and interested public, vaguely aware both of the colossal influence which the doctrines enunciated by Marx and interpreted by his disciples have had, whether by attraction or by repulsion, on human conduct in the greater part of the civilised (and in large sections of the uncivilised) world, and of its intrinsic value as a coherent and comprehensive system of thought. Professor Hook has already put us in his debt with an earlier book. In the present work he performs a work of critical investigation which has been made possible by the devoted labours of Marxist scholars like Mehring, Plekhanov, and Gustav Meyer.

He finally destroys the view prevalent among English socialists that Marx owed little to any thinkers save Hegel and Ricardo, and traces the course of his early intellectual development to

the point at which he finally found himself in the process of criticising the theories of his own former allies, Stirner, the Bauers, Ruge, Hess and Feuerbach, and of course, Hegel himself. The result is interesting and impressive, and does not, as do so many German works dealing with this period, leave one with the sense that the issues are unreal because the subjects under discussion are so many disguised logical figments. Professor Hook is, it must be admitted, an exceedingly pedestrian writer; but his scholarship is both wide and critical, his treatment of facts and theories scrupulous and skilful, and above all his erudition does not kill interest in the subject. This book is far and away the best account of an obscure and important subject at present available in English.

MONEY AND BANKING

NEW ZEALAND'S EXPORTS AND THE BANKS

THE Labour Government in New Zealand has now held office for nearly a year and has completed the first stages of its economic and financial programme. It began by nationalising and extending the powers of the New Zealand Reserve Bank, itself a comparatively recent link in the chain of Empire central banks. The private shareholders have been bought out by the Government, which has also assumed the power of making fresh appointments to the board of directors. The Bank has been charged with the regulation and control of New Zealand's credit and currency and with the conduct of foreign exchange dealings. It may grant over-drafts for the purpose of financing the Government's marketing schemes. The Government's general borrowing powers have also been enlarged. Finally, power has been taken to raise the minimum balances which the trading banks must maintain with the Reserve Banks above the original ratios of 7 per cent. for demand liabilities and 3 per cent. for time liabilities.

Simultaneously, the Government has passed the Primary Products Marketing Act. This sets up a special department in connection with the purchase by the Crown of primary products, and with the marketing in New Zealand or overseas of primary products, whether or not they have been acquired on behalf of the Crown. Since August 1st the Act has been applied to dairy produce, which now becomes the property of the Crown as soon as it is placed on board any ship for export. The producer receives payment at prices fixed by Order-in-Council, and to enable these payments to be made an overdraft will be granted by the Reserve Bank on an account termed "The Dairy Industry Account." Any loss resulting from the re-sale of the dairy produce overseas will be borne by the Government. Up to July 31, 1937, the price payable to the producer will be fixed after taking into consideration the prices receivable in New Zealand during the eight or ten years before July 31, 1935. After that date, prices will be fixed after several other (undefined) factors have been considered. The scheme may be extended to the internal marketing of dairy produce and to other products.

It is clear that the Government has already assumed far-reaching powers in the economic and financial affairs of the Dominion. Along what lines will it exercise its powers? So far, the Government has shown a fair degree of moderation. The latest Reserve Bank statement reveals little change from the figures issued in the early part of this year, and the drop in the Bank's reserve ratio since last February, from 98.5 to 96.1 per cent., is insignificant. Under the new marketing scheme the price of butter has been fixed at 117s. 3d. per cwt., which is in reasonable relationship with the current London prices of 122s. for New Zealand and 128s. for Danish butter. It is apparently realised that New Zealand by no means possesses a monopoly in the British market. What is more open to question is whether the Government has realised the extent of the repercussions that may follow its entry into the Dominion's export trade. Some of these, with which the banking system of the Dominion is intimately concerned, were discussed at the last annual meeting of the Bank of New Zealand by Sir George Elliot, the chairman. Sir George's comments have an added weight by reason of the close connection that has existed for forty years between this trading bank and the Government, and from the fact that the Government has the right to appoint four out of its six directors.

An initial consequence of the Government's scheme will be the transfer of the financing of New Zealand's export trade in dairy produce from the trading banks to the Reserve Bank. This follows automatically from the opening of the new Dairy Industry Account, which will be overdrawn pending the shipment of produce to London and its sale there. Thus, the trading banks will lose an important part of their business. Sir George Elliot, naturally, finds in this

some ground of complaint, the more so as the trading banks have given consistent and invaluable assistance in the development of New Zealand's dairying industry. Sir George, indeed, hinted that the loss of this business might render unprofitable certain of the bank's branches, whose existence was dependent on the bank's dairy factory connections. Though Sir George Elliot naturally does not say so, such a development might impel the Government, either directly or through the Reserve Bank, to open its own branches. This might involve the Reserve Bank in the dual and incompatible businesses of central and commercial banking.

The future of New Zealand's foreign exchange market is also affected by the Government's new powers. The Reserve Bank is to exercise general control over foreign exchange operations. Within well-defined limits, such a function is not opposed to modern central banking practice. The Primary Products Marketing Act, however, suggests wider possibilities. Briefly, while the trading banks will still have to meet the foreign exchange requirements of importers and others of their customers, it would appear that the supplies of foreign exchange emanating from New Zealand's exports will tend to become concentrated in the hands of the Government and the Reserve Bank. The trading banks will no longer be able to replenish their London funds through their own daily business and that of their customers. Instead, they will need to apply to the Reserve Bank for sterling and other foreign exchange according to their needs. This, surely, will be the inevitable corollary of the extension of the Government's marketing schemes to cover all New Zealand's staple exports. Such a *dénouement* may still be some way off, but it is easy to see why the trading banks should already feel a certain uneasiness. Another possibility, of a more general character, is that, to the extent that the Government becomes the sole shipper, it may be tempted to sell in bulk and even to conclude special agreements with the Governments of importing countries. Such action might well enhance the modern tendency toward bilateral trade, which has flourished in proportion to the growth of world economic nationalism.

Finally, if the world market price moves one way, the Government will make a profit, while under less favourable circumstances it may incur a loss on its marketing operations. There is nothing morally wrong in this, but the Government may find itself blamed either for intercepting profits which should reach the primary producer, or alternatively for throwing any loss incurred on to the general taxpayer, which it will be alleged is tantamount to giving a subsidy to the primary producer. These are the political risks which await a Government which engages in trade, and their existence should be recognised in advance.

Some of these dangers may be remote. But the New Zealand Government is certainly navigating uncharted waters, and it should at least be willing to consider the possible consequences of its decision. To say this is not necessarily to condemn the Government's policy, root and branch, in advance. There is a case to be argued for closer Governmental control over national credit and exchange, and another for giving the New Zealand farmer an assured market for his produce. But there are dangers in combining central and commercial banking under one roof. French experience has shown how this can lead to serious monetary confusion. And is it entirely just to the trading banks to deprive them of part of what has hitherto been remunerative business and to expect them, nevertheless, still to provide complete banking facilities to customers at little or no direct cost? All things considered, the New Zealand Government might be well advised to temper natural zeal, at the outset, with circumspection, and, throughout, to avoid any crippling restriction of the scope of the existing machinery of commerce and finance.

SATURDAY, AUGUST 29, 1936

No. 159

THE STATE OF TRADE

THERE has been little evidence this year of the usual seasonal decline in business activity during the summer. There are no indications that the recovery movement has exhausted itself; on the contrary, the evidence suggests that business activity, backed by a liberal monetary policy and stimulated by increased armament expenditure, is still on the up-grade. Industrial costs are gradually rising, but so are industrial profits. Nor are there any grounds to expect a decline in profitability in the near future. Hence the outlook for the autumn is encouraging, provided the civil war in Spain does not spread across the borders.

Employment of insured workers aged 16-64 in Great Britain rose to the record level of 10,895,000 in July, an increase of 63,000 over June and one of 481,000 over the corresponding month last year. The improvement was fairly well spread geographically, the Midlands and Scotland being the only districts to show an increase in unemployment during the past month. But the incidence of recovery remains uneven. In London, South-Eastern and South-Western England and the Midlands the percentage of

insured persons unemployed is now well below 10 per cent. On the other hand, the percentage of unemployed still exceeds 16 per cent. in North-Eastern and North-Western England as well as in Scotland and in Wales. The extent of the improvement in recent months is revealed by our index of business activity

continues at a high level. The value of plans passed for dwelling-houses by 140 local authorities last month was slightly lower than a year ago. This decline was more than offset by the doubling of plans passed for factories and workshops. The shipbuilding industry, though still depressed in comparison with other branches of activity, is also steadily gaining ground, unemployment showing a decline of 11.9 per cent. on the year. Business in the automobile industry is seasonally quiet, but production is remaining well above last year's level. Conditions in the coal-mining industry remain very patchy, but on the whole the position is better than a year ago, thanks mainly to increased home consumption.

Among consumers' goods industries the clothing and footwear trades showed a seasonal decline in employment last month. In the wool and cotton textile industries, on the other hand, activity has been maintained above last year's level. Retail sales continue to show improvement over the corresponding period a year ago, but the increased turnover last month was most marked in the case of food and

perishable articles.

Overseas, conditions are improving in most countries. The news from the United States remains encouraging, the trend of activity remaining strongly upwards. The usual summer recession in that country has been scarcely felt this year, for between June 15th and

July 27th more than a billion dollars of soldiers' bonus bonds were converted into cash. Stimulated by heavy expenditure on armaments, capital equipment industries in Germany continue to forge ahead, and the building industry is active; a shortage of skilled workers has consequently appeared in certain trades. Reports from Scandinavia continue satisfactory, and there are signs that even Switzerland is gradually gaining ground. Activity in Austria and Hungary is increasing, but in Belgium recovery has been slowed down by the recent increase in wages. The full effect of recent legislation in France has not yet made itself felt; meanwhile there is a good deal of uneasiness, and although devaluation is now considered inevitable, quotations for industrial securities have tended to decline during the past month.

Among Empire countries, South Africa reports continued progress, and business activity in Australia has been well maintained. In Canada the outlook has been somewhat obscured by the severe drought, but there has been a further expansion of industrial activity. The leading South American countries appear to be marking time at the moment. In the Far East, China's exports are steadily increasing, while in Japan business activity appears to have been well maintained. International trade, however, has made no headway in recent months. The index of the volume of world trade, calculated by the League of Nations, declined from 80.1 (1929=100) in the first quarter to 79.3 in the second quarter of 1936.

In fact, with the exception of the civil war in Spain, there are few clouds on the horizon at the moment. Commodity prices, especially those of raw materials and crude foodstuffs, have experienced a vigorous rise since last June, which should benefit producers of primary products in many countries. The improvement in confidence is revealed in the almost uninterrupted rise in the prices of industrial securities during the past month.

Reports from individual branches of activity are generally favourable. The heavy industries continue in the vanguard of recovery. The output of iron and steel has been well maintained, and August holidays had to be curtailed in some districts. The volume of orders is again showing signs of expansion in most departments of the industry. In engineering, the recent rate of progress is being maintained, and an encouraging feature of the past month was the fairly general rise in exports of machinery to a new post-depression record. Building activity also

HOME INDUSTRIES AND TRADE

The following reports on British industry cover, in most cases, the period to the middle of August. In the remainder they relate to the month of July.

COAL

The position of the industry showed little change in July, when the daily rate of production was about maintained at the June level. The month's output of 18,186,000 tons compared with 16,865,000 tons in June and 17,441,000 tons in July, 1935. The unseasonable weather was mainly responsible for the maintenance of the demand for house coal, a factor which has remained in evidence in recent weeks. Meanwhile, business in steam raising coal also continues active. Export business, however, shows no improvement, the volume of shipments last month being smaller than in July, 1935. Sales to Italy fell to zero last month—a factor which was alone more than sufficient to account for the decline in exports over the year. No improvement has been recorded in this section in recent weeks.

IRON AND STEEL

Although the position is a little easier than it was a month ago, activity is maintained on a high level. On a daily basis the production of both pig iron and crude steel in July showed a slight decline compared with the June figures. The month's output of pig iron totalled 661,100 tons, against 644,100 tons in June and 547,300 tons in July, 1935, while production of steel ingots and castings amounted to 974,100 tons, against 965,900 tons in June and 803,300 tons in the same month of last year. Meanwhile the strength of demand led to the curtailment of August holidays in some districts where works are operating at capacity. Imports, after declining slightly in June, rose steeply last month and were heavily in excess of the corresponding figure for 1935. The most encouraging feature of the July trade returns, however, was the recovery of British exports, railway material being one of the best items.

ENGINEERING

Progress was well maintained in July and a shortage of some classes of skilled workers was again reported from certain districts. A favourable feature of the past month was the high level of machinery exports—most categories of machinery showing improvement, which was well spread geographically. Sales of agricultural machinery are seasonally slack, but in almost all other sections headway is being made; machine tools and power equipment generally are particularly active. Meanwhile, the tendency of costs is still upwards, and it is reported that further wage claims are likely to be made in the near future. At present, however, the outlook for the industry remains favourable and the volume of orders on hand is sufficient to ensure the maintenance of activity at the present level for many months.

ELECTRICAL ENGINEERING

A further increase in orders received, both on home and export accounts, occurred last month. An encouraging feature was the receipt of orders from China, which appears to indicate a revival of confidence in that country.

INDEX OF NEW ORDERS RECEIVED BY HEAVY ELECTRICAL MANUFACTURING INDUSTRY*
(1920 = 100)

Period	Home	Export	Total
1928—July	71	80	74
1929 "	90	151	106
1930 "	55	232	100
1931 "	62	142	80

* Copyright of the British Electrical and Allied Manufacturers' Association. The above index is a 12-month moving average of new orders received by the heavy plant section of the industry. It is based on the horse-power and not on the value of orders.

MOTOR INDUSTRY

Although some seasonal slackness is inevitable at this time of the year, activity continues above the level of a year ago. Thus the June output of private cars and of goods vehicles totalled 29,969 and 9,232 units, respectively, against 23,567 and 7,018 units in June, 1935. New registrations of private cars amounted to 24,803 in June, against 21,351 in the same month of last year. Meanwhile imports in July were again smaller than a year ago, while British exports showed a further expansion. Some 5,920

private cars were exported last month, compared with only 3,718 in the same month of last year. The outlook remains favourable.

CHEMICALS

The chemical market has been fairly quiet in most sections during July, owing partly to uncertain conditions on the Continent. Trade in wood distillation products, however, has been better than is usual at this time of the year. The finer grades of coal tar products remain difficult to obtain, but otherwise the market is steady. Overseas trade improved again during July, the value of exports being £122,732 greater than in July, 1935. For the first seven months of this year exports were lower in value by £118,326 than during the same period of 1935.

ELECTRICITY

GENERATION OF ELECTRICITY*

	Output mill. k.w.h.	Index 1929 = 100

* By authorised undertakers in Great Britain

COTTON

Raw material prices have shown a sagging tendency, partly owing to a bearish American crop report. The position of the cotton textile industry showed little change in July, but the improvement over last year was well maintained. The percentage of spindles in full production at the end of July was unchanged at 79, against 70 at the same date a year ago. Export business in yarns and piece-goods has improved, the volume of shipments last month being well above the previous year's level. So far, however, the reduction in the Indian tariff has brought little benefit to Lancashire. Meanwhile, in the home trade unseasonable weather has adversely affected clearances of light summer materials and some houses have rather heavy stocks.

WOOL

Raw wool has been a firm market during the period under review and the position of the industry remains satisfactory. Despite some seasonal slackness, activity is above normal for the time of year. There was an improvement in the employment position in the woollen section last month, but a further slight decline in the worsted section. Home trade continues good and exports of woollen and worsted tissues in July were well above last year's corresponding figure. Shipments of tops and yarns, however, were lower than at this time last year. Meanwhile, the outlook for the autumn and winter trade appears to be good.

JUTE

Although the industry remains very depressed, some slight improvement was discernible during the past month. Inquiry has become more active, which may be of good augury for the future, but actual business is somewhat slow.

RAYON

Business in yarns shows a seasonal slackening, but the position remains generally satisfactory. Certain special types of weaving yarn are selling well and there is more activity in the hosiery section. Present indications are that business will be brisk from now until the end of the year.

LINEN

Raw material prices show a hardening tendency. Spinners and weavers have bought heavily during the past month owing to uncertainty regarding the flax crop in Russia and Belgium. Spindles and looms are well booked at least three months ahead. Sharp advances have been paid and prices are likely to rise further. Demand for damasks has improved and good business is being done in cambrics.

BOOTS AND SHOES

Employment registered a further slight decline last month, but remained moderately good for the time of year. Export business was better than in July, 1935.

POTTERY

Employment in North Staffordshire last month showed little change and was slack on the whole. At Bristol and Derby more active conditions prevailed.

AGRICULTURE

Corn crops are fair, but badly need sunshine. Harvesting has commenced in some areas, but is not yet general. The yield of both wheat and oats is at present forecast to be below, and that of barley approximately equal to, the average of the past ten years. Main crop potatoes promise an average yield. Yields of root crops are expected to be about average. Haymaking is very backward. The yield of both seeds and meadow hay is estimated to be below the ten-year average. The yield of hops is expected to be below average. Cattle and sheep have done fairly well, but need drier conditions. Milk yields generally have been maintained.

SHIPPING

A further improvement in the freight markets is reflected in the *Economist* index of whole cargo shipping freights (1898-1913 = 100), which rose by 2 per cent. to 92.4 in July, following a similar rise in the previous month. The River Plate market led

the upward movement, which seems likely to continue in the immediate future.

BUILDING

While unemployment was slightly higher in all districts last month, the position of the industry remains satisfactory. The *Economist* index of building activity rose to 109½ in July (1935 = 100), against a monthly average of only 57 in 1932, when the depression was at its worst. It must, however, be repeated that residential building has now probably reached its peak; during the first seven months of this year the Ministry of Labour building plan figures for residential purposes have been rather below the 1935 level. On the other hand, plans approved during the same period for other buildings were 26 per cent. in excess of last year's corresponding total. No fall in total building activity therefore seems probable in the near future.

RETAIL TRADE

The value of retail sales in July, according to the *Board of Trade Journal*, was 5.8 per cent. above the corresponding figure for 1935, the principal increases being in food and perishables (+ 9.4 per cent.) and furnishing departments (+ 11.1 per cent.). Sales of piece-goods and of men's and boys' wear, however, showed a decline. The improvement over 1935 was well spread geographically.

STATE OF TRADE OVERSEAS

BRITISH EMPIRE

Australia.—Employment, internal trade, overseas trade and secondary industries all show an improvement over last year, states a cable from the National Bank of Australasia. Building and associated trades remain active, iron and steel industries being further developed. The Stock Exchanges have had a firm tone. Both imports and exports have been running above the previous year's level and the active trade balance has improved.

South Africa.—Farming conditions show little change, though wheat prospects have improved as a result of recent rains, states a cable from the Standard Bank. Maize prices show a hardening tendency. Meanwhile, wholesale and retail trade remain good and building activity is well maintained. Railway earnings continue above Budget estimates. Imports and total exports in July amounted to £7,489,000 and £9,429,000, respectively, against £6,574,000 and £8,535,000, respectively, last year.

Canada.—The general improvement in mining, manufacturing and distribution has been well maintained. The output of central electrical stations has established a new record. Steel, paper, and automobile production, electrical apparatus, textiles and food-stuff manufacturing concerns all report better conditions than in 1935. The outlook has recently been obscured by the effects of the drought, but the continued buoyancy of grain prices should restore the purchasing power of the prairie provinces.

India.—Heavy rains have fallen in most parts of the country, and the condition of the crops is generally satisfactory. The final all-India estimate places the yield of the 1935-36 wheat crop at 9,435,000 tons, against a revised figure of 9,728,000 tons for last year. The acreage under cotton shows a rise of 3 per cent. on last year's figure. Merchandise imports amounted to 10,08 lakhs of rupees in July, against 10,06 lakhs in July, 1935, and exports to 14,42 lakhs, compared with 12,07 lakhs.

EUROPE

France.—The full effect of the legislation passed by M. Blum's Government cannot be precisely assessed as yet. Although the country is outwardly calm, there is a good deal of uneasiness concerning business prospects. Devaluation in some form is now widely regarded as inevitable. Under normal circumstances this should pave the way for recovery. But the view is held that the adjustment may not be accomplished without a political crisis, and this explains the downward trend of the prices of industrial securities during the past month. Meanwhile both wholesale and retail prices are rising, and the number of persons in receipt of unemployment benefit is still appreciably higher than a year ago.

Germany.—The trend of business activity in Germany remains upwards. The index of industrial production of the German Institute for Business Research rose from 107.5 (1928 = 100) in May to 108.6 in June, compared with 93.7 in June, 1935. The improvement continued most marked in the capital equipment trades, stimulated by heavy expenditure on armaments. During July unemployment, as officially recorded, fell from 1,314,700 to 1,170,000, compared with 1,754,000 a year ago. The expansion of activity during the past twelve months has been accompanied by an increase of about 8½ per cent. in the volume of money in circulation. Both imports and exports in July were higher than a year ago, the excess of exports over imports rising from Rm. 29 millions to Rm. 49 millions. Wholesale and retail prices are scarcely changed on the month, but the improvement in quotations for industrial securities has not been fully maintained.

Austria.—A further improvement in the economic situation occurred in July. The heavy industries were particularly active, mainly in consequence of the Government's armament programme. The improvement is reflected on the Stock Exchange, which has recently displayed a firm tone. Meanwhile, tourist traffic is expanding and the National Bank's reserves of foreign exchange have consequently increased.

Hungary.—The continued progress of recovery is reflected in the national accounts for the year ended June 30, 1936. The Budget deficit for this period amounted to 18 million pengő, against almost 43 millions in the previous year. After seven years of uninterrupted deficits, budgetary equilibrium is once more in sight. Meanwhile crop reports are good and foreign trade is on the up-grade.

Norway.—Bank deposits suffered a sharp decline during the past month, the note circulation rose, and bond prices showed a sagging tendency. On the other hand, foreign trade continued above the 1935 level. Employment showed some improvement and the index of production was rather better last month. Shipping, however, suffered from trade restrictions in the Mediterranean and laid-up tonnage rose by some 120,000 tons.

Switzerland.—Although recovery is still far away, the business position is rather more encouraging than at the beginning of the year and prospects seem a little brighter. The principal export industries have done better this year than last. Although the total of foreign trade has been smaller this year than in 1935, the import surplus has been reduced. The half-yearly reports of the Swiss banks reveal an increase in commercial business.

UNITED STATES OF AMERICA

There have been few signs this year of the usual seasonal decline in business activity during the summer. The *New York Times* business index rose from 85.8 during the first week in August, 1935, to 101.4 and 103.0, respectively, during the first weeks of July and August this year. The absence of the usual summer recession may be partly traced to the soldiers' bonus, more than a billion dollars of bonds having been converted into cash between June 15th and July 27th. At the same time recovery during the last few months has been so vigorous and embracing more and more branches of activity that there is little fear of a renewed recession of any magnitude during the remainder of the year.

AMERICAN TRADE STATISTICS—JULY, 1936

	June 1936	July 1936	Compared with July '35

LATIN AMERICA

The British Government has given notice to terminate the existing trade treaty with Argentina in November next, but negotiations continue for a new agreement. Argentine trade figures for the first half of the year are disappointing, showing a decided contraction in both imports and exports. Due, however, to the North American drought and better local weather conditions, there has been a swing-round to optimism in Argentina, grain prices having advanced appreciably. The rise in Brazilian coffee prices has not been accompanied by any considerable increase in business, there being a scarcity of orders from abroad; possibly the rise in prices is due to official intervention and support of the exchange market. Exchange difficulties continue in Chile, notwithstanding some slight expansion in the supply of sterling and United States dollars. On the other hand, trade with Germany is increasing, that country having replaced the United States as the chief supplier of goods to Chile. Exchange control was re-applied in Ecuador as from July 31st. The Central Bank is now the sole buyer and seller of exchange and imports will be controlled by the Central Bank through a permit system.

THE FAR EAST

The tendency for the growth of Japanese imports to outstrip that of exports, noticed in the first half of the year, was reversed in July. Imports during that month amounted to 215 million yen, against 211 millions in the same month of 1935, while exports totalled 230 million yen, against 215 millions a year earlier. Meanwhile, the business position shows few new features. Raw silk prices have been buoyant during the past month, while the rayon and rice markets have been firm; cotton yarn has, however, turned dull. The Stock Exchange has had a quiet tone, and wholesale prices have been tending upwards. In China conditions remain very disturbed. According to the official figures—which, of course, cannot take account of the volume of smuggling—China's imports amounted to 74.92 million dollars in July, against 64.32 millions in July, 1935; exports were 60.45 million dollars, against 45.96 millions in the same month of last year.

STATISTICS

In the following tables we give trade and other statistics for many countries of the world as far as possible, our endeavour being to combine brevity with comprehensiveness. The greater number of the figures are taken from the *Monthly Statistical Bulletin of the League of Nations* (published by George Allen and Unwin, Ltd.).

Unless otherwise stated, the figures represent authorised share issue of new joint stock companies at home, and the increase of capital of existing companies. Bonus shares are excluded from the figures of Rountania and Czechoslovakia. In the case of the Netherlands, Switzerland and the U.K. both bonus shares and conversions are excluded. *c* Excluding Treasury Bills. *d* Excluding large railway issues. *e* "Rivista Bancaria." *f* Issues exceeding £10,000 on the Dutch market including Colonial, and since Jan. 1925, foreign issues. *g* Since 1924, excluding amalgamations and conversions. *h* Until end 1922 paper mark. *i* "Société de Banque Suisse." *j* Figures of net amount of new capital paid-up. *k* Compiled by "Commercial and Financial Chronicle." *l* Up to 1927, authorised issues, excluding western departments; since 1928 amounts actually issued, whole territory.

FINANCIAL NOTES

Dr. Schacht Returns a Call.—Dr. Schacht's visit to Paris in return for M. Labeyrie's visit to Berlin has naturally aroused considerable comment. One question he may be discussing is that of the revival of Franco-German trade. The 1933 clearing agreement between the two countries broke down a year ago, mainly because of the accumulation of a deficit of Frs. 550 millions due to French exporters. Since then a stop-gap arrangement has been in force, allocating 16 per cent. of the proceeds of German exports to France to the service of the French *tranches* of the Dawes and Young Loans, 59 per cent. to the liquidation of arrears of commercial debt, and only 25 per cent. to French exports to Germany. This has reduced Germany's power to buy French goods to microscopic proportions, and the rival claims of old creditors and current trade may well be under discussion. More generally, the whole world is watching the future of the franc, while the reichsmark can hardly remain indefinitely in its existing strait-jacket. If the franc were devalued, Germany would have an opportunity for the "realignment" of the reichsmark, and while monetary questions are inextricably mixed up with politics in both countries, Dr. Schacht may possibly be taking soundings. There is something to be said for preliminary discussions of this character, but the future of the franc and reichsmark is bound up with that of the dollar, the pound and the sterling area currencies. It is therefore pertinent to add that one of the main functions of the Bank for International Settlements is to provide a regular and common meeting-ground for central bank governors, and that it has been generally recognised that these periodical meetings are infinitely preferable to *ad hoc* discussion between two or three governors with all their attendant publicity.

American Banking Reserves.—The increase of one half in the minimum reserve percentages required to be kept on deposit at the Federal Reserve Banks by member banks of the Reserve system was accomplished by August 15th without any disturbance whatever to the money market. The Federal Reserve return for August 13th, two days before the change took effect, showed an increase in member bank borrowings from the Reserve of \$3.9 millions. But this sum is insignificant in comparison with the increase in required reserves of about \$1.473 millions which was enforced two days later. More over, borrowings had declined again by August 20th. On August 13th, total reserves were \$6,116 millions, required reserves \$2,946 millions and excess reserves consequently \$3,170 millions. If the increase in reserve requirements had been applied on that day, required reserves would have become \$4,419 millions and excess reserves \$1,697 millions. The return for a week later shows excess reserves of \$1,810 millions, so that there was an increase of \$113 millions on the week. As in other recent weeks, the increase has been due to the encashment of bonus bonds out of the Treasury balance. It will be noticed that the excess reserves are still 29 per cent. of the required reserves and would, in theory, support an expansion of credit of those proportions. This reflection, together with the fact that the member banks have found the increase in reserves without the slightest difficulty, justify the conclusion that the increase, so far from restricting credit, has not even sufficed to restore the control of the Reserve authorities over the volume of credit.

</

4½ per cent., and, as we pointed out at the time, these bills were taken up by the London offices of French banks. It is now suggested that a second block of £1,000,000 of bills are being placed, and it is possible that the object of these operations is to raise funds for the repayment of the credit of 3,000 million Belgian francs falling due in September. It is clearly desirable that such funds should be forthcoming, as otherwise France might be faced with a heavy gold loss. This would be made more serious by the impending maturity of the French Government's sterling credit of £40 millions, which falls due for repayment next November and may have to be met in gold. The existence of this credit makes it unlikely that the new French railway bills will appeal to British houses, who probably feel that they have already lent enough to France. They may well, however, appeal to French houses who to-day hold a fair amount of temporary sterling, which they have bought spot and sold forward in order to secure the profit of about 16 per cent. per annum accruing from the current discount on three months' francs. The chance of earning an additional 4½ per cent. by relending this money to French railways is very attractive. It is also an illuminating if cynical comment upon the parlous state of French finances.

The Money Market.—Conditions remain very easy and the Bank return shows that credit is abundant. Any further expansion in fact might make it difficult to maintain discount rates, especially as the return of the holiday currency usually makes September an easy month. Nevertheless, the clearing banks have experienced a fair afternoon demand for money. There are also reports that there is not much outside money available, but against this the clearing banks have had little or no demand for loans against bonds at ½ and 1 per cent. Hence the market is still able to obtain its "bond money" outside:—

Bank rate.....	2	2	2	2
Clearing banks' deposit rate ..	½	½	½	½
Short loan rate:—				
Clearing banks	½-½-1*	½-½-1*	½-½-1*	½-½-1*
Others	½	½	½	½
Discount rates:—				
Treasury bills	½	½	½	½
Three months' bank bills	½-½-1*	½-½-1*	½-½-1*	½-½-1*

* Loans against Treasury bills and other approved bills and British Government securities within six months of maturity; 1 per cent. Treasury Bonds and other gilt-edged stocks within six months of maturity; and other collateral, respectively.

Discount rates are unchanged, but while some banks are not taking three months' bank bills at less than ½ per cent., there are reports that when buying in the market other banks are willing to shade this rate. Tender issues of Treasury bills remain unchanged at £630 millions for the fourth week in succession, but next week maturities are £5 millions in excess of the amount to be offered, and so the tender issue will contract. This will increase the competition for bills.

The Foreign Exchanges.—The London Market is extremely idle, and the banks find that they are mainly occupied with technical questions arising out of registered marks and tourist lire. The Olympic Games brought out a big demand for registered marks, but this was easily satisfied, and the discount on these showed little change. This week exchange rates are practically unaltered, apart from a very slight improvement in three months' francs. The franc, however, still remains at the gold point against the dollar, guilder and Swiss franc, and more gold has been engaged for shipment to New York. Gold is not going to Amsterdam, as neither the French banks, nor presumably the Dutch banks in Paris, care to make the shipment, but the American banks, being outside the gold bloc, have no such inhibition. Gold, of course, only enters or leaves Switzerland on the initiative of the Swiss National Bank. The British Customs returns announce the further importation this week of £11.5 millions of gold from France, raising total importations since June 10th to £68.2 millions. Dollars have been very steady, but the current London

price of gold at 138s. 2½d. per ounce leaves a premium over the dollar parity of barely one penny, so that it nearly pays to buy gold in London for shipment to New York. With the approach of the Presidential election, there are rumours that the United States authorities have been buying silver in London, presumably with an eye on American silver interests. This would entail sales of dollars against sterling.

The Bank Return.—This week's reduction of £1.1 millions in the note circulation, though small, is quite normal for the last week of August, so that apparently French hoarding of British currency has for the moment ceased. The note circulation is now very nearly at its lowest point for the autumn, and little change is likely until the Christmas currency withdrawals begin. These may raise the circulation to a new record of £470 millions or more. Meanwhile the Bank is continuing to buy gold, possibly in preparation for the Christmas currency expansion.

Other securities	12.3	18.5	19.3	21.3	17.8
Proportion	38.1%	33.3%	35.0%	37.8%	40.0%

In the banking department, there has been a further reduction in Government securities, which have now fallen by £11.6 millions since the end of July. Owing to the Bank's gold purchases and the return of notes from circulation, the Reserve has risen by £10.2 millions, and, whether by accident or design, the two movements have neutralised each other. Public deposits, which were swollen last week by Excise duty payments, have receded to their level of a fortnight ago, but bankers' deposits have risen to over £100 millions for the first time since July 1st. Had it not been for the reduction in Government securities, bankers' deposits would now be unnecessarily high. It will be interesting to see if the Bank continues to buy gold and allow securities to run off.

Underwriting Air Raid Risks.—Certain Press reports last week-end conveyed a somewhat alarmist impression of prevailing conditions in that part of the insurance market concerned with the underwriting of air-raid risks. It has been well-known that the tariff offices, for some years past, have been unwilling to accept such business, not, ostensibly, on account of its excessive potential liability, but for the opposite reason that in the event of a war the Government would certainly evolve its own arrangements for compensation, and that therefore there can be no "risk" which would justify the taking of premiums. Two or three leading groups of underwriters at Lloyds have, in recent years, also held deliberately aloof from the market, but in other quarters there has been no difficulty in placing business at a rate of about 6d. per £100. Recently, the deterioration in the European political position, the increased publicity given to the aeroplane as a warlike weapon, and, finally, the inception of active industrial operations under the Government's re-armament programme have combined to increase the volume of business placed in the market. In the course of a single week risks running into seven figures have been underwritten, and the rate, consequently, has tended to harden in the neighbourhood of 1s. per cent. Large "lines" have, in fact, been placed at or near this figure, quite recently, and the suggestion that only a small minority of underwriters are prepared to transact this business, and are refusing total coverage, is not borne out by inquiries at Lloyds.

THE STOCK EXCHANGE

MACHINE TOOLS AND THE INVESTOR

WHEN Sir Thomas Inskip gave the House of Commons the first account of his stewardship as Minister for Co-ordination of Defence last May, one special feature of his speech was noted with alacrity by the Stock Exchange. The Minister was, at that time, about to allocate contracts for the supply of tools and gauges to be used for manufacture of shells. For gauges, he was unable to anticipate a substantial supply in under four to five months. To obtain the required machine tools might even take longer. And the Minister confessed himself anxious regarding the emergence of "bottle-necks" in the tool and gauge industry, which must necessarily be eased before bulk production of shells could be put in hand.

Two immediate inferences were drawn by the market from this statement. First, that the machine tool industry was already fully employed on peace-time work; and secondly, that the indications of large Government orders for the new aero engine factories clearly showed that the industry could count on production to capacity for several months to come. Inevitably, a further sharp rise in the existing small group of machine tool companies' shares resulted and, in an active season for new issues, several established companies were added to the list and warmly re-lished companies were added to the list and warmly re-lished. Thus, the defence programme in the course of a few weeks has familiarised the investor with an industrial group which, during the previous decade, showed few attractions in profits or market leadership. The boom continues and undoubtedly record profits are now being earned. How far are present share prices justified on a longer view?

The boundaries of the industry are difficult to define. The Machine Tool Trades Association, for example, consists of 118 members, of which the majority are relatively small private concerns, and therefore not of interest to the general investor. Some of these companies produce bearings, and other machine components which are not, strictly speaking, tools. Other concerns specialise on particular types of tools. All are very busy, and will remain so for many months to come, provided that the industry's own "bottle-necks"—both in equipment and skilled staff—are widened.

Examination of the results of recent Censuses of Production shows that the industry has become increasingly specialised during the last decade. In 1924 specialist firms produced tools valued at £2,295,000, compared with a total of £3,441,000 for all firms. They were therefore responsible for no more than two-thirds of the total output. In 1930, the specialist machine tool firms were responsible for an output valued at £4,824,000 (excluding "other work"), while the total output of all firms was no more than £4,950,000. Average values—which in this industry reflect changes of a technical nature rather than the direct effects of price policy—showed a distinct advance during this period of over 30 per cent in many instances. Milling machinery, to give but one example, rose on the average from £139.4 to £180.3 per ton. Again, between 1933 and 1934, the total output of complete machines increased from £2,894,000 to £4,342,000, although average prices showed a slight fall during the year. Between 1933 and 1935 the value of exports of machine tools increased from £1,265,543 to £2,246,497. In the same period, imports almost doubled in value from £852,987 to £1,697,689, and more than doubled in quantity. The higher average value per ton of imported than of exported machine tools—last year the figure for imports was £220 per ton, compared with about £136 per ton for exports—suggests that the engineering trades are still dependent to an appreciable extent on foreign producers, particularly in the United States and Germany, for the more advanced types of machine tools.

These trends continue to-day. During the first seven months of this year, the value of imports has again almost doubled, at £1,787,560, against £915,922, but exports show a sharp fall in quantity, a more moderate fall in total value, and a considerable increase in average value per ton. The

industry, clearly, is enjoying boom conditions. Business at home is so good that overseas orders are not in request. The rapidity of the re-equipment of British industry, both for the uses of peace and of war, and technical considerations together have vastly increased the quantities of machine tools required from abroad.

These are conditions which demand a prudent policy from the investor. Undoubtedly, current profits are running at records for all times—and so are current share prices. The boom may continue for many months, and there are doubtless large civil and export orders in the offing when armament work has been completed. Russia may be an

influential buyer, aided by her £10 millions credit. But history suggests that in this industry a boom may collapse with disconcerting suddenness. It is evident, both from the nature of the industry and from the detailed statistics of its American counterpart, that once re-equipment orders have been filled there may be no further support to business until the next "recovery" brings a new re-equipment boom. High profits may be earned during recovery; but there is no limit to possible losses in a severe depression. Of all trades in the engineering industry, the machine tools section is technically the most "highly-g geared." The moral applies particularly to certain recent new issues, which have been capitalised on a peak year's earnings. Investors can confidently expect an advance in profits over a limited period, but none of the relative stability which is the hallmark of many seasoned shares in other trades.

What, in fact, has been the industry's earnings record? The table on the preceding page supplies a partial answer. It presents the results of four groups of companies associated with the Machine Tool Trades Association. The first includes established concerns with a profits record extending back for a decade. Birmingham Small Arms claims inclusion through its control of B.S.A. Tools, although its direct machine tool interests, like those of Greenwood and Batley, are subordinate to its other engineering business. Both concerns, however, have a substantial re-armament equity apart from machine tools. The latest profits of Greenwood and Batley were disappointingly stable, but the company is well supplied with orders, although rising costs are apparently being experienced. Coventry Gauge and Tool is a 1928 boom flotation which has paid only one dividend of 5 per cent., for 1929-30. The earnings record of the company showed a deep trough in 1931, and until 1935 recovery was slow. Maintenance and depreciation charges have been regularly provided, and the debit balance on profit and loss was wiped out in 1935. The company's gauge business has expanded rapidly in recent months, and current profits are doubtless very satisfactory. But the last balance sheet disclosed a somewhat unliquid position, which the directors may well decide to strengthen when considering their dividend policy.

To the "new companies" the market has given an ungrudging welcome. British Timken is, perhaps, not a machine-tool producer in the strict sense, but its bearings are used extensively in new machinery installations. Craven Brothers may claim rank among the "established" group, for since the absorption of the Armstrong Whitworth machine-tool business it has become one of the largest machine-tool manufacturers in the world. The instant success of the recent offer of 5s. ordinary shares at 100 per cent. premium suggested that the market was confident not merely of the achievement, but also the maintenance of profits at £60,000 per annum and earnings at 20 per cent. The company, however, is one of the more substantial concerns in the industry. Kitchen and Wade, Modern Machine Tools and Newall Engineering are typical recovery flotations. All three show a geometric increase in profits over the past two years; all have distinctly small total capitals. Modern Machine Tools has introduced a conservative dividend policy, which may be continued if the company's capacity is to be doubled. These shares have attracted considerable speculative attention recently.

Finally, there are certain companies whose shares enjoy a somewhat intermittent market on various provincial exchanges, or which are only partially engaged in machine-tool manufacture. In few cases are past profits records impressive, but recent accounts show a general recovery to high equity earnings, although dividend policy, for many companies, is restricted by strained current positions, losses brought forward, or preference dividend arrears. In general, the relatively small capitals of all machine-tool companies and the speculative nature of the industry involve market and investment problems which the long-term investor is usually anxious to avoid. To the speculatively inclined there may still be scope for selective operations. But the majority of prices are standing at levels which discount much, if not all, of the geometric profits expectations of the industry during the current year. Subsequently, if the machine tool industry runs true to past form, a decline in turnover may appreciably ante-date any major reaction in general business conditions.

INVESTMENT NOTES

Wall Street.—The behaviour of Wall Street markets at the end of last week displayed a far greater sensitiveness to European affairs than has yet been shown in London or on the Continent; it seems to be a case of the further from the fire the more sensitive the skin. When prices dropped as much as seven points last Friday, accompanied by considerable short-selling and a fairly large turnover, it seemed almost as if Wall Street were convinced that a European war was imminent, for no domestic, economic or political circumstance could be urged in justification for so rapid a collapse of prices. The reaction has since been described as purely technical, but that hardly appears an adequate description. The collapse of prices on the Berlin Bourse, provoked by Hitler's press barrage of anti-Russian propaganda laid down last week as a prelude to increasing his army strength, and the evidence of intervention by the powers in the Spanish war, were the immediate causes of American uneasiness. By the middle of this week most of the lost ground had been recovered, the markets had been assured that, in the opinion of the House of Morgan, war was not just around the corner, and domestic events had reasserted their control over prices. The stocks which suffered most in the slump were market leaders, whose position has now been consolidated, and the technical position of the market has certainly been improved. The news from business and industry continues its excellent trend, with growing steel activity, signs of an exceptionally short duration for the seasonal change-over of automobile models, and estimates that what the farmers, as a group, will lose by reduced output they will regain from higher prices. The general market outlook remains as outlined in our Stock Exchange Leading Article last week, so far at least as predictable economic events are concerned, although it cannot be denied that political developments in Europe during the last week are not particularly encouraging for the world peace. Even if the worst were to happen, it is at least arguable that Wall Street is the market which might have least to fear, since America's recovery has still some distance to go, and is not rigidly bound up with external events. The troubles Wall Street would have to face would probably be much more political than economic or financial.

News for Bondholders.—When bondholder meets Greek, then comes the tug-of-war. Ever since the Greek Government defaulted on its foreign debt in 1932, there has been a serious and continuing difference of view over the extent of her ability to remit funds to her British creditors. In September, 1932, a provisional agreement fixed interest on all loans at 30 per cent. of its nominal amount and suspended amortisation. A year later, the transferred percentage was reduced to 27½ for 1933-34 and 35 for 1934-35. It was not until February of last year that negotiations were resumed, and then the Greek Government made an offer of 35 per cent. for the twelve months to March 31, 1936, which was rejected, as wholly inadequate, by the League Loans Committee (London), and the Council of Foreign Bondholders. The matter then drifted into an unsatisfactory state of suspended animation, while far-reaching constitutional events were being staged in Greece itself. After the return of the King, informal conversations were followed, this spring, by the announcement of an official visit to London, and after some further delay negotiations were opened on June 2nd. By July 17th deadlock was again reached, but the subsequent *coup* of General Metaxas has apparently changed the Greek attitude. The bondholders' representatives now recommend acceptance of the proposal that the Government should transfer 40 per cent. for the years 1935-36 and 1936-37; made on condition that the bondholders undertake to utilise the interval afforded by the extended arrangement to discuss the possibility of a permanent settlement. It would appear that the two parties interpret this formula very differently. As the bondholders' committees declare their conviction that the Greek Government

The following extracts from the prospectus are published for information only, and not as an invitation to subscribe for shares.
The **LISTS of APPLICATIONS OPENED** in London and in Melbourne on the 18th AUGUST, 1936, and both lists will be closed on the 15th SEPTEMBER, 1936.

NEW BROKEN HILL CONSOLIDATED LIMITED

(Incorporated in England under the Companies Act, 1929, with limited liability.)

CAPITAL £600,000, divided into 2,400,000 SHARES OF 5s. EACH

Of which 1,250,000 Shares are being issued for subscription in cash at par.

573,077 shares, credited as fully paid, are to be issued in part payment for the assets to be acquired from The Zinc Corporation Limited.
243,752 shares are reserved for allotment against transfers made of Barrier South Limited Shares in the terms of the offer to shareholders of that Company.
The balance of 333,171 shares, plus any shares not required to meet transfers of Barrier South Limited shares, will remain for the time being unissued.

ISSUE AT PAR OF 1,250,000 SHARES OF 5s. EACH

of which 898,831 shares are being offered to the members of The Zinc Corporation Limited in the proportion of one of such shares for each Preference and/or Ordinary share held by such members in the Capital of The Zinc Corporation Limited.

Members of Barrier South Limited who exchange the Preference and/or Ordinary Shares of Barrier South Limited held by them for fully paid shares in New Broken Hill Consolidated Limited, on the terms submitted to them, will be entitled to apply for and be allotted shares in this issue in the proportion of Five of such shares for each Preference Share and One of such shares for every two Ordinary Shares in Barrier South Limited so exchanged.

The Zinc Corporation Limited has agreed to take all the shares of this issue not required to meet the allotments made in response to applications by its own Members and those of Barrier South Limited who are entitled to apply.

No underwriting or other commission is being paid to The Zinc Corporation Limited.

DIRECTORS:

RT. HON. SIR ROBERT STEVENSON HORNE, G.B.E., K.C., M.P., 72, Devonshire House, London, W.1 (Chairman of The Zinc Corporation Limited), Chairman.

CLIVE LATHAM BAILLIEU, Esq., C.M.G., Parkwood, Englefield Green, Egham, Surrey (Director of The Zinc Corporation Limited).

JOHN ROMAIN GOVETT, Esq., 9, Upper Grosvenor Street, London, W.1 (Director of The Zinc Corporation Limited).

CAPTAIN OLIVER LYTTLETON, D.S.O., M.C., 4, Connaught Place, London, W.2 (Director of The Zinc Corporation Limited).

WILLIAM SYDNEY ROBINSON, Esq., 380, Collins Street, Melbourne, C.1 (Managing Director of The Zinc Corporation Limited).

LOCAL BOARD IN AUSTRALIA:

MARSHAL L. BAILLIEU, Esq., 360, Collins Street, Melbourne (Director of North Broken Hill Limited).

SIR COLIN FRASER, 360, Collins Street, Melbourne (Chairman of Broken Hill South Limited).

SIR WALTER MASSY-GREENE, K.C.M.G., 360, Collins Street, Melbourne (Director of Electrolytic Zinc Company of Australasia, Limited).

HALIBURTON SHEPPARD, Esq., 331, Collins Street, Melbourne (Chairman of North Broken Hill Limited).

DESCRIPTION AND OBJECTS OF THE COMPANY.

The Company was incorporated in England under the Companies Act, 1929, on the 8th July, 1936, for the purposes and with the objects specified in its Memorandum of Association, to carry on a mining or mining finance or other associated business in any part of the World, to invest in or finance companies similarly engaged, and in particular (but without restriction) to acquire:—

(a) From the Zinc Corporation Limited, its holding of 71,693 Preference Shares of £1 each and 229,224 Ordinary Shares of 2s. each in the capital of Barrier South Limited.

(b) From the other members of Barrier South Limited, who desire to exchange, their respective holdings of Preference and/or Ordinary Shares in the capital of Barrier South Limited on the same terms as those upon which The Zinc Corporation Limited has agreed to transfer to the Company its shareholdings in Barrier South Limited.

In addition, the Company is acquiring from The Zinc Corporation Limited:—

(i) Certain mineral leases situated in the Southern Section of the Broken Hill field in the State of New South Wales, which are referred to in greater detail below, and

(ii) The whole of the issued share capital of Aplite Syndicate Proprietary Limited (incorporated in the State of Victoria with an authorised capital of £5,000), viz., 4,103 shares of £1 each, and the whole of the issued share capital of Gresham Syndicate Proprietary Limited (incorporated in the said State of Victoria with an authorised capital of £2,000), viz., 1,403 shares of £1 each.

The mineral leases owned by Barrier South Limited adjoin the South-west boundary of the leases owned by The Zinc Corporation Limited, and cover an area of 160 acres.

Exploration work on Barrier South Limited's leases was stopped some years ago pending the further development of the adjoining leases of The Zinc Corporation Limited.

Recent developments and in particular the result of diamond drilling on the property of The Zinc Corporation Limited justify the expectation that the main orebodies now being profitably worked on a large scale by that Company extend into the adjoining leases of Barrier South Limited.

Diamond drill hole No. 128 completed by The Zinc Corporation Limited in February last is situated 1,140 feet north of Barrier South Limited boundary, and proved that the grade, general characteristics and southerly pitch of the main orebody were maintained to a depth of at least 2,500 feet vertical.

A comprehensive exploration programme has been prepared by Barrier South Limited, and diamond drilling operations have begun. While it is expected that the results of this work will be satisfactory, it is necessary to point out that exploration work of this nature is speculative.

The mineral leases to be acquired by the Company from The Zinc Corporation Limited adjoin the South-west boundary of those owned by Barrier South Limited, and cover an area of approximately 447 acres. Exploratory work on these leases is believed to be justified and will be undertaken at an early date.

The following is a copy of the Report received by the Zinc Corporation Limited from its General Managers, Messrs Bewick, Moreing and Co., 14th July, 1936.

The Managing Director, THE ZINC CORPORATION LIMITED, 62, London Wall, London, E.C.2.

Dear Sir,—Development and diamond drilling on the lodes in the Zinc Corporation leases have provided evidence supporting the following conclusions as to their southern extension:—

1. The continuity of the Zinc Lode developed in the upper workings of the Zinc Corporation leases has been definitely proved into the Barrier South leases by the characteristics and values.

2. The lead lode is divided into two sections, viz.: the Eastern or thin portion and the Western or broad massive portion. Both are profitably productive and have a pronounced "pitch."

3. In our opinion the upper limit of the Eastern, or thin portion of the Main Lead Lode, may be encountered in the Barrier South leases at a vertical depth of about 1,500 feet.

BANKERS:

LLOYDS BANK LIMITED, 72, Lombard Street, London, E.C.3.
ENGLISH, SCOTTISH & AUSTRALIAN BANK LIMITED, 5, Gracechurch Street, London, E.C.3, and Melbourne, Adelaide and Sydney.

SOLICITORS:

BIRKBECK, JULIUS, EDWARDS & CO., 49, Moorgate, London, E.C.2.
ARTHUR ROBINSON & CO., 360, Collins Street, Melbourne, C.1.

BROKERS:

GOVETT, SONS & CO., 22, Austin Friars, London, E.C.2, and Stock Exchange.
E. L. & C. BAILLIEU, 360, Collins Street, Melbourne, C.1.

AUDITORS:

MONKHOUSE, STONEHAM & CO., Chartered Accountants, 695, Salisbury House, London, E.C.2.

GENERAL MANAGERS:

THE ZINC CORPORATION LIMITED, 95, Gresham Street, London, E.C.2

MELBOURNE OFFICE:

360, COLLINS STREET, MELBOURNE, C.1.

SECRETARIES AND REGISTERED OFFICE:

AUSTRAL DEVELOPMENT LIMITED, 95, Gresham Street, London, E.C.2.

4. The upper limit of the broad Western portion has been located by the Zinc Corporation by diamond drilling at 871 feet South (i.e., 1,139 feet from the Barrier South Boundary at a vertical depth of 1,900 feet). This and its pitch in the stopes above No. 12 Level indicate that its upper limit may be expected at a vertical depth of from 2,200 to 2,500 feet in the Barrier South leases.

The accompanying longitudinal projection shows the probable continuation of the thin eastern and broad western portions of the lead lode from the Zinc Corporation leases into those of Barrier South Limited. The cross-section appended shows diagrammatically the relative positions of the zinc lode and of the thin eastern and broad western portions of the lead lode as occurring in the Zinc Corporation leases.

The evidence is, in our opinion, fully sufficient to justify the exploratory campaign, which has recently been commenced in the Barrier South leases. As suitable opportunity offers exploratory work should be commenced in the leases still further to the south.

Yours faithfully, BEWICK, MOREING & CO.

The Zinc Corporation Limited has agreed to act as General Managers of New Broken Hill Consolidated Limited for the period of 20 years from the date of its incorporation at an initial fee of £1,500 sterling per annum in addition to expenses. This Agreement will ensure the closest co-operation of the two companies and should result in substantial economy in working.

The purchase price payable to The Zinc Corporation Limited, of 95, Gresham Street, London, E.C.2, for the share interests and leases agreed to be sold is £158,269 5s. 0d., which sum will be satisfied as to £15,000 in cash and as to £143,269 5s. 0d. by the allotment to the Corporation or its nominees of 573,077 shares in the capital of the Company, credited as fully paid. Such purchase price has been allocated as under, viz.:—

£118,269 5s. 0d. in 473,077 shares credited as fully paid for the said Preference and Ordinary Shares in Barrier South Limited, being five shares in the capital of this Company for each of such Preference Shares and one share for every two of such Ordinary Shares.

£5,000 in 20,000 shares credited as fully paid for the said shares in Aplite Syndicate Proprietary Limited and Gresham Syndicate Proprietary Limited.

£15,000 in cash and £20,000 in 80,000 shares credited as fully paid for the said leases. No sum is payable for goodwill.

The promoter of the Company is The Zinc Corporation Limited. No consideration has been or will be paid to that Corporation other than the Vendor's consideration as detailed above, and the above-mentioned remuneration as General Managers.

The proceeds of the present issue will provide the Company with a sum of £312,500, in which it is estimated £297,500 will be available for working capital. This sum, in the opinion of the Directors, is adequate for carrying on the business of the Company.

The subscription of the whole of the shares now offered has been guaranteed and the Directors will therefore proceed to allotment on the closing of the lists.

The total preliminary expenses, including the Company's and Vendors' legal charges, bankers' and brokers' fees, expenses of registration, stamp duty on Allotment Letters and costs of this issue but excluding ad valorem duty and expenses of transfer, are estimated at £10,000. The Zinc Corporation Limited has agreed to pay such expenses up to but not exceeding the sum of £10,000.

Applications for Shares will be received only from The Zinc Corporation Limited, Members of the Zinc Corporation Limited and those Members of Barrier South Limited who have agreed to transfer their shares in such Company to New Broken Hill Consolidated Limited.

Should any of such Members not wish to subscribe personally they can by completing the form of Renunciation transfer their rights to subscribe to any other person or Company.

Prints of the Prospectus as filed with the Registrar of Companies have been sent to members of the Zinc Corporation Limited and Barrier South Limited, who alone are entitled to apply for shares.

Dated 14th August, 1936.

could well transfer higher percentage of the interest due, the inference must surely be that they are unwilling to envisage any "permanent" rate which is not considerably above that figure. The action of the Greek authorities, on the other hand, has every appearance of being a concession which they hope may be counted to them for righteousness when a final settlement is sought. The present agreement, therefore, seems to be little more than a breathing space before the final heat in the tug-of-war. Its achievement, nevertheless, suggests that time is working, slowly but perceptibly, on the side of the bondholder. This impression is confirmed from another part of the world by this week's announcement that the Chinese Government has made an offer to resume interest payments on two more railway loans. The Lung-Tsing-U-Hai 5 per cent. railway loan is to be paid at the rate of $1\frac{1}{2}$ per cent. for the year beginning July 1, 1936, with an additional $\frac{1}{2}$ per cent. in succeeding years to a maximum of 4 per cent. The Canton-Kowloon railway loan of 1905 is to receive $2\frac{1}{2}$ per cent. for twenty years and 5 per cent. thereafter, plus any surplus in net railway earnings over \$200,000 per annum. These offers follow earlier proposals, made this year, covering the Tientsin-Pukow railway loans and the Honan railway loan. These, cumulatively, have furnished welcome evidence both of increasing disposition and ability on the Chinese Government's part to meet external obligations—and these are the first and last assets of bondholders the world over.

Rising Railway Receipts.—The home railway market finds current railway receipts much to its liking. Since the turn of the half-year the four main line railways have achieved, in eight weeks, an aggregate gain of £1,239,000 in gross receipts, compared with those of the corresponding weeks of last year. The total "gain" for the first 34 weeks of this year is as much as £3,058,000. The railways are evidently obtaining a share in a recovery which has now become common to almost all branches of British industry. It does not yet appear, however, that their share is proportionate to the total rise in activity. Gross receipts for the first 34 weeks show a rise of 3.1 per cent. over 1935; whereas the Index of Business Activity (which is published with our Trade Supplement this week) shows an average rise of 6.0 per cent. for the first seven months. Since the turn of the half-year, railway receipts have been running approximately 4.7 per cent. higher than in 1935, while our Business Activity Index shows a rise in July, as compared with July last year, of 7.5 per cent. The main beneficiaries from improved conditions are still the two "heavy" northern lines, which, having lost most, have most to gain. The following table forcibly suggests that goods rather than passengers are providing the lion's share of increased gross receipts, and that the continuance of recovery in industries like steel and heavy engineering, whose flight from rail to road is less easy than that of many of the newer industries, has been a major factor in this year's railway revival:—

Changes compared with 1935	L.M.S.	L.N.E.R.	G.W.R.	S.R.

Comparison with the average figures for the pre-depression period, 1927-30, suggests that there has been a real improvement in the trend of receipts during the last few weeks, except—somewhat significantly—in coal receipts, which were particularly depressed at this time last year.

Investors, however, will be loath to look for spectacular increases in *net* revenue, in view of the tendency towards increased expenditure revealed in the half-yearly statements.

Actuaries' Investment Index.—The Actuaries' index of 178 industrial equities is slightly higher this week, at 87.0, compared with 86.7 last week and 85.0 a month ago. The yield calculations are 3.63 per cent. this week, 3.64 per cent. last week and 3.70 per cent. a month ago. Movements in various groups are shown below, together with figures for various fixed interest securities:—

Group and No. of Securities	Prices (Dec. 31, 1928 = 100)			Yield (%)		
	Month ago, July 28	Week ago, Aug. 18	This week, Aug. 25	Month ago, July 28	Week ago, Aug. 18	This week, Aug. 25
Fixed Interest						
2½% Consols	150.8	...	150.8	2.95	...	2.96
Misc. Ind. Debs. (17) ..	125.5	...	125.3	3.93	...	3.93
Misc. Ind. Pref. (44) ...	122.4	...	122.9	4.20	...	4.17
Ordinary						
Higher this week

Electric Supplies (10) ..	144.8	148.6	149.7	3.75	3.68	3.62
Stores and catering (20) ..	85.1	86.3	87.3	3.68	3.63	3.57
Miscellaneous (56)	77.3	78.4	79.0	3.93	3.89	3.87
Lower this week						
Cotton (6)	41.5	41.8	40.7	2.17	2.09	2.09
Iron and steel (12)	79.4	80.6	79.7	3.75	3.70	3.74

The yield on $2\frac{1}{2}$ per cent. Consols stands a fraction higher than a month ago. Higher prices and lower yields are the rule in the industrial equities, except in the cotton and the iron and steel groups.

COMPANY NOTES

Restaurant and Catering Companies.—The growing habit of taking meals away from home (which affords matter for complaint among gas company chairmen) has provided the restaurant and catering trade with an expanding market. The domestic servant problem is unlikely to become less acute; there is little sign of revival in housewifery; and the adult population will continue to increase for some time. For these reasons the catering trade can reasonably count on a continuance of rising demand. At present, however, that condition is overshadowed by the twin influences of fairly severe competition (combined with rising wholesale prices for provisions) and a tendency for wages to rise. Restaurateurs are retailers of a specialised kind. As the retail purchasing power of the public fell more slowly than wholesale prices at the beginning of the depression, the trade was at first able to fend off a serious fall in profits. But the heterogeneous nature of the traders, and the wide variation in their efficiency, made a growth of competition inevitable so soon as conditions became more difficult. Consequently, though wholesale food prices remain well below the 1928-29 level, profits are also substantially lower. Competition is taking several forms, the chief of which is the obvious reluctance to raise prices despite rising costs. It also includes a general movement to redecorate and reorganise premises. This is a capital investment forced on the traders to retain existing business rather than to create new, and it does not show any positive return. Moreover, profits have sometimes to bear

exceptional depreciation for decorations which have been scrapped. For the time being, therefore, there would not appear to be much scope for expansion of profits in the trade. If, however, economic revival can be maintained for some while longer, it is possible that the caterers may be able to raise their prices sufficiently to compensate for rising costs. This, in an expanding market where efficiency

was improving (especially in the case of the smaller concerns), would allow profits to achieve a late-maturing recovery—as happened in the later years of the last prosperity phase. In that event the smaller concerns would clearly have greater speculative possibilities than Lyons, the acknowledged leader of the trade, whose shares, as the accompanying table shows, have for many years been on a stable dividend basis.

Beet Sugar Finance.—The financial arrangements in connection with the Government's settlement of the beet sugar question are pursuing the even tenor of their way. The British Sugar Corporation, Limited, has been created with an ordinary share capital of £5,000,000, distributed among the various companies which it is absorbing in exchange for their respective share capitals. Particulars have been published this week of an issue of £750,000 $2\frac{1}{2}$ per cent. debenture stock, guaranteed by the Treasury, which has been issued to the fifteen vendor companies at 98, to provide working capital, and will be dealt in on the Stock Exchange. The stock, which has a first floating charge on the Corporation's undertaking, commands, of course, gilt-edged rates. It is redeemable over a period of twenty-five years by an annual cumulative sinking fund, but the Corporation has the right of redemption at par from 1946 onwards. Meanwhile, it is clear that the shareholders in the beet sugar companies will have no reason to complain over their fate. A final settlement is being delayed by two factors—namely, the hearing of an income tax appeal case before the House of Lords, and the absence, as yet, of an apportionment between the companies of the total amount granted for "capital services" under the terms of the Act. Two companies in the Lincolnshire group—the Lincolnshire Sugar and the Second Lincolnshire—have, however, called shareholders' meetings on September 15th. On what

PRELIMINARY NOTICE

GREAT NORTHERN STORES LIMITED

CAPITAL - £100,000

The Subscription List will open and close on
TUESDAY, September 1st, 1936, for an

ISSUE OF

1,220,000 Shares of 1s. each
at 2s. per Share.

The Prospectus will show, inter alia:—

- The Company has been formed to acquire a chain of 16 stores, principally situated in the districts of Manchester and London, operating as Retail Distributors of all classes of goods direct to the public.
- The Accountants' Certificate will show that the **net profits**, before charging Income Tax, but after providing for all other expenses, were as follows:—

For financial periods ending within
the year to 31st March, 1934 ... £14,195.
For financial periods ending within
the year to 31st March, 1935 ... £15,914.
For financial periods ending within
the year to 31st March, 1936 ... £18,793.
- The net profit for the financial period ending 31st March, 1936, of £18,793, is equivalent to **over 25 per cent. on the issued capital of the Company** and to **over 12½ per cent. on the issued price of the shares.**
- It is intended to establish departments for the sale of fixed price goods in the existing stores wherever this is practicable and, as opportunities occur, **additional stores will be opened for the sale of articles with a price range of 3d. to 5s.**
- It is anticipated that substantial savings will be effected through unification of control. The Company's ability to purchase goods in bulk will enable the stores to be supplied at lower cost, thereby affording adequate scope for larger profits on sales than in the past, and the Directors are of the opinion that the **net profits of the Company** for its **first financial year**, after charging all expenses, should not be less than **£21,000, equivalent to 28 per cent. on its issued Share Capital.**

Copies of the full Prospectus and Application Form can be obtained from:

appears to be a conservative estimate of the unknown factors, the directors declare that preference shareholders in Lincolnshire Sugar should receive 30s. 6d. for each £1 share and ordinary shareholders 7s. 6d. for each rs. share. These amounts are payable mainly in shares in the new corporation, taken at par, and the balance in cash. Ordinary shareholders in the Second Lincolnshire will receive 59 Corporation shares for every 40 shares held, i.e. the equivalent of 29s. 6d. for every £1 share. In the case of certain other groups, the terms may appear, at first sight, to be less generous, either because the balance sheet position at the last accounting date was less favourable or because the companies concerned have accepted a small allotment of Corporation shares in relation to their capital, since they have other assets which are not being transferred to the Corporation. There has never been anything like an active market in beet sugar shares, but the fortunate original shareholders will in most cases obtain a gratifying return from the tax-payers' bounty.

* * *

Lautaro Nitrate Scheme.—The announcement of the long-awaited reconstruction of the capital of the Lautaro Nitrate Company marks one more stage in the unravelling of the tangle of the Chilean nitrate industry. Less information is given than shareholders might desire, but the principles of the scheme are reasonably clear. The three prior charges—the 6½ per cent. First Mortgage and the 6½ per cent. First Mortgage (Antofagasta) Debenture stocks, of which £1,746,685 is outstanding, and the \$31,357,000 First Mortgage 6 per cent. Gold Bonds—are treated alike. They exchange their stock for income debenture stock and income bonds of equal nominal value. Thus their capital remains intact; but their redemption date is extended to 1975 and their four years' interest arrears are cancelled. As a measure of compensation, they receive 1 per cent. in cash and 1,122,533 "A" ordinary shares of £1 each. The distribution of these shares—244,537 for the debenture-holders and 877,996 for the bondholders—would appear slightly to favour the bondholders. No hint is given of the basis of division, but if the ratio of arrears in the last balance sheet had been taken, the bondholders would have secured only 862,980 shares. These income bonds and debentures participate with the company's bankers in the profits. The bank debt is written down from "sums largely exceeding" the new figure of £2,011,623—the exact aggregate is not given—and its redemption is wholly dependent upon the proceeds of the realisation of the 1933 nitrate stocks. These proceeds, whether greater or less than £2,011,623, will be paid to the bankers (apart from the sums legally due to the Chilean Government and the Banco Central de Chile) in full settlement of the debt. The bankers also receive 1 per cent. in cash and 225,000 "A" ordinary shares. During the "liquidation period," the interest on the outstanding bank debt is to be paid from profits. The whole profits are shared between the debenture-holders, bondholders and bankers in proportion to their respective capitals and debts outstanding. The bankers, however, participate only up to 2 per cent. The amounts available to each other class are divided by a complex formula between interest and redemption. The effect of the formula is that no stock is redeemed until 2 per cent. interest has been paid, and in no circumstance is more than 4 per cent. paid. For 1935-36, a dividend of at least 2½ per cent. will be paid. After the "liquidation period" is over—estimated by the directors to last until June 30, 1943, some 20 per cent. of the profits will be made available for the shareholders, and dividends will be paid to the hilt. The debenture-holders, bondholders and bankers will have 1,347,533 of the "A" ordinary shares. To these are added 800,000 "A" shares—the result of writing the 1,600,000 £5 cumulative preferred shares down to 10s. each—and 2,200,000 "B" ordinary shares of 5d. each—the result of writing down the rs. ordinaries to 5½d. and then consolidating them. The "A" and "B" shares rank equally for income. Although the "B" shares obtain only 2 per cent. of the equity, the principle of their reduction involves a serious discrepancy, for the preferred shares are written down by 90 per cent. and the ordinaries by only 54½ per cent. If the desire were to retain the con-

trol in the hands of the present ordinary shareholders, it would certainly not be incompatible with more equal treatment. The practical effect upon the preferred shareholders' prospects may be negligible, but the principle remains significant—though it is doubtful whether opposition will be forthcoming on such a formal ground.

* * *

Crosse and Blackwell.—In another scheme published this week—that of Crosse and Blackwell—the same principle is violated. The present is the third reconstruction since the war, and its predecessor left the company with the unusual capital structure of £2,250,000 in 7½ per cent. cumulative participating preference shares of 15s. each and £282,040 in rs. ordinary shares. The company's business is international. It has numerous foreign subsidiaries and a large export trade. In the conditions of the last few years, with such a capital structure, heavy preference dividend arrears have been well-nigh inevitable, and the total liability is now £928,125. The assets, also, are over-valued and there is a large debit carried forward. The scheme proposes to combine the two classes into ordinary shares, to cancel preference arrears, to write down the preference shares from 15s. to 6s., and, of course, to remove all preferential rights. The ordinary shares, on the other hand, are written down only from 1s. to 4d. The net effect is to give the preference shareholders 90.54 per cent. of the equity. The board admits that the ordinary shareholders have no rights and that the only reason for giving them 9.46 of the equity is to induce them to pass the scheme. Actually, however, unless profits reach a level double that of last year, the ordinary shareholders actually benefit, for they receive an earlier and larger dividend. The case for the simplification of an ungainly and artificial capital structure is strong. Further, we have repeatedly expressed the view, in these columns, that ordinary shareholders, generally, should never be deprived of all stake in future recovery. But the balance sheet and the company's earning prospects, even after the scheme, do not appear attractive enough to justify preference shareholders in making so extensive a concession as is suggested, to the holders of an equity which at present is admittedly worthless. In any case, the preference shareholders will now obtain voting control, and they have every incentive to make it effective.

* * *

Peter Robinson Offer.—The offer made to preference shareholders in Peter Robinson, announced at the end of last week, stands on a different footing. For one thing, acceptance is purely voluntary, and though voluntary schemes of capital reorganisation may occasionally include some objectionable feature—the withholding of information, for example—the fact that shareholders can simply ignore the offer if they think it unfair is in itself a powerful safeguard. The scheme, on the whole, is reasonable. The interim dividend has been passed, and the board announces that the company has been unfavourably affected by Court mourning and unseasonable weather. The board frankly state that, in view of the existing—and probably persisting—reduction in earning power they are desirous of increasing the share of profits available for the ordinary shares. They propose, therefore, to purchase up to one-half of the preference shares (which are entitled to 7 per cent.) and to replace them with a new 4 per cent. debenture. Preference shareholders may elect to receive cash in exchange, at the rate of 26s. a share—a clear shilling above the market price—or to receive new 4 per cent. debenture stock in conditions affording them a yield of 5.2 per cent. Otherwise they may merely "sit tight" on their preference shares. The terms are, in fact, so liberal that the ordinary shareholder will benefit only to the extent of 1 per cent. in dividends by the scheme. It is pertinent, indeed, to ask whether so meagre a result justifies the placing of a new fixed charge in front of the company's share capital. From this point of view the position of the preference capital will certainly be worsened, for the "cover" of the remaining preference shares will be significantly reduced.

Broken Hill Proprietary.—For several years past, writes our mining correspondent, the results of this enterprise have shown progressive expansion. Last year's net profit of £850,360 compared with £670,440 in the period to May, 1935, and £427,590 in 1933-34. In September, 1935, the capital was increased to provide for extensions and improvements and to acquire the whole of the ordinary shares of Australian Iron and Steel, Limited. Nevertheless, the rate has been raised to 2s. 6d., against 2s. in each of the two preceding periods. Last year's net profit was arrived at after the provision of £615,050 for depreciation—some £73,100 more than in respect of 1934-35. The gradual repayment of the debentures has reduced the requirements for interest. A further £500,000 is now transferred to reserve out of the funds accumulated in the appropriation account and used in the business. The reserve fund is thus raised to £2,500,000. The low prices ruling for metals and increased costs due to legislative enactments resulted in the cessation of mining operations at Broken Hill at the end of June, 1930. The recovery in lead and zinc prices, however, has changed the outlook, and ore extraction was resumed at Broken Hill last March. Extension of the company's activities to gold mining has resulted in the formation of a company named Wellington Alluvials, with a capital of £250,000 in 2s. shares, to operate an area nine miles long in the bed of the Macquarie River. The cabled summary gives a satisfactory account of operations in the Kalgoorlie district of Western Australia and describes the expansion of the company's iron mining activities in South Australia. On the current dividend the yield on the shares is little more than 3½ per cent. (allowing for payment in Australian currency), but the prospect of further dividend payments appears promising. For example, the Broken Hill North subsidiary has already made distributions totalling 12s. 6d. for the present year to date, against 7s. 6d. for the corresponding period last year.

* * *

Other Company Results.—An analysis of the reports of eleven companies appear on page 415. A satisfactory increase in the net profits of *Renold and Coventry Chain*, from £106,598 to £130,466, is reported, in spite of a slight fall in total sales; the dividend is raised from 7½ per cent. to 10 per cent. The net profits of *Lines Bros.* are, at £64,016, higher than for any previous year, and more than last year's by £2,575. *Meccano* have increased their profits from £24,945 to £27,684. *Toogoods*, the seedsmen, are able to maintain their 4 per cent. dividend, although profits have declined from £9,469 to £7,814. *Wiggins Teape*, whose example in publishing quarterly consolidated progress reports is all too rarely followed, give an estimate of net profits for the two quarters ended June 30th of £109,367, against £104,301. Of interest among this week's dividend announcements is the resumption of interim payments by *Ransomes and Rapier*, who declare a 2½ per cent. dividend. *Staveley Coal and Iron* are paying 9 per cent., tax free, as against 8 per cent., while *Sheepbridge Coal and Iron* have declared a substantially higher dividend of 10 per cent., as against 6½ per cent. The latter result is all the more satisfactory in view of the fact that the capacity of the iron and steel industries was already well occupied in the previous year.

THE WEEK IN THE MARKETS THE STOCK EXCHANGE

SETTLING DAYS

TICKET
SEPTEMBER 8

ACCOUNT
SEPTEMBER 10

BUSINESS has been on a modest scale this week, but prices have been very firm. Industrial news at home has been very encouraging, and the operators have been inclined to take a more optimistic view of European developments, particularly after the German embargo on arms to Spain was announced, although the effect of this step was somewhat overshadowed by the increase in the German army. The gilt-edged market was particularly firm, despite the limited turnover, and Colonial issues were in demand. Colonial stocks, particularly Australians, were attractive, but India stocks showed no change, while Home Corporation issues were quietly firm. The Foreign Bond market was better than last week, with

Greek issues supported on the debt settlement offer, and Chinese railway issues on the Lung Hai and Canton schemes for resumption of interest payments. German issues were depressed by the conscription announcement, although they showed signs of recovery later, and in mid-week French bonds, particularly the Railway Bonds, improved. Japanese issues suffered from the estimate of Japan's military budget.

Home rails hardened slightly before the traffics were published, but the excellent figures left them practically unchanged with very little demand. Great Western were affected by the trouble in the South Wales coalfield. The foreign Rails market was neglected, but Argentine common stocks hardened slightly on the good traffic figures.

Industrial markets were firm. Iron and steel issues were a little soft at the beginning of the week, but interest was revived by several dividend announcements. Whitehead Iron reacted after a strong opening, and in mid-week Sheepbridge were a prominent feature on the higher dividend. The motor group was active, with Leyland touching a new high, but business quietened in mid-week. Aviation issues were quiet. Prices in the electrical equipment group have moved irregularly, with advances registered by English Electric and Lancashire Dynamo. Woolworth broke into new high ground in the Stores section, but reacted on profit-taking, while Crosse and Blackwell closed dull after publication of the capitalscheme. Textiles were easy during most of the week, and Courtaulds were supported in the rayon group. In mid-week there was a good demand for leading issues in the Brewery section.

Good progress was made in the miscellaneous industrials market, with gains registered by building material securities, except cement issues, and by many miscellaneous engineering shares. Turner and Newall and British Oxygen were prominent. Triplex held its gains in mid-week.

Interest in the Oil Shares market increased as the week progressed. Advices from America were encouraging, and Continental interest changed from selling to buying, with Shell particularly favoured. Anglo-Ecuadorian were supported on dividend anticipations and Apex (Trinidad) for the same reason. A rise in the price of rubber was followed by slightly increased activity in the rubber shares market in mid-week, and prices were marked up on this sign of revived interest in a market which has accustomed itself to depression. The tea share market has also enjoyed slightly better conditions, with public support in evidence for leading Indian and Ceylon issues.

LONDON ACTIVE SECURITY PRICES AND YIELDS

In calculating yields on fixed interest stocks quoted below allowance is made for interest accrued since the last date of payment, less income tax at the standard rate. Where stocks are definitely redeemable at a certain date the yield includes any profit or loss on redemption; where stocks are redeemable at or before a certain date the final date of redemption is taken when the stock stands at a discount and the earliest date when the quotation is above par. The return on ordinary stocks and shares is calculated by reference to the latest dividends, account being taken of any enhancement or reduction of interim dividends. Allowance is made for accrued dividends in calculating the yield on "cum. div." shares.

(Continued from page 405).

The Kaffir market has been fairly active, with good support in evidence from the Cape, and many prices were higher in mid-week, despite a slight slackening off in interest. Dealings in the Libanon shares opened with a fair turnover. In the Far Western group Venterspost moved up sharply in sympathy with Cape prices, on rumours of new developments, but reacted later in the week. Finance descriptions attracted a good demand. Professional support was evident in the West African department, particularly for Amalgamated Bank and Gold Coast Selection issues, and the market looked brighter than for some time past. Rhodesian Copper issues have been firm, and tin issues have been neglected in spite of a slight improvement in the commodity price.

In mid-week business on the Paris Bourse was fairly satisfactory and prices generally were higher, this improvement being attributed partly to Dr Schacht's visit to M. Labeysie. Prices on the Berlin Bourse turned upward and are advancing slowly, as the shock of last week's political bombardment is forgotten. Conditions at Amsterdam were depressed, but tea shares were brighter in mid-week.

AMERICAN STOCK EXCHANGES

NEW YORK

At the beginning of this week the Wall Street markets had recovered part way from the low levels reached in Friday's dramatic slump, which had been provoked partly by a technical reaction, but mainly by a sudden scare of European war. This week prices moved slowly upward, with conditions very quiet and summer-like. One of the most bullish factors has been the estimate by *Iron Age* that steel mill activity is now 73 per cent. of capacity, compared with 72.5 per cent. last week, and that orders are still increasing faster than they can be completed. The industry has not yet got rid of the prospect of labour troubles, but steel shares have been very well supported. Reports from many industries are very encouraging, there have been several excellent dividend announcements, and Treasury issues have been put up to new high levels in the bond market on anticipations that no new money will be borrowed in September. Mr Morgenthau's expectation of soon-to-be-balanced budgets may not be far from the mark, since the evidence shows rapidly increasing Federal revenues from taxation and from repayments to the Reconstruction Finance Corporation. Even the drought has produced some compensation for the farmers who have crops to sell, in the form of higher prices which it is estimated may offset the decline in output. In mid-week, despite these justifications for strength, there was a modest setback in prices of most

securities, and Treasury issues were slightly irregular. Power output for the week of August 22nd was 15.2 per cent. higher than for the corresponding week of 1935.

COMPANY MEETINGS, &c.

COMPASS INVESTMENT TRUST, LIMITED

IMPROVEMENT IN VALUES

The seventh ordinary general meeting of the Compass Investment Trust, Limited, was held, on the 26th ultimo, at Winchester House, Old Broad Street, London.

Mr Paul Lindenberg (the chairman) said: The balance-sheet figures as at June 30, 1936, show an improvement as against those of the previous year under practically all headings. The depreciation of the investments now amounts to 17.43 per cent., against 21.22 per cent. at June 30, 1935. Since the end of June last there has been a further improvement, which we hope will continue, especially in regard to the old holding of securities outside the United Kingdom, which represents the largest part of the depreciated securities, and, incidentally, I may say that these securities contribute even now very little to the income of the company.

We are watching the securities very carefully and would, of course, like to replace them by British investments in order to improve the income account. However, the transfer of foreign investments into British securities, which your board desires, can only be carried out very gradually and with the utmost care.

The gross income of £33,286 8s. 10d. is about £1,000 in excess of last year's figure.

The dividend which we have to pay on the preference stock is very high for the present conditions, and cuts, of course, into the amount remaining at our disposal for dividends on the ordinary stock. Taking, however, the two dividends together—namely, the dividend on the preference stock and ordinary stock, which we are in a position to pay to our old stockholders, if they kept both kinds of stock, the combined rate is even now over 4 per cent. per annum, which cannot be regarded as unfavourable for present-day monetary conditions.

The dividend which has been paid on both classes of stock since the formation of the company works out at an average rate of 4.56 per cent. per annum, not a bad record considering the difficult times through which we have passed and which affected so seriously the investment companies, especially those that had not been able to create large reserves during many years of their existence previous to the crisis.

The report and accounts were unanimously adopted and a dividend of 2 per cent., less tax, on the ordinary stock was declared.

GOVERNMENT RETURNS, &c.

NATIONAL ACCOUNTS

The total ordinary revenue for the week ended August 22, 1936, amounted to £17,009,000, against ordinary expenditure of £6,622,000. After allowing for an increase in Exchequer Balances of £361,627, the operations for the week, as shown below, decreased the gross National Debt by £9,800,000 to approximately £7,976 millions.*

GOLD MARKET

Messrs. Samuel Montagu and Company write on August 26, 1936:—The Bank of England gold reserve against notes amounted to £243,789,154 on the 19th instant, as compared with £242,960,427 on the previous Wednesday. Purchases of bar gold as announced by the Bank during the week amounted to £966,015. In the open market about £1,375,000 of bar gold was disposed of at the daily fixing. Prices were maintained at a small premium over gold exchange parities, offerings being acquired mainly for a special account. The influx of gold from France, also presumed to be on special account, has continued, a further import from that country of nearly £10,000,000, bringing the figure since the movement started in the beginning of July to about £70,000,000. Shipments of gold from Bombay last week amounted to about £357,000. The s.s. "Naldera" carries £304,000 consigned to London and the s.s. "President Hayes" £53,000 consigned to New York. The Southern Rhodesian gold output for July, 1936, amounted to 66,652 fine ounces, as compared with 67,729 fine ounces for June, 1936, and 61,237 fine ounces for July, 1935.

SILVER MARKET

The week under review opened with a fall of 1d., prices declining to 19d. on the 20th instant, as the market, being poorly supported, could offer little resistance to further Indian resales and sales on China account. An important development ensued, for at the fall a good demand was received from America, and when it became apparent that this was on Government account, the market reacted. Selling by the Indian Bazaars eased, there was a renewal of buying from this quarter, and by to-day prices had recovered to 19½d. for cash and 19½d. for two months' delivery, cash being quoted at a premium for the first time since April 2nd last. The outlook has naturally been improved by the buying for the American Government, and although it is not considered that this quarter will exert any pressure, its recent intervention may indicate that prices may be kept from any important lapse.

Quotations for gold and silver are shown below:—

1936	Price of Gold per Fine Ounce	Equivalent Value of £ sterling	Price of Bar Silver in London per ounce standard	Price of Silver New York per ounce 1909 fine
Aug. 20	s. d. 138 2½	s. d. 12 3-52	d. 19½	Aug. 19 45
" 21	138 3½	12 3-43	19½	" 20 45
" 22	138 2½	12 3-52	19½	" 21 45
" 23	138 2½	12 3-52	19½	" 22 45
" 24	138 2½	12 3-52	19½	" 23 45
" 25	138 2½	12 3-52	19½	" 24 45
" 26	138 2½	12 3-52	19½	" 25 45
Average	138 2-58	12 3-51	19-344	19-333
Aug. 27	138 2½	12 3-52	19½	19½

The highest rate of exchange on New York recorded during the period from the 20th instant to the 26th instant was \$5-03½, and the lowest \$5-02½.

Economist, March 17, 1934, page 610.

COMMERCE AND TRADE

SURVEY OF COMMODITY MARKETS

THE movement of the prices of the leading primary products was irregular during the past week.

As often happens at this time of the year, the speculative advance in grain prices went too far and was followed, this week, by a sizable reaction. In the case of wheat this season's supply-demand position cannot yet be estimated with any degree of accuracy, but there is little doubt that repeated crop failures in North America have practically wiped out excessive stocks. Some rise in prices, therefore, was justified. A feature of this week was the sharp rise in the price of cocoa. The London tea auctions revealed a firmer tendency of prices this week, and raw sugar was also marked up a little. Trading in meat was not very active, with quotations scarcely changed on the week. Australian and New Zealand butter could be bought more cheaply than last week.

The trend of quotations for the raw materials of the metal industries remained upwards. New business in iron and steel showed a tendency to expand this week, and quotations for coke, ore and scrap remained firm, while wolfram and antimony rose sharply in price. Among non-ferrous metals, copper, lead and spelter were dearer, but tin was slightly cheaper owing to uncertainty concerning the future of restriction. Platinum rose suddenly in price after a long period of stability, and quicksilver was also marked up.

The market in rubber was dull, and prices fluctuated within narrow limits. Vegetable oils were marked down, partly in sympathy with grains and partly owing to the realisation that Argentina's supply of linseed had been underestimated. Among textile raw materials, cotton is scarcely changed in price on the week, but wool displayed a firmer tendency. The trend of timber prices remained upwards.

After rising for many weeks, prices of primary products in the United States tended downwards under the leadership of grains. The movement is reflected in Moody's daily index of the price of staple commodities (December 31, 1931 = 100) which fell from 187.5 to 183.9 in the week ended last Wednesday, against 177.9 a month earlier and 164.6 on the same day last year.

COAL

SHEFFIELD.—The demand for industrial coal remains on a large scale and the sustained activity in the heavy trades has led to contracts which are larger and at higher prices than for some time. New prices are expected to come into force for household coal from September 1st and the advance will be round about 2s. to 2s. 6d. per ton. There is still a shortage of furnace coke supplies owing to the heavy demand, and there are no stocks at furnaces. Numerous enquiries are made for central-heating coke at higher prices. There are but few inquiries for prompt or forward deliveries on the export market, but on the inland market business remains good.

WORKINGTON.—The coal trade is improving, and within a few weeks production, short still of that of the Whitehaven pits, will lag behind demand. Land sale is picking up and there is not enough coal to go round in Ulster and the Free State, the cross-channel shipments now seldom exceeding 3,000 tons weekly. Industrial coal is in such heavy request that about 800 tons of smalls are having to be imported each week from South Wales for the coking plants. Best round is 23s. 6d. f.o.b., best house, 35s. 8d. at station; gas coal, 27s.; and coke, 15s. 6d. to 16s. 6d. per ton.

NEWCASTLE-ON-TYNE.—Production of coal in Northumberland and Durham remains steady, despite the loss of Italian trade. Northumberland is producing about 297,000 tons weekly and Durham 637,000 tons, nearly a fourth of the country's output, which for a summer period is good and indicates the strength of the home market. All classes of steam coal continue to be a good market, and, owing to the active home demand, Durham coking coal is in a much better position.

GLASGOW.—New business is somewhat slow, and although collieries are for the most part comfortably placed for orders, steam coal is freely available. This latter condition is more noticeable in the East of Scotland, where supplies until recently have been well absorbed. In the West the position is improving in view of the stocking for winter requirements. In contrast with large fuel, washed smalls are in active request and none too plentiful, while navigation bunkers remain active and firm.

IRON AND STEEL

LONDON.—The weekly report of the London Iron and Steel Exchange indicates that business in the iron and steel trades is increasing as the holiday season draws to a close. The volume of new orders is showing signs of expansion and at the same time a steady stream of specifications against contracts is reaching producing works.

In the pig iron market the volume of new business has not yet regained the level ruling prior to the holidays, and "stop weeks" in various parts of the country have enabled the producers to accumulate some stocks. As a result rather more interest has been shown in export business. Deliveries to home consumers, however, have continued on a heavy scale, and the surplus available for overseas markets is not large.

The situation in the semi-finished steel department is being closely watched and some doubt is expressed whether the supplies of British

material will be sufficient to meet the demand when the normal autumn revival in trade occurs. On the other hand, the output of this class of material has been increased and the situation concerning arrears in deliveries against contracts has improved.

Active conditions have ruled in the finished steel section of the market and demand is gradually expanding. In some departments producers ask several weeks for deliveries against new contracts. Demand is still very largely for home account; but lately overseas markets have shown more interest.

MIDDLESBROUGH.—New business in pig iron has slowed down owing to the fact that foundries in some areas are closed down temporarily, but this does not affect the market here, which continues very strong. Most consumers have bought up to the end of the year and are prepared, in some cases, to purchase for delivery during the early months of next year.

Shipments of all classes of pig iron from the Tees during the first 25 days of August amounted to 5,110 tons, as compared with 8,554 tons for the same period in July. Shipments of foundry iron to Scotland have been resumed, but only small parcels of hematite are released for export to foreign destinations. Prices for No. 3 Cleveland foundry pig iron are maintained at 75s. per ton delivered locally. East Coast hematite No. 1 quality is fixed at 85s. 6d. per ton delivered to buyers in the North-East area, with a rebate of 5s. to consumers who do not place orders outside the Association. New business in foreign ore is restricted by the difficulties of shipping from Spain and owing to the high freights. Odd cargoes continue to be shipped from North Spanish ports, and it is significant that recently one or two Spanish vessels have been chartered to bring ore to the East Coast. The supply of good Durham blast-furnace coke is ample and makers are quoting 24s. 6d. per ton delivered at the furnaces.

Semi-finished steel is in good demand, and producers of finished steel are fully contracted up to the end of the year, large quantities being absorbed for constructional works, shipbuilding, and railway needs. There has been an advance in the price of common iron bars for home use from £10 2s. 6d. to £10 10s. per ton. Iron and steel scrap is in little demand, heavy steel melting scrap being still quoted at 57s. 6d. per ton delivered at the works.

SHEFFIELD.—The seasonal slackness, which has been less marked than usual this year, is disappearing and business is again becoming active. Any small parcels of foundry and basic pig iron are immediately taken up. Consumers are ready to buy forward, but producers are not desirous at present of accepting business beyond the first quarter of 1937. Supplies of East Coast hematite are good, but there is a scarcity of West Coast material. The expected rise in prices of finished iron has come into force but has not affected the market to any extent. South Yorkshire Crowns bars now stand at £10 10s. per 4-ton lot (not less than 1 ton of a size) with extras for special qualities. No. 3 bars are £8 17s. 6d. per ton basic and No. 4, £9 7s. 6d. per ton basic. Acid and basic steel billets are in demand and orders for the latter are completed with difficulty. In wire rods, strip and stainless steel business remains brisk and although production is still expanding, there appears to be no surplus. Rolling mills in this district are fully occupied. The railways are placing important orders and there is great activity in armament materials and aircraft steels.

WORKINGTON.—The already insufficient output of North-West Coast hematite pig-iron seems likely to be diminished in November if supplies of foreign ore other than those formerly drawn from Spain cannot be obtained at a satisfactory delivered price. Stocks are not heavy and will be exhausted in less than two months. Production of the nine furnaces blowing between Workington and Barrow is not yet slackening. Demand is far heavier than can be satisfied, but makers, having already disposed of as much iron as they can smelt during the remainder of the year, are selling only small parcels to customers of long standing who have been caught short. The Midlands, South Wales and Scotland are taking almost 40 per cent. of the output. The remainder is going into local consumption. Prices are steady. Bessemer mixed numbers are quoted at £4 0s. 6d. at Glasgow; £4 6s. at Sheffield; £4 8s. 6d. at Manchester, and £4 12s. 6d. at Birmingham, with an additional 2s. 6d. to 6s. per ton for special qualities. Malleable iron is a lively trade at £6 5s. delivered at Birmingham, and ferro-manganese is in keen request at £11 5s. home. The steel trade is brisk and continues to book orders. Maintenance of activity on the present scale is assured for twelve months. Workington is rolling home rails, billets, bars and slabs, and Barrow is on rails, hoops and strips. Some progress is being made with the development of the local hematite iron ore mines, but expansion in output is small and requirements cannot be met. The native ore commands from 16s. to 17s. 6d. per ton.

GLASGOW.—Every section of the industry in the West of Scotland seems to be developing even greater activity. Although demand is mainly from home consumers, export business is improving in several directions. Steelmakers continue to work to capacity and production is very rapidly passing into the hands of users; there is every prospect that when the extensions of capacity are completed, makers will find a ready market for the additional output. Producers of semis are also finding a market for their output among home users. Sheet makers have been able to add to the number of mills in operation. While the greater proportion of their deliveries is to home consumers, demand from several overseas markets has considerably improved of late, and bookings for export cover a good tonnage. The export price of medium plates was advanced this week by 10s. per ton, making the basis price £9 10s.

OTHER METALS

COPPER.—After early weakness, which reduced the cash quotation to below the £38 mark at one time, the market recovered and prices closed on Wednesday a shade higher on the week. This affords evidence of the underlying strength of the London market. In the United States, the attempt to raise the domestic price to 10 cents per lb. has apparently been abandoned for the time being. The market has consequently become dull and inactive. In view of the fact that American consumers will probably start to draw upon their stocks after Kennecott has increased production, no early improvement on the United States market seems probable.

Sales on the London Metal Exchange, 1,250 tons on Monday, against 1,800 tons last week; 1,025 tons on Tuesday, against 2,750 tons last week;

1,550 tons on Wednesday, against 1,000 tons last week. Domestic spot was quoted at 9.40 cents per lb. in New York on Wednesday, against 9.35 cents a week ago and 9.27½ cents a month ago. Wednesday's official closing price for standard cash in London was £38 3s. 9d. to £38 6s. 3d., compared with £38 2s. 6d. to £38 3s. 9d. a week ago. Stocks of refined copper in British official warehouses at the end of last week, at 52,695 tons, show an increase of 1,095 tons, while stocks of rough copper, at 2,920 tons, show an increase of 15 tons on the week.

LEAD AND SPELTER.—Lead enjoyed another improvement and closed on Wednesday with a gain of 10s. per ton on the week. The market is supported by the high level of building activity, by the armaments boom and also in some measure by the Spanish civil war. Last year's Spanish production of lead, at 70,568 tons, was only half as large as the 1926 output, while according to the *Metalgesellschaft* only 28,070 tons were produced in the first half of this year. The loss due to the civil war must therefore not be exaggerated; but the statistical position is at present so strong that even this fall in supplies has a considerable psychological effect. Spelter experienced a slight improvement this week, although supplies showed an increase last month. According to the American Bureau of Metal Statistics, world output in July further advanced by almost 7,000 short tons to 138,600 short tons. The basic position of the spelter market remains unchanged.

Sales of lead on the London Metal Exchange: 700 tons on Monday, against 800 tons last week; 750 tons on Tuesday, against 1,300 tons last week; 2,600 tons on Wednesday, against 650 tons last week. The New York quotation on Wednesday was 4.60 cents per lb., against 4.60 cents a week ago and 4.60 cents a month ago. The official closing quotation in London for soft foreign for shipment during the current month was £17 3s. 9d. per ton, compared with £16 13s. 9d. a week ago.

Sales of spelter on the London Metal Exchange: 50 tons on Monday, against 900 tons last week; 350 tons on Tuesday, against 275 tons last week; 250 tons on Wednesday, against 150 tons last week. Wednesday's quotation in East St. Louis was 4.80 cents per lb., against 4.60 cents the week before and 4.80 cents a month earlier. Wednesday's official closing quotation in London for "good ordinary brands" for shipment during the current month was £13 10s. per ton, against £13 8s. 9d. last week.

TIN.—Prices have been rather easier, both buyers and sellers being cautious in view of the uncertain future of the scheme. The advisor to the Siamese Government will, it is reported, be present at the next meeting of the International Tin Committee in London on September 18th.

Last week surprise was expressed at a report according to which Bolivia had exceeded her quota by 750 tons during July, and it was pointed out that this was in contradiction to certain *Metalgesellschaft* figures. The Statistical Bulletin of the Tin Research and Development Council, to hand this week, gives Bolivia's shipments at only 2,129 tons for July, or 214 tons below the previous month's shipments. This figure, which confirms the doubt expressed last week, is actually 777 tons below the quota. Despite the relinquishment by Bolivia of her right to produce the arrears accumulated to the end of May, exports were again in arrears to the extent of 1,727 tons at the end of July. Any quota transgression by Bolivia therefore appears to be much less likely than a continuance of under-shipments.

Sales of tin on the London Metal Exchange: 105 tons on Monday, against 275 tons last Monday; 145 tons on Tuesday, against 230 tons last week; 245 tons on Wednesday, against 335 tons last week. The New York quotation on Wednesday was 42.50 cents per lb., against 42.50 cents a week ago and 43.12½ cents a month ago. Wednesday's official closing quotation in London for standard cash was £183 to £183 2s. 6d. per ton, compared with £184 5s. to £184 15s. a week ago. Stocks of tin in London and Liverpool at the end of last week totalled 682 tons, an increase of 44 tons on the week.

OTHER NON-FERROUS METALS.—Among other non-ferrous metals, aluminium ingots and bars for home delivery were again quoted at £100 per ton, and rolling billets at £102 per ton. Nickel, for home and export, at £200 to £205 per ton, remains unchanged. Quicksilver, on the spot, was quoted at around £12 12s. 3d. per flask of 76 lbs. Chinese antimony was quoted at £53 per ton ex warehouse, duty paid, as against £51 to £52 per ton last week. Chinese wolfram for "August-September" shipment, was quoted at 29s. 6d. to 30s. 6d. per unit c.i.f., against 25s. 6d. to 26s. 6d. a week ago. Refined platinum was advanced to £12 7s. 6d. per ounce, as against £10 10s. per ounce last week.

TEXTILES

COTTON.—Manchester.—There have been very few indications of increased activity. Buyers still lack confidence in current quotations. This waiting attitude may be continued until the outlook is clearer concerning raw cotton supplies. Raw cotton prices have fluctuated within narrow limits. Considerable difference of opinion exists concerning the Government crop statistics due to be published early in September. Recently plants have deteriorated and a smaller forecast of the yield is anticipated. Freer hedge selling has shown itself in some directions and according to certain reports there is a possibility of a smaller consumption in Europe during the next twelve months. The weather in the belt is far from satisfactory.

COTTON PRICES

	1936					Corresponding Date	
	Aug. 5	Aug. 12	Aug. 19	Aug. 26	1934	1935

Although the general inquiry for piece goods keeps up fairly well, total sales remain disappointing, and during the last few weeks some manufacturers have not sold current production. There have been a few more attempts at transactions for India, but numerous bids have been altogether too low. Most of the buying has been in light bleaching descriptions and fancies for Karachi. Limited quantities of greys and whites have been

put through for Egypt. Heavy shirtings and prints have moved off fairly well for West Africa. Demand for South America has improved, there being freer buying in dyed cloths and sheetings. A mixed business has been done in home trade goods.

Yarn demand has been patchy. Consumers of American qualities have not been in the mood to place lines of any weight, but some moderate lots have been booked in ring descriptions. The offtake in Egyptian qualities remains poor.

COTTON SPINNERS' WAGES.—The Lancashire cotton spinning employers have replied to the application of the operatives for an increase in wages of 14 per cent. on standard piece price lists. The terms of the communication, which has been sent to the Operative Spinners' Amalgamation and the Cardroom Workers' Amalgamations, have not been made known, but it is understood that the demand has been met by a definite refusal to entertain any all-round increase in wages. It is reported, however, that the letter from the Federation of Master Cotton Spinners' Associations has left the door open for further discussions with the trade union officials. Amongst employers the opinion is held that a revision of wage rates is desirable and they are prepared to enter into negotiations with the representatives of the workpeople, but owing to the industry being still in a state of depression they cannot agree to any changes which mean a substantial increase in the total wages bill. It is being suggested that some alteration in ring spinning mills is necessary. The position of the employers is that if the trade unions will agree to some reorganisation of production which would effect economies in costs they are prepared to make arrangements for an increase in the wages of the lower-paid operatives. It remains to be seen whether the trade unions will accept the suggestions put forward and agree to further joint meetings, or whether the operatives will press their demand by giving one month's notice to cease work if the application is not granted. It may be pointed out that in this branch of the cotton industry there is now no Conciliation Board to deal with disputes.

JUTE.—Dundee.—Little attention is being paid to the final forecast of the jute crop for the present season. The figures to date show an increase of approximately 15 per cent. over the revised figures for last season, and this is evidently considered to be quite satisfactory, as sellers of raw jute have reduced their prices to some extent. In spite of the fact that the Indian Jute Mills have increased their production of jute goods, necessitating a larger consumption of the fibre, it is anticipated that there will be sufficient raw jute to satisfy the world's needs. It follows that other consuming countries will require less raw material if the Indian Mills are to continue selling their goods at prices which are so low as to defy competition. Working at the rate of 54 hours per week, the Indian Jute Mills will require approximately seven million bales of jute this season, but they are now holding stocks of four million bales, while other consuming centres will need round about 3,750,000 bales, a total consumption of 10,750,000 bales. Should the present crop yield less than this quantity, any excess requirements can be made up from stocks.

The question of tariffs on jute goods imported into this country from India cannot be lost sight of, for the home trade is suffering considerably from these. During the first seven months of this year, 83 million yards of jute piece goods were imported, compared with only 37 million yards during the same period last year, in addition to 25,800 tons and 21,000 tons of jute sacks and bags, respectively. Representations have already been made to the Government on the matter, but nothing can be done until November when the Ottawa Agreements expire.

Full grade Daisee-4 has been sold at £17, and fours are quoted at £16, with Tossa-4 at £18 and fours at £17, October/November. Good First Marks are at £20 10s. and Lightnings at £19, with Hearts at from £17 17s. 6d. for good quality, August/September.

Yarns are quiet, with common 8 lb. cops nominal at 1s. 10½d. and 8 lb. spoons at 1s. 11½d. Twist rules at 3½d. for 3 ply 8 lb. and sacking yarns are being sold quietly at 2½d. for 24 lb. weight and 3½d. for 8 lb. chains. Rove is firm at £19 for 48 lb. and £15 10s. for 200 lb., while the finer yarns are quiet and nominally unchanged. Carpet yarns have been freely sold at from 3½d. to 3¾d. for 14 lb. warp.

Cloth business is slow and buyers are confining their purchases to small lots for immediate use. Prices rule from 2¾d. for 10 oz. 4 in. and 1½d. for 8 oz.

Calcutta goods have further weakened during the past few days and there are no signs of any agreement yet being reached between the Indian Jute Mills' Association and the "outside" mills on the question of working hours.

GRAIN MARKETS

WHEAT.—As usual, the recent speculative rise in wheat prices went too far, and has since been followed by a reaction. Liverpool wheat futures (December), for example, declined from 7s. 4½d. per cental to 7s. 1½d. per cental. The fact is, that this season's supplies and requirements cannot yet be estimated with any degree of accuracy, and the position is frequently distorted by exaggerating crop reports. At this time of the year, therefore, prices very often fluctuate considerably. Some rise in prices was justified, however, for there can be little doubt that the repeated crop failures in North America have practically wiped out the excessive stocks of recent years.

On Wednesday last, "September" futures were quoted in Chicago at 111½ cents per bushel, against 114½ cents the week before and 108½ cents a month ago. Quotations in London, Wednesday: No. 1 Northern Manitoba, ex ship, 38s. per 496 lbs., against 40s. 9d. a week ago; No. 2 Northern Manitoba, ex ship, 37s. 9d., against 40s. 3d. a week ago. According to the *Corn Trade News*, total shipments of wheat and flour last week totalled 1,292,000 quarters, against 1,244,000 in the previous week and 1,241,000 quarters in the corresponding week a year ago.

FLOUR.—Prices tended to decline in sympathy with wheat. Wednesday's London quotations (excluding quota payments) were: Straight run, delivered Home Counties, 33s. per 280 lbs., against 34s. a week ago; delivered inner London, 32s. 6d., as compared with 33s. 6d. a week ago. Manitoba patents, ex store, 30s. to 31s., against 30s. 6d. to 32s. a week ago. Australian, ex store, 27s. 6d. to 27s. 9d., against 27s. 6d. to 28s. 6d. a week ago.

BARLEY.—There has been a good demand for barley, especially on the Continent, and quotations have remained firm. "October" futures were quoted at 54½ cents per bushel in Winnipeg on Wednesday, against 61½ cents a week ago. Quotations per 448 lbs. in London on Wednesday were: "English feed" at farm, nominal, as against 27s. a week ago; "English malting" at farm, not quoted.

OATS.—On Wednesday, "September" futures were quoted at 42½ cents a bushel in Chicago, against 44½ cents a week ago and 38½ cents last month. Quotations in London, Wednesday: "English Black," at farm, 19s. to 20s. per 336 lbs., against 21s. 6d. a week ago; "English White," at farm, 19s. to 20s., against 21s. 6d. a week earlier.

MAIZE.—The market experienced a reaction this week, for many consumers have covered their requirements in the near future and are, therefore, less anxious to pay the higher prices. "September" futures were quoted on Wednesday at 112½ cents per bushel in Chicago, against 116½ cents a week ago; and 94 cents last month. Quotations in London, Wednesday: "Plate," landed, 26s. 6d. per 480 lbs., compared with 27s. a week ago; "Plate," ex ship, 25s., as against 25s. 9d. a week ago; "Plate," "August," 24s. 3d., as against 24s. a week ago; yellow maize meal, ex wharf, was quoted at £6 17s. 6d. per ton, as against £6 10s. to £6 15s. last week.

SALES AND PRICES OF BRITISH CEREALS.—The following table gives the estimated sale of home-grown wheat during the harvest years 1932-33 to 1935-36:—

	1932-1933	1933-1934	1934-1935	1935-1936
Estimated sales of home-grown wheat—				
1 week to August 22	263,433	176,562	337,193	14,219
51 weeks to August 22	8,946,077	11,284,171	13,801,712	13,284,097
Average price of English wheat per cwt.	s. d. 5 4	s. d. 5 3	s. d. 4 5	s. d. 8 1

The following is a statement showing the quantities sold and the average price of British cereals in the past two weeks, and for the corresponding week in each of the years from 1932 to 1935:—

Week ended	QUANTITIES SOLD			AVERAGE PRICE PER CWT.		
	Wheat	Barley	Oats	Wheat	Barley	Oats
August 20, 1932.....	Cwts. 26,233	Cwts. 3,518	Cwts. 7,667	s. d. 6 7	s. d. 6 9	s. d. 7 6
August 19, 1933.....	263,433	21,384	33,138	5 4	10 4	5 4
August 25, 1934.....	176,562	29,743	30,706	5 3	10 5	6 4
August 24, 1935.....	337,193	27,899	41,399	4 5	9 0	6 2
August 15, 1936.....	14,170	1,510	9,754	7 9	6 10	7 0
August 22, 1936.....	14,219	1,557	10,976	8 1	7 3	7 0

AMERICAN WHEAT MARKETS.—The following table shows wheat quotations for selected weeks in 1934-36:—

NEAREST FUTURE	Jan. 3, 1934	Jan. 2, 1935	Aug. 23, 1935	Dec. 31, 1935	Aug. 19, 1936	Aug. 26, 1936
Winnipeg (No. 1, Manitoba) —Cents per 60 lb.	65½	82½	85	84½	102½	97½
Chicago (No. 2 Winter) —Cents per 60 lb.	84½	98½	87½	75½	114½	111½

The visible supply of wheat in Canada amounts to 60,434,000 bushels, against 62,306,000 bushels last week, and 126,337,000 bushels in the corresponding week last year.

OTHER FOODS

BACON.—Prices of Danish remain firm, with other descriptions barely steady. The official quotations (per cwt. for No. 1 Sizable) which formed the basis for dealings on the London Provision Exchange this week were: English, 97s. to 98s.; Canadian, 91s.; Danish, 100s., as against 99s., 93s. and 100s. last week. Arrivals in London last week included Danish, 15,247 bales; Canadian, 4,154; Dutch, 2,437; Lithuanian, 1,849, and Polish, 2,851, as against 14,449, 4,246, 2,439, 1,820 and 2,698, respectively, in the previous week.

BUTTER.—Demand has become rather less active, and prices of Colonial makes are not so firm. Quotations (per cwt.) on the London Provision Exchange on Wednesday were: New Zealand, finest salted, 120s.; Australian, choicest salted, 119s.; Danish, 128s., compared with 122s., 120s. and 128s., respectively, a week ago.

CHEESE.—Cheese encountered a quieter demand, but prices show little change. Quotations (per cwt.) on the London Provision Exchange on Wednesday were as follows: English, finest farmers, 70s. to 76s.; Canadian, finest coloured, 68s. 6d. to 70s.; and New Zealand, finest coloured, 67s. to 67s. 6d., against 72s. to 76s., 68s. and 67s. to 68s., respectively, a week ago.

COCOA.—Prices are again higher this week. The spot quotation in New York on Wednesday was 7½ cents per lb., as against 6½ cents per lb. last week. In London, on Wednesday last, good fermented new crop, "November-January," was quoted 31s. per 250 kilos, c.i.f. Continent, against 29s. 3d. for "October-December" a week ago. Last week's movements of cocoa in London were as follows: Landed, 1,726 bags; delivered for home consumption, 4,195 bags; exported, 225 bags; stocks, 160,683 bags, against 146,287 bags a year ago.

COFFEE.—The London market has again ruled quiet. The New York spot market displayed a steady tone, with prices unchanged. On Wednesday, Rio No. 7 (cash) was quoted at 8 cents per lb. in New York, as compared with 8 cents per lb. last week and 7½ cents per lb. a month ago. Movements of coffee in London last week were as follows: Brazilian, landed, nil; delivered for home consumption, 77 cwt.; exports, 65 cwt.; stocks, 10,267 cwt., against 14,560 bags a year ago. Central and South American, landed, 1,050 cwt.; delivered for home consumption, 2,076 cwt.; exported, 876 cwt.; stocks, 93,252 cwt., against 140,586 packages last year. Other kinds, landed, 237 cwt.; delivered for home consumption, 3,006 cwt.; exported, 555 cwt.; stocks, 135,695 cwt., against 158,903 packages last year.

EGGS.—Abundant supplies encounter an active demand, and prices are about unchanged. At Smithfield, on Wednesday, English (ordinary packing, Grade I, about 15-15½ lb.) realised 15s. 6d. to 16s. per 120, as against 15s. 6d. to 16s. last week, while Danish (15½ lb.) made 10s. 6d. to 10s. 9d. per 120, as against 10s. 9d. to 11s. last week.

FRUIT.—Supplies are generally heavy and, with demand showing the effects of the holidays, prices are easier. According to *The Fruitgrower's* Covent Garden report, supplies of plums are heavy, and inferior grades are practically unsaleable. Apples are also a very prominent feature, a wide variety of English dessert sorts being now available. Inquiry for

imported apples is consequently limited. Pears have also made a good showing. Currants have now finished, but cultivated blackberries are a good line, and a few raspberries are still available. Melons are in steady demand, while peaches and nectarines maintain their price. Hothouse grapes are easier, but sell well. Oranges are in good demand, with South African firm, and lemons are also steady. Prices of grapefruit are firmer than of late. Kent cobnuts and filberts are now reaching the market.

MEAT.—Except for fresh mutton and lamb, business at Smithfield market has been rather slow, with prices barely steady. On Wednesday last, Argentine chilled hindquarters were quoted at 3s. 10d. to 4s. 2d. per 8 lbs., as compared with 3s. 10d. to 4s. 2d. a week ago. New Zealand frozen mutton was 3s. to 3s. 8d. per 8 lbs., against 3s. to 3s. 8d. a week ago. According to the Smithfield Market official report, supplies during last week amounted to 7,802 tons, a decrease of 351 tons on the corresponding week last year. Beef and veal accounted for 4,296 tons, mutton and lamb 2,503 tons, and pork and bacon 554 tons, as compared with 4,444, 2,675 and 565 tons, respectively, in the same week of 1935.

MILK.—Agreement was reached last week-end between the Milk Marketing Board and the Central Milk Distributive Committee on the contract prices for milk for the new contract year from October 1st. The average wholesale price of liquid milk is to be the same as that recommended by the Committee of Investigation for the current year, namely, 15s. 3d. per dozen gallons. The average price, therefore, remains unchanged, but the monthly prices per gallon have been slightly modified as follows:—

	s. d.	s. d.	s. d.
October	1 5	April	1 4
November	1 5	May	1 0
December	1 5	June	1 0
January	1 5	July	1 1
February	1 5	August	1 1
March	1 5	September	1 3

In respect of milk used for manufacture, the buyers are to pay small increases over the prices in the current contract in the case of milk for butter, condensed milk, tinned cream and milk powder. The scheduled retail prices are the same as those in the present contract.

PEPPER.—Wednesday's spot price for black Lampung (in bond) was 2½d. per lb., against 2½d. a week ago. Movements of pepper in London during the past week were as follows: Black, landed, 10 tons; delivered, nil; stocks, 1,758 tons, against 1,709 tons a year ago. White, landed, 13 tons; delivered, 27 tons; stocks, 12,140 tons, against 17,871 tons a year ago.

RICE.—The spot price of Burma No. 2, cleaned, new crop, was 9s. 3d. per cwt., ex warehouse, on Wednesday, as compared with 9s. per cwt. a week ago. "August-September," in singles to Continent and U.K., was quoted at 8s. 1½d. per cwt., against 8s. 1½d. last week. Movements in London during the past week were as follows: Landed, 16 tons; delivered, 287 tons; stocks, 2,101 tons, against 9,930 tons a year ago.

SUGAR.—The London market has been quietly steady. The New York spot market has displayed a similar tendency. The spot price in New York on Wednesday was 3-70 cents per lb., as compared with 3-70 cents per lb. last week and 3-65 cents per lb. a month ago. Wednesday's sales of raw sugar in London included December delivery at 4s. 5½d., against 4s. 4½d. to 4s. 4½d. a week ago. The movements of raw sugar at public warehouses in London and Liverpool last week were as follows: Imports, 23,268 tons, against 25,541 tons last week and 27,239 tons in the same week of last year; deliveries, 19,372 tons, against 19,940 tons last week and 17,346 tons last year; stocks, 123,111 tons, against 119,215 tons last week and 159,344 tons last year.

TEA.—The following table shows the average prices (compiled by the Tea Brokers' Association) of tea sold in Mincing Lane on Garden Account in recent weeks:—

Week ending	Northern India	Southern India	Ceylon	Java	Sumatra	Africa	Total
Aug. 22, 1935	d. 15-15	d. 10-66	d. 12-82	d. 9-88	d. 8-57	d. 9-60	d. 19-01
July 9, 1936	12-15	12-11	13-06	10-42	10-01	11-32	12-23
July 16,	12-27	12-07	13-35	10-34	10-09	11-51	12-41
July 23,	12-11	12-01	12-93	10-22	9-88	11-44	12-32
July 30,	12-05	11-81	12-81	10-32	9-84	11-13	12-18
Aug. 13,	12-67	11-86	12-86	10-23	9-76	11-20	12-47
Aug. 20,	14-04	11-90	13-03	10-47	9-91	11-34	12-07

The quantities catalogued for the public auctions in Mincing Lane this week comprised 47,276 packages of Indian and 26,640 packages of Ceylon tea. Despite the increase in supplies, competition for the Indian grades was active and prices showed a hardening tendency. At the Ceylon sales, however, the better quality teas displayed some irregularity; but common sorts were a good market. Quotations for all teas, with the exception of Northern Indian, are now above the level of a year ago.

