THE ECONOMIST

"Were all nations to follow the liberal system of free exportation and free importation, the different States into which a great continent was divided would so far resemble the different provinces of a great Empire. As among the different provinces of a great Empire the freedom of the inland trade appears, both from reason and experience, not only the best palliative of a dearth, but the most effectual preventative of a famine, so would the freedom of the exportation and importation trade be among the different States into which a great continent was divided."—ADAM SMITH.

PREMIER AND CABINET

It is just a year since Mr Baldwin stepped into the shoes of Mr MacDonald as Prime Minister. The Cabinet was then reconstructed because of a growing sense that for various reasons—including the state of Mr MacDonald's health—the affairs of the nation were suffering from lack of direction and divided responsibility. The Cabinet had, in fact, become a committee without real direction; and the country heaved a sigh of relief when the chief of the dominant Party took over the reins. Though history is not repeating itself in every particular, it is obvious that the Government barometer has once again fallen very rapidly—partly due to the course of events, but even more to lack of public confidence in the cohesion of the Government and in the leadership exercised by its chief.

One of the oldest conventions of British constitutional practice is that the Cabinet must speak with undivided voice on all issues of Government policy. The convention is essential in a democratic system; for if the Prime Minister cannot secure its observance, the majority in Parliament cannot give firm support to the Government of the day. Cabinet and party will thus disintegrate and the Government itself become the target of factions and cabals.

Since the General Election the Cabinet has certainly not given an impression either of security or of discipline. These seven months have witnessed the dropping of one Foreign Secretary by Mr Baldwin in response to a wave of national indignation against a *volte-face* in the Government's foreign policy; his replacement by another Foreign Secretary who has been unable to prevent a second tergiversation in that field of Government policy; the re-inclusion of the first Foreign Secretary as First Lord of the Admiralty; and, finally, in recent weeks, two vital declarations on foreign policy by Cabinet Ministers not directly concerned with foreign affairs who professed to be merely "thinking aloud." The Chancellor of the Exchequer has been able to think aloud about the Government's aban-

donment of sanctions before it was decided upon by the Cabinet. The Secretary for War has been able to think aloud about what amounts to a military alliance with France in Paris, with the approval of the Foreign Office; and the Government have not disavowed his public cogitations.

These incidents have reached a climax at a moment when our diplomacy has suffered a humiliating failure, when Germany has almost contemptuously ignored the questions we put to her two months ago, and when our friends—in doubt where Britain's policy is leading—regretfully note the waning of our influence and prestige.

Small wonder that in all quarters of the House, as in all parts of the country, a sense of political *malaise* has steadily grown. Has the Prime Minister lost control of the Cabinet? Is there a single coherent Cabinet foreign policy? The Prime Minister says he will retire when he sees fit. But will this be sooner or later? How will the Cabinet be pulled together, and by whom? Who will be in, and who out? While such questions are being asked, Mr Baldwin has unfortunately been compelled to take a week's rest at Chequers and to hand over the reins for the moment to Mr MacDonald and Sir John Simon—the respective leaders of the two minority groups in the National Government.

It can hardly be doubted that these events are harbingers of a domestic political crisis. True, the Government is still in possession of an overwhelming majority in the House of Commons; but this merely means that, though the crisis will in all probability have important repercussions on the political situation at home, it is in origin Governmental and not Parliamentary.

At the moment of writing little can usefully be said about the personal issues involved. Indeed, it is possible that any Cabinet changes may be postponed until the end of the session. But whether Mr Baldwin remains as Prime Minister, or takes some other office, certain things are

necessary to repair the damage that has been done. And a changed outlook in political opinion at home must be carefully noted.

The first thing to be done is clearly to tighten up discipline in the Cabinet. When a former Chancellor of the Exchequer, Mr Lloyd George, made his historic excursion into the realm of foreign affairs at the time of the Agadir crisis, we have it on the authority of all the parties concerned that the text of what he had to say was seen and approved by both Sir Edward Grey and Mr Asquith. They both thought the speech would be helpful. His remarks emphasised the determination of Great Britain to take her stand firmly on the position already laid down in various agreements with France. The two speeches to which exception is now being taken are in quite a different category; for both suggested a change of direction in the most vital aspects of our foreign policy. Lord Halifax began his defence of Mr Duff Cooper in the House of Lords on Wednesday by observing that "it was extremely unwise for a Cabinet Minister to make a speech on any matter even remotely connected with foreign policy without the fullest preparation and most careful examination by all his colleagues." Interpreted literally, this is going very far in days when most public questions are indirectly associated with foreign affairs. But on so vital and so delicate an issue as our relations with France—where Locarno, where staff talks, and where our common obligations under the Covenant have made it so difficult to draw the line—the dictum of Lord Halifax is the only safe guide.

Discipline, then, is the first necessity. It is easy to enforce discipline if the policy of the Cabinet is clearly defined. It is extremely hard if the Cabinet has nothing to say. This is a moment when the formulæ of two or three months ago sound very much out of date; and it is obvious that British policy needs to be re-stated in the light of the events that have followed one another so rapidly in recent weeks. The general objectives remain the same. They need to be re-stated in the light of Italy's victory, the League's failure to protect one of its weaker members, and the re-armament of Germany. The man holding supreme responsibility for the Government of this country—whoever he may be—must quickly undertake the task of defining where we stand, and of unfolding a definite and constructive policy. Until this is done our voice will cease to count, events will pass us by, and Britain will give the impression of a ship with slack sails drifting idly in the doldrums. Either from Mr Baldwin or from someone else a fresh effort is needed if the Government's fortunes are to be restored.

Yet, whether this initiative is forthcoming or not, the events of recent months cannot fail to affect the balance of political forces in this country. Though there may not have been any pronounced swing to the Opposition, the popularity of the Government has certainly waned; and the Labour Party has seized the occasion to launch a nationwide campaign which will be carried into every sphere of policy—social, industrial and foreign. The new Unemployment Assistance regulations, the inadequacy of the School-leaving Age Bill, a rise in the cost of living, the Government's capitulation to the coalowners at the cost of consumers, the working of our tariffs in favour of vested interests like the iron and steel producers—all these will be invoked to supplement the main attack on the Government's failure in the foreign field. There will, in fact, be a sharpening of party divisions which will be accentuated if a new Cabinet sheds its "national" complexion and becomes avowedly Conservative.

Whatever advantages or disadvantages this evolution might have in other circumstances, it would clearly be a misfortune at the present moment if it led to a violent controversy over re-armament. This is the least appropriate subject of party rancour in any country. It can only be avoided if there is substantial unity—as there was unity last September—on the principles to be pursued in our foreign policy. The Government must re-state their foreign policy for their own credit's sake. It is even more essential to do so in order to prevent dissension and divided counsels within the country on a subject where our national interests demand that we should speak with one voice.

FRANCE'S NEW DEAL

THE victory of the Front Populaire in France—the very name is proof of the French workers' recognition of identical interests—seemed the beginning of a new political and social era, just as many American workers envisaged a rosy future after Mr Roosevelt's first election. It seemed the end of uncertainty, exploitation by Government and employers alike, and unemployment. The stay-in strike began as a spontaneous gesture of belief in the new Government's support of, and identity with, the working class. *Nolens volens*, the Government was forced hastily to adopt a whole series of social and economic measures, in themselves extremely important, which had never been fully prepared. Besides the social and economic measures on behalf of the workers, the Blum Government agreed to introduce legislation to alter the relationship between the Bank of France and the Government, to nationalise the armaments and munitions industry, to establish a wheat monopoly on behalf of farmers, to raise the school-leaving age, and to alleviate the pressure of mortgage and bank indebtedness on small farmers and business men.

There are moral as well as economic reasons why this movement for a "New Deal" developed so quickly. While some money wages, especially for skilled labour in the building and in several metallurgical trades, remained virtually stable throughout the depression, most other categories of wages—particularly in the textile industry—fell as fast as, and sometimes faster than, the cost of living. Thus, real wages as well as money wages had in some cases declined since 1932; and this was especially the case in the industrial North and East. Moreover, short-time and unemployment had imposed crushing burdens on the workers' families, without any nation-wide organisation of unemployment assistance. The French worker's standard of living had always been low—lower than that of his English *compatriote*—but during the deflation and depression in France in the last three years it had progressively declined, until working-class families in many industrial districts found themselves below the poverty line. Moreover, last August the cost of living began to rise again at a time when the downward pressure on wages was still being exerted by the Laval administration's measures. It was obvious that a readjustment of the workers' share in the national income could not be long delayed.

The swift legalisation of the workers' demands was followed by results which could have been expected. The French Federation of Trade Unions (*Confédération Générale du Travail*) before May of this year counted a membership of 1,100,000—mostly railwaymen, miners, civil servants and, to a smaller extent, textile workers. This membership has now increased to 3,600,000, and includes nearly all unions. Despite the difficulties of competition and the different interests of large and small enterprises, the employers are also trying to organise themselves in unions; so that collective bargaining should in time facilitate relations between employers and employees.

Whether the French working class as a whole will draw the full and expected benefit from the reforms adopted under the "Matignon Agreement" and the new laws, is quite another problem. Paid holidays have been, till now, the exception, save in one or two very big metallurgical plants, a few mines, and the companies operating under charter or concession, e.g. railways, public utilities, etc. Their extension to all wage-earners is an important advance. Again, thanks to the new public works programme, the housing conditions of the French working class should soon be on the way to improvement—now before it was due.

But these things and the rise in wages mean higher costs; and it is scarcely to be doubted that the cost of living will tend rapidly to increase. On the one hand, agricultural prices will be pushed up by the new wheat monopoly, not to mention the effects of a possible crop failure after a wet spring. On the other hand, the general increase in the earnings of those classes which have had abnormally low incomes will result in a bigger demand for consumption goods—financed, for the greater part, out of inflation—and this will tend materially to raise retail prices. Some signs are already apparent of a tendency to discount in advance such a rise in retail prices.

The French "New Deal," however, must exert a more general bearing on the country's economic life and on the welfare of all classes. The French price system, for long trembling in the balance, is now in complete disequilibrium. It is too early to calculate the rise in industrial costs of production caused by the "New Deal," because the 40-hour week is not yet effective, save in a few individual instances; it will probably not be able to enter into general application for some months; and the agreements between employers and unions are not yet completed in many branches of industry. The following table, however, gives some indication how certain industries would be affected by an increase of 35 per cent. in the cost of labour. (This percentage is a maximum, and presumes a 40-hour week.)

	Proportion of Wages in the Cost of Production (1933)	Net increase in the cost of Production
	%	%
Coal mining	62	21.7
Cotton spinning	48	16.8
Farm implements	38	13.3
Hardware	33	11.5
Building	40	14.0
Automobile	23	8.0
Rayon (one individual company)	35	11.5

Other costs, similarly, are bound to rise: raw materials, transport, distribution, etc. Theoretically, a rise in prices should be welcome after five years of depression, and the American precedent is often invoked. But Mr Roosevelt's "New Deal" consisted essentially in restoring the profit margin of the employer while granting a large proportion of such increased profit to the wage-earner. The system now to be applied in France consists in raising the wage-earner's share without any attempt to restore the profit margin.

From the employers' point of view the problem thus becomes extremely serious. But here, again, distinctions should be drawn. The heavy industries (iron, steel, coal, chemicals) will probably suffer less. Either they sell to the State or Government agencies and will be able to raise their prices; or they are sure to be protected by tariffs and quotas when the necessity arises; or, in some cases, cartel prices leave them at present a fair margin which could be reduced without undue hardship. In addition the bigger concerns enjoy good credit or large liquid resources and will therefore be able to increase their machinery and equipment and, in a few months' time, reduce their labour costs by such rationalisation. The situation is quite different for several other industries, including the textile industry and all smaller enterprises. Competition there is very keen, and increased labour costs for the small organisations, which up to the present have only "held on," may bring them to the verge of bankruptcy. It is true that the Government is endeavouring to grant small producers credit facilities, but their problem is not only one of liquidity. It is a question of their profit margin. To help them efficiently, their productive capacity would need to be raised considerably, so as to lower their cost per unit. In short, the result of the latest reforms is likely to be rationalisation, elimination of smaller units, industrial concentration, and reduced dividends.

The social and financial implications of the reforms are even more obscure. Elimination of the smaller business units and industrial rationalisation mean an immediate increase in unemployment. This will tend to offset the effects of a general abolition of overtime, paid holidays, a 40-hour week, and public works. It may, in addition, put out of work several small independent employers, who have always been a strong element in the French middle class.

On the other hand, the financial burden weighing upon the Government is extremely heavy. Not only the Budget and railway deficits, but the proposed policy of cheap credits (which may well turn out to be mere subsidies) will result in inflation. The fact that no gold embargo has yet been imposed leaves the door open to capital exports, and this may well continue to counteract the effects of inflation, as it has done during recent months. There is a chance, however, that the increase of incomes may develop the

internal market to such an extent that a kind of economic equilibrium would be restored if *only the rise in prices were rapid enough*. This rise in prices is the essential condition for the success of M. Blum's experiment. But then a dangerous dilemma will have to be faced. The Government has up to the present remained equally adverse to devaluation and to a closed economy system. Whether the experiment proves a success—in other words, if all prices rise practically in line—or whether the experiment fails, a choice between the two can scarcely be avoided much longer.

ELECTRICITY DISTRIBUTION

(BY A CORRESPONDENT)

WITH commendable promptitude, the Committee set up by the Minister of Transport in July, 1935, consisting of Sir Harry McGowan, Sir John Snell (chairman of the Electricity Commission), and Mr John Morrison, have issued their recommendations for the improvement of electricity distribution in this country. The Central Electricity Board's grid for the national transmission of the electricity which "authorised undertakers" are compelled to sell to the Board was completed last year. At once it became obvious that the nation-wide organisation of electricity transmission would not yield all its advantages as long as the distribution of "grid" electricity to consumers was left to innumerable competing concerns in all regions of the country.

The Committee now recommend the appointment of an unspecified number of District Commissioners to work out detailed plans for the reorganisation of electricity distribution to consumers, each for one district, and to draft the lines on which such plans should be based. The mandate of such a District Commissioner would be to consolidate the electricity supply system of his district into larger units by negotiating—with compulsory powers in his pocket—the absorption of the smaller undertakings by the larger, whether private company-owned or municipally-owned. The size of unit envisaged is not specified; but since the compulsory powers applicable to undertakings with an output of less than 10 million units are more drastic than for those of larger size, it is clear that a minimum well above this limit is presumed.

In cases where company undertakings survive—and it now seems likely that the greater part of the electricity distribution industry will fall into company hands—the franchises (licences) which are to be established should run, it is suggested, for fifty years. This period would apply to the wholesaling rights which the companies now hold in perpetuity, to distribution rights which they now hold (with varying unexpired periods of the usual 42-year franchise) and to the distribution rights which are to be taken over from other authorities. The private concerns are

to be subjected to control over their earnings. This is to be effected by sliding scales which connect the rates charged to consumers with the profits allowed. The basic earnings which are allowed (*before* the addition of the sliding-scale benefit to the companies) are to be slightly in excess of the present level of profits, with a further allowance for unfructified capital. The Electricity Commissioners are to revise the sliding scales every three years if necessary, in view of any changed circumstances. Local authorities which are dispossessed of their electricity undertakings are to receive in compensation the value of their physical assets at cost, less depreciation. Dispossessed companies are to be more generously treated, compensation being payable not merely for loss of present earning power, but also for loss of prospective increases in profits during the validity of the new franchise.

There are two broad issues on which the views of the Committee will receive almost unanimous approval. First, the desirability of larger units for electricity operation and distribution; second, the necessity for compulsory powers. The industry's history is strewn with attempts to bring some measure of rationalisation into the industry. They have failed because Parliament was unwilling to impose compulsion, even when co-operation would have been manifestly to the advantage of the supplier as well as of the consumer. The Committee's report refers to many such examples, but it omits two which are *à propos*.

In 1904 certain enterprising persons promoted legislation to compel the London Supply Companies to make intelligent co-operative arrangements for generation of electricity. Had it not been for the rarest of Parliamentary accidents, legislation would have been concluded; but at the last moment it was frustrated. Twenty long years, and a sum running into seven figures, were wasted in individual generation before the London Electricity Acts of 1925 achieved the same object. The 1925 Act made provision for similar co-ordination of distribution in London; it was not until 1935 that the first steps were taken to carry out that co-ordination. Again, the Central Electricity Board would have been unnecessary if the companies and local authorities had had sufficient business sense to take advantage for themselves of the easily demonstrable economies of "pooled generation."

It has been a common criticism of the industry that its management has been, generally, in the hands of technical men rather than of business executives or administrators. If the leaders of the industry have hitherto been slow to obtain, in the interests of their undertakings, so obvious a technical economy, it is scarcely surprising that, on the purely commercial side, the operation of the companies has been such that the general public has been led to believe that they are both inefficient and exacting in their charges. True, there are many exceptions. The North Eastern Electricity Supply Company, Ltd., for example, has built up a large system which, on the technical side, very largely forestalled the Central Board, and on the commercial side has been both enlightened and mindful of the public interest. But more intimate knowledge than that of the general public certainly suggests that the company-owned undertakings, by and large, have shown neither outstanding commercial efficiency in the pursuit of their own interests, nor overmuch zeal for those of the consumers.

The report claims that the steady increase of demand for electricity in recent years is testimony to the efficiency of the industry. It is doubtful whether the general public would accept this as adequate evidence. An interesting sidelight is thrown, both on the efficiency of some undertakings and on the attitude of the Committee, by their observation that, in the area of one undertaker, there have sprung up no less than thirty-two unauthorised undertakers, operating without statutory powers, and supplying some 29,000 consumers and 5,000 public lamps. This was apparently quoted by the undertaker, and accepted by the Committee, not as evidence of the statutory undertaker's high rates or lack of commercial enterprise, but as a sad case of a statutory undertaker being deprived of his natural prey.

If the operation of company undertakings has on the whole fallen short of reasonable standards, both in business efficiency and also in public responsibility, what reason is there for leaving large companies in possession of

the field for another fifty years? True, there are a number of companies open to neither reproach. But there is no particular reason to think that the virtues are found rather among the large companies than the small; and the terms proposed for compensation are such that (unless a crushing burden of capital charges is to be imposed on all consumers) District Commissioners will find themselves compelled to hand over the greater part of their districts to the larger companies, whether these are good, bad or indifferent. Consumption of electricity is not likely to streak ahead on this showing.

In so far as the report envisages the transfer to Local Authorities of a substantial district surrounding their own area, there is less ground for criticism. For although the administration of electricity supply by Local Authorities has, on the average, fallen as far short of the ideals of business efficiency as that of the companies, they have given service on much more economical terms—at all events, to domestic consumers. There does not, however, seem much logic in an arrangement which would give the citizens of Carlisle responsibility for electricity supply in districts perhaps twenty miles beyond their boundaries.

Inevitably a good deal of opposition to the Committee's recommendations will arise. Local Authorities which have developed their own undertakings and are giving efficient service at reasonable prices will scarcely view with equanimity the proposal to transfer their constituents to power companies from whom, at best, future reductions in rates are likely to come more slowly than if the present arrangements continue. It is hard to see how the District Commissioners will effectively carry out their duties, even within the limitations imposed on them. Delimitation of their districts alone will call for a great deal of careful study. Where are ten or twenty men of the requisite ability, special knowledge, and personal disinterestedness, ready to tackle such tasks merely on a temporary basis?

The report implicitly recognises that the ideal solution of the country's electricity distribution problem would be the constitution of regional authorities. There will be general agreement with this view, particularly when it can be shown that suitable arrangements could be devised to ensure public responsibility and public accountability. They are ready to prepare the way for such a solution—in fifty years' time! But they absolve themselves from recommending it for immediate application, on the ground that its institution would involve dislocations. One could have hoped that so eminent a Committee, even if they refused the ideal solution, would not have set their seal on temporisation and delay. Unfortunately, it seems too much to hope that the Government will be bolder than its advisers.

CAPITAL MARKET ANOMALIES

CONDITIONS in the London capital market in the last six months have presented a series of curious anomalies. The number of new prospectuses and offers for sale has been large enough to give a superficial impression of abundant activity, but closer examination suggests a different conclusion. The residential building boom continues to be financed mainly through the building societies. The steel industry has so far satisfied its requirements largely by bank accommodation or by offering new capital to existing shareholders. The majority of new company prospectuses—in which engineering concerns have figured prominently—have mainly transferred established businesses from private to public hands. Only a modicum of new working capital has been left over after satisfaction of "purchase considerations" and issue expenses.

Altogether, activity in the uncontrolled areas of the market has been unspectacular. In the gilt-edged new issue market, the British Government has not appeared as a borrower. Only the Australian and New Zealand Governments have made conversion offers on any considerable scale. The feature of the half-year, has been the flotation of a series of 3 per cent. home corporation loans at issue prices which have steadily declined from 101 (for Smethwick) in January to 98½ (for Salford) at the end of May. The absence of any further corporation issues in

the past month suggests that the authorities may have halted the queue of new borrowers once again.

Our customary computation of the total value of the half-year's new issues throws these tendencies into strong relief. We have supplemented our normal figures of direct public offers by including the proceeds of indirect placings which have reached the public through the medium of Stock Exchange "permission to deal." Our method of enumeration was explained in detail in the *Economist* of May 28th last (page 695), and it is necessary here merely to reiterate the warning that, while our old basis figures certainly underestimate the total new capital made available to the public, the new basis totals may err in an opposite sense. The following table shows the old basis totals for a number of past years and the new basis figures for the first two quarters of 1935 and 1936:—

NEW CAPITAL ISSUES, CLASSES OF BORROWERS
(£ millions)

	Total	British Government	Foreign and Colonial Govt.	British Colonial and Foreign Corpns.	Foreign Railways	Mines, Finance, and Exploration	Rubber and Oil	Balance (Mainly Home Industry)
Old Basis								
Whole year 1928	389.0	83.8	56.1	26.4	3.1	49.7	8.7	141.2
" " 1932	188.9	102.8	23.8	28.9	Nil	2.7	0.8	29.9

New Basis								
1935—1st quarter	74.7	3.0	0.7	3.7	0.2	12.7	0.9	53.5
2nd quarter	66.0	Dr. 5	Nil	12.6	Nil	6.6	0.2	47.1
1936—1st quarter	94.7	0.7	1.3	41.0	0.1	7.9	0.8	42.9
2nd quarter	79.2	Dr. 0.8	2.4	6.0	0.2	8.1	1.1	62.2

The market, clearly, is much less active to-day than in 1928, when industrial production, as a whole, was lower, and interest rates were higher. The really influential borrowers of pre-war years were Governments (especially foreign Governments), railways and overseas industries like rubber and oil. These classes of borrowers are obtaining practically no new money in London to-day. In the first half of this year some 47 per cent. of the total issues on the old basis (and some 60 per cent. on the new basis) have gone mainly into home industry, while domestic borrowing as a whole, as the next table shows, has accounted for as much as nine-tenths of the aggregate, on either method of computation:—

DESTINATION OF NEW CAPITAL

	Old Basis				New Basis	
	First Half Years of				First Half Years of	
	1933	1934	1935	1936	1935	1936
United Kingdom:						
Government	£ 61,420,800	£ 42,850,000	£ 2,500,000	£ Dr100,000	£ 2,500,000	£ Dr100,000
Other	39,799,700	35,315,500	87,851,300	90,173,800	124,543,300	156,736,500
	101,220,500	78,165,500	90,351,300	90,173,800	127,043,300	156,836,500
British Possessions:						
Government	6,989,500	8,481,200	Nil	Nil	264,000	410,000
Other	1,615,100	9,150,200	4,998,300	8,751,000	11,940,000	11,982,900
	8,604,600	17,631,400	4,998,300	8,751,000	12,204,000	12,392,900
Foreign Countries:						
Government	985,000	Nil	Nil	Nil	519,400	3,290,500
Other	36,800	1,103,300	182,800	447,300	930,900	1,682,400
	1,001,800	1,103,300	182,800	447,300	1,450,300	4,972,900
Grand Total	110,806,500	96,899,200	95,300,200	99,272,100	140,697,600	173,932,300

In the first six months of each year, from 1933 to 1936 inclusive, on the old basis, the percentages of domestic to total borrowing have been 92, 80, 92 and 91. The balance has gone almost entirely to the British Empire, the share of non-British countries in each of the four years

THE BRITISH LINEN BANK

Incorporated by Royal Charter, 1746

having been no more than 0.9, 1.1, 0.3 and 0.5 per cent. respectively. Even on the new basis, domestic borrowing accounted, in the first half of 1935 and 1936, respectively, for 91 per cent. and 91 per cent., British possessions for 9 per cent. and 7 per cent., and foreign countries for only 1.1 per cent. and 2.8 per cent.

Which industries have been responsible for the greater part of this mainly industrial and mainly domestic borrowing? The next table gives the answer:—

ANALYSIS OF NEW CAPITAL APPLICATIONS (EXCLUDING CONVERSIONS)

	Total for First Half of Years			
	Old Basis		New Basis	
	1935	1936	1935	1936
British Government loans	£ 2,500,000	£ Dr100,000	£ 2,500,000	£ Dr100,000
Colonial Government loans	Nil	Nil	264,000	410,000

Estate and land	2,958,200	561,300	3,760,000	949,200
Rubber	115,000	1,079,000	1,079,000	1,227,400
Oil	Nil	303,500	Nil	675,900
Iron, coal, steel and engineering	4,476,800	11,052,100	6,397,300	15,716,800
Electric light, power and telegraph	2,630,800	4,634,300	5,219,700	6,019,400
Tramway and omnibus	Nil	83,400	3,884,100	6,201,300
Motor traction and manufacturing	945,000	1,139,500	1,312,500	4,674,100
Gas and water	2,706,800	590,700	6,300,400	6,274,400
Hôtels, theatres and entertainments	317,400	1,846,000	634,400	3,097,100
Patents and proprietary articles	1,065,000	275,800	2,022,200	1,891,400
Docks, harbours and shipping	Nil	62,500	9,702,900	2,294,600
Banks and insurance	1,529,400	2,488,400	1,529,400	2,488,400
Manufacturing and miscellaneous	19,285,700	18,380,900	47,905,900	60,152,400
Total	65,300,200	99,272,100	140,697,600	173,932,300

Taking the more comprehensive new basis figures throughout, it will be seen that the largest group total is that of "British Corporation, County and Public Board Loans," which have accounted for £47,027,900 in the last six months. Altogether, 29 authorities have visited the market during this period, the great majority being municipal corporations. An appreciable part of the money raised by these bodies, however, has been for conversion purposes, or for the funding of short-term obligations. Of the total shown in our table, as much as £30,324,492 has been taken for quasi-industrial uses, by borrowers like the Railway Finance Corporation, the Central Electricity Board, the Mersey Docks and the Northern Ireland Transport Board. Next in numerical importance in our table come the steel and engineering industries, with aggregate new borrowing of £15,716,800 in the last six months. This total is about two-and-a-half times as large as that of the first half of 1935, but a significant part of it has reached the market indirectly, by Stock Exchange placing. The motor industry has also taken more capital, by issue and by placing, this year than last, but the figures for almost every other home industrial group show a falling-off this year—including the residual and very representative manufacturing and miscellaneous section.

The flow of conversion operations appears also to be slackening, as the following table suggests:—

TOTAL CONVERSION OPERATIONS (OLD BASIS)

Period	Total Conversions Old Basis	Period	Total Conversions Old Basis
Whole year, 1928	324,041,983	First quarter, 1935	67,794,807
Whole year, 1932	2,510,774,302(a)	Second quarter, 1935	21,379,935
Whole year, 1933	223,141,000(b)	First quarter, 1936	44,170,503
Whole year, 1934	241,871,800(c)	Second quarter, 1936	37,815,538
Whole year, 1935	312,203,758(d)		

(a) Includes British Government Conversions of £2,478,967,382.

(b) Includes British Government Conversions of £50,757,000.

(c) Includes British Government Conversions of £105,000,000.

(d) Includes British Government Conversions of £204,000,000.

The total amount of stock converted to a lower interest basis in the second quarter of this year was higher than in the corresponding period of 1935 (thanks mainly to an Australian Commonwealth operation involving £16½ millions in the middle of May), the total for the last six months is £7,188,701 less than that in the first half of 1935. On page 42 we give supplementary tables showing the distribution of new borrowing between fixed interest and equity stocks, and the latest prices of some of the more important issues of the last six months. Broadly, our analysis of contemporary conditions suggests that British industry, in a period of rising production, is making no abnormally large demands on the public capital market.

A significant part of the recent expansion of production, clearly, has been financed internally, by the ploughing-back of profits, etc. Though the investment quality of some recent company prospectuses may have been open to criticism, there has been little quantitative evidence of boom conditions, corresponding, say, to those of 1928. If the free market is less active than might be expected, the controlled market can only be described as stagnant.

There is disturbing evidence, indeed, that present conditions are producing a tendency to atrophy in many of the market's normal functions. The authorities may soon have to make a definite decision on a major question of policy. Should contemporary anomalies be allowed indefinitely to remain? Or would a stimulation of new gilt-edged borrowing, even if it involved some rise in the "offered" rate of interest, be preferable to a regime of output restriction? These questions give point to the suggestion made in our article on "Future Monetary Policy," in the *Economist* of June 20th (page 663) that the monetary authorities should be prepared to expand the national credit structure, in case of need. The coincidence of a long waiting list of borrowers, with "indigestion" among investors, is ominous when a re-armament loan looms on the horizon.

BRITISH STEEL METHODS

The discussion in the Commons on Tuesday over the proposal to start a basic Bessemer steelworks in Jarrow, one of the most depressed areas, renders timely an examination of the possibilities of this type of steelworks. The Jarrow scheme has been held up, for the time being, by opposing interests, as described in a Note on page 9. The following article, by a special correspondent, discusses the advantages of the basic Bessemer process, which was to have been employed in the proposed works at Jarrow.

THE sharp increase in the costs of steel manufacture in this country during the past year, and the stringency of supply in the sections of British steelworks which produce both finished and semi-finished goods, have served to focus the attention of steelmakers on alternative processes of steel manufacture. The potential importance of these new processes can best be gauged by the large sums now being sunk in new British steelworks. Plans involving the expenditure of over £8,000,000 have been begun or completed in the past six months. The time is clearly ripe for investigating methods of steel manufacture not hitherto practised in this country; but perfected abroad.

Since the discoveries of Thomas and Gilchrist in 1879, the basic open-hearth furnace has dominated the British steel industry, as the following production figures show:—

	1901	Tons 1913	1925
Basic open-hearth	351,000	2,252,000	4,744,000
Basic Bessemer.....	496,000	552,000	28,000

Steel refining by Bessemer convertors was also developed on a commercial scale in the '80's; but from the outset this process lost favour in this country, largely owing to difficulties in standardising and regularising the quality. On the other hand, well over half the output of steel ingots in Western Europe to-day consists of basic Bessemer, commonly known as Thomas steels, of which over 25 million tons have been imported into this country since the war. For all practical purposes, these two processes hold the field. Concentration of capital and research for half a century upon Siemens and Talbot furnaces embodying the open-hearth principle has led to a very high degree of efficiency in British melting shops. But until fairly recently the balance of conditions, originally unfavourable to the working of the basic Bessemer process in this country, had not altered sufficiently to call for reconsideration.

Under the most favourable conditions for supplies of the right type of pig-iron and coke, basic Bessemer steel could now be produced in this country at a probable cost cheaper by 6s. to 10s. a ton than open-hearth steel. This comparison is based on a figure of 20s. per ton for the cost of converting blast-furnace iron and scrap under present practice in this country. Any further rise in the prices of coal and scrap will widen this margin; for the Bessemer convertor uses no outside scrap and no external fuel. In contrast, the gas producers that serve open-hearth furnaces require some 4 cwt. of coal per ton-ingot of steel.

The Bessemer-produced billets in finished form would not, it is believed, under existing arrangements for prices, be sold at lower prices than the corresponding open-hearth billets. With both rising costs and inadequate existing capacity, the higher margin of profit, therefore, provides an incentive at the present time for the laying down of Bessemer plant.

There are further considerations. A number of modern wide strip mills for the manufacture of tinplate and sheets are now either under construction or on the drawing board. Basic Bessemer steel is eminently suitable for the wheel stampings, motor-car parts and body work which are made from such sheets. Its welding properties often surpass those of open-hearth steel. South Wales tinplate makers have for years relied on foreign supplies of semi-finished basic Bessemer. The easing of the congestion in the British steel industry, which has this year necessitated emergency imports of foreign semis, largely basic Bessemer, is another potent incentive to lay down Bessemer plants. Open-hearth steels have been increasingly diverted to structural purposes and to shipbuilding, for which, under ruling standards, basic Bessemer may not be specified. The latter, nevertheless, is a complete substitute in bars, hoops and smaller sections, as well as in tubes. Failures in the structure of basic Bessemer are to-day extremely rare. Of the 1935 output of finished steel in the United Kingdom, not less than 1,500,000 tons, and probably as much as 2,500,000 tons, could have been manufactured from basic Bessemer without departing from specification.

The future equipment of the industry calls for consideration in the light of possible modifications in the International Cartel agreement, or of its breakdown in consequence, for instance, of currency devaluation on the Continent. Were it not for the current import quota restrictions, foreign producers would make every effort to increase their imports into Great Britain of finished steels and to decrease those of semi-finished. The encouragement and maintenance of high prices of finished British steel by tariff and quotas, makes the former business extremely attractive to the foreign suppliers. In the event, therefore, of some allocation of new British import quotas to foreign producers after next August, a new call would be made on this country's capacity for semi-finished steel of the basic Bessemer type. But even without this assumption, it is clear that a reduction in British steel exports below Britain's agreed export quota will become more probable

as the claims of home demand become more insistent. A supply of cheap basic Bessemer steel in this country would provide the British steel industry with a powerful competitive weapon in foreign markets, where Bessemer products are in general use. Bars, light sections and sheets and tubes amounting to nearly 1,400,000 tons were exported from the United Kingdom in 1935. This tonnage could have absorbed so much basic Bessemer at a lower cost. Of the total production of steel in this country in 1935, amounting to roughly 10 million tons, between 3 million and 4 million tons could have found a market in the form of basic Bessemer.

At a time of rising costs, there exists a strong case for the inclusion of the Bessemer process within some of the schemes now in hand for extension of the British industry.

Moreover, the majority of these schemes include rolling mills and ancillary plant, such as coke ovens.

With a view to the avoidance of surplus capacity and excessive competition in the British industry later on, the British Iron and Steel Federation is exercising strict control over the expansion of steel furnaces. Another of the Federation's anxieties is to preserve the balance between imports and exports established in their pact with the Continental Cartel. In this way, a tendency has arisen to bring old furnaces back into production, or to overload existing furnaces, rather than to develop on new lines which, as in the case of basic Bessemer conversion, would help to keep down the prices of British steel. This tendency, in the present situation of both the British industry and the home consumers of British steel, is to be deplored.

NOTES OF THE WEEK

The Week at Geneva.—The meetings of the League Council have this week been overshadowed by the Assembly, the negotiations between three of the Locarno Powers, and discussions between the representatives of all the Powers (save Italy) interested in Turkey's request for the remilitarisation of the Straits. In the Assembly meeting on Tuesday the Argentine delegate vehemently urged non-recognition of any aggressor's forcible acquisitions; after which the Emperor of Ethiopia made a dignified, but fruitless, plea for the League assistance on which he had counted in vain. His speech was marred by a shameful scene of disorder, unique in the League's history, perpetrated by a gang of Italian so-called journalists, who were arrested and expelled from the Canton of Geneva. The Assembly on Wednesday confirmed the impression that sanctions would not be officially lifted, but that each country would defect from the sanctions front. A spirited speech by Mr Te Water, the South African representative, who urged the retention of sanctions as the lesser evil in the long run, even if they provoked war with Italy, contrasted strangely with Mr Eden's apologia for the British initiative and Mr Bruce's lame support of it. M. Blum's speech on Wednesday at least made it plain that his Government aims at removing the distrust, evoked by M. Laval's equivocation, of French support of collective resistance to aggression. It was a constructive programme which M. Blum put forward in an uninspiring manner: no amendments of the Covenant, strengthening of the provisions for collective resistance to aggression, obligations to give military assistance to be confined to States in the various regional groupings, and the general obligations of Article XVI to remain binding on all League members. Mr Eden made no declaration of British policy whatever, beyond associating his Government with the Assembly's insistence on "no recognition." He merely said that it would be better to leave the question of "League reform" till September, and that, for the present, his Government was maintaining the arrangements for mutual assistance in the Mediterranean in case of certain eventualities. The Danzig and Straits problems (discussed in succeeding Notes) lent a touch of drama to what must surely have been the most depressing and dispiriting Assembly in the League's existence.

Danzig Again.—Herr Hitler's personal rancour at the damning—and therefore, to him, damnable—virility of the old non-Nazi German political parties in the Free City of Danzig is dangerous for Europe. The speed with which one "incident" there is now following on the heels of another emphasises that danger. The latest incident is the refusal of the commander of a visiting German man-of-war to attend an official reception given in honour of the vessel's visit to Danzig, by the League of Nations High Commissioner, Mr Sean Lester. The commander was

acting under official instructions from Berlin; and the meaning of the act of discourtesy has been emphasised in a statement issued by a certain Herr Foerster—the Nazi regional leader in the Danzig territory. Herr Foerster's explanation is that the direct understanding between the third Reich and Poland has rendered the presence of any representative of the League of Nations at Danzig superfluous. On this account, according to Herr Foerster, "the High Commissioner thinks that he must prove his right to exist in Danzig in other spheres"; and he does this "by constantly interfering in the internal politics of the Free City." The honourable Gauleiter goes on to declare that "there would long ago have been no more parties in Danzig if it had not been for the League of Nations"—and in this statement, which is as accurate as it is sincere, he ingeniously gives away his Führer's case. Even the limited measure of authority which the League High Commissioner at Danzig enjoys has been sufficient—when equitably and courageously exercised, as it has been, in Mr Lester's hands—to prevent the notorious Nazi methods from producing in Danzig the results which they have achieved in the Reich. To Herr Hitler, this is a standing reproach. And for this reason we are compelled to regard Danzig as being no less acute a danger point than the Bohemian Sudetenland. A Nazi *Putsch* in Danzig would drive Poland out of the German-Polish Pact, and Colonel Beck, perhaps, out of office. It is a good thing that Mr Lester has gone to Geneva to render in person an account of these problems to the League Council. Mr Eden is *rapporteur* for Danzig. It is to be hoped that, once again, he will impress on Dr. Greiser, the Nazi President of the Danzig Senate, who is also in Geneva, the urgent concern of the League and of the British Government.

After the Conventions.—The Democratic Convention at Philadelphia, contrary to all expectations, turned out to be a more contentious occasion than the Republican Convention at Cleveland a fortnight earlier. Not that there was any hitch in the re-nominations of President Roosevelt and Vice-President Garner; both were achieved by acclamation, and the small group of dissidents who attempted to represent the views of Mr Al Smith got some rough handling. But there was quite a severe struggle in the committee charged with drawing up the platform. Until a few weeks ago it had been assumed that the platform would be drawn up to cause the least offence, and that the President would "run on his record" rather than on promises of future action. Events immediately preceding the Convention, however, apparently caused a change of plan, to which the conservatives in the party only consented after long debates. The advocacy by Governor Landon of a constitutional amendment, the widespread criticism of the Republican platform for its vagueness and contradictions, and the appearance of Mr

Lemke as a Presidential candidate on Mr. Roosevelt's left flank, all encouraged the President to be a little bolder than had been his intention. The resulting document is hardly a blueprint for four years of legislation. It is, as all such manifestos are, wordy, unprecise and equivocal. But it does at least face the major issue of American politics, which has been avoided for the past twelve months. We know, it says,

That drought, dust storms, floods, minimum wages, maximum hours, child labour, and working conditions in industry, monopolistic and unfair business practices cannot be handled adequately by 48 separate State Legislatures, 48 separate State Administrations and 48 separate State Courts.

Having gone so far, the platform fails to say in so many words that the Constitution ought to be amended to increase the powers of the Federal Government, but proposes instead a "clarifying amendment" to confer the necessary powers on "the Legislatures of the several States and the Congress of the United States, each within its proper jurisdiction." But the intention is nevertheless clear and the issue is joined, albeit somewhat obliquely. Mr. Roosevelt himself said nothing on this paramount issue in his eloquent speech accepting the nomination. He preferred to appear as the champion of the "forgotten man" against the encroachments of economic autocracy. He accused the Conservatives of being the destroyers of American liberty. "Out of this modern civilisation new royalists carved new dynasties. New kingdoms were built upon concentration of control over material things. . . . Against economic tyranny such as this the citizen could only appeal to the organised power of the Government." This is the voice of Liberalism as the term is understood in Europe. It is the theme which won such instant acclaim for Mr. Roosevelt in his inaugural address in 1933. It remains to be seen whether it retains its appeal in 1936, now that it has been made clear that the Constitution, as well as the Republican Party, stands between the President's eloquent generalities and their translation into hard fact.

* * *

Russia and the Straits.—Last Saturday there was a talk at Geneva between M. Litvinov, Mr. Eden and M. Aras which seems to have cut the knot of the problem under negotiation at Montreux. An agreement has been concluded to accept a solution which meets the Russian demand. The gist of this demand was that, while the Powers with Black Sea coastlines inside the Straits were to be free to send their warships out through the Straits into the Mediterranean without any limit on maximum global tonnage, there was to be such a limit upon the tonnage of warships that may be sent in through the Straits into the Black Sea by the Powers whose seaboard lies outside. Mr. Eden has succeeded in persuading M. Litvinov to agree to a higher maximum global tonnage for incoming naval forces than the Russian statesman originally proposed. This concession, however, will make no substantial difference—and as for the concession which has been demanded by M. Paul-Boncour, M. Litvinov was no doubt able to accept it with as great alacrity as if it had emanated from himself. (Indeed, it may well have done so.) M. Paul-Boncour's stipulation is that the provisions of the new Straits Convention for the passage of warships shall not in any way restrict the passage of warships fulfilling obligations of assistance resulting either from the League Covenant itself or from agreements concluded within its framework. In other words, there is to be free passage through the Straits for any French or Russian warships on their "lawful occasions" in pursuance of the Franco-Russian Pact of mutual assistance. This decision—in which Turkey appears to acquiesce—seems likely to have profoundly important international consequences. At the moment when Germany has succeeded in slamming her once open back-door in the Rhineland, a waterway is being opened along which France and Russia may keep in contact *via* the Mediterranean, if either or both of them find themselves again involved in war with Germany. For Herr Hitler this new turn in the international situation is unexpected and disconcerting. The present Russian move may incline him to make two

retorts. In the first place he may be tempted to inform the British Admiralty that he can no longer hold himself bound to the naval ratios laid down in last year's Anglo-German naval agreement. Secondly, he may lend a more favourable ear to Herr Rosenberg's schemes for detaching the Ukraine from Russia—since this would have the incidental effect of depriving Russia of most of her Black Sea ports. The current of international discord is swiftly gathering speed. Are there falls ahead, or only rapids?

* * *

The Arabs' Retort.—The steady inflow of British reinforcements into Palestine from Egypt has not so far had any appreciable effect in repressing the Arab insurrection, which has now flared into a veritable guerilla warfare all over the country. Mr. Ormsby-Gore's speech in the Commons on June 19th has drawn a reply from the Higher Arab Committee at Jerusalem. The document is impressive because it goes to the heart of the controversy and takes an intransigent stand in studiously moderate language. The main points made by the Arab leaders are, first, that the Colonial Secretary's conciliatory tone was unaccompanied by any suggestion that Great Britain was prepared to change the policy to which the Arabs object; secondly, that the situation is graver than Mr. Ormsby-Gore admits; thirdly, that the Arab leaders, in continuing the strike, are doing what is demanded of them by Arab public opinion; and, fourthly, that "the only measure possible for allaying Arab fears" is "a permanent stoppage of Jewish immigration, the cessation of the sale of land to Jews, and the establishment of a representative national Government"—interpreted in the sense of a Government representative of all peoples in the country. It is not clear whether the Arab leaders are demanding representation in proportion to numbers or representation on a communal basis in an agreed ratio which need not necessarily correspond to the relative numerical strengths of the Arab and Jewish populations. It is clear, however, that, while the Arabs do not propose to evict the Jews who have already found a home in Palestine, they do demand that there shall be no further reinforcement of their numbers by immigration. This would mean that the present ratio of numerical strengths—400,000 Jews as against 760,000 Arabs—would steadily change to the Jews' disadvantage, since, in absolute numbers, the Arab community, by natural increase alone, has advanced neck-and-neck with the Jewish community during a period when the latter has been growing, not only by natural increase, but also by an extraordinary influx of immigrants. The prospect laid by the Arabs before the Jews now gives an ominous meaning to the Higher Arab Committee's concluding remark that "the expectation that Arabs and Jews can live peaceably together is contrary to both logic and experience." If neither community in Palestine can muster the statesmanship to suggest terms of settlement that would make life tolerable for the other community, the outlook is grim.

* * *

The Unemployment Scales.—The chance of an adequate Parliamentary discussion of the new unemployment relief scales, and the hope of achieving something like agreement, seem to be steadily waning. After months of procrastination, Mr. Ernest Brown, the Minister of Labour, announced in the House on Tuesday that he would lay the regulations before the House on July 14th. Members at once protested that this would not allow adequate time for consideration and discussion, since the session is adjourned on July 31st. Mr. Attlee pointed out that the Government have taken sixteen months to consider the matter, and Mr. Maxton asserted that only five Parliamentary days would be available between July 14th and July 31st for discussing the regulations. Sir John Simon replied that the Opposition had long complained of delay, and asked whether they now wanted a postponement still further. To this, however, various speakers, Labour and Conservative alike, retorted that the regulations should either be published before July 14th or else postponed to the autumn. It will certainly be highly unfortunate if exami-

nation of the regulations is in any way hurried. They are bound to be at once complicated and controversial; and they will affect many interests, including the local authorities. Indeed, when it is remembered that lack of proper consideration was an admitted cause of last year's fiasco, the Government's decision finally to rush the matter seems unwise. The regulations have to be accepted or rejected outright by Parliament and cannot be amended. In these circumstances it is bound to be said that the Government is trying to hurry them through Parliament at the tail end of a session when the minds of both M.P.s and the public are directed to holidays rather than politics. Doubtless this suspicion is unjustified. But would it not be possible to publish the regulations a little earlier so as to allow, say, a fortnight's consideration before they are actually debated?

* * *

The Jarrow Scheme.—In a speech at Newcastle on the morrow of the General Election, Mr. Baldwin endorsed the general desire that the North-East Coast should be one of the districts selected for the extension of iron and steelworks, consequent upon the Government's re-armament programme. At that time it was proposed to lay down a complete basic Bessemer steel plant at Jarrow, probably the most destitute town in any depressed area. This Continental process of steel manufacture (described in a special article on page 6) could have been developed with good economic prospects in the proposed works at Jarrow on an annual output of 500,000 tons, provided sufficient extra land for the site could be obtained. Such was the report of the expert adviser called in to examine the scheme, an expert who, it is said, was "very largely responsible for the highly modern steel plant of Stewarts and Lloyds." In December, Sir Andrew Duncan, chairman of the British Iron and Steel Federation, declared that the Jarrow proposition not only should go on, but that it ought to go on. Yet in the Commons on Tuesday, during a debate on the obnoxious Clause 6 of the Finance Bill (on which we commented on June 13th, page 596) it was announced by Mr. Lewis Jones, speaking "officially on behalf of the iron and steel trade," that "a number of important steel firms examined the (Jarrow) position from a technical and a commercial point of view, and were forced reluctantly to the conclusion that it was not a commercial and technical proposition." Here is direct conflict of evidence between interested and disinterested technical experts, the former anxious not to see an increase of competition in the North-East area, the latter called in only to advise the promoters of the Jarrow scheme. Mr. Jones protested that if anyone still cared to launch the Jarrow scheme they "would be welcomed as members of the British Iron and Steel Federation and get all the facilities that any other member gets." Quite; but the plain fact is that under Clause 6 of the Finance Bill, as shown in the White Paper which was forced from the Government last week, the Federation is to be given power to decree the extra-quota quantities of imports of foreign steel at specially low duties or even duty-free, and to allocate them among British concerns as it sees fit. It will thus be enabled to control the entire price structure of the iron and steel trade. There will be little economic breathing space for any steelworks which does not bow the knee to the Federation, once it has these unparalleled statutory powers. If ever there was a clear case for an impartial inquiry, it is this Jarrow affair.

* * *

Government and B.B.C.—Nearly four months after the publication of the Ullswater Committee's Report, on the terms for a renewal of the British Broadcasting Corporation's charter, the Government have issued their views on the Committee's findings. They are significantly in accordance with the official views of the B.B.C., as stated in the remarkable document which appeared simultaneously with the Committee's report on March 16th. The Government accept most of the Ullswater recommendations; (these were summarised in the *Economist* of March 21st, pp. 633 and 639). But the exceptions are bound to

cause some misgiving about the Government's motives. Why, for example, is it necessary for the Government to reject the Committee's recommendation that a Minister "free from heavy Departmental responsibilities" should be specially appointed to be "responsible in respect of broad questions of policy and culture"? The Government adduce as their reason the probability that such a Minister would in fact find himself obliged to exercise actual and perhaps political control over the B.B.C. But the Committee made it plain that day-to-day independence should be guaranteed to the B.B.C.; while the Minister should only be responsible for questions of "policy and culture." Independent management by the Corporation, as the Committee and the Government agree, must be maintained; but as the charter is now to be renewed for ten long and important years, it would have been as well to ensure that the time-honoured reply of the Postmaster-General: "This is a matter of the Corporation's everyday administration, for which I am not responsible" should not continue to obstruct Members of Parliament who wish to inquire into the policy of a great and important monopoly service. True, the Government's agreement to separate the Broadcasting Estimate from the Post Office Estimate will give at least an annual opportunity of reviewing all aspects of the Corporation's activities. But this is scarcely more than obtains at present; and it is insufficient. The Government have decided not to acquire the "relay exchanges," but to allow them to continue until 1939, as against the Committee's recommendation. (Technical improvements may render these exchanges unprofitable.) The Government also, somewhat surprisingly, consider it undesirable that capital expenditure proposed by the B.B.C. should henceforth be published in the Estimate, as suggested by the Committee; though the B.B.C. has assured them that the Corporation will always be ready to provide information which can be given to Parliament about contemplated developments.

* * *

Waterloo and Charing Cross.—At long, long last the deplorable controversy about Waterloo and Charing Cross bridges seems to be coming to an end. A fortnight ago the House of Commons decided to reverse its rather partisan resolution of last year not to allow the London County Council to borrow for the rebuilding of Waterloo Bridge. Mr. Herbert Morrison's tactics have thus succeeded, and he has got his money after all. Meanwhile, it is reported that a new road bridge at Charing Cross is to be recommended by the Committee appointed eighteen months ago by the London and Home Counties Advisory Committee. The bridge would be linked with the Strand by an approach on the North, and with an Elephant and Castle street improvement scheme on the South. The removal of Charing Cross Station to the South Bank is not to be recommended. We have thus come back to the plan of Lord Lee of Fareham's Commission for a combined road and rail bridge at Charing Cross. Subsequently, it will be remembered, an agreed scheme was reached after years of negotiation for the removal of the railway station to the South Bank—perhaps the ideal scheme from all points of view. By a tragic coincidence, however, this scheme saw the light just before the "economy" campaign of 1931, and it was abandoned accordingly. To-day it is no longer considered wasteful to develop the nation's assets; but two other changes have simultaneously occurred. Waterloo Bridge is being rebuilt in isolation, though Charing Cross was always to have been the substitute—and the Southern Railway's Charing Cross traffic has become of even greater importance. Presumably the new Committee has decided for this reason against transferring the

Mem.—Floating Debt, outstanding March 31, 1936.

	1935 June 30	1936 June 30
Ways and Means Advances outstanding—		
Advances by Bank of England	8,500,000	28,750,000
Advances by Public Departments	17,400,000	35,240,000
Treasury Bills outstanding	877,155,000	765,285,000*
Total Floating Debt outstanding	903,055,000	827,255,000
Net Increase		45,085,000

* Includes £22,000 the proceeds of which were not carried to the Exchequer within the period of the account.

† Authority is being sought in the Finance Bill to meet the amount of the Statutory Sinking Funds in 1936 by borrowing.

Treasury, June 30, 1936.

station. The disadvantages of leaving the station on the North Bank are, firstly, the great difficulty of achieving an aesthetically successful combined road and rail bridge, and secondly, the continued disfigurement of the South Bank by railway arches. However, it may be that modern architecture and engineering combined can contrive to produce a beautiful combined bridge; and in any case the development of what is perhaps potentially the most magnificent urban site in the country awaits the adoption of some scheme. What is wanted now is not the appointment of yet another committee to examine the report of the last, but rather an immediate decision to rebuild a new Charing Cross bridge in order that a useful public works scheme may go forward, that the traffic problem may be eased, and that the centre of London may at last assume an aspect worthy of so marvellous an aesthetic opportunity.

Coal-Mining Results.—In view of the new agreement between the coalowners and miners, concluded last January, the statistical summary relating to the first quarter of 1936 (Cmd. 5198), just issued by the Mines Department, is of more than usual interest. That it is not the coal mining industry which has suffered in consequence of the wage concessions then granted, is apparent from the statistics summarised in the following table:—

Period	Tonnage Disposable (Mill.)	Costs per Ton		Proceeds per Ton	Profit per Ton	Output per Man-shift	Earnings per Man-shift †
		Wages	Total net				
1932		s. d.	s. d.	s. d.	s. d.	Cwts.	s. d.

† Excluding allowances in kind.

The output of commercially disposable coal showed a slight seasonal increase in the first quarter of the current year. This reflects an expansion in home demand for industrial fuels, since shipments for export and for bunkers fell from 12,777,000 to 10,924,000 tons. The production figures would doubtless have made a better showing had it not been for the heavy re-stocking movement which began at the end of 1935 owing to fears of a stoppage of supplies. The rise in net costs per ton, compared with the closing quarter of last year, is attributable to the wage concessions granted in January. But the further increase in proceeds per ton proves that the higher wage costs have been passed on to the consumer, as the mineowners demanded, in higher prices. In fact, profits per ton registered a further advance in the first three months of 1936 and were larger than in any quarter since 1925; but it is noteworthy that South Wales operated at an average loss of 5½d. per ton. Meanwhile, earnings per man-shift advanced to a higher level than that attained at any time since 1927. These figures are not likely to mollify the consumers, both private and corporate, on whom the burden of the Government's capitulation to the coalowners has fallen.

Nervousness in the Tin Market.—Since the meeting of the International Tin Committee on June 25th, London prices of tin have declined by not much less than £10 per ton. This decline was certainly not so much because the quota for the third quarter of this year has been increased by 5 per cent., to 90 per cent. The 5 per cent. increase means an increase in exports under the scheme of only 757 tons

per month. Since, according to A. Strauss & Company, Ltd., the total visible supply of tin did not exceed 14,972 tons on June 30, 1936—i.e., 1,950 tons less than a month before, and only 589 tons more than a year ago, when the "tin-famine" was just at its peak—the market is more than able to absorb these small additional quantities without a fall in prices. The true reason for the new slump in tin is, apart from the uncertainty concerning the future of the scheme, the refusal of the International Tin Committee to cancel the Bolivian arrears of over 10,000 tons. These arrears have steadily accumulated because, partly owing to the Chaco war and partly to conditions peculiar to the Bolivian tin-mining industry itself, the original Bolivian export allocations have not been fulfilled. Reports have been circulating in the last few days of a Bolivian amnesty for army deserters on condition that they work one year in the tin mines. According to another report the Bolivian Government is even determined to introduce compulsory conscription for work in the tin mines in order to overcome the acute labour shortage. Should these reports prove correct, the accumulated Bolivian arrears of exports are likely to create serious disturbances in the tin market in the near future. At any rate, to make up the leeway Bolivia would require a considerable reduction in the general quota. At the moment when the I.T.C. is trying to secure the support of the various tin countries for the prolongation of the scheme after the end of this year, such a reduction would be untimely. The nervousness of the tin market seems, therefore, well founded. Although at the moment supplies are still much below a normal level, it would not be surprising if prices declined even further.

Retail Trade Progress.—The steady growth in the value of retail sales in Great Britain continued during May, according to the statistics published in this week's *Board of Trade Journal*. The index of average daily sales, at 118 (1933=100), shows a rise of 7.2 per cent. compared with the same month of 1935. Sales of food and perishables advanced by 5.5 per cent. and sales of other merchandise by 8.7 per cent.:

INDEX OF VALUE OF RETAIL SALES, GREAT BRITAIN
(Average Daily Sales in 1933 = 100)

Period	Food	Merchandise	Total
1932	102	99	101
1933	100	100	100
1934	103	103	103
1935	111	108	109
1935—April	110	112	111
May	110	112	110
June	110	108	109
July	105	113	109
August	107	81	94
September	110	99	104
October	112	114	113
November	116	115	115
December	133	160	146
1936—January	115	118	116
February	116	88	102
March	117	97	108
April	121	113	117
May	116	121	118

The gain compared with May, 1935, was naturally most marked in those sections—apparel, boots and shoes and furnishing materials—where sales had been adversely affected by unseasonable weather in April. Sales of piece-goods and sports and games requisites were, however, again slightly smaller than in the same month of 1935. The advance over the year was common to each of the districts specified, being most marked (plus 10.2 per cent.) in the suburbs of London, and least evident (plus 1 per cent.) in Central London and the West-end. The continued expansion of business activity and the rising tendency of wages suggest that the value of retail sales will continue upwards in coming months. The trend of these figures suggests that it may even advance more rapidly than during the latter half of last year.

UNITED STATES

THE NEW TAXES ON PROFITS

CONGRESS adjourned early on Sunday, June 21, leaving business and the administrative branches of the Government a number of important Acts to interpret, the most significant of which are the Revenue Act, the Price Discrimination (Anti-chain Store) Act, the Ship Subsidy Act, and the Commodity Exchange Regulatory Act. Other important measures from the session included the soil conservation substitute for the invalidated A.A.A., the imposition of standards upon suppliers and contractors to the Government (N.R.A.-type standards), rural electrification appropriation, the bonus payment and the various appropriation Acts. Of these last the most significant were the relief grant of \$1,425 millions estimated to continue W.P.A. until February, and the defence authorisations, which are further increased.

The adjournment ends the legislative sessions of this term of the Presidency, sessions which, extending from March, 1933, have produced an unprecedented amount of business and financial legislation. Government has been taken far indeed into the economic field; and, although the development is but a counterpart of those in many other countries, the American business man finds the mass of legislation no easier to comprehend and the process of adaptation no less difficult. The extent to which the Republican platform included many of the concepts upon which the New Deal legislation has been based may foreshadow the impress which the period will leave upon the country.

The Revenue Act as finally written falls short of the President's recommendation, but includes the principle which he advocated. Undistributed corporate income is taxed on a graduated scale from 7 per cent. of the first 10 per cent. to 27 per cent. of amounts above 60 per cent., a basis of taxation new in this country. The "normal" rate on corporations is graduated more steeply than in the 1935 measure, from 8 per cent. to 15 per cent.; this levy upon income was not discontinued as the President requested. Likewise the capital stock tax was retained, although the rate was lowered to \$1 per thousand from \$1.40, and the excess profits impost was retained.

Corporations are thus subject to federal taxation on four different bases (besides excises applicable to various products), two of which discriminate against size, and one of which penalises retention of earnings. There are, of course, special provisions for several groups and types of concerns, the full meaning of which have not yet been understood by the business community—a statement which can, indeed, be made about the entire Act. Corporate dividends to individuals are made taxable at the "normal" rates, and were already subject to surtaxes, and 15 per cent. of the dividend income of corporations is made subject to taxes instead of but 10 per cent. as heretofore. A tax of 80 per cent. is levied upon refunded A.A.A. processing taxes. Foreign corporations not doing business here are taxed a flat 15 per cent., and their dividend income at 10 per cent., and those doing business here at 22 per cent., all on income derived in this country. In short, the share of income for the tax collector rises further.

The merchandise foreign trade figures for May are reported as follows:—

	Exports	Imports
	(\$'000)	(\$'000)
May, 1936	201,049	191,110
May, 1935	165,459	170,553
May, 1934	160,197	154,647
May, 1933	114,203	106,869

For the first five months of the year exports totalled \$969,545,000 and imports \$972,837,000. May imports

of gold amounted to \$169,957,000, compared with \$28,106,000 in April; while exports were but \$5,000 and in April were \$51,000. Silver imports in May were \$4,989,000, compared with \$4,490,000 in April and \$203,000 in May.

The weekly reporting member bank figures for June 17th show that these banks added \$474 millions to their holdings of Government securities during the preceding week, thus reflecting the effects of the June 15th Treasury financing. Since these banks include about one-half of the total banking resources of the country, the banks clearly took the major part of the \$1,000 millions of securities sold for cash. This is a continuation of the trend prevailing for some months. During 1935 the increase in the holdings of banks, together with life insurance companies, accounted for virtually the entire rise in the Government's interest-bearing debt. These institutions are unable to find other earning assets and are forced to take the Government paper even at yields quite displeasing to them. With the week's addition, 42 per cent. of the total loans and investments of the weekly reporting banks are in Government paper, and about 6 per cent. more in guaranteed paper.

The financing operations also resulted in a decline in member bank reserves of \$939 millions, as funds were transferred from the banks' to the Government's account at the Federal Reserve banks. This decline is much larger than those resulting in March and in December, 1935, and reflects, apparently, a continuation of the Treasury's policy of varying the reserve account and of the efforts of the banks to keep at a minimum the F.D.I.C. charges on deposits. Although this reduction of reserves amounts to about 17 per cent. the money market was in no way affected. The drop represents only a bookkeeping operation when excess reserves are so large. But there are some indications that a ramification of monetary policy may be being shaped from it; for the Treasury built member bank reserves up to a high level, following the previous decline, culminating just as its June financing was announced.

LABOUR SUPPORT FOR MR ROOSEVELT

Political developments during the week preceding the Democratic Convention seemed mostly favourable to the Republicans, although any conclusions are premature. The statement against Mr Roosevelt issued by Mr Alfred E. Smith and four other disgruntled Democrats revealed nothing new in their position, but if it means their participation in the campaign in any form the development would not be favourable to the Democratic Party. The new Union Party, whose candidate is Mr William Lemke, the Dakota Greenback advocate, and whose Father is Coughlin, seconded by Townsend and the remnants of Huey Long's Share-the-Wealth Movement, will draw voters from Mr Roosevelt primarily, to whatever extent it may draw them at all; the important and unanswered question is how ardently this group will campaign. Mr Roosevelt is thus being beset on the Left and on the Right, while the Republicans are crowding him in his own position. Organised labour, however, seems to be rallying to his support, and the section headed by Mr John Lewis of the miners is evincing some ardour. Mr Lewis, however, is carrying on a bitter fight with Mr Green, the American Federation of Labour President, on the question of the vertical *versus* the craft union, which is a factor complicating the consequences of Mr Lewis's political activities.

Business continues to be maintained at around the levels of several weeks past. Steel is operating at or over 70 per cent. of capacity; electric output shows further gains; car-loadings continue well above last year's; and commodity prices are rising. The drought is becoming quite serious in the North-West, and substantial relief funds have been specially allotted.

NEW YORK, June 23.

FRANCE

A RISE IN RENTES

THE chief features of the French situation at present are that the strike movement is receding and that rentes are rising on the Stock Exchange. Is this rise an episodic or a long-term movement? The invitations and the warnings of the Minister of Finance, the promise that the franc will not be devalued, perhaps also the intervention of foreign exchange funds, have provoked some return of capital and a relaxation of the exchange pressure on the franc. These circumstances, combined with the fact that rentes were already very low, contributed to a movement on the Stock Exchange which was further stimulated by two successive reductions of the rediscount rate of the Bank from 6 to 4 per cent. M. Auriol was thus able to point to an improvement in the situation. There had been imports of 60 million francs of gold in the last three days of the preceding week, and the renewal of Treasury bills had been easier.

But if Stock Exchange prices are rising it is because the Government has condemned deflation, and would probably decide, if the run on the franc began again, to defend the gold stock of the Bank with an embargo instead of by the old method of raising the Bank rate. For the first goal to be sought now is a lowering, by fair means or foul, of the rate of interest. The collaboration of the Stock Exchange has been promised to the new Government, since the admonition of the Minister of Finance could not be considered as a declaration of war on capital. And the Stock Exchange, like the money market, at present remains free from any vexatious inquisitions.

The following table shows the rise of rentes during the last two weeks:—

	June 18th	June 30th
3 per cent.	96.70	70.70
5 per cent., 1920	85.30	92.70
4 per cent., 1917	65.20	70.40
4 per cent., 1918	65.70	70.80
4 per cent., 1925	69.40	75
4 per cent., 1932 "A"	68.35	75.50
4½ per cent., 1932 "B"	67.25	74.45
Treasury Bonds 4½ per cent., 1934	900	944

The firmness of rentes and of medium-term Treasury bonds is a favourable prelude to the launching of M. Auriol's "Baby Bonds," which is due in a short time. The Senate has refused to authorise the issue of bonds of less than one year; whereas the wartime National Defence bonds had a one-month or three-month maturity, and sold very easily to farmers. The fixing of the rate of interest on the new bonds is thus rendered more difficult, especially as it must lie between the 2½ to 3½ per cent. rate on public savings bank deposits and the 5 per cent. rate on the old National Defence bonds.

The renewal of financial confidence has been aided by the repeated calls to calm and reason issued by the Socialist and Communist leaders, who were afraid of being overwhelmed by their followers. M. Roger Salengro, Minister of the Interior, has declared that "the workers of France do not intend to hurt the farmers, the people of the middle-class or the republicans," while an old Parliamentary Socialist has also declared in the Chamber that "the Socialists would never accept a Soviet France." Actually the economic policy of the Government seems to consist in general of Communist projects revised by the Socialists and finally accepted by the Radicals. But these measures imposed by the industrial workers entail, at least for a while, the threat of sacrifices from skilled workers and farmers.

THE GOVERNMENT AND THE "200 FAMILIES"

Middle-sized and small firms are protesting against the strike agreements of June 7th which were accepted by the Confédération Générale de la Production—that is, by a syndicate which represents only one-quarter of the whole of French business. The leaders of the heavy industries constituting the Fédération are partially dependent on State orders, and will thus be able to raise prices in proportion to the increased social charges. "The Socialist Government," it is accordingly being said, "has made a pact

with the 200 families." These criticisms, it is to be noted, are being made by people who are important supporters of the Radical Party. The same might be said of the farmers, who are disquieted by the "Wheat Office" proposed by the Socialist Minister for Agriculture, M. Monnet. The Communists' plan for raising wheat prices to 140 francs a quintal is severely criticised by the Radicals and the farmers, who remember the fall of wheat prices from 175 francs—once the minimum fixed price, and the "electoral price" of 1932—to 40 francs. Briefly, the farmers and middle-sized business firms are afraid of becoming the victims of the social laws; and their fears have not been allayed either by the credit facilities promised by the Government and the banks, or by the instructions given to tribunals to authorise industrialists to raise their prices and break contracts, or by the declaration of the Minister for Public Works that the application of the 40-hour week will be such as to make it more manageable than the 48-hour law.

But, for the time being, Parliament and the country seem resolved to give a fair chance to the Popular Front experiment. The old "mystique" of balancing the Budget has been replaced by the desire to try new economic policies. A sort of revolution is in progress, the end of which nobody can predict; but in it one can discern signs of a revival of nationalism, a desire for change, and a demand for Governmental authority and political and commercial integrity.

The recovery of the Stock Exchange in these conditions appears to be first due to buying by professionals, who consider that the political horizon has been cleared for two months at least. Nevertheless, the rise should make the task of the Government easier; for to some extent it is due to new hopes rather than mere speculation.

PARIS, July 2.

GERMANY

FOOD PRICES AND THE OLYMPIC GAMES

FOOD prices have not risen noticeably in the past three weeks. In Berlin the raising of prices has been forbidden until after the Olympic Games; though the shortage of eggs continues. Crops reports, however, are very satisfactory.

The export surplus in May was Rm. 35 millions, against Rm. 5 millions in April. The increase is mainly seasonal.

	April	May	Jan.- May
	Millions of Marks		
Imports			
I. "Nourishment"	131.1	118.8	656.5
(a) Livestock	6.8	7.5	35.0
(b) Animal foodstuffs	39.3	33.0	207.6
(c) Vegetable foodstuffs	85.0	78.3	413.9
II. Industrial goods	229.5	218.4	1,094.1
(a) Raw materials	136.2	127.8	637.3
(b) Half-manufactured goods	62.6	58.6	306.0
(c) Manufactured goods	30.7	32.0	150.8
Totals	360.6	337.2	1,750.6
Exports			
I. "Nourishment"	7.3	7.1	41.6
(a) Livestock	0.2	0.2	1.3
(b) Animal foodstuffs	0.7	0.6	3.8
(c) Vegetable foodstuffs	6.4	6.3	36.5
II. Industrial goods	358.2	365.0	1,830.2
(a) Raw materials	31.4	30.6	159.3
(b) Half-manufactured goods	37.0	36.7	192.6
(c) Manufactured goods	289.8	297.7	1,478.3
Totals	365.5	372.1	1,871.8

The percentage of occupied working places in all industry in May was 69.1, against 67.4 in April. In production goods trades it was 73.8 per cent., against 71.4 per cent.; and in the consumption goods trade 63.0 per cent., against 62.2 per cent. The only important trade that shows no improvement is textiles. A severe shortage of wool was felt in May. Coal production in May was 12,157,000 tons; and in the first five months 63,213,000 tons, as against 56,403,000 tons in the same months of

1935 (in January and February of which, however, Saar output was not included). Pig iron output in May was 1,228,000 tons, and in the first five months 6,141,800 tons, against 4,924,300 tons in 1935. Ingot steel output in May was 1,568,500 tons, and in the first five months 7,667,800 tons, against 6,367,000 tons.

Only three weeks ago the rumour of a new Reich Loan was officially denied. That a loan was under preparation was nevertheless known; and uncertainty about the amount and the conditions caused a reaction on the Bourse. It was believed that the Reich proposed to borrow Rm. 1,000 millions. The conditions now announced are: Rm. 700 millions to be issued at 98½ on the security of 4½ per cent. Treasury bonds, in denominations of between Rm. 100 and Rm. 20,000, at 4½ per cent., repayable at par in equal instalments of one-sixth in 1943-48. Of the Rm. 700 millions, Rm. 200 millions was taken up before the announcement, and the remaining Rm. 500 millions was underwritten. The yield, like that of other recent loans, is to go to the consolidation of short-term debt. The amount so consolidated since the beginning of 1935 will be brought up to above Rm. 3,000 millions. As the amount of short-term debt is unknown and is presumably increasing, it is impossible to say whether the new borrowing will reduce the ratio of short term to long term debt.

Dr. Schacht's organ states that total Reich indebtedness has not substantially increased above the Rm. 18,000 millions or Rm. 19,000 millions which it gave as the total some twelve months ago. The total given by the Reich Statistical Bureau is still around Rm. 14,000 millions. The following consolidation loans have been floated: two of Rm. 500 millions each from the Savings Banks; two of about Rm. 250 millions each (exact sum unknown) from the insurance companies; the new Rm. 700 millions loan; and a Rm. 500 millions Railway Corporation Loan, already subscribed in the open market, which is not a Reich liability but which was also for consolidation purposes.

THE FOREIGN DEBT MORATORIUM

The qualified moratorium for long and medium foreign debts, which expired on June 30th, has been prolonged by law until the end of the year on the ground that no improvement in the foreign exchange situation has taken place. On the improvement in the foreign trade balance (a shift of Rm. 285 millions from an import surplus to an export surplus in the first five months of 1936 as against 1935), the comment is made that only some 20 per cent. of the total export yield accrued in free exchange. This comment is hardly pertinent. The real question is the condition of the whole balance of payments, official returns of which have been suspended for two years. The renewal of the moratorium does not affect agreements with individual creditor countries, some of which are under revision. A short—six months'—term for the moratorium was probably chosen because of international currency uncertainty and hopes of a substantial all-round reduction in interest rates.

A new Reich law has settled numerous doubtful questions raised by the recent Reichsgericht decision that German holders of certificated dollar bonds who acquired them before the American Joint Resolution of June, 1933, must be paid in Reichsmarks at the old rate of Rm. 4.2 per dollar. The new law annuls the Reichsgericht's decision and any earlier similar decisions. It prescribes that in any case of foreign currency depreciation all loans in this currency, whether with or without a gold clause, are to be payable at the exchange rate of the day. But contracts to pay a different rate concluded after the currency depreciation began will hold good, so that the agreements of numerous German concerns which issued Reichsmarks in exchange for dollar bonds on an exchange basis of Rm. 3, that is considerably above the present dollar exchange, will not be voided. Further, payments already made in excess of the new norm, i.e. at the old rate of Rm. 4.2, will not be recoverable by the creditor.

The Reichsgericht's grounds for its decision of May 25th—that foreign creditors do not refuse to accept payment in the sense of paragraph 293 of the Civil Code if they reject offers of blocked marks (*Spermark*)—have been published. This decision, which revoked an earlier Reichsgericht ruling of January, 1935, is of importance to foreign creditors. The court holds that the original agreements to pay foreign

currencies remain valid without any qualification; that is, the foreign creditor may refuse to accept blocked marks although he cannot, in view of present German exchange legislation, claim payment in foreign exchange. His claim is merely in abeyance.

An official report puts the net income from German shipping in 1935 at Rm. 232 millions, which is slightly more than in 1934, or in 1933 when the lowest figure of Rm. 213 millions was reached. The highest recent figure, in 1929, was Rm. 571 millions.

BERLIN, July 1.

CZECHOSLOVAKIA

A DEFENCE LOAN

The tension in international politics has naturally influenced economic conditions in Czechoslovakia. This fact explains the passing of the Defence of the Realm Act on May 13th. On the strength of this Act the Government is issuing decrees which may drastically affect the country's economic life. On May 29th a Defence Loan was also sanctioned, and subscriptions have been coming in very satisfactorily.

The communal elections of June 7th did not produce any changes in the political situation. There has existed, however, a certain tension between some of the political parties since last year. Statements have been made by spokesmen of the Social-Democratic Party, in which a change of monetary policy has been advocated. The National Bank, however, is opposed to any change, and its view is shared by the Government.

The extension of the existing Corn Monopoly, and the Bill to combat unemployment, were the subject matter of political negotiations before the Parliamentary holidays. Agrarian interests demanded prolongation of the Corn Monopoly for a further 15 or 20 years. The present policy of the Corn Monopoly has assured rather high prices without corresponding restriction of the area under cultivation, and has led naturally to an increased production of corn; so that at the beginning of the new harvest the Monopoly will still have some 80,000 trucks of corn on hand. This is a serious danger to the Exchequer, and even in Government circles it is being insisted that the Monopoly should be financially independent in order not to encumber the State finances. It is also suggested that regulation of corn production should be undertaken. It seems that an adjustment will be effected by a Government Ordinance in such a way that the Corn Monopoly will be extended for two years only, and that the price will be substantially lowered so that the Monopoly can cover its expenses without having to ask for a subsidy or guarantee from the State.

COMPULSORY LABOUR EXCHANGES

A Bill has been drawn up by the Ministry for Social Welfare, in which obligatory Public Labour Exchanges are introduced both as a remedy for unemployment and as a more effective control of it. Private employment bureaux and employers' liberty to choose their employees will be limited. This measure is vehemently opposed by the employers, who maintain that they cannot be made responsible for the good management of their business without a free choice of their staff.

Revenue from taxes has been rising owing partly to the better economic situation of the country and partly to the grant of bonuses to prompt taxpayers. In Parliament the readjustment of direct taxation is nearing its completion; and some reductions are expected. In this respect Parliament has made fairly important changes in the Bill originally presented by the Government.

Improvement in industry is apparent, particularly in heavy industry. But improvement has also occurred in other trades such as paper, leather, chemicals, etc.; in the ceramics, glass, textiles and clothing trades there have been no changes. These trades are still suffering from export difficulties, and obstacles to international payment.

The number of unemployed at the end of May was 633,900, or 11.9 per cent. less than in April and 4.9 per cent. less than a year ago. Production of iron in May

was 92,384 tons, against 66,921 tons a year ago; and of steel 118,877 tons, against 106,190 tons a year ago. The index of wholesale prices declined in May.

Obstacles to exports still persist, due to restriction of imports, particularly in the gold bloc countries, and the restrictions on payments in the clearing countries. Between January and May Czechoslovak imports amounted to Cz.K. 2,956.7 millions compared with Cz.K. 2,406.8 millions in 1935; and exports amounted to Cz.K. 3,017.8 millions compared with Cz.K. 2,770.6 millions. Exports to extra-European countries with a free market have been gradually rising.

One of the principal problems of commercial policy is that of economic adjustment in Central Europe. In the second half of June a second conference of Little Entente experts was held to discuss this, and a truce has been suggested to prevent the further raising of import duties. The establishment of a commercial company, designed to foster economic relations between the Little Entente States, was also discussed.

The sanctions imposed on Italy were fairly injurious to Czechoslovakian trade and led to some shifting of trade. Industrial interests would, therefore, welcome a definite solution of this question. The credits granted to Soviet Russia have been more or less exhausted, and new negotiations are being conducted to renew them to the extent of about Cz.K. 300,000,000.

PRAGUE, June 27.

ARGENTINA

FALLING EXPORTS AND THE EMBARGO

The weather continues mild and wet, which is both unseasonable and detrimental, in so far as the maize crop is concerned. Rainfall has been exceptionally heavy, and a dry cold spell is badly needed. It is too early, however, to forecast this year's crops, as a spell of good weather during the coming month would radically change the outlook. The export figures are still below those of last year:—

	EXPORT FIGURES		Diff.
	First Five Months 1935	1936	
	Tons	Tons	%
Live stock products.....	534,621	548,125	+ 2.5
Agricultural products ...	6,538,348	4,419,873	- 32.4
Total	7,276,660	5,159,792	- 29.1
	VALUES OF EXPORTS		Diff.
	First Five Months 1935	1936	
	\$	\$	%
Live stock products.....	246,723,072	279,788,618	+ 13.4
Agricultural products ...	444,067,605	311,862,627	- 29.8
Total	720,070,020	620,795,770	- 13.8

The slackening of the export trade, together with the continued wet weather, must impair the balance of trade and the amount of exchange available for importers. Wheat shipments dropped from about 2,250,000 tons in the first five months of 1935 to just over 500,000 tons in the same period of this year; and although this falling off was to some extent offset by an increase of 500,000 tons in maize shipments, these also have fallen off recently, the latest June figures showing a decrease of over 50 per cent., compared with last year. Had it not been for the fund of foreign exchange set aside for equalisation purposes a decline in the peso during the next six months would have been a foregone conclusion; but, if proper use is made of the equalisation fund, no marked fluctuations from present quotations need be feared. The situation has been helped by the rise in export prices, for while the contraction in the volume of exports is 29.1 per cent., the shrinkage in their value is only 13.8 per cent.

The question of the co-ordination of transport is once again being pressed by the tramway and underground transport companies in the city of Buenos Aires. The complete lack of co-ordination in a city of over 2,000,000 inhabitants is very serious, and the number of accidents is increasing.

BUENOS AIRES, June 19.

CHINA

THE "CIVIL WAR" THREAT

The report of a Japanese news agency, during the course of last week, suggesting an imminent outbreak of civil war between the South-West Provinces and the Central Government was received in Hong Kong with incredulity. It seemed obvious that the news was deliberately designed to cause alarm and dissension among the Chinese. Never within recent years did civil war appear more unlikely; for the report coincided with the publication of a telegram from the South-West Political Council to the Nanking authorities urging armed resistance to the Japanese and offering the services of the armies of Kwangtung and Kwangsi. Denials of the Japanese canard were promptly issued from Nanking headquarters as well as from Canton and from the Kwangsi capital.

Yet there seems to have been some foundation for the report, as these denials were soon followed by rumours of internal quarrels in the South-West Political Council and signs of activity on the part of the principal military leader, General Pei Chung Hsi, who was said to be concentrating his troops with a view to marching northward. General Pei's idea seems to be that, as Marshal Chiang Kai Shek is incapable of resisting the Japanese invasion, the work should be undertaken by the South-West forces to be called "The Anti-Japanese Salvation Army," with a plan of campaign to include the capture of Peiping and Tientsin and a subsequent advance into Manchukuo. Such a programme is too fantastic to be treated seriously; but there is amongst the Southern Chinese leaders an unreasoning impatience with the Nanking Party for allowing the Japanese to encroach so far, and General Pei's call to arms is probably intended to shame the Central Government into action.

Apart from personal feelings the main obstacle in the way of co-operation is said to be the currency question. Nanking is anxious to see the standard dollar adopted throughout the Republic, but so far the Provinces of Kwangtung and Kwangsi have insisted on retaining their own currency. The Canton Government see no reason why they should lose control of their silver reserve. But in the meantime their notes have slumped so violently that it will be an extremely difficult matter to restore confidence in their currency. Whereas a few months ago the Hong Kong dollar was quoted in Canton at about 30 per cent. premium, it rose by daily jumps to 100 per cent., which was touched at the end of last week. There has since been some reaction, and with the subsidence of the war scare the premium has eased off to 70 per cent., i.e. 170 Canton dollars = 100 Hong Kong dollars. The situation is, of course, extremely unfortunate for Hong Kong, as the gradual recovery in trade during the past few months has now received a severe check owing to the high cost of imported articles in terms of Canton currency. The outlook is certainly very gloomy at the moment, for the coast port trade is virtually at a standstill, owing to the smuggling carried on from Formosa, and this in turn has affected local shipping.

BANKING PROGRESS IN HONG KONG

In the course of his annual report on the finances of the Colony for 1935, the Colonial Treasurer refers to the progress made in banking and finance. He points out that Hong Kong has more banks than Calcutta, Bombay or Singapore and that there are now twenty-two banks actively engaged in foreign exchange, not counting purely native Chinese banks whose bullion operations are by no means negligible. Several of these banks are newly opened branches of Shanghai establishments and it is doubtful whether some of them will remain open now that the managed currency of the Colony has greatly curtailed inter-bank business.

A Commission of Inquiry into the Mui Tsai (female domestic workers) question recently arrived here from home and has spent two weeks examining witnesses and inspecting social welfare centres before going on to Singapore. The system of domestic servitude by which girls are bought from parents and work for no pay is hard to defend in these times. But owing to the close proximity of Hong Kong to

the mainland it has proved impossible to abolish the system effectively so far as the Colony is concerned.

The share market has remained very steady, despite war scares and trade depression, and the marking down in London of such shares as Hong Kong and Shanghai banks and Union Insurance Society of Canton has not been reflected here. The volume of business in purely local shares has been restricted, but there has been considerable activity in shares of Philippine Islands gold mining companies, a small boom having persisted during the past month or two. The gold industry in the Philippines seems to have a bright future, and much development work is going on.

HONG KONG, June 8.

NEW ZEALAND

BEST EXPORT SEASON SINCE 1929-30

TAKEN as a whole, the export season now nearing its end is the best experienced since 1929-30. The price of wool has averaged £N.Z.13 6s. 10d. a bale, against £N.Z.9 6s. 8d. in the preceding season, an increase of 43 per cent.; while dairy prices have also been higher and meat prices satisfactory. As a result, exports for the year ending April, 1936, totalled over £N.Z.52 millions, compared with a peak of £N.Z.57 millions in 1928-29 and a low level of £N.Z.34½ millions in 1931-32.

Increased export income has again stimulated local demand, and internal business has responded. Compared with the same period in 1935, the first quarter of 1936 shows increases ranging from 12 to 25 per cent. in note circulation, bank debits, sales tax yield, totalisator investments and the volume of imports. Both land transfers and mortgage business have expanded by about 40 per cent., and building, though still only about half the pre-depression level, has improved greatly. Imports for the year ending with April amounted to £N.Z.38 millions, compared with less than £N.Z.25 millions in 1931-32, but are still £N.Z.10 millions lower than in 1928-29. The export surplus is thus exceptionally large, and bank resources both at home and abroad continue to accumulate. Total bank deposits reached a record figure for the March quarter, £N.Z.72.2 millions, while advances were £N.Z.46.6 millions, and net funds held overseas by the banks on New Zealand account amounted to £N.Z.44.1 millions at the end of March.

The effects of increased business activity and expanding income are seen in the returns for the Government's financial year ending March 31st last. Taxation yielded £N.Z.21.56 millions and total revenue £N.Z.26.17 millions, against £N.Z.20.18 millions and £N.Z.26.12 millions (including £N.Z.1.6 millions gold profits) in 1934-35. The surplus of revenue over expenditure is thus £N.Z.270,000; the estimate for the year was under £N.Z.10,000.

THE LABOUR GOVERNMENT'S DRASTIC LEGISLATION

The legislation introduced by the new Labour Government in its opening session of Parliament proved more drastic than most people expected. As a first step the Reserve Bank was brought under State ownership and control; the shareholders were paid off; and practically all the legal limits on the Bank's power to lend to the Government were removed. The directors were retained, but hold office at the pleasure of the Government, and the Bank's function is now to give effect to the monetary policy of the Government. A plan for the State marketing of all exports, under a Minister and a Department of Marketing, has been enacted, and is to be applied, together with a guaranteed price scheme, to dairy produce from August 1st, the beginning of the next export season. Other export products may be brought into the scheme later. The railways have been brought back under direct political control, and, though the railways' net revenue now falls short of its interest bill by about £N.Z.1½ millions, extensive additions to the railway system are promised. These are included in a public works plan estimated to cost £N.Z. 17½ millions over three years, and the Minister has made an agreement with public works employees based on 2s. an hour and a 40-hour week.

Compulsory arbitration of labour disputes, modified in 1932, is also restored and extended to cover most of the

field of employment. The new Act provides for basic wage rates for both male and female workers, makes the 40-hour week compulsory without reduction of weekly wages, except where it is proved to be impracticable, and establishes compulsory preference for unionists above the age of 18. A Factories Act and a Shops and Offices Act round off the labour legislation and reach areas formerly beyond the scope of compulsory arbitration. The general result is greatly to increase the numbers of trade unionists.

The Government also proposes to reduce the debt burden on farmers and home-owners by writing down mortgages to current values, to limit rents, and to see that retail prices are fair. Both the Transport Co-ordination Board and the Unemployment Board have been abolished and the departments brought more directly under Ministerial control.

Manufacturers, fearing higher costs, are appealing for more protection against imports; but the Government, hoping to make new trade agreements, particularly with Great Britain, has not committed itself. Some farmers, faced for the first time with the regulation of farm labour, are fearing that they may lose more in higher costs than they are likely to gain in guaranteed prices. Overdrafts at the Reserve Bank are to be used to finance the dairy produce marketing scheme; but there is as yet no indication how other increased expenditure, on unemployment relief and public works, for instance, is to be met.

CHRISTCHURCH, June 10.

[The Prime Minister's statement this week on New Zealand's foreign loans is discussed in an Investment Note on page 22.]

LETTER TO THE EDITOR

FUTURE MONETARY POLICY

TO THE EDITOR OF THE ECONOMIST

SIR,—I have read with interest but with dismay your article under the above heading which appeared in your issue of June 20th. You rightly refer to the hardening tendency in interest rates, and point out that this tendency has not gone very far. Should this tendency increase as a result of a genuine revival of trade, why should anyone deplore it and desire to prevent it as you appear to imply, and suggest as a remedy what you term "further broadening the basis of credit"?

As a means to this end you suggest that "it would only be necessary for the Bank to buy Government securities and for the fiduciary issue to be expanded." Your excuse for advocating this policy of inflation of the currency, naked and unashamed, is that you apparently fear unemployment. Might I suggest another way to prevent unemployment and to avoid further inflation, and that is to take steps to bring about a *de facto* stabilisation of the currency leading to stability of exchange? Remove the embargo on foreign lending, and other restrictions and the stimulus thus given to trade and industry will be enormous. Money for a considerable time may still be expected to remain comparatively cheap, but any hardening tendency in interest rates brought about by a legitimate increase in demand will surely not be deplored by any well-wisher of this country.

I am, Sir,

Your obedient servant,

D. M. MASON,
Chairman Executive Committee,
Sound Currency Association.

52 Fetter Lane,
London, E.C.4.

[If by a hardening tendency of interest rates resulting from a "genuine revival of trade" Mr Mason means a hardening tendency associated with an increase in employment, he will find that the prevention of such a tendency was not advocated in our article. For we clearly stated that interest rates should not be prevented from rising unless unemployment was increasing. But we cannot accept the view that a rise in interest rates should never be prevented if it is due to an increase in trade demand. Suppose in existing conditions of unemployment, a foreign demand for loans were allowed to raise interest rates, the domestic demand for loans might be correspondingly reduced. In this case to refrain from expanding credit might prevent the revival in trade from having its effect in reducing unemployment.—Ed. Econ.]

BOOKS AND PUBLICATIONS

SWEDEN'S ACHIEVEMENT*

THE story of Sweden's recovery during the last four years is of the very highest interest. Here is a country which, in 1932, was in the depths of depression, and was threatened with extremist political movements; which thereupon adopted a positive monetary and economic policy designed to promote recovery, carried it out by democratic methods, and to-day has abolished unemployment and raised the level of production and consumption above that of 1929. So far, however, Sweden's achievement has not received the attention given to the destructive exploits of dictators; and Mr Brinley Thomas's admirably informative book is therefore extremely welcome.

In Sweden, as Mr Thomas points out, there has always been much more contact and understanding between professional economists and business men than in most parts of the world: and he consequently prefaces his historical account of Sweden's recovery with a survey of the contributions made to our knowledge of monetary phenomena by Professors Myrdal and Lindahl and other successors of Wicksell and Cassel. These younger economists, Mr Thomas shows, have both emphasised the importance of psychological factors in the trade cycle and pointed out the danger of the rigid kind of explanation of depression which prompts the inference that no positive policy is any good.

When the Social-Democratic Government took office in the autumn of 1932, they believed that if nothing was done the depression might continue indefinitely; and after consultation with experts they decided to embark on a controlled expansionist policy. The krone had already depreciated in September, 1931; but no advantage had been taken of the monetary freedom thus obtained. In February, 1932, the Bank rate was still at 6 per cent., and the Krueger crash in March had still further shattered business confidence. It was therefore decided by the new government to reduce interest rates, to conduct open-market operations, to unbalance the Budget in order to expand the nation's spending, and to borrow for a three-year programme of public works. The exchange value of the krone was to be left to take care of itself. At the same time taxation on property was increased.

The Bank rate was reduced by stages to 2½ per cent. in December, 1933. At first a prolonged building strike held back recovery; but at the end of 1933 production and trade began to move upward, and the revival continued steadily throughout 1934 and 1935. So completely, in fact, did the course of recovery follow the Government's plan that in the spring of this year the Finance Minister was able to balance the Budget, repay the money borrowed for public works loans, reduce taxation, and increase expenditure on the social services. Meanwhile, unemployment had been reduced from 189,000 at the beginning of 1933 to 47,000 this spring—which is no more than the minimum of persons moving from one job to another.

The Social-Democratic policy was, of course, greatly helped by two factors: the depreciation of the krone and the increasing demand for Swedish exports (itself partly due to the British building boom). This supplied the central bank with the reserves necessary to support an expansionist policy. But the Government, by taking the opportunity thus offered, have shown that in suitable conditions a forward monetary policy can be followed with great success. They have also shown that increased taxation is not incompatible with recovery if the profitability of industry is restored by other means. And most important of all they have shown, as Mr Thomas justly observes, that cyclical depression and unemployment can be cured without revolutionary innovations and without the sacrifice of political liberty.

SHORTER NOTICE

"Reactionary England." By H. R. G. Greaves. Acorn Press. 160 pages. 5s.

Readers of this book of essays will find much to disturb their equanimity. For it is the main theme of Mr Greaves that social inequality and the class structure have scarcely been affected in Great Britain in the last twenty years, and that the liberties of the individual are being curtailed rather than increased. In the first essay, "Freedom and the Police," Mr Greaves argues that in recent years the police have been using their powers more arbitrarily and that the purposes for which they use them are generally reactionary.

The attitude of another section of the executive is examined in "Social Privilege in the Foreign Service." Here the well-known fact of exclusive recruitment from a few public schools and the older universities is underlined, and certain instances of its consequences are suggested. As a contribution to the effective control of foreign policy, Mr Greaves recommends the establishment of a special but small Parliamentary Committee.

Probably the most valuable essay in Mr Greaves's book is that entitled "The Old Foreign Policy Under a New Guise." In some very well-argued pages he explains what he regards as the real causes of the failure of the League, and then proceeds to consider the basis of a new start. He proposes, not a further curtailment of national commitments but a genuine pooling of defence forces. To the argument that nothing can be done, so long as certain Powers remain outside, he replies, with reason, that this "is an additional reason for having an effectively organised collective system, to deal with any attack they may make."

The last essay, from which the book takes its title, is a summary of the general argument that the post-war period in British history is one of almost continuous reaction. Here there is certainly some exaggeration. Until 1931 at least the social services were expanding reasonably fast. It cannot, however, be denied that the hopes of far-reaching social change created by the war and current at the end of it have been bitterly disappointed during the last few years.

MONEY AND BANKING

THE ANGLO-ARGENTINE AGREEMENT

WITH the pending expiration of the Anglo-Argentine—"Roca"—Agreement in November, negotiations are now actively proceeding for the conclusion of a new agreement. The desirability or otherwise of this step is being energetically debated between two schools of thought, one of which would, in the avowed interests of the British farmer, eschew any new agreement with the Republic; while the other, although frankly admitting that British agricultural interests should be taken into account, is strongly in favour of a new agreement affording continued protection to British interests generally in the Argentine. In advocating this they are thinking, not only of our important export trade and the relevant manufacturing industries, but also of the income from British capital in the Argentine.

The following table demonstrates the extent of trade between the Argentine and Great Britain:—

Year	Imports from United Kingdom "Tariff" Values c.i.f.		Exports to United Kingdom "Real" Values f.o.b.	
	(in thousands of paper pesos)			
1931	242,129	567,484		
1932	177,491	464,959		
1933	208,271	410,993		
1934	230,331	553,476		
1935	237,289	533,690		

Note.—Since 1933 the peso has been devalued to the extent of about 20 per cent., and to convert these returns into sterling, 15 pesos may be taken as equal to £1 sterling.

In considering the above figures, it must be borne in mind that it is the balance of all payments between the two countries which must be considered. The invisible British exports derived from trade between the two countries are of very great importance, particularly those relating to banking and insurance commissions and freights. British ships are constantly employed in the River Plate traffic, and Argentina has no such source of income.

The interdependent nature of Anglo-Argentine trade is further demonstrated by the following table:—

Year	Argentine Chilled Beef Exports		Argentine Textile Imports	
	Total	To United Kingdom (in thousands of paper pesos)	Total	From United Kingdom
1931	153,490	153,116	236,540	61,814
1932	125,651	125,508	232,568	57,792
1933	115,917	115,861	275,404	75,286
1934	127,126	127,041	275,668	86,013
1935	161,163	not yet known	276,265	not yet known

The above tables demonstrate not only the entire dependence of the Argentine chilled beef export trade upon the British market, but also the reciprocal tendency of British textile exports to the Argentine also to increase. Without Argentina's export trade in beef her imports of British textiles would shrink to nothing.

In April last the Argentine Ministry of Finance issued a statement—of which no refutation has been forthcoming—showing decisively the manner in which the Argentine Government had fulfilled the conditions of the Anglo-Argentine Trade Convention. It was shown that the order of priority governing the distribution of the sterling exchange resulting from Argentine exports is (a) public debt; (b) importation of goods; (c) freights; (d) interest on debentures and other loans; (e) private British remittances; (f) payment of dividends on preferred and ordinary shares of British companies in Argentina. During the operation of the "Roca" Agreement the full exchange proceeds derived from Argentine exports to the United Kingdom had been allotted for transfers to this country. Finally, British exporters receive definite advantages over those of other countries. Official exchange to pay for imports is allotted in respect of British goods without restriction. The value of this is shown by the fact that imports without prior exchange permit have to bear an exchange surcharge of virtually 20 per cent. As matters stand, Japan is only able to compete in the cheaper grades of textiles. Without the 20 per cent. surcharge she

would probably capture the entire Argentine textiles market.

In a speech in Buenos Aires, the Acting Commercial Counsellor to H.M. Embassy, speaking with full authority and as special representative of H.M. Government in all matters relating to exchange, expressed openly the satisfaction of the British Embassy at the loyal manner in which the Argentine authorities had implemented their treaty undertakings governing the distribution of the United Kingdom exchange quota. He also pointed out that the funding of the British-owned commercial peso balances cleared the way, and so was primarily responsible for the great improvement in Argentina's finances which had since set in.

Argentina must, of course, have consideration for her general economic position in entering into commercial commitments with any particular country. No reliable estimate of Argentina's balance of payments has been issued in recent years. The balance has undoubtedly been affected by the large-scale debt conversions which she has been able to undertake and which, together with the repatriation of external debt, are still in train. Prior to these conversions, it had been calculated that, in order to cover all necessary remittances on foreign account, Argentina required under the conditions ruling a few years ago an export surplus in her merchandise trade of about 200 million gold pesos. Apart from more recent changes, it is believed that the export surplus necessary to effect a balance of payments on all accounts at the present time is about 350-400 million paper pesos. Last year an export surplus of the requisite magnitude was actually recorded, but owing to the partial failure of the past season's wheat crop, a setback has occurred this year. The official figures compare as follows:—

Year	"Real" Values		
	Imports	Exports	Export Surplus
(in thousands of paper pesos)			
1931	1,173,828	1,455,815	281,986
1932	836,265	1,287,782	451,518
1933	897,149	1,120,842	223,693
1934	1,109,932	1,438,434	328,502
1935	1,174,981	1,569,349	394,368
First five months of 1935	467,393	720,070	252,677
First five months of 1936	458,420	620,796	162,376

Note.—Since 1933 the peso has been devalued to the extent of about 20 per cent.

It will thus be seen that exports in the first five months of 1936 fell by 13.9 per cent. compared with the corresponding period of 1935, whereas imports were reduced by only 1.9 per cent. The reduced export surplus for January-May, 1936, suggests that the active trade balance for the whole year will not exceed about 300 million pesos. This latter figure cannot be regarded in any sense even as an estimate, since it must be greatly affected by world conditions during the second half of the year, and more particularly by the current weather damage to maize as well as the results of the next fine cereal harvest, but it serves to illustrate the inevitable vicissitudes of an essentially agricultural country.

In the past, the failure of Argentina's principal cereal crop would undoubtedly have been followed by a break in the peso exchange. Since the beginning of last year, however, the Argentine credit and banking structure has been completely remodelled, and the new Central Bank, which has functioned since June, 1935, now holds not only a powerful reserve against the currency note circulation, but in addition a large accumulated Exchange Profits Fund which may be utilised when occasion warrants as an Exchange Equalisation Fund.

The first result of these reforms is that during the past few months something in the nature of a major crisis has been prevented. It also follows that Argentina's representatives in the present "Roca" Agreement negotiations are fully justified in having due regard to the vulnerability

of Argentina's economy. Importers and other remitters—apart from the British-owned railways who have been guaranteed a more favourable remittance rate—find cause for complaint in the Argentine Government's exchange profits, derived from the margin of 2 pesos between the official buying and selling rates for sterling and for other currencies, but the justification for the whole system is perhaps to be found in the relative stability which Argentina has enjoyed during a very unfavourable crop season.

It cannot be too strongly emphasised that, but for the conclusion of the "Roca" Agreement in 1933, Great Britain would have lost the most valuable of her trade connections in South America, and for British capital investments, the dividend position would have been immeasurably worse. It should not be difficult to ensure to Argentina that share of our market that she needs in order to buy an adequate volume of our manufactured goods and to discharge her obligations to the British investor.

FINANCIAL NOTES

The Foreign Exchanges.—The franc has been definitely stronger this week. It was rumoured in London that on one or two days the British Control sold francs in order to check too rapid an appreciation of the spot rate, while the New York-Paris cross-rate has also returned to Frs. 15.08 to the dollar, that is, to parity. The London discount on three months' francs has also narrowed since a week ago from Frs. 3½ to 2½ discount. During the week ended June 26th the Banque de France gained Frs. 46 millions of gold, and it is believed to have recovered rather more during the current week. The latest Banque de France return distinguishes between commercial and Treasury bills, showing the former at Frs. 7,764 millions on June 26th and the latter at Frs. 13,797 millions. It also contains a new item of Frs. 536 millions, called Provisional Advances to the State without interest, and this may represent the Treasury's first draft on the new Frs. 10,000 millions credit at the Bank. The remaining gold bloc exchanges are also stronger. Forward guilders have improved, and the Netherlands Bank has reduced its rate to 3½ per cent. Three months' Swiss francs have come in from 29 to 18½ centimes discounts. The New York spot rate remains weak at \$5.02½, and the three months' rate is little changed.

The Bank Return.—The end of the quarter has brought with it the usual increase in the note circulation, but the Bank's gold purchases have kept pace with this expansion, so that the Reserve is unchanged:—

	BANK OF ENGLAND				
	July 3, 1935	June 10, 1936	June 17, 1936	June 24, 1936	July 1, 1936
£ mill. £ mill. £ mill. £ mill. £ mill.					
Issue Department:—					
Gold	192.7	208.5	211.9	216.3	221.1
Note circulation	401.4	433.0	432.0	434.8	439.6
Banking Department:—					
Reserve	51.9	36.4	40.8	42.5	42.4
Public deposits	9.6	13.5	13.9	20.0	9.9
Bankers' deposits	110.5	86.5	91.0	90.8	111.7
Other deposits	38.0	37.1	37.4	37.4	39.8
Government securities	98.2	97.8	98.3	99.6	110.4
Discounts and advances	13.5	6.2	4.8	7.6	10.6
Other securities	12.5	14.6	16.3	16.5	15.9
Proportion	32.8%	26.5%	28.6%	28.6%	26.2%

The wide changes in the banking department are explained in the following Note. They are mainly due to the money market's preparations for the end of the half-year, but the drop in public deposits may also be due to the July 1st Conversion Loan dividend payment of about £6,000,000 in cash.

The Money Market.—The suggestion made in last week's *Economist* that the brunt of the half-year's borrowing would fall on the Government proved correct. While there had previously been some precautionary market borrowing from the Bank, the market did not have to go to the Bank at all on June 30th. Old day-to-day loans

were renewed by the clearing banks on that day at 2 per cent., and while 2½ per cent. was charged for new loans in the morning, by the afternoon some of the banks were lending money for the night at ½ per cent. Meanwhile, the floating debt statement for June 30th shows that £26.7 millions had been borrowed on Ways and Means from the Bank, while the Bank return for July 1st shows a drop of £10.1 millions in public deposits and an increase of £10.8 millions in Government securities. Discounts and Advances were little higher than in the previous week. It is thus clear that the market had arranged for its week's Treasury bill maturities to fall due on June 29th and 30th, and for its new Treasury bills to be paid for on or after July 1st. Thus although the Bank return shows an increase of £20.9 millions in bankers' deposits, this money was found by the Government and not by the market:—

	June 11, 1936	June 18, 1936	June 25, 1936	July 2, 1936
Bank rate	2%	2%	2%	2%
Clearing banks' deposit rate	½	½	½	½
Short loan rate:—				
Clearing banks	1-1*	1-1*	1-1*	1-1*
Others	½	½	½	½
Discount rates:—				
Treasury bills	½	½	½	½
Three months' bank bills	1-½	1-½	1-½	1-½

* Loans against Treasury bills and other approved bills and British Government securities within six months of maturity; 1 per cent. Treasury Bonds and other gilt-edged stocks within six months of maturity; and other collateral, respectively.

Since the end of June, one or two of the banks have bought a few August and September Treasury bills at ½ per cent. The present position is that there are no sellers of Treasury bills at ½ per cent., but the moment ½ per cent. is suggested sellers predominate over buyers. This contrasts with the position of two months ago, when there were more buyers than sellers at ½ per cent., but it looks as if rates slip back to the level ruling up to the end of May.

Six Months' Money Rates.—The following table gives for purposes of record a comparison of money and discount rates for the past half-year with those of previous years. The rates quoted, besides Bank rate, are the market rate of discount on three months' bank bills, the London deposit rate and the average rate for loans to bill brokers:—

Year	AVERAGE MONEY RATES			
	Bank Rate	Market Rate, 3 Months' Bills	Deposit Rate, Banks	Short Loans
£ s. d. £ s. d. £ s. d. £ s. d.				
1923	3 9 9	2 14 1	1 9 9	1 16 8
1924	4 0 0	3 10 9	2 0 0	2 12 8
1925	4 11 0	4 2 0	2 11 0	3 9 3
1926	5 0 0	4 10 3	3 0 0	4 1 1
1927	4 13 0	4 4 10	2 13 0	3 15 0
1928	4 10 0	4 3 0	2 10 0	3 12 6
1929	5 10 0	5 5 4	3 10 0	4 12 3
1930	3 8 5	2 12 3	1 8 5	2 9 6
1931	3 18 7	3 11 0	2 1 0	3 0 10
1932	3 0 2	1 16 9	1 5 2	1 15 7
1933	2 0 0	0 13 10	0 10 0	0 15 5
1934	2 0 0	0 16 7	0 10 0	0 16 10
1935	2 0 0	0 11 3½	0 10 0	0 14 10½
1st Half Year 1936	2 0 0	0 11 9	0 10 0	0 15 0

Generally speaking, money and discount rates were fractionally higher during the first six months than during the whole of 1935, but some care is needed in interpreting the 1936 averages. The clearing banks now charge fixed rates of ½, ¾ and 1 per cent. for call and short loans, according to collateral, and in practice the bulk of the clearing bank money is lent against Treasury bills at their lowest rate of ½ per cent. Outside lenders also charge mostly ½ per cent., so that if it were possible to strike a weighted average of the various loan rates, it would be very little above ½ per cent. Also the bulk of the bills dealt in in the discount market are now Treasury bills, so that the rate for three months' bank bills is at present hardly representative. During most of the half-year the banks were buyers of Treasury bills at ½ per cent., and except during June the average tender rate was very little above ½ per cent. Compared with the difference between current rates and those of several years ago, these discrepancies may be of little importance. Both short loans and discount rates are now largely controlled.

THE STOCK EXCHANGE

A NEW FOREIGN BOND INDEX

It is doubtless possible to invest successfully without benefit of statistics. But the unsuccessful investor can no longer blame his failure upon the lack of statistical information. Indeed, there may be dangers in an excessive concentration upon purely numerical data. In the United States the movements of the indices are watched so closely that it is sometimes difficult for any consideration other than "market performance" to secure a hearing in evidence when the value of a security is being judged. The British investor has yet to be convinced of the occult powers of the graph; he still believes that some secrets of the future are hid from the chart reader, and that the only way of foretelling the future is to guess on the basis of the best information available. But it cannot be denied that estimating the future is assisted by knowledge of the past. The separate movements of a crowd of disparate securities cannot be memorised, or combined into an intelligible record, by the mind of the individual investor. He requires assistance in the shape of index numbers, and such assistance has been given him in increasing measure in recent years. The Actuaries' Investment Index covers the entire range of ordinary and fixed-interest security movements, while the *Financial News* ordinary share index, following its revision last year, provides an up-to-date and sensitive market indicator. Both series are regularly published in the *Economist*. Nevertheless, one significant section of the market has hitherto largely escaped the statistician's net, for no comprehensive index number of foreign bond values, based on an adequate sample, has been regularly published. Changes in the total value of a sample of 26 foreign bonds are published each month as part of the *Banker's Magazine* valuation of 365 representative securities. From the invest-

ment aspect, however, aggregate changes of a small sample of quotations give only a vague outline of the picture, in which the individual features change quickly in response to peculiar political, budgetary and economic factors affecting the position of the countries whose securities happen to be included.

A new index of foreign bond prices has recently been constructed by the statistical staff of Municipal and General Securities Company, Ltd., which, by adopting a wider range of securities and sub-dividing them into component indices, attempts to meet these objections. The indices have been primarily devised in connection with the Foreign Government Bond Trust (which is managed by the company), and are in fact based upon the list of 114 securities in which the funds of the Trust can be invested at the discretion of the managers, subject to the limitations imposed by the trust deed. It should be clearly understood, however, that the new indices will not be affected by any changes that may be made in the composition of the Trust. Fluctuations in the index are likely to be of the same general character as changes in the prices of Foreign Bond Units, but it must be remembered that while the construction of the indices does not change, the underlying securities of the Trust may vary both in geographical distribution and also in number.

It is computed that the 114 securities included in the new index, of which all but nine (Chinese) issues are quoted in the Official List, have a nominal value of some £608 millions. The sterling value of foreign bonds quoted officially and unofficially on the London Stock Exchange exceeds £2,900 millions, so that the sample covers more than one-fifth of the total field, as measured by nominal

FOREIGN BOND MOVEMENTS, JANUARY 1934 to JUNE 1936
"MUNICIPAL AND GENERAL SECURITIES" INDEX (JAN.-JUNE 1934 = 100)

value. Five constituent indices have been calculated, comprising Europe (represented by 32 issues), Near and Far East (31 issues), Egypt (4 issues) and South and Central America, whose total of 47 bonds is further sub-divided into 36 State issues and 11 Provincial Government loans. The quotations employed are the "offered" prices for the last trading day of each month, adjusted for accrued interest according to the current rate of coupon payments. These quotations are then expressed as percentages of the average equivalent quotations during the base period, i.e. the first six months of 1934. The five constituent indices are then calculated from the unweighted geometric average of the price ratios, while the total index is a geometric average of the component indices, weighted by the number of bonds in each group. The subsidiary total index for Central and South American bonds is similarly calculated from the State and Provincial indices.

No system of individual weighting, even if it were based on average turnover as most closely representing market interest, is free from objection. The use of nominal values for weighting purposes would certainly overweight the high-priced at the expense of the low-priced bonds. Again, since wide price fluctuations are common in this market, weighting by nominal value would distort relative price changes. The effective weighting is therefore determined by the number of bonds in each component index, and since the spread of the sample appears to cover the whole range reasonably well, a broad relation between the weights and market importance is preserved. The compilers have wisely adopted a geometric index, in order to minimise the effects of wide relative movements which always tend to distort an arithmetic index.

The resulting indices are plotted on the chart opposite, and are given in detail in the following table:—

AVERAGE JAN.-JUNE 1934 = 100.

† For definition see text. † These are current totals. Changes in totals have been necessitated during period as follows: Jan. 1934 to July, 1935, 63 defaulted, 51 defaulted bonds; Aug. 1935 to April, 1936, 62 defaulted, 52 defaulted bonds; May, 1936 to date, 66 defaulted, 54 defaulted bonds.

Over the past two and a half years the change in the total index has been remarkably small, since the net decline over the whole period up to the end of last month was little over one point. The range of fluctuation, however, has been very considerable. The total index reached its peak of 107.6 in September, 1934, and fell nearly twenty points in the succeeding twelve months to 88.1. Among the component indices, greatest stability has been preserved by Egyptian bonds, while the fluctuations in Central and South American issues, both State and Provincial, have been most severe. After reaching respective peaks of 119.2 and 123.6 in the autumn of 1934, these two indices fell almost without interruption to low levels of 80.8 and

71.7 eleven months later. It is significant that all the "lows" for the total and constituent indices should have been recorded during the "sanctions crisis" last year. The foreign bond market is the least protected against political risk.

It is evident, from a study of the chart, that the movement of the total index is significantly affected by the South American group. Between October, 1934 and February last year the "pull" of the latter group is particularly clear. In part it is due to weight of numbers, for this group provides 47 out of the total of 114 bonds. Secondly, Brazilian bonds were unsettled during the base period, owing to the introduction of the Brazilian Debt Plan in February, 1934. The inclusion of 15 Brazilian issues in the "State" index and as many as 9 Brazilian issues in the "Provincial" index, coupled with the low base quotations, may therefore exaggerate the abrupt market movements in this group. In the Near and Far Eastern group, China is represented by 20 bonds, Japan by 7, Turkey by 2, and Persia and Siam each by one issue. The improvement and subsequent relapse of Chinese securities this year has exerted predominant influence upon this group, while an additional weight is given to Chinese issues by the inclusion of five tranches of identical loans. The European sample is well spread, although no French issues are included and Greece is represented by as many as six loans. Certain bonds in this group, such, for example, as the Belgian issues, impart a stability to the index owing to their approaching redemption dates.

The influence of default in coupon payments is also an important factor in the total index. The compilers have, therefore, calculated two subsidiary indices, showing the movement of bonds on which full interest payments are being made in London (disregarding any partial or complete default in sinking fund provisions) and of those remaining bonds which are in partial or complete interest default. At present, some 54 issues come within the latter category. The resulting index of their movements shows a close correlation with the South American index, whose composition it largely resembles. Subject to changes in composition noted in the table, the indices show that an investor who had held nothing but full interest-paying bonds during the past two and a half years would have been rewarded to the extent of 5½ per cent. in capital appreciation, while the speculator in search of recovery among the defaulted issues would have lost 8½ per cent. of his money.

This may be a salutary lesson for foreign bond investment in the future. Investors, however, will be able to follow the trend of the index in subsequent issues of the *Economist*, since Municipal and General Securities Company, Ltd., have courteously undertaken to supply us with the monthly figures for regular publication. We commend the index to the attention of investors in the belief that, although it is not free from certain defects inherent in the composition and sensitiveness of the foreign bond market as a whole, the index represents a careful attempt to measure movements which have, hitherto, lacked an adequate yardstick.

INVESTMENT NOTES

Course of Share Values.—The past month has witnessed a recovery in share values on both sides of the Atlantic. In London, the first trading day of June marked the end of a process of technical correction extending over the previous six weeks. The recovery opened hesitantly enough, for investors were pre-occupied with the most severe gold bloc crisis experienced to date. Anticipations that M. Blum would find himself compelled to devalue or to adopt exchange clearing were falsified, but the prevailing fears depressed commodity and gold shares, which were regarded as specially vulnerable to a fall of the franc and the guilder. The movements of the past month have been largely concentrated in the steel, motor, aviation and engineering groups. Despite the confident belief that industrial recovery will be maintained for many months to come, the market has wisely refrained from indulging in a

general buying movement, and has concentrated instead upon the re-armament and construction equities. The recovery of the franc has encouraged modest purchasing in other sections, but the "fixed-interest" equities have again found few supporters. The underlying political situation in Europe has shown no improvement during the month, although the market signalled the end of sanctions by marking slightly higher prices a fortnight ago. After a month of convalescence from the April shake-out, Wall

BRITISH AND AMERICAN INDUSTRIAL SHARE VALUES OVER THE PAST TWO YEARS

(1928 = 100)
British: "Financial News" Index of 30 Ordinary Shares
American: "Standard Statistics" Index of 50 Common Stocks

Street also recovered during June, and many stocks have regained the April "highs." The market has swallowed the tax measure with fair grace, but, like other centres, Wall Street took some time to shake off its fears for the franc. Recently it has shown more confidence in the industrial situation, with the steel industry working close to effective capacity. Distribution of the veterans' bonus, however, has not provided the consumers' goods trades with the expected filip. Cleveland provided the best news for the market, which rejoices to observe the falling odds on President Roosevelt's re-election resulting from the closing of the Republican ranks, but Wall Street, like London, still lacks a consistent market leader. Industrial ordinary share movements at home, as measured by the Actuaries' Investment Index of 178 issues, stand at 83.1, compared with 81.9 a month ago and 77.5 a year ago (December 31, 1928 = 100). During the year changes in average yields have been very small, the return being 3.76 per cent. at present, against 3.75 per cent. a month ago and 3.80 per cent. a year ago. Selections from the fixed interest and ordinary share indices computed by the Actuaries are given below:—

Group (and No. of Securities)	Prices (Dec. 31, 1928 = 100)			Yields (%)		
	Year Ago (June 25, 1935)	Month Ago (May 26, 1936)	This Week (June 30, 1936)	Year Ago (June 25, 1935)	Month Ago (May 26, 1936)	This Week (June 30, 1936)
Fixed Interest						
2½% Consols	151.7	149.7	152.7	2.94	2.98	2.92

Miscellaneous (58)	69.8	74.4	75.5	3.97	4.09	4.06

Fixed interest securities have shown little net change during the year. The recent movements in ordinary shares reveal the concentration of interest upon construction and re-armament equities.

New Zealand Bond Negotiations?—The market has not taken kindly to the suggestion of the New Zealand Premier, Mr Savage, that the Finance Minister when negotiating a trade agreement in London, will ask for a reduction of interest upon New Zealand loans. The Premier's economic case is that the Dominion is "paying more than was intended" when the loans were made. Later elucidations from Wellington have reiterated New Zealand's intention of honouring her bond, but have stressed the fact that the real burden of her debt service, measured in terms of exports, has doubled since the loans were raised. It is doubtless true that the physical quantity of goods to provide a given sum to meet the debt service has doubled in that period. But both parties to the loan contracts entered into the transactions on money terms, and a revision to accommodate the debtor now would surely pre-suppose the contrary adjustments in favour of the creditors if the value of their interest and principal, measured in terms of commodities, should fall in the future. The budgetary cost of New Zealand's external debt service has certainly increased in recent years, but that increase is attributable largely to the deliberate depreciation of the New Zealand pound by 25 per cent., which Mr Savage would admittedly like to reduce. Unlike Australia, New Zealand has enjoyed unlimited opportunities for converting her debt to a lower interest basis during the present low-interest cycle. She made two conversion issues during 1934-35, while at the end of April last an issue of £4,000,000 3 per cent. stock, 1952-55, was made at 98½ to convert an existing 6 per cent. stock. The next conversion opportunity does not occur until 1940, when a 3½ per cent. issue, of which £17,172,191 is outstanding, is due for redemption. The following table shows the redemption terms of New Zealand loans quoted in the Official List:—

Original Issue	Amount outstanding	Rate of Interest	Redemption	Quotations			Fall, July 1, 1936
				High, 1936	June 30, 1936	July 1, 1936	
18,014,276	17,172,191	3½	1940	104½	103	102	1½
9,657,980	9,657,480	3	1945	102½	101	100½	1½
10,881,819	10,505,989	4	1943-63	105½	105	105	2
5,898,800	5,869,988	6	1936-51	102½	102½	102½	2
7,362,000	7,339,656	4½	1944	109½	108	106	2
7,588,064	7,580,908	4½	1945	109½	108	106	2
12,893,924	12,886,110	4½	1946	114½	112	109	3
11,225,000	11,221,609	4½	1947	110½	108	106	2
19,227,988	19,225,465	4½	1948-58	109½	109	107	2
7,500,000	7,500,000	5	1949	115½	113	109	4
5,000,000	5,000,000	5	1956-71	121	119	117	2
5,000,000	5,000,000	3½	1949-54	104½	104	102	2
3,989,100	3,989,100	3½	1955-60	106½	104	102	2
8,000,000	8,000,000	3	1952-55	100½	98	96½	1½

Of the £130 millions of sterling loans now outstanding some 59 per cent. carries interest at 4½ per cent. or more. Some £58 millions of debt is repayable or convertible between 1945 and 49. There is little likelihood that creditors would be willing to anticipate these dates, nor, fortunately, that New Zealand would contemplate any action which would impair her justifiably high credit-standing in the London market.

Holding Companies and the Stock Exchange.

The Committee for General Purposes have made an important announcement this week on the subject of holding company promotions. The Committee have noted a tendency for new companies to be formed as holding companies acquiring the shares of existing undertakings instead of purchasing their assets in the usual way. While they realise that "holding companies in certain instances serve a useful purpose," the Committee will in future require to be satisfied that there are adequate reasons for this method of promotion. This announcement carries the Committee's evolutionary policy on the control of new issues a stage further. Some months ago the Committee declared that market "introductions" should not be used in cases where a direct public offer of shares would be more appropriate. The latest announcement is equally vague in detail, but no less explicit in intention. The holding company specifically formed for the process of flotation will probably earn the Committee's disapproval. In flotations of this kind the vendors, wishing to preserve their equity control in an established concern, usually transfer it to a new holding

company whose capital consists partly of preference shares and partly of ordinary shares. The former are then sold to the public, while the vendors take as their purchase consideration the ordinary shares, which carry the voting control of the holding company—and consequently of the operating company. It is possible, under this arrangement, for the vendors to preserve a very small financial stake in the concern, but to retain complete control. Real knowledge of the value of the physical assets of the operating concern is frequently lacking, and precise information regarding the level and—equally important—the trend of operating earnings is often concealed from the holding company shareholders. Again, where the shares of the operating company are entered in the holding company's books at purchase price, an asset may result which contains a substantial but undisclosed measure of goodwill. Two points may be made regarding the Committee's announcement. First, if the publication of adequate consolidated revenue accounts and balance sheets were generally practised, the work of the Committee and the investor would be vastly lightened. From the market aspect, secondly, the deliberate vagueness of the Committee's announcement is in keeping with its usual policy. It does not deny prior indication of what is considered "adequate" to those concerned in given cases, but it avoids the difficulties of legislation by fixed rule.

The McGowan Report and the Investor.—The broad aspects of the recommendations submitted by the McGowan Committee are discussed in a leading article on page 3. If these recommendations are implemented by legislation, no disadvantage will be suffered by companies whose activities are confined to, and whose profits are solely derived from, the normal business of electric supply, and some companies are likely to receive substantial benefit. On the other hand, undertakings with large electric supply interests which also make substantial profits on contracting and other services to subsidiary concerns—such as Edmundson's, Christy Brothers and Power Securities—may find difficulty in maintaining the present level of profits from these ancillary activities. The companies likely to benefit from the suggested legislation fall into three categories. First, there are companies holding Distribution Orders which, although approaching the end of their franchise, are large enough to continue in existence. These concerns will therefore receive fifty years' tenure of their existing rights, at the existing level of profits, which may be increased under a sliding scale. Such companies include the Northampton Electric and Bournemouth & Poole. Power companies owning distribution undertakings, such as the North Wales Power Company, North Metropolitan, County of London, Metropolitan, Midland Counties and others, would reap similar benefits in varying degree. Secondly, certain companies own distribution undertakings of suitable size for absorption with other large undertakings, on terms of compensation which would probably be higher than present share values. Southern Areas Electric and Electrical Finance and Securities, for example, fall within this class. But since compensation would vary with the length of the unexpired franchises, Southern Areas would have an advantage over Electrical Finance. Various composite companies would also obtain similar advantages, of which British Power & Light, British Electric Traction and Electric Supply Corporation may be mentioned. Finally, certain power companies may be permitted to absorb the undertakings now owned by relatively small local authorities in their area on favourable terms. North Wales Power and Scottish Power seem of chief importance in this class.

News for Foreign-bond Holders.—The League Loans Committee announced on Thursday a further prolongation, to August 1, 1937, of the present arrangements between the Hungarian Government and the holders of the 1924 Hungarian League of Nations Loan. As first agreed two years ago, and renewed last year, the arrangement provides for transfer of 50 per cent. of the service in foreign currencies, the balance being provided in the Hungarian Budget, but paid into the National Bank in pengoes and re-

borrowed by the Government against deposit of 2 per cent. twelve-months pengö Treasury bills. The bills represented by the untransferred 50 per cent. of the 1934-35 and 1935-36 services of the loan are to be renewed for a further year, at the same rate of interest. The Hungarian Government reaffirm their recognition of the special position of the holders of this loan. Although Hungary's finances are steadily improving under the able hands of M. Fábinyi, the Finance Minister (who has conducted this week's negotiations with the League Loans Committee on the Hungarian side), the progress is slow mainly owing to trading difficulties in the Danubian area. The Hungarian authorities have at any rate put their case promptly and straightforwardly before the League Loans Committee. Investors will hope that the Greek financial delegation, despite the recent irritating delays, has come prepared to meet the contentions of the creditors' organisations that the country could well afford to transfer more than 35 per cent. of the debt service. Polish 7 per cent. Stabilisation Loan, which fell as low as 50 nominal at the end of last week, has subsequently recovered to 64½, on official assurances that the service of the London loan is not affected by last week's suspension of payments to United States and other creditors. Despite the favourable trade balance which Poland enjoys with this country, however, her present economic problems justify the current low level of this loan.

A Danish Conversion.—The offer for sale of £1,900,000 4 per cent. bonds of the Associated Municipalities of Denmark represents the first conversion operation on behalf of a foreign corporation since the city of Bergen came to the market in January last year. The present issue, which is offered by Hambros Bank at 99, will repay the outstanding £1,820,300 5 per cent. bonds of 1922, which have been called for redemption on January 1st next. At the current price of 102½ the bonds are of exclusive interest to the money market. The new bonds, like the old, will be secured by the joint and several

TRIPLE SHELL LUBRICATING OIL

HUMBER

guarantee of 24 Danish municipalities. They will have a maximum life of 24½ years from January next, but will be optionally redeemable from July, 1947. The yield to average redemption is £4 1s. 9d. per cent. The Association of Municipalities provides an interesting example of co-operation to obtain improved credit standing. Total assets of the guarantors exceed their total debt by some 50 per cent., and their property revenues, which amounted to £1,380,769 for 1934-35, were £26,000 higher than revenue from rates and taxes. Certain of the municipalities are joined as guarantors of two dollar loans, of which \$5,960,000 is now outstanding. The bonds now called for redemption have attracted investors by reason of their high grade, and the integrity of the borrower eminently justifies the present conversion issue, which, like the original loan, gives the borrower power of optional repayment after ten years have elapsed.

COMPANY NOTES

Wool Textile Companies.—In stability of turnover the wool textile industry falls midway between cotton and rayon. The last 10 years have seen little variation in the volume of goods handled. Thus the production of tops fell between the production census years of 1924 and 1930, exceeded the 1924 level in 1933, but fell approximately to the 1924 level in 1934. If anything, there has been a slight expansion in this department, but it is not large. The same movement occurred in yarns, since 1930 was a bad year for the trade as a whole, but here the tendency has been

year of vigorous revival in physical turnover and a better year than 1934. This reduction in margins has affected all departments of the trade. Its effect appears to have been least serious, however, in the wool-combing section which performs one of the first processes of converting raw wool into "tops" for spinning. This section has maintained a steady turnover, and it enjoys better organisation than other departments. The Woolcombers' Mutual Association, formed in February, 1933, has made good progress in buying weak units and preventing rate-cutting. Moreover, by its traditional organisation the wool-combing section works predominantly on commission. It never owns the wool itself and thus avoids the market risk of price fluctuations. Although the spinning section has avoided any serious reduction in physical turnover, it is compelled to carry large stocks of wool in process of production, and is thus exposed to substantial fluctuations in profits arising from movements of wool prices. The price factor does not merely involve profits or losses on the stock valuations, for at times it results in unexpected pressure to reduce the spinners' margin between raw wool and yarn prices. The final processes in manufacture, of which weaving is the most important, are still largely under private control, and while there are certain large public companies in this section, several are specialists, whose results are largely dependent upon accurate anticipation of demand. So far as generalisation is possible, the accompanying table of profits suggests that conditions are tending to improve in the manufacturing section, but are still far from easy. In investment quality, Woolcombers stands first—though any renewal of pressure to reduce margins would constitute a serious threat to profits—while Patons & Baldwins, in the spinning section, whose profits swing inevitably with the price of wool, is a share for the specialist rather than for the general investor.

Half-Year's Rail Traffic.—The latest traffic returns bring the home rail half-year to a disappointing close. All lines have suffered considerably on passengers, while the L.N.E.R. goods comparison with last year is poor. The twenty-sixth week, however, closed on June 27th for this line and on June 28th for the other groups. The market's presumption, therefore, is that the half-year "sweepings" will fall into the twenty-seventh week's figures. The following table compares the half-year's receipts for each company with those of 1935 and with the average over the "normal" period 1927-30. They exclude ancillary revenues and are subject to any half-yearly adjustments which may be made:—

GROSS RECEIPTS, JANUARY-JUNE, 1936

	L.M.S.	L.N.E.R.	G.W.R.	S.R.
Passenger receipts (£)	11,379,000	7,414,000	4,720,000	7,145,000
Change compared with 1935 (%)	- 0.09	+ 0.45	+ 0.55	+ 1.22

Merchandise receipts (£)	12,274,000	8,334,000	4,856,000	1,566,500
Change compared with 1935 (%)	+ 5.83	+ 4.10	+ 3.98	+ 1.41
Change compared with 1927-30 (%)	- 18.0	- 23.8	- 15.9	- 24.1
Coal receipts (£)	6,408,000	6,114,000	2,651,000	837,500
Change compared with 1935 (%)	+ 4.82	+ 4.26	+ 2.59	+ 5.28
Change compared with 1927-30 (%)	- 9.4	- 9.3	- 17.7	- 3.2
Total receipts (£)	30,061,000	21,862,000	12,227,000	9,599,000
Change compared with 1935 (%)	+ 3.28	+ 2.89	+ 2.34	+ 1.59
Change compared with 1927-30 (%)	- 15.1	- 17.6	- 17.8	- 10.7

The L.M.S., with an increase in receipts of £937,000, has made the greatest absolute and relative progress on 1935, and its recent takings from merchandise have been particularly encouraging. The Southern's passenger increase, however, is smaller than for 1935. For the L.N.E.R. the trend is distinctly more encouraging, for the corresponding half-year in 1935 closed with losses for merchandise, coal and total receipts. In the table which appears on page 25 comparisons of the analysed traffics are presented. Since the end of February, goods traffics have approximately maintained a 5 per cent. rate of increase, after allowing for the incidence of last year's Jubilee celebrations. Receipts in this class still make the worst comparison with the "normal," owing to loss of business to the roads, but some ground has been regained during the half-year. The coal "pluses," although more modest during recent months, are satisfactory, for quieter condi-

* Broken period equated to 12 months. † Tax free. ‡ Interim 2½ per cent. tax free and final 7½ per cent. less tax. § Assuming normal pref. div. ** Omits 6 month period to June 30, 1934—previous periods to December 31. †† Prior to capital reorganisation—allocations not applicable to present structure. ‡‡ Interim 2½ per cent. less tax and final 7½ per cent. tax free.

towards a slight contraction in output. The variety of individual fabrics is great, but the statistics suggest an expanding tendency in all-wool fabrics and carpets, while mixture tissues of wool and other fibres have fallen. While the volume of work has been relatively stable, values have fallen in competition with other textile fibres, and the falling trend of wool prices has further reduced the manufacturer's margin of profit. Thus the "net output" of the industry fell from £53,064,000 in 1924 to £37,460,000 in 1930, and only recovered to £39,913,000 in 1933, a

* Jubilee fortnight in 1935.

tions would not have been surprising after the settlement in the mining industry and the termination of precautionary re-stocking. On the half-year's traffic figures, it would seem that L.M.S. ordinary and L.N.E.R. second preference have each earned about 1 per cent., while Great Western ordinary should be covered to the extent of 2½ per cent. Southern deferred, whose recent recovery merits have been dimmed by L.M.S. ordinary, has probably earned slightly under one-quarter of 1 per cent. While it recalls that only two lines took direct credit for rating relief in the last accounts, the market is not disposed to take a cheerful view of dividend prospects while the current wage uncertainties prevail. The Railway Staff National Council has been unable to agree on the N.U.R. and Railway Clerks' claim for restoration of the full 2½ per cent. earnings deduction, of which the companies have offered to restore one-half. The question therefore proceeds to the National Tribunal, which is composed of one nominee from each side, under independent chairmanship, to which Sir Arthur Salter has been appointed by the Ministry of Labour this week. Until the decision of the Tribunal is made known, a period of continued dullness in the home rail market is to be expected.

London Transport Year.—The receipts of London Transport, before pooling with the main line railways, show an increase of £380,400 for the 52 weeks to June 27th,

the total being £28,477,300. The total for the previous 52 weeks, amounting to £28,096,900, has been adjusted to take account of bus undertakings absorbed during that year. In last year's accounts, however, passenger receipts after the operation of the pooling scheme amounted to £28,823,262. It is difficult, as the market has acknowledged for several months, to frame reliable estimates of net earnings for the system on the basis of these gross receipts, for the operating ratio is affected by recent changes of wages and by variations in the cost of fuel. Consequently, stockholders who were tending to credit the Board with the intention of paying the full standard (5½ per cent.) dividend for the latest year, have been compelled to revise their estimates. Since the Board announced, in February last, that the increase in working expenses had more than absorbed the rise in receipts (which then amounted to £313,200 for the first 32 weeks), the "C" stock has fallen as low as 101, compared with an earlier high level of 112½. Although the recent traffics trend has not been exciting, renewed investment support for the stock has carried the price to 104. The stock, therefore, is again approaching those uneasy regions where it is reasonably valued on a 4 per cent. basis and greatly undervalued if payment of the standard rate were possible within, say, the next 12 months. An interim payment of 1½ per cent. has already been made, and stockholders may expect a prompt announcement of the final dividend, since the problems arising from the acquisition of the Tilling and other interests last year have been settled.

Union Cold Storage Profits.—The accounts of this large meat trading concern show that published profits are almost unchanged at £964,049. During the past decade, total declared profits have never varied below £960,000 or above £999,000. The changes, indeed, have merely been sufficient to provide for variable amounts charged for interest, and the amounts earned for dividends have remained completely stable between £820,000 and £830,000.

There is still no sign, from the disclosed earnings, of the anticipated reduction in profits which led the directors to seek a reduction of preference dividend rates two years ago. The profits for the last three years are analysed below:—

	Years to December 31		
	1933	1934	1935
Profit	962,172	962,124	964,049
Depreciation reserve	125,000	125,000	125,000
Fees and interest	17,112	14,619	14,494
Earned for dividends	820,060	822,505	824,555
Preference dividends	720,000	720,000	720,000
Ordinary Stock—			
Earned	100,060	102,505	104,555
Paid	100,000	100,000	100,000
Earned (%)	10.0	10.3	10.4
Paid (%)	10	10	10
Carried forward.....	203,597	206,102	210,657

A substantial rise in the value of steamships in the balance sheet is associated with the continued "deficiency" of net assets, in calculating which, however, it is necessary to make full deduction of the composite item for creditors, contingencies and other reserves as a current liability, although it may include certain "free" reserves. The bank overdraft, however, has been reduced, and the loans to subsidiary companies have increased from £623,000 to £777,000. A reduction in trade debtors and loans, from £1,514,000 to £558,000, has been effected during the year. Since interests in subsidiary companies account for more than half the balance sheet total of £17,129,596—such shareholdings again being qualified in the auditors' report—a consolidated statement showing the position of the group would undoubtedly be welcome, even though public interest in the company is restricted to the preference capital.

* * *

Zinc Corporation Profits.—This important mixed-metal undertaking, writes our mining correspondent, has experienced its most profitable year since 1926. A slightly increased tonnage of better-grade ore was milled, and the recoveries of lead and silver showed some improvement although in the case of zinc, values were not quite maintained. Profits benefited appreciably from the sale of part of the lead stocks held at December, 1934, above the book value, but the main advantage came from the recovery in metal prices. Lead last year averaged £14 5s. 8d. per ton, as against £11 1s.; zinc £14 3s. 6d., against £13 3s. 6d.; and silver 31.3d. per ounce, against 22.9d. Working costs increased from 23s. 8d. to 24s. 10d. per ton, owing partly to the expense of changing over to the new mill and partly to the higher wages which were paid from the end of October. In the following table the financial results of the past three years are presented in sterling:—

	1933	1934	1935
Gross value of output	746,810	768,860	1,042,940
Gross mining profit	63,820	85,950	292,910
Interest, dividends, etc.	69,400	64,960	90,580
Proportion of taxes, office expenses, etc.	13,000	19,690	59,490
Net profit	120,230	131,230	324,000
Fixed 20% Pref. dividends	49,140	49,140	49,140
Participating dividends	56,180	67,410	202,230
Mine development and plant	70,000	40,000	50,000
Carried forward	45,020	51,490	54,710

Last year's "sundry revenue" included a special non-recurring item of £23,100, the nature of which is not disclosed, a similar sum being transferred to profits equalisation reserve. The dividends amount to 42½ per cent. on the participating preference and 45 per cent. on the ordinary shares as against 27½ and 15 per cent. respectively for 1934, and slightly lower rates for the immediately preceding years. In 1926 the preference shares received 55 per cent. and the ordinary 70 per cent. On the basis of last year's distributions, the yield on the preference is just over 5 per cent. and on the ordinary shares slightly in excess of 7 per cent. In looking forward, account has to be taken of the trend of metal prices and of the increase in operating expenses due to higher wages and alterations

in working conditions. Freight rates for lead and zinc concentrates on the South Australian Government railways have also been increased. The accounts show a good financial position. Investments amount to £810,300, against £691,300; British and Dominion Government securities represent 89.9 per cent. of the total, compared with 51.8 per cent. at the end of 1934, the company having sold most of its commercial and industrial holdings. The ore reserve position is also satisfactory. The lead lode has been increased to 3,000,000 tons by the development of No. 13 level, and the directors state that recent diamond drilling has proved that the grade and character of the lead ore-body are maintained for at least 600 feet below this level.

* * *

Other Company Results.—Our usual table of company profits, which summarises the results of some 52 other companies, will be found on page 43. Among estate companies, the profits of *Connaught Estates* have advanced from £16,644 to £19,607, the dividend being maintained at 7 per cent. The results both of *Hampstead Garden Suburb* and *Associated London Properties* are practically unchanged, but the latter company has increased its dividend from 4½ per cent. to 6 per cent., and again makes substantial reserve allocations. Although the profits of *Greenwood and Batley* are lower by some £300, the dividend has been increased by ½ per cent. to 4½ per cent. The results of plantation companies make a very mixed showing. The most spectacular increase in profits is that of *Anglo-Ceylon and General* from £703 to £50,662, which is due mainly to improved revenue from the Mauritius tea interests. At the other end of the scale, *Manchester North Borneo* have raided the carry-forward to the extent of £1,653 to meet preference dividends, having earned a net profit of £716, against £6,250. In the catering group, *Spiers and Pond* are increasing their dividend from 3 per cent. to 5 per cent., and will distribute £53,120 out of net profits of £55,055. With the exception of *Bogawantalawa*, the tea company profits this week show large increases over last year. *Borelli and Koomsong*, for instance, have both doubled their dividends and more than doubled their profits. An increase in profits of *Amalgamated Dental* of £18,877 has enabled the directors to declare a dividend of 5 per cent. on the deferred stock, as against nil last year. *Aron Electricity Meter* maintains its dividend at 15 per cent. and carries forward £11,348 (as against £4,293 brought in) in spite of a reduction in profits from £32,999 to £30,902. *British Glues and Chemicals* re-enters the dividend list with a payment of 7½ per cent. Another satisfactory increase in profits is that of *Lovell and Christmas* from £142,244 to £148,083, the dividend being raised from 8 to 10 per cent. *Powell Duffryn Associated Collieries* report an initial profit of £721,159. After providing for debenture interest, and transferring £150,000 to reserve, a sum of £420,000 is distributed, of which Powell Duffryn Steam Coal receives £280,000 and Welsh Associated £140,000. *Broadcast Relay Services*, whose operations and capital have been substantially increased during the past year, announces net profits of £79,922 and a 10 per cent. dividend.

* * *

Company Meetings of the Week.—On later pages of this issue will be found the reports of the following company meetings:—Gas Consolidation, Boulder Perseverance, Callender's Cable and Construction, Barclay Perkins, Globe Telegraph and Trust, John Ismay and Sons, Lobitos Oilfields, Hovis, and Ohlsson's Cape Breweries. Major Julian Day, at the Gas Consolidation meeting, compared the gas industry to the electric, and said that many of the passages of the McGowan Committee report might well apply to the gas industry. The chairman of Globe Telegraph and Trust Company referred to the repayment during the year by Cable and Wireless (Holding), Limited, of £1,608,691 in respect of the Trust's holdings in 5½ per cent. preference stock. The chairman of Barclay Perkins and Company was glad to see a general tendency towards longer opening hours on special occasions and approved the tariff on imported lager. Mr. H. C. R. Williamson, of Lobitos Oilfields,

Ltd., said that the refinery was now working just below full capacity. The chairman of Boulder Perseverance, Ltd., discussed results of recent exploration work. Mr. John Ismay, of John Ismay and Sons, Ltd., justified the company's policy of disposing of several interests in which preference share holdings are retained in order to produce a more regular revenue. The chairman of Callender's Cable and Construction Company reviewed a satisfactory year's trading, and anticipated continued good conditions. Mr. A. H. Dence, of Hovis, Ltd., reported a net profit on trading almost identical with that for the previous year. At the Ohlsson's Cape Breweries meeting, Mr. Geoffrey Dent said the company had shared in the results of greater activity in the mining industry and the upward movement in wages.

THE WEEK IN THE MARKETS THE LONDON STOCK EXCHANGE

SETTLING DAYS

TICKET JULY 7 | ACCOUNT JULY 9

THE somewhat unsettled sentiment in the markets and the restrained volume of business of the early part of the week were relieved slightly in mid-week, but political uncertainties in Europe and at home are likely for some time longer to prevent any great display of enthusiasm. Despite the lack of vigour, the tone in many sections has been good, and there have been several bright features.

The account closed last week in the gilt-edged market without much interest, except for a demand for short-dated issues under the influence of an anticipated lower Treasury bill rate, which in the event averaged 12s. 7.8d. per cent. The annual drawing of Victory Bonds was followed at the opening of the week by a slight improvement in quotations to 115½, while the drawn bonds were bid for at 101½. Gilt-edged prices held firm in anticipation of re-investment of the disbursements. A temporary downward movement, however, resulted in sympathy with the fall in New Zealand stocks, which fell several points on the report that the New Zealand Government is trying to obtain a reduction in interest rates on grounds criticised on page 22. In mid-week, this influence was isolated, and prices continued firm. India loans were quietly steady, and among Dominion issues interest was directed to Australian issues, without much variation in quotations.

Home corporation issues have attracted fairly consistent support throughout the week, and a number of small price increases have been registered. There have been a number of interesting developments in the foreign bond market. The reduction of the French Bank rate stimulated an improvement in French Rentes, which continued with the improvement in the franc. The report of the temporary suspension of payments by Poland on her American bonds produced a sharp drop in Poland Sevens to a nominal 50, but assurances that the debt service would be continued in London led to a recovery which in mid-week put quotations up to 64½. Far Eastern issues continued to suffer from the quarrel between Canton and Nanking, and from the Customs developments in the North, but later an improvement resulted from the reinvestment of proceeds from drawn bonds. Among South American issues Argentine bonds were firm most of the week, and Brazil "Vargas Fours" were a feature.

Home rail issues were affected by the demand of the Associated Society of Locomotive Engineers and Firemen for a six-hour day in addition to the restoration of wage cuts, and prices weakened with a small amount of selling. The half-year's traffics are discussed on page 24, the latest poor figures quenching a momentary improvement later in the week. Transport "C" were in demand throughout the week for investment, and among foreign rails Argentine issues, which were firm at the end of last week on hopes of a satisfactory trade agreement, became dull on the traffic results. Cordoba Central debentures were weak on the report that the moratorium on the 4½ per cent. stock may be continued.

Conditions in the industrial shares markets have not been particularly bright, but underlying sentiment has been fairly well maintained. In the iron and steel section profit-taking developed at the end of last week, and the new week opened with less business than of late. Price movements were slight and irregular, but activity increased in mid-week, and quotations became firmer. Aviation issues were generally firm this week, Bristol issues being particularly active, while a good demand was reported for Handley-Page. Profit-taking then developed and prices moved irregularly, only to pick up later. The motor shares group has been rather dull, but Austin and Tilling were higher this week. Good trading reports were somewhat slow in producing any effect on the markets.

The electrical equipment group has been firm throughout, Crompton Parkinson being in the lead on eager canvassing of prospects, while General Electric continued firm on the recent meeting. Cables and Wireless preference lost ground after their recent gains. The textile section showed no change of significance and dullness prevailed, while in the rayon group Courtaulds became easier after recording an improvement on the record May rayon output figures. Groats were weak on the poor report. The stores group has also been dull, and failed to respond to the good retail trade figures. Great Universal Stores were depressed by suggestions of an increase in capital. Tobacco shares were somewhat firmer, and in the brewery section Distillers gained on the final dividend, which leaves the total dividend unchanged on the year.

The miscellaneous industrials section was dull at the opening of the week, with profit-taking evident in most sections, but later several bright features appeared. In mid-week business in building materials shares became more active, improvements being recorded by British Plaster Board, Alpha Cement and by Associated Cement on reports of an extension to the works. Among miscellaneous engineering companies British Timken were a feature.

The oil share market opened quietly, with prices inclined to fall slightly on a small volume of business. On Wednesday there were signs of a slight improvement, and Mexican Eagles moved sharply upward at the end of the day, but later a setback developed which affected most shares, with the exception of Anglo-Ecuadorian. The American news was not considered very satisfactory, but did not exert any great influence. Rubber shares have been idle this week, but the confident tone of last week has not been undermined, and quotations have not suffered. The commodity price improved slightly, and the fall in world stocks gave the share market rather more confidence. Dividend announcements during the week were as anticipated, and did not affect prices. Tea shares became a little brisker on Tuesday, with buyers predominating, but there was a rapid change in the position, and prices later became more erratic.

The Kafir market opened on a quieter note, but a firm tone was maintained, and later in the week there was a renewed upward movement in many prices, with public interest well maintained. The development companies were most active, West Witwatersrand shares and Ventersposts being prominent, while there was considerable speculative support for Far Eastern Rand issues, coming both from London and the Cape. Luipaards Vlei were a strong feature on renewed rumours of absorption by one of the big groups. West African issues by contrast have been much duller, with Ashanti a principal exception, and profit-taking continued in mid-week. The Rhodesian section has been extremely idle, with prices moving mostly against holders, and, thanks to a better tone in the commodity market, there has been a general increase of interest in tin shares, with several small increases in prices.

FOREIGN STOCK EXCHANGES

NEW YORK

Stock prices on Wall Street have continued their irregular display and remain more sensitive to political fears and prejudices than to business considerations. Concern for the immediate future of the steel industry is attributed to an expectation of labour trouble and of a slump in output in the third quarter when higher prices will be in force. The Government is suspected of sympathy with the labour movement, and it may oppose monopolistic policies of price-fixing, which only a little time ago were encouraged under N.R.A. Owing to these various apprehensions, steel shares have been out of favour during the week, but the industry appears to protest too much about a labour movement which itself is evidence of better conditions in the industry. The much feared report of the Securities and Exchange Commission, which favours division of function between brokers and dealers, has exerted an influence over the markets out of keeping with its moderation and the reasonableness of its economic motives. It is, of course, inevitable that the Democratic platform should be a damper on the market, for anything to which the name of Roosevelt is attached may now be expected to have that effect. This week two bright spots have been caused by anticipated reverses to the New Deal, the first in railroad shares on the decision of the District of Columbia Supreme Court that the Rail Pension Act is unconstitutional. The second was in Westinghouse Electric, which made spectacular gains in anticipation of returning prosperity for the utility industry, in spite of the Holding Company Act. The constitutionality of the latter, of course, has not yet come to the test. Chrysler shares were a strong feature, partly on expectations of forced higher dividend distribution under the new taxation Act, and partly on anticipated benefits from veterans' spending. Business reports are still encouraging. *Iron Age* estimates steel mill activity at 71.5 per cent. of capacity, against 71 per cent. last week; railroad companies report a higher gain in May operating revenues over last year than was recorded for April, while bank clearings for the week ended June 24th were 11.5 per cent. higher than a year ago.

PARIS

Following the recent reductions on the Bank rate, interest has centred upon Rentes, which have recorded a number of spurts and on balance have held their gains. If the way for the issue of "baby" bonds is to be well prepared, it is felt that Rentes will not be allowed to fall back from their present levels. Though the strength of the bond market is in part due to official support, its extent is uncertain, for it is suggested that by this time the public have started to take a hand in the proceedings in the hope that the latest cheap-money policy may somehow succeed. An element of disturbance was, however, introduced by the proposal that French nationals should be compelled to declare their holdings of foreign securities bought in France. The share market this week has displayed no very marked tendency one way or the other, caught as it is between the two conflicting influences of cheap money on the one hand and of the continued insecurity of the industrial situation on the other. Although Rentes pulled other prices slightly upwards, business has not been active, and the brisk demand which developed on Tuesday was due more to technical factors than to a genuine improvement in sentiment. On account of the steadier franc, no great interest has been taken in Internationals.

	June 24, 1936	June 29, 1936	July 1, 1936	June 24, 1936	June 29, 1936	July 1, 1936

BERLIN

After a dull period the market recovered somewhat at the end of last week, the chief gains being in Rheinische Stahl, Bayerische Motoren, Otavi and Hamburg-South-America. Other shipping shares continued weak. The new week opened with a good tone in evidence, although the turnover was not big. On Monday there were advances in steel, automobile and paper pulp shares, and on Tuesday a demand developed for Bayerische Motoren and Hamburg South-America, while textiles, papers and breweries reacted. By mid-week, sentiment improved, an important factor being rumours of good subscriptions for the new Reich loan, which, according to earlier reports, had been accorded a poor reception. The quotation of dollar bonds, suspended after the recent Reichsgericht decision, was resumed on Monday.

AMSTERDAM

The bond market has been firm owing to successive reductions in the bank rate, which now stands at 3½ per cent., but in other directions cheaper money has so far proved no stimulus towards greater activity. The turnover has been poor, and price movements have been slightly reactionary. The strength shown by commodity shares has not been consistently maintained; both rubber and tobacco issues were at first at lower levels, although rubber share prices have since improved. News of increased quotas and a fall in the price of the metal brought about a set-back in tin share quotations.

CAPITAL ISSUES

CONSIDERABLE activity has been witnessed in the capital market this week. Only one conversion issue has appeared, on behalf of *Associated Municipalities of Denmark*, and is discussed on page 23. The *South Durham Steel and Iron* 4 per cent. debentures are an industrial investment of a type which has been somewhat rare during recent months. The proceeds are to finance the new coke ovens at Seaton Carew and improvements to blast furnaces. The stock is well covered by recent earnings—which, of course, have shown a striking recovery since 1933—and is a reasonable heavy industrial debenture. The *Tunnel Portland Cement* 5 per cent. preference issue at 10 per cent. premium also provides for capital expenditure of an established concern. The shares rank after the existing 5½ per cent. issue, but their dividend requirements are adequately secured by recent average earnings. In this concern also a cyclical swing of earnings is naturally to be expected. *Lines Brothers* is a toy manufacturing concern, whose progress in earning power over the past 15 years has been almost uninterrupted. The offer of two-fifths of the equity in 5s. shares at 22s. 6d., is based on terms which depend upon the full maintenance of the recent high level of earnings, for the earnings yield on the issue price is no more than 5.9 per cent. The *Philco Radio and Television* mixed offer for sale shows a sharp jump in profits for the latest accounting period. In view of the fluctuating nature of past profits, the adoption of the £1 preference-2s. ordinary share capitalisation is not calculated to make for further

stability, from the investor's point of view. The prospects for the ordinary shares, which are issued at 22s. per cent. premium, again depend upon the maintenance of the recent high level of earnings. The ordinary shares of *Foster, Yates and Thom* must be allotted a speculative rating, for it is only in recent months that satisfactory profits have been made. The commission earned by the sub-vendors appears somewhat generous, although it is largely in ordinary shares. The prospectus of the *Magnet Joinery* mixed issue resembles recent £1 preference-2s. ordinary issues, since profits, after remaining stable for two years, have shown a rapid jump in the latest year. Some similar instances were outlined on page 736 of last week's *Economist*. Seven statements have been published "for information only." Among them, particulars of the *Marks and Spencer* issue of £2,500,000 3½ per cent. debenture stock have attracted much attention in the market. The stock, which has been placed at £99½, has met a good demand, and few companies could obtain similar terms for a thirty-year stock without any sinking fund provision. Another statement on behalf of *Super Oil Seals* has been published with a view to seeking permission to deal in the 5s. shares on the Birmingham Stock Exchange. The balance-sheet total amounts to £59,965, of which goodwill accounts for £40,500, while a reserve of £49,900 appears among the liabilities.

LONDON ACTIVE SECURITY PRICES AND YIELDS

In calculating yields on fixed interest stocks quoted below allowance is made for interest accrued since the last date of payment, less income tax at the standard rate. Where stocks are definitely redeemable at a certain date the yield includes any profit or loss on redemption; where stocks are redeemable at or before a certain date the final date of redemption is taken when the stock stands at a discount and the earliest date when the quotation is above par. The return on ordinary stocks and shares is calculated by reference to the latest dividends, account being taken of any enhancement or reduction of interim dividends. Allowance is made for accrued dividends in calculating the yield on "cum. div." shares.

CAPITAL INCREASE APPROVED

The report and accounts were unanimously agreed to, and the dividend of 17½ per cent. less tax was approved.

BARCLAY, PERKINS AND COMPANY, LIMITED

IMPROVED RESULTS—DIVIDEND OF 8 PER CENT.

The forty-first ordinary general meeting of this company was held, on the 29th ultimo, at Southern House, London, E.C. Lieut.-Colonel Robert Wyvill Barclay (the chairman) presided).

