THE ECONOMIST

"Were all nations to follow the liberal system of free exportation and free importation, the different States into which a great continent was divided would so far resemble the different provinces of a great Empire. As among the different provinces of a great Empire the freedom of the inland trade appears, both from reason and experience, not only the best palliative of a dearth, but the most effectual preventative of a famine, so would the freedom of the exportation and importation trade be among the different States into which a great continent was divided."—ADAM SMITH.

INDEX TO VOLUME CXXV

BEING FROM OCTOBER TO DECEMBER, 1936, INCLUSIVE

LONDON:
PUBLISHED AT THE ECONOMIST OFFICE,
8 BOUVERIE STREET, FLEET STREET, LONDON, E.C.4

THE GOLD BLOC FALLS

THE expected has happened. The gold bloc has fallen. For five years the garrison had held the citadel with a dogged pertinacity worthy of Verdun's defenders, though at heavy cost. It was evident, however, that the end was near last week, when the suspension of M. Vincent Auriol's "Baby Bond" issue and the raising of the discount rate of the Banque de France revealed that M. Blum had abandoned all hope of recovery by a policy of internal expansion within the bounds of the "Poincaré franc." In the early hours of last Saturday the outside world learned that the French Government had determined to risk devaluation. Within the next twenty-four hours Switzerland decided also on devaluation, and Holland, swearing she would ne'er consent, consented—though with obvious reluctance. On Monday, finally, it was announced that Greece, Turkey and Latvia were "aligning" their currencies with sterling.

Thus the past week marks the third decisive stage in a process of currency adjustment which began when the pound sterling, with a number of other currencies, cut loose from gold in September, 1931, and continued when the dollar was depreciated in 1933. It is not a final stage of stabilisation uniting all the currencies on a new swing of gold parities. But it has been made possible by an act of international co-operation: for the French Government only took the plunge on receiving assurances from Britain and the United States—in terms closely akin to those repeatedly suggested in these columns—that British and American resources would be used to prevent undue exchange disturbances.

One may anticipate with some confidence that in the present case there will be no such period of widespread uncertainty as followed the earlier episodes. The world has learned that uncontrolled inflation is not a necessary corollary of devaluation; that the new franc, like the new pound and the new dollar, need not go the way of the German paper mark. France's present action has, indeed, for a long time been widely regarded as bound to come sooner or later; and the advent to power of M. Blum with his expansive and expensive New Deal has done nothing

more than set the seal on the final failure of the policy of deflation. There has been ample time for the most nervous to accustom themselves to the idea of a further change, and to make actual preparations for it. Both foreign centres and the French public itself have certainly done so.

This long notice has enabled an unusually large body of capital to seek refuge in flight from France. But, by the same token, the authorities have had ample time in which to prepare to meet the situation that might be created by its repatriation. And in any case it is unlikely to return to France in its entirety—partly because of the political uncertainty that still persists in France and partly because French economic recovery, though it may be confidentially predicted, will come gradually and not with a sudden boom.

What, in general terms, are likely to be the consequences of the gold bloc's action when once the period of immediate readjustment is over? The French franc has never been an international currency in the same sense as sterling or the dollar, and its devaluation is likely to have a smaller disturbing effect than the fall of either of its distinguished predecessors. It is to be hoped, therefore, that the stimulus to French internal activity and external trade will be helpful to the world as a whole and will outweigh the effect of France's increased export competition. Certain of her industries—especially her wool textile industry—may be enabled to regain part of their lost markets. But, as we show in a later Note, the "luxury articles," and many other commodities which figure largely in French exports, are largely non-competitive with the characteristic products of countries like Great Britain and the United States; and a recrudescence in tourist traffic should help France and Switzerland without seriously hurting anyone else. The devaluation of the Dutch guilder, on the other hand, may have some deflationary effect on the general price level; for a significant share of the world's supplies of such essential raw materials as rubber, tin and oil is produced in the Dutch East Indies. The extent of devaluation in Holland, however, is likely to be less than in the other gold bloc countries; and any declining tendency in prices will be

checked by the restriction schemes which apply to most of these commodities.

Any adjustments that may have to be made in these directions are, however, of minor importance compared with the fact that an indispensable step has been taken towards the reconstruction of the edifice of world trade which collapsed after 1929. The countries whose currencies have been devalued within the past five years were responsible for more than four-fifths of the world's international trade before the depression set in. In the interim the value placed upon the world's monetary gold reserves (allowing for the effect of devaluation) has increased by approximately one hundred per cent. The latest developments have come at a moment when there is in many countries a psychological reaction against extreme economic nationalism and trade restriction. In many States, further, a definitely expansive economic philosophy is common to Government and people. There is little doubt that a World Economic Conference to-day would hold out far better prospects of achieving a modicum of sanity in international trade relations than its ill-fated predecessor of 1933.

It would be unwise, nevertheless, to look for a rapid and spectacular transformation of the international scene. In the first place, industries have been fostered and vested interests created by the prevailing system of high tariffs, exchange controls, quotas and prohibitions. Such interests are notoriously prone to outlive the emergencies which call them into being. In the second place, political relationships have changed greatly for the worse since 1931. Industries have been concentrated on armament production, and in more than one country self-sufficiency based on the alleged needs of defence has become an obsession.

These difficulties are formidable; but they should not be allowed to stand in the way of a determined effort by the countries which have adjusted their currencies to secure every practicable amelioration of trade restrictions among themselves. Without a reasonably free apparatus of payment and of valuation, trade cannot flow freely. These countries have an opportunity of demonstrating this truth to the world, and of showing that facilities for trade bring a handsome dividend in increased prosperity.

It is appropriate also that these countries should take the lead. For they are precisely the nations who believe in an increasingly international world as the condition of the advance of civilisation, who look upon narrow nationalism as a "throw-back" towards barbarism.

These, however, are considerations of the longer run. For the moment the task of the world's statesmen is to make the most of the opportunities which the events of the past week have placed before them. Devaluation of the franc, even when it is coupled with an agreement between the three Western democracies, does not automatically solve the problems that are still plaguing the world. But it does present manifold opportunities of moving forward along paths that were blocked so long as a group of the world's most important currencies were still stubbornly deflating. There is now a better prospect than at any time in the past seven years of true exchange stability, corresponding to a genuine equilibrium between the different national economies, and not merely to the rigid imposition of an arbitrarily "stabilised" rate of exchange. There is now an excellent prospect of the movement of domestic recovery spreading to the countries which have hitherto experienced nothing but a steady restriction of employment. Finally, there is the possibility of a real beginning being made at long last with the task of removing the barbed-wire entanglements which still cumber international trade.

These are great prizes. But they will not ripen and drop from the living tree of events without some exertion on the part of Governments. It will exercise all the talents and employ all the experience of the authorities of the three covenanting nations to preserve a genuine stability of the exchanges, a moving equilibrium between disparate national economies. It will need constant watchfulness to ensure that the movement of expansion which can be expected in every country of the world does not degenerate into mere inflation.

The measure of last week's achievement will not be fully revealed until time has been given for all these opportunities to be seized or let slip. If the tide of chance is now taken at the flood, it will indeed lead on to fortune.

MR EDEN AT GENEVA

THE speech which the Foreign Secretary made on Friday of last week in the League Assembly at Geneva is one in which we may take some small comfort, since Mr Eden has not entirely thrown up the sponge or despaired of saving the world from anarchy. His speech is hopeful because it holds out the promise of action on the part of the Government which he represents. That action extends over a broad front: it deals with the general principles of international relations, as well as with such concrete questions of the moment as access to raw materials and to markets, restraint of competition in armaments, the reform of the League, and regional pacts. Further, the speech goes into the intensely practical question of the relation between these particulars and the fundamental questions that underlie them. For example:—

In considering the future of the League, there are two essential elements—first, the League machinery, and secondly, the will to work that machine. The second is infinitely more important than the first, but the machinery can also be improved.

This was admirably said, and the speaker did not stop short at generalities. He grappled with the dilemma between the duty of believing in our own faith (and defending the institutions in which it is embodied) and the duty of tolerating the different, and even contrary, faiths and institutions of our neighbours. In fact, Mr Eden raised in precise terms, the problem of toleration. And this was well done; for that ancient problem, which within living memory seemed out

EFFECTS OF DEVALUATION

of date because it appeared to have been solved, is now as urgent again in Western Christendom in A.D. 1936 as in A.D. 1636.

The problem of believing in our own faith, and at the same time tolerating our neighbour's, implies, of course, that at bottom there lies some bed-rock of common ground. And Mr Eden gave prominence to two strong desires, in matters of capital importance, which are common to all living Governments and peoples, whatever their superficial differences in political creed and temper. Both the "haves" who wince at the thought of relinquishing any of their great possessions, and the "have-nots" who have been running after the will-o'-the-wisp of economic self-sufficiency, have a common desire and interest that international trade should be liberated from its present strangling shackles. Both, again, have a still stronger common interest and desire that a general war between the Great Powers shall be avoided—whatever reservations they may make about preparing to fight to the death rather than sacrifice treasured possessions or cherished ambitions.

So far so good; but when we look closely at these two possible foundation-stones for a new world-order, we cannot be blind to their weak points. Both these common interests may prove rather too negative and rather too material to offer a sufficient basis on which to inspire an international loyalty, and set up an organ of collective action. It is as if, in the domestic political life of this country, we had tried to build up our present parliamentary institutions simply on our common desire to stimulate trade and to preserve the King's peace. Certainly these two motives, between them, do account for a considerable part of the common

EUROPEAN REPRESENTATIVE'S OFFICE:

8 KING WILLIAM STREET, LONDON, E.C.4

ground which unites our opposing political parties and makes our parliamentary system workable. But we need look no further than the public speeches, made by leading members of all parties within the last few weeks, to remind ourselves that the essence of our common British faith is something at once more spiritual and more positive.

Unfortunately, there is as yet no comparable unit of inspiration between nations with their widely differing faiths, or if it exists it is at most but a feebly flickering flame. Yet, if disaster is to be avoided, we must make the most we can of any forms of co-operation that we can find. We should, therefore, give Mr Eden all our support in his renewed effort to grapple with the particular concrete problems through which we shall have to work out our own salvation. For example, the Foreign Secretary has renewed the offer concerning access to raw materials made in the same Geneva forum, twelve months ago, by his predecessor, Sir Samuel Hoare.

"This," said Mr Eden last week, "is a matter for suitable discussion at Geneva under the auspices of the League. We are prepared that steps shall be taken in this direction by this Assembly."

Here is a constructive piece of work which the Seventeenth Assembly ought to make sure of putting in hand before it disperses.

Again, Mr Eden's remarks about the avoidance of war affect the three closely inter-related topics of re-armament, the reform of the League, and regional pacts. On the question of re-armament, we cannot quarrel with the Foreign Secretary's frank declaration (melancholy though it be) that our own re-armament in the United Kingdom must be persisted in "unless and until nations reach an agreement for the reduction and limitation of armaments"; that "disarmament, to be real, must be not only military but mental" and that no solution can be found in a mere "standstill in armaments, calculated to give a permanent advantage to nations which had urgently concentrated upon achieving the most intensive measures of armaments within their power."

In this connection, we can only point, for the moment, to the encouraging fact that the French Government has now become the leading advocate of disarmament, after having steadily blocked all progress along this path for the first fifteen or sixteen years after the Armistice of 1918. No doubt, in one sense, France has reached a better frame of mind because her former intransigence has brought its Nemesis in the shape of a German re-armament on a titanic scale. Dare we hope that Germany may have the wisdom and generosity to avoid emulating her neighbour's error?

In regard to the reform of the League, Mr Eden has grasped and preached the all-important point that the will matters more than the machine. But he has gone further; for, in surveying the machinery, he has made certain definite suggestions for reform which are not at all on those defeatist and reactionary lines that might have been expected from His Majesty's Government after Mr

Chamberlain's famous "midsummer of madness" speech. Mr Eden did not suggest that we should cut out Article X and emasculate Article XVI. The Articles to which he addressed himself were XIX and XI. His strong plea for making a practically operative reality out of Article XIX on the ground that "we cannot encase human life in a rigid mould of a given date" ought to evoke a hearty response in Germany, Italy and Japan. Conversely, countries living under the fear of aggression ought to welcome Mr Eden's other suggestion (which a painful experience commends up to the hilt) that Article XI, relieved of the incubus of the unanimity rule, should be re-gear'd in a way that will make earlier effective action possible.

There is one point, however, in Mr Eden's speech on which we are left in doubt—his reference, namely, to regional pacts:—

"We favour regional pacts provided that they are harmonised with the Covenant. They might well be submitted to the Assembly and Council, and the Assembly might see that certain situations are included under them. His Majesty's Government are resolved to negotiate such a pact for Western Europe. This, however, is not our whole task. There is nothing essentially wrong with the League. Its general principles are right, and a logical and reasonable system can be constructed upon it."

If these words could be read *in vacuo*, they would in themselves dispel any lingering fear lest His Majesty's Government might consent to purchase a short-term immunity against German attack, at the price of giving Germany a free hand in Eastern Europe, by repudiating our British obligations under the Covenant in that region. Unhappily, Mr Eden's words have to be read in the light of the Manchurian and Abyssinian records of the Government of which he is a member, and of its immediate predecessor. Can Mr Eden explicitly reassure us on this all-important point?

EUROPE'S CURRENCY CRISIS THE STORY OF THE WEEK

The following is a brief chronicle of the principal events of this week's currency crisis. Market reactions and movements of prices and exchange, etc., are discussed in detail in our Money, Stock Exchange and Overseas Correspondence Sections.

SATURDAY, SEPTEMBER 26

At 1.10 a.m. M. Vincent Auriol, the French Finance Minister, announced at the Ministry of Finance that the Government had decided to devalue the franc. He stated that its new value would be between the limits of 49 and 43 milligrammes of gold, 0.900 fine (compared with the previous rate of 65.5 milligrammes), and that an exchange stabilisation fund of 10,000 million francs would be set up.

Parliament would be convened on the following Monday to ratify devaluation, and meanwhile the Bourse would be closed. At the same time, M. Vincent Auriol revealed the terms of a monetary agreement reached between the French, British and United States Governments. He added that devaluation had been made dependent on this agreement.

The agreement was also announced in statements made by the British and United States Treasuries in the early hours of the morning. The British Treasury's statement was as follows:—

1. His Majesty's Government, after consultation with the United States Government and the French Government, join with them in affirming a common desire to foster those conditions which will safeguard peace and will best contribute to the restoration of order in international economic relations, and to pursue a policy which will tend to promote prosperity in the world and to improve the standard of living.

2. His Majesty's Government must, of course, in its policy towards international monetary relations, take into full account the requirements of internal prosperity of the countries of the Empire, as corresponding considerations will be taken into account by the Governments of France and of the United States of America. They welcome this opportunity to reaffirm their purpose to continue the policy which they have pursued in the course of recent years, one constant object of which is to maintain the greatest possible equilibrium in the system of international exchanges and to avoid to the utmost extent the creation of any disturbance of that system by British monetary action. His Majesty's Government share with the Governments of France and the United States the conviction that the continuation of this two-fold policy will serve the general purpose which all Governments should pursue.

3. The French Government inform His Majesty's Government that, judging that the desired stability of the principal currencies cannot be ensured on a solid basis except after the re-establishment of a lasting equilibrium between the various economic systems, they have decided with this object to propose to their Parliament the readjustment of their currency. His Majesty's Government have, as also the United States Government, welcomed this decision in the hope that it will establish more solid foundations for the stability of international economic relations. His Majesty's Government, as also the Governments of France and of the United States of America, declare their intention to continue to use the appropriate available resources so as to avoid as far as possible any disturbance of the basis of international exchanges resulting from the proposed readjustment. They will arrange for such consultation for this purpose as may prove necessary with the other two Governments and the authorised agencies.

4. His Majesty's Government are moreover convinced, as are also the Governments of France and the United States of America, that the success of the policy set forth above is linked with the development of international trade. In particular, they attach the greatest importance to action being taken without delay to relax progressively the present system of quotas and exchange controls with a view to their abolition.

5. His Majesty's Government, in common with the Governments of France and the United States of America, desire and invite the co-operation of the other nations to realise the policy laid down in the present declaration. They trust that no country will attempt to obtain an unreasonable competitive exchange advantage and thereby hamper the effort to restore more stable economic relations which it is the aim of the three Governments to promote.

A similar statement was issued by the United States Treasury which undertook to "use appropriate available resources" to prevent undue exchange disturbances.

Later in the morning decrees temporarily suspending the payment of commercial claims in gold or foreign currencies, and closing the Paris exchanges until further notice, appeared in the *Journal Officiel*. Exports of gold were suspended in fact by the action of the Bank of France in raising the minimum quantity of gold obtainable to an extremely high level.

All foreign exchange dealings were suspended after a short time in the London market. In the few transactions which took place the pound fluctuated between \$4.90 and \$4.95.

The Swiss Federal Council held a meeting in the morning at which it was decided that the existing gold parity of the Swiss franc would be maintained. At a further meeting of the Council in the late afternoon, however, a decision was taken in favour of devaluation.

In Holland it was announced in the morning that no change would be made in the Government's monetary policy. After an exodus of gold of nearly £2,000,000 during the day, however, the Cabinet, meeting at midnight, decided that the Swiss decision had compelled the Dutch Government to reconsider its attitude, and that since Holland was the only country on the world gold standard, at the pre-1931 parity, the existing monetary policy could not be maintained.

In a statement to the press in the evening M. Blum said that it was the first time in history that three Great Powers had announced their determination to re-establish normal monetary and economic relations between one another. The French Government would never have devalued "unilaterally"; but they were prepared to do so as the first step to a new era in economic relations.

SUNDAY, SEPTEMBER 27th

The French Devaluation Bill was submitted to the Finance Committee of the Chamber, and adopted with minor amendments by 20 votes to 12, with 7 abstentions. The Bill contained the following provisions:—

(1) The provisional fixing of the full value of the franc between the limits of 43 and 49 milligrammes 0.900 fine.

(2) The institution of an Exchange Equalisation Fund of 10,000 million francs.

(3) The approval of a new Convention with the Bank of France by which the profit on the gold reserve should accrue to the Treasury.

(4) The extension of the Bill to colonies and dependencies using French francs as their currency; and a stipulation that it should not apply to foreign payments regularly made in gold before its application.

(5) The forbidding of all imports and exports of gold in bars or coin and all dealings in them at home, except with the authorisation of the Bank of France. French holders of gold coin or bullion, whether at home or abroad, to be compelled to declare their holdings to their local tax collector before October 20th; and foreign companies whose capital is mainly French to be subject to the same rule. Holders of less than 60 grammes of gold to be excepted. The excess value of such gold holdings due to devaluation to be sequestered by the Government; and failure to declare holdings to involve a fine equal to the value concealed. All exchange operations by Frenchmen between September 20th and September 26th to be declared within 15 days, under penalty of a fine equal to three times the amount involved.

(6) The institution of a sliding scale, varying with the cost of living, for all wages specified in the collective wage agreements recently signed or to be signed, and for "manual" wages and salaries in professions which have no such contracts. Power also to be taken to adjust civil servants' salaries to the cost of living, and to abolish the last of the "Laval cuts" in ex-soldiers' pensions.

It was later announced in Paris that special privileges would be granted to holders of the recently issued "Baby Bonds." The Director of the Sinking Fund had been authorised to issue reversionary annuities in exchange for *rentes*, Treasury bonds of a currency of more than six months, and National Defence Bonds, held by persons who had acquired these securities before September 26, 1934, who are more than 55 years of age, and whose 1930 incomes are below the taxable limit. The bonds to be taken back at their par value, and the *rentes* at the average daily rates ruling during the preceding fortnight.

In the course of the evening the Swiss Federal Council requested the National Bank of Switzerland to fix the gold value of the franc between 190 and 215 milligrammes of fine gold, corresponding to a devaluation of about 30 per cent.

MONDAY, SEPTEMBER 28th

The debate in the French Chamber on the Devaluation Bill began in the morning and continued throughout the day. In the main the Right attacked the Government, and the Popular Front parties supported it; but both the Radicals and Communists showed themselves restive. M. Bonnet argued that the Government had been forced to devalue by circumstances and had not chosen their own time. M. Paul Reynaud said the devaluation would have had much better effect if it had come long before. M. Vincent Auriol, in reply, said the currency problem

was international and that the monetary agreement between the United States, Great Britain and France was of "historic importance." The debate continued throughout the night.

In London there were no dealings in French francs, Swiss francs or Dutch guilders. The price of gold, however, rose to 140s. 9d. an ounce, and sterling depreciated in terms of dollars to about 4.95, compared with \$5.03½ on Friday. On the Stock Exchange there was some weakness in gilt-edged securities. The French, Dutch, Swiss and Italian bourses were closed throughout the day.

Dr Colijn, in a statement broadcast in the morning, said that outside forces had compelled Holland to leave the gold standard. For the present Holland would have a managed currency, and an Equalisation Fund of 300 million guilders would be formed. The Government were prepared to abolish trade barriers and work for international stabilisation.

The news of the abandonment of gold was received quietly in Holland, and private transactions indicated a depreciation in the guilder of 15 to 20 per cent.

The following statement was issued the same morning by the Bank of Greece:—

Consequent on the new international monetary situation the Bank of Greece, in agreement with the Government, has decided to base the drachma on the pound sterling. The buying price will be fixed by the Governor of the Bank within the limits of 540 and 550 to the pound. The price of other currencies will be fixed on the basis of their parity to sterling on the London Stock Exchange. After this decision the buying rate of sterling was to-day fixed at 546 drachmas, and the selling rate at 550. Since the London and Paris Exchanges are closed the Bank is unable to quote a rate for the franc.

The drachma was previously based on the Swiss franc, and on Friday, September 25th, it was quoted at 531.2 to the pound sterling.

Later in the day the Latvian Government announced that the currency would be devalued and attached to sterling. Previously the lat had been attached to the French franc, and had been quoted at 15.50 lats to the pound sterling. The new rate will be 25.22 lats.

In the evening the Turkish Government announced that it had adopted the pound sterling as the basis for its currency instead of the French franc. The new rate would be £16.35-£16.38 to the pound, compared with a rate of £16.34 quoted on Friday, September 25th.

TUESDAY, SEPTEMBER 29th

The debate in the French Chamber on the Devaluation Bill continued during the early hours of the morning. M. Blum, replying to the Government's critics, said that no Government could have refrained from devaluing the franc in the existing circumstances. The Bill was finally adopted by 350 votes to 221 at 10.30 a.m. The provision for a compulsory adjustment of wages according to a cost-of-living scale was abandoned in favour of a clause granting general powers to the Government to prevent a rise in prices. In its amended form the Bill also contained provisions permitting the Government to modify import quotas and tariffs, and to arrange a Convention with the Crédit Foncier enabling it to reduce interest rates in return for an advance by the Treasury.

The Dutch Chamber passed in the course of the evening the Bill providing for devaluation, including measures (1) against increases in prices; (2) for the establishment of an Equalisation Fund; (3) for the prohibition of gold exports.

Dealings in guilders and Swiss francs were resumed on the London market. Guilders opened at 9.9.20 to the pound, compared with 7.46½ on Friday, September 25th. Swiss francs were at 21½-21¾, compared with 15.48 on September 25th.

WEDNESDAY, SEPTEMBER 30th

After the approval of the First Chamber had been obtained a few hours previously, the Swiss Lower Chamber adopted the Government's devaluation proposals soon after midnight.

In the French Senate the Government's Bill was debated throughout the day. Finally, despite an appeal by M. Blum, the "social" provisions were removed, and a single clause empowering the Government to prevent price-raising

THE BRITISH LINEN BANK

Incorporated by Royal Charter, 1746

Head Office: 38 St. Andrew Square, Edinburgh

OVER 210 BRANCHES IN SCOTLAND

LONDON OFFICES:

City Office: 38 Threadneedle Street, E.C.2
West End Branch: 198 Piccadilly, W.1

was adopted. In this form the Bill was voted by a small majority. The Chamber met at 11 p.m. to receive the Bill in its amended form.

In the afternoon Dr Schacht read a declaration to the Central Committee of the Reichsbank. He said that Germany did not intend to devalue her currency, but was prepared to join in international negotiations designed to free the channels of international trade and payments. Should an international agreement of a more far-reaching kind than the three-Power monetary agreement prove possible, Germany would consider changing her currency policy.

THURSDAY, OCTOBER 1st

The French Chamber re-passed the Devaluation Bill in its original form soon after midnight, and added a clause providing for a tax of 50 per cent. on all profits made by speculation on Friday, September 25th. The Senate, on receiving back the Bill, adjourned in order to allow its Finance Committee an opportunity to reach a compromise. A plan was eventually adopted which, instead of granting arbitrary power over prices to the Government, provided for the institution of special tribunals to examine disputed questions connected with wages and prices. A new Bill will also be drafted, providing for measures, not included in the Devaluation Bill, to protect ex-Servicemen. This compromise was accepted by the Senate, and later by the Chamber. The Devaluation Bill thus became law.

THE PRICE OF GAS

LAST month the South Metropolitan Gas Company, which supplies a population of a million and a-half in a statutory area of about 52 square miles—including almost the whole of the County of London south of the Thames—replaced its flat-rate charge of 8½d. per therm by a new tariff under which individual consumers will pay 11d. for the first ten therms each month, 7½d. for the next "block" consumed (which for most consumers will be ten therms) and 4d. for all additional consumption. In reply to a considerable volume of protest from local authorities, Members of Parliament and other consumers' representatives, the company has intimated that it can justify but cannot postpone the new tariff. Its critics maintain that many of the company's poorest customers will pay an increased gas bill. The company has replied, through its president, Dr. Charles Carpenter, that, despite higher manufacturing efficiency, it is unable without adjustment to carry the burden of "unremunerative customers," owing to the rise of coal and labour costs and to economies in the use of gas; that actual increases in the price of gas will in no case exceed 5½d. a week; and that many of the company's poorest customers—other than the smallest—will benefit under the new tariff. In reply to the Leader of the London County Council, the President of the Board of Trade has replied that the company is acting within the powers conferred on it by Parliament; but that he intends to consider the desirability of a Parliamentary investigation of the propriety of those powers.

It may be questioned whether the company has been wholly well advised in introducing so far-reaching a change at relatively short notice. Recently an American telephone company conducted a whole year's propaganda before changing the basis of its charge, and American gas com-

panies, generally, have gone to great lengths in preparing the mind of their public for the introduction of tariff alterations. To secure the goodwill of customers appears the more desirable in the present instance, since the South Metropolitan Company's decision may be widely interpreted as a species of test case for the application of a principle whose importance may be crucial to the gas industry in its future competitive relationship with the electricity industry. The implications of this principle may be briefly indicated.

Both private consumers and industrialists have now become habituated to a tariff for electricity composed of two parts, the one dependent on the actual or estimated maximum demand and the other on the quantity of electricity consumed. The typical form of gas tariff, on the other hand, has been a flat rate per therm, or per cubic foot, for domestic users, with a cheaper rate for large-scale consumers. Despite the extended application of gas heat to industrial processes, the domestic user remains the bulwark of the industry, and the continuance of lower rates to factories and other industrial consumers is dependent on its success in retaining and extending its domestic load.

A charge based on a flat rate per cubic foot was reasonable and equitable when the use of gas was confined almost entirely to lighting; for demand was then fairly uniform between different customers. To-day, however, the position has been decisively changed by two factors. The first has been the increasing use of gas for purposes like cooking, continuous water heating and refrigeration, which has rendered demand from different customers no longer uniform. The quantity taken by an individual domestic consumer may now vary from a very few thousand to over forty thousand cubic feet a year. The second factor has been the post-war development of national electrification, which has taken from the gas industry part of its actual or prospective load and rendered a revision of charges necessary, if gas undertakings are to hold their own or to make new progress.

The cost of gas can be conveniently grouped under two heads. The first is dependent on the amount taken (the "commodity" or "gas into holder" cost) and the second on the number of customers or the size of the maximum demand on the works and distributive system. In the majority of undertakings in Great Britain the commodity cost represents less than half the total expenditure. In the case of a typical company selling gas at 8d. per therm, the cost of the gas actually produced may be no more than 3d., and the remaining 5d. covers "customer costs," expenses of distribution and remuneration of capital. When all consumers took more or less identical quantities of gas, the make-up of the total supply-cost was of minor importance. To-day, however, the companies must necessarily consider the consequences of a system under which small consumers may obtain their supply at less than cost, while larger domestic users pay more than their proportionate share of incidental expenses. On the figures already given, a consumer of five therms a quarter would contribute 2s. 1d. to the overhead costs of his supply, while the consumer of thirty therms would contribute 12s. 6d.—i.e. six times as much. Such a consumer may be disposed to lend a favourable ear to the counter-offers of electric supply undertakings, who are in a position to provide light and heat to large consumers on more advantageous terms. During recent years, in fact, there has been a persistent tendency for the number of British gas consumers to increase and the average amount taken by each consumer to decline.

Unfortunately, while few authorities defend the old system, there is no general agreement on the most desirable form which new tariffs should take. In the United States, where progress has been more conspicuous, many gas companies have secured the approval of State Public Utility Commissioners for two-part tariffs similar to those adopted by British electricity undertakings. In Germany, where the majority of works are municipally owned, two-part gas tariffs are common. In Great Britain the problem is peculiarly difficult, because gas is an "old" industry, while electricity, on its modern scale, is relatively "new." Electricity undertakings with a two-part tariff can maintain their flat rates at a relatively high level and reduce their charges per unit to an attractively low figure. The gas industry, which has operated for a century or more under

a different system of charging (the South Metropolitan Company was founded in 1829) has had ample time to reduce its flat-rate charges to levels which offer decidedly limited scope for new inducements to consumers. Except in a limited number of cases, where a reduction in average prices may produce a more than proportionate increase in consumption, special rates for the large domestic consumer, unaccompanied by any increase in the flat rate, may involve the sacrifice of revenue.

Companies, as distinct from municipalities, encounter a further difficulty where their authorised dividends to shareholders are correlated with the prices they charge. Under the sliding scale and the basic price systems the highest price to any customer is the "price of gas" for dividend purposes, and any two-part tariff must be devised within the framework of this limitation. Such two-part tariffs as are in existence are relatively simple. The Gas Light and Coke Company, for example, follows the practice of many electricity concerns in basing the fixed part of its tariff on rateable value and supplying gas thereafter at half the normal price. The Bradford and Leicester authorities base their fixed charge on the number of rooms in each consumer's premises. Manchester and Oldham, however, charge an identical amount to each domestic customer, whatever the size of his house.

In short, the gas industry is faced with the difficult task of putting old wine into new bottles; its problem is to graft upon an "old" industry—subject to statutory limitations mainly imposed at a time when its monopoly was more or less complete—a new system of charging which will secure for it the advantages of maximum consumption and return enjoyed by a formidable modern competitor, the electricity industry. Considerations of social advantage and psychological expediency alike may emphasise the undesirability of any "solution" which necessitates an appreciable increase in the amount paid by the poorest consumers. No complete answer to the problem has yet been discovered, and none which is one hundred per cent. satisfactory to all parties may be obtainable. It may be worth while, however, to draw attention to at least one method which incorporates the "promotional" element, inherent in the two-part tariff, without the necessity for a fixed quarterly charge. Under this system, "blocks" of consumption are fixed for different classes of customers—based usually on the number of rooms in their houses. After the consumption of these agreed amounts of gas at the standard price, all additional consumption is charged at a reduced figure. For example, a house of six rooms may be rated at twenty therms a quarter, all "excess" consumption paying only one-half or two-thirds of the standard figure. This type of tariff, which is in force in Glasgow and Newcastle, gives domestic users the advantages of a "block" tariff for increased consumption, but distinguishes between their different levels of normal demand. It is particularly suitable for undertakings which may be doubtful of the success of a conventional two-part tariff, but find that competitive conditions demand a more modern form of charging than the flat rate; and its use seems likely to become increasingly widespread in the industry.

THE NEW DEAL

In just over four weeks' time the people of the United States will go to the polls to elect a President for the next four years. Nowhere else in the world is so much political power placed in a single pair of hands by a process of free democratic election. Nowhere else is the battle of politics so completely a personal duel as in the quadrennial Presidential election in the United States.

The Presidential election is exciting and momentous even when the contestants are nonentities. But this year President Roosevelt is fighting for more than his own personality, for more even than his own Party. He is fighting for a whole philosophy of politics as embodied in the vast experiment of the last three and a half years. A verdict is required from the American people on the whole New Deal.

What is the New Deal? An attempt to answer this question has been made in the special Survey which accompanies this issue of the *Economist*. But even there, many

aspects of the New Deal remain unmentioned. Nothing has been said about the Social Security Act (which is hardly yet, however, in effective operation), about the effects of recent legislation on the railroads, about public health or education. Moreover, even apart from whole departments of the programme with which there has not been space to deal, there is much in the character even of the more familiar aspects of the New Deal which can hardly be put down in black and white. There is, first of all, the character of the President himself. In its hectic early months the New Deal derived a great deal of its force from the infectious optimism, the smiling confidence of Mr Roosevelt. He inspired the public and vitalised business. But these same qualities of character which made him a great democratic leader in the emergency of 1933 have given him many enemies in the more sober atmosphere of 1935 and 1936. What had earlier seemed to be courageous confidence now seems to his critics to be autocratic irresponsibility. The bold improvisation of 1933 has become rudderless instability. What was greeted as refreshing financial flexibility is now condemned as reckless extravagance. Sublime disregard for red tape has been converted in many men's minds into a deliberate assault on the Constitution. Humane Liberalism assumes the ominous guise of Red Revolution.

There can be no doubt that since 1933 there has been a very widespread and far-reaching revulsion of feeling against the President among virtually all the more comfortably established members of the community. How far this change of opinion is due to changes in the President's policy, how far to changes in the opinions of his critics, and how far to changes in circumstances, are interesting questions, but it is unprofitable to discuss them here. The qualities which inspire loyalty in a crisis are not those best calculated to inspire confidence in a calmer period. Mr Roosevelt is, above all else, a very shrewd politician. That is almost the same thing as saying that his methods are tortuous. Moreover, though his enactments are those of very moderate Liberalism, his statements, particularly in denunciation of the rich, are often extreme. If the fluctuations of his course and the violence of his language be borne in mind, the bitterness of the opposition to him can be understood, though not shared. It is very significant that hostility to the President is many times stronger than opposition to his policies.

It is sometimes difficult for observers in foreign countries to remember that the New Deal is a political movement—and one, moreover, sponsored by a Party which for three-quarters of a century has been almost continually in the minority. There have been divergent interests to be reconciled within the Democratic Party; there has been the future strength of the Party to be quite legitimately considered; there have been the irritating constitutional obstructions of the "separation of powers" to be overcome. If the President is accused of playing politics, he can justly retort that no one but a politician could have achieved anything at all. Whether this retort serves to excuse the extent to which the "spoils system" has been applied to the new agencies of government or to palliate the excessive partisanship of many of the Administration's acts is, to say the least, open to doubt. If the charge of dictator often hurled at Mr Roosevelt is laughable, it is still true that he and his agents have frequently been unnecessarily peremptory and prone to resort to petty bureaucratic tyranny.

If these matters have been mentioned at length, it is because they colour the background of the last three years and because they will enter largely into, and perhaps determine, the electors' vote on November 3rd. They are the life and substance of politics. But the outside observer has the opportunity, denied to the American elector, of regarding the accomplishments of the last three years with the perspective of three thousand miles of ocean, and of applying the less subjective criteria of judgment. Apart from the manner of its actions, has the New Deal in substance achieved its aims? Has it successfully attained to its three-fold goal of Relief, Recovery and Reform? Provisional judgments on isolated topics are expressed in the different chapters of our Survey. But the electors cannot particularise; they will have to express one single verdict, favourable or adverse, on the New Deal as a whole. Can

Sun Life Assurance Company of Canada

(Incorporated in Canada in 1865 as a Limited Company)

The Company has been rendering service to the public in Great Britain for more than 41 years by enabling prudent men and women to safeguard their own and their families' future, through comprehensive Life Assurance and Annuity plans.

Sums assured by new, paid-for Life Assurance policies issued during 1935 in Great Britain and Ireland total

£5,500,000

Total Assurances in force at November 15th, 1935, in Great Britain and Ireland

the outsider also arrive at some final synthesis of judgment?

If the criterion be Utopia, the achievements of the New Deal appear to be small. Relief there has been, but little more than enough to keep the population fed, clothed and warmed. Recovery there has been, but only to a point still well below the pre-depression level. Reform there has also been, but it is slight in comparison with the reformers' blueprints. The great problems of the country are still hardly touched. There has been no permanent readjustment of agriculture to meet its changed environment. Very little has been done to iron out the fluctuations of industrial production for the future. The monetary structure of the country, on balance, is less under control than formerly. All these problems have barely been broached. Moreover, the great overriding political problem of how America is to construct a socially responsible and socially regulated economy with her present Constitution has been shirked. There was a moment when it looked as if the President was going to put the issue of the "horse and buggy" Constitution squarely before the people. But the immediate reaction was unfavourable, and he relapsed into silence.

This is strong and sweeping criticism. Does it imply that the conscientious American should vote Mr Roosevelt out of office? A good case could undoubtedly be made for an Opposition which, without hiding behind the letter of the Constitution, would accept the paramount necessity for a broad economic and social policy and set out to correct Mr Roosevelt's mistakes. But the only way of voting Mr Roosevelt out would be to vote the Republicans in, and the Republicans have never shown any desire to be this sort of Opposition. Under Mr Hoover their policy was one of non-intervention so long as that was possible, and when non-intervention became humanly impossible, it was a policy of helping the men and institutions at the top of the social and economic heap in the hope that this help would "filter down" to the bottom. "Better the occasional faults of a Government that lives in a spirit of charity," says Mr Roosevelt, "than the consistent omissions of a Government frozen in the ice of its own indifference." Under Mr Landon, the Republicans have a policy distinguishable only in minor shades of emphasis from that of the Democrats. The Republicans in this campaign are paying Mr Roosevelt the tribute of borrowing his policies while denouncing his philosophy.

If the New Deal be compared, not with the absolute standards of Utopia, but with the achievements of other Governments, the former adverse judgment must be modified. If it be compared with either the performance or the promise of its rivals, it comes out well. If its achievements be compared with the situation which confronted it in March, 1933, it is a striking success. Mr Roosevelt may have given the wrong answers to many of his problems. But he is at least the first President of modern America who has asked the right questions.

NOTES OF THE WEEK

The Party Conferences.—The political season begins again this week-ended with the meeting of the Conservative and Labour Party Conferences. Of the two conferences the Conservative is the briefer, and its decisions are not binding on the Party leaders. Perhaps the chief interest at this year's Conference has been in personal issues, and in particular in the future of Mr Baldwin and the question of his successor. Mr Baldwin himself has not been able to be present, since his health does not permit it; and it has fallen to Mr Neville Chamberlain to deputise for him at the mass meeting with which the Conference concludes. In the past few years the conference has considered it its duty to "ginger" the Government into a more Conservative policy; and it has served as a reminder to the country that a Government generally regarded as Conservative might be even more Conservative still. Now that the Indian question is dead, most of the ginger is being directed towards re-armament, agricultural policy and the House of Lords. Sir Samuel Hoare, speaking at the Conference on Thursday, concentrated on re-armament, and he pleased the assembled Conservatives by declaring that "if, as we all hope, in the future we can arrive at a general limitation of armaments, it must be on the assumption that our own programme has been completed." There was audible in Sir Samuel's speech the political ring which is, perhaps, inseparable from a party conference. But he, at least, showed statesmanship in refusing to bind the Government never to consider any sort of transfer of British Mandatory or Colonial Territories. Sir Samuel concluded by inviting what he called the "more responsible Socialist leaders" to support the Government's re-armament policy. The Labour Conference will now be keenly watched to see how far the Party responds to this invitation. Do the speeches of Mr Bevin and Sir Walter Citrine at the T.U.C. portend a final abandonment of the hope of disarmament and collective security, and a virtual acceptance of the Government's attitude of qualified passivity in Europe? Or will the emphasis at the Labour Conference be on the strengthening of the pacific countries? Or will the traditional anti-war elements in the Party perhaps show unexpected strength? In comparison with these tormenting dilemmas, internal issues are likely to provoke relatively little dissension.

Records in the Air.—New air records, both for height and speed, have been made this week. On Monday, Squadron-Leader F. R. D. Swain, flying a Royal Air Force machine, reached the record height of 49,967 feet and, despite symptoms of suffocation, succeeded in bringing his machine safely to earth. Squadron-Leader Swain afterwards stated that at a height of 46,000 feet, then over Sussex, he had a view of the English coastline from the Wash to Margate, and from Margate to Land's End. On Tuesday, the competitors started in the Portsmouth-Johannesburg race held in conjunction with the Rand Jubilee. The winner, Mr C. W. A. Scott, covered the distance in 57 hours. What, it may be asked, is the purpose of these mechanical triumphs, and what good does it do a man to ascend 50,000 feet above the earth, or reach Johannesburg in 57 hours from London? Futile as are some records, however, the mechanical progress of aviation undoubtedly depends to some extent on record-breaking flights. Squadron-Leader Swain is one of the test pilots of the R.A.F. establishment at Farnborough, and was using a special high-flying aeroplane built by the Bristol Company. It may also be recalled that the acceleration of the air mail service to Australia followed on the breaking of the record time from London to Australia by Mr C. W. A. Scott. Feats of speed and endurance in the air, in fact, are the prelude to mechanical progress; and mechanical progress is the means to a quickening and cheapening of transport. And quicker and cheaper transport, in a world devoted to peace and trade, would contribute to raise the standard of living of all peoples alike.

British Statesmen and Democracy.—British statesmen have been accused more than once in recent months of remaining silent in face of the ever noisier battle in Europe between the principles of democracy and dictatorship. A fortnight ago it was left to M. Blum to speak up for liberty and equality after the totalitarians had had their hysterical say in Nuremberg and Moscow. The three speeches, therefore, by Mr Eden, Sir John Simon and Mr Winston Churchill last week-end, all actively championing the cause of political freedom, were very refreshing indeed. If there is any issue on which all British opinion is united, it is this; and certainly no speaker could get a hearing at either of this week's party conferences who questioned the fundamentals of Parliamentary government. For never were the ghastly consequences of appealing to political force more apparent than to-day. In Spain the horrors of war and anarchy have been let loose; and in Europe as a whole peace is threatened by the aggressive inclinations of dictators who are perpetually seeking to divert their peoples from internal affairs by threats against other nations. At the same time, this week's monetary agreement has added a new economic bond to those already linking the democratic countries together. The French democracy has refused to fall back, like Germany, Italy and others, on a totalitarian economy designed to "defend" the currency. In the United States the Press is talking of a "democratic *entente cordiale*." Here is yet another opportunity for British, French, American and other democratic statesmen to resume the international leadership that is fast slipping from their hands.

The Spanish Government at Bay.—On Thursday, September 24th, the Spanish Government made a desperate effort to stem the advance of the western rebel army upon Toledo and Madrid by opening the Alberche dam, which holds up the main water supply of Madrid. A vast mass of water flooded down upon the confluence of the Alberche and Tagus rivers at Talavera, which it was hoped would sweep away the camps and dumps in the rebels' advanced positions. Whatever damage Colonel Yague's force may have suffered, the rebels' progress has not been checked; Toledo fell at 9.0 p.m. last Sunday, with the defenders of the Alcazar still heroically holding out. The enemy is now at the threshold of Madrid, and the capital is a city which, in regular warfare, is not easy to defend. According to the comparatively merciful rules of the conventional war-game, the next step would probably be the evacuation of Madrid by the Government and its "peaceful" occupation by the insurgents. But in the conditions of a Spanish civil war it is probable that the Government will be inclined to fight to the death. The strategy of the rebels, however, is likely to aim at cutting Madrid off from its sources of supply and starving it into surrender; and already part of their forces seems to be swerving to the right in order to cut the railway between Madrid and Valencia. Meanwhile, as the toils close round Madrid, the reign of terror in the unhappy city is becoming daily more atrocious—in spite of the Government's apparently genuine, and temporarily successful, efforts to keep it in check. At the same time, at Geneva, the Spanish Foreign Minister, Señor del Vayo, has publicly denounced the non-intervention arrangements between the Powers. It must be said that the proceedings of the London non-intervention committee give some colour to his bitter complaint, notwithstanding the news of Portugal's belated adhesion to the agreement on Sunday. On the one hand, this Portuguese adhesion is hedged about with sweeping reservations. On the other, the procedure agreed upon by the committee for dealing with allegations that the agreement is being violated appears to preclude the entertainment of any direct representations from the Spanish combatants by laying down that "alleged breaches of the agreement will only be considered if the complaint is submitted on behalf of one or other of the countries that are parties to the agreement."

Geneva this Week.—Since the settlement last week of the question of the credentials of the Abyssinian delegation at the present session of the Assembly, the focus of interest at Geneva has shifted from Abyssinia to Spain. But whichever of these two unhappy countries happens to be in the limelight, the reflection cast upon Anglo-French policy is the same. A Franco-British anxiety—wholly praiseworthy in itself—to stem the drift towards another war between the Great Powers of Europe seems to be leading the two Western Powers ever farther along the dubious road of avoiding trouble by saving appearances. In the Assembly on Monday M. Litvinov attacked this attitude, and declared that "some countries strove to seek salvation in neutrality, but were often unconsciously placing their neutrality at the service of the forces of aggression." M. Litvinov also referred bitterly to the consequences in Spain of the working of the non-intervention agreement to which the Soviet Government was (reluctantly) a party. In making his accusation that the non-intervention agreement was being broken in the rebels' favour by foreign Governments, the Spanish Foreign Minister named no names—apparently because he had been warned that, if he did, the President of the Assembly was likely to call him to order. For the Spanish delegate's audience the most telling passage in his speech was his suggestion that, while the classic kind of war might be dying out, we were approaching a time like that of the Wars of Religion, when not nations but ideas were at war. M. Delbos, when he replied last Saturday, simply deplored the dangerousness of the "ideological mobilisation of Europe" and expressed a pious hope for "relief in the economic as well as in the political tension." In fact, his speech might be read as a tacit admission that M. Blum's Government would abandon Spain as his predecessors had abandoned Abyssinia.

The Gold Bloc's Economic Position.—The economic position of the former gold bloc countries is of special interest in the light of the past week's events. That France, Holland and Switzerland have suffered a severe contraction of economic activity since 1931—and still more since 1929—is clearly shown by the following table:—

ECONOMIC POSITION OF GOLD BLOC COUNTRIES						
	1929	1931	1935	Jan.-July		
				1935	1936	
France:—						
Industrial production (1929=100)	100.0	88.9	67.4	66.4	71.4	
Applications for work	10,052	75,215	465,875	415,964	458,543	
Imports } Million francs	4,852	3,517	1,745	1,760	1,972	
Exports } Monthly averages	4,178	2,536	1,289	1,294	1,182	
Holland:—						
Industrial production (1929=100)	100.0	79.0	66.3	68.2	69.8	
% unemployed	7.1	18.1	36.3	33.9	35.4	
Imports } Million guilders	229	158	78	76	78	
Exports } Monthly averages	166	109	56	53	54	
Switzerland:—						
% wholly unemployed	5.9	11.8	8.3	10.4	9.1	
Imports } Million francs	228	188	107	104	91	
Exports } Monthly averages	175	112	69	65	66	
Great Britain:—						
Index of business activity (1929=100)	100	88.8	101.6	99.6	106.1	

* August.

† July.

Although signs of recovery have been apparent, in some cases, since the beginning of this year, all these countries remain depressed. Business activity in Great Britain surpassed the 1929 level last year and has since tended strongly upwards; in the gold bloc countries, however, production is still around 70 per cent. of the 1929 figure. The scope for recovery is correspondingly great, and it may be confidently expected that forces of revival will be strengthened under the new regime.

Devaluation and French Exports.—In view of the probable repercussions of devaluation on international trade, it may be well to analyse the export trade figures of each of the gold bloc countries, and to show which are the leading commodities in each case, and how the returns for 1935 compare with those of the pre-depression year, 1929.

France's exports are distributed over a fairly extensive range of articles, the most important being metal goods, textiles and "luxury articles":—

FRENCH EXPORTS (In millions of francs)		
	1929	1935
Chemicals*	748	298
Cotton yarn and manufactures	2,942	855
Fruit and nuts	577	117
Glass and pottery	892	187
Prepared hides and skins	882	136
Iron and steel	2,127	639
Machinery, apparatus and parts	2,193	669
Metal wares and tools	1,850	551
Automobiles and parts	1,609	524
Paper	536	242
Perfumery and soap	861	223
Precious stones	1,244	140
Rayon tissues	889	287
Silk	1,526	145
Sugar	717	327
Wool, yarns and manufactures	3,290	407
Total exports	50,139	15,473

* Chloride of potassium, quebracho, fertilisers.

The value of the exports of all the commodities given in the table slumped heavily between 1929 and 1935, but the decline has not been uniform. The shrinkage of sales of textiles, for example, has been much more marked than the decline in exports of metal goods. Thus, the value of silk tissues exported in 1935 was less than one-tenth of the 1929 level. French specialities, such as perfumery and wine, have suffered a severe contraction. The majority of French export industries, accordingly, may derive considerable benefit from devaluation if costs do not rise unduly.

Swiss Exports.—The largest items in Switzerland's export trade are machinery and instruments, clocks and watches, dairy products and textiles, especially cotton and silk manufactures:—

SWISS EXPORTS (In thousand francs)		
	1929	1935
Aluminium, and its manufactures	49,351	22,322
Cheese	103,661	34,531
Cotton manufactures	218,702	66,514
Instruments and apparatus	39,907	16,947
Machinery	197,403	77,657
Condensed milk	39,795	4,755
Silk manufactures	201,232	36,560
Watches and clocks	267,283	123,635
Woollen manufactures	44,226	8,859
Total exports	2,076,195	791,569

As the British engineering industry is unable to meet even the requirements of the home market, an expansion in Swiss exports of machinery and instruments may be felt most keenly by German manufacturers producing similar goods. Devaluation may enable Switzerland to regain some of the trade lost in clocks and watches; but in textiles Swiss exporters will have to face keen competition from France.

Dutch Exports.—Though the nature of Holland's export trade differs widely from that of France, it has suffered a scarcely less marked contraction since 1929:—

DUTCH EXPORTS (In thousand Gulden)		
	1929	1935
Butter	86,339	26,198
Cheese	79,057	23,464
Coal	64,109	21,941
Cotton manufactures	109,041	16,353
Electric lamps	27,815	5,874
Flower bulbs	40,365	21,642
Margarine	40,139	1,375
Pork	68,484	17,546
Condensed milk, sweetened	38,904	15,599
Vegetable oils	65,862	24,785
Vegetables	94,370	21,879
Total exports	1,989,431	675,104

A substantial proportion of Dutch exports consists of dairy products, meat, vegetables and margarine. The scope for expansion is somewhat limited owing to the imposition of duties and quantitative restrictions by the United Kingdom—the principal market for Dutch exports of foodstuffs. Although Holland's exports are in the main non-competitive, there are a number of industries, such as wireless and electric lamp manufacture, vegetable oils and coal, where an expansion of exports might cut into Britain's share of international trade.

* * *

Dutch East Indies Exports.—The Dutch colonial possessions in the East Indies are an important source of some of the world's primary products. The export trade of the Dutch East Indies has suffered severely in recent years owing to the fall in the prices of primary commodities, and as a result of the growth of economic nationalism in former importing countries. The resulting changes in the exports of some of the leading commodities between 1929 and 1935 are shown below:—

(In millions of guilders and thousands of metric tons)

	1929		1935	
	Value	Volume	Value	Volume
Coffee	70	83	19	83
Tea	86	83	37	74
Sugar	311	2,982	36	1,410
Tobacco	83	85	36	51
Rubber	235	315	70	321
Petroleum and products ...	164	3,704	87	5,388
Total (all exports)	1,443	...	483	...

In the case of coffee, tea, rubber and petroleum the volume of exports has been well maintained, but the return per unit has shrunk considerably. Exports of tobacco and sugar suffered a severe decline in both volume and value. The catastrophic fall in Java's sugar exports is mainly due to the increase of subsidised production by former importing countries. The output of tin, another important raw material produced in the Dutch East Indies, was reduced from 35,730 long tons in 1929 to 24,719 tons in 1935. Other primary products exported by the Dutch East Indies in substantial quantities include sisal, copra and pepper. As devaluation is likely to be accompanied by an expanding world demand for primary products, the Dutch East Indies may experience a marked increase in the value of exports. The outlook for the prices of some of the principal commodities produced by the Dutch East Indies is discussed below.

* * *

Devaluation and Commodity Prices.—In view of the importance of the Dutch East Indies as an exporter of primary products it has been suggested that the devaluation of the guilder may be followed by a fall in prices. A wider profit margin, it has been argued, may induce Dutch interests to endeavour to secure a larger share of world trade by cutting prices. Some deflationary tendency there may well be—at the outset at least—but it may be questioned whether it is likely to go far. Supplies of rubber, tea and tin, three of the leading commodities produced by the Dutch East Indies, are strictly controlled by international restriction schemes. So long as supplies are not increased, there is no ground for expecting a serious fall in prices. Only this week the International Rubber Committee decided to leave export quotas unchanged during the fourth quarter of 1936. The Dutch authorities moreover, have already taken steps to prevent an expansion of native shipments by increasing the export duty on native rubber from 37 guilders to 47 guilders per 100 kilogrammes. The rubber, tea and tin markets have, in fact, remained quite steady in the past few days, while tin prices have risen in anticipation of an early agreement with Siam. Petroleum output is also "controlled" by international agreement. It is possible, however, that the Government of the Dutch East Indies may endeavour to stimulate

exports of sugar, sisal, coffee and tobacco, and that its action may have a somewhat detrimental effect on British East Africa. But the output of these commodities cannot be increased at short notice; and, before larger supplies are available, world demand for primary products, including demand from France, Holland and Switzerland, may itself have expanded. Altogether, there need be no surprise that devaluation has caused so little disturbance in the commodity markets this week. For the rest, the continued advance of wheat is due to unfavourable crop prospects. The marking-up of cotton prices has been due, in part, to the depreciation of the pound in terms of the dollar.

* * *

Devaluation and British Industry.—What conclusions do these figures suggest for British industry? It is still too early to assess the probable repercussions on individual trades in great detail. M. Blum's "New Deal" measures are not yet fully operative, and it is consequently impossible at this stage to estimate the future French cost, in terms of sterling, of producing, say, a given quality of worsted tissue. A marked industrial revival in France, Holland and Switzerland would stimulate world trade, and help the British shipping, shipbuilding and ancillary industries, including coal mining in South Wales. The cheapening of the two francs and of the guilder may divert an increasing volume of tourist traffic to France and Switzerland at the expense of Germany and Austria, and it may reduce the number of French visitors to Great Britain. The total volume of tourist traffic, however, will probably be increased. Apart from such general effects, it is necessary to distinguish between probable changes in direct Anglo-French, Anglo-Dutch and Anglo-Swiss trade, and changes due to increased competition in foreign markets. As far as foreign markets are concerned, France and the two other countries stand to gain most in the case of goods which embody a large proportion of labour costs. Thus, the automobile and textile industries of France, the machinery, clock and watch trades of Switzerland and the electrical appliances industry of Holland may derive an advantage from devaluation on the international market. In the case of wool tissues, in particular, France may tend to displace some of Yorkshire's products, for her exports have fallen from 43.3 million lbs. in 1929 to 5.7 million lbs. in 1935. In the foreign trade in linen and silk goods France may also gain a competitive advantage. Moreover, the improvement in the export trade of France, Holland and Switzerland may not be compensated at once by rising imports. If anything, the imports of these countries, especially of finished goods, may tend to fall at first, and it will probably take time before the increased purchasing power derived from expanding exports will react on imports. This is particularly the case in the direct trade of the three countries with England. But there is no danger that the British market will be flooded with French goods; the tariff and customs officials will see to that. France may, however, attempt to regain her lead in fashion goods, and to increase her exports of "luxury articles" generally. On the whole, however, the events of last week-end are likely to be beneficial rather than prejudicial; for British industry has everything to gain from increased world prosperity.

* * *

On the Eve in Palestine.—The situation in Palestine is rapidly moving towards deeper complications. The outstanding events of the last few days have been the arrival of the powerful reinforcements to the British Army on the spot; the consultations between the Palestinian Arabs on the one hand and the four independent Arab sovereigns of Saudi Arabia, the Yemen, Iraq and Transjordan on the other; and, finally, the publication of "The Palestine Martial Law (Defence) Order-in-Council, 1936." The new Order, which requires a proclamation by the High Commissioner in Palestine in order to bring it into force, goes far beyond the introduction of martial law on the ordinary

terms. General Dill, the General Officer Commanding, is to be empowered to make regulations for the public safety which will not be open to challenge in any civil court of law, and to set up military courts of his own for the trial of offences against these regulations—with discretion to exempt the decisions of these military courts from any appeal, challenge or review. The attribution of these arbitrary powers to a military officer is the more startling in view of the wideness of the field over which he is to be entitled to exercise them. The General may establish a censorship; he may execute arrests, detentions, exclusions and deportations; he may control harbours, ports, aerodromes and landing-grounds, as well as the movement of ships and transport by land, air and water; he may regulate trade, and decree the appropriation, control, forfeiture and disposition of property; and he may inflict communal fines, or the forfeiture and destruction of property, as punitive measures. In fact, the new Order-in-Council distinctly transforms Palestine into a totalitarian State under a military dictator. With so free a hand to use the ample military forces under his command, it cannot be doubted that General Dill will find himself able to crush any overt resistance—passive as well as active—that the Palestinian Arabs could conceivably put up. He can not only drive the guerillas off the field; he can break the strike of the Arab labourers and cultivators and shopkeepers. But we come back once more to the insistent question: "What next?" Can these things be done without destroying all prospect of that eventual understanding between Arabs and Jews which is the only hope for the future?

* * *

Sino-Japanese Crisis Again.—The troubled course of Sino-Japanese relations has now culminated in the inevitable batch of Japanese demands upon the Chinese Government. Although these have not yet been made public officially, report declares them to be alarmingly far-reaching. They are said to include an insistence upon "autonomy" (especially on the fiscal and financial side) for "the five northern provinces." There is a renewal of the demand for "economic co-operation"—a vague formula which may mean as much as the Japanese have the will and the power to make it signify. Japanese troops are to be stationed at points along the Yangtse River for the protection of Japanese lives and property. Is this riverain chain of Japanese garrisons to stretch right up to Chengtu, the scene of one of the "incidents" which are the pretext for this fresh Japanese forward move? If so, the Japanese are demanding a military entry into China which will enable them to isolate one half of the country from the other and to hold the whole of it strategically at Japan's mercy. There is also reported to be a demand for the right to supervise Chinese school-books and to superintend Chinese schools with an eye to eradicating anti-Japanese propaganda. On a long view, educational control over China might be more effective for Japanese imperialist purposes than either military garrisons or economic monopolies. If this outline comes anywhere near the truth, it is hardly conceivable that the Chinese Government can even nominally accept the new Japanese demands. President Chiang Kai-shek is hurrying back from Canton to Nanking; and, meanwhile, there has been no explosion at Shanghai. But in a statement to foreign press correspondents at Tokyo last Monday, the Japanese Minister for Foreign Affairs, Mr Arita, declared that Sino-Japanese relations had now come to a crisis. "The present negotiations can end only in one way. Either our relations will be very much better or very much worse." Apparently the Japanese have made up their minds to offer China the choice which might have been offered to Jonah by his whale: "You had better come quietly into my mouth, for, if you won't, I warn you that I am going to snap you up." It was no doubt unnecessary for the whale to add that on either alternative he would be swallowing Jonah whole. Are the Japanese really now opening their mouths to take this final gulp? If so, they may find it harder to digest their catch than to swallow it; for, after all, Japan is rather a small whale, while China is an enormous Jonah.

Six Months' Revenue Returns.—The returns of Revenue and Expenditure for the six months ended September 30th, which are printed on page 12, nominally cover half the financial year. In fact, however, the heavy concentration of revenue in the last quarter of the year makes it impossible to derive any exact idea from the present figures of the probable ultimate outturn of the year. It is already clear, however, that the forecasts of very greatly increased expenditure are going to be completely fulfilled. Expenditure in the first half of the present financial year has been no less than £19,047,926 more than in the first half of 1935-36. This increase is entirely due to the Votes for the three defence services, for expenditure on the Civil and Revenue Votes has been £1,283,420 less than last year. On the other side of the account, Revenue is £1,163,756 less than last year, so that the deficit on the six months' working is £80,392,290, or £20,945,170 more than last year. The decline in revenue is due in the main to lower receipts under the heads of Income Tax and Death Duties. The latter decrease is presumably fortuitous, and there has been an announcement in the Press in the last few days of a further large payment to come from the Ellerman estate. As for Income Tax, the receipts of the first two quarters of the year consist largely of the instalment due on July 1 of tax on individual incomes, and this year's July payments, compared with last year's, would reflect the effect of the concessions in allowances made in the Budget of 1935. There is thus no reason to believe that the Budget estimate will not be realised. The future course of expenditure, on the other hand, is quite problematical. The state of our public finances does not improve as time, and the rearmament programme, move on.

* * *

Retail Trade in August.—The value of retail sales in August, as recorded in this week's *Board of Trade Journal*, fell to the lowest level of the year; but the decline was entirely seasonal. If allowance is made for seasonal variations, retail turnover has been rising almost without interruption during the past three years. Turnover in August was 7.4 per cent. higher than a year ago and about 18 per cent. above the level of the corresponding month in 1933. During the same period the *Economist* index of business activity registered a rise of 20 per cent.:—

INDEX OF VALUE OF RETAIL SALES, GREAT BRITAIN
(Average Daily Sales in 1933 = 100)

Period	Other		Total
	Food	Merchandise	
1932	102	99	101
1933	100	100	100
1934	103	103	103
1935	111	108	109
1935—July	105	113	109
August	107	81	94
September	110	99	104
October	112	114	113
November	116	115	115
December	133	160	146
1936—January	115	118	116
February	116	88	102
March	117	97	108
April	121	113	117
May	116	121	118
June	119	109	114
July	115	116	115
August	116	85	101

The improvement in sales over August last year was shared by all the districts of Great Britain; it was most marked in Suburban London (+ 10.4 per cent.) and smallest in Scotland (+ 3.9 per cent.). Sales of food and perishable articles in August, accounting for about 57 per cent. of total sales, were 8.8 per cent. above the level of a year ago. The increase in the turnover of other merchandise, amounting to 5.7 per cent., was less marked. Sales of piece-goods, men's and boys' wear and sports and travel requisites were actually smaller in value than in August, 1935. On the other hand, sales of boots and shoes were 10.3 per cent. higher than a year ago, and turnover in women's wear and

OVERSEAS CORRESPONDENCE

EFFECTS OF DEVALUATION

[The following special messages from our correspondents in France, Holland, Switzerland, the United States and Germany discuss the effects in these countries of the devaluation of the gold currencies.]

FRANCE

A MODERATE DEVALUATION

DEVALUATION has come, and the French Government now embarks on a new experiment. But the objective remains the same: to induce hoarded savings to re-enter active circulation. The experiment of deflation and that of "reflation" without devaluation were unsuccessful. The next question is whether confidence will return, now that the spectre of devaluation is in the past and not the future. Will capitalists buy public funds and industrial securities and stimulate a fall in the rate of interest, a revival of business, an increase of fiscal receipts, and a diminution of unemployment?

In general, public opinion was aware of the inevitability of devaluation. It was thus less surprised by the decision in itself than by the so-called "duplicity" of a government, which had sworn fidelity to the franc in order, it is being said, to obtain large subscriptions for its "baby bonds" issue. This is a regrettable accompaniment of the start of the new experiment.

Economic experts were astonished by the very moderate percentage of the devaluation. They had foreseen a percentage of 30 to 50 per cent. Was this moderation a necessary condition of the tripartite monetary agreement? Even if it was, the agreement is generally welcomed, as opening the way to a better collaboration between the democracies—with or against the dictatorship countries—aimed at the revival of business and the preservation of peace in the world. M. Blum's declaration was remarkable for this, among other things, that the final choice of devaluation was dictated to the Cabinet by its desire to reject the policy of economic dictatorship and autarky. But the very moderation of the devaluation may complicate the French Government's task, since it leaves, unfortunately, little margin for the Treasury, which may very soon have to launch new loans. In other words, the French experiment must work rapidly if it is to succeed, and public opinion does not seem disposed to give it an enthusiastic reaction.

THE DANGER OF RISING PRICES

The possibility of a rise in prices and of social unrest is also pressing. It originally appeared that M. Blum had conceded to the Communists a sliding scale to adjust wages and various measures to compensate injustices created by devaluation; and to the Radicals he had promised social tranquillity. These material concessions threatened, however, to nullify the collective benefit of the devaluation. The sliding scale was thus rejected by the Radicals. M. Bonnet declared that there was no reason for not extending the system to peasants, rentiers, etc.; and the Communists agreed to replace this scale by the grant of wide powers to the Government to maintain the purchasing power of the franc by means of price decrees and other necessary measures. But the Senate is refusing to accept these full powers. Its view is that these provisions are not necessary unless the rise in prices actually materialises. Had not M. Blum himself declared that he did not see how devaluation could lead to a rise of prices? The first aim of the Government must be to impede this rise of prices by other means, and particularly by putting aside the social measures which have been added to the devaluation Bill, and which are creating many new charges on the Budget.

The suppression of quotas and the reduction of tariffs appear to be obvious methods of stemming the rise of prices. But such measures will encounter much opposition, and notably among the farmers, who are calling for an increase in the price of wheat. This circumstance makes the French experiment very different from the Belgian one. On the question of industrial prices and the suppression of

quotas, it is pointed out that in May French prices were 12 to 15 per cent. higher than world prices. A further increase of 8 per cent. resulting from the social laws—which will probably reach 10 or 11 per cent.—must be added to that margin, and the Government believes that the rise in the costs likely to result from devaluation will not be less than 3 per cent.; so that the benefit of the devaluation for the French prices are already substantially nullified.

On the other hand, costs may be diminished by the revival of business and the reduction of interest rates and indirect taxes. But this revival presupposes the maintenance of social peace. M. Blum declared in his speech that he would protect public order; that strikes were already diminishing; but that he would not take aggressive action against the workers, since he did not wish to lose their confidence and support. But the proposal of the Trade Unions to legalise strikes accepted by a majority of the workers—i.e. by their responsible organisations—and to institute an official closing of factories in cases where conciliation and arbitration have failed, will hardly obtain the support of the Radicals.

The public is inclined to believe that the promise of maintaining the franc and of avoiding new "stay-in strikes" have both been broken by the present Cabinet. But the political issue in the end will depend on whether or not there is a rise in prices, particularly in the prices of meat and coal.

On the other hand, there has been an improvement in sentiment since the new agreement was reached in the Northern textile trade, and since the Radicals began their offensive in favour of property and the "liberty of labour." The impression that public opinion supports this offensive was confirmed by recent local elections, which were not a success for the extremists. The Communists' policy remains opportunist. For the sake of the maintenance of the Popular Front, they first abandoned their desire to intervene in Spanish affairs, then their opposition to devaluation, and finally the sliding scale for wages. But will they make a new rise in prices the occasion for further industrial conflict? Such conflicts would impede the rapid return of confidence which the success of the devaluation requires. For, if confidence in the probability of a rise in securities and fall in the rate of interest does not exist, the devaluation will not produce the favourable effects which the Government expects from it.

PARIS, October 1.

HOLLAND

"NATION TAKEN UNAWARES"

THE long debate for and against the gold standard has now been resolved in Holland also by the Government's surprising midnight decision last Saturday to prohibit the export of gold.

In Holland this decision came very unexpectedly. The apprehension and uncertainty surrounding the French franc had naturally exerted their influence on the Amsterdam foreign exchange market and the Stock Exchange, but there was not the slightest sign of any panic or a pronounced devaluationist movement, even on Saturday after France had already decided to devalue. The guilder had been well maintained during the previous week, and there had recently been regular imports of gold. Even the weekly return of the Netherlands Bank (September 14th) actually showed gold imports of 5 million guilders. The following is a table compiled by the Central Statistical Bureau setting forth the imports of gold, and

the gold stocks of the Netherlands Bank since June:—

	GOLD MOVEMENTS AND STOCKS (in millions of guilders)			Stocks at Nether- lands Bank
	Imports into Nether- lands	Exports from Nether- lands	Balance	
June 21-27	6.2	2.9	+ 3.3	589
June 28-July 4	1.6	2.6	- 1.0	594
July 5-11	4.3	2.1	+ 2.2	611
July 12-18	2.0	1.6	+ 0.4	624
July 19-25	23.1	1.8	+ 21.3	629
July 26-August 1	1.0	1.6	- 0.6	642
August 2-8	12.2	2.2	+ 10.1	651
August 9-15	13.6	1.3	+ 12.2	659
August 16-22	18.8	1.7	+ 17.1	663
August 23-29	8.4	4.1	+ 4.3	672
August 30-Sept. 5	14.5	1.2	+ 13.4	682
Sept. 6-12	9.5	1.5	+ 6.4	696
Sept. 13-19	16.2	1.9	+ 14.3	701

From this it will be seen that recently there has been no question of any weak tendency or pressure on the guilder. Confidence in the guilder had, if anything, been enhanced rather than undermined, and apprehension of devaluation had been dismissed from the minds of many people. This explains why it was possible to maintain tranquillity up to the very last moment. Even after the devaluation of the French franc became known, there was not the slightest suspicion of panic on the Amsterdam Exchange on Saturday morning. The Stock Exchange, which remained open, could even be termed quiet; and the leading shares barely recorded any advance. The confidence and quiet were in part induced by the official statement of the Government that they would continue to pursue the existing monetary policy and would maintain the gold standard despite the devaluation of the franc. The President of the Netherlands Bank, Dr. Trip, also declared that he "did not see a single reason for following the French example; for what had taken place in France was merely the consequence of a situation which, in effect, was already in existence. The economic policy pursued by the French Government was inevitably doomed to lead to this situation sooner or later. The level of costs and prices in France had been driven up instead of being kept down. . . . Such a state of affairs does not apply to our country in the slightest degree."

NO NEW GOLD PARITY

After these official statements, which were published in the Saturday evening newspapers, the nation was completely taken unawares by an official *communiqué* coming through at midnight on the very same day, stating that the Dutch Government would, from sheer necessity, proceed to devaluation, since Switzerland had followed the lead of France. The official statement was as follows:—

Since the Netherlands Government, subsequent to the measures adopted in France, announced its intention to maintain its monetary policy, the decision made by the Swiss Government has compelled the Netherlands Government to reconsider its attitude. Now that Holland is the only country in the world which has kept her currency unsullied at its gold parity and is thereby exposed to the full to pressure on her exchange rates and gold reserves, the maintenance of the Government's present monetary policy can no longer be regarded as being possible.

With a view to avoiding the necessity in the long run of abandoning the gold standard after the gold reserves of the Netherlands Bank had first been depleted to an unwarranted extent, the Government has decided, in complete unison with the opinion of the Netherlands Bank, to prohibit as from September 27th the export of gold, unless covered by an authentic certificate issued by the Netherlands Bank.

The Stock Exchange will be closed on Monday, September 28th, and Tuesday, September 29th.

It will be seen from this that in Holland a different method is being followed from that adopted by France. Holland has abandoned the link with gold. No new gold parity for the guilder is to be adopted; and a form of "managed currency," moving, like sterling, independently of gold, has thus come into being. No amendment to the coinage law regulating the gold content of the guilder is therefore involved, and Parliamentary approval is accordingly superfluous. Parliament, however, has been summoned to assemble to deal with legislation against unwarranted profiteering, etc.

The moment chosen by the Government for devaluation happens to be fortunate; for the gold reserves of the

Netherlands Bank are larger than they have been for a long time. There will accordingly be a big additional profit on the gold. A special equalisation fund, amounting to 300 million guilders, has been formed for exchange stabilisation purposes. The Netherlands Bank is technically still in a very strong position, and will have no difficulty in maintaining the lower rate of the guilder.

The actual extent of the efflux of gold from the Bank in the last few days is not yet known with accuracy. On Friday, September 25, the loss of gold was estimated at 10 million guilders; and on Saturday, when the dollar rate was above the gold export point, the exodus of gold was said to be of the order of 15 to 30 million guilders.

The Government's decision was received throughout the country with perfect calm. This is largely attributable to the influence of the broadcast speech which the Prime Minister, Dr. Colijn, delivered at 8 o'clock on Monday morning. In this speech he enjoined the nation to keep cool, and pointed out that the guilder would remain a managed currency like sterling. He did not state, however, how great the depreciation would be in terms of foreign currencies; it is generally assumed that it will be about 15 to 20 per cent., that is to say far less than in France and Switzerland. In response to the official statements issued in Paris, London and Washington, with which Belgium has also associated herself, Dr. Colijn made the following declaration:—

The Government of the Netherlands has consistently regarded commercial restrictions and instability of international monetary relations as the foremost obstacles on the road to world-wide recovery. It therefore goes without saying that the Netherlands Government is wholeheartedly prepared to co-operate in all efforts designed to abolish such restrictions and obstacles in international monetary affairs, without, however, cherishing any excessively optimistic expectations on this score.

To-day, Tuesday, several Bills were introduced into Parliament, some providing for measures to avert unwarranted rises in prices. The rise is likely to be very small, as numerous necessities of life have been very heavily taxed here; and as a result of the abolition of these emergency taxes and excise duties, prices—of bread and potatoes for instance—will remain unchanged.

The country remained so quiet that it was decided to allow the Amsterdam markets to reopen to-day. Sterling advanced from 7.46 on September 26th to 8.91, and the dollar from 1.48½ to 1.79½. The French franc was 9.40 and the Swiss franc 42. On the Stock Exchange, rubber and sugar shares advanced by leaps and bounds. Amsterdam Rubber rose from 146½ to 191, and Trading Company Amsterdam from 283½ to 351. Inland industrials, too, rose steeply, Philips Lamps advanced from 168½ to 198½, Unilever from 119½ to 145½, and Royal Dutch from 293 to 345½.

The market had little basis for its operations; for Dr. Colijn once again declared in Parliament this afternoon that the Government had no intention of establishing in the immediate future a new fixed gold value for the guilder. Devaluation by law is thus not to be expected in Holland, but only a natural depreciation of the guilder in relation to foreign currencies. The exchange equalisation fund of 300 million guilders is to be raised by the issue of Exchequer bonds.

All things considered, it is generally conceded that the decision of the Government was wise.

AMSTERDAM, September 29.

SWITZERLAND

AN INEVITABLE DECISION

THE devaluation of the Swiss franc was quite unexpected, particularly as some days ago the chief of the Federal Finance Department declared that in no circumstances would the gold standard be abandoned. Indeed, on Saturday morning the Swiss National Bank stated that the currency was not in danger. But before midday the Bank had lost 30 million francs of gold, and by 2 p.m. the Federal Government had decided in favour of devaluation.

Though the fate of the Swiss franc was not directly connected with the French currency, the French devaluation put Switzerland in a delicate position. Had the National Bank been in a position to satisfy the calls made on its gold reserve and to maintain the value of the currency at its old gold parity, that would not have been sufficient to avert the final crisis. All the gold in the world cannot save a country whose economic situation is unsatisfactory.

At first the Government showed reluctance to take such a decision, but the force of circumstances, and the economic pressure brought against the Swiss franc on the financial markets, compelled them to decide—on Saturday afternoon—in favour of devaluation; it was also decided to close the Bourses until Wednesday and to call an extraordinary meeting of Parliament on Monday to approve the Government's decision. The causes of the sudden change in Swiss monetary policy are many. In the first place, Switzerland was incapable of sticking to the gold standard when France—the backbone of the gold *bloc*—had devalued. France is the second-best customer of Switzerland; and trade with her would have become impossible. Switzerland could not remain any longer an islet of high prices in Europe. Though a small economic improvement had been recorded in the past months, the economic crisis was attacking the building and hotel industry, while the number of unemployed was quickly rising. The reduction of prices and costs into alignment with those of other countries could only be achieved by means of devaluation. The Government's deflation policy had proved a failure.

OPPOSITION IN PARLIAMENT

The Government believed that the French devaluation and consequent disintegration of the gold *bloc* afforded them an opportunity to free Switzerland from the burden and uncertainty of an overvalued currency. They also thought that their action—followed by that of Holland—might concur in bringing about that general alignment of currencies which may give a new impetus to world trade. Furthermore, the Government will have at its disposal a sum of about 650 million francs, the profit realised by the National Bank through devaluation; and this sum is likely to be used to create an "exchange equalisation" fund.

The Government's action was approved by Parliament, but a strong opposition revealed itself, and at one moment the Government almost had to resign. But, as a Cabinet crisis would not have helped, the devaluation of 30 per cent. and the measures for preventing a rise in prices were adopted. The general impression is that devaluation was unavoidable in the present circumstances, but that the Government, which was taken by surprise, perhaps showed too much haste. Devaluation may be dangerous in a country importing all its raw materials and nearly two-thirds of its foodstuffs, and production costs may increase so as to annul the advantages of devaluation, unless the Government modify their Customs policy at once.

Financial interests are fairly optimistic. Devaluation, it is felt, will stop the hoarding of money and make it more abundant and cheap; it will also foster exports and give a new impetus to the transport and hotel industry, and thus reinvigorate the Swiss economic situation. But the new policy can only succeed if the Government shows its authority and skill by preventing speculation and any rise in prices.

It is to be hoped that—as Dr. Meyer, President of the Confederation and chief of the Federal Finance Department, declared in his speech of Sunday last—the Swiss people will follow the example of the British and show the same coolness and discipline as the British did when the pound left gold.

The slight improvement recorded in the Swiss foreign trade figures during the first seven months of the year seems, from the August figures, to be continuing. Imports in August reached 87,894,257 francs, and exports 67,973,447 francs, or nearly 1,000,000 francs more than in July and nearly 8,000,000 francs more than August, 1935. Exports of the watchmaking, silk, cotton and machine industries expanded further, and there was an improvement in exports of iron, copper and aluminium manufactured goods. With the added stimulus of devaluation exporters should now be in a strong position.

GENEVA, September 29.

UNITED STATES

A "DEMOCRATIC ENTENTE CORDIALE"

THERE are three distinct sections of opinion on the Gold *Bloc* devaluation. The first is the speculative. Wall Street attributes the dullness and hesitancy of the Stock Market, despite brilliant autumn business reports, to apprehensions of foreign liquidation, especially from the Dutch, who are large holders of American shares. Secondly, general comment is almost millennial, and enthusiastically interprets the official communication as equivalent to a definitive stabilisation of the dollar, pound, franc and guilder *plus* the creation of a democratic and economic *entente cordiale* with the promise of an early lowering of international trade barriers and a vigorous revival of international trade.

Thirdly, in financial circles there are three attitudes. Some believe that the French Government has made a useful decision, but reserve comment on the probable effect on the French and world economies pending a clarification of the French Government's general policy, especially towards the Budget and labour. Others question what the monetary consequences on the mark and lira and miscellaneous Continental currencies will be. Others, again, discuss the probable course of the pound after the suspension of the recent flight of Continental capital to Great Britain and a possible return flight from London. The technical problems of co-operation between three or more Governmental funds are also provoking doubts.

The actual repercussions on the security and commodity markets so far are invisible. There is a general disposition to rate France's action as a constructive aid to world recovery, but it is unlikely to produce any immediate marked consequences on the American economy.

NEW YORK, September 30 (by cable).

GERMANY

A SURPRISE TO GERMANS

THE abandonment of the gold standard by France, Switzerland, and Holland, came as a surprise to Germans. It had been observed here that franc crises recurred at brief intervals, and it was long ago concluded that they would recur until the question was finally disposed of by devaluation. But there seemed to be no reason why the September, 1936, crisis should be the last. Nothing was known of French negotiations with London and Washington; and when the French bank rate was raised, it was taken for granted that this particular crisis was over. Immediately before the devaluation announcement, the franc exchange was steady in Berlin.

For propaganda reasons the condition of France is habitually represented to Germans as disorderly and dangerous. Sincere Press views of the outcome of the present experiment are therefore not to be expected. In business circles, however, it is thought that the maintenance of the franc by means of the present high bank rate would have conflicted with M. Blum's trade revival plans; and the view is held that French business will now get a stimulus. But, although official Germany claims that currency depreciation has brought great advantages in foreign trade to Great Britain and the United States, it is doubted whether France's balance of trade and payments will benefit much.

The public at first regarded the new devaluations as a step towards international currency reform, in the course of which the Reichsmark might be thrown into the melting-pot. This expectation did not indeed appear in the Press, which waited for an official lead; but it was shown by the movement of the Bourse. During nearly all September the share market had been dull; prices had changed little, and the standard industrials were neglected. Immediately after the French Government's announcement, shares advanced violently, and the advance continued on Monday, and ceased only after it was made clear that the mark would not be affected. The Bourse advance represented the traditional "flight into real values." After a statement by Herr Reinhardt of the Finance Ministry that mark devaluation was not in contemplation, it was announced

that there was "no question of an alteration of German currency policy."

This official announcement did not surprise Germans, who understand currency matters. But the mass of the public believes, as it is officially told, that the Reichsmark is stabilised at its full value, and concludes that it is even on gold, and in the same class as the three currencies now to be devalued. Some foreigners seemed to share the same error; for whenever the fate of the franc or the guilder has come up for discussion they have indulged in conjectures about the fate of the mark. The two questions have practically nothing in common. It is, of course, likely that Germany's currency (which, though usually represented to be in itself sound, is sometimes also described as an imperfect but necessary makeshift) may be ultimately reformed; and if there were no special obstacles in Germany's case, the best time for reform might be when other currencies are being stabilised and gold payments resumed. But the present devaluations do not raise the mark question. Since 1931 the mark has belonged neither to the Franco-Swiss-Dutch group nor to the sterling-dollar group. If anything, it belongs to a Soviet-German group; for the German system, though more complicated, is essentially the Russian. There is, indeed, a Nazi faction with industrial backers, which advocates what is called "mark devaluation," seeing therein a salutary inflation, comfortable repudiation of debt, and a cheap alternative to the burdensome export-subsidies. But this agitation was not associated with the gold standard's vicissitudes abroad.

PECULIAR POSITION OF THE MARK

The Reichsmark can hardly be discussed in terms of devaluation. In so far as it has a free market (e.g. register and travel marks), it is already devalued and unstable. Unlike other currencies, which are unstable only in time, it is unstable in time and space. A mark which is accepted at a railway booking office from some at full value, from others at a 60 per cent. discount, is rejected entirely in a merchant's office; and a mark which has crossed a frontier is entirely worthless. If value is the question, the first necessary step is not to devalue down but to revalue up. The so-called stable mark is a calculation and statistical unit. A mere declaration that this calculation mark is worth, say 30 per cent., less gold than it is to-day officially but misleadingly claimed to be, would have no positive effect, and it would compel a revision of all the other marks. A real currency reform would have to produce one single mark. This would be incompatible with the differential treatment of foreign debts. Such a mark would be real only if free transfer and a free exchange market, which

mean redemption in gold or in exchange, were restored. The existence of the debts and non-existence of a currency reserve make such a free market impossible.

If the new devaluations therefore have any effect in Germany, it will probably not be on her currency but on her foreign trade policy, and this effect must be contrary to that proclaimed necessary in the first French Government *communiqué*. For currency depreciations abroad are officially adduced as a main cause of German import restrictions and export subsidies. The new devaluations may intensify these features. It seems likely in any case that the negotiations for a new agreement with France, initiated during M. Bastid's visit to Berlin, may be retarded.

The Berlin Bourse suspended quotations of the French, Swiss, Dutch, Italian and Turkish currencies. Quotations of foreign shares were also suspended.

But the Reichsbank will not suffer any loss worth mentioning from the new devaluation. Since 1933 its holding of foreign bills has been inconsiderable, though the Rm. 6 millions booked as exchange reserve in the returns does not constitute the whole total. The debt of Germany to abroad will be considerably reduced. The last reported total, for January, 1936 (unofficial but compiled by Dr. Eicke of the Reichsbank), was Rm. 13,000 millions, of which Rm. 6,500 millions is long-term and Rm. 6,500 millions short-term. Of the decline of total foreign debt from the Rm. 23,800 millions of July, 1931 (highest estimate Rm. 26,800 millions in mid-1930), Rm. 4,000 millions was due to the earlier currency depreciations.

As the Reich and other public corporations and, with certain exceptions, also private debtors have until now booked French, Swiss, and Dutch liabilities at gold parity, a considerable new debt reduction will result. The last official foreign-debt return for the different countries (for September 30, 1933) showed, out of a total of Rm. 14,841 millions: in French francs, 1,573 millions short-term and 2,489 millions long-term; in Swiss francs, 1,354 millions short-term and 1,078 millions long-term; in guilders, 628 millions short-term and 474 millions long-term. In German currency at the then exchange rate the debts to the three countries were respectively Rm. 667 millions, Rm. 1,976 millions, and Rm. 1,864 millions; and to all three together Rm. 4,507 millions. After September, 1933 (down to January, 1936), the total long-term and short-term foreign debt declined by 12 per cent. The decline since September, 1933, of indebtedness to individual countries has not been divulged; but if a devaluation by 30 per cent is assumed, the saving to Germany would be about Rm. 1,200 millions.

BERLIN, September 29.

OTHER OVERSEAS CORRESPONDENCE

UNITED STATES

FURTHER MONETARY EXPANSION

THE six-month period between the end of February and the end of August introduced two changes in American banking which may or may not prove to be significant of altered trends. Three of these may be enumerated: (1) The Reserve authorities took formal action to limit the consequence of accumulating excess reserves; (2) Government financing, while still the largest single element in expanding bank credit, was less important than in the past; and (3) commercial loans, for the first time for years, showed a marked increase.

RESERVE BANK AND TREASURY ITEMS (000,000)

	Aug. 28, 1935	Feb. 26, 1936	Sept. 2, 1936
Monetary Gold Stock	\$9,197	\$10,163	\$10,717
Gold Cfs. in Res. Bks.	6,482	7,670	8,334
Money in circulation	5,573	5,775	6,225
Bills discounted	9	7	9
Bills bought	5	5	3
U.S. securities	2,430	2,430	2,430
Member bank reserves	5,346	5,839	6,206
U.S. Treasury (gen. acct.) ..	50	433	418
U.S. Treasury (gen. acct.) ..	3,352	3,735	4,045
Fed. reserve notes	860	1,059	1,158
Silver certificates*	629	431	356†
Natl. bank notes*			

* End of Month figures. † July.

In this six-month period the gold stock increased by about \$550 millions, which was only half the sum of the increase of the previous six months. The holding of gold certificates by the Reserve Banks increased by about \$100 millions more than the increase in the gold stocks. Apparently, this is mostly accounted for by the monetisation of the gold profit in the general fund, intended to continue the retirement of the National Bank currency, of which almost \$100 millions was redeemed. The increase in member bank reserves was but \$367 millions—substantially less than the increase in gold, because of the large increase in currency—\$450 millions—of which about \$300 millions was supplied by the Reserve Banks and \$100 millions by silver certificates. In spite of reduced gold imports and increased currency demand, the member bank reserves continued to rise and are now at a new high peak, although this is only slightly higher than the figure

BRITANNIC
ASSURANCE COMPANY LIMITED
(Established 1866)

Annual Income : : : £6,200,000
Funds : : : £26,000,000

All classes of Life, Fire, Accident,
Motor and General Insurances transacted

Chief Office: BROAD STREET CORNER, BIRMINGHAM

reached in December, 1935. Excess reserves are, however, considerably lower.

Among the reporting member banks total loans and investments rose by \$1,250 millions, while deposits increased by almost the same amount. The notable fact was the gain of \$132 millions in time deposits—the first major increase in that item for years. The increase in demand deposits was smaller than in the previous six months, but this could be attributed to the unusually high level of Government deposits on that particular date.

REPORTING MEMBER BANKS (\$000,000)

	Aug. 28, 1935	Feb. 26, 1936	Sept. 2, 1936
Total loans and investments	19,839	21,006	22,263
Loans on securities	3,109	3,117	3,177
All other loans	4,808	4,842	5,277
U.S. securities	7,877	8,690	9,263
U.S. guaranteed securities	1,035	1,201	1,236
Other securities	3,110	3,156	3,310
Reserve with F.R. Banks	4,354	4,788	5,082
Demand deposits (adj.)	13,263	14,090	14,867
Time deposits	4,960	4,900	5,032
Government deposits	557	510	820

The increase in total loans and investments was even larger than in the previous period, but of this total less than half was attributable to the financing of the deficit—namely, \$573 millions. As the buying of guaranteed securities was only nominal, the total increase in Government and Government-guaranteed holdings was only a little over \$600 millions, compared with just under \$1,000 millions in the previous six-month period. The small purchases of Government securities were not due to lack of offerings; for in that time the increase in the public debt was large, including the Bonus financing.

The distribution of the increased loans has been general, but the percentage of increase has been larger in some areas than in others.

"OTHER LOANS" (\$000,000)

District	Feb. 26, 1936	Sept. 2, 1936
Boston	286	308
New York	1,239	1,419
Philadelphia	166	189
Cleveland	185	210
Richmond	101	104
Atlanta	131	137
Chicago	357	495
St. Louis	105	119
Minneapolis	118	110
Kansas City	124	143
Dallas	120	139
San Francisco	349	376

It will be noticed that the distinctly agricultural regions show the least increase, and that the industrial areas—New York, Cleveland and Chicago—the most.

NEW YORK, September 22.

SPAIN

FOREIGN HELP FOR REBELS

THESE are moments of grave preoccupation for the men who control the Republic. The active and valuable help received by the rebels from abroad compares very unpleasantly with the slammed door marked "Neutrality" which stares in the face of the Madrid Government. This kind of thing tends to upset many calculations. It is well enough to have right on one's side and to be backed by a tremendous enthusiasm, but an old aeroplane cannot make effective answer to an ultra-modern product of a world-famous factory. Modern war is such that superiority in equipment makes it possible to remedy in no small part deficiency in numbers. If things go badly here an enormous responsibility will rest on French and British statesmen. To fight 1936 model planes one needs other 1936 model planes; and that is all there is to the situation. There have, of course, been chinks in the door of Neutrality. But very few. By and large, Neutrality has been as effective against the Government as it has been in favour of the rebels.

It is still early to note the influence of the new Cabinet. But a decided and new activity in the international field

is obvious. A great deal is being done to improve organisation in the War Department; but the multiple fronts to be defended makes this very difficult. What is important is that the Republic appears to have found at least one commanding officer with real military talent, namely General Asensio. A month ago he was still Major Asensio and in Malaga. Then he was brought up to take charge of the Guadarrama front to replace General Riquelme, and he achieved very decisive results. Now he is in command of the whole forces in the centre of Spain, but he devotes himself preferentially to the Talavera front. He seems to have the makings of a real leader of men.

THE SYNDICALISTS' AIMS

The anarcho-syndicalist National Labour Confederation, although it declined to enter the new Government, is not content to remain out in the cold. The Syndicalists are obviously in a somewhat difficult position. They have for fifty years been attacking all Governments and refusing to recognise the decisions of Governments. Their solution is to substitute the Government by a Junta and to call the Ministries departments. Señor Largo Caballero, the Prime Minister, according to the proposals made by the meeting of the various regional branches of the Confederation, would be the President of the Junta. This would be composed of five representatives of the General Union of Workers—composed of Socialists and Communists—five of the National Labour Confederation and four Republicans. President Azaña would, of course, remain in his position.

Socialists and Communists, of course, decline to accept the implication of the Confederation that it is equal in strength to these two forces. But there is here a basis for discussion. It would obviously be an advantage if it were possible to place responsibility on the shoulders of the Confederation. The new Minister of Foreign Affairs, Julio Alvarez del Vayo, has promised the foreign Press that the censorship shall be lightened.

Things are quiet in Madrid. There have been no further air raids. Food continues to be fairly plentiful, although much "queuing" is necessary. There is, however, no real shortage of essential articles, and if some rationing system were introduced there would be ample for everybody. There appears to be less activity in the way of "taking people for a ride," although these killings of Right-wing people for real or supposed activities against the "public health" still go on. To stop it entirely would need drastic action, which would perhaps call for the withdrawal from fighting fronts of reliable militias and police forces. The argument used here that this is nothing compared with what the other side is doing may be true, but it is important for the Republic that this kind of thing should stop.

MADRID, September 20.

IRISH FREE STATE

AGRICULTURAL DEVELOPMENTS

THE estimates of the numbers of live stock and the acreage under crops in the Free State on June 1st, 1936, indicate that a small increase in tillage is resulting from the Government's determined efforts in that direction. The number of milch cows and of cattle under one year, of sheep, and of poultry increased during the year, whereas the number of cattle over one year and of pigs decreased. The area under crops increased by 1.5 per cent. This increase was altogether attributable to the high prices paid for wheat and sugar beet. The increase in tillage was obtained at quite disproportionate cost to the consumer and taxpayer. The deflection of any country's agricultural production away from the direction indicated by considerations of comparative advantage needs very strong justification. It is difficult to find any such justification in the Free State, which is never likely to suffer from any food shortage in war time. If maritime communications were interrupted by enemy action in war, the difficulty which the Free State would experience would be in getting food out, not in getting it in.

The Census taken last April shows that since 1926 the rural population of the Free State decreased by 4.8 per

cent., whereas the town population increased by 9.7 per cent. This change in the ratio of the rural and urban populations reflects the industrial protectionist policy, which has caused a considerable volume of urban employment of all kinds. The employment in the towns, however, has not been sufficient to absorb the migrants from the rural areas, as is shown by the fact that a very large emigration to the United Kingdom, estimated at 78,130, took place during the intercensal period. This movement shows every sign of increasing, and it is safe to forecast that, in view of the approaching decline in the British population, and of the slowing down of the Irish birthrate, the population of the Free State will tend to decline.

POPULATION AND HOUSING

The probability of a decreasing population is very unsettling in view of the large amount of capital investment which is being financed by public borrowing. The housing programme and the schemes of hydro-electric development are but two examples of investment that may prove unprofitable owing to a falling demand. Nevertheless, the Electricity Supply Board deserves to be congratulated on the excellent results disclosed in its report for the year 1935-36. The Board earned a surplus income of £309,938 after paying interest at 5 per cent. on £10,000,000. During the year further capital expenditure of £542,590 was undertaken; the network for the distribution of current was extended to twenty-four towns or villages; the number of consumers increased by 13,667; and the units sold increased by 30,000,000 to a total of 187,000,000.

DUBLIN, September 28.

LETTERS TO THE EDITOR ARE TRAMS OBSOLETE?

TO THE EDITOR OF THE ECONOMIST

SIR.—Those members of the British Association who have been enjoying, by the courtesy of the Blackpool Corporation, free rides on a splendid tramway system, will answer in the negative your correspondent's question whether tramcars are obsolete. One notable feature at Blackpool, which I should like to see copied elsewhere, is that just after the trams leave the Cabin Halt on the North Promenade, they turn into a light railway, running on sleepers, with a short wooden fence between the road on one side and the grass-covered cliffs on the other. Hence they can run much faster and do the journey to the other Halts and on to Rossall School in a few minutes.

What people often forget is that the tram has to construct and maintain its own track, while the motor bus wears out the road maintained by the ratepayer, and even the track maintained by the tram.

2 St. Peter's Terrace,
Cambridge.
September 30.

Yours, etc.,
J. E. ALLEN.

A NEW LITTLE ENTENTE TRADE PLAN

TO THE EDITOR OF THE ECONOMIST

SIR.—In your issue of September 12th you report the new measures which have been introduced in Czechoslovakia for the apportionment of "devisen" among Czech importers. In Bratislava a short time ago the Foreign Ministers of Czechoslovakia, Roumania and Yugoslavia, i.e., the Little Entente agreed to found a common "centre économique," in Prague, with the task of improving and regulating commercial relations between the three countries.

The foreign trade between Czechoslovakia and Roumania on the one side and Yugoslavia on the other in 1934, in spite of the clearing agreement, showed an export surplus for the former.

Foreign trade of Czechoslovakia with:—

Millions of Czech crowns							
	1934		Export surplus	1935		Export surplus	Import surplus
	Imports	Exports		Imports	Exports		
Roumania	185.7	271.1	85.4	280	283	23	...
Yugoslavia	199.8	258.9	59.1	362.5	318	...	44

Although the export surplus to Roumania decreased in 1935 and there was an import surplus with Yugoslavia, the commercial debts paid to the clearing offices of the latter States, but not transferred, amounted in both countries to more than 100 millions of Czech crowns. These blocked accounts due to Czech exporters

were partly used to purchase goods from Germany which the Czech would have liked to deliver themselves. This was apparently to the double injury of Czech exporters, since with their money Yugoslavia and Roumania financed German deliveries and refused Czech offers. As Czechoslovakian exports to the clearing countries amounted in 1936 up till June 30th to about 42 per cent. of the total exports, the Czech National Bank asked the exporters not to conclude new business with certain States, including Yugoslavia and Roumania, on a clearing basis. Further exports were only to be paid for on a compensation basis, i.e., in the form of barter.

By the new economic plan which the "centre économique" intends to establish, foreign trade should be increased between the three countries, the further blocking of claims should be avoided and the existent frozen claims transferred. The new "devisen" regulations are also intended to help in the elaboration of this new plan, by controlling and regulating imports of raw materials which are to be bought as far as possible from Yugoslavia and Roumania. Doubtless some raw materials, such as iron ores and, later, copper, will be able to be bought in Yugoslavia in far greater quantities than up to now. The same applies to oil from Roumania. Later imports to Czechoslovakia of cattle and farm products could be increased, and this could give the Czechoslovakian exporting industries, especially the textile and iron trades, a new impulse. Czech frozen balances would be transferred by loans and investments.

It is obvious that there are also difficulties in the practical achievement of this plan. Raw materials have been till now bought where they were cheapest and best in quality. With the new plan, however, their price may increase and the quality grow poorer. The same may happen with agricultural products and so handicraft exports by increasing production costs. It remains to be seen if the working of the new plan will not lead to some deviation of trade and artificial canalisation of commerce.

All things considered, this new plan may be regarded as a first step towards a bigger economic area, which would be designed to grow into a closer association with Germany and the States of the Roman Pact, i.e., Austria, Hungary and Italy. It is clear that it will bring us nearer to a release of trade from the drawbacks of clearing agreements and the consequences of exchange regulation, e.g., import control, high custom duties, frozen claims, etc.

Present omens suggest that the new régime of the "centre économique" will in the end help us to abolish clearing agreements and so to return to normality.

I am, Sir,
Your obedient servant,
PIERRE A. SACHS,
The Vitkovice Mines, Steel and Ironworks
Corporation, Mor.-Ostrava X,
Czechoslovakia.

September 21.

BRITAIN WITHOUT CAPITALISTS

J. A. Hobson, reviewing "Britain without Capitalists," in *Reynolds* says:

"The substitution of full Socialism for Capitalism in this country has failed to receive the attention it deserves from many men and women with open and reforming minds, because it is deemed idealistic and impracticable.

"Now, the conspicuous merit of this book, written by an anonymous 'group of economists, scientists and technicians,' is that, ignoring the theoretic arguments of Marxism and the mainly moral indictment of Capitalism, which have occupied so much attention in controversy, it confines itself almost entirely to practical considerations relating to the wastage of the present system and the feasibility of a Soviet economy.

"After an opening chapter on 'The Economic System as a Whole,' in which the general character of the present wasteful undertakings is exposed, and a preliminary picture is presented of the new productive resources liberated under Socialism, the book turns to a detailed expert examination of the several leading industries, their present vices and defects, with the remedies which Socialism would apply.

"But whether the optimism of our writers is justified or not, the well-argued and documented case they present deserves the close attention not only of Leftists but of those defenders of Capitalism who perceive the necessity of looking to their defences."

The Financial News says: "The book is probably quite the best of its kind that has so far appeared . . . a refreshing absence of restraint . . . one of the finest tonics . . . rich in suggestions."—(28 Sept.)

LAWRENCE AND WISHART
2, Parton Street, London

BOOKS AND PUBLICATIONS

FIFTY GOLDEN YEARS

THESE two books* are contributions, major and minor, to the current celebration of the jubilee of the Witwatersrand. In their respective fields, both authors have fully proved their ability. Mr Letcher's is a substantial work of nearly six hundred pages, which is clearly the result of elaborate and painstaking research into the crowded history of the past fifty years. Its authority and detail are certain to encourage its use as a standard work on the Rand for many years to come. Mr Jacobsson, who is Mining Editor of the *Johannesburg Star*, has written an eminently readable primer, which yet contrives to include all the main historical and technical aspects of the Rand into convenient compass for the lay reader. The South African mining industry has been well served by these two historians.

What are the main impressions which are to be drawn from the two works? First, perhaps, is the feeling that the early speculators on the field were actuated almost by blind faith, which, providentially, turned out to be right. The diamond mines of Kimberley and the superficial richness of the Barberton gold deposits had attracted the adventurous, and provided some of them with quick fortunes. But no one was invested with sufficient technical knowledge to tackle the problems of the Rand immediately. It took three years before the true significance of the banket formation of the gold-bearing reefs had been demonstrated. And, for a time, the knowledge was as Dead Sea fruit; the recovery of gold from low-paying finely divided banket deposits at depth presented a desperate problem. Undoubtedly the discovery of the cyanide process meant the salvation of the Rand. Its subsequent development has increased the degree of recovery, under modern conditions, to as much as 98 per cent. The very regularity of the gold deposits has enabled operations to be controlled with more precision than could be applied to most manufacturing industries. Nowhere is the calculation of profits "at the margin" more easily applied.

The dependence of the Union upon the prosperity of the Rand has received, perhaps, sufficient stress in recent years to make any underlining of the authors' remarks unnecessary here. A few figures will suffice. In 1935 the mining companies paid £16.4 millions in dividends, while the Union Government's revenue from State ownership, income tax and excess profits duty amounted to £13 millions. The indirect economic advantage to the Union, of course, is incalculable. In the depressed days of 1932, when the Union Government resolutely opposed the abandonment of the gold standard, the average pay limit was 4.3 dwt. per ton. From the Union's abandonment of the gold standard the present boom has emerged. Ore of no more than 2.9 dwt. content can now be mined; the lives of the mines have been enormously prolonged; a construction boom has developed around Johannesburg; and share prices have ascended to record levels.

Both authors describe present conditions vividly. That they leave discussion of future problems aside must not be accounted to them as a fault. They regard the future with a confidence borne of three years of remarkable recovery, during which gold has rarely fallen below 140s. On the ultimate possibilities of currency stabilisation, and of rising mining costs, however, the reader is left to form his own conclusions, and his reasoning will lead him far away from these historical narratives into the realm of theoretical speculation. But for the reader who seeks knowledge of how the Rand happened, of how economic freebooting was transformed into highly organised industry and brought prosperity to a Dominion which would otherwise have been forced to gain a relatively modest livelihood solely from agriculture, these two books can be confidently recommended. Mr Paul Emden has already written vividly of the personalities who blazed the trail. Here the fruits of their work are graphically displayed.

SHORTER NOTICE

"A Foreigner Looks at Australia." By Paul Staal. Jonathan Cape. 237 pages. 7s. 6d.

From his observations as Netherlands Consul-General in Sydney, M. Staal has set out to do for Australia what not so long ago he did with distinction for India. But the attempt is not quite so successful, and he is open to the charge of assuming the rôle of candid friend a little too easily. It is not hard, as M. Staal does, to parade the weak side of Australia's finances, but it is probably better criticism to inquire as well—which he does not—into the counterbalancing influences which after all have kept the Commonwealth pretty steadily at no mean standard of prosperity.

However, M. Staal is shrewd, in a not too deep way, he is an admirer and friend of the Australian people; and his comments are entertaining. It is just in the last two or three pages that we are assailed by a sudden doubt. Is M. Staal advocating a benevolent dictatorship for Australia? He seems to be. The country, he says, needs a man and a leader, it needs to be taught ways of self-denial, it needs to learn vigorously how to make the most of its opportunities. Under democracy its methods of finance and its whole economy has grown slack. High tariff, high costs of production and high wages chase one another in a regrettable circle. The intervention of the State is too easy. The vaunted democratic machinery of the Commonwealth has become merely an instrument for the exaction of someone else's money by voters and its facile distribution by ministers.