VEGETABLES.—At Covent Garden tomatoes continue an active trade, states *The Fruitgrower*, with prices rather easier. Plentiful supplies of cucumbers encounter a somewhat slow demand, but mushrooms are in short supply and dearer. Cabbage, scarlet runners, marrows and cauliflowers are plentiful and prices rule low. Yorkshire green peas are also very cheap. Onions are easier, and all root vegetables sell at low prices. Meanwhile, supplies of potatoes at London markets remain heavy, and prices in some instances are easier. At the Borough on Tuesday, however, demand showed some improvement and prices were steady. King Edward were again quoted at 5s. to 6s. per cwt., ex market.

MISCELLANEOUS COMMODITIES

VEGETABLE OILS AND OILSEEDS.—Easier conditions in the markets in vegetable oils became accentuated, partly in sympathy with grains and partly as a result of the improved outlook for linseed supplies. The official report of the area under linseed in Argentina gave a larger acreage than was anticipated and this together with favourable weather conditions for late sowing and the fact that the old crop surplus had been underestimated tended to depress prices. The area sown in Argentina is returned at 7,286,000 acres compared with 6,570,000 acres sown last year, of which only 5,167,000 acres were harvested. Moreover, the market for linseed is restricted owing to the poor demand for oil which has registered a decline of 25s. per ton during the week. Raw oil for August and September-December delivery ex Hull dropped to £25 7s. 6d. with January-April at a small discount. There has been rather more pressure to sell Indian linseed, but Plate quotations retain a degree of firmness. Argentina's old crop surplus at the close of last week was returned at 34,000 tons, and India is expected to ship about 60,000 tons. Cotton

seed is not so firm. Dealings in old crop have stopped and for new crop, September loading, £8 is asked without any response. Trade in refined cotton oil is slow and export demand below expectations. Oilcakes are in fair demand and prices are steady.

TIMBER.—Imports of sawn softwoods last month were rather below the corresponding figure for 1935. Prices show a hardening tendency and the stocks are light. Imports from Canada have increased, though not to the 1934 level, and the rise in prices seems likely to encourage heavier entries from other sources. Continental demand remains poor, in contrast to the active conditions prevailing in this country. In hardwood markets are also generally firm, especially for teak, the demand for which is good. Business in mahogany, however, is slow, but logs of good size and quality generally find a market. Oak remains the most prominent feature, and increasing supplies have come forward this year. The demand

for many popular hardwoods, including maple and birch, should now begin to show an increase, since home manufacturers will be busy on articles for Christmas trade. Plywood imports this year have been well above the level of a year ago, but spot stocks are not excessive.

RUBBER.—The market in rubber was again dull, prices being scarcely changed on the week. The spot price in New York on Wednesday was 16½ cents per lb., compared with 16½ cents per lb. a week ago and 16½ cents a month earlier. Wednesday's official buyers' price for standard ribbed smoked sheet on the spot in London was 7½d. per lb., as against 7½d. on the corresponding day a week ago. In forward positions, business has been done at 7½d. for "October-December" shipment, as against 7½d. a week ago. Stocks in London and Liverpool at the end of last week totalled 109,461 tons, against 111,242 tons a week earlier. A year ago stocks amounted to 175,363 tons.

3 ATTRACTIVE AMERICAN
STOCK GROUPS

THE FINANCIAL WORLD OF AMERICA has just published an interesting analysis showing three balanced portfolios in American stocks. One program requires an investment of about £500, a second requires £1,000 and a third program amounts to £1,500 at recent prices. These stocks should reflect continued American business improvement and are likely to benefit substantially by further American inflation.

You may have a copy of the foregoing carefully selected American Stock Groups if you return this advertisement and 4 shillings for the next 4 issues of THE FINANCIAL WORLD OF AMERICA. You will also receive the following extra aids to your success in American investment: "The Most Attractive American Rails," "POINTING TO A MAJOR CREDIT INFLATION," Latest American Stock Ratings and Data Book, 64 "Stock Factographs," "Low Priced Utility Stocks" and "Intelligent Building of Investment Portfolios."

Post only Cheque or Postal Order for 4s. for our four weeks' trial offer, or £2 8s. for one year, to:

COMMERCE AND TRADE

DR. SCHACHT AND THE FRANC

IN recent weeks the redoubtable voice of the President of the Reichsbank has been reinforced by that of the new Governor of the Banque de France in urging the need for what is now euphemistically termed "an alignment of currencies" and for an increase in the volume of international trade. At the end of July Dr. Schacht started the ball rolling. In the first week of August M. Labeyrie repaired to Berlin and Amsterdam to discuss such problems with Dr. Schacht and M. Trip; and last week Dr. Schacht repaid M. Labeyrie's courtesy with a visit to Paris. In view of the trade and exchange stringency in Germany and of the financial problems facing the French Government, the conversations in Paris last week have acquired an interest disproportionate to the meagre *communiqués* which accompanied them. It is worth delving below the surface of the conflicting reports from the French capital; for they bear the marks of anticipation rather than of information.

For example, it has been widely reported that Dr. Schacht, fearing his inability to maintain his "New Plan" for control of imports and foreign exchange requirements during the coming winter, repaired to Paris in order to sound M. Labeyrie and the French authorities on the possibility of a Franco-German agreement for a *modus vivendi* in the event of devaluation both of the franc and the Reichsmark. Further, it has been surmised that he tried to obtain a joint Franco-German proposition for "currency alignment" with which to face the Anglo-Saxon authorities who control the sterling and dollar legs of the sterling-dollar-franc exchange tripod. Again, it has been reported that he had raised in Paris Germany's need of raw materials, free exchange, and colonies; and that he had been sent by Herr Hitler both to assure the French that the German Conscription Prolongation Decree of August 24th was not aimed at them, and that German re-armament could only be arrested by timely economic and political concessions to Germany. There are obvious inconsistencies in these reports; notably between the reported German demand for concessions and the reported proposals for a currency agreement with the French. For one does not commit diplomatic blackmail and simultaneously offer the other party a way out which, in any case, it would eminently suit him to take.

At the outset it may safely be presumed that Dr. Schacht felt himself the stronger of the two in his conversations with M. Labeyrie—or with anyone else in Paris. Had not M. Labeyrie been impelled to visit him first? And while Dr. Schacht must needs admit urgent exchange difficulties, the German finances certainly are at present under a stronger control, and may even enjoy better immediate prospects, than those of France. The only advantage which the French authorities can adduce is the absence of immediate foreign exchange stringency. Dr. Schacht is harassed by no efflux of German funds, no vested interest in devaluation (for private resources, like all others, are strictly amenable to State control in Germany), and no lack of lenders, voluntary or involuntary, to the State. He already enjoys some of the advantages of devaluation without certain of its disadvantages. His regiment of polyonymous Reichsmarks enables him to use a currency devalued by about 55 to 60 per cent. in his rôle as a debtor, and to employ the gold standard as a trade creditor—witness his success with all the smaller countries who can only use their blocked marks to subsidise Germany's exports. He has practically no gold stock which formal devaluation might enable him to "write up" for profitable purposes.

It is inconceivable, therefore, that he came to Paris as a suppliant—a part which Dr. Schacht in any case would decline to play. It is just possible that he mentioned Germany's need of colonies *en passant*; for he has always been identified with the movement for their return. We can safely assume, however, that that was not the object of his trip to Paris. It is also understandable if he took the opportunity to voice Herr Hitler's mistrust of the Franco-Soviet Pact, and in that connection deprecated French fears.

Moreover, an amicable exchange of views between the President of the Reichsbank and the authorities in Paris—and such it certainly was—might at least enable Dr. Schacht to broach the possibility of increasing the volume of Franco-German trade. Northern and Eastern France and the industrial Rhineland possess many complementary industries in which both French and German funds are invested. Proportionate increases in their exports to each other would enable the hard-pressed authorities in both

MINING SHARES

THERE is no market in which the Investor and the Speculator must be so much on the qui vive as that in Mining Shares.

Movements in the price of gold, development reports, financial complications, the trend of the exchanges—these and many other influences can often make startling changes in mining share values, almost overnight.

It is essential for every shareholder in mining enterprises to keep himself in touch with day-to-day events in the mining market world and their influences on his market interests. In

countries to improve industrial employment and profitability by "civil" means—without the costly and distorting effects of more and more extensive re-armament, defrayed by State funds and providing no yield.

It seems far more likely that Dr. Schacht's visit to Paris was undertaken in a spirit of inquiry rather than in response to overwhelming necessity. Dr. Schacht knows, as most observers know, that the French Government's social reforms have brought either devaluation of the franc or a thorough-going system of rigid financial controls well within the ambit of foreseeable contingencies. Prices are rising in France; but the Popular Front Government are trying with one hand to hold them down for the workers' sake, while with the other they are substantially raising the effective level of French costs. The Banque de France has been reformed by the Government, so as to be able to stand in the gap which the Treasury faces. It may well do so for a time, but the increasing import surplus, the disappointing revenue returns, and the meagre response to M. Vincent Auriol's "baby bond" issue, point a cogent moral. The Banque cannot lift the burden of higher costs from the shoulders of industrialists simply by lending them money, at cheap rates, to defray them. Such a process would soon make industry the biggest debtor of the State, without proportionately increasing its profitability. Nor can the Banque continue indefinitely to make advances to the Treasury; a limit will come long before its advances equal its gold stocks. Nor, finally, has the gold efflux from France ceased steadily to trickle.

In the light of these facts, Dr. Schacht may reasonably have assumed, after M. Labeyrie's visits, that MM. Labeyrie and Vincent Auriol were setting the stage for devaluation. That would not have been an inherently unreasonable construction to put on the French authorities' reiteration of the need for "alignment of currencies" and the relentless trend of opinion in favour of devaluation in France, which is now shared by many Communists hitherto opposed to it. In that case, Dr. Schacht might find himself faced with a *fait accompli* in or about November, when the dressing of the French Budget by the Chamber and Senate Finance Committees brings the issue into the political arena. That would leave him to decide, perhaps too suddenly for his liking, how to effect a devaluation of the Reichsmark to a lower level than that of the devalued franc; in which case he might well find the new Reichsmark at the mercy of a firmly reconstituted franc-dollar-sterling triumvirate. In this connection, it was circumstantially reported by *The Times* Paris correspondent this week that an unofficial emissary of the French authorities received an official assurance in London two months ago, when the French gold efflux was at its recent peak. The terms were said to be that as long as the degree of franc devaluation were reasonable and did not result in "dumping" by France, the British authorities would not only refrain from deliberate depreciation of their own currency, but would even support sterling if necessary. It was also reported that a similar assurance had been given in Washington about the dollar. (This, we may recall, was the gist of the assurance which we proposed in the *Economist* as long ago as February 18th last.)

In these circumstances, it seems natural that Dr. Schacht should have decided to continue without delay the discussions which M. Labeyrie presumably initiated in Berlin five weeks ago. And to us it appears commendable that he should have done so; for despite his iron control of German domestic finances the German exchange situation remains one of acute stringency. This may well be intensified during the winter. The slow revival in international trade renders Germany a slightly less necessary market to primary producing countries. And their experience of the conversion of their blocked marks into relatively costly imports of German manufactures is no recommendation for a repetition of their experience *ad nauseam*.

In our opinion, agreement between London, Paris and Washington on the conditions precedent to eventual devaluation of the franc is more necessary than ever to-day; and, as we said last February, the German situation cannot be left out of account. The present position and prospects of the franc afford a framework for such an agreement. Dr. Schacht must remain, therefore, for the present a *tertius*, if not *gaudens*, at least *vigilans*.

THE ANGLO-EGYPTIAN TREATY

THE text of the Anglo-Egyptian Treaty, which was made public after the ceremony of signature last week, is a notable achievement by both Governments. At a time when developments in Africa, the Mediterranean and the Near East have provided them with plenty of preoccupations, they can congratulate themselves on so auspicious a result of their labours. It is, perhaps, not out of place to reserve part of our congratulations for Signor Mussolini. Like the Anglo-Iraqi Treaty and the Statute of the Little Entente, this is a treaty of alliance as well as of friendship; and, in the preamble, the object is stated to be to provide, in the common interest of Egypt and Great Britain, "for effective co-operation in preserving peace and ensuring the defence of their respective territories."

The first article declares that "the military occupation of Egypt by the forces of His Majesty the King and Emperor is terminated." The feeling of relief will be as sincere in this country as in Egypt itself at the end of a dispensation which has dragged on for fifty-four years.

The recognition of Egypt as a sovereign independent State (Art. 3) repeats one of the terms of the British declaration of 1922. But the formula has a new meaning in a treaty in which Great Britain no longer unilaterally reserves control over four of the principal attributes of sovereignty in Egypt's case; and an earnest of British good faith is given in the announcement, in the same article, that His Majesty's Government will support the Egyptian Government's forthcoming application for admission to membership of the League of Nations. In another place (Art. 10) it is stipulated that nothing in the present Treaty shall prejudice the rights and obligations of the parties under either the Covenant or the Kellogg Pact (to which Egypt is already a party).

The new Anglo-Egyptian alliance is established in Article 4, and the next two articles make provision—on the lines of the Anglo-Iraqi Treaty and the Statute of the Little Entente—for the avoidance by the parties of any attitudes towards, or relations with, third parties that might be inconsistent with their present treaty engagements with one another; provision is also made for consultation between them in face of any situation that might involve the risk of a rupture with a third party. In the event of either party finding itself at war, the other is immediately to come to the aid of its ally (Art. 7); and no limitation is set to the aid which, in this event, Egypt is to receive from Great Britain. On the other hand, it is expressly stated that the aid which Great Britain is to receive from Egypt is to consist in furnishing "all the facilities and assistance" in the Egyptian Government's power, including the use of Egyptian ports, aerodromes and means of communication.

In the next article the Egyptian Government authorises the British Government to station forces—in the first instance for a period of 20 years—in a zone of Egyptian territory in the vicinity of the Suez Canal, with the proviso that "the presence of these forces shall not constitute in any manner an occupation, and will in no way prejudice the sovereign rights of Egypt." This arrangement is to come to an end when the parties "agree that the Egyptian Army is in a position to ensure by its own resources the liberty and entire security of navigation of the Canal." But if the British Government has not come to this conclusion by the end of a twenty years' term, then the question is to be referred to arbitration, either to the Council of the League of Nations or to some other agreed authority. This article is supplemented by an annex which defines the area of the Canal Zone; limits the British forces there to 10,000 land troops and 400 Air Force pilots (exclusive of civilian personnel); arranges for the accommodation and exercising of these British troops; provides for the improvement of Egyptian roads and railways on a number of specified sectors; lays down conditions for the passage of aircraft; and—more important than these technical points—gives the British Government permission to maintain some of its forces at or near Alexandria for the first eight years. The legal status of the British soldiers stationed in Egypt is to be determined in a separate convention.

Down to this point the new treaty follows very closely the lines of the agreed portion of the draft for a treaty which

was negotiated in London in 1930 between Nahas Pasha and the late Mr Arthur Henderson. And His Majesty's present Government have thus honoured Mr Henderson's promise—given to Nahas Pasha when the negotiations broke down in 1930 over the Sudan—that the failure to arrive at a comprehensive agreement should not invalidate the agreement that had already been reached on a number of important heads. In this sense, the British contribution to the present treaty is the work of H.M. Opposition as well as of H.M. Government. This is an additional guarantee of the treaty's durability.

It is in the agreement over the Sudan that the present Treaty breaks new ground. Here (Art. 11) the Parties wisely declare that "nothing in this article prejudices the question of sovereignty over the Sudan," and that the administration of the Sudan is to continue to be based on the two Anglo-Egyptian agreements of January 19 and July 10, 1899. Unnecessary occasions for abstract controversy having thus first been eliminated, an agreement has been reached by concessions on both sides. The Egyptian concession is implicit in the statement that "the parties agree that the primary aim of their administration in the Sudan must be the welfare of the Sudanese"; for this means the abandonment of the old Egyptian view of the Sudan as an Egyptian colony which Egypt was entitled to exploit mainly for her own benefit. She is to be heartily congratulated on the change of attitude which the Sudan article of the new Treaty puts on record. The other concessions in this article are all on the British side.

"Egyptian immigration into the Sudan shall be unrestricted except for reasons of public order and health"—*nota bene*, for this question of immigration is the point on which the negotiations of 1930 finally broke down. Moreover, Egyptian troops and administrators are to be re-admitted into the Sudan side by side with the British troops and administrators—subject to the proviso that this is to be done at the discretion of the Governor-General (who is an Englishman), and that neither Egyptians nor British shall be appointed to any administrative posts for which properly qualified Sudanese candidates are available. There is to be no discrimination in the Sudan between British subjects and Egyptian nationals in matters of commerce, immigration or the possession of property.

The earlier articles safeguarding British military interests in Egypt are balanced by Articles 12 and 13, which promise British assistance to Egypt in a cause which the Egyptians have much at heart: that is, the abolition of the old Ottoman Capitulations—which are still in force in Egypt, though they were swept away in Turkey twelve years ago and have been suspended in the ex-Ottoman territories that are, or have been, under mandate (e.g. in the now independent kingdom of Iraq). In Article 13 it seems to be hinted that Egypt may abolish the Capitulations unilaterally in the last resort, if she does not succeed in her forthcoming endeavours, with British backing, to obtain their abolition by the consent of the interested Powers.

At the end of twenty years the whole Treaty may be brought up by either party for revision by agreement, with the League Council or some other agreed authority as referee in case of differences of opinion. But in any case the alliance between the two parties is to be maintained in force "in accordance with the principles contained in Articles 4, 5, 6 and 7."

Apart from the technical annex to Article 8, the Treaty has several appendices: an agreed minute ranging over points of detail in a number of articles; correspondence providing for the replacement of the British personnel in the Egyptian Army by a British military mission, and at the same time arranging for uniformity between the Egyptian and the British Army in equipment and in training; and finally, correspondence envisaging the progressive elimination of European officials from the Egyptian Public Security Department.

Taken together with these appendices, the Treaty seems to carry agreement into all the nooks and crannies of Anglo-Egyptian relations. Because the settlement is so comprehensive, even in detail, it ought henceforward to be a good guarantee of happy relations between Egypt and this country.

HOUSING IN AMERICA

THE crucial part which building trade activity has played in British trade revival is everywhere admitted. In America, however, though the need for improved housing facilities has been no less urgent than in Great Britain, the contribution made by the building industry to trade revival has been much less conspicuous, to say the least.

Two years ago, a survey of housing conditions in sixty-four American cities showed that, of 2,633,135 units housing a population of nearly 10 millions, some 20 per cent. of rented houses and 13 per cent. of owner-occupied houses had no indoor sanitary facilities; that 28 per cent. and 16 per cent. had no bath or shower; and that 48 per cent. were over twenty years old. A survey in the country areas revealed that four out of five rural houses had no running water; that three out of four had no gas or electricity; and that there was a need for the expenditure of \$3,500 millions to put these dwellings into good condition. America's estimated requirements, for slum clearance, the replacement of housing deficiencies and the abolition of overcrowding, have been put at ten million houses during the next ten years.

The need is obvious, but as yet few steps have been taken to meet it. According to the F. W. Dodge Corporation, residential construction contracts (inclusive of repairs) in 37 States east of the Rockies were \$2,748 millions in 1925 and averaged \$2,700 millions up to 1928. In 1933-34 the total fell as low as \$249 millions—less than one-tenth of the pre-depression level. Even in 1935, it increased only to \$479 millions, though it has shown signs of more rapid revival

in recent months. It used to be estimated that, with America's population increasing by 1.6 per cent. per annum, some 500,000 new dwellings were needed each year merely to keep pace with the increase. In fact, during the quinquennium 1931-35, the annual rate of increase was only $\frac{3}{4}$ per cent., but deficiencies of housing accommodation have piled up during the depression. The building permit figures for 257 cities showed a total of 490,000 new dwelling units, single and multiple, in 1925, but no more than 25,000 in 1934 and a little over 50,000 in 1935. That the housing deficiencies cannot be made good entirely by private enterprise is generally admitted. Even the advocates of private enterprise agree that Government action may be necessary to satisfy the needs of workers with incomes below \$1,000 a year, for houses not exceeding \$2,000 in cost. Advocates of wider Government intervention maintain that private enterprise cannot produce houses at a rent within reach of the \$1,500 or even the \$2,000 a year classes. As 50 per cent. of the American people at present have incomes falling between \$1,000 and \$2,500, and possibly 30 per cent. have incomes below \$1,000, it would seem that the problem certainly lies on the border line between private and public enterprise, and may be, in large part, insoluble, without some form of State or Federal subsidy.

Whether the private builder receives Government assistance or not, he must necessarily carry out the actual building operations over a large part of the entire field. It has been suggested that a private building boom is now, in fact, in its early stages, but the evidence is not wholly conclusive. Throughout the depression, building costs have been relatively unresilient. If the year 1926 be taken as a base, the Department of Labour's index of wholesale prices of all commodities was 95 in 1929, 65 in 1932, and 80 in 1935. The *Engineering News Record* index of building labour-material costs (which account for about 75 per cent. of the whole) was around 100 in 1929, 75 in 1932 and 94 in 1935. The need for all classes of property, again, is not uniform. The last boom has left a surplus of large-apartment houses. Demand for small apartments, it is true, is rapidly increasing, as a result of the favourable influence of rising national prosperity on the marriage rate and the ability of families formerly living together to set up house for themselves. Nevertheless, if any new construction boom occurs, its main field of activity is likely to be the single family dwelling rather than the apartment house. The increase in speculative building of this type of dwelling has so far been directed mainly to houses costing at least \$7,500, which are too expensive for the majority of potential buyers. Even if technical improvements and other factors combine to reduce this minimum figure, the extent of effective demand may be a function not only of industrial recovery, but also of the ability of would-be purchasers to obtain mortgage facilities.

In America, hitherto, mortgage rates have been higher than in England, and a smaller proportion of the total purchase price has been obtainable on mortgage. Fortunately, the position appears to be changing, to the borrower's advantage. In New York City, mortgage rates ruling at about 6 per cent. before the depression have fallen to 5 per cent., and this experience appears to be fairly typical of conditions in other parts of the country. The intervention of the Federal Government in the mortgage field, undoubtedly, has been decisive. The building and loan societies, whose work was largely paralysed by the depression, were rescued in 1932 by the new Federal Home Loan Banks, which will rediscount mortgages. This was later supplemented by a Federal Savings and Loan Insurance Corporation, which performed the same service for the depositor in these institutions as that of the Federal Deposit Insurance Corporation for depositors in commercial banks. The freezing of real estate loans did much to precipitate the banking crisis of 1933, and the action of the authorities checked the process of foreclosure, which was proceeding with catastrophic rapidity. A further measure of protection was provided by the Home Owners' Loan Corporation, which took over about one million mortgages and issued some \$3,000 millions of its own bonds. In 1934, the Federal Housing Authority was established to insure approved loans for modernising and repairing houses, up to individual totals of \$2,000 or 20 per cent. of the cost, and to

insure mortgages on new homes up to \$16,000, or 80 per cent. of their value. It was provided that charters were to be given to private mutual mortgage associations, which were authorised to issue debentures against the purchase of insured new mortgages, up to ten times their minimum capital of \$5 millions. The Federal Reserve Act was so amended as to allow commercial banks to rediscount real estate mortgages, to buy mortgages up to 60 per cent. of their approved value or 100 per cent. of their own banking capital and surplus, and to deal in the insured mortgages of the Federal Housing Authority. The Reconstruction Finance Corporation formed a Mortgage Corporation, initially for the relief of apartment houses and hotels in large cities and, later, to purchase insured mortgages from original holders. Recently, insured mortgages have found a fairly ready sale with the public, which is protected by the provision that in the case of default the Federal Government will substitute its own 3 per cent. bonds; and since the Government is responsible for the Federal Deposit Insurance Corporation, it is under some obligation to indemnify depositors in commercial banks against any losses through the new freezing of the banks' mortgage holdings.

Although the Federal Government's policy in the mortgage field has been mainly opportunist, and the resulting system is neither scientific nor symmetrical, it is generally agreed that its salvage work has been beneficial. If cheap money continues without any new rise in building costs, while rents increase sufficiently to stimulate the speculative builder, recovery in residential building may be encouraged by a rising national income. The Department of Commerce has estimated the national income in 1935 at nearly \$53,000 millions, against \$39,500 millions at the bottom of depression in 1932. There will remain, however, a considerable field for public enterprise in low-cost housing projects for slum clearance and other schemes which are insufficiently profitable for private enterprise. So far, the Federal authorities have endeavoured to promote activity along these lines by initiating projects of its own with a grant of 45 per cent. of the cost, rents being fixed to pay interest on the balance. So far, however, the effort has not been particularly successful. An unfortunate result of the absence of co-ordination in Federal activity has been a jealous three-cornered rivalry between the interests grouped around the Federal Housing Authority, the Home Owners' Loan Corporation, and the Public Works Administration. An attempt was made to solve the problem along P.W.A. lines, in a bill introduced by Senator Wagner, but the measure had not been passed at the close of the last session of Congress.

It may be concluded, therefore, that while the scope for new residential building activity is at least as wide in America as in Great Britain, neither in the public nor the private field has new constructional activity reached, proportionately, anything like the British dimensions as yet. If and when the Government, having overcome the difficulties bequeathed by the last depression, turn their attention systematically to the problem of re-housing, it may be hoped that one lesson at least will be learned from Britain's experience, and that re-housed slum dwellers will not be condemned to a lower standard of living by significantly increased rents and transport costs.

COMMERCIAL MOTOR PROGRESS

(BY A CORRESPONDENT)

THE number of commercial motor vehicles on British roads has increased this year. New registrations of goods vehicles numbered 58,643 for the nine months October-June. This record figure was 10.8 per cent. higher than the corresponding total for last year. It reflects an improvement which began early this year and is still in evidence. Omnibus sales at 4,222 (against 3,659) were higher than at any time since the coming into force of the Road Traffic Act of 1930. The number of omnibuses in use, exclusive of trolley-buses, has been stabilised by the Traffic Commissioners at around 45,000, including about 7,500 Diesels. The total goods vehicles in use have increased from 409,935 in May, 1935, to 433,531 this year.

Improvement has been most marked in the lighter type of goods vehicles and the medium and heavy classes of passenger vehicles. In both cases the present statutory position of road transport is one of the most important factors in demand. The Road and Rail Traffic Act of 1933 has served to concentrate attention on the total unladen weight rather than the number of vehicles. There has been a definite tendency to replace fleets of heavy-weight trucks by a larger number of light or middle-weight vehicles. On the other hand, the policy of the Traffic Commissioners in restricting the number of omnibuses on particular routes, rather than their seating capacity, naturally induces operators to increase the size of their vehicles whenever this can be profitably undertaken.

The manufacturers of the lighter classes of goods vehicle, up to 2½ tons unladen weight, have recently enjoyed a period of exceptional activity. These vehicles are mainly purchased by ancillary users, the expansion of whose road fleets, unlike those of road hauliers, is not restricted by law. The growth of new housing estates, outside the old urban areas, is compelling distributive firms continually to extend their delivery radius. New registrations of goods vehicles not exceeding 2½ tons unladen have increased this year by 12.9 per cent., from 47,595 to 53,735, and have accounted for 91.6 per cent. of all new lorry registrations. Within this class the most spectacular advances have been made by light vans not exceeding 12 cwt., which have increased by 27.7 per cent. from 9,894 to 12,638, and by "middle-weights" of 2-2½ tons, which come just below the legal line of demarcation between a "motor car" and a "heavy motor car." These have advanced by 26.3 per cent., from 13,480 to 17,019. These vehicles are increasingly popular with haulage contractors. The increase in the advertised carrying capacity of vehicles in the 2-2½ ton class, which has been raised during the past two years from an average of 40-50 cwt. to 60-80 cwt., and sometimes even more, undoubtedly contributes largely to their popularity, the manufacturers having concentrated their efforts on obtaining the highest possible ratio of pay-load to unladen weight.

Probably over 70 per cent. of the market for goods vehicles not exceeding 2½ tons is in the hands of three firms, Bedford (Vauxhall), Ford and Morris Commercial. Several of the other leading car manufacturers, notably Austin, have a substantial business in light delivery vans; and imported American vans and light lorries, such as Dodge, Studebaker and Reo, are gaining a foothold in the British market. Efforts to establish the light Diesel have not so far been successful. There have been no new registrations whatever of light-weight vehicles using steam, coal gas, producer gas, or any other fuels than petrol, heavy oil and electricity. Among the heavy-weight vehicles, sales of petrol lorries of over 2½ tons have decreased from 4,200 to 3,946, and Diesels have decreased from 1,079 to 926. "Steamers" numbered only 21, and can no longer be considered a factor of importance.

The setback to the Diesel must necessarily be disappointing to the two largest "heavyweight" manufacturers, who make their own engines, since their production now consists largely of Diesel vehicles. The other "heavyweight" manufacturers, for the most part, still make their own petrol engines, but buy Diesel engines, and instal them in chassis they have themselves built. Under existing conditions, it seems improbable that there will be any general revival in the popularity of the "heavyweight" on the home market. In some cases the "heavyweight" manufacturers are endeavouring to enter the "middleweight" market, but here the hold of the big three "lightweight" manufacturers is strong and their prices are low. The heavy vehicle section has, consequently, devoted increased attention to exports, and it is responsible for a large proportion of the whole commercial vehicle exports, which have risen this season from £2,141,906 to £2,413,164.

The most satisfactory experience of the heavy section of the industry has, undoubtedly, been the passenger section. New Diesel bus sales have increased from 1,602 to 2,066 and trolley-buses from 137 to 287, while sales of petrol buses have fallen from 1,920 to 1,869. The Diesel is forging ahead on the passenger side, where the saving in fuel costs on high mileages is sufficient to offset the heavier initial outlay. Further, the difference of about £150 in

capital cost between a Diesel and a petrol omnibus represents a much smaller proportion of the total cost of the complete vehicle than in the case of the lorry. The present scale of demand for new omnibuses is higher than the replacement level of 4,500 vehicles per annum, allowance being made for the fact that the best months for omnibus sales are in the summer. This condition is largely due to the decision of omnibus-operating companies to expedite their renewal programmes in order to profit by the lower operating costs of Diesel vehicles.

The most recent significant development in the passenger transport vehicle industry, however, has been the increase in sales of trolley-buses, which are being gradually substituted for electric trams by the London Passenger Transport Board and many municipal authorities. There are now some 1,500 trolley-buses in operation. It is true that some 10,800 trams are still in use, but as the obsolescence of the trams is now generally admitted, it is expected that a very large number will be replaced by trolley buses in the next few years. The legal position of the trolley-bus is curious. It is necessary for a local authority to obtain a special Act of Parliament before it can operate trolley-buses. Once these powers have been obtained, however, the operation of the trolley-buses is outside the sphere of the Traffic Commissioners, who are responsible for the control of buses using every other form of motive power. This anomaly will doubtless be corrected in due course. The majority of the trolley-buses sold are the products of three firms, the Associated Equipment Company (which uses the English Electric Company's equipment); Leyland (with General Electric Company equipment); and Sunbeam, controlled by Rootes (with British Thomson-Houston electric equipment). There is, probably, more scope for expansion in this market in the next few years than in any other section of omnibus manufacture. In other branches of the industry, once the omnibus-operating companies have completed the substitution of Diesel for petrol vehicles, demand will inevitably fall back to the normal replacement level. That condition is likely to continue so long as the Traffic Commissioners follow their present aim of stabilisation rather than expansion in the omnibus industry.

THE "QUEEN MARY"

THE "Queen Mary's" record, like the summer of 1936, has been rather long in coming. But, if the hopes of May remained unfulfilled till the end of August, there is none the less—indeed, perhaps the more—reason for rejoicing at their eventual fulfilment. For another chapter in the great ship's eventful story, now indissolubly linked, it seems, with the national fortunes, has been completed. Following on her capture of the East to West record a fortnight ago, she returned last week from the Ambrose Lightship to the Bishop Rock in 3 days 23 hours and 57 minutes at an average speed of 30.63 knots, the fastest crossing ever made. There is, perhaps, no more spectacular example of the technical triumphs of the modern world than the fact of a ship, or rather a floating city, as large or larger than the British Houses of Parliament, travelling unscathed through the ocean at not much below forty miles an hour. Drive a car at a corresponding speed down any second-class country road, and the "Queen Mary's" 30.63 knots becomes almost impossible to believe. To the engineers and workers of Clydebank, accordingly, we can all pay a most sincere tribute of wondering respect.

Perhaps that tribute would have been a little more spontaneous if the workers had been left to do their work unassisted by publicity experts. Nowadays, however, it seems that an up-to-date business firm, no less than an up-to-date Government, must have its Department of Propaganda and National Enlightenment. As a result, the story has had its moments of comedy, as well as melodrama and tragedy; and the layman, ignorant of marine economics and marine engineering, has found himself not so much enlightened by the glare of propaganda, as blinded and bemused. At one time he was told that the "Queen Mary" was to be the world's largest liner; yet, on the very day of her launching it was discovered that the

"Normandie" had grown several thousand tons and out-distanced her younger rival by a curiously narrow margin. There were even stories—surely not to be believed—of unobtrusive agents of the two companies, travelling incognito, visiting the rival ships in dry dock and returning unobserved.

Moreover, when the "Queen Mary" took to the water, the fog, if anything, grew thicker. She was a triumph, some said, of æsthetic dignity and graceful lines. On the contrary, whispered others, she entirely lacked the streamline of the "Bremen," "Europa," and "Normandie," and was unashamedly Victorian in design. Then there was an apparent difference of opinion about the intentions of her owners. The essential idea, we were told, was to provide two ships, as small and as slow as possible, but capable of maintaining in partnership a weekly service; and there was to be no question of breaking records. Yet the whole world was invited to attend, or at least follow, the maiden voyage of a lonely virgin; and it was only an inconvenient Atlantic fog, we were assured, that prevented her breaking the record after all. The fog, and other meteorological misfortunes, dogged her footsteps throughout the summer; until one day the layman was surprised to learn that the "Queen Mary" was in dry dock and that her engines were being examined and adjusted. Not long afterwards, just before the record-breaking trip, it was reported that the builders had waived a provision prohibiting the full use of her turbines and the development of a horse-power said to be 30,000 greater than the 170,000 of the "Normandie." At the same time certain of the ship's officers were recalled from holiday; and, though we were still assured that there was no question of breaking records, the record was duly broken on the very next trip.

Nor, despite the brilliant weather that welcomed the heroine home, has the fog entirely lifted even now. In one interview an official of the ship refused to state whether the last reserve of horse-power had been used; while another remarked that there were "still some more horses in the bag"—which an august contemporary translated: "The 'Queen Mary' had not utilised all her horse-power." And it has since been authoritatively stated that though the

ship was "let out," this was only done to obtain technical experience. Meanwhile one spokesman has remarked there was absolutely no vibration on the ship, and another that vibration occurs in every ship at certain speeds. Nevertheless, for all these trivial uncertainties, and even despite the possibility that the "Normandie" may find before the winter an Atlantic calm and fogless enough to go 0.4 knots faster, the general public will have no longer any doubts that the "Queen Mary" has won a famous victory. If anything were necessary to prove it, it would be the fact that she has conquered not merely the Atlantic but the advertisement hoardings in this country. Her familiar form meets one at every turn, and urges the benefits not merely of ocean voyages or even of oil and petrol, but of cigarettes, of patent medicines, of cosmetics, and of beer.

Whether the "Queen Mary" is a business proposition from her owners' point of view, whether a great ship designed for a double service can prosper alone, how great are the running costs incurred at 30 knots, are known only to the experts. But it seems, on the face of it, as though the "Queen Mary," like those Governments which came to power on the eve of recovery from the great depression, has been favoured by the gods. Wall Street prices are rising; and all the auguries tell us that the upward swing of the business cycle has at least 18 months to go in the sterling world and perhaps three years in America. May not the "Queen Mary" therefore count on another two summers of Transatlantic exuberance? But what after that? Will the second giant, not yet laid down, take to the seas just as another great slump drives the now bullish American millionaire scuttling to cover? And how about the proposed Imperial Airways Transatlantic services that are already being prepared at Southampton and Portsmouth? And is the "Hindenburg" a possible rival also?

Clearly the saga is only beginning, and there will be many chapters yet to tell in the fabulous career of the "Queen Mary." In 1929-30 she was born at a time of national optimism. In 1931 she was abandoned in a mood of despair. In 1934 came the day of re-awakening, and in 1936 of triumph. What will the next chapter bring? We shall not hazard any other answer than that the world still has its troubles, and the Atlantic Ocean its fogs.

NOTES OF THE WEEK

The Spanish Struggle.—The lull which we noticed last week in the south and north-west of Spain has given way to a storm of activity; and on the north-west front round Irun and San Sebastian it has reached a furious intensity. After a desperate, and by all accounts heroic, resistance round Irun the Government forces were beaten back on Wednesday. The next battle will be for San Sebastian; and if this falls the rebels will have harbours in the north as well as in the south, and direct land communication between them along the Portuguese frontier. Spain will be vertically divided, with the separatist Asturias miners' militia holding out in the *enclave* round Oviedo. In Estremadura, south-west of the capital, General Franco's forces seem to be making slow, if any, progress; in the Sierra de Guadarrama, covering the approach to Madrid from the north-west, the by now well-organised Government troops seem to be more than holding their own; and round Huesca and Saragossa the Catalan supporters of the Government are drawing their net tighter. Nothing yet indicates an early termination of the bloody struggle; and the principal diplomatic representatives in Spain have secured little encouragement for their proposals to humanise the conduct of the conflict—in any case, more encouragement from the Government than from the rebel Generals Franco and de Mola. The most disturbing news of the week is the long-drawn-out delay of the German and Portuguese Governments to put into practice their "agreement in principle" to the French plan for effective abstention from active assistance to either side in Spain. Both Por-

tugal and Germany are authoritarian States whose dictatorships can easily prevent, if they want to, the obvious economic and military assistance which their citizens, if not their servants, are consistently giving to the rebel forces. The number of German and Italian bombing aeroplanes now in use by the rebels seems to be rapidly increasing; and the British Government's instructions last week to their Ambassador in Lisbon seem to have produced no effective response from the Government of the Portuguese "economist dictator," Dr. Salazar. In these circumstances, the loyal observance of M. Blum's international neutrality pledge by Britain, France and the smaller democracies is in fact only penalising the Spanish Government. It is being turned by the non-conforming Powers into active assistance to the rebels. Such a travesty of international good faith should cause the British and French Governments grave misgivings over the situation which may consequently confront them in North Africa and Spain. It may not be the Spanish Government which sustains the real defeat in Spain. And it may not be Generals Franco and de Mola who, in Spain as on the African coast opposite Gibraltar, enjoy the real fruits of victory.

Naval Finesse.—Limitations on the size of the American, British and Japanese naval strength under the Washington and London Naval Treaties expire at the end of this year; thereafter, all the Naval Powers are free to build what quantity of ships they like in any category, pro-

vided they merely inform each other of their programmes. The United States and British Governments have agreed to avoid competitive building. They and the French, after the end of this year, will be the only naval Powers linked by the relic of the Washington system, barren as it is. Italy and Japan retain isolated liberty of action, while Germany's navy is limited to 35 per cent. of the British total tonnage, with a vague limitation on its total submarine strength, under the Anglo-German Naval Agreement of June 18, 1935. In accordance with the terms of the expiring London Treaty, the British Government informed the Japanese Government last July, more as a gesture than anything else, that they proposed retaining in commission 40,000 tons of destroyers which would otherwise have been scrapped at the end of this year. (During the last Commons debates on the Navy Votes strong demands were made by a section of the Conservative Party, led by Mr Churchill, for the retention of the destroyers in question.) The Japanese Government, under the "escalator clause" of the London Treaty, would have been "entitled to a proportionate increase in the category or categories specified." They have replied, however, by announcing smaller increases both in submarines (15,598 tons) and destroyers (12,059 tons)—making 26,657 tons against 28,133 tons under the old 3—5 ratio. This seems to be against both the letter and spirit of the Treaty. One of the main reasons for the British Government's retention of their ageing destroyers was the lack of any general agreement on submarine strength among the European Powers. If Japan and Italy remain outside any agreement, and if Germany, possibly, proceeds to develop her submarine strength, an unrelenting naval race may soon be well under way.

A New Move in Palestine.—The deadlock in the negotiations for a settlement in Palestine has perhaps been successfully broken, thanks to the good offices of Nuri Pasha, the Foreign Minister of Iraq. On a visit to Jerusalem last week, Nuri Pasha discussed the Palestinian situation with the Higher Arab Committee and offered to mediate between the Palestinian Arabs and the Mandatory Power on condition that the Palestinian Arabs agreed to certain conditions (laid down by Nuri Pasha and still undisclosed) for stopping the strike. After some vacillation, the Arab Committee invited him back and completely agreed with him last Sunday on procedure. According to a *communiqué* published by the Mufti of Jerusalem, president of the Committee, "a complete understanding was obtained and unanimous approval of the intervention of the Iraqi Government, as well as that of the [?] other] Arab sovereigns and princes." It is also announced that Nuri Pasha is going to initiate the necessary official correspondence, and that the Palestinian Higher Arab Committee is going to present the understanding with Nuri Pasha to a congress of national committees for confirmation. Pending a settlement, the strike is to go on. There is no suggestion that Nuri Pasha has obtained, or even sought, any preliminary assurances from the Mandatory Power. The Cabinet Council which met again on Wednesday—and from which the Prime Minister was again absent—deliberated for some time on the Palestine situation. It was reported on Thursday that British manoeuvres had been cancelled in order to send more troops to Palestine; and it was rumoured that this was a prelude to declaration of martial law. If His Majesty's Government, or their representatives in Palestine, do consent to negotiate on the Palestinian question with the Foreign Minister of Iraq, they will be recognising that the Arab, as well as the Jewish, interest in Palestine is not confined to the members of the community who happen to be inhabitants of this tiny country, but extends to all Arabs—as it admittedly extends to all Jews—throughout the world. A recognition of this principle would be politic, for it would certainly ease the tension on the Arab side. It would also be common sense; for the non-Palestinian Arab factor in the Palestinian problem is a very pertinent fact. Even if the last Palestinian Arab were beaten or bribed out of the country, Palestine would still remain a tiny enclave in a vast Arab world extending from the Taurus to the Indian Ocean and from the Persian Gulf to the

Atlantic. With this circumambient Arab world Zionism must somehow come to terms if it is to have any future in Palestine itself.

Poland and the "Old Love."—This week France has seemingly renewed an alliance and lost a friend. General Rydz-Smigly, Inspector-General of the Polish armed forces since Marshal Pilsudski's death last year, has quickly repaid the visit which General Gamelin of the French General Staff made to Warsaw a fortnight ago. The Polish semi-official Press has assured France and the world that Poland remains faithful to her military alliance of 1923, despite the ten-year Polish-German non-aggression pact of 1934. It may be surmised that the war-time commander-in-chief of the Polish forces hastened his visit to Paris as a result of the Nazi Government's Decree of August 24th, which doubled the effective conscript strength in Germany ostensibly because of "the Russian threat." Poland stands in an uncomfortable position, and it would not be surprising if, as is reported, General Rydz-Smigly discussed the possibility of a loan in Paris for the equipment and mechanisation of the Polish army. (Incidentally, both General Gamelin and General Rydz-Smigly travelled by Vienna without crossing German territory.) It seems certain that Polish foreign policy is identical with defence of the integrity of Polish territory from infractions in the east as in the west; and as it is unthinkable that Russian forces should wantonly invite Poland to join the Nazi camp by invading Poland on their way to Germany, it can only be assumed that Poland distrusts Nazi policy in Eastern Europe—despite the French and Czech pacts with Russia. Poland may well wonder what train may be fired by the Nazi intransigents in Danzig; for German mechanised divisions in East Prussia and bombers at Danzig might close Poland's vital outlet to the Baltic. The German attitude over Memel is hardly likely to diminish her preoccupations; and a *rapprochement* with France, and through France with Czechoslovakia and Russia, seems on the *tapis*.

France and Roumania.—This week France has lost her friend M. Titulescu, for fifteen years (with short exceptions) Foreign Minister of Roumania and one of the architects of the Little Entente. The new Roumanian Cabinet, from which M. Titulescu has been dropped, is ostensibly to suppress armed political groupings; but from its complexion it seems possible that this will be construed as the suppression of the peasants' "defence corps" (on which M. Titulescu depended for support against the Iron Guard) in favour of the Fascist Iron Guard itself. As M. Titulescu had the support of the peasants, and the violent opposition of the Iron Guard, for his policy of co-operation with France, the Little Entente and Russia, it may be that French solidarity with the Little Entente will be weakened as a result of this week's change in Bucharest. On the other hand, political intrigues are no new phenomenon in Roumania, and M. Titulescu has more than once been dropped, only to reappear a few weeks or months later with renewed vigour. And it may safely be presumed, for the present, that the new Roumanian Cabinet will not lightly forgo the proceeds of the recent loan from Prague for the construction of a strategic railway and the supply of Czech armaments. Berlin is a long way from Bucharest.

Three-Cornered Duel in Germany.—The Catholic Church is evidently convinced that the ultimate conflict in the world to-day is the struggle between Catholicism and Communism, and that there is not room in the world for these two faiths to live permanently side by side. This belief plainly emerges in the attitude of the Vatican towards the Spanish civil war; and it was, no doubt, one of several considerations which prompted the Pope cautiously to commend Signor Mussolini for his Ethiopian victory. There is, however, another claimant to the rôle of principal antagonist of Communism. This, of course, is Herr Hitler's National-Socialist Germany. Hitler is convinced, for his part, that his personal mission is to save not merely Germany but Europe from Communism—with a hegemony over the Europe which he will have salvaged as the inevitable and legitimate reward for his services to European civilisation. There cannot be two protagonists in one play: hence it is extraordinary to witness a German regime which claims to save Christendom from Bolshevism actually persecuting both the Catholic and the Protestant churches in exactly the same manner as the Church is persecuted in Russia by those Communists from whom Hitler is to rescue our Christian European culture. The paradox was pointed out in a pastoral letter drafted at a conference of German Catholic prelates the week before last. It was read from the pulpits of the Catholic churches in Germany last Sunday. The German bishops accept the Hitlerian thesis that Communism is the supreme menace with which Germany is confronted; and they point out—with a logic which in different ways may be equally disconcerting to Herr Hitler and to others—that the present disturbance of the unity of the German people in the field of religion is irreconcilable with Herr Hitler's own proclaimed policy. They ask why, in an anti-Communist Germany, the sphere of influence of Christianity and of the Church should be progressively circumscribed until it is confined to the Liturgy within the church walls. They demand, for their own Church, the same range of activity as is granted by the Nazis to the sects on which they look with favour—"German Christians," Rosenbergs, Hauserite Wotan-Worshippers, and the like. They further demand that the terms of the Concordat, signed by Herr Hitler three years ago, be carried out. Will Hitler close with the bargain offered him, to secure the Catholics' support? Or is the idol of German nationalism too fanatically jealous a god? Perhaps he may be inclined towards moderation by the discontent which is markedly rising as conscription and the costs of re-armament press more and more heavily upon the German civilian population.

Mussolini Talks Again.—This year the Italian army manoeuvres have been held in the South of Italy, which is the jumping-off ground of the new Roman Empire in the direction of its African goal. This has given Signor Mussolini the occasion to repeat some things he has said before. Now that he has proved in Abyssinia that he can bite as badly as he barks, the Italian dictator's words have to be taken very seriously by the rest of us. On August 28th he was addressing the civil population of Lucania at the provincial capital, Potenza, and he took occasion to congratulate Lucania on being the most prolific province of the kingdom. "The prolific peoples—those who have the pride and will to multiply their race—have the right to an empire." In other words: first create a population problem by political propaganda, then find a solution for it by military force. On August 30th he was speaking at Avellino to a mixed audience of civilians, blackshirts and soldiers, and he began by telling them that the powerful and well-equipped forces which had just been engaged in the manoeuvres were an almost negligible fraction of the 8,000,000 men whom, like Pompey, he could conjure out of the ground by just stamping his foot. He went on to tell them that, in Ethiopia, the exploitation of the spoils of "one of the most righteous wars that history records" would occupy Italy's energies for several decades; and that for this reason, among others, he wanted to remain at peace for as long as possible. He denounced, however, as he has often done before, "the absurdity of perpetual peace, which is alien to our doctrine and our

temperament"; and he then recited to his audience a number of reassuring symptoms which indicated, in his opinion, that the canker of peace in Europe was unlikely to be a long, long one this time. After "the catastrophic failure of the Disarmament Conference," in face of an armaments race "which has already been unleashed and which now cannot be arrested," and also in face of "certain political situations which are developing ambiguously," Mussolini told his countrymen that, "for the Italians of the time of Fascism," it was necessary "to be so strong as to be able to confront all the eventualities and look firmly in the eyes of any destiny whatsoever." Is this megalomania? Is it *hubris*? Does Mussolini really believe that, in a war of all against all in Europe, Italy would be among the victorious survivors (if "victory" and "survivor" any longer have a meaning in war)? Is he counting on association in war with the forces of Germany? If so, he should recall Machiavelli's advice to his Prince—"never go into war with one stronger than yourself"—for the allies of a victorious Germany would be as much at the victors' mercy as their defeated adversaries. Mussolini's language may be something more than mere clap-trap; but we cannot imagine what kind of future he pictures for Italy in an infernal Europe.

The Road Traffic Census.—The Ministry of Transport has lately been prolific of interesting and important statistical reports on the growth of road traffic and its effects on life and limb. The recent report on fatal road accidents was reviewed in last week's *Economist*. This week there have been published the results of the census of traffic on Class I roads which was taken in the month of August last year (a similar census of traffic on Class II roads was taken last month). It may be permissible to voice a preliminary regret that two such obviously connected factors as traffic and accidents have not been studied in closer conjunction. This study must undoubtedly be in progress in the Ministry, and it is to be hoped that its results will be published in due course. The last traffic census previous to 1935 was in 1931, the long interval being due to the outburst of Governmental economy shortly after the 1931 census was taken. Figures for the same traffic points in both censuses show that the number of passenger vehicles increased over the four years by 33.59 per cent., the number of goods vehicles by 44.71 per cent., while the number of horse-drawn vehicles declined by 26.82 per cent. A comparison of the figures for passenger and goods motor vehicles with the registration statistics gives an interesting result. Registrations of private motor cars and hackney vehicles were 11.6 per cent. higher in the third quarter of 1935 than in the same quarter of 1931. Traffic, however, was 33.59 per cent. higher. In the case of goods vehicles, registrations were 12.1 per cent. higher and traffic 44.71 per cent. higher. It appears, therefore, as if the average vehicle of either class is now getting more intensive use than formerly, and that this applies especially to goods vehicles. This, of course, makes the problem of the roads even more serious than the registration figures alone would indicate. The largest increase in traffic is attributable to pedal cycles, which have increased by no less than 94.98 per cent. in four years. This increase shows a greater geographical differentiation than the changes in other forms of traffic, which are fairly evenly spread over the country. Increase in pedal cycles, however, varies from 53.79 per cent. in the Eastern division to 119.3 per cent. in the Northern division. Smaller localities show even greater divergences, the change ranging all the way from a decrease of 5.58 per cent. in Clackmannan and Sutherland to an increase of 301.28 per cent. in the County Borough of Preston.

The Flow of Traffic.—An attempt was also made in the Road Traffic Census to collect information on the growth of traffic in different kinds of districts and on the variation between peak and "off-peak" hours. For the former purpose, traffic points were classified according as they were in Industrial, Agricultural, Residential-Suburban or Tourist districts. The report gives the figures for a number of specimen points in these four categories,

from which the following table has been calculated:—

	Passenger Motor Vehicles	Goods Motor Vehicles	Horse-drawn Vehicles	Pedal Cycles
	%	%	%	%
Industrial	+ 35.0	+ 30.6	— 30.8	+ 182
Agricultural	+ 29.7	+ 54.7	— 8.8	+ 73
Residential-Suburban	+ 20.3	+ 33.0	— 42.4	+ 61
Tourist	+ 40.8	+ 57.7	— 34.0	+ 75

Perhaps the most interesting fact emerging from this table is the great increase in cycles in industrial districts, tending to show that the popularity of the cycle is not primarily due to the craze for cycle touring, but to its greatly increased use by workers in getting to and from work. This is confirmed by the facts about peak-hour traffic, which show that the average peak-hour traffic, for all kinds of vehicles, was 236 per cent. of the normal, whereas for cycles it was as much as 373 per cent. Both these averages are, of course, compounded of a great variety of individual figures, which show a very wide range. But the concentration of cycle traffic in the hours just before and just after work in industrial areas may perhaps be taken as one more striking proof of the growing standard of living of the working-man in recent years.

The South Wales Dispute.—A chance to avoid the threatened strike in South Wales appeared at the beginning of the week. The South Wales Miners' Federation suggested to Sir Samuel Instone, chairman of the Bedwas Colliery, the scene of the trouble, that a plebiscite should be taken on the question whether a majority of miners prefer the Federation or the so-called Industrial Union. On Wednesday, however, it was announced that the suggestion had been rejected. The offer had seemed one which the management could hardly refuse. Sir Samuel Instone maintains that he is fighting for the freedom of the miners to belong to what union they choose. But it is stated that the "freedom" of workers at Bedwas Colliery is limited by the dismissal of anyone who joins the Federation and the deduction from wages at the colliery office of contributions to the "Industrial Union." In any case, if Sir Samuel has the freedom of the miners so much at heart, why should he object to the holding of an impartially supervised plebiscite, particularly when the adoption of the offer would avert the danger of a strike? The Federation, against which allegations of coercive practices are also made, has strengthened its case by a proposal that strikes the impartial observer as reasonable and fair. Immediate responsibility for preventing a stoppage now rests with the Minister for Mines. But until further facts are published, the public is likely to lay much of the blame on the Bedwas colliery management.

The American Budget.—Public finance is rapidly emerging as the dominant issue of the American Presidential election. In part, this arises inevitably out of the fact that the Budget is the only issue on which the Republican and Democratic platforms differ by more than shades of emphasis. Governor Landon is bravely promising to balance the Budget, and is attracting support from a large section of sober opinion which is genuinely alarmed by the continued series of large-scale deficits. Mr Roosevelt is therefore anxious to prove that his administration is also moving rapidly towards a balance. The deficit in the financial year which ended on June 30th last was the highest ever recorded. But this is not really a fair assessment of the position; for Mr Roosevelt's calculations were thrown out first by the invalidation of the agricultural processing taxes and then by the passage by Congress, over his veto, of the veterans' bonus. If the processing taxes be excluded from revenue, and the bonus and payments for debt redemption from expenditure, the deficit in 1935-36 was \$2,665 millions, compared with \$3,523 millions, and \$4,004 millions in 1934-35 and 1933-34 respectively. A revised estimate of the deficit in 1936-37 which has just been issued is \$1,517 millions (including a certain amount of bonus expenditure). This progress towards balance is not due to any reduction of expenditure, but solely to the extraordinary elasticity of the American revenue, which increases as rapidly in a period of recovery as it declines at

the onset of depression. Excluding the processing taxes, revenue in 1935-36 was \$4,039 millions, and it is estimated that it will be no less than \$5,666 millions in the current year. There is thus every reason to hope that the deficit will slowly disappear, if only the spending propensities of Congress can be held in check. The second problem of the Treasury, however, remains the task of converting about half the total debt from a short-term to a long-term basis. Even with a balanced Budget this preoccupation may prove to be a severe restraint upon the ability of the banking authorities to control the swollen credit structure.

Alberta's Next Step.—The only method open to Mr Aberhart of introducing anything like Social Credit in Alberta has always been to issue some sort of State promises to pay that are not illegal under the Federal Banking Laws. After his various intermediate measures, he is now apparently trying to do this. The "Alberta Credit House Act," passed this week by the Legislature, provides for the setting up of a "Credit House" and for the registration of all willing to accept the new form of credit. Only those signing the various covenants will be eligible for credit, and no person may demand currency in return for credit. Presumably the new institution will eventually issue free credit, i.e. "social dividends," to those eligible; though it seems that it will also issue repayable loans. An entire system of branch banks is to be established. The experiment will be watched with interest. First the Federal lawyers—and perhaps the courts—will have to determine whether the new plan is compatible with the banking laws. If it is held to be so, the crucial question will be how far traders are willing to accept the State credit certificates in payment for goods. If they are not, and if the credit is not changeable into currency, it cannot fail to go rapidly to a discount against the Canadian dollar. If it is accepted, and "social dividends" are paid out freely, a rise of prices in Alberta may be expected, followed by eventual depreciation of the credit certificates when those inside Alberta try to use the certificates to buy cheaper goods from outside. All this, however, will take time, and other measures are to be introduced meanwhile. There is to be an "Amendment of Trade and Industry Act," creating a "Just Price Board," designed presumably to resist the inevitable rise in prices, as well as two debt reduction Acts, providing for the virtual abolition of interest on old internal debts. Of these three measures the last would appear on the face of it to have the greatest chance of success.

The Recovery of World Trade.—The habit of measuring world trade in value, and even in gold currency units, has enormously exaggerated the fall in international trade between 1929 and 1932, and has equally concealed the recovery since that date. The new report* of the League

* "Review of World Trade." League of Nations, Geneva. (London) Allen and Unwin. 85 pages. 2s. 6d.

on World Trade in 1935 illustrates this recovery. We may neglect the usual practically meaningless calculation in "gold dollars," which shows the total value of world trade at \$23,550 millions in 1935, against \$23,288 millions in 1934 and \$68,622 millions in 1929! This is little more than a measure of the rise in the value of gold since that date. Far more significant is the movement of the *quantum* of trade (i.e. the volume of total imports and exports, expressed as a percentage of the 1929 volume), which has been as follows:—

1929	1932	1933	1934	1935
100	74.5	75.5	78.5	82

It thus appears that the volume of international trade (after falling 25 per cent. between 1929 and 1932) had risen by 1935 to 82 per cent. of its former volume. Since 1935 it has, of course, increased further. It would be most interesting to know the volume of trade in the sterling area: for there is good reason to believe that this is now virtually back at the 1929 volume. The present Report shows that trade in the sterling area is increasing, and in the gold *bloc* decreasing. But it only gives the value of trade in the British Empire as a whole in "gold dollars," and the ordinary volume figures for United Kingdom imports and exports. The latter show that even in 1935 British imports had recovered to 95.6 per cent. of their 1929 volume and exports to 74.7 per cent. There are at present many illuminating figures and details in the Report: but it would be very helpful to have in a future number, if statistically possible, a figure for the volume of trade in the sterling area, or in all countries which have abandoned 1929 gold parities.

The Price of Milk.—Tuesday's increase in the retail price of milk to the "winter" level of 7d. per quart forcibly reminds the consumer of the consequences of the Milk Marketing Scheme. As we showed in our Commerce and Trade section last week, agreement has now been reached between the Milk Marketing Board and the Central Milk Distributive Committee on milk prices for the new contract period, which begins on October 1st. The average wholesale price of "liquid" milk is to be the same as that fixed for the current year by the Minister of Agriculture on the recommendation of the Committee of Investigation, namely, 15s. 3d. per dozen gallons. Certain small increases are, however, to be made in the scale of "manufacturing" milk prices. It is greatly to be regretted that the current scale of retail prices, which the Committee of Investigation considered too high, is to be retained for a further twelve months. It is not in this way that the problem of the milk surplus will be solved. Sales under contract totalled 84.6 million gallons in July, against 64.9 millions in the same month two years earlier—an increase of 30 per cent. During these two years, however, "liquid" consumption increased by only 4 per cent. from 45.5 to 47.3 million gallons, whereas sales for manufacturing purposes rose by over 90 per cent. from 19.4 to 37.3 million gallons. It is increasingly apparent that prices must be fixed not merely in the interest of a few large distributors and of some 160,000 registered producers, but with due regard to the needs and the purchasing power of the 40 million potential consumers in England and Wales. The drastic rationalisation of distribution, long advocated by competent authorities, should permit of a substantial cut in retail prices and leave a reasonable profit margin for producer and distributor alike. The consumer cannot indefinitely acquiesce in the continuance of a system which allows two monopolistic factions to hold up the price of one of the most essential articles of food.

Australia's Constitution.—A sharp difference of opinion developed last week-end at the Australian Premiers' conference on the new constitutional dispute. Like the United States, Australia is troubled by a constitution which forbids all Federal regulation of inter-State trade. The issue was brought to a head in July, when the Privy Council reversed a decision of the Australian High Court

and ruled that the Commonwealth Acts restricting inter-State trade in dry fruits were invalid. Two possible means of escape from the deadlock were subsequently suggested: a referendum on reforming the constitution, or a use of the Commonwealth's taxation powers in substitution for the invalidated Acts. The Commonwealth Government favoured constitutional change; but several of the States, jealous of encroaching Commonwealth powers, were opposed to it. At last week's conference, the Commonwealth Government Attorney-General argued in favour of changing the constitution. Mr Forgan-Smith, Premier of Queensland, however, moved that the Commonwealth should use its power of excise and bounties to compensate the producers of dried fruit and butter for the losses incurred through the invalidation of the former Acts. Mr Butler (South Australia) supported him; but Mr Lyons ruled Mr Forgan-Smith's motion out of order, whereupon Mr Forgan-Smith walked out, followed by Mr Butler. There was further discussion next day, but it now appears probable that a referendum will be taken. It will be watched with interest from abroad, particularly from Canada and the United States.

Trend of Building Costs.—So far the pessimists have been confounded by the remarkable vitality of the building boom in this country. Though dwelling-house construction appears to have reached a peak, the construction of factories and workshops is proceeding apace, and our index of building activity attained a record level in July. The fall in construction costs between 1929 and 1933 may not have been the sole, or even a major cause of the building boom, but it certainly helped to stimulate the revival. It is of interest, therefore, to examine the recent trend of costs, as revealed by the calculations made in the process of computing our index. Briefly, these are based on wage rates, and on the cost of a sample of materials used in building. As the cost of materials represented about one-half the value of the gross output of the building and contracting industry in 1924 and in 1930, we give equal weighting to wages and materials. Similarly, we give identical weights to each class of labour and materials, in view of the extreme difficulty of selecting weights really representative of building as a whole. The index of wages, based on rates in London and Manchester, includes those of masons, bricklayers, carpenters and joiners, plasterers, slaters, plumbers, painters and labourers, and the index for materials is based on London quotations for stone, bricks, wood, tiles, joists and girders, lead, paint and glass. The final index represents the mean between the index of wages and the index of the cost of materials:—

ECONOMIST INDEX OF BUILDING COSTS
(1935 = 100)

	Index of Wages	Index of Materials	Combined Index
1929 December	109.6	115.3	112.4
1932 "	101.8	102.8	102.3
1933 "	99.6	100	99.8
1934 "	99.6	99.2	99.4
1935 August	102.2	99.7	100.9
" December	102.2	101.0	101.6
1936 January	104.2	100.4	102.3
" April	104.2	100.8	102.5
" August	104.2	103.3	103.7

Building costs reached their lowest point early in 1935, when the constructional boom was already well advanced. Subsequently, the index has tended gradually to rise, partly as a result of two increases in wages, and partly owing to rising prices of certain materials. The Board of Trade's index of the price of building materials, which is available only for a few years, has moved closely with the *Economist* index during the past twelve months. But both wages and materials are still appreciably below the pre-depression level. Such a slight rise in costs as has occurred, however, is quite unlikely in itself to endanger the progress of the building boom.

Raw Wool Prospects.—The opening of the new wool selling season in Australia was awaited with some anxiety, for it was feared that Japan's threat to boycott the auctions might lead to a temporary setback in prices. It was known that Japan had accumulated heavy stocks of merino wool during the past season and that she could well afford to hold off the market for some months. But as the trend of prices at this week's auctions in Sydney demonstrated, such fears were unfounded. Although Japanese buyers did not operate, support from other countries was strong enough to sustain the market. At the opening sale in Sydney on Monday, best qualities realised from 5 per cent. to 7½ per cent. more, while average to faulty wool was from 7½ per cent. to 10 per cent. dearer than at the close of the June auctions. Compared with the opening sales a year ago, best qualities realised slightly higher prices, average wool was unchanged, and inferior materials showed a decline of about 5 per cent. On Tuesday and Wednesday, quotations for good qualities were well maintained, but average and inferior materials suffered a decline of about 5 per cent. compared with opening rates. Meanwhile, it is reported that the Australia-Japanese trade dispute has been settled this week. The terms of the agreement, which has been submitted to the Japanese Government for ratification, are still unknown, but are believed to involve modifications of Australia's cotton and rayon import quotas. In any case, the outlook for raw wool, which plays such an important part in Australasia's export trade, is fairly encouraging. The carry-over of unsold wool in exporting countries at the end of June was relatively small, and stocks in the principal consuming countries are by no means excessive. And although the new world wool clip promises to be slightly heavier than last season's, a serious decline in prices and in Australasia's wool cheque is improbable.

An Anglo-Norwegian Whaling Dispute.—A regrettable dispute between British and Norwegian whaling interests came to a head this week, when the British Government decided to withdraw the close-season regulations imposed on whalers registered in the United Kingdom. Last year both the British and Norwegian Governments imposed a close season in Antarctic waters—where an overwhelming proportion of the catch is obtained—and, at the same time, the majority of the British and Norwegian companies (which together dominate the industry) reached a voluntary agreement by which a fixed quota of oil was allotted to each factory ship. Negotiations for a similar agreement were set on foot this season, the avowed British aim being to prevent an undue rise in the price of whale oil and to secure fair treatment for British factories. The Norwegians made proposals which appeared to penalise the more efficient British concerns for the benefit of a large number of less efficient Norwegian factories. Counter-proposals were accordingly put forward from this side; but, while these were under consideration, the Norwegian Seamen's Union informed the British companies that their ships—hitherto dependent on skilled Norwegian labour—would be boycotted unless the Norwegian proposals were accepted. Active interference with British whalers is understood to have occurred in the port of Sandefjord—even to the extent of attempts to prevent the removal of the ships to this country. The Norwegian authorities—a Left-wing Government with a General Election impending—may well have been embarrassed by this action; but the British Government could at least argue that its withdrawal of close-season regulations, though savouring of the method of diplomacy by the big stick, was logical if British whalers were to have time to train British seamen to replace the highly-skilled Norwegian personnel. The interjection of direct trade union action into international diplomatic negotiations is seldom productive of anything but bitterness and deadlock. It was learned with relief, therefore, on Wednesday, that the Norwegian workers had acceded to the request of their Government to raise the boycott. There is no reason why the resumed negotiations should not reach a conclusion satisfactory to both parties. After the equally regrettable fisheries dispute last year, it would be deplorable if an industry profitable to this country and vital to Norway should be jeopardised by hard-headedness on either side.

Increased Duty on Typewriters.—The return to pen and ink-pot has been encouraged by the latest decree of the Import Duties Advisory Committee, for the duty on new typewriters of a weight exceeding 22 lbs. (i.e. ordinary office machines) is to be raised from £3 10s. to £4 10s. from September 4th. The increase is quaintly deemed necessary by a rise in imports from about 50,000 machines in 1933 to 61,400 machines in 1935, when British manufacturers made only slight progress after a "healthy advance" in the previous year.

Sterling and International Prices.—Under the lead of cereals, specially wheat, primary products rose sharply in price during July and early August. But as frequently happens at this time of the year, when grain markets sway heavily under the influence of crop reports, the implications of the North American crop failure had been exaggerated. Hence, during the past fortnight, when markets took a calmer view, quotations for cereals suffered a setback, most marked in the United States. This corrective movement is responsible for the downward trend of our price indices of British and American primary products. The fall of the Irving Fisher index was less marked, for that index includes partly finished and finished articles, besides primary products. The index for Germany is also slightly lower than a fortnight ago. The complete British index, however, registered a slight rise owing to the advance of a number of commodities not included in the primary products index. The index for France continued its upward movement owing to the steady rise in the prices of domestic products. It is noteworthy that quotations for imported products, included in the index, are unchanged on the fortnight:—

* These figures relate to August 26th.

Details of the group indices comprising the complete *Economist* index number at the date of our suspension of the gold standard and for recent dates are given below.

"ECONOMIST" INDEX
(1927 = 100)

	Sept. 18, 1931	Aug. 5, 1936	Aug. 19, 1936	Sept. 2, 1936
Cereals and meat	64.5	77.5	77.0	79.7
Other foods	62.2	60.9	61.1	61.5
Textiles	43.7	61.9	61.4	61.1
Minerals	67.4	82.3	82.2	82.6
Miscellaneous	65.8	77.4	77.2	77.5
Complete index ..	60.4	72.4	72.1	72.8
1913 = 100	83.1	99.6	99.2	100.2
1924 = 100	52.2	62.5	62.3	62.9

With the exception of the textiles group, all the sectional indices registered a slight rise. The cereals and meat index rose owing to a jump in the price of English barley and potatoes. Advances in quotations for tea and cheese were mainly responsible for the rise in the index of other foods. Higher prices for lead and tin pushed up the index for minerals, while the improvement in quotations for timber and rubber are marked in the rise of the index of miscellaneous materials.

UNITED STATES

HIGHER FOOD PRICES AND RENTS

WHETHER it is a mere rationalisation of the recent reactionary behaviour of the stock market, or a question of the consequences of the drought and of the receding effects of the Soldiers' Bonus, the tone of business comment is somewhat less buoyant. Current business news is excellent—production is still at the best levels of the year, and the motor industry is effecting its transition to the 1937 models with remarkably little reduction of output. Yet, the fact remains that the retail price of food has risen steeply, and retailers predict that prices will go still higher; and the view is also unanimous that residential rentals are rising smartly. Obviously, there are two sides to this picture. The higher prices are to the producer no more than compensation for his reduced crops; but the consumer takes a different view.

It is difficult to fit American monetary statistics closely to the indices of production and distribution. The quantity of the circulating medium (deposits and currency) has been restored to the 1929 figure. But the velocity of bank deposits has continuously lagged; and while the debits to individual accounts have risen rather steadily since early 1933, they are far from the 1929 figures:—

DEBITS TO INDIVIDUAL ACCOUNTS (\$'000,000) 141 Cities				
	1929	1933	1935	1936
January	82,814	24,466	29,980	35,424
February	70,777	22,437	25,660	31,572
March	83,524	...	31,649	37,493
April	74,750	22,628	31,550	34,782
May	76,535	25,486	30,108	33,225
June	69,666	29,711	31,476	37,505
July	77,631	31,232	33,287	34,816
August	77,344	25,451	30,376	...
September	77,616	24,555	29,141	...
October	95,527	26,307	32,695	...
November	82,090	24,131	32,344	...
December	66,752	26,301	36,500	...

The Department of Commerce has released an estimate of the national "income produced" for 1935. This computation differs in method from others, and results in a slightly lower range of figures.

NATIONAL INCOME PRODUCED AND PAID OUT (\$'000,000)					
	1929	1932	1933	1934	1935
Income produced	81,034	39,545	41,742	48,397	52,959
Corporate savings	2,402	8,817	3,198	1,776	628
Business savings of individuals	979	2,451	402	563	815
Income paid out	78,632	48,362	44,940	50,174	53,587

From this tabulation, the dollar value of the income produced in 1932 was not quite half of that of 1929—a figure which shows more vividly than the usual indices the decline from boom to slump. The recovery in income produced from 1932 to 1935 exceeded 30 per cent., although the recovery in income paid out was only about 10 per cent. It is especially interesting to note that income paid out was actually lower in 1933 than in 1932.

The itemisation of income paid out is given as follows:—

INCOME PAID OUT (\$'000,000)					
	1929	1932	1933	1934	1935
Total income paid out	78,632	48,362	44,940	50,174	53,587
Total remuneration of employees	51,487	30,920	29,420	33,528	36,057
Total dividends and interest	11,218	7,980	6,969	7,211	7,303
Dividends	5,964	2,754	2,208	2,549	2,830
Interest	5,104	4,975	4,592	4,569	4,422
Entrepreneurial withdrawals	12,503	7,992	7,306	8,052	8,701
Net rents and royalties	3,424	1,470	1,245	1,382	1,526

Interest payments alone have thus shown no increase since the bottom of the depression. This is probably attributable to the refunding processes, initially on farm and urban mortgages, and more recently by corporate refundings in the market. The decline between 1929 and 1932 probably represented defaults. It will be remarked that entrepreneurial withdrawals have risen more than dividends, which in 1935 largely exceeded those of 1932, and in that year were less than half those of 1929.

Still another table reports the number of employees covered by the tabulation:—

NUMBER OF EMPLOYEES AND PER CAPITA INCOME					
	1929	1932	1933	1934	1935
All employees ('000)	34,485	25,308	25,358	27,325	28,094
Per capita income (\$)	1,466	1,178	1,097	1,143	1,201
Salaried employees* (\$)	2,560	2,125	2,028	2,019	2,080
Wage earners* (\$)	1,404	961	929	1,024	1,117

* Selected industries.

The comparatively small number of employees as compared with the "persons gainfully employed" of the Census is attributable to the omission of "entrepreneurs," estimated at about 10 million.

FINANCE COMPANIES AND CONSUMERS' CREDIT

The continuance of the cheap money policy is bearing heavily upon the small banks. This fact was illustrated vividly by the notice of voluntary liquidation of a Colorado bank. With \$2,000,000 of deposits, it had but \$99,000 of loans, and \$1,250,000 of cash and Government securities. Its earnings were so discouraging that it elected to liquidate. In other instances, small banks have given up their banking charters to become finance companies. The growth of the finance company is probably the major development in "commercial banking" in recent years. These companies operate under State licence, not bank charters, and nothing in the way of consolidated reports has ever been attempted. There are some half-dozen very large finance companies, but the small ones are numbered by thousands. The larger companies obtain funds from three sources (1) own capital, (2) debentures, (3) bank loans. The smaller ones, of course, are unable to issue debentures.

So far the record of losses is small, and of profits high; for although the overhead is greater than in banking, the rates of interest are never less than 6 per cent. and are commonly above 20 per cent. While a part of this consumer credit is found in the bank returns, in one form or another, the estimates of the totals run to unbelievable figures—but are only estimates. Altogether the finance company type of consumer credit has risen to a magnitude that compares with the "brokers' loans for the account of others" of the late '20's; and it is probable that a good deal of the money that formerly came into the stock market and was reported under that heading is now employed in other lending channels where it is no longer subject to any report.

The two-cent flat passenger railway fare that was imposed on June 1st has now been in operation for nearly three months. Whether because the fare itself has attracted travel, or because the time was opportune, passenger revenues have risen rather sharply. It will be remembered that passenger rates were not uniform before June. Many of the Southern and Western railways had experimented with fares under two cents for some time; but the Eastern lines were averaging three cents. While it is doubtful if passenger traffic is a source of profit in any section, the two cent fare experiment, over which the railways first protested, seems to have produced, or at least been followed by, consequences favourable to them.

NEW YORK, August 25.

FRANCE

FRICTION IN THE FRONT POPULAIRE?

RECENT political events have revealed a certain uneasiness among the three main groups of the Front Populaire: the Communists, the Socialists and the Radicals. The first trouble was provoked by the visit of Dr. Schacht. This took place twenty-four hours after the decision of Herr Hitler to increase the conscription period to two years, a coincidence which gave rise to a public exchange of letters between the Communist leader, M. Thorez, and the Socialist, M. Blum. M. Blum replied to the allegation that he had given too great honour to his visitor, and stated that he would neglect no effort which might lead to a general solution of European problems—a position which partisans of collective security cannot repudiate. The German conscription decree provided a new opportunity for the Communists to emphasise the need of unity among all Frenchmen. This attitude cannot well be criticised by Moderates or Conservatives, but the Radicals are asking what objective this sudden national zeal is to be directed towards.

Two days later the visit of the Polish Army chief, General Rydz-Smigly, was cheered by the Communists as the prelude to negotiations for the organisation of a Moscow-Warsaw-Paris front against Berlin. Newspapers of other parties showed greater circumspection, and asked if, after having received financial aid from Paris, Poland might not return to its flirtation with Germany.

Meanwhile, however, the Socialists are starting propaganda for a Parliamentary fusion of the Left parties—a fusion which has been already realised in the trade union field—and for a conquest of the State by the proletarian forces, designed to replace the capitalist economy by a collectivist one. But the Radicals are protesting against this conception of a class Government and against the "Union Sacrée" which is preached daily by the Communists. These controversies at present have no echo in the policy of the Government, which is relying on the profound desire of the public to remain attached to neutrality abroad and democratic traditions at home.

THE FARMERS AND WHEAT PRICES

It is evident, however, that the Radicals are being annoyed by the recurrence of strikes which are periodically provoked by the dismissal of a worker or by new claims for higher wages, though these are within limits justified by the rise in the cost of living. Recrimination is also being heard among the wheat farmers, who declare that the 140 francs fixed as the price of wheat by the new Office is lower than the price proposed by most of the farmers' delegates, and that the farmers have therefore been sacrificed to the interests of the cities.

The above price of wheat, however, represents an increase of 60 francs per quintal in comparison with the 1935 price, or an increase of 4,000 million francs in the purchasing power of the wheat farmers (on the assumption of a low crop of 65 million quintals). And if one adds to this figure the increase in farmers' income due to the revalorisation of other farm produce, the 10,000 million francs of increased wages, the increased salaries of civil servants due to the abrogation of the decree-laws, and the sums to be invested in public works, etc., one must admit that the Government has left nobody out in its effort to stimulate a recovery of business by increasing the purchasing power of the country. Indeed, the controversies within the Front Populaire will have little significance if prosperity follows the reflation policy.

The effect of the new purchasing power in raising real incomes will be in many cases reduced, if not annihilated, by the rise in prices. The prices of bread, milk and gas, for instance, have just been raised. That of bread, which is now 1.90 francs a kilo, against 1.60 francs a few weeks ago, will probably reach 2.25 francs, with the price of wheat at 140 francs. Nevertheless, the rise in retail prices and the cost of living has been slower than that of wholesale prices.

The yield of the turnover tax, for instance, was 3,536 million francs in the first seven months of 1936, against

BANKERS TRUST COMPANY
NEW YORK

Incorporated with
Limited Liability
in the U.S.A.

London Office:
26 OLD BROAD STREET, E.C.2.

3,437 million francs in the same period of 1935. The difference is 100 million francs, or 3 per cent., whilst the rise in wholesale and retail prices between the same dates was respectively 17 per cent. and 10 per cent.; an apparent proof that the volume of internal transactions continued to fall. Similar unfavourable conclusions are suggested by the evolution of the import surplus, which is increasing at the rate of 10,000 million francs a year against 5,000 million francs in 1935. Moreover, unemployment is 30,000 higher than at the same period of 1935, in spite of the repatriation of 150,000 to 200,000 foreign workers during the year.

The *Revue d'Economie Politique* estimates the French balance of payments in 1935 as follows:—

	Credit (Fr. 000's omitted)	Debit
Foreign Trade:—		
With foreign countries	...	5,000
With Colonies	...	1,000
Shipping	1,300	...
Insurance	100	...
Transit	200	...
Foreign workers' remittances	...	750
Tourist	750	...
Interests	4,000	...
	6,350	6,750
Capital Imports	...	1,750
Gold Exports	...	15,000
Invisible Exports	16,350	...

This table shows that the gold efflux in 1935, which reduced the gold stock of the Bank of France from 82,100 million francs to 66,300 million francs, was not the result of a deficit on current account, but was almost entirely due to flights of capital.

PARIS, September 2.

GERMANY

DR. SCHACHT'S VISIT TO PARIS

AFTER its very heavy fall the security market recovered early last week, only to suffer, however, a new collapse on the announcement of an increase in the corporation tax. Nevertheless, business sentiment somewhat improved. The propaganda campaign against Russia, it was noted, had subsided to normal violence, and the announcement of two years' military service had seemed to clear the air, the more so because this event was treated as less sensational abroad than at home. Of Dr. Schacht's visit to Paris, which also may have made for tranquillity, nothing official has been said. Paris newspaper reports of Dr. Schacht's utterances to French statesmen mostly merely reflect his familiar opinions, and seem to derive more from general knowledge than any leakages of information. It is inevitable that in general political conversations Dr. Schacht should have mentioned his favourite subject, colonies, and have discussed Franco-German trade relations and international currency. But it is not believed that any particular form of currency adjustment or "alignment," as it was called, was discussed.

Mark devaluation, which is apparently the "alignment" conceived in the newspaper mind, could not be put through without revolutionary changes in all branches of public and private economy. The story that Dr. Schacht made the abandonment by France of her Russian association a

condition of appeasement implies an ignorance in him of the main political factors of Europe which nobody has so far imputed to him. There are, indeed, reasons for thinking that Dr. Schacht regards the Moscow-Berlin propaganda war as an unnecessary nuisance. The only Press organ that has ventured to suggest that relations with Russia should be treated like relations with France—in the sense of at least trying to improve them—was the journal through which Dr. Schacht habitually conveys his views.

The agreement against non-intervention in Spain has not improved Berlin's attitude towards Paris. New dangers necessarily involved in this agreement to remove old dangers, have arisen. France is daily accused by the Berlin Press of systematically violating her pledges by delivering arms to Madrid. By this means Germany can construct a direct grievance against France which she had not before. The counter-accusations against Germany and Italy are not mentioned here.

The increase in the corporation tax made a considerable stir. This tax is levied on the net profits of share companies (*Aktiengesellschaften*), which are limited liability companies in the English sense, and of limited liability companies so-called here (*Gesellschaften m.b.H.*). Nearly all the great industrial, shipping and banking concerns are organised in the first form; a great many less important concerns in the second. The tax is really a company income tax, but payment of it by the company does not exempt the dividend drawer paying a second time as a part of his personal income tax. *Kommandit*—companies composed in part of partners with full liability for debts, in part of shareholders with limited liability—escape the corporation tax, being in the same position in this respect as individual business men. But they pay full income tax. Up till now the corporation tax has been a uniform 20 per cent. By the new law the rate is raised to 30 per cent., though for the current financial year to only 25 per cent. The collapse of share quotations expressed the investor's fear of still further anti-capitalistic measures.

RENEWED FOOD SHORTAGE

The cost-of-living index for August was 125.4, against 125.3 for July. The index of food prices has risen. Moreover, a serious shortage of meat again prevails. The number of pigs, it is officially explained, is 9 per cent. higher than a year ago; but in consequence of the exclusion of foreign fodder and of delay in harvesting at home, there is a shortage of slaughtered pigs. Beef has also been short. The consumption of meat in July was 11 per cent. lower than in July, 1935. The production of sausages has been curtailed, and the population is advised to eat more fish. A main cause of the meat shortage is the enforcement of price ratios which favour the production of fat. Owing to the failure of crops to reach the official estimate of the early summer measures are to be taken to check the consumption of cereals for feeding livestock. The carry-over of wheat, rye, oats and barley from the crops year 1935-36 was only 1,717,000 tons, against the 3,442,000 tons of a year ago.

The number of manual, clerical and technical employees required to take out work-books by September 1st is put at 21,600,000. The official and party Press is much concerned with the shortage of labour, in particular in the building and in certain mechanical trades. The construction of barracks is thereby retarded. Wages in building have risen much, though irregularly, owing to the enticement of workmen from one job to another. This is contrary to Government policy, which is to keep wages low and unchanged; but there is much discontent among workmen, who complain that they alone are not to profit from the forced industrial boom. It is officially held that, as the labour shortage has arisen mainly in trades which owe their activity to public orders, the authorities must establish priorities in the order of fulfilment of contracts, so that urgent works are executed in time and labour prevented from taking advantage of the State's needs. The journal of the Rhine-Main Chamber of Commerce complains of "unscrupulous enticement of labour and the irresponsible abandonment of work," and affirms that the economic existence of industry is threatened. It is not possible to draw labour from the present 1,200,000 unemployed; for except in agriculture the shortage is confined to certain skilled and specialised trades.

In July 71.1 per cent. of all industrial working places were occupied, as against 70.4 per cent. in June. The highest percentages, in each case 89.5, were in the iron and steel and motor-car branches. Industry in Rhenish-Westphalia is recovering, in spite of the iron and steel activity, less rapidly than elsewhere.

Money last week was very tight, and the month-end demand was abnormally heavy. Day loans opened this week at the high rate of $3\frac{1}{2}$ - $3\frac{3}{4}$ per cent. Only 86 per cent. of the Reichsbank's July-end credits had been repaid by August 23rd.

BERLIN, September 1.

SPAIN

CATALONIA'S SUPPORT FOR THE GOVERNMENT

WHILE the Catalan Generalitat, in collaboration with the proletarian organisations of which the Anarcho-Syndicalists form a predominating section, is performing an important service for Spain by defending it against the military rebellion, it is at the same time engaged in setting up its own "new state" by attributing to itself powers far beyond those conceded by the autonomy statute. The emergency once ended, Catalonia will be in the strongest possible position for demanding that Madrid recognise the accomplished fact of the Catalan Federal State. Similarly, there are signs that the Catalan Government is harmonising its old differences with the Anarcho-Syndicalists and the other proletarian organisations, which have been organising their columns of anti-Fascist Militia and sending them to the Aragon and other fronts in thousands. And if victory crown their efforts, they will demand recognition of proletarian claims in the future social and political system of this region. Already most industries and public utilities have been "penetrated" or "expropriated" by the workers and are in charge of workers' committees. Questions of the form and degree of collective ownership, not only of industry but of land, are now in the hands of a council of economy.

Spain's historic Catalan problem would seem to be in course of solution by an unexpected process, and perhaps according to an unforeseen formula: that of civil war. In the past, Catalonia has generally found itself at the sword's point with its traditional enemy, the Spanish Government at Madrid. But recently the picture has changed. For five years since the proclamation of the Spanish Republic, Catalonia has kept faith with that Republic and defended it, returning Republican majorities in years when Republican faith elsewhere in Spain seemed wavering. The so-called Catalan "rebellion" of 1934 was a rising against a Right Government which, hating the Republic, was openly engaged in destroying it and wrecking all hopes of Catalan autonomy. This was made clear in the manifesto of Don Luis Companys, the Catalan President, on the fateful night of October 6, 1934, when he proclaimed "the Catalan State within the Spanish Federal Republic." It was a Federal, and not a rebellious, movement. It was Catalonia's attempt to seize an opportune moment for enlarging her powers of self-government. But it was not separatism.

Catalonia is Spain's most intensively industrialised region; but it is an industrialism superimposed on an essentially agricultural territory. Trade with the American colonies first procured the establishment of textile and other manufactures in a region almost devoid of the necessary raw materials. The textile industry, in particular, depends upon the importation of cotton and silk in great quantities, while other industries require iron and coal. Should these supplies be cut off or diminished the situation would be serious. Catalonia is either at, or near, the top of the list in the national production of wines, olive oils and fruits. Spain is the principal market for all these products, but its buying power has in the past been low. With a managed economy, in which the buying power of the worker were taken into account, Catalan, and indeed all Spanish, production could be enormously increased. The fact that, in the past, Catalonia has been

able to export her surpluses, both in manufactures and agricultural products, has kept prices at a reasonable level. Should foreign markets be appreciably curtailed by present events, the repercussions on the Catalan economy would be serious.

One of the by-products of recent political developments has been the complete discrediting of the *Lliga Catalana*, formerly the *Lliga Regionalista*, founded thirty-five years ago by Francesco Cambo as the first of the Catalan nationalist parties. There was a period when it performed valiant service for Catalan nationalism; but in more recent years it became distinctly a party of the Right, defending propertied interests, compounding with the monarchy, the dictatorship, and with the more recent Right Government, which was openly engaged in wrecking regional rule.

The famous Catalan Land Contracts Law, the annulment of which at the behest of the *Lliga* provoked defiance of the Madrid Government on the part of the Catalan Parliament was predicated on an essential difference between Catalonia's land problem and that of the rest of Spain. In Catalonia there were no great land holdings, or *latifundios*, but relatively small holdings, constituting the traditional patrimonies of innumerable families. Most of this land, however, was subdivided and worked by peasants on the "share system." The law provided that at the end of eighteen years of continuous cultivation a peasant had the right to acquire by purchase as much of the land as he needed for himself and his family. It insisted on the principle of individual ownership in contrast to the Socialistic collective plan. By its creation of small patrimonies it necessarily broke up the larger holdings.

BARCELONA, September 1.

BELGIUM

THE INCREASE IN WAGES

It is now possible to appreciate more closely the situation resulting from the social troubles in June. These troubles had an essentially psychological cause, i.e. contagion from France, where the economic situation was quite different. In Belgium the general opinion was that at this stage a wage increase was possible, thanks to the revival following devaluation. But it had been thought better to wait a little before granting any increase.

A provisional estimate suggests that Belgian wages have risen about 10 per cent. in the last two months, including the extra charge for paid holidays. In certain industries, such as coal, the increase was larger; and the miners now receive about 12 per cent. more than before. In other industries a rise of 7 or 8 per cent. was granted.

What has been the influence of this rise of costs on the price level? The cost of living has risen very little. Internal coal prices have increased about 8 francs (1s. 1d.) per ton. This outweighs the rise in wages; but it has not been possible to increase export prices. The Steel Cartel, however, has increased export prices. In several consumers' industries the problem of increased costs has not been solved so easily as in the heavy industries. In the textile industry, for instance, adjustment is difficult; for prices cannot easily be raised. Other industries selling in the home market are trying to raise prices, and a rise of 5 per cent., but not more, is common.

Heavy industry, in fact, is now doing well, after having been long depressed. Consumers' industries are in a less strong situation, and in some cases partial unemployment has reappeared. Railway traffic, however, is better than last year, thanks to the activity in the mining and iron and steel industries. Some slackening is apparent in the building industry, which was extremely active until lately. The cause of this is probably a temporary saturation of the real estate market. But there is still considerable need for modern dwellings in Belgium, and the reduction of interest rates and abundance on the capital market are tending to re-animate the real estate market.

Throughout the summer the fall in interest rates has been continuing, and the public has been searching for outlets for its savings. Unified 4 per cent. Government securities,

issued on the conversion in 1935, have advanced from 93 to par, although the Redemption Fund had sold the Government securities which it was compelled to buy in order to check the fall in the summer of 1935. The demand for Government securities is due partly to the activity of the Belgian banks, which can no longer invest in industries, and partly to the influence of foreign capital, mainly from France. Capital exports from France, which slackened two months ago, were again felt strongly in August.

NEW INTERNAL GOVERNMENT LOAN

Availing itself of the favourable market, the Government has decided to issue a new 4 per cent. internal loan, which will be sold on the Stock Exchange as the demand arises, without any publicity. This method has already been used several times in Belgium. The Government will issue in this way 1,000 million francs of securities at or about par. It is stated that this loan will not be used to finance ordinary expenditure. The Government wants to avoid further depletion of the "gold profit" due to the revaluation of the National Bank's gold reserve. After the devaluation the Government was credited with an amount of 4,300 million francs of gold ingots. At the time of the General Election in May, 1936, this total was intact, except for what had been used to repay foreign loans. During recent months, however, the reserve has probably been used for the financing of public works; and the new loan will replenish it.

The general financial situation of Belgium is good. The economic position, though not as brilliant as one would like it to be, is still improving. The chief danger is the possible social agitation which might arise out of the situation in France. The forty-hour week Bill passed by Parliament may cause difficulties. The Government has stated that the change in hours does not necessarily imply an increase in hourly wages; and the reduction of the working day may therefore mean a curtailment of weekly wages. It is hoped that the Government will succeed in resolving the difficulty, and M. van Zeeland has already achieved so much success that one is entitled to grant him one's confidence.

LOUVAIN, September 1.

TURKEY

WOOL FOR JAPAN

It looks as if Japan's decision not to buy Australian staples will favour Turkish exports to Japan, and a suggestion to submit offers in Turkish wool has already reached Turkish exporters. The latter are hopeful of overcoming certain difficulties and of having Turkish wool accepted by Japanese spinners. The consequences of the drought which has affected the United States and several other countries are expected to offer a further opportunity of increasing Turkish sales to Japan. Cotton, it is believed, may be in demand, and there is also some hope of exporting wheat to Japan.

The trade agreement in force between Turkey and Japan is based upon a barter system, under which the exporter of Turkish goods has the right to import Japanese goods of the same f.o.b. value. In practice, he sells this right to the importer of Japanese goods at a price which is now about seventy per cent. of the invoiced f.o.b. Turkish port value. At first sight, it might appear that, favoured by such a rate, the Turkish exporter would have little difficulty in selling Turkish staples to Japan. In fact, however, he labours under several disabilities, such as high Turkish prices, the distance, and also the absence of standardised qualities, a situation which is best illustrated by the high rate of the

premium itself. This limits the influx of Japanese goods to articles like printed cotton textiles, celluloid products, and shell buttons which can stand that handicap.

In general, there are two factors which make Turkish prices high. One, and the more striking, is foreign buying of Turkish staples at prices above the world level. The fact that, of all European countries, Germany has the best working clearing account with Turkey, enables her to export German goods to Turkey on an artificial price scale, the average of which is above world level, and in return to buy Turkish products at prices that normally could hardly be obtained. Italy did about the same thing at the beginning of the Abyssinian War. Likewise, countries with frozen claims buy Turkish products at a loss. So do the Skoda Works through their subsidiary the Omnipol, and also the Ottoman Debt Administration. So do the French creditors, who, for example, buy mohair in Turkey, clear it in France, and resell it at Bradford at a price which means a substantial loss, but allows them to get the balance out of Turkey. On the very same system are based all the different private compensation operations which enable Turkish merchants to import a wider range of goods.

The other cause of high Turkish prices, of course, is in the country itself, where heavy taxes contribute to make the cost of living dear. For some time past, the Government have been active in devising means for the reduction of prices. They started by substantially reducing all fares on the State Railways, a measure which not only has benefited the national economy, but has also made the State Railways a better paying enterprise. So they continued, reducing the prices of salt, which is produced by a State monopoly, and particularly that of sugar. The cut was about one-third, and a further reduction is now anticipated for next year. The same method has been applied to other State industries, and recent laws authorise the Government to fix minimum selling prices for certain largely distributed articles of national manufacture, such as cotton yarns and nails, and also to fix a maximum margin of profit for manufacturers along with the right to make suggestions for the reduction of their overhead charges.

ISTANBUL, August 25.

LETTERS TO THE EDITOR

LEADERSHIP AND PUBLIC OPINION

TO THE EDITOR OF THE ECONOMIST

SIR,—In the leading article of the *Economist* of August 29th you draw attention to a matter of great public concern in discussing why "The Fascist Powers are advancing in the foreign field and the two remaining democratic Great Powers of Europe . . . are so passive as to give the impression that they are in retreat." When you ask "What miracles have Herr Hitler and Signor Mussolini wrought to secure their present initiative in European affairs?" there will be a general agreement with your answer. Something "has happened to that John Bullish quality of determination . . . dogged courage . . . wilfulness . . . or even brutality," and Mussolini can easily be credited with the reputed reply to his Admirals, "I can positively assure you that the British are never going to fight."

This loss of British courage and prestige you then suggest is above all a question of "leadership." It is not my purpose here to defend Mr Baldwin and his Conservative colleagues. I do, however, question whether we want our Premier to be a dashing "Führer," and suggest that Britain's ineffective foreign policy is due to causes other than deficient "leadership," especially if this is construed in its narrow political sense.

In the first place, whatever our views of Dictatorships, it must be admitted that they start with an automatic advantage in international affairs where, alas, capacity to bluff and to bully is of immense value. The Dictator with all sources of public information and propaganda under his control can distort the actions of other countries, suppress domestic or foreign criticism, and can count on nation-wide solidarity, discipline and enthusiasm. At a stroke of the pen he can mobilise all the resources in man-power and wealth of his country; Mussolini has just boasted that, *signo dato*, eight millions will leap to their allotted posts. Dictatorships thus inevitably have a great initial advantage over more democratically organised opponents even when in all earnestness they are feeling their way to a Collective System.

This capacity of the Authoritarian State for aggression is nothing new in our history; we had the same handicap to overcome in opposing Philip II., Louis XIV. and Napoleon; we should, however, I think, be foolish to underestimate it and unwise if we failed to ask ourselves whether we are in a position to meet it.

This leads me to my second point. If our leaders decide to stand up to the Dictators, what support are they likely to receive if, as is probable, the nation finds itself on the brink of war? Will they be able to face such a catastrophe with the knowledge that they have a nation behind them as unanimous as it was in 1914, and that they can mobilise resources adequate to our commitments? Or will they have to execute a disgraceful climb-down reminiscent of Palmerston and Denmark? Unless we are quite clear that there is no chance of the second alternative, then public opinion must take its share of responsibility for our failure to oppose the Dictators.

Since 1918 the British public has been subjected to an intense and continuous propaganda on behalf of various schemes for preventing war. While all have been unimpeachable in their ideal, the immediate result of some has been an embarrassment when confronted with our League obligations. In general it may be said that the martial qualities a nation must possess if it is to contemplate a "collective," or any other form, of war, have had scant encouragement from Left-wing circles.

Public opinion on this question has, it is true, shown a distinct change of attitude recently; the Labour Party Executive now, for example, takes a much more realistic view of Sanctions than it did at one time. But before we can expect our leaders to follow a really courageous line, there is much more to be done in this direction by those outside Government circles. It is to be hoped, therefore, your proposal that "the situation in Europe is now grave enough to warrant consultations between representatives of all Parties in Great Britain" will be taken up.

Yours truly,

Birmingham.

L. J. CADBURY.

DEATH ON THE ROADS

TO THE EDITOR OF THE ECONOMIST

SIR,—Your review of the Ministry of Transport Report on Fatal Accidents (not an annual report as you state) seems to be incomplete to the extent of analysing only such features of it as might lead to a predetermined conclusion. The complete segregation of different classes of road-users would, if practicable, obviously reduce accidents by preventing the motor-vehicles, which are involved in 90 per cent. of fatal accidents, from causing deaths other than among their own drivers and passengers. Even so, last year 127 pedestrians were killed on footpaths or refuges.

The number of motor-vehicles in Great Britain last year was 2,000,000, of which 5,310 were involved in fatal accidents; the number of pedal-cycles is estimated at 10,000,000, of which 1,746 were similarly involved. A further 5,310 motor-vehicles (excluding motor-cycles) were involved in fatal accidents, but only 248 drivers were killed; 1,746 pedal-cycles were involved, but 1,376 cyclists were killed. These figures speak for themselves. One-third of the fatal accidents are blamed on drivers of motor-vehicles, although the driver was able to defend himself. As you very properly point out, the majority of pedal-cyclists and pedestrians involved had no opportunity of defending themselves or of accusing the other party; so that the attribution of accidents to the victims is unreliable in the extreme. The heavy proportion of children and old people in the pedestrian victim class shows that, even if the victims "caused" the accidents, they can hardly be blamed for them, and suggests that far greater care is necessary on the part of the driver of the vehicle concerned.

Where practicable, special roads from which all other traffic is excluded might be built for the most dangerous vehicle, but it is not logical to prevent the victims of accidents from using their own highways. As a correspondent in *The Times* last Thursday replied to Lord Radnor, whom you quote, if the motorists were given an option not between "a grievance and the grave" but only between conversion and a prison, life might be happier for the majority of us.

If complete segregation by the building of motor speed-roads is not possible, is partial segregation by removing non-motorists on to special tracks the best method of eliminating accidents? (Incidentally, very detailed reasons for the "peculiar resentment" of cyclists to cycle-tracks can be obtained from either of the national cycling associations.) But 60.1 per cent. of pedestrians killed were crossing the carriageway—and over half of these were 60 or over; and building footpaths will not reduce this figure. Moreover, 39 per cent. of the fatal accidents involving cyclists occurred at road junctions (cycle paths would obviously tend to increase accidents at points where cycles were unavoidably driven into the motor stream—unless we are to adopt the fantastic type of crossroads recently illustrated by the Cement Marketing Association). Again, 62.3 per cent. of all accidents were in built-up areas, where pedestrians are already segregated and where cycle-paths are impossible. Partial segregation would still leave untouched the bulk of the road accident problem. Finally, 62 per cent. of accidents occur on straight roads or open bends with good visibility; and 79 per cent. in clear weather. These figures tend to indicate that speed is a more important factor in causing accidents than is assumed in the Report.

The most important single contribution to the solution of the problem must surely be to oblige all road users under pain of severe penalties to behave in such a way as not to endanger the lives of their fellow travellers. The appropriate punishment of anti-social road behaviour, coupled with the provision of more roads where traffic is densest (not necessarily speedways), would have more effect than mere attempts at segregation.

Yours faithfully,

London, N.W.3.

G. A. HASKINS.

BOOKS AND PUBLICATIONS

POLAND AS A MARKET

FOR American and British students of world affairs economic developments in Poland have been obscured by the political. The recent publication by the Department of Overseas Trade of an official Report* by Mr C. B. Jerram, Commercial Secretary in Warsaw, is therefore a timely reminder that Poland in an economic sense, no less than in a political, is an important element in the European scheme of things—and especially for Great Britain. Thirty-four million people on the Continent of Europe with the friendliest feeling towards Great Britain, which at the same time is their principal export outlet, constitute a market—even if it is still of greater potential than actual value—that is at least worth careful observation and study. The Report is also timely in that the period covered (March, 1935, to March, 1936) brought to an end the painful effort of Poland to adjust her financial and economic structure to a currency which, by March of this year, had become greatly over-valued. No other "gold bloc" country went anything like as far as Poland with its programme of deflation.

The value of Mr Jerram's Report, and the helpful information which it contains about the Polish market, has not been lessened by the introduction (in April, 1936) of *devisen* restrictions and the subsequent measures which have been adopted to protect what is left of the gold reserve. These measures, in any case, affect Great Britain less than any other important country because Poland still has a substantial export surplus to Great Britain. Although the decline in this export surplus from 105.7 million zloty in 1934 to 64.7 million zloty in 1935 was mainly responsible for the *devisen* restrictions applied this year, the present balance is surplus enough to cover Poland's "invisible" payments to Great Britain. It is not nearly sufficient, however, to offset the import surplus with the British Empire as a whole. As the food products which constitute the major part of Polish exports to Great Britain are steadily being brought up to the exacting demands of the British breakfast table, and as the general organisation of the export trade in all agricultural products receives constant attention, it is reasonable to expect that shipments will continue to grow, and that the sterling derived therefrom will be used for buying British goods—which, Mr Jerram states, "have never been so popular in Poland as they are to-day." It is fortunate that during the present difficult period of adjustment to a "managed" foreign trade, British commercial interests in Poland—from the official side—are being handled with complete understanding of prevailing difficulties—which Mr Jerram rightly hopes are only temporary—and with justifiable confidence in Poland's commercial integrity.

The Report considers the three outstanding features in the Polish economic situation to be: (a) The operation of the Anglo-Polish Trade Agreement, which came into force on March 14, 1935, and which was concluded only after a very thorough survey of the Polish market; (b) a commercial treaty with Germany, which came into effect on November 20, 1935, and the first between the two countries which provided for reciprocal most-favoured-nation treatment; and (c) the financial and budgetary situation.

The commercial treaty with Germany contemplated a merchandise exchange, on a strict "compensation" basis, totalling 170 million zloty a year on both sides. This figure, had it been reached, would have made Germany the principal factor in Poland's foreign trade. It has not yet been achieved, however, partly because of the many difficulties encountered in setting up the "clearing" arrangements, but mainly because there is still a great deal of "consumer resistance" in Poland to imports from Germany. This derives not only from political reasons and the active opposition of most of Poland's 3,500,000 Jews, but also from a feeling that German manufacturers—except in a few specialised machinery and chemical lines which have always been obtained from Germany—are not

able to-day to compete successfully with British and American. "Compensation" trade, moreover, is always at a disadvantage with "free" markets.

The Report presents a useful summary of the main Polish industries; "Hints to Commercial Visitors"; and statistical appendices relating to foreign trade and industrial production. It deals only incidentally, however, with a problem of vital importance for the economic future of Poland—namely, the increasing participation of the State in commerce and industry. It has recently been stated that more than 1,500 commercial and industrial concerns are now State-owned or controlled. There were good reasons during the disorder of the early post-war years for the State to "start things moving," and the salt mines, armament industry, railways and tobacco monopoly are even to-day legitimate Government undertakings. But State ownership or control has gone far beyond the early post-war stage, and there is now no important branch of industry—from the manufacture of typewriters to the operation of ships—in which the Government has not a direct participation. Entire industries, in fact, are rapidly becoming Government monopolies. The depression of the last six years has accelerated this trend. Many important industrial units have passed under Government control through the operations of "Court supervision," so that mills could be kept running and unemployment avoided. Poland will soon have to decide whether she is going to remain a capitalist State, and, if the decision is affirmative, to act ruthlessly. The prevailing tendency of indecision and drift may lead to State Socialism.

SHORTER NOTICE

"The Framework of the Pricing System." By E. H. Phelps Brown. Chapman & Hall. 221 pages. 10s. 6d.

This interesting exposition of the central problems of economic theory follows the traditional scheme of supply and demand, and shows in detail how a determinate system of prices may be deduced from a principle of "marginal productivity" on the one hand for supply, and from the principle of "marginal substitution" on the part of the consumer. This is not a new discovery; but the treatment of it is original both for its careful examples, and for the painstaking caution with which Mr Phelps Brown proceeds.

First, he describes the forces of the consumers' market in isolation, then the "producers' market"—where entrepreneurs are engaged in hiring the factors of production. He examines these with arithmetical examples, assigning arbitrary values in each case for total returns and amounts of the commodities produced. In a final synthesis he discards this part of the necessary assumptions, and introduces the "whole model set up," with the conditions that receipts of entrepreneurs are no longer arbitrary since they are to equate their outgoings, while "amounts of commodity produced" have to equate "amounts bought." Granted these conditions the forces of the markets can be shown to determine the rewards of the factors of production as well as prices, a neat rendering of the classical teaching on distribution.

For those with sufficient patience to follow a few numerical examples this book should once for all clarify this central point of theoretical economics. Mr Phelps Brown has thus rendered a useful service to every student of this subject.

MONEY AND BANKING

POUND, DOLLAR AND FRANC

At this season of the year foreign exchange dealers normally expect a heavy seasonal demand for dollars, required to pay for imports from America of the new crop of wheat, cotton, tobacco and other primary commodities. In the days when Britain was on the gold standard this seasonal demand frequently resulted in a pronounced weakening of the pound against the dollar, and in some years gold was shipped to America. Recently, however, several factors have combined to change the situation. In the first place, during the depression stocks of raw materials accumulated in the United States and purchases tended to be spread more evenly over each year. The seasonal demand persisted, however, though on a smaller scale, since importers were inclined to wait for a possible weakening of prices when the new crops came on the market before replenishing their stocks. Recently surplus stocks in the United States have been reduced to more normal levels, but another factor has emerged. For three years running the American wheat and maize crops have been affected by drought. This year the damage is so great that it is expected that the United States instead of exporting will be importing wheat, either from Canada or from the countries in the Southern Hemisphere which have a later crop. It would appear that the cotton and tobacco crops have not been seriously affected, but neither is expected to be above normal. Offsetting this decline in American exports is the boom in American exports of automobiles.

These seasonal movements, however, have in recent years had little noticeable effect on the exchange rates. If other things had been equal, some seasonal weakening of the pound between August and November would have been predictable. But in so complicated and sensitive an organisation as the foreign exchange market other things never are equal. A seasonal movement, however large, can always be nullified by a contrary capital movement, and it is in fact largely capital movements that have controlled the exchanges in recent years. For example, in the autumn of 1934 the American exchange, instead of strengthening, still reflected the uncertainties attendant on the United States Government's silver-buying policy, launched in that year. A year later New York was a haven for panic funds fleeing as far as possible from the storm centre of the Italo-Abyssinian war, and the exchange reacted accordingly. This year the centre of uncertainty is Paris. Though the phase of active "flight" has been arrested, nothing has occurred to restore confidence in the outlook for the franc, and the exchanges remain in a state of suspended animation.

As things stand at present the dollar-franc cross-rate is locked at the upper limit of Frs. 15.19 to the dollar, the gold export point. The pound is theoretically free to vary. But any substantial weakening of sterling would result in arbitrage operations tending to force the Paris-London rate up, and, consequently, no appreciation of the franc is practically possible in present circumstances. The pound, in fact, has remained for some time at about \$5.03 and Frs. 76 $\frac{1}{2}$, and, as far as can be ascertained, it has not needed the intervention of the Exchange Equalisation Account to keep it steady at this level. The governing rate is the franc-dollar rate, and as long as gold is allowed to be exported from France this rate is absolutely rigid within narrow limits. In theory gold could flow equally readily to London and to New York. In fact, it has not done so. Whether or not the British Exchange Equalisation Account, for quasi-political reasons, has regarded a movement to New York as preferable to further acquisitions on its own account is, indeed, a matter of secondary importance. Most observers would probably regard the amount of gold already earmarked for the Account at the Banque de France as more than ample, and further operations as neither necessary nor desirable.

The outward flow of gold from France, though not approaching panic proportions, remains steady at about

£500,000 a day. This figure is made up of various elements. In part it is due to the fact that the exchange is at gold-export point, and shipments of gold occur as a matter of course. The outflow is, however, meeting in large part our own seasonal purchases of raw materials from the United States. The position may be readily explained. The English importer, say of automobiles, asks his foreign exchange dealer for the requisite amount of dollars. The dealer buys them in the market from a French dealer, or someone in close touch with the French market, who ships gold from Paris to New York in payment. Thus, instead of gold flowing from this country and weakening the exchange, the gold flows from France. The French drain of gold is, in fact, the pound's protection against the seasonal demand for dollars.

The unfavourable "visible" balance of French trade with the United States (which amounted to Frs. 780 millions for the first six months of the year, and shows signs of increasing) can only in itself account for a comparatively small proportion of the gold flow. There is, however, a growing practice among French exporters of leaving the money with which they are remunerated in its country of origin. This feature finds no reflection in the trade returns, which show merely the values of goods exported and imported. The policy, naturally, is one for the trader of substance rather than the shipper with modest resources, who relies on the return from one operation for the financing of the next. In this connection, however, the official monetary policy of the French Government has a special relevance. Since the advent of M. Blum's Government interest rates have been sensibly reduced and a policy of cheap money has been embarked upon, with a view to stimulating trade. An unforeseen result has been the giving of an additional inducement to exporters to leave funds abroad and borrow at cheap rates in the home market. It is estimated that, at present, as much as 10 per cent. of the total exports are not being repatriated. Calculated on the basis of the July trade returns, capital is leaving France in this manner at the rate of over Frs. 100 millions a month. The total of French funds already outside France has been estimated at £300 millions.

How long can these gold losses be sustained? Under present conditions, it seems certain that the outflow of capital will continue. The measures taken by the Government, including legal threats to those who do not declare their foreign holdings, and requests to the banks to disclose clients' holdings abroad, have resulted in only a small return of capital and have not changed the direction of the main stream. In spite of the Government's declarations against devaluation, the mass of French business men are imbued with a widespread fear of this and other more direct measures, such as a capital levy. The Spanish rebellion has served both to heighten international tension and to strengthen the Government in its stand against the parties and policies of the Right. Whatever the outcome of the Spanish rebellion, it is expected to have significant political repercussions in France.

On the other hand, the raising of production costs in French industry by the various laws passed by the Government authorising wage increases, paid holidays and the 40-hour week, has brought the issue of devaluation nearer. The reported modification in opinion among certain members of the Communist Party in favour of devaluation is significant, as it produces much greater unity in the Government over monetary policy. But until M. Blum feels he is in a position to devalue the franc without surrendering all his prestige to his opponents of the Right, the present situation is bound to continue. Only devaluation of the franc or some other major disturbance can shake the present stability of the dollar-franc relationship, and until this happens the pound seems likely to remain strong at its present level.

FINANCIAL NOTES

The London Exchange Market.—The Market in foreign exchange is composed of the foreign exchange departments of the "Big Five" and the remaining clearing banks, of merchant bankers, of Dominion and foreign banks' London offices, and of various smaller exchange dealers. Since the abandonment of the gold standard by this country in September, 1931, the creation of the Exchange Equalisation Account, and the embargo on foreign lending administered by the Bank and the Treasury "in consultation with" the Foreign Transactions Advisory Committee, it has become desirable in the eyes of the authorities to be able to count on complete control of the foreign exchange market, both for the volume of transactions in the different currencies and for movements in the rates at which they take place. Hitherto there has been in existence—though not in vitality—an informal and only partial Foreign Exchange Committee drawn from the clearing banks and a few others, but not from the bulk of the Dominion and foreign banks. Its decisions have taken the form of recommendations. Now that control by "the authorities" is rapidly being extended over Treasury bill rates, the gilt-edged market and foreign capital transactions, it is not surprising that the same authorities should seek to render the Foreign Exchange Committee comprehensive, and thus to ensure that it receives sufficient influence to make its decisions effective in the foreign exchange market as a whole. Apparently it is now proposed to give the clearing banks, private houses and Dominion and foreign banks representation on a reconstituted committee, and to appoint an impartial chairman—whose impartiality, we may presume, will only be exercised among the interests represented on the committee and not *vis-à-vis* "the authorities" themselves. This latest extension of informal, but effective, control of the City's markets by the Treasury and the Bank comes at a time when the future of the major currencies is problematical, when the Exchange Account is apparently bulging with gold, and when this country's budgetary and foreign trading prospects might indicate a weakening of sterling some time ahead. It is by now quite clear that the Treasury and Bank between them mean to hold all the financial aces in their hands, and to play them, in case of need, against the individual interests of British or foreign financial institutions. These developments are logical; and the authorities are not shy of increasing the scope of their responsibilities; but we should prefer to see more public formality in these new financial organs. Their non-amenability to Parliamentary, not necessarily public, scrutiny may cover a multitude of arbitrary dealings—to say nothing of errors against the public interest.

The Money Market.—Conditions are very easy and credit is very plentiful. September is usually a quiet month, and except for a possible slight tightening towards the fourth week at the end of the quarter no changes are expected in any of the money rates:—

	Aug. 13, 1936	Aug. 20, 1936	Aug. 27, 1936	Sept. 3, 1936
Bank rate.....	2	2	2	2
Clearing banks' deposit rate ...	1	1	1	1
Short loan rate:—				
Clearing banks	1-1-1*	1-1-1*	1-1-1*	1-1-1*
Others	1	1	1	1
Discount rates:—				
Treasury bills	1	1	1	1
Three months' bank bills	1-1-1	1-1-1	1-1-1	1-1-1

* Loans against Treasury bills and other approved bills and British Government securities within six months of maturity; 1 per cent. Treasury Bonds and other gilt-edged stocks within six months of maturity; and other collateral respectively.