The Chairman, in moving the adoption of the report and accounts, said the profit for the year amounted to £349,562, as compared with £335,606 in the previous year. The board recommended a dividend of 5½ per cent., less tax, on the ordinary shares, making a total of 8 per cent. for the year.

Continuing, he said: The Jubilee celebrations came in the year under review, and, naturally, brought increased trade, but without the ill-effects anticipated by those who are opposed to longer opening hours of public-houses. I am glad to see there is a general tendency towards extending the hours of opening for special occasions, and that in London there is a great deal more uniformity than there used to be.

Beer once again appeared in the Chancellor of the Exchequer's Budget speech last April, but this time not with the intention of making the British brewer pay more. We are all very grateful for this fact, seeing that the beer duty still remains approximately ten times higher than in pre-war days.

The new Customs duty of £1 per bulk barrel on non-Empire beers is not really such a big thing as it sounds at first. It attracted a certain amount of attention during the debate on the Budget, and I agree with Colonel Gretton, who pointed out that some members were trying to make a mountain out of a molehill. At the same time, we, as brewers of lager beer, do greatly appreciate this action of the Government in supporting a British industry, but it is too soon as yet to judge what result this new Customs duty will have on the imports of foreign lager beer.

Last year I referred to your board's policy of maintaining a high standard in our public houses. This is still our policy as it has been for a great number of years, and you realise the responsibility we have in the upkeep of our licensed properties. Some of them are not as young as they used to be and require modernising or rebuilding over a period of years. This work is continuing. All this work is expensive, but has to be done in order to keep up the standard of our public houses, and necessitates the conserving of our cash.

It may be of interest to state that this company have for some time past been experimenting with the making of British barley into lager malt. This has now got beyond the experimental stage, and I can assure you that the Barclay's lager you drink in this country is made from a large proportion of British malt. The proportion of British malt has gradually been rising each year as our maltsters have mastered the making of lager malt from British barley, which requires a different process than for making malt for the top fermentation beers.

I can assure barley growers that the brewing industry has loyally fulfilled the "gentlemen's agreement" of 1933 between the Chancellor of the Exchequer and the Brewers' Society and has used the maximum quantity of home-grown malting barley. We shall continue to do so.

The report and accounts were unanimously agreed to.

OFFER TO NEW READERS

Any reader who makes his first acquaintance with this journal with this week's issue is invited to fill up the attached:

To The Publisher, "The Economist Newspaper Ltd.,"

8 Bouverie Street, E.C.4.

In order to test the value of your publication I should like you to forward this to me by post for the next four weeks. If I then decide to become a subscriber, it is understood that there will be no charge for the copies thus received, but otherwise I shall be willing to pay 4s. to cover their cost.

JOHN ISMAY AND SONS, LIMITED

NEW DAYLIGHT LAMP

The third ordinary general meeting of John Ismay and Sons, Limited, was held, on the 26th ultimo, at Sterling Works, High Road, Dagenham.

Mr John Ismay (chairman and managing director) said: Gentlemen, in going through the balance sheet there are one or two items that have arisen from our change of policy. Since Ismay Industries acquired the bulk of our ordinary shares and we became a subsidiary to them, it has not been necessary for us to finance the various electrical projects—refrigerators, vacuum cleaners, etc.—which we had in hand previously. The preference shareholders are now the ones who are mostly interested in our policy, and by taking shares, preference where possible, for our interests, while this will not give us the opportunity of securing such a big return, we shall probably obtain a more regular revenue, and I am quite satisfied that our interests in those companies are quite worth the figure at which they appear in the balance sheet.

In pursuance of that policy we sold our part of the property at Dagenham and accepted preference shares in the company to which we sold it. We are now interested principally in our main business of lamp manufacturing at Ilford. The profits from this line have been rather satisfactory as, although mantles have been rather disappointing and have shown a decrease, this decrease has been more than offset by the sales of lamps, which have shown a big expansion. Although we increased our productive capacity at Ilford during the past year, we find that we shall have to do so again this year, and plans for the new buildings are already in hand.

Our export trade in lamps shows very satisfactory growth, and I am confident that our export sales this year will total close on 1,000,000 lamps. Competition gets keener, but any reduction in profits from this cause will, I think, be more than made up by our increased turnover and economies in working, and I see no reason why the current year should not show at least as good results.

Our new daylight lamp has aroused great interest, and, while it is an expensive lamp, the light is so similar to daylight that people do not object to the cost.

The report and accounts were unanimously adopted.

HOVIS, LIMITED

DIVIDEND AND BONUS MAINTAINED

The thirty-eighth ordinary general meeting of Hovis, Limited, was held, on the 1st instant, in London, Mr A. H. Dence (the chairman) presiding.

The chairman, in moving the adoption of the report and accounts, said: The net profit on trading is almost identical with that of the previous year. The balance carried to balance sheet is some £7,000 more than last year. This is accounted for in two ways. We are recommending a dividend and bonus similar to that for the previous year.

It is, of course, obvious to all from these figures that financially the company stands in a very strong position, and our reserve fund at £450,000 is a very satisfactory and comforting figure.

Now, as to general comment. In the first place, I am pleased to say that more and more people are recognising the advantages of Hovis as a prime necessity of life; thus our sales have again shown an increase, and in respect to those sales, if you will turn your attention to the inset in the report, you will see there a significant picture, and that is the delivery of Hovis to S.S. Queen Mary, the most up-to-date and modern ship of this country, which has been the admiration of the whole world. The Cunard Company are regular users of Hovis, and it is particularly pleasing to the directors to think that our product should be associated with this latest beautiful ship. Hovis has stood the test of time, and it is still up to date. And why? Because we keep ourselves up to date, our plant, machinery and our mills. Our country mill at Haverhill, for instance, has recently been entirely rebuilt, and is now being fitted throughout with new plant and machinery. At our last annual meeting I reported that we had opened an advertising depot at Exeter. This depot is now fully equipped with proper machinery and is able to handle all our West of England work.

I believe that we are the only milling company in this country perhaps, possibly in the world, that has a physiological laboratory controlled by eminent consultants. In our cattle and poultry feeding stuffs, the turnover shows a gratifying increase to our trade.

The report was unanimously adopted, and the dividend of 15 per cent. and bonus of 5 per cent. approved.

LOBITOS OILFIELDS, LIMITED

PROGRESS AT THE REFINERY

The twenty-eighth ordinary general meeting of Lobitos Oilfields, Limited, was held, on the 30th ultimo, in London.

Mr H. C. R. Williamson (the chairman) said that the refinery was now working at just below full capacity. A new development was the production of transformer oil, satisfactory arrangements for the distribution of which had been made. They estimated that for the current six months there would be a small loss on the refinery working and for the ensuing six months a small profit. Thenceforth, and provided there was no unusual fall in the price of petroleum products compared with the price of crude oil, the refinery should earn a reasonable profit on the crude supplied to it as compared with selling that crude to the world market. Another important factor was that the power to refine completely their oils on a commercial scale enabled them to make true commercial evaluations of the four different crude oils produced by their Peruvian subsidiary and the two crudes produced by their Anglo-Ecuadorian friends and so to demonstrate to potential customers in what respects their crude oils were superior to many others for the type of refining for which they required the oil. The net operating income of their tankers was up by £10,000, and after providing depreciation there was a loss of £18,600, or some £15,800 less than for the previous year. Tanker freights had shown some improvement and the position looked more healthy. Profits from the purchase and sale of crude oil suffered a diminution of £30,000, but this would, it was hoped, be more than offset through the Peruvian company getting into a position to resume the payment of dividends. Dividends and interest were up by nearly £11,000, increased distributions having been received from the International Petroleum Company, Andian Corporation, and Anglo-Ecuadorian Oilfields.

To pay the proposed dividend of 7½ per cent. an inroad into the amount brought forward had been made, but the board felt that it was perfectly right to do so on this occasion, as from that it was fairly well known of the current year's prospects they were fairly confident of being able to pay a dividend next year at least equal to the one now recommended and were not without hope of increasing it.

The report was unanimously adopted.

GLOBE TELEGRAPH AND TRUST COMPANY, LIMITED

INCREASED DIVIDEND

The sixty-third ordinary general meeting of this company was held, on the 30th ultimo, in London.

The Right Hon. the Earl of Midleton, K.P. (the chairman), said that the receipts for the past year amounted to £208,214, against £207,087 in the preceding year. They recommended a final dividend of 4s. 6d. per share net (compared with 3s. 6d. in the previous year) on the ordinary shares, making 4½ per cent. the previous year, and would carry forward £121,769, as compared net for the year, and would carry forward £116,644 in the preceding year. Under present circumstances, too, they would feel justified in paying interim dividends on the ordinary shares of 1 per cent. instead of ½ per cent. on each of the quarterly dates of the year on which they were now entering.

The year under review had been rendered exceptional by the repayment of £1,608,691 by Cable and Wireless (Holding), Limited, in respect of that amount of the trust's holding in 5½ per cent. preference stock. The repayment had had an advantageous effect on the company in two ways. First, it had improved the security of their large preference holding by decreasing the capital on which dividend and arrears were payable, and, secondly, it was a considerable step in the direction of spreading the risks of their shareholders rather more widely. It was gratifying to find that the response by outside shareholders to the offer of Cable and Wireless was so good and that they had been able to pay the full 5½ per cent. dividend for this year on the stock as reduced. The trust had not reaped the full advantage in the present accounts of the exchange.

The year under review had been a difficult one for investors, as the Governments and companies were still taking advantage of the cheapness of money to retire or replace their higher-interest-bearing securities. Another disturbing factor was increasing taxation.

In view of the new investments which were not purchased in time to give them a full yield in the year under review they had felt justified in making the additions to the interim dividends on the ordinary shares.

The report was unanimously adopted.

OHLSSON'S CAPE BREWERIES, LIMITED

INCREASED SALES

The forty-seventh ordinary general meeting of Ohlsson's Cape Breweries, Limited, was held, on the 2nd instant, in London.

Mr Geoffrey Dent presided in the unavoidable absence of the chairman of the company, Mr W. D. Buxton, and read the speech prepared by the latter, in which he stated that the accounts reflected the continued improvement in trading conditions referred to last year. Throughout the period under review there had been a steady increase month by month in the sales of their products, the result of which was shown in an increase in the profit on trading and rentals for the year amounting to £31,344. The various branches of their business had each contributed to that satisfactory increase, and, so far as the present financial year had gone, the progress had been fully maintained.

The Dominion of South Africa had continued upon its course of prosperity, the prime factor being the activity in the mining industry. The immediate results had been a diminution of unemployment, an upward movement in the remuneration of labour and an expansion of general trade, in which this company had shared. There was every indication that the present prosperity of the Dominion would continue, and the board of directors were fully alive to the prospects which were opening up of further outlets for the sale of the company's products.

They were proposing to maintain the dividend on the ordinary shares at 10 per cent., but to supplement it with a cash bonus of 2½ per cent., making a total distribution of 12½ per cent. for the year. The fact that Dominion income tax relief operated in reducing the amount of British income tax was material to the calculation of the yield upon the shares, so that for the year under review the dividend and bonus of 12½ per cent. was equivalent to a return of approximately 14 per cent. where the standard rate of income tax had to be borne.

They had again made a large transfer to reserve for contingencies, which would enable them to continue their policy of extending and improving the company's properties, thereby increasing their value as revenue-producing assets. They had written off an amount of £44,950, which included expenditure upon alterations, additions and permanent improvements to various licensed and other properties. That would leave a balance to the credit of that reserve to be carried forward to next year of £65,394.

The report and accounts were unanimously adopted.

GOVERNMENT RETURNS, &c.

NATIONAL ACCOUNTS

The total ordinary revenue for the ten days ended June 30, 1936, amounted to £10,213,000, against ordinary expenditure of £16,557,000. After allowing for a decrease in Exchequer Balances of £199,533, the operations for the week, as shown below, increased the gross National Debt by £6,370,000 to approximately £7,982 millions.*

The aggregate revenue from April 1 to June 30, 1936, is shown below:—

FINANCIAL YEAR, 1936-37, APRIL 1, 1936 TO JUNE 30, 1936			
(000's omitted)			
Expenditure	193,705	Revenue	121,541
		Decrease in balances	349
		Gross borrowing	73,233
		Less	
		New Sinking Fund*	1,418
		Net borrowing	71,815
	193,705		193,705

* Authority will be sought in the Finance Bill to meet the Statutory Sinking Funds in 1936 by borrowing.

POSITION OF THE FLOATING DEBT			
Movement ten days ended			
Ways and Means Advances Outstanding—	June 30, '35	Mar. 31, '36	June 30, '36
Advances by Bank of England	8,500,000	26,750,000	26,750,000
Advances by Public Departments	17,400,000	19,055,000	35,240,000
Treasury Bills outstanding	877,155,000	763,115,000	765,265,000
Total Floating Debt	903,055,000	782,170,000	827,255,000

* Includes £220,000, the proceeds of which were not carried to the Exchequer within the period of the Account.

TREASURY BILLS BY PUBLIC TENDER				
Tenders for £50,000,000 Treasury bills were opened on June 26, 1936, and the total amount applied for was £67,555,000. Tenders were accepted for Treasury bills at three months dated Monday to Friday, at £99 16s. 9d., about 70 per cent. and above in full; Saturday, at £99 16s. 10d., and above in full. The average rate per cent. was 12s. 7-80d. The amount allotted was £50,000,000. The following table shows the weekly record at various dates:—				
Date	Amount Offered	Total Applications	Amount Allotted	Average Rate %
January 5, 1934	35,000,000	76,260,000	30,000,000	11-5
April 6	40,000,000	80,390,000	38,000,000	17 9-01
July 6	35,000,000	62,745,000	32,000,000	16 4-14
October 5, 1935	35,000,000	65,260,000	31,510,000	15 9-702
January 4, 1936	30,000,000	49,590,000	27,500,000	16 1-64
April 5	40,000,000	76,095,000	40,000,000	10 2-83
July 5	40,000,000	60,905,000	40,000,000	12 4-32
October 4, 1936	45,000,000	71,245,000	44,000,000	12 8-05
January 3, 1937	35,000,000	68,075,000	35,000,000	10 10-72
April 3	40,000,000	76,280,000	40,000,000	10 2-78
June 12	50,000,000	72,775,000	50,000,000	18 1-04
June 19	50,000,000	84,185,000	50,000,000	17 0-83
June 26	50,000,000	67,555,000	50,000,000	12 7-80

NATIONAL SAVINGS CERTIFICATES

Total Sales of Savings Certificates	No. of Certificates	Value
Week ended June 6, 1936	577,338	£433,003
Week ended June 13, 1936	618,442	£463,831
February, 1916, to June 13, 1936	1,262,336,340	£93,180,093

At the end of March, 1936, the amount remaining to the credit of investors in Savings Certificates, excluding interest, was £391,448,511.

REPORTS AND NOTICES

BANKS

MARTIN'S BANK, LTD.—A new branch of Martins Bank has been opened at 208 Kensington High Street, London, W.8, where a night life has been installed. This branch is under the management of Mr. E. C. Shaw.

INSURANCE

CLERICAL, MEDICAL, AND GENERAL LIFE ASSURANCE SOCIETY.—The following official changes are announced: Mr B. Smither, at present agency manager, has been appointed secretary; Mr N. L. arey, F.I.A., at present assistant secretary, has been appointed joint secretary; Mr G. F. Llewellyn, F.I.A., has been appointed assistant actuary; Mr E. F. Phillips has been appointed assistant secretary.

MISCELLANEOUS

OHLESON'S CAPE BREWERIES.—Profit on trading and rentals to March 31, 1936, was £210,556 as against £179,212, plus £96 transfer fees and £65,307 brought forward, making £275,959 against £232,360. After deducting the usual charges, First and Second Preference dividend, interim of 3 per cent. on the Ordinary, providing for depreciation and transferring £55,000 against £35,000 to contingencies, there is a balance of £122,047. It is proposed to pay a final dividend of 7 per cent. (same) and a bonus of 2½ per cent. (nil) on the Ordinary, making 12½ per cent. as compared with 10 per cent., carrying forward £72,172.

THE GUARANTEE SOCIETY, LTD.—Mr F. H. Sherwell, manager and secretary of the Guarantee Society, Ltd., is retiring at the end of July, after fifty years' service, and is to be appointed to a seat on the board. Mr Sherwell will be succeeded by Mr E. H. Labbett, at present assistant secretary.

COMMERCE AND TRADE

SURVEY OF COMMODITY MARKETS

FOLLOWING the short-lived improvement noted a week ago, quietude has again settled down upon the principal commodity markets. Although no general tendency was apparent, the prices of a number of commodities registered a setback during the past week. Thus, wheat lost part of its recent rise, although no significant change took place in the underlying market factors. Maize followed suit, owing to a quiet demand and the anticipation that shipments from the Plate will shortly show considerable expansion. The market in oilseeds had a quieter tone, but in seed was fairly firm, on rather unfavourable crop reports from the United States, and cottonseed advanced in sympathy with Egyptian prices.

Industrial grades of coal and coke remain in active demand at firm rates, but house and gas coal are seasonally quiet. The iron and steel markets are still as active as ever, and many manufacturers are in arrears with contract deliveries; but non-ferrous metals were generally rather easy this week. The difficulties of the international situation continue to exercise a depressing influence on the metal markets, while tin still suffers from uncertainty about the renewal of the restriction scheme and the future of Bolivian supplies. Among textile fibres, cotton was again marked up, partly in response to the crop situation in the United States, and wool remained firm. The jute markets were depressed owing to the expectation of a larger Indian crop and the news that the Indian Jute Mills Association has planned a further extension of production in the effort to force down quotations and so to bring the non-member mills to heel. Last week's improvement in rubber was well maintained, and the statistical position of the commodity continued to improve.

Among foodstuffs, price changes were few. Provisions were generally steady, and the cooler weather brought a welcome improvement in the demand for meat and eggs. The sagging tendency at the Mincing Lane tea auctions was arrested, but the spot market in raw sugar was decidedly easier. The import duty on potatoes was restored on July 1st. The duty amounts to £2 per ton during July and August, and to £1 per ton for the remainder of the season.

The tendency in the prices of primary products in the United States was again upwards, although the pace of the advance slackened. Moody's index of the dollar prices of staple commodities stood at 169.8 on Wednesday (December 31, 1931 = 100), against 168.4 a week earlier, 163.3 a month ago and 158.3 on the corresponding day last year.

COAL

SHEFFIELD.—There is a good demand for all classes of industrial coal, but a pronounced quietude in household and gas fuel. Demand for small coal for coke works exceeds the supply. Blast-furnace coke is in very strong request, and new business in graded coke for central heating is being transacted at higher figures. There is but little change in the week in the export market, inquiries for both prompt and forward delivery being somewhat restricted. Best hards are steady; washed singles and smalls are rather scarce, but other qualities more plentiful. Prices, however, remain firm.

Prices.—Inland: South Yorkshire, best, 23s.-25s.; South Yorkshire seconds, 20s.-21s.; Derbyshire best house, 22s.-23s.; Derbyshire best brights, 19s. 6d.-21s.; kitchen coal, 16s. 6d.-19s. 6d.; best screened nuts, 19s.-20s.; small screened nuts, 18s.-18s. 6d.; Yorkshire and Derbyshire hards, 19s. 6d.-20s.; rough slacks, 11s.-12s.; nutty slacks, 10s.-11s. Export: South Yorkshire: hards Association, 19s.-19s. 6d.; washed trebles, 17s. 6d.-18s.; washed steam doubles, 17s. 6d.-18s.; washed gas doubles, 17s. 6d.-18s.; washed steam singles, 17s.-17s. 6d.; washed gas

singles, 17s.-17s. 6d.; washed smalls, 14s. 9d.-15s. 3d.; washed coking smalls, 14s. 9d.-15s. 3d.; screened gas coal, 19s.-20s. 6d.; Derbyshire and Notts: top hards, 18s. 3d.-18s. 9d.; cobbles, 18s. 3d.-18s. 9d.; washed trebles, 17s.-17s. 6d.; slacks, 9s. 6d.-13s. 6d.

NEWCASTLE-ON-TYNE.—The Finnish State Railways have bought 13,500 tons of steam coal from this district, for delivery July-September. The firmness in all classes of Northumberland steam coal is unabated, and demand is brisk for export, if a shade easier in respect of domestic fuel. In Durham there is no change in market conditions generally: home industrial demand is on an increasing scale, but there is no indication of any additional export trade. Coke of all descriptions remains firm, with both home and export trade very active.

Current f.o.b. prices for export:—**NORTHUMBERLAND.**—D.C.B. screened, 15s.; smalls, 12s. 6d.; Howards, Bentinck, Newbigin screened, 14s. 9d.; smalls, 12s.; Tyne Prime large, 14s. 6d.; smalls, 12s. 6d.; Hartley Main large, 14s. 9d.; smalls, 12s. 6d. **DURHAM.**—Lambton, South Hetton screened steam, 15s. 9d.; smalls, 13s.; Wear Special gas, 15s.; Holmside, Ryhope, Boldon unscreened gas 14s. 8d.; Second Class gas, 13s. 6d.; Coking unscreened and/or smalls, 13s. 3d.; Prime unscreened bunkers, 15s.; Second class unscreened bunkers, 14s.; Prime Foundry coke, 26s.; Newcastle and District gas coke, 28s.

GLASGOW.—The Scottish trade remains busy. In the home market industrial demands continue on a large scale. The shipping trade is also quite satisfactory on the whole, although some disorganisation has been caused at the loading ports through delayed arrivals of boats owing to strike troubles on the Continent, and other reasons. At the Fife port of Methil there has been a lengthy loading turn. Supplies of both screened coal and nuts are well taken up in most districts. There is in fact a shortage of various classes of coal, and the market generally presents a very strong appearance.

Current export prices (f.o.b. district ports):—**LANARKSHIRE.**—Ell best, 15s.; Splint best, 18s.; Splint second 16s.-16s. 6d.; Navigation screened 16s.-16s. 6d.; Navigation unscreened, 15s.; Hartley, 14s. 6d.; Steam, 14s. 6d.; Trebles, 15s. 6d.-16s.; Doubles, 15s. 6d.-16s.; Singles, 16s.; Pearls, 15s.; Dross, 12s. 6d. **FIFE.**—Best unscreened navigation, 14s. 6d.; unscreened navigation, 14s. 6d.; first-class steam, 15s. 3d.-15s. 6d.; third-class steam, 14s. 6d.; trebles, 16s. 6d.-18s.; doubles, 16s.-17s.; singles, 16s.-16s. 6d.; pearls, 14s. 3d.-14s. 6d. **LOTHIANS.**—Best splint, 15s. 6d.-16s.; prime steam, 14s. 6d.-14s. 9d.; secondary steam, 14s.; unscreened navigation, 14s.; trebles, 16s.-16s. 3d.; doubles, 15s. 6d.-16s.; singles, 16s.-16s. 6d.; pearls, nominal. **AYRSHIRE.**—Best unscreened navigation, 16s. 6d.; steam, 13s.-13s. 6d.; trebles, 15s. 6d.-15s. 9d.; doubles, 16s.; singles, 16s.-16s. 6d.; pearls, nominal; dross, nominal.

CARDIFF.—Conditions show no signs of improvement. Shipments last week totalled 299,100 tons compared with 312,900 tons the previous week and 402,433 tons in the corresponding period last year. The French position has eased substantially as a result of the settlement of the dispute at the coasting and bay ports, and there is a better supply of tonnage in dock than was the case last week. But there has been no expansion in the volume of current demand and collieries are finding it difficult to dispose of their reduced export quota. There is a surplus of large, but a scarcity of small and sized grades, particularly for prompt shipment. The demand for coke, however, continues good and prices are firm, while patent fuel is steady at recent quotations. Pitwood remains firm. There has been a failure to agree on the price of French pitwood supplied under the coal-pitwood barter agreement, and licences for the shipment of 120,000 tons of coals to France during the September quarter are temporarily withheld. The parties are to meet again towards the end of the current week. The Madrid, Zaragossa, Alicante Railways have placed a contract for 40,000 tons for delivery over the second half of the year, and the Greek Navy an order for 5,000 tons; while the Palestine Railways are inviting tenders for the supply of from 6,000 to 12,000 tons of steam coals. The drafting of the scheme for the central control of coal sales has not yet been completed, and it is now thought very improbable that the scheme will be brought into operation as from the beginning of next month.

Current approximate quotations:—Best Admiralties, 19s. 6d.; seconds, 18s. 9d. to 19s. 3d.; best drys, 18s. 6d.; Black Veins, 18s. 3d.; Eastern Valleys, 17s. 3d. to 17s. 7½d.; Western Valleys, 17s. 6d. to 17s. 9d.; best small steams (washed), 13s. 6d. to 14s. 6d.; seconds 13s. to 14s.; coking smalls, 14s. 3d. to 14s. 6d.; anthracite best large 36s. to 40s.; Red Vein large, 22s. to 27s.; machine made cobbles, 35s. to 51s.; French nuts, 35s. to 51s.; stove nuts, 34s. to 50s. 9d.; rubbly culm 11s. 6d. to 12s.; special foundry coke, 42s. 6d. to 47s. 6d.; patent fuel (Crown) 21s.; pitwood, ex ship, Portuguese, 23s.

The following is a statement showing the quantities sold and the average price of British cereals in the past two weeks, and for the corresponding week in each of the years from 1932 to 1935:—

Week ended	QUANTITIES SOLD			AVERAGE PRICE PER CWT.		
	Wheat	Barley	Oats	Wheat	Barley	Oats
June 25, 1932	Cwts. 67,779	Cwts. 3,625	Cwts. 9,433	s. d. 6 5	s. d. 7 1	s. d. 8 1
June 24, 1933	47,859	15,578	8,746	6 5	6 11	5 9
June 30, 1934	75,291	4,780	25,650	5 7	6 6	6 5
June 29, 1935	84,653	9,834	10,353	5 6	7 2	7 6
June 20, 1936	81,355	6,541	23,268	6 8	7 7	6 3
June 27, 1936	70,154	3,672	13,843	6 8	6 4	6 3

AMERICAN WHEAT MARKETS.—The following table shows wheat quotations for selected weeks in 1935-36, with comparative figures for 1934:—

NEAREST FUTURE	Jan. 3, 1934	Jan. 2, 1935	June 3, 1935	Dec. 31, 1935	June 24, 1936	July 1, 1936
Winnipeg (No. 1, Manitoba)	85½	82½	81½	84½	83½	80½*
Chicago (No. 2 Winter)	84½	88½	86	75½	95½	95½

* June 30

The visible supply of wheat in Canada amounts to 80,217,000 bushels, against 82,589,000 bushels last week, and 113,088,000 bushels in the corresponding week last year.

OTHER FOODS

BACON.—No change was made in the official prices last week-end, but the market has subsequently had a quieter tone, prices tending slightly easier. The official quotations (per cwt. for No. 1 Sizable) which formed the basis for dealings on the London Provision Exchange this week were: English, 90s. to 94s.; Canadian, 85s.; Danish, 93s., as against 92s. to 94s., 85s. and 93s. last week. Arrivals in London last week included Danish, 13,791 bales; Canadian, 3,847; Dutch, 2,437; Lithuanian, 1,770; and Polish, 2,466, as against 13,341, 4,078, 2,498, 1,762 and 2,409, respectively, in the previous week.

BASIC PIG PRICE.—The Pigs Marketing Board announced this week that, in accordance with the provisions of the present contract, the ascertained price of green Wiltshire style bacon is 89s. 7d. per cwt. and the ascertained value of offals is 9s. 1d. The ascertained cost of feeding stuffs, as certified by the Ministry of Agriculture and Fisheries, is 7s. 9½d. per cwt. In accordance with the price schedule embodied in the contract, the price of the Class I, grade C pig, for the month of July is 11s. 4d. per score, against 11s. in June and 11s. 9d. in the same month of last year. The curers will also pay to the Pigs Marketing Board 2d. per score on every pig delivered and accepted during this year, to form a pool out of which will be paid the bonus on pigs delivered during the first four months of the year, in accordance with the 1936 Bonus Scheme.

BUTTER.—Although the market has been rather quiet, prices remain firm. Danish is rather dearer on the week. Quotations (per cwt.) on the London Provision Exchange on Wednesday were: New Zealand, finest salted, 106s.; Australian, choicest salted, 105s.; Danish, 117s., compared with 106s., 105s. and 114s. to 115s., respectively, a week ago.

CHEESE.—Trading has been rather quiet, but prices generally are well maintained. Quotations (per cwt.) on the London Provision Exchange on Wednesday were as follows: English, factory, 55s. to 58s.; Canadian, finest coloured, 65s. to 66s.; and New Zealand, finest coloured, 58s.; against 56s. to 58s., 64s. to 68s. and 58s., respectively, a week ago.

COCOA.—The spot quotation in New York on Wednesday was 6½ cents per lb., as against 6½ cents per lb. last week. In London, on Wednesday last, good fermented new crop, "October-December" was quoted 28s. 4½d. per 250 kilos., c.i.f. Continent, against 28s. 3d. a week ago. Last week's movements of cocoa in London were as follows: Landed, 1,679 bags; delivered, for home consumption, 5,476 bags; exported, 1,155 bags; stocks, 166,282 bags, against 195,492 bags a year ago.

COFFEE.—Demand in London has been quiet. The New York market has been steady at unchanged rates. On Wednesday, Rio No. 7 (cash) was quoted at 6½ cents per lb. in New York, as compared with 6½ cents per lb. last week and 6½ cents per lb. a month ago. Movements of coffee in London last week were as follows: Brazilian, landed, 621 cwt.; delivered, for home consumption, 53 cwt.; exported, 624 cwt.; stocks, 10,307 cwt., against 16,078 bags a year ago. Central and South American, landed, 2,598 cwt.; delivered, for home consumption, 2,332 cwt.; exported, 692 cwt.; stocks, 121,116 cwt., against 114,052 packages last year. Other kinds, landed, 986 cwt.; delivered, for home consumption, 4,936 cwt.; exported, 1,735 cwt.; stocks, 164,129 cwt., against 117,355 packages last year.

EGGS.—The cooler weather has brought an improvement in demand, and the market has been steady. At Smithfield on Wednesday, English (ordinary packing, Grade 1, about 15-15½ lb.) realised 11s. to 11s. 9d. per 120, as against 11s. to 11s. 6d. last week, while Danish (15½ lb.) made 8s. 9d. to 9s. 3d. per 120, the same as last week.

FRUIT.—Soft fruit is attracting the bulk of attention at Covent Garden, states *The Fruitgrower*, although the rush part of the season has now passed. Business in other sections has become rather slack, with prices generally showing an easier tendency. Despite heavy rains, supplies of most regular seasonal lines have accordingly been

ample for requirements. The strawberry season is drawing to its close, but Kent cherries, in good form, have encountered a steady demand. Good prices are expected for the later varieties, since the crop is much smaller than was at first anticipated. Green gooseberries sold better, while melons were rather short and firmer. Peaches, however, were in rather larger supply and easy in price, and grapes and figs also tended lower. Spanish cherry plums and apricots exhibited a similar tendency. The apple trade was slow with prices showing a fall, and pears were also a little weaker. All citrus fruit was cheaper this week.

MEAT.—Except for pork, demand was better this week and the market registered a recovery. On Wednesday last, Argentine chilled hindquarters were quoted at 3s. 4d. to 3s. 10d. per 8 lbs., as compared with 3s. to 3s. 8d. a week ago. New Zealand frozen mutton was 3s. to 3s. 8d. per 8 lbs., against 3s. to 3s. 8d. a week ago. According to the Smithfield Market official report, supplies during last week amounted to 7,650 tons, a decrease of 35 tons on the corresponding week last year. Beef and veal accounted for 4,115 tons, mutton and lamb 2,690 tons, and pork and bacon 436 tons, as compared with 4,162, 2,677 and 468 tons, respectively, in the same week of 1935.

PEPPER.—Wednesday's spot price for black Lampung (in bond) was 2½d. per lb., against 2½d. a week ago. Movements of pepper in London during the past week were as follows: Black, landed, nil; delivered, 3 tons; stocks, 1,753 tons, against 2,135 tons a year ago. White, landed, nil; delivered, 47 tons; stocks, 12,029 tons, against 18,709 tons a year ago.

RISE.—The spot price of Burma No. 2, cleaned, new crop, was 8s. 6d. per cwt. ex warehouse on Wednesday, as compared with 8s. 6d. per cwt. a week ago. "July-August" in singles to Continent and U.K. was quoted at 7s. 6d. per cwt., against 7s. 7½d. for "June-July" last week. Movements in London during the past week were as follows: Landed, 96 tons; delivered, 180 tons; stocks, 1,584 tons, against 10,202 tons a year ago.

SUGAR.—The London market displayed a distinctly easier tone this week, but prices in New York were about steady. The spot price in New York on Wednesday was 3.75 cents per lb., as compared with 3.75 cents per lb. last week and 3.72 cents per lb. a month ago. Wednesday's sales of raw sugar in London included "August delivery" at 4s. 3½d. to 4s. 4½d., against 4s. 6d. to 4s. 6½d. a week ago. The movements of raw sugar at public warehouses in London and Liverpool last week were as follows: Imports, 11,837 tons, against 11,832 tons last week and 25,546 tons in the same week of last year; deliveries, 18,341 tons, against 21,976 tons last week and 14,220 tons last year; stocks, 134,201 tons, against 140,705 tons last week and 119,485 tons last year.

TEA.—The following table shows the average prices (compiled by the Tea Brokers' Association) of tea sold in Mincing Lane on Garden Account in recent weeks:—

Week ending	Northern India	Southern India	Ceylon	Java	Sumatra	Africa	Total
June 27, 1935	d. 11-41	d. 11-58	d. 12-95	d. 9-84	d. 8-39	d. 10-12	d. 11-66
May 14, 1936	d. 12-59	d. 13-66	d. 15-08	d. 10-89	d. 10-36	d. 11-86	d. 13-19
May 21, "	d. 12-41	d. 13-00	d. 14-21	d. 10-81	d. 10-21	d. 11-75	d. 12-81
June 11, "	d. 12-24	d. 12-73	d. 13-30	d. 10-22	d. 10-11	d. 11-48	d. 12-40
June 18, "	d. 12-20	d. 12-26	d. 13-13	d. 10-17	d. 9-95	d. 11-44	d. 12-25
June 25, "	d. 12-20	d. 12-26	d. 12-98	d. 10-26	d. 9-95	d. 11-21	d. 12-18

This week's offerings at the public auctions in Mincing Lane comprised 47,529 packages of Indian and 25,010 packages of Ceylon tea. There was a brisk demand for Indian sorts, with prices about steady. Ceylon descriptions also encountered good competition and prices occasionally moved in sellers' favour.

VEGETABLES.—According to *The Fruitgrower's* Covent Garden report, business in tomatoes was quite good during the past week, with quotations showing little alteration. Cucumbers were also in better demand at rather higher rates. Green peas were an active market, but prices have tended to decline with heavier arrivals this week. Spring cabbage and cauliflower are easier now that peas are available. Marrows continue to sell well, but are cheaper; broad beans are steady and onions firm. Good quantities of asparagus are still on offer. Meanwhile, demand for new potatoes at London markets remains active but, with heavier arrivals, prices continue their seasonal decline. At the London Borough Market on Tuesday, Jerseys made 11s. to 12s. per cwt., against 12s. to 14s. last week. The remaining supplies of old potatoes declined this week, best siltland King Edward being quoted at 5s. to 6s. per cwt., against 8s. to 9s. a week earlier.

MISCELLANEOUS COMMODITIES

RUBBER.—Apart from a setback at the end of last week, the recent improvement in the tone of the market was well maintained during the period under review, the spot price showing a rise of ½d. on the week. Meanwhile, trade buying continues fairly active, and the steady decline in U.K. stocks continues. The spot price in New York on Wednesday was 16½ cents per lb., compared with 15½ cents per lb. a week ago and 15½ cents a month earlier. Wednesday's official buyers' price for standard ribbed smoked sheet on the spot in London was 7½d. per lb., as against 7½d. on the corresponding day a week ago. In forward positions, business has been done at 7½d. for "October-December" shipment, as against 7½d. to 7½d. a week ago. Stocks in London and Liverpool at the end of last week totalled 122,700 tons, against 124,261 tons a week earlier. A year ago stocks amounted to 170,369 tons.

VEGETABLE OILS AND OILSEEDS.—After a period of activity and rising prices markets are quieter and some reaction has taken place. Linseed, however, remains firm and is largely influenced

by the crop situation in the United States and Canada. Conflicting reports are to hand concerning damage done by high temperature and the want of sufficient moisture to the spring sowings; interest now centres upon the next official report as to area and condition, due on July 10. Meanwhile English crushers are buying from hand to mouth—chiefly Indian descriptions, as Plate (plus 10 per cent. duty) is out of line, and is attractive only to Continental users. Shipments from the River Plate have fallen off, but the quantity afloat for Europe is maintained. The total of 125,400 tons (including 38,700 tons from India) is 8,700 tons more than last week. That afloat for the United States is only 1,000 tons compared with 38,600 tons a year ago. Should the worst expectations regarding

the American yield be realised greater reliance will have to be placed on imports. Old crop cottonseed advanced sharply in sympathy with Alexandria and, supplies being small, £8 is now quoted. An extensive trade in new crop has been done at Hull at up to £6 16s. 3d. October loading, £6 12s. 6d. November, and £6 8s. 9d. November-January. For September £7 is asked.

The steady advance in linseed oil has been checked and £25 15s. now represents current value ex Hull July-August delivery, with later positions at a progressive discount. Cotton oil is dearer in sympathy with seed, but trade is quiet. Egyptian crude ex Hull is offered at £25 10s. and refined at £27 10s. prompt. Oilcakes are in normal demand and steady in price.

THE FINANCIAL NEWS

Special articles due to appear next week on the Leader Page of THE FINANCIAL NEWS are as follows:

MONDAY, JULY 6—PROGRESS OF THE DIESEL ENGINE. This article, a sequel to a survey of the progress of Diesel Engines, which appeared in THE FINANCIAL NEWS a year ago, brings the situation up-to-date, and analyses the very great strides made by the heavy oil motor during the past twelve months.

TUESDAY, JULY 7—CONSOLIDATED GOLDFIELDS. Our special Mining Correspondent, "MINOTAUR," deals this week with the position and prospects of this leading mining finance house.

WEDNESDAY & THURSDAY, JULY 8 & 9—COMPANIES AND THEIR PROFIT-EARNING CAPACITY, No. 19—THE MACHINE TOOL COMPANIES. Machine Tool Companies have come very much into the eye of Industrialists and Investors recently, owing to the enormous demand for their products, caused by Re-armament and the engineering boom.

On Wednesday, there will be a general review of the industry, and on Thursday, some of the companies will be dealt with individually, including:—

COVENTRY GAUGE & TOOL B.S.A.
MODERN MACHINE TOOLS KITCHEN & WADE

FRIDAY, JULY 10—REVIVAL IN THE DIAMOND TRADE. The revival of the demand for diamonds is continuing, and in the view of some judges, even being accelerated. This article surveys the scope of the recovery movement, and the further outlook, together with its significance for De Beers and the smaller diamond producing companies.

THE BITTER END

THE halting attempt by fifty-two States-Members of the League of Nations during the past nine months to do their duty to Abyssinia under the Covenant has come to an in-dutiful end. The decision to throw up the sponge and glorious end. The decision to throw up the sponge and glorious end. The decision to throw up the sponge and glorious end.

It was still possible, however, for the League to preserve some shred of dignity by facing its failure with frankness and with recognition of the intensity of the tragedy. Mr Eden's speech at Geneva, to which we referred in last week's issue, had at least the merit of striking this note. The proceedings at Geneva have ended, however, in an atmosphere of futility which will give a handle to the scoffers and the sceptics. It was meant to manipulate the procedure so as to avoid putting to the vote the first of the two so-called Abyssinian resolutions, in which the Assembly was called upon to proclaim that it would not recognise any annexation obtained by force of arms. For, in eluding the necessity of having to record a vote—either negative or affirmative—on this plain and pertinent question, the States-Members announced, as clearly as if they had written the words down and appended their signatures, that they intended to recognise the establishment of Italian sovereignty over Abyssinia as soon as public attention, in the countries respectively concerned, had been safely diverted to other objects. Again, in the light of the solemn obligations of the Covenant, it was hollow self-complacency in the President of the Assembly to declare, in his closing speech, that he had examined his conscience and found it clear, and to suggest that any one of his colleagues, if his own country found herself one day in a situation like that of Abyssinia, would be glad, in default of something better, to see economic and financial sanctions applied to his aggressor by fifty Governments.

These views seem the more extraordinary, in that this President of the League Assembly happened also to be the Belgian Minister for Foreign Affairs. For how do such views apply to Belgium's own experience in 1914-18—an

experience which may be repeated, who knows when? Within less than half the time that it took the Italian forces to reach Addis Ababa, the Germans, in 1914, had occupied (and this effectively, and not on skeleton lines) the whole of Belgium except a patch of sand dunes. What would the Belgians have said if, as soon as Antwerp and Ostend had gone the way of Liège and Brussels, the Allies had openly acquiesced in the German *fait accompli*? What would they have said if, from first to last, we had confined our payment on account of the Treaty of 1839 to a handful of economic and financial sanctions? Small wonder if the nations living under the shadow of armed and powerful States are asking themselves whether they can count upon any assistance worth having from any of their neighbours when it is their turn to be the victims of aggression.

It was the pair of Abyssinian resolutions—the second of which asked for a League guarantee for a loan to the Abyssinian Government—that brought the business at Geneva to a head. In order to keep the first of these two resolutions from even being put to the vote, the Bureau of the Assembly drafted an alternative resolution of its own. This resolution was called a recommendation, in order to get round the unanimity rule. The recommendation was given precedence over the Abyssinian resolution, on the ground that it emanated from the Bureau. And, when it had been adopted, it was ruled that the Abyssinian resolution had become superfluous, on the ground that its intention was already fulfilled in the Bureau's alternative text.

The recommendation which served this turn noted that, various circumstances had "prevented the full application of the Covenant." But at the same time it declared that the Assembly remained "firmly attached to the principles of the Covenant, which are also expressed in other diplomatic instruments such as the declaration of the American States of August 3, 1932, excluding the settlement of territorial questions by force." The document then went on to recommend that "any proposals to improve the application of the principles of the Covenant" should be sent in by the beginning of September for consideration by the

Assembly at its next meeting, and that meanwhile the Co-ordination Committee should advise the States-Members as to the time and method of taking the sanctions off.

This recommendation was adopted by the Assembly by forty-four votes to Abyssinia's one, with four abstentions on the part of South Africa, Chile, Panama and Venezuela. The Abyssinian resolution in favour of a loan to the Abyssinian Government was rejected by 23 votes to Abyssinia's one, with 25 abstentions.

Thus was Abyssinia thrown to the wolves.

In October last Italy, too, had found herself in a minority of one on the Council; but Baron Aloisi was at least able to beat up three unjust men—the representatives of Austria, Hungary and Albania—to take his side in the Assembly. The four abstentions from voting on the first of the two resolutions of last Saturday were the nearest approach to anything which could be called support that Abyssinia was able to obtain in her extremity.

It remains to state that, on Monday, the Assembly resolved itself into a Co-ordination Committee which duly advised its component States to discontinue the application of the present sanctions as from July 15th.

These proceedings have already produced their effect upon two groups of States: the Latin-American Republics and the seven European neutrals (the three Scandinavian countries, the two Iberian countries, Switzerland and the Netherlands). The European neutrals have given notice that, so long as their fellow States-Members continue to honour the Covenant in the breach rather than in the observance, they themselves will no longer feel bound to implement Articles X and XVI for their part. The Latin-Americans are disgusted at the refusal of their European fellow States-Members to commit themselves frankly to an undertaking to withhold recognition of the *fait accompli*; and they have not been placated by the reference, in the Bureau's recommendation, to the declaration of 1932. In fact, if not in form, it looks as if the Latin-Americans may dissociate themselves from Geneva from now onwards.

Whether this flight from Geneva will actually materialise or not and, if so, whether it will be followed by some, or all, of the self-governing Dominions of the British Crown overseas, the event will show. In any case, it will be a diminished band of States whose delegates will take an active interest in "the reform of the League" this autumn. There will be the United Kingdom, France and Belgium; there will be Russia and the States-Members of the Balkan and Little Ententes; there will be Poland; and there will also, presumably (we must not forget her), be Italy. What will these parties do when they come together?

We suspect that the policy of "reforming" the Covenant by emasculating it is doomed to suffer shipwreck on the rock of inertia. It seems probable that, if any of the Governments commit themselves to anything at all, their action will take the form of a declaration of the geographical limits within which they intend genuinely to honour a set of obligations which will in theory still remain universally applicable.

In our own case, we shall have to make up our minds what the area is within which the United Kingdom will be prepared to go to war in fulfilment of its covenanted obligations. Is Mr Baldwin going to say once more that "our frontier is the Rhine" and that Germany may do what she pleases in Eastern Europe so long as she drops (for the moment) her claim to recover her place in the African sun? Such a policy of leaving the Little Entente and Russia to fend for themselves while we defend the British (and incidentally the Italian) Empire behind a reconstructed Stresa Front, would be, of all policies, the most short-sighted. There is yet time for the Government to realise that the minimum area within which we ought to be prepared to take action in vindication of the Covenant should manifestly not be less than the region that lies within bombing range of these shores. Past history and present right would extend it to everything east of us, up to Russia-in-Europe inclusive.

Here is the next issue in the long battle that is now being fought over foreign affairs in this country between Government and public opinion. Its outcome depends on whether the so-called "National" Government can devise a foreign policy which will restore their prestige and command an essential unity in the country. As yet, we see no indication that the Government are devising such a policy.

BRUMMAGEM IMPERIALISM

BIRMINGHAM has this week been celebrating the centenary of the birth of Joseph Chamberlain. Birmingham's claim to the honour is unchallenged, for though Chamberlain was a Londoner by birth he became attached to his adopted city to an extent almost unparalleled in British public life. The city and the statesman were in fact almost identified, until the adjective "Brummagem" came to apply equally to the products of the one and the ideas of the other. What is more extraordinary, it was the man who stamped his impress on the city rather than the city on the man. He built up its industry, he changed its face, he mastered its politics to such effect that every division of the city followed his lead even in 1906, when the country outside Birmingham rejected him more emphatically than any other political leader has ever been rejected before or since.

There is much to celebrate in the centenary of Chamberlain. He was one of the first rationalisers of British industry, one of the first to succeed in bringing order and efficiency—and profits—out of competitive chaos. He was a great municipal reformer, more responsible by his energy and his foresight than any other man for the development of the modern British municipality. He was foremost in bringing into national politics the great force of Radical Nonconformity which transmuted Whigs into Liberals. Above all, he was a great personality. He was the man of whom it was first said (and by an opponent) that he had "a genius for friendship." There were decades when every man in England knew who "Joe" was. The nickname ranks with "Dizzy," "the G.O.M." and "Old Pam," and it indicates a combination of eminence and popularity which very few men achieve.

It would be wrong to say that the good that Chamberlain did was interred with his bones. The effects of his Mayoralty of Birmingham still live after sixty years. But his works were not unalloyed. It is doubtful, for example, whether his invention of the "caucus," the party machine in the modern sense, was a benefaction to any but the professional politicians. His Imperialism, in its political aspects, has caused a great deal of spilt blood, and is still causing bad blood between nations to-day. Perhaps the most questionable of his services to his country, however, was the economic doctrine with which he inoculated the party of his old age. Imperial Preference was his last and greatest love. It was the only cause in which, in his lifetime, he failed. But he has succeeded after his death, and the Government of which his second son is one of the leaders and his eldest son one of the chief supporters is putting a Birmingham ring-fence round the Empire.

The latest manifestation of British neo-Imperialism is to be found in the announcement of the Government's permanent meat policy, the details of which are recorded in a Note in this issue. There is very little in the announcement that is surprising, as it follows lines that have been foreshadowed for many months past. But there is equally little that is praiseworthy. The country is gradually slipping into a permanent policy which combines the worst features of the Corn Laws under which Chamberlain was born and of the Tariff Imperialism in whose advocacy he died. Wheat already has its permanent subsidy. The cattle subsidy, on the other hand, was supposed to be temporary and repayable; it is still entered on the Treasury Returns as "Temporary Advances." But the subsidy has now been increased and made permanent, while the promise of repayment has gone the way of many other obligations incurred in the curious financing of our agricultural policy.

A permanent subsidy to British farmers is nothing but the policy of the Corn Laws. True, the technique has changed and the cost of the subsidy is no longer put so blatantly on the price of the poor man's food. But it is nevertheless true that the cost comes out of the consumer's pocket. There may be a case for temporary assistance to British farmers to see them over a particularly difficult time; and if there is such a case, the assistance is best given by a cash subsidy. But a permanent subsidy, coupled with an import duty and buttressed by quota restrictions, to be paid in bad times and in good, is an entirely different matter. It means that the British public is being compelled, for the satisfaction of the farmer, to pay more than it need for its food. From this conclusion there is no

escape. If the import duty *plus* the quota raises the price of meat, the cost goes on to the consumer of meat. If prices to the consumer do not rise, as Mr Elliot promises, the cost of the subsidy must come either from the taxpayer or from the foreign producer. And even if this is one of those exceptional cases in which "the foreigner pays the duty," the British public still foots the bill in the end. For "the foreigner" in this case happens to be the Argentine, and the Argentine producer, as he has recently proved beyond question, spends all the proceeds of his British sales in Britain. So that if "the foreigner pays the duty," British exporters, shipowners and bondholders have their incomes reduced.

This is the first objection to the policy. The production of meat in England is less economic than in some other countries, and consequently any policy which artificially stimulates the production of meat in England involves an economic cost—not to a mythical "foreigner," but to the people of Great Britain. But there is another grave objection to be found in the favouring of the British Dominions. Argentina is to pay a duty on her exports of meat, Australia and New Zealand are not. Furthermore, the hint is given that the "quantitative regulation" of the market is to be manipulated in the Dominions' favour. Nothing more clearly illustrates the protectionist mind than the way in which these matters are discussed. One might be forgiven for supposing that it was a question of distributing buns to small boys. The sons and heirs shall have what they want, and the grocer's boy ought to be thankful for what he gets. We should be the last to refuse the Dominions the freest possible access to the British markets on terms fully as favourable as those offered to any other nation. We might even be persuaded, on the score of sentiment, to accord them a certain measure of preference. But we do most emphatically protest against the handing to them of a whole long-established and profitable trade, without visible sign of return or perceptible attention to the British interests that will be injured. It would be difficult to find in commercial history a clearer case of complementary economies than those of Great Britain and the Argentine. If Anglo-Argentine trade is injured, we know exactly where to put our fingers on the British traders and lenders who will be hit. What are the compensating advantages of exclusively Imperial trade? It is not between the son and heir and the grocer's boy that the buns have to be distributed, but between different and deserving members of the same numerous progeny.

At this appropriate moment a broadsheet has been published by PEP (Political and Economic Planning) which directs attention to the whole subject of inter-Imperial trade, and suggests that the opportunity might be taken at the second Ottawa Conference next year to reverse the purely restrictive policies of the first. The broadsheet is closely reasoned and impressive in its conclusions. It demonstrates that neither Great Britain nor the Dominions can find what they want purely in inter-Imperial trade. Britain cannot absorb all the Dominions' raw materials, nor can the Empire take all Britain's manu-

factures. Yet when they try to go outside, both parties find themselves increasingly hampered by their Ottawa obligations. "The best chance of increase is through enlarging the basis of world trade, and this can be achieved only through a relaxation, and not through a strengthening, of restrictive influences."

There is another aspect of these restrictive influences, and that the most ominous of all, to which the broadsheet directs attention. M. Van Zeeland, in closing the League Assembly on Saturday last, invited the nations to discover some means of increasing international trade as the most practical means of lessening the political tension which grips the world. But when we look at British commercial policy, we find it restricting, instead of expanding international trade. "What use is it," asks PEP, "for us to vote in favour of a collective peace system and to support the League if we simultaneously support economic policies which can only lead to impoverishment and unemployment in Europe, to the spread of hunger and fear, and to the rise of despotic Governments gambling with huge armaments and supported by neurotic and desperate peoples?" What use indeed? Perhaps the speeches at the Chamberlain centenary will supply the answer.

UNEMPLOYMENT IN BRITISH TOWNS

How has the geographical distribution of employment changed since before the depression? In two earlier articles (see the *Economist*, May 9th and 16th, pages 295 and 352) we analysed the industrial distribution of employment, and showed that the main transfer of labour between 1929 and 1935 had not been so much from the capital to the consuming industries as from the exporting to the domestic industries. The general tendency of geographical change, as shown in the classification of the eight large areas—London, South-East, South-West, Midlands, North-East, North-West, Scotland and Wales—is well known. There has been a southward, or rather south-eastward, drift. Employment has fallen most heavily in Wales, fallen slightly in the North-East, remained more or less stationary in the North-West and Scotland, increased moderately in the Midlands and South-West, and increased heavily in London and the South-East.

In order to examine this change in greater geographical detail we have analysed the number employed and unemployed in July, 1929, 1932 and 1935, in all towns in Great Britain with a population of about 100,000 or over. Unfortunately, it is impossible to state accurately the number of persons employed in different places at various dates. In the first place, an estimate of "numbers employed" can only be obtained by subtracting the number unemployed (which includes all persons of 14 and over, insured or uninsured) from the number insured (which merely includes insured persons age 16 to 64). The result is consequently a statistical abstraction, rather than an actual number of persons employed. If it is reduced to an index

number, and used simply to show *changes* in total employment, it becomes reasonably reliable. There are certain further difficulties, however, which have to be taken into account: (1) The figures are for Employment Exchange Areas and not for municipal areas. In the table annexed allowance has been made for changes in exchange areas during the period covered by the figures. (2) Insured persons may exchange their books in different exchanges in different years. (3) Legislative and administrative changes in conditions for receipt of benefit (e.g. the Anomalies Act and the Means Test) may have had different effects in different areas. (4) Our figures do not take account of more recent changes in regional employment, due to such developments as the re-armament programme. Detailed returns of numbers insured are obtained only once each year, and the data showing the position in July, 1936, will not be published before the late autumn.

If these qualifications are borne in mind, the following table may be taken to show the general trend of employment in the largest towns, with a population of 250,000 or over, during the last seven years:—

INDEX OF NUMBERS EMPLOYED (July of each year)			
	1929	1932	1935
London Division	100	98	108
Birmingham	100	93	112
Bristol	100	92	99
Nottingham (including Netherfield)	100	100	106
Stoke	100	85	100
Bradford	100	93	103
Hull	100	99	102
Leeds	100	93	106
Newcastle-on-Tyne	100	92	100
Sheffield	100	77	94
Liverpool and Bootle	100	91	94
Manchester	100	93	98
Edinburgh	100	99	102
Glasgow	100	86	93

The general tendency to greater prosperity in the South-East than in the North-West, and in inland towns rather than in ports, is apparent in this table. London, the only representative of the South-East, showed an increase of 8 per cent. in numbers employed between July, 1929, and July, 1935. The large Midland towns also showed up well, Birmingham, with an increase of 12 per cent., coming out even better than London. Further North, however, Liverpool, Manchester, Sheffield and Glasgow had fewer employed than in 1929. Edinburgh, however, exceeded the 1929 level. In all these cases the qualifications enumerated above must be borne in mind.

How far have these changes in employment affected the distribution of the insured population and the number of unemployed? The following table answers this question:—

NUMBERS INSURED AND PERCENTAGE UNEMPLOYED						
	Estimated Numbers Insured aged 16-64 in July			Percentage Unemployed*		
	1929	1932	1935	1929	1932	1935
London Division	2,214,430	2,366,200	2,466,310	4.4	12.6	7.5
Birmingham	365,620	381,850	410,330	6.1	16.1	8.5
Bristol	130,980	133,880	133,870	10.3	19.7	13.4
Nottingham (including Netherfield)	108,750	116,530	119,800	9.4	15.5	12.8
Stoke	113,580	119,070	120,690	16.3	32.0	21.1
Bradford	118,260	119,200	118,660	15.7	22.3	12.0
Hull	87,560	94,080	92,820	13.2	19.6	16.5
Leeds	167,630	179,390	184,460	9.5	21.8	12.5
Newcastle-on-Tyne	108,350	117,010	118,620	15.0	27.8	22.9
Sheffield	167,030	170,570	170,280	13.7	35.1	20.3
Liverpool and Bootle	313,730	334,070	334,890	16.0	28.0	26.1
Manchester	348,980	359,970	363,870	7.0	16.1	12.7
Edinburgh	123,200	131,610	134,750	9.8	16.3	16.0
Glasgow	376,320	402,500	406,910	12.8	30.2	25.0

* i.e. the numbers unemployed expressed as a percentage of the numbers insured.

London, which had the lowest unemployment percentage in 1929, greatly increased its insured population in the following six years, but actually in 1935 had a higher percentage of unemployment than Birmingham. Although the latter city has experienced a large rise in insured population, employment has largely kept pace with "recruitment," since the unemployment percentage, last July, was almost as low as in July, 1929. This is clear evidence of the special advantage which the Midland area has gained, *inter*

alia, from the tariff. The towns in the same area which last year had a higher insured population than in 1929*, with a relatively low percentage of employment, include Coventry, Derby, Leicester, Northampton and Nottingham. Derby actually had the lowest unemployment percentage for 1935 of all the towns examined, namely 4.2. Stoke, with 21.1 per cent. of unemployment last July, has fared worse than the other Midland towns. In Yorkshire, Bradford, Halifax and Huddersfield all showed unemployment ratios of less than 12 per cent. in July, 1935.

In Lancashire, much the lowest unemployment percentage in 1935 was 12.7 at Manchester. But towns like Barrow, Preston, Salford and Stockport also had percentages below 20. Liverpool had 26.1 per cent. unemployed and a growing population. But Blackburn, Bolton, Burnley, Oldham and St. Helens all had unemployment above 20 per cent. in 1935 and declining or stagnant insured populations. In Scotland signs of recovery were meagre. Glasgow and Greenock had unemployment percentages of 25 or more last July and Paisley one of 19, despite growing insured populations. Clydebank had 26.2 per cent. unemployed, and a steeply falling insured population. Dundee had 38.9 per cent. unemployed and a falling population. Aberdeen alone had a low unemployment percentage and a steadily rising insured population. The three Welsh towns of Cardiff, Newport and Swansea had over 20 per cent. unemployed last July (Swansea 32.2) but a rising insured population. Here it may be that labour from the surrounding district areas has migrated into the large towns more easily than into other more distant areas.

If we examine these geographical changes as a whole, we may perhaps discern at least one other influence besides the drift south-eastwards, and, what is partly the same thing, the favouring of home trades by the tariff at the expense of exporting trades. It seems that there is a tendency for the *medium-sized* towns to be hardest hit. The unemployed naturally tend to migrate to a large town; but in the case of the very largest the development of new secondary industries would appear to be more feasible. Thus, on the showing made by our figures, London and Birmingham have very low unemployment percentages indeed. Manchester is much better off than Burnley, or Blackburn, or St. Helens or Oldham; Newcastle than some of the smaller neighbouring towns, and Edinburgh and Glasgow than Greenock or Dundee. This does not, of course, mean that the medium sized town *as such* has been adversely affected; but rather that a medium-sized town, which has lost its one or two exporting trades, but has not the resources or the market to embark on new industries, seems to have lacked some of the compensating factors of the larger towns.

THE NORTHERN DEMOCRACIES

The observant visitor to the three Northern democracies—Norway, Sweden and Denmark—is first of all impressed by the culture and the high material standard of living which these small countries can maintain. Here are three nations, mustering only some twenty millions of inhabitants altogether, subsisting on lands of which more than half are mountains or uncultivable, yet living at the highest standards of living which *bourgeois* Europe can afford, and possessed of considerable capital assets in the shape of mercantile marine, foreign investments, etc. Their *train de vie* is higher than that of other countries, such as Argentina, which have a comparable population. Their popular culture is much higher, and their systems of social welfare are incomparable. The neatness and good quality of their clothes; their particular understanding of hygienic problems; their universal cleanliness; the wealth of their technical labour-saving devices of all kinds; the care of their children; the excellence of their schools (most of which, together with the universities, are free of charge) and the surprisingly high level of general education; finally, their love for and knowledge of art, music and literature—these are the things which most impress the observant visitor to the North.

* It must be remembered that in the case of all towns not included in the above tables, the comparison may have been affected by changes in exchange areas.

How do they do it? How is it possible for these small countries to have reached their present position, and to have maintained and even consolidated it despite a world crisis and the competition of more powerful nations?

When we compare the natural resources of Scandinavia with those of other countries it is clear that Nature has in no way been more generous to Northern Europe than to other parts of the world. Denmark, for instance, has practically no raw materials of her own except those produced by agriculture. There is just a little timber, a little china clay, a few peat deposits; but there are no minerals, no iron or coal. Yet Denmark has not merely concentrated on the scientific development of her agriculture, her mercantile marine and her fisheries, but despite the absence of raw materials has succeeded in building up certain industries of world renown. One need only think of her ships, railway and bridge-building concerns like Burmeister and Wain; of her porcelain, pottery and silver goods; of her chemicals, vegetable oil products and textiles; and of her breweries, like Carlsberg and Tuborg.

Though not quite so poor in natural resources as Denmark (there is considerably more timber and a few minerals), Norway had to surmount colossal difficulties before she established her various industries. Mining, wood manufactures and fishing have for a long time provided a large part of the country's exports, while in the last thirty years a new big export industry—the electro-chemical and electro-metallurgical industry—has assumed impressive proportions. Food canning (especially fish), textiles, glassware and engineering deserve mention. But the greatest industrial achievement of Norway is her shipping. Without any Government support in any form whatsoever—in fact, despite heavy taxation at home and subsidised competition abroad—the Norwegians have established themselves as the third maritime nation in the world, only Great Britain and the United States having larger commercial fleets. Not only is Norway, with a population of less than three millions, quantitatively ahead of Great Powers like France, Germany and Japan, but the quality of her ships, the standard of wages, maintenance and sailors' accommodation is higher than that of almost any other nation.

Finally, there is Sweden, rightly considered *primus inter pares* among the Scandinavian nations. With an area of 173,000 square miles, i.e. roughly one and a half times that of Great Britain and Ireland, yet with a population of a little over six million people (less than that of Greater London) Sweden has reached an amazing degree of economic development. Her natural wealth is great, it is true; but it is less than that of, say, Canada or Australia. There are 32 million acres of forests in the northern part of the country, and 14 millions in the south, which together form one of the world's principal sources of soft wood. Besides her vast timber resources, which have quite naturally become the foundation of a huge wood, pulp and paper industry, Sweden has also extensive and rich iron ore deposits, various other minerals, and a small but profitable gold mine. She has many rivers and waterfalls that have been put to profitable use, providing hydro-electric power not only for Swedish industry, but even for Denmark across the Bight. The importance of hydro-electric power in the industrial development of Sweden must be emphasised, a large percentage of the factories to-day having their own stations. For several centuries Sweden's mines have provided her with ore for manufacturing iron and steel; her forests have supplied her with timber for her sawmills and with fuel for her ironworks; while her waterfalls have furnished power not only for blast furnaces, forges and sawmills, but also for every other kind of industrial plant. Sweden's industrial and economic problems have thus for generations centred on the necessity to develop high engineering technique, as well as great mechanical skill, among her workers. One need only mention S.K.F. ball bearings, or separators, or steam turbines, or Electrolux vacuum cleaners, or high-grade steel tools, as instances of Swedish mechanical and engineering inventions and specialities, to show what a unique position her standard articles hold in the world's markets to-day.

The outstanding cause of ordered prosperity in all these countries has been peace—the absence of ravaging wars

E X P O R T

The Documentary Credit, whereby the Exporter is assured that he will receive payment immediately his goods are shipped for transit abroad, is the subject-matter of *A Brief Survey of the Financial Machinery of Exports and Imports*, copies of which may be had by asking at any local branch of the Westminster Bank

WESTMINSTER BANK LIMITED
41 LOTHBURY, LONDON, E.C.2

and of their crushing legacies: gigantic national debts, distorted distribution of national income, etc. Many decades of internal and external peace have enabled the Swedes and their fellow Scandinavians to turn their best brains to economic and cultural development. Good taste and common sense have guided them in this process, and the fact that they enjoy spending money and like to get the best of everything has helped to create a strong internal market. It must be realised that in the Scandinavian countries few people are rich, but fewer really poor. An extraordinarily even distribution of the national income has gradually taken place, with the result that the general standard of real incomes to-day is strikingly high.

There can be no doubt that the present prosperity of the Scandinavian countries is very largely a result of psychological forces and the broad human element. However great or limited their natural resources may be, perhaps the decisive factor is the national character and the quality of the population. All three countries are inhabited by people who possess the ability and the will to make the most of the opportunities offered them by their respective countries. Thus in Denmark, especially during the last few decades, the efficient and systematic industrialisation of agriculture was possible only because the Danish peasant is remarkably hard working and intelligent. Agriculture in Denmark demands a thorough knowledge of book-keeping and statistics, a comprehension of foreign exchange operations and of economic problems of world importance; and all this in addition to the ordinary knowledge of the peasant of tillage or cattle-breeding. It is enough to exchange a few words with a simple Danish peasant to realise at once that he has reached so high a degree of efficiency as to turn out a standard pig, cow or chicken with the same precision as Mr Ford turns out his motor cars.

The Swedish peasant has much in common with his Danish cousin, especially down in Skåne—justly considered the granary of Sweden. Industrialised as Sweden is, her agriculture remains one of the main foundations of her economic life. Moreover, the Swedish peasant—who, incidentally, has never known serfdom—has for centuries played a decisive part in the country's political life. Both the men and women seem particularly skilful with their hands; and Swedish arts and crafts, homespun textiles and rugs deservedly enjoy a wide repute. Orrefors glass, furniture, woodwork, mosaics and pewter must also be mentioned as typical specimens of Swedish artistic genius.

This flourishing economic and cultural development of Scandinavia has very deep roots in the history of her people. Democracy is there the tradition, yet it is creative, adaptable and vigorous. While the present economic and social institutions have been evolved during the last few decades, they are a continuation of Scandinavia's best traditions. These traditions, coupled with good management, have turned Sweden, Norway and Denmark into the aristocratic democracies of the North.

"IN A RELATIVE WAY"

IN its endeavour to apply the methods of mechanical science to human problems, the simple-minded nineteenth century made a fetish of uniformity, both in the political and the economic field. "Always do the same thing in the same way and call the same thing by the same name," was Jeremy Bentham's political principle. In economic matters his contemporaries and their successors developed a lively prejudice in favour of a system under which, at all times and at all places, a yard should be thirty-six inches, a pound a certain weight of gold, and a pint no more—or less—than a pint. They thought that the system ought to work in such a way that the same thing in the same place should sell at the same price. They even went so far as to extend the process to international trade, under the impression that business could be conveniently conducted on the inflexible basis of 25.22 francs or 4.86½ dollars to the £1.

We now live in an age of relativity. The rigid tenets of our predecessors have proved to be the product of unsophisticated timidity and elementary learning. What are Reichsmarks worth to-day? The answer is: It depends. If you want to spend them in hotels they are 25 to the £1, for another purpose they are 30 to the £1, for something else 20 to the £1, while nominally they are only 13 to the £1. The Konversionskasse will grind them into any shape required—Reichsmarks, Sperrmarks, Kreditmarks, Registermarks, Konversionmarks, Reisemarks, and "*Kraft durch Freude*" marks. Money, once regarded only as a veil, is now a whole wardrobe of fancy dresses.

To come nearer home; what is a gallon of milk? The cow may still be under the impression that she is delivering a homogeneous product, but ingenious Ministers of Agriculture segregate the output as it emerges. Bucket 1 for liquid consumption sells at 1s. 4d. a gallon wholesale; bucket 2 for butter and cheese at 6d. a gallon; bucket 3 for tinned cream at 5d.; bucket 4 for hokey-poke at 7½d.; bucket 5 for hocus-pocus at 8d., and so on. By the time different retail prices have been fixed for the ordinary citizen, the school child, the unemployed, and the depressed areas, a gallon is no longer a liquid measure but an *idealtypisch concept*, comprehensible only to philosophers and the higher officials of Marketing Boards.

There is no reason why this process of breaking down the absolute should not be extended over the whole economic field. We have seen that a flexible notion of aggression, sanctions, honour, or justice resolves political difficulties. So would adjustable units make for smooth working of the economic system. By all means let the Government lay down standards and proclaim its unshakable resolve to stand by them. It will thus earn the support of all righteous citizens. But then, on the precedents with which we are becoming only too painfully familiar, why should it not arrange at the same time to stamp bank notes paid out for unemployment relief and make them exchangeable at, say, 25 shillings to the £1? When these notes are passed through the accounts who will be any the worse? At any rate, who will be any the wiser? They would certainly have to be made available only for

local uses—like the French local coinages after the war which in effect constituted a buoyant tax on travellers from one part of France to another—but what of that? It would greatly accelerate the trend towards purely local prosperity and autarkic solutions of economic depression. Durham pounds specially issued for Durham unemployed might even snatch competitive advantages over Cornish (tin) coins, by a judicious lowering of the eyelids in the direction of black bourses. The "blocking" of income-tax or railway-fare revenue in Yorkshire would provide a useful reservoir of funds for those public works in Yorkshire which had been blocked by the refusal of Whitehall to make advances for roads, schools, etc., etc. What the South Wales Central Bank authorities might be able to accomplish by such blackmail—now apparently sanctified with the odour of respectability by many Great Powers—beggars imagination.

Why (except for astronomical reasons) should a day consist invariably of 24 hours or a week of seven days? Why (except in historical treatises on democracy) should one citizen be regarded as the equal of another? Like the young lady named Bright, once we go out in a relative way, we can out-Joshua Joshua and make even Time go backwards. Then the worker will earn £4 for a 48-hour week, but the pounds will exchange at 24s. plus a 2s. premium for residence in the North-East area, while working time is calculated at 50 minutes to the hour. He will be entitled to a fortnight's holiday on full pay, the fortnight consisting of 26 days if taken in June, 22 days if in July and 18 days if in August. At Easter his Good Friday starts on the previous Wednesday. He and his family can take 7d. tickets at the cinema and sit in the shilling rows. His beer will be delivered in pint bottles which hold a quart. For income-tax purposes and Marketing Board quotas he is regarded as a married man and a quarter, his two sons count as three and a half boys and his daughter as one and three-quarter girls. At 58 he will be registered as officially dead, however much longer he cares to live; and his wife can draw his insurance money and the widow's pension. Could there be any more potent influence for the preservation of social and industrial peace?

Finally, we have at last learned that debtors call the tune, and that creditors only pay the piper. May we not therefore soon see the biggest debtor of all—the State—calculating the pounds of the national debt as equal to shillings? Think how easy the financing of re-armament would then become. We could have more and more armaments for the same national debt, simply by writing-down the pounds paid to arms manufacturers every month. Indeed, the currency controllers in Threadneedle Street, Durham, South Wales, Yorkshire and Warwick might all put their heads together and rediscount each other's bills, paying the Government's suppliers in local currency. As the local currency could only be spent locally, every industrial region of England would soon become self-sufficing. And, if we believe what we are told, once this process were complete, peace would reign both between the nations and within them—just as it did in Europe in the grand old days of the feudal barons.

NOTES OF THE WEEK

"A Deficit Upon This Budget."—The Chancellor of the Exchequer, in the third reading of the Finance Bill on Friday of last week, said: "It is already made practically certain that there will be a deficit on this Budget, and the only question is what that deficit will be." This is because the rising tide of armament expenditure has already overflowed the £20 millions which the Chancellor allowed in the Budget as a margin over and above the £34 millions increase in this year's Defence Estimates over the total of last year's Estimates (excluding Supplementaries). Four Supplementaries amounting to £20,059,000 were presented on Thursday—£11,700,000 for the Air Force, £1,059,000 for the Navy, £6,600,000 for the Army, and £293,700 for

the Royal Ordnance Factories. The further increase in the R.A.F. expenditure includes £4,920,000 for aircraft and spares, £1,364,000 for munitions, and £3,164,000 for additional works, aerodromes and bases abroad. Two new cruisers, one aircraft carrier and small craft are to be laid down. And the Army's increase is mainly due to increased warlike stores and to movements and quartering of troops abroad. As Mr Chamberlain told the House, this year's defence expenditure will be £54 millions more than the expenditure of last year. For these and any further Supplementaries only £20,500,000 was provided in the Budget. Anything more can only be covered—if covered it is—from the buoyancy of the revenue.

The deficit is thus "practically certain." Mr Chamberlain concluded: "I cannot believe for a moment that this rising expenditure on armaments is going on indefinitely. We have great arrears to make up, and to make up in a short time, and during that short time we must face altogether exceptional, abnormal and phenomenal rates of expenditure." After that, he thought, the country would still have "sufficient resources to continue its upward march of progress." We find difficulty in sharing the unwonted optimism of an habitually ascetic Chancellor.

Roads for the Nation.—The Minister of Transport made a welcome announcement in the Commons on Monday. In the autumn the Government will bring forward a Bill to take over the upkeep of about 4,500 miles of trunk roads, including bridges, from the county councils, which now mainly bear that duty, to the Minister of Transport. The Bill will also give the Government power to include other roads in the national system. County and Metropolitan boroughs in England and Wales and the larger Scottish burghs will retain their powers and duties. The Government have rightly decided that without such transference to a national central authority it would be impossible to secure those uniform standards of width, surface, construction and signposting which, under the multiplicity of country authorities, were lacking at a time when the traffic on the main roads had rendered the need for them most clamant. Mr Hore-Belisha has already invited the County Councils' Association's representatives to discuss these proposals; and it is believed that they have met with general approval. It is pointed out that the number of vehicles on the roads in August of last year was 34.5 per cent. more than in August of 1931; and that, in any case, upkeep of many trunk roads has in practice devolved upon the Exchequer, owing to the block grant system and to the existence of many "corridor counties" whose authorities could not be expected to maintain main roads used merely by through traffic. The Exchequer's complete absorption of the Road Fund in the national accounts in the last Budget has rendered this step imperative. But it should only be regarded as a first step. Trunk roads are only one-tenth of our entire road system; and it is only 4,500 miles of this one-tenth are to be tackled. It is not yet known what costs are involved; but the highway authorities' five-year plan for roads envisaged the expenditure of £139 millions in that period; and the new scheme will involve urgently necessary works of improvement and standardisation, additional to that sum, the cost of which must fall on the Exchequer. The evils of ribbon development can now at least be checked. The Government are to be congratulated on their decision. We recall the French Marshal's advice: *Continuez, mon enfant, continuez!*

The New Unemployment Regulations.—The new Draft Unemployment Assistance Regulations, to replace those withdrawn as a result of public clamour at the beginning of last year, are issued as we go to press. It will be recalled that the Unemployment Act of 1934 drew a distinction between benefit, paid as a right, under the Unemployment Insurance scheme, and assistance, paid to those who had exhausted their right to benefit or, for one reason or another, were not included in the insurance scheme. This latter part of the system is administered by the Unemployment Assistance Board and it was their regulations for reducing to order the chaotic state of semi-local, semi-central administration which caused the uproar last year. The new regulations show a number of modifications in detail compared with the abortive draft, and all these modifications are in favour of the applicant. In addition to concessions on the scale of payments and on the methods of assessing both needs and means, provision is made for a considerably increased element of local discretion in varying payments. As a result, many unemployed persons, estimated at about 200,000 out of the total of 620,000 now in the Board's care, will receive increased payments. There will, however, be some reductions in payment, as the present "standstill" arrangement is that applicants are receiving assistance either at the rate specified in the first set of regulations (those withdrawn last

year) or at the old "transitional benefit" rate, whichever is the higher; and some of the local "transitional" rates are higher than the new regulations. These reductions are to be introduced gradually, but they will undoubtedly arouse some resentment in the areas of heavy unemployment. The regulations as a whole give the impression of an honest attempt to get over a very difficult transitional period with the least possible disturbance. If the changes are criticised as minor, the Board can fairly retort that the guiding lines of policy were too narrowly drawn in the Act to leave them much freedom of discretion.

The Jarrow Sequel.—"The Jarrow scheme is dead. Long live Jarrow." That was Mr Runciman's refrain in the Commons last week. He stated that it was "considered very unlikely that a scheme for an iron and steel works (at Jarrow) will be proceeded with." That was the end of the story which we first outlined last week. The somewhat belated statement of the British Iron and Steel Federation on Tuesday sheds new light on the responsibility for this deplorable outcome. From the utterly inadequate information provided by Dr. Burgin during last week's debate on the steel duties, it was assumed—no other conclusion was possible—that certain members of the Federation were using the weapon of price associations, backed by the tariff, to "freeze out" the proposed new concern. It now transpires—both in the official statement and in a letter in *The Times* on Monday from Mr Arnold-Forster, one of those who conducted negotiations for the promoters—that the promoters voluntarily sought the co-operation of other steelmakers, "a co-operation which the (promoting) syndicate was itself anxious to establish." That clearly implied financial participation. In this way the promoters might have saved the expense of a public issue or the need to win the approval of the Bank of England. Asked to co-operate in the venture, the steelmakers replied in effect that they did not consider the commercial prospects sufficiently promising to justify diversion of production from existing works, which the Jarrow scheme undoubtedly involved. Furthermore, they were by this time—last January—heavily committed to extensions of their own plant on the Tees and elsewhere, in view of the critical shortage in semi-finished steels which had arisen, largely as a result of the Government's re-armament programme, since the Jarrow scheme was first mooted. Small wonder they preferred to invest in new plant, which was to be an extension of their own plant. Convinced, nevertheless, that Jarrow should have a "co-operative works," the Federation Executive pressed for a modified scheme which would have cut down the finishing side and concentrated largely on soft basic Bessemer billets, large quantities of which are now imported. In the last resort, therefore, the scheme collapsed because of technical disagreement on what constituted an economic unit. Quite apart from any veiled threats of ostracism—it appears that at least membership of the Billet Association would be open to the new concern—the promoters could then have pro-

ceeded on their own; but they chose not to. In his letter, Mr Arnold-Forster explained that he attacked no one in the industry. After the Government's reiterated declarations that the promotion of a new works at Jarrow is a matter of national importance, responsibility now devolves wholly on them. They should examine the modified scheme in which one or more members of the Federation were prepared to participate on a commercial basis, and ensure that the necessary capital is forthcoming and the work begun.

A Policy for Beef.—After protracted negotiations, the Minister of Agriculture at last outlined his long-term policy for "safeguarding" the British livestock industry on Monday. In the first place, he proposes to continue for an indefinite period the fat cattle subsidy, first adopted as a temporary expedient in 1934, pending the formulation of a long-term policy. But the subsidy is now to be raised by about £1,000,000 annually to a maximum of £5,000,000 a year, and graduated to stimulate the production of high-quality beef. As a partial offset to the cost of this measure, a duty of 3d. per lb. will be imposed on imports of beef and veal from foreign sources. Dominion supplies will continue to enjoy the privilege of free entry. Finally, beef imports from all sources will be subject to what is quaintly described as a "voluntary" quantitative restriction. To this end the Government will constitute an Empire Meat Council, representing the United Kingdom and the Dominions, and an International Meat Conference, upon which the foreign countries concerned (i.e., Argentina, Uruguay and Brazil) will also be represented. Lest these bodies should fail in their task of inducing exporting countries to acquiesce in the proposed "voluntary" restriction, the Government are now to seek general powers to regulate all imports of livestock and meat into this country. Meanwhile, since these proposals cannot be put into operation immediately, Parliament will be invited before the summer recess to continue the existing cattle subsidy arrangements till July 31, 1937. Thus the British beef producer will receive a handsome subvention from the taxpayers, *via* the Exchequer; and it would not surprise us if he also reaps a further benefit at the expense of the consumer from a rise in the price of his product. Mutton and lamb are excluded from the present arrangements, but if the Government decides that it is expedient to "plan" this market, too, the plight of the South American cattle breeder will be desperate indeed. Argentina, which is one of the most important purchasers of British textiles and machinery, is now to be sacrificed on the altar of Imperial preference. Even if the price of beef does not rise here, she will have to choose between losing the British market or reducing the prices of her beef by 3d. per lb. in order barely to retain what she has hitherto had. If Argentine meat companies do the latter they may lose their profit; so they are urging their Government to block payments to Britain. Mr Elliot's declaration of policy seems to have been deliberately designed to prevent his *confrère*, Mr. Runciman, from renewing the "Roca" agreement, to invite Argentina to block or reduce transfers of interest and dividends on the £500 millions of British capital in Argentina, to deal British shipping yet another blow (and so to increase the "tramp-shipping" subsidy?) and to hit the depressed areas of Britain where our exporting industries are situated. It all seems a queer way of "safeguarding" the farmers who raise just one-half of our annual supplies of beef.

The Commons Discuss Poverty.—On a Labour Party motion the Commons on Wednesday discussed the evidence of considerable malnutrition in this country, especially in the "depressed areas." The mover, Mr T. Johnston, adduced such evidence as the following. Dr. M'Gonigle, Medical Officer for Stockton-on-Tees, found 83 per cent. of 2,676 children in Durham County showing definite signs of rickets. Ministry of Health experts, sent to check Dr. Walker's conclusion of a progressive deterioration in public health between the Tees and the Tyne, discovered that among 1,300 poor children in Sunderland 20 per cent. were suffering from subnormality or malnutrition. Sir John Orr concludes that 50 per cent. of our population

lives below an *optimum* diet costing only 10s. per head per week; and 20 per cent. lives below even the *minimum* diet (not the optimum) laid down by the British Medical Association in 1932. Dr. M'Gonigle, of Stockton-on-Tees, publishes the results of his inquiries into five income groups as follows:—

Group	Weekly Income (Shillings)	Required for B.M.A. Minimum in 1932	Required for same at Stockton in 1935	Available for Food after Rent, Fuel, Clothing, etc.
		£ s. d.	£ s. d.	£ s. d.
1.....	25-35	0 19 0½	1 2 10½	0 13 5
2.....	35-45	1 3 7½	1 8 3½	0 16 10
3.....	45-55	1 6 7½	1 11 11½	1 1 9
4.....	55-65	1 5 9½	1 10 11½	1 5 2
5.....	70-80	1 4 1½	1 8 11	1 12 7

Many speakers in the debate urged that the great majority of our population falls into the first three income groups only. (Mr Colin Clark recently estimated that 60 per cent. of all income receivers had less than 48s. per week.) Against the cogent evidence of malnutrition now accumulating from almost all industrial areas in the country, Sir Kingsley Wood's pæan on the theme of domestic recovery (which he claimed as a Government success), and Mr Elliot's vital statistics and his promise to see what he could do to make cheaper milk available in depressed areas, will evoke neither optimism nor comfort. Mr. Elliot's assisted, but still unsatisfied, farmers and their workers are offset by areas in which the bulk of our unemployed can scarcely maintain health and efficiency. The House on Wednesday looked first on this picture, then on that, according to Party sympathies.

The Danzig Ramp.—Last Saturday, the League Assembly which invited the League's High Commissioner at Danzig, Mr Sean Lester, and the Nazi President of the Danzig Senate, Dr. Greiser, to report on the situation there, was the scene of a vulgar farce. Such a piece of hooliganism as Dr. Greiser perpetrated would be best disposed of by being ignored (as Mr Eden ignored the school-boy gesture) if it were not fraught—as, unhappily, it is—with grave dangers of a European explosion. On Saturday evening, the Nazi President of the Danzig Senate hurled defiance at the League and abuse at its High Commissioner, Mr Lester (Irish Free State). Mr Lester's sole offence has been to carry out, in ever more difficult circumstances, the duties assigned to the High Commissioner in the Peace Treaty, and defined by the practice of the fifteen years and more during which the present regime in Danzig has been in force. This regime was set up for the purpose of ensuring Poland's liberty of access to the sea across the Free City's territory; but incidentally it also assured to the citizens of Danzig certain political liberties which have become both precious and contentious at a time when civil and religious liberties have been extinguished in almost every other community of German nationality. No doubt what the Nazis would like to do at the moment would be to overthrow the constitution of Danzig in so far as it seems to protect the non-Nazi half of the German population, while leaving untrammelled Poland's treaty rights until further notice. The Polish Government, however, to whom the task of dealing with Herr Greiser has been referred by the League, have, very reasonably, asked for "further and better particulars" from Berlin, and have declared that, if the Danzig constitution is overthrown for one purpose it cannot long be maintained for any other. Even Colonel Beck's complacency towards Nazidom does not, apparently, go the length of tolerating in Danzig a new Nazi drive towards *Gleichschaltung*. Meanwhile, Dr. Greiser's performance at Geneva has been hailed with acclamation in the Press of the Reich. The "snook-cocking" hero has received an ovation upon his return to Danzig (his journeys, both coming and going, were broken at Berlin). And this has been the signal for a new volley of repressive measures against the non-Nazi Germans of Danzig, beginning with another attack upon the local opposition newspapers. Undoubtedly Herr Greiser is authorised in making his public boast that, in all that he is doing, he has the Third Reich behind him. And thus, in spite of the German-Polish Pact of 1934, Danzig has once again become one of the danger points of Europe.

An Anglo-Russian Altercation.—Last week it seemed that Mr Eden had succeeded in damping down the Anglo-Russian disagreement which had flared up at Montreux over the new regime in the Straits. This week, however, the trouble has broken out again; and the difference of views and aims has been driven home in a British draft for a new Straits Convention. For the outstanding features in this draft are the points in which it traverses all the Russian, French and Turkish *desiderata*. What is the Government—or what are the Admiralty—driving at? We are confronted, at once, with a few disturbing questions. Do His Majesty's Government in the United Kingdom not contemplate co-operation with the Government of our Russian fellow State-member of the League for salvaging as much as can still be salvaged of the Covenant in Europe? There is no mention of the League in the British draft for a new Straits Convention (unless, perchance, the humorously unfortunate phrase about sending British naval tonnage into the Black Sea for "humanitarian" purposes is intended to mean action in fulfilment of League obligations). His Majesty's Government wish to retain the right to send as high a figure of non-riparian naval tonnage as possible into the Black Sea, while keeping down to a minimum the amount of naval tonnage the Russians will be at liberty to send out into the Mediterranean. This strongly suggests that the Government contemplate a necessity to fight in some war of the future on the opposite side to Russia. Is it to be a League war or a private war? If it is a private war, do the Government contemplate an alliance with—or a friendly neutrality towards—Germany? Germany, assuredly, is the Power whose turn is going to be served by the present Anglo-Russian altercation. It is a futile altercation; for, in the Russian alteration, Turkey is going to look to present state of the League, Turkey is going to establish Russia for protection, and is therefore going to establish in the Straits the regime that Russia wants. Why are the Government resisting a Turco-Russian policy which we have neither interest in thwarting nor any power to frustrate?

Fog Over Austria.—Austria lies enveloped in a political fog. Does Dr. Schuschnigg contemplate a restoration of the Habsburgs as an imminent act, or only, Hungarian fashion, as a theoretical postulate? Is Signor Mussolini lukewarm, indifferent or inimical to the hypothetical plan? Is there any possibility that Herr Hitler will accord it a provisional toleration in exchange for the insertion of a Nazi wedge into the hitherto more or less solid part of Dr. Schuschnigg's Cabinet? Are the three States-members of the Little Entente as firmly opposed to a Habsburg restoration? Is Czechoslovakia paralysed by terror and Rumania? Is Czechoslovakia soothed by distance, while Yugoslavia is being spurred into a frenzy by the fear that a Habsburg monarch re-established on a Viennese throne might work like a lode-stone upon the feelings of the Croats, with their tradition of loyalty to the older and grander dynasty? If Yugoslavia is on the warpath, how far does she mean to go? Is there any truth in the rumour (commended by the promptness of the official denial) that Yugoslavia has actually applied to France for a promise of military assistance against Italy in the event of a Habsburg *fait accompli* in the Hofburg? And there is a sensational sequel to the story. We can scarcely credit the statement that the Yugoslav Government, having received a rebuff from France, has addressed itself to Germany. If it is true, Herr Hitler may let fly in Austria and in Danzig simultaneously. Or he may behave like a prudent housekeeper in hoarding his slender store of possibly peaceful stunts and doling them out at intervals of not less than six months. We cannot guess what Herr Hitler had in mind on July 3rd when he announced to a quarter of a million of his followers—assembled at Weimar to celebrate the tenth anniversary of the first Nazi party rally—that "before the word peace we must always place the word honour." Is Austria one of the places where honour might come before peace in the near future? The present regime in Austria is like a pagoda in an earthquake. Through a mist of uncertainty, we can catch a glimpse of swaying roofs and crashing walls. But if ruin comes we cannot guess what will be the direction in which the tottering pile will fall.

Active Commodity Markets.—After a period of quietude, several of the principal commodity markets have been galvanised into activity during the past few days. In sympathy with Chicago, Liverpool wheat futures registered an abrupt rise on Thursday of last week and have since continued their upward trend, with certain profit-taking pauses; July futures are consequently almost 1s. per cent. dearer than a month ago. The movement was due to continued reports of damage to the United States spring wheat crop, owing to drought. Moreover, the drought has begun to affect the prairie provinces of Canada, and Dominion production is likely to suffer in the absence of early and generous rainfall. But, while the statistical position of the commodity—which showed a substantial improvement following last year's drought and rust—has undoubtedly been further strengthened in recent weeks, there is not the slightest danger of a world shortage of "the golden grain." It would therefore be rash to speculate upon the continuance of the present trend of wheat prices. The market in raw cotton, which has been buoyant for several weeks, received further stimulus on Wednesday from a bullish estimate of the United States Department of Agriculture. It was recently anticipated that the area under cotton in the United States this year would show an increase of some 15 per cent. over the 1935 acreage; but this week's estimate puts the area at 30,621,000 acres for the present season, or only 10 per cent. in excess of the 1935 figure. On receipt of this news the New York and Liverpool markets advanced by almost 3d. per lb. Although no official estimate is available, the yield from the present acreage may be tentatively put at 11,000,000 bales. Since world consumption of American cotton is at present equal to about 12,500,000 bales per annum, there seems little likelihood of lower prices in the near future. A third area of excitement this week has been the tin market, which was taken completely by surprise on Monday evening, when an announcement concerning the future of Bolivian arrears of shipments was made, following a secret meeting of the International Tin Committee. It was reported that Bolivia had surrendered her arrears of over 10,000 tons and that the quotas for the third quarter of this year would consequently be reduced from 90 to 75 per cent. of the standard tonnages, the signatory countries (except Bolivia) being granted an additional quota of 15 per cent., as their first share in the Bolivian arrears. The "adhering" countries also received a special quota and it is unlikely that the remainder of the arrears will be made up in the last quarter of the year. After falling last Friday to the lowest level for over three years, tin prices have since gained some £14 per ton. The International Tin Committee has undoubtedly strengthened its tactical position during the past few weeks, and it is now regarded as probable that it will be able to reach an early agreement with Siam. In that event, much of the uncertainty about the future of the restriction scheme,

which has been hanging over the market recently, would be removed. It may not be too much to hope that the tin market may return to more normal conditions in the fairly near future.

★ ★ ★

Unemployment in June.—That the tide of recovery continues on the flood is suggested by the June unemployment returns. On June 22nd the estimated number of insured persons aged 16 to 64 in employment in Great Britain was 10,832,000—1,000 more than in May and 441,000 in excess of last year's corresponding total. These figures, which are still exclusive of agricultural workers, show that employment has improved by 4 per cent. during the past twelve months. In this period the number of registered unemployed has fallen by 297,434 to a present total of 1,702,676, which includes 1,362,190 men, 251,616 women and 88,870 juveniles. Of the persons on the registers at June 22nd about 47 per cent. were applicants for insurance benefit, and about 38 per cent. for unemployment allowances; some 15 per cent. were, for various reasons, ineligible for benefit of either kind. How the different industries have fared is shown below.

NUMBER OF INSURED PERSONS UNEMPLOYED IN GREAT BRITAIN

	June 24, 1935	May 25, 1936	June 22, 1936
Coal Mining.....	300,079	216,676	274,229
Iron and Steel manufacturing.....	41,384	30,244	28,219
Engineering.....	88,522	60,308	57,537
Metal goods manufacture.....	50,634	39,804	39,155
Shipbuilding and repairing.....	63,559	49,480	44,801
Motor vehicles, cycles, and aircraft.....	28,415	14,772	15,504
Cotton.....	98,285	70,830	68,574
Woolen and worsted.....	32,971	21,828	24,593
Tailoring.....	21,649	12,485	20,101
Boot and shoe.....	20,190	15,165	17,045
Building.....	127,847	103,297	104,256
Public Works contracting.....	114,716	110,169	108,168
Road transport.....	35,430	32,149	29,800
Dock, harbour, etc., service.....	49,656	48,942	45,783
Hotel, Boarding-house service.....	52,051	60,003	51,083
Distributive Trades.....	200,380	194,834	180,884
All persons registered.....	2,000,110	1,705,042	1,702,676

The expansion of activity in the heavy industries was reflected last month in falling unemployment in iron and steel, engineering and shipbuilding, while hotel and boarding house service and the distributive trades registered a seasonal improvement. Seasonal factors also account for an increase in unemployment in the tailoring, footwear, wool textile and automobile industries. The most notable increase occurred in coalmining, but this was mainly due to a temporary stoppage at the Yorkshire pits in connection with the annual demonstration of the Yorkshire Miners' Association. The same factor was principally responsible for a rise of 32,740 in the number of unemployed in the North-Eastern division—which recorded the largest fall a month ago. In all other divisions except the Midlands unemployment again registered a decline during June.

★ ★ ★

Shipping Freight Index.—As measured by the monthly index the general level of whole cargo shipping freights rose by 2.0 per cent. during June, following a fall of 1.2 per cent. in May. The current figure of 90.6 compares with 84.0 in June, 1935 and 83.8 in June, 1934. Details of the index number are as follows:—

(1898-1913 = 100)

	Average, 1913	June, 1935	April, 1936	May, 1936	June, 1936
European waters.....	110.0	91.4	86.1	88.0	93.3
North America.....	113.1	79.8	90.9	89.0	89.6
South America.....	123.4	82.4	87.5	85.2	92.1
India.....	106.3	88.5	95.0	92.5	91.2
Far East and Pacific.....	117.4	77.7	87.3	85.6	84.7
Australia.....	127.9	86.4	92.6	92.6	92.6
Total.....	116.3	84.0	89.9	88.8	90.6

Freights are a little firmer, and there has, perhaps, been a better demand for tonnage for the Baltic. Otherwise there is no real increase in activity, and sailings to France were affected during June by the French strikes. Movements of the various sections are as follow.

	Index No.	Inc. or Dec. Points		Index No.	Inc. or Dec. Points
Home trade.....	84.2	+ 3.3	South America:—		
Bay—Outwards.....	110.1	+ 5.5	Outwards.....	76.3	+15.0
Bay—Homewards.....	103.2	+11.3	Homewards.....	108.0	- 1.0
Mediterranean:—			India—Outwards.....	77.2	...
Outwards.....	83.5	+ 3.2	India—Homewards.....	105.2	- 2.5
Homewards.....	94.5	+ 5.3	Far East, etc.....	84.7	- 0.9
North America.....	89.6	+ 0.6	Australia.....	92.6	...

Expressed as a percentage of the average for 1913, the complete figure of our index number for June is 77.8, compared with 76.3 for May and 72.2 for June, 1935.

★ ★ ★

Sterling and International Prices.—The past fortnight has witnessed a sharp rise in the price of primary products. The *Economist's* primary product index numbers have risen by 1.7 per cent. for British prices and by 5.6 per cent. for American prices, and in the United States the increase is mainly in grain prices. The complete index numbers, which include a certain number of semi-finished products, have naturally not risen by as much. In England the increase in the *Economist's* figure is 0.6 per cent., while the Irving Fisher American figure has also risen by 0.6 per cent. French wholesale prices have risen by 1.3 per cent., a movement which neutralises the previous fortnight's decline. German wholesale prices are unchanged.

1913 = 100	83.1	96.1	96.6	97.1
1924 = 100	52.2	60.4	60.6	61.0

In the cereals and meat group there was sharp advances in wheat, flour, beef (both Argentine and English), and in English mutton. There were heavy falls in English barley and potatoes. The rise in the other food group is due to increases in the price of butter and coco-oil. Wool and jute were weaker. Mineral price increases were mainly in pig iron and house coal. Non-ferrous metals were irregular. Among miscellaneous materials there were advances in linseed oil and rubber.

UNITED STATES

BUSINESS SLOWLY IMPROVING

The main business indices of the Board of Governors of the Federal Reserve System for May show little change from April, continuing at levels which favourably compare with the period of so-called prosperity before the boom of 1928-29. A sharp rise occurred in the value of department store sales compared with those in April. Within the index of manufacturing output, the chief developments were an increase in steel, and declines in food products, automobile and manufactured tobacco production (all seasonally adjusted). In the mineral group the output of anthracite, zinc and lead rose, and that of bituminous coal fell. The indices follow:—

U.S. BUSINESS INDICES

(1923-5 = 100; adjusted for season)

	May, 1935	April, 1936	May, 1936
Industrial production (total).....	85	100	101
Manufactures.....	84	99	100
Minerals.....	89	105	102

Factory employment.....	81.4	84.9	85.7
Factory payrolls*.....	68.5	77.9	79.2
Freight car loadings.....	61	69	70
Department store sales.....	76	81	88

* Without seasonal adjustment

These figures paint no picture of seasonal recession which some had anticipated for this summer, nor is such a development visible in the weekly June figures. Carloadings for the week ended June 20th totalled 690,716; the total (without less-than-carload) was 28.7 per cent. ahead of the same week a year earlier, which was a better comparison than had been registered during the two previous weeks of June. Automobile production during the first three weeks of June was running 100,000 per week compared with about 90,000 during the weeks of June last year. Steel operations were at 70 per cent. of capacity and have been estimated at a level several points higher during the last week of the month. Electric power output in the week ended June 20th was 2,005,243,000 kilowatt hours, the highest figure ever reached, and 13 per cent. ahead of the same week of 1935. The difficulties of the power companies in their relations with Government are not having any perceptible effect on their volume of business. The central region of the country mainly accounts for the favourable power production, as shown in the following table:—

PERCENTAGE INCREASE OVER PREVIOUS YEAR

Geographical Region	Week- ended May 30, 1936	Week- ended June 6, 1936	Week- ended June 13, 1936	Week- ended June 20, 1936
New England.....	18.7	12.7	14.5	15.4
Middle Atlantic.....	13.4	8.1	11.1	9.3
Central Industrial.....	21.7	16.3	20.3	17.9
West Central.....	18.3	14.9	14.0	17.1
Southern States.....	20.4	15.5	17.0	16.9
Rocky Mountain.....	22.8	18.9	17.5	22.7
Pacific Coast.....	11.9	4.6	6.7	7.5
Total United States.....	18.0	12.8	14.2	13.0

There is now some talk of easing-off in the amount of business activity during the third quarter, though it is not generally expected that this will be of much consequence if it does occur. Steel activity is the focal point, it being reasonably clear that some June production was taken from the third quarter by buyers in order to avoid the price increase which was scheduled to take effect early in July. The closing down of automobile plant in preparation for new models will occur in the autumn, and may be more

extensive than that of last year. The effect of veterans' spending following the distribution of the bonus bonds on June 15th is still an enigma. No noteworthy developments have yet been observable, though sufficient time probably has not yet elapsed.

DROUGHT AND STEEL

The steel industry is the centre of a major labour struggle which promises to continue for some months. It may prove an important factor in the political campaign, and, in the course of time, in the shape of the business curve. A group of labour leaders headed by Mr John Lewis, leader of the coal miners, and calling themselves the Committee for Industrial Organisation, are seeking to unionise the steel industry. This is the third major attempt to this end, previous efforts, including strikes, having been made in 1892 and 1919. The current drive is well financed; the group is reported to have \$500,000 available for this purpose. The management of the industry is actively combating the move, speaking vigorously through the trade association, the American Iron and Steel Institute, and making various overtures to employees, including the possibility of an increase in pay. Mr Lewis is seeking to form a vertical, or industry union. This has caused a break with Mr William Green, president of the American Federation of Labour, and the leaders who support him, the American Federation of Labour having always adhered to craft unions.

A strike is one of the traditional methods used during a unionisation drive in this country. A strike during the campaign, however, would probably adversely affect Mr Roosevelt's chance of re-election, since his critics would charge the disturbance to his pro-labour policies. Mr Lewis is an ardent supporter of the President, and is rumoured to be desirous of official position. The progress of the steel unionisation drive, therefore, is fraught with important possibilities to the campaign, the shape of the business curve during the next several months, and to the organised labour movement in this country.

The drought is another important problem in the business outlook for the latter half of this year. Crops are virtually ruined in western, North and South Dakota, and eastern Montana. Nearly all of the northern Mississippi Valley has had subnormal moisture, and unless rains come during July damage will be widespread. [The effects of the drought, now severe, are discussed in a Note on page 59.] It is quite improbable that the United States, will export any grain this year. Should dryness continue through July, to the harm of the corn crop and other animal feeds, business activity may well be affected by the diminution of agricultural purchases. During the first five months of this year total cash income from agricultural marketings and Government payments to agriculturists is estimated by the Bureau of Agricultural Economics at \$2,638 millions, compared with \$2,488 millions during the same period of 1935; Government payments accounted for \$105 millions and \$256 millions respectively.

Discussion of Federal Reserve action to increase the member bank reserve requirements has again been revived, and such a move during the third quarter is expected by some. The rise, if it occurs, is not expected to exceed 25 per cent. This would leave excess reserves in the neighbourhood of \$2,000 millions. Except for some disturbance to sentiment, it is difficult to see how such a development would have any effect of consequence upon the money markets.

NEW YORK, June 30.

FRANCE

POPULAR FRONT AND PARLIAMENT

THE Blum Government has contrived to get through both Chambers without great difficulty all the Bills it judged important. The law establishing a National Wheat Board was adopted in the Chamber by 375 votes to 215. At no time was there any vehement utterance on the part of the Opposition; and in any case parliamentary opinion is that the Blum Government cannot be overturned before it has had the chance to carry out its experiments. Even if the Government were scuttled as a result of some extraordinary manoeuvre in the Chamber, it would have to be reconstituted forthwith on the same basis.

France's Government is now "broad based upon her people's will" rather than upon that of Parliament. It has nothing to fear from the Right. The dangers to it are on the Left; and they would become redoubtable perils if the Communist elements contrived to swamp the Popular Front Government and either to sweep it towards extreme measures or to paralyse it. Though it has adhered to the Popular Front programme, the Communist Party does not consider itself bound by that "minimum" programme. It takes its own initiatives; for example, it advocates a capital levy, while M. Vincent Auriol, the Finance Minister, has categorically rejected it. The Communists also keep up a certain agitation among the working class, while M. Salengro, the Minister of the Interior, persistently pleads with the workers to remain passive and calm. A few incidents still occur; notably the action of the employers' associations in the textile industry of the Nord *Département*, who went to protest to the Prefect of the *Département* against the persistent agitation reported from some factories where, notwithstanding, agreements have been concluded between employers and workers. The employers' associations told the Prefect that if the high-handed activities of the workers continued the employers would have to envisage other measures than those hitherto adopted.

GOVERNMENT AND FINANCE

The persistence of these sectional troubles, events at Geneva and the Danzig crisis all explain the hesitancy shown by French capitalists in the last few days. The Bill requiring declaration of all assets abroad, of which the Government has secured adoption by the Chamber, but no discussion, as yet, by the Senate, has induced a few capitalists to repatriate the funds they had in London, Brussels and Geneva. Such repatriation, however, has not yet reached any considerable figures. At the same time, the Rentes have moved up, a rise which is the condition precedent of success for M. Vincent Auriol's proposed new issue of "baby-bonds."

This loan may be as large as Frs. 10,000 millions in several issues. It is to be put out in small denominations of one-year bonds. The Finance Minister first envisaged bonds at short term, i.e. three or six months; but on the urgent request of M. Caillaux, the Senate Finance Commission demanded that the bonds should be of one year's usance. In fact, many politicians nurse a kind of phobia against the floating debt. They fear that in a crisis the holders of really short-term bonds would be able to demand repayment of the securities that fell due in that period. That is precisely what happened with the three-months National Defence Bonds in 1925 and 1926. This ominous precedent decided the Government to stick to one-year bonds for their new loan.

PARIS, July 8.

GERMANY

THE LEAGUE AND GERMAN IRREDENTISM

A RENEWED campaign against the League of Nations and an increase of irredentism are the chief features of present German foreign policy as conveyed by the Press. During the early months of the Abyssinian campaign the League of Nations had to be treated impartially, since any general hostility might have been construed as a departure from neutrality in the League's dispute with Italy; and after March Herr Hitler's conditional proposal to return to Geneva obviously excluded any overt anti-League propaganda. Although formally the latter factor in German policy still remains, the League is once more being assailed and ridiculed. Thereby Germany is being brought into an ambiguous position. It is not easy for her to negotiate to rejoin the League when she is condemning it outright. Possibly the plans for League reform, unclear and unpromising as they are, may produce more favourable conditions for Germany's re-entry; meanwhile it seems that German interest demands either a powerful League, managed exclusively by a Great Power group, in which Germany would be influential, or an entirely helpless, academic League without any executive functions. Either solution would accord with the antagonism to effective and impartial internationalism, which is so deeply rooted in National-Socialism.

Meanwhile, no doubt is possible that Herr Greiser's anti-League utterances on the Danzig question were directed from Berlin. The same is true of his scarcely veiled presentation of Danzig's case as one of German irredentism. In general the irredentist agitation has of late become wider, though perhaps no more intense. The Reich Government could not tolerate direct plans by its publicists to annex foreign territory inhabited by German-speaking people. Any such plans would have justified resentment by foreign Governments. The new irredentism takes the less provocative form of a natural enough interest in the culture of German-speaking populations everywhere. This interest goes very far, embracing small German colonies in Russia and in the Balkans, and even the Flemish-speaking population of Belgium. The chief irredentist objects are Latvia, where German cultural influence is rapidly disappearing, and Czechoslovakia. In view of the present alliance systems and the increase in Russia's power, German agitation is not likely to take actively aggressive forms; but the suspicions harboured by neighbouring countries are increasing. They declare themselves in an often exaggerated sensitivity, of which the suppression by Czechoslovakia of an innocent Olympic Games map, which schematically regulated the Bohemian frontier, is characteristic.

"BUSINESS AS USUAL"

The business situation is little changed. The Reichs-Kredit-Gesellschaft's half-yearly report is optimistic about the trade outlook for Germany and the world; and, probably with reason, it credits Germany with much the greatest recovery in industrial production since the bottom of the depression was reached.

Consumption of electricity in May was 15 per cent. above that of May, 1935. The receipts of the Railways Corporation in the first half-year were 9.2 per cent. above those of the first half of 1935; from goods they were 12.3 per cent. up, and from passenger fares 5.5 per cent. up. The index of output of capital goods (1928 = 100) for April is 110.0, and excluding the Saar 107.3. The increase in production within this group of metal and building material trades has of late slackened, whereas the increase in finished products (machinery, ships, motor cars and buildings), which began later, has been proceeding ever more rapidly. The production index for these in the first quarter (1928 = 100) was 94.2, as against a low record in 1933 of 26.9; whereas for metals and building materials the index is 103.8, against a low record in 1932 of 41.2.

The export of capital goods has risen considerably this year, cement leading with 243,000 tons in the first five months, against 196,000 tons in 1935 and 82,000 tons in 1934. The increase is entirely to overseas countries, including the Irish Free State. Since the depression, cement output has increased fivefold. The film industry has recovered

at home, and there are signs of a revival in export. The production of cellulose wool in 1935 is estimated at 15½ million kilogrammes, against 7 million kilogrammes in 1934; and estimates for 1936 are as high as 40 million kilogrammes. The price is around Rm. 1.70 per kilogramme, which is cheaper than fine wool and rayon, but dearer than cotton and inferior wools. It is already partially compulsory to mix this substitute with natural materials, and the industry expects an extension of this compulsion.

COMPANIES AND THEIR ASSETS

A discussion has arisen in the Press about the heterogeneous ramification of industry. This is a result of the excessive financial liquidity of industrial concerns and of the restrictions on starting new businesses and on increasing production capacity. The restrictions are now in force in about thirty industrial branches. Prudence and the Loan-Stock Law have compelled many companies to pay out less of their profits in dividends than they might have done; and they can find no normal investments. Many of them are evading the prohibitions against expansion in their own domains by acquiring large interests in entirely alien undertakings. The Nazi Party's suspicion of "capitalism" plays a rôle in this, for Party organs are violently attacking the companies for their alleged slackness in subscribing to the new Reich loan. "Concerns" embracing several unrelated branches of industry are of course not new. Some years back they led to financial troubles, including the collapse of the biggest German brewery. But under the influence of the factors mentioned above, the "concern" movement has revived. Potash companies, for instance, have acquired ironworks; and public utility companies, copper works. In contrast to the financially liquid companies which are eager to buy others up, stand weak companies which have not recovered from the depression, and are ready to sell part of their undertakings in order to extinguish their debts.

CREDIT AND MARKETS

Subscription to the Rm. 500 millions offered in the market of the Reich's new Rm. 700 millions 4½ per cent. loan is reported to have proceeded satisfactorily. The definitive return of Reich tax revenue in the financial year 1935-36 shows Rm. 9,654 millions, against Rm. 8,211 millions in 1934-35. Subventions to the States were Rm. 2,591 millions, against Rm. 2,495 millions. Rm. 318 millions of tax credit certificates were accepted in payment of taxes. The yield of direct taxes and of taxes on business rose from Rm. 4,958 millions to Rm. 6,176 millions; of Customs and Excise, from Rm. 3,253 millions to Rm. 3,478 millions; and of Customs alone, from Rm. 1,149 millions to Rm. 1,249 millions. The Reich Loan seriously affected the money market, and the customary abundance of cash after the turn of the month was absent. The day-loan rate has remained at the level of the end of June: 3-3½ per cent. The Reichsbank's credits and investments correspondingly increased by the large sum of Rm. 805 millions in the last week of June, and its note circulation by Rm. 443 millions. Accordingly, its deposits rose by Rm. 221 millions. This increase largely represents cash held in preparation for payments on the Loan.

BERLIN, July 8.

HOLLAND

MONEY AND EXCHANGES EASIER

A MARKED degree of relaxation has set in in both the foreign exchange market and in the money market. Dollars, at a rate of 1.46½, again came below the gold export point. Sterling, too, dropped to 7.35½, a low level which has not been reached for a considerable time. This is largely attributable to the situation in France, but, on the other hand, domestic factors have been a contributory cause. The redemption of the 25 million dollar loan of the Batavian Petroleum Company has had some influence, as it was largely held in the Netherlands. This induced a plentiful supply of dollars, involving in turn additional liquidity on the money market. The rate for prolongation money even dropped to 2½ per cent. and call money

is quoted around the level of 1 per cent. The stocks of gold of the Netherlands Bank show no further depletion; they even rose by 5 million guilders in the course of the past week. The Netherlands Bank, despite the approach of the end-of-month settlements for June, therefore decided to reduce the official discount rate once again to 3½ per cent. It is expected that further reductions will follow. In the course of a little more than a year the discount rate of the Netherlands Bank has been changed no less than 21 times, ranging between 3 and 6 per cent.

The recent period of tension on the foreign exchange market has resulted in a substantial drain on the Bank's gold stocks. The stocks of gold stood at their highest figure this year round about the close of the Bank's financial year (March 31st), when they amounted to 774,654,000 guilders; whereas the weekly return on June 15th showed 588,823,418 guilders, the lowest point so far recorded. It may be recalled that last year, towards the end of July, the Bank's stocks of gold were depleted by 142,000,000 guilders in the course of a single week.

THE CENTRAL BANK CHARTER

A Bill has been introduced into Parliament providing for a modification in the charter of the Netherlands Bank. This is a measure of some importance. It provides new rules for the allotment of profits and stricter regulations on the building-up of reserves. It is to give the bank authority to pursue a so-called open market policy. By virtue of the present Banking Law, the Netherlands Bank is only permitted to exert influence on the money market by manipulating the rate of interest. The result has been that in many instances the Bank has been powerless to do anything but watch the course of events. Once the Bank has secured authority to operate in the open market, it will be in a better position to exercise influence. The Bank is to practice the open market policy—as is already being done by central banks abroad—by means of the purchase and sale of inland bills and Netherlands Exchequer bonds, subject to the latter having first been in the hands of third parties. This restriction is to prevent the Bank from securing bonds direct from the Minister of Finance, by means of a direct issue. As is only natural, the Bank is to conduct its operations in the open market as far as possible in conformity with the special interests of the State in the local money market.

STILL NO ECONOMIC RECOVERY

Despite the relaxation on the Amsterdam money and foreign exchange market, no fundamental change for the better has become perceptible. The Central Statistical Bureau reports that the returns of industrial activity for the first quarter of 1936 show divergent tendencies. In many factories some measure of recovery was noticeable, and in some of them the improvement was so pronounced that it could be stated that 1936 had made a far more propitious start than its predecessor. This did not apply, however, in other branches of industry, where the first quarter compared unfavourably with the preceding year, or was unchanged. Most of the other data of the Central Statistical Bureau leave a gloomy impression. The unemployment figures for all industrial groups collectively were again somewhat higher than last year. The average percentage of unemployed days in the first quarter of 1936 was 39.2, compared with 37.3 in the same period of 1935 and 31.2 in 1934.

Total exports of manufactures in the first quarter were down by 21,000 tons, and a value of 4 million guilders, compared with the corresponding period of 1935. In comparison with the average first quarter's exports during the past five years, the first quarter of 1936 showed a decline of 74,000 tons and of 37 million guilders. To illustrate the decline more strikingly, comparison with the first quarter of 1930 (exports 966,000 tons and a value of 290 million guilders) show a drop of 195,000 tons and of 201 million guilders.

DISPROPORTION IN COSTS

To a large extent this decline in the Netherlands' exporting industries is attributable to the disproportion between the high level of costs and that of foreign countries. Interesting calculations by the Central Statistical Bureau

show that the wages charge (in gold) per unit of production, with 1929 as 100, had dropped by 1934 to: 81 in Germany, 59 in England, 52 in Sweden, 51 in U.S.A., and 79 in the Netherlands. The disproportion in the cost of living (in gold) is shown in the following figures (1929=100): Germany 80, England 52, Sweden 51, U.S.A. 48, France 87, Switzerland, 79, Netherlands 81. The high cost level in Holland is due in the first place to high house rents. In the prices of textile goods (the best example of an industrial product which is an item in the cost-of-living index) divergencies in the various countries are slight.

After subjecting the indices of wholesale prices to an adjustment to enhance comparability, the result is (1929 in gold=100): Germany 75, England 50, Belgium 56, France 67, Switzerland 71, Sweden 48, U.S.A. 51, Netherlands 61½.

Not only were exports in May lower than in the preceding month, but there was again a drop compared with the corresponding month of last year, as had been the case almost consistently for many months. For the first five months of the current year imports amounted to 7,610,000 tons (last year 7,998,000), with a value of 389,497,000 (382,091,000) guilders. Imports were 5,260,000 (5,003,000) tons, with a value of 265,526,000 (267,897,000) guilders. The adverse balance of trade was 123,971,000 guilders (last year 114,195,000). Imports and exports in recent years, month by month, are shown below:—

	Imports			Exports		
	(in million guilders)					
	1934	1935	1936	1934	1935	1936
January	100	76	79	56	55	50

The trade returns of the Netherlands thus continue their unsatisfactory trend.

AMSTERDAM, July 1.

POLAND

UNREST AMONG THE PEASANTS

PARLIAMENT met in extraordinary session in June to extend, until the next ordinary session in the autumn, the "full powers" for the Government to legislate by decree. Under the "controlled democracy" created by the Constitution of April, 1935, and its complementary parliamentary system, the Sejm and the Senate, vote the "full powers"; the Government does the rest. It was clear from the temper of both Houses last month, however, that this system will not last much longer; and that the "dictatorship without a dictator" is crumbling. At the very least there should soon be a reform of the electoral system and different parliamentary methods. Many observers feel that much more sweeping changes are likely.

Government circles, no less than public opinion, were greatly impressed by a peasant demonstration on June 29th at Nowosielce, in Galicia, when 150,000 peasants from a radius of over fifty miles assembled with perfect orderliness to honour Michal Pyrz, who led Polish peasants against the Tartars in 1624. Many of them travelled for four or five days in carts, and at harvest time, to attend the festival. They were "reviewed" by General Rydz-Smigly, Marshal Pilsudski's successor as Inspector-General of the Polish Forces; and before him they cheered "The Polish Republic; the Polish Army; the Peasants' Party and its leader, Vincent Witos." M. Witos, who was thrice Prime Minister before May, 1926, is an outlaw who has been away from Poland since the "clean-up" of Opposition deputies in 1930. The peasants at Nowosielce resolved that M. Witos should be brought back to Poland; that a new and democratic Constitution should be prepared; that

a new Parliament should be elected; that a "just" Government resting on popular support should be formed; and that foreign policy should be changed.

It must be assumed that the 150,000 peasants at Nowosielce fairly expressed the feelings of ten millions or more of their compatriots who are awakening politically and whose reasonable demands no Government in Poland can long resist. The Army, for the most part, is made up of peasants who never lose touch with the countryside. The police, as they have shown on a dozen occasions within recent weeks, can deal very effectively with "town jobs"; but when and if the peasant masses decide that the recovery of their full political rights requires them to "take a walk" the police could not do much about it. The mere fact that General Rydz-Smigly, now the recognised leader of Poland and a liberal-minded soldier, witnessed the Nowosielce demonstration, and is known to have been greatly impressed by it, encourages the hope that the peasants will not be forced to prove the sincerity of their resolutions.

POLAND AND DANZIG

Until the internal political situation finds its proper level, Polish activity in external affairs will no doubt continue along "safety first" lines. For no apparent reason, except perhaps to "commend" Poland to Italy, the Cabinet on June 27th decided to proceed with the "liquidation" of sanctions, and a decree to this effect was published on July 2nd. Polish opinion from the outset recognised the danger their intensification would have held for peace; but it is probably safe to say that Poland would have been as resolute as Great Britain and France in defending all that the League was supposed to stand for, and that the decision to remove sanctions already reached by the British and French Governments influenced Poland's action.

The sudden twist to events in Danzig imparted by Berlin and the Danzig Nazis has caused misgivings in Poland, if only because by those actions Germany has pushed Poland into a quandary. The prospect of a war between Germany and the Soviet Union has not been regarded as likely for the medium-term future; in the first place, because it was felt that Soviet Russia would not in any contingency attempt to attack Germany across a hostile Poland; and, secondly, because Germany would not be likely to march hundreds of miles across what would become hostile territory in order to "get at" the most heavily armed nation in Europe. Many informed Poles believed that German talk about a "free hand in the East" was largely bluff, and that when the German army moved it would be along lines of least resistance. The line to Moscow is certainly not one of them. But the move towards Danzig holds out ominous possibilities. If, on the other hand, Germany struck in Central or Western Europe, and looked like being successful, she could still presumably count on Poland and the Baltic States to isolate Soviet Russia.

FOREIGN DEBT TRANSFER SUSPENSION

Polish Treasury representatives in New York on June 26th informed the fiscal agents of American bondholders that, until more normal conditions in world affairs were restored, debt service would have to be met in zlotys and deposited to the credit of the fiscal agents at the Bank of Poland. No legal steps have yet been taken, however, to implement this announcement.

The service on public and semi-public debt amounts to about 110 million zlotys a year, and on private debts probably to 40 million zlotys—a total equal to about £6,000,000. The principal creditor countries are the United States, France and Great Britain; but Holland, Sweden, Switzerland and a few others will also be affected because it is the intention to apply the suspension to all countries with which Poland has an unfavourable trade balance and/or an unfavourable balance of payments. Great Britain has an adverse trade balance with Poland equal to about £2,000,000 a year, which is not, as far as can be ascertained, wholly offset by debt and other payments to or through Great Britain. Britain's primary interest in the suspension, therefore, will be to see that her adverse trade balance with Poland does not fall below the total of the payments due from Poland to Britain.

It is the Government's intention to undertake discussions with all the creditor countries in the hope of making amicable arrangements. Great care will also have to be taken to avoid charges of discrimination. It will be necessary for all creditor countries, however, to realise that the Polish financial tide is now very low, and that they will need to have more confidence in the future than expectations in the present. Foreign creditors will be allowed freely to dispose of their zlotys in Poland, and if they are not used for buying additional Polish goods for export, or for investments in real estate, buildings, domestic securities, etc., they will remain on deposit at the Bank of Poland and bear interest. If the foreign exchange is available, private debtors will not be restrained from fulfilling their contracts with foreign creditors.

The Polish Defence Services, and importers of essential raw materials for industrial needs, will henceforth be preferred applicants for foreign exchange; but it is believed that, with the suspension of transfers for debt service, and with the present reserve of gold and foreign exchange (nearly 400 million zlotys), all essential demands for foreign exchange can be met, and the Government's four-year work-creation plan (to cost 1,800 million zlotys) carried out. This plan, which was disclosed to Parliament last month, is now finding work, chiefly on road-building, for about 200,000 unemployed.

The industrial indices, mainly because of the public works programme, are now better than at any time during the past five years. The figures on foreign trade, given below, also show an improvement in volume, largely because of increased imports of raw materials:—

	Imports	Exports	Active Balance
	(in millions of zlotys)		
January-May—			
1934	326.3	391.4	65.1
1935	339.6	363.7	24.1
1936	396.9	413.6	16.7

Poland's economic prospect is by no means one of unrelieved gloom, if only her problems of exchange transfers and foreign trade can be surmounted.

WARSAW, July 6.

JAPAN

THE TRADE WAR WITH AUSTRALIA

THE record of the session of the Diet which terminated on May 26th was remarkably good for a short sitting of three weeks. Besides the Finance Bills, the commercial and industrial credit plan, the anti-cartel law, the dismissal compensation scheme, tariff revision, and forty-one other Government measures were carried through both Houses. The Commercial and Industrial Credit Corporation plan provides for the establishment of a central financing organ to supply credit accommodation to small and medium-sized firms. It has a capital of 10 million yen, half of which is to be contributed by the Government. The important Industries Control Act was so revised as to restrict more rigidly the activity of cartels and similar combinations, and empowers the Government, if deemed necessary, to subject any trade to a licensing system. The dismissal compensation scheme makes compulsory for the employer the creation of a fund to give a bonus to his employees on dismissal, laying aside a sum equivalent to from 2 to 5 per cent. of wages. In the revised tariff, duties on aluminium, hoops and strip iron, petrol, essential oils, and aspirin, antipyrin and pyramidon were raised. These duties are all prohibitive.

The Government has decided to adopt an import licensing system for Australian wool and wheat in retaliation for Australia's restrictive measures against Japanese goods. The programme agreed upon between the Government and the representatives of the woollen trade is (1) to curtail purchases of wool in Australia by two-thirds of last season's total, or restrict them to 250,000 bales; (2) to buy another 250,000 bales in South America, Africa, New Zealand and elsewhere; and (3) to make good the shortage of 250,000 bales by staple fibre and other substitutes. The plan, however, involves many difficulties: first non-Australian wools are comparatively dear; secondly, Japanese spinners' tech-

nical skill has not developed to make the most of non-Australian wools; and, lastly, there is a problem of indemnities to the woollen firms, for it is not the woollen industry but the cotton, the rayon and other trades that suffer from Australia's restrictive measures. Moreover the import restriction of raw materials must inevitably give a severe blow to the woollen trade which is being built up as an important export industry. But the retaliatory measures will be put into force at any cost. As for wheat from Australia, an import quota scheme will be enforced with much less difficulty, and Manchukuo will co-operate with this country in the trade war.

IMPORTS STILL RISING

Imports continue to run well ahead of last year's figures, while exports show an almost stationary character as a whole. Last month's imports amounted to 240,695,000 yen, compared with 221,228,000 yen in May, 1935. The chief increases were in textile materials, while iron and steel and machinery recorded notable declines. Exports totalled 219,880,000 yen, against 215,164,000 yen last year. Raw silk and wheat flour decreased substantially, and the increase is largely accounted for by lesser exports such as leather, oils, rayon yarn, iron and steel, and machinery. The import surplus for the month was 20,815,000 yen, compared with 6,064,000 yen a year ago.

Business conditions, as revealed in other economic indices, have changed little in recent weeks. Output of cotton yarn during May totalled 121,587,000 lbs., an increase of 47,000 lbs. over April. Rayon yarn production during May amounted to 21,744,000 lbs., or 840,000 lbs. larger than in April; but this is largely accounted for by the two firms which have newly joined the Rayon Producers' Association. The Bank of Japan's wholesale index number for May shows no change on the month; advances in cereals and other foodstuffs were offset by the declines in textiles. The aggregate value of all shares listed on the Tokyo Stock Exchange on June 1st was up by 61.2 million yen, or 0.9 per cent., as against a month ago.

The spring cocoon crops are arriving on the markets. They are quoted at around 5.00 yen per kamme on the average, as against a mean of 4.00 yen for last spring and 2.50 yen two years ago. The prices are sufficiently high to compensate for the decreased crop caused by the great damage done to the mulberry trees by the unusually heavy snowfall last winter. This affords a somewhat bright spot in the dismal agricultural situation.

TOKYO, June 12.

ARGENTINA

FOREIGN TRADE DECLINING

THE foreign trade of the Argentine for the first five months of the present year, compared with that of the corresponding period of 1935, was as follows:—

	First Five Months		
	1935	1936	Diff.
	\$	\$	%
Imports	467,393,176	458,420,033	-1.9
Exports	720,070,020	620,795,770	-13.8
Balance of Trade	252,676,844	162,375,737	-36.0

These figures continue to show an unsatisfactory position. Notwithstanding a slight decrease in imports, the favourable balance of trade is down by some \$90 millions. Six months of the present year are already past, and the position in June will apparently show no improvement. On the basis of former years, Argentina will be very fortunate indeed if her favourable balance of trade reaches the \$300 million mark for the twelve months ending December 31, 1936. This is not sufficient, in itself, to supply enough *devises* to maintain a stable foreign exchange, and it will only be by clever manipulation of the Equalisation Fund, as we predicted earlier in the year, that exchange rates will be kept steady. Textile imports show a further decline and there has even been a falling-off in shipments from Japan due, it is thought, to excess importation of cheap goods during 1935, and to increased local production.

Great Britain remains at the top of the list of countries exporting to Argentina, the 1936 figure being practically the same as that of 1935. Imports of machinery and metals show very large increases and so also—strange though it may seem in a country which supplies food necessities to many parts of the world—do imports of foodstuffs. The principal items which show a decline in import values are tobacco and textiles.

AGRICULTURAL PROSPECTS

Except for a few days of cold dry weather, last week, unseasonable climatic conditions still continue; moderately mild, wet weather is the order of the day. This continuous rain and lack of sunshine has seriously held up the shelling of the maize crop, the quality of which will, for the same reasons, be adversely affected. Sowings of wheat have also been retarded due to excessive moisture in the soil; and lack of sunshine, where the cereal has been sown, cannot but have an ill effect on the growth. Fortunately the Southern zone sowings are in good condition and pasturage could scarcely be better.

The political situation is, at the time of writing, rather obscure; for the Chamber of Deputies cannot obtain sufficient attendance to form a quorum, owing to the intentional absence of the members of one Party. Two eminent members of Argentine political and public life have been appointed to act as mediators with a view to finding some reasonable solution to the present difficulties.

Exchange rates, possibly as the result of the foreshadowed reduction in the favourable trade balance, have tended to become easier, both the official and free market quotations having gone up several points, the former now standing at \$17.05 instead of \$17.02, the previous rate. Deposit and lending rates remain practically unchanged.

BUENOS AIRES, July 1.

INDIA

INDIAN AGRICULTURE

THE Viceroy is continuing his efforts to improve the lot of the ryot by appealing to self-interest. His Excellency recently sent a letter to the Governors of all the Provinces as an appeal "to develop cattle-breeding in India and the improvement of the fodder supply." The keynote of this letter is not to speed on the work of the Provincial Governments—they are already doing their best in this regard. It is to ask for the co-operation of the Provincial Governments in initiating "throughout India a sustained effort to attract that unofficial support and interest in livestock improvement which is so essential to real progress."

According to British India Agricultural Statistics (1934-35), compiled by the Department of Commercial Intelligence, the total area of British provinces was 668 million acres. Of this 234 million acres represented uncultivable area comprising forests (89 million acres) and other area not available for cultivation (145 million acres); 154 million acres represented culturable waste other than fallow, and 53 million acres the area left fallow during the year. The remainder, 227 million acres, was the net area actually sown with crops during the year. Food crops occupied 213 million acres of the total area sown (including areas sown more than once) and non-food crops 46 million acres. Rice represented 31 per cent. of the total area sown, millets 5 per cent., wheat 10 per cent., oilseeds and cotton 6 per cent. each, gram 5 per cent., barley and maize 2 per cent. each, and jute and sugar-cane 1 per cent. each. The total area irrigated amounted to 51 million acres, which was practically the same as in the preceding year. Canals irrigated 26 million acres, wells 13 million, tanks 6 million and other sources 6 million acres.

UNCERTAIN MONSOON PROSPECTS

The head of the Meteorological Service states that "evidence is so conflicting that no forecast of practical value can be issued concerning this year's monsoon rainfall." With Indian finances, as it were, on a razor edge, and with no reserve to fall back upon, it is clear that any failure of the monsoon will have the most serious conse-

quences upon Central and Provincial finances and could imperil the deductions of the Niemeyer report.

In his plans for a settlement, considered by the Central Government as very generous to the Provinces, Sir Otto Niemeyer has made it difficult for the Government of India, for the next decade at least, to increase the already reduced provision for the sinking fund. In 1923 a decision was arrived at to provide Rs. 4 crores a year for the reduction or avoidance of debt, the total outstanding debt at the time of this plan being Rs. 797 crores. In addition to the amount settled, one-eighth of the amount in excess at the end of a financial year over the amount outstanding on March 31, 1923, was to be appropriated to the sinking fund, and this was done until the annual allocation had reached Rs. 7 crores. For a number of reasons Sir George Schuster in his last Budget speech changed the appropriation for reduction of debt to Rs. 3 crores a year. This rate is being continued by the present Finance Member.

How rapid has been the expansion of the sugar industry in India is shown in "The Sugar Industry (1936) Annual," published by Mr M. P. Gandhi, secretary of the Federation of Indian Chambers of Commerce. In 1931-32 the total production of sugar in India was 478,119 tons; the first official estimate for 1935-36 fixes it at 849,000 tons. The area under sugar cane has kept pace with increased production. From 2,677,000 acres in 1929-30 it expanded to 4,141,000 acres in 1935-36. Cane factories have likewise multiplied rapidly. Before 1931-32 there were only 31 factories. To-day there are 139, and according to the official estimate there should be 156 in 1936-37. The present cane season has been exceptionally favourable to millers, and an increase of some 106,000 tons is expected over last year's production.

The rapid increase in internal production has been accompanied by a corresponding decline in imports. In 1931-32 the revenue from the import duty on sugar amounted to eight crores of rupees. In 1935-36 it had shrunk to just over three crores, and according to the latest Budget estimates it is expected to fall to two crores in 1936-37. At the rate the industry is expanding the stage must soon be reached when home production will outstrip consumption unless the internal demand materially expands.

BOMBAY, June 26.

LETTER TO THE EDITOR

THE JARROW SCHEME

TO THE EDITOR OF THE ECONOMIST

SIR,—I am glad you have given prominence to the abortive attempt to start steel works at Jarrow and hope you will not allow the matter to drop. The explanation of the incident is of course the desire of the now very small group of large steel manufacturers to protect their privileged monopolistic position. This position has been achieved by buying up control of all the smaller independent concerns with the aid and encouragement of the Import Duties Advisory Committee. Enforced idleness at Jarrow is by no means the only result.

A few years ago the steel framework (a very straightforward job) of a factory building in the Midlands was put up at a cost of £12 10s. per ton. Tenders were received a few days ago for a similar building at £20 per ton. Steel and wages during the interval have gone up only a fraction of the difference. The increase has occurred because all the steel erecting firms have made a ring and fix prices practically on "what the traffic will bear" lines. It is impossible to get an erector to quote from outside the ring, as he cannot get supplies of steel. The British makers stop home supplies and the Import Duties Commissioners foreign ones.

The motor car manufacturers and almost all steel users can quote many instances similar to the above. Let us hope the moral will not be lost on "planners" and those who have been urging the coal, iron and steel trade and other trades into vast combines, in the mistaken belief that such a course will be to the advantage of their customers and the country generally.

Birmingham
July 9, 1936.

Yours, etc.,
MANUFACTURER.

BOOKS AND PUBLICATIONS

AN INDIAN'S AUTOBIOGRAPHY

It is widely acknowledged that Pandit Jawaharlal Nehru, President of the Indian National Congress, has introduced a new note of realism into Indian politics. More than this, he claims to be helping India to take its proper place in the world to-day. "We cannot isolate India or the Indian problem," he said in his recent presidential address, "from that of the rest of the world to-day." Pandit Nehru is a Socialist, but because he considers Nationalism in the East to be the means to freedom, he is a Nationalist. He is not anti-British—he himself, in many ways, is a product of British education—but he is opposed to the rule of nation by nation or class by class.

Jawaharlal Nehru was born in 1889 and is the son of Pandit Motilal Nehru, the lawyer and statesman. He was educated at Harrow and at Trinity College, Cambridge, and returned to India in 1912. It was not till after the war that he began to take an important part in Nationalist politics, though he delivered his first public speech in 1915. From then on he was closely associated with Congress politics and Congress leaders. He belongs to a rich Kashmiri Brahmin family, and even before he went to Harrow he had an English education. He belongs at once both to the East and to the West, and denies that there is anything unalterable or mysterious in the differences between the Eastern and the Western worlds. To some things which are essentially Indian, such as communalism, untouchability and the subjection of women, he is strongly opposed. This, he knows, divides him from many of his representative countrymen, from the communal leaders, even from the Liberals or Moderates; but he believes that he can win the support of the masses to a widely democratic and Socialist system in which there will be no place for communal conflicts or caste subjection. This appeal to the masses is creating sharp opposition in India, not only from the Moderates and non-Congress elements, but inside the Congress itself. It is no doubt the beginning of a division of Indian political forces into Conservative and Socialist parties.

Though this book is only in a very personal sense a history of Congress during the last fifteen years, nevertheless, any understanding of that period is incomplete without reading it. Mr Nehru gives vivid portraits of many of the Indian personalities as well as a new and fresh assessment of Indian problems. The real problems, he believes, are not religious, linguistic or geographic, but rather social and economic. In this connection, his opposition to British rule of India arises from his antipathy to what he considers as economic exploitation as well as political overlordship. The first essential, he argues, once British rule has been superseded, is to plan the rapid industrialisation of the country and concurrently to work out a different agricultural system based on different laws of landholding. Among his portraits, the one of Gandhi is perhaps the best; for Mr Nehru's intrinsic loyalty and affection is such that he is not afraid to give us a very frank picture of the man who has been the chief political influence of his life. He is obviously completely out of sympathy with Gandhi's religious and social ideas; and the history of his emancipation from Gandhi's political influence is the history of severe intellectual shocks such as that caused by Gandhi's statement that the Behar earthquake was a punishment for the sin of untouchability, and of severe political shocks such as Gandhi's suspension of civil disobedience in February, 1922, after the Chauri Chaura incident.

Every word of the book was written in prison and it has the mark of prison on it. It has a detachment and a lack of detail in it which seems strange in the autobiography of an active political leader; on the other hand, it gains immensely from the enforced leisure which has made it possible for Mr. Nehru to think deeply and write clearly of the fundamental problems not only of India, but of the world.

SHORTER NOTICES

"Principles of Auditing." By F. R. M. de Paula. 8th Edition. Sir Isaac Pitman. 313 pages. 8s. 6d.

For the past two years, investors have enjoyed the practical advantages of Mr de Paula's work, for he has been intimately concerned with the excellent form of accounts recently adopted by the Dunlop Rubber Company. In this eighth edition of a work first published twenty-one years ago, Mr de Paula revises and enlarges his theoretical argument in equally vigorous fashion. There are two new factors which confront accountants with their most thorny problems. The first is the Royal Mail Steam Packet Case, which is the more perplexing in its legal implications because it answers the whole question of secret reserves and the presentation of profit and loss accounts by *obiter dictum* rather than by specific judgment.

The accountancy profession, as Mr de Paula shows, has since adopted standards which appear to rule out the possibility of any repetition of the proceedings in this case. But the second problem—reform of holding companies' accounts—still remains. Section 126 of the Companies Act, it is true, imposes upon the directors the obligation of describing—though not specifying—the treatment of subsidiary companies' profits in holding company profits. Of what use, however, as a guide to group earnings is a statement that one subsidiary company has declared a dividend which has been brought into the parent Company's accounts, while the losses of other subsidiaries have been carried forward without being specifically provided for? This sort of statement is not incompatible with a gross over-distribution of group earnings, and it incurs Mr de Paula's just criticism. The author, in fact, urges that a consolidated earnings statement, with clear indication of abnormal credits, is more valuable than a consolidated balance sheet.

It is the great merit of Mr de Paula's work that, in addition to being an authoritative text book on auditing principles, it also presents an essentially modern and progressive case for enlightened accounts. Investors, accountants—and company directors—will find it worth careful study.

King Edward's Hospital Fund for London; Annual Report for 1935.

The indispensable part played by the King's Fund in maintaining London's hospitals is further described in the annual report for 1935. During the year an ordinary distribution of £305,000 was made, of which £127,000 came from voluntary subscriptions. A further £120,000 was distributed as a special Jubilee gift to the hospitals. During the last ten years £3,193,417 has been distributed to the hospitals by the Fund.

MONEY AND BANKING

THE ANGLO-SOUTH AMERICAN BANK

ON Tuesday evening it was announced that, subject to the approval of the shareholders of both banks, the Bank of London and South America was taking over the business and assuming the liabilities (including deposits) of the Anglo-South American Bank. The purchase price was 100,000 fully-paid £5 shares in the Bank of London and South America. The result will be the disappearance of one of the oldest of the British banks operating overseas.

To understand the cause of this merger it is necessary to recall events of several years ago. During the 'twenties the Anglo-South American Bank engaged heavily in the financing of Chilean nitrate, and when the slump came, in 1929 and onwards, it found itself seriously involved. In 1932 a group of London banks, under the leadership of the Bank of England, provided financial assistance to the amount of £8,500,000, and in exchange took over nitrate assets to the nominal value of £7,500,000, together with £1,000,000 of 5 per cent. preference shares in the Anglo-South American Bank specially created for that purpose. The latter also gave the banking group a deferred guarantee of £7,500,000, to rank after the bank's liability on its deposits. It was further agreed that after paying the new preference dividend, half the bank's profits would be allocated towards the redemption of its liabilities under this guarantee. Later, in the summer of 1932, these assets, with the attached guarantee, were transferred to a special company called Chilnit, the shares in which were held by the banking group.

Clearly this was a stop-gap arrangement, which afforded full protection to the bank's depositors, but left the bank, inevitably, with a heavy burden. There has, subsequently, been a moderate recovery in South American trade, and Argentina has been able to put her monetary system in order. Nevertheless, the bank has only just been able to pay its way. It has been unable to distribute a preference dividend, still less to reduce its guarantee liability to Chilnit. Moreover, it still holds real property in South America purchased at the prices ruling some ten years ago. Partly owing to the bank's inability to make provision for depreciation, this property is seriously over-valued to-day.

In these circumstances, negotiations for a merger with the bank's sole British competitor appear to have been the only way out of a difficult situation. The 100,000 shares in the Bank of London and South America, which have been allotted as the purchase price, will be transferred to Chilnit, who in exchange will agree to the disappearance of their £1,000,000 of preference shares and will also release the Anglo-South American Bank from its £7,500,000 guarantee. There is no doubt but that Chilnit will incur a heavy loss. Of its £8,500,000 of nominal nitrate assets, only £2,000,000 can be recovered from the sale of old stocks, earmarked by Chilean law for the benefit of creditors. Some £1,000,000 has almost certainly been lost altogether, while the remaining £4,500,000 is repayable only without interest out of the profits, if any, earned by the Compania Salitrera de Tarapaca y Antofagasta.

The shareholders of the Anglo-South American Bank are left with nothing whatever. The business of the bank and its branches is transferred to the Bank of London and South America, and the purchase price goes to Chilnit. On the other hand, the "A" shareholders are relieved of the threat of the call of £5 on their £10 shares, £5 paid, which has been hanging over them since 1931. The holders of the £2 fully-paid "B" shares lose everything. So far as the "A" shares are concerned, this news has come as a relief to the Stock Exchange. The "A" shares were recently quoted at 6½ discount, so that the purchaser has received £1 12s. 6d. in cash and has had to pay nothing at all. This shows that the fear of a call was very real.

These are the broad outlines and initial consequences of the merger. It is more than regrettable that the shareholders in an important British bank should lose everything, and a name honourably known all over South America should disappear from banking history. But the Anglo-South American Bank's depositors escape without the loss or immobilisation of a penny. On the contrary, their money is safer than before. The solvency of the Bank of London and South America has never been subject to doubt, and behind it stands Lloyds Bank, one of the "big five," which holds the majority of the "London" Bank's shares. Depositors, further, have escaped only because in 1931 the London banking system came to the rescue of the Anglo-South American Bank. Otherwise the bank must have gone into liquidation, and this would probably have involved the appointment not only of a main liquidator in London, but also of liquidators, brought in by the domestic Governments, in each of the countries in which the bank operated. Under such an arrangement depositors would certainly have had to wait for many years for full payment. Once again, the British banking system has given a practical demonstration of its essential solidarity, at a certain financial cost. The moral effect may be well worth the expenditure. Public confidence is the life-blood of the whole banking system, and the ultimate loss arising from the repercussions of a major failure, such as that of the Anglo-South American Bank, would have been heavy indeed. It is hardly open to question that the bank's present position reflects not only the depression but also the fact that those responsible embarked upon optimistic projects a decade ago. The "A" shareholders undoubtedly have reason for thankfulness that they have not been called upon to put up more capital—as they certainly would have been had the bank gone into liquidation in 1931. A call upon them, however, could not have helped the "B" (fully-paid) shareholders, since the proceeds would necessarily have been handed over to Chilnit. The banks behind that organisation would appear to have decided, probably quite rightly, that the unfortunate moral effect of such a call would have more than offset its financial result—whose final yield would in any case have been somewhat problematical.

Consideration of the future of British banking in South America affords one of the main justifications for the merger. Whatever may have been the case in the past, under present conditions there is scarcely room for two competing British banks in that territory. International trade has shrunk, while British banking has to face competition from France, Germany and the United States. Apart from the misfortunes of the Anglo-South American Bank, the case for amalgamation was overwhelming.

Whether the purchase price is "fair" is primarily a question between Chilnit and the Bank of London and South America. At the recent rate of 3 per cent. paid on the "London" Bank's shares, the existing business of the "Anglo-South" must earn a net profit of £15,000 a year in order to cover the dividend on the new shares. The latest disclosed net profit of the "Anglo-South" was £37,000, but it is now clear that this did not include normal provision for reserves. On the other hand, there will now be opportunities for substantial economies, including a unification of administration and in some places the closing of redundant and overlapping branches, while, conversely, the "London" Bank will now have offices in Chile, Spain and elsewhere, where hitherto it has been sparsely represented. Further, the troubles of the "Anglo-South" have recently forced it to maintain a high degree of liquidity, which must have impaired earnings. On the whole it may, perhaps, be presumed that since the "Anglo-South" was a forced seller, while the "London" was not compelled to buy, the latter had every incentive to fix a

price which offered a moderate prospective profit on the business taken over.

Sympathy will be felt for the staff of the Anglo-South American Bank. As many as possible will doubtless be taken over under the new regime, and it may be assumed that as generous provision as may be will be made for the remainder. It is to be hoped that the number of redundancies, in London and abroad, will not prove so large as to inflict great hardship on those who have certainly had no part in producing the present state of affairs. The question of the bank's pension fund, moreover, will necessarily involve a series of complex problems.

Altogether, the sole consolation which can be drawn from an unfortunate chapter in overseas banking history is that it has served once again to demonstrate the willingness and ability of the British banking community to act co-operatively in order to preserve depositors from loss. The strength of that system is once more shown to be greater than that of any single one of its separate links. The tradition that the depositor comes first has been confirmed. But the corollary must be a constant realisation, on the part of those entrusted with the policy of great banking institutions, that they have a special responsibility towards their colleagues, as well as to their customers and shareholders.

FINANCIAL NOTES

The Money Market.—There has been a fair evening demand for loans, but money has on the whole been quite comfortable this week. The clearing banks have now resumed purchases of bills, and have bought Treasuries maturing in August, September and early October, at their minimum rate of ½ per cent. At the moment they are not taking large blocks of bills, but the discount market finds no difficulty in disposing of bills in small quantities.

Three months' bank bills	7-11	11-11	11-11	11-11

* Loans against Treasury bills and other approved bills and British Government securities within six months of maturity; 1 per cent. Treasury Bonds and other gilt-edged stocks within six months of maturity; and other collateral, respectively.

The rate for three months' bank bills has been kept up at 1½ per cent., and this is high enough to yield a profit on re-sales to the banks. It is uncertain how long this position will last, but at the moment the discount market is in an easier position than it has been for some time.

The Bank Return.—The holiday currency expansion has now begun, and so it is not surprising that last week the note circulation rose by £3.5 millions. The Bank, however, has acquired a further £4.5 millions of gold, so that the Reserve is £1.1 millions higher.

Since July 1st the market has once more taken up its due proportion of Treasury bills, while the joint-stock banks have released the funds called from the market at the end

of the half-year. In consequence, the Government has been able to repay the £26.7 millions borrowed on Ways and Means from the Bank on June 30th. These movements explain the contraction in Government securities and bankers' deposits.

The Foreign Exchanges.—Covering of open franc positions has dominated the foreign exchange market during the week. Now that it is clear that devaluation of the franc is being damped down, previous sellers of forward francs are buying them back spot. The French authorities are taking the opportunity of buying sterling, and this sterling is either being used for buying gold on the London market or is being turned into dollars. The reason is that the Banque de France prefers to hold gold or dollars instead of sterling, which is a non-gold currency. The market suspects that this week's sales of francs in Paris by the British Control have really been on behalf of the Banque de France and not for the British Exchange Equalisation Account. It is also noticed that the Control is no longer "playing the market," but for ten days now has been operating at a practically rigid rate of Frs. 75.70. This suggests that there may be a different motive behind the Control's operations. Three months' francs have gradually strengthened to Frs. 27½ discount, and Thursday's reduction in the French Bank rate from 4 to 3 per cent. assisted the forward market. Bear covering led to some bidding for Swiss francs and guilders, but French purchases of dollars have made the spot New York rate weak at \$5.02 against sterling and Frs. 15.08 against the French franc. Three months' dollars have weakened to 1 cent premium. The Banque de France's return for July 3rd shows an increase of Frs. 342 millions in gold to Frs. 54,340 millions. Treasury bills are reduced by Frs. 2,088 millions, while provisional advances to the State are increased by Frs. 3,088 millions. Thus the Treasury has borrowed an extra milliard of francs on balance, and this explains much of the week's expansion of Frs. 1,342 millions in the note circulation, and also the drop in the reserve ratio from 58.1 to 57.9 per cent. Among South American exchange the Argentine free rate has fallen from 18.80 to 18.40 pesos to the pound.

The National Bank of New Zealand.—The latest accounts of the bank show that a year of increased activity has resulted in a slight expansion in the bank's resources: Deposits have increased from £13,555,000 to £13,655,000, and cash holdings from £2,669,000 to £3,307,000. The bank has been able to reduce its investments from £4,194,000 to £2,696,000. Last year's dividend of 4 per cent. is repeated. Speaking at the general meeting last Wednesday, Sir Austin Harris, the chairman of the bank, made an important reference to the outlook for New Zealand Government securities. An Investment Note on p. 71 discusses this statement.

THE STOCK EXCHANGE

"CONTROL" IN THE CITY

THE growth of official "control" in the City of London exemplifies the truism that the most decisive revolutions come silently. Within the last five years a traditionally free and international market has been metamorphosed into something like an executive instrument of Government policy, largely without the passing of legislation or the formal recognition of any external change.

In September, 1931, the pound left gold, and in June, 1932, the Chancellor requested a self-denying ordinance from the issuing houses during the period of the 5 per cent. War Loan conversion. This "request," subsequently extended and modified, is still in force, e.g. so far as foreign issues are concerned. The terms of reference of the Foreign Transactions (Advisory) Committee, formed three months ago to interpret the Chancellor's mind to would-be borrowers, appears to presage the permanence of some system of regulation. Control of foreign lending, however, is only a single aspect of a system which touches the City at many points. A well-known firm of stockbrokers in a recent brochure has enumerated some of the myriad repercussions of Government policy on particular groups of investors. High prices for steel shares and low prices for textile shares reflect, in part at least, the Government's tariff policy and the official attitude towards cartels. Shipping shares are affected not only by tariffs, but by the tramp tonnage subsidy, the "scrap and build" programme, and the Government's financial backing of "The Big Ship." Holders of sugar company shares must take account of the beet subsidy arrangements. Brewery shareholders are handicapped by hop-growing limitations and restrictions on barley imports, and solaced by a differential duty on imported lagers. Changes in excise duties have accentuated fluctuations in rayon company earnings. United Dairies and companies in the butter and provision industries are affected by the Government's agricultural policy in general, and the activities of the Milk Marketing Board in particular. The Government's beef proposals announced this week will cause much questioning among holders of shares in British-owned railway, meat, extractive, land-owning and retail trading enterprises in the Argentine. Holders of engineering, shipbuilding and aircraft shares are vitally concerned with the Government's decision to re-arm, and investors in gilt-edged securities with its determination to keep interest rates low. There is, indeed, hardly any group of securities dealt in on the Stock Exchange whose contemporary prices are not a function, to a greater or less extent, of some form of official "policy." When we add the manifold adjustments associated with a "managed" currency, with their implications in the sphere of credit policy and joint-stock banking practice, and take due account of the repercussions of the Exchange Equalisation Account's activity on the day-to-day operations of the money market, we may not be open to the charge of exaggeration if we declare that the bonds between Whitehall and the City are today tighter than ever before.

From time to time, isolated criticisms of this state of affairs find expression. During the last franc crisis, for instance, a certain impatience was manifest in some quarters with the policy of the authorities in frowning on dealings in gold coins. On the whole, however, the City, while by no means reconciled to many features of the new regime, appears at least to have tacitly recognised the inevitability of "control," since the old automatic checks of the gold standard no longer exist, and the market is not yet master of the new technique. There is a widespread feeling that "control" has, at least, maintained some sort of orderly environment in which monetary business can be carried on in London while political and currency unsettlement are rife outside. And certain of its objec-

tives, like the maintenance of cheap money, command in themselves almost universal sympathy.

Perhaps the attitude of the City can best be summarised by saying that while all responsible quarters are prepared to co-operate in working the existing regulations, there is a good deal of uneasiness over the conditions which have necessitated their imposition, and the haphazard and piecemeal manner in which many of them have grown up. It is now appreciated that, by the gradual accumulation of precept upon precept, line upon line, something has been created which is not far removed from despotic rule in a hitherto free market. And the imposition of many of the "controls" has been preceded neither by Parliamentary enactment nor public discussion. A temporary suspension of foreign lending on a departmental "request" is one thing, but the indefinite prohibition of the export of British capital, on the initiative and authority of the Treasury alone, is quite another.

It is true that adjudication on individual foreign issue applications has been remitted to a Committee which includes members of the Bank of England, the Stock Exchange Committee, the banks and issuing houses and the steel and engineering industries; and that the traffic policeman for home gilt-edged issues is the Bank of England itself. But the avowed purpose of both the Committee and the Bank is to carry out the Government's wishes. They are interpretative and administrative rather than initiatory bodies, and, with all due respect, their position, so far as market control goes, is that of the ball which

"... little recks of ayes and noes,

But here and there, as strikes the Player, goes."

If "control" is to be maintained, therefore, as a quasi-permanent part of the market's machinery, the first essential would seem to be that the Treasury should seek legal authority for a very serious restraint of trade. The process of drafting the necessary measure might induce the authorities, further, to make a much-needed definition of their own objectives. At present, the "control" regulations betray their extemporised origin by a mass of anomalies and contradictions. Home companies may borrow freely in the market, but home corporations are controlled though both may be raising money for much the same purposes. The issuers of a fifth-rate industrial prospectus can choose the most convenient tactical moment and capitalisation for an offer, but cities enjoying first-rate credit must form a queue and fit their issues, as regards interest and "life," to a more or less rigid pattern, as Procrustes accommodated all travellers to his one bed. A wild-cat mining proposition in British Guiana may enjoy facilities denied to a responsible house in Venezuela or Mexico. Such anomalies are indicative of a certain confusion of thought and lack of co-ordination in the contemporary system of "control." They suggest that the authorities are not quite certain where they are going or what they really want. Last month's memorandum, signed by the chairman of the Foreign Transactions (Advisory) Committee, for example, declared that "one of the primary objects of the restrictions is to safeguard sterling exchange." Is this protection to operate against a rise, or a fall, in the gold exchange value of sterling? Is the Committee to be regarded, in essence, as a sub-department of the Exchange Equalisation Account? If so, should it aim at facilitating the maintenance of any fixed exchange value for sterling, or merely at "ironing-out" inevitable fluctuations? And what are the other "primary objects" of restriction, on which the memorandum is silent?