None the less, easy-going and improvident as he finds them, M. Staal has a great liking for the Australian people, and he admires much that they have done. He is not to be found, however, among the ranks of those who give unqualified praise to the Australian economic recovery. He admits the outward signs of it, but he cannot agree that it is on a sound basis. He points particularly to the renewal of borrowing—£15,000,000 in 1933, £26,000,000 in 1934, and £30,000,000 in 1935 (though this figure was, in fact, reduced). Is this a sign that Australia is slipping back into the bad old ways of before 1929? The country will have to go warily, thinks M. Staal, and cut her coat according to her cloth or "some day the cloth will burst into shreds, and she will either have to go a-begging in London once more or walk about in her shirt." This seems to make pessimism too simple: there are one or two unsatisfactory points about Australian recovery at this stage; but the choice is very far from being the plain one between over-spending and "economy."

MONEY AND BANKING

THE NEW CURRENCY REGIME

THE wider economic and political implications of the devaluation of the franc are discussed elsewhere in this issue of the *Economist*. In the following article we propose to analyse the present and future relations between the franc, the pound and the dollar, and to examine the possible reactions of devaluation upon the general banking and monetary position.

The old gold parity of 65½ milligrammes of gold, nine-tenths fine, for the franc has been abandoned, and the French Government has obtained power to fix the new gold content of the franc somewhere between 43 and 49 milligrammes. Thus, in place of the former parity of Frs. 15.09 to \$1 the new parity will (on the assumption that the present gold content of the dollar remains unchanged) lie somewhere between Frs. 20.15 and Frs. 23 to \$1.

The rest is still a matter of guesswork. The French Government has still to make its selection of a point between these limits, and it does not follow that its first selection will be final. Sterling has still to find its new level against both the other currencies, whether by the play of the forces operating in the exchange markets or as the result of agreement between the three Governments. Yet even to-day it may be of advantage to discuss the question of the appropriate rates at which equilibrium between the three currencies may be secured.

On May 30th last we examined the price levels of the three countries, and tentatively concluded that the pound should then have been standing around \$4.60 against the dollar and somewhere between Frs. 82 and 104 against the franc. The cross-rate should therefore have lain between Frs. 17.80 and Frs. 22.60 to \$1. These latter rates, in fact, correspond to limits of 55½ and 44½ milligrammes of gold to the franc. Since our article was written there has been a 6 per cent. rise in French wholesale prices, on which will be superimposed the consequences of M. Blum's New Deal. British wholesale prices, meanwhile, have risen by 5.5 per cent., and American prices by rather less. American opinion, undoubtedly, would be unwilling to agree that sterling needs to fall as low as \$4.60, in order to come into equilibrium with the dollar, and some evidence can be adduced to support the American view. No one, however, would deny that at the recent rates of over \$5 the pound was over-valued.

An upper limit of 55½ milligrammes for the gold content of the franc clearly has ceased to represent the facts, and even a lower limit of 44½ milligrammes is now on the high side. Thus, the proposed new limits of 49 and 43 milligrammes (that is, Frs. 20.15 and Frs. 23 to \$1) seem to be somewhere near equilibrium. On economic grounds the establishment of a rate at or near the lower of the two limits might have much to recommend it, though on political and psychological grounds the French Government may be loath to devalue any more than is absolutely necessary.

How is sterling to be brought within the new scheme? This week's very tentative rates have been rather over \$4.90, but they are not necessarily representative of the new level of the pound. On the whole, we might find it unwise to aim at a lower rate than \$4.86, i.e. the old parity. This rate would not be too far removed from equilibrium, to drive the pound lower might cause friction between the two countries. There may be something to be said for letting the rate ride free for a short time; but if the United States were to desire our co-operation to keep the pound from falling below \$4.86, we should probably be well advised to respond.

A rate of \$4.86 to the pound, set against a cross-rate of Frs. 20.15 to \$1, would fix sterling at Frs. 98½. At Frs. 23 to \$1, the pound would rise to Frs. 112. Taking nearly the lower limit for the franc, the following scale of rates would seem to offer a reasonable degree of equilibrium

in the complete exchange triangle, judged by the level of relative prices and costs:—

Gold content of franc	44 milligrammes
Exchange Rates:—	
Paris on New York	Frs. 22.50 = \$1
New York on London	\$4.86 = £1
Paris on London	Frs. 109½ = £1

Actual events are still a matter of uncertainty. There is reason to believe that it may take a few weeks to re-establish exchange stability. There is no assurance that even the price of gold expressed in francs will be fixed rigidly at the outset. The only certainty is that the American Treasury's price will remain at \$35 per ounce. Still there is no reason to fear the wild exchange fluctuations which followed our own departure from gold. The financial world has learned a good deal more of the rules of the new game since then. In particular, it has evolved the new weapon of Government-controlled Exchange Funds. This week the French and Dutch Governments have established new Funds to supplement and co-operate with the British and American Funds, and the exchange speculator to-day runs grave danger of being caught between no less than four extremely heavy mill-stones.

The next question arises from the operations of these Exchange Funds. One change, which has now become essential, is that the American Treasury shall undertake to sell gold, not only to the central bank of a gold standard country (which to-day can hardly be discovered) but to the Exchange Funds of countries with whom it is co-operating. Doubtless this change will be made, so soon as the present temporary confusion has been cleared away. The French and Dutch authorities must equally be prepared to buy and sell gold in the same manner, while it is difficult to see how an amendment of the statutes of the Bank for International Settlements, which to-day restricts its operation to the markets of gold standard countries, can any longer be deferred. The world in short must recognise that at the moment there is no gold standard country left, in the usual sense of the term.

What is the outlook for our own interest rates? If confidence revives, some of the French capital in London will be gradually repatriated, and this may lead to a movement of gold from London to Paris. There is a tendency to assume that this will lead to a stiffening of London money rates, and under the gold standard, when an outflow of gold meant a reduction in Bank of England's reserves and a contraction in joint-stock bank cash, this would undoubtedly have been the case. To-day, however, the gold which will be given up is gold held by the Government in the Exchange Equalisation Account. This gold is segregated from the internal credit system of the country, and to carry this gold the Government has had to expand its tender issues of Treasury bills. Thus, if French money leaves the country and carries gold with it, the first consequence will be that the Exchange Equalisation Account will lose gold and take up more "tap" Treasury bills. Less "tender" Treasury bills will be available for the joint-stock banks and the money market, and this reduction in earning assets will be the counterpart to the joint-stock banks' losses of their French deposits. The banks' cash will not be reduced, but on the contrary will tend to expand through the emergence of British currency from French hoards and its return to the Bank of England. The banks' cash ratios will therefore increase. The whole movement will be the converse to what happened last May, when the influx of French money and French hoarding of British currency reduced bank cash and increased bank deposits and discounts.

Unless the Bank of England intervenes by selling gold and/or securities (it will be remembered that it bought

gold last summer to off-set the French influx of money) any French repatriation of funds will tend to weaken discount rates and to drive the banks into the gilt-edged market to replace the reduction in their Treasury bills and to prevent an undue rise in their cash ratios. Therefore, so far as the next six months are concerned, no increase in either long-term or short-term interest rates is likely to ensue from the devaluation of the franc and the repatriation of French money. The effect of such repatriation as occurs will be the exact converse of its effect under the gold standard.

A longer view is more difficult to envisage. If world trade expands, world prices rise and the will to invest capital returns in response to the restoration of exchange equilibrium over a large part of the world, then interest rates should rise in due course, and with all our desire for cheap money, we may have to conform to this world movement. On the other hand, the revaluation of the monetary gold stocks of many countries have already created an extensive reservoir of unemployed credit, which the revaluation of the gold *bloc's* holdings and the eventual revaluation of the Bank of England's gold will further increase. Any freeing of the channels of international trade and investment will render this potential credit more mobile and, *pro tanto*, delay any considerable rise in world interest rates.

These are our first thoughts on some of the monetary aspects of the events of last week-end. They are not final, for the monetary system of the world is still in process of reconstruction. The details of the new plan have still to be worked out by agreement or by force of events. But one great gain has already been achieved by the establishment of monetary co-operation between the democratic leaders of the world.

FINANCIAL NOTES

The Swiss Franc Devalued.—The devaluation of the franc has caused the immediate break-up of the gold *bloc*, and neither Holland nor Switzerland found it possible to remain on the gold standard over the week-end. Switzerland decided to devalue in principle on Saturday afternoon, September 26th, while on Sunday the Federal Council announced that the gold content of the Swiss franc would be reduced from 290 to within limits of 190-215 milligrammes. This is a devaluation of 26 to 34.5 per cent., compared with proposed French limits of 26 to 35.2 per cent. On Monday the Swiss Bourses were closed for two days. The next day Switzerland announced her intention to maintain the free movement of gold combined with the creation of an Exchange Stabilisation Fund. No definite gold parity has yet been fixed, but the proposed intention is to follow the pound and the dollar, though at a value 10 per cent. above them. Between September 25th and 30th the Swiss franc fell in New York from 32.56 to 23.01 cents or a depreciation in terms of gold of 29.3 per cent. This week's initial quotations in London were Frs. 21.32½, against Frs. 15.56 before the crisis, but the Swiss National Bank later bought gold at a price corresponding to Frs. 21.53 to the pound, and the rate promptly moved to that point. On Thursday afternoon the rate was Frs. 21.42. Forward Swiss francs are now quoted at a premium contrasted with a discount before the crisis, but the three months' rate has moved slightly during this week from 12.9 centimes to about 10 centimes premium.

The Dutch Gold Embargo.—The Dutch Government's first reaction to the Paris decision was to announce its decision to adhere to gold at the old parity. By Saturday evening, September 26th, however, when it was known that Switzerland was devaluing, it became apparent that Holland would be the only country in the world on the old gold standard, and so would become the focus of the world's demand for gold. This position would have rapidly become untenable, for the previous week's gold losses were as high as Fl. 38.8 millions, coupled with an increase of Fl. 23.6 millions in the

note circulation on Sunday. It was announced, therefore, that the export of gold from Holland and the Dutch East Indies would be prohibited, except under certificate from the Netherlands Bank, and that an Exchange Equalisation Fund of Fl. 300 millions would be created. On Tuesday, the necessary legislation was carried, together with a Bill providing safeguards against excessive price increases. The immediate result is that the guilder is now riding free. Wednesday's New York quotation was 55 cents against 67.62 cents last week, or a depreciation of only 18.6 per cent. In London, the pound rose instantly from Fl. 7.48 to Fl. 8.86, while on Thursday it was quoted at Fl. 9.08. At these rates it is considered to be still over-valued, and three months' guilders in London are at 14 cents discount. To judge from a statement made by Dr. Trip last Wednesday, Holland is for the moment waiting on events, and in particular upon the future value of sterling. The Dutch position remains sound, and markets have responded rapidly to the depreciation of the guilder. Money is very easy, and this week there has been some repatriation of Dutch capital. Still an eventual rate of about Fl. 10 to the pound appears to be indicated to bring Holland into line with other countries.

Germany's Reaction.—Dr. Schacht, in his statement to the Central Committee of the Reichsbank on September 30th, made it clear that for the moment Germany is sitting on the fence. The mark is not to be devalued. Instead, Dr. Schacht was inclined to minimise the benefits that would accrue from the devaluation of the franc, and said that the new currency agreement did not even provide for a stable relationship between the pound, dollar and franc. He professed Germany's willingness to co-operate, but insisted that even if the mark were devalued, Germany could not dispense with exchange restrictions which were forced upon her by her heavy burden of foreign indebtedness and by her difficulties in obtaining raw materials. The German Government was prepared at all times to join in international discussions designed to free international trade and payments, and at the same time to safeguard national interests. This statement suggests that Germany's aim may be to link up her co-operation in world monetary policy with the questions of her foreign debts and colonies, and in the meantime to rely on the continuance of her clearing agreements. At the same time the devaluation of the gold *bloc* currencies will place Germany's export trade at a fresh disadvantage, and so Germany may be forced by the pressure of events to abandon this attempt at a bargaining-point. At the moment, however, Germany obviously intends to do her best to wait and see.

Other Monetary Changes.—The devaluation of the franc left in the air several countries which previously had pegged their currencies to the franc. In most cases, these countries have decided to peg to sterling, with a consequent enlargement of the sterling area. In Greece the drachma had been pegged to the Swiss franc, and the sterling quotation on September 25th was Dr. 531.2. The Bank of Greece has now announced a buying rate for sterling between limits of Dr. 540 and Dr. 550, and for the moment has fixed an actual buying rate of Dr. 546 and selling rate of Dr. 550 to the pound. Latvia has abandoned its former peg to the French franc, and instead has pegged to sterling at 25.22 lats, against a rate of 15.50 lats under the old regime. Turkey has similarly forsaken the French franc for sterling. The new rate is £16.35-6.38, against a former rate of £16.34. Italy, where the lira had been virtually pegged to the French franc, is left in a difficult position. The Government is formally pledged against devaluation, but on Wednesday there were rumours that the lira would be devalued by about 40 per cent. in terms of gold, and there were rumours that sterling would rise in consequence from Lit.64½ to about Lit.90. The Spanish peseta is nominally linked to the French franc, but the internal position is so chaotic that no forecast of future Spanish monetary policy can usefully be made.

The future of the Czechoslovakian, Austrian and Hungarian currencies has also to be determined, and on Thursday afternoon the view was expressed in London that an early devaluation of the Czech crown, possibly by 20 per cent., would not be surprising. The belga, which was devalued by 28 per cent. last year, has so far maintained its *status quo*.

The Foreign Exchanges.—The London Market was closed on Saturday, but dealings were resumed on Monday, and by Thursday were fairly general. Business in French francs, however, is still suspended, and bankers are only able to meet demands from their customers for very small quantities. The Bank of England made special arrangements to supply the needs of banks having maturing forward contracts. On Monday, as a precautionary measure, francs were only so offered by the Bank at a rate of Frs. 75, but by Thursday the rate had been raised to Frs. 100. Dealings in Amsterdam and New York were on the basis of Frs. 95 to Frs. 100. A big demand for francs is anticipated so soon as Paris re-opens and dealings are resumed in London. The following table shows the net movement to date in other exchanges:

	Sept. 24	Oct. 1	Three months' rate	Sept. 24	Oct. 1
New York	\$5.06½	\$4.93½	1½ cts. pm.	1½ cts. pm.	1½ cts. pm.
Paris	Frs. 76½	Frs. 74½	Fr. 7½ dis	Fr. 7½ dis	Fr. 7½ dis
Amsterdam	Fl. 7.49	Fl. 9.08	8½ cts. dis.	13½ cts. dis.	13½ cts. dis.
Zurich	Frs. 15.56	Frs. 21.42½	17½ cts. dis.	10 cts. pm.	10 cts. pm.
Brussels	Bel. 30.02	Bel. 29.25½	6 cts. pm.	10 cts. pm.	10 cts. pm.
Berlin	Rm. 12.60½	Rm. 12.30 (nom.)	...	...	...

On the whole the market was well prepared for this week. There have been Swiss sales of sterling, probably indicating repatriation of funds, and forward Swiss francs have gone to a premium. Less confidence is felt in the new level of the guilder, and forward guilders are at a wider discount than last week. Belgian rates are practically unchanged. The market generally is still most unstable, and is awaiting the re-opening of Paris. Further alterations in rates must be expected. The Banque de France's gold losses for the week immediately preceding devaluation and suspension of dealings amounted to Frs. 2,580 millions, reducing its reserves to Frs. 50,112 millions.

Gold Movements and Prices.—Variations in the price of gold and the volume of dealings have formed an interesting background to the foreign exchange fluctuations during the past week. Up till Thursday, September 24th, the price of gold stood at about 137s. 3d. per fine ounce and dealings at the fixing were about the £200,000 figure. On Friday, September 25th, the first change came when the gold price jumped to 137s. 9½d. due probably to increased demand consequent on rumours of alignment and stabilisation. On Saturday, when the pending devaluation of the major gold *bloc* currencies was announced, there was no longer any basis for the price of gold, and at the request of the Bank of England no price was fixed. On Monday the market re-opened, and when the price was fixed at 140s. 9d., a rise of 2s. 11½d., the abnormal amount of £1,200,000 was sold, and more dealings took place afterwards. The Bank of England is understood to have operated in order to give the market a basis. This Monday gold price was based on the dollar exchange quotation of \$4.94, and subsequent movements reflected the position of the dollar exchange. On Tuesday and Wednesday the price was 140s. 7d. and 140s. 2d., respectively, and at the above prices total dealings on these two days were £1,410,000 and £1,150,000. The source of the major part of this gold was almost certainly the French hoards which had been accumulating for some time. Buyers were the British Exchange Equalisation Account, which took an unknown amount, and arbitrage dealers operating on the dollar-pound exchange, where the London price of gold yielded a profit of about 1½d. Gold shipments to New York have been substantial, and offerings of dollars in London became so considerable that to prevent the appreciation of sterling the Control found it necessary to intervene strongly as a purchaser. For the moment the

price of gold will fluctuate in sympathy with the New York exchange, and even when the French authorities fix a price for gold in terms of francs it may not at once become immutable. The turnover is likely to be heavy, for the normal arrivals from India and South Africa may be supplemented by Continental dishoarding, while, apart from operations from the various exchange funds, the United States will take gold so long as there is a premium in London over the dollar parity price.

The Money Market.—While the market was in no way affected by the devaluation of the franc, the vagaries of the calendar once more caused a temporary distortion. As was pointed out last week, heavy payments for Treasury Bills fell due on Saturday, September 26th. During the first three days of this week there were no restrictions, because these dates corresponded first to a Sunday and then to the last two days of June, when both the banks and the markets refrained from taking up Treasury Bills. On the other hand, the bulk of this week's payments for new Treasury Bills were made during the first three days, as applications were confined to December maturities. The result was that by Wednesday both the banks and the discount market were very short of money. Resort to the Bank of England was narrowly avoided, and this week's Bank return shows that bankers' deposits were as low as £60.7 millions. This is equal to only about 3 per cent. of clearing bank deposits, so that even including till-money the banks' cash ratios (except that of the bank which called on Wednesday for making-up purposes) must have been well below 10 per cent. This is a purely temporary movement, and by next week bankers' deposits should be back to about £100 millions.

	Sept. 10, 1936	Sept. 17, 1936	Sept. 24, 1936	Oct. 1, 1936
Bank rate	2½	2½	2½	2½
Clearing banks' deposit rate	½	½	½	½
Short loan rate:—				
Clearing banks	½-1*	½-1*	½-1*	½-1*
Others	½	½	½	½
Discount rates:—				
Treasury bills	½	½	½	½
Three months' bank bills	½-¾	½-¾	½-¾	½

* Loans against Treasury bills and other approved bills and British Government securities within six months of maturity; 1 per cent. Treasury Bonds and other gilt-edged stocks within six months of maturity; and other collateral respectively.

During most of the week the banks were able to induce the market to sell bills every morning, and only lent sparingly in the afternoon. The banks' buying rate for Treasury Bills is unchanged, but three months' bank bills have hardened to 1½ per cent., as they are now a January maturity.

The Bank Return.—While this week's increase in the note circulation represents quarter-day demands for currency, it also shows that up to Wednesday evening there had been no foreign dishoarding. The Bank is continuing to buy gold, but on balance the reserve is reduced by £3.3 millions.

	Oct. 2, 1935	Sept. 9, 1936	Sept. 16, 1936	Sept. 23, 1936	Sept. 30, 1936
£ mill.	£ mill.	£ mill.	£ mill.	£ mill.	£ mill.
Issue Department:—					
Gold	193.6	246.5	246.8	247.6	248.6
Note circulation	402.0	445.6	444.9	445.1	449.4
Banking Department:—					
Reserve	52.4	62.0	63.1	63.6	60.3
Public deposits	25.5	20.4	14.8	10.4	49.7
Bankers' deposits	80.9	99.8	102.2	108.0	60.7
Other deposits	39.1	37.8	38.7	38.8	40.9
Government securities	82.5	83.5	81.6	83.7	80.3
Discounts and advances	17.3	10.5	9.2	7.9	8.6
Other securities	11.6	20.1	20.1	20.3	20.4
Proportion	36.0%	39.2%	40.5%	40.4%	39.8%

The wide divergence between Treasury Bill maturities and payments discussed in the Note on the Money Market, explains the temporary transfer of nearly £40 millions from bankers' to public deposits. Bankers' deposits have been further reduced by the increase in the note circulation and a drop of £3.4 millions in Government securities.

THE STOCK EXCHANGE

INVESTORS AND DEVALUATION

DURING the past two years the majority of British investors have adopted the view that the gold *bloc* would ultimately be compelled to surrender. Successive crises have provided clear indications of general market impact which devaluation might bring, and there has been no lack of advance warning. A week ago, the process of forearming had been carried a good deal further than at any previous crisis. Investors had effected their dispositions in the virtual certainty that the week-end would bring the inevitable decision from Paris. The market was well prepared, and in no section—except, partially, in the oil share market—could it be described as vulnerable.

This week's response has therefore been relatively temperate and, on the whole, reassuring. Undoubtedly, investment opinion generally holds that devaluation was inevitable before the forces making for greater world recovery and exchange stability had real scope. Unlike that other Monday, just over five years ago, when the Stock Exchange opened dismayed and anxious, the market this week took a favourable "view" of the consequences of devaluation, and was well supported by the general investor. In some individual instances, its opening exuberance was not wholly maintained. Unilever, for example, lost part of a sensational rise, and some lack of discrimination between British and Dutch rubber shares was apparent. Conversely, the sharp initial rise in gold shares surprised the "Kaffir" market, which for some weeks past had been fearing exchange and bullion market disturbances without anticipating the depreciation of sterling in terms of dollars. Here also second thoughts were rather more calm.

This week's market movements, illustrated by the accompanying table, have shown one thing conclusively. French holders of gilt-edged securities and favourite arbitrage oil and mining counters have been slow to take and transfer their profit on devaluation. In the gilt-edged market, falls of up to 1½ points were at first recorded, but they resulted largely from initial professional operations, in anticipation of the reopening of the Paris Bourse. Yet there has been no general tendency, on the part of foreign nationals, to sell gilt-edged and deposit the proceeds in London. During the first part of the week the closing of the Paris and Amsterdam Bourses also restricted similar profit-taking in oil and mining stocks, and the hand of the professional was again traceable in part of the fall in the leading arbitrage issues. The prompt recovery in all these markets showed that the technical disturbance, at any rate for the present, is quite limited. The market has concluded, altogether, that considerable clarification of the French political and economic position will be required before foreign holders are tempted to secure their devaluation profits.

These conditions may prevail for some time to come, and may thus even out the effects of devaluation profit-taking. Conversely, they may even tend to damp an immediate response of security prices to the prospects of an expansionary movement in international trade and world commodity prices. There has, at any rate, been no general upward movement in British industrial equities in anticipation of the spread of recovery across the Channel. Such developments, although widely—and reasonably—forecast, can only supervene after the impact effect of devaluation has been experienced. Meanwhile, the market has been largely concerned with more immediate factors. The prompt advance in the shares of rubber and tea companies operating on Dutch territory, for example, has not been based on calculations of the future prices of those commodities so much as on the prospective reduction in the "book" exchange losses sustained since 1931. Certain bonds payable in sterling at fixed exchange rates, such as Finnish 4½ per cent. and the 4 per cent. Norwegian loan of 1911, have, conversely, been nominally quoted 20 and 25 points lower, respectively.

By mid-week the Stock Exchange was better able to contemplate the long-term repercussions of gold *bloc* devaluation upon the course of the markets. The slight initial excesses of depression in the gilt-edged market and of over-confidence in the gold-mining market were corrected; and for the present the markets have resumed normality—on the surface. But long-term investment calculations are clearly vitally affected by this week's currency decisions, and certain of them may appropriately be discussed here. First, we may consider the position of home industrial shares, which have been almost unmoved by the week's developments. Undoubtedly, the Stock Exchange is right in expecting British industry to gain more from international trade expansion than it could possibly lose from any "exchange advantage" of the devalued gold currencies. An analysis of the competitive position of French and Swiss industry under the new regime is given on an earlier page. It affords, as the majority of market opinion has recognised, no ground for a bearish interpretation of the prospects of domestic equities. Where individual shares have a direct interest in an appeasement of currency difficulties, the market has taken a firmly optimistic view. The degree of currency co-operation already secured, and the new alignments to sterling, may well improve the prospects of such concerns as British American Tobacco, Cable and Wireless and Furness, Withy. At some points, such as the wool textile industry, the competitive factor may be stronger, but holders of these shares may reflect that the technical position of the French industry has deteriorated in recent years. Holders of heavy industrial equities may view the effects of devaluation with relative composure, for exports of French steel are determined by International Cartel arrangements and not by price considerations.

Provided that internal recovery is maintained, there is no danger whatever of harmful consequences to the profitability of British industry. There are, however, certain long-term possibilities which the investor may be wise to consider. If a general rise in commodity prices is stimulated, industrial costs will tend to increase. The effect of such a rise on industrial earning power would depend upon the relation of raw materials to total costs in each industry, and the ease with which increased costs could be passed on to the consumer. Manufacturers of primary foodstuffs and "consumers' goods" concerns may be more affected by such a movement than the basic equipment industries. Opportunities for discrimination between these two major divisions may become more frequent, and much more important, than they have been in the past. Companies handling primary commodities, however, have more to gain from a general rise in prices. In the case of copper shares the potential effects of exchange movements on the price of the metal are, for the moment, a minor influence beside the possibility of selling from Paris. But both here and in the oil market, shares which were reasonably valued in relation to prospects a fortnight ago should experience no more than momentary disturbance now, and their long-term prospects may even be improved. Calculation of the effect of devaluation upon the profits of international concerns, like the big oil producers, is possible only to those who know how profits are divided between "gold *bloc*" and sterling markets. This week's developments will not ease the situation in blocked exchange balances. But there remains, when all is said, a clear long-run presumption that more normal Western European trade relations will ultimately provide increased profits for these concerns, and the oil share market should recover promptly from any intermediate disturbance from Paris.

The prospects of rubber and tea companies, being bound up with the success of restriction schemes, are proportionately less easy to assess. In some quarters, a weakening on the restriction front is freely forecast, on the ground

‡ Previous franc crisis.

that Dutch producers, whose costs have already been reduced to competitive levels with sterling producers, will receive an effective further reduction of a result of devaluation. For rubber, in particular, some temporary increase in native production is also expected, although the Dutch authorities have recently been more successful in controlling native supplies. Caution, and a disposition to await events, have been reflected in the International Committee's avoidance, this week, of an immediate decision on next year's production quotas. That there will be any considerable "deflation" in rubber—or tea—prices, however, is unlikely, and the market, having immediately discounted the reduction of exchange charges for "Dutch" shares, has been further helped by the firm tendency in the commodity. On the whole, shareholders may expect a moderate improvement in the industry during the next year without a widespread rise of prices.

The position of the market for gold-mining shares is one degree more amenable to prophecy. If the lower limit for the sterling-dollar exchange proves to be 4.86, the London bullion price cannot exceed approximately 144s. per ounce. But, as the market showed on Tuesday, there is a reluctance to discount such a price. On the other hand, operators have been a little disturbed by the prospect of heavy French selling of such shares as Rand Mines and Central Mining. Their position, however, is stronger owing to cautious dealing pending the fall of the franc. Investors cannot regard Monday's hurried professional marking-up of "Kaffir" prices as any indication of the trend of mining profits under the new exchange arrangements. But they may be justified in assuming a minimum gold price of 140s. in the future.

What, finally, is the outlook for holders of gilt-edged stocks? There is, at present, no real burden of foreign selling, and the initial fall in prices has been wholly rectified. If, in due course, such selling occurs, it may be offset by corresponding purchases by British banks, for reasons explained on page 21. The ultimate consequences of the past week's events, however, are more obscure. If investors are to assume that the exchange pact means the first step towards *de facto* stabilisation, and British costs, for any reason, tend to rise relatively to those of other countries, the Treasury's two reins of cheap money and exchange stability may be difficult to control simultaneously. This contingency is not likely to present itself in any forceful

LLOYDS BANK LIMITED are Custodian Trustees of the underlying securities. They collect the dividends thereon and distribute the income to Sub-Unit Holders on June 15th and December 15th each year during the 15-year life of the Trust.

STUDY THESE IMPORTANT POINTS:

1. Sums of approximately £23 and upwards may be invested through any bank or stockbroker.
2. The Managers have full power to make the Trust cumulative by retaining capital bonuses in the Trust if considered desirable, thereby augmenting the capital value and earning power of the investment.
3. All the securities in the Trust are quoted on the London Stock Exchange and constitute a list which is representative of the soundest elements in British financial, industrial and commercial life.
4. Provision for continuity of management has been made by the creation of a special fund administered by the Trustees. Security Trust Managers Ltd., the Managers of the Trust, are controlled by interests associated with Dawney Day & Company, Ltd., Merchant Bankers, 15, Moorgate, London, E.C.2.
5. Sub-units are readily marketable since the Managers undertake to repurchase any sub-units offered to them, as explained in the Booklet.

Applications for sub-units will only be accepted on the basis of the information contained in the descriptive Booklet EC1, which can be obtained, free of charge from the Managers.

SECURITY TRUST MANAGERS LTD.

form for a considerable time to come. On the other hand, if *de facto* stabilisation paved the way to *de jure* stabilisation and made possible the revaluation of gold stocks, credit abundance might endure almost indefinitely—so long as the authorities were not intimidated by a possibly rapid rise of prices.

In short, the markets are experiencing a dynamic change, but there are weighty reasons for believing that the change will work for good. The position of specialist markets—Kaffirs, oil shares and perhaps rubber issues—may require careful attention in the next few weeks. But the broad effects of the gold *bloc's* surrender, if they are allowed free and fair scope, should be of distinct advantage to commodity and industrial equities. And for some time, at least, they are unlikely to challenge the position of the gilt-edged investor under a regime of control.

INVESTMENT NOTES

Course of Share Values.—At the beginning of September there was no disposition, either on the London or the New York Stock Exchange, to regard franc devaluation as imminent. The movement of foreign capital into British and American securities continued, but it had been a more or less continuous process for months past, and until the last ten days of the month its pace, in fact, had tended if anything to slacken. There is little doubt that the interests who were chiefly concerned in the gold *bloc*, having had ample notice, had largely completed their dispositions before the French Government took the final plunge. In London and New York alike, the trend of share prices, in the early part of September, continued to advance, as will be seen from the annexed chart. A quieter

BRITISH AND AMERICAN INDUSTRIAL SHARE VALUES OVER THE PAST TWO YEARS

(1928 = 100)

British: "Financial News" Index of 30 Ordinary Shares
American: "Standard Statistics" Index of 50 Common Stocks

tone occurred in the middle of the month, without any serious reaction in values. The news of devaluation, on September 26, was hailed enthusiastically as a bull point in London and—distinctly but a little less markedly—in Wall Street. Where every prospect pleased, only gilt-edged were vile, in the sense that between Friday, September 5th, and Monday, September 28th, $2\frac{1}{2}$ per cent. Consols fell $1\frac{1}{2}$ points—though by the close of business two days later the loss had been completely recovered and normality restored. It was clear enough that the markets believed that prospects of international trade revival transcended all else. By the month-end the markets had shed some of their enthusiasm, but obviously retained

their faith. The Actuaries' Index (computed on September 29th) showed that the reaction in gilt-edged, after a month of firm "discipline," still left $2\frac{1}{2}$ per cent. Consols fractionally higher than a month earlier. The Actuaries' mixed bag of 178 ordinary shares showed a rise of 1.3 per cent. during the month, at 88.2 against 87.0 (December 31, 1928 = 100), but a fall in average yield of no more than 0.1 per cent. from 3.63 to 3.62 per cent. Among component groups, coal shares rose by 7.0 per cent., oil shares by 6.3 per cent., and home rails by 5.8 per cent., as the following table shows:—

Group (and No. of Securities)	Prices, (Dec. 31, 1928 = 100)			Yield (%)

The yield on preference shares has fallen significantly over the past year. Twelve months ago the margin between the debenture and preference yields was 0.48 per cent. The present margin is only 0.25 per cent.

* * *

Wall Street and Devaluation.—Once again Wall Street has found anticipated bad news better on arrival. Most previous franc devaluation scares have caused a setback in prices, since operators were inclined to exaggerate the amount of French funds invested in New York which on devaluation would immediately return to Paris; they over-estimated the amount of such refugee money, and under-estimated the relative attractiveness of New York as an investment centre. Both these errors are now in process of correction. Since the announcement on Saturday morning of the three-power agreement on devaluation of the franc, markets have been bullish, although there have been natural signs of hesitation until the precise form of the laws to implement the French decision are known, and pending removal of such panic money as intends to leave the visible recovery of America for the unknown of France. On the eve of the devaluation announcement, Mr Morgenthau endeavoured to allay fears of a setback to American recovery through an efflux of foreign money. And with all domestic signs pointing to continued revival of business, to an excellent crop of third-quarter reports, and to dividend distributions greatly in excess of last year, the stock markets should be able to look forward to bullish conditions for some time to come. The chief remaining problem in external economic affairs is the exact nature of the agreement, if any, between the American and British Exchange Funds on the sterling-dollar exchange rate. It may require time before the two controls achieve full co-operation and find a precise objective. But the range of potential variation is certainly not great enough to upset the general expectation that the new currency arrangements will not cause any market reactions in New York. The Presidential election is about the only disturbing domestic factor between now and the New Year, and, whatever way it turns, it is likely to have only a temporary effect, if any, upon the recovery and the course of prices on the Stock Exchanges.

* * *

Railway Freight Rebates.—Consultations are now taking place between the Government Departments and the various authorities and interests affected by the reduced assessments for local rating purposes of the railway companies and the consequent revision of the present rebates on the conveyance of certain agricultural

traffics, coal, coke and patent fuel exported or delivered to iron and steel works, and other selected industrial traffics. It is estimated that the amount repayable to the railway companies by reason of the retrospective application of the reduced assessments is roughly £10,000,000, and that the amount available as reserve out of the past payments of the companies into the Freight Rebates Fund is only about £1,000,000. It is the intention of the Government to deal with the position legislatively when Parliament reassembles, and it is understood that the measure to be introduced will provide for the repayment of the balance of £9,000,000 in annual instalments over a period of fifteen years. The effect of the new assessments will be to reduce the contributions of the railways to the Fund by about 50 per cent., and the one-fiftieth per annum instalment will be the first charge on the attenuated resources of the 1929 scheme for the relief of the transport burdens of the heavy industries and certain branches of agricultural traffic. The rebates have been in operation for five years, during which railway rate concessions have been made on the traffics affected of between £3,750,000 and £4,750,000 per annum. These sums have given the coal export trade rebates averaging between 9d. and 10d. per ton, the iron and steel industry approximately an average of 1s. 2d. per ton on the coal and coke consumed by the blast furnaces and iron and steel works, other selected industrial traffics between 9d. and 10d. per ton, and the selected agricultural traffics about 1s. 10d. per ton. During the past two years the rate of rebate has been reduced, and at the present time it averages just under 8½d. on shipment coal. It is apparently the intention of the Government that the rebates on coal supplied to iron and steel works and those granted to other industrial selected traffics shall be discontinued after November 30th next, and that the sum of approximately £1,500,000 which will be available for rebate distribution under the amended scheme will be restricted to agriculture and coal for export in the proportions respectively of 20 per cent. and 80 per cent. These contemplated arrangements are strongly opposed by the industries immediately concerned, and representations are being made to the Government with a view to their modification.

* * *

Foreign Bond Movements.—The course of foreign bond quotations showed an inevitable reaction during September. In relation to the months' disturbing crop of news which included the Nuremberg rally, tension in the Far East, and the fall of the gold *bloc*—the decline of one point in the "Municipal and General Securities" index must be accounted moderate. Movements in component indices are given below:—

AVERAGE JAN.-JUNE 1934 = 100

Aug.	95.1	113.2	100.7	99.3	89.8	97.0	100.7	105.7	95.3
Sept.	94.7	110.7	99.9	98.8	89.0	96.4	99.7	104.3	94.8

† These are current totals. From August, 1935, to April, 1936, 62 defaulted, 52 defaulted bonds.

The European index has been affected by a sharp fall in Scandinavian gold bonds, but most Central European issues have been stronger. Chinese bonds show a sharp fall, partly compensated by a net rise in Japanese issues. Apart from a fall in Brazilian "defaulted" and provincial issues, little change has occurred in the South American group.

Shareholders' Protection Association.—For some weeks, members of the Shareholders' Protection Association have been the involuntary recipients of circulars and counter-statements, putting and rebutting the view of a dissenting member that officials of the Association should not assume office on the boards of companies whose affairs were in process of investigation. At a meeting on Thursday of last week, members heard a full statement on the position. In only two cases, it was declared, had such appointments been made—on both occasions with the consent of shareholders. It was shown that such appointments might be the best way of safeguarding shareholders' interests. The meeting adopted, with one dissentient vote, a motion of confidence in the work of the Association. A somewhat unpleasant incident may, therefore, be regarded as having ended in the complete vindication of the Association's policy; and its officers emerge with dignity and unimpaired prestige from their ordeal.

COMPANY NOTES

United Steel Companies Progress.—All forecasts of the profits of this concern for the year to June last, based upon the fractional increase in dividend to $7\frac{1}{2}$ per cent., have been disproved by the impressive results published this week. Against a 10 per cent. increase in ingot production, trading profits have increased by no less than 24 per cent. from £1,243,981 to £1,545,278. Recent capital expenditure is thus bearing impressive fruits, and the latter are by no means exhausted. Analysis of the latest profits illustrates the remarkable conservatism which the company has invariably turned successfully to account:—

	Years to June 30,		
	1934	1935	1936
Trading profit and divs. from subsidiary companies	1,191,665	1,243,981	1,545,278
Directors' fees	7,053	6,999	5,963
Income tax (including net transfer to reserve)	303,638	244,198	356,122
Staff fund, etc.	25,000	48,500	110,000
Debenture and other interest and redemption	83,294	135,079	143,566
Depreciation	275,000	275,000	400,000
Ordinary shares:—			
Earned	497,680	534,205	529,627
Paid	282,023	358,937	380,441
Earned %	9.7	10.4	10.4
Paid %	5½	7	7½

General reserve	Nil	100,000	100,000
Carried forward	446,037	521,305	570,491

Although the earnings rate is unchanged at 10.4 per cent., caution is evident in the reserve provisions. Depreciation for 1934-35 took £275,000, an amount in excess of the company's formula. For the latest year, no less than £400,000 has been provided. The new pensions scheme absorbs £75,000 more than the previous year's benevolent provisions, and the income-tax provision is usually generous. The surplus is again sufficient to provide £100,000 to reserve, and nearly £50,000 to swell the balance forward. There is, therefore, no evidence that rising costs are affecting earnings, and the new coke ovens opened last year should make a significant contribution to profits. The board's conservatism may find a partial explanation in the £2,200,000 ordinary share issue of last May, which ranks for dividend during the current year. On the latest earnings, there should be no difficulty in maintaining a $7\frac{1}{2}$ per cent. dividend on the increased capital, and since the £1 stock units yield £4 11s. per cent. at the present price of 33s., prospects of increased earnings do not seem to be over-valued. The expansion of the undertaking has been soundly directed, and there are ample current resources for further development.

Stewarts and Lloyds Extensions.—The new issue of 1,042,910 £1 deferred shares of Stewarts and Lloyds at 26s. per share has been given an auspicious send-off by the directors' circular to shareholders. This issue has been expected since last May, when the chairman specifically referred to further extensions at Corby, for which temporary bank finance had been arranged. New coke ovens and additional rolling mills have already been announced; this week's circular shows that further development is already in progress to increase the iron and steel ingot capacity by 150,000 tons per annum to some 600,000 tons. Satisfactory profits on this additional tonnage are anticipated, and a general reduction in overhead costs should be effected. In addition, there is news of an important arrangement with the Lancashire Steel Corporation, by which the latter concern will take a guaranteed tonnage of semi-finished material for re-rolling at a new precision-type bar mill which the corporation is to erect on the Corby site. So far as the home market is concerned, Stewarts and Lloyds can expect a progressive increase in profits from the new extensions. But what of the export trade, which even last year took 50 per cent. of the company's total output? The collapse of the International Tube Cartel would have involved a fall in profits of nearly £700,000 for 1935, but for Corby's impressive economies. So far, profits have shown an increase this year, and the final results will be better than those of 1935. But the export trade has made little contribution to this improvement. Negotiations have been proceeding intermittently for re-forming the ranks of the International Cartel, and there is news this week that a full meeting of the interests concerned will shortly be held. Meanwhile, export prices have remained depressed, and although the company's costs easily challenge those of Continental competitors, it must probably thank the home trade for the current year's improvement. A 5 per cent. dividend can comfortably be maintained on the new capital, but at the present price of 36s.—equivalent to 34s. 3d. per share ex rights—the yield is no higher than £2 18s. 6d. per cent. The market seems already to have adequately discounted the prospects of a new Cartel.

Murex Capital Bonus.—Investors are wise who, having discovered a company with able technical management and an expanding long-term market, hold their shares for the ripe fruits of capital rights and bonuses, and steadily increasing dividends. Such a share is Murex. Since 1928, the ordinary capital has increased, by cash subscription and bonuses, from £91,330 to £553,500. Last week's dividend announcement provides the major operation of this sort, which establishes the company among £1,000,000 concerns. The ordinary capital is first to be increased to £600,000 by the issue of 46,500 £1 ordinary shares at £6 10s. in the ratio of one new for every twelve shares held. After this issue, a capital bonus of two new shares for every three shares held will be allotted, ranking for dividend from July last, which will raise the total ordinary capital to £1,000,000. On the basis of a quotation of 9½, for the existing shares, the new capital should command £5 8s. per share, yielding £4 12s. 6d. per cent. on a 25 per cent. dividend. For the large investor, the attraction of this type of share lies in the conventional marking-up of the new shares from their theoretical level, on their apparent "cheapness." It is, indeed, rare for the "ex-all" price to prevail for long. Apart, however, from these market considerations, it is evident that the company's activities are expanding rapidly, and they are largely connected with new technical processes which have great secular potentialities. Prospective income considerations, accordingly, are pleasing.

Rover Results.—The latest accounts of the Rover Company, like those of United Steel, show that a high rate of earnings may not be synonymous with expansive dividends, where directors have reasons for a conservative distribution policy. The report reveals, indeed, a distinct stability in profits, after the remarkable recovery which

had been accomplished during the previous three years. Trading profits are less than £5,000 higher at £219,375, while net profits, after normal depreciation, are over £11,000 higher at £165,282. These earnings would suffice for a tax-free dividend of nearly 32 per cent., compared with the 10 per cent. paid. Of the balance (£113,282), extra depreciation absorbs £37,500, a general reserve fund is opened with a transfer of £50,000, and the balance carried forward is increased by over £25,000. The directors have thus shown their appreciation of strong finance in an essentially speculative industry, and have built up an impressive array of liquid assets. Significant increases are shown in plant and stocks, which may include the first installation of equipment for the production of aeroplane engines. At 28s. 6d. the 8s. shares yield £3 13s. 6d. per cent. gross. They are essentially a speculative medium with a potentially important equity in the aero engine programme. Earnings from that source, however, will not mature for some time, and will at all times be subject to official control.

Specialist Engineering Companies.—Investors are showing a marked interest in the shares of light engineering companies producing various types of specialised apparatus. These devices are usually protected by patents, or are at least of characteristic design, and they serve as adjuncts to machinery or buildings. In all cases the investor must decide whether the "gadgets" of to-day are the necessities of to-morrow, or whether they will be, in retrospect, merely fads. Companies making such goods each operate, by definition, in a restricted sphere, but many have one factor in common—adequate profitability. Where the devices which they supply form a relatively small proportion of the total cost of the work in which they are incorporated, the prospect of expanding turnover and profits is usually improved. The recent accounts of three companies are analysed in the accompanying table.

Year ended	Armstrong Shock Absorbers	Carrier Engineering	Serek Radiators		
			July 31

† Dividends received. * After writing off £1,050 stamp duty. ‡ After charging a full years pref. dividend. (a) Includes £5,703 net from Reserve.

Serek Radiators alone has been a public company for some years, and manufactures radiators for cars and aeroplanes and water-cooling apparatus. The latest profits are, by a good margin, the highest recorded in a decade. Many car manufacturers continue to purchase radiators from outside sources, and the company should continue to share in the general progress of the industry. **Armstrong Shock Absorbers** and **Carrier Engineering** have only recently become public companies, but in both cases the latest amount earned for dividends exceeds the prospectus profits. **Carrier Engineering** makes air-conditioning and heating plant, for which it seems reasonable to anticipate an increasing future demand. The disclosure, this week, that the company has pioneered the manufacture of anti-poison gas filters has attracted renewed market interest in the shares. The company's field is still experimental, but it is favoured with a small capital in relation to earnings. Another company which makes a product which has passed from a scientific curiosity into a valuable control for heating purposes is **British Thermostat**, whose shares, recently marketed at 8s. 6d., now stand at 16s. The processes of the latter company are extensively protected by

patents. The other three companies either do not include patents among their assets, or else show them at a comparatively nominal figure. Although such concerns may be exposed to the risk of revolutionary inventions, the market at any rate views their future with optimism.

Debenhams' Accounts.—The improving profits of Debenhams since the financial clear-up in 1934 show that the operation was well timed, and has yielded fairly satisfactory fruits. Its effect, broadly, has been to transform a highly-g geared group system (through ordinary share holdings in Debenhams' Securities and the Drapery Trust) into a highly-g geared capital structure for the reorganised company. In consequence, an 8 per cent. rise in total profits from £654,928 to £706,446 has increased the equity earnings by no less than 41 per cent. The accounts, even when supported by the Harvey Nichols' report, are not particularly revealing, for interests in subsidiaries account for 42 per cent. of the balance sheet total of £11,700,000. At this week's meeting, however, the chairman indicated his willingness to consider amplifying the accounts to show the subsidiaries' profits. At present, they represent merely the formal division of disclosed profits:—

	Years to January 31		
	1934	1935	1936
Profit	£585,993	£654,928	£706,446
Fees	300	1,800	4,050
Debt interest	145,953	145,127	144,133
Preference dividends	270,000	379,000	379,000
Ordinary shares:—			
Earned	169,740	129,001	179,263
Paid	Nil	62,500	83,333
Earned %	13.1*	29.7	41.8
Paid %	Nil	12½	16½
Reserve	50,000	50,000	50,000
Carried forward	119,740	136,241	182,171

The increase in the ordinary distribution is very modest in relation to earnings, but a distinctly cautious policy is being adopted by the directors. General expansion in purchasing power can hardly fail to produce a further high-g geared advance in equity earnings, but whether this will encourage corresponding generosity on the part of the directors is another matter. The 1s. ordinary shares, standing at 6s. 1½d. yield £2 14s. 6d. per cent. in cash and nearly 7 per cent. on earnings, but are not a bargain in relation to their prospects during the coming year. On the other hand, the junior 10s. 7 per cent. preference shares yield £5 12s. per cent. at 12s. 6d. They are in a speculative class, but reasonably covered on present earnings.

Selfridge Provincial Stores.—The results of this undertaking for the year to August are unimpressive, even after allowance for the special factors which the report stresses. The profits of the controlled businesses have fallen from £195,375 to £162,611. The rebuilding of the John Barnes Store, it is stated, seriously interfered with normal trading and added materially to expenses, but since May the results have been encouraging. Shareholders, nevertheless, might have expected a return to more normal trading results during the past year, for this rebuilding was proceeding in 1934-35. During the past eight years the earnings available for the controlling company have fallen considerably, and the general recovery in retail trade has brought no improvement in profits. At the meeting on Thursday, the chairman stated that profits had increased in encouraging fashion during the current year. It is, perhaps, significant that the closing of three stores "will not materially affect trading results," which would appear to imply that they have not been contributing any substantial sum to recent profits. Shareholdings in subsidiary companies are valued at £3,283,882, and the current rate of earnings before charging tax is no higher than 3.21 per cent. on this sum. There are, in addition, several contingent liabilities undertaken for subsidiary companies, while the net liquid assets, after payment of

OTARD'S
ESTABD 1795

THE BRANDY WITH A PEDIGREE

£57,188 ordinary dividend, amount 'to approximately £9,000. That dividend is, in fact, slightly short-earned, and no reserve provision is therefore possible. Indeed, some £40,000 has been transferred from reserve to provide for the subsidiaries closed down. The general drapery business has not kept in step with the improvement in retail trade as a whole, but the figures do not suggest a fall in profits of the present order, particularly in view of the apparent improvement in the stocks position of the group. The £1 ordinary shares are quoted at 8s. 9d. to yield a cautionary £6 1s. 6d. per cent.

Trinidad Leaseholds.—It appears from the report of Trinidad Leaseholds that considerable success has attended the marketing of the company's petrol in Great Britain. The company treated in its refineries 8,711,602 barrels, against 7,478,438 barrels in the previous year, and made a profit from trading of £669,128, against £549,492—an increase of 22 per cent. Of the company's turnover, 40 per cent. represented production from its own fields, the remainder being purchased or drawn from fields under joint management. It is notable that the Cruse area belonging to Trinidad Central Oilfields, which the company operates on joint account, produced 826,966 barrels in the year ending June 30th last. The increase in the working expenses per unit due to the greater footage drilled was more than offset by the increase in the volume of sales and by the higher prices realised. Net earnings on the ordinary share capital amounted to 26.2 per cent., against 18.3 per cent. in the previous year. As adequate depreciation is provided out of trading profits, the company generally distributes its net earnings up to the hilt. Dividends for the year were increased from 17½ per cent. to 25 per cent., leaving £86,472, against £70,161 to be carried forward. The following table shows the trading results for the past three years:—

	Years ending June 30th,		
	1934	1935	1936
Total trading profits	£443,650	£570,431	£679,409
Overhead expenses	29,391	31,745	36,146
Depreciation	235,756	243,552	244,061
Taxes	15,000	55,000	55,000
Earned for dividend	164,503	240,134	344,202
Paid	163,945	229,523	327,891
Earned %	12.5	18.3	26.2
Paid %	12½	17½	25
Reserve	...	10,000	...
Carry forward	69,550	70,161	86,472

In view of the expansion of the company's business necessitating capital expenditure over the next few years, the directors are making an issue of shares on the basis of one new share for every four shares held, at 75s., which will be underwritten by the Central Mining and New Consolidated Goldfields free of commission. At the present price of 113s. 9d. cum final dividend of 17½ per cent., the rights to this issue are worth 6s. 10d. per share, so that the shares at the present price yield over £4 13s. per cent. on the basis of last year's distribution.

Progressive Tin Profits.—Distinctly satisfactory results (writes our mining correspondent) have been announced by Renong and United Tin Areas. The first concern, which operates in Malaya, earned £49,790 for the year ended June 30th last, against £21,860 for the previous year. Some £4,150 is provided for amortisation, etc., compared with £6,090 in 1934-35. After payment of

dividends totalling 20 per cent.—double the previous amount—an increased balance of £21,160 is carried forward. The expansion in profits arises from the progressive increase in production quotas. Thus, the yardage dredged totalled 1,577,570, as against 760,040, and the quantity of tin ore produced was no less than 703 tons, against 306 tons for the previous year. Although the price received was some £16 lower at £151 per ton, the expanding scale of operations naturally resulted in a significant reduction in costs. Permitted production averaged 58.92 per cent. of standard last year, as against 32.05 per cent. in 1934-35. On the basis of the existing quota, the domestic percentage for the F.M.S. is 65, and provided that tin prices are maintained, a further improvement in profits is probable during the current year. The £1 ordinary shares are quoted at about 35s. United Tin Areas experienced a somewhat drastic capital reorganisation scheme early last year. Earnings of £19,760 for the twelve months to June, 1936, therefore represent a substantial percentage upon the 949,950 shares of 2s. 6d. each which are now in issue. Dividends totalling 17½ per cent. leave the higher balance of £11,350 to be carried forward, after deduction of income tax, and an interim dividend of 7½ per cent. is now declared. The ore reserves, although slightly lower at 2,320 tons of concentrates, represent more than six years' supply at the present rate. The shares, quoted at 3s., obviously give a generous yield.

Other Company Results.—Our table of company profits on page 44 includes the results of twenty-four additional companies, the majority being medium-sized industrial concerns. Several have issued their first reports as public concerns, and strictly comparable figures are, therefore, unobtainable. In general, however, the results appear well up to prospectus estimates. The first *Aspro* report, covering rather over thirteen months to June last, shows a net profit of £276,256, and 25 per cent. is paid on the ordinary capital. *British Aircraft* have incurred a loss of £18,878 on the first year's trading, despite the receipt of a dividend totalling £10,500 from a subsidiary company. *Max Stone* show an initial profit of £26,496, and pay 15 per cent., while *S. G. B. (Dudley)* have earned £21,779 and pay 7½ per cent. The profits of *Laycock Engineering*, another newcomer, amount to £10,013, and comfortably cover the 5 per cent. dividend. Among property companies, *Guildhall Property* is a young concern, whose earnings have amounted to £28,226 for 1935-36, while *Clarendon Property* shows a slight fall in net profits at £31,153. *Linotype and Machinery* reports satisfactory progress in profits from £98,179 to £110,622, and the company continues manfully to overtake preference dividend arrears dating from pre-war years. An apparent fall in *Vulcan Foundry* profits is due to the inclusion of investment profits in the previous year's total. The dividend is maintained at 2½ per cent. Among this week's dividend announcements, *Thos. Firth and John Brown* have resumed interim dividends, with a tax-free payment of 5 per cent., while the total dividend of *Joseph Lucas* is raised from 12½ to 15 per cent. *London Transport* have declared a final dividend of 2½ per cent., making 4 per cent. for the year.

Company Meetings of the Week.—On later pages of this issue will be found the reports of the following Company Meetings:—Anglo-Siam Corporation, City and International Trust, E. W. Tarry, D. Gestetner, Prices Tailors, and Tebing Rubber Estates (1931). At the Anglo-Siam Corporation meeting, Mr. J. M. Ryrie referred to improvement in the results of trading with India, while, in Siam, the large rice crop promised better conditions. Mr. Louis Kiek, at the City & International Trust meeting, reported that changes in investments had been numerous, and had resulted, on balance, in satisfactory capital profits. Shareholders in E. W. Tarry learned from Sir J. Fortescue Flannery that a valuable share of Government contracts at Port Elizabeth had been secured, and that considerable business had been obtained from contractors working on Northern Rhodesia's new capital. Mr. S. Gestetner referred to the record profits and total sales of D. Gestetner, Ltd., and drew attention to the increase in fixed assets

necessitated by the growing demand for the company's products. At the Prices Tailors meeting, Mr. H. L. Price described the extension to the Middlesbrough factory, and alluded to the part played by press advertising in the company's progress. Mr. Ridsdel, at the Tebing Rubber Estates (1931) meeting, said that benefit should be obtained from the devaluation of the Dutch guilder.

THE WEEK IN THE MARKETS

THE STOCK EXCHANGE

SETTLING DAYS

TICKET OCTOBER 6 | ACCOUNT OCTOBER 8

THIS week's dealings have been remarkable in one major respect. The collapse of the gold bloc, which had been so long anticipated, has involved only a minor test of the market's stability in the event. It was, of course, adequately discounted a week ago in most groups, but even in those sections of the market where considerable devaluation profits have been made by French operators, their reluctance to take—or at least to transfer—them, coupled with the closing of the Paris Bourse severely limited the amount of selling.

The resultant technical disturbance, as we show in a leading article on page 24, has been minimised. Such slightly excessive reactions which the market permitted itself on Monday—undue bearishness in the gilt-edged market coupled with undue optimism regarding gold-mining shares—were promptly corrected, and by mid-week the market wore an air of confidence and composure—confidence regarding the beneficial effects of devaluation in the long run, and composure at the prospect of relatively limited devaluation profit-taking.

Gilt-edged stocks, inevitably, opened flat on Monday, with Old Consols 1½ points down on French selling, and the precautionary tactics of dealers. By the close on Tuesday, Old Consols had recovered a quarter of their fall, and Wednesday saw the market back to normal conditions. The fluctuations in the L.C.C. scrip were symptomatic of the trend. After opening at ¾ premium, compared with the expected point or more, the scrip steadily appreciated to 1½ premium in mid-week dealings.

Foreign bond dealers reported a strong demand for rentes and the French railway bonds, after their price had been adjusted within the new parity limits. European issues were adversely affected, and Scandinavian gold bonds lost 20 points or more. Japanese bonds opened more confidently in the hope that counsels might prevail, but were not maintained. Chinese issues, in particular, were extremely heavy. Apart from an initial rise in Brazilian issues, South American issues showed undecided movements.

The home rail market accepted devaluation as an immediate bull point, devoting special attention to the improved tourist prospects for the Southern Railway. Both preferred and deferred stocks rose smartly and maintained their gains. Great Western opened with a further rise, but made no subsequent progress. The market, however, made no response to reasonably good traffics. Argentine rail issues continued their recent improvement, further assisted by the prospect of rising commodity prices and by the progress of the Co-ordination Bill. A good deal of profit-taking affected prices on Tuesday, but the lower prices proved very resistant, despite the indifferent traffics.

Industrial equities have reflected the market's view that devaluation implies no competitive threat to home industry, and may greatly assist concerns whose interest lies in normal international trade—like British-American Tobacco, Cable and Wireless, and Furness Withy. Unilever jumped excitedly on Monday, but settled down later at more reasonable levels. The steel group opened dull, but support for United Steel on the profits (see page 27) and Tube Investments improved the market slightly. In other sections there was little specific response to devaluation, either favourable or adverse. Electrical equipment issues were initially affected by fears of increased copper prices, but the speculative rise in Crompton Parkinson on Wednesday showed that normality had been restored. Other domestic industrials, like motor and aviation, were rather irregular, and textile shares—the only “vulnerable” industrial group—were merely undecided. The major home industrials made intermittent progress, as moderate profit-taking permitted. Consolidated Signals rose smartly on Thursday.

The oil shares market saw a considerable amount of selling on behalf of Continental operators when business opened this week, but most offerings were readily absorbed and prices became firm. Business was more or less concentrated on international counters, and although turnover slackened in

mid-week the tone remained satisfactory, with encouraging news received from America. Considerable uncertainty existed about the attitude of Paris operators on the re-opening of business at that centre. Burmah were firm on the dividend, and Trinidad Leaseholds gained in the mid-week uncertain market. Dealings were active in the rubber shares market, with interest concentrated at first on Dutch issues, whose prospects were made much brighter by the guilder devaluation, and spreading later to other issues. The decision of the Control Committee not to raise the quotas for the last quarter of the year helped the market considerably. Dutch tea shares showed many good gains at the opening of business this week, but Indians were as depressed as ever, and Ceylon issues not much better. Interest died away later in the week.

The Kaffir market was very excited by the devaluation, and under the main influence of Cape enthusiasm prices were generally marked up. The higher gold price added impetus to the movement, but contrary to expectations, the price fell later in the week, and interest slackened off. Against the initial trend, shares which might be particularly influenced by French sales were marked down. West African issues made many substantial gains, particularly since they are free from the heavy taxation of South African issues. In mid-week a dull tendency was generally evident. Rhodesian copper shares were mostly lower, with interest diverted elsewhere, and the outlook for the commodity considered uncertain. Tin company shares were slightly harder, with an improvement in the commodity price, and Mawchi were firm on the interim dividend.

FOREIGN STOCK EXCHANGES

NEW YORK

BUSINESS was active for a short session on the Saturday of last week after the announcement of franc devaluation. Prices were strong at the opening, weakened later, and closed higher on balance, with steel shares in the lead. Business opened this week with a continued firm trend, especially in industrials and utilities, and although prices became a little more irregular later in the week, there was no sign of the slump which many operators had forecast would be precipitated when the franc was readjusted. With business news still excellent, and steel mill activity, according to *Iron Age's* estimate, at a new post-depression high of 75 per cent. of capacity, dealers are concentrating for the moment on domestic securities, and waiting for the international currency and trade position to be clarified. In the bond market there was marked uncertainty immediately following the franc announcement, but prices turned firmer this week, with business more active. The market in general is optimistic about the long-term results of the new currency position, but uncertain about immediate reactions

upon many securities, and the expectation is that it will take a little time for short-term commitments to adjust themselves to the new conditions.

LONDON ACTIVE SECURITY PRICES AND YIELDS

In calculating yields on fixed interest stocks quoted below allowance is made for interest accrued since the last date of payment, less income tax at the standard rate. Where stocks are definitely redeemable at a certain date the yield includes any profit or loss on redemption, where stocks are not redeemable at a certain date the yield is calculated by reference to the latest dividends, account being taken of any enhancement or reduction of interim dividends. Allowance is made for accrued dividends in calculating the yield on "cum. div." shares.

PARIS

THE first weeks of September showed little more than moderate speculative activity in Internationals, for concern over the franc did not develop on a large scale until a fortnight ago. The upward movement in prices, though due primarily to active demand for Internationals, spread to other sections. This movement proceeded so far that 4 per cent. Rentes of 1925 became unobtainable, and quotations were suspended. By Thursday of the fatal week, liveliness turned into unhealthy agitation. The upward movement at the start of the session was suddenly reversed by the increase of Bank rate, which was almost unexpected. On Friday, the Bourse displayed extreme feverishness. Although it was clear that devaluation had become imminent, uncertainty as to the precise monetary measures produced two sharp reversals of price movements, and quotations were abnormally wide. The decision that no purchases of securities should be made for the settlement unless the buyer undertook to take delivery before the end of the month produced an immediate check to speculation, but prices closed firm. The closing of the Bourse this week, pending the passage of devaluation legislation, has given ample time to recover stability, but the committee have taken the precaution of demanding a 50 per cent. cash cover for forward purchases during the first two days of the settlement.

BERLIN

THE share market in September was dull. While the average price of standard industrial securities changed little, there were considerable advances in certain groups, in particular paper, cellulose, and rayon shares, and in raw materials generally. Lignite and potash shares were also firmer. Commercial bank issues reacted slightly, but Reichsbank remained steady. Shipping securities gained temporarily from reports of improved transatlantic traffic and from the resale, to private holders, of the Reich's interest in Hamburg-Süd-Amerika. Throughout the month, and in particular after the Nuremberg Party Congress, there was violent speculation in former German colonial securities, such as Deutsch-Ost-Afrika, Kamerun Railway, New Guinea, Shantung, and Otavi Copper. Sharp advances occurred, New Guinea being several times rationed to buyers. Reichsmark bonds were stable, but neglected, interest being concentrated on foreign currency issues, particularly Balkan and Central European pre-war securities. Trading in dollar bonds was small and prices fluctuated within narrow limits. At the end of the month, the devaluation of foreign currencies caused some irregularity. A rapid advance was followed by a wave of selling, but a firmer tendency developed later.

AMSTERDAM

DEVALUATION found the Amsterdam Bourse rather unprepared. Dealings for the earlier part of the month had been uneventful, although French buying contributed to the strength of certain internationals, particularly Royal Dutch, while the Budget speech made a good impression without producing much actual effect. The preliminary uneasiness of the Foreign exchanges a fortnight ago had an unsettling influence, but it did not become pronounced. Even the announcement of the devaluation of the franc still left the Bourse comparatively unmoved, and no more than slightly irregular. The market gave no signal of anticipating the week-end decision to devalue the guilder. When the Bourse reopened on Tuesday, after only one day's closing, the markets sprang into unusual activity, accompanied by gains which, although considerable in general markets, especially shipping and local industrial issues, reached huge proportions in the commodity sections. A momentous week-end is best revealed by the "Telegraaf" share price index, which rose from 161.94 to 186.17 for all classes of shares, and from 190.75 to 230.30 for Plantation companies.

CAPITAL ISSUES

A WEEK of moderate activity in new issue business has been largely obscured by the market movements resulting from the devaluation of the gold currencies. This factor was at first responsible for the comparatively modest opening premium of $\frac{1}{2}$ on the London County Council scrip, but by mid-week, the price had appreciated to $1\frac{1}{2}$ premium. Two further South African companies have issued $\frac{1}{2}$ 5s. per cent. preference and 4s. ordinary shares. Stanley Motors is an addition to the growing number of motor dealing concerns in the Union. The Company has a rather stable profits record during the past three years, but the resultant ordinary earnings appear to justify the $12\frac{1}{2}$ per cent. issue premium. Transvaal Mattress and Furnishing shows a more responsive profits trend, for businesses of this type frequently show a cyclical swing in earnings. The ordinary earnings position is therefore much less impressive on average than on latest profits, in relation to a substantial sterling premium on the shares. They may be regarded as a reasonable speculative industrial holding, offered under sound auspices. New London Properties, which issues 6 per cent. $\frac{1}{2}$ 1 preference shares at par, owns flat properties in Bayswater. The cover for dividend and capital—as is usual for property concerns—is sufficient, must be valued with due regard to the speculative factors in the property business. The 5s. shares of Burco, Ltd., offered at 100 per cent. premium, are backed by earnings for the latest year equivalent to 12 per cent. on the issue price. The prospects for the shares, therefore, are closely linked to the maintenance of the recent high level of earnings, which have jumped during the last five years from £2,848 to £25,200. The company is favoured by the increased use of electricity for domestic purposes, but it operates in a competitive market. The issue price, therefore, appears to represent a very adequate valuation of the company's prospects. Associated Weavers, whose preference shares were recently offered, have again been before the investor this week, for the 4s. ordinary shares have been offered at 150 per cent. premium. In this case also, the price is based on a 12 per cent. earnings yield in the latest year, which, for the long-term investor, is a too narrow basis. In some instances, investors may be on safe ground in anticipating a further rise in profits, but it is more usual for the geometric stage of profits, particularly for relative small concerns, to be passed at a fairly early stage. Investors may also remember that whereas share premiums paid on prospectus issues may benefit the company, such premiums on an offer for sale enter private hands. Statements "for Gold Mining, James and Geo. H. Matthews, and Birmid Industries."

OFFER TO NEW READERS

Any reader who makes his first acquaintance with this journal with this week's issue is invited to fill up the attached:

To Publisher, "Economist Newspaper Ltd.,"

8 Bouverie Street, E.C.4.

In order to test the value of your publication I should like you to forward this to me by post for the next four weeks. If I then decide to become a subscriber, it is understood that there will be no charge for the copies thus received, but otherwise I shall be willing to pay 4s. to cover their cost.

PUBLIC OFFERS

Stanley Motors.—Issue of 275,000 $\frac{1}{2}$ per cent. cumulative $\frac{1}{2}$ 1 preference shares at 20s. 6d. and 375,000 4s. ordinary shares at 4s. 6d. Formed in South Africa to acquire shares in two motor-dealing companies. Combined profits, after depreciation, years to June 30th: 1934, £54,690; 1935, £60,280; 1936, £59,710. Combined net assets, £395,253. Purchase price, £230,315 cash (vendor is subscribing for 1,125,000 shares at par), and £209,818 payment of liabilities. List closed 9.5 a.m. September 29th. Over-subscribed.

BY OFFER FOR SALE

Associated Weavers.—Offer for sale of 150,000 4s. ordinary shares at 10s. Upholstery fabric makers. (See particulars of preference shares in *Economist*, September 26, page 577.) Shares now offered for sale are part purchase consideration of the 450,000 shares. Ian Anderson and Nairn take issue at about 8s. 6d. List closed 9.5 a.m. September 29th. It is understood that over 1,400,000 shares were applied for.

Burco, Ltd.—Offer for sale of 280,000 5s. ordinary shares at 10s. Engineers and electric household appliance makers. Profits, after depreciation, years to June 30, 1934: £11,781; 1935, £14,944; 1936, £25,200. Net assets, £82,142, purchased for £104,900 in 419,600 5s. shares (goodwill, £22,858). London Industrial Finance Trust take issue at 8s. 2½d. per share and expenses.

New London Properties.—Offer for sale of 200,000 6 per cent. cumulative $\frac{1}{2}$ 1 preference shares at par. Owns four freehold flat and shop properties and will purchase further property for £32,500. Profits, after interest, maintenance, etc., period November 9, 1933, to May 12, 1934, Dr. £29; May 13, 1934, to June 24, 1935, £24,868; year to June 24, 1936, £30,608. Net assets, £480,387. Shares now offered are part of 395,000 shares in part payment of purchase price. List closed 9.5 a.m. September 29th. Over-subscribed.

Transvaal Mattress and Furnishing Company.—Offer for sale of 150,000 $\frac{1}{2}$ per cent. cum. $\frac{1}{2}$ 1 preference shares at 20s. 6d. and 150,000 4s. ordinary shares at 6s. 6d. (sterling). Acquires capital of operating company making mattresses, furniture, etc., in South Africa. Profits, after depreciation, years to June 30th: 1934, £19,650; 1935, £24,866; period to August 15, 1936, £52,009. Net assets, £112,222. Acquired for £150,000; vendors take 600,000 ordinary shares at par. Robert Benson and Company and Charterhouse Investment Trust take issue; preference shares at par, ordinary at 5s., and costs in England.

BY STOCK EXCHANGE INTRODUCTION

Birmid Industries, Ltd.—Issued capital 585,007 $\frac{1}{2}$ 1 shares. Acquires not under 90 per cent. of share capitals of Birmingham Aluminium Casting (1903) and five associated undertakings. Combined profits, after depreciation, years to July 31, 1933, £38,541; 1934, £59,599; 1935, £76,870. Total assets, Birmingham Aluminium, £610,863.

Holfontein (T.C.) Gold Mining Company, Ltd.—Capital, 1,300,000 10s. shares, of which 602,635 shares taken at par by Transvaal Consolidated Land and Exploration (the vendors), 162,635 by Central Mining, 162,635 by Rand Mines, and 372,095 offered at par to Transvaal Consolidated shareholders. Acquires all mineral rights over 4,492 morgen 100 square rods, and freehold of remainder of Holfontein farm. Purchase price, £270,000 cash (includes £50,000 refund of prospecting expenditure).

James and Geo. H. Matthews, Ltd.—Issued capital, 360,000 5s. ordinary shares and 100,000 5 per cent. cumulative $\frac{1}{2}$ 1 preference shares. Corn merchants, millers, etc., in Essex, established 1895. Total assets, May 31, 1936, £222,837. Capitalisation altered since date of balance sheet. Net profit, year to May 31, 1936, £17,812.

ISSUES TO SHAREHOLDERS ONLY

Boulton and Paul Aircraft.—Issue of 400,000 5s. ordinary shares at 5s. 6d. each to holders registered October 5th at the rate of one share for each three held.

Easterns, Ltd.—A bonus (free of tax) of ordinary shares is to be paid at the rate of one for each 20 ordinary shares held, out of capital reserve.

Murex, Ltd.—Murex proposes to issue 46,125 ordinary $\frac{1}{2}$ 1 shares to holders at $\frac{1}{2}$ 10s. each and to allot bonus shares of two for every three. General meeting, October 15th.

Stewarts and Lloyds.—Stewarts and Lloyds have decided to offer deferred stockholders and holders of the liaison deferred shares one new $\frac{1}{2}$ 1 share in respect of each five deferred, at 26s. per share. The new shares rank with the existing deferred stock as from January 1, 1937.

The Mawchi Mines, Ltd.—Issue on October 5th of 107,466 4s. shares at 34s. each in proportion of one share for every ten to shareholders registered on September 24, 1936. The new shares will rank for any final dividend that may be paid in respect of the year ending December 31, 1936.

West Witwatersrand Areas, Ltd.—100,000 10s. shares to be issued at $\frac{1}{2}$ 10 each. The new shares when issued will rank *pari passu* in all respects with the existing 1,200,000 shares. The right of subscription of this new issue accrues to the original subscribers of the working capital in terms of an agreement entered into at the time of the formation of the company.

CONVERSIONS AND REPAYMENTS

Croydon Corporation (1921) 6 per cent. Redeemable Stock, 1937-1947.—Croydon Corporation will repay the outstanding stock at par on January 1, 1937.

W. J. Rogers, Ltd.—The 5 per cent. stock is to be redeemed at $\frac{1}{2}$ 105 per cent., together with interest to September 30th.

OFFERS ABROAD

Adelaide Electric Supply.—This company announces a $\frac{1}{2}$ per cent. debenture issue of £200,000 at par, with a currency of 16 years. The debentures are being issued in Australia, and preferential consideration will be given to existing debenture holders and shareholders in the company.

REPORTS AND NOTICES

MISCELLANEOUS

FINANCIAL NEWS, LTD.—Profit for year to June 30, 1936, £50,207 against £40,660 for previous year. Ordinary dividend and bonus 15 per cent., against 10 per cent. for previous year, when half of the issued ordinary ranked for a half-year's dividend only. Carry forward is increased from £50,118 to £74,031. Meeting, Winchester House, E.C. October 7th, at 12.30 p.m.

EBBW VALE STEEL.—Holders of the 6 per cent. debentures of the Ebbw Vale Steel Iron and Coal Company at a meeting on September 29th passed a resolution authorising the trustee, the Royal Exchange Assurance, to enforce the security for the debentures or otherwise at its absolute discretion.

BRITISH COLUMBIA POWER CORPORATION, LTD.—The annual report for the year to June 30, 1936, shows earnings equivalent to \$1.64 per share on the 1,000,000 shares of Class "A" stock. This compares with earnings equal to \$1.68 per share for the previous year. Current assets are \$8,175,032, an increase over last year of \$463,958, and current liabilities are \$3,524,510, an increase of \$358,647.

LANCASHIRE STEEL CORPORATION (Control acquired of Broughton and Plas Power Coal Company).—Amalgamation of the whole of the undertaking and assets of the Bersham Colliery Company with the Broughton and Plas Power Coal Company, and reduction of the capital of the latter has been approved. Lancashire Steel Corporation and others of the group will provide capital for development and other purposes. In addition to first debentures it receives 51 per cent. of the reorganised share capital and controls the future administration and direction of the business through a majority on the board.

EASTWOODS LEWES CEMENT (Profits of £23,400 in 1935-36).—Eastwoods Lewes Cement reports trading profits of £23,448 for the year to end June, compared with £19,448 for the preceding twelve months. The directors recommend final dividends of 8½ per cent. on the ordinary and founders' shares, making 12½ per cent., less tax, against 10 per cent. for 1934-35. Carry forward £4,335. Meeting, River Plate House, E.C.2, October 7th, at 12 noon.

COMPANY MEETINGS, &c.

ANGLO-SIAM CORPORATION, LIMITED

TRADE CONDITIONS IN THE EAST

LARGER DEMAND FOR TEAK

MR J. M. RYRIE'S ADDRESS

The thirty-ninth annual ordinary general meeting of the Anglo-Siam Corporation, Limited, was held, on the 29th ultimo, at 5 St. Helen's Place, London, E.C., Mr J. M. Ryrie (the chairman of the corporation) presiding.

The Chairman said it gave him much pleasure to address the shareholders once more after being absent through illness from the last two annual meetings, and he took the opportunity of thanking Mr Greaves for taking his place on these occasions and giving such clear accounts of the position and activities of the corporation.

To fill the vacancy caused by the retirement of Mr Bateson through ill-health, the corporation had been fortunate in securing the services of Mr S. D. Gladstone, also a partner in the old firm of Messrs. Ogilvy Gillanders and Company, as a director.

REVIEW OF COMMERCIAL CONDITIONS

In reviewing the conditions of the past year in the various countries with which the corporation's trade is carried on, Mr Ryrie remarked that in each case there was a substantial excess of exports over imports in 1935-36, though not so large as in the previous year, this decline being accounted for, so far as India was concerned, by a falling off in the value of gold shipments, the total value of which since September, 1931, when India went off gold, now amounted to £218,000,000.

Imports into India from the United Kingdom showed a reduction in 1935-36 as compared with 1934-35, while imports from foreign countries increased, and particularly from Japan and Germany.

Exports from India to the British Empire increased substantially, while exports to foreign countries also increased, but to a comparatively small extent, and it appeared that the United Kingdom had not benefited from the Ottawa Agreement at the expense of India.

EXPORTS OF RICE FROM SIAM

Although exports of rice from Siam in 1935 were less by 250,000 tons than in 1934, when the record quantity of 1,842,000 tons was shipped, the improvement in price resulted in the average yield per ton being increased from about Ticals 46½ to Ticals 58½.

Malayan imports were more or less stationary, while exports declined owing to reduced shipments of rubber under the restriction scheme and some setback in the price, while uncertainty regarding a renewal of the tin restriction scheme was not helpful.

The most encouraging feature in the corporation's activities during the year was perhaps the improvement in the results of trading in India, though there was no marked increase in the turnover with that country.

EXPANSION IN DEMAND FOR TEAK

The expansion in the demand for teak, and particularly for cut timber, was encouraging, but, in view of the corporation's large stock of logs, it was disappointing to meet with so little demand for rough timber, and it was due to this that it had been deemed desirable to keep the saw mill at Bangkok running throughout the year.

The results obtained from the general trading in Siam were disappointing, this being due not only to a falling off in the volume of business but also to bad debts arising out of a financial crisis provoked by failures among Chinese banks.

Then the outcome of operations in Malaya did not come up to expectations as the result of the decline in the price of rubber a year ago.

PROFITS AND DIVIDENDS

It was disappointing that the net profit for the year showed a reduction as compared with the previous year, though it should not be overlooked that last year non-recurring credits amounting to £7,027 were brought into the profit and loss account compared with only £3,842 for the year to March 31st last.

Dealing with the accounts and the final dividends recommended by the directors, the Chairman pointed out that it was largely, if not entirely, due to the conservative policy in the past that this recommendation was made possible.

In view of the present obscure outlook it had not been considered prudent to draw on the equalisation of dividend fund for the purpose of maintaining the dividend of 8½ per cent. paid on the ordinary shares for the previous year.

Attention was drawn to the reduction of sinking funds from £22,730 to £4,553, and a correspondingly lower figure relating to livestock and up-country property on the other side of the balance sheet, and Mr Ryrie explained that this was merely an adjustment which the directors deemed it desirable to make in order to bring down the cost of livestock and up-country property to what was considered present-day values.

APPRECIATION OF INVESTMENTS

Apart from the investments depreciation reserve and other amounts standing in investments suspense account, there was a substantial appreciation in the value of investments on March 31st last as compared with the cost.

As regards the corporation's holding of 38,423 shares in the Sedenak Rubber Estates, Limited, he was pleased to say this investment looked promising at present, the market value of the shares being in excess of the book value, and he looked for an increased dividend from this source for the current year.

Referring to the finances of the Kingdom of Siam, he was glad to say that the revenue for the last financial year had exceeded the Budget estimate and had proved sufficient not only to cover the ordinary expenditure but a certain amount of capital outlay which it had been intended to meet out of the Treasury reserve.

PROSPECTS

After paying a tribute to the managing directors and the staff in London and the East for their close attention to the business of the corporation during another difficult year, Mr Ryrie commented on the outlook for the current year and mentioned that as there had been an appreciable improvement in the situation generally in India he hoped it might be possible to maintain the better results obtained there and to which he had already made reference.

As trade and economic conditions in Siam were largely dependent on rice it was satisfactory that another large crop had been harvested with the promise of better general trading conditions.

He was pleased to say that the improvement in price for certain qualities of teak which set in towards the end of last year had been maintained along with a more active demand.

QUESTION OF FOREST LEASES

The proposals of the Government of Siam in regard to fresh leases of forests were still awaited and he was hopeful that the Government would find a way to allow the corporation to maintain its interest in the teak industry of Siam and in which a considerable amount of capital had been sunk.

There had been a substantial improvement in economic conditions of Malaya during the past few years, and although there was at the moment a breakdown in the negotiations for a renewal of the Tin Restriction Scheme, he thought it would be arranged between the various producing countries to continue the scheme.

The directors' report and statement of accounts for the year ended March 31, 1936, were adopted and final dividends of 3½ per cent. on the preference shares and 5 per cent. on the ordinary shares were declared, making a total distribution of 7½ per cent., less tax, on the ordinary shares for the year.

Messrs J. Mackenzie and S. D. Gladstone were re-elected directors, and Messrs. Turquand Youngs and Company were appointed auditors for the current year.

E. W. TARRY AND COMPANY, LIMITED

IMPROVED RESULTS

The annual general meeting of E. W. Tarry and Company, Limited, was held, on the 22nd ultimo, at Southern House, London.

Sir J. Fortescue Flannery, Bt., D.L. (the chairman), said that no doubt every shareholder had noticed the improvement that had taken place throughout the Union of South Africa in regard to almost every item of trade.

At the Empire Exhibition recently opened in Johannesburg the company was showing a comprehensive exhibit of its principal lines, and they hoped for considerably increased business therefrom.

Business at Port Elizabeth was making steady progress, and they had secured a valuable share of Government contracts there. In Bulawayo the activity in gold mining had been maintained, and there had been a good demand for mining supplies. Their Salisbury branch also reported a considerable volume of business in gold prospecting and mining. At Lusaka, Northern Rhodesia, business continued steady, and during the early part of the year they obtained considerable business from the contractors working on the new capital of Northern Rhodesia.

The gross profit for the year of £117,741 showed an improvement of £4,800 on last year. Their good turnover had been maintained, although the percentage of gross profit earned was slightly less. Although the net profit of £37,627 showed only a slight improvement, he thought there was every reason to be satisfied with the result. After again transferring £15,000 to reserve account and placing £5,000 to income tax account, it was proposed to pay a dividend of 9 per cent. on the cumulative preference shares, leaving £6,829 to carry forward.

The payment of preference dividends was resumed on January 1, 1935, and with the dividend now recommended arrears amounting to 27 per cent. would have been paid off.

Mr J. Van Praagh, J.P. (chairman of the local committee), referred to the revival of prosperity in the diamond industry, and said that they all looked forward with the greatest amount of hope and optimism to the future of South Africa, the prosperity of which must reflect favourably upon the operations of this company.

The report was unanimously adopted.

TEBING RUBBER ESTATES (1931), LIMITED

SOUND FINANCIAL POSITION

The fifth ordinary general meeting of the Tebing Rubber Estates (1931), Limited, was held, on the 29th ultimo, at 411-419 Salisbury House, London.

Mr E. B. Ridsdel, who presided, said that the crop secured during the year amounted to 396,236 lbs. of rubber, of which 354,028 lbs. were sold, in addition to which export rights amounting to 64,584 lbs. were surrendered to the Dutch East Indies Government, realising £1,175, or the equivalent of 4.4d. per lb.

In the terms of the Rubber Restriction Scheme, the export of rubber from estates had been regulated throughout the year in accordance with the varying percentages of restriction fixed by the authorities and calculated on the standard production assessments allotted to estates. Although each estate was assessed independently so far as productive capacity was concerned, all estates were restricted to the same percentage of their assessment in regard to the rubber which they were permitted to export and which was generally referred to as "export allowance" or "export rights." In the case of their company, the export allowance for the year was equivalent to only 59.4 per cent. of their assessment.

The net sale price obtained was 5.887d. per lb., representing an increase over last year's figure of about ½d. per lb. He purposely referred to the sale price as "net" as freight, insurance and landing charges amounting to at least ½d. per lb. required to be added to arrive at a comparison with the average spot price, which for the period covered by the accounts was 6.2d. per lb. It would therefore be seen that the price realised showed quite an improvement on the average spot price for the year. Their f.o.b. and all-in costs at 3.8d. per lb. and 4.3d. per lb. respectively must be considered very satisfactory. Compared with last year they showed an increase of a little over ½d. per lb.

Holland had decided to go off the gold standard, and, as their estates were situated in the Dutch East Indies, they should accordingly benefit by the devaluation of the Dutch guilder. The balance sheet showed the company to be in a sound financial position, and that they were justified in distributing the dividend proposed, namely, 3½ per cent., less tax.

The report and accounts were unanimously adopted.

CITY AND INTERNATIONAL TRUST, LIMITED

INCREASED PROFIT AND DIVIDEND

The tenth ordinary general meeting of this Trust was held, on the 29th ultimo, in London, Mr Louis H. Kiek (chairman and managing director of the company) presiding.

The Chairman, in the course of his speech, said:—The report and accounts show a gross income for the year of £86,352, and after deduction of £6,930 administration expenses, a net income of £79,422; there is £15,938 at the disposal of this meeting, and we recommend the payment of a dividend of 3 per cent., less tax, on the ordinary stock, comparing with 2½ per cent. for last year.

In spite of the unfortunate developments abroad, we have suffered relatively little in revenue from our foreign holdings compared with last year.

The changes effected in our investments have been numerous, and have on balance again resulted in a satisfactory figure of capital profits, which have as usual been applied to the reduction of the cost of our holdings. The total of the book cost of these investments has on balance been increased by about £40,000 to £1,866,375 widely—and I hope also wisely!—distributed over 418 different securities.

I would like to refer to one important group of securities which for several years past has caused severe disappointment and considerable anxiety to thousands of investors in this country. I refer to our not inconsiderable interest in the British-owned railways on the South American continent. In Latin America definite symptoms of a marked improvement in economic conditions are now multiplying. The position to-day is distinctly more encouraging. It would indeed be surprising if the Argentine railways were not to derive benefits from this improvement, present and prospective, in the country's economic situation. The favourable effect upon exchange alone of an increased volume of exports at higher prices is likely to be a material contributory cause in facilitating remittances and, furthermore, bigger exports will mean greater freedom in imports, and consequently an increased volume of traffic for distribution to inland points.

It may also be presumed that the Government's rail and roads co-ordination measures will remove a source of unfair competition.

The report and accounts were unanimously adopted.

PRICES, TAILORS, LIMITED

INCREASED SALES AND PROFITS

The eighth annual general meeting of Prices, Tailors, Limited, was held, on the 29th ultimo, at Winchester House, Old Broad Street, London, Mr H. L. Price (chairman and managing director) presiding.

The Chairman, in the course of his speech, said that the trading profit for the past year was £446,470, compared with £345,000 for the previous year. They had provided £45,000 for income tax and £81,258 for depreciation, and with £93,006 brought forward there was an available balance of £411,718. The preference and preferred ordinary dividends had already been paid to June 30, 1936, and it was now proposed to transfer to Prices Trust Company by way of dividend upon the ordinary share capital for the year £162,000. He thought they had every reason to be satisfied with the result of the past year's trading.

The continued increase in sales, particularly in their old depôts, was very pleasing. Towards the end of last year it was decided to extend their factory accommodation in Middlesbrough. A site covering fourteen acres within easy reach of the city had been purchased, and the first section would be ready for occupation towards the end of the year. The factory would be one of the finest in the kingdom, and the complete scheme would provide for the employment of approximately 5,000 workpeople. The directors were looking well ahead, and laying out their programme of expansion with a view to maximum efficiency and economy. They were opening up new depôts as quickly as circumstances would permit with the intention of more than doubling the present size of the business, and this new factory when complete would meet all production requirements.

Advertising skill continued to be an integral feature of the company's progress, and he wished to pay tribute to the Press of the country for the results consistently obtained from the proper use of the newspapers for advertising purposes. Advertising could only bring permanent results when backed up 100 per cent. by the value of the articles sold.

In referring to the inauguration of a group pension scheme, the Chairman said he wished to thank all their employees for their co-operation and loyal service.

The report was unanimously adopted.

D. GESTETNER, LIMITED

RECORD SALES AND PROFITS

The ordinary general meeting of D. Gestetner, Limited, was held, on the 28th ultimo, in London, Mr S. Gestetner (chairman and managing director) presiding.

The Chairman, in the course of his speech, said: Once again I am in the happy position of being able to report to you a record year's figure of profit, and when I add to this that the total figure of our sales in the past year is also the highest on record, I think you will agree that the Gestetner organisation deserves credit for a fine achievement.

You will have noticed, I trust with satisfaction, that again we propose to capitalise a portion of the year's profit and to distribute this in the form of a bonus of new shares.

Our cash and cash assets, excluding debtors and loans, have again increased, and it says much for the soundness of our business that the figure of debtors and loans shows a decrease, and this in spite of the fact of the record turnover to which I have just alluded.

Fixed assets are up, for we have been spending money prudently on buildings and plant in order to cope with the growing demand for our products.

Our stock is up by a matter of some £13,000, the increase being accounted for in part by increased stocks of raw materials and in part by manufactured and semi-manufactured goods. This growth is perfectly normal, and, indeed, only to be expected in view of the increase in our business.

You will find a new item on the liability side of the balance sheet this year, namely, income tax reserve £30,808. Last year the income tax reserve was included in the figure of creditors and amounted to £21,244. Last year's creditors, other than income tax, were therefore £26,928, against a figure of £47,413 this year.

We enter our new trading period, and, incidentally the fifty-sixth year of the organisation, with pride and in the confident hope that we may be able in 1937 again to present you with satisfactory evidence of our stewardship.

The report and accounts were unanimously adopted; the dividend recommendations were approved, and the proposed capitalisation of a portion of the undivided profits of the company and the distribution of bonus shares was sanctioned.

GOVERNMENT RETURNS, &c.

NATIONAL ACCOUNTS

The total ordinary revenue for the eleven days ended September 30, 1936, amounted to £12,863,000, against ordinary expenditure of £17,174,000. After allowing for an increase in Exchequer Balances of £21,279,196, the operations for the eleven days, as shown below, increased the gross National Debt by £25,808,000 to approximately £8,008 millions.†

CENTRAL AND SOUTH AMERICAN EXCHANGE RATES

THE BANK OF LONDON AND SOUTH AMERICA, LTD., issues the following details relative to quotations for certain of the South and Central American exchanges. All these exchanges, with the exception of that of Bolivia, are related to the United States dollar, and the approximate sterling rates may be obtained by applying the dollar-sterling exchange rate:—

Bolivia.*	"Official" commercial rate fixed at 50 bolivianos per £ as from August 28, 1936.
Colombia.*	Sight rate 176.00 pesos per 100 United States dollars on September 16, 1936. This rate applies to holders of permits buying in the "open" market.
Ecuador.*	Sight selling rate on New York was maintained in July at 10.50 sucres per United States dollar.
Guatemala.	Sight rate on New York is maintained at 1 quetzal per United States dollar, but a commission of 1 per cent. is charged by the Banco Central for the sale of drafts.
Nicaragua.*	Official selling rate was 110 cordobas per 100 United States dollars on July 31, 1936.
Salvador.	Sight rate on August 31, 1936, 2.51 colones per United States dollar.
Venezuela.	Sight rate on New York 3.91½ bolívares per United States dollar on August 29, 1936.

* Exchange controls are operative in these countries.

GOLD MARKET

Messrs Samuel Montagu and Company write on September 30, 1936:—
The Bank of England gold reserve against notes amounted to £247,600,837 on September 23rd, as compared with £246,843,269 on the previous Wednesday. Purchases of bar gold as announced by the Bank during the week amounted to £1,048,831. During the week in the open market in London, about £4,170,000 of bar gold was disposed of at the daily fixing. On Saturday, September 26th, following the announcement referred to above, dealings in foreign exchanges were suspended, and no gold price was fixed, but on the 28th inst. there was great activity, large amounts of gold being placed on the market. Dealings in dollars had been resumed and with their sharp appreciation in terms of sterling, the price of gold was fixed at 140s. 9d., a rise of 2s. 11½d. over the previous quotation. There was some buying for a special account, and gold was also taken for New York on a very large scale; the fact that on September 29th the price of gold was fixed at a discount on the dollar parity enabled this to be done.

The s.s. "Cathay," which sailed from Bombay on the 26th inst., carries gold to the value of about £338,000 consigned to London.

SILVER MARKET

Prices showed a sharp advance, influenced by the appreciation of the dollar, which followed the decision to devalue the franc. Rises of ½d. on September 26th and ¾d. on September 28th, carried quotations to 20½d. This rather exceeded both the New York and Bombay parities, and there was a small reaction, prices to-day being quoted at 19½d. for both deliveries. The situation caused some buying by speculators, but there was profit-taking at the higher rates, and the Indian Bazaars also bought and sold. Small sales have been made on China account. The outlook is somewhat uncertain pending the adjustment of exchanges, but prices in the near future are likely to be governed mainly by movements of the dollar exchange.

Quotations for gold and silver are shown below:—

1936	Price of Gold per Fine Ounce	Equivalent Value of £ sterling	Price of Bar Silver in London per ounce standard		Price of Silver New York per ounce fine
			Cash	Two Months	
Sept. 24	137 3	12 4-55	19½	19½	Sept. 23 45
" 25	137 9½	12 3-97	19½	19½	" 24 45
" 26	140 9	12 0-88	20½	20½	" 25 45
" 28	140 7	12 1-03	19½	19½	" 26 45
" 29	140 2	12 1-46	19½	19½	" 28 45
" 30	139 3-70	12 2-37	19-760	19-760	" 29 45
October 1	140 5½	12 1-16	19½	19½	" ..

The highest rate of exchange on New York recorded during the period from the 24th inst. to the 30th inst. was \$5-07, and the lowest \$4-93.

OVER ONE HUNDRED YEARS OF SERVICE

SCOTTISH UNION & NATIONAL

INSURANCE COMPANY

ASSETS - EXCEED - £16,000,000

FIRE LIFE ACCIDENT MARINE

Edinburgh: 35 St. Andrew Square
London: 5 Walbrook, E.C.4, and 45 Pall Mall, S.W.1

York quotation on Wednesday was 4.60 cents per lb., against 4.60 cents a week ago and 4.60 cents a month ago. The official closing quotation in London for soft foreign for shipment during the current month was £18 per ton, compared with £18 a week ago.

Sales of spelter on the London Metal Exchange: 425 tons on Monday against 1,250 tons last week; 800 tons on Tuesday, against 2,100 tons last week; 500 tons on Wednesday, against 1,450 tons last week. Wednesday's quotation in East St. Louis was 4.85 cents per lb., against 4.85 cents the week before and 4.85 cents a month earlier. Wednesday's official closing quotation in London for "good ordinary brands" for shipment during the current month was £13 13s. 9d. per ton, against £13 17s. 6d. last week.

TIN.—Despite the devaluation of the guilder, which is likely to make the Dutch less anxious to secure the highest possible price for their tin, quotations for the metal rose sharply during the past week. The resumption of American buying, the occurrence of some "short" covering, and the hope of an early agreement with Siam, were the factors mainly responsible for this week's rise. Discussions among the restricting countries concerning the future of the tin scheme have taken place this week, and the date of the next meeting of the International Tin Committee is expected to be announced almost immediately.

According to Messrs A. Strauss and Company, the visible supply declined during September by 929 to 15,094 tons, due mainly to the small near supplies which, at 7,571 tons, were 2,759 tons lower than a month ago. Deliveries, on the other hand, rose from 8,870 to 9,379 tons. Despite these favourable statistics, the London cash price fell by £1 5s. per ton on Thursday, owing to profit-taking sales by holders who had bought the metal below £190 per ton.

Sales of tin on the London Metal Exchange: 550 tons on Monday, against 300 tons last week; 600 tons on Tuesday, against 225 tons last week; 100 tons on Wednesday, against 500 tons last week. The New York quotation on Wednesday was 46.00 cents per lb., against 44.95 cents a week ago and 42.87 cents a month ago. Wednesday's official closing quotation in London for standard cash was £203 10s. to £204 per ton, compared with £192 5s. to £192 15s. a week ago. Stocks of tin in London and Liverpool at the end of last week totalled 669 tons, an increase of 38 tons on the week.

OTHER NON-FERROUS METALS.—Among other non-ferrous metals, aluminium ingots and bars for home delivery were again quoted at £100 per ton, and rolling billets at £102 per ton. Nickel, for home and export, at £200 to £205 per ton, remains unchanged. Quicksilver, on the spot, was quoted at £13 5s. to £13 5s. 8d. per flask of 76 lbs., as against £12 18s. 6d. to £12 19s. per flask last week. Chinese antimony was quoted at £56 per ton ex warehouse, as against £54 per ton last week. Chinese wolfram for "October-November" shipment was quoted at 28s. 6d. to 29s. 6d. per unit c.i.f., against 28s. 6d. to 29s. 6d. for "September-October" shipment a week ago. Refined platinum was quoted at £13 per ounce, as against £14 last week.

TEXTILES

COTTON.—Manchester.—The cotton industry has not been unduly affected by international currency developments. The general opinion is that the devaluation will be followed by a slight increase in world wholesale prices, which should improve the purchasing power of the agricultural community. Traders hope that there will be a freer flow of international trade as a result of the agreement between Britain, France and the United States. The cotton markets took the devaluation news very calmly. Operators are awaiting final action on the franc and the establishment of parties between international markets. With regard to the American crop there has been some damage in Texas by the heavy rains. Sentiment is now a little more bullish, but should any advance occur in prices, increased hedge selling is expected and this will prevent any marked upward movement.

Continental currency developments temporarily disturbed the Manchester cloth market, but spinners and manufacturers have been firm in quotation; in some quarters there has been rather more inquiry for yarn and cloth. Many leading shippers and merchants, however, have been content to mark time. Fair transactions have been recorded for India, with large contracts for Colombo and Rangoon. Scattered sales have been mentioned for Egypt and the Near East. A moderate business has been done for South America. Continental trade has been difficult to arrange. More promising reports have been received from the home trade section and freer buying has taken place in a wide range of fancy styles and specialities. American yarn quotations have been fairly steady, but some spinners are now feeling the absence of fresh contracts and latterly there has been a tendency for prices to be irregular, especially in the medium spinning section. Egyptian yarns have been in quiet request. Low prices have been accepted by weak sellers.

COTTON WAGES.—The growing restlessness of the operatives in the spinning section of the Lancashire cotton industry regarding wages is indicated by the decision of the Cardroom Workers' Amalgamation,

representing 70,000 operatives, to hold a special meeting in Manchester on Thursday to discuss the whole position and consider the question of taking a ballot of all their members on strike action in order to enforce their demand for higher wages. The original application for an advance of approximately 1s. 8d. in the £ was rejected by the Master Cotton Spinners' Federation, as was also a similar claim made on behalf of the Operative Spinners' Amalgamation. The Skipton strike on the question of non-union labour remains localised and there are no fears that the trouble will spread. Meanwhile the application of the operatives in the manufacturing section, representing 100,000 workers, is being held up by the Skipton dispute. The Conciliation Board will not meet until that strike is ended.

WOOL.—Bradford.—The fifth series of London sales, concluded last week-end can be regarded as satisfactory, both as regards merino and crossbred wool. The auctions finished with prices for all descriptions at the highest point; crossbreds have greatly improved their position with a much larger inquiry and consumption than in the past three or four years. The home trade is credited with purchasing 51,500 bales, the Continent 29,000 bales, and America 4,000 bales. The carry-over is 33,500 bales.

The attention of the trade has naturally been directed to the currency changes on the Continent. The home trade has received the news with equanimity, and so far steadiness has characterised all markets. Whatever stocks of wool France and other countries possessed at the time of devaluation will naturally leave them with considerably increased profits. However, it is the export trade in partly and fully manufactured textiles which is of paramount importance to this district. If it means a bigger market for French spun yarns and dress goods it cannot but be a good thing, but many fear that the increase in business will mean a corresponding reduction in the exports of this country. However, wool prices are steady and firm.

GRAIN MARKETS

WHEAT.—The markets have been unsettled by the currency developments of the past week, and price movements have been rather irregular. Although closing on Wednesday below the week's best, quotations in this country are rather higher on the week; on the other hand, American rates have suffered a reaction. Meanwhile reports of disappointing wheat yields on the Continent continue to be received.

On Wednesday last, "December" futures were quoted in Chicago at 112½ cents per bushel, against 115½ cents the week before and 107½ cents a month ago. Quotations in London, Wednesday: No. 1 Northern Manitoba, ex ship, 42s. 9d. per 496 lbs., against 42s. 3d. a week ago; No. 2 Northern Manitoba, ex ship, 42s. 3d., against 41s. 9d. a week ago. According to the *Corn Trade News*, total shipments of wheat and flour last week totalled 1,361,000 quarters, against 1,528,000 in the previous week and 1,022,000 quarters in the corresponding week a year ago.

FLOUR.—Although business in imported flour has been rather quiet, prices show a further rise. Wednesday's London quotations (excluding quota payments) were: Straight run, delivered Home Counties, 36s. per 280 lbs., against 35s. a week ago; delivered Inner London, 35s. 6d., as compared with 34s. 6d. a week ago. Manitoba patents, ex store, 33s. to 34s. 6d., against 32s. to 33s. 6d. a week ago. Australian, ex store, 29s. against 29s. to 29s. 6d. a week ago.

BARLEY.—The market in imported feeding descriptions remains very firm. The British crop has suffered as a result of the unseasonable weather, and disappointment is expressed as to the quality of the new samples now on the market. "October" futures were quoted at 60½ cents per bushel in Winnipeg on Wednesday, against 65 cents a week ago. Quotations per 448 lbs. in London on Wednesday were: "English feed" at farm, nominal, as against a nominal quotation a week ago; "English malting" (new), at farm, 32s. to 50s., against 32s. to 50s. last week; Californian (new), ex ship, 46s. 6d. to 58s., against 45s. to 56s. last week; Chilean, brewing, ex ship, 35s. 6d. to 39s., against 34s. to 38s. a week ago.

OATS.—On Wednesday, "December" futures were quoted at 41½ cents a bushel in Chicago, against 42½ cents a week ago and 40½ cents last month. Quotations in London, Wednesday: "English Black" (new), at farm, 19s. to 20s. per 336 lbs., against 19s. to 20s. a week ago; "English White" (new), at farm, 19s. to 20s., against 19s. to 20s. a week earlier; mixed Canadian feed (Vancouver), landed, 21s. per 320 lbs., compared with 20s. 6d. last week.

MAIZE.—Prices are a shade easier, mainly in consequence of large shipments from Argentina, which have caused dealers to exercise caution. "December" futures were quoted on Wednesday at 93½ cents per bushel in Chicago, against 94½ cents a week ago and 91½ cents last month. Quotations in London, Wednesday: "Plate," landed, 25s. per 480 lbs., compared with 25s. 3d. a week ago; "Plate," ex ship, 24s., as against 24s. 3d. a week ago; "Plate," "September," 23s. 6d., as against 23s. 9d. a week ago; yellow maize meal, ex wharf, was quoted at £8 8s. 9d. to £6 12s. 6d. per ton, as against £6 10s. to £6 12s. 6d. last week.

SALES AND PRICES OF BRITISH CEREALS.—The following table gives the estimated sale of home-grown wheat during the harvest years 1932-33 to 1935-36:—

	1932-1933	1933-1934	1934-1935	1935-1936
Estimated sales of home-grown wheat—				
1 week to September 26	434,992	648,646	467,232	309,972
4 weeks to September 26	1,549,238	2,254,066	1,912,833	1,058,940
Average price of English wheat per cwt.	s. d. 4 10	s. d. 5 2	s. d. 5 4	s. d. 7 7

The following is a statement showing the quantities sold and the average price of British cereals in the past two weeks, and for the corresponding week in each of the years from 1932 to 1935:—

Week ended	QUANTITIES SOLD			AVERAGE PRICE PER CWT.		
	Wheat	Barley	Oats	Wheat	Barley	Oats
September 24, 1932 ...	Cwts. 188,043	Cwts. 188,535	Cwts. 53,055	s. d. 5 8	s. d. 8 9	s. d. 6 6
September 23, 1933 ...	434,992	482,967	55,335	4 10	10 11	5 4
September 29, 1934 ...	648,646	354,189	72,248	5 2	9 10	6 8
September 28, 1935 ...	467,232	472,190	74,179	5 4	9 9	6 3
September 19, 1936 ...	238,903	352,749	39,978	7 4	10 4	6 7
September 26, 1936 ...	309,972	338,738	56,314	7 7	10 3	6 8

AMERICAN WHEAT MARKETS.—The following table shows wheat quotations for selected weeks in 1934-36:—

NEAREST FUTURES	Jan. 3, 1934	Jan. 2, 1935	Oct. 2, 1935	Dec. 31, 1935	Sept. 23, 1936	Sept. 30, 1936
Winnipeg (No. 1, Manitoba) —Cents per 60 lb.	65½	82½	96½	84½	109½	106½
Chicago (No. 2 Winter) —Cents per 60 lb.	84½	98½	107	75½	116½	112½

The visible supply of wheat in Canada amounts to 83,660,000 bushels, against 80,131,000 bushels last week, and 135,413,000 bushels in the corresponding week last year.