There is a strong demand for bills in the market for selling to the banks, for since the rate of profit on bills is so very low brokers attempt to get as many as possible in order to keep up their profits. This week maturities of Treasury bills were £5 millions in excess of the amount offered, and the contraction in the tender issue further increased the competition for bills.

An Italian Bid for Credit.—A decree was published in Rome on August 27th to enable Italian Treasury bonds of 12, 18, 24 and 36 months' usance to be placed in foreign markets in denominations of other currencies. While interest is to be paid in lire, the bonds are redeemable at the expiry of their usance; and they are tax-free. It was reported that, owing to the state of Italian finances, the new bonds were intended to raise foreign credits for the development of the annexed Ethiopian territories. As we showed in a Note of the Week in our last issue, the aftermath of the Abyssinian war and Italy's current and future liabilities in Ethiopia have caused a drain on the Treasury. Even so, it is surprising that the Italian authorities should have gone so far as to advertise their need of funds in foreign markets. For although the short-term nature of the bonds would technically evade the ban on foreign loans to "defaulting debtors" contained in the American Johnson Act, it is not likely that Wall Street will smile upon what London and Paris reject. Nor is it likely that Amsterdam, Zürich or Stockholm will help. Italy is not creditworthy; there is no guarantee—other than the word of a Government which has not been zealous in keeping its pledged word—that even interest in lire will be paid; nor that such interest will be transferred; nor that the principal will be redeemed at due date. Even as a speculation, Italy's new bonds do not commend themselves, for at 5 per cent. they scarcely cover their own risk-premium.

The Bank Return.—The increase of £2.4 millions in the note circulation this week is accounted for by the normal increased demand for cash for the payment of wages, etc. As far as can be ascertained French hoarding has ceased. The bank is continuing to buy gold, however, to the extent of nearly £1 million, if Thursday's purchase of £336,000 is included. This may be due to a possible renewal of hoarding, or simply to a repatriation of excess gold held by the Exchange Equalisation Account in Paris:

	Sept. 4, 1935	Aug. 12, 1936	Aug. 19, 1936	Aug. 26, 1936	Sept. 2, 1936

Proportion	36.3%	35.0%	37.8%	40.0%	38.4%

Victory bonds and 3 per cent. Conversion Loan fell due on Tuesday and caused Government payments of about £15 millions. At the same time, owing to the fact that June 1st was Whit-Monday, there were no maturities falling due on Monday and Tuesday, so bankers' deposits, which would otherwise have shown a considerable expansion, remain more or less the same.

The Foreign Exchanges.—The London Market is extraordinarily quiet, and there is little interest in any direction. With the holiday season almost over, dealings in currencies for these purposes have virtually finished. The demand for registered marks for the Olympic games had no apparent effect on the discount, and it is presumed that travel agencies, through which most of these transactions are made, had previously provided themselves with sufficient marks to carry them through the period. The demand for "tourist" lire, too, has now considerably diminished. The franc continues to be at the gold point against the dollar, but only small shipments of gold have been made. As against the Swiss franc and the Dutch guilder it has also been at the gold export point, but gold losses in these directions have been insignificant. As was pointed out last week, gold moves considerably less freely between countries in the gold *bloc* than to a country outside it.

THE STOCK EXCHANGE

HOW SHOULD WE LEND ABROAD?

THERE is a stirring in the dry bones of the foreign bond market. Last week brought good news from the Near and Far East for bondholders. China announced arrangements for a resumption of partial interest payments on two more of her railway loans; Greece produced an overdue offer to increase the remittance percentage of her debt obligations to a figure which the representative associations of her bondholders in London accepted—provisionally, reluctantly and under protest, but accepted nevertheless. And on Monday of this week the League Loans Committee (London) has published its fourth annual report, which bravely maintains that the machinery by which £80½ millions of capital was subscribed between 1923 and 1928 for European economic reconstruction is "powerful and useful" and "has done indispensable work." Investors have every reason to be grateful to the Committee for its unremitting efforts to serve them in the past four years. They will honour the indomitable conviction expressed in the Committee's words, at a time when £37½ millions of an outstanding total of £41½ millions of League loans is actually in default. The Committee, admittedly, argues by faith and not by sight when it urges that creditors and debtors alike should preserve this reconstruction machine against the time when they may need it again.

But belief in a future resumption of foreign lending is not confined to the Committee. Its possibility has lately been considered, officially and unofficially, in circles so varied and influential as the Treasury, the City and the Federation of British Industries. What should the investor's attitude be?

If pure investment considerations were alone involved there would be little doubt of the answer. Foreign lending has always been recognised as a speculative business, in which heavy losses are inevitable from time to time. This condition, however, has always been appropriately recognised by both parties to the bargain. Borrowers have offered high rates of interest and lenders have regarded the majority of foreign bonds as suitable only for "mixing" purposes, to raise the average yield on a well-distributed investment portfolio. For the last hundred years every depression has produced its crop of defaults, but subsequent recovery has invariably witnessed renewed borrowing and lending. Compositions between debtor and creditor have fallen thick as autumn leaves in Vallombrosa, but no borrower who has shown a suitably contrite spirit has ever been refused fresh accommodation in London. And, on the whole, the business has been a paying proposition. The average rate of interest secured on the entire *corpus* of foreign loans—defaulted and defaulted, in bad times and good—has not been unprofitable. In the worst year of the present depression the Board of Trade's estimate of Britain's income from her overseas investments never fell below £150 millions. In 1935 it was put at £185 millions. It is not disputed that this country, so far as its overseas financial relations are concerned, is to-day "living on its interest"—if not, even to a small extent, on its capital.

If the present depression had differed in degree but not in kind from its predecessors, there is little doubt but that the beginnings of the customary revival in foreign lending would already have been evident. International trade recovery, though painfully slow, has definitely begun, and time is no longer the bondholder's worst enemy. In the last few months there has been a faint but perceptible upward trend in foreign bond prices. This is shown by the series of index numbers opposite, devised by Municipal and General Securities Company, Limited, in connection with the Foreign Government Bond Trust, on lines explained in the *Economist* of July 4, 1936 (page 20).

The current average price of the whole sample of 114 bonds is 13 per cent. higher than a year ago. The lion's share of the improvement, significantly enough, has occurred in bonds still under whole or partial default. The

Aug.	95.1	113.2	100.7	99.3	89.8	97.0	100.7	105.7	95.3

† These are current totals. Changes in totals have been necessitated during period as follows: January, 1934, to July, 1935, 63 defaulted, 51 defaulted bonds; August, 1935, to April, 1936, 62 defaulted, 52 defaulted bonds; May, 1936, to date, 60 defaulted, 54 defaulted bonds.

"undefaulted" bonds are 5 per cent. and the "defaulted" 24½ per cent. above the level of August, 1935.

Clearly, the market setting is more auspicious to-day than twelve months ago. But, in fact, no one inside or outside the market believes that there is the slightest possibility of a resumption by Great Britain of foreign lending on the old unrestricted scale. On the contrary, the inevitability of the imposition of some sort of authoritarian regime on the export of new capital is tacitly recognised even in quarters which are most friendly to the idea of a recrudescence of foreign lending, as such. It is not merely that Britain's balance of payments no longer shows a handsome annual surplus for overseas investment; that certain of the world's major currencies are still in disequilibrium; that numerous countries are no longer deemed credit-worthy and that international transfers are widely handicapped by currency and trade restrictions. Behind and beyond all this there is a growing conviction that, in the world of to-day, control of foreign lending has ceased to be a question of pure investment, and has become a matter of high policy.

This aspect is certainly not new. The conferment of trustee status on Colonial Government securities, at the beginning of this century, was avowedly designed to canalise part of the stream of overseas investment for Imperial irrigation. After the war, the appearance of a new phenomenon, the "defaulter on principle," like Soviet Russia, strengthened the marriage-tie between finance and politics. But the active concern of the British Government with currency policy in the disturbed period from 1914 onwards has done most to make foreign lending an affair of State. The war-time repatriation of dollar securities, which proved an indispensable instrument in financing the purchase of supplies from abroad, familiarised the authorities with one aspect of the question. Later, the unofficial embargo on foreign issues, associated with the return of Great Britain to the gold standard, was a lesson in the practicability of a converse type of control. To-day, though the Treasury, in theory, has power only to "request" the issue market to abstain from certain operations which are perfectly legal, the authorities have implicitly admitted that control of foreign lending is part of the machinery of a managed sterling currency, and have appointed a Foreign Transactions Advisory Committee as their City executive arm.

There are indications, however, of a further orientation of official policy. At a moment when domestic industry is passing from recovery to boom, British exports are

hanging fire. The thesis that "loans make exports" is classical. May not lending be a useful weapon in the armoury of a Government which has assumed a peculiar care for the continuance of trade revival, at a time when other export-forcing expedients, like bilateral commercial agreements, appear to have limited scope? The agreement announced on July 30th for a British Treasury guarantee to a £10 million five-year Russian Government loan for the purchase of British goods goes far beyond neutrality, benevolent or otherwise, in the foreign issue market. If it is followed by other operations of similar character, the conclusion will be inescapable that the Government has consciously combined the rôles of *entrepreneur*, dictator and insurer in the foreign loan market. And the process of foreign lending will have been definitely associated, as a branch of public policy, with the economic advantage, primarily, of the lender rather than the borrower.

It is much too early to pronounce a final verdict on the Treasury's new rôle in an old-established market. Within the limits imposed, in the long run, by our balance of payments, there may be scope for the development of a method which will undoubtedly tend to bring orders for British goods which might have gone elsewhere, and, carefully administered, may leave the Treasury with a sufficiently high premium to cover its "acceptance risk." But if the investor, henceforth, is to invest abroad by purchasing gilt-edged British Government securities (after having invested in railways, Tubes and beet-sugar in the same way), it is obvious that the new foreign lending cannot accept the same wide range of risks as the old. For this reason, if for no other, it is unlikely to attain anything like its former dimensions.

INVESTMENT NOTES

"Discipline" in the Gilt-edged Market.—Activity is developing once more in the gilt-edged market. For the last few weeks prices have been steady with a firm undertone, and they are now not far short of their highest levels of the year. The *Financial News*' index of fixed interest security prices is still three points below the peak of January last year, but it has advanced by a half-point since the beginning of last month. This behaviour of the market demands more than passing notice at a time when the international outlook is becoming increasingly uncertain and the prospect of a Budget deficit increasingly certain. At the present point in the trade cycle it would be natural, by classical canons, to look for some hardening of interest rates. Traditional criteria, however, are no longer entirely relevant in a market which is "managed" almost as invisibly and as indubitably as the exchange market and the foreign issue market. Investors will ask whether the Treasury has the power and the desire to play the rôle of a trick-riding Atlas, and to carry the entire system of interest rates on its shoulders, whatever the position of the cyclical machine on which it is seated. If so, the immediate outlook for gilt-edged securities is primarily a factor of the Treasury's will-power. It is clear enough that a continuance of low interest rates would suit the Government's book. There is a re-armament loan in the middle distance, and, meanwhile, the queue of municipal borrowers is lining up once again. The measures necessary to offset the French hoarding of British notes tend to obscure the usual monetary indicators, but the Bank of England returns show that credit is increasingly abundant. Last week a rise of one-eighth occurred in the price of 2½ per cent. Funding Loan, a large proportion of which, it is generally believed, has been held from the outset by the public departments. So far so good; but the rougher going which appears to lie ahead may call for more difficult equilibrium feats by the authorities than have as yet been necessary. The international trend of commodity prices, as a whole, is upward, and signs are appearing in industry of the beginnings of the spiral of rising costs. These are typical phenomena of a secondary stage in the upward swing of a normal trade cycle. Traditionally, the appropriate check comes by way of pressure on the foreign

Apply to above address for particulars of Sites for Works

exchanges, but this apparently works much less automatically under a managed than under a gold currency. The possible consequences may, in theory at least, be far-reaching. The market would give a good deal to know whether the Treasury has decided to face them, whatever may betide, rather than to allow interest rates to harden.

Course of Share Values.—Although the volume of Stock Exchange business suffered a seasonal contraction last month, there has been no halt in the process of establishing new "post-depression records" in the London equity share market. In America, on the other hand, there has been a measurable recession, though, as the annexed chart shows, its dimensions have been no more than those of many "technical pauses" which have served as punctuation marks in the main upward movement since March, 1935. Compared with the very considerable reaction last April, last month's setback was scarcely worth considering. It is by no means improbable that wider movements will be witnessed before the Presidential election is over, but the outlook for Wall Street remains promising. About London's prospects, there may be diversity of opinion. Industrial recovery started earlier in Great Britain than in America, and some of the characteristics of recent business in ordinary shares have been those of a mature rather than an adolescent movement.

BRITISH AND AMERICAN INDUSTRIAL SHARE VALUES OVER THE PAST TWO YEARS

(1928 = 100)

British: "Financial News" Index of 30 Ordinary Shares
American: "Standard Statistics" Index of 50 Common Stocks

Some cautious commentators are dwelling a little more on prospects of increasing industrial costs, and a little less on current increases in industrial profits, which were discounted by share values many months ago. The real mainspring, however, of the new increase in demand for equities, expected in the coming autumn, will be the state of industrial activity. British industry now has a good Press, but if any change occurs in the state of order-books, it is usually on the Stock Exchange that it finds its first outward and visible expression. Meanwhile, the figures of the Actuaries' Index show that the average level of the more substantial equity shares is approximately 15 per cent. higher than a year ago. The price index of 178 securities (December 31, 1928 = 100) has risen from 75.9

a year ago to 85.1 a month ago and 87.4 this week. The corresponding yield figures are 3.91, 3.69, and 3.62 per cent. Figures for various sub-groups are given below:—

Actuaries' Index						
Group (and No. of Securities)	Prices (Dec. 31, 1928 = 100)			Yields (%)		
	Year ago	Month ago	This Week	Year ago	Month ago	This week
	Sept. 3, 1935	Aug. 4, 1936	Sept. 1, 1935	Sept. 3, 1935	Aug. 4, 1936	Sept. 1, 1936
Insurance Co.'s (24)	119.1	133.3	134.5	3.52	3.19	3.16
Building Materials (5)	89.9	102.2	108.1	4.50	4.76	4.50
Coal (7)	89.0	102.0	104.1	4.18	3.31	3.21
Iron and Steel (12)	64.5	79.8	79.6	3.17	3.74	3.75
Electric Supplies* (10)	118.1	145.3	150.0	4.34	3.75	3.62
Home Rails (4)	61.6	73.3	77.7	1.64	1.53	1.53
Breweries & distilleries (21)	128.7	149.2	153.0	4.29	3.93	3.84

* Electrical equipment.

All these groups are higher than a year ago, but whereas the average yield has fallen in the insurance, coal, electrical equipment, home rail and brewery groups, it has actually risen in the iron and steel group and is unchanged in the building material group.

League Loans Committee Report.—The fourth annual report of the League Loans Committee (London)* (whose wider implications are discussed in a leading article on page 440), suggests that although holders of loans issued under the League's auspices appear, as a whole, to have fared better than non-League bondholders, the contrast between countries with a high and those with a somewhat less stringent conception of their obligations has tended recently to become more marked. Danzig and Estonia have maintained the full service of their League loans, but these, unfortunately, account for only £3.6 millions of a present outstanding total of £41.3 millions. Of the remaining borrowers, Hungary, who has £10.4 millions outstanding, deserves at least Dorcas's tribute, for the Committee recognises that she has done what she could. She transferred 50 per cent. of her current interest service last year and is to continue at this rate for a further twelve months. Bulgaria, with her £8.4 millions, however, and Greece, with £18.9 millions, have shown a spirit which the Committee, with commendable restraint, describe as "unsatisfactory." Bulgaria agreed in April, 1934, to transfer 32½ per cent. of the interest on her external debt, but failed to carry out her undertaking. Last year her transfers were limited to 15 per cent. for current interest and 6½ per cent. for arrears. After she had enjoyed an internal recovery, the Minister of Finance admitted last March that there was no real budgetary difficulty in providing 32½ per cent., but the Government could not be induced to transfer more than 21½ per cent. The Greek default was even more serious. A temporary *modus vivendi* has been arrived at, on the lines indicated in last week's *Economist* (page 400), but the Committee remains convinced that the present 40 per cent. of interest does not represent the maximum effort which Greece could make. The following table summarises the present position of the nine League loans which were issued between 1923 and 1928:—

(Amounts in Million £)						
Borrower	Nature of Loan	Original Issue Equiv. (at par)	Of which issued in London	Amount Outstanding	Issue Price (London)	Last Coupon Paid (Percent. of Full Service)
Austria	Guaranteed, 1923	32.8	14.0	Nil	...	Repaid or converted Full
Danzig Municipality	7½ Mortgage, 1925	1.5	1.5	0.8	90	65
Danzig Free City	6½ Tobacco Monop., 1927.	1.9	1.5	1.4	91	59
Estonia	7½ Banking and Curr., 1927.	1.5	0.5	1.4	94½	94
Bulgaria	7½ Settlement, 1928	3.3	1.7	3.0	92	15½
	7½ Stabilisation, 1928.	5.4	1.5	5.4	96	16½
Greece	7½ Refugee, 1924	12.2	7.5	11.6	88	44½
	8½ Stabilisation, 1928.	7.5	3.4	7.3	91	34½
Hungary	7½ Reconstruction, 1924.	14.2	7.9	10.4	88	46½

* Issued from 3 Bank Buildings, Princes Street, London E.C. 2. 5s. net.

It will be seen that while the heaviest losses for bondholders have occurred in the defaulted issues, political complications have resulted in a lower basis of quotation, among the defaulted loans, for Danzig than for Estonia. League bondholders have every reason to be grateful to the Committee for its unremitting endeavours.

New Issues in August.—Our computations of the value of new issues in August show a total of £17,516,000 (or £6,511,000 on the old basis of calculation). This reflects the traditional holiday decline in activity, for it is less than half the July total, but it compares with only £11,425,000 for August, 1935. The degree of activity, on the whole, is relatively high for the "close season," and it suggests a return to lively conditions in the autumn:—

August, 1936	Dr. 150	12,887	4,779	17,516	

Issues lately have been more numerous than important, and the few public offers contained none of any size. The Kenya loan, for instance, involved only a small amount for the London market. A considerable proportion of last month's total was made up by three large offers "to shareholders only." Comparative figures on the old and new bases are given above.

Industrial Profits in August.—The month of August is mainly a close season for the publication of company reports. Last month only 47 reports reached us, showing profits of £5,562,452 after deduction of debenture interest, against a total of £4,870,222 for the same companies in their preceding financial year. The increase of 14.21 per cent. thus revealed is somewhat above the average for all companies which have reported since the beginning of this year:—

Reports published in	No. of Companies	Rise in Profits*	Reports published in	No. of Companies	Rise in Profits*
1935—		%	1936—		%
April	242	16.49	January	128	13.66
May	244	11.07	February	205	9.00
June	191	21.72	March	236	17.39
July	232	13.44	April	254	9.66
August	38	5.93	May	269	9.41
September	77	9.28	June	214	13.50

November	160	17.47	August	47	14.21
December	159	12.27			

* After payment of debenture interest.

The greater part of the increase in last month's profits was attributable to four groups of companies. Seven breweries disclosed an aggregate gain of £159,000, four textile companies a gain of £134,000, three motor and cycle companies a gain of £93,000, and six iron, coal and steel companies a rise of nearly £51,000. Only two groups showed a decrease—"Financial, Land, etc.," and "Rubber." The growth of investment trust company profits, however, continues to be slow. Three trust companies which reported in August revealed an increase of under £7,000 in net earnings, from £121,000 to £128,000. Taken by and large, however, it is clear that there has been, as yet, no significant check to the upward movement in British earnings.

COMPANY NOTES

Lautaro Nitrate Prospects.—In a Note on page 404 of last week's *Economist*, we discussed the anatomy of the Lautaro Nitrate Company's capital reorganisation scheme. If and when the scheme has been passed, the capital will consist of £1,746,685 income debenture stock, and \$31,357,000 Income Bonds, followed by £2,193,366 of "A" and "B" ordinary shares. Until the corporation's nitrate stocks have been liquidated—which should be by 1943—the whole profit, apart from 2 per cent. bank interest, will be applied to the debenture and bond service. This is divided between interest and sinking fund by a complex formula, with a maximum interest rate of 4 per cent. on each. After the liquidation period, the ordinary shares will receive one-fifth of the profits. In fact, the scheme promises redemption of the prior charges at a rapid rate. If the level of profits permits a full 4 per cent. payment—which, presumably, was the directors' intention when the scheme was formulated—both debentures and bonds will probably be redeemed in less than twenty years. In the Chilean nitrate industry, however, profits are a matter over which producers have little control. In the early years of the slump, the synthetic industry established its supremacy at the cost of virtual bankruptcy of the Chilean industry. The synthetic producers still have a substantial advantage in the matter of costs. Their Governments, moreover—particularly the German Government—are willing so largely to subsidise them as to give them control of the entire export market if the matter ever comes to the test. The synthetic producers, however, are now united in an international cartel which covers every market except the U.S.A. and Chile itself. This cartel is working satisfactorily, and seems likely to be prolonged—the more so as the German and Polish Governments, for military reasons, are not anxious to export an unnecessarily large amount of nitrate. The price of nitrate in the United States is rising, and as long as military demand is maintained, the present upward movement is unlikely to be checked. In practice, therefore, the Chilean position may be stronger than appears at first sight, and a continuation of the present level of the Lautaro Corporation's profits may be conceivable. If so, the debentures at 39 (including rights worth at least 7½), and the bonds at 35, may have fair prospects. The position of the new ordinary shares will be more open to argument. They are entitled to nothing before 1943; after which they will receive only one-fifth of the profits until the whole of the prior charges have been redeemed. When they obtain full equity-ownership, heavy allowances will be necessary for depreciation of plant and amortisation of nitrate lands. The prospect of large dividends, therefore, is anything but bright.

Gordon Hotels Scheme.—The holiday period has certainly not been a close season for capital reorganisation schemes. Investors must be strongly impressed by the extreme urgency which impels boards of directors to put forward proposals, affecting financial rights in perpetuity, at a time when the majority of shareholders are away from home and deprived of normal access to expert assistance. With the best will in the world, it is difficult to deduce the reasons for such overwhelming haste from the actual terms of certain schemes recently put forward. The proposals of Gordon Hotels, Limited, for example, which have been published this week, amount simply to a reorganisation of the debenture burden, without any alteration of the assets figures in the balance sheet, or of the relationships of holders of share capital. The scheme's objective is defined as being "to enable the fixed charges to be brought more into line with the present and prospective earning capacity of the company"; and it is intended as a substitute for an existing arrangement under which the 6 per cent. debenture holders obtain 4 per cent. in cash and 2 per cent. in deferred interest certificates. The question at once arises why the burden of adjustment should fall alone on the debenture holders, who, *pro tanto*, increase the income of shareholders

OTARD'S

ESTABD 1795

THE BRANDY WITH A PEDIGREE

with rights junior to theirs. It is proposed to give every holder of £100 of 6 per cent. debenture stock, in exchange, some £25 of prior lien debenture, £50 of 6 per cent. debenture, and £25 of 7 per cent. income debenture—the last being non-cumulative until 1940 and dependent on profits. Thus, holders will obtain a firm 4 per cent. income *plus* a possible and contingent 1½ per cent., making a maximum of 5½ per cent. against a present 6 per cent. Their "cover" is actually reduced, for the company's bankers receive a large slice of prior lien stock, together with cash, in payment of their overdraft. Holders have right and reason to insist that any acceptable scheme must be comprehensive.

Triplex.—The market initially registered a somewhat unreasonable disappointment with the Triplex Safety Glass accounts for the year to June 30th last. Profits have increased by 30 per cent., and earnings for dividends, after heavier allowances for taxation and depreciation, have advanced from 55.1 per cent. to 69.5 per cent. The dividend has actually been doubled at 60 per cent. against 30 per cent. But the market had anticipated the announcement of a capital bonus. The shares are now at 121s. 3d. against 121s. 6d. before the report. The accounts, nevertheless, are excellent in every way. Despite the group's rapid expansion, liquid resources are still adequate, while fixed assets are being written down on austere conservative lines. The following table shows profits and their distribution during the last three years:—

	Years to June 30		
	1934	1935	1936
Total profit	132,349	131,909	177,333
Fees, etc.	3,084	850	1,350
Income tax	31,000	25,000	40,000
Depreciation, obsolescence	23,095	20,578	30,020
Ordinary shares:—			
Earned	75,170	85,481	105,963
Paid	38,750	46,500	91,500
Earned %	48.5	55.1	69.5
Paid %	25	30	60

Reserve

Carried forward	37,500*	50,000	12,763†
	13,331	3,335†	6,163†

* Written off goodwill, patents, etc. † Employees' profit-sharing fund. ‡ After bringing in £1,023 in 1935 and £1,128 in 1936, profit on the sale of investments.

The company's tactical position is favourable. The motor boom shows no signs of recession, and safety glass is being made compulsory for certain purposes. There is also a strong "re-armament equity" by way of the safety glass equipment of military aircraft. The company has two potentially valuable subsidiaries—Quickfit and Quartz and the Thermolux Glass Company—which, respectively, produce scientific and domestic glassware, but have not yet reached the profit-earning stage. Finally, the American subsidiary—Triplex Safety Glass of North America—has been awarded \$200,000 by the Court. This windfall, equivalent to roughly 20 per cent. on the capital, has not yet been distributed; though its existence may have been one reason for the freer dividend policy this year. Triplex 10s. shares have had an extraordinary rise this year—at one time they touched 85s. 6d. only—but even at 121s. 3d. they yield just under 5 per cent.

Eastwoods.—Although investors have become accustomed to look for expanding profits in the building trades and allied industries, the decline in Eastwood's profits by some £9,000 to £101,663 is not unexpected. The report mentions seasonal causes, but this week's unofficial

announcement of negotiations for tightening up the agreement of 1934 in the cement industry may also have relevance. The following table shows the allocation of earnings for the past three years:—

	Years ended March 31st		
	1934	1935	1936
Profit, less depreciation	91,871	110,720	101,663
General expenses and fees	13,267	16,233	13,910
Provision for bad debts	3,709	4,449	4,668
Taxation reserve	2,500	5,000	5,000
Earned for dividends	72,395	85,038	78,085
Preference dividend	10,500	10,500	10,500
Ordinary shares:—			
Earned	61,895	74,538	67,585
Paid	37,500	45,000	45,000
Earned (%)	23.0	27.7	24.9
Paid (%)	12.5	15	15
General Reserve	23,911a	22,500	22,500
Carried forward	9,773b	15,811b	15,897

a Including £1,411 to Investment Reserve.

b After deducting £1,000 Directors' Bonus, voted in the following September.

The fall in the latest period is diminished by a drop in expenses, and involves no change in the provisions made for bad and doubtful debts, for taxation reserve, or for general reserve, to which £22,500 is placed for the third successive year. Earnings of 24.9 amply cover the unchanged dividend of 15 per cent. The balance sheet reveals no major changes. Stock has increased from £103,125 to £118,857, and investments are lower, while cash and Government securities show a corresponding fall from £150,090 to £135,225, but still represent some 15 per cent. of the balance-sheet total. Although the limit to the rate of expansion in the building trades may be in sight, and the possibility of stationary or of lower future profits may loom on the horizon, the ordinary shares seem fairly valued at 52s. 6d., to yield 5 1/4s. per cent.

* * *

Tube Investments Expansion.—Plans for the expansion of Tube Investments' plant were made public recently in a letter from the chairman, Mr Arthur Chamberlain, to the stockholders. The rapid increase in the demand for tubes "has called for an ever-increasing production from all the company's factories," and extensive new capital expenditure has been necessary. Plans have already been prepared, and some have been put into operation, for the expenditure of £1,250,000. Some of the increase is, of course, made necessary by the Government's re-armament programme. But Mr Chamberlain emphasises the fact that the plan "is primarily designed" for normal peacetime purposes. There is, indeed, less danger of over-expansion here than in other sections of the steel industry. The company is not interested in the export trade, and, besides the huge and perhaps transient demand from the building boom, many new uses for tubes are being found. On the financial side, Tube Investments' position appears eminently sound. Mr Chamberlain points out that its programme could have been financed from liquid resources. It was decided, however, to finance the bulk of it by an issue at 30s. cash of 517,199 new £1 ordinary shares, bringing the total issued capital up to £3,932,179. Dealings are taking place in the new shares around 41s. 9d. premium.

* * *

Other Company Results.—The reports of 13 other companies are analysed on page 454. *Palestine Electric* net profits have increased by the substantial sum of £P.82,374 to £P.296,685, while an increase of over 50 per cent. in the number of consumers is reported. The income from interest and dividends and net profit on sale of investments of *Industrial Finance and Investment* is £143,919, as against £132,087. The first complete year's results of *Hilton Main Colliery* show net profits of £42,172, from which a dividend of 15 per cent. is being paid, and £10,000 put to reserve. *Whitworth and Mitchell* profits have fallen from £70,749 to £58,190, and the dividend from 6 1/2 per cent. to 4 1/2 per cent. *Hutchinsons and Company (Publishers)* report an increase in profits of £11,668 to £51,056. The amount earned for dividend by *London Express News-*

paper is practically unchanged at £146,321; a dividend of 10 per cent. is being paid for the ninth year in succession. *Debenhams* dividend has been raised from 12 1/2 per cent. to 16 1/2 per cent. The preliminary statement shows that net earnings are £558,263, against £508,001. The reserve allocation remains at £50,000, and £182,171 is carried forward, against £136,241 brought in. A cable from *Broken Hill South* reports net profits of £486,197 (£387,747 from the mining and £98,450 from the investment section), which represents the very appreciable increase of £143,687. Good quarterly statements from *Roan Antelope Copper* have been followed by a dividend of 30 per cent., compared with an initial distribution of 20 per cent. Other dividend announcements include *Ranks*, whose final payment of 12 per cent. makes 15.0492 per cent. for the year, against 15 per cent., and *Pinchin Johnson*, who have declared an interim dividend of 7 1/2 per cent. Again no interim payment on the deferred ordinary shares is proposed by *Maypole Dairies*; the directors of *Home and Colonial* do not wish to encourage expectations of an early resumption of ordinary dividends, but report that the decline experienced in the first quarter has now been arrested, and the reorganisation is being proceeded with.

THE WEEK IN THE MARKETS

THE STOCK EXCHANGE

SETTLING DAYS

TICKET ACCOUNT
SEPTEMBER 8 SEPTEMBER 10

ANOTHER holiday week has seen cheerful conditions in the markets, and dealers have been encouraged by the evidence of increasing trade at home, by somewhat unsubstantiated hopes of better political developments in Europe, and to some little extent by the improvement of Wall Street prices. The gilt-edged market has been very quiet, particularly toward the end of the account, but prices have moved upward, and Old Consols, Conversion 2 1/2, and War Loan are all higher. Colonial issues have been firm, though neglected, but India stocks have attracted considerable attention and are moving into line with Colonial issues. Home corporation stocks were higher in the few cases where movements were recorded. German bonds have been the best feature of the Foreign Bond market, and in mid-week about the only issues to lose ground were French Railway bonds. The further inroad into Chinese Customs revenues threatened by the new tariff established by the Chahar-Hopei political council depressed Chinese bonds, and left Japanese very steady. Brazilian issues were weak, on the coffee position. Home rails were firm in anticipation of the week's traffic, but the figures when published caused disappointment. Transport "C" improved on the traffic return, and Mersey Ordinary were well supported on absorption rumours. Apart from Americans, which moved in sympathy with Wall Street prices, the foreign rail market was dull.

Industrial markets have shown many good features. Iron and steel shares have been one of the quieter sections, without much change in prices despite the evidence of continued good industrial activity. T. W. Ward were in demand on dividend hopes, but reacted in mid-week. Aviation issues have not seen much business, but dealings in the motor section have been active, with Leyland, Standard and Tilling in the lead. Electrical Equipment issues have been among the strongest in the market, on the general increase in industrial demand, and signs of expansion in the supply industry. Business has been considerable, at rising prices, with Crompton Parkinson the main feature. Electrical supply shares were somewhat irregular.

Patons and Baldwins were prominent in the otherwise neglected textile markets, on hopes of higher dividend following improved business, and early in the week a good demand for Courtaulds was in evidence. The good July production figures continue to encourage Brewery issues, and there was support for some of the leading tobacco shares. The Stores section opened the week very well, but many issues became soft later in the week, while in the Provision and Catering group prices continued to improve, with Lovell and Christmas a bright feature on good trade reports. Insurance shares were firm on investment buying. There were a number of good features among miscellaneous industrials, particularly cement issues, which improved on prospects of a successful scheme to fix prices. Triplex gave way at the beginning of the week, on profit-taking, but recovered later. Miscellaneous engineering and machine tool issues were all firm in mid-week, and British Oxygen improved after an earlier setback.

Business in the oil shares market has been very active, all sections of the market becoming affected as the week progressed. At the start, Mexican Eagles were the feature on the increase in production and the prospects of the El Plan field, and prices advanced in very active dealings. Announcement by the directors of Anglo-Ecuadorian Oilfields that oil and mining companies are exempt from the exchange control was followed by a rapid improvement in the company's shares. There was considerable investment buying of the leading issues, and Shell, Royal Dutch, Anglo-Iranian and Burmah shares were all higher. The rubber shares market was devoid of interest, but prices on the tea shares market, particularly in the Indian section, advanced sharply on a relatively small amount of business, the principal factor being the higher price for cheap grade teas.

The Kaffir market opened the week very quietly, and was later somewhat depressed by profit-taking. In mid-week there was an improvement lead by Far Western issues, and Venterspost made a sharp recovery on development reports. Support from the Cape and London was encouraged by the August returns. The West African section was the most active in the market, although interest showed signs of flagging as the week progressed. Rhodesian copper issues have made slight improvements, and tin shares were firm on the higher commodity price.

FOREIGN STOCK EXCHANGES

NEW YORK

By the end of last week prices on Wall Street had more than recovered the ground lost in the previous week, and one of the elements which provoked the recovery was a speech by Candidate Landon, who promised, if elected, to repeal the last Finance Bill with its taxes on undistributed corporate profits. This was obviously more to the market's fancy than mere good business reports, and it must have been a Wall Street paradox that the introduction of the new bill some months ago was followed by a rise in prices. The new week opened with railroad issues leading the market on the excellent July operating results, but business then tailed off slightly until mid-week saw a revived interest. The revised Budget estimates were said to have little influence in industrial markets, but Government issues were strong on the Bond market, and several new high levels were reached. Utility shares are now the laggards in the market, which is only to be expected in view of the uncertain fate which awaits the holding companies. Otherwise, nearly all sections reflect the trend of business reports, and the slightly lower steel mill activity reported this week by *Iron Age* was considered better than normal, with the outlook for the industry as bright as ever.

LONDON ACTIVE SECURITY PRICES AND YIELDS

In calculating yields on fixed interest stocks quoted below allowance is made for interest accrued since the last date of payment, less income tax at the standard rate. Where stocks are definitely redeemable at a certain date the yield includes any profit or loss on redemption; where stocks are redeemable at or before a certain date the final date of redemption is taken when the stock stands at a discount and the earliest date when the quotation is above par. The return on ordinary stocks and shares is calculated by reference to the latest dividends, account being taken of any enhancement or reduction of interim dividends. Allowance is made for accrued dividends in calculating the yield on "cum. div." shares.

PARIS

SOMEWHAT irregular movements in the past month tended to obscure the slight improvement that took place as compared with the intensely depressed conditions of July, when prices reached their lowest since the stabilisation of the franc in 1928. Although the advance in Rentes was, on balance, small, and movements in bank shares varied, the rise as compared with last month in many leading industrial issues was marked. Improvement came by small degrees in spite of occasional bad sessions. The war in Spain had a very unsettling effect at the end of the first week in the month, and, combined with the smallness of the amount of business, has been an effective check to any considerable expansion. Fears of the effect on costs of the labour legislation were diminished by the soothing influence of the Parliamentary recess. The Finance Minister's statements on the disclosure of foreign balances, although a subject of much discussion, did not have any noticeable effect. The Schacht-Labeyrie conversations were also much commented upon; the results were, however, thought to be rather meagre, and after Dr. Schacht's departure the tone on the Bourse became a little hesitant following several days of activity.

BERLIN

THE share market in August was very weak, and quotations of the leading securities went back to about the level of April. The immediate causes of this decline were the Spanish Civil War with its risk of international complications, the continuing tightness of money in consequence of the Reich Loan flotation, and finally the increase in Reich Corporation Tax rates. It is probable that these events would have depressed the market less had they not come after a prolonged rise. Indeed, official and bank pronouncements before August were to the effect that shares were higher than their limited dividend yields and prospects warranted. The heaviest falls occurred on the news of a German protest to Madrid over the Kamerun incident and of the Corporation tax measure. Although the volume of selling was never very large, all groups of industrials and also bank shares declined heavily, but little change occurred in the already depreciated shipping issues. The home bonds market was inert, with occasional active buying and selling of Reich Valorisied Loan. Young Loan (Reichsmark issue) advanced. Austro-Hungarian and Mexican loans were the most active among foreign-currency issues. Certificated dollar bonds were little quoted, but many of the industrials gained slightly. The official index numbers for securities (1924-26 = 100) in July were: shares 103.07, as against 101.64 for June; bonds 95.94, against 95.82.

AMSTERDAM

No marked trend emerged during August. Although on certain days the holiday atmosphere caused listlessness, the market responded with reasonable alertness to day-to-day events. In the earlier part of the month Wall Street activity and some demand for leading issues from Paris were good influences. Later, the depressing foreign news caused nervousness, but the Bourse on the whole resisted the united onslaught of war in Spain and extended conscription in Germany. The reaction on Wall Street brought a weakness which was offset at a rather slow rate as recovery took place. The tendency in the commodities section was erratic, the governing factor in rubber issues being estimates of the chances of restriction by native producers in the Netherlands East Indies.

PUBLIC OFFER

Great Northern Stores.—Issue of 1,220,000 1s. shares at 2s. To form chain of 16 drapery, etc., stores, and acquire ladies' clothing manufacturing business; sale of fixed price goods to be established. Shops, as going concerns, valued at £35,990, excluding stock and goodwill. Aggregate profits of businesses to be acquired, after depreciation, years to March 31:—1934, £14,195; 1935, £15,914; 1936, £18,793. Purchase price to Allnatt Holding Co., £92,625 (of which £7,500 for stock) payable by £80,625 cash and £12,000 in 240,000 1s. shares. Goodwill, £49,135. Other stock-in-trade to be purchased for about £14,000. List closed 9.5 a.m., 1st September, Oversubscribed.

ISSUES TO SHAREHOLDERS ONLY

Central Commercial Properties.—Issue of 89,944 2s. shares at par (one new for each ten held on July 14th).

BY STOCK EXCHANGE INTRODUCTION

Mason and Burns, Ltd.—Issued capital 500,000 2s. ordinary shares. Acquires a Birmingham business founded in 1908. Malleable iron founders. Surplus liquid assets acquired £21,178; plant, machinery, etc., £14,530. Purchase price, £61,667 (goodwill, £28,643), payable by £45,000 cash and 166,667 2s. ordinary shares. Profits, years to June 30: 1934, £8,353; 1935, £12,388; 1936, £15,948.

R.F.D. Company, Ltd.—Issued capital, 500,000 2s. shares. Acquires aeronautical equipment manufacturing business at Guildford, founded 1920. Net assets, £38,000 (including £16,600 goodwill) acquired for £38,000, payable by £19,000 cash and £19,000 in 190,000 2s. shares. Profits, after depreciation: 1933, £2,251; 1934, £3,531; 1935, £5,096; seven months to July 31, 1936, £3,968.

PRIVATE PLACING

Second Great Northern Investment Trust.—This company has placed privately £100,000 three-and-a-half per cent. debenture stock, 1951-56.

CONVERSIONS AND REPAYMENTS

Barrier South, Ltd.—Shareholders in Barrier South, Ltd., which was formed in 1913 as a reconstruction of Broken Hill South Extended, Ltd., are reminded that until September 15th their shares may be exchanged for those of New Broken Hill Consolidated, Ltd. The proportion is five shares in New Broken Hill Consolidated for each preference share in the old company and one for every two ordinary shares. Such shareholders have also the right to apply for and be allotted additional shares in New Broken Hill Consolidated on the same basis.

Anglo-South American Real Property.—All 5 per cent. debentures will be redeemed at 102 per cent. on March 1, 1937. Debentureholders are, however, offered cash at the rate of 103 per cent. for immediate surrender of all or part of their holdings, ex the interest due September 1, 1936. The offer remains open up to September 30.

COMPANY MEETINGS, &c.

GOLD CORPORATION, LIMITED

DIVIDEND PROSPECTS

The second ordinary general meeting of the Gold Corporation, Limited, was held, on the 31st ultimo, at Winchester House, London.

Major W. A. Wills (chairman and managing director) said that at the close of the financial year their liquid assets were valued at a little over £210,000, against an issued and paid-up capital of £207,698, with contingent liabilities of some £2,298, so that their whole capital was about covered by liquid assets. The bulk of their capital had been invested on the Rand. Australian gold mining, of which they held considerable expectations two years ago, had been rather a disappointment. The best one could say about it was that shares like Wiluna and Lake View and Star gave a very good return—something like 10 per cent. on the present market value of the shares.

Two years ago, in the expectation of opening up new business in Australia, they had sent out an experienced engineer, Mr L. C. Stuckey to open an organisation in Victoria. Sir Herbert Gepp, who had been their director there from the start, had advised them to secure a substantial interest in the Monument Hill Consolidated (Bendigo). Some time ago Mr Stuckey estimated the profits would enable the company to pay a fair dividend on its capital, and Sir Herbert Gepp, who was a director of Monument Hill, wrote on July 11th that Monument Hill, he was sure, would give a good account of itself.

As they had told shareholders last year, they had secured a prospecting licence from the Victorian Government for a large area in the Castlemaine district, and had finally selected for development two areas of mining ground known as the Nelson and Quartz Blocks. They had not succeeding in finding payable ore on the Nelson ground and had agreed that the best thing to do was to shut the work down and face their loss, which fortunately had not been at all heavy. The Quartz Block was showing values sufficiently encouraging to induce them to continue, but it was too early yet to know whether they had a payable mine or not.

Their interests in Australia, apart from their shareholdings in Wiluna and Lake View and Star, had been held on joint account with the Nigel Van Ryn Reefs. In order to simplify bookkeeping, etc., they had formed a separate company to operate those joint holdings under the name of the Australian Gold Reefs Corporation.

AN INTEREST IN KENYA

They had done a piece of new business which he thought was worth mentioning. They had taken an interest with Sir Edmund Davis and another prominent mining group in the reorganisation of the Kenya Consolidated Goldfields, Sir Llewellyn Andersson, one of their Johannesburg directors, thought well of the proposition, which he recommended them to take up and had asked them to reserve a participation for him.

He supposed shareholders would like him to say something about the prospects of a dividend. They had been close to it recently and had called into consultation their auditors, who had told them that they could not do it in view of the depreciation on their Australian holdings. Since March 31st they had done quite well, but he was not going to say more than that he would not be surprised if they were able to declare an interim dividend fairly soon. At any rate, they had made money since the close of the financial year and they had no debts. Their future naturally depended on the prospects of gold mining, and gold shares to-day were almost entirely a matter of the gold premium. The latter had probably doubled the amount of payable gold ore available in the world's goldfields, besides perhaps trebling their divisible profits or more. As far as he was concerned, he had expected the price of gold by now to be higher than it was, instead of which it had declined from about 149s. to 138s. per oz. in spite of immense purchase of gold by the world's banks. The fall in the price of gold must be attributed to the increased production. What the future would be in that direction depended not only upon outputs but upon politics. If, as was possible, the whole world shortly developed into a battlefield between the extreme Right and extreme Left, gold might soar to great heights, as, after all, it was the only international money in times of war. If the world remained in its present state, then gold might remain at its present price or even become cheaper.

The report was unanimously adopted.

ISMAY INDUSTRIES, LIMITED

PROSPEROUS AND EXPANDING BUSINESS

The first ordinary general meeting of Ismay Industries, Limited, was held, on the 3rd instant, at Southern House, E.C.

Mr John Ismay (chairman and managing director) said that they were a holding company, roughly half their capital being invested in the electric lamp trade and associated businesses, and the other half in a number of different enterprises. In the lighting trade they were well established and had nothing to fear, their trade progressing steadily in both domestic and speciality lamps. They were recognised as one of the standard lamp manufacturers, and whatever they did in the present year he was sure that their returns from that part of the business would be at least equal to those of the period under review.

Their investments in associated companies represented holdings and interests in about fifteen different companies, the principal of which was the Sterling Works, Dagenham, an estate of about twenty acres containing a number of entirely separate freehold factories. One of those works manufactured Halcyon Radio sets, Electrix electric sweepers and electric clocks. Their radio sets were now so good that they were selling them on a two years' guarantee of full replacement of all parts, which had never been done in the radio trade before. They had disposed of the whole of the output budgeted for.

The summer had been an unfavourable one for refrigerators, but they had, nevertheless, sold 3,000 Zeros refrigerators, which gave an idea of what could be done in a favourable year. The Kniveton Cable Company was progressing in its manufacture of flex and small cables. They had just completed a new factory at Dagenham for batteries, and they were going ahead with their factory for paper cables. The sweeper business was progressing favourably, and they had overcome the initial difficulties with regard to electric clocks.

Half their money was invested to bring them in a steady return sufficient to pay the preference dividend and 8 per cent. or 9 per cent. on the ordinary shares, and in years to come the other half would probably bring them in a bigger revenue, but that would take time.

The report was unanimously adopted.

GOVERNMENT RETURNS, &c.

NATIONAL ACCOUNTS

The total ordinary revenue for the week ended August 29, 1936, amounted to £8,301,000, against ordinary expenditure of £9,714,000. After allowing for an increase in Exchequer Balances of £1,075, the operations for the week, as shown below, increased the gross National Debt by £1,414,000 to approximately £7,985* millions.†

SILVER MARKET

SILVER MARKET

A steady tone has been maintained, and prices had shown little change until yesterday, when 19½d. for both deliveries was quoted—a rise of 1d. as compared with the previous day. Although this level did not attract inquiry from America, support was given by this quarter earlier in the week, and this encouraged a continuation of the demand from the Indian Bazaars. The Indian Bazaars and speculators made resales and moderate offerings continued to be made on China account. The market appeared steady, and no important change is anticipated in the near future. It was announced that the President of Mexico issued a decree on August 30th restoring the Mexican silver currency. The old silver coins of .720 fine are to be released from the vaults of the Bank of Mexico and returned to circulation, whilst the one peso notes, issued when the high price of silver made it profitable to export coin as bullion, will be withdrawn.

Quotations for gold and silver are shown below :—

UPSONS, LTD.—Upsons, Ltd., are declaring an interim dividend of 5 per cent. (same on the ordinary capital. Last year's interim was followed by a final dividend of 6 per cent. making 11 per cent. for the year. The directors report sales have been substantially increased during the current year.

PINCHIN, JOHNSON AND COMPANY, LTD.—The board have declared an interim dividend of 7½ per cent. actual, less tax, on the issued ordinary shares of the company to be paid on September 22nd. Sales for the six months ending June 30, 1936, show a satisfactory increase.

HOME AND COLONIAL STORES.—The directors announce that the re-organisation of the business is proceeding according to plan. The turnover is showing a progressive increase, and although the profits suffered a further decline during the first quarter of the

Address.....

year, the returns since then indicate that the decline has been arrested and the directors now anticipate a gradually improving tendency. They, however, do not wish to encourage expectations of an early resumption of the payment of dividends on the ordinary shares as considerable progress must still be made before that stage is reached. The dividends on the preference and the cumulative ordinary shares will be paid on the due dates.

MAYPOLE DAIRY COMPANY, LTD.—The directors announce that they have decided not to pay an interim dividend on the deferred ordinary shares. They state that, as compared with last year, turnover shows a satisfactory improvement and profits have been maintained.

ASSURANCE

WESLEYAN AND GENERAL ASSURANCE SOCIETY.—Alderman Samuel John Grey, Lord Mayor of Birmingham, has been appointed a Director as successor to Mr John Morton, deceased. Mr Alfred Thomas England has been appointed a Director in succession to Mr H. S. Yoxall, deceased.

BANKS

DISTRICT BANK LTD.—District Bank, Ltd., announce the resignation of Sir Christopher T. Needham, D.L., from the position of Chairman of the Bank. In January last he accepted re-election on the understanding that he would be free to retire during the current year. The Board have accepted Sir Christopher Needham's resignation with regret and expressed their appreciation of the invaluable services rendered by him to the Bank as Chairman over a period exceeding fourteen years. Sir Christopher Needham retains his seat on the Board. Sir R. Noton Barclay, Deputy Chairman, has been elected Chairman, and Mr Francis J. Dickens, Deputy Chairman of the Bank.

MINES

COMMONWEALTH MINING AND FINANCE COMPANY.—It is stated that 350,000 shares of Commonwealth Mining and Finance Company for which permission to deal was granted on August 13th, were issued to the Australian Machinery and Investment Company as final consideration for that company's sale to the Commonwealth Company of the shares in the Aladdin, Atlas and Hercules Companies. On July 13th last, the Australian Machinery Company agreed to waive its right in the previous years purchase contract, to require the formation of new companies, consideration of the issue to it by the Commonwealth Company of 350,000 Commonwealth shares. It is understood that the approximate market price taken was 9s. per share;

LENA GOLDFIELDS, LTD.—Messrs Hoale, Smith and Field are instructed to make cash offer to shareholders of 9½d. per share; payment on delivery on or before September 8th. This follows Director's scheme to realise notes. Only tender received for £875,900 U.S.S.R. non-interest bearing notes is £188,000, equivalent to 8-6½d. per share. Shareholders not participating to combine into units of 144,000 shares would receive 8½d. per share after completion of formalities, and share of cash balance equal to about 1-28d. per share. Shareholders participating in Trust would receive per share (subject to expenses) about 1½d. every two years during next eight years, and thereafter about ¾d. each year from May, 1945, to November, 1954, in all about 3s. 4d. receivable over 18 years.

MISCELLANEOUS

LANCEGAYE SAFETY GLASS (1934), LTD.—The directors wish to state that there is no foundation for the rumours of arrangements with other safety glass manufacturers, or any developments beyond those indicated in the chairman's speech to shareholders on August 6, 1936. The two factories in which the company is interested are working to full capacity.

LANCASHIRE COTTON CORPORATION, LTD.—The Directors record an improvement in the Corporation's business and have come to the conclusion that, in view of the fact that the principal of the stock, together with £627,500 in respect of interest paid under the guarantee, falls due for repayment on March 31, 1937, payment of interest should only be considered in conjunction with a comprehensive scheme of capital reorganisation and reconstruction. It will not be possible to obtain before October next directions from the court for holding of meetings.

LEACH'S ARGENTINE ESTATES, LTD.—An accidental fire has occurred at this company's Calilegua estate during a gale which followed the recent heat wave. The extent of the damage done is confined to the burning of standing cane ready for cutting and milling which would probably have yielded some 700 tons of sugar towards the estimated total production of some 25,000 tons. The fire is reported to be now under control and there has been no loss of life.

SPILLERS, LTD.—The directors of Hosken, Trevithick, Polkinhorn & Company, Ltd., millers and merchants of Plymouth and Truro, have received an offer from Spillers, Ltd., to acquire the goodwill and assets of the flour milling and wholesale grain and provender sections of their business. The offer is to be considered by the shareholders at a meeting to be held on September 17th.

OIL OUTPUTS

BRITISH CONTROLLED OILFIELDS, LTD.—Production for week ended August 29th: Venezuela, 17,544 barrels; Trinidad, 26,035 barrels; total, 43,579 barrels.

THE MEXICAN EAGLE OIL COMPANY, LTD.—Production for the week ended August 22, 1936, was 524,000 barrels.

VENEZUELAN OIL CONCESSIONS, LTD.—Production for week ended August 29, 1936, was: Bolivar District, 768,474 barrels; Maracaibo District 26,676 barrels; total, 795,150 barrels.

TRINIDAD CONSOLIDATED OILFIELDS, LTD.— Production, July 24th to August 31st: 29,187 barrels. The intensive drilling programme is under way a month in advance of the time estimated.

PHOENIX OIL AND TRANSPORT COMPANY, LTD.—The gross production of crude oil of the Phoenix Group for August was 89,903 tons.

Since our last report, a further blast-furnace has been put into operation at Messrs Pease and Partner's Normanby Ironworks for the production of special hematite. It is expected that further blast-furnaces and steel furnaces will be put into operation shortly, to meet the expected heavy autumn demand. Foundry pig-iron producers are keeping home users well supplied, and the price for a quality is maintained at 75s. per ton.

A marked decline in grain prices took place in the United States, but cocoa, rubber, copper, spelter and tin were marked up. The movement is reflected in Moody's daily index of

OVER ONE HUNDRED YEARS OF SERVICE

FIRE LIFE ACCIDENT MARINE

Edinburgh: 35 St. Andrew Square
London: 5 Walbrook, E.C.4, and 45 Pall Mall, S.W.1

Consumers' interest in the metal is quite active, but the high rate of production prevents an improvement in prices. According to the American Bureau of Metal Statistics, world output rose from 131,700 short tons in June, 1935, to 138,600 short tons in July. No news is available regarding the international cartel discussions, but on the Continent it is expected that new discussions will take place in the second half of September.

Sales of lead on the London Metal Exchange: 850 tons on Monday, against 700 tons last week; 1,150 tons on Tuesday, against 750 tons last week; 400 tons on Wednesday, against 2,600 tons last week. The New York quotation on Wednesday was 4.60 cents per lb., against 4.60 cents a week ago and 4.60 cents a month ago. The official closing quotation in London for soft foreign for shipment during the current month was £17 2s. 6d. per ton, compared with £17 3s. 9d. a week ago.

Sales of spelter on the London Metal Exchange: 250 tons on Monday against 50 tons last week; 450 tons on Tuesday, against 350 tons last week; 950 tons on Wednesday, against 250 tons last week. Wednesday's quotation in East St. Louis was 4.85 cents per lb., against 4.80 cents the week before and 4.80 cents a month earlier. Wednesday's official closing quotation in London for "good ordinary brands" for shipment during the current month was £13 8s. 9d. per ton, against £13 10s. last week.

TIN.—Prices have shown a firmer tendency. The next meeting of the I.T.C. was postponed from September 18th to September 23rd in order to await the arrival of Mr. H. B. Connell, the adviser of the Siamese Mines Department. It is now generally expected that at the September meeting of the Tin Committee agreement will be reached with Siam, but no official statement has been made. According to Messrs. A. Strauss & Company, Ltd., the total visible supply, excluding the carry-over at Arnheim, increased during August by 915 tons to 16,023 tons. As the carry-over at Arnheim showed a reduction of 72 tons, the net increase during the past month was 843 tons. This figure is much below expectations, the market having counted with an increase of at least 1,500 tons. The smallness of the increase is due to the fact that new supplies increased by only 308 tons to 10,330 tons, although according to Metallgesellschaft the mining output of tin increased during July (i.e. the ore ready for shipment in August) from 14,112 to 16,388 metric tons. World deliveries during August declined by 1,485 tons to 8,870 tons. This decline was the result of the smaller deliveries in the United States (5,385 tons against 7,120 tons a month before), which did not come as a surprise after the very large deliveries in the two preceding months.

Sales of tin on the London Metal Exchange: 500 tons on Monday, against 105 tons last week; 245 tons on Tuesday, against 145 tons last week; 260 tons on Wednesday, against 245 tons last week. The New York quotation on Wednesday was 42.87 cents per lb., against 42.50 cents a week ago and 42.75 cents a month ago. Wednesday's official closing quotation in London for standard cash was £187 10s. to £187 15s. per ton, compared with £183 to £183 2s. 6d. a week ago. Stocks of tin in London and Liverpool at the end of last week totalled 692 tons, an increase of 10 tons on the week.

OTHER NON-FERROUS METALS.—Among other non-ferrous metals, aluminium ingots and bars for home delivery were again quoted at £100 per ton, and rolling billets at £102 per ton. Nickel, for home and export, at £200 to £205 per ton, remains unchanged. Quicksilver, on the spot, was quoted at £12 17s. to £12 17s. 6d. per flask of 76 lbs, against £12 12s. 3d. a week earlier. Chinese antimony was quoted at £53 10s. to £54 10s. per ton ex warehouse, as against £53 per ton last week. Chinese wolfram for "September-October" shipment was quoted at 30s. to 30s. 6d. per unit c.i.f., against 29s. 6d. to 30s. 6d. a week ago. Refined platinum was advanced to £14 per ounce, as against £12 7s. 6d. per ounce last week.

TEXTILES

COTTON.—Manchester.—The general inquiry in the market has shown some improvement, but in all sections many difficulties have been encountered in arranging terms of fresh contracts. Spinners and manufacturers have not been able to sell their products with any freedom.

Many ups and downs have taken place in raw cotton rates in Liverpool, but the level of prices shows very little alteration. Weather reports from the American belt remain unfavourable. Hedge selling has been more early. Much uncertainty exists as to the American Bureau report due to be issued on Tuesday next. A month ago the estimate was 12,481,000 bales, and it is generally believed that the revised forecast will be in the neighbourhood of 12,000,000 bales.

COTTON PRICES

	1936				Corresponding Date

Manufacturers of piece goods continue to complain that most offers are impracticable. Many firms are feeling acutely the absence of bulk lines for India. Some moderate lots of light whites and fancies have been put through for Karachi. Only occasional sales have been reported for Calcutta and dealers in the other outlets have exercised caution in making bids. Scattered transactions have been mentioned in dyed fancies for

Java, Singapore and Hong Kong. Exporters to Egypt and the Near East have given very little support. A fairly active demand has been met for West Africa in white shirtings, prints and coloured goods. Buying for South America has been patchy. Some very fair lines have been placed for the Dominions in heavy materials. Steady buying has occurred in home trade goods.

In the yarn section the most satisfactory feature at the present time is that deliveries against old contracts are being well taken. On the other hand new business is rather disappointing. Only a restricted turnover has taken place in American and Egyptian counts.

SURPLUS COTTON SPINDLES.—The Cotton Spindles Board which has been set up under the Cotton Spinning Industry Act for the purpose of dealing with the question of redundant spindles has got to work and for the first time in the history of the trade a detailed census of spindle capacity in Great Britain is being taken. This week the Board has issued to all spinners forms requiring a return of spindle capacity in their mills. It is understood that early in October the Board will know the number of spindles in the industry and from this information will be able to form an opinion as to the amount of redundant plant. When the figures are obtained an important point will arise, i.e., whether the redundant mills can be acquired by the Spindles Board, or whether, in spite of the efforts of the Board, their owners will endeavour to keep them in existence.

WOOL.—Bradford.—The event of the week was the opening, last Monday, of a new selling season at Sydney and the marketing of a new clip amounting to over 3 million bales. The initial catalogues met with a very hearty reception. Prices ruled fully on a parity with the cost of tops in Bradford, notwithstanding the absence of Japanese competition. Japan appears to be doing her very best to force Australia to accept her conditions determining the selling of her manufactures in Commonwealth markets, by refusing to compete for wool. The large purchases of merino wool on the part of that country during the past two years in Australia has led to the accumulation of heavy stocks in Japan, and most of her mills can easily run to the end of the year before needing to replenish supplies. The opening sale shows that wool occupies a very sound and healthy position, and even if medium and faulty classes ease a little, they are relatively dearer than good warp combing wools. Much will depend on the attitude of Germany, France, Italy and Belgium between now and Christmas.

Most mills in the West Riding continue to be very busy, particularly those engaged in the production of woollen cloths. The spring season for worsted dress goods and men's wear cloths has hardly opened, but in view of the comparative briskness of most trades, the rank and file of workers being in a better financial position, it is felt that from next month onwards when buying for next spring does definitely commence, spindles and looms will be kept fully running throughout the winter. Generally speaking the wool textile industry is healthy and sound, and the indications favour the maintenance of raw wool prices at about current levels.

GRAIN MARKETS

WHEAT.—The reaction on the wheat markets has continued, and prices are appreciably lower on the week. Better weather has been experienced in a number of Continental countries, and more favourable yields in Canada are being received from Argentina and Australia. Meanwhile, deliveries in that country have had a weakening influence on the market.

On Wednesday last, "September" futures were quoted in Chicago at 108½ cents per bushel, against 111½ cents the week before and 113½ cents a month ago. Quotations in London, Wednesday: No. 1 Northern Manitoba, ex ship, 37s. 6d. per 496 lbs., against 38s. a week ago; No. 2 Northern Manitoba, ex ship, 37s. 3d., against 37s. 9d. a week ago. According to the *Corn Trade News*, total shipments of wheat and flour last week totalled 1,218,000 quarters, against 1,292,000 in the previous week and 889,000 quarters in the corresponding week a year ago.

FLOUR.—Prices are again easier. It is reported that forward business is handicapped by uncertainty regarding the future of wheat prices. Wednesday's London quotations (excluding quota payments) were: Straight run, delivered Home Counties, 32s. 6d. per 280 lbs., against 33s. a week ago; delivered inner London, 32s., as compared with 32s. 6d. a week ago. Manitoba patents, ex store, 29s. to 30s. 6d., against 30s. to 31s. a week ago. Australian, ex store, 27s. to 27s. 6d., against 27s. 6d. to 27s. 9d. a week ago.

BARLEY.—Imported feeding descriptions have been quieter. The weather in this country has recently been excellent for harvesting the barley crop, but little business has been reported. "October" futures were quoted at 5½ cents per bushel in Winnipeg on Wednesday, against 5½ cents a week ago. Quotations per 448 lbs. in London on Wednesday were: "English feed" at farm, nominal, as against a nominal quotation a week ago; "English malting" (new), at farm, 32s. to 50s.; Californian (new), ex ship, 43s. to 54s.; Chilean, brewing, ex ship, 34s. to 37s.

OATS.—Business in imported oats remains quiet. On Wednesday, "September" futures were quoted at 39½ cents a bushel in Chicago, against 42½ cents a week ago and 42½ cents last month. Quotations in London, Wednesday: "English Black" (new), at farm, 18s. to 19s. per 336 lbs., against 19s. to 20s. a week ago; "English White" (new), at farm, 18s. to 19s., against 19s. to 20s. a week earlier; mixed Canadian feed (Vancouver), landed, 20s. per 320 lbs.

MAIZE.—Prices in this country have declined in sympathy with the easy tone ruling in North and South American markets. "September" futures were quoted on Wednesday at 104½ cents per bushel in Chicago, against 112½ cents a week ago; and 106½ cents last month. Quotations in London, Wednesday: "Plate," landed, 25s. per 480 lbs., compared with 26s. 6d. a week ago; "Plate," ex ship, 24s., as against 25s. a week ago; "Plate," "August," 22s. 9d., as against 24s. 3d. a week ago; yellow maize meal, ex wharf, was quoted at £6 10s. per ton, as against £6 17s. 6d. last week.

SALES AND PRICES OF BRITISH CEREALS.—The following table gives the estimated sale of home-grown wheat during the harvest years 1932-33 to 1935-36:—

	1932-1933	1933-1934	1934-1935	1935-1936
Estimated sales of home-grown wheat—	Cwts.	Cwts.	Cwts.	Cwts.
1 week to August 29	340,650	356,281	429,655	100,404
52 weeks to August 29	9,286,727	11,640,452	14,231,367	13,394,501
Average price of English wheat per cwt.	s. d. 5 0	s. d. 5 2	s. d. 4 6	s. d. 7 9

The following is a statement showing the quantities sold and the average price of British cereals in the past two weeks, and for the corresponding week in each of the years from 1932 to 1935:—

Week ended	QUANTITIES SOLD			AVERAGE PRICE PER CWT.		
	Wheat	Barley	Oats	Wheat	Barley	Oats
August 27, 1932.....	Cwts. 40,854	Cwts. 9,003	Cwts. 16,148	s. d. 6 2	s. d. 7 5	s. d. 6 11
August 28, 1933.....	840,650	69,649	46,420	5 0	11 0	5 5
September 1, 1934.....	356,281	110,998	33,883	5 2	10 10	6 5
August 31, 1935.....	429,655	87,699	55,085	4 6	9 6	6 1
August 22, 1936.....	14,219	1,557	10,976	8 1	7 3	7 0
August 29, 1936.....	100,404	17,406	21,070	7 9	10 1	7 1

AMERICAN WHEAT MARKETS.—The following table shows wheat quotations for selected weeks in 1934-36:—

NEAREST FUTURE	Jan. 3, 1934	Jan. 2, 1935	Sept 4, 1935	Dec. 31, 1935	Aug. 26, 1936	Sept. 2, 1936
Winnipeg (No. 1, Manitoba) —Cents per 60 lb.	65½	82½	82½	84½	97½	94½
Chicago (No. 2 Winter) —Cents per 60 lb.	84½	98½	88½	75½	111½	108½

The visible supply of wheat in Canada amounts to 63,861,000 bushels, against 60,434,000 bushels last week, and 126,635,000 bushels in the corresponding week last year.

OTHER FOODS

BACON.—The market has had a steady tone this week. The official quotations (per cwt. for No. 1 Sizable) which formed the basis for dealings on the London Provision Exchange this week were: English, 99s.; Canadian, 91s.; Danish, 100s., as against 97s. to 98s. 91s. and 100s. last week. Arrivals in London last week included Danish, 14,416 bales; Canadian, 3,940; Dutch, 2,406; Lithuanian, 1,732, and Polish, 3,659, as against 15,247, 4,154, 2,437, 1,859 and 2,851 bales, respectively, in the previous week.

BASIC PIG PRICE.—The Pigs Marketing Board announced this week that in accordance with the provisions of the present contract, the ascertained price of green Wiltshire style bacon is 95s. 7d. per cwt. and the ascertained value of offals is 8s. 6d. The ascertained cost of feeding stuffs, in accordance with the Ministry of Agriculture and Fisheries, is 8s. 1d. per cwt. of the Class I, grade C pig, for the month of September is 11s. 11d. per score, against 11s. 6d. in August and 11s. in the same month of last year. The curers will also pay to the Pigs Marketing Board 2d. per score on every pig delivered and accepted during this year, to form a pool out of which will be paid the bonus on pigs delivered during the first four months of the year, in accordance with the 1936 Bonus Scheme.

BUTTER.—Butter has been a quiet trade, with prices rather easier. Quotations (per cwt.) on the London Provision Exchange on Wednesday were: New Zealand, finest salted, 117s. to 118s.; Australian, choicest salted, 117s.; Danish, 128s., compared with 120s., 119s. and 128s., respectively, a week ago.

CHEESE.—Although demand has been rather quiet, prices are a shade firmer this week. Quotations (per cwt.) on the London Provision Exchange on Wednesday were as follows: English, finest farmers, 76s. to 80s.; Canadian, finest coloured, 70s. to 72s.; and New Zealand, finest coloured, 68s., against 70s. to 76s., 68s. 6d. to 70s. and 67s. to 67s. 6d., respectively, a week ago.

COCOA.—The rise in the price of cocoa has continued. The spot quotation in New York on Wednesday was 7½ cents per lb., as against 7½ cents per lb. last week. In London, on Wednesday last, good fermented new crop, "November-January," was quoted 32s. 3d. per 250 kilos, c.i.f. Continent, against 31s. a week ago. Last week's movements of cocoa in London were as follows: Landed, 15,194 bags; delivered for home consumption, 2,981 bags; exported, 100 bags; stocks, 172,776 bags, against 139,493 bags a year ago.

COFFEE.—The markets in London and New York have been quietly steady. On Wednesday, Rio No. 7 (cash) was quoted at 8 cents per lb. in New York, as compared with 8 cents per lb. last week and 8 cents per lb. a month ago. Movements of coffee in London last week were as follows: exports, nil; stocks, 10,154 cwt., against 14,293 a year ago. Central and South American, landed, 22 cwt.; delivered for home consumption, 135 cwt.; 1,992 cwt.; stocks, 10,154 cwt., against 14,293 a year ago. Central and South American, landed, 258 cwt.; delivered for home consumption, 1,992 cwt.; exported, 869 cwt.; stocks, 90,649 cwt., against 137,677 last year. Other kinds, landed, 496 cwt.; delivered for home consumption, 2,334 cwt.; exported 2,211 cwt.; stocks, 131,646 cwt., against 155,398 last year.

EGGS.—The market has been firm for Continental selections, especially Danish, which met a good demand. English, however, have eased. At 15-15½ lb. realised 14s. 9d. to 15s. per 120, as against 15s. 6d. to 16s. 10s. 6d. to 10s. 9d. last week.

FRUIT.—Although prices at Covent Garden have been low in the bulk of apples and plums continue to monopolise attention. The former have been a very active trade at rather low prices; Australian and New Zealand apples are now practically cleared and are certainly not inquired for. Large quantities of medium grades plums are on the market at low rates, but good samples realise fair still available. Blackberries have been a steady trade, while some raspberries are grapes have encountered a slow demand and are easier in price. Oranges, however, are in request and, with supplies rather short, quotations are firm. Lemons are dearer and grapefruit, though plentiful, sells steadily.

MEAT.—At Smithfield this week demand has been rather slow on account of the continuance of warm weather. Prices show little change.

On Wednesday last, Argentine chilled hindquarters were quoted at 4s. to 4s. 4d. per 8 lbs., as compared with 3s. 10d. to 4s. 2d. a week ago. New Zealand frozen mutton was 3s. to 3s. 8d. per 8 lbs., against 3s. to 3s. 8d. a week ago. According to the Smithfield Market official report, supplies during last week amounted to 8,164 tons, a decrease of 736 tons on the corresponding week last year. Beef and veal accounted for 4,356 tons, mutton and lamb 2,672 tons, and pork and bacon 678 tons, as compared with 4,897, 2,736 and 693 tons, respectively, in the same week of 1935.

PEPPER.—Wednesday's spot price for black Lampong (in bond) was 2½d. per lb., against 2½d. a week ago. Movements of pepper in London during the past week were as follows: Black, landed, nil; delivered, 1 ton; stocks, 1,757 tons, against 1,683 tons a year ago. White, landed, 28 tons; delivered, 39 tons; stocks, 12,129 tons, against 17,722 tons a year ago.

RICE.—The spot price of Burma No. 2, cleaned, new crop, was 9s. 3d. per cwt., ex warehouse, on Wednesday, as compared with 9s. 3d. per cwt. a week ago. "September-October" in singles to Continent and U.K., was quoted at 8s. 1½d. per cwt., against 8s. 1½d. last week. Movements in London during the past week were as follows: Landed, nil; delivered, 261 tons; stocks, 1,840 tons, against 9,424 tons a year ago.

SUGAR.—The spot markets in London and New York remain quietly steady, with prices showing little alteration. The spot price in New York on Wednesday was 3.70 cents per lb., as compared with 3.70 cents per lb. last week and 3.65 cents per lb. a month ago. Wednesday's sales of raw sugar in London included December delivery at from 4s. 4½d. to 4s. 5½d., against 4s. 5½d. a week ago. The movements of raw sugar at public warehouses in London and Liverpool last week were as follows: Imports, 11,330 tons, against 23,268 tons last week and 7,630 tons in the same week of last year; deliveries, 19,473 tons, against 19,372 tons last week and 22,180 tons last year; stocks, 114,968 tons, against 123,111 tons last week and 144,794 tons last year.

TEA.—The following table shows the average prices (compiled by the Tea Brokers' Association) of tea sold in Mincing Lane on Garden Account in recent weeks:—

Week ending	Northern India	Southern India	Ceylon	Java	Sumatra	Africa	Total
Aug. 29, 1935	d. 17-26	d. 10-76	d. 13-08	d. 9-99	d. 8-44	d. 10-09	d. 14-12
July 16, 1936	12-27	12-07	13-35	10-34	10-09	11-51	12-41
July 23, "	12-11	12-01	12-93	10-22	9-88	11-44	12-32
July 30, "	12-05	11-81	12-81	10-32	9-84	11-13	12-18
Aug. 13, "	12-67	11-86	12-86	10-23	9-76	11-20	12-47
Aug. 20, "	14-04	11-90	13-03	10-47	9-91	11-34	13-07
Aug. 27, "	14-43	11-99	13-21	10-73	9-88	11-36	13-41

The quantities catalogued for the public auctions in Mincing Lane this week comprised 48,728 packages of Indian and 24,632 packages of Ceylon tea. There was a good general demand for all descriptions of Indian, with prices showing a hardening tendency. Some irregularity was displayed at Tuesday's Ceylon auctions, but export demand was strong.

VEGETABLES.—At Covent Garden, according to *The Fruitgrower's* report, tomatoes continue an active trade and prices are a point firmer on the week. Cucumbers are also doing better and mushrooms remain dear. Lettuce, mint and green onions are going out well. Supplies of runner beans and marrows, however, remain in excess of current requirements, while cabbage continues to sell at low rates. With ample supplies and demand flagging on account of the warm weather, the potato trade has been rather quiet this week. But, at the Borough market on Tuesday, best King Edwards made 6s. to 6s. 6d. a cwt., against 5s. to 6s. a week earlier.

MISCELLANEOUS COMMODITIES

VEGETABLE OILS AND OILSEEDS.—Quietness continues and trade is small. Linseed oil, governed by the seed market, has given way further to the extent of about 5s. per ton on the week. There is, however, a fair demand from consumers for near delivery. The current price of raw oil ex Hull for September-December delivery is around £25 5s. and January-April, £25 per ton. In the absence of demand, linseed prices have again declined. Offerings from both Argentina and India are good and supplies to December seem well assured. The outlook for the new crop in Argentina

BANK OF LONDON & SOUTH AMERICA LIMITED

Affords a complete international banking service through its branches in

ARGENTINA, URUGUAY, PARAGUAY
CHILE, COLOMBIA, ECUADOR
GUATEMALA, NICARAGUA, PERU

Agencies in: New York, Manchester, Bradford

continues favourable, and, should weather conditions prove anything like satisfactory, a large yield is possible. There is talk of as much as two million tons, but this is pure conjecture as the young plants are not sufficiently forward. Hardly any Plate line seed is now on passage to this country, the great bulk being from India. There is, however, more Plate afloat for the Continent and for the United States. The latter is absorbing fair quantities to make up the deficiency in the domestic yield. The exportable surplus in Argentina and India is put at 425,000 tons as against 609,000 tons actually shipped in the remainder of 1935. A fair trade in the new Egyptian cotton seed is reported at lower levels. For October loading to Hull, £7 5s. and for February, £7 to £7 2s. 6d. have been paid. Shipment has not yet begun; meanwhile cotton oil on spot is scarce and late quotations are maintained around £29 10s. for crude and £32 for refined, ex Hull.

RUBBER.—After languishing for some weeks, the market has registered an improvement. Demand has shown some revival, although purchases have been almost entirely for spot and near shipment. Owing to the hand-to-mouth policy of manufacturers and the absence of speculative interest, forward positions have been neglected. Meanwhile, United Kingdom stocks continue their downward trend. The spot price in New York on Wednesday was 16½ cents per lb., compared with 16½ cents per lb. a week ago and 16½ cents a month ago. Wednesday's official buyers' price for standard ribbed smoked sheet on the spot in London was 7½d. per lb., as against 7½d. on the corresponding day a week ago. In forward positions, business has been done at 7½d. to 7½d. for "October-December" shipment, as against 7½d. a week ago. Stocks in London and Liverpool at the end of last week totalled 108,066 tons, against 109,461 tons a week earlier. A year ago stocks amounted to 176,705 tons.

BRITAIN AND PALESTINE

NINETEEN years after the British forces with their Arab allies captured Jerusalem and freed the Holy City from Turkish rule, British troops are being shipped from England to quell by force a spontaneous Arab campaign of violence against the rule of the British Mandatory Power. At the end of last week the invitation of the Palestinian Arab Higher Committee to General Nuri Pasha, Foreign Minister of Iraq, to attempt mediation had resulted in pourparlers—though not with the British authorities—which emboldened us to expect a happy issue from a campaign of insurgency that had already lasted for more than four months, and had outgrown the dimensions of a general strike.

Unhappily, as a letter from Mr. Ormsby-Gore, Colonial Secretary, to Dr. Chaim Weizmann, the President of the Jewish Agency, showed, General Nuri Pasha had no authority from the British authorities—neither from the British Government nor from Sir Arthur Wauchope, the High Commissioner in Palestine—to offer the Arab Higher Committee any concessions, least of all the cessation of Jewish immigration pending the visit of the already constituted Royal Commission. The Arab Higher Committee issued a manifesto to the Arab people on August 31st in which they announced that pending a settlement, with or without General Nuri Pasha's aid, the strike should go on, and that, meanwhile, negotiations should proceed.

It now appears that the Arab Higher Committee only put out their manifesto in order to maintain unity among the Arabs themselves, the younger elements of whom were inclined to break away from the Higher Committee's authority and continue the struggle at all costs. The Committee announced this week that negotiations with General Nuri Pasha had reached a favourable juncture by the end of last week, and that they had in effect given him a free hand to mediate, in the hope that he would secure full recognition of his credentials from the British Government, and so be able to effect a settlement on the basis of which Arabs, Jews and the British mandatory might deliberate, and the Royal Commission might set to work. As it was, however, last Saturday morning it was announced that 12,000 British troops—mainly withdrawn

from summer manoeuvres—would be despatched to Palestine; that some 3,000 "A" class reservists (those who had left the Service during the last twelve months or so) were being recalled to the colours; and that martial law might have to be applied in Palestine. And on Monday evening the British Colonial Office issued a statement of policy in which they expressed friendship for the Moslem peoples, but also their determination to employ every means, including force, in combating the Arab campaign of violence. They would yield neither to terrorism nor to outrage. The Royal Commission, it was reiterated, would not take up its task until the Arabs called off the campaign; and the British Government reaffirmed their interpretation of their mandatory obligations to safeguard the civil and religious rights of all the inhabitants of Palestine and their intention not to abandon the Mandate. They included, however, a categorical statement that the intervention of General Nuri Pasha had led to no satisfactory result, and that the Arab leaders, in their manifesto, had made clear their intention to continue the strike until their aims had been attained. The campaign of violence and threats could not be allowed to continue, and more rapid and effective action had become necessary to bring the present state of disorder to an end with the least possible delay.

The interpretation put by the British Government on the result of General Nuri Pasha's intervention is not easy to understand. It is inconceivable that the Arab Higher Committee, having invited General Nuri Pasha to mediate and repeatedly asked for his advice should, at the moment when his good offices were commending themselves to the overwhelming majority of the Committee, issue a unanimous manifesto of the "do or die" kind, pledging every Arab to fight all the forces of the British Crown until every Arab claim were met. Thus, the British Government appear, on the face of it, to have acted, after a delay of more than four months, with a convulsive zeal which, in the circumstances, may provoke rather a bloody rebellion by the Arab extremists than a general collapse of the Arab resistance. This is, indeed, the contention of the majority of the Arab Higher Committee and its secretary in reply

to the Government's statement of policy; and it must be taken very seriously.

It would be a calamity if the Government's zealous firmness provoked violent terrorism into open rebellion, however rapidly the British troops could quell the Arab rebellion in a blood bath. It would not solve the essential problem: the impartial administration of the Mandate in a manner calculated to harmonise the economic and social interests both of Arabs and Jews. It would probably garner a harvest of Dead Sea fruit; for, as we show in a Note on page 469, at a moment when Syria is following Iraq into complete independence and all the Arab sovereigns and peoples have their eyes on their brothers in Palestine, provocation of the Palestinian Arabs to become martyrs in the cause of Arab nationalism might easily undo much of the good work recently achieved in Egypt, Iraq, and Saudi Arabia, and raise problems for the British Government of more than Palestinian dimensions. There are about 800,000 Arabs in Palestine, of whom about 100,000 are Christian or non-Moslem; there are a little over 300,000 Jews; and the majority of the Arabs are sick of violence and outrage. They want a return to normality, and reasonable discussion of their understandable grievances. Those grievances have somehow to be met, as we showed in our article of June 27th. To this end the Arab Committee were working for the creation of a situation in which the Royal Commission might get to work; and last week such a situation seemed on the point of achievement. What may now transpire is scarcely a matter for optimism or satisfaction. "The only thing you cannot do with bayonets is to sit on them." And if the Royal Commission is to discuss the grievances of an embittered majority of the population of Palestine behind a ring of steel, the auguries for the development of our mandatory trust in that country do not seem bright.

TRADE UNION POLICY

THE eyes of the delegates to this week's Trade Union Congress at Plymouth have been evidently fixed on Spain, Russia and Germany. Some critics have accordingly seen fit to accuse the representatives of British labour of ignoring the interests of their own people and allowing themselves to be distracted by irrelevant issues. This is a most perverse line of criticism. The T.U.C. meets this year at a time when at home employment and wages are rising, but abroad the trade union movement is being assailed by force in yet another European country. Since 1933 not only have the British working man's political and trade union rights remained assured, but his economic position has been steadily improving. Yet in the same period trade union organisation has been destroyed in Germany and Austria by anti-democratic methods, and attacked in Spain. And in recent months the spectre of Fascism as an international movement has come to assume some of the contours of reality. It has become inescapably clear, in fact, that the most dangerous threat to the British working man's standard of living comes not from abroad but from home.

No surprise need therefore be felt at the continued recurrence in the T.U.C. delegates' speeches of reference to European events. Indeed, nobody of ordinary human feeling, watching the spectacle of the Spanish conflict, could well remain unmoved; and Mr Findlay, this year's President of the T.U.C., was undoubtedly expressing the sentiments of the mass of the British people when he spoke of those in Spain who were "making their magnificent fight in defence of constitutional government." He was also expressing a widely felt sentiment when he said that "it was a matter of most profound distress to most of us to see a reversion to less humane methods of rule in Soviet Russia." The President of the T.U.C. deserves every credit for openly protesting against Soviet, as well as Fascist, terrorism. It shows him to be a truer friend of democracy than those supporters of the Right in Great Britain who have given unreserved moral support to the Spanish rebels.

There was remarkably little evidence in the Congress, either in Mr Findlay's speech, in that of Mr Attlee, who

was representing the Parliamentary Labour Party, or even in those of the delegates, of a desire for immediate intervention in Spain. A few speeches were made in favour of actively assisting the Spanish Government; but, after Mr Bevin and Sir Walter Citrine had pointed out the danger of European war, the Congress voted by a 60 to 1 majority against intervention. The chief positive contribution made by Mr Findlay to the nation-wide debate on foreign policy was the declaration that "British Labour could never acquiesce in, but would fight strenuously against, any policy which secured temporary peace in Western Europe while giving a free hand in Eastern Europe and against the Soviet Union." This, together with Mr Attlee's declaration, that we have to "rebuild the League," is clearly of great importance; and as the official attitude of the British Labour movement it seems likely to endure. For there is nothing incompatible in a simultaneous abhorrence of Soviet internal methods and a belief that the U.S.S.R. as a whole is likely to throw its influence on the side of the peace-loving nations—particularly when the origin of the quarrel between Stalin and the Trotskyists is Stalin's desire to ally the U.S.S.R. with the pacific capitalist powers. It was probably the same anxiety to strengthen the influence of the pacific powers that restrained the delegates from any very vehement protests against the Government's re-armament policy.

Inevitably keen, however, as was the concern felt by the Congress at the threat to peace, much more than half the time available was devoted to discussion of internal labour conditions. In a year when the cost of living as well as profits are rising, and when trade union membership is recovering markedly, a more aggressive demand for a forward wage policy might perhaps have been expected. We have now reached the moment in the upward swing of the trade cycle when, traditionally, the strike weapon is used to convert increased profits into increased wages. Yet the Congress showed itself far more anxious for shorter hours, paid holidays and less overtime than for further wage increases. Even if the support for shorter hours as a "work-sharing" expedient diminishes with falling unemployment, the gradual rise in the worker's standard of living evidently tends to intensify his preference for leisure rather than income. And the striking success of the French and Belgian industrial workers in their campaign for a 40-hour week and paid holidays has clearly caught the imagination of their British colleagues. The claim is one of which we are likely to hear more in the future.

The absence of any aggressive demand for the use of the strike weapon is also no doubt partly due to the very success of normal trade union pressure during the past few years in securing wage increases. This has disinclined the worker to adopt a more dramatic method. The mere threat of strike action has won better wages for the miners, the railwaymen and various other important sections of the workers in the past two years. The trade union leaders may accordingly be satisfied with the fruits of their gradualist policy. That policy, together with the slow pace at which the cost of living has risen during recovery, are two important reasons why recovery in this country has not yet been precipitated into anything which can fairly be called a boom. Two eventual conditions of the continuance of steady recovery, therefore, are likely to be the adherence by the T.U.C. to its moderate policy and the easing by the Government of restrictions on food imports as prices tend to rise further. There is substance, however, in Mr Bevin's warning that present prosperity is almost entirely based on building and re-armament; though his calculation that "peace and a slight slump in building" would mean 3,000,000 unemployed by 1939 is surely very pessimistic.

The most spectacular debate on internal affairs at the Congress was concerned with the Unemployment Regulations and the means test. Delegates' speeches made it clear once again that the family means test is one of the subjects on which spontaneous working-class feeling runs strongest, particularly in the distressed areas. Sir Walter Citrine, however, in a notable speech of strict democratic propriety, while expressing resentment against the means test, rejected a suggestion emanating from South Wales and Durham that the T.U.C. should boycott the Corona-

tion and organise a march on London as a protest. Direct action, Sir Walter said, to coerce a newly-elected Parliament into altering its considered vote would be the most likely thing in the world to provoke direct action in reply by the opponents of the trade union movement. Never was the British working man's faith in the efficacy of democratic methods more convincingly expressed.

Various other measures of domestic reform were urged in the course of the speeches; and an impressive case was made for the raising of the school age to 16, the abolition of the waiting period of six days before the receipt of unemployment insurance benefit, and the extension and more rigorous enforcement of the Factory Acts. The dominant issue of internal politics, however, was naturally the possibility of the Labour Party forming a "United Front" with the Communists and even a general "Popular Front" of all Left-wing parties. The general desire of both the T.U.C. leaders and rank and file for a union of all forces opposed to reaction was clear enough. But there was no sign that the formidable practical difficulties had yet been surmounted. The dilemma from the trade union point of view is, of course, that on the one hand alliance with the Liberals and not the Communists might mean a loss of working-class support; while on the other hand the Communists, exiguous as they are, might prove a liability rather than an asset as political allies. The President consequently contented himself with the plea that all anti-Fascist groups should "refrain from firing at one another and turn their fire upon those who were opposed to them on every fundamental aim"; and there was no very determined pressure from the rank and file for alliance with the Communists. In general the discussion gave the impression that the issue would be postponed until the Labour Conference next month: and that that Conference would probably decide against Communist affiliation.

It would be a mistake to infer from this that the British trade unionist is the victim of a sectional and partisan outlook. Indeed, this charge comes ill from those who at the same time accuse the T.U.C. leaders of neglecting their own supporters in the interests of foreign trade unions. There is in reality something profoundly gratifying in the concern shown at Plymouth for the future of democracy in Europe and beyond. In a world where one statesman after another has become the slavish adherent of a narrow nationalism it is encouraging, if ironic, that the humbler trade unionist, traditionally charged with sectionalism, should feel himself a member of a community a little wider than his own country.

RISING PRICES

No estimate of the prospects of British trade activity can be made at the present time without reference to the question of changing prices. The trend of industrial profits and the volume of business activity are closely affected by changes in price relationships. Normally, prices of primary products are much more sensitive than those of manufactured goods and services, because the international commodity exchanges are subject to psychological factors which are not operative in the case of finished articles. Moreover, as the output of many primary products cannot be as readily adjusted to rapid changes in demand as the production of manufactures, long-term fluctuations in their prices tend to be much more marked than in those of finished goods. Thus, during such an upward movement of the trade cycle as has been in progress recently, the prices of primary products tend to rise faster and farther than those of manufactured goods. The prime cost of a finished article also contains a substantial, though varying, element of wages, and wages as a rule do not rise appreciably until a fairly late stage in the cycle. So far money wage rates in this country have risen only by 4.3 per cent. from their lowest; moreover, the official index of wage rates did not begin to advance until the second quarter of 1934, when recovery was already well under way. The prices of manufactured goods, in fact, hardly ever rise precipitously until industries are working at, or near, capacity.

In Great Britain, prices of manufactured articles tended

7, CHANCERY LANE, LONDON

to fall until last year, despite a substantial increase in quotations for primary products. More recently, however, pressure for higher wages and a rise in raw material prices have tended appreciably to raise manufacturing costs. So far, manufactures are little dearer, on the average, than a year ago, but their trend is now unmistakably upwards. The index of average British export prices, for example, rose from 81.1 (1930 = 100) in the second quarter of 1935 to 82.1 and 82.7, respectively, in the first and second quarters of the current year. It is quite possible that the advance of the prices of finished articles may be accelerated in the future, at least in a number of important industries, such as iron and steel and metal manufacture, which are now working practically at capacity. There are, however, no indications of such a precipitous and general advance in costs as would arrest the expansion of business activity in the near future.

Prices of primary products, in the meantime, are steadily moving upwards. After the re-stocking movement in the autumn of 1935, generated by the fear of a possible spread of the dispute between Italy and the League of Nations which caused an upward rush of quotations, prices of primary products moved within narrow limits until the end of last May. The general tendency of quotations was slightly downward, the *Economist* index of the prices of primary products falling from 133.6 (September 25, 1931 = 100) on October 23, 1935, to 130.1 on May 27, 1936. During June and July, however, prices advanced rapidly, and the *Economist* index rose to 142.4 on August 5th. Since then there has been a temporary lull, but the general tendency of quotations is still definitely upwards. The latest advance, significantly enough, has not been accompanied by a corresponding depreciation of the gold value of sterling. The rise of 9 per cent. in our index of prices of primary products since May 27th took place despite a slight fall in the sterling price of gold. Actually, while the sterling price of gold is now the same as in July, 1934, our index of primary products has risen in the meantime by 18 per cent., and our complete index, which includes a number of semi-finished articles, by 10 per cent.

The recent advance in the prices of raw materials and crude foodstuffs, however, has been far from uniform, as the following table suggests:—

	1934	1935	1936	
			May 27th	Sept. 9th
Copper, standard cash, per ton	£ s. d. 27 8 9	£ s. d. 33 13 9	£ s. d. 36 12 6	£ s. d. 38 8 9
Lead, soft foreign,	10 1 3	15 13 9	15 11 3	17 18 9
Spelter, G.O.B.,	12 7 6	15 2 6	14 8 9	14 0 0
Tin, standard cash,	228 17 6	219 0 0	201 8 0	194 0 0
Tin, three months,	227 2 6	209 0 0	196 5 0	191 15 0
Cotton, American,	0 0 7-15	0 0 6-22	0 0 6-59	0 0 7-02
Wool, Queensland,	0 1 11	0 2 1	0 2 2½	0 2 2
Linseed oil,	19 15 0	22 10 0	24 2 6	25 10 0
Rubber, smoked sheet, per lb.	0 0 7½	0 0 5½	0 0 7½	0 0 7½
Timber, Swedish,	17 15 0	17 15 0	17 10 0	18 10 0
Butter, Danish,	5 8 0	6 0 0	5 8 0	6 8 0
Sugar, Cuban 96,	0 4 6	0 4 3	0 4 9½	0 4 5½
Tea, auction average, per lb.	0 1 0-30	0 1 2-74	0 1 0-54	0 1 1-86
Wheat, Liverpool futures,	0 6 0	0 5 10	0 5 7	0 7 5
Gold,	7 0 5½	7 0 11	6 19 6	6 17 5½

Of the thirteen commodities included in the above table, nine rose and four declined between May 27th and September 9th. These changes may be considered in greater detail. We may take first the four principal non-ferrous metals which are subject to international arbitrage. Copper, lead, spelter and tin all fall into the category of commodities which are produced continuously. In each case there has been quite a substantial improvement in demand, with the possibility of a further expansion. Supplies of copper and tin are regulated, and lead producers work under a gentlemen's agreement. Copper and lead have both risen substantially in price. The decline in tin was due to the realisation that quotations had been maintained at an artificial level in past years and to increased uncertainty about the future of the restriction scheme. That the market had lost faith in the possibility of maintaining tin prices at £230 per ton is indicated by the disparity between the cash and three months' quotations since 1935. Rubber is also subject to international control. After a sharp rise following the inception of the restriction scheme, it was realised that it was impossible to balance supply and demand at a higher level of prices within a short period. Prices reacted sharply in 1935, but as restriction, helped by a steady increase in demand, is now gradually becoming effective, they have recently tended upwards. The timber position changed radically with the formation of the European Timber Exporters' Convention last November, under which exports of sawn and planed timber from the leading exporting countries were limited. After a long period of depression prices rose sharply this year. The latest developments in the timber market are discussed in greater detail on page 470.

Of the two textile raw materials, cotton has risen in price, and wool has slightly fallen, since May 27th. The rise of cotton prices in recent years is the direct outcome of the restrictionist policy of the United States Government. Nevertheless, prices showed a sagging tendency last year, for the maintenance of high prices for American cotton had stimulated cotton growing in other countries. The sharp upward movement this week was due to the reduction in the official forecast of this year's yield of the crop in the United States. The slight decline of wool prices represents a natural reaction following the steep advance of prices between September, 1935, and March, 1936. But as this year's wool clip is not likely to be much bigger than a year ago, and as stocks both in producing and consuming countries at the end of the season were comparatively low, no serious downward movement in prices is expected in the near future. Linseed oil tended to rise in price, partly as a result of crop failure in the United States and partly owing to the expectation of a smaller crop in Argentina. More recently, however, the price of linseed oil has declined somewhat as the area under linseed in Argentina and the available exportable surplus of last season's crop had been somewhat underestimated.

The marked improvement in wheat prices since May 27th is the direct outcome of another North American crop failure, as a result of which the excessive supplies which have for so long depressed prices are likely to disappear during the current season. A rise in prices, therefore, was justified, and the recent decline was merely in the nature of a corrective reaction. The price of tea has also tended to rise as supplies of this commodity are strictly regulated. Sugar is one of the few foodstuffs which have so far failed to rise in price. Despite the reduction in the output of Cuba and Java, the world's great exporting countries, the free market in raw sugar has dwindled in recent years as a result of subsidised home production and strictly limited import quotas by importing countries. Consequently, the much-reduced volume of unsold stocks is tending to depress prices as much as the larger volume of stocks in a free market.

As a result of the rising tendency of prices for raw materials and crude foodstuffs, the cost of production of manufactured articles is steadily increasing. At the same time, however, the rise is making a substantial contribution to world recovery by raising the income of a large section of the world's population. And it is likely to continue. It is highly unlikely, however, that rising raw material prices will themselves be sufficient to reverse the present trend of British industrial activity.

MR ABERHART'S EXPERIMENTS

(FROM A CORRESPONDENT IN ALBERTA)

THE experiments which Mr Aberhart, the Social Credit Premier of Alberta, is now conducting, must be described under two distinct headings—"Prosperity Certificates" and "Alberta Credit." There is no connection between the two except their common origin in the brains of Mr Aberhart and his confrères.

"Prosperity Certificates" are a form of stamped scrip—denomination \$1.00—the face a fair imitation of a Bank of Canada dollar bill—the back with 104 dated spaces for 1c. stamps. The scrip is redeemable in two years at \$1.00 when 104 1c. stamps have been affixed weekly. It is thus nothing more nor less than an entry form for a heavy turnover tax scheme, and discriminatory at that, because the tax only applies on the critical weekly dates. The order-in-council dated June 11, 1936, and purporting to be passed under the authority of the "Social Credit Measures Act," authorises the issue of \$2,000,000 of these "certificates." It is stated that \$500,000 have been printed, the use of \$250,000 approved, and some \$175,000 actually issued, mainly for work done during July on small road projects throughout the province.

Organised business, including the manufacturers and wholesalers, promptly announced its inability to take the "certificates," giving full reasons for refusal and notifying the retail trade. The Government itself will not take them at the Provincial Liquor Stores, at the School Books Branch of the Department of Education, for current business of the Provincial Telephone System, as fees for the Provincial University, or for Provincial licences, Land Titles, Office fees, etc., etc.; but it will accept them for old telephone accounts of abandoned branch lines and for sales tax. The latter is important as some merchants, who would not otherwise attempt to circulate the scrip, are accepting it up to the amount of their 2 per cent. Provincial Sales Tax.

The Government has agreed to redeem on a fixed date monthly from wholesalers and manufacturers such portion of their "certificates" as they cannot pass out locally. This was later enlarged to cover redemption from anybody in business who can prove to the Government his need of real money. Assuming that the Government is able to carry out this undertaking, the result will be an additional tax up to 4 per cent. or 5 per cent. for stamping the scrip up to the monthly redemption date and the great majority of business houses decline to pay this tax. Circulation so far has been secured by the not inconsiderable demand as souvenirs, through the efforts of enthusiastic Social Creditors and through a few larger concerns, hungry for business at any cost, or perhaps protecting themselves against the additional tax at the expense of the customers. The issue has been so widespread that very little disturbance is apparent at any one point, and the present small total can, and probably will, be quickly absorbed by the Provincial Treasury.

The Government also induced the Council of the City of Edmonton to enter into an agreement whereby, for the month of August, the City was to take \$85,000 of scrip instead of the \$55,000 of good money to which it is entitled as a Provincial grant towards unemployment relief, being, in turn, a parcelling out of a Dominion grant for that purpose. The agreement was promptly attacked in the courts and an interim injunction was secured which has been appealed by the City and the Province. The Court action should help to clear up the situation, because it attacks the agreement with the City on very general grounds, claiming not only that it is *ultra vires* of the City Charter, but that the issue of "certificates" does not fall within the powers given by the "Social Credit Measures Act" and is, generally, *ultra vires* of the Province.

Apart from this unexpected check through legal action, it is the general view that the Government speedily recognised the virtual failure of its "certificate" scheme and intended to abandon it, of course fixing the blame for the failure as far as possible on "the big interests." It, therefore, rushed into its more ambitious scheme of Social Credit proper.

This scheme is based on the issue of registration forms and of "covenants" with, respectively, "Individual

Citizens," "Retailers," "Manufacturers and Processors" and "Farmers and Producers." By the terms of the covenants farmers and manufacturers must stand ready to sell at least half their output for "Alberta Credit," the others must use it as much as possible—a nice vague term. All must work hard and none must ask for redemption of the "Alberta Credit" or tender it to the Government for taxes, licences, fines, etc. The Government covenants to establish and maintain profitable prices, to grant interest-free loans in "Alberta Credit" and, above all, to give monthly "dividends" so as to augment purchasing power.

The Dominion Government has sole control of currency, coinage, paper money and legal tender. No province may impose tariffs or quotas or otherwise restrict inter-provincial trade. In defiance of these things the Alberta Government, by the "covenants," is endeavouring to do voluntarily what it cannot enforce legally—to set up a system of currency, the so-called "Alberta Credit," and to control prices and the free flow of commodities so that it may ensure prices profitable to producer, manufacturer and retailer. The whole thing may be regarded as an attempt to create instantaneously a province-wide co-operative enterprise embracing producers, manufacturers and consumers. It may be significant that the Premier's latest announcement concerns negotiations with British Co-operatives to take surplus products of Alberta, such as wheat and cattle, in exchange for commodities which are not yet available here.

Instead of the \$25.00 a month which won the election, Mr Aberhart now talks of a Social Credit dividend reduced in size by the drought in parts of the province, and says that the actual amount of the dividend and other details can only be determined after compiling the answers to the questionnaires. It may be judged better politics to be disappointed at the result of the registration, especially by the farmers, manufacturers and retailers, and to postpone the whole plan, assuming the role of a thwarted benefactor. Subject to this, we seem destined within the next few months to have the whole machinery set up, of State credit houses and "dividends" and loans in "Alberta Credit"—i.e. entries on the credit side of an account transferable by an order which is constantly likened to a bank cheque.

Outsiders can have no conception of how much this Alberta experiment owes to its religious background and accompaniment. Twice every Sunday, at large meetings and over powerful radio stations, Mr Aberhart and his special disciple Manning—they are interchangeable and, over the air, indistinguishable—prate, pray and preach, denouncing the forces of evil in economics equally with those in morals and religion. For example, the above-mentioned court injunction prompted a fervent prayer to the Almighty to remove the impediments placed in the way of relief to suffering humanity—an appeal which short-circuits a great many earthly courts.

THE PROBLEM OF CHANGE

It is not often that it falls to an economist, professing or amateur, to preside over the British Association for the Advancement of Science. This fact alone would have lent a certain interest to this year's meeting. But in truth it is not often given to any calling, or even to the British Association itself, to count among its members a man of such varied activities in so many different spheres, of such wide learning matched by such practical experience, as Sir Josiah Stamp. Sir Josiah is an economist, a statistician, an expert on taxation; he has had the most eminent experience in the Civil Service, in the chemical industry and in the railway world; he is a banker (in two different branches of the profession) and Mayor of a flourishing borough; he is actively associated with a number of learned societies; he is an inexhaustible lecturer and writer. There is no shadow of hyperbole in the statement that there is no man living, in any country of the world, better fitted to interpret the practical world to Science and Science to the practical world, or to bridge the gap that too widely separates the "natural" sciences from those which deal with that very unnatural and unscientific creature, Man.

The Presidential Address to the British Association is not an occasion for the detailed monograph but for the broad outlook, and Sir Josiah's subject, "The Impact of Science on Society," is certainly broad enough in its implications. He made it clear that he was not concerned with the effects of Science upon Society. It was not the results of change that occupied him, but the process of change itself. There was a hint of reproach here and there to the physical scientists for confining themselves too exclusively to their research without considering its social consequences. Moreover, when scientists do lift their eyes from the test-tube, their attitude towards the wider problems is too frequently unscientific. "My own experience," says Sir Josiah, "is that when the attempt to deal with social consequences is made, we quickly find ourselves either in the field of larger politics debating the merits of the three prevalent forms of State government, or else performing miracles with fancy currencies and their blue prints reminiscent of the chemical engineer."

His main purpose, however, was not aggressive, but to plead for time, money and scientific spirit to be spent on studying the problem how best to adjust Man, especially in his economic organisation, to the scientific wonders he is constantly evoking. This is an almost virgin field. Indeed, it is astonishing that with so much clamour and dispute about the merits of this, that or the other economic system, so little attention has been paid to the problem of peaceful change, perhaps the most vital of all, in economics as in politics and international affairs. Sir Josiah has done something in this address to map out the ground that will have to be covered. To begin with, he questioned the assumption that "improvements" must always be introduced as quickly as possible. To scrap an old process for a new may mean depriving both men and machinery of their utility. The men may be reduced to "unskilled bipeds," the machinery to useless scrap iron. This is a real cost to Society, not merely to the workers or the capitalists directly concerned, for Society is poorer by the waste of skill and capital. Sir Josiah conveniently gave embodiment to the argument by estimating the cost of premature obsolescence and unemployment, due to innovations being forced on industry by the pressure of competition, at something of the order of 3 per cent. of the national income. The point is substantial, though it is as well to remember that the unduly slow introduction of improvements by a monopolist may carry a greater social cost than their unduly rapid introduction through competition. Moreover, Sir Josiah Stamp the President of the British Association is also Sir Josiah Stamp the Chairman of a semi-monopolist railway which is constantly being urged to speed up its re-equipment.

Sir Josiah showed that he realised this objection by turning from the disadvantages of uneconomic rapidity to those of improvident tardiness in effecting technical changes. The existing system has been subject to a formidable volume of criticism on this score. Much of it is doubtless deserved. It is certainly true that improvements have to wait upon the

emergence of profit before they are adopted. But Sir Josiah made the very pertinent point that improvements cannot be effected in any form of society merely by demonstrating their desirability. Nor is "planning" in this respect a very hopeful alternative, for "it deals mainly with planning the known, and hardly at all for changes in the known." Scientists who call for "the replacement of the present socially irresponsible financial control by socially responsible planning bodies" (the quotation is from Mr Julian Huxley), says Sir Josiah, "tend to think of prevision in terms of knowledge and appreciation of particular scientific possibilities, whereas it involves unknown demand schedules, the unceasing baffling principle of substitution, the inertia of institutions, the crusts of tradition and the queer incalculability of mass mind." Or, to take a practical example, "would a planning committee, planning a new hotel in 1904, have known any better than capitalist prevision that the fifteen bathrooms then considered adequate for social demand ought really to have been ten times that number if the hotel was not to be considered obsolete thirty years later?"

To quote isolated extracts such as these is to run the risk of giving the impression that Sir Josiah was concerned only to defend the capitalist system, whereas his real object was to point out the immense difficulties of change under any system. Indeed, the root cause of the difficulty is unconnected with any form of organisation. Any smoothly changing society has a certain natural periodicity set by the length of working life and the durability of materials. This is so because both human labour and also capital equipment can only with the greatest difficulty be transferred from one employment to another. If change is coming so slowly that its effectuation can wait upon the entry into industry of a new generation of workers or the gradual replacement of capital, it will be accomplished smoothly. For centuries this was so, and change was so slow that there was the illusion of a static society. But it is no longer true. The periodicity of change is now far more rapid than that of adjustment. In the long run, adjustments are doubtless made. But before the long run comes, we have suffered unemployment, and perhaps disrupted Society. Moreover, if the pace of change is quickening, that of adjustment is slowing down. We are shortly to have a declining population, and apart from the adjustments necessary to accommodate production to a changing

market, there is also the consideration that the young, the entrants to industry who have always brought about adjustments, are from now on to be a shrinking proportion of the total labour force. There are other elements making for rigidity: the inevitable decline in enterprise among a less numerous and better-protected younger generation; and the efforts of Society to protect itself against adverse change by petrifying the present structure of industry.

This is the problem which Sir Josiah laid before the scientists at Blackpool. He told them bluntly that it was much more difficult than they imagined ("specialist scientists have no particular gifts for understanding the institutional processes of social life and the psychology of multiple and mass decisions"), and he warned them that it would become more difficult in the future. He propounded no solution; even the President of the British Association cannot be expected to solve in sixty minutes the most difficult social problem of his age. But he did suggest that there is an urgent need for diverting some of the resources available for research in the physical sciences into the biological and social sciences. "We have spent much and long upon the science of matter, and the greater our success the greater must be our failure, unless we turn also at long last to an equal advance in the science of Man."

This is a call which both the State and the individual should heed. The present tendency all over the world is towards rigidity; the world's economic arteries are hardening. The active constructive portion of the world's economy is shrinking and supporting an ever-enlarging malignant growth of surplus tissue. A society, like a man, can continue to exist when its metabolic processes are faulty; but it will be notable neither for robust health nor for longevity. In our present case there is no more urgent task than to smooth the path of economic change. It is a task which will have to be confronted under any form of government; and it is a problem whose solution is ultimately more vital than any of the questions of productivity or equity which so greatly agitate the controversialists. If Sir Josiah Stamp's authority and the peculiar respect and attention which attach to the occasion of his address can serve to make the thinking public aware of the problem before us, the address will rank among the most notable that have been heard even in the hundred and five years of the British Association.

NOTES OF THE WEEK

A Truce in South Wales.—A disastrous stoppage in the South Wales coalfield was averted at the eleventh hour last week-end. Sir Samuel Instone, chairman of the Bedwas Colliery Company, which makes membership of the Miners' Industrial Union a condition of employment, had rejected the suggestion of the South Wales Miners' Federation that a secret ballot should be held to determine which union his employees would prefer. On Saturday, however, in response to representations from Captain Crookshank, the Minister of Mines, Sir Samuel agreed to discuss the question of the ballot with representatives of the Federation under a neutral chairman. And on these conditions the Federation agreed to withdraw the strike notices which would otherwise have taken effect on Monday. The meeting between the two parties to the dispute was held in London on Wednesday; but the discussion was interrupted almost at once by news of an unofficial "stay-in" strike at Bedwas. It was not clear who was on strike, or why; but the conference was postponed until Saturday in order that the truce might be enforced meanwhile. The occurrence of the unofficial "stay-in" strike is a pointed illustration of the tension, suspicion and confusion existing in the Bedwas district. A secret ballot of the miners on the main issue still seems the most practical and reasonable way out; and we can hardly believe that Sir Samuel Instone will persist in his refusal to accept it.

The Conflict in Spain.—It has been a momentous week in Spain. Last week-end Irun fell, though its defenders had burned it to the ground, to the rebel forces, who are now at the suburbs of San Sebastian; and it is uncertain as we go to press whether the various groups of Government supporters in that city will agree to put up a struggle. In Madrid, the Government has been reconstituted with Señor Largo Caballero, the veteran Left-wing Socialist leader, as Prime Minister and Minister for War; Señor Indalecio Prieto, the Right-wing Socialist, as Minister of Marine and Air; and the remaining portfolios divided among Socialists, two Communists, a Basque Nationalist, Catalans, and the ex-Premier Señor Don José Giral. This is certainly a stronger and more representative team of the groups in the Government; and the new Prime Minister has announced far-reaching measures of a financial and military kind which indicate an intensification and improvement of the Government's resistance to the rebel forces. Early evidence of this may be traced in the taking of Huesca, the key-town on the route from Saragossa to Jaca and the French frontier, by the Catalan forces which are gradually investing Saragossa, and in the offensive of Government forces in the South. The Alcázar in Toledo has apparently fallen to them; and near Talavera they are reported to have won back some territory occupied by the forces of General Franco which were advancing

towards Madrid. Meanwhile, the French Plan for securing the cessation of all aid to either side in Spain by other Governments or their nationals is patently in suspended animation, largely owing to the attitude of Portugal and Italy. Both Powers agreed "in principle," but pleaded ignorance of "the precise scope" of the plan. As a result, more Italian supplies of aeroplanes and war material for the rebel forces have been reported during the past week to have been landed in Vigo and Lisbon, for transit into Spanish territory. On Wednesday the first meeting of the "International Committee for the Application of the Agreement regarding Non-intervention in Spain" proved as fruitless as its title is imposing—the discussion was reported by an august contemporary to be "prosaic"—mainly because, though the 26 European countries who have imposed an embargo were represented, Portugal was the only absentee. (Incidentally, it seems strange that while Viscount Cranborne, Under-Secretary for Foreign Affairs, was the British Government representative, the Chairman of this important European committee was Mr W. S. Morrison, the Financial Secretary to the British Treasury.) The Committee therefore recorded its desire to meet again at some future date; and it is devoutly to be hoped that the British Government will in the meantime exert all the pressure of which they are capable upon the one-man Government of "England's oldest ally," Portugal, to prevent that country from becoming the tool of greater Powers interested in the outcome of the Spanish conflict, and to secure effective international neutrality. If it is not secured because of Portugal's interested recalcitrance, Europe—not excluding Britain herself—may soon have much to rue.

M. Blum and the Communists.—The continuous stultification of M. Blum's plan to prevent foreign assistance being given to either side in Spain has provoked a dispute in domestic French politics. The Communists under the leadership of the young and zealous M. Thorez are one of the three elements in the Popular Front, though they are not in M. Blum's Government. They support that Government because, ever since the General Election in May, M. Blum has loyally maintained that his Government must carry out a Popular Front programme; and as far as domestic economic and social legislation shows, the Government have done so. But the efforts of M. Blum's Socialist and Radical supporters to prevent the Spanish conflict from splitting Europe—and perhaps dragging France into war—have merely prevented the Spanish Government from receiving the assistance they might legally expect, while the international *saboteurs* and procrastinators in countries sympathetic to the rebel cause are still running warlike stores and equipment into the rebel camp. This has naturally incensed not only the French Communists, but a substantial proportion of the Radicals and most of the Socialists. The French Government last week-end seemed threatened by disintegration in the Popular Front. This week, despite the attacks on M. Blum's policy over Spain by M. Thorez in his journal *L'Humanité*, the Communist leader has by implication renounced his demand for a "working-class front"—which would mean the workers' rejection of M. Blum—and the Confédération Générale du Travail, the French Trade Union Congress, has declared its fidelity to all groups composing the Popular Front as well as to the Government which was created by that Front. On the other hand, the Trade Unions affirm their sympathy with the Communists' contentions about the day-to-day effect on the Spanish Government of M. Blum's hitherto abortive plan, and request M. Blum's Government to "reconsider" their non-intervention policy. These are ominous words alike for M. Blum and for Europe.

French Armaments and Alliances.—The French Popular Front Government have lost neither time nor energy in replying to Herr Hitler's recent decree prolonging conscript service in the German army. As we pointed out on August 15th and again a fortnight ago, the visit of General Gamelin of the French General Staff to Warsaw, and the return visit of General Rydz-Smigly, supreme chief

of the Polish armed forces, to Paris last week, were natural reactions to the intensification of the German armament programme, the Italo-German agreement over Austria, the joint Italo-German attitude over Spain, and the Nazis' truculence in Danzig. The French Government have now decided to spend an additional Frs. 13,000 millions during the next four years on re-equipment and mechanisation of the army, extension of defensive works, expansion of the Air Force and its equipment with the most modern types. In 1937, the additional expenditure is to be Frs. 4,000 millions; and the Air Force alone is to be raised to 2,000 first-line craft, irrespective of reserves. Such is the magnitude of the Minister of War, M. Daladier's, proposals which were approved by the French Council of Ministers on Monday. But this is not all; for Poland is to receive about Frs. 450 millions in cash as a loan for the establishment of military equipment factories. A further Frs. 375 millions are to be paid to Russia against Russian deliveries of war materials to Poland—another form of loan to Poland against French exports to Russia. An additional Frs. 975 millions is to be rediscounted by the Banque de France for the Bank of Poland. And a final Frs. 975 millions of French exports of arms and munitions to Poland are to be guaranteed payment by the French Treasury—which, as we know, to-day means the Banque de France. Evidently the French gold reserve can still function as a war-chest, despite the pressure on the overvalued franc and the emptiness of the French Treasury. But the latest decisions drive one more nail into the coffin of the franc's present gold parity, and make the Treasury's probable position next November or December look even more hopeless. France is to send Poland the latest types of heavy bombing aeroplanes and bomber-fighters, heavy guns and—it is reported—submarine minelayers. The last item is disturbing. The British Government's Naval Agreement with Germany last year handed naval supremacy in the Baltic over to Germany, and thus threatened Poland's commercial outlet on that sea at Gdynia. This joint Franco-Polish reply to Germany's armament programme may well have naval consequences for this country—especially as Heligoland has now, on the British Government's own admission, been unilaterally fortified by Germany. This week's news from the Continent should leave no British observer in any doubt about the direction and rapidity of the present arms race.