The memorandum and the Committee's instructions, indeed, suggest that the authorities have vague and half-considered ideas which go far beyond the mere safeguarding of sterling. The official willingness to consider transactions calculated "to finance additional exports"

suggests a preparedness to use the principal of new foreign loans, as Dr. Schacht has used the payment of interest on old loans, as an instrument in international trading policy. Even this purpose, however, may be impeded by the narrow interpretation of the Committee's terms of reference implied in the stipulation, in the chairman's memorandum, that the proceeds of issues must *concurrently* (the italics are ours) be calculated directly to benefit British industry. That control of foreign lending may even be designed as a semi-diplomatic negotiating weapon is suggested by the instruction given by the Treasury to the Committee to take into consideration, when deciding on any particular application, of "the treatment accorded to British-owned enterprises by the foreign country concerned."

It is arguable, of course, that all these restrictions may tend, ultimately, to protect the investor himself, by denying him the opportunity to make new investments whose background from the very outset is unpromising. In other words, they may be comparable to restrictive covenants in real estate deeds, which in fact secure property owners in their amenities. The rules, however, have been so drawn up as to leave the authorities under no obligation, express or implied, to abstain from using their powers for wider ends. It was not clear, for example, on purely investment considerations, why, in the current state of Far Eastern "political risks," permission was recently given for the London quotation of a new Chinese railway loan when applications for the repatriation of the shares of sound and prosperous British industrial enterprises, with foreign-controlled capital, had been frowned upon. Is it desirable to create, in this indirect fashion, a species of "blocked sterling"? In any case, the regulations are discriminatory, since they deny to the investing public, as a whole, facilities which remain available to the private capitalist. Individual purchases of foreign security may still be made without let or hindrance. Companies may transfer assets abroad to any amount, so long as they do not first go to the public market. The regulations, in fact, add a new example to the list of actions which are irreproachable in private, but contrary to public policy when done openly.

In the light of these considerations, we suggest that if "control" is to continue there are at least three *desiderata* to which the regulations should conform. They should be clearly defined; they should be legally enforceable; and they should form part of a well-thought-out scheme. If a case can be made out for them it should be formulated and defended, *coram publico*. It should receive Parliamentary sanction and cease to depend on the will of a Government department.

A fourth condition might also be laid down—namely, that there must be no further extension of "control" along present lines. If the pace of industrial recovery were to falter, even temporarily, or general interest rates to show even a slight rising tendency, there might well be a strong temptation to impose ever-widening restrictions in an endeavour to arrest the course of events. Certain aspects of recent gilt-edged issue control, indeed, are not wholly innocent of such a construction. And it is obvious that action on these lines might involve the authorities and the country in commitments which were economically objectionable and politically indefensible.

INVESTMENT NOTES

New Zealand Loan Service.—The speech of Sir Austin Harris, chairman of the National Bank of New Zealand, at the Bank's annual meeting on Wednesday, bears every evidence of an official statement of the New Zealand Government's intentions regarding its loan service. As we showed in an Investment Note last week (page 22), the market for New Zealand bonds has been profoundly disturbed by the suggestion made by the Premier, Mr Savage, that advantage would be taken of the Finance Minister's forthcoming visit to London to discuss a reduction in rates of interest. It would appear that the New Zealand authorities were unprepared for the blank dismay and incredulity with which the "feeler" was greeted on this side.

Behind Mr Savage's further reported protestations may be discerned an evident unwillingness directly to antagonise British investors, whose assistance may be as invaluable to New Zealand's development in the future as in the past. On the main question Sir Austin Harris's speech is explicit:—

I am in a position to-day, on the direct authority of the New Zealand Government, to reaffirm quite definitely that there is not, and never has been, any intention on their part to interfere in any way with the service and terms of the loans domiciled in England. This is in complete accordance with the high traditions of the Dominion. I hope that this statement will allay any remaining fears that anything in the nature of a forced conversion was ever contemplated by the responsible Ministers.

Other parts of Sir Austin's speech, however, are rather more obscure. They suggest that the Finance Minister envisages discussion "with his financial friends" of the "future conversion" of loans bearing high interest rates, "especially in the direction of earlier dates of conversion." Any arrangements come to must be "fair and acceptable to all parties concerned." But will any departure from the original terms of the loan contracts, of so significant a nature as the ante-dating of maturity, be acceptable? The principle goes to the very heart of the contractual system, which is the basis of investment—and, above all, of trustee investment.

* * *

A Questionnaire for "Placings."—The elasticity of the powers of the Committee for General Purposes of the Stock Exchange—which, so far as matters of dealing are concerned, are unlimited, uncontrolled and uncontrollable—is well illustrated by recent developments in the matter of "placing." In the last couple of years there has been criticism of the high premiums established by certain ordinary shares which have been introduced to the market by way of a preliminary "statement of information" followed by official permission to deal. More correctly, dissatisfaction has been due, not to the size of the premiums in themselves, but to the suspicion, on the one hand, that the placing method has been employed for private reasons in certain instances where a normal prospectus issue or offer for sale would have been appropriate; and, on the other hand, that devices scarcely distinguishable in their ultimate effect from market manipulation have been possible within the four corners of the existing rules. Without committing themselves to any pronouncement on market ethics, the Committee have effectively endeavoured to deal with both aspects of the problem. Last February they declared their view that, in the absence of special circumstances, all issues—especially of ordinary shares—should be made publicly rather than privately. A "form of question" has now been devised, to be filled in by brokers who desire to approach the Share and Loan Department, covering such matters as the number of shares available for the market and reserved for the issuing broker's clients respectively, opening prices for free dealings, any "reserve" of shares available if the initial balance is insufficient to meet demand, the names of the principals, the extent of placings already made (subject to permission to deal), details of any pooling arrangements, etc. In brief, the Committee now require sufficient disclosure to enable them to form a complete picture of probable "supply" conditions and the extent to which factors other than general public demand are likely to influence the market in the shares. The Committee appear to be doing everything possible to safeguard the investor's interest on the market side; no regulations can ever prevent purchasers from paying a high price if their appetite is sufficiently keen.

* * *

Industrial Profits in June.—As in recent months, the percentage increase in profits recorded in June was smaller than in the corresponding month of 1935. Although there is no absolute identity between the companies reporting in a given month in successive years, the companies are sufficiently similar to justify rough comparison. The fact that

February has been the only month to show a larger percentage increase this year than last suggests that a steadier rate of progress in profits is gradually becoming operative. Profits last month showed an increase of 13½ per cent. Figures for recent months are set out below:—

Reports published in 1935—	No. of Companies	Rise in Profits*	Reports published in 1936—	No. of Companies	Rise in Profits*
February ...	218	8.43	November ...	160	17.47
March ...	261	22.54	December ...	159	12.27
April ...	242	16.49	January ...	128	13.66
May ...	244	11.07	February ...	205	9.00
June ...	191	21.72	March ...	236	17.39
July ...	232	13.44	April ...	254	9.66
August ...	38	5.93	May ...	269	9.41
September ...	77	9.28	June ...	214	13.50
October ...	166	29.19			

* After payment of debenture interest.

Last month's reports disclose net profits of £26,140,561, compared with £23,030,579 in the preceding year. The June sample, however, is not an ideal indicator of home industrial results. Five oil companies reported profits of £7,792,596 against £6,045,030, and this accounted for over half of the month's total increase. Some 27 iron, coal and steel results, however, rank second with profits of £4,165,824, an increase of £647,085, while five electrical equipment companies also contribute £540,387 to the general increase. Of the 214 companies represented, as many as 57 are plantation companies. Instances of lower profits are not numerous. The largest proportionate drop (14 per cent.) is shown by rubber companies' profits, while the reduction from £2,829,947 to £2,483,916 for textiles is more than accounted for by the unexpectedly disappointing J. and P. Coats' profits.

Actuaries' Investment Index.—The firmness of a few sections of the market has barely sufficed to offset the easier trend in other directions. The general level of industrial ordinary share prices, as measured by the Actuaries' Investment Index of 178 issues, is slightly lower this week at 83.0, compared with 83.1 last week and 81.9 a month ago (December 31, 1928 = 100). The yield this week works out at 3.78 per cent., compared with 3.76 per cent. last week and 3.80 per cent. a month ago. The table below shows the movements in various sub-groups:—

Group and No. of Securities	Prices (Dec. 31, 1928 = 100)			Yields (%)		
	Month Ago (June 9)	Week Ago (June 30)	This Week (July 7)	Month Ago (June 9)	Week Ago (June 30)	This Week (July 7)
Highest this week:						
Iron and Steel (12) ...	69.8	71.7	72.3	3.95	4.12	4.08
Electric supplies (10) ...	136.6	141.4	141.8	3.82	3.85	3.84
Lower this week:						
Building materials (5) ...	99.1	101.6	101.5	4.88	4.75	4.75
Coal (7) ...	94.2	98.9	98.4	4.35	3.43	3.46
Gas (7) ...	131.8	131.9	131.7	4.48	4.47	4.48
Home Rails (4) ...	67.0	66.4	66.1	1.61	1.64	1.62
Miscellaneous (56) ...	74.5	75.5	75.2	4.07	4.06	4.09

Higher prices are shown in the productive group by the iron and steel and motor shares, and in the distributive group by electric supply shares. Armament expenditure is a more encouraging feature in the market than political factors, whose recent course has acted as a depressant in several investment groups.

COMPANY NOTES

Textile Finishing Companies.—Owing to their compact organisation and to the fact that they work mainly on commission from merchants—and not as an integral part of the textile trade itself—the textile finishers were able to resist depression rather longer than the cotton industry, which supplies the great bulk of their turnover. Depression, however, was ultimately inescapable. Between 1924 and 1930 the gross output of the trade was reduced from £41,357,000 to £29,002,000, from which level there has been only a slight subsequent recovery to £29,804,000 for

1934, the latest year for which returns are available. The greatest fall has been in cotton piece-goods, which used to provide approximately three-quarters of the trade's total turnover. The value of work done on cotton piece-goods fell from £30,407,000 in 1924 to £18,762,000 in 1930, with a further fall to £17,031,000 in 1934. Against reductions of this order in the most important section of the trade, the increase in rayon and linen business has been of little avail. Depression, however, has not weighed equally on all sections. Thus, cotton yarns subjected to finishing processes have only fallen from 179,698,000 lbs. in 1924 to 162,765,000 lbs. in 1934, and velvet cutting has not suffered severely. This, together with the relatively satisfactory position of wool, would account for the much better experience of British Cotton and Wool Dyers and of United Velvet Cutters, as compared with other companies in the annexed table. Similarly, within the cotton piece-goods section, the greatest reduction has been suffered in the bleaching business. The reduction in physical turnover, which had already been fully experienced by 1930, inevitably left the industry over-equipped, so that in the following five years the added burden of general depression

severely weakened the rates charged by finishers. Naturally, this situation has produced suggestions for elimination of excess plant. The first proposals were put forward about a year ago, and during last month an amended scheme was circulated, aiming at elimination of 25 per cent. to 30 per cent. of the existing plant at a cost of some £1,500,000, which would be paid off over fifteen years by a levy not exceeding 4 per cent. on turnover. Since the volume of business available appears now to have stabilised itself at the lower levels, and even to be showing some slight recovery, a scheme which could restore margins might be effective in re-establishing a measure of prosperity. The aim, officially, is not to increase charges (though no doubt some heavily cut rates would be improved) but rather to reduce costs by ensuring that machinery shall work at or near capacity, instead of about 60 per cent. as at present. The leading units have preserved a strong financial position, despite their long depression, and should be able to respond to improved conditions fairly rapidly. Accordingly, while the difficulty of obtaining the necessary support in other sections of the textile industry suggests caution in assessing the prospects of the present finishers' scheme, there would be reasonable prospects of recovery if it ultimately succeeds and were given legal force. At prevailing prices, however, the preference securities would be a better speculative purchase than the ordinary.

Bank and Discount Interims.—No surprises were anticipated in the interim dividend announcements from the leading banking and discount institutions, and none have occurred. The corresponding distributions of 1935 have been repeated in each case. Banking figures so far published for the half-year suggest that it should have been slightly more profitable. Advances have steadily increased, and a slight hardening of money and bill rates was achieved by discriminatory loan rates and measures to prevent outside "stagging" at the Treasury bill tender. In addition, further recoveries of earlier provisions against loans have probably been effected by the banks. While it would be misleading to over-emphasise the apparent increase in loan and discount rates (for reasons discussed on page 19 of last week's *Economist*), it is probable that the latest dividends are covered with a larger surplus than those of the preceding year. The following table compares the principal current dividends and share quotations with those of a year ago:—

Name and Shares (fully paid unless stated)	1935		1936 Interim	Price (ex div.) July 10, 1935	Price, July 8, 1936	Yield (%)

Compared with the levels of a year ago, most bank share quotations are fractionally higher, but there is no disposition to anticipate a rise of prices by an appeal to their earnings recovery prospects. The banking trends of the past half-year will be discussed in our Money and Banking section when the full figures are available.

Powell Duffryn Group Results.—The first report of Powell Duffryn Associated Collieries—formed in March, 1935, to amalgamate the properties of Powell Duffryn Steam Coal and Welsh Associated Collieries—states that the work of co-ordinating the two businesses is proceeding satisfactorily. Profits, however, total only £788,284, compared with an estimate of £840,000 for the previous year. Since the advance in mining wages has been only partially offset by increased contract prices, while the established difficulties in the export markets have been augmented by sanctions, full benefit from the economies introduced could not be expected. The balance of revenue available for distribution to Powell Duffryn Steam Coal and Welsh Associated amounts to £475,046, after transferring £150,000 to the general reserve of the operating company. Of this sum, the amount of £420,000 is distributed to the two participating shareholders in the respective two to one proportion which operated for all sums up to £450,000. The subsequent distribution of these payments is shown below:—

Year to March 31, 1936		
Powell Duffryn Associated Collieries		
Profit, after renewals and depreciation	£	788,284
Debt interest and sinking fund		67,125
General reserve		150,000
Preference dividend		96,113
Participating shares dividend		420,000
Carried forward		55,046
Powell Duffryn Steam Coal		
Income from Powell Duffryn Associated	£	280,484
Fees, etc.		4,329
Preference add preferred dividends		50,432
Ordinary dividend		222,992
Carried forward		2,731
Welsh Associated Collieries		
Income from Powell Duffryn Associated	£	140,054
Fees, etc.		3,027
Preference add preferred dividends		129,014
Ordinary dividend		Nil
Carried forward		8,013

Powell Duffryn Steam Coal pays the same ordinary dividend of 6 per cent. on the increased capital, while Welsh Associated net profits suffice to meet the 5½ per cent. preference dividend for the fifteen months up to June 30th and the 4½ per cent. preferred ordinary dividend. At this stage it seems premature to look for a substantial rise in profits. It is necessary, first, that the group should re-establish its position in the export markets, a matter of acute difficulty in the coal trade, where only quotas and exchange restrictions have an international currency. Secondly, further measures of reorganisation are in prospect. For the speculative investor Powell Duffryn Steam Coal ordinary shares, which have ultimate "group gearing" possibilities arising from the company's holding of half the Welsh Associated ordinary capital (on which no dividend has yet been paid) afford the best *entrée* to the group. At 18s. the shares yield £6 13s. 4d. per cent., which suggests no eager discounting of what recovery prospects exist in the prevailing mixed situation.

United Dominions Trust Progress.—The growth of this institution since its establishment fourteen years ago is the measure of its success in supplying long-term commercial credit facilities. In this specialised field, which has always been inappropriate for deposit banking institutions, the Trust has achieved a position of considerable strength and satisfactory profitability. Total profits for the year to June 30th, promptly published this week, have achieved a new record, after the necessary provision for rebate of interest, bad debts and contingencies, of £178,709, compared with £158,683 for the previous year. The ordinary dividend, raised to 17½ per cent. on the reorganised capital, is covered by earnings of 42½ per cent. Expansion of business has undoubtedly been assisted by a prudent reserve policy. Including share premiums, the general reserve now amounts to £1,075,000, compared with an ordinary capital of £425,000. Cash balances of £529,031 are held against loans, acceptances and deposits totalling £3,526,748, while bills and notes receivable have increased from £3,895,123 to £4,712,809. The three subsidiary undertakings show a further expansion in their operations. In particular, loans granted by Credit for Industry Limited, against security have increased by almost £100,000 to £309,143. Accompanying the report is an offer to existing ordinary shareholders of 340,000 out of 500,000 4½ per cent. preference shares which are now held by the Bank of England, at 20s. 6d. per share. The Bank will receive 20s. per share, leaving 6d. premium to cover interest during July at 4½ per cent. and costs of the offer. This offer, which is commended by the directors, will afford the ordinary shareholders an opportunity of acquiring a well-secured preference investment, covered nearly eight times by earnings, on distinctly favourable terms, in the proposition of four preference for every five ordinary shares held. It will be recalled that the Bank of England's interest in the Trust until July last year consisted of 250,000 £2 "B" shares, £1 paid. The uncalled liability was then paid and the shares converted to the preference issue. Originally, the "B" shares carried voting control, but the new preference shares, evidently a preliminary to public distribution, were divested of control. It may, therefore, be presumed that the Bank of England, whose period of association with the Trust has been helpful in every way, is well satisfied with the strong and independent status the Trust has now achieved. The Bank, retaining nearly one-third of the preference capital, will preserve a general interest in an institution which has a progressive and no longer experimental future.

Richard Thomas Accounts.—The full accounts of Richard Thomas and Company confirm the impressive preliminary figures discussed in the *Economist* of June 20th, page 683. After eliminating extraneous and non-trading credits, the combined gross profit of the group has increased by 35 per cent. from £879,995 to £1,186,635, while the net profits available for Richard Thomas ordinary shares have increased from £208,859 to £327,993, equivalent to some 13.8 per cent. on the ordinary capital. An ordinary distribution of 12½ per cent., therefore, is not ungenerous. The list of recent acquisitions, on which we have commented previously, is set out in the report, the principal item being the purchase of the Ebbw Vale and Lancaster's Steam Coal properties. Both the legal balance sheet and the consolidated statement illustrate the pace of recent expansion. Group fixed assets are £1.8 millions higher at £13,119,279, while an increase of £560,000 in floating assets—now standing at £3,510,525—is shared by rising stocks and debtors' balances. Among the liabilities, an amount of £681,946 is outstanding for works and stocks recently acquired, while current cash resources, at £523,495, are lower on the year. The construction of the new American strip mill, moreover, will involve substantial new finance, but the report is silent regarding the proposal. Since the extension of the tinplate cartel for two years has resolved part of the export trade difficulties, the main problem for investors is, therefore, to assess the long-run implications of the present phase of rapid expansion. The group is undoubtedly efficient; modern plant installations will increase that efficiency. Integration from raw material supplies to finished plates, however, involves problems of optimum size and geographical distribution of plant which are particularly intractable for the average investor. For this reason, shareholders will await Sir William Firth's speech on Wednesday next with particular interest. At 14s. 1½d. the 6s. 8d. ordinary shares yield £5 18s. per cent.

Distillers' Profits.—If the market were satisfied with earnings alone, the indicated improvement in Distillers' earnings would have been more warmly received. Since the announcement of increased dividends by a number of the subsidiaries in May, however, an optimistic section of market opinion has been operating in hope of an increased dividend. Last Friday's set-back, therefore, is easily explained, for although ordinary earnings have risen to 25.4 per cent. the 20 per cent. distribution is maintained. The increased revenue from the subsidiaries can be put at approximately £71,000 net, equivalent to about four-fifths of 1 per cent. for Distillers' ordinary stock. The report shows that profits increased by some £109,000 from £2,212,133 to £2,321,577, out of which the usual allocation for provident fund (£100,000) and a transfer to fire insurance fund (£50,000) is made. The latest profits are compared with those of preceding years below:—

	Years to May 15th		
	1934	1935	1936
Profit, less general expenses, fees and debenture interest	2,140,622	2,212,133	2,321,577

* Includes £50,000 Fire Insurance Fund.

Although profits are struck after various undisclosed provisions, it is possible to check the trend of the company's earnings fairly closely from consumption statistics. Potable spirits showed a very small increase during 1935, from 8,629,000 to 8,645,000 gallons. In the industrial branches, however, consumption for methylation increased from 14.4 to 15.4 million proof gallons and for industrial solvents from 19.4 to 22.7 million gallons. The company, however, pursuing a "Courtauld" policy in the industrial field, has greatly encouraged consumption by accepting a low

profit margin. Total production during the last decade has increased by 89 per cent., but 24 per cent. less is consumed in potable form and 218 per cent. more for industrial uses. Although the potable branches show some improvement, particularly in exports, the £1 ordinary stock units have a long-term industrial equity. They are quoted at 101s. 3d. ex-dividend to yield slightly under 4 per cent., and are thus in company with Imperial Chemical Industries ordinary.

International Tea.—The fall in the earnings of this leading provision store company from £886,591 to £864,557 is somewhat surprising, after the large increase of some £62,500 in the profits of the preceding year. The dividend is maintained at 30 per cent., and covered with a small earnings margin, but in order to maintain the allocation of £100,000 to general reserve for the fifth year in succession, a transfer of £90,000 from dividend equalisation reserve has been necessitated. At the last meeting, the chairman explained that existing contracts of the George J. Mason Stores had delayed the substantial benefits which would accrue to International Stores. The latest figures suggest in part that this important equity is being realised only gradually. Like other provision and catering concerns, moreover, the company may be experiencing the effect of rising wholesale prices upon profit-margins. The analysis of this factor by the chairmen of J. Lyons and the Unilever Stores group will be within the recollection of investors. The latest profits are analysed below:—

	Years ended		
	April 28, 1934	May 4, 1935	May 2, 1936
Trading profits and dividends	824,016	886,591	864,557
Depreciation	75,000	80,000	80,000
Taxation	50,000	50,000	50,000
Other expenses	53,156	51,276	48,856
Preference dividends	131,771	160,296	210,742
Ordinary shares—			
Earned	514,089	545,019	474,969
Paid (gross)	412,314	443,138	465,000
Earned %	39.6	38.9	30.6
Paid %	30	30	30
Reserve account	100,000	100,000	100,000
Dividend equalisation reserve	25,000	Nil	Dr. 90,000
Carry forward	106,965	108,846	108,805

The balance sheet shows comparatively little change. Stock in trade at £967,762 is £46,000 below the previous year's total, a reduction which is compatible with an improvement in stock turn as well as reduced turnover. Interests in subsidiary companies continue to rise. Advances have increased from £547,895 to £648,839, and shareholdings from £2,997,170 to £3,047,103. Nothing in the balance sheet suggests permanent alteration in the earnings trend, and this year's small decline in profits is not the occasion for revising the investment merits of the shares. The regular dividend of 30 per cent. has been maintained since 1929, on an increasing capital. The 5s. ordinary shares fully merit their "gild edged" industrial valuation of 29s. 7½d. to yield a few pence over £5 per cent.

Colvilles-Lanarkshire Steel Merger.—An existing technical link between Colvilles and Lanarkshire Steel Company will be forged into full control by the former concern under arrangements announced this week. Colvilles, whose leadership in the Scottish steel industry has been consolidated by the acquisition, *inter alia*, of the Mossend works of William Beardmore and of almost one hundred per cent. share interest in the Steel Company of Scotland, now controls a capacity of 1,350,000 ingot tons, and has effected considerable modernisation of plant in recent years. The Lanarkshire Steel Company, it is understood, has six furnaces in operation and is producing some 3,300 tons per week. Technical co-operation has been in operation for some time whereby the Lanarkshire plant rolls steel produced by Colvilles' Dalzell works. The Lanarkshire ordinary capital, consisting of 100,000 £1 fully-paid shares and 100,000 shares on which 17s. has been paid, will be acquired by allotment of 130,000 £1

ordinary shares of Colvilles. At the current price of approximately 32s. 6d. for the latter shares, the consideration is equivalent to some £211,000 in cash. The latest Lanarkshire balance sheet showed assets available for the ordinary shares of £289,000, while works and plant, less depreciation, amounted to £456,000. Earnings for 1935 were equivalent to 16.2 per cent. for the Lanarkshire ordinary capital, but no dividend has been paid since 1919. The merger, which has been the subject of intermittent negotiation over a period of years, may be regarded as favourable to Colvilles, who now rank as one of the largest British groups. Since further economies in rolling practice may be expected to result, the equity interest in Colvilles' ordinary shares—which have steadily appreciated since they were offered at 29s. per share last March—should be enhanced.

Hawker Aircraft Profits.—Since this company has continued to work to capacity during the past financial year, it is rather disconcerting that profits have hardly increased. Total income, at £198,476, shows an increase of less than £700; trading profit, shown after provision for depreciation, is actually £1,000 lower at £187,470. While a comparison of strict profits is therefore impossible, the stationary nature of the latest disclosed earnings contrasts sharply with the expansion of the previous year, which is shown in the following table:—

	Years to March 31st		
	1934	1935	1936
Trading Profit after depreciation	138,810	188,557	187,470
Other Income	8,026	9,244	11,006
Total Income	146,836	197,801	198,476
Fees	2,000	2,000	2,375
Taxation	41,266	49,241	38,721
Capital Redemption Reserve	14,500	15,165	15,839
Preference Dividend	11,661	14,888	14,472
Ordinary Shares—

† 20 per cent. on ordinary and 5 per cent. on "A" ordinary.
‡ 35.4 per cent. on ordinary and 8.8 per cent. on "A" ordinary.
§ After writing off £675 Issue Expenses.

The balance sheet, on the other hand, reveals important changes associated with increased turnover. The value of stock and work in progress has risen from £338,958 to no less than £554,198. The amount owing by the Gloster Aircraft subsidiary is more than doubled at £270,185, while debtors have risen from £185,846 to £236,287. Development at this pace has entailed resort to bank overdraft, the net liability of £240,961 contrasting with cash and bank balances of £173,431 a year ago. This overdraft, together with the item of £28,500 shown as owing by the Air Ministry, but not yet agreed by them, is of particular interest in the light of the suggestions regarding Air Ministry contracts made by the Select Committee on Estimates. The Committee considers that progress payments should be made without "undue delay," and should be of sufficient amount to minimise resort to temporary borrowing by the contracting firms. The high value of stocks and work in progress—almost one-third of all the assets—may perhaps imply that the benefits of expanding production will be more fully felt in 1937. The subsidiary company, which made a loss in the previous year, carried forward a profit for 1935-36, and is clearly doing better. On the other hand, it is significant that the Estimates Committee recommend the new principle that in assessing the element of profit in contract prices regard should be had to aggregate profits arising from the great increase in orders. This introduces a further element of uncertainty for the industry, which is still working under "Instructions to Proceed" on contracts for which prices will be agreed with the Ministry later. This consideration rather suggests that the current price of 28s. 4½d. and yield of £3 10s. 6d. per cent. for the 5s. shares is of interest to the specialist than to the ordinary investor.

London Tin and Anglo-Oriental.—The latest reports of these tin finance companies, writes our mining correspondent, show a distinct recovery from a prolonged period of difficulty. London Tin Corporation received £163,940 from dividends on investments for the year to April 30th, while total income amounted to £197,540. After deduction of expenses and writing off loans amounting to £68,600, a credit of £100,690 remains. A debit of £80,000 was brought forward from the previous year, reduced to the extent of £30,500 by refund of income tax. Payment of the preference dividend for the half-year to September 30th absorbed £37,340, leaving a surplus of £13,840. Thus the preference dividend is still six months in arrear. For the nineteen months ended April 30, 1935, a profit of £51,200 was reported. Payment of five years' arrears on the preference absorbed £379,500, leaving a debit balance of £80,000 to be carried forward after appropriation of the credit of £248,270 brought in. Quoted investments figuring in the balance sheet at £1,940,700 had a market value of £2,448,100 at the date of the balance sheet; the unquoted holdings at directors' valuation represented £915,600. Loans have been reduced from £248,350 to £32,620, while cash has risen from £7,200 to £198,270. The company's holdings are chiefly spread over Eastern, Nigerian and miscellaneous concerns, the former including many of the more important dividend-payers. It is an unfortunate consequence for shareholders that so large a proportion of the latest earnings is required for special provisions. The last cash distribution on the ordinary was 20 per cent. in respect of 1928-29. The Anglo-Oriental Mining Corporation, which depends for its revenue largely upon its holding of ordinary shares in the London Tin Corporation, made a profit of £1,630 for the year to April last, against a loss of £17,960 in the preceding ten months. One year's dividends was then paid on the preference shares, leaving payments in arrears since August, 1931. The company's holding in London Tin, at cost, appearing in the balance sheet at £1,212,750, had a market value of £317,320 at the date of the balance sheet. A loan to the Anglo-Oriental and General Investment Trust has been reduced from £360,000 to £269,000, while cash has risen from £2,170 to £75,940.

Venterspost Developments.—Prior to public flotation, encouraging values were struck by diamond drill on several sections of the Venterspost property. More recently, bore hole No. 7, in the Southern area, intersected the main reef at a depth of 3,224 feet, the value averaging 3.92 dwts. over the exceptional width of 189 inches. At the end of May a further bore hole passed through an alluvial reef at a depth of 2,774 feet, the assay showing 30.2 dwts. over a bore-hole width of 7 inches. In each case the news stimulated the share market. But these were minor movements compared with the rise which has accompanied the news of the intersection of the reef in No. 1 shaft. At a depth of 1,682 feet and 1,691 feet, sampling around the whole periphery of the shaft at 1,682 feet gave an average of 31.6 dwts. over a reef width of 7 inches, the ore body conforming to that intersected at the same horizon by the two bore holes. The official cable announced that the reef represents one of the upper beds of the main reef series. A later cable stated that at 1,691 feet the reef gave an average of 4.22 dwts. over 46 inches. Shaft sinking was at first delayed owing to the water-logged condition of the ground, but the difficulty has been surmounted by cementation, and the shaft is now in the solid underlying rock formation. Progress in the future is expected to be more rapid. At one time last week Venterspost 10s. shares approached 55s. On this basis the property would be valued in the market at about £7½ millions, there

being 2,800,000 shares in issue. This level appears adequately to discount the prospects, so far as they can be judged. On the news of the Venterspost developments the shares of neighbouring companies have enjoyed a miniature boomlet, and interest has spread to the shares of developing companies in the Eastern and South-Eastern as well as the Far Western sections of the Rand. It is probable that some of these shares will be obtainable at a lower figure before the production stage is reached.

* * *

Other Company Results.—Our usual table of other company results, on page 96 of this issue, gives the profits of 57 companies which are not discussed in preceding notes. A number of important recoveries are included in the list. Thus, *South African Breweries* reports an increase in net profits from £359,114 to £424,414, the dividend having been raised from 17½ to 20 per cent., tax free. In the property group, *Covent Garden Properties* reports slightly higher profits of £122,722, the dividend being maintained at 7½ per cent. *Davy Brothers* have converted a loss of £20,037 into a profit of £21,571, while *Grovesend Steel and Tinplate* (a Richard Thomas subsidiary) shows a very satisfactory increase in earnings. The accounts of *Phoenix Oil and Transport* show a profit of £183,886 compared with £134,275 for the previous year, dividends having again been passed. The announcement of a recovery in *Tankers'* profits (£97,292 against £33,404) comes opportunely on the publication of a revised scheme of reconstruction, which has been approved by a majority of the Committee of Shareholders. This week's tea company results are particularly interesting. Among the companies which show substantially increased profits and, in most cases, higher dividends are *Assam Frontier* (£26,168 against Dr. £10,322), *Dooars* (£64,288 against £38,092), *Empire of India and Ceylon* (£51,485 against £21,245), and *Jorehaut* (£59,199 against £23,386). *Anglo-Dutch Plantations of Java* shows a reduction in profits from £105,421 to £93,768, but the dividend is maintained at 4 per cent. Although net revenue of *Trustees' Corporation* is slightly reduced at £102,025, the dividend is one-half per cent. higher at 9 per cent. In the industrial list, the full report of *British Plaster Board* confirms the impressive profits announced recently. Net profits have jumped from £129,311 to £301,886, and the dividend has been raised to 50 per cent. *Broadcast Relay Service*, whose franchise is to be extended to the end of 1939, reports a large expansion in earnings from £30,320 to £79,923. Net profits of *E. K. Cole* have been reduced from £247,178 to £204,842 owing to intense competition in the radio industry, but the dividend has been increased from 30 to 40 per cent. *Millar's Timber* has enjoyed a profitable year, after the capital reconstruction, and earnings are £50,000 higher at £39,485, covering the 5 per cent. dividend with a satisfactory margin. The preliminary results of *Johannesburg Consolidated* show a slight decline in profits from £1,142,031 to approximately £1,086,000. The dividend is maintained at the rate of 20 per cent.

Company Meetings of the Week.—On later pages of this issue will be found the reports of the following company meetings:—National Bank of New Zealand, Imperial Bank of Iran, P. and O. Banking Corporation, Trust Company of London and Scotland, Zinc Corporation, Anglo-Ceylon and General Estates, Gordon (Malaya) Rubber Estates, British Glues and Chemicals, Amalgamated Dental and Meekatharra Gold Mines. Sir Austin Harris's reassurances at the National Bank of New Zealand meeting regarding the New Zealand debt service are discussed on page 71. Sir William Preston, at the P. and O. Banking Corporation meeting referred to the big demand for Indian Government securities following the dishoarding of gold. At the Imperial Bank of Iran meeting, the chairman said that the Iranian note circulation, which had risen from 338 to 600 million rials between March, 1935 and 1936, might well expand still further. Sir Robert Horne, at the Zinc Corporation meeting, attributed the considerable increase in liquid assets to the reduction of investments and also of stocks of concentrates and metals in course of realisation. Mr. Alfred Shepherd, at the Trust Company of London and Scotland meeting, pointed out that the valuation of investments showed a depreciation of only 19.03 per cent., as against 28.83 per cent. in the previous year. At the Amalgamated Dental meeting, the chairman reported that although international trading had not improved, the directors were encouraged by better business in the Home and certain overseas territories to continue their policy of expansion. The chairman of the Gordon (Malaya) Rubber Estates meeting anticipated that the extra production released by the 5 per cent. addition to the July-December quota would be readily absorbed. Sir Edward Rosling, at the Anglo-Ceylon and General Estates meeting, in referring to tea restriction problems, emphasised the real need for increased consumption. At the British Glues and Chemicals meeting the chairman attributed the improved profits to a bigger volume of trade, manufacturing control and economies and slightly increased prices. Mr. Alfred Collier, at a meeting of Meekatharra Gold Mines, dealt at length with work done and reports received concerning the Lalla Rookh area.

THE WEEK IN THE MARKETS THE LONDON STOCK EXCHANGE

SETTLING DAYS

TICKET
JULY 21

ACCOUNT
JULY 23

THE market has made light of its kicks this week, without finding many consolatory ha'pence. In particular, the Chancellor's preparation of public opinion for a Budget deficit, at the end of last week, exerted no marked pull upon prices. Even in the gilt-edged market, where the consequences might have been severely felt, it resulted in no more than a temporary waver and rather sullen conditions later. For the industrial markets there is, of course, the other side of the medal, exemplified by Thursday's £20 millions Supplementary Estimate. Speculative interest has concentrated in the iron and steel sections of the industrial market, and among the developing Kaffir undertakings. Restive political conditions, however, are responsible for the present phase of marking-time, the market's attitude, save in certain special groups, still being on the defensive.

Political uncertainty abroad, combined with Mr Neville Chamberlain's forecast of a Budget deficit, produced a passing uneasiness in the gilt-edged market early this week. Funding issues were largely unaffected, and the greatest reaction was in Old Consols. Price movements subsequently have not been large, but conditions have remained quiet and leaden. Increasing confidence that the last has been heard of suggestions to modify the New Zealand loan services has been followed by Sir Austin Harris's officially authorised assurances at the National Bank of New Zealand meeting. Although the actual volume of business has not markedly increased, dealing margins have been reduced.

Home Corporation issues have lately been particularly inactive. It is expected, however, that the lull will be interrupted by the loans of a few corporations before the

holiday "close" season "sets in." Birkenhead and Nottingham in particular, are suggested as likely borrowers.

In the foreign bond market, Danzig loans have suffered severely from Herr Greiser's statements at Geneva, and as yet show no real signs of recovering. Polish bonds, similarly, have been weak. In expectation of a positive outcome of the debt talks, Greek issues have hardened. Among Far Eastern issues, interest has switched from Chinese to Japanese loans, the 4 per cent. 1899 and the 5 per cent. 1907 issues leading a moderate advance. Details of the French "baby" bond issue made on Friday were awaited with interest, though estimates of the rate of interest ranged a little inconsequently between 2½ per cent. and 4 per cent.

Home Rails began the week very quietly, interest being centred mostly upon debenture and preference stocks. Ordinary stocks were disinclined to anticipate the findings of the National Tribunal regarding the restoration of the wage cuts, but more impressive traffics helped later to bring about a firmer tone and a better volume of business. Foreign rails provided no feature of interest. Leopoldina stocks fell after the publication of the report, and have so far failed to recover. The rise in wheat prices awakened some interest in Argentine ordinary stocks, but proved only a temporary stimulus.

The industrial shares market closed last week's account in a quietly confident manner, and business opened this week with prices steady, and buyers selecting the issues which are reaping the benefits of re-armament. Throughout the week the tone has been cheerful, although the volume of transactions has not been large, and in sections out of the limelight there has been rather a soft tendency. In the iron and steel section John Brown have been very prominent in the confident expectation that the company will secure the contract for the next mammoth liner, and a new high was reached. Clarke Chapman were in demand on reports of good business, and Richard Thomas shares improved on the full report. The aviation section was slightly irregular at the opening of the week, but

became much firmer on the supplementary estimates. Hawker were dull on the report, but improved slightly with the general trend. The motor section, by contrast, has not attracted much attention, but Standards improved in mid-week.

In the electrical equipment group, Crompton Parkinson opened the week with a rise, but profit-taking developed later. Electrical supply shares became somewhat firmer. Business in the stores securities has not been very active, but Woolworth continued to improve. Movements in the textile section have been irregular and not of great importance. Courtaulds kept their level on the maintained interim dividend, which was generally expected. Shipping shares were dull, with several small losses, and interest in brewery issues, which had been fairly keen at the end of last account, died away as the week progressed. Seager Evans were a feature on the resumed dividend. Tobaccos have been firm and improved slightly in mid-week.

The miscellaneous industrials section has put up a very satisfactory performance, with buying selective but persistent. British Oxygens have been a firm favourite, on good business reports, and have risen steadily; but the miscellaneous engineering company issues have been in the forefront of the market. British Piston Ring, Timken, and Hoffman Manufacturing have all benefited. As the week progressed interest increased in the building materials section, particularly in cement issues, with Associated Cement in the lead. There was an active market in Gaumont-British shares.

In the oil share market conditions were quiet until dealings in the Eagle issues became very active on Tuesday afternoon, and continued until profit-taking checked the rise in mid-week. Anglo-Ecuadorian continued to be in demand, and there was a good market for Attock shares. In the Roumanian group, Phoenix issues suffered from inability to transfer funds for dividend payments, although production last year reached a high record. There was continued selective buying of rubber issues, but the market is very restrained and reacted slightly in mid-week. The tea shares

market is as modest as ever, with a small volume of investment support in the Indian section.

Interest in the Kaffir market has been well maintained, and in mid-week the market moved upward again after a short turn of profit-taking on Wednesday. The development companies have been the centre of attraction, with Venterspost and West Witwatersrand in the lead. Very satisfactory results have been obtained in the Venterspost No. 1 shaft. There was some disappointment on the profits of "Johnnies." The West African section continues to attract increasing business, but there have been no marked price changes. There has been very little activity in Rhodesian copper descriptions. Tin company shares have improved on the rise in the price of the commodity, and the greater prospects of renewing the international restriction scheme.

NEW YORK

LAST week the market closed for the Independence Day holiday with improved spirits. It was hoped that rain in the Western States would relieve the danger of a widespread drought, and that the Government's relief measures would preserve the affected States from disaster. An improvement was shown in motor shares on the excellent output figures, in utilities on hopes of weakening Government threats and on a marked increase in orders placed by the utilities for new equipment (which reacted also to the benefit of equipment companies), and in building shares on expected increased demand for houses. Various issues were bought in expectation of increased dividends under the new tax Bill. The markets opened this week in a more disturbed atmosphere, with threats of troubles in the steel industry depressing steel shares, and with rising estimates of damage done by the continued drought, which has produced a sharp rise in grain prices and a sympathetic improvement in certain food company securities, and, conversely, has depressed securities of companies dependent upon farmers' purchases. There was an improvement in sentiment in mid-week, with railroad securities in the lead on the very favourable comparison between car-loadings

for the first week of July with the figures for the same period a year ago. Electricity output is still well above last year's level, and although *Iron Age* estimates steel mill activity at 70 per cent. compared with 71.5 per cent. last week, orders in hand are still considerable. The Securities and Exchange Commission has introduced easier regulations for issuing prospectuses which are expected to permit briefer prospectuses and to facilitate new issues.

PARIS

Rentes have not continued the triumphal progress which was expected to precede the "baby" bond issue on Friday this week. Despite encouraging declarations by the Finance Minister, operators began to unload Rentes a week ago, but, thanks to the timely arrival of fresh support, only slight net falls were registered in prices. Foreign news during the week-end was depressing, and caused a weakness on Monday in all sections of the market, except internationals. Trouble with the Croix de Feu did nothing to help local conditions, and Rentes, which fell by round about one franc, shared in the general trend. This weakness, however, did not prove serious, for although Tuesday's session was quiet and selling pressure continued, the actual changes in quotations were small, and by mid-week the general tone was noticeably firmer in spite of

continued restriction in the volume of business. Operators were unwilling to undertake large commitments until the precise terms of the new bond issue were known.

BERLIN

Special interest developed last week in home banks, German overseas banks and overseas securities generally, in particular Otavi Copper. Among standard industrials the chief demand was for automotive industry shares and for the securities of such companies as have been freed from the valorisation risk under the new law, which prescribes that foreign currency bonds held by Germans shall be payable in marks at the current (depreciated) exchange. The leading home commercial banks gained about four points; Deutsche Ueberseeische Bank rose from 149 to 165, Deutsch-Asiatische Bank from 619 to 725, and Otavi from 26 to 30. Hamburg-America Shipping gained ten points on the expectation of favourable terms of reorganisation. Dollar bonds were irregular, after an initial decline in certificated bonds. Early this week news from Geneva caused a rather hesitant tone, which, however, lasted only a short time and was not characterised by any large falls. Little business has been done since, the greatest activity being in bank shares. The official shares index (1924-26 = 100) for June was 101.64, as against 99.25 for May; bonds index 95.82, against 95.49.

AMSTERDAM

The last few days have brought in no new trends, and although conditions have been very quiet prices have not fallen, nor have they fluctuated within wide limits. If interest can be said to have centred in any section at all, it has been found (as for a few weeks past) in rubber and tobacco issues. In addition, however, tin share prices have rallied on this week's more encouraging developments. The market awaits a further reduction in the Bank rate, which at 3 per cent. is still above the market rate, and is therefore ineffective.

CAPITAL ISSUES

AFTER the recent high pressure, the new issue market has been accorded a slight respite this week. Although a resumption of Corporation borrowing has been discussed as a possibility in the near future, no arrangements have yet been made. An issue on similar terms, however, has been made by *The Electricity Board for Northern Ireland* in 3 per cent. stock dated 1955-60 at £98 10s. per cent. The proceeds are required for repaying temporary loans (which now total £1,597,000) raised for constructing transmission lines in the Board's area. The stock is guaranteed as to principal and interest by the Ministry of Finance for Northern Ireland, and is eligible for trustees in Northern Ireland only. This may limit interest in the issue in the London market, where several recent corporation scrips are standing at relatively attractive discounts. *Hosegood Industries* is a holding company formed to acquire interests in flour milling concerns in the West of England. The present issue of 5 per cent. £1 preference shares at 10s., and the subscription at par of 300,000 5s. ordinary shares by brokers, is to provide finance for extensions. The subsidiaries show rising profits during the

OTARD'S

ESTABD 1795

THE BRANDY WITH A PEDIGREE

past three years, and the preference dividend is covered satisfactorily. There seems, however, no compelling advantage in reorganising the business on holding company lines. *Newall Engineering Company*, whose 5s. ordinary shares are offered at 5s. 9d. per share, shows a three-year profit record of which only the latest year's profits are on a satisfactory level. Total assets amount to £55,054, of which nearly £30,000 is taken over at balance sheet or directors' valuation. After deduction of overdraft and creditors, net assets of £30,948 remain, and are acquired for £46,970. This appears rather generous consideration for a business whose profits during the last three years have been: £2,705; £2,140; and £12,042. The net assets of *Newman and Watson*, valued at £69,568, have been acquired for £98,568. The prospectus, in setting out the earnings for the 10s. preference and 2s. ordinary shares (the latter issued at 100 per cent. premium) employs the results of the latest year, which were over 50 per cent. larger than those of the previous year, and nearly 150 per cent. larger than two years earlier. These two issues fall in a speculative category. Statements for information have been published this week by *Sahang Rubber Selections*, *Elswick-Hopper Cycle and Motor*, *D. Anderson and Son*, *Banister, Walton and Company*, and *Courtney, Pope and Company*.

(a) This figure includes £1,920,000,000 for conversion of 5 per cent. War Loan into 3½ per cent. War Loan.

(Continued on page 82)

LONDON ACTIVE SECURITY PRICES AND YIELDS

In calculating yields on fixed interest stocks quoted below allowance is made for interest accrued since the last date of payment, less income tax at the standard rate. Where stocks are definitely redeemable at a certain date the yield includes any profit or loss on redemption; where stocks are redeemable at or before a certain date the final date of repayment is taken when the stock stands at a discount and the earliest date when the quotation is above par. The return on ordinary stocks and shares is calculated by reference to the latest dividends, account being taken of any enhancement or reduction of interim dividends. Allowance is made for accrued dividends in calculating the yield on "cum. div." shares.

PUBLIC OFFERS

Hosegood Industries, Ltd.—Issue of 350,000 5 per cent. cumulative £1 preference shares at 21s. Acquires capital of H. Hosegood and Sons, Ltd., and Smiths Newport, Ltd. (Rour, etc., millers), who also control subsidiaries. Proceeds to finance extensions, etc. Profits, after depreciation, years to January 31st: 1934, £45,022; 1935, £54,757; 1936, £66,079. Net assets, £441,847 (£210,182 investments in subsidiaries), purchased for 3,639 £1 preference shares and 1,834,688 5s. ordinary shares. Other interests (valued at £18,700) to be purchased for 65,312 ordinary shares. List closed 9.5 a.m. in London, and 10.5 a.m. in Bristol on July 7th. Over-subscribed.

Electricity Board for Northern Ireland.—Issue of 3 per cent. guaranteed stock, 1955-60, at 98½. Guaranteed by Ministry of Finance for Northern Ireland. Redeemable from 1936 by purchase, from 1946 to 1955 by drawings at 102, and from 1955 at par on three months' notice. Proceeds to repay temporary loans. Net revenue, before depreciation, etc.: 1933, £24,012; 1934, £46,432; 1935, £66,657. Units sold: 1933, 7,195,000; 1934, 13,910,000; 1935, 23,333,000.

BY OFFER FOR SALE

Newall Engineering Company, Ltd.—Offer for sale of 200,000 "A" 5s. ordinary shares at 5s. 9d. Acquires machine tool and gauge-making business founded 1890. Profits, after depreciation, years to March 31: 1934, £2,705; 1935, £2,140; 1936, £12,042. Net assets, £30,948, acquired for £46,970 (goodwill £16,022), payable by £11,980 cash and £349,900 "B" 2s. ordinary shares. "A" ordinary shares rank for 10 per cent. *pari passu* with "B" ordinary, and thereafter for 25 per cent. of surplus profits. Cheviot Trust take 200,000 "A" ordinary shares at par, plus expenses; £6,730 fee. List closed 9.1 a.m., July 6th. Heavily oversubscribed.

Newman and Watson, Ltd.—Offer for sale of 120,000 6 per cent. cumulative 10s. preference shares at par and 600,000 2s. ordinary shares at 4s. Acquires sanitary and electrical engineering businesses founded 1865 and 1876. Profits, years to March 31st: 1934, £10,879; 1935, £16,264; 1936, £25,319. Net assets, £69,839. Combined purchase prices, £89,839 (£20,000 goodwill), payable by 59,880 10s. preference shares and 599,986 2s. ordinary shares. List closed 9.15 a.m., July 7th. Preference shares fully subscribed. About 62 per cent. of the ordinary shares subscribed.

BY STOCK EXCHANGE INTRODUCTION

Banister, Walton and Company, Ltd.—Issued capital 400,000 5s. ordinary shares. Constructional engineers. Incorporated 1919. Total assets, March 31, 1936, £197,475. (Debtors, £103,076; goodwill, £20,000.) Profits, after all expenses, years to March 31: 1934, £7,590; 1935, £19,795; 1936, £53,940. Net assets, excluding goodwill, £115,801. Provincial Stockbrokers' Trust acquire 276,200 5s. ordinary shares at 12s. 6d. and expenses.

Courtney, Pope and Company, Ltd.—Particulars of issue of 100,000 6 per cent. cumulative 10s. preference shares and 125,000 4s. ordinary shares. Store fitters. Net assets £109,403. Profits after depreciation, years to May 31st: 1934, £10,268; 1935, £13,131; 1936, £23,425.

Anderson (D.) and Son, Ltd.—Issued capital 280,000 10s. ordinary shares and 110,000 5½ per cent. cumulative £1 preference shares. Incorporated in N. Ireland, acquires felt and building materials business founded 1849. Net assets £198,000. Acquired for £198,000, payable in 88,000 £1 preference shares and 220,000 10s. ordinary shares. Profits, after depreciation, years to March 31st: 1934, £15,840; 1935, £35,819; 1936, £35,492.

Sahang Rubber Selections, Ltd.—Issued capital, 300,000 2s. ordinary shares. Investment Company incorporated 1935. Acquire business of Rubber Selections, Ltd., and Naamloze Vennootschap Sahang Rubber Maatschappij, holding a concession in Dutch South-West Borneo. Profits before depreciation, Rubber Selections, years to March 31st: 1933, Dr. £59; 1934, Dr. £34; 1935, £36. N. V. Sahang Rubber Maatschappij: 1933, Dr. £522; 1934, £1,132; 1935, £1,717. Net assets, £29,999 (of which £23,833 shares in N. V. Sahang Rubber Mij.), acquired for £29,999, payable by allotment of shares.

Elswick Hopper Cycle and Motor Company, Ltd.—Issued capital 106,259 £1 ordinary shares and 33,560 8 per cent. cumulative £1 preference shares. Incorporated 1913 to acquire cycle-manufacturing businesses founded 1880, and also owns Barton Cycles, Ltd. Total assets, August 3, 1935, £197,887. Profits, after depreciation and debenture interest, 53 weeks to August 5, 1933, £20,523; years to August 4, 1934, £29,083; 1935, £28,490. Net assets, after adjustment for recent ordinary share issue, £201,156.

PRIVATE PLACING

Trust Company of London.—The Trust Company of London and Scotland has placed privately £50,000 4 per cent. debenture stock, 1967-70.

BONUS ISSUES

Metal Industries, Ltd.—Metal Industries is making free bonus share issue in proportion of seven new "A" ordinary and 49 "B" ordinary for each £44 of "A" or "B" ordinary stock held.

Strong and Company of Romsey.—The directors have distributed by way of capital bonus 500,000 8 per cent. preferred ordinary shares of £1 in the proportion of 30 shares for every one £10 ordinary share held.

Central Commercial Properties, Ltd.—Ordinary shareholders registered on July 14, 1936, are to be given the right to subscribe for one ordinary share at par for each ten held.

ISSUES TO SHAREHOLDERS ONLY

African City Properties Trust.—25,000 ordinary shares of £1 are offered to ordinary shareholders at 45s. per share.

Metal Box.—Issue of 100,916 ordinary £1 shares at £3 each.

New Columbia Rubber.—The directors are issuing 200,000 shares of 2s. at 3s. each to repay £20,000 of seven per cent. Convertible notes and to provide funds for new machinery.

H. W. Phillips and Company.—H. W. Phillips and Company is issuing 250,000 ordinary shares of 2s. at 2s. 9d. in the proportion of five new shares for every nine held.

CONVERSIONS AND REPAYMENTS

Green (J. W.).—The directors have decided to redeem the 4 per cent. first mortgage debenture stock (of which £186,000 is outstanding) at 110 per cent. with accrued interest, on October 1, 1936. The company has recently acquired the undertaking of Adey and White, Ltd., brewers, St. Albans. The directors have decided to create £600,000 3½ per cent. first mortgage debenture stock, £500,000 of which is to be now issued.

Kassala Cotton.—The 6 per cent. debentures of the Kassala Cotton Company which are outstanding on August 14th are to be repaid on December 31, 1936, at par, plus accrued interest. A new series of 4½ per cent. debentures of £100 each up to the amount of £224,300 is to be created. Until July 21, 1936, holders of the present debentures are to be given the right to exchange their present holding for a like nominal amount of the new issue as at August 14th.

Settle, Speakman and Company.—Settle, Speakman and Company are to redeem their 6½ per cent. debenture stock, of which there is £154,913 outstanding, on January 2, 1938, and holders are invited to exchange into a new issue at par of £300,000 4½ per cent. mortgage debentures. Those who convert will receive interest at 6½ per cent. on their present holding for three months to July 31st next, and, in addition, a sum of £2 10s. will be paid, being the premium payable on redemption, and £2 10s. being compensation for the difference between 6½ per cent. and 4½ per cent. interest from August 1, 1936, to January 2, 1938.

FORTHCOMING ISSUES

National Coke and Oil Company.—Lists open on July 14th for an issue of 300,000 6 per cent. £1 preference shares and 150,000 5s. ordinary shares.

Nottingham Corporation.—A new loan is about to be issued amounting to about £1,890,000, part of which will be to redeem £999,700 6 per cent. stock.

The Kern River Oilfields of California, Limited.—750,000 new shares are to be issued of 3s. 4d. each at 3s. 8d. per share in the proportion of one new for every 4 shares now held.

OTHER RESULTS OF ISSUES

Magnet Joinery.—Lists closed 9.5 a.m. July 3rd. Underwriters had to take up about 88 per cent.

Great Grimby Gas.—Tenders for the £40,000 4 per cent. redeemable debenture stock amounted to £117,510 at prices ranging from £109 per £100 down to the minimum of £102. The lowest accepted tender was at £105 6s. per £100, and the average price obtained was £105 10s. 5d. per £100.

COMPANY MEETINGS, &c.

THE P. AND O. BANKING CORPORATION, LIMITED

DIFFICULT TRADING CONDITIONS

SIR WILLIAM PRESTON'S SPEECH.

Sir William E. Preston, chairman of the P. and O. Banking Corporation, Limited, presiding, on the 3rd instant, at the bank's sixteenth annual meeting, said that Mr Ferguson, chief manager of the Chartered Bank, had been asked to join their board, and his long experience in the Far East would be of great assistance in the consideration of their Far Eastern business.

The results of the year, after making the usual provisions, showed a net profit of £111,610. Out of this a further £5,607 had been written off bank premises and furniture and £4,500 had also been set aside for the pension fund, which now stood at over £30,000.

In his address last year he mentioned the difficult conditions which surrounded trading generally, and particularly the international exchange of commodities and manufactures. Those difficulties had not become less marked in the year under review, and had particularly affected the interchange of commodities between India and the Far East on the one hand, and the Continent of Europe on the other.

Indian trade specially had suffered from those disabilities, for the Continent was a large purchaser of Indian produce, while the internal recovery in this country had not been accompanied by an equivalent increase in the exports of manufactures to the East. Money conditions in India had also been abnormal and money rates had fallen to a low point never known before. The dishoarding of gold by India had resulted in the export of gold since 1931 of some £211 millions, releasing a very considerable amount of funds previously immobilised in gold, and the result was big demands from the Indian investor for Indian Government securities. Recently the Indian Government had issued a loan at as low a rate as 2½ per cent.

It was too early to infer from this that the attachment of the East to gold and silver bullion had been permanently discarded. It might be that the high prices which gold and silver had reached had been turned to account by the East, and it was significant in this connection that a demand had recently sprung up in India for silver when a severe reaction in prices in London silver took place on the withdrawal of America from the active policy on which she was engaged of buying silver in carrying out the programme set by Congress.

BALANCE-SHEET CHANGES

The figures on the balance sheet reflected the conditions created by the above world-wide influences.

Current deposits and other accounts showed a contraction on last year's figures, and to an extent this was due to the lower rate of exchanges which prevailed in Shanghai and Hong Kong. Loans against security had dropped by £1½ millions, acceptances remained at much the same as last year, and there was a slight increase in bills receivable for collection.

The year closed with over £1,000,000 of cash with their bankers and in hand, a condition reflecting the difficulties that all bankers were experiencing in finding suitable outlets for their spare funds. Bills receivable decreased by £500,000, while investments showed a fall of nearly £1,000,000. This was due to a deliberate policy on their part owing to uncertainty regarding the trend of long-term interest rates, as there was not now available any large amount of short-dated securities which it had been their practice to hold as an investment for surplus funds. Loans receivable against security showed a small increase, while stagnant conditions of trade were responsible for the reduction in advances to customers.

The Chairman added that the result achieved under these conditions by their staff, both at home and abroad, deserved the commendation and thanks of their shareholders.

Their affiliate, the Allahabad Bank, had not escaped the influences referred to above, and it was satisfactory that their profits showed so small a diminution on those of the previous year. At the meeting of that bank in May it was decided to increase their reserve fund by another Rs. 2 lacs, bringing up the total to Rs. 46,50,000, against a capital of Rs. 35,50,000.

The report was unanimously adopted.

THE IMPERIAL BANK OF IRAN

DIVIDEND MAINTAINED—RESTORATION OF CAPITAL

The forty-seventh ordinary general meeting of the Imperial Bank of Iran was held, on the 3rd instant, at Southern House, London.

Sir Hugh S. Barnes, K.C.I.E., K.C.V.O. (the chairman), in the course of his speech, said:—The profit and loss account shows very little variation from last year's figures. After making ample provision for income tax and for bad and doubtful debts, our profit amounts to £75,786 7s. 10d., which is practically the same as last year. We are again placing £10,000 to reserve account, and we propose with your approval to make the same distribution as we have done since 1930, namely, 7s. per share and a bonus of 2s. per share, both free of income tax. This, with the interim dividend of 4s. per share, makes a return for the year of 13s., tax free, per share. Thereafter we carry forward the sum of £50,604 9s. 7d., which shows the small increase of £786. I feel sure you will regard this maintenance of the dividend as satisfactory.

FLUCTUATIONS IN EXCHANGE

The result of the past year's working in Iran has not been achieved without difficulty. There have been serious fluctuations in the rate of exchange, which fell to 52 rials to the pound in April and reached as high as 101 during the winter. You will remember that in 1933 I was able to report that with the one exception that imports still required a licence, the Government of Iran had abolished all trade restrictions and had declared foreign exchange to be entirely free. I am sorry to say that circumstances, chiefly the violent fluctuation in the rate of exchange, have compelled the Government to change their policy. Accordingly, on March 1st last all operations in foreign exchange were placed under the strict control of a Government Commission, and the rate of exchange was fixed at 80 to 80½. This rate has since been maintained.

In the autumn there was a currency famine created by the illicit export of silver, and by a temporary shortage of small notes, which has since been remedied. There is now practically no silver in active circulation. The note circulation, which is protected by a statutory reserve of 60 per cent. in gold and silver, rose from 338 million rials on March 21, 1935, to some 600 million rials—or 7½ millions sterling—a year later, and with continuing development in capital construction and industrial enterprise it may well expand still further.

RESTORATION OF CAPITAL

I now come to the circular enclosed in our report, in which we announce that we have applied to the Treasury for a supplemental charter restoring our capital to the original figure of £1,000,000. This we propose to do by utilising the £200,000 received from the Iranian Government for the surrender of our note issue, plus a sum of £150,000 from our special provision for contingencies, which we no longer require. You are not required to vote on this proposal to-day, for we have not yet received the supplemental charter. As stated in our circular, if and when it is received an extraordinary meeting will be called, and you will be asked to accept it.

Meanwhile, for your information, I may mention the reasons which have led us to this decision. By our original charter and our deed of settlement we were required to keep a metallic reserve equal to at least one-third of our note issue, and the uncovered amount of our notes in circulation was not to exceed the capital of the bank—£650,000. At the time the note issue was taken over by the Government this amount was in effect a substantial addition to our working resources in Iran. We received only £200,000 for the surrender of the note issue, but that sum is obviously a capital asset and should be retained in our business. So after careful consideration we felt we could not do better than give formal effect in the balance sheet to the recovery of the capital loss suffered by our shareholders in 1894.

It is a pleasure to us to do this, and also a matter of pride that we are confident you will share with us, more especially as a number of the shareholders of 1894 are still on our register. We felt that we should not be justified in recommending the distribution, by way of dividend, of a capital sum realised by the surrender of an asset which provided in the past a considerable part of our resources. We also felt that it would be inappropriate to add such an amount to our reserves, which is already in excess of the existing capital. It is to be borne in mind that although the value of the shares was written down to £6 10s., the reserve liability of shareholders remained at £10 per share, and it still remains at that figure.

The report and accounts were unanimously adopted.

NATIONAL BANK OF NEW ZEALAND, LIMITED

SATISFACTORY RESULTS IN DIFFICULT CONDITIONS

DOMINION'S DEBT PROPOSALS: A MISAPPREHENSION

LEGISLATION

The sixty-fourth ordinary general meeting of the National Bank of New Zealand, Limited, was held on the 8th instant, at 8 Moorgate, London.

Sir Austin E. Harris, K.B.E., the chairman of the company, presided, and, having dealt with the most important features of the balance-sheet, he continued: The net profit of £102,594, after providing fully for bad and doubtful debts, shows a very slight increase of £355 as compared with last year. I think we did as well as could be expected in the difficult circumstances prevailing. We have already paid an interim dividend in sterling at the rate of 4 per cent. per annum, free of income-tax, and after allocating the usual sum of £14,000 to pension and gratuity funds and placing £10,000 to premises account, we propose to pay a final dividend at the same rate, leaving £113,959 to be carried forward as against £115,365 last year.

BANKING FIGURES

The general banking figures show that the trading banks still have heavy surplus resources, although there has been a welcome increase in advances. The average deposits and advances for the March quarter for all banks were: Deposits, £65,600,000, showing an increase of £4,500,000 as compared with a year ago, of which £3,229,000 occurred under the heading of non-interest-bearing deposits; Advances, £45,106,000, showing an increase of £2,000,000.

TRADE

The trade figures for the year to the 31st March showed distinct signs of recovery. Exports were valued at £39,901,000 sterling, as against £35,985,000 a year ago, and imports at £30,048,000, as compared with £26,082,000, giving an excess of £9,853,000. Dairy produce and wool both showed an increase of £2,500,000 New Zealand currency. Meat showed a decline in value of £800,000, due to a smaller export, especially in the case of lamb. The average price received remained about the same, with a tendency to improve in the case of beef, pork and veal.

Imports showed an all-round increase, though motor vehicles and spirit accounted for £1,400,000 of the total increase of £4,900,000 (New Zealand currency). It is satisfactory to note that just over half the cars imported during the year were of English manufacture. Trade conditions internally were brisker and more buoyant.

GOVERNMENT FINANCE

The Minister of Finance is able to announce a surplus for the year of £281,800, which may be regarded as highly satisfactory, in that expenditure at £25,890,000 exceeded appropriations by £52,000. On the other hand, revenue at £26,172,000 was £430,000 more than anticipated.

Last July I referred to the repayment of £2,135,000 of the 5 per cent. stock in London and the successful conversion of the remaining £8,000,000 to 3 per cent. stock at 98½. In May, this year, £4,000,000 of the 6 per cent. Loan due for repayment on August 1st was offered for conversion to 3 per cent. stock at 98½, and, although this was not fully subscribed, the result was not entirely unsatisfactory in view of the general conditions in the London market and the trend of events in New Zealand, which have aroused a not unnatural hesitation on the part of investors.

This sentiment has been heightened during the last few days by a statement made by the Prime Minister, which, when first cabled over, created a feeling of something approaching alarm. We realise to-day that this statement which created so unfortunate an impression in the minds of many investors in New Zealand securities, has been misinterpreted. The announcement made by the High Commissioner published on Saturday was reassuring, and I am in a position to-day, on the direct authority of the New Zealand Government, to reaffirm quite definitely that there is not, and never has been, any intention on their part to interfere in any way with the service and terms of the loans domiciled in England. This is in complete accordance with the high traditions of the Dominion. I hope that this statement will allay any remaining fears that anything in the nature of a forced conversion was ever contemplated by the responsible Ministers.

No doubt you will expect me to express some opinion as to the possible course of events during the forthcoming year, and their effect on the prosperity of the Dominion and in particular on our own business. The overwhelming success of the Labour Party at the November elections was the outstanding feature of the year in the Dominion, and I find it more difficult than ever to give any forecast, due largely to uncertainty as to how far the Government will apply its new legislation and what further measures it will introduce in order to carry out its published programme, and, lastly, how far any such legislation might affect our own business.

Although one is forced to look with a certain apprehension to the new developments foreshadowed by this legislation, I may say at once that I am confident in the future of the Dominion, and we shall gladly do all we can to support the Government in carrying out their policy. I feel it would be premature to criticise at this early stage of the administration, and I will only refer briefly to one or two points in recent legislation that concern us as bankers.

SIGNIFICANT POINTS

By amendments to the Reserve Bank of New Zealand Act the Reserve Bank has now been converted into a State Bank with powers to "regulate and control credit and currency in New Zealand, the transfer of moneys to or from New Zealand, and the disposal of moneys that are derived from the sale of any New Zealand products and for the time being are held overseas." You will realise that this implies very wide powers, which would enable the Reserve Bank at any time to enforce the Government's policy. The Primary Products Marketing Act, for instance, provided for the creation of a Department of State, to be known as the Primary Products Marketing Department, charged with the special duty of marketing all primary products in which the Government has acquired control, and under this Act it has already been decided that the butter industry shall be taken over from the beginning of August next. It is in contemplation that wool and meat shall be similarly controlled at a later date, but it is to be hoped that the Government will be content to proceed slowly in this direction.

I referred just now to the power of the Reserve Bank to regulate and control credit. This has been fortified by an amendment, providing that the Governor of the Bank, acting with the authority of the Minister of Finance, may require the trading banks to increase to any extent the balances which they have to maintain with the Reserve Bank. At present these balances are fixed on a percentage basis of 7 per cent. of demand liabilities and 3 per cent. of fixed. Should the trading banks accumulate very large deposits, they would hold a considerable control of credit, and it is this control which the Government desires to keep in its own hands. It is a significant provision, but I do not imagine the Government would exercise such powers except for emergency purposes; nevertheless, this clause must have an unsettling effect on the banks' conduct of their business, and if put into force might inflict a considerable tax on their resources and activities.

GENERAL CONDITIONS

Our experience during the past year under the governing conditions has not been unsatisfactory, and without being unduly optimistic I may say that on all sides there has been a substantial increase in internal business, accompanied by a healthy improvement in the Dominion's overseas trade. The wool season just closed has been an excellent one; meat prices have been maintained at a remunerative level; while dairy produce prices also showed a satisfactory measure of recovery, and, as I have already said, there has been an expansion of banks' advances, which is another healthy sign.

With the present definite signs of trade improvement, we might normally expect a reasonably good year, but from what I have said you will appreciate that banking in New Zealand is no easy task, and our ability to make profits may well be affected by the extent to which the Government proposals encroach upon banking business. We know that difficulties must be encountered, but we shall continue to do our best to secure the interests both of our customers and our shareholders.

The report and accounts were unanimously adopted.

MEEKATHARRA GOLD MINES, LIMITED

ATTRACTIVE NEW MINE PURCHASE

MR. A. H. COLLIER'S STATEMENT

An extraordinary general meeting of the Meekatharra Gold Mines, Limited, was held, on the 9th instant, at Winchester House, Old Broad Street, London, to consider a resolution approving an agreement with the Australian Machinery and Investment Company, Limited, for the acquisition of the whole of the issued capital of Lalla Rookh Gold Mines, Limited, a company registered in Western Australia, for £42,000 sterling.

Mr Alfred H. Collier (chairman of the company), in the course of his speech, said: Your company was formed in the first instance to acquire the Haveluck Property and also options over the "King of the Hills" and the "Rough-Up" leases. Your board took steps to proceed immediately with the development of the mines, and your managing director proceeded to Australia for the purpose. The earlier stages of this work were satisfactory, but after a time the results became disappointing. As a result of the managing director's visit, and on subsequent examinations made by the company's general managers, doubts were entertained by your board as to whether the properties would ultimately prove to be commercially successful as mining ventures, but before coming to a definite decision on this question your board decided to engage Messrs Bewick, Moreing and Company, the well-known firm of mining engineers, to make an independent report, and such inspection was made by Mr V. Edquist, who was formerly general manager of the Sons of Gwalia.

Their report, whilst confirming that payable values had occurred between the surface and the 100 ft. level, stated that values were fading out down to the 150-ft. level. The conclusion arrived at by the engineers was that the values, disclosed by sampling, were fading away between the surface and the 100-ft. level, that the payable ore occurs in isolated and relatively short shoots, and that the widths and values of the ore diminished between the surface and the 100-ft. level, also that the work carried out by the company at the 150-ft. level showed further diminution in value. This being so, the board were advised that as a company proposition the property was economically of no value.

As was announced in the Press last December, the directors reported that other properties were being inspected with a view to increasing the company's holdings, and that diamond boring was meanwhile being carried out to locate the ore bodies at about 800 ft. I am sorry to say that the results of boring have been negative as foreshadowed by the engineers.

Having regard to this report, the options over the "King of the Hills" and the "Rough-Up" were not exercised, and your board decided to conserve the resources of the company as far as possible by reducing all expenditure on the mine to an absolute minimum, as they considered that in view of the expert advice obtained no good purpose would be served by risking the shareholders' money on further development work on the Haveluck Mine. However, the lease is being retained for future consideration.

Under all the circumstances, the board, in the interests of the shareholders, instructed their Australian managers to endeavour to obtain another property, and after the managers had considered various mining propositions, they submitted to the board the gold mining area known as the "Lallah Rookh Reservation," situated about 25 miles west of the Port Hedland Marble Bar Railway in the Pilbarra Goldfield, Western Australia, short particulars of which are contained in the circular before you. As this appeared to offer a good opportunity of acquiring a most promising property your board decided, subject to your approval, to immediately enter into an agreement for its acquisition.

NEW MINING AREA

This Lalla Rookh Area has been the subject of reports by a Federal Government survey party, under the control of Mr K. J. Finucane, the senior Government field geologist, and Mr R. C. Wilson, the Western Australian State Government mining engineer.

Mr Finucane's report was made as recently as February of this year, and we have the Federal Government report of 1936 and the State Government report of 1924, upon which fullest reliance can be placed. A copy of Mr Wilson's report has reached this country by air mail, and the résumé which I am about to give

you is taken from it, nearly the whole of that report having been confirmed by Mr Finucane's report, dated February 3, 1936.

NORTH AND SOUTH REEFS

Dealing with Mr Wilson's report, the Chairman said that there were two reefs running through the property, the North Reef and the South Reef. The North Reef had been stoped out for a length of about 200 ft. down to the 90-ft. level, and Mr Wilson had been informed that the old books showed an average of about 25 dwts. for the whole block taken out. Comparatively little stoping had been done below the 90-ft. level. The main shaft had been sunk vertically to a depth of about 148 ft., or 8 ft. below the bottom level of the mine. Mr Wilson had taken samples which he regarded as most encouraging, and on the question of the prospects of ore from the North Reef he stated that on present appearances there was a block of ore above the 90-ft. level, nearly all of which could be profitably extracted provided that anything like satisfactory treatment could be effected. It was also encouraging to notice that good values had been met with at the bottom level and that they were going under foot.

With regard to the South Reef, he considered that there were good prospects of a large tonnage of payable ore between the 150- and 60-ft. levels, subject to the width and value of the reef above the fault at the 150-ft. level being ascertained. The mine assays indicated high values going under foot. As to surface equipment, there was a second-hand ten-head battery, rock-breaker, gas engines, Commonwealth gas producer, and also a Crossley charcoal producer, air compressor, five cyanide vats, pumps and sundry other plant on the property. The capacity of that plant was estimated at 600 tons per month. Treatment, Mr Wilson stated, was far from satisfactory at the time of his visit. The head value of the ore was 75s. per ton; 30s. per ton had been obtained by amalgamation and 30s. per ton by cyaniding, leaving the balance in the residues. Mr Wilson had asked the Government mineralogist to carry out some experiments from the samples to see if a good extraction could be obtained by raw treatment. The report thereon stated that amalgamation, followed by concentration with cyanidation of the concentrates and tailings in the presence of lime, gave a high recovery with a fairly low consumption of cyanide. The recovery obtained in the laboratory had been 90.92 per cent. Finally he stated, "Well handled, the mine should on present appearances have a good chance of success. The prospects of such success will, of course, be much improved if the tailings from the battery present no treatment difficulties and a better extraction be obtained without additional cost."

Continuing, the Chairman said: I might point out to you here that the report deals only with the mine, which covers a comparatively small portion of the reservation, which extends to some 840 acres, and this acreage gives every possible scope for the discovery of further lodes.

AN OPPORTUNITY NOT TO BE MISSED

Shareholders will gather from the information I have given that the Lalla Rookh Mine is one which is readily saleable, and your board had accordingly to make an immediate decision. After careful consideration they came to the conclusion that this was an opportunity which should not be missed, and accordingly they decided, subject to your approval, to purchase, and they have already entered into an agreement to buy and have deposited the purchase money, namely £42,000 sterling in escrow, in terms of an agreement, which only needs your approval to render it binding.

Your directors regret the failure of the Haveluck properties to show the results which reasonably might have been expected. You are now offered the opportunity of acquiring a mine and plant which, on the reports of the Government engineers, is most promising. Moreover, owing to your board having decided to stop expenditure on the Haveluck, the company has sufficient financial resources not only to acquire and pay for this new property, but also to carry through a scheme of development and equip the mine with up-to-date plant.

If you pass the resolution before the meeting to-day—as I feel sure you will—the Board intend to proceed at once with the scheme of development outlined by Mr Wilson in his report. In the near future we can look for favourable development results from the mine, and as development proceeds and a sufficient tonnage is opened up the eventual installation of an up-to-date treatment plant. I trust, therefore, you will authorise your board to complete the purchase, and I can assure you that if you do, we will in turn do all we can to make a success of this new property.

The resolution was carried.

GORDON (MALAYA) RUBBER ESTATES, LIMITED

TAXATION OF THE INDUSTRY

The thirteenth annual general meeting of this company was held, on the 3rd instant, at 19 Fenchurch Street, London, Sir Francis Voules, C.B.E. (chairman), presiding.

The chairman, in the course of his speech, said:—We produced last year a restricted crop of 1,685,488 lb., compared with 1,745,726 lb. in 1934. Our profit for the year is £6,354, and we propose paying a dividend of 2 per cent. on the ordinary shares, absorbing £5,140, and carrying forward the sum of £9,679.

The directors have taken advantage of the facilities granted for the cutting out and replanting of old areas of rubber by deciding to treat thus some 65 acres of the Sungei Inas estate.

As regards the current year, we have received assessments totalling 2,273,320 lb., and if the current basis of release remains unchanged our exportable quota should be 1,420,800 lb. We hope that working costs will show a reduction, and with the improvement in price we should show better results.

The Rubber Growers' Association have issued a supplement containing the correspondence between the association and the Malayan Governments and the Colonial Office regarding the taxation of the industry. The justice of the rubber producers' claim for reduction is undeniable. In addition to a quit rent amounting to a maximum of \$4 an acre, we have to pay a cess on rubber exported amounting to 7/10th of 1 cent a pound. This cess, added to the quit rent, is calculated to amount to over 10 per cent. of the gross proceeds of the majority of estates. Just over two of the gross proceeds of the regulation scheme was introduced, and years have elapsed since the regulation scheme was introduced, and during this period shipments have been reduced from a yearly figure of over a million tons to about 820,000 tons, whereas absorption has risen from about 900,000 tons to over 950,000 tons. World stocks, while continuing to increase during the early period of the regulation scheme, have since declined from a peak of 678,000 tons to under 500,000 tons at the end of May this year. Unless there is a serious falling off in consumption during the remainder of this year, which I do not anticipate, I believe that the extra 30,000 tons released by the 5 per cent. addition to the July/December quota will be readily absorbed and that the stock reductions will continue steadily.

The report and accounts were unanimously adopted.

AMALGAMATED DENTAL COMPANY, LIMITED

SUSTAINED PROGRESS

The thirty-first annual general meeting of the Amalgamated Dental Company, Limited, formerly Claudius Ash, Sons and Company, Limited, and De Trey and Company, Limited, was held, on the 3rd instant, at the Holborn Restaurant, London.

Mr E. Russell Polden (the chairman), who presided, said that international trading upon which the company's business was fundamentally based had not improved during the year under review. Restrictions against world-wide freedom of trading had not been relaxed, but rather increased, and the inevitable consequence had been a contraction of business. It was some relief that he was able to report that business in the home and certain overseas territories showed further improvement, and encouraged the directors to continue to pursue their policy of expansion of the company's manufacturing departments, the increased output of which should establish still more firmly their high position in the dental trade. The balance standing to the credit of profit and loss account, £128,000, was higher by £25,000, and the directors felt justified in recommending the payment of a dividend of 5 per cent. on the deferred ordinary stock, which would take £15,250, leaving £22,000 to be carried forward, against £11,000 brought in.

An analysis of immediate future prospects certainly revealed steadily improving conditions in the home and British overseas markets, and he might say without hesitation there was no organisation in their trade and industry better equipped effectively to serve that particular and wide section of their markets.

So far as the future scope for development of their company was concerned, it was possible to look forward with a sensible degree of optimism. The peoples of the world would seem to have realised more and more in the last few stressful years that greater demands on the resistance of the individual called for perfect bodily health, and inevitably the mouth and teeth became objects of a care and attention previously denied them. Trench-dentist strides had been made by the dental profession, the fear of pain in dentistry was rapidly becoming a thing of the past, and it was being generally recognised that timely and periodic visits to the dentist were the best safeguard.

The report was unanimously adopted.

BRITISH GLUES AND CHEMICALS, LIMITED

RESUMPTION OF ORDINARY DIVIDENDS

The sixteenth ordinary general meeting of this Company was held, on the 9th instant, at the Connaught Rooms, London.

Mr. T. Walton, F.C.A. (the Chairman), said that it was naturally a source of pleasure to the directors that they recorded a fifth consecutive improvement. Each of the company's main productions had contributed to the improvement, and there was full justification for their recommendation of recommencement of dividend on the ordinary shares. The company was in some respects peculiarly subject to fluctuations not always coincident with fluctuations in the general trade of the country, and it was for this reason that, before striking the balance of profits, the reserve for contingencies had been augmented by £15,000. The disposable balance, which included £36,216 brought forward from the previous year, was £123,057; there had been or was proposed to be paid in respect of dividends on the preference shares, including the additional 1/2 per cent. to which they were entitled in respect of their participating rights, £44,625, the proposed ordinary dividend of 7 1/2 per cent. took £13,125, there had been transferred to general reserve £20,000, there had been written off machinery and plant (in addition to the usual depreciation) £5,000, and, after adding £5,000 to the provision for income tax, there remained £35,307 to be carried forward.

The company's interests in subsidiary companies had increased by £26,471, due in part to extension of manufacturing capacity, in part to the acquisition of other businesses and in part to merely temporary requirements. The investments were made for the purposes of the business as a whole, and their contributions to the profits, which substantially increased during the year, justified the board's policy. British Government and other quoted securities and bank and cash balances taken together exceeded by £17,227 their corresponding figure in 1935, and the market values of the securities was greater than their cost. The company's liquid assets at April 30, 1936, exceeded its total liabilities, including provision for the dividends proposed to be paid on the 31st instant, by £232,520; taking parent company and subsidiary companies together, the surplus was in the region of £350,000.

The reasons for the improved profits might be summarised under three headings, namely, bigger volume of trade—indeed, their biggest for fully ten years—manufacturing control and economies, and slightly increased prices obtained for some of their commodities. Notwithstanding tariffs and restrictions their export trade had been held; at home they had participated in a welcome expansion in industry generally and they had obtained their share of the increased business.

They anticipated that the imposition upon entry into America of about £12 10s. per ton upon greases and tallows which was to come into force next month would probably close the market to them, and it might result in heavy disturbance of prices generally; nevertheless, in their view the price level was not likely to fall much further, though they feared improvement might not be quick, and therefore they felt that in the coming year they must look in the main to glues, fertilisers and feeding stuffs rather than to greases and tallows for their profits. In the interests of customers it was proper he should make special mention of their Cascade Pearl and Flour glues; there convenience in form became more appreciated by actual users, and prospective users might yet learn from them as well as from the company's research department and sales staff more of these advantages of convenience. Fertilisers and their Churn Brand and other cattle feeding stuffs also made headway.

It would be optimistic for him to expect that the coming year could show a sixth consecutive improvement; the grease and tallow market was bound to affect them, hence the importance of the provisions they had made in the good year just closed. The dividend proposal was, therefore, modest, but his opinion, taking a wide view, was that it was in their best interests in still unsettled conditions to preserve strength and so justify expectations of maintenance until gradual increase.

The report and accounts were unanimously adopted.

Orders for the publication in these columns of the reports of Company Meetings should be addressed to the Reporting Manager of THE ECONOMIST, 8 Bowyer Street, Fleet Street, London, E.C.4.

TRUST COMPANY OF LONDON AND SCOTLAND, LIMITED

IMPROVED VALUES AND REVENUE

The seventh annual general meeting of this company was held, on the 6th instant, at 25-31 Moorgate, London, Mr Alfred Shepherd (the chairman) presiding.

The Chairman, in the course of his speech, said: As regards the balance sheet, the capital of the company is the same, but the debenture stock has been increased by £200,000. On the assets side of the balance sheet the investments at or under cost amount to £1,313,265, as against £1,143,419, owing to additional investments purchased with the proceeds of the new debenture stock.

Coming to the revenue account, the income from investments has risen from £40,878 to £44,597, due to a certain extent to the increase of revenue from the additional investments.

You will see that from the net revenue there has been deducted the full year's dividend on the preference stock, amounting to £23,025, leaving surplus revenue for the year of £1,392.

The final result is that after deducting a small sum of expenses in connection with the issue of the Four per Cent. debenture stock the carry-forward is increased by £1,879.

The surplus of capital profits over losses during the year, amounting to £14,710, has been applied in reducing the realisation account to £9,924. The valuation of investments shows a depreciation of only 19.03 per cent., as against 28.83 per cent. last year. Put another way, last year on total investments of £1,143,419 there was a depreciation of £312,094, while this year, although the investments have increased to £1,313,265, the depreciation is only £241,845.

It will thus be seen that the present accounts show a satisfactory, though not exceptionally large, increase in revenue, a material reduction in the amount of the realisation account, and an encouraging improvement, in the valuation of our investments.

It is impossible with confidence to forecast the future, but undoubtedly the position of finance and trade in our country, where we have 45.4 per cent. of our investments, is such as to give rise to optimism. Unless fresh troubles arise, I would anticipate that the figures in next year's accounts will be as satisfactory as those now shown, and I hope considerably better.

The report and accounts were unanimously adopted.

GOVERNMENT RETURNS, &c.

NATIONAL ACCOUNTS

The total ordinary revenue for the four days ended July 4, 1936, amounted to £9,806,000, against ordinary expenditure of £18,157,000. After allowing for an increase in Exchequer Balances of £151,137, the operations for the week, as shown below, increased the gross National Debt by £8,502,000 to approximately £7,991 millions.*

THE ANGLO-SOUTH AMERICAN BANK, LTD., has received telegraphic advice from the Madrid Branch that the gold surcharge for the payment of Spanish Customs duties has been fixed for the period July 1st to 10th at 138.52 per cent. The previous rate was fixed as from June 21st at 139.24 per cent.

CENTRAL AND SOUTH AMERICAN EXCHANGE RATES

THE ANGLO-SOUTH AMERICAN BANK, LTD., issues the following details relative to quotations for certain of the South and Central American exchanges. All these exchanges, with the exception of that of Bolivia, are related to the United States dollar, and the approximate sterling rates may be obtained by applying the dollar-sterling exchange rate:—

- Bolivia.** "Export" market selling rate fixed at 50.50 bolivianos per £ as from April 30, 1936.
- Colombia.** Sight rate, 175.80 pesos per 100 United States dollars on June 9, 1936. This rate applies to holders of permits buying in the "open" market.
- Ecuador.** Sight selling rate on New York was maintained in May at 10.50 sucres per United States dollar.
- Guatemala.** Sight rate on New York is maintained at 1 quetzal per United States dollar, but a commission of 1 per cent. is charged by the Banco Central for the sale of drafts.
- Nicaragua.** Official selling rate was established at 110 cordobas per 100 United States dollars on April 30th, 1936.
- Salvador.** Sight rate on June 15, 1936, 2.51 colones per United States dollar.
- Venezuela.** No rates available.

* Exchange controls are operative in these countries.

SURVEY OF COMMODITY MARKETS

A strong upward movement of prices was recorded in the United States, grains, cotton and tin being well to the fore. Thus, Moody's daily index of the dollar prices of staple commodities (December 31, 1931 = 100) rose from 169.8 to 175.8 in the week ended Wednesday. The index stood at 163.5 month ago and at 157.5 on the corresponding day last year.

EDMUNDSONS ELECTRICITY CORPORATION, LTD.—The results of the operations of the Edmundson group of companies during the month of June, 1936, as compared with the corresponding month of 1935, show an increase of 22 per cent. of units sold.

GLASGOW.—The market maintains a steady tone. In the shipping districts the collieries are virtually fully booked until the holidays—an indication of the position is the continued high level of shipments—and in the West, although household demand is slow, some

Current approximate quotations:—Best Admiralties, 19s. 6d., seconds, 18s. 9d. to 19s. 3d.; best drys, 18s. 6d.; Black Veins, 18s. 3d.; Eastern Valleys, 17s. 3d. to 17s. 7½d.; Western Valleys, 17s. 6d. to 17s. 9d.; best small steams (washed), 13s. 6d. to 14s. 6d.; 17s. 6d. to 17s. 9d.; best small steams (washed), 13s. 6d. to 14s. 6d.; anthracite seconds, 13s. to 14s.; coking smalls, 14s. 3d. to 14s. 6d.; machine best large, 36s. to 40s.; Red Vein large, 22s. to 27s.; machine made cobbles, 35s. to 51s.; French nuts, 35s. to 51s.; stove nuts, 34s. to 50s. 9d.; rubbly culm 11s. 6d. to 12s.; special foundry coke, 42s. 6d. to 47s. 6d.; patent fuel (Crown), 21s.; pitwood, ex ship. Portuguese, 23s.

IRON AND STEEL

SHEFFIELD.—Demand continues active, but producers of pig-iron have very little for casual sale, most of them being fully committed under contract to the end of the quarter, and some to the end of the year, or even beyond. No Lincolnshire iron is on offer here, but the expansion of Derbyshire output will ease the pressure to some extent. Heavy accumulation of stocks either at furnaces or works

GLASGOW.—There is no important change in conditions ruling in the West of Scotland this week. Practically every plant connected with the industry is working to capacity, but it is often impossible to give deliveries to meet the requirements of users. A number of extensions to plant are being carried through, and further extensions are in contemplation. It is estimated that the additional output will be readily absorbed by the manufacturing trades. Clyde shipbuilders are now taking very heavy tonnages of material from local makers and the continuing improvement in the structural steel business in the West of Scotland is making increasing demands on the section makers. At the same time, demand from other engineering trades is on a very satisfactory scale. Sheet makers are likewise busy and bookings of both black and galvanised sheets are exceedingly heavy. While the bulk of this trade is on home account the tonnage of export business is decidedly heavier this week. Business is still somewhat quiet in the tube trade, but plants are regularly employed.

CARDIFF.—Shipments of tinplates at Swansea were exceptionally high last week, amounting to 73,710 boxes, compared with only 33,280 the previous week. They were still, however, less than the quantity of 91,687 boxes shipped in the corresponding period of last year. The effect of the larger exports was a decrease in stocks from 116,581 to 94,952 boxes. The works were fairly regularly employed, although output was slightly below 60 per cent. of allocated capacity. Prices were unaltered at 18s. 9d. per box f.o.b. There has been no improvement in the condition of the galvanised sheet export trade, but the home demand for sheets is being well maintained. Quotations for galvanised sheets are unaltered at £11 15s. per ton, while quotations for steel bars are steady at 46 per ton delivered.

OTHER METALS

Sales on the London Metal Exchange: 1,450 tons on Monday, against 1,200 tons last week; 525 tons on Tuesday, against 1,100 tons last week; 600 tons on Wednesday, against 1,100 last week. Domestic spot was quoted at 8.95 cents per lb. in New York on Wednesday, against 8.92½ cents a week ago and 8.82½ cents a month ago. Wednesday's official closing price for standard cash in London was £36 12s. 6d. to £36 13s. 9d., compared with £36 11s. 3d. to £36 12s. 6d. a week ago. Stocks of refined copper in British official warehouses at the end of last week, at 56,398 tons, show a decrease of 1,036 tons, while stocks of rough copper, at 4,542 tons, show a decrease of 76 tons on the week.

Sales of lead on the London Metal Exchange: 1,000 tons on Monday, against 450 tons last week; 450 tons on Tuesday, against 1,300 tons last week; 300 tons on Wednesday, against 1,100 tons last week. The New York quotation on Wednesday was 4·60 cents per lb., against 4·60 cents a week ago and 4·60 cents a month ago. The official closing quotation in London for soft foreign for shipment during the current month was £15 7s. 6d. per ton, compared with £15 3s. 9d. a week ago.

Sales of spelter on the London Metal Exchange: 175 tons on Monday, against 425 tons last week; 750 tons on Tuesday, against 575 tons last week; 1,750 tons on Wednesday, against 550 tons last week. Wednesday's quotation in East St. Louis was 4.75 cents per lb., against 4.85 cents the week before and 4.90 cents a month ago.

earlier. Wednesday's official closing quotation in London for "good ordinary brands" for shipment during the current month was £13 3s. 9d. per ton, against £13 7s. 6d. last week.

TIN.—After declining on Friday of last week to the lowest level for over three years, tin prices scored a spectacular recovery of no less than £13 15s. per ton. The reason for the movement was the announcement, made after dealings were over on Monday that the International Tin Committee had held an unexpected meeting, at which the problem of Bolivian arrears was disposed of. Bolivia has surrendered her arrears of shipments, amounting to over 10,000 tons and the quotas for the third quarter of the year have consequently been reduced from 90 to 75 per cent. of the standard tonnages. But the signatory countries other than Bolivia have been granted an additional quota of 15 per cent. as their first share in the latter's arrears. The "adhering" countries have also received a special quota, and it is likely that the remainder of the Bolivian arrears will be made up in the last quarter of the year. The market registered its extreme satisfaction at this news by the sharp rise in quotations referred to above. In view of the stronger position in which the International Committee now finds itself, it is generally anticipated that an understanding will shortly be reached with Siam. The decisions announced on June 25th and July 6th mean nothing less than a complete change in policy. If the uncertainty concerning the future of the scheme, which has had a depressing effect upon the market for so long, is removed, an early return to more normal conditions may be anticipated.

Sales of tin on the London Metal Exchange: 225 tons on Monday, against 240 tons last week; 435 tons on Tuesday, against 255 tons last week; 470 tons on Wednesday, against 275 last week. The New York quotation on Wednesday was 43.50 cents per lb., against 40.75 cents a week ago and 42.12½ cents a month ago. Wednesday's official closing quotation in London for standard cash was £188 15s. to £189 5s. per ton, compared with £178 5s. to £178 10s. a week ago. Stocks of tin in London and Liverpool at the end of last week totalled 717 tons, a decrease of 6 tons on the week.

OTHER NON-FERROUS METALS.—Among other non-ferrous metals, aluminium ingots and bars for home delivery were again quoted at £100 per ton, and rolling billets at £102 per ton. Nickel, for home and export, at £200 to £205 per ton, remains unchanged. Quicksilver, on the spot, was quoted at £12 2s. 6d. per flask of 76 lb., the same as last week. Chinese antimony was quoted at £54 per ton ex warehouse, duty paid, as against £54 to £55 per ton last week. Chinese wolfram for July-August shipment was quoted at 27s. 6d. to 28s. 6d. per unit, c.i.f., as against 29s. to 29s. 6d. last week. Platinum (refined) was maintained at £7 10s. per ounce.

TEXTILES

COTTON.—**Manchester.**—Prices have again shown a hardening tendency in sympathy with the further advance in raw material rates. It has been difficult for spinners and manufacturers to obtain the higher quotations, but a fair amount of business has, nevertheless, been done. There has been considerable interest in the acreage estimate of the United States Government, the figure of 30,621,000 acres being below expectations. Demand for cotton on the spot and for forward delivery in New York and Liverpool has remained active.

The cloth section has been rather more busy. Quite a number of home trade buyers who have recently hesitated to commit themselves have placed substantial contracts with manufacturers for a variety of goods. Export business, however, has been irregular. Rather better advices have been received from India, with an increased turnover in dhooties, light bleaching descriptions and dyed cloths, most of the buying being for Calcutta and Karachi. Encouraging support has also come through from South America, chiefly in printing and finishing styles. Steady buying has occurred for the Dominions and the Crown Colonies. Yarn business has been patchy, but spinners' quotations remain much firmer. A moderate trade has been put through in American and Egyptian qualities.

WOOL.—**Bradford.**—The chief event of the past fortnight was the opening of the fourth series of Colonial wool sales last Tuesday, 90,000 bales being available. The selection of both merinos and crossbreds should be an average one, and the opening revealed a stronger position than was generally expected. The past interval has been anything but inspiring, although consumption has been well maintained in manufacturing districts. The political and financial situation on the Continent has given rise to uncertainty, and there has been a marked decline in the demand for wool, tops, yarns and by-products. No Continental country can be considered a free buyer of raw materials, but on the opening night there was

better German competition than anyone expected. It is well known that urgent requirements exist on the part of more Continental countries than Germany, but it remains to be seen what they will actually take.

Greasy combing merinos declined barely 5 per cent. compared with the close of the May series, but faulty sorts were generally 7½ per cent. cheaper. Scoureds were likewise easier, but shorter wools, suitable for the woollen trade met a keen demand, and were par to 5 per cent. cheaper. Crossbreds, including slipes and South American wools, met a good reception—generally at 5 to 7½ per cent. cheaper rates. Before the series finishes competition may broaden on the part of France, Germany and Russia, which would soon cause prices to improve. In any case, the call for the raw material is distinctly better than expected, clearly indicating that stocks are light in consuming centres and that wool is wanted. A settlement of Continental troubles would lead to a strong wool market and develop a healthy situation. The trade now faces the quietest time of the year, but firmness in Coleman Street will certainly inspire confidence and lead to the placing of cloth orders for next spring and summer with greater confidence.

AUSTRALIAN WOOL STATISTICS.—The National Council of Wool Selling Brokers of Australia cabled their London committee this week, giving particulars of disposals and stocks of wool for the 1935-36 season. These figures, together with comparable data for the previous season are shown below:—

	1934-35	1935-36	Decrease
Season Bales	2,907,970	2,831,930	—76,040
Sales	2,791,196	2,710,767	—80,429
Shipped from brokers' stores (unoffered and withdrawn)	30,909	23,943	—6,966
Destroyed by fire	...	21,387	...
On hand	85,865	75,833	—10,032

In addition, 81,164 bales carried over from the 1934-35 season have been disposed of in the period under review, and 4,788 bales have been shipped unsold. The average price of greasy wool in Australian currency for the season ended June 30, 1936, was 14.01d. per lb., or £17 10s. 11d. per bale, but the average price for the month of June was only 10.74d. per lb. or £14 7s. 9d. per bale. The comparatively low average for June was partly due to the miscellaneous nature of a proportion of the offerings at the clearing sale.

GRAIN MARKETS

WHEAT.—As was the case a year ago, the wheat markets are dominated by crop reports from North America. London and Liverpool have registered a spectacular advance this week, in sympathy with Chicago and Winnipeg. The continuance of exceptionally hot and dry weather in the United States has taken a heavy toll of the spring wheat crop. Moreover, the effects of the drought are now being felt in Canada and there are fears of a serious loss to the Dominion crop unless early and abundant rainfall soon occurs. The position is discussed in a Note of the Week.

On Wednesday last, "July" futures were quoted in Chicago at 105½ cents per bushel, against 95½ cents the week before and 84½ cents a month ago. Quotations in London, Wednesday: No. 1 Northern Manitoba, ex ship, 35s. per 498 lbs., against 32s. 3d. a week ago; No. 2 Northern Manitoba, ex ship, 34s. 9d., against 31s. 9d. a week ago. According to the *Corn Trade News*, total shipments of wheat and flour last week totalled 921,000 quarters, against 886,000 in the previous week and 886,000 quarters in the corresponding week a year ago.

FLOUR.—The market has registered a sharp advance this week in sympathy with wheat. Wednesday's London quotations (excluding quota payments) were: Straight run, delivered Home Counties, 30s. per 280 lbs., against 28s. a week ago; delivered inner London, 29s. 6d., as compared with 27s. 6d. a week ago. Manitoba patents, ex store, 26s. 6d. to 28s., against 25s. 3d. to 28s. 9d. a week ago. Australian, ex store, 23s. to 23s. 6d., against 22s. to 22s. 6d. a week ago.

BARLEY.—Business in imported feeding descriptions has been fair this week. The little English malting barley on offer is of poor quality and realises little more than 30s. per 448 lbs. Business in English feed qualities is inactive. "July" futures were quoted at 46½ cents per bushel in Winnipeg on Tuesday, against 38½ cents a week ago and 36½ cents a month ago. Quotations per 448 lbs. in London on Wednesday were: "English feed" at farm, 22s., as against 22s. 6d. a week ago; "English malting" at farm, 25s. to 30s., against 25s. to 40s. a week ago.

OATS.—American markets have been strong in sympathy with wheat, but business in this country has been of moderate dimensions. On Wednesday, "July" futures were quoted at 36½ cents a bushel in Chicago, against 30½ cents a week ago and 24½ cents last month. Quotations in London, Wednesday: "English Black," at farm, 19s. per 336 lbs., against 19s. a week ago; "English White," at farm, 19s., against 19s. a week earlier.

MAIZE.—After the slight reaction of last week the tone of the market has shown a substantial improvement. But weather conditions in Argentina continue adverse for picking, moving and conditioning the maize crop, and the quality of the latter continues to deteriorate. "July" futures were quoted on Wednesday at 81½ cents per bushel in Chicago, against 68½ cents a week ago, and 61½ cents last month. Quotations in London, Wednesday: "Plate," landed, 21s. per 480 lbs., compared with 20s. 6d. a week ago; "Plate," ex ship, 20s., as against 19s. 3d. to 19s. 6d. a week ago; "Plate," "June," 19s. 9d., as against 19s. 0d. a week ago; yellow maize meal, ex wharf, was quoted at £5 7s. 6d. to £5 10s. per ton, as against £5 7s. 6d. to £5 10s. last week.

SALES AND PRICES OF BRITISH CEREALS.—The following table gives the estimated sale of home-grown wheat during the harvest years 1932-33 to 1935-36:—

	1932-1933	1933-1934	1934-1935	1935-1936
Estimated sales of home grown wheat—	Cwts.	Cwts.	Cwts.	Cwts.
1 week to July 4	42,553	64,080	80,134	63,413
44 weeks to July 4	8,509,293	10,578,756	13,058,332	13,023,675
Average price of English wheat per cwt.	s. d. 6 5	s. d. 5 6	s. d. 5 6	s. d. 6 9

The following is a statement showing the quantities sold and the average price of British cereals in the past two weeks, and for the corresponding week in each of the years from 1932 to 1935:—

Week ended	QUANTITIES SOLD			AVERAGE PRICE PER CWT.		
	Wheat	Barley	Oats	Wheat	Barley	Oats
July 2, 1932	Cwts. 45,374	Cwts. 3,522	Cwts. 6,784	s. d. 6 5	s. d. 6 10	s. d. 7 10
July 1, 1933	42,553	9,877	10,135	6 5	6 9	5 6
July 7, 1934	64,080	5,504	23,178	5 6	6 11	6 6
July 6, 1935	80,134	4,568	9,704	5 6	6 9	7 7
June 27, 1936	70,154	3,672	13,843	6 8	6 4	6 3
July 4, 1936	63,413	3,554	13,897	6 9	6 6	6 1

AMERICAN WHEAT MARKETS.—The following table shows wheat quotations for selected weeks in 1935-36, with comparative figures for 1934:—

NEAREST FUTURE	Jan. 3, 1934	Jan. 2, 1935	July 10, 1935	Dec. 31, 1935	July 1, 1936	July 8, 1936
Winnipeg (No. 1, Manitoba)	65½	82½	80½	84½	80½*	90½
Chicago (No. 2 Winter)	84½	98½	84½	75½	95½	105½

* June 30

The visible supply of wheat in Canada amounts to 68,229,000 bushels, against 80,217,000 bushels last week, and 114,673,000 bushels in the corresponding week last year.

OTHER FOODS

BACON.—Official prices show an all-round decline and demand, fair at first, has since shown some improvement. The official quotations (per cwt. for No. 1 Sizable) which formed the basis for dealings on the London Provision Exchange this week were: English, 86s. to 90s.; Canadian, 82s.; Danish, 91s., as against 90s. to 94s., 85s. and 93s. last week. Arrivals in London last week included Danish, 13,056 bales; Canadian, 4,169; Dutch, 2,446; Lithuanian, 1,827; and Polish, 2,308, as against 13,791, 3,847, 2,437, 1,770 and 2,466, respectively, in the previous week.

BUTTER.—Butter prices have risen, but demand remains moderately good. Quotations (per cwt.) on the London Provision change on Wednesday were: New Zealand, finest salted, 112s. 11s.; Australian, choicest salted, 111s. to 112s.; Danish, 125s., npared with 106s., 105s. and 117s., respectively, a week ago.

CHEESE.—The market in cheese has been more active with prices generally higher. Quotations (per cwt.) on the London Provision change on Wednesday were as follows: English, factory, 56s.; aadian, finest white, 67s. to 70s.; and New Zealand, finest oured, 59s. 6d. to 60s.; against 55s. to 58s., 65s. to 66s. and 5s., respectively, a week ago.

COCOA.—The spot quotation in New York on Wednesday was cents per lb., as against 6½ cents per lb. last week. In London, Wednesday last, good fermented new crop, "October-December," quoted 28s. 3d. per 250 kilos, c.i.f. Continent, against 28s. 4½d. week ago. Last week's movements of cocoa in London were as ows: Landed, 18,882 bags; delivered, for home consumption, 56 bags; exported, 663 bags; stocks, 182,048 bags, against 162 bags a year ago.

COFFEE.—Demand in London continues quiet with prices steady. New York market has firmed up this week. On Wednesday, No. 7 (cash) was quoted at 6½ cents per lb. in New York, as pared with 6½ cents per lb. last week and 6½ cents per lb. a nth ago. Movements of coffee in London last week were as ows: Brazilian, landed, 147 cwt.; delivered, for home onsumption, 293 cwt.; exported, nil; stocks, 10,166 cwt., against 174 bags a year ago. Central and South American, landed, cwt.; delivered, for home consumption, 2,842 cwt.; exported, 28 cwt.; stocks, 118,180 cwt., against 108,369 packages last r. Other kinds, landed, 1,393 cwt.; delivered, for home sumption, 3,254 cwt.; exported, 1,348 cwt.; stocks, 160,719 ., against 113,952 packages last year.

GGs.—Prices have shown some improvement this week and land continues steady. At Smithfield on Wednesday, English linary packing, Grade I, about 15-15½ lb.) realised 12s. to 9d. per 120, as against 11s. to 11s. 9d. last week, while Danish (lb.) made 9s. to 9s. 6d. per 120, the same as last week.

RUIT.—Business has been good at Covent Garden, states *The ilgrower*, and prices have maintained a fair level. Demand for fruit continues strong, and now that the strawberry season is tically over, other lines are selling rather better. The demand

for raspberries, however, has not been good, but is expected to improve. English blackcurrants have met with a steady sale, and cherries are also selling well at fairly firm rates. There was a moderately good demand for green gooseberries. Peaches and nectarines met with a consistent inquiry and prices for melons and figs remained steady. English hothouse grapes are attracting more attention, with prices easier on account of larger arrivals of Belgian and Dutch grapes. Prices for apples show some improvement but the pear trade has fallen off. Oranges and lemons are doing well, whilst grapefruit is plentiful and cheaper.

MEAT.—Trade in meat at Smithfield Market has been moderate during the past week and prices have remained at about recent levels. On Wednesday last, Argentine chilled hindquarters were quoted at 3s. 8d. to 4s. 2d. per 8 lbs., as compared with 3s. 4d. to 3s. 10d. a week ago. New Zealand frozen mutton was 3s. to 3s. 6d. per 8 lbs., against 3s. to 3s. 8d. a week ago. According to the Smithfield Market official report, supplies during last week amounted to 8,560 tons, a decrease of 2 tons on the corresponding week last year. Beef and veal accounted for 4,602 tons, mutton and lamb 2,874 tons, and bacon 568 tons, as compared with 4,470, 3,015 and 499 tons, respectively, in the same week of 1935.

PEPPER.—Wednesday's spot price for black Lampong (in bond) was 2½d. per lb., against 2½d. a week ago. Movements of pepper in London during the past week were as follows: Black, landed, 20 tons; delivered, 6 tons; stocks, 1,769 tons, against 2,086 tons a year ago. White, landed, 43 tons; delivered, 30 tons; stocks, 12,273 tons, against 18,575 tons a year ago.

RICE.—The spot price of Burma No. 2, cleaned, new crop, was 8s. 6d. per cwt. ex warehouse on Wednesday, as compared with 8s. 6d. per cwt. a week ago. "July-August" in singles to Continent and U.K. was quoted at 7s. 6d. per cwt., against 7s. 6d. for "June-July" last week. Movements in London during the past week were as follows: Landed, 30 tons; delivered, 297 tons; stocks, 2,131 tons, against 10,129 tons a year ago.

SUGAR.—The demand for sugar in London has been steady throughout the week. In New York, prices were firm at first but declined later. The spot price in New York on Wednesday was 3.70 cents per lb., as compared with 3.75 cents per lb. last week and 3.72 cents per lb. a month ago. Wednesday's sales of raw sugar in London included "August delivery" at 4s. 5d. to 4s. 5½d., against 4s. 3½d. to 4s. 4½d. a week ago. The movements of raw sugar at public warehouses in London and Liverpool last week were as follows: Imports, 19,133 tons, against 11,837 tons last week and 26,529 tons in the same week of last year; deliveries, 20,172 tons, against 18,341 tons last week and 15,532 tons last year; stocks, 133,162 tons, against 134,201 tons last week and 130,482 tons last year.

TEA.—The following table shows the average prices (compiled by the Tea Brokers' Association) of tea sold in Mincing Lane on Garden Account in recent weeks:—

Week ending	Northern India	Southern India	Ceylon	Java	Sumatra	Africa	Total
July 4, 1935	d. 11.49	d. 11.54	d. 13.00	d. 9.94	d. 9.38	d. 10.20	d. 11.74
May 21, 1936	12.41	13.00	14.21	10.81	10.21	11.75	12.81
June 11, "	12.24	12.73	13.30	10.32	10.15	11.48	12.40
June 18, "	12.20	12.26	13.13	10.17	9.95	11.44	12.25
June 25, "	12.20	12.26	12.98	10.26	9.95	11.21	12.18
July 2, "	12.19	12.10	13.04	10.33	9.89	11.26	12.22

This week's offerings at the public auctions in Mincing Lane comprised 42,950 packages of Indian and 25,869 packages of Ceylon tea. Demand has been good for all grades of Indian tea, at firm prices. Ceylon tea was also much in request, prices of plain sorts being well maintained whilst the better qualities showed a rising tendency.

VEGETABLES.—According to *The Fruitgrower's* Covent Garden report, the tomato trade continues good, prices being fairly well maintained in spite of increased supplies. Cucumbers also are selling well. Green pea prices have fluctuated throughout the week. Carrots, turnips and marrows have met with steady inquiry. Egyptian onion prices are firm. Trade in lettuce has been poor. New potatoes improved in price in the early part of the week but have since declined owing to the very heavy supplies on the market. Demand has been fairly steady. At the London Borough Market on Tuesday, Jerseys made only 7s. per cwt., against 11s. to 12s. last week, while English kidneys made 7s. 6d. to 8s. 6d. per cwt.

MISCELLANEOUS COMMODITIES

VEGETABLE OILS AND OILSEEDS.—A much firmer tone has developed on the markets for oilseeds and their products, mainly on account of adverse reports as to the condition of growing crops in the United States. High temperatures and want of moisture have been detrimental to the linseed sown late and the problem is to assess the extent of the damage. Pessimists incline to the belief of a repetition of the conditions in the drought year 1934, but an immediate change in the weather and ample rains might do much to save the situation. Hence, apart from market sentiment, much depends upon day-to-day reports of the prospects of better weather conditions in the districts most affected. Prices have moved up quickly and good business in Indian linseed is reported at rising prices. Plate also is dearer and is firmly held in anticipation of the United States increased requirements later. Shipments from the Plate to date exceed a million tons and in view of an increase in the official estimate of 50,000 tons, about 550,000 tons remains for export which, with 110,000 tons expected from

RUBBER.—Business has again been active and the firm tone of the market has continued. Good buying for the home trade

has been in evidence and American manufacturers have also been making purchases in London. Meanwhile, the trend of stocks in the United Kingdom continues its downward course. The spot price in New York on Wednesday was 16½ cents per lb., compared with 16¼ cents per lb. a week ago and 15½ cents a month earlier. Wednesday's official buyers' price for standard ribbed smoked sheet on the spot in London was 7½d. per lb., as against 7½d. on the corresponding day a week ago. In forward positions, business has been done at 7½d. for "October-December" shipment, as against 7½d. a week ago. Stocks in London and Liverpool at the end of last week totalled 120,857 tons, against 122,700 tons a week earlier. A year ago stocks amounted to 172,513 tons.

The prices in the following are revised with the assistance of an eminent firm in each department.

GERMANY AND AUSTRIA

THOUGH for some days past there had been rumours of negotiations for an Austro-German accommodation, the announcement that an agreement had actually been concluded last Saturday probably caused as much surprise inside Germany, as well as abroad, as the announcement of the German-Polish Pact, two and a half years ago. The present surprise has not been diminished by the reported terms on which this Austro-German *détente* has been achieved; for, on points, the arrangement seems almost wholly in Austria's (or ought we to say in Italy's?) favour.

There are three principal heads of agreement: First, the German Government recognises the full sovereignty of the Federal State of Austria. Secondly, Germany agrees to regard the question of Austrian National-Socialism as a domestic concern of Austria, upon which Germany shall exert neither direct nor indirect influence. Finally, while Austria's general policy, and her policy towards Germany in particular, are to be constantly guided by the principle that Austria recognises herself to be a German State, at the same time the Rome Protocols of 1934 (together with the additional clauses of 1934 and 1936), and the relations of Austria to Italy and Hungary as partners in those Protocols, are not to be regarded as being affected by the new Austro-German understanding.

The official joint Austro-German *communiqué* in which these three bases of agreement are announced goes on to mention, in conclusion, that a series of detailed measures are to be taken for establishing the preliminary conditions necessary in order to produce a relaxation of the tension which has characterised Austro-German relations ever since Herr Hitler's advent to power in the Reich. It is credibly reported that these measures are to include the dissolution of the Austrian Legion in Germany, the cessation of Nazi propaganda in Austria, the abolition of the Rm. 1,000 tax on German visas for German nationals wishing to visit Austria as tourists, and permission for Austrian Nazi refugees in Germany to return to Austria only in those cases in which the refugee has not acquired German citizenship—an exception which will rule out the return of most of the Austrian Nazi leaders.

On the other hand, it is circumstantially reported from Vienna that the Austrian Government of Dr. Schuschnigg have agreed not only to introduce two Pan-German Ministers into the Cabinet—one of them is apparently to be the Chancellor's co-adjutor for foreign affairs—but also to release all Nazis in detention camps and to introduce pro-Nazis into high position in the armed forces and the civil service. Moreover, the same reports indicate that the Austrian Government have undertaken, at least for a period of two or three years, not to condone a restoration of the Habsburg dynasty. This is, indeed, another side to the Austro-German medal.

What does this rather surprising agreement mean? Presumably, in the first place, that Herr Hitler has apprehended—and resolved to avert, even at a stiff price—our own Government's present policy of trying to bury the hatchet between Great Britain and Italy, and thus giving French diplomacy an opportunity to rebuild the Stresa Front. It might have suited the book of His Majesty's Government in the United Kingdom to keep the two European dictators in opposing camps, and to utilise Fascist Italy's proved readiness to fight by employing her as a policeman to stand guard over Germany in Europe. On some such policy the Government may have thought that the British Empire could sleep easy, with the former German colonies in Africa and the Pacific still safely stowed away under our comfortable British bed. This British dream of comfort was naturally disagreeable to Herr Hitler; for, since the present French Government will not readily renounce the Franco-Russian Pact, Germany might have been confronted with a real encirclement in which all the other four European Great Powers would have been joining hands round her and against her. As it happened, this plan did not suit Signor Mussolini either. Undoubtedly, the Duce regards it as being one of Italy's vital interests to prevent the absorption of Austria into the Third Reich. But it was obvious that, if the encirclement of Germany did become an accomplished fact, and if Herr Hitler then screwed up his courage to risk his neck by making a desperate attempt to break the iron circle, it would be Italy, in all probability, who would have to bear

the brunt of the German onslaught. The British might meanwhile still lie snugly in bed and listen contentedly to the din of Italy fighting on Austrian soil in order to preserve Tanganyika in British keeping—as Frederick the Great once fought on Saxon soil in order to make Great Britain mistress of Canada.

Thus, Italy and Germany both had an interest in arranging to avoid falling out with each other. In order to make sure of this, they had to come to an understanding over Austria, which is the bone of contention between them. An Italo-German accommodation on the Austrian question has been notoriously difficult to achieve, because either party has appeared to have irreducible demands on the future of Austria, incompatible with the irreducible demands of the other. Yet an accommodation has been achieved—and on a basis which, if Signor Mussolini's and Herr Hitler's professions to harbour no ulterior motives invited unalloyed confidence, would be in itself a wise, sound, and logical development. For while it recognises Austrian affinity with Germany, it also recognises that Austria is not Germany and has her own interests to secure. It is a settlement, in fact, that some benevolent deity, untrammelled by human feelings and material conditions, might have proposed. But neither Mussolini nor Hitler has yet qualified as a benevolent deity. Are we, then, to conclude that either Hitler or Mussolini has renounced an objective which we had always imagined fundamental to his foreign policy?

At first sight the terms of the Austro-German arrangement have the appearance of being a great diplomatic success for Italy, since they involve a recognition, on Germany's part, of just that status for Austria which Italy wishes Austria to enjoy. Austria has now been recognised by Germany as an independent State which is entitled to treat with Germany on a basis of perfect social equality, and also to maintain her special relations with Italy and Hungary. Even the formula about Austria being a German State—which is the sole apparent concession to the Nazi standpoint—is double-edged; for it implies that a State can be German without being Nazi. To Hitler's mind this is the most damnable of all political heresies, as is clear from his sensitiveness over the not dissimilar situation at Danzig.

On second thoughts, however, the present arrangement may appear likely in the long run to play into Hitler's hands, rather than into Mussolini's. The catch in the agreement is conveyed in the proverb that "he who sups with the Devil needs a long spoon." Hitler is known to take the view that he need not unduly worry his mind about Austria, because she is bound to drop, like ripe fruit, into his mouth in course of time. If he can really afford to take his time, he probably has a good chance of seeing his patience rewarded. Peaceful penetration from within may actually prove more rapidly effective if it is not disturbed by a raging, tearing propaganda from without. While the present agreement may perhaps confer a permanent advantage upon Austria by enabling her to acquiesce gradually in the Third Reich's hegemony without having to submit to a complete *Gleichschaltung* on the Bavarian pattern, this will be cold comfort for Mussolini if he wakes up one day to find all Europe up to the Italian frontiers and the Adriatic coastline, including Austria as well as Yugoslavia, rounded up in Hitler's corral.

Meanwhile Mussolini as well as Hitler may congratulate himself on having shown the statesmanship to avoid a collision with his brother-dictator. Thanks to this diplomatic success, both dictators have, for the moment, gained a free hand. And the rest of us may ask ourselves, with some anxiety, what use Mussolini and Hitler are likely to make of their initiative, and whether they will prefer to hunt singly or as a pair. Hitler is the hungrier as well as the stronger of the two; Mussolini has still to devour and digest his recent African kill. Which will Hitler judge to be the easier prey for himself: Central, Eastern and Balkan Europe, or Colonies? If the former, Mussolini may find himself in an uncomfortable position. If both decide on a common colonial policy, France and Britain will be in the uncomfortable position of the rich relations, with little to gain and a great deal to lose. It is with Hitler, clearly, rather than with Mussolini, that the initiative still lies.

THE LESSONS OF JARROW

THE story of the abortive attempt to establish a basic Bessemer steelworks at Jarrow is now almost fully revealed, and the few gaps still remaining can be filled in by intelligent conjecture. But schemes of this nature are delicate plants which do not thrive if exposed before maturity to the open air and the bitter winds of recrimination. The unemployed of Jarrow will find cold comfort in Mr Runciman's announcement in Parliament on Wednesday that the Import Duties Advisory Committee is to undertake an inquiry into the whole position of the iron and steel industry. This inquiry is to have no specific reference to Jarrow, and there is no assurance that either the inquiry or the report will be public. Moreover, the past tenderness of the Committee towards the iron and steel industry does not encourage the belief that its inquiry will be very searching. The Jarrow scheme is dead. It remains only to hold an inquest over the remains.

The full importance of Jarrow cannot be understood without some reference to the technical conditions of the British iron and steel industry. The production of basic steel, especially by the Bessemer process, has been strangely neglected in this country—strangely, because British ores are not suited to the production of acid steel, and because the Bessemer process originated in this country. It is true that basic steel is not suitable for all purposes, but it is suitable for many. And the Bessemer process, in its modern form, is the cheapest method of producing basic steel. It is the foundation of the huge metallurgical industry of Western Germany. There is a market for basic Bessemer steel in Great Britain—for three or four million tons a year of it. But though we have the ore, the coal, the process and the market, we have not got the plant; and at present we import large amounts of semi-finished basic Bessemer steel. The obvious inference—obvious for many years past—is that we should equip ourselves with the plant. One basic Bessemer plant, producing about 350,000 tons a year, has recently come into production at Corby in Northamptonshire, amid the plaudits of all sections of opinion. Another large plant is wanted, and since Corby is inland on the ore, the second might well be on the coast where there is coal available. Jarrow, in fact, is the ideal site, was declared to be so by competent technical advisers, and was offered for the purpose. The syndicate having an option on the vacant site was prepared to go ahead in raising the capital necessary to erect a modern basic Bessemer plant on the scale necessary to secure the full economies.

This plant was intended to be more complementary to, than competitive with, the existing steelworks of the North-East Coast, and it was reasonable to invite the co-operation of the existing firms in the scheme. There was another and more compelling reason for seeking the co-operation of the existing industry. The British Iron and Steel Federation—through its agreements with the international cartel, through its apparently close relations with the authorities who determine the degree of tariff protection and through the almost unique power about to be conferred on it of importing supplies of raw material at a specially low rate of duty and distributing them to its members—has almost complete control of imports, exports and production of iron and steel in this country. These powers were not given it to enable it to exploit the market to its heart's content, but to provide a screen behind which the industry could proceed with the technical re-equipment and the commercial co-operation which all authorities recognised to be necessary. That this alone was the object of such an unparalleled devolution of power to a private organisation has been attested, hand on heart, by the industry and endorsed by the Government.

The Jarrow scheme, providing as it did for a co-operative venture in re-equipment, appeared to be precisely the sort of project which the Federation had been founded to foster. Indeed, the Federation itself, in so far as it can be divorced from its members, appears to have welcomed the scheme, at first, with some degree of warmth. The North-East Coast firms, however, who were being offered this source of cheap steel at their doors, were very far from enthusiastic. If there was to be increased production on the North-East Coast they had plant and sites to offer. It is true that they could not produce Bessemer steel, that

the plant was antiquated, and the sites less favourable, but both plant and sites were blessed by belonging to firms already members of the Federation.

These counter-proposals led to discussions which were, and were clearly intended to be, interminable. And by the time the technical consultant had rendered a second report, confirming his earlier support of Jarrow, there had been a change in the external circumstances. The re-armament programme had arrived, and with it a greatly enhanced and urgent demand for steel. The urgency of this demand, in the Federation's words, made it "imperative to proceed with expansions of plant, both on the Tees and elsewhere, which would give a much more immediate production than the construction of a completely new plant at Jarrow." It is true that steel of some sort, at some price, could be produced more quickly from the existing resources of the Tees than from Jarrow. But it is hard to see how this is relevant to the much longer-range argument for Jarrow. On the Federation's own showing, the right policy was to go ahead on both rivers, with temporary patching-up on the Tees and with permanent plans on the Tyne.

The excuse, however, served its purpose of killing the Jarrow scheme. The Federation was no longer prepared to extend its "co-operation" and the scheme fell to the ground. As we remarked last week, it was still open to the promoters to proceed on their own responsibility. There is no legal prohibition against starting a new steelworks in England against the disapproval of the Federation. Similarly there is no legal prohibition against making issues of trustee securities in the City of London without consulting the wishes of the Bank of England, or against exporting large amounts of capital to foreign countries without the permission of the Chancellor of the Exchequer. But these things are not done. The Jarrow steelworks, to be economically justifiable, would have had to be large. Large steelworks cost more money than any private syndicate can be expected to find out of their own pockets. In other words, there would have had to be a large public issue, and it may confidently be surmised that underwriters would hesitate to endorse an issue for a steelworks which would face from the outset the hostility of an omnipotent Federation. So tight is the interlocking web of "control" that it is disingenuous in no minor degree for the Federation to state that it did not prevent the scheme from coming to fruition. In present circumstances, the mere withholding of its approval was an absolute veto.

The story of Jarrow throws a particularly vivid light upon the degree to which British industry is already in the strait-jacket. No matter how excellent the proposition, no matter how available the capital, no matter how deserving of employment the prospective site, nothing can be done without the approval of Authority. Over large tracts of British industry and commerce the freedom of initiative has gone.

Moreover, observe the nature of Authority. The Jarrow scheme was not intended to be competitive with, so much as complementary to, the existing industry, a contribution to that technical renovation of the industry that has been so long promised. The Federation, on the other hand, has received unusual favours at the hands of the State and might be expected to have obligations in return. But neither the soundness of the scheme nor the obligations of the Federation availed one whit. The scheme was turned down flatly and the obligations were defaulted. And why? Because the Tees-side firms had interests which they "could not see their way to sacrifice."

The facts about Jarrow, once they are widely known, ought to blow sky-high the strange delusions of those who believe in the "self-government of industry." The plain fact is that if an industry is elevated to a monopoly and placed in charge of those who own it, it will act as a private monopoly always acts. It will refuse entry to newcomers, however irreproachable their case. It will put its own interests above those of anybody else, even of the community as a whole. It will exploit the market for all it is worth. If the monopolistic powers are exercised by a central body elected by individual producers, none of whom has individual responsibility for the action of the whole, the case is worse. For the central body will have

7, CHANCERY LANE, LONDON

the conscience, while the individual members have the power. London may wish to pay some attention to the public interest, but Tees-side will crack the whip. Cartels of this now fashionable nature, especially if they are endowed with legal powers, are injurious to the consumer and contrary to public policy, unless much more effective provision is made than has hitherto been the case for ensuring the final authority of the common interest. An "independent" chairman is not enough, unless he has the power and will use it.

This is the pass to which we have come in the steel industry. If the Government pursues its economic policies further it is the pass we shall come to in other industries. We are, in short, well on the way to becoming a Corporative State. But it is Corporativism without its single putative excellence—the power to put the ablest head in each industry in charge. As illustrated by Jarrow, it is an ossification of inefficiency, an endowment of selfishness.

Of the insured workers of Jarrow, 70 per cent. are still unemployed.

UNEMPLOYMENT ASSISTANCE

THE Government's long-awaited Draft Unemployment Assistance Regulations, with explanatory memoranda by the Minister of Labour and the Unemployment Assistance Board,* were issued too late for detailed examination in last week's *Economist*. They envisage the co-ordination of all unemployment relief, other than pure insurance benefit, under the Unemployment Assistance Board by April 1, 1937. Under the Unemployment Assistance Act of 1934 the Board was, by March 1, 1935, to have taken over from local authorities responsibility for relieving 200,000 applicants for poor relief—now termed "public assistance." Already, on January 7, 1935, it had taken over the payment of relief to the 735,000 applicants who, though nominally under the insurance scheme, had exhausted their benefits and were receiving so-called "transitional payments." Before March 1, 1935, however, a storm of protest from many districts led the Government to withdraw the regulations laid down by the Unemployment Assistance Board and to substitute a "standstill" arrangement which brought the new rates into being if they involved an increase, but left the old rates in force if the new rates would have meant a decrease.†

The Temporary Provisions Act of February, 1935, therefore established that "every applicant for assistance should have his needs assessed both under the Unemployment Assistance Regulations and under the Transitional Payments Scheme as if that Scheme had still continued in operation." He was then to receive payment "at whichever rate was the more favourable to him." The local authorities continued to give widely differing rates of

* Cmd. 5228 and 5229. † See the *Economist*, March 7, 1936, p. 514; and June 27, 1936, p. 717.

"assistance," and in some cases even increased them; and the Assistance Board's effective rates naturally tended to follow them.

Moreover, while local authorities have shown a general tendency to give applicants the most favourable treatment possible, their official rates may not always be strictly adhered to in practice, whereas the Unemployment Assistance Board's scales (which follow the local scales) have of necessity to be applied uniformly in each district. During the last 17 months there has thus been a levelling upwards of the average amount of benefit paid under both sets of non-contractual relief. The following figures, taken from the Minister's Memorandum, page 11, illustrate this rising tendency:—

TRANSITIONAL PAYMENTS SCHEME

Period	Average Weekly Payment
November 12, 1931–March 31, 1932	19s. 0d.
April 1, 1932–March 31, 1933	19s. 3d.
April 1, 1933–March 31, 1934	19s. 7d.
April 1, 1934–June 30, 1934	19s. 9d.
July 1, 1934–September 30, 1934	21s. 6d. (a)
October 1, 1934–January 6, 1935	21s. 10d.

UNEMPLOYMENT ASSISTANCE SCHEME

January 7, 1935–October 31, 1935	22s. 11d. (b)
November 1, 1935–June 30, 1936	23s. 6d. (c)
For June, 1936	23s. 7d.

(a) Unemployment benefit rates increased from July 1, 1934, and maximum transitional benefit rates correspondingly raised.

(b) Includes cost of allowances supplementing original regulation rates, and also increased unemployment allowances as compared with transitional payments.

(c) Includes effects of increased unemployment benefit rates for dependent children, operative from October 1, 1935.

The total annual amounts paid out during the last four years and the average number of weekly payments have been as follows:—

Year ended	Expenditure (£ millions)	No. of Average Weekly Payments ('000's)	Average Annual Payment £ per head
March 31	50.4	988	£51.0
1933	48.4	951	£50.4
1934	42.2	761	£55.5
1935	42.4	705	£60.1
End June, 1936	38.0*	620	£61.3*

* Annual rate of expenditure.

Meanwhile, other influences have raised the average rates of payments. Although the "live register" of unemployed persons has been falling during the recent months of industrial recovery, the distribution of the total among those entitled, respectively, to contractual (i.e. pure insurance) benefit, to transitional payments and to assistance has shown variations which could not easily be foreseen. Young single men, living alone, entitled to 15s. a week in relief, appear to have been reabsorbed into employment more quickly than the older married men with dependants, receiving anything from 27s. per week upwards, and the average level of payment has thus been raised.

So much for the background of the new Regulations. What do these Regulations in fact lay down? First, the Means Test embodied in the 1934 Act remains; but the current objection that the basic rent standard was too high has been met by more generous allowances and greater discretionary powers. Wider use is to be made of the Local Advisory Committees, particularly in the treatment of rent and for payments in rural areas, where rent and costs of living present peculiar difficulties. The rate for female householders is raised from 14s. to 15s. per week; all dependent male members in the household over 21 receive 10s. per week, in lieu of 10s. and 9s. for subsequent members; and all female dependants over 21 receive 9s. All male and female dependants over 16 and under 21, receive 8s. per week, in place of the hitherto graduated scale, ranging from 6s. to 8s.; and all persons living on their own (e.g. as boarders), whether under or over 18, are to receive 15s. subject to adjustments, up or down, to meet their particular circumstances. These increases are expected to be introduced within five weeks from November 16.

Two special provisos call for comment. First, any worker, whether he has been insured or not, who is head of a household with dependants, and has no available resources, is to be assessed at not less than the insurance benefit rate; though special cases (e.g. rent in rural areas)

will be given special treatment. This, in effect, means that, though the Board has not universally raised the basic rate of 24s. per week for every man and wife, they will not pay an applicant, who conforms to the description above, less than 26s., minus any special reduction on account of a low rent.

Secondly, if the new Regulations were to come into effect in all areas on November 16th next, the "standstill" arrangement would come to an abrupt end, and the Board's scales would be applied everywhere, uniformly and at once—in many localities on lower scales than the local allowances based on the practice of transitional payments administered by local authorities. To obviate this, a "buffer" period is to be introduced, which can be extended, if necessary, to eighteen months after November 16th. The Board is to be given power to increase allowances, from time to time, to applicants who would have received more under the "standstill," by such an amount "as is reasonable" and the co-operation of the local Advisory Committees will be enlisted in this task. As the scales for local unemployment relief differ, the Board's explanatory Memorandum expressly states that these Committees will have to consider the situation in their areas in the first place. Reductions towards the new scales will be made initially in areas "where, in view of the resources that are available to the household, the (local authorities') allowances are grossly excessive." Young single men and women will be the first group to be placed on the new standard.

The effects of the new scales are contingent on a number of factors which cannot yet be measured. These include the rate at which applicants' "households" increase their earning-power from now onwards, as employment extends; and the decisions of local Advisory Committees in the matter of rent and other allowances. The extent to which the new discretionary powers now accorded will be locally exercised must also depend on the composition of the live register, which alters as recovery proceeds. Then there is another factor: the awards of the Appeal Boards (which are judicial bodies). These may exert a big influence. Not least, local political opinion will be brought to bear on the local committees. And, lastly, the Trade Unions are likely to judge the scheme in the light of the possible effects of its failure, which might throw even the Statutory Fund into the melting pot. In general, it would seem that the anticipated "further increases" in the scales will be spread over all areas, largely in favour of householders without resources; while the bulk of the gradual reductions during the "buffer" period will fall on the households with resources.

Finally, the finance of the new Regulations calls for observation. The long-postponed "second appointed day" is to be fixed for April 1st next. The cost of the new scales, on the basic (June, 1936) figure of 620,000 applicants, is not expected to exceed an annual charge of £38½ millions—which is £750,000 more than the annual rate based on last month's actual experience. From next April onwards, the Exchequer will assume full responsibility for the relief of all the able-bodied unemployed outside the scope of the Statutory Insurance Fund. The Exchequer, however, will be relieved of the payments it has been making to local authorities (at the rate of £5,600,000 a year) to compensate them for the relief of unemployment left on their hands owing to the postponement of the "appointed day" last February. What amounts, if any, local authorities may be asked to contribute to the Exchequer—either directly or by way of reductions in the Exchequer's block grants, which are already weighted for unemployment under the 1929 Local Government Act—is not yet settled. It is clear, however, that the national accounts will soon be bearing, not 95 per cent. of the cost of relief, as at present, but a full 100 per cent.

It may be hoped that the new Regulations will be critically and dispassionately examined, in the light of these considerations. Within the limits imposed on their draftsmen by legislation and hard fact, the Regulations appear to embody an endeavour, in good faith, to find an empirical solution for a complex problem which political controversy threatened to render acute. It is difficult, at present, to prophesy how they will work out in practice; but in intention they seem reasonably framed.

BRITISH INDUSTRIAL EARNING POWER

No survey of the economic experience of British industry in the last few eventful years is really comprehensive without some reference to the impact of depression and recovery on profit-earning power. How has the return on the capital invested in different industries varied during, say, the last seven years? The question intimately affects industrialists, investors, and the Exchequer—the silent third partner in every British enterprise.

The material for an answer is available in our periodical surveys of the published profits of a large sample of British industrial companies. The latest figures, which are given on page 146 of this issue, relate to profits disclosed during the twelve months to June 30 last and earned for the most part during the calendar year 1935. The returns (taken, in each case after deducting debenture interest but before allowing for preference and ordinary dividends) relate to public companies only. They may underestimate the amplitude of annual fluctuations, thanks to internal "adjustments" made by individual companies; but otherwise they may be regarded as reasonably representative. During the last eight years, the size of our sample has broadened from 1,771 companies with an issued share capital of £1,879 millions to 2,138 companies with £2,436 millions. To ascertain, in the first place, the relative movement of total profits for all companies, we have therefore constructed a "chain" index, on the lines shown below:—

GENERAL PROFITS INDEX

Reports published during twelve months ended June 30	No. of Companies	Net Profits per cent. (after debenture interest) Same Companies, 1929 = 100	Chain Index (1929 = 100)
1929	1,771	198,471,070	100.0
1930	2,053	187,588,541	103.8
1931	2,017	139,436,950	88.6
1932	1,949	137,083,181	69.9
1933	1,960	159,597,442	68.2
1934	2,072	192,965,202	81.5
1935	2,138	224,045,804	92.8

We have chosen as a base the published profits of the twelve months to June 30, 1929, rather than of the peak year 1929-30, in order to afford a more direct comparison with present conditions, which, cyclically, have some points of resemblance with those of 1928, when the bulk of the "base profits" were earned. It will be seen that average profits rose by nearly 4 per cent. in 1929-30, fell by 15 per cent. in the following year, dropped to three-fifths of the datum level in the trough of depression, and have now recovered to a little more than nine-tenths of the basic figure. With this broad picture of recession and recovery in mind, let us see how far earnings in a number of important industries have conformed to the general pattern. Using the figures given on page 146, and in earlier surveys, we may construct the following series of "chain" indices:—

PROFITS IN SIX BRITISH INDUSTRIES

(Published Figures for year to June 30, 1929 = 100 in each case)

Twelve Months to June 30	Iron, Coal & Steel	Electric Light and Power	Motors, Cycles and Aircraft	Textiles	Breweries	Retail Trade*
No. of companies:—						
1929	119	43	30	62	93	69
1936	140	36	38	79	105	83
Total share capital (£ millions):—						
1929	200.6	67.8	21.0	155.0	105.9	74.9
1936	249.7	93.9	41.8	168.1	128.3	116.4
Indices of profits:—						
1929	148.8	105.3	111.1	69.6	104.0	103.3
1930	120.8	112.2	85.3	29.7	105.6	98.4
1931	61.4	113.4	28.1	20.7	95.5	80.6
1932	43.1	121.4	2.1	27.5	72.6	73.2
1933	79.7	129.0	35.8	42.0	75.6	73.4
1934	147.9	140.4	46.6	41.9	83.6	79.2
1935	192.2	149.0	54.9	41.2	103.7	87.0

* Shown as "Shops and Stores" in our detailed analyses.

Our samples are not equally comprehensive in every case, and the indices, one and all, are far less representative

than the general figure for all trades. On their showing, however, the palm for the best all-round achievement, in good times and bad, goes to the electricity industry; for the most spectacular recovery from depression, to the iron and steel industry; and for the steadiest profit record, to the brewing trade. Electricity is a major public utility, and the table covers a period during which the national "grid" was completed and the electrification of industry proceeded apace. Steel is a tariff-assisted "capital" in-

PROFITS IN CERTAIN BRITISH INDUSTRIES

(According to company reports issued during twelve months to June 30 of each year)

1929 = 100

dustry with an equity in re-armament, and brewing a "consumption" trade *par excellence*, whose record would have been even more stable in the absence of changes in the beer duty. The course of the index for the motor and allied trades suggests that keen competition in an expanding market has given less to the larger firms than has been relinquished by the smaller. The textiles figures are eloquent of the plight of export industry under the rule of economic nationalism. The index of retail trade profits (which tended to run above the index for all industries during the early years of depression and below it, on the whole, during recovery), suggests that increasing turnover has recently been associated with fiercer competition and lower profit-margins, particularly in the provision trades. The "geometric" profits of famous chain-store companies are not typical of retail earnings as a whole.

What general conclusions are suggested by these figures? It would seem, first (as the annexed chart clearly shows), that the profits of individual industries showed more uniformity of trend during depression than in recovery. Since 1933, the different curves on the chart reveal a decided tendency to spread fanwise. Secondly, although the latest earnings figures for industry as a whole are still below the pre-depression level, they relate to a period whose central point lies about halfway through last year. In view of the subsequent rise in production (disclosed, for example, by our "Business Activity" index) current earnings may well be fully equal to those of 1928-29.

It is much less certain, however, that investors are receiving an equivalent return on their capital, even in the more progressive industries. The following table of percentage rates of ordinary dividend throws direct light on this question:—

AVERAGE ORDINARY DIVIDENDS PAID
(By Companies included in the *Economist's* Surveys)

	Iron, Coal and Steel	Electricity	Motors, etc.	Textiles	Brew- eries	Retail Trade	All Trades (including others)
Twelve months to June 30—	(%)	(%)	(%)	(%)	(%)	(%)	(%)
1929	3.2	8.7	11.8*	11.9	17.6	14.4	10.3
1936	4.5	7.2	9.8	5.2	13.9	14.1	7.9

* 1930. Preceding year's figure exceptional.

Allowance must be made for increases of capital by bonus shares (with their converse, the writing-off of lost capital), and for a somewhat more conservative directorial distribution of profits in 1936 than in 1929. Nevertheless, it would appear that earnings have not, as yet, been fully proportionate to the growth of capital during the last seven years, even in trades whose *absolute* profits have made a relatively favourable showing. Shareholders, in short, may still have some way to go before their pre-depression status has been fully restored.

PRIVATE LIVES AND PUBLIC POLICY

THE Insurance Supplement published with this week's issue of the *Economist* reviews prevailing conditions and tendencies—as expressed by the results for 1935 of a large number of offices—in a British "industry" whose name has gone out into all the world. The facts and figures marshalled in this survey are prefaced by an article containing an appreciation of the great place that insurance holds in the modern State and an examination of some of the problems which are involved in the changing conditions of the industry. As the statesman and the social reformer rely more and more on the machinery of insurance, that machinery has to be adapted to new ends; and at times there will inevitably develop a clash between the purpose that insurance is made to serve to-day and the old principles which served our turn where it was a simple voluntary contract between two parties.

As though to confirm in advance some of the arguments of that article, a troublesome and puzzling case has been before the courts this week, and a judgment of the greatest interest was delivered on Monday by Mr Justice Swift. The case itself is troublesome and puzzling because it was fought on a troublesome and puzzling principle. As the argument between plaintiff and defendant progressed it became increasingly difficult to see how the old principle of law, as it has been generally understood, could be maintained with equity under present-day conditions.

The case is that of *Beresford v. The Royal Insurance Company*, and it was fought on a life insurance claim for £42,000. Mrs Beresford was the niece and administratrix of a Major Rowlandson, who, being so short of money that he could no longer pay his life premium, waited until three minutes before the days of grace expired, and then, with every mark of deliberation, shot himself in a taxi-cab. He was at the time insolvent; and there was nothing but the proceeds of the policy to satisfy debts of £68,000. So

the administratrix, though fighting the case in her own name, was really engaged in salvage operations for her uncle's creditors. Two matters were in dispute. One—was Major Rowlandson mad or sane? The jury, without much hesitation, replied that he was not mad—from which it followed that his suicide was a crime. The second matter of dispute was a legal one—if his death was criminal, was the insurance company liable to pay or was it debarred from paying on grounds of public policy? The judge, replied that the insurance company was not debarred, and consequently gave judgment for the plaintiff.

Public policy has always been a difficult horse to ride. It has generally been thought, however, that a man is prevented by public policy from either benefiting or being indemnified in respect of an action which is clearly a crime; and that the party against whom a claim of this nature is brought not only may but *must* deny liability. The law has been stated, with varying degrees of emphasis, fairly often. Forty years ago, when an action which arose out of the Jameson Raid turned on this point, Mr Justice Kennedy put in a few sentences the view of the law which then prevailed; the view which has never been rejected by a higher court; the view that any claim arising out of a manifest crime is opposed to the public interest and invalid.

As recently as three years ago the Appeal Court seemed to affirm this view in a peculiar insurance case that sprang out of a solicitor's indemnity policy. The insured solicitor had been guilty of the old-fashioned offence of champerty, and for that wrong had paid damages in a civil action in which he was defendant. Having paid the damages, he claimed against the underwriters who had insured him against the consequences of professional negligence, explaining that he had somehow omitted to acquaint himself with the full theory of the law of champerty, and so committed the offence without knowing that he was committing an offence at all. "No!" said his underwriters. "We do not pay. Champerty is a grave sin and its full consequences must be borne by the sinner. It would be contrary to public policy to indemnify you, and it would ill become us as underwriters to offend against the fine old law of public policy just because you as solicitor have offended against the venerable law of champerty." It was a beautiful defence, and it won, Lord Justice Scrutton and his colleagues all holding that, on grounds of public policy, the civil consequences must rest nowhere but on the champertous attorney.

But now a difficulty crops up. Champerty, detestable as it undoubtedly is in the eyes of all right-minded lawyers, is not a thing that the general public worries very much about; and if every practising solicitor committed an act of champerty every week in the year the sleep of the proletariat would probably not be disturbed. But there are other offences that do obviously worry the public, and among them is the offence of driving a car dangerously on the highway and killing or injuring a pedestrian. It is all very well to say that an underwriter may not indemnify against the results of an act of champerty, but shall we also say that he may not indemnify against the results of an act of manslaughter? If a law-abiding citizen is knocked down and killed by a negligent or a drunken motorist, is his widow to go uncompensated because the knocking down was a crime? Is the law to stand thus—that a man injured by a non-criminal insured person must be paid by the insurer and a man injured by a criminal insured person must not? If so, what becomes of the Road Traffic Act and compulsory insurance? Is the law going to eat its own tail by declaring first that everybody in the public interest must insure and then that the insurer in the public interest must not pay?

These questions, which are certainly embarrassing, have twice been raised in the courts, each time before the Road Traffic Act was passed; but as this is a matter not touched on by the Act, the legal position is now what it was when these cases were tried. One case was decided by Mr Justice Bailhache and the other by Mr Justice Roche. The effect of their judgments was roughly this—that, while it is against public policy to pay claims arising out of an intentional crime, it is not against it to pay claims arising out of an unintentional crime. This distinction got the judges out of their immediate dilemma and enabled them to reach a practical decision which they were doubtless anxious

enough to come by; but it does not give all that the public may reasonably ask. It does not, for example, meet the case of the motorist who knowingly drives fast through a controlled area and in the process of breaking the law injures a pedestrian; and it does not meet this life insurance case in which the insured man, with the clearest possible intention, committed a crime in order to produce a claim on his policy. But the consequences of giving judgment against the plaintiff in this case might have been serious, since hundreds of thousands of loans are secured on the assignment of life policies, and if the policies are invalid the security goes. In the epidemic of Greek scuttling cases which followed the war the mortgagees lost their money because the rights of an assignee of a marine policy do not rise higher than those of the assured, and in this matter it is not easy to make a distinction between a marine and a life policy.

Mr Justice Swift reached the view that he expressed in his judgment and upheld the policy on these lines. If, he said in effect, a contract is entered into in contemplation of the commission of a felony; if a man insures his life with the fixed purpose of committing suicide—then it is contrary to public policy to pay. If payment on the policy of one man who has committed *felo-de-se* is likely to produce an epidemic of deliberate suicides, then it might at least be arguable that public policy stands in the way of payment. But such an epidemic is improbable, and the law does not demand the avoidance of a plain contract merely because one man has committed a crime in order to make the contract operative. Unless, therefore, this judgment is reversed, life insurance companies will have to pay for deliberate suicide and the security of lenders on life policies is not impaired.

But champerty still stands.

NOTES OF THE WEEK

A Shock for the Government.—On Friday of last week the Labour Party captured the Derby Parliamentary seat, vacated by Mr J. H. Thomas, from the Government. The Labour candidate, Mr P. J. Noel Baker, polled 28,419 votes against the 25,666 votes of the Government candidate, Major A. G. Church, in a total poll of barely more than 65 per cent., due to holidays and bad weather. The constituency, which had been represented by Mr J. H. Thomas for over twenty years, is mainly industrial. At the General Election last November the Government's majority was 12,670. Thus, the new Labour member effected a turnover of more than 15,000 votes. This bad blow to the Government cannot be ascribed to the circumstances of Mr J. H. Thomas's resignation; for it was widely observed in Derby that "after all, Mr Thomas was a Labour man." Nor can the Government palliate the result by pointing to the weakness of Conservatism in Derby, for the issue between Major Church and Mr Noel Baker lay between two Labour candidates, one "National" and the other "Party." It was a wet polling-day—which habitually favours the Government candidate, who can muster more cars. The verdict of Derby is inescapably clear. The election was "cleanly fought," on the Government candidate's testimony; but it was mainly fought on the Government's foreign policy; and Mr Noel Baker, an ex-professor of international relations, a penetrating writer and a lucid speaker on foreign affairs, made the very best of an occasion rendered favourable to his cause by the Government's successively timid, equivocal and disingenuous attitudes on foreign affairs. A piece of consummate oratory from Mr Lloyd George just before polling-day probably rallied many Liberals to the support of the Labour Party's candidate. Mr Noel Baker thus returns to the House after some years' absence. He will be an undoubted asset, and not only to his Party; and the Government benches will face a continual reminder of the cost of equivocation.

Mr Runciman on Trade.—A rather thin House of Commons, on Wednesday, heard a characteristically comprehensive and lucid exposition of the state of British trade from Mr Runciman. So far as internal recovery was concerned, the President of the Board of Trade had an inspiring story to tell, and made the most of it. Even the bare facts and figures of the past year's story are impressive—a rise of 440,000 in insured workers in employment, of 4 per cent. in postal receipts, 7 per cent. in bank clearances, 6 per cent. in retail sales and 7 per cent. in industrial production. The rate of revival has, if anything, been accelerated in recent months. To-day, as Mr Runciman pointed out, steel production is at record levels, the motor industry continues its prosperous career, demand for certain engineering products has over-run supplies, and even depressed industries like shipbuilding and

cotton have recently reported some improvement. When Mr Runciman turned to the foreign trade outlook, however, the tone of his speech changed, inevitably, from eulogy to apology. Although Britain's proportion of the world's export trade had increased, only a slight improvement had taken place in the volume of international trade itself. Mr Runciman's effort to minimise the significance of Britain's increased adverse balance of visible trade in the first half of this year was not completely convincing. It is true that the rise in imports is (as we show in a subsequent note on page 111) the result mainly of increased purchases of goods "for purposes of consumption by our industries." It is not, however, the rise in imports, but the recent stationary tendency of exports which is disquieting, and the President of the Board of Trade was not in a position to announce any new Government policy calculated to effect a fundamental change. All the twenty-four trade agreements concluded with foreign countries during the last three years, and all those at present under discussion, were bilateral. The Government would continue to base its policy on "equality of opportunity for all nations," and would cautiously use its power as a huge import market "to promote the sales of its goods abroad rather than to compel artificially enhanced purchases." But the Government would "take no undue risks," and would continue to insist on quotas *à l'Anglaise*—namely, those designed not as "additional means of protection," but as means "for the better regulation of production and marketing." It is difficult to see how, on these lines, any decisive increase in British export trade is to be brought about in the near future. And is the Government entirely satisfied that even the limited increase in our adverse trade balance, in recent months, would not have imposed some "strain on our exchanges," in the absence of a fortuitous and temporary influx of refugee French capital?

Credit Control in America.—The Board of Governors of the Federal Reserve System has at length decided to adopt the advice repeatedly offered to it by its own Advisory Council and by a large number of private bankers, and the minimum reserve requirements of all member banks of the system are to be increased by one-half on August 15th. The present requirements are: against time deposits, 3 per cent.; against demand deposits, in New York and Chicago, 13 per cent., in other Reserve Cities, 10 per cent. and elsewhere 7 per cent. The new rates will therefore be 4½, 19½, 15 and 10½ per cent. respectively. This action is the latest in a series of pointed hints, dropped by the authorities that they are anxious to regain control of the credit structure. The first was the ostentatious shifting of Treasury funds from member banks to the Reserve banks last January, which reduced excess reserves by some \$300 millions. The second was the raising of the

minimum cash margin required to be put up by Stock Exchange speculators from 40 per cent. to 55 per cent. in the same month. We discuss the probable extent of the reduction in excess reserves in a "Financial Note" on page 120. But there will still be at least \$1,400 millions of excess reserves, or sufficient, in theory, to expand the credit structure by 23 per cent. The change is not likely to incommode the member banks, as they are plentifully supplied with cash, severally as well as collectively. It is interesting to see the Federal Reserve authorities using some of the novel instruments of control put in their hands in recent years. The theory of changes in reserve requirements accepted in Washington is that they should be infrequent in occurrence and should serve the authorities as a fulcrum on which the lever of open market operations can be based. As a gesture, the change will doubtless be salutary. As an actual measure of control its effects are not likely to be startling, for with \$1,400 millions of excess reserves still remaining, the fulcrum is hardly yet in position. Moreover, so long as the Budget is unbalanced, no Board of Governors can set its hand to the lever of Government bond sales. In spite of this brave display of weapons, there is no new reason to believe that the Federal Reserve authorities would succeed in restraining a really forceful movement of expansion if it should get under way.

The Old Diplomacy.—What has been happening at Montreux illuminates, with a lurid light, the rapidity with which we are relapsing into the old "eve-of-1914" state of things in Europe. Every Power has been playing its traditional part: the Continental Powers and their satellites dividing into the two camps of France and Russia *versus* Germany; the Peninsular Italian power puts up its support for sale to the higher bidder; and the insular British Power tries, as of old, to run with the hare and hunt with the hounds, while stoutly declaring it favours neither party. The Admiralty seemed afraid that if they accorded the French and Russian *desiderata*, Germany would denounce the Anglo-German Naval Agreement; and the Foreign Office seemed determined to go as far as—or a point or two further than—British public opinion would stand in a wild-goose chase after the flitting shadow of an Anglo-Italian reconciliation. The issues at Montreux have crystallised into one concrete question: Is a general rule that, in wartime, the Straits may be closed to belligerents when Turkey is neutral, to be overridden in the case of belligerents who are acting in fulfilment of obligations arising, not merely under the League Covenant itself, but under treaties of mutual assistance that have already been contracted, or may hereafter be contracted, within the framework of the Covenant? On July 9th the Roumanian delegate, M. Titulescu, asked the British delegation why Great Britain, who at Geneva had just declared herself in favour of regional security pacts, was now seeking at Montreux to hamstring the pacts of this kind (which a number of European Powers had concluded, or might conclude, with one another) by refusing to agree that such pacts ought to carry with them the vital privilege of free passage through the Straits in wartime for the armed forces of the contracting parties. Turkey, France and Russia then countered by offering to give Turkey power to allow only the entry of allies' or colleagues' warships—a clear hint that the British have only succeeded in cementing Turkey and Russia firmly together. With this last solution the British delegation was instructed to concur on Wednesday. Thus Turkey will be able not only to refortify the Straits, but also to exclude warships of Powers not her allies or colleagues. Whether Italy will agree, or whether, if she disagrees, any notice will be taken of it, is still unsure. At any rate, after much British ado about nothing, the end of the first major revision of a treaty by consent is now in sight.