OTHER FOODS

BACON.—English has been in rather slow demand this week, at irregular prices, but Danish has been firm on short supplies. The official quotations (per cwt. for No. 1 Sizable) which formed the basis for dealings on the London Provision Exchange this week were: English, 88s. to 94s.; Canadian, 87s.; Danish, 100s., as against 92s. to 97s., 87s. and 100s. last week. Arrivals in London last week included Danish, 12,264 bales; Canadian, 4,457; Dutch, 2,119; Lithuanian, 1,908; and Polish, 1,952, as against 11,717, 4,487, 2,228, 1,755 and 2,800 bales, respectively, in the previous week.

BUTTER.—Following last week's reaction, the market has had a firm tone, with quotations showing a rising trend. Quotations (per cwt.) on the London Provision Exchange on Wednesday were: New Zealand, finest salted, 106s.; Australian, choicest salted, 106s.; Danish, 125s., compared with 98s., 98s. and 122s., respectively, a week ago.

CHEESE.—The market has been firm for New Zealand, with other descriptions showing little alteration. Quotations (per cwt.) on the London Provision Exchange on Wednesday were as follows: English, finest farmers, 78s. to 80s.; Canadian, finest coloured, 67s. to 71s.; and New Zealand, finest coloured, 67s. to 68s., against 78s. to 80s., 69s. to 70s., and 65s. to 66s. 6d. respectively, a week ago.

COCOA.—The steady rise in the price of cocoa was continued this week. The spot quotation in New York on Wednesday was 7½ cents per lb., as against 7½ cents per lb. last week. In London, on Wednesday last, good fermented new crop, "November-January," was quoted 34s. 6d. per 250 kilos, c.i.f. Continent, against 33s. 3d. a week ago. Last week's movements of cocoa in London were as follows: Landed, 17,232 bags; delivered, for home consumption, 4,799 bags; exported, 115 bags; stocks, 171,997 bags, against 136,408 bags a year ago.

COFFEE.—The London market has had a quiet tone, while in New York prices have been barely steady. On Wednesday, Rio No. 7 (cash) was quoted at 7½ cents per lb. in New York, as compared with 7½ cents per lb. last week and 8 cents per lb. a month ago. Movements of coffee in London last week were as follows: Brazilian, landed, 1 cwt.; delivered, for home consumption, 180 cwt.; exports, nil; stocks, 9,852 cwt., against 13,523 a year ago. Central and South American, landed, 176 cwt.; delivered, for home consumption, 1,554 cwt.; exported, 790 cwt.; stocks, 79,185 cwt., against 119,568 last year. Other kinds: landed, 335 cwt.; delivered, for home consumption, 3,563 cwt.; exported, 1,586 cwt.; stocks, 115,337 cwt., against 136,769 last year.

EGGS.—With fairly heavy arrivals and an active demand, the market has been steady this week. At Smithfield on Wednesday, English (ordinary packing, Grade 1, about 15-15½ lb.) realised 15s. 9d. to 16s. 3d. per 120, as against 15s. 9d. to 16s. 3d. last week, while Danish (15½ lb.) made 13s. 3d. to 13s. 9d. per 120, as against 13s. 3d. to 13s. 9d. last week.

FRUIT.—Business at Covent Garden continues steady, states *The Fruitgrower*, and prices for the regular seasonal lines are generally satisfactory. Supplies of cooking apples remain excessive and prices are consequently rather low. Pears are in good supply from home sources and prices, though moderate, are steady. The rush of plums is over, but fair quantities are still arriving; prices are steadier. Hothouse grapes encounter a better inquiry at firm rates for best quality. Peaches are short and dear, but Spanish melons have declined in price. A good showing of blackberries sells at easier prices; cobnuts are in plentiful supply and are steady in price. French walnuts are now more prominent, while the season for Italian chestnuts has begun. Oranges are doing well, lemons have eased on heavier arrivals, and grape fruit are a dull trade.

MEAT.—Business at Smithfield market was moderate this week, with prices showing little alteration. On Wednesday last, Argentine chilled hindquarters were quoted at 3s. 10d. to 4s. 4d. per 8 lbs., as compared with 4s. to 4s. 4d. a week ago. New Zealand frozen mutton was 3s. 2d. to 3s. 10d. per 8 lbs., against 3s. to 3s. 10d. a week ago. According to the Smithfield Market official report, supplies during last week amounted to 8,811 tons, a decrease of 140 tons on the corresponding week last year. Beef and veal accounted for 4,601 tons, mutton and lamb 2,294 tons, and pork and bacon 1,074 tons, as compared with 4,498, 2,510, and 1,221 tons, respectively, in the same week of 1935.

PEPPER.—Wednesday's spot price for black Lampong (in bond) was 2½d. per lb., against 2½d. a week ago. Movements of pepper in London during the past week were as follows: Black, landed, nil; delivered, 5 tons; stocks, 1,777 tons, against 1,572 tons a year ago. White, landed, 5 tons; delivered, 23 tons; stocks, 12,023 tons, against 16,657 tons a year ago.

RICE.—The spot price of Burma No. 2, cleaned, new crop, was 9s. 3d. per cwt., ex warehouse, on Wednesday, as compared with 9s. 3d. per cwt. a week ago. "October-November" in singles to Continent and U.K., was quoted at 8s. 1½d. per cwt., against 8s. 1½d. for "September-October" last week. Movements in London during the past week were as follows: Landed, 140 tons; delivered, 670 tons; stocks, 1,337 tons, against 8,562 tons a year ago.

SUGAR.—The London market has had a steadier tone, with prices, higher on the week. The New York spot market shows little alteration. The spot price in New York on Wednesday was 3.40 cents per lb., as compared with 3.40 cents per lb. last week and 3.70 cents per lb. a month ago. Wednesday's sales of raw sugar in London included December ago. Wednesday's sales, against 4s. 1½d. to 4s. 1½d. a week ago. The delivery at from 4s. 4d., against 4s. 1½d. to 4s. 1½d. a week ago. Movements of raw sugar at public warehouses in London and Liverpool last week were as follows: Imports, 17,743 tons, against 17,712 tons last week and 21,653 tons in the same week of last year; deliveries, 17,805

tons, against 19,446 tons last week and 14,279 tons last year; stocks 105,121 tons, against 105,183 tons last week and 157,936 tons last year.

TEA.—The following table shows the average prices (compiled by the Tea Brokers' Association) of tea sold in Mincing Lane on Garden Account in recent weeks:—

Week ending	Northern India	Southern India	Ceylon	Java	Sumatra	Africa	Total
Sept. 26, 1935	d. 16.42	d. 12.37	d. 15.48	d. 11.27	d. 9.90	d. 11.45	d. 15.18
Aug. 20, 1936	14.04	11.90	13.03	10.47	9.84	11.34	13.07
Aug. 27, "	14.43	11.99	13.21	10.73	9.88	11.36	13.41
Sept. 3, "	15.14	12.19	13.39	10.88	10.19	11.76	13.86
Sept. 10, "	14.82	12.13	13.31	11.02	10.06	11.28	13.88
Sept. 17, "	14.29	12.13	13.32	11.03	9.96	11.53	13.56
Sept. 24, "	13.86	12.04	13.29	10.75	9.95	11.46	13.29

The quantities catalogued for the public auctions in Mincing Lane this week comprised 50,744 packages of Indian and 24,050 packages of Ceylon tea. Demand for Indian grades was fairly active and quotations were about steady. The lower priced Ceylon grades showed little change, but teas above 1s. 0½d. per lb. were irregular and in some cases easier.

VEGETABLES.—According to *The Fruitgrower's* Covent Garden report, tomatoes are improving and quotations are steadier. Cucumbers are also doing better, at hardening prices. Cabbage, savoy and cauliflowers are in abundant supply and sell at cheap rates; only the best samples of runner beans are saleable. Brussels sprouts have encountered a better demand, but carrots remain at a low figure. Cultivated mushrooms remain short and dear, while turnips have risen in price. Supplies of potatoes at London markets remain on a liberal scale and, although demand has been rather quiet, prices show some improvement. The continuance of the colder weather should cause some further hardening of rates in the near future. Best siltland King Edward made from 6s. 6d. to 7s. 7d. per cwt. at the Borough on Tuesday, against 6s. to 7s. a week earlier.

MISCELLANEOUS COMMODITIES

VEGETABLE OILS AND OILSEEDS.—Very quiet conditions prevail, and there is little disposition to do business in consequence of the unsettled exchange situation. Linseed oil, which has been on the down grade for some weeks, has thus further declined to almost the lowest figure touched this year, notwithstanding the relatively strong position of seed. Raw oil, ex Hull, for October-December delivery, is now quoted at £24 7s. 6d., as is January-April. Owing to the poor demand for oil and cake crushers are withholding purchases until the position clears. The quantity of linseed afloat for Europe has been further reduced to 108,700 tons. Fairly large shipments are being made to the United States, the quantity afloat now being 57,800 tons, against 25,800 tons a year ago. British India is expected to export rather more than recently stated, which, with 260,000 tons still available for export from Argentina, brings the total up to 330,000 tons, against 490,000 actually shipped in the remainder of last year. Reports concerning the growing crop in Argentina continue to be favourable and exert a steadying influence. After a sharp set-back, cottonseed has rallied, and new crop black Egyptian afloat for Hull is now quoted at £7 5s. with later shipments, at a progressive discount. Cotton oil is a very poor market, and Egyptian crude ex Hull has further declined to £26 10s., and common edible to £29 10s. spot, while business has been done at £24 10s. for January-April delivery.

FURS.—On Thursday of last week (September 24th) a sale of South-West African "Persian lambs" was held in London. Competition was good and no less than 95 per cent. of the offerings were cleared. Although the undertone of the market was very strong, prices were unchanged compared with the spring sales. On Monday a three-day series of silver fox sales opened in London; some 30,000 skins were on offer. The supply consisted almost entirely of skins held over from last season, and the quality was generally rather inferior. Apart from the question of quality, the devaluation of the franc was also an adverse factor. French buyers—normally the largest purchasers of silver foxes—were present, but refrained from bidding in view of the uncertainty regarding the future course of the exchanges. Consequently, only between 30 and 40 per cent. of the furs were cleared, and at prices 10 per cent. below those realised

in the summer. Despite this fact, it is generally believed in market circles that the past week's currency developments will, in the long run, have a beneficial effect upon the fur business. Keen buying is expected when the London series of general fur auctions opens about the middle of October.

RUBBER.—After appreciable fluctuations, the London market closed on Wednesday showing a rise of $\frac{1}{4}$ d. per lb. on the week. Fears of increased competition and underselling by the Dutch, in consequence of the devaluation of the guilder, were mainly responsible for the early reaction; but these fears were subsequently seen to be groundless. The output is controlled by the restriction scheme, and, moreover, the question of native exports has been dealt with by raising the export tax by 10 cents per kilo. Uncertainty regarding the future course of the exchanges has caused Continental buyers to hold off the market. On the other hand,

the decline in sterling vis-à-vis the dollar has produced a considerable volume of American buying on the London market. Meanwhile, the International Committee met in London on Tuesday, but decided to make no change in the quotas for the time being. The next regular monthly meeting of the Committee is to be held on October 27th.

The spot price in New York on Wednesday was 16 $\frac{1}{2}$ cents per lb., compared with 16 $\frac{1}{2}$ cents per lb. a week ago and 16 $\frac{1}{2}$ cents a month ago. Wednesday's official buyers' price for standard ribbed smoked sheet on the spot in London was 7 $\frac{1}{2}$ d. per lb., as against 7 $\frac{1}{2}$ d. on the corresponding day last week. In forward positions, business has been done at 7 $\frac{1}{2}$ d. to 7 $\frac{1}{4}$ d. for "November" shipment, as against 7 $\frac{1}{4}$ d. a week ago. Stocks in London and Liverpool at the end of last week totalled 103,784 tons, against 104,327 tons a week earlier. A year ago stocks amounted to 176,958 tons.

ensure the application of a concordant policy designed to re-establish a durable equilibrium between the economies of various countries and to lay more solid foundations for the stability of economic relations." But the limpid clarity, the unambiguous precision, of this resolution cannot hide the fact that, in the British Government's eyes, all the action is to come from others and none from themselves.

It is evident that the British Government are labouring under a very strange delusion about the world's opinion of their commercial policy. To themselves, all doubtless seems perfect. Mr Chamberlain, for example, can speak of "the system of very moderate protection" which he has set up. Now, it is true that the rates of duty levied on imports into the United Kingdom are not, on the average, very high. But the destructive nature of a tariff cannot be measured merely by the height of its imposts. A 1 per cent. duty placed upon imports into incomparably the largest international market in the world does much more damage to international trade than a total prohibition of imports into, say, Guatemala or Albania. Moreover, the circumstances in which the British tariff was imposed must be borne in mind. Mr Morrison now argues that with the "alignment" of a currency the reason for special protective measures disappears. But is it conceivable, his hearers must have asked themselves, that this British statesman, who is so conscious of his own country's unfailing rectitude, can have forgotten that when the pound fell, his own Government seized the opportunity—not to reduce duties, but to impose a brand-new general tariff?

There are some other aspects of British commercial policy which are not forgotten in foreign countries. There is, for example, the incident of Ottawa, when what are, save for a technicality, independent States safeguarded their own mutual trade by penalising the commerce of others. At Ottawa tariffs were raised, and there was no thought of most-favoured nations. But when at Ouchy an attempt was made by Belgium and Holland to lower tariffs, Great Britain took the lead in standing firm upon the letter of the most-favoured-nation clause. Mr Morrison now talks of "bilateral negotiations on the basis of the most-favoured-nation clause." But have the British Government paid much attention in their own bilateral negotiations to the spirit of the most-favoured-nation clause? Are not the currency clauses of the Roca-Runciman Agreement, the coal provisions of the Scandinavian Agreements, obvious attempts to evade the whole meaning of the clause? The plain truth is that the British Government are still in the frame of mind in which Mr Chamberlain at the World Economic Conference in 1933 produced his famous distinction between "good" (i.e. British) and "bad" (i.e. all other) quotas.

If there is to be any lasting improvement in international trade it is essential that this mentality should be changed. There is a matchless opportunity now, with prosperity at home and a willingness to consider relaxation of restrictions abroad, to make a real advance towards the ideal of freer trade, which is so frequently on the lips of Cabinet Ministers. The opportunity will be short-lived, and it may not recur.

There is no difficulty whatever in finding practical ways of giving effect to a policy of tariff reductions, if only the will is there. What is important, for a first step, is that it shall be taken collectively by as many nations as possible, rather than that its dimensions shall be large. The simplest and quickest method would be for the British Government to propose to every nation in the world that every tariff should be lowered and every quota expanded by, say, one-twentieth of its present amount, the agreement to come into force when accepted by nations doing, say, one-third of all the world's trade. This would at least be a beginning, and it should lead up to the negotiation of a more far-reaching Low-Tariff Club. The most-favoured-nation clause need not stand in the way of reciprocal tariff reductions; for there is already a very substantial body of agreement between the nations that multilateral treaties which do lower some duties without raising others are a legitimate exception to the universal most-favoured-nation clause.

In any case, the ingenuity that has been applied to the increase of tariff barriers can easily find methods of reducing them, if once the Governments say the word. As the leader of the rapidly growing sterling group, the British Government must not fail those who are looking to them for a lead.

PARTIES AND DEFENCE

THE prospect of international troubles normally favours the Right in a modern democracy; and the prospect of peace normally favours the Left. Not unnaturally, therefore, in the two Party conferences of the last ten days, in which an almost universal acceptance of the possibility of war was alarmingly apparent, the dominant note among the Conservatives was resignation and complacency and among the Labour delegates confusion and perplexity. Meanwhile the mind of the average citizen is probably about equally compounded of resignation on the one hand and confusion on the other.

The former sentiment was most completely expressed in the speech of Sir Samuel Hoare at the Conservative Conference. In that oration there was not so much as an echo of the Sir Samuel Hoare of September, 1935, who saw peace as an objective and believed in the efficacy of steady and collective resistance to all acts of unprovoked aggression. To the evident satisfaction of the Conference, Sir Samuel virtually ignored foreign policy—not, perhaps, his business; but then why did not Mr Eden speak?—and confined himself to a justification of re-armament. Such a justification is, of course, easy enough, if all objectives are forgotten and all consequences ignored. And Sir Samuel, in his efforts to arouse the martial ardour of the delegates, fell into the easy error of over-simplifying the issue. He spoke of the "need of a greatly strengthened British Empire as a stabilising force on the side of peace." Such a statement may in certain circumstances be the truth; but it becomes hypocritical if it is allied to a determination to base British re-armament on some imaginary standard of absolute needs and not on collective obligations. And this was what Sir Samuel Hoare did. "Much of the programme is absolute not relative. . . . The communications of a great Oceanic Empire must be secured, whatever may or may not happen in other countries of the world."

Similarly, Mr Chamberlain, in his speech to the Conference, painted a most remarkable picture of the last twenty years. Great Britain, he indicated, had disarmed alone in a world of militant nations; we had waited in vain for others to follow our example; they had not done so, but rather had proceeded (quite uninfluenced by British policy) to re-arm more heavily; and, finally "the League" (again unaffected apparently by British action) had "given us some bitter experiences" in the last year. Later in the debate the reviving disposition of the Conservatives to think of colonial and foreign, as well as defence, policy in terms of national advantage, was again illustrated by Sir Henry Page-Croft's observation, on the delicate question of the Mandated Territories, that "what we have we intend to hold."

In reality the crux of the matter is not re-armament at all but foreign policy. The question is not whether we are to have 5,000 aeroplanes or 20,000 aeroplanes, but whether we are to have unlimited competition or collective limitation, whether the arms are to be used in defence of a principle or merely to make more deadly the final unprincipled scramble for national advantage. The blurring of this distinction was as apparent at the Labour as at the Conservative Conference. Evidently the Executive of the Party, and, in particular, to judge from the speeches, Dr. Hugh Dalton, wished to relieve the Parliamentary Party of the embarrassing necessity to vote against—or refrain from voting for—the Service estimates. Such a vote, he implied, must necessarily be misunderstood at a time when the Labour Party were calling on the Government to use force, if need be, in support of democracy and international law against the aggression of the Fascist Powers. A resolution was consequently submitted to the Conference by the Executive declaring that "the armed strength of the countries loyal to the League of Nations must be conditioned by the armed strength of the potential aggressors." The resolution, quite logically, then affirmed that "realising the relationship between foreign policy and armaments, and having regard to the deplorable record of the Government, the Labour Party declines to accept responsibility for a purely competitive policy."

The difficulty for the Labour delegates was consequently to decide whether or not the present Government could be

regarded as in fact "loyal to the League of Nations" or whether it was pursuing "a purely competitive policy." The Conference was agreed that a competitive policy should not be followed and that defence estimates proposed by any Government pursuing such a policy ought to be unhesitatingly opposed. But there was much less agreement whether the present Government could or could not be trusted to defend collective principles. Dr. Dalton, though he attacked the Cabinet in more unmeasured terms than any other speaker, seemed to believe that it conceivably might defend those principles—though more, he evidently thought, from necessity than from conviction. Mr Herbert Morrison, who has done much in recent months to belie the suggestion that he is moving steadily to the Right, was very much more sceptical:—

The Government's policy (he said) is merely a reproduction of pre-war competition in national armaments. The Labour Party cannot vote for it in the House.

Sir Stafford Cripps, on the other hand, was quite convinced that the Government never had and never would pursue any but a nationalist policy. Finally, Mr Attlee emphasised again the connection between armaments and policy; and the Conference voted the Executive's resolution by a moderate majority. Confused as were the terms of the resolution, it gives the Parliamentary Party the discretion to vote as it thinks fit on the defence estimates; and this seems to be its main practical effect. It was evident, however, that most individual delegates at the Conference were torn between a desire to strengthen the democratic against the Fascist powers and a fear of giving support to a policy of competitive re-armament.

In the debates on Spain the same underlying dilemma was apparent. Illogically on the surface, but really naturally enough, those who were most loth to support re-armament were most anxious to intervene in Spain. Nobody will deny that the issue (which we discuss in a Note on page 55) is an extremely difficult one; and it is not perhaps surprising that the Conference which first voted reluctantly in favour of "non-intervention" subsequently sent two of its leaders to Whitehall to state the case for intervention put before it by two Spanish visitors. Mr Chamberlain, in reply, assured the delegation that the British representatives on the Non-Intervention Committee were fully conscious of the dangers of the situation.

The international cloud, which spread such an atmosphere of perplexity in the Labour Party's debate on foreign affairs, cast its shadow at the Conservative Conference, even over internal policy. There was an alarming tendency for speakers to think of domestic affairs in terms of war preparation. Agriculture must be further protected and extensively stimulated in order to avoid a food shortage in time of war. Health must be improved because recruits were physically unfit. The depressed areas could best be revived by the placing of armament orders. "Once again," said Sir Samuel Hoare, in tones slightly reminiscent of the walrus addressing the oysters, "our suffering fellow citizens in the Depressed Areas will have the chance of honourable work and of sharing in the great national effort."

Mr Chamberlain, it is true, in the long eulogy of the Government's economic achievements which he addressed to the assembled Conservatives, refrained from attributing Great Britain's recovery to the re-armament programme. But this was largely because he was anxious to attribute it wholly to the magical influence of the arrival of the National Government. Doubtless the Government has played an important part in many of the changes that were necessary to the stimulation of recovery. But Mr Chamberlain implicitly ascribed the whole industrial advance of the last four years to the election and re-election of himself and colleagues. He said not a word about the influence in restoring business confidence in Great Britain of the departure from gold, of the emergence of cheap money and cheap food, or of the movement of world cyclical forces. "Confidence," he said, "is the mainspring of recovery; and I claim that we have created it." The implication was that as long as the present Government remained in power, the downward swing of the trade cycle could never occur. Indeed, some passages in Mr Chamberlain's panegyric recalled the paeans of self-congratulation that used to be sung by Mr Hoover in 1928.

7, CHANCERY LANE, LONDON

What, it may be asked, will be the response of the plain man to the political clatter of the week? On the issue of British recovery, he would probably give the Government the benefit of the doubt, though he would also be sympathetic to the Labour Conference's desire for further extension of the social services, as well as to their rejection of Communist affiliation. He is probably not opposed to re-armament. But he would be no more likely to fight for Sir Henry Page Croft's slogan of "What we have, we hold" than for the Labour Left Wing's policy of giving armed support to none but Socialist or Communist Governments. A year ago the plain man was prepared to fight for the principle of collective justice and collective defence. But the failure of the Government's Abyssinian policy has left him perplexed. If, therefore, anything like national unanimity on defence and foreign policy is to be restored, if the Government's protestations are to be justified, and if the Labour Party's conversion to conditional support for re-armament is to prove anything but a myopic mistake, the objectives of the "national effort" demanded by Sir Samuel Hoare must be made plain, and those objectives must be something more than a mere pursuit of national advantage. The attempt to rebuild international order out of chaos is no doubt discouraging and laborious. It may be that the situation cannot now be made better. But to accept as inevitable, and without serious resistance, the present suicidal growth of war preparation cannot fail to make it worse.

A QUARTER'S NEW CAPITAL

THE third quarter of each year is normally a semi-close season for capital offerings. No public issue can be carried through without the co-operation of the Stock Exchange, where staffs are invariably depleted in August and early September. Further, there is a close correlation, for obvious reasons, between the volume of issues and the flow of company and other dividends. Last year the rule was honoured in the breach, but this year's experience has run true to form. Our compilations show that total issues made direct to the public during the past three months involved £33.1 millions of new money—a figure £4.3 millions less than in the second quarter, and little more than half the total of £61.9 millions for the first quarter. Issues of all kinds—including Stock Exchange "placings," "introductions," capital increases by existing companies and all securities for which permission to deal on the Stock Exchange was granted—aggregated £73.8 millions, against £79.2 millions in the second quarter and £94.7 millions in the first quarter.

Much the most important feature of the last few months has been the extent to which issues destined for employment in home industry have dominated the market.

NEW CAPITAL ISSUES, CLASSES OF BORROWERS
(£ millions)

	Total	British Government	Foreign and Colonial Govts.	British, Colonial and Foreign Corps.	Foreign Railways	Mines, Finance, and Exploration	Rubber and Oil	Balance (Mainly Home Industry)

2nd quarter	79.2	Dr. 0.8	2.4	6.0	0.2	3.1	1.1	62.2
3rd quarter	78.8	Dr. 0.7	0.5	13.3	Nil	19.8	0.9	40.0

The comprehensive "New Basis" figures show that £40.0 millions of the £73.8 millions issued in the past quarter went directly into home industry. If other forms of company financing—as distinct from Government and municipal financing—be included, the aggregate is raised to £59.9 millions, or 81 per cent. of the quarter's total. For the first nine months of this year the percentage was 74. Companies, rather than Governments, are making the running to-day. This is a conclusion of great importance, from which two others necessarily follow.

In the first place, the volume of new issues is much below that of comparable periods in the recent past. The Stock Exchange is at least as active to-day as in 1928 and industry in general is considerably more active. But whereas public capital issues (on our "Old Basis" of computation) totalled £291 millions in the first nine months of 1928, this year they have been no more than £132 millions. The British Government, as a long-term borrower, has been out of the market, while British municipalities, which have had the trustee field largely to themselves, have continued to be quantitatively regulated by a paternal Bank of England. Although the company issue market has been entirely "free," the average issue has been relatively small. A "New Basis" total of £183,260,000 has been divided among 601 companies, giving an average of £305,000 per issue. If, however, we deduct the proceeds of 28 of the largest issues, aggregating £50,386,000, the average for the remaining 573 issues is no more than £232,000.

In the second place, an overwhelming proportion of the new money represented by London capital offerings continues to be destined for employment at home:—

(£000)

	United Kingdom		British Empire (excluding United Kingdom)		Foreign Countries	
	Government	Other	Government	Other	Government	Other
THIRD QUARTER						
Old Basis:—						
1934	Dr. 200	22,074	Nil	6,372	Nil	800
1935	Dr. 700	60,323	1,670	2,835	Nil	73
1936	Dr. 750	27,160	375	5,266	Nil	139
New Basis:—						
1935	Dr. 700	78,742	1,670	6,849	Nil	73
1936	Dr. 750	62,575	755	11,079	Nil	139
NINE MONTHS						
Old Basis:—						
1934	42,650	57,389	8,461	15,522	Nil	1,403
1935	1,890	117,974	1,670	7,801	Nil	258
1936	Dr. 750	116,733	375	14,017	Nil	586
New Basis:—

Totals ...	129,500,900	132,462,000	226,131,000	247,760,800

Of a total of £247.8 millions ("New Basis") for the first nine months of this year, "Manufacturing and Miscellaneous" (mostly industrial) offerings account for £71.7 millions, or 29 per cent. This, however, is a residual item, after many of the most important British industries have been separately specified. Of these, the heavy industries and engineering head the list, with a total of £20.9 millions. Next comes £18.3 millions for "Exploration, Financial and Investment Trust" companies—a *mélange* including numerous investment trusts (whose issues have mostly taken the form of debentures) and more than a sprinkling of real property concerns. Mining (mainly overseas) comes next with total issues in the nine months of £17.4 millions, of which South Africa has taken the lion's share, with "other mines" (not Australian) running a close second. These "other mines" have, in fact, been very largely West African, and they have included in their number some of the most speculative of the year's offerings. Among home industries, other than those already mentioned, the largest borrowers have been trades whose shares are currently most favourably regarded on the Stock Exchange, including public utilities, chain stores, the motor industry and brewing.

Out of the £645 millions ("New Basis") raised by Governments and municipalities in the past nine months, as much as £58.3 millions has been taken by a single group—"British Corporations, Counties and Public Boards." This group includes the Railway Finance Corporation, which raised £26,190,000 under Treasury guarantee in February, and some 37 authorities whose offerings have ranged from £6,100,000 of new money for the London County Council to a modest £107,385 of new money (out of a total issue of £1,500,000) for the Newcastle-upon-Tyne Corporation. In this "controlled" section of the market, there has been a prevailing uniformity in issue conditions, for as many as 24 borrowers have raised their money by the issue of stock having a redemption yield not more than one-sixteenth above or below 3 per cent. Two other features are worthy of comment—the large proportion of the "new" corporation money which, in fact, has been used to refund local short-term indebtedness, and the virtual "closing" of the market (for purposes of "digestion") between the end of May and the middle of July, and again between the end of July and the last week of September.

On page 91 we show, in supplementary tables, the division of recent issues between bonds, debentures, preference shares and ordinary shares; the aggregate amounts involved in conversion operations; and a list of some of the largest individual issues of the past quarter. The proportion of ordinary capital to the total offered by British companies is increasing. During the past three months it was 73 per cent. ("New Basis"), against 49 per cent. in the third quarter of 1935, and during the past nine months it has been 71½ per cent. (against 52 per cent.).

The volume of new issue activity is unlikely to return to the average level of the nineteen-twenties until gilt-edged borrowing is resumed on something like its old scale. When to-day's totals of Government and corporation borrowing are compared with those of eight or ten years ago, a strong impression remains that the present level of long-term interest rates is in a very special sense a function of Treasury policy. If future conditions arise which would call, in the normal way, for a moderate rise in interest rates, the authorities may be faced with a dilemma. They may be compelled either to make restriction more stringent, or to allow a moderate upward movement to take place—even if a Re-armament Loan has eventually to be financed at a somewhat increased cost to the taxpayer.

THE WHEAT POSITION

SINCE the middle of last June the prices of wheat futures in Liverpool have risen by no less than 45 per cent. The average British import price of wheat in August was 7.47s. per cwt., a higher figure than in any corresponding month since 1930. While rumours of a coming world wheat shortage may be discounted, the rise in prices has been sufficiently rapid to give special point to an examination of its causes. The world's agricultural population derives a substantial share of its total income from wheat, and the importance of recent developments needs no emphasis.

The sharp rise in prices since June has been due, mainly, to the fact that the coming season's wheat crop, like its predecessor, is likely to be well below the crops harvested between 1927-28 and 1933-34. The position at the beginning of the new season provided a favourable background for a price advance. Since the 1932-33 season importing countries have artificially maintained their wheat output about 300 million bushels per annum above, and their imports some 300 million bushels below, the pre-depression level. On the other hand, production in exporting countries has been reduced more than proportionately, not so much by deliberate curtailment as by a succession of crop failures in North America. Consequently the huge surplus stocks of wheat accumulated between 1927 and 1933 had been practically depleted at the end of the last wheat season, on July 31st. The world's exportable end-of-season stocks have declined ever since 1934, but prices responded only very slowly to the improved position.

The small response of prices to the decline in stocks since 1934 may be ascribed partly to the great shrinkage in international trade. Prices on the world market are not determined by the absolute volume of supplies, but by the ratio between exportable supplies and importers' requirements. World import requirements expressed as a proportion of exportable supplies, for example, declined from 61 per cent. in 1931-32 to 59 per cent. in 1934-35, despite a reduction in exportable end-of-season stocks from 523 million bushels in 1932 to 367 million bushels in 1935. During 1935-36, however, the ratio between requirements and supplies rose to 68 per cent. But in 1926-27, before the accumulation of stocks had begun, the proportion of world import requirements to exportable supplies was as high as 81 per cent. In spite of the substantial reduction in exportable end-of-season stocks between 1933 and 1935, the stage was, therefore, not really set for improvement until the past season. The relatively slight increase in wheat prices between 1933-34 and 1935-36 was thus largely due to the facts that the ratio between import requirements and exportable supplies was then still considerably less favourable than before the depression, and

that the reduced output of the exporting countries could not be foreseen, as it was the result not so much of deliberate restriction of acreage as of a series of crop failures. The main features of the recent history of the wheat markets are summarised in the following table, which is based on the calculations of the International Institute of Agriculture:—

WORLD PRODUCTION, TRADE, STOCKS AND PRICES OF WHEAT
(In millions of bushels)

Season	World production (a)		World exportable supplies (b)		World import requirements	World exportable end-of-season stocks	Average Brit. Import (c.i.f.) Price (shillings per cwt.)
	Exporting Countries	Importing Countries	Season's surplus	Total (incl. carry-over from previous year)

(c) Provisional.

(b) Including U.S.S.R.

What are the prospects of the world's wheat markets? The current season began with exportable stocks at more normal levels. Clearly, another relatively small wheat crop was bound to lead to a considerable rise in prices, for the cushion formed by surplus stocks had been considerably deflated. At the moment, the world's wheat crop, exportable supplies and import requirements cannot be assessed with any degree of accuracy. The crops of Argentina and Australia, two of the leading exporting countries, will not be harvested until November-January. Some provisional and unofficial estimates of world production, however, are already available.

The agricultural branch of the Canadian Bureau of Statistics have collected information which indicates that world production in 1936-37 will be about 5 per cent. smaller than in the preceding year. The European crop, exclusive of Russia, is estimated at 1,491 million bushels, a reduction of 78 million bushels on the previous season. The decline in total European production, however, is the resultant of an increase of 69 million bushels in the four Danubian countries and a fall of 147 million bushels in the crops of the remaining countries, compared with a year ago. The decline was most marked in the leading importing countries. Great Britain's harvest, for example, fell from 65.0 million bushels in 1935 to 56.5 million bushels in the current year. Similarly, France is expected to harvest only 242.5 million bushels, compared with 278.8 million bushels in 1935 and 338.5 million bushels in 1934. The Italian crop, estimated at 238.8 million bushels, shows a reduction of about 45 million bushels on 1935.

Spanish and Portuguese crops are also considerably smaller than a year ago. Spain harvested 121.5 million bushels, compared with 158.0 million bushels in 1935 and 186.8 million bushels in 1934, and Portugal's crop, at 8.4 million bushels, was 15 million bushels smaller than a year ago. In Germany, on the other hand, production rose from 171.5 million bushels in 1935 to 177.3 million bushels in 1936. While part of the deficiency of the leading European importing countries can be made good by purchases from the Danubian countries, there can be little doubt that Europe as a whole will necessarily draw on overseas supplies to a greater extent than during the past season.

The total North American crop is estimated at 876.2 million bushels, compared with 911.5 million bushels in 1935 and 783.7 million bushels in 1934. Canadian production declined from 277.3 million bushels in 1935 to 233.0 million bushels in 1936, but the United States harvest, at 630.2 million bushels, is about 7 million bushels above last year's level. Total North American production, however, is appreciably below the output of former years, which was as high as 1,491 million bushels in 1928. As a result of the succession of short crops in the United States, that country has disappeared from the export market. Indeed, it has been estimated that the United States will need to import 50 million bushels from Canada during the current season, while exports of both wheat and flour are not expected to exceed 24 million bushels. North African production is also likely to be appreciably smaller than in 1935; for the combined output of Tunis, French Morocco, Algeria and Egypt fell from 113.3 million bushels in 1935 to 97.1 million bushels the current year. Similarly, in Asia, the harvests of India, Japan, Turkey and China are expected to yield only 487.7 million bushels, compared with 514.3 million bushels last year.

While it is beyond doubt that the requirements of importing countries will be appreciably heavier this season than in 1935-36, it is clear that exportable supplies (carry-over plus new crop export surplus) will be smaller than in 1935-36. According to the *Corn Trade News*, world shipments of wheat and flour since the beginning of the new season were 12.0 million quarters, compared with 9.8 million quarters during the same period a year ago. Shipments to Europe alone rose from 7.6 million quarters to 8.9 million quarters during this period. The course of the wheat markets during the next few months will be largely governed by crop reports from Argentina and Australia. Both countries have recently been suffering from a lack of rain and are unlikely to turn out bumper crops. Provisional estimates forecast the crops of the two countries at 360 million bushels, compared with 381 million bushels in 1935-36. Argentina is expected to harvest about 215 million bushels, a reduction of 26 million bushels on last year; while Australia's crop may yield 145 million bushels, or 5 million bushels more than in 1935-36. But even if the crops of the Southern Hemisphere turn out to be somewhat larger than is expected, the margin between world import requirements and exportable supplies is likely to be very small during the current season. Hence the exportable carry-over of wheat at the end of the current season will be negligible. The tendency of prices over the winter, therefore, is likely to be firm, and as there will be practically no old stocks to draw upon in 1937-38, nothing short of a bumper crop in that season may be sufficient to prevent a steep upward trend of prices next summer. The wheel of the wheat cycle, in fact, has almost turned full circle.

NAZI ECONOMICS

(BY OUR BERLIN CORRESPONDENT)

DUNCES have called political economy dismal, and one living exponent who finds his science romantically vague has described it as "something like lyrical poetry." President Professor Dr. Reiter, head of the German Office of Health, has launched a new "Biological Political Economy," which is neither dismal nor vague. Biological Political Economy lays down principles for valuing in money the really precious elements of national wealth, and books them to the Third Reich in a superabundance which would turn

a mere Second Reich green with envy. Dismal ("Liberalistic") Political Economy concerns itself, it appears, unfruitfully with "dead" property—land, cattle (though these are not always dead), houses, factories and railways; and omits reprehensibly the money values of individual men reckoned according to their health, the number and vigour of their offspring, and their cultural and moral conditions. Biological Political Economy sets a reichsmark value on each of these human assets, and can thereby reach estimates of national wealth which (at least in Germany's case) are five times the skimpy totals of "Liberalistic" pedants.

Professor Reiter has discovered that a German citizen has three separate cash values, which, where sufficient data are available, can be exactly determined. The citizen has "A," a material money value; "B," a biological money value; and "C," a cultural money value. The average material value of an adult, hereditarily-sound male German is 29,400 reichsmarks; of a hereditarily-sound female 11,000 marks. The biological money value, "B," of a German varies with his record as father. As parent of two hereditarily-sound sons and two hereditarily-sound daughters he has a biological value of 40,000 reichsmarks. Professor Reiter computes at 80,000 marks the value of "the marriage itself," but he apportions this sum equally between husband and wife. The 40,000 marks, however, represents only the "quantitative-generative" value of a father, and may be increased by a high "qualitative-generative" value, or heavily reduced—if rickets intervenes. The "C," cultural money value of a German "is not less important" than his material or biological value. It is therefore something between 29,400 and 40,000 reichsmarks.

"To the cultural value of a man, however, belongs his ethic," which may unfortunately be bad. The 29,400 (or 40,000) marks' cultural value of a man who knows his Schopenhauer would barely suffice to balance the reichsmark deficit of his wife-beatings. Since data on the culture and ethics of 65 million citizens are scanty, Professor Reiter omits "C" provisionally from his table of Third Reich national wealth. But even without that he reaches the imposing total of 1,935 milliard marks, of which 1,625 milliards represents the "A" and "B" material and biological money values, and 310 milliards the "dead" wealth already computed by "Liberalistic" economists. Professor Reiter calls the new 1,625 milliards "State property."

Professor Reiter claims for Biological Political Economy the dual merits of an exact and of an applied, or applicable, science. Applicable it certainly is to the "biological-medical-educational selection" of the future, whereby "A," "B" and "C" will be raised to astronomical magnitudes. He claims also that the science is a Nazi Party invention. This claim will not be disputed; for though long ago the Mother of the Gracchi boasted that her living treasures were more precious than her dead, she neglected to appraise in reichsmarks the cultural-ethical wealth of Caius and Tiberius.

Biological Political Economy is in its infancy. Indeed, Professor Reiter is compelled to apologise for having to use provisionally "methods of thought that recall Liberalistic forms." When the science reaches manhood, it will have hard problems to solve. Why should it stop at a meagre national wealth of 1,935 milliards plus the not yet determined "C" value, when by adding "D" (say, the sporting money value) and all the other letters down to Z, it could reach 10,000 milliards? Why should a German cow have only a material value "A," and not, like a German human, also a biological value "B"? Why should morals not be given their own money value instead of being "cleared" (this is Professor Reiter's word) as a minor item in the account of culture? And who will devise a calculus mighty enough to solve the intricate problems of the next National Wealth Census—the money value "A," for instance, of a citizen 85 per cent. hereditarily sound, who under "B" has six infants varying in hereditary soundness between 1 and 99 per cent., and who under "C" has the positive cultural money value of a cubist painter less the negative ethical money value of a housebreaker?

NOTES OF THE WEEK

More Devaluations.—The lira and the Czech crown have this week followed the franc. At a Cabinet meeting on Monday, the Italian Government decided to devalue the lira by 41 per cent. (see Financial Note on page 71). So the 1927 gold parity, which was graven on marble, and which Signor Mussolini promised to defend with the last drop of his blood, has fallen before the onslaught of economic realities. The official announcement ignored the change in gold value, and informed the Italian people that the value of the lira in dollars and pounds was to be restored to the 1927 level. So easily, in a totalitarian State, can a dictator eat his own words—as Herr Hitler and Dr. Schacht will doubtless remark. The decision to devalue the lira by 41 per cent.—a record for one fell swoop—is, of course, wise and indeed inevitable. It does no more than bring the currency into line with economic fact and acknowledge the deterioration in Italy's exchange position that has followed the Abyssinian venture. The mistake was to have hesitated so long; but the greatest mistake of all (astonishing in a master of politics) was to have graven the old gold parity on stone. In conjunction with the devaluation, considerable tariff reductions on food and raw materials are announced: affording yet another proof that artificial currency values are the greatest enemy of free trade. The decision, however, not to establish an exchange fund suggests that nothing like a free market in lire is likely to emerge for some time. Meanwhile, the Czech Government has decided on a new devaluation of between 11 per cent. and 16 per cent. The Czech crown was devalued by 16 per cent. in February, 1934, and some economic recovery followed. But the choice of so low a figure, which looked like moderation at the time, has since proved unwise. For it brought the shock of devaluation without the relief of full readjustment. Last week's general 30 per cent. devaluation by the gold bloc, therefore, made Czechoslovakia's position untenable; and the Government has been sensible, as well as courageous, in deciding on a second devaluation. It may now be hoped that substantial tariff reductions will follow in Czechoslovakia also.

Inflationary Budgeting.—Much of the Chancellor of the Exchequer's speech at the Bankers' Dinner, as was natural, was devoted to the effects of the currency agreement between Great Britain, France and the United States. But Mr Chamberlain did devote a portion of his speech to a discussion of "the public purse," and what he had to say was hardly reassuring. Expenditure on the defence programme, he informed his audience, "is rising so rapidly as to outweigh any reasonable probability of its being counterbalanced by corresponding expansion of revenue." "And in those circumstances," he continued, "the variation of one million or two millions in the yield of this or that tax seems to be of relatively minor interest, for it does not look as if it will be of much account when we come to reckon up the net result of the financial year." This sounds ominously like a confession that expenditure is no longer considered in relation to revenue, and that no effort will be made to balance the one against the other when the next Budget comes to be drawn up. As we pointed out last April, there is no shadow of an excuse in economic theory or in social equity for financing an unremunerative and unproductive expenditure such as re-armament out of a loan. A re-armament loan could only be justified if, and to the extent that, the country could not afford to pay for it out of taxation. But the small increase in the income tax imposed this year has had no effect whatever upon recovery. Indeed, business activity is now rising as rapidly as ever before, while the Stock Exchange, which has a professionally keen nose for the trend of business profits, is enjoying boom conditions. Economic policy in general, in fact, reinforces the purely fiscal arguments for making at least a genuine effort to balance the Budget.

Sir Oswald Mosley's Methods.—The vast majority of Englishmen will agree in regarding last Sunday's disturbances in East London as a public nuisance, and in heartily desiring to prevent their recurrence. Those responsible for the disturbances were not primarily concerned to express their political opinion in a normal peaceable way. Sir Oswald Mosley appeared in a pseudo-military uniform, and proposed to march his similarly attired followers, shouting anti-Jewish slogans, through a preponderantly Jewish district. And though the bulk of the huge crowd which blocked the way doubtless consisted of ordinary citizens who resented the Fascists' flamboyant intrusion, the Independent Labour Party and Communist Party leaders had done their best to instigate the anti-Fascists and non-Fascists to forcible obstruction. It is arguable that the Home Secretary and police authorities were wise in refusing to ban the march until it had become plain to all eyes that a very formidable breach of the peace would occur if it were allowed to go on. Sir John Simon, in his speech at Cleckheaton on Wednesday, pointed out that the authorities cannot forbid a political procession on any other ground than its liability to provoke disorder. Certainly Sir Philip Game was right to stop the march when an actual clash had been proved certain. For the future, public opinion, while desiring to prevent any more of these undesirable histrionics, will be anxious that genuine rights of free speech are not infringed and that the extremist factions are not advertised or encouraged by a specious pretence of martyrdom. It may be that the desired result can be achieved by a mere enforcement of the police's existing powers to ban demonstrations likely to lead to a breach of the peace. A demonstration whose time, place and character are obviously provocative might come under this head; and the organisers could be given the chance to hold their meeting in more appropriate circumstances. Over and above this, however, the question of political uniforms calls for very careful consideration. Nothing could well be more provocative than the semi-Teutonic garb assumed by Sir Oswald Mosley's followers in recent months. The British people are not likely to tolerate any organisations whose ideas and dress, if not their finances, appear to be imported from abroad.

The Nation's Health.—Both Mr Chamberlain, in his speech to the Conservative Conference on Friday, and Sir Kingsley Wood, in a subsequent statement, have this week emphasised the need for further Governmental action to improve the nation's health. It is also understood that specific, if minor, measures will be introduced into Parliament in the new session. Unquestionably, a further advance on the health front would be welcomed by all sections of opinion. If it is to succeed, however, it must not be conceived, as some Conservative speakers at Margate appeared to have conceived it, as a mere service for improving young men's fitness for military service. "Physical education," for those who have left school, and other such schemes, must be voluntary if they are to be of real value. Secondly, it remains true, as Sir Kingsley Wood seems to realise, that the problem of health is very largely a problem of poverty, and that nothing really substantial can be achieved without the spending of at least a moderate amount of money. Apart from the filling of the important "gaps" in health policy, which Sir Kingsley Wood mentioned, such as the extension of midwifery services, and the spreading of knowledge about health facilities, the two fundamentals of the health problem remain housing and nutrition. The first has now been vigorously attacked; the second remains practically untouched.

Parliament and the Gas Dispute.—Difficult as is the technical problem facing the South Metropolitan Gas Company (to which we referred in a leading article last week), there can be no doubt of the tenor of South London

feeling on the merits of the new tariff. Meetings of protest, deputations and mass processions have continued throughout the week. Moreover, both the Labour and Municipal Reform (Conservative) Parties on the L.C.C. have given their support to the campaign of protest. The claim of the company that very few customers would have to pay more for their gas does not appear to have been substantiated. Mr Runciman, therefore, is clearly justified in his decision, announced on Wednesday, to ask Parliament to consider the new tariff at the earliest opportunity. The company has also been wise to declare that, should the tariff be modified as a result of Parliamentary inquiry, they will refund to consumers any excess paid by them since the introduction of the new tariff. In a democratic country, even a 100-year-old monopoly may be well advised to bow to public opinion.

Spain and Non-Intervention.—There have been few spectacular moves in the Spanish campaign this week. The miners of Asturias seem to be on the point of capturing Oviedo, which has long withstood a determined siege. But the threat to Madrid is serious; and the Government's obvious danger has prompted acute misgivings in this country, not only at the Labour Conference, about the effective operation of the policy of "non-intervention." The Soviet Government have gone so far as to declare that if immediate steps are not taken to stop violation of the Pact they will regard themselves as released from it. The crucial question, accordingly, is whether Germany, Italy or Portugal can be shown to have supplied arms to the rebels since August 25th, when the pact became effective. An unofficial committee of inquiry (consisting of Miss Eleanor Rathbone, Mr J. B. Trend, Mr R. McKinnon Wood, Mr E. L. Mallalieu, Lord Faringdon and Mr John Jagger) alleges in a report published this week* that such evidence exists. After setting forth a great deal of material to show that arms were supplied to the rebels by Germany, Italy and Portugal after the beginning of the revolt but before the Pact was signed—and nobody has any doubt of this—the Committee state that they were informed by Mr William E. Dodd that the British Pro-Consul at Vigo had told him on September 25th that the Italians had landed aeroplanes at Vigo three or four days before. If this is true, the Italian Government has plainly broken the Pact. The British Government at least is in a position to ascertain from its own Pro-Consul whether a breach has, in fact, occurred. As a member of the International Committee, it is the Government's plain duty to prosecute this inquiry and, if necessary, to bring the result officially to the notice of the Committee. If it emerges that the facts are as stated, it is clear that there can be no justification for continuing the embargo at the Spanish Government's expense.

First Fruits in France.—The first ten days after devaluation have passed quietly in France, with less political trouble and much less economic disturbance than might have been expected. There were scuffles at a Communist demonstration in Paris on Sunday, and a hotel strike during the week-end; but these were of little more importance than the Mosleyite imbroglio and unofficial bus strike which London experienced during the week. Stories of impending social disturbances in France are quite without foundation. There is probably a better prospect to-day of social stability in France than there has been for many years. The rentier classes are likely to be solaced by the huge profits made on the Stock Exchange during the past week, when rentes rose 15 per cent. and 20 per cent., and industrial shares 30 per cent. and 40 per cent. Most important of all, however, there has been virtually no rise in the cost of living. The Statistique Générale return shows the general index of wholesale prices as having risen only about 5 per cent. between September 26th and October 3rd. Prices of domestic products rose about 3 per cent. and prices of imported products about 12 per cent. Wholesale

* Report and Findings of Committee of Inquiry into Breaches of International Law relating to Intervention in Spain. Wm. H. Taylor & Sons, Dukes Road, W.3.

food prices as a whole rose by less than 5 per cent., and industrial raw materials by less than 10 per cent. Practically no rise in retail prices or the cost of living is reported. Meanwhile, apart from the fall in the long-term rate of interest reflected in the rise in rentes, there are signs of a fall in short-term interest rates; and the Bank rate was reduced to 2½ per cent. on Thursday. At the same time the substantial easing of tariff and quota restrictions on foods, raw materials and semi-finished goods (repeatedly urged in these columns as the appropriate concomitant of devaluation), will do more to keep the cost of living down than any amount of price-fixing and profiteer-hunting. There is, consequently, every reason to believe that the French people have successfully turned one of the most difficult corners in their recent history.

The Week at Geneva.—Since the provisional arrangement about the representation of Abyssinia and the inconclusive ventilation of the Spanish question in its international aspect, the Assembly of the League has been mainly occupied with four subjects: first, M. Blum's new drive for the limitation of armaments and the liberation of international trade; second, Danzig; third, the composition of the Council; and fourth ("on the margin" of the Assembly), the bearing of the British move for a new Locarno Conference upon the future of France's East European alliances. On the first of these points M. Blum is profoundly right in pursuing his two aims simultaneously; for it is the economic and political pressure produced by the strangling of international trade during the last half dozen years that has supplied a large part of the driving force for the new international competition in armaments. The economic pressure which re-armament has been producing, in its turn, at other points in the social organism may perhaps now win a hearing for M. Blum's voice of reason from those Governments which at times have given the impression of being in love with re-armament for its own sake. At any rate, it is good news that the Assembly has once more set up its Third (Disarmament) Committee, with Hungary alone refusing to take part in its work. We deal elsewhere in this issue with the British Government's attitude to the new drive for a reduction in trade barriers. In the matter of Danzig, the transfer of the present League High Commissioner, Mr Sean Lester, to a post at Geneva suggests that the Polish Government—to whom the League delegated the task of discussing the Danzig question with Germany—is proposing to sacrifice the non-Nazi parties in Danzig in exchange for German assurances of respect for Poland's interests in the Free City. Geneva may argue that Poland, alone of all States members, is militarily competent to take action at Danzig in the event of a *Putsch*. The Poles, on their side, may argue that the intention with which the present arrangements about Danzig were written into the Peace Treaty was to secure access to the sea for Poland and not to provide a city of refuge for German democracy. As to the Council, the Assembly has voted for a temporary increase in the number of non-permanent seats from 9 to 11 (thus provisionally disposing of the two permanent seats vacated by Japan and Germany). It is noteworthy that the representative of one small State, Norway, has sounded a warning against a move which shifts the balance of representation on the Council still further to the nominal advantage of the small countries, who will now hold eleven temporary seats against four permanent seats held by Great Powers. Finally, the question of "applying the Covenant" has been remitted to a committee which will report next year. At the moment, the Great Powers are too preoccupied with other pressing matters to try to collate their differences.

Trade Barriers and Raw Materials.—The Economic Section of the League has been very busy this week. Following on Mr W. S. Morrison's speech (which we discuss in a leading article on page 49) a draft resolution was presented to the Economic Committee by the British and French Delegations.

The Assembly (this resolution states), noting with satisfaction the joint declaration issued by the Governments of

France, the United States and the United Kingdom of September 26th, and the adhesion thereto immediately given by several States . . . considering that a concordant policy designed to re-establish a durable equilibrium between the economies of the various countries, and to lay more solid foundations for the stability of economic relations, and to promote international trade, would effectively contribute to the consolidation of peace . . . affirms the general desire of States members of the League to pursue the realisation of those objects . . . invites all States, whether members of the League or not, to co-operate fully to that end; and urgently recommends the States concerned, as an essential condition of final success, to organise without delay determined and continuous action to ensure the application of the policy indicated above, to reduce excessive obstacles to international trade and communications, and in particular to relax, and as soon as possible to abolish, the present system of quotas and exchange controls.

Three further resolutions are also to be introduced. One, in Mr Morrison's name, proposes that the question of "access to raw materials" should be considered by a committee under the auspices of the League, after having consulted non-members. So it seems that something is at last to be done to further the investigation of this very much discussed question. The other two resolutions are concerned with fiscal evasion and emigration. The combined activity of the British and French Delegations at Geneva this week at least show how much could be achieved in international economic co-operation if only Governments had the will to act as well as to pass resolutions.

The Far East.—The tension in the Far East has not diminished since last week. The Japanese armed forces in Hongkew are fortifying their positions there, and the Japanese Ministry for Foreign Affairs has insisted on personal explanations between the Japanese Ambassador in China and President Chiang Kai-shek himself. The Chinese are showing a remarkable forbearance and alacrity to remove any pretext for a Japanese grievance. Already, for example, two out of the three Chinese accused of having been the murderers of the Japanese sailor in Hongkew on September 23rd have been condemned to death by a Chinese court. On the other hand, the Chinese Government have retorted to the Japanese demands (which we reported last week) by presenting four counter-demands. They have asked, first, for a Sino-Japanese agreement that in future the soil of China shall not be trespassed upon by Japanese naval landing parties; secondly, for the suppression of Japanese smuggling activities in China; thirdly, for the withdrawal of Japanese troops from Fengtai, the important railway junction near Peking; and, fourthly, for a Sino-Japanese understanding that the Chinese Government shall have a free hand to suppress the so-called "East Hopei autonomous regime," which has come into existence under the shadow of Japanese bayonets. It looks as though the Chinese Government had now made up its mind that it must be prepared to fight Japan—even with the knowledge that China's only possible strategy would be to let the Japanese tiger break his teeth on her bones and gorge himself to a lethal surfeit on her flesh. It seems also that the Japanese civilian authorities may once more be afraid of seeing their military colleagues take the bit between their teeth, and may be trying to forestall fresh acts of naval and military aggression by securing some measure of satisfaction, by diplomatic means, for the Japanese militarists' demands. Grave though the situation may be, we need not yet assume that a major catastrophe is inevitable. There have been several previous Sino-Japanese crises in which the Japanese Foreign Office and the Chinese Government between them have successfully deprived the Japanese militarists of a pretext for drastic measures.

The Late General Gömbös.—The Prime Minister of Hungary, General Gömbös, whose death occurred last Tuesday, was a soldier-statesman who was responsible for the Government of Hungary during the peculiarly critical years since 1932. Of modest origin, he won his way to the front by force of character. Like Hitler and Mussolini, Gömbös combined a strong vein of nationalism with radical

holm and Malmö.

SKANDINAVISKA
KREDITAKTIEBOLAGET

—or ex-radical—views on social questions; but unlike his German and Italian counterparts, he did not fall into the path of dictatorship—partly, perhaps, because the rôle was personally distasteful to him, and partly because Hungary has an ancient native political tradition of her own which makes for oligarchy and not for autocracy. During Gömbös's regime, Hungary was confronted by two big questions: Should she, or should she not, recall the Habsburgs to her vacant throne? And should she align herself with Italy or with Germany? On the former question, Gömbös, like the Regent, Admiral Horthy, was an anti-Habsburgist. He saw no reason for reintroducing a dynasty which would re-link Hungary with Austria, embroil her with the little Entente, and possibly threaten the monopoly of power enjoyed by the Magyar governing class. On the question of orientation, he was distinctly Italophil, though he took pains to treat the Third Reich with respect. On the whole, he was a sane and steady influence in European affairs, and his premature disappearance from the scene at the age of fifty will be regretted beyond the borders of Hungary.

Italy's Exports.—The effects of devaluation on the export trade of Italy are not likely to differ fundamentally from its effects in other countries. The development of Italy's principal exports during the depression years is shown in the following table, where 1934 is substituted for 1935, in view of the abnormal conditions prevailing in the latter year:—

Italy's Exports (Million Lire)		1929	1934
Cotton tissues		1,309	262
Flax, hemp, jute and manufactures thereof...		565	218
Hats and caps		469	83
Motor cars and chassis		356	84
Silk, rayon and manufactures thereof.....		2,886	638
Wool and hair and manufactures thereof.....		769	256
Lemons and oranges		484	276
Nuts		404	170
Olive oil.....		527	61
Tomato preserves.....		367	124
Total exports		15,236	5,225

The heavy reduction in textile exports is striking, and serves to indicate the extent to which, in favourable circumstances, Italian exports might benefit from devaluation. The application of sanctions, however, resulted in a loss of goodwill which may, in part, be permanent. British motor car manufacturers, however, may expect to encounter increased Italian competition in export markets. The devaluation of the lira may conceivably cause a not unwelcome fall in the high price of lemons on the London market.

Czechoslovakia's Export Trade.—In view of Czechoslovakia's decision, an analysis of her export trade is of special interest. Figures for 1929 and 1935 are shown on the next page.

The MERCANTILE BANK of INDIA

LIMITED

Head Office: 15 Gracechurch St., London, E.C.3

Branches and Agencies throughout the East

EXECUTORSHIPS AND TRUSTEESHIPS
ACCEPTED

CZECHOSLOVAKIA'S EXPORTS (Million krona)

	1929	1935
Chemicals and chemical products	395	118
Coal, coke and lignite	923	390
Cotton yarn and thread	524	216
Cotton piece-goods	1,728	269
Glass and glassware	848	299
Iron and steel and manufactures thereof	1,804	956
Leather and leather manufactures	1,420	372
Machinery, apparatus and parts	547	232
Woolen piece-goods	1,167	177
Malt	502	144
Total exports	20,485	7,403

Czechoslovakia's export trade more nearly resembles our own than that of any other country which has devalued during the past fortnight. Recovery in her exports of textile manufactures, chemicals or coal might, therefore, be of some competitive significance for British industry. So far as textiles are concerned, however, competition from France, Switzerland and Italy has a closer bearing on Czechoslovakia's prospects. The British iron and steel industry, incidentally, has little reason for disquietude over Czechoslovakia's currency policy.

Employment in September.—The estimated number of insured persons in employment in Great Britain on September 21st reached a new high level at 10,966,000, which was 5,000 more than a month ago and 488,000 more than a year ago. Since last month, however, there has been an increase of 10,399 in the number of unemployed persons on the registers, though the total of unemployed, at 1,624,339, is 334,271 lower than in September of last year. Of the persons on the register entitled to benefit or unemployment allowances, 45 per cent. have been unemployed for less than six weeks, 57 per cent. for less than three months, and about 66 per cent. for less than six months. Approximately only 24 per cent. had been on the register for twelve months or longer. The following table shows recent changes in the unemployment figures for various industries:—

NUMBER OF INSURED PERSONS UNEMPLOYED IN GREAT BRITAIN

	Sept. 23, 1935	August 24, 1936	Sept. 21, 1936
Coal mining	243,105	190,109	192,082
Iron and steel manufacturing	35,772	28,484	26,077
Engineering	84,750	55,690	53,571
Metal goods manufacture	47,349	36,848	35,139
Shipbuilding and repairing	83,833	45,079	43,209
Building	138,790	109,803	117,699
Public works contracting	124,719	114,700	114,696
Motor vehicles, cycles, aircraft	23,186	19,599	17,425
Pottery, earthenware, etc.	12,342	13,528	10,461
Cotton	97,501	67,207	66,523
Woolen and worsted	23,453	24,085	20,239
Boot and shoe	18,945	17,044	15,538
Hotel, boarding house, etc., service	59,459	47,664	55,670
Distributive trades	207,843	175,224	181,657
Dock, harbour, etc., service	49,805	44,782	41,862
All persons registered	1,958,610	1,613,940	1,624,339

Last month's increase in unemployment took place in the category of wholly unemployed and was caused by a seasonal decline in employment in hotel and boarding-house services, the distributive trades and the building industry. The improvement in employment which occurred in other branches of activity, including the iron and steel, engineering, shipbuilding and motor vehicle industries, was insufficient to offset the seasonal decline in other trades. An analysis of changes in unemployment by districts shows

a reduction in the Midlands, the North-Eastern and Northern districts, but an increase in the South-Eastern and South-Western districts, Scotland and Wales.

Improvement in Shipping.—The substantial rise in freight rates since last spring indicates that the shipping industry is now well on the road to recovery. The improvement is also reflected in the rise of quotations for shipping shares. As a result of the steady increase in the demand for accommodation, coupled with the reduction of tonnage in recent years, the margin between the supply and demand for tonnage has been narrowed appreciably. Consequently it has been possible to introduce and maintain a system of minimum freight rates on most of the important trading routes. Our index of freight rates, shown below, has risen by no less than 13 per cent. since last May. Since August, the improvement has been accelerated, and even now tonnage in an early loading position is in short supply on most routes:—

	Average, 1913	September, 1935	July, 1936	August, 1936	September, 1936
European waters	110.0	92.8	98.1	100.9	102.2
North America	113.1	78.7	89.8	95.3	95.0
South America	123.4	82.3	87.8	89.5	93.4
India	106.3	88.9	93.4	99.5	104.0
Far East and Pacific	117.4	90.4	90.5	97.0	98.8
Australia	127.9	86.4	94.4		
Total	116.3	86.6	92.4	97.5	100.3
1913 = 100	100	74.4	79.4	83.8	86.2

It is scarcely surprising, therefore, that higher rates are being obtained for early loading position. The next table shows the changes in rates on the various routes:—

	Index No.	Inc. or Dec. Points		Index No.	Inc. or Dec. Points
Home trade	90.0	- 3.9	South America:—		
Bay—outwards	117.4	+ 1.1	Outwards	62.5	+ 1.7
Bay—homewards	121.0	+ 4.9	Homewards	124.2	+ 6.0
Mediterranean:—			India—outwards	82.1	+ 2.1
Outwards	86.0	+ 0.7	India—homewards	134.4	+ 9.1
Homewards	108.9	+ 9.2	Far East, etc.	104.0	+ 4.5
North America	95.0	- 0.3	Australia	98.8	+ 1.8

But the improvement is not confined to the cargo section of the industry. Passenger traffic is steadily improving, especially on the North Atlantic, and bookings from Australia and elsewhere for next year are likely to be heavy. Altogether the outlook for British shipping is quite encouraging, especially as the events of last week promise a further expansion of international trade.

Timber Quotas and Prices.—At a meeting in Stockholm on October 1st the members of the European Timber Exporters' Convention decided to leave the export quotas of planed and sawn timber for 1937 practically unchanged at the 1936 level. Roumania is the only country whose quota was slightly increased, from 223,000 standards to 246,000 standards. Latvia, a new member of the Convention, was given a quota of 127,000 standards. The export quotas for 1937, therefore, are as follows:—

(In thousands of standards)			
Finland	1,005	Roumania.....	246
U.S.S.R.	950	Jugoslavia	168
Sweden	820	Latvia	127
Poland	313	Czechoslovakia ..	96
Austria	275	Total	4,000

The Convention thus has decided against a relaxation of quotas, despite the improvement in demand and the sharp rise of prices in recent months. At the Finnish auctions last month, for example, prices realised for logs registered an advance up to 60 per cent. over those paid a year ago. Moreover, contrary to the usual practice of beginning to buy in October or November, after the log auctions have been held in Finland and Sweden, some importers began to cover part of their requirements for 1937 as early as July this year. It is to be hoped that the Convention has not under-estimated next year's consumption; for a further upward rush of prices is scarcely in the interests of the trade.

UNITED STATES

MR ROOSEVELT AND THE COMMUNISTS

THE issue of alleged Communist support for Mr Roosevelt has now become firmly implanted in the election campaign. It is there thanks to the Hearst Press; but it is there, too, because Mr Roosevelt incomprehensibly sanctioned it, first through an angry answer to the Hearst charge made from the White House by Mr Stephen Early, his secretary, and then by an ostentatious repudiation of Communist support made by the President in his first political speech of the campaign at Syracuse, New York. It is difficult to fathom Mr Roosevelt's motives in accepting the "red herring" as a campaign issue. He does have left-handed Communist and Socialist support for whatever it is worth. But it was not affecting him and nobody really seriously thought that he courted it.

The Communists began the campaign by attacking Mr Landon as a potential Fascist. Adapting the united front strategy of Europe to this country, they advised co-operation with the labour unions supporting Mr Roosevelt. Mr Earl Browder, the Communist candidate for the Presidency, is not trying to pull his weight. Mr Norman Thomas, Socialist nominee, on the other hand, is having an unfortunate time of it. The united front strategy has deprived him of what ought to have been a growing following, particularly in the trade unions. The Socialist vote, which ought to have passed the million mark this year, may be the lowest since the war. Mr Thomas is accepting his fate with good humour, and is the only campaigner from the Left who acknowledges there is little to choose between Mr Roosevelt and Mr Landon, and little to hope from them—for a Socialist. He knows that Mr Roosevelt does not merit the laurel wreath placed on his brow by Mr John L. Lewis and other insurgents from the American Federation of Labour. And he thinks still less of Mr Landon, whom he calls "a governor who dropped on the back of an elephant."

President Roosevelt all too obviously was annoyed by the Hearst attack, and his own testiness about it bewilders some of his supporters. But this is not a new story. After recognising the Soviet Government, the President has treated Russia with poor grace and once almost broke off relations with Moscow over the activities of the Comintern. Secretary Morgenthau's attack on the Soviet State Bank, when the franc devaluation agreement went into effect, made even sturdy Wall Street conservatives hilarious. A relatively small transaction, clumsily undertaken by a Moscow institution, was dressed up for the American public as a Communist offensive against the British-American agreement. It was all too clear that the Administration was trying to prove its right to be known as a "respectable" regime.

Such sensitiveness is difficult to understand. Everybody in Washington knows that during the worst of the depression a great many forebodings were loosely voiced by certain employees of the Government. Everybody knows, too, that there are scattered "ideological" Communists in Government offices. But Professor Tugwell, who serves the Hearst Press as symbol of the hidden menace of Moscow, would stand far more chance of execution as a reactionary than of getting office at the hand of Soviet Russia.

But if the President has asked for this trouble, he has benefited handsomely from the unforeseen boon of the franc devaluation. Governor Landon had attacked him for dynamiting the London Economic Conference, an episode which of itself is not easy to justify. The Governor had said that the absence of international agreement was responsible in part for the present dangers of war in Europe. Rabbits never popped out of a hat more neatly than came the news of the stabilisation agreement. Governor Landon had been a mere side-line critic. The President could be shown on the field of play scoring a

brilliant goal. Some reports suggest that the agreement was timed in a way to be a gamble by France on Mr Roosevelt's re-election and had been originally planned for November. But the effect on the political situation in the United States has been such as to make it look more like a careful move to help Mr Roosevelt as much as to help France.

The promised "major" speeches by Governor Landon have yet to materialise. The only one of that rank, the criticism of the Social Security Act, found him far more critical than constructive. He had been expected to offer a better programme for old-age pensions and a better philosophy for social security than the hodge-podge scheme hastily concocted by the Roosevelt Administration. But in effect he offered old persons only means test relief, as though he was fearful of carrying his Party for a more liberal measure. His Milwaukee speech, attacking the reciprocal trade agreements, particularly the one with Canada, marked the high-point for inconsistency in the campaign. It distorted the effects of the treaties, it promised to limit future agreements to non-competitive products, and preached the need for international trade with an eloquence that would have pleased John Bright. At the time of these two speeches President Roosevelt had not made a political sortie of any kind. Then he attended the New York Democratic State Convention and talked chiefly about the "red herring." So on both sides the campaign continues to be disappointing.

WASHINGTON, October 1.

WALL STREET AND DEVALUATION

THE re-adjustment of the gold bloc currencies had been so long expected in New York that interest centred more in circumstance and method than in the fact or even in the new rate of alignment. For that reason the official *communiqué* of the Secretary of the Treasury, by authority of the President, was read closely. It is appreciated that the Secretary was obliged to speak with caution, but the general tone of the announcement was more "international" than might have been expected. The emphasis upon monetary co-operation as "linked with the development of international trade" was followed by reference to the desirability of collateral action to "relax progressively the present system of quotas and exchange controls with a view to their abolition."

Broadly speaking, Wall Street has had two simple thoughts on the franc. It has believed that a cheaper franc would revive the French tourist business, and that while devaluation alone would not stop the flight of French capital or solve the related fiscal problem, it might contribute to these ends. On the other hand, it has had some apprehensions that French action would set in motion a new epoch of currency warfare. Further, a considerable amount of Continental money has come here in recent months, and under imaginable circumstances these funds might be withdrawn. Data on these sums are far from complete; the Department of Commerce estimated French investments in the United States at the end of 1935 at \$282 millions;

Swiss holdings at \$399 millions and Dutch holdings larger—\$800 millions; and in addition there are doubtless substantial balances. Concern by Wall Street has not centred on the possible withdrawal of funds with concomitant gold exports and reductions in bank reserves—indeed, the American reserve position is distinguished for its embarrassment of riches; it is the possibility of liquidation of foreign-owned securities in the stock market that has occasioned some real anxiety, but it is not now regarded as threatening.

The prospective levels of the franc and guilder provoke little discussion here. On the other hand, minor fluctuations of sterling arouse intense interest, and have superseded the attention which attached to the price of gold in 1933. At the present time, consideration of making use of the Executive authority to devalue the dollar from 59.06 per cent. to 50 per cent. is entirely dormant. The announcement by the Secretary of the Treasury of a purchase of sterling in London to check a decline in the pound induced by Russian selling is, so far as is known, the first use of our Stabilisation Fund in the London market. In short, Wall Street looks at all exchange problems primarily from their possible influences on the pound sterling; and it would appear that Washington shares that point of view.

BUSINESS ADVANCE MAINTAINED

The last month of the third quarter has at least maintained the high levels of July and August, and may have lifted the index of production somewhat. Steel operations are at 75 per cent. of rated capacity, and are as high as at any time this year; the question of deliveries in some special lines is beginning to appear. The motor industry has passed its seasonal low and is now entering on production of its 1937 models; and from most parts of the country reports of retail trade are highly satisfactory. Estimates of agricultural income are still only tentative, but none have computed a farm income lower than last year. Late crops, especially forage, were freshened under the tardy rains, and the drought, which was the universal theme a month ago, has completely disappeared from discussion. Quite apart from crops, it is estimated that not less than \$500 millions of the bonus went to agricultural veterans, while on October 21st the "gentle rain of cheques" will descend upon some 6,000,000 beneficiaries of the soil erosion subsidy. With these aids, agricultural purchasing power is well maintained. Altogether the autumn is developing according to the most optimistic expectations.

It would appear that one of the outstanding economic developments of the past six years has been the world shift in cotton production. The following figures, quoted from the *Annalist*, are taken from tables compiled by the Cotton Exchange.

WORLD PRODUCTION OF COMMERCIAL COTTON, (AMERICAN RUNNING BALES, FOREIGN EQUIVALENT)

	1931-32	1933-34	1935-36
U.S. production	16,877,000	12,712,000	10,495,000
Rest-of-World production	9,587,000	13,399,000	15,767,000
Total	26,464,000	26,111,000	26,262,000

Consumption in 1935-36 is put at 27,729,000 bales, or well above production. The most conspicuous fact in the table is the remarkable expansion in cotton production outside America; the second most conspicuous fact is the repetition of alternate 26 million bale years. The question raised by the table is whether, given an increase of world consumption, future expansion of production will occur outside the United States or inside. To a great extent, the decline in American production is the result of official "planning"; it would therefore be relatively easy to increase it. Political intervention was undoubtedly efficacious in maintaining price; whether there would have been so marked a growth in foreign production had the American programme been less drastic is of course debatable. Whatever the answer, the past five or six years have increased by 60 per cent. the growth of cotton outside the United States, and it is not likely that these new areas will be taken out of production.

NEW YORK, October 1.

FRANCE

PUBLIC OPINION "SUSPICIOUS"

THE international agreement on monetary alignment was received by public opinion with great suspicion. At first it appeared as a mere euphemism to conceal the political blow of devaluation. But the hope of a revival of international collaboration, if still expressed with the greatest prudence, is not absolutely dead. Advantage will be taken, however, in the future of whatever new step Great Britain or the United States can make in this direction. The main contention of the French critics of the three-power agreement is that several nothings only make nothing, and that the alliance between democracies will be worthless if every democracy, and France notably, shows herself unable to maintain at home the principles of peace and order, which are so often preached at Geneva.

The reopening of the Stock Exchange was naturally marked by a burst of buying orders from people anxious to align their securities with the new level of the franc. This fever has no profound significance. The real question is whether the movement will be supported in the future by dishoarded savings, or in other words, whether hoarders will feel confidence in the recovery of business. This, again, poses the question whether the Blum Cabinet has the confidence of the public.

One must distinguish here between the experts and the general public. The experts are divided into the two schools of thought which were represented in the Senate by M. Blum and M. Caillaux. M. Caillaux adopted the following attitude:—

By choosing devaluation, you have changed your policy; you have returned to deflation, and the Senate therefore rejects your compensatory measures which introduce new Budgetary charges. You must immediately take the consequences of the new situation and return to order: Budgetary order, monetary order and social order. Follow the British example.

M. Blum's reply may be summarised as follows:—

Economic policy is subordinate to social policy just as currency policy is subordinate to economic policy. Our policy aims at budgetary equilibrium, at the stabilisation of currencies, and the maintenance of the right of property. But we are aware that the task must take time and that on the very day after the breaking of our gold fetters, we should be wrong to enclose ourselves in new and rigid chains. Observe the American example.

M. Caillaux is a Conservative, with a certain disposition to social progress; while M. Blum is a revolutionary who preserves only those foundations from the past on which he hopes to build up the future.

THE "MEN OF DEVALUATION" DEVALUED

Public opinion as a whole remains far removed from these technical speculations. For the public, the present Cabinet is the Cabinet of the devaluation of the franc and the Cabinet of persistent stay-in strikes. Attacks on savings and attacks on property: these are the two serious grievances of the middle classes and the peasants. The 1928 devaluation had the excuse of war and was the counterpart of victory. The 1936 devaluation has no excuse for the masses of people who are ignorant of the international repercussions of the English and American devaluations. And M. Blum is not M. Poincaré. In the eyes of the middle classes the men of devaluation are devalued. These considerations may have important consequences at the Radical-Socialist Congress at Biarritz on October 26th; for the public's dislike of devaluation is chiefly reflected in this Party.

Actually, it appears that the French Cabinet was very well advised to decide that the new franc should not be rigid, but flexible—despite the preference of the French people for mathematical and juridical stability. For the full repercussions of the Social Laws on prices are not yet known. The 40-hour week is not yet in application. And nobody knows what re-armament will cost the Budget. The equilibrium level of the franc is difficult to appreciate, though it seems probable that its final value will be closer to the maximum than to the minimum limit of depreciation.

But the expostulations of the Senate were not superfluous. They usefully expressed the impatience of some sections of the public. They made it plain that the present level of the national debt in France does not justify experiments à l'américaine. As a result of the intervention of the Senate, the Government and the Communists realise that they must show a greater respect for the small saver.

Economists, however, applauded the lowering of tariffs and easing of quotas, the chief object of which was to prevent a rise in prices; for the Senate had refused the Government the means to compensate such a rise by a proportional increase in wages. Public opinion also applauded the first intervention of the police against the stay-in strikes in the case of the hotels, and on the same day M. Blum again condemned stay-in strikes.

The Government, it thus appears, must rapidly win over public opinion, the enthusiasm of which appears to be very cool. And when internal warmth is wanting, successful technique and external support may be of the first importance. Hence the rapid action of the Government in reducing tariffs and the warm appeals for a revival of international collaboration which it has addressed to the nations at Geneva, and particularly to Great Britain.

The situation of the Treasury demands the speedy success of recovery policy. The Government still has 8,000 million francs available at the Bank of France; and the revaluation of the gold at the Bank will bring it another 6,000 millions. The total is thus 14,000 millions, a sum sufficient to last until the end of the year. But its needs for 1937 have been estimated at 25,000 millions. By then, therefore, the battle for the new franc and for the revival of business must be won.

Fiscal receipts for August were 2,774 millions, of which 2,600 millions are ordinary receipts:—

Direct taxes	678 millions
Indirect taxes	1,921 millions
Special Receipts	10 millions
Total	2,609 millions

This total is 72 millions lower than the estimates, but 15 millions higher than in August, 1935. The yield of turnover tax was 490 millions, or 19 millions less than the estimates, but 1,000,000 more than the yield in August, 1935. For the first eight months of the year the total yield is 490 millions less than the estimates, but 151 millions more than in the same period of 1935.

Production in the French coal mines during August, 1936, totalled 3,210,337 tons in 25 working days, against 3,972,468 tons in July (26 working days) and 3,769,119 tons in August, 1935 (26 working days). Production in August, 1936, was affected by the application of paid holidays. Average daily production was 128,413 tons, against 152,787 tons in July and 144,966 tons in August, 1935. The number of men employed was 223,006 at the end of August, against 223,380 at the end of July and 224,197 at the end of August, 1935.

PARIS, October 8.

GERMANY

DR. SCHACHT SAYS "NO"

THE Berlin share market, which on September 29th had saluted the devaluation of the franc with a marked advance, continued to rise rapidly nearly all last week and after. Gains of ten points, for high-priced shares around 15 points, occurred. The banks warned clients that if securities stood too high already in July, as was then officially declared, there was nothing in the new foreign devaluations to drive them still further up. But the "flight into real values" continued.

That a desire for security was the motive of the share boom there is little doubt; for the public not only bought shares. They attempted to buy real estate; and there was also a tendency (visible, however, before the devaluation and already the subject of official measures) to withhold certain industrial commodities from the market. Dr.

A 6% ANNUITY with CAPITAL RETURN at death

"WHAT investment do you advise?" is a question often asked. To the ageing, the best return combined with security is the Annuity, but everyone is not prepared to surrender their entire capital and so deprive their heirs of legacies.

The new 6% Annuity Scheme solves this difficulty in a very satisfactory way. On capital invested there is allowed 6% interest for the life of the Annuitant. At death a generous return is made. Have particulars of this new and attractive Scheme by you. A supply of prospectuses will be sent to you upon request.

LEGAL & GENERAL ASSURANCE SOCIETY LTD

10 Fleet Street, London, E.C.4
Established 1836 Assets exceed £36,000,000
General Managers W. A. WORKMAN, F.I.A.

Schacht's denial of currency reform intentions before the Reichsbank's Central Committee on Wednesday last week failed to calm the public mind. A Central Bank, it was argued, will inevitably deny the possibility of devaluation until it has actually decided to devalue, and it will then, to avoid trouble, put through its plan as speedily as possible. Though this reasoning agrees with observation on other countries, it does not apply to Germany. Being in complete control of foreign payments and capital movements, Germany could admit a design to devalue long before she intended to execute it without suffering any inconveniences.

It is certain, moreover, that Dr. Schacht's rejection of devaluation was seriously meant, not only for the moment but for the remote future—unless certain highly improbable developments should take place. The gist of Dr. Schacht's address was his remark that the exchange control system could not be abolished as a mere consequence of Reichsmark devaluation. This remark was specially addressed to native devaluation enthusiasts. Paraphrased, it means that German exchange control is primarily a means of restricting payment of old debts to abroad and of making the contraction of new debts impossible by warning would-be lenders (if there are any) that they would not be repaid. Default on the old debts takes the exclusive form of exchange control; for it is only the transfer that is prohibited.

DEVALUATION AND DEBTS

The question of "devaluation," the question whether the Reichsmark is claimed to be worth, say, the 1-2,000th part of a pound of gold instead of the present Bank Law's 1-1,392nd part, has nothing to do with the question of exchange control. Control could be removed only if Germany possessed sufficient currency reserves for the transfer of all debt liabilities as soon as they mature for payment; and further if her foreign trade prospects were such as would preclude a new depletion of reserves. It is quite possible that in so far as foreign trade is concerned Germany could get along with a very small currency

reserve; but there is no possibility whatever of a reserve sufficient for the free transfer of the old debts. The exchange control must therefore remain. A mere nominal devaluation is no doubt practicable; but it is hard to see what advantages it would bring to Germany, still harder to judge whether its consequences would be as welcome to foreign countries as these seem to think. Here again a parallel with countries which have devalued but which nevertheless permit unrestricted foreign payments would be misleading. In such countries certain rational assumptions are made about the relations between currency values, internal price levels and foreign trade movements. The Reichsmark, however, has no real relation to any foreign currency.

The consequences for Germany of the French, Swiss and Dutch devaluations are not yet clear to German experts. At first the tendency was to assume that German foreign trade would be badly hit, and that the present restricted debt service, though alleviated by the new cheapening of foreign currencies, would be ever more difficult to maintain. But later the argument appeared that Germany may not suffer at all. Naturally the possibility of German counter-measures must be taken into account; for though Dr. Schacht in general implied that Germany sympathised with the foreign suggestion of freer trade, it is declared by authoritative persons that the measures taken for the restriction and subsidising of foreign trade, in consequence of the earlier devaluations, may have to be extended. That is what many Germans, in particular good Nazi partisans, desire. They are ashamed rather than proud of the official pretence that Germany has a world currency; and would prefer an absolute "autarky mark," with which they could at least buy pork, to the present "Jewish-international mark" of higher mathematicians, metaphysicians and casuists.

Dr. Schacht's refusal to devalue was accompanied by some very general but significant remarks about the future. Superficially read these remarks seemed to imply that foreign Governments so much desire a reform of the German currency that they would be willing to pay a very high price. Here, however, he meant real reform and not a mere nominal devaluation, which would have no visible advantages for anyone. Obviously, one condition of Dr. Schacht is that the German debts to abroad should go. With this the lack of a German gold or exchange reserve would cease to dominate the problem; but it would still be necessary for Germany to replenish her currency reserve to moderate proportions. That would require a foreign long-term loan. A withdrawable short-term credit would not suffice. It has been recent German policy, emphasised in many official utterances, that no new indebtedness should be incurred. But this self-denying ordinance applies only to present conditions; and if Germany could get rid of her old debt she would certainly not be averse to contracting a new.

Dr. Schacht also referred once more to his favourite subject—colonies. If the possession of colonies, as Dr. Schacht affirms, would reduce the dividend payment for imports from foreign countries, the demand for colonies can be understood. But it cannot be said that these proposals bring German currency reform any nearer. There is no prospect that foreign Governments would, or could, annul the claims of their citizens against Germany; and the annulment of these claims would hardly favour the flotation of a new loan for Germany. Of a redistribution of colonies there seems to be little prospect. Certain ambiguous official utterances in Great Britain have indeed encouraged Germans to think that at least on the British side this question might be considered. But these utterances were attributed to philanthropy or pusillanimity, which Germans consider to be the same thing in international affairs. A return of colonies through bargaining, in which the British Government would obtain a *quid pro quo*, is a somewhat different thing, for bargainers, unlike donors, necessarily weigh offers. It is not possible that the advantages, if any, to be derived by Great Britain from a real German currency reform, even if this facilitated international stabilisation, would outweigh the loss of debt claims, the probable loss of the new credits in the next international business crisis, and the loss through colonial or other political concessions.

It is indeed not likely that Dr. Schacht really expects for Germany any such profitable deal, or that he really believes that German currency reform is a vital interest of foreign Governments. More likely his design was of a different kind. He had inevitably to reject any mere nominal mark devaluation, against which there are very strong objections; but he had also to prevent Germany's appearance as the one obstacle to all-round currency stabilisation. The last-mentioned aim was not to be furthered by a categorical and unqualified "No." Dr. Schacht therefore expressed a general and academic willingness to co-operate in a general and academic, but indeed entirely undefined international plan; but simultaneously suggested conditions which imply that Germany has causes of complaint against the world, and that therefore the world, not Germany, is the obstacle.

BERLIN, October 5.

SPAIN

FALSE OPTIMISM IN MADRID

THE fall of Toledo justifies a certain amount of pessimism. The excuse that the trained Moorish troops and Foreign Legion, equipped with modern armaments and backed up by excellent foreign aviation, made it difficult to put up any effective resistance is only partly true. The real gravity lies in the fact that no preparation for such an emergency had been made. A vital point such as Maqueda had been left without defences, except for a few shallow trenches of doubtful value, and Toledo had not even a single trench nor any barbed wire to block the way. Only treason or ineptitude could be responsible for such lack of prevision among the military men in charge.

It would be pleasant to think that some lesson had been learned by the shocking spectacle of the Toledo débâcle. But the very slow progress being made in the vitally urgent necessity for the fortification of the approaches to Madrid makes one doubtful. Even in responsible circles there is an over-confidence which is highly depressing to the independent observer.

When the Republic has welded its new Army into shape and has adequate equipment, then it will be able to fight the rebels in open country. For the present it needs deep trenches, six or eight feet deep, with dugouts where the inexperienced militiamen can fight back adequately against their experienced opponents. Out in the open country, faced with a terrible barrage of machine-gun fire from the enemy's ample aviation and fiercely attacked by the Moors and Legionaries, there is not much hope of holding the attack. Not that trenches would guarantee victory for the Government; but they would help to make its defeats more costly to the enemy both in time and in money at the very least. There is a tremendous desire to avoid facing realities. It is fantastic that in these critical moments Madrid should be building houses and an underground railway and laying a new tramcar route down. There are 80,000 building workers in Madrid and five cement factories in the neighbourhood.

The Parliamentary session fulfilled the constitutional precept which provides that Parliament meets on the first of October of each year. The session itself proved a somewhat platonic affair, with little plain speaking concerning the present situation. The concession of the Basque Statute of Autonomy should increase the warmth of the fervour of the Basque Catholics who are fighting on the Government side. To all intents and purposes autonomy has in any case been enjoyed by the Basques since July when the *coup* of the rebel generals cut them off from Spain's capital.

The reader abroad who is more or less influenced by the exaggerated reports about conditions in Madrid, which emanate from Hendaye, Lisbon, Gibraltar and other nests of rumours, probably wonders how the Madrileño continues to remain so indifferent to the danger threatening the city. Yet life in Madrid continues to preserve a certain surface normality. Cinemas are open, the cafés are crowded, the concerts of the Philharmonic Orchestra under Maestro Perez Casas have begun. There is greyhound racing on Sundays. Much standing in queues is necessary to obtain

food, but on the whole there is no actual shortage, and there are unlimited supplies of fresh fruit and vegetables, except potatoes. The unpleasant aspects of actual fighting go on in the hills or away near Toledo, except for the killing of spies or people merely accused of Right Wing sympathies; and even this is not particularly obvious unless one drives around the outskirts of Madrid early in the morning. Water supplies are adequate. So the Madrileño has adapted himself to new conditions with a certain and dangerous complacency which may have a rude awakening.

Madrid has, within its boundaries, no small proportion of Right-wing sympathisers. That is to say it has an actual enemy attacking from outside and a potential enemy within. Of course, this cuts both ways. It gives the forces on the side of the Government a large number of hostages.

DISCIPLINING THE MILITIA

The decision to bring the militias under military law and direct control from October 12 onwards is a wise one. The militias served a very useful purpose during the first weeks of the struggle. They provided the Government with loyal forces at a moment when it hardly knew on whom it could depend. Their enthusiasm made up in great part for their lack of experience. But such forces are only valuable when operating in relatively small groups led by chiefs whom they know and trust. For most of the militia groups are more or less independent, and in some cases have their own service section for supplying food, and their own Red Cross units. This implies a serious overlapping of services. A great difficulty in the way of organising a regular army again, is to find sufficient loyal officers. And more serious, even, than the necessity for officers is the lack of modern machine guns and other equipment.

MADRID, October 4.

AUSTRIA

TO DEVALUE OR NOT TO DEVALUE?

IN contrast to Switzerland, Holland and Czechoslovakia, the Austrian Government and the Austrian National Bank took up no definite attitude towards the French devaluation during the first three days after its declaration. There was a general desire to form a more precise idea of the effect of the first crop of devaluations. Further, consultations with Berlin, Budapest, Prague and Rome were held. The new depreciation in Czechoslovakia, with a maximum of 16 per cent., can hardly affect Austria's economy; and the depreciation in Italy was executed in agreement with Vienna and Budapest in such a manner that the two Roman-pact States in no way suffer loss of exports. The declaration on September 29th of the Austrian Finance Minister, Dr. Drexler, and of the chairman of the National Bank, Dr. Kienböck, to the effect that Austria contemplated no change in its currency policy, was made on the basis of the consent and agreement of other States; so that there was no reason for change when a few days later the devaluations in Czechoslovakia and Italy were announced. After some objection on the part of heavy industry and the electro-technical trade, Austrian industrialists proved to be unanimously in favour of maintaining the present level of the schilling. The banks are also opposed to devaluation; but the farmers are inclined to favour it.

The purely technical position of the Austrian National Bank is in any case so strong that from this point of view "defence" of the currency is certainly feasible. From January 31, 1936, the date when the transfer of the payment against the Credit-Anstalt debt was made, to September 30, 1936, the gold and foreign-value holdings of the National Bank rose from 312 to 376 million schillings, while the percentage of cover improved from 27.4 to 31.1. There are also not inconsiderable hidden reserves.

It has to be considered, however, whether the economic situation would not justify devaluation. French, Dutch and Swiss competition on the world export markets is of scarcely any significance to Austria, and competition from Germany is the thing that Austria has most to fear. The devaluation in Czechoslovakia will result in very little dumping in Austria's markets, and it remains to be seen

whether and to what degree the devaluations in Italy and Switzerland will divert foreign visitors from Austria. How very successful the foreign tourist season in Austria was in the summer of 1936 is evident from the fact that during the four months May to August no fewer than half a million foreigners visited Austria, a third more than in 1935. Revenue from foreign tourist traffic during the 1935-36 season, which ends on October 31st, is estimated at 250 to 260 million schillings, compared with 200 millions in the year 1934-35. As the Austrian balance of trade improved in the first eight months of the year, and the total import surplus is estimated for this year at only 260 to 270 million schillings, it is for the first time almost wholly covered by the proceeds of the foreign tourist traffic. It also must not be overlooked that the schilling was devalued by about 23 per cent. in 1932, and that subsequent price reductions in Austria have already resulted approximately in that level of prices and wages which other countries are only now striving to reach.

LARGER GRAIN IMPORTS

Important consequences are probable from the fact that the grain harvest is less favourable than last year's. Recent estimates made by the Ministry of Agriculture are as follows:—

	Estimates (in thousands of tons)	Percentage differences compared with last year
Winter wheat	345.6	— 15
Winter rye	458.7	— 24
Winter barley	14.2	+ 5
Summer barley	275.5	+ 7

The first effect of the reduced harvest will be the necessity to import a larger quantity of grain. For many weeks imports of rye have been increasing in volume, though normally requirements are covered from domestic stocks at this season of the year. The necessity to import larger quantities of grain naturally means an exchange burden, which, however, is mitigated by the fact that larger contracts can be placed by way of compensation trading.

The diminished grain harvest is in some measure counter-balanced by the excellent crop of green fodder, potatoes, beet and maize. Although the area last season under sugar beet was strictly limited to prevent over-production, the requirement has been exceeded by 1.5 million metric centners in consequence of improved quality. As a whole, Austrian agriculture will not be much worse off on account of the poorer grain harvest, especially as in cattle, dairy produce and timber exports improvement is expected shortly, chiefly owing to the German treaty.

The recently prepared Budget for 1937 compares as follows with that of 1936:—

	1936	1937
	In millions of schillings	
Expenditure	1,902	1,980
Revenue	1,881	1,940

The increase in expenditure is entirely due to national defence measures, particularly the introduction of general Federal service duty, which will come into full effect next year.

VIENNA, October 4.

U.S.S.R.

"NO ALTERNATIVE TO STALIN'S POLICY"

UNTIL the recent sensational Zinovieff-Kameneff trial 1936 had been a curiously uneventful year, with international politics far more spectacular than internal policies. The new Constitution, summing up eighteen years of Communist rule, also summarises 1936; for the inner structure of the new Russia has become clearer than ever before, and the Constitution expresses this. By providing a measure of democracy unknown to Russians under either Tsar or Commissar, the Constitution embodies the long step which Russia has taken from the first bitter days of class conflict and the mailed-fist Communist dictatorship.

Just as democracy in the first years of the Communists' power would have been suicide, to let democracy grow

now is simply to allow support for the regime to assume expression. Even after the civil war had settled the immediate issue, internal enemies remained many and strong—the kulaks, the Nepmen, the Church and others. To-day employers and rich peasants as a social class are eliminated. There is no economic basis for any opposition element in the population. Mass opposition to Stalin in particular has melted away with the success of his industrial and agricultural policy. There is no other alternative programme to his. It is this also which deprives the Trotskyist groups now being run to earth, starting with the Zinovieff trial, of real significance.

Rising optimism and the only relative improvement in standard of life have brought with them rising loyalty, despite disgruntledness over such measures as the abortion law. Nationalist patriotism, once condemned, is growing fast, and "Our Fatherland" is encountered everywhere.

Wages have risen, along with industrial and agricultural output. The once empty shops have filled with goods. Prices have steadily fallen. The tension of the first Five-Year Plan and the struggle over collectivisation has relaxed. The other side of the medal is not so bright. Food prices are still high in relation to wages; and while bread is plentiful, the less well-paid worker still has a diet lacking in fats, meats and luxury foods. Commodities such as clothing are expensive, of uniformly bad quality, and scarce. Housing is still overcrowded.

The people will probably have to wait some time for improvement. The Kremlin has permanently vetoed a big programme of importing consumers' goods as being too costly. If peace lasts, the third Five-Year Plan, scheduled to begin in 1938, will attack this problem first of all. But the demands of the Army have eaten up, each year thus far, most of the growing economic surplus.

6,000,000 BIRTHS A YEAR

The shortage of goods was chiefly responsible for the discontented reception given in July to the prohibition of abortions. Criticism, in public meetings and in letters to the Press, was invited. The most clearly expressed sentiment was the complaint that with most families living in one room, and unable to obtain adequate supplies of goods, the prohibition of abortions means adding children to many families which cannot support them. Health was apparently the first consideration in passing the law. But the desire for an increase in population was also partly responsible for the law. Russia to-day has over 6,000,000 annual births and an annual natural increase of 3,500,000—2½ times that of all Europe. The population is now approximately 175,000,000, of whom more than 43 per cent., by official figures, are under 18 years of age.

Continued improvement in conditions is apparently assured for the winter by a good harvest. It will not be less than last year's, 100 million tons of grain, but the planned increase of 20 per cent. has been prevented by the drought. Over most of Russia's grain fields there has been practically no rain since early May. With the millions of individually-owned farms and land-strips of Tsarist times this would have meant simple disaster. Collective measures to save the crop, however, have reduced the drought threat to a minimum. Machinery, irrigation, better seed and more fertiliser have made a huge difference. Harvesting combines reaped 22 per cent. of the harvest this year, against 7 per cent. last year. Grain deliveries to the Government collecting stations are being made faster than ever before.

Industrially, progress has continued at an accelerated rate. The "Stakhanov Movement" for higher labour productivity—actually a mass movement for rationalisation of labour processes—has accomplished much towards giving Soviet industry technical maturity. The railways are now loading 90,000 trucks daily and promise to reach 100,000 by the end of the year; 46,000 tons of steel are produced daily, and there is a plan for raising this figure to 50,000 by January. Heavy industry increased its gross production for the first seven months of 1936 over the same period last year by 36.1 per cent. The coal and oil industries, however, have lagged badly. Light industry, though there are marked increases of production, is also still back-

ward. The drive for defence preparation is felt most acutely here; for it necessitates a continued emphasis on heavy industry and absorbs most of the modest gains of light industry. Food production, however, has made strides forward in the past year or two. Quantitatively the problem is solved, and attention is now directed towards the output of tinned goods and luxuries.

Gold is far and away the most prosperous branch of Soviet economy. Last year's production reached £20 millions, and by the end of 1937 Russia expects to have surpassed the Transvaal's annual £40 millions, at present the world's greatest. At a result, the country's cash position is excellent. At the end of last year the State Bank held reserves of £167,800,000. Added to this are £20,000,000 of gold produced last year, plus £15,000,000 mined since the beginning of this year; more than £50,000,000 which was realised during four years of operating the "Torgsin" stores where only foreign money or gold was accepted; and an active balance of payments of £6,200,000 last year. This gives a total of £259,000,000, and foreign indebtedness has been largely liquidated. Pending offers of favourable credits, the Kremlin is doing a strictly cash business; 85 per cent. of all imports were paid for in cash last year. The newly-granted British credit is considered significant more for the precedent it established in entering a wedge into the capitalist credit blockade than for its intrinsic value.

Total foreign trade for the first six months of this year was £49,100,000; embodying £22,660,000 of exports and £26,440,000 of imports. Most significant, 80.7 per cent. of exports were semi-finished and manufactured goods; agricultural goods were only 18.7 per cent. In 1926 the proportions were almost exactly reversed. The success of industrialisation is nowhere more clearly reflected than in these figures. Instead of selling food to Europe, Russia now sells motor-cars and textile machinery to the Near East, telephones to the Baltic countries, and pig-iron to Japan.

Imports are changing as well. The day of purchasing huge quantities of heavy machinery and finished products abroad is over. According to Rosengolts, Commissar of Foreign Trade, cotton, rolled steel and ball bearings, once vital imports, will now be supplied entirely at home. Britain continues to be Russia's best customer.

The stabilisation of the currency is now in progress. Rationing was abolished a year ago and a single price system introduced. Prices are now tending to fall. The nominal value of the rouble has been changed to three (pre-September French francs). Meanwhile, internal loans of the past eight years, amounting to over 25,000 million roubles, which would have begun to fall due next year, have been refunded on a 20-year basis at 4 per cent. interest. The interest rate on savings accounts, once 8-9 per cent., is now only 3 per cent. And rates on internal credits from the State Bank have been raised. The real value of the rouble is thus continually approaching its nominal value. Last year one pound bought 150 roubles on the "Black Bourse"; to-day it buys only 75 roubles.

Moscow, October 1.

JAPAN

FURTHER RISE IN REVENUE

ACCORDING to the national accounts for the fiscal year ended on March 31st last, which were published lately, receipts from taxation reached the record total of 978,540,000 yen, an increase of 67,593,000 yen upon the estimates and of 57,330,000 yen upon the preceding year. Income tax, business profit tax, and customs and excise produced 31.4 millions, 6.6 millions and 35.4 millions respectively more than was anticipated, while *sake* duty yielded 3.2 millions less than the estimates. As for non-tax revenue, profits from State monopolies, receipts from State-owned forests, investment income and miscellaneous revenue disclose moderate

increases; but the Bank of Japan's contribution to the Exchequer shows a substantial decline of 5.8 million yen. Thanks to the growth in revenue, the deficit-covering loan of this year, at 678,370,000 yen, was smaller by 93,280,000 yen than was originally budgeted for.

The Treasury is making fresh efforts to expedite the bank amalgamation movement, with the ultimate object of establishing "one bank for one prefecture." During the decade since the monetary crisis in 1927 the number of Japanese joint-stock banks has been reduced from 1,280 to 450. But in many prefectures there are still more than a dozen small local banks with a capital of less than one million yen. The authorities, to begin with, intend to cut by half the present number of banks in a couple of years.

The recent declining tendency in banking profits has been apparently arrested; the aggregate net earnings of the seven big banks for the June half-year amounted to 28,691,000 yen, as against 28,695,000 yen in the preceding half-year. Except in the case of Mitsubishi and Sumitomo, there was a moderate increase in earnings. The most notable feature in the balance sheets of the "Big Seven" is the marked fall in cash totals. While the deposits rose by 255,150,000 yen, loans and advances by 116,917,000 yen, and investment holdings by 200,639,000 yen, cash in hand and at the Bank of Japan decreased by 12,111,000 yen. The smaller cash ratio, 8.2 per cent. against 8.8 per cent., implies that larger resources and low interest rates have forced the banks to employ a greater proportion of their resources in profit-earning directions.

IMPORTS AND EXPORTS STILL EXPANDING

Fears that foreign trade is slowing down have been greatly allayed, if not removed, by the gratifying figures in the August returns. The total of imports was 191,148,000 yen, compared with 169,294,000 yen in August, 1935 (an increase of 21,854,000 yen, or 12.9 per cent.), and exports were 229,514,000 yen (an increase of 15,764,000 yen, or 7½ per cent.). Imports of raw wool and waste were down by 11.7 million yen, but raw cotton imports were up by 20.9 million yen. Imports of iron and steel and timber also substantially increased. Exports of raw silk and cotton piece-goods declined, but rayon products and woollen and worsted tissues advanced. There are again notable increases in exports of refined sugar, vegetable oils, and machinery and parts. The export surplus for August was 38,366,000 yen, against 44,456,000 yen in August, 1935.

Other home trade statistics for August show a continuance of the trend of recent months. The Bank of Japan's wholesale index number for August rose a further 1.67 per cent. on the month, raising the total to 200.7, the highest since January, 1930. The output of cotton yarn during August decreased by 1,098,000 lbs., or 0.9 per cent., upon July, whereas rayon production increased by 344,000 lbs., or 1.6 per cent.

Early September this year did not bring the usual typhoon damage to the rice crop, which is now distinctly promising. On the other hand, autumn cocoon crops have deteriorated in a few areas, owing to dry weather. Cocoon prices are also lower, in sympathy with the slump in the raw silk market.

Tokyo, September 20.

PALESTINE

THE END OF THE BOOM

WHEN trying to assess the losses incurred by Palestine since the outbreak of political trouble last April, one must necessarily remember that a first-class economic crisis was already in full swing. The greatest boom the country had ever witnessed came to an abrupt end in the autumn of 1935, when the tension in the Mediterranean reached its climax. Despite some hesitant tendencies towards recovery the situation had not yet returned to normal when the Levant Fair opened its doors in April in an effort to set things going again. The general strike, which was started

FOREIGN TRADE

THE DOCUMENTARY CREDIT, whereby the Exporter is assured that he will receive payment immediately his goods are shipped for transit abroad, is the subject-matter of

A Brief Survey of the Financial Machinery of Exports and Imports

copies of which may be had by asking at any local branch of the Westminster Bank

WESTMINSTER BANK
LIMITED
41 LOTHBURY, LONDON, E.C.2

by the Arabs immediately afterwards dashed all such hopes.

The economic crisis seems to have then been aggravated in two ways. The contraction of activity was prolonged, and even accentuated, just when it was showing signs of recovery; and some new trades which had previously escaped, have now been affected.

The first quarter of the year, which was quite peaceful, recorded a sharp recession in foreign trade, compared with the same period of 1935:—

	1935 (January-March)	1936 (January-March)
Imports	£P4,352,398	£P3,732,056
Exports	2,507,510	2,044,764

During the second quarter, after the troubles had started, the slump grew calamitous:—

	1935 (April-June)	1936 (April-June)
Imports	£P4,255,929	£P3,000,686
Exports	714,863	218,862

Although imports of manufactured goods during the six months receded by a third from last year's figures, the loss was partly balanced by a sale of stocks on hand. The import surplus actually shrunk from £P5,385,954 during the first half of 1935, to £P4,479,116 for the first half of 1936. Although imports into Palestine of manufactured or semi-manufactured goods fell most heavily, Great Britain increased her share from 16.7 per cent. during the first six months of 1935 to 19.6 per cent. during the corresponding period of 1936.