Nazi Political Economy.—Herr Hitler's opening proclamation to the Nazi Party Rally at Nuremberg on Wednesday was a muddle of economics and politics. The Führer's message to the Rally—which this year receives the title "The Party Rally of Honour"—almost ignores the Jews, political opponents in Germany, the Churches, and "carpers and critics"; for it was based on two main theses—the responsibility of the Nazis for the defence of Europe from Communism, and the necessity for

Nazi Germany to become economically self-sufficing. The first point was driven home by the Führer's deputy, Rudolf Hess, in a speech which linked Italy and Germany as the two Powers whose mission was to prevent the extension of Communism anywhere in Europe—a significant admission of their interests in the Spanish conflict. Herr Hitler's proclamation outlined a four-year plan to make Germany as self-sufficing in raw materials and foodstuffs as possible, and based this on Germany's present dependence on foreign resources and on exports to pay for them. Herr Hitler deplored the inability of foreign statesmen to see that such German exports were a vital necessity; but he did not draw the conclusion that the German self-sufficiency programme in agriculture and discrimination between imports during recent years had deserved equal castigation by Germany's neighbours. He likened "a British statesman's" observation that Germany did not need colonies, because she could buy raw materials with her exports, to Marie Antoinette's adjuration to the hungry mob to eat cake. He claimed that Germany had been "bled white" for fifteen years, conveniently forgetting the magnitude of Germany's borrowings from abroad after the war, only part of which could be set against reparations that ended in 1932. He declared that Germany could not abate one jot of her claims to possess overseas colonies; but made it clear that they would be exploited only in the cause of German self-sufficiency, to enable the Germany of the Four-Year-Plan to extend her own currency area over new markets and resources. Herr Hitler was silent on Nazi Germany's ability to find the necessary capital either to develop virgin colonies or to compensate their former owners. For the rest, he launched a panegyric on the employment and capital-construction created by the Nazi Government's rearmament programme; deprecated strikes; said wages could not be raised, production being more important; and added no word on lagging consumption standards and the eventual cost of the State's credit-inflation. Herr Hitler is free to point to vast armaments and a vast army and air force as the appurtenances of national honour. As Dr. Goebbels said this year, "We may not have butter, but we have the guns." Herr Hitler's avowal this week of the aim and end of the Nazi movement raises a chilling spectre before the rest of us.

★ ★ ★

"Hands off Africa!"—Herr Hitler's blunt demand for colonies, and the equivocation of the British Government after their abandonment of sanctions against a European dictatorship which seized an African State, have led the South African Government to protest in no uncertain manner against any proposals to hand African territories over as Danegeld to European dictators. It will be recalled that Generals Smuts and Hertzog roundly condemned the British Government for allowing Italy to "get away with" Ethiopia, and declared that South Africa would be prepared to back sanctions, even if it meant war with Italy. Ever since, the Portuguese, French, Belgian, Spanish and South African owners of African territories have noted the equivocations of Mr Baldwin and Mr Neville Chamberlain; and they suspect that the British Government may be faintly inclined to allow Herr Hitler colonies in Africa—either by acquiescence in as brutal a German *coup de main* as that of Signor Mussolini or by direct negotiations—as long as British territories are not involved. And evidently our South African cousins do not even believe that the present British Government would oppose the return to Germany of South-West Africa, now under the Mandatory South African Government. It is only on such assumptions that one can interpret this week's speeches in South Africa. On Monday, Mr Pirow, Minister of Railways and Defence, told the delegates to the Southern Africa Transport Conference (at which British, Belgian, French and Portuguese Governors were present) that he could "imagine a circumstance in which a threat, a military threat, to one of us might be regarded as affecting the safety of all or most of us." This foreshadowing of a united Pan-Africa movement transcending purely British political bonds, was reinforced by General Smuts on Tuesday, who pleaded for Pan-African "family relations," and warned "those who try to transplant to this Continent the barren feuds and poisonous racialism which are paralysing Europe," that they might find in Africa "the spirit of a small League of Nations."

The strongest utterance, however, was that of Mr J. H. Hofmeyr, in an interview at Daar-es-Salaam, which stated that African territories and peoples were not to become pawns in the European game, and that African peoples themselves should decide their destinies. It concluded with words which may be pregnant with discomfiting possibilities for His Majesty's Government in the United Kingdom: "Hands off Africa!" These were the words which General Smuts exhorted the British Government to make their policy, cost what it might, towards aggression by one European dictator. They failed to do so. Now that Herr Hitler becomes importunate, the wheel is coming full circle.

★ ★ ★

The Presidential Campaign.—The American Presidential campaign is now entering on the second phase of its extraordinary quadrennial course. The first phase ends with the nominations of the candidates. There is then a pause for the closing of ranks and the preparation of speeches. After Labour Day, the traditional end of the holiday season (which fell on Monday), the oratorical bombardment begins in earnest, and everything that happens in this period is grist to the electoral mill. Mr Roosevelt has scored first advantage by neatly capitalising the drought crisis. He extracted the utmost political advantage from it by declaring that he would not "play politics with the drought," and by summoning a conference of the Governors of the afflicted States, Mr Landon among them. This conference passed off last week. The Government is projecting a very vigorous programme of immediate relief for the victims of the drought and a no less extensive, though somewhat vague, long-term policy for the agricultural reconstruction of the regions concerned. Mr Landon was compelled not only to occupy second place on the stage of publicity, but also to appear as completely acquiescing in his rival's plans. The labour situation is developing more ambiguously. The split between the two sections of organised Labour is now complete. The American Federation of Labour, whose traditional policies are, in industry, to favour the "horizontal" organisation of the minority of skilled craftsmen, and in politics to remain neutral between the two large parties, has expelled its largest and most vigorous unions. The dissidents, under the aggressive leadership of Mr John L. Lewis, believe in large "vertical" or "industrial" unions, uniting all the workers in one industry, irrespective of their crafts or lack of crafts. They also believe in very active support of Mr Roosevelt, and have formed a so-called Non-partisan Labour League to express this new-found political partisanship of Labour. Their support might, however, be embarrassing for the President. For Mr Lewis is trying to organise the steel industry, and if his efforts should result in a strike the inevitably ensuing violence and bloodshed would frighten more voters away from the President than it would attract to him. Mr Lewis is therefore being asked to subordinate his industrial enthusiasms for two months more to his political beliefs. Meanwhile the first test of party strengths is approaching; for the State of Maine will elect on Monday next its State officials and its representatives in Congress (though not its Presidential electors). Maine is a "rock-ribbed Republican" State, and there is no historical truth in the belief that "as Maine goes, so goes the nation." But the vote will nevertheless give some indication of the state of sentiment among the voters.

★ ★ ★

Growing Tourist Traffic.—The volume of tourist traffic varies fairly closely with periods of good and bad trade. The economic aspect of this form of international intercourse is of considerable significance, especially for countries, such as Austria, France and Switzerland, which derive a substantial proportion of their national income from the expenditure of foreign tourists. The information about the tourist traffic in this country is somewhat meagre, especially in comparison with the mass of details available on the movements of United States citizens abroad. The United States Government publishes every year full information on the number of tourists visiting various foreign countries, their expenditure and length of stay in each country, together with many other details. Last year 57 per cent. of United States citizens

travelling to Europe visited this country, staying, on the average, 19.2 days and spending between \$15 and \$20 millions. The world depression, accompanied by falling incomes, was responsible for a considerable decline in the international tourist traffic, but the gradual revival since 1932 has prompted an increasing number of persons to spend their holidays abroad. Concurrently with economic recovery the number of persons travelling for reasons of business has also tended to increase. The number of foreign visitors to this country in recent years, as recorded by the Immigration Branch of the Home Office, is shown below. Visitors from the Empire are excluded owing to the absence of statistical returns:—

	VISITORS TO BRITAIN		
	On Holiday	On Business	Total
1929	238,391	93,013	331,404
1930	245,865	87,950	333,815
1931	195,142	80,759	275,901
1932	181,147	72,227	253,374
1933	186,421	74,095	260,516
1934	207,108	81,493	288,601
1935	227,761	87,983	315,744
1935, January-July	137,205	50,974	188,179
1936,	163,511	58,309	221,820

The increase in tourist traffic, as in international trade, has not been as rapid as domestic recovery, largely owing to the restrictions on foreign travel imposed by a number of countries, including Germany and Italy. But the trend is definitely upwards; for the number of visitors to this country during the first seven months of the current year showed an increase of 18 per cent. over the corresponding period a year ago. During July alone 66,313 foreign nationals landed in this country on holiday. Of these, 22,524 came from the United States, 15,500 from France, 6,140 from Germany, 5,308 from Holland, 3,601 from Scandinavia and 2,161 from Belgium. A classification according to ports of entry shows that 13,760 landed at Dover, 12,523 at Southampton, 7,829 at Harwich and 7,743 at Newhaven. No less than 2,039 holiday visitors landed at Croydon, an indication of the growing popularity of travelling by air. Of the total number of business visitors, amounting to 7,947 in July, 1,438, or 18 per cent., landed at Croydon. German, French and Dutch nationals accounted for more than one-half of the total number of business visitors.

★ ★ ★

The New Constitution of Malta.—The reconversion of the Government of Malta to the crown-colony pattern from the dyarchy inaugurated in 1921 was completed last week. On September 2nd the Governor-General proclaimed the entry into force on that date of letters patent, embodying the change, which had been promulgated by him on August 12th; and he followed this up the next day by promulgating ordinances on education, notarial acts and court procedure which have the effect of virtually eliminating the Italian language from official use in Malta, and leaving the field partitioned between English and Maltese. When the Maltese constitutions of 1936 and 1921 are compared, no English student of politics will be disposed to dispute that the change marks a long step backward. The now re-established crown-colony government in Malta is to be maintained, it is said, so long as the international situation in the Mediterranean remains uncertain—which, after H.M. Government's recent impassivity in that zone of British interests, may prove to be a roundabout way of saying "until the Greek kalends." Now the justification of the Empire's existence in the world of to-day rests avowedly on its claim to be in process of evolution towards a complete local self-government in all its parts; and it would be difficult to maintain that the inhabitants of Malta—or for that matter those of Cyprus—are unfit to enjoy in the near future the self-government that is already within the grasp of the Syrians and Egyptians—not to speak of the sovereign independence of other Levantine countries such as Greece, Turkey and Iraq. In Malta, as in Cyprus, the reason why H.M. Government have reversed the engines of political evolution is because they feel they cannot afford to face the risks of complete self-government in an island which is of such great strategic importance to the United Kingdom. The anti-Italian language ordinances in Malta give the key to the abrogation of the semi-autonomous constitution of 1921; Italian is

not, of course, the mother-tongue of the Maltese people; the Maltese language is a survival of Phoenician with Arabic and Italian infusions in its vocabulary. The part that has hitherto been played by Italian as the culture-language of the Maltese educated class is a relic of a mediæval state of affairs in which Italian was the *lingua franca* of all the outposts of Western Christendom overseas. Under modern conditions, Italian would certainly have succumbed to Maltese in Malta in the long run, as education spread downwards from the Italian-speaking minority to the non-Italian-speaking majority of the Maltese people, if the two languages had been left alone to fight it out between themselves. The danger now is that the Italian language may be given a new significance—and consequently a new lease of life—in Malta through the very fact of its having been officially eliminated as part and parcel of a retrogressive constitutional move.

The Franco-Syrian Treaty.—In Paris, at the end of last week, the representatives of the Governments of France and Syria initialled the draft of a treaty of friendship and alliance between the two countries which is to replace the present French mandate over Syria. This Franco-Syrian treaty is modelled very closely on the Anglo-Iraqi treaty of 1930. The latter treaty, in its turn, was inspired by the draft terms of the Anglo-Egyptian treaty which was all but concluded in 1930 and which has just been achieved. Thus three Arab States in the Middle East are starting, almost at the same time, on a new chapter in their history, in which they will be possessed, for the first time, of genuinely sovereign independence. The outward symbol of this new status is their admission to membership in the League of Nations. Iraq obtained admission in 1932; and it is one of the stipulations of the new Franco-Syrian treaty, as it is of the Anglo-Egyptian treaty, that the Arab contracting party is to apply forthwith for membership, with the European contracting party's support. Since there is no ground for expecting to see either the Syrian or the Egyptian application rejected, we may look forward to seeing the Arab world soon represented by no less than three voices on an international organisation in which there was not a single representative of the Arab world four years ago. Moreover, when we turn our eyes to the Arabian Peninsula itself, we observe there two more Arab States—Saudi Arabia and the Yemen—which have both been most effectively sovereign and independent ever since the end of the Great War, though neither of them has chosen so far to register the fact of its independence by applying for League membership. When Syria and Egypt have completed the last stages of the evolution through which Iraq has already passed, the only two non-self-governing Arab countries that will be left in the Middle East will be the Lebanon under its French mandate and Palestine under its British mandate; and these will stand out as tiny enclaves in the midst of a vast circle of independent Arab countries. The almost certain result of this will be to focus all the interest and emotion of Arab nationalism in South-Western Asia and in Northern Africa upon these two burning points—and particularly upon Palestine. It is only in Palestine, and not in the Lebanon, that the Arabism of the country is in jeopardy; since, in the Lebanon, the competing communities and sects are all Arab in their language and their culture.

Mr Keynes on Gold Supplies.—The ever-increasing supply of monetary gold is becoming one of the dominant factors in the world economic situation. In our review of "British Economic Prospects," on June 13th, we suggested that the basis for a huge "gold inflation" now exists. Mr Keynes, in an article on "The Supply of Gold," in the September number of the *Economic Journal*, collates various sources of information on the existing gold supply. He thinks it "quite possible that Russia has by now an international balance in her favour, if we allow for the whole of her gold output, at the rate of some £50 millions per annum." And he calculates that about £250 millions of gold altogether became available for monetary and other purposes in 1935, of which the "other purposes" now only account for 5 per cent. This figure of £250 millions Mr Keynes calculates, is likely to represent the annual increase (5 per cent.) of the world's monetary gold stock for

some time. On the "demand side" he infers from the B.I.S. estimates that of the new gold available in 1935, after deducting what was employed in industry, about £113 millions appeared in central bank returns, £110 millions was absorbed in Equalisation Funds and the like, and only £10 millions was added to private hoards—"thus 90 per cent. of the new gold was available for monetary purposes." Inequality of distribution between countries, however, is still very great. Mr Keynes infers that interest rates are likely to be kept low by the increasing gold supply, but that "for the present there seems to be no risk . . . of their being over-abundant." But if the gold *bloc* were dissolved, private hoards dispersed, and Europe "cashed in its profits," as much as £500 millions of gold might be added in a single year, and an equal sum in the year following, to the reserves of central banks outside the United States. This might be embarrassing; but, in general, Mr Keynes thinks the abundant world supplies of gold are going to ease the world's acutest economic problem by lowering interest rates. "Communist efficiency in the extraction of gold," he says, "may serve to sustain yet awhile the capitalist system." Perhaps the Comintern would accelerate the coming of world revolution if it gave up propaganda and used its funds instead to corner gold by purchasing it at something well above the world price!

Still More Employment.—On August 24th the number of insured persons in employment in Great Britain reached the record figure of 10,961,000, which was 66,000 more than a month ago and 500,000 more than a year ago. At the same time the total number of unemployed on the registers declined to 1,613,940—38,132 fewer than a month ago and 334,024 fewer than a year ago—and is the lowest figure recorded since February, 1930. That a decrease in total unemployment should take place in August is noteworthy as the figures for that month are usually swelled by the registration of juveniles who left school at the end of the summer term; and, indeed, between July 20th and August 24th this year the number of unemployed boys and girls rose by 10,227. Despite this fact, unemployment was reduced for the seventh month in succession. How the various industries have fared is shown below:—

NUMBER OF INSURED PERSONS UNEMPLOYED IN GREAT BRITAIN

	August 26, 1935	July 20, 1936	August 24, 1936
Coal mining	256,489	234,187	190,109
Iron and steel manufacturing	37,358	28,469	28,454
Engineering	83,388	56,804	55,690
Metal goods manufacture	49,630	37,634	36,848
Shipbuilding and repairing	61,500	45,251	45,079
Building	130,994	111,772	109,803
Public works contracting	121,439	116,041	114,700
Cotton	98,904	68,667	67,207
Tailoring	33,801	24,482	28,833
Boot and shoe	21,333	19,015	17,044
Distributive trades	199,765	171,176	175,224
All persons registered	1,947,964	1,652,072	1,613,940

The biggest reduction in unemployment was among coal-miners; but the improvement was also shared by the building, public works contracting and general engineering industries. The North-Eastern division once again heads the list in the reduction of unemployment by districts, followed by Scotland and then Wales. All of these areas suffered acutely during the depression, and the recovery now taking place augurs well for the future.

Rising Timber Prices.—Timber is one of the few important raw materials which had not risen in price before the beginning of this year. Between January and July, however, the average British import price of sawn softwood, other than planed or dressed, rose by about 10 per cent., and since then the upward movement has gained momentum. The beginning of the improvement can be traced to the formation, last November, of the European Timber Exporters' Convention, whose aim was to bring order into the timber market by adjusting supplies to demand at a remunerative level of prices. Although not all the exporting countries joined the restriction scheme, the Convention decided to fix definite export quotas for sawn and planed timber during 1936. Total exports were

fixed at 3,850,000 standards, and individual members of the Convention were allotted the following quotas:—

(In thousands of standards)			
Finland	1,005	Austria	275
U.S.S.R.	950	Roumania	223
Sweden	820	Yugoslavia	168
Poland	313	Czechoslovakia	96

So far the E.T.E.C. has been successful; for demand in both exporting and importing countries this year has exceeded expectations. In some exporting countries home demand has been so good that producers may not even be able to ship abroad their full quota. When the members of the Convention (which has been strengthened by the adherence of Latvia) met in Moscow last June, they agreed to continue the regulation of the market in sawn and planed timber during 1937. Although export quotas for next year will not be fixed definitely until the general meeting of the E.T.E.C. at Stockholm next month, it is understood that certain interests are opposed to an increase in the total quota above the 1936 level. But if the Convention wishes to stimulate consumption at reasonable prices rather than to project an ephemeral boom, it would be well advised carefully to study demand prospects before fixing quotas.

—And Cotton Prices.—The market in cotton was surprised this week by a considerable reduction in the United States Government's forecast of the yield of this year's crop, compared with the estimate issued a month ago. The yield forecast was reduced by no less than 1,360,000 bales, from 12,481,000 bales to 11,121,000 bales. As market circles expected a figure of about 11,900,000 bales, prices were marked up sharply, the "spot" quotation for middling American rising from 6.73d. per lb. to 7.02d. per lb. The marked reduction of the probable yield was due to the serious deterioration of the crop from Mississippi and Tennessee to West Texas and Oklahoma. If the reduction in yield is confirmed by the harvest, it is probable that prices will be maintained at a higher level. World consumption of United States cotton last season was 12,500,000 bales. Even if this season's requirements be only 12,000,000 bales, the carry-over, amounting to 7,000,000 bales at the end of July, will be substantially reduced.

Shipping Freight Index.—Measured by our monthly index, the general level of whole cargo shipping freights rose by 5.5 per cent. during August, following a rise of 2.0 per cent. in July. The current figure of 97.5 compares with 82.1 in August, 1935, and 89.6 in August, 1934. Details of the index number are as follows:—

(1898-1913 = 100)					
	Average, 1913	August, 1935	June, 1936	July, 1936	August, 1936
European waters	110.0	88.5	93.3	98.1	101.0
North America	113.1	78.2	89.6	89.8	95.3
South America	123.4	82.3	92.1	87.8	89.5
India	108.3	83.3	91.2	93.4	102.6
Far East and Pacific	117.4	77.7	84.7	90.5	96.5
Australia	127.9	82.8	92.6	94.4	97.0
Total	116.3	82.1	90.6	92.4	97.5

Conditions in the freight market remain quiet. Liverpool reports an improvement in the River Plate market, and at Newcastle demand for the Baltic and Mediterranean are also better. Otherwise business is slack. Movements of the various sections are as follows:—

	Index No.	Inc. or Dec. Points		Index No.	Inc. or Dec. Points
Home trade	93.9	+ 8.4	South America:—		
Bay—Outwards	116.3	—	Outwards	60.8	— 6.1
Bay—Homewards	116.1	— 6.5	Homewards	118.2	+ 2.1
Mediterranean:—			India—Outwards	80.0	+ 16.3
Outwards	85.3	+ 2.8	India—Homewards	125.3	+ 9.0
Homewards	99.7	+ 3.4	Far East, etc.	99.5	+ 2.6
North America	95.3	+ 5.5	Australia	97.0	—

Expressed as a percentage of the average for 1913, the complete figure of our index number for August is 83.8, compared with 79.4 for July and 70.6 for August, 1935.

UNITED STATES

SHADOW-BOXING IN THE ELECTION CAMPAIGN

THE political campaign has been disconcertingly vague throughout the summer. This has been due in part to the strategic decision of President Roosevelt not to enter the arena as combatant until shortly before the election. It has been due, still more, to the want of focus in Governor Landon's speeches. The Republicans have had the lime-light, and have made little use of it. Since President Roosevelt's speech at the close of the Democratic convention, nothing of major political importance had been said for the Administration by the beginning of September. Governor Landon might have used the hiatus to become thoroughly known to the American public. He might have established himself as a three-dimensional personality, with a mastery of national problems and a programme for meeting them. He chose not to, probably for the same reasons which moved President Roosevelt to postpone important speeches till the end of the campaign. Mr Roosevelt obviously left the field clear to the Republicans so as to win in an intense, brilliant month of rebuttal. So Governor Landon has declined to lay his cards on the table. The campaign so far has been shadow-boxing, and the strength of the two parties has not changed.

In only one or two minor particulars has anything really happened. Governor Landon has announced himself as an advocate of direct taxation, which if no more than a personal conviction, is as healthy as it is unusual in a presidential candidate in a country which raises two-thirds of its revenue indirectly. He also has disassociated himself from Mr William Randolph Hearst by devoting a speech at Chataqua, New York, to the praise of academic freedom and unmincing opposition to loyalty oaths for teachers. This may appear to be an academic theme in both meanings of the word, but it is real enough in America, where fourteen States require loyalty oaths from teachers, where leading Republicans have sponsored legislation of this kind in still more States, and where Publisher Hearst is on a continual rampage against radicalism in schools and colleges. Mr Hearst was the "discoverer" of Governor Landon, but sponsored him because of his budget-balancing in Kansas rather than his progressivism. Governor Landon, however, has been embarrassed by the Hearst stigma, and waited for the occasion when he might run up his own colours. The Hearst organisation had intimations of what was to be said in the Chataqua speech and sent a messenger to Mr Landon to dissuade him from saying it. The Republicans in New York State also tried to stop him; for the Ives Teachers' Oath Law had been introduced by the Republican leader in the Assembly. But Governor Landon refused to yield; and the speech, like his telegram to the Republican Convention, confirmed him as a man of independence and convictions.

MR LANDON AND THE "OLD GUARD"

His trip to New York and Pennsylvania also served to demonstrate that the man from Kansas was not playing with the Eastern Old Guard. He did meet Charles Hilles, National Committeeman for New York, but only as one of a delegation of local Republicans. And in Pennsylvania he paid as little attention to Joseph Grundy. And instead of touring in the company of Eastern leaders, most of whom would be of the Harding-Coolidge-Hoover vintage, he confined his associates to a few neighbours and old friends from Kansas.

But besides asserting in these secondary ways his personal independence and progressivism, Governor Landon had little benefit from his first Eastern visit. He has a poor delivery both in addressing an audience and before the microphone. His success is in private meetings, where all testimony agrees that he has as much charm as President Roosevelt, with more apparent sincerity. But until he makes his main speeches, on social security, labour, foreign

affairs, agriculture and relief, he can expect little headway as candidate. He will be addressing himself in these speeches, one is given to understand, to the mugwump vote, rather than to convinced Republicans or disappointed conservative Democrats.

About seven million voters, who were for Hoover in 1928, switched to Roosevelt in 1932. Four million of them will have to switch back to Landon if he is to be elected. Apparently Governor Landon believes they voted for Roosevelt because he was a Liberal; so he will continue to insist that he is a progressive who will consolidate the Roosevelt gains, make new ones, but administer the country with a greater steadiness. That is the Landon line; it is of course out of harmony with the Republican record since the war, and he will have trouble in convincing the country that he is stronger than his Republican environment. He will have still more trouble convincing it that he is not a provincial, and has the poise, insight and calibre to be chief executive. The more Mr Landon appears, the more he will be liked. But it is difficult to believe that by November enough mugwumps, however tired they may be of Mr Roosevelt, will have decided that Mr Landon is a better man for the hardest political job in the gift of democracy.

WASHINGTON, September 1.

PRODUCTION INDEX AT RECORD LEVEL

THE July data confirmed the expectation that the index of production would reach a new "high" for the recovery; actually, however, it did so by reason of the large seasonal correction assigned to the month. Without seasonal adjustment, the index was even with June, and one point down from May. For the past ten months the fluctuations in industry have scarcely affected the index so much as have the seasonal adjustments. The following table shows this:—

INDEX OF PRODUCTION OF THE FEDERAL RESERVE SYSTEM (1923-25=100)

	Without Seasonal Adjustment	With Seasonal Adjustment
October, 1935	97	95
November	98	98
December	95	104
January, 1936	96	98
February	96	94
March	96	93
April	103	100
May	105	101
June	104	103
July	104	108

On the whole, it would appear that the application of the seasonal corrections has distorted the record. The change in the dating of new motor-car models created the October-December spurt and the fictitious December-March recession; the second quarter jump (which occurs in both forms of the index) is largely attributable (a) to the Bonus, and (b) to the increase in governmental outlays, as tabulated later in this letter.

The following table shows the items of the index:—

FEDERAL RESERVE INDEX (1923-25 Adjusted for Seasonal)

	June, 1935	June, 1936	July, 1936
Industrial production, total	86	103	108
Manufactures	86	104	109
Minerals	84	99	102
Construction contracts, total	35	52	57
Residential	25	36	40
Other	43	65	70
Factory employment	80.6	86.3	87.7
Factory payrolls	64.8	78.7	77.8
Freight car loadings	58	70	73
Department store sales	80	88	91

Every element of the production index shows a large, and in some cases an enormous, gain over last year.

Building is over 50 per cent. higher, and is now a major element in recovery.

INDEX OF RESIDENTIAL BUILDING (1923-25=100)

Average, year 1932.....	13
" " 1933.....	11
" " 1934.....	12
" 1st half, 1935.....	17.5
" 2nd half, 1935.....	25.1
" 1st half, 1936.....	29
July, 1936.....	40

Residential building was slow in starting. The index of manufacturing was 63 in 1932 and 78 in 1934—an increase of over 25 per cent. before there was any recovery whatever in residential building; this did not appear until the late spring of 1935. The residential building index is still low, against its base period, but this base period covered a residential building boom. The current rate, however, is three times the average of 1932-1933-1934; when, presumably, a shortage accumulated which, to judge from the tendency of rentals, has been far from satisfied by less than one year of moderate building activity.

In comparison with last year, the most marked gains are in those indices that reflect "heavy industry."

INDICES REFLECTING HEAVY INDUSTRY

	July, 1935	July, 1936
Iron and steel production	69	119
Cement	52	74*
Iron ore shipments	50	81
Tin production	80	104
Lead production	59	71

* June figure.

It is true that, to a great extent, this represents the intensification of the Government building programme; nevertheless, there is at least a beginning of industrial building. The close association between Federal works expenditure and heavy construction has been pointed out by the *Annalist*. The table below compares these expenditures with the production index—a parallel to be borne in mind when interpreting its extra-seasonal strength.

	F.R. Production Index*	Fed. Works Expenditures†
January, 1936	96	73,000,000
February	96	61,000,000
March	96	64,000,000
April	103	102,000,000
May	105	98,000,000
June	104	140,000,000
July	104	127,000,000

* Unadjusted for seasonal.

† Exclusive of W.P.A.

The coincidence is a little too pat to be taken at face value; but the opinion seems warranted that the increased Federal works expenditures plus the Bonus played a heavy role in this summer's activity.

Belated rains appear to have ended the drought in many sections and, although too late to affect wheat, will give some help to maize, and promise the autumn forage which is so important to the livestock and dairying industry. But over most of the dry areas, the damage has already been done. Farm income during the first half-year (including subsidies) was substantially above 1935; but it is now questionable if farm income for the entire year will be more than equal to 1935. Reports from the drought centres indicate that business is slackening, and while Federal relief will doubtless be liberal, it is doubtful if it can compensate for the almost complete destruction of crops in wide areas.

While the drought has caused sharp increases in the cost of food, and retail food prices are, perhaps, 25 per cent. above the average of 1932-33, the cost of living, which went down with the depression, has not risen much with the recovery. The cost-of-living (quarterly) index of the United States is based, like the production index, on 1923-25; and for 1928 it averaged 100. In 1932, the average was 80; it fell to 76 in 1933, and in the first half of 1936 it was 81. In 1928, the British cost-of-living index (1914=100) was 166; in 1933 (the "low" year as in the United States) it was 140; and it is now 144, which was about the figure of 1932. In short, since 1932, the two have moved or rather remained together; but between 1928 and 1932, the Ameri-

can cost-of-living index fell 20 per cent., while the British index fell but 13 per cent. The remarkable inertia of the Bureau of Labour Statistics wholesale index, and of the cost-of-living and retail food indices is in strong contrast to the wider movements of primary commodities. Moody's index of 15 primary commodities has more than doubled from its low point of early 1933, while the B.L.S. index has advanced only about 25 per cent., and the cost of living less than 10 per cent.

Foreign trade in July showed the small import surplus which has become rather common in recent months.

MERCHANDISE TRADE FOR JULY (\$000,000)

	1935	1936	Increase
Exports	173	178	+ 5
Imports	177	193	+ 16

SEVEN MONTHS ENDED JULY

	1,197	1,332	+ 135
Exports	1,171	1,357	+ 186

Gold imports were \$15,400,000 for the month, and silver \$6,500,000. Gold imports for the first seven months were \$526 millions, compared with \$822 millions last year; net silver imports at \$122 millions were higher than in 1935 (\$108 millions); but have been erratic—almost half came in January. With merchandise trade in almost perfect balance, the question of the utilisation of the dollar balances created by the gold imports is still open. There is a continuous stream of foreign purchases of domestic securities.

NEW YORK, September 1.

FRANCE

M. BLUM AND THE COMMUNISTS

THE defeat of the Spanish Government's troops at Irun was the signal for a recrudescence here of the agitation by the Communists against the non-intervention policy. This agitation took the form of a one-hour strike by the metal workers, who began the strikes in June. Their demonstration was declared by M. Blum to be "futile." In an unexpected speech, the Prime Minister retorted that his Government would remain faithful to the neutrality pact which it itself had proposed, and which has been signed by the Soviet Government itself. After declaring his paramount attachment to peace, M. Blum, without naming it, invited the Communist Party, who signed the electoral manifesto known as the "Rassemblement Populaire," to declare if it was still in agreement with that contract. The same question was addressed to the trade unions, of whom the metal workers are one section.

The workers maintained their strike, however, and the Communists' organ, *L'Humanité*, continued, despite a conference between M. Blum and the Communist leader, M. Thorez, to call for the suppression of the embargo on arms to Spain, though declaring at the same time its fidelity to the Front Populaire. The Socialists meanwhile applauded the speech of M. Blum, and notably protested—through the mouth of the Minister of Agriculture, M. Monnet—that the "Front Français," the formation of which is urged by the Communists, could not be anything else than the Front Populaire itself. Finally, M. Blum let it be understood that, should the Communists or the trades unions interfere with his foreign policy, he would summon Parliament, so that the country's regular representatives should decide the matter. The "ultimatum" by the metal workers also urged the Government to enforce a more close observation of the new social laws on employers. It is to be feared that certain elements may take the opportunity of the rise in prices and of the discontent among the masses to attack the Government, though its foreign policy is assured the support of a majority in the country.

All members of the Front Populaire, however, are apparently in agreement in rejecting any prolongation of the military service period as an answer to the German extension of conscription. The alternative urged by M. Paul Reynaud of a "qualitative" army has been adopted by the Government, which has thus anticipated the preferences of the country. It has been decided to set aside a sum of

GERMANY

AN END OF CHEAP MONEY?

THE political outlook was regarded less unfavourably last week. The international dangers threatened by the Spanish Civil War were, however, visible in an ever-stronger agitation against the French Government for its alleged continued delivery of arms to Madrid. Against the retirement of M. Titulescu, which was naturally regarded as advantageous to Germany, was set the new Franco-Polish transaction; but against this, in turn, the assumption that the Franco-Russian alliance has been watered down in order to reassure Warsaw.

The Bourse failed to respond to the calmer view taken of affairs. Apparently, the Reich Government does not relish the imputation that the heavy fall in securities of the last five weeks was a result of its foreign policy or of its increase in taxation; for in an elaborate official analysis the depreciation of shares is attributed mainly to dearer money. Against this theory stands the fact that hardly any Bourse trading is now being done on credit. The market for future settlement has been closed since 1931, and it is not likely to be re-opened as long as a Nazi Government holds office.

The dearer credit, however, is a fact, and a very important one. The extraordinary abundance of money witnessed down to this spring was officially attributed to Reich credit-creation for public works and re-armament. The divulged public works credits have now been exhausted and no new programme is spoken of. The volume of re-armament credit-creation by means of "special bills" has always been a mystery. Last year, the abundance of money was so great that even constant Reich short-term borrowing did not provide sufficient investments. There was, therefore, acute competition to buy up short-term

13,000 million francs during the next four years for national defence alone, of which 4,000 millions will apply to the 1937 financial year. These credits will be principally used for strengthening the Belgian and the Alsatian frontiers and for the mechanisation of the Army. Will these huge sums be merged with the 20,000 millions to be set aside for public works? Nobody can say, though it appears that the German decision renders the military expenditure inevitable; and this explains why the Minister of Finance, after having given his assent to it, urged the Government to do its utmost to stop the armaments race.

But this unexpectedly huge expenditure, added to the advances promised to Poland and to so much other expenditure on economic recovery, will impose heavy charges on the Budget and Treasury. This lends a new urgency to France's financial and economic difficulties. The Government is still urging the capitalists to use the delay still accorded to them for declaring their holdings abroad, and it has notified all French banks to supply the administration with particulars of the securities they may have sent abroad since January, 1934, for the account of their customers. This is a new procedure which makes the employees of the banks fiscal agents, whereas former legislation merely gave the civil servants a right to inquire into the banks' books. The capitalists, on their side, seem to be abstaining from making these declarations. Nor are they bringing back their foreign holdings. The three last weekly returns of the Bank of France have accordingly shown outflows of 140 millions, 170 millions and 160 millions of gold respectively, an amount which corresponds exactly with the weekly average of import surplus. But the sympathy which the Minister of Finance is receiving in his efforts to secure a return of confidence is being hindered by the Communists' new claim for a special levy on all big fortunes, designed to assist the workers and the middle classes.

"ALIGNEMENT MONETAIRE"

The outflow of gold and the recurrent problem of prices, which has been rendered more acute by the latest rise in the price of bread to 2.15 frs. a kilo. (it was 1.60 a month ago), the prospects of new strikes for increased wages, and the newly-increased military expenditure, have reawakened devaluation rumours, or—to use a more official word—the rumours of a possible "alignement monétaire." And it is not impossible that these rumours have stimulated the rising tendency on the Stock Exchange. But, officially, the question has not been discussed, and a decision would always be dependent on a conversion of the Communist Party. The question is whether the rise in prices likely to accompany the Government's reflationary policy will weaken the principal objection of the Communists to devaluation; i.e. their belief that a rise in prices following a devaluation would lose them the votes which they gained in the last election among the workers and the middle-classes.

The Government, in its turn, is emphasising the favourable movement of certain statistics, such as railway traffic. The increase in railway receipts for the week ended August 18th was 8.66 per cent. compared with the same period of 1935. Since July 28th the recovery has been steady, and the deficit on the year's receipts has diminished regularly. Loaded wagons since the beginning of the year total 9,357,180 against 9,318,492 in 1935, an increase of 0.41 per cent. Unemployment fell last week by 4,000 to 413,351 against 380,664 in the same week of 1935. An agreement has been reached between employers and workers in the coalmines for a 38-40 hour week in the mines.

The output of the French coal mines during July, 1936, was 3,972,468 tons in 26 working days, against 3,481,850 tons in June (25 working days and strikes-month), and 3,883,594 tons in July, 1935 (27 working days). The average daily output was therefore 152,787 tons, against 139,275 tons in June, and 141,985 tons in July, 1935. The number of men employed was 225,505 at the end of July, 1936, against 222,595 at the end of June, 1935, and 223,380 in July, 1935. The output of coke in the coke plants of the coal mines in July was 568,456 tons, against 489,492 in June and 462,595 in July, 1935.

papers with even a very low interest yield. The Diskont-Kompagnie's refusals to accept deposits and many other phenomena reflected the plethora of cash. In May, 1935, this condition resulted in the systematic selling of promissory-notes by the Gold-Discountbank, ostensibly for the purpose of making good the market's lack of securities. The notes were snapped up, and the yield went to relieve the Reichsbank of part of its discounts. Nevertheless, the market fluidity continued until well into this year. At the end of April, the G. D. Bank's promissory-note circulation reached a record total of Rm. 862 millions, which is a very large sum for German conditions. At about that time came the change. The maturing notes could no longer be prolonged, and their circulation fell headlong until, at the end of August, it was only Rm. 71 millions, or one-twelfth of the April amount. In the meantime, the work-creation and re-armament bills, which industry a little time before had been eagerly competing to buy, were flowing back from the industrial holders to the banks. Though the banks' holdings of real commercial paper of up to three months were falling, the holdings of longer-term paper, among which were the six-months' work-creation bills, rose by 500 millions. Deposits in the banks, the declines of which were formerly slight, and were represented to be due entirely to register-mark withdrawals, have also of late fallen heavily. Deposits in the savings-banks still increase, but of late by only about one-third of the monthly increment of a year ago. The month-end demand for credit from the commercial banks has been about 100 per cent. higher than at the same time last year.

This reversal of money-market conditions was first commented on after the flotation this summer of the Rm. 700 millions Reich Loan, but that relatively small transaction could not have been the main cause. It is officially stated that the accumulation of liquid funds by industry, to which the former extreme market fluidity was attributed, has almost ceased. The capital-market situation and the system of regulating it do not satisfy industry. It is complained that while over-hasty work-creation and armaments orders have made new investment for plant necessary, the means of investment have been taken away. The Trade Research Institute admits that "after more than three years of continuous and intense utilisation of the industrial apparatus, there is a need for replacement of plant and for new industrial equipment"; but the capital-market, it is added, is still closed to industrial borrowers and their resources for the self-financing of capital undertakings have dried up. On the Bourse, bond quotations have not weakened of late; and there seems to be a tendency towards a lower average yield on capital. But this tendency has merely enabled certain share companies to reduce the cost of already-borrowed capital, and not to obtain new.

A NEW ATTACK ON THE JEWS

Many large Jewish concerns find themselves suddenly threatened with ruin in consequence of a new and unexpected Government measure. The Reich Flight Ordinance of 1934 taxes capital removed to abroad very heavily, and authorises the Finance Offices to exact security for payment of taxes in cases of supposed danger of evasion. Jewish business houses and banks have in the last few weeks received circulars stating that "it may be surmised that you will transfer your residence to abroad whenever an opportunity occurs," and demanding on this ground that the business houses immediately hand over one-quarter of their property, as assessed for Property Tax in 1935, as security. If the demand is not met within one week, the property will be seized. It is, of course, seldom possible for a business concern, whose assets are usually locked up, to meet such a demand within a short time. The "surmise" that a bank or a department-store may suddenly, with all its assets, disappear abroad and cheat the Reich of its Capital Flight tax money is a thin excuse for a measure which must ruin prosperous undertakings.

The Railway Corporation's gross receipts in July totalled Rm. 369 millions, against Rm. 332 millions in June, its operating surplus being Rm. 64 millions against Rm. 30 millions. The monthly fixed charges of about Rm. 30 millions are therefore being more than covered. The estimate of gross receipts in 1936, which was Rm. 3,700 millions, will be exceeded, it is officially predicted, by some Rm. 120 millions.

The President of the Reich Unemployment Board attributes the new shortage of skilled labour in certain industries to compulsory military service, and predicts that the shortage will be aggravated by the lengthening of the service term to two years.

Reich indebtedness, long-term and short-term, on June 30th is returned at Rm. 14,375 millions, to which must be added Rm. 627 millions of tax-credit certificates in circulation and Rm. 410 millions deposited with the Reichsbank as security. In June, 1935, the respective figures were Rm. 13,088, Rm. 913 and Rm. 547 millions. These figures do not include an unknown quantity of work-creation and armaments bills. The chief change in the twelve months was an increase of home debt incurred since March, 1924, from Rm. 4,645 millions to Rm. 6,217 millions. This was a consequence of the new long-term or medium-term loans of 1935.

BERLIN, September 8.

HOLLAND

REVENUE STILL DECLINING

THE yield of taxation in July was very disappointing. The item "other sources" (i.e. direct taxation excepted) yielded 28,147,000 guilders, compared with 32,061,000 guilders in July, 1935, and an estimate of 30,960,400 guilders. The yield for the first seven months of 1936 was 204,127,492 guilders, compared with 212,776,300 guilders in the corresponding period of 1935, and an estimate of 216,722,900 guilders. The public is consequently wondering what means the Government will devise to meet the deficit. Expenditure on unemployment in 1935 exceeded the estimate by 15,730,000 guilders.

There accordingly seems little justification for the optimism which is being expressed in certain quarters. This optimism is founded on the argument that the advance of wholesale prices and the cost of living in Great Britain and other countries will automatically achieve the desired re-adjustment of Dutch prices and costs to those prevailing abroad. This might prove feasible if only the Government reduced various emergency levies on imports and the excise duties on many classes of merchandise, and thereby prevented the rise in prices which goods now undergo on passing the Dutch frontiers. But it is evident that the Government is not pursuing a readjustment policy of this kind. For instance, in view of the world-wide advance of wheat prices, it was recently urged from various quarters that there should be a reduction of the import duty of 2 guilders per 100 kg. on foreign wheat, as well as of the guaranteed price of home-grown wheat. The Minister of Agriculture and Fisheries, however, has declined to accede to the request.

Exports amounted in July to 1,133,000 tons, with a value of 59,657,000 guilders, against 969,000 tons, with a value of 53,000,000 guilders in June. The increase in value compared with July, 1935, was 10 per cent. Total exports for the first seven months of 1936 have advanced to 7,363,000 tons (1935, 7,004,000), with a value of 378.18 million guilders (1935, 372.74). Imports in July, 1936, amounted to 1,799,000 tons, with a value of 79,627,000 guilders; against 1,744,000 tons and a value of 76,927,000 guilders in June.

	IMPORTS			EXPORTS		
	1934	1935	1936	1934	1935	1936
(In million guilds.)						
January	100	76	79	56	55	50
February	81	70	74	51	51	50
March	94	80	79	61	54	55
April	85	78	81	54	50	57
May	87	78	76	57	58	53
June	89	73	77	59	51	53
July	86	76	80	58	54	60
August	87	76	...	69	61	...
September	78	76	...	69	59	...
October	87	95	...	62	70	...
November	88	86	...	60	60	...
December	75	73	...	56	52	...

Thanks to the high exports in July (the highest July figure since 1932), the import surplus of 19,970,000 guilders was smaller than in July last year (22,139,000 guilders), or in June, 1936 (23,927,000 guilders).

AMSTERDAM, September 4.

JAPAN

IMPROVEMENT IN BUSINESS SENTIMENT

THE lifting of martial law and the execution of the insurgent military officers in the middle of July have been largely responsible for the return of confidence. The satisfactory progress of the debt conversions also has done much towards an improvement in sentiment. Since early May the 5 per cent. loan of 1,752.5 million yen has been successfully converted into a 3½ per cent. loan. Corporation borrowings, too, have been very active. Industrial borrowers raised 281.5 million yen during July, an increase of 75.9 million yen over June and 202.6 million yen over July, 1935. Full reflection, however, of the improvement in sentiment is to be found in the Stock Exchange, which has steadily continued its upward trend, with occasional profit-taking pauses, and has regained nearly the position held just before the February revolt. The aggregate value of all shares listed on the Tokyo Stock Exchange on August 1st was up by 108 million yen, or 15½ per cent., as against a month ago. Commodity prices have developed a definite upward tendency.

The Bank of Japan's wholesale index number for July registered a marked rise of a fraction less than 2 per cent. on the month. Thirty-four out of 56 articles participated in the advance. Industrial production alone shows a recession, which is partly seasonal. Output of cotton yarn during July totalled 117,843,000 lbs., a decrease of 13,977,000 lbs. over June; and rayon production during last month amounted to 21,456,000 lbs., or 410,000 lbs. less than in the preceding month.

The export season has set in normally this year. Imports for last month amounted to 203,245,000 yen and exports to 222,895,000 yen; so that there was an export surplus of 19,650,000 yen. As compared with July, 1935, imports increased by 13,285,000 yen, or 7 per cent., and exports by 15,862,000 yen, or 7.7 per cent. A substantial contraction in imports of raw wool and an expansion in exports of raw silk are features of the July returns. The trade war with Australia is, of course, responsible for the sharp decline in wool exports; while the increase in silk exports is due to higher prices.

CONTINUING INDUSTRIAL ADVANCE

The earnings statements so far published of important industrial companies for the first half of this year show that industrial advance in this country has still been continuing throughout a wide range of industry, although the pace has appreciably slowed down. A large number of concerns in electricity and gas, iron and steel, mining, machinery and tools, shipbuilding, chemicals, paper, and sugar groups have fared considerably better, and the midsummer dividends have been generally maintained. The textiles results, however, have been again less satisfactory; so have been the earnings of many shipping concerns, warehouses, shops and trading companies, and stock and produce exchanges. The experiences of big commercial banks for the June half-year were varied more or less; net profits of Dai-ichi showed a substantial increase, whereas those of Yasuda and Sanwa increased only slightly.

The Kawasaki-Daihyaku Bank has decided to amalgamate its two subsidiary savings banks. Total deposits of the bank, after the absorption is completed, will amount to approximately 730 million yen, nearly approaching those of some big banks. The term "Big Six" which is occasionally used will now be changed into "Big Seven," including Mitsui, Mitsubishi, Yasuda, Dai-ichi, Sumitomo, Sanwa, and Kawasaki-Daihyaku.

According to the *Labour Gazette* the number of trade disputes involving stoppage of work in 1935 was 590, the number of workpeople involved in all the disputes was about 37,700, and the estimated aggregate duration of the disputes was 301,300 working days. As compared with 1934, the number of disputes decreased by 36, that of workpeople involved therein by 11,800, and the aggregate duration by 44,800 days. On the other hand, tenant farmers' disputes with landlords over farm rent last year reached the record figure of 5,004, involving about 68,500 tenant farmers, as against 3,849 disputes and 72,700 tenants in the preceding year. These may be largely explained by industrial recovery

on the one hand and acute agricultural distress on the other.

Official statistics in the same journal put trade union membership at the end of 1935 at 408,600, or 6.9 per cent., out of 5,900,000 organisable labourers in this country. Transport and engineering account for nearly two-thirds of the trade unionists, and in such major industries as textiles and mining organised labour has an almost negligible foothold. Japanese industry as a whole thus still remains predominantly non-union.

TOKYO, August 14.

NEW ZEALAND

LABOUR'S FIRST BUDGET

THE first Budget of the Labour Government, presented on August 4th, has quietened the fears of those who expected dangerous experiments with credit, but has given rise to protests from many different sources. The methods of finance adopted are quite orthodox; revenue is to be raised through the usual channels, and the only changes in taxation are found in increased income-tax and the re-imposition of the graduated land-tax. Expenditure has been increased considerably, chiefly on account of increased pensions and the restoration of salary cuts throughout the public service. Public works are to be financed up to £NZ4 millions from revenue, and to a further £NZ6 millions without external loans or any public issue, apparently by borrowing departmental surpluses. But the monetary reformers protest against orthodoxy; business men against high company taxation, which reaches 7s. 6d. in the £1 on company incomes of £8,950 and above; both land owners and industrialists against the graduated land-tax, which discriminates against large businesses as well as large farms; and the dairy farmers are dissatisfied with the guaranteed price of 12½d. per lb. to be paid for first-grade butter.

For 1935-36 taxation, without change in rates, yielded £NZ21.5 millions, exceeding the previous year by £NZ1.4 millions, and total revenue amounted to £NZ26.17 millions. Expenditure was £NZ25.89 millions, compared with £NZ24.50 millions for the preceding year. The surplus of £NZ280,000 was wholly due to the fact that revenue exceeded the estimate by £NZ430,000. Estimated expenditure for 1936-37 is £NZ4.91 millions higher at £NZ31.05 millions. Interest is slightly lower owing to conversions, but there is an all-round increase in votes consequent upon the restoration of public service salaries, substantial increases for highways and for the labour, native, lands, defence, and education votes; and pensions are increased from £NZ3.77 millions to £NZ5.48 millions. Social services, excluding unemployment relief, are to cost £NZ10.3 millions, one-third of the total expenditure.

The estimates of revenue are based on the assumption that business will expand considerably during the year. There are good grounds for this assumption. For the year ended June, 1936, exports amounted to £NZ53.66 millions, 25 per cent. more than the previous year, and imports to £NZ39.46 millions, an increase of 15 per cent. on the former year. In addition, the Government intends to spend about £NZ6 millions more than last year on public works; and this expenditure should stimulate business further. In these conditions increased yields from existing taxes might be expected. The estimates anticipate an average increase of 13 per cent. from taxes whose rates are

unchanged, an extra £NZ1.5 millions from higher income taxes, and £NZ800,000 more from the progressive land-tax. On earned incomes the new income-tax ranges from 1s. 8d. in the £1 on taxable balance (exceeding £210, plus family exemption) to 8s. 2d. in the £1 on £8,950 and above. On unearned incomes these rates are increased by one-third, and reach 10s. 10½d. in the £1. Company income-tax ranges from 1s. to 7s. 6d. in the £1, reaching the maximum on incomes of £8,950. The graduated land-tax starts at 1d. in the £1 on taxable balance of unimproved value up to £5,000, increasing to 6d. in the £1 at £45,000.

The past export season has been exceptionally good. Total exports realised £NZ10.71 millions more than in 1934-35; the chief increases being £NZ4.1 millions for a slightly larger quantity of butter, and £NZ12.76 millions for 918,471 bales of wool, against £NZ6.33 millions for 582,763 bales in the preceding year. Exports of pork, veal, tinned meat, hides and skins and gold also increased both in quantity and in value. Cheese, lamb, mutton, tallow and seeds declined both in quantity and in value. The increase in imports for the year, £NZ5.1 millions, covered a wide range of goods, including motor vehicles, motor spirit, hardware and building materials, textiles and paper. There is also abundant evidence of expanding internal trade in the statistics for the first half of the year. The sales tax collected continues to reach new high monthly records, building has nearly doubled during the past year, land transfers and mortgage business has increased, bank debits are 20 per cent. higher, and radios and motor vehicles licensed have reached record figures. Unemployment, however, took a sharp upward turn in June.

CHRISTCHURCH, August 14.

LETTERS TO THE EDITOR

LEADERSHIP AND PUBLIC OPINION

TO THE EDITOR OF THE ECONOMIST

Sir,—In the last issue of the *Economist*, Mr L. J. Cadbury seeks to imply that the slackness of the British Government in its foreign policy is due, not to the inefficiency of the members of the Cabinet, but to the fact that public opinion has become so pacifist that the Government dare not take any action which might eventually involve the application of sanctions because it is afraid that public opinion would not support them. This implication is apparently intended as an excuse for the Government and also to show how impracticable pacifism is.

I desire to state some considerations to show that pacifist suggestions have been much wiser than Mr L. J. Cadbury suggests and that the Government have no such excuse as he imagines.

The pacifists have urged ever since the end of the Great War that Great Britain should carry out its promise to Germany and disarm down to the level to which Germany was compelled to disarm. This the Government has consistently refused to do. This fact has meant that Germany was always in an inferior position in the Councils of the world, which Germany has naturally resented. After waiting for about fifteen years, the Germans have taken the matter into their own hands, and partly through the push of Hitler have thrown over their treaty obligations, which were obtained by brute force, and are now arming up to the level of other nations.

The pacifists have also urged the abandonment of preferential tariffs, and freer trade. This would have created a better state of feeling and would have helped to remove unemployment. Nothing has been done in this direction. Japan has been irritated by the special measures taken against her by some of our colonies. The

pacifists have further urged that something should be done to meet the cry that Great Britain has been too acquisitive and secured an enormous addition to her territories at the end of the War. Here, again, nothing has been done to meet the claims of Italy and Germany.

The pacifists' theory is that it is infinitely better to meet the point of view of other countries where it is obvious that an injustice exists and to endeavour to remove that injustice, whereas the militarists' theory is that nothing should be done to meet the point of view of other countries unless we are compelled by brute force to do so. If only this country had had some wise and statesmanlike leaders who could have taken up these pacifist suggestions, the present position of a race in armaments would have been avoided.

The only way in which permanent peace can be secured is by mutual give and take and some unselfishness. Surely it is not impossible even now, though the lack of statesmanship of our Government has helped to place Hitler in the position he now occupies and has consolidated the position of Mussolini, to undo some of the follies of the Treaty of Versailles and to produce a more reasonable atmosphere.

Yours faithfully,
HARRISON BARROW.

40 Weoley Park Road,
Selly Oak, Birmingham.

HOW TO RUN THE RADIO

TO THE EDITOR OF THE ECONOMIST

Sir,—I take leave to send you a few reflections on the most interesting article on "How to Run the Radio" in the *Economist* of August 22, 1936. The Hungarian radio is, like the British, based on a system of complete monopoly; and one of the most important problems of both corporations is whether "the sugar coating of entertainment on the pill of education is not a shade too thin."

As a solution, your radio correspondent suggests duopoly. The State should continue to collect the licence fee, the amount of which would be shared by the two corporations. But if the State really continued to collect the fee and divided the revenue between the corporations, I cannot see any chance of real competition. Instead of a strong corporation based on the monopoly system, the two weaker corporations would provide the programme, and the cost of a double administration would consume a considerable part of the money available for artistic programmes.

It is true that under such circumstances "the listener might even be permitted to distribute some very small fraction of his ten shillings as a mark of favour to the Corporation which he considers the better." If I am not mistaken, this means that the competition would be for the "very small fraction of the listener's ten shillings" which, after all, might total a considerable amount if the number of listeners was high enough. It is probable, however, that "the mark of favour" would be given to the corporation which broadcasts the more popular programme. Naturally, the corporations would then prefer popular programmes to educative programmes. There might be periods when the amount of "fraction-income" accruing to the two corporations was approximately equal, and if so, they would scarcely try to make their programmes more attractive with lectures by university professors or even quotations from poets. They would broadcast more jazz and—in Budapest—more gipsy music. If one of the corporations struggled to maintain its programmes on the higher level achieved under the monopoly system, its revenue would not rise above the 50 per cent. of the licence fees. Actually, therefore, the "small fraction of the listener's ten shillings" would merely increase the income of jazz singers.

During the brief period of the Republic in Hungary a peasant once remarked: "Well, that's the Republic, but who is the King?" In the case of your correspondent's duopoly system there would be at the same time a King and a President in the land. Which of them would be the more wealthy? I leave the answer to your constitutional sense.

Yours truly,
DR. LADISLAS CS. SZABÓ.
Chief of the Literary Department of
The Hungarian Broadcasting Company.

Budapest.

BOOKS AND PUBLICATIONS

THE FUTURE OF THE LEAGUE*

THE failure of the French and British Governments to enforce the League's authority in the Abyssinian dispute might well have induced the friends of peace in this country to throw up their hands in despair. It is refreshing to find that, instead, there has been a general disposition to accept what is now an accomplished fact and to consider what can be done in the future. This pamphlet is the verbatim record of discussions held by various eminent persons

* "The Future of the League of Nations." The record of a series of discussions held at Chatham House. Royal Institute of International Affairs. 188 pages. 3s. 6d.

at Chatham House immediately after the *débâcle* of last May.

In the first discussion, Professor Arnold Toynbee suggested that the "paramount aim" of the ordinary peace-loving man—shadowy though it may be—is not peace, but security. Almost everybody is prepared to fight in self-defence. In commenting on this thesis, Mr Gathorne-Hardy argued that a general security system could most easily be built out of the various individual and local desires for security, just as society itself was built—or is alleged to have been built—out of the realisation of rival brigades that if they all league together to shoot the aggressor, they will all live in greater peace. Sir Norman Angell reinforced

the point by observing that we shall always have defensive alliances anyway, and that the only question is what sort of alliances they will be. Mr H. G. Wells, however, thought that a beginning should be made by education and the re-fashioning of the ordinary man's thinking throughout the world. Few other members of the group seemed to think this very practical.

In the next discussion, Sir Norman Angell argued that security must come before the alteration of the *status quo*. He pointed out that Germany in 1914 had greater economic and territorial opportunity than she could hope for now; yet war came. Sir Norman rather marred his case here, however, by the astonishing statement that international trade "was enormously greater" in 1913-14 than it is to-day. In later discussions, Sir Arthur Salter made the specific suggestion that, in cases of recommendation for peaceful change made under Article XIX of the Covenant according to third-party judgment, any country refusing to accept such judgment should be deprived of collective protection in the event of a "resulting" war. Mr Gathorne-Hardy put the case for "regional" collective security, and was inclined to argue that Europe was all that really mattered; but he failed to meet the obvious objection that Russia, which is partly in and partly outside Europe, is already threatened on two frontiers. Mr Harold Nicholson also thought that the attempt at League universality was a mistake.

The discussions, as a whole, leave the impression that the League itself was originally conceived on the right lines, but that certain peoples and Governments have failed to make it live. For the League—in so far as it is or has been real—is built not out of Utopianism, but, like society, out of enlightened self-interest and a long-sighted desire for security. The difficulty is that, whereas no single individual thinks he has much chance in a fight against society as a whole, a single nation, which is relatively large, may very well think so. That is the League's fundamental problem. Its immediate problem, as Mr Gathorne-Hardy and others urged, is to reconstruct a security system which will preserve peace in Europe in the next five years.

SHORTER NOTICES

"Soviet Money and Finance." By L. E. Hubbard. (London) Macmillan and Company, Ltd. 339 pages. 12s. 6d.

Although so much has been written and talked about economic planning in recent years, its technical and theoretical details have usually been left to the imagination. The merit of this book is that it is the most comprehensive and up-to-date work on Soviet financial planning available in English, and is written by one who is thoroughly acquainted with Russia and her language.

The description of the banking system will be of particular interest to bankers and business men, and the discussion of the qualitative credit control in relation to the general plan of production illustrates excellently the new uses which are being made of familiar instruments of credit. One is apt to be surprised at the rigidly orthodox distinction which is drawn by the Russian authorities between long and short term credit; but the author convincingly justifies it.

The treatment of the Budget and taxation is rather disappointing. Mr Hubbard allows himself to be drawn into a discussion of the economic system as a whole, but omits any detailed account of the exact relation between Federal and State budgets, of the allocation of social service expenditures, and of the precise nature of direct and indirect taxation.

The second half of the book largely discusses such questions as savings, investment, price movements and changes in the volume of credit. The description of the working of inflation in a planned economy is interesting; but none of the theoretical discussion is as satisfactory as the more descriptive parts of the book. Mr Hubbard rightly regards the present year as crucial, since it marks the abandonment of much of the system of rationing, which has hitherto been such a powerful instrument of control. This movement towards free consumers' choice is, in his opinion, to be welcomed; but the problem of maintaining full employment of all the factors of production with free consumption may deter the authorities from completely abandoning a policy which persuades the consumer to buy in accordance with the central plan.

In an appendix Mr Hubbard attempts to make a comparison of standards of living. It is to be regretted that he examines only food prices, and takes no account of rent, social services and general amenities.

EXPORT

The Documentary Credit, whereby the Exporter is assured that he will receive payment immediately his goods are shipped for transit abroad, is the subject-matter of *A Brief Survey of the Financial Machinery of Exports and Imports*, copies of which may be had by asking at any local branch of the Westminster Bank

"Revolt on the Clyde." By William Gallacher, M.P. Lawrence and Wishart. 301 pages. 10s. 6d.

The chief value of this book lies in the fact that the attitude to war of the propertyless worker is usually difficult to discover through the intervening labyrinth of patriotic propaganda. That the worker should see war as a means for employers to make profits, to lower wages and raise rents will not appear astonishing to anyone who reads this description of events on the Clyde during the Great War. A first-hand account is given of the great strike of February, 1915, of the visits of Mr Lloyd George and others, of the strike of January, 1919, for the 40-hour week, and of the continual agitation against higher rents and the dilution of labour.

MONEY AND BANKING

AFTERMATH IN ITALY

(BY A BRITISH MERCHANT)

ITALY has secured, or perhaps it would be more judicious to say obtained, her place in the sun of Abyssinia. She has prevailed against what purported to be overwhelming international opposition. Thereby she has raised herself to an important and conspicuous rôle in the game of power politics at present absorbing nine-tenths of the diplomatic, military and industrial energies of Europe. But even a Dictator cannot set aside the operation of cause and effect in the economic life of his country.

To the most casual observer it is evident that the economic position of Italy is not a happy one. Difficult and depressed before the Abyssinian adventure, it is more strained than ever to-day, especially as the artificial stimulus given by the campaign to certain industries in the larger centres is not being maintained. Tourist traffic improved noticeably in the course of the summer, but was completely overshadowed by that of Germany and remained far below the levels of the good years of the past.

By no stretch of imagination or figures can the country be described as prosperous. On many sides the shoe is pinching severely, and nowhere more conspicuously than in the matter of foreign exchange. Everywhere there are indications that the supply of foreign resources is inadequate for the needs of the country, and though matters in this respect should tend gradually to improve, there are as yet few signs of their doing so. Industrialists complain that they cannot obtain sufficient raw materials from abroad, and are thereby hampered in the very process of export, which should produce supplies of foreign exchange. Even those traders and manufacturers who have in the past regularly provided a net balance of foreign income for the country out of their operations grumble that regulations do not permit them to cover their essential imports directly out of their export receipts, so that harassing delays and complications are introduced into the working of their businesses. The allotment of the available foreign exchange is worked and controlled centrally from Rome and cannot be compared with the now highly efficient and to some extent regionally decentralised exchange management of Germany. But, quite apart from the complex difficulties besetting the activities of industry and trade, the absence of a score of articles of daily use and common consumption, normally derived from abroad or made of imported material, is glaringly evident. Substitutes have been provided in some instances, but not in many others. The experiences of the population with the substitutes would, moreover, provide abundant source of amusement if they were not a rather gruesome commentary on the aberrations of which statesmen are still capable.

Unemployment is once more rising. Markets closed to Italian exports during the sanctions period—such as the Balkan and Near Eastern States, which normally absorb a substantial portion of Italy's textile and rayon output, as well as other manufactures—are not readily re-opening their doors. Naturally other countries, Germany among them, who have gained for their export trades what Italy has lost, are not making Italian re-entry easier. A once flourishing export trade in motor cars has dwindled to insignificant proportions. The process of contraction enforced upon it, moreover, has not improved the quality of the article produced, so that prospects are not bright. Meanwhile the home market, though tending slowly to improve, is a shadow of its former self. Petrol, of inferior quality, costs the Italian motorist 3 lire a litre, or about 5s. a gallon. Small wonder that Italy's superb roads are almost wholly deserted. Unless it can still be argued that motor transport is a luxury which a thrifty and hard-working population should virtuously deny itself, Italy is to-day one of the economically most backward countries in Europe.

The publication of ordinary trade statistics has not been

resumed, although sanctions are dead and done with. The same applies to fiscal returns, which were never in any case very illuminating. Nor are any statements being issued by the Banca d'Italia, so that the amount of its gold reserve, heavily depleted when the last figures were published, is not known. But in this connection it is worth noting that the State—as distinct from the Bank—has been issuing new paper money—*Biglietti di Stato a corso legale*. These were to replace silver 10-lire coins; but no one knows the amount actually put into circulation. If the rising trend of domestic prices affords any indication, the volume may be considerable.

While there remains no semblance of control over domestic finance, the population has been obliged to surrender its foreign assets to the Government in exchange for 5 per cent. unquoted and unsaleable Italian Government lire bonds. Nothing is known, of course, of the extent to which the Italian exchange authorities have already disposed of such foreign assets. What is certain is that these—the accumulated results of years of foreign trading—once dissipated, will not be easy to reconstitute in prevailing conditions, both in Italy and in the world outside.

It has recently been suggested that a foreign loan may be forthcoming for Italy. Any such report may be received with scepticism until some concrete evidence emerges. For the moment more credence may, perhaps, be given to the rumour that the Italian Government, having taken from its nationals, against payment in lire scrip, considerable blocks of Italian Government, Municipal, Public Utility, Hydro-Electric and other industrial dollar bonds issued and quoted in New York, may endeavour, with the assistance of a syndicate to be created for the purpose, to re-sell these uncanceled dollar bonds to the New York market against payment in U.S. dollars. The total amount of such dollar bonds now outstanding may be taken as roughly \$250 millions at par. It has been estimated by competent Italian authorities that some 80 per cent. of this total was in the possession of Italian investors when, in the autumn of 1934, Italian exchange difficulties first became acute. Assuming that virtually all these holdings were ceded to the Italian exchange authorities by the holders, the former should have in hand some \$200 millions, par value, worth of uncanceled Italian dollar bonds which they can, without legal restraint, sell—in theory, at least—on the New York market. Allowing for the circumstance that they would have to be offered at heavy discounts compared with their nominal value, an amount of \$150 millions is probably the most that could be secured for them. But this sum, at any rate, would be a welcome addition to the depleted exchange resources of the country. It might, moreover, serve as a *masse de manœuvre*, facilitating the prompt purchase of raw materials without which it will be impossible, in turn, to resuscitate certain lines of Italian exports.

For the rest, Italy will in all probability be restricted for some time to barter and clearing transactions and to those commercial credits which, here and there, it may be possible to obtain. As to the former, Italy is less favourably placed than Germany, since the goods which she can offer are on the whole much less varied and valuable, as well as in many instances more dependent on prior imports of raw materials. Her difficulties are enhanced, moreover, by two further factors. Italy's colonial acquisition in East Africa will for some time prove, on net balance, a consumer rather than producer of foreign exchange; and this season's crops are such that a substantial import of grain will be required.

Of the momentary state of affairs the following facts are sufficiently indicative. Foreigners who have in the last year given up residence in Italy cannot at present remove their

funds though the amounts involved are in the aggregate absurdly small. Months of waiting are required, after due application to the Exchange Control, for the release of a few hundred pounds. Further, Italian traders are now not allowed to ship consignments of certain Italian staple exports, such as quicksilver, to the United Kingdom unless they receive cash payment in sterling of a foreign currency *outside the clearing*. This interesting new device for avoiding the loyal discharge of commercial indebtedness may be commended to the attention of those who profess to see the future salvation of world-trade in clearing agreements.

It would be wholly mistaken, however, to conclude from the foregoing that Italian currency will suffer abrupt or precipitate exchange depreciation. It is sufficiently well controlled to prevent any such contingency. If there is a "black bourse" it is a small one. Domestically, the lira is gradually losing in purchasing power; but the supply offered abroad is limited to the amount of foreign exchange coming forward against it. Moreover, if domestic purchasing power in terms of *goods* is diminishing, its purchasing power in terms of *services*, that is, of skilled and unskilled labour, can, under a dictatorship, be kept arbitrarily high. It is the volume of consumption and the standard of living of the people that have to give way. Thus the currency remains "stable"—at any rate, for a protracted period. Quite recently, wages have had to be raised in some of the chief branches of Italian industry on account of the rising cost of living—without regard, however, to the ability of industry to support them. But the lira is unlikely to be devalued unless and until France sets the example, or some general move towards "alignment" takes place. There are some forms of power which shrink more than others from a loss of prestige.

Fascist rule, after all, has produced no self-consistent economic policy. It is true that the marshes have been reclaimed, and splendid roads and imposing edifices constructed. But working hours have been first lengthened and then shortened; interest on the debt has been reduced and raised again; rents have been cut and real estate values increased, and the currency has been successively deflated and inflated. Signor Mussolini may boast of his ability to put 8,000,000 trained men in the field. No impartial observer will believe that he could feed them for a week.

FINANCIAL NOTES

Another Franc Crisis.—After a comparatively long period of quiet in the foreign exchange market, at the end of last week the franc began to show signs of weakness, and has persistently required the support of the Exchange Equalisation Account. The latter seems to be evolving a new technique. Instead of pegging the rate at a certain level, the peg has been shifted and support given at different levels. Thus, instead of preventing sterling from appreciating and perhaps catching speculators short by a reversal of the trend, the Account now momentarily holds the franc to prevent a sudden run and then lets it go gently. On no occasion in the past week has support been at all firm, and on Tuesday the franc reached the highest level for two years at Frs. 76 $\frac{3}{4}$ to the pound, and on Thursday it went as far as Frs. 76 $\frac{1}{2}$. Three months' francs were at one time as much as Frs. 5 discount, equivalent to 25 per cent. per annum. The reasons for this new crisis of the franc are not hard to find. M. Blum has been experiencing difficulties with the Communist supporters of his Government, and the threat of a serious split at once produced a weak tendency in the franc. It is believed that should M. Blum's Government fall, devaluation would be considerably nearer and would probably be the first measure of a new Government. Another reason for nervousness is the increase of £40 millions in the Government's 1937 expenditure on defence, which not only puts the Budget well on the wrong side, but, coupled with Germany's extended military service and Hitler's remarks about colonies, also adds to the international tension. The Government's renewed efforts to enforce declaration of capital exports, so far from causing a repatriation of funds, have been regarded as a sign of desperation, and confidence has

securities will find the fiduciary service of our bank useful. For particulars apply to our offices at Göteborg, Stockholm, or Malmö.

SKANDINAVISKA
KREDITAKTIEBOLAGET

further weakened. The gradual increase of costs in industry due to the Matignon agreement about wages, etc., is, furthermore, continually bringing the issue of devaluation nearer. However, the latest rates on Thursday showed that pressure on the franc was decreasing, but though this may possibly indicate that the crisis is over, the future of the franc still remains dependent on the uncertainty of European and French politics.

* * *

The Foreign Exchanges.—The weakness of the franc, discussed above, inevitably had serious effects on the other currencies of the gold bloc. At the beginning there was some effort to move the franc-dollar cross-rate away from the gold point, and dollars were offered, moving the rate to Frs. 15.18, the gold point being Frs. 15.19. However, when pressure on the franc was renewed the support was not sustained, the franc went to the gold point again and shipments were engaged. Guilders, belgas, and Swiss francs all weakened, but on Saturday when the franc was quieter they improved slightly. At the beginning of the week pesetas, which had remained at the nominal rate of about 43 to the pound, suddenly broke and went to 55 and subsequently to 60. These rates are, of course, purely nominal as no dealings are made. In fact the break in the rate was due probably to someone who had been paid in pesetas and wished to convert into sterling at any cost. He was probably unsuccessful during the week. After various fluctuations during the first part of the week the gold bloc currencies showed a quieter tendency on Thursday, and closed slightly firmer. The dollar finished at 5.05 $\frac{1}{4}$ after having been outside 5.06, Swiss francs at 15.53, guilders 7.46 and belgas 29.92 $\frac{1}{2}$. The weakening of the gold bloc currencies meant that the franc was no longer at the gold export point, but gold has continually been shipped to New York and to a certain extent to London.

* * *

Czech Exchange Problems.—New measures have been introduced in Czechoslovakia which regulate the apportionment of *devisen* to Czech importers. In essence, it seems as though sterling rather than the gold franc were likely to be the future measuring rod of the Czech crown. Czech exporters, who send the bulk of their goods to the countries of Central and South-Eastern Europe, have been finding their blocked balances in these countries mounting up; and this has made it difficult for Czech importers to find free exchange to pay for the necessary imports of textile and metal raw materials; for most of these raw materials come from outside the ambit of Czechoslovakia's biggest markets. The gold reserve of the Czech National Bank altered only slightly between the beginning of 1935 (2,682 million gold crowns) to August 23rd last (2,698 millions); but the Bank's holdings of foreign

exchange during the same period have fallen from 302.8 millions in January, 1935, to 262 millions in July of that year, to 81.5 millions last December, and to a "low" of 23.5 millions on August 23rd last. This is the measure of hardship occasioned by the blocking of proceeds of Czech exporters to Central European countries. The Czech authorities have now decided only to make such *devisen* available for Czech importers as actually come in from Czech exports. This means a decline in Czech exports to the "exchange control" countries which hitherto took most of the Czech exports—indeed, that decline has already begun—but it may mean increased trade with Great Britain. Despite the close political link with France, Czechoslovakia has an unfavourable balance of payments with that country; for on debt and other service account she must pay to France about 300 million crowns per annum, and as a result of the stringent French import quotas her balance of trade will probably show an import surplus of about 120 millions with France this year—a passive item of about 420 millions in her economic relations with France as a whole. Thus the Czech National Bank has been unable either to secure enough francs to balance the trade account with France, or to equalise the services account, to say nothing of an opportunity to secure francs wherewith to buy essential imports *via* the French markets. Such a situation offered no permanent basis for the Czech crown in relation to the gold franc.

Czechoslovakia and Sterling.—In contrast to the above, Czech trade with this country has been developing favourably. Czech exports to the United Kingdom have risen from 236.6 million crowns in the first half of last year to 305.7 million crowns in the first half of this, and Czech imports from (or through) this country have risen for the same periods from 166.5 millions to 203.2 millions. This has led many Czech industrialists to urge the purchase of raw and prepared wool from England rather than, as hitherto, from France. The new Czech measures envisage the purchase of essential raw materials out of free exchange in those countries where such exchange arises—e.g. the United Kingdom, U.S.A., and British Dominions or possessions. Many Czech export industries are also to receive rebates on taxation, if they can thereby secure orders and free exchange proceeds. This expedient has been chosen in order to avoid further devaluation or direct export subsidies, which might well evoke accusations of Czech dumping. Meanwhile the National Bank has sold about 100 million crowns' worth of its gold and thereby raised its foreign exchange holdings to about 123 millions. This should ease the transition to the new system of *devisen* apportionment. It is a commentary on the restrictive trade policies of the gold *bloc* countries that even their clients and close associates which, like Czechoslovakia, are fundamentally in a sound economic position, are driven by the drastic import quotas of the gold *bloc* countries to enter, in effect, into the sterling area. Certainly neither the Czechs, nor the British merchants and manufacturers, should take this amiss.

The Money Market.—The market is still very quiet and money is plentiful. There were no Treasury bill maturities on Monday, as June 7th was a Sunday, but the momentary restriction had no noticeable effect on the market. Rates remain unchanged.

	Aug. 20, 1936	Aug. 27, 1936	Sept. 3, 1936	Sept. 10, 1936
Bank rate.....	2	2	2	2
Clearing banks' deposit rate ...	1	1	1	1
Short loan rate:—				
Clearing banks	1-1-1*	1-1-1*	1-1-1*	1-1-1*
Others	1	1	1	1
Discount rates:—				
Treasury bills	1	1	1	1
Three months' bank bills	1-1-1	1-1-1	1-1-1	1-1-1

* Loans against Treasury bills and other approved bills and British Government securities within six months of maturity; 1 per cent. Treasury Bonds and other gilt-edged stocks within six months of maturity; and other collateral respectively.

Last week's tender of Treasury bills was a serious disappointment. The rate was slightly up by about 1d. to 10s. 9.49d., but the percentage allotted was only 29 per cent., a proportion completely inadequate to the needs of the market. Furthermore, bills were under-allotted to the extent of £4 millions. The smaller percentage was probably due to heavy outside competition, for applications totalled over £80 millions.

The Bank Return.—The note circulation this week has dropped by only £0.2 millions from the high level caused by end-of-month wage payments, and this suggests that the French crisis has brought about a renewal of hoarding. Compared with last year, the note circulation is up by about £1.3 millions.

	BANK OF ENGLAND				
	Sept. 11, 1935	Aug. 19, 1936	Aug. 26, 1936	Sept. 2, 1936	Sept. 9, 1936
	£ mill.	£ mill.	£ mill.	£ mill.	£ mill.
Issue Department:—					
Gold	193.4	243.8	244.8	245.4	246.5
Note circulation	400.3	444.5	443.4	445.8	445.6
Banking Department:—					
Reserve	54.0	60.3	62.4	60.7	62.0
Public deposits	16.0	23.6	17.2	18.1	20.4
Bankers' deposits	91.0	96.0	100.9	101.1	99.8
Other deposits	37.8	40.0	37.8	38.8	37.8
Government securities ...	84.5	86.4	84.8	85.7	83.5
Discounts and advances... 12.4	9.7	9.2	10.6	10.5	
Other securities	12.2	21.3	17.8	19.1	20.1
Proportion	37.2%	37.8%	40.0%	38.4%	39.2%

As expected, the Bank has bought gold to the extent of £1.1 millions, offsetting this with a reduction of £2.2 millions in Government securities. These two opposite trends have been evident in recent weeks, and in so far as they cancel each other out it cannot be said the Bank is either expanding or contracting the basis of credit. Public deposits are unusually high, but bankers' deposits have fallen by £1.3 millions.

August Clearing Bank Averages.—There are no very striking changes between the July and the August averages. Discounts and advances both show decreases of £3.3 millions and £7.7 millions respectively, suggesting that, in spite of the cheapness of money, there is no great demand for accommodation, and industry seems to be financing itself from its own resources.

	(In £ millions)

Total assets	2,195.2	2,310.7	2,356.3	2,427.0	2,394.6	2,444.1

(a) Excludes District Bank.

(b) Includes District Bank.

Cash and call money have increased by £8.3 millions and £4.7 millions respectively. This increased liquidity shows that the gold purchases by the Bank of England have been more than enough to balance the needs of the joint-stock banks for coping with the holiday expansion in the note circulation. The small increase of £2.8 millions in deposits is offset by an increase of £2.4 millions in investments. Acceptances, etc., are a little higher than last month, but lower than the June figures.

THE STOCK EXCHANGE

FUTURE OF UNIT TRUSTS

THE Report of the Departmental Committee on Fixed Trusts has been available for the past month for inward digestion by the authorities, the investing public and the managements chiefly concerned. First impressions of an exceedingly complex and detailed document are slowly giving place to maturer judgment. The Government, of course, is free to enact, reject, or ignore the Report, in whole or in part. But the authority behind the document is second only to that of the classic report of the Greene Committee, on which the complete overhaul of British Company Law, in 1928, was largely based.

It is already apparent that the Report's main conclusions are supported by an overwhelming body of investment opinion, professional and otherwise. Official expressions of opinion from the unit trust movement itself have been mostly limited to that sincerest form of flattery which finds expression in claims to have anticipated many of the Committee's findings. Doubtless, all the recommendations are not equally acceptable to every management group; and the Movement as a whole retains its freedom to make representations, both before and after the drafting of a possible Parliamentary Bill, against individual recommendations. But the Movement does appear to have morally committed itself to underwriting the Report's main principles, and its own credit with its clients has certainly not suffered thereby. If, then, the Government decides to take up the matter, there should be nothing but the exigencies of Parliamentary time to prevent the passing of a Unit Trusts Act during the forthcoming session.

What would be the implications of such a measure, from the viewpoint, first of the Movement itself, and secondly of the investor? It is clear that the extension of regular and impregnable legal status to unit trusts is a fundamental concession whose ultimate benefits justify cheerful compliance by the Movement, even with the draconian conditions associated with its donation. We see no reason for modifying our original view that the Committee reached its conclusions that the trusts should have freedom to be fruitful and multiply, by intuition rather than by ratiocination. The requirements attached to the Movement's Magna Charta, however, cannot be criticised on the ground of undue leniency. On the contrary, the grant of legal autonomy has been hedged with so many conditions that its ultimate effect may be restrictive. A report which in theory places no limit to the propagation of new fixed trusts may in practice lead to the closing of old ones, and the concentration of genital powers in the hands of a few managements with large financial resources.

If the Committee's recommendations pass into law it will be well-nigh impossible to hide anything from the public that the public ought to know. No series of official recommendations has ever carried belief in the virtues of publicity so determinedly to its logical conclusion. Publicity has its own "sanctions," which are more effective than the severest scale of fines and penalties. A well-known Stock Exchange house has lately reviewed the Committee's Report under the caption: "Light and Air." The Committee's intentions could not be better summed up.

We may, however, pay the Movement the compliment of declaring that there are few, if any, present managements whose continued existence is necessarily endangered by the Committee's publicity recommendations alone—though adherence to them may well throw individual differences of investment "appeal" into stronger relief. But the effect of the financial sections of the Report is another matter. The proposed insistence on a £20,000 deposit from every unit trust (apart from any funds held in reserve) will not secure investors therein against all possibility of future victimisation by the deliberately dishonest or the criminally reckless. A similar stipu-

lation has not saved policy-holders in certain unhappy insurance companies from a total loss. But it will limit the opportunity to make mistakes to those who, at least, start with a certain substance. In fact, it is likely, given the peculiar conditions obtaining in the unit trust field, to close that field completely to the casual profit-snatcher. Experience has already shown that the running of a unit trust does not yield anything like a handsome profit until unit sales have reached something like £1,000,000. If the "overheads," in addition, are to include, at best the immobilisation, and at worst the immolation, of £20,000 for every new scheme, the irresponsible adventurer will pause before committing himself.

It remains to be seen how many of the smaller existing trusts, whose units for one reason or another have not achieved a strikingly large sale, will take advantage of the Committee's suggestion that trusts which cease the issue of new units or sub-units within three months from the publication of the Report (i.e. by November 12th next), should be allowed to function as "closed trusts" without the £20,000 deposit. Their number may be considerable, for the amount invested in the average unit trust, other than about ten of the largest, has been estimated at no more than £500,000. It is probable that, under the new regime, the managements interested in the continuance of "live" trusts and the formation of new ones will be capable of being enumerated on the fingers of two hands—or even one. In theory, their ranks will not be a closed corporation. If "big money" is really to be made out of unit trust organisation, there is nothing to prevent public companies, with capital subscribed through a public prospectus issued in the ordinary way, from coming in, establishing their own satellite trusts, and reaping the ostensibly bounteous harvest. Actually, the omens are against any such development, on a widespread scale. The day of pioneer profits in the movement has passed. Management has become a specialised and highly competitive business, in which all the advantages are on the side of those already equipped with a working organisation and a fund of experience.

It is probable, therefore, that the broad effect of the Committee's Report will be a pruning out of some of the weaker existing trusts, and control of the formation of new ones by a relatively small number of management houses with substantial financial resources, administering a somewhat stringent code of law and practice. As a result, some of the features to which, in the past, we have taken exception in these columns, may well be eliminated or substantially modified. Strong managements, in a movement which has achieved the hallmark of recognition *per ardua*, have every incentive for avoiding such blemishes as the artificial forcing-up of "yields." Other pitfalls, like unscrupulous advertising, will be railed-off by the law itself. The danger of excessive "duplication" of over-popular stocks and shares in the portfolios of many trusts will remain. But the ability of the leaders of the movement to prevent duplication from reaching excessive lengths will obviously increase in proportion as the element of irresponsible competition within the movement diminishes. In any case, the more truly *flexible* unit trusts become, and the less their choice of securities is dictated by window-dressing for salesmanship purposes, the wider the range of unit trust investment is likely to be.

Present omens suggest that the trusts may well have time to adapt their organisation to the new regime, before the supreme test of administration in a falling market is imposed on them. Hitherto, it has been almost impossible to choose a portfolio of securities, by wisdom or the common pin, which could not be relied on to show substantial capital appreciation after a few months. This state of affairs may not be immediately threatened, but it cannot

endure indefinitely. Having created a new medium for the investor, the movement's leaders must now make good their claim to special skill in investment.

All things considered, it is arguable whether the most desirable of all future developments would not be a closer association between some of the leading groups in the "unit trust" and the "investment trust" spheres, such as has already occurred in America. Hitherto, the experience of unit trust management, as such, has been mainly on the "sales" side. The choice of an original portfolio has received much attention, but there has been little opportunity (and, perhaps, even less inclination) to acquire intimate knowledge of the problems involved in managing a "liquid" unit, whose constituent securities may change widely, from time to time. The investment trust movement has been acquiring precisely that knowledge for more than half a century, but a number of considerations have deprived it of any opportunity to share in the fruits of the popularity of "pooled investment" during the past five years. At bottom, however, both types of trust are selling the same thing—investment by the law of averages.

If, as a result of the Committee's Report, the unit trust Movement is destined to abandon certain of the more spurious elements in its appeal, after having earlier abandoned its untenable insistence on "fixity," there will remain, in the last analysis, no recognisable divergence between the main objectives of the two movements. Unit trust interests may claim that they have made the benefits of risk-spreading available to the small man. They may contend that they are not hampered, as the investment trusts are, by damaging historical legacies such as large foreign security holdings and heavy fixed interest obligations. The investment trust authorities may reply that their rivals have a great deal to learn about what is, after all, their real *raison d'être*—the management of a well-tempered portfolio. Here, surely, is the strongest argument for a marriage of convenience.

INVESTMENT AND COMPANY NOTES

Stagnant Home Rails.—The home railway market has lately been in stagnant condition. Present prices of "marginal" stocks adequately discount prospective increases in net revenue. Investors are inclined to retain, but not to increase, their existing holdings, and no early change in their attitude is likely in the absence, on the one hand, of any indication of the extent to which rating over-payments will be recouped, and, on the other, of any renunciation by the railwaymen of their claims to the lion's share of the proceeds of railway revival. The weekly traffic figures, which at present afford the only possible stimulus to market interest, are making an irregular showing. This week's gain on the four railways of £229,000, compared with the corresponding week of 1935, was hardly sufficient to compensate for the relatively unsatisfactory showing of the preceding week, when the gain was only £61,000. The past fortnight's traffics, as a whole, show some reduction in railway activity when compared with those for the preceding eight weeks which were analysed in detail on page 402 of the *Economist* of August 29th. The average weekly gain in terms of 1935 is lower, and comparison with the pre-depression average for 1927-30 is less satisfactory. Receipts on the L.M.S. have been running 13.2 per cent. below the 1927-30 level in the last fortnight, compared with 10.8 per cent. in the preceding eight weeks. The Great Western's deficiency has increased from 12.5 per cent. to 14.3 per cent., and the Southern's from 6.4 per cent. to 7.5 per cent. The most satisfactory trend has been on the London and North-Eastern; but even this company's receipts have been 14.6 per cent. below the pre-depression average, against 13.8 per cent. It would be premature to read too much into any couple of weeks' figures, but stockholders who are endeavouring to estimate the probable increase in gross takings for the whole year 1936, compared

with last year's figures, should take due account of the fact that the last quarter of 1935 produced substantial improvements in traffic, particularly in coal transport. And coal at the moment is the least impressive member of the passenger-merchandise-coal triumvirate.

* * *

Coal Share Prospects.—Since the settlement of the miners' wage dispute last January, coal shares have been a rising market. Investment interest has been whetted by every subsequent development in the industry—the increase in prices, the introduction of the minimum price and centralised selling schemes, the industry's refusal to accept the Government's reorganisation proposals, the publication of the official quarterly returns, and, this week, the truce in the South Wales dispute. Coal-mining recovery has been long delayed, but the immediate outlook for many individual concerns, at least, has become more promising. Between district and district, however, there is considerable variation. Coal exports, unfavourably affected in any case by the disappearance of trade with Italy, are still acutely depressed, and the exporting areas, consequently, are little better off than before. Durham and South Wales, in particular, have made little progress. Companies in those areas which produce mainly for home demand, and are relatively prosperous, may well be penalised by the proposed district levies to subsidise the export trade. The shares of companies like Powell Duffryn and Ocean Coal have, therefore, scarcely participated at all in the general upward movement of values. Market attention has, in fact, been concentrated mainly upon the "Midland" shares, a selection of which appears in the following table:—

Company and accounting date	Ord. share denomination	Earnings (%)		Dividend (%) 1935-36	Price	Yield (%)
		1934-35	1935-36			
Bolsover Colliery (Dec. 31).....	£1	13.4	15.6	9†	47 6	3.79
Hilton Main (June 30).....	£1	15.9	26.5	15	54 6	3.50
Manvers Main (June 30).....	£1	15.8	...	4†	28 0	3.21
Shipley Collieries (March 31).....	£1	6.9	18.4	8	33 0	4.85
Sneyd Collieries (June 30).....	£1	26.3	...	12†	45 0	5.56
Yorkshire Amalgamated (March 31).....	£1	2.0	4.8	4	23 0	3.48

† For calendar year 1935.

* For 1934-35.

Yorkshire Amalgamated and Manvers Main are in the Yorkshire area, Bolsover in Nottingham, Shipley in Derbyshire, Hilton Main in the Cannock Chase field, and Sneyd Collieries in the Potteries. All are supplying an increasing internal demand for coal at an increasing price. In the first quarter of this year the average profit in these districts was 2s. 10½d. per ton, compared with 1s. 5½d. in the country as a whole. Their results have not yet reflected the operation of the new selling schemes. In some parts of the country, these schemes provide only for the fixing of minimum prices, with a very loose planning of the distribution of the output. In N. Staffordshire, however, a full centralised selling scheme has been working successfully for three years—and is partly responsible for the excellent profit level of Sneyd Collieries. In the big "Midland Amalgamated" area, a system of group centralised selling has been introduced, by which, in this very large region, the entire output will be handled by twenty-three area monopolies. This scheme will necessarily benefit profits, for it is unlikely that prices will be lowered as efficiency increases. A sign of the times is the decision of the directors of Hilton Main to expand the company's business and issue new capital. A coal company capital issue for new development is *rara avis*, and affords a significant pointer to the prospects of the "Midland" companies.

* * *

Shipping Share Revival.—A main feature of an unusually active holiday season on the Stock Exchange has been a revival in interest in shipping shares. The rise in quotations has been steady, and prices now stand little below their highest levels of the year. There has been singularly little in the latest trade returns to encourage such a movement. The volume of world trade is expanding, but still relatively slowly. British trade itself, apart from coastwise traffic, is not making a better showing.

There is little sign of abatement, moreover, in the making of competitive subsidies. This week, the New Zealand Minister of Marine foreshadowed the introduction of a New Zealand subsidy system to counter United States competition. Nevertheless, conditions in the industry are improving. The volume of laid-up tonnage has diminished appreciably, and the normal seasonal improvement of freight rates has been well in evidence. Last autumn this movement was accentuated by the "war risks" increases in freight rates. Although the market, at the time, was inclined to attribute the whole of the advance to that cause, present rates are still running some 10 per cent. higher than a year ago. The minimum freight rate structure is apparently being well maintained, and in the last week or so the market has been encouraged by news of a number of new increases. The most important has been the conclusion of a fresh contract between the New Zealand Government and four British shipping companies at rates 2½ per cent. higher than those of the previous contract. On the whole, prospects look better than at earlier stages of industrial revival. Shipping shares, as such, however, remain a somewhat speculative group. Only a few of the companies, like Clan Line, have returned to the dividend list. Others, like Cunard and Coast Lines, depend upon specialised types of traffic. Of the two best-known shares, P. & O. Deferred has risen this year from a "low" of 18s. to 26s., and Furness Withy has improved from 16s. 3d. to 22s. Neither paid a dividend last year, and P. & O. did not even earn its full depreciation. Present prices, therefore, already discount a substantial increase in the level of profits. Of the two, Furness Withy appear the nearer to a dividend.

* * *

Actuaries' Investment Index.—The Actuaries' Index computed on Tuesday last, does not register the easier tendency which was in evidence about the middle of the week. Actually the average for 178 industrial equities (December 31, 1928=100) comes out at 88.0 this week, and compares with 87.4 last week, and with 85.7 a month ago. The average yield is given as 3.60 per cent., against 3.62 per cent. last week, and 3.68 per cent. a month ago. Movements in selected groups are set out below:—

Group and No. of Securities	Prices (Dec. 31, 1928 = 100)			Yields (%)		
	Month Ago (Aug. 11)	Last Week (Sept. 1)	This Week (Sept. 8)	Month Ago (Aug. 11)	Last Week (Sept. 1)	This Week (Sept. 8)
Building Materials (5).....	103.1	108.1	108.8	4.71	4.50	4.47
Coal (7).....	102.4	104.1	104.2	3.30	3.21	3.29
Cotton (6).....	41.3	41.2	41.0	2.14	2.09	2.11
Iron and Steel (12).....	80.3	79.6	81.6	3.72	3.75	3.70
Oil (5).....	83.6	85.2	90.4	3.22	3.18	3.00
Home Rails (4).....	78.1	77.7	78.3	1.49	1.53	1.48
Breweries and Distilleries (21).....	150.6	153.0	155.0	3.91	3.84	3.79

The principal change has occurred in oil shares, the appreciably higher index for which reflects the great activity of the past ten days. The upward trend in brewery issues continues. A similar rise is shown in the iron and steel group. The cotton group, alone of those appearing above, shows a fall which, though unimportant in itself, is typical of the continued dullness of this section of the market.

* * *

Triplex Prospects.—Although the immediate effect of Mr Graham Cunningham's speech at Wednesday's meeting of Triplex Safety Glass was a marking down of the company's shares from 122s. to 118s. 9d., this expression of disappointment was due to the absence of an immediate announcement of a bonus share issue rather than to dissatisfaction with a commendably frank review of the company's prospects. Only the short-term speculator, indeed, had any grievance, for the chairman specifically stated that, before the next annual meeting, the board would submit "proposals for the reorganisation of the company's capital"—which obviously will include a bonus issue, as the greater includes the less. On the pre-meeting Stock Exchange price of 122s. for Triplex shares, the market valuation of the equity was £2,440,000, while the total issued capital, general reserve and "carry forward" is under

A 6% ANNUITY with CAPITAL RETURN at death

"WHAT investment do you advise?" is a question often asked. To the ageing, the best return combined with security is the Annuity, but everyone is not prepared to surrender their entire capital and so deprive their heirs of legacies.

The new 6% Annuity Scheme solves this difficulty in a very satisfactory way. On capital invested there is allowed 6% interest for the life of the Annuitant. At death a generous return is made. Have particulars of this new and attractive Scheme by you. A supply of prospectuses will be sent to you upon request.

LEGAL & GENERAL ASSURANCE SOCIETY LTD

10 Fleet Street, London, E.C.4
Established 1836 Assets exceed £36,000,000
General Manager: W. A. WORKMAN, F.I.A.

£500,000. Of more consequence for long-term investors was the chairman's review of the company's competitive position and sales policy. Triplex works in close association with Imperial Chemical Industries, and its attitude is much the same as that of the I.C.I.—that customers as well as shareholders should participate in the fruits of progress by way of appropriate adjustments in selling prices. This policy has played its part in the increase in the company's turnover from 2,958,000 feet in June, 1933, to 5,964,000 feet in June, 1936. Sooner or later, there is a limit to every such geometric increase, but that limit, obviously, will have been reached only when every road vehicle, private and commercial, has been fitted with safety glass as part of its standard equipment. Actually, between November and last February, there was a decline in the company's turnover, but the causes were exceptional. Certain motor-car manufacturers, who had formerly used Triplex on all their models, began to use ordinary glass for their cheaper cars, to compete with other makers who had not adopted safety glass exclusively. This, as Mr Graham Cunningham declared, was a retrograde step, but the board answered it in the best possible way, by offering substantial reductions to makers who would fit Triplex all round. The trade's response has been satisfactory, and the "hundred-per-cent. list" now comprises eighteen British car manufacturers, including the largest. Earning power has been further fortified by such semi-windfall factors as the cessation of a royalty payment this year, and the winning of an important legal action by the company's American subsidiary. Altogether, the chairman's review contained many arguments for the retention of Triplex shares by present holders.

* * *

Second Alliance Trust.—This Dundee company, like its senior stable-companion, the Alliance Trust, transacted a large pre-war American mortgage business, but this has been gradually liquidated for many years past. To-day some 96.21 per cent. of its invested funds are in bonds and stocks, and the company ranks as one of the most successful in the range of investment trust concerns. Its invest-

ment and other income fell from £215,790 in 1930-31 to a low-water mark of £175,649 in 1933-34, and ordinary dividends were reduced from 22 per cent. to 18 per cent. Recovery, subsequently, has been steady:—

	Years to July 31st		
	1934	1935	1936
Investment and other income	175,649	180,866	191,318
Expenses and fees	8,194	8,894	8,975
Taxation	30,340	30,050	31,303
Interest	58,649	56,074	53,948
Preference Dividend	24,216	24,675	24,478
Ordinary shares—			
Earned	54,250	61,173	72,614
Paid	48,431	49,350	48,956
Earned %	20.2	22.3	26.7
Paid %	18	18	18

Contingent reserve and other provisions 25,994† 10,742† 25,163
Carried forward 11,449 12,531 11,026
† Includes expenses of debentures, £994, £742 and £163, respectively.

The decision to maintain the dividend at 18 per cent. is definitely conservative. In 1933, when the earnings ratio was lower than at present, a total ordinary distribution of 22 per cent. was made. The recovery in the capital value of the company's investments has been satisfactory to all concerned. A depreciation in market value which four years ago was as much as 20½ per cent., had been reduced a year ago to one per cent., and has now been replaced by a surplus, whose amount the directors, with the tantalising modesty common to most investment trust boards, refrain from disclosing. The company, more fortunate than many English trusts, has more than a third of its debenture debt in terminable debentures and interim loans. As these fall in, they are being replaced by bonds at 3½ per cent. The ordinary stockholders' equity has thus been increased proportionately with the decline in total interest charges from over £60,000, three years ago, to under £54,000 at present. If the company could but see its way to depart from Scottish traditions of reticence, and to furnish summary particulars of the distribution of its investments, its example would doubtless have a powerful effect.

D. Gestetner.—Further progress is reported in the latest accounts (published, as always, promptly after the close of the year) of these makers of duplicators and office appliances. The total profits are £194,082, against £176,794; no credit is taken for the profits of subsidiaries, although losses have been allowed for before striking the balance of profit. This very satisfactory improvement has resulted in the highest level of profits recorded since the business became a public company in 1929. An analysis of results for the past three years appears below:—

	Years to August 31		
	1934	1935	1936
Profit	138,212	176,794	194,082
Depreciation	11,378	12,715	14,245
Staff funds and directors' fees	8,714	9,024	8,655
Income tax reserve	4,000	15,000	16,500
Earned for dividends	114,120	140,055	154,682
Preference dividend	20,473	18,375	18,375
Ordinary shares:—			
Earned	93,647	121,680	136,307
Paid	63,750	89,250	100,406
Earned %	48.2	51.4	51.4
Paid %	30	35	35
General reserve	32,367	31,875	35,859
Carry-forward	19,134*	19,689	19,731
Capital bonus:—			
From general reserve	42,500	31,875	35,859
Rate %	20	12.5	12.5

* Includes £2,244 profit on sale of investments.

The ordinary dividend is maintained at 35 per cent., and the rate earned for the equity is likewise unaltered at 51.4 per cent., the higher profits having been earned on an ordinary capital increased by a share bonus last year. In addition, a capital bonus of 12½ per cent. is being distri-

buted, of equal amount with the year's allocation to general reserve, which remains at £100,000. The balance sheet, though devoid of outstanding changes, carries the expected signs of progressive business. A highly liquid position is again shown; cash and gilt-edged securities amount to £281,397, as against £259,263. Stock-in-trade has risen by the considerable sum of £13,229 to £80,743, but debtors other than subsidiaries stand at £104,382, as compared with £116,480. There is no reason to expect, in the near future, inability to maintain the current dividend on the increased ordinary capital, though a business of this nature is always exposed to the risk of new inventions or processes. Whether the company can be expected to maintain the payment of substantial annual capital bonuses, however, is another matter. The ordinary shares at the current price of 47½ yield £3 14s. 6d., exclusive of capital bonus.

Oil Shares.—Activity in oil shares has broadened considerably since we discussed oil prospects in an investment note on August 22nd. At the moment a reaction has occurred, but, as the following table shows, the leading shares have on balance enjoyed a considerable rise:—

	Prices		Last	Est.
	Aug. 21	Sept. 10	Div.	%
Anglo-Iranian £1	4 3/8	4 3/8	15	17 1/2
Burmah Oil £1	4 1/2	5 1/8	20	22 1/2
Shell Transport & Trading £1	5 1/2	5 1/2	17 1/2*	20*
Trinidad Leaseholds £1	5 3/8	5 1/2	17 1/2†	25†
Mexican Eagle \$4 Pref.	25/9	28/6	10d. p.s.	1/6 p.s.

* Tax free.

† Year ending June 30th.

No change has occurred in the American oil situation to justify the optimism of the London market, though consumption of oil products is being well maintained. Sir John Cadman has been misquoted as warning the World Power Conference in Washington about the possibility of the exhaustion of the world's oil resources in twenty years' time. It appears that Sir John mentioned in general terms only the estimates of oil reserves which had recently appeared in trade journals and that he refrained from expressing any opinion as to the accuracy of these estimates. His sole object was to draw attention to the importance of preventing waste in the production and utilisation of the natural sources of liquid fuel, which are certainly not inexhaustible. This may have impressed oil shareholders in Great Britain, but hardly the American investor, seeing that the United States are still blessed, or cursed, with an over-production of crude oil. At the end of August, the daily average production of crude oil was 3,032,050 barrels, which exceeded the recommendations of the Bureau of Mines by a daily average of 95,150 barrels. This in itself was no cause for alarm, having regard to the considerable reduction in crude oil stocks during the past few months, but it was accompanied by an increase in refinery operations. The runs to refinery stills are exceeding 3,000,000 barrels a day for the first time in the history of the American oil industry. During the past four weeks refinery operations have increased by no less than 180,000 barrels a day, which is far more than is justified in the 10 to 12 per cent. increase in gasoline consumption. The oil industry is now approaching the season of declining consumption with gasoline stocks still in excess of requirements. The American gasoline market is, therefore, easier and, in addition, the Roumanian gasoline market has become decidedly weak. There is, however, no reason for nervousness among oil shareholders. Earnings this year will show great improvement over those of 1935, the results of twenty-five American oil companies in the first half of this year, indeed, disclosed an increase in net profits of no less than 40 per cent. The London market is probably justified, therefore, in estimating the increases in dividends shown in our table.

General Mining and Finance.—The increase from 7½ per cent. to 10 per cent. in the interim dividend of this corporation, writes our mining correspondent, is primarily due to the entry into the dividend list of the deferred shares of West Rand Consolidated. At the end of 1935 only a small balance remained to complete the £1,500,000 which the ordinary shares were entitled to receive before the

deferred ranked for dividend. For the first half of the current year an initial dividend of approximately £2.59 was paid upon the deferred shares and absorbed £64,847. The General Mining is understood to hold practically the whole of the capital concerned. If West Rand maintains the dividend of 25 per cent. paid on the ordinary shares for 1935—as seems probable, to say the least, in view of the increase in monthly profits—the disbursement on the deferred will amount to £170,000 per annum. Factors contributory to the additional prosperity of the General Mining have been the increase in dividends from the holding of East Rand Proprietary and the receipt of revenue from the New Steyn Estate after its absorption by the Durban Roodepoort Deep. General Mining is understood to possess a large interest in Metal Traders, whose shares have lately been prominent. It is also one of the original subscribers to West Witwatersrand Areas, and is a participant in Vogelstruisbult, which is expected to commence crushing towards the end of this year. The advance in the General Mining interim dividend has naturally been interpreted by the market as foreshadowing a larger final distribution, which might bring the total for the year up to, possibly, 25 per cent.

Other Company Results.—An analysis of the reports of fifteen other companies appears on page 496. Profits of *Kay's Atlas Brewery* show a satisfactory increase of £1,826 to £14,714, and allocations to reserve have been resumed. Still further improvement is shown by *Grosvenor House* (Park Lane), whose net earnings are £73,649 against £61,464. The net profits of *United Caterers* are slightly lower at £4,012, and the auditors' report is qualified in several particulars. *Hawthorn Leslie*, the shipbuilders and engineers, are paying a higher dividend of 6 per cent., the amount earned for the equity being £25,648 against £23,194; trading profits have, however, fallen from £30,215 to £27,023, but no debenture interest has been chargeable. Five rubber company reports have been received this week; *Brooklands Selangor* record the very substantially increased profits of £13,551, against £8,908, and are raising their dividend from 5 per cent. to 7½ per cent. Nothing in the full *Calico Printers'* results reduces the disappointment caused by the preliminary statement; the directors' report offers no explanation of the year's loss. The balance sheet discloses, as usual, a liquid position. The profits of *North Central Wagon*, at £43,966, are slightly higher. The report refers to a re-valuation of the company's interest in *Wagon Repairs*. A preliminary announcement by *Cohen Weenen*, controlled by Godfrey Phillips, shows a continuance of the downward trend of profits. After charging depreciation, etc., net profits are £51,428 against £67,376, and the dividend has been halved at 9 per cent. *Initial Services* have declared a final dividend of 16½ per cent., making 25 per cent. on a capital doubled last year by a bonus issue. A number of tin company interim dividends have been announced this week. *Sungei Besi* are paying 12½ per cent. against 5 per cent. this time last year; *Tronoh Mines* have, at 10 per cent., doubled their third interim, and paid 27½ per cent. to date, and *Kinta Tin Mines* also, in paying 5 per cent., double their interim payment.

Port of London Authority.—The results given in the Port of London Authority's full report for the year ended March 31, 1936, promise well for the ultimate usefulness of the work now being carried out under the docks modernisation scheme. The net register tonnage of vessels arriving and departing in 1935 was, at 59,762,150 tons, the highest ever recorded, and represented an increase of 1.4 per cent. over 1934, when the comparable figure was 58,947,642 tons. Of greater significance, perhaps, is the increase from 39,284,779 to 40,888,825 tons, during the year covered by the Report, in the quantity of imported and exported goods, equivalent to 2.9 per cent. in imports and 9.9 per cent. in exports. The increase in the "Foreign" tonnage is, however, slightly smaller than the total increase; it stands at 3.5 per cent., as against 4.1 per cent. for all classes combined. A consideration of total volume alone does not bring out clearly the advance in foreign exports, which,

FIRST PROVINCIAL "B" Certificates

offer an opportunity to spread sums of £25 and upwards and to own a definite share in the undermentioned securities.

The wisdom of spreading capital over a defined list of first class British securities is obvious. It combines safety with regularity of income. It eliminates the risk of a single security, however carefully this may be chosen.

though constituting only one-twelfth of the tonnage of goods dealt with, are 11.7 per cent. in excess of the previous year. Foreign imports, on the other hand, have increased by 2.2 per cent. only. The Report gives details of the improvements and reconstruction works that have taken place. Work on the modernisation of the Royal Victoria Dock appears to be well under way, and 10 out of the 25 electric quay cranes ordered have been completed; the deepening of the Royal Albert Dock is being proceeded with, and the widening of the North Quay for most of its length is finished. In an account of events of general interest, the Report refers to the growing problem of river pollution, and it is satisfactory to see that a conflict of interests between the Port of London and the L.C.C. was settled without recourse to a petition against a clause of a Bill presented by the latter body. The financial statement shows a total revenue of £5,668,279, against expenditure of £4,082,354; capital expenditure for the year was £288,558. After deduction of interest and other charges, there remains a small surplus of £6,166, to which is added £399,152 brought in and carried forward. The excess of revenue over expenditure is £1,585,925, representing a yield of £4 10s. per cent. on the aggregate of the Authority's stocks, which are of a semi-gilt-edged character, and of which there is £35,175,963 outstanding.

THE WEEK IN THE MARKETS

THE STOCK EXCHANGE

TICKET	SETTLING DAYS	ACCOUNT
SEPTEMBER 22		SEPTEMBER 24

THE fortunes of the market have been subjected to fluctuating forces during the past week. The account opened well, with uneasiness over Palestine and over the coal situation removed for the time being by the Government's statement of forceful intentions and by the cancelling of the South Wales strike notices. The strength of Wall Street was encouraging and everything then went well until the French difficulties began to grow in mid-week, accompanied by renewed flight from the franc. As the foreign exchange situation improved slightly later, the markets recovered from their rather too rapid depression. The gilt-edged market was slightly sensitive to these changes, but on the whole the tone was very firm, and in mid-week there was a further advance in the tap price of 2½ per cent. Funding Loan. Colonials improved slightly, particularly Australians, while India stocks held firm, and Home Corporations were well supported, except for a slight hesitation in mid-week. The foreign bond market opened the week well, with Chinese issues to the fore on the peace settlement in the south, and the reported quashing of the new Customs tariff in the north. German bonds were the next to recover, and Peru Corporation bonds have been in good demand. The mid-week developments pushed down most prices in this market, particularly for French issues, but Peru Corporation continued their upward movement.

Home rails responded rapidly to the South Wales settlement and were very firm in anticipation of good traffic figures; but the French development upset the market, and prices declined on Wednesday in spite of the excellent returns. Transport "C" gained steadily. The focus of interest in the foreign rails markets were Leopoldina shares, which were

encouraged by the good traffic figures, and in mid-week Argentine issues were firm for the same reason.

The industrial share market made a good start to the week, and the iron and steel section became firmer on the continued trade expansion; Pressed Steels benefited from the interim dividend and coming share bonus, and Hawthorn Leslie gained on the results. Motor shares have made rather an irregular showing, but aviation issues have been very firm. There was a quick improvement among coal issues on the settlement, and Bolsover were bought on the increased dividend. Profit-taking developed among electrical equipment issues, after a good beginning to the week, and supply shares were idle, apart from Perak River.

Textile issues have been satisfactory on the whole, while among rayon shares Courtaulds lost ground in mid-week after earlier strength, and textile machinists also turned dull. Woolworth were lower on profit-taking at the end of last week, and have since continued to sag in a fairly steady stores section. Tate and Lyle were the feature in the Provision group. Breweries have put up a very satisfactory performance, apart from a temporary setback in Guinness, which quickly recovered. The miscellaneous industrials market has been irregular, particularly in mid-week, although there have been a few bright spots. Triplex Glass were depressed by the Chairman's remarks at the meeting, but recovered on second thoughts; Carrier Engineering improved along with a few other engineering shares, but building material shares were mostly lower.

The oil shares market was very active at the end of last and at the beginning of the present week, and practically all issues gained ground. In mid-week a temporary reaction set in under the influence of the French situation and the fear of European developments, but later prices became much firmer. American news was considered encouraging, and Continental support was in evidence. Business in the rubber and tea shares markets was very dull, with prices moving downward on a very small volume of business.

The Kaffir market opened the week quietly, after a strong close to the last account, and business tailed off further in mid-week on the political and economic situation in Europe and the falling price of gold. Prices which had mostly been firm reacted for both operating and finance issues, but later in the week a firmer tendency became evident, on a slight improvement in the metal price and on buying from the Cape. Ashanti and Bibiani were the features in the West African section, but all shares came on offer in the general setback. Rhodesian copper descriptions improved slightly on the higher commodity price and the proposed increase in production quota, but became easier later. Mawchi and one or two other tin issues benefited from dividend anticipations. On the Paris Bourse, the difficulties of the franc affected business, and most shares were dull. Similarly weak conditions, with irregular price movements, prevailed on the Berlin Bourse, while in Amsterdam conditions became irregular after a fairly cheerful opening. Royal Dutch were the main attraction.

AMERICAN STOCK EXCHANGE

NEW YORK

THE announcement that Carnegie Illinois Steel would raise prices for the fourth quarter of the year caused last week's dealings to end with a flourish last Saturday, and modest price gains were registered by steel, industrial and railroad company shares. Dealings opened on Tuesday of this week, after the Labour Day holiday, in a very cheerful mood, with automobile and farm implement shares leading the market, and turnover near the million and three-quarter mark. But in mid-week a setback developed, under the supposed influence of European developments relating to Germany and to Spain. Metal and rubber securities gained against the general trend. On the bond market Government issues were irregular immediately after announcement of the terms of the new issue, but the tone hardened later, and prices improved. Railroad issues were in good demand. Steel mill activity for the week was estimated at between 3 and 4 points down on the previous week, thanks to the Labour Day shutdown; scrap prices are very high, and supplies are very short. Business news continues to be very satisfactory, and activity is expanding with the approach of the autumn.

LONDON ACTIVE SECURITY PRICES AND YIELDS

In calculating yields on fixed interest stocks quoted below allowance is made for interest accrued since the last date of payment, less income tax at the standard rate. Where stocks are definitely redeemable at a certain date the yield includes any profit or loss on redemption; where stocks are redeemable at or before a certain date the final date of redemption is taken when the stock stands at a discount and the earliest date when the quotation is above par. The return on ordinary stocks and shares is calculated by reference to the latest dividends, account being taken of any enhancement or reduction of interim dividends. Allowance is made for accrued dividends in calculating the yield on "cum. div." shares.

COMPANY MEETINGS, &c.

EASTWOODS, LIMITED

RECORD OUTPUT AND SALES

The sixteenth ordinary general meeting of Eastwoods, Limited, was held, on the 8th instant, at River Plate House, London. Mr Horace Boot, M.Inst.C.E., M.I.Mech.E., M.I.E.E. (chairman and managing director), in the course of his speech, said:—The past year's trading was the largest in the history of the company, although there has been a slight contraction in the net trading profits.

Other investments at cost total £171,039, compared with £182,260 last year. Cash and Government securities taken together amount to £135,224. The assets side of the balance sheet totals £897,857, a figure nearly double the amount of the issued capital.

Investment reserve has been further increased to £29,829. The company is in an exceptional position by reason of the fact that as at the date of the account our quoted investments show appreciation amounting to more than £100,000 over the price at which we purchased them. We are again recommending the appropriation of £22,500 to general reserve account, bringing the total to the substantial figure of £195,000, equivalent to nearly 44 per cent. of the issued capital. No less than £135,000 of the assets is available in the form of cash, while external investments and cash in hand totalling £306,000 exceed the amount of the Ordinary share capital.

Trading profits from all sources amounted to £101,663. The net profit of £83,085 enables us to repeat all the appropriations precisely as last year, to maintain the dividend at 15 per cent. and slightly to increase the carry-forward.

Our output and sales during 1935 exceeded all previous figures and we are confidently looking towards similar satisfactory results in 1936.

Current estimates and returns indicate that this steady progress is being maintained, and your directors have every confidence in the prospects for the future prosperity of the company, coupled with satisfactory returns to the shareholders.

In conclusion, the Chairman announced that the turnover of the company during the five months of the current year exceeded the figures of the corresponding period in the previous year by 10 per cent.

The report and accounts were unanimously adopted.

GOVERNMENT RETURNS, &c.