The Mediterranean.—In their strenuous endeavours to propitiate Italy, His Majesty's Government have now hit on two moves which have given Signor Mussolini satisfaction. As recorded in the preceding Note, they have been opposing, at the Montreux Conference, the

desiderata of France, Turkey, Russia and the Little Entente in the Straits. At the same time, they have set about reducing the British naval forces in the Mediterranean to "normal" strength. There are, however, at least two features in H.M.G.'s present naval policy that are still causing Mussolini displeasure. For one thing, British "normal" strength in the Mediterranean has been officially stated to mean, not our strength as it stood before the Mediterranean Fleet was reinforced last autumn, but a strength at some higher level which has not yet been divulged, but which is avowedly intended to be permanent. Secondly, Mr Eden has announced, first in the Commons and then again at Geneva, that we intend for the present to maintain those mutual undertakings of reciprocal naval assistance in the Mediterranean, in the event of an Italian attack, which we received last winter, and gave in return, when the tension between Italy and the other States-members of the League was at its height. The Mediterranean Powers with whom we have been in these relations are France, Yugoslavia, Greece and Turkey (Spain eluded our invitation to commit herself); and no doubt the three East Mediterranean countries would like to see these arrangements continue in force so long as the whole international situation remains as uncertain as it is. Although these mutual undertakings were originally entered into at Great Britain's instance and for the sake of her security, it is to-day not we so much as Turkey, Greece and Yugoslavia who are afraid of being selected as the next target for Italian aggression. On the other hand, France has now liquidated her own agreement with Great Britain for mutual assistance in the Mediterranean because she has now, apparently, no fear that Italy may wish to attack either France-in-Europe or even France-in-Africa. France is also eager to coax Italy back into aligning herself once more on the Stresa Front and re-assuming her obligations under the Locarno Pact on a non-reciprocal footing, in consideration of the breach of the Locarno Pact by Germany. With this aim, the French Government is reported to have given both Great Britain and Italy to understand that, in the French view, the Anglo-French mutual assistance agreement in the Mediterranean has lapsed automatically upon the decision of the States-members of the League to abandon the operation of Article XVI against Italy. The French position is, as usual, judicially unimpeachable, diplomatically unwise and morally ungenerous.

—and Locarno.—The French are in danger of falling between two stools. They have made a move which is inevitably disagreeable to Great Britain, without having taken the precaution of making sure in advance that, at the price of this further alienation of British feelings, they could prevail upon Mussolini to play their game. What French diplomacy was leading up to was an invitation to Italy, through the Belgian Government's mouth, to attend a meeting of the Locarno Powers, other than Germany, which was to be held at Brussels at the end of this month. This French approach to Italy, however, met with a rebuff. For last Saturday it was announced that Italy had parried the Belgian invitation by formulating two objections. First, while Italy declared herself ready to "make a concrete contribution towards the guaranteeing of peace," she announced at the same time that she was "compelled to take account of certain Mediterranean undertakings which hinder her participation in the work of international co-operation which she eagerly desires." In the second place, she expressed the opinion that it was advisable to invite Germany also to be represented at the preparatory phase of the forthcoming Locarno meeting. This second Italian objection is common sense; for a Locarno meeting without the participation of Germany threatens to be simply one more repetition of a gesture the futility of which ought by this time to have been impressed upon French minds by bitter experience. The Italian reply tells us that Italy does not intend to line up with France, Belgium and Great Britain in an anti-German pact which is almost certain to amount to nothing more than a parade-ground demonstration in which the performers are not expected to mean business. And the Italian reply may mean more than this. It may mean that, in the next act of the international

animal play, Italy intends (as we have suggested in another place) to hunt in the German pack. It is perhaps in this light that we must read the Italian objection to the Mediterranean mutual-assistance undertakings. For Mussolini's sensitiveness about other people's attempts to provide for their own security is significantly akin to Hitler's feelings on the same subject. The cloven hoof of the potential aggressor can always be detected when he paws the ground in indignation at the sight of a fence. Turkey, Greece and Yugoslavia—indeed, most of the European family—have good grounds for nervousness.

Free Speech.—Free speech is only negatively a right of the citizen. It is a right not to be interrupted or stopped in so speaking, unless an obstruction or a breach of the peace tends to be caused. The police have to decide on the conditions for free speech; and their decisions can be reviewed in the Courts—not, of course, very satisfactorily in courts of summary jurisdiction, where unpaid and untrained Justices of the Peace tend merely to confirm the contentions of the police. An interesting and dignified debate on free speech arose in the Commons on Friday of last week when the Home Office vote came up for discussion. Mr D. N. Pritt, K.C., asked for greater care in the exercise by the police of their powers to ban meetings on the ground of "technical" obstruction, greater assiduity in their powers to enter meetings where a breach of the peace may reasonably be expected to occur, and more impartiality in preventing violent attacks by organised "stewards" on any questioners at a meeting. It came, therefore, as rather a shock to some Members to hear the following:—

"Mr Pritt: Is it part of the efficiency of the Oxford City police force which we are allowed to criticise here, that a police officer refuses to apprehend identifiable persons alleged to be guilty of causing grievous bodily harm?"

The Deputy-Chairman: No; it is not."

Thus, the protection of the citizen's right could not really be discussed. Members from all Parties urged that Fascists' meetings in Jewish areas amounted to deliberate provocation, and adduced evidence of provocative Fascist printed matter. Sir John Simon, replying, endeavoured, with considerable skill and good-natured badinage, to assure the House "that to my knowledge there is no discrimination drawn at all" by the police in treatment of meetings held by organisations of various political colourings. The debate was held rigidly within the strait-waistcoat of that procedure which prevents any but London police activities from being discussed in the House of Commons.

Another Supplementary Estimate.—In the first three months after the Budget, Supplementary Estimates have been merrily mounting up. This week another Supplementary, this time to the Civil Estimates, was issued for £4,006,250, divided as follows: an extra £100,000 for the Secret Service; £857,000 for the Home Office; £2,930,900 for the Ministry of Agriculture; and £111,100 for buildings and palaces at home and abroad. The wind that blows money to the Secret Service bloweth where it listeth; we only hear the sound thereof—though this year it has blown "His Majesty's Foreign and other Secret Services" £100,000 more than the original £250,000. The Home Office Estimate now moves up from £1,019,259 to £1,876,259, in virtue of an extra £7,000 for the headquarters staff of the Office's Air Raid Precautions Department, and of £850,000 as "increased provision for the production of respirators," *alias* gas-masks. It is now reported that the Government will be able to distribute these masks gratis to the population of the most vulnerable areas—though these areas are not yet specified. Extra sums for Palestine and the Middle East are offset by Appropriations-in-aid. The Cattle Fund received only £1,069,000 in the Budget for the subsidy on cattle sold on or before June 30. The new Estimate gives it another £2,930,900, in virtue of the subsequent extension of the subsidy to October 31st, bringing the total so far this year

The MERCANTILE BANK of INDIA

to £3,999,900; but of the extra sum, £1,712,900 "is in respect of the period subsequent to October 31, 1936, and is subject to the necessary statutory authority being obtained." Again, of the extra sum £220,000 is needed to repay the Civil Contingencies Fund, which advanced that amount to the Ministry to enable the latter to make subsidy payments due in July. Supplementary Estimates so far this year total £33,972,212, against an allowance in the Budget of £25,600,000. Mr Chamberlain's "paper deficit" is thus already £8,372,212.

British Shipbuilding.—That the fruits of recovery are at last being shared by Britain's shipbuilding industry is revealed in *Lloyd's Register Shipbuilding Returns*, issued this week. The returns show that during the quarter ended June 30th construction was started in Great Britain and Ireland upon a mercantile tonnage of 282,322—an increase of 49,799 tons over the total for the March quarter. New tonnage launched, however, at 167,958 tons, showed a drop of 26,317 tons compared with the preceding quarter. Work on hand at the end of June was 6,371 tons in excess of the corresponding figure for March and 288,411 tons (or over 50 per cent.) above the level of a year ago. The June figure of 848,732 tons was the highest quarterly total recorded since December, 1930; it was equal to 43.5 per cent. of the mercantile tonnage under construction in the world as a whole, and exceeded the aggregate tonnage under construction in the four leading foreign countries. About 64,000 tons (7.6 per cent.) now being built in this country are intended for registration abroad or for sale. The 1,102,273 tons under construction abroad at the end of June was distributed among the principal countries as follows:—Germany, 365,179 tons; Japan, 156,811 tons; Holland, 148,005 tons; Sweden, 124,250 tons; United States, 90,275 tons; Denmark, 71,620 tons. It is, unfortunately, still true to say that British shipbuilding is far less active than in the pre-depression years. Failing positive action to loosen the shackles of international trade, the permanent outlook cannot be viewed with any approach to confidence.

Six Months' Overseas Trade.—A considerable increase in imports and re-exports, with continued stagnation in British exports, were features of our overseas trade during the first half of this year. The excess of imports over exports consequently showed a large increase, compared with the first six months of 1935. These tendencies were intensified in June, as the following tables disclose:—

OVERSEAS TRADE IN JUNE
(000's omitted)

	1934	1935	1936	Change between 1935 and 1936	%
Total imports	61,172	57,829	67,844	+ 9,815	+ 17.0
British exports	32,120	32,914	32,085	- 849	- 2.6
Re-exports	4,318	5,222	5,008	- 214	- 4.1
Total exports	36,438	38,136	37,073	- 1,063	- 2.8
Excess of imports over exports	24,734	19,693	30,771	+ 10,878	+ 55.2
Transshipments under bond	1,799	1,755	2,203	+ 448	+ 25.5

FIRST HALF-YEAR'S OVERSEAS TRADE
(000's omitted)

	1934	1935	1936	Change between 1935 and 1936	%
Total imports	362,186	359,371	402,801	+ 43,430	+ 12.1
British exports	189,704	206,475	207,890	+ 1,415	+ 0.7
Re-exports	29,016	28,944	32,407	+ 3,463	+ 12.4
Total exports	218,720	235,419	240,297	+ 4,878	+ 2.1
Excess of imports over exports	143,466	124,052	162,504	+ 38,452	+ 31.0
Transshipments under bond	11,921	11,753	12,755	+ 1,002	+ 8.5

The increase in imports this year, although most marked in raw materials, was, nevertheless, well spread between the principal categories. In Class I (Food, etc.) the only group showing a decline during the past half-year was meat, while in Class II (Raw Materials, etc.) the only fall was in imports of rubber. The drop in British exports for the six months is wholly accounted for by reduced shipments of raw materials, etc.—principally coal. The two remaining categories show a slight improvement, compared with the first half of 1935.

Trade by Commodities in June.—Changes in our main imports last month, as compared with the June figures in the last two years, may be seen in the table below:—

RETAINED IMPORTS Month of June				
Item and Measure	1934	1935	1936	
Wheat	8,441	8,670	10,302	
Beef and veal	1,201	1,087	1,030	
Mutton and lamb	677	613	667	
Sugar (unrefined)*	3,123	3,486	4,093	
Iron ore and scrap	368	420	581	
Raw cotton	874	767	1,267	
Sheep's and lambs' wool	261	220	446	
Flax, hemp and jute	18,842	19,965	16,408	
Crude petroleum*	55,313	67,855	71,547	
Hides, wet and dry	87	107	147	
Wood pulp*	198	170	240	
Rubber	371	230	240	
Unwrought copper*	23,759	30,410	25,648	
Pig-lead	20,831	25,360	23,807	
Tin				
Ore and concentrates*	3,140	2,344	2,487	
Blocks, ingots, slabs and bars	1,597	343		
Iron and steel manufactures	68	98	110	
Machinery	4,725	5,490	7,326	

* Total imports.

The Government's re-armament programme, *inter alia*, is reflected in an increase in imports of iron ore and scrap, of iron and steel manufactures and of machinery. The bulk of the increase was in imports from Canada, Germany and the United States. Purchases of non-ferrous metals, on the other hand, showed a decline. The jump in imports of raw cotton is largely accounted for by a 100 per cent. expansion in shipments from the United States, while New Zealand was primarily responsible for the rise in entries of wool. Imports of other textile fibres were smaller than a year ago, and in the case of rubber and of tin blocks, etc., re-exports actually exceeded imports last month. The most important British exports are given in the following table:—

BRITISH EXPORTS Month of June				
Item and Measure	1934	1935	1936	
Coal	3,557	3,062	2,574	
Iron and steel scrap	13,243	16,435	7,180	
Pig-iron and ferro-alloys	9,757	11,197	7,986	
Railway materials	26,852	10,747	28,720	
Total iron and steel manufactures	201,479	187,083	178,536	
Textile machinery	6,294	4,986	3,928	
Total machinery	28,897	30,956	27,559	
Cotton yarns	10,845	11,776	12,313	
Cotton piece-goods	148,778	138,516	129,634	
Wool tops	2,660	4,002	2,990	
Woolen tissues	2,231	2,941	3,068	
Worsted tissues	5,198	4,795	5,393	
Linen piece-goods	2,383	2,941	3,068	
Leather boots and shoes	6,811	5,938	6,223	
Leather	30,900	23,784	21,301	
Paper and cardboard	14,951	24,095	19,066	
Locomotives (complete and parts)	295	295	298	
Motor vehicles and chassis	470	617	2,205	
	4,124	5,372	6,434	

Continued depression in coal mining and in the cotton industry find expression in these figures. The slump in shipments of coal, which has hit South Wales so severely, is

largely accounted for by the application of "sanctions" against Italy; but, unfortunately, it cannot be assumed that their removal will restore this section of our export trade to normal. Italy is still owing British coal exporters large sums. The cotton industry still suffers from the shrinkage of overseas markets, but the woollen industry has more or less held its own. The iron and steel and engineering industries remain extremely active on home orders, and their exports are smaller than at this time last year.

Iron and Steel Production.—That activity in the British iron and steel industry was well maintained during June is revealed by the latest returns of the Iron and Steel Federation, issued this week. On a daily basis, the output of pig iron showed a slight increase last month, while production of steel was considerably larger than in May. In both cases output was heavily in excess of the corresponding figure for 1935. Imports declined between May and June, but remained above last year's corresponding figure. Exports were lower compared both with May, 1936, and with June, 1935:—

(In thousands of tons)				
Period	Production		Foreign Trade	
	Pig Iron	Steel Ingots and Castings	Total Imports	British Exports
1913—Monthly Average	855.0	638.6	185.9	414.1
1929 " "	832.4	603.0	235.2	364.9
1932 " "	297.8	438.5	132.7	157.4
1935 " "	344.7	585.3	90.9	160.2
1936 " "	498.2	738.3	113.9	187.8
1935 " "	535.5	820.2	96.0	197.7
1935—May	558.9	853.3	96.4	206.8
" June	529.3	770.0	98.2	187.1
" July	547.8	803.3	90.2	205.7
" August	543.4	796.9	74.8	203.5
" September	529.6	855.9	90.3	187.3
" October	544.3	907.3	101.2	224.0
" November	529.5	903.9	77.0	215.8
" December	550.3	911.6	113.0	190.3
1936—January	595.5	911.7	119.9	184.8
" February	584.7	938.5	123.2	167.8
" March	633.6	980.1	130.8	163.4
" April	629.8	984.2	120.8	177.5
" May	661.0	963.0	117.5	204.1
" June	644.1	965.9	110.6	173.5

In our export trade with the Empire a reduction in shipments to India and Canada, compared with a year ago, was roughly offset by an increase in business with the Union of South Africa, Australia and the Irish Free State. South Africa thus easily maintained its position as the most important overseas customer of the British iron and steel industry. Exports to a large number of foreign countries were lower this year than last, the decline being especially noticeable in the case of Russia and Italy. It remains to be seen how far business with Italy will be increased by the removal of "sanctions," which took effect this week.

Road Passenger Transport Fusions.—The dominating position in the road passenger transport industry held by the Tilling and British Automobile Traction group is being continually extended by absorptions of small local 'bus companies. A perusal of the lists of Traffic Commissioners' applications and decisions for the first five months of this year reveals that as many as forty-three independent 'bus companies have lost their identities and been merged into one or other of the Tilling and B.A.T. operating companies. During 1935, apparently, ninety-odd concerns were similarly absorbed, and every year since 1930, when the Road Traffic Act was passed the Traffic Commissioners appointed, there has been similar evidence of the disappearance of the small operator. The number of independent 'bus companies is still relatively large, but nearly all are operating on a small scale. According to the latest reports of the Traffic Commissioners, there were 4,692 operators owning less than five vehicles each at December 31, 1934, while a further 626 operators owned between five and nine vehicles each. At December 31, 1932, the number of operators with less than five vehicles was 5,180, while 660 operators had more than five but less than ten vehicles. In a couple of years, therefore, the total operators in the former category declined by 9½ per cent. and in the latter category by 6 per cent.

OVERSEAS CORRESPONDENCE

From our Correspondents in each centre

UNITED STATES

ROOSEVELT'S REPUBLICANS

BEFORE the Republican National Convention met at Cleveland most of its Eastern leaders had resigned themselves to see the Party control shift to the Middle West. They assumed that since the November election was lost in any event, it would be wise if the West bore all the blame. But when the Convention met the Easterners could not bring themselves to surrender. They were willing to bow to Governor Landon's nomination, and to the election of John D. M. Hamilton as national chairman. But they took command of the sub-committee on resolutions and proceeded to emasculate the Landon draft platform.

It is well to distinguish between Easterners. The Landon opponents in the Committee were remnants of the Old Guard who have dominated the Republican Party for a generation. Other Easterners, notably Eugene Meyer, formerly of the Federal Reserve Board and now publisher of the *Washington Post*, and Ogden Mills, former Secretary of the Treasury, were both behind Landon, though once close to Hoover; and, with the help of Eastern economists like Professor Kemmerer, of Princeton, they had helped prepare the monetary plank of the Landon draft platform. The Landon Easterners, however, were not on the sub-committee. So the fight waged was a genuine struggle for political power. It turned out to be the only significant struggle at the Convention. The Old Guard won in the sub-committee; it tore the platform to pieces, though precisely how much so will not be known until the full draft of the Landon proposals is published. The news was telephoned to Governor Landon in Topeka, who sent back word that he would decline the nomination unless given a platform he could accept. Further sessions of the sub-committee failed to unhorse the Old Guard, and the fight was transferred to the main committee. Even here Governor Landon did not obtain full satisfaction. And in the end he had to assert himself on the three points of his telegram (constitutional amendment, civil service and the gold standard) read to the Convention by Mr Hamilton before proceeding with the nomination speech. These being the circumstances, it is not surprising that the platform, though more liberal than any adopted by Republicans since the Bull Moose days, is composite rather than synthetic. On the very issues where precision and clarity are essential it propounds contradictions, such as the declarations on farm policy, tariff negotiations, and the European debts.

Points on which Governor Landon compromised include foreign affairs and the scope of social legislation. His original draft on foreign affairs, while containing a pledge against foreign commitments, spoke of co-operation. And this has been replaced by the specific refusal to join the League of Nations or adhere to the World Court. On social legislation he was prepared to amend the constitution, if necessary, to give the Federal Government as well as the States the right to legislate on working conditions, hours and wages of men, women and children.

Governor Landon emerged from the Convention as a distinct personality after having been irritatingly obscure during the entire pre-Convention period. It may be a help to him if the country comes to recognise that personally he stands to the Left of the platform, for in four years he may have less trouble to get his planks written as he wants them. But he may lose Republican Liberals who have been estranged by Hearst's support of him, and who will not be reassured to learn that Ogden Mills is in the inner circle of advisers.

THE DEMOCRATS AT PHILADELPHIA

The surprise candidacy of Congressman Lemke for the Presidency cast a shadow over the Democratic National Convention in Philadelphia which expert stage manage-

ment could not dispel. Mr Lemke, joint author with Senator Frazier of an inflationary farm mortgage Bill, is not himself formidable. But, backed by Father Coughlin's Union for Social Justice, his party takes on substance. If he should have the backing of the Townsend movement as well, the election may go to the Republican candidate, Landon. Dr. Townsend has been in conference with Father Coughlin; and that Louisiana rabble-rouser, Dr. Gerald L. K. Smith, leader of the late Huey Long's Share-the-Wealth movement, is trying to bring Lemke, Coughlin, Townsend and himself into effective fusion. That would bring all the scattered parties but the Socialists, Communists and prohibitionists under one control; and no one is wise enough at this moment to foretell the consequences. The Lemke party, assuming that this four-way merger can be effected, could win few victories; but it would have mass support in many districts. Presumably it would take many more votes from the Democrats than the Republicans; and by setting up third-party candidates, or by endorsing Republicans, it could ensure a Republican victory.

If Mr Farley and other Democratic leaders at Philadelphia were worried they did not show it. The platform contained remarkably few pledges, as though Roosevelt had learned the political safety of eschewing the explicit. It was not even a platform, but a two-way escalator on which the President can move up or down without losing his footing. The acceptance speech, too, was not born of hard thinking but of honest liberal emotion. It contained no attack on the Republicans in general, or on Governor Landon in particular. It is said the President omitted both because he had resented the prediction of Mr Farley that this was to be a "dirty" campaign. At any rate, he started it off on a high note; and the largest political gathering in American history, an impressive gathering of 110,000, was stirred.

The Democratic Convention was without even such vestiges of reality as could be noticed in the Republican meeting in Cleveland. The one real conflict, over the abrogation of the rule requiring a two-thirds vote for nomination, was privately settled. The proceedings were being broadcast, and the party did not care to carry its differences to the millions of listening voters. Radio has certainly ended the institution of the political convention without as yet creating a tolerable substitute. And neither delegates, nor the fourteen thousand onlookers, showed any desire to listen to speeches. Throughout the proceedings the vast auditorium was humming with conversation. Those in attendance had come to shout, demonstrate and visit. Symbolic of the mood was one episode, when the invocation was being begun by a golden-voiced clergyman, who began: "O Lord Our God!" and far back in the hall a single delegate could be heard answering "Whoopee!" Another episode was still more significant. Governor Lehman, of New York, came to the Convention to make an important speech on social security. Because he is considered essential to a party victory in New York State, and had declined to run for re-election, his appearance was the signal for a fifteen-minute demonstration, an unusual tribute to a Governor at a national convention. But when he launched on his speech the great crowd would not listen. He asked the chairman to restore order. The chairman chid the audience, which then resumed conversation. A second time he scolded the audience. Again Mr Lehman had a few seconds' quiet; and then the drone of conversation nearly drowned him out. The Governor was piqued. He shouted into the microphone; and the drone of conversation merely rose. After a third appeal from the chairman the speech was duly finished, for the radio audience alone. This may seem like discourtesy to the speaker. But it only reveals that conventions have ceased to be. They are no longer deliberative bodies.

Only on broad lines can one speak of Democratic policy as distinct from Republican. It favours amendment of the Constitution, "if necessary," to enable the enactment of

Federal and State social legislation. The Republican platform is silent on this point; and Governor Landon's telegram spoke of a Constitutional amendment—also "if necessary"—giving this power only to States. The Democratic farm, tariff and monetary pronouncements are less contradictory than those in the Republican platform, and more liberal. The Republicans will reduce expenditure and thus balance the Budget; the Democrats will continue to spend for relief under Federal supervision. On foreign affairs the Democrats have taken up as isolationist a stand as their rivals, without specifying that the United States is to remain out of the League and the World Court. Thus the offer of co-operation is omitted from both major platforms.

WASHINGTON, July 2.

GOVERNMENT AND THE DEFICIT

The Government's deficits are not solely a liability of the Treasury; they are also a political liability to Candidate Roosevelt. No single feature of the activities of the Administration occasions so much denunciation, and the same people who urge increased outlay for some specific purpose are caustic in their comments on the debt. Consequently, when the fiscal year closed on June 30th with a gross deficit of \$4,763.8 millions, a gross Federal debt of \$33,778.5, and with official calculations that the session of Congress just ended appropriated nearly \$10,000 millions in all, more statistics were heaped beneath the oratorical fire. This deficit is much the largest of the Roosevelt Administration; and the total allocations of \$8,879.7 millions are its largest expenditure. These facts are sufficient proof to many observers that, despite a considerable measure of recovery, public finance is unsafe in the hands of the present Administration.

The opposing point of view is that the Administration is making satisfactory progress towards a balanced budget, and that the figures for the fiscal year just closed are distorted by the bonus payments ordered by Congress over the Presidential veto. These constitute a non-recurring outlay. When this amount is deducted, and the provision for sinking fund subtracted, the deficit for the last fiscal year is \$2,587 millions, which compares with \$3,002 millions in the preceding period, and \$3,630 millions in the fiscal year 1934. This declining trend results from rapidly mounting revenue, due to improving business and higher tax rates. Expenditure during the last three fiscal years, after deducting bonus payments and sinking fund, was \$6,704 millions, \$6,802 millions and \$6,745 millions for the fiscal years 1936, 1935 and 1934, respectively. Receipts should rise substantially during the new fiscal year just beginning, both owing to better business and to the new Revenue Act, while expenditure is not expected to be very much changed. A substantially smaller deficit is anticipated; but not even the hopeful can foresee debt reduction for a long time to come.

LIQUIDITY IN BUSINESS

There has been a great increase in the working capital of business resulting from the operations for financing these deficits. The large imports of gold have contributed to the same development. Bank deposits created by either process pass directly, or after a few transfers, into business funds to a considerable extent; and the current assets of many concerns are accordingly expanded. The possession of this amount of cash has made short-term borrowing almost unnecessary; thus, current liabilities have not substantially increased. These facts are demonstrated by the bank returns, which show deposits not far below their "all-time high" (demand deposits are at new peaks), and commercial and other loans not far from their "lows." A perusal of business reports and financial statements shows the same facts. The rising volume of business has not therefore resulted in commensurate demands upon the banks for credit. This changed position in the working capital of business contrasts strongly with the depression period, one of the most striking characteristics of which was the shortage of working capital.

The total loans to customers of weekly reporting member banks in 101 leading cities averaged \$6,967 millions in May of this year, as compared with \$6,715 millions a year

earlier, while demand deposits of all others than banks and the Federal Government rose from \$13,090 millions in May, 1935, to \$15,220 millions in May, 1936. Reserves with the Federal Reserve Banks rose by \$757 millions from May, 1935, to May, 1936, and investments increased by \$1,746 millions during the same period. Instalment and personal loans have increased, rising by something like 30 per cent. from the end of 1934 to the end of 1935, on the basis of the very scattered figures available; but these loans are chiefly made by institutions outside the banking system. The combined result of deficit financing, gold imports and lending by non-banking financial institutions has thus been virtually to crowd the banks out of the lending field.

The effects of the Securities Act's margin regulations are still another factor limiting the amount of bank lending. The present rules call for maintenance of a 55 per cent. margin in brokerage accounts, and the accounts become "restricted" when the collateral is below that ratio. A study made by the New York Stock Exchange of the condition of its members' customers accounts at the end of March, April and May discloses that the number of restricted accounts ranged between 29 per cent. and 39.5 per cent. of the total; these figures were increased to 40.6 and 49.3 if borderline accounts were included. All activity in restricted accounts ceases. In addition to these accounts, in which business is stopped, the very size of the required equity curtails the amount of possible borrowing on securities.

NEW YORK, July 7.

FRANCE

THE NEW SHORT-TERM LOAN

ON Friday of last week the Government opened the lists of their offer of new short-term Treasury bonds. The lists seem likely to remain open for many weeks. The offer is, in fact, addressed not only to the credit institution and the big capitalist, but also—perhaps principally—to the small saver. The offer creates small denominations of 200 francs, and larger slices of 500, 1,000, 10,000 and 100,000 francs. There are two series of bonds: six-months and one-year bonds. The former bear 3½ per cent. interest, the latter 4 per cent. Interest is payable in advance, so that the subscription price for a 1,000-franc bond comes out at 982.50 francs for the six-months series and at 960 francs for the one-year series. The yield on the bonds is exempt from all taxes, including income tax. Moreover, the Bank of France has undertaken to discount these bonds without limit or restriction, as soon as they have no more than three months to run (the Bank's rate of interest has just been further reduced to 3 per cent.). In fact, the Bank is already liberally discounting public securities; but it is now officially committed to do so. Moreover, the new Governor, M. Labeysrie, declares he is resolved to place the Bank's credit entirely at the disposal of the Government's financial policy, and to lend his most active collaboration in their policy of breaking the vicious circle of monetary stringency.

The total of the loan is not fixed. The Treasury is empowered to raise Frs. 10,000 millions at short term, either by borrowing them from the Bank or by inviting them from the public. Actually it has already borrowed Frs. 1,500 millions from the Bank; but the more bonds it can place with the public the less it will need to have recourse to the Bank.

GOVERNMENT AND LABOUR CONFLICTS

Both for the success of the new loan and for the favourable development of the Popular Front Government's policy, it is imperative that the workers' agitation should be once and for all settled. There are now only a few tens of thousands of "voluntary out-of-works," compared with an estimate of more than a million a little while ago. A few medium-sized factories and a few farms are still occupied by "stay-in" strikers. The Senate had recommended the Government to oppose resolutely any further occupation of factories or farms, and M. Salengro, the Minister of Labour, replied that the Government would put an end to such occupation "by all appropriate means." The Government's

primary means are negotiation and persuasion. The Communists and the majority of Socialists are solidly hostile against any eventual employment of force to stop the movement. It is significant that the Communists agree with the Government in opposing any new occupation of factories or farms, and even in hastening the finish of the current occupations. M. Thorez, secretary of the Communist Party, has given the word of command: "You must know how to end a strike." The reason for the Communists' attitude seems dictated by the necessity to evolve tactics of appeasement for the evident disquiet of the middle classes and peasants; for the Communists have only 183,000 adherents, of whom 21,000 are in Paris. The Party's strong organisation, and not the number of its members, explains its influence over the workers to-day.

THE RAILWAYS' DEFICIT

The 1935 deficit of the big French railway systems rose by Frs. 442 millions over the 1934 figure to Frs. 4,012 millions. This is the biggest deficit since 1930:—

Year	Frs. millions	Year	Frs. millions
1930	1,297	1933	3,978
1931	2,624	1934	3,570
1932	3,681	1935	4,012
Six years' total	...	Frs. 19,162 millions	

If account be taken of former deficits (*déficits arriérés*), the total deficit of the railway systems' combined funds at December 31st last reached Frs. 21,776 millions. Consequently on the new social legislation, now voted (increased wages, 40-hour week, paid holidays, etc.), the deficit on the current year's working will prove still bigger. Already, in default of any surprisingly favourable recovery in the general business situation, the possibility of a shortfall of Frs. 6,000 millions in revenue, compared with expenditure, is being canvassed.

PARIS, July 15.

GERMANY

AGREEMENT BETWEEN BERLIN AND VIENNA

THE agreement between the Governments of Berlin and Vienna, it may be reasonably expected, will terminate overt German attempts to interfere in Austrian affairs and end those platform recriminations and Press attacks for which the two Governments have been directly responsible. It is not likely to solve the so-called German-Austrian question, which consists in a German desire for fusion. So far the realisation of this ambition has been impeded, rather than furthered, by Nazi actions.

In both of the above respects the precedent of the Berlin-Warsaw agreement will probably apply. Except for minor complaints, the relations between Germany and Poland have been good since the agreement was concluded—so good that Poland is sometimes incongruously included in an active German diplomatic group. The Reich Government has entirely stopped the vilification of Poland by the Press, which was the practice three years ago. But the German-Polish question has not been settled. It has only been shelved. Germany has not admitted that the Corridor, the Danzig regime and the Silesian partition are definitive solutions. Fusion with Austria continues to be a German national aim. By the new agreement, Germany merely recognises that the aim cannot be attained without Austria's consent, and also without radical changes in the diplomatic constitution of Europe. The new self-denying ordinance implicitly admits this condition by beginning with a recognition of the independence—"full sovereignty"—of Austria. As Austria's independence already exists in fact and by virtue of treaty, and as it has never been formally impugned even by Germany, the recognition questions rather than confirms. The third paragraph of the agreement, by placing on Austria somewhat obscure obligations, sounds the same note. It was superfluous for Austria to admit such an obvious fact as her Germanism. This paragraph therefore means nothing, unless it means that Austria will work in foreign policy with Germany, at least to the extent allowed by the diplomatic instruments mentioned at the end of the paragraph.

GIVE HER AN INCOME FOR LIFE

The Widow's Pension Policy provides an income in the event of your death before or after retirement age. If you provide your widow with an Income by means of this policy you can say with certainty that the financial future of your family is secure. To provide an adequate income by means of the interest on a capital sum would require a greater amount than the average man can accumulate, but by means of the Widow's Pension Policy you can assure quite a substantial Income for a moderate outlay. If at 60 or 65 you feel the protection is no longer required you are assured of the return of the greater part of your premiums. Here is a simple means whereby you can make sure that your widow will never want. Obtain a detailed illustration showing benefits and cost applicable to your own case by quoting your age next birthday to the

LEGAL & GENERAL ASSURANCE SOCIETY LTD.

Head Office: 10 Fleet Street, London, E.C.4.

General Manager: W. A. WORKMAN, F.I.A.

Established 1836.

Assets exceed £36,000,000

Naturally, Germans surmise that the agreement may change the whole international situation. There are even speculations about a German-Austrian-Italian-Polish bloc. Berlin's relations with Rome have much improved. It is noteworthy that German neutrality in the Ethiopian dispute, which until lately was represented to be absolute, is now being represented as an outcome of an "understanding" of Italy's policy which the League lacked. The Berlin-Vienna agreement is an expression of waxing German self-confidence. By means of it Germany has foiled the new Locarno Conference, in the narrow frame which was originally designed for it; and has contributed to the British confusion caused by, and the cause of, the unlucky questionnaire. That the British questionnaire initiative is as dead as the British protests against Germany's re-armament and against her denunciation of the Locarno treaty there can be little doubt. The Berlin Press is informed that, "essentially, London now demands from Germany only a friendly acknowledgment of the Note, whereby the friendly form would merely express (Germany's) rejection of the contents."

It is assumed that the agreement will improve Austro-German economic relations. Too much must not be expected from the impending removal of the ban on German visits to Austria. For financial reasons it is almost impossible for Germans to visit foreign countries in any considerable number, with the exceptions of Italy and Switzerland, with which special exchange agreements exist. Trade between Germany and Austria, after sharing in the general foreign trade decline, has of late been relatively stable; and there has been no revival comparable to that in German trade with countries further to the South and East. In 1929, the year of highest German foreign trade turnover and of exports, imports from Austria were Rm. 202 millions, exports to Austria Rm. 441 millions. In 1933 German imports from Austria were Rm. 58 millions, exports to Austria were Rm. 121 millions; in 1935 Rm. 71 millions and Rm. 108 millions respectively. Since mid-1935, German exports to Austria have revived. The decline in the once heavily active German balance of trade

with Austria is connected with the clearing settlement of August, 1934, and with the increased German demand for European wood, yarns, leather, livestock and dairy products. The balance of payments with Austria differs materially from the balance of trade, owing to Germany's import of electrical current, to railway accounts and other factors. There has even been a slight clearing balance in favour of Austria, which Germany hopes to settle by increasing her exports to Austria. At present her chief exports to Austria are coal, coke, ironwares, machines, electro-technical goods, and chemicals and dyes. Some consumption goods are also exported, but in the way of an increase of such exports stand protection of Austrian industry and Czechoslovak competition, helped by preferential duties.

BUSINESS IMPROVING

Railway goods traffic is increasing at a swifter pace than at this season of the past three years. The first five months brought an increase in receipts, compared with 1935, of Rm. 142 millions; and yielded an operating surplus about sufficient to cover the contribution to the Reich and other fixed charges. Railway finance has greatly recovered. At the bottom of the depression receipts even failed to cover operating expenditure.

The steel market is active; and exports in May increased. Production by the Steel Trust, however, in the second quarter of this year shows only a slight increase over the first quarter. It is assumed that the International Cartel will again take up the question of export prices of rolling-mill products. The president of the Vereinigte Stahlwerke, Herr Poensgen, states that after conclusion of the agreements with Great Britain, Poland and South Africa, 90 per cent. of the world's steel export is cartelised; and that the average price has been raised by £1 (gold) per ton. The Cartel must, however, still take American, Japanese and Swedish outside competition into account.

The provisional crops report shows substantial increases in the yield per unit of area, in particular of winter rye. All of these yields are higher than in 1935, and are also above the 1930-35 average. Estimated crops of 1936, compared with the final return for 1935, are:—

	1935	1936
	(Millions of tons)	
Rye	7.48	8.42
Wheat	4.67	4.92
Barley	3.39	3.63
Oats	5.38	5.69

The total bread-grains crop is estimated at 13,430,000 tons, against 12,270,000 tons in 1935 (both without Saar); total cereals (whole Reich), 23,830,000 tons, against 22,030,000 tons.

BERLIN, July 15.

DENMARK

POLITICS AND TRADE TREATIES

DEVELOPMENTS at Geneva are being closely followed in this country; and it is with profound disappointment that the world's gradual return to the Machiavellian maxim of "Might before Right" is observed. Following the British Government's initiative in abandoning sanctions it is expected that a trade agreement will be concluded with Italy, whereby liquidation of the frozen Danish credits will be obtained.

The trade treaty with Great Britain which recently expired has been prolonged until further notice, with a few minor changes. An important new feature, however, will be introduced on August 1st, viz., certificates of origin must accompany practically all imports from Great Britain which are of British origin. Only certificates issued and signed either by the Federation of British Industries, or by a Chamber of Commerce belonging to the Association of British Chambers of Commerce, will be accepted.

The elections to the Landsting (Upper House) are to take place on September 15th. It is expected that the Conservatives will emphasise the necessity for improved and increased defence forces on land, on sea and in the air. The voluntary Air Defence League has made arrangements

for a big demonstration on July 19th. Members of the league, and police and ambulance sections will show what to do during an aerial gas bombardment. A few years ago anything like this would not have met with the slightest response from the Danish public.

Danish agricultural exports for the first six months of 1936 have been a little better than for the corresponding period of last year. The reason is not any relaxation of import restrictions in foreign countries, but the general rise of prices. During the first five months of 1936 the total value of Danish agricultural exports has been 397 million kroner, against 354 million kroner for the corresponding period of last year—an increase of 43 million kroner. While the trade agreement with Germany has opened up a market for Danish livestock, conditions in Denmark's secondary markets are still unsatisfactory; and on the whole the exports to these markets have decreased. Bacon exports to Great Britain are 10 per cent. lower than last year, but exports of eggs are 11 per cent. up and the butter market is considerably better. The rise in the prices paid in Great Britain for Danish agricultural produce has been as follows, each year compared with the preceding:—

	Rise in Prices paid in 1935	1936
For Danish butter, per 100 kg.	Kr. 11.80	Kr. 23.13
For Danish bacon, per 100 kg.	" 21.21	" 25.10
For Danish eggs, per 100 score	" 1.97	" 26.86

A certain improvement in Danish shipping was noticed in 1935, and has continued during 1936. The amount of freight earned increased by about 10 million kroner, and has for the last three years been as follows:—

	Total Amount of Freight earned by Danish Shipping (In million kroner)
1933	abt. 181
1934	" 191
1935	" 201

The increase is not caused by rising freight rates, but by improved operation of the fleet. The financial result is therefore not yet satisfactory. About two-thirds of the freights have been earned abroad. The small profits made have in most cases been used for consolidation and renewal. Only in a few cases has a modest dividend been paid.

The number of unemployed at the end of June was down to 46,789, or 11.3 per cent. of the total number of employed. This favourable position, however, is due to increased trade and is in the manufacturing industries only; for the activity of the building industries is below that of last year. At present the outlook for this country is quite satisfactory, as the growing purchasing power of a number of foreign countries will mean better marketing possibilities for Danish agricultural produce; and despite prevailing trade restrictions, Danish shipping is finding more opportunity of employment and certain Danish industries better markets.

COPENHAGEN, July 13.

CANADA

END OF SESSION

The prorogation of the Federal Parliament was delayed until June 23rd owing to wrangles between the Commons and the Senate about the latter's amendments. Ministers have no reason to be dissatisfied with the fruits of their first session; for they secured endorsement of their trade agreement with the United States, and contrived to get legislative authority for the changes which they regarded as necessary for the management or control of the Bank of Canada, the Canadian Radio Commission, the Canadian National railway system, and the administration of the chief ports, which has been brought under central authority. Another useful measure passed consolidates a number of departments under two new Ministries, styled "Transport" and "Mines and Resources." The Senate, with a Conservative majority, remained obdurate about the provision in the projected constitutional amendments, which proposed to confer powers of indirect taxation on the Provinces; and the Ministry declined to proceed with the resolution thus amended. But in the absence

of legal authority for the proposed Loan Councils, Mr Dunning announced after the close of the session that negotiations were afoot with the Provinces for a national financial committee on a voluntary basis. It is to be equipped with a secretariat and meet at least twice per annum; and its functions will be to collect information about public finances and taxation, to afford a clearing-house for the exchange of data about such problems as overlapping taxation, methods of tax collection, the placement of bond issues, etc.

A few days before the session ended the fate of most of the "New Deal" programme of the Bennett Ministry was thrown into the melting pot by the delivery of a series of verdicts of the Supreme Court upon the eight special references submitted to it by the King Ministry about various social and industrial reform measures of its predecessor. The six judges who heard the arguments by constitutional lawyers proved to have been sharply divided in their views, and only on one reference were they completely unanimous. The Court upheld the Farmers' Creditors' Arrangement Act, the amendment to the Criminal Code designed to check commercial malpractices, and part of the Bill establishing the Federal Trade and Industry Commission. They divided equally about three laws ordaining a minimum wage scale, a limitation of hours of work, and a weekly day of rest in industrial enterprise; but they pronounced *ultra vires* the two most important items in the Bennett programme: the Employment and Social Insurance Act, and the Natural Products Marketing Act. The former is not in operation, but the latter is; and as minorities object to compulsory pooling schemes which have been started under it, considerable confusion may result. However, the verdicts, which are merely *obiter dicta* of the Court, will all be appealed to the Privy Council, either by the Federal or some provincial Government, and its judgments cannot be given until the autumn.

THE ALBERTA EXPERIMENT

In Alberta the Aberhart Ministry has begun to issue its "Alberta prosperity certificates" in \$1 and \$5 denominations, paying them to men engaged on public works. Each certificate is redeemable in cash at the end of two years, by which time it will bear stamps, bought from the Government, to the amount of its own face value plus 4 per cent., for on every \$1 scrip a one-cent stamp is to be affixed every week during the two years. The Government will thus collect \$1.04 on it, using the dollar for redemption purposes and the four cents for administrative expenses. This scheme is not "Social Credit" in any sense, but is merely a method of spending money in anticipation of tax receipts, like the "Papen" scheme in Germany before the advent of Hitler. The *Winnipeg Free Press* describes it as a rather troublesome alternative to borrowing from a bank. Meanwhile, the wholesalers' and manufacturers' section of Edmonton Chamber of Commerce, and the Alberta branch of the Canadian Manufacturers' Association, have notified the 12,000 retail merchants of Alberta that they will be unable to accept scrip. While some country storekeepers may accept it, the business community as a whole will have nothing to do with it. The protective committee which is looking after the interests of Alberta's bondholders have advised the latter not to accept the reduced rate of interest now offered by the Aberhart Ministry; and it is reported that comparatively few coupons are being presented for payment of such interest as is due.

DROUGHT AND BUSINESS

Once more serious anxiety prevails about the all-important Western grain crop. The recurrence of drought conditions over a wide area for the sixth year in succession makes illusory the hopes, raised by more generous rainfall last autumn and early spring, that the drought cycle had at last been broken. The latest telegraphic crop survey of the Bureau of Statistics asserts that, as the result of abnormally high temperatures and negligible precipitation (except in east-central Saskatchewan and north-western Alberta) there has been in the past week a general and serious reduction in crop prospects in the prairie provinces. As the drought conditions extend to the spring wheat belt of the United States, grain prices have been moving sharply upward in Winnipeg.

General business conditions after a stationary spell are now showing considerable improvement, and the economic index of the Bureau of Statistics, by rising 2.6 points to 108.5 for the week ending June 26th, showed a gain for the third consecutive week. It is now almost ten points above the figure for the parallel week in 1935: 98.7. The following are the data about three important components of the index:—

Week ended	Car-loadings	Wholesale Prices	Bank Clearings	General Index
June 22, 1935 ...	72.2	71.5	89.5	98.7
June 20, 1936 ...	72.5	72.4	105.6	108.5
June 13, 1936 ...	71.9	72.2	95.2	105.9

There has been an encouraging gain in employment, and the employment index of the Bureau of Statistics stood on June 1st at 102, compared with 99.5 on May 1st and 97.6 and 96.6 on June 1, 1935 and 1934, respectively. New construction is picking up; and the value of new contracts awarded in June, \$20,803,400, represents an advance of 12 per cent. on the figure for June, 1935. The majority of factories are reasonably well employed and the mining industry continues to expand its activities and output.

OTTAWA, July 1.

LETTER TO THE EDITOR

PROFESSOR A. L. BOWLEY

TO THE EDITOR OF THE ECONOMIST

SIR,—It is proposed to mark the retirement of Professor A. L. Bowley from the Chair of Statistics in the University of London by a recognition in some degree commensurate with his distinguished services.

Professor Bowley has not only given to the London School of Economics, since its beginning in 1895, years of brilliant and devoted teaching; he has at the same time made contributions to social welfare that have been recognised throughout the world, by universities, by learned societies and by governments. His published writings have given him an eminence all his own; and his kindness and geniality have endeared him to generations of students and to all who have had the good fortune to work with him. It is felt that these and many others will welcome an opportunity to share in an expression of admiration for the work he has done.

It is proposed that this tribute of esteem shall include the following:

(1) A portrait of Professor Bowley to be hung in the London School of Economics.

(2) A scholarship or prize tenable in the University of London (at the London School of Economics) to assist a student pursuing undergraduate or postgraduate study in economic or social statistics.

We invite your co-operation in the effort to make a worthy tribute possible.

It is proposed to furnish Professor Bowley with a complete list of all subscribers to the Fund. For this reason we are naturally anxious that it should be as large as possible.

Sir William Beveridge has agreed to act as Treasurer of the Fund; and all subscriptions should be addressed to him at the London School of Economics, Houghton Street, Aldwych, W.C.2, England.

We are, Sir,

Your obedient servants,

(Signed) KENNETH.

J. M. KEYNES.

D. H. MACGREGOR.

W. R. SCOTT.

JOSIAH STAMP.

Investment For Appreciation

by L. L. B. ANGLAS

Author of *Coming Rise in Gold Shares* (Feb. 1931); *Coming English Boom* (Sept. 1931); *Coming Rise in Wall Street* (Apr. 1933); *Coming American Boom* (Aug. 1934), etc., etc.

A method of forecasting and exploiting industrial cycles. Do not wait for a crisis to read this best seller. Descriptive folder available. Macmillan & Co. Ltd., St. Martin's St., London. Price 61 net.

BOOKS AND PUBLICATIONS

WISE MEN AND THEIR MONEY

HERE are four books* which, from widely different viewpoints, challenge the investor to consider his tactics—and even his principles.

Major Angas elaborates his earlier work into a rigid mathematical investment system, designed to offer the alluring prospect of 30 per cent. capital appreciation each year. Dr. Shaffner, on the other hand, is a sceptic over investment; he argues effectively that the so-called legal safety of the debenture holder has proved illusory and pours scorn on the past history of foreign investment in the United States. For him, the trade cycle is a plague upon investors; for Major Angas, it provides the essential context within which capital may be multiplied fourteen times in a decade. "Securitas"—the *nom de plume* of the financial editor of *Time and Tide*—draws on his published material to show that straightforward inference from broad economic movements has given his followers speculative investment opportunities in plenty during the past five years. He writes with breezy good sense and without attempting to explore the subtleties of investment systems. But he makes many suggestions which the speculative investor might well incorporate in his general attitude to the market. The fourth book is not very substantial, but might profitably be read by housemasters and country rectors.

Major Angas's book is certainly the most challenging of the four. His object is to convert the precarious art of investment into an applied science. His system is in part inductive, based on cyclical and intermediate market fluctuations, and in part deductive, as far as it relies upon simple mathematical truisms. Its exploitation, however, demands an intellectual and moral equipment of no mean order, both from the operator and from his broker. The first requirement is a complete understanding of cyclical fluctuations in industry and finance. (The description of these economic phases, incidentally, is more effective than the author's analysis of their causes.) But the application of this knowledge to changes in security prices must be constantly controlled by reference to the market's own movements. Here the author introduces his graphical laws of probability, urging that while graphs do not tell the investor *why* to operate they do show *when* to operate. As Mr Keynes has recently pointed out, it is futile to invest rationally at times when the irrational behaviour of the majority of speculators swings prices widely from the theoretical norm. Investors must therefore await the market's own signal before they begin to operate their cyclical or intermediate policies. They must, further, distribute their risks by a carefully planned "staking" system, designed to avoid large individual losses and to conserve some paper profits on the rise. This policy requires the placing of rigid "stop loss" orders, which are almost as unfamiliar to brokers as to investors on this side of the Atlantic. The mathematical plan of campaign—once the shares are chosen—is clearly essential to the system. It is not complicated in essence, but for a sizable portfolio—and Major Angas writes for the speculator with means—the detailed work would demand full-time attention.

Investors who suspect charts and have no use for systems will still find much market wisdom in this book. How many could claim the thirteen virtues—and absolution from the seven deadly vices—which Major Angas lists? On the manipulation of share prices, the dangers of "boom markets" and sharp company practices, this prophet of rational speculation is moved to an almost puritanical denunciation. In this respect he shares the conviction of Dr. Shaffner who, by drawing on evidence submitted to United States Senate Committees, shows that recent tendencies in investment finance and in the judicial interpretation of the bondholder's position have added to the investment risks

inseparable from a dynamic world. This book gives part of the long-term analysis of investment risks which is so conspicuously absent from Major Angas's discussion. It ends with an interrogative chapter entitled "Are there any investment experts?" Readers of these books will freely admit that such counsellors do exist although, like the oracles of old, they seem to raise as many doubts as they answer.

SHORTER NOTICE

"Walks and Talks Abroad." By Sir Arnold Wilson. Oxford University Press. 1936. 292 pages.

"This book," the author says, "chronicles things seen and heard between January, 1934, and April, 1936, and includes visits to Belgium, France, Germany and Italy." "My aim," he adds, "has been to present a faithful though inevitably superficial cross-section, varied by occasional reflections of my own, of the feelings and ambitions, joys and sorrows, of men and women whom I have met in travels in four countries." By far the greatest space, in fact nine long chapters out of a total of fourteen, is devoted to Germany. Two more discuss problems closely connected with (and partially arising out of) the change which was brought about by the surrender of power by President Hindenburg to Herr Hitler. France is scarcely mentioned.

It is not, perhaps, surprising if a verbal reproduction of remarks heard in public in Fascist and Nazi countries should sometimes give the impression of a mere repetition of Fascist and Nazi propaganda. The author's strange views heighten this effect. He bases his intense hatred of the Russian Communists on the Christian faith. Yet he finds it not inconsistent to accept an invitation from the "Germano-European Cultural Association" on the morning of the massacre of June 30, 1934.

Sir Arnold finds a "new-born" unity in Nazi Germany. The soldier in him admires the quasi-military camps, the order, the splendid physical condition of the young members of the labour service. The reader of his book is thus given the false impression that before Hitler there was no social service, and no housing policy, in Germany. No doubt the youngsters he met were enthusiastic. But what is the source of their inspiration? An uncritical prejudice, born of propaganda—propaganda against the Liberal, the Pacifist, the Jew, and one or another foreign nation. Sir Arnold's picture of unanimity, of animal enthusiasm and obedience, conjures up a vision not of working but of marching columns. Sir Arnold does not like war, though for different reasons than most civilians; it disorganises the Army.

MONEY AND BANKING

THE BANKING HALF-YEAR

THIS year it is not entirely easy to form a definite impression from the half-year's statements of accounts of the leading British banks. For one thing, the Midland Bank's accounts have not yet been published, though those of several other banks have been available for more than a week. It is a great pity that there is no understanding between the banks to publish their half-yearly accounts at the same time. Again, the leading institutions have followed precedent by calling money from the market at the end of the half-year. This practice tends to give a distorted view both of the condition of the Bank of England and the composition of the floating debt; for on June 30th and December 31st the discount market arranges to let Treasury bills run off, and force the Treasury to borrow on Ways and Means from the Bank. On June 30th last Ways and Means borrowing ran as high as £26.7 millions, against only £8.5 millions a year before, so that the distortion was accentuated. Also, as not all the British banks who keep balances at the Bank of England make up their accounts or call from the market on June 30th, there is a certain concentration of bank cash in the hands of those banks which issue half-yearly accounts. This is the main conclusion to be drawn from the very small increase in bankers' deposits with the Bank of England this year, when compared with the growth in the total of bank cash held by the seven clearing banks discussed in the present article. On this occasion, therefore, it is not easy to trace the expansion of credit from the original dispositions of the Bank of England and the Treasury through to the actual changes in the resources and assets of the joint-stock banks.

There is no doubt, however, that some expansion has occurred. This is clearly revealed by the two following tables, which analyse the deposits and assets of the leading clearing banks, other than the Midland:—

DEPOSITS, ACCEPTANCES AND CASH ON JUNE 30TH

* Omitting Midland Bank.

The total cash holdings of the seven banks under review have expanded during the past year by £15.0 millions. This figure is in striking contrast with the increase of only £1.2 millions in bankers' deposits with the Bank of England. On the argument, however, that the joint-stock

banks require more till-money as an offset against their own expanded deposits, it is reasonable to assume that part of the year's increase of £38.3 millions in the note circulation has found its way into the joint-stock banks' cash. In passing it may be noticed that the increase in the note circulation has been approximately balanced by the expansion in the Bank of England's gold *plus* Government securities. The latter item is subject to the qualification of the half-yearly distortion mentioned earlier, but in general the authorities would seem to have been at pains to prevent the growth of the note circulation from causing any credit stringency.

Call and short loans have increased by £7.0 millions and discounts by £36.3 millions. These increases, which mainly represent the expansion in the banks' and the discount market's holdings of Treasury bills, appear small when compared with the increase of £110 millions in the tender issue of Treasury bills, even when read in conjunction with the market's arrangements for reducing its bill holding on June 30th to a temporary minimum. Subject to what the Midland Bank's discounts may show, it would certainly appear that a large proportion of the new Treasury bills issued during the past year have passed into other hands than those of the clearing banks and the bill brokers. It would be of interest to know exactly where these bills have gone and how many of them, for example, are held by French interests.

The total investments of the seven banks included in our tables have risen during the year by £10.9 millions. This is a very moderate figure, attributable, probably, in the main to the fact that during the past twelve months there has not only been an expansion in tender issues of Treasury bills, but also a growing demand for bank credit. Thus the banks are under less compulsion to add to their investments; while fears that the gilt-edged market may have reached its peak have left bankers little incentive to purchase more Government securities, especially as their holdings were already well above normal a year ago.

The increase of £58.7 millions in advances is equivalent to 10 per cent. on last year's total. If allowance were made for the share of these banks in the French credit of £40 millions raised last spring—and still outstanding—the year's increase would be much less impressive. The relative failure of bank advances to respond to the trade revival of the past four years raises far-reaching questions, which we hope to discuss in the near future. Meanwhile, the inelasticity of the demand for bank loans, which are the most profitable of banking assets, has a direct bearing on the prospect of increased bank earnings in the current year.

Deposits, according to our table, have risen during the year by £126.9 millions. This increase is not quite ten times the year's cash expansion, and the banks' aggregate cash ratio, consequently, has risen slightly from 10.9 to 11.0 per cent. It is clear that the banks are finding some difficulty in discovering a sufficiency of credit-worthy borrowers in need of accommodation. Rather than take up still more Treasury bills they prefer to let their cash ratios rise. Immediate interest lies chiefly in the character of these new deposits. A large part must evidently be French money. As we have shown in earlier articles, the fresh Treasury bills taken up by the banks have come largely from the Exchange Equalisation Account, and are the counterpart to the influx of French funds. The £40 millions of sterling lent under the French credit, similarly, have been sold by the French Treasury, and so transformed into French refugee money. Allowing for these two facts, it is conceivable that quite half the year's increase in the deposits of the clearing banks either consists of French money or has originated from French purchases of British securities. If this view is correct, the banks

cannot regard these resources as "permanent" in any sense; and they may have been well advised to allow a slight compensating increase in their cash ratio.

Finally, we show, in the following table, the ratio borne to deposits by the chief assets of those members of the Big Five whose statements are available:—

RATIO OF CASH AND ASSETS TO DEPOSITS ON JUNE 30TH

	Cash		Discounts		Investments		Advances	
	1935	1936	1935	1936	1935	1936	1935	1936
Bardays.....	11.6	11.9	11.6	12.2	27.5	28.6	42.7	42.4
Lloyds.....	11.2	11.6	13.6	14.2	30.2	26.5	36.6	39.3
National Provincial.....	10.3	9.8	13.1	13.5	29.6	28.9	38.8	39.4
Wm. Lister.....	10.4	10.6	12.1	15.6	32.1	29.8	36.3	35.5
Total*.....	10.9	11.0	12.6	14.1	29.7	27.8	38.7	39.2

* Midland Bank omitted.

Subject to whatever the Midland Bank's accounts may show, the figures suggest an increased cash ratio has been accompanied by slight increases in the percentages of discounts and advances to deposits. The investment ratio, on the other hand, is rather smaller this year. The banks, in short, in relation to their deposits, are rather less heavily committed in the gilt-edged market than they were a year ago. The main impression conveyed by the table is of increased liquidity—which is satisfactory, at least, from the point of view of the banks' customers, especially at a time when it is notorious that British banks are carrying a large amount of volatile foreign money. But the bank shareholders, who, so far as dividends rather than the security of their capital are concerned, naturally see the obverse of the medal, appear to have little reason to expect any significant increase in their earnings, though last year's scale of profits and dividends should be well maintained. Since the crisis of 1931 the banks have become established upon a relatively even keel, and in the absence of wholly unforeseen developments, stability may be the most striking feature of their profits for some time ahead.

FINANCIAL NOTES

American Excess Reserves.—The wider implications of the increase of 50 per cent. in American member bank legal minimum reserve requirements, to take effect on August 15th, are discussed on page 109, but it is of interest to see how they will affect existing excess reserves. A statement from Washington suggests that excess reserves will be reduced from about \$3,000 to about \$1,900 millions, but the statement in its crude form is definitely misleading. On July 9th total member bank deposits at the Reserve Banks were returned at \$5,814 millions and excess reserves at \$2,880 millions. This meant that minimum legal reserves were approximately \$2,900 millions, and if these were increased by 50 per cent. they would become \$4,350 millions. Deducting this last figure from the total reserves of about \$5,800 millions, this would give an excess reserve figure of \$1,450 millions, which differs considerably from the Washington estimate of \$1,900 millions. The explanation of this discrepancy would seem to hinge on the fact that the change does not take effect until August 15th. By that time it is calculated that veterans' bonus payments will have shifted \$500 millions from Treasury Account to member bank account at the Reserve Banks, thus raising at the member banks themselves, however, will equally increase as the result of this transfer, and so their legal minimum reserve requirements will expand as well—possibly by \$70 millions. Other movements, such as gold imports, are also likely to affect member bank reserves and deposits during the next few weeks, so that the Washington estimate of \$1,900 millions is obviously based upon a number of imponderables. A clearer way of expressing the matter might have been, in short, to say that on the basis of the member banks' position of early July, excess reserves would have been reduced to about \$1,400 millions, but that changes before August 15th might raise this new estimate of excess reserves to the neighbourhood of \$1,900 millions.

Banque de France Reform.—M. Vincent Auriol has introduced the revised legislation for the reform of the Banque de France statutes. The original Bill, which was withdrawn, gave the Government general powers to enact reforms by decree, and it was drawn so widely that in the opinion of some observers it would have enabled the Government to force the Bank to suspend gold operations or vary its statutory buying and selling prices of gold—that is to alter the gold parity of the franc. The new measure consists of a detailed series of reforms with no enabling powers for the Government. It provides that the Regents of the Bank shall serve for a definite term of six years, and the number of Regents is also to be increased through the appointment of additional representatives of industry, commerce and agriculture and labour. The Bill relieves the governor and the vice-governor from the need of having to take up shares in the Banque de France, with the risk of subsequent fluctuations in their price, and also increases their salaries. All shareholders are to be given the right to vote at annual meetings, irrespective of the size of their holdings, so that the limitation of voting rights to the 200 largest shareholders disappears. These proposals are all in the direction of the liberalisation of the Bank. They do not necessarily place the Bank under close State control, but the Government will undoubtedly be able in practice to exercise wide powers, and it is to be hoped that it will differentiate between its own true function and those of a central bank. The Bill, however, does make the Banque de France more representative of national interests, and relieves it from the charge of being a close corporation. On these grounds, the proposed reforms are to be welcomed.

Anglo-Italian Clearing.—Now that sanctions are being terminated, the Treasury has had to regularise the question of payments between England and Italy. It will be recalled that in April, 1935, a payments agreement was signed, providing that all debts due to Italians for British goods or freight should be paid into a special account with the Bank of Italy. This was only a "one-way" agreement, for British debtors were not under a similar obligation, but when sanctions were imposed last autumn, it was ordained that all debts due for Italian goods should be settled by payments to a special official in England, called the Controller of Anglo-Italian Debts. Thus sanctions had the incidental consequence of substituting a full reciprocal clearing agreement for the previous one-way payments agreement. This new scheme was a stop-gap arrangement, arising out of sanctions, and so a permanent scheme has now become necessary. It has been decided to continue full reciprocal exchange clearing, and an order was issued at the week-end setting up an Anglo-Italian Clearing Office, providing that debts due for Italian goods or freight shall be discharged by payment into this office's account at the Bank of England. Negotiations are proceeding with the Italian Government with a view to the disposal of the sterling paid into this clearing account, and pending the outcome of these negotiations, these sums will accumulate in the account in the form of a reserve fund. One question which must be settled is whether outstanding Italian debts due to British exporters and others will rank ahead of new debts. Mr Runciman's statement in the House last Wednesday suggests that the British view is that old debts should come first; but if the Italians are in need of fresh imports for re-stocking purposes, they may be arguing the contrary view.

The Foreign Exchanges.—Paris was closed on Monday and Tuesday, but the London market has been unusually idle, and there was no accumulation of business either before or after the Paris holiday. At the end of last week the spot-Paris rate suddenly weakened from Frs. 75½ to Frs. 76½. This was because several London dealers found themselves with surplus francs on their hands, and they sold them in order to clear their books in case of disturbances in Paris during the holiday. No disturbances occurred, and the general trend of the market has been in the direction of covering open bear positions in francs. Hence on Wednesday of this week there was a renewed

demand for francs, and London dealers had to replenish their stocks with the rate back to Frs. 75½. Three months francs have been steady at Frs. 2½ to Frs. 2½ discount, with very little business. The Banque de France return for July 10th shows an increase of Frs. 266 millions in its gold stocks and one of Frs. 358 millions in the note circulation. There has been another switch of about one milliard francs from Treasury bills discounted at the Bank to Provisional Advances to the State, but net Government indebtedness to the Bank is reduced by Frs. 250 millions. The holidays have interrupted subscriptions to the new "baby bonds" issued at the end of last week, but it is ominous that no news of the response to the issue is forthcoming. Dollars have been steady at \$5.02½-¾ in London and Frs. 15.07½-10 in Paris. Gold bloc currencies are stronger owing to bear covering, and Swiss francs are quoted in Paris at not far off the point at which it pays to send gold to Switzerland.

The Money Market.—There has been a moderate demand for loans every afternoon, but money has been easy and plentiful. The clearing banks have bought Treasury bills for dates covering August, September and early October, at their minimum rate of ½ per cent. Three months' bank bills are quoted at ½-¾ per cent., with the emphasis on the lower rate. The market has been able to earn a small turn by buying bills at ½ per cent., and reselling them at ½ per cent.

	June 25, 1936	July 2, 1936	July 9, 1936	July 16, 1936

* Loans against Treasury bills and other approved bills and British Government securities within six months of maturity; 1 per cent. Treasury Bonds and other gilt-edged stocks within six months of maturity; and other collateral, respectively.

Tender issues of Treasury bills continue to expand, and this week have reached £620 millions, against £493 millions at the end of the financial year. Tap issues have fallen during the same period from £204 to £191 millions, and are £21 millions higher than a fortnight ago. This last movement may reflect both the easier tendency of the franc and the Bank of England's gold purchases, for the Exchange Equalisation Account has lately been selling gold and presumably increasing its holdings of Treasury bills. Otherwise the tender issue would have risen still higher.

The Bank Return.—This week the Bank has purchased a further £5.4 millions of gold, and as the note circulation is unaltered, the Reserve is increased by £5.2 millions.

	BANK OF ENGLAND				
	July 17, 1935	June 24, 1936	July 1, 1936	July 8, 1936	July 15, 1936
	£ mill.	£ mill.	£ mill.	£ mill.	£ mill.
Issue Department:—					
Gold	192.7	216.3	221.1	225.6	231.0
Note circulation	399.6	434.8	439.6	443.1	443.3
Banking Department:—					
Reserve	53.7	42.5	42.4	43.5	48.7
Public deposits.....	7.9	20.0	9.9	10.5	20.4
Bankers' deposits	103.6	90.8	111.7	96.7	90.6
Other deposits.....	38.8	37.4	39.8	38.4	40.7
Government securities ...	91.9	99.6	110.4	96.8	96.8
Discounts and advances ..	9.3	7.6	10.6	6.0	5.9
Other securities	13.5	16.5	15.9	17.4	18.4
Proportion	35.7%	28.6%	26.2%	29.8%	32.0%

In the absence of any change in the Bank's earning assets, the Bank's gold acquisitions and the increase in the Reserve are reflected in an expansion in deposits. The Bank has to pay for the gold it purchases, and, even if it buys it from the Exchange Equalisation Account, the result is that the Account takes up more Treasury bills, so that the joint-stock banks and the money market have to take up and pay for less bills than they would have had to otherwise. This week the increase is mainly confined to public

deposits, which have risen by £9.9 millions, while bankers' deposits have fallen by £6.1 millions. Monday, July 13th, fell exactly three months after the Easter Bank Holiday, and so early in the week Treasury bill payments were in excess of maturities. This explains the increase in public deposits as on July 15th, the date of the Bank return.

June Clearing Bank Averages.—Partly because of the Bank of England's acquisition of gold and Government securities, the average cash holdings of the ten British clearing banks were £4.7 millions higher in June than in May. This has permitted a general expansion in bank assets, leading to an increase in deposits of £43.4 millions, or practically the traditional ten times the expansion in cash. There is also an increase of nearly ten millions in balances with other banks and cheques in course of collection, which may indicate the more active circulation of money.

(a) Excludes District Bank.

(b) Includes District Bank.

Among the Bank's earning assets, discounts are £19.9 millions higher; this reflects the increase of £35 millions in tender issues of Treasury bills, taking the average of the weekly figures for May and June. Advances have risen by £8.5 millions, which shows that the demand for banking accommodation is continuing its slow expansion. Investments are almost unchanged.

Standard Bank of South Africa.—The accounts of the bank for the year ended March 31, 1936, indicate that there has been no break in the regime of cheap and plentiful money that South Africa has been enjoying since the suspension of the gold standard in 1932. Nearly all the items in the balance sheet show increases. Both cash and deposits have advanced, though not in the same proportion, and consequently there has been a slight increase in the cash ratio. The considerable increase of nearly £2.5 millions in discounts and advances bears witness to the continued improvement of business activity in South Africa. The main features of the accounts are summarised below:—

	Year ended March 31		
	1934	1935	1936
Liabilities:—	£'000	£'000	£'000
Capital	2,500	2,500	2,500
Reserve fund	2,500	2,500	2,500
Deposits	55,163	55,463	57,881
Bills for collection	7,282	8,336	8,364
Assets:—			
Cash	17,081	12,055	12,991
Call money	2,600	1,871	2,100
Investments	9,826	12,726	12,406
Bills purchased	3,971	4,361	4,347
Discounts and advances	25,249	27,738	29,616
Net profits	433	503	478
Dividend	10%	12%*	12%*

* Includes a bonus of 2 per cent.

There is a slight decline in net profits from £503,000 last year to £478,000. As there has been no decrease in the bank's earning assets this may indicate a fall in money rates, or may possibly be purely fortuitous. In any case it is not serious, and last year's dividend of 10 per cent. with an additional bonus of 2s. per share has been repeated.

THE STOCK EXCHANGE

ARGENTINE RAILWAY YEAR

IN recent months, Argentine railway stocks have won undeniable distinction as the most neglected section of the London stock markets. Some improvements in the situation—such as the important exchange concessions announced last February—have introduced temporary relief. Occasionally, the market has been tempted to ignore successive poor traffic returns, and has put quotations fractionally higher. But it has been unwilling—or unable—to gauge the future trend of events for more than a few weeks ahead. An already complex situation has been rendered even more uncertain by the Anglo-Argentine trade agreement negotiations, and by the British Government's beef policy announced last week.

The operating results of the chief Argentine railways for the year which ended three weeks ago had for some time been in little doubt. Prolonged drought during 1934-35 severely reduced the area sown to wheat, and the inevitable consequence has been seen in a sharp reduction of wheat shipments during the past season. Maize movements have been delayed—and the quality of the crop reduced—by excessive rain. The effect of lower wheat traffics is clearly shown by the Buenos Aires Great Southern receipts of \$113,570,000 for the 52 weeks to June 27th last, which show a fall of no less than 9.4 per cent., compared with the previous 52-week period. For the Central Argentine, which is predominantly a maize line, the decline in peso traffics is more moderate. The Buenos Aires Western, closely interested in livestock traffics, shows a reduction of slightly over 1 per cent. For Buenos Aires and Pacific the increase of 4.4 per cent. in gross receipts is probably attributable to wine and fruit movements. The following table shows the peso receipts for the 52-week periods to the end of June, 1935 and 1936, and provides a percentage analysis of the principal sources of traffics:—

	Years to June 30	Traffic Receipts	Change compared previous year	Sterling Equivalent Traffic, at average exchange	Percentage of Gross Receipts derived from		
					Wheat	Maize	Livestock
B.A. Gt. Southern.	1936*	113,570	- 9.4	6,671.6	12.5	0.8	8.4
	1935†	125,397	+ 4.1	7,353.7	12.9	1.1	9.0
	1934†	120,450	...	...	...	...	...
B.A. Western	1936*	39,904	- 1.1	2,344.1	8.7	6.8	22.5
	1935†	40,336	- 2.5	2,364.4	13.7	5.9	21.2
	1934†	41,375	...	...	...	...	...
Central Argentine.	1936*	103,817	- 4.2	6,098.6	8.6	16.7	3.3
	1935†	108,351	...	6,348.2	13.9	15.5	3.2
	1934†	...	...	...	...	...	...
B.A. and Pacific...	1936*	74,430	+ 4.4	4,372.4*	6.7	7.8	6.6
	1935†	71,315	...	4,182.5	9.0	6.5	6.1
	1934†	...	...	...	...	...	...

* 52-week period. † Year to June 30th. ‡ Latest year's figures not yet available.

Stockholders, clearly, can hope for little relief in the forthcoming accounts on these traffics. There are, certainly, a number of mitigating factors. The exchange position is undoubtedly better. Until the introduction of the new arrangement last February, the companies had been compelled to purchase sterling mainly at the "official" rate of 17 pesos, with occasional resort to the "free market" at over 18 pesos to the £. The new rate is determined by adding 5 per cent. to the official purchase price. At the present level of 15½ pesos to the £, it represents a substantial concession to the companies. This exchange agreement, moreover, was accompanied by maize freight concessions for 1936 amounting for all the railways to 3½ million pesos. It was at first believed that this *quid pro quo* would cost the Central Argentine most, as much the heaviest maize carrier. The chairman, however, has recently stated that the railways will pool the maize concession, in proportion to their remittances during 1936.

Under this arrangement, the maximum benefit for the railways may be estimated at about £950,000 (calculated on the basis set out in the *Economist* of February 22nd), shared among the lines as in Column (1) of the table below. These estimates, however, are based on the 1934-35 remittances, and they seem, in fact, to be somewhat generous, so far as the current calendar year is concerned. Mr Howard-Williams has recently stated that the net saving for Central Argentine during 1936 "will not be less than £150,000."

In view of the impossibility of calculating even approximate figures, in the absence of precise knowledge of the value of the maize concession and of the volume and "spread" of the current year's remittances, we have contented ourselves with setting out, in the following table, the range of the potential saving, on our revised estimates and on the minimum basis announced by Mr Howard-Williams, and the position of the marginal stocks on either hypothesis. The percentages take no account of operating factors:—

	(1) "Upper Limit" Estimated Net Saving	(2) "Minimum" Net Saving (1936), based on Central Argentine Estimate	Marginal Stock	Savings as percentage on Marginal Stock	
				Estimate 1 (%)	Estimate 2 (%)
B.A. Gt. Southern	381,000	212,000	6% 2nd pref.*	4½	2½
Central Argentine	269,000	130,000	4½% pref.	2½	1½
B.A. Western ...	98,000	53,500	4½% 2nd pref.*	1½	Nil
B.A. and Pacific	201,000	112,000	4½% 2nd deb.	4	Nil

* Half dividends paid for 1934-35; largely unearned for B.A.G.S., wholly unearned for B.A. Western.

On the lower estimate, B.A. Great Southern second preference stock, which last year received a largely unearned 3 per cent., might cover that rate of payment, other things being equal, from the net saving. At the upper limit, the stock might be substantially covered. More modest advantages are suggested for B.A. Western second preference, which also received half payments last year. The two limits for Central Argentine 4½ per cent. preference—dividendless since 1933—are 1½ and 2½ per cent.

For 1935-36, however, it is evident that whatever relief is secured in this direction will be greatly outweighed by the fall in traffics, at least for B.A.G.S. and Central Argentine. Taken in sterling, at par, the traffic reduction amounts to over £1,000,000 for the former undertaking, and to about £400,000 for the latter. It may be possible to effect further cuts in renewals—though of nothing like this magnitude—and, perhaps, to obtain some modest savings in operating expenditure. Again, the improvement in the exchange position over the past year should enable the companies to take further credit for amounts provided in earlier years against the fall in the sterling value of currency net floating assets. The Central Argentine, alone among the "Big Four," brought no credit from exchange reserve into last year's accounts. But next October's report of the B.A. Great Southern can hardly be a cheerful document. The B.A. and Pacific, presumably, will seize the opportunity presented by the improvement in revenue and the exchange saving to raise the standard of maintenance of its line now that it has brought the interest on its second debenture stock up to date. Holders of the 4½ per cent. consolidated and 5 per cent. stocks, on which interest has been postponed for 4½ years, may have to exercise the virtue of patience before old coupons are met. The B.A. Western has a slight fall in traffics to offset small prospective net benefits from the exchange agreement. On the whole, the market may be right in valuing the second preference stock on a substantially higher basis than B.A.G.S. second preference. With all the companies, however, remain problems of restoring renewals provisions and, in some cases, of

strengthening the standard of maintenance. How is the investor to interpret the long-run prospect?

The position within Argentina itself does not lack hopeful factors. The coming season's wheat crop will almost certainly be heavier than that of 1935-36. And the exchange concessions are valuable indications of the Government's goodwill. The market has also greeted with relief the assurances given by Señor Nogues to limit competition from State lines. But, in the ultimate analysis of Argentina's railway position, the effect of British fiscal and agricultural policy cannot possibly be ignored. The Government last week announced that imports of beef from non-Empire sources will be subject to an import duty—generally expected to amount to ½d. per lb. Argentina, therefore, will have to find an alternative market for part of her present supplies to this country or, as many apologists claim, "pay the duty herself." If the prices realised by the Argentine grazier were, in fact, to be reduced by nearly one-fourth, irresistible pressure upon the companies for a reduction in freight rates may undoubtedly be expected. A reduction of £3,000,000 in Argentina's sterling exchange resources, moreover, would shatter the railways' hopes of further exchange relief and imperil even the maintenance of the present facilities. The effect of this declaration on the negotiations for the renewal of the "Roca" agreement has yet to be seen; investors, however, can hardly be blamed for adopting a cautious policy at the moment.

Similar warnings have been put plainly before the Argentine railway investor by more than one company chairman. They are the simple embodiment of the proposition that the return on exported capital must be received in the form of goods and services. Meanwhile, investors may be forgiven for showing a certain impatience over the delay which has occurred in enacting the Transport Co-ordination Bill in Argentina. Its delayed consideration in the Senate legislative committee has been further prolonged by the issue of a questionnaire to the interests affected, seeking their opinion of the measure. Since local strikes greeted the consideration of the Bill, British investors may wonder whether the Committee was in any real doubt regarding the state of local opinion on transport co-ordination. The adoption of the measure may be seriously prejudiced by this move. Again, the pooling of receipts is forbidden under a law enacted nearly sixty years ago and the companies have pressed for amending legislation.

At present the market values the best debentures in the group on a 5½-5¾ per cent. yield basis, and even the full-dividend-paying preference stocks of B.A. Great Southern and B.A. Western at well over 8 per cent.:—

Company and Stocks	1929-36		1935		1936 July 15	Current Div. Basis (%)	Yield %
	High	Low	June 30	Dec. 31			
B.A. Great Southern:—							
4% deb.	90	47	81½	74½	74½	4	5 7 5
5% non-cum. pref.	96	28	73	63	58	5	8 18 6
6% non-cum. pref.	112	27	73	53	35½	3	8 9 0
Ordinary.....	110½	19½	23	18	15½	Nil	Nil
B.A. Western:—							
4% deb.	88½	44½	78	64½	68½	4	5 16 10
5% non-cum. pref.	94	35	75	61½	60	5	8 6 8
4½% non-cum. pref.	86½	25	64	36½	35	2½	6 8 7
Ordinary	100½	10	18½	14½	12	Nil	Nil
Central Argentine:—							
4% deb.	82	43½	70½	61	68½	4	5 16 10
5% deb. 1927-28	95½	48	80½	65½	74½	5	6 16 0
4½% non-cum. pref.	79½	18	34½	24½	25½	Nil	Nil
6% cum. conv. pref.	110	18½	32½	24	24	Nil	Nil
Ordinary	100½	7	14	12	9½	Nil	Nil
Deferred	93½	3	7	5	6½	Nil	Nil
B.A. and Pacific:—							
4% 1st deb.	81½	40	75	71½	75	4	5 6 8
4½% 2nd deb.	85½	24	68	63	66½	4½	6 15 4
4½% cons. deb.	85	15	68	63	37	Nil	Nil
5% 1912 deb.	95½	11½	20½	18½	19	Nil	Nil
6% cum. pref.	106½	5½	8½	8½	9½	Nil	Nil
Ordinary	107½	4½	8	8	7½	Nil	Nil

On present tendencies B.A. Western second preference alone seems to have a quotation which does not put a fairly high value on "recovery" possibilities in a depressed group. By comparison, the B.A. Great Southern and Central Argentine preference issues seem fully valued. For the token money speculator, the market, for no fault of its own, has become a hunting ground—but not altogether a happy one.

ADVANCE PARTICULARS

TRINIDAD CONSOLIDATED OILFIELDS LIMITED

The List of Applications will open on
Wednesday, July 22, 1936

FOR AN ISSUE AT PAR OF

400,000 Ordinary Shares of 10s. each

The Prospectus shows (inter alia) that:—

- 1 The Company's proven oil properties of 607 acres are already producing commercially at the rate of 25,000 barrels per month.
- 2 The first year's profits are estimated at 13½ per cent. on the issued capital.
- 3 In addition to the producing areas, which alone form the basis of the profit estimates, there are reserve areas totalling 5,819 acres.
- 4 The entire production from the producing areas has been sold on a three years' contract to Trinidad Leaseholds Limited.

Copies of the Prospectus and Application Forms will be available, on Monday, from:—

BANKERS:

WESTMINSTER BANK LIMITED,

New Issue Department, 9, Old Broad Street,
London, E.C.2, and Branches.

BROKERS:

CREWS & CO.,

30, Throgmorton Street, London, E.C.2

COPPOCK & BRATBY,

65, King Street, Manchester, 2

and Stock
Exchanges.

BRITISH PACIFIC TRUST LIMITED

4, Cleveland Square, St. James's, London, S.W.1

INVESTMENT NOTES

Fixed Trust Portents.—Believers in omens and auguries may read into events on the eve of the publication of the Committee on Fixed Trusts (expected early in August), all the signs of an approaching grand climacteric for the movement. The current revival in the promotion of new trusts, after three months' quietude, may be attributable to a variety of causes. It may reflect the recent modest increase in general stock market activity. Or, possibly, it may be due to a natural and businesslike desire to insure against the possibility of some recommendation for restrictive action in the Report, just as applications for motor licences increased before the imposition of a driving test. However this may be, the past week has seen the announcement of new formations whose features are indubitably portentous. The Domestic Investment Trust is to specialise in the shares of companies associated with "nationally advertised goods"—"B.P.," "Hovis," "Cerebos" and the like. The appeal is obvious and direct but whether its merits, on close analysis, run on pure investment lines is more open to question. Of greater historic interest is the fact that the management is given power, subject to the trustee's veto, to vary the list of underlying securities, not within the limitations of any alternative panel, but by discretionary choice from the entire gamut of securities "of a similar nature" to those of the original unit. Thus, within a mere five years, the movement has gone full circle from fixity to one-hundred-per-cent. management—for the limitations as to the proportion of total resources which may be invested in any single security, etc., imposed on the Domestic Investment Trust, are common form among managed investment trusts. What remains after this process of evolution is the unit formation. This, we ventured to prophesy many months ago, may survive as the movement's peculiar contribution to the technique of investment, long after "fixity," in any shape or form, has been abandoned. The second of this week's new trusts is, as an omen, only slightly less striking. The Bank Insurance and Financial Shares Trust may invest in the securities of 123 concerns, of which no less than ninety-three are investment trusts. It is described, in its publicity literature, as "The Trust of Trusts." Two questions suggest themselves. Is the notoriously un-free investment trust market a suitable venue for fixed trust buying and selling operations? Is there really a sound investment case to be made out for the formation of trusts to hold shares in companies formed to hold shares? "Pyramiding" has obvious disadvantages—the more so as it is improbable that the Board of Trade Committee can have had any concrete case of this tendency in mind when framing their recommendations.

Wall Street Recovers.—During the past week there has been an almost uninterrupted display of strength on Wall Street, and industrial share price indices have recovered the ground lost since they touched their year's high on April 8th. The hesitancy which has characterised the markets during the last few months, despite persistently good business reports, seems definitely to have been overcome. A variety of factors have been advanced from time to time in explanation of the lack of conviction on Wall Street, but all have eventually been exorcised. Party conventions, the activities of the Securities and Exchange Commission, flood and drought, fear of labour troubles in the steel industry, and the menacing uncertainty of Europe—each factor has played a part in helping speculators and investors to ignore the healthy progress of business and to discount the steady pressure of cheap money. During the week the drought has broken, and the labour troubles have been postponed. Public interest has revived, turnover has rapidly increased, and prices are again on the move. Investors are left with the difficult problem of deciding just how far and how long economic recovery may be expected to continue. The opinion has been expressed that American recovery has covered two-fifths of the way from depression to peak, and this may be as reasonable a guess as can be made. Fears that recovery is unsoundly based

upon an uncontrollable inflation are hardly justified so long as the Federal Reserve Board continues its determined efforts to control the monetary position without reversing its cheap money policy, as exemplified by its decision (discussed in a Note on page 120) to raise reserve requirements by 50 per cent. Moreover, the Securities and Exchange Commission maintains a healthy control over the speculative markets, and there still remains a large body of cyclical unemployment. The Presidential election, it is true, draws nearer, but most observers seem to be of the opinion that whatever the outcome, the course of domestic business recovery will not be appreciably disturbed. The moral of this week's recovery on Wall Street may well be that the depression is over, for until this improvement had occurred many observers feared that the recent year-long recovery was too good to be true, and that the retreat from April price levels might continue down to the "lows" of early 1935. That argument, at least, should no longer be tenable.

Alberta and the Investor.—Although positive news of the intentions of the authorities of Alberta and Calgary towards their bondholders has been infrequent recently, the announcement, last week, that a committee has been set up to protect the interests of British holders of Alberta provincial stocks suggests that close watch on the position is being maintained in London. The committee, of which Mr J. Davidson (of the British Empire Trust Company) is chairman, includes representatives of the Insurance and Investment Trust Associations and five members from Stock Exchange houses. It recommends that holders should accept nothing but full payment of interest pending the results of the independent study of the financial position of the Province. The Government, it will be recalled, declined to meet the full interest while the study was in progress. Calgary, which recently threatened to reduce interest rates to 3 per cent., duly met the July coupons, and her stocks have been restored to the Official List. Alberta issues meanwhile, remain unquoted. The Dominion Minister of Finance appears to have abandoned the idea of reforming Western Provincial finance by setting up Loan Councils, for more than one Province would apparently prefer disgrace to subjection to limited Federal supervision. The position of some of the cities presents a special problem, though many municipalities, like Vancouver, have experienced a partial recovery. In cases of dire economic straits, however, bondholders would be willing to consider special temporary arrangements, provided that no attempt was made to enforce a unilateral reduction of interest. But obdurate attempts to impose immediate cuts without consultation will undoubtedly undermine the attempts which Mr Dunning is making towards the rehabilitation of Canadian finance. So far, recent events have had only mixed repercussions upon the credit of the Dominion, but if they are allowed to go unchallenged the London market may ultimately be forced, regretfully but firmly, to award a lower credit rating to certain Canadian bonds than to similar issues in other Dominions.

Sale and Return?—The market has been greatly interested this week by reports—which at present lack official confirmation—which may affect the control, respectively, of Gaumont-British Picture Corporation and Edmundsons Electricity Corporation. Mr Isadore Ostrer, president of the former concern, is at present in New York, and reports suggest that negotiations are in progress affecting the Ostrer interest in the Corporation. Of the five million 10s. ordinary shares in issue, over three millions are held by Metropolis and Bradford Trust, control of which is vested in 10,000 voting shares. Of these, 4,950 are held by the Ostrer interests, 4,950 by Twentieth Century Fox Films, and the balance of 100 shares by the independent chairman, Viscount Lee of Fareham. Reports differ regarding the object of the negotiations, but it was rumoured last week that Loews Incorporated—the controlling interest behind Metro-Goldwyn-Mayer—might obtain a 25 per cent. interest, while Twentieth Century Fox would

be willing to buy the remaining 26 per cent. The shares responded with a sharp rise on these reports, although some speculative purchasers appeared to assume without question that the strategic value of the shares to a large American organisation would provide an index to their intrinsic value. The negotiations may, indeed, have anticipated any attempt at a fusion of interests between Gaumont-British and London Films. Service agreements between the Ostrer interests and the company, however, may affect the course of the present negotiations. New York has also provided the second rumour. Mr Floyd B. Odum, president of the Atlas Corporation, who sailed for this country on Wednesday, is credited with the intention of seeking a purchaser for the British properties of Utilities Power and Light Corporation, which is controlled by Atlas Corporation. Utilities Power and Light (through its Canadian subsidiary of similar name) which in turn controls Greater London and Counties Trust, which holds 73 per cent. of the £3,740,000 ordinary capital of Edmundsons Electricity Corporation. This controlling interest has existed since 1928. In the following year a capital bonus of 150 per cent. was declared. The gross ordinary dividends have increased 7½ times during the period from £40,000 to £299,200. The repatriation of this important interest, if it were negotiated, would clearly yield a handsome profit to the holders. But would not the Treasury, through the Foreign Transactions (Advisory) Committee, have something to say?

Actuaries' Investment Index.—The much firmer tone of most sections of the market is reflected in the first substantial increase in the Actuaries' Industrial Index of 178 industries equities since the week ending June 23rd. This week's price index works out at 83.5, compared with 83.0 a week ago, and 82.4 a month ago (December 31, 1928 = 100). The yields are 3.75 per cent. this week, 3.78 per cent. last week, and 3.78 per cent. a month ago. Prices and yields of various sub-groups are shown below:—

Group (and No. of Companies)	Prices (Dec. 31, 1928 = 100)			Yield (%)		
	Month Ago (June 16)	Week Ago (July 7)	This Week (July 14)	Month Ago (June 16)	Week Ago (July 7)	This Week (July 14)
Higher this week:—						
Building Materials (5)...	101.2	101.5	102.8	4.78	4.75	4.70
Cotton (6)	36.4	36.3	37.7	2.23	2.24	2.23
Iron and Steel (12)	69.8	72.3	74.8	3.97	4.08	3.97
Motors (5)	55.2	56.7	57.7	4.28	4.17	4.12
Home Rails (4)	67.3	66.1	68.2	1.57	1.62	1.60
Lower this week:—						
Oil (5)	83.4	82.1	80.5	3.07	3.38	3.34
Stores & Catering (20)	86.4	87.1	85.8	3.60	3.60	3.64

The backbone of the recovery is seen to be in the iron and steel section, which has been officially blessed as the successor to the building group. A decline in the price index of the oil group for the third week in succession shows the continued relapse of speculative activity in this market. Prices have declined in a few sections, the most notable being the stores and catering group, which has reacted on the recent International Tea report.

COMPANY NOTES

Jute Manufacturing Companies.—The jute manufacturing industry is at present subject to two opposing influences—the improved manufacturing efficiency of individual works and failure to control the Calcutta mills output. The improvement in efficiency is shown not only by the leading chairmen's speeches in this country and India, but also by the Census of Production and the Import Duties census for 1933 and 1934. Between 1924 and 1930 the industry suffered a sweeping reduction in the value of its gross output, from £14,206,000 to £9,605,000. This fall was only partially offset by the decline in raw material prices, and involved a reduction in net output from £4,390,000 to £2,640,000. After 1930 gross output continued to fall, being no higher than £7,623,000 for

MEMBERS OF THE ASSOCIATION OF FIXED & FLEXIBLE TRUST MANAGERS

1934, but net output increased to £2,966,000 for that year—a larger figure than for 1930, despite the continued fall in the gross value. Similarly, the output per person employed has increased considerably since 1930, following the installation of modern equipment. The recovery in the profits of Jute Industries between 1932 and 1934 illustrates the effects of rising efficiency. The general economic circumstances of the trade, however, have since deteriorated sharply. The Indian Jute Manufacturers' Association had regulated production throughout the post-war period, either by restricting working hours or by sealing looms. In course of time, however, a substantial number of mills were established in Calcutta which, being outside the Association, made profits by working unhampered by restrictions on hours or machinery. Last year, these outside firms had become a serious menace to the industry, and efforts were made to obtain Government support for output control. This attempt failed, and the Association therefore allowed their members to work the full 54 hours a week (instead of 40 hours) and to unseal all looms. The increase in the output of manufactured jute goods has coincided with a period of restricted raw jute planting, which, until recently, has tended to increase raw jute prices. In consequence,

capital of Edward Lloyd Investment at par, bringing the total purchase price to £1,000,000, and will give notice to redeem £3,000,000 4½ per cent. debenture stock of the Investment Company at £104. The authorised capital of Bowater's Paper Mills is to be increased by creating 500,000 6½ per cent. cumulative preference shares, 700,000 7½ per cent. cumulative participating preference shares, and 500,000 ordinary shares. The debenture redemption will be partly financed by the issue of 2,000,000 Edward Lloyd Investment Company 5 per cent. £1 cumulative preference shares. All the new 7½ per cent. Bowater's preference shares are to be offered at a premium to the public, while all the new ordinary shares will be offered at a premium to the existing ordinary shareholders, share for share, on bonus terms. Of the new 6½ per cent. preference issue, £250,000 is to be placed privately at a premium. Holders of the 4½ per cent. Investment Company debentures, which are guaranteed by Allied Newspapers, are to be invited to exchange into the new 5 per cent. preference shares, which are redeemable and without guarantee.

The effect of these transactions upon the capital structure of the three companies, and their relation to present earnings, is shown in the following table:—

(Profits in £'000—except Champdany Rs. '000)

* In '000 rupees for full year (i.e. two half-yearly figures added together in each case).

the manufacturers' margin has been reduced. Though the Calcutta mills do not produce a high proportion of jute goods directly competitive with Dundee, there is sufficient overlap for Dundee to be seriously affected by conditions in India. The British industry still relies on export markets for about a quarter of its output, and has to face Indian competition there. Even in the home market, the rise in imports of jute piece-goods from 31,804,000 square yards in the first six months of 1935 to 72,291,000 square yards in the first six months of this year shows the effect of Indian competition. The present annual rate of imports of approximately 145 million square yards per annum far exceeds the total United Kingdom output of jute piece-goods in 1934 of 394,362 square yards. The Indian manufacturers may, ultimately, be able to restore order in their trade. It is also possible that an increasing world demand for jute which is now showing itself may absorb much of the excess output. The matters, however, are uncertain for the present, and jute manufacturing shares appear to lack attraction.

Bowater-Lloyd Merger.—It was announced at the end of last week that Bowater's Paper Mills, Ltd., had agreed to purchase at par the 830,890 ordinary shares of the Edward Lloyd Investment Company at present held by Allied Newspapers. The Investment Company owns the entire ordinary share capital of Edward Lloyd, Ltd. The purchase will thus give Bowater's control of Edward Lloyd and will consolidate the two largest newsprint manufacturers in Europe, which produce more than 60 per cent. of the newsprint manufactured in this country. It is anticipated that Bowater's will acquire the remaining ordinary

DECLARED EARNINGS OF THE COMBINED COMPANIES

Year	Bowater's to Sept. 30th (a)	Edward Lloyd to Dec. 31st (b)	Combined
1931	108,210	321,250	429,460
1932	132,259	349,809	482,068
1933	142,527	288,494	431,021
1934	91,062	195,154	286,216
1935	136,768	250,036	386,804

(a) Trading profit, less directors' fees, capital reserve and depreciation fund. (b) Profit, after charging interest on loans, depreciation, income tax, etc.

The combined earnings shown above should be increased for comparison with the prior charges by the amounts provided for income tax. These would probably raise the 1935 figure to not far short of £500,000, compared with combined prior charges of around £400,000. A more accurate estimate of the position must await the publication of the prospectus shortly. One of the advantages of the scheme which will be stressed is the economy which may be made possible in the operation of the companies' mills, and in transport of supplies to customers. Allied Newspapers do very well out of the transaction and will receive £830,000 in cash with which to strengthen their already strong liquid position. Newspaper shareholders will hope that this supply of ammunition will not be used to embark upon a circulation war among London evening newspapers, which is already being rumoured.

Richard Thomas Meeting.—Investors will welcome the detailed statement of the progress of the Richard Thomas undertaking given by Sir William Firth last Wednesday. It provided optimism controlled by frankness. The past year was not satisfactory at Redbourn, where out-of-

date melting shop practice and old-type coke ovens resulted in higher costs compared with modern practice. These matters will be rectified. Export demand for tinplates was disappointing, and this section is still working at 62½ per cent. of capacity. Profits on sheets were disappointing, but here Belgium has increased prices from £1 to £2 per ton, a Continental Sheet Cartel is about to be formed, and expansion in the home motor and furniture trade is anticipated. On the marketing side, Sir William's review thus confirmed the impression that the outlook has improved. The investor, however, will pay even closer attention to the important changes in productive organisation which are in prospect. In this connection, the improvements at Redbourn are of secondary importance. The Ebbw Vale project will clearly be the main factor to determine the fortunes of the company for the next few years. A basic Bessemer and open hearth steel plant, together with a modern wide strip mill will be erected on the site of the old Ebbw Vale works. The mill will have a capacity of 300,000 to 450,000 tons per annum, and production costs are expected to be extremely low. The chairman spoke with some enthusiasm of the prospects of the new plant. It is proposed to issue 4,500,000 6s. 8d. ordinary shares in the autumn, on "rights" terms, which will still yield a premium. The existing £1,246,022 debentures will be redeemed a year hence, and the balance of the cost of erecting the new plant raised later. Earnings on the existing ordinary shares may be affected, for a time, by the proposals—as the present quotation of 13s. 9d. recognises—but the ultimate prospects of the new plant seem undoubtedly favourable.

National Coke and Oil Prospectus.—In October last year the Chancellor of the Exchequer addressed a letter to the Stock Exchange Committee, and others, offering the facilities of the Government Research organisations for investigating and reporting upon new scientific processes which might form the basis of a public issue. The prospectus of this company, which operates a coal distillation process, contains no reference to such a report. From information circulated by the company this week it appears that the company's patent agents have advised against a public report, on the grounds of secrecy. Since, however, the Fuel Research Board has stated the conditions under which it is willing to carry out tests—which are apparently limited to the general character and results of operating such plants—the omission seems regrettable, although the process is attested by experts with high scientific qualification in reports circulated with the prospectus, which are adopted in the report of the general manager on the working of the plant. The company, it is stated, commenced commercial operations in 1935, and subscribers would therefore have welcomed some information regarding the trading results of, say, the past six months. Such figures would usefully have supplemented the estimated net trading profit of 18s. 9d. per ton of coal processed, which is given by the general manager.

Building Material Company Results.—The market has recently recognised the persistence of a high level of building activity, particularly on the commercial side, by giving greater attention to leading cement shares. While the latest results of a number of building materials' suppliers throw little light on the trend of profits in the group as a whole, they illustrate the need for a selective investment policy. The profits of *Plaster Board* were announced some time ago, and the full accounts have been followed by an encouraging speech from the chair this week. During the past two years the company has acquired a number of concerns, but in future it is unlikely to interest itself in further amalgamations. With the acquisition of the Peter Ford group, the company has absorbed the only established concern outside the group. Little more than a year ago five important concerns were engaged in price cutting; to-day all come under British Plaster Board's wing. This rapid consolidation of its gypsum plaster interests has involved an increase in ordinary capital from £100,000 in April, 1933, to nearly

† Earned for preferred and deferred ordinary shares. ‡ Paid on ls. deferred shares.
* Before charging £20,000 investment reserve.

Cement profits seems moderate in the light of the progressive interim report issued last February. *Hollychrome Brick* earnings show a small increase, and the dividend of 15 per cent. is satisfactory. *Yorkshire Brick*, however, has suffered a severe setback, whose causes were frankly set out in the chairman's recent speech. The company had spread its interests geographically in order to eliminate local fluctuations in business. Its Metropolitan Brick subsidiary, however, encountered serious technical difficulties

in operating both of the mass-production plants, which were attributed to peculiarities of the raw materials. A sum of £20,000 has been provided against investment depreciation, and, as a technical *pis aller*, the large new plants of Metropolitan Brick have been turned over to the production of facing bricks. The accompanying table of profits and share yields shows that the market is valuing these building trade equities—particularly the brick shares—on a commendably cautious long-term basis, although (as Mr Runciman has pointed out this week) there is no sign of an immediate decline in building activity.

* * *

Consolidated Tin Smelters.—During the year to June 30th, dividends from subsidiaries increased by £18,764 to £268,953, comparing with an increase during the previous year from £180,044 to £250,189. Since world tin production rose from 119,596 tons for the year to April, 1935, to 147,100 tons for the succeeding twelve months, better results might have been expected. Full benefit, however, was not derived from the increase in permitted output owing to the failure of Bolivia to produce her full quota. After writing down the value of holdings in subsidiaries by £25,000 for the fourth successive year, the amount earned for the ordinary shares is £158,918 (equivalent to 10.4 per cent.) as against £132,163 (8.5 per cent.) for the previous year. The ordinary dividend has been maintained at 7 per cent. and as in 1935 £50,000 is transferred to general reserve, while the carry forward at £96,136 is £6,689 more than the amount brought in. The principal changes in the balance sheet are the increase in cash from £569,000 to £886,000; and a further large reduction in the amounts due from subsidiaries. The latest balance sheet shows a net amount of £179,000 due to subsidiaries, compared with £28,000 net due from them at the end of the previous year.

* * *

Other Company Results.—Our usual table on page 148 of this issue contains the results of some fifty companies, as many as eighteen reports out of the total being issued by rubber companies. In the heavy industry group, *Darlington and Simpson Rolling Mills* reports a profit of £42,649 and pays a 5 per cent. ordinary dividend. Among industrial concerns, *Falk, Stadelmann* have increased their profits from £104,370 to £111,052, the dividend being raised from 8½ to 10 per cent. *Booth's Distilleries* reports a substantial increase in profits from £65,696 to £107,863, but maintains the ordinary dividend at 7½ per cent. *W. Barratt and Company*, the shoe manufacturers, show a slight rise in profits at £132,640 and again pay 10 per cent. on the ordinary shares. The net revenues of *City of London Brewery Investment* are somewhat higher at £188,795; the transfer of the Nalder and Collyer interests to Ind Coope and Allsopp, it is pointed out, took place after the accounts had been closed. The income from this source will not be greatly affected, but a large capital increase will accrue to City of London Brewery. Among the rubber companies which report reduced earnings are *Bertam Consolidated*, *Bukit Rajah*, *North Hummock*, and *Port Dickson-Lukul*. In the tea group, *Jokai (Assam)* reports a large increase in profits from £20,411 to £86,686, the dividend being raised from 2½ to 12½ per cent. *Nigerian Electricity* has enjoyed a better year owing to freer tin production, and profits have increased from £24,909 to £34,335, permitting the raising of the dividend to 4½ per cent.

* * *

Company Meetings of the Week.—On later pages of this issue will be found the reports of the following company meetings:—Richard Thomas and Company, Powell Duffryn Associated Collieries, International Tea Stores, Trustees Corporation, Covent Garden Properties, Estates Control, South African Breweries, Anglo-Australian Gold Development, South African Torbanite Mining and Refining, Great Boulder Proprietary Gold Mines and Chosen

Corporation. Sir William Firth's address at the Richard Thomas meeting is discussed on page 126. At the Powell Duffryn Associated Collieries meeting, the chairman declared that the situation in South Wales was a national problem, and that practical assistance should be looked for from the Government. Mr Collier, at the International Tea Store's meeting, ascribed the failure to earn higher profits entirely to severe competition. At the Trustees Corporation meeting, the chairman reported that the valuation of investments showed that capital, reserves and carry-forward were covered by a substantial margin. Mr Philip Hill, at the Covent Garden Properties meeting, said that a considerable saving in interest charges would result from the debenture stock conversion. At the South African Breweries meeting, the chairman reported that the new "Golden Pilsener" beer had proved a great success. Mr Claude de Bernales, at the Great Boulder Proprietary Gold Mines meeting, recommended the expediting of development and increased capacity of the treatment plant to 25,000 tons a month. At the Chosen Corporation meeting, the chairman discussed the reasons for postponing a full report to the shareholders until the close of the financial year. Lord Luke, discussing meat subsidies at the Estates Control meeting, considered the possibilities of food production in this country. At the South African Torbanite Mining and Refining meeting, the chairman said it was estimated that by 1937 50 per cent. of the refinery's requirements would be supplied from torbanite oil. The managing director of Anglo-Australian Gold Development reported that after personal inspection of the Yellowdine mine he was well satisfied with its possibilities.

THE WEEK IN THE MARKETS THE LONDON STOCK EXCHANGE

SETTLING DAYS

TICKET JULY 21	ACCOUNT JULY 23
-------------------	--------------------

UNLIKE Wall Street, London has not yet restored prices to the "highs" recorded earlier this year, but further progress has been made this week towards this objective. The marked improvement in business which was recorded at the close of last week was maintained, and for the first time in recent weeks there was a sizable Monday post-bag, swelled by confident interpretations of the Supplementary Estimates and the Anglo-German agreement. The hunt in the armament group began at a smart pace which could not be sustained. This group has provided the keynote for the week's dealings, which have shown a very selective character. Mr Runciman's optimism and the disappointing June trade figures cancelled out as market factors, and there was no company news of sufficient importance to distract the market's attention from the armament programme—and no inclination to consider its financing.

Firmer conditions ruled in the gilt-edged market this week, and welcome support was received from the £17 millions repayment of India 5½ per cent. stock. In mid-week, prices were satisfactorily maintained. Indian issues improved on this disbursement, and some home corporation scrips showed fractional improvements. In the Dominion list, Australian loans received early support at steady prices. European bonds were variously affected by news of the Austro-German agreement. German bonds made a few hesitant advances, but showed no very appreciable gains; but Austrian loans, on the other hand, were bought at higher prices. On consideration of possible consequences to third parties, Czechoslovakia and Prague bonds lost ground. Fears of a disappointing response to the French baby-bond issue led to a reduction in Renten. Chinese Customs loans recovered on statements suggesting a diminution of smuggling. In the South American section, Brazilian bonds were brightest, though Argentine loans were reasonably cheerful on the good revenue figures.

The home rail market was at first willing to be fed on hopes of a voluntary wages settlement, and brisker activity

and better prices developed, by no means confined to ordinary stocks. The negligible traffics "plus" of £6,000 disappointed market expectation, and a general reaction set in. London Transport "C" stock declined owing to nervousness regarding the dividend outlook. Foreign rails provided no movements of importance. Argentine issues were inclined to ease on the wheat situation, but selling pressure was never strong.

Although the volume of business in the industrial markets has been modest, prices have risen in many sections, primarily under the influence of continued Government blessings for the re-armament industries. Buying in the non-armament groups has been selective, but in the iron and steel group an increase in prices seems to be the order of the day, and most profit-taking sales were rapidly absorbed. Lloyds' shipbuilding return brought further stimulus to the steel group and to John Brown, Cammell Lairds and Harland and Wolff issues. The only reaction of importance in iron and steel shares was the easing of quotations for Richard Thomas, on the proposed new issue. Aviation issues have been firm, with Hawker shares in good demand following the meeting, although prices became slightly irregular toward the end of the account. Dennis Motor have been prominent in the motor group.

Electrical equipment issues have not been in much demand, and Crompton Parkinson have been soft most of the week. The new telephone concessions have diverted attention to the telephone manufacturing concerns, among which Ericssons have been in the lead. Quite a cheerful tone has been evident in the textile section, due to reports of increasing business activity, and many quotations have made slight improvements. Rayon shares have been quiet, with small but irregular price changes. Woolworth have registered a slight gain over the week on good trading reports. The brewery section was quiet most of the week, but improved slightly on Thursday, and, among the tobacco issues, Gallagher were bought on rumours of intention to purchase another business. International Tea reacted on the chairman's remarks at the meeting.

Business has been rather idle in the miscellaneous industrial section, but several features have been prominent. Triplex shares attracted a good demand on the prospect of a share bonus in addition to an increased dividend, and many of the small engineering issues continued to share in the demand for armament shares. British Oxygen have been weak, but Turner and Newall improved on dividend hopes. Bowaters Paper Mills gained slightly on the interim dividend, and Allied Newspapers were bought in the hope of increased dividends as a result of the sale to Bowaters of control in Edward Lloyd's Investment Company. Spillers deferred were actively supported in anticipation of benefits from the drought in America through its effect upon the wheat situation.

The oil shares market started the week very quietly, but business improved as the week progressed. Mexican Eagle were temporarily depressed by news of a strike in Vera Cruz, but a fair investment demand developed for Shell, Burmah and Anglo-Iranian issues, and a number of purchases were made by investment trusts. Apex Trinidad improved notably in mid-week. The rubber shares market has been dull, and with the commodity weakening slightly there is no sign of improvement. The tea share market has been steady, though stagnant.

The week opened erratically in the Kafir market, and prices of recent favourites lost considerable ground. Conditions improved slightly later, with New Central Witwatersrand shares a prominent feature. There was fair support from the Cape for several issues, particularly West Springs, and the finance descriptions were in demand. But in mid-week there was a fairly general reaction, encouraged by profit-taking from the Cape, and the approach of the end of the account, although West Springs were able to hold their ground. Business was dull in the West African section, in spite of some excellent progress reports, and in mid-week South Banket issues were the only bright feature. There was very little business in the Rhodesian copper issues, and prices were inclined to ease. At the beginning of the week there were signs of improvement in the tin shares market, but later prices weakened all round in sympathy with the commodity.

FOREIGN STOCK EXCHANGES

NEW YORK

TRADING on Wall Street closed at the end of last week in very good form, with turnover higher than for many weeks. Operators could no longer resist the pressure of excellent business reports, and were encouraged by the reduced tension in the steel industry labour dispute, and by signs of breaking drought. Improving dividends and second quarter earnings reported by several companies maintained the level of interest this week, and substantial gains were made by many prominent issues, such as Union Carbide, and Westinghouse Electric. Farm implement shares recovered with the fall of rain, and there was a marked jump in railroads, influenced by a remarkably sharp rise on a very small transaction in Norfolk and Western. The Utility group is beginning to be safely past the worst, and is shaking off the fear of intervention. Some profit-taking was precipitated by the Federal Reserve Board's 50 per cent. increase in member bank margin requirements, but the market did not suffer greatly, and closed higher on balance. In the bond market, Government issues are holding their ground well, and there is strong support for speculative issues. *Iron Age* estimates steel mill activity at 69 per cent. of capacity, compared with 70 per cent. last week, and reports that demand for most products is much more active than had been anticipated for mid-summer. Electricity production for the first week of July was 18.2 per cent. higher than for the corresponding week of 1935. The drought continues to exert its influence on the wheat market. Estimates of retail sales show substantial increases over last year throughout the country.

BOARD ROOM FOR MEETINGS 7 PARK LANE, LONDON, W.1

10/6 per hour

One of the most beautiful Board Rooms in the most distinguished office building in London. All enquiries: Way and Waller, 7 Manover Square, W.1. (Mayfair 8022)

* Two-Hour Session.

PARIS

Although on the whole the news both of the terms of the "baby" bond issue and of the reduction in the Bank rate to 3 per cent. was well received and produced advances in Renten and in Treasury bonds, there was a complete absence of excitement in the markets this week. This comparative calm could not be attributed to rumours of disappointing public response to the issue, for they lacked confirmation, and in any case could not carry much weight at this early stage. At the end of last week the Bourse, being on the eve of closing down until Wednesday for the July 14th holidays, appeared to be disinclined to take hasty action, and preferred to wait for the resumption of business. Yet, after the holiday, the market showed less inclination to make up for lost time than to postpone action still further till next week. The general tone was listless, Bank of France lost ground, and Renten fell by amounts of about 1 franc. The chief event this week was the announcement on Wednesday that quotations for Bank of France shares would be suspended until the Reform Bill is finally passed.

BERLIN

A recovery at the end of last week followed some earlier selling, particularly of foreign-currency issues. Steel shares, including Stahlverein, Rheinstahl, Kloeckner, Hoesch and

Mannesmann, were heavily bought, gaining between two and four points on the week. Paper-pulp and shipping issues also rose, but other industrials were little changed. The market opened firm this week, with occasional reaction, and steel issues made further progress. Farbenindustrie, leading lignite issues and public utilities were in demand, and Deutsche-Asiatische Bank continued its rapid rise. Home bonds, after suffering from the effects of the Reich loan issue last week, became steadier towards the close, but industrial bonds this week were easier. In the dollar bond list, declines of four and two points respectively were registered by certificated Dawes and Young loans.

AMSTERDAM

The market was apparently anxious to make amends for its past lack of enthusiasm, for during the earlier part of this week, in the commodity sections at any rate, conditions have been considerably brighter, in spite of occasional irregularity and profit-taking reactions. Interest has been awakened in sugar issues, which have for some time been out of the limelight, tobacco shares have continued strong, and a fresh high was recorded in Amsterdam Rubber. Though the Bourse recently has been accustomed, when business has been particularly dull, to turn to the commodity sections for inspiration, a slight improvement now seems to be more general. Unilever provided an outstanding feature on the Government's announcement that it would support the margarine industry, and reached the highest level since 1932.

CAPITAL ISSUES

AFTER an interval of six weeks, corporation borrowing has been resumed this week, with issues of *Birkenhead* and *Nottingham* 3 per cent. stocks at 99, both redeemable expressly on September 1, 1937, with no option of earlier call. In each case, the conversion of 6 per cent. stock to the extent of nearly £1 million will be effected. These municipalities, who were so near admittance when the door closed on the last occasion, will probably feel somewhat relieved that no significant change in terms has occurred in the interim. *Craven Brothers (Manchester)* is a well-known machine tool business, whose profits during 1934 and 1935 were approximately £26,750. The prospectus estimates that annual earnings will be increased to £60,000 at least. The 5s. shares which are offered at ros. each, have changed hands at rising prices since April. Although the company is now working at high pressure, the fluctuation in past earnings puts the shares in a speculative category for long-term investment purposes. The 5 per cent. preference shares of *John Crowther (Millsbridge)* are reasonably covered by recent earnings. About half the total assets consists of stock, however, and the company's exposure to the consequences of fluctuation in wool prices should be noted by the investor. The income of *Odham's Properties* may be regarded as a prior charge on the group's revenues, since the company leases properties and machinery to other concerns in the group and controls an important copyright licence. The profits record of the past three years is stable, but yields of 5 per cent. on the debenture stock and 6 per cent. on the ordinary shares now issued show the high return which is rightly expected of newspaper issues. Points arising from the speculative *National Coke and Oil* issue are discussed on page 127. Statements for information have been published this week by *London and South American Invest-*

ment and *British Combined Investors* (both relating to debenture stock issues), *Laundry Services* (whose preference shares have been marketed by British Electric Traction), *National Trading Company, Aeroplane and Motor Aluminium Castings, D. M. Davies (Slough), Mid-European Corporation*, and *J. W. Green*, the Luton brewing concern.

In calculating yields on fixed interest stocks quoted below allowance is made for interest accrued since the last date of payment, less income tax at the standard rate. Where stocks are definitely redeemable at a certain date the yield includes any profit or loss on redemption; where stocks are redeemable at or before a certain date the final date of redemption is taken when the stock stands at a discount and the earliest date when the quotation is above par. The return on ordinary stocks and shares is calculated by reference to the latest dividends, account being taken of any enhancement or reduction of interim dividends. Allowance is made for accrued dividends in calculating the yield on "cum. div." shares.

(Continued from page 131)

No accounts for any period of active trading. Proceeds of issue to complete purchases, pay off overdraft (£37,902), extend and lay down manufacturing units. Lists closed 4 p.m. July 14th.

Odhams' Properties, Ltd.—Issue of £100,000 5 per cent. first mortgage debenture stock at par and 50,000 £1 ordinary shares at £2. Stock ranks with existing £720,778; first charge on properties, etc. Redeemable at 102½ by January 1, 1936, or from 1942 on six months' notice. Proceeds to erect new buildings. Profits, before interest, years to March 31st: 1934, £115,901; 1935, £115,753; 1936, £116,705. Net assets, £1,226,170 (£663,393 "The People" copyright licence).

BY OFFER FOR SALE

Craven Bros. (Manchester), Ltd.—Offer for sale of 1,000,000 5s. ordinary shares at 10s. Machine tool makers and general engineers; founded 1853. Profits, after depreciation: 1933, £81,386; 1934, £26,537; 1935, £26,739. Total assets, £593,001. Issue purchased for £490,000, including expenses (approximately 9s. 9½d. per share). Lists open five minutes, closing July 14th. Heavily oversubscribed.

Crowther (John) and Sons (Milsbridge), Ltd.—Offer for sale of 300,000 5 per cent. cumulative £1 preference shares at 20s. 6d. Woollen and worsted cloth manufacturers; founded 1840. Profits, after depreciation: 1933-34, £100,685; 1934-35, £74,077; 1935-36, £74,206. Net assets, £584,715 (stock-in-trade £475,386). British Shareholders Trust take £400,000 4 per cent. first mortgage debenture stock at 97½, and preference shares at 20s.

BY STOCK EXCHANGE INTRODUCTION

Aeroplane and Motor Aluminium Castings, Ltd.—Capital, 400,000 4s. ordinary shares. Acquires business of Heritier, Ltd., of Birmingham, aluminium casting specialists. Net assets £31,820, purchased for £55,000 (goodwill £23,180) in 275,000 4s. shares. Profits, after depreciation, years to March 31st: 1934, £3,827; 1935, £8,209; 1936, £10,331.

British Combined Investors Trust, Ltd.—Particulars of issue of £100,000 3½ per cent. debenture stock redeemable at par June 1, 1978, or from 1968 on six months' notice. Secured *pari passu* with £700,000 5 per cent. debenture stock by floating charge. Right reserved to issue further debenture stock ranking *pari passu* up to maximum of issued share capital. Stock purchased at 101 less commission.

London and South American Investment Trust, Ltd.—Particulars of £250,000 4 per cent. debenture stock purchased by Power Securities Corporation at 100 less ½ per cent. commission. Secured with existing 5 per cent. debenture stock by first floating charge. Right reserved to create shares ranking *pari passu* up to maximum of five-ninths of share capital. Repayable at 102½ October 1, 1972, or from 1957 on three months' notice.

Laundry Services, Ltd.—Particulars of issue of 100,000 5½ per cent. cumulative £1 preference shares. Incorporated 1933; owns shares of New Model Laundries, Ltd., and other laundry companies. Total assets, December 31, 1935, £317,721 (subsidiaries investments and advances, £249,148). Profits, after depreciation: 1933-34, £16,462; 1934-35, £18,642.

National Trading Company, Ltd.—Issued capital, 125,000 £1 ordinary and 125,000 5½ per cent. cumulative £1 preference shares. Incorporated in South Africa, 1928, to acquire business of A. Oppenheimer and Company, importers and merchants. Total assets, December 31, 1935, £288,936. Net profits, after depreciation and before interest: 1933, £19,244; 1934, £27,902; 1935, £31,916. Rowe, Swann and Company take 125,000 preference shares at 21s. less 3d. commission.

D. M. Davies (Slough), Ltd.—Capital, 325,000 4s. ordinary shares. Manufacturers of radio cabinets. Net assets, £66,428. Profits, after depreciation: 1933, £5,326; 1934, £8,692; 1935, £10,551.

J. W. Green, Ltd.—Particulars of 8,760 £1 ordinary shares; 640,000 5½ per cent. cumulative £1 preference shares; £500,000 3½ per cent. 1st mortgage debenture stock, redeemable at par from 1940 to 1982 by drawings, or in 1982, or at 101 from 1940 on six months' notice. Incorporated 1897. Controls 296 licensed properties. Profits, after depreciation, years to September 30th:—J. W. Green, Ltd.: 1933, £61,691; 1934, £70,612; 1935, £86,095. Adey and White, Ltd. (acquired 1936): 1933, £19,073; 1934, £18,244; 1935, £21,164. Net assets, £984,986 for J. W. Green, and £163,303 (book value) Adey and White.

Mid-European Corporation.—Particulars of issue of £100,000 4 per cent. debenture stock at 100½. Redeemable at par, 1971, or from 1946 at 105. Secured by floating charge.

ISSUES TO SHAREHOLDERS ONLY

Abridged particulars are shown in table on page 131.

CONVERSIONS AND REPAYMENTS

County Borough of Birkenhead.—Issue of £1,000,000 3 per cent. redeemable stock, 1957, at 99, to convert £993,175 6 per cent. stock, 1936-51. Redeemable at par September 1, 1957. Ranks *pari passu* with all other loans. Population, 149,400. Rateable value, £990,477. Debt, £6,833,439 of which £5,322,628 for productive undertakings. List closed at end of business hours July 14th. Conversion lists close July 20th.

Japanese 5 per cent. Exchequer Bonds.—The fourth conversion of 5 per cent. Exchequer Bonds (Internal Loan) amounting to about 582 million yen will take place on August 15th. As in the previous case, better terms are offered for conversion application and cash application is confined to the Bank of Japan. The terms of the new bonds are as follows: Amount to be issued, 597,000,000 yen; rate of interest, 3.5 per cent.; date of final redemption, December 1, 1950. Issuing price: Cash application, 98 yen; conversion application, 97.5 yen. Yields: Cash application, 3.68 per cent.; conversion application, 3.72 per cent.

United Molasses Company.—The directors announce that the entire outstanding balance of £102,419 4 per cent. funded income stock will be redeemed on August 31, 1936.

REPORTS AND NOTICES

The Union Bank of Australia, Ltd., announce that Mr W. A. Laing is retiring on 21st instant after long service, during the last ten years of which he has occupied the position of manager. Mr F. H. McIntyre, the present assistant manager, has been appointed manager, and Mr C. E. Murch, the secretary, to the position of assistant manager. Mr C. R. Pearce has been appointed secretary.

BANKS

BANK OF THE MANHATTAN COMPANY.—The half-yearly statement of the Bank of the Manhattan Company, as on June 30, 1936, shows total resources amounting to \$561,647,160 as against \$548,163,875 on December 31, 1935. Deposits have increased during the six month period by \$30,638,267 to \$457,125,942, and the bank's holding of U.S. Government obligations has increased by \$19,834,970 to \$104,024,221. Loans and discounts have increased from \$125,659,682 to \$135,104,916. Capital and surplus remain unchanged at \$20,000,000 each, and undivided profits remain at \$5,431,681.

RUBBER

KUALA MUDA RUBBER.—Profit after depreciation of Kuala Muda Rubber Estates to March 31, 1936, was £23,558, £31,320 plus £716 brought in. To debenture interest £12,600, interest on 7 per cent. notes £1,654, and redemption of 7 per cent. notes (one-half of second series) £6,300, leaving £3,721 to go forward. Crop 2,288,724 lbs. collected at average cost f.o.b. of 2-86d. per lb. (against 2,577,060 lbs. at cost f.o.b. of 2-55d.). Meeting, 19 Fenchurch Street, E.C., July 23rd, 12.30 p.m.

MISCELLANEOUS

LAMPORT & HOLT, LTD.—Receiver has completed sale of Coast Lines ordinary Stock held by him. As a result there is a sum, subject to a claim to assets of company in priority to claims of the Debenture Stockholders, sufficient to pay slightly more than two-thirds amount debenture stock at present outstanding of stock i.e., £1,251,162 12s. 0d. After sanction by the Court it is hoped to make a 66½ per cent. cash distribution amounting to £834,109 on Debenture Stock about October.

TANKERS' NEW SCHEME.—The new scheme is based on proposals of four members of the Committee of Shareholders who have issued a minority report. The main features of the original scheme have been adopted except that it is recommended that the funding certificate holders should receive in cash 7½ per cent. on their holdings instead of 5 per cent. and an option, exercisable up to December 31, 1937, to subscribe for two ordinary 1s. shares (less 10 per cent. commission) for each £1 face value of funding certificates, or, alternatively, three 8 per cent. cumulative preference shares of 6s. 8d. (less 10 per cent. commission) for each £10 of funding certificates now held, and that the preference shareholders receive a 6 per cent. dividend instead of 4 per cent. if the new scheme becomes operative. The capital cuts remain.

BOWATER'S PAPER MILLS, LTD.—Bowater's Paper Mills, Ltd., announce that, in addition to the appointment of Mr Percy Denson as a director and vice-chairman of the company, it is also intended to appoint Mr E. L. Fifoot to the board. Mr Fifoot has for some years been a director and the sales manager of Edward Lloyd, Ltd.

BOOTH'S DISTILLERIES, LTD.—Net profits for year to March 31, 1936, at £107,863 show an increase of £42,167. After providing for preference and preferred ordinary dividends, transferring £3,000 to debenture redemption reserve, and £10,000 to special reserve for subsidiaries, there remains £51,894. Dividend on the ordinary capital is maintained at 7½ per cent., less tax, leaving the carry-forward increased from £25,852 to £53,227.

COMPANY MEETINGS, &c.

RICHARD THOMAS AND COMPANY, LIMITED

IMPROVED RESULTS AND PROSPECTS

SIR WILLIAM FIRTH ON THE COMPANY'S ACTIVITIES

The eighty-seventh ordinary general meeting of Richard Thomas and Company, Limited, was held, on the 15th instant, in London.

Sir William Firth (chairman and managing director), in the course of his speech, said: The normal trading profits of the combine amounted to £1,186,635. The directors propose a final dividend of 9½ per cent., making 12½ per cent. for the year, on the ordinary shares for the year, and the transfer to general reserve of £91,293, bringing the total general reserve fund to £300,000. There will then remain £785,844 to carry forward, which is £39,139 more than the amount brought in after payment of the 1935 dividends. The trading profits for the first three months of the current year show an improvement on the same three months of last year, and the order-book position is substantially better—and I think it reasonable to expect improved results during the current year.

REVIEW OF THE YEAR'S OPERATIONS

Although the profits during the year under review were larger than in the preceding year they were not entirely satisfactory to your directors.

Three subsidiaries made small losses and the profits of another subsidiary were below what they should have been. The losses were due to uncontrollable circumstances—in the case of the subsidiary where the profit has been unsatisfactory steps are being taken to obtain better results, and there is no reason to doubt success. The profits in our sheet department were also disappointing, due to a poor export demand and low prices due to severe competition from Belgium, and insufficient attention having been paid by us to the home trade demand, which is expanding. During the current year I anticipate the profits in our sheetworks will improve.

Belgium has recently advanced her selling prices £1 in some markets, in others even £2 per ton, and a Continental sheet cartel is on the point of being formed, and we have made arrangements to expand our production of high-grade sheets for the home trade. The acquisition of a merchant house with close connections in the motor and steel furniture industry has secured to us an outlet.

The year under review was not a satisfactory year for us at our Redbourn plant, where the advance in the price of coal reduced our profits, and our out-of-date melting shop practice and our old type coke ovens made our cost higher than obtainable with modern practice and plant. We are taking steps to remedy the situation and we look forward to a substantial improvement in the earning power of our Redbourn works. The export demand for tinplates during the year under review was disappointing. For nine months we were only able to operate to 55 per cent. of our capacity. The demand has since somewhat improved, but we are still only operating at 62½ per cent. of capacity. In the home trade, thanks to the enterprise of tin-box manufacturers and better trading conditions, the demand has expanded and shows sign of considerable further expansion. When we met last year you will remember I was a little unhappy about the entry into the tinplate trade of an important tin-box manufacturer. I am glad to be able to tell you the differences of opinion that then existed between us have been brushed aside, and we are now working with these friends in complete harmony and to our mutual benefit.

EXPANSION DURING FOUR YEARS

I think that some details of the expansion of your business during the past four years, covering all our acquisitions during that period up to March 31st last, will interest you. We have purchased fifteen businesses previously under separate independent control, either competing with us, or drawing their steel supplies from our competitors. These purchases have increased our steelworks capacity by 140,000 tons per annum, and our sheet and tinplate capacity by 230,000 tons per annum. We have increased our coal reserves by 38,000,000 tons, and our ore reserves by 71,500,000 tons.

We have secured from the American Rolling Mill Company the exclusive rights in this country to manufacture wide strip steel by that company's patent process, and have prepaid to that company royalty and service fees covering the first 1,000,000 tons of production.

We own in all 9,828 acres of freehold and leasehold property, including six collieries with an annual capacity of 2,000,000 tons; four blast furnaces with an annual capacity of 250,000 tons, excluding those at Ebbw Vale which we are remodelling; seven steelworks with an annual capacity of steel ingots of 1,100,000 tons and four hundred and thirty coke ovens with an annual capacity of 600,000 tons (this item does not include some coke ovens at Ebbw Vale, which we are dismantling, and none of them is modern, but nevertheless they are producing coke at a price that yields to us a profit); three by-product plants; eight steel-rolling mills with an annual capacity of 1,000,000 tons; two hundred and seven mills with a capacity of 500,000 tons; forty-seven sheet mills with a capacity of 250,000 tons; three foundries with a capacity of 30,000 tons; eight brickworks with a capacity of 50,000,000 bricks; lime stone quarries, cottages, etc., and two merchant businesses.

The assets purchased from the Ebbw Vale Company as a whole have, during the eight and a half months since the date of takeover, earned a gross profit sufficient to twice cover the bank interest on the purchase price, despite the fact that the steelworks and blastfurnaces have contributed nothing and the collieries have been adversely affected by the absence of Italian demand.

The steelworks is being completely demolished and the value of the resultant scrap will represent a substantial reduction in the purchase price, and the collieries recently secured an Egyptian Government contract that will enable them to be worked to greater capacity and yield improved results.

ERECTION OF NEW STRIP MILL

The site of these old works is being prepared for the erection of a modern basic Bessemer steel and open-hearth plant and an American-type wide strip mill. Some of you will have read statements to the effect that a strip mill is not a suitable plant for this country, and will wish some information on this point. Tinplate, as you know, consists of thin steel sheets coated with approximately 1½ per cent. of tin, just as a galvanised sheet is a steel sheet coated with a small percentage of spelter. The total output of the above class of sheets in this country approximates 2,000,000 tons per annum.

The method in this country of manufacturing these sheets is by what is known as the two high and three high mill method. The modern and cheapest method of manufacturing black sheets is by a patent process owned by the American Rolling Mill Company of America, who themselves produce one million tons per annum and receive royalty payments for the several million tons produced under their patents by their competitors, including the great United States Steel Corporation. Under the agreement with the American Rolling Mill Company we have secured the exclusive rights in this country of this patented process, and we propose for the present to erect one strip mill at Ebbw Vale.

Strip mills have a capacity of 300/450,000 tons per annum, according to gauge and width worked, but an exceedingly low production cost and an almost absolutely perfect product can be produced with an output of 300/350,000 tons per annum, and that for the present is the output we propose to aim at. It represents approximately one-sixth of the country's present output.

ISSUE OF ORDINARY SHARES

The combined cost of this modern steelworks and strip plant will approximate £4,500,000. To provide the necessary money it is proposed to issue some time in the autumn 4,500,000 ordinary shares of a nominal value of 6s. 8d. each at a price that should benefit the ordinary shareholders and still yield to the company a substantial premium. We believe that just as in the States this strip mill (of which there are 21 in that country) has resulted in a great expansion of demand, it will result in an expansion here, and I sincerely believe our workpeople have no grounds to worry and that our shareholders, as possessors of the most modern sheet and tinplate plant in this country and equal to any in the world, will in the absence of abnormal and unforeseen circumstances have good cause to congratulate themselves on their investment in our company.

The reports and accounts were unanimously adopted.

POWELL DUFFRYN ASSOCIATED COLLIERIES, LIMITED

THE POWELL DUFFRYN STEAM COAL COMPANY, LIMITED

WELSH ASSOCIATED COLLIERIES, LIMITED

MR E. L. HANN ON NEED FOR GOVERNMENT ASSISTANCE

The first annual general meeting of Powell Duffryn Associated Collieries, Limited, was held, on the 14th instant, at Southern House, London, Mr Edmund L. Hann (the chairman) presiding.

The Chairman, touching on public matters of importance affecting the company, referred to the recent increase in miners' wages. South Wales, he said, owing to it being largely dependent upon export trade, had been unable to make an offer on the same scale as other districts.

Shareholders would remember that in the latter part of last year each district gave an undertaking to set up controlled selling organisations. The South Wales organisation would shortly be established, and it was to be hoped that it would achieve its object; foreign competition would, however, make it extremely difficult to bring about a substantial increase in the sales proceeds.

The Chairman drew attention to the serious position facing South Wales. Its export trade was now menaced and adverse circumstances over which it had no control threatened its existence and had condemned a large proportion of its workpeople to the demoralising influence of unemployment. This state of affairs was a national problem, and the Government should be looked to for practical assistance. Conditions in South Wales, where the hopelessness of the unemployed grew day by day, had become so bad that the problem of rehabilitating its industries and of creating new industries was so gigantic a task that it was beyond the solution of any industrial company, however powerful, without the help of the Government.

By means of special assistance, South Wales should also be given a larger share of the inland market. In this regard the Chairman said that it was becoming increasingly necessary for local authorities to prohibit the use, in densely populated areas, of any fuel other than smokeless fuel; the damage caused by smoke to human life, property and plant life was of staggering magnitude, but it could be largely prevented by the greater use of Welsh coals, the bulk of which were smokeless and were admirably suited both for industrial and domestic purposes.

FOREIGN MARKETS

Dealing with foreign markets, the Chairman said that conditions abroad had increased in severity during the past year. The Welsh coal trade with Italy had, as a result of sanctions, practically disappeared this year; in France there had been a steady decline as a result of the quota system, whilst monetary and political difficulties were reducing exports to Spain. Both Greece and Yugoslavia had issued decrees which rendered almost impossible the export of coals to those countries.

Dealing with the domestic affairs of the company, the Chairman said that during the last twelve months the board had been faced with many complicated problems which had arisen from the merger, but the experience gained had assured them that the policy embarked upon was fully justified. It had been possible to effect economies by the concentration of production, and by the co-ordination of policy in the various selling organisations.

The company's coke ovens have worked full time and the company produced "PhuroD" and "WAC" smokeless coals specially prepared for domestic boiler and central heating plants, and capable of being used with very high efficiency in plants where coke may at present be used. The company's proprietary by-products, including Presotim, Presomet, Synthatar, Synthacold and Synthaprufe, particularly the latter, were becoming better known and fully appreciated.

The Chairman said he had painted a somewhat gloomy picture of the position in South Wales, but shareholders were not to imagine that he had any doubt as to the ultimate future both of South Wales and of the company. He was convinced that the Government's attention having been drawn to the state of affairs, remedies would be found. Next year he hoped the clouds would have lifted and that he would have a more cheerful picture to put before them.

The auditors' report and accounts were adopted and the dividends recommended were duly declared.

Annual general meetings of the Powell Duffryn Steam Coal Company, Limited, and Welsh Associated Collieries, Limited, were held, subsequently, at which the reports and accounts were adopted and the dividends recommended were duly declared.

ANGLO AUSTRALIAN GOLD DEVELOPMENT, LIMITED

PROGRESS AT YELLOWDINE—HEARTENING FIRST RETURNS

The third ordinary general meeting of Anglo Australian Gold Development, Limited, was held, on the 16th instant, at Winchester House, London.

Colonel Sir William R. Campion, K.C.M.G., D.S.O. (the chairman), said that since the last annual meeting the managing director and he had spent several months in Western Australia and had visited most of the scenes of the company's activities. Results of the work done up to the present on the properties which they controlled had not been without their disappointments, but he had returned happy in the knowledge that they had a stake in some excellent properties and that the prospects, on balance, were full of promise.

With regard to the famous Yellowdine mine, in which their participation was approximately one-fifth, he was glad to be able to report very favourably. At this time last year they had been at the critical stage of testing the continuation below water level of the rich and wide ore near the surface. The east crosscut from the shaft at the 100 ft. level had given a completely satisfactory answer to that question, and no time had been lost in preparing for the extraction and treatment of the ore. Sufficient high-grade ore had already been blocked out to keep the plant running for about two years.

MANAGING DIRECTOR'S SPEECH

Mr Claude A. de Bernales (managing director) said that his personal inspection of the Yellowdine mine and his discussions with those in control of its development had caused him to be well satisfied with its possibilities of success and in its developing favourably at depth. Disregarding the question of what lay in the deeper levels, the upper portion of the lode exposed to date formed an immensely valuable block of ore. The East Crosscut from the 100 ft. level of the main shaft proved the main lode to have, at that depth, a width of 47 ft. and to carry gold values in the crosscut of 18 dwts. per ton. Disregarding 5 ft. of low-grade ore in each wall, the centre 37 ft. of lode carried values in the crosscut of 24 dwts. per ton. Development at the 100 ft. level had shown the grade to be lower than in the level above, but highly payable values had been proved and extensions north and south were very promising. The estimates of the tonnage available above the 100 ft. level had varied from 100,000 to 135,000 tons of ore of an average value of 15 dwts. to 1 oz. per ton.

Their management's survey department had further estimated that with the width of the lode remaining constant, and not extending further north or south than had at present been proved, an additional 74,000 tons of ore would be opened up at every 100 ft. stage of sinking.

Great encouragement could be taken from the result of No. 12 Diamond Drill Borehole, which cut 22 ins. true width of stone at a vertical depth of 226 ft., which was 126 ft. below the present deepest level in the mine. The values showed an average of 1 oz. 9 dwts. per ton. The lode being lenticular in formation the management were not perturbed at the size of the orebody where cut, and confidently expected greater widths of ore when the orebody was being opened up.

The sinking of the main shaft was going forward steadily, and it had now reached a vertical depth of 254 ft. It was the intention of the management to sink a shaft to a depth of 320 ft. which would permit of a crosscut being put out at a vertical depth of 300 ft. to cut the orebodies at that horizon, which should be in the definite settled sulphide zone. The management would also doubtless put out a crosscut from the 200 ft. level for general information as also to permit of the proper working of the orebody.

Nothing could have been more heartening than the cabled news of the first monthly return. That showed that 3,109 tons or ore had been crushed for a return of 1,501.7 ozs. of gold worth £12,908 over the plates and with £11,477 of gold in the tailings, which were being stacked for future treatment by cyanidation. The total value of gold which in due course should come to the Yellowdine company from its June crushing would be £24,385, less the cost of treating the tailings, and the total net profit on 3,109 tons of ore treated for June should be £17,800. Anglo-Australian Gold Development, Limited, could reasonably expect the approximate dividend of £50,000 Australian per annum from its investment in the Yellowdine Company.

A summary of developments during the past 12 months showed that the Anglo-Australian company had made good headway in carrying out its policy and that, on average, it stood in a materially stronger position than it had done a year ago.

The report was adopted.

INTERNATIONAL TEA COMPANY'S STORES, LIMITED

DISTRIBUTION OF 80 PER CENT. MAINTAINED

The forty-first annual general meeting of this company was held, on the 14th instant, at Winchester House, London, Mr Guy Collier (chairman and joint managing director) presiding.

The Chairman, in the course of his speech, said: The profit for the year is £864,557 1s. 11d. To this must be added £108,845 16s. 1d. brought forward from the last account, making a total of £973,402 18s. After charging directors' and audit fees, interest, pensions, national health and unemployment insurance, depreciating leaseholds, fixtures and fittings by £80,000, placing £100,000 to the reserve account, providing for the preference dividends, and the interim dividend of 12 per cent. already paid on the ordinary shares, the balance is £347,804 17s. 8d.

The directors recommend the payment of a final dividend of 18 per cent. on the ordinary shares, making 30 per cent. for the year, that a provision of £50,000 be made for income tax liability, and that the balance of £108,804 17s. 8d. be carried forward to the next account.

I think that it is a matter of congratulation that we were able to build up this dividend equalisation fund in the years when profits were good, and competition not so severe, to provide for a lean year such as we have just gone through, and I do feel that it comes quite within the province of sound and prudent finance to use the money so provided, to stabilise our dividend this year.

TRADING DIFFICULTIES

I would like to say just a few words about the profits earned during the year under review. The figure of £864,557 1s. 11d., or roughly £22,000 less than last year (which was a record one for the company) appears on the face of it quite good, especially in view of the fact that the year just passed was for 52 weeks only, whereas the record year of 1935 was made up of 53 weeks. Another week's profit would have meant roughly £16,000, which would have put our figures within £6,000 of last year, but, on the other hand, there is the hard fact to face that 1935 accounts only included four months' profits of the George J. Mason Company, whereas this year we have had the advantage of a full year's trading profits. But for the profits included from George J. Mason, the trading profits of the International would have been substantially less.

The diminished profit is due entirely to the severe competition in selling that has been experienced during the entire 12 months. We have supplied a greater number of customers with a substantially increased weight of commodities, but we have had to take a smaller percentage of gross profit in so doing, and it has been quite impossible to make any substantial saving in expenses.

We are in possession of a very solid business built up during more than 50 years of successful trading, and we cannot allow it to be filched away from us, and, whatever the cost of maintaining our vast volume of trade, it has to be met, and that is the reason—and the sole reason—why the figures for 1936 do not show the normal expansion of profit that we might have reasonably expected as the result of 12 months' strenuous endeavour on the part of everyone engaged in your great undertaking.

In this connection, I do want to assure you that all our associated companies have equally pulled their weight in making up this year's balance sheet, and every subsidiary company has made a profit.

The total amount invested in freehold properties, including I.T.S. Properties Development Company, Limited, is now nearly two and a quarter millions, and in bad years when the competition is so fierce I feel even more thankful that we are protected in so many of the leading towns, up and down the country, because I am quite certain that, were we not already established in the majority of the leading towns, the rents now being secured for first-class trading positions would make the opening of new shops increasingly difficult, and in some cases quite impossible.

MR COLIN COOPER'S VIEWS

Mr Colin Cooper (vice-chairman and joint managing director) seconded the motion. Referring to the question of competition, he said that it required no skill or salesmanship to sell at a loss an article of a certain known value, and cutters would learn to their cost that those who flocked to them while they did it would immediately go back from whence they came when the price was put back to a normal one. During the past very difficult year the company had had to see to it that none of their customers had been taken from them by the attraction of price, and he was glad to be able to say that both the turnover and the number of customers had increased.

The report and accounts were unanimously adopted.

THE TRUSTEES CORPORATION, LIMITED

FURTHER INCREASE IN REVENUE

The forty-eighth annual general meeting of The Trustees Corporation, Limited, was held, on the 15th instant, in London.

Mr W. Sandford Poole (the chairman) first referred to the deeply regretted death of the late chairman, Sir George Touche.

Proceeding, he said that the income from interest and dividends, less income tax, amounted to £134,651, an increase of some £5,600 on the previous year's figure. The conditions he outlined last July had since prevailed, and, indeed, had become intensified. At home, industrial and commercial revival had steadily proceeded. With regard to the disposition of their investments, on the basis of book figures approximately 65 per cent. and on the basis of valuation figures 78 per cent. were in Great Britain and the British Dominions and Dependencies. In spite of the difficulties abroad and the present rubbish levels of many foreign holdings, the market appreciation over book values of their total investments at May 31st last almost reached the level of that shown towards the end of 1930. The valuation showed that, over and above their capital, their reserves and carry forward, which together amounted to more than £580,000, were intact with a substantial margin.

The total revenue for the year was £159,858; £10,000 has been transferred to the reserve fund, and the directors recommended a final dividend of 6½ per cent. actual, making a total of 9 per cent. for the year. That compared with 8½ per cent. for the previous year and with 7½ per cent. for 1933-34. The balance carried forward was £100,342. Their investment revenue for the current year should show no retrogression providing that no serious calamity occurred. The economic strength of this country and recovery and stability within the "sterling area" might well prove to be the first foundation upon which a sound structure of world international trade could be rebuilt. Recent trade returns, however, made it plain that no effort must be spared to stimulate our exports and widen trade interchange by all possible means.

The report and accounts were unanimously adopted, and the proceedings terminated with a hearty vote of thanks to the chairman, directors, and staff.

GREAT BOULDER PROPRIETARY GOLD MINES

INCREASE OF TREATMENT PLANT

The forty-second ordinary general meeting of the Great Boulder Proprietary Gold Mines, Limited, was held, on the 15th instant, in London.

Mr Claude A. de Bernales (vice-chairman) said that the mine working profit for the year under review was £88,660, compared with £88,135 for 1934, and, in view of the fact that operations had been suspended for eight weeks in January and February, 1935, owing to a strike, could only be considered satisfactory. Had normal conditions existed throughout the whole of the year, a substantial increase in profit could have been expected. The net profit was £70,636, out of which two dividends of 12½ per cent. had been paid, and he was able to announce that an interim dividend of 12½ per cent.—3d. sterling per share—less income tax had that day been declared on account of the current year. The ore reserves at December 31 last amounted to 697,394 tons.

He had recently visited Kalgoorlie and held a conference of mine officials, and had had no hesitation in recommending the adoption of the policy of which the board had approved and which had had the approval and recommendation of all those attending the conference. The recommendation was that development should be expedited and the capacity of the present treatment plant increased to 25,000 tons per month at an estimated total cost for development and plant of £300,000 (Australian currency) spread over two to three years. To meet the expenditure and not to interfere with the present rate of dividend distribution, the board had decided to issue the 166,667 reserve shares, and those have been allotted to Great Boulder Mining and Finance, Limited, at 8s. 6d. sterling per share, the market price on the day of allotment. Sufficient cash was, therefore, made available with funds at present in hand together with profits estimated as receivable over the next two years from the mine and the retreatment of the residue dumps to carry out and pay for the policy recommended and at least to continue the present rate of dividend.

He believed that properly handled and energetically developed the Great Boulder Proprietary Mine had ahead of it many years of highly profitable life.

The report was adopted.

ESTATES CONTROL, LIMITED

LORD LUKE ON MEAT SUBSIDIES

Presiding at the thirty-second annual general meeting of Estates, Control, Limited, held on the 16th instant, Lord Luke said that while nearly all the cattle from the Bovril Australian Estates provided frozen beef for this market, he doubted if any beef, frozen or chilled, came here from Argentine Estates of Bovril, so they were not directly interested in the £d. a pound duty on foreign beef recently announced.

It was realised in South America that the home farmer had the first claim on this market, and the new duty not only gave him protection advantage but helped to provide the bonus for the best grade of cattle produced here.

He had recently had his attention drawn to some statistics in Sir Thomas Middleton's book "Food Production in War," published by the Carnegie Endowment. For the purpose of the food statistics, a person was reckoned as requiring one million calories per annum. It was then indicated on that basis that 100 acres of wheat land would support 208 persons for a year, whereas the same area of average milk producing pasture would support 41 persons, whilst the average beef producing pasture would support only nine persons to the 100 acres.

There was, of course, only a limited amount of land suitable for food production in this country. Therefore in any consideration (especially with the possibility of war conditions) the greatest thought should be given to increasing the actual amount of food necessary to sustain the population.

It was to be hoped that the Government would make it a condition that the bonus to be given to the beef-cattle farmers should only go to those who maintained or improved a high standard of stock.

The net profits of the company, at £41,043, were some £5,300 down on the year. This was due to there having been a lower profit margin on the trading side of the accounts. Having made the usual dividend payments on the preference and preferred ordinary shares, they now suggested a final dividend on the ordinary shares that would bring the total dividend up to 4s. per share, the same as the previous year.

The report and accounts were adopted.

COVENT GARDEN PROPERTIES COMPANY, LIMITED

SATISFACTORY OUTLOOK

The twelfth ordinary general meeting of this company was held, on the 14th instant, in London.

Mr Philip E. Hill (the chairman) said that the revenue for the year before providing for directors' fees, taxation, and debenture interest, was £259,000. The income from rents, tolls and interest on investments was £228,000, an increase of £17,000, or, if the further increase in rates was added, £22,000 as compared with last year. The balance of revenue arising out of realisation of securities was £30,770, as against a figure of £30,763 in last year's accounts. As anticipated, their revenue continued to increase, and should be further augmented during the current year and the next year to the extent of about £30,000. There were also, of course, valuable reversions falling in during the next few years.

During the year the company had issued £2,500,000 4 per cent. first mortgage debenture stock, and in connection with the issue an offer had been made to the holders of the 5 per cent. and 4½ per cent. debenture stocks to convert into the new issue, or to accept redemption. As a result, the whole of the £1,000,000 5 per cent. debenture stock and £835,090 of the £1,000,000 4½ per cent. debenture had been converted or redeemed. There still remained a balance of £164,910 of the 4½ per cent. stock outstanding, and the company had deposited £181,401 in cash with the trustees for that stock to provide for the redemption of this in 1937.

The directors had instructed Messrs Goddard and Smith and Messrs Knight, Frank and Rutley to make a valuation of the whole of the company's freehold and leasehold properties, and their valuation, made on December 23rd last, disclosed an increase in the value of those properties of £663,604 over the figure at which they appeared in the balance sheet.

During the year certain of the company's investments had been realised at a satisfactory profit and the proceeds, together with the surplus arising from the recent debenture issue figured in the balance sheet item as cash in hand. With a view to the satisfactory employment of those funds, contracts had been entered into for the purchase of shop properties let to well-known multiple concerns. Generally he thought the outlook of the company might be considered as quite satisfactory.

The report was unanimously adopted.

SOUTH AFRICAN TORBANITE MINING AND REFINING COMPANY, LIMITED

INCREASE OF CAPITAL APPROVED

An extraordinary general meeting of the South African Torbanite Mining and Refining Company, Limited, was held, on the 22nd ultimo, in Johannesburg.

Mr W. Patrick Jones (the chairman) said that the meeting had been called to consider resolutions increasing the capital of the company to £1,000,000 divided into 2,000,000 shares of 10s. each by the creation of 500,000 additional shares of 10s. each. He would remind shareholders that prior to the incorporation of the company an expenditure of approximately £50,000 had been incurred primarily in proving the torbanite possibilities of portions of the farm Mooifontein No. 287, upon which the company's mine and retorts were now situated. Those investigations had considerably facilitated the opening up of the torbanite seams and a fully equipped mine had now been established.

The mining operations carried out to date confirmed the original estimate that when the output had reached 300 tons per day the mining costs would be of the order of 10s. per ton of torbanite. It was anticipated that that output would be reached early in 1937. It was estimated that on Mooifontein alone there was sufficient payable torbanite to supply the retorts for 25 to 30 years on an estimated throughput of 300 tons per day. Operations had been commenced at the refinery in January and it was estimated that by the beginning of 1937 fifty per cent. of the refinery's requirements would be supplied from torbanite oil.

As to marketing, an efficient organisation had been constituted to deal with the distribution of the company's products, which had already met with a satisfactory reception from the public. In addition to motor spirit, progress was being made in regard to the disposal of by-products. Since the original capital expenditure programme was formulated there had been several developments as a result of which a wider scope of activity was envisaged and they were advised that it would be of advantage to expand their operations.

Shareholders might anticipate that their prospects would be substantially enhanced as a result of the expansion and the directors were confident that the new capital would improve their prospects.

The resolutions were passed unanimously.

CHOSEN CORPORATION LIMITED

IMPORTANT AGREEMENT WITH UNION OF MINES

An extraordinary general meeting of the Chosen Corporation, Limited, was held, on the 15th instant, at Winchester House, London, E.C., Mr Gerald W. B. Portman (Vice-Chairman) presiding.

The Chairman, in the course of his speech, dealt at length with the reasons which had made it desirable, in the opinion of the board, for no full report on the position of the company, together with audited accounts, to be submitted to the shareholders until the close of the financial year on June 30th last, and to questions that had been raised in regard to recent issues of shares.

He proceeded to explain the difficulties with which the company was faced owing to the strong national feeling which had arisen in Japan recently against foreign companies operating in Japanese territory, which had necessitated some arrangement being made with Japanese interests if the future of Chosen Corporation and its Japanese subsidiaries was to be safeguarded for the shareholders.

Having dealt with the lengthy negotiations extending over some eight months which had been carried on with Japanese and American interests, he announced that, as the outcome of these, a final agreement had been signed on May 5th with the Chosen Union of Mines, a Japanese Corporation, whose chairman was Viscount Innouye, amongst the effects of which were the acquisition by the Corporation of shares in the Nurupi Company, and an undertaking by the Corporation in regard to the guarantee of the receipt of a minimum dividend amounting to £53,593 per annum on the Nurupi shares owned by Chosen Corporation. In the opinion of the board, the agreement that had been entered into would be very beneficial for Chosen Corporation shareholders.

He announced a dividend for the half-year of 1s. per share, payable on July 21st, making a total of 10 per cent. for the year with a further possible bonus dividend out of the commission to be received under agreement with the Japanese interests.

Mr Serge Rubinstein, in reply to questions, said that in his opinion the best answer to the criticisms of the consulting engineers was that at March 31, 1936, the grade of ore, the tonnage and also the dwts. were the maximum in the company's history.

SOUTH AFRICAN BREWERIES, LIMITED

RECORD PROFIT

The forty-first ordinary general meeting of the South African Breweries, Limited, was held, on the 15th instant, in London.

The Rt. Hon. Sir A. Griffith-Boscawen, P.C., J.P. (vice-chairman), said that the company had had a very good year; in fact, they had made a record profit, and he was glad to add that though one could not expect that their business would expand at the same rate every year—it must be remembered that the returns which they were receiving that day were in comparison with the large increases made last year over the returns for the previous year—there was at present no indication of any diminution in their business; on the contrary, their prospects for the present year were distinctly encouraging.

The net profit showed an excellent increase of £62,800, and they proposed to increase the dividend on the ordinary shares by 2½ per cent., making it 20 per cent. for the year, free of income tax, and after making provision towards the establishment of the pension and life assurance scheme of £35,000, they would carry forward an amount of £60,901.

Their beers had maintained their high quality, and without wishing to draw any invidious distinctions with the products of their competitors, he was confident that they remained the best beers brewed in South Africa. Since their last meeting they had put on to the market a new Pilsener beer—Golden Pilsener it was called—and it had proved a great success. It had commanded a very large sale, which he was glad to tell them had in no way interfered with the sale of their Lager, always a very popular beverage, or of their other products.

The company aimed at making their product all-African so far as was possible, and, as a matter of fact, the only thing they had been compelled to import to any extent was hops. For some years past, in conjunction with the Union Government, and acting with Ohlssons Cape Breweries, they had been experimenting in hop growing with satisfactory results up to a point. He would not wish it to be supposed that there was any immediate prospect of their being able to give up importing a large proportion of the hops which they required, but so far as it was possible, they intended to grow as many hops in South Africa as they could make use of profitably.

The report was unanimously adopted.

GOVERNMENT RETURNS, &c.

NATIONAL ACCOUNTS

The total ordinary revenue for the week ended July 11, 1936, amounted to £13,935,000, against ordinary expenditure of £10,416,000. After allowing for an increase in Exchequer Balances of £155,532, the operations for the week, as shown below, decreased the gross National Debt by £2,902,000 to approximately £7,988 millions.*

TREASURY BILLS BY PUBLIC TENDER

Tenders for £50,000,000 Treasury bills were opened on July 10, 1936, and the total amount applied for was £76,605,000. Tenders were accepted for Treasury bills at three months dated Monday to Friday, at £99 17s. 0d., about 66 per cent. and above in full; Saturday, at £99 17s. 1d., and above in full. The average rate per cent. was 11s. 9.41d. The amount allotted was £50,000,000. The following table shows the weekly record at various dates:—

Date	Amount Offered	Total Applications	Amount Allotted	Average Rate %
1934				
January 5	35,000,000	76,260,000	30,000,000	0 18 11.5

GOLD MARKET

Messrs Samuel Montagu and Company write on July 15, 1936, as follows:—
The Bank of England gold reserve against notes amounted to £225,600,525 on the 8th inst., as compared with £221,111,585 on the previous Wednesday. Further large purchases of bar gold were announced by the Bank, and the total amount bought during the week under review was £5,393,875. In the open market offerings were on rather a larger scale, about £2,140,000 being disposed of at the daily fixing. Buying was mainly for a special quarter, and the fixed prices included a good premium over gold exchange parities.
Quotations during the week:—

	Per fine ounce	Equivalent value of £ sterling
July 9	139s. 1d.	12s. 2.60d.
" 10	139s. 0d.	12s. 2.68d.
" 11	138s. 8d.	12s. 3.04d.
" 13	138s. 8½d.	12s. 2.99d.
" 14	138s. 10d.	12s. 2.86d.
" 15	139s. 0d.	12s. 2.68d.
Average	138s. 10.58d.	12s. 2.81d.
July 16	138s. 11d.	12s. 2.77d.