What has tended to make things worse since April is the falling off in the immigration of capitalists and in the tourist traffic, as well as the rise in the cost of living. Individuals entering Palestine with more than £P1,000 totalled 958 during the first quarter and 680 during the second. The fall has been very steep since the troubles started (394 in April, 183 in May, 101 in June). Tourists have greatly decreased in numbers:—

April	12,082
May	3,422
June	1,426

Building activity has been affected, not only by the fall in immigration, but also by the difficulty of obtaining local material owing to the strike. However, in the important centre of Tel Aviv the strike seems to have passed its worst; and the number of building permits granted has been increasing steadily during the second quarter and after. The cost of living, which had been falling for a long time past, has suddenly climbed in three months to the level ruling six years ago.

Jerusalem, October 1.

LETTERS TO THE EDITOR

A CHANCE FOR STATESMANSHIP

TO THE EDITOR OF THE ECONOMIST

SIR,—During the past few years efforts at reviving international trade have been frustrated through the deadlock by which disordered currencies prevented the revival of trade and yet order could not be introduced into the currency system while trade remained stagnant. The devaluation of the French franc by agreement between France, the United Kingdom and the United States, followed by devaluation of the Swiss franc, the guilder and the lira, has brought this deadlock to an end. All agree that new opportunities are now open for the revival of international trade, but these may prove transient, and recent statements of Ministers and business men do not inspire much confidence in the likelihood of these opportunities being seized.

What are the prospects of a constructive British policy? The three-power currency agreement has created an atmosphere in which further agreements should be less difficult. Ottawa, often regarded as an obstacle, may well prove an opportunity for the Empire, as a net exporter of raw materials; and the Dominions, once prone to play up to a narrow protectionism in the United Kingdom, now recognise that the British market cannot go on absorbing all their expanding output of foods and raw materials. Other industrial countries would be able to take what the British market cannot absorb, if they were in effect brought into a widened Ottawa group through openings for some of their manufactured goods being provided within the Empire. In order to set at rest natural fears of "dumping" or of price-cutting wars, and to prevent countries from impoverishing one another by throwing goods on the market anyhow in a struggle for foreign exchange, it seems desirable that there should be a deliberate sharing of markets, at any rate to some extent, both by complementary and by competitive industries.

The Ottawa agreements, and the bilateral British trade pacts afterwards linked to them, were based on the "sterling area" as it has existed during the past five years. Since a fortnight ago, however, the "sterling area" has been greatly enlarged and its centre of gravity has shifted, owing to the practical adhesion of several European industrial countries complementary in their economic needs to the earlier members of the group. If we are to work in terms of political actualities, our obvious course, therefore, is to recognise and make full use of this expansion of the "sterling area" in order to build up by degrees a new multilateral basis of trade in place of the narrow bilateralism recently forced on us. Opportunities are open for new markets to be developed by agreements between industries, and for less developed countries to be helped to take more British goods by assisting them, wherever possible, to place their own exports both in British and in non-British markets.

Instead of denouncing Ottawa, denouncing economic nationalism and protesting our own attachment to principles which neither the British nor any other government is at present prepared to implement, cannot we in the United Kingdom work out in concert a new economic policy which will start by taking the world as it is, and will aim at widening the sterling and Ottawa groups? And cannot we aim at opening Empire markets to other industrial countries, at a bold credit policy designed to make raw materials more acces-

sible to the semi-developed States with relatively weak financial structures, but with considerable potential consuming capacity, and at using our vast economic and financial power in order to show that countries prepared to collaborate with us in peaceful development of an economic rather than a political nature will reap lasting advantages for which coloured shirts and the parade ground are unsatisfying substitutes?

MAX NICHOLSON,
General Secretary, P.E.P.

16 Queen Anne's Gate, S.W.1.

ARE TRAMS OBSOLESCENT?

TO THE EDITOR OF THE ECONOMIST

SIR,—I have been interested in the correspondence in the *Economist* relating to tramways. May I be permitted to point out, in passing, that the word used by your correspondent was "obsolescent," which is defined as "going out of use," not "obsolete," which is defined as "gone into disuse."

The fact of the "obsolescence" of the tram certainly appears to be confirmed by the Ministry of Transport Census figures, which show a fall in the number of trams in use from 14,097 in 1927 to 13,014 in 1931 and 10,872 last year, and by the Returns of Tramways and Light Railways, which shows a reduction in the miles of tramway track open from 3,151 in 1930-31 to 2,339 in 1934-35. My main point in writing, however, is to point out the unfairness of Mr Allen's comparison between the tram and the omnibus, in which he states that "the tram has to construct and maintain its own track, while the motor-bus wears out the road maintained by the ratepayer."

It may be of interest to recall that the Royal Commission on Transport in their Final Report made the following recommendation (section 70, paragraph 372):—

Our considered view is that tramways, if not an obsolete form of transport, are at all events in a state of obsolescence, and cause much unnecessary congestion and considerable unnecessary danger to the public. We recommend, therefore, (a) that no additional tramways should be constructed, and (b) that, though no definite time limit can be laid down, they should gradually disappear and give place to other forms of transport.

Omnibuses and motor-coaches pay to the Exchequer annually £2,700,000 in licence duties and £6,800,000 in petrol and heavy oil tax, a total of £9,500,000. They are used almost entirely on Class I and Class II roads, and this compares with a total cost of maintaining Class I and Class II roads of £15,290,000. In other words omnibuses and motor-coaches pay special taxation equivalent to 62 per cent. of the cost of Class I and II roads. The tram, on the other hand, pays for its own track, the existence of which is by no means an unmixed blessing to other road users, a total of some £1,250,000, but makes no contribution whatever towards general revenue.

Yours faithfully,

H. E. CRAWFORD.

Bush House,
Aldwych, London, W.C.2.

BOOKS AND PUBLICATIONS

THE TRANSPORT PROBLEM*

In spite of the numerous attempts on the part of statesmen in recent years to solve the so-called "problem" of transport, there still remains a general feeling of uncertainty about the future. There are still "aggrieved parties" convinced they are not getting a square deal. There is still bitter controversy about the rights and wrongs of this or that regulation, bearing in mind the "freedom" enjoyed by competitors. There are still some who sincerely advocate and some who equally sincerely oppose the further application of the principles embodied in the London Passenger Transport Act to other areas and other forms of transport. To some extent, of course, these differences of opinion do no more than reflect the different "pulls" of vested interests. But when we have explained away as much of the transport controversy in this way as is possible, there remains a residue of unsolved problems the solution of which demands more than a mere choice—problems which are of real intellectual complexity. These problems at present lie hidden under such slogans as "co-ordination," "covering like costs," the "cream" of the traffic, "wasteful" competition, "cut" rates, and so on.

* "The Economics of Transport." By M. R. Bonavia. Nisbet and Cambridge University Press. 202 pages. 5s.

Now, in the introduction to the now famous series of Cambridge Economic Handbooks, of which the book under review is the latest addition, Mr Keynes tells us that it is just this gap that the series are meant to fill. One might, then, have expected from this series the very book which so many of those interested in the problem of transport are so keenly awaiting; but in spite of many merits, Mr Bonavia's book cannot really be said to have succeeded in meeting this great need. The first three, out of a total of six chapters, are devoted almost exclusively to descriptive economics; and when Mr Bonavia does come to treat of those highly important, though controversial, problems already mentioned, he treats them in a manner not very different from that in which they have been treated before.

This does not say that the book has not great merits. It is written in a lively and entertaining style. The author's examples are always interesting in character, and reliably authenticated. Moreover, in his two chapters on competition and monopoly in transport, Mr Bonavia gets very near to finally elucidating some of the more urgent problems of the day. Had he only dwelt a little longer on these themes, he might have written a book of no little importance; for he is obviously capable of carrying the elucidation of the whole problem further; and it is to be hoped that he will some day do so.

SHORTER NOTICES

"The Record of the National Government." By Ramsay Muir. Allen and Unwin. 200 pages. 5s.

"As a student of modern history," Mr Ramsay Muir says in his preface, "I believe this to be the worst, the weakest, the most timorous and the most incompetent Government that Britain has known since the days of Lord North." He proceeds to develop this uncompromising thesis, "avoiding personalities and mere denunciation" and confining himself to "the analysis of facts and to the development of serious argument."

Mr Muir's attack is concentrated on the weakest points in the Government's record: its protectionism and its vacillating foreign policy. He shows that the economic recovery after 1931 was predominantly due to measures taken in the lifetime of the First (and partially Liberal) National Government of August-October, 1931; and that "Great Britain was carried on the tide of a general (if slight) world movement and did not profit from it as much as some other countries." He then traces the ominously steady deterioration of world affairs that led from the Manchurian dispute of 1931 to the Spanish rebellion of 1936, and the repeated failure of the Government to seize the opportunities offered it. There could be no more concise and dispassionate statement of the case against the National Government.

"English Radicalism, 1832-1852." By S. Maccoby. Allen and Unwin. 462 pages. 16s.

There have been studies of Chartism, of Owenism, of Utilitarianism, and of philosophic Radicalism. Mr Maccoby here makes an interesting attempt to review many of these threads of a single movement. He tells how Radicalism was thwarted successively by repressive Tory, hypocritical Whig, priggish "philosopher," and rash and demagogic Chartist; how the effort to re-build society was betrayed by leaders, opponents or helpers, by its impractical intelligentsia, its too sensitive Irish allies, and the weakness of man on every side and within.

Mr Maccoby shows how the Radicals failed to impose their programme on the Whig Government. The revival of Conservatism under Peel, both in principles and in organisation, encouraged the House of Lords to "reject even such Reform as passed through the Whig Cabinet sieve," until the economic blizzard of the late 1830's swept the Whigs out altogether. But many reforms owed everything to Radicalism.

There was a clear division between Radicals and ultra-Radicals. Here Mr Maccoby brings out very clearly the weight of the personal factor. Just as Cobbett's choleric prejudices gave that mighty penman a small voice in the House of Commons, so Chartism was ultimately ruined by the support of Tory demagogues like Oastler—who managed to believe in Throne and Altar Toryism and insurrectionism at the same time—an adventurer like O'Connor, or a fanatic like the Reverend J. R. Stephens. If the people could not have the fruits of the earth, earned by the sweat of their brow, Stephens used to shout, "then war to the knife with their enemies, who are the enemies of God." But despite this unhappy interlude of left-wing Radicalism—and despite the consequent ruin of even the sober working-class movement of London and Birmingham, Parliamentary Radicalism persisted.

It is impossible to mention half the fascinating points in Mr Maccoby's book. There are admirable quotations from contemporary writings and speeches. He has written a worthy chronicle of Radicalism.

MONEY AND BANKING

THE MECHANISM OF EXCHANGE FUNDS

THE Paris market is once more open, and dealings in francs have been resumed. The devaluation of the Czech crown and Italian lira probably completes the present series of monetary changes, although the Austrian and Hungarian authorities have still to decide their final policy. So far Austria has declared against devaluation. Hence the world is beginning to see where it stands under the new monetary regime. The French franc is apparently being held at Frs. 21.40 to the dollar, while the pound is slowly sliding in the direction of \$4.86; for from \$4.94 it has already fallen to \$4.89. As we suggested a week ago, these rates represent a fair degree of equilibrium, and there has been some evidence of official intervention with the object of holding them.

But the exact nature of the intervention has not been disclosed, and it should be remembered that there are now at least four Exchange Funds (including that of Holland) ready to operate, while other funds may be established. How will they function in the new situation? It is not enough to proclaim international monetary co-operation and to institute Exchange Funds to carry it into effect. It is also necessary to co-ordinate the technique of these funds so that each exercises approximately the same effect upon the internal credit and banking system of the country to which it belongs.

To emphasise this need it is sufficient to point out that the operations of the British Exchange Equalisation Account are calculated to have a paradoxical effect upon the British internal credit position; and, as we shall see, the same applies to the new Dutch Exchange Fund. It is a point which we have touched upon before, but it is so important to obtain uniformity of technique between these various funds that this fundamental point merits explanation in greater detail. The essence of the matter is that the acquisition of gold or foreign assets by the British Exchange Equalisation Account involves the sale of Treasury bills to the joint-stock banks and the discount market. This is due to the statutory origin of the Exchange Account. It was not created out of any windfall profit of the Treasury, as is the case with the American and French Exchange Funds, which arose from the profits on gold revaluation. It was brought into being by the creation of Treasury bills, which constituted the capital assets of the Fund. Whenever the operations of the Fund involve the substitution of gold or foreign assets for these bills they are added to the supply of bills in the money market or in the hands of the banks. Conversely, when gold or foreign assets are disposed of, the Account acquires Treasury bills, and the supply in the market is correspondingly reduced. Apparently the Dutch Exchange Fund is to be similarly financed by short-term borrowing.

To see how the British Exchange Account works in practice, let us assume the withdrawal of £1,000,000 of French money from deposits at the British joint-stock banks and its repatriation to France. The British banks have to buy £1,000,000 of francs (say Frs. 105 millions) to cover the transfer. To meet these needs the British Exchange Account sells £1,000,000 of the gold which it holds under earmark in Paris for Frs. 105 millions, which it re-sells on the London market to the British joint-stock banks. To pay for these francs, the British banks pay £1,000,000 sterling to the Exchange Equalisation Account, and so initially this quantity of cash is transferred from bankers' deposits to public deposits in the Bank of England. We now reach the crux of the problem. This million pounds will then be normally converted—either through purchase or more usually by an increase in the weekly issue through the "tap"—into Treasury bills. The market's supply of bills will fall correspondingly, and the cash with which the Treasury effects this net redemption of debt to the market will swell the cash balances of the

joint-stock banks. The joint-stock banks recover their £1,000,000 of cash, but suffer a reduction of £1,000,000 in their holdings of Treasury bills or call and short loans to the market against Treasury bills.

To clarify these operations, they may be set out in tabular form:—

STAGE 1.—The banks buy francs provided by the Exchange Account, to cover the withdrawal of £1,000,000 of French money:—

<i>Joint Stock Banks</i>	
Deposits	£1,000,000 (the French withdrawals)
Cash	£1,000,000 (to pay for their francs)
Bills and short loans...	Unchanged.
<i>Bank of England:</i>	
Public deposits.....	+ 1,000,000 (the Exchange Account is paid in francs)
Bankers' deposits.....	- 1,000,000 (the banks pay for their francs)

STAGE 2.—The Exchange Account's cash receipts of £1,000,000 are applied to the redemption of Treasury bills:—

<i>Joint Stock Banks:</i>	
Deposits.....	Unchanged
Cash	+ 1,000,000 (in redemption of bills)
Bills and short loans...	- 1,000,000 (bills redeemed and/or loans repaid)
<i>Bank of England:</i>	
Public deposits.....	- 1,000,000 (due to redemption of bills)
Bankers' deposits.....	+ 1,000,000 (bills)

FINAL RESULT—the combination of the two stages:—

<i>Joint Stock Banks:</i>	
Deposits.....	£1,000,000
Cash	Unchanged
Bills and short loans...	- 1,000,000
<i>Bank of England:</i>	
	No change.

The net result is that the joint-stock banks' deposits and earning assets are reduced, while their cash is unchanged. Therefore their cash ratio is increased, so that they are in a position to grant more loans or buy more securities. In more general terms this loss of French money from London and loss of gold by the Exchange Equalisation Account has created easier credit conditions, calculated to depress interest rates. It will be evident even to the layman that for this to occur as the result of the funds being withdrawn from this country is a complete paradox.

Now let us see what is happening in Paris. Frs. 105 millions (at Frs. 105 to the pound) of French money has come from London into the deposits of the commercial banks. The French authorities have bought Frs. 105 millions of gold from the Exchange Equalisation Account, which is taken by the Banque de France and added to its reserves. Meanwhile the French authorities have given the British Exchange Account Frs. 105 millions. These francs are sold to the British joint-stock banks, who transfer them to the French commercial banks to cover the repatriation of the French money; and, finally, the French banks add them to their cash balances at the Banque de France. Thus the net result is an equal increase in the French banks' deposits and cash and a rise in their cash ratios. In Paris, the repatriation of French money has the normal "gold standard" consequence of creating easier credit conditions. It may be assumed that under normal circumstances the same would be true of such operations as the American Exchange Fund may undertake.

Thus a movement of capital from London to Paris will create easier conditions in both centres—a result which Euclid, if he were alive to-day, would describe as absurd. Some co-ordination of technique is clearly called for. In England a means must be found of preventing the Exchange Equalisation Account's gold sales from raising the joint-stock banks' cash ratios. At the best these ratios should remain unchanged, and on general grounds it may sometimes be advisable for gold sales to have a slightly restrictive influence upon British credit. This would be the case if instead of converting the whole proceeds of its

franc sales into Treasury bills, the Exchange Equalisation Account exchanged part of them for gold withdrawn from the reserve of the Bank of England. Only a small diversion of its operations in this way would be needed to exert the required leverage on the internal credit system.

The three major financial powers are now engaged on a co-operative effort to seek and maintain currency equilibrium. The task will not be easy. The authorities of the three countries will have to diagnose, and agree in their diagnosis, which movements are temporary and to be "equalised," and which are permanent, demanding more fundamental treatment. The mechanism through which their control is to be exercised, the use of Exchange Equalisation Funds, is, so far as co-operation is concerned, as yet purely experimental. It would be a great pity if the respective Governments refused to contemplate change in some of the purely technical arrangements that have been made, if it can be shown that those arrangements tend to upset rather than give equilibrium. There is a strong case for uniform operation in each centre. Otherwise, with the best will in the world, "co-operation" may create fresh disequilibrium.

FINANCIAL NOTES

The City and Whitehall.—Mr Montagu Norman, in replying to a toast at the Lord Mayor's dinner, made one of his very rare public utterances. On this occasion he alluded to the gradual growth of unofficial Government control over the City's different activities, and from this he came to speak of the way in which the City, while preserving its freedom, carried out the desires of the Government just as willingly and efficiently as if it were bound to do so by law. "I assure Ministers," he said, "that if they will make known to us through the appropriate channels what it is they wish us to do in the furtherance of their policies, they will at all times find us as willing with good will and loyalty to do what they direct as though we were under legal compulsion." This raises once more an important point of public policy. There are strong arguments for leaving the City nominally as free as possible from the rigid bonds of legislation, but the result is that the Government and the Departments find themselves able to exercise very real powers without reference to Parliament. Legislation would have to come before Parliament for debate and possible amendment or rejection, but a request to the City to do this or not to do this is not, and cannot be, subject to any Parliamentary control at all. The City acts willingly, and in so doing automatically relieves Westminster of the responsibility. The result is that while the City may be retaining its nominal freedom, the elector and his representatives in Parliament may be losing their powers of control. The present tendency towards the loyal but free obedience of the City to Whitehall is therefore not wholly desirable and needs careful watching.

The Pound and the Dollar.—The attention of the foreign exchange markets has naturally been mainly directed towards the currencies which have recently been devalued. But the relations between the pound and the dollar are also of considerable interest. The new rate between the franc and the dollar will be determined by the gold content of the franc decided upon by the French Government, and is meanwhile fixed by the control in Paris. The London-Paris rate is also under control. But between London and New York there appears to be some lack of clarity. The rate agreed upon by the two Governments at the time of the common announcement of policy has never been divulged. Indeed, some people are beginning to question whether any rate was agreed upon. One rumour has it that in the negotiations the American Government would not agree to any rate below \$4.95, while the British authorities would not concede any rate higher than

the old parity of \$4.86. If this is true, it may be that the rate is free to move within this range before either Exchange Fund intervenes. It certainly appears to be the case that the fall of the pound towards \$4.86 in the course of the past week has been neither hastened nor impeded by either "control." The British authorities do not seem to have been buying dollars, although it is understood that they have abandoned their previous practice of refraining on principle from operating in dollars. Similarly, there have been no indications of purchases of sterling by the American Stabilisation Fund since the much-publicised purchase from the Russian State Bank a fortnight ago. It therefore looks as if the free tendencies of the market are settling the divergence of view between the authorities of the two countries.

The Foreign Exchanges.—This week exchange rates have been trying to find their new levels. So far Paris has been concentrating upon holding the New York cross-rate at Frs. 21.40 to the dollar. The result is that French repatriation of capital has caused sterling to weaken not only against the franc but against the dollar as well; and the latter movement has been reinforced by the current British demand for American securities. The British Control has apparently done little more than smooth out these movements and has not resisted their general trend. In mid-week sterling had fallen to \$4.88½, but has since risen to \$4.89½, possibly owing to American purchases of silver in London. The franc has strengthened against the pound from Frs. 105½ to Frs. 104½. This movement in one sense suits the French authorities, for in conjunction with the strength of Rentes it encourages the repatriation of French capital before the franc becomes dearer. The French Bank rate was reduced on Thursday from 3 to 2½ per cent. As a result of the revaluation of the franc, the French Bank return for October 2nd showed an increase of Frs. 7,247 millions in gold to Frs. 57,359 millions. Frs. 3,599 millions of Provisional Advances to the State have also been repaid. Guilders, after weakening to Fl. 9.30, recovered to Fl. 9.19 on the repatriation of Dutch funds, but this last rate is not expected to be maintained. The lira is now quoted at Lit. 92½, while the rate for tourist lire has been moved from Lit. 82.10 to Lit. 100 as the result of devaluation.

The Bank's Gold.—The devaluation of the franc has given rise to a fresh crop of rumours and speculations over the revaluation of the Bank of England's gold. It is unlikely that revaluation will be undertaken in the immediate future, for, as Mr Chamberlain made clear this week, we are not yet returning to gold. Yet it may be of use to set forth a few simple facts. The gold held by the Bank of England amounts to approximately £250 millions. This is valued, by law, at 84s. 11d. per ounce fine. If the future price of gold turns out to be 144s. per ounce fine, that gold will become worth £425 millions. There will thus be a profit of £175 millions. Now, as this gold is part of the assets of the Issue Department of the Bank, this profit will presumably accrue to the Government, in accordance with the Currency and Bank Notes Act of 1928; and under the law as it stands to-day, the Government will include it as a miscellaneous receipt in the year's revenue, which means that they can use it as they think fit. The point, however, has been legitimately made that £175 millions represents a serious over-estimate of the profit, because a lot of the gold now held by the Bank was acquired since September, 1931, and, therefore, cost considerably more than 84s. 11d. per ounce. The answer here is that the Bank actually incurs a loss every time it buys gold at, say, 140s. per ounce and promptly writes it down to 84s. 11d. per ounce. This loss, however, by the Finance Act of 1932 has to be made good by the Exchange Equalisation Account there and then. This fact enables us to give the true calculation. When the Bank's gold is revalued, the Government will obtain the full profit of, say, £175 millions, which it can apply to current revenue. There will also remain the assets of the Exchange Equalisation Account. These

consist of:—(a) The sums issued to it in 1932 and 1933, believed to be £375 millions; (b) its accrued jobbing profits or losses; less (c) the amount paid to the Bank of England in compensation for the Bank's losses on its gold purchases since September, 1931. The Government will have to decide whether to keep the Exchange Equalisation Account in being, and if so, to determine its size, but if the Account is wound up, its assets must be applied to the reduction of the National Debt. It looks, therefore, as if under existing legislation the Government will get for the redemption of debt the whole of the profit on the revaluation of the Bank's gold for revenue, and an unknown net profit (the loss on the Bank's gold purchases since 1932) from the Exchange Equalisation Account. It is a matter for careful consideration whether this is the best way of dividing these profits and assets.

The Devaluation of the Lira.—The Italian authorities have given way to the force of circumstances, and the lira has been devalued so as to bring it back to its 1927-33 parity with the dollar. Following the new fashion set by the United States and extensively copied last week, the new gold value of the lira is only fixed within limits of 10 per cent., namely, between 50 and 60 per cent. of its former value, but the present degree of devaluation is purposely made exactly equivalent to the American 1934 devaluation to 59.06 per cent. of the old gold parity, so that the former relations between the lira and dollar have now been re-established. The new rate for sterling is lire 92½ to the pound, against lire 64½ on September 25th, and the official clearing rate has been raised from 64.38 to 93 lire. In New York the exchange is once more back at lire 19 to the dollar, against 12.72 lire a fortnight ago. Italy has also announced numerous reductions in import duties to offset the devaluation of the lira, but her sole object in doing so is to prevent any rise in internal prices as the result of devaluation. It in no way implies any relaxation in her control over the volume or origin of imports.

Dutch Monetary Developments.—Our Amsterdam correspondent writes that considerable uncertainty exists, especially as the public are left wondering what will be the ultimate devaluation of the guilder in terms of gold. At present the guilder is divorced from gold, and the following table shows how it has fallen since September 26th:—

	AMSTERDAM EXCHANGE RATES		
	Sept. 26	Sept. 29	Oct. 6
London (Fl. to £1)	7.46	8.91	9.24
Berlin (Fl. to Rm. 100).....	59.50	70.00	75.75
Paris (Fl. to Frs. 100).....	—	9.40	8.80
New York (Fl. to \$1)	1.48½	1.78½	1.88½
Prolongation Rate.....	2%	1½%	3%

The weakening of the guilder has been reflected in a stiffening of the Amsterdam prolongation rate. So far the Dutch authorities have given little indication of their future policy, and it is even doubtful if the new Exchange Fund of Fl. 300 millions, to be financed by the issue of Exchequer bonds, is yet in existence. Dr. Trip, the Governor of the Netherlands Bank, has stated that "we just want to see how the guilder will manage." In any case, before the Exchange Fund can operate both ways, it will have to acquire gold or foreign exchanges, and it cannot easily do so until foreign exchange is offered in Amsterdam as a result of a repatriation of Dutch capital. In the meantime Holland's departure from gold has had curious political reactions. The former advocates of devaluation are now insisting that the degree of devaluation must be definitely fixed by Dutch initiative, so as to bring Dutch prices and costs into line with those of other countries. Conversely, the former advocates of the gold standard now desire the guilder to ride free and find its own level, on the ground that the Government only abandoned the gold standard under economic *force majeure*. The Netherlands Bank's return for September 28th shows gold losses over the preceding week of about Fl. 40 millions and an expansion of Fl. 33 millions in the note circulation. There was some increase in the volume of credit extended by the Bank and a big drop of Fl. 44 millions in deposits on current account.

These movements show how impossible it would have been for Holland to remain on gold, and the public on the whole have taken the change very quietly.

Devaluation of the Czech Crown.—The devaluation by 16½ per cent. of the Czech crown in 1934 was the first real deflection from the gold bloc and consequently, after the recent general devaluation of the gold bloc currencies, it was thought for a time that this would prove sufficient. The Czech Government, however, has now decided that a further measure of devaluation was necessary, and a Bill to this effect was laid before Parliament on Wednesday last. The Bill proposes that the gold content of the crown shall be fixed within limits of 31.21 milligrammes and 33.21 milligrammes. This amounts to a devaluation of from 10.6 per cent. to 15.98 per cent. from the present parity, or 25.5 per cent. and 29.99 per cent. from the 1934 parity. The Bill also provides that as soon as the effect of the new level of the exchanges has been ascertained, the Government is empowered to fix at a definite figure the gold content of the crown. The usual precautions are to be taken against a rise in prices, and the Government has also declared itself in favour of removing obstacles to trade. During the depression Czechoslovakia's annual total foreign trade has fallen from about Kc. 40,000 millions to about Kc. 15,000 millions, evenly divided between imports and exports. Czechoslovakia has virtually no foreign debt, and from that standpoint there is no need for an export surplus, but her industries, who rely largely on export trade, should benefit.

The Money Market.—The Bank return shows that last week's depletion of the market's resources, caused by the heavy payments for Treasury bills maturing on December 28th and 31st, has only been partially eliminated. While money is less plentiful than usual, there has been a brisk demand for loans, emanating probably from the Stock Exchange. Money rates are still unchanged, but the market is already beginning to envisage a possible hardening:—

	Sept. 17, 1936	Sept. 24, 1936	Oct. 1, 1936	Oct. 8, 1936
Bank rate.....	2	2	2	2
Clearing banks' deposit rate ...	½	½	½	½
Short loan rate:—				
Clearing banks	1-1-1*	1-1-1*	1-1-1*	1-1-1*
Others	½	½	½	½
Discount rates:—				
Treasury bills	½	½	½	½
Three months' bank bills	½-½	½-½	½	½-½
* Loans against Treasury bills and other approved bills and British Government securities within six months of maturity; 1 per cent. Treasury Bonds and other gilt-edged stocks within six months of maturity; and other collateral respectively.				

Throughout the week the banks have been buying bills. October, November and December maturities have been bought at the minimum rate of ½ per cent., and January maturities at ¾-1% per cent.

The Bank Return.—While the Bank's gold stocks are practically unchanged there has been an increase of £1.4 millions in the note circulation, so that the Reserve is reduced by £1.4 millions.

	BANK OF ENGLAND				
	Oct. 9, 1935	Sept. 16, 1936	Sept. 23, 1936	Sept. 30, 1936	Oct. 7, 1936
	£ mill.	£ mill.	£ mill.	£ mill.	£ mill.
Issue Department:—					
Gold	193.7	246.8	247.6	248.6	248.7
Note circulation	402.1	444.9	445.1	449.4	450.8
Banking Department:—					
Reserve	52.3	63.1	63.6	60.3	58.9
Public deposits.....	36.0	14.8	10.4	49.7	24.8
Bankers' deposits	75.1	102.2	108.0	60.7	84.2
Other deposits.....	38.6	38.7	38.8	40.9	40.9
Government securities ...	85.5	81.6	83.7	80.3	79.8
Discounts and advances..	17.6	9.2	7.9	8.6	9.3
Other securities	11.8	20.1	20.3	20.4	19.6
Proportion	34.9%	40.5%	40.4%	39.8%	39.3%

Out of the £40 millions taken off the market and into public deposits a week ago, only about £24 millions have returned, so that bankers' deposits are still low in comparison with recent weeks.

THE STOCK EXCHANGE

RE-ARMAMENT BOOM FINANCE

THE Macmillan Report contained a melancholy table of losses sustained by subscribers to the bubble company boom of 1928-29. Now, in the fullness of time, activity has returned to the company issue market, though speculation's *venue* is no longer greyhounds, artificial silk, gramophones, automatic photography or patents lit with the light that never was on land or sea. The fashion of 1936 is for engineering and constructional enterprises, particularly those which can claim a fifth cousinship to the armament industry. When the boom of 1928 was comparatively young, we made a detailed analysis of the structure and finance of the companies then appearing. It may be of interest similarly to dissect the anatomy of a number of typical "re-armament" concerns which have recently appealed for the investor's suffrage.

The compilations which follow are based on the prospectus figures of twenty companies, issued since the beginning of this year, whose activities are related to the Government's defence programme either directly or by implication. In a number of border-line cases we have regarded the prominent display of a claim to inclusion among War Department contractors in heavy prospectus type or in other ways, as a deciding factor. The companies fall naturally into four groups, on the following lines:—

I.—AIRCRAFT	III.—ENGINEERING
Aeronautical Corp. of Gt. Brit.	Armstrong Stevens
Blackburn Aircraft	Foster, Yates & Thom
Corncroft	Marshall, Sons & Co.
British Marine Aircraft	Mitchell, Shackleton
	Newall Engineering
	Smethwick Drop Forgings
	Thos. Blackburn
II.—AIRCRAFT ACCESSORIES, ETC.	IV.—MISCELLANEOUS
Aeronautical and Gen. Instru-	J. Crowther
ments	W. B. Dick
F. Hills & Sons	Newman & Watson
Williamson Mfg.	Steel Barrel Scamell
Titanine	National Coke & Oil

The first and most striking feature of these companies is their moderate size. In Group I the average authorised capital is £395,000; in Group II, £125,000; in Group III, £212,143; and in Group IV, £524,000. For the entire 20 companies the average is £309,250—i.e. little more than a quarter of a million. Only one company—National Coke and Oil—has an authorised capital of £1,000,000, and if this be omitted the average is reduced to £259,250. Nine concerns have an authorised capital of £150,000 or less, and it is obvious that their shares can scarcely command, in future, a really wide and free market. Consciousness of this potential disadvantage may have been partly responsible for the decision to divide a relatively small capital into a large number of "dealing counters," by the issue of shares of low denomination. Eleven of the twenty companies, in fact, have a "straight" capitalisation in ordinary shares only, one has two classes of ordinary shares, while eight have divided their capital between preference and ordinary shares. Of the 29 different securities thus created only five are of £1 denomination, while seven are of 10s., eleven of 5s., three of 4s., and three of 2s. nominal value. The "shilling share," which achieved unenviable notoriety during the 1928 boom, has thus reappeared in a slightly less objectionable guise; and in certain instances it has been associated with the vicious "high-preference-and-low-ordinary" type of capitalisation, which makes for absence of real security for preference dividends and exaggerated fluctuations in returns on the ordinary. It is partially reassuring, therefore, to find that, among the eight companies which have preference shares, the ratio of issued ordinary to preference capital is as much 1.15 to 1.

The evil of "knife-edged ordinary" capitalisation, on the whole, has been less evident this year than in 1928, but certain other features of that epoch have, unfortunately, been more widely resurrected. For example, the "inside parties" associated with each issue have allowed the general

public to subscribe, on the average, for 86 per cent. of the total preference capital, but only 55 per cent. of the total ordinary capital, at the time of issue. In Group I, indeed, the public's share has been limited to 48 per cent. of the ordinary, and in Group IV to a mere 38 per cent. The readiness of vendors to take a significant part of their purchase price in equity shares may, ostensibly, be a token of confidence. It is relevant to point out, however, that if inside interests do not wish to retain their holdings in perpetuity, they may enjoy substantially favourable opportunities for disposing of them in due course. For, in the first place, they obtained them on more favourable terms than the general public, who subscribed for their ordinary shares at a weighted average premium (for all but one of the companies) of 35 per cent.—in Group III the average was as high as 50½ per cent.—while the "insiders," in 16 out of 20 cases, obtained allotment on a par basis. Secondly, to-day's market prices are substantially higher than those prevailing at the dates of issue. Omitting National Coke and Oil (which did not obtain its minimum subscription) and the "B" shares of Newall Engineering (which are privately held), the current market capitalisation of all the companies, according to the Stock Exchange Supplementary List of September 30th last, is 106 per cent. of the nominal capitalisation of the preference shares and no less than 190 per cent. of that of the ordinary shares. In Group II the average ordinary market capitalisation is 221 per cent. of par.

Inevitably, the overwhelming proportion of the cash put up for these issues has been provided by the public. In Group I, for example, the public subscribed 97 per cent. of the total, while for the four groups (taking preference and ordinary subscriptions together) the public put up £90 of cash for every £10 by the "insiders." What was the ultimate destination of the money? Our analysis shows that only 31 per cent. of it was available by way of net new capital for the extension of the various businesses. Some 55 per cent. was taken in whole or part purchase consideration by the original owners, and 14 per cent. was absorbed by intermediate parties or required for issue expenses—a somewhat striking figure. Altogether, the cash payments to vendors represented 62½ per cent. of the total purchase price of the different businesses, the remaining 37½ per cent. being taken in shares.

Were these purchase considerations reasonable or otherwise? Our figures do not permit of a final answer, but they throw, nevertheless, valuable light on this crucial question. Omitting four companies for which no comparable figures were available, they show that assets valued at £2,156,093 were acquired for £2,932,845. In other words, the purchase price exceeded the total valuation by 36 per cent.—a not ungenerous "goodwill" figure if there be any validity in the common assumption that valuers of property and other fixed assets for prospectus purposes are apt to err, if they err at all, on the side of liberality.

Investors, however, are usually less impressed by official asset valuations than by past profit figures. Of the twenty companies included in our survey, as many as seventeen had been in existence sufficiently long, in one form or another, to provide the three-year profits statement required by the Companies Act of 1929. Their total profits, as shown, were: Year I, £271,875; Year II, £208,464; Year III, £376,980. Their earnings for the latest year, in other words, were 57 per cent. higher than the average figures for the two preceding years. Their experience thus afforded encouraging evidence of "recovery," plus a certain liability to wide fluctuations of earning power. The latter consideration is of special importance since, in numerous cases, prospectus calculations of "cover" and prospective return were based, not on average profits, but on those for the latest year only. Omitting two companies which made losses in the period, the average purchase price was equal to 8½ years' purchase of Year III earnings, but to

nearly 12 years' purchase of the mean profits of the two preceding years.

A final section of our analysis has been devoted to the question of voting control. Altogether, as we have seen, the public subscribed 90 per cent. of the cash involved in 19 issues. They obtained 64 per cent. of the nominal issued capital (on a par basis) and 55 per cent. of the aggregate voting power. The "insiders," 42 per cent. of total votes may well be sufficient to give them effective control in most cases, since their shares are centrally held, while those of the public are widely diffused. In eight cases, however, the "insiders," in fact, hold 50 per cent. or more of the issued share capital.

The conclusions suggested by this survey are of a mixed character. Clearly, the "re-armament" companies of 1936 are an appreciably better vintage than the "patent process" companies of 1928. They are, for the most part, established concerns with some sort of profits record behind them. They may, however, be liable to severe future variations in earnings if and when present activity in the armament and "capital goods" trades generally has run its course. For this reason criticism may attach to the basing of prospectus capitalisations (and the issuing of ordinary shares at a premium) on the results of a single favourable year, and to the "gearing" of preference and ordinary capital, in some instances, in such a way as to exaggerate the effect of rising or falling profits. On the whole, the verdict must be that while the majority of these offerings have been *bona fide* propositions, they are essentially speculative; that their capitalisation is liberal; that their issue terms have been generous to inside interests, and that their "market," in many cases, may become inconveniently narrow if economic conditions take an unfavourable turn.

INVESTMENT NOTES

Exuberant Markets.—This week the security markets have been in the state of mental exaltation colloquially described as "optimism with the lid off." Favourite industrial shares, like British Oxygen, R. A. Lister, Rolls Royce and Triplex have jumped from 5s. to 10s. within the compass of a single day's business. Since the announcement of France's devaluation, the *Financial News* Industrial Ordinary Share Index of thirty industrial counters has advanced by 4½ per cent. in ten days. Although activity has not—as some august commentators have suggested—been concentrated on depressed shares which have most to gain from an international trade revival, considerations of the latter kind have certainly been in the market's mind. Broadly, it is assumed that the domestic trade boom will continue, and that a considerable increase in the volume of foreign trade will be superimposed on it. This confident assurance that Britain will secure the best of both worlds may have been supported by a first reading of the Chancellor's speech at the Bankers' Dinner. Whether second thoughts will wholly confirm that complacent interpretation is questionable. For the burden of Mr Chamberlain's song is that Britain reserves all her rights to use tariffs, interest rates, credit policy, and even (in the last resort), currency depreciation to maintain her own internal trade prosperity. Mr Morrison, less *suaviter in modo*, has hinted that other countries must be grateful if Britain merely refrains from increasing her tariffs. Mental reaction against the more extreme forms of trade barriers is certainly finding expression abroad. But the psychological impulse of the moment will be lost if no strong lead is forthcoming from this country, whose importance as a "buying market" is decisive. On this reasoning, investors may be inclined to limit their devaluationist expectations to the discounting of increased trade and prosperity in the devalued countries themselves, accompanied by a much more limited amelioration of international trade generally. This is the same thing as saying that Britain's internal prosperity will remain the backbone of any London Stock Exchange movement. And not even the most excellent domestic prospects could justify the "pace of this week's rise in share values. The market, in fact, has had the word "boom" written all over it.

Devaluation and the Bourse.—The reopening of the Paris Bourse honoured the British precedent of September, 1931. Orders for domestic industrial equities had been placed in such volume that, for a time, the organisation of the official market was thrown into sheer confusion. Sellers were so scarce that in many stocks it was impossible to deal. Conditions have become calmer this week, and a certain amount of profit-taking has checked the sweeping rise in equities and international stocks. The Government's hold on the market—exercised by limiting the extent of daily advances, and by the introduction of new regulations to control speculative business—has imposed a further restraint upon a market which is, technically, very inadequately organised. It seems probable, however, that the initial purchasing of industrial equities is a monetary phenomenon. It is, in short, a traditional reflex to currency depreciation, rather than a calculation of the immediate recovery prospects of French industry, whose costs are rising to offset much of the advantage of devaluation. The French internal situation probably explains the fact that profit-taking sales in international industrials and gold shares have been very moderate. If the British precedent of 1931 is pursued, it may well be that the rapid rise in equities will be checked quite shortly, to be renewed after an interval if the recovery factors become clearer. The two situations, however, differ to the significant extent that French commodity prices may rise steadily, thus encouraging more consistent equity investment, whereas British prices fell for many months after September, 1931. For the moment, however, it seems probable that fixed-interest securities and speculative bonds with a "cheap money—industrial recovery" equity will attract more consistent support. The Amsterdam Bourse, which reopened some days before Paris, promptly exhausted the impact effects of devaluation with a striking rise in commodity and leading industrial shares. The course of this week's trading, however, shows that the market is distinctly sensitive to fluctuations in the guilder. Since the franc depreciation may range between 25.2 and 34.4 per cent. in terms of gold, there may be corresponding fluctuations in store for the Paris Bourse as the repatriation of French funds proceeds. Some recent prices may, therefore, be found too high, for a time. So long as exchange factors hold sway, operations in Continental equities must be the more speculative. To the British investor, the technical difficulty in dealing in Paris is an added disadvantage. On the assumption, however, that a regime of cheap money may presently encourage industrial recovery in France (despite the rising cost situation), and in Holland (which has deflated more successfully), there may be opportunities for the specialist operator in close touch with the markets. A review of some leading securities in these countries is given in succeeding Notes.

French "Recovery" Shares.—The arguments for and against investment in French equity shares are set out above. Assuming that recovery sets in, which shares are likely to benefit? The accompanying table shows the recent record of six representative undertakings in banking, shipping, electricity supply, heavy industry, chemicals and industrial gas. All except the shipping company have paid dividends during the depression, and in two cases slightly increased payments have been made during the latest year. The table shows the gross profit, amount available for distribution in dividends and reserves, the dividend record, the fluctuation in share quotations between 1929 and 1935, and the latest Bourse quotations, where available. Characteristic trends are shown by the different companies. The record of *Crédit Lyonnais* shows a stability of disclosed profits which surpasses even that of British banks. *Chargeurs Réunis*, which last paid an ordinary dividend in 1930, has a record typical of shipping concerns the world over, and can be regarded only as a long-term recovery counter in present circumstances. *Air Liquide* and *Péchiney* (*Compagnie de Produits Chimiques*) have recently shown a distinct recovery in net earnings and combine recovery possibilities with the expansionary potentialities of "new" industries. On the other hand, *Société des Forges et Acieries du Nord* is a highly-g geared "capital goods" producer, which has, nevertheless, paid dividends every year, except for

* Plus 15% paid from Premium Reserve.

1931-32. The company conducts a mixed steel business, is self-sufficient to a considerable extent for raw materials, and has achieved a partial recovery since 1932. The sixth concern, *Energie Industrielle*, is a large power supply concern, with interests in France and overseas. Its revenue has risen consistently throughout the past decade, and in recent years very substantial sums have been set aside to investment and depreciation reserve. *Suez Canal* perhaps rounds off the list. Its international trade equity is undoubtedly improved by the devaluation of the gold bloc. Investors will recall, however, that the tolls were adjusted to a sterling basis some months ago, and there may accordingly be a period of uncertainty until it is seen whether any revision is necessary owing to the new gold basis of the franc. It will be observed that present dividend yields are rarely expansive, but the Bourse has not emulated the London market, two years ago, in discounting recovery possibilities.

Dutch Equity Shares.—A similar table, setting out the record of Dutch equity shares, is given below. The scope for domestic industrials is distinctly narrow on the Amsterdam Bourse, where the favourite equity counters are commodity and trading shares. The list, therefore, includes three concerns—*Deli-Batavia*, *Amsterdam Trading* and *Unilever N.V.*—which can be placed in this category, an international trade equity (*Holland-Amerika*), and two Dutch electrical concerns, *Philips' Lamps* and *Dutch Cable* :—

The Distinctive System

of
The Scottish Provident Institution

Under *The Distinctive System* the premiums are so moderate that, at early and middle ages, the annual sum charged elsewhere for a Whole Life Assurance of £1,000, with profits, will here secure from the first as much as £1,300 or thereby with right to share in the Surplus.

Write for an explanatory booklet

The Scottish Provident Institution
London (City) Office - - - 3 Lombard Street, E.C.3
HEAD OFFICE - - - 6 St. Andrew Square, EDINBURGH
FUNDS EXCEED £24,000,000

Holland-Amerika, with a typical shipping record, is now able to make modest provision for depreciation, and has wiped out a debit balance. No dividends have been paid since 1921, and the share can be considered only by those who can afford to take the risks of a long view on the ultimate recovery of world trade. *Deli-Batavia Tobacco* resumed dividend payments in 1935 after five years' absence from the lists, and there is reason to anticipate better prices for its crop as a result of devaluation. *Amsterdam Trading*, interested mainly in sugar and other primary commodities, has been compelled, through low prices, to abandon cultivation of sugar. A distinct improvement in profits was reported in 1935, and the company enjoys a substantial equity in rising produce prices. British investors are familiar with the experience of *Unilever N.V.* during recent years. Falling prices and currency controls have prevented any progress during the past three years. For complete restoration of profitability this undertaking needs something more than devaluation; it would gain as much from relief from transfer restrictions as any other undertaking in existence. *Philips' Lamps* also has an important international trade equity, and has been forced to decentralise its operations to avoid tariff and currency difficulties, despite the resulting increase in operating costs. The shares have been an unsettled market on the Amsterdam Bourse in recent months, and the results for the year to April, 1936, are awaited with special interest. An excellent dividend record is shown by *Dutch Cable*, and the shares may be regarded as a steady investment medium. The Bourse has not settled down to a steady post-devaluation course, and has shown itself sensitive to fluctuations in the guilder this week.

"Investment Trust Groups."—The comments of some readers of our article under this heading in the *Economist* of September 26th, page 567, suggest the reiteration of the warning, given in its text, that our list of groups was not designed to be exhaustive. For reasons of space, for example, it explicitly excluded several Scottish groups (e.g. the "Mores, Carson and Watson" group of Glasgow). Further, as we explained, individual trusts were grouped in our table under the name of the firm or leading personality associated with their management. Such an arrangement may, conceivably, be somewhat arbitrary so far as legal control is concerned, but it is highly significant for purposes of investment comparisons. Thus, the doubly-named "Layton-Bennett—R. G. Simpson" group was shown to include Scottish Investment Trust, Second Scottish Investment and U.S. Trust Company of Scotland. It should be made clear that Mr R. G. Simpson is a director of these three companies, and that the eminent accountancy firm of which he is a partner is not concerned in their management. Messrs Layton-Bennett, Chiene and Tait act as managers for the first four trusts in the group only.

Actuaries' Investment Index.—Continuing activity in the markets has resulted in a rise of a full point in the Actuaries' Index of 178 industrial ordinary stocks, to 89.2 against 88.2 in the previous week, and 88.0 a month ago (December 31, 1928 = 100). The corresponding yield percentages are 3.61 this week, 3.62 last week and 3.60 a month ago. Indices of selected groups are set out below:—

Group (and No. of Securities)	Prices (Dec. 31, 1928 = 100)			Yields (%)		
	Month Ago (Sept. 8)	Last Week (Sept. 29)	This Week (Oct. 6)	Month Ago (Sept. 8)	Last Week (Sept. 29)	This Week (Oct. 6)
Cotton (6).....	41.0	42.3	46.1	2.11	2.09	2.05
Gas (7).....	133.1	133.2	132.4	4.43	4.43	4.46
Iron and Steel (12) ..	81.6	80.1	82.7	3.70	3.78	3.70
Motors (5).....	59.8	58.1	60.3	3.92	4.07	3.95
Shipping (4).....	20.4	21.9	22.6	0.64	0.55	0.55
Breweries & Distill. (21)	155.0	154.8	155.7	3.79	3.80	3.78
Miscellaneous (56) ..	79.5	79.6	80.6	3.85	3.86	3.86

Recovery buying of cotton shares has produced the largest rise of the week, and the steady advance in shipping shares is maintained. Gas stock prices have been disturbed by the South Metropolitan dispute. The large miscellaneous group shows a more than normal rise.

COMPANY NOTES

Murex Accounts.—The full Murex accounts are little more than a postscript to the bonus issue arrangements discussed in last week's *Economist* on page 28. They show an increase of £49,348 in net income at £278,741. Of this increase, some £25,944 arises from trading profits, and over £22,000 from dividend receipts. The spectacular progress of the past three years is shown below:—

	Years ended June 30,		
	1934	1935	1936
Trading profit	123,867	190,391	216,335
Other income	32,945	39,002	62,406
Total income	156,812	229,393	278,741
Expenses, fees & special charges	45,620	25,712	23,339
Depreciation and obsolescence	20,567	22,421	40,759
Tax	25,190	38,000	50,000
Preference dividend.....	3,500	3,500	3,500
Ordinary shares:—			
Earned	61,935	139,760	161,143
Paid	58,417	83,698	105,511

Ordinary capital	225,000	540,000	553,500

* Includes credit of £14,000 contributed by Murex Welding to staff fund.

† 100 per cent., January, 1935, on £270,000, and 2½ per cent. in October.

The increase in the allocations to obsolescence and other depreciation represent about 4 per cent. in terms of equity earnings. Provision for general reserve is also increased from £40,000 to £100,000, but £400,000 will be needed later from this reserve for the bonus share issue, while the premiums from the new cash issue yield over £253,000. Against this must be set a reduction in the carry-forward amounting to £44,368. The balance sheet vividly illustrates the recent capital expansion. Liquid assets, other than stock, have fallen by about £25,000, while stocks have risen from £155,248 to £224,122, and buildings, plant and machinery together are over £83,500 higher, at £243,260. The company is rightly regarded as an efficient undertaking, serving numerous branches of industry with excellent prospects of secular expansion. An increase of some 19 per cent. in earnings will be required to maintain the 25 per cent. dividend, somewhat more than last year's increase in profits. At the present quotation of 9½ the shares would yield £4 8s. 6d. per cent. on an "ex-all" 25 per cent. basis.

Austin Motor Report.—Relative stability of earnings—as investors had generally anticipated—is revealed by the Austin Motor report. There are, indeed, few concerns in the industry which could produce so stable a record during the past three years. It is evident, however, that competition has remained keen, and the difficulties in maintaining profit-margins on last year's models were intensified by an appreciable increase in materials and wage costs. Gross trading profit has increased from £1,469,144 to £1,496,696, including an unstated profit from the sale of investments; but an increase of some £76,000 in the combined charges for maintenance and depreciation has reduced the ordinary share earnings from £434,111 to £365,745. As the following table shows, this level of profits covers the ordinary dividends with a margin of more than 50 per cent.:—

	Years to July 31st.		
	1934	1935	1936
Profit	1,505,212	1,469,144	1,496,696
Income tax	160,000	150,000	165,000
Directors' fees	2,000	2,000	2,000
Maintenance of plant, etc.	480,218	483,553	530,828

Ord. "A" Ord. Capital	150,000	622,459	622,459

† And 300 per cent. capital bonus.

Investors who have watched the 5s. ordinary shares gradually resume the pre-dividend level of 49s. 4½d. may find the balance sheet more revealing. The net assets position is enviable; cash represents £867,416, while investments, other than subsidiary interests, have increased from £469,613 to £522,279 (suggesting incidentally, that the investment profits taken into revenue cannot be large). At the same time, holdings in subsidiaries have increased from £1,000 to £106,502. There is, too, the significant intimation in the report that new plant and equipment cost £281,840 during the year. It seems probable that this sum includes a relatively small part of the expenditure on the new aircraft factory, now in course of erection, and it is premature to assess the profitability of this venture, except that it will be subject to official control. Although the valuation of stocks shows only slight advance over the previous figure, it seems reasonable to expect a maintenance of sales during the current year, which has already begun well. But investors may be justified in placing greater emphasis on rising costs during the current year. This factor, above all, promises to make next Monday's meeting of particular interest to shareholders. They obtain a yield of £5 1s. per cent. at the current price of their shares.

Joseph Lucas Progress.—This company's record of steadily rising profits has been surpassed by the latest report. Profits, after contingencies, are 20 per cent. higher at £320,642. These results, and the increased dividend, are distinctly satisfactory, but the report is uncommunicative regarding trading conditions during the year. Comparative profits figures appear in the following table:—

	Years ended August 7,		
	1934	1935	1936
Profits, after depreciation, tax, etc.	259,882	266,168	320,642
Fees and staff funds	12,500	12,500	17,500
"A" and "B" pref. dividends ..	10,561	10,734	10,647

Ordinary shares:—

Earned	236,821	242,914	292,495
Paid	189,739	189,933	224,244
Earned %	15.6	16.0	19.6
Paid %	12½	12½	15

Reserve	50,000	56,007	75,000
Carry forward	77,383†	74,377	67,628

† Includes £16,023 profit on realisation of securities.

The greater margin between equity earnings and dividend, permits a much larger reserve allocation. The balance sheet reflects expanding business in several directions. Stock, which represents nearly one-third of the assets, is almost unchanged, but other current items show relatively large increases. Debtors at £484,320 are 22 per cent. higher, creditors at £710,866 are 30 per cent. higher, while loans to subsidiaries have risen by £88,655 to £190,648. The position of the business itself is distinctly interesting. Lucas is a famous name among those who take courage, rather than fear, from a growing number of knobs, switches, and levers. This provides a fairly independent demand for accessories as such. There is, moreover, still scope for the introduction of new devices or improvements. Two points, however, may be noticed by the investor. The fitting of accessories as a standard equipment on popular cars links the profitability of the accessory makers with that of the car manufacturers. Reduced profit margins on cars may thus be transferred to some extent. Secondly, the effect of competition and increasing costs among accessory makers themselves must not be underestimated. At a current price of 73s. 3d. the shares yield £4 2s. per cent.

Argentine Rail Dividends.—Wednesday's dividend announcements cracked the whip over the Argentine rail market, where conditions have recently been distinctly buoyant on the recovery in cereals prices and the progress of the urban transport co-ordination measure in Buenos Aires. Not for the first time, however, the market's hopes of the future obscured its legacy for the past year, now three months distant. B.A. Great Southern have been forced to cut the dividend on the 5 per cent. non-cumulative first preference stock to 1 per cent.—the first occasion that the full payment has not been made, according to the available records. For the previous year, 1934-35, the company paid the full rate, but was compelled to halve the 6 per cent. non-cumulative second preference dividend. The heavy fall in receipts—particularly in the third quarter of the company's year—was equivalent to £682,155 on the artificial sterling conversion basis. The directors of B.A. Western have decided to pay the 5 per cent. first preference dividend in full (requiring the small sum of £15,000), but further to reduce the dividend on the 4½ per cent. non-cumulative preference capital from 2½ per cent. to 1 per cent. The fall in "sterling" traffics on this line, however, amounted to no more than £20,000. The immediate market reactions in Argentine railway and ordinary stocks are shown in the following table:—

	1936 quotations					Fall on Dividend Announcement
	High	Low	Aug. 28	Oct. 6	Oct. 8	
B.A. Gt. Southern:—						
5% Pref.	73½	51½	54	67	58	9
6% Pref.	63	32	37	47	45	2
Ord.	23½	14	17	23	20½	2½
B.A. Western:—						
5% pref.	72	55	59	66½	66½	—
4½% pref.	46	30	34	44½	42½	2
Ord.	19½	11½	14	19	17	2
Central Argentine:—						
4½% pref.	40½	22	31	40	41	+1
6% cum. pref.	41½	22	28½	40½	40	½
Ord.	18½	8½	12	18	16	2
B.A. and Pacific:—						
5% cum. pref.	17½	8	10	17	17	—
Ord.	11½	6½	8	11	10	1

Until the accounts are available in a few weeks' time, the market must operate largely in the dark. Unsettled conditions, indeed, may well endure longer, for the recovery features in the Argentine rail position are still very limited.

Herbert Green Receivership.—Late last week it was officially announced that the directors of Herbert Green and Company, Ltd., had deemed it advisable to ask the trustee for the debenture holders to appoint a receiver. The company, formed in 1934, exploits a process for manufacturing lubricating oils. Its capital consists of £50,000 6 per cent. mortgage debenture stock, £300,000 in 7 per cent. cumulative £1 preferred ordinary shares, and £50,000

THE NATIONAL CITY BANK OF NEW YORK

Incorporated with limited liability under the National Bank Act of the U.S.A.

36 BISHOPSQATE, E.C.2. 11 WATERLOO PLACE, S.W.1

in its ordinary shares. Successive progress reports have been couched in optimistic terms. In the first report a year ago the directors permitted themselves the observation that trading prospects were excellent and that substantial orders had been received. Delays occurred in the erection of the plant, but in March this year it was announced that all sections of the lubricating oil refinery were in production, and that the board remained satisfied as to the earning capacity of the company. Only seven months later, immediately before the due date of the debenture interest, a receiver has been appointed. Substantial sums have been spent by the company (and earlier concerns) on the properties, and important oil interests have already adopted the process in the United States and elsewhere. The directors' "conservative estimate of profits, after detailed costing" (including royalties) was £120,000 in a full working year. Full debenture service costs £9,000 and the October coupon £4,500. In the June, 1935, balance sheet the liquid position was shown to be reasonably adequate to cover the prospectus estimate of the cost for erecting new plant. In what respect were the profits estimates deficient, since trading began last March? Were costs unexpectedly high? The second point is of more general application. The 1s. shares were issued at par. They reached 4s. 6d. in 1934, touched 9s. 9d. in 1935, and have been as high as 15s. 9d. this year. Their favourable prospects have been widely canvassed inside and outside the market. The reckless confidence of some of the "tipping" argues a case for further inquiry.

Financial Advertising and the Investor.—The speech of the chairman of The Financial News, Limited, Mr Brendan Bracken, at Wednesday's meeting, contained many points of interest to investors in newspaper shares as a whole. Seen in retrospect, the earnings of financial papers are, as Mr Bracken pointed out, an accurate barometer of conditions in the City of London. Their inevitable fluctuations are of material consequence to specialised financial newspapers, but they cannot be wholly ignored even by shareholders in the "national" journals. It is possible that general advertising may have a narrower curve of cyclical fluctuation than national industry and trade itself. In the early stage of trade recession, industrialists and retailers may be impelled to maintain, or even increase, their advertising, in order to prevent their sales falling below their "budgeted" figures. At the outset of recovery they may follow the same policy in order to secure the earliest possible benefit. Financial advertising, however, is mainly a function of Stock Exchange activity, which is notoriously liable to wide fluctuations. The financial newspapers have wisely refused to be drawn into the maelstrom of insurance, free gift and "circulation" campaigns. But, as Mr Bracken suggested, competition which results in the provision of progressively improving news and editorial services is enlightened but expensive. To investors, therefore, a policy of broadening

the basis of advertising so as to draw in a substantial revenue from industrial as well as from "City" sources, will appear well conceived. The same judgment applies to the broadening of newspaper group interests to take in properties whose revenue "catchment area" is non-financial. Above all, a conservative distribution of earnings has everything to recommend it. Its corollary is a conservative appraisal by investors of short-term "yield" possibilities.

Malayalam Plantations.—The ground lost by this plantation company since 1929 has been fully caught up. The increase in net earnings during the past year from £81,071 to £132,739 is decidedly satisfactory:—

	Years ended March 31,		
	1934	1935	1936
Sales, stock and interest	447,384	457,713	539,442
Production and selling expenses..	296,857	331,439	329,822
Office expenses, fees and staff fund	9,218	8,819	14,408
Taxation reserve	9,000	19,000	35,500
Buildings, etc., reserve or expenditure	25,000	17,384	26,973
Stock:—			
<i>Earned</i>	107,309	81,071	132,739

<i>Earned %</i>	7.8	5.5	9.4
<i>Paid %</i>	8	5	8
Reserve	...	...	20,000
Carry forward	90,576†	98,222	98,107

† Includes £6,368 profit on investments realised.
‡ £226,796 transferred from special reserves to write off buildings, etc.

Despite the progressive tendency of recent earnings, the speech of the chairman, Mr H. J. Welch, at Tuesday's meeting, was cautious in its estimation of prospects both for the tea and rubber industries. It also contained an admirable exposition of the objectives of the rubber regulation scheme, which Mr Welch defined as being (1) the reduction of the world's stock to a normal figure, (2) the adjustment in an orderly manner of supplies to demand, and (3) the maintenance of an equitable price level reasonably remunerative to efficient producers. The first of these aims, Mr. Welch believes, is being rapidly achieved. Visible and invisible stocks, outside the regulated countries, have been reduced by something over 250,000 tons since the scheme came into force. Objective number (2) is, in fact, closely related to number (3), and on that subject Mr Welch spoke bluntly and courageously. In his opinion, producers should be satisfied with the prices they are now obtaining under the scheme. This is wise advice. The fact that in the past ten years the world's absorption of rubber has nearly doubled, suggests that the industry has most to gain from moderate results and quick returns.

Roan Antelope Results.—Investors can follow the progress of this undertaking from the detailed quarterly profits' statements, and the full accounts contain few surprises. Nevertheless, the first full year of restriction coupled with the substantial rise in copper prices which has occurred during the last fifteen months, has resulted in an impressive report. Total sales, after adjustments for opening and closing stocks, were somewhat lower than last year at £1,752,289, for increased prices did not fully offset decreased production. Operating expenses have been kept at the remarkably low level, in the circumstances, of £19 19s. 7d. per ton, which was only 7s. 10d. per ton higher than in the previous year, when production amounted to 67,316 long

tons, compared with 50,672 long tons for the past year. The operating surplus has accordingly been increased from £590,522 to £771,402, and the earnings for the ordinary shares are equivalent to 32.1 per cent., compared with the 30 per cent. dividend paid. The following table sets out the principal features of the revenue accounts:—

	Years to June 30th		
	1934	1935	1936
Copper sales, after stock adjustments	1,800,901	1,879,903	1,752,289
Operating surplus	659,650	590,522	771,402
<i>Earned for Dividend</i>	307,064	236,420	381,087
<i>Paid</i>	Nil	241,481	356,466
<i>Earned (%)</i>	25.4	19.6	32.1
<i>Paid (%)</i>	Nil	20	30
General reserve	—	—	200,000
Carried forward	327,885	322,824	147,445

The accounts, satisfactory though they are, are dwarfed by the profits expectations of the current year. Since the date of the accounts, two additional quota releases have been announced, and at the current quota rate production for 1936-37 will amount to 56,400 tons—an increase of over 11 per cent. on last year's output. In addition, the average price of copper since June has steadily advanced to over £5 per ton over last year's average of £34.581. If it is assumed that an average price of £39 per ton is maintained during the current year, that no further quota releases are made, and that operating costs remain unchanged, it would appear that earnings during the current year may reach 55 per cent., On the current price of 45s. for the 5s. shares, this would represent a yield of 6 per cent., compared with the current dividend yield of 3½ per cent.

Other Company Results.—Our weekly table, on page 92, sets out the results of 28 companies, in addition to those discussed in earlier Notes. The best report in the heavy industry group is from *Ransome and Marles Bearing*, whose profits have jumped from £72,985 to £116,809. The 15 per cent. dividend is thus covered with a substantial margin retained in the business. *Kayser Ellison* profits are higher, and *Parsons Marine Steam Turbine* shows a satisfactory improvement. Several appreciable recoveries are shown by the miscellaneous industrial companies. Such concerns as *Clyde Paper*, *Gratton Warehouses*, *Burt Boulton and Haywood* and *Associated Piano Company* have shown a sharp increase in earnings, usually accompanied by increased dividends. In the Finance group, *Argentine Land and Investment* has achieved an increase in profits from £37,053 to £47,203, and maintains the 2½ per cent. dividend. The full report of *Atkinson-Oates Motors* reveals a highly satisfactory advance from £313,063 to £433,826. As already announced, the dividend has been raised from 4½ to 60 per cent. A substantial improvement is also revealed by *Goode Durrant and Murray*, whose profits for the latest year amount to £24,410, compared with a mere £1,878 for the previous year. Among this week's dividend announcements, *United Dairies* has maintained a total distribution of 12½ per cent., while *Tube Investments* is to pay a final dividend of 12½ per cent., making 17½ per cent. for the year.

Company Meetings of the Week.—On later pages of this issue will be found the reports of the following company meetings:—The Financial News, Gold Mines of Kalgoorlie, Kirklees, Malayalam Plantations, Bajoe Kidoel Rubber and Produce, and Broome Rubber Plantations. Mr Brendan Bracken's remarks at the Financial News meeting are discussed on page 75. Mr William Tong referred to the introduction of a continuous shift system by Kirklees, Ltd., whereby working hours of an average of 42 hours a week, against 56, resulted in no reduction of earnings. At the Gold Mines of Kalgoorlie meeting, Mr Marmion said that during the past year work had been largely concentrated upon the Iron Duke and Oroya South group of leases. Mr Eric Miller, at the Bajoe Kidoel meeting, referred to the new coffee subsidy in the Nether-

lands East Indies; the proceeds of a duty on imported coffee are to be used to assist producers and to provide funds for improvement and for propaganda. The Malayalam meeting is referred to in a Note on page 76. At the Broome Rubber meeting, Sir Lionel Smith-Gordon disclosed that the acquisition of the Eldred Estate had doubled the planted area.

THE WEEK IN THE MARKETS THE STOCK EXCHANGE

SETTLING DAYS
TICKET OCTOBER 20 | ACCOUNT OCTOBER 22

FROM the commencement of business on Monday, markets have been in a state of "near boom." The week-end post brought ample buying orders for home industrials, and demand was again maintained on Tuesday. But the degree of optimism which the Chancellor of the Exchequer permitted himself at the Bankers' Dinner that evening was an open invitation for mass buying of industrials. If the market is assured that domestic policy—cheap money and free sterling—will be maintained, and can yet indulge in wishful thinking regarding the classical benefits of stable currencies and reduced trade barriers without having to assess the factors on the debit side of the account, it is undoubtedly in a position to capitalise all the diverse elements in the present economic situation.

This it did to some purpose on Wednesday. Bidding with a bullishness unknown since 1929, professional operators and investors together produced sharp rises in every branch of the industrial market, where floating supplies were already small. The effect upon prices is vividly shown in our table of Active Security Prices on pages 80 and 81. On Thursday, considerable profit-taking ensued and the market was affected by the Soviet statement regarding non-intervention in Spain.

It has, therefore, been a gala week for equities. For a time, it seemed possible that gilt-edged might fall into line, but in fact the raising of the 2½ per cent. Funding tap price on Tuesday failed to stimulate the market, owing to the resumption of trustee borrowing and the competing attractions of the speculative markets. The market, however, was more impressed by Mr Chamberlain's remarks on cheap money than by his remarks on the budget position.

Support in the foreign bond market fluctuated, but Brazil, Chinese, German and Peruvian bonds attracted attention in their turn. The whole list thus had a more consistent appearance than for many weeks past.

Steady business was at first reported in the home rail market, but the stocks displayed real firmness in mid-week, on some impressive traffics. Great Western and Southern issues received the best support. The recent boomlet in Argentine rail stocks was pricked by this week's dividend announcements. The extent of the sharp mid-week fall is shown on page 75.

No section of the industrial market was friendless this week. From the depressed industries, like textiles and shipping, to the highly prosperous steel, motor and aviation groups, impressive rises were scored all round. Vickers were among the strongest in Wednesday's market, but innumerable shares, including R. A. Lister (with a 7s. jump on Wednesday), John Brown (on the Cunard 552 contract) and Babcock and Wilcox responded to buoyant trade and rearmament expectations.

Motors, too, provided brilliant features. Triplex again jumped spectacularly before profit-taking checked the rise, and Standard were active, although fluctuating considerably. Leyland similarly lost part of a handsome rise. Electrical equipment issues were well supported, General Electric providing the main feature. The aircraft group, perhaps, was least excited, but Rolls-Royce were a strong feature. Buying of depressed cotton equities continued (Lancashire Cotton debentures touching 90), while Courtaulds and woollen textile issues also advanced.

Chain store shares remained very firm, and the brewery list showed fractional improvements. Tobacco shares—apart from British American—did not move decisively until mid-week, when Imperial Tobacco jumped on bonus hopes. In the shipping group, Furness Withy continued to rise. Hudsons Bay issues further appreciated. The leading miscellaneous issues showed themselves as responsive as ever to good buying, and all the "million pound" companies' shares rose as sharply as the "narrow market" specialities. British Oxygen, for example, rose 6s. on Wednesday, exceeding the rise in Carrier Engineering. Most of the leaders, however, proved themselves susceptible to Thursday's profit-taking.

In the oil share market the uncertainty which existed prior

When choosing a Preference Share the prudent investor always enquires

- (1) What are the earnings of the Company?
- (2) What prior charges have to be met?
- (3) After deduction of these charges and a net figure has been arrived at—
- (4) How many times could the fixed dividend be paid with these remaining earnings?

The investment value of a Preference Share is determined by a satisfactory answer to question Number Four.

FIRST PROVINCIAL "A" Certificates

comprising nothing but cumulative Preference stock and shares in

26 British Companies

form an investment which is difficult to equal because the average dividends are covered by earnings more than five times. Thus is capital and income security made watertight. These Certificates have consistently proved their value as an investment right from the start. The actual gross income distributions received by Certificate

holders each half year are as follows

	d.
1st half year	5.3648 per Sub Unit
2nd " "	5.3668 " "
3rd " "	5.5392 " "
4th " "	5.1904 " "
5th " "	5.5444 " "

This represents an average of no less than 5.40112 pence per Sub Unit every half year for two and a half years.

LONDON ACTIVE SECURITY PRICES AND YIELDS

In calculating yields on fixed interest stocks quoted below allowance is made for interest accrued since the last date of payment, less income tax at the standard rate. Where stocks are definitely redeemable at a certain date the yield includes any profit or loss on redemption; where stocks are not redeemable at a certain date the yield is calculated by reference to the latest dividends, account being taken of any enhancement or reduction of interim dividends. Allowance is made for accrued dividends in calculating the yield on "cum. div." shares.

REPORTS AND NOTICES

Mr Hartley Withers, chairman of Allied Investors Fixed Trusts, Ltd., has now been appointed managing director, and in future will carry out the duties attaching to both offices. Allied Investors Fixed Trusts, Ltd. are responsible for the conduct of the four British Industries Fixed Trusts and the Electrical Industries Trust.

The Anglo-Portuguese Colonial and Overseas Bank, Ltd., announces that the Rt. Hon. Sir Francis Lindley, G.C.M.G., C.B., C.B.E., a former Ambassador to Portugal, has been appointed to a seat on the board to fill the vacancy caused by the retirement of Sir Basil E. Mayhew, K.B.E., from all City engagements.

It is officially announced that Sir F. Victor Schuster, Bart., has been appointed a director of the National Provincial Bank, Ltd. Sir Victor has relinquished his seat on the London local board.

Joseph E. Pogue, of New York City, has been appointed a vice-president of the Chase National Bank at its head office in 14th Street, New York City.

Mr Stuyvesant Henry Le Roy-Lewis has been appointed a director of the Trustees Corporation, Ltd., to fill the vacancy caused by the death of the Right Hon. Lord Wargrave, P.S.

Mr Harry Dansie Hall, one of the founders of Hall and Company, Ltd., retired on September 30, 1936. Mr Reginald Gordon Golding Cromwell and Mr Harry Valentine Hall have been appointed joint managing directors with Mr Joseph Hall as from September 30, 1936.

The Right Hon. the Earl of Dartmouth has been appointed a director on the London board of the Royal Insurance Company, Ltd.

The directors of the Standard Bank of South Africa, Ltd., announce that Mr Bertram Lowndes has been appointed to a seat on the board on his retirement on November 5th from the London management. Mr Ralph Gibson has been appointed to succeed Mr Lowndes as London manager. It is also announced that Mr T. D. Williams, the bank's secretary, retires on October 12th, and will be succeeded by Mr H. Dales.

BANKS

MIDLAND BANK, LTD.—The Midland Bank announces that Mr Harold Lindsay Rouse, formerly controller, has been appointed a joint general manager, and that Mr Walter James, principal of the bank's legal department, has been appointed to succeed the late Mr F. O. Free as secretary.

CHASE NATIONAL BANK.—Statement dated September 30, 1936, shows deposits \$2,290,889,000 compared with \$2,083,328,000 on June 30, 1936, and \$1,951,532,000 on September 30, 1935. Total resources, \$2,568,430,000, compared with \$2,356,357,000 on June 30, 1936, and \$2,220,541,000 on September 30, 1935. On September 30, 1936, the capital of the bank was \$100,270,000, and the surplus was also \$100,270,000. Undivided profits amounted to \$20,963,000, compared with \$18,947,000 a year ago.

BROWN BROTHERS, HARRIMAN AND COMPANY.—The financial statement dated September 30, 1936, shows total deposits of \$59,528,203, representing an increase of 14 per cent. compared with \$52,157,918 on June 30, 1936, and a gain of 44 per cent. over deposits of \$41,228,461, September 30, 1935. Total assets have increased to \$87,460,863 from \$79,757,095 on June 30, 1936, and \$66,900,488 on September 30, 1935. Capital and surplus of \$12,001,413 compare with \$11,609,786 three months ago and \$10,839,076 a year ago.

COMPANY MEETINGS, &c.

THE FINANCIAL NEWS LIMITED

INCREASED REVENUE FROM PUBLICATIONS

DISTRIBUTION OF 15 PER CENT

Its present annual earnings would provide a not unsatisfactory dividend on the ordinary share capital of the Financial News Limited.

The record of that subsidiary may stir us to consider further investments in properties of companies unconnected with the financial Press. We believe that the well-worn saw about not keeping all one's eggs in one basket has not lost its merit. Controlling, as we do, the largest group of financial newspapers in the world, we are in a good position to profit from active financial

us from the effects of depressions in the City.

OTHER INTERESTS

For a number of years your directors have been pondering the problem of how to create alternative sources of revenue when the City enters into hard times. That problem shows signs of slowly yielding to treatment. The proof that we have made some progress in dealing with it is to be found in the accounts you are now considering. Our subsidiary companies have contributed a goodly sum to our published profits. The progress of one—a company with no connection with the financial Press—is hopeful.

the company's bank account at a small rate of interest.

The report and accounts were unanimously adopted.

Orders for the publication in these columns of the reports of Company Meetings should be addressed to the Reporting Manager of THE ECONOMIST, 8 Bowyer Street, Fleet Street, London, E.C.4.

GOLD MINES OF KALGOORLIE, LIMITED

ENCOURAGING DEVELOPMENT RESULTS

The second ordinary general meeting of Gold Mines of Kalgoorlie, Limited, was held, on the 5th instant, at the Chartered Insurance Institute, 20 Aldermanbury, London.

Mr P. E. Marmion (the Chairman), in the course of his speech, said that notwithstanding the large amount of development work undertaken during the year the balance sheet again showed a position of great strength and liquidity. The total of debtors, less creditors' short-dated Government securities, and cash represented the substantial sum of £312,135, and owing to the recent very favourable returns from the small associated mill this position had been fully maintained, the corresponding figure at August 31st, after providing for all outgoings in the meanwhile, being £312,874. There was an operating profit of over £10,000 from the treatment of 9,742 tons of ore in the small associated mill during the six months it was working, a result which he hoped would be regarded with satisfaction.

IRON DUKE RESULTS

During the year work was again largely concentrated on the Iron Duke and Oroya South group of leases, and some of the results had been most encouraging. In the Iron Duke their main objective had been the full exploration of the well-known Hinchcliffe shoot, and they had every reason to be well satisfied with the results so far attained. At the last meeting he was able to state that they had indications that the continuation of this rich shoot had been located at No. 7 and No. 11 levels. The development work done in the last twelve months on No. 12 level had located the shoot at that level, and diamond drill hole No. 37 had intersected ore assaying 12.8 dwts. per ton over a true width of 20 feet at a depth of 100 feet below No. 12 level. There was a further interesting development below No. 12 level. Diamond drill hole No. 22 from the North Kalgurli No. 14 level had intersected very high-grade ore—35.9 dwts. for a length of 8 feet—25 feet inside their boundary and approximately 200 feet below their No. 12 level. Further exploration work was necessary before any reliable opinion could be offered on the significance of this exceptional result. They had every reason to be pleased with the result of the year's work in the Iron Duke lease.

Development work in the Oroya South group of leases had been carried on from the Oroya South shaft, which had been unwatered and retimbered where necessary to within 400 feet of the fifteenth level, and good progress towards that objective was being made.

AUSTRALIA EAST LEASE

In the Australia East the ore occurrences were irregular and somewhat complicated, but there were numerous places with interesting possibilities which they were now in a position to explore. The ore from No. 4 lens had been consistently rich, the average value for considerable tonnages frequently being over one ounce to the ton, and considering its proximity to the surface in an area that was intensively prospected by the original owners he thought they were particularly fortunate in discovering it so opportunely. The result of the year's work on the Australia East lease in the circumstances had been quite satisfactory, and they looked forward with confidence to the maintenance of similar results from the enlarged programme of development and preparation for stoping on which they were now in a position to embark.

It was estimated by their technical advisers that the proved and probable ore at March 31st last amounted to 210,000 tons of an average grade of 7.4 dwts. per ton, representing an addition of 100,000 to the previous year's estimate. The further examinations carried out by their geologists during the year had thrown a great deal more light on the potentialities of their properties, and they saw no reason to modify the opinion expressed last year that while the known ore bodies might yield as much as 400,000 tons their expectations envisaged possibilities of an ultimate tonnage appreciably in excess of that figure.

When they last met he informed them that the reconditioning of the old Associated Mill had just been completed, and that the mill had started operating. Since that date it had been in continuous operation, and up to the end of September had treated 19,634 tons for a yield of 13,081 oz. of fine gold, equivalent to an average of 13.3 dwts. per ton. The yield up to the end of March, the period covered in the accounts under review, averaged 10.5 dwt. It was reasonably efficient on the class of ore it was treating, recoveries averaged about 91 per cent., and there remained considerable remnants that it could handle usefully.

The report and accounts were unanimously adopted.

MALAYALAM PLANTATIONS, LIMITED

POSITION OF TEA AND RUBBER INDUSTRIES

The fifteenth ordinary general meeting of Malayalam Plantations, Limited, was held, on the 6th instant, at 19 Fenchurch Street, London, Mr H. J. Welch (the chairman) presiding.

The Chairman, in the course of his speech, said: The total net cost of the properties appears in the balance sheet at £1,658,961, and the buildings and machinery at £1. After paying the final dividend, making other appropriations, including £20,000 to reserve account and £35,500 to taxation reserve, the net surplus assets stood at £270,000, or £6 14s. 9d. per planted acre. The net cost of the planted areas, buildings, etc., was less than £39 per acre; £26,973 has been written off buildings account, and the balance of profit transferred was £174,689. The final dividend proposed was 5½ per cent., making 8 per cent. for the year.

The company owns 32 square miles of planted tea and 28 square miles of planted rubber, nearly all of which is in bearing. The restricted tea crop amounted to 9,621,542 lb., only 60.2 per cent. of the basic assessment being permitted for export. The rubber crop was 5,714,932 lb. The average net price obtained for tea was 9.87d. per pound, and although it was ½d. better than last year it compared unfavourably with the average of 13.44d. for the eight years 1922 to 1929. Including that sold for local consumption at low prices, the rubber was produced at an increased cost of about one-third pence per pound, and realised 5.63d. per pound net, or 6.32d. London equivalent.

CURRENT YEAR'S PROSPECTS

The company has erected a modern factory on its Lockhart estate, which produces high-grown tea. The cost is being written off out of revenue. Capital expenditure for the current year is estimated at £8,000, and crops at 9,500,000 lb. of tea and 5,726,000 lb. of rubber, both at slightly higher cost. Prices realised to date for the crops are better than last year. Each penny per pound profit on the tea would equal nearly £40,000, or 2.18 per cent. upon the capital, and each penny per pound on rubber nearly £24,000, or 1.32 per cent.

TEA INDUSTRY

Except in the case of Ceylon, the average prices for tea this year have been higher than last, but prices generally are at a very low level and medium, good medium and fine teas realise a much smaller premium over common teas than generally prevailed before the depression. Between the commencement of the Regulation Scheme and July last, stocks of tea in bond in the United Kingdom had been reduced by 48½ million pounds, and they are expected to fall to normal by next July.

He went on to say that the Preferential Tea Duty in this country continued, in his opinion, to be injurious to the interests of Empire producers. Not only were India and Ceylon teas being displaced in out-markets by non-Empire teas, but this brought relatively larger supplies of Empire teas to the British market, and consequently depressed their price. There was a danger of the displacement of Empire teas in foreign markets becoming permanent.

It might reasonably be expected that tea prices would be at least maintained at their present levels during the Regulation of Exports Scheme, which, it was thought, would be renewed upon its expiration in 1938, and it was to be hoped that producing countries outside the scheme might be induced to join, as while they were out they constituted a continuous and probably increasing danger. Meanwhile, the campaign for increased consumption was being continued.

RUBBER INDUSTRY

The remarkable increase in the world's absorption of rubber temporarily interrupted between 1929 and 1932 was continuing and surplus stocks were being rapidly reduced. The depreciation of gold currencies should prove favourable to the industry.

Between 1925 and 1935 the world absorption of crude rubber was nearly doubled. The United States absorption increased 30 per cent. and that of other countries 200 per cent. Countries in the Far East were taking much more and should continue to provide an expanding market. In the light of the present known facts there seemed reasonable ground for hope that the industry would emerge successfully from its difficulties in the next few years.

The report and accounts were unanimously adopted.

KIRKLEES, LIMITED

TRADING PROFITS INCREASED

The eighth ordinary general meeting of Kirklees, Limited, was held, on October 6th, in London.

Mr William Tong, M.C. (chairman and managing director), said that trading profit again showed a marked increase, having risen from £61,228 to £78,125. Expenditure on maintenance of machinery and plant showed an increase of nearly £10,000, but he was hopeful that as the result of improvements effected in design and construction some gradual reduction would be forthcoming in the future. On the accounts submitted shareholders might have hoped for a larger dividend than the 4 per cent. recommended, but with their intimate knowledge of conditions in the trade the directors believed it was essential to retain as strong a position as possible, and that by so doing they would give themselves the best prospects of steady improvement. The board would give consideration to the payment of an interim dividend in future.

He wished to assure shareholders that, so far as their company was concerned, every possible precaution had been taken to keep the premises and plant in a first-class state of repair and efficiency and their process and manufacturing organisation well in line with modern standards. He believed that their manufacturing costs would bear comparison with any in this country. He placed his reliance in the future of the company in this belief, and they would never relax their efforts to maintain that and continuously to improve their efficiency. With steady trade and healthy competition he was confident they would be able to earn satisfactory profits.

An active recreation and welfare committee, to which every department of the factory elected its own representatives, had been set up, and through this organisation a sickness and benevolent fund had been established, with weekly subscriptions ranging from 1½d. to 4d., and benefits varying between 6s. and 22s. 6d. per week.

In the company's main department, where continuous shift working was essential, a system had been adopted whereby shift workers worked an average 42 hours per week instead of 56 hours, without any reduction in their total earnings.

The report and accounts were unanimously adopted.

BAJOE KIDOEL RUBBER AND PRODUCE COMPANY, LIMITED

BETTER PROSPECTS

The twenty-fifth ordinary general meeting of the Bajoe Kidol Rubber and Produce Co., Limited, was held, on the 6th instant, in the Council Chamber of the Rubber Growers' Association, London.

Mr H. Eric Miller (Chairman of the company), who presided, in the course of his speech, said: Dealing first with rubber, we had available for the year under review export licences for 1,426,664 lbs., but the N.E.I. Government, in order to keep within their export quota, requested European producers to sell them part of their export licences. We returned export licences for 210,742 lbs., for which we received 25,422.70 florins.

A crop so much below the potential yield of the estates meant a relatively high cost of production and left only a small margin of profit, under the handicap of a currency on a gold basis. Our average rate of exchange for the year was 7.22 florins, against a par rate of 12.10 florins. The management of the guilder exchange in Holland should have no difficulty in maintaining an exchange value in line with realities. The rate now was about 9 guilders against 7.22 guilders.

Coffee producers in the Netherlands E. Indies are to be helped by a subsidy. The Netherlands Government has, from April 16, imposed a duty varying from 10 to 12 guilders per 100 Kg., on all coffee imported into the Netherlands, and it is their intention to allocate the proceeds of this duty to assist producers of coffee in the Netherlands E. Indies and to provide funds for improving the native coffee and for propaganda. The Netherlands East Indies Government are not yet able to announce the value of the subsidy or how it will be made available to producers.

The English company's profit and loss account shows a small credit balance made up of the dividend from the Celebes Company and of interest. The modest dividend which we recommend will come in part out of accumulated profits of former years, but its payment is justified by the strong financial position of the company. We hope that the accounts a year hence may make a better showing.

The report was adopted.

GOVERNMENT RETURNS, &c.

TREASURY BILLS BY PUBLIC TENDER

Tenders for £50,000,000 Treasury bills were opened on October 2, 1936. The amount applied for was £77,980,000. Tenders were accepted for Treasury bills at three months dated Monday to Friday, at £99 17s. 4d., about 96 per cent. and above in full; Saturday at £99 17s. 5d. and above in full. The average rate per cent. was 10s. 6.07d. The amount allotted was £50,000,000.

(d) Paid on a larger capital. † Free of Income Tax. (c) Also Scrip bonus 10 per cent.

ELECTRIC AND MUSICAL INDUSTRIES, LTD.—The profit of Electric and Musical Industries for the year to September 30, 1936, amounts to £266,789. The directors intend to recommend a dividend of 10 per cent. For the previous year the ordinary dividend was 10 per cent. with the addition of a bonus of 2½ per cent. For that period there was a profit, before providing £108,000 for income tax, of £451,002, to which was added £114,544 from the sale of investments, making £565,546.

THE SMITHFIELD AND ARGENTINE MEAT COMPANY, LTD.—In view of the present uncertainty regarding future trading relations with Argentina the Board deem it advisable to defer consideration of the payment of an Interim Dividend on the Ordinary Stock, until they have the final accounts for the year before them.

PATERSON, LAING AND BRUCE, LTD.—The trading results reported from Australia, though showing improvement, do not permit of the payment of dividends on the 6 per cent. cumulative preference shares and 6 per cent. cumulative "B" preference shares on October 1st.

AMALGAMATED FIXED TRUST.—Williams Deacon's Bank announces that the fifth income distribution on Amalgamated Fixed Trust Certificates will be paid to certificate holders registered as at September 15th, at the rate of 5-3286d. net per sub-unit, on due date October 15th. This covers the period from March 16, 1936, to September 15th. Payment compares with a distribution of 4-4375d. for the period September 15, 1935, to March 15, 1936.

THE BURMAH OIL COMPANY, LTD.—Interim ordinary dividend for year to December 31, 1936, at the rate of 5 per cent. per annum (1s. per £1 unit) less 3s. 7d. tax in the £ payable November 6th, to holders registered September 29th. The directors state that the increased interim dividend is not an indication of an increased total dividend which depends on the full year's results.

CENTURY FIXED TRUST.—Midland Bank Executor and Trustee Company announces that the second income distribution upon Century Fixed Trust certificates—representing the period from March 16th to September 15th last—will be paid to certificate holders registered as at September 15th at the rate of 6-3827d. net per sub-unit, payable November 2nd.

BORAX CONSOLIDATED, LTD.—The directors considered the matter of an interim dividend on the preferred ordinary shares and in accordance with their practice of recent years it was resolved to postpone the consideration of a dividend until after the completion of the accounts for the past financial year.

DUNLOP RUBBER COMPANY, LTD.—Mr John Lyon Collyer has been appointed a director of the Dunlop Rubber Company, Ltd. The directors announce that the trading results to date so far as ascertained compare favourably with those of last year. The dividend on the company's preference shares will be paid on October 31st as usual.

PROVIDENT INVESTORS TRUST.—A distribution, amounting to 5d. per sub-unit after deduction of income tax, is announced on sub-units of Provident Investors Trust. This distribution, the second to be made, is in respect of all dividends and other income received by the trust from March 18, 1936, to September 17, 1936. It is payable on October 15, 1936, on all sub-units issued up to and including September 18, 1936.

ARGENTINE LAND AND INVESTMENT COMPANY, LTD.—Dividend 2½ per cent payable (less income tax) on October 30, 1936, to proprietors registered on October 5, 1936. At a board meeting held October 1st, the directors resolved to recommend to shareholders a reduction of the capital of the company by making a return of 2s. in cash per £1 share and a reorganisation of the balance of 18s. by the issue of 8s. in redeemable income stock and one share of 10s.

MORRIS (HERBERT), LTD.—Profits to July 31, 1936, amounted to £119,505. Final dividend 12½ per cent. free of tax, absorbing £50,000. The sum of £10,000 goes to reserve. Carry forward £39,313, compared with £27,506 brought in. Total dividend for year, 17½ per cent. free of tax, also capital bonus of 33½ per cent. Dividend for 1934-35, 18 per cent. less tax.

GALLAGHER, LTD.—Interim dividend on ordinary shares 5½ per cent. less tax in respect of year 1936. This rate is the same rate as a year ago when it was followed by a final dividend of 17 per cent. and a bonus of 2½ per cent., making 25 per cent. for 1935, compared with 18 per cent. for 1934.

PAHANG CONSOLIDATED, LTD.—Final dividend on ordinary shares 20 per cent. less tax, making 40 per cent. less tax for year to July 31, 1936. This compares with a final dividend of 10 per cent., making 15 per cent. for year to July 31, 1935. It is the largest dividend since the company was formed in 1906. The 7 per cent. £1 preference shares receive 15 per cent. against 12 per cent. for 1935. Both dividends are payable on November 18th, less tax, to members registered on 6th October.

KREUGER AND TOLL 5 PER CENT. DEBENTURES.—Payment will be made on October 15th next of £22.50 on account on each £1,000 of the 5 per cent. secured sinking fund gold debenture of Kreuger and Toll, and £11.25 on each £500. The payment will be made at the office of the trustee, Marine Midland Trust Company, successor trustee, of New York, Room 201, 120 Broadway, New York, or, at the option of the Debentureholder, at the office of the Guaranty Trust Company, of New York, 32, Lombard Street E.C.

THE BUENOS AYRES GREAT SOUTHERN RAILWAY COMPANY, LTD.—The Directors announce that payment of a dividend of one per cent. for the year ended June 30, 1936, upon the Company's 5 per cent. preference stock will be made on November 5th. The Board are of opinion that no further distribution on the 5 per cent. preference stock or any payment on the 6 per cent. preference stock would be justified, having regard to the earnings of the past year. The annual general meeting will be held at River Plate House, Finsbury Circus, London, E.C.2, on October 28th, at 12.15 p.m.

BUENOS AYRES WESTERN RAILWAY, LTD.—The Directors announce that payment of a dividend of 5 per cent. for the year ended June 30, 1936, upon the Company's 5 per cent. preference stock will be made on November 5th. On the same date a dividend of 1 per cent. on the Company's 4½ per cent. preference stock will be paid in respect of the same period, the Board being of the opinion that no higher distribution would be justified having regard to the earnings of the past year. The annual general meeting will be held at River Plate House, Finsbury Circus, London, E.C.2, on November 4th, at 12.15 p.m.

LONDON PASSENGER TRANSPORT BOARD.—Final dividend payable October 29th on "C" stock 2½ per cent. for year to June 30, 1936. To be paid to holders registered October 5th less income tax at 4s. 9d. This final dividend will make total payment 4 per cent. for year as before. The report will be available on October 29th. Price is it can be obtained from offices of the Board, 55 Broadway, London, S.W.1.

OFFER TO NEW READERS

Any reader who makes his first acquaintance with this journal with this week's issue is invited to fill up the attached:

To Publisher, "Economist Newspaper Ltd.,"

8 Bouverie Street, E.C.4.

In order to test the value of your publication I should like you to forward this to me by post for the next four weeks. If I then decide to become a subscriber, it is understood that there will be no charge for the copies thus received, but otherwise I shall be willing to pay 4s. to cover their cost.

GUARANTY TRUST COMPANY OF NEW YORK.—The statement of condition, as of September 30, 1936, shows: Deposits, \$1,619,256,428, as compared with \$1,462,789,373 at the corresponding quarter a year ago. The company's total resources are \$1,953,014,382, as compared with \$1,779,579,553 a year ago. Capital and surplus remain unchanged at \$90,000,000 and \$170,000,000, respectively; and undivided profits are \$3,070,734, as compared with \$7,649,439 at the close of the last quarter (June 30, 1936) and \$6,598,517 a year ago.

MISCELLANEOUS

ALLIED IRONFOUNDERS, LTD.—Mr John A. Brown and Mr George Muir have been appointed directors of Allied Ironfounders, Ltd. Mr Brown is a director of Forth and Clyde and Sunnyside Iron Cos., Ltd., Falkirk, and of Dobbie, Forbes and Company, Ltd., Larbert. Mr Muir is secretary of the company, and will continue to hold that office.

ASSOCIATED PROVINCIAL PICTURE HOUSES.—The report to March 31, 1936, shows a net profit of £115,236—an increase of £12,360 on the previous year. The ordinary dividend for the year is 6 per cent., less tax as before, leaving £69,214 to be carried forward. During the year the company purchased freehold reversions in the Regent, Portsmouth, and the Plaza, Southsea.

WEST HARTLEPOOL STEAM NAVIGATION.—The report for the year ended March 31, 1936, shows that profits have risen from £41,319 to £65,125. A sum of £10,000, against £4,970, has been allowed for depreciation. Preferred ordinary dividend 20 per cent. tax free. Deferred ordinary dividend 20 per cent. tax free. Carry-forward £23,089.

COMMERCE AND TRADE

SURVEY OF COMMODITY MARKETS

In contrast to the hectic activity on the Stock Exchange, business in commodities was generally quiet this week. In Liverpool wheat prices continued their upward trend, for it is now improbable that Argentina and Australia will harvest large crops. Raw sugar, on the other hand, has been marked down and the market in tea was irregular. There was a decline in meat prices at Smithfield market, but quotations for bacon remained unchanged. Australasian butter was cheaper. A feature was the sharp rise in the price of English eggs on a shortage of supplies.

Textile raw materials are scarcely changed in price on the week. The latest cables from Australia indicate firm wool markets. Quotations for raw jute were marked down a little. Meantime, in Bengal, instructions have been issued to Government officers to do their best to ensure that individual cultivators should sow three-sixteenths less in 1937-38 than in the standard year 1934-35. Among non-ferrous metals, copper and lead were slightly dearer, and spelter and tin somewhat cheaper, than a week ago. The market in rubber was steady, but quotations for linseed oil continued to sag.

In the United States the general trend of the prices of primary products was slightly downwards. Moody's index of staple commodity prices declined from 183.8 (December 31, 1931 = 100) on September 30th to 183.0 on October 7th, compared with 185.7 a month ago and 175.3 last year.

COAL

SHEFFIELD.—Demand for industrial fuel continues very strong. Inland requirements are on such a scale that only a limited tonnage of washed doubles, singles and smalls is available for export. Supplies this month will be further restricted by the all-round reduction of quotas. Furnace and foundry coke continues strong with little available outside contract. Sheffield district coke makers have advanced prices by 1s. 6d. per ton, raising large coke for industrial purposes to 25s. per ton at ovens and graded coke to 26s. at ovens. Blast furnace coke is in short supply and prices are firm. On the export market there is little change, supplies being rather scarce and enquiries quiet. Household coal has been advanced 1s. 8d. per ton at pits.

NEWCASTLE-ON-TYNE.—Despite the standstill in trade with Italy and Spain, North-East collieries are working regularly and have little free coal for the coming winter. Steam coals of all grades and classes are very firm and prices tend to advance. Gas coals are much better placed, whilst coking coal is becoming scarce under active home trade and a much better demand from Belgium. Patent oven coke has a good sale in both the home and export markets.

GLASGOW.—The market remains steady in tone. The recent currency developments have unsettled the export market to some extent, but generally there is still a very good flow of inquiry, and it is not expected that these developments will have any detrimental effect. Supplies are more plentiful than a week or two ago in most districts, but, as collieries have good orders in hand, there has been no question of cutting prices to any notable extent.

CARDIFF.—There has been no improvement during the past week on the Cardiff coal market. Inland trade is fairly active and coastwise shipments are expanding, but exports are practically limited to contract commitments. Large coals are weakest and washed small and sized grades firmest. Throughs are in moderate request, but cobbles lack support. Coke is strong, and there is a fair inquiry for patent fuel; pitwood quotations show no change. The Jamaica Railways have placed an order for 6,000-7,000 tons, while the Greek State Railways are inquiring for 10,000 tons and the Bona Electricity Works for 5,000 tons.

The outstanding event of the week has been the decision of the Executive Board of the Coal Marketing Scheme to relieve the Control Board of the restraints of a rigid minimum price schedule. The new scheme for the centralised control of the sale of coal empowers the Control Board to

THE TIMES PUBLISHING COMPANY, LTD.—The twenty-ninth annual report to June 30, 1936, reveals a profit of £133,323, comparing with £132,855 for year to June 30, 1935, and £74,741 for year to June 30, 1934. The sum of £30,000 is put to reserve for contingencies and rebuilding as last year, while £10,000 is again allocated to reserve for supplementary pensions and grants. Preference dividend of 5 per cent. absorbs £16,000, and preference shareholders receive £6,880 against £7,027 as a further dividend (5 per cent. share of surplus profits). The ordinary shareholders receive a 10 per cent. dividend, less income tax, as before. This dividend will absorb £64,500. The amount to carry forward is £138,085, against £131,942 brought in. It is with deep regret that the board record the death of Sir John Pybus, Bt., who had been a director for 13 years. Brigadier-General Sir Harold Hartley, C.B.E., M.C., F.R.S., has been appointed a director.

EASTENS, LTD.—Trading profits for year to August 31, 1936 amounted to £50,399, against £41,047 for preceding year. Ordinary dividend 15 per cent. and a 5 per cent. capital bonus, against 12½ per cent. for previous year. Carry-forward £5,185. Meeting, October 20th, at Winchester House, London, at 11.30 a.m.

ELECTROLYTIC ZINC COMPANY OF AUSTRALASIA.—The directors state that the net profit for year to June 30, 1936, after providing £145,000 for amortisation and depreciation and £75,403 for taxation, amounts to £322,863. This compares with net earnings of £256,020 for the previous year, when a similar sum was deducted for amortisation and depreciation and £55,923 for tax requirements. For 1935-36 the dividend on the ordinary shares was doubled at 10 per cent., with an interim of 4 per cent. and a final of 6 per cent., and an extra payment of 2 per cent. was distributed on the participating preference shares, making 10 per cent. for the year.

authorise sales at "approved" prices, and in the determination of these the Board may now depart from the schedule when satisfied that a reduction may be necessary in the interests of the district. At the same time, it must continue to have regard to existing relative prices and to the channels through which trade is at present flowing. There is a provision in some existing contracts conceding to the buyer the advantage of any reduction in prices, but under the new instructions of the Executive Board the colliery companies are prohibited from making any reduction in prices in respect of existing sales or contracts.

IRON AND STEEL

LONDON.—The weekly report of the London Iron and Steel Exchange indicates that there has been no relief from the stringency in the iron and steel markets, although practically all departments of the trade are operating at capacity. Few producers are seeking fresh business and it is becoming increasingly difficult to place orders for completion within normal periods.

In the pig iron market new business has been rather quiet, mainly because makers have sufficient orders on their books to absorb the greater part of their production for several months to come and are reluctant to enter into additional forward commitments. The system of rationing customers is extending and it is claimed that by this method consumers are kept supplied with sufficient material for immediate needs. The quantities available, however, do not enable them to accumulate reserves against possible emergencies.

In the semi-finished steel department consumers are pressing to obtain deliveries against contracts and many works have sold their output for the remainder of this year.

Requirements of finished steel show no diminution, and the productive capacity of the works is being taxed to the utmost. In spite of record outputs the home market absorbs a very large proportion of production, and in some departments consumers complain of the stringent conditions which are developing. Little surplus remains for export, but business with overseas markets shows signs of improving and recently there has been a good volume of inquiry.

MIDDLESBROUGH.—Shipments of pig iron from the Tees during September amounted to 6,900 tons, of which 2,892 tons went coastwise, chiefly to Scotland; 1,300 tons went to Australia, 243 tons to South Africa and about 1,400 tons to Denmark. Manufactured steel shipments amounted to 36,800 tons. The market in pig iron continues strong. Buyers are willing to place orders running into next year, but makers are not prepared to go too far ahead. Producers are using large quantities of pig iron in their own foundries and steelworks; sales to other home users are good, and they could easily dispose of larger quantities. Prices are unchanged. It is expected that imports of semi-manufactured steel which have declined recently will again increase under the new arrangement with the Cartel for the importation of a further quantity.

Manufactured steel is in strong demand; the export price for black sheets has been increased, and quotations (24-gauge) are now £12 for home use, and £10 10s. f.o.b. Whilst there is a heavy demand for steel scrap, works are adhering to their price of 57s. 6d. per ton delivered, although the quantity of imported scrap from America is likely to be reduced owing to the higher price and to the increased sterling value of the dollar. Further orders are being placed in this district for new vessels. Good Durham blast furnace coke is maintained at 24s. 6d. per ton delivered to the furnaces. Prices of foreign ore are not mentioned owing to the difficulties of the freight position.

SHEFFIELD.—The strength of the iron and steel market is fully maintained. Supply is no more than equal to demand. Although consumers of pig iron are well contracted over the next few months, they instantly take up any limited parcels which come on the market. Producers, however, have but little to offer, and so heavy are contract specifications that their stocks are rapidly disappearing; there seems little likelihood of making replacements at any early date. Further expansion in the output of Derbyshire iron is reported, but even this will not fully meet consumers' needs. There appears to be some shortage of foundry material and forge iron is not so easily obtainable as three months ago. Lincolnshire makers have been out of the market here for some time. The whole output is going into consumption at source. More business in hematite is offering than can be accepted and although deliveries under contract are on a heavy scale, current needs are barely met.

In finished iron good business is being done in common and marked bars and there is some slight improvement in the call for crown iron. Production of basic steel billets reaches record proportions, but is falling short of requirements. Acid steel billets are in good demand. Wire rods,

steel strip and stainless steel sheets are in heavy request. There are no price changes.

GLASGOW.—Steelmakers in this district are endeavouring to increase output, but are unable to meet the calls made upon them. There is an urgent demand for plates and certain semis, but users are unable to place orders except for delivery many weeks ahead. Quite a large amount of important new work has been placed recently in the Glasgow area including—in addition to shipbuilding work—orders for heavy castings, machinery for both home and export trade and engineering work of many descriptions. Makers of steel structures in the West of Scotland are almost without exception exceedingly busy at present, and there is a steady flow of new business. Sheetmakers are keeping a very large proportion of plant in operation and output is being speedily taken up.

CARDIFF.—Shipments of tinplates at Swansea last week were not so heavy as in the previous week, but the works were fully employed up to their recently increased output quotas. If the recent improvement in demand continues, quotas may be further increased. Galvanised sheets are quiet, but the pressure for pig iron, steel ingots and bars is undiminished. Prices are unaltered and ruling at 18s. 9d. f.o.b. per basis box for tinplates, up to £12 10s. per ton for corrugated sheets in bundles, and £8 per ton, delivered, for steel sheet and tinplate bars.

OTHER METALS

COPPER.—The London market has shown no new features. After a lull at the end of last week, buying interest was resumed and, with sellers reluctant to make concessions, prices recorded a further moderate advance. In the United States an easier tendency has been apparent.

Sales on the London Metal Exchange: 1,600 tons on Monday, against 2,100 tons last week; 1,800 tons on Tuesday, against 1,400 tons last week; 1,700 tons on Wednesday, against 1,350 tons last week. Domestic spot was quoted at 9-50 cents per lb. in New York on Wednesday, against 9-55 cents a week ago and 9-55 cents a month ago. Wednesday's official closing price for standard cash in London was £39 15s. to £39 16s. 3d., compared with £39 2s. 6d. to £39 3s. 9d. a week ago. Stocks of refined copper in British official warehouses at the end of last week, at 49,127 tons, show an increase of 297 tons, while stocks of rough copper, at 1,992 tons, show an increase of 300 tons.

LEAD AND SELLER.—A revival of demand and reports of a strike at Broken Hill carried lead prices to a higher level at the end of last week. But quotations subsequently eased under moderate selling pressure and most of the gain was lost. Selter advanced irregularly and closed on Wednesday with a gain of 3s. 9d. on the week.