NATIONAL ACCOUNTS
The total ordinary revenue for the week ended September 5, 1936, amounted to £10,359,000, against ordinary expenditure of £21,855,000. After allowing for a decrease in Exchequer Balances of £334,577, the operations for the week, as shown below, increased the gross National Debt by £13,070,000 to approximately £7,877* millions.†

GOLD MARKET

Messrs Samuel Montagu and Company write on September 9, 1936:—
 The Bank of England gold reserve against notes amounted to £245,405,334 on the 2nd instant, as compared with £244,755,170 on the previous Wednesday. Purchases of bar gold as announced by the Bank during the week amounted to £1,118,995. In the open market about £1,500,000 of bar gold was disposed of at the daily fixing. There was a general demand and some special buying was also in evidence yesterday, prices being maintained at a premium over gold exchange parities. The French franc developed weakness and this influenced the dollar/sterling exchange; with the sharp depreciation of these gold currencies in terms of sterling, the price of gold in the London market moved sharply downward, to-day's quotation of 137s. 5½d. being the lowest recorded since July 4, 1934. There has been a large movement of gold from France to this country, presumably for a special account, the figures below showing a further influx of over £9,500,000.

Gold shipments from Bombay last week amounted to about £349,000. The s.s. "Kaiser-i-Hind" has £240,000 consigned to London and the s.s. "President Wilson" £109,000 consigned to New York.

SILVER MARKET

The market has continued to show a quietly steady tone and during the past week prices varied only between 19½d. and 19¾d. American demand was restricted, possibly owing to the depreciation of the dollar in terms of sterling, but there was some inquiry from this quarter at the lower price, at which, however, offerings were scarce.

The Indian Bazaars and speculators have both bought and sold and moderate sales have been made on China account. There is no indication of any wide movement from the present level of prices.

Quotations for gold and silver are shown below:—

1936	Price of Gold per Fine Ounce	Equivalent Value of £ sterling	Price of Bar Silver in London per ounce standard		Price of Silver New York per ounce .999 fine
			Cash	Two Months	
Sept. 3	s. d.	s. d.	d.	d.	Sept. 2
" 4	138 2½	12 3-52	19½	19½	" 3 45
" 5	138 0½	12 3-70	19½	19½	" 4 45
" 6	138 1½	12 3-61	19½	19½	" 5 45
" 7	138 1½	12 3-61	19½	19½	" 5 45
" 8	137 10½	12 3-88	19½	19½	" 6 45
" 9	137 5½	12 4-3	19½	19½	" 7 45
Average	137 11-67	12 3-77	19 594	19 594	
Sept. 10	137 7½	12 4-2	19½	19½	

The highest rate of exchange on New York recorded during the period from the 3rd instant to the 9th instant was \$5.06½ and the lowest \$5.03½.

OIL OUTPUTS

VENEZUELAN OIL CONCESSIONS, LTD.—Production for the week ended September 5, 1936, was: Bolivar district, 759,373 barrels; Maracaibo district, 25,544 barrels; total, 784,917 barrels.

THE BRITISH BURMAH PETROLEUM COMPANY, LTD.—A cablegram has been received from Burma reporting the production of crude oil by this company for the month of August as 41,338 barrels.

BRITISH CONTROLLED OILFIELDS, LTD.—Production for the week ended September 5th: Venezuela, 16,787 barrels; Trinidad, 26,581 barrels; total, 43,368 barrels. Production for August: Venezuela, 78,822 barrels; Trinidad, 108,826 barrels; total, 185,648 barrels. Deliveries for August: Venezuela, 77,553 barrels; Trinidad, 119,684 barrels; total, 197,237 barrels.

THE ATTOCK OIL COMPANY, LTD.—Production for August, 7,079 barrels. TRINIDAD LEASEHOLDS, LTD.—Oil produced during August, 45,694 tons; oil purchased during August from other companies, 69,906 tons.

THE MEXICAN EAGLE OIL COMPANY, LTD.—Production for the week ended August 29, 1936, was 479,000 barrels.

COMPANY NEWS

REPORTS AND NOTICES

BANKS

MIDLAND BANK, LTD. (Death of Secretary).—We regret to announce the death, on September 6th, of Mr F. O. Free, secretary of the Midland Bank, Ltd. Mr Free was born on April 11, 1872, and joined the staff of the Midland Bank at New Street, Birmingham, in May, 1893. In 1902 he became private secretary to the late Sir Edward Holden, and was appointed secretary of the bank in 1916.

MINES

COMMONWEALTH MINING AND FINANCE COMPANY.—Official confirmation is available for the option deal referred to in the *Economist*, September 5th, page 455. The Commonwealth Company in a circular confirming the facts states that: "In the opinion of the board, market conditions did not justify the flotation of three new companies, which would call for a guaranteed cash capital of not less than £450,000 as set out in the option agreements and stated in the prospectus of the company. In these circumstances the transaction effected was one which the board consider most satisfactory and advantageous to the company."

SIMMER AND JACK MINES, LTD.—We are officially informed that the ground movement which took place on September 8th has caused only minor dislocation of underground work and that no serious casualties have resulted.

LENA GOLDFIELDS.—At an Extraordinary General Meeting the shareholders passed a resolution confirming the Directors' acceptance of a tender of £188,000 for £875,900 U.S.S.R. Non-interest bearing Notes. (Further details of the Directors' scheme appeared in the *Economist* of September 5, 1936, on page 455.)

MISCELLANEOUS

MORRIS MOTORS, LTD.—Mr L. P. Lord has resigned the managing directorship of the Morris group of motor-car companies. Mr Oliver Boden has been appointed managing director in succession to Mr Lord. Mr Boden has been associated with Lord Nuffield since he bought the Wolseley factory nine years ago. Since 1932 he has directed the Morris Commercial Car Company.

THE BENGAL IRON COMPANY, LTD.—A scheme for amalgamation with the Indian Iron & Steel Co., Ltd., has now been approved by the two boards, and the annual general meeting has been postponed to obtain directions of the Court for holding the necessary shareholders' meetings to consider the scheme. The ordinary annual general meeting and the special meetings are anticipated during the first half of November. The results of both companies for the year to March 31, 1936, show marked improvement. A new company is to be formed to operate a steelworks with an initial production of over 250,000 tons of ingots. This will be situated alongside the Indian Iron & Steel Company's blast furnaces at Hirapur and will be financed by the Tata Iron & Steel, Burn & Co., Indian Iron & Steel, Bird & Co., and Haes & Sons.

CABLE AND WIRELESS, LTD.—Traffic index for July, 70.3, unchanged compared with June, 1936; July, 1935, 68.7. For particulars of index since 1930 and method of construction, see *Economist*, July 25, 1936, page 203.

EDMUNDSONS ELECTRICITY CORPORATION, LTD.—The results of the operations of the Edmundson group of companies during the month of August, 1936, as compared with the corresponding month of 1935, show an increase of 13 per cent. of units sold.

GROSVENOR HOUSE (PARK LANE), LTD.—Trading profit for year to June 30, 1936, amounted to £119,940, against £107,274 for year to June 30, 1935. The ordinary dividend is maintained at 5 per cent. The carry forward is increased from £36,418 to £40,445. Meeting, Grosvenor House, Park Lane, W.1, September 14th, at 11.30 a.m. The Directors announce that Mr A. H. Jones has been appointed General Manager of the Company but will continue to hold the office as Secretary.

LENNARDS, LTD. (Meetings Adjourned).—The meetings of the various classes of shareholders in Lennards, Ltd., and Lennards Real Property, held September 8th, in Bristol, were adjourned until September 17th, in order to give the Property Company an opportunity of adding an amendment or modification to the scheme for the reorganisation of share capital.

CALICO PRINTERS' ASSOCIATION.—We dealt with the preliminary figures of this Association in the *Economist* of August 22nd, page 359. The full report for year to June 30, 1936, shows a balance, after providing £379,335 (against £375,125) for maintenance, depreciation, etc., of £91,318, compared with £181,294. Debenture interest takes £128,000 and directors' fees £10,800, leaving a net loss of £47,247, against a profit of £42,969, which makes the carry-forward slightly higher at £42,579. No dividends are being paid on either the preference or the ordinary stocks, the last payment on the latter being 5 per cent. for 1928-29. Meeting, Manchester, September 16th, at 11 a.m.

GUINNESS (ARTHUR), SON AND COMPANY.—On September 9th, this company issued the following: "With reference to rumours on the Stock Exchange, as stated by the chairman at the annual general meeting on August 8th, everything is satisfactory at Park Royal. Nothing has occurred since then to modify that statement."

BRITISH MOSS LITTER CAPITAL SCHEME.—The directors propose to reduce the capital from £200,000 to £120,833. This will be effected partly by returning 2s. 6d. on each of the 90,000 6 per cent. curvilinear preference shares of £1 and reducing the 10,000 unissued shares to 17s. 6d. each. The 90,000 issued £1 ordinary shares will be cut to 6s. 8d. each and the 10,000 unissued shares will also be reduced to 6s. 8d. Meetings will be held at 2-3 Norfolk Street, W.C.2, on October 2nd.

INTERNATIONAL AUTOMATIC TELEPHONE COMPANY, LTD.—An extraordinary general meeting will be held at Incorporated Accountants' Hall, Victoria Embankment, London, W.C.2, on October 1, 1936, at 10.30 a.m. to consider changing the name of the company to Automatic Telephone and Electric Company, Ltd.

BRITISH ROPES, LTD.—British Ropes paid a half-year's dividend on 6 per cent. cumulative preference shares on July 1st in respect of the period from January 1 to June 30, 1936. The directors have declared an interim dividend on 7 per cent. preferred ordinary shares for the same period payable on October 1st. The board announces that the progress made by the company has been more than maintained. The dividend on the ordinary share capital when the accounts for the completed year are available.

FOREIGN GOVERNMENT BOND TRUST.—Municipal and General Securities Company announces the fifth income distribution by the Foreign Government Bond Trust of £4d. per bond-unit, tax free, payable October 1st Lloyds Bank Limited, 72 Lombard Street, E.C. The distribution covers a period of six months to September 4, 1936.

IMPERIAL CHEMICAL INDUSTRIES, LTD.—The directors have declared an interim dividend of 2½ per cent. actual on £43,764,759 ordinary stock, resulting from conversion into stock of former ordinary shares, payable (less income tax at 4s. 5½d. in £, being United Kingdom income tax at 4s. 9d. in £, less Dominion income tax relief at 3½d. in £) on November 2, 1936, to stockholders on register on September 12, 1936. Contingent upon the House of Lords upholding the decision of the Supreme Court which confirmed the reduction of the capital, they have declared an interim dividend of 2½ per

cent. actual (less income tax at the appropriate standard rate reduced by Dominion income tax relief at 3½d. in the £) on the £5,434,141 ordinary stock, resulting from conversion and consolidation of the former 21,736,584 deferred shares of 10s. each, payable to stockholders on Register on a date to be fixed by resolution of the board.

UNIVERSAL FIXED TRUST.—National Provincial Bank announces that the fourth half-yearly income distribution on Universal Fixed Trust certificates will be paid to holders registered on September 1st, at the rate of 5.9283d. net per sub-unit, on October 1st. For the previous half-year the payment was 5.0178d. net per sub-unit.

ANGLO-SIAM CORPORATION (timber and general merchants).—Final 5 per cent. on ordinary, less tax (same), making 7½ per cent. (against 8½ per cent.) for year to March 31, 1936. Meeting September 29th.

ENGLISH AND CALEDONIAN INVESTMENT COMPANY, LTD.—Dividend for half-year ending September 30th on 5 per cent. preference stock and also an interim dividend of 1½ per cent. actual on ordinary stock, both dividends payable on October 1, 1936. This company last paid an interim dividend on the ordinary stock in respect of the year ended March 31, 1931, but ordinary dividends have been paid ever since the formation of the company.

COMMERCE AND TRADE

SURVEY OF COMMODITY MARKETS

THE general tendency of quotations for primary products was firm during the past week, and there were a number of important developments which caused a stir on the commodity markets.

An event of some importance was the publication, by the United States Government, of a revised forecast of the probable yield of the cotton crop this year. The estimate of the crop, discussed in a Note of the Week, was considerably lower than expected; consequently quotations were marked up sharply. Another significant event was the decision of the companies adhering to the international copper regulation scheme to increase output from 75 per cent. to 80 per cent. of nominal capacity from October 1st. It will be remembered that quotas, which had been fixed at 70 per cent. of nominal capacity when restriction came into operation in March, 1935, had been raised to 75 per cent. from August 1st. The gradual relaxation of restriction indicates that copper producers are not anxious to use the expanding demand for the metal as a lever to push up prices unduly. Quotations reacted slightly on the decision, but as demand remains brisk, a lasting fall of prices is not expected.

The downward movement of cereal prices, which followed upon the sharp rise of quotations during July, was arrested this week, when wheat prices took a sharp upward turn. In contrast, the improvement on the tea market was not maintained, and raw sugar prices remained depressed. Quotations for cocoa, however, were maintained at the higher level to which they had risen this year. Among provisions, eggs were dearer, beef and mutton a little cheaper, while quotations for New Zealand and Australian butter were marked down sharply.

Demand for non-ferrous metals continued active at rising prices for lead, spelter and tin. The market in vegetable oils was firmer, but business in rubber was not very active, and prices were barely maintained. The tendency of prices at the wool auctions in Australia was steady.

In the United States, too, commodity markets showed a firmer tone this week, and grains, cocoa, cotton, copper and tin all registered price gains. These rises are reflected in Monday's daily index of the price of staple commodities (December 31, 1931=100) which advanced from 183.8 to 185.4 in the week ended last Wednesday, against 183.6 a month earlier and 168.3 on the same day last year.

COAL

SHEFFIELD.—Home demand for industrial coal continues steady and some pits shortened the Doncaster race-week holiday owing to pressure for supplies of manufacturing fuel. There is an exceptionally heavy demand for furnace coke as a sequel to the lighting of additional furnaces, and prices are very strong. Graded coke is also in better request. Gas coke is almost unobtainable. The household market shows no improvement, demand being confined to limited quantities. Conditions are quiet on the export market, supplies being ample to meet all current requirements.

NEWCASTLE-ON-TYNE.—Shipments from the Tyne last week showed an increase of 55,719 tons compared with last year, the aggregate being 266,908 tons. Increasing home trade and a good bunker demand account for the improvement. Northumberland steam collieries are working at full capacity under a brisk home and Scandinavian trade, and it is not easy to obtain these steam coals for several months ahead. Durham gas coal is quiet, but coking coal and bunkers are a steady market. Patent oven coke is offered a little more freely for prompt shipment, but there is no change in prices.

GLASGOW.—The market remains firm in tone. Home trade is keeping up well, and new contract business in nuts is being arranged at prices 2s. 6d. to 3s. 6d. per ton above those ruling a year ago. Export trade continues to be hampered by the stringency of supplies in certain cases and by the rise of prices, but the Baltic markets are operating a little more freely at the moment. The Danish State Railways have invited tenders for approximately 100,000 tons of locomotive qualities for delivery between

the end of this month and March. Navigation sorts remain a strong feature, but steam classes are now a little more plentiful. Nuts are strong in all districts.

CARDIFF.—During the week-end assurances were given by Sir Samuel Instone concerning the settlement of the inter trade union dispute at the Bedwas colliery which enabled the South Wales Miners' Federation to withdraw the notices for a general stoppage which expired on Saturday. Except at the Fernhill colliery, where some sixty miners are preventing work by a "stay-in" strike over a local minimum wage dispute, collieries have continued operations. The question of balloting the workmen at the Bedwas colliery over the issue between the Federation and the Miners' Industrial Union is at present under the consideration of a joint committee sitting in London with an independent chairman appointed by the Mines Department, and it is hoped that this procedure will eventually lead to a settlement.

The trade position is unaltered. To some extent business has been unfavourably affected by the threat of a general stoppage, but it is not known that any important orders have been diverted, and confidence is expressed that the Egyptian State Railways will renew their quarterly contract for South Wales coals. Except for small and sized coals, which are quoted at scarcity prices, quotations are at the scheduled minimum basis. Minimum prices as well as the higher prices of small and graded classes are rigidly enforced by the new Control Board. Coke is very main and scarce, and quotations for pitwood and patent fuel are well maintained. Among the inquiries on the market, in addition to the Egyptian State Railways for 170,000 tons, are one from the Danish State Railways for 100,000 tons and another from the Trinidad Railways for 6,000 tons. Shipments at the South Wales ports last week totalled 334,500 tons, compared with 361,300 tons the previous week, and 354,588 tons in the corresponding week last year.

IRON AND STEEL

LONDON.—The weekly report of the London Iron and Steel Exchange indicates that great activity in all sections of the iron and steel industry is assured well into next year. With the completion of the holiday season the demand for most materials is increasing and there are indications that autumn requirements will be heavy.

In the pig iron department consumers appear anxious to build up stocks in case market conditions become stringent later in the year. But producers, being faced with the rising tendency of the cost of ore and fuel are reluctant to enter into far-dated commitments; though contracts which are completed are generally renewed for delivery over the first part of next year.

There has been no lull in activity in the semi-finished steel department and all works are operating at capacity. Although consumers generally have well bought ahead, they have shown an inclination to place further contracts in anticipation of an increased demand for their products. Specifications against contracts are being pressed upon the works, and the latter are finding it difficult to meet their customers' requirements.

In the finished steel section of the market signs of the beginning of the autumn expansion in trade are already apparent. Practically all the steelworks are producing at capacity. Most of them are in arrears with deliveries and the periods required for the fulfilment of orders are lengthening. Export business has shown some improvement and the volume of inquiry from overseas markets has been active.

MIDDLESBROUGH.—All departments of the iron and steel works in operation in this area continue very active. Demand for all classes of material shows signs of increasing and further blast-furnaces are being prepared to be put into operation shortly. Producers of Cleveland pig iron are so heavily contracted that output is readily taken up by home consumers, and, as there are practically no stocks, actual transactions are very few. Fixed minimum prices are based on No. 3 Cleveland foundry pig iron at 75s. per ton, delivered Middlesbrough. Makers of East Coast hematite are also well sold ahead to the end of this year, the price being based on No. 1 grade at 85s. 6d. per ton, delivered locally, less the 5s. per ton rebate. Shipments of pig iron from the Tees during the first eight days of September amounted to 1,496 tons, compared with 2,118 tons during the same period in August. Parcels have been exported to Belgium (180 tons) and Denmark (750 tons), whilst shipments of foundry iron to Scotland have been on a lower scale.

In the steelworks re-rollers are requesting larger supplies of semi-finished material; all classes of finished steel are heavily specified for constructional work, shipbuilding, railway and other requirements. Whilst business in heavy melting steel scrap is quiet, merchants are inclined to quote higher prices, although consumers maintain that they can still secure their requirements at 57s. 6d. per ton, delivered works. Good Durham blast-furnace coke is obtainable at 24s. 6d. per ton delivered at the furnaces, but makers are not inclined to press sales owing to the expected increase of demand. Arrivals of foreign ore into the Tees during the first eight days of September amounted to 55,140 tons, against 51,932 tons during the same period of August. These deliveries are in fulfilment of contracts, but new business is extremely difficult owing to the higher freights.

SHEFFIELD.—The iron market remains steady and fairly active. Demand for foundry iron exceeds that for forge, but in neither class o

material is there any great surplus. Deliveries for consumption are keeping up with output, so that there is little iron available for putting into stock, either at furnaces or works. Producers are not accepting all the forward business offered, and are not inclined to go beyond the first quarter of next year. Contracts accepted are made subject to any official change in prices. Last week, the Producers' Association decided that there should be no immediate alteration in quotations. Business is good in both East and West Coast hematite. Production of the former is being expanded. In finished iron there is a good market, but crown bars are still in only moderate request.

The steel market is very active, and there is every indication that this state of affairs will continue, at least until the end of the year. Demand for acid and basic billets continues strong, and in the case of the latter it is not easy to meet all requirements. Wire rods, strip, and stainless steel sheets are important features. Prices generally are unchanged. Local industry is working at a high level. The open-hearth furnaces are operating at full capacity, and forges and rolling mills are fully employed.

GLASGOW.—Activity in the West of Scotland is maintained at the highest level, and steel masters are finding it increasingly difficult to meet all the demands made upon them. Although working to capacity, makers of semis are finding output quite inadequate for the requirements of consumers who are rapidly absorbing available supplies. Large tonnages of steel are now being taken up by the Clyde shipbuilders and by local structural engineers. Sheet makers are again busier and have a large number of mills in operation. Bookings are considerable and include a fair tonnage for overseas markets. In the manufacturing trades the position is highly satisfactory, practically all branches having sufficient work on hand to ensure regular employment of plant and men for some months to come. It was announced this week that the Fairfield Shipbuilding and Engineering Company, Ltd., of Glasgow, have received a contract from the London Midland and Scottish Railway Company for two paddle steamers, and that work on these will be commenced almost immediately.

CARDIFF.—The heavier branches of the iron and steel trade in South Wales continue exceptionally active. There is a national shortage of steel bars, and the main handicap of the South Wales steel smelters is the shortage of scrap. In the tinplate industry the works are employed at 62 per cent. of allotted capacity, but the outlook is so promising that it is anticipated that the quota may be increased to 65 per cent. during the next few weeks. Prices are unaltered and are ruling at 18s. 9d. per basis box for tinplates, and from £11 15s. to £12 12s. 6d. for galvanised sheets, and £6 per ton for sheet and tinplate bars. At Swansea last week shipments totalled 97,979 boxes, compared with 60,132 boxes the previous week, and 53,466 boxes in the corresponding week last year; while stocks at 66,950 boxes compare with 92,065 boxes and 61,391 boxes respectively.

OTHER METALS

COPPER.—The market continued to display a strong tone until Tuesday when prices reached a new high level at £38 17s. 6d. per ton. On Wednesday, however, it was announced that the co-operating producers had decided to raise production quotas by a further 5 per cent. to 80 per cent. of the standard tonnages, and prices consequently reacted. Supplies will be increased by some 40,000 tons annually in consequence of this decision. The setback in prices on Wednesday morning was, however, almost entirely recovered in the afternoon and Wednesday's closing quotation was only 8s. 9d. below Tuesday's level. Although this week's decision is evidence that the producers are not anxious to see prices go much higher than at present, a further improvement on the London market is commonly anticipated. In the United States also the market has registered an improvement, and on Tuesday the New York export quotation rose to 9.77½ cents per lb., against a domestic price of 9.75 cents. This is the first time since early in 1934 that the export price has been higher than the domestic quotation.

Sales on the London Metal Exchange: 1,800 tons on Monday, against 975 tons last week; 1,900 tons on Tuesday, against 1,050 tons last week; 2,200 tons on Wednesday, against 750 tons last week. Domestic spot was quoted at 9.55 cents per lb. in New York on Wednesday, against 9.47½ cents a week ago and 9.40 cents a month ago. Wednesday's official closing price for standard cash in London was £38 8s. 9d. to £38 10s., compared with £38 10s. to £38 12s. 6d. a week ago. Stocks of refined copper in British official warehouses at the end of last week, at 50,341 tons, show a decrease of 1,044 tons, while stocks of rough copper, at 1,994 tons, are unchanged on the week.

LEAD AND SPELTER.—Both markets have been active. For the first time since last autumn lead prices passed the £18 mark, while spelter rose to £14 per ton on Wednesday. The strength of lead is, of course, mainly due to its excellent statistical position, which has frequently been discussed in these columns. An additional cause for this week's buoyancy was a report that an international lead conference will be held in London towards the middle of this month. Spelter derived support from industrial buying and from the United States statistics for August, which made a good showing. Deliveries in that country rose by over 4,000 tons to 46,085 tons, while stocks fell by 2,471 tons to 86,194 tons. One other factor which may have had a bullish influence is worth mentioning. Owing to the increase in wages, Belgian zinc smelters have recently been faced with rising costs of production; it is suggested that this tendency may make the Belgians more interested in proposals for a new international Cartel.

Sales of lead on the London Metal Exchange: 2,300 tons on Monday, against 850 tons last week; 3,000 tons on Tuesday, against 1,150 tons last week; 1,500 tons on Wednesday, against 400 tons last week. The New York quotation on Wednesday was 4.60 cents per lb., against 4.60 cents a week ago and 4.60 cents a month ago. The official closing quotation in London for soft foreign for shipment during the current month was £17 18s. 9d. per ton, compared with £17 2s. 6d. a week ago.

Sales of spelter on the London Metal Exchange: 500 tons on Monday against 250 tons last week; 750 tons on Tuesday, against 450 tons last week; 1,500 tons on Wednesday, against 950 tons last week. Wednesday's quotation in East St. Louis was 4.85 cents per lb., against 4.85 cents the week before and 4.80 cents a month earlier. Wednesday's official closing quotation in London for "good ordinary brands" for shipment during the current month was £14 per ton, against £13 8s. 9d. last week.

TIN.—Prices scored a recovery and closed on Wednesday at £194 10s. per ton, a rise of £6 10s. on the week. The sole reason was the hope of an early settlement with Siam. Mr van den Broek, the Dutch delegate on the International Tin Committee is again in Bangkok, engaged in discussions with the Siamese Government. He is expected to reach London by air in time for the meeting of the International Committee on September 23rd. Although the prolongation of the scheme now seems likely, the recent rise in prices seems to have been overdone; for the continuance of the scheme would not by any means imply that prices will again attain the levels reached before the Siamese problem became serious. Standard tonnages

will be higher, and there is also a tendency towards a more liberal restriction policy. A too-rapid price advance in the near future would, therefore, probably be followed by a reaction.

Sales of tin on the London Metal Exchange: 675 tons on Monday, against 500 tons last week; 375 tons on Tuesday, against 245 tons last week; 455 tons on Wednesday, against 260 tons last week. The New York quotation on Wednesday was 59½ cents per lb., against 42.87½ cents a week ago and 41.37½ cents a month ago. Wednesday's official closing quotation in London for standard cash was £194 to £194 10s. per ton, compared with £187 10s. to £187 15s. a week ago. Stocks of tin in London and Liverpool at the end of last week totalled 745 tons, an increase of 53 tons on the week.

OTHER NON-FERROUS METALS.—Among other non-ferrous metals, aluminium ingots and bars for home delivery were again quoted at £100 per ton, and rolling billets at £102 per ton. Nickel, for home and export, at £200 to £205 per ton, remains unchanged. Quicksilver, on the spot, was quoted at £12 17s. to £12 17s. 6d. per flask of 76 lbs., against £12 17s. to £12 17s. 6d. a week earlier. Chinese antimony was quoted at £53 to £54 per ton ex warehouse, as against £53 10s. to £54 10s. per ton last week. Chinese wolfram for "September-October" shipment was quoted at 29s. 6d. to 30s. 6d. per unit c.i.f., against 30s. to 30s. 6d. a week ago. Refined platinum was steady at £14 per ounce.

TEXTILES

COTTON.—Manchester.—The event of the week has been the distinctly bullish crop report of the United States Government. There has been some confusion amongst buyers and producers of yarn and piece goods, and an unsettled feeling has prevailed. Operators expected an estimate of production of about 11,900,000 bales, against 12,481,000 bales a month ago, and scarcely anyone anticipated such a low figure as 11,121,000 bales. It is quite evident that the deterioration of the plants under the influence of the drought in the Western section of the belt has been greater than realised.

Inquiry in cloth for foreign outlets has improved. Sales of any weight for India have been few and far between, but more orders have been secured in light whites and fancies, chiefly for Karachi, Madras and Bombay. Special makes have moved off fairly well for Java and Hong Kong. Increased activity has shown itself for the outlets of South America. Some encouraging contracts have been arranged for the Dominions in a variety of cloths. There has been buying by the Government in heavy materials, and home trade houses have placed a few more orders with manufacturers.

Buying in the yarn market has been irregular. In American qualities rather more business has been done in coarse and medium counts. During the last day or two inquiry in Egyptian descriptions has improved, there being freer operations in medium numbers.

JUTE.—Dundee.—The final forecast of the jute crop for the current season indicates a yield of 8,710,800 bales. The acreage given in July as 2,505,800 acres has now been revised to 2,545,600 acres, compared with last year's revised acreage of 2,180,400 acres. Last season's crop yielded 8,150,000 bales and world consumption amounted to 9,806,000 bales. Owing to the increased production of jute goods in India, consequent upon the extension of working hours to 54 per week by the mills in the Jute Mills Association, world consumption during the current season is expected to reach approximately 11,000,000 bales. If the figures of the forecast are anywhere near correct, the quantity will be considerably below consumption, but during the past few seasons the actual yield of the crops has exceeded the forecast by well over one million bales. Stocks of jute in the hands of the Indian Mills at the beginning of this season on July 1st were 4,000,000 bales; in addition, 1,750,000 bales were then held in consuming centres outside India.

No change has taken place in the position of the mills' dispute in India. A meeting is to be held between the Associated Mills and the "outside" mills at the request of the latter, and hopes are entertained that an agreement concerning working hours may be concluded. Meantime prices for Calcutta goods vary slightly around recent levels.

Raw jute prices have fluctuated a little. The full group of Daisee-1 is quoted at £16 16s. 3d. and single marks at £17 to £17 10s. per ton, with Daisee-4 at from £15 13s. 9d., October/November. Tossa-1 quoted at £17 16s. 3d. and fours at £16 15s., same shipment. Good First Marks are more or less nominal at £20, good Lightnings have been sold this week at £18 12s. 6d. and Hearts at £17 12s. 6d., September/October.

Jute yarns are in some demand and spinners are very busy on orders in hand, so that deliveries are difficult to obtain reasonably early. Common 8 lb. cops are quoted at from 1s. 10½d. to 1s. 11d. and 8 lb. spools at 1s. 11½d. to 2s. All other qualities are firm and unchanged.

A moderate business is taking place in jute cloth and manufacturers are able to dispose of their current production. Prices are very steady at from 2½d. for 10 oz. 40 in. and 1½d. for 8 oz. Linoleum hessians rule quiet, but steady, and a fair and steady business is being done in sacking, bagging and tarpauling.

GRAIN MARKETS

WHEAT.—Prices continue to fluctuate widely under the influence of crop news. A better tone has prevailed this week and quotations, both in this country and North America, have recovered. Latest estimates of the Canadian crop are somewhat below expectations and yields in Europe are also reported to be disappointing. Meanwhile, harvesting in this country has been hampered by unfavourable weather and a substantial proportion of the crop still remains to be gathered.

FIVE YEARS OFF GOLD

Five years ago to-day, Saturday, September 19, 1931, the decision was taken to relieve the Bank of England of its obligation to redeem its notes in gold; and on Monday, September 21st the abandonment of the gold standard by Great Britain was announced to the world. Seen in the retrospect of five years, the events of that memorable week-end appear as the most important turning-point in post-war British economic history. And in the world as a whole no single event, apart from the Wall Street collapse of October, 1929, and the Nazi Revolution of March, 1933, can claim to have been more far-reaching in its effects.

The abandonment of gold by Great Britain has been followed, with greater or less reluctance, by the great majority of nations. By the summer of 1936, France, Holland and Switzerland were the only countries which had not, overtly or covertly, abandoned or qualified the gold parity of 1931. Moreover, by midsummer, 1936, economic revival in countries outside the gold bloc had carried production in most cases above the 1929 level. In Great Britain employment had increased from 9,338,000 in September, 1931, to 10,961,000 in August, 1936; and to-day a belt of new houses, roads, factories, shops and cinemas around London and most of the towns in Southern England and the Midlands bears very concrete witness to the train of events which followed September, 1931.

In the face of this favourable sequel, how comes it that the prospect of being driven off gold was viewed with such grave misgiving—amounting almost to panic—and that the event was so long and so strenuously resisted by practically the whole united strength of the country? For one may recall that it was not the uninstructed alone who were dismayed. The Macmillan Committee, whose report was issued in July, 1931, had "no hesitation in rejecting the course" of a modest devaluation of 10 per cent.; there was no dissent in the Committee on this point. Nor, indeed, was there any dissent among expert opinion from the view that a fall of sterling would be a disaster for the whole world.

These apprehensions were founded on the anticipation of a general shock to business confidence; on the disastrous experience of inflation in the previous decade; on a general scepticism—not yet entirely dead on the Continent—about the possibility in the long run of controlling the movements of a currency that had cut adrift from its gold anchor, and on the fear of a revival of economic nationalism in a world where currency depreciation had again set in. In the light of the knowledge then available, these apprehensions were entirely justifiable. In the light of to-day they seem exaggerated. We have undoubtedly learned some lessons which will permanently alter the accepted view on these matters. But five years is a short time; it is, in particular, short relatively to the length of a trade cycle. The depreciation of sterling was certainly not a disaster for the whole world. But was it an unalloyed gain?

Our departure from gold did, indeed, administer a very great shock to the central banking organisation of the world; but if the other fears were not realised, this was due at the outset mainly to two facts. The first was that confidence was aroused in the stability of our financial situation by the truly heroic efforts taken to balance the Budget. The second factor, which was almost entirely unexpected, was that the depreciation of sterling—in the conditions then obtaining—produced a general deflationary effect abroad, owing to the cutting down of British purchases. The break with gold, far from being the signal for wild inflation, began by producing the opposite effect.

But even after five years, the dangers feared in 1931 have not materialised, and it may truthfully be said that in this country at all events there has been a radical change of opinion as the result of the experience of the past quinquennium. This change is symptomatic of a difference both in the world's economic problems and in the angle from which they are approached. In the immediate post-war years it appeared that the basic condition of restoring economic order out of the prevailing chaos was the re-establishment of an international monetary standard. From

the Genoa Conference of 1922 to the Geneva Conference of 1927, the general strategy was to organise financial and monetary reconstruction, on the basis of the gold standard, as a prelude to the restoration of international trade. It is true that a regime of fixed gold parities clearly implied that in certain contingencies money wages might have to be reduced; but the general expectation was that these deflationary contingencies would not arise. The institution of the gold-exchange standard, the new policy of "economising" gold, the prospect of expanding international trade, were together expected to support a permanent price level of at least 50 per cent.—possibly more—above pre-war prices.

Unfortunately, however, mistakes were made. The wrong gold parities were adopted; tariffs were not reduced; and the latent maladjustments were covered up and left uncorrected by unstable movements of international capital. When, therefore, a powerful deflationary impulse spread outwards from Wall Street in 1929, it was found that the social opposition to reduction in money wages was too great to allow an adequate readjustment of costs except by currency depreciation. In those countries which abandoned their old gold parities with sterling in 1931, the change came smoothly and without political commotion. But in the United States deflation ended in almost complete economic collapse and in Germany in political revolution.

Despite these events, however, and despite the combined revival and stability which the sterling countries began to enjoy, an almost panic fear of cutting adrift once more from gold persisted on the Continent of Europe. To the European *rentier* only two alternative policies were conceivable: "inflation," or the retention of existing gold parities. And for several years after 1931 it was generally believed on the Continent that sterling prices must rise to astronomical heights like mark prices in 1922-24. These ideas have died slowly, and are not yet quite dead. For France, Holland and Switzerland are still on the gold standard; and in Germany, Dr. Schacht, compelled, on the one hand, by the memory of 1923 to avoid devaluation, and, on the other, by the rise of militarism to finance rearmament, is still giving his altogether unprecedented exhibition of monetary tight-rope walking.

In the sterling area and the United States the development of ideas since 1931 has been gradual but far-reaching. In Great Britain the original anxiety vanished as soon as the initial rise in prices subsided. And as time has passed new considerations have come to the fore. It was originally supposed, for example, that the main advantage of "exchange depreciation," was that it assisted a nation's export trade. Since 1931 in Great Britain, however, it has gradually been realised that the effect on exports is comparatively unimportant; and that the real importance of "monetary alignment" is to relieve the pressure on a central bank's gold reserves and to allow the adoption of a cheap money policy designed to restore full employment. In the sterling area to-day freedom from gold is valued almost entirely for its internal advantages—and, it might almost be said, in spite of its external disadvantages.

If a balance were struck to-day, the internal advantages would doubtless be found to outweigh many times over the external disadvantages. But the present moment may not be the correct time for striking a final balance. The "off gold" period has coincided with the upward phase of the trade cycle. The departure from gold has been, in nearly every country, the occasion for recovery, but *post* is not necessarily *propter*. There is no doubt whatever that, if all countries, after "re-alignment" of their currencies, were to agree to bring order into the chaos of the exchanges, the recovery of international trade would be greatly accelerated, unemployment would be reduced, and one powerful cause of international friction would be removed.

We do not suggest that the ultimate judgment will go in favour of the gold standard as it existed before 1931. The lessons of the last five years are too decisive for any return to gold in that sense to be either practicable or desirable. A fixed rate of exchange will never again be the one and only object of economic and social policy. But the full benefits of the new regime will not be reaped until some compromise has been discovered between the rigid system which burst in 1931 and the uncertainly shifting exchange rates of to-day.

PORTUGAL'S DILEMMA

THE Spanish tragedy has been producing, beyond the Spanish frontiers, effects which are as unexpected, and as untoward as those in Spain itself. One of the most startling of these repercussions has been the consequence of the impact of the Spanish civil war upon Portugal.

Under this impact, Portugal has suddenly assumed a new rôle in the international arena. Hitherto, during these post-war years, Portugal has been enrolled (as, for that matter, Spain has also been) in the respectable company of the "neutral" group of West European States which have neither been, nor aspired to become, Great Powers. Within this group she has been in the company of Belgium and Holland as the precarious possessor of a valuable heritage of colonial possessions which it has ceased to be possible for her to defend by the force of her own arms. On this account, Portugal has hitherto been as eager as the other members of the same group of States to do everything in her power to promote and maintain the reign of law in the field of international relations; in the Italo-Abyssinian conflict the Portuguese Government was offered, and accepted, the vitally important chairmanship of the Committee of Eighteen; and it was certainly not the fault of Senhor de Vasconcellos, the Portuguese statesman who acted for his country in this post, that the oil-sanction was not applied against Italy. On the other hand, at the present moment, Portugal is apparently ranging in quite a different camp—in the camp of the Fascist States—and no longer in that of the neutrals. And the anxiety which has led the Portuguese Government to show itself in this strange alignment is a new concern for the security of the existing regime in the metropolitan territories of the Portuguese Republic in Europe, in place of the old Portuguese concern for the integrity of the Portuguese colonial empire overseas.

No doubt it was inevitable that the Spanish civil war should profoundly affect the life of an adjoining European country which has Spain for its sole neighbour on the landward side. But the re-orientation of Portuguese foreign policy in the present crisis is far-reaching enough to call for an examination of the colonial motive and the domestic motive in the Portuguese Government's mind.

The Portuguese colonial empire has steadily appreciated in value during the last half century, thanks to the opening up of the hinterland of Portugal's colonies by the enterprise of other Powers. For example, the present Portuguese possessions in West and East Africa have grown out of the African ports of call along the route to the long-lost Portuguese empire in India. These African crumbs were left in Portugal's hands when the Indian loaf was snatched away from her, because a handful of African ports with a barbarous and unexplored hinterland did not seem worth the trouble of picking up. To-day, however, when this once dark hinterland has been transformed into the Transvaal, the two Rhodesias, Nyasaland and the Belgian Congo, these derelict Portuguese settlements on the two African coasts have become the maritime termini of railways that run into the heart of Africa and tap copper mines, cattle-ranges and agricultural regions producing crops for export. Lourenço Marques, Beira and Lobito Bay have become busy and flourishing *entrepôt* centres. In fact, the value of the Portuguese colonies has appreciated all round. And the precariousness of Portugal's tenure has been accentuated in the same ratio.

Until the other day, a growing anxiety about the security of her colonial empire had been the mainspring of Portuguese foreign policy; for there has been—and presumably still is—a real danger that these indefensible overseas possessions of a weak European State may one day be seized by strong and unscrupulous hands, in order to be used for redressing the inequality between the "have" and "have-not" Powers at a helpless third party's expense. On the eve of the Great War, Great Britain perhaps sailed rather near the wind in making a private agreement with Germany, over Portugal's head, about a possible future division of the colonial possessions of "England's oldest ally," should Portugal one day feel inclined to sell them. And Portuguese fears must have been aroused once again by

some recent utterances of Mr Pirow, the South African Minister for Defence, whose formula is that, while it is unthinkable that Germany should be allowed to regain possession of Tanganyika and South-West Africa, it is equally unthinkable that Germany should remain without any African possessions whatsoever. The prospects for Portugal are the more ominous because she has been freely charged, as Abyssinia has been, by parties who can hardly be regarded as disinterested, with the crime of misgoverning her alien African subjects so grossly that it would be a deed of justice and mercy to relieve these victims from the tyranny under which they are groaning.

In these circumstances, Portugal has shown an anxiety about her colonies that is only natural. In order to drive the last nail into the coffin of the pre-war Anglo-German agreement, Portugal took the extreme step of intervening in the Great War on the anti-German side—a desperate remedy which certainly availed to save the Portuguese Empire for the moment, though the German armed forces in East Africa were actually standing on Portuguese territory at the moment of the Armistice of 1918. Again, after the War, the Portuguese Government was only induced with the utmost difficulty to sell to the Belgian Government at a very handsome price a minute portion of Portuguese territory near the mouth of the Congo which was wanted by the Belgians in order to provide an alignment for a railway from the narrow coast to the vast interior of the Belgian Congo—so apprehensive were the Portuguese lest the sale of any of their colonial territory, in whatever quantities or circumstances, might be used against them later on as a precedent for forced alienations on a larger scale.

Now the Portuguese do not fear spoliation at the hands of Belgium, or again at the hands of Holland or Great Britain or France. If any Powers do cherish nefarious designs upon the Portuguese colonial empire, the would-be robbers can only be Japan in the Far East and Italy and Germany in Africa. Yet, at this moment, we see the extraordinary spectacle of Portugal aligning herself with Germany and Italy against France and Great Britain over the Spanish affair.

The truth is that the Spanish civil war has raised a new issue which touches the present regime in Portugal still nearer the quick than colonial anxiety. For, since 1926, Portugal has been living under a local variety of Fascism; and since 1931 things have been kept quiet there. Her present rulers are evidently afraid that if the extremists who emerge victorious out of the present internecine struggle in Spain are those of the Left, then the position of the Portuguese Government will become untenable. This new and pressing anxiety seems to be justified in some measure by the naval mutiny of last week—quickly and easily suppressed though it was. Indeed, the Portuguese Government is now so alarmed about its own position at home that it seems to have made up its mind to do what it can to prevent a victory of the Government forces in Spain, even if the alternative is the establishment of a Spanish regime which will be dependent on the armed support of Italy and

Germany. The result may be that the very two Powers that have been casting covetous glances at the Portuguese colonial empire will be henceforth in a position to put a Spanish screw upon Portugal in Europe.

We may sympathise with the Portuguese Government in their dilemma. For the last five years Senhor Salazar's Government has maintained internal peace, by hook and by crook, in a country which had been distracted by ceaseless revolutions and revolts during the years between the expulsion of King Manoel in 1910 and the advent of Senhor Salazar to power as Finance Minister and then Dictator in 1926. In Great Britain and France, there is, of course, no more desire than there is in Italy or Germany to see the present Portuguese regime overthrown by violence in order to plunge Portugal into an anarchy as destructive as that now devastating Spain. On the other hand, it will be a very serious matter for Portugal if her Government persists in its apparent policy of ignoring British requests and working for the triumph of the Spanish militarists at the cost of stultifying the efforts of the rest of us to hold the ring in Spain, and thereby to preserve the peace of Europe. Portugal should think again before she irrevocably places herself in Italian and German hands.

RETAIL WAGES AND HOURS

(BY A CORRESPONDENT)

AFTER an interval of seventeen years, official consideration may again be given, in the near future, to the vexed question of hours and wages in the retail distributive trades. At a recent conference with retail representatives, Mr Ernest Brown, the Minister of Labour, dwelt on the implications of the fact that while the number of insured persons in retail trade had greatly increased between 1923 and 1935, the percentage of unemployment in the industry had simultaneously been rising. The amount of unemployment among youths and girls is higher in retail trade than in any other industry. Figures available at the conference showed that, early in 1936, the distributive trades alone accounted for 24 per cent. of all unemployment among youths of 18 to 20 years, and for nearly 28 per cent. of all unemployment among girls of the same ages. The economic and social consequences of this condition were attested by the same official records, which showed that the percentage of men aged 21 to 24 who had been unemployed for more than one year was 15.9 in the distributive trades against 8.8 in all other industries.

There is little doubt that the practice of employing casual labour, particularly juvenile labour, in this industry has increased rather than decreased of recent years. The problem of "blind-alley" occupation has, consequently, become increasingly serious. Closely related to it is a further problem—that of long hours. The width of the gulf which separates the worst from the best employers imposes

an almost decisive limit on the latters' efforts to raise prevailing standards; for in an industry where wages represent a significant portion of total working costs, the competition of low wage-paying shops is formidable.

The ignorance of the general public about prevailing rates of wages and hours of labour in the retail trades may be explained largely by the absence of really comprehensive and up-to-date information, official or otherwise. Few industries are worse served, but a useful working idea of existing conditions may nevertheless be obtained by co-ordinating such information as is available. In 1926 the Ministry of Labour conducted an inquiry into wages in the drapery and allied trades. The results, based on a sample of 48,749 employees, showed that 57 per cent. of male workers under 18 earned less than 15s. a week. Among males aged 18 to 20, some 35 per cent. earned less than 25s., while of males aged 21 and over, 47 per cent. earned less than 65s. and 24 per cent. earned 50s. and under. Among women workers, 36 per cent. of those under 18 earned 15s. or less, 60 per cent. of those aged 18 to 20 earned less than 25s., and 45 per cent. of those of 21 and over earned less than 35s. a week.

The National Union of Shop Assistants has conducted various surveys of conditions in the tailoring and grocery trades. According to the resulting figures, some 60 per cent. of adult male workers in the tailoring trade earn less than 50s. a week; some 47 per cent. earn 45s. or less, and only 18 per cent. earn over 60s. In the grocery trade, wages are lower; some 57 per cent. of adult male workers earn 40s. or under, and the average wage is 38s. 6d. In some multiple shops in the boot and shoe trades, women sales assistants are frequently paid less than 30s. a week.

Agreements operated by some of the more progressive employers, though relatively few in number, afford a striking contrast with conditions elsewhere. For example, the figures of eight co-operative societies, operating in different parts of England, show that, on the average, male sales assistants receive remuneration rising in regular stages from 14s. 7d. a week at the age of 15 to 60s. 8d. a week at the age of 24. Among female sales assistants, earnings rise, between the same age limits, from 13s. 5d. to 38s. 6d. A well-known chain store which carries on an increasing and profitable business, pays its female sales staff 22s. at the age of 16, rising by annual increments of 1s. 6d. to a total of 37s. at 22. Window dressers and floor walkers receive 32s. 6d. rising to 45s., and cashiers 40s. rising to 100s. Additional remuneration takes the form of an annual bonus equal to two weeks' pay, and the provision of cheap meals.

On the matter of hours, the report of a Select Committee on Shop Assistants, five years ago, showed that an average week of 48 hours, with a maximum of 57, was worked, generally, in departmental stores, shops for the sale of wearing apparel, ironmongery and fancy goods establishments. The total averaged 50 to 54 hours in bakery, pharmaceutical, dairy, fishmongery, grocery and hairdressing businesses. For newsagents' shops the general average was 54 hours, though many "family" premises were open longer. Among butchers', cooked food and green-grocers' shops the average was as high as 55½ hours. In tobacconist shops it was 59, in the confectionery trade as much as 62 hours (in London) with a maximum for the whole country of 80 hours. Hours were found to be definitely longer in London than in provincial cities. For seventeen categories of retail trade, the mean totals were 55½ in London and 51½ elsewhere.

The problem of long hours is particularly difficult, because it is governed largely by the shopping habits of the general public, which, in turn, are frequently determined by the hours of employment in other trades. The co-operative societies have achieved a strict 48-hour week by a combination of such expedients as later opening, longer meal hours and six o'clock closing on three days a week, but for many other trades the provision of extra staff to enable a relay system to be worked would appear to be a more advantageous course. Already, such a system has been introduced, with satisfactory results, in certain districts and trades, particularly in tobacconist, confectionery, and multiple newsagent businesses.

The Committee reached the conclusion, in 1931, that a limitation of working hours should not tend to raise prices (except in the grocery trade, where the average margin of profit was relatively small), and that a 3 per cent. increase in the gross return, devoted to the payment of higher wages, would probably not encounter serious objection from consumers.

The Committee's estimate may be somewhat on the low side. Mr Lawrence Neal, in 1932,* estimated that of a gross "mark-up" of 28 per cent. (a representative average figure for departmental stores), salaries and wages absorbed 12½ per cent., occupancy, publicity and miscellaneous expenses 11½ per cent., and interest on working capital 1 per cent., leaving 3 per cent. for net surplus. A deficiency in estimated turnover of only 5 per cent. may, according to Mr Neal, cause a fall in net surplus to a mere 1.33 per cent. But it would appear, in the light of available data, that fully one-third of the lowest paid adult employees would have to receive wage increases averaging 25 per cent. if the minimum of 60s. a week for adult male assistants, and 45s. for adult women workers, envisaged by the employees' unions, were to be realised. The "surplus" margin would obviously be reduced to small proportions, even for the departmental stores, and to even smaller proportions for the multiple shops, which have more employees at the lower levels.

Nevertheless, the prospect of an amelioration of working conditions is heightened by contemporary developments such as the adoption of higher standards of living, the concessions secured by workers in other trades, and the increase in the strength of trade unionism in the industry itself. The Government's attitude is sympathetic; the public is friendly; and the example of recent events abroad, particularly in France, may be contagious. Whether the change will come from within, however, may be questionable; for many employers who would welcome improved conditions declare them to be impracticable until all their competitors are required to subscribe to them. The initiative, whether by the establishment of trade boards or otherwise, must apparently, come from the Ministry of Labour. And the extent to which the inevitable cost should be passed on to consumers or offset by a far-reaching overhaul of organisation in many branches of the industry, is a question of direct public interest.

AGRICULTURAL TRACTORS

ONE of the most striking results of the measures taken during the past few years to stabilise the position of British agriculture has been a rapid increase in mechanisation following directly from the improved purchasing power of the agricultural community. This process has been noticeably accelerated during the past year. It is opening up an unexpectedly large market for agricultural tractors, the production and sale of which is shared between makers of commercial road vehicles and agricultural machinery manufacturers. Official information about the size of this industry is scanty, since an agricultural tractor need not be registered as a motor vehicle unless it makes use of the public roads. For registration purposes an agricultural tractor is classified as an "Agricultural Engine—5s. Class," and the small amount of the licensing fee naturally gives little incentive to the authorities to require registration. Nevertheless, the motor census of September, 1935, showed that 18,978 tractors were registered, compared with 16,221 in 1934.

The actual number of tractors in use must be considerably in excess of the number registered; it may well be nearly twice as great, possibly even more. A recent publication of the Oxford Agricultural Economics Research Institute gives the number of tractors as "over 30,000" in 1934, which compares with 14,000 at the time of the agricultural machinery census of 1925. For the past year new registrations—i.e. known new sales of tractors—have numbered 4,252, compared with 2,828 in the previous year, and 2,029 two years ago. It is a reasonable inference that actual sales of new tractors are considerably in excess of this number.

* "Retailing and the Public." By Lawrence E. Neal. Allen and Unwin.

The replacement demand alone is considerable; for the average life of a tractor is about eight years. A reasonable estimate of sales on the home market in the past year would appear to be 7,000.

Although tractor work is mainly associated with large-scale arable farming in the Eastern Counties, recent developments in market gardening and in the improvement of grass land are opening up new uses for the tractor. Thus, the potential increase in tractors is probably greater outside than inside the main arable areas. The factor limiting increased sales is the small size of many farms. On arable farms of 300 acres and upwards, the employment of tractors is the rule; whereas on farms of less than 100 acres it is the exception. To some extent the difficulty is being overcome by the extension of the functions of the agricultural contractor, who, with adequate and fully utilised mechanical equipment, is often in a position to undertake ploughing, cultivating and other operations, at a pre-arranged charge per acre, more cheaply than the farmer can do them himself.

The development of agricultural tractors has naturally made most progress in the United States, with its large farms, extensive farming methods, highly developed industrial organisation, and (until recently) shortage of labour. It is therefore not surprising that the British market should at first have been mainly supplied either by direct imports from America or by American-designed machines manufactured elsewhere. In 1932, for example, British imports of agricultural tractors amounted to 2,566 and exports to only 55. Recently, however, a sharp rise in imports (reflecting improvement in home demand) has coincided with a noteworthy increase in exports of British-made tractors. Thus, during the first eight months of 1936 imports totalled 3,170 tons, valued at £273,324, against 2,927 tons, valued at £228,350 in the corresponding period of 1935. Exports of British agricultural tractors, on the other hand, have this year risen to an aggregate of 7,531 tons, valued at £462,596, compared with only 4,410 tons, valued at £279,444, in the first eight months of last year. Imports are almost entirely from the United States, while British exports go mainly to the Dominions. Taking imports at 2,300 tractors annually, exports at 5,400, and home sales at 7,000, British production would appear to be running at around 10,000 annually—an increase of over 100 per cent. during the past year.

In view of the British Government's agricultural policy there would appear to be considerable room for the further expansion of the industry. The essential to success is to supply a sound article at a price within the means of the smaller farmer; for demand from the larger farms is mainly for replacement purposes. There will, however, always be a good demand from agricultural contractors and large farmers for the more expensive machines, provided that the economies resulting from their full employment are sufficient to counterbalance their higher initial cost.

Tractors fall into two main classes: lightweight tractors, which usually have wheels and, having been started on petrol, are run on paraffin; and heavy tractors, many of which are equipped with "caterpillars" instead of wheels, and frequently have Diesel engines. Those most commonly employed are Fordsons and Internationals, the latter being a product of the International Harvester Company of Chicago. The prices of these two makes range respectively from £135 to £355, and from £172 to £550. Other makes with a substantial sale on the British market include the American Case, Massey Harris and Caterpillar, with a price range of £240 to £2,100; the Bristol, a British machine produced by the Bristol Tractor Company, which sells at £195; and the Marshall and Ruston, both of which are British machines. The greater part of the agricultural demand is for wheeled tractors, which, although much cheaper and lighter than the "roadless" type are quite suitable for ordinary agricultural operations. Prices for the wheeled Fordsons range from £135 to £180, compared with £320 to £355 for the "roadless." The latter type is necessary on difficult or hilly land. It is fairly extensively used in forestry operations and in association with the heaviest type of agricultural equipment. Although still much less numerous than the wheeled variety, this type is tending to gain ground.

The great impetus in British tractor exports coincided with the beginning of large-scale production of Fordsons at

Family provision scheme

A scheme to secure a Capital Sum payable at death and a regular income over a period of years for dependants in the event of early death, at a cost which is little more than that of ordinary life assurance.

It is readily adaptable, and rates will be quoted on application for policies to suit the needs of each individual.

Established 1844 Funds exceed £23,000,000

Dagenham, and it may be assumed that it mainly represents exports of Fordsons. Similarly, imports may be taken as mainly representing Internationals. These two makes will undoubtedly have to face keener competition in the future than in the past, but they have the great advantage of being well established in a somewhat conservative market, and of producing on a sufficient scale to keep their prices competitive. Nevertheless, the growth in demand and the great potentialities of this market are not likely to remain unnoticed by other concerns.

BED AND BREAKFAST

[Our Special Correspondent has lately returned from an investigation, in propria persona, of one of the oldest but least organised of Britain's indigenous industries.]

It should not be assumed too readily that the decision of the Government not to apply the overcrowding regulations to holiday lodgings represents a tacit admission by the authorities that all is well with the board-residence industry. On the contrary—if we are to judge by the reasoning which has been held to justify intervention in the case of coal, cotton, iron and steel, transport, fishing and agriculture—all the evils which used to afflict these industries are rampant in the bed-and-breakfast trade.

In the first place, the industry is functioning within the simple pattern of a *laissez faire* economy, and all experts in modern reconstruction are agreed that this condition is irreconcilable with efficient operation. Entrance into the industry is ridiculously easy. The most cursory observation *in situ* will reveal that any person regards himself or herself as qualified to put up a notice offering homely accommodation to all and sundry. More detailed inquiry elicits extraordinarily trivial excuses for such action. "There's a spare room doing nothing and we may as well use it." . . . "We are glad to earn a few extra shillings for the winter." . . . "It makes a bit of company"—all absurd pleas which would earn short shrift in any sound totalitarian community. It is all the Exchange Equalisation Fund (*née* Lombard Street) to a china orange that some of the people in Jarrow, who were prevented just in time from earning an income as steel producers, have coolly put up a card in the window, and transferred their disturbing activities to Scarborough, Skegness, or Southend. One of the basic problems confronting the advocates of a planned economy is this propensity of persons excluded from a reorganised industry to seek an opening in some other occupation.

What is the net result of the policy (or absence of policy) of allowing an industry to work out its salvation without let or hindrance? In the bed-and-breakfast trade we have a multiplicity of unco-ordinated and intensely individualistic producers, ranging from the luxury hotel which is strenuously supporting the official programme of reflation, down to the hopelessly inefficient widow who overfeeds a couple of youngsters because they remind her

of her own boys. There is no national plan, no standardisation, no orderly production and marketing. A few simple tests will demonstrate this fact. What are bacon and eggs, the staple morning meal? One may range the whole countryside and the seaside, study all the Reorganisation Committee reports, read all the orange books, without discovering a simple clear-cut definition. Are there one, two or three rashers? Are they served with or without the rind? Are the eggs scrambled or fried? At the higher stages of production the pig, the hen and the cow are rigidly controlled and regulated. But at the final stages their products are disbursed in a perfectly chaotic manner. Has the Ministry of Agriculture wearied in well-doing? Of the countless other examples of disorder created by the free play of unbridled forces reference need only (but must) be made to the unstandardised and inadequate provision for the hanging of a razor strop.

The effect of these conditions on the consumer should not be forgotten. Haphazard methods of production are inevitably reflected in the casual behaviour of the *clientèle*. The terminology in vogue in the industry is significant of this tendency. People talk of "popping down to the sea," "clearing off for the week-end," "dropping in at so-and-

so." Persons start in the morning for a ride, a walk or some other excursion without the slightest idea where they will put up for the night. Is this the right mentality or the right training in a world rapidly arming for a decisive struggle? It may be true that most generals start a battle without knowing where they will be at nightfall. But neither the rank and file nor the general populace is expected or allowed to know of this fact. On the contrary, even in a headlong retreat G.H.Q. is careful to report that the movement was conducted according to plan. Plan is the operative word here, as everywhere else.

There is, however, a more decisive military argument against an unco-ordinated bed-and-breakfast industry. Peace-time lodgings are war-time billets. If the Government does not promptly take the industry's affairs in hand, one of our enterprising daily newspapers will produce a blue book on Billet Unpreparedness, which will shake the seats of the mighty. All the circumstances point to the immediate establishment of a Bed-and-Breakfast Marketing Board, with the complete paraphernalia of registered producers, regulated production, quotas, price control and central selling. A statutory levy for the scrapping of some of the earlier bedsteads should be part of the scheme.

NOTES OF THE WEEK

"The Rally of Honour."—The Nazi Party Rally at Nuremberg, which in view of Germany's attainment of national equality in armaments was dignified with the name "Rally of Honour," ended on Sunday night with a rhetorical speech by the Führer. In this he announced that Germany could never have any diplomatic dealings with "Bolshevism"—as the Jews once had none with the Samaritans. The closing speech, however, was in the nature of an anticlimax after the extraordinarily violent outbursts of Herren Hess and Goebbels against Russia last week; for both German and foreign diplomats present, remembering former Party Rallies, had expected the traditional *dénouement* of some striking "accomplished fact." It had been rumoured that the Reichstag would be convoked at the close of the Rally; which led observers to guess that something would need to be ratified by the appointed representatives of the German people. Nothing occurred; and conjecture at once shifted to the plane of the new Locarno discussions. It was rumoured that, after such virulent abuse of Russia, Communism, and the personalities in the Moscow Government, Herr Hitler would instruct the German Foreign Office to make the abandonment by France of the Franco-Soviet Pact of Mutual Assistance the condition for Germany's participation in any future conference with France, Belgium, Italy and this country. Certainly this would accord with the temper of Herr Hitler's two speeches at the Rally; and rumour went even further—namely, to the effect that Germany would offer France a German undertaking to respect her frontiers, and some limitation of German armaments, as a *quid pro quo* for the denunciation of the Pact. This would be in line with Herr Hitler's offer to the Locarno Powers on March 7th last of a security pact strictly limited to the German frontiers with Holland, Belgium and France. It is, however, after all, the very issue which the Locarno Powers have to discuss in London—whenever the German Government are satisfied that the period for "the necessary preliminary diplomatic arrangements" is long enough. It can scarcely be posed as an "either . . . or" by Germany before she agrees to participate in the London negotiations, without arousing suspicions about her good faith. In this connection, the importance of the Rally seems to have been more of a domestic nature than the tenor of the speeches at first appeared to indicate. The gratuitous violence of the speeches at Nuremberg must have alarmed many Germans themselves; and not the least important effect abroad has been—not the reaction of Russia, but the evidence of Signor Mussolini's discomfiture over the performance of Herr Hitler. This may yet have significant repercussions on the Locarno preliminaries.

Manœuvres at Minsk.—While Herr Hitler has been pouring out anti-Russian invective at Nuremberg, other speeches were being made last Saturday at Minsk, on Soviet soil, by Marshal Voroshilov, People's Commissar for Defence in the All-Union Government, and also by the heads of the Czechoslovak, French and British military delegations attending the manœuvres. All three visitors alike spoke in terms in which cordiality was mingled with admiration for the Soviet Army's equipment and performance; while Voroshilov told them that "the invincible Red Army is ready at any moment to destroy the enemy in his own territory." The aggressive note in this boast (which Marshal Voroshilov repeated at Kiev on Thursday) is a new and unfortunate innovation in Russian utterances on foreign relations; yet it is scarcely surprising if the Russians do at last begin to retort in kind to Herr Hitler's unprovoked and unremitting campaign of verbal provocation. It is also inevitable that Germany's neighbours, including ourselves, should look with a tolerant eye on the only force that can in the long run provide an adequate equipoise to Germany's armed might. More and more menacingly, we are confronted with the prospect of Germany launching an attack against Russia. But in this prospect there are two unknown quantities. On the one hand, while we can be sure that the Germans will know how to make use of their new armaments with the utmost efficiency, we still do not know whether Herr Hitler really does mean to wage the war of aggression towards which he seems so rapidly working up. On the other hand, while we can be sure that Russia—if only because of her great possessions, of which Herr Hitler gave his followers an inventory—will not be the first to take up arms in a war from which she can have nothing to gain, we cannot be sure that, if a war is forced upon Russia by Germany, the Russians will show themselves appreciably more efficient in the modern art of war than they were in 1914-18. It would be interesting to know how far the foreign military observers of last week's manœuvres at Minsk were able to judge how the present Russian Army would be likely to acquit itself on active service. It is noteworthy that the Russian arms which all three observers singled out for their highest praise were arms like the tank corps and the air force, which are entirely dependent for their effectiveness upon a command of mechanical technique. Has the Soviet regime really been able, in less than twenty years, to transform the Russian moujik into a sort of Shavian Straker to whom the mechanic's art of driving—and repairing—a tractor or a tank comes as natural as it is for the peasant to handle the antique plough-share or sword?

M. Blum's New Problems.—The French Popular Front Government is engaged in a struggle to combine social progress with business recovery at home and peace with security abroad. No sooner had the Communist revolt on the Spanish issue been composed last week, than new stay-in strikes and occupations of factories broke out, particularly in the North. These strikes, as our Paris correspondent points out this week, are not concerned with intervention in Spain nor even mainly with the threatened rise in the cost of living. They are in most cases the result of disputes over the application of the "Matignon Agreement" of last June between employers and workers. That agreement, which greatly benefited the workers, was accepted by the employers under great social and political pressure. Some employers have doubtless been unnecessarily tardy in applying it; while others, particularly small employers and those engaged in exporting and consequently hard hit by the over-valuation of the franc, have been faced by formidable difficulties. The Northern exporting textile industry, a French depressed area, has naturally been the danger spot where the pressure of the over-valued franc on the one hand and the rising cost of living on the other have met and provoked friction. At the moment it seems that M. Blum's personal effort at conciliation will succeed. But the conflicts this week in the export trades show what trouble the French Government has incurred as a result of the Communists' obstinate refusal to agree to devaluation last June. Until the moment for devaluation seems politically ripe, the best policy for the Government would seem to be to stop the rise in the cost of living—which has so far only been slight—by an easing of import restrictions, particularly wheat, and by some substitution of direct for indirect taxation. That the Government has both "monetary alignment" and tariff reduction in mind is indicated by the economic proposals which, according to reports from Paris, it intends to make at Geneva this week. The French delegation is to include M. Spinasse, Minister of National Economy, M. Bastid, Minister of Commerce, and M. Jouhaux, Secretary-General of the Confédération Générale du Travail. And it is hoped that, following the recent conversation with Dr. Schacht (on whom M. Bastid paid a call this week, in Berlin), some joint committee, at least including French and German representatives, may be formed to tackle the inter-related currency and fiscal problems. At the same time M. Delbos and M. Paul-Boncour are to make yet one more effort to achieve an agreement on arms limitation, or at least on the publication of armament Budgets. M. Blum's Government deserves congratulations on its refusal to despair in a lowering international atmosphere.

Suspense in Spain.—Last week-end, the Spanish Government militia and Basque Nationalist forces silently stole away from San Sebastian, and the city fell into the hands of the rebel forces without any repetition of the destruction at Irun. The rebel generals have thus obtained their port in the North, which should enable them to secure supplies for General Mola's forces direct by sea, instead of indirectly from the South by the corridor along the Portuguese frontier. The Government troops have fallen back on the stronghold of Bilbao and on a line between that place and just north of the rebels' headquarters at Burgos. In the North-East, Huesca has still not fallen, though it is all but invested; and both sides are pouring reinforcements into their lines round Saragossa. In the South-west, General Franco's force is slowly advancing beyond Talavera towards Toledo and Madrid; but the Government's troops have been reinforced both here and on the Sierra de Guadarrama to the north-west of Madrid; and General Franco has so far refrained from attempting to outflank the defences of the capital by a thrust eastward against the free corridor between Madrid and Valencia. Since the week-end another period of stalemate seems to have supervened on the intense activity of last week. Meanwhile, the French Government's plan to secure an effective and supervised international neutrality still hangs fire, and the Portuguese Government maintains its attitude of non-co-operation.

Mr Roosevelt's Prospects.—Monday's election in the State of Maine has not shed a great deal of light on the outcome of the Presidential election in November. The offices to be filled were those of Governor of the State, United States Senator and three Congressmen. Of these, the Governorship and two of the seats in Congress were before Monday held by Democrats. All, as a result of the election, are now in the hands of the Republicans, as is normal in Maine. The State has thus "gone Republican," and Mr Landon is naturally elated over the fact. The Democrats, on the other hand, draw comfort from the manner of its going. The Republican victor in the Senatorial election had a majority of only about 5,000 in a total poll of 310,000. The Republican majority in the contest for the Governorship was 43,000, but even this is small as Republican majorities go in Maine. If the election shows anything at all of wide application (which is doubtful), it is that the normally Republican States will return to their old allegiance in November. But that has been known for months past. The election will turn on the border-line States, and Maine, not being one of these, can give no guide to their choice. The primary elections in other States, which have also been held this week, have given equally scanty indications of the trend of electoral opinion. In Michigan, for example, the only lesson to be learned is that Democratic voters will vote for a Roosevelt supporter, but Republicans will not. The President's adherents seem to have made a good showing in New York and Wisconsin, two vital States, but primary elections are a notoriously inaccurate guide to the ultimate election. The position thus remains that Mr Roosevelt is going to have a hard fight for re-election. It still seems likely that he will win, but it is not at all certain that he will be able to carry a Democratic majority with him into the House of Representatives. If he fails in this, American politics look like relapsing into their normal state of irritable frustration, sanctified as the separation of powers.

Tariffs and Devaluation.—The inter-relation of tariff and currency problems is specially emphasised by the report to the Council of the Economic Committee of the League, published this week. A further move towards the freeing of trade, the Committee recognises, cannot be made while the existing monetary tension affecting certain countries continues. The Committee is perhaps a little pessimistic in arguing that the economic situation has reached a "parting of the ways, the one road leading to a worsening of international trade and the other to the normalisation of the exchanges." For even without a "normalisation of the exchanges" there is no sign of any current shrinkage in international trade. As is pointed out in another League document issued this week, the "Note by the Secretary-General" on the economic situation, "the tide of recovery is flowing strongly." Indeed, in the sterling-dollar area international trade is rising; and what holds it back and maintains trade restrictions elsewhere is the attempt of a few European countries to preserve over-valued gold parities a little longer. In places the Committee seems to suggest that it is not so much this tension as the internal credit expansions (which it oddly classes with "quotas, embargo, restrictions and attempts at self-sufficiency") that have proved injurious. But where internal credit expansion has been preceded by devaluation it has been the prelude to stable recovery—as the Committee in effect admits when it adduces as an encouraging sign the fact that "all countries are promoting the expansion of internal credit, which is accompanied by increased production." Few will dispute the Committee's general conclusion, however, that what is now wanted is a combined "monetary alignment" and easing of trade restrictions. The first should facilitate the second; for as long as internal purchasing power is shrinking, governments will seldom, if ever, consent to tariff reductions. It is notable that the Committee gives a cautious blessing to devaluation: "whether by deflation or devaluation, the accommodation to external price levels is one that each country must undertake for itself." In proposing consultations between the leading countries rather than another World Conference, the Committee also shows itself wise.

A Crop of Strikes.—There have been some signs this week of an outbreak of minor strikes, "stay-in" and otherwise, in various parts of Great Britain. Is there evidence here that the rise in the cost of living and in profits is initiating the traditional strike movement that accompanies the latter part of the upward swing of the trade cycle? The Bedwas dispute is of course entirely concerned with the "company union" issue, as this week's events have again demonstrated. The postponed meeting between representatives of the South Wales Miners' Federation and of the Bedwas Colliery management was held in London on Saturday. Mr Horner, President of the Federation, argued the case for a ballot on the union issue, and the meeting was postponed for a week. At the same time the Miners' Industrial Union (which is regarded as a mere "company union" by the Mineworkers' Federation of Great Britain, of which the South Wales Federation is a part) announced its refusal to take part in the ballot. It added that a "terror" had been introduced into the Bedwas coalfield by the Federation. In reply to this statement, the General Secretary of the Federation remarked that the Industrial Union had not been asked to take part in the ballot, and that the issue was one between the Federation and the Bedwas Colliery management. It may be hoped that no further time will now be lost in arranging for the ballot, even if the parties cannot agree beforehand to abide by the result. For the result will at least clarify the situation and make it easier for the Minister of Mines to suggest a reasonable solution. Meanwhile the Lanark coalfield has been troubled by a "stay-in" strike of over fifty miners at Blantyre. The strike began on Thursday of last week and ended on Sunday, when the men, who had been refused food and water by the management, came to the surface. As a protest against the refusal of food and water by the Blantyre management, between 20,000 and 30,000 Lanark miners observed a 24-hour strike on Monday. The original dispute is understood to have concerned rates of wages. A miners' strike in West Yorkshire on the union issue has also been threatened during the week; and as a result of the failure to stop the strike of 220 weavers at Skipton, the Lancashire employers decided on Monday not to take part in the proceedings of the Cotton Conciliation Board. It will be noticed that all these strikes are in the depressed coal and textile industries and not in the prosperous heavy industries in which wages and prices are alleged to be "chasing" one another. Nevertheless the concentration on the union issue, and the tendency to adopt the stay-in method, possibly indicates the growth of a politically more aggressive spirit among the labour rank and file.

The Cure for Malnutrition.—The study of malnutrition is now passing from the scientific investigation of food values to the economic investigation of comparative money incomes and consumption standards. The newly published report*, for instance, of a sub-committee of the League's committee on nutrition, contains interesting figures of food consumption in different countries. Consumption per head of dairy products in Great Britain, though growing, is shown by this report to have been in the period 1930-34 still below consumption per head in Switzerland, Norway, Denmark, Australia and New Zealand. (Consumption in Italy was less than half that in any of the 13 other countries included in the table.) Consumption of all meat per head in Great Britain was a little above that of the United States, and was only exceeded in Canada, Australia and New Zealand. Italy is here again the lowest in the table. In consumption of eggs, Belgium, Canada and the United States come out above Great Britain; and in consumption of wheat Great Britain is sixth, following France, Bulgaria, Italy, New Zealand, and Australia. The cure for malnutrition, as Sir John Orr frankly admitted in his address to the British Association, is an increase in the purchasing power of the poorer classes. "Health and agricul-

* "The Problem of Nutrition: Statistics of Food Production, Consumption and Prices." Documentation prepared by the International Institute of Agriculture. League of Nations Publications Department. (London) Allen and Unwin. 110 pp. 3s.

ture," he said, "could not be married without the gold wedding ring"; and we could not make an advance without spending money. The purchasing power of the under-nourished can, of course, be increased partly by a removal of trade barriers which would reduce prices, partly by a general recovery policy designed to increase employment and aggregate money wages, and partly through public social services. Sir Daniel Hall, speaking after Sir John Orr, emphasised the need for reversing interferences with trade, and urged a concentration by British agriculture on fruit, vegetables and dairy products rather than wheat and sugar. When the Treasury has money to spend, in fact, it ought to be spent as well as possible. And it may perhaps prove best to spend it neither on money subsidies to producers nor consumers but on direct grants of health-giving foods in cases of special need.

Science and Unemployment.—A great deal of attention was also directed to unemployment by speakers at the British Association. Sir William Beveridge analysed existing British unemployment. He said that in proportion to numbers the volume of unemployment increased with each decade after 35, not because older men lost jobs more often, but because the difficulty of recovering a job after it was lost was greater. "Cyclical unemployment arising out of trade depression," Sir William added, "is at the moment practically non-existent." For the "long period" unemployment of the special areas some more drastic remedy than money payments in idleness was required. The problem of the special areas was considered by several other speakers. Mr S. R. Denison, of the University of Manchester, found in the unemployment figures very definite evidence of a drift of industry to the South. He thought, however, that transfer of labour was too slow an operation to offer a solution in any reasonable period. Both Mr Denison, therefore, and Professor Sargent Florence (of Birmingham University), who followed, added their voice to the growing volume of authority behind the opinion that the right solution is the direction of new industries into the special areas. "Biscuit making, the cattle and poultry food industry," Professor Florence said, "sugar refining, match making, jam making and tobacco might be established anywhere where there is a port." The suggestion indicates the need for the kind of general planning for change which Sir Josiah Stamp advocated in his Presidential Address. And if such long-term planning of British employment policy is to be undertaken, one of the "known" factors to be allowed for will have to be the coming fall in population. Dr. E. P. Poulton, in another paper at Blackpool, predicted that the population of Great Britain would fall to less than 6,000,000 in 200 years; and he attributed the fall to the "strain" involved in the higher standard of living of to-day. The problems of major adjustment of labour to changing demands seem likely, in fact, to increase rather than diminish with the passage of time.

The Little Entente Confers.—After a reunion of the three Foreign Ministers of the Little Entente States in President Benesh's country house, the latest of the regular conferences provided by the Permanent Statute of 1933 took place in Bratislava last week-end. The recent agreements between France and Poland and the renewal of the old alliance between Poland and Roumania had so improved the political position of Czechoslovakia as to warrant optimism about the outcome of this latest conference. Moreover, the recent agreement between Germany, Italy and Austria had greatly diminished the tendency in Belgrade towards sympathy with Germany; for, while this tendency had been fostered by economic necessity resulting from the blocking of Yugoslav export proceeds in Germany, an agreement which ranked Italy closely with Germany over the prostrate body of Austria could not be viewed otherwise than askance in Belgrade. Yugoslav opinion quickly sensed the dangers of a Croatia lured towards a German Austria, and of an Adriatic under the domination of allied Italian and German forces. The Bratislava meeting has strengthened the links of the Entente mainly

by economic and military provisions. The Roumanian and Yugoslav authorities have agreed, as a result of the preliminary visit of the Yugoslav Prime Minister, Dr. Stoyadinovitch, to Bucharest, that about 40,000 metric tons of Roumanian petroleum are to be delivered to Yugoslavia to bring her reserves to full strength. This will also be of great assistance to Roumania, for as a result of sanctions against Italy, Italy has drastically reduced her imports of Roumanian oil, despite recent favourable overtures from the new Roumanian Government to Rome. Moreover, whereas previously there had only been talk of Yugoslav imports of crude Roumanian petroleum for refinement in a German refinery (to be erected in Yugoslavia as "liquidation" of Yugoslav blocked marks), Yugoslavia has now agreed that the 40,000 tons are to be refined in Roumania against Yugoslav 6 per cent. Treasury bills of six years' duration. This agreement between Roumania and Yugoslavia postpones the need for any Yugoslav refinery for the Yugoslav naval and air force requirements, and thus arrests the tendency for Germany to penetrate Yugoslavia economically by the aid of withholding Yugoslavia's export proceeds in marks.

"Bolshevism" in Czechoslovakia.—All these facts hang together with the forthcoming visits of several Little Entente statesmen to Paris—whence, doubtless, financial assistance will be sought. On the military side, the long-debated bridge over the Danube at Turnu-Sevarin is at last to be built, and will open a direct strategic road between Bucharest and Belgrade. The opportunity was taken, both at the conference and in the communiqué which followed, categorically to rebut Herr Hitler's (and other Nazi leaders') assertions at the Nuremberg Party Rally that Czechoslovakia was being "Bolshevised" by Russia, and that Russia could dispose of Czech aerodromes under the Czecho-Russian pact of Mutual Assistance. The Czech authorities indignantly denied both statements, and the Entente's communiqué not only denied present foreign intervention in the internal affairs of each State, but proclaimed a common front against any future intervention. The Bratislava conference has thus effectively closed the Entente's ranks, so that, in foreign affairs at least, it stands at one State—and no insignificant one at that.

The Week in Palestine.—As we ventured to anticipate last week, the Government's despatch of General Dill, followed by a division of troops, to Palestine has so far failed to cause a complete collapse of the Arabs' strike and campaign of violence. The Arab Higher Committee have been forced to counter the British Government's statement of policy with a flat denial that General Nuri Pasha's mediatory intervention had had "no satisfactory result." They affirmed last week-end that their aims were to secure the Government's official recognition of General Nuri Pasha's mediatory status, and then to call off the strike. As it is, martial law seems to have come nearer, for the extremist Arab leaders of the campaign of violence have secured fresh supplies of ammunition and are building strategic block-houses in various key districts. Thus, while the Government's stern measures after more than four months' delay, may have succeeded in splitting the Arab movement as a whole, it remains to be seen whether law and order can be restored without a more or less prolonged guerilla campaign. Among the many drawbacks of such a campaign would be its potential effect on the phalanx of Arab States in the Middle and Near East. It would be regrettable if control of the Arab side of the dispute were slowly but surely to slip from the hands of the Arab Higher Committee, in proportion as the Committee's policy becomes more moderate and statesmanlike.

British Crops in 1936.—Long spells of unseasonable weather have severely hampered the British farmer this year. In the circumstances, the picture presented by the latest monthly report of the Ministry of Agriculture is surprisingly favourable. The corn harvest, the report

states, became general about the middle of the month, but harvesting is likely to be protracted owing to the difficulty of cutting crops which have been laid by the weather. In consequence of unfavourable weather during the growing season, the yield of wheat, at 16.7 cwt. per acre, is expected to be 1 cwt. per acre below the ten-year average, while the quality will also be inferior to that of recent years. Barley is probably the best of the corn crops, and the yield per acre is likely to be very little below the average. The area under barley showed a significant increase this year, and total production is anticipated to be in excess of last year's figure. The average yield of oats, at 14.9 cwt. per acre, is expected to fall short of the ten-year average by 0.9 cwt. per acre, and the total output will be appreciably below that of 1935:—

	Acreage		Production	
	1935 (acres)	1936 (acres)	1935 (Actual) (tons)	1936 (Forecast) (tons)
Wheat	1,772	1,703	1,623	1,422
Barley	792	819	656	659
Oats	1,418	1,417	1,138	1,056

Beans and peas are fair crops, but are yielding less than the average. For potatoes an average yield of 6 tons per acre is forecast; but in some areas disease is more prevalent than usual and doubts are entertained about the keeping quality of the tubers. The hay harvest was late owing to wet weather and had not been completed by the end of August. Much of the crop was seriously damaged and the general quality is often poor. By way of contrast, this year has seen a bumper crop of orchard fruit—principally apples and plums—but no official estimates are available of production in this section.

Overseas Trade in August.—Following the sudden spurt in British exports in July, the former trend of overseas trade reasserted itself in August, when imports again forged ahead while exports increased at a slower pace. The month's imports, in fact, at £66,057,087, were 11.7 per cent. above the level of a year ago, while British exports, at £35,258,115, show an increase of only 1.1 per cent. over August, 1935. Re-export trade, though less good than in July, showed an increase of 4.1 per cent. over last year's figure. The following tables give details for the past three years:—

OVERSEAS TRADE IN AUGUST
(000's omitted)

	1934	1935	1936	Change between 1935 and 1936	%
Total imports	59,971	59,146	66,057	+ 6,911	+ 11.7
British exports	32,080	34,883	35,258	+ 375	+ 1.1
Re-exports	3,302	4,186	4,356	+ 170	+ 4.1
Total exports	35,382	39,069	39,614	+ 545	+ 1.4
Excess of imports over exports	24,579	20,077	26,443	+ 6,366	+ 31.8
Transshipments under bond...	2,019	2,024	2,524	+ 500	+ 25.0

FIRST EIGHT MONTHS' OVERSEAS TRADE
(000's omitted)

	1934	1935	1936	Change between 1935 and 1936	%
Total imports	479,383	479,045	536,624	+ 57,579	+ 12.0
British exports	255,069	277,737	283,170	+ 5,433	+ 2.0
Re-exports	36,431	36,744	41,690	+ 4,946	+ 13.5
Total exports	291,521	314,481	324,860	+ 10,379	+ 3.3
Excess of imports over exports	187,872	164,564	211,784	+ 47,200	+ 28.7
Transshipments under bond...	15,651	15,818	17,784	+ 1,966	+ 12.4

Our visible import surplus continues to increase. The excess of imports over total exports for the first eight months of this year, is now £211,764,000, which is £47,200,000, or 28.7 per cent., bigger than a year ago.

BRITANNIC ASSURANCE COMPANY LIMITED
(Established 1868)
Annual Income : : : £8,200,000
Funds : : : £26,000,000
All classes of Life, Fire, Accident,
Motor and General Insurances transacted
Chief Office: BROAD STREET CORNER, BIRMINGHAM

Part of this increase, however, is attributable to larger imports of foodstuffs and of raw materials, such as timber, iron and steel, and cotton, which are essential to meet the growing needs of industry. Further, prices of crude foodstuffs and raw materials have recently shown a rising tendency.

* * *

Trade by Commodities.—Changes in the more important of our retained imports last month, together with the August figures for the past two years, are shown in the following table:—

RETAINED IMPORTS Month of August			
Item and Measure	1934	1935	1936
Wheat.....'000 cwt.	7,906	7,024	7,283
Beef and veal.....'000 cwt.	1,111	1,320	1,179
Mutton and lamb.....'000 cwt.	634	505	440
Sugar (unrefined).....'000 cwt.	3,189	3,587	4,142
Iron ore and scrap.....'000 tons	400	403	630
Raw cotton.....'000 cwt.	956	555	1,061
Sheep's and lambs' wool.....'000 cwt.	142	177	177
Flax, hemp and jute.....'000 cwt.	16,325	17,329	21,758
Crude petroleum.....'000 galls.	44,750	45,617	50,565
Hide, wet and dry.....'000 cwt.	100	118	146
Wood pulp.....'000 tons	176	194	196
Rubber.....'000 cwt.	308	316	35
Unwrought copper.....'000 tons	7,998	11,825	15,463
Pig lead.....'000 tons	30,658	26,798	26,073
Tin.....'000 tons	4,127	3,421	4,033
Ore and concentrates.....'000 tons	1,101	1,450	382
Blocks, ingots, slabs and bars.....'000 tons	102	74	141
Iron and steel manufactures.....'000 tons	6,700	5,203	7,956

Wheat imports continue on a large scale, the most notable increase being from Canada and Australia. As a result of the failure of the wheat crop in the United States, imports from that country last month were nil. The decline in meat imports is due chiefly to smaller shipments of beef, mutton and lamb from New Zealand, whilst the rise in imports of raw sugar is accounted for by larger purchases from Cuba and the British West Indies. There was a fairly general increase in imports of raw cotton. The major part of the rise in flax imports was shared by the Soviet Union and Latvia. Larger quantities of iron ore, machinery and iron and steel manufactures have again been imported. Our non-ferrous metal purchases show an increase, with the exception of pig lead and tin blocks and ingots. The chief British exports are given below:—

BRITISH EXPORTS Month of August			
Item and Measure	1934	1935	1936
Coal.....'000 tons	3,269	3,451	2,754
Iron and steel scrap.....'000 tons	19,555	9,491	8,350
Pig iron and ferro-alloys.....'000 tons	13,843	12,077	10,056
Railway material.....'000 tons	28,865	20,135	21,137
Total iron and steel manufactures.....'000 tons	191,857	193,634	163,959
Textile machinery.....'000 tons	5,245	5,135	5,248
Total machinery.....'000 tons	26,139	28,653	28,243
Cotton yarns.....'000 lbs.	10,183	11,943	11,885
Cotton piece-goods.....'000 sq. yds.	168,743	160,557	158,985
Wool tops.....'000 lbs.	2,850	3,634	3,928
Worsted yarns.....'000 lbs.	2,527	2,503	2,166
Woolen tissues.....'000 sq. yds.	7,671	8,025	7,907
Worsted tissues.....'000 sq. yds.	3,343	3,946	3,889
Linen piece-goods.....'000 sq. yds.	5,354	4,492	6,563
Leather boots and shoes.....dozen pairs	33,337	30,494	27,110
Leather.....'000 cwts.	14,035	18,735	18,661
Paper and cardboard.....'000 cwts.	313,454	322,923	290,185
Locomotives (complete and parts).....'000 tons	632	1,191	1,064
Motor vehicles and chassis.....number	4,038	4,406	5,458

The fall in coal exports continues; there has as yet been no resumption of the coal trade with Italy, and a further loss of markets has resulted from the civil war in Spain. Exports of iron and steel manufactures, machinery and locomotives are lower, but home demand for these products continues at a high level. There has been a welcome improvement in exports of wool tops and linen piece-goods. The motor trade remains active, and exports of cars and chassis have shown a further advance.

* * *

Prices Still Rising.—The commodity markets remain in a state of great activity. This week's turnover has been substantial, and the prices of many commodities have shown a strongly rising trend. At the London wool auctions, which began on Tuesday, for example, competition between Yorkshire and Continental buyers was keen from the outset. Both greasy and scoured merino qualities

realised as much as during the last sales in July, and cross-bred wool was unchanged to 10 per cent. dearer, according to quality. The firm tendency of wool prices was not unexpected; for stocks at manufacturing centres (except in Japan) are relatively small and this season's world clip will only be slightly larger than a year ago. In contrast, raw cotton prices tended to sag under the influence of hedge selling, despite the reduced estimate of the yield of the United States crop. Grain markets have been very active, following the reaction from the sharp rise in prices a month ago, and Liverpool futures (December) rose from 7s. 5½d. per 100 lbs. to 7s. 9½d. during the week. The renewed upward movement of prices was induced by the September forecasts of the probable yield of the North American crops, by reports of a shortage of rain in Argentina and Australia, and by a strong demand. According to the *Corn Trade News*, the Canadian harvest is likely to be the smallest since 1919, while world shipments since the beginning of the current season, at 7,640,000 quarters, show an increase of 27 per cent. over the corresponding period a year ago. While rumours of a shortage of wheat are unfounded, world supplies will probably be appreciably smaller this season. Hence some rise in prices was justified, and prices will probably be maintained well above the level of the 1935-36 season. The market in cocoa (discussed in a separate Note) has again been active and prices continued to advance under speculative buying. The volume of business in some of the principal non-ferrous metals was heavy. Despite the recent relaxation of copper restriction, prices continued their upward trend, and the latest statistics showed a further decline in world stocks. Lead, too, continued to advance in price and spelter was marked up on a good demand and renewed hopes that the Zinc Cartel may be resuscitated. The markets in tin and rubber, however, were subdued, as the Committees administering the rubber and tin restriction schemes are due to meet in the near future. In general, the upward trend of the prices of many raw materials and crude foodstuffs is evidence of a growing demand, intensified in some cases, such as wheat, by a reduction of world supplies.

* * *

Iron and Steel Production.—Since the beginning of this year the iron and steel industry has operated practically at capacity. Certain sections, being unable to meet all requirements, have fallen in arrears with deliveries, though the stringency of semi-finished materials was eased somewhat by increased imports. The industry, therefore, welcomed the breathing space provided by the holidays. Pig iron production was reduced slightly from 21,326 tons per day in July to 20,509 tons per day in August, and the output of crude steel was curtailed by 1,170 tons per day to 34,908 tons per day in August:—

(In thousands of tons)				
Period	Production		Foreign Trade	
	Pig Iron	Steel Ingots and Castings	Total Imports	British Exports
1913—Monthly Average.....	855.0	638.6	185.9	414.1
1929 " ".....	632.4	803.0	235.2	364.9
1932 " ".....	297.8	438.5	132.7	157.4
1933 " ".....	344.7	585.3	80.9	160.2
1934 " ".....	498.2	738.3	113.9	187.8
1935 " ".....	535.5	820.2	96.0	197.7
1936—July.....	547.3	803.3	90.2	199.3
" August.....	543.4	759.9	74.3	193.6
" September.....	529.6	855.9	89.3	187.2
" October.....	544.3	907.3	101.2	224.0
" November.....	529.5	903.3	77.0	215.8
" December.....	559.3	811.5	118.0	180.3
1936—January.....	595.5	911.7	119.9	164.8
" February.....	584.7	938.5	123.2	167.8
" March.....	633.9	980.1	130.3	163.4
" April.....	629.8	984.2	120.8	177.5
" May.....	661.0	983.0	117.5	204.1
" June.....	644.1	965.9	110.6	173.5
" July.....	665.6	974.1	170.3	216.1
" August.....	635.8	872.7	141.8	164.0

Demand was so well maintained throughout August that producers found it impossible to build up a reserve to ease the situation during the autumn and winter. The lull in inquiries has been of short duration this year, and all indications point to a considerable increase of requirements during the autumn. The semi-finished section of the industry, though working at capacity, is finding it difficult to

meet current requirements. Many producers of finished steel are requiring increased time for the completion of orders. It is scarcely surprising therefore that the improvement in exports has not been maintained.

* * *

Sterling and International Prices.—The reaction of the prices of primary products from the high levels reached at the beginning of August has been followed by a renewed upward movement during the past fortnight. The rising trend of the prices of some of the principal materials, discussed elsewhere, is reflected in the advance of our price indices of British and American primary products. The more comprehensive British and American indices registered a smaller rise; for they include a number of semi-manufactured products, besides raw materials and crude foodstuffs. The official index of wholesale prices for France also advanced, mainly as a result of higher prices for domestic products, but the German index remained unchanged:—

1924 = 100.....	52.2	62.3	62.9	63.5

It will be seen that prices rose over a wide front, for all the group indices, with the exception of the miscellaneous section, advanced during the past fortnight.

* * *

Speculation in Cocoa.—Since the beginning of 1936, quotations for cocoa have risen by about 40 per cent. As in the case of most other primary products, the improvement of consumption has effected a gradual reduction of the heavy stocks accumulated during the depression. According to the estimates of Messrs W. R. Grace and Company, of New York, world shipments of cocoa beans by producing countries rose from 542,000 metric tons in 1929 to 579,000 tons in 1933 and 675,000 tons in the past year. World consumption increased from 515,000 metric tons in 1929 to 553,000 tons in 1933 and 645,000 tons in 1935. As production rose further than consumption during the depression, world stocks of cocoa beans rose to 166,000 metric tons at the end of 1933. By the end of last year, however, stocks had been reduced to 150,800

metric tons, or about 24 per cent. of consumption in that year. Consumption during the current year is again expected to exceed shipments, but no shortage is in sight. Though some rise in prices may have been justified by the improved position, much of the recent market activity has been frankly speculative. In any case there seems no *raison d'être* for the international restriction scheme advocated not long ago.

* * *

Growth of Rayon Industry.—The consumption of rayon, stimulated by progressive improvements in quality and reductions in price, is increasing by leaps and bounds. According to the American *Rayon Organon*, world production of filament yarn rose by 22 per cent. between 1934 and 1935, from 769 million lbs. to 936 million lbs. The output of staple fibre increased by no less than 148 per cent. during this period, from 54 million lbs. to 134 million lbs. As a result, the proportion of world rayon production to the combined output of cotton, rayon, silk and wool has risen from 3 per cent. in 1932 to 6 per cent. in the past year. The United States and Japan produce about one-half of the world's total output. Before the depression, production in this country, though increasing rapidly, failed to keep pace with world output, but since then Britain's share has been maintained at about 12 per cent. British production of filament yarn rose from 87½ million lbs. in 1934 to 111½ million lbs. in the past year. During the same period the output of staple fibre was trebled, reaching 10 million lbs. in 1935. Meanwhile, the industry continues to expand in this country, as elsewhere. Last month production of yarn and waste reached a new record at 13.8 million lbs., compared with 10.9 million lbs. a year ago. Despite the unfavourable weather this summer, British manufacturers have experienced a good demand, which is expected to be maintained during the remainder of the year. It is understood that spinners of high quality viscose yarns, in particular, are scarcely able to keep pace with demand.

* * *

Self-Sufficiency in Petrol.—Last week Herr Hitler announced that the policy of self-sufficiency in raw materials and foodstuffs would be intensified during the next four years. Unfortunately, Germany is not the only country in which the fever of economic nationalism has taken hold; but so far none of them has achieved the same degree of independence of foreign supplies of petroleum products. A calculation made by Petroleum Press Service shows that although world output of substitute motor fuels has almost doubled since 1932, production in 1935 was still only 0.9 per cent. of that of crude oil. Substitution has been most marked in the case of light motor fuels, the proportion of world requirements satisfied by substitutes in 1935 being 2.6 per cent. But, as the following table shows, no less than 44.3 per cent. of Germany's consumption of light motor oils in 1935 consisted of substitutes:—

CONSUMPTION OF LIGHT MOTOR OILS IN 1935		
	Total Consumption (Thousand metric tons)	Of which Substitutes (%)
Germany.....	1,930	44.3
Czechoslovakia.....	235	21.7
France.....	2,685	13.2
Austria.....	143	7.0
Great Britain.....	4,400	6.6
Sweden.....	410	3.4
Italy.....	501	3.2
Spain.....	436	3.0
Belgium.....	360	2.2
Holland.....	400	1.0

Although Germany leads by a substantial margin in the production of substitutes for light motor oils, the tendency has been encouraged in recent years in France and Great Britain also. Nevertheless, the proportion of total consumption satisfied by substitutes in this country last year was still relatively small. Italy, which has practically no coal resources, has made little headway so far. The technical obstacles on the road towards self-sufficiency may not be insurmountable, but the cost of such a policy will be very heavy.

UNITED STATES

REDUCTION IN BUDGET EXPENDITURE

THE remarkable maintenance of industrial activity through the summer months has invested the dividing date between summer and autumn—Labour Day (September 7th)—with less than its usual interest. Ordinarily that holiday is regarded as the boundary between summer inactivity and seasonal resumption. This year there has been no summer inactivity, and consequently there is less emphasis upon the prospect of autumn bringing marked increases. This does not mean that none are looked for; the motor-car industry is now in its transition period and presently will bring out its new models—and the motor-car is the biggest single seasonal item in our economy. But apart from that, the data of recent years indicate that seasonal forces have either become less important or have been submerged in the comprehensive cyclical upward movement.

It is now almost exactly two years since the present phase of recovery started. From the feverish boomlet of the spring of 1933 there was a slow relapse, in 1934 complicated by wide labour troubles, which brought the production index (unadjusted) for the third quarter of 1934 to an average of 73—only about 10 per cent. above the average of the year 1932. But from September, 1934, this index has risen without any substantial setback until July, 1936; and it is likely that August will show as high or higher figure than July. The average for the third quarter of 1936 will be approximately 40 per cent. or more above the average for the third quarter of 1934, and fully 30 per cent. above the average of the year 1934.

The presentation of an interim Budget estimate for the current fiscal year (1937) has aroused an unusual amount of interest:—

EXPENDITURE (\$'000,000)	1936 Actual		1937 Estimated	
	1936 Actual	1937 Estimated	1936 Actual	1937 Estimated
Regular Budget	4,429	5,368		
Bonus	1,673	560		
Recovery and relief	2,777	1,835		
	8,879	7,763		

From the recovery and relief expenditures of 1936 are deducted \$400 millions of realisations on loans and \$620 millions for 1937. The decline in recovery and relief expenditures (\$942 millions) is thus actually about \$200 millions less than the figures would suggest. The decline in the aggregate of expenditures (\$1,116 millions) is almost exactly the amount of the Bonus differential—about three-quarters of the Bonus being attributed to the fiscal year 1936. The so-called regular Budget indicates an increase (\$939 millions), a little greater than the estimated decline in recovery and relief expenditures. The largest single element in the decline in relief is in the disappearance of the Federal Emergency Relief Administration, while in the regular Budget the Social Security Act has led to an increase of almost \$400 millions. National defence, *plus* items listed as "War Department, non-military," required about \$200 millions more than in 1936. And the debt charge rose by \$250 millions, of which three-fifths are allocated to debt retirement. Whether one is more encouraged by the decline in the recovery, i.e. the emergency, and relief Budget or alarmed by the equal increase in the regular Budget, the fact remains that expenditures will be reduced by about \$1,100 millions—or the differential of the Bonus. This is not a final figure. The President suggested that relief expenditures might be increased by as much as \$500 millions.

Of these expenditures \$4,116 millions were actually covered by revenues in 1936, and the estimated revenues for 1937 are set at \$5,643 millions, an increase of almost 40 per cent. The income tax is expected to bring in \$900 millions more; the new Social Security tax over \$300

millions; the tax on carriers and their employees almost \$100 millions more; and the "windfall," or "unjust enrichment" tax, \$82 millions. So far in the fiscal year revenues are running about 10 per cent. above 1936.

However, so far as the data are concerned it would appear that the "reflation" aspect of the Budget is a thing of the past. Even if the public debt for one reason or another is increased by a sum three times the Budget schedule, it would be small in comparison with the \$5,100 millions increase of the past fiscal year. On the other hand, it seems that the period of taxation is beginning. Some doubt whether the present tax schedules, even given the increase in national income, will equal the estimate; but the steady rise in the regular Budget suggests that if these rates do not, the rates will be increased or more taxes found. It will be appreciated that no tax schedule applied to an economy, which has increased its rate of activity between 30 and 40 per cent. in the past two years, will be mathematically accurate. Except for the Bonus, one can say that the United States fiscal programme is to spend about the same amount, but to borrow less and tax more.

NEW "MARGIN" REQUIREMENTS AND WALL STREET

The Federal Reserve Board has published data which throw new light on the margin position of the New York Stock Exchange. Some 420 Stock Exchange firms carry margin accounts, and customers in July owed these brokers \$1,295 millions; at the same time other customers of the same firms had credit balances with these brokers, amounting to \$383 millions, of which \$96 millions came from short sales, commodity accounts, etc. In addition, security customers owed banks some \$2,040 millions against stocks and bonds. The total value of all stocks and bonds listed on the New York Stock Exchange (August 1st) was about \$96,000 millions, of which the listed shares were valued at \$54,000 millions. The increased margin requirements have been an effective deterrent to purely speculative trading, without having prevented an appreciation of security prices. It has probably had an influence in reducing the average daily turnover in shares, which during the past summer has been about 1,500,000. The reduction in the daily turnover has produced what are called "thin markets"; but on the whole the markets have been more "orderly" than they formerly were.

NEW YORK, September 8.

[Owing to an error in transmission the table in our New York Correspondent's letter, printed in our issue of September 5th, showing the "national income produced and paid out," contained certain misplaced items. The table should have been as follows:—

	NATIONAL INCOME PRODUCED AND PAID OUT (\$'000,000)				
	1929	1932	1933	1934	1935
Income produced	81,034	39,545	41,742	48,397	52,959
Total business savings +2,402	-8,817	-3,198	-1,776	-	-628
Business savings of individuals	+ 979	-2,451	- 402	+ 563	+ 815
Income paid out	78,632	48,362	44,940	50,174	53,587

A negative figure for business savings represents withdrawals from reserves.]

FRANCE

NEW SOCIAL CONFLICTS

THE temper of public opinion and M. Blum's threat, addressed to the Communists, to summon Parliament to decide on Spanish affairs, have induced the Communists and the trade unions to reaffirm their support of the Popular Front Government. The Communists have stated, moreover, that they will not continue to use the phrase "Front Français" which was disagreeable to their Socialist allies. And the trade unions, the attitude of which had been strongly influenced by the pending decision of

their English colleagues, would not go further than calling on M. Blum to summon the League to enjoin a strict observance of the non-intervention pact.

But no sooner had calm been re-established on the foreign policy field, than new economic grievances provoked fresh social conflicts and stay-in strikes, notably in the North. Actually, these strikes have never wholly ceased since June; but recent conflicts affected small firms only. The new strikes in the Northern textile area, however, concern more than 40,000 workers and threaten a general strike. The exact motive of the conflict is difficult to determine. No doubt certain elements among the employers and the workers are showing themselves unreasonable. But they are a minority. It appears that the employers must have signed the famous June 7th Matignon Agreements too rapidly, when the Government urged them to do so in order to escape at once from a revolutionary situation. Apparently the employers afterwards decided that the new charges which they had accepted were impracticable, while the workers complained that they had signed and that they must honour their signatures.

The present situation, difficult for big employers, is intolerable for medium-sized and small ones; and small employers, whose whole capital is represented by their factories, declare that they have been betrayed by the employers' associations. The conflict is thus a double one: It is between the Government and the so-called "200 families" representatives, and also between the large and the small employers. Moreover, the Matignon Agreements had a counterpart, which was the promise made by the Government to stimulate an economic recovery that would make the burden of the new social charges less heavy. But recovery is delayed, while a noticeable rise in prices and the cost of living undoubtedly justifies to a certain extent the new wage claims of the workers; and this is creating in the country an uncertainty which naturally impedes business recovery.

COMMUNISTS AND PRIVATE PROPERTY

Many employers in the textile industry are managing old family firms which have not adopted the joint-stock form. These directors are particularly vexed by the disappearance of "authority" in the factory as a consequence of the constant interference of the trade unions in factory management. The Communists repeat that their intention is not to attack private property. The textile employers retort that the disappearance of "authority" combined with that of social concessions, if supported by the Government, must amount to an attack on property—a policy which the Radical-Socialists would not accept. Of course, the textile industry, an export industry, hampered by high French prices, represents the French "depressed areas." Wages are extremely low, and the workers have been particularly affected by the recent increase in the cost of living. Employers are therefore justified in being particularly anxious about the final issue of an economic experiment in which a rise of prices, following a rise of wages, threatens to set up a most dangerous vicious circle.

But public opinion is not yet ready for a Parliamentary change. No doubt numerous citizens have changed their views since they voted heavily for the Popular Front six months ago. The civil servants, the veterans, the *rentiers* and the salaried classes represented the opposition to the former deflation. But the subsequent "reflation" and rise of prices is disquieting every consumer, i.e. the whole country, including those who have benefited from reflation, since the rise in prices threatens the increase in their real purchasing power. And this is dangerous in a country which has not lost the habit of saving and of bargaining on the city markets for "a sou." A new armistice on the Matignon Agreements will therefore be a momentary success for the Government, the fortunes of which are more and more dependent on a marked recovery of business.

Speaking of this recovery, M. Vincent Auriol, the Minister of Finances, in a speech addressed to the Stock Exchange this week, declared that the Government's policy was beginning to show its first perceptible results. The turnover of certain firms, he said, was increasing... the cost of living was rising less rapidly than wholesale prices... and the Stock Exchange was wrong to pay attention

to a series of stupid and harmful rumours, which ascribed to the Government an aggressive attitude towards property. On the contrary, the Government was considering a lowering of taxes on incomes from stocks and a better protection for saving; for, the Minister stated in words which remind one of the recent words of M. de Man at Brussels: "When business is active, the State is comfortable."

The Statistique Générale has just published its monthly figures showing industrial production in France (1913 = 100):—

	July, 1935	May, 1936	June, 1936	July, 1936
General Index	93	102	98	98
Engineering	95	102	102	102
Iron and steel	80	92	78	80
Textiles	67	67	60	58
Mines	98	103	94	103
Building (adjusted figures)	65	70	66	65
Leather (")	93	108	108	110
Paper (")	129	165	168	170
Rubber (")	760	985	970	961
Motors (")	412	464	425	418

In the motor industry, 15,503 motor cars and 1,898 lorries were put on the road in July, compared with 12,673 and 1,514 in June. The figures for the cotton industry were as follows:—

	April, 1936	May, 1936	June, 1936	July, 1936
Spinning (average per spindle in kilograms):—				
Production	1.698	1.581	1.348	1.606
Deliveries	1.733	1.638	1.440	1.704
Stocks	1.763	1.717	1.652	1.652
Unfulfilled orders	5.639	5.856	5.557	5.069
Weaving (average per loom in pieces of 100 metres):—				
Production	5.16	5.49	5.08	5.46
Deliveries	5.08	5.68	6.05	6.23
Stocks	8.14	8.14	7.50	6.74
Unfulfilled orders	25.96	26.98	25.32	22.02

The figure for bankruptcies in August was 550, against 619 in July and 720 in June; bankruptcies and judicial liquidations were 718, against 841 in July and 987 in June.

PARIS, September 17.

GERMANY

FOREIGN POLICY AND WELTANSCHAUUNG

ALTHOUGH the Nuremberg Party Congress, which concluded this week, is officially called a Congress of "Honour," it was concerned almost exclusively with questions of foreign policy. This applies to the announcement of a Four Year's Plan for increasing the production of raw materials; for this kind of autarky, which is economically wasteful and which, if currency and foreign-trade methods were sound, would not be necessary in a peaceful world, finds a real justification in the expectation of war. Of the Four Years' Plan no details were given. The Plan will presumably be put through with tariffs, state credits, bounties and monopolies. This means that the methods of the past four years, which from the viewpoint of the volume of production were satisfactory, will continue. There is little doubt that Germany can make herself entirely independent of foreign materials and thereby eliminate a main factor of weakness in war.

The Colonial question is also foreign policy. It is noteworthy that the Reich Government for the first time spoke of "colonial demands," although no demands have been made. Until now German Colonialism has been organised as a sort of Irredentism, little differing from the Irredentism pursued with regard to German-speaking minorities in neighbouring countries. It is a novelty, however, that although the British mandated territories were long almost exclusively the object of this Irredentism, new official and officially inspired utterances speak of the restoration of the former colonies without any limitation. "Demands" in this sense would have to be addressed to several Great Powers, most of which would certainly reject them. Herr Hitler's words aroused expectations in financial circles; and on the Bourse the five Colonial securities officially quoted rose very sharply.

If literally read, and taken seriously, the Ministerial utterances on other international questions at Nuremberg

might be called alarming, and it seems that they have been so taken abroad. They were actually dominated almost entirely by considerations of *Weltanschauung*. This unlucky word is now commonly used by Germany for all foreign issues—newspapers even describe alleged differences in South-East Europe about the construction of strategical railways as a *Weltanschauung* dispute. The Nuremberg speeches might seem to indicate that Germany is resolved not only to protect her notions of good government at home but to enforce similar notions on the world generally. That at least is the German view of the utterances about Communism. It is affirmed that Germany is resolved to "annihilate" Bolshevism. This ambition, of course, involves not only an attack upon Russia but the suppression of the Communist parties in democratic countries. That such designs are held might be induced from Herr Hitler's speeches, in which, while little was said about Bolshevism, vehement attacks were made upon the world's democratic governments. These were described as being on the downward path to anarchy. Herr Hitler expressed his view that democracy is inevitably an intermediate stage on the road to disorder. Indeed, through the mouth of Dr. Goebbels, the Congress learned that London contains "millions" of citizens who in consequence of their "social misery" under a democratic government are ripe for Communism.

"LITVINOFF LIES"

It seems, therefore—again if oratory is taken literally and seriously—that the Third Reich's *Weltanschauung* campaign would involve very extensive military operations. But, while Nuremberg—taken literally—means that Germany holds herself able to enforce her own system of government on other countries, the same Nuremberg—also taken literally—proclaimed that she does not want to do this at all, and is terrified lest other countries enforce their systems of government on her. In fact, one can take out of Nuremberg, as out of most Third Reich demonstrations, anything one pleases; and perhaps the best way would be to regard the Congress of Honour as one regards the Iron Maiden in the citadel close by, which, with its torture spikes, thrills innocent tourists, but which, according to accepted history, was not made for use. It might, indeed, be alleged that the language used at Nuremberg about foreign, and by no means only Russian, politics and persons, hardly conduces to international peace; and certainly the words "Litvinoff lies," as one Government's comment on another's statements to the League of Nations, betray a mild asperity. But the establishment in diplomacy of a totalitarian standard of verbal truculence may have advantages. Abuse, events have proved, no longer leads to diplomatic rupture, or even to protest; and as the resources of language cannot be strained further in the future, the world may feel delivered from one possible cause of war.

Owing to bad weather, a part of the cereals crop had not been harvested by September 1st; but the condition of fodder and root crops improved during the month. The number of unemployed declined in August by 72,000 to 1,098,000. The Reich Unemployment Board considers that the shortage of skilled labour in certain industries is the result of compulsory military service, and believes that it will be aggravated by the extension of the service term to two years. Labour is now short in the clothing branch. A controversy, official or semi-official on both sides, about the advisability of permitting a rise in wages is under way. The prices of certain foodstuffs have again risen.

The steel industry is active. Deliveries of Spanish ore, which is mostly used for hematite production, have practically ceased; and the insurgent generals have stopped the shipment of Morocco ore owing to a German rejection of their demand for cash payment. A Reichkohlenverband report shows an increase in the volume of coal exports in 1935 of nearly 26 per cent. as compared with 1934, and of 47 per cent. as compared with 1932. The figure for 1935 was 30,692,000 tons. In the same time, the value (c.i.f. to the German frontier) rose only from Rm. 269,262,000 to Rm. 281,847,000. The toy industry reports a revival of exports. Textiles were more active in August, but there was a continued shortage of raw cotton. New restrictions

have been imposed on trading in yarns made of mixed cotton and substitute materials. The Nitro Syndicate reports a sharp increase in output.

Money last week was in heavy demand, partly owing to the quarterly income-tax liability. Reich Treasury bills and bank acceptances were thrown into the market. This week conditions are easier, and on Tuesday the day-loan rate fell to 3-3½ per cent.

BERLIN, September 15.

SPAIN

THE CABALLERO GOVERNMENT

THE new Government has produced a good effect. Some of its members are unknown quantities, but others are men who have already shown themselves to be of considerable capacity. It is interesting to note that of the six Socialist Ministers, four belong to the Right Wing of that Party; that is to say, to the sector which stands nearer to the Republicans than to the Communists. These four are: Sr. Indalecio Prieto, Dr. Juan Negrin, Sr. Angel Galarza and Sr. Anastasio de Gracia. Only Sr. Caballero himself, the Prime Minister, and the Foreign Minister, Sr. Julio Alvarez del Vayo, belong to the Left Wing of the Party.

This is interesting in so far as it shows that only four members of the Cabinet, two Socialists and two Communists, can be said to hold political views of a really radical character. Of course, in this peculiar mixture of civil war and revolution not all the initiatives start from the Government. Often the Government has only to make good or to legalise steps already taken. The absence of a member in the Cabinet representing the anarcho-syndicalist groups is somewhat strange. Of course, the traditional policy of the National Labour Confederation and its affiliated Iberian Anarchist Federation has always been to avoid any direct connection with politics, but this has not prevented them from placing representatives in the Generalitat of Catalonia and in the Committee of Defence in the Basque country. Their absence from the new Cabinet in Madrid would appear to be due rather to differences of opinion between the various groups of Anarchists as to who should be their representative.

In the explanation of this absence published in the newspaper of the National Labour Confederation, it is claimed that the Anarcho-syndicalists asked for and obtained from the Government a promise that committees on which all workers and political organisations connected with the Popular Front should be represented should be established in each Ministry. So far the Government has, however, made no comment on such an interesting innovation.

FOOD SUPPLIES IN MADRID

The Government has only one primary mission, and that is to win the war; a task which is likely to absorb all its energies for some time to come. This does not, of course, preclude the adoption of social or economic proposals which might also have a political effect. One point to which attention will have to be turned soon is the question of the rationing of the food supplies in Madrid, which is not being at all well handled by the City Council. Instead of introducing a system of rations in order that the supplies, which are on the whole ample, should be divided evenly, the distribution of supplies received is left to the retailers, with the result that some persons buy excessive quantities, while other families go short.

The new Finance Minister, Dr. Juan Negrin, is well known in Madrid. He is a professor of the Madrid University and a director of a laboratory for medical analysis; and from 1931 until 1933 he was chairman of the Budget Committee of the Chamber of Deputies. He has lived a good deal abroad and speaks French, German and English. It may be doubted whether the Left Wing of his Party, the Socialist Party, feels any great enthusiasm over his appointment; but this is not considered the moment for any far-reaching social transformation.

Probably no party or organisation is getting so much advantage from the present situation as is the Communist

Party, which, as recently as twelve months ago, really meant nothing in Spain. The Communists find themselves in the—for them—happy position of having a definite attitude towards all the various problems which arise in these dramatic moments. This is not necessarily an attitude or viewpoint which does not need modification or adaptation to the circumstances prevailing here in Spain. There is bound to be a great deal of woolly thinking at such a confused moment in the nation's history. Many politicians are frankly quite out of their depth. The Communists are therefore, with at least a general policy to guide them, are able to make hay while the sun shines at the expense of allies who are far less clear about where they are going or even where they want to go.

MADRID, September 8.

SWEDEN

A CRUCIAL GENERAL ELECTION

THE General Election campaign, which is now in full swing, is progressing in a peaceful atmosphere, and a foreigner would hardly realise that in a week's time there will take place an election which may possibly change the economic structure in Sweden. The crucial question is whether the Social-Democrats, who now hold 112 seats out of the 230 in the Riksdag, will be able to secure the extra four seats necessary for an absolute majority. The prevailing opinion is that the Liberals might gain a few seats from the Conservatives, but that the *status quo* of the two main groups, Social-Democrats and others, will be maintained. The war cry of the other parties, including the farmers, is: no State interference in the free economic life of the country. Social-Democrat speakers are emphasising the striking recovery which the country has undergone during the last four years, when they were in office. The idea of a "Popular Front" has never even been considered in Sweden, and attempts by Communists to organise a united Socialist front have completely failed.