Gold shipments from Bombay last week amounted to about £1,069,000. The s.s. "Rawal Pindi" carries £889,000 consigned to London, and the s.s. "President Polk" £180,000 consigned to New York.

SILVER MARKET

The market has been quiet, and although prices have been inclined to fluctuate, the tone has been fairly steady.
Sales on China account have continued, and the Indian Bazaars have made some resales, whilst speculators have both bought and

sold. The Indian Bazaars have also given support, buying for prompt shipment, and also for forward delivery.

There have been no new features and, for the near future, no wide movement from the present level is anticipated.

Quotations during the week:—

IN LONDON		IN NEW YORK	
Bar silver per oz. std.		Cents per Ounce	
Cash	Two Months'		
delivery	delivery		
July 9	19½d.	July 8	45
" 10	19½d.	" 9	45

COMMERCE AND TRADE

SURVEY OF COMMODITY MARKETS

THE excitement recorded a week ago was short-lived and the majority of the commodity markets have exhibited a distinctly quieter tone during the past few days. But while the advance in prices was checked in certain instances, the general tendency of quotations was still upwards.

The expectation that the scattered showers which have fallen in North America heralded the break-up of the drought was responsible for a slight setback in wheat. But although prices closed on Wednesday below the best, there was no net fall on the week. The rise in maize continued, shipments from Argentina having failed to increase, and other grains were also strong. Among other foodstuffs, butter and cheese sold at higher prices on the London Provision Exchange, while bacon was about steady. Eggs and meat were rather dearer. Sugar remained a quiet

market, but the improved tone recently shown at the Mincing Lane tea auctions was well maintained.

Demand for steam coal on home account remains strong, and new contracts are being arranged at advancing rates. In some districts the demand for iron and steel has become less intense, owing to seasonal influences, but makers are frequently in arrears with deliveries. Non-ferrous metals have been a quiet market this week, but prices are generally rather higher. The rubber market displayed a steady tone throughout the period under review, while oilseeds were generally firm after declining slightly in sympathy with wheat. The rise in the price of cotton continued this week, and wool was also strong. An estimate of the area under jute this season, revealing a substantial increase over the corresponding figure for last year, was partly responsible for dullness on the jute market. Other textile fibres were generally quiet.

American prices remained practically stationary during the past week. Thus Moody's index of the dollar prices of staple commodities (December 31, 1931 = 100) stood at 175.9 on Wednesday, against 175.8 a week ago, 164.8 a month earlier and 158.1 on the corresponding day last year.

COAL

SHEFFIELD.—The demand for steam coal is active on inland account, and prices are well maintained. New contracts for supplies to industry are being placed at advanced rates. Export business, however, is dull, inquiries for prompt shipment being few and far between. More fuel is available than for some time, especially in trebles and doubles. Home demand for washed smalls is maintained at a high level, and furnace and foundry coke is very firm.

Nominal prices at pit for inland are: South Yorkshire best 23s.-25s.; ditto second, 20s.-21s.; Derbyshire best house, 22s.-23s.; ditto best brights, 19s. 6d.-21s.; kitchen coal, 16s. 6d.-19s. 6d.; best screened nuts, 19s.-20s.; small screened nuts, 18s.-18s. 6d.; Yorkshire and Derbyshire hards, 19s. 6d.-20s.; rough slacks, 11s.-12s.; nutty slacks, 10s.-11s. Export prices: South Yorkshire—Association hards, 19s.-19s. 6d.; washed trebles, 17s. 6d.-18s.; washed steam doubles, 17s. 6d.-18s.; washed gas doubles, 17s. 6d.-18s.; washed steam singles, 17s.-17s. 6d.; washed gas singles, 17s.-17s. 6d.; washed smalls, 14s. 9d.-15s. 3d.; washed coking smalls 14s. 9d.-15s. 3d.; screened gas coal, 19s.-20s. 6d. Derbyshire—Top hards, 18s. 3d.-18s. 9d.; cobbles, 18s. 3d.-18s. 9d.; washed trebles, 17s.-17s. 6d.; washed doubles, 16s. 9d.-17s.; slacks, 9s. 6d.-13s.

NEWCASTLE-ON-TYNE.—Steam coals of all sizes and qualities remain very strong and as the autumn approaches it is the general expectation that prices will further appreciate. With the seasonal decline in the coasting trade, Northumberland steam collieries generally experience some idle time at this period, but this year demand from Scandinavia is very active, under trading agreements, and these collieries are working full time. Durham prime gas is quiet, but coking and bunkers are a steady market. Coke of all descriptions is very firm and lack of supplies is making operations difficult both in the export and inland trade.

Current f.o.b. prices for export: NORTHUMBERLAND—D.C.B. screened, 15s.; smalls, 12s. 6d.; Howards, Bentinck, Newbiggin screened, 14s. 9d.; smalls, 12s.; Tyne prime large, 14s. 6d.; smalls, 12s. 6d.; Hartley Main large, 14s. 9d.; smalls, 12s. 6d. DURHAM—Lambton, South Hetton screened steam, 15s. 9d.; smalls, 13s.; Wear special gas, 15s.; Holmside, Ryhope, Boldon unscreened gas, 14s. 8d.; second-class gas, 13s. 6d.; coking unscreened and/or smalls, 13s. 3d. Prime unscreened bunkers, 15s.; second-class unscreened bunkers, 14s.; prime foundry coke, 26s.; Newcastle and district gas coke, 28s.

GLASGOW.—The collieries in the Lothians have been closed for the annual holidays this week, and those in the other areas cease work at the week-end. Market conditions have been quiet. Outputs in Fife have been well taken up, with only odd lots of large coal obtainable for new business, and these mainly because of delays in the arrival of tonnage. The quieter demand for house fuel is a factor in the position in the west, where round coal is readily obtainable; but with smaller general outputs washed nuts are scarce and firm. A fair volume of orders is on hand for the resumption, but the disinclination of the collieries to accept further business pending the new selling arrangements and the higher level of prices asked combine to limit expansion.

Shipment prices (f.o.b. district ports): LANARKSHIRE—Ell best, 15s.; splint best, 18s.; splint second, 16s.-16s. 6d.; navigation, screened, 16s.-16s. 6d.; navigation, unscreened, 15s.; Steam, screened, 14s. 6d.; trebles, 16s.; doubles, 15s. 6d.-16s.; singles, 16s.; pearls, 15s.; dross, 12s. 6d. FIFE—Best unscreened navigation, 14s. 9d.-15s.; unscreened navigation, 14s. 6d.; first-class steam, 15s.-15s. 3d.; third-class steam, 14s.-14s. 6d.; trebles, 16s. 6d.-18s.; doubles, 16s.-17s.; singles, 16s.-16s. 6d.; pearls, 14s.-14s. 9d. LOTHIAN—Best splint, 16s.; prime steam, 14s. 6d.-15s.; secondary steam, 14s. 6d.; unscreened navigation, 14s. 6d.; trebles, 16s. 3d.-16s. 6d.; doubles, 15s. 9d.-16s.; singles, 16s.-16s. 6d.; pearls, nominal. AYRSHIRE—Best unscreened navigation, 16s.-16s. 6d.; steam, 13s.-13s. 6d.; trebles, 15s. 6d.-15s. 9d.; doubles, 16s.; singles, 16s.-16s. 6d.; pearls, nominal; dross, nominal.

CARDIFF.—There has been no improvement in conditions on the Cardiff coal market. In June, total shipments to foreign countries were nearly 30 per cent. less than in the corresponding month last year. Since the beginning of the present month the docks have not been employed up to 50 per cent. of capacity, and in the week ended July 12th traffic in the coastwise as well as the foreign trade totalled only 293,800 tons as against 426,423 tons in the corresponding period last year. This persistent decline in the export trade is the cause of serious anxiety, and representations on the subject are being made to the Government. With current demand substantially below the authorised output quota, stocks of large classes are exceptionally heavy, while small and sized classes are very firm on scarce supplies. Cobbles are a weak market, but there is a steady demand for throughs, particularly for bunkering. Coke continues very strong. At its reduced rate of output patent fuel is also firm; but the pitwood market is quiet. The differences over the price to be paid for the September deliveries of French wood under the coal-pitwood barter arrangement have not yet been adjusted.

Current approximate quotations: Best Admiralties, 19s. 6d.; seconds, 18s. 9d. to 19s. 3d.; best dross, 18s. 6d.; Black Veins, 18s. 3d.; Western Valleys, 17s. 6d. to 17s. 9d.; Eastern Valleys, 17s. 3d. to 17s. 7½d.; best small steams (washed), 13s. 6d. to 14s. 6d.; coking smalls, 14s. 3d. to 14s. 6d.; second steams, 13s. to 14s.; anthracite best large, 36s. to 40s.; Red Vein large, 22s. to 27s.; machine-made cobbles, 35s. to 51s.; French nuts, 35s. to 51s.;

stove nuts, 34s. to 50s. 9d.; rubbly culm, 11s. 6d. to 12s.; special foundry coke, 42s. 6d. to 47s. 6d.; patent fuel (Crown), 21s.; pitwood, ex ship, French 24s. 3d., Portuguese 23s.

IRON AND STEEL

LONDON.—Some seasonal slackening in demand is noticeable, states the official report of the London Iron and Steel Exchange. In practically all departments of the market, however, works are operating at capacity; but, even so, in many cases they are unable to overtake arrears in deliveries. In pig iron, although new business is less than a few weeks ago, there has been no decline in quantities passing into consumption, and producers are fully booked for several months to come. It is now less difficult to arrange for supplies, as a result of the increased production. Many consumers are anxious to place contracts for delivery beyond the end of the year; but makers are maintaining a cautious attitude, and are not disposed to accept far forward business. In semi-finished steel, requirements of consumers show no signs of decreasing. The pressure to obtain supplies of British material is unrelaxed, and the output of the producing works is passing into immediate consumption. An active business is being transacted in finished steel and the demand for constructional material is particularly heavy. Export inquiry has improved of late.

MIDDLESBROUGH.—Production of pig iron is steadily maintained. Cleveland foundry iron is gradually increasing in supply, and hematite pig iron is more readily available than for some little time. Makers of both qualities are, however, well booked for some time ahead, and it is expected that further furnaces will be restarted. Prices are fixed at the agreed minimum rates of 75s. per ton for No. 3 Cleveland foundry pig iron and 85s. per ton for East Coast mixed numbers, the latter being subject to a rebate of 5s. under certain conditions. A shipment of 1,050 tons of pig iron has been made this week to South Wales, and merchants are now hoping to resume shipment to customers abroad, with whom they are in arrears. Demand for semi-finished and finished steel continues, with makers barely able to keep up with requirements, and in some cases delivery of smaller steel sections can only be given after an interval of a few weeks. Blast furnace coke continues firm at 25s. per ton delivered at the furnaces, whilst foreign ore is firmer owing to the continued high freights. Heavy steel melting scrap remains at 57s. 6d. per ton delivered works.

SHEFFIELD.—The iron market remains virtually unchanged, the recently-increased prices having in no way affected demand. There is little foundry on offer beyond a few limited parcels, and forge requirements are making inroads on stocks at furnaces. Notwithstanding the increased production of Derbyshire material, supplies are barely equal to the full requirements of consumers. Makers of hematite are heavily committed, and are hesitant about accepting further large commitments. In marked and common bars business is fairly active, but much more could be undertaken in crown bars. Ironmasters are not finding it easy to secure all the blast-furnace coke they need, and are entering into contracts at up to 21s. per ton on rail at ovens, the highest figure quoted for several years. Production in all sections of the steel industry is being expanded, and makers of fine steels are busier than they have been for a very long period. Aircraft steel is a big feature, and heavy quantities of Siemens acid steel are being taken up. Production of basic steel billets continues on a huge scale. All prices are firm and unchanged. There is a strong demand for foundry cast-iron scrap at 62s. 6d., and for heavy wrought-iron scrap suitable for shearing at up to 67s. 6d. Steel scrap is quieter, recent imports having eased the position, although prices are little lower than for home-produced material.

GLASGOW.—Works in Glasgow and district suspend operations towards the end of this week for the annual Fair Holidays, and a general resumption will not take place until Tuesday the 28th. Plants have been running to utmost capacity this week in an endeavour to give deliveries to users who are pressing for materials before works close. In most branches large tonnages of unexecuted orders are on books, but with a few exceptions it has not been considered advisable to curtail holidays as plants are needing overhauls and repairs which can be carried out only when plant is idle; a large amount of such work will be undertaken within the next ten days. It is usual at this season to find new business somewhat scarce, but there has been little slackening off this year. Steelmakers are experiencing a steady demand for all classes of material, and makers of semis and all re-rollers are finding new business plentiful. Makers of machinery have received some large orders within the past few weeks and have much work on

tons last week; 1,050 tons on Wednesday, against 600 last week. Domestic spot was quoted at 9-02½ cents per lb. in New York on Wednesday, against 8-95 cents a week ago and 8-87½ cents a month ago. Wednesday's official closing price for standard cash in London was £36 18s. 9d. to £37, compared with £36 12s. 6d. to £36 13s. 9d. a week ago. Stocks of refined copper in British official warehouses at the end of last week, at 54,960 tons, show a decrease of 1,438 tons, while stocks of rough copper, at 3,467 tons, show a decrease of 1,075 tons on the week.

LEAD AND SELLER.—After the end of last week demand for lead became very quiet, but sellers were not disposed to accept lower rates and, at the close on Wednesday, prices were unchanged on the week. Spelter, however, scored a slight recovery from the previous week's level, despite the restricted nature of demand during most of the period under review.

Sales of lead on the London Metal Exchange: 800 tons on Monday, against 1,000 tons last week; 550 tons on Tuesday, against 450 tons last week; 550 tons on Wednesday, against 300 last week. The New York quotation on Wednesday was 4-60 cents per lb., against 4-60 cents a week ago and 4-60 cents a month ago. The official closing quotation in London for soft foreign for shipment during the current month was £15 7s. 6d. per ton, compared with £15 7s. 6d. a week ago.

Sales of spelter on the London Metal Exchange: 500 tons on Monday, against 175 tons last week; 325 tons on Tuesday, against 750 tons last week; 200 tons on Wednesday, against 1,750 tons last week. Wednesday's quotation in East St. Louis was 4-75 cents per lb., against 4-75 cents the week before and 4-90 cents a month earlier. Wednesday's official closing quotation in London for "good ordinary brands" for shipment during the current month was £13 8s. 9d. per ton, against £13 9s. 9d. last week.

TIN.—After last week's excitement, the market in tin became much quieter this week. Nevertheless, prices recorded a sharp advance on Monday and closed with a strong tone; lighter offerings in the Straits at firmer prices, and a further fall in British stocks, induced sellers to exercise caution. Although the advance was not fully held on Tuesday, prices at the close on Wednesday were appreciably higher on the week.

Sales of tin on the London Metal Exchange: 475 tons on Monday, against 225 tons last week; 175 tons on Tuesday, against 435 tons last week; 190 tons on Wednesday, against 470 last week. The New York quotation on Wednesday was 44-12½ cents per lb., against 43-50 cents a week ago and 41-37½ cents a month ago. Wednesday's official closing quotation in London for standard cash was £192 10s. to £193 per ton, compared with £188 15s. to £189 5s. a week ago. Stocks of tin in London and Liverpool at the end of last week totalled 583 tons, a decrease of 134 tons on the week.

OTHER NON-FERROUS METALS.—Among other non-ferrous metals, aluminium ingots and bars for home delivery were again quoted at £100 per ton, and rolling billets at £102 per ton. Nickel, for home and export, at £200 to £205 per ton, remains unchanged. Quicksilver, on the spot, was quoted at £12 2s. 6d. per flask of 76 lb., the same as last week. Chinese antimony was again quoted at £54 per ton ex warehouse, duty paid. Chinese wolfram for July-August shipment was quoted at 26s. to 27s. per unit, c.i.f., as against 27s. 6d. to 28s. 6d. last week. Platinum (refined) was quoted at £8 per ounce as against £7 10s. last week.

TEXTILES

COTTON.—Manchester. The higher prices have been well maintained. Rather wider fluctuations have occurred in raw cotton quotations, but without any general decline. Rather more favourable weather advices have been received from the American cotton belt, but demand has continued active and the statistical position remains strong. According to present indications, the new growth will not be more than 11,500,000 bales, whereas world consumption is now equal to 12,500,000 bales per annum. Manufacturers of cloth have experienced an increased inquiry. Most buyers have been slow in raising offers, but in certain quarters more trade has been done. Despite many difficulties, a few more transactions have taken place for India in light bleaching descriptions and prints, and the improved demand for South America has been maintained. Some fairly encouraging orders have been obtained for the Dominions and Crown Colonies, especially Australia, South Africa and West Africa. Home trade buyers are pleased with their purchases of a week or two ago, and further orders have been reported in household goods, dress materials and poplins. It has not been a satisfactory week for spinners of yarn. Home users and exporters have refused to pay the advanced rates. Business, therefore, has been patchy in both American and Egyptian qualities.

COTTON PRICES

COTTON YARN PRICE-FIXING SCHEMES.—Further determined efforts are being made to arrange price-fixing schemes in the

spinning section. The legal agreement in coarse American counts, known as the Royton section, has been in force about two years and has been eminently successful. Meetings are now taking place of spinning employers engaged on medium mule yarns. A draft legal agreement has been approved and is being circulated to the companies affected—which control about 5,000,000 spindles. A movement is also on foot amongst yarn doublers, and it is hoped that the 250 firms owning 3,000,000 spindles will soon take action to protect their margins. In this connection one of the most difficult branches has been the Egyptian section. Last November, when a ballot was taken on a price-fixing scheme, the owners of less than 58 per cent. of the spindles involved voted in favour, and it was decided not to take any further action for the present. This week, however, at another meeting of the special sub-committee of the Master Cotton Spinners' Federation, price-cutting was discussed. It is generally believed that the prospects for a scheme are now brighter, and a further meeting is to be held next week.

JUTE.—Dundee. The first forecast, estimating an area of 2,505,800 acres under jute for season 1936-1937, compared with the newly-revised acreage for last season of 2,180,000 acres, created little impression on the market. The present figures show an increase over last year at this time of approximately 33 per cent., and it may be that they are as far out on this occasion as they were on the last. The last crop yielded about 8,000,000 bales, and the present one is expected to yield something like 9,500,000. There is therefore no lack of jute when the extensive stocks in the hands of consumers and carried forward from previous seasons are added to the probable yield of this crop. The market in general has ruled dull, with buyers looking for lower prices for all commodities in the trade. The Calcutta goods market has appreciated a little, but prices are still at a very low level. Business normally shows some seasonal improvement about this time of the year. Dundee yarns and cloth are only being bought in small quantities for delivery as early as can be given. The full group of Daisee-2/3 has been sold down to £15 15s., but sellers are now rather more reserved and quote £16 lowest, with single marks at from £16 10s., and Daisee-4 at from £15 10s., October/November. Tossa-2/3 is quoted at from £17 2s. 6d., at which business was done in a short group, with fours at from £16 2s. 6d., same shipment. Red Diamond DS First Mark is offered at £19 10s. and Double Triangle DS Lightning at £18 7s. 6d., with Hearts at £17 5s., August/September.

Common 8 lb. cops still rule at 1s. 10d. and 8 lb. spools at 1s. 11d., which rates buyers are not keen to pay, but spinners declare that they will curtail production further, rather than sell at less. Twist is steady at 3½d. for 3 ply 8 lb., and sacking yarns are unchanged at 2½d. for 24 lb. web and 3½d. for 8 lb. chains. Rove continues at £19 lowest for 48 lb. and £15 10s. for 200 lb., while the finer yarns are quiet at 2s. 7d. for second quality 8 lb. warp, 2s. 3½d. for third and 2s. 1d. for fourth. Carpet yarns are steady at 3½d. done for 14 lb. warp. Orders for cloth are confined to small lots for immediate delivery, buyers being disinclined to buy any distance ahead in view of the uncertainty. Prices are lower at 2½d. paid for 10 oz. 40 in. and 1½d. for 8 oz. Linoleum hessians are slow and nominal, but a quiet steady demand is still being made for heavy goods. Calcutta hessians have been advanced to 17s. 2½d. for 10 oz. 40 in., and 13s. 10d. for 8 oz., July, and 17s. 1d. and 13s. 8d. for August/September. Liverpool twills are at 43s., and "B" twills at 38s., July/September.

GRAIN MARKETS

WHEAT.—The weather in North America remains the dominant factor determining the movement of wheat prices. Scattered showers have fallen in the spring wheat belt of the United States and in the prairie provinces of Canada during the past week, but much heavier rainfall is needed. The expectation that this change marks the break-up of the drought was responsible for a slight setback in prices. But, at the close on Wednesday, quotations showed little net change over the week.

On Wednesday last, "July" futures were quoted in Chicago at 104½ cents per bushel, against 105½ cents the week before and 88½ cents a month ago. Quotations in London, Wednesday: No. 1 Northern Manitoba, ex ship, 35s. per 496 lbs., against 35s. a week ago; No. 2 Northern Manitoba, ex ship, 34s. 9d., against 34s. 9d. a week ago. According to the *Corn Trade News*, total shipments of wheat and flour last week totalled 980,000 quarters, against 921,000 in the previous week and 941,000 quarters in the corresponding week a year ago.

FLOUR.—Prices are maintained at last week's level. Wednesday's London quotations (excluding quota payments) were: Straight run, delivered Home Counties, 30s. per 280 lbs., against 30s. a week ago; delivered inner London, 29s. 6d., as compared with 29s. 6d. a week ago. Manitoba patents, ex store, 26s. 6d. to 28s., against 26s. 6d. to 28s. a week ago. Australian, ex store, 23s. to 23s. 6d., against 23s. to 23s. 6d. a week ago.

BARLEY.—The market in imported feeding descriptions remains strong and prices have advanced during the past week. "July" futures were quoted at 53½ cents per bushel in Winnipeg on Tuesday, against 46½ cents a week ago and 37½ cents a month ago. Quotations per 48 lbs. in London on Wednesday were: "English feed" at farm, 24s., as against 22s. a week ago; "English malting," at farm, not quoted, against 25s. to 30s. a week ago.

OATS.—On Wednesday, "July" futures were quoted at 37½ cents a bushel in Chicago, against 36½ cents a week ago and 26½ cents last month. Quotations in London, Wednesday: "English Black," at farm, 20s. per 336 lbs., against 19s. a week ago; "English White," at farm, 20s., against 19s. a week earlier.

MAIZE.—Business has been active at advancing prices. The position in Argentina shows little alteration, and shipments from that country remain below normal. "July" futures were quoted on Wednesday at 85 cents per bushel in Chicago, against 81½ cents

a week ago, and 62½ cents last month. Quotations in London Wednesday: "Plate," landed, 22s. per 480 lbs., compared with 21s. a week ago; "Plate," ex ship, 21s. 3d., as against 20s. a week ago; "Plate," "July," 20s. 3d., as against 19s. 6d. a week ago; yellow maize meal, ex wharf, was quoted at £5 12s. 6d. to £5 15s. per ton, as against £5 7s. 6d. to £5 10s. last week.

SALES AND PRICES OF BRITISH CEREALS.—The following table gives the estimated sale of home-grown wheat during the harvest years 1932-33 to 1935-36:—

	1932-1933	1933-1934	1934-1935	1935-1936
Estimated sales of home grown wheat—	Cwts.	Cwts.	Cwts.	Cwts.
1 week to July 11.....	27,971	59,590	73,122	56,209
45 weeks to July 11.....	8,537,254	10,638,348	13,131,454	13,079,884
Average price of English wheat per cwt.	s. d. 6 6	s. d. 5 6	s. d. 5 6	s. d. 6 10

The following is a statement showing the quantities sold and the average price of British cereals in the past two weeks, and for the corresponding week in each of the years from 1932 to 1935:—

Week ended	QUANTITIES SOLD			AVERAGE PRICE PER CWT.		
	Wheat	Barley	Oats	Wheat	Barley	Oats

COFFEE.—The New York spot market has been strong this week, prices having recorded a sharp advance. The London spot market remained quiet. On Wednesday, Rio No. 7 (cash) was quoted at 7½ cents per lb. in New York, as compared with 6½ cents per lb. last week and 6½ cents per lb. a month ago. Movements of coffee in London last week were as follows: Brazilian, landed, 104 cwt.; delivered, for home consumption, 67 cwt.; exported, nil; stocks, 10,203 cwt., against 16,882 bags a year ago. Central and South American, landed, 351 cwt.; delivered, for home consumption, 4,597 cwt.; exported, 1,691 cwt.; stocks, 112,243 cwt., against 178,246 packages last year. Other kinds, landed, 253 cwt.; delivered, for home consumption, 3,460 cwt.; exported, 789 cwt.; stocks, 156,723 cwt., against 183,308 packages last year.

EGGS.—Eggs were an active market, prices showing a rising tendency. At Smithfield on Wednesday, English (ordinary packing, Grade I, about 15–15½ lb.) realised 13s. 6d. to 14s. per 120, as against 12s. to 12s. 9d. last week, while Danish (15½ lb.) made 9s. 6d. to 10s. per 120, as against 9s. to 9s. 6d. last week.

FRUIT.—Although the changeable weather had an adverse effect on the soft fruit trade, and caused other prices to be somewhat erratic, business at Covent Garden was generally good during the past week, with prices well maintained. Although demand for good samples of cherries has been active, states *The Fruitgrower's* report, prices for this fruit have been rather easy. Black and red currants have encountered a better business this week, and gooseberries realised moderate prices. Raspberries and strawberries made a good showing, but the quality of the latter deteriorated with the

approaching end of the season. Californian plums rose in price, but Spanish apricots and Italian and Hungarian peaches met a poor trade. Melons were about steady. The apple trade was fairly good, while Australian and New Zealand pears are finishing the season at steady rates. Lemons and grapefruit have eased in price, but oranges generally sold well at slightly firmer prices.

MEAT.—Business at Smithfield Market recorded a significant improvement this week, and prices in some cases advanced. On Wednesday last, Argentine chilled hindquarters were quoted at 4s. 4d. to 4s. 8d. per 8 lbs., as compared with 3s. 8d. to 4s. 2d. a week ago. New Zealand frozen mutton was 3s. to 3s. 8d. per 8 lbs., against 3s. to 3s. 6d. a week ago. According to the Smithfield Market official report, supplies during last week amounted to 9,143 tons, an increase of 401 tons on the corresponding week last year. Beef and veal accounted for 4,866 tons, mutton and lamb 3,243 tons, and pork and bacon 558 tons, as compared with 4,732, 3,026 and 477 tons, respectively, in the same week of 1935.

PEPPER.—Wednesday's spot price for black Lampong (in bond) was 2½d. per lb., against 2½d. a week ago. Movements of pepper in London during the past week were as follows: Black, landed, nil; delivered, 10 tons; stocks, 1,759 tons, against 2,029 tons a year ago. White, landed, 29 tons; delivered, 29 tons; stocks, 12,273 tons, against 18,536 tons a year ago.

RICE.—The spot price of Burma No. 2, cleaned, new crop, was 8s. 6d. per cwt. ex warehouse on Wednesday, as compared with 8s. 6d. per cwt. a week ago. "August-September" in singles to

Continent and U.K. was quoted at 7s. 7½d. per cwt., against 7s. 6d. for "July-August" last week. Movements in London during the past week were as follows: Landed, 191 tons; delivered, 337 tons; stocks, 1,989 tons, against 10,005 tons a year ago.

MILK.—Information relative to the operation of the Milk Marketing Scheme during June, as issued by the Milk Marketing Board, is given in the following table, together with comparable statistics for earlier months:—

	June, 1935	March, 1936	April, 1936	May, 1936	June, 1936
Regional pool prices* (per gallon)					
Northern	9½	12½	11½	8½	9
North-Western	9½	12½	11½	8½	9
Eastern	10	13½	11½	9	9½
East Midland	9½	12½	11½	8½	9
West Midland	9½	12½	11½	8½	9
North Wales	9½	12½	11½	8½	9
South Wales	9½	12½	11½	8½	9
Southern	10	13½	11½	9	9½
Mid-Western	9½	12½	11½	8½	9
Far Western	9½	12½	11½	8½	9
South Eastern	10½	13½	12½	9½	9½
Liquid milk price (per gallon, all regions)	12	17	16	12	12
Manufacturing price (per gallon, average)	5.13	5.793	4.885	4.755	4.941
Total sales under contract	85.00	74.05	77.03	90.56	87.56
For liquid consumption	46.00	47.54	45.44	48.03	46.67
For manufacturing	39.00	26.51	31.59	42.53	40.89

* On account to the nearest farthing.

Accredited producers receive 1d. per gallon in addition to the above prices. Premiums for level deliveries and for Grade "A" or special services are paid to the producers concerned in addition to the pool price. Transport charges are payable by individual producers and are deducted from accounts.

SUGAR.—Raw sugar has again been in quiet demand on the London market, while prices in New York remain unchanged. The spot price in New York on Wednesday was 3.70 cents per lb., as compared with 3.70 cents per lb. last week and 3.80 cents per lb. a month ago. Wednesday's sales of raw sugar in London included "August delivery" at 4s. 5d., against 4s. 5d. to 4s. 5½d. a week ago. The movements of raw sugar at public warehouses in London and Liverpool last week were as follows: Imports, 21,350 tons, against 19,133 tons last week and 14,442 tons in the same week of last year; deliveries, 18,993 tons, against 20,172 tons last week and 15,689 tons last year; stocks, 136,647 tons, against 133,162 tons last week and 129,235 tons last year.

TEA.—The following table shows the average prices (compiled by the Tea Brokers' Association) of tea sold in Mincing Lane on Garden Account in recent weeks:—

Week ending	Northern India	Southern India	Ceylon	Java	Sumatra	Africa	Total
July 11, 1935	d.	d.	d.	d.	d.	d.	d.
June 11, 1936	11.58	11.84	13.39	10.41	8.87	10.30	11.96
June 18, "	12.24	12.73	13.30	10.22	10.15	11.48	12.40
June 25, "	12.20	12.26	13.13	10.17	9.95	11.44	12.25
July 2, "	12.20	12.26	12.98	10.26	9.95	11.21	12.18
July 9, "	12.19	12.10	13.04	10.33	9.89	11.26	12.22
July 16, "	12.15	12.11	13.06	10.42	10.01	11.32	12.23

This week's offerings at the public auctions in Mincing Lane comprised 37,141 packages of Indian and 25,138 packages of Ceylon tea. The market maintained a good tone, with prices about steady generally.

VEGETABLES.—According to *The Fruitgrower's* Covent Garden report, tomatoes continued in fair demand, and appreciated in value on shorter supplies. On the other hand, cucumbers declined in response to the unseasonable weather. Beans and mushrooms were firm in price. Peas were in moderate demand at fair prices, cabbage showed some improvement, and cauliflowers were steady. Some improvement of business in imported onions was experienced this week. Meanwhile, demand for English new potatoes is well maintained but, with increasing supplies at London markets, prices have shown a slightly easier tendency. The continuance of wet weather might, however, reduce loadings and cause prices to harden. At the London Borough Market on Tuesday last, English Epicure were quoted at 6s. to 7s. a cwt., against 7s. a week earlier. The season for Jerseys has now finished.

MISCELLANEOUS COMMODITIES

VEGETABLE OILS AND OLSEEDS.—Generally firm conditions prevail and only a slight reaction has taken place in sympathy with the easing in wheat. The removal of "sanctions" against Italy is a steady influence and the crop situation is such as to give confidence. The heat and drought in the United States are undoubtedly adversely affecting the late sown linseed, but reports of scattered rains give support for the hope that seed already germinated may improve, though over wide areas there is no doubt that much has been lost. Official reports were in accord with market expectations and served to strengthen prices rather than otherwise, until reports of rain caused the tone to become subdued. In Argentina the sowing for the new crop is being delayed owing to the heavy rain.

The position in regard to available supplies is unchanged. The Argentine official estimate of the exportable surplus of the old crop is 514,000 tons—which, with 90,000 tons expected from India,

CHILD & CO., 1, Fleet Street, London, E.C.4, and Marygold House, Carfax, Oxford.
HOLT & CO., Kirkland House, Whitehall, London, S.W.1.

gives a total of over 600,000 tons as against 825,000 tons actually shipped in the remainder of last year. The United States so far this year has taken 138,000 tons as against 234,000 tons in the first half of 1935. Future U.S.A. requirements to meet the domestic shortage are problematical. Crushers here have bought fair quantities of Indian linseed at rising prices, while on the Continent Plate has been in demand. Linseed oil has fluctuated slightly, but is steady at about the level of a week ago. Raw oil ex Hull for July-August delivery is quoted £26 10s. per ton (naked). Later positions are not so firm and are at a discount. Cottonseed has further advanced, old crop Egyptian being held for £8 2s. 6d. and new crop September for £7 10s. Cotton oil is steady but demand is slow.

RUBBER.—Prices have been steady throughout the period under review, and show no net change on the week. Although the market has been rather less active, business is still good and the demand in United Kingdom stocks continues. The spot price in New York on Wednesday was 16½ cents per lb., compared with 16½ cents per lb. a week ago and 15½ cents a month earlier. Wednesday's official buyers' price for standard ribbed smoked sheet on the spot in London was 7½d. per lb., as against 7½d. on the corresponding day a week ago. In forward positions, business has been done at 7½d. to 7½d. for "October-December" shipment, as against 7½d. a week ago. Stocks in London and Liverpool at the end of last week totalled 119,095 tons, against 120,857 tons a week earlier. A year ago stocks amounted to 173,311 tons.

found in the Monthly Supplement which accompanies this issue, together with a chart of the Index from January, 1924, to date.

Examination of the trend of the Index in recent months confirms the favourable impression made by the daily news. The upward slope of the curve is not as steep as in 1933, but it is still distinctly upward, and the provisional figure for June is more than 5 per cent. above June, 1935.

Amid all these favourable indications, however, there are others of a different character, not so much unfavourable as evidence that the recovery movement has reached an advanced stage. In the first place, there are signs—not yet decisive, but certainly significant—that the whole structure of prices is beginning to rise. The Board of Trade Index of wholesale prices is nearly 5 per cent. higher than a year ago, and the cost-of-living index is more than 3 per cent. higher. As we show on p. 163, both the *Economist's* "complete" and primary products wholesale price index numbers have during the past fortnight risen to new high records since the end of the depression. What is perhaps more significant, wage rates, as measured by the London and Cambridge index, are 2½ per cent. higher than a year ago and still rising. There are rumours of increases in the prices of manufactured articles which do not enter into any of the indices, such as motor cars.

Another straw in the wind which has excited some anxious attention is the increase in the import balance of trade. If we compare the first halves of 1936 and 1935, we find that imports have increased by £43.4 millions, while exports are only £1.4 millions higher. Judged by volume, imports are 7 per cent. greater, while exports are 0.6 per cent. smaller. Does this failure of exports to advance any further denote a fundamental change, to Great Britain's disadvantage, in the world market? This question can only be answered, and then only tentatively, after detailed analysis. We have, accordingly, examined the export figures for the first half of 1936. Of the 45 main categories into which British exports are divided, 19 show decreases compared with the first half of 1935. But of these 19, only eight show decreases of more than £100,000 in value, and the remainder can therefore be dismissed as insignificant. Examining the eight important categories, one (coal) is entirely explained by diminished exports to Italy, and two (raw wool and oils, fats, etc.) are entirely and one (cotton waste) very largely due to diminished exports to Germany. Four of the eight are consequently indications of the commercial effect of political decisions rather than of economic tendencies in the world as a whole. One more category, cotton piece-goods, is more than adequately explained by a heavy reduction in exports to India. Only the remaining three show reduced exports to a long list of countries. These three are iron and steel and manufactures thereof, non-ferrous metals and manufactures, and chemicals. All, in fact, are commodities directly affected by the large new demand for re-armament. In these cases reduced exports can be largely attributed to a deliberate preference on the part of the British industries concerned for concentration on the domestic market. These industries are also those in which increased costs are likely to show themselves first, and this factor may also be playing some part.

If such conditions persisted for a long time, these industries might find that our customers had developed the habit of filling their needs from other sources. But, with this qualification, there does not seem to be much warrant for alarm over the balance of trade. There have been suggestions in some quarters that the pound has recently become over-valued. There is *prima facie* evidence of this in the rising price level, rising imports and falling volume of exports. But this suggestion also seems to disappear on examination, as the only countries which have considerably reduced their purchases of British goods appear to be Italy, Germany and India. In none of these cases can the cause be over-valuation of sterling. To deny over-valuation, however, is not to postulate under-valuation. Any competitive advantage that we gained in 1931 has now clearly been lost, and vigilance will be needed—and will presumably be exercised—to prevent sterling getting out of adjustment in the period of currency "re-alignment" ahead of us.

None of these qualifications of optimism is inconsistent with the normal development of the upward movement of

the trade cycle. It is natural for prices to rise towards the end of that movement, and it is also natural that a country which had the start over others should in the later stages of recovery lose some of its advantage in export markets. Of the beneficent trinity, the pregenitors of recovery—cheap food, cheap money, cheap sterling—two at least remain undisturbed. But there are the clearest indications that the present boom (the word is not exaggerated so far as Southern England is concerned) is in a stage of maturity. There are some who say that booms could, and should, be eternal. But the prudent man will assume, until proof to the contrary is produced, that booms, like men, are subject to a morphology which human efforts can influence but cannot alter. That being so, the prudent man will already be making his preparations for the change in the economic trend that must come some day, and may come soon.

ORDEAL IN SPAIN

THE five-year-old Spanish Republic is being tried in the fires of civil war. A new chapter of history is being written this week, as political history frequently is written, in characters of blood. As we write, bullet and bomb are determining whether power shall reside with the few or with the many—a question which was nominally settled by the victory of the People's Front last February. Once again, simple God-fearing officers of the Army, placing sympathies and interests of caste before allegiance to the State, have rebelled "to save Spain." The new factor—which has come in since the failure of the last foolhardy enterprise, headed by the late General Sanjurjo, in 1932—is the transition of the familiar constitutional theme into the major *motif* of the class struggle. Monarchist aspirations are not avowedly in question; the Generals are simply desirous of rescuing the country from Communism, though the result, unhappily, can only be to hasten its advent. A desperate emergency has already produced a *levée en masse* of the Spanish people reminiscent of the citizen fervour which defeated Napoleon in the Peninsula.

The armed struggle originated in Morocco, and is still in progress in all the chief military centres as we write. It was preceded by a disturbed period in which sectarian passions reached fever-point with the assassination, on July 13th, of Señor Calvo Sotelo, the one able figure of the Right, by a posse of uniformed "shock police." This foul deed was avowedly a reprisal for the earlier killing of Lieutenant Castillo, a man of known Socialist sympathies, by armed Fascist youths. On receipt of the news, Parliament was closed and the existing state of alarm prolonged, while wrangling sections of the Socialist Party and other Left groups made their peace with each other in anticipation of some kind of *coup d'Etat* by the Right.

Following a series of ominous "incidents," Señor Casares Quiroga, Prime Minister and Minister of War, had given orders for the removal from their posts of a majority of the military leaders serving with the Foreign Legion, whose part in the ruthless repression of the Asturias revolt of October, 1934, had made them particularly obnoxious to the adherents of the People's Front. It was, in fact, under the cover of this professional grievance that the Army in Morocco mutinied. Occupation of civil Government buildings by the military began at Laraiche at 11 p.m. on Friday night (July 17th). At 2 a.m. on the Saturday the garrisons in all the principal towns showed their hand, and in a very short time Melilla, Ceuta and Tetuan were under the control of the insurgents. Martial law was proclaimed, and from the broadcasting station at Ceuta messages were sent out announcing that transports of Foreign Legion units and native troops were crossing to the mainland. Meanwhile, the shock of the "criminal attack against the Republic" had overset Señor Quiroga's Government. The Prime Minister, a sick man, resigned rather than accept the demand of loyalist Army officers that a professional should be put in charge of the Ministry of War. This point, however, was conceded by his successor, Señor Martínez Barrios, the President of the Chamber; and two Generals were imported into the Cabinet. The Left Wing following of the Government thereupon took umbrage, and the Cabinet had to be reconstructed a second time, Señor Jose Giralt (another mouthpiece of Señor Azaña) becoming

Prime Minister. Thus, the Government remained non-Socialist, but the labour unions issued a radio announcement that they would give unqualified support to any action the Government might take against the Fascist menace.

An official broadcast on Saturday morning bravely affirmed that the insurrection was confined to Morocco, the Canaries, the Balearic Islands and similar "outlying areas." The measures of defence which were promptly taken, however, belied these smooth words. A number of eminent but disaffected generals were incontinently dismissed and all officers above the rank of lieutenant in rebel regiments were relieved of their commands. News arrived that General Franco, a young and able officer who had been relegated to the Canaries for his part in a plot for a military dictatorship after the February elections, had placed himself at the head of a nation-wide revolt; that disaffected Army elements were mobilising for a march on Madrid from north and south; and that General Quepo de Llano, head of the *Carabineros*, had joined the mutineers. The Government, despite its claim that the bulk of the Army remained loyal, was taking no chances; it announced that, apart from the Civil Guard and shock police, it was relying primarily on the resistance that could be mobilised by the deputies of the People's Front. In Madrid itself the disciplined troops were at first confined to barracks, while the "private armies" of the Marxist (i.e. syndicalist) organisations were encouraged to parade. Wherever martial law was proclaimed, labour unions were officially authorised to retort by general strikes.

What with official and rebel leaders' broadcasts, censored and "interested" news messages, the picture of events since Saturday is confusing in the extreme. It is known that two pitched battles have raged in Barcelona and on the outskirts of Madrid, that the revolt has made considerable headway in Andalusia, and that a force some 8,000 strong from Navarre, the stronghold of reaction, is also leading a rebellion in the north. The rebel General Goded has surrendered in Barcelona, and General Sanjurjo, joint leader with General Franco of the enterprise, has perished in an air crash on his way from Portugal. The Air Force, with trifling exceptions in the Mediterranean and elsewhere, has been on the Government's side and has undoubtedly been an important factor. Units of the Spanish Navy have bombarded and are again threatening to bombard the rebels in Algeciras, Cadiz and other coastal cities captured by the insurgents. Popular feeling has been outraged by the placing of the Foreign Legion in the forefront of the rebellion and by the bringing over from Morocco of native troops—a serious error of psychology which has unquestionably strengthened the hand of the Government. Generally, the Government resistance in Madrid and Barcelona would seem to have upset the rebels' plans. The insurgents appear to have secured the backing of the Monarchists and Fascists, to whom they have appealed, only in the mountain passes of the north, where the peasantry is still imbued with the spirit of the Carlist wars. On the other side, the improvised citizen forces,

including youthful volunteers, women and old men—have clamoured for revolvers and pistols to fight for the Republic. These, and the well-trained "Red" militias, may turn the scales.

What a military junta might do with power, if they were successful, it is hard to say. In the present temper of the Spanish people, their tenure of power would be very precarious and would leave a trail of unimaginable bitterness behind it. As things are, an authoritarian Government of some kind may be inevitable, though not necessarily the "dictatorship of the proletariat." The Socialist militias, once accepted as defenders of the Republic, will not easily be demobilised. It may be reasonable to expect—assuming a Government victory—that an interim Committee of Public Safety or a "National" Government will be set up. Its way has been prepared by the inclusion of Señor Sanchez Roman, standing well to the Right of Señor Azaña, in the present Giralt Cabinet. From the latter the integral Marxists will probably stand aloof, though they may give full support to the inclusion of moderate Socialists like Señor Prieto, which they have hitherto fiercely opposed. Such an interim administration might well be succeeded by a People's Front Government pledged to a programme of pragmatic Socialism and thoroughgoing anti-Fascism on the lines now being followed in France by M. Blum. The poverty-stricken condition of much of the peasantry of Spain has created the conditions out of which revolutions spring. To ride such a storm as the present calls for very high qualities of leadership. Parliament, as we understand it in Great Britain, may well be condemned to disappear. Altogether the consequence of Spain's latest ordeal seems likely to be another leap into the political unknown.

FROM C3 TO A1

It was commonplace during the last war to hear of recruits ranked in health from A1 down to C3. Recently, the Minister of War has complained of the high percentage of peace-time rejections on account of health. Recently, also, there has gradually arisen widespread interest throughout the Western world in the relationship between poverty, malnutrition, and the agricultural or commercial policies of Governments. How far is disease caused by unbalanced diet? How far can Government policies, social and economic, be used to abolish malnutrition and under-nourishment?

These are questions which demand impartial investigation; and consciousness of that fact led the delegates of twelve countries, at the League Assembly last autumn, to ask for a full discussion of nutrition in relation to public health and economic and social organisation. The Assembly adopted a resolution requesting the Council, *inter alia*, "to appoint a Committee of agricultural, economic and health experts to submit a general report to the 1936 Assembly on the whole question in its health and economic aspects." This Mixed Committee, under the chairmanship

of Lord Astor, found it impossible to draw up in one year an adequately comprehensive report. They have therefore issued this week* an interim report on the fundamental problem of the relationship between nutrition and health containing preliminary observations on the economic and agricultural aspects, and reserving more detailed treatment for the final report.

A summary of the Committee's interim report, which is an admirably succinct, interesting and non-technical document, may well begin with the issue of the Quarterly Bulletin of the League's Health Section, in June of last year, containing a report by Drs. Burnet and Aykroyd of their investigations for the League. "Deficiencies in important nutrients (it was stated) are a common feature of modern diets, and . . . these deficiencies usually occur in the protective foods (foods rich in minerals and vitamins) rather than in the energy-giving foods (proteins, fats and carbohydrates)." It was long assumed that, provided an adult took in sufficient calories, their form did not greatly matter. But in the last thirty years scientifically controlled experiments have established that many of the child's and adult's diseases to-day can be ascribed to some deficiency in diet—generally to a deficiency in the balance of the diet, and mainly to a lack of "protective foods." Such foods are rich in vitamins, whose presence has been found definitely protective against certain diseases or disorders. They include milk, eggs, green vegetables, butter, cheese, and most fresh fruit. These protective foods, and the vitamins they contain, are most important for very young and growing children. Their absence causes, among other things, rickets, dental caries, and malformation of the pelvis in girls—the last being, in turn, responsible for a high rate of maternal mortality.

Now, malnutrition and defective diets are not limited to the poor urban areas or depressed agricultural regions of the world. "It is abundantly clear that in no country does the whole population attain the standard scientifically desirable in the interests of health." In November, 1935, the League's Health Organisation convened an international commission of physiologists from all countries, who speedily reached complete agreement on both dietetic principles and the composition of a rational diet. Yet the present Committee's report quotes the following passage from Sir John Boyd Orr's recent report†:—

Dividing the population (of the United Kingdom) into six groups according to income, the average diet of the lowest income group, representing 10 per cent. of the population, is inadequate for perfect health in all of the (diet) constituents considered. The diet of the next group, representing 20 per cent. of the population, is adequate only in total proteins and fats. The third group, containing another 20 per cent. and living at a better income level, has a diet adequate in energy value and protein and fat; but even the diet of this group is, on the average, below the standard in mineral and vitamin constituents. It thus appears that, in the United Kingdom, the diet of at least 50 per cent. of the population falls short of the desirable standard; and it is estimated that to raise the consumption of this low-income half of the population merely to the level of the next group would require an increase of 16 per cent. in the amount of milk consumed, 15 per cent. in that of butter, 18 per cent. in eggs, 12 per cent. in meat, as well as a 25 per cent. increase of expenditure on fruit and vegetables.

The International Labour Office's analysis of family budgets shows that both the gross calorie-intake and the consumption of protective foods increase in all countries as the worker moves up in the income scale. Thus, as that scale rises, more meat, fish, butter, eggs, green vegetables, and fruit, and less cereals, are consumed. "Workers' families with low incomes evidently find the protective foods too expensive and cannot afford them. The question of income is thus at the root of the workers' nutrition problem."‡ The well-to-do, in fact, are better protected from the ill-effects of malnutrition simply because their incomes allow them to diversify their diet. Thus, "the greatest single cause of defective nutrition is poverty"; for all the specially protective foods are the more costly.

* League Publication, II, Economic and Financial, 1936, II.B.3. London. Allen and Unwin. 2s.

† "Food, Health and Income." Macmillan. 2s. 6d.

‡ Report, p. 73; italics in original.

Malnutrition and disease, expenditure on social services, education, and much of the work of hospitals are all related to the general level of income. This leads directly to the conclusion of the report that the two first essentials of a sound economic policy directed towards improved nutrition are the absence of restrictions on the supply of foodstuffs, which tend to raise prices, and measures against avoidable fluctuations in the availability of supplies.

The Assembly is asked "to consider what steps should be taken, whether at the public charge or otherwise, to meet the nutritional needs of sections of the communities with low incomes, in particular as regards ensuring adequate supplies of safe milk for expectant and nursing mothers, infants, children and adolescents." The Assembly is further recommended "to take steps to improve and cheapen marketing and distribution of foodstuffs especially so that protective foods may be as far as possible available to all"; and "to consider the desirability of any modification of general economic and commercial policies that would help to secure the supplies of foodstuffs necessary for a sound nutrition policy." All countries since the war have run flatly in the face of these recommendations. They have jettisoned the cost of production as a criterion of their agricultural policies. They have endeavoured to prevent the prices of food from falling; and they have even, in some countries, raised food prices during the depression, by what Adam Smith termed "conspiracies against the public." It is the more disturbing, therefore, to learn from Sir John Orr that if every inhabitant of the United Kingdom lived on the standard diet for perfect health we should need to double our present milk output; and to know that Scandinavians, who drink that amount of milk per head, have a much better infant mortality rate than this country, and a better average state of health. It has been authoritatively stated that if every European lived on the standard diet, there would be a most appalling European shortage of certain foodstuffs.

All these "ifs" turn on costs and prices, and in almost every industrialised country these are now "controlled" by regulations of production, marketing, imports, and sales, in the interests of the agricultural community. But students of the League Committee's valuable but disturbing report can hardly fail to reach the conclusion that the solution of nutritional problems lies along lines not of restriction but of increased food production for the masses. To tax the majority in each nation, to ignore one of the main causes of disease while spending considerable sums of public money on remedial medicine and social services, and to pinch posterity on behalf of a minority is a myopic and unstatesmanlike policy. Sir Arthur Salter has declared that there can be no real overproduction till the last Hottentot lives like a millionaire. The Western nations will never lead their population from a C3 to an A1 health rating until they have frankly abandoned all measures whose logical conclusion is to make millionaires live like Hottentots.

A CLOSE RACE IN AMERICA?

(BY OUR WASHINGTON CORRESPONDENT)

POLL-TAKING is an American indulgence which Europeans do not sufficiently appreciate. An organisation which tries to measure public opinion by sending out 200,000 ballots obviously cannot pretend to give even an approximation to the opinions of 100,000,000 persons. This an outsider sees clearly enough. What he may miss is the effect on a large number of persons of discovering what the views of 200,000 happen to be. Thus the poll of the American Institute of Public Opinion, which has sent out 200,000 ballots on the relative popularity of President Roosevelt and Governor Landon, produced not very credible material on which to base a sound national appraisal. But the poll, one of a series, shows that Mr Roosevelt has suffered a substantial setback since the Republican convention, and now would win only 51.8 per cent. of the popular vote; and that Governor Landon, if the election were held to-day, and the poll were a true indication, would have a majority in the electoral college and become President. The effect

of this poll is to make large numbers ready to believe what they were not ready to believe a few months ago, that the Republicans have a chance of winning in November. As Republicans, themselves defeatists as lately as March and April, take on confidence, their organisation becomes more effective, and they can recruit votes with more conviction. It is a case where simply suggesting that the election in November will be close has a tendency to make it close.

Without relying on any poll, one can say that the political situation has undergone a marked change since the early spring. Then the Democrats had every reason to expect a walk-over in November. They counted then, too, on certain victory being based on a Democratic success in the solid South and the solid West. To-day, victory cannot be predicated on a solid West. The nomination of Governor Landon has made the West a doubtful harvest field for Democrats. The ground becomes still more doubtful in view of the rise of the Lemke party, and its possible success in uniting the numerous followers of Father Coughlin and Dr. Townsend. If the West is not to be Democratic, success in New York, Illinois and Missouri becomes of utmost importance.

Roosevelt would be elected if he carried the ten states of the solid South; the four border states of Missouri, Kentucky, Tennessee and Oklahoma; California; Wisconsin; and New York and Illinois. Together, these eighteen states have 271 votes in the electoral college, five more than a majority. Thus Roosevelt could win if every one of the remaining thirty states went Republican—which they are hardly likely to do. But if Roosevelt fails to carry New York with 47 votes or Illinois with 29, he would have to carry several smaller states to make up for the loss. The election can be said to hinge on New York and Illinois, and in a lesser degree on Missouri.

We may examine this position more closely. In New York the outcome depends on the New York City vote, dominated by Tammany, though not as much as it used to be. The Republicans will probably carry up-state New York by a comfortable, perhaps a large, majority. But this will be wiped out if the Tammany organisation in New York City is both loyal and active for Roosevelt. In Illinois the Republicans will carry the down-state easily, and Cook County (Chicago) will turn the tide. If the Kelly machine remains loyally Democratic, Chicago will have a decisive influence on the national outcome. Similarly, the Pendergast machine in Kansas City will have to overcome an almost certain Republican majority in the rest of the state if Roosevelt is to have the Missouri vote in the electoral college. Tammany and the Kelly and Pendergast machines are among the most disreputable factors in American political life, and it is not without irony that the crusading Roosevelt, battling for the "good," is relying for victory on the South—certainly not overweeningly Liberal—and the loyalty of the three worst city machines, without all of whom he would most certainly be defeated.

There can be little question that Roosevelt's strategy has changed since early spring. His acceptance speech, with its "battle-cry" and its appeal to class feeling, was not aimed at the West or Middle West, but at industrial and urban voters. In other words, the contest is going to be much closer than the Democrats themselves believed a short while back. And there has been a shift to a new, temporary alignment for the sake of the immediate victory. Temporary, it is bound to be. There is no economic or social unity which conceivably can make the solid South a permanent political ally of New York and Illinois. The alliance of the South and West was one to build upon, but it has had to be abandoned because of the nomination of the Kansas Governor Landon. The present alliance has no future; and even if it wins for the Democrats in 1936 it can hardly repeat its victory in 1940. Some other Democratic brotherhood will have to be founded in the next four years.

The loyalty of the three great city machines, then, becomes of crucial significance, and here no poll can be taken. Part of Tammany has been at war with Postmaster-General Farley. Shortly before the Democratic convention the President made a bold bid for Tammany friendship in three nominations for Federal judgeships which were denounced by the New York Bar Association.

Family provision scheme

A scheme to secure a Capital Sum payable at death and a regular income over a period of years for dependants in the event of early death, at a cost which is little more than that of ordinary life assurance. It is readily adaptable, and rates will be quoted on application for policies to suit the needs of each individual.

EQUITY & LAW
LIFE ASSURANCE SOCIETY

18 Lincoln's Inn Fields, W. C. 2

Established 1844 Funds exceed £23,000,000

Tammany, to speak in the American vernacular, may not double-cross Roosevelt, and yet it may not take its shirt off and work hard for him. Without its hard work, Roosevelt may not carry New York State. In Chicago the situation is also somewhat in doubt. The Kelly machine is impregnable on paper, but it enrolls many Republicans who have simply gone over to the dominant leadership. Once Chicago had a Republican machine, and no doubt it will have another some day. It might begin to change its complexion this year, and if it did Roosevelt and the New Deal might pay the price. Only the Pendergast machine in Kansas City can be said to be utterly reliable.

The outcome of the election will depend, then, on factors which polls do not reveal—namely city machines first of all, and then the ultimate united strength of the Coughlin-Townsend-Lemke following. It is much too early to guess about either. Until more is known about them no reliable forecast is possible. If the election were held to-day the probability is that President Roosevelt would win, but even to-day by a close vote.

DEPRESSION IN DANZIG

(BY A SPECIAL CORRESPONDENT)

DANZIG has once more been very effectively brought into the limelight. Not only is this due to the Nazi President of the Danzig Senate, who "cocked a snook" in the League Council, but also by the intensification of the reign of terror over the Danzig Opposition which Herr Greiser announced, with the approval of Berlin, last week-end.

Except among jubilant members of the Nazi Party, who glory in the humiliation of Geneva, gloom and uncertainty prevail in Danzig to-day. This is true both on the political and the economic plane. The totalitarian menace to the Free City's constitution, which is still nominally guaranteed by the League, is immediate and all-pervading. Whatever developments the future may bring, the economic outlook before Danzig is the reverse of bright. Whether one considers the standard of life, the Budgetary position or the commercial prospect there is nothing very pleasing to report. Since the currency collapse in May, 1935, a sharp deflation has followed the devaluation, and great hardship has resulted. Prices have remained fairly steady since the end of last summer; but there was a sharp rise in the cost of living between the devaluation in May, 1935, and August last, of 40 to 50 per cent. Wages have remained nominally what they were, except where a few foreign employers have been able to raise them. The consequent decrease of real purchasing power has also been accentuated by the removal of a number of retired officials and officers of the Reich, so that a noticeable reduction of the spending population has occurred. There has been no definite panic or run on the banks since the summer of 1935; but two points deserve notice. First, the circulation of bank-notes, which used, before the Nazis took over the Government in 1933, to be

in the neighbourhood of 33 million gold gulden, and rose under the Nazi administration to an average of about 40 million gold gulden, fell to 33 million depreciated gulden in May, 1935, and has been under 30 million depreciated gulden almost without exception since that date. The figures published on June 16th and July 2nd of this year were 27,122,540 and 29,956,400 depreciated gulden respectively. Secondly, whereas the money in the savings banks on December 31, 1934, amounted to 45,746,805 gold gulden, the figure for December 31, 1935, was 34,963,195 depreciated gulden; and there is nothing to suggest that savings have appreciably increased since then.

At the end of last March the Nazis published a Budget for the financial year in advance for the first time since they took over the government. There was even a certain amount of debate about it in the Volkstag. The figures produced by the Government were so very round that it was impossible for the Opposition or the public to obtain any exact picture of the finances of their State. It is clear, however, that a deflationary has replaced an inflationary policy; public works on the grand scale have, for instance, been called off; and, where the authorities do not see fit to continue the dole, the unemployed are either sent to Germany or put on to mending old roads. Taxes are exceedingly high, and tax evasion has been made more difficult. All Budgetary discussions are, however, extremely unsatisfactory, since the large non-Nazi public is not convinced of the accuracy of the published statements. It seems certain that Government and Nazi Party funds are not kept strictly separate, and that political motives enter into financial policy. While the Nazi Party obtains particular privileges in financial, as in many other matters, it provides a channel by which certain sums of money still flow from Germany to Danzig. To take one example, the Danzig Government last year found itself unable to complete the new State Theatre. Since then "money from a private source" has enabled completion, and everyone presumes that the money came from Germany to save Nazi prestige; for the National Socialists had set great store by their attempt to serve culture in the "German outpost of Danzig."

Technically, the currency situation is satisfactory. That is to say, since the devaluation of the gulden in May, 1935, the value of the gold cover, which had fallen to 35 per cent. of the note circulation, has been restored to a fairly steady average—about 70 per cent. Though annual services on Danzig's foreign debt are high, the Bank of Danzig seems confident that they can still be paid in full. It should here be observed that the chief loans made to Danzig from abroad were due to the League of Nations, without whose influence not one penny would have been obtained. Though the League did not, as in the case of the Austrian loans, take direct responsibility, it sponsored the transactions and appointed trustees. Thus, when Herr Greiser complained at Geneva on July 4th that the League had

done nothing for Danzig, the indictment lacked even a rhetorical foundation.

It is generally agreed that clearing arrangements have very substantially reduced the amount of Danzig gulden—estimated a year ago at 15 million—frozen in Germany. Last year it was generally expected that Poland would successfully press Danzig into adopting the currency of Poland. For a time Polish zloty circulated pretty freely in Danzig, in spite of the immensely strong resistance Danzigers have always shown when faced with the loss of what they regard—against Poland—as their one token of sovereignty: their independent currency. The threat was ended by Poland's currency crisis last spring. With the introduction of Polish currency control towards the end of April, the whole economic position of Danzig was vitally affected. Although the devaluation, by dragging down the Danzig standard of living towards the Polish level, had enabled Danzigers to compete more easily with Poles, the harbour statistics show that Danzig's trade, particularly her imports, continued to drop behind that of Gdynia.

The introduction of currency control in Poland removed the zloty from circulation in Danzig; it has also drawn attention to Poland's unsatisfactory economic position, which is thought likely to deteriorate further. This causes a hesitating trader to send *via* Danzig rather than Gdynia; but it hampers the Danzig merchant in forwarding the goods so much that he would be almost as well without the commission. The Poles have introduced a system of blocked zloty, called *Daki-zloty*, for trade with Danzig. It is, of course, the Danzig importer rather than exporter who is hit by this system. The Danziger who imports herrings from Britain to Poland, for instance, first of all has the difficulty that his British suppliers will no longer give him credit; and, secondly, he finds that he is paid by the Poles in blocked zloty, or *Dakis*, which can only be used to buy goods in Poland and Danzig. In July the herring traders are accustomed to lay in their stocks for the year, but it is noticeable, to-day, not only how small the volume of purchase has become as a whole, but also how the biggest firms buy least—Lever's representatives, for instance, can afford to wait and see. It is even uncertain whether the Bank of Danzig could produce all the *devisen* required for the large purchases usual at this time of year. Actually the herring importers have hopes that Great Britain will take steps to safeguard her herring markets, but the other importers—the cotton merchants, for instance—lack even this consolation.

Political uncertainty adds to the gloom. If reunion with Germany should come unexpectedly soon—and provided that Germany did not take the Polish Corridor and Polish Silesia as well—Danzig, severed from the Vistula, would be definitely worse off. Further, the anti-Semitism of the Reich would eliminate a very large part of her experienced commercial personnel. Lastly, the smell of war is in the Baltic air, too; and Danzigers know the rôle of their city if war comes.

NOTES OF THE WEEK

Mr Baldwin on Foreign Policy.—Last Saturday, both the Prime Minister and the Foreign Secretary discussed the Government's foreign policy in public speeches. The highest common factor in their speeches gives us rather a clearer idea than we have hitherto been able to obtain what the present Government's foreign policy now is—or, perhaps we should say, what it is not. Mr Baldwin began by tilting against the out-and-out pacifists. This was rather irrelevant; for these pacifists have no more chance in this country than in any of its neighbours of becoming a serious force in practical politics—at least, not before we have been overtaken by another international catastrophe. In this country, the resignations, last autumn, of Mr Lansbury, Lord Ponsonby and Sir Stafford Cripps from their positions in the Labour Party were the decisive events. The Labour Party now is, and will almost certainly continue to be, at one with the

Conservative Party in being prepared to use armed force, in the last resort, in the conduct of international affairs. More than that, all parties in this country are also at one in their extreme reluctance to make use of this terrible instrument of policy. What they disagree about—and here the cleavage is profound—is over the issue for which this country ought to resort to the *ultima ratio*. Even here, there is still nominal agreement; for the Government, notwithstanding their Italo-Ethiopian record, insist on professing undiminished devotion to the League of Nations. But, in the light of that record, the Opposition now openly and militantly profess thoroughgoing scepticism about the sincerity of the Government's protestations; and, in sounding this note of scepticism, Mr Attlee and his colleagues undoubtedly express a misgiving that is deeply felt to-day by a much wider circle of people in this country than is represented by the membership of the Labour Party. To

this scepticism Mr Baldwin referred last Saturday in plaintive accents. He went on to claim that, "when the responsible Government at any time expresses its view that the country requires its deficiency made good and it requires recruits," then, irrespective of any misgivings about either the rightness of the Government's policy or the efficiency of its measures, all parties ought to club together to present the Prime Minister with a blank cheque. This is not only unreasonable; it is a surprising piece of political presumption. When the Government itself sounds a warning that the country is in danger, the rest of us have more ground than at ordinary times for demanding satisfactory evidence that the Government is not guilty of follies and incompetences that might conceivably be tolerated in less critical hours. The Opposition has every right to-day to insist on bringing the Government's true aims and activities to light before even thinking of giving the Government unqualified support.

* * *

—**And Mr Eden.**—Is the Government's foreign policy still really a League policy, or is a very different policy now beginning to show through beneath the Geneva veneer? "We are a people," said Mr Baldwin, "who seek peace and who are not easily provoked, but who will fight to the last man if their own [sic] liberties are encroached upon by any nation upon earth."—"Nobody," said Mr Eden on the same day, "should imagine that, because we in Great Britain wish passionately for peace, that fact presents an opportunity for inducing us to abandon direct [sic] and vital British interests as the price of peace." These two passages agree so closely that they must at last represent some clear understanding in the Cabinet over British policy. Taken together and by themselves they mean that this Government will fight for the territorial integrity of the British Empire, perhaps inclusive of Mandated territories, but for nothing else in the world. This interpretation of the Government's policy is borne out by the rider which accompanied the main statement in the Foreign Secretary's speech. "There are certain parts of Europe in which Britain has, and has had for centuries, a special interest, and in respect of which she has undertaken to maintain certain guarantees." In other words, France and Belgium—and possibly Holland as well—are to be treated as though they were British territory, in the sense that any attack on them will be taken by us as a *casus belli*. But this is the limit of the occasions for which we are prepared to go to war. For, though "this does not mean that we disinterest ourselves from events elsewhere in Europe," the implication is that any interests that we may feel elsewhere will be felt as platonically as they have been recently felt by the Government in Ethiopia. It seems clearly implied that the Government have decided never to treat collective security—that is to say, the maintenance of a "King's Peace" in the international field—as a "vital" British interest, on behalf of which we shall fight when that is required for the genuine fulfilment of our obligations under the Covenant. As Mr Eden said, in his defence of our decision to drop sanctions against Italy: "The maintenance of the then existing sanctions could not reverse the course of events and restore the situation in Abyssinia." The implication here is that any intensification of sanctions which might have led to war between us and Italy was an alternative ruled out from the very beginning. Is this really the new foreign policy of the United Kingdom?

* * *

Defence in the Dark.—On Monday a lively debate took place on Supplementary Estimates for the rearmament programme and for co-ordination of defence. Sir Thomas Inskip, Minister for Co-ordination of Defence, confirmed the appointment of Vice-Admiral Sir Harold Brown as Director-General of Munitions Production, but added that Sir Harold would only assist the War Office, not all three Services. Sir Thomas went on to talk of "what is really a formidable programme"; of "regular sources of supply . . . used to their utmost capacity"; of "professional firms and others . . . in receipt of orders

on a yearly basis which will strain their capacity to the utmost"; and of fifty-two new firms being offered munitions contracts. Replying to an intervention by Mr Churchill, the Minister confessed that not all these firms had the necessary machine tools and jigs to perform their contracts. The Minister and his Department would pay careful attention to the need for prompt deliveries, so that at least seven-eighths of the Government's requirements of shells, fuses and cartridge-cases would be duly provided. The Royal Filling Factory would be transferred from Woolwich, in part to South Wales (Bridgend), in part to Lancashire (Chorley) and in part to "a place in Scotland"; and a filling factory at Hereford would be brought into full operation. This step would involve delay in the programme, but it "was absolutely necessary and right." Gun manufacture was already proceeding "not only to the full works capacity, but to labour capacity"; and a former gun factory at Nottingham would be re-installed and set to work. Sir Thomas then made an appeal for recruits to man the guns, during which he uttered the two surprising statements that defence of "their own homes and their own employment had nothing to do with foreign policy," and that "if anything is true defence it is our Air Force." The latter declaration ill consorts with Mr Baldwin's indication that the bomber will always "get through" and that the only real defence from aerial attack is an overwhelming counter-attack—which is poor defence for the bombed. The Minister admitted that comparison of the first-line air strength of this country with that of others is "fallacious," for the cryptic reason that "such calculations take no account of Great Britain's special position." Whether he intended a hint that our "reserves," all first-line quality, were much greater than those of other countries was not clear. The Minister reiterated the Government's pledge against profiteering; announced that the sub-committee of the Committee of Imperial Defence on food supplies had arranged for an increase in agricultural output in time of war, and for special transport provisions so as to enable imports of food to arrive only at Western ports; and that the Billingham "oil from coal" plant, which it is now admitted is "very assailable and vulnerable," should be duplicated, "possibly in South Wales." The Minister wound up with the threat of "further Supplementary Estimates from time to time, and possibly for even larger sums," on account of machine tools, etc. Mr Churchill again urged the need for a supreme Minister for Defence: "The Government have created a labyrinthine tangle of committees with an able and unfortunate Minister flitting about between them, and they call it the Co-ordination of National Defence." Over the whole debate there brooded a latent sense of political *malaise*. The Labour Party's attitude was summed up by Mr Alexander: "We do not believe that the Government in its present structure, in its present foreign policy, in its present international outlook, can be trusted, and we will not vote this money as long as that condition of affairs obtains."

* * *

Unemployment Assistance: the Big Debate.—On Tuesday the three days' debate began on the Government's motion to approve the new Draft Regulations for the assistance of the able-bodied unemployed who have exhausted their rights to contractual benefit. The House could not amend the Regulations (analysed in a leading article last week), but could only accept or reject them outright. Mr Ernest Brown, Minister of Labour, proposing the motion, pointed out that neither under the contributory unemployment insurance scheme nor under the unemployment assistance scheme had any other country been able to give so much practical attention to its able-bodied unemployed. He reminded the House that the State in April,

BRITANNIC

ASSURANCE COMPANY LIMITED

(Established 1886)

Annual Income	£6,200,000
Funds	£26,000,000

All classes of Life, Fire, Accident,
Motor and General Insurances transacted

Chief Office: BROAD STREET CORNER, BIRMINGHAM

1933, accepted full liability for relieving all able-bodied unemployed not over 65. On the necessity for the "means test," the Minister urged the need to differentiate the rates of contributory benefit and of assistance, to achieve an impartial uniformity in assistance, and to prevent household economic units from deriving more money from assistance than from the earnings of some of their members. He also asked how long the contributory insurance system could be expected to last if assistance were to be given on the same automatic terms as benefit. He then explained the scope of the Regulations. Mr Dingle Foot and Mr. Graham White, for the Liberals, criticised the details of the new Regulations. It was not made clear in the course of the subsequent debate whether the Labour Members' opposition was to every assessment of needs—which implies assessment of means—or only to the household "means test." This was unfortunate, as it is surely evident that no State system of assistance to the able-bodied unemployed can be tolerably financed without assessment of individual means; and that implies some examination of individual income from all sources; and income includes such "real" elements as residence within or without a household unit. On Wednesday the debate was extended to back-benchers; the Government held its hand; and an all-night sitting carried the debate right through to Thursday night. No division had been taken when we went to press.

Locarno: What Next?—The three-Power Locarno meeting this Thursday and Friday appears to represent a compromise between French and British desires. Separate consultation between only the three Western members of the Locarno group is a concession to the wishes of France. Britain, however, has seen to it that the meeting shall be explicitly treated as an overture to a wider meeting in the autumn, that the present place of assemblage shall be London and not Brussels; and that the other two Locarno Powers shall be kept fully informed of proceedings from which they are absentees—Germany because she has not been invited to be present, and Italy because a pressing invitation has not been accepted by her. The next meeting, which the British Government plans for the autumn, is to include Italy and Germany. The first notion which this suggests to the layman is that the five Great Powers of Europe will meet one another round the table precisely in the manner of the pre-war concert of Europe. In fact, it is a meeting of the five Locarno Powers; the two West European Great Powers and the two Central European Great Powers will be there; but Number Five will not be Russia, but Belgium. The hope is held out to us that the conference in the autumn may be followed in due course by a still larger one at some later date, for which invitations will be sent to Russia—and presumably to the States-members of the Little Entente and the Balkan Entente—as well as to the five signatories of the Locarno Rhineland Pact. This programme may be duly achieved; and we devoutly pray for a blessing on the Foreign Office's efforts. At the same time, we doubt whether this scheme of successively widening conferences is good diplomacy. Why, this week, has it been a three-Power meeting only? Simply because France is unwilling to admit Germany into the circle. And supposing that we can overcome this French objection to a round-table discussion with Germany, why is the next conference, which is to include Germany, not planned to include Russia as well? Simply, of course, because Germany's attitude towards Russia is an exaggerated counterpart of the French attitude towards Germany. If Europe is still to be saved from the fate of dividing into two camps in preparation for another general war, a supreme effort ought to be made to bring all five European Great Powers together without further delay.

Signatures at Montreux.—As we were able to record last week, agreement has been finally reached at Montreux. If a war breaks out in which Turkey is a neutral, belligerent warships are only to be given passage through the Straits when they are acting in fulfilment either of the League Covenant itself or of some regional mutual

assistance agreement, within the framework of the Covenant, to which Turkey herself is a party. The arrangement as it now stands—and as it has been embodied in the new treaty signed on Monday—effectively fulfils the desiderata of the Franco-Russian-Roumanian group, and on that account is presumably distasteful to Germany—and perhaps to Italy too. The truth is, of course, that Turkey is *de facto* a member of the Franco-Russian camp already. To Roumania she is formally bound by the Balkan Entente statute; and she can now bind herself any day in similar fashion to France and Russia, either by adhering to the existing Franco-Russian Pact, or by the negotiation of special diplomatic instruments. Two significant provisions of the new Straits Convention are the abolition of the Straits Commission (which is a pity) and the authorisation given to Turkey to carry out her reoccupation of the demilitarised zones upon the signature of the Convention, without waiting for its ratification. This Turkish troops duly and ceremoniously accomplished on Tuesday. It was, of course, a foregone conclusion, before the Montreux Conference was convened, that the military, naval and air control over the Straits would now once again pass into Turkey's hands. Turkey herself regarded this as an urgent and vital necessity for her national security, while it was desired, almost as strongly, by her two friends Russia and Roumania. In these circumstances, no opposition at Montreux could have averted a *fait accompli*. The Straits were going to be, and now are, in the hands of that East European *bloc* of non-aggressive-minded countries: the Balkan Entente, the Little Entente and the Soviet Union. Through the Straits, these countries hope to keep open their communications with France in case they all find themselves at war with Germany. Between France and the Straits, however, stands Italy; and it remains to be seen what Italy will say. The Turkish Government have invited Italy to accede to the new Straits Convention, notwithstanding her non-participation in the Montreux Conference; and at the same time they are reported to have informed her that, in their view, the Anglo-Turkish mutual assistance agreement under Article XVI of the Covenant has lapsed with the abandonment of the application of Article XVI against Italy. Italy is thus "sitting pretty." She can put her goodwill up to auction; and either Germany on the one hand, or the Franco-Russian group on the other, will bid for it.

An Australian Dilemma.—Australia, with a trade war against Japan already on her hands, as a result of her last essay in Imperial preference by the method of the "shut-out bid," is now faced by an internal trade dilemma not unlike that of President Roosevelt's administration after the rejection of the New Deal by the United States Supreme Court. On Friday of last week the Judicial Committee of the Privy Council, in the case of *James v. Commonwealth of Australia and Others*, allowed an appeal by a South Australian grower and processor of dried fruits from an order of the Australian High Court confirming the seizure of certain consignments of dried fruits under the Dried Fruits Act, 1928-35. The effect of the judgment is to invalidate the Australian system of control over the marketing of certain primary products, under which producers are compensated by a relatively high fixed home price for a lower export price. The prohibition of trade in dried fruit between one Australian State and another, except under licence, has been found contrary to Section 92 of the Constitution (which declares that commerce and intercourse among the States shall be "absolutely free"), and it remains unconstitutional even if the Commonwealth and the States agree jointly to measures of trade restraint. The Commonwealth Government is now faced with the alternative of abandoning its system of controlled marketing—which affects other products, including wheat—or endeavouring to attain its end by different means, such as the imposition of excise duties or other forms of special taxation. The prospect of securing a change in the Constitution by referendum does not appear bright, for certain of the States are bitterly opposed to any fresh extension whatever of the Commonwealth's powers, and the principle involved, in this case, is fundamental.

World's Shipping Tonnage.—The statistics of gross tonnage of the world's shipping, given by the tables of Lloyd's Register Book for 1936-37, show an increase for the first time since 1931. The total of 65,063,643 tons compares with 64,885,922 tons for a year ago, the rise of 0.3 per cent. being the resultant of an increase of 985,908 tons of motor vessels and a decrease of 708,340 tons in steam tonnage. Great Britain's share (which is 26.8 per cent. of the world's steam and motor tonnage) has decreased from 17,400,409 to 17,285,459 tons, a fall of 0.7 per cent., which is roughly equivalent to the rise in all other countries combined. Decreases are also shown by the United States (2.9 per cent.), France (0.8 per cent.), and Holland (1.8 per cent.), while Japan and Norway are among the countries whose tonnage has risen. Rather less than half of the world's tonnage belongs to the 4,000-8,000 ton group; some 49 per cent. of this country's tonnage falls in that category, and 63 per cent. of that of the United States. Some 35 per cent. of British ships are under 10 years old, compared with 27 per cent. for the world. During the past twelve months steam tonnage as a whole has fallen, but there has been a rise of 47,000 tons in vessels fitted with turbine engines. Motor tonnage still amounts only to 18.9 per cent. of the whole, but its total has risen by over 9,500,000 tons in the past ten years. Motor-ships form a proportion of total tonnage which varies widely between different nations; Norway has 51.8 per cent. of her tonnage in this form, while the other two Scandinavian countries and Holland each have over one-third. Great Britain has 18.4 per cent. in motor-ships, and the United States only 5.8 per cent. Coal and oil (either for boilers or internal combustion engines) are now used by practically equal proportions of the world's tonnage. Some far-reaching changes are revealed by a comparison between 1936 and 1914. At 64,005,000 tons, the world tonnage of steam- and motor-ships is 18,601,000 tons more than 1914; but in the same interval this country's tonnage has fallen from 18,892,000 (41.6 per cent. of the whole) to 17,183,000 (26.8 per cent.). The United States' proportion has risen from 4.5 to 14.7 per cent.

A European Coke Cartel.—The proposal for a European coal agreement has never ceased to attract attention in all European coal-exporting countries. Up to the present there have been merely bilateral arrangements, like those which regulate British coal exports to Germany, and the Anglo-Polish marketing agreement. Yet an agreement on the European coke market seems at last to have been reached. The intention is to terminate the ruinous competition among coke exporters, especially in Scandinavian markets. An agreement has now, after several months of very difficult negotiations, been concluded and is to be brought into force at once, in spite of certain reservations by British and Belgian exporters. The agreement covers prices as well as quantities. A minimum average selling price of 19s. 6d. per ton f.o.b. port of export, has been fixed; but Dutch and Belgian exporters are allowed to sell down to 19s. The new minimum selling price represents an improvement of 1s. 6d. to 2s. per ton compared with the average price in 1935. Export quotas have been fixed as follows: Germany 52.30 per cent., Great Britain 21.0 per cent., Holland 17.0 per cent., Belgium 7.0 per cent., and Poland 2.7 per cent. These quotas are based on the actual exports in 1934 and 1935. The Scandinavian countries take almost the whole of British shipments. The agreement, which applies first of all to the Scandinavian market, is therefore of considerable importance for the British coke trade. To enable a comparison between exports and output, the following table shows the production figures of the cartel members (not including gas coke) in 1935:—

(Metric tons)	
Germany	29,556,000
Great Britain (1934)	11,697,000
Belgium	4,678,000
Holland	2,146,000
Poland	1,388,000

As freights to the consuming countries amount to roughly one-third of the f.o.b. prices (e.g. the rate from Hull to Horten, Norway, is 7s. 3d. per ton), orders to coke exporters

are to a large extent dependent on shipping facilities. By limiting and distributing the coke exports of the individual countries, competition, it is hoped, may be minimised in future, so long as demand does not fall below that of 1934 and 1935, on which the quotas are based. The scheme provides fines for exceeding the quotas; these are low for small over-exports, but very high as soon as actual exports considerably exceed the quotas. The success of the coke agreement depends largely on developments in the coal markets. Coke prices cannot be raised for a long period without raising the prices of coking coal. The coke agreement may be regarded as a first step towards a comprehensive international coal cartel. If, however, cut-throat competition in the European coal markets continues, the coke cartel will certainly have difficulties with which to contend.

Sterling and International Prices.—There has been a further advance in British wholesale prices, and both the *Economist's* British index numbers have this week established new high records since recovery began. The complete figure has risen by 1.5 per cent. and the primary products index by 3.7 per cent. Prices in the United States have been more hesitant. The *Economist's* primary American index has risen by 1.3 per cent., again to a new high record, but the Irving Fisher general index number, relating to last week, has fallen by 0.6 per cent. French wholesale prices have risen by 0.8 per cent., while German wholesale prices continue to harden:—

Details of the group indices comprising the complete *Economist* index number on the date of our suspension of the gold standard and for recent dates are here given.

"ECONOMIST" INDEX
(1927 = 100)

	Sept. 18, 1931	June 24, 1936	July 8, 1936	July 22, 1936
Cereals and meat	64.5	72.8	72.9	74.5
Other foods	62.2	58.8	59.5	61.2
Textiles	43.7	59.2	59.9	61.0
Minerals	67.4	80.8	81.3	82.5
Miscellaneous	65.8	77.8	78.1	77.7
Complete index ..	60.4	70.2	70.6	71.7
1913 = 100	83.1	96.6	97.1	98.6
1924 = 100	52.2	60.6	61.0	61.9

In the cereals and meat group, wheat, maize, rice, potatoes and bacon are all higher than a fortnight ago. There were increases in butter, coco-oil and cocoa. Among textiles, cotton continues to advance, while there has been a sharp recovery in wool. Jute is again cheaper. In the minerals group, copper, lead and spelter were all dearer. In the miscellaneous group there was a drop in petroleum, and rubber and linseed oil fell slightly.

UNITED STATES

STEADILY RISING NATIONAL INCOME

A COMPREHENSIVE review of American economic developments in recent years is given by the report on the national income published by the Department of Commerce this week. In 1935 the income had recovered to 65.4 per cent. of the 1929 total, after having fallen in 1932 to 48.8 per cent. of the 1929 total. That portion of the national income which is actually paid out did not reach so low a point, touching in 1933 only 57.2 per cent. of the 1929 figure, and recovering to 68.1 per cent. in 1935. The distributed portion of the national income did not fall so low as the income actually produced because of corporate and individual deficits ("negative savings"), which dwarfed Governmental deficits. The following table tells the story in detail:—

NATIONAL INCOME PRODUCED AND PAID OUT
(Millions of dollars)

Item	1929	1930	1931	1932	1933	1934	1935
Income produced	81,034	67,917	53,584	39,545	41,742	48,397	52,959
Total savings	2,402	-5,015	-8,120	-8,817	-3,198	-1,776	-628
Corporate savings	1,423	-3,909	-5,877	-6,366	-2,796	-2,340	-1,443
Business savings of individuals	979	-1,106	-2,243	-2,451	-402	563	815
Total income paid out	78,632	72,932	61,704	48,362	44,940	50,173	53,587

* Includes mining, manufacturing, construction, steam railroads, Pullman, railway express, and water transportation.

† Includes pay rolls and maintenance of Civilian Conservation Corps enrollees and pay rolls of Civil Works Administration, Federal Emergency Relief Administration and Works Progress Administration work projects plus administrative pay rolls outside of Washington.

‡ Includes also net balance of international flow of property incomes.

Recovery in this country is often attributed solely to Governmental deficits, i.e. the expansion of incomes by inflation. Both advocates and opponents of this view find evidence in the figures:—

Calendar Years	Governmental Deficits (\$ millions)	Changes in Income Paid Out
1932	3,119	- 13,342
1933	2,580	- 3,422
1934	4,536	+ 5,234
1935	3,755	+ 3,413

The figures of national income are adjusted neither for population growth nor for changes in price levels. The former adjustment would make the comparisons with 1929 a little less favourable, while the latter would make the 1935 totals compare much more favourably, since both

retail and wholesale prices are substantially lower than they were in 1929.

Thus far the drought has steadily become worse. Damage is most widespread in North and South Dakota, Montana and Wyoming; the area of Kentucky, Tennessee and Southern Ohio is next most seriously affected. Unless moisture comes by the end of this month, failure of crops will be general in those regions, and in some others somewhat less extensive. The Administration is, of course, hastening an extensive relief programme in the affected areas, operating through several Governmental agencies; large amounts of funds will be distributed. Any major adverse effect from the drought upon general business activity seems improbable. The better prices which will be realised by producers who have crops, plus distribution of Governmental relief money, are expected to validate earlier estimates that total agricultural income this year will exceed that of last year by 10 per cent. to 15 per cent.

Retail trade in June is reported by the Federal Reserve Board to have exceeded that of the same month a year ago by 15 per cent., and for the first six months of the year to have been 10 per cent. better than the same period of 1935. The improvement is fairly evenly distributed. Cashing of bonus bonds has now exceeded \$1,000 millions; it is still without noticeable effects, unless it has contributed to the maintenance of trade at a period when some dullness might have been expected. Automobile output was unchanged during the first week of July. While power output and car-loadings declined, due to holidays, the decline was less than might have been expected.

NEW YORK, July 14.

SWEDEN

"LOOSE FROM GENEVA"

PUBLIC interest has again been devoted to Sweden's future attitude towards the League of Nations. The question is of special interest for Sweden just now, as she will probably succeed Denmark on the Council. The tone of the Press and discussions at the Riksdag clearly show that belief in the Geneva organisation has been seriously undermined, and it seems as if the tacit consecration by the League powers of the conquest of Ethiopia has turned the Scandinavian Governments towards a policy of loosening their hitherto very active co-operation with Geneva. At least they have now made official reservations about their participation in any future coercive League action. The reply of the new Swedish Foreign Secretary when asked about his impression from Geneva was characteristic: "Thus, a country should avoid being defeated." Not without pride the Swedish Press emphasised that the only delegate who at the recent Geneva meeting dared to express sympathy for the unfortunate Ethiopian Emperor was Miss Hesselgren, of the Swedish delegation.

The coming into power of the new Agrarian Party, after the resignation of Mr Hansson's Labour Cabinet, has so far not produced any noticeable effect in this very democratic country; and the campaign for the autumn elections to the Riksdag has not yet begun. Though a couple of months ago prospects of a Socialist majority in the future Riksdag were favourable, events in France will probably strengthen the non-Socialist Parties' position.

BUSINESS STILL PROGRESSING

In the meantime business conditions continue prosperous. Building activity is lively, occupation in domestic as well as export industries is good; timber and pulp sales are increasing despite hardening prices. Foreign trade figures in May showed an import surplus of only Kr. 0.9 millions, compared with Kr. 17.9 millions in April. Ore shipments

from the Graengesberg mines totalled in May 744,000 tons, compared with 484,000 tons in May, 1935. They rose in June to 948,000 tons, which is a record since 1929. Total sales of wood manufactures during the first half-year amounted to 625,000 standards, which, according to the international agreement reached with the other European timber exporters in Copenhagen, leaves about 200,000 standards for export this year. Pulp sales have also been satisfactory, and of next year's production of chemical pulp about 70 per cent. has been placed already. Since deliveries have been made at prices agreed earlier, Swedish pulp exporters so far have not benefited from the price improvement. Owing to the record consumption of iron in the home market, the Swedish iron industry continues at peak capacity, with prices tending upward.

Harvest prospects are generally good, though the recent drought has impaired the situation in some parts of the country.

Employment continues to improve, and the number of unemployed decreased during May from 47,000 to 35,000, compared with 61,000 in May, 1935. A shortage of labour is reported among agricultural workers, and there is an increasing demand for workers in the sawmills.

During May, the money market hardened slightly owing to considerable capital exports and to payment of income tax. Total "Cash and at the Bank of Sweden" holdings of the joint-stock banks declined from Kr. 233.4 millions to Kr. 168.4 millions. For the same reasons deposits also declined, particularly those lodged on short-term account. The joint-stock banks' total advances also showed a slight contraction, which can be partly explained by the reduction in outstanding Treasury bills, which the Treasury has lately carried out on account of its extremely liquid position. The Bank of Sweden's and the joint-stock banks' total holdings in foreign currencies, securities and gold have increased during May by some Kr. 10 millions to a new high record at Kr. 1,549.3 millions.

The Stock Exchange showed no considerable fluctuations during May, and the price index fell from 150 to 147 (100 = nominal value). Following the resignation of the Labour Government, and the temporary alleviation of fears of nationalisation and monopolisation in certain branches of industry and trade, a revival occurred towards the end of June and the index ran up to 152. The recovery was mainly in industrial stocks, whereas bank and insurance companies' stocks remained fairly stable.

STOCKHOLM, July 19.

AUSTRIA

ECONOMIC EFFECTS OF AUSTRO-GERMAN AGREEMENT

DESPITE the political tension between Germany and Austria in recent years, business between them has proceeded smoothly, and the payments agreement concluded two years ago has functioned without any friction. The Austro-German clearing is one of the settlements about which no complaints are heard from interested parties. The chief explanation is, of course, that a balance is due from Austria to Germany. For the first five months of the current year the Austrian trade balance is as follows:—

	1935	1936
(In millions of schillings)		
Austrian imports from Germany	75.0	83.0
Austrian exports to Germany	64.8	63.4
Import surplus	10.2	19.6

Although Austria has this year a deficit in her trade with Germany 90 per cent. higher than last year (Austria's total deficit in foreign trade is still 188 million schillings), an increase of exports to Germany is difficult to achieve. As can be seen from trade treaty negotiations between Germany and other countries, the chief obstruction is the German restrictions on foreign exchange. An increase of Austrian exports to any important degree is therefore only possible on the basis of barter, and apart from the clearing. Indications of this tendency are already observable. Only a few weeks ago the Vienna Government succeeded in

reducing previous supplies of coal from the Polish mines by 100,000 tons in the new trade treaty with Poland. This quantity is regarded as a "barter reserve" chiefly for Ruhr coal. In return, Germany will take more milk, butter, cheese, timber and cattle. Some increase in barter trade will be achieved.

The German tax of 1,000 marks per head on German travellers to Austria can only be removed in this manner. According to the exchange regulations, German travellers cannot take more than ten marks abroad. It will, however, be possible first to create a compensation fund by facilitating Austrian travel to Germany. Important preparations were made several weeks ago. Apart from the possibility of acquiring various kinds of Sperr-Marks, Austrian travellers to Germany will be able to get a special travel mark at a discount of about 35 per cent. Further, the increased imports of German goods into Austria will be paid for by the currency requirements of German travellers in Austria. It should not be forgotten that Germany already heads the list of countries both in Austria's list of imports and exports. The second important supplier of Austria, Czechoslovakia, delivered 40 per cent. less in the first five months of the current year than in the corresponding period of last year. Germany is by far Austria's largest supplier of finished goods, and therefore the chief competitor of Austrian domestic industries. About 40 per cent. of Austria's imports of all finished goods in the first five months of 1936 came from Germany, making 75 per cent. of Austria's total imports from the Reich; while the German market took only about 13 per cent. of Austria's exports of finished goods. If Austrian exports are to be expanded, raw materials and farm produce will come chiefly into consideration.

What further changes in trade policy may arise out of the new order of things can scarcely yet be foreseen. The preference treaty with Czechoslovakia concluded in April could not be duly put into force, because Germany protested in Prague against the preferential treatment. The treaty was modified and will come into force on August 1st. It remains to be seen whether German objections to preferential agreements will have to be respected in future. It is an important fact that Austria's economic relations with the associates of the Rome Protocols will not be altered. In the first five months of this year Austria's exports to Italy rose to 61.9 million schillings, against 48.8 million schillings in the corresponding period of last year, while imports remained practically the same at 23.9 million schillings. As a result, Austria's export surplus in her trade with Italy rose from 24.8 to 38 million schillings. However, the new Italian import regime, put into force on July 1st, lays certain impediments in Austria's way, and Austria's previous preferential position no longer obtains in Italian treatment of import permits. This caused some surprise here. Austrian trade with Hungary has this year shrunk somewhat; but the Austrian import surplus has been reduced from 7.6 to 5.8 million schillings. It was constantly emphasised in the Rome Protocols that no objection would be raised to their extension to other States. It remains to be seen to what extent the Austro-German agreement, which is itself connected with the Italo-German *rapprochement*, will influence the economic regime established by the Rome Pact.

VIENNA, July 17.

The British and Polish Trade Bank A.G.,
Danzig

Paid-up Capital: D. Gulden 5,000,000.--

Reserves: D. Gulden 3,527,571.57

Chairman: Sir William Grenfell Max-Muller,
G.B.E., K.C.M.G.

Vice-Chairman: Józef Koźuchowski.

Joint Managers: Stanisław Pawłowicz and
Philip Frederick Rann.

Assistant Manager: Aleksander Kowalski.

The Bank was formed to facilitate Exports and Imports from
and to Poland, including Danzig.

INQUIRIES SOLICITED

TURKEY

THE NEW LABOUR CHARTER

THE new Turkish economic order, mainly characterised by a process of accelerated industrialisation based on the initiative, control and direction of the State, has had little, either of tradition or of legislation, on which to lean. With evolution discarded, because it was too slow, new laws are being elaborated to supply the structure of the social organisation now in being. To a nation hitherto largely composed of peasants and officials, this legislation brings a sort of ready-made frame to suit the logical requirements of a modern social outlook. The recently passed Labour Bill is the most important. It is composed of one hundred and forty-eight paragraphs, of which thirty-three lay down penalties; and it covers labour contracts, work regulations, health protection, distribution of labour, settlement of conflicts, control, and social assistance. Before it was laid before the Kamuty it was submitted for investigation to Chambers of Commerce and similar bodies, and several times rewritten.

The worker is protected against the employer by a compulsory labour contract which may be cancelled only in specific cases. Against third parties, e.g. usurers, the protection consists in the illegality of seizure, or of the worker's own alienation of such a fraction of his wages as would deprive him of a monthly minimum of £T.30 (about £4 15s.). This is the sum considered necessary for his existence. Women are forbidden to work during a period of three weeks before, and three weeks after, their confinement, during which they are entitled to half-pay. In general, the worker's week is limited to forty-eight hours, with overtime paid at a higher rate. Overtime cannot exceed three hours per day, or a total of ninety days per year.

THE STATE AND THE WORKERS

Much more significant, however, is the relationship between State and Labour. First, both strikes and lock-outs are forbidden. All labour conflicts must be settled by the employers' and workers' delegates; and if this fails, by committees formed by officials and neutral persons, with successive grades of appeal. It is a strike when only three workers simultaneously suspend work so as to cause the stoppage of the concern. A lock-out is the simultaneous dismissal of but three workers, when the absence of these three workers necessarily interrupts the working of the enterprise. Social assistance is made a State monopoly. Moreover, the *distribution* of labour becomes the concern of the State, as a consequence of which all private labour bureaux will have to retire from activity. The new State organisation will especially be concerned to regulate the demand for and supply of work; to compare wages with the cost of living; and to take such measures as will be necessary for the elimination of social unrest. Both employers and workers must notify their needs to this State organisation.

All the provisions included in the new law entail some increase in the cost of production. This is why the same law explicitly restrains the employer from reducing rates of wages hitherto paid by him, if such reduction is claimed on the grounds that the limitation of the working week and social assistance, under the new law, have increased his normal charges. Whether he will be authorised to increase his sale price is another thorny question. A recent measure fixes maximum prices for a number of basic goods, such as cotton yarns; and manufacturers' profits are likely to be limited to a given maximum percentage.

Thus the new laws, considered as a whole, aim on the one hand at increasing the Turkish workers' standard of living, and, on the other, by rationalised methods, at reducing the cost of a series of commodities. The realisation of this programme seems to be greatly facilitated by the fact that the larger part of Turkish industry is State-owned. At the same time, the State has virtually complete control of all foreign trade. It is therefore possible for the Government to parry such economic shocks as the introduction of this extensive social reform will entail by measures extending over the entire field of business activity.

ISTANBUL, July 15.

EGYPT

THE BUDGET: INCREASED DEFENCES

ALTHOUGH at the time the new budget was drafted it was not yet possible to foresee the outcome of the Anglo-Egyptian negotiations, the Nahas Cabinet acted on the assumption that the Treaty would be signed and that much larger provision would have to be made in the near future to meet expenses for the accommodation of British troops in the Canal Zone, for the building of strategic roads and for the expansion of the nation's defence forces. The budget drawn by the former Minister of Finance was, therefore, revised, thus effecting further economies and increasing revenue.

Such services as public health and social welfare are very little developed yet, and require ever larger appropriations. The Royal Civil List has been reduced from £E150,000 to £E100,000 annually, and several economies will be effected in the Palace Administration which would not have been possible under the late King Fuad. The diplomatic corps will also come in for retrenchment. But, although 45 per cent. of the State's revenue goes into salaries and there is room for the axe, under present circumstances an all-round reduction is out of the question.

Indirectly, however, the recent abolition of the stamp duty on junior officials' salaries has increased those salaries. Further, Members of both Houses of Parliament have raised their monthly emoluments from £E30 to £E40, and some new Parliamentary Under-Secretaries have been created. This, coupled with the removal of that part of the watchmen's tax collected in the provinces, has deprived the State of an important sum. Moreover, the Five-year Plan of Public Works which, in ordinary times, would have been financed out of the reserve fund to the extent of £E2 millions annually, will be covered by current revenue because of the new Government's reluctance to diminish a reserve which may be much needed later.

It has been, therefore, necessary to resort to new taxes on a larger scale than was foreseen. Import duties on sugar, tea and tobacco have been increased, and a new batch of taxes may be imposed if the improvement in revenue based upon continuation of world recovery does not come up to expectations.

GOVERNMENT'S FISCAL POLICY

In balancing the budget, fixed at £E35,147,500 for expenditure and revenue alike, the Minister of Finance has been guided by the same principles that actuated his predecessor: the lightening of the burden on the agricultural population. But just as on former occasions, the lack of complete freedom resulting from the existence of the Capitulations has compelled the Government to seek relief in only that form of indirect taxation where it enjoys full liberty of action: customs duties.

Thus it happens that import duties which are applied to protect the local agricultural and industrial production are also used freely for purely fiscal motives. In this way the foundations of future difficulties are laid down, as the State's finances become ever more dependent upon foreign trade. Yet, although in 1935-36 Customs receipts represented half the State revenue, this has not attracted wide enough attention because, some time after the tariff reform, world recovery set in. Signs are not lacking, however, that future expansion of customs receipts will not run as evenly as hitherto. For the first two months (May and June) of the new fiscal year, these receipts reached £E2,737,608, against £E2,468,892 during the corresponding period of 1935; but all the gains relate to May, and the results in the coming months may well be disappointing. Nevertheless, the Government hope that by the time a crisis comes, Egypt will have obtained freedom of action from the Capitulatory Powers. A strongly worded reference in the budget speech to Egypt's fetters, and to the necessity of extending taxation to other sources of revenue than land and buildings, attracted widespread attention in local European financial circles.

CAPITAL AND LABOUR

The strength prevailing in the securities market since the beginning of June is not due solely to the relaxation of

the tension in the Mediterranean, but also to local factors. Since last winter business turnover, which had increased by 11.5 per cent. during 1935, has limped. The following are the Cairo and Alexandria clearings:—

	(January 1st to July 11th) 1935 £E.	1936 £E.
Cairo	35,924,967	34,621,788
Alexandria	25,036,260	25,324,057
Total	60,961,227	59,945,845

The accumulation of funds and poor trading results, together with some unwillingness to follow the building boom, are directing capital to the higher class of securities. Egyptian State funds, in particular, are feeling the pressure of investment and have now become the brightest feature on the Exchange.

Labour problems have also come in the public eye of late. The Wafdist Ministry has abolished that old-time institution, the *corvée* (or forced labour) on the Nile banks in flood period. It has also joined the International Labour Office, whose activities previous Cabinets had considered with scant sympathy and followed only through unofficial observers. The Government, however, will be called upon to display far greater interest in labour questions, as the unrest among workers is greatly increasing. This is not only the result of the assumption of power by a Party specially pledged to meet labour demands, but seems also due to the French example. Five stay-in strikes, the first of the kind in Egypt, have been staged up to the present; and in three cases serious clashes occurred.

Former autocratic Ministries had vainly expected the workers to accept, as a substitute for trade unions, an organisation which the Ministry of Interior had tried to create, and which was not much more than a police department designed to shield the workers from dangerous influences. It now appears, however, that the efforts of the Wafd to canalise into national political channels the desire of the labour classes to organise for the achievement of social aims will not meet with the same success as in the past. Class consciousness is developing in the cities in no uncertain way.

ALEXANDRIA, July 15.

SOUTH AFRICA

GOLD FEVER

DURING July the Transvaal gold-mining companies will pay out in dividends for the past half-year a sum of £8,480,396. A large percentage of this sum will remain in this country and find its way through various channels for the further stimulation of commerce, industry, investment and speculation. Locally the last named will probably absorb a large proportion, as there is at present even more than the customary speculative fever in evidence on the Witwatersrand. This is largely a result of the extraordinary activity in shares of the West Witwatersrand Areas and other companies engaged in exploratory investigation on what is confidently believed to be the beginning of a huge extension of the Witwatersrand goldfield to some hundred miles or so west of its present western boundary, beyond Randfontein. Most of this potential new gold-producing area is under the control of the Consolidated Gold Fields Group and the Anglo-American Corporation. A few weeks ago the former company disposed of a large block of its reserve shares at a very satisfactory price, yielding over £1,000,000, which it was understood was to be applied to the further exploration and possible exploitation of these Far West areas, which under modern scientific prospecting methods have given highly promising indications. This announcement in turn stimulated interest in the principal properties of the Gold Fields, chiefly West Witwatersrand Areas, Ltd. After rising £2 in one day these shares within a week or two reached their peak price of £12 15s., which for ten shilling shares of a potential gold producer, still in the early stages of development and exploratory work, must be regarded as sensational. These shares are still only about 15s. below their highest level, and show an advance of approximately £8 over prices towards the end of last year.

NATIONAL BANK OF GREECE

Established in 1841

Capital paid up and Reserves Drs. 1,205,000,000

It is not surprising that with this and other somewhat less spectacular rises in recent share values the speculative aspect of the gold mining industry has lately assumed somewhat disproportionate, and possibly demoralising, dimensions. It tends to dwarf the much more significant development of the industry, such as, for example, is set out in the recently issued report for 1935 of the Government Mining Engineer. In his introductory paragraphs (preceding the customary array of statistics) Dr. Hans Pirow observes:—

"The spectacular expansion of the gold-mining industry, to which I referred in the two preceding annual reports, continued without interruption during the year under review. This is instanced by the fact that the tonnage hoisted by large gold mines on the Witwatersrand rose 48,099,248 in 1934 to 52,912,593 in 1935, whilst the number of Europeans employed on such mines increased from 27,586 to 30,798. It is obvious that this extra employment has its repercussions not only in the immediate vicinity of the Witwatersrand, but practically throughout South Africa. This is also reflected in the increased expenditure on salaries and wages, amounting to £20,819,686 in 1935, and in the amount expended on stores, namely, £22,755,341."

Discussing the effects of the growth of the industry on employment, Dr. Pirow expresses the opinion that:—

"If the present expansion continues during the next six or seven years, as it appears likely to do, it is clear that more than 18,000 additional Europeans, and approximately 120,000 additional natives will be required in order to keep the mines at their full labour complement. As far as one is able to judge, there should be no serious difficulty in obtaining the necessary white employees, the more so as the Government Miners' Training Schools are now being extended to train approximately 700 to 800 apprentices per annum. There is likely, however, to be a definite shortage of trained young mining engineers."

Following up Dr. Pirow's forecast in this connection, it is interesting to note that the Minister of Mines, Mr Patrick Duncan, in opening the new Government Miners' School, just completed at a cost of £18,000, said the need for skilled men to be employed underground became greater every year. Mr Duncan added that he knew of nothing that offered a more sure and certain prospect than did the profession of mining engineer. According to a speech made by the same Minister a couple of days earlier, the Union Government is not content to rely only on the gold mines, either as a source of revenue (they have yielded an average of £15,000,000 to the State every year since the country's departure from the gold standard) or as an opportunity for employment. Mr Duncan disclosed the fact that the Government is already taking practical steps to develop the country's basic mineral resources and incidentally, by way of subsidies—an entirely new departure in mining—to encourage the small "outside" gold mining properties, which at present provide a precarious career for a number of individuals and small syndicates.

JOHANNESBURG, July 1.

IRISH FREE STATE

ELECTION TACTICS

THE political situation in the Free State is becoming very interesting because a general election must be held before the end of next year. Mr de Valera has never possessed more than a narrow majority, and the two major political parties are so evenly matched that quite a small swing of the electoral pendulum would be sufficient to displace the party in office. The recent municipal elections in Dublin seem to indicate that the pendulum is swinging away from Mr de Valera towards Mr Cosgrave. The present Government widened the municipal franchise to a manhood basis, with the curious result that Fianna Fail secured fewer seats on the corporation with the new franchise than with the old. The personal popularity of the Lord Mayor, who led the opposition forces, doubtless had something to do with this result, but there is distinct evidence of a change of political sympathy among the electorate.

As a signpost for the general election the result is highly significant, because it is reasonable to assume that the people of Dublin have far less reason to be displeased with the Government than the inhabitants of the countryside. The whole bias of recent policy has been in favour of industry at the expense of agriculture, and Dublin has reaped the greater part of the fruit of the new industrial development. Much has been done to help farmers in their difficulties caused by the dislocation of markets and the economic war, but they have fared far less favourably than the urban dwellers, who have derived considerable advantage from industrial protection and public expenditure. If Dublin is anxious for a change of Government, the country should be even more anxious, and the defeat of the de Valera Party at next year's election is by no means impossible.

Mr de Valera has shown himself a master of the art of electioneering in the past, and there is no reason to think that he has lost any of his skill. It is therefore to be expected that some patriotic issue will be placed in the forefront of the Government's election programme in the hope that the farmers' national feelings will prevail over any economic discontents which they may nourish. The new constitution, which is at present being drafted, will probably figure largely in the election. It is safe to predict that this document will be drafted in such terms as to enable it to be represented as a Republican Constitution and that the electorate will be invited to endorse it as a mandate for a Republic. It does not, of course, follow that such a mandate, if it were given, would be followed by any definite action, as the present Government possesses a genius for Fabian tactics on the major issue of Anglo-Irish relationships. Perhaps this is all to the good, since delay is probably making it easier to find a mutually satisfactory settlement in the end; and has alienated the Left Wing Republi-

cans and thereby split the ranks of the Government's supporters.

One reason for avoiding any further political separation from the British Commonwealth is that the present situation allows an uninterrupted flow of migration from Ireland to Great Britain, which is doubtless beneficial to both countries at the present time. There has been for nearly two hundred years a steady flow of young people of both sexes from Ireland to seek employment in Great Britain. In the middle of last century this emigration became of secondary importance compared with that to the United States; but, with the practical cessation of the American movement, the movement to Great Britain has resumed its old importance. No statistics of the volume of this migration are available, but it is well known to be of considerable magnitude. With the coming decline in the rate of population-increase in Great Britain, this influx of intelligent and willing workers may become an exceedingly important factor in the maintenance of industrial activity. Any loss caused by this human flow is experienced in the country of departure, not in the country of arrival.

The improvement in the trade balance continues and is the cause of much satisfaction:—

EXTERNAL TRADE OF IRISH FREE STATE, TWELVE MONTHS
ENDING MAY 31ST

Year	Imports	Exports	Import Surplus
1935	38,662,333	18,380,112	20,282,221
1936	37,894,629	20,886,781	17,007,848

Although no precise statistics are available, it may be safely stated that the invisible credit balance is sufficiently favourable to support an adverse visible balance of this magnitude. A new equilibrium seems to have been attained, and the drain on the banks' sterling assets appears to have come to an end. Indeed, the half-yearly statements published by four of the leading banks show a remarkable lack of variation between the first six months of last year and of this year. The difference in the total profits of the four banks in the two periods is merely £600. In the case of institutions whose total balance sheets are over £100 millions, such a slight variation in profits indicates a very steady condition of business.

The progress of industrialisation is shown by the increase in the capital issued by the Industrial Credit Corporation from £500,000 to £1,000,000. This company, which is principally concerned with capital underwriting and investment banking, has since its establishment in 1933 underwritten or been associated with the underwriting of capital issues by companies to the amount of £3,968,400, of which the underwriters have been called upon to take up 12½ per cent. The greater part of the shares in the company are held by the Minister for Finance, and it has played an important part in laying the foundations of a capital market in Dublin.

BOOKS AND PUBLICATIONS

DEFENCE—OF WHAT?

As Mr Brailsford says in the opening sentence of his interesting pamphlet,* "the least reflective citizen in our island is aware that the failure of mild economic sanctions to prevent the Italian conquest of Abyssinia compels us to think out anew the whole problem of European security." Mr Brailsford puts his finger at once on the League's weakness: its utter dependence on identity between French and British foreign policies in support of collective restraint of aggression. He takes us right back to the cradle of the League: the lack of farsightedness in the economic sphere (reparations), the failure of America to ratify the 1919 Anglo-American Treaty of Mutual Guarantee for France, the consequent British aloofness and the French recourse to military alliances to defend the *status quo*, the ignoring

* "Towards a New League." By H. N. Brailsford. *New Statesman and Nation*. 6d.

of Russia by all save Weimar Germany, the Ruhr tragedy, the unprincipled and unresisted Vilna coup, and its sequel, the Lithuanians' rejoinder at Memel. Mr Brailsford's wide vision fastens on the deplorable collapse of the French initiative, aided by Arthur Henderson, in the 1924 Geneva Protocol for European security, largely as a result of the 1925 Conservative Government's eagerness to accept the Dominions' objections. (He omits to point out that this Conservative Government, driven to supply a substitute for the Protocol in order to get Germany into the League, perfected the Locarno Treaty of 1925, to which the Dominions also refused to adhere!) In 1929 he traces the beginnings of reaction: Stresemann's death, Briand's departure, Tardieu's advent, the stiffening of Polish and Jugoslav dictatorships; and he gives judicious weight to the effects of the slump and the intensification of economic nationalism which began in that year. Then come in rapid review the major failures of the Great Powers to render

the League a potent defence against the aggressor; the Japanese rape of Manchuria in 1931-32—Mr Brailsford deals shrewd blows at British foreign policy in Sir John Simon's hands—the failure of the Disarmament Conference to supply an effective collective substitute for unilateral rearmament, the year of violence in 1932, political fissiparity in Eastern Europe, and so to recent events: the unilateral German ruptures of the Versailles and Locarno Treaties, and the Italian aggression against Abyssinia. Mr Brailsford castigates not the League idea—indeed, he insists that this must be retained for the future of civilisation, at all costs—but the Governments which shuffled from temporisations to expedients, and from excuses for inaction to blatant betrayals. He urges the need for "a League within the League" of European democratic Powers—a federal union of such European Powers, a Front Populaire in the international field—pledged to mutual defence and with even a set of federal economic and political institutions. In it would be France, Scandinavia, Spain, Czechoslovakia, Russia, and Great Britain, once Labour resumes power. This brilliantly written and provocative pamphlet should be widely read.

The second pamphlet* is much more controversial, and gravely disturbing in its implications. The author contends that the betrayal alike of the League Covenant and of British interests by the present British Government renders war in Europe inevitable, into which the National Government will inevitably be drawn by its previous timidity and equivocation. Then, says the author, after a hectic rearmament programme, culminating in conscription, the British Labour Party will be called on to rally to the undivided support of "British interests." Meanwhile, the Government will proceed to emasculate the League Covenant and to contract out of all obligations save for the defence of the Low Countries. He contends that the Labour Party should demand that the Government should, in exchange for wholehearted Labour co-operation, guarantee its ratification of an all-European non-aggression, arbitration and mutual assistance treaty; the nationalisation of the armaments and aeroplane industries; and the passing of a Peace Act binding the Government to submit any dispute to arbitration and not to use force as an instrument of national policy. If the Government should not agree—as, he admits, it dare not, as a Conservative Government—the Labour Party should pledge its members "not to serve in the armed forces, nor to perform work of national importance, nor to pay taxes, in the event of war." While the Government has certainly given "Covenanter" ample reason for his strictures, it is extremely doubtful if Labour in this country is ready thus openly to court the danger of elevating Right-wing tendencies to supreme control from the very outset. But no student of current opinions in the present flux can afford to ignore an argument so challenging and sincere.

SHORTER NOTICE

"Deficits and Depressions." By Dan Throop Smith. Chapman & Hall, Ltd. 264 pages. 12s. 6d.

The most remarkable feature of the policy of emergency expenditures by the United States Government during the depression has been the variety of methods which have been adopted in order to increase spending. In this much needed book Dr. Smith applies the results of recent economic analysis to the actual effects of unbalanced budgets in the United States both during the depression and also in the war period.

His opening chapters on the methods of American Treasury financing serve as an admirable summary for the English reader, but the most valuable part of the book is the clear and careful discussion of the manifold repercussions of different kinds of emergency expenditure and of the methods of acquiring funds. His broad division of the expenditures between those designed to strengthen the credit structure (e.g. the RFC), and those for relief and public works, enable him to analyse in detail the whole problem of how unbalanced budgets can best increase the volume of the *right* kinds of spending. Of these two types, the first has hardly received sufficient examination at the hands of economic theorists, and Dr. Smith aptly links it up with the more general questions of

* "Labour and War Resistance." By "Covenanter." Gollancz and New Fabian Research Bureau. 6d. net.

eligibility for rediscount and the relation between the Treasury and the Federal Reserve banks. There is also an interesting discussion of the effects of various forms of Government spending on the velocity of circulation of bank deposits.

Dr. Smith's treatment shows how necessary it is to take institutional factors into account when examining theories of the trade cycle. In many places his ideas run parallel to those of Mr. Keynes, though he writes before the publication of Mr. Keynes's latest work. Thus, in discussing the effect of unbalanced budgets on the market for Government bonds, he remarks: "The crucial factor is the public reaction, not so much on the question of saving from current income, which is of long-run significance nevertheless, but as regards the preference for holdings of cash or securities." Finally, his view of the actual budgetary prospects in the United States is a happy blend of tempered optimism and common-sense warning.

MONEY AND BANKING

THE FRENCH TREASURY AND THE BANQUE DE FRANCE

In the following article our Paris correspondent describes and examines the French Government's Bill for the amendment of the constitution of the Banque de France. In view of the close co-ordination between the Government, the Treasury and the Banque which this Bill provides, special interest attaches to the French Government's publication of the Treasury's position in the first five months of this year, which is also examined by our correspondent.

THE Chamber has voted the Bill for the new statute of the Banque de France. The Senate passed the Bill on Thursday by 196 votes to 77.

Till now, the Banque has been governed by a Regency Council of 15 members, a Governor, and two Vice-Governors. The Governor and Vice-Governors are nominated by the Finance Minister, and the 15 Regents must be nominated by the general meeting of shareholders. But, in fact, the shareholders have always limited their activity to mere ratification of the selections put before them; so that everything proceeded as if the Regency Council merely recruited itself by co-option. The example is cited of one seat on the Council which, ever since the creation of the Banque by Napoleon in 1800, has been held without interruption by the same family—that of MM. Mallet, the bankers. The new Bill abolishes the Regency Council and replaces it by a board of twenty directors, as well as the Governor and two Vice-Governors. Of these twenty directors there are ten civil servants, including the following: three who represent respectively the Finance, National Economy and Colonial Ministries; and seven *ex officio*: the president of the Finance Section of the Conseil d'Etat, the director of the Office for the General Movement of Funds, the director of Trade Treaties and Agreements, the general director of the Caisse des Dépôts et Consignations, the Governor of the Crédit Foncier, the general director of the Crédit National, and the general director of the Caisse National du Crédit Agricole. The remaining ten directors are to be appointed on these lines: (1) Five directors are to be chosen by the Finance Minister from lists each containing three names presented by the following organisations: the National Federation of Consumers' Co-operatives, the General Confederation of Labour, the General Confederation of French Production (employers), the General Confederation of French Artisans, and the professional agricultural sections of the National Economic Council; (2) One director is to be appointed by the Minister of Commerce from among the best qualified representatives of small traders; (3) Two directors are to be selected by the Finance Minister from lists each containing three names presented by the following organisations: the Associated Union of Paris and Provincial Bankers, and the Associated Chamber of People's Banks; (4) One director is to be elected under secret ballot by the staff of the Banque de France itself; (5) and finally the general secretary of the National Economic Council is to be director *ex officio*.

According to these provisions, the civil servants will have preponderant importance in the management of the Banque, for there will be (with the three governors) at least thirteen civil servants on the directorate. The Government will thus be able in future to make its policy prevail more easily than hitherto. Struggles like those of 1924-26 under the Herriot and then under the Briand-Caillaux Cabinets, and that of last year under the Flandin Cabinet, either over the total of the Banque's advances to the State, or over exchange market technique, or over the discount of Treasury bills, should be practically impossible in future. As for the shareholders of the Banque, all of them are in future accorded the right to attend the General Meeting, whereas hitherto only the 200 largest shareholders had the right to attend. There are 40,947 shareholders, of whom 17,931 hold one share each, and 8,923 only two each. The shareholders' rights, however, are to be more restricted than hitherto. Henceforward,

the General Meeting can only appoint the three "Censors," who, though attending directors' meetings, will only be there in a consultative capacity and cannot participate in the directors' discussions and decisions. Nevertheless, the three censors' powers in control of the Banque's day-to-day operations remain fairly important.

Finally, Government decrees before December 15th are to modify the statutes controlling the Banque's discount and portfolio obligations, so as to render credit regulations more supple. M. Vincent Auriol, the Finance Minister, is making the notable proposal to introduce an open-market policy, to which the Banque has never yet consented. It is more probable, however, that this proposal will not be rigidly adhered to, but that the whole mechanism of the central bank will be widened in a general way. It is generally desired that credit should henceforward be easier—whether to the State or to private concerns.

The Government has undertaken regularly to publish the Treasury's position. Its first statement, covering Treasury operations between January 1st and May 31st, is summarised below:—

(In Millions of Francs)

	Outgoings	Receipts
1935 Budget, supplementary period	4,114	296
1936 Budget, period of execution	17,348	14,085
Expenditure financed by loan	2,601	...
Expenditure financed by special resources	1,368	1,397
Treasury operations of Postes, Tel. et Tel., and other services in the Budget Annex	33,118	34,382
Treasury operations of Public Boards and autonomous institutions	35,623	34,720
Treasury operations of local communities	32,557	33,457
Treasury operations for private persons	16,960	17,132
Treasury advances	3,705	1,933
Repayments and issues of Treasury loans, respectively	18,841	28,063
Funds in transit, suspense accounts, etc.	715	...
Total	166,950	165,465

Expenditure financed by loan mostly comprises armaments (Fr. 2,231 millions). It is stated that the Treasury has had to borrow Frs. 10,000 millions odd, to cover the total of its expenditure in the first five months of this year. Thus, its total loans have been Frs. 28,063 millions, of which Frs. 18,835 millions has had to go to repay Treasury bills falling due. These Frs. 28,000 millions of loan resources are composed thus: Treasury bills, 21,785 millions; sundry loans to the Caisse des Dépôts, 682 millions; loans via the Crédit National, 37 millions; 5 per cent. 1935 sinking-fund Treasury bonds, 572 millions; 1936 two-year 4 per cent. Treasury bonds, 2,000 millions; and, finally, the Treasury's 1936 loan of 2,987 millions from the London money market.

In order to place Frs. 21,785 millions of Treasury bills, the State has had to have recourse to rediscounts at the Banque. Indeed, the Banque accepted Frs. 13,833 millions of bills for discount, which was a veritable hidden inflation. The Blum Government has now consolidated these 13 milliards of discounted Treasury bills in the guise of long-term advances from the Banque without interest, so that the position is fully disclosed and the problem of their repayment no longer arises. The result is that the Banque de France is brought under the control of the Government. It remains to be seen if it will be completely subservient, and how far the Government will act on its technical advice. Still, at least the days of antagonism between the State and its central bank should now be past and gone.

FINANCIAL NOTES

Midland Bank's Accounts.—The accounts of the Midland Bank were issued too late for us to comment upon them last week in our discussion of the banking half-year, and so are summarised below. Aggregate totals for the "big five" banks are also given for purposes of comparison:—

	Midland Bank		"Big Five"	
	1935	1936	1935	1936
June 30th				
Liabilities:—	£ mill.	£ mill.	£ mill.	£ mill.
Deposits	418.0	487.5	1,794.0	1,941.9
Acceptances, etc.	16.1	17.1	90.5	86.2
Assets:—				
Cash	39.3	43.0	190.0	205.9
Balances and cheques	16.7	18.4	64.6	66.0
Call and short money	26.1	26.6	124.0	129.5
Discounts	42.6	74.0	216.2	282.0
Investments	127.1	121.0	537.0	531.4
Advances	171.3	191.9	704.4	770.6

The increase in the Midland Bank's discounts is almost as great as that of the other four banks taken together. The result is that when the Midland Bank's figures are included, the discounts of the "big five" have risen by £65.8 millions, or by over half the year's increase of £110 millions in tender issue of Treasury bills. Thus it now transpires that a substantial proportion of the year's new Treasury bills have passed into the hands of the clearing banks.

The "South American" Merger.—On July 17th special meetings of the shareholders of the Anglo-South American Bank and the Bank of London and South America were held for the purpose of approving the proposed merger, described in the *Economist* of July 11th. At the meeting of the Bank of London, the shareholders duly agreed to increase the authorised capital by 100,000 £5 shares, representing the purchase price involved in the merger. At the Anglo-South American Bank meeting Sir Bertram Hornsby had the difficult task of explaining to the shareholders that they were suffering a total loss of their capital. The "A" shareholders, who are also relieved of the threat of a call, were under a less sense of loss than the fully-paid "B" shareholders. The latter were informed that in no conceivable circumstance could the purchase price have been anything like sufficient to meet the prior claims of Chilnit, and so the actual figure agreed on was of no practical importance to the "Anglo-South" shareholders. Chilnit could not be expected to forgo any part of the purchase price in favour of the "B" shareholders, and even if it did, the major portion of some 15s. out of every available pound would accrue to the "A" shareholders. Alternatively, the bank's articles precluded the making of a call on the "A" shareholders for the benefit of the "B" shareholders. There was thus no way of escape for the "B" shareholders. Naturally, this statement gave rise to some discussion, but in the end the resolution approving the scheme was carried by a large majority.

The Foreign Exchanges.—Rates this week have been very steady, but the franc and other gold *bloc* currencies tended to weaken on Monday on the news of the Spanish revolt. Guilders, however, were firm, and it is reported that the Bank of England has been a seller. Dollars are a little stronger in both London and Paris, now that the recent French liquidation of dollar holdings is over. This week's Banque de France return shows gold acquisitions of only Frs. 50 millions. Treasury bills rediscounted are reduced by Frs. 250 millions, and there is a contraction of Frs. 810 millions in the note circulation. This week the Customs report an importation of £9.9 millions of gold bullion from France; raising total imports for the past three weeks to £16.7 millions. As no privately-owned gold is now coming to London, this must represent the movement of gold belonging to the Exchange Equalisa-

tion Account. Quite possibly it represents gold sold to the Bank of England, for the Bank would hold this gold, which is behind the note issue, in its own vaults.

The Money Market.—The Bank of England is continuing to buy gold, and while initially it may be buying it from the Exchange Equalisation Account in exchange for Treasury bills, the fact that its holdings of Government securities are unchanged shows that it must be replenishing its bills from other sources. There were, in fact, rumours this week of open-market buying. As the note circulation is unaltered, the supply of bank cash has been increased, and so money has been easy all the week.

	July 2, 1936	July 9, 1936	July 16, 1936	July 23, 1936
Bank rate	2	2	2	2
Clearing banks' deposit rate ...	½	½	½	½
Short loan rate:—				
Clearing banks	½-1*	½-1*	½-1*	½-1*
Others	½	½	½	½
Discount rates:—				
Treasury bills	½-¾	½	½	½
Three months' bank bills	½-¾	½-¾	½-¾	½

* Loans against Treasury bills and other approved bills and British Government securities within six months of maturity; 1 per cent. Treasury Bonds and other gilt-edged stocks within six months of maturity; and other collateral, respectively.

Last week the market only obtained a small allotment of Treasury bills, the average tender rate being 11s. 7.57d. per cent. With money so plentiful, bill-brokers were unwilling sellers. Next week, the bulk of the maturing Treasury bills only fall due on Saturday, so that money may be less easy early in the week. Next week the London County Council are issuing £2,000,000 of bills.

The Bank Return.—This week the note circulation is unchanged. Gold acquisitions amount to £4.8 millions, and the reserve has risen by £4.4 millions.

BANK OF ENGLAND					
	July 24, 1935	July 1, 1936	July 8, 1936	July 15, 1936	July 22, 1936

The gold purchases have helped to raise bankers' deposits by £7.6 millions. The drop in other deposits may be due to India 5½ per cent. stock repayments.

Standard Bank of South Africa.—Mr J. F. G. Gilliat, the chairman of the Bank, had a pleasant task to perform at last Wednesday's annual meeting. He could point to an increase during the year both in deposits and in discounts and advances. The slight reduction in net profits, which a week ago we suggested might be fortuitous, was due to a very satisfactory cause. The bank's staff have, during the recent trade revival, been working under unusual pressure, and so it was decided to pay them a special bonus for the first time since 1931. In describing conditions in South Africa, Mr Gilliat was able to say that gold-mining was no longer the only factor contributing to the general prosperity. More remunerative prices are ruling for wool and other farm products, while there had been a remarkable increase of activity in the building trade. The external debt of the Union had been reduced by £34.2 millions during the year by the repayment of outstanding loans, and while part of the money so repaid had been borrowed internally, there was a net reduction of about £9.0 millions in the total public debt. Both import and export trade of the Union had expanded during the year. Reports from other territories served by the bank were also in many respects encouraging.

THE STOCK EXCHANGE

STEEL SHARE PROSPECTS

OF all industries, iron and steel has been most favoured by Government policy during the last three years. Heavy protective tariffs (used both to safeguard the home industry and to stimulate foreign producers into making agreements favourable to Britain), the stimulus given by easy money to the construction industries, the Government-guaranteed loans for railway re-equipment and, finally, re-armament—all have contributed to the industry's unprecedented prosperity. All output records have been broken; steel production is now running at an annual rate of 11½ million tons, some 15 per cent. higher than any previous figure. Profits have increased in proportion, and share prices have steadily advanced to levels which would have been thought fantastic three years ago. Present prices are little short of the highest levels achieved since the depression, and they confront the investor with two problems. First, can and will the demand for steel be maintained at its present record height? Secondly, what is the possible extent of further profit increases?

The first problem involves an analysis of the market for steel on broad lines, for the exact destination of the millions of tons now being produced is unknown. During the first four months of this year, 2,696,500 tons of finished steel products were made, a total 18.8 per cent. higher than that of the corresponding period of 1935. The following table shows some of the main products:—

	1929*	1935	January-April 1936
Structural steel	718	754	935
Sheets, plain and galvanised and tinplates	772	525	621
Steel plates	480	355	445
Rails and sleepers	250	161	201
Hoops and strip (including tube strip)	113	157	183
Wire rods	83	133	165
Forgings	81	85	91

* One third of year's total figures.

The implications of the table are clear. The immense significance of the building boom is apparent, not only in the 1936 figure for structural steel, but also in the increased production of tube strip. Moreover, the structural steel output has increased more rapidly than the volume of building activity; the transfer of activity from residential house building to industrial and commercial building is evidently favourable for the steel industry. Next, the figure for plates shows the importance of, and the improvement in, shipbuilding. The railway companies are also getting to work on their new programmes. Sheet and tinplate production, however, has increased less rapidly than some of the other items. Here, an improved home market has only partially offset the failure of exports to recover.

Broadly, the maintenance of the present demand for steel is dependent mainly upon the future course of the building and construction boom. There are, additionally, two possible sources of increase in demand. The first is from the shipyards, where the latest returns suggest that some recovery is in progress. The second is the export trade, which has actually declined in the first half of this year. Under the cartel agreement, exports are unlikely to increase rapidly over the next few years. Armaments, pure and simple, do not provide substantial orders for the industry as a whole. Guns and gun mountings are forged, and only three firms—Vickers, Firth-Brown, and William Beardmore—do forging work of the heaviest armament type. Even a naval programme gives less work, for every pound spent, to the ordinary steel-maker than mercantile shipbuilding. The value of re-armament to the industry in general lies in the substantial new construction work—such as aerodromes and factory extensions—which it will involve. This expenditure, however, is definitely of a capital nature. Sir Thomas Inskip's speech on Monday showed that it is proceeding rapidly. But, when it is

finished, there will be no "replacement orders" for the steel industry proper, as opposed to the armament concerns.

The construction boom is thus all-important. There seems, at this stage, no reason to expect a rapid or catastrophic decline. That consideration suggests part of the answer to the second problem—the future course of profits. The earnings of the industry must be limited, in the first place, by technical capacity. In the earlier stages of "recovery," profit margins increase rapidly as output increases. As the industry approaches capacity, however, costs tend to rise. Bottlenecks appear in works organisation, the need for repairs becomes more frequent, plant must be rested periodically, and the maximum efficiency cannot be realised. If, ultimately, plant extensions become necessary, a conservative dividend policy is unavoidable in the short run, unless new capital is raised.

The industry seems now to have attained this position. Moreover, the organisation of raw material supplies is proving inadequate. In some districts, there is a shortage of scrap. In others, coke prices have increased rapidly—thus giving the composite companies, with their own collieries and coke-ovens, a strong competitive position. The recent rise in costs led to a successful agitation for an advance in official prices, which have been increased sufficiently to maintain former profit margins. There is reason to believe, however, that costs will rise once more, for price increases involve corresponding wage increases under the "melters" sliding scale. The industry may, in fact, be in a position to force its consumers to pay somewhat more for their steel—the engineering and motor industries are highly prosperous, and steel costs represent a comparatively small part of building costs. None the less, investors cannot regard this cost-price spiral with composure, particularly when the industry's capacity is being enlarged near the top of a rising market. The British Iron and Steel Federation itself seems somewhat concerned on this score, and the fact that the Tariff Board is to consider the future development of the industry is significant.

Broadly, therefore, the position of the industry from the investor's point of view is reasonably clear. Production in 1936 will probably be 15 to 20 per cent. higher than in 1935, but the effect of this output increase will, to some extent, be offset by reduced profit margins, while plant extensions will restrain directors' generosity. Next year, the increase in capacity will evidently increase total profits, but some further expansion in costs may involve a consequent diminution in profit margins. Except for a number of specialist armament concerns, whose medium-term future seems promising, steel share prices should not discount further sensational dividend increases. Above all, conditions in different parts of the country vary widely, particularly for coke supplies and prices, and a selective policy on the investor's part is essential.

Steel shares, to-day, fall into four groups. First, the heavy engineering-cum-armament companies—predominantly Vickers, Hadfields and Firth-Brown—must be regarded as a class by themselves. Their prospects are governed by factors essentially different from those which affect the steel industry proper. Similar considerations apply to miscellaneous engineering companies, whose shares are quoted in the iron and steel group, such as Babcock and Wilcox and Thomas W. Ward. Secondly, the iron companies—Stanton, Staveley and Sheepbridge and, with its further differences, Allied Ironfounders—must also be treated separately. They are dependent to a large extent upon their efficient and profitable coal properties, and are more closely connected with house-building and utility construction work than the steel companies proper. Thirdly, there are a number of specialist concerns, led by Stewarts and Lloyds. The prospects of this concern, in the short run, depend upon the reconstruction of the international tube cartel, and it cannot be expected to show larger profits in 1936 than in 1935. Tube Investments, on the

INVESTMENT NOTES

Issue Market Activity.—Noteworthy activity has developed in the new issue market on the eve of the August close season. As many as half a dozen separate operations have been announced in a single day this week. This recrudescence may be directly related to the firmer tone of the Stock Exchange, which has raised the *Financial News*' index of thirty ordinary shares to a new recovery peak. The keener edge to investment appetite may be attributable partly to psychological considerations connected with the prospective duration of trade recovery (which we discuss in a leading article on page 155). It may also, possibly, be an initial result of the broadening of the basis of the national credit structure, which has been in progress for some weeks past. The July banking averages will show, in due course, whether the banks have once again been "forced" into the gilt-edged investment market on a fair scale. What is certain is that the absorptive powers of the issue market for trustee securities have so far improved that the authorities—who recently were faced with the possibility of another "holiday" in home corporation offers—have been able not only to secure an adequate response to two urgent "6 per cent. conversion" issues by Nottingham and Birkenhead respectively, but also to authorise issues by further local authorities. Activity in the patrician areas of the market, however, is fully paralleled by that in the "uncontrolled" industrial sections. To the question whether a continuance of present conditions would involve the danger of a boom, similar to that, say, of 1928-29, with its inevitable aftermath, it is impossible to give a decided answer. The present movement has the advantage that the majority of issued prospectuses relate to companies already well established in private hands, whereas the concerns of 1928-29 were new flotations with nothing more substantial behind or before them than the interested optimism of their promoters. Less favourable contemporary features, however, are the numerical frequency of issues in a narrow range of "popular" industries—particularly engineering (including machine tools) and any activity which, however remotely, can be related to national re-armament. Whatever the merit of individual flotations, it is clear that the market is not wholly free from the traditional reproach of giving the public what the public wants rather than what is necessarily best in the public's long-term interest. In other words, the market is "following the news" rather than taking a really broad economic view, and the eventual result may be overdevelopment, excessive competition and depression in the industries which are now "favoured." Another ground for criticism is the tendency to base prospectus calculations, and to demand large premiums in issue prices, on the results of a single year (even on those of a still uncompleted year) which are far above those of immediately preceding periods. When this practice is allied with capitalisations involving a heavy proportion of preference capital and a highly-gearred "razor-edged" ordinary capital, whose yield at the issue price may be little more than 5 or 6 per cent., it is clear that subscribers are being asked to give a heavier hostage to fortune than they would normally be willing to do. And that, if the process were long continued, would be a dangerously inflationary sign.

* * *

Spain and the Investor.—This week's rising in Spain, like its many predecessors, has left the Stock Exchange's withers unwrung. There are few countries in the world, indeed, in which the markets have a smaller direct interest. Spanish Government borrowing is represented by only one peseta issue in the Official List; no municipal loans are outstanding, and of the handful of companies operating in Spain only Rio Tinto is of first-rate market importance. This company, moreover, has in recent years so greatly extended its interests in Rhodesia and elsewhere that it is questionable if Spanish domicile properly applies. Its business in Spain is now largely confined to the pyrites trade, a market in which the company has exerted an important stabilising influence. News received early this week suggests that conditions at Huelva, where the company's properties are situated, have remained quiet, but

other hand, produce tubes only for the very prosperous and rapidly expanding home market. Whitehead Iron and Steel is another "specialist"; the company is a re-rolling concern, making no pig iron or semi-finished steel. The position of Richard Thomas is more difficult to define. The company is one of the largest steel producers in the country, but its finished products consist of sheets and tinplates. The prolongation of the tinplate cartel and the formation of the sheet cartel will stabilise the price structure in the industry. The company is thus proof against a fall in profits. Moreover, it is expanding its business very rapidly, and has the British rights for the construction of an American continuous strip mill, which should substantially reduce costs of production. The long-term prospects of an expanding company are inevitably difficult to assess, but the shares seem reasonably priced. The results of Millom and Askam have so far been a little disappointing, but the company stands to benefit eventually from the demand for hematite steel for armaments.

Lastly, we come to the steel producers *par excellence*, the composite producers of pig iron, semi-finished steel, and finished products of various sorts. There are the three North-East coast companies—Dorman Long (to which structural steel is of primary importance), South Durham, and Consett Iron. The last-named produces mainly acid steel, for ship and boiler plates; the first two produce mainly basic steel. Together with Colvilles—the Scottish group which has recently become of interest to the investor—they are the chief producers of ship steel. The next important group includes Guest, Keen and Nettlefolds which, through its subsidiaries (of which John Lysaght is the chief), produces the whole gamut of steel products, and, jointly with Baldwins, dominates the South Wales heavy steel industry. Finally, there is United Steel, with works in Lincolnshire, Sheffield and Cumberland. This group, similarly, produces almost every kind of steel, but it concentrates upon structural steel and rails.

To these twelve companies, therefore, the general considerations governing the industry mainly apply. The following table shows the monthly production of the relevant types of iron and steel in each of their areas in the first five months of this year, of 1935 and of 1934:—

IRON AND STEEL OUTPUT AND EARNINGS

Company (and Accounting Date)	Regional Output Jan.-May ('000 tons)			Ord. Share de-nomination	Price	Latest dividend (%)	Earnings (%)	Gross Yield (%)
	1934	1935	1936					
Composite steel producers:—

Dorman Long (Sept. 30)...	£1 40 0	Nil	12.7	£1 40 0	Nil	12.7	Nil	
South Durham (Sept. 30)...	683(b)	757	916	£1 37 6	5	11.9	3.70	
Colvilles (Dec. 31).....	515(c)	537	658	£1 35 6	Nil	13.4(g)	Nil	
United Steel (June 30)...	1,128(d)	1,170	1,303	£1 35 0	7	10.4	4.00	
Baldwins (Dec. 31).....	205(e)	220	272	£1 11 6	7½	12.1	2.80	
Guest, Keen & Nettlefolds (Mar. 31).....	...	(f)	...	£1 37 0	5 f.t.	7.7 f.t.	2.70 f.t.	
Specialists:—								
Stewarts and Lloyds (Dec. 31).....	...	(f)	...	£1 36 3	5	9.7	2.75	
Tube Investments (Oct. 31).....	...	(f)	...	£1 75 0	10(k)	18.9	2.66	
Richard Thomas (Mar. 31)...	455(l)	436	511	£1 14 0	12½	13.8	5.95	
Whitehead Iron (Mar. 31)...	(j)	...	...	£1 145 0	35	55.0	4.82	
Millom & Askam (Dec. 31)...	267(h)	283	...	£1 15 0	Nil	Nil	Nil	

(a) N.E. acid steel. (b) N.E. basic steel. (c) Scottish steel. (d) Cumberland, Lines, and Sheffield steel. (e) S. Wales pig iron. (f) No useful figures available. (g) Sheet and tinplate figures, four months. (h) Coast hematite pig iron. (i) After allowing for recent capital reconstruction, and allowing £200,000 for depreciation. (j) Charging only one year's pref. div. and before £200,000 special reserve for pref. div. (k) And capital bonus of 10 per cent. Earnings given on new capital.

This table provides a better measure of the companies' position than the national steel output figures, and each controls a sufficiently large proportion of the output in its area to make the comparison significant. The conclusion would appear to be that the possible future profit increases are already adequately discounted. It is difficult to see on what grounds the very "highly geared" Dorman Long ordinary shares stand substantially higher than Guest, Keen and Nettlefolds or Colvilles and the low-gearred and stable United Steel ordinary shares. It might, perhaps, be argued that the steel share group as a whole is highly unstable. That might be a justification for the relative levels of the two sets of shares. But if it is true, the dividend yields on the group as a whole should be appreciably higher in relation to shares of other industrial groups than they are to-day.

that the mines were not working. The £5 shares fell from 13½ at the end of last week to 13¼, after some nervous selling which reduced the quotation to 12½, but have subsequently recovered to 14. The movements in this share—and a day's suspension of dealings in the peseta—are, as yet, the only market consequences of Spain's civil war.

The Still, Small Voice.—The theory that every shareholder, no matter how small, has the right to express his view on the general policy of his board is, in principle, unchallengeable. Fortunately for company administration, however, it is usually exercised with restraint. It may be hoped, therefore, that company directors will not regard the changes in the articles of Lloyds Bank, which were approved by shareholders last week, as affording a general precedent for control of *bona fide* criticism at annual meetings. Two substantive changes in shareholders' rights were approved at the Lloyds Bank meeting. First, the power of members to submit any resolution to a general meeting, on written notice given in advance, has now been withdrawn. Secondly, a poll may still be demanded by five members, but they are now required to hold 10,000 shares (save for an extraordinary or special resolution), compared with 500 shares formerly. These changes are undoubtedly restrictive, though they merely bring the bank into line with certain others of the Big Five. The presentation of resolutions relating to staff conditions has been a regular feature of recent annual meetings. Whatever the merits of the case which certain small shareholders have thus pressed, it cannot be contended that the most suitable time or place for its ventilation is at the annual meeting of shareholders. Unfortunately, the resolutions approved last week also impose restraint on the small shareholder who may have an investment rather than a professional interest in the Bank. The first alteration rules out *bona fide* resolutions moved, after due notice, from the floor of the meeting; and criticism of management (if any there be) may depend on the power to attract the chairman's eye. This restriction applies to both large and small shareholders. And the minimum support of 10,000 shares for any demand for a poll is bound to remove that right from all but fairly substantial holders. Bank shares, it is well known, are frequently held in small individual amounts. Without venturing to criticise the soundness of the board's motives, we should regard it as regrettable if their strong counter-measures were taken as a model by other directors whose claims to the confidence of their shareholders were less unquestionable.

Insurance Share Index.—Our quarterly index of insurance share prices shows a very slight rise during the past three months. The average level of the twenty-four shares included in the index stood at 4.965 on June 30th, compared with 4.952 on March 31st and 4.811 at the end of 1935 (1935=1,000). The quarterly indices are based on the mean market quotations and the yearly figures on the average of the high and low levels. Movements of the component shares are given below:—

	1931	1934	1935	June 20, 1935	Dec. 31, 1935	Mar. 31, 1936	June 30, 1936
Alliance	1,475	2,208	2,316	2,289	2,499	2,478	2,478
Atlas	2,809	3,452	3,667	3,746	3,905	4,063	3,905
Caledonian	4,041	4,820	5,032	5,284	5,409	5,535	5,221
Commercial Union	3,540	4,449	4,694	4,517	4,960	4,789	4,789
Employers' Liability	2,068	2,355	2,405	2,252	2,432	2,567	2,567
Equity and Law	1,866	3,733	4,670	4,419	4,999	6,071	6,180
General Accident	7,189	10,165	12,099	12,266	13,868	14,266	14,132
Gresham Fire	2,248	4,651	5,166	5,143	4,857	4,762	4,381
Guardian	2,340	3,272	3,487	3,474	3,718	3,692	3,737
Legal and General	5,696	10,068	11,735	12,022	12,896	13,771	13,552
Life Assoc. of Scotland	2,036	3,186	3,667	3,542	3,780	3,780	3,923
London and Lancashire	3,731	4,673	5,039	5,116	5,385	5,462	5,539
London Assurance	1,653	2,687	2,996	2,939	3,105	3,081	3,493
North British and Mercantile	3,857	4,984	5,995	6,051	6,824	6,815	6,878
Northern	1,700	2,149	2,364	2,418	2,507	2,627	2,686
Phoenix	1,569	1,970	2,089	2,083	2,165	2,199	2,199
Prudential	2,027	3,195	3,387	3,501	3,597	3,549	3,597
Royal Exchange	2,772	4,204	4,805	4,990	5,175	5,380	5,806
Royal	2,460	2,828	3,129	3,054	3,355	3,398	3,333
Scottish Life	2,352	3,708	4,382	4,270	4,607	4,494	4,494
Scottish Union and National	3,928	4,732	4,996	5,102	5,176	5,472	5,620
Sun Fire	2,347	3,088	3,271	3,378	3,422	3,422	3,333
Sun Life	2,023	2,632	2,972	3,174	3,224	3,325	3,426
Yorkshire	2,441	3,401	3,575	3,504	4,071	3,985	4,020
Average	2,840	4,025	4,497	4,522	4,811	4,952	4,965

It will be seen that stability of the average was accompanied by moderate irregularity in the component shares. The feature of the quarter was provided by London Assurance index, which rose from 3,081 to 3,493.

Actuaries' Investment Index.—A further substantial improvement in the market has, this week, raised the Actuaries' Investment Index of prices of 178 industrial equities to 84.4, compared with 83.5 last week and 83.0 a month ago (December 30, 1928 = 100). The yield has dropped to 3.72 per cent., compared with 3.75 per cent. for last week and 3.79 per cent. a month ago. Details of movements in selected groups are tabulated below:—

Group (and No. of Securities)	Prices (Dec. 30, 1928 = 100)			Yield (%)		
	Month ago (June 23)	Week ago (July 14)	This Week (July 21)	Month ago (June 23)	Week ago (July 14)	This Week (July 21)
Building materials (5)	101.2	102.8	102.8	4.77	4.70	4.71
Coal (7)	98.0	98.8	100.7	4.24	3.45	3.36
Cotton (6)	36.5	37.7	40.9	2.21	2.23	2.23
Iron and steel (12)	71.7	74.8	78.5	4.11	3.97	3.81
Oil (5)	83.4	80.5	82.1	3.06	3.34	3.27
Electrical supplies (10)	138.8	141.6	143.2	3.89	3.85	3.81
Stores and catering (20)	87.1	85.8	85.4	3.58	3.64	3.66

The most marked improvement is shown in the cotton group, where the price index is 3.2 points higher on the week. Prices in the oil group have regained the ground lost in the previous week, and iron and steel shares continue to advance. Slight declines are shown in the gas and electric light and power sections, and also in the stores and catering group.

COMPANY NOTES

Linen Companies.—The linen industry, like all the other textile industries, has experienced difficult and competitive conditions during most of the post-war period. Prices have been reduced to maintain "parity" with other textile prices, and fashion has moved unpredictably. The industry, however, having met the situation by substantial reduction of prices, has in consequence largely maintained its turnover. The total output of flax yarn for 1934, at 932,000 cwt., considerably exceeded the total of 868,600 cwt. for 1924, and although piece-goods have not quite maintained the 1924 volume, the reduction is not serious. The industry has therefore attempted to reduce costs sufficiently to restore profit margins at the new level of prices. To some extent this was achieved simply through the fall in flax prices, but the 1935 boom in flax again narrowed the spinners' margin and checked the recovery in profits. But since technical efficiency has also improved, there should be room for some further recovery in profits as a result of the easier conditions in the flax market. In general, however, profit margins remain very low. In

Northern Ireland, where more than three-quarters of the industry's capacity is located, the net output per worker

employed for 1934 was only £96, which is one of the lowest, if not the lowest, returns for any trade. Some improvements have been made in plant in recent years. But it is probable that there is ample room for further re-equipment. From the investor's point of view, there are relatively few linen shares from which to choose. Linen Thread has succeeded in adjusting its costs and products to new conditions and can well afford to keep abreast with improvements in plant. Robinson and Cleaver, though linen specialists making a large part of their own requirements, depend for their profits mainly on their retail store business. York Street Flax Spinning has made progress with costs reductions; if its buying policy has been successful it will no doubt have improved its margin this year. But until further economies have been achieved, its preference and ordinary shares must be reserved for the specialist with local knowledge.

Southern Railway Statement.—The home railway dividend season has opened somewhat disappointingly with the Southern Railway statement. The 1 per cent. interim on the preferred ordinary stock has, in fact, justified the market's revised estimate, but the operating figures are somewhat damping. Increases in receipts of £111,000 for passengers and £79,000 for goods have been almost completely absorbed by higher working expenditure. Net income from steamships and other ancillary services is £24,000 lower, and, on balance, net revenue for the half-year is £17,000 below that of the first half of 1935. Operating costs have thus increased by £183,000. The company's payments to Local Authorities and to the Rebates Fund are still based on assessments previously ruling, and an amount of £125,000 has been deducted, for both half-years, on account of estimated overpayments. The full 5 per cent. dividend was paid on the preferred ordinary stock for 1935, and was virtually covered by earnings. The reduction in net revenue for the past half-year represents, in fact, a very small percentage on the stock, which the market will, probably, continue to regard as fully covered. Two points, however, may be borne in mind by holders of Southern Deferred. First, the recent recovery in traffics has been concentrated on the goods traffics of the two northern lines. Secondly, increased wage costs conceded for the second half of the current year will be equivalent to nearly one-quarter of 1 per cent. on the Deferred stock. The London and North Eastern statement was not available as we went to press.

Furness, Withy Report.—Although the speculative purchaser who bought Furness, Withy ordinary shares as high as 21s. 10½d. earlier this year may well be disappointed by subsequent events, the latest accounts show a recovery which is not unsatisfactory. Profits for the year to April last have been struck without crediting any transfer from reserve. For the preceding three years a sum of approximately £100,000 was credited. After adjusting the 1934-35 profits, it would seem that true earnings rose from £295,083 to £415,310—a figure comfortably higher than in any year since 1930. It is, therefore, entirely due to the directors' prudent increases in depreciation provisions from £150,000 to £350,000 in the same period that the cover for preference dividends is now at its lowest level throughout the last decade. A comparison of profits over the past three years is given below:—

	Years to April 30		
	1934	1935	1936
Profit, including dividends received	278,165*	295,083*	415,310
Transfers from reserves (approx.)	100,000	100,000	Nil
Total	378,165	395,083	415,310
Depreciation	300,000	300,000	350,000
Preference dividend	57,187	58,125	57,656
Ordinary shares—			
Earned	20,978	36,958	7,654
Paid	Nil	Nil	Nil
Earned (%)	0.5	0.8	0.2
Paid (%)	Nil	Nil	Nil
Carried forward	166,175	203,133	210,787

* Approximate.

The directors' report is, if anything, rather more cautiously framed than the increase in profits might have suggested.

FOREIGN AFFAIRS
45 East 65th Street, New York, N.Y.

It welcomes the improvement and hopes for its continuation, but also underlines the unsettled conditions which prevail "in certain directions." The balance sheet, invariably cast on rigid lines, shows an increase in investments in subsidiaries which, presumably, is associated with the Shaw, Savill and Albion acquisition. The determination of the directors to raise depreciation provision to the highest figure in a decade, and thus to reduce available profits to the lowest figure, must be regarded as a portent for the ordinary shareholder. The latest year's provision is equivalent to some 4 per cent. on the total value of shipping property and investments in subsidiary companies. It may be doubted if the directors will reduce the charge if future profits are maintained, and since the volume of world trade is still fettered, a sharp increase in earnings, sufficient to provide a satisfactory return on the £6,000,000 ordinary capital, is still to seek. The shares rose this week on the Chamber of Shipping returns to par—an adequate valuation since they have received no dividend since 1932-33.

Distillers Meeting.—The essentially long-term equity of Distillers' Stock units—which frustrated optimistic speculative purchases some weeks ago—was underlined by several passages in Mr Thomas Herd's speech last week. Although the demand for blended whisky, both at home and in the United States, is rising, the company's operations each year extend further into industry. A growing demand for industrial solvents and plaster board is now served, but there is, at any rate for the time being, no prospect of increased dividends proportionate to the expansion of these "industrial" branches. Competition has kept the profit margin on industrial spirits low in relation to the capital employed. To this the company takes no exception, for its long-term policy is designed, very wisely, to encourage consumption in this branch. Alcohol is the raw material for many solvents and industrial chemicals; technical change is rapid, and the company is determined to keep abreast of developments. The chairman added, however, an interesting rider to his discussion of the company's industrial business. "At any moment we may be compelled, either alone or in association with others, to invest considerable sums in new installations which may only be profitable on large-scale production." Substantial liquid reserves and heavy depreciation provisions are plainly forecast, but they carry their converse of a stable near-future dividend prospect in the immediate future. In short, the company aims at stability and security. Distillers' ordinary stock units, like Imperial Chemical Industries ordinary, are sound industrials offering an assured 4 per cent. yield for the next few years, and a deferred long-term equity.

A Jurgens Conundrum.—Should tangible compensation be given to preference shareholders for the loss of a purely contingent right? That conundrum is raised by this week's scheme for the complete amalgamation of Van den Berghs, Ltd., and Jurgens, Ltd., joint members of the Unilever combine. The 7 per cent. cumulative preference stock of Jurgens has the right to an additional $\frac{1}{4}$ per cent. of dividend for every 1 per cent. above 7 per cent. paid on the ordinary. Holders are offered on a par for par basis 7 per cent. cumulative preferred stock in Unilever, Ltd., which has no participating rights. The exchange will give them a stock quoted on July 22nd at 33s. 3d., against 30s. for their existing stock and an increased earnings "cover." The first of these "compensations," however, benefits only those who may wish to cease to be stockholders. The second widens the industrial risk of Jurgens preference stockholders, for their "catchment area" will no longer be restricted to the margarine trade, but will include the multifarious activities of the whole Unilever combine. In general terms, it may be urged that the appropriate *quid pro quo* for the abandonment of "deferred equity" rights should itself be of an "equity" character. It is true that the Jurgens preference shareholders have never received any participating dividend, because no more than 7 per cent. has been paid in any year on Jurgens ordinary. But as the latter is a "group controlled" stock, the

amount of its dividend is a function, not wholly of earnings, but of the dividend policy of the controlling party. Actually, the earnings on the ordinary stock, after allowing for the preference participating rights, have exceeded 7 per cent. in six out of eight years since 1928. It would appear, on the whole, that a decision by the directors to afford additional compensation would, in this case, have the weight of first principles behind it.