Sales of lead on the London Metal Exchange: 700 tons on Monday, against 1,400 tons last week; 550 tons on Tuesday, against 700 tons last week; 700 tons on Wednesday, against 1,100 tons last week. The New York quotation on Wednesday was 4-80 cents per lb., against 4-60 cents a week ago and 4-60 cents a month ago. The official closing quotation in London for soft foreign for shipment during the current month was £18 1s. 3d. per ton, compared with £18 a week ago.

Sales of spelter on the London Metal Exchange: 600 tons on Monday against 425 tons last week; 1,100 tons on Tuesday, against 800 tons last week; 1,650 tons on Wednesday, against 500 tons last week. Wednesday's quotation in East St. Louis was 4-85 cents per lb., against 4-85 cents the week before and 4-85 cents a month earlier. Wednesday's official closing quotation in London for "good ordinary brands" for shipment during the current month was £13 17s. 6d. per ton, against £13 13s. 9d. last week.

TIN.—Following last week's improvement, the markets in both this country and the United States have suffered a reaction. Prices have fluctuated in a downward direction and business has been limited.

Sales of tin on the London Metal Exchange: 225 tons on Monday, against 550 tons last week; 190 tons on Tuesday, against 600 tons last week; 320 tons on Wednesday, against 100 tons last week. The New York quotation on Wednesday was 45-00 cents per lb., against 46-00 cents a week ago and 52-50 cents a month ago. Wednesday's official closing quotation in London for standard cash was £202 to £202 5s. per ton, compared with £203 10s. to £204 a week ago. Stocks of tin in London and Liverpool at the end of last week totalled 722 tons, an increase of 53 tons on the week.

OTHER NON-FERROUS METALS.—Among other non-ferrous metals, aluminium ingots and bars for home delivery were again quoted at £100 per ton, and rolling billets at £102 per ton. Nickel, for home and export, at £200 to £205 per ton, remains unchanged. Quicksilver, on the spot, was quoted at £13 5s. to £13 5s. 6d. per flask of 76 lbs., the same as last week. Chinese antimony was quoted at £56 per ton ex warehouse, the same as last week. Chinese wolfram for "October-November" shipment was quoted at 28s. to 29s. per unit c.i.f., against 28s. 6d. to 29s. 6d. a week ago. Refined platinum was quoted at £12 per ounce, as against £13 last week.

TEXTILES

COTTON.—Manchester traders have been rather slow in settling down after the disturbance caused by devaluation on the Continent, and there is some confusion concerning the effect upon export trade. On the whole, however, the business outlook in Lancashire is more promising, though the labour situation causes some anxiety. It is probable that the operatives in the spinning branch will press their claim for an advance in wages.

Interest has been centred on the American Government crop estimate, due to be published after the dispatch of this report. It was anticipated that the forecast would be rather larger than a month ago, when the figure

was 11,121,000 bales. Trade demand continues fairly active, but on any advance in prices there is still some hedge selling. Manufacturers of piece-goods have been firmer in quotation. At the end of last week freer buying took place for India, and general advices from that quarter are rather more cheerful. A fair business has been done for Egypt, chiefly in bleaching descriptions. Demand from Java has fallen off, owing to the Dutch devaluation. Some useful lines have been put through for the outlets of Central and South America. Home trade buyers have purchased rather more freely.

Yarn quotations have tended to stiffen. A steady business has been done in American qualities, chiefly in coarse and medium counts. Buying in Egyptian spinings has been irregular.

JUTE.—Dundee.—With the exception of prices of Calcutta goods quotations in the jute industry are being very well maintained. The raw material may show slight signs of weakness occasionally, but in Calcutta sellers are very reserved, and the prices paid by the Indian Mills have remained unchanged for some time past. Arrivals of jute into Calcutta from up-country markets are being well absorbed, due to the increased consumption of the mills in India. Production of hessians would now appear to be above demand, as stocks increased by 22 1/2 million yards during September, but stocks of sackings were reduced by 35 million yards during that month owing to seasonal trade.

The price war in Calcutta between the Associated Mills and the "outside" mills continues. Prices have been depressed to very low levels, but there is no sign of any agreement being reached on the question of working hours. The "outside" mills are working 108 hours per week, compared with 54 hours per week worked by the majority of the Association Mills. The price of 10 oz. 40 in. hessians has been reduced to 16s. 3d. and 8 oz. to 12s. 10 1/2d., October, and to 16s. 2d. and 12s. 11d., November/March.

Sellers of Daisce-2/3 are offering the full group at £16 12s. 6d., and four at £15 13s. 9d., October/November, while Tossa-2/3 is named at £17 15s. at £16 15s., same shipment. Good First Marks are obtainable at £19 12s. 6d., and good Lightnings at £18 2s. 6d., with Hearts at £17 10s. for best qualities, October/November. Jute yarns have been in good demand and prices have advanced all round. Common 8 lb. cops are not obtainable at less than 2s. 0d. or 8 lb. spools at under 2s. 1d., while twist is raised to 3 1/2d. for 3-ply 8 lb., and sackings are firmer at 2 1/2d. for 24 lb. warp, and 3 1/2d. for 8 lb. chains. Rove is now generally named at £19 10s. for 48 lb., and £15 15s. for 200 lb., and the finer yarns are very firm at 2s. 2d. lowest for fourth-grade Rio 8 lb. warp. Carpet yarns are firm at 3 1/2d. paid for 14 lb. warp.

A good inquiry prevails for jute cloth and manufacturers are fairly comfortably placed with orders. A few substantial quantities are being bought each week, and delivery extends in some cases into next year. Prices are very firm at 2 1/2d. lowest for 10 oz. 40 in. and 2d. for 8 oz., with quotations as a rule 1/2d. more. Linoleum hessians are in some demand and prices are firm, while a fairly steady trade is being done in heavy goods.

GRAIN MARKETS

WHEAT.—Prices in Liverpool, London and Chicago are higher, following a somewhat uneventful week. Until Wednesday, quotations in this country were very firm, but an easier tone then developed in consequence of reports of moderate rainfall in Southern Hemisphere producing areas. Meanwhile, present indications point to a moderate outturn in Argentina and Australia. The world outlook is discussed in a Leading Article this week.

On Wednesday last, "December" futures were quoted in Chicago at 113 cents per bushel, against 112 1/2 cents the week before and 110 1/2 cents a month ago. Quotations in London, Wednesday: No. 1 Northern Manitoba, ex ship, 43s. 9d. per 496 lbs., against 42s. 9d. a week ago; No. 2 Northern Manitoba, ex ship, 43s. 3d., against 42s. 3d. a week ago. According to the *Corn Trade News*, total shipments of wheat and flour last week totalled 1,439,000 quarters, against 3,361,000 in the previous week and 1,507,000 quarters in the corresponding week a year ago.

FLOUR.—The market is steady, with prices showing little change compared with last week. Wednesday's London quotations (excluding quota payments) were: Straight run, delivered Home Counties, 36s. per 280 lbs., against 36s. a week ago; delivered inner London, 35s. 6d., as compared with 35s. 6d. a week ago. Manitoba patents, ex store, 33s. to 34s. 6d., against 33s. to 34s. 6d. a week ago. Australian, ex store, 29s. 6d. to 30s., against 29s. a week ago.

BARLEY.—Imported feeding descriptions remain a firm market. Good qualities of English malting barley are in demand, but are difficult to secure. "October" futures were quoted at 60 1/2 cents per bushel in Winnipeg on Wednesday, against 60 1/2 cents a week ago. Quotations per 448 lbs. in London on Wednesday were: "English feed" at farm, nominal, as against a nominal quotation a week ago; "English malting" (new), at farm, 32s. to 50s., against 32s. to 50s. last week; Californian (new), ex ship, 46s. 6d. to 58s., against 46s. 6d. to 58s. last week; Chilean, brewing, ex ship, 35s. 6d. to 39s., against 35s. 6d. to 39s. a week ago.

OATS.—On Wednesday, "December" futures were quoted at 41 1/2 cents a bushel in Chicago, against 41 1/2 cents a week ago and 42 1/2 cents last month. Quotations in London, Wednesday: "English Black" (new), at farm, 19s. to 20s. per 336 lbs., against 19s. to 20s. a week ago; "English White" (new), at farm, 19s. to 20s., against 19s. to 20s. a week earlier; mixed Canadian feed (Vancouver), landed, 21s. per 320 lbs., compared with 21s. last week.

MAIZE.—The markets in this country have again been rather easy, but quotations in Chicago show a gain on the week. "December" futures were quoted on Wednesday at 94 1/2 cents per bushel in Chicago, against 93 1/2 cents a week ago and 94 1/2 cents last month. Quotations in London, Wednesday: "Plate," landed, 24s. 3d. per 480 lbs., compared with 25s. a week ago; "Plate," ex ship, 23s. 3d., as against 24s. a week ago; "Plate," "September," 23s. 3d., as against 23s. 6d. a week ago; yellow maize meal, ex wharf, was quoted at £6 5s. to £6 10s. per ton, as against £6 8s. 9d. to £6 12s. 6d. last week.

AMERICAN WHEAT MARKETS.—The following table shows wheat quotations for selected weeks in 1934-36:—

NEAREST FUTURE	Jan. 3, 1934	Jan. 2, 1935	Oct. 9, 1935	Dec. 31, 1935	Sept. 30, 1936	Oct. 7, 1936
Winnipeg (No. 1, Manitoba)	65 1/2	82 1/2	92 1/2	84 1/2	106 1/2	108 1/2
Chicago (No. 2 Winter)	84 1/2	98 1/2	104 1/2	75 1/2	112 1/2	113
Cents per 60 lb.						

The visible supply of wheat in Canada amounts to 86,244,000 bushels, against 83,660,000 bushels last week, and 138,987,000 bushels in the corresponding week last year.

OTHER FOODS

BACON.—The market has been generally firm this week. The official quotations (per cwt. for No. 1 Sizable) which formed the basis for dealings on the London Provision Exchange this week were: English, 88s. to 94s.; Canadian, 87s.; Danish, 100s.; as against 88s. to 94s.; 87s. and 100s., last week. Arrivals in London last week included Danish, 12,155 bales; Canadian, 4,578; Dutch, 2,232; Lithuanian, 1,541; and Polish, 3,131; as against 12,264, 4,457, 2,119, 1,908 and 1,952 bales, respectively, in the previous week.

BASIC PIG PRICE.—The Pigs Marketing Board announced last week that in accordance with the provisions of the present contract, the ascertained price of green Wiltshire style bacon is 97s. 7d. per cwt. and the ascertained value of offals is 8s. 5d. The ascertained cost of feeding stuffs, as certified by the Ministry of Agriculture and Fisheries, is 8s. 5½d. per cwt. In accordance with the price schedule embodied in the contract, the price of the Class 1, grade C pig for the month of October is 12s. per score, against 11s. 1½d. in September and 10s. 2d. in the same month of last year. The curers will also pay to the Pigs Marketing Board 2d. per score on every pig delivered and accepted during this year, to form a pool out of which will be paid the bonus on pigs delivered during the first four months of the year, in accordance with the 1936 Bonus Scheme.

BUTTER.—The market in Colonial descriptions was quiet and easier, but Danish remained firm in price. Quotations (per cwt.) on the London Provision Exchange on Wednesday were: New Zealand, finest salted, 101s. to 102s.; Australian, choicest salted, 102s.; Danish, 126s., compared with 100s., 106s. and 125s., respectively, a week ago.

CHEESE.—Quotations for English have been advanced, but the market in other descriptions has been quiet at about late rates. Quotations (per cwt.) on the London Provision Exchange on Wednesday were as follows: English, finest farmers, 80s. to 84s.; Canadian, finest coloured, 69s. to 70s.; and New Zealand, finest coloured, 68s. to 69s. 6d., against 78s. to 80s., 67s. to 71s. and 67s. to 68s., respectively, a week ago.

COCOA.—The spot quotation in New York on Wednesday was 8 cents per lb., as against 7½ cents per lb. last week. In London, on Wednesday last, good fermented new crop, "November-January," was quoted 35s. 6d. per 250 kilos., c.i.f. Continent, against 34s. 6d. a week ago. Last week's movements of cocoa in London were as follows: Landed, 4,192 bags; delivered, for home consumption, 10,062 bags; exported, 8,608 bags; stocks, 157,519 bags, against 135,574 bags a year ago.

COFFEE.—The markets have been quietly steady. On Wednesday, Rio No. 7 (cash) was quoted at 7½ cents per lb. in New York, as compared with 7½ cents per lb. last week and 8 cents per lb. a month ago. Movements of coffee in London last week were as follows: Brazilian, landed, 401 cwt.; delivered, for home consumption, 215 cwt.; exports, 2 cwt.; stocks, 10,036 cwt., against 13,204 a year ago. Central and South American, landed, 553 cwt.; delivered, for home consumption, 2,318 cwt.; exported, 1,659 cwt.; stocks, 75,761 cwt., against 114,978 last year. Other kinds: landed, 651 cwt.; delivered, for home consumption, 2,975 cwt.; exported, 1,521 cwt.; stocks, 111,492 cwt., against 132,450 last year.

EGGS.—Owing to short supplies, English eggs rose sharply in price; imported selections were steady to firm. At Smithfield on Wednesday, English (ordinary packing, Grade I, about 15-15½ lb.) realised 17s. 6d. to 18s. 6d. per 120, as against 15s. 9d. to 16s. 3d. last week, while Danish (15½ lb.) made 13s. 6d. to 14s. per 120, as against 13s. 3d. to 13s. 9d. last week.

FRUIT.—Although business at Covent Garden has not been quite so brisk, prices are generally steadier, states *The Fruitgrower's* report. There are still substantial supplies of inferior cooking apples on the market, but these are being cleared and prices for dessert sorts are improving. Supplies of English pears are not so heavy and, with a steady demand, prices are a point firmer. The rush of plums is now over, and supplies are more limited; prices remain moderate. Cultivated blackberries are in rather shorter supply, but cobnut prices show no change. Hothouse grapes encounter a fair inquiry at steady prices, but peaches are limited and dear. Oranges continue a good trade, but supplies have increased and prices are accordingly lower. Lemons are a shade easier, and grapefruit encounter a slow trade.

MEAT.—Business at Smithfield has been rather slow, and prices in some cases have weakened. On Wednesday last, Argentine chilled hindquarters were quoted at 3s. 9d. to 4s. 2d. per 8 lbs., as compared with 3s. 10d. to 4s. 4d. a week ago. New Zealand frozen mutton was 3s. to 3s. 8d. per 8 lbs., against 3s. 2d. to 3s. 10d. a week ago. According to the Smithfield Market official report, supplies during last week amounted to 9,716 tons, a decrease of 288 tons on the corresponding week last year. Beef and veal accounted for 5,087 tons, mutton and lamb 2,448 tons, and pork and bacon 1,291 tons, as compared with 4,959, 2,798 and 1,376 tons, respectively, in the same week of 1935.

PEPPER.—Wednesday's spot price for black Lampung (in bond) was 2½d. per lb., against 2½d. a week ago. Movements of pepper in London

during the past week were as follows: Black, landed, 19 tons; delivered, 12 tons; stocks, 1,784 tons, against 1,545 tons a year ago. White, landed, 16 tons; delivered, 51 tons; stocks, 11,988 tons, against 16,382 tons a year ago.

RICE.—The spot price of Burma No. 2, cleaned, new crop, was 9s. 3d. per cwt., ex warehouse, on Wednesday, as compared with 9s. 3d. per cwt. a week ago. "October-November" in singles to Continent and U.K. was quoted at 8s. per cwt., against 8s. 1½d. last week. Movements in London during the past week were as follows: Landed, 525 tons; delivered, 27 tons; stocks, 1,835 tons, against 8,238 tons a year ago.

SUGAR.—The markets in London and New York have been quietly steady. The spot price in New York on Wednesday was 3-40 cents per lb., as compared with 3-40 cents per lb. last week and 3-65 cents per lb. a month ago. Wednesday's sales of raw sugar in London included December delivery at from 4s. 3½d., against 4s. 4d. a week ago. The movements of raw sugar at public warehouses in London and Liverpool last week were as follows: Imports, 35,824 tons, against 17,743 tons last week and 23,605 tons in the same week of last year; deliveries, 26,070 tons, against 17,805 tons last week and 12,883 tons last year; stocks 114,875 tons, against 105,121 tons last week and 166,257 tons last year.

TEA.—The following table shows the average prices (compiled by the Tea Brokers' Association) of tea sold in Mincing Lane on Garden Account in recent weeks:—

Week ending	Northern India	Southern India	Ceylon	Java	Sumatra	Africa	Total
Oct. 3, 1935	d. 16-20	d. 12-53	d. 15-82	d. 12-60	d. 10-17	d. 11-70	d. 15-20
Aug. 27, 1936	14-43	11-99	13-21	10-73	9-88	11-36	13-41
Sept. 3, "	15-14	12-19	13-39	10-88	10-19	11-76	13-86
Sept. 10, "	14-82	12-13	13-31	11-02	10-06	11-28	13-88
Sept. 17, "	14-29	12-13	13-32	11-03	9-96	11-53	13-56
Sept. 24, "	13-86	12-04	13-29	10-75	9-95	11-46	13-29
Oct. 1, "	13-39	11-95	13-41	10-91	9-90	11-55	13-09

The quantities catalogued for the public auctions in Mincing Lane this week comprised 52,523 packages of Indian and 23,143 packages of Ceylon tea. Demand for Indian turned rather quiet on Wednesday, prices of common sorts and medium kinds being easier; best qualities ruled about steady. The market in Ceylon teas showed little change, except for finest teas, which sold at higher prices owing to an improvement in quality.

VEGETABLES.—Tomatoes are in decreasing supply at Covent Garden, according to *The Fruitgrower's* report, and although demand is not brisk, prices show some improvement. Cucumbers remain a slow trade, but mushrooms are short and dear. Celery of good quality sells well. Abundant supplies of cabbage sell at low rates, but sprouts, Brussels tops and cauliflower show a hardening tendency. Washed carrots, turnips and parsnips are also firmer in price. Meanwhile, supplies of potatoes at London markets have shown a reduction and, with an improved demand, prices show a hardening tendency. Thus, at the London Borough market on Tuesday, best siltland King Edward made from 8s. to 8s. 6d., against 6s. 6d. to 7s. 6d. a week earlier.

MISCELLANEOUS COMMODITIES

VEGETABLE OILS AND OILSEEDS.—Business is still hampered by the dislocation of the exchanges. Linseed oil has been affected by the revised franc and guilder rates, and the prospect of supplies of cheap oil from abroad. After some recovery, raw oil again relapsed to the lowest level of the year. The current price, ex Hull mill, for October-December delivery is around £24 per ton, naked, with January-April at a small premium. Shipments of linseed are rather heavier. As the result of a special inquiry by the Argentine Government, the recent estimate of the exportable surplus has been raised by 23,000 tons in addition to the 48,000 tons "discovered" in August. The estimated old crop exportable surplus, including a small quantity from Uruguay, is put at 302,000 tons and that from India at 64,000 tons, making together 366,000 tons, compared with 453,000 tons actually shipped in the remainder of 1935. In view of the poor demand, prices have further eased.

Cottonseed is easier on the official report of a larger area in Egypt, and cotton oil is quiet and lower. Egyptian crude, ex Hull, is offered at £25 10s., and common edible at £28 10s. per ton, prompt. Generally, vegetable oils have an easy tone. Oilcakes are in fair demand and prices remain steady.

TIMBER.—The spot market is being relieved by larger imports of European and Canadian joinery woods, but supplies during the present year have been well below those of the corresponding period of 1934—when record imports caused a slump in prices. Stocks are smaller than in that year, while consumption is well ahead. In view of these factors, prices are on the up-grade, and further increases are anticipated. On the other hand, Canadian shipments are increasing and it is not unlikely that the American Pacific slope will also send additional supplies to this country in the near future.

Larger supplies of mahogany logs and sawn wood from British Empire sources and teak have been received; prices of the latter are tending to harden. Imports of oak timber (sawn wood) were lower last month, but receipts during the first eight months of the year were larger than in 1935. Demand shows a seasonal expansion at this period of the year. Meanwhile, stocks of the popular hardwoods are ample for demand. The outlook for timber prices is discussed in a Note of the Week.

POTASH.—The gross yield of Germany's potash exports during the present year is expected to amount to £4,250,180, according to information received by Messrs. J. Henry Schröder and Company, the receiving bank for the German potash loans; this compares with actual gross proceeds totalling £3,810,258 in 1935. About the middle of this year the 1936 proceeds were estimated at only £4,238,000 by the German potash syndicate. The slight increase in the new estimate is probably due to the fact that German exports have shown an increase in consequence of the Spanish civil war, which has hampered the shipment of potash from the latter country. The world market is, however, not likely to suffer from this contraction of Spanish supplies, for there are indications that exports from Spain will shortly be resumed and, moreover, the Franco-German cartel has sufficient reserves to cover any demand which may develop on the April, 1935, so that the level of world prices has not been much affected by the interruption of Spanish supplies.

NITRATE.—Italy has recently considerably extended the capacity of her synthetic nitrogen industry. The Italian output of synthetic nitrogen products last year totalled 2.9 million metric quintals, against a domestic consumption of 3.4 millions. By the end of this year the capacity of the industry will be rather more than 6 million quintals; but

since consumption in Italy is increasing only gradually, output is likely to outrun domestic consumption fairly considerably in the near future. Since Italy is a party to the international agreements concluded last September no immediate repercussions on world markets are probable. But the extension of Italian production may well give rise to difficulties when the agreements come up for renewal in 1938. Meanwhile, import requirements in other countries are on the increase. Germany has recently increased the quota for duty-free imports of Chilean nitrate from 80,000 tons to just under 100,000 tons. In the United States from domestic producers raised prices for the various products as from September 30th. Chile, which exerts a most important influence on the United States market, is expected to follow the lead of the American industry.

RUBBER.—Although demand has been somewhat less active this week, the market remains fully steady. The duty on exports of rubber from the Dutch East Indies has been further advanced to counteract the effects of the depreciation of the guilder. Meanwhile, United Kingdom stocks continue to decline. The spot price in New York on Wednesday was 16½ cents per lb., compared with 16½ cents per lb. a week ago and 16½ cents a month ago. Wednesday's official buyers' price for standard ribbed smoked sheet on the spot in London was 7½d. per lb., as against 7½d. on the corresponding day last week. In forward positions, business has been done at 7½d. for "November" shipment, as against 7½d. to 7½d. a week ago. Stocks in London and Liverpool at the end of last week totalled 103,015 tons, against 103,784 tons a week earlier. A year ago stocks amounted to 177,381 tons.

WHOLESALE COMMODITY PRICES

THE FINANCIAL NEWS

Special articles due to appear next week on the Leader
Page of **THE FINANCIAL NEWS** are as follows:

MONDAY, OCTOBER 12—BETTER DAYS FOR CHINESE
BONDHOLDERS.—The resumption of payment on certain of
the Chinese Railway Bonds, followed more recently by a
resumption of payments on the Marconi and Vickers Notes, is
an indicator (perhaps not so widely recognised, so far, as it
might have been) of the much more promising and stable
financial conditions developing in China. This article surveys
the further outlook for China from every essential angle.

TUESDAY, OCTOBER 13—LAKE VIEW AND STAR. Our
Special Mining Correspondent, MINOTAUR, in his weekly
article, this week sheds his spotlight on this old and famous
Australian mine which has mystified its followers so often with
alternate high hopes and depressing disappointments.

WEDNESDAY, OCTOBER 14—THE WHALING IN-
DUSTRY. The hardening tendency of whale oil prices and
the recent conclusion of a new agreement with the Norwegian
Whaling Industry draws attention to the prospects of a section
of the market of which the average investor has but little
knowledge. These prospects will be dealt with in this article.

THURSDAY, OCTOBER 15—THE MOTOR TRADE'S NEW
YEAR. In this article, on the day of the opening of the
Olympia Motor Show, a special Motor Trade Correspondent
examines the general prospects for the industry and discusses
the position of the principal manufacturing companies of
interest to the investor in the light of their new season's
programmes.

FRIDAY, OCTOBER 16—HIGHWAY CONSTRUCTION
AND THE INVESTOR. In this article a Special Correspondent
analyses the present position of road construction in
Great Britain in the light of the Government's main road co-
ordination plan and discusses the prospects of the companies
engaged in road construction and in the supply of road-
making materials.

A SELF-BINDER

FOR

The Economist

Week by week you keep your copies of
"The Economist," and ultimately you either
file them or bind them. Doubtless you are
accustomed to the annoyance which attaches to
the ordinary binder—the difficulty of reading
half the left-hand page and the unwieldiness
of the device generally.

We are able to offer our readers a binder which
overcomes these irksome difficulties and is, in
our opinion, the most efficient contrivance for
the purpose we have yet seen.

It holds three months' issues and index, it
has no wires, clips or metal contrivances,
and each issue can be bound up in an instant,
in such a way that it can be read as easily
as a well-bound book.

UNLAWFUL ASSEMBLY

THE attention of the British public has been directed in the last few weeks to a subject which, happily enough, rarely concerns them—the problem of preserving order in the streets of the capital. London is ordinarily, both as the centre of Government and as a great metropolis, an uncommonly law-abiding city. Even now nothing has occurred which, if it be regarded in isolation, need occasion serious misgivings. But there has been in recent weeks an undoubted tendency for organised hooliganism in the East End of London to increase, and it is this waxing tendency, rather than the dimensions to which it has yet attained, which gives rise to anxiety.

The attitude of the ordinary man, whether he be the man in the East End street on Sunday, or the man who stays by his own fireside, is perfectly clear. Irrespective of the merits of Fascism and Communism, without prejudice to the undoubted right of either party to propagate its beliefs by all peaceful means, the ordinary man is determined that the bitter hatreds of civil strife shall not be permitted to emerge in Great Britain. If our democracy is lenient towards those who, from either extreme, preach against its principles, it must also be severe in compelling them to confine their warfare to words. If a body which preaches anti-Semitism and Fascism proposes to march, in military formation and in uniform, through a quarter of London which is notoriously Jewish in race and Left Wing in politics, the ordinary man will regard that as patent provocation. If disorder ensues, he will blame the provokers. But the chief anxiety of the ordinary man is not to allocate blame between the provokers and those who are only too ready to be provoked, or to see that justice is meted out to those responsible. His chief anxiety is to see that scenes such as those which have disgraced the East End on the last two Sundays are not repeated.

The English law of public assembly is little understood. Unlike other democratic nations, we have no formal guarantee, enshrined in a written constitution or in some great fundamental charter, of the right of public meeting.

Such right as there is arises out of the common law right of every citizen to go where he likes, so long as he commits no trespass, and to say what he likes, so long as he says nothing that is seditious.

This does not mean, of course, that there is no such thing as unlawful assembly. The assembly of persons for the purpose of committing a crime by open force is obviously illegal. But the law goes further than that: any assembly of persons, gathered together even for a perfectly lawful purpose, becomes unlawful if it gives "firm and courageous persons" in the neighbourhood reasonable grounds to apprehend a breach of the peace. The peaceful intentions of the persons who compose the assembly are no criterion of its lawfulness or unlawfulness. The results which can reasonably be apprehended to flow from it are the sole test.

This is a valuable principle. But it is somewhat difficult to apply in practice. Were there reasonable grounds, two Sundays ago, for firm and courageous persons in the East End to apprehend a breach of the peace? And if so, did their apprehension attach to the assembly of Sir Oswald Mosley and his followers, or to the assembly of his opponents who erected barricades and endeavoured to prevent his march? If the Communists of the East End had chosen to remain indoors, would not the provocation have fallen on deaf ears? Could even the least firm and courageous then have apprehended a breach of the peace? These are questions which passion and prejudice will answer easily, but which reason and the law cannot lightly prejudice.

The leading cases on the subject are not of great assistance. The older of the two chief cases, which dates from 1882, laid it down that the magistrates might not prohibit a meeting of the Salvation Army, even though there was reason to apprehend, and the convenors of the meeting knew there was reason to apprehend, that hooligans would endeavour to break up the meeting and cause a breach of the peace. But the later of the cases, dating from 1902,

determined, in substance, that magistrates were within their powers in prohibiting a "protestant crusader" from continuing to hold meetings in the Catholic quarter of Liverpool which he knew would end in a riot. The question seems, therefore, to turn upon provocation, and neither the layman nor the police can safely forecast which side the Courts will ultimately decide to have been foremost in provocation. Moreover, the meeting has to be held before the question of its legality can arise. No proclamation, by the Secretary of State or anybody else, can in advance render unlawful a meeting otherwise lawful.

There is another power residing in the authorities. The police are empowered to prevent meetings if the police officer in charge reasonably apprehends that a breach of the peace will result; and if the convenors of the meeting persist in the face of this decision they can be prosecuted for wilfully obstructing the police in the execution of their duty. This power of the police was emphatically confirmed as recently as last year by authority as high as the Lord Chief Justice and two brother judges, and it is the power by virtue of which Sir Philip Game prohibited the Fascist march a fortnight ago. But, even here, in the present state of the law, before the police can take action, the meeting must either have begun or be about to begin.

Does the law, as thus briefly outlined, provide sufficient protection to the peaceable public against the extremists of the Right or of the Left? There has been a certain amount of somewhat hasty clamour for investing the Home Secretary with power to prohibit in advance meetings which seem to him likely to result in a breach of the peace. But the dangers of such a course need no emphasis: one needs only to consider how an extremist Secretary of State would use such powers.

Must we, then, be content with the law as it is? In broadest outline the answer must be that the priceless value of freedom of speech outweighs all those disadvantages which are inseparable from it. But it may be permissible to make three suggestions for possible amendment of the present law, which will make the path of provocation more difficult while leaving real freedom of speech undiminished.

First, there might well be the power not to prohibit a meeting in advance, but to prohibit its being held at a certain place or at a certain time. Even this power, however, is somewhat dangerous to place in the hands of the Secretary of State, to be used at his unfettered discretion. To confine meetings of one's political opponents to Dartmoor at 3 a.m. would be a serious infringement of the freedom of speech. This power should therefore be exercised only by Judges of the High Court, acting on the application of the police.

Secondly, a distinction can usefully be drawn between meetings and processions, marches or demonstrations, which may be as disturbing to traffic as they are dangerous to the King's peace. There might well be power to prohibit these entirely, if the police can satisfy a Judge of the High Court that they will either intolerably obstruct traffic or seriously threaten a breach of the peace.

Finally, we believe the time has come to prohibit entirely, on all occasions, the enlistment of private armies and the wearing of uniforms for political purposes. There are, of course, practical difficulties in drawing a clear line of distinction between Fascists and Boy Scouts, by which the one can be prohibited from wearing uniform without interfering with the legitimate pleasures of the other. But other countries—Sweden conspicuously—have discovered effective means of surmounting these practical difficulties, and the English law has successfully coped with many much more puzzling cases of definition in the past. The ordinary man can clearly distinguish the legitimate and harmless use of uniform from the obnoxious and dangerous; and where the ordinary man can draw a clear line, the law can do as much.

These suggestions will not save us from internecine strife if the people of Great Britain become infected with the hatreds that are poisoning the Continent. But so long as the vast majority prefer reason to violence and argument to force, they will assist in protecting that internal order of which all Englishmen are justly proud against the deliberate provocation, the violent intolerance, of raucous minorities.

THE CENTRAL EUROPEAN SCENE

IN the last few weeks something like a reshuffle of the political pack of cards has taken place in Central Europe, and though it would be premature to talk yet of a "new deal" in that vexed area of Europe, the chances of a re-alignment between the parties have sensibly improved. For many years past the Central European States have been sharply divided into Austria and Hungary (with Italy as protector) on the one hand, and the three Little Entente States (with France as ally) on the other. The depression accentuated both political tension and economic separatism. In recent years Nazi Germany has been actively bidding against Italy for the political allegiance of Austria and Hungary; while, with comprehensible foresight, the leaders of the Little Entente have closed their ranks and improved their relations with Russia and with the Balkan bloc. Now, in the last two weeks, three sets of events have given the Central European picture a new perspective.

First in chronological order is the course of events in Austria. The agreement between Signor Mussolini and Herr Hitler in July seemed to bring Italy and Germany almost into alliance over the dead body of Austria; but nothing has been more apparent in the last few weeks than that the Duce is neither prepared to make completely common cause with his brother dictator over Central Europe, nor to invite the active hostility of France and Great Britain by retiring from the League of Nations. Consequently, the July agreement to respect Austrian integrity and to refrain from intervention in Austrian domestic politics has, in effect, worked rather to the advantage of Austrian independence—and therefore of Italy—than to that of an expansionist-minded Germany.

Under this agreement, and with the Duce's unobtrusive acquiescence, the Austrian Chancellor, Dr. Schuschnigg, has been able to strengthen both his personal position as "constitutional dictator" and the grip of his Government over internal affairs in Austria. The final eclipse of Prince Starhemberg, founder of the notorious Heimwehr which became the tool of Signor Mussolini, was heralded months ago; and when the young Prince gracefully retreated from the Heimwehr and the political limelight a fortnight ago, many observers viewed with alarm the apparent victory of Major Fey, the leader of the Vienna Heimwehr. But the victory, thanks to Dr. Schuschnigg's preparations during the last few months, was Pyrrhic. For within a few days the Heimwehr was officially dissolved, and its members are now to be redistributed throughout the unitary organisation of the Governmental national militia. The Duce is firmly backing Dr. Schuschnigg; the passive acquiescence in the Schuschnigg regime by all non-Nazi elements in Austria leaves the Nazis at a disadvantage—even if their underground activities infringe the terms of the July agreement; and there is reason to believe that the commendable policy of gradual reconciliation with the Austrian workers, first broached by Dr. Dobretsberger when he was in the Cabinet, will not be abandoned.

Secondly, events in Hungary have taken a favourable turn—favourable alike to Hungarian internal and foreign policy. The late Prime Minister, General Gömbös, was not the first statesman in history to become the victim of a few political advisers. A small section of these had hoped for a dictatorship, buttressed by promises to those landless peasants and agricultural labourers whose lot in Hungary has long been, and still is, deplorable. But the sudden and premature death of General Gömbös last week presented the extremists of the Right in Hungary with a situation for which they were unprepared. All the responsible leaders of Hungarian political life, whether in the Government or the Opposition, were agreed that the new Prime Minister and Cabinet should be given the opportunity to pursue a policy of non-provocation and quiet consolidation, both in economic and political affairs, and both in internal and external matters. The new Prime Minister, Dr. Darányi, formerly Minister of Agriculture, is, by all accounts, a sound man: he has begun by removing Right-wing extremists from influence; he has a good team, well equipped for their places; he has the goodwill of the Opposition; and he has to prepare for

the introduction of the secret ballot in country districts, a reform awaited ever since the War. It is well within the bounds of possibility that once this important reform is accomplished—whatever its electoral substance may prove to be—Hungary may face a General Election, with an extremely strong and able Coalition Government, more representative of national interests and better equipped to face European problems than any in recent years.

Hungary's debt position, though greatly improved by successive devaluations and by internal recovery, is not yet regulated; and the bulk of her foreign trade is rigidly canalised within the conduits of the 1934 Rome Protocols (with Austria and Italy) and of the clearing with Germany. Thus, Signor Mussolini's decision to devalue the lira—thereby expunging the letters he had graven on marble—has created for Hungary, as well as for Austria, a pretty problem which must shortly be debated at the meeting of the Protocol parties in Vienna: namely the future currency and trade relations of Austria-Hungary with Italy. The answer given to this problem will largely determine the extent to which, if at all, the schilling and the pengő may eventually be devalued; and also whether trade can be rendered freer between all three countries and the outside world. At the same time, the devaluation of the lira has convinced many Austrians and Hungarians that Italy has been compelled, for both diplomatic and economic reasons, to line up with France, the United States, and Britain. Accordingly, there is now evident, both in Vienna and Budapest, a faint but growing desire to make some breakaway from the too rigid confines of "canalised" trade. With their trading and currency situations in flux, it is to the advantage of Austria and Hungary to avoid internal dissensions and external complications. Thus, the strengthening of Dr. Schuschnigg's Government and the formation of the steady Darányi Government in Hungary have come at the right moment.

Finally, events in the Little Entente countries have been moving in a direction which brings all three of them—Czechoslovakia, Roumania, and Yugoslavia—slightly nearer in sympathy to Italy, Austria and Hungary. Old feuds and rabid economic nationalism have worked havoc throughout Central Europe; and he would be a constitutional optimist who hoped to-day for immediate economic co-operation and political reconciliation between the two sets of countries. But it is significant that the Little Entente States, after their recent important meeting at Bratislava, have set up a common "Economic Centre"; have arranged to improve trade and communications between Roumania and Yugoslavia; and have begun to explore—gingerly, so far—the possibilities of economic rapprochement between themselves and their three neighbours of the Rome Protocols. The Prime Minister of Czechoslovakia, M. Hodza, himself an agricultural economist of distinction, made an overture to Rome last spring in this sense; but at that time it was rejected by the Italians and Hungarians together. (At that time General Gömbös was still effectively in power in Hungary.) To-day, while one

must not hope too much, the recent devaluations, the rise in world (free) prices of agricultural products, and the consequent disposition in all Central European countries to sign for freer trade and more *Edelweissen*, have combined to bring the minds of statesmen, farmers, manufacturers and bankers nearer to some semblance of unity than at any time in the last five years. The possibility of a more fruitful, economic and political *modus vivendi* in Central Europe, blessed by Signor Mussolini, must to-day be reckoned more than a mere dream.

In these circumstances, the importance of the recent devaluations—and even more, their repercussions on finance and trade—can scarcely be exaggerated. Central Europeans have learned from bitter experience to be cynical about "new worlds for old," and the brave protestations of Anglo-Saxon and French democratic statesmen. They affect to-day a cold, deprecating realism. But they cannot altogether escape the impression that big economic and political influences are at work in Europe, after five years of frigid paralysis. They recognise the temporary alleviations which bilateral trade and clearings have afforded them; but they also recognise the high real costs of selling their exports for blocked currencies. Since these "proceeds" cannot be liquidated otherwise than gradually, and then only in imports which are either competitive with their domestic manufactures or else at higher prices than need have been paid in free markets, the discontent of farmers and business men in Central Europe is likely to take a constructive turn. For example, it is highly significant that in Yugoslavia—which has recently been treated as if it were completely dominated in economic affairs by Germany—the authorities are now to limit future exports to Germany and to press for the final liquidation of the 500 million dinars' worth of blocked Reichsmarks. The same tendency is observable in most Central European countries, and even more evident in the Balkans. Rising prices in the world's free markets, and an expansion in the volume of European trade between freer-trading countries as a result of the devaluations and the ensuing tariff reductions and quota increases, will powerfully reinforce a tendency which is just beginning to make itself felt.

Central European statesmen, like everybody else in Europe, have been badly frightened by the events of the past twelve months; but for reasons discussed elsewhere the German bogey does not loom quite so terrifying as it did in the summer. Indeed, the devaluations have tended to accentuate an impression of a Germany that is in danger of finding herself increasingly isolated. If the effort of the nations to establish an international order was badly rebuffed in Abyssinia it is apparently becoming evident to the slowest-witted that decent relations and freedom of commerce between civilised States is the only way to prosperity. If Germany is ready to act on this assumption the gleams of hope which can now be discerned in Central Europe may brighten the prospects before our troubled Continent.

BRITISH MONETARY POLICY—I

THE devaluation of the gold currencies, and the international currency agreement, have once more brought to the front the question of British monetary policy in all its aspects. Both internal British policy, owing to the adherence of more countries to sterling, and British exchange policy, owing to the currency agreement, have been rendered of even greater importance. It is impossible, however, to determine exchange policy until we are reasonably certain what internal policy is desirable; for an expansionist internal policy is bound to have a different effect on the exchanges from a contractionist one. As Sir Henry Strakosch remarked in his lecture to the Insurance Institute of London on Monday, "exchanges cannot be stabilised until internal economic equilibrium in the countries concerned is established on firm foundations." In this article, therefore, it is proposed to consider the problem of internal policy during the next few years.

In an article on British monetary policy on June 20th we argued that there was no technical reason (such as a lack of gold) why interest rates in this country should be allowed to rise; and we suggested that if there should be any sign of a rise in interest rates, combined with a rise in unemployment, credit should be expanded. The actual course of events, however, has turned out quite differently. Instead of the rise in interest rates, and possible rise in unemployment, that seemed likely in the summer, interest rates have remained steady and there has been a remarkable further fall in unemployment. Unemployment outside the distressed areas has fallen to the "normal minimum" of 4 to 5 per cent., which, in effect, if we allow for persons moving from one job to another, etc., represents the point at which a shortage of labour begins.

Moreover, the building figures (which we analysed in an article on September 26th) show that building activity as a whole is still increasing. For slum clearance and "overcrowding" replacement are offsetting the slight fall in private building; while commercial and re-armament construction are going rapidly ahead. There is also good reason to believe that the peak of both these forms of building will occur somewhere in the next eighteen months or two years. Private building will almost certainly have slackened by two years hence; slum-clearance, after a period of intense activity, is due to cease in 1938; a new building programme called for by the enforcement of the official standard of "overcrowding" will start soon, and though still proceeding two years hence may be insufficient to make up for the fall in other kinds of building; commercial construction, to judge by former experience of the trade cycle, should be at its height in the next two years; and re-armament construction, whose end cannot of course be predicted, is already under way. The outlook on the building front, therefore, suggests that the present level of building employment will at best be maintained, and at worst be unlikely to show more than a slight fall for, say, two years; and that after that time, if nothing else is done, it will begin to fall off. And such a falling off, unless it were compensated by increased activity in other industries, would in all probability spread a general deflationary influence; for we must emphatically dissent from Mr Chamberlain's view that, because the increase in building employment has only been 320,000 out of a total of 1,000,000 in the recovery period, it has not therefore been the most important single cause. He forgets the secondary effect of the expenditure of their wages by the newly employed 320,000 building workers.

Superimposed on the very high level of building activity likely in the next two years, an actual expansion of capacity in the iron and steel industry is now going on; and output in September was a record for all time with over 1,000,000 tons. The present expansion of activity is intended to supply an exceptional demand coming mainly from these sources: the ordinary strong demand for capital goods associated with the later stages of cyclical recovery; the building boom; and re-armament. Now the first two of these, at any rate, are likely to be slackening two years hence; so that over-expansion and unemployment in the

iron and steel trade may very well be added to unemployment in the building trade. Lastly, it should be observed that commodity prices are rising; and that a simultaneous rise in commodity prices and fall of unemployment to the "normal minimum" should ordinarily be the sign for the policy known as "putting on the brake."

The course of events over the next two years cannot, of course, be predicted with certainty. But in the light of these clear probabilities, what internal policy should now be pursued? For, without prejudice to the question whether depressions can or cannot be arrested by deliberate policy, it is at least expedient to inquire by what methods the intensity of fluctuations can be smoothed out. Supposing, in our present situation, there were no "special" unemployed in the distressed areas over and above the normal minimum elsewhere, there would certainly be a case for allowing interest rates to increase if the present rise in commodity prices were to continue.

To-day, however, the situation is different, since there are something like 900,000 "special" unemployed in the distressed areas who—unless and until special measures are taken to absorb them by reviving exports, etc.—can find employment only by a continuation of the slow process of transfer to the prosperous areas. And the condition of the continuance of this transfer is naturally the maintenance of a slight inflationary pressure, and consequent shortage of labour, in the prosperous areas. The existence of this "special" unemployment, therefore, justifies some modification of the policy of raising interest rates which would otherwise be appropriate. How far it should be modified cannot be determined by any absolute test; but it may be suggested that a working compromise would be neither to raise nor lower interest rates, but to keep them substantially where they are. This can easily be done, as we have several times pointed out, by means of small transfers of gold from the Exchange Account to the Bank, which would result in an expansion of credit. At any rate, it may be hoped that interest rate policy will be decided by reference to its economic effects and not according to the short-term needs of Treasury borrowing.

The real problem, in fact, is not to reduce the present volume of activity, but to prevent the growth of purely speculative developments and to prepare measures for maintaining business activity when a possible recession is threatened eighteen months or two years hence. There is consequently some case for going slow with public works now, provided that the schemes held up are not abandoned altogether, but are kept in readiness to be undertaken as soon as a recession threatens. No schemes already in execution should, of course, be abandoned; but big schemes which are under consideration—as, for instance, a second instalment of "overcrowding" work, the Charing Cross Bridge Scheme, further railway electrification and big road development plans—might well be prepared and held in reserve. In particular, the extension of the "overcrowding" programme to cover the 280,000 families found to be only just above the "minimum standard" seems an excellent opportunity for careful preparation in advance.

The most obvious way, however, to restrain inflationary tendencies during the next two years, and to release them afterwards, is to refrain from financing re-armament by borrowing. To finance re-armament out of a deficit at the present time would be gratuitously to administer a powerful inflationary stimulus at a moment when "boom" tendencies are already latent. To pay for re-armament as far as possible out of direct taxation, on the other hand, would be at once to put a healthy restraint on the abnormal profits that now seem probable, to assist the national finances, and to make it more possible later on to borrow for public works. Ideally, the Treasury ought to build up surpluses and pay off debt during a boom, and permit borrowing for public works purposes during a depression. But even if taxation high enough to produce a surplus is not now practically possible, we believe that income tax and surtax should be raised as near as possible to the point at which the prospective deficit would be covered. No increase in indirect taxation would be justified, in view of the increasingly "regressive" character of our tax system.

Further, it may be observed that any easing of import restrictions will help to moderate the inflationary tendencies of the next few years. Such an easing would tend to check

the rise in prices and the cost of living, and therefore of wages, and would prevent the appearance of actual shortages of labour and materials in certain particular trades. Moreover, any increase of imports would intensify the demand for our exports and gradually increase the volume of trade in both directions. This would be an insurance against the deflationary tendencies that may be expected two years hence.

Finally, the possibility of revaluing the Bank's gold "profit" is relevant to the problem of internal policy. It is shown in our Money article this week that the revaluation of the Bank's gold and the use of the profit by the State even to pay off debt would have a sharply inflationary effect on the credit structure unless the Fiduciary Issue were reduced. There is consequently a strong case for postponing revaluation for the next two years and keeping in reserve this potential inflationary instrument also.

In general, therefore, the safest line of policy in the next two years seems to be the maintenance of interest rates near their present levels, the preparation of a reserve of big public development schemes, an increase in direct taxation, and the easing of import restrictions. The implication of such a general internal programme for exchange policy will be considered in a second article.

PRIVATE CAR RECORDS

THE Motor Show which opened at Olympia on Thursday is chiefly remarkable for the absence of any noteworthy new developments in design, although many of the coming season's models show important improvements in detail. The more freakish streamlined bodies are giving place to more symmetrical shapes, and there is a movement away from the more unorthodox experiments. Such developments as independent front wheel springing, thermostats, fitted jacks and telescopic and sprung steering wheels are gaining ground; but patent gear changes and front wheel drive do not appear to be doing so.

The number of private cars in use in Great Britain is estimated to have reached the figure of 1,645,000 this year. This compares with 1,477,000 last year, 1,308,000 two years ago, and 981,000 in 1929. There has been an increase every year since the War, but the amount of the increase, which is now about 170,000 a year, compares with only 27,000 in 1931 and with roughly 100,000 both in 1928 and 1929, which were typical pre-depression years. The question how long the present rate of expansion can be expected to last is now one which concerns not only the manufacturer, but every highway authority in the country, since the problem of congestion on the roads is rapidly becoming more acute. It seems all but impossible to establish an even approximate relationship between incomes and the number of cars in use. There are now estimated to be rather more than 800,000 incomes of over £500 a year, and a further 1,500,000 between £250 and £500. Many other factors, however, must be taken into consideration, such as the use of private cars for business purposes by firms owning fleets for their travellers; in addition, there are many persons using their cars partly or entirely in connection with their business, while people in the higher income categories often run more than one car, either directly or by subsidising their use by dependents. Joint ownership by a family is also important.

The chief facts that emerge from a study of the problem of the limits of expansion of the private car market are, that there is a close connection between the increase in car-ownership and in house-building on estates at a distance from the places of work of their inhabitants; that, for many people living on these estates, a car has ceased to be a luxury or even an amenity, but has become a necessity owing to the impossibility of public transport coping with their transport requirements; and that experience in other countries, such as France, where there are more private cars registered than in Great Britain, would suggest that there is still plenty of room for expansion in the British market. With continued good trade there seems no reason why the 1936-37 season should end the car boom.

Family provision scheme

A scheme to secure a Capital Sum payable at death and a regular income over a period of years for dependants in the event of early death, at a cost which is little more than that of ordinary life assurance.

It is readily adaptable, and rates will be quoted on application for policies to suit the needs of each individual.

Established 1844 Funds exceed £23,000,000

With official figures of registrations available for ten months of the current motor year, which ends in September before the new models come in with the Motor Show, it is possible to make a fair estimate of the position for the whole year. Total private car production seems likely to reach 342,000, compared with 309,000 in 1934-35 and 255,000 in 1933-34. Although still increasing, the rate of expansion has fallen off a little compared with last year, while there appears to have been some growth in the proportion of replacements to additional cars sold, as the following table shows:—

PRIVATE CARS

Year	Production	Exports	Imports	New Home Registrations		
				Replacements	Additional Vehicles	Total New Registrations
1931-32	169,229	25,354	1,999	102,874	43,000	145,874
1932-33	219,624	41,358	3,780	106,046	76,000	182,046
1933-34	254,995	45,114	9,629	125,500	95,000	219,510
1934-35	309,336	51,159	13,459	102,636	169,000	271,636
1935-36*	342,000	57,000	11,000	128,000	168,000	296,000

* Estimate on basis of 10 months' figures.

The healthy state of demand has enabled the Motor Trade Association to keep a close control over the allowance made on old cars "traded in" in part payment for new purchases, which in the past has been the most usual method of undercutting the retail price of new cars; in this way, by maintaining the price of the new vehicle, it has been made possible for the motor trader to dispose of the old at a low figure. The effect has been, on the one hand, to give the trader a more rapid turnover of second-hand cars, while on the whole raising the level of his profits, but, on the other hand, to increase slightly the cost of depreciation, the heaviest item in keeping a car.

Exports show a fair increase, mainly to countries in the British Empire; but the decline in the average value of complete cars exported from £123 to £115, and of chassis from £94 to £82, serves to illustrate a new principle in export business. Certain firms deliberately increase their exports at seasons when the home trade is quiet, thereby keeping their works fully employed all the year round. In consequence, the export trade is becoming to a large extent a cut-price market, since manufacturers are coming to look at it as a means of getting something towards overheads and keeping their staff together in slack seasons, rather than as a profit-making section of the business worthy of development for its own sake. Imports have fallen from the peak level which they attained last year, owing to the manufacture of a larger proportion of the high-powered cars at factories in the United Kingdom.

The trend of home demand during the past season is interesting. More attention has been paid to the 11/14 h.p. category and less to the small car classes, especially the 8 h.p.; while the 15/19 h.p. category has continued to

* See "Britain's Economic Prospects" (*The Economist*, June 13).

decline. At the other end of the scale new registrations of large cars have again slightly increased their share of the market.

PERCENTAGE ALLOCATIONS OF NEW CAR REGISTRATIONS BY HORSE-POWER CATEGORIES

	1931-32	1932-33	1933-34	1934-35	1935-36
Not exceeding 10 h.p.	47.2	59.3	56.7	60.7	59.1
11-14 h.p.	31.0	22.9	24.8	21.5	24.6
15-19 h.p.	16.1	11.9	11.3	8.4	8.5
20 h.p. and over	5.7	5.9	7.2	9.4	9.8

It is not always safe to draw conclusions about changes in the public's taste from consideration of sales of horse-power classes. A really popular model of, say 10 h.p., will have the effect of drawing demand away from the 8 h.p., 9 h.p. and 12 h.p. classes, and some knowledge of the success of individual models is necessary to a proper understanding of the figures. Nevertheless, there does on balance seem to be a tendency for a somewhat larger type of vehicle to be purchased by the small car motorist than was the case a year ago. This is undoubtedly largely attributable to the narrowing margin in initial price between all vehicles of not more than 14 h.p. Demand seems to be concentrating on two classes of vehicle, those of between 8 h.p. and 14 h.p., and especially those of 10 h.p. and 12 h.p., on the one hand, and really large cars of 20 h.p. and upwards on the other.

The past year has been no exception to the rule in the matter of the severity of fluctuations in demand for the products of the different car manufacturers, which depends on the extent to which new models have caught the public's fancy. In general, those makers who had adopted the popular semi-streamlined bodies for their cars last season have fared best. The year has been, for instance, a better one for Morris than for Austin, to take the two largest manufacturers; and Austins are changing the lines of their new models for the coming season. In the same way Standards and Hillmans (Rootes) have both sold particularly well during the past year; Fords, although among the first to introduce to-day's popular body shape, have probably done less well with their small models. The 8 h.p. category, the one in which they are primarily interested, actually shows a small decrease in new registrations; but the new 22 h.p. V.8 appears to have accounted for most of the 3,400 new registrations in this class without prejudicing the sales of the 30 h.p. model. New registrations in the latter category, which are mainly big Ford V.8's, have been at the rate of 5,000 a year both last season and this season. Vauxhalls, the other really large manufacturer, would appear to have concentrated more especially on the commercial market, particularly that for 2-2½ ton lorries, a section which has been specially prosperous. The six largest manufacturers probably account for over 85 per cent. of total home registrations of private cars and for an appreciably higher proportion of exports.

Next season's policy for the motor industry, as disclosed by the pre-Motor Show announcements, appears to be based on the assumption of a continued expansion in demand. Thus, in spite of higher raw material costs, there is no general advance in prices; the prospect of larger sales, and the exceptional profits accruing to the maker of a best seller, are acting as a brake on the usual consequence of higher raw material prices. Similarly no important attempt has been made to reduce the number of different models sold, which, so far as the six main groups are concerned, will be 48 next season, compared with 45 last. There does, however, as indicated above in the case of Morris, appear to be a tendency to cry halt to changes in models made for the sake of change; and several manufacturers, who have been satisfied with last season's results, are selling substantially the same models in the coming year. A number of factories are already producing to capacity. If it were not for the notorious fickleness of the public's taste in cars and the consequent necessity for each manufacturer to keep his products in the limelight—since both success and failure in the motor industry are liable to be extreme—there would be a danger at the present time of spoiling the motor manufacturers by a too easy prosperity.

JEEVES AT THE TREASURY

After British declarations of commercial policy during the last momentous fortnight the reader is invited to assume that Mr P. G. Wodehouse's "gentleman's gentleman," Jeeves, has left the employ of B. Wooster and joined the staff of the Treasury.

CHIEF: I believe, Jeeves, that when you were with Mr Wooster you helped him occasionally in the preparation of speeches?

JEEVES: That is so, sir. Mr Wooster was kind enough to call me into consultation whenever he was required to deliver an oration at a school in which he took a personal interest. The occasion was commonly the annual distribution of prizes to those scholars who had gained distinction in the terminal examinations.

CHIEF: If you helped him, I suppose you might help me?

JEEVES: I will endeavour to justify your confidence, sir.

CHIEF: It's about France, you know, and devaluation and the lowering of quotas and tariffs, declaring the attitude of the British Government and saying how delighted we are that the policy which we have made our own, the policy of breaking down economic barriers and the encouragement of international trade, has been adopted by our French friends. Sort of welcoming the prodigal son, if you follow me.

JEEVES: Entirely, sir.

CHIEF: I've got something here that I've jotted down. It goes like this. The event must have come, I say, like the cracking of ice at the approach of a warmer season to the Polar explorer whose ship has been frozen for many months into immobility.

JEEVES: If it would not be taking a liberty to say so, sir, the metaphor, or to speak more correctly the simile, would appear to be strikingly felicitous. Mr Wooster at the height of his faculties as an orator could not unaided have expressed himself with such poetic feeling.

CHIEF: Glad you like it, Jeeves. I thought it wasn't bad myself. Can you think of anything to go with it?

JEEVES: If I might make a suggestion, sir, I would advocate following it up with an extract from the poets.

CHIEF: Got anything in mind?

JEEVES: Yes, sir. I would recommend, after your reference to the ice, that you commit yourself with some firmness to the statement that the hounds of spring are on winter's traces.

CHIEF: Rather neat that. Your own, Jeeves?

JEEVES: The poet Swinburne's, sir. *Floruit circa 1890.* In early life he embraced Republican principles which rendered him unpopular in the Highest Quarter; but subsequently he enjoyed a not inconsiderable vogue, and it would be safe to hazard an excerpt from his works.

CHIEF: Very well, I'll make a note of that. Hounds of spring—winter's traces. Good. But now I'm in a bit of a difficulty. It seems to me, and I should like your opinion on it, that there's just a danger of my being taken to mean our tariffs and quotas are going to be reduced. Some of these fellows may not appreciate the difference between a tariff or a quota that a British Government puts on, and the tariff or quota that a foreigner puts on. See what I mean?

JEEVES: Most clearly, sir.

CHIEF: We know, of course, that our quotas are not economic barriers at all, but would you say that some of these foreigners or some of the Opposition might twist my words into meaning that ours ought to come down as well as the foreigner's?

JEEVES: The contingency is, I fear, one to be contemplated as a possibility, sir.

CHIEF: Then perhaps I had better follow up the cracking ice and the hounds of spring with a declaration that we aren't going to reduce our tariffs. Let 'em know that if anything is to happen to British tariffs and quotas they are going up.

JEEVES: I would not advocate a procedure of such an uncompromising character, sir. Foreign gentlemen are sometimes of a sourer disposition than that to which we are accustomed, and if you were to declare your purpose

in what might seem, if I am not taking a liberty in applying the word, a provocative style, they might proclaim themselves suspicious of the *bona fides* of His Majesty's Government. Many of them, I understand, are somewhat ill-disposed to British statesmen as a class and have at times gone to the length of openly charging them with hypocrisy.

CHIEF: Well, what would you suggest?

JEEVES: I would recommend, sir, the employment of what might be termed the *oratio obliqua* rather than the *oratio recta*. Your purpose might be expressed in such a manner that immediate cause of offence would not be given, while on the other hand, at a later stage in any slight controversy which may be engendered, you would be in a favourable position to point out that you had from the first entered a *caveat*.

CHIEF: How would you work it exactly?

JEEVES: If I might make the suggestion, sir, it would be judicious to take advantage of the simile of the Polar explorer and the welcome approach of a more clement season, and make use of it as a *terminus a quo* for the latter part of the speech.

CHIEF: You mean a starting point, Jeeves?

NOTES OF THE WEEK

Cabinet and Parliament.—Rumours of Mr Baldwin's impending resignation will be laid for the time by his arrival in London on Tuesday after a prolonged holiday in the country. Mr Baldwin's return was followed by a Cabinet meeting, at which Palestine and the East-End disorders are understood to have been discussed. The issues raised by Sir Oswald Mosley's methods are discussed in an article on page 99, and the Government's decision on the matter will be awaited with keen interest. So far nothing has emerged from the Cabinet meeting but a rebuke to the Jarrow unemployed "marchers." Doubtless such "marches" are of questionable value; but if the Government were taking steps to revive the abandoned Jarrow steel project, the rebuke would be more justifiable. Simultaneously with Wednesday's Cabinet meeting came the news of the death in Zürich of Sir Godfrey Collins, Secretary of State for Scotland. Sir Godfrey Collins, who was little known to the public, joined the Cabinet as a Simonite Liberal in 1932. With this week's Cabinet meeting the political season, which began with the recent Party Conferences, has got into full swing; and Parliament is due to re-assemble in ten days' time. Its programme includes the insurance of black-coated workers; various agricultural Bills embracing provisions for the Government's long-term meat policy; the Coal Mines Bill abandoned last summer; an amendment of the National Health Insurance Act; some undisclosed advance towards a nutrition policy; and, it is hoped, measures for the preservation of order at political meetings and demonstrations. The programme is not a very ambitious one. Militarism on the Continent, it is only too clear, is interfering with social progress in Great Britain as well as on the Continent itself; and a great deal of Parliament's time will inevitably be taken up with the lowering international situation.

Housing Progress.—The latest housing figures confirm the conclusion, reached in the article on Housing and Building in our issue of September 26th, that no contraction is likely for some time in the volume of building activity. Quite apart from the increase in commercial building, which will probably in itself offset the slight fall in the building of houses by private enterprise, re-housing activity arising out of the slum-clearance and overcrowding campaigns is likely to remain high for another two years. Out of 300,000 houses actually to be built under the slum-clearance campaign, about 110,000 houses have been completed; and 57,302 were under construction at the end of August. Nearly 150,000 houses not yet begun will there-

JEEVES: Precisely, sir. Employing the cracking of the ice and the hounds of spring as a *terminus a quo*, or starting point, I would recommend your envisaging the explorer stationed on the deck of his vessel. . . .

CHIEF: Or bridge, Jeeves?

JEEVES: Certainly, sir, on the deck or bridge, whichever you prefer. He is concerned that the ice should crack in the right places. It would, in fact, be foreign to his policy to encourage any cracking of ice to his own detriment. The theme could also be further developed so as to explain, or at least indicate, that H.M.G. contemplated the removal not of all tariffs and quotas, but merely those of an excessive or unjustifiable character. It will, of course, be necessary to state very precisely that none of our tariffs and quotas fall into the latter category. But if any sour-minded foreigners make any ill-advised suggestion for the lowering of British duties, you can invoke your imagery of cracking ice and hounds of spring as equivalent to an emphatic *nolle prosequi*.

CHIEF: Thank you, Jeeves. Most helpful. It looks as though you are going to be invaluable here.

JEEVES: I endeavour to give satisfaction, sir.

He shimmers out of the room.

fore have to be built under the slum-clearance scheme by September, 1938. A further 200,000 houses at least have to be built under the "Overcrowding" Bill. The maintenance of the present rate of building of about 300,000 houses a year consequently seems likely (unless there is a catastrophic drop in private building) for eighteen months or two years. The significance of these facts, in the light of the general economic outlook, are considered in an article on Monetary Policy on page 102.

* * *

The End of the Palestine Strike.—The strike in Palestine has been called off; the violent resisters have been asked by their leaders to lay down arms; and an atmosphere of rejoicing reigns. For the present armistice in Palestine we have to thank the four Arab sovereigns, King Ibn Saud of the Nejd and Hedjaz, King Ghazi of Iraq, the Emir Abdullah of Transjordan, and the Imam Yahia of the Yemen. Appeals couched in almost identical terms for a cessation of the strike and the bloodshed in Palestine, from the first three of these four neighbouring Arab rulers, came under consideration by the Palestinian Higher Arab Committee on October 9th. On the strength of these appeals, the Committee nerved itself to take the difficult step of calling upon the community which it represents to cease resistance; and the Arab strike in Palestine was duly terminated last Monday. The Committee is also doing what it can to persuade the guerrillas in the hills to stop fighting. This far-reaching action on the Arab side has been taken without any conditions being asked of, or conceded by, the Mandatory Power. In calling upon the Palestinian Committee to "resolve for peace in order to save further shedding of blood," the Arab rulers declare in their letter that "in doing this we rely on the good intentions of Great Britain, who has declared that she will do justice," and at the same time they add: "You must be confident that we will continue our efforts to assist you." Thus the honour of these three Arab rulers is explicitly engaged to see that the Palestinian Arabs shall not suffer for having returned unconditionally to pacific methods of political action on the three rulers' explicit recommendation. Honour and interest alike should now counsel the Mandatory Power to arrange terms of settlement between Arabs and Jews that will commend themselves—not only to the Arab princes but to the public opinion of the world at large—as being really fair and statesmanlike. The Royal Commission ought now to go out to Palestine with all possible speed.

Where Stands Germany?—The Anglo-Franco-American currency agreement, the Italian and other re-alignments to which it gave rise, and the gradual movement towards an expansion of trade among the countries concerned have combined to emphasise Germany's political and economic isolation in Europe. Her economic isolation—the joint effect of the "New Plan," which bilaterally controls trade with each separate country, and of the consequently rigid exchange-control system—has already lasted a long time; and though she has been able to exact commercial credits for her imports by an astute "blocking" of the commercial debts thus incurred, the resultant "additional exports" have barely been more than tolerated with ill-grace by their foreign recipients. Rising world prices and expanding free markets outside Germany are already making the German import market less attractive. On the political side, the refusal of Signor Mussolini to quit the League after its acceptance of the Abyssinian delegate's credentials, and the devaluation of the lira, have raised the stock of Britain and France; while the anti-Russian fulminations and the continuance of Herr Greiser's attempts to put all Danzig under the heel of the Nazis—he is to visit Herr Hitler after this week's banning of the Social-Democratic Party in Danzig—have reinforced the tendency of Poland to organise defence of her interests, territory and neutrality. The Polish authorities' reaffirmation of the alliance with France even poses a strategical and economic problem for the Nazis; for ever since they came into power they have reckoned with the benevolent passivity, if not active assistance, of Poland in their Eastern and Central European policy. Consequently, after the 1934 ten-year pact, they never fortified the eastern marches of Germany. To-day, the rapid rearmament of the entire Rhineland zone may be slowed down by necessity to divert men and material to the East. Moreover, Germany this autumn has had a poor harvest and will need to import more foodstuffs from her neighbours at considerably higher prices than a year or two ago. This will *pro tanto* reduce her ability to accelerate—perhaps even to maintain—her imports of industrial raw and war materials. Such is the unexpected effect of the strait-jacket which the "New Plan" has clapped around Germany's trade.

* * *

Dr. Schacht's Problem.—In all these circumstances Dr. Schacht faces a grievous dilemma: devaluation can only bring advantages if trade and the exchanges are eventually freed; that means the end of the "New Plan" and the certainty of attempts to export capital; and there are no "free Reichsmarks" to devalue, owing to the complete interdependence of the exchange-control and the bilateral foreign-trade control in Germany, and to the subsidisation of exports by the array of already devalued "blocked" marks. Accordingly, the division of counsels between those who wish to retain the strategic "New Plan" at all costs and those who desire a gradual return to freer currency, industrial and trade conditions has lately been rendered more acute. It is scarcely surprising that the Nazi authorities should be holding conferences with the Führer, and that they should be vigorously protesting—in terms almost as provocative as the cause of their protestations—against the ill-chosen words of the French Communist leader in Alsace last week-end. It is difficult to-day for the Nazi authorities to dispel the feeling that their actions and policy in the last few months have helped to isolate Germany in Europe. Even so, such speeches as that of Herr Hess this week—in which he stoutly asserted that Germany would continue to make herself independent of other countries—can bring little comfort, either to Germans themselves or to the rest of us. Something more constructive than continual tirades, of the Nuremberg variety, against Russia and the Communist danger is now required from National-Socialism.

* * *

Storms Over Non-Intervention.—Two successive storms have been raised in the last few days in the International Committee in London which is superintending the execution of the agreement for non-intervention in Spain. According to an official *communiqué* published after the

critical meeting of the Committee on October 9th, the United Kingdom Government had taken, on the 6th, the step of communicating to the Committee certain documents, submitted by the Spanish Government, in which the Italian, German and Portuguese Governments were accused of serious infringements of the agreement in favour of the rebels. The chairman of the Committee also received two letters from the representative of the Soviet Union: one, dated the 6th, in which charges of violating the agreement were made against the Portuguese Government and a proposal was put forward that an international committee of investigation should be sent to the Portuguese-Spanish frontier; and another letter, dated the 7th, announcing that if violations of the agreement were not stopped immediately, the Soviet Government would consider itself free from the obligations arising out of the agreement. In taking these steps, which in themselves were just as legitimate as the British Government's action, the Russian Government put itself technically in the wrong by publishing the terms of its two letters before the London Committee had had an opportunity to consider them. This was apparently a breach of the Committee's agreed rules of procedure. The Russian contention would probably be that there is a virtual conspiracy in the Committee, between France and England on the one side and Italy, Germany and Portugal on the other, to use the Committee for a purpose which, whatever may be thought of it, is not that for which the Committee nominally exists. The second Russian Note, reinforced by the Russian Ambassador's visit to the Foreign Office on Wednesday, proposed Anglo-French naval supervision of Spanish water to secure non-intervention. While allegations of breaches of the non-intervention agreement are coming in thick and fast, the Committee dallies—and continues to dally in spite of the Russian attempt to speed up its operations. At the meeting on the 9th, all that happened was that the Portuguese representative withdrew and that there was a passage of arms between Signor Grandi and M. Kagan, the Russian representative. The charges were duly referred to the Governments against whom they were made, but (in the words of the *communiqué*) "no action could be taken on the statement made by the representative of the Soviet Union, in view of the fact that no concrete proposals were before the Committee on this occasion." The British Government's passivity may soon be held responsible for a situation most uncomfortable for the British Empire.

* * *

The Threat to Madrid.—The news from Spain this week is not so encouraging for the Spanish Government. While the Asturias miners are gradually winning Oviedo street by street, the three main forces of the rebel Generals—those centred on Toledo, the Sierra de Guadarrama to the north-west of the capital, and those under General Mola, due west—have been concentrated in a narrow semi-circle round Madrid. Rain has arrested the advance on the capital and permitted the Government forces to consolidate their strong defensive positions. But the discouraging feature is the growing number of aeroplanes, heavy guns and tanks which the rebel forces are now bringing into action; and though the Government's defensive positions are flung wider than the extreme ends of the rebels' forces, the threat of penetration of the Government's lines at the centre by the rebels' better-equipped armies seems quite as great as the Government's threat to outflank the rebels. However, despite aerial bombardments of Aranjuez, communications between Madrid and Valencia, its provisioning depot, are still open; nor have the rebel forces been able to advance from their positions down in the south-east, where Malaga and the whole littoral up to Barcelona and as far west as beyond Madrid still defy their efforts. It seems that, whatever happens round Madrid, the Government's forces are a very long way from crumbling. If the rebels were cut off from their suppliers of war material, or if both sides were allowed to obtain it freely, theirs would seem a hopeless enterprise. The effective ban on supplies to the Spanish Government which the so-called non-intervention pact constitutes is clearly at present the greatest asset of the rebels.

A King's Declaration.—On Wednesday King Leopold of Belgium presided over the first Council of Ministers since his accession, and his speech to the Council, convoked to discuss national defence, was published at the request of M. van Zeeland, the Prime Minister. The speech aroused wild alarm in Paris; but it scarcely constitutes a reversal of Belgian policy and obligations, as the French seem to think. The King emphasised the importance of Belgian neutrality and its defence; pointed out that in modern war the strategy of the surprise attack would not enable Belgium to rely on "friendly intervention" at the outset; that in consequence her defences must be such as would hold up any assailant; and that, as a result of the unilateral rupture of the Rhineland Locarno Pact by Germany last March, Belgium's position to-day was almost that which she occupied in Europe in 1914. The King urged that Belgium should eschew unilateral policy and anything approaching the taking of sides in policies of the Great Powers. (It is this that has apparently alarmed the French.) In this respect, King Leopold's declaration of Belgian policy approximates to the policy of Poland on the other side of Germany; namely, insistence on neutral rights and preparations to defend them with all the resources at her command. In view of the languishing state of the preparations for a Western European security agreement and for a general European settlement, the policy of Belgium and the new measures for lengthening military service are very important. It will be interesting to observe developments in Holland, Switzerland and the Scandinavian countries—the so-called neutral *bloc*—since in all these countries recent European events have necessitated increases and improvements in the defence forces. Their insistence on protecting their neutrals' rights may force Britain and France to consider European security as a whole.

* * *

Devaluation and Prices.—The natural readjustment of prices that was expected to follow devaluation is now taking place in France, Holland, Switzerland and elsewhere. Wholesale prices, that is to say, are rising moderately, and retail prices, owing to increased turnover and the easing of restrictions, are scarcely rising at all. The countries concerned are thus getting the best of both worlds, just as they got the worst of both when over-valuation caused low wholesale prices and trade restrictions prevented the cost of living from following. In France in the past fortnight the general level of wholesale prices, as our French correspondent shows in his letter this week (see also our note on prices on page 108), has risen less than 10 per cent., and retail prices have scarcely risen at all. In Holland and the Dutch East Indies the wholesale price of sugar has risen (our Amsterdam correspondent reports) by about 20 per cent., and the producers' profit margin has thus been restored. But the Government has prevented any rise in retail prices by reducing the Excise duty. The rise in the wholesale price of rubber has also restored profitable working to many companies operating in the Indies. The general business outlook in Holland is consequently greatly improved. In Switzerland some rise in retail prices is reported. But here again it is in the Government's power to restrain it by a removal of import restrictions. They have already reduced the sugar import duties, which, after the devaluation of the Czech crown and the record sugar crop in Czechoslovakia, will increase trade in Central Europe and keep retail prices down.

* * *

End of the Gas Dispute.—The suspension of the new gas tariff was announced by the South Metropolitan Gas Company on Wednesday. In future the old method of charge will apply, but there will be a slight increase, to be announced later, in the price of gas to all consumers. The company has thus wisely given way to the widespread campaign of protest that greeted the announcement of the new tariff last month. The effect of the tariff in discriminating against small, and therefore poor, consumers, was the chief subject of protest; and the new plan will avoid this discrimination, while enabling the company to increase

its charges. If the increase is slight and is justified by increases in the cost of raw materials, etc., it will in all probability be accepted by consumers without protest.

* * *

Copper Production and Prices.—On Monday the Standard cash copper quotation of the London Metal Exchange passed the £40 limit per ton for the first time for over four years. On Wednesday the official quotation at £40 18s. 9d. exceeded this year's "low" by no less than £6 9s. 5d. Nevertheless, further increases are quite possible as not only consumers and speculators but also most of the London metal merchants are in rather bullish mood. In these circumstances the speech of Mr. A. Chester Beatty, at the annual meeting of Roan Antelope on Wednesday, was timely. Mr Beatty pointed out *inter alia* that "it is not the policy of responsible leaders of the copper industry to curtail supplies unduly in order to force up prices." The parties to the restriction agreement consider that an unduly high price is good neither for producer nor for consumer, and flexible arrangements were set up so that increases or decreases in production could be made quickly to meet changes in market demands. Later, the leader of the Rhodesian copper producers referred to the two increases in quotas which were made recently, and said that this was in order to provide for the increased requirements, and that "the maintenance of the current rate of consumption will require an additional output of copper." This statement foreshadowed the increase in quotas on Thursday from 80 to 85 per cent. of assessed capacity. As leading Rhodesian copper producers have mentioned the £40 limit as a "peg" for the copper price in recent months, it is possible that restriction of copper production will be exercised in an even more liberal way in the future. Mr Beatty's statements and the increased quota are new proofs that the leaders of the copper industry know their duties and are willing to perform them in a far-sighted manner.

* * *

South Wales Coal Prices.—The decision of the Executive Board of the South Wales District (Coal Mines) Scheme to scrap its minimum price schedule is a challenge not only to the Central Council but also to the Executive Boards of the other regional schemes introduced by the 1930 Coal Mines Act for the regulation of the sale and supply of coal. The South Wales minimum schedule (writes a correspondent) has been the highest and the most uniformly enforced of those in operation in the principal exporting districts of the country; and many colliery firms believe this disability to be at least partly responsible for the fact that the South Wales export trade has suffered relatively more from competition in foreign markets than any other British coalfield, and that its output has declined during a period when that of the other districts has increased. The South Wales Executive Board has made repeated attempts during the last four or five years to secure a fair and effective co-ordination of district prices through the advisory machinery of the Central Council; but though prices on the North-East Coast, the Humber, and the Scottish ports have been increased during the past twelve months, the disparity still gives those districts a competitive advantage in both the inland and export trades, and the South Wales coalowners are not persuaded that there is sufficient unanimity among members of the Central Council to give a prompt application to its new statutory powers for the co-ordination of district schedules of minimum prices. Moreover, under the amended schemes for the centralisation of control over sales and prices which came into operation in each district as from the beginning of August, a considerable measure of administrative freedom is given to the newly created Sales Agents of

Central Control Boards. It is under the pressure of these circumstances that the Control Board in South Wales has been given the powers of differentiation which were denied to the Executive Board under the previous schemes. These new powers, however, may be exercised only within certain limits. At a meeting of South Wales colliery owners last week the view was expressed that the time had arrived when it was necessary in the interests of the district that "approved" prices should take the place of minimum prices, but the Control Board has been instructed that its approved prices shall not be less than the minimum prices in force on October 5th unless the Control Board is satisfied that such reduction will be to the advantage of the district; and that in fixing approved prices it shall have regard to the existing relative values of the classified coals, and to the channels through which trade is at present flowing. To what extent these restrictive conditions will limit competitive trading *vis-à-vis* other districts experience alone will show. But the incident illustrates the incompleteness of the marketing reorganisation which the amended schemes of August 1st were intended to promote, and will probably require the serious attention of the industry.

Iron and Steel Production.—Production in this country of steel ingots and castings in September for the first time exceeded one million tons. The average daily output rose from 33,000 tons in September, 1935, to 34,908 tons in August and 39,500 tons in September, 1936. Pig iron production last month was also appreciably higher than a year ago, and the number of blast furnaces in operation at the end of September was 111, against 109 a month earlier. Yet the expansion of production barely keeps pace with the increasing home demand. In some districts, for example, pig iron producers have now to ration consumers.

(In thousands of tons)

Period	Production		Foreign Trade	
	Pig Iron	Steel Ingots and Castings	Total Imports	British Exports
1913—Monthly Average	855.0	638.6	185.9	414.1
1929	632.4	803.0	235.2	364.9
1932	297.8	438.5	132.7	157.4
1933	344.7	585.3	80.9	160.2
1934	498.2	738.3	113.9	187.8
1935	535.5	820.2	96.0	197.7
1936—January	543.4	759.9	74.3	193.6
February	529.6	855.9	89.3	183.8
March	544.3	907.3	101.2	224.0
April	529.5	903.3	77.0	215.8
May	559.3	811.5	119.0	190.3
June	595.5	911.7	119.9	184.8
July	584.7	936.5	123.2	167.8
August	629.8	980.1	130.3	163.4
September	629.8	984.2	120.8	177.5
October	661.0	963.0	117.5	204.1
November	644.1	965.9	110.6	173.5
December	665.6	974.1	170.3	216.1
1936—January	635.8	872.7	141.8	164.0
February	650.3	1,027.0	165.0	183.0

Moreover, the pressure of home demand has not only arrested the expansion of exports, but it has necessitated a considerable increase in imports, from 89,300 tons in September, 1935, to 165,300 tons in the past month. It is quite clear, therefore, that British producers entirely miscalculated the domestic demand and capacity at the time of the agreement with the International Crude Steel Cartel. That agreement, it will be remembered, provided for a considerable reduction in imports in consideration for a limited share in the export market. Meantime, home demand continues on the upgrade, and, incidentally, it is practically impossible to place orders for finished products except for far forward delivery.

Sterling and International Prices.—The past fortnight's movements in wholesale prices are particularly interesting; for they indicate the initial effects of the devaluation of the franc and other currencies. The first point to notice is that devaluation has in no way checked the rise in British or American prices. The *Economist's* complete British index number has risen by 0.4 per cent., and the primary products index by 0.6 per cent. In the United States the primary products index is also 0.6 per cent.

higher than a fortnight ago, and the decline in the Irving Fisher (complete) index is insignificant. In France, on the other hand, wholesale prices have risen during the past three weeks by 8.9 per cent., so that in spite of the lowering of tariffs, etc., prices are beginning to respond to devaluation. For imported goods alone the increase is 15.6 per cent., but for home-produced goods it is only 6.4 per cent. These movements are moderate when compared with the 36 per cent. appreciation of sterling against the franc.

Details of the group indices comprising the complete *Economist* index number at the date of our suspension of the gold standard and for recent dates are given below.

Economist INDEX

(1927 = 100)

	Sept. 18, 1931	Sept. 16, 1936	Sept. 30, 1936	Oct. 14, 1936
Cereals and meat	64.5	80.7	82.0	81.5
Other foods	62.2	62.5	61.6	62.0
Textiles	43.7	61.4	61.7	62.2
Minerals	67.4	84.3	84.2	84.7
Miscellaneous	65.8	77.3	77.0	77.4
Complete index ..	60.4	73.5	73.6	73.8
1913 = 100	83.1	101.1	101.3	101.6
1924 = 100	52.2	63.5	63.6	63.8

During the past fortnight, an advance in wheat, flour, oats and potatoes has been more than offset by declines in other cereals, and in meat. Among other foods, tea and butter are cheaper, but there have been increases in cheese and sugar. Cotton is firmer, but wool is unchanged. Among non-ferrous metals, tin is cheaper, but there were advances in copper and spelter. In the miscellaneous group there were increases in Swedish timber, leather, linseed oil and rubber.

British Shipbuilding.—The British shipbuilding industry is steadily extricating itself from the long period of depression. The tonnage supply and demand position is not only more favourable than for a number of years, but the sharp advance of freight rates since last May even revealed a shrinkage of capacity. That shipbuilders in this country are benefiting from the improvement in shipping is revealed by the latest quarterly returns of Lloyds Register. The gross tonnage of mercantile vessels launched increased from 113,000 tons in the third quarter of 1935 to 168,000 tons in the second quarter of this year and 212,000 tons in the third quarter. The tonnage commenced rose from 119,000 tons in July-September, 1935, to 282,000 tons and 293,000 tons, respectively, during the past two quarters. The gross tonnage under construction is again nearing the million ton mark, though the average quarterly tonnage in hand in 1929 was 1,455,000 tons. Actually, the gross tonnage in hand at the end of September was 920,000 tons, compared with 849,000 tons at the end of June and 837,000

tons a year ago. One disappointing feature is the virtual absence of export orders, which previously provided a substantial volume of work for British shipbuilders. At the end of last month, for example, only 5.1 per cent. of the tonnage under construction was intended for registration abroad or for sale, compared with 21.0 per cent. a year ago. In addition to the increase in the construction of mercantile tonnage, British shipbuilders have been given larger orders for the Navy. Altogether, prospects are fairly encouraging, though subsidised construction abroad may prevent the industry in this country from regaining its former share of the foreign demand for mercantile tonnage, the gross tonnage under construction abroad having increased from 667,000 tons to 1,183,000 tons during the past twelve months.

Marketing Schemes in 1935.—In at least one respect the Agricultural Marketing Acts have conferred a benefit upon one section of the community without inflicting damage upon another. The 1931 Act requires the Minister of Agriculture and the Secretary of State for Scotland to submit to Parliament an annual report on the schemes in operation during the year. These reports have generally been most informative, and the latest,* issued this week, contains a mass of interesting information. The reader of the report will learn that there were eight schemes in operation during 1935 and that a number of others were under consideration. Many statistical and other details concerning these schemes find a place in the report, which also contains in appendices the accounts of the several marketing boards. As in past years, the report will be of considerable interest to all who are concerned with the study of recent developments in the agricultural policy of the British Government.

Overseas Trade in September.—The recent tendency for imports to increase faster than exports is once more apparent in the trade returns for September. Imports, at £71,891,528, were the highest recorded in any month this year, and, compared with September last year, show an increase of 18.2 per cent. British exports, at £36,960,737, though above the average for the year, were only 8.4 per cent. more than in the corresponding month a year ago. Such comparisons with a year ago, however, are vitiated because there was one working-day more than in September last year, but after due allowance has been made, last month's figures still show some improvement. The following tables give details for the past three years:—

OVERSEAS TRADE IN SEPTEMBER
(000's omitted)

	1934	1935	1936	Change between 1935 and 1936	
Total imports	£ 57,913	£ 69,322	£ 71,891	+ 11,069	+ 18.2
British exports	33,957	34,098	36,961	+ 2,862	+ 8.4
Re-exports	3,250	3,811	3,855	+ 44	+ 1.2
Total exports	37,207	37,909	40,815	+ 2,906	+ 7.6
Excess of imports over exports	20,706	22,913	31,076	+ 8,163	+ 36.3
Transshipments under bond	1,858	2,046	2,770	+ 722	+ 35.9

OVERSEAS TRADE—FIRST NINE MONTHS
(000's omitted)

	1934	1935	1936	Change between 1935 and 1936	
Total imports	£ 536,906	£ 539,439	£ 608,008	+ 68,569	+ 12.7
British exports	289,048	311,796	320,092	+ 8,296	+ 2.7
Re-exports	39,674	40,554	45,533	+ 4,979	+ 12.3
Total exports	328,722	352,350	365,625	+ 13,275	+ 3.8
Excess of imports over exports	208,184	187,089	242,383	+ 55,294	+ 29.5
Transshipments under bond	17,504	17,975	20,579	+ 2,605	+ 14.5

The increase in imports was most marked in the raw materials group, in semi-manufactures (non-ferrous metals and iron and steel manufactures) and in machinery—an

* Report on Agricultural Marketing Schemes for the year 1935. Cmd. 5284. His Majesty's Stationery Office. 2s. net.

indication of the expansion of industrial activity. But it must also be remembered that prices of primary products have been rising during recent months. The improvement in exports was fairly well distributed.

Trade by Commodities.—Changes in the more important of our retained imports last month, compared with the September figures for the past two years, are shown in the following table:—

RETAINED IMPORTS
Month of September

Item and Measure	1934	1935	1936
Wheat	'000 cwt. 9,521	7,287	7,560
Beef and veal	'000 cwt. 1,128	953	1,128
Mutton and lamb	'000 cwt. 477	413	571
Sugar (unrefined)	'000 cwt. 3,125	3,619	3,331
Iron ore and scrap	'000 tons 403	468	582
Raw cotton	'000 cents 713	569	929
Sheep's and lambs' wool	'000 cents 156	215	250
Flax, hemp and jute	'000 galls. 42,881	48,137	49,469
Crude petroleum	'000 cwt. 15,326	11,630	16,607
Hides, wet and dry	'000 cwt. 82	134	169
Wood pulp	'000 tons 172	192	212
Rubber	'000 cents 252	251	...
Unwrought copper	tons 10,468	18,333	13,629
Pig lead	tons 22,844	18,641	30,006
Ore and concentrates	tons 1,467	3,728	4,304
Blocks, ingots, slabs and bars	tons 681	283	803
Iron and steel manufactures	'000 tons 89	89	165
Machinery	tons 5,395	5,623	9,038

An increase in wheat imports from Empire sources was more than sufficient to offset a heavy reduction in shipments from Argentina, the United States and Russia. Imports of meat were also higher compared with last year, but those of raw sugar showed a decline. Overseas purchases of textile fibres were considerably higher than a year ago, reflecting the improved demand by manufacturers in this country. A recovery in shipments from Mexico and Australia was the factor mainly responsible for the rise in imports of pig lead. The principal British exports are shown below:—

BRITISH EXPORTS
Month of September

Item and Measure	1934	1935	1936
Coal	'000 tons 3,541	2,929	3,031
Iron and steel scrap	tons 18,875	9,912	17,658
Pig-iron and ferro-alloys	tons 9,343	12,914	10,897
Railway material	tons 20,716	17,092	7,243
Total iron and steel manufactures	tons 194,952	183,785	183,023
Textile machinery	tons 5,388	5,191	3,616
Total machinery	tons 27,484	29,878	32,052
Cotton yarns	'000 lbs. 9,509	10,123	11,825
Cotton piece-goods	'000 sq. yds. 177,742	150,259	153,553
Wool tops	'000 lbs. 2,842	3,717	2,237
Worsted yarns	'000 lbs. 2,580	2,482	2,237
Woolen tissues	'000 sq. yds. 6,327	6,419	6,856
Worsted tissues	'000 sq. yds. 2,518	3,057	2,915
Linen piece-goods	'000 sq. yds. 5,501	4,965	6,788
Leather boots and shoes	dozen pairs 44,285	32,918	31,454
Leather	cwt. 15,265	20,627	17,764
Paper and cardboard	cwt. 290,298	332,401	406,177
Locomotives (complete and parts)	tons 767	1,598	618
Motor vehicles and chassis	number 5,094	5,723	7,065

There has been a welcome revival in coal exports, despite the continued absence of Italian demand, mainly owing to non-settlement of the large sums outstanding. Apart from an increase in exports of iron and steel scrap, recent tendencies in the iron and steel group continued during the past month. Exports of textile manufactures were again higher than in the corresponding month of 1935. The motor industry continues to make headway in foreign markets.

Six Months' Revenue Returns—A Correction.—In a Note on page 11 of the *Economist* of October 3rd, entitled "Six Months' Revenue Returns," the decline in the Revenue in the first half of the present financial year, as compared with the same period of the preceding year, was stated to be £1,163,756. This figure should have been £1,897,244. In the large table on the following page the figure was quoted correctly, but it was stated to be a net increase in revenue. This should have been a net decrease.

OVERSEAS CORRESPONDENCE

UNITED STATES

AUTUMN TRADE "BOOMING"

ON Friday, October 2nd, the day that the French markets opened, American shares advanced vigorously in the most active day's trading since late July—about the time that the franc crisis began to develop. Yet commodity markets scarcely show a ripple to mark the event. Generally speaking, Wall Street is now not inclined to look for immediate repercussions of importance on the American economy. Indeed, unusually heavy European buying is reported in the stock market.

Contrary to its usual habit, Wall Street seems little inclined to generalise about the new situation. It read and re-read the "Gentlemen's Agreement," and still was unable to reach the conclusions voiced here and there in the Press, that the three participating Governments had agreed to definitive stabilisation. It hopes that the Agreement opens the way to a removal of trade barriers, but in the creation of additional "stabilisation funds," with free traffic in gold now almost everywhere a State monopoly, it sees not a relaxation of restrictions but additional evidence that the spirit of economic nationalism is still in the ascendant.

Autumn business is so good that it could almost be described as booming. It lacks two distinct attributes of a boom—there is no one section of the economy that is active to an exaggerated degree, and there is no sellers' market in commodities. The nearest thing to a sellers' market is in labour, and, while labour disturbances are not yet an important economic factor, they are rather more pronounced than at any time since the autumn of 1934.

The production index of the Federal Reserve Board maintained in August the same figures as in July. The following table shows the data:—

BUSINESS INDICES

(1923-5 = 100)—Adjusted for Seasonal Variation

	Aug., 1934	Aug., 1935	July, 1936	Aug., 1936
Industrial production (total) ...	73	87	107	107
Manufactures	72	88	108	108
Minerals	80	81	101	98
Construction Contracts (total) ...	27	38	59	65
Residential	10	24	44	48
All other	40	50	71	78
Factory Employment	79.3	81.8	87.7	88.6
Factory payrolls	62.2	69.1	77.8	81.0
Freight car loadings	59	60	73	70
Department store sales	77	77	91	86

The following table shows the adjusted and the unadjusted indices for recent months:—

INDEX OF PRODUCTION

	Adjusted for Seasonal	Unadjusted
May	101	105
June	103	104
July	107	104
August	107	105

Except for building, which showed a considerable increase, there was little marked change between July and August. But, comparing August with a year ago, the gain in general production is almost 25 per cent.; while in residential building it is 100 per cent. Comparison with August, 1934, is even more striking—the increase in total production is just under 50 per cent. in two years, while residential building is now almost five times as active. This remarkable increase in production has occurred with only minor increases in price indices.

PRICE INDEX (B.L.S.)

	Aug., 1934	Aug., 1935	Aug., 1936
All commodities	76.4	80.5	81.6
Farm products	69.8	79.3	83.8
Foods	73.9	77.9	83.1
Hide and leather products	83.8	89.6	93.6
Textile products	70.8	70.9	70.9
Fuel and lighting materials	74.6	74.1	76.3
Metals and metal products	86.7	86.6	87.1
Building materials	85.8	85.4	86.9
Chemicals and drugs	75.7	78.6	79.8
House furnishings	81.8	80.5	81.4
Miscellaneous	70.2	67.3	71.5
All except farm products and foods	78.3	77.9	79.7

There are two distinct ways of viewing America's recovery—the first as a series of cyclical waves and the second as the emergence of successive layers of demand. According to the former interpretation, there have been three surges—the first which began in the summer of 1932 and slumped in the autumn and winter; the second (inflation boomlet) of the spring of 1933, which slumped off after July until August-September, 1934; and the third and most vigorous, which began in October, 1934, and is still in progress. Each of the three has been more vigorous, more comprehensive and more sustained than its predecessor; and each successive relapse after the first two did not fall quite so low as the previous bottom. According to the other interpretation, the first upturn of 1932 showed itself most vigorously in the area of the greatest previous pressure—the stock market; the second was almost confined to consumers' goods; the third has been most emphatic in durable or semi-durable goods, and its most obvious manifestations are in steel and residential building.

There is little doubt that September sustained the levels of August. Steel production was substantially higher. It did, however, include the transitions to the new motor-car models, and this factor will have some depressing influence on the index. Although October is not a week old, the reports from both the steel and motor industries indicate that that month will very likely lift the index to a still higher figure.

The foreign trade of August showed little change from July, but both imports and exports were higher than a year ago:—

EXTERNAL TRADE OF U.S.
(\$000,000)

	Exports	Imports
June	185	190
July	180	194
August	178	195
June	...	Gold
July	7	278
August	...	16
June	...	Silver
July	...	24
August	...	7
		17

In the first eight months of 1936 merchandise exports amounted to \$1,512 millions and imports to \$1,552 millions, compared with \$1,370 millions and \$1,341 millions respectively for the corresponding period of 1935. The result this year was a cumulated import surplus of \$40 millions—the first since 1926. Silver imports at \$140 millions were about \$10 millions less than in the first eight months of 1935, while net gold imports of just under \$600 millions were almost \$300 millions less. The shift in the American visible balance is one of the most striking phenomena of recent years. As late as 1930 America had an eight-month export surplus of \$465 millions, which was unusually large, but rather typical. As far as one can see, merchandise trade is not far from equilibrium; while gold imports reflect mostly the desires of foreigners either to buy American securities or to accumulate inactive dollar balances.

NEW YORK, October 6.

FRANCE

THE GOVERNMENT AND THE COMMUNISTS

THE conflict between the Government and the Communists is growing though both camps are showing the greatest prudence. The Communists arranged 52 meetings in Alsace-Lorraine. The Government authorised ten only, and the Communists gave in again; the meetings, moreover, were not a great success. The moderate veto of the Government had a counterpart in the measures taken against Colonel de la Rocque, the leader of the former "Croix de Feu," for having reconstituted his "Fascist League." A new meeting has now been announced by the Confédération Générale du Travail in Mulhouse, and the delegates of the C.G.T., who seem to have become dominated by the Communists since the fusion of the Socialist C.G.T. with the Communist C.G.T.U., are rebelling against the decision of the Government to prevent stay-in strikes.

The conflict is tiring both adversaries; the Communist Party, whose members are baffled by repeated retreats (on Spanish affairs, on devaluation, on the wages scale, on the Alsatian meetings, etc.); so that many are turning to the Anarchists, whose numbers are increasing, and others to the Socialists. As to the Government, public opinion, and notably its Radical-Socialist supporters, are reproaching it with being too lenient in dealing with the Communists. This agitation is impeding the return of confidence which, following devaluation, should be stimulating a recovery of business and coming to the assistance of the Treasury.

This week's events give a new importance to the Radical-Socialist Congress at Biarritz on October 22nd and 26th (the re-assembly of Parliament is planned for the end of November), and to the latest speeches of M. Blum and Senator Chautemps, who is still a leader of the Radicals and is frequently named as the next Prime Minister. M. Blum declared at Lens that he intended to maintain contact with Parliament as with the workers' organisations and added that he had every confidence in the good sense of his supporters. M. Chautemps said at Angers that if stay-in strikes continued the question of dissolving Parliament would arise. This warning, it is supposed, was not launched by M. Chautemps without the consent of President Lebrun, of the President of the Senate and even that of M. Blum.

POPULAR FRONT PROGRAMME "ACHIEVED"

It is difficult to discover the drift of opinion as a whole. There is certainly discord in the factories between the C.G.T. and the C.G.T.U. members, discord between the Trade Unions and Parliament, and discord between Paris and the provinces. It appears, moreover, that a large section of French opinion is annoyed by the Communist demonstrations against Berlin, which might be dangerous for peace. It is evident that after six months of social reforms, "an effort without parallel in history," the programme of the Rassemblement Populaire on which France voted in May has been achieved. Such rapid advance cannot go on long in a country which is moderate and which is aware that there are countries still more unfortunate in the world. Moreover, prices are rising. The Government is, therefore, trying to maintain the patience of those suffering from the rising cost of living (the middle classes) by announcing an audacious plan of fiscal reform, including a drastic limitation of the turnover tax. A certain revival of business is also apparent.

Much, if not all, will depend on the movement of prices. Prices had been rising a long time before devaluation, and the rise since devaluation is small:—

(1914 = 100)

	September, 1935	September, 1936	October 10, 1936
General index	345	407	438
National products	370	457	479
Imported products	299	319	363
Foodstuffs	343	447	469
Vegetable	304	487	543
Animal	365	412	442
Industrial products	346	373	411

The rise, as can be seen, is particularly pronounced in the case of agricultural products. This explains its rapid repercussion (before devaluation) on retail prices, which

rose from 460 in August to 483 in September, or 5 per cent. since August, 1936, and 20 per cent. since September, 1935. The cost of living for the second quarter of 1936 was 497, against 481 in the first quarter and 490 in the second quarter of 1935.

The Statistique Générale has just published its monthly figures showing industrial production in France (1913 = 100):—

	August, 1935	June, 1936	July, 1936	August, 1936
General index	93	98	98	93*
Engineering	96	101	100	98
Iron and steel	79	78	81	73
Textiles	66	60	58	51
Mines	98	94	102	87
Building (adjusted figures)	66	66	65	63
Leather (adjusted figures)	93	108	110	110
Paper (adjusted figures)	127	166	166	165
Rubber (adjusted figures)	761	970	959	936
Motors (adjusted figures)	402	425	418	404

* The month of paid holidays.

In the motor industry, 10,213 cars and 1,404 lorries were put on the road in August, compared with 15,503 and 1,898 in July. The figures for the cotton industry are as follows:—

	May, 1936	June, 1936	July, 1936	August, 1936
Spinning (average per spindle in kilograms):—				
Production	1,581	1,348	1,606	1,191
Deliveries	1,638	1,440	1,704	1,185
Stocks	1,717	1,652	1,652	1,714
Unfulfilled orders	5,856	5,557	5,069	4,765
Weaving (average per loom in pieces of 100 metres):—				
Production	5.49	5.08	5.46	3.21
Deliveries	5.68	6.05	6.23	3.95
Stocks	8.14	7.50	6.74	6.02
Unfulfilled orders	26.98	25.32	22.02	22.39

The first estimate of the total 1936 wheat crop is 67,500,000 quintals, to which a carry-over of 10,000,000 must be added. The total should thus be 77,500,000 quintals. The requirement for consumption is about 80 millions. If one remembers that nearly 8,000,000 quintals are of a bad quality, and on the other hand that consumption needs are lower than in the past, the imports necessary may be reduced to 5,000,000 quintals.

PARIS, October 15.

GERMANY

DEVALUATION AND TRADE POLICY

THE Bourse last week continued its "devaluation-rise," ignoring the warnings of competent private authorities who fully accept the official declaration that no change in the reichsmark's nominal value is contemplated. There are indeed private surmises, based on the threatening food and raw materials position, about a possible partial freeing of transfer, to be conceded in exchange for foreign credits. This is not very probable. An officially determined part of the mark currency is already transfer-free in the sense of being legally saleable for whatever it may fetch; and the suggested measure (which is indeed only vaguely described) would add a new complication. The *Frankfurter Zeitung* says with reason that "nothing less than the possibility of dispensing with exchange control along the whole line" would justify mark devaluation.

Of immediate interest is the question whether the gold bloc countries' devaluations will derange Germany's balances of trade and payments to the extent of reducing the supply of indispensable goods. It must be remembered that Germany has a margin of reserve in her debt-service. The debt-service agreements are expressly based on the assumption of export surpluses with nearly all creditor countries, among which the new "devaluers" are prominent; and if this condition ceases *force majeure* will probably be pleaded before the whole burden is shouldered by Germany.

As summarily presented here, the maintenance of the present trade balance with the new devaluation countries is

indispensable if Germany is to have any export surplus at all. In the first half of this year, in trade with all the world, imports were Rm. 2,111.0 million marks and exports Rm. 2,242.7 millions. The export surplus was thus Rm. 131.7 millions. The export surplus with Europe was exactly three times as great. Of this European export surplus three-quarters fell to five "devaluing" countries, France, Switzerland, Holland, Italy, and Czechoslovakia. In a mere clearing of marks against foreign currencies, devaluation of the latter does no harm to Germany's balance of payments; on the contrary it brings her a gain. But as in future operations this gain involves a rise in prices of German goods for foreign customers, it is assumed by the more pessimistic that the customers will buy from Germany's competitors, and that her exports, except possibly certain special or semi-monopoly goods, will decline sharply.

Optimists point to the probable general rise of prices in the devaluing countries, and the possibility of credit-expansion there; the tariff reductions; the fact that the now devalued currencies already stood too high in the exchange market; the clearing (debts and travel) interests of these countries, and their partial dependence on German goods. The last point is important. Exports to the three chief gold bloc countries had already declined heavily, contrary to the tendency in trade with certain other clearly-defined groups of countries.

It is certain that Germany will seek to counter disadvantages, if any, by new measures. The only measure so far announced affects railway rates. From October 2nd retrospectively the Railway Corporation has introduced what it calls "freight-rate equilibration" for export goods in transport *via* the land frontiers to Antwerp and Havre. The question of the export subsidies is again alive. Dr. Schacht's Press-organ remarks, with special reference to the new devaluations, that the outside world cannot object to an extension of this system; and the Institute for Trade Research refers to the subsidy system as a means for attaining "what other countries seek to attain by devaluation."

PAYING FOR THE EXPORT SUBSIDY

The first question is, where subsidy money is to come from. The subsidy system is treated here as a great mystery. The levy imposed early last year, though often referred to obliquely, has never been formally announced; its yield has therefore necessarily been concealed, and manufacturers have been forbidden to divulge its incidence on particular export trades. The sum raised to date is believed to have been Rm. 1,000 millions. Newspapers hint that more money must be raised; and one implies that it will not be raised by the old method—that is, from particular industries and individual concerns. Hence there is talk of a new general tax. It would be against precedent to advertise the subsidy-system by earmarking a tax for it; in fact, as long as no Budget and no expenditure returns are published, differentiation of taxes according to their purposes would be meaningless. The last, and since the Nazis attained office, the only substantial increase in taxation was this year's 50 per cent. advance in Corporation Income Tax. It is now announced that a Reich Industrial Tax will be imposed in the next financial year.

The total of unemployed declined in September by 63,000 to 1,035,000, as against 1,714,000 in September, 1935. According to the official report this was partly due to the lengthening of the period of military service. In August 71.5 per cent. of all working-places in industry were occupied, as against 71.2 per cent. in July. The greatest improvement was in iron and steel (90.9 per cent.). The Olympic Games, contrary to expectation, depressed retail trade; for the turnover in August was 4 per cent. above that of the same month of 1935, whereas in the first half-year it was 10 per cent. above. The output of manufactured consumption goods in the first half-year was 95.5 per cent. of that of 1928. The Steel Trust (Vereinigte Stahlwerke A.G.) returns coal output for the business year ending September 30th at 22,320,000 tons, against 19,440,000 in the preceding year; pig iron at 6,030,000 tons, against 4,780,000 tons; and ingot steel at 6,400,000 tons, against 5,200,000 tons. The engineering and motor

trades are still active. German motor exports continue to invade the South American market.

Reich tax receipts in the first five months of the financial year were Rm. 4,387 millions, against Rm. 3,657 millions in 1935. Of the Rm. 730 millions increase, Rm. 678 millions was in direct taxes and Rm. 52 millions in Customs and Excise. For the business year ending March 31st the Reich's post returns a net profit of Rm. 43.5 millions, against a loss of Rm. 23.6 millions in the preceding year.

Money this month has been somewhat easier, and after a long pause there has been some marketing of Gold Discount Bank promissory notes, the circulation of which by the end of September had fallen to around Rm. 30 millions, against nearly Rm. 800 millions at the end of June. In substance, the credit stringency continues. Repeated official statements that industry has become less liquid, and that this process will continue, seem to indicate that the Reich, whose armaments-financing by bills has been curtailed, is borrowing directly from, or not paying, its own contractors.

BERLIN, October 14.