Meanwhile economic conditions continue satisfactory, and so far no signs of a slowing down of the boom can be discerned. Building activity continues to be lively, though not quite so much so as in the past year, owing to a slight slackening in the construction of residential buildings in the bigger towns. The situation in the timber market is gradually improving as a result of better foreign demand and higher prices; and at the end of August exports totalled 725,000 standards, compared with 620,000 standards at the same time in 1935. Timber exports to Great Britain during the period January-May totalled 96,752 standards, against 75,200 standards in the same period of 1935. As usually in August, the pulp market was less brisk, but the outlook for the future is good. The paper industry reports very satisfactory activity. The iron and steel industry is working at full capacity, but prices continue low in accordance with the policy of the international steel cartel.

Contrary to expectations, the foreign trade figures for July showed a slight import surplus. But compared with the past year there has been an increase in exports of about Kr. 20 millions, thanks to better sales of Sweden's staple exports. Foreign trade figures for the first seven months of the current year are as follows:—

(In million kronor)		
	1935	1936
	January-July	January-July
Imports	790.2	888.1
Exports	682.8	789.5
Import surplus.....	107.4	98.6

Trade with Great Britain has moved as follows:—

(In million kronor)		
	1935	1936
	January-June	January-June
Exports to U.K.	142.3	159.0
Imports from U.K.	132.7	142.2
Export surplus.....	9.6	16.8

It was probably this increase in the export surplus to

Great Britain that gave rise recently to an article in the *Daily Mail* in which a modification of the present commercial Treaty with the Scandinavian countries was urged. To this the answer was given in a Swedish economic weekly, by a high official of the Board of Trade, that in 1936 Swedish imports from Great Britain were 70 per cent. higher than in 1933, before the present treaty came into force. If figures for the first half of the current year show a growth of the export surplus compared with 1935, this was mainly the result of the threat of a coal strike in Great Britain at the beginning of this year, which prevented Swedish coal firms from getting their necessary supply of British coal.

UNEMPLOYMENT STILL FALLING

Unemployment continues to drop, and during July the total fell from 25,500 to 21,000. This is the lowest figure since 1930. There is still a keen demand for agricultural workers and a shortage of hands in the timber industry. Shortage of skilled workers is also reported from the engineering industry.

The wheat crop showed a slight decline of 350,000 quintals to 4,970,000 quintals, and the rye crop of 600,000 quintals to 3,630,000 quintals.

The money market has been increasingly easy. Bank advances have been declining, and bank deposits and cash holdings rising. The "surplus" of advances over deposits was in July only Kr. 102 millions, which is probably a low record in the history of Swedish banking. The note circulation fell during July by Kr. 12 millions to Kr. 780 millions. For the time being the Bank of Sweden has discontinued its gold purchases, and the gold reserve remains practically unchanged at Kr. 433 millions. The stock market has lately been dull in anticipation of the General Election.

STOCKHOLM, September 10.

DENMARK

GOVERNMENT'S SUCCESS IN SENATE ELECTIONS

THE election to the Senate took place yesterday, and the result was at once a sign of the popularity of the present Government of Socialists and Radicals and a vindication of its policy of moderation. The position of the Government has been strengthened, and it is evidently more widely supported even than when it came into power in 1929. There is a possibility, from the results so far published, that the Government parties will obtain a majority in the Senate as well as the Lower House.

As from September 1st Danish bacon exports to Great Britain have been subject to another unwelcome cut of 12 per cent.; and they now amount to only 55,000 pigs per week, or less than one-half of what they were in 1932 when the quota system was introduced. In terms of money the latest cut will mean 30 million kroner per annum.

For the first six months of the present year Danish industrial exports have experienced various unforeseen difficulties. First of all the growing financial difficulties of Spain resulted in the freezing of considerable outstanding credits and a gradual stoppage of industrial exports to that country. Another setback was the influence of the sanctions imposed on Italy, in causing non-payment of goods delivered and interruption of trade. Moreover, the great Danish lock-out in March, the imposition of new restrictions on various overseas markets and further delays caused by negotiations about trade agreements have supplied further impediments. The German export policy in Europe as well as overseas has been fatal to Danish exports in a number of cases where under normal conditions Danish exporters would have secured orders. Although a large percentage of Danish industrial exports go to Great Britain, Germany, Sweden and Norway, any increase of industrial exports has to be made in the fifty or sixty markets all over the world where to a smaller or larger degree an outlet for Danish industrial products has been found. During the first six months of the present year, therefore, in spite of

improved world conditions, the value of Danish industrial exports has only increased from 142 to 147 million kroner.

An important improvement of the facilities for unloading and storing lubricating oils, petrol, etc., in the port of Copenhagen has resulted from the opening of the new oil port. The port itself has been constructed on a now dismantled fortress, the "Provestenen," south of Copenhagen; and a concrete embankment with carriage-way and railway track is maintaining the connection with the mainland. There is a depth of 9 metres of water along the quays, and vessels up to 10,000 gross tons can berth there. The tourist season has this year been a little better than last year. About 58,000 foreign tourists visited Denmark, against 46,000 last year; and it is estimated that they have spent about 31 million kroner in this country.

COPENHAGEN, September 16.

CANADA

REVISING THE OTTAWA AGREEMENTS

THE Prime Minister, Mr Mackenzie King, sailed from Quebec to-day in the "Empress of Britain" for Europe, where he will attend the Assembly of the League of Nations and perhaps sign new trade agreements between Canada and the United Kingdom, and possibly with several continental countries, including Germany, Holland and the Soviet Republic. During the past few days the Dominion Cabinet has been examining proposed pacts with these countries. It is believed that Canada will make valuable concessions to the United Kingdom in order to retain the substantial preferences which the Mother Country accorded this Dominion in the Ottawa Agreement of 1932, as a result of which Canadian exports to the British Isles have increased by more than \$100 millions annually. It is well understood in Ottawa that the British are not satisfied with the pact of 1932, when Mr Bennett took advantage of their ignorance of the tariff game and drove a hard bargain with them. Examination of the trade returns shows that while the volume of Canadian imports from the United Kingdom and from all Empire countries has increased, there is a decrease in the British percentage of the total imports from all countries. At the same time, Canadian imports from the United States have not only increased in volume, but the percentage of imports from the United States has increased from 55.8 per cent. in 1935 to 57.9 per cent. in 1936.

In the new agreement which Canada is making with Great Britain, worthwhile preferences are being accorded to British manufacturers of iron and steel products and textiles, and it has been possible to grant these favours without impinging upon the new trade agreement with the United States, which came into effect last January. Within the near future, efforts will be made to revise the trade agreement between Canada and Australia and Canada and New Zealand.

Mr King departs for Europe amid an agitation on the platform and in the Press of Canada for a more adequate defence policy. The furore was started by Lord Elibank, a British industrialist, who in a speech at Toronto recently urged that Canada should take steps to meet a hostile air raid. The British peer was sharply criticised by Mr Mackenzie, the Canadian Minister of Defence. Led, however, by the *Toronto Globe*, the chief Liberal newspaper of Eastern Canada, the Press rushed to the defence of Lord Elibank and turned loose a terrific barrage against Mr Mackenzie and the Liberal Government at Ottawa, claiming that the Dominion had been sponging long enough on the Mother Country and calling for the creation of an effective defence force. Lord Tweedsmuir, the Governor-General, added fuel to the flames by declaring in an address to the Alberta Military Institute at Calgary that "No country is safe from danger. Canada has to think out a policy of defence and take steps to implement it."

Some \$25 millions have been appropriated for national defence this year, which is several million dollars more than was voted annually during the regime of the late

Bennett Government. The Federal Minister of Finance anticipates a deficit of \$100 millions during the present fiscal year, including perhaps \$40 millions for the Canadian National Railways, which will have a small operating surplus, and \$30 millions or \$40 millions for unemployment relief and assistance for the drought-stricken farmers of Western Canada.

Quebec's Liberal Government was overwhelmingly defeated in the recent General Election, after holding office for nearly forty years. Maurice Duplessis and his National Union Party, embracing Conservatives and insurgent Liberals, captured 75 of the 90 seats in the Legislative Assembly; and huge majorities were registered for the Union Nationale Party in protest against a series of scandals which recently forced the resignation of Mr Taschereau, who had been Premier of the Province for fifteen years.

Economic conditions in Canada have improved very materially during the summer months, and the Dominion is climbing out of the depression by means of a golden ladder. It is estimated the nation's gold production this year will reach \$135 millions, the highest in the country's history. Another gold mine is the tourist traffic, which is estimated to yield \$275 millions this year, as compared with \$202 millions last year. It is reckoned that 400,000 tourists will have visited the famous Dionne quintuplets before the season is over.

MR ABERHART GOES AHEAD

Doubts that Alberta's Social Credit plan would go ahead may be said to have vanished with the official estimate that 80 per cent. of the persons on the voters' lists have registered in order to qualify for the monthly dividends which have been promised by Premier Aberhart. This is considered satisfactory, since only 54 per cent. of those who voted in the Alberta Provincial elections voted for the Social Credit Party. But Mr Aberhart now says that he did not guarantee \$25 a month to every adult citizen of the Province, and he is talking of starting the plan with monthly payments of \$5 or \$10. Many people have refused to sign the covenant agreeing to turn over half of their production in exchange for Alberta credit if required.

The Western harvest, which is now certain to be not more than 200 million bushels of wheat, will be disappointing to the railway companies in the matter of freight tonnage; and the Federal Exchequer will be called upon once more to meet a deficit of \$30 millions or more on the Canadian National system. The prairie grain-growers will benefit by the advance in wheat prices, and the Government will be able to get out of the wheat business without loss, thanks to this year's curtailed crop and the gradual reduction of visible supplies. It is now officially announced that Canada's wheat carry-over at the end of the crop year, July 31st, totalled only 108,747,059 bushels, compared with 203,273,016 bushels a year previously. The 1936 carry-over is the lowest since 1929. The average for the five years 1931-35 inclusive was 174,985,451 bushels. The peak was recorded in 1933, when the carry-over was 211,740,188 bushels.

OTTAWA, September 12.

SOUTH AFRICA

RECORD BUSINESS FIGURES

NEW records are still being made in various departments of mining, financial and industrial activity in South Africa. Banks' clearing house returns are the latest to supplement previously published statistics of the country's recent phenomenal development. For the first six months of the present year the clearing house returns for Johannesburg alone total £264,165,142. The clearing house returns for this and other centres, together with corresponding figures for the six months ended December, 1932, indicate the remarkable expansion of the country's business since its departure from the gold standard.

	Banks' Six Months' Returns Period ending	
	Dec. 31, 1932	June 30, 1936
Johannesburg	106,446,139	264,165,142
Cape Town	30,191,259	45,511,588
Pretoria	26,339,438	42,279,678
Durban	25,439,981	37,030,032
Port Elizabeth	9,040,064	15,053,451
East London	3,976,602	6,226,631
Bloemfontein	1,921,125	3,514,633
Totals	203,354,608	413,781,155

In each case the figures show a steady advance from the "gold standard" period to the present time. But the Johannesburg figures are the outstanding evidence of the prosperity that has developed in the last four years and which in many respects will be found reflected in the Empire Exhibition which opens here on September 15th. This enterprise will represent an aggregate expenditure, up to the opening, of not less than £2,000,000, and its promoters claim that it will challenge comparison with any previous Exhibition of its kind anywhere in the world.

July established yet another record in the matter of company registrations. In that month the registration office at Pretoria (which deals with the returns for the whole Union) approved 148 new applications, thus exceeding the highest totals reached in March and June by six and 27 additional applications respectively. The average number of registrations during the first six months of the year was 119, compared with an average of 100 a month last year. July registrations, however, although a record in number, represent capital of only £2,115,726, against an aggregate of nearly £7,500,000 represented by the registrations in May and of £6,738,800 in June. Besides the new registrations in July, 26 companies increased their capital by over £1,000,000.

The gold mining industry also achieved some new records in July. The value of the Transvaal gold output reached the unprecedented figure of £6,703,351, while in ounces the output (967,993 fine ounces) is the highest since the Union's suspension of the gold standard at the end of 1932. The actual record production was in August, 1932, when it reached 991,322 ounces; the average recovery per ton of ore then was nearly 6½ dwts., whereas it is now only 4½ dwts. per ton. Another new record established by the gold mines was in the native labour force, which reached the total of 292,500 working on the Witwatersrand mines.

RAPID INDUSTRIAL DEVELOPMENT

The Census of Industrial Establishments (excluding mining) for the year 1933-34 has just been issued. The previous Census covered part of the depression period; so that the returns under review claim "to give a clear measure of the industrial expansion which has been taking place." Briefly, in the year covered by the present report there was an increase in all industries of 861 establishments, 15,059 European and 21,960 non-European employees, £20,443,000 in gross output and £8,476,400 in "value added to materials" (as the reports described the value of processes of manufacture). European employment in these industries has at last passed the 100,000 mark; and although the gross value of production was nearly £2,000,000 short of the 1929-30 record in value, it probably exceeded it in volume by about 15 per cent., owing to lower prices. Excluding Government undertakings such as railways and those of local authorities, the gross value of output of industrial establishments for the year is returned at £99,507,724; from this has to be deducted £51,329,379 value of materials used, leaving as "value added" by the process of manufacture a figure of £48,100,000.

Interesting details of the development of insurance business in South Africa are furnished in the summaries of returns deposited with the Treasury by insurance companies during the year ended December 31st. The statement of life insurance business (excluding annuities and of bonus additions) shows that for the last financial year for which figures are available operations were as follows.

	South African Companies	Other Companies
New policies issued	40,198	20,772
Sum insured	£18,342,737	£12,622,084
Annual premiums	£579,355	£440,230
Policies existing at end of year (number)	243,772	107,587
Sums insured	£108,757,718	£60,059,512

Industrial insurance business returned by three companies domiciled in the Union, show a total of 120,959 new policies issued during the year, representing a total sum insured of £2,618,759, with annual premiums amounting to £157,593.

JOHANNESBURG, September 1.

LETTERS TO THE EDITOR

"PLANNING" AND CHANGE

TO THE EDITOR OF THE ECONOMIST

SIR,—Sir Josiah Stamp's address to the British Association last week, far from convincing me that planning offered no solution for the many problems arising out of change, convinced me most forcibly that the only hope of finding such a solution lay in some form of planning.

People are horrified at the thought of planning because of the encroachment on individual liberty which the term seems to imply. What they do not seem to realise, however, is the enormously important part which social and economic environment plays in the moulding of their habits. If they did, they would be less worried at the prospect of losing some of their quite fictitious liberties. Further, they are too ready to believe in the harm which large-scale planning does, while they ignore the good. Sound planning is essential to any successful enterprise, and this is no less true of the largest forms of enterprise than it is of the smallest forms. In fact, the larger the enterprise, the more essential it is that it should be preceded by sound planning.

The usual argument against the largest forms of enterprise is the difficulty of personnel. This is an argument which can be used with especial force against economic planning. Who are the planners to be? What is to be the system of election? That, I suggest, is a useful problem to which the scientist might apply his mind. Until, however, I am satisfied that the problem is insoluble I shall be very loath to accept it as an argument against planning.

It is hardly fair to argue that planning deals mainly with the known. It is founded on the known, of course; but that surely is a very different matter. After the scientists have been mobilised under the direction of Sir Josiah, the known will include much which, put at the disposal of a properly co-ordinated planning body, will be of immense social value, but which in the absence of such a body will almost certainly misfire.

The chief difficulty which stands in the way of the acceptance of planning as the logical successor of the present unco-ordinated system is the prejudice which not unnaturally exists in the minds of people against anything which flavours of an autocracy. Social and economic planning, if it is to produce the results desired of it, must combine the fair-mindedness of a democracy with the efficiency of an autocracy. That is a difficult combination to achieve, but it is one which must be achieved if we are successfully to combat the growing forces of social disintegration.

I am,

Yours sincerely,

46 Beverley Court,
Chiswick, W.4.

W. L. B. FAIRWEATHER.
September 14, 1936.

LEADERSHIP AND PUBLIC OPINION

TO THE EDITOR OF THE ECONOMIST

SIR,—Mr Harrison Barrow has somewhat missed the point of my letter which he seeks to confute by a defence of the Pacifist position and a recital of the mistakes made in the treatment of Germany since the War. It is, however, the present dangerous situation with which I sought to deal, a situation which Mr Bevin has remarked may mean temporarily "burying some of our cherished feelings in the past."

Since you published my letter, Mr J. M. Keynes has written as follows to the Editor of a Left Wing contemporary:

Now that you are minded to criticise the Government for having recently avoided at least three suitable opportunities for risking war, you underestimate the effect on others of the pacifist movement of the past ten years . . . The dominating factor behind this country's policy is not the malice of the "anti-reds," but the blind determination of the average man to keep out of war, including preventive wars, and out of threats of war.

I believe Mr Keynes is profoundly right. If we are going to change the country's policy, the attitude of the average man must be modified as well. Labour opinion is emphatic that circumstances appear to demand a change of policy, and it is most important that labour should play its part simultaneously in modifying public opinion. It would be calamitous if such momentous matters as rearmament and improved recruitment to the Regular and Territorial Forces were dealt with on a party basis. May I again therefore support your proposal that "the situation in Europe is now grave enough to warrant consultations between representatives of all parties in Great Britain."

Yours truly,

Northfield,
Birmingham.

L. J. CADBURY.

BOOKS AND PUBLICATIONS

SOCIAL-DEMOCRACY IN SWEDEN

IN the coming week the Swedish electors will vote at a General Election which will decide whether the Social-Democrats who have ruled Sweden during the last four years of recovery are to obtain an absolute majority. All who are interested in Sweden's remarkable economic and social achievements should read Mr Childs's instructive and thoughtful book,* which may be regarded as, in many ways, a supplement to Mr Brinley Thomas's recent book on Swedish monetary policy. The theoretical discussion and statistics which made Mr Thomas's study so valuable are, in Mr Childs's book, replaced by abundant historical and descriptive material acquired at first hand. The author was so much impressed by the high standard of living, social stability and rapid recovery from depression in the Scandinavian countries that he visited Sweden to discover for himself the secret of these favourable features of Scandinavian life, and, in the present book, he publishes the result of his pilgrimage.

Sweden, according to Mr Childs, has attained the ideal compromise between individualism and socialism—hence the title of the book. Capitalism has been kept in working order because its abuses have been checked. "The degree of *laissez faire* that has continued to exist in Sweden is, in a manner of speaking, hot-house *laissez faire*. It exists under a bell-jar. The State, the consumer and the producer have intervened to make capitalism 'work' in a reasonable way for the greatest good of the whole nation." The basis of the success of Swedish economic life is, fundamentally, the character and homogeneity of the people, the geographical situation safe from the war-clouds of Central Europe, and the political and social stability of the nation. The success has been obtained principally by the encouragement of consumers' co-operation in retail and wholesale trade, industry, housing, and public utilities, and by the public control or operation of monopolies, which the author appears to regard as the most dangerous enemies of uncontrolled capitalism. The co-operative enterprise and public monopolies are fully described, with many interesting illustrations.

The peculiar mental qualities that have enabled these methods to curb the abuses of individualism without the introduction of full-blooded socialism are said to be a spirit of empiricism and eclecticism; and it is further stated that it is because of the presence of this spirit that the Swedish "contribution to political and social thought has been slight." In view of the rich output of Swedish economic literature, this statement is scarcely fair, unless economics is not regarded as one of the social sciences. An alternative opinion, no less plausible, would be that the great success of Swedish economic policy is largely due to the attention which has been paid by statesmen in that country to the advice of professional economists, and to the vigorous theoretical dialectic that has usually preceded practical action. Readers who wish fully to understand the Swedish situation should, on these matters, refer to Mr Thomas's book, where they are fully discussed.

On the more topical question of Sweden's recovery from depression, Mr Childs is, in some ways, more sceptical than Mr Thomas, because he attributes a larger part of the recovery to external influences than to domestic monetary and financial policy. He is inclined to discount the efficacy of the expenditure on public works, of which so much has been heard in the British press, and points out that "before the Government's large-scale work relief programme could be put into operation, private employment had begun to show a marked improvement." The purchasing power of consumers was maintained by the strength and reserves of the trade unions, the low import duties, and the early revival of the export trade. The export trade revived principally as the result of the British building boom, which, in its turn, was largely caused by the low price of food as well as cheap money; so that it may be argued that Sweden owed her early and rapid recovery partly to the depression in the

agricultural world. The stability of the Swedish currency was the result of its being linked to sterling rather than to internal monetary policy.

Mr Childs, on the whole, agrees with this explanation of the recovery, but he insists, rightly, that Sweden would not have been able to make the most of her favourable opportunities if her own internal organisation had not been satisfactory. Sweden has been lucky; but "luck comes only to those who are ready for it, and Sweden, even through the war and difficult post-war adjustment, has kept her economic house in order."

SHORTER NOTICE

"Hitler the Pawn." By Rudolf Olden. Gollancz. 420 pages. 12s. 6d.

Mr Rudolf Olden was political editor of the *Berliner Tageblatt* when it was a free and independent paper, and his book is written with the disillusion of a German who believed in a different Germany.

America had lent Germany milliards (he writes), but to which Germany? It had been a strong pacific republic, the Germany of Stresemann. The country of threatened revolution with its menace of national-socialism inspired no confidence. One dark day creditors reached the only conclusion possible. The banks closed their counters, undertakings collapsed, restricted their activities, and cut down business. All hopes, confidence and enterprise vanished.

Mr Olden gives a vivid and devastating picture not only of the third Reich but of the timid and much-tried German Republic in which the Third Reich lay dormant for fifteen years. Even without Hitler he thinks "the German Republic would have fallen a prey to national reaction, to the desire of revenge of the officers and moneyed classes," but with Hitler the Germany of 1936 seems to Mr Olden a ghastly parody of the Germany of 1914. How did it happen that Hitler became the ruler of Germany and of such a Germany? Mr Olden spares no pains in giving us his picture of Hitler. He has conducted minute researches into Hitler's early life, into various statements in *Mein Kampf*—which are used most damagingly against him—and into his political tactics. Certainly, it is a most terrible portrait which emerges, not only of the Führer but of the Germany which he has aroused—a portrait of brutality, sentimentality and vulgarity.

To the question how such a man became the ruler of Germany Mr Olden replies that Hitler, "like his Reich, is only an executive agent." He is the executive agent, Mr Olden argues, of the re-established rulers of Germany, of the Reichswehr, of heavy industry and of the Junkers. They tolerate him while his regime rules in their interest because through him "the single aim for which alone Germany has lived since Stresemann died was achieved. The Reichswehr is armed once again and once more it has become a military monarchy bristling with arms." Without Hitler, Germany would indeed present a very different appearance to the world, but Herr Olden is not alone in thinking that "plus ça change, plus c'est la même chose." This is a remarkable book which deserves a wide circulation.

BOOKS RECEIVED

The Republic Arraigned. By Randolph Hughes. Reprinted from June, 1936, issue of "Nineteenth Century and After." (London) Stanley Nott. 30 pages. 6d. net.

Mr. Hughes's article is an elaborate attempt to prove that political reform cannot be introduced through France's present Parliamentary system. Since Mr Hughes article was written, H. Blum has passed more practical measures of reform than most other countries could compass in five years. It is odd that Mr Hughes should have decided to reprint his article.

The British Coal Industry in 1935. A lecture to the Chartered Institute of Secretaries, given on December 10, 1935. By Mr W. A. Lee, C.B.E., Secretary of the Mining Association of Great Britain (London) The Mining Association of Great Britain, Aldwych. 16 pages. No price stated.

Mr Lee's lecture to the Chartered Institute of Secretaries, here reprinted, is a reasoned defence of the attitude and policy of the British coalowners. It suffers somewhat from having been delivered as long ago as December, 1935.

L'Individu et l'Etat dans l'Evolution de la Suisse. By W. E. Rappard. (Zurich) Editions Polygraphiques S.A. 265 pages. 12 frs. ss.

Tendances économiques en Grande-Bretagne. By H. Pouyanne. (Paris) Revue Politique et Parlementaire. 10, rue Auber. 16 pages. No price stated.

* "Sweden, The Middle Way." By Marquis W. Childs. Faber and Faber. 10s. 6d.

MONEY AND BANKING

CHILE'S EXCHANGE PROBLEMS

CHILE has been suffering since 1929 not only from the general world depression but also from the loss of her former virtual monopoly of the nitrate markets of the world. United national effort, however, succeeded in averting a complete collapse, and the country's economy has been slowly but steadily reorganised. It is now far less dependent than before on the single industry of nitrate production. The output of gold, copper and coal has been increased, and agricultural production, which supports about half the population, has also been developed. To conserve the limited foreign exchange resources available after the decline in exports, imports have been cut down to absolute essentials, and national industries have been fostered to an extent which renders the Republic far less dependent upon foreign goods than in earlier days.

During 1929, the peso rate was comparatively steady at round about the parity rate of 40 pesos per £, but it moved up steadily in 1930. The considerable decline in Chile's export trade in August and September of that year compelled the Central Bank to intervene by utilising its gold reserves abroad, and a threatened collapse of the currency in 1931 was averted by the establishment in Chile of an Exchange Control Commission, with power to restrict foreign exchange operations. In September, 1931, a Bill was passed, authorising the Central Bank to reduce its minimum gold reserves to 35 per cent. and amending its statutes to permit of an increase in its advances to the Government from 30 to 80 per cent. of the Bank's capital and reserves.

Increasing economic and political difficulties found their vent in the revolution in June, 1932, but stability was restored with the election of President Alessandri four months later. In the preceding April, a new monetary law had been issued, which suspended the convertibility of the note issue. In October, the Central Bank began to fix a daily official buying exchange rate for United States dollars, on which exchange rates for other currencies were based. The suspension of convertibility, however, and the monetary inflation which began immediately after the passing of the first Control Law, brought about an inevitable depreciation of the peso's external value. An "official" exchange rate still exists in theory, but no commercial transactions are effected at this rate. It is used, in practice, only for statistical purposes, although the Central Bank is still nominally "buying" dollars at about 19½ pesos, and sterling at 98. After many difficulties, a controlled commercial rate—known as the "export" rate—became firmly established towards the end of 1933 as the operative rate for commercial transactions. During 1934, this export rate improved from 136 pesos to the £ in January to 117 in December. A retrograde movement throughout 1935, however, carried the rate from 116 in January to 127 in December. It then became obvious that there was a shortage of cover in the export market. By May, 1936, the rate had risen to 136, and it has since been "pegged" at 130.

The objects of the Exchange Control are to prevent the flight of capital, to stabilise the peso at between 120 and 130 pesos per £, and to restrict imports within the reasonable requirements of the country. The basis of the "export" exchange market, therefore, is the granting of Exchange Control permits only to those exporters who give ample guarantee that the net value of the goods sold abroad will be returned to Chile in foreign exchange or in merchandise. From this condition, however, nitrate, iodine, copper and iron are excepted. In view of the losses which exporters would have incurred by selling their foreign exchange to the Central Bank at the official rate, they exercised their right, from the outset, to offset exports by imports authorised by the Control Committee, either by importing merchandise of equal value or ceding their rights to third parties. Fluctuations in the export rate were thus governed,

to some extent, by the balance of supply and demand. The "export" rate of exchange has also been applied to operations in metallic gold.

At present the Chilean exchange market is tending to become increasingly complex. The number of exchange markets is perplexingly large. In addition to the theoretical official rate, the commercial export rate and "compensation" rates with various countries, there exists a "gold" rate, under which remittances in payment of certain goods (usually luxuries) may occasionally be obtained against gold purchased and deposited with the Central Bank. Occasionally "privileged" exchange has been available, owing to the fact that, from time to time when the "export" rate touched levels which the Chilean authorities considered inconvenient, the Government placed limited amounts of dollars at the disposal of the Exchange Control through the Central Bank. These, when available, could be sold to importers of goods from the United States and Great Britain. There is also in existence a "blanqueado" (or whitewashed) exchange, which was recently adopted to give some kind of tacit regularisation to dealings in "free" exchange. Such dealings, however, are unlikely to develop while "black" market rates are well above the "export" rate.

The "black" rate is paid in the curb market for foreign currencies which have usually become available otherwise than as the proceeds of exports. The non-enforcement of some of the regulations give brokers operating on the curb an advantage over the foreign banks, which has been recently accentuated by the efforts of the Exchange Control to peg the "export" rate at 26 pesos to the dollar, or approximately 130 pesos to the £, whereas the "black" market rate stands at about 145 pesos. At present the lack of exchange at the maximum rate means that shippers of goods from the United States and Great Britain run serious risk of non-payment unless they can trust their clients to make every effort to obtain the necessary exchange.

On the other hand, payment under the Compensation Treaties with Chile appears to be freely forthcoming, and a most significant feature has been the continued advance in German imports. The value of these imports was 48,500,000 pesos in the first half of 1936, compared with only 21,500,000 pesos in the same period of 1935. In the same period imports from Great Britain were under 24,000,000 pesos, against some 30,000,000 pesos. But this German competition is by no means an unmixed blessing to Chile. At first sight Chile should apparently benefit by the discount on German marks, because, *pro tanto*, she can buy her goods more cheaply. Actually, under the existing "compensation" or barter system, Chile's exports to Germany are not paid for in negotiable money, but only in what may be termed barter credits, which are known in Chile as "export" marks. These barter credits can be used only to buy German goods. These marks are not tied to gold in any way, nor are they subject to international arbitrage. Consequently, Chilean exporters sell them at a discount, and free foreign exchange becomes correspondingly difficult to obtain at any price. The arrangement is scarcely an economic triumph for Germany, since it compels her to pay more than would be otherwise necessary for her imports of Chilean products.

Other countries, including Holland, France, Belgium and Spain, have "compensation" trading arrangements with Chile. Though these compensation currencies show no depreciation, the blocking of so much foreign exchange is severely reducing the "free" exchange available for trading with non-barter countries, such as the United Kingdom and the United States. Inevitably, Chile's trade with the barter countries is tending to increase, and her dealings with non-barter States to decline, and already talk of retaliatory measures is heard in the United States, possibly by way of discriminatory Customs duties.

In the past few years Chile, largely by her own efforts along orthodox lines, has made a gratifying financial and commercial recovery. It is questionable, however, whether the limit of that recovery in present world circumstances has not now been reached. There may be danger in the over-development of national manufacturing industries in a country devoted primarily to mining and agriculture, with a comparatively small consumptive demand for manufactured goods. The time may have come to call a halt to further industrial expansion and to avoid mercantilist methods, expedients which only create new problems for Chile. International tendencies and current politico-social considerations, however, may make these desiderata difficult of realisation.

FINANCIAL NOTES

American Government Borrowing.—On September 3rd, Mr Morgenthau, the Secretary to the Treasury, announced that on September 15th the United States Government would borrow \$400 millions in cash in the form of 20-23 year 2½ per cent. bonds, and, in addition, that \$514 millions of 1½ per cent. notes maturing on September 15th would be refunded. The loan was nine times oversubscribed, the amount offered being \$3,600 millions. In view of Mr Roosevelt's recent assurance that Government expenditures would be kept down as far as possible in order to reduce the Budget deficit, this new borrowing caused some comment. Mr Morgenthau stated that the purposes of the loans were the financing of the House Owners' Loan Corporation and of the loss of revenue resulting from postponing for 90 days the so-called "windfall" tax, but as these only total about \$110 millions, it is thought that the loan is more probably needed to cover an increase in next quarter's operating deficit, due to recovery programmes and the increased demand for relief owing to the drought. At the same time the Canadian Government announced a \$100 millions conversion loan, to meet obligations of \$73 millions and for general purposes, which was heavily oversubscribed. The issue may be designed to cover increased prospective expenditure owing to the drought, but more probably is related to the financial difficulties that have been growing, despite Mr Dunning's efforts to impose a modicum of order in the chaos of Provincial finances.

Anglo-Turkish Clearing Agreement.—On September 2nd a new clearing agreement was signed with Turkey, to come into effect on September 17th. The new agreement is of the compulsory bilateral type, and replaces the old agreement of June, 1935, under which payments into the clearing account for Turkish goods imported were not obligatory. Under the old agreement considerable arrears had accumulated and at the end of August this year totalled over £1 million. The provisions of the new agreement remain more or less the same. The allocation of sums paid into the clearing account at the Bank of England remains as before at 70 per cent. for commercial debts and 30 per cent. for the Central Bank of Turkey. Until June 30th next year, however, only 65 per cent. will go to commercial debts, the remaining 5 per cent. going to a special account for Turkish Government orders in this country. The list of Turkish products which may be paid for by private compensation has been considerably extended, but, as before, the value of the British goods must not exceed 70 per cent. of that of the Turkish goods. These special goods may be imported by the holder of a blocked account, who retains 70 per cent. of the resulting sterling and gets the remaining 30 per cent. through the ordinary clearing machinery. This encouragement of barter is in many ways regrettable and is certain in the long run to restrict trade within narrow limits. All clearing agreements are bound to be unsatisfactory, but as they constitute the only feasible method for liquidating arrears of debts their disadvantages have to be accepted as inevitable. Somewhat alarming, however, is the Board of Trade warning that as the sterling available for British exports will be limited, payment for

new exports may be considerably delayed. With an outstanding debt of £1 million and a clearing agreement not radically different from the one under which this debt accumulated, the outlook would not appear to be very encouraging.

The Foreign Exchanges.—Interest in the foreign exchange market has naturally centred round the franc. Although the initial crisis seemed over when it became clear that there was no serious split in the Front Populaire Government, subsequent events have not been reassuring and the pressure on the franc has continued throughout the week. At the end of last week the general quietness was belied by the nervous undertone, reflected in the uncertain movements of the three months' discount. On Monday the new difficulties in France over the strikes in the textile industry at Lille and the growing unrest in the north of France, led to heavier pressure on the franc, which at one moment went as far as 77, the highest since June, 1934, though probably no dealings were made at this figure. The control intervened, however, and the rate was pegged at 76½, and closed at 76½. On the whole, apart from occasional contrary movements, the other currencies of the gold bloc and the dollar have moved in sympathy with the franc. The consequent appreciation of sterling is giving rise to considerable criticism of the methods of the Exchange Equalisation Account, which instead of supporting the franc firmly has been letting it go slowly to a lower level.

The Bank Return.—The note circulation is down again this week by £0.6 millions, but this is less than usual at this time of year and shows that foreign hoarding of the currency is continuing. Gold is up by only £0.3 millions, and is more than offset by the reduction of £1.8 millions in Government securities.

	BANK OF ENGLAND

Three months' bank bills	↓	↓	↓	↓

* Loans against Treasury bills and other approved bills and British Government securities within six months of maturity; 1 per cent. Treasury Bonds and other gilt-edged stocks within six months of maturity; and other collateral respectively.

Last week's tender issue of Treasury bills was more normal, and though the discount was rd. less, the allocation of 68 per cent. was more in consonance with the needs of the market. Considerable competition is expected for the next tender, as these are bills which mature at Christmas and the incidence of the holidays extends them from 90-day to 93-day bills.

THE STOCK EXCHANGE

FIFTY YEARS ON THE RAND

[The following article has been specially contributed by Professor S. Herbert Frankel, of the University of the Witwatersrand, Johannesburg, in connection with this week's celebration of the Rand's Jubilee.]

THE discovery of the gold deposits of the Rand fifty years ago not only marked the commencement of a new era of gold production of incalculable importance to the world as a whole, but also provided the foundation on which European civilisation was established in the Union of South Africa and on which it still rests.

The geological character of the gold field is unique. It is marked by the exceptional continuity in length and breadth of its general low-grade ore deposits, which cover more than 60 miles from East to West. The present known extent of the formation exceeds 150 miles. The history of the Rand is the history of the adaptation of modern industrial and financial methods to the exploitation of a mining field, continually dumbfounding the prophets both as to the area and the scale of operations economically most suited to it. The development of the field was accompanied by a relatively slow realisation of its economic implications. There has been a tendency to confuse the economic problems of the Rand with those of other isolated gold deposits elsewhere. The custom to speak at times of Johannesburg as a mining camp, which might one day disappear as suddenly as it arose, has died hard. This has led, abroad, to much misunderstanding concerning the nature of the industry, and in South Africa to a considerable amount of mistaken legislation affecting it.

The facts are, that since the beginning of the century, when it was realised that the exploitation of the Rand involved deep-level mining, the economic problems of gold mining have approached closely to those of most large-scale industries. These, in new countries, are dependent on considerable long-term capital investment from abroad, and owing to their great importance in the national economy, are greatly affected by general economic conditions in it.

With the development of this field (as the late Professor Leffeldt wrote nearly 20 years ago) gold mining came for the first time into the normal economic categories. Alluvial and quartz mining elsewhere has always been so speculative and that no clear connection between costs of production and return could be predicated of it, but on the Rand gold mining is an industry rather than a gamble, and the economic results, not perhaps of the single mine but of the field, are calculable.

It must, however, be emphasised that such calculations may, at any time, be greatly vitiated by a change in the conditions on which they are based.

MARGIN OF PROFITABLE MINING

The growth of the industry has been continuously influenced by the interaction of many variable factors (quite apart from changes in the grade of ore) which determine the marginal yield and costs of gold production. Since once ore bodies have been opened up mining on the Rand can almost be described as a manufacturing process, the rate of production is governed by the endeavour, as far as practical mining considerations permit, to maximise the marginal net product in terms of money. The lower the cost of the other factors of supply, the lower will be the grade of ore from which gold can be manufactured. Thus, the elasticity of Rand gold supplies is considerable.

These general statements, however, hide numerous difficulties met with in practice by individual mines. At any given time the life of a mine is determined by the capacity of its plant in relation to the total ore which can be economically mined. The size of the plant will, in turn, depend on the capital invested. There can be an increase in both life and the scale of operations only if the grade is lowered.

It must be remembered, however, that an increase in the scale of operations requiring new capital investment for additional plant, etc., really involves the creation of a new mine in place of the old. Any change in the expectations which have led to such new capital investment creates a new situation—either there will have been over-investment of capital and capital losses will result, or the calculations will again have to be revised and further new capital investment take place, resulting in a different relation between the life, scale of operations, and the grade.

LOW RETURN ON CAPITAL

The net mean annual yield to all capital invested in the industry from 1887 to 1932 has been estimated by the writer to amount to 4.1 per cent. This cannot be regarded as a high yield. It is due to unforeseen changes in the factors already referred to. Apart from the absolute losses of capital due to the inherent risks of mining, the large scale and long period nature of the investment required on the Rand (the amount that has to be expended in opening up a new mine to-day ranges from £2,000,000 to £3,000,000) is one of the main causes. The investment is associated with a long period of development during which no return to capital accrues. At different times the normal period of development has been greatly prolonged owing to the supply of new capital (most of which, inci-

dentally, has been raised under boom conditions in the mining share market) failing in the interim. Capital has at times been invested in opening up new mines or testing auriferous areas, and subsequently, owing to changes in the rate at which further capital could be obtained, development has had to be postponed until the cost of the additional capital required was again equivalent to the original anticipations. World factors influencing the rate of interest and the supply of capital, therefore, exert a very great influence on the industry.

INCREASED EFFICIENCY AND REDUCED COSTS

An important feature of the industry is the continuous increase in efficiency which, after making allowance for monetary factors, has resulted in a fall in costs, notwithstanding the ever-increasing depth of mining.† This is largely due to the process of amalgamation which had already taken definite shape as early as 1897, and can be regarded as having been firmly established by the time of Union. It has led to a degree of rationalisation and concentration in finance, technical organisation and control which has often been held up as an example by outside observers. Its extent can be indicated by the fact that out of 576 gold mining companies floated on the Rand during the period 1887-1932, some 206 were amalgamated, 313 were wound up, and only 57 remained in existence in 1932. The latter were, with some minor exceptions, controlled by six financial houses or groups. Of the total Witwatersrand production, amounting to nearly 300,000,000 ozs. of gold to date, approximately 35 per cent. is accounted for by only six mines, all of which are still large producers at the present time.

The decline in the average working costs is illustrated by the fact that whereas they were 29s. 6d. per ton milled in 1897, they had been reduced to 18s. 10d. in April, 1936. As a result there has been a great lowering of the grade of ore mined.

The writer has calculated that whereas in 1898 of the total ore milled 55 per cent. was attributable to individual mines which gave a return indicating an average grade of ore of over 9 dwts. (36 per cent. over 10 dwts.), in 1934 over 60 per cent. was under 5 dwts. and almost 35 per cent. below 4 dwts. The increased depth of mining which has accompanied these changes can be seen from certain calculations, from which the writer has concluded that whereas, in 1898, some 48.5 per cent. of the dividends came from mines working to depths of not more than 1,000 feet, a further 43.7 per cent. from mines which had not exceeded a depth of 2,000 feet, and only 7.8 per cent. was accounted for by mines which had reached 3,000 feet. In 1932 the position had been reversed. Only 5.8 per cent. of the dividends were accounted for by mines working to 3,000 feet; 37.8 per cent. came from mines working to 4,000 feet; 35.8 per cent. from mines working to 5,000 feet; 11 per cent. from mines working to 7,000 feet; and actually 2.5 per cent. from those already at 8,000 feet.

These changes have also been accompanied by large increases in the average claim area of the mines. In 1898 the average claim area of mines then in existence was 287, in 1910 it was 663, in 1920 it was 973, and in 1932 it was 1,672. Actually, however, this does not sufficiently indicate the change that has taken place. It is anticipated that within the next few years no fewer than 14 new mines will be producing on the Rand. Many of these, as a result of the recent policy of granting leases over very large areas to encourage the opening up of new mining districts, will have an area of from 4,000 to 6,000 claims.

CAPITAL INVESTMENT ON THE RAND

The cyclical nature of the industry's development is indicated by an examination of the statistics of capital invested. From 1887 to 1932 over £149 millions of share capital, including cash premiums on the shares subscribed for, were invested in the Witwatersrand Gold Mines. In addition £63 millions were appropriated from profits for re-investment. About two-thirds of the latter amount can be regarded as new capital expenditure, the remainder

† It is significant in this connection that the number of white and coloured employees in service on the producing mines of the Witwatersrand per 1,000 tons treated per year has declined from 10.07 in 1906-7 to 6.83 in 1934.

being for replacement and depreciation. Furthermore, £9 millions of debentures were redeemed out of profits. The Rand thus absorbed £200 millions of capital, and during the same period paid £255 millions in dividends.

By far the largest part of this capital was raised before the war during the mining "booms" of 1889, 1895-96, 1902 (resumption of activities after the Boer War), and 1908-10. From 1913 to 1932 the average annual capital raised was relatively small. The maximum reached in any one year was in 1927, when approximately £2 millions were subscribed. At various times during this period a considerable number of mines were being "nursed" by the parent groups from current profits. Owing to the fall in the real value of gold, the consequent rise in working costs, the war and post-war conditions, the rise in interest rates and similar factors, the industry was practically forced to maintain itself on the basis of its own capital resources and was in fact largely based on the last great expansion financed by the new capital made available during the boom of 1908-10, when a sum exceeding £14 millions of new capital was invested in the industry. This had previously been exceeded only in 1895-96, when nearly £26 millions was obtained.

THE BASIS OF PRESENT PROSPERITY

By 1932 the average working costs in the industry, although again at the level of 1917 (from 1917 to 1921 they had risen by over 6s. per ton—from 19s. 2d. to 25s. 8d.), had not been sufficiently reduced relative to the yield per ton to bring about a revival of new mining enterprise. It was under the conditions then existing that the pessimistic forecast of the Government Mining Engineer in 1930 that the output of gold would have fallen by more than 50 per cent. to £20 millions per annum in 1942, was justified. The changes that have taken place since the departure of the Union from the gold standard and the resulting rise in the price of gold are, in fact, equivalent to a further reduction of 6s. per ton in working costs. It was estimated in 1932 that with a reduction of only 4s. the available tonnage would be doubled. As a result there has been a repetition of past history, and the Rand has experienced a boom during which the foundations for a very long period of new expansion are being laid—once again a New Rand is in the making, as in 1896 and 1910.

It must be noted that during the present boom several favourable factors have coincided. Apart from the rise in the money price of gold and the fact that this has not yet been followed by a rise in working costs, recent years have been characterised by very low interest rates, and exceptionally large supplies of capital have been available. At the same time, an abnormally large supply of native labour, on the fluctuations in which the rate of production and expansion of the industry have always been peculiarly dependent, has been available.

RECENT RESULTS AND DEVELOPMENT

The following table illustrates the results of the new conditions and the intense activity of the producing mines. The large increase in Government revenue from the mines is significant:—

WITWATERSRAND PRODUCING MINES (EXCLUDING HEIDELBERG)				
Percentage Increase or Decrease over 1932

† From gold mining, lease revenue plus taxation, figures to March 31st of the following year.
* Estimated.

This activity has been paralleled by intense development in new mining areas assumed to be gold-bearing, for the testing of which capital could previously not be obtained. The prospecting operations for the main reef series in areas south-west of the Witwatersrand have, for example, been particularly successful. Sir Robert Kotze has in fact estimated that under existing conditions the industry in ten or twelve years' time will have doubled its tonnage and its expenditure, that it will employ 50,000 Europeans and 400,000 natives, and that the population of the Rand will be 50 per cent. higher than at present.

The writer has estimated that during the three years to the end of 1935 the nominal capital of new companies floated on the Rand amounted to over £34 millions. The cash invested (including premiums) was approximately £25 millions. The number of new gold mining companies registered during this period was 149. Of these, 74 are carrying on operations, 27 are defunct, and 48 have already ceased operations.

The geographical distribution of the new capital strikingly illustrates the far-flung nature of the present developments. Of the £34 millions, about £7,500,000 was registered for operations in the Far East Rand; nearly £6 millions was for the West Rand; £10,200,000 for the Heidelberg area; the Central and East Rand absorbed £2,500,000; Klerksdorp obtained £3,300,000; and the rest of the Transvaal and parts of the Orange Free State accounted for the balance of £4,500,000.

THE UNION'S DEPENDENCE ON THE RAND

The table on page 523 gives a series of statistical data illustrating the development of the industry. It will be immediately apparent therefrom that the gold-mining industry has become of ever greater importance in the economy of the Union. The finances of the State and the economic activities of the country as a whole are closely linked to it and will continue to be determined by it. Even in 1932 the writer estimated that 50 per cent. of the direct and indirect revenues of the Government were derived from the Witwatersrand gold-mining industry—a percentage which is very much larger now. On the other hand, the future of the industry will depend on the degree to which the level of costs and prices of the economy as a whole, of direct and indirect taxation, and of State expenditure can be readily adapted to changing conditions, so that the country's most important export industry will not be hampered. The future of the Rand is now bound up with State policy to an extent unequalled in the past.

An increasing portion of the economic activities of the country are directly dependent not only, as in the past, on the normal activities of the gold-mining industry, but on State expenditure financed from the additional taxation of the present profits of the industry. It is disquieting to find that, as a result, the unprecedented activity in the constructional industry, caused by gold-mining expansion (and of the capital imports associated therewith), is being fanned by the most lavish Government expenditure on public works and by very costly measures, of doubtful utility, intended to bolster up the agricultural industry. Expenditure is keeping pace with windfall revenues and the future is being discounted by the Government at a level which appears unduly optimistic. If this tendency continues it cannot be long before the scarcity of productive factors (not only of native labour, which in itself threatens to become serious) will bring about a definite slowing up of the present rate of expansion. Much of the existing activity outside the mining industry may then be found to rest on an artificial foundation. He would be a brave man who would deny the dangers of such a situation in the light of the rapid changes which we are witnessing in international economic conditions.

Moreover, the past history of the Rand suggests that a period of boom such as the present will be followed; quite apart from possible unforeseen changes, by a long period of consolidation at a new level of more normal activity. The transition from the boom psychology to this new norm will provide the acid test of South African economic statesmanship.

THE LATEST "15 MOORGATE" TRUST:

INVESTORS FLEXIBLE TRUST
offers a combination of the advantages of a Fixed Trust and a managed Investment Trust with an experienced Board of Directors.

The Trust's initial portfolio contains the shares of 70 companies, selected from a permitted list of over 250 first-class companies representative of the strongest and soundest elements in British commercial, industrial and financial enterprise. Within that list the Trust is fully flexible and offers a sound investment with the possibilities of increased capital value and income yield.

4½ PER CENT. MIDLAND BANK EXECUTOR AND TRUSTEE CO. LTD.

is the estimated gross annual yield, on the basis of dividends paid during the past twelve months on the securities forming the initial portfolio. This does not include capital bonuses or sales of rights.

Sums of from approximately £45 upwards may be invested through any Bank or Stockbroker. For free descriptive Booklet EC7, which is the basis for all purchases, apply to the Managers:—

INVESTMENT AND COMPANY NOTES

Prospectus Harvest.—The capital issue market is returning from holiday, and an early recurrence of its recent activity is more than probable. If this autumn's company prospectuses are modelled on some of those which saw the light during the spring and summer, it will be impossible to view future possibilities with complete confidence. This year, certain features associated with earlier phases of over-activity have been indubitably in evidence. Promoters have ruthlessly exploited the popular taste for re-armament shares; capitalisations have been based on the results of a single peak year; and the discredited high-preference-cum-low-ordinary has become (as the motor manufacturers would say) standard on all models. Such financing is bound, in due course, to have an unhappy aftermath; but it is, at least, reassuring that its appearance in a more extreme form has been comparatively recent. The new company financing of the earlier phase of the recovery period appears, in fact, to have been conceived on moderately sound lines. We have recently compared the earning power disclosed by twelve companies in their first published accounts, with that of the same companies disclosed or estimated in their prospectuses, which were published in 1934-35. The list includes the following concerns (engaged in the industries shown in brackets):—

Taylor Woodrow Estates (residential building); Ault and Wiborg (printing ink makers); J. W. French (flour millers); S. Collier (cloth merchants); Prices Trust (holding company in multiple tailoring trade); Cannon Iron Foundries (gas stoves and household appliances); Vactric (vacuum cleaners); Ismay Industries (holding company, electric lamps, etc.); Silentbloc (anti-vibration appliances); Bennis Combustion (boiler and coaling plant); Briggs Motor Bodies (motor parts); and Bristol Aeroplane (aircraft manufacturers).

Precise comparison is difficult, partly because "first accounts" frequently run for periods of more or less than a year, and partly because prospectus figures are usually hedged round with "adjustments," whose precise nature is known only to those who make them. If, however, all figures are expressed on an annual basis, it would appear that these dozen companies have together earned £766,000, against prospectus estimates of £756,000. The latter figure represents, broadly, the amount "held out" to subscribers. In the majority of cases it is based on the "cover" calculations given in each prospectus, which in turn were based on the average profit figures as required under the Companies Act. The impression, nevertheless, is that prospectus figures have not unduly flattered actual earning power. Of the twelve companies, in fact, eight have shown larger earnings than their prospectus estimate. These companies, doubtless, were fortunate in coming on the market at a relatively early stage in British industrial recovery. But their broadly satisfactory showing may be due even more to the fact, first, that the majority were established concerns which were earning satisfactory profits before they made their public *début*; and, secondly, that their financing did not disclose many of the objectionable features which have characterised some of this year's flotations.

Tate and Lyle and Caroni Sugar.—Proposals were made this week to the shareholders of Caroni Sugar Estates (Trinidad) for a capital rearrangement under which Tate and Lyle will take an active financial and managerial interest in the company. These proposals appear to reflect important decisions of policy by the directors of Tate and Lyle. To the scheme itself, no exception need be taken. Holders of 1,040,000 5s. shares in Caroni Sugar are invited to convert their holdings into 6 per cent. cumulative 5s. preference shares, guaranteed for ten years by Tate and Lyle. The existing ordinary shares received no dividend between 1924 and 1933, when 1½ per cent. was paid, while 3 per cent. was distributed for the first nine months of 1935. From the income standpoint, therefore, Caroni shareholders have no cause for complaint. In addition, they are to receive 520,000 new 2s. ordinary shares as a capital bonus,

while Tate and Lyle will subscribe for an equal number of shares at par. Their equity therefore is halved, but it is likely to be an equity of a distinctly different order than in the past. Tate and Lyle will nominate three members to the board and their technical services should prove valuable. The current year will undoubtedly be the most favourable in the history of Caroni Sugar, for it is expected that a 6 per cent. dividend will be paid. For the future, the directors welcome the scheme, which permits them "to develop a progressive policy, on a scale, and within a period, which, otherwise, could not be attempted under present conditions." This statement is best interpreted in the light of Sir Leonard Lyle's statement on co-operation with colonial sugar growers, which, subject to the continuation of Imperial preference, the company has in mind. The Caroni proposals are the first step in this policy. Sir Leonard discussed the prospect of the domestic beet sugar industry under the new Corporation and declared, with complete frankness, that the prospect for the future did not entice him. In the past, the company has been most successful in the beet sugar industry, for, in the chairman's own words, "our factories were the most efficient and the subsidy was so huge." The change of policy towards greater development of Colonial supplies will, in fact, reinforce a movement which has proceeded since 1931-32. In the subsequent three years, full duty sugar retained for consumption was halved, preferential sugar increased by 42 per cent., and home-grown sugar by over 80 per cent. There has, in consequence, been a fall of 28 per cent. in Customs and Excise receipts during the period, which has probably not escaped the notice of the Chancellor.

A Calico Printing Scheme.—The annual addresses of Mr Lennox B. Lee to shareholders of the Calico Printers' Association perform the same service for investors in the cotton textile industry as those of Mr Samuel Courtauld for rayon investors. Both speeches are invariably illuminating, comprehensive, and sealed with the stamp of authority. But, alas! the story which the two chairmen have to tell is very different. While the rayon industry is busily compiling new records of production and sales, the cotton textile industry is battling against international forces for its very existence. The working profit of the Calico Printers' Association has fallen from £1,052,150 in 1928 to £470,887 in 1936; and for the first time during depression the company has passed its preference dividend this year. The figures given by Mr Lee at last Wednesday's meeting are the best commentary on the Association's problems. In 1925 the United Kingdom exported 4,436 million square yards of cotton piece-goods. In 1935 the total was 1,950 millions. The Chinese market took an average of 587 million square yards annually in the five pre-war years. In 1925 she took 173 millions, in 1934 20 millions, and in 1935 14 millions. Such conditions cannot be overcome by tariffs, preferences or quotas. The industry must accept the conditions of life in a world which is no longer made for Lancashire. For seven years at least the problem has been engaging the best minds in the industry, and now the turn of the printing section has come. The Calico Printers' Association has maintained its share in Lancashire's reduced trade by accepting a steadily declining level of sale prices in a fiercely competitive environment. In the process, however, in Mr Lee's phrase, the printing trade is "bleeding to death." Two years ago a special committee was formed with the support of more than 90 per cent. of the industry. It began by exploring the possibility of eliminating surplus machinery so as to leave the trade with an adequate margin for productive requirements, but with no inducement to sell at a loss. Unfortunately, this solution turned out to be unpracticable, for the calico printing trade is dominated by fashion and must always have machinery which may, at a given moment, be "surplus," but is not redundant. Consequently, the Committee has decided on the principle of "sterilisation" rather than destruction, and has evolved a plan based on a covenant between all firms to accept an agreed proportion of the total trade available, with complete freedom to produce any style or pattern it chooses, within the limits of its "quantum." The scheme, Mr Lee

declares, "has secured general acceptance, though outside critics may complain that, like the salvage schemes of other industries, it involves restriction and the giving of the quasi-monopoly powers to existing producers. The scheme's future lies on the lap of the Board of Trade, for without Parliamentary sanction, Mr Lee is convinced, producers will always poach on each other's preserves. Lancashire's history, for the last fifteen years, suggests that he is right.

Ranks' Uninformative Accounts.—The report and accounts issued by the directors of Ranks, Limited, this week, contain the bare minimum of information to satisfy the requirements of the law. It is doing them no injustice, however, to say that they cannot possibly satisfy the investor who is attempting to assess the value and prospects of Ranks, Limited, 5s. ordinary shares. The profit and loss account discloses three items, but 99.9 per cent. of the total receipts are attributable to dividends receivable from the company's shareholding in Joseph Rank, Limited, the operating company. In these circumstances it is completely without significance that a somewhat higher balance of revenue is available in the holding company's accounts for the payment of the 15.0492 per cent. ordinary dividend. Nor is any light to be gleaned from the balance sheet regarding the assets position of the flour-milling business from which shareholders of Ranks, Limited, draw their dividends at one remove. Of a balance sheet total of £7,787,760, shares in Joseph Rank, Limited, account for £7,295,593. The statement under Section 126 of the Companies Act, appended to the profit and loss account, records that the dividends brought in from Joseph Rank, Limited, are exceeded by that company's profits. In the directors' report it is further stated that "a substantial amount, which the directors consider to be a sufficient reserve out of the profits for the year, has been retained or carried forward in the accounts of Joseph Rank, Limited, and its subsidiaries." But why should not the proprietors of Ranks, Limited, the holding company, know what are the profits of the company on whose earnings they are entirely dependent? Here, surely, the usual arguments against the publication of consolidated profits and balance sheets can hardly apply. Milling is no more competitive than many other trades, of which distinguished members already publish group accounts. Even if the stock position of milling companies is put forward as an argument against consolidation (on the ground that rival firms would be able to anticipate future market trends from the figures) it is tolerably certain that the general lines of such information are already broadly known in informed trade circles. In this instance, the technical accounting difficulties of consolidation, or at least of the publication of the accounts of the main subsidiaries separately, are far less serious than those surmounted by many other concerns. We suggest that shareholders should demand fuller information at the forthcoming meeting regarding the progress and prospects of the group, and should press for fuller accounts in future. A minor point also arises regarding the remuneration of the directors, which is not disclosed in the Ranks' accounts, although an item appears in the profit and loss account for "Administration Expenses." Normally, directors' fees of the holding company (not being remuneration to managing directors) and fees paid by subsidiary companies to all directors must be disclosed. Does the absence of a statement in the present instance imply that the directors are remunerated by sub-subsidiary companies?

Palestine Electric Progress.—To the British investor, the Arab disaffection in Palestine has provided an unwelcome reminder that even a rapidly developing mandated territory is not without its generous quota of political risk. The operations of a handful of Palestine concerns known to the British investor—they include two progressive utility concerns and a bank—have at least been hampered, if not positively checked, by internal strife. Nevertheless, Sir Herbert Samuel's speech to shareholders of the Palestine Electric Corporation this week was in some respects dis-

tingly more favourable than a superficial view of the present circumstances would suggest. Sir Herbert pointed out that the economic structure of the country had not been seriously affected, and that the expansion of demand for electricity still continued, although at a slackened rate. Thus, during the three months from May to July, the Corporation's receipts amounted to £145,000, compared with £129,000 for the corresponding period of 1935. And the chairman expressed his confidence in the restoration of order and the resumption of peaceful progress. The progress of the Corporation during the decade of the late Lord Reading's administration was most remarkable. The total capacity of the power stations has grown from 2,482 kw. to 52,375 kw.; some 1,758 kilometres of mains are now installed, compared with 120 kilometres in 1926; consumers have increased from 6,500 to 53,000; and the standard charge per unit for lighting has been reduced from 50 mils. to 27 mils. The expansion of gross revenue from £66,000 to £488,000 has kept pace with large capital expenditure, of which much recent outlay has doubtless become fully productive. Given an appeasement of the present strife, there should be scope for a gradual increase in profits and dividends. The £1 ordinary shares are, in effect, a 15 per cent. maximum equity, and have received 7½ per cent., free of British income tax, during the past two years. At 48s. 9d., they offer an equivalent gross yield of £4 os. 9d. per cent., which seems fairly to preserve the balance between current troubles and long period prospects.

Actuaries' Investment Index.—The movements of the Actuaries' Investment Index, calculated on Tuesday's prices, clearly reflect the irregular opening in the industrial markets which, later in the week, became markedly hesitant. The total index of 178 industrial shares, therefore, is only fractionally lower at 87.8, compared with 88.0 a

COMMERCIAL SERVICE

The Bank has over 370 Branches in Africa, and Agents and Correspondents throughout the World. The closest touch with Trade and Industrial conditions is maintained, with special attention to Commercial and Credit Intelligence. This service is available to Exporters, Importers and others wishing to develop trade with South, East and Central Africa.

THE STANDARD BANK MONTHLY REVIEW is sent post free on application. It gives the latest information on all South, East and Central African matters of Trade and Commercial Interest.

week ago, and 86.7 a month ago (December 31, 1928 = 100). The corresponding yield figures are 3.61 per cent., 3.60 per cent., and 3.64 per cent. Such a corrective, after a period of active dealings which culminated in last week's sharp speculative advances, is not unnatural. Examination of the component movements in the index shows that the reaction has, on the whole, been slight:—

Group (and No. of Securities)	Prices (Dec. 31, 1928 = 100)			Yields (%)		
	Month ago (Aug. 18)	Week ago (Sept. 8)	This week (Sept. 15)	Month ago (Aug. 18)	Week ago (Sept. 8)	This week (Sept. 15)
Building materials (5)	104.7	108.8	108.3	4.64	4.47	4.49
Coal (7)	103.6	104.2	103.7	3.24	3.29	3.31
Iron and steel (12)	80.6	81.6	80.5	3.70	3.70	3.74
Oil (5)	85.7	90.4	88.1	3.20	3.00	3.07
Electric supplies (10)	148.6	152.4	150.7	3.66	3.58	3.60
Home rails (4)	77.2	78.3	78.1	1.51	1.48	1.41
Miscellaneous (56)	78.4	79.5	79.5	3.89	3.85	3.85

The oil share market, ripe for technical adjustment after last week's 5 point rise, has lost about half its gains. A comparably sharp (and perhaps less justified) advance in electrical equipment shares has been similarly followed, and selling of rather over-valued stock is still in progress in this market. The moderate reactions in building material shares (since partially off-set) and in home rails are typical of a large section of the market.

Johannesburg Consolidated Investment.—Although the profits announced in July showed a further, if small, decline, several important changes in the assets—and in the prospects of the company's interests—have occurred during the past twelve months. The balance sheet shows a substantial reduction in the portfolio and a marked expansion in cash holdings. The decline in earnings is attributable in part to reduced dividends received from most of the Rand gold mining companies in the group (Randfontein, of course, providing a notable exception), and in part to the less favourable market conditions during the year. After the allocation of £300,000 to reserve, however, the balance carried forward is only slightly reduced. A comparison of significant items in the accounts for the past three years follows:—

	Year ended June 30		
	1934	1935	1936
Stocks and shares	6,454,150	6,626,260	6,075,080

Carried forward	168,643	170,673	166,870

* Including dividend. † Includes £100,000 to staff pension fund.

Interesting developments have occurred which favourably affect the company's copper, diamond and platinum interests. A further increase in the production quota of the Northern Rhodesian copper producers takes effect as from October 1st. Rhokana, in which "Johnnies" has a large holding, paid 3s. 6d. for the past financial year, as compared with 2s. 6d. in respect of 1934-35. Within the past few months the price of platinum has doubled, and demand is expanding. The plant at the Rustenburg Platinum Mines is therefore being modified and enlarged. Nothing is said regarding Potgietersrust Platinum, which holds slightly more than half the capital of Rustenburg, and has itself been shut down for some considerable time. Although the diamond business "is still much below that of prosperous times," a considerable improvement in ornamental and industrial demand has occurred. A favourable account is given of the company's South African industrial interests. A majority holding in the East Champ d'Or has been acquired. This property lies between Randfontein, Luipaards Vlei and Durban Deep, and had

lain dormant since before the war. This transaction, together with advances to the Rand Leases and subscription for the additional working capital for Vogelstruisbult doubtless account for most of the increase in mining properties. Holdings have been written down to market value, but no credit has been taken for recovery, and a large surplus over book value is shown. On the 20 per cent. dividend "Johnnies" shares at 77s. 6d. yield slightly over 5 per cent.

Consolidated Main Reef.—Last year's results, writes our mining correspondent, strikingly reflect the expansion of operations. The quantity of ore treated—1,753,000 tons—exceeded the previous year's increased total by 412,900 tons. The average yield was reduced by 0.358 dwts.; but a reduction of 1s. 2d. in working costs (largely from lower development charges), combined with the increased tonnage milled, provided £62,250 more working profit. Development expenditure totalled £200,960, compared with £212,160 in the previous year, although the footage was 7,848 higher at 110,360 feet. Some salient statistics showing the progress of the past three years are set out below:—

	Working Profit	Dividends	Carried forward	Ore Reserves	Value
	£	£	£	Tons	dwts.
1933-34	601,306	212,160	174	181,420	5,787,090
1934-35	624,290	296,310	234	200,920	7,130,300
1935-36	686,540	374,280	30	215,880	9,688,700

Exploration on the main reef and main reef leader provided a large increase in the payable tonnage, while prospecting on the main reef in the western section and in the bottom levels of the mine gave encouraging results. These developments are significant, since the additional property acquired during the previous financial year adjoins on the south and south-west. Work on the south reef was slightly less fruitful than before; but on another subsidiary ore body, the Bird Reef, an increased tonnage of ore of slightly lower value was opened up. The available ore reserves show an increase on the previous estimate of 2,558,400 tons, and represent fully five years' supply for the mill at last year's rate of extraction. Capital expenditure during the past year amounted to £92,670; and although the additions to the treatment plant have been practically completed, considerable further outlay is foreshadowed on hoisting equipment, improvements to the reduction works and compounds. On the basis of last year's record dividend total of 30 per cent., the gross yield afforded is approximately 6½ per cent.

New Modder and Nourse.—In the case of New Modderfontein, a substantial increase in the quantity of ore treated, coupled with a slight reduction in the working costs ratio, failed to offset the decline in average revenue, which amounted to 31s. 8d., as against 35s. 4d. in 1934-35. The cut in the dividend rate therefore was inevitable. Compared with the results of the previous year, the total tonnage of payable ore developed last year declined by 389,100 tons. The reduction in the available ore reserves, however, is no more than 135,700 tons, although the value is 0.6 dwts. down at 4.5 dwts., due partly to the inclusion of low-grade but payable material. While the mine will doubtless continue to pay substantial dividends for a good many years, shareholders must prepare themselves for a progressive shrinkage in profits. Comparative results of New Modder and Nourse during the last three years are given below:—

	Working Profit	Dividends	Carried forward	Ore Reserves	Value
	£	£	£	Tons	dwts.
New Modder:					
1933-34	2,304,860	1,470,000	105	224,690	7,760,100
1934-35	2,280,210	1,505,000	107½	198,960	7,872,200
1935-36	2,049,106	1,385,000	97½	206,940	7,736,500
Nourse:					
1933-34	370,050	146,940	18½	110,290	3,580,800
1934-35	350,580	146,940	18½	98,330	4,007,100
1935-36	351,430	176,320	22½	134,420	4,132,800

Somewhat similar features are displayed by Nourse Mines, at least on the financial side, but in this case the two favourable factors rather more than counterbalanced the adverse trend of average revenue, and the operating profit showed

a small increase. In fact, the ability of the company to pay a larger dividend than for the two preceding years, and to carry forward a substantially increased balance, arises from the marked reduction in the charge for taxation, which was no higher than £116,240 last year, as against £184,980 in 1934-35. Net expenditure on capital account is also somewhat lower at £14,500. The report of the consulting engineer contains the significant intimation that the main development of the upper portion of the mine is now practically completed, and states that "it is anticipated that for the ensuing year the development footage and the tonnage of ore developed will show a further decrease." These facts justify a current price for the shares which gives a gross yield of nearly 10 per cent.

Modder Deep to Wind Up.—At the thirty-fifth general meeting of this Union Corporation company last May, shareholders learned that the board had in mind the desirability of placing the company in voluntary liquidation, while mining operations were still being carried on. This week's announcement, that such recommendations will shortly be made, has therefore caused no surprise. It has been fully known to mining investors that the management could not accurately assess the duration of profitable operations, although at the meeting the chairman's estimate suggested that operations would continue during the current year and probably next year. The Main Reef ore is now nearing exhaustion, and although the supplementary Kimberley Reef ore is sufficient to ensure full milling operations, its payability is not consistent and its total quantity is relatively small. Shareholders will doubtless approve the recommendation of the board. Operations will not be affected by the liquidation, so long as they remain payable, and steps will eventually be taken to clean up the reduction plant, and to realise the assets on the best terms. The company's history is part of the romance of the Rand, which is being currently celebrated in Johannesburg. The company

was founded in 1899, but it was not until 1915 that milling operations started, and patient shareholders received their first return. In the subsequent years, however, they were richly rewarded. In the flush decade of the 'twenties, when ore of well over 10 dwts. per ton was being milled, dividends ranged between 120 and 150 per cent. In all, £12,325,000 has been paid in dividends during 21 years, equivalent to 2,465 per cent. on a capital of £500,000. Modder Deep 5s. shares, which last year touched 20s. 9d., to-day stand no higher than 6s.

Other Company Results.—The results of twenty-three other companies are set out on page 534. *Lichfield Brewery* have earned £25,523 for the latest year against £19,031 for the nine previous months, the dividend being maintained at the rate of 10 per cent. per annum. A serious fall in the profits of *Brick Investments*, from £22,519 to £9,478 is ascribed by the directors partly to the non-recurrence of income from new capital issues, whose extent was not specifically disclosed last year. *Initial Services* have shown further progress to a new record profit level of £245,476, the dividend on the increased capital being 25 per cent. Considerable improvement is reported by two iron and steel companies: *Horseley Bridge and Thomas Piggott*, have made net profits of £24,798, as compared with a mere £1,104 for the previous fifteen months. *Sheffield Forge and Rolling Mills* have doubled their dividend, having increased the latest year's profits by £2,490 to £12,200. *Capital and National Trust* have resumed dividend payments on their ordinary stock, though at the modest rate of 1 per cent. The first annual report of *Aire Wool*, the wool-combing holding company, shows a profit of £14,770, which is, however, below the estimate based on an average of five years' earnings of the chief subsidiary. *Sir J. L. Hulett and Sons*

The available ore shows a decrease of 135,700 tons, compared with the previous year, and the average value is 0.6 dwt. per ton lower. The full Report and Accounts (with Plan of Workings) may be obtained from the London Secretaries, A. MOIR & Co., 4 London-wall Buildings, E.C.2.

LONDON ACTIVE SECURITY PRICES AND YIELDS

In calculating yields on fixed interest stocks quoted below allowance is made for interest accrued since the last date of payment, less income tax at the standard rate. Where stocks are definitely redeemable at a certain date the yield includes any profit or loss on redemption; where stocks are redeemable at or before a certain date the final date of repayment is taken when the stock stands at a discount and the earliest date when the quotation is above par. The return on ordinary stocks and shares is calculated by reference to the latest dividends, account being taken of any enhancement or reduction of interim dividends. Allowance is made for accrued dividends in calculating the yield on "cum. div." shares.

have suffered a considerable decline in profits from £178,307 to £122,304. Among British industrial concerns, *Leyland and Birmingham Rubber* have earned £70,694, as compared with £66,218, while the net profits of *Ketton Portland Cement* show an advance from £50,249 to £59,045. The increase in the *Associated Portland Cement* interim dividend from 5 per cent. to 7½ per cent. was well received by the market. The subsidiary, *British Portland Cement*, has maintained its 7½ per cent. rate, but the dividend is payable on a substantially increased capital. A final dividend of 5 per cent. declared by *United Steel Companies* makes a total distribution of 7½ per cent., which is somewhat below the best estimates.

THE WEEK IN THE MARKETS

THE STOCK EXCHANGE

SETTLING DAYS
TICKET SEPTEMBER 22
ACCOUNT SEPTEMBER 24

The good angel of cheap money and rearmament is fighting it out with the bad angel of international fear and War, for control of the stock markets. This week the good angel seems on the whole to have prevailed. A slight sagging was in evidence at the beginning of the week owing to Herr Hitler's trouble-mongering, but confidence, among Stock Exchange speculators, is ever born anew. The gilt-edged market became firmer on Tuesday, and prices continued to rise in mid-week, despite a very small volume of business. Indians and Colonials, particularly Australians, moved upwards with the home issues, and Home Corporations were slightly harder. The foreign bond market was less buoyant, and German bonds in particular paid the price of Hitler's truculence, and continued their decline while French issues staged a recovery. Poland Sevens and Hungarians were the firmest points in the European bond market. Brazilians weakened on the continuation of martial law, and Peru Corporation dropped after last week's strength. Far Eastern bonds suffered from the universal disease—fear of War. The Home Rails market has been dull apart from Great Western, which have been very well supported and continued strong in mid-week, after the good traffics. Argentine issues were bought in the foreign rail market.

Industrial markets have been fairly quiet. A sharp improvement in American issues was provoked by London's mistaken interpretation of the Maine elections result as a victory for Landon in November, but New York threw cold water on this little burst. Iron and steel issues moved irregularly, although there are no signs of a let-up in the trade expansion. Swan Hunter was one of the few issues to improve in mid-week. Coal shares have been weak on the uncertain position of the industry, and the possible effects of centralised selling on some issues. Aviation issues have been generally firm, while the motor group has been more or less neglected. There have been no outstanding features in either department. In the Stores section prices have been rather irregular; Woolworth lost ground at one time on fears of increased competition, but recovered later, along with Marks and Spencer. Provision and Catering shares were a little soft in mid-week. Textile and rayon issues were uninteresting. Electrical equipment shares were mostly lower, and realisations were the order among Breweries, although there were signs of a slight recovery later.

There were few changes of importance in the miscellaneous industrials section. Cement issues were fairly good, and improved on the interim dividends, but gave way later on profit-taking. British Oxygen continued to recede. The best section was the miscellaneous engineering group, in which Carrier Engineering were prominent on the dividend.

The oil shares market has been dull most of the week, with business on a very small scale. Mexican Eagles were depressed at the beginning of the week by reports that the Mexican Government intends to require foreign companies to invest 25 per cent. of their annual profits in Mexico, but lack of confirmation was followed by a slow improvement. Royal Dutch and Shell have been holding their ground on a small volume of investment support from London and from the Continent. Other business was not important. Both the rubber and the tea shares markets have been dull, the former despite a slight improvement in the price of rubber.

The Kaffir market opened the week very dully, with selling from the Cape and slight buying from Paris. The international situation depressed the market, and business slackened on account of the Jewish New Year. A slight

improvement was apparent later, and West Witwatersrand were the centre of attraction on a rumoured new issue. In mid-week Gold Fields made considerable gains. The West African section was neglected as the week opened, but later Bibani came into demand. Copper shares were active at the start, partly on the increased quota, but business slackened down as the week progressed. Tin shares have been firm, despite the uncertain position of the restriction agreement, on a number of excellent dividend announcements.

Business on the Paris Bourse was in its customary idle condition as the week opened, but sentiment improved on M. Auriol's statement. There were signs of a movement into internationals in anticipation of an early franc devaluation. A similar improvement from dull conditions was in evidence on the Berlin Bourse in mid-week, particularly in industrials. The Dutch Budget had a good impression on the Amsterdam Bourse; the effect was most evident in a rise in all Government issues. Royal Dutch rose to a new high early in the week.

NEW YORK STOCK EXCHANGE

THE New York Stock Exchange has passed an unsettled week. Prices have sagged despite the satisfactory condition of the business recovery; practically every section of the market has been affected, including the bond market. Apart from business news the principal event of the week was the Maine election, but the result showed so small a margin for the Republican candidates that Landon supporters could draw no encouragement for the success of their man in the Presidential elections. Wall Street took a more reasonable view of the result than London. European news grows more disturbing, and contributes nothing to steady the uneasiness of operators. Business reports continue their good trend.

OFFER TO NEW READERS

Any reader who makes his first acquaintance with this journal with this week's issue is invited to fill up the attached:

To Publisher, "Economist Newspaper Ltd.,"

8 Bouverie Street, E.C.4.

In order to test the value of your publication I should like you to forward this to me by post for the next four weeks. If I then decide to become a subscriber, it is understood that there will be no charge for the copies thus received, but otherwise I shall be willing to pay 4s. to cover their cost.

Name.....
Address.....

but Wall Street seems to remain unconsoled. *Iron Age* estimates steel mill activity at 72 per cent. of capacity for the week compared with 70 per cent. for last week, and foresees continued improvement for some months. Railroad earnings compare very satisfactorily with last year's levels, but the influence of holidays has cut down electricity output below the previous week.

CAPITAL ISSUES

THE new issue market this week has resumed business after the holiday period with two small industrial offers, and the preparations already reported suggest that considerable activity may be anticipated during coming months. The fashion for small issues, however, seems likely to remain, and this week's offers are typical of the small-sized industrial undertakings which have recently sought the investor's support. *Lane Fox and Company* is a contracting concern, established in the North of England. Of the total assets of £110,777 (acquired at par), some £54,340 represents the value of work in progress and stocks, as valued by the managing director, and of the consideration some £35,777 is to be applied in discharge of existing liabilities. Profits have jumped sharply during the latest year, and a further rise is anticipated during the current year. The past record of the concern, however, is less impressive, and investors must value the shares with regard to the possibility that current operations in the residential building industry are close to the peak. The 4s. shares are, consequently, distinctly speculative in character. The 2s. shares of *R.F.D. Company*, to which the Stock Exchange Committee declined to accord facilities recently when they were "introduced" to the market, have this week been offered for sale at 3s. per share. The prospectus is of a character which has recently become familiar. The total capital of the company is no more than £50,000. Government contracts are featured in heavy type, and the profits record shows a spectacular jump during the past two years. Of the total assets acquired (£40,363), goodwill, patents and designs as valued by the managing director total £24,600. A premium of 50 per cent. for these shares seems sufficiently large, in view of the fact that the company is capitalised on the basis of profits which have yet to accrue during the current year. Statements for information only have been published by *Lawrence, Scott and Electromotors*, and by *Ambrose Shadlow and Company*.

ISSUES OF THE WEEK

January 1 to September 12, 1936, including conversions, Old Basis, £302,336,533.
January 1 to September 12, 1936, excluding conversions, Old Basis, £124,952,446.
January 1 to September 12, 1936, including conversions, New Basis, £327,478,923.
January 1 to September 12, 1936, excluding conversions, New Basis, £233,285,945.

National Savings Certificates, Net receipts week ended September 12, 1936, Dr. £50,000.

The report and accounts were unanimously adopted.

GOVERNMENT RETURNS, &c.

NATIONAL ACCOUNTS

The total ordinary revenue for the week ended September 12, 1936, amounted to £10,442,000, against ordinary expenditure of £14,113,000. After allowing for an increase in Exchequer Balances of £109,341, the operations for the week, as shown below, increased the gross National Debt by £3,780,000 to approximately £7,987* millions.†

(000's omitted)	
Treasury Bills	+ 7,790
Public Department Advances	- 2,150
National Savings Certificates	- 50
Road Fund	- 922
Post Office & Tel. Capital Exp.	- 700
British Shipping Assistance	- 188
	- 4,010
	+ 7,790

* After adding back Capital Liabilities additional to Deadweight Debt.
† Including £375 millions on Account of Exchange Equalisation Fund and Borrowing for Statutory Sinking Fund.

A complete analysis of the approximate position of the National Debt at June 30, 1936, appeared in the *Economist* of July 4, 1936.

Messrs Samuel Montagu and Company write on September 16, 1936 :—

The Bank of England gold reserve against notes amounted to £246,524,329 on the 9th instant, as compared with £245,405,334 on the previous Wednesday. Purchases of bar gold as announced by the Bank during the week amounted to £318,940. In the open market about £1,230,000 of bar gold was disposed of at the daily fixing. Demand was unusually for a special account and prices included a premium over gold exchange parities. With the weak tendency of the gold currencies in terms of sterling, following the industrial troubles in France, the price of gold touched lower levels, yesterday's quotation of 137s. 4d. being the lowest since June 7, 1934. The situation in France is likely to govern the tendency for the time being, meanwhile gold continues to leave Paris for New York. The s.s. "Strathaird" which sailed from Bombay on the 12th instant carried gold to the value of about £525,000 consigned to London.

There has been little movement in prices, but the weakness of the dollar made for a rather dull tendency. By the 12th instant quotations had sagged to 19½d. for both deliveries, at which they remained unchanged until to-day when, on some Indian and bear covering orders, cash was quoted at 19½d. on a premium of ½d. over two months. Demand for the Indian Bazar has been strong, but further support was given by America, which the former also effected some resales. Speculators bought and sold but sales on China account have been very moderate. The market appears steady at about the present level of prices, but there is the possibility of any important advance in the near future.

The following statistics of imports and exports of gold and silver for the week ended September 17, 1936, are issued by the Statistical Department of H. M. Customs and Excise.

REPORTS AND NOTICES

BANKS

IMPERIAL BANK OF IRAN.—At an extraordinary meeting of the Imperial Bank of Iran, held September 16th, a special resolution approving the Supplemental Charter whereby provision is made for the increase of the capital of the bank from £650,000 to £1,000,000, divided into 100,000 shares of £10 each, and for the capitalisation of £350,000, part of the assets of the bank, and for altering the manner in which special resolutions are to be passed, was carried unanimously. A confirmatory meeting will be held on October 2nd.

THE YOKOHAMA SPECIE BANK, LTD.—The accounts for the half-year ended June 30, 1936, show net profit for the past half-year of Yen 17,196,651.83, including Yen 10,060,937.10 brought forward from the preceding half-year. The amount was distributed as follows: to reserve fund, Yen 1,750,000; dividend at 10 per cent. per annum, Yen 5,000,000; balance carried forward, Yen 10,446,651.83. The results achieved have again proved most satisfactory and highly encouraging. It has been possible not only to maintain the dividend at 10 per cent. per annum, but to place a further sum of Yen 1,750,000 to reserve, so bringing this fund to Yen 130,900,000 and to carry forward an amount of Yen 10,446,651.83. Mr. Kenji Kodama has retired from the presidency of the bank and Mr. Toshikata Okubo, previously vice-president, has succeeded him as president, while Mr. Yakichi Suitsu has been elected as vice-president.

MISCELLANEOUS

"THE MANGANESE BOOM."—In a leading article, published in the *Economist* of August 8th, by an error of transcription, South Africa's output was given at 947,000 metric tons in 1930 (instead of 147,000 tons) and at 702,000 metric tons in 1931 (instead of 102,000 tons), and Egypt's production in 1929 at 791,000 metric tons (instead of 191,000 tons).

CERTIFIED ACCOUNTANTS.—The next examinations of the London Association of Certified Accountants will be held on December 1st, 2nd and 3rd in Belfast, Birmingham, Bristol, Cardiff, Cork, Dublin, Edinburgh, Glasgow, Hull, Leeds, Liverpool, London, Manchester, Newcastle-on-Tyne, Nottingham, Plymouth and Sheffield. Women are eligible under the Association's regulations to qualify as certified accountants upon the same terms and conditions as are applicable to men. Particulars and forms are obtainable at the offices of the Association, 50, Bedford Square, London, W.C.1.

KETTON PORTLAND CEMENT COMPANY, LTD.—Profit on trading after charging current working expenses but before charging depreciation amounted to £65,469 for year to June 30, 1936, comparing with a trading profit of £53,566 for year to June 30, 1935. The 74 per cent. shareholders receive 8 per cent. against 74 per cent. The ordinary dividend is higher at 10 per cent., compared with 74 per cent. The sum of £20,000 is transferred to depreciation reserve account against £18,000, while £8,000 is written off preliminary expenses against £5,568. This extinguishes preliminary expenses account altogether. The carry forward is increased from £14,619 to £16,457. Meeting at Sheffield, September 29th, at 3.30 p.m.

ARDATH TOBACCO COMPANY, LTD.—The report for year to June 30, 1936, discloses a net profit of £460,475 compared with £460,427 for year to June 30, 1935. Preference dividend absorbs £84,000 as before. The ordinary dividend is again 12 per cent. free of income tax, and amounts to £360,000. The carry forward is increased from £249,421 to £265,896. Total assets, £5,889,372, of which £2,942,439 is for goodwill, trade marks and registered brands at cost. Stocks stand at £828,869 against £802,900, Debtors are at £383,588, against £406,145. Cash stands at £1,395,507, against £1,262,368. Reserves total £760,019.

AFRICAN STEAM SHIP COMPANY (OFFICIAL RECEIVER'S STATEMENT).—Mr E. T. A. Phillips, Senior Official Receiver, informed the creditors and shareholders of the African Steam Ship Company on September 15th that the present position was quite hopeless with regard to the shareholders. The creditors, he said, would receive something less than 1 per cent. on the amount of their claims, and there was not the remotest possibility of any return being made to the shareholders. The statement of affairs lodged under the liquidation shows liabilities to unsecured creditors £722,897, and the only assets are the 6,000 shares of Elder Dempster Lines Holdings, estimated to realise £6,900. The deficiency to creditors amounts to £715,997 and the issued capital to £2,500,000, thus increasing the deficiency to £3,215,997.

REPORT OF DIRECTORS.—To be submitted to the Shareholders at a Meeting to be held in the Board Room, Johannesburg Consolidated Investment Company, Limited, Consolidated Building, Fox Street, Johannesburg, on Tuesday, the 24th November, 1936, at 11 o'clock in the forenoon.

The following table summarises the principal details in the reports and accounts and gives a comparison with the previous year :—

MISCELLANEOUS INTERESTS.—13. During the year interests have been acquired in various industrial concerns dealing in products consumed by the Mines. Substantial additions and improvements will shortly be completed at the Carlton Hotel, Johannesburg. The Polana Hotel at Lourenco Marques has been disposed of.

The Company has taken up its proportion of the additional working capital issued by Vogelstruisbult Gold Mining Areas, Limited, which is expected to commence milling operations in the course of a few months.

ELECTION OF AUDITORS.—18. Messrs. S. Thomson and F. Dix, the Auditors of the Company in Johannesburg, and Messrs. Kemp, Chatteris, Nichols, Sendell & Co the Auditors in London, retire from office and offer themselves for re-election.

10 & 11, Austin Friars, London, E.C.2.
17th September, 1936.

OVER ONE HUNDRED YEARS OF SERVICE

SCOTTISH UNION & NATIONAL

INSURANCE COMPANY

ASSETS EXCEED £16,000,000

FIRE LIFE ACCIDENT MARINE

Edinburgh: 35 St. Andrew Square
London: 5 Walbrook, E.C.4, and 45 Pall Mall, S.W.1

with £38 8s. 9d. to £38 10s. a week ago. Stocks of refined copper in British official warehouses at the end of last week, at 50,253 tons, show a decrease of 88 tons, while stocks of rough copper, at 1,592 tons, show a decrease of 402 tons on the week.

LEAD AND SELLER.—Both metals remain firm. At £18 11s. 3d. per ton, lead prices reached a new high level for the current year on Wednesday. The basic position of the market is unchanged, and higher prices may be witnessed in the near future, provided the present strong demand is maintained. An active demand, both from consumers and speculators, raised spelter prices by a further 8s. 9d. to £14 18s. 9d. per ton this week. Hopes concerning the resumption of international negotiations, owing to higher production costs in Belgium, was the main reason for the improved demand; but no definite news concerning such negotiations has been received.

Sales of lead on the London Metal Exchange: 800 tons on Monday, against 2,300 tons last week; 850 tons on Tuesday, against 3,000 tons last week; 1,750 tons on Wednesday, against 1,500 tons last week. The New York quotation on Wednesday was 4.60 cents per lb., against 4.60 cents a week ago and 4.60 cents a month ago. The official closing quotation in London for soft foreign for shipment during the current month was £18 11s. 3d. per ton, compared with £17 18s. 9d. a week ago.

Sales of spelter on the London Metal Exchange: 1,150 tons on Monday against 500 tons last week; 950 tons on Tuesday, against 750 tons last week; 1,375 tons on Wednesday, against 1,500 tons last week. Wednesday's quotation in East St. Louis was 4.85 cents per lb., against 4.85 cents the week before and 4.80 cents a month earlier. Wednesday's official closing quotation in London for "good ordinary brands" for shipment during the current month was £14 8s. 9d. per ton, against £14 last week.

TIN.—After fluctuating continuously, prices closed on Wednesday showing a rise of 5s. per ton on the week. Demand is not active, but sellers are even more reserved than buyers, so that the market has been rather dull. Attention is at present concentrated on next Wednesday's meeting of the International Tin Committee in London. In view of this meeting, any attempt to forecast the course of prices in the near future would be futile.

Sales of tin on the London Metal Exchange: 300 tons on Monday, against 675 tons last week; 315 tons on Tuesday, against 375 tons last week; 205 tons on Wednesday, against 455 tons last week. The New York quotation on Wednesday was 42.50 cents per lb., against 42.50 cents a week ago and 42.50 cents a month ago. Wednesday's official closing quotation in London for standard cash was £194 5s. to £194 15s. per ton, compared with £194 to £194 10s. a week ago. Stocks of tin in London and Liverpool at the end of last week totalled 705 tons, a decrease of 40 tons on the week.

WOLFRAM.—After a somewhat surprising relapse, wolfram ore prices recovered to 25s. per unit in July, and have been very steady at around 30s. per unit during the past fortnight. Demand is now quite active and supplies not too plentiful. Private advices from China indicate that the Southern Chinese Wolfram Monopoly, which has controlled the entire export from China after the end of 1933, has been dissolved since the flight of the military chief of Kwangtung. No change is, however, anticipated in China's wolfram policy, and exports of ore can be made only if permitted by the Central Government.

OTHER NON-FERROUS METALS.—Among other non-ferrous metals, aluminium ingots and bars for home delivery were again quoted at £100 per ton, and rolling billets at £102 per ton. Nickel, for home and export, at £200 to £205 per ton, remains unchanged. Quicksilver, on the spot, was quoted at £12 18s. 6d. to £12 19s. per flask of 76 lbs., against £12 17s. to £12 17s. 6d. a week earlier. Chinese antimony was quoted at £53 to £54 per ton ex warehouse, the same as last week. Chinese wolfram for September-October shipment was quoted at 29s. to 30s. per unit c.i.f., against 29s. 6d. to 30s. 6d. a week ago. Refined platinum was steady at £14 per ounce.

TEXTILES

COTTON.—Manchester.—Inquiry has continued more encouraging. In all sections, however, it has been difficult for spinners and manufacturers to secure orders without price concessions. Traders are still confused by the raw cotton situation. On the latest information concerning supplies of the American staple, prices should advance, but an upward movement is checked by hedge selling. Weather advices from the American belt do not improve, and plants continue to be adversely affected by heat and dryness in the Western section. Supplies this season will probably be much smaller than consumption.

Manufacturers of piece-goods have not been short of inquiry. A little more business for India has taken place in a variety of cloths, mostly light bleachers and fancy styles. The bulk of the demand has been for Karachi and Calcutta. Scattered sales have been reported in dyed goods

for Java and Hong Kong. Buying for South America has been patchy, but some makers of finishing styles have again done fairly well. A few more orders have been put through in fine fabrics for Switzerland. Steady buying has taken place for the Dominions and the Crown Colonies, especially South Africa, Australia and West Africa. A mixed business has been done in home trade goods. Yarns have been bought irregularly. In the American section fair weights have been booked in coarse and medium counts. Prices for ring beams are well held. A little more activity has again shown itself in Egyptian qualities.

EGYPTIAN COTTON CONTRACT.—For some months the directors of the Liverpool Cotton Association have had under consideration the introduction of a new futures contract to take the place of the existing Egyptian Sakellaridis contract. It has been recognised that some alteration was necessary owing to the declining production of Sakellaridis during the last few years. At a meeting of the members held on Monday last the new contract was approved, and trading will begin on October 1st for delivery in January, 1937, and onwards. The existing Sakellaridis contract will come to an end on September 30, 1937. The present contract is based on Fully Good Fair Sakellaridis, but the new one is based on Fully Good Fair Giza 7. For some time supplies of the latter variety have increased, and Giza is now more representative of long staple cotton.

LABOUR DISPUTE.—The members of the Weavers' Association at a mill at Skipton came out on strike about a fortnight ago as a protest against the employment of non-unionists. The Skipton Cotton Employers' Association reported the matter to the central body in Manchester. At the end of last week the committee of the Cotton Spinners' and Manufacturers' Association sent an ultimatum to the Weavers' Amalgamation that if the workpeople on strike did not return to their employment on Monday morning the employers would not take part in the meeting of the Conciliation Committee (fixed for September 22nd) to deal with the application of the weavers for an increase in wages of 15 per cent., as the joint rules had been broken. The operatives at Skipton are still on strike and the officials of the Weavers' Amalgamation confess that they have committed a breach of the joint rules. It appears, therefore, that the Amalgamation has not been able to control the local trade union. The Weavers' Amalgamation, however, have asked for a joint meeting with the employers in Manchester to discuss the situation.

WOOL.—Bradford.—The fifth series of London wool sales began last Tuesday, when there was a large attendance of buyers, the Continent being better represented than for a number of series. From the outset competition was keen, all sections participating in the bidding. The increased competition of the Continent, particularly Germany, was very welcome. The home trade is undoubtedly the largest buyer, which can be taken as evidence of low stocks in manufacturing areas. Both greasy and scoured merinos were fully firm at the best rates of the July series. Fine greasy crossbreds were about 5 per cent. dearer, medium and coarse 7½ to 10 per cent., while scoured crossbreds were unchanged to 5 per cent. dearer. Slipes met a particularly good reception; fine half-bred lambs being mostly 4d. dearer, with medium and coarse often 1d. per lb. more. Capes were par to 5 per cent. higher, while Puntas were a good 5 per cent. dearer.

Demand overseas, where a new selling season is now in full swing, is equally good. Although business in Australia is good without Japanese competition, it would be welcome news to hear that an agreement had been reached between the Australian and Japanese Governments. Japan is carrying a fair weight of wool, and can consequently well afford to do without purchasing heavily for some time to come. Apparently increasing use is being made of substitutes, but demand for raw wool is still on a large scale. Germany is greatly in need of raw wool, her stocks being very light. In British manufacturing districts machinery continues to be fairly well employed, and, following a settlement of orders for next spring—which may be hastened by the results of the current series of London sales—all spindles and looms will probably be running full time. The indications favour the maintenance of current wool prices, and stocks of raw wool at the end of the current season will probably be relatively small.

GRAIN MARKETS

WHEAT.—World prices are again on the up-grade. The official September estimates of the American and Canadian spring wheat crops are interpreted as moderately bullish in market circles. The unfavourable European political situation and adverse weather conditions for late harvesting have also contributed to the buoyant tone of the market. Meanwhile, news from the Southern Hemisphere remains fairly satisfactory, although additional rainfall would be beneficial in many parts of Argentina and Australia. There is a good milling demand in this country and shippers' quotations are very firm.

On Wednesday last, "September" futures were quoted in Chicago at 114½ cents per bushel, against 111½ cents the week before and 114½ cents a month ago. Quotations in London, Wednesday, No. 1 Northern Manitoba, ex ship, 40s. 6d. per 496 lbs., against 39s. 3d. a week ago; No. 2 Northern Manitoba, ex ship, 40s., against 38s. 9d. a week ago. According to the *Corn Trade News*, total shipments of wheat and flour last week totalled 1,500,000 quarters, against 1,155,000 in the previous week and 1,195,000 quarters in the corresponding week a year ago.

FLOUR.—Imported flour is a firm market and prices are higher generally. Wednesday's London quotations (excluding quota payments) were: Straight run, delivered Home Counties, 34s. per 280 lbs., against 32s. 6d. a week ago; delivered inner London, 33s. 6d., as compared with 32s. a week ago. Manitoba patents, ex store, 30s. 6d. to 32s., against 30s. to 31s. 6d. a week ago. Australian, ex store, 28s. to 28s. 6d., against 27s. 6d. to 28s. a week ago.

BARLEY.—Imported feeding barley remains a steady market. Despite unfavourable weather conditions, trading in English malting descriptions is more active. "October" futures were quoted at 58½ cents per bushel in Winnipeg on Wednesday, against 53 cents a week ago. Quotations per 48 lbs. in London on Wednesday were: "English feed" at farm, nominal, as against a nominal quotation a week ago; "English malting" (new), at farm, 32s. to 50s., against 32s. to 50s. last week; Californian (new), ex ship, 44s. to 54s., against 44s. to 54s. last week; Chilean, brewing, ex ship, 34s. to 38s., against 34s. to 38s. a week ago.

OATS.—On Wednesday, "September" futures were quoted at 42 cents a bushel in Chicago, against 41½ cents a week ago and 44½ cents last month. Quotations in London, Wednesday: "English Black" (new), at farm, 18s. to 19s. per 336 lbs., against 18s. to 19s. a week ago; "English White" (new), at farm, 18s. to 19s., against 18s. to 19s. a week ago; mixed Canadian feed (Vancouver), landed, 19s. 9d. per 320 lbs., compared with 20s. last week.

MAIZE.—Although the market closed on Wednesday rather below the week's best, prices are higher than a week ago. "September" futures were quoted on Wednesday at 114½ cents per bushel in Chicago, against 110½ cents a week ago and 116½ cents last month. Quotations in London, Wednesday: "Plate", landed, 25s. 3d. per 480 lbs., compared with 24s. 9d. a week ago; "Plate", ex ship, 24s. 3d. to 24s. 6d., as against

23s. 9d. a week ago; "Plate," "September," 23s. 9d., as against 23s. 6d. a week ago; yellow maize meal, ex wharf, was quoted at £6 10s. to £6 12s. 6d. per ton, as against £6 7s. 6d. to £6 10s. last week.

SALES AND PRICES OF BRITISH CEREALS.—The following table gives the estimated sale of home-grown wheat during the harvest years 1932-33 to 1935-36:—

	1932-1933	1933-1934	1934-1935	1935-1936
Estimated sales of home-grown wheat—	Cwts.	Cwts.	Cwts.	Cwts.
1 week to September 12	355,593	532,140	435,043	260,121
2 weeks to September 12	702,462	1,008,820	855,987	510,065
Average price of English wheat per cwt.	s. d. 4 9	s. d. 5 1	s. d. 4 8	s. d. 7 2

The following is a statement showing the quantities sold and the average price of British cereals in the past two weeks, and for the corresponding week in each of the years from 1932 to 1935:—

Week ended	QUANTITIES SOLD			AVERAGE PRICE PER CWT.		
	Wheat	Barley	Oats	Wheat	Barley	Oats
September 10, 1932....	Cwts. 118,467	Cwts. 56,087	Cwts. 45,968	s. d. 5 8	s. d. 6 6	s. d. 6 7
September 9, 1933....	355,593	356,831	48,605	4 9	10 10	5 3
September 15, 1934....	532,140	682,692	44,340	5 1	11 3	6 8
September 14, 1935....	435,043	426,223	63,733	4 8	10 4	6 2
September 5, 1936....	249,944	73,469	45,278	7 3	9 11	6 8
September 12, 1936....	260,121	804,231	42,612	7 2	10 11	6 6

AMERICAN WHEAT MARKETS.—The following table shows wheat quotations for selected weeks in 1934-36:—

NEAREST FUTURE	Jan. 3, 1934	Jan. 2, 1935	Sept. 18, 1935	Dec. 31, 1935	Sept. 9, 1936	Sept. 16, 1936
Winnipeg (No. 1, Manitoba).....						106
Chicago (No. 2 Winter).....	65½	82½	92½	84½	99	111½
Chicago (No. 2 Winter).....	84½	98½	97	75½	111½	114½

The visible supply of wheat in Canada amounts to 76,244,000 bushels, against 69,949,000 bushels last week, and 128,476,000 bushels in the corresponding week last year.

OTHER FOODS

BACON.—Danish remains steady, but other descriptions are generally quiet or irregular. The official quotations (per cwt. for No. 1 Sizable) which formed the basis for dealings on the London Provision Exchange this week were: English, 97s.; Canadian, 87s.; Danish, 100s., as against 99s., 91s., and 100s. last week. Arrivals in London last week included Danish, 12,234 bales; Canadian, 4,458; Dutch, 2,279; Lithuanian, 1,779; and Polish, 2,667, as against 13,964, 4,141, 2,128, 1,527 and 2,545 bales, respectively, in the previous week.

BUTTER.—Prices for Danish butter remain steady, but Colonial makes have shown weakness. Quotations (per cwt.) on the London Provision Exchange on Wednesday were: New Zealand, finest salted, 108s.; Australian, choicest salted, 108s.; Danish, 128s., compared with 109s. to 110s.; 109s. to 110s., and 128s., respectively, a week ago.

CHEESE.—In common with other provisions, the market in cheese has been rather easy this week. Quotations (per cwt.) on the London Provision Exchange on Wednesday were as follows: English, finest farmers, 78s. to 80s.; Canadian, finest coloured, 69s. to 70s.; and New Zealand, finest coloured, 66s., against 76s. to 80s.; 71s. to 72s., and 67s. to 67s. 6d. respectively, a week ago.

COCOA.—Prices have continued to rise this week. The spot quotation in New York on Wednesday was 7½ cents per lb., as against 7½ cents per lb. last week. In London, on Wednesday last, good fermented new crop, "November-January," was quoted 34s. per 250 kilos., c.i.f. Continent, against 32s. 6d. a week ago. Last week's movements of cocoa in London were as follows: Landed, 1,481 bags; delivered for home consumption, 9,995 bags; exported, 5,084 bags; stocks, 157,972 bags, against 133,853 bags a year ago.

COFFEE.—The markets in London and New York have again been quietly steady. On Wednesday, Rio No. 7 (cash) was quoted at 8 cents per lb. in New York, as compared with 8 cents per lb. last week and 8 cents per lb. a month ago. Movements of coffee in London last week were as follows: Brazilian, landed, 50 cwt.; delivered for home consumption, 101 cwt.; exports, nil; stocks, 9,957 cwt., against 13,516 a year ago. Central and South American, landed, 654 cwt.; delivered for home consumption, 2,335 cwt.; exported, 711 cwt.; stocks, 84,674 cwt., against 127,779 last year. Other kinds landed, 542 cwt.; delivered for home consumption, 3,152 cwt.; exported, 475 cwt.; stocks, 124,616 cwt., against 146,856 last year.

EGGS.—Prices are again firm on rather short supplies. At Smithfield on Wednesday, English (ordinary packing, Grade I about 15-15½ lb.) realised 15s. 9d. to 16s. 3d. per 120, as against 15s. 6d. to 16s. last week, while Danish (15½ lb.) made 12s. to 12s. 6d. per 120, as against 12s. to 12s. 6d. last week.

FRUIT.—With the passing of holiday influences, Covent Garden market has settled down to a more steady and consistent trade, states *The Fruit-grower*. Although some prices remain low, a firmer tendency is often apparent. Supplies of apples continue heavy, but with the elimination of inferior fruit, best grade clean samples are being fairly good at the moderate prices ruling. Plums, although abundant enough to keep prices low, are not in such heavy supply this week. Blackberries are doing better, while peaches, nectarines and melons are firm on an active demand, while lemons are scarce and exceptionally dear. As a result of somewhat shorter supplies, grape fruit are doing better.

MEAT.—At Smithfield Market trade has been moderate and prices generally show little change. On Wednesday last, Argentine chilled hind-quarters were quoted at 3s. 10d. to 4s. 4d. per 8 lbs., as compared with 3s. 10d. to 4s. 2d. a week ago. New Zealand frozen mutton was 3s. to 3s. 10d. per 8 lbs., against 3s. to 3s. 10d. a week ago. According to the

Capital, £1,247,602 in 1,247,602 Shares of £1 each (all issued)

DIRECTORATE

C. I. READ (Chairman). SIR ABE BAILEY, Bart., K.C.M.G.
R. S. G. STOKES. G. CARLETON JONES. MAJOR C. S. GOLDMAN.
W. A. MACKENZIE. A. A. AURET. W. H. A. LAWRENCE.

Tonnage Milled, 1,753,000.

	£	s.	d.	Per ton milled.
Total Working Revenue	£2,481,805	5	9	£1 8 4
Total Working Expenditure	1,795,264	16	6	1 0 6
Working Profit	£686,540	9	3	£0 7 10

Total Profit for the year	£694,173	3	8
Balance unappropriated at 30th June, 1935	200,919	12	10
Forfeited Dividends Account	103	16	5
£895,196	12	11	

This amount has been dealt with as follows:—

Net Expenditure on Capital Account for the Year	£92,670	0	10
Miners' Pensions—Provision on account of Outstanding Liability as at 31st July, 1935	6,023	0	0
Provision for Taxation	206,339	15	7
£305,032	16	5	

Dividends declared during the year:—

No. 52 of 12½ per cent., and No. 53 of 17½ per cent.	£374,280	12	0
Leaving a balance unappropriated of	£215,883	4	6

Ore Reserve.—The available ore reserve has been re-estimated, and is as follows:—

	Tons.	Value.	Stopping width, Inches.
Main Reef	479,500	4.22	53.9
Main Reef Leader	3,237,000	5.09	50.4
South Reef	2,998,600	4.64	49.1
Bird Reef	2,973,600	3.41	79.8
Total	9,688,700	4.39	56.5

In addition, there were 781,800 tons of payable ore developed, of an average value of 5.23 dwt. per ton standing in shaft and safety pillars, which are not at present available for stopping.

The available reserve shows an increase of 2,558,400 tons compared with the previous estimate, the value being 0.35 dwt. lower and the width the same.

The Full Report and Accounts (with Plans of Workings) may be obtained from the London Secretaries, A. MOIR & Co., No. 4 London Wall Buildings, London, E.C.2.

Smithfield Market official report, supplies during last week amounted to 9,721 tons, an increase of 869 tons on the corresponding week last year. Beef and veal accounted for 5,266 tons, mutton and lamb 2,696 tons, and pork and bacon 1,088 tons, as compared with 4,572, 2,466 and 1,106 tons, respectively, in the same week of 1935.

MILK.—Information relative to the operation of the Milk Marketing Scheme during August, as issued by the Milk Marketing Board, is given in the following table, together with comparable statistics for earlier months:—

	August, 1935	May, 1936	June, 1936	July, 1936	August, 1936
	d.	d.	d.	d.	d.

The quantities catalogued for the public auctions in Mincing Lane this week comprised 57,666 packages of Indian and 23,299 packages of Ceylon tea. At the Indian sales the tone was generally good, and quotations were about unchanged. The market in common Ceylon sorts was, however, barely steady, and prices were easier in some instances.

VEGETABLES.—The vegetable section at Covent Garden market shows signs of general improvement, according to *The Fruitgrower's* correspondent. Supplies of tomatoes, however, are heavy, and prices are at the season's low level. Cucumbers have met a moderate trade at easy rates. Cabbage and marrows continue plentiful, and cheap, but good samples of green peas and best stick beans are realising more money. Cauliflowers remain at a moderate trade, while mushrooms are still in somewhat limited supply. Celery is doing fairly well, and onions, carrots and turnips have improved. Meanwhile, in response to cooler weather and the elimination of poor quality samples, the potato trade shows some improvement. At the Borough Market on Tuesday, best King Edward's were steady at 6s. 6d. to 7s. per cwt.

VEGETABLE OILS AND OILSEEDS.—Markets are quiet, with a rather easier tendency. Linseed oil is in fair demand from consumers for spot and near delivery, and, in sympathy with seed, prices are a shade lower on the week. Rape oil, ex Hull, for October–December delivery, is quoted around £25 10s. per ton, at which actual business is recorded. The seed outlook is satisfactory. Weather conditions in Argentina and on the Pampas are favourable to the newly sown seed, and should not be unforeseen happenings. A bumper yield is expected. Meanwhile, shipments of the old crop proceed.

RUBBER.—The market has had a steadier tone this week, and prices are a shade higher. Demand remains only moderate, but selling pressure has been absent. Attention is now being concentrated on the meeting of the International Committee, to be held in London on September 29th. The market is likely to remain inactive in the meantime. The spot price in New York on Wednesday was 16½ cents per lb., compared with 16½ cents per lb. a week ago and 16¼ cents a month ago. Wednesday's official buyers' price for standard ribbed smoked sheet on the spot in London was 7½d. per lb., as against 7d. on the corresponding day last week. In forward positions, business has been done at 7½d. to 7½d. for "October-December" shipment, as against 7½d. a week ago. Stocks in London and Liverpool at the end of last week totalled 106,279 tons, against 108,993 tons a week earlier. A year ago stocks amounted to 178,012 tons.

DEMOCRACY AND THE DICTATORS

THE past few weeks have not been a very happy time for the diplomats of England and France, who have been floundering badly. Whether our sympathies may be with one side or the other in Spain, it is anything but creditable to Mr Eden and M. Blum that they have so far completely failed to bring into effective operation their policy of non-intervention and seem to have little chance of closing the stable door until the fighting is over. Mr Eden is having little better fortune with his Locarno talks. So long as England and France maintain that any settlement must be on a European scale and not limited to the West only, Herr Hitler is uninterested, and all Britain's blandishments arouse no more response from Berlin than did the famous questionnaire of May last—which is still unanswered.

But the climax has come at the Geneva Assembly meeting. It would be hard to find a parallel to the humiliating spectacle of two great Powers hunting round the lobbies of the League of Nations to find someone willing to perform the obnoxious task of shutting the door in the face of the Abyssinian delegation. The attempt was a failure, as anyone might have foreseen who really understands the attitude of the small Powers and why they rally so sincerely to the principles of the Covenant. It was inevitable that every single delegate should recall the situation of Belgium in 1914, and should ask himself what would have been thought of the guarantors of Belgium's neutrality if they had pleaded the Belgian Government's flight to Havre and the German occupation of the capital as excuses for defaulting on their obligations.

The collapse of the Geneva intrigue compels a reconsideration of British and French policy. For the immediate and inevitable result is that Italy, which was ready to return and take her former place at Geneva, will remain away from the present meeting of the Assembly at least, and may continue her self-imposed isolation for some time to come. It will perhaps be said that this flouting of Italy is a Pyrrhic victory; for it is scarcely to be believed that the Abyssinians who are still resisting in Western Ethiopia can do more than maintain a precarious opposition to the scientific resources of Italy. Italy's absence from Geneva, on the other hand, undoubtedly narrows to a perilous extent the basis on which to build a new collective system.

The Assembly's action was, however, the only possible

course for the League to take. It is one more demonstration, to a world still sceptical of the existence of such a thing as world opinion, that it is capable of influencing the action of nations. The members of the League are not mere pawns which can be moved about at will by the Foreign Ministers of the Great Powers.

But though Geneva has taken the only honourable course, this has in no way eased the diplomatic situation. On the contrary, the repeated demonstrations of the weakness of the League and of the democratic nations of Europe leave each nation to face the problem of its relations with its individual neighbours. In this respect the situation is unfortunately steadily deteriorating. In particular, the peace of Europe is falling ever more deeply under the shadow of a feud between a Power that has recently seceded from the League and one that has recently joined it; between the champions of the rival political and economic ideas which divide every people in the world. Moreover, the gulf between Germany and France has been widened to an alarming degree by the German reaction to the Franco-Soviet Pact, which was itself a reply to German menaces. And now, Italy has drifted further away from the Western Powers. Can the League, or can Great Britain, do anything to prevent the schism of Europe into two rival camps of Fascism and Communism? Great Britain remains the friend of France, without having yet become the ally of Russia or enemy of Germany. Is it still possible to harmonise within the bounds of a single continent these rival elements, or must we, too, make our choice between one or other of these extremes?

The voice of reason says that—given peace—time will modify both of these systems of life; that future civilisations may take from both of them something that is good and embody it in the society of the future—provided always that civilisation can escape destruction in the meantime. Can democracy persuade either or both of these formidable rivals to live at peace?

So far as Russia is concerned, we have repeatedly expressed the opinion that her internal development, and the solution of the problems with which her great experiment is constantly confronted, will for a long time to come absorb her energies, and that there is consequently no reason to fear her physical aggression. Is this also true

A SELF-BINDER

FOR

The Economist

Week by week you keep your copies of "The Economist," and ultimately you either file them or bind them. Doubtless you are accustomed to the annoyance which attaches to the ordinary binder—the difficulty of reading half the left-hand page and the unwieldiness of the device generally.

We are able to offer our readers a binder which overcomes these irksome difficulties and is, in our opinion, the most efficient contrivance for the purpose we have yet seen.

It holds three months' issues and index, it has no wires, clips or metal contrivances, and each issue can be bound up in an instant in such a way that it can be read as easily as a well-bound book.

(IN FULL CLOTH, LETTERED ON SPINE AND FRONT)

Price 5/- each, post free (Overseas 6/-)

THE ECONOMIST

8 BOUVERIE STREET, LONDON, E.C.4

about Germany? On this point, Mr Lloyd George, who has recently spent some time talking to Herr Hitler, is reassuring. Herr Hitler, he tells us, wishes to be friends with England. Germany, he says, is not a menace; her armaments are for defensive purposes only, and even if she wished to wage an aggressive war she would not be in a position to do so for twenty years.

If these assurances could command general acceptance, they would produce a widespread feeling of relief all over the civilised world. But can they be believed? In one respect, Mr Lloyd George's conclusions are obviously suspect. Whether or not the German army is an efficient fighting machine at the present moment, it is quite certain that it could become so in very much less than the twenty years that Mr Lloyd George envisages. In 1914 Great Britain, starting with far less than Germany has now, created an enormous and efficient army in something like twenty months, and there is no reason to believe that Germany cannot do as much. Unfortunate though it may be, there is no respite of twenty years imposed by technical factors.

If this technical argument is set aside, is the rest of Mr Lloyd George's thesis sound? It rests on one thing—faith in the good intentions of the Nazi Government. Is it reasonable to entertain such faith? Unhappily, we have to admit—in spite of the gravity of the admission—that we have serious grounds for misgiving when we reflect on the constitution of the Third Reich, the creed underlying its constitution, the course of the struggle between the extremists and the moderates within the bosom of the Nazi Party and—most ominous of all—the totalitarian system of education by which the rising generation in Germany is being drilled into an uncritical and fanatical subservience to the orthodox "party line."

It will be said by many people that we have no right to criticise the internal arrangements of an independent state, or to condemn the ideals with which it sees fit to impregnate its citizens. It is true that we have no right whatever to attempt to impose on another people our own way of living. But when a foreign country's *Weltanschauung* so clearly carries within itself so many threats to the peace of Europe and the security of that country's neighbours, it becomes a consideration of the very first importance. Great Britain's foreign policy may be said to turn very largely on the estimate formed by British public opinion of Germany's probable intentions, and that estimate must depend upon the ideas prevalent in Germany and the apparent objectives of the new society which is arising there. And contemplation of those ideas and objectives is hardly reassuring.

We cannot, indeed, escape the conclusion that the Nazi menace to peace is inherent in the Nazi system and is therefore a reality which cannot be left out of account in the shaping of British policy. In blunt words, faith in Germany's good intentions is not a sufficient basis for European peace and security, and that means for British peace and security. As an elementary consideration of national defence, further precautions are necessary.