Gaumont-British Deal.—After various unofficial reports (referred to in last week's *Economist*), it was announced from New York on Monday that agreement had been reached "in principle" for the transfer of half of the Twentieth Century-Fox interest in Gaumont-British to Loew's Incorporated. A new trust company is to be formed to acquire the 2,915,000 Gaumont-British ordinary shares at present held by Metropolitan and Bradford Trust. Some 2,100,000 of these shares, it is understood, are at present held by Twentieth Century-Fox. Control of Gaumont-British is vested in British hands by a special voting arrangement (see the *Economist*, July 18, page 124) and will so remain. Gaumont-British will enjoy specially favourable distribution facilities in the United States, through these companies, and the three concerns will combine their British distribution organisation. No official information is available regarding the capital of the new company. It is suggested that the three parties will control less than half the capital, leaving the balance to be offered to the British public. The agreement has considerable strategic importance for the American producing companies, who have, for some time, been concerned over their hold on the British market. Gaumont-British ordinary shares have advanced during the last fortnight from 9s. 6d. to 12s. 10 $\frac{1}{2}$ d. It is, however, difficult to read justification for this rise into the terms of the agreement, whose positive benefits to the Corporation seem reserved to the improved United States rentals.

Cement Prospects.—The speech of Mr Horace Boot at Wednesday's meeting of shareholders in Eastwoods Cement included a review of prospects which tended, incidentally, to explain contemporary differences in market value between the shares of representative front-rank companies in the cement and brick trades. Both industries have an obvious equity in constructional activity, but, of the two, cement has the advantage of a wider range of uses and a closer internal market organisation. Cement, indeed, is a "public works" material *par excellence*. For some housing schemes, e.g. flat-building and slum clearance, its advantages are decisive. It is being extensively used in connection with other housing schemes, and in the construction of commercial and industrial buildings, roads and harbours. On many sites it is now customary to lay roads and foundations entirely in concrete before building construction begins. The decision of the Minister of Transport to bring 4,500 miles of British trunk roads under national care and control is of obvious relevance for cement company shareholders, though it applies to no more than about one-tenth of the total length of classified roads in the country. It is no matter of surprise that the sales tonnages for the cement industry as a whole are expected to show, for 1936, an increase of 38 per cent. over those of three years earlier. Moreover, the industry, since December, 1934, has enjoyed the protection of "price stabilisation methods," which have made reductions of schedule quotations, such as that of December, 1935, a matter of policy rather than of involuntary adjustment in the face of competitive "price cutting." The end of the constructional boom is certainly not yet in sight; and so long as it endures, co-operative price arrangements in the cement industry may endure likewise.

Oil from Coal.—Government spokesmen have recently discussed the possibility that hydrogenation plants might be set up in the depressed areas. Mr Runciman suggested that the claims of Jarrow might be considered, while last week-end Mr Baldwin referred to the advantages of South

Wales as being less vulnerable than the North-East coast. The investing public is interested in the Billingham experimental plant, erected with Government assistance, through the ordinary shares of Imperial Chemical Industries. Developments at Billingham are still described, in official quarters, as a "commercial scale experiment." That the investor, however, draws a distinct difference between large-scale hydrogenation and the rival low temperature carbonisation processes is suggested by the fate of the National Coke and Oil issue, to which reference was made in last week's *Economist*, page 127. The response was insufficient to provide adequate funds for the development programme, and subscribers' cheques have been refunded. Technical difficulties, including a fire at the works, have handicapped another concern, Coal and Allied Industries. Although the company was established last year, difficulties have arisen, and the plant alterations have only recently been tested. Only Low Temperature Carbonisation has a reasonably successful profits record, achieved *per arduum*. Both as a solution to unemployment on the coalfields, and as medium for the investor, oil from coal processes have limited utility at this stage.

Rubber Share Outlook.—After a long period of stagnation some signs of returning life have recently been evident in the rubber market. Since the franc has won its most serious round in the fight against devaluation, the market has taken heart once again. The importance of political and currency influences during the last two months is strikingly demonstrated by the general disregard of successive favourable developments in the general rubber position. Consumption in the United States, always a significant market pointer, was well in excess of 50,000 tons in both April and May. This is considerably above the level of the corresponding months last year. At the same time evidence has been accumulating that the Dutch East Indian Government is now well in control of the native export situation, and shipments have been kept within their allotted quota by timely variations of the export duty. Of greater importance is the official announcement that the system of individual restriction on native estates, which at present covers only a small fraction of the total area, will be extended at the beginning of next year to all native growers, and the present unwieldy control through the export tax abolished. Thus the native problem, which, more than any other, jeopardised the smooth working of the restriction agreement, is now within sight of final solution. From the long term standpoint, therefore, the outlook remains as favourable as in the

Company and Share Denomination	"All-in" Costs (pence per lb.)		Ordinary Dividends		Id. per lb. on Price = % for Ord.	Current Price	Yield on latest Divs.

brighter days of several months ago, when prices were steadily advancing and promised to reach the much-vaunted eightpenny level with little delay. Until recently, market sentiment has continued to regard the possibility of guilder devaluation as a potent bearish influence—at least over the short term. This calculation, however, neglected the shortcomings of an analogy between the effects of sterling depreciation on raw commodity prices at the bottom of a depression, and gold *bloc* devaluation in a period of pronounced recovery in which only the gold countries themselves are lagging behind. If this sentiment should recur, however, the recent recovery would prove little more than a temporary phase. Nevertheless, the market has expressed its confidence in the strength of the underlying position by recently marking up rubber prices to 7 $\frac{1}{2}$ d. a lb., their highest level for over six years. If the

subsequent reaction to 7 $\frac{1}{2}$ d. should, eventually, be reversed, there would still be little justification for any substantial rise in rubber share quotations beyond their current level. As the accompanying table shows, dividends in 1935 were in most cases below those of 1934, as a consequence of increased restriction and the rise in costs which necessarily followed. Current yields, even on the shares of high-gear companies, such as those included in the table, suggest that present prices amply discount any improvement which it is reasonable to envisage at the moment.

Tanganyika Concessions Report.—Market interest in Tanganyika Concessions is faithfully persistent, despite the inability of the company to show a real recovery in earnings. The report, published this week, shows a loss of £79,316 for 1935, after crediting revenue of only £4,202. Market opportunities have been distinctly unfavourable, and a loss of £53,279, arising mainly from the sale of 5,240 Union Minière shares, has been sustained on share dealings, compared with a profit of £34,937 in the previous year. Again, the 1934 revenue was increased by a profit of £100,003 from the Kentan sale. In short, therefore, there has been no improvement to record in the regular earnings position. A debit balance of £14,006 is carried forward, to which is added £351,000 advanced to the African Railway Finance Company, which is, for the time being, treated as irrecoverable. The report points out that this company's holding of Tanganyika "B" preference shares (totalling 1,200,875 at December 31st last) may, if the market value improves sufficiently, ultimately cover all advances until the debentures are repaid (i.e. until 1951 at the latest date). Greatest attention, of course, will be devoted to the progress of the Union Minière interest. For this reason, shareholders may regret that the chairman's

The Bank has over 370 Branches in Africa, and Agents and Correspondents throughout the World. The closest touch with Trade and Industrial conditions is maintained, with special attention to Commercial and Credit Intelligence. This service is available to Exporters, Importers and others wishing to develop trade with South, East and Central Africa.

THE STANDARD BANK MONTHLY REVIEW is sent post free on application. It gives the latest information on all South, East and Central African matters of Trade and Commercial Interest.

detailed report is not supplemented by a print of the Union Minière report and accounts, given in previous years. This concern, whose report was issued from Brussels in the middle of June, resumed ordinary dividends last year, after four years' break, and showed an increase in net income from 76,670,000 francs to 176,696,000 francs. The net amount receivable by Tanganyika Concessions from the recent dividend declaration is £68,848. Future prospects of this interest are regarded favourably, and the capital reorganisation will result in a substantial bonus for Tanganyika Concessions. The Benguela Railway holdings are still carried in the accounts at par for the ordinary shares and 40 per cent. for the debentures. It is still impossible to assess their value. Current operations are covering expenditure without leaving substantial funds for renewals, and these will become onerous unless traffics improve, since the company charges replacements when the work is carried out. The gold properties are developing in promising fashion, but it is still unprofitable to work the Kanshansi copper mine of Rhodesia-Katanga. In sum, Tanganyika Concessions—with its large and unremunerative railway obligations—is unlikely to share in the favourable copper prospect commensurately with unencumbered mining undertakings. And the market, rightly or wrongly, continues to invest its gold properties with a political risk. The £1 ordinary shares, at 12s., thus appear adequately to value their recovery equity.

Amalgamated Banket Areas.—The first accounts covering the period from February 25, 1935 to March 31, 1936 show a net profit of £42,146, after deducting expenses and interest from a sum of £50,439 received in dividends from the Tarkwa Gold Areas subsidiary (which owns the Abbontiakoon mine). This net profit is carried forward, but an interim dividend of 5 per cent. has been declared for the current year. From August, 1935, to May, 1936, the ore milled from the Abbontiakoon mine (acquired in August, 1935, together with the old Tarkwa mine now being opened up) was 105,015 tons, yielding 33,044 oz. fine gold valued at £219,931. The working profit was £111,670, the calculated costs of £108,261 representing 20.6s. per ton, excluding development. Some 28,369 ft. of development has been carried out, the footage per month having increased from 600 ft. in August last to 1,400 ft. at present; development costs have fallen to 42.9s. per foot, and are now about equivalent to 5.4s. per ton milled. Ore reserves are 658,900 tons, valued at 6.5 dwts., 195,184 tons at 4.28 dwts., and probably about 512,099 tons of average grade. The total assets of £1,296,501 include £645,319 in shares in the two subsidiary companies, which are to be wound up during the current year. Development expenditure and preliminary expenses together amount to £68,859, and liquid assets stand at £66,745. An unsecured loan of £101,215 for working capital appears among the liabilities. This is part of a sum of £250,000 which is obtainable in consideration of an option on 1,000,000 5s. shares at par. The 5s. shares are quoted at 12s. 7½d.

Southern Kinta Consolidated.—This concern, formed to merge several Malayan dredging companies, shows a considerable expansion of profits for the second year's working. Excluding proceeds from buffer stock sales operating profits amount to £227,160 for the year to March last compared with £127,178 for the previous fourteen months, after allowing for depreciation of £54,500 and £27,000 respectively. Higher values have been recovered, and working costs, which at £38 19s. 8d. were already satisfactory, have been further reduced to £37 15s. per ton. Some 10,035,400 cubic yds. were dredged—an increase of 11 per cent.—which yielded 3,244 tons of concentrates, an increase of 30 per cent. After crediting additional revenue of £56,503 from the buffer stock sales and from other receipts, and after charging £83,000 to income tax reserve, the profit available for the ordinary shares is £192,430 (28.8 per cent.) compared with £101,677 (or 15.8 per cent.) for the previous period. Distributions have been increased from 15 to 20.1 per cent. and £63,185 is carried forward, as against £5,391 brought in. An interim dividend of 6 per

cent. has been declared in respect of the current year. Strengthening of reserves is reflected in the increase of cash holdings from £161,032 to £386,033. Since the average rate of production during the current year is 87½ per cent. of the quota, compared with an average of 74 per cent. over the latest year, current earnings have markedly increased. The latest monthly returns show an average production of 383 tons per month for April and May, as compared with 270 tons per month for the previous year. At the present price of 13s., the shares yield £7 14s. 6d. per cent.

Other Company Results.—Our table of company profits, on page 201, includes the results of some sixty concerns. This week's steel and engineering reports include some important features. *Consett Iron*, in particular, shows an increase in net profits from £262,328 to £399,753. Of this sum, £150,000 has been reserved for workmen's compensation and £200,000 for plant improvements, and the balance carried forward is increased to £106,488. The improvement in shipbuilding has benefited the company's steel business, and demand for coke has been very satisfactory. The latest earnings are equivalent to approximately 8 per cent. on the reorganised ordinary capital. *W. and T. Avery*, whose ordinary capital was last year increased by a 20 per cent. capital bonus, has reported record profits. Net earnings amount to £149,601 against £124,087, and the rate of dividend is maintained at 15 per cent. on the new capital. *Crossley Brothers and Head Wrightson* also show a marked improvement in profits. *South African Distilleries and Wines* have enjoyed a successful year, despite the E. K. Green episode, and profits have increased from £138,051 to £160,919, the dividend being raised to 10 per cent. *Threlfall's Brewery* profits also show a satisfactory advance from £295,745 to £322,862, and the dividend has been increased to 17 per cent. In the industrial group, *Thomas Bolton* profits are nearly £22,000 higher at £98,287, but *Griffiths Hughes*, the "Kruschen" proprietary concern, appears to have reached a stable earnings stage, since profits are only £3,000 higher at £249,627. *McDougalls, Ltd.*, show reduced earnings, but *McDougalls Trust* has maintained its income and pays a higher ordinary dividend. *Tilbury Contracting* strengthens its impressive profits and dividend record, while *Totalisators*, thanks to the re-introduction of the totalisator to dog-racing tracks, has converted a loss of £6,739 into a profit of £26,565. This week's rubber results show some irregularity. *Anglo-Java*, for example, shows much reduced profits, but *East Asiatic* has maintained the previous level. Other results include *Cicely*, *Craigielea* and *Kuala Muda*.

Company Meetings of the Week.—On later pages of this issue will be found the reports of the following company meetings:—The Standard Bank of South Africa, Bank of London and South America, Provincial Bank of Ireland, Anglo-Spanish Construction, City of San Paulo Improvements and Freehold Land, United Dominions Trust, Anglo-Dutch Plantations of Java, Bukit Rajah Rubber, Kuala Muda Rubber Estates, Merlimau Pegoh, Distillers Company, Victoria Falls and Transvaal Power, Millars' Timber and Trading, and Rosterman Gold Mines. We comment on the chairmen's speeches at the Standard Bank of South Africa and the Bank of London and South America meetings on page 171. Mr Trotter, at the Provincial Bank of Ireland meeting, referred to the improvement in the Free State's balance of trade. At the Anglo-Spanish Construction meeting, the chairman explained the difficulties arising from the Spanish Government's debt of some £1,750,000 to the Santander Mediterraneo Railway and from its failure to pay the sums owing. It was stated that the company had received no reply to an offer to abandon its interests in exchange for the equivalent of the sums due. At the United Dominions Trust meeting, Mr Gibson Jarvie emphasised that the home market was still capable of further development, and expressed appreciation of the Bank of England's association with the Trust. Col. Sir Robert Williams, at the Anglo-Dutch Plantations of Java meeting, reported that the gross profit from tea was distinctly better than for the previous year. At the Bukit Rajah Rubber meeting, the chairman said that the

small increase in the price of rubber was more than offset by the increase in the cost of production. Sir Francis Voles, at the Kuala Muda Rubber Estates meeting, hoped that the company would extend the policy of replanting in future years. At the Merimau Pegoh meeting, the chairman referred to a marked improvement in the rubber position, which had been reflected in a firm market and rising prices. Mr Thomas Herd's speech at the Distillers meeting is referred to on page 176. The chairman of Victoria Falls and Transvaal Power referred to the increase of 13 per cent. in the number of units sold. Mr James White disclosed that Millars' Timber and Trading, thanks to scientific kiln drying, now produced well-seasoned timber in months instead of years. At the Rosterman Gold Mines meeting, the chairman reported that sufficient development work had been done to indicate more than one year's supply of ore for the mill. Mr Guedalla, at the City of San Paulo Improvements meeting, described the proposal to construct a stadium on the company's property.

THE WEEK IN THE MARKETS

THE STOCK EXCHANGE

SETTLING DAYS

TICKET AUGUST 11	ACCOUNT AUGUST 13
---------------------	----------------------

ACTIVITY has been unfettered in almost every section of the market this week. Leading ordinary shares have, in many cases, broken through the year's high levels. The *Financial News* index of 30 industrials, for example, reached 115.2 on Thursday, compared with the previous high level of 114.5 in mid-February. In the gilt-edged market, conditions have markedly improved owing to the success of recent corporation issues. The opening week of the long holiday account, as a year ago, has brushed aside the decent tradition of quietude. Favours have been widespread, save, perhaps, in the rather leaden plantation markets. Whether this week's profits prove irresistible, in due course, remains to be seen. Many wise operators will certainly leave no unattended open accounts before their departure for warmer climes. Although profit-taking was comfortably absorbed this week, the possibility of a technical check next week cannot be ruled out.

Gilt-edged stocks began the week firmly, unhampered by political news, and further encouraged on Tuesday by the welcome success of the Birkenhead and Nottingham loans. Prices hardened, although business showed only a modest expansion. In the corporation loan market, however, fresh activity developed in the recent scrips.

In the foreign bond market, Rentes were inclined to sag on the continuance of rumours of poor support for the "baby" bond issues. Austrian and German loans held their ground, while Czechoslovakian bonds recovered somewhat from their earlier weakness. Greek issues recovered on hopes of a favourable debt settlement. Chinese loans, however, were the chief feature of the list, with an early improvement in most issues. Although mid-week business was not so brisk, demand was maintained for the Vickers and Marconi notes. Japanese bonds, in contrast, were weak on the closing of the Stock Exchange, and failed to recover appreciably on the re-opening.

Home Rails began the week in firm style, and the volume of business, which at first was not large, expanded when the traffics were announced. The Southern Railway interim statement (discussed on page 175) was, however, less favourable than the market had expected. Foreign rails remained without real support, although Argentine stocks improved somewhat on buying which the market regarded as significant.

Industrial shares have been generally cheerful throughout the week, and buying has been better spread than recently. Iron and steel shares continued prominent, and the reported decision of the Federation to adhere to the Steel Cartel added force to the rearmament impetus. The leading shares (whose prospects are discussed on page 172) all advanced. John Brown again jumped on expectations of a higher dividend. Among the smaller companies, Platt Bros. responded to the extension of armament manufacture to Textile Machinery Makers. Business in the aviation and the motor sections was less enthusiastic, but the tone remained firm.

Electrical equipment issues improved considerably on good trade prospects, and cable makers' shares responded to the Post Office extension programme. Enfield Cable were prominent on the interim dividend. In the drapery and stores sections, Woolworth continued to take the lead and rose to a new high

SITES FOR WORKS Apply to above address for particulars

level on bonus hopes. Unilever were supported among provision issues, which were generally firm. The textile group was well supported from the North on hopes of improved business but irregularity became apparent in mid-week, when profit-taking affected several issues. Brewery shares were firm early in the week, Mitchells and Butlers being a strong feature on good provincial trading reports, but irregularity ensued. Activity spread to the shipping group on publication of the Chamber of Shipping figures and improvements were registered by P. and O. deferred and Furness Withy. Renewed reports of Government activity in South Wales led to demand for Milford Docks, which jumped 4s. to 27s.

Business in the miscellaneous industrials section has been mixed, but there have been many bright features. Good building figures stimulated a further rise in cement issues, and British Oxygen improved with the continued expansion of steel and construction activity. There was some profit-taking toward mid-week which affected Associated Portland Cement and several other building material shares. Turner and Newall again rose sharply. Bowaters ordinary improved on the prospectus profits figures.

The oil market opened the new account with enthusiasm, based on optimistic trading expectations, which brought buyers for all the leading issues. On Tuesday, attention shifted to the more speculative shares, and the volume of business died down, only to be renewed with greater activity later in the week, when "Shell" Transport passed the £5 mark. Considerable support has been received from the Continent. Business in the rubber and the tea shares markets was dull with prices sagging slightly.

At the beginning of the week the Kaffir market was completely overshadowed by activity elsewhere, but in mid-week there were signs of revived interest, particularly in Far Western issues. West Witwatersrand, Western Reefs and Venterspost were prominent. Later there were signs of profit-taking. West African issues sagged, despite increased activity in mid-week, but business in Rhodesian copper shares improved on the activity in the metal market. Interest in tin issues was stimulated by hopes of a satisfactory arrangement with the Siamese producers.

Despite an unexpectedly bright day at the end of last week, Paris was not reassured, and underlying nervousness persists. On the Berlin Bourse, quiet conditions were relieved by a demand for low priced specialties. In Amsterdam, the Spanish rising prompted caution, but in the commodity sections the upward movement still continues.

FOREIGN STOCK EXCHANGES

NEW YORK

At the end of last week price movements became a little irregular, with considerable profit-taking in progress, but there was every sign of underlying strength, particularly in the Building, Aviation and Railroad sections. This week the market continued optimistic, and prices improved generally until a reactionary movement developed in mid-week. The principal causes of the renewed upward movement which has carried many prices to new post-depression highs, are the excellent company results for the second quarter, and the signs of breaking drought. Nearly all sections of the market benefited from the continued economic recovery. Rails and rail equipment shares improved with increased car-loadings, steel shares with increased steel mill activity, farm-implement shares with the increased rainfall in some of the drought-stricken areas. Utilities are no longer the black sheep of the market. Copper shares improved during the week, on the strong position of the metal, evidenced in mid-week by the increased price. On the bond market government issues were weak at the end of last week on the new reserve policy. This, it was anticipated, might be followed by sales of government securities as an open market policy to control reserves still further. But this week such fears were dispelled, and the bond market recovered. Speculative bonds have been strong. *Iron Age* estimates steel mill activity for the week at 71 per cent. of capacity, compared with 69 per cent. last week, and electricity output is running 16.5 per cent. higher than the corresponding week of last year.

* Two-Hour Session.

CAPITAL ISSUES

THIS week's activity in the new issue market, as we suggest in a Note on page 173, shows that the usual pre-holiday pressure is meeting with a willing response from the investor. Moreover, the success of the *Nottingham and Birkenhead* issues has encouraged the authorities to allow *Ayr* to issue £1,500,000 3 per cent. stock at the same price—£99 per cent.—again redeemable on a single date, in 1956. A large proportion of the issue is new money. *Scarborough*, which does not enjoy trustee status owing to her small resident population, has placed the maximum amount of £250,000 3 per cent. stock 1957, at £97 10s. per cent. net, while a *Plymouth* issue has also been approved. The 7½ per cent. participating preference issue of *Bowater's Paper Mills*, which provides part of the finance for the Edward Lloyd Investment acquisition (described on page 126 of last week's *Economist*), ranks after the 6½ per cent. preference capital. Profits of the two merger concerns show considerable fluctuation, but if present earnings levels are maintained the fixed dividend cover seems adequate. The group will be in a strong technical position, and the stress is laid on future economies in distribution and transport. The shares yield 5 per cent., with prospect of an eventual one-fourth per cent. participation in surplus profits, after payment of a 7½ per cent. ordinary dividend. *Bachelor's Peas* has achieved a remarkable growth in profits between 1933 (£8,808) and 1936 (£76,100). Of the company's assets, as much as £248,000 will be represented by goodwill, compared with £29,202 for fixed assets, and £68,032 for net assets, these figures being increased, however, by £130,766 from the proceeds of the issue. Although plant extensions are to be effected, the rate of earnings shown for the 5s. ordinary shares, issued at 8s. per share, may somewhat flatter immediate dividend possibilities, in view of the apparently generous capitalisation. The *London and Coastal Oil Wharves* convertible debentures and ordinary shares must, at this stage, be regarded as speculative, for the company intends to build oil wharves, and storage accommodation. Only estimated profits, therefore, are at present available. *Trinidad Consolidated Oilfields* ordinary shares must also be regarded as speculative, for the company's main area (although regarded as promising by a firm of consulting technologists, one of whose partners appears on the board of the company) is as yet unproven. *Freedlands Limited*, whose 5s. ordinary shares have been offered at 12s. 9d., have a distinctly stable profits record during the past three years. At the issue price, however, the ordinary share earnings yield of 8½ per cent. is no more than fairly satisfactory, in view of the size of the issue. Particulars of statements "for information" which have been published this week will be found in a succeeding column.

ISSUES OF THE WEEK

BY TENDER

Rainham Waterworks Company, Limited.—Messrs. A. and W. Richards offer for sale by tender, £20,000 £1 additional ordinary shares at minimum price of par. The company is constructing new works at an estimated cost of £35,000. This issue is to provide part of the cost.

Brighton and Worthing Gas.—The directors are offering for sale by tender £50,000 four per cent. preference stock. Minimum price £105 10s. for each £100 of stock.

(Continued on page 184)

LONDON ACTIVE SECURITY PRICES AND YIELDS

In calculating yields on fixed interest stocks quoted below allowance is made for interest accrued since the last date of payment, less income tax at the standard rate. Where stocks are definitely redeemable at a certain date the yield includes any profit or loss on redemption; where stocks are redeemable at or before a certain date the final date of redemption is taken when the stock stands at a discount and the earliest date when the quotation is above par. The return on ordinary stocks and shares is calculated by reference to the latest dividends, account being taken of any enhancement or reduction of interim dividends. Allowance is made for accrued dividends in calculating the yield on "cum. div." shares.

The overseas produce markets in which South Africa is particularly interested improved considerably during 1935, though it was not until the last quarter that there was any substantial recovery in prices from the comparatively low level at the beginning of the year. Since the turn of the year prices of wool and other raw materials have remained steady at the higher level and the statistical position generally is

strong and demand is good. Apart, therefore, from the uncertainty as to the outcome of the political position in Europe the outlook appears promising, but it must not be overlooked that South African farmers are largely dependent upon overseas manufacturers for the sale of their products and that in the present unsatisfactory state of international trade relationships manufacturing countries are endeavouring to grow their own raw materials or produce artificial substitutes thereof.

Trade Returns A brief reference to the trade returns will suffice as an indication of the remarkable recovery of South Africa notwithstanding the unsettled world conditions which prevail.

The value of the external trade of the Union for 1935, inclusive of the estimated currency premiums on gold exported, increased by £29,000,000 as compared with 1934. Exports rose from £82,000,000 to the substantial total of £102,000,000 while imports advanced from £66,000,000 to £75,000,000.

The chief factors in the increase on the export side were gold bullion and specie £15,550,000 and farm products £4,320,000. The latter amount was spread over the various important commodities, wool accounting for £1,400,000, sugar £925,000 and maize and products £600,000.

Of the increase in imports of £9,000,000 metals and machinery accounted for £4,000,000, Government stores £1,300,000, textiles £956,000 and vehicles and parts £932,000.

Southern Rhodesia A further substantial advance was apparent in the external trade due to continued activity in the gold mining industry and a substantial improvement in base metals notably in asbestos production.

Imports rose by £1,250,000 to £6,500,000 and exports by over £600,000 to £9,000,000. The value of the mineral output for the year was £6,250,000, which established another record.

Unfortunately, exports of agricultural and pastoral products declined owing in the main to adverse weather conditions and restrictions due to outbreaks of foot and mouth disease.

Government revenue for the year ended March 31st last, which amounted to nearly £3,000,000, gave a surplus of £32,000 over expenditure and the estimates for the current financial year provide for a small surplus over an expenditure of £3,000,000.

Northern Rhodesia This territory is very largely dependent on the production of copper. Consumption depends mainly upon industrial activity, more particularly in the electrical, motor-car and building trades, and as these industries are improving in most countries and the nations are spending large amounts on armaments there is an increasing demand for this metal.

Imports for the year totalled over £3,000,000 and exports £4,800,000.

Nyasaland Trade within the Protectorate has remained quiet at about the level of the previous year. The chief products are tobacco, tea and cotton. Tobacco, the most important, suffered a setback owing to unfavourable weather conditions, but prospects for the present season are more encouraging.

An increase in tea production was recorded and the next few years should show a substantial improvement as fairly large acreages are not yet at the full bearing stage.

Cotton growers experienced an exceptionally favourable season. Good progress towards recovery was witnessed in this Territory. The removal of restrictions on the export of cattle and produce to the Union, an adequate rainfall and good grazing materially assisted the farming industry and the freer circulation of money has afforded farmers encouragement in their efforts to re-establish themselves after the setbacks of recent years.

South-West Africa The Karakul lambskin industry continues to be the most lucrative branch of farming, while dairying constitutes an important source of revenue.

The outlook is considered to be brighter than at any time during the last five years.

The economic position of the East African Territories improved during the year.

East Africa Absence of drought and locusts and the encouragement of native cultivation by the Government have been responsible for an increased volume of production. This increase and the large amount spent on mining development has meant improved traffic for the railways and a greater spending power for the natives, resulting in its turn in larger revenue from direct and indirect taxation.

There has not, however, been any marked improvement in the sphere of European farming. With the exception of sisal, prices of European-grown produce have shown little, if any, margin over costs of production.

Director's Visit to Africa Our colleague, Lord Balfour of Burleigh, has recently returned from a tour of South, East and Central Africa. By making extensive use of airway facilities he was able to visit, with one exception, all our Branches in East Africa and 80 Branches in the Union, the Rhodesias and Nyasaland, including all the larger centres.

The Directors attach much importance to visits of this nature which enable them to keep in close personal touch with developments in the territories with which the Bank is so closely concerned.

Mr Ralph Gibson, of the London management, also visited our branches in East Africa and the larger centres in Rhodesia and South Africa.

In the time at my disposal I have only been able to survey in rough outline the economic progress achieved by South Africa, but I think I have said sufficient to indicate its present prosperity and great potentialities.

With her natural resources, a united people and wise leadership South Africa is indeed a fortunate country. There is every reason to look forward with confidence to continued prosperity provided the peoples of the World find in a spirit of co-operation and goodwill a peaceful solution to the problems which beset them.

Appended to the report of the proceedings of this meeting which you will receive in due course will be further particulars regarding trade in South and East Africa.

I now beg to move: "That the report and balance sheet to March 31, 1936, now presented, be adopted," and I will ask my colleague, Mr Reiersen Arbuthnot, to second the resolution.

Mr W. Reiersen Arbuthnot: I have much pleasure in seconding the resolution.

The Chairman: Before putting the resolution to the meeting I will endeavour to answer any questions, if there are any.

Mr J. Hardy: Mr Chairman, I should like to ask one question. Is there any reason why the shareholders should not know the total amount, or approximately the total amount, granted as bonus to the staff this year. I make no objection to the bonus—I quite agree with you—but is there any objection to the shareholders knowing the lump sum?

The Chairman: Yes, sir, there is; but I will tell you the rate at which the bonus was paid. It was paid at the rate of 10 per cent. upon their salaries.

Mr Hardy: Thank you.

The resolution was then put to the meeting and carried unanimously.

DECLARATION OF DIVIDEND.

The Chairman: I now have to make a formal declaration of dividend by reading the following to the meeting:—

"As empowered by the articles of association, on behalf of the Board, I now declare a dividend for the six months ended March 31, 1936, of 5s. per share on 500,000 shares, as a final dividend for the 12 months ended on that date, with a bonus of 2s. per share (making, with the interim dividend, a total distribution of 12 per cent. for the year), both payable in British currency and subject to income tax, to be paid to those shareholders whose names appeared on the Register on the 1st day of July, and to become payable on the 25th instant."

We now come to the second resolution. I beg to propose:— "That Horace Peel, Esq., Brigadier-General Sir Samuel Herbert Wilson, G.C.M.G., K.C.B., K.B.E., and Edward Clifton-Brown, Esq., be re-elected directors of the company."

I will ask Mr Dickinson to second that.

Mr R. E. Dickinson: I beg to second that resolution.

The resolution was unanimously adopted.

The Chairman: We now come to the third resolution, which I will call upon Mr C. N. Daniels to propose.

Mr C. N. Daniels: Mr Chairman, ladies and gentlemen, I have very much pleasure in proposing:—

"That A. T. Turquand-Young, Esq., F.C.A., Roderick M. Peat, Esq., F.C.A., and Sir Nicholas E. Waterhouse, K.B.E., F.C.A., be re-appointed auditors of the company for the ensuing year at a remuneration of 400 guineas each."

Mr R. E. N. J. Seyd: I have much pleasure in seconding that resolution.

The resolution was passed unanimously.

SERVICES OF THE STAFF

The Chairman: We now come to the fourth resolution. I beg to propose:—

"That the thanks of the meeting be given to the general managers, the London manager, and other officers for their valuable services." This is always a pleasurable task.

PARTICULARS IN REGARD TO THE CHIEF INDUSTRIES OF SOUTH AND EAST AFRICA FOR THE PERIOD UNDER REVIEW

MINERALS *

The value of the total mineral output of the Union for 1935, taking gold at the standard value, was £52,988,458, as compared with £50,446,783 in 1934. Including the currency premium on gold the value was £83,460,236.

The Transvaal gold output—10,776,684 fine ounces—although 290,291 fine ounces more than in the previous year, was 776,860 ounces below the peak figure reached in 1932, owing to the continuation of the policy of milling ore of lower grade. The average yield per ton of ore worked which in 1932 stood at 6.471 dwts. dropped by successive stages to 4.728 dwts. in 1935. The quantity of ore treated per annum increased during the same period from 35,209,650 tons to no less than 44,598,050 tons, and the expansion of milling is compensating in increasing degree for the lowering of the grade.

In Southern Rhodesia the gold output reached 726,281 fine ounces, valued at £5,089,962, as against 691,152 ounces, with a valuation of £4,695,746, in the previous year.

In East Africa heavy development expenditure has been incurred. Production comparisons for the last three years were as follows:—

	Gold	Kenya	Uganda	Tanganyika
1933		14,147 oz.	1,166 oz.	39,532 oz.
1934		15,939 "	5,842 "	54,702 "
1935		23,008 "	5,651 "	64,134 "

Diamonds

Exports of diamonds from the Union were valued at £2,975,525 as compared with £2,819,031 in the previous year. Industrial diamonds formed a large proportion of the 1935 exports, a development which opened up a source of profit not formerly exploited.

Coal

The value of coal produced in the Union showed a further increase and was estimated at over £3,500,000. Internal sales improved largely, owing to the greater demand for power caused by the gold mining activity and general industrial expansion.

Asbestos

The market for asbestos has shown further improvement and the Union export trade is increasing. The output was valued at £226,881, and in Southern Rhodesia the figures increased from £402,745 to £646,658.

FARMING INDUSTRIES

Maize The value of the Union exports of maize and maize meal rose from £1,383,850 to £1,991,160.

The latest estimate of the 1935-36 maize crop is 15,438,000 bags of 200 lbs., as compared with 18,728,000 bags in the previous season.

Wool

A feature of the 1934-35 wool season was the marked recovery which occurred in its closing stages. The announcement in January, 1935, of the completion of a compensating trade agreement with Germany gave a much needed stimulus to competition, but it was not until March of that year that wool, which had accumulated heavily at the ports, began to move freely. Thereafter, demand steadily increased, competition became keen and practically all available stocks were cleared, leaving a carry-over of only 11,537 bales.

The 1935-36 selling season opened favourably, and the readiness with which sales were effected induced the free arrival of wool at the ports, with the result that receipts and disposals to the end of December last considerably exceeded those for the corresponding period of the previous season. Latest advices indicate that unsold stocks are well below the average of previous years.

The Union exports were valued at £9,516,000, as against £8,084,000 in the previous year.

Mohair

The mohair position has improved considerably and prices, which at the end of 1935 were more than double those ruling at the beginning of that year, still show an upward tendency.

Mr F. E. King recently relinquished his responsible position as General Manager in South Africa. He has served the Bank with distinction, and we trust that he may be spared for many years to enjoy his freedom from the cares of office.

Mr King is succeeded by Mr Milton Clough, whose experience as Deputy General Manager in Cape Town well fits him for the high position of General Manager of the Bank in South Africa.

We have a large staff widely spread through the Continent of Africa and in London, New York and Hamburg, performing their duties with efficiency. To one and all we tender our thanks and our warm appreciation of their services. (Applause.)

I will ask Mr Nissim to second the resolution.

Mr Joseph Nissim: I beg to second the resolution and to say how pleased I am to be able to associate the whole body of shareholders with the vote that you have moved. The term of office of the General Manager, Mr F. E. King, expired with the year under review. We are grateful to him for the excellent work he has done. His successor, Mr Milton Clough, is a man in the prime of life, and we do wish to extend to him our best wishes for a long and successful tenure of his high office. As for our very valued friend, Mr Bertram Lowndes, who goes by the modest name of London Manager, I am afraid shareholders do not realise that his sphere of office extends far beyond London—important as that is—to branches in East Africa of which he is in charge.

Now, I think that shareholders of some business experience realise the weight of responsibility that rests upon the General Manager, his deputies and the London management, and the fact that the work of the Bank goes on so smoothly and so successfully is very largely due to the splendid organisation which our very able and experienced Board has slowly built up over a period of years with the help of very competent heads of departments. (Hear, hear.)

As for the officers of all ranks, I believe that nothing is left undone to secure their efficiency and competence. They are selected with great care, trained with every consideration, stimulated by adequate remuneration, their pensions are provided for and a reserve built up to help their families in the future, and the result is, of course, that the Board can always count upon their cordial co-operation. (Hear, hear.) They are in themselves a very united family, and it is no wonder that when resident or travelling customers visit branches of the Bank they are welcomed sympathetically, and I believe that if you were to seek the key to the uniform success and progress of this Bank it would be found in this happy association of all parties. (Hear, hear.) We shareholders profit invariably by the labour of the officers of the Bank, and I think we all welcome the opportunity of associating ourselves with the chairman and the Board in bestowing praise upon those who are in every respect praiseworthy. (Applause.)

The vote was unanimously accorded.

The Chairman: That, ladies and gentlemen, concludes the business of the meeting.

VOTE OF THANKS TO CHAIRMAN AND DIRECTORS

Sir Ernest Clarke: Mr Chairman, ladies and gentlemen, I have a very pleasing duty to perform, and that is to propose:—

"That the cordial thanks of the meeting be accorded to the directors for their attention to the affairs of the Bank, and to the chairman for his conduct in the chair."

I am very pleased, sir, to be privileged to propose that resolution.

I have been a customer of the Bank for 41 years, and this is the first opportunity I have had of publicly expressing my admiration of the great ability of its management and direction. The Bank operates in a country where speculation is second nature to a very large proportion of its inhabitants, but the Bank has never taken any risk; it has been built up entirely to its present great strength and position by the application of sound banking principles by its directors and its staff. (Hear, hear.) I should like, sir, to thank you very much indeed on behalf of the shareholders for the way in which you have presided over this meeting, and you and your colleagues for the great services you have rendered to the Bank during the past year; and, sir, may I add the hope that you may all be spared to give similar services for very many years to come. (Applause.)

Mr C. Hadfield Wright: There has been given to me the pleasing duty of seconding the resolution which has just been so ably proposed by Sir Ernest Clarke. At this time of day, having regard to what he has already said, I shall content myself with formally seconding the resolution.

The motion was carried amid applause.

The Chairman: Sir Ernest Clarke, Mr Hadfield Wright, ladies and gentlemen, on behalf of my colleagues and myself, I thank you.

The proceedings then terminated.

Hides and Skins

Hides and skins have shared in the general improvement. There has been a steady advance in the prices of all classes of skins, particularly of goatskins. Sheepskins have followed the upward trend of wool, and Angora goatskins have benefited from the revival of the mohair market. Hides remained steady throughout the year, and the improvement in the South African leather and footwear trade has increased the demand by local tanners for raw material. The value of hides and skins exported during 1935 was £1,422,000.

Sugar

The 1935-36 sugar output of the Union, which amounted to 417,318 short tons, as against 358,738 in 1934-35, constituted a record for the South African industry. Exports during the year totalled 212,502 tons.

The level of consumption within the Union reached during the previous season was well maintained.

Fruit

The Union exports of fruit were valued at £2,619,000 as compared with £2,583,000 in 1934.

Dairying

Dairy production in the Union showed a substantial increase.

Exports of butter increased in value from £170,928 to £492,771 and of cheese from £16,732 to £106,562.

The downward trend in the export of eggs was checked, the value rising from £139,606 to £166,248.

Tobacco

In Southern Rhodesia exports of tobacco leaf during 1935 were valued at £651,576, as against £769,283 in the previous year. The decline in production was due partly to adverse weather conditions and partly to the Government warning to growers to limit acreages to normal requirements. The new crop is selling well at prices which are considered to be fairly satisfactory.

Unfavourable weather conditions also affected the crop in Nyasaland, the production falling in value from £470,404 to £296,933. The present crop is estimated to be larger than last year and good prices are being obtained.

Wattle Bark and Extract

Exports of wattle bark and extract from the Union further improved in value from £555,560 to £767,632.

Sisal

Exports of sisal from Kenya and Tanganyika compared as under:—

	Kenya		Tanganyika	
	Tons	Value	Tons	Value
1934	24,016	£311,371	72,510	£847,562
1935	32,710	£431,858	82,676	£1,134,732

At the beginning of 1935 the price of sisal stood at £14 to £16 per ton; it increased in July and by December had reached £28 per ton, at about which level it has since remained.

Coffee

Coffee exports from Kenya and Uganda rose in value from £785,072 to £1,160,772, but the Tanganyika figures showed a slight decline from £495,237 to £486,842.

Cotton

The value of the exports of cotton from Uganda fell from £2,927,796 to £2,822,739, while those from Tanganyika rose from £326,613 to £369,547.

Manufacturing Industries

Industrial progress was maintained in all provinces of the Union, though the rate of advance showed some slowing down compared with 1934.

Manufacture, particularly in the leather and textile sections, showed steady improvement.

Phenomenal activity in the building trade continued unabated and previous records have been eclipsed.

The iron and steel industry has assumed important dimensions. All secondary industries are well employed and expansion is evident in every direction.

PROVINCIAL BANK OF IRELAND, LIMITED

IMPROVED FREE STATE TRADE FIGURES

The half-yearly meeting of the Provincial Bank of Ireland, Limited, was held, on the 22nd instant, at the Hibernian Hotel, Dublin, Mr Richard Durant Trotter (the chairman) presiding.

The Chairman, in moving the adoption of the report and balance sheet for the half-year to June 30th last, said that he was glad to report that the bank's deposits, at £15,098,000, had been maintained at practically the same figure as at twelve months ago.

Notes in circulation at £994,000 showed an increase of £50,000 on the amount outstanding at this time last year. On the assets side advances and bills discounted amounted to £6,441,500. That disclosed a falling off of some £257,000 on the figures of December last, which was accounted for by the repayment of a large special advance required for a temporary period.

In addition to that it might be mentioned that the Free State County Councils had required far less accommodation from the banks, due to the improvement in the relative rate collections, a very satisfactory feature from, at least, the point of view of the Free State Government finances.

Apart from those factors, what he might call their normal advances showed an increase, and he would here again repeat that the bank had ample resources to meet legitimate trade or farming requirements.

Their total of cash and money at call stood at £1,895,000, as compared with £1,723,000 a year ago, while investments at £8,659,000 showed an increase of £230,000 on a like comparison. Their liquid position, accordingly, to meet the monies lodged by their customers, and the notes in the hands of the public stood at the high percentage of 65, and he was happy to be able to give an assurance that the market value of their investments exceeded the total at which they appeared in their balance sheet. They had made full provision for all bad and doubtful debts. Their premises stood at the figure of £201,700, as against £207,800, and they regarded that asset as considerably undervalued.

Rates in the money market remained at a very low figure, and the return continued to militate against the maintaining or increasing of profits.

The net profits were £35,148, to which must be added £33,832 brought forward, a total of £68,980.

They proposed to pay the same dividend as before at the rate of 12½ per cent. per annum requiring an amount of £25,734, to place £5,000 to reserve fund and a similar amount to bank premises, and to carry forward to next account a slightly reduced total of £33,246.

With regard to agricultural conditions in the Free State they were led to believe that the harvest generally showed much promise and it was hoped that recent adverse weather conditions would not unduly interfere with satisfactory results, and that prices would prove to be remunerative to the farmers.

It was satisfactory to note that as the outcome of the new Coal-Cattle Agreement completed in January last with the United Kingdom, the prices for cattle of all classes had shown considerable increase.

"You will have noticed, no doubt," Mr Trotter proceeded, "from the published figures, that the adverse trend in the Free State trade balance has been arrested to an important extent, the figures for the year to May, 1936, showing an improvement on those for 1935 of over £3,000,000, and during the past few months the import and export figures have shown expansion. You will note from reports appearing in the newspapers this morning that a further expansion is shown."

"As to affairs in Northern Ireland trade conditions seem very promising, and the position of the farmers following the introduction of various marketing schemes should now show much improvement."

The recent agreement of the British Government to provide a further £447,100, towards the Unemployment Fund, is an important item.

The half-year just completed has been a busy period in the local shipbuilding industry, and an average of something like 14,000 to 15,000 men have been employed.

He felt sure that they would agree with the wisdom of the decision as to the sub-division of their shares. The wisdom of that decision had been amply proved, not only in the greater marketability of the shares, but also in their enhanced market value, showing at the present time approximately an increase of over 16 per cent. and representing an improvement in the capital value of around £206,000.

The report and accounts were unanimously adopted.

BANK OF LONDON AND SOUTH AMERICA, LIMITED

ACQUISITION OF ANGLO-SOUTH AMERICAN BANK

SCHEME APPROVED

MR J. W. BEAUMONT PEASE'S ADDRESS

An extraordinary general meeting of the Bank of London and South America, Limited, was held, on the 17th instant, at the head office of the bank, 6, 7 and 8 Tokenhouse Yard, London, E.C., to consider a resolution authorising the increase of the capital.

Mr J. W. Beaumont Pease (chairman of the bank) presided.

The Secretary (Mr J. A. Stark) having read the notice convening the meeting,

The Chairman said,—Ladies and Gentlemen,—I think the purpose of this meeting is sufficiently clearly indicated by the notice which you have just heard read and by the wording of the resolution which I shall in a moment put to you for your acceptance. Your board and that of the Anglo-South American Bank Limited have agreed to the terms under which our bank is taking over the business of the Anglo-South American Bank Limited. A meeting is being held to-day by the shareholders of the Anglo-South American Bank Limited to ratify the arrangement agreed to by the respective boards. In order that we may carry out our part of the bargain and allot the agreed purchase price of 100,000 of our £5 fully-paid shares, it is proposed that the authorised capital of our company should be increased from its present figure of £4,000,000 to £4,500,000, which will enable us to allot the necessary number of shares and at the same time to hold the same amount of unissued capital at our disposal if required at any time in the future.

Under the arrangement agreed to by the respective boards, the capital which we propose to issue to the vendor undertaking will not rank for dividend until after October 1st next.

ELIMINATION OF COMPETITION

I do not think it is necessary for me to enter into any detail or to amplify at any length the reasons which have actuated us in coming to this arrangement. Under the changed conditions that have come about in international trade in recent years it is only a matter of common sense that the two English banks, operating for the most part in South America, should avoid unnecessary competition between each other and come together to form a single strong English bank capable of rendering to the public all the banking facilities which traders in our respective countries may desire. The suggested arrangement has met with very general approval by the authorities, the Press, and public both here and abroad.

It will be realised that the new issued capital only requires an amount of £11,400 to provide its proportion of the present modest dividend paid by this bank. The elimination of competition, the economies to be effected by the amalgamation of redundant branches at those places where both banks are represented and in other ways, ought to be amply sufficient not only to provide the additional dividend required but to leave a substantial margin in excess for building up reserves or for any other purpose which is considered desirable. For this reason both on general grounds of policy and having regard to the interest of our shareholders we believe that the proposed arrangement will be for the benefit of all concerned.

One cannot help sympathising with the regrets which many may feel at the disappearance of a bank which has operated successfully in the past to the benefit of its customers and to the development of the countries in which it has been situated, but I expect you will agree with me that the step under contemplation is one which will commend itself to you in the interests of sound banking.

BRITISH BANK OF SOUTH AMERICA

As a result of this deal on its ratification by the shareholders of the Anglo-South American bank this bank will become possessed of all the shares of the British Bank of South America Limited, the subsidiary of the Anglo-South American Bank Limited operating in Brazil; it is contemplated that the business of the British Bank of South America Limited will be merged in due course with our own. I now beg to move. "That with a view to the acquisition of the undertaking of the Anglo-South American Bank Limited the authorised share capital of the company be increased from £4,000,000 to £4,500,000 by the creation of a further 100,000

shares of £5 each." I will ask Mr Foster to second it, but before putting the resolution to the meeting I shall be glad to answer, to the best of my ability, any questions which shareholders may like to put to me.

Mr Richard Foster (deputy chairman): I have much pleasure in seconding that resolution.

The Chairman having replied to two points of detail, the resolution was put to the meeting and carried unanimously.

A SHAREHOLDER'S CONGRATULATIONS

Mr Vere Herbert Smith said that as the business of the meeting was concluded he would like, if he might, to offer on his own behalf and also on behalf of all the shareholders their congratulations to the chairman upon the honour which His Majesty the King had lately conferred upon him and to express the hope that he might live a long time to enjoy his exalted position. In mentioning His Majesty he thought he must add how grateful they all were that no harm had come to him through the incident on the previous day. (Hear, hear.)

With regard to the arrangement which had been made, while they must all sympathise with the proprietors of the other bank, it did appear to him as though the directors had made an excellent and far-reaching arrangement, and he would like to congratulate the chairman upon that arrangement, and to thank him and the board generally for the work they had done in carrying it through.

Mr Barnabas F. Russell seconded the proposition.

The vote was unanimously accorded.

THE CHAIRMAN'S REPLY

The Chairman, in thanking Mr Vere Herbert Smith for the personal note which he had so kindly introduced into their proceedings, said he would like to add how very much he appreciated those congratulations and the way in which they had been endorsed. Ever since he first came into business, and that was a great many years ago, banking had really been his sole business occupation, and it would always be his greatest interest and duty to do all he could to support and increase and keep in good order those banking businesses with which he was connected.

The proceedings then terminated.

KUALA MUDA RUBBER ESTATES, LIMITED

SATISFACTORY RESULTS

The eleventh annual general meeting of this company was held, on the 23rd instant, at 19 Fenchurch Street, London.

Sir Francis M. Voules, C.B.E. (the chairman), said that the profit for the year amounted to £23,558, to which they had to add the balance brought forward from last year, making £24,274 available. They had to deduct debenture and note interest and £6,300 for one-half of the second series of notes redeemed on January 1st last and were left with £3,720, which they proposed to carry forward. Having regard to market conditions, and remembering that their exportable crop under the Regulation Scheme was about 20 per cent. less than in the previous year, shareholders would, he thought, agree in considering the results for the year satisfactory.

Since the last meeting they had redeemed £6,300 of the 7 per cent. notes, and they considered the position and the outlook justified them in paying off the balance of £18,900. They therefore proposed to give one month's notice to do that immediately. Assuming that the amount required for the redemption of those notes was covered by the profits of the current year, which they anticipated would be the case, it would enable the directors to consider the payment of dividends on the shares of the company in future years.

The total crop collected during the year was 2,288,724 lbs., the average f.o.b. cost being 2.86d. per lb. The average gross price realised for the rubber exportable during the year was equivalent to 6.58d. per lb. London landed terms. Their standard production under the Rubber Regulation Scheme for 1936 was 3,304,600 lbs. If there were no variations in the percentage released, their actual crop would be approximately 2,106,700 lbs. They expected their f.o.b. cost would be fractionally over 3d.

Their properties had been maintained in good order during the year. Plans were being prepared for the replanting of certain areas amounting in the aggregate to about 300 acres. They hoped to be able to extend the policy of replanting in future years. Apart from their own very fine estate, with mature rubber of 7,280 acres, they had a further asset in their large holding of Kepong shares, to which he attached great value.

The report and accounts were unanimously adopted.

ANGLO-DUTCH PLANTATIONS OF JAVA, LIMITED

IMPROVED TEA PROFITS

THE RUBBER OUTLOOK

The twenty-sixth ordinary general meeting of Anglo-Dutch Plantations of Java, Limited, was held, on the 17th instant, at 19 Fenchurch Street, London, Col. Sir Robert Williams (the chairman) presiding.

The Chairman, in moving the adoption of the report and accounts, said:—1935 was on the whole a disappointing year. Compared with the slump years, the improvement which set in in 1934 was still apparent, but we had hoped for a continued improvement, which, to a large extent, failed. Tea and tapioca show better results, cinchona and rubber not so good, the loss on sisal is reduced, the loss on coffee is greater, whilst instead of a small profit on rice in 1934 a loss is shown. The result is that, before reckoning depreciation and writings-off, but including interest received from the debenture redemption account, a net profit of £199,864 19s. 5d. is transferred to the London company, approximately £40,000 less than for the previous year. In view, however, of the improved prospects, the board have decided to recommend the same dividend as for last year.

TEA

The gross profit from tea was distinctly better than for the previous year, and, including profits made by the Tjoekol, Bodjong Asih and Goeboek Companies, amounted to just over F.805,000, compared with F.543,000 for 1934.

The area under tea is 26,698 acres, all of which, except for 185 acres, is in bearing. This area is represented by 22 estates, 20 of which are equipped with factories, and this year another is to be erected on our Tjiater estate, which is one of our highest estates and that most recently planted. The Jat of seed from which the estate was planted being uniformly good, we have every expectation that the quality of tea which will be produced here when the new factory is completed towards the end of 1937 will be equal to our best.

In setting out crop figures we are under the difficulty that the restriction year which covers the company's allowable quota does not synchronise with our financial year. The company's standard production for 1935-36, that is, from April 1, 1935, to March 31, 1936, was 18,424,335 lb., and that for 1936-37 is somewhat higher at 18,640,818 lb. The restriction percentage was 41½ per cent. for 1935-36, and is 43.21 per cent. for the current year. These, of course, are the local restriction percentages and not the international percentage, which for the current year remains the same as for last year at 17½ per cent. The crop for 1935 amounted to approximately 12,329,000 lb., including licences bought during the year. The crop estimated for the current year is some 11,700,000 lb., without purchased licences, but including these, we expect about 12½ million lb. Our standard assessment represents almost exactly 700 lb. per acre, whilst our production for 1935 was equivalent to 465 lb.; this gives an indication of the severity with which restriction affects our production.

Both cost and selling prices were more favourable to the company in 1935 than during the previous year. Notwithstanding the less favourable rate of exchange, the cost price fell from 7.54d. per lb. in 1934 to 7.16d. in 1935. In this latter figure is included a farthing per lb. representing the cost of licences purchased, therefore the actual cost was under 7d. The selling price advanced from 8.79d. in 1934 to 9.05d. per lb. last year.

It is extremely difficult to be prophetic as to the probable course of the tea market for the present year. At the commencement of the period of control the market responded by a strong advance; this was followed by a rather severe setback during the second year, after which a reasonable recovery again set in. So far the present year has seen this recovery maintained, the average of tea sold in public auction for the first six months of this year having shown an improvement of nearly 1d. per lb. compared with the corresponding period last year. There is no reason to suppose that this improvement will not continue. Price will be influenced mainly by stocks, and there can be no question as regards the more favourable position in this respect.

RUBBER

The gross profit has been disappointing, amounting to F.755,000 compared with approximately F.1,390,000 in 1934. This is accounted for chiefly by the very much smaller crop we were allowed to produce, namely, just under 10,000,000 lb., against slightly over 15,000,000 lb. the previous year. The control scheme came into force on June 1, 1934, so that during that year we had five months of full production. The 1935 output shows the

amount we were allowed to export during the first full year of control. In addition to the heavy fall in production, we suffered also from the natural result, namely, an advance in the cost price. Though in 1934 the cash cost had been reduced to a figure equivalent to 2.72d. per lb., the smaller crop and the more adverse rate of exchange explains the increase to 3.31d. per lb. for 1935. Furthermore, and perhaps the most disappointing feature, notwithstanding the heavy fall in production the selling price was also lower than that for the previous year, namely, 5.63d. per lb., compared with 5.74d. per lb.

Our rubber area now totals 35,918 acres, of which 29,243 are in production, and comprises 16 estates, of which six also produce tea, three coffee and one kapok, and in addition our large Soekamandi estate of sisal and tapioca has a small area of 338 acres rubber.

Our standard rubber assessment for 1935 was fixed at 16,504,786 lb., whilst for the current year it is slightly larger at 16,754,385 lb. This latter figure may be somewhat increased, as we have a certain number of appeals pending for increased assessment. The standard assessment represents an average yield of 573 lb. an acre, whilst the actual crop obtained works out at a yield of 340 lb.; here, therefore, as in tea, the severe effect of restriction is very apparent.

The international restriction figure for 1935 was 32½ per cent., whilst the internal restriction figure worked out at approximately 36½ per cent. For 1936, if no further change is made than that already announced, the international restriction for the whole year will be 37½ per cent. of standard; the internal restriction is still uncertain, but for the first half-year it appears likely to be approximately 45 per cent.

COFFEE

This unfortunate commodity appears to go from bad to worse. In 1934 our coffee loss amounted to just over F.89,000; last year the loss increased to nearly F.211,000.

At the time of the setting of the blossom for the 1935 crop we were unfortunately in a position to predict a small crop, which prediction came true, as the amount harvested fell from over 21,000 cwt. in 1934 to some 15,000 cwt. last year. As a result, the cash cost advanced from 41s. 9d. in 1934 to 53s. 3½d. At the same time the selling price continued to fall and only averaged 21s. 2d. per cwt., compared with 30s. 10d. the previous year.

The coffee gardens themselves showed continued improvement. Weak areas are gradually being replanted, and the whole of the coffee is undoubtedly in better condition than it has ever been before, and it is hoped to harvest something approaching 20,000 cwt.

CINCHONA

Though not as good as for 1934, the result last year was still quite a satisfactory one, the gross profit amounting to approximately F.188,000. Under the control of export, which is also in existence for this product, our standard was 66,617 kilos of sulphate, a reduction of about 2,000 kilos compared with the previous year. The percentage of restriction was also greater, being 60½ per cent. as against 58 per cent. This year our standard quota has advanced again to nearly 69,000 kilos, whilst the restriction percentage remains almost the same figure as last year. The cost price, at 6.60d. per lb., showed a satisfactory reduction on that of the previous year, namely, 7.06d. The unit price of sulphate has been the same for the two years.

RICE

With the steady development of Blocks 26 and 28, now called Soekanagara Estate, the area of paddy planted on the company's own freehold land continues to increase; rice is therefore assuming each year more relative importance in the company's activities.

On the Soekanagara Estate the planted area at December 31st last was approximately 6,950 acres, which includes 35 acres set aside as a seed paddy selection garden. Of the above total, about 1,648 acres were cleared for paddy during 1935. The company's main irrigation work, the Pamanoekan canal, which, when completed, will traverse the whole length of Block 28, is now just over 13 kilometres long. During the year the company's steam railway track has been extended and linked up through this area, so that there can be uninterrupted transport, through these important blocks, to the company's steam railway at Pamanoekan.

Our main kapok areas total 3,367 acres. During the year a further 513 acres were bud-grafted, and the area so treated to date comes to 1,298 acres.

The crop amounted to the equivalent of some 200 tons of cotton, against roughly 100 tons the previous year. The loss on last year's crop was approximately F.20,000.

The report was unanimously agreed to.

UNITED DOMINIONS TRUST, LIMITED

SATISFACTORY YEAR—DIVIDEND INCREASED

The fourteenth annual general meeting of United Dominions Trust, Limited, was held, on the 21st instant, at the registered offices of the company, Regis House, King William Street, London.

Mr J. Gibson Jarvie (chairman and managing director) in the course of his speech, said: To the general reserve, which stood at £400,000, there has been added £594,950, representing the sum of £612,500 received as premium on the issue of additional ordinary shares after deducting £17,549, the cost of the issue, and in this year's profit and loss account the directors have allocated a further £80,049 so that the general reserve now stands at £1,075,000, and exceeds the issued capital by a substantial margin.

We shall continue to adhere to the principles which have brought the company to such a strong position both financially and as a proved and welcome public servant. In the happiest way, fortuitously or by design, we have contrived to blend in a public limited liability company the best characteristics of a public utility with the advantages of private and competitive ownership. We have accomplished this because in serving the best interests of the shareholders we have never lost sight of the fact that we could best do so by observing at all times a proper sense of responsibility to the interests of our customers and the community.

SERVICE TO INDUSTRY

In every department of our various and growing activities, we have developed, and are constantly improving, a new and highly specialised technique, in order that we may not only lend safely to our customers, but in lending, give at the same time that kind of service which industry needs, but which only the experts in each industry with financial training and experience, can render with safety to the lender and benefit to the customer.

The provision of money on a medium and long term basis on a large scale for the kind of transactions in which we specialise, is not a business which can be safely conducted without special qualifications. It calls for much more than money. It demands an adequate staff of industrial experts and others with specialised professional knowledge. I give this warning, because there are apparently some who believe that the ability to raise and lend money is the sole requirement.

Allowing for exceptional cases, I am personally convinced from experience that credit is not being refused for any worthy proposal. That the use of credit is being restricted is in my opinion true. The more general use of credit for these and similar purposes would have a far-reaching effect, in that physical assets would be created with resulting enhanced capital values, increased productivity, and more employment. The home market has already been expanded in a quite surprising manner, but it is capable of further development. At the same time we must remember that neither greater activity in the domestic field nor the mere provision of money will effect a complete cure for the economic problems which still persist. Nor will money alone guarantee successful enterprise and a permanent increase in employment. Money by itself cannot and will not revive industrial activity and recreate lasting prosperity in our depressed areas which have suffered through the collapse or migration of staple industries on which they were dependent.

The free and intelligent use of credit and an active domestic trade will be powerful factors in mitigating our difficulties and in fostering international activity, but they are not enough.

Imports we must have, so we must export or render services. The return on our foreign investments, of great value as it undoubtedly is, is not enough to supply our needs. We must at all costs retain the confidence of other nations.

There is still another important matter to which I must refer—the offer made on behalf of the Bank of England of 340,000 of the 500,000 preference shares which they hold. These shares have been offered on terms which are extremely generous to the ordinary shareholders and the response to the offer discloses that this has been fully appreciated. The price at which the shares will be transferred, as you know, allows for no profit whatever to the Bank apart from the actual interest which these shares would normally carry until July 31st, the date of settlement.

The association with the Bank of England has been a valuable one for us, and a valued one, but—and this has been understood from the beginning—it was never the intention of the Bank permanently to maintain a large investment in your company.

The report was unanimously adopted, and a final dividend was declared on the ordinary shares of 11½ per cent., making 17½ per cent. for the year, against 15 per cent. for the previous year.

BUKIT RAJAH RUBBER COMPANY, LIMITED

MR T. J. CUMMING'S VISIT TO THE ESTATE

The ordinary annual general meeting of this company was held, on the 23rd instant, in London.

Sir Edward Rosling (the chairman) said that the results for the year were again disappointing. It was hoped as the result of the International regulation of exports they would have seen a higher range of prices. As it was, the small increase in price of ¼d. per lb. was more than set off by the increase in the cost of production.

With regard to the current season's prospects, their estimates were based on a crop of 1,050,000 lbs. Their standard production had been assessed at 1,652,896 lbs., and for the first three months to June 30th the exportable allowance was 60 per cent., and for the six months ending December it had been put at 65 per cent. The price to-day was about 1¼d. per lb. better than a year ago, and before the end of their financial year they might see a further increase in export licences.

Mr T. J. Cumming, speaking of his visit to the property in November last, said that, as must be expected in rubber of the age of theirs, the oldest of which was well over thirty years, the foliage was getting thin, especially in the hill areas, and measures were being taken to improve the condition, or, at any rate, stop further retrogression. What had struck him most was the very fine reserve of tappable bark which had been built up over the past years. Provided they could maintain the foliage in a reasonable condition, they had nothing to fear in the way of a shortage of bark, and, of course, yields were dependent to a great extent on foliage. The rubber in the flat areas was in very good condition. They had been faced with heavy expenditure in the replacement of lines. A very fine type of permanent line was now being built, and the expenditure was being spread over a period of years. The factory was running very efficiently and economically. He thought it might be taken as a compliment to their manager and to the way the estate was being run that an area of 250 acres had been selected for experimental opening and development under the International Rubber Regulation Scheme. Generally speaking, he was very favourably impressed with the conditions on the estate.

The report was unanimously adopted.

MERLIMAU PEGOH, LIMITED

IMPROVED OUTLOOK

The twenty-sixth annual general meeting of Merlimau Pegoh, Limited, was held, on the 22nd instant, at 19 Leadenhall Street, London.

Mr G. Kingsley, the chairman, said that the operation of the rubber regulation scheme had involved an increasing measure of restriction during the year under review, so that the crops harvested by the company and its principal subsidiary, Consolidated Eastern Plantations, Limited, were nearly 1,300,000 lb. less than those for the previous year. The reduced crops had brought in their train higher production costs, and it was not surprising that there had been a decline in the net profit. The higher average price realised for the rubber had, however, relieved the situation to some extent, and the board were able to recommend that the dividend should be maintained at 7½ per cent., which they trusted would be regarded as satisfactory in the circumstances.

With regard to the outlook for the current year, their rubber was selling at over 1d. a lb. more than the average price secured last year, and the confidence in the future which he had expressed on previous occasions appeared to rest on solid foundations. Consumption of rubber was progressing steadily, and the rising tendency should be accelerated as benefit was derived from the valuable research work which was being undertaken with the object of discovering and extending new uses and applications for rubber and rubber products. There had recently been a marked improvement in the statistical position which had been reflected in a firm market and rising prices. Indications pointed to a continuance of those favourable conditions, provided the market was not upset by adverse influences from outside.

With regard to the industry as a whole, chairmen of rubber companies had, he thought, been unanimous in acknowledging the benefits the industry had derived from the regulation scheme, and he would go a step further. Not only did he regard the introduction of the scheme as having been the industry's salvation, but he said in all seriousness that its premature removal would be akin to taking away the supporting hand from an invalid who had just left his bed and had been assisted to stand.

The report was unanimously adopted.

THE VICTORIA FALLS AND TRANSVAAL POWER COMPANY, LIMITED

FURTHER EXPANSION OF BUSINESS

MR ARTHUR HADLEY'S REVIEW

Mr Arthur E. Hadley, C.B.E., the chairman and managing director, presiding at the general meeting of shareholders held on the 23rd instant in London, presented a satisfactory account of the company's business for the year 1935. The net profit, after allowing for taxation and all other requirements, amounted to £543,076. The maximum dividend of 10 per cent. had again been paid on the preference shares and a dividend of 12 per cent. on the enlarged ordinary share capital of £2,500,000. The reserve fund had been brought up to £300,000 by the addition thereto of £80,000, and a further £160,000 had been added to the renewals fund. The outstanding debentures had all been repaid with the exception of bonds for £10,112, which had not yet been presented. The trustees for the debenture holders had released the mortgages on the company's properties charged in their favour.

GOLD-MINING ACTIVITY

Exceptional difficulty had been experienced in supplying the additional requirements of consumers at the dates desired in view of the time required for the manufacture and installation of plant. The activity in the gold mining industry since the Union of South Africa departed from the gold standard had roughly doubled. The strain had been relieved by the Klip Power Station coming into commission, and in a short time the normal reserve of plant would again be available. The maintenance of supply during the year had been due to the foresight of the staff in Africa in making early preparations and to the London staff for their efforts in getting new plant delivered quickly. The Chairman also acknowledged with thanks the co-operation of consumers in arranging their loads and the assistance of the municipality of Johannesburg at times when its plant was available.

The units sold during the year were approximately 2,000 millions, an increase of 13 per cent. on the previous year. The outstanding notifications for power required would involve large extensions of plant for generation, transmission and distribution. The Klip Generating Station would be the natural place for further generating plant, and the scheme of co-operation with the Electricity Supply Commission arranged some years ago had proved satisfactory and of undoubted benefits to consumers. During the past five years the company had expended over £2,000,000 on plant and apparatus, and the work in hand would add substantially to this amount.

PRICE REDUCTION

The price for supply to the principal consumers during the year was 5 per cent. lower than in 1934 and 10 per cent. below that for 1933. This enabled the consumers to enjoy a saving of about £100,000 in the past year. It was pointed out that further increases of sales would not produce a proportionate increase of profits, as the consumers under the company's tariff would enjoy further reductions in price with the growth of the company's business; also, capital charges would increase with the re-establishment of the normal provision of reserve plant and the debenture savings which appeared in previous accounts would no longer exist.

In Northern Rhodesia negotiations for a small supply to Livingstone were brought to a satisfactory conclusion. Consequent upon the agreement with the Government of Northern Rhodesia covering the rights at the Victoria Falls, arrangements had been actively pushed forward which enabled contracts for the civil engineering work and plant for lighting Livingstone to be arranged.

PENSION SCHEME

It had been decided in the interests of the company to create a pension scheme for the hourly and daily paid employees, and after careful examination a scheme had been adopted and brought into existence during the present year.

The Chairman concluded by expressing on behalf of the board and the shareholders their appreciation of the services to the staff both in London and South Africa, who had all had a most strenuous year, and he desired to express the board's continued confidence in them.

The report and accounts were unanimously adopted, and the retiring directors, Sir Henry Birchenough, Bart., G.C.M.G., and Mr R. E. Shott, were re-elected and Messrs Cooper Brothers and Company were re-appointed auditors.

ROSTERMAN GOLD MINES, LIMITED

PRODUCTION COMMENCED—GOOD PROSPECTS

The first annual general meeting of this company was held, on the 17th instant, at 20 Copthall Avenue, London.

Mr George J. S. Scovell, C.B.E. (chairman of the company), in the course of his speech, said: The salient feature of the year's work has been the disclosure of good values at an incline depth on the Horst Reef of 800 ft. The No. 5 level is now being opened up, and we have every reason for believing that the reef will live to a much greater depth. On the Ross Reef, development is proceeding, and, as you have been advised, good values are now being opened up on the No. 2 level.

Sufficient development work has been done to indicate that we already have over a year's supply of ore for the mill, mainly on the Horst Reef, and that as development advances on this and the other two reefs, further additions to the ore reserves will be provided. On a former occasion you were advised that we anticipated a milling grade of at least 10 dwt., and the developments to date indicate that this is a reasonable prediction.

As an indication of the potentialities of the deep ground, you will have observed the excellent values we are obtaining in depth on the Horst Reef, and particularly I would call your attention to those in the winze on the Ross Reef, which is the deepest point yet touched on that reef.

It was only in August last year that we were able to accelerate development footage. Since that date rapid progress has been made, and it is your board's considered policy to concentrate on the still more speedy advance of this important work.

The treatment plant, consisting of milling and cyaniding sections, has been completed and is now being tuned up in stages towards full load, *pari passu* with the opening up of stopes on the Horst Reef and the advance of development on the Ross Reef.

We have reached the end of the construction stage, and from now on, apart from the breaking and raising of ore, our main consideration must be the further advancement of underground development.

To sum up, all our technical experts and those who, like myself, are not experts, feel confident you have a fine property in Rosterman.

The report and accounts were unanimously adopted.

CITY OF SAN PAULO IMPROVEMENTS AND FREEHOLD LAND COMPANY, LIMITED

The Chairman, Mr Herbert Guedalla, F.C.A., presided at the twenty-fourth ordinary general meeting, on the 24th instant, at River Plate House, and in dealing with the accounts he emphasised that the assets, liabilities, profits and expenses arising in Brazil had been taken at the fixed exchange of 6d. per milreis. The net result for the year—after providing for exchange and debenture interest, a profit of £80,000, which increased the carry-forward to £250,247—was due to larger sales at better prices. The important Pacaembu estate had occupied most attention during the year. Arrangements were now being made to construct a stadium on part of the company's property which had been given to the municipality for that purpose. The stadium would cost 4,400 contos of reis, payable by the municipality over eight years, and the company had agreed to assist the contractors in the finance. This improvement would ensure the more rapid sale of the company's property and probably increase its value. The municipality had undertaken to bear the cost of making up and paving certain main roads on the property, costing about 1,500 contos; this alone would attract purchasers. Other important improvements in the city were also referred to. Both subsidiary companies had made profits.

Dealing with exchange, the chairman said that the free rate had been about 2½d. per milreis for a long time. It had been hoped that with a rich country like Brazil matters would right themselves, but the outlook was not bright. The balance of trade had fallen and the Government were apparently embarking on large internal expenditure without providing for it in the budget. Cost of living, house rents, and general land prices had not materially altered, and the directors were considering whether they could not now put forward a scheme for adjusting the balance sheet to the present rate of exchange. It was difficult to deal with exchange in respect of debts receivable over a long period of years, and particularly with land which might take many years to dispose of. However, a valuation by local officials of the company had been made, and if this were adopted at the current rate of exchange the capital value per ordinary share would be well above the present market price.

The report and accounts were adopted.

ANGLO-SPANISH CONSTRUCTION COMPANY, LIMITED

UNSETTLED CLAIMS AGAINST SPANISH GOVERNMENT

At the eleventh annual general meeting of the Anglo-Spanish Construction Company, Limited, held on the 22nd instant at No. 1 London Wall Buildings, London, the chairman, Mr David McAdam Eccles, said that the outstanding debentures were now 65 per cent. repaid. The company's capital and liabilities amounted to £3,204,205, and the assets consisted of approximately £115,000 in cash, gold bonds to the value of £208,733, and its interest in the Santander-Mediterranean Company, to which the Spanish Government owed some Pts. 65,000,000, equivalent to about £1,750,000.

As a result of the disturbed conditions of the country, the exploitation deficit for last year was Pts. 652,757, as compared with Pts. 80,508 in the previous year.

Interest on the sums outstanding was continuing to accrue at the rate of some Pts. 2,400,000 per annum; and if the Government had faithfully fulfilled its obligations, the revenues would have been more than sufficient to meet all the exploitation requirements. No doubt the authorities would realise the injustice of retaining the amounts due for construction and taxes improperly levied while advances were required to meet fresh coming to either of these offers.

No payments had been received during the year: and it was necessary once more to emphasise that there was no question as to the legality of these indisputed claims of the company. The fulfilment of these obligations would be regarded as an important test of the Government's good faith in respect of its commitments generally, and the company had the active support of the British Government for the claims.

COMPANY'S OFFERS IGNORED

The Anglo-Spanish Construction Company had offered to abandon its interest in the undertaking to the Government, in exchange merely for the equivalent of the sums due; and the Spanish company had expressed its willingness to accept sums on account; but although the means existed whereby a payment could at any time have been made, no reply had been forthcoming to either of these offers.

The railway had been well built and was a great asset to the Spanish nation, and one capable of yielding greater benefits in the future; and it was not to be anticipated that, once the present troubles were over, a firmly established Government would allow the stigma to attach to the country that it accepted the benefits and service afforded by the railway without paying the sums due under the contract, which, even then, would result in heavy losses to those responsible for its completion.

GOVERNMENT RETURNS, &c.

NATIONAL ACCOUNTS

The total ordinary revenue for the week ended July 18, 1936, amounted to £14,396,000, against ordinary expenditure of £13,079,000. After allowing for an increase in Exchequer Balances of £115,765, the operations for the week, as shown below, decreased the gross National Debt by £1,201,000 to approximately £7,987 millions.*

* Includes £1,000, the proceeds of which were not carried to the Exchequer within the period of the Account.

TREASURY BILLS BY PUBLIC TENDER

Tenders for £50,000,000 Treasury bills were opened on July 17, 1936, and the total amount applied for was £80,485,000. Tenders were accepted for Treasury bills at three months dated Monday to Friday, at £99 17s. 0d., about 37 per cent. and above in full; Saturday, at £99 17s. 0d., and above in full. The average rate per cent. was 11s. 7-57d. The amount allotted was £50,000,000. The following table shows the weekly record at various dates:—

Date	Amount Offered	Total Applications	Amount Allotted	Average Rate %
January 5 1934	35,000,000	76,280,000	30,000,000	0 18 11-5
April 6	40,000,000	80,390,000	38,000,000	0 17 9-0

OFFER TO NEW READERS

Any reader who makes his first acquaintance with this journal with this week's issue is invited to fill up the attached:

To The Publisher, "The Economist Newspaper Ltd.,"

8 Bouverie Street, E.C.4.

In order to test the value of your publication I should like you to forward this to me by post for the next four weeks. If I then decide to become a subscriber, it is understood that there will be no charge for the copies thus received, but otherwise I shall be willing to pay 4s. to cover their cost.

Name.....

Address.....

MANCHESTER SHIP CANAL COMPANY.—The traffic receipts for the month of June, 1936, amounted to £106,191, against £108,365 (adjusted) in June last year, a decrease of £2,174. The traffic receipts for the half-year ended June 30, 1936, amounted to £650,965, as compared with £625,444 (adjusted) for the corresponding period of last year, an increase of £25,521. The net revenue of the whole undertaking for the half-year (after providing for interest and fixed charges) was £6,780 more than the corresponding half-year in 1935.

ELECTRICAL INDUSTRIES TRUST.—The General Accident Fire and Life Assurance Corporation, Ltd., trustees to certificate holders, announce a distribution of 3.2d. per unit, free of income tax, representing income received during 14 weeks ended June 30, 1936. Carry forward to the next half-year of 0.135d. per unit, free of income tax.

TURKISH DEBT 7½ PER CENT. 1935 AND 1936.—The Council of the Repartitioned Public Debt of the former Ottoman Empire informs holders that the Turkish Government has paid in Turkish pounds the monthly instalment for June, 1936, fixed by the contracts. The Turkish Government has transferred into French francs that part of this monthly instalment equal to one-fifth of the 50 per cent. of the sum payable in foreign exchange at the next due date, as laid down in the Agreement between the French Government and the Turkish Government, of which holders were notified in the Council's communication of May 4, 1936.

NATIONAL FIXED TRUST.—The sixth income distribution on National Fixed Trust certificates, Unit "B," for the period January 16, 1936, to July 15, 1936, will be paid to certificate holders registered as at July 15th at the rate of 8.9083d. net per sub-unit on August 15th.

OIL OUTPUTS

ANGLO-IRANIAN OIL COMPANY, LTD.—Production in Iran for the month of May amounted to 768,000 tons, making a total of 3,366,000 tons for the first five months of 1936.

LOBITOS OILFIELDS, LTD.—The production of the Peruvian company for May is cabled as 27,405 tons.

BRITISH CONTROLLED OILFIELDS, LTD.—Production for the week ended July 11th: Venezuela, 20,221 barrels; Trinidad, 24,524 barrels; total, 44,745 barrels. Production for June: Venezuela, 85,712 barrels; Trinidad, 97,966 barrels; total, 183,678 barrels. Deliveries for June: Venezuela, 76,325 barrels; Trinidad, 106,697 barrels; total 183,002 barrels. Production for the week ended July 18th: Venezuela, 18,660 barrels; Trinidad, 23,664 barrels; Total, 42,324 barrels.

PHOENIX OIL AND TRANSPORT COMPANY, LTD.—Production for June, 1936: The gross production of crude oil of the Phoenix group for June was 83,787 tons.

THE MEXICAN EAGLE OIL COMPANY, LTD.—Production for the week ended June 20, 1936, was 510,000 barrels. Production for the week ended July 4, 1936, was 541,000 barrels. Production for the week ended July 11, 1936, was 547,000 barrels.

TAMPICO OIL, LTD.—The total production from the company's properties in Mexico during May was 11,216 barrels, in respect of which the royalty due to Tampico Oil, Ltd., amounted to 842 barrels. The total production from the company's properties in Mexico during June was 11,153 barrels, in respect of which the royalty due to Tampico Oil, Ltd., amounted to 836 barrels.

TRINIDAD LEASEHOLDS, LTD.—Oil produced during April, 38,840 tons; oil purchased during April from other companies, 60,132 tons. Oil produced during May, 41,135 tons; oil purchased during May from other companies, 72,639 tons. Oil produced during June, 44,353 tons; oil purchased during June from other companies, 61,910 tons.

VENEZUELAN OIL CONCESSIONS, LTD.—The Venezuelan Oil Concessions, Ltd., announces that its production for the week ended July 11, 1936, was: Bolivar district, 840,671 barrels; Maracaibo district, 26,946 barrels. Total, 867,617 barrels. Production for the week ended July 18, 1936 was: Bolivar District, 748,007 barrels; Maracaibo District, 24,166 barrels; total 772,173 barrels.

REPORTS AND NOTICES

The directors of Lloyds Bank, Ltd., announce that Mr William George Verdon Smith, C.B.E., of Clare Street House, Bristol, has been elected to a seat on the board.

The directors of Martins Bank, Ltd., announce that Mr Edgar Rennie Bowring has been elected to a seat on the general board of the bank.

BANKS

THE BANK OF LONDON AND SOUTH AMERICA LTD. AND THE ANGLO-SOUTH AMERICAN BANK LTD.—The provisional agreement entered into by the directors whereby the Bank of London and South America, Ltd., will take over the business of the Anglo-South American Bank, Ltd., and assume liability for all its obligations to depositors and others has been ratified by the shareholders of the latter in general meeting. The actual date of transfer has been fixed for the close of business on August 13, 1936. In the interval there will be no interruption in the normal course of business. The capital of the Bank of London and South America, Ltd., will be £4,500,000 authorised, £4,040,000 issued, and published reserves £2,000,000.

MINES

ROSTERMAN GOLD MINES, LTD.—The first report and accounts to end of 1935 show that the value of gold recovered from February 5, 1935, to December 31, 1935, amounted to £10,939 after deduction of £4,750 for expenses. Selling expenses have also been deducted. Administration and other expenses in London absorbed £4,526. The sum put to depreciation is £12,522. A sum of £5,227 has been transferred from profit and loss account to mine development account, making it £61,561. During the year, with the exception of operating the Pilot Mill, operations have been confined to shaft sinking and underground development, the erection of plant and machinery, the provision of permanent buildings to house the European and non-European staffs and the erection of the necessary workshops and offices.

MISCELLANEOUS

ANGLO-ARGENTINE TRAMWAYS.—Moratoria on Anglo-Argentine Tramways debenture stocks have been extended for a year.

SANGERS, LTD.—Net profits for year ended March 31, 1936, are up by £32,353, to £188,723, and after bringing in £80,896 there is a balance of £269,619. The final ordinary dividend, as already announced, is 16½ per cent., less tax, making 25 per cent., against 22½ per cent., and after providing £42,682 for tax the carry-forward is increased from £80,896 to £100,338.

MILLARS' TIMBER AND TRADING.—Net trading profits have risen from £9,212 to £78,266 in 1935. The preference, preferred and ordinary dividends absorb £66,583, leaving £11,682 forward. During 1935 there was an improvement in trading conditions in Australia. Turnover was 11 per cent. greater than in 1934. During the year an additional mill was reopened and the production of timber for 1935 was increased by about 25 per cent. over that of 1934. Trading in the United Kingdom, South Africa and other world markets in which the company deals in timber of all classes and in various other produce was satisfactory, the turnover in 1935 exceeding that in 1934 by some 26 per cent.

FALK, STADELMANN AND COMPANY.—Falk, Stadelmann reports an increase in profits before tax in the year to March 31, 1936, from £108,317 to £117,005. In addition, there is a surplus of £2,615 realised on sale of investments and the reinstatement of the amount previously written off shares in a subsidiary. A similar surplus of £1,971 was realised in the previous year. General reserve again receives £15,000, and the allocation to staff pension and benevolent fund is repeated at £5,000. Ordinary dividend, 10 per cent., against 8½ per cent. Carry-forward is up from £18,951 to £20,752. Meeting, 91 Farringdon Road, E.C.1, July 23rd, at 12 noon.

J. BROCKHOUSE AND COMPANY, LTD. (PURCHASE OF CAPITAL OF DISTRICT IRON AND STEEL, SMETHWICK).—J. Brockhouse and Company, Ltd., announces that negotiations have now been completed for the acquisition on satisfactory terms of the entire capital of the District Iron and Steel Company, Ltd., of Smethwick. The purchase price is being satisfied by the allotment of a portion of the unissued £1 ordinary shares of J. Brockhouse and Company.

"LONDON TRANSPORT YEAR."—An Investment Note under this heading on page 25 of our issue of July 4th referred to the prospective announcement of the final dividend upon the "C" stock. In order to avoid misapprehension, it may be desirable to state that the amount available for distribution will not be known until the ascertainment of the Pooling Scheme has been made. It is unlikely that the announcement regarding the dividend will be made until early October, as last year.

CABLE AND WIRELESS, LTD. (INDEX NUMBERS).—These index numbers represent the estimated monthly receipts from traffic as related to comparable traffic in the year 1929. Monthly figures reduced to working-day average. Working-day average of comparable receipts year 1929 = 100.

ALVIS-STRAUSSLER, LTD.—An important agreement has been made between Alvis, Ltd., and Straussler Mechanization, Ltd. Under the agreement, Alvis, Ltd., will now be responsible for the

manufacturing side of the business, while the technical and commercial side hitherto carried out by Straussler Mechanization, Ltd., will be in the hands of Alvis-Straussler, Ltd.

COLVILLES, LTD.—An extraordinary meeting held in Glasgow for the purpose of considering resolutions enabling the company to acquire the whole Ordinary Share Capital in the Lanarkshire Steel Company, Ltd. The Chairman announced that the Board of Colvilles, Ltd., had invited Mr Harry Cunningham, Chairman of Sir William Arrol & Co., Ltd., to join the Board of the Lanarkshire Steel Co., Ltd.

EDWARD LLOYD, LTD.—Lord Camrose, Lord Kemsley and Lord Iliffe have resigned from the Board, and Messrs. Eric V. Bowater, Arthur Baker, Noel V. Bowater and E. C. Duffin have been elected directors. Mr Eric V. Bowater has been appointed Chairman, Mr Percy G. Denson, Vice-Chairman, and Mr H. J. Inston, A.C.A., Secretary of the Company.

THE EDWARD LLOYD INVESTMENT COMPANY, LTD.—Lord Camrose, Lord Kemsley, and Lord Iliffe have resigned from the Board, and Messrs. Eric V. Bowater, Noel V. Bowater, Arthur Baker, E. L. Fifoot, E. C. Duffin, Ian F. Bowater and H. J. Inston have been elected directors. Mr Eric V. Bowater has been appointed Chairman, Mr Percy G. Denson, Vice-Chairman, and Mr H. J. Inston, A.C.A., Secretary of the Company.

THE RIO DE JANEIRO CITY IMPROVEMENTS COMPANY, LTD.—The directors announce that, pending the outcome of negotiations for a new drainage rent, they have received payment by the Brazilian Government in Rio de Janeiro of the half yearly revenue to June 30, 1936, on the basis of 218 milreis per house per annum, which is equivalent at the present free rate of exchange to £2 10s. 7d. per annum.

CONSETT IRON COMPANY, LTD.—Net profits, before depreciation, are up by £137,425 to £399,753. The directors propose to replace in reserves the sum of £150,000 set aside in the balance sheet specifically for workmen's compensation liability, and to provide £200,000 towards reserve for improvement and extension of plant and machinery, etc., leaving £106,488 carried forward, against £56,735 brought in. A year ago there was a provision of £300,000 for depreciation, but there is no such allocation this time. There is no ordinary dividend. The report adds that legal and other arrangements relating to the purchase of a constructional engineering undertaking have been completed. Meeting, Newcastle-upon-Tyne, August 11th, at 11 a.m.

MARCONI-EKCO INSTRUMENTS, LTD.—Marconi's Wireless Telegraph Company, Ltd., and E. K. Cole, Ltd., have decided to form a jointly-owned company to be called "Marconi-Ekco Instruments, Ltd.," with a nominal capital of £5,000. The chairman will be the Rt. Hon. Lord Inverforth, P.C.

COMMERCE AND TRADE

SURVEY OF COMMODITY MARKETS

AFTER a period of hesitancy last week the majority of commodity markets exhibited a strong tone during the past few days and the upward trend of prices was resumed. The grain markets remain under the influence of the weather in North America, and the continuance of the drought over a wide area was responsible for a further rise in wheat. In view of the reduction in the supply of this cereal recently, the wheat markets will henceforth be sensitive to crop reports from Argentina and Australia. Maize prices are likely to be increasingly affected by crop news from the United States, since a failure in that country would necessitate substantial imports from Argentina. Meanwhile, American cotton suffered a reaction after last week's rise, but speculative interest carried Egyptian Sakel to a higher level. Wool continued firm, while other textile fibres showed little change.

Non-ferrous metals were generally dearer this week. Copper rose in sympathy with the advance in the American domestic price, while spelter responded to renewed hopes concerning the re-establishment of the International Cartel. The exception to the general tendency was tin, which was depressed owing to uncertainty regarding the outcome of the conversations between the International Committee and Siam and to the expectation of an increase in stocks. Rubber was a shade easier on the fear of renewed labour troubles at tyre factories in Akron. The market in oilseeds and their products showed little general change.

Owing to the shortage of bacon supplies, the Board of Trade announced an arrangement this week for the importation of an additional 12,000 cwts. from foreign sources. Half of this is to be shipped immediately, while the other half will be spread over the next two weeks.

COAL

SHEFFIELD.—There is a slight improvement in the demand for house coal, and industrial demand continues at a high level. Steam coal is strong. For new contracts for locomotive hards the railway companies are being quoted 2s. 6d. per ton more. Demand for coking smalls is very active and prices are firm. Output is going into immediate consumption. Furnace coke is in heavy request. Export requirements are limited, and orders for prompt shipment are rather scarce.

Prices.—Inland: South Yorkshire best, 23s.-25s.; ditto seconds, 20s.-21s.; Derbyshire best house, 22s.-23s.; Derbyshire best brights, 19s. 6d.-21s.; kitchen coal, 16s. 6d.-19s. 6d.; best screened nuts, 19s.-20s.; small screened nuts, 18s.-18s. 6d.; Yorkshire hards, 19s. 6d.-20s.; Derbyshire hards, 19s. 6d.-20s.; rough slacks, 11s.-12s.; nutty slacks 10s.-11s. Export: South Yorkshire hards, 19s.-19s. 6d.; washed trebles, 17s. 6d.-18s.; washed steam doubles, 17s. 6d.-18s.; washed gas doubles, 17s. 6d.-18s.; washed steam singles, 17s.-17s. 6d.; washed gas singles, 17s.-17s. 6d.; washed smalls, 14s. 9d.-15s. 3d.; washed smithy peas, 19s.-20s.; washed coking smalls, 14s. 9d.-15s. 3d.; screened gas coal, 19s.-20s. 6d.; Derbyshire and Notts top hards, 18s. 3d.-18s. 9d.; cobbles, 18s. 3d.-18s. 9d.; washed trebles, 17s.-17s. 6d.; washed doubles, 16s. 9d.-17s.; slacks, 9s. 6d.-13s.

NEWCASTLE-ON-TYNE.—Large steams and all descriptions of graded coals produced in Northumberland and Durham are in brisk demand. With bookings of Northumberland steam coals so heavy, there is every indication that higher prices will rule this winter.

Durham prime gas continues weak—which is natural at this period of the year—but good class coking coal is a much better market. Prime bunkers are steady, but ordinary classes are offered fairly freely. Coke of all descriptions is a good market; exports are at a high level and demand from inland sources is just as persistent.

Current f.o.b. prices for export—NORTHUMBERLAND.—D.C.B. screened, 15s.; smalls, 12s. 6d.; Howards, Bentinck, Newbiggin screened, 14s. 9d.; smalls, 12s.; Tyne Prime large, 14s. 6d.; smalls, 12s. 6d.; Hartley Main large, 14s. 9d.; smalls, 12s. 6d.—DURHAM.—Lambton, South Hetton screened steam, 15s. 9d.; smalls, 13s.; Wear Special gas, 15s.; Holmside, Ryhope, Boldon unscreened gas, 14s. 8d.; second-class gas, 13s. 6d.; coking unscreened and/or smalls, 13s. 3d.; Prime unscreened bunkers, 14s. 9d.; second-class unscreened bunkers, 14s.; Prime foundry coke, 26s.; Newcastle and District gas coke, 28s.

GLASGOW.—Lothian collieries have resumed this week, and some in Ayrshire have also been working; but, with holidays elsewhere and salesmen absent, market conditions have been quiet. A fair amount of business is on hand for the restart, but as regards exports the collieries, have not been pressing owing to the pending change in selling arrangements and the likelihood of continued activity in home demands.

Shipment prices (f.o.b. district ports):—LANARKSHIRE.—Ell best, 15s.; splint best, 18s.; splint second, 16s.—16s. 6d.; navigation, screened, 16s.—16s. 6d.; navigation, unscreened, 15s.; steam, 14s. 6d.; trebles, 16s.; doubles, 15s. 6d.; singles, 16s.; pearls, 15s.; dross, 12s. 6d. FIFE.—Best unscreened navigation, 14s. 9d.—15s.; unscreened navigation, 14s. 6d.; first-class steam, 15s.—15s. 3d.; third-class steam, 14s.; trebles, 16s. 6d.—18s.; doubles, 16s.—17s.; singles, 16s.—16s. 6d.; pearls, 14s. 6d.—14s. 9d. LOTHIAN.—Best splint, 16s.; prime steam, 14s. 6d.—15s.; secondary steam, 14s. 6d.; unscreened navigation, 14s. 6d.; trebles, 16s. 3d.—16s. 6d.; doubles, 15s. 9d.—16s.; singles, 16s.—16s. 6d.; pearls, nominal. Ayrshire.—Best unscreened navigation, 16s.—16s. 6d.; steam, 13s.—13s. 6d.; trebles, 13s. 9d.; doubles, 16s.; singles, 16s.—16s. 6d.; pearls, nominal; dross, nominal.

CARDIFF.—The Paris-Orleans Railway has placed an order for 70,000 tons of steam coals, but apart from this contract the dull conditions of the market have had no redeeming feature. Day-to-day inquiries have been extremely scarce and the depressed state of the European trade has been accentuated by the virtual suspension of shipments to Spain, owing to the disturbances at the ports of that country. It is feared that some of the repercussions of the new French Coal Mines Act centralising control of both internal and import prices, and further limiting the employment of foreign tonnage in the transport of external supplies, will be unfavourable to this country. The glut of large coal continues the main problem. Coal breaking is adopted to a limited extent, but the restricted demand for the best Admiralty large classes is causing a great deal of irregular working, and washed smalls and sized classes are very scarce for prompt positions with prices firm. South Wales colliery owners have agreed to increase their price for French pitwood under the coal-pitwood barter agreement by 7½d. to 24s. 10½d. per ton ex-ship. Of the 80,000 tons of pit props to be supplied by France under this agreement for the September quarter about 50,000 tons are to be delivered before September 15th and the remainder by October 30th, but one of the terms of the new settlement is that if by August 20th either party desires a revision of the price of the balance of 30,000 tons remaining to be delivered after September 15th the two sides shall meet to consider the matter, and in case of failure to agree either shall have the right to cancel this quantity. It is expected that the Secretary for Mines will this week formally accept the South Wales scheme for the centralised control of sales, and that the new regime will become operative with the announcement of the constitution of the Control Board next Monday. Coke is still very strong, while patent fuel is a steady market.

Current approximate quotations:—Best Admiralties, 19s. 6d.; seconds, 18s. 9d. to 19s. 3d.; best dries, 18s. 6d.; Black Veins, 18s. 3d.; Western Valleys, 17s. 6d. to 17s. 9d.; Eastern Valleys, 17s. 3d. to 17s. 7½d.; best small steam (washed), 13s. 6d. to 14s. 6d.; seconds, 13s. to 14s.; coking smalls, 14s. 3d. to 14s. 6d.; best anthracite large, 36s. to 40s.; Red Vein large, 22s. to 27s.; machine made cobbles, 35s. to 51s.; French nuts, 35s. to 51s.; stove nuts, 34s. to 50s. 9d.; rubbly culm, 11s. 6d. to 12s.; special foundry coke 42s. 6d. to 47s. 6d.; patent fuel (Crown), 21s.; pitwood, ex ship, French, 24s. 10½d.; Portuguese, 22s. 6d.

IRON AND STEEL

LONDON.—With the opening of the holiday period, the volume of new business has shown signs of declining, but most of the steelworks have sufficient orders on their books to keep them busy until the end of the year, says the official report of the London Iron and Steel Exchange. Demand is expected to increase when the holiday season is over, and some consumers seem to fear that a stringency will develop in the market later in the year. A more satisfactory situation has developed in pig iron and most consumers are able to secure supplies, whilst some progress has been made by producers in overtaking arrears in deliveries. Works are fully

booked, but there has been some suspension of deliveries on account of holiday stoppages. Many consumers would be prepared to place orders for delivery over the early months of 1937; but makers are not inclined to accept business so far ahead. In semi-finished steel, works are producing at capacity, but are unable to keep pace with demand. The position, however, is better than a few weeks ago owing to increased production, and there are fewer complaints by consumers of late deliveries. New business in finished steel has been quiet; but production continues almost at a record rate in several departments. There is no relaxation in the quantities of structural material passing into consumption, but the greater part is being used for home requirements. Export business of late has shown signs of expanding, but development is slow.

MIDDLESBROUGH.—The position of the pig iron and steel producers in this area is very satisfactory. Outputs are disposed of for some time to come and the holidays in Scotland this week will enable makers to supply rather larger quantities of foundry pig iron to local consumers. There is no indication of any seasonal slackening in demand. Prices of Cleveland foundry pig iron, also East Coast hematite, remain unaltered. The requirements of semi-finished steel users are heavy, whilst manufactured steel is being turned out in large quantities. It is announced this week that Messrs. Dorman Long & Co. have secured a contract in connection with the construction of a new bridge in China, which will require approximately 4,000 tons of steel. Shipments of all classes of pig iron from the Tees from July 1st to the 20th amount to 7,005 tons as compared with 7,800 tons during the same period in June. Imports of foreign ore to the Tees so far during July are approximately twice the quantity which was imported during the same period of June. The present dislocation of communications with Spain is rendering it almost impossible to do business in ore from that country. Heavy steel scrap remains at 57s. 6d. per ton delivered at the works. Blast furnace coke is maintained at 25s. per ton delivered.

SHEFFIELD.—The iron and steel market remains very firm, with an active demand in most sections. Business in forge and foundry iron is mostly in small lots for immediate delivery, producers being already fully committed under contract over the next few months. Lincolnshire makers have nothing to offer in this area, their output being taken up at source. The increased production of Derbyshire material has made no great impression on the market so far, and has done little more than meet contract requirements. Stocks at furnaces are small, and with demand at its present level little can be done to replenish them. Good deliveries of hematites are being made, but makers are heavily booked, and some are refusing further contracts for the present. Finished iron is a better market, especially common bars. Crown iron is in rather better request. The demand for basic steel billets is at a record level, and acid qualities are more active than for some time past. Wire rods are in strong request, as is steel strip. Heavy business is being transacted in stainless steel sheets. There is little change in the iron and steel scrap market. Merchants' price for heavy basic steel for melting remains at 56s. delivered, but users are unwilling to pay this and are purchasing supplies of imported material at a slightly lower figure. Foundry cast iron is very active at around 62s. 6d. Heavy wrought shearing iron is obtainable at from 62s. 6d. to 65s. with a moderate demand. Local forges, rolling mills and foundries are all well employed, and normal business is being heavily supplemented by Government armament work.

GLASGOW.—Holidays are general in the West of Scotland this week. Although production will not be resumed till early next week, there is a little more market activity, and prospects of regular employment for plant and men are very good. There is much new constructional work in contemplation, and enquiries are on the market for considerable tonnages. At a meeting in London on Wednesday, it was agreed to advance the home price of both black and galvanised sheets by 10s. per ton.

CARDIFF.—The heavier branches of the iron and steel industry continue very active, and this week the first of the cargoes of Russian pig iron arrived at Swansea. It is reported that the contract with the Soviet Government is for 100,000 tons, and that of this quantity approximately two-thirds is to be delivered to the South Wales steel makers. There is some dissatisfaction amongst the local makers that they are to accept this iron through an English firm instead of having been allowed by the Federation to make purchases direct and on their own terms. Conditions on the tinplate market are a little easier, and shipments at Swansea last week totalled only 48,570 boxes compared with 63,181 boxes the previous week. There is a good demand, however, for sheets (other than galvanised sheets for export), for tubes, plates and wire rods. Prices are unaltered.

OTHER METALS

COPPER.—The market again improved, standard cash showing a gain of 15s. on the week. Although there was a considerable increase in demand, the factor mainly responsible for the movement was the rise in the United States domestic quotation from 9.50 to 9.75 cents per lb. The latter increase had been anticipated and, up to the date of the change, sales in July amounted to some 146,000 short tons, against an abnormally low figure of 16,500 short tons in June. But this raising of the American price seems rather untimely, since American consumers are still well stocked, while the next few weeks are likely to witness a seasonal slackening of demand. The chances therefore are that the United States market will experience a period of extreme dullness in the near future.

Sales on the London Metal Exchange: 2,100 tons on Monday, against 600 tons last week; 3,600 tons on Tuesday, against 775 tons last week; 2,700 tons on Wednesday, against 1,050 last week.

Domestic spot was quoted at 9.22½ cents per lb. in New York on Wednesday, against 9.02½ cents a week ago and 8.95 cents a month ago. Wednesday's official closing price for standard cash in London was £37 13s. 9d. to £37 15s., compared with £36 18s. 9d. to £37 a week ago. Stocks of refined copper in British official warehouses at the end of last week, at 54,643 tons, show a decrease of 317 tons, while stocks of rough copper, at 3,191 tons, show a decrease of 276 tons on the week.

LEAD AND SELLER.—In response to a good general demand, lead prices experienced a sharp rise, and closed on Wednesday at the week's best. According to the *Metallgesellschaft*, world lead smelter output totalled 128,054 metric tons in May, against 124,143 tons in April; the daily rate of production was, however, reduced by 7 tons to 4,131 tons in May. Spelter also scored a rise this week. Partial responsibility for this movement is attributed to the hope that the recent statement of Sir Robert Horne in favour of a higher import duty on zinc might act as a stimulus towards the re-establishment of the Cartel. But, in the absence of definite news on this matter, the outlook for spelter remains obscure.

Sales of lead on the London Metal Exchange: 1,550 tons on Monday, against 800 tons last week; 2,100 tons on Tuesday, against 550 tons last week; 2,100 tons on Wednesday, against 550 tons last week. The New York quotation on Wednesday was 4.60 cents per lb., against 4.60 cents a week ago and 4.60 cents a month ago. The official closing quotation in London for soft foreign for shipment during the current month was £16 12s. 6d. per ton, compared with £15 7s. 6d. a week ago.

Sales of spelter on the London Metal Exchange: 800 tons on Monday, against 500 tons last week; 800 tons on Tuesday, against 325 tons last week; 750 tons on Wednesday, against 200 tons last week. Wednesday's quotation in East St. Louis was 4.80 cents per lb., against 4.75 cents the week before and 4.85 cents a month earlier. Wednesday's official closing quotation in London for "good ordinary brands" for shipment during the current month was £13 17s. 6d. per ton, against £13 8s. 9d. last week.

TIN.—Contrary to the tendency of the other principal non-ferrous metals, tin showed weakness. Uncertainty concerning the outcome of the negotiations between the Tin Committee and Siam—which began on Monday and were adjourned on Tuesday—and the anticipation of higher stocks at the end of this month, were the chief reasons for the reaction. American consumers have bought very little recently and without an increase in United States interest in the market the present dullness will with difficulty be dispelled.

Sales of tin on the London Metal Exchange: 190 tons on Monday, against 475 tons last week; 150 tons on Tuesday, against 175 tons last week; 170 tons on Wednesday, against 190 last week. The New York quotation on Wednesday was 44 cents per lb., against 44.12½ cents a week ago and 42.75 cents a month ago. Wednesday's official closing quotation in London for standard cash was £189 15s. to £190 5s. per ton, compared with £192 10s. to £193 a week ago. Stocks of tin in London and Liverpool at the end of last week totalled 575 tons, a decrease of 8 tons on the week.

OTHER NON-FERROUS METALS.—Among other non-ferrous metals, aluminium ingots and bars for home delivery were again quoted at £100 per ton, and rolling billets at £102 per ton. Nickel, for home and export, at £200 to £205 per ton, remains unchanged. Quicksilver, on the spot, was quoted at £11 19s. to £11 19s. 6d. per flask of 76 lb., against £12 2s. 6d. last week. Chinese antimony was again quoted at £54 per ton ex warehouse, duty paid. Chinese wolfram for July–August shipment was quoted at 26s. 6d. to 27s. per unit, c.i.f., as against 26s. to 27s. last week. Platinum (refined) was held at £8 per ounce.

TEXTILES

COTTON.—Manchester.—See-saw movements have taken place in cotton prices. American quotations are easier as compared with a week ago, but Egyptian have hardened. The technical position of American cotton, however, remains strong. There continues an active demand, and spinners throughout the world are consuming the raw material on a bigger scale than for a long time. Future movements will depend largely upon weather advices from the American belt. With regard to Egyptian cotton, speculative operations have pushed up prices, which are generally higher than at any time this year. The activity has been due to reports that the Egyptian crop, and especially Sakel cotton, will be smaller than anticipated.

COTTON PRICES

	1936				Corresponding Date	
	July 1	July 8	July 15	July 22	1934	1935

The larger inquiry in cloth for abroad has been maintained. A favourable feature is that buyers have been more disposed to pay the higher level of prices. An interesting development has been the larger inquiry and freer buying for India, and it is reported that

clearances in the native bazaars are improving. There has been a fair turnover for Java and Singapore, while a steady demand has been about for Central and South America. Egypt has been very quiet, but more orders have been placed for the Near East. There has not been any slackening off in demand for the Empire markets, and steady buying has taken place for Australia. Quite a number of manufacturers, as a result of the contracts booked during the last few weeks, are now presenting a firmer front to buyers. In the yarn section there has been more business in coarse and medium American counts, but it has again been a struggle to obtain satisfactory prices. Business in Egyptian descriptions has been patchy, but latterly some sellers have booked more orders.

WOOL.—Bradford.—The firm finish last week of the fourth series of Colonial sales sent all buyers home feeling that the raw material was very sound. Prices responded to the increased call for wool on the part of the Continent, Russia being a very active bidder during the second week; there is a reasonable prospect that she will continue buying either here or in Australasia. Good merinos recovered the initial fall, while medium crossbreds particularly rose 1d. per lb. on opening rates. Apart from a little ease in greasy crossbreds, prices recovered well, most classes selling on a full parity with the close of the May series. This has greatly inspired home manufacturing districts, and during the past fortnight there has been considerable buying in new cloths for next spring and summer. The ease during the first week of the series stimulated the placing of large orders for men's wear in particular, and retail clothiers having done a reasonable summer trade, the outlook for the coming winter is encouraging.

The home trade is credited with taking 42,000 bales, the Continent 30,000 bales, while the carry-over is 45,000 bales. The best feature is the steady decrease this year in old stocks of New Zealand crossbreds, and it is to be hoped that by December 31st all accumulations will be in the hands of users. The outlook is certainly very good for crossbreds. Turning to manufacturing areas, mills are fairly well employed, especially in the woollen section. Among dress goods manufacturers in Bradford and district many looms are idle, while some spinners are only working three days per week. A little uneasiness is felt regarding the reception new dress goods meet with for the next spring season, but new designs are being made on a large scale. Taking a general all-round view of the wool textile position, conditions are sound and healthy.

GRAIN MARKETS

WHEAT.—The rise in prices has been resumed. It is confirmed that the Canadian wheat crop has been seriously damaged, practically no rainfall having been reported this week. In consequence of the heavy reduction in available supplies of wheat, the market is likely to be sensitive to any adverse reports from Australia or Argentina in the near future.

On Wednesday last, "July" futures were quoted in Chicago at 104½ cents per bushel, against 104½ cents the week before and 95½ cents a month ago. Quotations in London, Wednesday: No. 1 Northern Manitoba, ex ship, 36s. 6d. per 496 lbs., against 35s. a week ago; No. 2 Northern Manitoba, ex ship, 36s., against 34s. 9d. a week ago. According to the *Corn Trade News*, total shipments of wheat and flour last week totalled 1,086,000 quarters, against 980,000 in the previous week and 967,000 quarters in the corresponding week a year ago.

FLOUR.—Following the recent advance in prices, business has been quieter. Wednesday's London quotations (excluding quota payments) were: Straight run, delivered Home Counties, 30s. per 280 lbs., against 30s. a week ago; delivered inner London, 29s. 6d., as compared with 29s. 6d. a week ago. Manitoba patents, ex store, 27s. 6d. to 29s., against 26s. 6d. to 28s. a week ago. Australian, ex store, 23s. to 23s. 6d., against 23s. to 23s. 6d. a week ago.

BARLEY.—Prices of imported feeding descriptions have continued to advance, but sales of English barley are now negligible. "July" futures were quoted at 50½ cents per bushel in Winnipeg on Wednesday, against 53½ cents a week ago and 39½ cents a month ago. Quotations per 448 lbs. in London on Wednesday were: "English feed" at farm, 25s., as against 24s. a week ago; "English malting," at farm, not quoted.

OATS.—On Wednesday, "July" futures were quoted at 38½ cents a bushel in Chicago, against 37½ cents a week ago and 29½ cents last month. Quotations in London, Wednesday: "English Black," at farm, 20s. 6d. per 336 lbs., against 20s. a week ago; "English White," at farm, 20s. 6d., against 20s. a week earlier.

MAIZE.—The market remains strong, the principal factor at the present time being the weather in the United States. A crop failure in that country would necessitate substantial imports, whereas further rains in Argentina would merely retard the movement of the crop and affect its quality. "July" futures were quoted on Wednesday at 94½ cents per bushel in Chicago, against 85 cents a week ago, and 67 cents last month. Quotations in London,

AMERICAN WHEAT MARKETS.—The following table shows wheat quotations for selected weeks in 1935-36, with comparative figures for 1934:—

NEAREST FUTURE	Jan. 3, 1934	Jan. 2, 1935	July 24, 1935	Dec. 31, 1935	July 15, 1936	July 22, 1936
Winnipeg (No. 1, Manitoba)	85½	82½	81½	84½	93½	92½
Chicago (No. 2 Winter)	84½	88½	85½	75½	104½	104½

OTHER FOODS

BACON.—Arrangements have been made by the Board of Trade, as a temporary measure, for the importation of additional supplies amounting to 12,000 cwt., from foreign sources. Half of this is to be shipped immediately and the other half to be spread over the following two weeks. Meanwhile, the market remains firm at the recent advance. The official quotations (per cwt. for No. 1 Sizable) which formed the basis for dealings on the London Provision Exchange this week were: English, 91s. to 92s.; Canadian, 85s.; Danish, 94s.; as against 88s. to 90s., 82s. and 91s. last week. Arrivals in London last week included Danish, 13,779 bales; Canadian, 4,639; Dutch, 2,465; Lithuanian, 1,679; and Polish, 2,561, as against 14,156, 4,436, 2,293, 1,886 and 2,536 respectively in the previous week.

BUTTER.—The market has again displayed a firm tone this week. Quotations (per cwt.) on the London Provision Exchange on Wednesday were: New Zealand, finest salted, 117s. to 119s.; Australian, choicest salted, 116s. to 117s.; Danish, 128s., compared with 116s., 115s. and 128s., respectively, a week ago.

CHEESE.—The market has been about steady. Quotations (per cwt.) on the London Provision Exchange on Wednesday were as follows: English, factory, 56s. to 58s.; Canadian, finest coloured, 64s.; and New Zealand, finest coloured, 61s. 6d.; against 54s. to 57s., 62s. to 64s. and 62s., respectively, a week ago.

COCOA.—The spot quotation in New York on Wednesday was 6½ cents per lb., as against 6¼ cents per lb. last week. In London, on Wednesday last, good fermented new crop, "October-December," was quoted 28s. 6d. per 250 kilos., c.i.f. Continent, against 28s. a week ago. Last week's movements of cocoa in London were as follows: Landed, 877 bags; delivered, for home consumption, 5,792 bags; exported, 34 bags; stocks, 174,685 bags, against 175,807 bags a year ago.

COFFEE.—The New York spot market continued to display strength, but in London business was limited. On Wednesday, Rio No. 7 (cash) was quoted at 7½ cents per lb. in New York, as compared with 7½ cents per lb. last week and 6½ cents per lb. a month ago. Movements of coffee in London last week were as follows: Brazilian, landed, 14 cwt.; delivered, for home consumption, 81 cwt.; exported, 18 cwt.; stocks, 10,118 cwt., against 16,677 bags a year ago. Central and South American, landed, 432 cwt.; delivered, for home consumption, 5,054 cwt.; exported, 598 cwt.; stocks, 107,023 cwt., against 165,315 packages last year. Other kinds, landed, 1,014 cwt.; delivered, for home consumption, 3,574 cwt.; exported, 922 cwt.; stocks, 153,241 cwt., against 177,932 packages last year.

EGGS.—Prices were slightly higher for best selections, with cheaper eggs unchanged. At Smithfield on Wednesday, English (ordinary packing, Grade I, about 15-15½ lb.) realised 14s. to 14s. 6d. per 120, as against 13s. 6d. to 14s. last week, while Danish (15½ lb.) made 9s. 9d. to 10s. 6d. per 120, as against 9s. 6d. last week.

FRUIT.—Business at Covent Garden remains moderately brisk, states *The Fruitgrower*, supplies generally going out fairly well. An interesting feature has been the re-entry of plums and pears, with a few peaches, from Italy in consequence of the raising of sanctions. A fair showing of English green apples has been on the market, while the Australian apple trade has been steady. Home-grown cherries cleared fairly well, but many samples were ruined by rain. Gooseberries held their price and demand for black and red currants was good. English grapes and peaches were also a good line, but strawberries were inclined easier. Prices of South African oranges were higher and melons again sold well.

MEAT.—The improvement at Smithfield noted last week was not maintained and prices were easier. On Wednesday last, Argentine chilled hindquarters were quoted at 3s. 8d. to 4s. 2d. per 8 lbs., as compared with 4s. 4d. to 4s. 8d. a week ago. New Zealand frozen mutton was 3s. to 3s. 8d. per 8 lbs., against 3s. to 3s. 8d. a week ago. According to the Smithfield Market official report, supplies during last week amounted to 8,630 tons, an increase of 325 tons on the corresponding week last year. Beef and veal accounted for 4,700 tons, mutton and lamb 2,826 tons, and pork and bacon 661 tons, as compared with 4,480, 2,947, and 457 tons, respectively, in the same week of 1935.

PEPPER.—Wednesday's spot price for black Lampung (in bond) was 2½d. per lb., against 2½d. a week ago. Movements of pepper in London during the past week were as follows: Black, landed, 3 tons; delivered, 7 tons; stocks, 1,755 tons, against 1,827 tons a year ago. White, landed, nil; delivered, 12 tons; stocks, 12,261 tons, against 18,602 tons a year ago.

RICE.—The spot price of Burma No. 2, cleaned, new crop, was 8s. 6d. per cwt. ex warehouse on Wednesday, as compared with 8s. 6d. per cwt. a week ago. "August-September" in singles to Continent and U.K. was quoted at 7s. 9d. per cwt., against 7s. 7½d. last week. Movements in London during the past week were as follows: Landed, 301 tons; delivered, 255 tons; stocks, 2,035 tons, against 9,715 tons a year ago.

SUGAR.—The London market has been quiet, but steady. American prices remain unchanged. The spot price in New York on Wednesday was 3-70 cents per lb., as compared with 3-70 cents per lb. last week and 3-75 cents per lb. a month ago. Wednesday's sales of raw sugar in London included December delivery at 4s. 5d., against 4s. 5½d. a week ago. The movements of raw sugar at public warehouses in London and Liverpool last week were as follows: Imports, 9,537 tons, against 21,350 tons last week and 13,178 tons in the same week of last year; deliveries, 17,140 tons, against 18,993 tons last week and 15,132 tons last year; stocks, 129,044 tons, against 136,647 tons last week and 127,281 tons last year.

TEA.—The following table shows the average prices (compiled by the Tea Brokers' Association) of tea sold in Mincing Lane on Garden Account in recent weeks:—

Week ending	Northern India	Southern India	Ceylon	Java	Sumatra	Africa	Total
July 18, 1935	d. 12-15	d. 12-11	d. 13-06	d. 10-42	d. 10-01	d. 11-32	d. 12-23
June 11, 1936	12-15	12-11	13-06	10-42	10-15	11-48	12-40
June 18, 1936	12-24	12-23	13-30	10-22	9-95	11-44	12-25
June 25, "	12-20	12-28	13-13	10-17	9-95	11-21	12-18
July 2, "	12-20	12-28	12-98	10-26	9-89	11-26	12-22
July 9, "	12-19	12-10	13-04	10-33	9-89	11-32	12-23
July 16, "	12-15	12-11	13-06	10-42	10-01	11-51	12-41
July 18, "	12-27	12-07	13-35	10-34	10-09	11-51	12-41

This week's offerings at the public auctions in Mincing Lane comprised 28,389 packages of Indian and 25,123 packages of Ceylon tea. There was an active demand for common Indian grades at generally firm rates, but medium and better qualities were fractionally easier. At the Ceylon sales, on the other hand, only the best quality descriptions maintained recent rates, quotations for the majority showing an easier tendency.

VEGETABLES.—Prices in general were rather low at Covent Garden this week, says *The Fruitgrower's* report, supplies being ample for requirements. Trade in tomatoes was rather easy and cucumbers also declined. Green peas eased on heavier supplies and as a result of competition from runner beans. Cabbage and cauliflowers have made steady prices, but quotations for turnips declined. Meanwhile, business in potatoes at the various London markets has not been good. Ample supplies encountered a slow demand and prices were marked down. At the London Borough market on Tuesday King Edward made 7s. to 8s. per cwt., while English Epicure were quoted at 5s. to 5s. 6d., against 6s. to 7s. last week.

MISCELLANEOUS COMMODITIES

VEGETABLE OILS AND OILSEEDS.—Business in most sections is quiet, but the undertone is steady. Linseed is again subject to adverse conditions in regard to the newly sown linseed in the United States, and although there has been some reaction in Plate linseed the market is steady. Indian shippers' quotations have been advanced in the expectation of an improved future demand and are too high to tempt English crushers to buy. The heat and drought have undoubtedly had a serious effect upon the new crop in America and this is confirmed by official reports, which place the probable yield at 237,000 tons although private estimates suggest about 200,000 tons. These figures, however, are subject to revision when the time for harvest approaches. In Argentina, weather conditions vary considerably and are not favourable on the whole to the sowing of the new seed. Argentine shipments are on a moderate scale. The quantity now afloat for Europe is 136,200

tons (including 34,800 tons from India) or 10,000 tons less than last week. That afloat for the United States has increased to 6,000 tons against 11,000 tons a year ago. Linseed oil is easier and about 10s. per ton down on the week. Current value ex Hull for July-August delivery is around £26 10s. per ton, with later positions at a small discount. Cotton oil is firm in sympathy with America. Egyptian crude oil is held for £26 10s. and refined for £28 10s. per ton prompt. Old crop Egyptian cottonseed is scarce and dear. Business in new crop October landing for Hull is reported done at £7 5s.

RUBBER.—Despite the continued decline in United Kingdom stocks, the market was a shade easier this week. For this tendency,

the fear of renewed labour troubles in Akron tyre factories was mainly responsible. American prices also showed weakness. The spot price in New York on Wednesday was 16½ cents per lb., compared with 16½ cents per lb. a week ago and 15½ cents a month earlier. Wednesday's official buyers' price for standard ribbed smoked sheet on the spot in London was 7½d. per lb., as against 7½d. on the corresponding day a week ago. In forward positions, business has been done at 7½d. for "October-December" shipment, as against 7½d. to 7½d. a week ago. Stocks in London and Liverpool at the end of last week totalled 116,975 tons, against 119,095 tons a week earlier. A year ago stocks amounted to 172,184 tons.

THE FINANCIAL NEWS

Special articles due to appear next week on the Leader Page of THE FINANCIAL NEWS are as follows:

MONDAY, July 27.—ARGENTINE RAILS.—The factors affecting the current and prospective earnings position are many and complicated—the new exchange remittance rate, the traffic trend, the terms of renewal of the Roca agreement. This article relates them all to the profit prospects of the individual companies and the earnings on the individual stocks, giving general conclusions and indicating which stocks offer most scope for the investor.

TUESDAY, JULY 28.—ANGLO-AMERICAN CORPORATION.—Our special Mining Correspondent, "MINOTAUR," deals this week with one of the big mining finance houses, which has recently been in the forefront of the news.

WEDNESDAY, JULY 29.—COMPANIES AND THEIR PROFIT-EARNING CAPACITY, No. 21.—HUDSON'S BAY.—This article discusses the short and long term prospects of a concern which has already turned the corner in marked fashion under reorganised management.—"The Company of Adventurers of England Trading into Hudson's Bay."

THURSDAY & FRIDAY, JULY 30 & 31.—BRITAIN'S TRADE PROBLEM IN THE FAR EAST.—The recent protracted visit of Sir Frederick Leith-Ross to China and Japan has stimulated interest in, and increased general knowledge of, this country's problems in the Far East. These two articles by our Special Correspondent in the Far East survey in detail Britain's business prospects in this part of the World—China's economic future, the nature and effects of Japan's China policy, and the overriding problem of Britain's relations with Tokyo in regard to Chinese questions.

THURSDAY: Britain and China.

FRIDAY: Britain and Japan.

A SESSION OF DISAPPOINTMENTS

THIRTEEN years ago Mr Baldwin succeeded to the highest office in the State in a Parliament elected on the slogan of "Tranquillity." At the close of this first session of the fourth Parliament in which Mr Baldwin has taken the helm of Government—possibly the last before he hands it over to a successor—we have to ask ourselves how the ship of State has fared in storm and stress under the guidance of one fitted by temperament and inclination to sail in quiet waters. For the ceremonial occasion the Prime Minister remains unsurpassed, and at the time of the King's death, and again this week in his words to our Canadian visitors, he voiced with perfect understanding the simple sentiments of the people. But when we ask how Britain's prestige stands to-day, what has happened to the solidarity of the nation so strikingly in evidence last September and October, how the policies have been fulfilled for which the nation voted so overwhelmingly in November, and what is the temper of the great majority returned at the general election—to these questions the answers are very much more dubious. As the House of Commons disperses for the holidays, members of all parties are very conscious that there are very few good marks in the session's report and a lamentable number of failures and lost opportunities.

This verdict is best illustrated by the standing of the Government itself. Mr Baldwin had a great opportunity to present to the country and to the world the spectacle of a strong and united Cabinet, and by so doing to prove that democracy had a conclusive and crushing answer to the much vaunted and fashionable claims of dictatorship. This opportunity has been missed. Instead, we have seen a divided Cabinet turning from side to side and seeking refuge in expedients and temporisation. In Parliament itself the Conservative battalions have preserved order in the division lobby, but on the floor of the House former Conservative leaders, with great names, have given the Opposition lessons in every kind of attack on the Government, from sniping to frontal assaults.

This dwindling reputation has occurred in a setting that in normal circumstances would have created in the public mind a benevolent attitude towards the Government in power. Economically the country has enjoyed not merely continued but increasing prosperity, aided by a deliberate

policy of cheap money. Unemployment has fallen, and the Government has had the great advantage of an expanding revenue. In this connection perhaps the most courageous single act of the Government is that in the Budget it did not hesitate to bring the country face to face with the consequences of re-armament, and to increase taxation. But even in this sphere there is no sign that any plan has been thought out by which our economic recovery can be used—as it should be used—to help in conjuring away the gathering political dangers that threaten to destroy it.

For the rest, the major items in the legislative record of the session in home affairs are a story of half measures, of compromise and of concession. Thus, the school-leaving age, after a decade and a half of delay, is nominally to be raised to fifteen. But the Bill has turned out to be one which achieves nothing before September, 1939; which then makes 14½ the effective school-leaving age; which leaves every local authority the power to exempt children of that age from school attendance if their labour is deemed necessary for the home or for the district's labour supply. Again, the Government, after introducing a Coal Mines Bill to give the Reorganisation Commission compulsory powers, capitulated to the coalowners and withdrew their Bill. Meanwhile, the coal consumers have been left to bear the burden of higher prices to offset the increase in miners' wages. In yet another direction, the Government—by the devious channel of the Finance Bill—conferred powers on the Iron and Steel Federation which enable it to relax the import quotas for foreign iron and steel, to distribute the extra supplies, and even to permit their importation at lower duties. Finally, a spate of Orders and Bills has prolonged the Government's grants of largesse to agricultural producers and to tramp shipowners; and the beet sugar industry has been statutorily welded into a vested interest enjoying the right to levy a tax on the public for a period of five years—in opposition to the recommendations of the Greene Committee.

Less objectionable have been those Bills which have regularised tithe, air navigation and the Unemployment Assistance Board's operations. The Tithe Bill is a delicate and complicated adjustment of conflicting interests; and though the Government might well have used more public

money to shorten the period of tithe amortisation, and to soften the blow on the Church, the end of an anachronistic burden on land ownership is in sight. The Air Navigation Bill evoked reasonable criticism of the Government's partiality for Imperial Airways and of the duration of the subsidy; but a measure of co-ordination in the realm of civil air transport was overdue, and is now promised. Finally, new unemployment assistance regulations have appeared. Despite the Labour Party's intense hatred of the "means test" as a criterion of need for assistance, and despite criticisms that the Board's officers should not be given such wide powers for assessment of need, there is a general feeling that the Board has learned one lesson, and that its officers are now placed on their mettle to make the new system work equitably.

In short, the session's record may be briefly summarised as "the mixture as before." Its shortcomings, had it stood alone, would have done little or nothing—in a period of expanding trade—to shake the position of a Government which was one of the strongest of modern times when it took office. But in the present situation of the world the items of a programme such as this are of secondary importance compared with international affairs. There, the great issues of peace and war, and the struggle for survival of democracy as an essential principle of modern civilisation, are still at stake.

The shock to public confidence of the Hoare-Laval proposals, so soon after the election, was profound. But Signor Mussolini's victory over the League, and the British Government's tame initiative in abandoning the policy of sanctions were felt as a diplomatic defeat and a national humiliation. If, as now appears, the Government never intended to run the risk of war with Italy by intensifying sanctions to a point where they would become effective, why did they ever start out on what was to prove only "a half-hearted and half-headed" policy? And what is their policy now? Is it to acquiesce in the tremendous swing-over in European opinion towards the dictators; to retreat to the Western tip of the Continent of Europe and hope that trouble will take another direction? These and other disturbing questions still await an answer.

The Government's failure to implement in the international field the policy on which they fought the election has naturally led to an exacerbation of party feeling. Indeed, the Labour Party, and certainly the small section of Opposition Liberals, seemed to feel British humiliation more than many Conservative members, some of whom had openly espoused the cause of an aggressive Fascism. But that was only because the Labour Party and the Liberals had identified British interests and British policy with the full and unqualified support of the ideals, principles and honour of the League. The Opposition, Liberals and Labour alike, have reason enough, after the Government's behaviour in the last eight months, to call for greater precision in the Government's foreign policy, to scrutinise the risks which hang over the people of this country, and to demand better assurances before they hand the Government a blank cheque for re-armament. Yet the Opposition has not been able to capitalise the prevailing dissatisfaction. The views of the Labour Party are still hesitant between pacifism and whole-hearted support of sanctions, while its leaders and its internal policy command too little confidence to enable it to rally a majority of the country to its support.

The result is apathy. Except at the recent Derby election, where the Labour Party had an exceptional candidate and the support of Left and Centre opinion far beyond the limits of its own ranks, the by-elections show a lower total poll, a succession of heavy reductions in the Government vote, and even slight falls in the Labour vote. It is undeniable, as *The Times* remarked on Monday, that there is a growing disposition in the country to cry "A plague on both your houses!"

This is an ominous sign; for apathy is an open invitation to would-be dictators. If our politicians cannot reveal higher qualities of leadership and inspiration, there is a real danger that they may find themselves faced not merely with troubles abroad, but with a weakening of political stability at home. On that stability our influence in world affairs depends.

AMERICAN RECOVERY

THE attention of America is on politics, and between now and November 3rd little else will be heard. The subject-matter of politics in America, as elsewhere, is almost entirely economic, but the economic issues are couched in strangely general terms. The Republicans are going to battle under the banner of "Liberty and the Constitution" (and it may be added that their concept of liberty is almost as exotic as the Constitution) while the President is once more raising the standard of "the Forgotten Man" against the "economic royalists." The one specific economic issue, that of recovery, is being thrust somewhat into the background. Governor Landon has, it is true, accused Mr Roosevelt of "fumbling with recovery." But neither side is making a major issue of recovery, neither side is uttering threats of grass growing in the streets if the other is elected. The truth seems to be that the degree of recovery since 1933 has been sufficient to prevent the Republicans from attacking Mr Roosevelt on that score, but not enough to serve as the basis for any very triumphant boasts on the President's part. That recovery has ceased to be a hot party issue is itself a very significant economic fact, for it indicates that the period of acute apprehension is past. And when that state of mind is reached, recovery can be said to be firmly established.

The current crop of business indices is almost uniformly favourable. Most of the indices, that is to say, are moving upwards, although some of them are still very low and some of them are moving very slowly. The official index of industrial production for May was above the base level of the average of 1923-25; and the June figure, expected in the next few days, will probably show a further increase. The index of Business Activity published by the *New York Times* (which has, it is true, a somewhat narrow and volatile composition) has in recent weeks exceeded the calculated "normal" trend line. The profits of a number of large corporations in the first quarter of 1936 were no less than 42.3 per cent. higher than in the first quarter of 1935. In terms of the average of 1925-28, this represents a rise from about 72 per cent. to about 88 per cent. The production of automobiles in June was the highest ever recorded for that month. The value of retail trade in the first five months of the year was more than 10 per cent. higher in 1936 than in 1935. The volume of merchandise shipped on the railways shows an almost equal rate of increase, although this particular index is still a long way below the average even of a period as long ago as 1923-25.

These examples, though they do not cover the whole field, are sufficient to show that the continued movement of recovery is both widespread and substantial. It is no longer a question of searching for bright spots in a dismal picture. The favourable general outlook can be taken for granted and attention can most profitably be directed to those elements which give rise to disappointment or anxiety.

One of these is the still formidable total of unemployment. Much is made in current American comment of the fact that the index of industrial employment has lagged behind that of industrial production. In May, for example, employment stood at 85.7, while production was 100. This divergence, however, is not so startling when it is remembered that the base for both indices is the average of 1923-25. The divergence amounts to about 11½ per cent., which would not seem excessive as the accumulation of a dozen years of technical progress. Nevertheless, though fears of permanently mounting technological unemployment may be groundless, it is undeniable that the volume of unemployment is very large—exactly how large nobody knows. The American Federation of Labour estimates a total of some 10 millions, but this is almost certainly too large. Another private estimate is about 4,000,000 (on a definition of unemployment closely corresponding to the British), but this is certainly too low. The figures of persons receiving relief are still virtually as high as ever. But relief, on the American definition, and unemployment, on the definition usually accepted in Great Britain, are rather different matters. In the absence of any accurate information on the extent of unemployment (i.e. destitu-

tion caused by the lack of wage-employment) it is scarcely possible to do more than aver that the problem exists.

The problem of agricultural poverty, on the other hand, is neither new nor unscarred by experimentation. There were hopes earlier in the season that the cycle of dry years was over and that normal rainfall could be expected. Those hopes have been disappointed, for 1936 is to be another dry year. The afflicted areas are much the same as those which suffered most in 1934—that is to say, the "prairie States" between the Mississippi and the Rocky Mountains—though the present drought has kept rather more to the north than some of its predecessors. It is already officially pronounced to be worse than that of 1934, worse, at least, in its effects, since men and soil are alike becoming progressively exhausted. This drought has created the enormous problem of feeding perhaps a million more destitute rural families than were already on relief. The technical difficulties of providing relief in rural areas are greater than in the cities, but the Administration is taking the most energetic steps to provide relief work, or at least food, in the affected area—as well it may, since the drought States are the centre of Governor Landon's strength. Behind the immediate problem of relief, there is the much larger problem of changing the whole economy of the prairies. It is now almost universally recognised to have been a tragic mistake to break the sod of these States for grain crops. But to depopulate whole areas is not an easy task, especially when they are sovereign States with electoral votes.

It would be easy, however, to exaggerate the effect of the drought on the purchasing power of the agricultural population as a whole and *a fortiori* on the progress of recovery in general. What one farm family loses by drought, another may very well gain in enhanced prices. It is estimated that the total cash income of the farmers in the first six months of the year was some \$325 millions, or 11 per cent., more than in the first half of 1935, when it already showed a substantial increase from the disastrous level of 1932. The drought is a reminder that the permanent problem of American agriculture has not yet begun to be solved. But in the immediate future it is unlikely to disturb the progress of American recovery.

The greatest laggards in recovery are still the construction trades. The steel industry is doing much better, in volume at least, though its outlook is still clouded by the threat of a strike. The building industry, on the other hand, is still very inactive. The indices of contracts awarded show considerable improvement in comparison with last year, but they are still far below normal. In the worst year, building activity was only about 20 per cent. of the pre-depression level, and though it has since doubled it has only made up one-quarter of the leeway. There can be little doubt that a very large demand for housing is accumulating, and that the efforts of the Federal Government have considerably eased the path of the would-be mortgagor. But demand has so far failed to become effective, and rents have not caught up with building costs. Until they do, it is unlikely that a building boom will develop. But it is even less likely that the present rising curve will turn downwards.

The last field for apprehension is in finance. The announcement of the increase in reserve requirements for the member banks of the Federal Reserve system has had no noticeable effect on the credit situation in general, although rates have hardened in the money market. Excess reserves will still be large even after the increase in reserves becomes effective, and the removal of uncertainty about the Board's intentions may even have an inflationary effect. The Federal Budget is further from balance than ever. The financial year just ended, thanks largely to the Veterans' Bonus, closed with a deficit (excluding debt retirements from expenditure) of \$4,361 millions, which is \$731 millions more than the previous record. There is little sign as yet of any unhealthy expansion of credit, but with enormous excess reserves in existence and a very large Budget deficit the possibility of undue expansion, sooner or later, remains.

The immediate outlook for American recovery, altogether, is undoubtedly favourable. There are many fundamental problems to be faced. The banking system is as unstable as ever—if not more so. No progress has been made towards the necessary reorganisation of agriculture to meet

a changed world situation. Less than none has been made towards adapting the political and constitutional structure of the country for the solution of these problems. A permanent policy for succouring the victims of erratic industrial progress has yet to be devised. No one would underrate the importance or the magnitude of any of these problems. But none of them seems likely to threaten the immediate future of the recovery movement. America can safely turn its attention to the hustings.

OUTLOOK FOR SHIPPING

FUNDAMENTALLY the world's shipping problem is similar to the difficulties of many other industries. The rapid shrinkage in the volume of international trade after 1929 was accompanied by a corresponding fall in the demand for carrying capacity. Since it was impossible to reduce the supply of shipping tonnage as fast as the decline in demand, a fall in freight rates and in the profitability of shipping companies was inevitable. Two factors, however, combined to aggravate and prolong the shipping crisis. Many countries, infected with the virus of economic nationalism, adopted measures tending still further to reduce the volume of overseas trade. Simultaneously, they endeavoured to foster their shipping interests by subsidising both the construction and running of merchant vessels. The recovery of international commerce, consequently, has failed to march *pari passu* with revival in internal trade, and the adjustment of shipping tonnage to demand has been seriously delayed.

A few simple figures may be given by way of illustration. Despite the rapid shrinkage in the volume of international trade after 1929, the world's carrying capacity continued to expand from 68.1 million gross tons in the pre-depression year to 70.1 million gross tons in 1931. Two years thus elapsed between the impact of the depression and the downward turn in the world's shipping tonnage. Incidentally, the volume of British shipping tonnage began to decline in 1930, two years before the capacity of the rest of the world reached its peak. In 1933 the world's shipping tonnage, at 67.9 millions gross, was still only 154,000 tons below the 1929 level. But by that time the volume of international trade was about 25 per cent. smaller than in 1929, and the tonnage of idle shipping capacity amounted to 11.7 millions gross—equivalent to 17 per cent. of the merchant tonnage of the world. Moreover, many of the vessels in commission sailed half empty. Apart from a few sectional agreements, the schemes designed to adjust the supply of tonnage to demand, originating chiefly from this country as the world's largest carrier, foundered on the rock of economic nationalism and vested interests. In the end the British Government decided to follow in the footsteps of other countries by granting a moderate subsidy to tramp shipping and by advancing part of the funds required for the construction of two "prestige" liners for the North Atlantic service.

Since 1933 a slight increase in international trade, combined with the belated reduction in the world's carrying capacity, has resulted in a gradual improvement in freight rates and in the profitability of shipping enterprise. Idle tonnage fell from 11.7 millions gross in June, 1933, to 7.7 millions in 1934 and 5.6 millions, or about 9 per cent. of the world's carrying capacity, in the past year. About one-half of the decline of 6 millions gross in idle tonnage was due to the reduction of the world's carrying capacity from 67.9 millions gross in 1933 to 64.9 millions in 1935. The gradual adjustment of the supply of shipping tonnage to demand has rendered possible closer international co-operation, expressed by the introduction of minimum freight rates on the leading overseas trade routes. The *Economist* index of freight rates has consequently risen by 8 per cent. since June, 1935.

As a result of the advance in rates, coupled with some expansion in the demand for shipping tonnage, the profitability of shipping concerns is slowly improving, and shipbuilders have been able to record a steady increase in the volume of mercantile orders on their books. But, as the following table shows, the burden of the readjustment of shipping tonnage to the lower level of demand has been borne entirely by the United Kingdom:—

BRITISH AND FOREIGN MERCANTILE SHIPPING CAPACITY

BRITISH AND FOREIGN MERCHANT SHIPPING CAPACITY					
	Shipping Tonnage (Thousand gross tons)		British Proportion of World Capacity %	Size of Fleet (1924-26=100)	
June	U.K.	Rest of World		U.K.	Rest of World
1924	19,106	44,913	29.8	99	99
1927	19,309	45,881	29.6	100	100
1929	20,166	47,908	29.6	104	106
1930	20,438	49,170	29.4	106	109
1932	19,672	50,062	28.2	102	111
1935	17,400	47,486	26.8	90	105
1936	17,285	47,779	26.6	89½	106

Source: *Lloyd's Register Book*, 1936-37.

The tonnage owned by the rest of the world in June, 1936, was practically the same as in 1929, while British tonnage had been reduced by 14 per cent. Moreover, while the tonnage owned abroad registered an increase between 1935 and 1936, that of the United Kingdom continued to decline. As a result, the proportion of the world's tonnage owned by the United Kingdom fell from 29.6 per cent. in 1929 to 26.6 per cent. in 1936, compared with 39.2 per cent. in 1914.

Changes in the ownership of the world's shipping tonnage since 1929, apart from sailing ships and barges, are shown in the next table. Excluding the United Kingdom, it will be seen that declines in the tonnages of the United States, France, Germany, Holland and Italy were accompanied by substantial increases in Greece, Norway, Sweden and Japan. Again, three of the last four, with Germany and Italy (where economic nationalism is particularly marked), were alone in registering an increase in shipping tonnage during the past twelve months:—

WORLD'S STEAM AND MOTOR TONNAGE (In thousands of gross tons)

Country	June, 1929	June, 1933	June, 1935	June, 1936
Great Britain and Ireland	20,046	18,592	17,298	17,183
United States (Sea)	11,036	10,088	9,665	9,434
Japan	4,187	4,258	4,086	4,216
Norway	3,218	4,078	3,967	4,054
Germany	4,058	3,888	3,693	3,708
France	3,303	3,470	2,989	2,973

Greece	1,267	1,417	1,711	1,801

World

Source: *Lloyd's Register Book*, 1936-37.

Apart from tankers, lake vessels, ships of less than 4,000 tons gross and tonnage over 25 years old, there remains in 1936 a world tonnage of 30.0 million gross tons (against 30.2 million gross tons in 1935) of large, efficient ocean-going vessels, available for general cargo and passenger purposes.

Our final table reveals that, although the British proportion of the world's total carrying capacity is now only 26.6 per cent., our proportion of large, efficient vessels still exceeds one-third of the world total. Japan, Italy and Norway are the only countries which have secured an

increasing proportion of efficient tonnage during the past twelve months.

LARGE OCEAN-GOING TONNAGE (In thousands of gross tons)

Country	June, 1935 Tonnage	June, 1935 Percentage of World %	June, 1936 Tonnage	June, 1936 Percentage of World %
Great Britain and Ireland	10,899	36.1	10,818	36.1
United States	5,339	17.7	5,148	17.2
Germany	2,259	7.5	2,194	7.3
Japan	2,133	7.1	2,168	7.2
France	1,710	5.7	1,692	5.6
Italy	1,682	5.6	1,840	6.1
Holland	1,479	4.9	1,378	4.6

To-day the prospects of the shipping and shipbuilding industries are not, in themselves, wholly unfavourable. International trade is slowly expanding, especially between countries with depreciated currencies. Replacement demand for shipping tonnage is likely to rise, for the running costs plus fixed charges of new vessels are now below those of many older vessels still in commission. But the share in the demand for new tonnage secured by British builders may not be governed wholly by considerations of relative efficiency. Thus, Germany is building ships for foreign (including British) owners to unfreeze blocked marks. Economic nationalism remains the greatest barrier to a widespread and healthy revival in British shipping. As Lord Essendon pointed out in a lucid address to the shareholders of Furness, Withy and Company, which is discussed on page 229, "every maritime nation seems to be determined to increase its merchant marine, but has hitherto not shown commensurate keenness to increase the trade which those ships are designed to carry." New warships may provide employment (of a specialised kind) for shipyards; but they earn no freights.

GERMANY'S RE-ARMAMENT

1.—FINANCE

(BY A CORRESPONDENT)

GERMAN expenditure on armaments has been much discussed during the past year. The figures given by different newspapers vary from a maximum of about 35,000 million Reichsmarks to a minimum of about 10,000 million Reichsmarks. Mr Winston Churchill, speaking in the House of Commons, recently gave a figure of about 20,000 million marks. The disparity between these estimates is partly due to the German habit of throwing a veil over the actual expenditure on armaments. The Budget is not published, and the exact military expenditure out of State revenues is not known. Official statements on the total indebtedness of the Reich exclude the large amount of "employment-creation bills," on the ground that they are not yet an actual debt. Moreover, the distribution of the sums spent on armaments and on non-military public works respectively is not clearly specified. If to these obstacles are added different views about what should be reckoned as expenditure for military preparations, and different methods of computing the total re-armament cost, it is not surprising that the estimates oscillate between very high and very low figures. Very great discrepancies likewise arise from the exclusion or inclusion, as the case may be, of expenditure on the semi-military organisations or on industrial investments for armament purposes. To get a clear picture it is important to differentiate these various forms of re-armament.

The following discussion is confined to uncontested figures published in Germany and to their consistency with other facts of the general economic situation. Having submitted the statistical material one may leave the reader to take into account the question of the general credibility of the official figures.

Whether 10,000 or 20,000 million marks is the correct figure for German re-armament expenditure, it is at any rate a huge amount to be drawn off from a national income which is much smaller than the national income of England. How has Germany contrived to finance expen-

liture of such magnitude at the bottom of a very severe depression? She has tapped and nearly exhausted three financial sources: (1) she increased actual and "future" short-term debts; (2) she issued long-term loans and sold public assets; (3) she devoted higher proportions of her increased revenues to military objects. These three methods of securing the necessary funds may be briefly described.

(1) The German Institut für Konjunkturforschung has stated that the total amount of short-term bonds issued from 1933 to 1935, after allowing for amortisation, reached about 8,000 million marks. Most of the total of the 3,000 millions are discounted by the Reichsbank, which had in its portfolio about 500 million "employment-creation bills" in December, 1933; about 1,600 millions in December, 1934; and about 2,000 millions in 1935. The Reichsbank deposited in addition about 1,200 millions in the Golddiskontbank (affiliated to the central bank) and about 400 millions in the clearing and conversion fund. The remainder is held by industry, credit banks, savings institutions, etc. The tempo of issue accelerated from 1,000 or 2,000 millions in 1933, to 2,000 or 3,000 millions in 1934, and over 5,000 millions in 1935. General evidence would suggest that the tempo has not been greatly diminished in 1936.

(2) Additional funds came from long-term issues, of which 2,000 millions were placed in 1935 to consolidate a part of the short-term debt. (Another loan of 700 millions was issued in July, 1936.) Loans of 500 to 1,000 millions from the two preceding years have to be added. These 3,200 or 3,700 millions were partly offset by repayment of foreign debts and by the depreciation of foreign currencies in creditor countries, amounting to about 1,500 millions. Thus the total consolidated Reich debt, which declined slightly between 1933 and June, 1935, had risen by December, 1935, by about 1,500 millions. In the same period the officially recognised short-term debt increased from 1,200 millions to 3,000 millions, and the total Reich debt from 12.1 to 14.7 millions. But the "employment creation bills" and "tax credit certificates," which are a future obligation of the Reich, are not included.

(3) Budget figures for 1935-36 not having been published, it is difficult to say how much the Budget contributed to the increased expenditure. In the autumn of 1935, however, the Minister of Finance stated that reduced expenditure for unemployment relief, etc., and increased revenues had expanded his available resources by about 5,000 million marks since 1933. The revenues from taxes and duties show an increase from 5,000 millions in 1933 to 7,200 millions in 1935. How much of this surplus revenue was spent on the Army, Navy and Air Force cannot be precisely ascertained.

Thus, revenue receipts in excess of previous years, increase in the long-term debt, and bill financing, provided an additional sum of at least 15,000 to 17,000 million marks, which has been at the disposal of the Reich for extra military and social works since Herr Hitler came into power. But not the whole amount was used for direct re-armament. Important sums were spent on normal repairs of roads, allowances for residential building, and purely social measures. It seems that we shall not be far out if we put the Government's expenditure on all these items at about 4,000 to 5,000 millions. This sum must be excluded from any estimate of armament expenditure. On the other hand, allocations for subsidising important raw material industries like copper, petrol, iron ore, staple fibre and rubber should be reckoned as for armaments, in the same way as allocations for the strategic roads.

Following the officially recognised figures given by German sources we come, then, to the conclusion that the Reich spent in the period 1933-1935 at least between 10,000 and 12,000 million marks on building up a larger Army, Navy and Air Force, on fortifications and on industrial and other purposes ancillary to re-armament in the widest sense of the term. The real effective value of this enormous expenditure cannot easily be ascertained, because some of the work is done by compulsory labour and such workers are paid wages below normal rates. Certainly, the British Government could not achieve the same real effect by spending the equivalent sterling amount.

There is another question connected with Government expenditure on armaments: the secondary effects on war-

material industries. The Government's methods of building up these industries are various. Armament orders have often been given on condition that the firm should erect new plants in the centre of Germany, prices being so calculated that the additional costs could be covered. The money value of such migration of industries to protected zones cannot be calculated. Secondly, the Government compelled industry to erect new plant, especially for the supply of petrol and textile substitutes. An estimate of the amount of investment in industrial re-armament must contain a still larger element of guesswork than the estimate of the Government's direct expenditure on re-armament. A careful consideration may lead to the following conclusion; the total capital investment (omitting stocks) for the three years 1933 to 1935 amounted to 25,000 million marks (5,300 millions in 1933, 8,700 millions in 1934 and 11,600 millions in 1935). Capital investment of 11,600 millions in 1935 is not very excessive, and after allowances for the lower price level only slightly exceeds the figures of 1928. But this investment now forms a much larger proportion of the national income than before, and the direction of investment was fundamentally altered. The public authorities' acknowledged share in the gross investment rose from 25 per cent. in 1932 to about 50 per cent. in 1935, or absolutely from about 1,000 to 5,800 millions. Of the period's net investment perhaps 5,000 millions may be reckoned as spent on the expansion of armament industries, whereas 17,000 millions were perhaps invested in normal industrial replacements, agriculture, wholesale and retail trade. The addition to stocks of raw material and unfinished goods did not correspond to the increase of fixed capital, since the exigencies of Germany's import and export industries prevented her from replenishing stocks sufficiently. Nevertheless, the value of stocks for industry is probably about 1,000 million marks more than in 1933.

To sum up, it is not an over-estimate to say that the German Government spent between 10,000 and 12,000 million Reichsmarks directly or indirectly on armaments in the years 1933 to 1935; and that industrial re-armament caused an investment of perhaps 5,000 to 6,000 million Reichsmarks. Mr Winston Churchill, supposing that the total capital investment after deduction of investments in residential buildings was devoted to warlike preparations, advanced a figure of 20,000 million marks. But on the basis of German statistics it can easily be shown that a considerable amount of investment did not directly concern re-armament, and that a further amount represented only normal replacement.

The number of persons employed in Germany rose by 2,600,000 between April, 1933, and April, 1934; a further 600,000 between April, 1934, and April, 1935; and another 500,000 between April, 1935, and April, 1936. On the assumption that all these additional workers were paid out of re-armament expenditure at an annual rate of 1,500 marks per head, their total wage bill for the three years would run up to about 14,000 million marks. To this wage bill we must add profits, depreciation and the value of raw materials. This assumption is, of course, an extreme one; but on the other hand, we must remember that many workers formerly employed in producing non-military goods are now producing armaments goods. The armaments boom, however, must have had very considerable secondary effects in stimulating the output of non-armament industries. If we take the facts as a whole, a total sum of 10,000 to 12,000 million Reichsmarks as a minimum figure for armament expenditure is not an unreasonable estimate.

THE HAGUE RULES

AFTER many postponements, the United States Congress this spring passed a measure bringing into operation the international standard conditions for bills of lading known as The Hague Rules. President Roosevelt signed this measure—the Carriage of Goods by Sea Act—on April 16th, and it took effect three months later, namely on July 15th last. As a result, contracts for the carriage of goods by sea, as expressed in bills of lading, are now standardised in the United States, the United Kingdom, Australia, India, British Colonies, Protectorates and

Mandated Territories, and, finally, in Belgium. They should shortly be standardised, also, in a number of other maritime countries, which have been postponing the adoption of the Hague Rules pending the passing of legislation by the United States.

If this hope is realised, the culmination will be seen of a world-wide movement which originated fifteen years ago. The beginnings of this movement were described in the *Economist* of November 19, 1921. Its aim was to put an end to a controversy which had existed for half a century between shipowners and shippers of cargo about the conditions on which goods should be carried by sea. This controversy concerned not only the actual parties to the contract, but also merchants (to whom bills of lading were endorsed), underwriters and bankers. The bankers, especially, who handled large quantities of shipping documents in connection with c.i.f. contracts, were strongly in favour of a scheme which promised far-reaching simplification of their work. Though there had been great diversity in the forms of bills of lading, all had had one leading characteristic. By various kinds of "negligence clauses" they relieved shipowners from liability in respect of the goods carried. When pilferage of goods in transit became rife after the war the controversy over terms of bills of lading became more acute, and shipowners, recognising that the irritation of their customers was bad for business, were disposed to come to a new understanding.

An opportunity was taken to broach the matter at a conference of the International Law Association at The Hague in 1921. The United States already, in its Harter Act, had made the shipowner responsible for safe carriage, but freed him from certain risks. Some of the British Dominions had also adopted similar legislation, and various measures were under discussion in other countries. In view of the prospect of a confusing diversity of legal rules, the bold step was taken of putting forward a scheme for a self-contained set of conditions of carriage to be voluntarily incorporated in bills of lading issued in all countries. All interests and nationalities were represented; and under the tactful chairmanship of Lord Merrivale (then Sir Henry Duke) the details were adjusted and the Hague Rules were offered to the world.

To a considerable extent the experiment succeeded. The Rules making the sea carrier responsible for the period of

the voyage, while freeing him from certain risks of navigation, were incorporated in many bills of lading. But cross currents and sectional objections developed. The mere fact that shipowners had proffered concessions made some traders suspicious, while, conversely, some shipowners feared that they had gone too far and offered too much. The representatives of particular trades were doubtful whether their requirements had been met, and from some quarters came a demand for legislation. Hope of voluntary international agreement gradually faded. The Rules were revised and embodied in an international convention, which each country was left to bring into effect by national legislation.

Accordingly, the relevant countries legislated to that effect. Holland also adopted the Rules, but in a modified form. Other countries continued to discuss the project, but waited for the United States to act. Protracted negotiations ensued to meet the opposition of sectional American interests, conducted under the leadership of Mr Charles Haight of New York. Successive Bills introduced into Congress met with less and less opposition; and, finally, this year, success was achieved. France has also recently legislated on similar lines to those followed by the Netherlands.

At the meeting of the Baltic and International Maritime Conference last month it was stated that countries which accounted for about 60 per cent. of the world's shipping tonnage had accepted the Hague Rules; and 80 per cent. were likely shortly to be governed by one maritime law. Canada will follow the United States; and the Rules will probably also be enacted in the Scandinavian countries and in Italy. Germany and Japan may well follow suit.

Thus the movement for the adoption of the Hague Rules may shortly attain the desired goal of standardisation. For the period of the voyage the responsibility of the carrier-by-sea is prescribed, the insertion of any clause reducing his liability being prohibited. The carrier's responsibility is not to exceed £100 per package or unit, or the equivalent in some other currency, unless a higher value has been declared before shipment. In this way, the interests not only of the cargo owner but also of third parties, to whom the bill of lading may in the course of business be negotiated, are protected by assessment on a basis which cannot be reduced by any qualifying clause. In a world of conflicting legislative restrictions, this is no mean achievement.