NORWAY

TROTSKY AND THE COMING ELECTIONS

POLITICAL interest is chiefly focussed on the forthcoming elections, and the campaign is increasing in intensity every day. The clear Socialist victory in Sweden, the Trotsky imbroglio, and the already unpopular deposit tax are the most discussed issues of the campaign.

Foreign trade has been increasing steadily during the year, and the figures compare favourably with those of the preceding month and of July last year:—

(Kroner 000's omitted)					
Exports			Imports		
	July	August	July	August	
1935	43.8	51.5	63.6	63.6	
1936	51.1	51.8	65.1	74.3	

The increase in imports is due chiefly to heavy purchases of ships and machinery, raw and semi-manufactured metals and minerals, and dry goods. While the rise in exports during August is almost negligible, there was an increase during the first eight months of the year of 43 million kroner compared with the same period last year.

After protracted negotiations between the British and Norwegian Governments, an agreement has been reached for the limitation of the catch of whales in the coming season. The terms of the agreement call for a limitation of catching operations to the period December 8th to March 7th, i.e. 16 days shorter than last season. Further, the number of catchers has been limited, and the companies classified into three groups, according to the importance of the factories. Excepted from this arrangement are three British factories, which have been allowed larger quotas than the agreement would entitle them.

PRODUCTION AND EMPLOYMENT WELL MAINTAINED

The latest available figures of industrial production for July indicate a reduction of 17 points compared with June, but a rise of 16 points compared with July, 1935. The reduction is due to stoppage during the summer holidays. It appears from the figures that the degree of employment has been very well maintained in the capital goods industries, while the home and consumption industries show a falling off compared with the June figures. The brighter tone on the international freight markets has brought a good demand for Norwegian tonnage, and the number of laid-up vessels has decreased. On account of falling tank freight rates, however, the number of unemployed tank vessels increased considerably.

The repercussions of the various Continental devaluations of last month on the international exchange markets have not, so far, been very spectacular here; which is again a proof that Norway made the right decision when she attached her currency to sterling in 1931. The devaluation of the guilder will afford an appreciable saving to the Government, to various municipalities and to private traders, all of whom have raised loans in Holland.

The problem of financing industry, which has hitherto—with more or less success—been tackled by private commercial banks, has grown more and more complicated on account of the steadily increasing demands for efficiency and modern equipment. The Government has now initiated a scheme under which the financing of industrial undertakings is taken over by a State Bank for Industry, which has recently been established with a share capital of 10 million kroner. Well over one-half of this capital is owned by the Government, while the balance has been subscribed by a number of banks and semi-official institutions.

OSLO, October 10.

JUGOSLAVIA

BETTER EXPORT PROSPECTS

THE visits of Dr. Stojadinovitch to Czechoslovakia and Roumania have had as their sequel the extension of the political collaboration between the States of the Little Entente into the economic field, with the agreements for the supply of petroleum to Yugoslavia by Roumania and for the building of the long-debated bridge over the Danube at Turnu Severin. At home the chief event is the municipal elections which are being conducted by provinces, and which are still in progress. In Croatia, as expected, they have given an overwhelming majority for the list of Dr. Macek, and in Slovenia for the Government *bloc* under Dr. Korosec.

State finances for the first quarter of the financial year (April to June) showed satisfactory results as compared with last year. Revenue was 2,227.5 million dinars, or 4.2 per cent. more than in the first quarter of 1935. Direct taxation yielded 9 per cent. more than in 1935, and indirect taxation 7.5 per cent. more. Expenditure was 1,880 millions, and there was thus a surplus of 346.8 million dinars.

The harvest this year has been extremely good. Figures of the calculated export surplus of the three most important crops are as follows:—

	1935		1936	
	Exports		Export forecast	
Wheat	Volume	Value	Volume	Value
Maize	3,028 trucks	39.8 mill. d.	60,000 trucks	720 mill. d.
Prunes	38,771 "	313.0 "	220,000 "	2,200 "
	1,254 "	61.5 "	4,500 "	120 "

The prices of all three are being maintained by the Government Privileged Export Company, which is also busy securing markets. Czechoslovakia is buying wheat, and France has undertaken to take a quota of maize. Germany is to be a large buyer of wheat, fresh plums and prunes under the clearing arrangement, though there are indications that the Schacht agreement for the import of agricultural produce against the export of manufactured goods is not working out as smoothly as was expected. With good reserves of food at home and better exports than for some years past, the coming winter is anticipated with optimism. Prices are rising.

Foreign trade returns for the half-year and the two succeeding months were as follows:—

	1935				1936			
	Exports		Imports		Exports		Imports	
Half-year	Tons	Mill. d.	Tons	Mill. d.	Tons	Mill. d.	Tons	Mill. d.
July	1,580,523	1,774.9	441,179	1,746.3	1,112,178	1,631.4	479,442	2,000.7
August	277,961	305.8	80,845	300.1	213,880	329.9	71,728	312.6
8 months	297,250	310.3	62,191	276.9	239,587	372.2	63,286	274.2
	2,155,734	2,391.1	584,215	2,323.3	1,565,645	2,333.7	614,436	2,587.6

The import surplus for the half-year of 370 millions, compared with an export surplus in the first half of 1935

of 28 million dinars, shows that exports are still suffering from the loss of the Italian market. Germany now heads the trade list with 25.4 per cent. of Yugoslav exports and 23.5 per cent. of imports. Trade with Italy, however, is being reopened under the new six months' agreement operating from October 1, on a 100 per cent. compensation basis. In exchange for timber, cattle and corn, Yugoslavia will buy yarns, cars and fruit.

AN AGRICULTURAL DEBT SETTLEMENT

The long-awaited decree for the settlement of peasant debts, issued on September 26th, comes into force on November 15th. It involves some 800,000 debtors and a sum of about 600,000 million dinars (£24,000,000). Its two chief features are the reduction of the debt to the peasant and the taking over of the entire debt by the State through the Privileged Agrarian Bank. Debts up to 25,000 dinars are reduced by 50 per cent. and over that sum by 30 per cent. On the remaining debt interest is charged at 3 per cent. and redemption is spread over twelve years.

Mining reports record an increase of over 50 per cent. in the output of iron, bauxite and copper, and lively building activity has alleviated the depression in timber. Registered employment for the three months of 1936 was 625,871, against 565,739 in 1935, although registered unemployment stands at 14,000, against 11,000 in 1935. The series of strikes, now ended, succeeded in almost all cases in asserting the right of collective agreement and of the minimum wage.

The scheme of road-building for which 578 million dinars was allotted in the spring is now under way. Some 93 kilometres is being completed, and 402 kilometres are under construction. Altogether 323 millions are being spent on sections of the international London-Stambul route. In view of the record tourist season this year special attention is being paid to the roads in the Dalmatian coastal area.

BELGRADE, October 3.

TURKEY

FOREIGN TRADE EXPANDING

It is now four years since Turkey pegged her currency to the gold franc and seven years since she ceased to have an import surplus. The export surplus has been steadily maintained:—

	Exports	Imports
1933	£T.96,161,855	£T.74,675,881
1934	92,149,094	86,789,908
1935	95,861,137	88,823,480

The figures available for the first half of 1936 show a marked improvement, if one allows for the fact that the first half always shows an import surplus:—

	Exports	Imports
1934 (1st half year)	£T.28,408,953	£T.41,921,971
1935 (1st half year)	34,160,954	43,392,043
1936 (1st half year)	41,006,516	44,559,916

Ever since Turkey began her industrialisation, though Turkish products have maintained a satisfactory standard of quality when competing against foreign products, nevertheless, internal competition in articles exclusively produced at home has led to a rapid deterioration in quality. In order to preserve the standard of the Turkish silk industry, which from yarn to fabric is entirely national, the Government has now decreed the standardisation of silk tissues, and the maximum increase in weight through finishing as well as the minimum width, weight, number of threads, etc., for each category, such as crêpe de chine, crêpe birman, crêpe d'amour, crêpe Georgette, crêpe marocain and crêpe satin. The manufacturers besides are under obligation clearly to describe their products as artificial silk (when 100 per cent. artificial silk); as mixed silk; or pure silk (when really 100 per cent. pure silk).

ISTANBUL, October 1.

INDIA

IMPORTANCE OF THE PLANTING INDUSTRY

A WELL-DESERVED tribute to the planting industry was paid by Sir K. V. Reddi, the Acting Governor of Madras, recently, when opening the annual meeting of the United Planters' Association of Southern India. He said that the planting industry was one of the oldest and most important in this country. The remark draws attention to the important place which plantations occupy in the general and agricultural economy of India. That place is insufficiently appreciated. The Royal Commission on Agriculture, over which the present Viceroy presided, suggested that this might be due to the fact that Indian interests had not in the past been largely associated with the planting industry.

Tea from plantations is, after cotton and jute, the most important Indian export. Over the last sixty years there has been a four-fold increase in the area under tea, and production has increased ten-fold. The tea plantations give employment to over 850,000 people—a far larger number than finds work in any manufacturing industry in this country. Coffee growing gives employment to about 100,000 persons.

Attention has recently been drawn to the notable achievements of the Imperial Institute of Agricultural Research, which has now been moved from Pusa to Delhi, in the evolution of better varieties of food crops such as wheat, rice and various pulses and money-crops such as tobacco, sugarcane, oilseeds and cotton. Pusa wheats are now known even beyond the borders of India, and it was at this Institute that they were produced. These wheats have spread over about 6 million of acres in Northern India, and are the dominant wheats in the North-West Frontier Province, the United Provinces, and in Bihar and Orissa. Because of their high yielding power and good quality even at the modest estimate of an increased dividend of R. 1 per acre, over and above that of the desi crop, they have increased the return which the cultivator gets from his labour by crores of rupees. In Australia, also, the well-known Pusa 4 has met with success.

TOBACCO DEVELOPMENTS

Among the money-crops, tobacco is one which has assumed new importance in India in recent years. There are approximately one million acres of tobacco in India; and until recently the crop consisted almost entirely of coarse, dark, native tobaccos, but the introduction of American varieties and their hybridisation at Pusa with the Indian tobaccos, has given several kinds which grow well in India and yield a leaf suitable for cigarette manufacture. Experiments at Pusa in 1926 showed that it was possible to cure this leaf to the colour necessary for the modern cigarette, and a large manufacture of cheap cigarettes is now developing in the country. This is of great importance as, owing to the preferential duty on Empire-grown tobacco imported into the United Kingdom, Indian tobacco now plays a large part in the production of "pipe" tobacco for the United Kingdom market.

The production of new varieties of sugarcane was also carried on at Coimbatore, a sub-station of the Institute in South India. The new canes produced there were brought up to Pusa and grown on the Pusa Farm, where they were subjected to rigorous tests, and finally, those which were considered suitable were distributed over the cane growing tracts of Northern India. To-day Coimbatore sugarcane is a household word.

The area under improved varieties of crops in British India is now over 16,000,000 acres, representing an increase of over 20 per cent. in the last two years. The corresponding area in the States rose by 12 per cent. last year.

The statistical review of irrigation in India for 1934-35 just issued shows that the irrigation system can certainly be regarded as one of the wonders of the country. The area irrigated by Government works alone is nearly one-seventh of the whole area under crops in British India. The total capital outlay connected with irrigation, including works under construction, is Rs. 15,089 lakhs. The net return on capital comes to the satisfactory figure of 4.9 per cent. The value of the crops from areas receiving State irrigation

has benefited India to the extent of Rs. 9,111 lakhs. There are more than 300 irrigation schemes in operation in British India alone.

The report for 1935-36 of the Directorate of Civil Aviation of the Government of India shows remarkable increases in the carrying of mails and passengers across the country. Imperial Airways carried 82.2 tons of mail and 983 passengers compared with 59.2 tons of mails and 606 passengers in the previous year. Mail traffic on the trans-India service increased at an even more satisfactory rate than that on the England-India service.

BOMBAY, October 1.

LETTERS TO THE EDITOR
NEWS FROM MOSCOW

TO THE EDITOR OF THE ECONOMIST

SIR,—The publication in the *Economist* of October 10 of a letter from Moscow is something of a coincidence, because I was in course of writing to you on this subject. Speaking for myself and at least one other regular reader, more news of the U.S.S.R. from such a source as your paper would be enormously welcome. Would it not be possible to have regular weekly reports from the U.S.S.R. as you have from Berlin and Paris? To anyone following affairs, the value of reports of such quality and accurate objectivity as are the normal standards of *Economist* journalism, may be imagined. From such a point of view, and from the point of view of European and world economy, it seems that developments in the U.S.S.R. have at least as great a claim on the attention as have developments in Germany or France—and certainly a much better claim than have, say, some of the smaller European countries.

I notice also that the "State of Trade" Supplements, although including production statistics of the U.S.S.R., only occasionally give a report. Could this also be remedied? I must conclude with expressing my great appreciation of the admirable quality of your Moscow correspondent's report in to-day's issue.

I am, Sir,
Yours faithfully,
F. MEDDINGS.

174 Sutherland Avenue, W.9.
October 10, 1936.
[We propose in future to publish regular letters from Moscow in our Overseas Correspondence section, and to include a report on Russian economic conditions in our monthly Trade Supplement.—Ed., *Econ.*]

THE MECHANISM OF EXCHANGE FUNDS

TO THE EDITOR OF THE ECONOMIST

SIR,—The article in your issue of October 10th on the "Mechanism of the Exchange Funds" seems to underrate both the extent and the value of the freedom enjoyed by the authorities who are managing, in the new conditions, rates between currencies detached from gold.

It describes a series of transactions by which French balances held in this country are "repatriated," and suggests that under existing arrangements the result would be an expansion of credit in both countries, which, it is implied, would be undesirable and should be provided against by an alteration of practice. While it is no doubt true that if all the steps described were taken, both banking systems would be placed in a position to increase loans (though in the case of the British banking system only to the extent required to restore the deposit-cash ratio to the point at which it stood before the withdrawal of French balances took place), the salient feature of the situation is surely the freedom of the exchange authorities to take what steps they choose, i.e. either to restore the level of bankers' cash in full, or to restore it in part, or to leave it reduced by the transaction, as in your "Stage 1" it is.

The decision taken would or should be governed (within the limits of the Exchange Account's resources) by the desire to promote or check internal expansion in accordance with the needs of the moment, keeping step so far as is reasonable with the other countries within the exchange agreement. And it is just control over internal conditions, which constitutes the virtue of the new experimental arrangement as compared with an international gold standard on the old lines.

It is somewhat disconcerting, therefore, that you should appear to suggest, first, that the procedure ought to be so defined and formalised that action in any given circumstances would approach to the automatic; and, secondly, that it should be based on the theory that it is necessarily desirable that expansion in one of the countries concerned should be accompanied by restriction in another.

8 Milborne Grove, S.W.10.

Yours faithfully,
M. CURTIS.

[In our article on the "Mechanism of the Exchange Funds" we were mainly concerned to examine the technical effect of gold movements under existing conditions, without prejudice to the question how major international adjustments ought to be made. We propose to examine this question in a future article.—Ed., *Econ.*]

MONOPOLY AND COMPETITION

TO THE EDITOR OF THE ECONOMIST

SIR,—In the last issue of the *Economist* in your Note of the Week on Parliament and the Gas Dispute the following sentence appears:—

"In a democratic country even a 100-year-old monopoly may be well advised to bow to public opinion."

Your use of the word "monopoly" suggests that monopoly exists where one producing unit controls the supply of a service or commodity. But monopoly is more than that. It is the control of the supply of a commodity or service for which there are no substitutes at all, or no substitutes which can be marketed at a competitive price.

Now, notwithstanding any statutory authority behind the monopoly, as commodities or services arise which become (a) more and more substitutable for the monopoly, and (b) approach a price competitive with the monopoly price, the monopoly commodity or service loses its monopoly power and the controlling producing unit has to frame its policy to compete with the substitute.

And as electricity has fulfilled the two conditions in the preceding paragraph, the reason is clear why the public has power to protest against the Gas Company's new tariff and why the latter has bowed to public opinion.

Yours faithfully,
R. H. N. PYKETT.

4 Palin Street, Nottingham.
October 13, 1936.

SIR OSWALD MOSLEY'S METHODS

TO THE EDITOR OF THE ECONOMIST

SIR,—As a regular reader of the *Economist*, and one who has been inclined to rely upon the accuracy of its statements, it is distressing to note the inaccuracy and bias in your paragraph on Sir Oswald Mosley in your Notes of the Week in to-day's issue. If it is the uniform of Sir Oswald's followers which is so provocative, can you explain why in Manchester, when the procession was not in any uniform, the same attitude was adopted by self-styled lovers of freedom and Social-Democrats? If it is desirable to prevent Fascists conducting their propaganda in hostile quarters, is it not also desirable to prevent Communists doing the same?

And if a procession is to be forbidden as soon as it is clear that disorder is probable, is it not obvious that the opponents of any cause must in future organise disorder and so gain their end—the preservation of freedom? Is it the hall-mark of the freedom-lover to deny to others the freedom to wear such clothes as they wish? Or am I to have the liberty to express my love of freedom by collecting my friends to throw bricks at Mr Chamberlain because we dislike frock coats and top hats?

Yours faithfully,
S. W. TURNER.

249 Fulwood Road, Sheffield, 10.
October 10, 1936.

[We discuss the issues raised by Sir Oswald Mosley's methods in a leading article on page 99.—Ed. *Econ.*]

BOOKS AND PUBLICATIONS

THE PRIVATE ARMS TRADE *

"THIS book," writes Mr Noel-Baker rather regretfully, "sets forth only a tiny fraction of the evidence which would be revealed if the files of the arms firms could be searched." But it is difficult to dispute his claim that the "tiny fraction" of evidence he has so skilfully marshalled in 560 pages amply proves the case against the present system of the private manufacture of armaments.

* "The Private Manufacture of Armaments." By Philip Noel-Baker, M.P. Gollancz. Vol. I. 560 pages. 18s.

In a second volume Mr Noel-Baker proposes to examine at length the familiar argument that, whatever political disadvantage private manufacture may involve, it is offset by the technical advantage of the better arms-production which it ensures. The present volume is a penetrating study of the moral and political implications of the system. At a time when, as Lord Cecil says in a prefatory note, every decent citizen should be striving his utmost to maintain peace, "there exists a great industry with branches in every country and having a capital running into

London, W.C.1

hundreds of millions of pounds, whose interest it is to promote war."

Without indulging in over-emphasis, Mr Noel-Baker recites the unpleasant pre-war and post-war history of these great interests and gives in detail major and minor examples of the way in which the traffickers in the commerce of destruction have stimulated the competition in arms in most countries of the world and increased the peril of war. He does not pretend that their promiscuous solicitations of orders even from potential enemies, their bribing of Ministers and officials, their influence over the Press, and their subsidising of "patriotic" societies have been the sole or principal cause of war. That they have been a serious contributory cause, is demonstrated by the logic of events.

The private manufacturers of arms are individually no more murderously inclined than the ordinary soldier behind the guns. Many of them are respectable, God-fearing persons who profess to be horrified at the suggestion that they have ever acted unpatriotically or anti-socially. It is not often that they are so self-revealing as the American commercial traveller in arms who, in a letter published by Senator Nye, admitted that "we are certainly in one hell of a business, where a fellow has to wish for trouble so as to make a living."

The celebrated Mr Mulliner, of the Coventry Ordnance Works, who started the German Dreadnought scare which brought high profit to his own firm and to others and made the Great War a little more certain, is said to have been an honest fellow who "loved his country" and believed himself to be a true patriot. There are to-day more Mulliners than ever; some of them not such honest fellows and considerably more cynical than the original Mulliner.

After the war the German armament industry, encouraged by the German General Staff, helped materially to reorganise the re-armament of Russia. Herr Stolzenberg, for instance, set up a chemical warfare factory on Russian soil; and Junkers built extensive aircraft works. In many other ways the German arms firms helped the Soviet Government to lay the foundations of its present military strength.

The element of private profit remains a deadly obstacle to international disarmament. It cannot be doubted—indeed, Mr Noel-Baker's evidence on the point is irresistible—that the immediate interest of the aircraft industry in military expansion played an important part in determining the tone and temper of technical Air opinion while the Disarmament Conference was at work, and that it was this body of technical opinion which "defeated the efforts of those who strove so nobly to demilitarise the air."

Mr Noel-Baker argues with passionate conviction that what is needed is some world-wide change which will end the evils that flow from private profits in every arms-producing country in Europe and the world. Unfavourable though the moment seems to be, he believes that the example of actual abolition in Great Britain might well prove decisive in its influence on the rest of the world.

SHORTER NOTICES

"Money and Banking." By George William Dowrie, Ph.D., John Wiley and Sons, Inc., and Chapman and Hall, Ltd. 512 pages. 16s. net.

In the great American Republic the number of books on money is already legion. The latest is a review—by the Professor of Finance in the Graduate School of Business, Stanford University—of past and present monetary doctrine. The author tells yet once more of battles long ago; he recounts the famous victory of the "compensated dollar" and the (temporary?) defeat of bimetalism; he revives forgotten controversies upon free versus regulated banking. He has in fact compiled a well-digested summary of monetary theory, for which his students will be duly grateful; and, happily diverging from the present practice of most writers on money, he has presented it in a vocabulary intelligible without a new dictionary. The treatment is, perhaps intentionally, elementary. The Professor makes only an approach to the theory of the value of money; but his approach falls short of the green. He leaves it "with the hope that readers will be sufficiently interested to read the writings of Hawtrey, Robertson, Pigou, Keynes and others." The valuable part of the book for English readers will be the admirable summary of recent monetary history in the United States.

"The Revival of Agriculture." Allen and Unwin. 138 pages. 3s. 6d.

The Rural Reconstruction Association is responsible for the preparation and publication of this book, which advocates an elaborate programme of planning for British agriculture to be administered by a National Federation of Agriculture in conjunction with a National Food Council. The aim of the Association is to render Great Britain as far as possible self-sufficient in the production of food. Although considerations of safety in war time and the relief of unemployment are mentioned, the policy is advocated principally in the interests of agricultural producers. It would not be quite true to say that the objections that are usually urged against an intensification of food production in Great Britain are ignored, but they are noticed only to be brushed aside without the type of reasoned refutation which might be expected. It is perhaps unfair for an economist to criticise these proposals on the ground that their economic reactions have not been sufficiently investigated, as the authors expressly disclaim any desire to stand well in the opinions of the adherents of "orthodox economic theories," the study of which is liable to give rise to "books that come to different conclusions." Indeed, to a reader trained in economic science, the book appears a little naïve, and disappoints the expectations aroused by the rather high-sounding Foreword of self-laudation.

MONEY AND BANKING

GOLD REVALUATION PROBLEMS

THE supplementary tripartite Agreement between the British, French and American authorities, described in a Financial Note below, makes it clear that gold can henceforward be transferred freely between the Exchange Funds of the countries concerned, together with those of other countries who decide to co-operate. As we pointed out a fortnight ago, it represents no more than an essential adaptation of the financial machinery. Mr Morgenthau had some reason on his side in describing it as "a new gold standard way of doing business," for there is every prospect that exchange fluctuations will henceforward be moderated by international movements of gold. Yet it is a gold standard with three fundamental differences: (1) No country is bound to fix the price of gold definitely in its own currency, though as a matter of policy the American authorities are maintaining their price of \$35 per fine ounce; (2) The impact of gold gains or losses need not necessarily fall upon the central bank and the internal credit system of any country, but the Exchange Fund can be interposed as a buffer to receive the impact; (3) There is no new permanent gold parity for sterling (or as yet for the guilder), and so the Bank of England is under no immediate compulsion to revalue its gold.

Nevertheless, the question of the ultimate revaluation of the gold stock is naturally attracting a certain amount of attention; for other countries have not waited for permanent stabilisation before declaring an "interim dividend" out of the profits of revaluation. It will accordingly be of service to amplify a Note which was devoted to the subject in last week's *Economist*. As a preliminary the relevant legislation may be cited:—

Currency and Bank Notes Act, 1928

Section 6 (1).—The Bank shall at such times and in such manner as may be agreed between the Treasury and the Bank, pay to the Treasury an amount equal to the profits arising in respect of each year in the Issue Department . . .

Finance Act, 1932

Section 25 (3).—Whenever any gold is purchased or sold on account of the Issue Department [of the Bank] during the existence of the Exchange Equalisation Account, the amount by which the price of the gold exceeds the fixed value thereof [i.e., 77s. 10½d. per standard ounce] shall, in the case of a purchase, be made good to the Issue Department from the Account, and, in the case of a sale, be made good to the Account from the Issue Department.

Section 25 (4).—Immediately before the Account is wound up, the amount by which the market value . . . of the gold then held in the Issue Department exceeds its fixed value shall be made good by the Department to the Account.

Section 26.—On the winding up of the Account the assets thereof shall be applied in such manner as the Treasury may direct for the redemption of debt . . .

The difference between the £250 millions of gold now held by the Bank and valued at 85s. per fine ounce, and the same physical quantity of gold revalued at, say, 144s. per fine ounce is about £175 millions. It is quite clear from a recital of the above legislation that as the Bank has already been compensated for the losses on its current gold purchases, the Issue Department has an unrealised profit amounting to the whole of this sum. The Act of 1928, disposing of the profits of the Issue Department, was passed at a time when no one dreamed that we could ever go off gold. The Act of 1932, setting up the Exchange Equalisation Account, was chiefly concerned with providing for the practical consequences of a divergence between the Bank's statutory price and the current market price of gold. Its framers, however, did apparently envisage a time when we might restore the gold standard, revalue the Bank's gold, and wind up the Exchange Equalisation Account. In that event the profit on the revaluation of the Bank's gold is to go to the Exchange

Equalisation Account and is to be applied, with the Account's other assets, to the reduction of the National Debt. But let us suppose that the Exchange Account is not wound up when the Bank's gold is revalued. Then Section 25 (4) of the 1932 Act does not apply, and it appears that under Section 6 (1) of the 1928 Act the profit of £175 millions will be paid to the Treasury and will rank as current revenue.

While it is clear that the Government will obtain this profit, it appears entirely a matter of chance, depending on the fate of the Exchange Equalisation Account, whether this huge amount must be applied to the redemption of debt or can be brought into the year's revenue. Clearly, this is a doubt which must be removed in advance, and it can only be removed by legislation.

There is another vital point on which ambiguity appears to prevail, namely, the ultimate destination of the gold itself. In place of the Bank's gold reserve of £250 millions (assuming to-day's figure for purposes of illustration) there will be a gold reserve of £425 millions, apart from the large but unknown quantity of gold now held by the Exchange Equalisation Account. The fact that the Government takes the profit does not necessarily mean that the Government takes the gold. The full £425 millions may remain in the Bank, and the consequential changes in the Bank return would, according to their nature, be of the utmost importance.

To prove this, let us recite some of the various alternatives:—

(1) The Government takes both the gold and the profit—that is, it buys £175 millions of gold from the Bank and pays for it with its profit of £175 millions. In this event, the position of the Bank is entirely unaltered by the revaluation of its gold and the subsequent changes. The Government, however, would be committed either to retaining the Exchange Equalisation Account in being, with its gold holdings increased by £175 millions, or of finding some other way of holding its gold. Nevertheless, this would be a simple and "neutral" solution.

(2) The Government takes the profit, but the Bank keeps the gold. Initially, therefore, the following changes would occur in the Bank return:—

Issue Department

Gold	+ £175 millions
Notes issued to banking department	+ £175 millions

Banking Department

Reserve.....	+ £175 millions (additional notes)
Public Deposits	+ £175 millions (the Government's profit).

The Government's profit, however, would probably not remain in public deposits, but would be used somehow. These are the alternatives:—

(a) A reduction of £175 millions in the fiduciary note issue as permitted by Section 2 (2) of the 1928 Act. The net result then would be:—

Issue Department

Gold	+ £175 millions
Securities	— £175 millions

Banking Department

No change.

(b) The redemption of debt held outside the Bank, or an application of the profit to current expenditure. In either event the sum of £175 millions so disbursed must find its way out of public deposits and into the cash reserves of the joint-stock banks, or more precisely into their deposits at the Bank of England.

The net result would then be:—

Issue Department

Gold	+ £175 millions
Notes issued to banking department	+ £175 millions

Banking Department

Reserve	+ £175 millions
Bankers' deposits	+ £175 millions

General Banking System

Joint-stock bank cash + £175 millions, permitting theoretically an expansion of £1,750 millions in bank deposits (now about £2,000 millions).

This last result so obviously represents a "gold inflation" of astronomical proportions, that we do not suggest for one moment that it would be allowed to come about. What its enunciation actually shows is that this position could arise unless something were done to prevent it. Thus the need for further legislation is imperative, and this in turn raises questions of policy.

First of all, there is no need to revalue the Bank's gold at once, and this for the time being is the best way out of the difficulty. In any case, the first need is for the Government to recognise that the fiduciary note issue should not be rigid, but should be varied according to circumstances, free use being made of the powers contained in the 1928 Act. Legislation will also be needed if it is desired to ensure that the profits on the revaluation of the Bank's gold are applied to the redemption of debt, regardless of whether the Equalisation Account is wound up or not. In practice it would be best to apply initially the whole of the profit to a reduction of the fiduciary note issue, and then to increase the fiduciary note issue from time to time as circumstances warranted at subsequent dates—for example, if it was thought desirable to check a downward trend of the trade cycle. There is no need to be precise on this point at present. For the moment revaluation of the Bank's gold can well be postponed, and in the meantime the Government should realise the need for regularising the position and for passing in advance the necessary legislation.

FINANCIAL NOTES

Devaluation in Practice.—As we had anticipated, the United States authorities have bowed to the inevitable and have decided to extend their gold operations. On Monday evening a statement by the British Treasury announced that

Arrangements for technical co-operation with the monetary authorities in the United States have now been completed and a new regulation is being published by the Secretary of the Treasury of the United States which will enable gold to be obtained in the United States in exchange for dollars by any country which gives reciprocal facilities to the United States. His Majesty's Government have arranged for such facilities to be afforded in London to the United States authorities. This day-to-day working arrangement should greatly facilitate the technical operations of exchange control; similar arrangements have been made with the Bank of France so as to provide for effective co-operation between the three centres.

Mr Morgenthau hailed this new agreement with the words that it represented a new type of gold standard, but, as we show in the leading article in this section, this is a very fanciful description. Rather is it a mutual recognition of the obvious fact that if the three Governments are to co-operate their exchange funds must be free to deal in gold between each other. Dealings can no longer be restricted to the central banks of gold standard countries, as has been the American practice hitherto, for hardly any full gold standard country now exists. The Bank for International Settlements, at its monthly board meeting this week, has recognised the same difficulty. The board began by emphasising the need for stabilisation, but then admitted that under present conditions a new basis for the bank's accounts must be found, though in the meantime the present basis of the "old gold Swiss francs" is to be continued. The board intends to present a plan to the next general assembly in May, 1937. The board also recognises the need of modifying paragraphs 5 and 21 of the statutes, which limit the bank's dealings for its own account to currencies of gold or gold exchange standard countries.

Controlled Sales of Gold.—It cannot be said that the new technical agreement between the three Governments answers all questions and clears up every obscurity remaining over from the devaluation of the franc. For example, nothing is yet known of the probable effects upon the London gold market of official sales of gold to foreign Governments at a price fixed by the British Treasury. The "official" price of gold is apparently only to be fixed when there is an actual transaction to be accomplished between the Governments. But when it is fixed, will it prove to coincide with the price now fixed daily by the market, or will the Treasury have ideas of its own about the proper price of gold? If there is a new, and ultimately all-powerful, influence in the market, will any modification of the present arrangements for fixing the price be necessary? Or again, it would seem to be inconceivable that this agreement could have been reached without some parallel agreement between the British and American Treasuries on the rate of exchange to be maintained between the pound and the dollar; for on the surface the agreement would appear to strengthen the control of the British authorities over the value of the pound, and correspondingly to weaken the ability of the American Treasury to "defend" the dollar against a fall of the pound. But if there is such an agreement on the rate of exchange which is to be pegged, or on the limits within which the peg is to work, the market does not know, and has not been allowed to infer, its terms. If it is properly worked, the new arrangement might well develop into that satisfactory working compromise between rigidity and chaos for which the need has been felt ever since it became obvious that the old gold standard could never be restored. It would be a very great gain if the technique of the gold standard could be used to prevent day-to-day fluctuations in the exchanges, to balance transient disequilibria in the balances of payments, and to relieve international commerce of the very heavy burden of insuring against violent fluctuations of the exchanges, without at the same time barring the way to such alterations in the gold parities of the different currencies as are called for by changes in the real underlying circumstances. The new arrangement appears to be a long step in this direction; but before we can be sure, the questions asked above must be answered, either by official pronouncements or by the unfolding of events.

The Foreign Exchanges.—The world's exchange markets are now acclimatising themselves to the simultaneous intervention of three or four Control Funds, and while so far as can be judged the various authorities are working in co-operation, their intervention is certainly creating new conditions of working. Broadly speaking, the French Control has been trying to sell francs against both sterling and dollars with the dual object of covering such repatriation of French funds as is taking place and of building up a reserve. It has had no difficulty in buying sterling, but when trying to buy dollars it has found itself outbid by the market. The result is that while the pound-franc rate has been held at just over Frs. 105, the dollar-franc rate has been raised from Frs. 21.41 and Frs. 21.39 to Frs. 21.46. This rise in the latter rate has depressed the pound-dollar rate to under \$4.90, and there is a theory that the French Control is guided in its operations by the belief that sterling will fall to \$4.86. This week the French Bank rate has been reduced from 2½ to 2 per cent. The Swiss franc is also now under control. The New York rate has been allowed to rise from Sw. Frs. 4.32½ to Sw. Frs. 4.35½ per dollar, but the London rate has only moved from Sw. Frs. 21.25 to Sw. Frs. 21.30. Forward Swiss francs have remained steady at a small premium. The guilder has been erratic, and while it is rumoured that the Dutch Control has intervened there is no definite proof. The general view is that the guilder will weaken slowly, and forward guilders are still at a discount. The Czech crown is now quoted at Kc. 138-139 with no buyers, against Kc. 119-121 on October 2nd. The Polish zloty has not been devalued, but there is at present no market and the rate is only nominal at Zl. 26-26½. The Canadian dollar is following the American dollar in its appreciation against sterling.

French Gold Revaluation.—The revaluation of the Banque de France's gold stocks in the ratio of 65.5 : 49 has brought about certain changes in the Banque's assets and liabilities, but it is not entirely easy to see what has happened. On September 25th, immediately before devaluation, the Banque's gold amounted to Frs. 50,111 millions. Revaluation would have written this amount up to Frs. 66,800 millions, or an increase of about Frs. 16,700 millions. The actual increase shown in the return for October 2nd was only Frs. 7,200 millions, so that there is Frs. 9,500 millions unaccounted for. There are several possible explanations of this discrepancy, including (1) the transfer of gold to the new State Exchange Fund of Frs. 10,000 millions; (2) the earmarking of gold sufficient to cover the repayment of the London credit of £40 millions sterling (equal to about Frs. 3,000 millions at the old rate and just over Frs. 4,000 millions at the new rate); and (3) any changes in the physical quantity of gold held by the Banque de France during the week between September 25th and October 2nd. All these explanations are entirely surmises, and between them they could account for far more than the discrepancy of Frs. 9,500 millions. The return for October 9th showed a further increase of exactly Frs. 5,000 millions in the Banque's gold stocks.

	Sept. 25	Oct. 2	Oct. 9
	(Francs million)		
Gold	50,111	57,359	62,359
Provisional advances to State	15,903	12,304	12,303
Note circulation	83,750	86,027	85,778
Reserve ratio	54.4%	60.5%	63.4%

It is also not easy to see how the profit on revaluation has been so far applied. The reduction of Frs. 3,600 millions in provisional advances to the State clearly shows how some of it has been used, while if gold has been transferred from the Banque de France to the new Exchange Fund, it has of course taken an equivalent part of the profit with it. These are the only definite indications to be derived from the French Bank return. Any other changes are hidden by the daily ebb and flow of the Bank's business, which, like other spheres of French economic life, has been affected by the impact of devaluation.

September Clearing Bank Averages.—The September returns of the eleven English clearing banks indicate a further expansion in credit. Deposits have risen to a new high record, and the drop in cash probably reflects the conditions ruling at the end of September, when heavy Treasury bill payments absorbed an unusual amount of funds. This may also be the explanation of the September rise in call and short loans:—

	(In £ millions)					
	Sept., 1935	August, 1936	Sept., 1936	July, 1936	August, 1936	Sept., 1936
	(a)	(a)	(a)	(b)	(b)	(b)
Capital and reserves	125.7	125.8	125.8	131.8	131.8	131.8
Acceptances, etc.	90.4	97.1	95.3	101.2	103.5	101.8
Deposits (including undivided profits, etc.)	1,986.6	2,133.4	2,143.0	2,206.0	2,208.8	2,219.7
Total liabilities	2,202.7	2,356.3	2,364.1	2,439.0	2,444.1	2,453.3
Cash	204.7	222.3	218.5	221.7	230.0	226.1
Cheques, balances and items in transit	48.3	54.6	54.8	58.3	56.4	56.9
Money at call	142.4	150.5	153.5	153.0	157.7	161.2
Discounts	297.7	336.3	334.2	347.0	343.7	342.1
Investments	602.2	597.0	604.3	623.3	625.7	632.7
Loans and advances	747.9	830.1	835.1	864.9	857.2	862.5
Investments in affiliated banks	25.1	25.2	25.2	25.2	25.2	25.2
Cover for acceptances, pre-mises, etc.	134.4	140.3	138.5	101.2	148.2	146.6
Total assets	2,202.7	2,356.3	2,364.1	2,394.6	2,444.1	2,453.3

(a) Excludes District Bank.

(b) Includes District Bank.

Among the banks' earning assets, discounts are practically unchanged. This is not surprising, as September witnessed a reduction in tender issues of Treasury bills. Investments are appreciably higher for the first time for several months, while the upward trend of advances continues. The September cash ratio for the eleven banks taken together was as low as 10.2 per cent., but this was due to the temporary drop in the banks' cash at the end of the month.

The Dutch Exchange Fund.—Our Amsterdam correspondent writes that during the week ended October 13th the guilder followed a relatively stable course, on a level about 22 per cent. below the former gold parity. It is not known whether the Dutch Exchange Fund has yet intervened on the market, but it is clear that the Fund has been established. The evidence is that the balance sheet of the Netherlands Bank made up on October 5th reveals a reduction in the gold reserves of about Fl. 100 millions, and the Netherlands Bank reports that this reduction is due to its having placed part of its gold reserves at the disposal of the Equalisation Fund as working capital. Thus the Exchange Fund has been instituted by raising a loan, in the form of gold, from the Netherlands Bank, which shows it among "credits outstanding." The operation of the fund is to be kept a secret as far as possible, and it remains to be seen whether its actual working will ever be revealed. The situation on the Amsterdam money market remains fairly tight. In view of repatriation of capital, a more liquid money market had been expected, but the money rates actually show a rising curve since the devaluation, with the result that the market discount rate of 2½ per cent. and the prolongation rate of 2½ per cent. closely approach the official Bank rate of 3 per cent. Nevertheless, the bond market remains very firm.

The Money Market.—This week money has again been less plentiful than usual, and there was calling by the clearing banks on Monday, Wednesday and Thursday. The Bank return shows that a fair quantity of funds has remained in public deposits ever since the heavy Treasury bill payments at the end of last month. It is probable that the Government is preparing for dividend payments, amounting to about £16 millions in cash, which fall due on October 15th and November 1st. If so, money should again be plentiful next month.

	Sept. 24, 1936	Oct. 1, 1936	Oct. 8, 1936	Oct. 15, 1936
	%	%	%	%
Bank rate.....	2	2	2	2
Clearing banks' deposit rate ...	1½	1½	1½	1½
Short loan rate:—				
Clearing banks	1½-1*	1½-1*	1½-1*	1½-1*
Others	1½	1½	1½	1½
Discount rates:—				
Treasury bills	1½	1½	1½	1½
Three months' bank bills	1½-1½	1½	1½-1½	1½-1½

* Loans against Treasury bills and other approved bills and British Government securities within six months of maturity; 1 per cent. Treasury Bonds and other gilt-edged stocks within six months of maturity; and other collateral respectively.

The clearing banks have bought December Treasury bills at ½ per cent., but are not interested in January maturities. Three months' bank bills are quoted at 1½ per cent., but rates of 1½ per cent. have been paid in competition.

The Bank Return.—The currency withdrawn at the end of the September quarter has now returned, and so there has been a drop of £4.4 millions in the note circulation. There has also been some Continental dishoarding.

	BANK OF ENGLAND				
	Oct. 16, 1935	Sept. 23, 1936	Sept. 30, 1936	Oct. 7, 1936	Oct. 14, 1936
	£ mill.	£ mill.	£ mill.	£ mill.	£ mill.
Issue Department:—					
Gold	193.7	247.6	248.6	248.7	248.7
Note circulation	399.6	445.1	449.4	450.8	446.4
Banking Department:—					
Reserve	54.9	63.6	60.3	58.9	63.4
Public deposits.....	32.1	10.4	49.7	24.8	31.6
Bankers' deposits	78.8	108.0	60.7	84.2	82.2
Other deposits.....	37.8	38.8	40.9	40.9	41.2
Government securities ...	86.2	83.7	80.3	79.8	80.4
Discounts and advances..	13.7	7.9	8.6	9.3	9.6
Other securities	11.6	20.3	20.4	19.6	19.4
Proportion	36.9%	40.4%	39.8%	39.3%	40.8%

Normally the drop in the note circulation should have raised bankers' deposits, but this week, for reasons discussed in a previous Note, there has been a renewed diversion of funds to public deposits, and so bankers' deposits are slightly lower.

THE STOCK EXCHANGE

ELECTRICAL EQUIPMENT SHARES

ELECTRICAL engineering has been among the later trades to enter the recovery orbit. It is still little more than a year since the big rises in share prices and profits occurred. Crompton Parkinson shares, for example, made their great jump last year, and even this autumn General Electric ordinary, which had already seemed fully valued at 80s., have been as high as 95s. 9d. What is the present position of the industry? Are present share prices justified?

One of the notable points in the company accounts of the last year has been the uneven incidence of recovery. It is possible, indeed, to divide companies into two groups. Analysis reveals that, on the whole, the "recovery" group covers companies with substantial interests in the heavy electrical engineering trade, while the second includes such trades as switchgear, meters and wireless. The following table shows the results of ten companies, grouped on this basis, since 1931:—

(Earnings in £000)						
	1931	1932	1933	1934	1935	1936

* 15 months reduced to 12 months basis.
† And capital bonus of 5 per cent. in 1933, 7 per cent. in 1934, and 7 per cent. and 100 per cent. in 1935.

The table, in fact, gives investors the clue to the recent movement in share prices. The electrical manufacturing industry is, to a greater extent than is often realised, a capital construction trade. It is true that modern housing standards offer new openings for domestic apparatus, apart from the immediate demand for wiring and lighting, but the spectacular increase in building activity occurred well before the general electrical equipment manufacturers were enjoying the fruits of recovery. It is the "heavy" trade in generators, motors, converters and control gear which has been responsible for most of the recent improvement in profits, and which five years earlier were responsible for most of the fall.

By chance, the circumstances of the last depression emphasised this dependence on the heavy trades. During the latter half of the 'twenties the manufacturers rapidly extended their heavy departments, in anticipation of an expanding demand. The depression found the "heavy" departments over-expanded. By a coincidence, the completion of the "grid" released stand-by generating plant

to satisfy the rising consumption of electricity. The consequent saving on generating plant expenditure was estimated by the Central Electricity Board at £11.5 millions up to March, 1935—a very substantial loss to the manufacturers in the worst years of the depression. Further, the Central Electricity Board under-estimated the growth in demand for electricity in 1934-36, and having cut down the orders of 1932-33 were compelled to ask for urgent deliveries in 1934-36. Both domestic and foreign commercial demand followed approximately the same course.

The importance of the "heavy" departments is confirmed by the following table, which gives the value of the output of some of the more important sections, as shown by the Census of Production for 1924 and 1930 and by the "Import Duties" figures for 1933 and 1934. The figures show the great importance of the machinery section and the considerable contraction which it suffered between 1930 and 1933. By comparison, the relative stability and unimportance of the domestic lighting market is obvious. The sharp fall in cables output is due to lower raw material prices (which form a high proportion of manufacturing costs) and to the completion of the "grid."

Output values (in £ millions)

	1924	1930	1933	1934
Machinery	17.6	21.2	16.1	20.1
Cables and wire	18.7	19.2	11.9	14.7
Wireless (incl. valves)	6.3	8.4	13.0	16.7
Lighting (incl. lamps)	4.1	4.8	5.1	6.0
Telegraph and Telephone	3.9	6.1	3.8	4.0
Batteries	4.3	6.4	6.3	6.6
Total value (gross)	69.0	87.7	74.7	87.6
Total net output	33.0	44.8	40.9	46.4

For companies with substantial interests in the heavy departments, the sudden advent of recovery led to fuller employment of existing plant (in many cases improved during its enforced idleness) and drafts on ready supplies of trained labour. In such conditions profits were bound to jump. Investors must now decide whether most of the road from depression to full prosperity has been covered in that one bound.

There are, in fact, good grounds for expecting further significant improvements this year. On general grounds it can hardly be expected that the whole of the initial recovery movement was included in the 1935 accounts. Even if activity were merely maintained at the high levels of 1935, the results for the twelve months of the succeeding financial period would be better than for the previous year, when the trend was still rising. There are clear signs, however, of a further substantial rise this year. The most convenient index of activity in the heavy departments is the B.E.A.M.A. index of new orders, whose monthly movements for 1935 and 1936 are shown below:—

TOTAL HOME AND EXPORT ORDERS 1924=100

	Jan.	Feb.	Mar.	Apr.	May	June	July	Aug.	Sept.	Oct.	Nov.	Dec.
1935	140	146	141	144	146	144	136	124	116	116	128	133
1936	138	144	153	170	170	178	184	...	...	...	...	...

Though business this year opened at about the same level as 1935, the trend has been progressively stronger since March. As the index is constructed on a twelve months' moving average, it bears direct relevance to company profits.

To deal with the increasing flow of work, the industry has supplemented its capacity with new plant, which, having

been largely financed from surplus funds, may be expected to give a satisfactory and immediate return. The industry is still expanding its equipment, but at present it is probably working at—or near—full capacity, when allowance is made for necessary stand-by plant. Some heavy departments, indeed, are quite unable to give normal delivery of goods ordered.

This fact suggests a further reason for expecting satisfactory profits. Throughout the depression, prices were cut very fine in the heavy equipment section, and even at the end of last year chairmen were still complaining of narrow profit margins. There has been no sweeping increase in profit margins during the current year, for prime costs have tended to rise, but the pressure of demand has enabled the manufacturers to secure margins nearer to those which are prescribed in the industrial agreements.

There remains the question of higher raw material prices. It seems probable that these will not present a serious problem to the heavy departments of the industry. Although in such trades as cable making, costs of materials represent a high proportion of the total, the more complicated products of the heavy departments carry a higher percentage of fixed and wage costs. For the trade as a whole, the "Import Duties" figures for 1934 show that the total cost of materials purchased and used was £40,864,000, out of a gross output of £87,554,000. Copper, though the most important individual material, accounted for no more than £6,317,000, while "Other Materials Including Fuel" accounted for £29,935,000. While the industry is not insured against a further rise in raw material prices, the "spread" of the risk should at least save the heavy equipment producers from undue disturbance. Finally, and even more important, the trade agreements which govern most of the activities of these concerns provide that prices shall be fixed on an agreed basis of costs plus a given percentage for profit. In theory, therefore, higher costs should produce a higher absolute margin for profit, thus constituting a substantial buffer against losses from rising raw material costs—provided that wise purchasing policies have been followed.

It would appear, therefore, that the current prospect is good. Investors are already discounting its fruits in confident fashion, as the following table shows:—

SHARE PRICES AND YIELDS

Company (and Denomination)	1929-35		1936		Pre- sent Price	Latest %		Yield
	High	Low	High	Low		Earnings	Dividend	
Assoc. Elec. Ind. (£1)...	58/6	14/-	55/6	42/-	53/3	9.4	8	£ s. d. 3 0 0

* And capital bonuses of 7 per cent. and 100 per cent. † Earnings for 1935 covered normal preference requirements 1½ times. Dividends in arrears, ranking from January, 1934. ‡ Latest earnings covered preference dividend twice. 6.6 per cent. earned and 6 per cent. paid on ordinary.

For the longer view, the investor must bear in mind that the volume of capital construction, which at present favours the trade, may ultimately recede. Any new depression cycle should not again be intensified by the same fortuitous coincidences which operated in 1931-32, but at best the industry can hardly avoid the fluctuations of a capital construction trade. It can, on the other hand, reasonably expect the advantage of an expanding market for a considerable time to come. The tide of electrification is still flowing strongly, and though British industry is now calculated to be about 73 per cent. electrified, it must progress further to reach percentages well into the 80's, which are shown by Germany and America. Moreover, even when the phase of "extensive" expansion is passed, there will still be an important "intensive" development to be served. Where strong finances permit companies to even out the effects of fluctuation, electrical manufacturing shares offer both for the immediate future and for a long-term holding a sound investment.

By investing in

HUNDRED SECURITIES TRUST

you spread your capital over as many as 100 first-class dividend-paying British securities covering the whole range of sound British investment, including Government funds, banking, insurance, property, commerce and industry. The yield is approximately

4½%

NOTE. This is the approximate Gross Annual Yield at a price of 23s. 3d. per sub-unit, calculated solely on the cash dividends paid in the past year on the 100 selected securities. Capital bonuses are excluded from the computation of yield. An addition to the yield may be expected from the sale of any new issue rights or broken capital bonuses.

LLOYDS BANK LIMITED are Custodian Trustees of the underlying securities. They collect the dividends thereon and distribute the income to Sub-Unit Holders on June 15th and December 15th each year during the 15-year life of the Trust.

STUDY THESE IMPORTANT POINTS:

1. Sums of approximately £23 and upwards may be invested through any bank or stockbroker.
2. The Managers have full power to make the Trust cumulative by retaining capital Bonuses in the Trust if considered desirable, thereby augmenting the capital value and earning power of the investment.
3. All the securities in the Trust are quoted on the London Stock Exchange and constitute a list which is representative of the soundest elements in British financial, industrial and commercial life.
4. Provision for continuity of management has been made by the creation of a special fund administered by the Trustees. Security Trust Managers Ltd., the Managers of the Trust, are controlled by interests associated with Dawney Day & Company, Ltd., Merchant Bankers, 15, Moorgate, London, E.C.2.
5. Sub-units are readily marketable since the Managers undertake to repurchase any sub-units offered to them, as explained in the Booklet.

Applications for sub-units will only be accepted on the basis of the information contained in the descriptive Booklet ECI, which can be obtained, free of charge from the Managers.

INVESTMENT NOTES

The Morris Placing.—Several points are raised by the marketing of Morris Motors ordinary capital this week. Hitherto, the investing public has been interested only in the 7½ per cent. preference shares. Permission to deal was obtained for the whole ordinary capital, which has recently been increased to £2,650,000. One quarter of the whole—2,650,000 units of 5s. each—were made available to the market at 37s. 6d., but public demand proved so strong that even after increasing the supply, slightly less than 5 per cent. of requirements were covered. Dealings commenced on Thursday at 39s., and after one of the most hectic days in the memory of the "House," the price closed at 41s. 10½d. The statement "for information," published on Tuesday, gave detailed particulars of recent capital changes, but provided no information regarding the earnings and general financial position of the company. Such information, of course, is available in the Stock Exchange Official Year-Book (to which readers of the statement were referred), but the inconvenience of "information by reference" might surely have been avoided in a transaction involving over £5,000,000. It is, however, difficult to relate the marketing method adopted in this instance to the policy of the Stock Exchange Committee on "placings." The Committee declared last February that all issues, particularly of ordinary capital, should be made publicly (by prospectus or offer for sale), in the absence of special circumstances. The Committee has, of course, full liberty to determine the circumstances in any particular case, but in certain recent instances it appears to have exercised its discretion to insist upon a public offer. In this case, it is true, no new issue is involved, and it would appear that this consideration finally determined the Stock Exchange Committee's decision. To the outside observer, unfortunately, the Morris placing appears both in magnitude and method to resemble certain earlier instances which caused lively dissatisfaction last year. The affair, which has aroused almost unanimous comment in the "House" may, in fact, tend to increase the uncertainty regarding the precise terms on which "placings" or private marketing of existing shares must be arranged to satisfy the Committee's requirements. The February "understanding" was as categorical as any member could expect, and its general import was clear. It is unfortunate that, from the present instance, the lay observer may infer a modification of policy from a special circumstance. And the majority of brokers would regard the disturbing excitement and uncertain allotment basis of such introductions as less desirable than a direct offer for sale. It would be regrettable for the good name of the "House" if the misgivings of the public which were aroused by certain introductions last year were to gain currency once more.

* * *

What Basis of Valuation?—The hectic dealings in the 5s. Morris units on Thursday raise another point regarding the marketing. Market estimates of earnings for the current year equivalent to 56 per cent. and dividend expectations of 40-45 per cent. are wholly unofficial. For the investor who is more concerned with past earnings performance, the company's recent equity record is given below:—

	Years to December 31st						
	1929	1930	1931	1932	1933	1934	1935
Earned tax free (%)	40.7	36.5	17.2	23.2	6.8	16.4	41.5
Paid tax free (%)	10	10	5	10	5	10	15

The range of earnings fluctuations is evidently considerable. Purchasers of the 5s. at, say, 42s., would obtain a yield of 45 7s. per cent. if the best "estimates" were realised, but they must consider the fact that 1936, on this dividend basis, would be a peak year in the company's fluctuating history. Whether the cautious margin between equity earnings and dividends, on which the strength of the Morris Motors organisation has been founded, will be permanently modified remains to be seen. The chairman's control of the equity may clearly prove the deciding factor in distribution policy.

The Argentine Conversion.—It is always satisfactory to welcome the scrupulous debtor to the London market. This week, the Argentine Government has turned its excellent record to account by a conversion issue which enables the Republic, for the first time, to offer a loan carrying a nominal 3½ per cent. The 4 per cent. Railway Guarantees Rescission bonds of 1896 and 1899 (of which £2,631,000 are outstanding) are to be called for redemption on January 1st next. Holders are offered the right of conversion into an equal nominal amount of the new 3½ per cent. bonds, together with a cash payment of £15 10s. for every £100 bonds surrendered, to be found from the Government's present resources. The two lines of bonds to be redeemed were finally repayable in 1952 and 1954 respectively. Argentina's improving credit has maintained their price within the narrow limits of 99½ and 103½ this year and they are at present quoted at 101½. Holders are likely to find the present offer attractive, for the new conversion issue will yield 4 7s. per cent. to final redemption in 1972. The Argentine Government is also enabled to prolong the life of the loan up to twenty years at a very small additional cost in effective interest. The creditworthiness of the republic seems conditioned by one primary factor—the repercussions on her economy of British agricultural policy.

* * *

Railway Rates Repayment Questions.—In a note on p. 26 of our issue of October 3rd it was suggested that the problem of repayment to the railway companies of sums over-paid to local authorities and the Freight Rebates Fund would be solved by the issue by these bodies of loans for the required amounts. The service of such loans—£3½ millions for the Local Authorities and £9 millions for the Rebates Fund—would be met from the ordinary revenue of the local authorities and from the railways' diminished contributions to the Fund. If this were done, the companies would receive some £13½ millions in cash (including £1 million which the fund has already at its disposal). Of this, the London Midland and Scottish would get approximately £5,500,000, the London and North Eastern £4,400,000, the Great Western £1,800,000, and the Southern Railway £1,600,000. There has been some speculation in the market concerning the use to which these amounts might be put. It is evident that, if companies have made drafts upon reserves during the depression in order to pay dividends, those sums should be reinstated. The Great Western, for example, has taken £4,210,000 from general and contingency reserves during the last five years in order to maintain the 3 per cent. dividend on the ordinary stock. Only this company, however, has drawn from reserve to any substantial extent. On the other three lines there will be considerable "free" sums available. Assuming that these sums were regarded as available for dividends, on what principle could they be distributed between the various classes of stockholders? To regard the sums as ensuring to the equity would be manifestly unreasonable. The main burden of the depression fell upon the preference stockholders, and it is evident that repayment should be made to them rather than to ordinary stockholders. At the same time, to proceed by first repaying the first preference stockholders in full, and the rest in turn, as if one were dealing with cumulative stocks, would be equally inequitable to the junior stockholders. It might be possible, however, to arrange dividends to the various classes according to what would have been earned in each of the years 1931-35, had the rating charges been adjusted to the new scale. It is interesting to see what the effect of this procedure would be. The holders of L.M.S. 4 per cent. first preference would receive 1½ per cent., the preference 3 per cent., and the ordinary 1 per cent. The 4 per cent. first preference holders of the L.N.E.R. would get 4½ per cent. and the second preference holders 2 per cent. The holders of Southern preferred would receive 4½ per cent. These figures make allowance, of course, for the small allocations to replace sums paid out during the depression. Investors, however, would be well advised to set relatively little store on receiving payments of these dimensions. The companies might well consider that such

Preliminary Notice

PHILIP HILL & PARTNERS

LIMITED

(Incorporated under the Companies Act, 1929.)

SHARE CAPITAL:

ISSUE OF

1,250,000 5 PER CENT. CUMULATIVE PREFERENCE SHARES OF £1 each AT 21s. PER SHARE

and

1,250,000 ORDINARY SHARES OF 5s. each AT 15s. PER SHARE

Directors have applied for and will be allotted in full 250,000 Cumulative Preference Shares and 250,000 Ordinary Shares upon the terms of the Prospectus.

DIRECTORS:

PHILIP ERNEST HILL, Chairman and Managing Director.
SIR EDWARD M. MOUNTAIN, Bart., J.P., Vice-Chairman.
J. STANLEY HOLMES, M.P.
HUBERT A. MEREDITH, Assistant Managing Director.
LOUIS NICHOLAS.
SIR PERCY COLEMAN SIMMONS, K.C.V.O., D.L.

PHILIP HILL & PARTNERS LIMITED was incorporated in 1932. The Company, or its wholly owned subsidiary, Quadrant Trust Limited, has been associated with many important issues, including those for Joseph Rank, Ltd., The Eagle Star & British Dominions Insurance Co. Ltd., Covent Garden Properties Co. Ltd., Second Covent Garden Property Co. Ltd., Beechams Pills Ltd., Hawker Aircraft Ltd., Hawker Siddeley Aircraft Co. Ltd., and other well-known British concerns.

The chairman, Mr. Philip E. Hill, has entered into an agreement to serve the Company as Managing Director for a period of 7 years, and Mr. Hubert A. Meredith, who for several years was the Financial Editor of the "Daily Mail," has been appointed Assistant Managing Director for a period of 10 years.

The assets as set out in the Prospectus, including investments in marketable securities at the valuation shown in the Company's Stockbrokers' certificate, and the estimated net proceeds of the present issue, amount to £4,480,186. This sum is sufficient to cover the Preference Shares now being issued 3½ times, and after deducting the amount of such Preference Capital, will cover the nominal value of the Ordinary Shares already issued and now being issued, over 3 times.

The profits of the Company and of Quadrant Trust Limited for the last financial year on the basis shown in the Auditors' Certificate which is printed in the Prospectus amounted to £291,920, which together with the estimated additional income of £109,195, referred to in the Prospectus, would give a total of £401,115. After allowing for Directors' remuneration, management expenses and Preference Dividend, there would remain a balance of £313,615 available for dividend and reserves, which is equivalent to 29½% on the nominal value of the Ordinary Share Capital already issued and now being issued, or 9.8% on an Issue price of 15s. per share.

The present issue is being made to extend the activities of the Company, and the net proceeds of the Issue will be available for this purpose.

Prospectuses and Forms of Application can be obtained from the

a *bonne bouche* could very suitably be utilised in strengthening the reserve position, in order that when receipts decline—as they must eventually—preference stockholders will be less liable to violent fluctuations in their dividends. To the L.N.E.R., faced with heavy renewals bills and having no "provision" system for charging them to renewal fund, this procedure might find particular favour.

* * *

Plantation Industry Prospects.—Although Mr Eric Miller modestly referred to the difficulty of finding new features dealing with the rubber plantation industry, his hearers at Tuesday's Harrisons and Crosfield meeting—and that wider circle of tea and rubber shareholders, who rightly recognise Mr Miller's authority in the industry—could have wished for no more comprehensive and plainly-spoken statement. His speech divided naturally into two parts. Dealing with the tea industry, Mr Miller made no attempt to under-estimate the difficulties in the present restriction situation. Undoubtedly, the increase in the tea duty last April shook the hopes of the trade that consumption—already difficult to encourage in competition with other beverages—could be gradually increased in this country. Prices during the past twelve months have been little more than steady, and this stability has brought no improvement in the margin between common and fair medium teas. Nevertheless, Mr Miller professed himself "mildly optimistic" regarding the immediate future, and suggested that the restriction scheme would be extended for a further period of years. His account of the rubber position, inevitably, was more cheerful, for absorption is increasing, and London and Liverpool stocks are declining equally steadily. Moreover, the Netherlands authorities have controlled their exports more successfully, for which, admittedly, the increase in basic quotas granted by the International Committee must be largely thanked. There are hopes, accordingly, that native control by individual assessments will be introduced next year without difficulty. Mr Miller remains fully convinced of the necessity for regulation of supplies, and has made one suggestion which deserves consideration. The present scheme has little more than two years to run. The lesson of the negotiations for the continuance of the tin restriction scheme suggests a case for preliminary consideration in the near future of the terms on which the rubber scheme should be renewed.

* * *

Actuaries' Investment Index.—The effect of last week's boom activity, despite considerable profit-taking, is apparent from the further rise of the Actuaries' Investment Index of 178 industrial ordinary shares to 90.2 on Tuesday of this week, compared with 89.2 last week and 87.8 a month ago (December 31, 1928 = 100). The yield this week is 3.58 per cent., compared with 3.61 per cent. last week, and 3.61 per cent. a month ago. Changes in various groups are shown below:—

Group and No. of Securities	Price (Dec. 31, 1928 = 100)			Yield %		
	Month ago (Sept. 15)	Week ago (Oct. 6)	This week (Oct. 13)	Month ago (Sept. 15)	Week ago (Oct. 6)	This week (Oct. 13)
Coal (7)	103.7	110.9	112.7	3.31	3.24	3.21
Cotton (6)	41.0	46.1	47.0	2.11	2.05	2.01
Iron and steel (12)	80.5	82.7	83.0	3.34	3.70	3.67
Oil (5)	88.1	90.2	93.0	3.16	3.07	2.99
Home rails (4)	78.1	81.4	83.9	1.41	1.32	1.28
Stores and catering (20)	87.2	87.1	87.9	3.66	3.67	3.65
Miscellaneous (56)	79.5	80.6	81.7	3.85	3.86	3.81

The oil group shows the greatest absolute rise, but prices are higher this week in every section, except for the building materials group. Representative oil shares now yield less than 3 per cent. on the average. Shipping shares again rose by the greatest proportion, and the "all-round" nature of the advance is shown by an advance of over one point in the miscellaneous group.

COMPANY NOTES

Motor Share Prospects.—A week which has included the Morris "placing," an issue by Alvis, Lord Austin's speech, a satisfactory dividend and report from Standard Motors, and finally, the Motor Show itself, should provide motor share investors with sufficient interest. The motor "year" 1936, which dates, statistically, from October, 1935, has registered new production records. For the ten months from October, 1935, to July, 1936, 307,988 private cars were produced, compared with 266,866 cars for the corresponding period of the preceding "year." It has been computed that the number of cars in use during the past summer exceeded 1,635,000—a comfortable record for all time. The industry, however, has preserved its traditional characteristic. It has been dangerous to infer from the total figures the profits of any individual manufacturer. If the recent accounts of Austin Motor, for example, are examined, it is clear that stability of earning power has become rather marked, despite the increase in turnover. As Lord Austin explained at this week's meeting, the recent increases in wages and materials costs have reduced the profit margin per unit, and a compensating increase in total turnover—for which the company is budgeting this year—involves the closest competition, both in quality and price. The industry, however, has recently learned that valuable savings in costs can be obtained from "smoothing" production over the season. These factors apply, broadly, to

all the "mixed" producers, whose range includes, say, six standard models. Within this category may also be placed such concerns as Morris Motors and Standard Motor. The latter company has successfully exploited the market for stylish cars at a few pounds higher cost, and its £1 shares have provided this year's most spectacular market feature, with a rise from 70s. 9d. to 125s. 3d. Until the market in Morris Motors shares, however, has settled down, and until dividend policy has been completely clarified, Austin and Standard must satisfy the bulk of the general investors' interest. Ford shares, which yield no more than 2.88 per cent. at the present price of 34s. 9d., offer a more specialised equity, for the company concentrates upon fewer models (involving a somewhat higher industrial "risk") to promote the full utilisation of the company's efficient resources at Dagenham, pending a revival of international trade. Devaluation may tend ultimately to increase the overseas trade of the company. All the companies in the accompanying table (with the exception of Ford Motor) are interested directly or indirectly in the Government's scheme for the manufacture of aero engines, while Austin Motors and Rootes, Limited, are to produce aircraft. Investors, however, would be wise to moderate their expectations of profit from this source. It is, indeed, possible that the scheme is meeting with difficulty, for it is understood that

Wolseley Motors (controlled by Morris Motors) has withdrawn from the arrangement. Motor share investment is essentially a specialist occupation, particularly in shares of the smaller companies. The investor in close touch with the industry may occasionally profit from such spectacular recoveries as that of the Rover Company, but the essentially fluctuating nature of the earnings of such specialist concerns as Alvis justifies a share valuation on a higher yield basis than applies to the "staple" producers. The accompanying table shows that investors have no lack of confidence in dividend prospects, for many current yields must be accounted low in relation to the past fluctuations in the industry.

* * *

United Steel Expansion.—Sir Walter Benton Jones' speech at the United Steel Companies' meeting is invariably detailed and illuminating. He directs a company whose *raison d'être* is efficiency, and whose output has advanced at roughly twice the pace of the steel industry generally since 1929. If the steel trade could be described as merely "convalescent," United Steel Companies must surely be the lustiest patient. His speech combined encouraging domestic news with a realistic appraisal of the future problems which the entire industry may have to face in future. The company's steel production increased by 11½ per cent. last year, in response to a general increase in demand at home. Only Workington, which depends upon rail-making to a large extent, has been affected by poor export business, and even here other classes of business have more than made up the difference. At Sheffield the forging works and rolling mills have done exceptionally well; the special steels produced by Samuel Fox have shared the improvement; and at the Frodingham and Appleby works record production was obtained. Investors, however, must thank the company's wise policy of expansion during recent years for the impressive increase in profits. The rise in prices of steel products has not offset the increase in costs, and the greater profit results from larger turnover and increased efficiency. This

policy of re-equipment is to continue. No company has a more successful record in making modernisation pay, and few command United Steel Companies' present resources. But the chairman's emphasis on cautious husbandry to provide for leaner years was rightly deserving of the shareholders' support. The company's development has been a highly creditable achievement, and long-term investors, with the lessons of the past depression in the steel industry fresh in their minds, will undoubtedly applaud the company's policy without losing sight of its good near-term prospects.

* * *

Gaumont-British Control Transferred.—Mr John Maxwell is to be congratulated on his great *coup* in obtaining a controlling interest in Gaumont-British Picture Corporation. When Mr Maxwell formed British International Pictures in 1927, now the producing unit of his holding company, Associated British Picture Corporation, few people in the cinema industry regarded him as a serious rival of the Gaumont-British combine. But gradually Mr Maxwell has built up his theatre subsidiary, Associated British Cinemas, to a circuit of nearly 300 cinemas, which is not far short of the 350 circuit of the Gaumont-British. On the production side, Mr Maxwell never attempted to compete with Gaumont-British, whose Shepherd's Bush studios have been responsible for the most lavish of British films. The relations between the Associated British and Gaumont-British combines have been no less competitive since the report of negotiations some time ago for the acquisition of Gaumont-British. The opportunity has now been presented to Mr Maxwell, since the negotiations between the American film combines (20th Century-Fox and Metro-Goldwyn-Mayer) and the Ostrer Brothers for the sale of the Ostrer holdings failed to be completed. Why these negotiations failed has not been explained, but it is thought that completion was waiting upon an issue of Gaumont-British shares being made to the public which has not been arranged. Mr Maxwell, in a

OFFER OF CONVERSION

to holders of

ARGENTINE RAILWAY GUARANTEES RESCISSION BONDS of 1896 and 1899

The proposal to make this issue has been considered by the Foreign Transactions Advisory Committee and by the Chancellor of the Exchequer in the light of the statement made by the Chancellor on the 7th April 1936. The Treasury raise no objection to the issue. Application will be made to the Committee of the Stock Exchange, London, for permission to deal in and, in due course, for an official quotation for the Bonds.

Argentine Government Conversion Loan

ISSUE OF

£2,500,000 3½ per cent. Sterling Bonds

Sanctioned by Decree dated the 14th October 1936 pursuant to Law No. 12150 extended by Law No. 12237 authorising the conversion of Argentine Government Loans.

Interest payable 1st January and 1st July.
Six months' interest payable 1st July 1937.

The Bonds are the direct obligation of the Argentine Government and are to be repaid in sterling in London on or before the 1st January 1972. An accumulative sinking fund of one and one-half per cent. per annum is to be applied half-yearly in the purchase of Bonds at a price not exceeding par (exclusive of accrued interest but inclusive of expenses) or, to the extent to which Bonds are not so obtainable, in the redemption at par of Bonds to be selected by drawings. The first operation of the sinking fund will be in respect of the half-year ending 1st July 1937.

The Argentine Government reserves the right, on three months' previous notice, to redeem at par on any interest payment date the whole or any part (to be determined by drawings) of the Bonds outstanding. The Argentine Government also reserves the right to accelerate redemption of the Bonds at any time by increase of the sinking fund. Principal of and interest on the Bonds are exempt from all Argentine taxes or impositions present or future. In the event of the Argentine Government creating any obligations secured by a charge on any of its revenues or assets, the Bonds of the Conversion Loan shall (in common with any existing obligations of the Argentine Government entitled to the benefit of a similar provision) be secured equally and rateably with such obligations.

BARING BROTHERS & CO., LIMITED, and MORGAN GRENFELL & CO. LIMITED are authorised by the Government of the Argentine Republic to offer to holders of Argentine Railway Guarantees Rescission 4 per cent. Bonds of 1896 and 1899

(to be redeemed on the 1st January 1937)
in exchange for each £100 nominal of Bonds surrendered
£100 nominal 3½ per cent. Sterling Bonds
carrying interest from 1st January 1937

and
A cash payment of £15 10s.

Bonds presented for conversion must be accompanied by all coupons maturing on and after 1st July 1937. The coupon maturing on 1st January 1937 should be detached by holders for encashment in the usual way. Holders accepting the offer of conversion must lodge their Bonds, together with the appropriate forms of acceptance duly completed, at the Counting House of Baring Brothers & Co., Limited, 8 Bishopsgate, London, E.C.2, or of Morgan Grenfell & Co. Limited, 23 Great Winchester Street, London, E.C.2, not later than 4 p.m. on the 29th October 1936.

Holders will receive fully paid Letters of Allotment, exchangeable in due course for Provisional Scrip Certificates to Bearer which will be issued in denominations of £1,000, £500 and £100. Provisional Scrip Certificates will be exchangeable in due course for Definitive Bonds to Bearer which will be issued in denominations of £1,000, £500 and £100. Brokerage will be paid to Bankers and Stockbrokers at the rate of 5s. for every £100 nominal of Bonds issued pursuant to this offer and comprised in forms of acceptance bearing their stamp.

The above-mentioned offer of conversion has been underwritten. Provisional Scrip Certificates will be issued to underwriters in respect of any Bonds to be subscribed by them on which a final payment of 74½ per cent. is to be made on or before the 29th December 1936.

Forms of acceptance may be obtained from Baring Brothers & Co., Limited, 8 Bishopsgate, London, E.C.2, or Morgan Grenfell & Co. Limited, 23 Great Winchester Street, London, E.C.2.
LONDON, 16th October 1936.

statement issued to the Press, declared that he stepped in to prevent Gaumont-British passing under foreign control. Had that happened, the other large American companies, in his opinion, would have bought control of rival cinema circuits, so that in a short time the bulk of the cinemas in this country might have passed under foreign control. Mr Maxwell is understood to have paid approximately £1,250,000 for the controlling interest in Gaumont-British. It is held through the Metropolis and Bradford Trust which has a capital of £422,500 in 10,000 "A" (voting) ordinary shares of £1 and 1,000,000 "B" ordinary shares of 8s. 3d. Associated British Picture Corporation is acquiring from the Ostrer Brothers 250,000 "B" shares which have already been transferred, and an option on 5,100 "A" shares. Negotiations for the purchase of the shares in Metropolis and Bradford Trust held by the Fox interests have broken down, but their acquisition is not essential to the scheme. Metropolis and Bradford Trust controls Gaumont-British through its holding of 2,915,000 ordinary 10s. shares. Under Mr Maxwell's management the shareholders of Gaumont-British can rely upon economical administration. The new group, of course, will be in a strong bargaining position with producers. The American film combines will have to take the price which exhibitors offer rather than dictate the price which they must pay. But shareholders who imagine that the new combine will be left alone to dominate the field should first inquire whether American interests may not begin to build up a rival circuit.

Cables Investment Trust Accounts.—The first accounts of this Trust, which was formed in July, 1935, in connection with the repayment of part of Cables & Wireless preference stock, cover about fifty weeks to June 30th last. They show that the prospectus estimate of earnings has not been reached. When the Trust took over from Cables & Wireless (Holdings), and its subsidiaries, securities to the value of £7,000,000, it was a term of the contract that the investments acquired should be such as had produced, in the year to June 30, 1935, a gross income of £315,000, yielding overall 4½ per cent. on the Trust's capital, or £300,000 after deducting expenses. The total income for the fifty weeks was £273,572, yielding 3.8 per cent. on a book value of £7,115,008, and the amount available for the ordinary shares is £38,102 (or 2 per cent.) out of which a dividend of 1½ per cent., requiring £30,000, is to be paid. General expenses and fees were only £10,856, but the principal charge was a non-recurring item of £79,856 paid as interest on the outstanding purchase price of the securities. The report suggests that in a normal year it should be possible to reach the prospectus estimate. A comparison of the distribution of investments contained in the Trust's portfolio, and those contained in the Cables & Wireless consolidated balance sheet at the end of 1934 shows that the Trust has only 28.8 per cent. of its securities in Government and corporation stocks, against 51 per cent. for the combined undertaking. This is partly offset by 20 per cent. in public utilities (against 9.7 per cent.) while commercial and industrial and miscellaneous groups account together for 28 per cent., compared with 13.3 per cent. The Trust, therefore, has apparently acquired a full proportion of industrial securities but, in September last year, fixed interest and dividend securities accounted for more than two-thirds of its portfolio. Since equities only amount to about one-third of the whole—and were bought at values ruling in mid-1935—the apparent lack of buoyancy in earnings may be explained. It is, however, an academic point for Cables & Wireless (Holding) which shares the equity with Globe Telegraph, and holds the remaining investments of the group. For the latter concern, however, it may be rather more material for the prospects of its own £10 ordinary shares, which yield £4 5s. per cent. gross at the present price of 13½.

Seager Evans Position.—The accounts of this concern are as comprehensive as investors could wish. It is, however, decidedly difficult to relate the past year's apparent progress to the eventual investment ranking of

the shares. The company, during recent years, has been catering for the popular taste for cocktails, and the considerable expenditure incurred in developing this market has been capitalised. There is, therefore, a touch of unreality in the net profit of £67,346 (excluding £23,006 from investment profits) compared with £37,617 for the previous period of sixteen months. On this basis, the earnings would be equivalent to 24.3 per cent., covering the dividend nearly twice. The following table analyses the profits accordingly:—

	Year to March, 1934	16 mos. to July, 1935	Year to July, 1936
Net profit	26,009	37,617	67,346
Fees, etc.	4,123	5,260	2,454
Ordinary stock:—			
Earned	21,877	32,357	64,892
Paid	Nil	Nil	33,359
Earned (%)	10.7	8.9†	24.3
Paid (%)	Nil	Nil	12½
Investment profit realised ..	...	...	Cr. 23,006
General reserve	...	...	14,830
Special provisions	...	...	40,400†
Carried forward	Dr. 11,111*	32,357	31,666
Development expenditure capitalised	...	45,000	73,000

† Per annum. * Written off from general reserve.
† Includes £35,000 written off development account, and £5,400 new issue expenses. In addition, £25,000 share premiums written off development.

During the year, however, some £73,000 was capitalised to development account, compared with £45,000 for the previous year. From the balance of £118,000, an amount of £35,000 has been written off from normal revenue and a further £25,000 from share premiums. The report states that the sales promotion campaign initiated in 1934 may realise its expected results in a shorter time than was originally anticipated. But it remains true that less than half last year's capitalised expenditure was provided for from current earnings, and there is no indication in the report whether sales can be maintained—or even increased—through a less costly sales campaign. At the present rate of trading profits the balance, after paying 12½ per cent., would not suffice to write off the balance of capitalised expenditure in under two years. But the payment of this rate of dividend is dependent upon the maintenance of a satisfactory level of earnings. Is the latter itself dependent upon further advertising expenditure, or have the company's products won their own national market? The answer is essential before the £1 units, standing at 53s. 6d. to yield £4 15s. per cent., can be safely regarded as modestly valued.

Copper News.—The copper producing industry has shared this week's headlines with the motor trade. A consistent trade demand has effectively stemmed profit-taking in the metal, which has advanced this week from £40 to over £41 for standard. Mr Chester Beatty's speech to shareholders of Roan Antelope, therefore, could have enjoyed no more optimistic setting. The chairman showed that the pressure of stocks which existed two years ago had been completely eliminated. World supplies, indeed, now represent slightly less than three months' requirements, and current world consumption is running somewhat ahead of production. Consumption outside the United States for the year to August last was estimated at 1,044,000 tons, compared with an estimated production of 940,000 tons. The two recent quota relaxations have released an additional 76,600 tons per annum, but, to quote Mr Chester Beatty himself, "the maintenance of the current rate of consumption will require an additional output of copper." From such an authority these remarks suggested the imminent likelihood of an additional quota release, and it duly followed on Thursday, when a further 5 per cent. reduction in curtailment was announced, from that date. The metal market's strength was quite unaffected by this decision. Mr Beatty's speech was an essay in productive efficiency and moderation in restriction policy—

fixed, in the public mind, by a "notional" figure of £40 per ton for copper. The company has achieved a profit of £174,500 for the first quarter of the current year, and on present indications investors may be justified in expecting even higher earnings than those suggested last week (see page 76). If, indeed, earnings of over 60 per cent. are within the company's scope, the yield on the 5s. shares, at 50s. 6d., would be over 6 per cent. The Rhodesian Selection Trust accounts published this week are not, in themselves, of particular interest, but the accompanying Mufulira figures (in which R.S.T. has a two-third equity) are becoming impressive. The company earned £142,189 for the year to June last, compared with a loss of £102,626 for the previous year, and the debit balance carried forward has consequently been reduced to £93,545. During the past year the company produced only 28,123 long tons, but during the present year its permitted production is 36,850 tons, assuming that the 85 per cent. quota is maintained. Rhodesian Selection Trust, therefore, after the difficulties and disappointments of eight years, should now be approaching the dividend zone. The 5s. shares rose with the rest of the group to 18s. 9d. on Thursday.

Sub Nigel Records.—Throughout last year, writes our mining correspondent, this prosperous Kaffir enterprise operated the new treatment plant, compared with little more than six months during the preceding period, and its nominal capacity was increased from 50,000 to 55,000 tons per month. The further expansion in the quantity of ore treated is therefore substantial. The average revenue fell nearly 5s. per ton, and the price of gold was 1s. per ounce lower. Owing, however, to the expansion in operating, and to some saving in costs, the working profit rose by £123,070. Capital expenditure absorbed only £125,140, and was completed during the first half of the year. The corresponding figure in 1934-35 was £375,000, of which £291,730 came from share premiums. Recent results are summarised below:—

	1934	June 30 1935	1936
Ore crushed..... tons	500,100	568,200	632,700
Yield per ton	112/7	112/1	107/4
Cost per ton	34/11	34/6	33/9
Profit per ton	77/8	77/7	73/7
Total working profit	£1,941,590	£2,205,240	£2,328,320
Dividends, amount	£1,223,440	£1,350,000	£1,434,370
Dividends, per cent.	145	160	170
Carried forward	£56,960	£73,540	£84,030
Development footage	88,650	109,270	119,700
Ore reserves	1,773,000	1,818,000	2,099,000
Average value	16.1	15.6	15.1

Despite the increase in profits, Government and provincial taxes, at £752,680, required slightly less; and after payment of the highest dividend total (170 per cent.) on record, an increased balance is carried forward. Increased development, coupled with a reduction in the pay percentage, has expanded the ore reserves to over 2 million tons. Some 46.7 per cent. of the footage sampled proved payable. Good progress has been made with the three main haulages in the Spaarwater area, and a "contour drive" has been commenced from the Sub Nigel 19th level west drive to traverse the Spaarwater area. Sub Nigel has a substantial interest in that concern, and also in Vlakfontein, whose preliminary operations it similarly assisted. These holdings are valued at £117,500 in the balance sheet. Sub Nigel 10s. shares yield approximately 7 per cent. Having regard to the recent trend of the company's profits and to the outlook for gold, it would seem reasonable to anticipate the establishment of fresh records this year.

West Witwatersrand and Venterspost.—The reports of these two undertakings contain little which is really new, for both have been so much in the limelight recently in connection with developments and a flotation and issue by West Witwatersrand. The consulting engineer's report to West Witwatersrand Areas shareholders is comprehensive and provides a full technical survey of the position. These detailed matters appear to justify his conclusion: "The year's operations can be regarded as eminently satisfactory; and the results obtained from borehole intersections,

together with the co-ordinated results from the geophysical and geological investigations, emphasise the vast potentialities of your company's holdings." On June 30th cash stood at £135,140. This amount, as the directors stated in a later circular, was barely sufficient for the exercise of the remaining options on certain areas, and accordingly an issue of 100,000 shares at £10 was taken up by the original subscribers of the working capital. These funds will cover the completion of the exploration programme now in hand, will enable the company to take up its proportion of any new issue by Venterspost, and will allow the retention of the 975,000 shares due shortly from Libanon, which acquired from West Witwatersrand certain claims for £500,000 which sum was returned in subscribing at par for 1,000,000 shares in Libanon. On the Venterspost property development has been more satisfactory. The nature of the ground encountered in No. 2 shaft should allow more rapid progress than for the No. 1 shaft, which for a considerable distance was sunk through heavily watered dolomite. On June 30th, cash amounted to no more than £10,930, while £84,100 was owing to New Consolidated Gold Fields, which is temporarily financing the concern. The terms of the new issue are not yet available, but, obviously, it is not likely to be much longer delayed.

Other Company Results.—The results of 39 further companies appear on page 142. *Manchester Liners*, while maintaining a 5 per cent. dividend, have earned £44,352 against £46,231, but report that some improvement in freights occurred later. *Burberry's*, whose earnings have increased by £14,671 to £85,321, have paid 8 months' preference dividend to May 31, 1933, and a further 2½ per cent. on the arrears of £212,500. A second payment of 2½ per cent. is due in November. The profits of *H. M. Rayne* are practically unchanged at £26,361. *Venesta* report a very substantial improvement, having earned £111,929 against £82,245, and dividends are resumed with a 10 per cent. payment. *Press Caps*, while maintaining

"DOUBLE SECURITY" POLICY

The new United Kingdom Pension Assurance Plan is called "Double Security" because, in addition to insuring the husband's life,

it also safeguards the widow from loss of her insurance money through bad investment by providing her with a regular income for the rest of her life.

This second safeguard removes the one cause for anxiety that even the well-insured man must have.

Alternatively, there is available a "Double Security Endowment Plan" for those wishing to provide benefits for themselves at age 60, as well as for their dependents.

UNITED KINGDOM PROVIDENT INSTITUTION

Head Office: 196 Strand, London, W.C.2

their 10 per cent. payment, are enabled to do so only by including in their balance on trading account a transfer from a reserve; the auditor's report points out that nothing has been written off patents since their acquisition. *Steel Ceilings*, having earned £15,501 against £11,421, are able to pay the first dividend since 1929. *Sheffield Steel Products* are now free from debenture interest arrears. The profits of *Standard Motor* are 60 per cent. higher than for the previous year, and the 25 per cent. dividend is paid on a larger capital. Although increased working expenses resulted from a greater proportion of output by the steam stations, *Perak River Hydro-Electric* earned £195,709 last year, against £108,482. Although average sale prices were lower, a record production enabled *Ste. Madeleine Sugar* to earn profits of £82,772 against £79,414. The reports of 13 rubber companies now available show no change from recent mixed results. *Central Sumatra, Lewa and Batu Rata* have made the greatest improvements, while *Sengat* has earned slightly increased profits. This week's dividend announcements include those of *Rio Tinto*, who are paying the half-year's preference dividend from surplus, and of *Rolls Royce*, who have raised the interim payment from 5 per cent. to 7½ per cent.

* * *

Company Meetings of the Week.—On later pages of this issue will be found the reports of the following Company Meetings:—Roan Antelope, Herrburger Brooks, Murex, Nigel Van Ryn Reefs, Goode, Durrant & Murray, Industrial Finance and Investment Corporation, Harrisons and Crosfield and Tangoel Rubber Estates. Mr Chester Beatty's optimistic speech at the Roan Antelope meeting is discussed on page 126. At the Murex meeting Mr Joseph pointed out that the increased profit was due not only to higher trading profit, but also to increased dividends from Murex Welding Processes, to interest on investments, and to lower charges. The proceeds of the new issue are needed to deal with the increasing turnover, as well as for capital expenditure. Mr W. A. Wills, at the Nigel Van Ryn Reefs meeting, referred to the formation of the Australian Gold Reefs Corporation to take over the Monument Hill shares and the Quartz Block. At the Industrial Finance and Investment Corporation meeting, the chairman referred to the possibility of arrangements "for a more equitable division of profits" between both preference and ordinary shares since the latter carry 6½ per cent. Mr Eric Miller's speech at the Harrisons and Crosfield meeting is referred to in a Note on page 124. At the Tangoel Rubber Estates meeting, the chairman anticipated that devaluation would put the company in a much better competitive position. Mr Louis Sterling, at the Herrburger Brooks meeting, explained that the large reduction in interest receivable was due to the realisation of Government securities at advantageous prices. Announcing the resumption of preference dividends, the chairman of Goode Durrant and Murray warned shareholders that recovery in Australia was still only partial.

THE WEEK IN THE MARKETS

THE STOCK EXCHANGE

SETTLING DAYS
TICKET ACCOUNT
OCTOBER 20 OCTOBER 22

LAST week was the occasion of an industrial share boom. This week, gilt-edged stocks have occupied more of the stage. That there were no wounds to lick after the dashing advances a week ago is a tribute to the massive technical strength of the markets. Profit-taking this week has produced a few much-needed adjustments, for the later stages of the advance became very ragged. But of short-period vulnerability there has been no sign. The account moved to its close with a rather subdued air, but with no semblance of retreat. Adequate, if somewhat intermittent support was given to the industrial section, which although more vulnerable to a change of trend, has proved itself very resistant. Thursday's turmoil when dealings in Morris Motors units began (see page 122) was wholly unrepresentative of the general market.

The feature of the gilt-edged market was the raising, on two successive days, of the "tap" price of 2½ per cent. Funding to 93½. A general improvement was immediately recorded in other issues, with Old Consols leading the way in mid-week. Profit-taking on Thursday made little impression on the market. Home Corporation issues remained firm, despite the Bristol issue.

Much interest was aroused in the Argentine bond market by the 3½ per cent. Conversion issue (discussed on page 122), and considerable support was accorded to the Buenos Ayres provincial issues. The strained political atmosphere over the week-end depressed Central European issues, and Far-Eastern bonds were dull until mid-week.

Further demand for Great Western Ordinary took the price to 60 on Tuesday, although it was not held. Interest switched to Southern deferred, which were the only certain feature in mid-week, despite the satisfactory traffics. The announcement of debenture arrears payments by B.A. Pacific and Argentine Great Western helped the Argentine rail market on Wednesday, and the ordinary stocks and marginal preferences were in good demand. On Thursday, Central Argentine 4½ per cent. preference jumped 8 points to 52½ on the dividend.

Trading in industrial share markets has not been very enthusiastic this week, and prices have naturally moved irregularly, although the tone has been very firm. The iron and steel section was irregular despite record production figures; R. A. Lister were in good demand, and there were signs of slightly increased activity in mid-week. John Brown shares did not hold the ground gained on news of the share offer on bonus terms. Powell Duffryn were a feature in the coal section. Aviation issues were soft when the week opened, but the tone became firmer later. The motor section provided the high spot of the week, and hysterical conditions prevailed when dealings in the Morris 5s. units opened on Thursday; within ten minutes the price was bid up from 39s. to 46s., but in quieter conditions later the price came back to 42s. Standard Motors were also prominent in mid-week, after an earlier setback on the dividend announcement, the accounts showing a considerable jump in earnings. In an otherwise dull electrical equipment section, Henley shares were in good demand up to mid-week.

Textile issues were somewhat irregular, although there were several firm points. American Celanese were in demand among rayons. Debenham shares were supported on dividend hopes in the stores group and among provision and catering issues. Tate and Lyle and Unilever N.V. were firmer than the general trend. With few exceptions the Brewery issues were dull. Shipping shares were slightly harder in mid-week. The miscellaneous industrials group saw irregular conditions, and price movements were not of any great importance. British Plaster Boards were fairly consistently strong, but the building material group in general was inclined to be easier. Profit-taking was evident among various engineering issues, and British Oxygen shares lost ground steadily.

The oil shares market has seen very active dealings, mainly in the Eagle issues and in Royal Dutch, both on English and continental account. Dividend anticipations seemed to be behind the movement, which paid more attention than of late to Canadian Eagles; but in mid-week there was a setback in which Mexican suffered more than Canadian. There was a firm market in Burmah issues, while Roumanians came on offer. Trinidad Leasehold shares were well supported in anticipation of the forthcoming meeting. The rubber shares market attracted but little attention, although the tone remains fairly firm; prices in the tea shares market gave way on increased selling orders and lack of support.

Quiet conditions have prevailed in the Kaffir market this week, although there was some buying of dividend-paying shares, and Anglo-American issues were strongly supported. There was some buying from the Cape early in the week, but this died away later. The West African section remained very firm, with signs of increasing support from a wider market. Rhodesian copper issues attracted most of the interest in the mining markets, on the Roan Antelope meeting, the continued strength of the commodity, and the increased production quota. Tin shares have been easier this week on the generally uncertain outlook for the metal.

Cheerful conditions have prevailed on the Paris Bourse this week, and political uneasiness has not overawed the market. Internationals have been consistently strong, and domestic issues have not been neglected in the general rise. The week opened firmly on the Berlin Bourse, but prices sagged later, and showed no signs of recovery in mid-week. In Amsterdam, sharp advances in rubber shares, particularly in the minor issues, were the chief feature, the reaction which followed being only slight. Later on, interest became centred in Royal Dutch, on London buying.

"FINANCIAL NEWS" DAILY BARGAIN INDEX

Approximate number of Bargains recorded in Stock Exchange Lists

	Week to Oct. 9	Oct. 8	Oct. 9	Oct. 12	Oct. 13	Oct. 14	Oct. 15

NEW YORK STOCK EXCHANGE

PRICES on Wall Street were still rising when business closed for the extended week-end holiday, and continued their progress this week, although there was a considerable volume of profit-taking in evidence at all times. Prices became a little weaker in mid-week, after a steady ten-day rise. Railroad shares have been favoured on the excellent car-loading figures, but this week there was more irregularity in this section. Motor shares have been firm on the growing output, and steel shares suffered slightly from rumours of wage increases in the industry, although output figures are still very satisfactory. *Iron Age* estimates a slight reduction in mill activity at 75 per cent. of capacity against 75.5 per cent. for the previous week, but the *Iron and Steel Institute* shows an increase at 75.9 per cent., against 75.3 per cent. last week; automobile demand is increasing, and the railroads are continuing their buying. Utility issues reacted on disappointment with the slow progress made at the conference between utility officials and the T.V.A. in pooling agreements. Farm Equipment and Mail Order shares were firm on the improved outlook in the farming States. Business news generally is good; power output for the week of October 10th was 16.1 per cent. higher than for the corresponding week of last year, and bank clearings for the week of October 7th were 26.2 per cent. up on last year. Government obligations on the Bond market were rather irregular this week.

OFFER TO NEW READERS

Any reader who makes his first acquaintance with this journal with this week's issue is invited to fill up the attached:

To Publisher, "Economist Newspaper Ltd.,"

8 Bouverie Street, E.C.4.

In order to test the value of your publication I should like you to forward this to me by post for the next four weeks. If I then decide to become a subscriber, it is understood that there will be no charge for the copies thus received, but otherwise I shall be willing to pay 4s. to cover their cost.

LONDON ACTIVE SECURITY PRICES AND YIELDS

In calculating yields on fixed interest stocks quoted below allowance is made for interest accrued since the last date of payment, less income tax at the standard rate. Where stocks are definitely redeemable at a certain date the yield includes any profit or loss on redemption; where stocks are redeemable at or before a certain date the final date of redemption is taken when the stock stands at a discount and the earliest date when the quotation is above par. The return on ordinary stocks and shares is calculated by reference to the latest dividends, account being taken of any enhancement or reduction of interim dividends. Allowance is made for accrued dividends in calculating the yield on "cum. div." shares.

† Columbus Day.

CAPITAL ISSUES

The real excitement in the new issue market this week has surrounded the *Morris Motors* placing of 5s. ordinary stock units. We comment upon the implications of this marketing and on Thursday's extraordinary scenes on page 122. The *Argentine Republic* conversion issue, with its record low nominal interest rate of 3½ per cent. is discussed on page 122. Trustee borrowing has been continued this week with the *Bristol* issue, on identical terms with last week's Manchester offer, and was therefore assured of success. Only *Alvis Limited* have made a direct share offer this week, of 5s. shares at 82½ per cent. premium. These shares rank for dividend from next January. The company has a fluctuating profits record characteristic of the specialised motor producer, and the attractions of the present issue are based largely upon the new re-armament equity which the company has recently acquired. This covers the production of aero-engines, armoured cars and tanks. The latter branches, however, are still in an early stage of development, and the shares must accordingly be allotted a speculative ranking. *Woking District Gas Company* has made a small prospectus issue of 4 per cent. perpetual preference stock at £104 per cent. This week's statements "for information only" have been published on behalf of *North British Rayon*, *Gas Consolidation*, *Island Trading Company*, *Parkland Manufacturing*, *Waile and Son*, *Samuel Williams and Sons*, and *Continental Union Trust*.

ISSUES OF THE WEEK

January 1 to October 10, 1936, including conversions, Old Basis, £22,038,553.
January 1 to October 10, 1936, excluding conversions, Old Basis, £140,548,466.
January 1 to October 10, 1936, including conversions, New Basis, £356,201,829.
January 1 to October 10, 1936, excluding conversions, New Basis, £257,542,851.

Net Sales National Savings Certificates, October 1 to October 10, 1936, Dr. £150,000.

Middleton and Company at 42s. until November 27, 1936.

FORTHCOMING ISSUE

Philip Hill and Partners, Ltd.—Lists will open and close on Tuesday next, October 20th, for an issue of 1,250,000 5 per cent. cumulative £1 preference shares at 21s. per share and 1,250,000 5s. ordinary shares at 15s. per share. Mr. Philip E. Hill is chairman and managing director of the company. The prospectus will show that the assets ordinary over 3 times, while on the basis of past profits a return of nearly 10 per cent. is shown on the basis of past profits a return of price of 15s. Industrial conditions in this country are expected to offer exceptional opportunities for expanding the company's business, for which the net proceeds of the issue will be available.

ISSUES TO SHAREHOLDERS ONLY

Kenya Consolidated Goldfields, Ltd.—Issue at par 800,000 shares 2s. 6d. each at par, in proportion of three shares for each four held. The offer will be open till October 29th. The issue has been underwritten by the Fanti Consolidated Investment Company, Ltd., who will receive as consideration an option on 400,000 shares at par for 12 months, and on a similar number of shares for 18 months.

Hilton Main and Holly Bank Collieries.—Issue to shareholders registered September 30th, 41,100 £1 ordinary shares at £2 each in proportion of one new share for each five shares held.

Murex, Ltd.—Issue of 46,125 £1 ordinary shares to ordinary shareholders registered on October 1st. One new share at £6 10s. each for every twelve ordinary shares held. Will rank as fully paid up for any dividends declared in respect of year commencing July 1, 1936.

British Industrial Plastics.—British Industrial Plastics has issued a further 75,069 ordinary shares of 2s. each under the exercise of the options granted shareholders in 1934.

John Brown and Company, Ltd.—Issue of 391,617 6s. ordinary shares at 30s. each in proportion of one for every ten held on October 13th. Proceeds of issue will be utilised for the general purposes of the company. The new shares will rank for dividend and in all other respects *pari passu* with the existing issued ordinary shares. Lists close November 7th.

CONVERSIONS AND REPAYMENTS

New Zealand Government Conversion Loan.—The New Zealand Government announces that arrangements have been made for the conversion or repayment at par on January 15th of approximately £12,400,000 4 per cent. 1937-40 stock. This stock, which is mostly domiciled in New Zealand, will be convertible into 3½ per cent. stock repayable 1955-57, or into 3 per cent. stock repayable 1939-41.

OFFERS ABROAD

Straits Settlements Government Loan.—Issue of \$30,000,000 3 per cent. loan, 1962-1972, at \$100 per cent. Interest payable April 15th and October 15th. The loan is being raised for the purpose of the redemption in due course of the Straits Settlements 3½ per cent. inscribed stock. Priority will be given to applications from co-operative societies registered in Malaya. The loan is secured on the general revenue and assets of the Colony and of the Singapore and Penang Harbour Boards. To be repaid at par on April 15, 1972, or after April 15, 1962, at three months' notice.

COMPANY MEETINGS, &c.

HARRISONS AND CROSFIELD, LIMITED

TEA AND RUBBER POSITION

Mr Eric Miller's speech, on the 13th instant, at the twenty-eighth annual meeting of Harrisons and Crosfield, Limited, comprised, as usual, a review of the tea and rubber industries during the past year. Of the former he said: Probably the most striking event in the tea industry has been the increase of twopence per lb. in the United Kingdom tea duty imposed in the last Budget, raising it to 4d. per lb. on Empire and 6d. per lb. on foreign grown tea. Even though this additional duty may not materially check consumption in this country, it will certainly not help us to increase it. It came as an unexpected and unpleasant surprise to the trade, and it is a pity that the present time should have been selected for this additional impost, when the industry is still unable to make ends meet without the help of international regulation of supplies and is expending large sums on propaganda in an effort to stimulate the further consumption of tea in the countries which offer the best prospects of expansion. Something like £400,000 a year is being put up by producers for propaganda conducted by The International Tea Market Expansion Board.

RUBBER PLANTATION INDUSTRY

Turning to the rubber plantation industry, Mr Miller said: Stocks in London and Liverpool public warehouses, which are looked upon as the barometer of the industry, had reached the highest figure ever recorded at 178,000 tons in mid-September, 1935. The corresponding figure at the end of September this year was 103,000 tons, the diminution having proceeded very steadily week by week. It is natural, therefore, that the price should have improved in recent months from the unsatisfactory level to which it fell in 1935. The world output of automobiles has made rapid recovery in the last year or two, although the 1935 total of 5,200,000 vehicles is still about one million less than were turned out in the boom year 1929. The output for 1936 will be greater than it was in 1935. At the end of 1935, 26 million automobiles were registered in the United States and 11 millions in other countries, a total of 37 million vehicles in use.

Although the automobile industry still absorbs about two-thirds of the rubber which goes into consumption and is likely to remain the predominant user, it is gratifying to see a steady increase in other directions. The fitting of pneumatic tyres to agricultural vehicles has proved very advantageous to farmers, and though it is not practical to convert old vehicles from iron-shod to rubber tyres, it looks as if pneumatics will soon be standard equipment on most new vehicles sold. The use of rubber in latex form continues to increase, the 1935 shipments, equivalent to over 20,000 tons of dry rubber, being four times as great as the 1929 figure. This latex is going largely into outlets for which ordinary rubber is not suitable and is extending well beyond the field of the rubber industry. 1936 shows further headway in this direction.

THE REGULATION SCHEME

The present agreement has little more than two years to run. With the experience of the Tin Regulation Committee before us it seems to me not inappropriate to suggest that the rubber industry and the Governments concerned might well be turning their minds to a preliminary consideration of the question of continuing regulation, so that any queries or possible difficulties can be cleared up in good time.

In concluding my address to the shareholders of this company, which has business contacts with most parts of the world, I must make brief reference to the devaluation of the franc and the guilder. We are more directly interested in the guilder than the franc, and the decision which was taken towards the end of September by the Governments concerned came to us as a relief from prolonged tension. The Chancellor of the Exchequer last week referred to this devaluation in a most interesting speech and gave us an encouraging view of the significance to be attached to the declarations of the Governments of the U.S.A., France and our own country, opening up a prospect of co-operation for the revival of international trade. Let us hope that this movement will speedily gather strength, for nothing is better calculated to dissipate international political unrest and restore amity amongst the nations, who are still suffering from the distressing experiences of the last two decades. (Applause.)

The report and accounts were unanimously adopted and a dividend of 15 per cent. on the deferred ordinary stock, making 20 per cent. for the year, was declared.

NIGEL VAN RYN REEFS, LIMITED

AN UNUSUALLY LIQUID POSITION

The ordinary general meeting of the Nigel Van Ryn Reefs, Limited, was held, on the 13th instant, in London.

Mr W. A. Wills (chairman and managing director) said that the realised net profit for the year ending June 30, 1936, was £30,722. They were recommending a dividend of 10 per cent. and the carrying forward of the balance of £20,722, with certain unrealised prospective profits. As they had to wait for the returns from their South African secretaries, it was probable that the dividend warrants would not be ready for posting until about the end of December. The company was in an unusually liquid position with no debts. On June 30th last cash at bank amounted to £33,924, and their quoted assets at middle prices were valued at £77,671 on June 30th. Their quoted shares at that date consisted of 48,920 Marievale Consolidated Mines, 2,500 Wiluna Gold Corporation, 1,000 Lake View and Star, 2,000 Commonwealth Mining and Finance, 500 Nigel Gold Mining, and 2,500 Camp Bird. In addition, the company owned unquoted shares standing in the books at £59,512. The chief item was 561,500 shares in the Lamplough Gold Mining Company, of which they were co-vendor with the Camp Bird group, with a book cost of £24,901. Exploration was still going on, and they were not yet in a position to tell shareholders whether results were satisfactory or the reverse.

The sale of the 257 claims adjoining the Nigel Company to the Marievale Consolidated Mines, Limited, had at length been completed. The purchase price was £25,000 in cash, which, under the agreement, was applied to the purchase of 50,000 shares in the Marievale Consolidated Mines at 10s. per share. The shares now stood in the market at 23s. In addition, they had an option on 25,000 shares at par (10s.) when issued and a further option on some further shares at 15s. or lower. The Marievale Consolidated Mines was under the exceedingly careful and conservative management of the Union Corporation, and they expected those shares to stand at a much higher level by the time the productive period was reached, as the company was situated on the extension of the main shoots of the Far East Rand and was contiguous to the Nigel Gold Mining Company and on the same reef.

With regard to the Australian Gold Reefs Corporation, they used to hold their Monument Hill shares and the Quartz Block on joint account with the Gold Corporation, but it was inconvenient assigning those assets at cost to a company registered for that purpose to which was given the name of the Australian Gold Reefs Corporation, Limited. They practically controlled the Monument Hill company through their large holding. The main shaft had now been carried down to a depth of 1,230 ft., and the mill was operating. The grade had been low, but had latterly shown signs of improvement, and Mr Stuckey had expressed the opinion that the mine would pay dividends. In a letter from Mr Stuckey dated September 21st he stated that the initial returns from the mill added that there had been an improvement in the ore being stoped above the 240 level near the central shaft at 500 ft. south of the main shaft.