What form should these precautions take? The question has only to be asked to suggest its own answer. There is only one means of taking precautions against the danger of Germany's intentions not being as peaceful as she now claims, without at the same time joining an alliance against her and becoming one of her professed enemies. That method is for this country to set itself, at long last, with all its energy and determination and courage to build up in Europe a collective system which the Dictators will be compelled, despite themselves, to take seriously—a real League of Nations instead of the cringing obsequiousness to aggression shown by the Great Powers at Geneva this week.

It is the fashion in some quarters to represent advocacy of the collective system as impractical idealism. The epithet is untrue: a workable collective system would be more practical defence for Britain than all the squadrons that the Air Ministry can put in the air. But the advocates of collective security can proudly plead guilty to idealism. This week's events at Geneva have shown that the smaller States (who have much more to lose by war) have remembered the truth the Great Powers have forgotten: that to have right on one's side, and to stand up for it courageously, may be worth more than a host of allies.

HOUSING AND BUILDING

THE provision of decent housing conditions for the whole population has become an objective of social policy, acknowledged by all parties, in the last few years. Under the double influence of this movement and of the private housing boom, building activity has grown to an unprecedented volume; and Sir Kingsley Wood, speaking at Bristol on Friday of last week, said that we had "now got down in many respects to the 'hard core' of bad housing conditions and were in sight of rooting out much of it for good and all." How far can it justifiably be assumed that the permanent removal of the intractable evil of bad housing is now within our grasp?

In the winter of 1932-33 the phenomenal boom in the building of dwelling houses by private enterprise began, and it has continued uninterruptedly ever since. The number of houses built by private enterprise without State assistance rose from 62,456 completed in the six months ended September, 1932, to 79,356 in the subsequent six months, and continued to rise steadily up to a peak figure of 149,409 in the six months ended March 31, 1935. There was then a slight drop; but the latest figure, for the six months ended March 31, 1936, was as high as 145,729. Between September, 1932, and March, 1936, over 850,000 houses had thus been built by unassisted private enterprise (the total must now be close on 1,000,000), compared with a total of less than 1,300,000 built between the Armistice and September, 1932.

The Government abolished the Wheatley subsidy in Sir Hilton Young's first Housing Act, passed early in 1933, on the ground that private enterprise would be able to supply the necessary working-class houses. But in fact the great majority of the houses built in the succeeding period by private enterprise were for middle-class and to some extent better-paid working-class families. In the six months ended March 31, 1936, for instance, the number of "Class C" houses built to let (which are generally taken to represent working-class houses proper) by unassisted private enterprise was only 18,793. Only about 10 per cent. to 15 per cent. in fact of the houses built by private enterprise throughout the "boom" have been working-class houses proper, and there has been surprisingly little sign of any tendency for overcrowded "working-class" tenants to "filter up" into premises abandoned by middle-class families. This has of course been partly due to the general increase in the number of families during the period.

As these facts began to be realised, a public demand for a more active State policy arose, and in April, 1933, the Government announced its five-year slum-clearance plan. The local authorities were to schedule all the slum houses in their areas, and were to undertake to demolish them and rehouse the occupants, with the assistance of the subsidy given in Mr Greenwood's Act of 1930, during the five years between September, 1933, and September, 1938. The programme in its final form provided for the demolition of about 300,000 houses, or an average of 60,000 a year. At first, as was to some extent inevitable, progress was slow, and the number of new houses built by local authorities with the Greenwood subsidy only rose from 3,377 in the six months ending September 30, 1933, to 9,211 in the six months ended September 30, 1934. Since then, however, the rise has been steady; and the total was 18,539 in the six months ending September 30, 1935, and 20,591 in the six months ending March 31, 1936. In the summer of this year new houses were being completed under the slum-clearance programme at the rate of about 4,000 a month, and Sir Kingsley Wood was able to claim last week that 500,000 persons had already been rehoused. He admitted, however, that another 150,000 houses were needed to complete the slum-clearance programme. In the two years that now remain out of the original five, therefore, just half the total houses originally contemplated have to be completed. Naturally the peak of construction must come near the end of the programme, but public vigilance—and the pressure of the Ministry on the local authorities—will clearly need to be maintained if the programme is to be punctually fulfilled. The announcement of a £10,000,000 loan, largely for slum clearance, by the London County Council this week is a welcome sign that the

campaign is being actively prosecuted in the area where the need is perhaps greater than anywhere else.

The slum-clearance programme, however, did not for a long time compensate for the abolition of the Wheatley subsidy. The total of houses built by local authorities with State assistance fell steadily from 35,371 in the six months ending March 31, 1932, to 14,143 in the six months ending March 31, 1935; since when it has been rising slowly. For three years after the advent of the National Government, in fact, the increase in the building of middle-class houses was accompanied by a decline in the building of working-class houses. Eventually, in the spring of 1934, the Government admitted that private enterprise *plus* the slum-clearance campaign were incapable of producing the necessary new working-class houses; and the "Overcrowding" Act, so-called, was introduced and passed about a year later. By this Act a standard of minimum accommodation was laid down, and local authorities were called upon to ascertain the number of families living below it, and subsequently to re-house them with Exchequer assistance. The standard itself, as we pointed out in an article on August 15th, is none too liberal; and we consequently welcome Sir Kingsley Wood's statement on Friday that he "hoped it would soon be possible to ask Parliament" to reconsider it. On the basis of this standard, however, the local authorities' Survey showed that 341,554 families were overcrowded, and Sir Kingsley Wood estimates that 200,000 new houses will have to be built to rehouse them. But another 283,844 families were only just above the minimum.

From the point of view, therefore, of the social ideal of rehousing the people, the present position may be said to be as follows. Between September, 1932, and March, 1936, rather over 1,000,000 houses of all kinds were built. Of these about 150,000 were built by local authorities with State assistance; and perhaps another 150,000 of those built by private enterprise may be classed as genuinely working-class houses. About 300,000 working-class houses were therefore built in the whole period. There remain, however, 150,000 to be built under the slum-clearance plan in two years—i.e. a rate of 75,000 a year, compared with about 40,000 a year at present—and 200,000 to be built under the overcrowding programme. It is clear, therefore, that the social objective of housing policy, though within sight, is by no means yet realised; and that its continued prosecution should in itself be able to maintain a high level of building activity for some little time yet. For instance, if the building of middle-class houses by private enterprise fell from its present rate of about 250,000 a year to 150,000, the completion of the present slum-clearance and overcrowding programmes in a little over two years would be sufficient to maintain the total rate of building at its present figure of 300,000 a year for that period.

Meanwhile there are two other factors tending to maintain building activity: commercial building and re-armament. The total value of building plans approved is still rising, despite some falling-off in private house-building. The movement of the figures has been as follows:—

BUILDING PLANS APPROVED BY 146 LOCAL AUTHORITIES (£'000)			
	Dwelling houses	Other buildings	Total
1933	62,308	21,372	83,680
1934	69,588	25,975	95,563
1935	78,429	35,880	114,309
First 8 months of 1935	51,651	23,079	74,730
First 8 months of 1936	51,270	28,706	79,976

The present tendency of private house-building to fall is evidently being more than offset by the combined increase of municipal house-building and commercial and other building. The rate of 300,000 houses a year contemplated in our estimates of the social demand for houses in our article of March 31, 1934, is being maintained. But of the further increases in building activity in 1936, far the most important element was factory and workshop construction. The total so far provided for direct Governmental construction work arising out of re-armament in the current financial year is no more than £15,000,000.

If it may fairly be assumed that the maintenance of the present level of building activity and employment is a condition of British economic stability, and that a slackening might start depression and a further acceleration

provoke "boom" conditions, there would appear to be dangers latent in the situation that will arise some two years hence. For not only will slum-clearance have reached its climax, but commercial and re-armament building may possibly have done so too. If, therefore, housing policy is to be successfully dovetailed into economic policy as a whole, there would seem to be a strong *prima facie* case for so planning and extending the overcrowding programme (and indeed other available public works) as to fill the gap that may appear if other forms of building activity begin to fall off together eighteen months or two years hence. For instance, the extension of the overcrowding programme to provide for the 283,844 families on the verge of the present minimum would probably require about 150,000 houses; and a plan for building these houses might well be prepared in advance. The difficulty now is not so much to solve the housing problem, or to maintain building activity in the next two years, but to prevent it dwindling thereafter.

UNREALITIES IN AMERICA

(BY OUR WASHINGTON CORRESPONDENT)

THE Presidential campaign has so far been disconcertingly unreal. It teems with contradictions and paradoxes, and few fundamental issues have been raised that are worthy of discussion. The most characteristic inconsistency is the elevation of Mr Roosevelt by the unions and progressives to the rank of their crusading leader. Anyone who has spent much time in Washington in the past two years can testify that Mr Roosevelt has been the continual despair of both these groups. He was the kind of President who had to be forgiven continually for not taking a straight and logical course. His New Deal grew into a hotch-potch of liberalism, paternalism and social settlement charity. Its economics were never one thing or another. The big achievements of the Administration, such as the acknowledgment of the Federal duty to help the unemployed, and the determination of the Government to spend its way out of the depression, were offset by many major and minor mistakes.

Mr Roosevelt himself betrayed labour in the Automobile Code, and instructed his Labour Relations Board to keep its hands off a newspaper case affecting a writer dismissed by Mr Hearst for union activities. The President did not even sponsor the Wagner-Connolly Bill until it was certain of slipping through as a concession to labour after N.R.A. was declared unconstitutional. The only big fight he put up in his entire term was over the Holding Company Bill, hardly the battle of the century. While Congress was being flooded with Bills infringing civil liberties in the name of patriotism, President Roosevelt never spoke a public word against them. He was a constant annoyance and frustration to the very groups which now fervently

swear by him as their leader. And they are campaigning for him, not because of his real achievements, but on the ground that he is the very person they so often discovered he was not.

Even this, however, would be reasonable if Governor Landon were a reactionary or a weak man certain to succumb to the reactionary elements in the Republican Party. But Governor Landon, according to those who know him personally, is about as liberal as President Roosevelt. There is little to choose between the reactionaries in the Republican Party and those in the Democratic Party, such as the Solid South, Tammany in New York City, and the Chicago and Kansas City machines. It may be that Governor Landon is not as firm or as stubborn as President Roosevelt and would be a feeble man in the White House. But this has to be proved against him, whereas Mr Roosevelt's compromises are a matter of record. The campaign, if it were real, would be over such questions as good administration, where Mr Roosevelt is vulnerable but where the Republicans have yet to say anything effective. It would debate the revision of the Social Security Act, one of the most hurried and unconsidered pieces of legislation in this highly complicated field. It would begin concretely to define the function of Federal government and not lose itself in accusations that Mr Roosevelt is a socialist or a dictator, or that American institutions are at stake.

In the absence of a debate on realities, the campaign so far can only be described as being a race between a man well known, loved for his good intentions by many and cordially hated for the same intentions by others, and an opponent who is gradually becoming known. Governor Landon has been at a great disadvantage so far, because of his mediocre speeches and still worse delivery of them. Exception must be made of his Chautauqua and Wichita speeches on civil liberties, which were more Jeffersonian than anything yet said by President Roosevelt. Governor Landon's intention of conducting a front-porch campaign was vetoed by the Republican high command, and he swooped upon Maine on the eve of its State election and accepted a programme of frequent appearances thereafter. He spoke better—that is, more effectively—in Maine than previously, particularly from his special train; and his speech at Portland, winding up the State campaign, was somewhat more forceful than earlier efforts.

Whether Governor Landon was more of a help in piling up to 42,000 the Republican majority in Maine than that majority was a help to him is not easy to say. Certain it is that he was sent to Maine to benefit from an assured victory rather than to turn the tide in a close fight. The Maine result is not much use as a forecast, as is shown by the diametrically opposite conclusions that are being read from it. Had the Republicans polled 62 per cent. of the total vote, instead of 56 per cent., they might feel confident of a national victory. The most that Maine promises is a far closer contest than was generally conceded a few months ago. One result is that President Roosevelt will step down from his exalted "non-political" status and make frequent campaign speeches, both from the platform and over the radio. But even if Mr Roosevelt begins to fight harder, Governor Landon will also grow in favour as he becomes better known; for he is a likeable man.

If this sounds as though the race were between two charming men of the same general political outlook, each backed by hidden and unsavoury elements in their respective parties, it is not far from the truth. Colonel Knox will go on maintaining that the banks and insurance companies are not safe under Mr Roosevelt. Mr Hearst will go on branding Mr Roosevelt as a Red; and Mr Roosevelt's "Non-partisan" Labour League will continue to call Mr Landon the chosen tool of the Liberty League and all industrial reaction—all palpable falsehoods. But the contest is essentially between the liberal wings of the two major parties. And the one obvious boon of it all is that here is a political campaign without the breath of a danger of Fascism and with hardly any Communism—a truly democratic election, not at all wise and instructed, but surprising safe in a fairly unsafe world. There is something to be said for a fight between two liberals. For it is at least a fight in which a liberal is bound to win.

WOOL TEXTILE PROSPECTS

In contrast to the Lancashire cotton trade, the wool textile industry, on the other side of the Pennines, is now enjoying a fair measure of prosperity. Recently, however, there have been indications of growing unrest among its workers over questions of wages and working hours. As the employers' and operatives' organisations have failed to reach agreement, the Minister of Labour has appointed a Board of Enquiry to investigate the matters in dispute. The risk of serious industrial strife at the opening of a season which holds out favourable prospects for the industry has thus been removed, and it is hoped that the findings of the Board will provide a basis for agreement.

The present moment is opportune for taking stock of the position of the wool textile industry. Yorkshire has felt depression much less keenly than Lancashire, for reasons which are not far to seek. In the first place, the British wool textile industry has never been as dependent on overseas markets as the cotton trade. And competition in overseas markets, though it is increasing, has been less marked than in the case of cotton textiles. Moreover, the displacement of the products of the wool textile industry by rayon has not yet gone as far as in the case of cotton textiles.

The following table shows the trend of available supplies of raw wool in the leading consuming countries during every year since 1929:—

AVAILABLE SUPPLIES OF RAW WOOL IN PRINCIPAL MANUFACTURING COUNTRIES
(In millions of lbs.—greasy basis)

	U.K.	U.S.A. (a)	France (a)	Germany	Italy	Japan (b)	U.S.S.R. (c)
1929.....	610	672	608	399	172	107	506
1930.....	650	589	617	377	173	115	496
1931.....	734	624	594	352	149	189	307
1932.....	750	498	514	366	209	204	217
1933.....	736	611	601	410	238	239	212
1934.....	640	558	389	398	197	182	205
1935.....	670	651	450	370	160	244	254

(a) Actual weight. (b) Imports only; domestic production negligible.
(c) Excluding skin wool.

Seven years ago this country occupied second place among consumers, after the United States, closely followed by France. Since 1930, however, the British wool textile industry has regained its leading position. In the worst years world consumption of raw wool declined much less than that of other raw materials. The supplies available for consumption in the eleven leading manufacturing countries, for example, declined from 3,362 million lbs. in 1929 to 2,782 million lbs. in 1934, but rose again to 3,079 million lbs. during the past year. The improvement in consumption in 1935 was probably more marked than the statistics suggest; for during that year, stocks held in consuming countries were reduced appreciably.

International trade in wool tissues, however, suffered a severer decline than total consumption. Exports of wool tissues from the eleven principal European manufacturing countries fell from 228.4 million lbs. in 1929 to 100.8 million lbs. in 1932. British exports declined less steeply from 88.3 million lbs. to 46.0 million lbs. But, while the total exports of these eleven European countries have risen only by 2.5 million lbs. between 1932 and 1935, British exports increased by 15.3 million lbs. during that period. As a result, Great Britain's proportion of the European export trade in wool tissues rose from 30 per cent. in 1929 to nearly 60 per cent. in the past year. The United Kingdom is thus not only the leading consumer of raw wool, but also by far the most important exporter.

The improvement in Britain's position in the export markets has been mainly at the expense of Germany, France and Czechoslovakia, whose shipments last year were a mere fraction of their pre-depression level. Nevertheless, despite the increase in British sales of wool tissues overseas since 1932, the quantity exported last year was still 30 per cent. below the pre-depression level. The fact that Europe's total exports in 1935 were still less than half the volume of shipments in 1929 was due, in part, to the rapid development of manufacture in former importing

countries, especially Japan. The remarkable growth of the wool textile industry in Japan is reflected in the steep increase of her imports, from 107 million lbs. in 1929 to 244 million lbs. in the past year. But, far from being content with satisfying her home requirements, Japan has made strenuous efforts to gain a substantial share of the export trade. In 1928 she still had an import balance of wool tissues of 14.8 million square yards. By 1935 her imports had been reduced to 4.1 million square yards and her exports had risen from almost nothing to 21.3 million square yards.

In contrast to the decline in Britain's exports of wool tissues since 1929, British shipments of tops (after allowing for imports) registered a marked increase, from 30.9 million lbs. in 1929 to 54.9 million lbs. in 1935. Similarly, Britain's export balance of yarn rose from 26.5 million lbs. to 39.5 million lbs. during the past seven years. During the same period France's yarn export balances declined from 55.4 million lbs. to 20.9 million lbs., and Czechoslovakia's from 16.9 million lbs. to 10.7 million lbs. The marked improvement in British exports of tops and yarns has not been maintained this year, during the first eight months of which our total exports of tops have declined from a comparable 1935 figure of 37.4 million lbs. to 32.8 million lbs. Concurrently, exports of yarn have fallen from 26.7 million lbs. to 24.3 million lbs. The decrease in exports of tops and yarn is mainly due to smaller purchases by Germany. British sales abroad of wool tissues, on the other hand, continue to expand, total exports rising from 40.7 million lbs. during the first eight months of 1935 to 45.2 million lbs. this year. Germany has also increased her exports this year, but those of France and Czechoslovakia have suffered further contraction. In the Far East, Japan continues to make rapid headway. Her exports of woollen tissues rose from 11.6 million square yards in the first half of 1935 to 15.3 million square yards during the corresponding period of this year. To some extent the rapid rise of the wool textile industry in Japan has been helped by the growing popularity of woollen tissues in the Far East.

What are the prospects for the industry in this country? For the time being Yorkshire appears to be safely entrenched as the world's leading wool textile manufacturing and exporting centre. At home there are no signs of a decline in the popularity of wool products. Despite increasing competition from rayon, home demand is likely to continue brisk, so long as the general improvement in business conditions endures. The outlook for the export trade, however, is more uncertain. Total international trade in wool textiles is increasing very slowly, partly as a result of increased production by former importing countries; and competition from Japan is increasing. Moreover, some of the improvement in British exports in recent years has been achieved at the expense of France, Czechoslovakia and Germany. If and when France decides to devalue her currency, the competitive position of her wool textile industry will be strengthened. Total French exports of wool tissues in 1935, indeed, were only 5.7 million lbs., compared with 43.3 million lbs. in 1929. Another factor of importance is the future trend of raw wool prices. In the short run, a decline in raw wool prices tends to lead to a contraction of purchases by wholesale houses, just as a rising trend of prices brings out additional orders.

On balance, it appears that the raw wool market will continue firm, despite Japan's persistence in her abstention from purchasing in the Australian market. Stocks of raw wool, both in producing and manufacturing centres (except in Japan), were relatively small at the beginning of the new season. And, although the new world clip is likely to be somewhat bigger than a year ago, world supplies are not likely to be appreciably larger than in 1935-36. A further steep rise of prices, however, might react unfavourably on the profitability of some sections of the industry. Recent developments in the clothing trade have a direct relevance in this connection; for "fixed price" retailing has rendered the passing on to the consumer of a sharp rise in prices increasingly difficult. In a period of rising prices the rigidity of retail prices may be of great advantage to the consumer and of equal disadvantage to the manufacturer. A marked rise in raw wool prices might, therefore, considerably alter the outlook in the wool textile trade.

SPECIAL SUPPLEMENT
entitled
THE NEW DEAL
AN ANALYSIS AND APPRAISAL

reviewing the economic experiments of the Roosevelt Administration since March, 1933, and estimating their degree of success.

ABYSSINIA UNDER ITALIAN RULE

(BY A CORRESPONDENT)

WHEN the Italians marched into Addis Ababa they drew round it a curtain of secrecy through which very little news has filtered. Occasional reports come through by one means or another, but the censorship is close and effective and becomes closer and more effective still the moment anything happens which is likely to be especially interesting to the world outside. When the Djibouti railway was cut by raiding Abyssinians, the authorities hurried round to all the legations and closed their wireless plants, showing such a turn of speed that they arrived at all but one of them in front of the news itself. Some facts, however, can be ascertained; and as the occupation of the town has lasted long enough for the Italian Government's attitude towards its new possession to be defined, it is possible to deduce from the steps already taken what the policy of an Authoritarian State in a dependent colony is likely to be.

Everything that has happened so far suggests that the Government has avoided with complete success those disabling old-fashioned liberal ideas which emphasised the rights of the native and regarded the white man's burden as a trusteeship. There is to be no nonsense about the claims of the Abyssinians or the open door or the rest of the fusty apparatus of liberal-minded colonial administration. Abyssinia is to be for the Italians, and foreigners will be shown unmistakably that they are not wanted. Already the work of clearance is begun, and both by direct and indirect methods the Italians are pushing the aliens towards a final departure. In some cases they either serve a notice of expulsion or more courteously express the hope that it will not be necessary to serve such a notice. In this way they have got rid both of an English chaplain and of an English lady who has devoted years of her active life to Abyssinia. In other ways they are making it so difficult for people to carry on their business that there will be no alternative to evacuation. This method is naturally applied to members of the trading community, and it appears to be so thorough that even concerns which have voluntarily offered to become Italian receive the same treatment as those which stick to their old nationality.

To make clear what is happening it should be explained that for many years the business of Abyssinia has been largely in the hands of foreigners, who by and large are a fairly mixed bag. English interests have been represented by the Bank of Ethiopia (which still functions in the south-west, but at Addis Ababa is now absorbed by the Bank of Italy), and by the Asiatic Petroleum Company. British India has supplied Addis Ababa with a very considerable trading company and a number of smaller firms, while France has had the railway and one limited company of some importance controlled locally by an Austrian manager. The rest of the trading has been mainly in the hands of Greeks and Armenians, who together represent probably about 65 per cent. of the old business community. Some of these Levantines still remain in Addis Ababa, but the exodus began early, and several of them have already found new homes in various parts of the Eastern Mediterranean.

From the fact that the country's business is so largely in foreign hands, and that almost all the foreigners are engaged in trade, two things follow: first, that if

sufficiently difficult all the foreigners—⁵⁰ and secondly, that when they have disappeared, trading will have disappeared with them and the country's business will have to start again from zero. And that appears to be the Italians' objective. They are so resolutely determined to do without the foreigner that they are prepared to sacrifice all the country's old connections, all the old export trade, to restart it from nothing in a narrow channel that has Italy at one end and Addis Ababa at the other.

The device that the Italians are using to put the necessary pressure on to the foreigner is a rigid control of currency. In the last ten years we have had illustrations enough of the tricks that frightened governments can play with currency, but the Abyssinian experiment is probably the first example of a currency being used for the deliberate destruction of a country's trade. The result is achieved by running two currencies, the lira and the old Maria Theresa dollar, in double harness with a fixed artificial unreal parity which it is a serious criminal offence to override. The true value of the lira in Maria Theresa dollars is about 10½ lire to the dollar and where anyone has courage enough to run a black market that is the rate at which the currencies change hands. But the official Italian rate is 5 lire to the dollar and at that figure only may trade be carried on.

Now, the Ethiopian in general is a person of untutored mind and Gresham's law is not one of the familiar commonplaces of Ethiopian conversation. But the Ethiopian peasant is more ready to follow the law of Sir Thomas Gresham, of whom he has not heard, than the law of the Italian administrator with whom he is uncomfortably familiar, and the lira at 5 to the dollar has quickly driven the dollar itself out of circulation. Peasants bringing their produce to market found not only that they were paid in lire but that they were searched on their way to market and relieved of any dollars that they had been rash enough to carry with them. Naturally, the dollars went to earth and the peasants postponed their visits to market, with the result that there was at one time a deficiency of food which was made good only with difficulty. There is believed still to be a shortage in the town of all but the bare necessities of life. And if the artificial exchange has made more difficult the trade between town and country, it has altogether exterminated the foreign trade. Firms which have hitherto exported hides and other commodities to Europe or elsewhere are paralysed. They cannot afford to buy in dollars and sell in lire, and even if they could they would not dare to bring money back into the country because of the tight restrictions on the export of currency. These restrictions are such that nobody wants to be paid in Abyssinia and those who have foreign credits

(most of which arise from recent claims on insurance policies) are urgent to have the payment made in some place other than Addis Ababa.

This restriction on the export of currency is amazingly thorough. One person is allowed on leaving the country to take with him only 350 lire; and on the train to Djibouti passengers are turned inside out in the search for money. They are taken down in parties to one end of the train and there their clothing is examined; their boots and socks are removed; sometimes they are stripped to the skin. And there seems to be nothing in the economic position—apart from the artificial parity between the two currencies—which can justify these extreme measures or make the Italians so fearful of a "run." If, on the other hand, the measure is political and designed to drive the foreigner out, the motive is clear enough, and the machinery will certainly be effective. Under such conditions, it is impossible either to export or to import, and as the foreigners in Addis Ababa cannot remain there unless they do both, the day must soon come—unless the currency restrictions are lifted—in which the foreign community will be chased out of the country. Then, presumably, Italians will be brought in to fill the vacuum, and a trade of some kind between the Colony and the Motherland will be encouraged and fostered. At present, the only part of Abyssinia which can carry on a trade with the civilised world outside is the South-West, which has not yet been submitted to the beneficial influence of an ancient civilisation, and goes on in its old barbaric way, importing and exporting on a comparatively sound currency.

One of the many difficulties that the Italians have to face is naturally the French control of the railway, and already friction has occurred. The railway insisted on being paid its fares in dollars, and the Government insisted on its accepting lire. For a time it seemed as though there would be a deadlock, with the Frenchman saying "I will have dollars," and the Italian saying "You shall take lire." According to messages from Rome the dispute ended in favour of Italy, the railway undertaking to accept lire and to buy its rolling stock from Italian manufacturers. That agreement will be satisfactory to the pride of Rome and may be a step towards the realisation of her ambitions, but if those ambitions include, as doubtless they do, a net economic gain to Italy the day of their complete fulfilment seems to be remote. A poor country with its trade in ruins and its traders expelled, held down by an army of many thousands that must be supplied with food and clothing, and by a great array of aeroplanes and tanks and armoured cars that need to be maintained and fed with imported petrol—how long will it be before such a country brings a credit balance to the feet of its conqueror?

NOTES OF THE WEEK

Cross-purposes at Geneva.—The Seventeenth Session of the Assembly of the League of Nations met at Geneva this week under the shadow of events past and to come. Each of the main delegations was pre-occupied by its own peculiar cares. Mr Eden arrived on the morrow of the dispatch of a British Note to Germany, designed to further the "diplomatic preparation" for the new Locarno Conference, on which the Führer had insisted; and it speedily became clear that the British Delegation would welcome Italy's presence, with the object of carrying the process of preparation a stage further at Geneva. But Signor Mussolini refused even to begin to discuss the terms of his translation from poacher to gamekeeper, or any other subject at Geneva, so long as an Abyssinian Delegation remained there. As the Assembly refused, however, to eject the Abyssinians, the waiting Italian representatives remained on the Southern side of the Swiss frontier. France, inspired by M. Blum's praiseworthy enthusiasm in an unpromising environment, was credited with the intention of raising the practicability of a halt in unrestrained international re-

armament; but the more pressing domestic problem of the over-valued franc inevitably pre-occupied French minds. The report of the Finance Committee of the League (discussed below), with its stress on an ordered alignment of currencies, was liberally interpreted in some quarters into an open invitation to France to devalue; and there was a general feeling that, if devaluation were to come, it should come soon, if France were to pull her full weight in international affairs. Amid all these currents and cross-purposes it was not until the middle of the week that the Assembly, having settled Abyssinia's status, was able to begin consideration of its agenda, much the most important item of which is the question of "reform" of the Covenant, in the light of the events of the last twelve months. The atmosphere has greatly changed since Sir Samuel Hoare electrified the Assembly by his clarion call for "steady and collective resistance to all acts of unprovoked aggression," last September; and it would be reassuring if the Great Powers which still attend Geneva would afford evidence that the dogged determination to defend the spirit of the

League Covenant, which found expression in this week's Assembly's vote on Abyssinian representation, was not the sole prerogative of the smaller States.

* * *

Abyssinia Remains.—It is notoriously easier to commit and connive at a murder than to dispose of the corpse. That this commonplace holds good in public as well as in private life has been illustrated at Geneva this week. Italy had intimated that she would not resume her place at Geneva until Ethiopia's corpse had been removed. France and Great Britain, who are eager to obtain Italy's collaboration again, were anxious to pay Signor Mussolini's price. They found, however, that, after all, the task was not as simple as it looked. Accordingly, the Italian delegation to the League Assembly remained standing on one leg at the frontier while at Geneva the French and English delegations hunted for seven mates who would be obliging enough to lend a helping hand in carrying out Abyssinia's mortal remains. The French and English were compelled to take the initiative because the Abyssinian delegation has a right to sit unless and until its credentials have been declared out of order; and this has to be done by the Assembly itself on the report of a credentials committee consisting of nine members. The first Anglo-French idea was to pack a committee with satellites who would pledge themselves in advance to find the Abyssinian credentials out of order. But only two countries were willing to serve on these terms, and in the end a quorum was obtained on the two conditions that France, Great Britain and Russia should all serve and that all the members should retain a completely free hand. On these terms the committee was constituted from the representatives of Peru, Holland, New Zealand, Czechoslovakia, Greece and Turkey, in addition to the three Great Powers. This committee discussed the legal aspects of the case and debated whether the delegates had sufficient information to say whether or no an Abyssinian Government still existed. It even contemplated sending the matter to the Permanent Court of International Justice. But a reference to the Court would have taken weeks to decide, and the Assembly must decide in the meantime what to do. The committee therefore decided—and the Assembly approved with four dissentients—that the credentials were derived from the same authority as in previous years, and it was difficult to judge of the Emperor's authority; but as no member had suggested that the credentials should be declared out of order, the committee was unanimous that they should be accepted. Ethiopia, therefore, continues to be a full member for the present, while Italy remains outside; and the League has been spared the humiliation of turning out the victim in order to make room for a successful aggressor.

* * *

Steps to "Monetary Alignment."—This week's report of the League Finance Committee, like the Economic Committee's report issued last week, recognises the need for devaluation—which appears in Geneva literature under the discreet guise of currency "adjustment" or "alignment"—as the only possible cure for extreme divergences between national price levels. Also like the Economic Committee, the Finance Committee recommends direct consultations between the British, American and French authorities, rather than any new world conference, as the prelude to alignment. This would amount in practice to an assurance by the British and American Governments that devaluation by France would not be taken as an occasion for further depreciation by Great Britain and America. We think that such an assurance should be given by the British Government; indeed, it is reported already to have been given. But this does not mean that we should commit ourselves to a higher exchange stabilisation at the present dollar-to-pound rate, particularly as the pound was devalued first and might accordingly be in some danger of being left high and dry once more. Similarly, the Finance Committee is wise in pointing out that devaluation is a great opportunity for liberalising import restrictions. Already M. Blum's

problem is a rising cost of living rather than a falling wholesale price level. When devaluation comes, therefore—and the same applies to Holland and Switzerland—he will have a golden opportunity at once to ease his own cost-of-living problem and help to expand international trade without injuring France's internal producers. Devaluation means a sellers' market, and a sellers' market is the psychological moment for freeing imports.

* * *

Labour and Re-armament.—Since the T.U.C. Conference at Plymouth there has been much speculation about the Labour Party's attitude to re-armament, and the speeches of Mr Bevin and Sir Walter Citrine have been taken as a presage of an important change of policy at next month's party conference in Edinburgh. A meeting of the National Executive of the Labour Party was held in London on Friday of last week, at which a sub-committee was appointed to prepare the draft of a resolution for submission to the Edinburgh Conference. On Saturday Mr Greenwood, speaking at Thornbury, said that "if peace methods failed, the Labour Party would not shrink from the necessary preparations to resist aggression and imperialism." There is little doubt that, in face of European events, opinion in the Labour movement is becoming increasingly in favour of an abandonment of the opposition to re-armament. The perplexity of Labour supporters on the issue is, of course, a reflection of the eternal dilemma of peace or liberty. Is peace our supreme aim, or are there other things we are prepared to fight for? If, as seems likely, the trade unions prevail, and the Labour Party commits itself to fighting on the side of democracy and collective security in Europe in return for assurances from the Government, the chance of national agreement on foreign policy may once again be brought nearer—even if agreement is only reached because, in the present situation, only one policy remains possible.

* * *

Coal and Textile Disputes.—Progress towards settlement has been made in the three minor coal disputes which have been disturbing the industry in recent weeks. In the most important dispute, over the miners' union at Bedwas Colliery, it has now been agreed to hold a secret ballot. The owners accepted the plan at a meeting with the South Wales Miners' Federation in London on Saturday, and certain guarantees are to be given by both sides. It now appears, therefore, that the whole issue may be peaceably settled. Meanwhile, the unofficial "stay-in" strikers at Blantyre, Lanarkshire, have agreed to return to work while their grievance is examined; and Mr Ebby Edwards, General Secretary of the Mineworkers' Federation, has persuaded the men at Harworth Main Colliery, near Doncaster, to postpone strike notices and to consider further attempts

at conciliation. The troubles in the textile trades, on the other hand, are no nearer solution. It was announced on Saturday that the Minister of Labour had appointed a Board of Inquiry into the dispute between the employers and workpeople in the woollen textile industry. The inquiry is to have special reference to the dispute between the Wool (and Allied) Textile Employers' Council and the National Union of Dyers, Bleachers and Textile Workers, and other unions. It was stated that the Minister had decided to take this action partly as a result of the "growing unrest" in the industry. It may be hoped that individual disputes will be allowed to rest while the inquiry is carried out. In the cotton trade, however, conciliation is still held up, since the 220 Skipton weavers remain on strike and the employers refuse to join the conciliation board until they resume work. The dispute is concerned with the employment at Skipton of six non-union operatives. To the outside observer this issue hardly seems of sufficient importance to justify the suspension of conciliation throughout the whole industry.

Gas Dispute in South London.—Widespread protest preceded the introduction this week of a new scale of charges by the South Metropolitan Gas Company. The scale is more favourable to large users and less favourable to small users, and it is alleged by its opponents that it will discriminate against poorer consumers. Several South London Members of Parliament, both Conservative and Labour, have associated themselves with the company's critics; and meetings of protest are being called by the Mayors of several boroughs. The London County Council addressed a letter to the company during the week in which it suggested, as "a large consumer," that the company should suspend the new scale while the matter was considered by the Council. To this the company replied with a defence of the tariff and a refusal to suspend it. The tariff, it stated, is as "necessary to us as it has been to the electrical undertakings who are our chief competitors." The dispute raises the vexed question of the public responsibilities of a monopoly. For though the company claims to be impelled by the competition of electricity, it may not be possible for many of its poorer customers to do anything but pay the new charges. The company will certainly need to make out a strong case before its new tariff is accepted by the public as justified.

Toledo and Madrid.—The fires of the Spanish Civil War have blazed up again this week in a desperate struggle for possession of the Alcazar at Toledo, which is one of the keys to Madrid. On Friday, the 18th, the Government forces besieging the Alcazar sprang a great mine, and for a moment it was believed that every living creature inside the rebel fortress had been blown to pieces—including the women and children, to whom the Government had previously offered a safe retreat before opening the final act of this terrible drama. The mining operations, however, were only partially successful; and the storming party was checked by the fire of the surviving defenders. On Wednesday it was rumoured that the Alcazar had fallen, but the report was subsequently denied. Meanwhile, the main insurgent army in the west, which had earlier captured Maqueda—forty-six miles south-west of Madrid—had occupied Torrijos, on the road to Madrid; but it is reported, as we go to press, that the Government troops have checked the advance by opening the floodgates of the Alberche River. The main objective of the insurgents is now the capital itself. Not only on this western front but also round Oviedo, Bilbao and Huesca the rebels now seem to have established their ascendancy. As they are neither more numerous, more keen nor more brave than the Government militia, the inference seems to be that they must be considerably better armed. Although the insurgent movements constitute a definite threat to Madrid—their eastward thrust from Talavera has driven a wedge into the Government lines—the Government has so far shown no signs of contemplating an evacuation of the capital. Considering the vehemence of the resistance which the rebels are encountering, it is difficult to see how they could permanently hold Spain down, even if

they were to succeed in breaking all the organised resistance to their advance. If it is a case of "sitting on bayonets," they will assuredly find themselves unable to do so without importing some foreign bayonets to supplement their own. Thus the Spanish Civil War, as it proceeds on its dreadful course, threatens ever more insistently to implicate neighbouring nations, who find sufficient difficulty already in keeping the peace among themselves.

Social Democrats Win in Sweden.—Scandinavia has strengthened its reputation for democratic stability. For in both Sweden and Denmark renewed electoral support has been given to the Governments which have been in power throughout the depression. The Swedish result, described in detail by our Stockholm correspondent on page 561, is naturally most notable. From 1932 until June this year the Social-Democrats were in office, though without a clear majority; and with the support of the Farmers' Party carried out the recovery policy whose success is now well known. In June the Government resigned, ostensibly on the issue of defence expenditure, but it was generally believed that the move was a tactical one designed to leave the Social-Democrats to devote their attention to the coming election. These tactics, combined with their general economic policy, have resulted in an increase in the Social-Democratic representation from 101 to 112 seats. At the same time, the dissident Socialists (or Right-Wing Communists) have 6 seats. The combined "Labour" parties thus have the clear majority which they lacked during the last four years. The question now is whether the Social-Democrats will form a Government with the Farmers, who are a radical party well to the Left of the Liberals, or with the dissident Socialists. If they choose the latter alternative, the social reform policy of the last four years is likely to be followed by actual socialisation measures. These would be most likely, however, to take the form of an extension of the system of Government monopolies, already far-reaching in Sweden, to the petrol and coffee trades in the first place. It is most likely, however, that a coalition with the Farmers will be secured and that attention will be directed to the expansion of the social services which, despite years of progressive Government, are still backward by English standards. The real test of the new Government, however, will be its ability to devise a "boom" policy. And it is likely to find that the task of curing one depression was simple compared with that of preventing the next.

Fortune Favours the Left.—In Denmark the Government has secured a majority, thanks partly to the will of the people but also to the whim of fortune. Denmark really preceded France and Spain by many years in forming a Government of the "Popular Front" variety. For a coalition of Radicals and Socialists has been in power since 1928, and is one of the few Governments in the world to have survived the depression in a democratic country. The coalition, however, lacked a majority in the Landsting or Upper House; and attempts to abolish it were frustrated by its own vote. The election this week to the Landsting was, consequently, largely fought on this issue. It resulted in a tie, apart from the result in the island of Bornholm; and here the islanders elected 23 committeemen supporting the Government and 23 supporting the Opposition. Lots were accordingly drawn, and the successful candidate was the Socialist Mayor of Rønne, a supporter of the Government. So has the ancient Athenian instrument of democratic impartiality, the lot, decided a modern election; and though some may not think this a very satisfactory method of settling important political issues, it is at least better than violence. It now remains to be seen whether the Government will proceed at once with its intention of abolishing the Landsting.

China Misbehaves.—Events in China threaten to defeat the desire of the Nanking Government to afford the Japanese militarists no pretext for fresh aggression. Within the last month Japanese citizens have been murdered in

Chengtu, capital of the Chinese province of Szechwan on the Upper Yangtse, at Pakhoi on the coast in Kwangtung Province, and more ominously at Hongkew, adjacent to the famous Chapei sector of Shanghai. And in the north, at Fengtai, the most important railway junction in North China, a Chinese soldier had the impudence to smack the honourable hindquarters of a Japanese officer's horse. These outbursts of anti-Japanese feeling have been a godsend to the Japanese, who have seized the occasion to reinforce their garrison in the north, to send warships to the south, to land marines in Chapei, and to demand the complete evacuation of Fengtai by Chinese troops. They have revived their demands for cessation of anti-Japanese feeling, and their plans for consolidation of the five northern provinces of Shantung, Hopei, Shansi, Chahar and Suiyuan into a second "Manchukuo." We are witnessing a race between China's efforts to unify herself and Japan's efforts to swallow China whole. The Nanking Government is to extend its effective power in the interior of China. The recent completion of the Hankow-Canton railway should enable it to retain hold upon the psychologically important province of Kwangtung. Further, the warlike sister-province of Kwangsi, in the north-western hinterland of Canton City, which has lately been setting the Nanking Government's authority at defiance, is reported to have come to terms; and this will spare President Chiang Kai-shek from having to face the military task of subjugating Kwangsi without losing control of Kwangtung.

Japanese at Chengtu.—Japan's attitude, nevertheless, is ominous in the light of the antecedents of the Chengtu murders. The crime was a misguided expression of local anti-Japanese feeling which had been aroused by a demand which the Japanese Government had made for permission to open a Japanese Consulate at Chengtu. The demand was neither technically nor morally well founded, although the Japanese have had a consulate at Chengtu in the past; for Chengtu is not a treaty port, and Japanese commercial interests in this remote inland region of China are inconsiderable. For the province of Szechwan—a vast mountain-ringed basin of agricultural country which is economically self-sufficient and which supports a population of 50 million souls—affords a natural citadel in which the national Government of China might hope to hold out in the event of Shanghai, Nanking, Hankow and Canton going the way of Mukden, Tientsin and Peking. Evidently the Japanese mean to forestall this possibility of a strategic retreat on President Chiang Kai-shek's part into Szechwan. In the meantime, the Japanese Navy Department's declaration, after this week's murder of a Japanese sailor in Hongkew, that "Japan's honour is at stake," has a too-familiar sound; for that statement has hitherto been a curtain-raiser to each new act of Japanese aggression.

Tin: Restriction or Ransom?—The firmer tendency of tin prices recently was due largely to the conviction that the conclusion of a deal with Siam would be announced after last Wednesday's meeting of the International Tin Committee, in order to clear the way for a renewal of the restriction scheme. The market, consequently, was disappointed to learn that Siam's intransigence was still holding up the whole question. In a statement, after the meeting, the Committee laconically observed that the newly appointed Siamese delegation "explained the point of view" of their Government and that negotiations for a renewal of the scheme would continue. Meanwhile, the present restriction scheme will lapse at the end of the year. Siam, apparently, is determined to wait until the last moment before yielding, in the hope of obtaining better terms at the eleventh hour. The Committee will meet again a month hence. Meanwhile, production quotas are to be unchanged during the last months of this year at 90 per cent. of the "standard" tonnages allotted to each country adhering to the scheme.

Progress of the Motor Industry.—Motor manufacturers are now busy putting the last touches on the new models which will be displayed at "Olympia" on October 15th. Meanwhile, the industry as a whole has every reason to be satisfied with the results of the 1935-36 season. Production of private cars and taxis rose from 266,866 units during the ten months ended July, to 307,988 units during the corresponding period this season. The improvement was most marked in the home market, but exports, too, showed an increase, from 46,261 units during October, 1934—August, 1935, to 54,899 units this season. The commercial vehicle section of the industry benefited from the increase in business activity at home and abroad. Output increased from 78,833 units during the ten months ended in July, 1935, to 91,036 units during the corresponding period this season. Exports, at 14,055 units between October, 1935, and August, 1936, showed an increase of 499 units over last season. As a result the number of private cars in use, as estimated by the Society of Motor Manufacturers and Traders, increased from 1,455,721 at the end of August, 1935, to 1,625,799 last month. During the same period the number of goods-carrying road vehicles in use rose from 414,760 to 438,746. Moreover, there are no signs that the demand for automobiles has reached saturation point, and the industry is looking forward to another record-breaking season. But costs are now tending to rise as a result of higher raw material prices and increased wages. To some extent, however, the rise in costs may be offset by further improvements of technical efficiency. If the general business conditions continue to improve and if the industry can obtain its increased requirements of materials and labour, the coming season should bring disappointment only to those manufacturers whose models fail to catch the public fancy.

Entente Cordiale in the Whaling Industry.—The story of the dispute between British and Norwegian whaling interests, recounted in the *Economist* dated September 5th (p. 431), had a happy ending this week, when agreement was reached between the two Governments about measures to be taken to safeguard the stock of whales during the forthcoming season. The basis of the present agreement, according to an official statement, is the imposition of regulations providing for a close season and for limitation of the number of whale catchers used at any one time in conjunction with a factory ship. In a few exceptional cases, where hardship might be caused, restriction by quota has been substituted for restriction by close season. For ships registered in the United Kingdom and the British Dominions, restriction will be voluntary, since these Governments do not possess statutory powers to limit the number of whale catchers. There is no reason, however, to suppose that restriction will thus be less effective, for British ships will carry inspectors, charged with the duty of safeguarding the terms of the agreement. The open season will be from December 8, 1936, to March 7, 1937, and the permitted number of whale catchers to be used at any one time in connection with a factory ship will vary from seven to five. This satisfactory ending to long and difficult negotiations is creditable to all concerned.

Fall in Irish Population.—The preliminary report of the Census of Population of the Irish Free State taken last April states that the population was 2,965,854, compared with 2,971,992 in 1926, representing a decrease of 6,138 or 0.2 per cent. These figures have caused some surprise, as the annual estimates of population had suggested that the census enumeration would reveal an increase. The discrepancy between the anticipated and realised results of the census is explained by the under-estimation of the volume of emigration to the United Kingdom, which amounted in ten years to 78,130, of whom 31,421 were males and 46,709 females. The census also discloses a remarkable internal migration in the Free State from country to town. Between 1926 and 1936, the urban population increased by 9.7 per cent., while the rural population decreased by 4.8 per cent. The population of Dublin increased by 15.7 per cent.

OVERSEAS CORRESPONDENCE

From our Correspondents in each centre

UNITED STATES

UNEMPLOYMENT AND SKILLED LABOUR SCARCITY

THE American Federation of Labour estimates that although two million persons have become re-employed in the past year, there are still 10 millions out of work. Other published estimates are a little higher or a little lower. Little faith can be placed in these estimates or in the methods by which they are derived. The Federal Relief Rolls account for less than four millions, and local and private charity for an uncertain, but much smaller figure. In other words, only about one-half the estimated 10 millions unemployed are provided with any sort of formal assistance. Statistics aside, it seems preposterous that such a situation could exist without giving rise to public demonstrations or at least audible clamour. It is conceded that there are unemployed who have no access to formal relief; for distress does not establish a "right" to Federal relief. But that the number of unemployed not receiving aid can equal the number receiving aid, without making their existence felt in some visible or audible way, taxes one's credulity—particularly in an election year, when five million unrelieved unemployed representing 10 million votes "on a division" would be worth political attention.

The fact of a widespread labour scarcity, co-existent with widespread unemployment is, of itself, no paradox. The scarcity exists in skilled or semi-skilled trades, although most semi-skilled work requires no more than average physique and average aptitude, plus a few weeks' training. It is impossible to reconcile this acknowledged fact of a scarcity with the estimate of five million unrelieved unemployed. Whether they exist in reality or only on paper, the fact is that the United States is pretty close to a sellers' market in labour.

The boundary line between prosperity and boom is signalled by the general appearance of a sellers' market. There is scant evidence that the United States has crossed that boundary, but it is obviously near it. For several months, for example, steel operations have continued at about 70 per cent. of the rated capacity of the industry; but it is estimated that the effective economic capacity is no more than 75 per cent. of its rated capacity. The freight car loadings index is about 75 per cent. of its base period; yet there are hints of a "car shortage" at the seasonal peak, which will come within a month. One could multiply these instances of the points at which current demand is encroaching upon readily-available supply.

END OF THE DROUGHT

The belated rains of August broke the drought just in time to prevent that calamity from surpassing the record of 1934. It is now estimated that agricultural production will be 2 or 3 per cent. above that of 1934; a slender margin which shows how near the forebodings of July came to fulfilment. Agricultural income, however, will be substantially above that of 1934, as the agricultural price level is higher; owing to Federal subsidies it may be larger than 1935, but most of the increase over last year occurred in the first half. For the last half of 1936, farm income, including subsidies, may run below the last half of 1935.

The inertia of American price indices is a source of frequent discussion. The Bureau of Labour Statistics index was 78.8 in January, 1935. It is now about 81; that is, for the better part of two years it has remained in a bracket of three points, or about 4 per cent. The following figures, taken from the September Bulletin, are, of course, not precisely comparable, but they have some significance:—

	July, 1935	July, 1936
United States*	82	81
United Kingdom†	85	90
France‡	292	405

* U.S., 1926 = 100. † U.K., 1930 = 100. ‡ France "Farm and food products" 1913 = 100.

Industrial Products

United States§	78	80
United Kingdom	90	96
France	347	378

§ "Other commodities" (i.e., excluding farm products and foods)
Our "farm products" index has risen from 77 to 81.

The rising tendency in France and England appears to be quite definite, while in the United States the outstanding feature is stability. American farm and food price indices have risen somewhat since July; on September 5th, the Bureau of Labour Statistics index was 80.9; with farm products at 82.1, foods 82.2 and "other commodities" 79.6. The corresponding figures for the week of September 7, 1935, were 80.4, 79.9, 85.9, and 77.9. The retail food index shows a little more marked tendency to rise; it was 80 in July, 1935, and 84 in July, 1936. This is a rather larger increase than the British, from 126 to 129; but it is much less than the French, 83 to 91. There is something of a paradox here; for the man in the street, or rather the woman in the home, is persuaded that retail prices of all kinds are not only higher than a year ago, but much higher.

If the steel industry is typical, it would appear that American labour costs have been rising. In July, steel output was 13 per cent. below the average monthly production of 1929, but it was employing 10 per cent. more workers, at a higher average hourly wage. A major reason for the increase in the number of workers would seem to be the shorter week—39 hours (average) in July against 55 hours in 1929.

For the first time in the history of New York City, the enrolment in the local schools at the opening of the autumn term was below the previous year. The total enrolment was 1,120,000, or 9,000 below last September. Enrolment in the elementary grades was down 17,000, but this was partly made up by increased registration in the secondary schools.

NEW YORK, September 15.

FRANCE

"STAY-IN" STRIKES AND THE RIGHTS OF PROPERTY

THE recent "stay-in" strikes in the Northern textile area were made the occasion for an agitation by employers for the defence of "authority" and order in factories. The employers refused conciliation and arbitration by the Government, but declared that "should the Government impose its arbitration—if the law authorised it to do so—they would obey." The employers knew that the law could not give such an authorisation to the Government; for this authorisation would have been contradictory to the right of property, and the Radicals could not support such a policy. The Government thus gave way and, with the aid of the Trade Unions delegates, persuaded the strikers to leave the factories at once. The employers then consented to an increase of 6 per cent. in wages.

The Government of the Popular Front was thus preserved once more, but as soon as the textile agreement was reached, on Sunday last, there began a general offensive by the leaders of the Radical-Socialist Party emphasising the need for the Government to condemn stay-in strikes and to impose respect for the democratic rights of property and the liberty of labour—that is respect for those victories of the Revolution of 1789 which M. Blum had applauded a few days earlier. The Radicals also declared their unshakable fidelity to the Popular Front, but added that such breaches of liberty and rights might damp the enthusiasm of the people who voted for it in May.

There is, indeed, a visible change in public opinion, and the political leaders are making the greatest efforts to put the break on the activity of the revolutionary elements; but the accord in the textile industry was followed by new stay-in strikes, and the rise of prices is fomenting other

GERMANY

TOWARDS AUTARKY

IN business circles last week there were rumours of a new law designed to further the production of raw materials in accordance with Herr Hitler's Nuremberg speech; and it was expected that Dr. Schacht might make an announcement early this week. It is not clear, however, whether the Four Years' Raw-material Plan mentioned at Nuremberg means anything definite. Since the Nazi Government came into power the word "Plan" has been used loosely in the sense of "Policy," in a very different meaning from that of the Russians from whom the "Planning" notion was borrowed. It is not possible for Germany to plan production in the rigid Russian way unless she controls capital and dictates to producers. Control of capital so far has been negative rather than positive. Producers in many trades (mostly manufacturing) have been told that they must not invest in new plant. In those trades, however, in which an increase of output is desired, governmental influence has in general been limited to credits, guarantees, bounties, monopolies and of course, import restriction. This policy dates back to long before 1933.

In the case of no raw-material is the home market absolutely dependent on imports. Substitute materials, such as those designed to replace standard textile fibres, are at worst usable. Where no substitute has been, or is likely to be, found, there is in a number of cases a theoretically unlimited source of home supply, in highly uneconomic conditions. Autarky would require, however, adaptations of home consumption which would be very hard to bring about; and it is significant that official attempts to influence consumption, as of certain meats and fats, have so far had little success. It seems that the consumption of goods normally favoured can be reduced only by stopping the supply. This, however, is difficult; for in the period before complete autarky is attained, foreign trade must go on, and certain goods must, therefore, be admitted.

But progress towards autarky in turn involves serious difficulties in foreign trading. Substitute raw materials, which can be forced on manufacturers producing for the home market, cannot in general be used in manufacturing for export; for foreigners will not buy goods which are usually inferior and always dear.

A DISPUTE OVER IRON ORE

Officially these matters are usually presented as part of the opposition between Germany and the world. Autarky, being nationalism, is good in itself, or it is a necessary evil imposed by vicious foreign countries, or it is required for defence. Within Germany, however, autarky is a matter of controversy not on national grounds, but on grounds of the rival pocket interests of particular manufacturing and raw-material producing groups. At present a vigorous agitation, vigorously opposed, is proceeding about the iron supply. It is theoretically possible to increase home iron-ore production almost indefinitely—on the assumption that prices matter nothing at home, and that exporting is only an undesirable device for maintaining the imports which autarkists desire to eliminate. Home production of iron ore has of late rapidly increased, but owing to the rise in iron output, it still plays an unimportant role. The import of ore, which was nearly 17 million tons in 1929 and fell to under

strikes, although M. Daladier has stated that these strikes are disturbing production and in particular defence preparations. A clash between the strikers and the employers and between the Communists and the Radicals may thus recur; and this will give a particular significance to two coming events: the extraordinary conference of the General Committee of the Trade Unions which is summoned for Sunday, and the annual congress of the Radical-Socialist Party on October 25th at Biarritz. At the trade union meeting M. Jouhaux, the general secretary, will propose the institution of a new legal procedure designed to prevent stay-in strikes or lockouts being adopted before conciliation has taken place. What will be the answer to this of the Trade Unions delegates, among whom revolutionary elements predominate now that the number of their followers has increased from 2,500,000 to 5,000,000 in three months? Their decision, in any case, will have repercussions on the Radical Congress, the date of which seems to have been postponed in order to prepare provincial branches for a strong protest against the alleged breaches of the liberties and rights of 1789.

FURTHER GOLD LOSSES

Whatever congresses and speeches may achieve, however, the contradictory situation created by simultaneous strikes and their condemnation by the Government, and by public opinion, cannot continue indefinitely. This is specially true now that other events are menacing the uneasy Popular Front alliance. The drain of gold is persisting. During the past few weeks there has been a further fall in the Bank of France's reserves to the extent of nearly 1,500 million francs. The Bank's liabilities at the same time are increasing as a result of the recent public works vote, the wheat office, military expenditure and the Treasury deficit. The 3,000-million English loan will soon reach maturity; so that the gold stock of the Bank will soon be less than 50,000 millions (against 82,000 millions twelve months ago); whilst the ratio of gold reserves to liabilities is steadily dropping. (It is, nevertheless, still 58.03 per cent. against a legal level of 35 per cent.)

Prices are also rising and foreign trade falling. The strikes are impeding economic recovery, though the Government is still trying to promote it through a "reflation" of purchasing power. At this moment, when the Radicals had just emphasised the necessity of safeguarding property rights, and M. Vincent Auriol had declared it indispensable to re-establish a margin of profit in industry and trade, M. Paul Reynaud has returned from America. He stated that America had recovered prosperity after devaluation, and also that London and New York agreed to come to the aid of France in carrying out the difficult step of devaluation.

Is the long and painful struggle for the franc coming to an end? Is France nearing its "September 21st"? The problem remains a political one. But the sole opponents are the Communists, who think it possible to impede the rise of prices by the maintenance of the franc. But prices are already being raised by reflation, which is the financial substitute for devaluation. And devaluation now appears to be the only way of restoring international trade, while the simultaneous revival of free trade and prosperity appears as the sole hopes by which the Radicals can achieve the re-establishment of their former political predominance in the country. Will then an acceptance by the Communists and the Radicals, aided by the support of the great democracies abroad, open the way to a solution? Or will France begin by an embargo and new State controls?

Foreign trade in August declined again to 2,938 million francs, against 2,951 million francs in July. Imports were 86 million francs lower, but exports increased by 73 million francs. The import surplus was 590 million francs, against 750 million francs in July. It was 253 million francs in August, 1935. The total import surplus for the first eight months of the year is more than 6,000 million francs, against 3,800 million francs for the same period of 1935. Imports were 15,567 million francs in 1936, against 14,476 million francs in 1935; and exports 9,446 million francs, against 10,234 million francs.

PARIS, September 24.

The British and Polish Trade Bank A.G., Danzig

Paid-up Capital: D. Gulden 5,000,000.---

Reserves: D. Gulden 3,527,571.57

Chairman: Sir William Grenfell Max-Muller, G.B.E., K.C.M.G.

Vice-Chairman: Józef Kozuchowski.

Joint Managers: Stanisław Pawłowicz and Philip Frederick Rann.

Assistant Manager: Aleksander Kowalski.

The Bank was formed to facilitate Exports and Imports from and to Poland, including Danzig. INQUIRIES SOLICITED

3½ million tons in 1932, rose to 14 million tons in 1935; and has this year been at the rate of over 19 million tons. Home output, which was lowest at 1,340,000 tons in 1932, rose to 5,300,000 tons in 1935, and is this year at the rate of six million tons. The iron content of the foreign ore, however, is 55-60 per cent., and of the home ore 30-35 per cent.; and as against some 1,794,000 tons of iron in the home ore (1935) there was some 7 million tons in the foreign. The smelting cost of the home ore is four-fold that of the foreign. The recent increase in home output has been mainly due to an uneconomic undertaking by the iron industry to purchase certain minimum quantities.

The continuing rise in the retail price of consumption goods has led to punitive measures. In general, fixed-price limitations are observed, but free prices are being pushed up sharply. The restoration of the office of the Reich Price Commissary is being discussed.

The September cereal-crop estimates, like that of August, revise those of the previous month. The wheat estimate is reduced by 200,000 tons, rye by 300,000 tons, and all bread cereals by 682,000 tons. The new bread-crops estimate is 12,420,000 tons, against 12,270,000 tons in 1935; and all cereals 22,580,000 tons, or 500,000 above the 1935 figure.

The decision taken during M. Bastid's visit to Berlin to negotiate for a new Franco-German commercial and payments agreement was well received, and had some influence on the Bourse. The German view, as expressed a year ago, was that the clearing system should be replaced by an agreement resembling the Anglo-German agreement. The economic agreement with Poland of November 4, 1935, has been prolonged until the end of the year, and a new agreement for 1937 will be negotiated. The foreign trade return for August shows the largest export surplus attained since the era of import surpluses terminated:—

	July	August	Jan.-Aug.
Imports	Millions of Marks		
I. Foodstuffs	105.2	109.2	991.6
(a) Livestock	7.8	8.4	58.7
(b) Animal foodstuffs	27.4	33.4	296.5
(c) Vegetable foodstuffs	70.0	67.4	636.4
II. Industrial goods	240.5	236.5	1,810.8
(a) Raw materials	135.1	128.7	1,036.8
(b) Semi-manufactured	71.8	73.0	520.3
(c) Manufactured	33.6	34.8	253.7
Total	345.7	345.7	2,802.4
Exports			
I. Foodstuffs	6.5	5.4	59.6
(a) Livestock	0.1	0.1	1.7
(b) Animal foodstuffs	0.7	0.6	5.8
(c) Vegetable foodstuffs	5.7	4.7	52.1
II. Industrial goods	388.8	403.6	2,987.4
(a) Raw materials	32.3	35.6	260.9
(b) Semi-manufactured	38.2	37.4	303.9
(c) Manufactured	318.3	330.6	2,422.6
Total	395.3	409.0	3,047.0

There is a close parallelism with 1935 which showed also a steady improvement after June.

According to an official report, the average time worked daily in industry in January, 1936, was 7.5 hours, as against 6.88 hours in March, 1932, and 7.8 hours in September, 1927. The longest working times, slightly over eight hours, were in the paper and engineering branches. The total number of hours worked monthly in the middle of 1936 was 3,950 millions, as against 2,700 millions in 1932, and 4,010 millions in 1928. Of the increase since 1932, 91 per cent. was due to the rise in the number of employed, and 9 per cent. to the lengthening of the time worked.

Industry continues to be active. Coal production in the first eight months was 101,884,000 tons, against 91,374,000 tons in the same period of 1935, without Saar output in January and February. (For comparison the former figure should be reduced by 1,867,000 tons.) Pig-iron production in August was 1,362,000 tons; in the first eight months it was 10,056,500 tons, against 8,141,200 tons in 1935.

In connection with the meeting of the British Iron and Steel Institute at Düsseldorf, the leader of the German group in the International Steel Cartel, Dr. Poensgen, expresses the view that agreement between the tube producers, whose cartel collapsed early in 1935, will be restored. Dr. Poensgen implies that the countries outside

the Steel Cartel, in particular the United States and Japan, may come in. The Kloeckner Steelworks Company has increased its dividend from 3 to 4½ per cent. The monthly report of the engineering industry is again favourable.

The July, 1936, motor-car census shows 962,000 private cars, against 810,000 in July, 1935; 271,000 commercial vehicles, against 244,000; and 1,184,000 bicycles, against 1,059,000. Exports of motor-vehicles are rapidly increasing, and imports have almost ceased.

Berlin, September 22.

POLAND

"BACK TO FRANCE"

FOR internal no less than external reasons it is widely felt that the most important Polish event since the death of Marshal Pilsudski in May, 1935, is the "return to France," which reached a definite stage with the initialing in Paris on September 6th of a political-military agreement of far-reaching importance. Emphasis has been placed here, not on the contents of the agreement, about which very little has been disclosed, but on its strictly bilateral character. Any suggestions that the agreement even indirectly involves Czechoslovakia or Soviet Russia draw a prompt denial from the newspapers which reflect the views of the Foreign Office.

The agreement was made, from the Polish side, by General Rydz-Smigly, the military successor of Marshal Pilsudski. It has not passed without diplomatic comment here that an agreement of such importance should have been virtually concluded in the absence of Colonel Beck, the Foreign Minister, who has been looked upon as the custodian of Pilsudski's "political testament" in foreign affairs. There are many Poles who would have felt easier about the "return to France" if Pilsudski had signed the agreement—not because they do not share the traditional friendship for France, but because the more discerning realise that the step taken is a very serious one. They may have been harbouring illusions, but many Poles felt Pilsudski had so arranged affairs that Poland might have been able to keep aloof—for some time, at least—from a European war. The situation in this respect now looks much less hopeful.

The main factors in Polish foreign policy must always be Germany and Soviet Russia, and it needs a very capable diplomatist—such as Marshal Pilsudski was and Colonel Beck is—to walk the tight-rope between them. Walking the tight-rope, difficult as it is, is preferable to walking the plank. France, after the refortification of the Rhineland zone, is for Poland a secondary factor in a strictly political sense, but of growing importance from the financial side, and here no doubt lies the secret of the September 6th agreement. Pilsudski was too strong to permit finance to influence foreign policy.

THE GOVERNMENT'S INCREASED POPULARITY

The Government has not been slow to appraise the "leverage" which the re-invigoration in the fullest sense of the Franco-Polish alliance may exert on the internal political situation. Public opinion at large has heartily welcomed the "return to France," and the personal authority of General Rydz-Smigly, backed by French acclamation, has been successfully "put across." The Government's position one month ago was not at all comfortable. The peasants were showing increasing dissatisfaction with the regime, and six years of relentless deflation had severely shaken confidence. General discontent for the moment has given place to gratification over the "return to France," and French money may do the rest.

Great reticence is being shown here about the cash consideration involved. Poland has received from France in one form or another since 1918 about 1,500 million zloty, on which there is now practically no service. More than half this amount is represented by the so-called war debts, which may presumably be regarded as dead; but a substantial portion is in industrial and commercial investments on which the transfer of service or interest was "blocked"

NATIONAL BANK OF GREECE

Established in 1841

Head Office: Athens

Branches and Agencies throughout Greece

Branches and Agencies in Egypt:
CAIRO, ALEXANDRIA, ZAGAZIG

Affiliated Bank:

HELLENIC BANK TRUST COMPANY
51 Maiden Lane, NEW YORK

Capital paid up and Reserves Drs. 1,205,000,000

by the exchange restrictions introduced this year. Temporary arrangements were made in July to adjust—until the end of this year—commercial relations to the exchange restrictions, and it is intended to negotiate a new commercial treaty before December 31st which will provide for a substantial increase in Polish exports to France. Only about 3 per cent. of Poland's exports now go to France, but it is suggested that France could greatly increase her imports of Polish coal. In that case, however, Franco-British commercial relations, not to speak of the Anglo-Polish coal marketing agreement concluded nearly two years ago, would be affected. France, unlike Germany and England, is not a natural market for the products which Poland is able to export in quantity.

Coal also figures prominently in a temporary trade agreement which Poland concluded with Italy a few days ago; and this, like the agreement made with France in July, accepts the principle that, in the present state of Poland's foreign exchange reserve, debt service can be met only by the export of goods.

The troublesome matter of payment by Germany for railway transit across the "Corridor" has now been regulated until the end of this year. The haul across Polish territory has been shortened, and the monthly payment (as from March 25th) reduced from about 7,000,000 zloty to 3,200,000 zloty, which is being paid in foreign exchange. The arrears of 81,600,000 zloty which accumulated up to March 25th will be "liquidated" as to approximately 50 per cent. in goods and the balance by off-setting German financial claims against Poland arising from the acquisition of German holdings in Upper Silesian industrial plants and the "blocking" of German balances since the introduction of Polish exchange restrictions.

Except that the export surplus, with the development of "compensation" trade, is slowly disappearing, the foreign trade figures are improving. They are as follows:—

	1934	1935	1936
	(Millions of Zloty)		
Exports	554.5	519.2	566.2
Imports	463.2	490.6	541.1
Export Surplus	91.3	28.6	25.1

Figures of industrial production, car loading, retail trade, etc., also show a general improvement over those for 1935, and this has been accomplished simultaneously with a balanced Budget. It is expected that the improvement will gather momentum with the inflow of French arms credits, and security markets are responding with a feeling of hopefulness not experienced for several years to the better industrial outlook.

WARSAW, September 21.

SWEDEN

THE SOCIAL-DEMOCRATS' VICTORY

CONTRARY to general expectations, the elections to the Second Chamber of the Riksdag on Sunday resulted in a marked advance by the Social-Democrats and a still more marked defeat for the Conservatives. According to the preliminary figures, the Conservatives will hold only 44 seats, compared with 58 previously. The Farmers' Unionists lost one seat, and will now have 36 seats. The Social-Democrats have advanced from 101 to 112 seats. The Liberals went up from 24 to 27 seats and the Communists from 2 to 5; and Right-wing Communists (or dissent Labour) have lost 2 seats and now hold only 6. In the new Chamber there will thus be a Labour majority of 123 members, against 107 non-Labour members.

The question is whether the Social-Democrats will form a Parliamentary coalition with the 36 Farmers or with the 11 Communists. At the moment the former combination seems more probable, and the formation of a Cabinet under M. Hansson, the Social-Democratic leader and late Prime Minister, in partnership with the Farmers' leader, M. Persson-Bramstorp, seems likely. If, however, the Social-Democrats and Farmers should not be able to agree upon a common programme, M. Hansson will be obliged to have

recourse to the Communists and to offer a seat in his Cabinet to a Communist representative. In that case the resulting Labour Cabinet would certainly embark on a more radical economic policy than Sweden has hitherto known. The possibility of the socialisation of certain branches of industry and trade has therefore become more real, and the Stock Exchange has recorded strong declines, particularly in brewery stocks, since this trade is considered ripe for socialisation.

The chief reason for the victory of the Social-Democrats is in the general economic recovery experienced during the four years' rule of their recent Government, led by M. Hansson, and in his moderate and wise policy. The defeat of the Conservatives is partly explained by the lack of effective leaders and the failure to adapt the Conservative programme to the wishes of clerks and salaried employees, who have consequently voted for the Labour parties.

STOCKHOLM, September 22.

HUNGARY

ELECTORAL REFORM PROPOSALS

ON the eve of his departure for a prolonged sick-leave, the Prime Minister, General Gömbös, addressed a letter to the President of the House of Deputies expressing his desire that the long-delayed electoral reform proposals should be discussed by the leaders of the parties when Parliament re-assembles at the end of October. Electoral reform proposals have figured on the party programme of all governments for the last fifteen years. All parties want the abolition of the open balloting, and General Gömbös is committed by his last electoral pledge to institute the secret ballot in the rural constituencies. At present about one-fifth of the deputies are elected by secret ballots, i.e. those in the big towns only. In connection with the electoral reform the extension of the prerogatives of the Regent and of the Upper House will also be considered.

There is much doubt whether the Prime Minister will be able to resume his duties as virtual leader of the Government when Parliament re-assembles. His illness has prevented him since the end of May from discharging his duties, and his absence gave rise to frictions amongst the various factions of the Government party, so that it was necessary to invest his deputy Prime Minister, Dr. Darányi the Minister of Agriculture, with the leadership of the Government party as well. It is just four years since General Gömbös formed his first Cabinet. During his premiership, thanks to the able administrations of his Finance Ministers, Dr. Turrédy (in his first Cabinet) and Dr. Fabinyi, the purchasing power of the pengő has been fully maintained, and the finances of the States have been brought in order, which was no small achievement considering the huge deficit and the burdensome interest rates prevailing in 1932. His foreign policy was cautious and successful; Dr. Kanya, the Foreign Minister, enjoys the confidence of all parties. It is in the domestic field where

General Gömbös encountered great difficulties, due largely to a number of younger party zealots who unnecessarily embittered the opposition parties by their fanaticism. It is a pity that General Gömbös, who has been so fortunate in choosing his Cabinet Ministers, should have been so unlucky with the management of the political organisation of his party. There is little doubt that on questions of electoral reforms he wants to fulfil his pledge, which he feels as a debt of honour to the country. Considering the grave illness of the Prime Minister, it is only natural that there should be great excitement and political intrigue over his probable successor. Besides several of his Cabinet Ministers, a number of outsiders are freely mentioned in the Press. It seems most likely, however, that in case of his inability to resume leadership, his deputy, Dr. Darányi, who is moderate and beyond petty party politics, will carry on.

BUSINESS RECOVERY CONTINUED

The economic recovery, thanks to the good harvest and the financial progress made in the last two years, continues satisfactorily. The revenues of the State and the State enterprises were considerably higher than last year, both in July and in August, and the liquidity of the banks has increased. Sight deposits of the State and the banks with the National Bank at the end of August totalled 131 million pengö as against 90.4 million pengö a year ago, and the note circulation expanded moderately from 390.6 million pengö to 410 million pengö in the same period. Economic activity is best demonstrated by the substantial increase in residential building. It is interesting to note that building activities were financed mostly from private savings without the creation of long-term or short-term bank debts. As the State does not need the liquid resources of the banks to meet the deficit as it did from 1930 to 1934, credits are more freely granted for commercial purposes.

Foreign trade returns in August were very satisfactory. Imports amounted to 32.1 million pengö, against 30 million pengö last year, and exports jumped to 49.2 million pengö against 32 million pengö last year. The rise of 50 per cent. in the value of exports is due chiefly to the good harvest and partly to higher prices. Comparative figures for the first eight months are as follows:—

	Imports	Exports	Export Surplus
	In million pengö		
January–August, 1935 ...	234.4	256.7	+22.3
January–August, 1936 ...	289.1	306.9	+17.8

Prices of some primary commodities such as cattle, eggs and fat have considerably increased; but those of vegetables, fruit and potatoes have fallen substantially.

BUDAPEST, September 15.

CHINA

CHIANG KAI SHEK AND THE KWANGSI WAR-LORDS

MARSHAL Chiang Kai Shek seems to possess the patience of Job. For over a month he has resisted the attempts of the Kwangsi War Lords to lure him into civil war, and although he has at his command forces which are greatly superior to the Kwangsi army in numbers and efficiency, he is still endeavouring to reach a peaceful settlement. At the moment, a peaceful solution of the trouble seems remote, as Kwangsi troops have now invaded the southern portion of Kwangtung and have taken possession of the port of Pakhoi. With the entrance to the West River (Kwangsi's normal channel of trade) blockaded by the Central Government forces, the only outlet from Kwangsi to the sea is by way of Pakhoi.

There are various rumours that the Kwangsi Government, although ostensibly anti-Japanese, is in collusion with the Japanese, who wish to keep Chiang Kai Shek occupied in the South, while they extend their hold on Northern China. If there is any foundation for these rumours, Kwangsi would require a seaport for the importation of munitions. There are some cruisers of the Central Government in the neighbourhood of Pakhoi presumably intended to intercept any attempts at gun-running, but they are small vessels and could not provide landing parties to drive the Kwangsi troops out of Pakhoi.

The deposed dictator of Canton, Chan Chai Tong, sailed for Europe last Sunday in an Italian liner. It is, by the way, worthy of note that for the past year or two distinguished Chinese personalities visiting Europe have invariably travelled by the Italian line. Chan Chai Tong spent nearly a month in Hongkong, unable to leave the colony owing to the absence of a passport. At last, the Nanking Government agreed to issue one, and it is wondered what proportion of the Canton Government's funds were surrendered by Chan Chai Tong in exchange for the passport.

REORGANISATION IN CANTON

Meanwhile, the civil officials in Canton have been settling down to the formidable task of reorganising the Province. So far, the most striking achievement is the abolition of gambling houses, all of which were closed on August 31st, after their last session had attracted huge crowds. Certain irregular taxes on imports have been abolished, but others are still in force, and some time may elapse before trade is relieved of the many imposts brought into force by the late Government.

The announcement in Nanking that the new Income Tax Law will become effective on October 1st is viewed with some anxiety. Information about the way in which the tax will be applied is wanting, but however carefully compiled the regulations may be, it is obvious that the tax will never be collected on a uniform basis. The Chinese themselves will have little difficulty in evading the law, and the Japanese will ignore it.

Like many other commercial centres, Hongkong is beginning to realise the value of the tourist as an invisible export. The first report of the Hongkong Travel Association has just been published, and during the past twelve months a considerable amount of overseas publicity has been arranged together with the production of a "Magic Carpet" film. The report mentions that the number of foreign visitors landing in the colony during 1934 was 1,819,000, and that this number increased to 2,282,000 during 1935. American tourists have hitherto formed the greater proportion of visitors to Hongkong, but during the past year or two there has been an appreciable increase in the number of tourists making a round trip from Australia to the Far East.

HONGKONG, September 3.

LETTER TO THE EDITOR

ARE TRAMS OBSOLETE?

TO THE EDITOR OF THE ECONOMIST

SIR,—In your article on Commercial Motor Progress you make the statement that "the obsolescence of the trams is now generally admitted." It is perfectly true that the tramway industry is a declining and not an expanding one. I suggest, however, the bare statement that trams in general are obsolete merits some qualification. Trams are still being manufactured in considerable numbers, and in certain circumstances they are still the most effective form of transport both at home and abroad.

In the first place, may I quote the example of Liverpool, which is overhauling its tramway service and in pursuance of its programme has already acquired during the last two years 250 new vehicles and is expected to be in the market for many more before re-organisation of its fleet is complete. Though this is the largest tramway programme for any individual concern in the country at the present moment, many other municipalities and companies have placed substantial orders in the past few years, and are still continuing to acquire new rolling-stock or modernising their existing stock. At the same time orders have come to this country in recent months from several overseas tramway concerns in India, New Zealand, Australia and Africa. The order from South Africa was for 50 Equal Wheel Bogie cars for Johannesburg. The cars were fitted with four 40-h.p. motors. It is probable that a considerable number more cars will be required to fulfil their programme.

The foregoing is sufficient to show that the tramway industry is by no means dead. May I briefly outline the reasons why this is the case, and first of all compare the tram with the motor omnibus.

Economical though it is, the modern Diesel (or, to be more precise, compression ignition engine) is a less efficient source of power than a large central electricity generating station, even taking into account the costs of distribution. Also despite the improvement of road services the effort required to move a tram along rails is less than a bus along roads. The motor-bus has to

be somewhat economical in its use of electricity, which it has to generate as it goes along. The tram can be far more lavish in this respect and, as a result, trams at night are better lighted vehicles in which to ride.

In comparison with a trolley bus, and still more a motor-bus, the tram has a considerable advantage in the matter of depreciation. All three types of vehicles cost about the same, but it is likely that a tram will have a life of from 10-20 years, a trolley bus of 5-10 years, and a motor-bus not more than 5 years. To the depreciation of the tram must be added the cost of the track. This, however, is a comparatively small item if traffic is dense. If a separate track is used, or, alternatively the tram undertaking is credited with the section of the road it maintains. In maintenance costs the tram scores heavily against both its competitors, rubber tyres being costly, and against the bus in the care of its engine and transmission.

The great objection to the tram is the obstruction which it creates for other traffic. There can be no quibble on this point. Where, therefore, traffic congestion is a problem there is no doubt that the trolley bus is a superior vehicle. There are, however, many places where this problem does not occur. Some of the main roads radiating out of Birmingham, for instance, for large portions of their length have separate tram tracks between two one-way roads. May I suggest that where traffic congestion

is not a problem, as for instance by employing the principle of a separate track, there is still a very definite place in the transport industry for the tramway.

There is one further disability under which the tram labours which should not be overlooked. In their desire for economy, usually for the purpose of relieving the rates, many Corporations have run their trams until they have become excessively old and derelict. The L.C.C. have recently been scrapping trams which are over 30 years old; the Birmingham Corporation still have in operation trams approximating that age. If tramway undertakings were sufficiently enterprising to place before the travelling public none but up-to-date trams, such as those recently purchased by the Liverpool Corporation, the prestige of the tram would be very greatly enhanced.

In conclusion, may I add that in almost all parts of the Empire there are highly successful tram companies. It is interesting to note in this connection that where there is a colour bar which prevents natives from riding in the motor buses, it automatically provides a very large clientèle for the trams. I hope the foregoing is sufficient to justify the assertion that the tram is not entirely obsolete and that given the right circumstances it still has a very useful rôle to fulfil.

Yours truly,
L. A. CATLIN.

BOOKS AND PUBLICATIONS

MR STIMSON ON MANCHURIA

THE history of Anglo-American relations is one of friction struggling with friendship, and friction seems to have played the greater part. One of the most fundamental causes of criticism of Britain in America is the conviction that Britain is still playing the game of imperialism, and it was not until Britain had abandoned such ambitions in the Americas that the way was really clear for friendship to develop. In the first quarter of this century the influence of Bryce, Root, Choate and many others had gone some way to exorcise American suspicions of Britain. Progress was made when Lord Salisbury associated Britain with John Hay's Open Door policy for China, and in the Nine-Power Treaty signed at Washington in 1922. Under the influence of rapidly improving Anglo-American relations America was emerging from the accentuated isolationism which had marked its attitude to the League of Nations since the Great War. It is one of the tragedies of the last five years that America should once again have been given cause to renew her suspicions, and should have been driven back toward isolation.

Mr Stimson's recollections and observations on the Far Eastern crisis* show only too clearly the American view of the world crisis which started in Japan in 1931. When Japan used warlike means to annex Manchuria in 1931, Mr Stimson was eager to vindicate the Nine-Power Treaty and the Kellogg Pact, both of which Japan had signed, because they represented to him the most valuable results of the Great War. For this purpose he was willing to co-operate with the League of Nations to a much greater extent than his public might have wished. The atmosphere was troubled by the approaching Presidential election, by the most acute years of depression, and by the default of European nations on their war debt payments; yet he was willing to take the risk of failure, since victory would justify his actions. Early in November, 1931, he says, the League was anxious to obtain commitments from America on possible sanctions, before its members had even discussed such action between themselves. He explains that such a commitment in such circumstances was impossible, but he authorised Mr Dawes to inform M. Briand that if the League desired to impose sanctions, "we were anxious not to discourage them or to put any obstacles or dangers in their path." M. Briand was perfectly satisfied with this attitude.

It was in pursuit of the common aims of America and the League of Nations that Mr Stimson on January 7, 1932, sent a note to Japan and China, expressing America's determination not to recognise any situation brought about by means contrary to the Pact of Paris. Mr Stimson writes: "We naturally looked to the Government of Great Britain for a sympathetic understanding of the position we had

taken, as well as for possible co-operation in the subsequent steps which might make more effective our policy." He was disappointed. On January 11th the British Government, in a Press *communiqué*, accepted Japan's statement that Japan was the champion in Manchuria of the principle of equal opportunity and the open door for the economic activities of all nations; the British Government did not consider it necessary to address any formal note to the Japanese Government. Mr Stimson continues: "The contents of this *communiqué* were such as to be taken by most readers, including what was most important—the Japanese Government, as a rebuff to the United States. It was entirely silent about the preservation of the sovereignty,

JAPANESE TRADE & INDUSTRY

PRESENT AND FUTURE

Compiled by

Mitsubishi Economic Research
Bureau, Tokyo

With Maps and Charts, 686 pp. 21s. net.

The principal object of this book is to give a clear understanding of the actual situation of the Japanese economic world and its future tendency, through the scientific analysis of abundant statistics, chiefly relating to the production and trade of internationally important commodities, and by thorough studies of reliable data, thus explaining the real causes of Japan's phenomenal expansion.

"An exhaustive analysis of the great expansion of Japanese trade and industry which has followed the depression period of 1929-32. It includes statistical data and diagrams under every possible heading."—*Times Literary Supplement*.

MACMILLAN

* "The Far Eastern Crisis," by Henry L. Stimson. Published in England by Milford, for the Royal Institute of International Affairs. 293 pages. 15s.

independence and integrity of China, the Kellogg-Briand Pact and the assertion of the principle of the non-recognition of the fruits of unlawful aggression." Yet *The Times* said the British Government had acted wisely; did not fear that Japan would set up an independent regime in Manchuria; and did not believe in the administrative integrity of China. Japan was prompt to take advantage of this assurance of divided counsel.

On January 28, 1932, the Shanghai bombardment opened. This action was at its height on February 8th, when an unofficial suggestion came from the Tokyo Foreign Office that a ten-years' trial of the Nine-Power Treaty had proved it ineffective, and that demilitarised zones should be formed at the principal Chinese ports, and in Manchuria. Mr Stimson felt that this should be refuted at once, and President Hoover agreed that an attempt should be made to invoke a common protest from the signatories to the Nine-Power Treaty. Once again this was in conformity with the purposes of the League. Mr Stimson saw the British Ambassador on February 9th. He spoke to Sir John Simon by telephone at Geneva on February 11th and 12th, and again in London on the 13th and 15th.

Says Mr Stimson: "while no explicit refusal to my suggestion was ever made, I finally became convinced from his attitude in those conversations that for reasons satisfactory to it, and which I certainly had no desire to inquire into or criticise, the British Government felt reluctant to join in such a *démarche*. The British nonjoinder obviously killed the possibility of such a *démarche*." Mr Stimson might well have recalled the experience of both John Adams and Charles Francis Adams: "Of civility, cold and formal, such as only the English know how in perfection to make offensive, there was enough. No marked offence, but supercilious indifference." Once again, Japan was encouraged by Britain to pursue her conquest.

British reputation in America was further damaged by Sir John Simon's speech on the Lytton Report, which was at once reported in America as strongly pro-Japanese, and by the abortive arms embargo declared by Britain on both Japan and China, to the advantage of the former. After Manchuria came Abyssinia; after Abyssinia, Spain. Coming at this particular time, Mr Stimson's book can hardly fail to confirm the American isolationists in their distrust of Britain. Sir John Simon may have been merely the mouthpiece of his Government, but he will be remembered as the Foreign Minister who did more than any other to keep a friendly America at arm's-length.

Mr Stimson says: "I have emphasised our experience in co-operation with the Government of Great Britain because . . . it is inevitable that upon the Government of Great Britain and her Dominions will fall great responsibilities of leadership . . . and I further believe that my own feeling as to the importance of Anglo-American co-operation in the solution of the problems of this troubled world is shared by the great majority of my countrymen." Our own Government seems to wish for American co-operation, but in Canning's sense rather than in Stimson's; America is a useful ally in war. A contemporary recently suggested that we should resume war debt payments in order to clear the ground for borrowing for the next war. Fortunately this does not represent the attitude of the majority of our people; but American co-operation will not be obtained until definite proof has been given that imperialism is not our ambition. We believe with Mr Stimson that Anglo-American co-operation is one key to world peace; but that co-operation can only be achieved if British democracy reasserts its faith in the principles of the League of Nations, and impresses such faith upon its Government.

SHORTER NOTICES

"Book-keeping and Accounts." By Donald Cousins. English Universities Press. 340 pages. 7s. 6d.

The aim of this book is the relatively modest one of providing up to what is usually called the "Intermediate Stage," instruction in book-keeping to persons who need have no previous knowledge of the subject. Within the limits the author has deliberately imposed upon himself, he has succeeded. For the length of the work, the subject is treated as comprehensively and as thoroughly as possible (the main omission being

the treatment of Income Tax); examples are complete and copious, and perhaps form one of the chief merits of the book. A realistic view of the subject is denoted by a certain amount of very useful insistence on points of practical detail which are often glossed over in books of an elementary character. The work is developed on the plan, at first sight logical, of beginning with the books of prime entry, and following transactions through to the final presentation of accounts, ending with those of limited companies.

A section is added dealing with such matters as Bills of Exchange, which do not fall into any natural place in the general scheme. It is very questionable, however, whether this is the best or even a good method of introducing a subject to people having no previous knowledge of it. In this case it seems that a student is more likely to be bewildered than helped by plunging directly into a fairly detailed treatment of Journal entries, without first being given some outline of the general aims and methods of book-keeping. A certain amount of space is given to the reprinting of questions set by professional and other examining bodies.

"How Britain Rules Africa." By George Padmore. Wishart. 402 pages. 12s. 6d.

In this ambitious study Mr Padmore takes his readers through every territory of British Africa in turn, and describes the political, social, and economic conditions in each, with special reference to the relative position of the native populations. Being of African descent himself, he not unnaturally has a strong bias against imperialism as such, and in particular against the British colonial system, for which indeed he has scarcely a good or civil word to say. In his view, the Empire is an offensively composite product made up of the white man's racial insolence and the exploitation of a decaying capitalism which scours and scavenges the earth for profits in a kind of bestial frenzy. His scorn of the hypocrisy of "trusteeship" as a symbol of our relations with the subject races of the Empire is bitter, and he consequently has no faith in indirect rule, the dual mandate, or any other such expedients.

Nor does the League of Nations, with its system of A, B, and C mandates and its Permanent Mandates Commission, emerge from his scrutiny in much better case. He is particularly hostile to the suggestion which has been put forward by the Labour Party and by some sections of the peace movement, that British colonies and protectorates should be brought within the scope of a mandate system managed by the League. That whole question Mr Padmore sees simply as a discussion among the members of a gang of racketeers about the disposal and division of colonial swag. As an African, and in a sense therefore as part of the swag himself, he considers it prejudicial as well as undignified to join in any such debate.

Consequently it is no surprise that for Mr Padmore the only way of escape from an intolerable situation lies along the path of independence and self-determination for coloured peoples, and that his main appeal is accordingly made to the working class of Britain on the lines of the Communist manifesto. Our professional patrons of the Empire and indeed respectable members of society in general will be tempted to ignore this book. They will make a great mistake if they succumb. It has its faults—but for all that it may, mark the turn of a tide.

MONEY AND BANKING

FUTURE GOLD RESERVES

IN a recent article in the *Economist* (May 3, 1936, page 427) we estimated that if Britain's gold reserves were revalued at the current market price the combined gold stocks of the Bank of England and the Exchange Equalisation Account would be in the neighbourhood of £600 millions sterling. Subsequently, these holdings have been further increased by official gold purchases made in support of the franc. A week ago, in a leading article on the fifth anniversary of our suspension of the gold standard, we laid stress on the ultimate need of our devising some practicable compromise between the rigid gold standard of 1925-31 and the exchange instability of to-day. Such a system would pre-suppose some form of currency "stabilisation" for sterling, which, in turn, would involve the question of the future employment and distribution of our gold reserves. It may be profitable to consider the implications of this question, even though stabilisation, in itself, may not be practical politics to-day, for stabilisation requires a considerable measure of international agreement. Our own adherence would be governed by the consideration that no international commitment should be allowed to impede our trade revival and interfere with our policy of cheap and plentiful credit. Without prejudice to these matters of principle and expediency, there are certain technical considerations involved, which may well be considered in advance of any decision on the main questions.

If stabilisation took the form of a return to gold its first consequence would be the obligation of the Bank of England again to buy and sell gold in defined quantities—though at a very different statutory price from that of pre-devaluation days. Hitherto, the Bank's buying and selling prices have corresponded approximately to a price of 85s. per ounce fine, but the new price might be by all appearances in the neighbourhood of 140s. It would be for the authorities to make the fundamental decision whether the new price were to be rigid or whether it could be altered under certain defined conditions. Whichever policy were followed the immediate consequence would be the revaluation of the Bank's gold. To-day the Bank holds nearly £250 millions of gold. Revaluation at 140s. per ounce would write this holding up to £410 millions. This latter amount, undoubtedly, would be far in excess of the Bank's needs, under any conditions comparable with those of the present time. If the whole were allowed to become the basis of our credit structure, there would be all the material for a dangerous expansion in the total volume of credit which if unchecked might threaten us with the prospect of a widespread and disturbing "gold inflation." Thus the question of a possible segregation of some part of the £410 millions of gold might well arise at the outset.

This brings us immediately to the next consideration—namely, the future of the unknown quantities of gold held by the Exchange Equalisation Account. On the one hand, it might be argued that, if and when we returned to gold, the Exchange Equalisation Account would have played its part and could be wound up. But it might equally be argued that, under the gold standard of the future, the Exchange Equalisation Account would be capable of performing a new and important function and would facilitate the operation of a "managed," as distinguished from a rigid gold standard like that which broke down five years ago.

Such a result might be secured, possibly, along some such lines as these: After the Bank had revalued its total gold (including gold taken over from the Exchange Equalisation Account), the authorities would decide approximately how much gold the Bank needed to enable a policy of cheap and plentiful credit to be maintained. All gold which was surplus to this requirement would be transferred from the Bank to the Exchange Equalisation Account. Thus our gold reserves would be divided into two portions, the one held by the Bank (and forming the basis of our internal credit supply), and the other held by

the Exchange Equalisation Account. As stabilisation would, *ex hypothesi*, limit exchange fluctuations between narrow "gold-points" and remove any opportunity for large-scale exchange speculation, there would no longer be any need for secrecy as to the amount of gold held either by the Bank or by the Exchange Account. Both figures, therefore, could and should be regularly published.

Subsequently, if the state of the foreign exchanges led to movements of gold, the Bank of England would be required to buy or to sell gold. Thus the initial impact of any gold movement would fall upon the Bank's stocks. At this point, the question of "management" would arise. The Treasury and the Bank, co-operating along lines with which both have now become familiar, would need to decide on the underlying cause of any gold movement of significant size. For example, they might be compelled to conclude that a loss of gold was due to some internal disequilibrium. The British level of prices and costs might be disproportionately high, and the level of British interest rates disproportionately low, judged by those of other countries; or Great Britain might be passing through a period of excessive speculation. In such cases, if the authorities decided that the disequilibrium was not so serious or prolonged as to raise the question of the continuance of the existing parity between sterling and gold, the remedy would be to allow the gold loss to fall on the Bank alone, so that the Bank would be compelled to apply the time-honoured correctives of a higher Bank rate and a restriction of credit. Under such conditions, in short, the gold standard would operate in its traditional manner. Suppose, on the other hand, the authorities decided that the gold loss was due simply to the repatriation from London of foreign funds, and that there was no justification for allowing this loss to affect British internal interest rates, supplies of credit and general trade activity. In that event, the Bank would make good its loss by drawing gold from the Exchange Equalisation Account, the amount of gold so drawn being subject to any necessary compensating adjustments of the kind which we described in a recent article (see the *Economist*, August 8, 1936, page 271). In brief, the extent and nature of these adjustments would be governed by the desire to maintain a constant supply of joint-stock bank cash and/or a sufficient cash ratio for the joint-stock banks, as determined by their outstanding deposits. Since the amount of any transfers of gold between the Exchange Equalisation Account and the Bank would be published simultaneously with the Bank's own sales or purchases, the general public would have the material for a shrewd estimate of the prevailing view of the authorities.

Such a division of our gold reserves would not only be the logical extension of our existing monetary technique, but would bring with it several concrete advantages. The Exchange Equalisation Account's gold would be retained as a *masse de manœuvre*, while the Bank would be relieved of the responsibility of holding gold surplus to its needs. Large in or out payments on international account could be made without giving rise to the fear of undesirable repercussions on the internal credit situation.

Obviously, the success or otherwise of any such plan turns on whether or no the Bank and the Treasury are in their joint wisdom able to distinguish between movements that should or should not produce internal reactions. Provided they can, and do so decide rightly, it may be said that nothing is gained by going to the trouble and expense of dividing the country's reserve into two separate parts; and from the point of view of control, there is, indeed, no advantage. But there is something to be said for the view that such a separation would clarify the public mind as to the dual functions of the country's gold reserve.

Whether, however, there be one reserve or two, the important point is that it would be possible for it to fulfil two quite separate purposes and make it practicable for the authorities to deal with adjustments on international account

without necessarily interfering with internal policy and *vice versa*. If this could be achieved, it would effect a reasonable compromise between the "discipline" imposed by a return of gold and the monetary freedom of to-day. We should retain cheap money and a reasonable internal price-level, and gain international exchange stability. Admittedly, any successful return to gold would pre-suppose stabilisation by international agreement without any gross over- or under-valuation of currencies, along lines which would permit of the eventual removal of trade barriers and exchange restrictions. This wider question, however, lies beyond the scope of our present discussion.

FINANCIAL NOTES

The Fate of the Franc.—Events this week have moved fast in Paris, and are still moving as we go to press. The issue early this week of the League of Nations Economic Committee's report, with its plain hint that the "re-alignment" of the franc was essential, has had a profound effect. The French Cabinet is no longer adamant in its opposition to devaluation, and it is quite likely that a majority of Ministers are now in favour. On Wednesday, the subscription lists for the baby bond issue, which had been open since July 10th, were hurriedly closed, although only Frs. 4,000 millions had been subscribed. The Banque de France also requested the Paris banks not to allow foreign exchange positions to remain open (for the purpose of marrying dealings) even for a day, with the result that there was a temporary squeeze in the foreign exchange market, particularly in forward business. This was followed on Thursday by the abrupt raising of Bank rate from 3 to 5 per cent. This last move, in particular, appears to be in flat contradiction to the policy of cheap money announced by M. Vincent Auriol when he made his inaugural financial statement last June. No one believes that a 5 or even a 7 per cent. Bank rate will be the smallest use in saving the franc, and present appearances suggest that the French Government may well be clearing the decks for a major operation on the franc—perhaps within a very short time. The exact character and repercussion of such an operation are even to-day still a matter for speculation, but the ultimate fate of the franc has been apparent for so long that there has been plenty of time to concert measures in Paris, London and New York for the purpose of minimising any consequent disturbance. The invention and development of the technique of Exchange Funds has occurred since we ourselves took the plunge in 1931, and this is an important fact whose significance must not be overlooked. One thing, at least, we can safely say: that if the obsequies of the franc are conducted in a spirit of international financial co-operation and goodwill, the gain will not be confined to France alone.

The Foreign Exchanges.—The uncertain fate of the franc, discussed in the previous note, imparted considerable activity to the London foreign exchange market, particularly in the middle of the week. Spot francs, though consistently supported by the British Control, weakened at one time to over Frs. 77, but on Thursday afternoon were brought back to Frs. 76½. Forward francs were freely offered with no takers, one month's francs being nominally Frs. 3½ discount (or 55 per cent. per annum), and three months' francs being Frs. 7½ discount (or 39 per cent. per annum). The wider discount on the nearer position is particularly ominous. The franc has remained fixed at the export gold point against the dollar, and gold has continued to go to New York. The franc has also been at the export gold point against the other gold *bloc* countries, but these in their turn have been weak, with the guilder quoted at the export gold point against the dollar. Early on Thursday morning the New York spot rate stood at \$5.07½ against the pound, but later in the day it came back to \$5.06½. Three months' dollars were a strong market at ½ cent premium, this again being due to pressure from

the gold *bloc* countries. The London market is already discussing what will happen to the pound-dollar rate when the expected break in the franc occurs. The Banque de France return for September 18th shows further gold losses of Frs. 840 millions, reducing the Banque's gold to Frs. 52,692 millions. There was a net increase of Frs. 400 millions in Government borrowing at the Bank. This week's imports of gold from France into England amount to £3.2 millions.

The Money Market.—The Treasury Bill Tender of September 18th, for bills to be paid for this week, was complicated by the fact that the bills mature in Christmas week. In particular, bills paid for on Saturday, September 26th, do not fall due until Monday, December 28th, and so are a 93-day maturity. This fact induced the market to apply mainly for Saturday bills, with the result that during most of the week the Government was disbursing funds against maturing Treasuries and receiving very little in return. This made money very easy during most of the week. It was reported that a certain amount of money was borrowed for re-lending to the Stock Exchange, possibly to finance the big bull position in the gilt-edged market.

* Loans against Treasury bills and other approved bills and British Government securities within six months of maturity; 1 per cent. Treasury Bonds and other gilt-edged stocks within six months of maturity; and other collateral respectively.

The banks were buying Saturday's bills forward during most of the week at their minimum rate of ½ per cent. One million pounds of Liverpool yearling bills were issued during the week at an average rate of 12s. 6.00d. per cent. It is not known who took them, for the market tendered mainly at 1½ and 2 per cent., on the ground that the clearing banks would only lend against them at 1 per cent., so that they would have to be carried on "outside" money.

The Bank Return.—This week the circulation is almost unchanged, and comparison with past years suggests that there has not been much additional French hoarding. The Bank has continued to buy gold, and so there is a slight increase in the Reserve.

The absence of Treasury bill payments during the early part of the week explains the reduction in public deposits and the increase in bankers' deposits. It may also explain the week's increase in Government securities, for the Treasury must have been temporarily short of funds, and so may have had to borrow from the Bank on Ways and Means. All these movements are quite small, but they have sufficed to raise bankers' deposits temporarily to the high level of £108 millions. A recession is likely next week, as the market will pay for its Treasury bills in the early part of the week so as to secure December maturities.

THE STOCK EXCHANGE

INVESTMENT TRUST GROUPS

THE fortunes of a movement which comprises over 200 companies, with a combined capital of some £300 millions, are of moment to many British investors. Apparently, they are also a matter of keen interest to the Securities and Exchange Commission in Washington. The Commission has recently entered upon an investigation of American investment trust practice, and has armed itself (like many New York houses) with detailed information concerning the British investment trust movement. At many points the objectives of the British and American movements diverge, and the present article may serve a useful purpose by giving an outline of British methods and organisation. The development of the movement in Great Britain has been evolutionary. Several trusts have sixty years to their jubilee. In the course of their development many trusts have become linked together in compact groups, or more loosely associated through directorial connections. Successful management of trust funds through a world war and two major economic crises has bestowed a prestige upon numerous British groups which has never been achieved in the United States. It has been suggested, further, that problems of efficient management limit the size of individual trusts, so that managers prefer to expand their activities through the formation of new trusts rather than increase the size of their existing trusts. Some authorities regard a fund of £2 millions as the optimum, affording a portfolio of, say, 700 holdings with an average amount of £3,000 each. There may, of course, be advantages to

promoters in the formation of new trusts, but the latter offer the advantage that a greater—or at least different—degree of diversification can be obtained.

There are, therefore, sound investment reasons why the British investment trust movement has tended to develop along "group" lines. In view of contemporary American interest, we have prepared an analysis showing the main features of this grouping. It should be understood that the trusts are linked, not through cross-holding of capital (a most unusual feature in the movement), but through attachment to a common management or association with investment or merchant banking firms. Our table, therefore, groups the trusts under the firm responsible for their management, or under the name of a leading personality whose influence has been decisive in their development. The list is not exhaustive, and there are a number of border-line cases where, e.g., directors are common to more than one group. Any allocation must therefore be to some extent arbitrary.

The total debenture and share capital of the eleven English and eight Scottish groups shown in our table amounts to £208.2 millions. The 120 trusts included represent some 60 per cent. of the total number and control over 70 per cent. of the movement's total capital. The English groups contribute £127.5 millions to the total (including £20.3 millions for trusts associated with merchant banking or finance houses), while the Scottish groups—which usually command smaller resources than the English groups—contribute £80.7 millions. These respec-

* These companies publish a list of investments. † Associated Companies. ‡ In association with Robert Fleming and Company. § Robert Fleming and Company act as London correspondents for all trusts in Brown, Fleming & Murray Group, with the exception of Capital and National, and Railway and General, and for Moody, Stuart and Robinson Group, except for Camperdown and British and Canadian.

tive proportions of 61 to 39 are virtually identical with the division of the movement's total capital between the English and Scottish trusts, which was analysed in a special survey published with the *Economist* of December 1, 1934.

Historically, the development of the movement has been somewhat different north and south of the Border. In London, the movement owes much of its prestige to the pioneer work of such leading personalities—among many others—as the late Sir George Touche, Viscount St. Davids and Sir Miles Mattinson. The Scottish movement can also claim an impressive gallery of well-known figures, including the late Mr Robert Fleming, and, to-day, Mr T. J. Carlyle Gifford, Sir J. T. Cargill, Mr R. A. Murray and Mr. R. G. Simpson. But whereas the English movement owes much to a rather specialised type of financial management, which has left its imprint upon the portfolios of a fair number of semi-specialised trusts, the Scottish movement has founded its success on a more generalised investment *expertise*. This may be ascribed to the professional training of typical Scottish managements, many of whom are accountancy firms or Writers to the Signet. It is evident that separation by 400 miles from the world's largest financial centre is not necessarily disadvantageous, but several Scottish groups now include trusts with London offices.

The largest group, numerically, is the "St. Davids" group. Measured by issued capital, however, the "Industrial and General," or "Touche," group takes precedence with a total of £25.7 millions, compared with £21.1 millions for the "St. Davids" companies. Both are fairly compact groups, whereas the "Benson" group is associated with Robert Fleming and Company in the management of three trusts grouped under its name. An example of further inter-relationship is shown by the appearance of Viscount St. Davids on the board of the Metropolitan Trust. Including the "Stockholders'" group, it is possible to distinguish four English investment trust groups, each in command of £20 millions of capital or more, with between seven and sixteen individual trusts under their influence. The important "Mattinson" group comprises nine trusts, including the Mercantile, but some of its remaining trusts, although they date from the 'nineties, are of less than the average size.

American inquirers have evinced keen interest in the relations of the movement with Stock Exchange houses and banking institutions. Here, however, comparison with trans-Atlantic conditions breaks down. Some investment trust companies certainly include members of the Stock Exchange and banking communities upon their boards. But no specific instance is on record of the creation and control of an investment trust as an auxiliary institution to an existing Stock Exchange or money market firm. On the other hand, certain specialised institutions are definitely concerned with the movement, and their main interests are shown under Section II of our table. Of all British trusts they are most akin to the American trusts in organisation, though not in general policy and financial results.

Such associations play no part in the Scottish movement. Here, the largest group is associated with the accountancy firm of Brown, Fleming and Murray, who act as secretaries to thirteen trusts, with a total capital of £19.7 millions. Eight of these trusts are Scottish registrations, under the chairmanship of Sir J. T. Cargill. The "Baillie and Gifford" group is associated, through directorship and secretarial services, with nine trusts, and provides an example of successful legal penetration into investment fields. Grahams, Rintoul, Hay, Bell and Company, the Glasgow chartered accountants, have seven trusts under their secretaryship, while Layton-Bennett, Chiene and Tait, an Edinburgh firm in the same profession, performs similar duties for a comparable group in that city. There is much more *localisation* of investment trust management in Scotland than in England, and the influence of secretarial firms upon policy has undoubtedly been important.

Generalisation may be as dangerous in the financial as in the historical field. Both the English and the Scottish group managers have followed the same fundamental principles of investment for income rather than capital profits, steady ploughing-back of earnings, the issue of debenture, preference and somewhat "highly-g geared" ordinary capital, and, in the past, the placing of a substantial pro-

portion of their resources in foreign investments. The system of grouping shown in our table, however, will repay careful examination. For the essential feature of investment trust practice is that directors ask for, and receive, the equivalent, within wide limits, of a blank cheque from investors. In the long run, the real security for investment trust stockholders is the experience, acumen and good faith of the men in control.

INVESTMENT NOTES

Autumn Investment Prospects.—The London County Council has this week produced an autumn crocus, in the shape of a loan of £10 millions in 3 per cent. stock, issued at 99, with a life of 20 to 25 years. The terms are very different from the offer of £10 millions of 2½ per cent. stock at par, with a life of 25 to 35 years, made in conversion of L.C.C. 3½ per cent. stock, in the cold winds of January, 1935. That loan was left largely with underwriters; it caused a complete shutting down of the corporation loan market for five months, and it has remained at a substantial discount on its issue price to this day. It is doubtless an ungrateful task for the biggest county borrower in the country to submit to the yoke of official control. But in the interim, "management" of gilt-edged issue prices has strengthened, and it was clear that if the L.C.C. were to pocket the money, it must also pocket its pride. There is considerable speculation whether the loan is a *ballon d'essai* for a possible early Government issue, either for re-armament or for funding. The market has been well "prepared" (as we showed in a Note on September 5th, page 441); the amount of the L.C.C. loan is sufficiently large to afford a test of digestive capacity; and it mainly represents new money, especially for housing. The question whether, when or how the Treasury wishes to come down to market-place again, however, is of lesser moment than the fact that, whatever may betide, the authorities are determined that cheap money shall endure. This decision, and the means taken to implement it, directly affect the investor in equity shares no less than in gilt-edged securities. It is more than possible that coming months will decide whether, in fact, the trade cycle, and all the far-reaching phenomena associated with it, have become an anachronism under a "managed economy." Industry has reached a high pitch of activity, and the review given in our *Trade Supplement* this week shows that some of the phenomena associated with the "boom" phase of a normal cycle—rising prices and wage costs, shortage of skilled labour, etc.—are beginning to appear. Stock Exchange values have had a long and substantial rise. They are highest, to-day, in those capital-producing industries whose activity cannot be indefinitely prolonged, once the present active demand (including that arising from the re-armament programme) has been satisfied. If, indeed, the Government can do what Mrs Partington failed to do, then the ultimate phenomena of a boom—rising interest rates leading to a decisive check to industrial activity—will not eventuate. If, however, the uneasy conviction of many of the more influential and conservative sections of market opinion is correct, and the squared circle, like the squared circle, remains an unachieved ideal, then it is probable that investors, after a possible but limited further advance in security prices, will become increasingly concerned with the question of judiciously "cashing in" their profits during the next few months.

A Unit Trust Portent?—The formation of British Empire First Unit Trust is of particular interest, since it is the first trust to offer new units since the publication of the Board of Trade Committee's report on the movement in August. The managers—a company with the significant capital of £25,000—deserve credit for adopting the Committee's general recommendations, although many months must elapse before their enactment. In view of the surprisingly detailed public interest in the report, however, this policy may well meet with success. The Trust, like

recent flexible issues, has a very large range of permitted investments, to which other companies may be added under specified conditions. Profits arising from adjustment of quotations (though not from re-sale of sub-units) will ensure for the benefit of the Trust, and not of the managers, whose initial service charge will be 2½ per cent., with a half-yearly management fee of 1/10th of one per cent. of the average value of the Trust investments. The Trustees receive 1/4 of one per cent. from the initial charge, and the same half-yearly percentage from income as the managers. Purchasers will therefore pay 2½ per cent. initially, and approximately 1/4 of one per cent. annually. The initial service charge may seem low in relation to a 25-year life, but commission on purchase is payable by the applicant to his broker. Trust income accounts, sub-unit dealings accounts and the balance sheet and profit and loss account of the management company will be available to unit holders. The duties of the trustees—and the limitations which apply to them—are set out in detail. If this formation should prove a prototype for future trusts, both in its method of operation and its publicity, the delay between the Committee's Report and its possible enactment will not be devoid of improvement. It remains for the management to prove its capacity in achieving a consistent return of 4 per cent. during a period which may span three economic cycles. The Trust, like recent flexible units, makes no specific reference to the treatment of underlying securities bought *cum* dividend, whose subsequent sale would enable the Trust to show an inflated yield. Provisions against such practices have already been adopted by certain flexible trusts, and should be common form. Similarly, the question of jobbing profits (and losses) receives no specific mention in the booklet. Possibly, this is a matter on which the managers prefer to await the possibility of legislation. It has recently been suggested that the solution of the jobbing problem, for which the Board of Trade Committee suggested the lime-light of publicity, might be to credit the Trust with all such profits, and compensate the managers by a somewhat higher loading charge. Unfortunately, this would involve unit-holders in a fixed payment for a contingent return. The benefit, or otherwise, of operating in underlying securities is not fundamentally part of the unit-holder's equity, and if jobbing profits are, on the whole, merely sufficient to ensure reasonable earnings for the managers (which publicity would immediately disclose) both unit-holders and managers are probably best served. If abnormally high jobbing profits arise from special attention to market operations on the part of trust managers, they might cease altogether if diverted to the unit-holder, whereas they could be reasonably controlled through publicity.

Central Selling and Coal Shares.—The first results of the Lancashire and Cheshire coal scheme, covering only six months of actual working, throw interesting light on the prospects for coal shares, discussed on page 482 of the *Economist*, of September 12th. After charging depreciation and other expenses, Lancashire Associated Collieries shows a balance of £206,779, out of which it is proposed to distribute £195,587, or 4d. per ton of annual basic supply, to the owners in the scheme. Some £244,000 has already been disbursed in increased purchase prices, equal to a further 5d. per ton. The implications of this scheme for collieries in other districts are evidently considerable. Initially, difficulties and adjustments, such as the chairman described to members of Lancashire Associated Collieries, may prove considerable. In the present instance, the trade percentages of the various collieries were fixed as early as 1934, and changes in quality involved the special fixing of provisional purchase prices. Nor did the chairman lose sight of the importance of meeting the consumers' preference for quality, if not price. The results of such schemes, which are to be introduced in other districts, may tend to accentuate, rather than diminish, the relative prosperity of different areas. Such schemes will obviously afford little help to the coastal areas, interested mainly in export trade. But distinctly satisfactory results for the collieries, may be achieved in inland districts producing for a domestic market. Such areas are already showing good profits in response to recovery and higher

BRITISH EMPIRE FIRST UNIT TRUST

Adopting the recommendations
of the Government Committee's
Report

BRITISH EMPIRE GROUP

announce the formation of Unit Trusts Limited to sponsor the issue of British Empire First Unit Trust. This Trust complies with the recommendations (so far as they can be adopted pending legislation) set out in the Government Committee's report.

Among the provisions so adopted are:

1. Full accounts of the Management Company will be available to Certificate Holders.
2. Certificate Holders will be entitled to convene meetings to consider the affairs of the Trust.
3. Certificate Holders will have the power at such meetings to appoint the Auditors.
4. Meetings of Certificate Holders can give directions to the Managers as to Voting Rights on underlying securities.

The investments of the Trust Fund will be selected from a permitted list of over 400 companies covering a wide field of enterprise throughout the Empire.

Within this limit the Trust is fully flexible with the reservations that not more than 5% of the Trust Fund may be invested in the securities of any one company, and not more than 2½% of any class of stock and/or shares of any particular company may be held by the Trust.

Sums from £50 upwards may be invested.

An explanatory booklet containing the full information as required by the Government Committee can be obtained from any Bank or Stockbroker, from the Custodian Trustees, LLOYDS BANK LIMITED, or from the Managers

UNIT TRUSTS LTD.
116 Old Broad Street, London, E.C.2

London,
23rd September, 1936.

supposition that the new company will do reasonably well. If all the shareholders made the exchange, the present proprietors of Bengal preference would hold more than 10 per cent. of the equity, and the Bengal ordinary shareholders about 30 per cent. of the equity in the joint concern. For the last eleven years the two companies have been closely associated, but the existence of a profit-sharing agreement has, paradoxically, limited the inclination of both to launch out into new fields, particularly that of steel manufacture, since half the profit on any venture by either company would have automatically gone to the other concern. The amalgamation is the prelude to the erection, in conjunction with the Indian company's blast furnaces at Hirapar, of a new steel works with an initial capacity of 250,000 tons. The largest Indian iron and steel interests are behind the venture, and its successful financing appears assured. Both companies passed through a difficult period during the depression, but have increased their earning power recently. The future depends on continued expansion of demand for steel products in the protected Indian market. Under the new political regime in India, the company's tactical position is likely to be strengthened rather than weakened, but India's prosperity, in the last resort, is not independent of external factors.

* * *

Initial Services Report.—Since 1933 the revenues of this concern have shown considerable expansion. Recovery has involved increased staffs in offices (which are supplied with toilet and refreshment services by the company) and the natural "saturation point" of the company's business has not yet been reached in many centres. The past year's profits, accordingly, show a new record level of £254,428, a satisfactory result, though it does not maintain the sharp advance of the previous year. The report discloses, in fact, a slight decline in the aggregate profits of the company and its subsidiaries, to £267,006, although this fall is attributed to expenditure on plant written off. The following analysis of profits shows the effect of last year's 200 per cent. increase in capital, on which 25 per cent. has been paid (where ranking) compared with 50 per cent. in the previous year:—

	Years to June 30th		
	1934	1935	1936
Total income	226,929	245,881	254,428
Fees	1,874	1,913	2,187
Depreciation	5,263	5,580	6,765
Taxation	51,423	45,298	42,152
Preference dividend	32,000	32,000	32,000
Ordinary shares:—			
Earned	136,369	161,090	171,324
Paid	86,250	87,188	123,281
Earned %	79.1	92.4	34.7
Paid %	50	50*	25
Reserves, etc.	45,000	50,000†	50,000
Carried forward	20,154	19,056	13,330‡
Ordinary capital	225,000	225,000	675,000

* And capital bonus 100 per cent. † Of which £10,000 reserve and £40,000 written off goodwill. ‡ After writing off £3,769 new issue expenses.