NOTES OF THE WEEK

The Government and Foreign Affairs.—The Liberal Party on Monday, the nineteenth Supply day, put down the Foreign Office vote for debate. Mr Eden began by explaining that the absence of an "early and constructive reply" to "certain questions . . . neither acrimonious nor inquisitive" to the German Government had impelled His Majesty's Government to call a further meeting of the three Locarno Powers who had agreed to the London arrangements of March 19th. (The Locarno Conference is discussed in a succeeding Note.) Mr Eden reviewed the new Straits Convention; and then announced that the Government had decided, in view of recent Italian assurances to Greece, Turkey and Yugoslavia that no Italian aggressive designs were harboured against them, to suspend the British assurances to the three smaller Mediterranean Powers. (Mr Eden, in effecting this "climb-down," omitted to state that it was the British Government which first asked for assurances of assistance from these three smaller Powers.) The Foreign Secretary carefully refrained from comment on the Danzig problem, leaving it to Poland; he then passed to the vexed question of reform of the League. Here Mr Eden, despite an urgent request from Mr Lloyd George for a statement of Government policy, could only say that the Government were in favour neither of universal and automatic obligations to take military action nor of shearing the Covenant of all coercive provisions. The Government would not propose "any drastic amendments of the main structure of the Covenant." He excused the lack of a clear Government statement by

reference to the proposed Five-Power Conference, which might be "prejudiced." Mr Eden concluded with an explicit undertaking that the armaments of this country would never be used by the Government "for any purpose inconsistent with the Covenant and inconsistent with the Pact of Paris." On behalf of the Liberals, Sir Archibald Sinclair supported the Government's plans for a general European settlement, but deplored the Government's vague attitude to the future of the League. He urged that "the only complete solution" of the problems facing Italy and Germany "lies in the free movement of capital, goods and men over the surface of the globe." He said he saw no value in a Locarno Treaty supplemented by a Western Air Pact except on two conditions: it must lead to some immediate and substantial measure of disarmament; and it must be immediately followed by a further conference in which Russia could be accorded by Germany, Britain and all the other Powers the same equality and fairness of treatment as Germany was now rightly claiming for herself. The Labour Party refused to vote the estimate, for the same reasons which prompted them to refuse to vote the Defence Estimates: that they had obtained no satisfaction on the Government's foreign policy. This drew a castigation from Sir Austen Chamberlain, who roundly accused Liberals and Labour alike of inconsistency and vagueness greater than the Government's. Mr Eden made a spirited plea for national unity; but on foreign policy the Labour Party divided the House.

A Batch of Government Decisions.—On Wednesday, Mr Eden informed the Commons that Government inquiries had established that Heligoland was now being fortified by Germany, in unilateral contravention of the Treaty of Versailles. The Government's reason for saying and doing nothing about it was that negotiations were on foot which "may lead to a fresh effort at European settlement, in which Germany may play her full part." Therefore, said Mr Eden, "individual matters of this kind, though they cannot pass unobserved, should not be raised at a moment and in a manner which might react unfavourably on the negotiations." Mr Garro-Jones put his finger on the more probable reason for the Government's shyness: Had not the Government condoned German naval rearmament in last year's Anglo-German Naval Agreement? At the same time, Sir Samuel Hoare informed the House of the Government's decision to give the orders for the two new battleships of the 1936 programme, without fixing prices beforehand, to Vickers-Armstrong on the Tyne, and to Cammell Laird at Birkenhead. Their keels cannot be laid till after the Washington Treaty expires at the end of this year. The need for haste in drawing up specifications, which would be ready by October, had necessitated this deviation from the normal practice of drawing up specifications and fixing prices before awarding contracts. The Admiralty would examine the two firms' estimates of costs when specifications were ready; and in the event of disagreement on prices, the First Lord of the Admiralty was to decide. On the same day, but "in another place," in debate on a motion by Lord Ponsonby asking the Government to press at the League's autumn session for the removal from the Covenant of any obligations to use force, the Lord Privy Seal, Lord Halifax, announced that the Government could not formulate any clear policy about League reform till they had had time for the fullest consultation with the Dominions. But he did say that, of "the principles which we wish to serve," the first was that there must be "a collective plan," and the second was that in any such system the purpose must be the prevention of war and the deterrence of aggression. (In this connection he advocated strengthening the "preventive" Article XI by making its efficacy no longer dependent on a unanimous vote.) The third principle was to perfect means of discussing and settling the causes of war. "Especially is this true of those economic maladjustments in the world order to-day." No one yet knows how the Government proposes to serve these principles.

A New Locarno?—The one day meeting of the three West-European Locarno Powers on July 23rd, resulted in a definite plan of action which has been made public. The British, French and Belgian Governments envisage two successive steps: first, a conference in the early autumn between all five parties to the Rhine Pact of Locarno for the purpose of negotiating a new agreement to replace the Rhine Pact, "and to resolve, through the collaboration of all concerned, the situation created by the German initiative of March 7th." If this first step proves successful, it is proposed in the second place to convene a conference with a larger membership for facilitating "the settlement of those problems the solution of which is essential to the peace of Europe." The nature of this ultimate objective is described thus: "The main purpose to which the efforts of all European nations must be directed is to consolidate peace by means of a general settlement. Such a settlement can only be achieved by the free co-operation of all the Powers concerned; and nothing would be more fatal to the hope of such a settlement than the division, apparent or real, of Europe into opposing blocs." This statement of the conditions for a genuine appeasement and a lasting peace in Europe is wholly admirable. But there is a potential contradiction between this clear recognition of the truth that, at any rate for Europe, the problem of peace is indivisible, and the proposal to take two bites at the cherry. This potential contradiction need never, of course, become practical politics; but that depends on the fulfilment of two conditions. First, the Western Powers must be resolute in their purpose to secure a settlement for Europe as a whole; secondly, the Central Powers must be

sincere in entering into negotiations with this intention. Evidence of this danger of incompatibility is already furnished by the shy reception of the three Powers' invitations by the Nazi Government; and there is a noticeable tendency for Rome and Berlin to pose joint conditions before agreeing even to attend the (first) Five-Power Conference. A crisis will arise if, in the preliminary Five-Power conference between the Western and the Central Powers, it becomes evident that the former can persuade the latter to treat with them at the price of a tacit agreement, on the Western Powers' part, to leave Central and Eastern Europe at the Central Powers' mercy. We cannot win peace, either with honour or with security, if we stoop to bargain for it at someone else's expense. The Government's attitude on this point will be the acid test of their sincerity in the great European enterprise on which they are embarking.

★ ★ ★

Good Progress at Cairo.—At Cairo on July 24th, the British and Egyptian delegations initialised an agreed text of the military clauses of the Anglo-Egyptian treaty now in process of negotiation. The conference has proceeded to tackle the problem of the Sudan, and—if and when the discussions on this head have the same happy ending—the way will be clear for the conclusion of a comprehensive Anglo-Egyptian agreement. The other issues left open in the unilateral British declaration of 1922 have already been settled by agreement in the course of the several attempts between 1922 and the London negotiations of 1930—culminating in the opening of the present negotiations. The initialling of the military clauses is an achievement on which all parties concerned deserve the heartiest congratulations. Since it has been wisely decided to refrain from piecemeal publication until the whole treaty is complete, it would be idle to speculate on the details of the military chapter—particularly as Mr Eden warned the House of Commons on Monday that unofficial accounts of the terms should be received with caution. We may, however, assume that the British military, naval and air authorities have contributed to make the presence of British armed forces on the territory, and in the territorial air and waters, of Egypt, as little visible and as little burdensome as possible; and that the Egyptian delegation have waived any objection which they may previously have had against any arrangements for effective British participation, together with Egyptian armed forces, in Egypt's defence. It is evident that the main factor in the present success must have been the emergence of a new spirit of Anglo-Egyptian reciprocal confidence and goodwill. This is the best possible augury for a similar success, within the next few weeks, in the negotiations about the Sudan. For the past twelve years the Anglo-Egyptian Sudan has been administered and garrisoned exclusively by the British partner in the condominium (as far as the work has not been done, as it is now being done to an increasing degree, by the Sudanese themselves). This *de facto* situation is the result of the removal of the Egyptian personnel from the administration and the garrison of the Sudan in 1924. This, in turn, was the result of a loss of mutual confidence and goodwill which, on the British side, was caused by the subversive activities of certain individual Egyptians in both the Sudan and Egypt—activities which culminated in 1924 in the

assassination of Sir Lee Stack, the Governor-General of the Sudan and Sirdar of the Egyptian Army. The British Government have never, however, ceased to acknowledge Egypt's rights in the Sudan as a *de jure* partner in the condominium. Accordingly, there will be no legal obstacles to prevent the present happy restoration of confidence between Great Britain and Egypt from leading to a settlement about the Sudan.

* * *

The Spanish Revolt.—Clearly lacking any spontaneous popular support, the rebellion in Spain can now be seen in its true proportions. In Barcelona and Madrid shops and offices are open; the Government announces the severest penalties for looting and violence to property. A certain amount of wanton destruction of churches took place, however, in Catalonia, in the first few hectic days. Local authorities have been empowered to take over all educational establishments of the religious orders. Despite tendentious reports to the contrary, there is—at present, at any rate—no sign of mob rule. Savage fighting continues, but, save for Spanish Morocco and pockets of territory in Andalusia and the North, the rebels have failed to establish themselves in any vital centres. The early capture of Seville and Cadiz by the rebels in the South, and the progress of the rebel General Mola's forces from Navarre and Aragon to join with the main rebel body from the north-west, seemed at first to bear out the rebel claim of convergence on the capital to "starve Madrid into surrender." The second week of civil war has seen several sharp and bloody engagements in the mountain passes of Guadarrama, not thirty miles from the capital; but the Government has skilfully averted any danger of being caught in the pincers. (It is not for nothing that President Azaña is an authority on military strategy.) By military successes in the south-east last week-end, the Spanish Government's forces secured complete road and rail communications with the all-important eastern littoral. From Valencia, Alicante and the coastal region down to Malaga, the committee under Señor Martínez Barrio, President of the Chamber, and under the Minister of Agriculture, can guarantee supplies; and the authorities in Madrid are now able to finance and organise, unhindered, a citizen army which looks as if it would turn the scale.

* * *

—A Ding-Dong Struggle.—San Sebastian seems to be now in the hands of the Government; and Saragossa, the main stronghold of the rebels in the north, is being besieged from south and east. Desperate encounters are still reported from the south, between Gibraltar and Malaga. And the rebel General Franco seems to be staking all on the conveyance to his confederates in South Spain of sufficient reinforcements of coloured troops from Morocco. The Government's fleet makes this conveyance—now being carried out in dribbles by air—a perilous and slow proceeding; and the rebel General has made persistent protests against the use by Government warships of the bay at Tangier. If we are to judge by an interview he gave to a correspondent of a London newspaper, he ultimately expects some kind of intervention by the Powers to secure Spain for the Fascist rule of a military *junta*. But it is devoutly to be hoped that the French and British Governments will not depart from the strictest observation of international law—which not only prescribes non-intervention, but also abstention from any acts, save those justifiable only by reference to the other country's own security, which might hamper the Government of a friendly State in suppressing a rebellion. The Press of the German and Italian dictatorships have already openly espoused the rebel cause in Spain. This may reflect a natural desire to see the piece of Morocco, which General Franco and his confederates have "jumped," thrown once more—by grateful rebels—into the diplomatic market for African territory. And doubtless the British and French Governments have taken due note of these German and Italian straws in the whirlwind which has descended upon Republican Spain.

Canada Reminds Europe.—On Sunday, His Majesty made his first visit to France since his accession, in order to unveil the Canadian National Memorial on Vimy Ridge to the Canadians who fell in France, but who have no known graves. Vimy Ridge, lying within the triangle formed by Lille, Arras and Béthune, was the objective which the Canadian Army Corps, under General Byng, captured after a sanguinary action in April, 1917. The King expressed thanks to the President of the French Republic for its gift for all time of the piece of "ancient Artois" on which the memorial stands,—"upon soil that is as surely Canada's as any acre within her nine Provinces." Mr. Mackenzie King, Prime Minister of Canada, in his speech relayed from Canada, asked that the nations of Europe should strive to bring into being a world at peace: "A world at peace is the only memorial worthy of the valour and the sacrifice of all who gave their lives in the Great War." And President Lebrun reminded those who were listening all over the world that the fallen Canadians "agreed to sacrifice their lives not for the satisfaction of material interest, but for the beauty of an ideal." The King pointed the moral: "It is one of the consolations which time brings that deeds of valour done on those battlefields long survive the quarrels which drove the opposing hosts to conflict." The Canadian British who fell in 1917 repaid to France the French blood which the English, under General Wolfe, spilled on the heights of Abraham in 1759 when they took Canada from French hands. We may trust that the bonds between French and British in Canada, now consecrated anew by the memorial to the Canadians' sacrifice in the last war, will prove of happy augury for other "opposing hosts."

* * *

Another "Queen Mary."—It was announced in the House on Tuesday that the Chancellor of the Exchequer had received specific proposals from the Cunard White Star Company, and had agreed to Treasury advances, under the North Atlantic Shipping Act, for the building of a sister ship to the "Queen Mary." The company had supplied the Chancellor with "evidence" showing clearly that technical and commercial considerations oblige them to place the contract with John Brown and Company, Ltd., the builders of the "Queen Mary"; and he had agreed to that course. It was always foreseen that the "Queen Mary" by herself would not be an economic proposition. Two such big ships were needed to secure the economies of larger accommodation on a fast weekly shuttle-service both ways; and the reclassification of the North Atlantic Conference ratings last year, which the Cunard White Star Company effected, was to enable two such ships to sail every week with all classes of passengers. But this week's news, though welcome, raises one or two queries. Will the Government continue in future to do what Lord Essendon has just described as assisting shipbuilders rather than shipowners? Do the "technical and commercial considerations" which have obliged the Cunard White Star Company to place the new contract with the builders of the "Queen Mary" imply that the sister ship will be an identical twin? If so, it would be a pity; for the "Queen Mary" is really an old design—the plans were apparently drawn up five years ago; and the "Normandie" is a much more modern-looking, more streamlined, more æsthetic piece of work. Perhaps, too, the "Queen Mary's" sister, if she is a younger sister, will be turned out a little more decoratively and less as a *bourgeoise*. She may even be faster.

* * *

The Overcrowding Survey.—The peculiar value of the Report of the Overcrowding Survey, which has been published this week, is that its figures cover not merely those families who transgress against the official definition of overcrowding, but also of all other families. It is consequently a real mine of information on housing. The number of families found to be living in overcrowded conditions is 341,554. The definition is that of the Act, which lays it down that, subject to separation of the sexes, one room may not serve as a dwelling for more than two persons, two rooms for three persons, three rooms for five persons, and

so forth. Children under ten are counted as half a person or, if under one year, as no person at all. Similarly, a standard room is one between 70 and 90 square feet, anything larger or smaller than that being counted as more or less than one room. How completely the volume of overcrowding depends on the precise definition is shown by the fact that there are a further 380,000 families which, if half a person larger, or inhabiting a dwelling half a unit smaller, would be overcrowded. Moreover, these overcrowded families are larger than most. They consist, on the average, of 5.60 "units," as against 3.11 "units" for uncrowded families. Indeed, the Survey brings out very clearly the fact that overcrowding is caused by poverty among large families. The Report makes the tentative estimate that 200,000 new houses will be needed to remedy the overcrowding revealed. Most observers less rigidly restricted by the statutory definition would accept that figure as a first instalment only.

* * *

The Palestine Commission.—The personnel of the Royal Commission which is to visit Palestine and investigate the underlying causes of the present deplorable situation was announced in the House of Commons by the Colonial Secretary on Wednesday. Lord Peel is to be chairman, Sir Horace Rumbold vice-chairman, and the members are to be Sir Laurie Hammond, Sir Morris Carter, Sir Harold Morris, and Professor R. Coupland. There is plenty of administrative experience on this Commission, and there need be little fear that it will be intimidated by the extremists of either party. Whether the Commission will have the sympathetic imagination necessary to understand the psychologies of two very different peoples, both of them ill-comprehended by the educated Englishman, is a little more doubtful. The Government are persisting in their decision that the Commission shall not go out until order is restored. Mr. Ormsby-Gore also refused to appoint a woman to the Commission, pleading the religious susceptibilities of the more conservative Arabs, and in the circumstances both decisions are doubtless wise. All sections of opinion will wish the Commission well. It is futile, however, to hope that the Palestine question can be solved by any impartial finding of facts or mere advocacy of compromise. Sooner or later the British Government will have to take critical decisions of policy. If the Commission assists to that end it will have done good. If it is merely a device to postpone decision, it will be a waste of time and energy.

* * *

Rising Prices in France.—The French Government of the Popular Front are pledged to maintain the gold parity of the franc at the same time as they are energetically engaged in "reflating on gold" by borrowing from the Banque de France and the public. The combined effects of the new social legislation and the financing of Budget deficits by borrowing are rapidly becoming visible. Since the policy of "reflation on gold" was adopted twelve months ago, increases of more than 50 per cent. have been registered in the wholesale prices of foodstuffs quoted at the central food market in Paris, including steep rises in the prices of butter, meat and eggs. Retail prices are following suit. The bakers were allowed to advance bread prices by 10 centimes to 1.70 francs per kilo. after the passing of the Act which fixed a 40-hour week; but they now state a new rise is necessary. Grocers are also demanding increases of 10-15 per cent. in prices. The Government tabled a Bill on Tuesday, already approved by the Chamber Committee for Civil Legislation, the preamble of which declares that prices need not rise in direct proportion to the rises in real wages effected by the Government's social legislation, and that—in view of the fixed charges for rent, obsolescence, executives' salaries, fuel and power, transport and public services and the falling rate of interest—wholesale and retail prices need not rise substantially above present levels. The Bill provides a National Committee, presided over by the Minister for National Economy, and Committees in the *Départements* presided over by the Prefects, which are to control wholesale prices of goods of "prime necessity," a list of which is to be prepared by the Minister. After a

warning for any initial transgression, manufacturers, wholesalers and retailers may be fined up to £130 or imprisoned up to one month. Thus, the Government have decided to tread the slippery slope of general price control; but that declivity is dangerous, not so much because of the effects of the social legislation on costs, as because of the initial incompatibility of the Government's currency and financial policies. Maintenance of the gold franc alongside credit inflation, Budget deficits, declining revenues, falling foreign trade, and costly social legislation is a task before which Sisyphus might have blanched. Not so M. Blum and his colleagues. Is theirs the courage of despair, or shrewd preparation of a state of affairs in which devaluation becomes inevitable? If the latter, M. Blum, after his success with the cry "*Va Banque!*" is staking the future of the Popular Front Government on higher play.

* * *

Volume of Overseas Trade.—The Board of Trade's quarterly calculation of changes in the volume of our overseas trade, published last week, reveals that the downward trend of British exports, which began in the first quarter of 1936, continued during April-June. Although the volume of British exports in the past quarter was only 1.1 per cent. smaller than during the corresponding period a year ago (owing partly to the application of sanctions against Italy) the decline is nevertheless disappointing. The fall in exports, most marked in the case of raw materials and partly finished articles, has been accompanied by a slight rise in average values:—

VOLUME AND VALUE OF IMPORTS AND EXPORTS

Period	Retained Imports				Exports of Domestic Produce			
	Declared Values	Index of Average Values	Values in terms of 1930 Values	Index of Volume	Declared Values	Index of Average Values	Values in terms of 1930 Values	Index of Volume
	£ Million	1930 = 100	£ Million	1930 = 100	£ Million	1930 = 100	£ Million	1930 = 100
1924 ...	1,137	135.0	842	88.0	801	120.8	663	118.2
1930 ...	957	100.0	957	100.0	571	100.0	571	100.0

1932 ...	652	75.3	887	90.3	385	83.3	438	76.8
1933 ...	627	71.3	878	91.7	387	81.9	447	78.7
1934 ...	681	73.3	929	96.9	398	82.2	482	84.4
1935 ...	702	75.0	936	97.8	426	81.8	521	91.2
1935 1st quarter	164.4	74.1	221.4	92.8	105.5	81.6	129.2	90.6
2nd "	166.1	73.1	227.0	95.0	101.0	81.1	124.4	87.3
3rd "	168.4	74.5	228.0	94.5	105.3	82.1	128.3	89.9
4th "	201.6	77.5	259.7	109.3	110.0	82.2	134.8	97.3
1936 1st quarter	184.5	76.6	240.7	100.6	106.1	82.1	129.2	90.5
2nd "	185.9	76.7	242.3	101.3	101.8	82.7	123.1	86.3

In contrast to exports, the volume of retained imports in April-June, compared with a year ago, showed an increase of 7 per cent. The increase was particularly marked in retained imports of raw materials and partly-finished products, which rose by 15½ per cent. The volume of foodstuffs imported was also larger, but purchases of manufactured articles increased by only 2 per cent. compared with the second quarter of 1935. But retained imports of certain finished articles, including machinery, electrical equipment, chemicals and timber manufactures, showed an appreciable increase over the second quarter of last year. The volume of machinery (including machine-tools) purchased abroad to supplement home production, for example, rose by 37 per cent. The trend of the prices of imports has been strongly upwards, the average value of purchases abroad having increased by 5 per cent. since April-June, 1935. The buoyancy of our import trade is satisfactory, but unfortunately there are no signs of a marked expansion of exports in the near future.

* * *

Britain and the Steel Cartel.—The negotiations on the details of the agreement between the British Iron and Steel Federation and the Continental Steel Cartel have taken more than a year, but they are now satisfactorily completed, and Britain becomes a fully-fledged member of the Cartel until August 8, 1940. The last and most difficult part of the negotiations was the creation of the international thin-sheet syndicate. In this class of product there had hitherto

been no international organisation of any kind: in France, indeed, there was not even a national *comptoir*. The syndicate, however, has now been formed, and will begin to operate from August 1st. In its general lines the agreement follows the main series of agreements. The year 1934 is taken as base, and the orders for thin sheets are shared between the countries in the same proportion as they shared the trade in that year. In black sheets the British and Belgian proportions are each 28 per cent., the German is 23 per cent., and the remainder is divided between France, Luxemburg and Poland. In galvanised sheets Britain and Belgium share 90 per cent. of the trade and Germany gets 6 per cent. The choice of 1934 as a base year is more favourable to Britain, in this class of products, than it has been in the agreements as a whole. The formation of the syndicate, of course, is likely to lead to a firmer export price structure. Meanwhile, the release of the British industry from the danger of foreign competition has been signalled by an advance of thin sheet prices to home consumers of ros. a ton, the equivalent of about 4 per cent.

* * *

Britain's Fish Supplies.—The importance of the contribution of the fishing industry to Britain's food supplies is evidenced by the fact that the first-hand value of the wet fish landed by British-owned fishing vessels was nearly £7½ millions in the first half of this year. The following table is taken from the official returns of the Ministry of Agriculture and Fisheries and the Board of Trade:—

(First six months)				
	Weight in cwt.		Value	
	1935	1936	1935	1936
British caught:—				
England and Wales	6,216,442	7,001,230	5,574,412	5,473,994
Scotland	2,308,283	2,449,102	1,783,646	1,797,608
Shellfish	...	...	174,509	203,786
	8,524,725	9,450,332	7,532,567	7,475,388
Foreign landings:—				
Imported	372,159	298,705	244,275	239,945
Imported shellfish	942,518	802,056	1,219,084	1,192,821
	...	...	114,756	111,538

Average prices have fallen appreciably this year. The average value of fish landed in England and Wales by British-owned vessels was just under 18s. per cwt. in the first half of 1935, but has dropped to 15s. 8d. per cwt. this year. In Scotland, similarly, increased landings were accompanied by falling values, this year's average being 14s. 8d. per cwt., as against 15s. 5d. per cwt. last year. In the current quarter the figures are likely to be affected by the prohibition of fish from the White Sea and Bear Island under an ordinance designed to prevent a glut in the market. Actually this measure has already considerably curtailed the supplies of the fish most in demand by fish fryers; and in response to urgent representations the Government has agreed to allow landings from these fishing grounds after a close season of two months, as compared with three months last summer. The retail fish trade, however, would like to see the prohibition dispensed with altogether, and are pressing for such a measure next year. We exported during the first half of this year wet fish of British landing valued at £623,849, against £440,000 in the same six months of 1935, and "cured or salted" fish valued at £718,334 against £594,121. Herrings were sold to Germany—our principal customer—to a value of £476,000, compared with £224,000 last year.

* * *

Retail Trade in June.—The seasonal decline in the value of retail turnover between May and June was more marked than usual, and the increase in June compared with June, 1935, was the smallest recorded this year. Various special factors contributed to the unfavourable showing. As Whitsuntide fell earlier in June than a year ago the greater part of purchases in preparation for that holiday were made in May. The cold and rainy weather, moreover, had a depressing effect on sales of sports and "holiday" goods. Comparison with a year ago was also

affected in some cases by differences in the opening date of the semi-annual clearance sales:—

INDEX OF VALUE OF RETAIL SALES, GREAT BRITAIN (Average Daily Sales in 1933 = 100)			
Period	Food	Merchandise	Total
1932	102	99	101
1933	100	100	100
1934	103	103	103
1935	111	108	109
1935—May	110	112	110
June	110	108	109
July	105	113	109
August	107	81	94
September	110	99	104
October	112	114	113
November	116	115	115
December	133	160	146
1936—January	115	118	116
February	116	88	102
March	117	97	108
April	121	113	117
May	116	121	118
June	119	109	114

Total turnover (in value terms) in June, as recorded in the *Board of Trade Journal*, was 4.7 per cent. above that in June, 1935, which, in turn, was 5.8 per cent. above the level of June, 1934. The increase, compared with a year ago, was most marked in Scotland (+ 6.1 per cent.), and least pronounced in the North of England (+ 3.3 per cent.). As was to be expected, sales of commodities other than foodstuffs suffered most from the special influences indicated above. Sales of sports and travel requisites, fancy articles and boots and shoes were actually lower than a year ago. Total sales of articles other than foodstuffs showed a reduction on last year's in Suburban London and in the North of England. In contrast to the small increase in the turnover of these goods, amounting to only 0.8 per cent., sales of foodstuffs and perishable articles registered a rise of 8.5 per cent. over the year. But since the Ministry of Labour's index of the cost of living has risen by 2.1 per cent. during the past year, only part of the increase in food sales can be attributed to an expansion in the volume of turnover.

* * *

Industrial Production in 1934.—Volume IX of the preliminary reports of the limited census of production taken under the Import Duties Act of 1932, published with the *Board of Trade Journal*, covers the timber, paper, clay and building materials trades. The following summary shows, for 1933 and 1934, the gross value of production in these industries; the net output (i.e. the gross value, less the cost of materials and payments for work given out); and the net output per employee:—

TIMBER, PAPER, CLAY AND BUILDING MATERIALS				
Trade	Gross Output (selling value of goods made and value of work done) (In thous. £)	Net Output (In thous. £)	Average number of persons employed	Net Output per person employed (In £'s)
Timber (Saw-milling).....	1933 16,399 1934 17,756	5,889 6,267	32,449 34,317	181 183
Paper (a)	1933 33,639 1934 38,695	13,699 15,155	53,215 57,839	257 262
Wallpaper	1933 2,941 1934 2,914	1,769 1,836	5,344 5,735	331 320
Brick and Fireclay	1933 22,115 1934 25,662	15,708 18,095	75,177 84,466	209 214
China and Earthenware	1933 12,339 1934 13,472	8,136 8,829	61,790 65,492	132 135
Glass	1933 14,098 1934 16,166	8,425 9,905	39,791 43,525	212 228
Cement	1933 7,052 1934 7,872	4,219 4,592	9,629 10,136	438 458
Building Materials	1933 10,886 1934 12,121	5,924 6,363	24,750 26,588	239 239
Total	1933 119,469 1934 134,658	63,769 71,042	302,145 328,098	211 217

(a) Firms which were not manufacturers of paper but were only engaged in the processing of purchased paper were excluded from the 1933 Inquiry.

The majority of industries in this group made considerable headway between 1933 and 1934, when the expansion of building activity gained momentum. All of them registered increases in employment and in value of net output.

UNITED STATES

AN "ADVERSE" TRADE BALANCE

FOR the first half of 1936 the United States has had an "unfavourable" balance of trade on merchandise account, a record without parallel in recent decades. If silver be added to the merchandise totals, the import surplus is quite sizable. The foreign trade figures for June and the first half of the year are as follows:—

	Exports		Imports	
	1935	1936	1935	1936
Merchandise—				
June	170.2	185.2	156.8	192.2
Six months	1,024.1	1,154.4	994.5	1,165.0
Gold—				
June	0.2	0.07	230.5	277.9
Six months	1.2	26.4	805.4	536.7
Silver—				
June	1.7	0.2	10.4	24.0
Six months	12.2	1.6	91.3	117.6

The degree to which gold movements continue to be divorced from trade movements is attested by these figures.

North American and European countries accounted for the chief increases in exports of merchandise from this country during the first four months of this year, compared with the same period of last year. The increases in shipments to South America, Africa and Oceania were small; those to Asia actually declined. Rises in imports were more general, but Germany was an exception; her exports to the U.S.A. were slightly smaller. Among the more important nations, increases in imports from the United Kingdom and Australia were particularly marked, rising, in the case of the former, by nearly one-third, and somewhat more than doubling in the case of the latter.

THE INCREASED RESERVE RATIO

The increase of one-half in the reserve requirements of member banks, announced on July 15th to become effective on August 15th, has produced almost no effect so far, even though it was somewhat larger than expected. The almost nominal discount and Treasury bill rates have fractionally risen, and the Government bond market has reacted very slightly, but has since improved. Three facts appear to have minimised the effects: first, excess reserves, after the increase, will still total nearly \$2,000 millions; second, the Reserve governors strongly reiterated their "easy money" policy; thirdly, considerable doubt exists whether the Reserve system can really control monetary developments.

The action was well timed, in that the Treasury need incur no important borrowing until mid-September, and the corporate new issue market is quieter than in earlier months. What reason actuated the Board in taking their action may never be known, but a number of reasons existed, all of which doubtless exerted some influence. First, bank loans are at last tending to rise, and the addition of private credit expansion to that occurring in large amounts as a result of deficit-financing is sufficient to warrant caution. Secondly, the Treasury is reported to be unwilling any longer so to use its balances as to keep excess reserves down. Thirdly, a fairly extensive demand for such move was being voiced.

But though the Reserve Board has taken action more courageously than its critics expected, and though it has been able to act without disturbing the money markets, the outlook remains obscure. Following the enactment of a number of laws restricting credit in various ways during recent years, the Board is now engaged in an effort, which will doubtless extend over several years, to "Christianise" the American monetary system. Its difficulties are many, apart from the fact that the monetary system tends to be exuberant as the people are exuberant. The Board has jurisdiction over only some 6,400 of about 16,000 banks in the country. The Treasury is committed by law to

an expansionist silver policy; and, judging by the June trade figures, silver is available in sizable amounts, even at the now reduced market price. The Stabilisation Fund has \$1,800 millions in untouched gold which, if and when finally utilised, will either increase bank reserves or, if used to buy the Reserve system's holdings of Government securities, hobble its power to conduct open-market operations. The Treasury has also several hundred million dollars' worth of unused seignorage on silver purchased. Any further substantial rises in reserve requirements appear likely to operate with painfully unequal incidence upon a number of member banks; because, after the rise already ordered becomes effective, the amount of excess remaining will be very small for, probably, several hundred banks. The budget remains unbalanced, and only the optimistic expect any approach to equality between income and expenditure within two years. Despite the Board's quite extensive powers to vary margin requirements, alter reserve requirements, engage in open market operations, and curb bankers in more detailed ways, there are grounds for reservations about its efficacy.

Owing to the devastating drought, this year's total agricultural income is open to question. Hitherto the general expectation has been an increase of something like 10 per cent. over that of last year; and the general business outlook has been partly predicated upon this expectation. Each day without rain diminishes the chance of a gain in income from marketings; funds from the Federal Government are going into the drought region on a rising scale, however; and, unless relief comes from the skies, the comparison of agricultural income this year with last year will depend entirely upon the volume of the "gentle rain" of merciful cheques.

Current business figures continue to tell the same unvarying story of moderate prosperity. Power production has risen to new high levels, and questions about the adequacy of generating capacity are being heard. New York City department store sales for the first half of June were 13 per cent. ahead of those a year ago—the largest gain for any fortnightly period this year. One of the two largest mail-order houses reported sales in the month ended July 16 as 32.5 per cent. ahead of those in the same period a year before. Conversion of bonus bonds into cash is diminishing, but the cash distribution must be a factor in the maintenance of business at its present favourable levels in the face of drought, rising food prices, and a period of normal seasonal dullness.

NEW YORK, July 22.

FRANCE

REVENUE AND FOREIGN TRADE STILL DECLINING

THE yield of the taxes in June was Frs. 2,226 millions, composed as follows: direct taxes, Frs. 215,451,000; indirect taxes, Frs. 1,999,242,000; and estate duties, Frs. 11,527,200. These figures show a deficit of Frs. 54,946,800 compared with the estimates, and a fall of Frs. 38,425,000 compared with the revenue in June, 1935. The yield of turnover tax, however, shows an increase of Frs. 23,545,000 at Frs. 459,699,000. The deficit for the first six months of the year is Frs. 244,853,600 compared with the estimates; which means a fall of Frs. 285,544,700 compared with the yield in the first half of last year. It should be noted, moreover, that extraordinary expenditure does not appear in the ordinary budget, as it is left over to the charge of the Treasury.

The foreign trade returns for June show a new decline compared with those for the preceding month and June, 1935:—

	(Thousand francs)	
	Imports	Exports
June, 1935	1,679,053	1,237,881
May, 1936	1,966,637	1,170,118
June, 1936	1,831,467	1,131,147

The decline affects imports (which are down by Frs. 135 millions on the month) as well as exports (which are down by 39 millions on the month). The import figures are the lowest since May, 1935; but exports are at their lowest since the stabilisation of the franc in 1928.

The Statistique Générale has just published its monthly figures showing industrial production in France (1913 = 100):—

	May, 1935	March, 1936	April, 1936	May, 1936
General index	92	101	102	103
Engineering	95	100	102	104
Iron and steel	81	86	88	91
Textiles	63	70	68	—
Mines	101	102	103	103
Building (adjusted)	65	71	72	72
Leather	90	97	102	106
Paper	132	146	155	161
Rubber	758	990	990	985
Motors	422	465	465	464

In the motor industry, 17,077 automobiles and 2,039 lorries have been put on the road, compared with 16,979 and 1,906 in April. The figure of bankruptcies in June was 720, against 793 in May, and 721 in April. Bankruptcies and judicial liquidations were 987, compared with 1,116 in May and 1,041 in April.

PARIS, July 29.

GERMANY

GERMANY'S COMMERCIAL BANKS

THE advance a fortnight ago of commercial bank shares to par, and last week to around 106, attracted much attention. It has aroused conjecture about possible all-round increases of capital and of higher dividends for the 1936 business year. The dividend expectation seems to have been the immediate cause of very heavy buying; this the banks themselves, it is understood, deprecated, and have countered by throwing shares into the market. The banks in question are the Deutsche-Disconto, Dresdner, and Commerz-und-Privat. The fourth great commercial bank, the Berliner Handelsgesellschaft, is in a class by itself, being without the local branch and deposit ramifications of the other three, and having come unscathed out of the crisis of July, 1931. The three banks mentioned were financially helped by the Reich, which had allowed the Darmstaedter-und-National to collapse. Later they scaled down their capitals as part of a severe process of reorganisation, assisted by the general business revival, by the improvement in all debtor concerns' finances, and by a very substantial rise in quotations on the Bourse. The three banks resumed dividend payments for the business year 1935. It was declared that they might have resumed it earlier, though there are critics to-day who doubt whether they ought to have resumed it at all, and allege that the aim was to restore quotations to 100, so as to pave the way for increases of capital. Increases of capital became all the more necessary after the Bank Law of 1934, which provided for a fixed ratio, to be later determined, between the banks' own resources and their credits. At the close of 1935 the shares of the three banks were selling at around 84; and though they shared in the general rise on the Bourse, they gained in the first half-year only about as much as they have in the last fortnight, when other securities rose very little. Whether a dividend increase or a capital increase (which would reduce dividend-paying capacity, unless profitable investment were found for the new resources) is contemplated, is at present in doubt. The first half of 1936 developed satisfactorily for banking business. General business expanded, though irregularly; commissions on Bourse transactions increased very much; and the Stock Exchange quoted values of the banks' own holdings rose rapidly. If the reorganisation process involved losses on many debtor accounts, these were smaller than anticipated. Many debtor concerns, which four years ago were in suspended insolvency, are now paying dividends; and buildings, which after the disappearance of the Darmstaedter-und-National Bank long remained a burden, have been profitably disposed of.

The real financial position of the banks is, however, not quite clear. Before the war their strength lay in the

possession of large hidden reserves, which disappeared in the crisis years. It was formerly a rule that quotations of bank shares ought never to sink below par. In the earlier stage of the 1931 crisis, when industrial shares had already fallen heavily, Berlin banks bought up their own shares, and thereby retarded their fall. After reorganisation had been completed and recovery was well under way, the shares were quoted at only 40 to 50. It is argued that the present prices are high at around 105, even at a time when industrials carrying the same 4 per cent. yield sell at about 120; for the banks' assets, unlike those of industrial concerns, are not "real values," protected against the effects of currency depreciation. In fact, all Bourse securities in Germany, like commodities, sell at inflation prices. Market conditions at present scarcely favour increases of capital; and it is doubtful whether the Ministry of Economy would consent to them. It seems, further, that the increases would have to be preceded by a definite settlement between the banks and the Reich, which is the biggest holder of the banks' capital. Originally, the Reich did not intend permanently to hold the participations it acquired in 1931; and the Nazi Party is opposed to State shareholding in private corporations. Also, the Reich wants money; and it has shown a tendency to shed its interests in other private concerns, having recently sold back its steel trust shares. In the banks the Reich and the Gold Discount Bank still have an interest of some Rm. 150-200 millions. "Re-privatisation," as it is called, has, however, been under way in the cases of all three banks. Some 40 per cent. of the G.D. Bank's holding of Deutsche-Disconto shares had passed back into private hands by the end of 1935. The new advance of bank shares to above par ought to smooth the way for complete "re-privatisation," and probably only after that will the increases of capital be undertaken.

AGRICULTURE AND INDUSTRY DOING WELL

The wholesale price index number for July 22nd was 104.1, against 104.2 for July 15. The agricultural products component has fallen, but there were sharp rises in non-ferrous metals, fertilisers, and rubber; and the manufactured goods component continues to rise. The crops reports are more and more satisfactory. For bread cereals in 1936-37 the price regulation of 1935-36 has been maintained, with local alterations. The main features of this regulation are a rise in prices from east to west, and a monthly increase everywhere, which encourages farmers to market gradually. Compulsion to deliver fixed quotas of grain remains. For fodder cereals there are new regulations, designed to bring marketing almost entirely within the competence of the Nutrition Corporation. The area under flax, which was only 4,500 hectares in 1932, and had risen in 1935 to 22,300, is this year 40,600 hectares; but it remains below the pre-war "high" of 215,000 hectares.

Industry continues active. In June, 70.3 per cent. of working places were occupied, against 69.3 per cent. in May. The greatest improvement was in building. Coal output in the first half-year was 75,513,000 tons, or without the Saar 73,647,000 tons, against 67,288,000 tons, without the Saar, in 1935. Production of crude mineral oil in the half-year was 215,000 tons, against 219,000 tons in 1935. Pig-iron output in June was 1,241,600 tons; in the first half-year 7,383,400 tons, against 5,903,300 tons in 1935 (January and February, 1935, without Saar output).

For ingot steel the respective figures are: 1,630,800 tons, 9,299,700 tons and 7,617,300 tons. Steel output is, therefore, now at a rate of nearly 20 million tons a year, which exceeds the best pre-war figure for the then larger Reich. It has multiplied 3½-fold since the first half of 1932, when production fell to 2,900,000 tons. The definitive agreement concluded between the steel cartel and Great Britain, and the foundation of a thin sheets export syndicate, led last week to an advance in steel shares on the Bourse. The next cartel steps, it is expected, will be agreement with Austria, Hungary and Czechoslovakia, which were in the old cartel, probably by binding them to observe cartel export prices, and a new general increase in prices, which the trade Press considers imperative. The home market for semis and joists is active. The machine manufacturing branch was occupied in June to 79 per cent. of capacity. Home orders in the first half-year, compared with the first half of 1935,

increased by 10 per cent., and foreign orders by 40 per cent. Cotton concerns report substantial increases in their earnings in 1935, though they were hit by the enforced substitution of inferior cotton, for which they paid considerably more than for the displaced American material.

FOREIGN TRADE IN JUNE

Foreign trade in June showed an export surplus of Rm. 11 millions, against one of Rm. 35 millions in May. The decrease in activity was seasonal. In June, 1935, exports only just balanced imports. This year the June value of imports, compared with May, rose 7 per cent., and the quantity of imports slightly less. Imports of raw and half-manufactured material increased considerably; and imports of manufactured goods, which fell to their lowest in January and have since been recovering, were the highest of the year. Imports of British cloth increased. Exports were little changed compared with May, which is satisfactory in view of the seasonal declines of former years. The chief export increases in Europe were to Italy, Russia and Switzerland. To Great Britain, exports decreased. Exports of machinery and motor cars rose considerably; of chemicals, ironwares and textiles decreased.

The first half-year shows an active balance of Rm. 132 millions, against a passive balance of Rm. 163 millions in the first half of 1935. The average export price in the half-year declined by about 4 per cent.; but the quantity of exports rose by nearly one-fifth. The figures are as follows:—

	(Millions of Reichsmarks)	May	June
Imports:—			
Foodstuffs and livestock.....	118.8	120.7	
Raw and half-manufactured material	186.4	205.0	
Manufactures	32.0	34.4	
Totals	337.2	360.1	
Exports:—			
Foodstuffs and livestock.....	7.1	6.1	
Raw and half-manufactured material	67.3	69.5	
Manufactures	297.7	295.3	
Totals	372.1	370.9	

FINANCE AND CREDIT

As officially reported, the Reich Rm. 700 millions loan was "over-subscribed by several millions." It seems that some banks in the flotation syndicate had difficulty in marketing their quotas, and even failed to do so; but that after official appeals (and warnings to industry) had been made, large sums of the loan were bought by concerns in the West and in Saxony. The expectation that money would again become plentiful after subscriptions to the loan had been paid was not realised. There has been stringency in the money market, reflected by the Reichsbank returns. The bank's gold reserve has increased to Rm. 74 millions.

Reich tax revenue in June was Rm. 995 millions, against Rm. 765 millions in the same month of 1935. In the first quarter of the financial year it was Rm. 2,528 millions, which is Rm. 415 millions (with readjustment for changes in taxation law, Rm. 401 millions) more than in the first quarter of the financial year 1935-36. The commercial banks' balance sheets for June show increased deposits and reduced advances.

BERLIN, July 29.

FINLAND

GENERAL ELECTION RESULTS

THE General Election in Finland was held on July 1st and 2nd, on the basis of proportional representation. Voting was fairly lively, the number of votes cast being 1,174,000, against 1,108,000 at the General Election in 1933. The votes were distributed among the different parties as follows:—

	1933	1936
Social-Democrats	413,551	452,033
Agrarians	249,758	262,803
Swedish	115,433	131,251
Unionists	187,527	121,341
Patriotic National Party.....	82,129	97,476
Progressives	37,544	73,865
Small Farmers	9,390	22,406
People's Party		7,376

The 200 seats were divided as follows among the parties: Social Democrats 83 (78 in 1933); Agrarians 53 (53); Swedish 21 (21); Unionists 20 (18); Patriotic National Party 14 (14); Progressives 7 (11); Small Farmers 1 (3); and People's Party 1 (2). The new Diet, which scarcely differs from the former, is to assemble at the beginning of September.

FINNISH FINANCES IMPROVING

On June 30th an agreement was concluded between the Government and a syndicate of Finnish banks for issuing a new State loan of 400 million Fin-marks nominal value, at 4½ per cent. for 30 years. The loan is to be placed at 98½ per cent. The proceeds are to be used for redeeming the 6½ per cent. State dollar loan of 1926, which has been called for September 1st of this year. The nominal value of the outstanding bonds of this loan is 12.8 million dollars; but over a third of these are held in Finland. Thus, the conversion of Finnish State loans to lower rates of interest, and of Finland's foreign to internal debt, progresses "according to plan."

The State finances appear, too, to be developing favourably. In January-April, current revenue amounted, according to preliminary figures, to 982.5 million marks, against 858.2 millions in the same period of 1935. The increase was mainly due to Customs.

The Central Statistical Office recently published its calculations of Finland's balance of payments for 1935. The chief items, as well as those for previous years, are as follows:—

	Credit Mill. mks.	Debit Mill. mks.	Credit Surplus Mill. mks.
1932	5,630	4,450	1,180
1933	6,190	4,840	1,350
1934	7,190	5,620	1,570
1935	7,240	6,180	1,060

These large credit balances have been employed principally to redeem Finland's foreign indebtedness; and last year, to a small extent, the gold reserve of the Bank of Finland was thereby increased.

The large credit balances of payments in recent years were chiefly due to big export surpluses in the balance of trade. Apparently the course of foreign trade this year is likely to proceed in the same direction as in previous years. Both exports and imports seem to grow at the same rate, so the balance of trade remains positive. During the first six months of recent years, exports, imports and export surpluses have moved as follows:—

First 6 months of—	Exports Mill. mks.	Imports Mill. mks.	Surplus of Exports (+) or Imports (—) Mill. mks.
1933	1,945	1,650	+ 295
1934	2,368	2,187	+ 181
1935	2,375	2,403	— 28
1936	2,820	2,873	+ 53

Now, as a rule, the balance of trade records a considerable surplus of exports during the latter part of the year. Thus, the surplus of exports for the current full year—1,370 million marks in 1933, 1,450 millions in 1934, and 896 millions in 1935—will probably be of a substantial size.

THE LAND WITH NO UNEMPLOYED

At the end of June the number of unemployed was only 2,123. The corresponding figure for June, 1935, was almost three times as large, at 6,205; and for 1933-1934 more than ten times as large. The majority of the unemployed were engaged in relief work organised by the State or the communes, so that the number of people temporarily without any employment has dropped to 251! A shortage of labour has been experienced in some places; and, to-day, it cannot be said that there is any unemployment in Finland. In this respect, conditions are now as satisfactory as during the boom of 1928.

HELSINKI, July 20.

GREECE

THE FOREIGN DEBT AND GREEK FINANCES

APART from the just grievances which the bondholders' committees may have about the increase in Greek public expenditure since 1933, they are apparently under an illusion about the present capacity of this country to transfer service of its foreign debt. With foreign exchange resources

steadily declining, with a growing unfavourable balance of trade owing to larger imports and to the rising world prices of necessary imports, with the increasing need of the country for foreign exchange to pay for armaments, railway and other material (the supply of which cannot, in the present state of Greece and of Europe, be any longer postponed), one might well ask whether the Greek authorities could even have carried out the obligations they were ready to undertake of paying foreign bondholders 35 per cent. of the debt service in foreign exchange. True, by new import restrictions imposed on July 1st a saving in payments abroad will be effected. But such saving, and any that may subsequently be decided, will at best slacken the deterioration in the exchange position. That position seems bound to grow steadily weaker for some time. It is doubted here if the bondholders' committees were wise to reject the offer made by the Greek Finance Minister; the more so since, in the event of emergence of a Party Government later in the year, it is doubtful whether even that offer will be repeated.

Public revenue and expenditure for the first two months of the financial year 1936-37 compare as follows with those for the corresponding period of the past year:—

(In millions of drachmas)				
	Estimated (whole year)	Revenue Calculated for first two months	Collected	Actual Expenditure
April and May 1935	10,812.8	1,701.2	1,368.7	1,090.6
1936	11,642.3	1,940.9	891.9	1,516.0

On the other hand, gross receipts from revenues assigned for the service of the public debt were as follows for the months of January to May, 1935 and 1936:—

(In millions of drachmas)		
	May	January to May
1935	423.4	1,669.7
1936	377.5	1,759.3
Difference	- 45.9	+ 89.6

A Government Bill has been tabled to make several amendments in existing taxes, and increasing taxation on the profits of limited companies. After the example of other countries, a large parliamentary committee has been formed to investigate the advisability of regulating the outstanding agrarian, mortgage and commercial debts, in order to relieve private debtors. Moreover, the Government is studying how to improve the conditions of the workers by fixing minimum wages, maximum working hours and paid holidays, as well as by organising social relief and putting into effect the hitherto non-applied law for social insurance.

GLOOMY TRADE PROSPECTS

According to official information, this year's production of wheat will be 20 per cent. lower than last year's. Production of currants and fruit was also severely curtailed by unusually bad weather. An increase in imports of cereals will thus be necessitated. Owing to bad harvests, an unfavourable balance of payments, depression in home trade, a rising cost of living, growing public expenditure, and lack of financial assistance from abroad, economic prospects are the reverse of bright.

Provisional foreign trade returns for the first five months of this year compare as follows with the figures for the corresponding period of 1935:—

(In millions of drachmas)			
	1935	1936	Increase in 1936
Imports ...	4,124	4,640	516
Exports ...	2,321	2,372	51

Increase in import surplus 465

Italy was a good customer of Greece, and sanctions have appreciably affected exports from this country. Higher world wheat prices have resulted in a larger amount spent so far this year for the purchase of wheat, notwithstanding the decrease in the quantity imported (1935: 176,643 tons, valued at Drs. 536 millions; 1936: 142,963 tons, valued at Drs. 563 millions).

It has already been reported in this correspondence that the larger imports are chiefly due to the working of the clearing and compensation system, which, especially in the case of trade with Germany, results in the accumulation of large frozen balances abroad, to liquidate which excess

imports have to be authorised. Despite the recent visit of Dr. Schacht, the anomalous position of Greek trade with Germany is far from being regularised. Professor Varvarettos, Deputy-Governor of the Bank of Greece, is at present in Berlin discussing the question, and trying to ensure that at least all the goods which Greece, as a result of the clearing system, is compelled to buy in large quantities from Germany, should be paid for out of Greek export proceeds and priced at the world price level and not at the higher fictitious prices obtaining in Germany. But even if Germany drops her claim to be paid in *Devisen* for goods made with raw materials imported from abroad, and even if the price question be settled, the problem of the abnormal and exclusive growth of trade with Germany—to the detriment of trade relations with all other countries—and of the disagreeable political, economic, financial and social implications of such a development, will remain unsolved.

ATHENS, July 25.

BULGARIA

THE NEW GOVERNMENT

WITH the formation of the new Government under the Presidency of Mr Kiosseivanoff, Bulgaria expected a Parliamentary Government; but the elections, fixed for October, have been postponed. The new Government is composed of prominent members of the judiciary and non-party men, with the participation of two representatives of Professor Tzankoff's movement. The King's wish is to see a normal situation within the country restored as soon as possible, but without the former embittered partisan strife. To this end the Parties, formerly numbering more than twelve and now dissolved, will be considerably reduced in accordance with the new electoral law in preparation. A reduction of the number of deputies from 300 to 120 or 150 is proposed; and the principle of voting for individual candidates, one for each constituency, will very probably be adopted, in opposition to the system hitherto in force, under which Party lists competed. The Constitution might also be amended in order that the differentiation of the Executive and the Legislative powers may be strengthened.

A BETTER TURN IN BUSINESS

The economic recovery during the first half of the year was satisfactory. Wholesale prices have risen, and also industrial production, the latter by over 20 per cent. compared with last year. Trade is a good deal more active. The State revenues show a rather remarkable improvement, having reached 2,726 million leva for the first five months, against 2,092 millions for the same period last year. A reduction in the anticipated deficit may therefore ensue.

Foreign trade results are as follows:—

(Million leva)		
	1935 January-May	1936 January-May
Imports	1,088	1,269
Exports	1,174	1,300
Export surplus	86	31

Imports have increased by 18 per cent., and exports only by 11 per cent. The main difficulties that confront Bulgaria's foreign trade arise from the great increase in her exports to Germany (now about 60 per cent. of the total), and the important Reichsmark balances which have accumulated there—at present about 300 million leva. Such a situation seriously affects the amount of free foreign exchange available to the National Bank, and it inevitably tends to increase imports from Germany. The recent visit of Dr. Schacht to Sofia may have as a result a reduction in Bulgaria's credit balance.

According to preliminary crop estimates there will be a slight increase in the production of wheat, barley and the remaining cereals. The production of grapes and other fresh fruit will be rather unsatisfactory; but prospects for sunflower seed, cotton and tobacco are better.

The general outlook is for continued improvement in the economic situation, which will undoubtedly facilitate transfers of the services of Bulgaria's foreign loans.

SOFIA, July 20.

BOOKS AND PUBLICATIONS

• AN OFFICIAL VIEW OF GERMANY

OWING to the death in 1934 of the former Commercial Counsellor in Berlin, Mr J. W. F. Thelwall, no Report on Germany by the Department of Overseas Trade appeared in 1935. To this sad event is due the appearance of a Report * which formally embraces two years and, in fact, covers almost the entire economic and social-economic history of the first three years of the National-Socialist administration. Thus official and Party measures which developed piecemeal, and therefore could not have been handled satisfactorily as the current history of successive years, are compendiously described in the new Report. The reader has concise descriptions of many undertakings in their present or definitive form, without being confused by details of their past vicissitudes. This advantage is particularly obvious in the excellent accounts of corporative organisations (or Estates), made clearer by excellent charts; but it cannot be said that all these organisations have reached their final form. The Report contains XXIII appendices, including a glossary of new terms devised for Nazi institutions.

D.O.T. Reports are normally based on concrete data, not necessarily official, but at least derived from citable authorities. In the conditions at present prevailing in numerous European countries, the Reports are inevitably imperfect. In Nazi Germany some important statistics are not published, and other statistics (e.g. of public debt) are misleading to the point of falsity; but on these subjects, owing to the suppression of criticism and even of friendly analysis, there are no citable unofficial data or estimates. Rumour and conjecture pass from mouth to mouth; and in discreet secrecy one can even obtain written private estimates. But a Commercial Counsellor cannot cite illicit authorities. In consequence, Mr Rawlins' Report can throw no light on the suppressed budgets of 1935 and 1936, the suppressed expenditure returns formerly published once a month, the suppressed balance of foreign payments, and other important matters. The whole public debt has to be shown as having increased by only 812 million marks in the first two Nazi years; and Mr Rawlins can merely mention—that is officially admitted—that the debt returns omit the work-creation and "special" (re-armament) liabilities. In the same way the yield of Dr. Schacht's export-subsidy levy of 1935 cannot be given, for though the amount is known to within 100 million marks, the Reich has issued no figures, and the available private estimates are anonymous and therefore unusable. In this matter official mystification went so far that the law of June, 1935, by which the levy was regularised (after it had already been imposed), does not mention the word "export" at all.

Other parts of the Report reflect these unsatisfactory conditions. The Third Reich enjoys official and Party facts and opinions; but the contrary facts and opinions, being surreptitious and underground, have no overt and citable existence. The Report, for instance, begins: "In the National-Socialist State all economic activity must serve the interests of the community," and later quotes the familiar principle "common weal before private interests," but how far these party slogans are genuine, and how far, owing to unclear definition, they are meaningless, is not examined. Yet this question is raised by Mr Rawlins' statements, on his opening page, that "in the interests of the community . . . wages must be kept low in spite of the rising prices of foodstuffs, and the consumer must go without certain commodities formerly considered as necessities." It is plain that the official motive for this policy is the Defence Economy (*Wehrwirtschaft*) to

which Mr Rawlins refers; but it is hard to see how the defence interest of the community can be served by lowering the standard of nourishment, and this under a Government which places physical fitness first. On such issues Germany has no publicly expressed opinion; and an official report necessarily confines itself to the only opinion there is.

The most instructive part of the Report is that which describes the National-Socialist corporative organisations. The Agricultural Estate (*Nährstand*), with land and land-labour policy and development of agricultural resources; the Estate of industry, trade and handicrafts, with developments in the individual industrial branches; the organisation of transport enterprise; the Social Policy organisations; and the Chamber of Culture, are all correctly and adequately described. Readers will be struck by the schematic character of these organisations, and the apparent desire for similarity of structure in their higher and lower organs. The Reich Chamber of Economy is also analysed. There are good accounts of foreign trade, and of the involved currency question: here it may be mentioned that Mr Rawlins has unearthed 13 different marks, some officially called "credit-balances" or "accounts," but all in reality currencies of varying depreciation and varying use. Mr Rawlins estimates the rise of agricultural prices in 1933-35 as more than 40 per cent. The rise in the cost of living (1933-36) he puts at 15 to 20 per cent., and he illustrates the inadequacy of the official cost-of-living index by mentioning that it allows a workman only one shirt a year. He presents German foreign trade as a State monopoly in almost all respects, except State ownership of the goods, but though the State does not formally own the goods, it disposes over imports, and to some extent over exports, as if it did. "Government, not Business," Mr Rawlins says, decides what the imports are to be, and whence they are to come. He estimates that the export subsidy works out at an average at 25 per cent. for all goods exported; and he critically examines the equally costly, if unavowed, import-subsidisation, which results from discriminating between supplying countries. He mentions that prices well above world market prices are being paid for important commodities. He refers also to the excessively swollen trade-officialdom and to the burden imposed on private firms engaged in trade. His summary is: "A hand-to-mouth economy . . . a cumbersome control by mighty bureaucratic machinery, and in many cases recourse to unwieldy barter transactions, with heavy executive expenses and waste of time." That is, indeed, what is said by such German authorities, e.g. Dr. Schacht, as profess to regard foreign-trade regulation as a passing, inevitable evil. But against this view stands the old Nazi passion for autarky as a thing inherently desirable; and it seems that this Party view is the dominant one. Mr Rawlins does not echo German official complaints that the enforced Clearing Agreements are entirely to Germany's disadvantage. He comments that they have enabled Germany, as a country three-fourths of whose imports are raw materials, to obtain these materials in the knowledge that they could only be paid for with the manufactured goods which are Germany's main export resource. The whole Report repays careful reading, even if, for the reasons given, it inevitably deals more with the positive than with the negative results of three years of Nazi Government.

MONEY AND BANKING

BRITISH BANK ADVANCES

AMONG the more striking features of the present trade recovery has been the sluggishness of bank advances in responding to the growing credit requirements of trade. In the early stages of recovery, such a phenomenon was to be expected, for the first consequence of better trade is the repayment of frozen bank loans. Once this process is complete, however, the expansion in bank advances should begin to march in some sort of step with the progress of trade. It has certainly not done so during the past few years, either in Great Britain or in the United States.

The following table brings out this fact very clearly so far as Great Britain is concerned. It shows relative movements in the deposits and advances of the "big five" banks and in general business, respectively, since June 30, 1932:—

	(June 30, 1932 = 100)		
June 30th	Bank Deposits	Bank Advances	General Business Activity*
1933	111	94	104
1934	105	90	113
1935	112	92	119
1936	121	101	126

* Economist business activity index.

One consequence of the lag in advances is that the banks to-day are only employing 40 per cent. of their deposits in this way, against 55 per cent. in 1927-29, immediately before the slump. There are various explanations of this slackening in the demand for advances. First and foremost, potential borrowers are undoubtedly much more "liquid" to-day than in the past. The "unfreezing" of commercial and industrial loans has, on the banks' own admission, meant that loans written off during the depression as bad or doubtful have been repaid and brought back into profit and loss. The recovery in the iron and steel trades alone must needs have thawed out a substantial mass of frozen loans. Next, the rationalisation of industry has reduced the demand for bank loans. Formerly, two separate companies may have maintained, the one a credit balance and the other company an over-draft at its bank. On amalgamation, the two balances are self-cancelling. Thirdly, during the depression, manufacturers, wholesalers and retailers tended to operate on smaller stocks of commodities, and are still doing so to-day.

The abundance of money, the expansion in savings, and the fall in the long-term rate of interest have also been contributory causes. It no longer pays people to lodge gilt-edged stock at the banks as collateral for loans, for with the current high prices and low yields it is better to sell the stock outright. Many companies have either been able to issue fresh capital or to place fresh debentures, and the proceeds have frequently been applied to the repayment of bank loans. There is a tendency, further (as our surveys of industrial profits show), for companies to distribute a smaller proportion of their earned profits in dividends, and to "plough back" more in the form of reserves than before the depression, so as further to increase their liquidity.

Municipal finance, again, has played a prominent part in the recent trend of bank loans. Many municipalities have succeeded in floating new loans on the market, and part, at least, of the proceeds has been used to repay advances from their bankers. Under the present system of control, further, municipalities are not entirely free to choose the date on which they issue new loans. They are liable to find themselves with surplus cash on their hands, either because they cannot redeem old loans from the private investor at once, or because the new money they have borrowed is required for housing or other public works expenditure, which is spread over a term of years. Some municipalities, consequently, have not merely ceased to borrow from the banks, but have themselves become lenders of funds at short-term.

In other ways, the banks have been affected by the appearance of new "competitors." In some cases, it is true, fresh business has been brought to the banks. For example, hire-purchase finance has made great strides during recent years, and many instalment finance companies have come into existence. These smaller companies, in fact, often obtain their own finance from their bankers. It is not uncommon for a bank to lend up to 50 per cent. (or even more in approved cases) against the net total outstanding loans due to finance companies by their customers. Other developments, however, have had an opposite effect. The insurance companies and accepting houses have recently become serious competitors. The insurance companies, admittedly, specialise in mortgages and other long-term loans of a type unsuitable to bankers, but they are ready and willing, nevertheless, to place floating funds at medium- or short-term. Though little has been heard of the inland bill during the past two years, it is, in fact, beginning to come into use, especially in the North of England. For example, some Liverpool cotton-brokers are now financing themselves by bills of exchange drawn on a London accepting house in place of an advance from a joint-stock bank. A bill has inconveniences, including the fact that it falls due at a specific date, but under present conditions it is definitely cheaper than a bank loan. "Personal" loans, as distinct from "trade" loans, have been affected very considerably by the course of the stock markets. They reached their peak in 1929, declined heavily during the following three or four years, and to-day are expanding again. Their growth, however, is not over-fast, for, even under present active market conditions, the majority of investors are chary of buying more securities than they are able to pay for.

Of one thing there is little doubt. The size of the average loan is less than in 1929—perhaps one-third less. It is probably less even than in 1932. Since that time, however, the total number of borrowers has, probably, changed very little. The average customer is borrowing less, though demand is itself as widespread.

How far is the rate of interest charged by the banks a serious deterrent? To the small borrower the difference between 3 and 5 per cent. per annum on a loan of £20 for three months is only two shillings—apart from the borrower's right to use bank interest as an offset for income-tax purposes. To the large borrower of tens of thousands, however, each additional 1 per cent. is a matter of great importance, and this type of borrower will probably endeavour to obtain cheaper accommodation wherever he can find it.

This raises a wide question. British banking has developed in such a way that the big branch banking system performs for the public the essential and complex service of transmitting money, in the form of cheques, all over the country. This service is performed free of charge, except for an unremunerative charge on small accounts, and the banks recoup themselves out of the yield on their earning assets, notably on their advances.

Now the present era of cheap money is exposing the banks to new competition in the field of their advances, and it may be that part of this competition is permanent. The banks, therefore, may have to reconsider their practice. Public opinion probably would not tolerate even the imposition of a small charge per cheque cleared, but it may have to reconcile itself to the curtailment of some of the many other numerous services rendered by the banks. For example, the banks are already exercised by the rapid growth in the practice of collecting periodical payments by means of bankers' orders. In any case, bank shareholders may have to reconcile themselves to the possibility that neither profits nor dividends will return to the high level of the late 'twenties. Thus, while the stability of the banks remains unimpaired, banking may be a little less remunerative in the future.

FINANCIAL NOTES

Anglo-Russian Trade Agreement.—The conclusion of an Agreement between the British Export Credits Guarantee Department and the Soviet Trade Representation in London was announced on July 30th. The Soviet Government through its importing organisations agrees to place orders for British goods to a total of £10 millions during the period ending September 30, 1937. The goods ordered will be of a kind which will give rise to a substantial amount of employment in Great Britain, but will exclude munitions of war. The object of the Agreement, in effect, is to remove any qualms of British manufacturers over the question of prompt payment. Russian import organisations will place these orders direct with the British manufacturers, under terms requiring payment in cash within thirty days of delivery of a satisfactory set of shipping documents. The Soviet Government will issue sterling notes at par, carrying interest at 5½ per cent. and payable at par five years after date. Principal and interest of these notes will be guaranteed in full by the Export Credits Department, who will proceed to place the notes in the London market at the best price obtainable. The cash proceeds will be paid into a special account of the Soviet Trade Representative at a British joint-stock bank and the British manufacturers will be paid by cheques drawn thereon. It is expected that under this agreement orders to the value of £10 millions will be placed practically within the next twelve months. In 1935, British goods were exported only to a total of £3.5 millions. The manufacturer has a complete British guarantee of prompt payment. He also does not have to pay an insurance premium in respect of the guarantee, which the Export Credits Guarantee Department normally requires. The rate of interest is not unfavourable to the Soviet Government, which has been able to obtain credits in Germany and Czechoslovakia only on a 6 per cent. basis. The Export Credits Guarantee Department will retain the premium which is certain to be derived from the sale of the notes, and this should be sufficient to cover the cost of the work and to leave a margin in the way of "insurance," instead of the premium normally charged to the British exporter. Finally, the money market will be offered a series of 5½ per cent. five-year notes carrying a British Government guarantee, and at the present low level of interest rates is likely to be a keen bidder. The possibility of an issue price of about 115 per cent. has already been mooted. Is this, indeed, the much-discussed "Soviet loan," made without any disclosed stipulation on the vexed question of pre-war Russian debts?

The French Bond Issue.—It has for some time been obvious that the new French issue of "baby bonds," designed to rectify the cash position of the Treasury, was making indifferent progress, and M. Vincent Auriol's statement in the Chamber on July 29th confirms the fact that so far it has met with a very moderate success. Up to July 17th total subscriptions had amounted to only Frs. 1,400 millions, while the Finance Minister estimated that by the evening of July 29th they would amount to Frs. 2,000 millions. Up to a point the French Government has some reason to congratulate itself, for a few months ago it would have been impossible to float a loan at all. Unfortunately, the response which has so far been evoked by the authorities' efforts is small in comparison with the Treasury's needs. M. Vincent Auriol was optimistic enough to hope that the result of the loan would enable the Government to keep its borrowings from the Banque de France within the limits set by the new legislation last month, but such estimates as it is possible to make in the tangled state of the French national finances have inspired the belief that to achieve this object subscriptions to the new baby bonds will have to total at least Frs. 10,000 millions. Also it was apparently stated during last Wednesday's debate in the Chamber that the new Budget, to be opened in October, will show a deficit of nearly Frs. 7,000 millions, and this estimate may clearly have to be revised in the light of any changes in Government expenditure which occur by the autumn. Apparently the Government realises that it may exceed its self-

imposed limits to direct borrowing at the Banque de France, for our Paris correspondent states that the new Act revising the statistics of the bank contains a clause obliging the bank to rediscount without limit all Treasury bills of less than three months' maturity offered to it, provided that the Treasury may not rediscount its own bills direct. This opens the door to the indirect rediscounting of Treasury bills which attained such formidable dimensions during the past year and which ultimately called for last June's formal extension of the Treasury's borrowing powers. Having consolidated Ossa, the Government appears to be ready to erect Pelion.

French Railway Bills.—The action of the Chemin de Fer de l'Est, in placing £1,000,000 of sterling three months' bills in London in the early part of July, has been the subject of some comment this week. In itself, the event is not of major importance. The amount involved is moderate. The house in London which placed the bills contains among its members the president of the borrowing railway company. To complete the circle, it is believed that the bulk of the bills have been taken firm by the London offices of certain French banks. On this showing the operation is tantamount to the re-lending of French refugee money to a French railway company. The rate of discount on the bills is 4½ per cent, plus ½ per cent. commission, so that the French banks secure an unusually good return on a short-term sterling investment, while part of the French funds which have fled to London are used to filling a railway deficit which ultimately is a liability of the French Government. Wider issues would be involved, however, if there were any desire to borrow more money in the same way. If, for example, the total were to rise, say, to the neighbourhood of £5,000,000, the British authorities (who have not been consulted or thought it necessary to express a view) might well have something to say—the more so as the maturity of the bills coincides approximately with the date on which the French Government's sterling credit of £40 millions matures.

Anglo-Italian Clearing.—The negotiation of the new Anglo-Italian Clearing Agreement is proving very difficult. The crux is whether outstanding British commercial debts or payments due for new British exports are to have the prior claim upon the sterling paid into the British clearing account by future importers of Italian goods. There is little doubt that the British Government's view is that outstanding debts must be paid first, and indeed Mr Runciman said recently in the House that the hope of recovering old debts was to us the main justification for involving ourselves in clearing agreements. Mr Runciman, however, admitted only last Thursday that the Italians were refusing to give priority to outstanding debts, and at present Italy was imposing some restriction upon imports from Great Britain. She is also hinting that in the future she will not import more than she can pay for, and that she is

not really dependent upon the sanctionist countries at all. If this is anything else than pure bluff, there is no earthly reason why she should not consent to apply the proceeds of her future exports to the liquidation of her outstanding debts, and so she stands convicted of inconsistency out of her own mouth. In the interests of British commerce it is essential that old debts should come first. If shipments of goods made in the past are only to be paid for by degrees, or if payment is to be delayed until the Greek (not the Roman) Kalends, there is little inducement to British exporters to incur further risk in the field of Italian trade. Even if the City would like to have the chance of opening fresh commercial credit to finance Italian trade, the present accumulation of blocked lire due to British creditors is a serious warning to them. If Italy wishes to re-establish her credit, her best course is to pay her debts and in the meantime to regulate her external trade in a way that enables her to do so without unreasonable delay.

The Money Market.—This week bill-brokers have been at the mercy of the vagaries of the calendar. Three months ago it suited the Government and the market to concentrate the week's applications and issues of Treasury bills upon bills maturing on August 1st. Hence this week there have been practically no maturities until Saturday, while the payments for the new bills issued on July 24th were well spread over the whole of the week. As the Bank return shows, money was therefore less plentiful than usual during the whole of the week, and there was a keen demand for loans. The banks have not been ready buyers of bills, as they wished to prepare for the heavy holiday withdrawals of currency, but they were ready every day to lend money overnight. There was also some special buying of early September bills, while on Thursday one of the clearing banks is believed to have bought more freely. As a result no real stringency has developed, and next week normal conditions will again prevail.

Three months' bank bills ...	1-1/2-1	1-1/2-1	1-1/2-1	1-1/2-1

* Loans against Treasury bills and other approved bills and British Government securities within six months of maturity; 1 per cent. Treasury Bonds and other gilt-edged stocks within six months of maturity; and other collateral, respectively.

Last week's Treasury bills went at an average discount rate of 10s. 6.11d. per cent. The market did not obtain its full requirements, and so this week there was a keen demand for the £2,000,000 of London County Council four months' bills. These went at an average rate of 10s. 5.65d. per cent., or slightly less than the Treasury bill rate, which is very unusual. This week's Treasury bill rate, however, is likely to be still lower.

The Bank Return.—The holiday expansion in the note circulation has now begun, and amounts this week to £5.0 millions. This is nearly balanced by the Bank's gold purchases of the week, which amount to £4.1 millions. There is a contraction of £900,000 in the Reserve.

	BANK OF ENGLAND

Other securities	13.4	17.4	18.4	19.4	19.1
Proportion	32.5%	29.8%	32.0%	33.9%	33.3%

The main change in the banking department is a concen-

tration of funds in public deposits, which have risen by £22.4 millions. This is due to the fact that there are few Treasury bill maturities this week until Saturday, August 1st, and so the Government has not so far been repaying bills. Payments for new Treasury bills, which have been going on all the week, have reduced bankers' deposits by £23.0 millions.

The Foreign Exchanges.—The London market has been very quiet. The spot franc rate has weakened fractionally from Frs. 75 3/4 to Frs. 76, and there were rumours that the British Control had intervened, but these have not been confirmed. The three months' rate is unchanged at Frs. 2 1/2 discount. The Banque de France return for July 24th shows an increase of Frs. 145 millions in the bank's gold holdings, at Frs. 54,832 millions. The Government has continued to replace rediscounted Treasury bills at the Bank by provisional advances, for the former are reduced by Frs. 1,336 millions to Frs. 9,059 millions, while the latter have risen by Frs. 836 millions to Frs. 5,274 millions. There has been a net reduction of Frs. 500 millions in the Treasury's indebtedness to the Banque de France, which may be due to the receipt of the first subscriptions to the new bonds. Gold continues to be imported from France into Great Britain. This week's movement is no less than £12.0 millions, and raises the total importation for the past four weeks to £28.7 millions. This must represent gold formerly held in Paris under British ear-mark, and the total now begins to approach the size of the Bank of England's gold purchases since the end of April, amounting to £37.2 millions. Spot dollars have been steady at \$5.02, while there has been no change in either the Dutch or Swiss spot and forward rates.

National Bank of Australasia.—The Directors this year are able to report a further expansion in the bank's business. Deposits are in the aggregate higher, and the accounts show some transfer of funds from current to deposit account. Among assets, cash is little changed, but there has been a greater demand for credit by the bank's customers, so that discounts and advances are higher. To meet this demand the bank has had to reduce its more liquid assets, such as Commonwealth Treasury bills and investments. This expansion in the bank's business is reflected in higher profits, and while the interim dividend was unchanged at 5 per cent., the directors are recommending a final dividend of 5 1/2 per cent.

	March 31, 1934	1935	1936
Liabilities:—			
Capital	£'000	£'000	£'000
Reserve fund	5,000	5,000	5,000
Exchange reserve	3,000	3,000	3,000
Note circulation	300	300	300
Deposits:—			
(a) Government	155	194	334
(b) Other, not bearing interest	11,891	12,270	13,587
(c) Other, bearing interest	24,167	24,586	23,848
Assets:—			
Cash and call money	4,262	5,437	5,567
Commonwealth Treasury bills	2,835	3,225	2,670
Investments	2,943	3,096	1,662
Bills receivable and in transit	3,710	2,565	3,575
Discounts and advances	30,671	31,183	32,446
Gross profits	1,087	1,087	1,163
Expenses	742	752	781
Taxation	72	59	88
Net profit	274	276	294
Dividend	5%	5%	5 1/2%

The ratio of discounts and advances to deposits has risen from 84.3 to 86.1 per cent., while that of cash and Treasury bills and deposits has fallen from 23.4 to 21.8 per cent. As we pointed out last April, during 1935 the Australian pendulum swung in the direction of recovery, higher purchasing power and heavier imports. This increased the demand for credit from the leading banks, and for the moment they have lent nearly up to the prudent limits of their resources. Still, the accounts of this and other banks show that they are still carrying an adequate margin of cash and quick assets behind their deposits, and there is no sign of over-lending or serious credit stringency developing.

THE STOCK EXCHANGE

HOME RAILWAY PROBLEMS

THE duplicated and triplicated expresses which leave their termini for sea and mountain this week-end will carry many "tired bulls" of railway stocks. Home railway dividends, like the Abyssinian (and the British) climate, have seasons of the Greater and the Lesser Rains. The final dividends for 1935 were deemed moderately encouraging, but the interim declarations for 1936 have so far made a curiously mixed showing. Although London, Midland and Scottish stocks, for example, have been marked up on this week's dividend, quotations for "marginal" railway stocks are, with few exceptions, well below the highest points achieved more than two years ago. London, Midland and Scottish ordinary, for example, which touched 30 1/2 in 1934, are only 26 1/2 to-day. Great Western ordinary, which were dealt in at 66 1/2 in the first phase of the "recovery" period, are now no better than 51 1/2. Southern deferred stand at 22 1/2, against 32 1/2 in 1934. The London and North-Eastern, which is carrying the heaviest load of difficulties of the Big Four, sees its 4 per cent. second preference stock—which has become the real "equity stock" for this line—at no more than 28, against a maximum quotation of 46 1/2 in 1934. The prices of its 5 per cent. preferred stock at 11 1/2 and its deferred stock at 5 1/2 are little more than option money.

The reasons for the failure of home railway stocks to share in the rise in industrial security values are evident on the most superficial comparison between railway gross traffic receipts and the *Economist* Business Activity Index—which, for reasons we explained last week, may be regarded as the most sensitive of existing economic barometers. Between 1929 and 1933 our Business Activity Index declined by 10 per cent., while the combined gross railway receipts of the four lines fell by 20 per cent. In 1934, business activity rose by 8 per cent. and railway receipts by only 4 per cent. In 1935, business activity was 4 per cent. and railway receipts only 1 per cent. higher than in the preceding year. In the first six months of 1936, business activity has been running, on the average, 6 per cent. above the corresponding period of 1935. The gross receipts of the four railways, for the first thirty weeks of this year, however, show a rise of only 3 per cent.

The first reason for the market's hesitant attitude, therefore, is that the railways appear to have had more than their share of depression and less than their share of recovery. Between 1929 and 1933, they were fighting simultaneously on two fronts, for general business recession coincided with the worst phase of road competition. The latter not only reduced aggregate railway receipts, but altered their general balance and left the companies more dependent on the heavier traffics, like coal and steel, which were notoriously subject to cyclical influences. The year 1933, which marked the turning-point of the cycle, was noteworthy also for the passing of legislation limiting the fleets of road hauliers, but not those of manufacturers and retailers transporting their own goods. Broadly, the railways' policy has been to attract passenger traffic by effective reductions of fares—in 1935 they carried 7.4 per cent. more passengers than in 1933, but receipts from ordinary and workmen's fares increased by 5.9 per cent. There has been no comparable reduction, however, in average goods charges. The earlier stages of business recovery helped the railways only moderately. As Sir Josiah Stamp pointed out last February, a reduction in shipbuilding and coal, offset by higher production, say, of wireless sets, silk stockings and films, leaves the railways the losers on balance.

Now, at long last, the tide of recovery has reached those industries which are characteristic users of railway transport. Passenger receipts for the first 30 weeks of this year show a rise of only 0.7 per cent., but coal receipts and general merchandise are each higher by 4.6 per cent. A continuation of this tendency would benefit the "heavy" Northern lines—the L.M.S. and the L.N.E.R.—

most, the Great Western (a "coal and passenger" line) next, and the Southern (a "passenger" company) least. In fact, of a total gain over 1935 for the first thirty weeks of £2,424,000, some £1,289,000 has gone to the L.M.S., whose receipts show a rise of 3.8 per cent. The L.N.E.R. has taken £734,000, representing a gain of 2.9 per cent. The Great Western's share of £286,000, on the other hand, is equivalent to a rise of only 2 per cent., and the Southern's £115,000 to 1 per cent.

If dividends rose in exact proportion to gross receipts, the immediate outlook for stockholders would be fairly satisfactory. But, unfortunately, in the first half of this year there has been a tendency for expenses to rise *pari passu* with revenue. The Southern's railway receipts for the first six months (including an extra day for leap year) showed an increase of £190,000, but railway working expenditure rose by £183,000. The London and North-Eastern's total receipts were up by £819,000, and expenditure rose by £806,100. The London, Midland and Scottish, whose figures are received as we go to press, show a half-year's rise of £1,200,000 in receipts and of £700,000 in expenditure. The company, with increased net earnings of £440,000, is paying a full half-year's dividend on its 1923 preference stock.

The differences between the expenditure figures of these companies cannot be attributed merely to higher direct costs of operation. The London and North-Eastern, for example, has been placing orders for freight rolling stock in excess of the programme of recent years, to cope with the actual and prospective increase in demand from the coal, iron and steel trades. The method of accounting followed on this line throws the burden of replacements and renewals more heavily on periods of recovery than in the case of the other three companies.

Broadly, there are four elements in railway expenditure, of whose dimensions investors would like to have a clear idea before they can begin to estimate the future dividend outlook. The first of these, "running expenditure," can be broadly assessed. Normally, something like 40 to 50 per cent. of increased receipts may thus be absorbed. Secondly, rating expenditure has lately been a stumbling-block to the statisticians. Now, the law having said its long and expensive say, the companies have arrived at direct agreements with the local authorities, covering the past quinquennium (1931-36) and the next (1936-41). The effect of this eminently wise and reasonable compromise solution is set out below:—

	(£'000)

* On which rates have hitherto been paid. † Figure decided by the Courts. ‡ No "agreed" figure yet. (a) Approximate figures, which will be affected by assessments to rates in Scotland, to which present agreements do not apply. (b) Compared with actual amounts paid in last five years.

It remains to be seen how far wages increases will offset the reduction in annual expenses. The railways are now due to receive, for the past five years' over-payments, approximately £3 1/2 millions from the local authorities and nearly £10 millions from the Freight Rebates Fund. The former debt is probably "good," for a joint loan will doubtless be arranged for the authorities, but the Fund debt

looks "bad," for the Fund is now bankrupt. Investors, on the whole, would be wise to disregard any "windfall" dividends from these recoupments in framing earnings estimates.

It is in the domain of wages and additional "physical" charges that investors are most at a loss in estimating future prospects. The L.N.E.R. is certainly in a less favourable position, so far as "normal" renewals expenditure goes, than the other three lines. All four, however, have important capital projects on hand. These, when completed, should increase the companies' earnings potentialities; but they are unlikely to have a decisive effect on receipts during the period of construction, i.e. for the next five years at least. They have been financed by a Treasury-guaranteed loan of £27 millions, issued last January, whose low rate of interest is obviously advantageous for the railways. Nevertheless, it marks a far-reaching departure from precedent. A decision is due as we go to press on crucial wage questions, from the representative Tribunal which has risen out of the ashes of the old National Wages Board. It is not unfair to regard railway workers and railway stockholders, in a sense, as rival claimants for the rare and refreshing fruits of increased revenue. Since the war, admittedly (and probably rightly), the workers have increased their share of the pool. Their present demands amount, in fact, to a claim that the restoration of the whole of the wages reductions they have suffered since 1931 should be regarded as a first charge on higher earnings, and the railways are already committed to the restoration of the third quarter of the 1931 "cuts."

The truth is that railway stockholders are at present in the uneasy position of Mahomet's coffin, suspended between heaven and earth. The comfortable theory of the 1921 Act—with its "standard revenue" and its mulcting of the consumer to make good any deficiency—is dead. Stockholders, who cannot strike, have hitherto believed that the ultimate safeguard of their position was the fact that the ability of any commercial undertaking to raise new capital was contingent on the rate it paid on its existing capital. If, in fact, the last Treasury-guaranteed issue is a precedent of a new order in a "controlled" British economy, this last "sanction" of the junior stockholder no longer exists. If future schemes of electrification, etc., are to be financed with the backing of the State, will there be a tendency for the railways' position to approximate increasingly to that of numerous public utility undertakings which have been formed since the war, to administer essential communal services on quasi-commercial lines? The interest of investors in such bodies has frequently been confined to debenture and loan stocks, with a purely nominal ordinary capital.

If the long-term trend lies in that direction, it may be necessary to distinguish two very different categories of railway securities. The senior fixed interest stocks, whose service is well covered by earnings now, are likely to be relatively secure in any event. They rank among high-grade fixed interest securities, whose future price and yield will be governed mainly by the long-term trend of general interest rates. The remaining "equity" and "marginal" stocks, however, fall somewhat outside the normal category of "recovery counters" on a near view, and may have, to say the least, limited prospects of capital appreciation on a more distant view. On immediate prospects, L.M.S. ordinary, which is earning approximately 1 per cent., is a more promising stock than Southern deferred, which is earning nothing, for—to take the most optimistic hypothesis—the Southern is much nearer its "standard revenue" limit than the L.M.S. The Great Western may, at last, be within sight of earning the 3 per cent. ordinary dividend which it has paid so regularly. But are the directors likely to pay more, even if earnings rise above 3 per cent., before they have made good their recent drafts on reserves? The outlook for junior stockholders in the L.N.E.R., with its heavy renewals requirements, appears the least promising of all. The senior preference dividends are neither being earned nor paid in full. The second preference stock is earning nothing, and the ordinary stocks fall outside the pale of any contemporary investment calculation.

INVESTMENT AND COMPANY NOTES

Course of Share Values.—During July, the share markets completed their convalescence and resumed their advance. As the annexed chart shows, quotations both in London and New York, at the beginning of the month, had approximately regained the ground lost in the reaction of last spring, so that every gain during July took them into new territory. In both countries, advancing industrial activity remains the mainspring of the upward movement. As we show in a leading article on page 210, neither drought nor a spate of election oratory has checked the advance of American economic indices all along the line. In Great Britain industrial news has, similarly, been almost uniformly good. The burial of sanctions, and the harmonious blacksmithy of the Powers at Montreux and

American: "Standard Statistics" Index of 50 Common Stocks

London, has enabled the markets to relegate troublesome questions of international politics beyond, at least, the next account-but-one, without losing the exhilaration of new battleship and other re-armament orders. Above all, the Bank of England has been steadily taking in gold, and it has been made clear that there is to be no contraction—but rather an expansion—of abundant supplies of money. Though the pace of the markets slowed down a little at the end of the month, a substantial break in market activity during the holiday period is not expected, and something like an autumnal boom is forecast in a number of quarters—though the question where and when it will reach its peak, and whether the peak will be a major or minor one, finds opinion divided. Meanwhile, the Actuaries' Index (December 31, 1928 = 100) shows that while the average value of 158 representative industrial shares has advanced during the month from 83.1 to 85.0, and the yield thereon has declined from 3.76 to 3.70 per cent., the index of the price of 2½ per cent. Consols has fallen from 152.7 to 150.8:—

Among ordinary shares, the beneficiaries of last month's activity have been not only the seasoned market leaders and popular favourites in the constructional industries, but also some of the depressed areas of the market, like cotton, shipping and shipbuilding shares.

Agricultural Implement Companies.—The British agricultural machinery trade, though including several famous firms, represents a relatively small section of the engineering trade as a whole. Its total output for 1934, including replacement parts, was £2,617,000, of which £786,000 (or 30 per cent.) was represented by lawn mowers, other than agricultural grass cutters. Agricultural machinery proper thus covered an output of, say, one-sixth of the output of the textile machinery industry, even on the textile machinists' present restricted basis. Against this relatively small total rise, however, the investor may put the fact that a large part of the business is now concentrated in the hands of the Ruston and Hornsby group. Both directly and through its holding of the entire ordinary share capital of Ransomes, Sims and Jefferies, Ruston and Hornsby also controls the businesses of Barford and Perkins and of Aveling and Porter. Though not its only interest, therefore, agricultural machinery accounts for a substantial part of Ruston's business. Demand for agricultural implements has expanded considerably with the incipient revival in agriculture and—not least—with the considerable

* After normal preference dividend requirements. The earnings of Ruston and Hornsby for 1935 and the earnings and dividend for 1936 are on the capital as reduced by the 1935 scheme.

State aid which agriculture now enjoys. Between 1933 and 1934 total output of agricultural implements rose from £2,110,000 to £2,617,000, while the rise in imports (other than tractors) from £234,783 in 1934 to £306,172 for 1935 and to £356,977 for the first six months of 1936 suggests further vigorous recovery since 1934. Ruston's ordinary shares (on which dividends were resumed last year after a lapse since 1929) thus offer quite an interesting stake in the recovery of British agriculture. For those who are willing to invest in America a much larger industry is available, with a gross output (including tractors) of over £100 millions in 1930. Last year the gross output was \$331,998,066 (say, £65,400,000), which represented a sharp recovery over 1931-34. Though exports now only take about 10 per cent. of the total American output, they are, absolutely, considerable; and they give the trade a stake in the revival of the large-scale farming communities in other parts of the world. International Harvester or (more speculatively) the Canadian Massey Harris are shares in the American field. The dairying industry might be covered by the Swedish A/B Separator.

THE NATIONAL CITY BANK OF NEW YORK

Incorporated with limited liability under the National Bank Act of the U.S.A.

Founded 1812

Head Office: 55 Wall Street, New York

London Offices:
36 BISHOPSGATE, E.C.2. 11 WATERLOO PLACE, S.W.1

Lord Essendon on Shipping.—Perhaps the greatest tribute to Lord Essendon's management is the fact that Furness Withy may pay an ordinary dividend next year. The measure of this achievement was given by the chairman's review, at the annual meeting on Tuesday, of the impact of rabid economic nationalism on shipping—the most international of all industries. Some years ago Furness Withy built six steamers specially for the New York-London service. To-day, owing to the competition of subsidised United States tonnage, the service has been abandoned, and of the six steamers five have been sold at a loss and one remains laid up. In the last few weeks the President has approved new regulations, under which subsidies up to 33½ per cent. (or 50 per cent. in exceptional cases) of construction costs will be provided by the American Government, and owners will be remunerated for any excess between their own operating costs and those of their competitors in foreign countries. This is an example—though perhaps an extreme example—of the uneconomic conditions which British shipping has to face almost all over the world. The British Government itself is by no means guiltless, and many of its measures have had consequences unforeseen by their promoters. The Treasury guarantee for new tonnage construction under the Trade Facilities Act, in Lord Essendon's opinion, served the interests of shipbuilders much more than those of ship-owners, and the "scrap and build" scheme may, similarly, tend to increase rather than decrease competition in the industry. "A great deal of the tonnage which is being scrapped under this scheme is tonnage which was unlikely to be put into effective service under normal conditions, and it is being replaced by modern tonnage of the most efficient character, which consequently will be actively competitive with existing vessels." The Government's meat policy, again, closely touches the shipping interest. Lord Essendon had obviously weighed his words very carefully when he declared that if the projected arrangements envisaged a further substantial reduction in the Argentine meat quota, and agreement could not be reached for a longer period than three years, his company would find it "impossible to contemplate the construction of new tonnage" to replace tonnage which had "reached the normal limit of its period of usefulness." Other matters discussed by Lord Essendon are dealt with in a leading article on the shipping outlook on page 221 of this issue of the *Economist*. It is clear, however, that while the chairman of Furness Withy regards international governmental action as essential if world shipping is to be rescued from its present plight, the company itself is making its strategic dispositions with a view to guarding, as far as possible, against all eventualities. It has extended its minority investment in Shaw, Savill and Albion to a hundred per cent. holding in order to secure definite participation in an Empire trade—between the United Kingdom, New Zealand, Australia and South Africa—which may well have possibilities as a set-off to any decline in Anglo-Argentine trade. Furness Withy, in fact, is going East.

Edmundsons Comes Home.—The visit of Mr Floyd B. Odum, on which we commented a fortnight ago (page 125) has fulfilled our anticipations. It is announced that, after negotiations with Mr Odum, Lazard Brothers (acting on behalf of themselves and associates) have bought the holdings of Utilities Power and Light Corporation (controlled by the Odum interests) in Greater London and Counties Trust. The latter concern acquired 73 per cent. of the £3,740,000 ordinary capital of Edmundsons Electricity Corporation in 1928. No further official details have been issued, but it is believed that some weeks must elapse before the transaction is completed. It will undoubtedly rank as one of the most important repatriations of British capital in recent years, involving, at the current market price of the shares, approximately £5,950,000. At present, however, no particulars of the purchase price nor the composition of the consortium are available. Meanwhile, investors may be somewhat perplexed by a statement by an august contemporary which suggests that transactions involving the repatriation of control of important British enterprises are "of course, not objected to by the Treasury." In fact, such transactions are explicitly included in the terms of reference of the Foreign Transactions (Advisory) Committee, which, it is understood, has regard to the individual merits of each transaction. The suggestion that automatic approval awaits such repatriations would certainly not appear to have been borne out, e.g. by the Upsons Case. Such a relaxation of official policy would doubtless be warmly welcomed, but the question is so obviously important as to deserve a clear statement from the appropriate authority—the Foreign Transactions (Advisory) Committee.

Multiple Tailoring Prosperity.—The preliminary statement of Prices Tailors' profits, the operating company in the "Fifty Shilling Tailors" group, shows a further spectacular expansion of earnings. For the third year in succession profits have jumped by £100,000, and total approximately £446,000 for the year to June 30th. The ordinary capital, which is entirely held by Prices Trust, receives £162,000 in dividends, after deduction of tax, compared with £88,156 in the first trading period from October, 1934, to September, 1935. The Trust proposes to pay a total dividend of 30 per cent. on its ordinary shares, compared with 15 per cent. a year ago. The successful expansion of factory tailoring by this and other firms may be ascribed to efficient management, both at the manufacturing and retailing end, which has attracted custom from the bespoke tailoring trade. Its finance, however, has been characterised by special and somewhat unusual features. Both this group and the Montague Burton undertaking were built up in their earlier stages largely from the ploughing-back of profits. Their subsequent finance, however, shows an increase in group prior charges and a raising of the ultimate equity gearing. Thus, Prices Trust, which has a 50-50 preference and ordinary capital, holds the equity of the operating concern, the latter also holding the relatively small equity capital in Prices Tailors' Properties, which owns the shop properties of the group. Similarly, the Montague Burton undertaking formed Montague Burton Estates in October last, which acquired properties leased to the operating company at fixed rents. This week, issues of debenture and preference capital have been made by a second property-owning subsidiary—Montague Burton Shop Properties—which has acquired other properties under a similar arrangement. These subsidiary company prior charges are often accorded a somewhat superior ranking, to similar securities of the operating company, since their service is payable from a prior rent charge. The formation of such property-owning subsidiaries has, from this viewpoint, definite financial advantages, but if it were carried to an extreme, in any particular case, it might tend to weaken the equity of the parent company's shareholders.

Beet Sugar and the Investor.—Beet sugar has been in the news this week, on both sides of the Irish Channel. At home, the expected "statement for information" has been published on behalf of the British Sugar Corporation.

The constitution of the corporation was described on the publication of the Sugar Industry (Reorganisation) Bill in the *Economist* of February 8th. The statement shows that the amalgamation has closely followed the principles enunciated in the Bill and the Government's White Paper, which were little changed in Parliamentary discussion. The fixed assets of the fifteen constituent companies (valued in their books at £5,195,363) have been acquired for £5,000,000 in £1 ordinary shares, and the vendors will subscribe £750,000 2½ per cent. Treasury-guaranteed debenture stock, in order to provide the necessary working capital. Past ordinary share earnings afford no guide to the future profits of the Corporation. These will be determined by operating efficiency and the rate of Exchequer assistance, which will vary from year to year. Normally, ordinary dividends may not exceed 7 per cent., but drafts made upon reserves to pay a 4 per cent. dividend in any year may be provided for, with the approval of the Sugar Commission and the Government, in the assistance granted in the following year. The opening price of 21s. 3d. appears reasonable for a basic 4 per cent. share, but future earnings depend not merely on economies, which have been stressed in the market, but also upon the annual revision of assistance. From Dublin comes the report of the Irish Sugar Company, showing a trading profit of £270,131 for the year to April last. From this amount as much as £148,843 has been written off factories and plant, which now stand at £1,597,283, and an ordinary dividend of 5 per cent. has been comfortably earned. Increased deliveries of beet were taken during the 1935-36 campaign. Factory efficiency, therefore, improved, and a corresponding increase in molassed pulp met a better demand for feeding purposes. The Irish Sugar Company is in a strong position since, under its monopoly, it may restrict imports of sugar to those quantities and types which it is unable to supply. Although autarchy in sugar production may be anathema to the non-farming taxpayer, the necessary Government bounties ensure the financial stability of the home refining companies, although they operate in a wholly uneconomic terrain.

Good Copper News.—The copper shareholder has enjoyed a bounty of good news this week. It is announced, first, that companies participating in the voluntary Restriction Scheme are permitted, from August 1st, to produce 75 per cent. of their standard tonnages, compared with the rate of 70 per cent in force since the scheme was inaugurated in June last year. Although it has always been claimed that the scheme (which now runs until July, 1938) is more flexible than other restriction arrangements, the short notice granted to the mines came as a surprise to the market. Recently, the possibility of increased production had been canvassed, on the rise in copper prices, for a quotation between £38 and £40 has generally been regarded as pivotal. The Committee's decision, therefore, confirms the lower estimate. It has been repeatedly urged in these columns that the Rhodesian producers enjoy greater relative benefit from a moderate increase in production than from a moderate increase in copper prices. It seems doubtful, however, whether a further increase in production is sufficiently near at hand to affect the market, in view of the statistical position, although the metal market, both in London and New York, may well remain firm for some months to come. The expansion in the quota will be of considerable benefit to Rhokana Corporation, whose preliminary statement of profits has impressed the market this week. After charging debenture interest, depreciation and development costs, an estimated profit of £610,000 has been earned for the year to June last—comparable, it would appear, with a sum of £325,000 for the previous year. The total dividend on the ordinary and "A" ordinary shares is raised from 12½ per cent. to 17½ per cent. For the first half of the year, profits were estimated at £250,000, and the rate of £720,000 per annum earned during the second six months may well be increased during the current year, on present indications. The latest earnings are equivalent to about 21 per cent. on the ordinary shares. These, at 6½, yield 2.7 per cent. in cash, and 3½ per cent. on earnings, and carry a prospective

earnings yield of, say, at least 4 per cent during the current year, if the copper situation remains favourable. The current price is therefore looking some distance ahead, but the long-run prospect seems sound.

Tin Tactics.—By an irony of fate, the chairman of Consolidated Tin Smelters, Mr Ernest B. Pearce, was reading his speech to shareholders, reviewing the outlook for tin in hopeful terms, almost at the identical moment when the delegates of the International Tin Committee were drafting, in Singapore, a communiqué disclosing an apparently complete breakdown in the negotiations with Siam for the renewal of restriction after the end of this year. It was believed that the Committee had cleared its worst hurdle when Bolivia agreed to cancel her arrears of production, and that Siam would be brought in, without undue difficulty, by the promise of a substantially increased quota. Apparently, Siam asked for 18,000 tons and the Committee was prepared to offer only 15,000 tons. Apart from the normal procedure of Eastern bargaining, there are "political" considerations on both sides. Certain rubber interests are reported to have made representations to the British Colonial Office against the giving of undue concessions to Siam on tin—presumably lest she should be encouraged to demand them, later, for rubber. On the other side, Japan, through the firm of Mitsubishi, is said to have been wooing Siam with a proposal that, in effect, the two countries should pool their production, outside the scheme, and market it through Japanese intermediaries. The fall of over £7 in tin prices which ensued immediately on the news of the breakdown (and has left the present price at £182, against a maximum, earlier this year, of £217 per ton) was doubtless not wholly unwelcome to the International Committee, as a reminder to Siam of the economic consequences of recalcitrance. It is now announced that Siam has agreed to the continuance of restriction "in principle," and the odds are on eventual agreement on a 15,000 or 16,000 tons quota, which would satisfy both honour and economics, and leave neither party a loser on the deal. Meanwhile, the prophecy of the chairman of Consolidated Tin Smelters, that the company would smelt a materially increased quantity of ore during the present year appears likely to be fulfilled. Quota releases under the control scheme during 1935 averaged 58½ per cent. of the 1929 standard tonnage and for the first six months of this year have averaged 87½ per cent. The world's tin consumption rose from 117,500 tons in 1934 to 142,500 tons in 1935, and has been running for the first six months of 1936 at an estimated rate equivalent to 151,000 tons per annum. The company, which owns the shares of smelting concerns at Penang, Bootle and Redruth, is directly interested in the continuance of the policy of increased releases. If lower prices—which still leave efficient Eastern producers with a handsome margin of profit—are a further stimulus to increased world consumption, their results may well be beneficial for all concerned.

Other Company Results.—This week's table of profits, which appears on page 249, shows a seasonal contraction to 25 companies. *Showells Brewery* reports a profit of £31,682 for the full year to June 30th and maintains the annual rate of dividend on the ordinary shares at 30 per cent. *Colchester Brewing*, whose income is derived from rentals and not from trading, shows an apparent decline in net profits to £14,778, but shareholders this year receive a special distribution from income tax reserve no longer required. The *Pearson and Knowles* group results for the eighteen months to June last show a perceptible improvement but the financial position of the parent concern and *Partington Steel and Iron* remains difficult, and the cash position strained. In the textile group, *Kelsall and Kemp* report a significant rise in profits from £19,386 to £44,533, ordinary dividends being resumed at 5 per cent. *Isaac Holden* has raised the ordinary distribution from 11½ to 13½ per cent., tax free. The brewery dividends, undoubtedly, are the most interesting feature of the week's company news. The *Guinness* dividend is maintained at 29 per cent., to the

market's disappointment. Profits are approximately £30,000 higher at £2,043,209. *Wainey, Combe Reid* increase the total dividend to 18 per cent., against 16 per cent. with a 12 per cent. final and bonus payment, while *Friary Holroyd and Healey's* dividend is raised from 11 to 13 per cent.

Company Meetings of the Week.—On later pages of this issue will be found the reports of the following company meetings:—*Cómhluclht Siúicre Eireann, Teoranta* (Irish Sugar Company), *McDougalls Trust*, *Furness Withy and Company*, *Gold Fields Rhodesian Development*, *Consolidated Tin Smelters*, *Southern Kinta Consolidated*, *Bukit Mertajam Rubber*, *Trojan (Holdings)*, *Tanganyika Concessions*, *Amalgamated Banket Areas and Griffiths Hughes Proprietaries*. Comment on the position of the Irish Sugar Company will be found on page 230. Mr K. A. E. Moore, at the McDougalls Trust meeting, referred to the installation of automatic plant which was expected to reduce packing costs. Lord Essendon's speech at the Furness Withy meeting is discussed on page 229. The Chairman's speech at the Consolidated Tin Smelters' meeting is discussed on page 231. Captain Lyttelton, at the Southern Kinta Consolidated meeting, referred to the stabilising of operations by the use of the company's six dredges. At the Bukit Mertajam Rubber meeting the Chairman reported that the directors were well satisfied with the new Kedah estate, which would provide a valuable source of young rubber. At the statutory meeting of Trojan (Holdings) the Chairman said that the company was considering the introduction of new types of commercial vehicles specially suitable for railway companies. At the first meeting of Amalgamated Banket Areas, Mr Latilla pointed out that the company's vast area had led them to embark on a more ambitious programme for the future. Sir Bertram Hyde Jones, at the Griffiths Hughes Proprietaries meeting, declared that the company had one of the finest selling organisations in the

TRIPLE SHELL LUBRICATING OIL

officially
recommended
by

HILLMAN

world. At the Gold Fields Rhodesian Development meeting, Mr Christopherson summarised the progress of the company's investments in various areas. Sir Robert Williams, at the Tanganyika Concessions meeting, pointed out that the Union Minière bonus issue would permit a reduction in the book value of the shares now held.

THE WEEK IN THE MARKETS

THE STOCK EXCHANGE

SETTLING DAYS

TICKET
AUGUST 11

ACCOUNT
AUGUST 13

PROFIT-TAKING, like rumour, is quick to spread, and there were occasions earlier this week when realisation—much of it of a professional character—was as widespread in scope as the greatest activity of the previous week. The news of cancelled holidays in France by King and Premier tilted the scale just at the moment when a large part of the market was disposed towards quick profit-taking. The iron and steel group was first to suffer, but also first to recover, and a livelier market was evident at the turn of the week, with home rail stocks distinctly strong on a plethora of news. The interruption of the holiday bull market, however, came at an inopportune time for a subsequent revival in general activity, and the industrial market contented itself with moderate support in iron and steel shares, and with special attention for certain favourites, like Turner and Newall.

The gilt-edged market has been very firm throughout the week, due partly to the Chancellor's expectations that taxpayers have seen the worst of the re-armament burden, and to the evidence of continued cheap money. Corporation issues have been equally firm, recent new issues having been very successful, and during the week the Plymouth loan was very considerably oversubscribed. Business in the Ayr Threes started at a small premium. India and Dominion stocks have been steady, apart from some selling in anticipation of the Sydney issue. In the foreign bond market, German issues made a substantial recovery at the end of last week on the decision to invite Germany and Italy to the Locarno conversations, but this week they became somewhat easier on the less favourable European situation. The poor support for the French Treasury baby bonds and the continued weakness of the internal situation led to some selling of French bonds. Chinese loans have been dull.

Home rails have been in very good form this week. Great Western improved in anticipation of better trading conditions in South Wales, and a general rise set in after the L.M.S. decision to pay full interim dividends on all Preference stocks for the half-year. A further encouraging factor was the rating decision and the prospect of an early settlement of the wages question. In the foreign rail market, Argentine issues were firm at the end of last week, but reaction set in this week in spite of improving traffics. Brazilians were firm, and among Americans, Norfolk and Western were outstanding.

Price movements in the industrial share markets have been rather irregular this week, the approach of the holidays discouraging new commitments. Iron and steel shares became undecided after heavy profit-taking, the only outstanding points being slight improvements in John Brown, Cammel Laird, and Vickers, following the placing of contracts for the new Atlantic mammoth, and the two battleships. Tube Investments improved on the proposed issue of ordinary shares. In the motor section, Leyland moved up on the order from London Transport, and movements in the aircraft section were irregular. There was less certainty in the electrical equipment group than last week, but in mid-week Crompton Parkinson made a good recovery, and there was a firmer appearance in the supply section under the influence of the Edmundsons deal.

Irregular movements have prevailed in textile shares, with some support for Tootal Broadhurst on dividend anticipations, and the rayon section has been very quiet. Woolworth reached a new high level at the end of last week, but became dull this week along with other stores shares. Brewery shares were mostly lower. In the miscellaneous industrials group business has been selective and on a small scale. Turner and Newall further advanced, and in mid-week cement issues were a little higher. Imperial Continental Gas were bid for in the belief that they will benefit from the Edmundsons deal. British Oxygen lost ground at the opening of the week, but improved slightly later.

The oil shares market reached its peak at the end of last week, and business has been much duller since Monday, when Trinidad Leaseholds reached a new high. Profit-taking has been in progress most of the week, and business has been restricted, except for fairly active dealings in Eagle issues. The rubber and tea shares markets have been thoroughly depressed, with business at negligible proportions. The Kaffir market has been generally subdued, with the approach of the holiday stifling all interest. The Western issues have been relatively firm, with support shown for Venterspost and West Witwatersrand and a slightly firmer tendency spread round the market in mid-week. West Africans remain one of the duller sections of the market, apart from a little support for Ashanti Goldfields. Rhodesian copper descriptions were brighter on the higher Rhokana interim dividend, and the increase in production quotas. Roan Antelope, Zambesia and Rhodesia Anglo all improved. Break-down of the negotiations with Siam for continuation of the tin restriction scheme provoked a general marking down of quotations throughout the market, but later this week hopes of a satisfactory agreement with Siam led to an equally general recovery.

FOREIGN STOCK EXCHANGES

NEW YORK

WALL STREET has been enthusiastic on the improved second-quarter earnings reports made by a large number of industrial corporations, and by the non-appearance of the usual seasonal business recession. At the end of last week motor stocks, and Chrysler in particular, led the market, and the reports of rising steel activity encouraged a further rise in steel shares. This week's business opened very strongly, with rises of up to five points, despite some profit-taking, the chief encouragement coming from the Consolidated Edison and General Motors statements. Later in the week, continued profit-taking kept prices in restraint, but the tone remains very confident. The sugar group continues to be attractive, but steel shares have suffered from disappointment with the U.S. Steel Preferred distribution. In the bond market Treasury issues have been firm, but International Telephone bonds reacted on the discouraging news from Spain. Business reports are still very good, and Iron Age estimates steel mill activity for the week at 71.5 per cent., compared with 71 per cent. a week ago. Electricity output for the week ending July 25th was 14.5 per cent. higher than the corresponding

week of 1935. The business outlook still seems set fair, and investors and speculators are becoming more confident.

PARIS

THE market's hopes—and fears—during July have been centred on the "baby" bond issue. On the poor public response, it failed to arrest the gradual and relentless deterioration in a

large number of local securities during the last few weeks. The Spanish troubles did not encourage the Bourse, but it would be unfair to charge the fall in prices to the account of external factors. The domestic situation, with the evidence of rapidly rising prices and costs to the fore, is far from encouraging to local investors. Poor turnover has therefore been accompanied by a widespread decline in quotations. Rentes, in particular, have fallen slowly throughout the month. Earlier apathy could doubtless be attributed to the desire to mark time pending the July 14th holiday and the precise terms of the State Loan. The apparent failure of the loan to fulfil official expectations has accentuated the drooping tendency, and during the last few days it has become even more pronounced. M. Vincent Aurio's precise figure for the baby-bond subscriptions leaves little doubt that the public response has been small. Meanwhile, political fears, which are responsible for much of the present uneasiness, remain, to be dispelled or confirmed as France's New Deal takes shape.

BERLIN

BOTH bonds and shares were quieter in July. The Reich Treasury Bond issue of Rm. 700 millions in the second half of the month caused a tightness seldom witnessed in the money market. But whereas the average quotation of home bonds, both government and industrial, declined, shares continued to rise (though at a slackened pace), and reached the highest point of the year. Speculative operations in expectation of a general advance were replaced by investment purchases through the banks. The public successively favoured isolated specialities or particular industrial or business groups. Among the specialities, the two leading department stores were in demand, and among the industrial groups, machine-manufacturing and motor-cars. Steel shares were prominent later in the month, the leaders gaining as much as fifteen points. Shipping shares were also heavily bought at times, but only one company made a substantial gain. Late in the month interest turned to the three chief commercial banks, which all passed par. Mexican and Austro-Hungarian pre-war issues were at times in demand. Certificated dollar bonds were a little lower, but Dawes and Young loans fell considerably.

AMSTERDAM

THE main feature of the market during July was the strength of most branches of the commodity share market, which continued almost uninterrupted until the end of last week, when it was pulled up sharply by profit-taking. The check, however, appeared to be only temporary, and later profit-taking sales were comfortably absorbed. At first, activity in the commodity sections contrasted with quiet—though not depressed—conditions elsewhere. The cheerfulness of this group, however

LONDON ACTIVE SECURITY PRICES AND YIELDS

In calculating yields on fixed interest stocks quoted below allowance is made for interest accrued since the last date of payment, less income tax at the standard rate. Where stocks are definitely redeemable at a certain date the yield includes any profit or loss on redemption; where stocks are redeemable at or before a certain date the final date of redemption is taken when the stock stands at a discount and the earliest date when the quotation is above par. The return on ordinary stocks and shares is calculated by reference to the latest dividends, account being taken of any enhancement or reduction of interim dividends. Allowance is made for accrued dividends in calculating the yield on "cum. div." shares.

CAPITAL ISSUES

THE new issue market has enjoyed one final burst of activity this week, before the holiday "close season" commences. The response to the Plymouth issue of £750,000 stock measures the recent improvement in the trustee investment market. An issue of £250,000 Wembley stock has also been placed this week. By accident of Census dates, the stock does not fulfil the Trustee Act requirements, although the present population is estimated to be well in excess of the minimum standard. A conversion issue of Sydney County Council 4 per cent. debentures was made on Thursday at 99. It provides the Council with a marked saving in interest, and offers an attractive yield for the non-trustee investor. Reference to the security of the Montague Burton Shop Properties debenture and preference share issues is made on page 230. The existing rental arrangements are well covered by the recent profits of the parent company. The 5s. ordinary shares of Armstrong Stevens, offered at 10s. 6d., show an earnings yield of 8 per cent. at the issue price, on the latest year's profits. In view of previous fluctuations in profits, however, the premium—as in recent engineering issues—seems high. Preston Breweries is a small undertaking, owning 18 licensed premises. An increase in profits is expected on the introduction of centralised brewing, but the shares must be allotted a rather speculative status owing to the technical changes involved, and also to the small size of the issues. Lansdowne House (Berkeley Square) shows sparing cover—usual in property issues—for the debentures and preference shares, which have no special attraction. The mixed issue of Sisal Estates shows that the market interest in the revival of this commodity is not at an end. The preference shares offer a high yield in keeping with their speculative ranking. It may be asked, however, whether a 50 per cent. premium is expedient, from the investor's point of view, for the ordinary shares, which offer 6 per cent. on latest earnings, and whose prospects are largely dependent upon the estimated doubling of net profits in future years. Jax Stores have made a somewhat rare issue in these days—a 5s. share at par. The business is taken over on a par basis, and evidently needs the infusion of new working capital. The trend of recent profits has been favourable, but the size of the capital is rather small to appeal to the general investor. Particulars of statements "for information only" are summarised in a succeeding column.

ISSUES OF THE WEEK

January 1 to July 25, 1936, including conversions, Old Basis, £290,135,109.
January 1 to July 25, 1936, excluding conversions, Old Basis, £115,481,022.
January 1 to July 25, 1936, including conversions, New Basis, £292,857,548.
January 1 to July 25, 1936, excluding conversions, New Basis, £202,229,360.

National Savings Certificates, Net receipts week ended July 18, 1936, nil.

COMPANY MEETINGS, &c.

CÓMHLUCHT SIÚICRE EIREANN, TEORANTA
(IRISH SUGAR COMPANY)

SUCCESSFUL YEAR—INCREASED PROFIT

DR. J. H. HINCHCLIFF'S INTERESTING REVIEW

The annual ordinary general meeting of Cómhluacht Siúicre Eireann, Teoranta, was held on July 23rd, 1936, in Dublin.

Dr. J. H. Hinchcliff (the chairman) presided.

The Chairman said:—I now propose the adoption of the directors' report, the profit and loss account for the year ended April 30th last, and the balance sheet as at that date.

Copies of the report and accounts were furnished to shareholders three weeks ago, and having regard to the position disclosed by the statement of accounts, it is not, I think, necessary for me to embark upon any lengthy comment.

BALANCE SHEET ITEMS

The provision for depreciation of premises and plant, namely, £148,842 as shown in the profit and loss account and also, of course, in the balance sheet may, at first sight, appear somewhat excessive. In this connection regard must, however, be paid to many considerations—amongst others, to the fact that during the manufacturing season the plant is in operation day and night for seven days each week. Lest you should think that the various machines, etc., are not proving satisfactory from the point of view of durability, I wish to assure you that the wear and tear of the plant and machinery installed in your factories is by no means abnormal. Of the £26,156 provided for interest on the debenture stock, £10,656 was duly paid on November 1st last and £15,500, which is shown in the balance sheet as a liability on April 30th, was paid on the due date, namely, May 1st last. As you will have observed, £11,250 has been debited to the profit and loss account in respect of the entire underwriting commission and expenses in connection with the issue of debenture stock in July last and £40,000 has been put to reserve.

PROFIT AND DIVIDEND

The trading profit for the year, after charging all manufacturing and selling expenses, including directors' remuneration, and after providing for taxation, amounted to £270,130 as against £231,312 in the previous year. A credit balance of £45,137 was brought forward from the previous year and after making the provisions for depreciation and reserve, to which I have referred, and allowing for the debenture interest for the year, and also for the interim dividend on the preference shares which was paid on February 1st last, there remains a credit balance of £77,394, as compared with a like balance of £72,492 at April 30, 1935. Your directors recommend that out of this sum of £77,394 there should be paid the final dividend on the 6 per cent. cumulative preference shares and a dividend of 5 per cent. on the ordinary shares, both less tax, thus leaving £46,393 to be carried forward to the credit of the profit and loss account for the current year.

With reference to the balance sheet, the increase of, approximately, £198,000 in stock in trade is due mainly to the larger quantity of sugar which we had on hand and also to the larger quantities of seed which were sown and put into reserve. Turning to the other side of the balance sheet, you will see that while the issued share capital remains the same there is an increase of £500,000 in loan capital because of the issue of that amount of 4 per cent. guaranteed debenture stock which was made and fully subscribed last July. The liability of £462,371 17s. 6d. to sundry creditors, in which is included the amount due to the company's bankers on April 30th last is, approximately, £347,000 less than the corresponding figure shown in the previous balance sheet. Since the close of the accounting year the seasonal improvement in the liquid resources of the company has, of course, taken place following the steady and regular realisation of sugar stocks. In fact, although the company still have considerable stocks of sugar on hand, they have fully discharged their liability to their bankers, who now hold funds to the credit of the company's account.

INCREASED DELIVERIES OF BEET

The net factory weight of beet delivered by 27,734 farmers to the four factories during the 1935-36 campaign was 563,174 tons, as compared with a throughput of 484,236 tons in the previous

season. The average yield of the 1935 crop was 10.38 tons per statute acre and its average sugar content 17.17 per cent. The 1935 beet was slightly richer in sugar than that of 1934, though not, however, in this respect, as good as the Irish crops have been on the average of the past few years. The 1935 crop, like that of 1934, did not fully ripen or mature. I should, however, explain that this was due to unfavourable weather in autumn, and was not to be ascribed to negligent cultivation or manuring, for the vast majority of our growers are most careful in attending to their beet. The net production of sugar from last year's crop was, in terms of white sugar, 78,911 tons, an output which, though somewhat below our expectations, is not by any means unsatisfactory.

The larger throughput of beet in the last campaign resulted, of course, in a corresponding increase in the output of molassed pulp, and I am glad to say that a proportionately larger quantity of this commodity, namely, 83 per cent. of the entire output, was used in the Saorstát by beet growers and other stockowners. This figure clearly indicates that the value and suitability of this product as a feeding-stuff for most classes of livestock are now much more generally recognised than was the case even so recently as three years ago.

54,267 statute acres of beet were grown under contract last year. Of this area approximately 15,000 acres were grown in the Carlow district, and the remainder was fairly evenly divided between the other three factory districts.

INCREASED EFFICIENCY DESPITE LARGER THROUGHPUT

The plant and machinery at all four factories was operated throughout the campaign without serious or abnormal interruption. There was a larger daily throughput of beet at the new factories and a higher standard of efficiency in manufacture was attained. I mentioned a year ago that plant and machinery for the manufacture of cube and castor sugars was being installed at the Carlow factory. This new plant has worked quite satisfactorily. The extensions to the sugar stores and the new offices at the Mallow, Thurles and Tuam factories, as well as the additions to the railway sidings at Mallow and Thurles, to which I referred last July, were duly completed prior to the commencement of the 1935-36 campaign.

The arrangements made in October, 1934, for the sale of the company's production of sugar still obtain with but slight modification. Granulated sugar of home manufacture is accordingly sold at a flat price, inclusive of freight, at 41 distributing centres throughout the Saorstát, and a like system of sale has operated in respect of the cube and castor sugars manufactured at Carlow.

THE CURRENT YEAR

Turning now to matters which appertain to the current accounting year and to next campaign I should perhaps, in the first place, mention the Sugar (Control of Imports) Act, 1936, which was enacted towards the end of April last, and which met with the approval of the wholesale sugar trade. Under this statute your company have had the monopoly of the importation of all types of sugar since the middle of last May. Though your company are obliged to remit to the Government any profits arising from the sale of sugar which they import they are now, in the exercise of that monopoly, able to restrict imports of sugar to such quantities and types as they are not in a position to supply, and thereby to ensure a ready market for all the types of sugar which are now manufactured at the Saorstát factories. Arrangements have already been completed for the import of the total quantity of white sugar which will be required to supplement the stocks of home manufactured sugars until the beginning of next campaign.

Though it was not practicable to arrange for the allotment of an increased acreage to the Carlow district, in which approximately 15,000 statute acres of beet were grown under contracts last season, your board decided to contract this season for a somewhat larger acreage in the Mallow, Thurles and Tuam factory districts than was grown in those areas last year. The total acreage allotted under contracts this year is just over

59,000 statute acres, and this is fairly evenly divided between the four factories.

PROMISING OUTLOOK FOR 1936 CROPS

Yield and sugar content of the crop are largely dependent upon climatic conditions and cannot, therefore, be estimated at all reliably until the season is much more advanced. I am, however, pleased to say that, on the whole, the 1936 crops in all four factory districts are at present very promising. Reports received during the past few days indicate that they are more advanced in growth than were the 1935 crops at the corresponding date.

The plant and machinery at your factories is undergoing the usual thorough overhaul and repair in preparation for the coming campaign. Your board realise the truth of the old saying—paradox though it may be—that sugar is made during the non-manufacturing season. You may, therefore, rest assured that no pains are being spared to maintain the factory equipment in good order and condition and thereby to secure, as far as possible, its efficient and smooth working during the coming campaign.

NEW STOCK-SEED EXPERIMENTS

During the past few seasons the Department of Agriculture have conducted preliminary small-scale experiments on the propagation of sugar beet seed and your board decided last spring that the company should undertake experimental work of that nature on a small commercial scale. Arrangements for the supply of stock-seed were accordingly made with two well-known firms who have specialised in the breeding of improved varieties of sugar beet and whose seed has yielded, in this and many other countries, superior crops in respect of both yield and sugar content. The initial supplies of stock-seed were sown last month at six specially selected centres. As, however, beet is a biennial the plants produced this year, i.e. the stocklings, which they are termed, will be transplanted next spring for seed production and for the harvesting of seed next year.

I am pleased to avail of this opportunity of testifying to the interest which the staff of all grades at the factories and the head office have taken in their work and to the efficient manner in which they have discharged their duties.

The report and accounts were adopted.

AUDITORS' REPORT TO THE SHAREHOLDERS

We have obtained all the information and explanations we have required in the course of our examination of the foregoing Profit and Loss Account and Balance Sheet of Cómhluacht Siúicre Eireann, Teoranta, for the year ended April 30, 1936. The Balance Sheet is, in our opinion, properly drawn up so as to exhibit a true and correct view of the state of the Company's affairs according to the best of our information, and the explanations given to us, and as shown by the books of the Company.

KEAN & CO.,
Chartered Accountants.

46-7 Dame Street,
Dublin, June 20, 1936.

FURNESS, WITHEY AND COMPANY, LIMITED

A STRONG BALANCE SHEET

PROSPECT OF DIVIDEND RESUMPTION

The forty-fifth annual general meeting of Furness, Withy and Company, Limited, was held, on the 28th ultimo, at the registered office of the company, Furness House, Leadenhall Street, London.

The Lord Essendon, who presided, said: The balance sheet is, I venture to believe, a document which is sound and unencumbered by any deadwood. The profit and loss account also gives cause for reasonable satisfaction, although it is a matter of great regret to your directors that once again it is considered desirable to recommend to you a policy of prudence in preference to the payment of a dividend on the ordinary share capital. Naturally, it is hoped to resume the payment of dividends at as early a date as possible; if last year's profits are maintained and improved, as I hope will be the case, this may be possible next year.

After adding to the profit for the year the amount brought forward from 1935, the total is £618,443, from which has been deducted the preference share dividends, which absorbed £57,656, and we have transferred £350,000 for depreciation, leaving an amount of £210,787 to be carried forward to the current year.

PROBLEMS OF SHIPPING INDUSTRY

Shipowning is surely the most diversified occupation in the world, with the possible exception of politics. That we have experienced substantial improvements in some directions is obvious from the figures which we are able to submit to you to-day, but whilst it is a source of strength to our company that our interests are so widespread, it is equally true that our problems are multiplied for the same reason. We have, in the past, endeavoured to secure a participation, either by creation or by acquisition, in such trade expansions as we considered most probable, as, for example, the acquisition of the Prince Line, which gave us a participation in several United States trades at a time when the overseas trade of the United States was rapidly developing. We also established our regular service from the Pacific Coast ports of Canada and the United States to the United Kingdom in order to participate in the development which was anticipated in consequence of the opening of the Panama Canal, but however right a liner company may be in its judgment as to the probable trend of trade expansion, there is always the unknown factor which sooner or later comes into the picture. It may be that political changes, or nationalistic tendencies, alter the whole outlook, and the great problem is to protect one's interests as far as possible by the merits of the services provided, and at the same time to continue to expand in the direction of trade development. With this policy in view, we have, as already reported, acquired during the past year the balance of the share capital of Shaw, Savill and Albion in order to secure a very definite participation in an Empire trade of the first importance.

Our New York-Bermuda Service has shown a considerable improvement, the number of passengers having exceeded those carried in previous seasons. Shareholders will, however, have noticed the announcement recently made by His Majesty's Minister for Air that an agreement has been entered into with Imperial Airways, Limited, for the establishment of a regular aircraft service between Bermuda and New York for which His Majesty's Government have agreed to make a capital grant not exceeding £34,500, in addition to an annual subsidy of £18,000 for a period of five years. The effect of this competition upon the steamship service will be watched with care and interest.

Since we last met arrangements have been made to terminate the Roca Agreement, and a fresh trade agreement with the Argentine is at present being negotiated, which, I understand, is nearing the point of completion. Whilst I think it is necessary in the national interests to recognise that a substantial measure of protection must be accorded to the British stock-raising industry, and also that a certain measure of preference has properly been promised to the Dominions, nevertheless it is to be hoped that the interests of British shipping will not be overlooked or subordinated in the negotiations for a new trade agreement.

UNITED STATES SUBSIDY REGULATIONS

I have at all times weighed most carefully any remarks which I have felt it my duty to address to our shareholders on the subject of United States shipping legislation, recognising as I do that the United States is determined to have sufficient merchant tonnage under her flag to serve her purposes in times of emergency. It is a fact, however, that we have many interests in the United States, and consequently I consider our shareholders are entitled to be advised of any matters which affect those interests. We have,

in past years, been obliged to abandon entirely our New York-London service, chiefly owing to the competition of the United States subsidised services. We built six steamers specially for that trade, five of which have been sold at a very heavy loss, and one still remains laid up.

By the latest subsidy regulations which have within the past few weeks been approved by the United States President, American shipowners engaged in overseas trade will be entitled to Government assistance in regard to both construction and operation of their ships.

I make no comment on these regulations, but merely state the facts for your information in order that you may know what is the measure of competition with which foreign vessels are faced in American overseas trades notwithstanding that such foreign vessels, including our own, have been engaged in those trades for a great many years and have in many cases assisted very materially in their creation and development.

In contrast with this protection of American liner services, our own Government has, I think rightly, given a subsidy of £2,000,000 last year and again this year for the preservation of tramp tonnage under the British Flag. The cargo liner, however, has no assistance from the Government, but has to encounter the competition of foreign flag vessels which are subsidised, and the competition which ensues from the supply of tonnage being in excess of the demand—in other words, from the contraction of international trade without any adequate contraction in the amount of tonnage available to carry the reduced volume.

VOLUNTARY LAYING-UP

The remedy which I proposed some four years ago, of a voluntary laying-up agreement, was not considered universally practicable; there followed a proposal for a contributory laying-up agreement, which, however, has not received the necessary measure of support. Tanker owners have for some time been operating a contributory scheme with great success, and although it is beyond dispute that a similar scheme would be much more difficult to apply to ordinary cargo liner tonnage, the success of the tanker scheme does at least demonstrate that the task should not be cast aside as impossible. However, without sufficient support no progress can be made towards international rationalisation. In any case, international rationalisation, which involves the laying-up of ships, becomes exceedingly difficult so long as encouragement is being given by Government assistance to keep existing ships in operation and to build new ones.

No survey of the problems confronting the shipping industry would be complete without reference to the scrap and build scheme, a scheme which I venture to suggest is of greater benefit to the shipbuilding than to the shipowning industry. The ships that were built under the Trade Facilities Act did a great deal of harm, and I venture to think that the scrap and build scheme will also do much harm to the shipowning industry as a whole, although both schemes no doubt did a great deal of good to shipbuilders and engineers, and in the process benefited the employment problem. I suggest that the Government might reasonably reconsider the matter in view of the large amount of work which those two industries are at present enjoying, and likely to enjoy, in consequence of the enlarged Naval programme to which the Government is now committed, and which was not contemplated at the time the scrap and build scheme was inaugurated.

The whole country must have been gratified to hear the recent survey of British trade made by the President of the Board of Trade in the House of Commons. It was a remarkable survey of recovery and progress in many branches of the industry. You who read the President's speech will have noted that the improvement was largely confined to home markets, and the recovery had been slower in the export trades.

REMEDY FOR UNFAIR COMPETITION

The only other remedy I can suggest for the immediate relief of the shipping industry is one which has always been abhorred, and still is abhorred, viz., that subsidies and discrimination should be met by counter subsidies and counter discriminations. I am very far from advocating this latter course, but it must be made apparent to our foreign competitors that British shipping cannot continually be ousted from trades which it has served for generations without effective measures of protection being taken.

The true solution of the shipping problem lies in the restoration of international trade. Every maritime nation seems to be determined to increase its Merchant Marine, but has hitherto not shown commensurate keenness to increase the trade which those ships are designed to carry. It is encouraging to find that the desirability of expanding overseas trade is gradually being more widely recognised.

The report and accounts were adopted.

McDOUGALLS TRUST LIMITED

DIVIDEND RAISED TO 7½ PER CENT.

SALES FULLY MAINTAINED

The third annual general meeting of McDougalls Trust, Limited, was held, on the 28th ultimo, at the registered offices, 3 Thames House, Queen Street Place, London, E.C.

Mr Kenneth A. E. Moore (the chairman of the company) presided.

The Secretary (Mr Reginald E. Clark) having read the notice convening the meeting and the report of the auditors,

The Chairman said:—In sending you the report and accounts of your company we have, as is our practice, enclosed with them those of the operating company, McDougalls, Limited, covering its last completed financial year—namely, that ending on March 31, 1936. As it is from this source that the bulk of your revenue is derived, it is appropriate that I should deal, in the first place, with the results shown by those accounts.

TRADING CONDITIONS

The past trading year was by no means plane sailing owing to the unsettled state of the wheat market, which was affected not only by world harvest conditions and the wheat policy of the Canadian and certain other Governments, but also by the Abyssinian war. The net effect was to increase the cost of our wheat supplies, but as a matter of policy we refrained from raising our selling prices, which remained the same throughout the year. For this reason, our margin of profit was slightly less, but our sales were more than fully maintained.

During the year considerable progress was made with the construction of the new packing warehouse at Millwall and we hope that it will be in occupation and full operation in a few months' time. We anticipate that the highly specialised automatic plant and equipment which is being installed will effect a useful reduction in packing costs. During the rebuilding operations at Millwall our working costs have unavoidably been a little higher than usual. The reduction in profits from £220,974 to £208,044, while partly due to the increased cost of wheat, is also, to some extent, accounted for by this factor and by increased expenditure on advertising.

STRENGTHENED FINANCIAL POSITION

The financial position of the operating company, which was already strong, was still further strengthened during the year by the settlement in the company's favour of an outstanding claim for income tax, as referred to in the report, and at the date of the balance sheet the floating assets, which included trustee securities of the market value of £265,000, were greatly in excess of creditors and dividend requirements.

I turn now to the accounts of McDougalls Trust, Limited. You will observe that we recommend the payment of a final dividend of 4½ per cent., making 7½ per cent. for the year, as against 5 per cent. for the previous year. This increase has been rendered possible because the earnings of the operating company are again substantially above the average of the last five years, and because on this occasion no appropriation is required for the preference shareholders' reserve fund, our obligations in that regard having been fulfilled out of the profits of previous years.

FUND FOR EQUALISATION OF DIVIDENDS

The distribution recommended enables us to increase our carry-forward by nearly £30,000 to £46,179, almost the whole of which has, since the date of the balance sheet, been invested in trustee securities. In this way, we are, in effect, building up a fund for the equalisation of dividends.

The report and accounts were unanimously adopted.

The retiring director, Mr Robert McDougall, was re-elected, and the auditors, Messrs Ball, Baker and Company, were re-appointed.

Orders for the publication in these columns of the reports of Company Meetings should be addressed to:—

AMALGAMATED BANKET AREAS, LIMITED

VALUABLE PROPERTIES

The first ordinary general meeting of Amalgamated Banket Areas, Limited, was held, on the 27th ultimo, at River Plate House, London.

Mr H. G. Latilla (the chairman), in the course of his speech, said that the company possessed by far the greatest individual area covering the known payable banket beds of the Tarkwa series. That banket formation was more or less in the form of a trough or basin. Thus, there were two outcrops, one to the east, running through the Tarkwa Gold Areas and Tarkwa Southern Mines properties, and the other to the west, contained in the Teberibie, Mantrain, Pepe, and Patet No. 1 areas, so that they covered a considerable portion of each outcrop as well as most of the large area of the basin itself.

The properties at present in direct possession of the company covered an area of 19,799 acres, and included the Mantrain Concession, which was being actively developed and on which over 70,000 tons of payable ore had already been proved, and the Pepe Concession, which was being opened up over a large area, where preliminary work had already proved 27,740 tons of payable ore. The Sommahoo areas contained the deep levels of the mines being worked on the eastern rim, which included the Abbontiakoon mine. With regard to the property of the Tarkwa Gold Areas, the most important section was situated on the eastern outcrop, and the rest was situated on the western outcrop south of the Mantrain area.

On the southern block was situated the Abbontiakoon mine, which appeared to have been first operated in 1879, from which date up to 1935 over £4,000,000 worth of gold had been extracted, calculating gold values at roughly £4 per ounce. This mine to-day treated over 11,000 tons per month, yielding a satisfactory profit, on which basis of output they had already over seven years proved ore reserves.

AN AMBITIOUS PROGRAMME

The vast area of the formation which the company controlled had led them to embark on a very much more ambitious programme for the future—a policy they were fully justified in undertaking in view of the results and reports of the various engineers they had consulted. It was in no way an extravagant forecast to state that in future they should have a mill capable of treating 50,000 tons per month and adequate ore supplies developed for maintaining such an output, as in addition to the areas adjacent to and within easy mining distance of the new shaft, they had the property of the Tarkwa Southern Mines, Limited, which adjoined the Abbontiakoon mine area to the south.

The most important feature which had recently been disclosed by their development work in the Abbontiakoon mine was the existence of an entirely new ore body which had been discovered in driving north on the 16th level beyond the limit of the workings. In addition, development work in the upper levels had opened up blocks of new payable ore left by the old company; it was anticipated also that the continuance of this work in the upper levels would add a further appreciable tonnage to the ore reserves.

One heard remarks about how much more stable and attractive the Kaffir market was than that for West African Mining shares. People seemed to forget that profitable gold mining had been going on for 50 years on the Witwatersrand and that in South Africa there were big cities with a large and prosperous white population who invested and speculated in Mining shares, not only through local stock exchanges but also in London. No such conditions existed in West Africa, but those of them engaged in gold mining on the Gold Coast realised that there were some compensations for the adventurer in that country.

From the facts which he had put before the meeting he felt that they could be justly optimistic with regard to the future of the company.

Substantial profits were accruing to them through their Tarkwa Gold Areas Company; thus the board had felt justified in declaring an interim dividend of 5 per cent., less income tax. They had an enormous area over which to mine. To develop and work some portion they might form two or three subsidiary companies or more. It was not their immediate intention to consider such a policy, but to confine their attention to making the company the owners of a mine of premier importance. If and when any subsidiary company was floated, the shareholders would be given the right to subscribe for shares on ground-floor terms.

The report was unanimously adopted.

SOUTHERN KINTA CONSOLIDATED, LIMITED

STRONG POSITION

The second ordinary general meeting of this company was held, on the 29th ultimo, at 20 Aldermanbury, London.

Capt. Oliver Lyttelton, D.S.O., M.C., (the chairman), said that in future, where earnings and other circumstances permitted, the directors had decided to declare three interim dividends and to recommend a final dividend, instead of two interim dividends and a final as in the year under review. The profit for the past year showed a satisfactory improvement over that for the previous year, but it had been increased by an extraordinary receipt, namely the profits from the sale of the "Buffer Stock" tin amounting to £53,585, which was used to build up the carry forward to £63,184.

The financial strength of the company was great. It was possessed at the date of the balance sheet of £386,000 in cash, which had been increased since that date. It would continue to be their policy to make the financial position as impregnable as possible. The advantages of having large cash balances were too obvious to require explanation.

The average rate of quota allowance for the past year was 51.525 per cent. of the assessment, equal to 3,016.97 tons of concentrates. Since March 31st the company had been operating at an average quota allowance of 63.5 per cent., which was at the rate of 3,718 tons of concentrates per annum, increases respectively of about 12 per cent., or 701 tons of concentrates. The gain in output nearly, but not quite, offset the fall in the price of tin.

The company had an important advantage in the fact that it was operating six dredges; the spread of their operations tended to make a more stable average than could be expected with a single unit, however efficient. Moreover, the restriction scheme led to the winning of tin by the more efficient plants and to the general planning of production through amalgamation, co-operation between producers and sales of quota—a result which was surprising to some of its critics. The directors gave their unequivocal support to a renewal of the agreement. The company had low costs of production, a very liquid financial position and efficient field management, had made reserves for all known contingencies and could face the future with confidence.

The report was unanimously adopted.

TROJAN (HOLDINGS), LIMITED

EXISTING WORKS AT FULL CAPACITY

THE NEW FACTORY

The statutory meeting of Trojan (Holdings), Limited, was held, on the 27th ultimo, at Winchester House, London.

Mr F. L. Blow, J.P. (the chairman), who presided, said that no time had been lost by their subsidiary company in pressing on with the new factory. Work was well in progress, and by the terms of the contract a modern factory covering some 50,000 sq. ft. of floor space would be completed by mid-October, and would enable the output of the company to be increased to a very marked degree within a few months of the building being completed.

They were working to full capacity at the existing works, and the orders in hand would keep them busily employed until the end of the year. Their selling organisation was being strengthened, and a programme was being prepared for the energetic marketing of Trojan commercial vehicles, while steps were being taken to foster the overseas export trade. The feature of the Trojan vehicle was a minimum of working parts, coupled with a maximum carrying capacity—essential factors for the economy in maintenance and addition to revenue. New types of Trojan commercial vehicles, specially suitable for railway companies and large fleet owners, were under consideration.

The company's technical staff had been mainly concentrating on work in connection with the aircraft industry, and in the execution of Government orders. They had designed, experimented with, and now finally produced, a mechanically controlled airplane gun turret on the design of which provisional patents had been taken out by the company.

If the gun turret proved as valuable as they believed it to be, it would become a considerable asset to the company. The aircraft industry, for present demands, replacement and development purposes, was of potential importance to their company, and their directors would not miss any opportunity to secure a fair share of orders for mechanical requirements. Subject to no undue delay being experienced in obtaining the raw materials, the directors were confident that the estimates made in the document containing information for the public at the formation of the company would be fully borne out.

KRUSCHENS

GRIFFITHS HUGHES PROPRIETARIES LIMITED

STEADY PROFIT

The second ordinary general meeting of Griffiths Hughes Proprietaries, Limited, was held, on the 28th ultimo, at Salford, Manchester.

Sir Bertram Hyde Jones, K.B.E. (the chairman), said that during the year under review sales of the operating company's products constituted a record. Nevertheless, the profits of £456,678 showed a slight reduction on those of the previous year, due to variations in foreign exchange, but were £74,218 in excess of the five years' average referred to in the prospectus. The general reserve had been increased by a further £90,000, and now stood at £180,000. The total of the capital and general reserves together now amounted to £423,858. As he had stated last year, it was the resolve of the board to build up a financial position on sure foundations.

For years the management of the company had been building up an international sales organisation, and they now exported their products to 121 markets, in 83 of which they had an advertising campaign running.

They had, they believed, one of the finest selling organisations in the world—one that was world-wide and which was being constantly improved and strengthened. In these markets they had to meet ever-changing political and economic conditions, which in some countries were very difficult to deal with, and they had to contend with constant alterations in trade barriers and a bewildering complexity of regulations. Mr Harry Marland had this year already visited 11 foreign countries in Europe and elsewhere, so that he could study conditions on the spot and ensure that their selling organisation should be constantly adapting itself to changes in its economic and commercial environment.

Many countries were controlled by dictators, and the whole world was under the dictatorship of fear, which was responsible for national self-sufficiency. The shareholders of this company were helping the world towards the goal of international goodwill, for there could be no greater assurance of world peace than prosperity built on good international trade.

The report and accounts were unanimously adopted.

CONSOLIDATED TIN SMELTERS, LIMITED.

IMPROVED RESULTS—GOOD PROSPECTS

The seventh ordinary general meeting of this company was held, on the 27th ultimo, in London, Mr Ernest V. Pearce, Assoc.Inst.M.M. (chairman and managing director), presiding.

The Chairman, in moving the adoption of the report and accounts, said: Turning to the revenue account, the dividends from our subsidiary companies and investment show an increase of £18,764 at £268,953. There remains, with the amount of £89,447 brought forward, an available balance of £202,804, compared with £197,864 last year. Your directors recommend a dividend of 7 per cent. on the 1,998,470 ordinary shares, and that the balance of £96,136 be carried forward.

While supplies of ore this year have shown an increase over those of the preceding year, this has not been proportionate to the increase in the quota releases sanctioned under the International Tin Control Scheme, as Bolivia found herself unable to produce her full quota. Her shortage at the end of May amounted to over 10,000 tons of tin, equivalent to approximately 16,000 tons of ore. In the ordinary course a large percentage of this tonnage, had it been exported, would have come to our works for smelting. The average quota for the periods covered by the accounts of our subsidiary companies was some 22 per cent. higher than during the preceding periods.

Quota releases under the International Tin Control Scheme during 1935 averaged 58½ per cent. of the 1929 standard tonnages. They have for the first six months of this year averaged 87½ per cent. Provided that this rate continues, and the various countries are able to export during the remainder of the year their full permitted quotas, it is reasonable to expect that the tonnage we shall smelt this year will show a material increase over that smelted during the period covered by the accounts before you.

Regarding the future of the tin industry, there seems to be good reason for optimism. According to figures published by the statistical office of the International Tin Research and Development Council, world's consumption, which in 1934 totalled 117,500 tons, increased to 142,500 tons in 1935, and for the first six months of this year is estimated to be at the rate of approximately 151,000 tons per year.

The report and accounts were unanimously adopted.

THE GOLD FIELDS RHODESIAN DEVELOPMENT COMPANY, LIMITED

WIDESPREAD INTERESTS

MR DOUGLAS CHRISTOPHERSON'S ADDRESS

The twenty-fourth ordinary general meeting of the Gold Fields Rhodesian Development Company, Limited, was held, on the 30th ultimo, at the Institute of Chartered Accountants, Moor-gate Place, London, E.C.

Mr Douglas Christopherson, C.B.E. (the chairman of the company), said:—Gentlemen, the profit for the year carried down amounts to £209,845, as compared with last year £229,823, representing a decrease of £19,978. This decrease is due to the item revenue from dividends, interest, net profit realised by sales of investments and sundry receipts being down by £17,074, and general expenses and donations up by £2,903. Whilst the receipts from dividends for the year under review amounted to £59,649, or about £1,200 more than the previous year, on the other hand the profit on realisation of investments, etc., is down by £13,870.

The interim dividend of 5 per cent. paid in March last absorbed £62,855, and it is recommended that a final dividend of 5 per cent. be declared, leaving £26,313 to be carried forward to next year's accounts.

APPRECIATIONS OF INVESTMENTS

Our investments at market prices ruling at the end of the financial year show a very substantial appreciation on the figure of £1,121,882, and still greater at to-day's prices. We still retain a large shareholding in the Wanderer Consolidated Gold Mines, Limited, from which we are receiving a steady and good revenue. The profits obtained show a considerable improvement over the previous year, and for the current year can be expected to show still further improvement.

The company continues to hold various investments in mining companies on the Witwatersrand, amongst which is a holding in the Sub Nigel, Limited, on which we receive a substantial revenue, the dividend for the last half-year having been the highest half-yearly dividend the company has so far declared, namely, 9s. a share. At the same time the development position continues to be very satisfactory. We also have a material interest in the Spaarwater Gold Mining Company, on which property development is proceeding with highly encouraging results.

So far as our holding in West Witwatersrand Areas, Limited, is concerned, it is our intention to retain this and follow up this investment by taking up our *pro rata* share in the working capital of the various subsidiary mining companies which will be formed from the large areas held by this company. We already have an interest in Venterspost Gold Mining Company, Limited, and expect, at an early date, to take up our rights when the Libanon flotation takes place. I may here mention that the Consolidated Gold Fields have received a cable to-day saying that the Minister of Mines has now signed the lease, so that we can expect that flotation at an early date. There is little doubt that our investment in West Witwatersrand Areas, Limited, will prove highly profitable.

WEST AFRICA

Turning to our West African Investments, we still hold a substantial interest in Ashanti Goldfields Corporation, Limited. In view of the excellent values being exposed at depth on the main property and also the high values on their outlying properties, it would appear that this company will continue to produce for many years highly satisfactory results.

We also now hold a very considerable interest in Amalgamated Banket Areas, Limited, which company recently declared a 5 per cent. dividend. In view of the remarks the chairman made at the meeting of the shareholders of this company held on Monday last, the future of this company would appear to be very bright. Two other West African companies in which we hold considerable interests are the Gold Coast Selection Trust, Limited, and Marlu Gold Mining Areas, Limited. As regards the first-named, that company also hold a large share interest in the Amalgamated Banket Areas, Limited, as well as in Ariston Gold Mines (1929), Limited, Marlu Gold Mining Areas, Limited, and Gold Coast Main Reef, Limited. In addition, this company owns other reef and alluvial areas.

Our own company also has a considerable holding in the Marlu Gold Mining Areas, Limited, which, as you will see from the report, holds 7,831 acres of ground where an extensive crush zone of payable oxidised ore has been proved, which can be very cheaply worked, whilst development in depth has proved sulphide ore of good value and width. The first unit of a plant to treat 50,000 tons per month is expected to be in operation in September, and will treat 12,500 tons per month.

OTHER HOLDINGS

Our investments, representing interests in other parts of the world, include a holding in Oroville Dredging Company, Limited, which remains substantial and we look on this as a valuable investment, holding as the company does a large interest in the Bulolo Gold Dredging, Limited, the Pato Mines (Colombia), Limited, and Asnazu Dredging, as well as other promising interests. The Bulolo Gold Dredging, Limited, holds and operates about 15 miles of dredging ground on the Bulolo and Watut Rivers in the Mandated Territory of New Guinea. The approximate results of dredging operations for the year to May 31, 1936, were 10,957,400 cubic yards treated, yielding 123,910 ounces of gold, showing a profit of \$3,076,500.

The Pato Mines (Colombia), Limited, apart from considerable areas which are unsuitable for dredging but will later be profitable if hydralised, controls areas of about 16 miles along the Nechi River. It is estimated that the properties contain 189,000,000 cubic yards, with an estimated profit of \$21,350,000. A further 300,000,000 cubic yards of probable ground is estimated to be available, with an indicated profit of \$23,000,000. On the Asnazu Gold Dredging, Limited, property a dredge commenced digging in September, 1935, and to June 1, 1936, 1,058,000 cubic yards were dredged, with an average recovery of 44.7 cents per yard. The area being dredged is estimated to contain 16,000,000 cubic yards, of an average recoverable value of slightly over 40 cents per yard, whilst additional ground is being proved, and it is possible that a further dredge will be warranted later. Among other investments the Oroville Dredging Company, Limited, has an interest in certain Deep Lead propositions in Victoria, which are now in course of being explored.

Amongst other gold mining enterprises in which we are interested are the Golden Queen Mine in California, where recent development results are coming up to expectation, Ariston Gold Mines (1929), Limited, East Rand Consolidated, Limited, Robinson Deep, Limited, Konongo Gold Mines, Limited, on which property milling has now commenced, whilst recent development has continued to expose extremely satisfactory values, Lake View and Star, Limited, which company continues to maintain good profits, Rand Leases (Vogelstruisfontein) Gold Mining Areas, Limited, where the first crushing gave satisfactory results, Tano Gold Dredging, Limited, where the latest results from No. 1 Dredge show a steady improvement in not only the recovery but also in the cubic yards dug.

COPPER AND TIN

Our copper interests consist of holdings in Rhodesian Selection Trust, Limited, Rhodesian Anglo-American, Limited, Rhodesia Katanga Company, Limited, Roan Antelope Copper Mines, Limited, all of which will benefit by the improved price of copper.

So far as tin is concerned, our principal interests are in Associated Tin Mines of Nigeria, Limited, and Southern Kinta Consolidated, Limited, both of which investments give good returns, and a small holding in Toyo Tin, Limited. We also purchased an interest in the Mawchi Mines, Limited, which at to-day's price shows a considerable appreciation. Our principal holdings in Industrial Companies are still in the British Celanese, Limited, and the Celanese Corporation of America, Limited, both of which companies continue to make good profits.

Our investments are such as to hold out good prospects of proving highly profitable in the none too distant future, always providing nothing arises in the international or the industrial situation to cause a general upsetting of market values. The position of the company is sound, and we hope by following a prudent policy as regards our investments it will continue to become even more so.

The report and accounts were unanimously adopted.

OFFER TO NEW READERS

Any reader who makes his first acquaintance with this journal with this week's issue is invited to fill up the attached:

To The Publisher, "The Economist Newspaper Ltd.,"

8 Boulevard Street, E.C.4.

In order to test the value of your publication I should like you to forward this to me by post for the next four weeks. GOLD MARKET

Messrs Samuel Montagu and Company write on July 29, 1936:—The Bank of England gold reserve against notes amounted to £235,767,025 on July 22nd, as compared with £230,994,404 on July 15th. Purchases of bar gold announced by the Bank during the week total £4,174,193. About £1,660,000 gold has been dealt with at the daily fixing. The demands of the special buyer have not been so keen and the premiums over the gold parties have eased slightly. The Customs figures below show a further £11,700,000 bar gold transferred to London from Paris, presumably for a special account.

Gold shipments from Bombay last week amounted to about £707,000. The s.s. "Corfu" carries £682,000 consigned to London, whilst the s.s. "President Adams" carries £45,000.

SILVER MARKET

Conditions have continued quiet. During the earlier part of the week China sales and Indian and speculative resales were countered by Indian demand both for immediate shipment and for forward delivery, and by some fresh speculative purchases; but during the latter half of the period, support has considerably diminished, with the result that prices have sagged until on July 29th we quote 19½d. for cash and 19½d. for forward delivery. These prices compare with 19½d. quoted for both deliveries on July 25th, and with 19½d. quoted on July 22nd. The market is small and therefore sensitive, but although the undertone lacks strength, prices may be about low enough for the moment.

Quotations for gold and silver are shown below:—

1936	Price of Gold per Fine Ounce	Equivalent Value of £ sterling	Price of Bar Silver in London per ounce standard		Price of Silver New York per ounce .999 fine
			Cash	Two Months	
July 23	s. d. 138 8½	s. d. 12 2-99	d. 19½	d. 19½	July 22 45
" 24	138 10	12 2-86	19½	19½	" 23 45
" 25	138 10½	12 2-81	19½	19½	" 24 45
" 27	138 10	12 2-83	19½	19½	" 25 45
" 28	138 11	12 2-86	19½	19½	" 27 45
" 29	138 10	12 2-86	19½	19½	" 28 45
Average	138 10	12 2-86	19-583	19-594	
July 30	138 9½	12 2-90	19½	19½	

The highest rate of exchange on New York recorded during the period from the 23rd inst. to the 29th inst. was \$5.02½ and the lowest \$5.01½.

§ Tax free. (a) For period June 6, 1934, to January 29, 1935. (b) Half-year. † Free of income tax.

THE COMMERCIAL BANK OF AUSTRALIA, LTD.—Net profits for year ended June 30, 1936, were £234,480, as against £228,458 for the previous year. Appropriations: Reduction of bank premises, £25,000. Final dividend for six months on preference shares at 4 per cent. per annum, £42,347. Final dividend for six months on ordinary shares at 6 per cent. per annum, £66,666. Carried forward to next year, £98,929. The dividends in both cases are payable in Australian currency.

IMPERIAL TOBACCO (GREAT BRITAIN AND IRELAND).—Interim of 7½ per cent., tax free, unchanged.

LONDON AND NORTH-EASTERN RAILWAY.—Interim dividend unchanged at 2 per cent. on 4 per cent. first and second guaranteed stocks.

REPORTS AND NOTICES

RAILWAYS
THE CENTRAL URUGUAY RAILWAY COMPANY OF MONTEVIDEO, LTD., AND ALLIED COMPANIES.—The "Stockholders' Committee" appointed under the Scheme of Arrangement sanctioned on July 15, 1935, has, under the powers conferred upon it by the scheme, extended the moratorium for a further period until September 30, 1937.

BANKS
BANKERS TRUST COMPANY, NEW YORK.—We regret that owing to a printer's error the total liabilities of the Bankers Trust Company, New York, in the balance sheet of June 30, 1936, printed on page 145 of the *Economist* of July 18th last, were shown as \$18,123,18,961. The correct figure is \$1,123,818,961.

MISCELLANEOUS
ANGLO-SPANISH CONSTRUCTION COMPANY, LTD.—At the eleventh annual general meeting, held on July 22nd, the chairman, Mr David McAdam Eccles, said that the outstanding debentures were now 65 per cent. repaid. The company's capital and liabilities amounted to £3,204,205, and the assets consisted of approximately £115,000 in cash, gold bonds to the value of £208,733, and its interest in the Santander-Mediterranean Company, to which the Spanish Government owed some Pts. 65,000,000, equivalent to about £1,750,000. No payments had been received during the year: and it was necessary once more to emphasise that there was no question as to the legality of these indisputed claims of the company. The fulfilment of these obligations would be regarded as an important test of the Government's good faith in respect of its commitments generally, and the company had the active support of the British Government for the claims.

* For half year. † Free of income tax. (b) No comparable figures. (s) Eighteen months. (t) Nine Months.											

that those in control of the scheme are more anxious to stimulate consumption than to exact scarcity prices from consumers. Tin reacted sharply on the news of the breakdown of the negotiations with Siam, but subsequently it staged a partial recovery in the belief that Siam's "no" was merely a move in the game of bargaining. The market in lead reacted a little following the recent advance in prices, and spelter was firm. Rubber was a quiet market. Among textile raw materials, United States cotton was marked down on better crop news, but the speculative rise in Egyptian Sakellaridis continued. Wool is scarcely changed on the week.

Under the lead of cereals, quotations for primary products in the United States registered a further advance. Thus, Moody's index of the dollar prices of staple commodities (December 31, 1931 = 100) rose from 179.1 to 180.7 in the week ended last Wednesday. The index stood at 169.0 a month ago and at 162.4 on the corresponding day last year.