On the Quartz Block values hitherto had been good, running from a few dwts. to 2½ ozs. They must wait until more development had been carried out before they knew whether they had a 4 dwts. by amalgamation, while the tailings also showed 4 dwts. The pyrites concentrates had not yet been assayed. That, of course, as far as it went, was very satisfactory; it looked like at least 8 dwts. Mr Stuckey's last letter, received the previous day, remarked that they were justified in describing it after 15 months' work as an encouraging prospect.

Their future for the next few years should be assured, as they had carried forward a solid sum independent of further profits holding in the Marievale Consolidated Mines, amounting at the present time to 50,000 shares plus 25,000 under option. Their liquid assets in cash and quoted shares alone exceeded the issued capital, and they had no debts or open commitments.

Their prospects were very largely dependent upon the price of gold. After efforts on the part of France and other countries to adhere to the gold standard, which was ruining them, as it nearly ruined this country in 1931, France had reluctantly gone off on September 25th, followed by Switzerland on the 28th, Holland on the 29th and Italy on October 5th this year. The immediate consequence had been that gold had already risen from 137s. 6d. to approximately 142s. He still thought that gold would ultimately reach a much higher price, which would make a vast difference to the profits of gold mining companies.

The report was adopted.

HERRBURGER, BROOKS, LIMITED

BETTER OUTLOOK FOR PIANOS

The sixteenth annual general meeting of Herrburger, Brooks, Limited, was held, on the 15th instant, at Winchester House, London.

Mr Louis Sterling (the chairman) said: As regards the profit and loss account, a considerable reduction appears under the heading of interest receivable, due to the fact that last year—that is, the year to June, 1935—advantage was taken by your directors of the appreciation in value of Government securities held by the company by the sale thereof, resulting in a profit of £13,682, which was duly brought to account. Out of the cash realised, approximately £70,000 was repaid to the shareholders on repayment of capital, and the balance of £80,000 allowed temporarily to remain on deposit at our bankers.

Money on deposit, of course, only earns a very small rate of interest, and when this is taken into account, together with the reduction of the amount by the £70,000 referred to, the interest earned has decreased by approximately £3,200. Against this item, however, interest payable, £3,398, has disappeared. This interest was payable on the balance of purchase price outstanding of two businesses taken over by us some years ago, and these balances were paid off during the previous year, with the result that the interest charge has accordingly now disappeared.

Your directors have, however, since the end of the financial year reinvested a considerable portion of the cash which was on deposit at June 30th last in Government securities, and securities guaranteed by the British Government, all of which are redeemable at comparatively early dates. The rents receivable and rents payable have both increased, due mainly to the taking over of a factory held on lease and sub-let which was previously included in the accounts of a subsidiary company which has been wound up.

APPROPRIATION ACCOUNT

The profit and loss appropriation account includes the expenditure incurred in connection with the repayment of capital. The charge for income tax represents the sum necessary to maintain the income-tax account at a figure to cover all liability in respect of profits made up to and including the year under review.

Your directors are pleased to be able to propose payment of a final dividend which will be slightly in excess of the amount paid last year, and at the same time to increase the carry-forward on profit and loss account by approximately £3,500.

There seems to be no doubt that the piano is slowly but surely returning into public favour, and there is considerable optimism in the piano trade generally that the present year will show an improvement. Unfortunately, that is something we, as suppliers to the trade, can do nothing to control, but we naturally hope that such will be the case, as any increase in piano sales should carry with it an increase in our own business.

The general trade of the country has undoubtedly improved, and appears to be likely to continue to improve. This will result in increased prosperity all round, and although it takes some time for that prosperity to benefit the trade in which we are concerned, there is no doubt that in due course benefit should be realised, and we are pleased, therefore, to say, as on previous occasions, that we view the future with confidence.

The report and accounts were unanimously adopted.

TANGOEL RUBBER ESTATES, LIMITED

BENEFITS OF DUTCH DEVALUATION

The annual ordinary general meeting of this company was held, on the 12th instant, in London.

Mr Walter Hilliers, the chairman, in the course of his speech, said:—Our crop had to be curtailed to the extent of some 45,000 lbs., as the licences for the corresponding weight of rubber were sold back to the Government in response to their request in connection with the regulation of exports, and the profit on this quantity was smaller than if the rubber had been sold in the open market. Over 22,000 lbs. of rubber had to be sold locally at about cost, as any purchases of licences at that time would not have been remunerative.

We are pleased with the progress of the Wonokerto division, and the whole area of about 260 acres will now be tapped. The estimated cost does not exceed that of our principal estate. The crop for the first year of tapping is expected to be about

90,000 lbs. By opening up this little property we were able to reduce appreciably the capital costs of our rubber per acre.

If rubber prices remain at about the present level, we can, I think, look forward with confidence to an improvement on the year under review. It is too early to say much as to the effect of the devaluation of the guilder, but this should, of course, be beneficial. In any case, companies situated in the Dutch East Indies will no doubt be put in a much better position than hitherto to compete in the world's markets. No forward sales of rubber have been made, and none is contemplated at present.

The report and accounts were unanimously adopted, and a dividend of 2 per cent. was declared.

ROAN ANTELOPE COPPER MINES, LIMITED

REVIEW OF THE COPPER POSITION

Mr A. Chester Beatty (chairman) presiding in London, on the 14th instant, at the ordinary general meeting, said:—

The net profit of £514,487 was the highest so far reached, and compares with £330,220 for the preceding year. This satisfactory result was obtained notwithstanding a restricted output of copper, and was due to the higher market price for the metal.

Having in mind that our enterprise is now well established for production on a relatively low cost basis, you will see that variations in our profit-earning capacity are primarily dependent on the price of copper and on the quantity which we produce and sell. A review of conditions affecting these factors is therefore of special interest to shareholders. It is only about two years ago that the copper market was under the pressure of unduly large stocks which had accumulated during the period of depression, and production was continuing at a rate somewhat in excess of consumption. In consequence, the market for the metal was unsettled, and prices were unduly low. Efforts made by leading producers to correct this position led to the scheme for restriction of output which has now been in operation for nearly 18 months. That scheme was timely, and its successful outcome has been aided greatly by the increase which has taken place in the demand for copper. Since the inception of curtailment the price of the metal has risen steadily from the exceptionally low level to which it had fallen.

The primary purpose of the scheme was to ensure so far as possible a rational regulation of output, and it is not the policy of responsible leaders of the industry to curtail supplies unduly in order to force up prices. As I told you last year, the parties to the restriction agreement consider that an unduly high price is good neither for producer nor consumer, and flexible arrangements were set up so that increases or decreases in production could be made quickly to meet changes in market demands. These arrangements have worked smoothly and effectively as demonstrated by the two recent changes in the rate of curtailment.

An important change in the position since the commencement of curtailment has been a substantial reduction of copper stocks. At the time the agreement was reached world stocks of refined copper amounted to 585,000 tons (I am now referring to short tons of 2,000 lb.). By the end of August, 1936, there had been a reduction of 179,000 tons to 406,000 tons. These world stocks represent slightly less than three months' market requirements, and current world consumption continues somewhat ahead of production. To provide for the increased requirements of copper, two recent changes in curtailment were made, which will produce further supplies at the rate of 76,600 tons a year. The maintenance of the current rate of consumption will require an additional output of copper.

The all-round improvement in the position of the market, coupled with the possibilities which exist for further expansion in demand for the metal, in my view fairly justifies us in looking for a marked improvement in our company's results for the current financial year. The usual report covering the first quarter, ended September 30, 1936, will be issued to shareholders in the course of a few days, and will show an estimated net profit, subject only to taxation, of £174,500. The average revenue from copper sales account for that quarter works out at £37 17s. 8d. per ton, against an average over the last financial year of £34 11s. 7d.

The report was unanimously adopted.

Orders for the publication in these columns of the reports of Company Meetings should be addressed to the Reporting Manager of THE ECONOMIST, 8 Bouverie Street, Fleet Street, London, E.C.4.

MUREX, LIMITED

BUSINESS STILL EXPANDING

The seventeenth ordinary general meeting of Murex, Limited, was held, on the 15th instant, at Winchester House, London.

Mr Geo. P. Joseph (the chairman) said that the increase of £53,500 in the sum carried from profit and loss to the appropriation account was due on the one hand to increased profit from their own trading, increased dividends from Murex Welding Processes, Limited, and interest on investments, and, on the other hand, to a reduction in the various charges as set out on the debtor side of the accounts. After the payment of a dividend of 3s. a share, less income tax, there would remain £133,361, of which £100,000 would be transferred to the general reserve, making £317,180, and leaving £33,361 to be carried forward.

At their Rainham works the range of the company's activities had been extended, and that part of their business continued to show a very satisfactory increase.

The dividend proposed—an increase from 20 per cent. last year to 25 per cent. on an increased capital—would no doubt be considered satisfactory, particularly as it was accompanied by an issue of shares on terms which, having regard to the present market price, constituted an appreciable bonus. After payment of the dividend they would still have large liquid resources, but they had very heavy commitments in regard to capital expenditure to meet. It was clear to the board that in order to carry their programme into effect and leave them with the necessary margin, the new issue was required not alone to provide for capital expenditure, but to maintain the company's business and deal with increasing turnover and expanding demand. When the issue had been made, the general reserve would be raised by the premium thereon to £572,930. It was then proposed to convene an extraordinary general meeting to capitalise a portion of the reserve to be distributed on the basis of two fully-paid ordinary shares for every three ordinary shares held, and to effect that it was proposed to increase the authorised capital of the company by a further 600,000 ordinary shares of £1 each.

The company's new financial year had opened well, and with trade increasing generally he saw no reason why they should not be able to issue another satisfactory trading record in the next report and accounts.

The report was unanimously adopted.

INDUSTRIAL FINANCE AND INVESTMENT CORPORATION, LIMITED

IMPROVING POSITION

The eleventh ordinary general meeting of this Corporation was held, on the 9th instant, at Winchester House, London, Mr Paul Lindenberg (the chairman) presiding.

The Chairman, in the course of his speech, said that the receipts for interest and dividends amounted to £112,431, from which they had to deduct discounts on realisation of loans amounting to £42,000, and therefore, on balance, £70,258 remained, against £42,750 last year. Their investments again showed an increased appreciation compared with the preceding year of £31,487. They proposed to pay a dividend of 2 per cent. on the ordinary shares. The ordinary dividend was not very high, but the fact that they had to pay so high a rate as 6½ per cent. on the preference shares prevented them this year from distributing a higher dividend on the ordinary shares. They hoped that the time would not be too distant when they could make some arrangements for a more equitable division of profits for both classes of shares. Once they had finally reduced the loans in foreign countries to a figure which would avoid losses due to exchange restrictions they were confident that the income from other sources would enable them to declare more satisfactory dividends on the ordinary shares.

They had taken an interest in and they had been able to carry through transactions which had not only been profitable for the company, but had also proved entirely satisfactory to their friends who were associated with them in those transactions and to the public which had invested in shares placed by them. Their sphere of operations had been entirely transferred to enterprises in the British Empire. The economic conditions, especially in the United Kingdom, had been highly satisfactory, and, he hoped, would continue so. With regard to the changes which had taken place in the last few weeks in the foreign exchange situation, France, Switzerland, Holland and Italy had devalued their currencies and were therefore now more in alignment with the United States and Great Britain. The steps taken were, in his opinion, a move in the right direction.

The report was unanimously adopted.

GOODE DURRANT AND MURRAY, LIMITED

RESUMPTION OF PREFERENCE DIVIDEND

The thirty-eighth ordinary general meeting of Goode Durrant and Murray, Limited, was held, on the 15th instant, in London.

Mr William E. Pennick (the chairman) said that shareholders had probably seen a great deal that had been published in recent months about the prosperity of Australia as a whole, and it was obvious to all that an improvement had taken place. That was reflected in the company's accounts, but it would be wrong to assume that the whole of the community had recovered from the effects of the depression which had lasted for so long a time. During the year under review there had been serious drought conditions, particularly in Western Australia, but in South Australia the harvest generally had been satisfactory, and the improvement in prices of both wheat and wool had to some extent helped to make up for a smaller crop and clip.

The difficulty of having to deal with the competition of cheap Japanese products had continued throughout the year, and the directors were gratified when in May last the Australian Government put on such duties that the price of those goods would be brought more into line with those of the productions of this and other countries.

With regard to their land and buildings, they held substantially the same properties as in 1929. In that year they were valued at £165,000 more than the then book value. At the height of the depression they had been valued at £106,000 more than the then book value, and since 1931, with the improved state of Australia generally, property values had increased.

The outstanding feature of the report was the fact that they were able to announce an amount of profit sufficient for them to recommend the payment of a dividend on those preference shares on which the dividend had been in arrear since October, 1931. Before issuing their report, the whole question had been submitted to their legal advisers, and they were satisfied that in view of their real position they were justified in their recommendation.

With regard to the future, they were reasonably optimistic. The company's trade in both Western Australia and South Australia to date in the current year was in advance of that of the previous year, and, with the present high prices of both wheat and wool, there was reason to look forward with confidence. The report was unanimously adopted.

GOVERNMENT RETURNS, &c.

NATIONAL ACCOUNTS

The total ordinary revenue for the ten days ended October 10, 1936, amounted to £21,322,000, against ordinary expenditure of £34,647,000. After allowing for a decrease in Exchequer Balances of £21,380,473, the operations for the ten days, as shown below, decreased the gross National Debt by £7,825,000 to approximately £8,000 millions.†

The French Bank Rate was reduced on October 15 from 2½ to 2 per cent. Other Overseas Bank Rates, together with South African, Central and South American and Australasian Exchange Rates appeared on pages 41 and 42 of the *Economist* dated October 3rd.

THE BANK OF LONDON AND SOUTH AMERICA, LTD., has received telegraphic advice from the Madrid Branch that the gold surcharge for payment of Spanish Customs duties has been fixed for the period October 11th to 20th at 142.04 per cent. The previous rate was fixed as from October 1st at 136.58 per cent.

GOLD AND SILVER

The following statistics of imports and exports of gold and silver for the week ended October 15, 1936, are issued by the Statistical Department of H.M. Customs and Excise.

GOLD MARKET

Messrs. Samuel Montagu and Company write on October 14, 1936:—
 The Bank of England gold reserve against notes amounted to £248,660,346 on October 7th as compared with £248,649,668 on September 30th. No purchases of gold by the Bank have been announced during the week under review. The open market continued to be active, but liquidations have been on a much smaller scale. About £3,000,000 was available at the daily fixing and was taken mainly for the Continent, the demand maintaining prices at a small premium over the dollar exchange parity. An official announcement was issued by the Treasury on October 12th to the effect that arrangements for technical co-operation with the monetary authorities in the United States of America have now been completed and a new regulation is being published by the Secretary of the United States Treasury which will enable gold to be obtained in the United States in exchange for dollars by any country which gives reciprocal facilities to the United States. The British Government has arranged for such facilities to be afforded in London to the United States authorities. Under the regulations existing in the United States hitherto, gold could only be sold to countries on the gold standard and had they remained in force, Great Britain and France would have been debarred from converting into gold any dollars acquired through the working of their Exchange Equalisation Funds. The new arrangement, which is a sequel to the monetary agreement made between Great Britain, the United States of America and France, provides for a reciprocal exchange of currencies into gold to give fuller effect to the working of the agreement. The price at which the United States Treasury will sell gold is \$35 per fine ounce plus ½ per cent. handling charge; no announcement has been made as to the price at which gold will be sold by the British and French authorities, so it is supposed that it will be on the basis of market rates. The s/s "Narkunda," which sailed from Bombay on October 10th carries gold to the value of about £1,279,000.

SILVER MARKET

There have been no new features and the price has shown little movement; there was a decline of ¼d. on October 9th to 20d., at which it remained unchanged for the rest of the week. China sales have been made fairly freely, but buying by the Indian Bazaars continued and purchases were also made for America, whilst speculators have both bought and sold. The market appears fairly steady at the present level, and price movements are expected to keep within narrow limits.

Quotations for gold and silver are shown below:—

MISCELLANEOUS

BENGAL IRON COMPANY, LTD.—Resolutions agreeing to the scheme of arrangement and amalgamation with the Indian Iron and Steel Company, which were submitted at special meetings of preference and ordinary shareholders of the Bengal Iron Company on October 12th, were approved.

BOWATER'S PAPER MILLS, LTD.—Bowater's Paper Mills, Ltd., announces that, in addition to the controlling interest in the ordinary capital of the Edward Lloyd Investment Company, Ltd., acquired in July last, they have since acquired the remaining shares of that class, and now own 100 per cent. of the ordinary capital of that company.

BURBERRYS, LTD.—Profit for year to March 31, 1936, £85,321, comparing with £70,650 for year to March 31, 1935. Fixed dividend on preference shares for eight months to May 31, 1933, absorbed £50,000, leaving to be carried forward £91,167. No provision has been made in the balance sheet dated March 31, 1936, for the fixed dividend on the preference share capital accrued from June 1, 1933, to March 31, 1936, amounting to £212,500. Since the date of the balance sheet the company paid on August 1st a dividend of 2½ per cent. on account of these arrears, and a further dividend of 2½ per cent. will be paid on November 14, 1936. These two payments amount to £50,000. Since the date of the last balance sheet mortgages on the company's property, amounting to £97,655, have been repaid and there is now no charge on the company's assets. Meeting, November 6th, at Carlton Hotel, S.W.1, at noon.

CARONI SUGAR ESTATES (TRINIDAD).—Shareholders of Caroni Sugar Estates (Trinidad) at a meeting on October 12th approved the agreement with Tate and Lyle and the capital reorganisation scheme.

EBBW VALE STEEL.—The trustees have declared that the security for the 6 per cent. first debentures has become enforceable. They have appointed Mr J. Ivan Spens, of Messrs Brown, Fleming and Murray, 4b Frederick's Place, E.C.2, receiver and manager. Directors of Ebbw Vale Steel, Iron and Coal Company have issued a statement in which they say that the trustees for the debenture holders have now put in a receiver. The directors add that there can be no prospect of any return of capital to the shareholders.

RANSOME AND MARLES BEARING COMPANY.—The report for the year ended June 30, 1936, shows a rise in gross profits from £125,125 to £192,667. A sum of £32,480, compared with £28,782, has been written off for depreciation, and £43,378, against £23,359, is provided for tax. This leaves the net profit £43,825 higher at £116,809. The dividend for the year is raised 5 per cent., to 15 per cent., and £50,000, compared as against £26,239 brought in. The balance carried forward is £35,860.

SALTS (SALTAIRE), DEAL.—Salts (Saltaire), Ltd., has acquired the share capitals of Pepper, Lee and Company, Ltd., worsted manufacturers, of Bradford, the Wike Mill Company, Ltd., and Popplewell and Ingham Prospect Mills, also of Bradford. The fusion operates from October 1st.

STAVELEY TRUST, LTD.—The accounts to July 31, 1936, disclose a rise in profits from £28,619 to £44,435. After deducting expenses amounting to £6,064, there is a balance of £38,371, to which is added £2,699 brought in, making £41,070. Income tax takes £8,605, against £4,476, leaving a balance of £32,465, and the directors propose maintaining the distribution for the year at 7 per cent., less tax. The reserve allocation is doubled at £10,000, raising this account to £35,000, which leaves £2,308 to go forward.

COMMERCE AND TRADE

SURVEY OF COMMODITY MARKETS

THE leading commodity markets were active during the past week, and the general tendency of prices was upwards. Quotations for wheat futures in Liverpool, for example, rose from 8s. 0½d. per cental (December delivery) to 8s. 6½d. per cental, the highest level reached in any corresponding month since 1929. The sharp advance was due mainly to the sustained improvement in the demand by importing countries, and the realisation that neither Argentine nor Australia are likely to harvest bumper crops this season.

Quotations for raw sugar were marked up, and cocoa was also dearer. The market in tea showed a slightly firmer tendency. At Smithfield market, Argentine beef was cheaper. Both Australasian and Danish butter was cheaper, but prices of English eggs continued their seasonal rise.

Among industrial raw materials, copper, lead and spelter were marked up, but tin was slightly cheaper. In order to prevent a further marked increase in copper prices, the concerns adhering to the international restriction scheme decided to increase their output from 80 to 85 per cent. of "assessed" capacity as from October 15th. Quotations for rubber were firmer on an improvement in demand. The market is already discounting an increase of 5 per cent. in export quotas for the first half of 1937 at the next meeting of the International Rubber Regulation Committee on October 27th. Raw cotton prices have tended upwards, despite the fact that the latest American crop estimate was higher than anticipated, and it is expected that the volume of hedge-selling may soon diminish. The trend of raw wool prices at the auctions in Australia remains firm.

Quotations for primary products in the United States, too, showed a rising tendency. Moody's index of staple commodity prices rose from 183.0 (December 31, 1931 = 100) on October 7th to 184.6 on October 14th, compared with 186.1 a month ago and 173.6 last year.

COAL

SHEFFIELD.—Demand for nearly every grade of fuel in this area is good and most of the output is taken up by contract deliveries. There is an increase in export business and inquiries for forward delivery are more numerous. All supplies of coke are readily taken up. The increased demand for fuel for conversion into electric current and for central-heating is reducing the amount available for large patent-oven coke. Home industry is taking a fair supply and merchants in the household market are still completing orders received before the rise of prices in October.

NEWCASTLE-ON-TYNE.—Last week's shipments of coal and coke from the Tyne, at 301,263 tons, were the best this year. At other ports on the North-East Coast shipments are expanding, mainly as a result of the improvement in home trade. Northumberland steam collieries continue very firm and have little coal to offer over the winter. Graded sorts are in good demand from home consumers, whilst screened find a ready market in Scandinavia. Durham collieries are working much more regularly, the gas section being better placed with the approach of winter, whilst coking and manufacturing coal is finding an outlet in the home market.

GLASGOW.—The market remains very steady in tone. There is a lull in new buying for export at the moment, but this is expected to be temporary, for inquiries remain quite promising. Meantime, industrial demand continues on a large scale, and the coastwise trade is expanding. The improvement in the coastwise trade is reflected in last week's shipments from the Clyde. With the exception of one week, shipments, at 116,000 tons, were the highest since the last week in 1933. Nuts generally remain in limited supply, and the market in steam sorts is strong in Lanark and Ayrshire.

CARDIFF.—The volume of traffic at the South Wales ports is being well maintained. Coal shipments in the foreign and coastwise trades last week totalled about 340,000 tons, compared with 362,600 tons in the corresponding period last year, when the French import quota was 10 per cent. greater than it is to-day, and when the sanctions policy of the League of Nations had only just commenced to react on coal exports to Italy. Inquiries are a little more active, and hopes are entertained of a substantial improvement during the next few months. Stocks of large coals are very heavy, but of the smaller and sized classes there is a comparative scarcity. The substitution of approved for minimum prices, while securing for the Control Board a greater measure of administrative freedom, has not affected the determination of the industry to improve its revenue position, and this week the prices of several classes of small coals were higher than a week ago. Coke is in active demand at firm prices, while patent fuel is steady.

IRON AND STEEL

LONDON.—The weekly report of the London Iron and Steel Exchange indicates that in spite of the record production of steel demand appears to be growing more rapidly than output. In most departments of the industry manufacturers are concentrating upon distributing their output equally amongst customers rather than upon seeking new business. Most consumers have covered their prospective needs as far forward as producers are prepared to commit themselves; but it is not easy to arrange satisfactory delivery dates for new transactions.

Business in pig iron is limited by the inability of producers to add to their already crowded order books, and in some districts it has been found necessary to ration consumers. Considerable imports of Russian iron, arranged by British producers, have relieved the stringency in the basic iron department; but consumption of foundry iron appears to be growing and tight conditions seem likely to rule in that section of the market for some time.

The works producing semi-finished steel are operating at capacity; nevertheless difficulty is experienced in meeting consumers' requirements. Consumers' fears that a shortage will develop later in the year, however,

OVER ONE HUNDRED YEARS OF SERVICE

 London: 5 Walbrook, E.C.4, and 45 Pall Mall, S.W.1

have been allayed by arrangements for an increase in the imports of this class of material during the fourth quarter.

Demand for finished steel of all descriptions shows no signs of relaxing; and it is practically impossible to place orders except for far forward delivery.

MIDDLESBROUGH.—In spite of the inability at the present time to increase the production of Cleveland foundry pig iron and East Coast hematite, producers are able, by rationing supplies, to keep home consumers furnished with a sufficient quantity to keep them regularly employed. During the past week a further cargo of about 865 tons of foundry pig iron was shipped to Grangemouth, and 590 tons of hematite were despatched to Denmark. Prices are unaltered, and makers are not prepared to discuss prompt business, as they have sufficient contracts on their books for some time. Owing to the difficulty of obtaining increased supplies of foreign ore, it is unlikely that production of hematite pig iron will be increased at the present time. Arrivals of foreign ore in the Tees during the first 13 days of October amounted to 65,445 tons, practically the same quantity as during the corresponding period in September.

Steel producers are in some cases still in arrears with deliveries, the demand for all classes of finished steel exceeding the supply. The price of heavy steel melting scrap is now not less than 60s. per ton, delivered at the works. The price of ferro-manganese has been increased by 10s. per ton to home users, the quotation now being £11 15s.-£12 5s. per ton. Good Durham blast furnace coke is maintained at 24s. 6d. per ton, delivered at the furnaces.

SHEFFIELD.—Business in the iron and steel market continues brisk. Owing to contract commitments there are very few parcels of foundry iron coming to the market, and these, although small, are eagerly taken up. Consumers are prepared to place contracts as far as June, 1937, but producers are unwilling to commit themselves beyond the first quarter. The increased output of Derbyshire iron has done little so far to ease the situation. There are rumours of a rise in pig iron prices at the turn of the year in consequence of the increased cost of production. East and West Coast hematite are in good demand, with supplies barely equal to requirements. In finished iron common and marked bars are in active demand, but business in crown bars is rather slow. Demand is brisk in every section of the steel market, but producers are hesitant about committing themselves to early delivery. Demand for both acid and basic billets shows steady expansion. Heavy business is being done in bars, strip and wire rods. Stainless steel sheets are a good feature. Foundries, forges and rolling mills in this area are working at capacity, and the current level of activity appears assured for months to come.

GLASGOW.—In Glasgow and the West of Scotland intensive activity continues at practically all works. Yet, it is becoming increasingly difficult to give the deliveries desired by users. While heavy plates seem in most urgent demand, there appears to be a ready market for all the products of the heavy and lighter industries of the West of Scotland. Manufacturers of all products have much work on hand and are experiencing some difficulty in obtaining materials in sufficient quantity to ensure the regular working of plants and to meet their commitments. In all branches in this district work on hand is sufficient to keep men and machinery employed for many months to come.

CARDIFF.—Conditions in the tinplate industry continue on the whole favourable, and deliveries in both the inland and export markets are expanding. Prices, however, are unaltered. There has been a slightly better inquiry for galvanised sheets, while the pressure on the heavier sections of the industry is as great as ever. Steel sheet and tinplate bars are unchanged at £6 per ton delivered.

OTHER METALS

COPPER.—The standard cash quotation advanced this week by no less than £1 3s. 9d. to £40 18s. 9d. per ton—the highest level since 1932. The increase was due to a strong demand from British and Continental quarters. Since it appears that leading London metal merchants, as well as speculators and consumers, are taking a rather bullish view of the market outlook, a further price advance is not impossible, despite Thursday's increase in production quotas to 85 per cent. of capacity. In the United States, too, an improvement has been recorded and an early rise in the domestic price from 9.75 to 10 cents is expected. The president of the Kennecott Corporation recently stated that he was not opposed to an increase in prices, provided this is justified by the market position. The opposition of the Kennecott group has hitherto made an increase impossible, but the situation seems likely to change shortly, especially in view of the fact that consumers who have been out of the market for two months are likely to make larger purchases during the next few weeks. The position is further discussed in a Note of the Week.

Sales on the London Metal Exchange: 2,900 tons on Monday, against 1,600 tons last week, 3,800 tons on Tuesday, against 1,800 tons last week; 3,850 tons on Wednesday against 1,700 tons last week. Domestic spot was quoted at 9.72½ cents per lb. in New York on Wednesday, against 9.50 cents a week ago and 9.67½ cents a month ago. Wednesday's official closing price for standard cash in London was £40 18s. 9d. to £41, compared with £39 15s. to £39 16s. 3d. a week ago. Stocks of refined copper in British official warehouses at the end of last week, at 48,597 tons, show a decrease of 530 tons, while stocks of rough copper, at 1,891 tons, show a decrease of 101 tons.

LEAD AND SELLER.—Both markets were slightly firmer. The improvement in lead was not surprising for supplies are rather scarce and consumption is running on a high level. World output of smelter lead outside Spain, according to the *Metallgesellschaft*, again declined from 117,439 metric tons in July to 111,120 metric tons in August, despite an increase in Australia to the highest level of the year.

Zinc production also registered a decline during August, from 125,744 to 123,428 metric tons; but the United States was chiefly responsible for the movement, so that the European market does not benefit. During the week reports have been current that negotiations for the renewal of the International Cartel have been abandoned. The improvement in spelter, notwithstanding these rumours, must be attributed to better reports from consuming trades and to the wide margin between the price of spelter and that of lead.

Sales of lead on the London Metal Exchange: 650 tons on Monday, against 700 tons last week; 550 tons on Tuesday, against 550 tons last week; 700 tons on Wednesday, against 700 tons last week. The New York quotation on Wednesday was 4.65 cents per lb., against 4.60 cents

a week ago and 4.60 cents a month ago. The official closing quotation in London for soft foreign for shipment during the current month was £18 5s. per ton, compared with £18 1s. 3d. a week ago.

Sales of spelter on the London Metal Exchange: 575 tons on Monday against 600 tons last week; 450 tons on Tuesday, against 1,100 tons last week; 950 tons on Wednesday, against 1,650 tons last week. Wednesday's quotation in East St. Louis was 4.85 cents per lb., against 4.85 cents the week before and 4.85 cents a month earlier. Wednesday's official closing quotation in London for "good ordinary brands" for shipment during the current month was £14 3s. 9d. per ton, against £13 17s. 6d. last week.

TIN.—This metal was subject to wide fluctuations and, although the market closed on Wednesday well above the week's lowest, the undertone was slightly easier. The outlook is at present very uncertain. It became known on Wednesday that the October meeting of the International Tin Committee will be held on Wednesday next, but it is by no means certain that the problem of Siam will then be disposed of. But the course of the market may be considerably affected by the outcome of next week's meeting.

Sales of tin on the London Metal Exchange: 220 tons on Monday, against 225 tons last week; 250 tons on Tuesday, against 190 tons last week; 245 tons on Wednesday, against 320 tons last week. The New York quotation on Wednesday was 44.55 cents per lb., against 45.00 cents a week ago and 44.50 cents a month ago. Wednesday's official closing quotation in London for standard cash was £200 to £200 5s. per ton, compared with £202 to £202 5s. a week ago. Stocks of tin in London and Liverpool at the end of last week totalled 846 tons, an increase of 124 tons on the week.

OTHER NON-FERROUS METALS.—Among other non-ferrous metals, aluminium ingots and bars for home delivery were again quoted at £100 per ton, and rolling billets at £102 per ton. Nickel, for home and export, at £200 to £205 per ton, remains unchanged. Quicksilver, on the spot, was quoted at £13 17s. 6d. to £13 18s. per flask of 76 lbs., as against £13 5s. to £13 5s. 6d. last week. Chinese antimony was quoted at £56 per ton ex warehouse, the same as last week. Chinese wolfram for "October-November" shipment was quoted at 28s. to 29s. per unit c.i.f., the same as last week. Refined platinum was quoted at £10 5s. per ounce, as against £12 last week.

TEXTILES

COTTON.—Manchester.—The general tone of the market continues more encouraging. During the past week most spinners and manufacturers have been able to report an increased inquiry and some producers have sold more freely. The raw cotton market tends to become stronger. The American Government estimate of the crop, at 11,609,000 bales, was slightly larger than expected, but prices this week have gone against buyers on an active demand and bullish figures concerning consumption. There are indications that hedge selling is coming to an end and that the peak of the movement has about been reached.

The market in piece-goods continues well supplied with inquiry. Most of the offers for India have been unworkable, but scattered transactions have been put through, chiefly for Calcutta and Karachi. A slightly improved demand has been experienced for Egypt. More business has been reported for the outlets of South America. Some makers have done more business for the Continent, especially in heavy materials for Germany. Printed and dyed cloths have attracted increased attention for the Dominions, chiefly Australia and South Africa. Manufacturers' quotations have been firmer and wide looms are better employed than for a long time.

The tone of the yarn market has been healthier. In the American section some substantial weights have been booked in coarse and medium counts. The sales of some mills have been larger than current output. Rather more activity has shown itself in medium Egyptian numbers.

COTTON PRICES

RAW COTTON STATISTICS.—The United States Government cotton crop estimate published at the end of last week of 11,609,000 bales against 11,121,000 bales a month earlier was rather larger than expected, the New York and Liverpool markets having discounted a figure of 11,500,000 bales. It is estimated that supplies during the current season will be about 1,000,000 bales less than in the previous year. Following the American crop forecast markets met with substantial buying orders and there was a small advance in prices. This week prices have again hardened on bullish advices with regard to consumption, especially in the United States. It is anticipated that hedge selling will come to an end very shortly and the supply-demand position points to higher prices.

WOOL.—Bradford.—Raw wool is selling on a larger scale than anticipated, and there is nothing to indicate a decline in prices. Australian markets are firm, with prices for straight combing wools tending upwards in spite of the absence of Japanese purchases. In South Africa, Germany and Japan are competing keenly. As a result, prices have been driven to higher levels than those ruling in Australia for similar merino combing wools.

During the past fortnight there has been a considerable movement in wool and tops in Bradford, Halifax and Huddersfield. Prices for merinos moved against buyers, and crossbreds also remain firm. There has been some improvement at the spinning and manufacturing end of the industry. Active preparations are now being made for next spring and summer, especially as there is nothing to indicate any decline in raw wool prices.

GRAIN MARKETS

WHEAT.—Although the fundamental position of the market appears to have undergone little change, prices have been mounting steadily during the past week in response to an active demand. Quotations have reached new high levels for the current season.

On Wednesday last, "December" futures were quoted in Chicago at 116½ cents per bushel, against 113 cents the week before and 112½ cents

a month ago. Quotations in London, Wednesday: No. 1 Northern Manitoba, ex ship, 45s. 3d. per 496 lbs., against 43s. 9d. a week ago; No. 2 Northern Manitoba, ex ship, 44s. 6d., against 43s. 3d. a week ago. According to the *Corn Trade News*, total shipments of wheat and flour last week totalled 1,300,000 quarters, against 1,439,000 in the previous week and 1,325,000 quarters in the corresponding week a year ago.

FLOUR.—Prices have risen further this week on a firm demand. Wednesday's London quotations (excluding quota payments) were: Straight run, delivered Home Counties, 38s. 6d. per 280 lbs., against 38s. 6d. a week ago; delivered inner London, 36s., as compared with 35s. 6d. a week ago. Manitoba patents, ex store, 34s. to 35s. 6d., against 33s. to 34s. 6d. a week ago. Australian, ex store, 30s. to 30s. 6d., against 29s. 6d. to 30s. a week ago.

BARLEY.—After another week of active trading, prices of imported feeding barley are again higher. Meanwhile, samples of English barley on offer show wide quality variations. "October" futures were quoted at 62½ cents per bushel in Winnipeg on Wednesday, against 60½ cents a week ago. Quotations per 448 lbs. in London on Wednesday were: "English feed" at farm, nominal, as against a nominal quotation a week ago; "English malting" (new), at farm, 32s. to 50s., against 32s. to 50s. last week; Californian (new), ex ship, 47s. to 58s., against 46s. 6d. to 58s. last week; Chilean, brewing, ex ship, 36s. 6d. to 42s., against 35s. 6d. to 39s. a week ago.

OATS.—On Wednesday, "December" futures were quoted at 41½ cents a bushel in Chicago, against 41½ cents a week ago and 42½ cents last month. Quotations in London, Wednesday: "English Black" (new), at farm, 20s. per 336 lbs., against 19s. to 20s. a week ago; "English White" (new), at farm, 20s., against 19s. to 20s. a week earlier; mixed Canadian feed (Vancouver), landed, 21s. per 320 lbs., compared with 21s. last week.

MAIZE.—After easiness in the early part of the period under review, prices registered a recovery and closed higher on the week. Meanwhile, the statistical position of the market shows little change. "December" futures were quoted on Wednesday at 95½ cents per bushel in Chicago, against 94½ cents a week ago and 95½ cents last month. Quotations in London, Wednesday: "Plate," landed, 24s. 6d. per 480 lbs., compared with 24s. 3d. a week ago; "Plate," ex ship, 23s. 6d., as against 23s. 3d. a week ago; "Plate," "October," 23s. 9d., as against 23s. 3d. a week ago; yellow maize meal, ex wharf, was quoted at £6 10s. per ton, as against £6 5s. to £6 10s. last week.

AMERICAN WHEAT MARKETS.—The following table shows wheat quotations for selected weeks in 1934-36:—

NEAREST FUTURE	Jan. 3, 1934	Jan. 2, 1935	Oct. 16, 1935	Dec. 31, 1935	Oct. 7, 1936	Oct. 14, 1936
Winnipeg (No. 1, Manitoba) — Cents per 60 lb.	65½	82½	88½	84½	108½	114½
Chicago (No. 2, Winter) — Cents per 60 lb.	84½	98½	100½	75½	113	116½

The visible supply of wheat in Canada amounts to 86,843,000 bushels, against 86,244,000 bushels last week, and 141,499,000 bushels in the corresponding week last year.

SALES AND PRICES OF BRITISH CEREALS.—The following table gives the estimated sale of home-grown wheat during the harvest years 1932-33 to 1935-36:—

	1932-1933	1933-1934	1934-1935	1935-1936
Estimated sales of home-grown wheat	Cwts.	Cwts.	Cwts.	Cwts.
1 week to October 10	392,971	426,155	495,987	306,492
6 weeks to October 10	2,392,671	3,227,887	2,915,023	1,673,883
Average price of English wheat per cwt.	s. d. 4 11	s. d. 5 0	s. d. 5 11	s. d. 8 3

The following is a statement showing the quantities sold and the average price of British cereals in the past two weeks, and for the corresponding week in each of the years from 1932 to 1935:—

Week ended	QUANTITIES SOLD			AVERAGE PRICE PER CWT.		
	Wheat	Barley	Oats	Wheat	Barley	Oats
October 8, 1932	Cwts. 333,392	Cwts. 246,045	Cwts. 80,464	s. d. 5 8	s. d. 7 11	s. d. 6 3
October 7, 1933	392,971	458,285	64,916	4 11	10 7	5 5
October 13, 1934	426,155	453,715	68,250	5 0	9 8	6 7
October 12, 1935	495,987	587,548	58,078	5 11	9 7	6 3
October 3, 1936	308,451	359,188	61,691	7 11	10 3	6 10
October 10, 1936	306,492	453,111	63,863	8 3	10 0	6 10

OTHER FOODS

BACON.—Firm conditions have prevailed, and prices have advanced. The official quotations (per cwt. for No. 1 Sizable) which formed the basis for dealings on the London Provision Exchange this week were: English for 94s.; Canadian, 90s.; Danish, 100s.; as against 88s. to 94s.; 87s. and 92s. last week. Arrivals in London last week included Danish, 12,275 100s.; Canadian, 4,898; Dutch, 2,078; Lithuanian, 1,873; and Polish, 2,265; bales; as against 12,155, 4,578, 2,232, 1,541 and 3,131 bales, respectively, in the previous week.

BUTTER.—The market has been slow, with prices easier. Quotations (per cwt.) on the London Provision Exchange on Wednesday were: New Zealand, finest salted, 96s.; Australian, choicest salted, 96s. to 97s.; Danish, 122s. to 124s., compared with 101s. to 102s.; 102s. and 126s., respectively, a week ago.

CHEESE.—New Zealand cheese has been steady at the lower level of quotations, showing little change. Quotations (per cwt.) on the London Provision Exchange on Wednesday were as follows: English, finest farmers, 82s. to 84s.; Canadian, finest coloured, 68s. to 70s.; English, finest farmers, 82s. to 84s.; against 80s. to 84s.; 69s. to 70s. and New Zealand, finest coloured, 65s., against 80s. to 84s.; 69s. to 70s. and 66s. to 66s. 6d., respectively, a week ago.

COCOA.—The trend of quotations, both in this country and in America, remains upwards. The spot quotation in New York on Wednesday was 8½ cents per lb., as against 8 cents per lb. last week. In London, on Wednesday last, good fermented new crop, "November-January," was quoted at 38s. per 250 kilos, c.i.f. Continent, against 35s. 6d. a week ago. Last week's movements of cocoa in London were as follows: Landed, 887 bags;

delivered, for home consumption, 5,479 bags; exported, 35 bags; stocks, 152,892 bags, against 130,503 bags a year ago.

COFFEE.—The New York spot market has displayed a firmer tone, but in London quiet conditions have prevailed. On Wednesday, Rio No. 7 (cash) was quoted at 7½ cents per lb. in New York, as compared with 7½ cents per lb. last week and 8 cents per lb. a month ago. Movements of coffee in London last week were as follows: Brazilian, landed, nil; delivered, for home consumption, 108 cwt.; exports, 76 cwt.; stocks, 9,852 cwt., against 13,119 a year ago. Central and South American, landed, 1,167 cwt.; delivered, for home consumption, 3,142 cwt.; exported, 517 cwt.; stocks, 73,239 cwt., against 106,840 last year. Other kinds: landed, 1,029 cwt.; delivered, for home consumption, 4,404 cwt.; exported, 1,284 cwt.; stocks 106,833 cwt., against 128,988 last year.

EGGS.—The market was firm for all selections, with English showing a further sharp improvement. At Smithfield on Wednesday, English (ordinary packing, Grade I, about 15-15½ lb.) realised 21s. to 22s. 6d. per 120, as against 17s. 6d. to 18s. 6d. last week, while Danish (15½ lb.) made 14s. to 14s. 3d. per 120, as against 13s. 6d. to 14s. last week.

FRUIT.—Business at Covent Garden has been rather quiet this week, states *The Fruitgrower*. Supplies of apples remain heavy, but inferior grades are being cleared. Although cooking apples remain at a low figure, dessert varieties are in rather better demand at hardening prices. Good supplies of English pears sell at rather easy rates, while plums are now almost over. Grapes are in plentiful supply, and prices are lower. Cobnuts are firmer on a more active demand, while blackberries are in shorter supply. Demand for oranges is not quite so keen, and prices are lower, while lemons remain dear. Grapefruit have been in heavy supply at rather easy rates this week.

MEAT.—Business at Smithfield has again been somewhat slow, some prices having declined this week. On Wednesday last, Argentine chilled hindquarters were quoted at 3s. 4d. to 3s. 10d. per 8 lbs., as compared with 3s. 9d. to 4s. 2d. a week ago. New Zealand frozen mutton was 3s. to 3s. 8d. per 8 lbs., against 3s. to 3s. 8d. a week ago. According to the Smithfield Market official report, supplies during last week amounted to 10,137 tons, an increase of 411 tons on the corresponding week last year. Beef and veal accounted for 5,321 tons, mutton and lamb 2,649 tons, and pork and bacon 1,323 tons, as compared with 4,695, 2,921 and 1,326 tons, respectively, in the same week of 1935.

MILK.—Information relative to the operation of the Milk Marketing Scheme during September, as issued by the Milk Marketing Board, is given in the following table, together with comparable statistics for earlier months:—

	Sept., 1935	June, 1936	July, 1936	August, 1936	Sept., 1936
	d.	d.	d.	d.	d.
Regional pool prices* (per gallon):					
Northern	12½	9	9½	9½	11½
North-Western	12½	9	9½	9½	11½
Eastern	13	9½	9½	9½	11½
East Midland	13	9½	9½	9½	11½
West Midland	12½	9½	9½	9½	11½
North Wales	12½	9	9½	9½	11½
South Wales	13	9½	10	10	12
Southern	12½	9½	9½	9½	11½
Mid-Western	12½	9½	9½	9½	11½
Far Western	12½	9½	10½	10½	12½
South Eastern	13½	9½	10½	10½	12½
Liquid milk price (per gallon, all regions)	16	12	13	13	15
Manufacturing price (per gallon, average)	5-54	4-941	5-05	5-256	5-656
Total sales under contract	66-06	87-56	84-58	80-00	73-65
For liquid consumption	46-01	46-67	47-29	45-82	46-80
For manufacturing	20-05	40-89	37-30	34-18	26-85

* On account to the nearest farthing.

Accredited producers receive 1d. per gallon in addition to the above prices. Premiums for level deliveries and for Grade "A" or special services are paid to the producers concerned in addition to the pool price. Transport charges are payable by individual producers and are deducted from accounts.

PEPPER.—Wednesday's spot price for black Lampung (in bond) was 2½d. per lb., against 2½d. a week ago. Movements of pepper in London during the past week were as follows: Black, landed, 6 tons; delivered, 7 tons; stocks, 1,783 tons, against 1,533 tons a year ago. White, landed, 44 tons; delivered, 48 tons; stocks, 11,984 tons, against 16,110 tons a year ago.

RICE.—The spot price of Burma No. 2, cleaned, new crop, was 9s. 1½d. per cwt., ex warehouse, on Wednesday, as compared with 9s. 3d. per cwt. a week ago. "October-November" in singles to Continent and U.K. was quoted at 7s. 10½d. per cwt., against 8s. last week. Movements in London during the past week were as follows: Landed, 261 tons; delivered 7 tons; stocks, 2,089 tons, against 7,903 tons a year ago.

SUGAR.—The New York market has been rather easier, but in London prices have shown a firmer tendency. The spot price in New York on Wednesday was 3-35 cents per lb., as compared with 3-40 cents per lb. last week and 3-60 cents per lb. a month ago. Wednesday's sales of raw sugar in London included December delivery at from 4s. 5½d. to 4s. 6d., against 4s. 3½d. a week ago. The movements of raw sugar at public warehouses in London and Liverpool last week and 3,692 tons in the same week of last year, against 35,824 tons last week and 26,070 tons last week and 14,985 tons last year; stocks 116,870 tons, against 114,875 tons last week and 154,964 tons last year.

TEA.—The following table shows the average prices (compiled by the Tea Brokers' Association) of tea sold in Mincing Lane on Garden Account in recent weeks:—

Week ending	Northern India	Southern India	Ceylon	Java	Sumatra	Africa	Total
Oct. 10, 1935	15-63	12-87	16-98	12-74	10-88	11-80	15-42
Sept. 3, 1936	15-14	12-19	13-39	10-88	10-19	11-76	13-88
Sept. 10, "	14-82	12-13	13-31	11-02	10-06	11-28	13-88
Sept. 17, "	14-29	12-13	13-32	11-03	9-96	11-53	13-56
Sept. 24, "	13-86	12-04	13-29	10-75	9-85	11-46	13-29
Oct. 1, "	13-39	11-95	13-41	10-91	9-90	11-55	13-09
Oct. 8, "	13-22	11-92	13-62	10-81	9-85	11-63	13-03

The quantities catalogued for the public auctions in Mincing Lane this week comprised 51,037 packages of Indian and 21,182 packages of Ceylon tea. Demand for Indian grades was fairly good, and prices showed little alteration. At Tuesday's Ceylon auctions, quality teas sold at rather higher prices.

VEGETABLES.—Supplies of tomatoes are declining with the advance of the season, and prices have been firmer at Covent Garden. According to *The Fruitgrower*, cucumbers are also firm on shorter supplies. Cabbage and savoy are, however, plentiful and cheap, while cauliflower shows a similar tendency. Sprouts and tops sell well at firm rates. Celery is more plentiful and much cheaper, but parsnips, carrots and turnips meet a better demand. Meanwhile, supplies of potatoes at London markets have declined and, with demand showing an improvement in response to the rather colder weather, the better samples are firm in price. At the Borough on Tuesday, best siltland King Edwards realised from 8s. to 9s. per cwt., against 8s. to 8s. 6d. a week earlier.

MISCELLANEOUS COMMODITIES

VEGETABLE OILS AND OLSEEDS.—The market remains quiet and business is of a "hand-to-mouth" character. An important factor is the outlook in Argentina, where the yield of the new linseed crop is expected to be at least two million tons, if the weather between now and the harvest is favourable. The revised estimate of area issued by the Argentine Government is 7,422,000 acres, or 136,000 acres more than in August. The growing plants have had a good start. The question arises whether in these circumstances the present fixed price will be maintained by the Government. Until this is known definitely crushers hesitate to buy forward or to do more than cover current requirements. The surplus of old crop, together with what may come from India, is put at slightly over 300,000 tons, or 25 per cent. less than the quantity actually shipped in the remainder of last year. In view of the slow sale of oil and cake this is considered about sufficient until the new Plate seed is marketed. The United States is taking larger quantities from both South America and India in order to make up for the domestic shortage. Trade in linseed oil is quiet and the current quotation ex Hull for October-December delivery is around £24 10s. per ton, naked.

Cotton seed is quiet and lower in sympathy with the American cotton outlook, and trade in oil has dropped to small dimensions. Egyptian crude, ex Hull, is now offered at £28, and refined at £28 10s. per ton, prompt.

RUBBER.—In response to a good trade demand, prices have firmed up this week. It is reported that substantial quantities have been sold on c.i.f. terms for shipment over the whole of next year. Attention now centres on the meeting of the International Committee, to be held on October 27th. The spot price in New York on Wednesday was 16½ cents

per lb., compared with 16½ cents per lb. a week ago and 16½ cents a month ago. Wednesday's official buyers' price for standard ribbed smoked sheet on the spot in London was 7½d. per lb., as against 7½d. on the corresponding day last week. In forward positions, business has been done at 7½d. for "November" shipment, as against 7½d. a week ago. Stocks in London and Liverpool at the end of last week totalled 100,617 tons, against 103,015 tons a week earlier. A year ago stocks amounted to 176,544 tons.

FURS.—The autumn series of general fur sales opened in London on Monday with an irregular tendency. The attendance of foreign representatives is quite good, the countries of the former gold bloc being better represented than at the preceding sales. Supplies are not as heavy as in recent years, but the quality of the goods offered is about the same as last

October. Owing to the uncertain international position and the many trade barriers from which the fur market is suffering, buyers showed some reserve and prices of beaver, otter, blue foxes, cross foxes, red foxes, white foxes and fisher were marked down by 5 to 7.5 per cent., as compared with July last. On the other hand, musquash, marten, ermine and mink showed considerable resistance, and were not affected by the slightly easier tendency. None of the latter furs, however, was able to record an appreciable price rise. The tendency of the first days of the sale does not necessarily indicate that prices during the entire series will be easier. Indeed, it is commonly expected that prices will firm up to some extent in the immediate future. It is possible, therefore, that an improvement will occur before the close of the present series, which will last for two or three weeks.

THE FINANCIAL NEWS

Special articles due to appear next week on the Leader
Page of THE FINANCIAL NEWS are as follows:

MONDAY, OCTOBER 19—SWITZERLAND AFTER DEVALUATION. Of the three gold bloc countries which last month abandoned their traditional currency parities, Switzerland alone has adopted a more or less definite stabilisation rate. In this article a Special Correspondent examines Switzerland's economic policy since devaluation and analyses the effect which the long term policy thus indicated will have upon the economic and financial position of the country.

TUESDAY, OCTOBER 20—MOUNT MORGAN. Our Special Mining Correspondent, MINOTAUR, in his usual Tuesday article, this week examines the position and prospects of this famous Australian Gold Mine—a mine which, though old established, has only comparatively recently attracted the attention of Investors in this country.

WEDNESDAY, OCTOBER 21—COMPANIES AND THEIR PROFIT-EARNING CAPACITY—No. 24. Our series of articles on "Companies and Their Profit-Earning Capacity" is resumed by an article on BORAX CONSOLIDATED. The article will trace the growth of this old-established Company with special reference to its predominating position in the industry, and will analyse in detail its earnings record in the past. On this basis its future earning capacity will be examined in the light of the growing diversification of the uses for Borax and Borax Products.

THURSDAY, OCTOBER 22—THE OUTLOOK FOR WHEAT. The price of Wheat has risen by 45% since last June. In this article a Special Correspondent shows how the statistical position of the commodity has been greatly affected by the disastrous crop failures in Canada and the U.S.A. and discusses the prospects of a continued rise, with particular reference to the coming crop in the Southern Hemisphere.

FRIDAY AND SATURDAY, OCTOBER 23 AND 24—COPPER IN THE LONG RUN. Despite the persistence and extent of the recent rise in Copper, the market still finds the short term outlook very favourable. These two articles describe the general background of the whole Copper position and on this basis seek to assess the ultimate likely level of Copper prices in the very long run.

PARLIAMENT AND OPINION

PARLIAMENT meets next week, at a time when criticism of both the Cabinet and the Labour leaders by their own supporters is heard on every hand. In two current by-elections, one at prosperous Erdington, held by the Government with a reduced majority this week, and another at less prosperous Clay Cross not yet decided, the electors are having to choose between an embarrassed and divided Government and an embarrassed and divided Opposition.

It is constantly said that the chief strength of the present Government is the weakness of the Labour Opposition. How much truth is there in this? Those who on the whole take a favourable view of the Government's record would not of course admit it. They would put forward a case for the Government based mainly on the fact of recovery, and they would attempt to show that the chief causes of recovery were not the abandonment of gold but the tariff and the "confidence" alleged to have been inspired by the Government. They would add that the India Bill had been successfully passed, and that housing measures and further expansion of the social services were resumed after the crisis was over. And as for the terrible deterioration of international relations in Europe and the world, they would claim as the Government's greatest achievement that it had kept us out of war and thereby given effect to the nation's most ardent desire.

The critics, on the other hand, would attribute recovery almost entirely to the depreciation of sterling and hardly to Government action at all; and they would allege that it was mainly the British Government's continuous ineffectiveness and lack of decision in foreign policy that had brought the threat of world war ever nearer. They would accuse the Government of insincerity. And in particular they would cite the insistence of British Ministers during the Manchurian affair that America was holding them back, when really she was pushing them on; their complaint of impotence against Italy, when really they had no wish to unseat Signor Mussolini; and their complacency, in the name of "neutrality," in a victory of

the anti-democratic forces in Spain. They would say that to anyone who had ever shared the post-war ideal of a peaceful and liberal Europe nothing could have been more bitterly ironical than the events of last autumn; when the Italian Liberals were looking to England to rescue them at last from an irresponsible despotism, and some members of the British Cabinet, which contained both "National Labour" and "Liberal National" representatives, were saying in private that military sanctions were impossible because they might end in the overthrow of Signor Mussolini and in social disorder in Italy. Finally, the critics would say that indecision of policy, engendered by lukewarm enthusiasm for the League and distrust of the company in which British Ministers found themselves at Geneva, had resulted in the sacrifice of the Empire's strategic interests.

The average man, unattached to party, who is in fact in a substantial majority, probably gives the Government the benefit of the doubt in the controversy over the causes of recovery. For the inexpert, naturally enough, *post hoc propter hoc* is a legitimate working hypothesis. He probably also under-rates the Government's share of responsibility for the growing danger of world war. At the same time, he inclines to support what appears to be the Government's present policy of re-armament *plus* isolation.

This is not to say, however, that he has much faith in the *personnel* of the present Cabinet. Indeed, the lack of convincing personalities, either in the Cabinet or the Labour Party, seems to be more responsible than anything else for the current political malaise. The Cabinet itself is elderly and cumbered with dead wood. In Mr Baldwin's case, what now unsettles the public is not so much perhaps the memory of last winter's *débâcle* as a feeling that he remains Prime Minister not because he has a mission but because he cannot yet make up his mind to retire. Mr Ramsay MacDonald is a spent force. Mr Chamberlain, the great success of the Cabinet, certainly inspires confidence

among business men, who regard him as a prototype of themselves; but he does not inspire enthusiasm. Nor is there anyone even among the younger men who now challenges these older hands.

The radical weakness of the National Cabinet, in fact, is that, with the possible bad exception of protectionism, it has never had a philosophy to unite it. Hence the appearance of indecision and insincerity. There has been, and still is, no sign of constructive or of generous enthusiasm, but only opportunism and compromise.

What, then, of the Labour Party? Where the Government is all adaptability and no conviction, the Labour Party, as manifested once again at Edinburgh, is all conviction and no adaptability. Mr Lansbury and Lord Arnold are for the Sermon on the Mount; Sir Stafford Cripps believes that a capitalist Government can do no right; and the laudable attempts of Mr Attlee, Dr. Dalton and Mr Morrison to bring these aspirations down to earth have so far only left the public worse confounded. The ordinary man may well complain that Labour's objects are at present no more clear to him than those of the Government. Indeed, when one estimates the degree of confidence felt by the public either in the Cabinet or the Opposition leaders, it is a great relief to recall that Sir Oswald Mosley inspires no confidence at all.

Yet there was perhaps never a time when there was more political thinking and feeling going on in this country, and more ardent, though ill-organised, allegiance to the ideals of social progress, peace and liberty. Common observation shows every day that the Government might have aroused a great crusading spirit in defence of international justice last autumn. That chance is now gone; and the public disillusion is profound. But there are at least some other abandoned threads still waiting to be picked up. A bold decision to stamp out ruthlessly the new menace of extremist disorders would win the Government an immediate access of popularity; and there is a strong and widespread desire to see a little more money spent on public health and nutrition, involving something more imaginative than a mere campaign for physical drill.

The decisive issue, however, lies abroad. Does the Government stand for the revivification of the League; or does it desire to destroy the Franco-Soviet pact and to allow Germany a free hand in the East? No foreign policy can succeed unless it has behind it the majority of the nation. But the country cannot rally to mere vagueness and contradiction. Until both Cabinet and Opposition can give a clear account of their intentions, British policy will fall increasingly into disrepute and the elector will mark his disapproval by staying away from the polling booth.

BELGIUM AND EUROPE

THE motives behind King Leopold's speech last week on future Belgian foreign policy ought not to be difficult for English readers to divine. They are transparently akin to those which have been impelling the Government of the United Kingdom, for some time past, to retreat towards isolation as they advance towards re-armament. Any Government which has come to the conclusion that, in the present state of Europe, it must re-arm whatever its foreign policy may be, is in effect driven to adopt the selfish and short-sighted policy of proclaiming that the increased armaments are only to be used for purposes of national defence in the narrowest definition of the term. In King Leopold's words:—

A unilateral policy . . . rightly or wrongly arouses dissensions at home. . . . We must pursue a policy "exclusively and completely Belgian" [in the words of a recent speech of the Belgian Prime Minister]. This policy must aim resolutely at putting us outside the conflicts of our neighbours.

With the substitution of "British" for "Belgian," these words would fit into almost any recent speech by any member of H.M. present Government in this country. The concrete situation which the Belgians particularly dread is to find themselves committed, in the event of a

war between Germany of the one part and a Franco-Russian alliance of the other, to giving passage to French troops to attack Germany across Belgian territory. The Belgians also know—and this not only from the recent experience of Abyssinia and China, but from their own experience in 1914-18—that a country which is militarily weak, either through being small or for any other reason, is certain if once it is involved in a war to suffer the horrors of war in their extreme degree, even if, at the end, the victim happens to find itself on the winning side. Now, supposing that King Leopold's suggestions for the future course of Belgian foreign policy are translated into action; will this be compatible with Belgium's obligations under the Covenant of the League, under the interim Anglo-Franco-Belgian arrangement in lieu of the Pact of Locarno, and under the post-war Franco-Belgian military convention?

Under the first head, the Belgian Ministry of Foreign Affairs would almost certainly be able to find chapter and verse, in declarations made by the French and British Governments during the Manchurian and Abyssinian crises, which would entitle Belgium to maintain—at any rate against England and France—that she was fulfilling her obligations under the Covenant even if she were in fact observing a pre-League kind of neutrality in a war in which either or both of her two Western neighbours might be engaged with Germany. It seems to be agreed that, under Article XVI, military sanctions are in any case optional; and among the statesmen of the ex-neutral countries there has been, since the abandonment of Abyssinia to her conqueror, a tendency to declare that in future all sanctions, even those of the non-military kinds, must be treated as being optional likewise. As for the Anglo-Franco-Belgian Staff talks, to which the Belgian Government is provisionally pledged, it is theoretically possible—though politically difficult—to work out the technical arrangements for taking action in a certain event without becoming pledged so to act if the case does arise. There remains the Franco-Belgian military convention of 1921; but there can be no profitable discussion of this, as its terms have never been made public. So far as we know, the policy foreshadowed in King Leopold's speech could be adopted by Belgium without any formal breach of her existing obligations.

This, however, is cold comfort; for the important thing about the new Belgian policy is its intention. And that is only too plain:—

Our military policy, like our foreign policy, by which it is necessarily determined, must aim not at preparing for a more or less victorious war as the result of an alliance, but at keeping war away from our territory.

As the Belgian Foreign Minister said this week, collective security has been proved unreliable. Thus, King Leopold's speech is more a recognition of facts than a departure of policy. That, however, does not minimise its international effects.

The German and Italian Governments, for their part, have not been able to conceal their gratification; and no doubt King Leopold's speech will be taken, in both Rome and Berlin, as a happy overture to the important meeting between Herr Hitler and Count Ciano this week. The only rueful countenances are the French and the British. The nemesis for the Franco-British abandonment of Abyssinia, and for their joint passivity over the remilitarisation of the Rhineland, has, indeed, come with exemplary speed. During the months when the small or weak countries that are in an overwhelming majority in the membership of the League were shuddering at the spectacle of the cold-blooded butchery of one of their own number, and were calling upon the two Western Great Powers to prevent the consummation of a crime which would be a precedent, French and British statesmen reiterated that, as the brunt of the labour and peril involved in genuinely executing the Covenant would fall upon French and British shoulders, it was for France and Britain to lay down how far they proposed to fulfil the Covenant. Now the smaller Powers are following where the British and the French led.

But what shook Belgium even more than the British and French *débâcle* over Abyssinia was the German remilitarisation of the Rhineland and its effects. Belgium had not even given Germany the excuse of signing a pact

with Russia; yet the Rhineland opposite Belgium was unilaterally militarised and fortified. Though the British Government reaffirmed its guarantee of the French and Belgian frontiers after this stroke, and authorised military conversations, the Belgians may well have cast one eye on the fate of Abyssinia, the other on the Rhineland *coup*, and decided to invite, by a declaration of "neutrality," Britain and France to define their common policy over the security of Western Europe. For the temporising tactics of the German Government in the last year have made it plain that they do not intend to allow discussions over a new "Western Locarno" to extend to European security as a whole. Again, the Belgian announcement last week serves domestic as well as foreign policy. The Rexist Party, a Fascist organisation on the usual totalitarian prototype, has been raising its own nuisance value by attacking the Belgian Government for "truckling" to Socialist France and her "Communist ally," Russia. The Flemish Nationalists have joined with it. It has also demanded better relations with Nazi Germany; and it has powerful friends beyond the frontiers of Belgium. King Leopold's declaration was clearly intended to consolidate domestic political forces in Belgium.

Yet, after all these things are borne in mind, will Belgian neutrality work any better in 1937 or 1938 than it worked in 1914? In the same paragraph in which King Leopold stated that the fundamental aim of Belgian policy must be to keep the next war out of Belgium, he also stated that Belgium was now again in almost the same international position as she had been before the last war. How can Belgium alone prevent Germany and France from fighting on Belgian soil once again? Even if Belgium were to burst herself in expanding her armaments, it cannot be supposed that any attainable increase in Belgian armaments would turn the scale of Germany's policy. Evidently the importance of Belgium's new departure does not lie in any effect that it might have in the event of war breaking out in Western Europe. Its importance lies rather in its bearing on the question whether the next war, if it comes, shall be pan-European, like the last, or East European only.

From this point of view, King Leopold's speech may have been a trial lever to prise France away from the Franco-Russian alliance. Belgium's gesture of rejoining the ranks of the European neutrals may be of momentous importance, if it leads not only the United Kingdom, but also France, to follow suit. And, if all the West European States-members of the League tend to "go neutral" in Belgium's footsteps, we may be absolutely certain that Germany will give them every encouragement. All the evidence indicates that the Germans do not want another war in Western Europe, any more than West Europeans want it. What the Germans do want is *carte blanche* from all their Western neighbours to pursue in Eastern Europe whatever policy Germany chooses, and by whatever means she wills. Granted this, Germany can dictate to the West at her leisure after she has settled accounts with the East. Will Belgium's move force France into giving Germany a free hand to play this deadly Eastern game? That is the question.

The importance of the Belgian declaration of last week is really its challenge to France and Britain. Belgium by herself cannot refashion European policy. Her geography conditions her own policy even more than official declarations. But she has bluntly faced the British and French Governments with the need to define their attitudes, both to their own security and to the wider European security on which it depends. And it is surely high time someone did that.

BRITISH MONETARY POLICY—II

If we assume that the kind of internal monetary policy outlined in our article of last week would tend to preserve internal equilibrium, and that the present pound-dollar-franc rates are reasonably near the equilibrium rates, what should our exchange policy be, both in the immediate and more distant future? Exchange policy is a controversial subject; but there are at any rate some points on which practically everyone is now agreed. We are

CHRISTIANIA BANK OG KREDITKASSE OSLO

agreed, first, that short-term fluctuations ought to be "ironed out" by exchange fund methods; secondly, that ephemeral flights of capital should be offset by exchange fund operations and not allowed to affect internal credit policy; and thirdly, that deliberate *under-valuation* designed to secure an advantage for one's exports is in no circumstances justifiable.

This, however, leaves entirely undecided the question how major international adjustments ought to be made. And here it is impossible to avoid discussing, not merely the immediate future, but the kind of long-term regime towards which we ought to conceive ourselves to be moving. If, for instance, a substantial and sustained fall takes place in the demand for a country's exports, the resulting over-valuation of its currency must be met either by a cut in internal money costs or a devaluation of the currency. Such a maladjustment, it should be noticed, can arise (and often does arise owing to the changes in relative prices resulting from the trade cycle) without any internal credit inflation having occurred or any wrong parity having been originally chosen. The periodic appearance of international disequilibrium, in fact, is unavoidable, even if perfectly correct internal policies have been everywhere pursued.

What, then, is the correct remedy? The argument for preserving a regime of permanently fixed exchanges, and altering money costs, rests on the supposed difficulty of conducting international trade and lending on any other basis than that of rigid exchange rates. There is certainly much substance in this argument. But it has certainly also been greatly over-stated. Other things being equal, it is, of course, most convenient to the international trader and financier to be able to count on rigid exchange rates. But it is absurd to suggest that slight or occasional fluctuations, or the risk of them, mean that virtually no trade will be carried on at all. The volume of international trade depends partly on the absence of exchange fluctuations, but also on the prosperity of the countries concerned; and the last three years have shown that the sacrifice of internal monetary stability to the preservation of fixed exchanges may actually reduce the volume of international trade. Tariffs and quotas imposed to buttress an over-valued exchange rate have become a commonplace in contemporary Europe; and last month's crop of tariff reductions, the first for many years, followed the abandonment of untenable exchange rates.

It is a great mistake, therefore, to discuss this question as though it were a choice between economic nationalism and internationalism, or simply a question how Great Britain can preserve her "freedom of action." France, in adopting devaluation, was in fact rejecting the alternative of economic nationalism. The real question is: What international regime will achieve the greatest volume both of production and trade? And, in considering this question, there are strong grounds for thinking that absolute exchange rigidity is not merely the more painful way of achieving international adjustments, but that it is not a way of achieving it at all. The experience of Great

Britain in 1925-31, and of the gold bloc in 1932-36, suggests that in modern social conditions the attempt to reduce money costs is almost bound to fail unless the necessary adjustment is very small. Absolute exchange rigidity, therefore, in the case of serious maladjustments, may mean not merely that a prolonged deflation will be imposed on a country but that in the end it will be forced to devalue after all.

If, however, we reject absolute exchange rigidity even as an ultimate goal—for it will not become more workable with time—there is every reason to prevent all exchange movements which are not indubitably necessary. How can we obtain the greatest possible stability in the short and medium period without committing ourselves to absolute rigidity? Various suggestions have been made for the establishment of a regime of movable gold parities in which all countries would agree not to alter their parity more than a certain percentage in a certain period. It might alternatively be possible to undertake to maintain certain gold points (with, perhaps, a 5 per cent. or 10 per cent. margin) for certain periods. Or, again, it might be best simply to announce that such and such gold points would be maintained until further notice. The exact form which such an agreement should take would probably have to be decided by practical experience.

If some such objective as this is contemplated, what immediate policy should we pursue? There is, at least, good reason to hope that serious over-valuation crises may be avoided in the next few years because the increased supply of gold is exerting an expansionist influence on all countries alike. Perhaps we may envisage, therefore, an approach to normality in three successive stages. First, policy in the next few months will presumably be guided by the existing "gentlemen's agreement" not to vary exchange rates more sharply than can be helped. No actual rate, however, has yet been the subject of declared international agreement; and rigidity in the coming months, before the newly devalued currencies have "found their own levels," would, in fact, be most undesirable. In particular, it is widely believed that sterling at \$4.89 is appreciably over-valued and that an adverse pressure may develop unless receipts from our invisible exports recover substantially.

Secondly, at a later date, if and when agreement on rates could be reached, a pair of gold points (with, perhaps, a 10 per cent. margin) might be assigned to each currency. Already France, Switzerland and America have such gold limits, and the adoption of similar ones by Great Britain would bring practically the whole world into the system. Such an agreement would have to be made initially for a trial period and would probably have to be subject to denunciation at six months' notice. Even so, however, it should be able to be coupled with a mutual low-tariff agreement as well as with the continuance of exchange fund co-operation; and some resumption of international lending might be expected as a result.

Finally, in the third phase, which should, perhaps, be regarded as a possibility rather than a probability, a general convention might be arranged providing for definite limits (with a margin of, perhaps, 5 per cent.) in the case of each individual currency. These would in effect be gold points in the case of America, France, Switzerland, Great Britain and a few others, and "sterling" points in the case of those countries which preferred not to adopt a direct link with gold. It might then be possible for each country to guarantee not to alter the limits more than, say, once a year, or by, say, two or three per cent., and then only if a marked gold movement justified it. Even with this amount of latitude, however, it could not be certain that the agreement might not have to be broken, or at least denounced. For if, for instance, the price of commodities like coffee, wheat or wool were to fall 30 per cent. in a few months, countries like Brazil or Australia would be forced to devalue in order to avoid an internal convulsion (unless large international loans could be rapidly arranged). In the last resort exchange policy is within the sovereign rights of a self-governing country; and no system which neglects this fact will long survive.

The truth is that the old rigid gold standard is not able to cope with fluctuations and disturbances on the scale customary to-day, and that no equally automatic method

can be devised to succeed it. A gradual narrowing of the gold (or sterling) "points" by international agreement consequently seems the most practical policy. And for Great Britain, both in the immediate and remote future, there are still two chief dangers to be avoided: on the one hand, excessive fluctuations, which hamper international trade and lending; and, on the other, an excessive rigidity, which might impose internal deflation on the whole sterling area.

INDUSTRIAL EARNING POWER

If industrial recovery is destined imperceptibly to pass, now or later, from revival to boom, movements in our industrial profits figures will be an index in a special sense. Over a large part of the British field the profit-making motive still largely determines the force and direction of individual policy. Rising industrial earnings, again, have, beyond all doubt, been the major force in a Stock Exchange movement which has raised the Actuaries' Index of 178 ordinary shares by 106 per cent. since June, 1932. Our quarterly surveys of the results of a large number of British companies show that profits fell steeply between 1929 and 1932, began slowly to recover in 1933, and (as we showed in the *Economist* of July 18th last, page 10) have returned to within approximately 8 per cent. of their pre-depression level. The detailed tables given on page 187 show that the tale of revival was continued by the 382 companies whose reports reached us during the quarter ended September 30th. The most significant figures are these:

	Reports published in	
	1935	1936
Profits (after deb. interest)...	£25,359,334	£28,974,570 (+14.3%)
Proportion of Total:—		
Paid in dividends.....	76.3%	70.3%
Added to reserves, etc. ...	23.7%	29.7%
Average rate of ordinary dividend	6.7%	7.6%

Here is recovery writ large enough to stimulate a desire to measure its actual dimensions a little more closely. Of really up-to-date information of industrial profits from official sources there is an unfortunate dearth. The latest index figures recently published by Sir Josiah Stamp in a contemporary, for example, are based on Revenue data only up to 1933, later figures being based on our own quarterly surveys. All indices of the volume of industrial profits, however, have a further disadvantage, to which Sir Josiah drew attention when publishing his latest figures. They afford no precise indication of the rate of return on capital, since the amount of capital employed in earning profits may have changed considerably between, say, 1929 and 1936. "Capital" in the economist's sense may be inexpressible in clear-cut numerical terms, but it is possible to obtain an accurate measure of the capital, in the legal sense, of all the companies included in our regular surveys. We propose, therefore, in the following article, to use the returns of the 382 companies whose figures appear on page 187, as an example of the method involved. Similar data are available in our columns for many years past. Though the companies included in our "sample" have never been identical in any two years, their composition has been sufficiently similar, over short periods, to afford a basis for comparison in relative rather than absolute terms.

Our latest tables show that the 382 companies which earned £28,974,570, after payment of debenture interest, in their latest year, had a total issued capital, at par, of £82,222,584 in debentures, £118,994,208 in preference shares, and £192,354,801 in ordinary shares. What was the average rate of earnings on this aggregate capital of £393,572,000? Our published tables do not show the total amount paid in debenture interest, but they give its weighted average rate, namely 4.8 per cent. On this basis the companies paid £3,046,000 before striking the profits shown in our table. Their earnings before debenture interest, would therefore have been £32,920,000, equivalent to 8.37 per cent. on their issued capital of all kinds. This figure, though not exact, is unlikely to be far out, so far as

the debenture "adjustment" is concerned, for only a very small minority of distressed British companies, in fact, fail to meet their debenture interest in full. Similar "overall" indices of earning power for every year from 1929 onwards are shown below:—

EARNINGS ON TOTAL ISSUED CAPITAL (Reports published in September Quarter of each Year)

Year	No. of Companies	Total Capital (Deb., Pref. and Ord. (£'000))	Total Profits before Deb. Interest (£'000)	Ratio of Profits to Capital (%)	Same, 1929 = 100
1929	257	258,128	25,726	9.98	100
1930	329	340,137	27,492	8.09	81
1931	320	421,085	19,063	4.53	45
1932	303	418,611	18,195	4.34	43
1933	307	369,202	18,980	5.14	51
1934	318	330,876	20,401	6.17	62
1935	345	370,348	26,338	7.11	71
1936	382	393,572	32,920	8.37	84

The rate of earnings, on this showing, fell from just under 10 per cent. in 1929 to a nadir of less than 4½ per cent. in 1932, and has since recovered steadily to nearly 8½ per cent. These, however, are "overall" figures. What was the rate of return on ordinary—i.e. risk-bearing—capital alone? Our returns show that the 382 companies, in 1936, paid out total preference dividends of £5,729,000. If we presume that this figure represented their full preference requirements (an assumption which may be broadly true to-day, but may be somewhat optimistic in depressed years), then we may regard residual profits as inuring to ordinary shareholders. This figure, for 1936, is £23,246,000, equivalent to 12.1 per cent. on an ordinary capital of £192,355,000. The average ordinary dividend, as we have seen, was 7.6 per cent. It is clear, therefore, that, even if our earning-power figure is a little on the high side, the dividend policy of these companies has been conservative.

Similar figures for earlier years are shown below:—

EARNINGS ON ORDINARY CAPITAL (Reports published in September Quarter of each Year)

Year	Total Ordinary Capital (£'000)	Earnings for Ordinary Shareholders (£'000)	Ratio of Earnings to Capital (%)	Same, 1929 = 100
1929	139,715	19,169	13.7	100
1930	178,664	19,158	10.7	78
1931	212,160	10,060	4.7	35
1932	225,695	10,171	4.5	33
1933	175,807	10,038	5.7	42
1934	161,187	12,912	8.0	58
1935	174,159	16,922	9.7	71
1936	192,355	23,246	12.1	88

Average ordinary earnings fell, approximately, from 13¾ per cent. in 1929 to 4½ per cent. in 1932 and have now recovered to a little over 12 per cent. But "reserves" are receiving a larger and shareholders a smaller part of actual earnings to-day than in 1929. This tendency to "plough back" may be partly a legacy of the bad days of 1931-33, when the reserves of some companies were depleted, but it also throws a direct light, say, on such a contemporary phenomenon as the reduced demand for bank advances.

Taking the figures as they stand, there has been a rise, during the "recovery period" between 1932 and 1936, of 93 per cent. in the rate of earning power on all capital and of an appreciably larger percentage in the rate on ordinary capital. The rise in Stock Exchange values has thus had a substantial foundation in increased earnings, although the average rate of dividend paid has risen, during the same period, only by 77 per cent.

It is possible, similarly, to calculate the rate of earnings for individual industries, but as the "sample" in each case is necessarily much smaller, the results must be accepted with greater reserve. We show at the head of the next column the resulting figures, for 1929 and 1932-36, of five groups of companies which have a fairly substantial representation in the September quarter's returns. Broadly, the steel and engineering companies have shown most recovery and the brewing concerns have been most stable. Rubber and tea were fellow-sufferers during depression, but have shared recovery unequally. Earnings in the textile trades have similarly shown wide fluctuations.

GROUP PROFITS AND DIVIDENDS (September Quarter Companies)

	1929	1932	1933	1934	1935	1936

The September harvest of company reports is usually the leanest of the year. Future figures will give a more representative indication of the trend of earning power. Nevertheless, results of the past three months justify the broad conclusion that recovery has been reflected in industrial earning power, and that the pace of revival has been fully maintained—and even slightly accelerated—during recent months. But directors are evincing a certain caution in passing on the fruits of revival to shareholders. And it would appear that recovery has not yet fully restored earning power per unit of issued capital, in industry as a whole, to the level of 1929. If industrial activity continues, but costs tend to rise, future analyses will afford early and valuable evidence of any resulting check to increased earnings.

MINING ROYALTIES—I

(BY A CORRESPONDENT)

IN redemption of the pledge given to the electors last year the Government will shortly introduce into Parliament a Bill for the unification or nationalisation of mining royalties. Another Bill is also promised to take the place of that withdrawn earlier in the year, which had the object of increasing the powers of the Coal Mines Reorganisation Commission. These two Bills, if passed, will be much the most important legislation affecting the mining industry since the Coal Mines Act of 1930.

The present legal status of ownership in ungotten minerals, with the exception of gold and silver, dates back to the reign of Elizabeth. For nearly 400 years the law has followed the precedent of a decision of the Courts in 1568 that, with the exception of the two precious metals, all minerals are the property of the landowners, i.e. that the ownership is not confined to the surface but extends to the centre of the earth. Broadly speaking, Great Britain and the United States are the only coal-producing countries where this principle obtains. In almost all other countries the State owns the coal, and either works it or grants concessions to do so.

Every tribunal which, in recent years, has inquired into the condition of the mining industry has agreed that private ownership of the minerals has operated greatly to the disadvantage of the industry. Even the Sankey Commission, which issued seven separate reports, and the members of which differed on almost every other issue on which they had to report, was unanimous in this. The disadvantages are various in character. Some are technical. Thus, the layout of a minefield has to be governed largely by surface boundaries and surface rights; a mine-owner sinking a shaft has to obtain leases from a multiplicity of landowners (the average number is five), and any one of these may, if he chooses, cause endless trouble and expense by refusing to lease or demanding unreasonable or exorbitant terms; barriers of coal have to be left between the property of one royalty owner and that of another. Other disadvantages are financial. The charges

levied for royalties and for wayleaves, both surface and underground, are very heavy. The average royalty charge is 5.78d. per ton (1935); but the highest recorded is 1s. 9d. per ton (in South Wales). The total sum paid out in 1935 was £4,806,139. Even between whole districts there are very wide variations. Thus the average in South Wales is 8.48d. per ton and in South Derbyshire 3.82d. per ton of coal commercially disposable. Broadly speaking, the charges are heaviest in the least profitable districts, and especially in the export districts. Finally, the private ownership of royalties has a series of political disadvantages: the workers are embittered by the knowledge that very large sums are paid every year to fortunate individuals who contribute nothing to the carrying on of the industry.

The post-war changes in the position of the industry have not only emphasised the seriousness of the burden of royalties in general, but revealed also the inequalities and injustices of the existing system. In the main, royalties were fixed in a period of phenomenal expansion in the industry. In the forty years from 1874 to 1914 production increased from 127 million tons to 287 million tons per annum. Moreover, the most rapidly expanding section of the industry was the export trade, for while home consumption increased from 109 million tons to 189 million tons, the export figures rose from 17 million tons to 98 million tons. Demand from abroad was increasing rapidly in the years just before the war, and in these circumstances it was not unnatural that the average rate of royalty should have been fixed at a higher figure in the export districts than in those mining coal for the domestic market.

Royalties are usually fixed as a certain sum on each ton of coal mined, or an equivalent charge based on the area and thickness of the coal worked. But in some cases there is a "fixed rent," a minimum charge which must be paid whether coal is worked or not. In other cases, there is a sliding scale based on the selling price of the coal produced.

Since the war the prosperity of the industry has vanished, and the export districts, which were formerly the most prosperous, have been the hardest hit. But the incidence of royalties has not been altered. Thus in 1934 Yorkshire, North Derby and Notts, South Derby, Leicestershire and Cannock Chase together produced 72½ million tons and paid £1,429,000 in royalties. South Wales produced 31 million tons and paid £1,115,000. The inland areas not only have a sheltered market, but they have gained most from the tariff policy of the Government through their close connection with the iron and steel industry. Compared with 1913, total domestic consumption in 1934 had fallen by 22 million tons, or 12 per cent.; exports, however, had fallen off by 41 million tons, or 42 per cent. In the five pre-war years the annual profit of the whole industry was roughly £13,000,000 per annum. In the five years 1930-34 the "profits" (before charging interest on debentures, bank loans, etc.) were about £3,000,000 per annum, and more than all of this profit was made by the inland districts since the export areas had an annual loss of nearly £200,000.

The royalty owner, meanwhile, was on velvet. None of the adverse factors under which the industry was labouring affected him except the reduced output. The average royalty in the five pre-war years was 5.64d. and in 1930-34 it was 5.43d. per ton. In the five pre-war years profits were more than twice as much as royalties. In the last five years royalties were nearly twice as much as profits. Since 1913 profits have been reduced by £10 millions per annum; but the royalty owner's income has been reduced by only £1,000,000 per annum.

The heaviness and the unequal burden of these charges would alone make a strong case for some relief being extended to the industry. When the hindrances which the existing system imposes upon efficient working are also taken into account, the case is unanswerable. The two great needs of the coal-mining industry are to increase the financial return to those engaged in it, and to increase its technical efficiency. The private ownership of royalties obstructs both.

Since mining royalties have for 400 years been a fully recognised form of private property, there can be no question of expropriating them without fair and just compensation. It may also be taken for granted that the State is not prepared to assume the whole cost itself. Royalties are, indeed, only a form of rent, and there can be no case for relieving one industry entirely of its rent burden without simultaneously relieving others. It may therefore be assumed that royalties will continue to be paid. Nevertheless, their nationalisation, or purchase by the State, would have very considerable advantages. The terms and conditions of leases could be standardised. The technical disadvantages of a multitude of separate royalty owners could be done away with. Obstructions to efficient working could be removed. Above all, the financial burden could be equalised. It will be noticed that all these things could be done without a reduction in the total amount paid in royalties by the industry as a whole.

Ten years ago the Samuel Commission made an exhaustive study of the cost of nationalisation. It came to the conclusion that the probable price to be paid for all existing royalties and underground wayleaves was £92 millions. Adding £8,000,000 for contingencies, the Commission accepted £100 millions as a maximum figure. Since then the fall in the rate of interest might be held to justify an increase in the figure; but on the other hand the financial position of the industry has worsened. The Samuel Commission's estimates were based on figures supplied by the Inland Revenue. On the assumption that the same sum would continue to be paid in royalties, the Commission reached the conclusion that the transaction would have practically no effect on the national Budget. In making this calculation factors such as diminished income tax yield and loss of mineral rights duty have to be taken into account, as well as interest and sinking fund charges.

In a second article consideration will be given to some of the technical problems connected with the nationalisation of mining royalties.

NOTES OF THE WEEK

The East End Question.—It is reported that the Government hope to introduce legislation next session to cope with the threat to civil peace by uniformed political demonstrations. The measure should not involve discriminatory treatment, or the grant of undue discretion to the police; for, as we observed last week, uniforms, military formations, and meetings called in places which constitute provocation of a whole class of citizens, are all things susceptible of fairly precise definition. At least they can be defined as precisely as obstruction, nuisance, negligence, driving to the public danger, assault, and a host of other elements of English law. Sir John Simon urbanely informed the Labour deputation from the East End which waited on him on Monday, that the Government were not allowing the matter to escape their attention. But urbanity

is not so evident in suburbs. Social workers, magistrates, and doctors working in the East End testify to the political indifference of the vast majority of the inhabitants, who are disposed to cry on Fascists and Communists alike, "A plague on both your houses!" But when political formations proceed in column of line to enemy strongholds, hurling imprecations and insults with equal ferocity, the threat to the peace, to life and limb, and—as streets of broken Jewish shop-windows in the East End now testify—to property, is a matter beyond Party politics. It is a matter for the law. No citizen's so-called "rights" enable him to exercise them *in terrorem populi*. The Government would be well advised not to under-estimate the extent to which this sentiment is spreading, on all sides.

Motor Manufacturers and the Air Programme.—An unexpected hitch has arisen over the manufacture of aeroplane engines for the Government's air programme by the leading British motor manufacturers. The Government's White Paper on Defence last March announced that extensions of industrial plant necessitated by the increased re-armament contracts, or extensions to be held in reserve at the Government's disposal, would be undertaken on a Government financial guarantee. Also contract prices and costs were placed under supervision by independent accountants and special committees. Subsequently, some of the leading automobile manufacturers—Austin, Rover, the Rootes concerns, Singer, Standard, Daimler and Wolseley—entered into negotiations with the Air Ministry for contracts. In some cases work was begun almost immediately, mainly under licence, on a basis which left costs and prices to be determined as work progressed. On May 29th Sir Thomas Inskip, the new Minister for the Co-ordination of Defence, told the House of Commons that these manufacturers had agreed on "a cut and dried programme" which would proceed with the absolute minimum of delay occasioned by shortages of skilled workers and machine tools, etc. (Imports of the latter were speeded up from Germany, France and the United States.) Now, this week, Lord Nuffield has sprung a surprise by announcing that the Wolseley concern has withdrawn its offer to co-operate in the "shadow" scheme; and it has reasonably been inferred that a serious difference has arisen between the Ministry and Lord Nuffield's concerns. This is confirmed by the report that Government contracts for the Wolseley company crossed the company's notice of withdrawal in the post. Not only has the Wolseley car company withdrawn from the Government's "shadow" scheme for airframes, but Lord Nuffield has closed down the works of the Wolseley Aero Engine concern—which has been designing and making its own aeroplane engines for some years. The causes of the quarrel appear to be—not that Lord Nuffield objected to the methods of supervision of costs, profits, etc., established by the Air Ministry—but that he distrusted the method of making aero-engines by distributing orders for the separate component parts among a number of factories, and (2) that he objected to building a brand new aero engine factory with Government money when he already had a factory ready for production. Whether this is the whole story or not remains to be seen—for we may assume that Lord Nuffield's statement on Thursday will be amplified by an explanation by the Minister for Air. What is certain, however, is that the public will regard it as a serious defect in the Government plans if one of the greatest units in our motor industry is given no part to play in an effort which we are so repeatedly reminded is of the greatest national urgency.

Refortification in the Pacific.—The British Government have taken the initiative in proposing to discuss with the Governments of Japan and the United States the situation which will arise when the Washington Naval Treaty of 1922 expires, at the end of the present calendar year, over Article 19 of that instrument. Under that Article the parties agree, so long as the treaty remains in force, to keep their fortifications and naval bases in their respective insular possessions in a defined area of the Pacific at a level of strength and efficiency not exceeding the *status* at the time when the treaty came into force. The good results of the Washington Treaty system during the first decade of its operation have been destroyed by three Japanese acts: first, the Japanese war of aggression against China, which was launched in the autumn of 1931 and has not yet ceased; second, the (suspected) fortification of the Japanese insular possessions, including the Japanese mandated territory within the prohibited zone; third, the Japanese refusal to renew the ratios agreed upon for capital ships at Washington in 1922, and for other naval craft at London in 1930. But Japan has an Achilles heel. She is vulnerable from the air: from Vladivostok first, but soon perhaps from Hawaii and Singapore. Article 19 of the Washington Naval Treaty cannot be scrapped by Japan with impunity.

Madrid in Extremis.—After moving troops, tanks, and heavy guns up to their semicircular lines round Madrid, the rebel Generals Franco and Mola launched their big offensive against the capital on Wednesday. On Monday and on Tuesday they rolled back the Government forces along the road from Toledo to Illescas—twenty miles from the capital. Their semicircle is now extending from Sigüenza in the north-east, round the Guadarrama range to Navalcarnero (which they captured on Wednesday) and so eastward again up to Aranjuez. So far the latter railway junction, the key town on the Madrid-Valencia railway, has held out. But the position of the capital is desperate; and desperate measures have been taken by the Government, who have sent every man they could lay hands on to the fronts. On both sides, barbarities are increasing as the crisis approaches; and the British Government's attempts to secure an exchange of hostages have so far failed to commend themselves to fanatical leaders on both sides. At Cartagena, on Wednesday, the militia shot out of hand all their hostages as a reprisal for repeated aerial bombardment of the town by the rebel forces.

The Powers and Non-Intervention.—The Spanish rebel forces have an immense superiority of equipment—notably in brand-new tanks, aeroplanes, heavy guns, and unlimited munitions. The Government are short of the latter, which hampers their plans. This is the measure of tragedy which clouds the farcical exhibition of the so-called Non-intervention Pact. It has effectively served the purpose which many observers predicted it would serve, which the delaying activities of Italy, Germany and Portugal have furthered: the unilateral blockade of the Spanish Government and its troops. Nothing which the Russian Government or the French and British Liberals and Labour have done has so far availed to galvanise the supervisory Committee into activity. It is announced, however, as we go to press, that a meeting of the Committee has been called for Friday of this week. Despite reports that H.M. Government were "concerned" about the delay of Germany, Italy and Portugal in replying to the Russian Government's allegations, Mr Baldwin on Wednesday was able to refuse the Labour Party's request for the convocation of Parliament over Spain in terms which recall the apocryphal Austro-Hungarian Imperial *communiqué* during the war: "The situation is hopeless, but not critical." (The German reply on Wednesday simply charged Russia with sabotage.) So much for our first foretaste of the new international co-operation between the Great Powers of Europe. Meanwhile, in Spain the Government have made arrangements to retire into Catalonia and capitalise the great local patriotism there in a last stand for an independent Socialist Catalan Republic. Even so, we fear that Generals Franco, Mola, and Queipo de Llano, with due assistance from their friends abroad, will carry the war thither. In that case, the British and French Governments will find the position in the Balearic Isles and in North Africa turned greatly to their discomfort. The last

of the Spanish rebellion will not be heard with the fall of Madrid; and when it is heard, it will prove highly unpalatable, we fear, to the British and French Governments.

* * *

Roosevelt v. Landon.—As the American Presidential Election campaign nears its end—the election is on November 3—the onslaught of the Republicans on the New Deal does not become any less fierce. When Mr Landon was nominated, there was a great deal of talk of the new Liberal influence which he would inject into the Republican Party. For the first few months of the campaign Mr Landon himself did something to justify this belief. His criticism of the Roosevelt Administration was moderate and constructive; he made no wild charges; and his speeches were refreshingly devoid of personalities. But from the start his chief manager, Mr Hamilton, and the Vice-Presidential candidate, Colonel Frank Knox, laid no such curb on their tongues. Their speeches have been full of what, from the European side of the Atlantic, seem to be the veriest absurdities, such as the alleged Communist sympathies of the President, or the imminent danger to bank deposits and life insurance policies if he is re-elected. Recently, however, Mr Landon himself has been taking this attitude. He still leaves abuse to his opponents, but he is repudiating all the symptoms of Liberalism with which he was once credited. He now declares, for instance, that he would cancel Secretary Hull's reciprocal trade treaties. Formerly he accepted the principle of Social Security while attacking the details of the existing Act; but lately the denunciation of details has almost swamped the acceptance of the principle. In the last few days, perhaps with the desperation of impending defeat, he has invaded California and wooed the supporters both of Mr. William Randolph Hearst and of the egregious Dr. Townsend. In the light of recent speeches, the dream of a Liberal Republican President is fading; the appellation of "Kansas Coolidge" is beginning to appear only too just. To all this Mr Roosevelt has one supremely effective reply. In the American phrase, he is "standing on his record." He invites the voters to consider whether they are better off than they were in March, 1933, when he came into office, and to draw the obvious political conclusion. Prophecy is hazardous; but the present indications are that this argument is winning the day over the somewhat hysterical assertions of the Republicans. "Straw votes," as usual, are confusing the picture. One of them, which has been surprisingly accurate in the past, predicts a victory for Mr Landon. But its rivals argue, with considerable apparent justification, that this election is the first in which the poor will vote differently from the rich, and that a ballot taken from owners of telephones and motor-cars is therefore not sufficiently representative. In short, there are predictions to suit every fancy, and the American public is getting an excellent show for its money.

* * *

Italy and Germany.—The return visit of Count Ciano, Foreign Minister of Italy, to Berlin, has been paid this week. Despite protestations of amity and solidarity of outlook on European questions by the two countries' representatives, it may be assumed that the real discussions were concerned with two things. First, Central Europe; and secondly, the common Italo-German attitude to the British and French Governments over the now receding "Western Locarno," over the Mediterranean, and the Spanish aftermath. As to Central Europe, the meeting of the three Rome Protocol Powers—Italy, Austria, and Hungary—is due early next month in Vienna; and it may be that Germany will now obtain the right to send an observer. More important, however, are the informal discussions between Italians, Austrians, Roumanians and Czechs, which have been going on for some time; and Count Ciano's Berlin talks can scarcely alter Italy's real interest in keeping Germany out of Austria and away from the Adriatic. The lightning visit of the Roumanian Prime Minister, M. Tatarescu, to Belgrade on Wednesday—reported to be in connection with Belgium's neutrality declaration, and the growing Roumanian and Yugoslav nervousness over the Czecho-Soviet Pact—may be taken

as evidence that Central Europe as a whole is becoming more self-conscious. To that extent, and especially after the recent devaluations (the lira among them), there seems no reason to expect anything like joint Italo-German activities, both political and economic, in Central Europe. Over Western Europe, Spain, and the Mediterranean, however, it would be little short of sheer foolishness if Italy and Germany did not together continue to keep the British and French Governments diplomatically "on the run." Their joint diplomatic successes so far have been encouraging them to further joint action; and we in Britain may certainly expect a common Italo-German attitude over Western European security.

* * *

Mediterranean Balance of Power.—In a *communiqué* reporting the information which Signor Mussolini laid before a Cabinet Council at Rome on October 10th, the head of the Italian State has announced to the world a formidable intensification of Italy's efforts to strengthen her armaments on land, at sea, and in the air. Between the lines of this document it can be noted that the Italian announcement is a reply to the declarations made by Sir Samuel Hoare after his recent visit, as First Lord of the Admiralty, to the British possessions in the Mediterranean. Sir Samuel announced that, while this country has no intention of making her naval and air power in the Mediterranean a menace to any other country, she also has no intention of evacuating the Mediterranean, but means to ensure that her hold on this essential line of maritime communications between different parts of the British Empire shall be at least as strong as ever. In the same strain, the inspired commentary on Signor Mussolini's *communiqué* in the Italian Press announces that "Italy excludes any aggressive plans," but adds that she must have in her hands the means of safeguarding, in all eventualities, "the vast system of national life which has been created between the Italian Peninsula and Abyssinia," and that one of these eventualities is the possibility of "a compulsory conflict brought on by others' irresponsibility." The truth is that the short route between the British Isles and India, Australia and New Zealand—a route which has been under British strategic control ever since the British occupation of Egypt in 1882 followed the opening of the Suez Canal in 1869—is now traversed by the cross-route from Italy to the Italian colony of Libya. It is also shadowed, in the Levant, Suez Canal and Red Sea by the other new Italian imperial highway from Genoa or Naples to Massawah. Italy now considers herself just as much entitled to protect her maritime route to Ethiopia as Great Britain may be to protect hers to India; and as it is impossible for both Italy and Great Britain simultaneously to possess the desirable margin of superiority in strength over all comers in these waters, the new situation that has been created by the Italian conquest of Abyssinia is big with possibilities of a most dangerous Anglo-Italian competition. In this competition Italy is much less at a disadvantage than she would have been 30 or 40 years ago, owing to the potency of air-power in narrow seas. Malta, and perhaps even Aden, is already overshadowed by the wings of the Italian air force; and our British command over the Straits of Gibraltar has now likewise been placed in jeopardy by the entente between Italy and the Spanish insurgents.

* * *

Exit the German Colonial League.—The "No! No! Never" resolution about the ex-German colonies, which Sir Samuel Hoare allowed the Conservative Party Conference to pass a few days ago, has met with a prompt response. It has moved Herr von Ribbentrop, the German Ambassador-designate to the Court of St. James's, to put his foot down on the soft pedal of Dr. Goebbels' propaganda organ in Berlin. On October 14th it was made known that Herr Hitler's Deputy, Herr Hess, had given orders, not only for the cancellation of the forthcoming conference of the German Colonial League, but for the dissolution of the whole organisation—and this at a moment when its activities had been on the point of being vastly extended. This sensational move is a signal victory for Herr von Ribbentrop. (He will now come to Carlton House Terrace as *persona grata* to the back-bench supporters of His

Majesty's Government.) But is it a victory for the Conservative Party and for this country? No doubt the Die-hards will be jubilant. "This will show you," they will say to the rest of us, "that we can be firm when we choose; and we are only firm in British—not in Abyssinian—interests. We have only to stamp our foot, and the bullies who threaten our British interests immediately back down. First the Arabs, then the Germans! Why, we have confounded two enemies in one week!" A shrewder observer, however, will be left wondering whether a hastily resuscitated John Bull has really heard the last either of Arab claims in Palestine or of German claims in Africa. It seems more probable that the Conservative Party resolution has achieved no more than to make Herr Hitler swerve back into the line of foreign policy laid down so clearly in *Mein Kampf*. "First things first" is Herr Hitler's motto in setting himself to avoid the late Kaiser's disaster and surpass even Bismarck's success. The first thing for Herr Hitler, if he does go on the warpath, is to obtain from Britain and France a free hand for making himself master of all Central and Eastern Europe. After that he will be so immeasurably stronger than all the West European Powers together that, in the West, there will no longer be any question of fighting. He will tell us what we are to do, and we shall have no choice but to obey. If our Conservatives have simply pushed the Führer back into this dangerous road, they have done as gross a disservice to England as to Europe. It is vitally important that Mr Baldwin should not now take the Conservative resolution and the German response as an excuse for dropping the whole attempt to find a solution for the colonial problem. If we push Germany into fighting a second time for world power—this time on a single eastern front—she will not only take back her own former colonies in her own good time. She will also hold the entire British Colonial Empire in fee.

* * *

Gleichschaltung at Danzig.—The last refuge of Weimar democracy has been taken from it. Last week the Nazis started to do in Danzig what they did in the Reich itself during the first six months of 1933. On October 14th the Police President of Danzig issued an order dissolving the Social Democratic Party and all its affiliated organisations in the territory of the Free City. The pretext is the illegal possession of arms; and on that pretext some two hundred members of the Party have been thrown into prison. The Catholic Centre and Conservative National Parties have been given a broad hint that they will incur the same fate unless they anticipate it (as they did in the Reich in 1933) by dissolving themselves. Already the leader of the Conservative Party in Danzig has been accused of tax evasion and been reported to be on the point of resigning his leadership for reasons of health. So the complete "co-ordination" of the political life of Danzig is already in sight. Presumably the Nazi Government of the Reich would not have given the Nazi Government of Danzig the word to open fire if they had not ascertained beforehand that there would be no reply from Poland, to whom the Council of the League seems to have given a kind of mandate for looking after—or neglecting—the stake which the League was given in the regime at Danzig by the Treaty of Versailles. The Poles are in a quandary. If they intervene in Danzig they run the risk of driving the last nail into the coffin of the Polish-German entente of January, 1934, in a quarrel which, in the Poles' eyes, is not their own. If they allow the domestic liberties of Danzig to be swept away in defiance of the terms of a statute on which the whole post-war status of Danzig is founded, then the Poles give the Third Reich an excellent precedent for disposing of Poland's own vital interests at Danzig in the same unceremonious fashion. In the present craze for taking short views, we may expect to see Poland lie low. We may then expect the Council of the League to take the line that, if Poland is satisfied, then they also are content. The decline in the League's efficacy—and therefore in the prestige of its two guiding members, Britain and France—has been precipitous during the last six months. Are H.M. Government satisfied by the degree of British isolation in European and world affairs which their hesitancy and indifference have now achieved?

Wise Economic Counsels.—The plan published by the International Chamber of Commerce in Paris last Sunday for the progressive removal of trade restrictions deserves careful examination and a warm welcome. It urges the conclusion of multilateral conventions to increase the volume and extent of trade, "open to all comers." Outside this ambit, the most-favoured-nation clause might be denounced; inside it, retained in its unconditional form. As a preliminary, bilateral treaties containing the unconditional clause might be used to lower restrictions. The import quota should be abolished after appropriate monetary and trade measures have been taken; and for a transitional period the "tariff" quota should supersede the import quota. The plan advocates international currency agreements for the future maintenance of the correct relations between currencies, on the lines of the tripartite Anglo-Franco-American agreement; and it proceeds to urge a joint declaration by the leading World Powers, renouncing currency depreciation as a form of competition. Finally, the plan advocates progressive removal of exchange clearings as and when international debts can be settled, foreign lending resumed, and flights of capital controlled. All these are desirable things; they are also, after the gold *bloc* devaluations, expedient; for the danger to-day is that of many unco-ordinated rises in national price-levels, as an outcome of extended bases of credit, rising commodity prices, etc. If national prices are not to rise out of all relation to those of other countries, thus bringing new price- and exchange-disequilibria and new currency maladjustments, the area within which currencies are kept relatively stable and trade expands must be widened without delay. Only in that way can the worst evils of protectionism during the depression be prevented from entangling each country in the toils of purely domestic booms, and further and further economic controls.

Road-Rail Test Case.—An issue involving the future of the long-distance road haulage business was settled last Monday when the Metropolitan Licensing Authority, Mr Gleeson Robinson, allowed the application of Messrs Bouts-Tillotson for renewal of their public carrier "A" licences. The railways had asked that all "trunk" services by road should be eliminated. They argued that the railways were "under-utilised" and were capable of handling all the applicant's trunk traffic. Road operators, they declared, were carrying this traffic at rates lower than the railways could afford, because railway rates were fixed in the interests of traders and the public generally. Mr Robinson accepted these points in his judgment, but declared his conviction, nevertheless, that premature action to provide a quick remedy for existing evils would be short-sighted, and that the prudent course was to maintain the *status quo*. Road transport contractors are therefore now assured of a life longer than the two years' currency of their licences, unless this decision is upset on appeal. Since Messrs Bouts-Tillotson applied for no more than the renewal of their existing licences, and received licences only for vehicles actually in use, the road transport business is secure on its present scale. But what will be the attitude of the Authorities to future expansion of the industry now that the original licence period of two years is expiring? The answer will be in doubt until applications for additional vehicles are decided in other renewal cases.