Shareholders may reasonably anticipate the maintenance of the present rate in the coming year. The chairman has previously declared that subsidiary companies' profits may justifiably be drawn upon to a greater extent than in the past, and the current rates of payment are very comfortably covered by earnings. It may be presumed, further, that the fructification of increased investments in subsidiaries, coupled with the successful utilisation of the generous floating resources with which the company is armed, should maintain the upward trend of earnings for some time to come. The 5s. shares, quoted at 31s. 10d. to yield £3 18s. 6d. per cent., discount some further expansion in disclosed profits, either from "policy" or increased earnings, or both.

* * *

Qualcast Profits.—The feature of Qualcast reports during the past three years is the steady expansion of profits to a highly satisfactory level. The company is a specialist in light iron and steel castings, and supplies a wide range

of consumers, from industrialists to amateur gardeners. The latest accounts show a record total profit of £49,817, for a year during which the company handled the largest turnover in its history. The dividend policy, however, remains conservative, and, as in the two preceding years, the equivalent of 10 per cent. on the ordinary capital is "ploughed back" into the business out of profits:—

	Years to June 30th		
	1934	1935	1936
Profit	44,112	45,240	49,817
Directors' fees, staff bonus, and tax.....	11,572	12,054	17,504
Preference dividend	4,003	4,069	4,036
Ordinary shares:—			
Earned	28,537	29,117	28,277
Paid	19,219	19,375	19,141
Earned %	29.7	30.1	29.5
Paid %	20	20	20

Carried forward 38,036 47,778 56,914

The general impression from the balance sheet is satisfactory. Changes during the past year have not been substantial, apart from the disappearance of a temporary bank loan. There is adequate provision for maintaining the present volume of business, and present indications are favourable. Two points emerged from the chairman's speech on Tuesday. First, the Australian subsidiary has been remitting profits for some time, and achieved a production record last year. Secondly, the new steel foundry, which commenced operations a year ago, should contribute its first profits during the current year. The chairman hinted fairly clearly at the possibility of a higher distribution in the near future. The company's past success and satisfactory prospects suggest that the 5s. ordinary shares at 24s. 3d. are reasonably valued to yield £4 2s. 6d. per cent.

* * *

Second Alliance Meeting.—Investment trust chairmen, both by training and inclination, are accustomed to be cautious in their pronouncements to shareholders. Mr James Prain's speech at the Second Alliance meeting this week was the more significant for the marked optimism of its references to the economic position both of this country and America. Recovery has produced a satisfactory appreciation in the investment portfolio of the Trust, and has yielded as much as £10,500 during the past year from fixed-interest securities which have resumed interest payments under more prosperous conditions. In the chairman's view, there is widely prevalent confidence throughout the business community to-day, which frequently provides its own justification in tangible economic progress. The recent movement in employment, the effect of increased purchasing power, the adequacy of funds awaiting investment, and continued activity in housing, combined to encourage him to take a hopeful view of the prospect—politics, as always, apart. Equally important was Mr Prain's contribution to the chorus of confident prophecy over the position in the United States, where the Trust has 18.5 per cent. of its funds. The Trust is well placed to take advantage of the prospects of further recovery in this country, the Empire and the United States, for 76 per cent. of its investments are placed in these areas, while 38 per cent. of its total portfolio is in equities.

* * *

Modderfontein East.—The latest accounts, writes our Mining correspondent, tend to modify the interpretation of the company's recent dividend record. The company paid 20 per cent. for four years to June, 1932, and the rate has since shown a progressive increase, despite only moderate expansion in earnings in the period. The increased distributions arise chiefly from reduced amounts required for taxation. For the year ended June last, taxation and consideration for mineral leases absorbed no more than £239,330, against approximately £328,000 for the two preceding years. This was partially offset by an increase in capital expenditure to £66,300 against £43,100 for 1934-35. The increased capacity of the treatment plant has permitted the milling of lower-grade ore at reduced costs. Average revenue, therefore, fell to 29s. 9d. against 31s. 1d.,

but costs were reduced from 20s. 8d. to 19s. 2d. per ton. Although the profit per ton was lower at 10s. 7d., total operating surplus showed a modest increase as set out below:—

Year to	Working Profit	Dividends Amount	%	Carried Forward	Ore Reserves Quantity Tons	Value Dwt.
June, 1934...	606,550	232,700	25	151,950	4,186,100	4.7
June, 1935...	615,220	255,970	27½	132,820	5,142,300	4.7
June, 1936...	626,910	290,880	31½	157,610	5,514,300	4.6

The ore developed during the past year, at 1,448,400 tons, was 202,510 tons lower than in the previous year, but it substantially exceeded the quantity of material taken out of the mine. Hence the increase in the available ore reserves which represent about four years' supply. The report of the consulting engineer suggests that development work during the current year may prove somewhat less fruitful. During recent months earnings have displayed a slight reduction, which may be remedied when the tube mills now in course of erection come into use. On the basis of last year's dividend, the shares yield nearly 7 per cent.

* * *

Other Company Results.—An analysis of the reports of 33 other companies appears on page 585. Though a large debit balance is still carried forward, the profits of Bengal Iron (whose scheme is discussed on page 571) show a distinct improvement from £5,581 to £49,874. *Carrier Engineering*, who make air-conditioning plants, have earned £49,925 for the first year as a public company and pay 50 per cent. Although strictly comparable accounts are not available, this appears to be a good improvement. A four months' stoppage at the Barnboro' Pits is the main cause for the decline in net profits of *Manvers Main Collieries* from £103,784 to £65,898. *Bajoe Kidol Rubber* has earned only £3,359, against £12,913, but good progress is reported regarding the elimination of uneconomic coffee. In contrast *Tandjong Rubber* has declared a doubled dividend and more than doubled profits. Among British concerns, *Prices Tailors* report a very substantial improvement in profits, from £302,500 to £399,970. Little change is indicated in the *J. Hepworth* accounts, although profits at £83,094 are some £3,300 higher. *Kirklees* are paying a 4 per cent. dividend, against 3 per cent., having earned £27,768 against £25,021. Although *Allied Industrial Services* report expanding business, the apparent increase in profits from £58,442 to £93,088 is largely attributable to the surrender of rights to commission by the managing directors. *General Theatre Corporation* reports improved results, permitting a distribution of 12 per cent. on the preferred ordinary shares. The accounts show the new capital structure after giving effect to the reorganisation scheme. Further expansion by *Serck Radiators* is indicated by the considerable increase in profits from £27,819 to £39,859. In a preliminary announcement, *Atkinson-Oates*, the South African motor dealers, report profits of £388,154, against £323,063, and are paying 60 per cent. as compared with 46½ per cent., the general reserve allocation being halved. *Trinidad Leaseholds* are paying the substantially increased dividend of 25 per cent., against 17½ per cent., and are to make a new issue on bonus terms. *Debenhams'* full report shows a profit of £706,446, against £654,928.

Indians were a little firmer. The bond market has been relatively quiet, with an improvement in German and in French issues on M. Blum's speech, and a weakening in Far Eastern bonds on the latest Japanese intervention in China. South American issues were firm, and Brazilians attracted considerable support.

Home rails have done very well, particularly "Brums," although Great Western suffered from profit-taking. The traffics were moderately good, but most prices were lower in mid-week. Mersey were bought on rumours of purchase by L.M.S. Argentine issues were prominent in the foreign rails market on expectations that the Co-ordination Bill will be passed, and on hopes of a good crop.

The industrial share market opened the account well, but tailed off toward mid-week in many sections, the slackening in interest being attributed to the troubles of the franc, and to a slight extent to the weakening on Wall Street. The iron and steel section was not very bright despite good trade activity, but several shares were bought in anticipation of favourable reports at forthcoming meetings. Coal shares were much better this week, in the hope of benefits to come from centralised selling schemes, and Hilton Main were prominent. Standard gained in the motor section on dividend hopes, but were subjected later to profit-taking, and the whole section became rather irregular. Similar conditions, of firmness giving way to irregularity, prevailed in the aircraft section. Electrical equipment issues attracted new support, particularly Crompton Parkinson. There were no outstanding features in the stores and textile groups. Shipping shares became more attractive on encouraging trading reports, and continued to improve through the week. Tobacco and Brewery issues held their ground.

There were several good features in the miscellaneous industrial market when the week opened, but later the section became irregular and most prices were lower. *Carrier Engineering* were an exception, along with other miscellaneous engineering securities. Triplex were firm on the promising outlook for the safety-glass industry.

Business in the oil shares market became active on the news of Trinidad Leasehold's dividend and the new capital issue to shareholders, and prices generally advanced. Anglo-Ecuadorian were a good feature on hopes of an increased dividend. American news helped the market, and continental support encouraged prices further. In mid-week activity died down, and prices became irregular. Royal Dutch were an exception, and continued to improve. Business in the tea shares market was as dull as ever, but there were slight signs of a very modest revival of interest in the rubber shares market, with no particular justification.

The Kaffir market has been as quiet this week as last, and such gains as were recorded by mid-week were being lost as fears of franc devaluation once more became prevalent. At the start the principal item of interest was the publication of particulars of the new issue by West Witwatersrand, and later the new Anglo-American Investment Trust was favoured. Most prices were on the down grade by mid-week. The West African department was very idle, but the tone was firm, until mid-week when prices were generally marked down. Rhodesian copper issues have continued to attract attention on the sound position of the commodity, while tin shares were irregular on the uncertain outlook for the restriction scheme.

Business on the Paris Bourse has been good, and fears of the currency devaluation did not affect price movements. The Berlin Bourse found more uncertain conditions, but there were several bright spots, particularly in banking and industrial issues. Good gains were registered by a number of issues at Amsterdam, particularly Royal Dutch.

THE WEEK IN THE MARKETS THE STOCK EXCHANGE

TICKET OCTOBER 6 | ACCOUNT OCTOBER 8

The new account opened well in the stock markets, with domestic news exerting much more influence than foreign political developments, although conditions tended to become poorer in mid-week. The gilt-edged market was strong at the opening, but the new L.C.C. issue provoked a little selling for switching purposes, and renewed expectations of a franc devaluation kept the market rather unsettled. Old Consols and Local Loans were weaker, but Funding issues held their ground. A similar situation developed in Home Corporation issues, but the success of the L.C.C. issue induced a recovery. Australians were still in favour among Dominion issues and

LONDON ACTIVE SECURITY PRICES AND YIELDS

In calculating yields on fixed interest stocks quoted below allowance is made for interest accrued since the last date of payment, less income tax at the standard rate. Where stocks are definitely redeemable at a certain date the yield includes any profit or loss on redemption; where stocks are redeemable at or before a certain date the final date of redemption is taken when the stock stands at a discount and the earliest date when the quotation is above par. The return on ordinary stocks and shares is calculated by reference to the latest dividends, account being taken of any enhancement or reduction of interim dividends. Allowance is made for accrued dividends in calculating the yield on "cum. div." shares.

COMPANY MEETINGS, &c.

SECOND ALLIANCE TRUST COMPANY, LIMITED

SATISFACTORY REVENUE AND CAPITAL POSITIONS

MR JAMES PRAIN'S REVIEW

The ordinary general meeting of the Second Alliance Trust Company, Limited, was held, on the 18th instant, in the company's office, Meadow House, 64 Reform Street, Dundee.

The chair was taken by Mr James Prain, and after formal evidence of the proper calling of the meeting had been submitted, the Secretary read the auditors' report to the shareholders.

The Chairman, in moving the adoption of the annual report, said:—

I have now to submit for your approval the directors' report and accounts for the year which ended on July 31st last. They have been in your hands in printed form for the statutory period, and I have no doubt you have familiarised yourselves with their details. They reflect in a satisfactory manner the general improvement in investment conditions and show about 26½ per cent. earned on the ordinary stock against 22½ per cent. for the previous year. We have, however, thought it wise simply to repeat last year's dividend and devote the surplus to strengthening the position of the company.

There are several reasons for taking this conservative course. One is, that a portion of the increase in revenue must be regarded as non-recurring. It has been received in the form of arrears on fixed interest investments which have been out of the dividend list for some years. We find that our revenue has benefited to the extent of about £10,500 under this head. I am not suggesting that future years may not bring their own benefits, but that depends on a continuance of the present prosperous conditions, and of that no one can be sure. It must not be forgotten that while this is an old-established company it was not until after the close of the war almost entirely a mortgage company, and that it was only transformed and developed into a bond and stock investment company in those post-war years whose difficulties are reflected in the troubles which have affected and still affect so many investment lists. We are satisfied that the correct policy is one of prudent reservation from revenue, which will enable us to meet with equanimity whatever the future may have in store.

APPRECIATION OF INVESTMENTS

However, both the revenue and the capital positions are at present satisfactory, and we were glad once again to report to you that a valuation of the company's bond and stock investments showed their market value to exceed the amount at which they stand in the balance sheet. Last year we had to record a depreciation, though a small one. This year the valuation shows a substantial appreciation—a very healthy symptom—although, as we have told you in the past, we do not place too much importance on these market appreciations, which are here to-day and may be gone to-morrow.

The further prosperity of investment trusts is bound up with a continuation of present conditions, and it is reassuring to note the atmosphere of confidence which prevails among those who direct the business activities of the country. Such confidence, drawn as it is from long practical experience, is often based on an intuitive insight which is frequently a better guide than the reasoning of economists, and indeed it often itself produces results which provide its own justification. It was given a good deal of confirmation and reasoned expression in a notable speech by the President of the Board of Trade in July. He based a definite view as to the probable continuance of business recovery on a number of factors—the confidence established in the nation's financial position, the protection set up for the home market—"adequate without removing the incentive to productive efficiency," the development of overseas markets assisted by bilateral agreements with Empire and foreign countries, the fertilising influence of cheap money and so on. Certainly the published figures continue to justify his view.

EMPLOYMENT RECORD

Perhaps the best of these from every point of view is that of the numbers in employment. The August figure was 10,961,000, or 66,000 more than the July figure, which itself was a high record for this country. When we consider that employment has

had to contend with the displacement of labour by the growing mechanisation of industry, this figure represents an achievement which is as surprising as it is gratifying.

Quite apart from the growth in employment, the increase in wage rates which certain industries have been able to bear are estimated to produce half a million pounds a week. In turn, this distribution of wages to many more people, and in some cases at higher rates, has had an excellent effect on retail trade, statistics of which show sales from February to July this year more than 6 per cent. higher as compared with the same period last year.

The growth of deposits at the banks also suggests that the duty of saving has not been neglected and that incidentally we shall continue to have plentiful funds for investment in industry. The actual rise in the totals of "plans approved," particularly under the heading of buildings other than houses, the probability of growth in slum replacement schemes, the great Government expenditures in prospect, all point to a continuance of business activity.

BRITAIN'S INCREASED SHARE IN WORLD TRADE

The difficulties in the way of international trade are well known, but Britain appears to be getting more than her share of any increase, for our total exports in July last were 1½ per cent. greater than in July, 1935. The August figures do not present such a remarkable increase, but reflect the same tendency. Of course, there is another side to the picture—the serious uncertainties of the political outlook abroad, the fact that since Mr Runciman spoke the Chancellor has flatly told us that a Budget deficit is already certain, and so on. We must always remember how quickly the outlook may change, but if it is right to make provision for such changes, the facts I have mentioned on the whole permit one to end this short reference to general conditions in his country on a note of hope.

CONDITIONS IN UNITED STATES

In the United States, where 18.5 per cent. of our funds are invested, an atmosphere of confidence also prevails. There are three main factors—the industrial position, the position of the national finances, and the uncertainties of the forthcoming Presidential election. The last we need not trouble to discuss. As to the first, all appears to be well. All the indices point to continued prosperity. Everything from cigarettes to car loadings is going up, the all-important capital goods indicators—constructional contracts, machine tools, etc., are said to be no less than 50 per cent. better than a year ago.

Railroad and Utility Companies are being forced to extend and equip. Everything is set fair. As regards the remaining factor—the position of the national finances, one hesitates to speak. The enormous budget deficit would appear to be a menace, but the general view appears to be that the advancing wave of American prosperity will supply a yield from taxation sufficient to meet the situation with the help of easy money and that control of the banks which enables the Federal Government to solve all normal problems of financing. At any rate, even the pessimists agree that there is no prospect of trouble for twelve months ahead, and in the economic sphere it is probably not wise in any event to look further ahead.

DISTRIBUTION OF INVESTED FUNDS

The distribution of our invested funds, geographically and otherwise, is, I think, satisfactory. Over 76 per cent. is invested in the British Empire and the United States, while as regards the nature of the securities about 62 per cent. is in fixed interest bearing investments and 38 per cent. in ordinary stocks. The latter percentage enables us to participate substantially in the prosperity of which I have spoken, and at least a portion of the yield from many of our leading ordinary stocks is *de facto* more secure than that from many fixed interest investments, and from a capital point of view these first-class equities have a high degree of marketability.

GOVERNMENT RETURNS, &c.

NATIONAL ACCOUNTS

The total ordinary revenue for the week ended September 19, 1936, amounted to £13,192,500, against ordinary expenditure of £8,579,000. After allowing for an increase in Exchequer Balances of £158,238, the operations for the week, as shown below, decreased the gross National Debt by £4,230,000 to approximately £7,983 millions.†

(000's omitted)	
Treasury Bills	+ 3,485
Public Department Advances	— 7,400
National Savings Certificates	— 100
Road Fund	— 195
	+ 3,485
	— 7,995

† Including £375 millions on Account of Exchange Equalisation Fund and Borrowing for Statutory Sinking Fund.

A complete analysis of the approximate position of the National Debt at June 30, 1936, appeared in the *Economist* of July 4, 1936.

1936 — OUR CENTENARY YEAR

"The best pledge of the future
is from the past"

THE
LIVERPOOL
AND
LONDON
AND
GLOBE
INSURANCE CO., LTD.

Head Office: 1 Dale Street, Liverpool, 2 | London: (Chief Office): 1 Cornhill, E.C.3

To conclude, your directors feel that by prudent reservation from revenue and by a wide spread of the company's investments, both geographically and otherwise, we are following the sound rules of trust company management which have placed this company in its present strong position and will work for the eventual benefit of yourselves as its shareholders.

I shall not detain you further, but with once again a hearty acknowledgment of the valuable services of our staff, I shall conclude by moving that the directors' report and accounts for the year ended July 31, 1936, be adopted and approved, and that the final dividends be declared at the rates therein recommended on £700,000 preference stock at the preferential rate of 4½ per cent. per annum, and on £350,000 ordinary stock at the rate of 18 per cent. per annum, all subject to income tax.

The report and accounts were adopted, and resolutions declaring dividends, re-electing the retiring director, and appointing auditors were unanimously passed.

INITIAL SERVICES, LIMITED

CONTINUED EXPANSION OF BUSINESS

The eighth ordinary general meeting of Initial Services, Limited, was held, on the 23rd instant, at Winchester House, London.

Mr W. J. Chinneck, who presided in the absence abroad of the chairman and managing director, Mr A. P. Bigelow, said that the trading profit, which included dividends declared by subsidiary companies, was approximately £7,500 greater than that of the previous year, being £246,227 as against £238,881. The net profit showed an increase of £7,000, being £245,476, compared with £238,388 in 1935.

The balance brought forward was £19,056, to which must be added the net profit for the year, amounting to £245,476, making a total of £264,532. From that total they deducted the cumulative preference dividend for the year to June 30, 1936, £32,000, and a sum of £37,500 in respect of an interim dividend of 5d. per share on the 1,800,000 ordinary shares of 5s. each, which had been transferred to taxation reserve account, and £3,769 had been written off in respect of the expenses of increasing and issuing the new capital. Those deductions totalled £115,421 and left a surplus of £149,111. They proposed to transfer £50,000 to general reserve, increasing that account to £100,000, and recommended that a final dividend of 10d. per share, less tax, be paid on the 2,700,000 ordinary shares of 5s. each. As the ordinary capital ranking for that dividend was three times the amount on which the final dividend of 1s. 8d. per share was paid last year, and the current rate of income tax had been increased from 4s. 6d. to 4s. 9d. in the £, that final dividend absorbed £85,781, as against £58,125 last year. They would carry forward a balance of £13,330, as against £19,056 brought in.

There had been considerable expansion in their business during the past year and they hoped that the aggregate profits next year would show some benefit as a result.

The Chairman concluded by explaining at some length the board's share proposals for the staff.

The report and accounts were unanimously adopted, and a resolution approving the board's share proposals was passed.

POSITION OF THE FLOATING DEBT

REPORTS AND NOTICES

Mr R. J. Hall has been appointed a director of Salt Union, Ltd.
 The Hon A. Morton Weir has resigned from the board of British Continental Airways.
 Mr Walter Allen and Mr Evan Phillips have retired from the board of the British Oak Insurance Company, and Mr A. F. Forbes, Mr Wilfred D. Vernon and Mr Arthur Whittaker have been appointed directors.

MISCELLANEOUS

THE ANGLO-SIAM CORPORATION, LTD.—The accounts for year ended March 31, 1936, show a net profit of £22,528 for the year ended March 31, 1936. After crediting £44,317 brought forward from the previous year the balance at the

MANVERS MAIN COLLIERIES, LTD.—Profit £67,898, after allowing £29,236 for depreciation for year to June 30, 1936. Previous profit £103,784 after allowing £26,992 for depreciation. Transfer to reserve £25,000, and a special "Jubilee" allocation of £2,000 for aged employees' homes. Ordinary share dividend 4½ per cent. Carry forward £30,080.

Sales of tin on the London Metal Exchange: 300 tons on Monday against 300 tons last week; 225 tons on Tuesday, against 315 tons last week; 500 tons on Wednesday, against 205 tons last week. The New York quotation on Wednesday was 44.95 cents per lb. against 44.50 cents a week ago and 42.50 cents a month ago. Wednesday's official closing quotation in London for standard cash was £192 5s. to £192 15s. per ton compared with £194 5s. to £194 15s. a week ago. Stocks of tin in London and Liverpool at the end of last week totalled 631 tons, a decrease of 74 tons on the week.

Calcutta goods have shown little change for some time past, with only slight price fluctuations from day to day.

GRAIN MARKETS

WHEAT.—The upward trend of quotations continued during the past week, when Liverpool futures advanced to the highest point since June, 1930. Little change in the fundamental position of the market has occurred, but reports from the growing areas in Argentina and Australia State that the need for moisture is now becoming urgent.

On Wednesday last, "September" futures were quoted in Chicago at 116½ cents per bushel, against 114½ cents the week before and 111½ cents a month ago. Quotations in London, Wednesday: No. 1 Northern Manitoba, ex ship, 42s. 3d. per 496 lbs., against 40s. 6d. a week ago; No. 2 Northern Manitoba, ex ship, 41s. 9d., against 40s. a week ago. According to the *Corn Trade News*, total shipments of wheat and flour last week totalled 1,528,000 quarters, against 1,500,000 in the previous week and 1,259,000 quarters in the corresponding week a year ago.

FLOUR.—In sympathy with the advance in wheat, flour prices have been marked up this week. Wednesday's London quotations (excluding quota payments) were: Straight run, delivered Home Counties, 35s. per 280 lbs., against 34s. a week ago; delivered inner London, 34s. 6d., as compared with 33s. 6d. a week ago. Manitoba patents, ex store, 32s. to 33s. 6d., against 30s. 6d. to 32s. a week ago. Australian, ex store, 29s. to 29s. 6d., against 28s. to 28s. 6d. a week ago.

BARLEY.—Imported feeding barley is a shade higher on the week. Meanwhile, there is a good demand for English malting descriptions at rising prices. "October" futures were quoted at 65 cents per bushel in Winnipeg on Wednesday, against 58½ cents a week ago. Quotations per 448 lbs. in London on Wednesday were: "English feed" at farm, nominal, as against a nominal quotation a week ago; "English malting" (new), at farm, 32s. to 50s., against 32s. to 50s. last week; Californian (new), ex ship, 45s. to 56s., against 44s. to 54s. last week; Chilean, brewing, ex ship, 34s. to 38s., against 34s. to 38s. a week ago.

OATS.—On Wednesday, "September" futures were quoted at 42½ cents a bushel in Chicago, against 42 cents a week ago and 42½ cents last month. Quotations in London, Wednesday: "English Black" (new), at farm, 19s. to 20s. per 336 lbs., against 18s. to 19s. a week ago; "English White" (new), at farm, 19s. to 20s., against 18s. to 19s. a week earlier; mixed Canadian feed (Vancouver), landed, 20s. 6d. per 320 lbs., compared with 19s. 9d. last week.

MAIZE.—Although business has been somewhat less active, the market has had a steady tone. "September" futures were quoted on Wednesday at 110½ cents per bushel in Chicago, against 114½ cents a week ago and 112½ cents last month. Quotations in London, Wednesday: "Plate," landed, 25s. 3d. per 480 lbs., compared with 25s. 3d. a week ago; "Plate," ex ship, 24s. 3d., as against 24s. 3d. to 24s. 6d. a week ago; "Plate," "September," 23s. 9d., as against 23s. 9d. a week ago; yellow maize meal, ex wharf, was quoted at 6½ 10s. to 6½ 12s. 6d. per ton, as against 6½ 10s. to 6½ 12s. 6d. last week.

SALES AND PRICES OF BRITISH CEREALS.—The following table gives the estimated sale of home-grown wheat during the harvest years 1932-33 to 1935-36:—

	1932-1933	1933-1934	1934-1935	1935-1936
Estimated sales of home-grown wheat				
1 week to September 19	411,784	599,800	589,614	238,903
3 weeks to September 19	1,114,246	1,605,420	1,445,601	748,968
Average price of English wheat per cwt.	s. d. 4 9	s. d. 5 1	s. d. 5 0	s. d. 7 4

The following is a statement showing the quantities sold and the average price of British cereals in the past two weeks, and for the corresponding week in each of the years from 1932 to 1935:—

Week ended	QUANTITIES SOLD			AVERAGE PRICE PER CWT.		
	Wheat	Barley	Oats	Wheat	Barley	Oats
September 17, 1932...	Cwts. 133,328	Cwts. 137,074	Cwts. 42,175	s. d. 5 8	s. d. 9 2	s. d. 6 6
September 18, 1933...	411,784	402,053	53,829	4 9	10 8	6 4
September 22, 1934...	599,800	294,021	76,372	5 1	10 0	6 8
September 21, 1935...	589,614	531,699	69,068	5 0	10 4	6 2
September 12, 1936...	280,121	804,231	42,612	7 2	10 11	6 6
September 19, 1936...	238,903	352,749	39,978	7 4	10 4	6 7

AMERICAN WHEAT MARKETS.—The following table shows wheat quotations for selected weeks in 1934-36:—

NEAREST FUTURE	Jan. 3, 1934	Jan. 2, 1935	Sept. 25, 1935	Dec. 31, 1935	Sept. 16, 1936	Sept. 23, 1936
Winnipeg (No. 1, Manitoba)	65½	82½	91½	84½	106	109½
—Cents per 60 lb.						
Chicago (No. 2, Winter)	84½	98½	98½	75½	114½	116½
—Cents per 60 lb.						

The visible supply of wheat in Canada amounts to 80,131,000 bushels, against 76,244,000 bushels last week, and 131,019,000 bushels in the corresponding week last year.

OTHER FOODS

BACON.—The market has been steady to firm, with prices showing little alteration. The official quotations (per cwt. for No. 1 Sizable) which formed the basis for dealings on the London Provision Exchange this week were: English, 92s. to 97s.; Canadian, 87s.; Danish, 100s., as against 97s., 87s. and 100s. last week. Arrivals in London last week included Danish, 11,717 bales; Canadian, 4,487; Dutch, 2,228; Lithuanian, 1,755; and Polish, 2,800, as against 12,234, 4,458, 2,279, 1,779 and 2,667 bales, respectively, in the previous week.

BUTTER.—Prices are generally easier this week. Quotations (per cwt.) on the London Provision Exchange on Wednesday were: New Zealand, finest salted, 98s.; Australian, choicest salted, 98s.; Danish, 122s., compared with 108s., 108s. and 128s., respectively, a week ago.

CHEESE.—The market has ruled firm for English and steady for other descriptions. Quotations (per cwt.) on the London Provision Exchange on Wednesday were as follows: English, finest farmers, 78s. to 80s.;

Canadian, finest coloured, 69s. to 70s.; and New Zealand, finest coloured, 65s. to 66s. 6d., against 78s. to 80s., 69s. to 70s. and 66s., respectively, a week ago.

COCOA.—The spot quotation in New York on Wednesday was 7½ cents per lb., as against 7½ cents per lb. last week. In London, on Wednesday last, good fermented new crop, "November-January," was quoted 33s. 3d. per 250 kilos, c.i.f. Continent, against 34s. a week ago. Last week's movements of cocoa in London were as follows: Landed, 6,937 bags; delivered for home consumption, 4,916 bags; exported, 314 bags; stocks, 159,679 bags, against 142,291 bags a year ago.

COFFEE.—The London spot market ruled quietly steady. In New York, rather dull conditions have obtained and quotations are a shade easier. On Wednesday, Rio No. 7 (cash) was quoted at 7½ cents per lb. in New York, as compared with 8 cents per lb. last week and 8 cents per lb. a month ago. Movements of coffee in London last week were as follows: Brazilian, landed, 148 cwt.; delivered for home consumption, 21 cwt.; exports, 53 cwt.; stocks, 10,031 cwt., against 13,669 a year ago. Central and South American, landed, 592 cwt.; delivered for home consumption, 1,939 cwt.; exported, 1,974 cwt.; stocks, 81,353 cwt., against 123,898 last year. Other kinds landed, 99 cwt.; delivered for home consumption, 4,089 cwt.; exported, 475 cwt.; stocks, 120,151 cwt., against 141,841 last year.

EGGS.—With a sustained demand, prices for most descriptions of eggs were higher this week. At Smithfield on Wednesday, English (ordinary) packing, Grade I about 15-15½ lb. realised 15s. 9d. to 16s. 3d. per 120, as against 15s. 9d. to 16s. 3d. last week, while Danish (15½ lb.) made 13s. 3d. to 13s. 9d. per 120, as against 12s. to 12s. 6d. last week.

FRUIT.—The *Fruitgrower* reports that business at Covent Garden is gradually improving. The apple trade is fair to moderate; good dessert fruit is in better demand, but quantities of inferior produce have still to be cleared. Good supplies of pears from home sources encounter a fairly steady inquiry. The rush of plums has now subsided and the market presents a steadier appearance. Hothouse grapes are moving rather better, but prices for Continental remain moderate owing to heavy supplies. Peaches are short and dear, while nectarines and English hothouse melons are about finished. Good supplies of Dutch and Spanish melons are, however, still on the market. Oranges are rather easier on heavier arrivals, but lemons are still scarce and dear. With an improved demand, best quality grape fruit have advanced in price.

MEAT.—Demand for mutton, lamb, and pork at Smithfield Market showed some improvement this week, but fresh beef and veal were in limited request. On Wednesday last, Argentine chilled hindquarters were quoted at 4s. to 4s. 4d. per 8 lbs., as compared with 3s. 10d. to 4s. 4d. a week ago. New Zealand frozen mutton was 3s. to 3s. 10d. per 8 lbs., against 3s. to 3s. 10d. a week ago. According to the Smithfield Market official report, supplies during last week amounted to 9,650 tons, an increase of 585 tons on the corresponding week last year. Beef and veal accounted for 4,930 tons, mutton and lamb 2,882 tons, and pork and bacon 1,111 tons, as compared with 4,640, 2,823 and 1,074 tons, respectively, in the same week of 1935.

PEPPER.—Wednesday's spot price for black Lampung (in bond) was 2½d. per lb., against 2½d. a week ago. Movements of pepper in London during the past week were as follows: Black, landed, 10 tons; delivered, nil; stocks, 1,782 tons, against 1,580 tons a year ago. White, landed, 16 tons; delivered, 42 tons; stocks, 12,041 tons, against 17,114 tons a year ago.

RICE.—The spot price of Burma No. 2, cleaned, new crop, was 9s. 3d. per cwt., ex warehouse, on Wednesday, as compared with 9s. 3d. per cwt. a week ago. "September-October" in singles to Continent and U.K., was quoted at 8s. 1½d. per cwt., against 8s. 3d. last week. Movements in London during the past week were as follows: Landed, 15 tons; delivered, 287 tons; stocks, 1,867 tons, against 9,004 tons a year ago.

SUGAR.—The markets have displayed an easier tendency this week. The spot price in New York on Wednesday was 3-40 cents per lb., as compared with 3-60 cents per lb. last week and 3-70 cents per lb. a month ago. Wednesday's sales of raw sugar in London included December delivery at from 4s. 1½d. to 4s. 1½d., against 4s. 4½d. a week ago. The movements of raw sugar at public warehouses in London and Liverpool last week were as follows: Imports, 17,712 tons, against 13,183 tons last week and 15,457 tons in the same week of last year; deliveries, 19,446 tons, against 16,305 tons last week and 14,148 tons last year; stocks, 105,183 tons, against 106,917 tons last week and 150,562 tons last year.

TEA.—The following table shows the average prices (compiled by the Tea Brokers' Association) of tea sold in Mincing Lane on Garden Account in recent weeks:—

Week ending	Northern India	Southern India	Ceylon	Java	Sumatra	Africa	Total
Sept. 19, 1935	d. 17-52	d. 11-92	d. 14-54	d. 10-77	d. 9-79	d. 10-82	d. 15-31
Aug. 13, 1936	12-67	11-86	12-86	10-23	9-76	11-20	12-47
Aug. 20, " "	14-04	11-90	13-03	10-47	9-91	11-34	13-07
Aug. 27, " "	14-43	11-99	13-21	10-73	9-88	11-36	13-41
Sept. 3, " "	15-14	12-19	13-39	10-88	10-19	11-78	13-86
Sept. 10, " "	14-82	12-13	13-31	11-02	10-06	11-28	13-88
Sept. 17, " "	14-29	12-13	13-32	11-03	9-96	11-53	13-56

The quantities catalogued for the public auctions in Mincing Lane this week comprised 52,982 packages of Indian and 24,392 packages of Ceylon tea. At the Indian auctions on Monday and Wednesday, the tone of the market was quieter and quotations a shade easier. The market in Ceylon descriptions on Tuesday showed some irregularity.

VEGETABLES.—Tomatoes, which remained at a low level throughout last week, have now improved in price, states *The Fruitgrower's* Covent Garden report. Cucumbers remain a moderate trade, with no improvement in quotations. Beans and peas are in shorter supply, and marrows are practically finished. Sprouts are in demand, while carrots and turnips are doing better. Onions are easy. Meanwhile, supplies of potatoes at London markets have become more plentiful, and prices are accordingly a shade easier. At the Borough Market on Tuesday, best King Edward realised from 6s. to 7s. per cwt., against 6s. 6d. to 7s. a week earlier.

MISCELLANEOUS COMMODITIES

VEGETABLE OILS AND OILSEEDS.—Business has been quiet and prices have shown a declining tendency. Linseed oil is again about 5s. per ton lower on the week. Demand is confined to near positions, and is about normal. There is no disposition to anticipate requirements in view

of the continued optimism regarding future supplies of seed. Unsold balances available for export are substantial and, considering the present rate of consumption, they are regarded as sufficient until the new Plate crop is harvested. With an increased area sown under favourable conditions, Argentina's crop is expected to yield more than this season, though this is largely contingent upon good weather during the next two months and more, when much may happen to upset market calculations. World shipments so far this year amount to 1,280,000 tons, or 225,000 tons less than a year ago. High prices and bad economic conditions in Europe have restricted the demand for both oilcake and oil, and the use of substitutes (such as perilla oil in the United States) also has had an effect in reducing consumption of linseed oil. The exportable balance in Argentina and India is estimated at 315,000 tons, against 510,000 tons actually shipped in the remainder of last year. The current quotation for raw

linseed oil for October-December delivery ex Hull is around £25 5s. per ton, naked. Cottonseed and likewise cotton oil have eased further. Crude Egyptian oil ex Hull is now quoted at £28 and refined at £30 10s., without attracting buyers.

RUBBER.—The market in rubber was quiet at unchanged prices. The spot price in New York on Wednesday was 16½ cents per lb., compared with 16½ cents per lb. a week ago and 16½ cents a month ago. Wednesday's official buyers' price for standard ribbed smoked sheet on the spot in London was 7½d. per lb., as against 7½d. on the corresponding day for last week. In forward positions, business has been done at 7½d. for "November" shipment, as against 7½d. for "October-December" a week ago. Stocks in London and Liverpool at the end of last week totalled 104,327 tons, against 106,279 tons a week earlier. A year ago stocks amounted to 177,753 tons.

THE
Frankfurter Zeitung

Founded in 1856
*The newspaper for home
and foreign news*

The Frankfurter Zeitung has a wide Home circulation and in addition is read throughout the world for its up-to-date and reliable survey of important economic and political events in Germany and all other countries.

Surveys are made by its own correspondents in all the principal capitals. The Frankfurter Zeitung considers the English point of view on various subjects. There is therefore an ever-growing demand in England for the Frankfurter Zeitung and its various supplements.

A SELF-BINDER

FOR

The Economist

Week by week you keep your copies of "The Economist," and ultimately you either file them or bind them. Doubtless you are accustomed to the annoyance which attaches to the ordinary binder—the difficulty of reading half the left-hand page and the unwieldiness of the device generally.

We are able to offer our readers a binder which overcomes these irksome difficulties and is, in our opinion, the most efficient contrivance for the purpose we have yet seen.

It holds three months' issues and index, it has no wires, clips or metal contrivances, and each issue can be bound up in an instant in such a way that it can be read as easily as a well-bound book.

(IN FULL CLOTH, LETTERED ON SPINE AND FRONT)

I.—INSURANCE AND THE PUBLIC

THE FUTURE OF INSURANCE

A DEPARTMENTAL Committee of the Board of Trade is at present discussing the subject of compulsory insurance, and the terms of reference will probably prove wide enough to produce a survey of very great interest. Implicit in the problem of compulsory insurance are the major problems of solvency and security, of contractual freedom, and of the relations between insurance interests and the State both at home and abroad; and if the witnesses who give the evidence and the members of the Committee who ponder it rise to the height of their opportunity, the report when it is published will deserve the closest study of all who are connected with the industry. If it has the effect of stimulating their imagination and bringing home to them the changes which (unnoticed, perhaps, by the majority) are coming over their business, it should, what-ever it does for His Majesty's Government, do a world of good to the insurers. The contrast between the Clauson Report published nine years ago and the report of this Committee when it sees the light may be sharp enough to bring out unmistakably the fact that insurance is passing silently, almost unconsciously, through a time of revolution.

Perhaps the most astonishing fact in the history of insurance is that the pioneer who first accepted a burglary risk is alive to-day and is not yet an octogenarian. Let us, in the light of that fact, look back sixty years and remind ourselves of what insurance meant to the men of the eighteen-seventies. It meant life. It meant fire. It meant marine. It meant little or nothing else. To-day it still means life and fire and marine, but it means, too, unemployment, sickness and personal accident, public liability, work-

men's compensation, motor cars, storm and tempest, earthquake, aircraft, riots and civil commotion, credit and many other forms of enterprise which have one thing in common—that they reflect the growing complexity of our civilisation. The old engine is pulling a much heavier load, and if it is doing (as it undoubtedly is) a far greater service to the community than ever before, it is doing it under watchful and critical eyes and in such close co-operation with the State itself as our fathers never dreamt of. Insurance to-day is the greatest of all the social services, and it has to face both the responsibilities and the risks that go with the title.

THE STATE INTERVENES

It was in 1913, when Mr Lloyd George introduced his scheme of National Health Insurance, that insurance, so far at least as this country is concerned, first became the handmaid of social reform; and from that year onwards the politician anxious to bring greater security into the lives of the less prosperous classes adopted it not only as his ally, but as his servant. Those whose memories go back to that epoch, now so strange and so unreal, will recollect the fierce denunciations of the employers who would not "lick stamps"; and if their fury seems at this distance of time a trifle ridiculous, it must nevertheless be admitted that they had divined a new principle which hitherto had never touched insurance, but was to touch it often enough thereafter—the principle of compulsion. Until the National Health Act was passed, the State had never said to any body "You must insure," but had left it to every man's

judgment whether to run his own risk or transfer it to the shoulders of someone else. The opposition which the Act provoked was an instinctive reaction to this unwelcome pressure. On the field of insurance it was the first and the most spirited of a series of battles between the old and the new.

From health the legislators moved on to unemployment, and again the principle of compulsion won—not, this time, compulsion to insure with a company or an underwriter, but compulsion to insure with the State. And when Parliament introduced that measure it was, in effect, saying that insurance which had hitherto been carried on only by private enterprise would in case of need, when the risks were too heavy or too catastrophic to be borne by a company, be managed and controlled by a State Department. It threw out a challenge and declared that insurance, which had become an essential factor in the relations of class with class, would not be limited by the resources of the insurance market, but would be a direct interest and activity of the State machine. Judged by the standards of old-fashioned underwriting, the scheme has had no great success, and in the years before the crisis of 1931 it came within measurable distance of ruining even the British Exchequer; but, as an example of what the State can do with the principle of insurance, its significance is beyond question.

Within the last six years two more compulsory Acts have been passed for the protection of the public, one dealing with the workmen's compensation of coal miners and the other with the third party risk of motorists. Today, subject to certain unimportant exceptions, every employer who hires men to go down a mine must insure his statutory liability to the workmen, and every man who drives a car must insure his common law liability to the other users of the road.

THE NEW PROBLEM

What a distance has been travelled in twenty-four years! As recently as in 1912 John Bull treated insurance as he treated any other contractual relationship. He was as free then to take out a policy or not to take out a policy as he is free to-day to have a cheque book or not to have a cheque book, to live in a house or to live in a flat, to take his holiday at Margate or to take it at Blackpool. In 1936 the choice has gone. He must take out an insurance on the health of his servants and on their continued employment, on the disablement of his miners and on the cracked skulls of his road victims.

It is with the problems of this new conception of insurance as a social service, and in particular with the effects of compulsion, that the present departmental Committee is presumably grappling. Where it is open to a citizen to enter or not to enter into a contract according as his judgment or his fancy dictates, there is no great need for the State to intervene. The law courts must be there to interpret, and there may be legislative protection against gross imposition on one party to the contract by the other

party. But the State's interest in the transaction is slight, and if a man makes a bad bargain the loss may be allowed to rest where it falls. But once the contract is made (part of a great scheme for the prevention and alleviation of poverty; and once it is made compulsory for the individual or the employer to cover himself against certain stated risks, then it is not unnatural that the State, though not itself a party to the contract, should claim the right to a say in fixing its terms and to a stricter control over the solvency of those who accept a premium against the taking of the risk. That is the problem with which this Committee's report will doubtless deal—the problem of how far contractual freedom can be maintained in an industry which is serving the greater social needs of the country and of how the compulsory insured, the third party and the injured workman can be guaranteed a hundred per cent. security against the possible inadequacy of his insurance contracts and the failures of insurance companies, mutual associations and individual underwriters.

SOLVING THE PROBLEM

To the Socialist the solution of the problem is no doubt simplicity itself—nationalisation of insurance. But to that simple plan there is, apart from all the general arguments against State enterprise, one particular objection which applies with overwhelming force to insurance. Great Britain is the centre of the greatest international insurance industry that the world has ever known. In the face of ever increasing difficulties, in spite of ever-rising barriers, the managers of the industry have been able not only to maintain but to extend their foreign connections and add year by year to the invisible exports which they contribute to our foreign trade. In this Supplement there will be found tables of the premium income of the fire and accident departments of our great offices, and the figures are almost staggering in their size and their consistency. What proportion of them is derived from the companies' foreign connections it is not possible to say with accuracy, but it would probably be within the mark if the foreign income of the fire departments were taken at seventy per cent. of the whole. That result has been achieved by the skill and enterprise of the managers of British insurance offices, hampered though they have been by the growth of protective legislation and the curse of economic nationalism.

In such conditions it would be the very midsummer of madness to check the private enterprise of insurance at home and lead the rest of the world to believe that the British insurance industry is not capable of meeting the needs of its own domestic market. The industry, as our figures prove, is stronger to-day than ever before. Apart from the risk of unemployment and the fruits of bad statesmanship, there is, even in our over-complex society, no legitimate risk that it cannot satisfactorily carry, no reasonable service to the community that it cannot adequately perform.

RECENT LIFE ASSURANCE DEVELOPMENTS

During the quarter of a century which marked the reign of King George V, the premium and interest incomes and the accumulated funds of life assurance companies—omitting industrial life assurance—each increased threefold. Although substantial, such increase is really not very impressive after allowance for the lower present-day value of money, the higher average standard of living, and the increase in the population. It is doubtful if pure life assurance makes any greater appeal to-day than before the War. In this country at least, increased emphasis has been placed on assurances maturing during lifetime, and less stress on adequate provision at death.

Post-war bonuses have been on an unprecedented scale, due mainly to years of high interest earnings, but partly to improved mortality. Future bonus estimates connected, though not necessarily identical, with these declared rates, combined with the substantial income-tax rebate enjoyed by the offices (who are charged tax not on interest receipts as such, but on gross earnings less expenses), have enabled endowment assurances to be presented as excellent investments maturing in the lifetime of the assured. The latter, moreover, has the satisfaction of knowing that if prior death should claim him the sum assured would be payable to his dependents. It is very unlikely that any early reversal

of fashion in favour of straight "death cover" only will take place; nor, perhaps, would there be any special virtue in such a change.

In recent years, however, it has become usual to issue in conjunction with an endowment assurance policy an additional benefit, in the form of an income, not subject to tax, of from 10 per cent. to 15 per cent. of the sum assured. This income begins at the date of death, should that occur within twenty years from the outset; and it is payable until the end of that period. The endowment assurance is payable in the usual way, viz. at the expiry of the endowment term or at previous death. Such a combination of benefits admirably meets the needs of the typical family man. In the event of the premature death of the assured, the income continues until his children have reached an age when they might reasonably be assumed to be at least partially self-supporting; while the sum assured can be utilised according to circumstances, e.g. in the purchase of an annuity for the widow, beginning when the income instalments cease.

INSURING FOR INCOME

With the general adoption by the British offices of this special scheme, there has been growing recognition of the advantages of insuring for a definite amount of income rather than for a capital sum, thus placing on the broad shoulders of the insurance company the burden of investment, even after the occurrence of the event upon which assurance depends. The risks and uncertainties of individual investment are so much greater to-day that this tendency seems likely to develop considerably. In any case the average man has perforce to budget entirely on an income basis, and a lump sum of unaccustomed proportions is apt to assume quite illusory potentialities, both as a source of interest and profit. Thus it is apt to be overlooked that, taking interest at 4 per cent., a capital sum equal to two years' income will earn interest of only 8 per cent. of that income.

The customary stress on capital sums assured may account partly for the lamentably inadequate insurance cover usual in this country. Of the new basis of insuring for income a typical example may be given. A policy can be taken out under which a guaranteed income of £100 per annum for twenty years would be payable, at the same annual premium as would be charged for a capital sum of approximately £1,500. In the case of an endowment assurance maturing at age 60, an income of £100 would be guaranteed for twenty years, either from age 60 or from prior death; while by payment of an additional premium the instalments would be continued after age 80 during the remaining lifetime of the assured. Additional protection could similarly be given to cover the lifetime of the assured's widow, after the cessation of the guaranteed instalments. These guaranteed instalments under existing regulations would be regarded by the Inland Revenue authorities as capital, and so be exempted from income or sur-tax. This capital, and so be of extraordinary value; and it provides an advantage over existing practice in life annuities. As is well known, payments under life annuities are taxed as income in their entirety, though they consist, in varying proportions, of interest plus a partial return of the capital sunk. The inequity of this arrangement may be clearly seen from an example. At about age 65, the cost of a life annuity of £10 per annum may be taken approximately as £100. In the first year about £6 10s. of the annual payment of £10 is really a return of capital; in the second year about £6 15s., and thereafter continually increasing amounts. In the United States the taxation of annuities is on a much fairer basis, and properly allows for the fact that each payment consists partly of capital and partly of interest. In spite of this severe taxation disability, however, the amount sunk in annuities since the War Loan Conversion of 1932 has greatly increased; though, in the meantime, the terms which the offices have been compelled to charge have become much more onerous. The low yield on money and the growing precariousness of individual investment have created this new demand. The same considerations must be held to apply to income in the more or less remote future, so that there is a very strong argument for providing, in advance, by means of a life assurance policy, for tax-free income.

OTHER DEVELOPMENTS

For reasons already mentioned, post-war bonuses have been very high. With lower interest earnings, there is a strong probability of a definite reversion towards pre-war levels. Even so, for endowment assurances at least, where the chief attraction is the amount at maturity, the balance of advantage still lies with a policy participating in profits. And certainly, public demand is as much as ever directed on such policies.

A movement of American, and purely post-war, origin, which is showing continuous development, is the provision of staff pensions by means of group pension policies effected with an assurance company. Only a minority of offices transact this type of business, which requires a special technical and sales organisation. The plan has certain advantages over the older type of private pension fund, which, nevertheless, has its own special merits. The whole problem of provision for retired servants of big companies has acquired a new orientation since pre-war times, and there seems plenty of scope for both systems. It is usual for a firm, before inaugurating a staff pension scheme, to examine both methods critically under actuarial guidance before coming to a decision.

Another feature of greatly increased life assurance activity in recent years has been the lending of money, repayable by an endowment assurance, for the purchase of homes. The building society movement has not always looked with favour on this new competition. On the other hand, there are many cases in which a building society works in conjunction with a life office. In that event the building society makes a loan which, instead of being repaid in the usual way by means of monthly repayments of capital and interest, is a fixed amount repayable in one sum by means of an endowment assurance at the end of a given number of years, or on the previous death of the borrower.

GENERAL RESULTS IN 1935

THE multifarious branches of British insurance, each presenting its own special technical problems, may be divided into two broad groups. One group comprises life assurance, where the contracts are for definite amounts; while the other group includes the remaining branches, such as fire, accident and marine insurance, in which the contract indemnifies only against actual losses.

In life assurance the contracts are generally long-dated and subject to uniform annual premiums; the excess of the premiums over current risk requirements, in the earlier years, is necessary for the purpose of supplementing later premiums when the current risk has begun to exceed the annual premiums. On the other hand, the "indemnity" types of insurance are transacted on a short-term basis, generally one year, and each annual premium is calculated to meet only the current annual risk and costs. In practice, however, considerable reserves are held for these classes of insurance, and are of two kinds. First, there is the reserve for outstanding claims and the reserve for the unexpired risk already paid for in the year, generally taken at 40 per cent. of the premium income; and, secondly, there are general reserves arising from undistributed past profits and investment reserves. Thus, while in life assurance in its present form the interest element is fundamental, it is only of importance in the other branches of insurance in the investment of the shareholders' capital and reserves, neither of which forms an essential part of the financial structure.

Something of the magnitude of the insurance industry may be gleaned from the latest official returns to the Board of Trade for the year 1934. At the end of that year the total assets of the insurance companies established in this country amounted to over £1,500 millions contrasted with paid-up capital of £46 millions. While it is not possible to give any exact figure, owing to the varying practice of allocating general and other special reserves, probably the

assets specifically relating to branches other than ordinary and industrial life assurance are somewhat in excess of £250 millions. The premium income in these branches is approximately £125 millions, compared with life assurance, including industrial, premiums of nearly £130 millions.

The experience of British insurance companies in 1935 was, on the whole, very satisfactory. In the fire and miscellaneous branches of insurance, total premium income was slightly greater, but underwriting profits showed considerable expansion over the level in 1934. This improvement in profits was due in large measure to results in the United States, where, in the fire branch, underwriting experience was extremely favourable. In the life branch new business further increased, and annuity consideration money, which has shown so remarkable an increase over the last few years, was fully maintained. No doubt the amount being sunk in the purchases of annuities arises partly from the large sums now falling in under matured endowment assurances.

In the annexed table, which gives the results in respect of all branches of insurance of twenty-two of the most important companies, the figures have been calculated on a uniform basis for all the offices. The reserve for unexpired risk, except in the marine branch, has been taken at 40 per cent. of the premium income of the year, which is the basis used by the majority of offices. It is not possible to use a uniform method of calculating underwriting profits in the case of the marine accounts, and the method of the company concerned has been followed. Special attention is drawn to the headings of each column; the calculations may differ from the published results of individual companies, as is only to be expected when various data are reduced to a comparable basis, and this fact should be borne in mind. In arriving at the trading surplus shown in Column 2 all allocations to investment and other special reserves have been deducted; undoubtedly this will operate

somewhat unfairly in certain cases, but it is impossible from the accounts to distinguish between what may be regarded as an addition to free reserves and what is required by ordinary business prudence. Column 4 indicates the amount of the contribution to the net trading surplus derived from the operations of the life department. Such profits emerge from actuarial valuations, and in the majority of cases these valuations take place only at quinquennial intervals. It may be mentioned that some companies set aside the shareholders' proportion of surplus revealed at a quinquennial valuation, and, in each year of the new quinquennium, credit one-fifth of that surplus to profit and loss. This practice, however, is not universal. Hence the absence of any figure in this column for some companies which transact life business merely means that no valuation was due to be made. The Prudential is in a special position, since the life profits belong entirely to the

"A" shareholders. The table is concerned only with the "B" shareholders, whose interest is confined to the remaining departments and who have no rights to any share in the surplus of the life and annuity department.

DIVIDEND POSITION

As will be seen from the table, 78 per cent. of the total dividends were made out of interest earnings, which, it is very satisfactory to note, are well maintained; excluding the Pearl, whose activities are mainly confined to life assurance, the figure is 83 per cent. By a policy of meeting the cost of a very substantial part of the shareholders' dividend from interest earnings, a considerable portion of the underwriting profits is available to augment the special reserves. In consequence the offices are in a very strong financial position.

II.—LIFE ASSURANCE

LIFE ASSURANCE RESULTS

Last year the life offices enjoyed a period of relatively quiet trading, undisturbed by substantial changes in investment conditions. On the whole, there was probably a small appreciation in their assets. These now stand in the balance sheets at considerably below market values. New business increased, and the average net rate of interest earned on the funds was well maintained. Elsewhere in this Supplement the various aspects of the business are examined in detail. Here, we may refer, as in past years, to the latest returns made by the British life offices to the Board of Trade in respect of their 1934 accounts.

A summary of these returns shows that, exclusive of industrial insurance policies, there were 5,432,000 policies in force at the end of that year, representing sums assured, plus existing bonuses of £1,809,000,000. The total interest income was £35,292,000, and the premium income £77,284,000; while the accumulated funds totalled £868,372,000. The following table is compiled from the same official source:—

Year	Aggregate Net Sums Assured under New Policies (Mill. £)	Increase or Decrease per cent. compared with preceding year
1920	147	+ 11.6
1921	109	- 25.3
1922	106	- 2.8
1923	112	+ 5.7
1924	124	+ 10.7
1925	130	+ 4.8
1926	129	- 0.8
1927	148	+ 14.7
1928	160	+ 8.1
1929	162	+ 1.2
1930	166	+ 2.5
1931	161	- 3.0
1932	164	+ 1.9
1933	183	+ 11.6
1934	208	+ 13.7

NEW BUSINESS

(A) *Life Assurance*.—The table opposite shows the new sums assured, excluding industrial assurances, effected in each of the past two years by a number of representative offices. The Dominion offices are omitted, as the figures of their new business in this country are not made public.

While each of the four groups showed some expansion, it will be noticed that the largest relative increase took place in the industrial-cum-ordinary group. The substantial annual increases in new business during the last few years for this type of office may no doubt be largely attributed to the improvement in employment conditions.

(B) *Annuity Business*.—After several successive years of increased annuity business, last year's total considera-

tion moneys received suggest that new business is now more or less stabilised at the higher level attained. Any

drastic change in the level of interest rates would no doubt have early repercussions on the amount of annuity business. Most companies do not actively seek annuity business, even at the rates now charged, owing to the difficulty of finding profitable investment for the consideration money and to the ingrained fear of annuitants' verbal longevity. There are one or two offices, however, which follow a bolder new business policy and count on securing thereby an average type of annuitant who will not outlive reasonable expectations. Again, some offices have special opportunities of investment, or have opened up new channels of investment; and as interest on the annuity fund is virtually on a gross basis there is a possibility in such cases of securing a welcome contribution to the surplus which is distributable to participating policies.

MORTALITY

Many offices make detailed investigations each year to arrive at the true mortality profit, on the basis of the expected mortality according to the tables used at the periodical valuations. These are generally purely internal arrangements in the offices, and the results are seldom

published. Sometimes, however, an indication is given in the annual reports or the chairman's speeches, by comparing simply the expected and actual claims, without taking into account the reserve values held in respect of each policy, as would be necessary to calculate the true mortality profit.

The amounts paid in death claims by the various offices in 1934 and 1935 suggest, however, in combination with other considerations, that the general mortality experience last year was rather more favourable than in 1934, and that each of the past four years showed an improvement on its predecessor in this respect. The new mortality table, A1924-29, appears to be receiving general acceptance by the offices, as and when the actuarial valuations fall due; and the now obsolete O* table appears doomed to disappear almost entirely from valuation calculations within the next few years.

INTEREST

Of the various elements entering into the conduct of life assurance, and contributing to policyholders' profits, the rate of interest earned on funds is, to-day, the most important. The great popularity of endowment assurances somewhat circumscribes the scope for mortality profit. Income tax is charged on the gross interest earnings less expenses, with the result that the effective rate of tax does not exceed three-quarters of the standard rate. Even so, an average net rate of £4 3s. 10d. per cent. is satisfactory, and, of course, is only possible because a large portion of the funds was invested in years of higher interest yields and has not since been written up to the present level of market values. Actually, the position is even better than this rate would suggest, since the funds exceed the actuarial reserves, in terms of which the rate of interest should most properly be expressed. The average of the rates of interest earned by the companies shown in the following table rose slightly in 1934 from £4 4s. 5d. per cent. to £4 5s. per cent., but it must be remembered that 1934 saw a reduction in the rate of tax. Last year, in the absence of any such fortuitous aid, a fall of only 1s. 2d. is less than might

have been expected, and suggests some movement towards higher yielding types of investment. In considering the following table it should be borne in mind that the rates shown for any two offices are not usually strictly comparable, owing to differences in bookkeeping. Among other things, a good deal depends on the method of valuing the assets.

ENDOWMENT POLICIES WITH HOUSE PURCHASE PRIVILEGES

SOME ADVANTAGES OF ENDOWMENT POLICIES

Issued by the
**WESLEYAN
& GENERAL
ASSURANCE
SOCIETY**

- 1 If you take up a policy at once, you can obtain it at a cheaper rate than you will have to pay in the future. "DO IT NOW."
- 2 You may be insurable now, but not insurable in the future, when an advance for House Purchase would prove of great service to you.
- 3 The Life Assurance comes into force immediately the first premium is paid; the policy is a sound investment even if the privilege of obtaining an advance is never exercised.
- 4 You can take out your policy now and defer the selection of the house until a suitable property is available.
- 5 The premiums paid under these policies enable you to obtain statutory rebate of income tax.
- 6 The policy entitles the assured to all the benefits of an ordinary Endowment Assurance Policy with the additional advantage of being available for House Purchase.

Owing to the general fall in interest rates, among other causes, it has become increasingly difficult to obtain attractive mortgages. The proportion of assets so invested, including policy loans, has fallen steadily in recent years. A further reduction occurred last year in British Government stocks, and in Foreign and Colonial Government and Municipal securities. On the other hand, Debenture, Preference and Ordinary holdings each showed further expansion. The following table gives the average distribution of all the companies for each of the last four years:—

Class of Assets	Year			
	1932	1933	1934	1935
Mortgages, including loans on policies ...	27.2	24.2	22.8	23.0
British Government securities	20.4	22.0	21.3	19.6
Indian, Colonial and Foreign Govern- ment securities	9.5	9.7	9.2	8.8
British municipal and county stocks.....	2.1	2.9	2.9	2.9
Indian, Colonial and Foreign municipal securities	3.0	2.8	2.9	2.7
Debenture stocks	15.9	16.4	17.7	18.4
Preference and guaranteed stocks.....	6.7	6.8	7.6	8.7
Ordinary stocks	5.1	5.6	6.4	7.5
Reversionary interests, properties and other assets	10.1	9.6	9.2	9.5

Clerical, Medical and General.—The system of bonus distribution is quite distinctive, and the amount of reversionary bonus allotted varies with the age at entry and the time a policy has been in force. The rates of bonus declared show a slight reduction compared with 1930, and are equal to the average rates declared during the decennium 1921-1930. It is of special interest, in view of other expressions as to the bonus outlook, to note the official statement that there is "every indication that the 1936 scale of bonuses will be maintained." The very large increase in the carry-forward appears to be due to the existence on the last occasion of a separate bonus maintenance reserve of £400,000, which is included on this occasion in the carry-forward. Bonuses under policies participating for the first time vary from 44s. per cent. at the younger ages to over 70s. per cent. at the higher ages. For longer durations the rates are much higher.

Equitable.—The bonus reserve method was used. The future rates of bonus assumed are on the scale now declared, which is practically the same as on the last occasion. In the non-profit class the rate of interest assumed at the valuation was reduced from 4 per cent. to 3½ per cent., and in the participating section the increased carry-forward is stated to be sufficient to meet the cost of a reduction from 4 per cent. to 3½ per cent. at the next valuation in 1940, should such a change be then considered desirable. In the whole life class the bonus rate is 15s. per cent., calculated on the sum assured multiplied by the number of years a policy has been in force, and subject to a minimum of 30s. per cent. for each year of the past quinquennium. In the endowment assurance class the rate of bonus is 30s. per annum, calculated on the sum assured and existing bonuses plus 15s. per cent. per annum calculated on the sum assured, and payable only in the event of survival to the end of the endowment term.

General.—The rate of bonus has been reduced from 35s. per cent. to 30s. per cent., both calculated on the sum assured.

London Assurance.—The rate of bonus in the present series is 45s. per cent., calculated on the sum assured and existing bonuses for whole life policies (same), and 40s. per cent. for endowment assurances against 45s. per cent. five years ago. The cost of the change made in the rate of interest assumed from 2½ per cent. to 2¼ per cent. has been met out of trading surplus.

Northern.—The rate of bonus has been reduced from 50s. per cent. to 45s. per cent., both calculated on the sum assured.

North British and Mercantile.—The rate of bonus is reduced by 4s. per cent. to 36s. per cent., calculated on the sum assured and existing bonuses. The basis of valuation has been

strengthened by the use of A 1924-29 2½ per cent. instead of OM 3 per cent., and the cost of the change has been met out of trading surplus. Practically the whole of the remaining surplus is required to meet the cost of the policyholders' bonus, leaving the allocation to shareholders to be met otherwise.

Norwich Union.—The reversionary bonus varies with the age, duration and plan of assurance. The generous rates declared are on the same scale as in 1930, and vary from 54s. per cent. to 95s. per cent. for whole life and from 38s. per cent. to 60s. per cent. for endowment assurances. Nevertheless, the cost of the distribution is well within the trading surplus. In 1931 a depreciation of £1,100,000 was written off, but although the aggregate market value of the stock exchange securities on December 31, 1935, was much in excess of the book values, it was decided not to write up the latter.

Phoenix.—Rate of bonus, 50s. per cent. for whole life policies and 46s. per cent. for endowment assurances, both calculated on the sum assured (same).

Royal Exchange.—The rate of bonus was 40s. per cent. (same), calculated on the sum assured and existing bonuses.

Scottish Amicable.—The directors, preferring to take a cautious view of the outlook, reduced the rate of bonus from 42s. 6d. per cent. to 40s. per cent., calculated on the sum assured and existing bonuses, and strengthened the valuation by reducing the future rate of interest from 2½ per cent. to 2¼ per cent. £120,000 has also been written off securities.

Scottish Life.—The rate of bonus was reduced from 48s. per cent. to 42s. per cent., both calculated on the sum assured. The valuation rate of interest was reduced from 3 per cent. to 2½ per cent., and £125,000 credited to staff pensions compared with £17,000 on the last occasion.

III.—OTHER INSURANCE

FIRE INSURANCE

The following tables relate to twenty-two large composite offices, which in many cases include subsidiary companies. In reality, therefore, the totals embrace a much larger number of offices. There is, however, no duplication in the tables. The total premium income shows a relatively small reduction from the 1934 figure, to the 1933 level. Both commission and expense ratios are a little higher. The claims ratio, following a substantial reduction in 1933 and 1934, fell further to 40.0 per cent., resulting in the highly satisfactory profit ratio of 12.5 per cent. of the premium income. The unusually favourable experience in the United States in the last two years has contributed very largely to the improved results. The Alliance, however, does not transact business

in the United States and is almost alone in showing a reduction, though almost insignificant in amount, in profits. This office is known to possess a very select class of business in this country, and as usual its results are excellent; as in 1934, its profit ratio is only surpassed by the General Accident. The Century has the highest commission ratio, and due to this fact has the lowest profit ratio; this, however, at 7.3 per cent. of the premium income, compares with the average of 4 per cent. for the offices in 1932. The fall in Guardian profits is partly illusory; it will be noticed that owing to the fall in premium income in 1934 there was a release from the unexpired risk reserve of £67,000, which was included in the 1934 profits.

MARINE INSURANCE

Marine insurance premium income in 1935 was in the aggregate only slightly below that of the previous year; but the amount transferred as profit was approximately 10 per cent. smaller.

The general tone of the chairmen's speeches, as in each year of the recent past, was of almost unrelieved gloom. It is emphasised that the market is much too large for available business. This is caused to a large extent by the fall in values and rates. In the last few years the rates appear to have decreased in general by about 30 per cent.; nevertheless, the profits for which credit is taken are not unsatisfactory. They compare quite well with fire profits, and are much better than the results shown in accident and miscellaneous insurance. It must be remembered that the marine premium income of any year has to serve claims not only of that year, but also of a number of future years, so that the full effect of the rate reductions of the last few years has yet to be felt, particularly in view of the increased cost of repairs. As an offset to these rate reductions, one effect of the depression in shipping has been the large number of old vessels broken up, leaving a higher average type of vessel in commission. During these difficult years of almost continuous decline in premium income, the funds have suffered comparatively small reduction. The marine funds in the aggregate are very strong, amounting to about 170 per cent. of the current premium income. During the year the international situation led to a scale of rates for war risk, which is revised from time to time under agreement between the companies and Lloyds.

It is the practice of those offices who confine their activities mainly to this class of business to leave the underwriting account open for two years. The account is then

closed by taking the unexpended balance of the first year's premiums to profit and loss, after making suitable provision for further claims by a transfer to a suspense account. Hence the 1935 report shows the profit which, it is estimated, emerges from the 1934 premiums. The following table gives the results obtained during the past five years by representative marine companies:—

Office	Account	Premiums	Claims and Suspense	Expenses	Surplus or Deficit
British and Foreign	1930	454,580	308,045	95,391	51,144
	1931	481,573	345,603	97,855	38,115
	1932	431,189	298,548	99,143	33,498
	1933	371,539	268,117	97,202	6,220
	1934	389,127	262,890	98,650	27,587
Indemnity	1930	361,649	337,374	24,275	None
	1931	382,224	322,889	23,355	16,000
	1932	371,370	327,856	23,514	20,000
	1933	316,256	275,228	21,028	20,000
	1934	348,266	311,971	21,295	15,000
Merchants	1930	279,225	237,110	42,115	Def. 10,000
	1931	247,396	192,491	40,571	14,334
	1932	225,328	171,719	37,741	15,868
	1933	180,188	145,374	32,949	1,865
	1934	166,766	129,097	33,082	4,587
Sea	1930	586,334	501,632	44,337	40,363
	1931	521,004	409,845	44,890	66,269
	1932	536,793	438,007	47,089	51,697
	1933	478,092	377,926	46,956	53,210
	1934	475,505	400,705	36,336	38,464

The general practice of composite offices is to present their marine accounts in the form used for their fire and accident business. The claims are thus to a large extent unrelated to the premiums appearing in the same account. The amount transferred to profit and loss does not represent

ACCIDENT AND MISCELLANEOUS INSURANCE

THE total premium income of the various branches of insurance coming under the above category—namely, motor, workmen's compensation, personal, accident, etc.—fell continuously for a number of years until 1934. That year witnessed a substantial increase over 1933, and last year there was further expansion. Last year's aggregate underwriting profit of the twenty-two companies included below was the best for many years, and the improved results in the United States were probably the main contributory cause. In that country, workmen's compensation business is generally unprofitable, partly owing to inadequate rates; but last year the experience was better. There was also some improvement in motor insurance results. The average percentage of profit for all the offices is

usually very small, but, as might be expected where so many branches of insurance are involved, the results of the individual companies vary considerably; for the distribution of any one company's total business between accident, motor, workmen's compensation, etc., will differ from that of any other company.

In motor insurance the tendency is for damages awards to increase; and although only a small percentage of the claims reach Court, larger sums have to be paid in cases settled without recourse to the Courts. Present premium rates were not designed to cover such heavy liabilities. In 1935, the Alliance and the North British and Mercantile again returned the best results; in no case, however, was an actual underwriting loss incurred.

BRITISH INSURANCE COMPANIES IN U.S.A.

THE 1935 reports of the large British composite companies have for the most part presented a cheering picture of very satisfactory fire profits—in some cases record profits—while in the accident and general branches improved results have also been common. Approximately one-half of the total premium income of these companies in both the fire and miscellaneous branches of insurance is obtained in the U.S.A., and it has been generally understood that the improved results last year were largely due to better conditions in that country. That this belief has not been ill founded is borne out by the tables which follow. The figures in these tables are based on the official reports of the companies as furnished to the American Insurance Authorities and published by the Spectator Company of New York; underwriting profits having been adjusted to conform with the British practice of allowing for an unex-

pired reserve equal to 40 per cent. of the premium income. The exchange is taken at £1 = \$4.86½ throughout. The aggregate results in the U.S.A. of eleven British companies or groups of companies in the miscellaneous branches of insurance are given in the following table:—

PREMIUMS AND PROFITS, 1929-35

Year	Premiums	Underwriting Profit Amount	Underwriting Profit Percentage of Premiums
1929	28,423,000	+ 78,000	+ 0.3
1930	27,065,000	— 439,000	— 1.6
1931	24,953,000	— 168,000	— 0.7
1932	22,312,000	— 377,000	— 1.7
1933	22,613,000	— 16,000	— 0.1
1934	23,657,000	— 275,000	— 1.2
1935	22,795,000	+ 434,000	+ 1.9

4 SPECIAL POINTS about Our New CHILD'S OPTIONAL POLICY

- 1 Provision is made for a cash sum to be payable when a child comes of age, whether or not the parent survives.
- 2 No medical examination of either parent or child is normally required.
- 3 A rebate of Income Tax on the premium is allowed.
- 4 When the child comes of age, a substantial life policy may be taken out for him (or her) at an extremely low rate, and without medical examination, if preferred to acceptance of the assured sum.

UNITED KINGDOM PROVIDENT INSTITUTION

Head Office: 196 Strand, London, W.C.2

London & Manchester Assurance Company, Ltd.

The experience of individual offices in the past two years is next shown:—

11. Yorkshire	208,000	53,000	-25.1	187,000	7,000	+ 4.3
	23,657,000	275,000	- 1.2	22,795,000	434,000	+ 1.9

Of the two main branches of miscellaneous insurance, some further improvement took place in workmen's compensation insurance, while motor insurance results were slightly less unfavourable than in 1934. On the whole, however, conditions are still very difficult, and leave plenty of scope for improvement.

Fire losses in the U.S.A., on the other hand, have shown a remarkable decline in the last few years. Official estimates show that total losses in post-war years have varied between about \$450 and \$550 millions until 1931. In the succeeding three years the figures were \$400, \$270, and \$200, but for 1935 the estimate is only \$180 millions. So far as 1936 is concerned, experience to date suggests that fire losses will be considerably higher than in 1935, and the effect of 1935 reductions in rates will be felt over the whole year.

In the tables at the head of the final column we give the aggregate results of 21 British companies or groups of companies, which transact fire business in the U.S.A. for each year from 1929 to 1935, and the figures for individual companies during the past two years.

Unfortunately, future results depend not only on actual fire losses, but also on the rates of premium allowed by

the various State Departments; and on taxation, which seems unlikely to become less onerous. State Departments also are generally quicker to discover a pretext for reducing the rates than to recognise claims for increasing them as a result of unfavourable underwriting experience. On the whole, it would seem that the fire results last year must be regarded as exceptional.

THE ECONOMIST

TRADE SUPPLEMENT

New Series

SATURDAY, JULY 25, 1936

No. 158

With this issue our Index of Business Activity appears calculated on a new base (1935=100). Details will be found in subsequent pages and, in place of our usual monthly graph, readers will find overleaf a chart of the Index from 1924 to date.

THE STATE OF TRADE

An examination of the latest available data suggests that economic recovery has lost none of its momentum. The pace was artificially stimulated at the end of last year by anticipation of a coal stoppage, and an inevitable setback occurred in January. Subsequently, however, the process of expansion continued and, judging by our own index of business activity, last year's rate of progress has been well maintained. Recovery, it is true, remains patchy, and the special areas are only one degree less depressed. More over, as we point out in a leading article in this week's *Economist*, certain nebulous clouds have appeared on the horizon which may presage less settled conditions eventually. But, for the present, the barometer is "set fair," and immediate industrial prospects are good.

A further slight improvement in employment occurred last month. According to the Ministry of Labour estimate, there were some 10,832,000 insured workpeople, aged 16 to 64, in employment in Great Britain on June 22nd last—a total 1,000 above the May estimate and 441,000 (or over 4 per cent.) higher than last year's corresponding figure. During the past twelve months unemployment has fallen by 297,430 to a present figure of 1,702,676, which includes the 1,362,190 men, 251,616 women and 88,870 juveniles. The June figures would have made a better showing but for the occurrence on the day of the count of a miners' demonstration in Yorkshire, which caused a sharp increase in the numbers "temporarily stopped" in the coal-mining industry. Unemployment was reduced last month in most of the geographical areas, but showed a slight increase in the Midlands, Wales and Northern Ireland and was considerably higher in the North-eastern region.

Allowing for seasonal factors, bank clearings and postal receipts were higher last month than in May; the trend of industrial profits remained upwards and interest rates hardened little, if at all. Retail trade in June, however, was adversely affected by unseasonable weather, and when the official statistics become available next week they will probably compare unfavourably with those for the same month of 1935. Last month's imports into the United Kingdom showed a sharp increase compared with the same month of 1935, but exports of British manufactures failed to hold their own.

The *Economist* index of business activity, corrected for seasonal fluctuations—which appears this month on a new base (1935 = 100)—rose from 104 in May to 105½ in June, both figures being provisional. In June, 1935, the index stood at 100, after touching a low point during the depression of 81½ in September, 1932. Of the constituent series only two—merchandise on railways and exports of British manufactures—showed a decline in June. Two—employment and electricity consumption—were unchanged, and ten showed a rise.

In the vanguard of recovery the iron and steel and engineering industries still figure prominently. Indeed, all the capital equipment industries made further headway last month. The volume of re-armament and other orders

recently received by the engineering industry is reported to be sufficient to maintain the existing level of activity for nearly twelve months. On a daily basis, the output of pig iron and of crude steel was again higher in June, and there are no indications of an early setback. Building activity is still going ahead, and the total value of plans approved by 144 local authorities last month, published in the *Ministry of Labour Gazette*, was over 30 per cent. above the corresponding total for June, 1935. Though the bulk of the increase was in plans for non-residential buildings, the total plans approved for dwelling houses during the second quarter of this year, nevertheless, show a gain over the corresponding aggregate for last year. Whether increased dwelling-house construction has reached its limit, however, remains an open question, and plans already approved would not necessarily be executed in their entirety if the demand for new housing accommodation fell off. In the capital equipment industries in general, wage and other costs are now tending upwards. Professor Bowley's index of average weekly wages (published by the London and Cambridge Economic Service) now stands at 97½ (1924=100) against 95½ a year ago.

Industries like cotton textiles and coal mining, which rely to an appreciable extent on overseas markets, remain depressed. Coal exports are actually running below last year's level, partly on account of the application of "counter-sanctions" by Italy; though, unfortunately, the raising of sanctions on July 15th does not guarantee the restoration of this trade to normal. Other industries which experienced a seasonal slackening of activity last month include the footwear and clothing trades, wool textiles, linen and automobile production. The jute industry is still acutely depressed.

Business conditions overseas remain uneven. In the United States, despite the intensity of the heat-wave and the accompanying drought, no summer recession has yet appeared. Partial responsibility for this maintenance of activity is widely attributed to the unexpected volume of spending arising from the soldiers' bonus. This stimulus, however, cannot be indefinitely continued, and the threat of labour troubles in the heavy industries has not been finally dispelled. In France the outlook is a little more favourable, but business seems to be "marking time," and uncertainty remains concerning the future of the franc, under a "New Deal" which has not, as in America, been preceded by devaluation. Holland seems to have lost further ground recently, and the outlook in other gold bloc countries remains obscure. Scandinavia, on the other hand, remains relatively prosperous, and news from the British Empire is mainly favourable. South Africa, Australia and New Zealand have benefited from an improvement in the prices of their staple exports. In Canada recovery is patchy, but still continues. The decline in Argentina's exports has worsened her balance of payments. In the Far East, despite political uncertainties, business conditions show little change.

HOME INDUSTRIES AND TRADE

The following reports on British industry cover, in most cases, the period to the middle of July. In the remainder they relate to the month of June.

COAL

The coal mining industry experienced a seasonal recession in June, but the output of saleable coal, at 16,865,100 tons, was a little above last year's level. The sharp increase in the number of workers temporarily stopped was partly accounted for by the annual demonstration of the Yorkshire Miners' Association, which led to a temporary suspension of work at a number of pits. Exports were smaller than in May and were also less than in June last year. This diminution of export business, which has hit South Wales so severely, is mainly due to the virtual cessation of business with Italy. But, unfortunately, it cannot be assumed that the lifting of sanctions will be followed by the restoration of this trade to normal dimensions. Exports to France have improved in recent weeks with the cessation of the port strikes, but, on the other hand, the raising of the taxes on imported coal in France has dealt South Wales yet another blow. Meanwhile, during the past few weeks orders for house coal have dwindled, but heavy deliveries of industrial grades are being made; small sizes are in short supply.

IRON AND STEEL

Activity in the iron and steel industry was well maintained in June, and there are no indications of an early setback. On a daily basis, production of pig-iron showed a slight increase, while the output of steel ingots and castings was considerably larger than in May. In both cases output remained heavily in excess of the corresponding 1935 figures. Imports, although still above last year's level, registered a decline between May and June, while exports were lower compared both with May, 1936, and with June, 1935. In recent weeks the acute pressure for delivery has been somewhat relaxed and makers have been able to overtake some of the more urgent requirements of home users. Rather more material is now available for export purposes—a factor which gives ground for satisfaction in view of the fact that export markets have recently been neglected. Meanwhile productive capacity is still increasing. Prices have shown a hardening tendency in recent weeks.

ENGINEERING

While few new features were discernible last month, the recent rate of progress was well maintained and the outlook is very satisfactory. Unemployment in some sections is now as low as in any post-war year. Further progress was recorded during the past month in prime movers, while the position as regards machine tools and electrical engineering was very good. The volume of unemployment in marine engineering remains heavy, but the progress recorded over the past year has been substantial. Production of agricultural machinery experienced a seasonal contraction in June. Meanwhile, the lagging tendency of exports continues, the attention of makers being concentrated on the home market. Imports of tools, etc., urgently required by the home industry, although still well above last year's level, are not quite so heavy as recently. As foreshadowed a month ago, the pressure for higher wages continues; the trade unions have accepted the employers' recent offer, but are negotiating for additional increases. Meanwhile, orders on hand for armament and other purposes are reported to be sufficient to ensure the maintenance of the existing level of activity for almost twelve months.

ELECTRICAL ENGINEERING

The past month witnessed a welcome revival of orders, both on home and export account. The increase in the index shown below is traceable not to the receipt of large orders, but to a considerable number of smaller ones.

INDEX OF NEW ORDERS RECEIVED BY HEAVY ELECTRICAL MANUFACTURING INDUSTRY* (1920 = 100)

Period	Home	Export	Total
1928—June	68	105	78

* Copyright of the British Electrical and Allied Manufacturers' Association. The above index is a 12-month moving average of new orders received by the heavy plant section of the industry. It is based on the horse-power and not on the value of orders.

MOTOR INDUSTRY

Despite the fact that this is the time of year when construction is at its lowest ebb, owing to the fact that new models are about to be announced, there seems to be an unusually high demand for new cars. In May, 31,641 new private cars were registered for

the first time—an increase of 27 per cent. compared with May, 1935. In the period October, 1935, to May, 1936, 210,424 new private cars were registered, an increase of 13 per cent., compared with the same period in the previous season. During the present season to date, 248,224 private cars and 71,730 goods vehicles have been produced, against 217,515 and 63,892 respectively, at this time last year.

CHEMICALS

In most sections of the chemical market business was rather quiet during June. The demand for wood distillation products, however, was well maintained, and, with the exception of pitch, the coal tar products market was quite active, although business in the finer distillates was still rather difficult owing to lack of supplies. There was an improvement in overseas trade in June as compared with June, 1935, exports of chemicals, dyes and colours increasing in value by £90,587 and imports by £121,957. The increase was mainly due to larger exports of coal tar products and dyes and dyestuffs.

COTTON

The outstanding event of the past month has been the sharp advance in raw cotton prices due to an increasing demand and the publication of a rather bullish estimate by the U.S.A. Government of the acreage under cotton in that country. The cotton textile industry showed little change in June, but the employment position remains considerably better than at this time last year. Meanwhile, the percentage of spinning spindles in full production was unchanged at 79, against 70 in June, 1935. Exports remain stagnant and sales of piece-goods abroad show a decline over the past year. In recent weeks inquiry for piece-goods has improved, but although in certain directions more business has been done, numerous buyers have refused to pay the higher rates necessitated by the advance in the raw material. There is no indication that the slight reduction in Indian import duties has yet benefited Lancashire. Makers have met with their chief support from the home trade.

WOOL

Prices of tops and yarns, which showed a sagging tendency in June, recently firmed up following the London sales. Business showed a seasonal recession in June and employment in the worsted section declined; in the woollen section there was little general change. The improvement over last year continued, but was much more marked in the woollen than in the worsted section. Machinery, however, remains more active than is usual at this time of the year. Exports in general were well maintained last month and remained above the level of a year ago. Meanwhile, the end of the season is reflected in imports of sheep's and lambs' wool, which, although in excess of the corresponding total for 1935, again registered a decline in June.

JUTE

Little change was recorded in June, and unemployment continues very heavy. The position is worse than it was at this time last year, and business has continued very quiet in recent weeks. In view of the prevailing uncertainty buyers are reluctant to commit themselves, and the majority of inquiries are consequently for small lots for immediate delivery.

RAYON

The yarn market shows considerable improvement, and stocks, although high, are being gradually reduced. Owing to the lack of large-scale buying during most of the year, stocks of fabrics are decidedly small. Apart from autumn business, which is now beginning to get into its stride, there is a good deal of buying for stock replenishment.

LINEN

All classes of the raw material are firm in price and sellers are showing reserve. Reports from flax-growing areas, both in this country and on the Continent, indicate crops of average quality and quantity. Yarns are selling freely, with Belgian and German consumers buying in bulk. Business in cloth has also improved, especially in damasks, cambrics and dress linens. Prices are firm.

BOOTS AND SHOES

The industry experienced a slight seasonal contraction in June, which was reflected in a decline in employment. But the position

remains better than at this time last year. Exports, however, showed a sagging tendency and were smaller than in June, 1935.

POTTERY

Employment in North Staffordshire continued slack in June and showed some decline on the whole, although there was a seasonal improvement in the sanitaryware and glazed tile sections. At Bristol employment continued good; at Derby it was good in earthenware and moderate in china manufacture. Exports declined in June, and were below the level of a year ago.

AGRICULTURE

At the end of June it was anticipated that in most areas the yield of wheat would be below, that of barley about equal to, and that of oats slightly above average. Where lifting has begun the yield of early potatoes is reported to be above average. Main crop potatoes were generally looking well, and the outlook was regarded as favourable. The turnip crop, where established, was reported to be looking well. Mangolds were almost everywhere a healthy and promising plant and sugar beet was making rapid progress. Hop vines were generally healthy and vigorous and of good colour. Harvesting of the hay crop has been protracted. It is officially estimated that the yield of both seeds and meadow hay will be below the average of the ten years 1926-35. Cattle and sheep made good progress and were doing well. Milk yields were slightly below normal for the season.

SHIPPING

A slight improvement on the freight markets in June is reflected in the *Economist* index of whole cargo shipping freights (1898-

HOME TRADE STATISTICS—JUNE, 1936

	May, 1936	June, 1936	Compared with June, '35
UNEMPLOYMENT— (State Insurance %)	13.0	13.1	— 2.4
PRODUCTION—			
Coal (million tons)*	4.5	4.0	...
Iron (thous. ")	661.0	644.1	+ 114.8
Steel (" ")	963.0	965.9	+ 195.9
FOREIGN TRADE—			
Imports (million £'s)	69.2	67.6	+ 9.8
Re-exports (" ")	5.6	5.0	— 0.2
British Exports (" ")	36.4	32.1	— 0.8
TRANSPORT—

1913 = 100), which registered a rise of 2 per cent. to 90.6, following a fall of 1.2 per cent. in the previous month. Meanwhile, during the past fortnight, the drought in North America has been reflected in an increased demand for Australian wheat, and thus in an important demand for shipping tonnage.

BUILDING

The present position of the building industry remains satisfactory. Employment showed little change last month, but in all divisions of the country and in all occupations (except brick-layers) it was considerably better than at this time last year. The *Economist* index of building activity (1935 = 100) now stands at 109, against 98½ in June, 1935. Meanwhile the building plan figures published by the Ministry of Labour continue to forge ahead. Plans approved by 144 local authorities last month, for non-residential purposes (especially for business premises) were again heavily in excess of the corresponding 1935 figures, which confirms the view recently expressed that any slackening in residential building will be counterbalanced by increased construction for other purposes.

RETAIL TRADE

The official statistics for June will not be available until next week. Preliminary information, however, suggests that business was adversely affected last month by unseasonable weather and that the results will compare unfavourably with those for June, 1935. But last year's figures benefited from over a week of pre-Whitsun business, which fell this year in May.

COMPONENT SERIES OF THE INDEX OF BUSINESS ACTIVITY

1. *Employment*.—Based on the Ministry of Labour estimates of insured workers aged 16 to 64 in employment in Great Britain. Seasonal fluctuations are eliminated.

2. *Consumption of Coal*.—From the output of saleable coal is deducted exports of coal, coke and manufactured fuel and of coal shipped for the use of steamers. The resulting figure of home consumption is adjusted for variations in stocks of coal at pithead and is placed on a daily basis. Seasonal fluctuations are eliminated.

3. *Industrial Consumption of Electricity*.—From the daily average output of the "authorised undertakers" is deducted the units generated for domestic purposes and for use in traction and public lighting. The series is adjusted for transfer from private to public generation and is corrected for seasonal fluctuations.

4. *Merchandise on Railways*.—Based on a daily average of the tonnage of freight (less coal and coke) carried on the standard-gauge railways of Great Britain. Seasonal fluctuations are eliminated.

5. *Commercial Motor Vehicles in Use*.—The monthly computations of the number of licences for goods vehicles current in Great Britain, published by the Society of Motor Manufacturers and Traders, are corrected for seasonal fluctuations.

6. *Postal Receipts*.—The official series of daily postal receipts, calculated by the Post Office, is corrected for seasonal variations.

7. *Building Activity*.—From the Ministry of Labour figures showing the value of building plans approved by 146 local authorities in Great Britain a twelve-months' moving average is calculated, on the assumption that about twelve months elapse, on the average, between the passing of the plans and the completion of the building. Seasonal fluctuations are automatically eliminated by this process, but no account can be taken of the fact that some plans approved may not be executed. The series is corrected

for changes in building costs by means of an index, the construction of which was explained in the *Economist* of November 11, 1933.

8. *Consumption of Iron and Steel*.—Based on the output of steel ingots and castings, plus forge and foundry pig iron and the crude steel equivalent of imports, less the crude steel equivalent of exports. The index is on a daily basis and seasonal variations are eliminated.

9. *Consumption of Cotton*.—Total deliveries of cotton, as published by the Liverpool Cotton Association, are converted into lbs., placed on a daily basis and corrected for seasonal fluctuations.

10. *Imports of Raw Materials*.—The value of United Kingdom imports of raw materials, less re-exports, is corrected by the Board of Trade quarterly index of prices. The figures are placed on a daily basis and seasonal variations are eliminated.

11. *Exports of British Manufactures*.—The value figures are corrected for price changes by means of the Board of Trade quarterly index and are placed on a daily basis. Seasonal fluctuations are eliminated.

12. *Shipping Movements*.—Based on a daily average of the shipping tonnage engaged in overseas trade entered and cleared at ports in the United Kingdom, with seasonal variations removed.

13. *Metropolitan, Country and Provincial Bank Clearings*.—Based on daily average clearing figures corrected for price changes by an index constituted as follows:—Ministry of Labour Index of Wages (2 weights); Ministry of Labour Cost-of-Living Index (2 weights); *Economist* Index of Wholesale Prices (1 weight). Seasonal variations are removed.

14. *Town Clearings*.—Calculated from the monthly town clearing figures by the same means as in the previous index.

STATE OF TRADE OVERSEAS

BRITISH EMPIRE

Australia.—Agricultural and pastoral prospects are now generally satisfactory, states a cable from the National Bank of Australasia. The wool clip is probably equal to that of last year, the wheat acreage is slightly higher and a normal spring butter output is anticipated. Higher prices for principal exports have stimulated local trade and secondary industries, and unemployment has consequently declined. Exports continue above the level of a year ago and the favourable trade balance has increased.

South Africa.—The expansion of business activity continues. Mining remains very active and building shows no sign of abatement. The improvement is reflected in the upward trend of railway receipts and in the national accounts. Better prices have recently been realised for staple exports. Total imports in June were valued at £7,269,000, against only £5,837,000 in the corresponding month of 1935, while exports totalled £8,472,000, compared with £8,206,000 in June last year.

Canada.—The expansion of business activity recorded in May appears to have been well maintained in June. But developments remain somewhat uneven, and in recent weeks the drought in the prairie provinces has given rise to anxiety. Foreign trade continues to run well above last year's level. The mining industry continues to expand and building activity has made headway recently.

India.—Except in Sind and Bombay, rainfall has been moderate to heavy generally and standing crops are in fair to good condition. Cotton has, however, been attacked by caterpillars, and sugar cane by grasshoppers in some parts. The final estimate for the linseed crop discloses an area of 3,402,000 acres, with an estimated yield of 384,000 tons, against 420,000 tons last year. The wheat area is estimated at 33,500,000 acres and the yield is put at 9,394,000 tons, against 9,861,000 tons a year ago. The export balance in foreign trade was reduced last month.

EUROPE

France.—Industrial production recorded a slight improvement in May, the gain being well spread, and remained well above the level of a year ago. The output of iron and steel showed a significant expansion and unemployment was reduced. Wholesale prices suffered a fall in June, but have recovered in recent weeks. Meanwhile the settlement of the labour difficulties has temporarily improved the position, but business activity appears to be marking time. The question of the devaluation of the franc has been shelved, but the outlook is still obscure. The Stock Exchange consequently continues to sag.

Germany.—The upward trend of industrial production was continued in May, when the Institut für Konjunkturforschung index rose to 106.7 (1928 = 100), against 104.5 in the previous month and 96.5 in May, 1935. The fall in numbers unemployed has also continued and a shortage of some classes of skilled labour is reported. In consequence of rearmament activity the demand for iron and steel continues on a high level; capital goods industries in general remain busy. Consumption of electricity in May was 15 per cent. above the previous year's corresponding figure, while railway receipts show substantial gains compared with last year. Meanwhile wholesale prices and the cost of living have been practically stationary in recent months.

Sweden.—Business remains prosperous and the improvement in the employment position continues. Building is active and sales of timber and pulp are increasing, despite the hardening of prices. Foreign trade returns for May disclose an import surplus of only kr. 0.9 millions, against kr. 17.9 millions in April. The iron industry is operating at capacity, with prices showing a rising tendency.

Denmark.—Progress is being maintained. Owing to a rise in the price of staple exports, the export figures for the first six months of 1935 make a favourable showing when compared with the same period of last year. The slow revival in shipping has continued, but activity in the building industries is below last year's level. The number of unemployed at the end of June was down to 46,789, or 11.3 per cent. of the total number employed. The outlook is satisfactory.

Holland.—The business position in Holland continues to give little grounds for satisfaction. Returns of industrial activity for the first quarter of the year show divergent tendencies, but the general picture is unfavourable. Unemployment was above the level of a year ago, and exports of manufactures showed a decline. Costs in the Netherlands are disproportionately high, and until something can be done to remedy the over-valuation of the currency little improvement can be anticipated.

Poland.—The output of iron and steel this year has been heavily in excess of the 1935 level, pig iron production in June showing an increase of almost 100 per cent. over June, 1935. The output of non-ferrous metals shows a similar trend. Goods traffic on the Polish State railways has shown a decline this year compared with last, mainly due to a fall in transit business between Germany and East Prussia. Meanwhile the volume of trade passing through Gdynia continues to grow.

Greece.—In consequence of unfavourable weather, the crop of cereals and currants will be considerably smaller this year than last. Overseas trade in May was well maintained at the 1935 level; new import restrictions, designed to protect the foreign exchange reserves of the bank of issue, came into force on July 1st. Internal trade remains slack and the stock markets are lifeless. Labour unrest is compelling the authorities to examine the possibility of improving the workers' condition.

UNITED STATES OF AMERICA

Despite the intensity of the heat wave and the accompanying drought, the summer recession—which in any case had been expected to be smaller than usual—has not put in an appearance. Thus the *New York Times* weekly business index stood at 101.4 for the week ended July 11th, against 101.1 a month earlier and 83.2 in the corresponding week of last year. The maintenance of activity is widely attributed to the unexpected volume of spending arising from the soldiers' bonus, which has given a definite fillip in a number of directions. Meanwhile, steel production continues at about 70 per cent. of capacity, automobile production is well maintained, and the output of machine tools has reached a level higher than at any time since 1929. Industrial profits are consequently on the up-grade. There is, however, a cloud on the horizon in the shape of possible labour troubles, and it must be remembered that the stimulus arising from the expenditure of the soldiers' bonus cannot be indefinitely continued.

AMERICAN TRADE STATISTICS—JUNE, 1935

LATIN AMERICA

Unseasonable weather in Argentina has caused considerable damage to the maize crop and has hampered harvesting operations. Shipments of wheat, oats and linseed during the first half of the year showed a heavy decline compared with the corresponding period of 1935. The "official" selling rate of the Central Bank has been advanced from 17.02 to 17.08 paper pesos per £, and the rate may be allowed to go higher, to provide funds for the assistance of cattle breeders who will be adversely affected by the proposed British import duty on meat. Regulations governing the marketing of the 1936-37 coffee crop in Brazil, signed on July 1st, stipulate that the "sacrifice" quota will be 30 per cent., for which payment will be made at the rate of Rs. 5,000 per bag. Shipments of coffee during the crop year which closed on June 30th, were 15,929,259 bags (of 60 kilos), against 13,391,232 bags in the previous season. A virtual deadlock continues in the Chilean foreign exchange market, and the insistence by the Exchange Control Commission of a maximum selling price for "export" exchange of 26 pesos per United States dollar has caused considerable inconvenience both to exporters and to importers.

THE FAR EAST

Business conditions in Japan have shown little change. Imports have recently been running above the 1935 level, but exports have been stagnant. These tendencies are brought out in the foreign trade figures for the first half of the year, which disclose that exports amounted to 1,263 million yen (3.4 per cent. above the previous year's level) and imports to 1,578 million yen (an increase of 11.4 per cent.) during this period. The excess of imports during the first half-year was 61.6 per cent. larger than in the same period of 1935. Meanwhile Japan has embarked upon a "trade war" with Australia which is likely to damage both countries. Commodity markets have shown some improvement recently. China's trade balance continues to improve. Her imports totalled 83.75 standard dollars last month, and her exports 58.41 standard dollars, against 91.53 and 41.23 dollars in June, 1935.

STATISTICS

In the following tables we give trade and other statistics for as many countries of the world as possible, our endeavour being to combine brevity with comprehensiveness. The greater number of the figures are taken from the *Monthly Statistical Bulletin of the League of Nations* (published by George Allen and Unwin, Ltd.).

Unless otherwise stated, the figures represent authorised share issues of new joint stock companies at home, and the increase of capital of existing companies. Bonus shares are excluded from the figures of Roumania and Czechoslovakia. In the case of the Netherlands, Switzerland and the U.K. both bonus shares and conversions are excluded. Excluding Treasury Bills. Excluding large railway issues. / "Rivista Bancaria." A issues exceeding Fl. 100,000 on the Dutch market including Colonial, and since Jan., 1925, foreign issues. m Since 1924, excluding amalgamations and conversions. Until end 1922 paper mark. o "Société de Banque Suisse," figures of net amount of new capital paid-up. p Compiled by "Commercial and Financial Chronicle." y Up to 1927, authorised issues, excluding western departments; since 1928 amounts actually issued, whole territory.

No. 160

THE STATE OF TRADE

THE latest evidence of business conditions in this country indicates that recovery has as yet lost none of its momentum. The normal seasonal decline in activity has been scarcely noticeable this year, for unemployment continued to decline fairly rapidly throughout the summer. The acceleration of recovery early this year was probably encouraged by the Government's rearmament programme and by the policy of keeping interest rates low by the maintenance of ample supplies of credit. The upward trend of commodity prices has also tended to stimulate activity in certain industries by inducing an increased volume of orders. Meantime, all the indications point to a further expansion of activity during the winter; but it is difficult to see how the present rate of advance can be kept up in view of the growing scarcity of skilled labour.

The sustained expansion of business is reflected in the rise of the *Economist's* index of business activity shown on this page. The index advanced from 107 (1935 = 100) in July to 108½ in August, when it was 9 per cent. higher than a year ago. Of the 14 constituent series shown on page

23, eight registered a rise between July and August, three remained unchanged, and three, including those relating to the consumption of coal and cotton and British exports, showed a decline. All the indices are now appreciably higher than a year ago.

Employment rose to a new record level in August, when the number of persons, aged 16 to 64, employed in Great Britain was 10,961,000, an increase of 66,000 over July and of 500,000 over August, 1935. The improvement between July and August was well distributed geographically, only the North-west of England registering a decline. As a result of the continued fall in unemployment the proportion of insured persons out of work was reduced to 12.3 per cent. last month.

Reports from the majority of individual branches of activity remain favourable. Demand for iron and steel, for example, is still growing, for the principal consuming industries, including constructional engineering, the automobile and general engineering trades as well as shipbuilding, are still expanding. Indeed, the iron and steel industry, though working at capacity, is unable to keep fully abreast of demand, despite increased imports of semi-finished materials. Again, there are no signs of a setback in building activity, for the gradual decline in unassisted residential construction has been offset by increased State-assisted and non-residential building. As British industry is now going through a period of intensive re-equipment, non-residential construction is expected to increase further, even though the current rate of activity is well above the pre-depression level.

The majority of consumers' good trades, especially those which do not depend mainly on foreign markets, are also gaining ground with the improvement in general business conditions. Most branches of the textile industry, including

cotton, as well as trades engaged in the production of food, drink and clothing, are much busier than a year ago.

Many sections of industry, however, especially the metal and other capital equipment trades, appear to have reached a point where available resources of both skilled labour and machinery are fully employed. Capacity is being extended rapidly with the help of increased imports, particularly of machine tools, but the lack of skilled labour—a gap which cannot easily be filled at short notice—appears to hamper certain industries, such as engineering. In these circumstances there is a possibility of a more rapid increase in costs which would act as a brake on further expansion. Incidentally, the difficulty of keeping abreast of the increase of home demand partly explains the slow improvement in exports which, in August, were only slightly above the level of the corresponding month a year ago.

The marked rise of the prices of raw materials and crude foodstuffs, such as grains and non-

HOME INDUSTRIES AND TRADE

The following reports on British industry cover, in most cases, the period to the middle of September. In the remainder they relate to the month of August.

COAL

On a daily basis, the August output of saleable coal, at 17,056,000 tons, was practically unchanged compared with July, but both production and employment showed an improvement over August, 1935. Exports, however, were below the level of the corresponding month in the two preceding years; no shipments were made to Italy, and sales to a number of British countries showed a decline compared with 1935. In part, this position is a reflection of the active home demand, and export markets are thus firmer than would otherwise have been the case. Industrial grades of coal and coke remain in active demand from home users, and some qualities are difficult to obtain. Demand for house coal has, however, been quiet in recent weeks.

IRON AND STEEL

Activity showed a slight seasonal decline during August; pig iron production was reduced from 21,326 tons per day in July to 20,509 tons per day in August, and the average daily output of steel was curtailed by 1,170 tons to 34,908 tons in August. But, as our index of the consumption of iron and steel shows, home consumers' requirements, after allowing for seasonal variations, reached a new record. Actually, demand was so well maintained during August that producers found it impossible to build up a reserve in August to ease the situation during the autumn and winter. The lull in inquiries has been of short duration this year, and all indications point to a further expansion of demand. The semi-finished section of the industry, though working at capacity, is finding it difficult to meet current requirements, and many producers of finished steel are needing increased time for the completion of orders. It is scarcely surprising, therefore, that the improvement in exports has not been maintained.

ENGINEERING

The re-equipment of British industry is making heavy demands on the various branches of the engineering industry. In view of the pressure of home demand the improvement in exports has tapered off, the volume of shipments in August being actually lower than a year ago. Moreover, the industry is being increasingly hampered by the scarcity of skilled engineers, especially in the production of machine tools. To some extent the pressure of home demand is being eased by increased imports; during August, for example, imports amounted to 8,227 tons, compared with 5,421 tons a year ago. Imports of machine tools alone (mainly from the United States and Germany) rose from 618 tons, valued at £1,068,285, in August, 1935, to 1,632 tons, valued at £2,060,193, during the past month. Meantime, there are no signs that the expansion of demand has reached its peak. New business continues active, the agricultural and textile machinery sections and the railway equipment branch being among the few departments to show a slight falling-off in business during the past month.

ELECTRICAL ENGINEERING

Both home and export orders for heavy electrical machinery continued to increase rapidly during the past month.

INDEX OF NEW ORDERS RECEIVED BY HEAVY ELECTRICAL MANUFACTURING INDUSTRY*
(1920 = 100)

Period	Home	Export	Total
1928—August	74	86	78
1929 "	88	140	102
1930 "	63	245	109

August	148	200	165

* Copyright of the British Electrical and Allied Manufacturers' Association. The above index is a 12-month moving average of new orders received by the heavy plant section of the industry. It is based on the horse-power and not on the value of orders.

MOTOR INDUSTRY

Activity continues on a high level, and the number of vehicles in use in this country continues to expand. The season's production of private cars to the end of July totalled 307,988 units, against 266,866 to the same date last year; while the output of commercial vehicles during the same period amounted to 91,036, compared with 78,833 a year ago. New registrations of private cars in July were 10 per cent., and new registrations of goods

vehicles almost 20 per cent., in excess of last year's corresponding figures. Exports remain well above the level of a year ago, both in quantity and value terms. Imports of commercial vehicles are also running above the 1935 level, but imports of private cars are substantially lower on the year.

CHEMICALS

A steady though rather limited business was transacted in most sections of the home chemical market. However, August was an exceptionally good month for sales of wood distillation products, in comparison with the same month in previous years. Grey acetate of lime, wood tar, charcoal and wood naphtha were particularly good items. In the coal-tar products market active interest was shown in tar acids, but business was quiet in other directions. There was a decrease of £27,379 in the value of exports in August as compared with the same month of 1935, the total decrease for the eight months of the year 1936, as compared with the first eight months of 1935, being £149,977. Imports showed a further increase in August.

ELECTRICITY
GENERATION OF ELECTRICITY*

* By authorised undertakers in Great Britain

COTTON

Available data suggest that the position of the industry has undergone little change during the past month, but that the gain over a year ago is well maintained. Raw material prices have been subjected to sharp fluctuations and have tended upwards in response to an unexpectedly bullish crop report of the Washington Government. The percentage of spindles in full production in August was unchanged at 79, against 70 a year ago; the *Economist* index of cotton consumption was 110½, against 120 in July and 100 in August, 1935. In the American section, demand has run chiefly on coarse and medium counts, while spinners of Egyptian yarns have sold more freely. On the whole, exports compare favourably with those of a year ago, but conditions remain somewhat patchy.

WOOL

Apart from a further slight decline in the worsted weaving branch, the position of the industry showed little change in August. Employment in the woollen section was considerably better than at this time last year. Exports of tops and yarns were above, and shipments of tissues rather below, the level of August, 1935. In recent weeks the raw material has been firm in price, and competition at the London auctions was good. Yorkshire mills are generally fairly busy, especially those weaving woollen tissues. Meanwhile, the placing of orders for spring dress goods is expected to result in a substantial increase in the volume of work on hand in the near future.

JUTE

Although the industry remains acutely depressed, a slight further improvement was recorded during the past month. The continuance of the mills' dispute in India remains an unsettling factor, but it is now expected that a settlement may be reached.

RAYON

Although some sections of the trade are fairly busy, business in rayon yarns still suffers from seasonal slackness. The weaving section is busier than the hosiery trade, but sales of dress goods and finer fabrics generally are slow to expand. But there are reported to be indications that business will be very brisk towards the end of the year, and yarn production is consequently maintained at a high level.

LINEN

With supplies at a minimum, flax prices have been firm. In view of the smallness of stocks, prices are likely to remain at a high level until new crop material is marketed. Meanwhile, spinners and weavers remain busy, an encouraging feature being the substantial improvement in linen exports to the United States.

BOOTS AND SHOES

A seasonal improvement occurred last month and employment was appreciably better than a year earlier. Exports in August were, however, smaller than in the same month of 1935.

POTTERY

Following the termination of local holidays, employment in North Staffordshire registered an improvement at the end of August. Although shortages of skilled labour were reported in some occupations, short-time working is still common.

AGRICULTURE

The corn harvest became general about the middle of August. The yields of wheat, barley, oats and potatoes are at present estimated to be below average. Average crops of turnips, swedes and mangolds may, however, be expected. The sugar beet crop is likely to be rather below average, while the yield of hops is expected to be equal to the average of the previous ten years. The general quality and condition of hay is not good. The yield of seeds hay is expected to be below and that of meadow hay slightly above the average yield for the ten years 1926-35. Cattle

and sheep made good progress during August. Milk yields have been well maintained.

SHIPPING

A further substantial improvement in freight rates during August is reflected in a 5.5 per cent. advance in the *Economist* index to 97.5 (1898-1913 = 100), following a rise of 2 per cent, in July. The markets have continued to present a firm appearance in recent weeks, and prospects are fairly good.

BUILDING

The volume of building activity has been well maintained in recent weeks. There are indications that unassisted residential construction is gradually tapering off, but State-assisted building to improve the housing conditions of the poor by the elimination of slums and overcrowding is likely to expand further. Non-residential construction, moreover, is still rapidly expanding. The August figures of the value of building plans approved by 146 local authorities show a slight increase over the corresponding month last year in the case of dwelling-houses and a more marked expansion in non-residential plans. Consequently, no slump in building activity as a whole seems imminent. Meanwhile, the *Economist* index of building activity is unchanged on the month.

HOME TRADE STATISTICS—AUGUST, 1936

	July, 1936	August, 1936	Compared with August, '35

STATE OF TRADE OVERSEAS

BRITISH EMPIRE

Australia.—The new season wool sales opened strongly, wheat crops promise heavy yields and pastoral conditions are generally satisfactory, states a cable from the National Bank of Australasia. According to the same authority, there has been some irregularity in trade, but turnovers generally exceed those of August, 1935. Building continues active, the Stock Exchange is buoyant, and industrial profits continue on the up-grade.

South Africa—Business activity remains at a high level. Farming conditions are fairly favourable generally, according to the Standard Bank, but the maize market is subject to continual fluctuations in accordance with crop reports. The new season's wool clip is estimated at 262 million lbs., against about 238 million lbs. last season. The briskness of business at Johannesburg is spreading; the building and allied trades remain well employed and prospects are deemed satisfactory. Railway earnings remain above Budget estimates.

Canada.—The seasonal revival in business has been accelerated, according to the Canadian Bank of Commerce, by the early harvest on the prairies and by activity in forestry, mining and some of the heavy and secondary industries. Residential construction has been active, but other building is comparatively quiet. Tourist traffic this summer has been the heaviest for five years. The western wheat crop is estimated to be about 60 per cent. of normal and about 85 per cent. of last year's crop.

India.—The total area under wheat in India is officially estimated at 33,631,000 acres, or 2 per cent. below the 1935 figure of 34,490,000 acres. The total yield is estimated at 9,435,000 tons, against 9,728,000 last year—a fall of 3 per cent. Meanwhile, industrial production continues to go ahead and shows a significant improvement over the past year. Imports in July were slightly below, and exports above, the corresponding figures for 1935.

EUROPE

France.—Industrial activity has not yet recovered from the setback earlier this year. The official index of production, for example, remained unchanged at 98 (1913 = 100) in July, compared with 102 a year ago. Unemployment also is still appreciably higher than last year, the number of applicants for work at the end of August amounting to 458,543, compared with 415,964 last year. Moreover, industry is still hampered by industrial disputes arising from the legislation earlier this year. Prices, meantime, are steadily rising, but quotations for industrial securities remain at a low level, a reflection of the lack of confidence prevailing among business men and investors.

Germany.—Industrial activity continues at a high level. The number of officially recorded unemployed declined further, from 1,169,900 at the end of July to 1,098,000 at the end of August, compared with 1,706,200 a year ago. The heavy industries, particularly, are very active under the stimulus of re-armament expenditure. Output of iron and steel and coal is well above the level of a year ago and the engineering industry is fairly active, having benefited from the increasing orders placed by the United Kingdom. On the other hand, a number of consumers' goods industries, including textiles, appear to be hampered by the shortage of raw materials. Commodity prices are scarcely changed on the month, but quotations for industrial securities have recently tended to sag, partly owing to a decline of confidence in Germany's ability to maintain the current volume of industrial production and profitability.

Norway.—The steady upward trend of foreign trade continued in August, especially as regards imports. The rise in imports is due mainly to increased imports of raw products, ships and machinery. Unemployment is practically unchanged on the month, but appreciably smaller than a year ago. Industrial production in July showed a seasonal reduction compared with June, but the index rose from 91 in July, 1935, to 107 this year. There was a slight increase in unemployed shipping tonnage, due to a deterioration in the tank freight market.

Poland.—Industrial activity is gradually expanding; the index of industrial production rose from 65.9 (1929 = 100) in July, 1935, to 71.9 in June and to 72.0 in July, 1936. The number of applicants for work is slightly lower than a year ago. Imports and exports are also running above the level of 1935.

Sweden.—Business activity is well maintained at the higher level. The extent of the progress made during the past year is reflected in the rise of the index of industrial production, from 126.9 (1929 = 100) in July, 1935, to 135.8 in the corresponding month this year. The value of both imports and exports shows a strongly rising trend and unemployment is below last year's level.

Holland.—There are faint signs of improvements in business conditions here and there, though there has as yet been no reduction in unemployment and hardly any increase in industrial production. Both imports and exports in August, however, were above the level of the corresponding month in 1935.

UNITED STATES OF AMERICA

Recovery continues steadily and is embracing a growing number of branches of activity. Progress is reported in mining, manufacturing, building, transport and overseas trade. Agriculture is

the only industry to have suffered deterioration, a consequence of the drought, but the money income of the farming community is expected to be higher than last year owing to the steep rise in prices. The normal seasonal decline in industrial activity was scarcely felt this summer. Steel production, for example, has been maintained at about 70 per cent. of capacity throughout the holiday period. The *Annalist* index of business activity for August is 101.5, compared with 102.0 in July and 84.9 in the corresponding month last year. It is noteworthy, meantime, that the expansion of industrial production is disclosing a shortage of capacity in a number of industries, including iron and steel, just as the growing prosperity of the country is revealing a shortage of housing accommodation. Hence, a more marked expansion in the activity of the capital equipment and building industries may be expected in the future.

AMERICAN TRADE STATISTICS—AUGUST, 1936

	July 1936	August 1936	Compared with August '35
EMPLOYMENT —(1923-25 = 100)†	87.7	...	+ 7.3

LATIN AMERICA

Shipments of grain from Argentina have not been as large as had been anticipated, and, owing to the limited Argentine supply, no substantial increase is expected in shipments of wheat, linseed and oats. Maize exports, however, are expected to rise to 200,000 tons per week from the present 150,000 tons level. Wheat and linseed quotations have now reacted from the high levels ruling in the early part of August. The Minister of Agriculture has issued an estimate placing the area sown to fine cereals and linseed in 1936-37 at 12 per cent. more than in last season. Exchange difficulties continue in Chile, but trade with Germany continues to expand. Brazilian exports in June were the highest for some eighteen months, this being due mainly to increased shipments of cotton. The improvement in coffee shipments noticeable early in August was not maintained, and that month's exports were only slightly higher than in July. Criticisms continue to be made by British trading interests in Brazil of the German compensation mark trading arrangements with Brazil whereby German imports are expanding at the expense of Great Britain and the United States. Favourable reports are being received regarding the forthcoming Central American coffee crops.

THE FAR EAST

With the clarification of the political situation, the business outlook in Japan appears more favourable. The maintenance of low interest rates is having a stimulating effect, and industrial profits continue generally on the up-grade. Prices also show a rising trend. Although Stock Exchange business was seasonally quiet during August, the tone was steady. Imports fell to 203 million yen in August, against 215 millions in the previous month and 171 millions in August, 1935; exports rose to 237 million yen, against 230 millions in July and 213 millions in the same month of last year. Meanwhile, China's foreign trade continues above last year's level, imports in August amounting to \$70.4 millions and exports to \$55.3 millions, against \$56.2 millions and \$45.3 millions, respectively, in the same month of 1935.

STATISTICS

In the following tables we give trade and other statistics for as many countries of the world as possible, our endeavour being to combine brevity with comprehensiveness. The greater number of the figures are taken from the Monthly Statistical Bulletin of the League of Nations (published by George Allen and Unwin, Ltd.).