COAL

SHEFFIELD.—There continues to be a strong demand for industrial coal and supplies of best hards are somewhat scarce, being almost wholly taken up under contract on inland account. There is little new business in steam coal. Small coals are in demand, the needs of coking plants being heavy. All grades of coke remain firm, and furnace coke is particularly in demand. The Coal Quota Committee of the Midland Amalgamated District has increased the output quota for July by 2½ per cent. of standard tonnage to 60 per cent., and the inland sales quota similarly. This is due to the shortage of coal for coke-making and the heavy demand for hard steam coal for the iron and steel trades.

WORKINGTON.—The coal trade is picking up again, and unless the pits at Whitehaven resume working, a difficult situation will confront the collieries during the autumn and winter. Even now there is not enough coal to go round. Small coal especially is in short supply, and Welsh coal has to be brought in for the 52 new ovens recently lighted at Workington. All classes of industrial fuel are in strong request, and there is an improving Irish and local market for house fuel. Prices remain at winter level.

NEWCASTLE-ON-TYNE.—The summer season this year has made no difference to the demand for all classes and grades of Northumberland steam coals. This month has been marked by a heavy demand from Scandinavia, and already trade is assured for August and September. Hence there seems little doubt that Northumberland steam collieries are going to have a busy time during the winter. Durham steams are also in good request, and there is a much better demand, principally from the home market, for good classes of coking coal. Ordinary second classes of manufacturing fuel are offered freely. Coke of all descriptions continues to be an active market.

GLASGOW.—Following the resumption of work at the collieries in Fife and Lanarkshire a freer movement of coal has been seen this week. New business in both the inland and export branches has been quiet, but for shipment collieries are fairly well booked and are disinclined to accept further orders pending the coming change in selling arrangements, while in the home market the indications are that an expansion in demand will develop from now onwards. In the east best steam coal is notably strong, and navigation bunkers and washed nuts are scarce and firm in all districts.

CARDIFF.—Conditions on the Cardiff coal market remain practically unchanged. New inquiries have been very scarce, and contracts have been insufficient to keep collieries regularly employed. Large coals are the weakest and washed smalls and sized grades the strongest features. Demand for coke remains active; there is a steady but contracted demand for patent fuel. Prices are unaltered.

IRON AND STEEL

LONDON.—The weekly report of the London Iron and Steel Exchange indicates that conditions in the iron and steel markets have become rather quieter, but that there has been no relaxation in the activity at the steelworks. Consumers' requirements are well maintained, and although production is almost at a record rate, deliveries in several departments of the industry are in arrears.

Demand for pig iron is steady and the consuming industries are more comfortably situated with regard to supplies than for some time past. The halt in the flow of new orders is not expected to last for more than a week or two and fear is expressed that stringent conditions will develop in the autumn.

The request for semi-finished steel has been active, but works are so heavily committed that it has not been easy to place orders for near delivery. Works are operating practically at capacity, but are finding it difficult to meet requirements. The position in this department, however, seems to be slowly improving and holiday stoppages have enabled makers to overtake some of the delays in the execution of orders.

In the finished steel section there is a tendency for new business to become quieter, but the pressure on deliveries seems to increase. Large quantities of structural steel are passing into consumption and users are finding it difficult to obtain the material they need. Inquiry on export account has broadened somewhat of late.

MIDDLESBROUGH.—Makers of Cleveland foundry pig iron are busily engaged fulfilling orders to home consumers. Rather larger quantities are available, but as shipments to Scotland are recom-

mencing, there is not very much available for the market. There has been an increase in production of East Coast hematite pig iron by the relighting of an additional large furnace at Consett. Output is readily taken up, and producers are well sold to the end of the year. All departments of the steel trade are busy. Supplies of semi-finished steel are easily absorbed. Home demand for structural steel, shipbuilding material and rails continues firm. Steel sheets have been advanced 10s. per ton for home sales, but the export price is unchanged.

SHEFFIELD.—The iron and steel market is somewhat quieter owing to the coming holiday, and pig iron business has been mainly in small parcels for early delivery. Producers are not anxious to add further to their commitments and forward buying is small. Forge demand is increasing. Foundry sorts are fully taken up. There is a scarcity of East and West Coast hematites. Business in common and marked bars remains good. Crown iron transactions are on a rather limited scale. Demand for both acid and basic steel billets continues strong. Bars, strip and stainless steel sheets are in growing request. Structural steel business is good, and the demand for wire rods is at a high level. Prices remain unaltered. The position in the iron and steel scrap market is unchanged. Steel output in this district shows further expansion, and in addition to the heavy run of orders from ordinary sources, important Government business in connection with the defence programme is being placed.

WORKINGTON.—The rush of business in the North-West Coast hematite pig-iron market after the recent increase of prices was so large that for the rest of the year makers have only the iron for sale that they have reserved to meet unforeseen needs. With nine furnaces in blast between Workington and Barrow they are still without sufficient iron to satisfy all requirements. Unfortunately there is little, if any, possibility of an expansion of production this year. The position is made more difficult by the shortage of ore supplies. The disorders in Spain prevent regular imports of ores, while native ore, despite the increase in output by 1,200 tons a week, is not abundant enough to render smelters independent of foreign ore. The spill-over, representing 40 per cent. of production, is all going to users in the Midlands, South Wales and Scotland. None can be spared for the Dominions or for the Continent. Steelmakers have on their books orders that will keep them engaged for another twelve months. Workington is rolling rails, billets, bars and slabs, and Barrow is on rails, hoops and strip. Native ore, at from 16s. to 17s. 6d. per ton, is wholly in local request.

GLASGOW.—Work has now been resumed at the various works in Glasgow and district, and it is many years since a re-start was made under happier circumstances. The definite announcement that the sister ship to the "Queen Mary" is to be built at Clydebank is good news not only for the thousands of men in that district who will find steady employment there for a number of years, but also for the steelmakers in the West of Scotland who are to supply thousands of tons of plates and sections to be used in the construction of the vessel. There is at the moment a fair amount of work on hand at the Clyde shipyards and further contracts are practically assured within the next month or two. Marine engineers and machinery builders in the Clyde area are exceedingly busy, having contracts for many vessels under construction in Clyde yards and also in other shipbuilding centres. As has been the case for some months now, steelmakers are fully employed, and are finding it increasingly difficult with existing plants to meet the demands of users, materials of all kinds being in urgent demand. Sheet makers find no falling off in home demand at the increased prices fixed last week and they are all exceedingly busy. Export demand also seems somewhat better both for black and galvanised sheets.

CARDIFF.—The recent improvement in the demand for tinplates has led to an increase in the quota to 65 per cent. of allotted capacity. Shipments at Swansea last week totalled 82,222 boxes, and there was also a good inland demand. Prices are unaltered at 18s. 9d. f.o.b. per basis box. Export demand for galvanised sheets is very restricted, but there is a good home trade. Quotations for sheets as well as for steel bars are unaltered.

OTHER METALS

COPPER.—The market continued firm and on Tuesday and Wednesday prices climbed to the highest level so far reached this year. Demand is still quite good, while supplies are showing signs of contraction. During the past week home warehouse stocks declined by 1,040 tons to 56,794 tons, 30,500 tons less than on January 1, 1936. Reports from the United States have been favourable during the week. According to the American Bureau of Metal Statistics copper consumption in the United States reached 103,650 short tons in the second quarter of this year, as compared with 79,250 tons in the preceding quarter and 85,700 tons in the second quarter of 1935. In order to prevent a further sharp advance in prices, the members of the international restriction scheme decided to increase production from 70 to 75 per cent. of capacity from August 1st.

Sales on the London Metal Exchange: 1,300 tons on Monday, against 2,100 tons last week; 1,500 tons on Tuesday, against 3,600 tons last week; 1,900 tons on Wednesday, against 2,700 tons last week. Domestic spot was quoted at 9.27½ cents per lb. in New York on Wednesday, against 9.22½ cents a week ago and 8.92½ cents a month ago. Wednesday's official closing price for standard cash in London was £37 18s. 9d. to £38, compared with £37 13s. 9d. to £37 15s. a week ago. Stocks of refined copper in British official warehouses at the end of last week, at 53,539 tons, show a decrease of 1,104 tons, while stocks of rough copper, at 3,255 tons, show an increase of 64 tons on the week.

LEAD AND SPELTER.—After the recent advance lead prices experienced a slight reaction during the past week. Reports from

Spain, indicating that the revolution will have only a minor influence on the lead output of that country have probably been the chief cause. According to the American Bureau of Metal Statistics world production of lead in June reached 145,300 short tons, against 144,400 tons in May. June was the fifth consecutive month which showed a rise in lead output. Nevertheless, production does not yet exceed consumption. The outlook for prices remains, therefore, hopeful. Unlike lead, spelter for the first time since February registered a reduction in output in June. According to the Metallgesellschaft the world smelter output of zinc totalled 121,192 metric tons in June against 126,587 tons in May. The decline was chiefly due to the Belgian and French strikes. Spelter prices were strong during the past week and on Wednesday surpassed the £14 mark for the first time since the early part of June. Unless the cartel negotiations will have some tangible results in the immediate future the present level of spelter prices will probably not be maintained.

Sales of lead on the London Metal Exchange: 850 tons on Monday, against 1,550 tons last week; 1,300 tons on Tuesday, against 2,100 tons last week; 550 tons on Wednesday, against 2,100 tons last week. The New York quotation on Wednesday was 4.60 cents per lb., against 4.60 cents a week ago and 4.60 cents a month ago. The official closing quotation in London for soft foreign for shipment during the current month was £16 8s. 9d. per ton, compared with £16 12s. 6d. a week ago.

Sales of spelter on the London Metal Exchange: 700 tons on Monday, against 800 tons last week; 900 tons on Tuesday, against 800 tons last week; 800 tons on Wednesday, against 750 tons last week. Wednesday's quotation in East St. Louis was 4.80 cents per lb., against 4.80 cents the week before and 4.85 cents a month earlier. Wednesday's official closing quotation in London for "good ordinary brands" for shipment during the current month was £14 1s. 3d. per ton, against £13 17s. 6d. last week.

TIN.—The market experienced a sharp decline during the earlier part of the week on the report that the Government of Siam has rejected the quota offer of the International Tin Committee. On Wednesday, however, it was reported from Bangkok that further negotiations between the I.T.C. and the Siamese Government would take place and that Siam is not definitely opposed to the continuation of restriction. Prices subsequently recovered and the closing quotations on Wednesday afternoon showed a reduction on the week of only £2 15s. per ton for cash and £3 10s. per ton for forward tin. On the basis of the report it is believed in London tin circles that the scheme may be continued after all. The sharp drop in tin prices after the breakdown of the negotiations has been a warning to the Government of Siam, and it is believed that the Siamese will now be more accommodating.

Sales of tin on the London Metal Exchange: 875 tons on Monday, against 190 tons last week; 425 tons on Tuesday, against 150 tons last week; 400 tons on Wednesday, against 170 tons last week. The New York quotation on Wednesday was 43.12½ cents per lb., against 44.00 cents a week ago and 40.75 cents a month ago. Wednesday's official closing quotation in London for standard cash was £184 to £184 10s. per ton, compared with £189 15s. to £190 5s. a week ago. Stocks of tin in London and Liverpool at the end of last week totalled 565 tons, a decrease of 10 tons on the week.

OTHER NON-FERROUS METALS.—Among other non-ferrous metals, aluminium ingots and bars for home delivery were again quoted at £100 per ton, and rolling billets at £102 per ton. Nickel, for home and export, at £200 to £205 per ton, remains unchanged. Quicksilver, on the spot, was quoted at £11 19s. to £11 19s. 6d. per flask of 76 lb., the same as last week. Chinese antimony was quoted at £53 to £54 per ton ex warehouse, duty paid, as against £54 per ton last week. Chinese wolfram for July-August shipment was quoted at 26s. to 27s. per unit, c.i.f., as against 26s. 6d. to 27s. last week. Platinum (refined) was held at £8 per ounce.

TEXTILES

COTTON.—Manchester.—Business in yarn and cloth has been disturbed by the wider fluctuations in cotton prices. There has been a fair inquiry in piece goods for export, but the turnover has shown no improvement. Although there is a general acceptance of the view that the technical position of raw cotton is strong, there is a reluctance amongst shippers and merchants to enter into important cloth contracts. Business for the most part has again been of a hand-to-mouth character. More favourable advices relating to the progress of the American crop have tempered bullish feeling. Profit taking and hedge selling have caused a slight downward reaction. The position regarding supplies will become clearer with the publication of the official forecast. Meanwhile markets will be harassed by numerous private estimates to be issued during the next week.

Business in yarns has been difficult to arrange. There has been a fair turnover in American numbers and quotations have remained steady. In the fine spinning section, however, the stiff advance in Sakel cotton resulted in users purchasing from hand to mouth. Business has since been definitely checked.

JUTE.—Dundee.—The chief item of interest in the jute industry is the news of a probable settlement of the question of working hours in India. Calcutta hessians and bags show signs of firming up again. The low prices for Calcutta goods have had a depressing influence on prices of all goods produced at other centres, and competition for business all over the world has been extremely keen.

Raw jute prices have altered little in recent weeks and Daisee-½ continues to rule round about £16 for the full group and Tossa-½ at £17, October/November.

Jute yarns have ruled very quiet and prices are more or less nominal, especially this holiday week.

Cloth business is still somewhat slow, but there has been quite a fair volume of inquiry in the market recently, which augurs rather better for the future. Business has been done at from 3½d. for 10 oz. 40 in., and 1½d. for 8 oz. Linoleum hessians are nominal, and heavy goods are quieter after a good spell of buying.

GRAIN MARKETS

WHEAT.—Wheat prices continued to rise during the past week on unfavourable weather reports from North America. Although it is as yet too early to estimate the supply-demand position during the 1936-37 season, the world's carry-over of old wheat is considerably smaller than a year ago. Thus, the *Corn Trade News* estimated world reserves (except in Russia and Asiatic countries) at the end of July at 402 million bushels, a reduction of 182 million bushels on the year.

On Wednesday last, "September" futures were quoted in Chicago at 108½ cents per bushel, against 104 cents the week before and 97 cents a month ago. Quotations in London, Wednesday: No. 1 Northern Manitoba, ex ship, 38s. per 496 lbs., against 36s. 6d. a week ago; No. 2 Northern Manitoba, ex ship, 37s. 6d., against 36s. a week ago. According to the *Corn Trade News*, total shipments of wheat and flour last week totalled 963,000 quarters, against 1,086,000 in the previous week and 829,000 quarters in the corresponding week a year ago.

FLOUR.—Quotations for flour were marked up in sympathy with the rise in wheat prices. Wednesday's London quotations (excluding quota payments) were: Straight run, delivered Home Counties, 31s. per 280 lbs., against 30s. a week ago; delivered inner London, 30s. 6d., as compared with 29s. 6d. a week ago. Manitoba patents, ex store, 28s. 6d. to 29s. 9d., against 27s. 6d. to 29s. a week ago. Australian, ex store, 24s. 6d., against 23s. to 23s. 6d. a week ago.

BARLEY.—There was a good demand for Danubian barley at firm prices. The latest crop reports indicate that supplies will not be excessive next season. "July" futures were quoted at 55 cents per bushel in Winnipeg on Wednesday, against 50½ cents a week ago and 38½ cents a month ago. Quotations per 448 lbs. in London on Wednesday were: "English feed" at farm, 25s., as against 25s. a week ago; "English malting," at farm, not quoted.

OATS.—On Wednesday, "September" futures were quoted at 38½ cents a bushel in Chicago, against 37½ cents a week ago and 32½ cents last month. Quotations in London, Wednesday: "English Black," at farm, 20s. 6d. per 336 lbs., against 20s. 6d. a week ago; "English White," at farm, 20s. 6d., against 20s. 6d. a week earlier.

MAIZE.—The market in maize has been active and quotations rose sharply on unfavourable crop reports and in sympathy with the advance in wheat prices. "September" futures were quoted on

reasonable undertaking to stop enrolment of volunteers and public subscriptions, the cessation of demonstrations and press campaigns in favour of either side in Spain, and information whether a pledge of non-intervention is to apply "to individuals as well as to Governments." This is an attempt to export Fascism, with a vengeance. It is doubtful if even the *Daily Mail* in this country would agree to discontinue its campaign on the rebels' behalf. The Duce is trying to muzzle freedom of speech in other countries, while maintaining a free hand for his own Fascists' "individual" activities in the foreign field.

The essentials of the international problem posed by the revolt in Spain are plain enough. The duties of one sovereign State towards another with whose constitutional Government relations remain friendly, for so long as that Government subsists and maintains its accredited representatives abroad, are clearly prescribed by international law. The plainest of these obligations is not to succour or assist rebels against such a Government. Whether one State will actively assist the Government of another against rebels, lies with the first State itself to determine. It may or it may not; and if it does not, the Government against which rebellion has broken out cannot complain. But if assistance to a friendly Government is optional, assistance to rebels against a friendly Government is not. Indeed, it can be an act of war. It is espousal of the cause of piracy; and any ships or aeroplanes of a State actively assisting rebels can be destroyed as "pirates" by the Government against which the rebels are fighting. The State assisting rebels is liable for damages, but can claim no redress for damages to its filibustering nationals' lives or property.

These considerations at least point one clear path through the confusions in which the Spanish situation threatens to involve us all. The British Government should at once—for time is of the essence of the problem—associate themselves with the French Government in a joint *communiqué* to such European Powers as are directly involved in the progress of the Spanish struggle. Their *communiqué* should invite the German, Russian, Italian, Belgian and Portuguese Governments—to begin with—to agree, *without delay and within a time limit*, to observe the principles outlined above: namely, to refrain from assisting, or allowing their nationals to assist, the rebels; and to reserve their legal rights to assist, or to withhold assistance from, the Spanish Government if they should ask for it.

But this in itself is not enough. Any Government in these days can judiciously lower one or both eyelids at the activities of "private" persons or corporations. Therefore the proposed Anglo-French *communiqué* should envisage the immediate formation of international air and naval forces to "keep the ring" of the Spanish cockpit; to isolate the conflict; and to prevent filibustering and freebooting. If Russia or Germany or Italy refuses the invitation to accede, and to participate in this international work of law and order, those Powers should proceed who do agree. Interest and obligations alike counsel the Government of this country to act, not to breathe pious formulae; to co-operate fully and without a moment's delay with all Governments who will help to localise a tragic conflict; and to take action to prevent filibuster politics from a triumph over democracy.

One last word to His Majesty's Government: Do they imagine that, if they sit idly by in holiday mood, material aid by two European Great Powers to one side in Spain will not be followed by the material aid of the two other European Great Powers to the other side? In that case, this country—with its Imperial defences and communications to maintain—may have to reckon with either another European conflagration, or with a Spain which forms a third military dictatorship on the third frontier of France and the second military dictatorship in the Mediterranean. Are the British Government prepared to acquiesce in either of these dire developments when a third way lies plain before them—a way that will be safer for Spain, for Europe, and for Britain herself? After 1914, and after Abyssinia, it would be better to state British intentions clearly and unhesitatingly. From their vacational pursuits, we trust the Prime Minister and the Cabinet will at least tell Europe that they have decided actively to assist in localising the conflict in Spain.

THE CHALLENGE TO DEMOCRACY

WHEN the knight-errant of the classical world, King Pyrrhus of Epirus, sailed away from the shores of a Sicily where he had just inexplicably thrown in his hand after having played it within an ace of victory, he is reported to have gazed back at the island and to have said to his suite: "My friends, what a marvellous arena we are leaving for the Carthaginians and the Romans to fight in." Plutarch, who tells the story, does not fail to add that "Pyrrhus's surmise was soon translated into fact." Our own Mr Baldwin is no knight-errant; but he does display, quite often, those flashes of insight with which poor flighty Pyrrhus was so seldom blessed. At this moment we can easily imagine the present Prime Minister of H.M. Government in the United Kingdom heaving a complacently irresponsible sigh as he evacuates the Continent (a seven minutes' passage, nowadays, by air!) and leaves that handy arena at the disposal of Fascism and Communism. These two young and lusty forces are to-day spoiling for a fight over the derelict domain of a retreating Democracy.

Fascism and Communism, between them, are indeed already in occupation of the field to an extent which is acutely alarming. Even in the Mother of Parliaments at Westminster, when there is discussion of what the British Government's attitude is to be towards the present unhappy civil war in Spain, we saw last week a tendency—surely both unprecedented and untoward in English political life—for the supporters of the Government and the Opposition to line up against one another under the opposing partisan flags: pro-Communist and pro-Fascist. When Members of the House of Commons show an inclination to make their choice between these alien and exotic colours, it begins to look as if the cause of democratic parliamentarianism—a cause which has hitherto been common to all Parties in Great Britain—were in some danger of going under even here, its first and last citadel. For our traditional English political system and philosophy is threatened by Fascism and by Communism alike. From the standpoint of a democrat and a liberal these Russian reds and Italo-German black-and-tans have this one thing in common—that they have both put their trust in the same denial of liberty and in the same barbarically intolerant political philosophy of violence. Democracy is being challenged by a "Fasci-Communism" which is uniform in these essential points.

Democracy and this authoritarianism are thus the two real protagonists in the vast political struggle on which mankind is engaged to-day. The world-arena will not, after all, be at the disposal of the Communist and Fascist factions of the authoritarian camp unless and until our own Democracy has been completely and irretrievably driven off the field. If that happens, the reward of centuries of struggle will be lost, and Liberty will vanish from the world until the day when it achieves a painful rebirth from within one or other of the rival authoritarian systems.

Fundamentally, this struggle between Democracy and authoritarianism is a struggle of Parties; but, in a world that is carved up, as our world is, into a number of parochial States, the opposing causes are represented by countries as well as by Parties which transcend national frontiers. In this division of the world by countries, the Liberal-democratic camp is to-day represented by three Great Powers out of seven; but, at the moment, not one of these three democratic Powers is showing much fight in the democratic cause. The United Kingdom and France to-day look almost like time-expired Powers that are contemplating abdication. The United States, still a young Power, shows a deep disinclination to assume the rôle which her strength would enable her to play in international affairs.

If France and the United Kingdom now yield to their apparent inclination to retire from international business, one result would be to open the way for an enormous change in the present balance of power between States. In a Note on page 261 we discuss this possibility in its regional application to the Mediterranean. When Pyrrhus evacuated Sicily the Greek States of the ancient world went down, while Rome and Carthage fought for the hegemony. Yet that was not the most serious effect of

Pyrrhus' historic retreat. With the Greek States went Greek liberty; with the Roman ascendancy there came in a Roman world dictatorship in the shape of Cæsarism. And so it is in our world to-day. The ultimate question is not whether the French Republic and the British Empire shall lose power to the German Reich and/or the Fascist neo-Roman Empire and/or the Soviet Union. The real question is whether some new form of tyranny is to get the upper hand over that Liberal-Democratic political dispensation of which France and England are—whether we relish the responsibility or not—the two principal European trustees. They are its trustees in virtue of a birthright which the living generation of Frenchmen and Englishmen cannot repudiate without betraying both their fathers and their children, and without deeply dishonouring themselves. Mr Baldwin is thus responsible for the vindication of something that is greater than either the United Kingdom or even the whole British Empire. His highest duty and task, in his present office, is to uphold, against an extremely formidable challenge, those principles and ideals of which our British Commonwealth of Nations is still a concrete embodiment. Nothing less than Democracy itself is the cause in which the Blums and Baldwins ought to be giving the rest of us a courageous lead to-day.

Unhappily, we are being compelled to-day to assist at a deplorably different spectacle. What we are actually witnessing is a state of affairs that looks suspiciously like democracy "on the run." What is the explanation of this *débâcle*? To discover it, we must evidently look beyond the personalities of the politicians. When Mr Baldwin says that he is only translating public opinion into public policy, we cannot deny that there is a large measure of truth in his apologia; and though it is far from being the whole duty of a democratic statesman to wait upon the popular will—for he should be a leader rather than a follower—it is certainly true that the temper which Mr Baldwin represents is widespread to-day among the citizens of all the surviving democratic countries.

What is it, then, that has gone morally wrong with the democracies—leaders and rank-and-file alike? Perhaps our moral malady is incidentally betrayed in a public statement that was made on Monday by the French Minister for Foreign Affairs. "At all costs," said M. Delbos, "there must not be a new crusade of ideals in Europe, which would probably lead to war." As a declaration of practical policy over the Spanish civil war, M. Delbos's formula may be impeccable, but it has an uglier appearance in its previous application—now a perhaps irretrievable *fait accompli*—to the Italo-Abyssinian issue. And, at any rate, how profound and how illuminating is the contrast between these "ideas of 1936" and the "ideas of 1789" to which M. Delbos and his Radical-Socialist colleagues are still officially dedicated. What would have happened to the democratic cause in France in 1792, or in America in 1775, if the trustees of democracy in its precarious infancy had anticipated M. Delbos in preaching the virtue of dropping one's principles in order

to avoid a row? That is not the spirit in which either causes or countries are led to victory. It is not the spirit which has brought victory, since the war, to the cause of the Lenins and the Hitlers and the Mussolinis. These victorious post-war dictatorships are the obverse of our own problem: that of post-war democracies which have suffered continual reverses.

It is manifest that a lively faith—a willingness to back the cause one believes in, and to take any consequences—has been the secret of the triumphs of the anti-democratic cause. Yet it is fundamentally a bad cause, for it has a lie in the soul. It preaches a class-war or tribe-war or race-war of man against a human brother; and it makes an idol out of man's imperfect handiwork, the State. Yet, with this lie in the soul, the anti-democrats have been going from strength to strength. They have been conquering because they have had the faith to believe of their ideals that *in hoc signo vinces*. We democrats are the votaries of an opposing and incompatible ideal. In our belief, it is a true and not a false ideal. Will the leaders of our democracy allow truth to suffer a disastrous defeat simply for lack of that faith and readiness for self-sacrifice which our manfully benighted opponents so conspicuously display?

THE MANGANESE BOOM

THE rapid and extensive increase in the demand for steel to fulfil the requirements of the Government's armament programme has created quite a boom in manganese. Manganese is in universal use for de-oxidising, desulphurising and recarburising steel. Moreover, the addition of certain quantities of manganese considerably increases the hardness and toughness of steel. Over 90 per cent. of the world's manganese supplies are absorbed for these purposes by iron and steel makers. Although no reliable statistics of the world's manganese consumption are available, it can be safely assumed that manganese consumption fluctuates between 2.5 and 3.0 per cent. of the world's steel production. In other words, manganese shares fully in any rise in consumption of iron and steel. The metal can be regarded as one of the most important armament metals.

Before the war the structure of the manganese industry was very simple. In 1914 world production was 1.87 million metric tons, of which 0.9 millions came from Russia. British India supplied 0.6 millions, and the balance was spread over many countries which produced certain quantities of manganese in connection with iron ore mining. Up to the present day—except for some years after the Russian revolution—Russia has maintained the leading place as the world's supplier of manganese ore. Russia's record output exceeded 1.3 million metric tons in 1927. During the slump years it declined below the million mark; but at present production is again at about the record level.

There are two chief sources of manganese supply in Soviet Russia, the Tschiaturi and Nikopol deposits. The Tschiaturi mine (on the south side of the Caucasus) still contains about 75 million tons of ore, while the ore reserve of Nikopol (Ukraine) is given as 65 million tons. Both mines have relatively good transport facilities. A direct railway connects Tschiaturi with the harbour of Poti, about 80 miles away on the Black Sea. Nikopol has a comparatively good connection (200 miles) to the harbour of Nicholaiev (Black Sea). While the Tschiaturi ore is almost entirely exported, Nikopol supplies chiefly the domestic market and some adjoining countries, e.g. Poland and Czechoslovakia. There have been reports in recent years of large manganese discoveries in other parts of Soviet Russia, but nothing has been heard of new important mines actually coming into production.

British India is still potentially the second largest manganese ore supplier in the world. Last year India's output of manganese actually ranked second. During the slump years, however, production declined to approximately 222,000 metric tons, which compares with the record output of 1,150,000 tons in 1927. In 1935, the Indian output must have been again in the vicinity of 700,000 tons. Exports from India in the year ended March 31, 1936, were 729,000 metric tons, against 460,000 tons a year ago. India has been producing manganese since 1893; but her rapid expansion only began after the discovery of the deposits in the Central Provinces in 1900. To-day the aggregate ore content of the Indian manganese deposits still exceeds 100 million metric tons; but the mines suffer one great disadvantage. They are very far from the sea. The mines of the Central Provinces are about 500 miles from Bombay, and not much less than 700 miles from Calcutta. Most of the smaller Indian mines, therefore, had to close down during the slump years; and the Indian Manganese Company, Ltd., formerly an important producer, has been unfavourably affected by prevailing conditions. In the last three years, however, the small port of Vizagapatam, which saves the leading producing company a railway haul of 185 miles, has been adequately developed. Moreover, transport facilities have been improved in other ways (by reductions in freight, construction of cable ways, etc.), so that the outlook now seems more favourable. Even the shipment of low-grade ore from India, which has been unremunerative in the past, is at present making good progress.

Outside these two old-established producing areas several new competitors have sprung up since the war. Of these regions the Gold Coast (British West Africa) and the Union of South Africa are far the most important. The Gold Coast started production in 1916; and in 1929 the colony supplied some 415,000 metric tons of high-grade manganese ore. Although output declined to a very low level during the slump years, it has since experienced a remarkable recovery; and at present production is running at a level similar to that of 1929. As the transport and loading facilities at Takoradi are quite favourable, and as West African ore is of high quality, the Gold Coast has every prospect of becoming a manganese ore supplier of increasing importance.

The South African mines (Postmasburg, Griqualand West) have, perhaps, an even brighter future. Up to the present, however, output has not reached an important level, though some fairly high annual production figures have been reported for 1930 and 1931—947,000 metric tons and 702,000 metric tons respectively. The reason for slow progress in South Africa in the past has been lack of concentration of the industry, and a certain scarcity of capital owing to low ore prices in recent years. The manganese industry of South Africa seems now on the eve of a brighter future. In the second half of last year the chief deposits of Postmasburg district were put under the control of a single company, known as the Associated Manganese Mines of South Africa, Ltd. Capital for large-scale development is available. Transport facilities are being afforded by the Union Government, which is providing special railway communication; and loading facilities already exist at the port of Durban. The South African manganese industry is likely, therefore, to come into prominence this year or next.

These four sources of supply are likely to dominate the world manganese market of the future. There are one or two more producing countries of some importance, e.g. Egypt (whose record production was 791,000 metric tons in 1929) and Brazil (with a record of 360,000 metric tons of low-grade ore in 1928). In all these cases, however, possibilities of further expansion are rather restricted, or the output is maintained only for military reasons.

Military considerations naturally play a great rôle in manganese production; but apart from Soviet Russia and the British Empire (India, West Africa and South Africa) none of the world Powers has adequate manganese ore deposits. The United States (through the U.S. Steel Corporation) have endeavoured to develop production in Brazil and Cuba. In spite of large tariff concessions, however, production is still, in the main, unremunerative. France is trying to develop production in Morocco. She has so far, however, met with little success. France is, therefore, like Germany—who produces some low-grade ore within her own frontiers—and Japan, more or less dependent on Russian and Indian ore.

No figures of the world's manganese ore consumption are available. As the metal and its compounds are only of minor use outside the iron and steel industry—flux for the removal of iron colours in the glass industry, as pigment, for the production of chlorine in the chemical industry and as basis for several medicaments—the trend of manganese consumption can be measured only from the world's steel output. The spectacular rise in the manganese ore purchases of the three leading importing countries in the last three years can be seen from the following table:—

Into	MANGANESE ORE IMPORTS (Metric Tons)				
	1929	1932	1933	1934	1935
United Kingdom	282,921	75,173	116,959	197,817	222,681
United States	350,946	66,192	98,031	205,330	233,691
Germany	390,282	106,779	131,926	224,745	394,256

It is only natural that these fluctuations in demand for manganese ore have had a great influence on prices of manganese. A good 50-per-cent. ore was quoted at 1s. 1d. to 1s. 3d. per unit (i.e. 1 per cent. of metal per ton of ore) in 1929. By 1930 the price had fallen to 1s. per unit; in 1932 it oscillated around 9d.; early in 1934 the 10d. limit was reached again; and during the first nine months of 1935 approximately 11d. was paid. Since October last the price has been fairly steady around 1s. per unit.

The outlook for manganese ore prices is not entirely dependent on the present world-wide armaments boom, or on the peace-time requirements for steel, but also on the resultant changes in manganese production. Between 1927 and 1933, Soviet Russia has reduced prices to prevent development in new areas overseas. The rising armament demand and the jump in Russia's home consumption has set a limit to Russia's influence on world prices. Nevertheless, the Soviet Union continues to be an extremely efficient competitor; and as production in Africa and India is quite likely to show a considerable increase—the world output may even surpass its previous peak of 3.63 million metric tons (1927) during 1937 if only the present trend of consumption is maintained—there seems little prospect of much higher prices for manganese ore in the near future.

GERMANY'S RE-ARMAMENT II—ECONOMIC ASPECTS

(BY A CORRESPONDENT)

THE first article of this series described the methods which enabled a poor country like Germany, after a prolonged and devastating depression, to spend very large amounts on re-armament. Is it possible to continue this method of financing? And how long can Germany spend on such a scale? There is no agreement in Germany itself about these questions. Dr. Schacht, it is generally agreed, wishes to restrict public expenditure and to check the credit inflation which is undermining Germany's foreign trade and foreign exchange position. On the other hand, important Nazi circles led by Dr. Kepler, Hitler's economic adviser, and some members of the heavy industries group,

are determined to go on financing "employment creation" by further increasing short-term debts and inflating credit. They are, consequently, inclined to devalue as soon as possible in order to facilitate their expansionist policy.

Some economists think that the growing national debt, whether funded or unfunded, whether acknowledged or not, will put an end to the Government's borrowing, since the increasing interest burden will become unbearable and outrun the revenues that can reasonably be anticipated. But this theory overlooks the fact that actual interest payments have been greatly reduced by the more or less compulsory consolidation of the long-term debt from 7-8 per cent. before 1933 to 4½ per cent. in 1935. The total interest payment on debts in 1932 at an average rate of 8 per cent. did not exceed 8 per cent. of the total revenue. Even if we assume that it rises to 20 per cent. of the revenue, this percentage would be smaller than in many other countries, e.g. France, Italy, etc. During a time of continued expansion the revenue from taxes and duties increases, and that temporarily relieves the pressure of the higher debt burden. At any rate, the problem of the debt increase is not by any means as serious as that of the burden of financing the new Army.

To the psychological argument that continued State borrowing may lead to a widespread lack of confidence, and so prevent investment in Government bonds, many objections may be raised. Under a dictatorship, propaganda to a considerable extent directs public opinion. Even if general mistrust renders official propaganda ineffective, people can hardly escape from investing in Government securities, since all the outlets for capital are controlled by the Government and the export of capital is prohibited.

Another view is that the financing of re-armament continued credit expansion will soon lead to violent inflation. The method of finance adopted was originally regarded as only a temporary measure. For a long time it was counterbalanced by credit repayments made possible by increasing State orders. The volume of notes circulating also rose only slightly because wages were kept down. The upward movement of prices during the first two years of Nazi Government was thus caused less by credit inflation than by the price-raising policy of monopolies and cartels, particularly in agriculture. Later on in 1934, the higher prices of international raw materials and the difficulties of the clearing business affected the level of German wholesale prices.

The general credit situation likewise changed in 1935. The levy on industry for subsidising the export trade prevented industries from continuing to repay their credits to the banks and brought about some credit inflation. Secondly, important industries approaching full employment entered the stage of rising costs, and new demands for investment credit were made. The loans and advances of the banks began to rise. Additional short-term financing affected the price level more than in the earlier stages, and continuation of this policy would strengthen the tendency of prices to rise. This normal effect is only mitigated by the deliberate maintenance of wages (of unskilled labour) at a low level, by a system of Government-controlled system of prices, and finally by a deterioration in the quality of goods. Thus the official wholesale and retail price indices show but a moderate increase. But the gap between the German and the international price levels has widened continuously. The German authorities will need to do two things if they are to prevent themselves from sliding into a real inflation: to reduce the tempo of re-armament and re-employment and to skim off all the available savings for consolidation purposes.

Though supported by the Army and some industrialists, Dr. Schacht's restrictive policy is opposed by a section of industry and by Nazi Party circles, who argue that the greater the disparity between purchasing power inside and outside Germany becomes, the more the mark should be devalued. Devaluation would immediately free Germany from the pressing export levy of Rm. 700 millions and allow her to go on with expansion. This view leads us to the third and most severe limit on domestic expansion—that set by the foreign trade and foreign exchange position. Practically the whole of Germany's foreign trade is carried on under clearing agreements. Hence the amount of available foreign exchange left over after urgently

EXPORT

The Documentary Credit, whereby the Exporter is assured that he will receive payment immediately his goods are shipped for transit abroad, is the subject-matter of *A Brief Survey of the Financial Machinery of Exports and Imports*, copies of which may be had by asking at any local branch of the Westminster Bank

WESTMINSTER BANK LIMITED

41 LOTHBURY, LONDON, E.C.2

needed raw materials have been paid for is very small. Germany can freely dispose of only a few millions of marks of foreign exchange per month. This small sum has been further reduced since April, when the credit repayments by Russia, resulting from former business transactions, were liquidated. It was the object of Dr. Schacht's "New Plan" to equalise imports and exports, and this goal was almost attained, at the expense of stabilising imports at a very low level, of ponderous bureaucratic developments and of important changes in the structure of foreign trade. Even now this equilibrium is not proving very stable. "A rise of only 1 per cent. in raw material prices"—the German Institut für Konjunkturforschung remarks—"would mean an increase in expenditure in foreign exchange of about Rm. 3 millions per month for imports."

Receiving only small amounts of free foreign exchange and possessing only about Rm. 100 millions in gold, the Reichsbank cannot readily take the risk of devaluation. Even if it does, Germany cannot easily loosen her control of the foreign exchanges, since a heavy outflow of capital would begin immediately. Moreover, she would have to pay more for her imports without receiving more foreign exchange from her exports. For new outlets for export goods would open only gradually, and any possible increase has partly been anticipated by the current system of export subsidies. Finally, the psychological repercussions on general business confidence and on the behaviour of the great number of small savers should not be overlooked. The public would be very much disappointed if the Chancellor and Dr. Schacht broke their pledged word.

The dilemma seems to be complete and the way out will not be very easy to find. After steady efforts to expand the production of agricultural goods and raw materials at home, imports cannot be greatly reduced as long as re-armament continues on the present scale. Certainly every effort will be made to stimulate exports. But an increase in the export levy may be no more than sufficient to maintain the present export level. For every increase of the levy means an increase of production costs and tends to accelerate the undesirable upward movement of prices. There remains the possibility of stopping all interest and amortisation payments on the foreign debt. But at the present juncture such an action would not be very well suited to the international situation or to German foreign policy.

No conceivable internal measure can serve to extricate Germany from her precarious position. That does not mean that her business life is going to break down in the near future. Emergency measures may tide things over during the next few months. For instance, Germany's efforts to extend commercial intercourse with different countries will certainly reduce the present pressure. The agreements reached with Poland and Yugoslavia and the results of Dr. Schacht's tour to South-East Europe are significant examples of such measures. Germany will at least be able

to continue her policy of re-armament for some time if she succeeds in maintaining the present level of foreign trade and covering her losses of foreign exchange. But she cannot return to peace-time business without financial assistance from abroad—especially in the event of devaluation.

JUGGERNAUT

THE paucity of industrial statistics in this country is a standing reproach to the trade organisations of British industry. To this generalisation, however, there are some shining exceptions. The statistical service of the Society of Motor Manufacturers and Traders is one of these, and the appearance of their annual volume* presents an opportunity of paying tribute to the enterprise shown in bringing together information bearing upon the development of the greatest of the post-war industries.

The 1936 volume contains a number of interesting innovations, such as a chart showing the changes in popularity of the different horse-power classes in the last ten years, and a table of the exports of motor vehicles by the five chief producing countries to a number of the more important markets (from which, incidentally, a striking impression of the growth of German exports can be gained). But the chief interest in the volume lies in the continuation of the old series and in particular of the figures of motor vehicles on the road. The total number of motor vehicles in use (excluding motor cycles) at the September census exceeded 2,000,000 for the first time last year. The exact figure was 2,070,715, which was 10 per cent. more than in 1934, 32 per cent. more than in 1930 and 92 per cent. more than the figure in 1926, just nine years earlier. It may be added that the registration figures for the first half of 1936 show that this rate of increase is being substantially maintained.

Even this phenomenal rate of growth is eclipsed if we take the figures of private cars alone. The 1935 total was 1,505,019, which was 13 per cent. greater than 1934, 40 per cent. greater than in 1930, and as much as 117 per cent. greater than in 1926. For any estimate of future numbers, moreover, the rate of growth of private cars is more significant than the figure for total vehicles, since the numbers of vehicles plying for hire are now strictly limited. Private cars already constitute three-quarters of the total and as the proportion is increased, the rate of growth of the whole will tend to approximate more closely to that of private cars.

If the experience of the past decade is repeated, then we shall have at least twice as many motor vehicles on the roads in 1946 as we have to-day. But will that experience be repeated? Prophecy, of course, is idle, but it is at least significant that the development of the motor car in Great Britain has hitherto been very similar—with a time-lag of fifteen to twenty years—to that of the United States. It may therefore be worth while to examine the present position in that country.

The total number of motor vehicles registered in the United States in 1935 was 26,167,107. This represents one vehicle for every 4.79 inhabitants of the country. In Great Britain there is one vehicle to every 22.4 inhabitants. It would be carrying the argument too far to divide the one figure by the other and declare bluntly that British cars will increase nearly fivefold. The average American income, in normal times, is higher than the British. But it has not been any higher in recent years, on the showing of American official estimates. The larger market enables the American manufacturer to give maximum value for money, but the cheapest American car is no cheaper than the cheapest British car. The exact ratio may be inapplicable, but the American figures very strongly suggest that a public with the purchasing power of the British can afford many more cars than we have at present. There is nothing in

the level of incomes to prevent a continuation of the increase.

Comparison between Britain and America cannot, however, be made without consideration of the enormous difference in the area of the two countries. We may have fewer cars, but more congestion, than the Americans; and there is ground for believing that this is, in fact, the case. Definitions of a "road" or "highway" may vary very widely in different countries, but taking the statistics as they stand, there appear to be 8.7 motor vehicles for every mile of road in the United States and 14.5 vehicles per mile in Great Britain. The accuracy of this comparison is startlingly confirmed by an examination of the accident statistics. The total of fatal road accidents in the United States is very much greater, both absolutely and relatively to total population, than in this country. But when the number of deaths is related to the number of vehicles on the roads, we get the amazing result that there were 13.8 deaths per 10,000 vehicles (in 1934) in the United States, but 30.5 (in 1935) in Great Britain. As these figures refer to deaths only, they avoid the difficulty of defining what constitutes a non-fatal "accident."

PLAN OF CLOVER-LEAF CROSSING

Will increasing congestion in Great Britain put an early end to the increase in motor traffic? The American figures once more suggest an answer. The States of New York and Pennsylvania are together almost exactly equal in area to Great Britain. Their population is less than half that of Great Britain, but they have almost twice as many motor vehicles (4,100,246 to 2,070,715). These two States have 23.7 vehicles per mile of road to Great Britain's 14.5. Unfortunately, roads are measured only in length. If it were possible to bring *width* into the calculation, congestion in Great Britain might more nearly approach that of these populous Eastern States. The American figures would seem to show, however, that neither lack of means nor congestion of the roads is likely to prevent a continuance, for some years at least, of the present rate of increase in traffic on the roads. We must contemplate at least the possibility of a doubling of our traffic by 1946.

This statistical discussion reveals a public problem of the greatest magnitude. It is hardly practical politics to limit the number of cars. The difficulty of deciding who should and who should not be allowed to possess a car would alone rule it out of court. Motorists already form so substantial an electorate that an increase in taxation sufficient to limit the increase can, probably, be ruled out also. But how can we possibly accommodate twice as many cars on our present roads? The answer, apparent to anyone who has driven a car in this holiday week, is that we cannot. If the roads are left substantially as they are, the traffic problem will be insoluble in ten years' time.

If our roads were already perfect, there might be cause for despair; but they are far from perfection. Road

surfaces in Great Britain are, in general, better than anywhere else in the world. But in straightness, in freedom from obstruction, and, above all, in width, British highways are already inadequate. It would be reasonable to expect that the country with the highest average traffic density in the world would be foremost in its efforts for road improvement, but, in fact, we are lagging behind. Judged by the standard of recent construction in Germany and Italy, as well as in the United States, we have not a mile of modern road in the country. Some of the recent by-passes have been constructed with dual carriage-ways and with adequate width, either already surfaced or available for surfacing. But we have no single example of the "clover-leaf" type of road junction (illustrated in the diagram opposite), which is being widely adopted in the United States to permit of a continuous flow of traffic in all directions. Our main roads, again, having been widened and by-passed in the country, degenerate into narrow streets, cluttered with slow-moving horse traffic and indiscriminately-parked vehicles, as soon as they enter a city.

NOTES OF THE WEEK

The Balance of Power in the Mediterranean.—The pre-war balance of power in the Mediterranean, which was scarcely disturbed by the world-shaking upheaval of 1914-18, has, since the restoration of peace, been shifting at a pace that is now *accelerando*. On the technical side, there has been "the annihilation of distance," particularly in the air. On the political side, there is the increase in the stature of Italy and the crumbling of Spain. Since Wellington pushed the French back over the Pyrenees in 1814, Spain has been *de facto* neutralised; and the assignment to Spain of what is now the Spanish zone in Morocco was designed to place both sides of the Straits of Gibraltar (save for the Rock itself) in neutral keeping, on the analogy of the narrow seas between the North Sea and the Baltic, which are flanked by the neutral Danish and Swedish coasts. The old convenient neutral Spain may now be dissolving into temporary chaos out of which we may expect to see some extreme partisan regime emerge. This may be of the Left or of the Right; but in either case it may prove unable to maintain itself except by leaning for support upon some ambitious foreign Power of its own colour—whichever lurid colour that may be. If this were to happen, it would have a profound effect upon the Mediterranean balance, and particularly upon the Mediterranean power of the British Empire. The present desultory and incompetent fighting between the contending Spanish forces in the air, on the sea, and on the land above and around Gibraltar, rubs in the truth that if either Andalusia or Spanish Morocco or both of them were to fall under the control of a first-class military Power other than the British Empire itself, then that Power would be mistress of the Straits—even though the Union Jack might still be flying over Gibraltar itself. The British fortresses at crucial points on the sea route through the Mediterranean and Red Sea—Aden and Malta, as well as Gibraltar—are all laid out on an old-fashioned miniature scale which has now been rendered obsolete by the invention of aircraft and long-range artillery. While a Power commanding Spanish Morocco (with or without Andalusia as well) could draw Gibraltar's teeth, Aden could likewise have its guns spiked by a Power ensconced in Ethiopia (all the more so with the help of an Italo-Phil Yemen). As for Malta, an Italian air-arm and navy with Libya as well as Sicily at their disposal are perhaps already in command of the passage between the Western Mediterranean and the Levant. England's present sea power in the Mediterranean is founded upon the break-up of the ancient Spanish Empire in the West Mediterranean basin at the beginning of the eighteenth century. A break-up of the modern Spanish republic might offer Signor Mussolini a sporting chance of making a successful grab at the Mediterranean prong of Britannia's trident.

The Government's reply to the advocates of a public works programme has always been that worth-while works could not be found in sufficient volume. Here is a type of public works which will rapidly become imperatively necessary. If it is to be done properly it will cost a great deal of money, but it has the merit of assisting an increase in revenue from motor taxation. The motorist now contributes over £70 millions a year to the national Exchequer alone. If the number of vehicles doubles in ten years, and other things remain equal, his contribution will be £140 millions by 1946. The capitalised value of the increase alone would provide funds for a substantial programme of road development. Perhaps it is not too optimistic to hope that the recent assumption by the State of complete responsibility for some of the more important trunk roads of the country will be followed by the initiation of such a programme. Something of the sort will have to be done, and done quickly, if the country is not to suffer in a very few years' time from a hardening of its traffic arteries.

The Five-Power Conference to Meet.—By the end of last week, both Germany and Italy had accepted the Anglo-Franco-Belgian invitation to take part in a conference between all five Locarno Powers in September. Neither of the two Central Powers has made its acceptance subject to any conditions except that there must be a thorough preparation for it through the ordinary diplomatic channels. Italy's acceptance is only "in principle"; and, in the light of the latest Italian precedent, this qualification may seem ominous; for, in April, 1935, Signor Mussolini acceded "in principle" to the League's demand that he should enter into peace negotiations with Abyssinia. To-day, as in the years 1911-15, Germany on the one hand, and the Western Powers and Russia on the other, are angling in competition for Italy's support. Thus, when faced, owing to Italy's acceptance, with a choice which he would perhaps rather have been spared, Herr Hitler has chosen to keep company with Italy rather than insist on his policy of conducting his negotiations with foreign Powers *tête-à-tête* and eschewing the method of round table conferences. The same anxiety not to drive Italy into the Western Powers' arms doubtless also accounts for the omission, from the German terms of acceptance, of any attempt to stipulate that the Five-Power Conference shall be a one-act play rather than the overture to a later and larger gathering, in which the countries of Eastern Europe will be represented, as well as those of the Centre and the West. This is, of course, the framework in which the project for the Five-Power Conference was set in the three-Power London *communiqué* of the week before last; and the prospect of a Pan-European conference, including Russia, is known to be very much more distasteful to Herr Hitler than that of a Locarno meeting. In the diplomatic preparation that is now to begin, it is certain that Germany will do her utmost, behind the scenes, to torpedo the larger conference and thus keep a free hand in Central Europe for the execution of whatever designs Herr Hitler may have there. This, however, will be delicate ground for German diplomacy to tread, because this is precisely the ground on which Italy's interests coincide, not with Germany's, but with the Western Powers'.

Another Dictatorship.—Last November the long and bloody feud between Monarchists and Veniselist Republicans in Greece ended with the return of ex-King George to the Greek throne. There were not a few foreign observers at that time who feared that the return of a monarch, behind the bayonets of the Army, would in effect mean the end of those democratic institutions which normally accompany Republican Government and a limited monarchy. That is what has happened this week. In the last few

* "The Motor Industry of Great Britain," 1936 Edition. Published by the Society of Motor Manufacturers and Traders, Ltd., 83 Pall Mall, London, S.W.1. 168 pages.

months death has removed M. Veniselos, General Kondylis, Professor Demerdjis and M. Tsaldaris from the Greek scene, leaving General Metaxas, the Monarchist leader against the Veniselist revolt last year, as candidate for the always-vacant post of "strong man." Republican and democratic feelings have been goaded during recent months by the inability of Greek party leaders to co-operate on an agreed programme which would begin the crucial work of social and economic reconstruction under parliamentary and party government. The trade unions were understood to be calling a 24-hour general strike in protest against the apparent drift towards dictatorship. General Metaxas has now copied Signor Mussolini; he struck on Tuesday; and Greece thus finds that she has fetched a monarch home only in order to found a military dictatorship. Apparently the General did not find "a whiff of grape-shot" necessary. But although Greece certainly needs firm and resolute government, the advent of yet another military dictatorship in a nominal kingdom may prove as inauspicious for Greece as for Europe.

* * *

More Good News from Cairo.—It looks as though Sir Miles Lampson's recent visit to London had a decisive effect in turning the scales in the Anglo-Egyptian negotiations. The successful agreement on the military clauses of the draft Anglo-Egyptian treaty—which we were able to report last week—has now been followed, more quickly than had been expected, by the initialling of an agreed text of the Sudan clauses last Saturday. We may now venture, without undue temerity, to look forward to the completion in the near future of a text which, by now, has been on hand for fourteen years—or, perhaps we should say, for fifty-four years. For the Anglo-Egyptian problem really sprang into being on the morrow of the original British military occupation of Egypt, forty years before the British Government's unilateral declaration of 1922. It is in the light of this major success—an agreed settlement of an anomalous situation which has so long defied all attempts to settle it—that both parties will have to make their judgment of the details when they are published; and therefore these details would only be seen out of focus if they were published piecemeal in advance. On the assumption that the terms are such as to enable the Sudan chapter to serve as one of the pillars of the general Anglo-Egyptian settlement, it is possible to guess its character in broad outline. The Sudan is a backward country with a future which, in different ways, and perhaps also in different degrees, affects the interests of both parties to the present Anglo-Egyptian condominium over it. While, as in the case of other backward African countries which are either juridically or morally under a trusteeship, the interest of the local native population ought to be the first consideration in the shaping of policy, each of the two trustees for the Sudan is also entitled to demand that the long process of Sudanese education towards self-government shall not be given a turn which is likely to make the Sudan a bad neighbour, either for Egypt on the one hand, or for the British East African protectorates and colonies on the other. It will be surprising if the clauses initialled last week do not turn out to have fulfilled this general desideratum.

* * *

Coal Selling Schemes.—The terrible mine disaster near Barnsley on Thursday reminds us once again of the constant obligation under which the nation stands to improve the earnings and working conditions of the miners. The centralised selling schemes, which were promised by the mine-owners as part of the agreement reached with the miners last winter, came into force on August 1st. There are three different types. The complete centralisation scheme, of the type successfully worked by the Lancashire district since a year ago, has been adopted by Shropshire, South Staffordshire and the Forest of Dean. Under this kind of scheme an executive district board, appointed by the mine-owners in the district, appoints a selling committee, which buys all the mine-owners' coal, with certain small exceptions. The committee fixes minimum prices and conditions of sale, sells the coal itself, and pays the owners in proportion to their quotas, with the usual system of deficiency payments

and fines. In South Wales, Scotland, Cumberland, Cannock Chase, Northumberland, Durham, North Wales, North Staffordshire, Warwickshire, Kent, on the other hand, much less thorough schemes have been adopted. In most of these areas a sales committee has been set up which merely approves the price, tonnage, etc., of coal sold by individual producers. Thirdly, in the Midlands a scheme midway between these two has been organised. The owners are to form "groups," with a maximum of nine groups in South Yorkshire, eight in Derby and Notts, four in West Yorkshire and one each in Leicestershire and South Derby. Each of these groups has a co-operative agency on the lines of the Lancashire scheme, and there is a committee to co-ordinate the work of the groups. The schemes as a whole appear to fulfil the conditions laid down by the Minister during the spring; though they do not altogether come up to the expectations of such independent reports on the industry as, for instance, the recent PEP report. That report urged strongly that schemes of a less thorough kind than the Lancashire scheme "would not in any way improve the average sales efficiency of the industry." Moreover, the selling schemes are only half of the public's bargain with the coal industry; and they are the half which benefits the owners. The other half, the amalgamation schemes, are in the same limbo of suspended animation as the Government's ill-fated Coal-mines Bill.

* * *

Railway Wages.—Some 400,000 railway workers are affected by the award of the Railway Staff National Tribunal replacing the present deduction of 2½ per cent. from all earnings by one of 1¼ per cent., and restoring time-and-a-quarter rates for overtime in place of the existing time-and-an-eighth. Under the agreement of February, 1935, the Tribunal replaced the National Wages Board as the ultimate point of contact between the railways, the unions and the public. Its initial award should commend itself to the companies, for it will cost them little more during the present year than their previous offer, which, but for its refusal by the men, would have come into effect on July 1st. The recommendations, however, may have a stormier passage at the special delegate conference of the National Union of Railwaymen which has been called for next Tuesday. The delegates have been well on the left of their executive in recent negotiations, and a settlement which retains the *status quo* for night duty and Sunday working may arouse little enthusiasm. But the maintenance of the authority of a Tribunal whose creation, out of the shattered fragments of the earlier conciliation machinery, was a work of infinite difficulty and delicacy, is worth more to the unions than any immediate uncovenanted wages benefit. And the post-war record of railway negotiations suggests that everything, in fact, comes to those who wait. The Tribunal's finding explicitly recognises that recent increased railway traffics "represent a real improvement"; that rating relief is worth about £2 millions to the railways this year; and that "the case for returning to the standard rates [of wages] becomes stronger with time." On the other hand, railway stockholders are still receiving an average return of only 3.08 per cent. against 3.66 per cent. in 1930—their "cut" thus being nearly 16 per cent. The Tribunal meet the possible criticisms, from the men's side, that these figures are based on "watered capital" by using totals "received in actual cash," which, they point out, are almost exactly equal to the nominal capital. The award thus, by implication, lays down the principle of equitable distribution of the net profit of railway enterprise between labour and capital. But it refuses to recognise that junior stockholders have special claims merely because they may be dividendless at the moment. The criterion, in the Tribunal's view, must be the return on railway capital as a whole—debenture, preference and ordinary. In practice, everything will depend on the proportions in which future "recovery" is shared, and the Tribunal—probably with wisdom—refrains from any expression of view on this point.

* * *

Public and Private Interest.—On Thursday a White Paper (Cmd. 5254) and a Minute by the Prime Minister were published which came as a surprise and a shock to the public. The White Paper contained a Report by a Board

of Inquiry appointed on July 3rd by the Prime Minister to investigate "certain discussions engaged in by the Permanent Secretary to the Air Ministry, Sir Christopher Bullock"; and the Prime Minister, in his Minute accepting the Report, announced that Sir Christopher would be dismissed the Service. From the Report it appears that Sir Christopher, who "had constantly in mind the question of leaving the Civil Service and entering upon a career in the world of commerce and business," on several occasions sought the advice of Sir Eric Geddes, chairman of Imperial Airways, on Sir Christopher's future career, although the Ministry and the company were at the time engaged in negotiating over the conveyance of Empire mails on Government subsidy. In interviews in June and September, 1934, Sir Christopher discussed, successively, the bestowal of an honour on Sir Eric and the new Imperial Airways Empire mail agreement. In these interviews and in discussions with the managing director of Imperial Airways, in June of this year, Sir Christopher clearly stated that he would like to become either chairman of Imperial Airways in succession to Sir Eric or one of the two Government directors. The Report says:—

"While we are not criticising his desire to link his future with that Company, we think that the special and intimate relations subsisting at all times between the Air Ministry and the Company made it intrinsically improper for him, in any circumstances, to initiate conversations with its Chairman or any other representative of the Company in furtherance of that desire. . . . At a period when a contract of first-class importance was in course of negotiation between the Air Ministry and the Company it was especially necessary to avoid the obtrusion of matters affecting private and personal interests. . . ."

It is to be regretted that so eminent a civil servant, after a meteorically brilliant career, should have placed himself in a position to which the Government Circular of March, 1928, could apply: "A civil servant must not subordinate his duty to his private interests; but neither is he to put himself in a position where his duty and his interests conflict." Civil servants have, in the past, frequently chosen to take up senior positions in commerce and industry, and Sir Christopher, in a personal statement, has explained that he viewed Imperial Airways as a semi-public rather than a purely commercial concern. Nevertheless, the Prime Minister's decision, though severe, is salutary. It is in the public interest that the highest civil servants shall avoid taking the initiative in any endeavour to secure non-Governmental posts for which public opinion, rightly or wrongly, may regard their official knowledge as being an important qualification.

* * *

Two New Reserves.—Two Government statements just before Parliament adjourned last week are disquieting. On the Tuesday, the Minister for War, Mr Duff Cooper, announced that he proposed to create a new infantry section of the Supplementary Reserve, with an initial establishment of 17,000. Enlistment would be for general service in the infantry for six years with an option of re-engagement for a further period of four years, and would be open to unmarried men of ages between 17 and 25. These men would be trained with Regular Army units for 26 weeks in their first year and for an annual 14 days thereafter. This proposal may be the outcome of a long series of disappointing recruiting results, both for the Regular and Territorial Armies; though recent recruiting figures have made a slightly better showing. On Thursday, Lord Swinton, Minister for Air, announced in the Lords that the King had approved the creation of a new Reserve called the Royal Air Force Reserve, to which recruitment would only be open to men engaged in civil life. Although R.A.F. recruiting has always been satisfactory, it appears that the formation of a *cadre* of Reserve pilots is "most urgent," and that 800 pilots will be required every year for the new Volunteer Reserve. It was stated that the expansion of R.A.F. first-line strength necessitates this step. Again, entrants must be between 17 and 25; and the units are to be based near the big centres of population; but the recruits to this new Reserve will be able to train in their spare time, with 14 days' annual training. Here are two more straws in the wind which the pace of the Government's re-armament programme has created. We may not

Sun Life Assurance Company of Canada

(Incorporated in Canada in 1865 as a Limited Company)

The Company has been rendering service to the public in Great Britain for more than 41 years by enabling prudent men and women to safeguard their own and their families' future, through comprehensive Life Assurance and Annuity plans.

Sums assured by new, paid-for Life Assurance policies issued during 1935 in Great Britain and Ireland total

£5,500,000

Total Assurances in force at November 15th, 1935, in Great Britain and Ireland

£69,500,000

know whither it goeth; but we can all form a fairly shrewd idea. It all sounds uncomfortably like the frenzied preparations and expedients which preceded 1914.

* * *

"Nature's Remedy."—Once again, as in 1934, Nature has confounded the best-laid restriction schemes of men. Ever since the bumper cereal harvests of 1928-29, the countries which normally produce cereals for export have been compelled to "carry over" hundreds of millions of bushels of wheat from one crop year to another. As the Chief Economic Adviser to His Majesty's Government, Sir Frederick Leith-Ross, pointed out in a Memorandum to the League of Nations, this result has been due to at least three causes: the extension of cereal cultivation in the war and its maintenance thereafter (e.g. in the United States); the protection of domestic cereal farmers by the normally importing States of the Old World (e.g. this country, Austria, Czechoslovakia, France); and the secular trend of demand at a higher standard of living away from cereals to meat, fish, fruits, vegetables, etc. The world's cereal producers for export found themselves obliged to try all manner of devices to restrict cultivation; and the world Wheat Agreement attempted to arrest the process of protectionism for cereal producers in the European importing States. A bad drought in 1934 reduced the world stocks of wheat available for export by roughly 50 per cent., from 600 million bushels to 300 odd millions at the beginning of the 1935-36 crop year. Wheat, which has been as low as 4.36s. per cwt., c.i.f. British ports, in September, 1931-32, had only risen by September of the current crop year (1935-36) to 5.00s., when Canada alone had a carry-over of 214 million bushels. Since then, however, summer in the Old World "has set in with its usual severity," and the corn has rotted in the ear; while in Canada and the United States from one-half to two-thirds of the wheat crop has been wiped out by a drought even more devastating than that of 1934. It is still doubtful how much of the carry-over from 1935-36 will be available for export to normally importing countries; it will certainly be very small. Owing to the almost complete failure of the American maize crop, the new wheat crop will be entirely used for domestic food and fodder. The U.S.A. will probably absorb all the Canadian reserve stocks. The price of wheat in this country had reached 8s. 0d. per cwt. by Thursday; the price of the quartern loaf had already gone up from 7½d. to 8d.; and, as a result of the price per sack of flour (including the 3s. of the levy to subsidise wheat farmers in this country) having risen to 38s. 6d., a further increase in the price of the loaf to 8½d. was threatened this week. The wheat price is now higher than at any time since 1930, the year after the initial "bumper crops" which ushered in the agrarian depression. There seems now no reason why the depredations of Nature—more ruthless than restriction schemes—should not take it even higher. In that case we may legitimately expect a "cut" in the wheat levy. The sudden and considerable rise in the price of bread weighs most heavily on the least well-to-do.

New Zealand's Experiment.—It is one of the advantages of democracy that a country can indulge in the luxury of a reformist Government during prosperity and return to the discipline of a conservative Government during depression. In New Zealand a Conservative National Government restored the financial position during the crisis of a few years ago, and a reformist Labour Government is now engaged in distributing the fruits of recovery. Already the new Government has raised Government wages, reduced hours, and guaranteed certain agricultural prices; and this week it introduced its first Budget. The Budget, which shows a small surplus, is an orthodox "recovery" one, enlivened with a dash of redistributive taxation. Some £470,000 additional expenditure necessary to restore salary "cuts," some £1,037,000 for public works not of a "self-supporting" kind, and £250,000 extra for defence, are all to be financed out of the natural increases from revenue accruing from recovery. A further £1,710,000 for extending old-age and invalid pensions, however, is to be provided by increases in income tax and land tax. Provided that recovery continues, as now seems probable, this modest increase in direct taxation should be able to be borne. It is proposed to spend £10,450,000 out of loans for self-supporting public works. Meanwhile the guaranteed prices for butter and cheese, now published by the Government, have evidently been fixed with great caution. They have even been criticised by Conservative speakers as ungenerously low! The success of the Labour Government's policy wholly depends, of course, on the maintenance of the price of New Zealand's exports. So long as world recovery keeps those prices from falling, New Zealand's new reformist experiment will continue to be prosecuted under the most favourable conditions.

Another Employment Record.—Employment on July 20th rose to 10,895,000, which was 63,000 more than a month before and 481,000 more than a year before. The total unemployed fell to 1,652,072, which was 50,604 less than a month before and 320,869 less than a year before. The industries which have benefited most from the improved conditions are clearly shown in the following table:—

	NUMBER OF INSURED PERSONS UNEMPLOYED IN GREAT BRITAIN		
	July 22, 1935	June 22, 1936	July 20, 1936
Coal mining	293,839	274,229	234,187
Iron and steel manufacturing	40,191	28,219	28,469
Engineering	86,406	57,537	56,804
Metal goods manufacture	50,475	39,155	37,634
Shipbuilding and repairing	62,962	44,901	45,251
Electric cable, apparatus, lamps, etc.	10,254	10,014	8,655
Cotton	99,824	69,674	66,667
Tailoring	26,880	20,101	24,482
Boot and shoe	21,614	17,045	19,015
Building	133,805	104,256	111,772
Public works contracting	120,975	108,195	116,041
Road transport	34,668	29,800	28,529
Dock, harbour, etc., service	47,421	45,763	44,093
Shipping service	38,588	34,551	31,940
Hotel, boarding house service	49,341	51,083	46,991
Distributive trades	193,641	180,884	171,176

All persons registered 1,972,941 1,702,676 1,652,072
The rise in total employment between June and July was exaggerated by the fact that a demonstration of Yorkshire miners took place on the day of the June count. But there has been a continuous series of six monthly increases; and since January the total number employed has risen from 10,349,000 to 10,895,000, a rise of 546,000 persons. Since the low point of January, 1933, there has been an increase of 1,630,000. The present figure of 1,652,072 unemployed is the best for six years, and is likely to be the record for the year, since the seasonal increase usually begins after July. Indeed, a total figure of 1,652,072 represents unemployment of no more than the "normal minimum" in the non-distressed area. "Cyclical unemployment," in fact, in the sense defined in our Survey of Britain's Economic Prospects (see the *Economist*, June 13th) is virtually non-existent.

Sterling and International Prices.—During the past fortnight there has been a further advance in British wholesale prices, and both the *Economist's* British index numbers have risen to a new high record since recovery began. The

complete index has risen by 0.9 per cent., and the primary products index by 1.4 per cent. These increases are less than those of the previous fortnight. Owing to the holidays, the latest Irving Fisher index number is not available, but it will almost certainly show a slight increase. There has been a sharp rise in the French wholesale price index number, amounting to 1.5 per cent. in a single week. Since the end of June French wholesale prices have risen by 4.5 per cent.:—

* These figures relate to July 29th.

Details of the group indices comprising the complete *Economist* index number on the date of our suspension of the gold standard and for recent dates are here given.

"ECONOMIST" INDEX (1927 = 100)				
	Sept. 18, 1931	July 8, 1936	July 22, 1936	Aug. 5, 1936
Cereals and meat	64.5	72.9	74.5	77.5
Other foods	62.2	59.5	61.2	60.9
Textiles	43.7	59.9	61.0	61.9
Minerals	67.4	81.3	82.5	82.3
Miscellaneous	65.8	78.1	77.7	77.4
Complete index ..	60.4	70.6	71.7	72.4
1913 = 100	83.1	97.1	98.6	99.6
1924 = 100	52.2	61.0	61.9	62.5

Practically all prices moved upwards in the cereals and meat group, the increases in wheat, flour and maize being particularly marked. Among textiles, cotton prices tended to react, but there were increases in wool tops, flax, hemp and jute.

Australia's Trade Balance.—Cables from Canberra state that for the year ended June 30th last Australia had an active trade balance of £22.5 millions sterling in respect of trade in commodities and gold. This was rather better than the active balance of £16.2 millions sterling for 1934-35, but hardly up to the preceding three years. As the annual cost of the service of Australia's external debt amounts to about £29 millions, it appears that last year her final balance of payments left her with a deficit. The cable states that this has been covered by an influx of capital, but this can hardly be considered a recurrent item. Compared with 1934-35, exports of wool increased by nearly £10 millions, and there were also increases in the value of her wheat and gold exports. As her total export surplus has only risen by six millions sterling, it is clear that she must have been importing more. The general impression left by the returns is that Australia is living a little beyond her means, and has been fortunate in that she has been able to import capital during the past year. If imports of goods continue to expand, she may have some difficulty in building up her London funds, which, as we pointed out last April, have sunk below the level of recent years. On the whole her present position inspires a feeling of caution, but not of alarm.

UNITED STATES

THE COURSE OF RECOVERY

JUNE commonly shows a seasonal recession, but this year it was negligible. The index of industrial production without seasonal adjustment fell one point, and with seasonal adjustment rose two points. The following table shows the course of these indices over the past year:—

	FEDERAL RESERVE BUSINESS INDICES (1923-5 = 100. Adjusted for Seasonal)			
	June, 1935	Dec., 1935	March, 1936	June, 1936
Industrial production	86	104	93	103
Manufactures	84	104	93	104
Minerals	98	101	95	99
Construction contracts (total) ..	30	67	47	48
Residential	24	26	26	36
All other	36	101	64	58
Factory employment	79.9	85.6	84.2	86.3
Factory payrolls	66.4	76.6	76.3	79.5
Freight car loadings	63	71	66	70
Department store sales	80	84	88	89

From these data one might infer that because the index of industrial production was a bit lower in June than in December there had been some retrogression in the past six months, or at least an absence of progress. This would be quite inexact; difficulties of allowing for the new seasonal in motor production exaggerated the December figure; while the concentration of W.P.A. contracts in December (to which the seasonal adjustment was applied) created an erroneous impression of non-residential building. The data show that manufacturing is almost 25 per cent. above a year ago, that residential building is about 50 per cent. higher, that factory employment is about 10 per cent. higher and factory payrolls about 20 per cent. higher.

The discrepancy between the movement of the production of manufactures and of minerals is so striking as to warrant elaboration.

INDICES OF MINERAL PRODUCTION

	June, 1935	Dec., 1935	March, 1936	June, 1936
Bituminous coal	79	77	70	75
Anthracite coal	97	71	48	66
Petroleum	133	146	146	146
Iron ore shipments	53	—	—	80*
Zinc	79	84	85	103
Silver	47	68	90	91*
Lead	55	70	59	75*

* May figure.

It will be noted that the sluggishness of the index is traceable to coal. Petroleum, and more especially the metals, have shown an increase on the average much bigger than the increase in the index of manufacturing. The increase in manufacturing, in turn, when broken into its components shows distinctly the same influences as have affected the metals:—

INDICES OF MANUFACTURING INDUSTRIES

	June, 1935	Dec., 1935	March, 1936	June, 1936
Iron and steel	66	103	83	113
Textiles	100	111	100	107
Food products	74	83	87	88
Automobiles	99	126	109	119
Leather and shoes	104	124	105	104
Cement	58	59	58	74*
Tobacco	138	147	140	147

* May figure.

The largest increases have been in the groups representing the so-called durable goods industries—iron and steel and cement; and among the minerals, the metals. Among the consumers' quasi-durable goods, it will be remarked that demand for automobiles preceded the demand for houses, but that in the past twelve months, while the demand for motor-cars has advanced practically to the record levels of 1929, the index of residential building has risen more in percentage, although it is still far below the average of the 'twenties.

BANKERS TRUST COMPANY
NEW YORK

Incorporated with Limited Liability in the U.S.A.

London Office:
26 OLD BROAD STREET, E.C.2.

So far as industrial production is concerned, the data show that the United States economy has reached a level which justifies the descriptive term "prosperity." In the decade since the base period the population has increased by something over 10 millions, and some allowance should be made for this in using the indices as a yardstick. None the less, there is still something to be explained in the fact that the index of manufactures is 104 and the index of factory employment is 86. The usual answer is, of course, technological unemployment, or its counterpart, the increased productivity of labour. Nevertheless, there is a considerable agreement on two non-statistical facts: (1) that a number of new demands for labour have developed, and (2) that unemployment distress as measured by the relief rolls is not so much an industrial as a non-industrial phenomenon.

THE DROUGHT AND THE BONUS

Two factors began to affect the United States economy toward the close of the second quarter of this year, each of which has an uncertain bearing on the course of the last half of the year—the drought and the Bonus. The drought is a major meteorological phenomenon, following a succession of droughts, of which the worst was 1934. The drought of 1936, although lacking the spectacular features of the 1934 drought, appears to cover more territory, affect more crops and more individual farmers, and probably to represent a greater deficiency of rainfall. The effect of shortages on farm income may be compensated by price; but the repercussions of the disaster extend far beyond its initial point of incidence.

An influence in the opposite direction is the Bonus. Already above \$1,000 millions of the Bonus bonds have been converted into cash, presumably for immediate spending. As yet this has produced no clearly identifiable consequences—possibly because the payment was more or less anticipated in May or June. Altogether the second quarter was better than the first, and falsified predictions by showing no seasonal recession. July, traditionally dull, has maintained approximately the level of the preceding three months.

NEW YORK, August 1.

FRANCE

AN INCREASE IN COAL PRODUCTION

TOTAL production of coal during the first six months of 1936 was 23,670,000 tons, against 23,426,000 tons in 1935. Production of metallurgical coke was 2,000,000 tons, against 1,966,000 tons in 1935. The internal consumption was 500,000 tons higher than in 1935. The first half of 1936 thus shows progress in comparison with the same period of 1935, which had registered a fall of 2,400,000 tons in consumption and 1,250,000 tons in production. Stocks, which increased by 400,000 tons in the first six months of 1935, diminished by 85,000 tons in the same period of 1936. Exports, however, were 36,000 tons lower. The import

price of foreign coal showed a new fall at 90.78 francs a ton, against 93.62 francs in the same period of 1935.

The recovery of French production would have been greater without the strikes in June; during that month the coal mines produced 3,480,000 tons only in 25 working days, against 3,921,000 tons in May in 24 working days, and 3,725,000 tons in June, 1935, in 24 working days. The average daily production was thus diminished from 163,377 tons to 139,275 tons, against 155,207 tons in June, 1935. Consumption was 5,138,000 tons in June, against 5,711,000 tons in May and 6,027,000 tons in April.

Wages in coal mining represent 65 to 70 per cent. of costs. The French coal mines will thus be particularly affected by the new social charges. The total of wages will be nearly 16½ per cent. higher than in 1935. But the Government is not authorising an increase of the price of coal of more than 9 francs per ton. This explains the Coal Mines Bill, which has been already voted by the Chamber by 400 votes against 170. The Rapporteur of this Bill in the Chamber stated that French coal production was 47 million tons and consumption 67 million tons. The surplus was imported. But foreign coal was much cheaper than French; at the beginning of 1936 the price per ton was 80 francs in France, 52 francs in Great Britain, 60 francs in Germany, and 47 francs in Belgium.

The Coal Mines Bill stipulates that the Minister who has the mines under his authority will have to fix the price of coal by categories and by districts. The determination of this price will necessitate the communication by the companies of their accounts. Moreover, the companies, the importers and merchants will be requested to form among themselves a central organisation for buying, selling and clearing operations. The clearing system will be designed to aid the small companies. They will be subsidised out of the proceeds of the tax on imports of foreign coal, which was increased on July 1st from 4 francs to 15 francs a ton for industrial coal and from 5 to 20 francs for domestic coal.

Such is the Bill voted by the Chamber. A special clause stipulates also that 40 per cent. of foreign coal should be transported by French shipping. It does not seem that the Government proposes for the time to impose a new tightening of the import quota. But the Chamber was visibly impressed by the figure of 27,000 million gold francs which France has had to pay in the last ten years for the import of foreign coal.

The Chamber has also voted a stipulation that banks and other companies should declare the foreign assets they have held since January 1, 1935, for their own account or for the account of their customers. This will enable the agents of the State to verify the authenticity of the declarations which the recent law affecting foreign holdings obliges private persons to make. Such a decision marks a new step in the progress towards controlling capitalists. This policy of planning and autarky must certainly be considered a merely provisional move in a democratic country whose income partly springs from international activities; and the recent declarations of M. Labeyrie, the new Governor of the Bank of France, that there must be an international monetary agreement, with an "alignment" of currencies, show that the present Government has not abandoned its international outlook.

PARIS, August 6.

GERMANY

FOREIGN POLICY AND THE PRESS

BARON VON NEURATH's remark to the British and French Ambassadors that the programme of the Five Power Conference needs careful diplomatic preparation is regarded here as Berlin's most significant reaction to the invitation to participate. An unconditional refusal of the invitation was never considered possible. No further overtly official views have been published, though it is naturally considered that German diplomatic preparation will aim at narrowing as much as possible the scope of discussion. The Press has dealt with the matter in that sense, and also with other connected matters, including Anglo-Italian relations, the new Anglo-Russian naval and business agreement, the likelihood of a formal Franco-Turkish support pact, and of

course the civil war in Spain. This is indeed the chief immediate interest. Finally, the League of Nations is being discussed with edifying frankness.

Such Press activity always reveals the interests of the German Foreign Office or of the Nazi Party. The newspapers are daily told, through the Ministry of Propaganda, what they are to suppress, what they are to reveal and what comments they are to make. This system, which for official Germany has obvious advantages in that it can push interests and direct sympathies without formally committing itself, has serious disadvantages for the reader, who is expected to approve of judgments the factual basis of which is distorted or even entirely withheld. The suppression of undesired news has gone so far that an important Anglo-German topic which filled columns of the English newspapers was not mentioned in the German at all. In the Berlin Press the recent Nazi demonstration in Vienna, being undesirable news because it would weaken the good impression created by the Austro-German agreement, was described as entirely the work of Left-wing agents provocateurs. The Spanish civil war is being treated in the same misleading way—as a conflict between a party of "national regeneration" and a mere mob of assassins and incendiaries, among whom, the reader is told, German emigrants and Jews are the most prominent. German interest in Spain is very natural. It is not forgotten that the war of 1870 arose out of the question who should rule in Madrid. The German official Press campaign against the present Spanish Government is probably not due to any positive hope for a military dictatorship in Madrid. In view of the animosities between Europe's present dictatorships everywhere between Moscow and Rome such a result would promise no diplomatic gain. But the common basis of the dictatorships, that is, the extraordinary inertia and tameness since the war of the once aggressive industrial working class, seems threatened by the Spanish Government's resistance.

There is a new German antagonism to the League of Nations which is not consistent with approval of British policy. Thus the letter in *The Times* of August 1st from persons anxious to consummate a European settlement conveys, the Press affirms, merely "a plan to draw the historical course of European development once and for all into the same Geneva system which has so entirely, and to the derision of the world, failed." The chief offence of this letter, it seems, is the argument that there should be no separation in the matter of security deals between Western and Eastern Europe.

SKILLED LABOUR SHORTAGE

An increasing shortage of skilled labour is reported from some machine manufacturers, and also locally in the building industry. Lack of agricultural workers has, also locally, retarded harvesting. The wholesale prices index number for July 29th shows a relatively big rise from 104.1 to 104.5, a consequence of rises in agricultural prices.

The references in the British Parliament to German construction of ships for British account attracted some attention. An official German report on shipbuilding published some months back complained that German cheap building for blocked-mark payment had the undesirable effect of renovating competing mercantile marines. The age of Germany's commercial fleet, which was relatively low at the end of the first post-war reconstruction period, has of late increased. A Hamburg despatch published in June shows that while Germany in 1928 had a smaller proportion of ships of the oldest class than before the war she has at present a much higher proportion. Also, the proportion of entirely new ships is to-day very low. The figures refer to ships actually in service:—

Age Class:—	1914	1928	1935
Under 1 year	%	%	%
1 to 3 years	5.5	4.6	0.7
3 to 10 years	13.1	7.9	1.1
Over 10 years	33.2	46.1	31.2
	48.2	41.4	67.0
	100	100	100

German tonnage is, of course, still young in comparison with that of those countries which carry on almost exclusively tramp services.

The money market and Bourse were closed on August 1st. Money rates became somewhat easier last week until the month-end demand supervened. The day loan rate early this week was 3-3½ per cent. The Reichsbank's return for July 31st shows the large increase of Rm. 544 millions in credits and investments, and as 23 per cent. of the June month-end credits remained unpaid, a considerable burden is carried into August. The total currency circulation is Rm. 6,448 millions, as against Rm. 5,948 millions at the same date of 1935.

BERLIN, August 4.

AUSTRIA

A CHECK TO RECOVERY?

In the last few months industrial production in Austria has slowed down. Only a few industries have been affected by this recession; but some unfavourable figures are now published at a time when, last year, a remarkable improvement was recorded. Thus, the index of production receded from 104 in April to 99 in May, whereas in May, 1935, it advanced from 90 to 94. This is the most unfavourable monthly figure since last October. The following figures on the development in individual branches of production are available:—

	May, 1935	June, 1935	May, 1936
Electric current output (mill. kwh.).....	92	87	90
Iron ore (tons).....	78,000	54,000	80,000
Crude iron, 1923-32 = 100	79	44	78
Crude steel, 1923-32 = 100	99	82	89
Rolled products, 1923-32 = 100	96	79	88

	May, 1935	April, 1936	May, 1936
Brown coal (tons)	214,000	208,000	199,000
Cotton yarn (1923-31 = 100)	154	162	145
Prepared timber (wagons).....	746	712	777
Cellulose (wagons)	2,320	2,187	2,059
Paper (wagons)	1,791	1,431	1,520
Cardboard (wagons)	508	449	582
Beer (1,000 hectolitres).....	233	269	245

There is thus no longer any uniformity in the progress of production. The recession in the iron and steel industry has been in progress since March, though returns are still considerably above last year's level.

In recent weeks, however, the setback in Austrian industry appears to have been checked, for unemployment continues to decline. In the middle of July the number of unemployed in receipt of relief in Austria was 224,000, against 236,000 in June, 322,000 in February and 228,000 in July, 1935.

There is one circumstance which must be borne in mind in estimating the industrial situation in Austria. Whenever improvement is recorded to a high degree, it is the result of an increase in exports or of public works, if not from defence expenditure. The sale of consumption goods, on the other hand, is on the decline. The index for the turnover of consumption goods receded from 82 in April to 78 in May, against 80 in May, 1935, while the returns for June from certain branches of industry show a further decline. In June the index of turnover in the clothing industry fell from 76 to 68 (against 80 in June, 1935); of that for footwear from 70 to 69 (74); and of that for household utensils from 67 to 63 (58). Only the index of turnover in foodstuffs stands at a somewhat better level, albeit a very low one in comparison with that of the prosperity period. Individual prosperity can only be traced in the new registrations of passenger automobiles, this being the outcome of the abolition last year of the automobile tax. Thus, in May, 846 passenger cars were newly registered, against 329 in May last year; that figure is the highest attained since 1930. Record business is reported from the biggest Austrian automobile factory, the Steyr works; and a further consequence is an increased sale of petrol.

Credit facilities are still among the most important and partially unsolved problems of Austrian financial policy. There is plenty of available money, and the nominal rates of interest are relatively low. The official discount rate is at 3½ per cent., official loan rates at 4 to 4½ per cent., and call money rates at 5 per cent. But only a very few privi-

leged firms can get credits on these conditions; and the commercial bill portfolio of the National Bank is estimated at 40 million schillings at most. Moreover, producers complain that they can obtain loans only at very high rates, and then with great difficulty.

VIENNA, August 1.

JUGOSLAVIA

NEW POLITICAL GROUPS

The tranquillity of Yugoslav relations with the Little Entente and the Balkan Entente has been demonstrated in the past two months by the visit of the Prince Regent to Bucharest, the Bled conversations, the Dardanelles negotiations, and even by the rumours of a possible Habsburg restoration. Internally the political situation turns on the forthcoming municipal elections, which, even with an open ballot, should give the best indication for some time of group strengths and national sentiment. Apart from the Government group, two others have now crystallised out of the old parties: the so-called United Opposition and the National Party. The United Opposition, consisting of various shades of Serbian Liberals and Agrarians, have made great efforts to induce the Croatian Peasant Party to go to the polls with them, and in spite of Dr. Machek's tactless declaration to the Paris *Populaire* emphasising their differences, it is thought that he may still throw in his lot with the Opposition even at the price of resigning Croatian Federalist claims.

The foreign trade figures for April and May were as follows:—

	1935				1936			
	Exports		Imports		Exports		Imports	
	Tons	Mill. dins.	Tons	Mill. dins.	Tons	Mill. dins.	Tons	Mill. dins.
April	324,600	368.2	95,100	325.4	190,500	269.0	82,600	326.0
May	316,400	297.2	105,400	369.0	206,900	220.0	78,700	324.2
Five mths.	372,000	1,464.0	132,900	1,532.0	411,000	1,708.0	865,000	1,337.0

Both the wheat and the maize harvests are good, in yield and quality, and a surplus of up to 50,000 trucks for export is forecast for each. After the lean year of 1935 good marketing of this year's crop is vital to the peasant, and the corn is being bought under Government supervision by the privileged export company in order to ensure the peasant a good price. Italy, in retaliation for sanctions, is buying from Hungary. Czechoslovakia, however, has undertaken to buy 10,000 truckloads from Yugoslavia, and Germany a similar amount, to be written off the clearing account. But the National Bank is anxious to secure foreign exchange from the harvest, and Yugoslav corn is being therefore directed in the main to Western European markets, where there are hopes of good prices owing to the small deliveries from America.

TRADE WITH SPAIN

The import restrictions, clearing difficulties and the loss of the Italian market, which absorbed over 50 per cent. of the Yugoslav exports of timber, eggs and cattle, are bringing about important changes in foreign trade. Spain, with which an agreement was concluded on May 15th, is regarded as a hopeful substitute for the Italian market; and mutual facilities have been granted affecting Spanish Mediterranean fruits, cotton yarn, rice, cork and resin, and Yugoslav timber and eggs. Negotiations for new commercial agreements are also expected in the autumn with Hungary, Poland, France and Great Britain.

Germany, Yugoslavia's greatest debtor under the clearing system, is finding in Yugoslavia a profitable market for her machinery and for iron and steel, railway and bridge-

BRITANNIC ASSURANCE COMPANY LIMITED

Motor and General Insurances transacted

Chief Office: BROAD STREET CORNER, BIRMINGHAM

building and armaments goods. In the last two months her debt has been reduced from 22,250,000 marks to 20,300,000 marks. This, and the fact that coal and textiles and yarn come under the list of controlled imports, must mean a reduction of imports from Great Britain.

Following the reconstruction of the Zenica mines by Krupps, the French-owned Bor copper mines have just opened new refineries, which are to supply the needs of national electrification schemes and armaments. The Prime Minister declared on this occasion that these two steps were but the first in a new economic policy of building up the national metal industries, and were to be followed by reorganisation of the production of lead, zinc, cellulose and bauxite. Trepča Mines, Ltd. (British-owned), are already reported to be setting up a lead-smelting installation which will prepare the ore on the spot instead of exporting it.

A noticeable feature of the summer has been a number of organised strikes, the first on a large scale, in the building, clothing and mining trades. These strikes have resulted in some urgently needed improvements in wage rates and working conditions.

BELGRADE, August 1.

ROUMANIA

THE GERMAN "DRIVE"

THE news about the Austro-German understanding has aroused considerable interest in Roumania. It is now considered only a question of time before Austria is drawn entirely into Germany's orbit. Allusions to Germany's *Drang nach dem Südosten* leave little doubt in the public mind about the significance of this development in the Central European political situation. Under these circumstances, it is not surprising that the negotiations in Czechoslovakia for Roumania's loan were brought to a speedy and successful conclusion. The loan, which is to pay for armaments ordered in Czechoslovakia, amounts to Cz. Kr. 220 millions at 5 per cent. interest, repayable in ten years. A further loan of Cz. Kr. 80 millions at 2 per cent. interest is to provide means for building a strategic railway communicating with the Czechoslovakian railway system.

No little uneasiness has been caused at home and abroad by certain elements that take their cue from Berlin, and because no serious measures seem to have been taken by the Government to discourage them. M. Titulescu's sudden arrival in Roumania from the council tables at Montreux, his long audience with the King, and his interviews with members of the Cabinet and Opposition leaders, are believed to have been caused by the Government's apparent indifference. The corner-stones of M. Titulescu's policy are the Little Entente and the Balkan Pact. Both are under the auspices of France. Any encouragement of Nazi propaganda by Roumania would rouse the suspicion that Roumania was playing a double game, and would naturally weaken M. Titulescu's position in international councils. The recent conferences which the Foreign Minister attended have now resulted in his complete agreement with the Government. The statement issued after the Cabinet council of July 15th endorses M. Titulescu's foreign policy in its entirety.

GOOD HARVEST PROSPECTS

Heavy rains during June and hot and dry weather this month have enhanced crop prospects. It is believed that the total production of wheat will amount to something like 3,500,000 tons. Estimates of the exportable quantity vary between 800,000 and 1,200,000 tons. Barley and rye crops are expected to be relatively small. Total production of barley is estimated at 1,200,000 tons, and the exportable surplus at about 600,000 tons. The oats harvest is expected to yield 300,000 tons. The state of maize is considered exceptionally good. In view of rising cereal prices in international markets there are expectations of a very active export season. The new wheat valorisation system came into force on July 11th.

The provisional foreign trade returns for the five months January to May show satisfactory increases, both in exports and imports, over those of last year.

	Imports		Exports		Export Surplus
	Quantity Tons	Value '000 Lei	Quantity Tons	Value '000 Lei	
Jan.-May, 1935..	177,325	4,420,000	3,489,334	5,395,900	975,900
Jan.-May, 1936..	230,545	4,672,296	3,549,679	6,154,349	1,482,053

Increase 53,220 252,296 60,345 758,449 506,153

The National Bank is said to be satisfied with the recent working of the various clearing arrangements which are supposed to have increased the available stock of foreign exchange. The Anglo-Roumanian clearing is of too recent a date to show appreciable results. It is, however, doubtful if the clearing arrangements are making much impression on the arrears of commercial indebtedness.

BUCHAREST, August 1.

BRAZIL

FOREIGN AND HOME TRADE

THE Federal Bureau of Statistics has recently published a summary of trade statistics for the period 1928-35 (1928-9 = 100). This shows the difficulties Brazil has had in meeting her foreign currency obligations. It also shows how a number of national industries have expanded, thus reducing imports:—

	(1928-9 = 100)					
	Year	Tons	Index	Value '000	Index	Gold Index
Total imports ...	1928	5,838	98	3,695	102	90,669
	1935	4,338	73	3,855	107	27,431
Coffee exports ...	1928	832	99	2,840	102	69,701
	1935	920	109	2,157	77	17,374
Other exports ...	1928	1,242	96	1,130	100	27,725
	1935	1,842	143	1,947	173	15,638

In 1928 coffee constituted 71.54 per cent. of the total exports by value, but in 1935 only 52.55 per cent. In this period the price per bag dropped from £5, or 205 milreis, to £1 3s., or 141 milreis.

Both public revenue and expenditure have increased; but there is still an "all in" deficit:—

	Revenue			Expenditure		
	Federal	State	Muni- cipal	Federal	State	Muni- cipal
1928	2,216	1,103	547	2,332	1,290	603
1934	2,479	1,342	694	3,050	1,372	696

Thus, there was a Federal deficit of 116,000 contos in 1928, and of 571,000 contos in 1934. All mineral production has continued to increase:—

	1928		1935	
	Kilos.	Tons	Kilos.	Tons
Gold	3,135		3,680	
Coal	325,000		756,953	
Pig iron	25,761		59,281	
Laminated steel	20,881		64,232	
Laminated iron	26,227		52,358	
Cement	87,964		363,000	

For comparison the corresponding imports were:—

	1928		1934		Decrease Per cent.
	Tons	Tons	Tons	Tons	
Coal	1,950,300		1,079,600		44
Pig iron	2,595		723		72
Cement	456,200		125,700		73
Other steel and iron products	107,580		80,213		25

Similar falls in imports occurred among a number of other articles, e.g. textiles, leather goods, pottery, hardware, paper, insulators, electrical appliances, etc. These goods are now more and more manufactured in the country. Several important American manufacturers, for example, manufacturers of automobile tyres, artificial silk, accumulators, etc., have transferred equipment to Brazil and started manufacturing. But there are still good opportunities for other factories.

RIO DE JANEIRO, July 20.

ARGENTINA

EXPORTS STILL SLACK

EXPORTS in the first six months of 1936 were most depressing. The tonnage was the lowest recorded during the past ten years, except for 1930; and, notwithstanding a marked improvement in commodity prices, the total value of

exports is down by \$126 millions compared with the same period of last year.

	ARGENTINE EXPORTS	
	1935 tons	1936 tons
Meat products	628,734	638,796
Agricultural products	7,815,286	5,154,213
Total	8,702,151	6,028,535
	Values	Values
Meat products	\$289,866,268	\$322,097,972
Agricultural products	522,481,276	366,164,097
Total	849,210,595	723,076,488

The principal reason is the very large decline in wheat shipments, which, for the six months, were only 659,000 tons, compared with 2,547,000 tons for the first six months of 1935. Linseed, oats and barley also show appreciable falls, and maize shipments, which it was hoped would be considerably greater this year, are only up by 141,000 tons. The maize harvest, which at one time looked like breaking all previous records, did not come up to expectations, owing to unseasonable autumn weather, and because over 2,500,000 hectares sown to maize were later turned over to pasture. The final figures given by the Ministry of Agriculture show a reduction of 15.5 per cent. compared with 1935. Unless a phenomenal and highly improbable rise in prices takes place or exports improve during the coming six months, the exchange market may weaken.

The privately owned railways have presented a lengthy *communiqué* to the Legislative Committee of the Chamber of Deputies, supporting the Transport Co-ordination Bill. It is hoped that the Bill will be passed by Congress this year. One of the local companies has already come to a private arrangement with certain bus services in order to minimise competition and share profits.

The amalgamation of the only two British banks in Argentina, the Anglo-South American and the Bank of London and South America, is of great importance in the financial world. The combined institution, to continue under the name of the Bank of London and South America, will be one of the most powerful banks in the country and, with its widespread chain of branches throughout Spanish America, should be able to give even better service to its clients than hitherto.

BUENOS AIRES, July 28.

AUSTRALIA

A COMMONWEALTH SURPLUS

AUSTRALIAN public finances, as far as ordinary revenue and expenditure are concerned, have turned out more favourably during 1935-36 than was expected. Setting deficits against surpluses, the figures of the Commonwealth and the six States' Budgets show a net deficit of approximately £1,000,000 after applying approximately £9,000,000 to sinking funds. This is subject to the usual qualification that with fresh borrowings the aggregate debts continue to increase. Preliminary figures show that the Commonwealth has a surplus of £1,000,000, due principally to larger Customs and Excise receipts, which amounted to £41,437,717—an increase of £3,568,231 compared with 1934-35. Among the States, the New South Wales deficit is £1,680,000; that of Victoria approximately £230,000; of Queensland £741,815; and of Tasmania £200,000. Against these deficits, South Australia shows a surplus of £148,000 and Western Australia a surplus of £88,378.

The proposal of the New Zealand Government for the reduction of interest on the external debt has been welcomed in Labour circles in Australia. The proposal is similar to that put forward some years ago by Mr Lang for Australian external debt. The London portion of the New Zealand public debt at March 31, 1935, was £161 millions (inclusive of £24 millions due to the British Government), compared with £78½ millions in 1914, the average rate of interest being a little under 4½ per cent. Apart from interest due to the British Government, which remains in suspense, the actual amount paid on the London debt during 1934-35 was a little under £6,000,000, exclusive of exchange. In view

of the political programme of the present Government, a reduction in interest would facilitate additional spending.

The quarterly average returns of the ten trading banks in Australia show that while deposits within the Commonwealth for the June quarter were £291,484,438, or a decrease of £224,421 as compared with a year ago, advances were £262,403,037, or an increase of £8,697,580. Against the latter movement Government and municipal securities (inclusive of Treasury bills) were £44,285,485, or a decrease of £7,727,720, while the cash items, including cash with Commonwealth Bank, were £30,862,482, or a decrease of £7,630,824. The decrease in the cash items of the trading banks is reflected in another form in the quarterly average return of the Commonwealth Bank, which shows that balances due to other banks have fallen to £16,938,233 for the June quarter of 1936, against £23,681,964 a year ago. In addition to the cash items, the trading banks hold Treasury bills of nearly £25 millions (included in securities above).

A very disturbing effect has been produced by the decision of the Privy Council against the Commonwealth Government in the James case, showing that the dried fruit marketing scheme is inconsistent with Section 92 of the Constitution, which provides that "trade, commerce and intercourse among the States whether by means of internal carriage or ocean navigation shall be absolutely free."

MELBOURNE, July 24.

SOUTH AFRICA

CONTINUED PROSPERITY

THE trade and finance returns for the first six months of the current year reflect continued prosperity. The Union's Customs returns for the period show that goods to the value of £40,902,745 were imported, against £35,425,743 in the corresponding period of 1935. Exports in the same period were £59,235,247, against £47,629,316. This improvement masks a fall in exports of maize, from £897,423 in the first half of last year to £54,362 for the first half of 1936; but the increase in the value of exports this year is largely due to the calculation of the value of gold bullion at the price ruling at the date of export instead of at the "standard" price, as hitherto. Customs yield for the first six months of this year reached £5,736,542, against £5,276,532.

In the first six months of the year there were 713 new companies registered, compared with 630 in the first half of last year. Of this year's total, 534 were Transvaal registrations; and of these fully 90 per cent. are on the Witwatersrand. The total nominal capital of the companies registered this year is £12,656,468, compared with £8,568,595 for the first half of 1935.

Building statistics support the evidence of unprecedented prosperity on the Witwatersrand. In the financial year ended June 30th Johannesburg municipality passed plans for no fewer than 10,594 new buildings, representing a total value of £8,724,802—an increase of over £3,000,000 on the value of the previous year's building operations in the city. The figures for the calendar year are still more impressive; in 1935, 8,934 plans represented buildings to the value of £6,717,146. It is expected that the figure for the present year will total about £9,000,000. The monthly returns support this estimate. Last month's value of building plans exceeded £1,000,000. The phenomenal development of the city is represented not only in these figures, but the whole aspect has been changed in the last few years. Whereas two-storey buildings were rather the exception, the modern blocks of flats and offices run to a dozen storeys or higher.

BOOKS AND PUBLICATIONS

PLAN FOR PEACE*

THIS is an extremely readable as well as opportune book. Mr Francis Williams has a keen instinct for the really significant factors in international affairs; he writes in an easy epigrammatic style, pointed with not a little irony and wit; and he has strong feelings on the subject of war and peace which he knows how to express. His main contention is that the menace of European war is very grave indeed, but that it can be averted even now if the right action is taken.

He begins with a survey of the political and economic position of the three "enemies of peace," Germany, Italy and Japan, whose Governments, he fears, may not be quite so peaceable as their peoples. The Nazi regime he sees as the product mainly not of the Treaty but of the depression. With apt quotations from "Mein Kampf"—which might well be more widely read in this country—he argues that that regime is fundamentally expansionist in its very nature. Indeed, he thinks that increasing economic difficulties would make it more rather than less militarist, since there would be an urge to divert attention from distress at home; and he estimates Nazi expenditure on re-armament up to June, 1936, at between £1,400 millions and £1,600 millions (at the old par rate of exchange). Mussolini, he thinks, may look for further colonial wars unless the world can "show the Italian people that relief from economic distress can be achieved more surely and more easily by peaceable methods than by war." Mr Williams then turns to Japan, "that country of producers with a remarkable industrial efficiency, partnered by a political and moral philosophy that might have been regarded as an anachronism in the modern world if Mussolini and Hitler had not demonstrated so efficiently the rapidity with which the wheel of progress can be reversed in Europe." Mr Williams' analysis of internal economic and political tendencies in Japan is quite unusually interesting.

Democracy's dilemma, Mr Williams argues, is whether or not to fight for peace. He thinks—though he has a warm regard for the pacifists—that it should be ready to do so. He advocates in short, therefore, that the peace-loving nations should on the one hand rebuild a collective defence system, pledged to resist any aggressor, and on the other should make such economic concessions as the aggressive Power's claims seem to justify. He consequently analyses these claims in detail; and he is inclined to find in them a little more substance than recent critics such as Sir Norman Angell. Mr Williams thinks that the general disintegration of international trade hits with accentuated severity a country with a large overseas trade but no colonies. Colonial trade, he points out, though statistically small, is at least comparatively secure; and 10 per cent. of one's export trade in the hand may seem worth 20 per cent. in the bush.

He does not advocate, however, the transfer of colonial and mandated territories to different sovereignty. But he would like to see Great Britain and the other imperialist Powers make all their colonies mandates; and Great Britain, in particular, he thinks, should renounce the reactionary discriminations adopted at Ottawa and should form a low-tariff group of British nations open to all countries to join. He would also institute a colonial loans authority under the League to supervise colonial investment internationally, and urge the removal of immigration restrictions. Such, in combination with collective resistance to aggression, is Mr Williams' plan for peace. It may be that he slightly over-estimates the extent to which aggressive Powers, mainly concerned with expansion and glory, can be appeased by legitimate concessions. It may be that though certain claims have a just foundation, the aggressive designs of those who make them will in no way be diminished by concessions. This would be a dilemma indeed, which Mr Williams does not perhaps entirely escape. But he at least has to offer a constructive and intelligible policy.

* "Plan for Peace." By Francis Williams. Methuen. 184 pages. 3s. 6d.

SHORTER NOTICE

"Economic Principles of Transportation." By W. T. Jackman. University of Toronto Press. Humphrey Milford. 891 pages. 21s.

Professor Jackman's book, which is based on one issued in 1926, but now largely re-written, avoids the worst pitfalls that await the writer on transport. The author does not over-simplify the complicated influences that determine the level of railway rates; and as the main part of the work is more descriptive than analytical, the theorist will not find here too wide a gap between orthodox economics and the special pleading often adopted by transport experts. The book is not a theoretical treatise on transport in general, but a detailed survey of transport in Canada to-day, of which by far the largest part is devoted to railways (19 out of 21 chapters, or 749 out of 881 pages). As a treatise on Canadian railway problems, it will be invaluable to the specialist.

The chapters which describe the rise of the world's most baffling railway problem, that of the Canadian National system, are lucid and interesting. Professor Jackman's conclusion is, broadly, in favour of unifying the C.P.R. and the C.N.R. under private ownership.

On the question of railway rates, which are considered in great detail, the book is concerned with practical problems rather than with theory, although the author devotes more attention than most writers to the effect of fluctuations in railway costs, and to the relation of rates to changes in the commodity price level.

The final chapter on "Highway Transportation," in which the road-rail controversy is discussed, is, perhaps, the least satisfactory in the book. The usual criticisms of the road goods hauliers are repeated. But the gradual progress of the industry outside Canada towards more stable conditions, and the progress which has been made, as in Great Britain, in removing the evils that accompanied its first period of uncontrolled expansion, are given rather less than their due. This rather perfunctory treatment may be a result of allotting only one-eighth of the space given to railway freight rates to a discussion of the whole road-rail controversy. But it is surely a perilous generalisation that "the operators of motor-trucks have frequently asserted that the motor vehicles are paying their own way. If this were true, there would not have been the great rush in recent years to get a start in highway transport operation." What new masterpieces of restrictive legislation would be called for if we could automatically assume that any expanding industry, whose progress outstepped the general line, was in receipt of a concealed subsidy from the community!

MONEY AND BANKING

THE BANK'S GOLD PURCHASES

FOR the past three months the Bank of England has been a steady buyer of gold, and its purchases have been accelerated since the middle of June. The cause and effect of these operations have aroused considerable discussion, and it is opportune to place them in perspective.

The following table briefly summarises recent developments. The dates chosen are April 29th, which marked the beginning of the recent expansion in the note circulation; June 10th, when discount rates were approximately at their peak and when the Bank began to accelerate its gold purchases; and August 5th, the latest date available:—

	April 29th £ mill.	June 10th £ mill.	Aug. 5th £ mill.
<i>Bank of England:</i>			
Gold	202.7	208.5	243.0
Note circulation	416.9	433.0	454.4
Reserve	46.6	36.4	49.6
Bankers' deposits	104.7	86.5	92.7
<i>Discount Rates:</i>			
Treasury bills (tender rate) 10s. 6.00d. 18s. 1.04d. 10s. 6.35d.			
Three months' bank bills (market rate)	12-18	11-12	11-18

The period to June 10th covered the weeks of the heavy influx of French funds into London. Part of this money was lodged on deposit with the British joint-stock banks, and part was hoarded in British currency. To offset the effect of this French influx, the British Exchange Equalisation Account made extensive purchases of francs, which it at once resold for gold, held under its earmark at the Banque de France. To finance its franc purchases, the Exchange Account reduced its holdings of Treasury bills, but the total volume of Treasury bills issued by the British Government was not affected by these operations, and the joint-stock banks and the discount market had necessarily to increase their holdings. To the extent that the discount market took up more bills, it borrowed more short money from the joint-stock banks.

The effects of these operations may usefully be contrasted with those of an influx of foreign funds under the gold standard, offset by sales of gold to the Bank of England. Under the *ancien régime*, an influx of, say, £2,000,000 would have had the following repercussions:—

<i>Bank of England:</i>	
Gold	+ £2,000,000
Note circulation	Unchanged
Reserve	+ £2,000,000
Bankers' deposits	+ £2,000,000
<i>Joint-stock Banks:</i>	
Deposits	+ £2,000,000
Cash	+ £2,000,000

The increase in the joint-stock banks' deposits represents the influx of foreign funds. The increases in their cash and in bankers' deposits at the Bank of England are due to the fact that the Bank of England must pay for the gold it buys.

To-day, however, the gold is initially bought by the Exchange Equalisation Account and not by the Bank of England. Now suppose that £2,000,000 of foreign money comes into the country, of which £1,000,000 goes into deposits at the joint-stock banks, and £1,000,000 into British currency; and that the Exchange Account buys £2,000,000 of gold. The following changes will then occur:—

<i>Bank of England:</i>	
Gold	Unchanged
Note circulation	+ £1,000,000
Reserve	- £1,000,000
Bankers' deposits	- £1,000,000
<i>Exchange Equalisation Account:</i>	
Gold	+ £2,000,000
Treasury bills	- £2,000,000
<i>Joint-stock Banks:</i>	
Deposits	+ £1,000,000
Cash	- £1,000,000
Short loans	
Discounts	+ £2,000,000

The declines in the Bank's Reserve, in bankers' deposits and in joint-stock bank cash arise on the supposition that the owners of foreign funds, having transferred £2,000,000 to deposit at the joint-stock banks, proceed to draw out £1,000,000 in British currency.

Reference to the initial table in this article will show that, so far as the Bank of England is concerned, movements in these directions actually occurred up to June 10th. Between April and May, clearing bank deposits rose by £32 millions, while the banks' cash fell by £7 millions, and their short loans and discounts rose by £39 millions. So far, therefore, the sequence of events followed the lines already suggested. At this point the contrast between the effects of gold purchases by the Bank under the gold standard and by the Exchange Equalisation Account under the present regime assumes particular importance.

When the Bank bought gold under the gold standard, both the Bank's ratio of Reserve to deposits, and the joint-stock banks' ratio of cash to deposits were increased, and easier credit conditions were consequently created. When the Exchange Account buys gold, however—especially when foreign funds are hoarded in British currency—both the Bank's "proportion" and the joint-stock banks' cash ratios contract, and more stringent conditions follow. Our initial table shows that, in fact, discount rates hardened perceptibly between April 29th and June 10th.

It is now possible to indicate the remedy for the stringency. For every £1 of British currency hoarded by foreigners, the Bank, and not the Exchange Equalisation Account, should buy £1 of gold. If foreign funds go, not into currency, but into deposits at the joint-stock banks, the Bank should buy £1 of gold for every £10 so deposited, leaving the remaining £9 to the Exchange Account. This will enable the banks to maintain their 10 per cent. cash ratio.

This gives us the key to events in the period which began on June 10th, during which the Bank has greatly accelerated its gold purchases. Most of these have been made from the Exchange Equalisation Account, which has received, not the market price of, say, 138s.-139s., but the Bank's statutory buying price of 84s. 10d. per fine ounce. This, however, is a matter of detail, which does not affect the main argument. The crucial fact is that, at its own valuation, the Bank has bought £40 millions of gold since June 10th.

To illustrate the consequences, let us assume that the Bank buys £1,000,000 of gold from the Exchange Equalisation Account. The Exchange Account promptly uses the cash it receives to take up an additional £1,000,000 of Treasury bills, and the amount of bills included in "tender" offerings to the market is similarly reduced below what it would otherwise have been. But the cash disbursements of the Government, against either Treasury bill maturities and/or any excess of expenditure over revenue, are unaffected. Therefore, the banks and the discount market obtain £1,000,000 in cash which they would not have received otherwise; and this appears in bankers' deposits at the Bank of England. The sequence of events may be set out thus:—

	(1)	(2)
<i>Bank of England:</i>		
Gold	+ £1,000,000	+ £1,000,000
Note circulation	Unchanged	+ £500,000
Reserve	+ £1,000,000(a)	+ £500,000
Bankers' deposits	+ £1,000,000(a)	+ £500,000
<i>Exchange Equalisation Account:</i>		
Gold	- £1,600,000	- £1,600,000
Treasury bills	+ £1,000,000	+ £1,000,000
Net loss on gold sale to Bank...	£600,000	£600,000
<i>Joint-stock Banks:</i>		
Deposits	Unchanged	+ £1,500,000
Cash	+ £1,000,000(a)	+ £500,000
Short loans		
Discounts	- £1,000,000	+ £1,000,000

The column headed (1) ignores, while the column headed (2) allows for, certain secondary changes. For the reason already mentioned, the Exchange Account has a loss on its gold sale to the Bank. If (as has occurred recently) the note circulation continues to expand, there is a consequent and equivalent reduction in the expansion of the items marked (a) and also in joint-stock bank deposits. If, simultaneously, Government expenditure adds to the

total issue of Treasury bills, there is an increase in joint-stock bank deposits, and a smaller reduction in their short loans and discounts. In column (2) we have assumed a £500,000 expansion in the note circulation and a £2,000,000 increase in the floating debt, due to Government expenditure. This column, in fact, takes in all the changes which have occurred since June 10th. To-day, the Bank of England's Reserve has been restored to its April level. Bankers' deposits are higher than in June, and discount rates have fallen back to their April level. As an indirect consequence there have been heavy gold imports from France, amounting since June 10th to £30.4 millions. The inference is that while the Exchange Equalisation Account is prepared to hold gold in Paris under its earmark, the Bank prefers to hold its gold in its own vaults. As this gold is the backing to the note issue, this preference is very reasonable.

By its gold purchases the Bank has achieved two objectives. It has put an end to the tighter conditions which threatened to develop as the result of French hoarding of British currency; and it has relieved the Exchange Account of some of its gold and, to that extent, increased its ability to give future support to the franc without going beyond the statutory limit of its resources. The danger of this new technique is that if it is carried too far, a big repatriation of French funds may force the Bank to sell gold to the Exchange Account to enable the latter to support sterling against this repatriation. This danger is probably remote, as the Exchange Account should still have ample gold reserves of its own in hand. Within this limit, therefore, this new technique has everything to commend it. In fact it indicates a possible line of monetary practice which we could conceivably continue to follow even after a possible return to gold.

FINANCIAL NOTES

An American-German Imbroglio.—A very pretty dispute has developed between the United States and Germany as a result of the German system of granting direct subsidies to exports and fostering them indirectly by the use of compensation or "Aski" marks. For some years now a direct levy has been imposed upon Germany industry for the purpose of subsidising the export trades, while German imports and exports are carefully regulated to ensure the maintenance of a small export surplus. In addition, trade between Germany and many other countries is conducted on the basis of compensation agreements. These are a form of exchange clearing or barter, and the principle is that all payments for German imports are made in marks into special "Aski" accounts, which are subsequently drawn upon to reimburse German exporters, a parallel arrangement being made in the foreign country. The rate of exchange at which all these transactions take place is fixed arbitrarily at a rate much below the official rate of exchange, so that the German exporter obtains a valuable indirect subsidy. This arrangement has lately fallen foul of the American anti-dumping legislation, and the United States Government have not only imposed countervailing duties ranging from 22½ to 56 per cent., but are also requiring German exporters, under pain of forfeiture of the goods, to disclose the amount of direct and indirect subsidies received by them in respect of each shipment. This has placed the German exporter in an impossible position, for such disclosure constitutes a serious offence under German law. The German authorities have now countered by issuing a decree prohibiting all trade between the two countries on a compensation basis. This will limit German imports from the United States to such a volume as can be financed out of Germany's supplies of foreign exchange, and in practice will reduce them almost to zero. American exporters of raw materials will thus suffer the almost complete loss of the German market, which will be a serious matter for them. And Germany will lose a profitable source of supplies. A cynic might well observe, "Oh! what a tangled web we weave when freedom's path in trade we leave."

The Foreign Exchanges.—Business has been restricted by the holidays, but the franc has developed fresh weakness. Spot francs have depreciated to Frs. 76½, and three months' francs have widened to Frs. 3½ discount. Once or twice the British Control has bought some few francs. The weakness is ascribed partly to the difficult position of the French Treasury and partly to the reactions of the Spanish revolt, but the main cause is a statement made by the Governor of the Banque de France in an interview at Amsterdam that general stabilisation would permit of an "alignment" of exchange rates. This is interpreted as a hint at devaluation, and it is also believed that the French Government will before long have to ask the country to choose between the gold franc and the Government's reform programme. The renewal of the French sterling credit for a further three months occasioned little surprise. M. Vincent Auriol has stated that subscriptions to the new bond issue exceed Frs. 2,300 millions, and that they are coming in at the rate of 100 to 150 million francs a day. He agreed, however, that the Government had still to find Frs. 17,000 millions by the end of the year. The French Bank return for July 31st shows no reduction in total Government borrowing during the preceding week, but merely a transfer from rediscounts to provisional advances, so that that week's bond subscriptions must have been used in other ways. The London market has practically suspended all dealings in spot and forward pesetas. Communications with Spanish banks are now very uncertain, and so, apart from the moratorium, it is impossible to guarantee delivery.

The Money Market.—Conditions have been very comfortable, but it is reported that outside lenders have less ½ per cent. money available for loans against bonds. The market has borrowed moderate amounts of ½ per cent. money from the clearing banks. There was a good demand at ½ per cent. for September and October Treasury bills.

	July 16, 1936	July 23, 1936	July 30, 1936	Aug. 6, 1936
Bank rate.....	2	2	2	2
Clearing banks' deposit rate ..	1	1	1	1
Short loan rate:—				
Clearing banks	1-1*	1-1*	1-1*	1-1*
Others	1	1	1	1
Discount rates:—				
Treasury bills	1	1	1	1
Three months' bank bills ..	1-1	1-1	1-1	1-1

* Loans against Treasury bills and other approved bills and British Government securities within six months of maturity; 1 per cent. Treasury Bonds and other gilt-edged stocks within six months of maturity; and other collateral, respectively.

Last Friday's Treasury bill tender issue was only £45 millions, against maturities of the same amount, and the same position will arise on August 7th, so that for a fortnight the total tender issue is remaining at £630 millions.

The Bank Return.—Holiday currency demands have outstripped the week's gold purchases by the Bank, so that the Reserve has fallen by £2.8 millions.

The heavy Treasury bill activities of last Saturday have restored both public and bankers' deposits to more normal proportions. Government securities, which lately had been running high, have also been reduced by £6.5 millions, and are now back to where they stood at the end of April.

THE STOCK EXCHANGE

NEWSPAPER FINANCE

NEWSPAPER shares have been a group apart during recent months, when ordinary shares in general have been rising and average yields of under 4 per cent. have become widespread. Certain newspaper equities have recorded some improvement in prices, but the general investor has shown no disposition unduly to discount recovery—or perhaps even stability—in newspaper finance. Even the best shares still yield 4½ per cent., and the majority offer over 5 per cent.

Basically, newspaper economics are simple enough. Production costs—paper, wages and fixed charges—are usually slow to change. On the revenue side, the growth in circulations during recent years has been accorded proud publicity. Advertising revenue—which provides newspaper profits—follows the course of the business cycle. Sufficient information is obtainable under all these heads to suggest, ostensibly, good earnings prospects.

Advertising revenue, for example, is in the flush of recovery. We are indebted to the management of the London Press Exchange, Ltd., for an estimate of the value of Press advertising during the last three years. The figures, which are based on a sample of 150 publications, probably cover some 80 per cent. of the total expenditure on display advertising for branded goods, but they exclude classified and financial advertising. During 1935 the computed value of this category of Press revenue rose by no less than 10.7 per cent., amounting to £17,464,000, compared with £15,778,000 for 1934 and £14,754,000 for 1933. The distribution of the total among various groups of publications is given in the following table:—

Newspaper Group	Computed Value of Advertising			Percentage of Total			Increase 1935 on 1934
	1933	1934	1935	1933	1934	1935	
National Morning	£'000's 5,317	£'000's 5,789	£'000's 6,364	36.0	36.7	36.5	9.9
Sunday	1,950	2,169	2,505	13.2	13.7	14.3	15.5
Weekly Journals...	1,722	1,931	2,290	11.7	12.3	13.1	18.6
Provincial Evening	2,109	2,078	2,178	14.3	13.1	12.6	4.7
Provincial Morning	1,088	1,097	1,208	7.2	6.9	6.9	9.9
London Evening...	1,027	1,035	1,168	7.0	6.6	6.7	12.7
Illustrated Morning	997	1,054	1,074	6.8	6.7	6.1	1.9
Monthly Magazines	568	625	683	3.8	4.0	3.9	9.3
Total	14,754	15,778	17,464	100.0	100.0	100.0	10.7

These figures give an accurate impression of trend in branded goods advertising. They represent, of course, only a proportion of total display revenue which, for the "national morning" group alone, increased from £9,080,000 in 1934 to £9,450,000 last year. There is no sign, as yet, of a setback. The large advertisers—spending more than £50,000 per annum—accounted for £5,659,000 in 1935, compared with £4,833,000 in 1934; the leading trade groups, headed by the ubiquitous medicine and toilet section, and followed by food and drink, building material and household equipment, and motoring and travel groups, have remained faithful and remunerative patrons of the Press.

For the investor, the significant feature is to be found in the increased revenue of the "national morning," "Sunday," "weekly journals," "provincial morning," and "London evening" groups, for here lie the investor's main interests, directly or indirectly. It would, doubtless, be unwise to expect all journals to show the same degree of improvement. It is conceivable, indeed, that some of the largest percentage increases have recently been secured by journals which remain in private ownership, while other favourite advertising media, whose circulations reveal a comparatively small rate of expansion in recent years, tend to show a corresponding stability in advertising revenue.

On the costs side, the price of newsprint, which has been as high as £16 5s. per ton in the last decade, has recently remained almost unchanged at £10, and there is

no reason to anticipate any imminent change in this figure. The New York price of Canadian newsprint, however, has been increased to \$41 per ton, compared with \$40 for 1935. As the Canadian mills operated at about 78 per cent. of effective capacity for the first six months of 1936, the possibility of an increase in the 1937 prices is being discussed. In some quarters it is claimed that, when weak selling has been eliminated, a "fair" price of \$47 per ton may be attained. In that event, large British buyers of Canadian supplies may have to face a rise in their costs. Meanwhile, the competitive balance of the British newsprint industry has been altered considerably by the recent Bowater-Lloyd merger. Publishers, however, usually cover their requirements for a considerable period ahead, and if newsprint became dearer the effect on newspaper profits would probably be gradual. On a long view, however, investors can neither leave its consequences entirely out of consideration nor assume the projection into the indefinite future of the rate of increase in advertising.

There is, however, one source of uncertainty which affects, not the distant but the immediate future. The glorious achievement of increased circulation is costly for shareholders. The treaty governing "free gift" offers has been interpreted with a liberal ingenuity which has gone far to frustrate its intention, though, following the best modern precedent, there has been no formal declaration of war. It is possible only to guess at the annual expenditure on "new reader" offers, but between one and two million pounds must be involved. All the "million circulation" dailies and several Sunday papers are continually canvassing with eight-week offers to new subscribers, the great majority of whom are not permanently retained, but are attracted, lost, and re-attracted solely by inducements which are "free gifts" in all but name. The "marginal" reader, who buys a paper during the qualification period only, may cost the publishers as much as £1 per annum. Circulations as a whole have tended to increase, but the main result of heavy canvassing is to change round—but not to increase—sales.

The reason for this largely unproductive competitive expenditure is, of course, that a good half-year's certificate may persuade advertisers to allocate more space to a given paper—for a given time. But the really impressive fruits of rising circulation—an all-round increase in advertising space-rates—are slow to mature and costly to acquire. To obtain, and keep, an increase of a quarter of a million new readers may, in the end, cost as much as the increased revenue which can be extracted from advertisers. There are, also, other methods of possible competition, some of which are connected with expensive technical developments. Odhams Press, for example, are developing a high-speed rotary gravure process which may, eventually, lead to a "penny plain, tuppence coloured" press. Coloured supplements—now a popular feature of the week-end Press in the United States—may, indeed, be nearer at hand.

These indications of rising expenditure suggest that investors may be wise in viewing all newspaper shares cautiously. There is still, however, scope for discrimination for the investor who can keep in close touch with developments. One of the best recoveries—and one of the lowest ordinary share yields—is shown by Allied Newspapers, which, together with the separate Daily Sketch and Sunday Graphic subsidiary, controls the "Camrose" group of publications, other than the *Daily Telegraph*. A strong financial position has been strengthened by the sale of the Edward Lloyd Investment holding. Even at the present high rate of disclosed earnings, nevertheless, copyrights and goodwill appear in the balance sheet at a seven years' purchase valuation. But no newspaper group is free from financial complexity. Allied Newspapers, for

example, guarantees the 4½ per cent. debentures of Daily Sketch and Sunday Graphic, and is providing resources for the development of these publications. Again, the Associated Newspapers group consists primarily of four concerns, with complex joint interests in newsprint companies in Canada and Newfoundland, and a number of provincial papers acquired during the expensive "war" a few years ago. Inter-group financial operations—such as the advance from Daily Mirror Newspapers to Sunday Pictorial for the purchase of debentures of Anglo-Canadian Pulp and Paper (itself an associated concern) and the finance of Associated Newspapers' newsprint supplies from Anglo-Newfoundland Development—strengthen the need for consolidated accounts.

Similar comments apply to the Odhams Press group. Only the vaguest impression is available regarding the true profitability of the Daily Herald (1929), Ltd., owing to the capitalisation of "development" expenditure in earlier years. This publication is understood to have been earning profits for some time, but its contribution to the parent company's income has not been divulged. The Odhams group has followed the fashion for extension by way of subsidiary companies (against which the parent company made £55,000 reserve last year); such interests now total £2,351,000, compared with £1,942,000 two years ago. The group, too, has maintained a high gearing in its combined capital structure. In 1929 the proportion of fixed interest to equity capital of the parent company was 3.3:1. Since that time the parent company's expansion and the formation of Odhams Properties and Odhams (Watford) have merely reduced the relation to 3.2:1. From the earnings aspect, the gearing is even higher, for the Odhams Properties' rent and royalty income of £130,000 (now to be increased) in effect ranks ahead of Odhams Press debentures, while the £450,000 5½ per cent. preference capital of Odhams (Watford) is guaranteed by the parent concern.

Such involved financial structures, in the present competitive situation, appear to justify the high equity share yields shown in the following table:—

Company (and Denomination of Equity Share)	Date of Accounts	Earned (%)			Paid (%)			Pre-sent Price	Yield (%)
		1933-4	1934-5	1935-6	1933-4	1934-5	1935-6		
Allied News. (11)	End Dec.	11.9	17.1	20.6	5	7	8	33/10½	4 14 6
Assoc. News (5s.)	Mar. 31	28.8	32.3	31.0	20	26½	26½	23/-	5 16 0
D. Mail and Gen. Trust (11)	Sept. 30	8.9	8.6	10.7	10½	11½	11½	52/1½	4 6 3½
Sunday Pictorial (11)	Feb. 28	16.7	16.9	17.5	12½	12½	12½	42/3	5 18 6
Daily Mirror (5s.)	Feb. 28	17.2	17.6	17.9	15	15*	15*	22/3	5 12 3
London Express (11)	June 30	10.7	10.1	...	10	10	...	45/-	4 9 0
Odhams Press (4s.)	Dec. 31	37.3	33.4	30.4	15	15	15	10/9	5 11 6
Odhams Properties (11)	Mar. 31	13.0	15.1	18.3	10	11½	12	42/6	5 13 0
United News (7½ per cent. £1 pref.)	Dec. 31	1.2	2.1	2.6	None paid since 1929	18/-	Nil	Nil	Nil

† Tax free. * In addition, 7½ per cent. in 1935 and 10 per cent. in 1936 paid tax free from realised investment profits. 10 per cent. payments expected for next 10 years, and yield calculated on 25 per cent. basis.

A range of equity yields between £4 9s. per cent. and £5 16s. per cent. shows that due discrimination has been exercised. It is significant that the highest yields have been accorded to those shares which, for reasons of interlocked group finance, are most difficult to value. Allied Newspapers £1 shares have attracted attention from speculative investors, who are expecting a continuation of recent progress. Together with London Express Newspaper, whose 10 per cent. dividend has been regularly paid during the past eight years—although recently with a very modest margin—this group has one of the simplest capital structures in a complex industry. Gross yields of 5½ per cent. or more for the Associated Newspaper group equities and of a few shillings less in the Odhams group attest the investor's caution where the financial structure is more complex. The above table shows that certain earnings and dividends have increased, but there is no evidence of spectacular recovery possibilities. The group newspaper has always been a medium for the specialist investor, but even he must be prepared constantly to review his position. And for the long-term investor newspaper competition writes its own message on the wall.

INVESTMENT NOTES

Depression in Paris.—The French and American "New Deals" have many economic ideals in common. But while the first six months of the American experiment provoked an upward burst of security prices on Wall Street, M. Blum has succeeded only in frightening the Paris Bourse. The French business man sees himself ground between the upper and nether millstones of rising costs and controlled prices. The domestic industries fear not only for their individual position, but for the permanence of the present economic system. The export industries find their competitive power steadily weakened as costs rise, but the franc remains fixed. The Treasury position has not been improved, and the public has made a far from encouraging response to the "Baby Bond" issue. Bank rate may be down to 3 per cent., but the yield on Government securities remains stubbornly high, and on recent Treasury bond issues ranges up to 9 per cent. M. Auriol threatens to print new money if the public does not lend, and the Government's proposal to make cheap borrowing available to retailers whose desire for higher retail prices is being condemned as immoral does not cancel out the New Deal's determination to raise costs. Of all these real and imagined dangers the prices of securities on the Paris Bourse are a sensitive indicator. The Popular Front Government was elected in May, and took office in June; in July the official index of 300 French stocks (1913 = 100) touched an eight-year low point of 142. In March it had been at 202, compared with 221 at the beginning of 1932 and 548 early in 1929. Movements of prices for a few selected securities are tabulated below.

Stock	Quotations					
	July 31, 1935	Dec. 31, 1936	May 27, 1936	June 29, 1936	July 29, 1936	Aug. 5, 1936
Banque de France ...	9,950	9,550	5,800	5,840	5,625	5,500

Rentes 3% Perpetual	78.75	73.35	68.10	69.65	65.90	65.70
4½ 1932 "A" ...	86.85	83.30	72.40	74.25	68.85	68.65

The drop in prominent industrials in the last few months ranges from 40 to 60 per cent. Banque de France shares have fallen by over 40 per cent. during the past year, though the greater part of this loss of ground occurred before M. Blum's Government took office. Suez Canal shares, a "refugee" stock, stood at the end of July at their highest level for the past twelve months. Last year the decision was taken to stabilise rates on sterling. A revival of confidence on the Bourse cannot be anticipated until M. Blum has shown who is to be master—he or the fixed franc.

Home Railway News.—In a market which has generally been somewhat under holiday and political weather, home railway stocks have been distinguished, this week, by moderately cheerful activity. Railway stockholders, who must normally base their estimates on the bare modicum of information provided by the weekly gross traffic returns, have been treated within the last nine days to a gargantuan feast of crucial facts and figures. First, the four main line companies have disclosed their position at the end of the first half of 1936. Except in the case of the L.M.S., the results have frankly disappointed the market. Of a moderate increase in gross receipts, some 58 per cent. was absorbed by increased expenditure on the L.M.S., 98½ per cent. on the L.N.E., 88 per cent. on the Great Western and 96 per cent. on the Southern. In view of this obduracy of costs, the second announcement of the series was the more welcome—that agreed settlements had been reached with representative local authorities on the question of rating. These (which we discussed in last week's *Economist*, page 227), promised total "savings" of £2,670,000 this year and nearly £3,000,000 next year. The

third announcement was the award of the Wage Tribunal, which is discussed on page 262 of this issue. In fact, it appears to give railway workers only a little more than the railways had already offered them. Its total cost of £600,000 for this year and about £1,500,000 in a full year absorbs only about one-half of what the railways will save by reduced rating. But the Tribunal's lucid and closely reasoned finding has a couple of stings in its tail. It includes what is almost an invitation to the men to re-open the wages question next year. It implies that, in judging what is a fair and equitable distribution of the earnings of recovery between workers and stockholders, the depressed junior stockholder is not entitled to special consideration merely because he may happen to be dividend-less. The fourth event of the week has been the publication of excellent pre-Bank Holiday week traffic takings, which show a gain of £239,000 over 1935, and raise the aggregate gain for the five weeks of the second half of 1936 to £844,000. In the past, a good pre-Bank Holiday week return has frequently been offset by mediocre figures in the succeeding week. There is no doubt, however, that the railways, at the moment, are feeling the favourable effects of trade activity and increased purchasing power. Further impressive gains may be recorded in subsequent weeks. In view of the rising trend of expenditure, however, it seems doubtful whether—allowing for all the factors mentioned above—the maintenance of the present favourable movement in receipts will leave L.M.S. ordinary, at the year end, covered by more than 1 to 1½ per cent., or Great Western ordinary by much more than 2 per cent. L.N.E. first preference may now, probably, be regarded as fully covered by earnings, but the second preference has hardly yet begun to come into the picture. Southern deferred, similarly, stands, as yet, only on the fringe of earnings.

American Dividends and Taxation.—Wall Street is now comparing its bullish estimates with earnings and dividend statements which, during recent weeks, have included Chrysler, General Motors, Consolidated Edison and U.S. Steel. A substantial increase in second-quarter earnings compared with 1935 is reported in each case, although the market seemed rather disappointed with the \$1 dividend for the quarter on the U.S. Steel 7 per cent. preferred. Since 1933 only 50c. has been paid each quarter, and an increase to the full rate had been hoped for. The company's conservative distribution, however, seems justified, for of the \$171,000,000 taken from surplus since October, 1931, some \$55,000,000 has been distributed in unearned dividends. Consolidated Edison reported an increase in second-quarter earnings from 48c. per common share in 1935 to 54c. this year, and has raised the quarterly dividend from 25c. to 50c. General Motors earned \$2.00 per share for the second quarter compared with \$1.16 a year ago, while Chrysler has declared a common dividend of \$4 compared with \$1.50 for the first quarter of 1936, and \$1.00 for the last quarter of 1935. The new taxation law appears to have influenced the Chrysler distribution. Corporations are now required to pay a normal tax ranging from 8 per cent. on "net income" (after dividend payments) not exceeding \$2,000 per annum, to 15 per cent. upon "net income" in excess of \$40,000 per annum. In addition, a surtax is levied on undistributed profits, ranging from 7 per cent. on the first 10 per cent. of such profits to 27 per cent. on the last 40 per cent. To avoid discrimination against small companies, special concessions are made where undistributed profits are less than \$50,000. The system of taxation for foreign corporations does not involve the taxation of undistributed profits. Non-resident foreign corporations not doing business in the United States are required to pay 15 per cent. of their income from American sources, except dividends, upon which 10 per cent. will be payable. Resident foreign corporations, doing business in America, are to pay a normal tax of 22 per cent., instead of the sliding scale of taxes provided for domestic corporations. Taxes due from non-resident foreign corporations will be deducted at source. Non-resident foreigners are entitled to a personal exemption

of \$1,000, but this exemption is obtainable only by filing a return. They will no longer be theoretically liable, as they were in the past, for taxation on capital profits. This new system of taxation, whatever its merits or demerits, may play a large rôle in encouraging corporations to distribute a larger part of their earnings. The main reason for Wall Street's present confidence is undoubtedly the rapid growth of earnings and the spread of recovery to the capital goods industries.

New Issues in July.—The high rate of activity in the new issue market, which lasted until the close of business before the Bank Holiday, is clearly shown in our usual calculations of new capital. On the revised basis adopted in January last, the total new money raised is computed at £42,292,000, compared with £22,789,000 in June and £63,038,000 in July, 1935. Comparative figures on the old and new bases are given below:—

(000's omitted) Excluding Conversions					
Monthly average (Old Basis)	United Kingdom	British Possessions	Foreign Countries	Total	
1932	£ 13,589	£ 2,129	£ 24	£ 15,742	
1933	17,520	2,429	449	20,398	
1934	11,474	2,494	125	14,093	
1935	18,388	1,270	21	19,679

June, 1935	<i>Dr. 150</i>	25,566	669	Nil	26,085
June, 1936	<i>Dr. 150</i>	20,752	2,019	168	22,789
July, 1935	<i>Dr. 150</i>	59,659	3,273	256	63,038
July, 1936	<i>Dr. 300</i>	35,691	6,763	138	42,292

For comparison over the past twelve months, it must be recalled that the £32 millions London Electric Finance issue was made in July, 1935. Although some prospectuses from engineering companies required careful examination, the market has recently proved itself responsive, and the resumption of corporation borrowing enjoyed a good reception. A renewal of active conditions seems probable after the August break.

Foreign Bond Movements.—The index number of foreign bond prices, compiled by Municipal and General Securities Company, Ltd., shows a rise from 99.1 at the end of June to 99.8 at the end of July (average January-June, 1934 = 100). The May level is thus restored. Movements of the component group indices (whose construction was outlined in the *Economist* of July 4th, pages 20-21) are shown below:—

Index	No. of Bonds	Average Jan.-June, 1934 = 100			
		July, 1935	May, 1936	June, 1936	July, 1936
Europe	32	98.5	96.1	96.3	94.7
Near and Far East	31	99.7	106.5	104.4	110.6
Egypt	4	102.2	99.2	99.4	100.9
South and Cent. America:					
State	36	85.9	101.3	100.2	99.1
Provincial Govt.	11	79.0	88.6	89.2	89.2
Total	47	84.2	98.1	97.5	96.7
Complete Index	114	92.7	99.8	99.1	99.8
Undeclared	60	103.4†	104.3	102.8	104.4
Defaulted	54	81.7†	95.0	95.1	95.0

† 63 Bonds.

‡ 51 Bonds.

The weakness of Danzig and Roumanian bonds has produced a fall of 1.6 points in the European group. Again, speculative Brazilian and Chilean bonds have been marked down during the month, thus affecting the South American State index. The most spectacular movement, however, is a recovery of over 6 points in the Near and Far East group, owing primarily to the appreciable improvement in Chinese issues and to a slight rise in Japanese bonds.

Actuaries' Investment Index.—A week of small irregular changes in various sections of the market has left the Actuaries' Investment Index of 178 industrial equities almost unchanged at 85.1, compared with 85.0 a week ago and 83.0 a month ago (December 31, 1928 = 100). The yield this week works out at 3.69 per cent., against 3.70 per cent. last week and 3.78 per cent. a month ago. Movements in various sections of the market are tabulated below:—

Group (and No. of Securities)	Prices (Dec. 31, 1928 = 100)			Yield (%)		
	Month ago July 7	Week ago July 28	This week Aug. 4	Month ago July 7	Week ago July 28	This week Aug. 4
Building materials (5) ...	101.5	102.7	102.2	4.75	4.72	4.76
Cotton (6)	36.3	41.5	39.8	2.24	2.17	2.17
Gas (7)	131.7	131.4	132.2	4.48	4.49	4.46
Iron and steel (12)	72.3	79.4	79.8	4.08	3.75	3.74
Home rails (4)	66.1	69.5	73.3	1.62	1.54	1.53
Stores and catering (20) ..	87.1	85.1	84.9	3.60	3.68	3.67
Breweries & distilleries (21)	146.0	148.5	149.2	3.99	3.95	3.93

The outstanding feature of the week is the sharp rise in the railways group, under the influence of the rating assessment, the proposed wages agreements and good traffics. The cotton group has slipped back after a three weeks' rise, and Stores and Catering shares are fractionally lower.

COMPANY NOTES

Agricultural Feeding Stuff Companies.—The makers of agricultural feeding stuffs rely almost entirely on the home market for their sales, exports of their products being very much smaller than the imports which this country makes to supplement its domestic output. The trade has thus been able to benefit from the steadily expanding trend in the cattle population of the United Kingdom and Northern Ireland, which rose from 7,764,000 head in 1922 to 8,659,000 in 1935, the 1934 figure having been somewhat higher at 8,742,000. In addition to this extensive growth of the market, some intensive growth may be expected from the measures now being taken to increase the consumption of liquid milk, since the feeding of special foods to dairy cows is generally considered to show a profit. There is also a tendency for special diet foods to increase sales. Cattle foods are produced only in part by the cattle food trade proper, a large proportion of seed-cake coming from the oil-crushing trade as a by-product and other foods as a by-product of the flour millers and beet-sugar factories. The seed-cake is used partly as a raw material for the production of more specialised cattle foods, but is also itself used for cattle food without further preparation.

In such a trade the cost of the raw material represents a fairly high proportion of total costs, since for ordinary seed-cake the manufacturing process is not expensive. The

trade is therefore dependent for its profits on maintaining a margin between a raw material subject to considerable market fluctuations and a finished product in which prices, though allowing for fluctuation, are less flexible than those of the raw material. The present position is that the prices of oilseeds and imported cake are tending to rise and are in all cases above the level of last year. British-made linseed cake has been increased in price three times in the last quarter, but is not substantially above the prices ruling in the middle of last year. It would appear possible, therefore, that margins are, temporarily at least, narrowed. On the other hand, the virtual certainty that the current hay crop will be of poor quality should make for improved demand for cattle feedstuffs later in the year. The accompanying table of profits demonstrates the wide fluctuations to which the earnings of the trade are subject, and suggests that the shares are not suited to the general investor. Too much depends on price movements in somewhat obscure markets and on such intangibles as prudent buying policy, or the reverse.

Guinness and Watney.—The market has mollified its slight disappointment on the mere maintenance of the Guinness dividend and earnings by seeking consolation in an impressive Watney Combe Reid report. The former concern reports a total income, including dividends and other receipts, of £2,180,047—an increase of no more than £7,000. This result was received coolly by those hopeful operators who had, apparently, expected Park Royal to yield its full fruits immediately. Although this level of earnings is, in itself, a sound achievement, the static nature of profits has deflected the market's attention to the considerable balance-sheet changes. The Watney Combe Reid results, on the other hand, reveal a recovery which is up to the best expectations. Total profits have increased from £2,446,645 to £2,531,011, while equity earnings represent 29.1 per cent., against 32.1 per cent. for the previous year. The increased 18 per cent. dividend is thus covered by the customary handsome margin. A comparative analysis of the latest accounts of each company follows:—

	Arthur Guinness Son		Watney Combe Reid	
	1935	1936	1935	1936

† Deferred ordinary for Watney Combe Reid.

If the Guinness revenue account lacks some of its usual lustre, the balance sheet makes handsome atonement. Premises and plant are nearly £1,400,000 higher at £8,712,799, before deducting the depreciation reserve of £1,601,090. Cash resources, by contrast, have been reduced from £2,215,000 to £1,082,000, and amounts due from subsidiaries (which showed a sudden increase last year) are considerably lower. Both in liquid assets and in presumptive inner reserves—creditors and provisions for taxation and contingencies appear at £2,693,580—the Guinness balance sheet rivals that of any industrial concern. The ordinary stock units are quoted at 154s. 6d. to yield £3 17s. per cent., while Watney Combe Reid deferred ordinary stock stands at 85s. 3d., yielding £4 7s. per cent. Are these valuations reasonable?

—And the Brewery Share Outlook.—Investors may well feel confident that the new Guinness undertaking is destined, in time, to produce important economies, both in transport and internal costs. At present, however, the plant is still operating experimentally, and stockholders,

while rightly remaining confident, must still exert their patience. Guinness stock ranks among the soundest long-term equities in the industry. Other brewery concerns—following Watney Combe Reid's example—may, however, produce better recoveries during the current year. The argument has been advanced in the *Economist* that the secular decline in the consumption of beer might, eventually, lead to a greater stability of profits than has been experienced in the past. There is, however, reason to suppose that the improvement of the past two years will be maintained during the next twelve months. Recovery—particularly in the heavy industries—has already produced a rise in beer consumption and will almost certainly encourage a further increase in coming months. Admittedly, the dry summers of 1934-35 have not been repeated this year, and there is the possibility of a check in the July brewing return. But recovery factors will probably produce a satisfactory rise in the year's output. Again, between 1924 and 1935 the number of breweries brewing was reduced from 2,148 to 1,144—a fall which greatly exceeds the drop in consumption. This combination of increasing efficiency in brewing and distribution and rising purchasing power suggests that the profits outlook for the current year is reasonably bright. This is likely to apply particularly in the large steel and engineering centres, and a policy of regional selection may well be advantageous.

Associated British Picture Progress.—Shareholders in this concern were already prepared for a good report, for last February's debenture stock prospectus envisaged an increase of "not less than £200,000" in profits for the year to March last, while the raising of the total dividend to 12½ per cent. was announced earlier this week. The report now published is distinctly impressive. Total profits have increased from £656,725 to £926,483 (figures which in turn compare with £573,198 for 1933-34), while the amount earned for the ordinary shares is more than doubled at £396,851. Increased provision is made for depreciation, and debenture interest and preference dividends have cost more owing to new issues made during the year. Investors may conclude that the past year's progress, which is analysed in the following table, is due in large measure to the exhibiting and renting departments:—

	Years to March 31st,		
	1934	1935††	1936
Profit and dividend receipts	156,967	656,725†	926,483
Taxation and fees	25,534	93,398	71,405
Depreciation	...	125,000	150,000
Mortgage and debenture interest ..	...	192,573	215,227
Preference dividend	48,456	65,827	93,000
Ordinary shares:—			
Earned	82,977	179,927	396,851
Paid	72,075	120,125	148,703
Earned (%)	6.9	15.0	33.4
Paid (%)	6	10	12½
General reserve	Nil	162,806	200,000
Carried forward	36,787	83,481†	91,998*

* After writing off £39,631 new issue expenses. † Compares with £573,198 in previous year. †† After crediting £149,698 undistributed profits of Associated British Cinemas. †† Figures for 1934-35 include revenue of Associated British Cinemas.

The consolidated balance sheet shows an increase in buildings and plant from £6,870,653 to £7,945,227, and a comparable increase is recorded in the company's balance sheet. This advance represents the acquisition of further cinemas during the past year. As a result, the group now controls 283 cinemas, and further additions are now being completed. Although the board has treated the current year's profits conservatively, investors will note that the general reserve of £1,200,000 compares with an ordinary capital of £1,550,000. The group's finance has been well devised, its current position has improved, and it should experience favourable conditions over the next twelve months. A quotation of 12s. for the 5s. shares (yielding £5 9s. per cent.) appears a reasonable valuation for a progressive share in a speculative industry.

REDUCE PRODUCTION COSTS

—USE ELECTRICAL POWER FOR ALL INDUSTRIAL PURPOSES—

NORTH-EASTERN ELECTRIC SUPPLY Co. Ltd.

Carlisle House, NEWCASTLE-UPON-TYNE

Apply to above address for particulars of Sites for Works

Tootal Broadhurst Lee.—Many Lancashire concerns might draw an instructive lesson from the latest results of this company. By concentrating its attention on the home market, producing special fabrics and branded goods, and developing an efficient sales organisation, the company has not merely avoided the wrath to come, but, on a modest recovery in textile trade conditions, has achieved the highest profits for many years. In 1930-31, total earnings were no higher than £36,616; the latest reports shows a total of £217,696. Ordinary share earnings have increased from £84,682 to £119,516 during the past year, and the ordinary dividend of 10 per cent., paid for the fourth year in succession, is covered with a surplus of 8.4 per cent. The recent profits trend is apparent from the following table:—

	Years to June 30th		
	1934	1935	1936
Total profit	136,647	168,514	217,696
Employees' bonus	20,000	20,000	20,000
Taxation	30,000	44,000	60,000
Interest	4,566	4,332	2,805
Preference div.	15,250	15,500	15,375
Ordinary shares*—			
Earned	66,831	84,682	119,516
Paid	65,844	65,844	65,042
Earned %	10.1	12.9	18.4
Paid %	10	10	10
Reserve	Nil	Nil	25,000
Carried forward	18,773	37,611	67,085

* Including employees' shares

The balance sheet is impressive. Net liquid assets total almost £1 million, of which £600,000 is in cash and trustee securities. The rise in profits during the past two years has been accompanied by a fall in stocks and stores from £835,000 to £709,000. It is a fair inference, therefore, that an increased rate of turnover has contributed its quota to rising profits and reduced costs. At 51s. 6d. the £1 shares yield approximately 4 per cent. and rank as one of the best investments in the cotton industry.

Other Company Results.—Our table of company profits, on page 287, includes the results of 15 additional concerns. *Gabriel Wade and English* show an improvement in net earnings from £56,157 to £67,700 and maintain the dividend at 5 per cent. The accounts of *Riley (Coventry)* cover an 18 months' period. They show net profits of £68,898, compared with the previous twelve months' profit of £40,504. A dividend of 20 per cent. paid for the period compares with the same rate for the previous year. In the textile group, *Fras. Hinde and Hardy* have issued a disappointing report, but *York Street Flax Spinning* shows an improvement in profits. The net earnings of *T. Greenwood (Millers)* have also been significantly reduced to £44,955, entailing a reduction in the ordinary dividend.

THE WEEK IN THE MARKETS

THE STOCK EXCHANGE

SETTLING DAYS

TICKET AUGUST 11 | ACCOUNT AUGUST 13

THE end of an active account, coupled with the usual holiday influences, has produced somewhat irregular market conditions, although price changes, on balance, have not been extensive. A hesitant note was introduced by the fear of international complications arising out of the Spanish rebellion, and where new buying appeared, it was usually insufficient to offset the moderate technical straightening-up which remained from over the holidays. Dull conditions in the gilt-edged market, an advance in home rails, and selective buying of a handful

(Continued on page 280)

LONDON ACTIVE SECURITY PRICES AND YIELDS

In calculating yields on fixed interest stocks quoted below allowance is made for interest accrued since the last date of payment, less income tax at the standard rate. Where stocks are definitely redeemable at a certain date the yield includes any profit or loss on redemption, where stocks are redeemable at or before a certain date the final date of redemption is taken when the stock stands at a discount and the earliest date when the quotation is above par. The return on ordinary stocks and shares is calculated by reference to the latest dividends, account being taken of any enhancement or reduction of interim dividends. Allowance is made for accrued dividends in calculating the yield on "cum. div." shares.

(Continued from page 277)

of leading industrials produced the traditional holiday atmosphere.

Gilt-edged securities were steady in mid-week, but the Sydney scrip reacted and interest in Home corporation issues became slack. In the foreign bond market a smart rise occurred in Poland Sevens, attributed to buying for the sinking fund. Greek issues were dull on political developments, but Chinese bonds, despite news of the civil war, remained firm. French Renten shared in the general weakness on the Paris Bourse.

The Home Rail market forgot its disappointment with the Great Western statement, and re-opened under the stimulus of the Tribunal's award on the wages question. Coupled with the excellent traffics, this produced a general rise, particularly in "Berwick" stocks, but there was a slight reaction towards the end of the account. Among foreign rails, Argentine issues attracted most attention on the sharp improvement in the price of wheat, and favourable exchange movements.

The industrial markets have been fairly quiet, but there have been many bright spots. The iron and steel section has been quieter, and prices gave way slightly at the end of the account. Tube Investments were prominent in mid-week. Motor issues have been in good demand, Standard on dividend hopes, and Leyland on the good export trade results for the past six months. The aviation group has been idle. Electrical equipment issues have attracted considerable attention and most prices have improved; Crompton Parkinson have been in the lead, and Associated Electrical Industries gained on the offer to exchange shares with Edison Swan. Electrical supply shares were idle.

The breweries section was encouraged by the June output figures, and by the dividend announcements, and most prices improved. There was further evidence of support from the provinces, and Distillers made progress. Stores and Catering issues were not very active, and prices moved irregularly. Leading textile shares have been quiet but firm, although they sagged slightly before the holiday. In mid-week there was a slight improvement. Rayons were a little harder when business opened this week, but gave way later. Business in the miscellaneous industrials section was cheerful at the beginning of the week. Triplex continued in marked favour, and London Brick gained ground with several other building material issues. Turner and Newall weakened on the new issue proposals, and British Oxygen reacted slightly in mid-week. Profit-taking developed toward the end of the account, and there were numerous slight losses.

After a quiet session on the eve of the holiday, the oil shares market re-opened this week in an unexpectedly cheerful mood, and there was keen buying of Mexican Eagle, in hope of a rapid settlement of the labour troubles, of Shell, and Trinidad issues. Among the latter Leaseholds touched a new "high." In mid-week a reaction set in, under the influence of movements on Wall Street; European news was hardly encouraging, and support from the Continent slackened. Business in both the rubber and the tea share markets was extremely dull, and there are no signs of revival.

The Kafir market was quiet and firm at the opening of business this week, but reacted in mid-week, through lack of support from the Cape and Paris, and prices drifted downward. Far Western issues seemed to be adversely affected by the terms of the Libanon flotation, and the more or less satisfactory July returns did not lead to much support. Later in the week support from the Cape was renewed, and various issues improved, notably Venterspost, and West Witwatersrand. Marievale, however, fell sharply on the latest cable. Business in Rhodesian copper issues was brisk at the opening of the week, but tailed off later. Tin shares continue to be overshadowed by the difficulties of the restriction scheme, and prices move irregularly.

On the Paris Bourse, industrial share prices continue to fall, and business this week has been very dull. In Berlin there was general weakness at the opening of this week, but in mid-week many prices recovered. Prices were very firm on the Amsterdam Stock Exchange on Monday and Tuesday, led by industrials, sugar and rubber securities; but in mid-week a general reaction set in.

AMERICAN STOCK EXCHANGES

NEW YORK

THE drought was the major factor influencing prices on Wall Street during the past week. A reaction in farm implement, packing, and mail order securities occurred at the end of last week on estimates of heavy damage. Business has continued irregular this week, although shares directly affected by the drought improved temporarily as rain fell in some areas. Company news is still very good, but for the time being operators are exercising great restraint and buying is very selective. The news from Spain has naturally checked the market, and the labour union quarrel is still open. Steel mill activity continues at about last week's level, freight car loadings increased by 10,660 on a week ago, automobile output is about 30 per cent. higher than a year ago, and electricity output 14.5 per cent. higher than for the corresponding week of last year. But the combined bear forces are holding the markets back. In mid-week an improvement against the market trend was shown by Union Pacific, Allied Chemical and International Cement. Business on the bond market has been quiet, with Treasury issues firm.

CANADA

THE Canadian stock markets have recently shown their usual midsummer dullness. Movements have been irregular, and the adverse reports on the Western stocks has been a bearish factor. Construction stocks, however, have advanced, and good buying of selected paper and utility stocks has been reported at times. But investors still favour depreciated and defaulted preferred stocks or bonds of companies which are now showing signs of recovery. Bonds have been very firm; the price for Dominion bonds advanced to 117 for June, against 115.9 in May, thus reaching the highest price level since they became a wide domestic market during the war. Mining counters have been strong, and some of the newer gold stocks have enjoyed phenomenal rises for which there seems inadequate justification. The Bureau's "Investors" index for the week ending July 9th stood at 118.5, as compared with 119.2, 119.7 and 118.1 for the weeks ending July 2nd, June 25th and June 18th.

NATIONAL ACCOUNTS

The total ordinary revenue for the week ended August 1, 1936, amounted to £12,709,000, against ordinary expenditure of £18,387,000. After allowing for a decrease in Exchequer Balances of £402,547, the operations for the week, as shown below, increased the gross National Debt by £5,275,000 to approximately £7,993 millions.*

(000's omitted)	
Public Department Advances ... + 7,300	Treasury Bills - 1,910
	British Shipping Assist. - 115
+ 7,300	- 2,025

* Including £375 millions on Account of Exchange Equalisation Fund and Borrowing or Statutory Sinking Fund.

A complete analysis of the approximate position of the National Debt at June 30, 1936, appeared in the *Economist* of July 4, 1936.