* * *

Mr Duff Cooper is Annoyed.—Mr Duff Cooper's dislike of ecclesiastics who disagree with him is now well known to the public. But his attack on the Bishop of Birmingham in Staffordshire on Monday is, nevertheless, if correctly reported, a most surprising oration. The Bishop, Mr Duff Cooper is reported to have said, might have "found sufficient causes of a religious nature to preach about in the pulpit without entering into politics." Yet not only had he entered into politics; but he had made a "judicious," "impracticable" and "impossible" proposal, which (in Mr Duff Cooper's opinion) must have made his audience "laugh at him while he was preaching." And what was this eccentric, this outrageous proposal made by the Bishop? He suggested, we find, that the British

Crown Colonies should be transferred to the international authority of the League of Nations. Now there are arguments for and against the proposal for an international agreement to place colonies under the control of some sort of improved Mandatory system. But it is a proposal which must at least command the sympathy of all who sincerely regard the Colonial Empire as a trust to be conducted in the interests of the natives and not as an opportunity for Imperialistic domination. Yet Mr Duff Cooper considers that this proposal "would disgrace a street-corner orator." We are all in favour of demanding a high standard of statesmanship from street-corner orators; but it is a little hard on them that they should be debarred from urging a policy which scores of our most respected public men—from Lord Cecil downwards—have approved.

World Production and Prices in 1935-36.—In its new survey of world production and prices,* the League Secretariat shows that the recovery in world production, which began in 1932, continued throughout 1935. Total primary production was as large in that year as in 1928. The rise in industrial recovery accelerated, and the volume of world trade rose by 5 per cent. to 90 per cent. of the 1925-29 average. The survey shows that industrial activity in the world as a whole was greater in 1935 than in 1928, and only 5 per cent. less than the 1929 record. Yet unemployment was still very much higher than before the depression; which suggests that in 1935 a good deal of technological unemployment was still prevalent. The rise in prices is shown to have been general in 1935. As a whole, the survey gives us a picture of many countries fairly set on the upward swing of the trade cycle.

Distribution of Electricity Sales.—The annual return of engineering and financial statistics,† issued by the Electricity Commission last week, showed that the number of consumers of electricity in Great Britain increased by 791,000 to 6,901,000 between the years ended March, 1934 and 1935. The distribution of sales of electricity by Authorised Undertakers in 1933-34 and 1934-35 is shown below:—

SALES OF ELECTRICITY IN GREAT BRITAIN

	1933-34			1934-35		
	Units Sold	Percentage of Total Units Sold	Percentage contributed to Total Revenue	Units Sold	Percentage of Total Units Sold	Percentage contributed to Total Revenue
(Millions)				(Millions)		
Lighting, heating & cooking	3,916	34.2	61.6	4,535	34.8	62.0
Power	6,392	55.7	32.4	7,285	55.9	32.2
Public lighting	219	1.9	1.9	243	1.9	2.0
Traction	961	8.2	4.1	967	7.4	3.8
Total	11,468	100	100	13,030	100	100

The expansion of sales was most marked in the case of (mainly domestic) lighting, heating and cooking, and least marked for traction purposes. But while sales for lighting, heating and cooking purposes accounted for only about a third of total sales, they contributed nearly two-thirds of the total revenue, amounting to £64.9 millions in 1934-35. The average selling price per unit declined from 1.262d. in 1933-34 to 1.196d. in 1934-35. Although prices declined for all the four purposes enumerated in the table, the difference between the charges for domestic uses and power remains considerable. Thus, the price per unit for lighting, heating and cooking in 1934-35 was 2.129d. (2.276d. in 1933-34), compared with 0.689d. (0.733d. in 1933-34) for power; 1.258d. (1.300d. in 1933-34) for public lighting; and 0.614d. (0.628d. in 1933-34) for traction. The downward trend of prices is encouraging and, if continued, will provide a further stimulus to consumption.

Coal-Mining Results.—Production of coal during the second quarter of 1936 underwent a seasonal contraction; but despite the fall of 2,500,000 tons in exports and in the quantity shipped for the use of steamers, the disposable tonnage raised was 0.6 million tons higher than in the second quarter of last year. Home consumption in April-June, 1936, thus showed an increase of more than 3,000,000 tons over the corresponding period in 1935. Moreover, in spite of the increase in the energy derived from each ton of coal, home consumption is now as high as it was in 1929:—

Period	Tonnage Disposable (Mill.)	Costs per Ton		Proceeds per Ton	Profit per Ton	Output per Man-shift	Earnings per Man-shift †

† Excluding allowances in kind.

As usual, the profit per unit of disposable coal declined in the second quarter with the fall in production. But profits were 4d. per ton above the level of a year ago, against a loss of 3½d. per ton in the second quarter of 1929, when output was appreciably larger. Wages were nearly 8d. per ton higher than a year ago, but the rise in total net costs per ton was even more marked. The increase in profits, therefore, was due to the rise of 1s. 1d. per ton in proceeds. Durham and Wales were the only districts to show a debit balance for April-June. Wales has suffered seriously from the shrinkage of exports during the past year; but that district also stands to gain most if the French import quotas are increased, and if the devaluation of the gold bloc gives a fillip to international trade.

Another Year of Potato Marketing.—From the producers' point of view, the Potato Marketing Scheme is one of the most successful schemes operating under the Agricultural Marketing Acts. It is not surprising therefore, that in the Board's Report for the year ended August 31, 1936, just published, a note of complacency is frequently apparent. The past year, the reader is informed, was "a year of remunerative prices," and attention is drawn to a series of diagrams "which indicate that much higher levels of prices were maintained in 1935-36 than during 1927-28 and 1930-31, despite the fact that those seasons were seasons of good prices." Now it is open to the Board to argue that some part of this increase was due to the more "orderly marketing," which it has introduced into the industry; but the consumer will not fail to notice that the rise in prices may also be attributed to the restriction of supplies. Home production—according to the figures published in the Report—declined from 3,854,000 tons in 1927-28 (a "season of good prices") to 3,765,000 tons in 1935-36. Over the same period imports fell from 443,700 to 229,600 tons, so that total supplies—ignoring shipments from Northern Ireland and the Channel Isles, which are being limited by "friendly agreement"—were reduced by some 303,000 tons. The members of the Board may, therefore, justly claim that they are "ever mindful of the needs and interests of the registered producers whose trustees they are." These same producers will, perhaps, demonstrate their gratitude to the Board at their annual meeting on October 29th. But it is eminently desirable that in fulfilling their obligations to 65,000 registered producers during the coming winter, when supplies of potatoes will not be too plentiful, the Board will also endeavour to bear in mind the interests of the millions of consumers upon whose good-will the fortunes of the industry must ultimately depend.

UNITED STATES

TARIFFS AND PARTIES

ONE phase of the rather nebulous Election campaign has developed a real clash of issues, and as would be expected in contemporary America, the issue does not divide along party lines. This issue is tariff policy, specifically as affected (a) by the Hull Agreements and (b) by agricultural policy.

Formerly the Democratic Party stood definitely for low tariffs; but as the Democratic South became industrialised, and as tariffs were applied on a variety of agricultural products, the Democrats divided into high-tariff and low-tariff groups. Secretary Hull holds to the older Democratic doctrine, and with his bi-lateral trade agreements made the first breach in America's protective system—a breach very considerably widened by the application of the "most-favoured-nation" principle to the bi-lateral parts. At the same time, the Administration's agricultural policy was directed to the somewhat contradictory end of making agricultural tariffs effective by the limitation of output; but the basic schism within the Party did not come to the surface. While this rift was developing within the Democratic party, an almost identical split was dividing the Republican party, traditionally ultra-protectionist. Even as long ago as the Hawley-Smoot tariff of 1930, some of the strongest opposition to that Act came from within the Republican Party; and in the ensuing six years, low-tariff opinion has grown among Republicans.

REPUBLICAN SUPPORT FOR MR HULL

The net result is that the bi-lateral trade agreements are always in conversation referred to as the Hull Agreements—as if they were Mr Hull's personal projects, rather than as elements of a party programme—partly because they were disliked by many Democrats and partly because they were equally liked by so many Republicans, even many Republicans to whom the New Deal was anathema. The Democratic Platform, in citing the accomplishments of the Administration, minimised reference to the Agreements, and in the paragraph allotted to foreign trade, placed its chief emphasis upon a promise of "adequate protection." It was probably the most equivocal tariff plank ever inserted in a Democratic platform. Yet, paradoxically, a large section of the Republican Party—at least the Eastern or Wall Street species—was literally shocked by the vigour of the Republican plank, with its forthright denunciation of the Reciprocal Trade Agreement Act, and its general advocacy of extreme protection. It is understood that this plank was inserted at the demand of what is called the progressive wing of the Republican Party.

Nothing could more perfectly illustrate the confusion that exists within party lines. On a really major issue—international economic relationships—the Administration has produced a solid achievement, which its platform not only did not boast of, but almost blanketed with contradictory affirmations; while the Republican opposition violently denounced that achievement, although a substantial fraction of its party membership regards it both in principle and in technical handling as one of the most commendable acts of any American administration in recent years.

By and large, since the war both parties had become officially protectionist, and consequently in no recent national campaign has the tariff figured as a major issue. In the last three years, with no clear demarcation between parties, Secretary Hull proceeded steadfastly with his policy, unmindful of inter-partisan praise and blame, with the praise rather more vocal than the blame.

Even when the Republican platform raised the issue, few (perhaps none) imagined it would develop importance in the campaign. It actually struck a responsive chord, particularly in the Middle West; and consequently it has been considerably emphasised by Republican spokesmen,

who alleged that the increased imports, notably of foodstuffs, reflected a failure to give the farmer adequate protection. At this juncture the currency understanding was negotiated, raising new hopes that the idea of economic nationalism was fading throughout the world. This, of course, was almost like an international endorsement of the principle of the Hull Agreements, and went an uncertain distance in neutralising the success of the protectionist campaign, although not necessarily in the same regions.

The international monetary undertakings of recent days have only moderate importance in themselves. They could lead to a reversal of the world-wide tendency toward autarky, provided there has been a fundamental change in public opinion, to support such a shift. American opinion has for years been not only isolationist, but to all appearance, increasingly isolationist, with the Hull Agreements standing out in contrasting relief.

No longer can one think of the Solid South as the citadel of free trade; that area has preserved its party designation but not its party principles of pre-war days. Nor can one think of the financial and industrial North-East as the enclave of high protection. That section, still largely Republican, has steadily drifted in the direction of low protection, and Wall Street in particular is often accused by the rest of the country of being internationally-minded—a term of reproach almost synonymous with that of a trafficker with the enemy.

The election itself is not likely to throw much light on the attitude of the American public. The tariff issue, with its broader implications of economic nationalism versus internationalism, ignored up to the end of August, has now definitely come to the fore; but not on well-defined party lines, at least as yet.

NEW YORK, October 13.

FRANCE

LOWER RATES OF INTEREST

THE increase of 5,000 million francs in the gold stock of the Bank of France—gold which was sold by the French Stabilisation Fund—from 57,000 millions to 62,000 millions, and the lowering of the rediscount rate of the Bank to 2 per cent.—the lowest point since 1931—were welcomed on the Stock Exchange, although the mystery surrounding the Bank returns prevents the real significance of the increase in gold being known exactly. Here and there, a certain revival of business is perceptible. But these favourable movements are being checked by politics.

The annual congress of the Radical-Socialist Party takes place this week at Biarritz. This Party very largely represents the peasants and middle-classes. The congress will give the provincial delegates a first opportunity to say to

MOODYS AMERICAN CARDS

Separate folders are provided on 500 (others available) leading American companies. The information given, in addition to the usual profit figures and balance sheets, includes latest news, dividends, etc.—added daily. Advisory bulletins, kept up-to-date, and "Moody's Ratings" are provided on about 70 of these companies. As this Service is produced by MOODY'S LONDON OFFICE, much of the news included is cabled from New York. Spare copies of any of these analyses are available free of extra charge.

the revolutionaries of Paris what people think in the country about the recent attacks on property and the liberty of work. The importance of the Radical participation in the Government is such that the leaders of the Communists and Socialists have been scrupulously observing the principles of Radicalism in the last few weeks. The Communists are singing hymns to "order and property, which is the fruit of work and saving," and the Socialists are appearing as staunch supporters of order and discipline. But if the Radical M. Chautemps eight days ago began to threaten a dissolution of Parliament, M. Blum warned the Radicals that after a rupture with the Communists they would not gain the support of the Conservatives. M. Chautemps, in a new speech, then condemned "hereditary patronage" in the purest Communist tone. It is thus thought that the leaders will try to appease the delegates, and that the latter, after having expressed their protests, will only ask for assurances that the present armistice will not be denounced on the day after favourable resolutions at Biarritz.

Even so, the French people who have always been susceptible to politics, are reacting with the greatest sensibility to the polemics which are now issued by both the Right and the Left Press apropos of the smallest daily incidents, and these polemics are disquieting the Stock Exchange and the country. French observers contend, however, that the opposition of the farmers and middle classes will check Communist activity, as after the revolutionary days of 1848, when Blanquist theories about property and the agitation for an intervention in favour of Poland provoked a general return to good sense and wisdom. Others point out that the New Deal and even social disorders did not finally impede the recovery of business in America.

BALANCING THE BUDGET?

The Budget Bill, which the Minister of Finance, M. Vincent-Auriol, will soon lay before the Government, will, however, provoke new difficulties, all the more since it will be accompanied by an important reform of credit and taxation. Nobody knows the Budgetary situation exactly; for the present Government has banished to the museum of deflation the alarm bell of Budgetary equilibrium. But the Budget total has much changed since the 40,000 millions level of M. Laval. Much new expenditure has been decided on since then: 1,300 millions for the abrogation of the decree-laws on civil servants' salaries; 1,000 millions for the 1936 public works; 3,500 millions in "advances" to industry and trade; 2,700 millions in supplementary credits for re-armament in 1936 and 4,200 millions for 1937; and 3,000 millions to 4,000 millions for social insurance, etc. If the Budget Bill is to entail even moderate diminutions in taxes, and if M. Vincent-Auriol is to have any chance of passing his Bill victoriously through the Senate, with its accompaniment of new measures against fraud, he will certainly encounter many great difficulties. New polemics will support the Government's new offensive, and the stool of the accused will be occupied no more by the Fascists but by the taxpayer.

Total foreign trade in September was 3,052,492,000 francs, or 100 millions more than in August. Imports were 1,862,000,000 francs and exports 1,190,000,000 francs. The following table shows the results of the first three quarters of the year.

(In thousand francs)			
	First Nine Months of 1935	First Nine Months of 1936	Difference for 1936
<i>Imports</i>			
Foodstuffs	4,557,703	5,305,115	+ 747,412
Raw materials	8,315,289	9,445,918	+ 1,130,629
Manufactured goods ..	2,641,690	2,679,407	+ 37,717
Totals	15,514,682	17,430,440	+ 1,915,758
<i>Exports</i>			
Foodstuffs	1,779,406	1,618,649	- 160,757
Raw materials	3,135,706	3,003,961	- 131,745
Manufactured goods ..	6,512,320	6,044,367	- 467,953
Totals	11,427,432	10,666,977	- 760,455

These figures show an increase in the import surplus due to a further increase in imports and a further fall in exports (exports of manufactured products have fallen in volume and value). This growing import surplus must be

attributed to the former over-valuation of the franc, but also to political considerations such as the sanctions imposed against Italy and an unfavourable evolution of trade with Russia.

In the week ending October 10th unemployment increased seasonally to 411,536, against 408,589 in the preceding week. It was 372,329 in the same week of 1935.

FISCAL RECEIPTS

Fiscal receipts were 2,017 million francs in September, or 15 million francs less than the estimates, but 142 million francs more than in September, 1935. The yield of most items shows an improvement, particularly in turnover tax, which exceeds the estimates by 17 million francs and the yield of September, 1935, by 23 million francs. This improvement, however, results from the rise in prices much more than from any revival of business. For the first nine months of the year, the yield of indirect taxes is 20,000 million francs, or 500 million francs less than the estimates and 300 million francs more than the yield of the same period of 1935.

But prices, following the new social laws (though the 40-hour week is not yet in force), were rapidly rising before devaluation, as the following table shows:—

	End May	End September
Wholesale prices	377	404 (444 on Oct. 10)
Alimentary products ..	405	441
Industrial products ..	354	372
Retail prices	459	494

The official indices for the period after devaluation are not yet known. But certain price indices have been published, for instance, by the iron and steel industry:—

Index of Price per Ton	Sept. 25th	Oct. 9th	Per cent.
Steel ingots	252	354	+ 40
Billets	296	415	+ 40
Rolled products	358	500	+ 39
Joists	358	500	+ 39
Hoop iron	435	610	+ 40
Wire rod	445	625	+ 40

The Bordeaux cost-of-living index shows, for the third quarter of the year, an increase from 506 to 552.

PARIS, October 22.

GERMANY

GENERAL GÖRING'S NEW POWERS

A decree of October 18th gives General Göring unlimited authority for the execution of the Four-Year-Plan announced at the Nürnberg Party Congress. In Herr Hitler's words, the plan is to make the Reich "within four years entirely independent of all such raw materials as can in any way be home-produced by means of German ability, or by means of her chemicals and mechanical industries, as well as mining." Probably Agriculture and Forestry were also meant. This is, of course, not a Plan in the Russian sense; for there is no programme of production. If not qualified, the words "entirely independent" would indeed constitute a production programme; for the shortage of raw materials, at present made good by import, is approximately known; but the qualification "as can in any way, etc.," makes the "entirely independent" meaningless. It is clear that there is no Plan with an absolute objective, but rather a policy of increasing the supply of home-produced materials as far as may prove practicable. This merely means speeding up measures already under way. Technically (and assuming that the present partial compulsion to use inferior substitutes is extended) entire independence of all important raw materials except iron-ore could ultimately be attained. But an attempt to speed up this process would raise very difficult capital and labour questions, and would certainly aggravate the already deranged food situation.

It is not clear how General Göring's appointment as "raw materials dictator," as he is being summarily described, will operate. Even a policy of increasing the output of raw materials to the practicable limit (as distinguished from a Plan of absolute production) would require co-ordination in the capital, labour, and other domains. There is at present no instrument for this,

though there are instruments for regulating individual trades. Unco-ordinated regulation of production, including production of materials, is already in force. There are numerous isolated regulations directed against the "excessive" production of particular commodities. In official announcements of these restrictions it is always implied that capital, labour and the mechanism of production will be spared for production of goods of which an increased supply is desired; but no positive measures are taken in direct connection with the restrictions. There are, however, unconnected positive regulations which encourage or even practically compel the increased production of certain goods. The Minister of Economy has much the widest powers. The Cartels Law of July 15, 1933, authorises him to regulate production restrictively. Dr. Schacht has made wide use of this power. Independently of this law, he has general powers in economic matters which go even further than those now given to General Göring.

Unless a co-ordination authority is created, it is doubtful whether the empowering of General Göring to "direct uniformly" will bring any material change. "Economic dictatorships" seem seldom to lead to much change. In April this year, General Göring was given supreme authority in the foreign-exchange question (also Dr. Schacht's special domain), of which the raw material question is a facet. Since then, General Göring may have occasionally intervened as arbitrator in conflicts between the various departments that claim priority of exchange supply; but the main problems continued to be regulated by the old mechanism and by the old personnel; and the work is done by organs subject to Dr. Schacht as Minister of Economy, or as Reichsbank President. Certainly, General Göring, who has already numerous offices, could not personally handle the innumerable issues of a raw material campaign; and possibly, therefore, his appointment is merely a demonstration designed to give the appearance of a formal Plan to something less precise and less exacting. In general, the Second Four-Year-Plan seems to resemble the First, announced by Herr Hitler immediately after he became Chancellor.

DR. SCHACHT'S POSITION

Naturally, there are the usual conjectures about the position and attitude of Dr. Schacht. The Four-Year-Plan is, in some quarters represented as Socialistic. As such, it would be favoured by the Nazi Party Radicals, who dislike the Minister of Economy. As "autarky," the Plan must be differently regarded by these Party extremists and by Dr. Schacht. In this question, however, there are not two factions, but three. To Dr. Schacht, restriction of imports is an unavoidable evil, temporarily imposed by the trade policies of other countries, the debt to abroad, the depletion of the currency reserves, the lack of colonies, and so on. But Dr. Schacht has consistently implied (for the last time in connection with the gold bloc devaluations) that he would welcome freer international trade. His attitude towards autarky might, therefore, be called apologetic. Very many well-qualified Germans agree with him. The Radical Party men regard autarky as a thing in itself desirable. The third faction is not interested in autarky as an economic system; but considers that self-sufficiency in war must at all costs be maintained. This view, which was expressed also by Herr Hitler in Nürnberg, is naturally not rejected by the other two factions. In general politics, the extremist Party men seem to have increased their influence of late; and the new measure will certainly gratify them; but that does not mean that Dr. Schacht's position is shaken.

Production of pig-iron in September was 1,349,700 tons; and the output per working day continued to rise: in the first nine months, 11,407,000 tons was produced against 9,253,800 tons in the first nine months of 1935. There is great activity in the sheets-consuming industries, and exports in this industry have risen. The machine-manufacturing industry reports orders for four and a-half months ahead. In September, this industry was occupied to 84 per cent. of capacity as against 82 per cent. in August. The chief demand seems to be for industrial investment, in particular for blast-furnaces, steel mills and rolling mills

for power, building, and transportation machinery, and for machine-tools.

The Institute for Trade Research last week published an elaborate analysis of foreign-trade conditions and prospects, the substance of which is that those tendencies which brought a return to export surpluses in 1935 and 1936 will continue. The improvement is attributed to the New Plan restricting imports, and to the recovery of world-trade. An important factor is the disappearance of the once heavy import surplus with Russia, conditioned by repayment of the German trade-credits. As of the goods ordered by Russia under the last Rm. 200 millions credit, only Rm. 32 millions have been delivered (up to July 1st), a continuing improvement is certain. The active balance this year, says the Institute, will probably well exceed Rm. 400 millions, whereas debt-payments (including standstill interest) will be below Rm. 250 millions. This optimistic forecast is confirmed by the foreign-trade return for September, which shows an export surplus of Rm. 75 millions, the biggest since October, 1933. Imports, which are usually at about their lowest in September, were Rm. 9 millions below that of August, while exports, which had already risen considerably in August, were at the year's highest. The September increase, however, was entirely due to a rise in the average price. The active balance for the nine months is Rm. 320 millions. The figures are as follows:—

	Aug.	Sept.	Jan.- Sept.
(Millions of Marks)			
<i>Imports</i>			
1. Foodstuffs	109.2	110.6	1,102.1
(a) Livestock	8.4	8.4	67.1
(b) Animal foodstuffs ..	33.4	33.2	329.7
(c) Vegetable foodstuffs ..	67.4	69.0	705.3
II. Industrial goods	236.5	225.8	2,036.6
(a) Raw materials	128.7	121.5	1,158.4
(b) Semi-manufactured ..	73.0	71.7	592.0
(c) Manufactured	34.8	32.6	286.2
Total	345.7	336.4	3,138.7
<i>Exports</i>			
1. Foodstuffs	5.4	5.0	64.6
(a) Livestock	0.1	0.1	1.9
(b) Animal foodstuffs ..	0.6	1.0	6.7
(c) Vegetable foodstuffs ..	4.7	3.9	56.0
II. Industrial goods	403.6	406.6	3,394.0
(a) Raw materials	35.6	37.9	298.8
(b) Semi-manufactured ..	37.4	40.5	344.4
(c) Manufactured	330.6	328.2	2,750.8
Total	409.0	411.6	3,458.6

Money last week was plentiful owing to repayments of Reich Treasury bonds, and early this week, owing to temporary availability of Reich tax-subsidy funds. Large sums in Gold Discount Bank promissory notes were sold. On Monday, the market discount-rate was reduced from 3 to 2½ per cent. The Foreign Exchange Board has forbidden, with certain exceptions, arbitrage transactions in foreign securities. About 100 securities are affected, in most of which, however, very little business was done.

BERLIN, October 20.

SPAIN

DEFENDING MADRID

THERE is an old Spanish proverb which says that the Spaniard thinks intelligently—but tardily. It is to be hoped that the appointment of a Commissioner-General of War and of numerous delegate-commissioners will not prove altogether too tardy. But it is a step which might quite well have been taken earlier. After all, this is a political war; it is half war and half revolution. In the first few weeks everybody lent a hand; politicians, trade union leaders and other prominent personalities dashed to and fro to the various fronts patching up things here, organising supplies there.

But then there came the period when organisation behind the front began to absorb many energies; and especially after the republican-socialist Government was formed. There was a tendency to leave things in the hands of the military. Trips to the front became fewer. The grimy, overalled figures put on collars, ties and black suits, and packed

ambassadorial bags or filled antique chairs in this, that or the other ministry. The result was Oropesa, Talavera, Maqueda, Toledo.

So now things go back to where they started. Naturally. Because most of Spain's officers are on the other side. There is a handful of loyal officers. But loyalty does not always imply efficiency. And the loyal officers had to be widely spread. There are on what is generally called "the Madrid front," no fewer than twelve different sectors, each with no particular connection with the other; each of which is virtually a tiny army on its own. There are men, and to spare. But the officer problem is tremendous.

The choice of Commissioner-General is an excellent one; or so it would seem. Julio Alvarez del Vayo, a journalist who has worked long years in Berlin, Geneva and Madrid, writing for *La Nacion* of Buenos Aires, and the *Manchester Guardian*, is not only alert to judge situations, but he is a man who gets things done. It was not his fault that he did not get better results at Geneva, but the loss of Toledo came at a most unfortunate moment. As Foreign Minister he recently named a General Secretary of Foreign Affairs who doubtless will take much of the ordinary day-to-day work off his shoulders. It is all very late in the day, but if Vayo can get his delegates to work at the various fronts and build up a liaison service and give the men spirit by giving them the presence of political and trade union leaders they know, then a lot of good should be done.

To a correspondent such as the writer, who has travelled long distances over the fronts near Madrid since the revolt started, it has long been clear that some kind of action was necessary. There was no kind of leadership. Even strategic points were left without a trench or barbed wire or even a sandbag. That the private soldiers and militias did not think of this is, perhaps, not surprising. But the officers must have known better. Too often the Government front line consisted of a line of men out in open country without any kind of shelter.

LACK OF LEADERSHIP

Meanwhile, Madrid looks to Moscow and wonders whether or not she will get artillery and aviation in time to save the capital. The Russian intervention has given her some hope. Many acute political observers have been somewhat surprised by the activity of the Soviet Union in this connection. Apart from what is after all a platonic and secondary consideration, that is to say, the general encouragement of world revolution, Russia has, unlike Britain and France, no very direct interest in the triumph of the Spanish Republic, but the Madrileños who see themselves abandoned by the western democracies are naturally only too eager to welcome anyone who will plead their cause without asking questions about ulterior motives. Some real artillery, a few tanks, and some good bombing and fighting planes would make such a difference to the Government outlook.

The silver "duro" or five peseta piece is to disappear. The five and ten peseta notes are already in circulation. The duro weighs twenty-five grams. When melted down, the duro is to-day worth a good deal more than its face value.

Madrid has so far escaped any very far-reaching changes in her general economy, but in the regions of Valencia and Catalonia a good deal of experimenting goes on. The long distance from the firing line encourages revolutionary fervour; but how much of all this will stand after the war is over remains to be seen.

MADRID, October 18.

SWEDEN

THE NEW GOVERNMENT'S POLICY

FOLLOWING the formation by M. Per Albin Hansson of his new Cabinet, composed of eight Social-Democrats and four Farmers, and an official statement issued by the Prime Minister outlining a very moderate programme, public opinion has entirely recovered from the shock which the unexpected victory of the Social-Democrats in the Riksdag elections produced. Besides the popular M. Hansson, the

list contains M. Richard Sandler as Foreign Secretary; the retiring Prime Minister, M. Pehrsson-Bramstorp, as Minister for Agriculture; M. Moeller, the *enfant terrible* of the late Labour Cabinet, as Minister for Public Welfare; and, on the Left Wing, the Radical M. Wigfors as Minister of Finance. As long as the sturdy M. Hansson remains at the head of the Government, and as long as the present coalition of Social-Democrats with Farmers holds, it does not seem likely that the Government will proceed to any radical economic experiments besides preparatory measures for the socialisation of the petrol and beer industries. A coalition between the Social-Democrats and Communists seems under present conditions rather unlikely; and in case of a rupture with the Farmers, M. Hansson would prefer to govern with a pure Social-Democratic Cabinet than to enter into a coalition with the Communists.

The devaluation of the French franc and other currencies has been of minor importance to Sweden, for neither the Bank of Sweden, nor the joint-stock banks nor private investors had held French or Swiss stocks or deposits in franc currencies ever since the situation of the franc had become endangered. Some of the big international concerns, particularly the SKF and the Ericsson Telephones, carried in their portfolios stocks of French subsidiaries; it is hoped, however, that these book losses will be out-balanced by higher profits as a result of the generally expected business recovery in France. If news of the franc devaluation was received with the greatest satisfaction in Sweden, it was because it was considered as a first step towards international currency stabilisation and, what is still more important for Sweden—a step towards the abolition of international trade barriers. The Treasury and some of the big Swedish mortgage banks, which have floated loans in franc countries, will make a direct profit on the devaluation of their outstanding bonds. So will probably the Swedish Match Company, which owes to French and Swiss banks 232 million French francs and 22 million Swiss francs, though the question is at present subject to negotiations with French authorities.

EMPLOYMENT AND PRODUCTION STILL INCREASING

In spite of the troubled political outlook abroad and a certain political strain at home, necessarily connected with an election campaign, the business boom has not lost anything of its strength. On the contrary, throughout August business activity showed a growing liveliness. Thus foreign trade resulted in an active balance of Kr. 10 millions, as against an import surplus of Kr. 2 millions in August, 1935. August exports reached Kr. 136 millions, which is exceptionally high. Timber exports for the current year so far stand at 775,000 standards, and the quota for Swedish timber exports, as fixed by the European Timber Exporters' Convention, amounts to only 820,000 standards a year.

The general index of Swedish industrial production was 108 in August, as against 107 in July and 93 in August, 1935. Employment is also satisfactory in practically all branches of industry, and the number of unemployed remains around 21,000, which is the lowest August figure ever reached since the boom-year 1929. An increasing demand for labour is reported from the building as well as from the machine and timber industries. The iron and steel works have enough orders to keep them fully busy even during the first months of 1937.

The price level has showed a slightly rising tendency since July, and the general wholesale price index rose from 118 in June to 119 in July and 120 in August (1913 = 100). Stiffening prices for raw materials and wooden goods for building purposes mainly accounted for the rise.

The money market has experienced a growing easiness, and the total cash reserves of the joint-stock banks increased during August by Kr. 34 millions to a total of Kr. 417 millions. In spite of the prevailing liveliness in all branches of economic life, the joint-stock banks' total advances increased during August by only 7 millions owing to a slight increase in loans for building purposes, whereas home bills showed a contraction.

Stock Exchange prices moved downwards when the results of the Riksdag elections became known; but they quickly recovered.

STOCKHOLM, October 12.

POLAND

DISTRESS AND DISCONTENT

POLISH interest in such lively current topics as the Danzig question, the war in Spain, reform of the League and currency devaluation is overshadowed by the economic distress and political discontent at home. The hopes entertained a month ago that the inflow of arms credits from France would have an immediately beneficial effect on the internal situation have not been realised because progress on the Franco-Polish financial arrangements has been retarded by the monetary disturbance in France. Until more definite information becomes available on the size of these credits, and the use which is to be made of them, the disposition is to "go slow" in discounting the effect they may have towards alleviating the distress and discontent, which are clearly causing the authorities concern.

The actual statistical position of Polish agriculture and industry is not worse—it is, in fact, appreciably better—than it was a year ago; but it is not an unusual phenomenon for political unrest to become more manifest on a rising market. With population increasing by about 500,000 a year, and a present "surplus population," according to some reports, of "8,000,000, including 3,000,000 Jews," there is so much slack to be taken up that a 10 or even 20 per cent. improvement in economic activity may well mean that the underlying situation has not improved at all. Moreover, the price index of "products sold directly by farmers" fell from 100 in 1928 to 35.8 a year ago. It stands now at 37.2 per cent. of the 1928 level.

LAND DISTRIBUTION RESUMED

Several recent Decrees show that official consciousness of the underlying discontent is not lacking. Labour camps for unemployed youths not yet ready for the Army are being organised under military direction; as is also an auxiliary defence service for those not subject to immediate call in the event of mobilisation. More acceptable to the peasants, however, was the Decree of September 24th, providing for the resumption of land distribution; and a beginning has been made by the expropriation of 70,000 acres belonging mainly to members of the nobility.

The Agrarian Reform Law of 1925 contemplated an annual parcellation of about 220,000 acres. Parcellation, in fact, stopped several years ago owing, the Government recently announced, to "unfavourable economic conditions." The owners of the very large estates belong to the Pilsudski Party, formed after the *coup d'état* of May, 1926, so that there were presumably other than "unfavourable economic conditions" to account for the pigeon-holing of agrarian reform. Its resumption now, even though on a trifling scale, must be accepted as a move in the right direction by a Government which, since the death of Marshal Pilsudski eighteen months ago, appears to have lost touch with the masses.

Peasant leaders themselves admit in private that the most drastic expropriation of large estates would not solve the agrarian problem in Poland. Thorough-going agrarian reform, with extensive land irrigation and the draining of the eastern marshes (which would be very costly), it is estimated, might make available for parcellation some 10 million acres, on which 600,000 new farms could be established. This would provide direct employment for 400,000 families, or about 2,000,000 people. These authorities contend, however, that 5,000,000 peasants will be without work in Poland this winter; and, including 3,000,000 Jews, they arrive at a "surplus population" of 8,000,000. It presents a problem that needs to be tackled with urgency and in a national spirit without regard to vested interest or party ties.

Another indication that the Government is perturbed was the appeal made by the Polish representative to the Second Committee of the League Assembly at Geneva last week for "international collaboration" in seeking a solution of the problems of over-population and lack of raw materials essential for industrial development. This *démarche* was accompanied by the specific request—made for the first time by Poland—for an "international solution of the

Jewish problem through emigration." There are about 3,500,000 Jews in Poland, and their "mass emigration," it is contended, requires that other territories besides Palestine be opened up, and that international support be obtained for the financing of Jewish emigration. The emigration of about 25,000 Polish Jews to Palestine in 1935 deprived Poland of nearly £2,000,000 in gold or foreign exchange.

It is a great misfortune for the Jews, and perhaps also for Poland, that the Government should have given—perhaps unwittingly, or, more likely, because of internal pressure—encouragement to the Nationalist and Fascist elements which attempt to hold the presence of 3,500,000 Jews primarily responsible for the prevailing distress. The leading Nationalist newspapers for several months now have been advocating that the Jews be "driven out of the towns," so that destitute peasants can find employment in those trade and handicraft industries which through the centuries have become almost Jewish monopolies.

It has been decided for the present to make no change in currency policy. The official view, as expressed at Geneva last week, is that "the development of international exchanges will not occur on a broad basis unless a quickening in the movement of goods is accompanied by a quickening in capital exchanges and in emigration."

After six years' deflation, with internal prices virtually adjusted to the enhanced value of the zloty, and the "closed economy" introduced with the exchange restrictions last April, there is felt to be no urgent reason why Poland should take the plunge.

WARSAW, October 12.

ROUMANIA

FALL IN IMPORTS AND EXPORTS

A COMPARISON of the June figures of foreign trade with those of the previous months shows a fall in the value of imports of about 11.5 per cent. and in that of exports of 15 per cent. The volume of imports has hardly changed, but the volume of exports has fallen about 11.5 per cent. The full figures for the first half of 1936 and 1935 are as follows:—

	Exports	
	Volume 100 kgr.	Value 1,000 lei
January to June, 1936	43,321,856	7,443,965
January to June, 1935	41,910,113	6,670,796
Increase in 1936	1,411,743	773,169
	Imports	
	Volume 100 kgr.	Value 1,000 lei
January to June, 1936	2,797,200	5,545,790
January to June, 1935	2,137,695	5,229,045
Increase in 1936	659,505	316,745

	Export surplus
	1,000 lei
January to June, 1936	1,898,175
January to June, 1935	1,441,751
Increase in 1936	456,424

Representatives of the principal petroleum companies of Roumania have called on the new Minister of Industry and Commerce, M. Valer Pop, chiefly in order to lay before him a series of crucial questions. The price of crude oil has fallen by 20 per cent. since the beginning of the year, and the price of transport represents now in certain cases more than twice the value of the product at the factory door. Other taxes amount to a similar figure. This has caused a reduction in exports and an agglomeration in the reservoirs which it is feared will soon prove insufficient for the quantity of stock held.

BUCHAREST, October 1.

U.S.S.R.

A RESTRAINED INTERNATIONAL POLICY

SOVIET RUSSIA'S determination to mind its own business during the "present historical stage" has been clearly indicated by Moscow's attitude towards the Spanish civil war. Soviet restraint has been a stabilising factor during this crisis; Moscow has not only accepted and faithfully observed an arms embargo, but has also avoided picturing the Spanish conflict as one between Fascism and Communism. Soviet speakers, soliciting money from workers to send food to Spain, have emphasised that the food was destined for "the women and children of the Spanish democratic republic."

Russia's present rulers are realists; M. Stalin and his associates have learned much during nineteen years in power. In recent critical weeks they have relegated even further to the background their underlying conception of "world revolution," meanwhile concentrating upon safeguarding their country's borders and increasing its self-sufficiency. The Soviet Union has become more than ever their paramount concern, and they have calmly pushed aside quixotic notions which might involve their country in a premature war.

Every Soviet citizen is being drawn into organised discussions of the new constitution which will be adopted by the Congress of Soviets in November and is described as "the most democratic constitution in the world." Of course, this is a gross over-statement. The new constitution does not curtail the Communist Party's political monopoly, which gives it complete control of the country's economy and social organisation. Russia remains under the new constitution a Party dictatorship. But the constitution does provide the Soviet Government, a well-controlled subsidiary of the Party, with a Parliament more nearly resembling those of western democracies, directly elected by the equal votes of all adults through secret balloting. The peasants, composing 70 per cent. of the population, are admitted to equality with the "proletariat"—industrial workers. The persistent Soviet emphasis upon democracy may ultimately have favourable results.

The Constitutional Congress is being used as an occasion to increase the quantity and quality of industrial production. Enterprises of every sort have pledged themselves to present as "gifts to the Congress" new production records. Soviet leaders use evangelistic methods to increase industrial efficiency. Their chief concern at the present and for some time to come will be the increase of every kind of production and its qualitative improvement. The successive "plans" are little more than guesses of the maximum production possible, and the rationing of limited raw materials and capital among various branches of production according to their estimated importance.

Demand far exceeds supply in everything. No consumers' goods, however defective, remain unsold; no raw materials, however inadequate, remain unused. The Soviet State, owning and operating all means of production and distribution, buys abroad as little as possible,

and compels its citizens, for the most part, to get along with what they can themselves produce. Consumers scramble for the limited output of consumers' goods; unfortunate late-comers do without. Industrial enterprises likewise contest for the available raw materials, and the unsuccessful fail to fulfil their "plans." Their directors and workers thus forfeit the premiums and bonuses given for fulfilment. The universal shortage inspires a spirit of competition as keen as that under any form of capitalism.

Meanwhile, Soviet leaders set aside as much of the national income as they dare for industrial expansion, concentrated in military and heavy industries. They are so intent upon building up a powerful Red Army and self-sufficient heavy industries that they reluctantly concede increases in consumers' goods. But they make an exception of agriculture and the food industry, in which supply now approximates demand. The State rations animal products, which are still insufficient, by fixing high retail prices.

SUCCESS OF MECHANISED INDUSTRY

The cereal grain harvests this year were considered a triumph for mechanised agriculture. Weather conditions were generally unfavourable, but were offset by the substantial increase of agricultural machinery and superior organisation of collective farms. The collective farms (kolkhozi)—in which individual peasants are permitted to cultivate private gardens and to own a limited number of private animals—have worked so well that the State has turned over to them an additional 15 million acres detached from State farms, which are owned and operated directly by the State. The State's monopolistic ownership of agricultural machinery ensures its firm control over collective farms, which cannot buy machinery but must lease it from State-owned machine-tractor stations.

The Soviet system is not static; organisational changes are made constantly. Some of these changes have been misinterpreted as a "return to capitalism." They are rather directed toward achieving Lenin's conception of the State as "one vast syndicate." Individuals are sometimes permitted greater freedom in the interests of efficiency, but always within the framework of State-ownership. Every change tightens rather than relaxes the State's control of every means of production and distribution.

Moscow, October 8.

CANADA

TRADE WITH THE UNITED STATES

CANADIANS are not impressed with the statement of Governor Landon at Minneapolis that President Roosevelt "sold the American farmer down the river" when he negotiated the reciprocity pact with Canada. Trade returns for the first eight months in which the agreement has been in effect—January to August inclusive—show that total Canadian exports to the United States were \$240 millions, compared with \$215 millions in the corresponding period of last year, and that exports of commodities affected by the trade agreement increased by \$27 millions, or about \$3½ millions a month. Canadian imports from the United States in the eight months ending August this year totalled \$235,948,000, against \$208,368,000 in the like period last year, an increase of \$27.6 millions, or about the same as the expansion in exports.

The Canadian-United States Trade Agreement has not ruined either the United States farmers or the Canadian manufacturers. Canadian cattle producers have undoubtedly benefited by the provisions which reduced the duty on beef cattle entering the United States from this country by \$9 per head. But it is doubtful if the price of a porterhouse steak has been reduced in any American city as a result of the influx of Canadian steers. Canada was also supposed to have secured a substantial concession on cream entering the United States; but only \$11,000 worth of cream has been shipped southward in the first eight months of the agreement. Similarly, the total exports of all potatoes from Canada to the United States during the

first eight months of this year were \$621,000, which would scarcely put an extra dollar in the pockets of Canada's half million or more potato growers. Canadian turnip growers were to get rich shipping their products to the American market; thus far they have sold \$381,000 worth of turnips. Maple sugar was considered of "prime importance," to quote the Canadian Government's statement issued on the consummation of the agreement. Total exports of that commodity thus far have been \$774,000. And though Canada did fairly well in selling \$1,109,741 worth of cheese to the United States for the first eight months of this year, even the much vaunted American lumber market has been disappointing. Thanks to the concessions in the agreement, Canada has increased her exports of lumber and its products from \$6,000,000 in the first eight months of last year to \$9,000,000 in the first eight months of this year; but in 1929 the American market absorbed \$38 millions' worth of Canadian lumber. Broadly speaking, Canadians feel that the trade agreement with the United States is a fair one and mutually profitable.

The cancellation of \$75 millions in tax, relief and interest bills affecting farmers in 158 drought-stricken municipalities of the Province of Saskatchewan is announced by Mr Patterson, Premier of the Province. About 50,000 farmers are affected. Mortgage interest rates on farms are cut to 6 per cent.

GENERAL BUSINESS RECOVERY

General economic conditions in Canada have shown substantial improvement during 1936, notwithstanding the partial failure of the western harvest. The index of business operations compiled by the Dominion Bureau of Statistics this summer reached the highest point since May, 1930. Exports continued to expand, and Canada's export surplus for the latest twelve-month period is \$350 millions. Wholesale prices have advanced sharply in the last three months. The market advance in high-grade bond prices continues, and bond yields are now at a lower level than at any time since 1919. Further expansion in productive operations was shown in August, when the index of the physical volume of business advanced from 110 to 113.2.

A board of seven directors has been appointed for the Canadian National Railways, replacing the three trustees who had managed the publicly-owned railway system during the greater part of the Bennett regime. The Canadian Radio Broadcasting Commission has also been replaced by a board of governors, and the Government has secured control of the Bank of Canada (Central Bank) by appointing a sufficient number of new directors to obtain voting control and by issuing 102,000 Class B shares to the Federal Minister of Finance.

The Dominion Government recently floated a \$100-million domestic loan, which was oversubscribed within two hours. Part of the issue consists of perpetual bonds, which is a new feature of Canadian financing. The bonds have no stated maturity date, but are callable any time after September 15, 1966, on sixty days' notice.

Meanwhile, in the first five months of the Dominion's fiscal year, April-August inclusive, an increase of \$28,392,821 in Federal revenues is reported. Total receipts were \$201,617,491. Expenditures, including \$22,700,000 for unemployment relief and public works designed to provide employment, totalled \$197,826,778. It seems probable, however, that the next Budget will show a deficit of at least \$50 millions when account is taken of the Canadian National Railway's deficit and the appropriation for the relief of the unemployed and the drought-stricken farmers of the Prairie Provinces.

The Dominion Bureau of Statistics has issued its first estimate of the present wheat crop at 232,973,000 bushels, of which 216,000,000 bushels is Manitoba spring wheat. The 1936 yield per acre is the lowest for 29 years. The crop is very high, however, in grade and quality. The Cabinet has decided not to set a minimum price for wheat unless the market at Winnipeg closed on any market day below 90 cents per bushel, when 87½ cents on the basis of No. 1 Northern wheat at Fort William would automatically become the fixed minimum price without any further action by the Government. There is a good prospect for the

liquidation of the huge Canadian carry-over of wheat, which has hung over the market for the last five years.

The Cabinet has also rescinded the Order-in-Council passed by the Bennett Government in February, 1931, imposing an embargo on imports from Soviet Russia, including coal, pulpwood, wood pulp, lumber, timber, furs and asbestos. In return for this concession the U.S.S.R. has removed its embargo on Canadian products.

OTTAWA, October 10.

LETTERS TO THE EDITOR

GOLD REVALUATION PROBLEMS

TO THE EDITOR OF THE ECONOMIST

SIR,—In your analysis of "Gold Revaluation Problems" there is one point which is not quite clear. In making good to the Bank its loss on current gold purchases, it would seem that the Exchange Equalisation Fund bears the loss itself. Gold for which the Fund has paid £1,000,000 is sold to the Issue Department of the Bank for, say, £600,000, the remaining £400,000 being "made good" in the form, presumably, of a "debt due from the Bank" in the Fund's accounts. This debt must have been piling up on every ounce of gold sold by the Fund to the Bank, and the reimbursement of the Fund must surely be a first charge on the revaluation of the Bank's gold.

If this is correct, it appears that, while the Government would receive a gross profit of £175,000,000, the net profit (available for debt redemption or other purposes) would only be about £90,000,000 (i.e. the proceeds of the re-valuation of the gold in the Bank on September 20, 1931, plus or minus the difference between the price on revaluation and the cost to the Fund of all the gold sold to the Bank).

"Marella," The Drive,
Hook Heath, Woking.

Yours faithfully,
J. C. JOHNSTONE.

[It is true that the Exchange Account has to make good to the Bank the loss incurred in gold purchases. But this loss is made good at regular intervals. And since Mr Chamberlain has repeatedly stated that the Exchange Account "shows a profit," it must be inferred that its jobbing profits exceed the Bank's losses. The available gold profit is therefore about £175,000,000.—Ed., *Econ.*]

"PLANNING" AND CHANGE

TO THE EDITOR OF THE ECONOMIST

SIR,—I should like to make certain remarks about the letter of Mr Fairweather on "Planning" and Change in a recent issue of the *Economist*.

The writer confuses the economic system of a country with a big business undertaking, which can and must be directed from a single centre. He recognises that planning is necessary for every business. Of course! Nobody can direct a business without a plan, if he wants to profit and make a living from it. Now, the greater the business, the more necessary the planning. But who is it that shall plan, who shall be the director in all these businesses? Only he who is bound to the business with a personal interest. If his own money is at stake, if he will profit by good planning, if he will lose by bad planning or by no planning at all, then the business will be well directed.

As for the rest, the so-called big businesses have their limits. Experience has shown that beyond a certain size even the best planning is of no avail; for the machinery is simply too complicated and goes beyond the power of human control. How can anyone seriously believe that it would be possible to control and to plan for every concern in the whole land, to guide the innumerable undertakings of industry from one single centre? If even a unified concern, such as a sugar factory, a bank, a gasworks or an electricity works is difficult to control when it exceeds a certain size, how will it ever be possible from one single centre to direct the aggregate of all these various concerns—which form the economic life of a people: industries, businesses, gasworks, sugar factories, shoe and textile factories, ironworks and everything conceivable!

The confusion of thought therefore consists in confusing the economic life of a people with a single great undertaking. The economic life of a people, however, is precisely not a single unified undertaking; it is the aggregate of thousands and thousands of individual businesses.

If each of these individual concerns is well-guided and well-planned, the economic life of the community will be healthy. But the individual concerns can be well directed only by those individual persons who are bound to the undertaking by their personal interest, by everything which they have, and who are competent to lead the business well by virtue of their own experience and their own knowledge. None of these conditions is fulfilled by a centralised bureaucratic machinery.

Yours faithfully,

JULIUS MEINL,
Präsident der Julius Meinl A.G.,

Vienna.

"P.R." AND EUROPEAN DEMOCRACY

TO THE EDITOR OF THE ECONOMIST

SIR,—In a recent issue you state that the explanation for the troubles of democracy must be sought "beyond the personalities of politicians." I am one of those who hold the view that the paramount factor which transcends personalities in the struggle for democracy has been of an institutional nature, i.e. Proportional Representation.

First, the case of Italy. Whoever looks at detailed electoral statistics will admit that both in 1919 and in 1921 under a majority system only a few Communists would have been elected. This would largely have done away with the red bogey, which proved to be of such a valuable help to the Fascists. Fascist deputies numbered 35 after 1921. In spite of their alliance with the Nationalists, perhaps none, certainly only a few of them would have been elected under the majority system. Further, P.R. complicated the problem of the formation of a democratic government both from the numerical and the political point of view. The great parties, especially the Socialists and the Popolari, were proud of their independence and doctrinal integrity—as proud as Victor Considérant and John Stuart Mill had wanted them to be—whereas, under the majority system, the necessity to form electoral alliances would have forced them to co-operate. It thus happened that during the greater part of the critical year the stop-gap Premier Facta "governed." On October 26th his Ministers resigned once more. Two days later the Fascists started the march on Rome. Would they have done so in the face of a "strong and stable government?"

Second, Germany. There is no doubt that hardly any of the

small German parties which arose after 1919 would have been possible under a majority system. Moreover, the Communists would not have been able to conquer more than about a dozen constituencies; they would never have been able to form a parliamentary group and obtain seats in the parliamentary committees. The Nazis would have been without any seat from at least December, 1924, to the elections of 1928 included. And in analysing subsequent events, if we divide the territory of the Reich into about 400 constituencies of about equal size, the result is startling: the Nazis nowhere obtained an absolute majority, and nowhere even 40 per cent. of the votes cast. They generally obtained about 20 per cent. of the votes; either Socialists or Centrists were mostly in a much more favourable strategic position. There can be no doubt that the latter two parties would have had a substantial majority in the Reichstag.

Instead, all the remaining democratic parties had to combine in order to assure Dr. Brüning's "majority of toleration." Thus, the democratic forces were encircled, and, since the continuing economic crisis favoured the Opposition, they gradually succumbed to this war on two fronts. In 1932, Nazis and Communists combined obtained a "majority." This, naturally, accelerated the end of democracy.

The situation in Austria was similar. The only substantial difference was that when the two wings of the Opposition together were expected to secure a majority as the inevitable outcome of new elections, it was the Centre which established the dictatorship and not the Right. In Belgium we are now watching a coalition of all the democratic parties, encircled by the Communists, the Flemish Frontists and the "Rexistes," all of whom would have been without seats under a majority system. Washington, D.C.

BOOKS AND PUBLICATIONS

ECONOMISTS AND THE PUBLIC *

PROFESSOR Hutt has written an interesting and readable book; but it is doubtful if he has succeeded in his purpose. He had the idea of tracing the relations between economists and the public from Adam Smith's time to the present day, examining the causes of the contemporary antipathy between the two, and possibly suggesting a remedy. And he writes, with much erudition and many illuminating allusions and quotations, of the development of British economics in relation to public opinion. His book, however, suffers from a certain ambiguity of purpose. For he is alternatively recording the history of economic thought and expounding his own economic and social views.

Moreover, the advice that Professor Hutt gives to his fellow economists will strike many readers as being in peculiar contrast with his own opinions and outlook. For he wants economists to abandon all contact with politics or business interest. He even recommends that "university teachers of the social sciences" should be compelled to renounce the right of standing for Parliament (surely an unwarrantable interference with their civic rights), and he remarks that "economists actively engaged in business cannot expect authority to attach to their pronouncements."

Yet Professor Hutt has the most precise, not to say extreme, economic and political views. He regards universal competition as the ideal of social policy; and he would apparently like to sweep away everything, including even trade unions, which could, conceivably, be represented as interferences with free competition. There is, of course, a very much stronger case for competition than it is now the fashion to admit; and one may welcome a book which shows how the classical economists have been misrepresented and dissects the crude popular idea that competition is always synonymous with "chaos," and that interference with competition inevitably brings "order" and "coordination." But Professor Hutt spoils his good case by going too far. When we are asked to believe that the industrial revolution was a time not merely of "unparalleled equality of opportunity" but also of "growing humanity," that the distress of the early 19th century was wholly due to "war, taxation, inflation and the Poor Law, i.e. the results of Government activity," and that trade unions have usually been injurious even to the working classes, common sense, even though fortified by less learning than Professor Hutt, revolts and becomes a little sceptical.

The great weakness in Professor Hutt's book is his failure

apart from a perfunctory rejection of hedonism, to relate economics to the psychological realities—wants, sacrifices, poverty and wealth—lying behind the phenomena of prices. Professor Hutt recognises that the institutional framework of the price system—inheritance, for instance, and the limitation of opportunity—are potent causes of inequality. And he advocates inheritance taxation as an effective method of reform. But he carries to extreme lengths his belief that interferences in the price system itself cannot mitigate inequality; and he would leave almost everything to the mercy of "consumers' sovereignty" interpreted in the sense of money demand. Yet it is not just the constant over-emphasis of some economists on a calculus of money and prices, to the apparent neglect of wants and satisfaction, that makes the plain man suspicious of economists?

SHORTER NOTICES

Regional Types of British Agriculture. By Fifteen Authors, edited by J. P. Maxton. Allen and Unwin. 318 pages. 12s. 6d.

The original conception of this volume of essays was to provide a brief outline of farming methods in Great Britain for the benefit of foreign visitors to the Fourth International Conference of Agricultural Economists, held in St. Andrews. The essays are well worth reprinting in a collected form for the benefit of all students of British agriculture, as no similar survey has been made for many years, during which conditions have greatly changed. The whole of Great Britain or seven main regions, within each of which the varying conditions of farming are described by agricultural economists possessed of specialised local knowledge.

The collection of essays, the utility of which is obvious, is edited by Mr J. P. Maxton, and an introductory chapter is contributed by Mr A. Bridges, who outlines the broad differentiating features of the country as a whole. Mr Bridges summarises the outstanding characteristics of British agriculture as the great variety of conditions in different areas, the diversification of production on the majority of farms, the growth of occupying ownership, the very high proportion of small farms, and the large amount of wage-paid labour.

From the standpoint of the economist, the chief interest of this valuable symposium is that it brings out so clearly the lack of homogeneity in British agriculture, which is a complex collection of competing industries rather than a single industry. Many of the finished products of our farms are part of the raw material on other farms, and it is quite impossible to pass any legislation that will benefit all branches of agriculture simultaneously. If the authors of British agricultural "policy" discover that the problems which they are attempting to solve are more complex than they appear to realise.

"The Demand for Colonial Territories and Equality of Economic Opportunity." The Labour Party. 52 pages. 4d.

In this pamphlet, prepared by a Labour Party advisory Committee, but not necessarily endorsed by the National Executive, an examination is made of the claims of the so-called "dissatisfied powers" for Colonial Territories and equality of economic opportunity. The Committee bring further facts and figures to reinforce the conclusion of recent surveys by Sir Norman Angell and others that Colonies are of very little quantitative importance in relation either to raw materials, markets, population or investments.

The committee believe, however, that the principle of Imperial preference is highly vicious. They consequently recommend that the remedy should be found in a freeing of trade rather than an exchange of territories. The "formation of a low-tariff group open to all countries on equal terms" is suggested. The committee do not think that Mandated territories should be returned to "Dissatisfied" Powers until the mandate system has been improved, and the Powers concerned are ready to accept disarmament and League obligations as part of a general international settlement.

"Bank of England Operations, 1890-1914." By R. S. Sayers. P. S. King and Son, Ltd. 142 pages. 6s. net.

This is a valuable book, clearing up many obscurities of a critical period in the history of the development of the Bank of England into a Central Bank. The traditional British belief is that, problems solve themselves *ambulando*. When devices planned to meet a problem are based upon obvious practical needs, the belief is sound. We can get no better illustration of this than is afforded by the development of the functions of the Bank of England. No pre-conceived plan, statutory or otherwise, has turned it into the typical Central Bank, with the task of managing the currency.

The Bank Charter Act of 1844 contemplated an automatic currency, for which the Bank of England was to be no more than the agent of the Mint. Irresistible forces have made our currency a managed one, and the Bank of England its Manager. This book of Mr Sayers was badly needed by the student. For till its publication the process by which the Bank adopted its "Open Market Policy," as an accessory of the Bank Rate for controlling the Money Market, has been shadowy and obscure. Here in this carefully documented account it is made clear. Not only does this book contribute an able digest of the *Economist's* notes upon the matter during the period in question; it also contains a digest of documents well-nigh inaccessible to the ordinary student.

"Key Economic Areas in Chinese History: as revealed in the development of public works for water-control." By Ch'ao-ting Chi. Allen and Unwin. 168 pages. 8s. 6d.

The author of this book comes from an inland province of China, is a graduate of Chicago University and has taken a doctorate at Columbia. He is one of a group of Chinese historians who are now busy applying modern critical methods to the rewriting of their country's history; and he has specialised on a subject by the study of which he has made an important contribution to the understanding of social and political development, not only in China, but also in other countries where similar fundamental conditions of economic life have prevailed.

Wherever insufficiency or too great variability of rainfall or excessive flooding has made intensive agriculture dependent on systematic, large-scale water-control, such water-control has been a major function of the economic system and has generally, before the development of modern capitalism, been performed directly by the State with *corvée* labour. In China, as Dr. Chi says, "almost all the major regions demand water-control in one form or another as a basis of agricultural development," though the need arises from diverse conditions in different areas; thus, "in the loess region in the north-west, the problem is primarily one of canal irrigation, in the Yangtze and Pearl River valleys it involves the continuous draining of the fertile but swampy alluvial land and the maintenance of a complicated system of drainage and irrigation, while in the lower Yellow and Hwai River valleys the problem is essentially one of flood control." In these circumstances a successful water-control policy was extremely profitable for any government which carried it out. For it meant not only an increase of agricultural productivity and therefore of revenue, but also, by means of the canals, better facilities for the transport of the grain tribute and military supplies.

Dr. Chi shows how often this factor has been politically decisive in Chinese history: how in the third century B.C. the irrigation policy of the Ch'in state in Shensi helped it to

unify China under its hegemony; how the development of water-control in Szechwan and Yangtze valley enabled Shu and Wu to become independent in the period of the Three Kingdoms; how the economic centre of gravity gradually shifted from the Yellow River basin to the Yangtze; though the construction of the Grand Canal enabled the political capital to be transferred northwards to Peking. The author has provided English readers with an admirable economic introduction to Chinese history.

MONEY AND BANKING

THE OUTLOOK FOR STERLING

WHAT influences are in future going to bear upon sterling? In what direction are they likely to lead the policy of the Exchange Fund authorities in this country, and the exchange rates which their policy affects? These two questions have been brought into the forefront of current international discussion by the tripartite agreement for provisional stabilisation of the dollar-franc-pound rates and by the agreement last week for mutual dealings in gold between the three centres. Despite the lack of detailed and up-to-date statistics on the balances of trade and payments between the countries of the British Empire, the sterling area as a whole, and the rest of the world, some answer must be attempted. For, as we pointed out last week, the new agreements on gold dealings between the American authorities and this country can scarcely have any significance unless they rest on either a fixed price of gold (within limits) in both centres, or—another way of saying the same thing—on a fixed dollar-pound rate. It is surely inconceivable that the American authorities would have agreed to mutual gold dealings on a basis that permitted the British authorities to vary the sterling price of gold indefinitely from day to day. If we have to assume that, as a result of the two sets of agreements, some limits have been set for the dollar-pound rate, questions of background and policy become decisively important.

Since 1931, the factors conditioning the exchange value of sterling have arisen not only in this country's balances of trade and payments, or even in those of the Empire as a whole, but in the balances between the entire sterling area and the rest of the world. For London during the last five years has re-established its financial pre-eminence, not, indeed, as a lending centre, but as a clearing-house and compensation centre for the sterling area. This result has been due both to the relative stability of sterling prices in the world's greatest import market, and to the need of sterling area countries to maintain liquid balances in London as minor exchange funds. Seasonal shipments to British ports from the sterling area produce mounting funds in London. These, in turn, are reduced by payments through London to other countries for their products, by dividends and interest paid to British investors in sterling area concerns, and by transfers of gold or liquid balances in London to maintain stability of exchange rates between the various currencies of the sterling area countries and the pound sterling.

It would appear, for example, that the United Kingdom owed foreign countries (including non-British countries in the sterling area), in 1935, £206 millions on balance. This was a net import surplus on merchandise account only. It also owed all other British countries as a whole £73 millions on balance for an excess of imports of merchandise from them. But the invisible exports of the United Kingdom to all other British countries in 1935 accounted for an annual income of about £150 millions. The United Kingdom was therefore in net credit with other British countries last year to the extent of about £80 millions. This credit was available for the sale of Empire products to foreign countries, to offset, in part, the United Kingdom's import surplus with those foreign countries. A further instance of London's rôle may be cited. During the years of depression, non-merchandise items in the balance of payments—gold movements, capital movements, shipping freights—have altered much more from year to year than in normal times. This influence has powerfully affected sterling, but its incidence has varied according as the movements have been within the sterling area, or between it and the outside world. Last year, a rapid rise in commodity prices, a slight increase in world trade, a recovery in the volume and rates of shipping freights, and an abnormal drain of speculative and "panic" funds from Europe to Wall Street, all exerted greater influence on sterling than in earlier years,

and the task of the British Exchange Fund authorities was proportionately more complex.

To-day, however, their task is even more difficult. In the first place, the embargo on foreign lending from London and the deliberate measures designed to drive the "cheap money" policy forward have coincided with the psychological effect of a rapid re-armament programme, which has tended, in turn, to maintain the output of constructional industries at a high level. Domestic output of iron and steel, machinery, etc., has required to be supplemented from outside sources. More industrial new materials have been purchased; and the United Kingdom's import surplus on merchandise account alone, so far this year, is already £55 millions higher than at the corresponding date last year. Is this necessarily dangerous? Taken by itself it is certainly not. This country had a credit balance in last year's balance of payments of about £40 millions. Moreover, we have been obtaining every year amortisation payments from abroad, both from sterling area and non-sterling-area countries. Even in the depressed year 1933, it was calculated that we obtained £67 millions of repayments of our capital abroad; and the figure for 1936 may prove to be as high as £80 millions. True, these are capital transfers; but since the Treasury imposed its unofficial embargo on foreign capital issues, they have not been re-lent in the same degree as in the past. Their repatriation favourably affects the sterling exchange. They swell liquid balances in London. They may come in as net gold imports; they may go out again as short-term capital transfers to Wall Street (thus depressing sterling again), or they may be re-invested in this country as long-term industrial investments. In that case the country is not, strictly, "living on its capital," but redistributing it geographically.

The British authorities might now be well advised to pay closer, and perhaps more benevolent, attention to this country's income from its invisible exports of services. That income is divided between a number of sources. It includes interest on our overseas investments, placed by Sir Robert Kindersley at £160 millions in 1934 and at roughly £170 millions for 1935. The Board of Trade's gross figure for 1935 was £185 millions. Other income comes from shipping freights, estimated at £75 millions last year, and from a miscellaneous set of services—such as sales of ships, commissions, Government transactions, net foreigners' remittances, etc.—which last year were placed at about £40-£50 millions. Recovery in the whole sterling area has by now proceeded to a point where, in certain outlying countries—as we pointed out in an article on the area in last week's Banking Supplement—tendencies towards disequilibria in individual countries' balances of payments are again becoming observable. While rising commodity prices may still carry recovery forward inside the area, it may well be that, for the immediate future, the chances of improving transfer capacity among debtors of this country will be greater in the hitherto neglected "foreign" world than inside the sterling area. The devaluations, quota increases and tariff reductions of the last three weeks are a signpost pointing in that direction. The British Treasury authorities cannot afford to overlook the importance to this country of any British measures which might tend to raise our gross investment income from its present £185 millions' level—to which, after four years of devices to canalise trade within the Empire, it has painfully climbed from its lowest depression level of £300 millions. Shipping freight income would undoubtedly respond in like manner.

If nothing is done to increase the volume of trade—and with it the transfer capacity of foreign debtors—in the non-sterling-area world, sterling may be faced with two considerable dangers. The first may be a drain of capital due

to a Stock Exchange boom in Wall Street, and the second, an increasing adverse balance in the United Kingdom's merchandise account. Repatriation of "panic" funds from the former gold bloc countries need occasion no alarm, for the Exchange Fund can offset it. As we have previously pointed out, these funds are held in London against gold earmarked abroad. A flow of funds to Wall Street might be checked—though not completely arrested—by increasing the array of "controls" in the City, but the authorities cannot call forth from the blue an increase of this country's exports of merchandise. On Friday last week, Sir Robert Kindersley declared that the adverse balance of merchandise trade this year would probably be £75 millions net larger than last year; and, in our view, it will be larger still. Against it we can count this year only on an increase of about £10-£20 millions in overseas investment income; and perhaps another £10-£15 millions in shipping income. Apart from capital movements, that is all on which we can reckon. Thus the capital movements are the crux of the whole situation; and in the sterling area as a whole they are capable of assuming dimensions which may outweigh all factors relevant to this country's position alone.

Prognostication, obviously, is dangerous at the moment. On the whole, however, we may be justified in assuming that if no "run" to Wall Street develops on a large scale, sterling may be maintained stable this year. What will happen in 1937 in America, in the countries which have recently devalued their currencies, and in the world commodity markets is beyond prophecy. One thing, however, is clear already. The British authorities will have their work cut out next year if, as Mr Chamberlain has suggested, this country intends to decide her internal policy by purely domestic considerations and simultaneously to maintain a more or less fixed relation of sterling to gold.

FINANCIAL NOTES

Trade with China.—The Export Credits Guarantee Department announced on Monday that Mr W. H. Kirkpatrick, M.P., has been appointed to act as its special representative in China. Mr Kirkpatrick has had a lengthy experience of commerce in the Far East, and there is little doubt that he is the right man for this new job. In one sense this appointment—which incidentally necessitates a by-election at Preston—is a new departure, for hitherto the Export Credits Guarantee Department has obtained its information on credit risks attaching to different importers by means of its contact with our Embassies, Consulates, and also banking and other private channels in different parts of the world. China, however, presents peculiar problems of a political, geographical, economic and social character, and for these reasons the Department is fully justified in having its own man on the spot. It must be emphasised, however, that this is the only new departure. There is no question of any general loan or guarantee to China, nor is there any parallel with the recent Russian credit. The Department will continue to underwrite credit risks attaching to British export trade on its normal commercial basis, and each application from British exporters will be dealt with independently and purely on its merits. It will be Mr Kirkpatrick's duty to advise the Department on the standing of Chinese importers, so that the Department may judge how to treat its application for insurance. The real importance of Mr Kirkpatrick's appointment lies in the fact that China is on the threshold of far-reaching industrial development and will be placing large long-term contracts with foreign suppliers of machinery. The Export Credits Guarantee Department has already evolved a system of insuring medium-term credits extending up to as much as five years, thereby enabling contractors to approach their bankers for the necessary finance. It therefore looks as if British contractors will be in a favourable position to secure their share of this new business. Apart from this, Mr Kirkpatrick's work will be watched with great interest, for his appointment may constitute a valuable precedent to be followed in other parts of the world.

The Money Market.—There has been a good demand for money all the week, with a fair amount of calling by one or more of the clearing banks every day. By Wednesday morning definite stringency began to develop, but the authorities then intervened and bought large quantities of bills, thus making it clear that the policy of cheap money was being continued. This week's Bank return shows that the shortage of money was entirely due to a further accumulation of funds in public deposits, although there was a dividend payment on October 15th and there have been no sales of foreign exchange by the British Control. A probable explanation is the large sales of Funding Loan by the Departments, which in some quarters are thought to indicate the clearing of the decks for a further loan.

* Loans against Treasury bills and other approved bills and British Government securities within six months of maturity; 1 per cent. Treasury Bonds and other gilt-edged stocks within six months of maturity; and other collateral respectively.

The banks have bought a few mixed parcels of December and January Treasury bills at $\frac{1}{2}$ per cent. January bills by themselves are $\frac{1}{16}$ per cent., with very little demand.

* * *

The Bank Return.—During the past fortnight the note circulation has dropped by £10 millions. Part of this movement is seasonal, but part represents Continental disboarding. The funds so realised, however, have probably only been repatriated to a small extent, for sterling has recently needed little support.

Government securities are practically unchanged, so that the bills bought in the open market must have gone elsewhere. Conceivably the Exchange Equalisation Account is taking up bills in this way. Bankers' deposits are unchanged, as the return of notes from circulation is neutralised by the increase in public deposits.

* * *

The Foreign Exchanges.—The franc has once more begun to develop weakness, and three months' francs are at Frs. 13 $\frac{1}{2}$ discount, equal to about 7 per cent. per annum, which is a wide margin for a devalued currency. The spot rate has been very erratic, for after rising from Frs. 105 $\frac{3}{4}$ on Monday to Frs. 106 $\frac{3}{4}$ on Thursday afternoon, it was brought back in half an hour to Frs. 105 $\frac{1}{4}$ bid. Presumably the French Control intervened to the sorrow of some speculators. Sterling has remained very steady against the dollar at about \$4.89, and no support has been needed. Guilders have been firmer at Fl. 9.07, after Fl. 9.16 early in the week. The reduction in the Dutch Bank rate from 3 to 2 $\frac{1}{2}$ per cent. created a good impression, and there has been some repatriation of funds and also a demand for guilders to cover purchases of Royal Dutch shares. The long-run view for the guilder, however, remains more dubious, and three months' guilders are still 9 $\frac{1}{2}$ cents, or over 4 per cent. per annum discount. Swiss francs are steady, and for the moment the Swiss National Bank has ceased buying gold.

THE STOCK EXCHANGE

COSTLY COMPANY FINANCE

A FORTNIGHT ago we published an analysis of some twenty recent company prospectuses, which had a direct or indirect connection with "re-armament." From our examination we concluded that the majority of the offers had been *bona fide* propositions, but that many were of essentially speculative character. Their capitalisation, we suggested, was frequently liberal and generous to inside interests. We pointed out, finally, that certain of these companies would be vulnerable to a change of trend in constructional and armament activity.

The boom in small company issues, in fact, has so far been exuberant rather than vicious. The half, however has not yet been told. There is little doubt that the coming winter will see greater new issue activity than at any time since 1929. The market is in a state of incipient boom, and it will be catered for by types of issuing houses ranging from capably administered and adequately financed institutions to concerns with resounding titles and nominal capitals of no more than a few pounds. There may be occasion for the investor to be on guard against the men of straw who (in the words of the Bubble Act) may "presume to open books for public subscriptions and to draw in unwary persons to subscribe."

It may, therefore, be relevant, at this particular moment, to discuss the cost of company financing in the London market. Of the cash proceeds of any particular issue, what proportion remains with the company concerned, and what finds its way into the pockets of intermediaries—for the re-sale of assets, for services rendered, and for other payments? And is the prospectus or offer for sale the ideal medium for the smaller companies? There is no lack of evidence that it is an expensive medium. In contrast with the economical terms on which a trustee issue or a large public industrial issue can be arranged, a small company offer may involve preliminary expenses amounting to well over 10 per cent. of the issued capital. There is still force in the criticisms, voiced in the Report of the Macmillan Committee, that industrial company finance is expensive, and not always competently carried out either in the interests of industry or of the investor.

Let us, for purposes of illustration, consider the facts revealed in one of the prospectuses included in our recent analysis. Company A had an issued capital of £132,000 in £60,000 6 per cent. preference and £72,000 ordinary shares. Of the latter, some £47,900 had been issued in purchase considerations. The nominal value of cash subscriptions was therefore £84,100. The cash received amounted to £94,500, including a 43½ per cent. premium on the ordinary shares. The prospectus showed an estimate of £10,070 for preliminary expenses and £3,780 for underwriting commissions, together totalling £13,850. Of the cash subscribed, therefore, as much as 14½ per cent. was absorbed in constituting the company and floating the issue. Let us carry the analysis a little further. Of the total expenses of £13,850, underwriting commissions absorbed about one-quarter. Of the balance of £10,070 payable to the issuing broker, £2,500 was specifically attributed to his services. Press advertising probably cost over £2,500, and may have approached £2,750. Capital duty cost £750; brokers' commission on allotments amounted to £1,000; prospectus printing and circularising may have absorbed £1,000 or more; and the balance, say £2,000, was probably absorbed by the fees payable to bankers, solicitors, valuers and auditors.

If this public issue had taken the form of an introduction, these expenses might, ostensibly, have been halved. Whether the eventual saving to the public investor would have been equally substantial is, however, more doubtful. Recent experience of small offers for sale suggests that they are, in practice, only a little more expensive to subscribers than an introduction in which the investor, in

effect, pays an appreciable "turn" to the first "placees." There are, however, two means by which expenses might be reduced. In the first place, a company with a relatively satisfactory earnings record ought to be in a position to secure the best possible terms by the force of competition between different issuing houses. Secondly, a company of moderate size should confine its capitalisation to one class of ordinary shares.

The cost of new issues, however, in the broadest sense includes many elements besides direct expenses. In our earlier analysis of twenty company issues we showed that, of the total cash subscribed, only 31 per cent., i.e. less than one-third, was actually available for net new capital for the companies concerned. Some 55 per cent. was absorbed by purchase considerations and 14 per cent. by intermediaries and issue expenses. A few examples, culled from individual prospectuses, will show how subscriptions were utilised. Company B had a capital of £125,000 in 5s. shares, offered to the public at 20s. The company owned net assets of £132,929, which had been acquired from Vendor X for £123,750, satisfied by allotment of 495,000 shares. These (together with 5,000 shares separately subscribed for £5,000 in cash), were then sold to the Vendor Y (who made the offer for sale) for £430,000. Expenses of Vendor Y on the offer for sale were computed at £40,000, leaving him with a "turn" of 1s. 2½d. per 5s. share. The result was that the public paid £500,000 for the shares of a company whose total net assets had been valued at £137,929. In other words, the public paid £362,071—equivalent to 262 per cent. of the assets acquired—for goodwill. No "goodwill" figure, however, will appear in the balance sheet, for the surplus over par value was received, not by the company, but by intermediate vendors.

We may supplement this instance of what may be termed "the diverted premium" by an illustration of the method of "best-year capitalisation." Company C, whose shares were offered for sale, showed final net assets of £100,000, after deducting a bank overdraft of £24,729 of one constituent undertaking and adding £30,161 from new share subscriptions. The acquisition of the various constituent undertakings is summarised in the following table:—

Constituent A	50,000 6% 10s. pref. shares	25,000
	18,108 2s. ord. shares	1,811
	Discharged liability	24,729
Total consideration		51,540
Goodwill		20,000
Constituent B	9,680 6% 10s. pref. shares	4,840
	323,008 2s. ord. shares	32,301
Properties acquired from directors		37,141
258,870 2s. ord. shares		25,887

Total assets of £94,568 were therefore acquired for £114,568, the latter sum including the repaying of liabilities. The total considerations consisted of 59,680 10s. preference shares (£59,680), 599,986 2s. ordinary shares (£59,999), and a cash transfer of £24,729. The ordinary capital was thereupon acquired by the vendor to the offer for sale for £76,916 (plus 28s. for the remaining 14 shares). The 59,680 preference shares were acquired at par, and a further 60,320 shares were separately subscribed or purchased at par. At this stage, therefore, total assets of £100,000 were represented by shares sold to the vendor for £136,917. The issuing house, within a few days, offered the 120,000 preference shares at par (£60,000) and 600,000 2s. ordinary shares at 4s. (£120,000). These shares had cost (including £18,000 expenses) some £154,917. Of this sum, £30,161 was available to supplement the company's cash resources, from which liabilities of £24,729 fell to be discharged. We

may conveniently summarise the various stages in the transactions as follows:—

Original value of assets	£94,568	Cost of shares acquired by vendor	£136,917
Net new capital subscribed	5,432	Vendor's expenses	18,000
Total net assets	100,000	Difference between gross cost to vendor and issue price	25,083
Payment for goodwill to original vendors	20,000		
Added "goodwill component" in issue price	60,000	Issue valuation	180,000
	180,000		

The placing of an "issue valuation" of £180,000 on assets (ex goodwill) of £100,000 was based on the effective market capitalisation of a single year's peak earnings. Its weaknesses would be immediately revealed if, for any reason, profits took a sudden downward turn.

Though these examples have all been taken from issues made by way of "offers for sale" (which, indeed, provide the greatest scope for expansionary finance), the direct prospectus also affords opportunities for generous capitalisation, though its presence may be more readily revealed by a substantial goodwill account in future balance sheets. It is true that, in the last resort, the real security for all shares is earning power. But criticism will rightly attach to a system under which a disturbingly large part of the money paid by the investor for the expectation of future earnings goes not into the coffers of the profit-earning companies, but into intermediate pockets. The midwife's fee appears uneconomically high. Never since the world began has the course of company profits been uniformly upward; and liability to fluctuation will apply particularly to smallish companies whose recent prosperity has been due to special features of the re-armament or constructional boom. And the fact that many issues in this class have taken the form of high-denominational preference cum low-denominational ordinary shares will undoubtedly involve difficulties of marketing when Stock Exchange business is less active.

We have before us a document in which His Majesty's Commissioners for Trade and Plantations complain that the end and design of companies has been wholly perverted to the private profit of the first projectors who sell again with advantage to ignorant men, "drawn in by the reputation . . . concerning the thriving state of their stock." This complaint was, in fact, voiced in the year 1696. Two hundred and forty years later, the investor may at least be well advised to examine new issues with the greatest circumspection, carefully to read the "small type" sections of all prospectuses, and to give his own pocket the benefit of every doubt.

INVESTMENT NOTES

Strength in Wall Street.—The course of prices on Wall Street since the franc was devalued has conformed more to the expectations of London than to the fears of New York. European centres have so far been buyers and not sellers of American securities, partly because conditions in Europe are still uncertain and partly because the intrinsic merits of American investment are being emphasised by a steady series of business reports suggesting that fundamental economic recovery is well under way in the United States. Recent technical changes are calculated to enhance the Stock Exchange's response. Increased margin requirements tend to hold more stock out of the floating supply, and a similar effect may result from the grading of the capital profits tax, which falls the longer securities are held. Similarly, the surplus profits tax, according to the evidence of recent declarations, is tending to push up dividends. Nevertheless, there does not appear to be any reason as yet to describe Wall Street's strength as excessive or dangerous. The American economy has still considerable leeway to make up, and there is scope for greatly increased activity in building and utilities—to mention only two fields. There is, as the chairman of the United States Steel Corporation has stated, considerable expansion ahead for the capital goods industries, in order to cope with the rising consumers' demand. The leading groups in the recent rise in prices were the steel and automobile sections, and when activity slowed up this week, interest shifted to oil, liquid and utility shares, which have been rather sluggish. Interest

in utility shares is encouraged by the prospects of a truce between the private power interests and the T.V.A., which is now ready to expand its market in order to use power available from the Norris dam. The truce proposed is a common power pool, roughly on the lines of the excellent Connecticut Valley pooling system. If the discussions do not prove to be merely a pre-election tactic (which would hardly seem necessary from the trend of opinion at the moment), then the utility field should once again come into its own. There remains, therefore, as the only possible disturbing factor, the Presidential election itself. So far the campaign has had no effect upon the stock markets, and it is difficult to believe that there will be any great effect when the outcome is decided. President Roosevelt's re-election could hardly be made the occasion for more than a brief reaction in prices, while, conversely, Landon's return would probably provoke only a short display of fireworks.

* * *

Railway "Maintenance."—A great teacher was lost when Mr W. V. Wood became Controller of Costs and Statistics and subsequently Vice-President of the London, Midland and Scottish Railway. Early this month, before the Bristol and District Section of the Institute of Transport, Mr Wood gave a characteristically lucid explanation of the "mystery" (in the ancient and modern senses) of railway accounting. Perhaps the most interesting section of the address dealt with the subject of repairs and renewals, which has puzzled many investors. Since 1928, the term "maintenance," in railway accounts, has covered all depreciation, repairs and renewals, i.e. everything from the repainting of a fire bucket at Oxenholme Junction to the replacement of Euston Station. Broadly, capital expenditure on any given asset is regarded, so to speak, as a segment of perfection at the time it is incurred; and "maintenance" is designed to ensure that the wherewithal for replacing it shall be available when replacement becomes necessary. Day-to-day expenditure on preserving the assets in condition, and in making small replacements, is normally charged as and when it is spent; but expenditure on complete renewals of major assets, such as rolling stock and permanent way, is charged annually on a "provision" basis, during the estimated life of the assets concerned. Thus there is no necessary correspondence between the amounts provided and those actually spent in any one year. The result, obviously, is a tendency to equalise the necessary charge over good and bad years. This, from the investor's viewpoint, involves a paradox (which Mr Wood did not mention), since the effect of *stability* in any charge on a fluctuating revenue is to accentuate differences in the net amount available for dividend. But it has the supreme merit of keeping the physical condition of the railways "up to the mark." So long as the "lives" of the assets are not lengthened for any extraneous reason, it emerges that, in bad times and good, railway users will be spared the rickety vehicles and leaking locomotives with which, on certain systems abroad, they are only too familiar. It presupposes, necessarily, a reasonable standard of prosperity—for the claims of maintenance hereafter will always suffer in a conflict with those of debenture holders for current interest. Its continuance on three of the four British main-line railways, however, goes far to guarantee that their physical efficiency shall remain second to none in the world.

An Issuer's Issue.—This week's offer of Preference and ordinary shares by Philip Hill and Partners, Limited, is that *rara avis*, an issue on behalf of an issuer. The company is one of the most enterprising and successful examples of the modern industrial finance house. Although

its incorporation was as recent as 1932, it has been associated with some of the most notable company issues of the last four years, and its profits have risen from £95,648 in 1933-34 to £291,920 in 1935-36. For such a company, present conditions are certainly promising, but, as an investment, the shares are subject, from their very nature, to special considerations. Over a long period new issue business has wide cyclical swings, beyond control by any individual house. Personal factors, again, count for more in this type of business than in almost any other. The fact that Mr Philip E. Hill, founder of the business, has agreed under contract to act as managing director for seven years is highly relevant, for subscribers are, in effect, buying Mr Hill. It is, of course, true to say that last week's eager purchasers of Morris Motors 5s. ordinary stock units at around 42s. were mainly buying Lord Nuffield, whose genius has raised the Morris business to its present eminence. But even a highly competitive industry like motor manufacturing is subject to less risk of changes in "demand" than the production of company prospectuses. And it is easier for industrialists, who are mortal, to leave an organisation which their successors can successfully operate than for a Napoleon in finance to transmit personal ability to his field marshals. The prospectus sets out a "cover" valuation of net assets (excluding the proceeds of the present issue) of £2,303,186. But more than the whole of this figure is represented by "investments in marketable securities," whose market value is certified by the company's brokers to exceed £2,479,000. Certification by the brokers, rather than the auditors (who give merely a "cost less reserve" figure of £1,478,905), doubtless reflects the fact that many of these investments are, presumably, shares in companies whose issues have been made under the auspices of Philip Hill and Partners. To some extent, therefore, their market value is a function of the company's own policy. Here, surely is a paradox. Would the "security" for the investor have been greater if the company had been less successful in disposing of its wares?

Actuaries' Investment Index.—The average level of 178 industrial ordinary shares, included in the Actuaries' Investment Index, was substantially unchanged on Tuesday of this week, at 90.3, compared with 90.2 for last week and 87.8 a month ago (December 31, 1928 = 100). The yield was lower at 3.55 per cent. this week, against 3.58 per cent. a week ago and 3.62 per cent. a month ago. Movements in different sections are tabulated below:—

Group (and No. of Securities)	Prices (Dec. 31, 1928 = 100)			Yield (%)		
	Month Ago (Sept. 22)	Week Ago (Oct. 13)	This Week (Oct. 20)	Month Ago (Sept. 22)	Week Ago (Oct. 13)	This Week (Oct. 20)
Higher This Week:						
Coal (7)	101.8	112.7	114.6	3.38	3.21	3.16
Cotton (6)	42.0	47.0	48.0	2.10	2.01	2.00
Iron and Steel (12)	80.9	83.0	84.1	3.75	3.67	3.63
Oil (5)	90.7	93.0	94.9	2.96	2.99	2.90
Lower This Week:						
Home Rails (4)	80.0	83.9	83.2	1.33	1.28	1.31
Breweries & Distilleries (21)	153.6	156.6	155.1	3.82	3.76	3.80
Miscellaneous (56)	79.4	81.7	81.5	3.87	3.81	3.74

The slight change in the complete index is the resultant of substantial increases in some small sections and minor decreases in the largest groups. The average is pulled down mainly by the drop in breweries, and in the large miscellaneous group, which also shows a decline in the yield.

COMPANY NOTES

B.A. Great Southern.—The proprietors of this line, warned in advance of adversity to come by the reduction of the 5 per cent. first preference dividend to 1 per cent., will express relief that the accounts at least contain no further unpleasant surprises. The bulk of last year's heavy fall in operating receipts from £10,957,684 to £10,006,699 is due to the failure of the cereals harvest. Freight receipts

as a whole have fallen by over £850,000 and of this wheat accounted for over £500,000. It has been impossible to reduce operating expenses—from £7,571,296 to £7,326,277—in this proportion, for the company is not free to dismiss surplus labour, and a reduction of over £700,000 in operating profit to £2,683,422 has accordingly resulted. Despite the improvement in the exchange situation (which reduced the cost from £1,552,722 to £1,173,982), the balance available for preference dividends covers the 1 per cent. distribution on the first preference stock with the narrowest of margins, as the following table shows:—

	Years to June 30		
	1934	1935	1936
Operating receipts	10,516,260	10,957,684	10,006,699
Operating expenses	7,347,472	7,571,296	7,326,277
Operating profit	3,168,788	3,386,388	2,680,422
Dividends, interest, and discounts received	Cr. 206,216	Cr. 204,758	Cr. 210,095
Exchange loss on remittances	896,589	1,736,071	1,364,657
Depreciation of currency floating assets	551,145	Cr. 183,343	Cr. 190,675
Payments under working agreements	541,139	541,977	548,699
Debt interest and other fixed charges	1,085,079	1,085,079	1,085,079
Earned for dividends	301,052	411,367	82,757
Preference dividends	1880,000	1640,000	180,000
Carried forward	187,179	128,547	31,304

† After crediting £70,000 transferred from Bahia Blanca and North Western Railway contingencies fund. ‡ 5 per cent. preference in full 1934 and 1935; 1 per cent. for 1936. 6 per cent. preference in full 1934; 3 per cent. for 1935; nil, 1936.

There is little, however, of positive encouragement in the report. Expenditure has been trimmed almost to the limit. On renewals £86,705 was spent, compared with £242,987 in the previous year, and no contribution was made to the Fund, which last year received £120,000. A further provision of £60,000 to Claims and Casualties Fund has been suspended. Wage costs were also higher, and it was necessary to increase locomotive maintenance charges. Meanwhile, competition from the roads has increased in intensity, and its peak is not within sight. Against this factor, the increase in livestock freights (itself at the mercy of British agricultural policy) and in fruit are purely incidental. Three factors, however, remain predominant in the B.A. Great Southern situation. The cereals freights must recover; they are still affected by last season's reduced carry-over, although the outlook is more encouraging. Secondly, the transport co-ordination measure which would protect the railways from the more excessive road competition, is in danger of becoming a deferred hope. Finally, investors are bound to calculate the effects of British agricultural protection on the Argentine economy and the company's freights. The outlook is far from propitious. B.A. Great Southern 5 per cent. first preference stock at 61 yield no more than £1 12s. 6d. per cent. on the 1 per cent. payment, and the 6 per cent. preference stock stands at 51.

B.A. and Pacific.—In the language of negative consolation appropriate to current Argentine Railway reports, we may declare that while the B.A.G.S. accounts are no worse than might have been expected, the B.A. and Pacific report is as good as could be hoped. An increase in operating receipts from £6,239,964 to £6,529,274 is entirely attributable to goods traffics, and in particular to maize transport. Passengers and other cereals, of course, have yielded less, but there has been further encouraging increase in wine traffics. The company, however, has very properly increased its working expenditure by £508,450, from £4,670,779 to £5,179,229. Of this increase, £326,000 is in respect of increased expenditure on current and deferred renewals, while £168,700 arises from higher salaries. In effect, therefore, some 334,100 tons of additional traffic have been handled at an extra cost of £13,750. Exchange differences on remittances are in fact higher this year (owing to the debt interest arrears payments), but the increase is more than offset by a transfer from the reserve covering exchange differences on floating assets. After deducting all prior charge interest, the net loss amounts to £889,114.

compared with £830,667 for 1934-35. The results of the past three years are analysed below:—

	Years to June 30th		
	1934	1935	1936
Operating receipts	5,843,973	6,239,964	6,529,274
Operating expenses	4,641,886	4,670,779	5,179,229
Operating profits	1,202,087	1,569,185	1,350,045
Interest and other receipts	Cr. 87,098	Cr. 149,012	Cr. 169,205
Exchange loss on remittances	850,217†	915,881	985,586
Depreciation of currency floating assets		Cr. 112,820	Cr. 275,527
Debt interest*	879,115	914,155	938,819

Income tax	104,000	93,000	Nil

Net revenue Dr. 1,254,379 Dr. 830,667 Dr. 889,114
Carried forward Dr. 2,464,884 Dr. 3,295,551 Dr. 4,184,665

† £664,719 in respect of remittances and £502,545 for depreciation of currency floating assets, less £317,047 in respect of previous years charged to general reserve. * Including interest on arrears except first debenture stocks met on due dates for each year. All arrears, plus interest paid on second debenture stocks of B.A. and Pacific and Argentine Great Western Railway during latest year.

Arrears on the second debenture stocks have been paid during the year, and six months' interest on the 4½ per cent. consolidated debenture stock to June, 1932, will be paid on December 1. The current year has opened with better crop prospects, but there is a much smaller carry-over, both in fine cereals and maize. Real improvement in traffics—if Nature continues kind—can hardly be expected until the second half of the year. The company may then be in a position to consider the possibility of further arrears payments, of which £3,000,000 was outstanding in June. It is clear, however, that such recovery as is in prospect can hardly make much impression on the balance of over £1,450,000 due to 4½ per cent. consolidated debenture stockholders. The demands of a more generous renewal programme, and of labour, are likely to become more clamant in the future, and the company has no further opportunity for retrenchment. The consolidated debenture stock has already enjoyed a rise of 20 points since June, to the present level of 63.

Rhokana Accounts.—Copper shareholders have again enjoyed a week of good news. The price of the metal has made further strong progress, standard copper closing at £42 on Thursday, against £41 7s. 6d. a week earlier. But the market has been most pleased by the Rhokana accounts, which are excellent both in achievement and promise. Total profits have jumped from £576,019 to £831,221, and net earnings are £245,470 higher at £600,294. The 17½ per cent. dividend absorbs £427,401 (entitling the directors to additional remuneration of £21,370), and the sum of £150,000 is again transferred to general reserve. The report itself contains numerous pointers to the coming year's prospects. Production last year was almost equally divided between blister and electrolytic copper. The electro refinery, in fact, was responsible for 25,342 tons, compared with a capacity of some 33,000 tons. During the present year, therefore, the increased quota will comfortably permit full operations at the refinery, and enable a further reduction in electro costs—already no higher than £25.346 per long ton—compared with £22.345 per ton for blister copper. The existing cost margin, already lower than the prevailing difference of over £4 per ton between blister and electro copper, will thus be further reduced. The report also emphasises the importance of cobalt to the Corporation's profits. Some 924,842 lbs. were sold, compared with 711,132 lbs. for the previous year. The market position in this commodity is firmly governed by agreement between the principal producers. As the holder of a 32 per cent. interest in Mufulira Copper Mines, the Corporation possesses an asset which is substantially undervalued in the balance sheet, on the basis of the prevailing price for Rhodesian Selection Trust shares. Mufulira may be able to pay its maiden dividend during the current year. Successive increases in quota releases, coupled with the unshaken strength of the metal market, have opened up prospects of high earnings for the current year. The £1 shares stand at £11½d.—double the price prevailing a year ago—and

SITES FOR WORKS Apply to above address for particulars.

yield no more than £1 10s. per cent. on the 17½ per cent. dividend. They are an extremely narrow market, for a substantial proportion is held by Rhodesian Anglo-American Corporation, Rio Tinto and other interests. In conjunction with the new issue (which is to provide funds for the development of the N'Changa property), there might be advantage to the general investor in share-splitting to promote better marketability.

Gaumont-British Profits and Control.—Shareholders in Gaumont-British and in Associated British Picture Corporations have this week had more than their fair share of news, partly unencouraging and partly mystifying in tenor. The long-awaited Gaumont-British profits figures are, to say the least, unspectacular. No ordinary dividend was expected, and none is forthcoming. Net profits are only £4,969 lower at £715,514, but a sum of £200,000 has been placed to a Special Reserve. In view of the strained liquid position shown by the parent company's accounts last year, this policy seems well advised. The "special" nature of the provision, however, invites explanation, and lends emphasis to the demand for consolidated accounts, which have been promised but never published. The Associated British Picture Corporation has stated this week that its profits for the first six months of the current year are £150,000 higher than for the corresponding previous period, and the directors anticipate that this improvement will be maintained. On the deal between the two companies, statements have been forthcoming from both sides. The Gaumont-British announcement declares that reports to the effect that control of the Corporation has passed to Associated British are incorrect; that no change has occurred in the voting position of the Metropolis and Bradford Trust; and that the second part of the deal—the acquisition of 5,100 "A" shares of the Trust—has not been completed. The Associated British statement records that the Corporation has entered into an agreement with Messrs Isidore, Mark and Maurice Ostrer "the object of which is to obtain, on terms which the directors consider satisfactory, a controlling interest in the share capital of Metropolis and Bradford Trust." The second stage may take time to complete, and the remainder of the unissued shares are being reserved for this "and possibly further acquisitions in the same connection." Technically, control has not passed, for the controlling interest is, so far, only under option. Is this the sense of the Gaumont British statement? Or does the option include any condition precedent (such as the acquisition of the Twentieth Century-Fox non-controlling interest) before it can be implemented? Shareholders in both groups are obviously entitled to an early and unambiguous statement on this point. Gaumont-British 10s. shares have fluctuated considerably during the past fortnight and closed on Thursday at 11s. 1½d. Shareholders will have to wait until the accounts are published—and possibly longer—before their precise basis of valuation can be ascertained.

United Dairies Check.—During recent years, investors have looked to United Dairies for steady expansion of earnings and complete assurance of regular 12½ per cent. dividends. The latest accounts, however, show that total profits have fallen from £652,904 to £627,973, the latter figure including £7,435 from profits on the realisation of temporary investments. The accounts for 1934-35, however, included fifteen months' profits from the engineering and utensil subsidiaries, and the effect upon comparability has not been disclosed. In consequence, the ordinary earnings have fallen slightly from 19.2 per cent. to 17.9

per cent., which covers the 12½ per cent. dividend and a transfer of £400,000 to reserve by a small margin:—

	Years to June 30,

† Includes £7,761 from profit on sale of temporary investments in 1934 and £7,435 in 1936. ‡ And capital bonus of 10 per cent. requiring capitalisation of £224,000 from reserve. § After writing off £3,079 issue expenses.

In other respects, the accounts suggest solidarity rather than enlightenment. The extent of the organisation's rapid growth in recent years could be more conveniently assessed if consolidated assets and earnings figures were supplied. Nor will shareholders glean much information from the report regarding the dairy business, which is emerging from a prolonged controversy over milk prices. United Dairies ordinary stock units are ranked among the stable "consumption trades" equities, and earn a rightful place in the long-term investors' portfolio. It is, however, somewhat early to decide upon the company's ultimate destiny in an industry which is increasingly subject to administrative control. The £1 ordinary stock units stand at 61s. 7½d., to yield slightly over 4 per cent.

Singer Reorganisation.—In an announcement made on Tuesday, Mr Charles Latham, chairman of Singer and Company, Limited, stated that arrangements had been concluded for providing further finance and for management reorganisation. The financial arrangements contemplate a reorganisation and reduction of capital "including an assessment upon the holders of the ordinary stock," and the scheme, which is being drafted into legal form, has been unanimously approved by the Shareholders' Committee appointed last May. Until precise details are available, it will be impossible to assess the prospects of the concern under the new arrangement, and the relative position of the preference and ordinary shareholders. Meanwhile, the holders of the 5s. ordinary stock units, which at present stand at 5s. 10½d., would appreciate early enlightenment regarding the precise significance of the terms of the "assessment." Does the scheme contemplate the liquidation of the existing company and the issue of partly-paid shares to the existing holders, on which further calls can be made? This question may appear to anticipate the publication of the full details, but it has real relevance to present market price of the stock units, for nearly one-third of the ordinary capital was shown to be lost in the last balance sheet. The market is evidently discounting—whether justifiably or not remains to be seen—a substantial improvement in the earnings position.

Trinidad Leaseholds Prospects.—The market was expecting a confident statement from Mr A. W. Rogers at Monday's meeting, and the subsequent movement in the shares showed that it was not disappointed. The company is still expanding its areas, and is recording a substantial increase in oil reserves. In relation to the record outputs established last year, this news was assured of a gratifying reception. In the past, a substantial proportion of the company's development programme has been financed from working revenue. This policy is to be continued, but the present programme of expansion has called for the provision of further capital, taking the form of an offer of

200,000 shares to shareholders at £3 15s. per share. This policy, in fact, seems destined to enlarge the scope of the company's operations to a major degree. Considerable expenditure will be involved in the exploitation of proven areas, in the systematic exploration of the new areas which the company is to acquire, and in substantial plant extensions. The chairman showed that the working results of the first quarter of the current year had been good, although the refinery extensions will have no effect upon the current year's profits. And he went so far as to anticipate a return, even on the increased capital basis, no less satisfactory than for the past year. Provided that the price structure in the oil industry is maintained, investors may reasonably look to Trinidad Leaseholds for prospects of considerable expansion over the next year or two.

Other Company Results.—Our weekly table of company profits on page 189 shows the results of 35 additional concerns, the majority of which are smaller industrial undertakings and rubber companies. The former group includes companies like *Ferranti*, *Fison Packard and Prentice* and *Genatosan*, all of which have shown marked stability in earnings and dividends. *Tecalemit* have achieved a satisfactory increase in trading profits. The dividend rate, however, has been reduced on the increased capital, although earnings would comfortably have covered its maintenance. *Robinson and Cleaver*, the linen specialists, show a considerable improvement in profits, from £10,321 to £24,318, and the dividend has been raised from 6 to 7 per cent. In the heavy industry group, the principal report comes from *Sneyd Collieries*, whose profits have been somewhat reduced to £71,980, an amount, however, which covers the increased 15 per cent. dividend and a transfer of £20,000 to reserve. *Roneo Limited* have staged a considerable recovery. Net profits have increased from £27,754 to £59,683, and a balance of £15,355 is carried forward, compared with a debit balance of £30,061 brought in. The accounts of *Prices Trust* reflect the prosperity of the associated operating concern, *Prices Tailors*. Among the rubber companies, *Eastern Sumatra, K.M.S., Strathisla (Perak)* and *Tebrau* have earned higher profits and pay increased dividends; and the remaining concerns mainly show irregular falls in profits. The week's announcements include a 100 per cent. scrip bonus by *W. T. Henley's Telegraph Works*. All arrears of dividend are to be paid off on the *Consolidated Diamond* preference shares, equivalent to 4s. 1½d. per share.

Company Meetings of the Week.—On later pages of this issue will be found the reports of the following company meetings:—Perak River Hydro-Electric Power, Gold Exploration and Finance Company of Australia, Chosen Corporation, Thistle-Etna Gold Mines, Cables Investment Trust, Trinidad Leaseholds, Seager Evans, Rubana Rubber Estates, Hosco Rubber Estates, British Rubber Estates of Java, and Batu Rata (Sumatra) Rubber Plantations. Mr George Balfour, addressing the shareholders of Perak River Hydro-Electric Company, declared that they could anticipate a moderate increase in revenue during the year, provided that tin output was maintained. Mr A. W. Rogers' remarks at the Trinidad Leaseholds meeting are discussed on this page. Shareholders of Seager Evans and Company were informed that the directors' anticipations from the recent programme had been largely, though not yet completely, realised, and that sales were increasing satisfactorily. At the Gold Exploration and Finance meeting, Mr L. S. Amery declared that the company's West Australian and Victoria properties should show a substantial increase in production next year. At the Chosen Corporation meeting the chairman stated that a substantial dividend was expected from the Nurupi undertaking, and that the usual interim dividend could be expected in December from the Corporation. The statements of rubber company chairmen were couched in cheerful vein. Mr M. S. Parry informed shareholders of Batu

Rata that prospects seemed very favourable, and looked forward to an increased assessment and quota. Mr James Davenport, at the British Rubber Estates of Java meeting, anticipated better results from rubber during the current year. Mr F. E. Maguire, addressing shareholders of Rubana Rubber, declared that the restriction scheme was working effectively, and expected good profits for some time to come. Similar views were expressed by Mr Eric Macfadyen at the Hosco Rubber meeting. Mr J. C. Denison-Pender anticipated the realisation of prospectus estimates by Cables Investment Trust. At the Thistle-Etna meeting, the chairman discussed the extended development policy.

THE WEEK IN THE MARKETS

THE STOCK EXCHANGE

SETTLING DAYS

TICKET	ACCOUNT
NOVEMBER 3	NOVEMBER 5

FOLLOWING the firm close to the last account, business opened briskly on Monday of this week, but slackened away later, except in the more speculative sections. International political complications played their part in restraining activity, but the market was also overshadowed by the very big settlement for the last account. There was a particularly noticeable setback in gilt-edged, after the first day's business had seen the fifth successive increase in the "tap" price of Funding 2½. This was ascribed partly to profit-taking, partly to the desire to obtain funds for the settlement. There seemed no reason to justify fears of an alteration in the country's monetary policy. Toward mid-week a decline in prices became fairly general among gilt-edged, but later there was a recovery which carried Funding 2½ to within sight of the tap price. Colonial issues remained firm throughout, Australians holding their favoured position, but Indian stocks suffered along with the Funds. Home corporation issues were also subjected to depressing influences, and the market was overshadowed by new issue activity.

Foreign bonds were very quiet, and Europeans in particular were depressed by the political developments of the last few days. German bonds reacted from recent levels. Such interest as existed seemed to be in the South American bond market, where most speculative issues attracted some support.

Home rails were a quietly firm market, and the only feature was Mersey Ordinary which ended higher in mid-week. The satisfactory traffic returns failed to stimulate any general interest. Foreign rails were steady, although the Argentine market was overshadowed in the early part of the week by publication of the B.A.G.S. Report. Later the market was very firm on the traffic returns and on the crop prospects, and prices tended to rise. Brazilians shared in this movement.

Slackening business and some profit-taking produced irregular conditions in industrial markets this week. The iron and steel section was generally very firm, and several issues were actively supported, *Dorman Long* in particular attracting the limelight. Trade reports were considered very encouraging. Motor shares were very active in the early part of the week, on the excellent business done at the Motor Show, and Standard were especially favoured. Profits were taken in the leading issues in mid-week. Rumours of yet another speed up in re-armament led to support for the aircraft shares, but prices became softer later, although sales were readily absorbed. The electrical equipment group continued in favour, *W. T. Henley's* rising rapidly on news of the 100 per cent. scrip bonus, only to react slightly later in the week.

There were a number of good gains in the brewery group, although prices were generally irregular, and the reports of record sales of cigarettes stimulated support for tobacco shares. Woolworth were supported but the Provision group turned irregular after the opening day of the week. Textile and rayons made a mixed showing. In the miscellaneous industrials section building material shares were easier on the monthly figures, and engineering issues were irregular, although prices revealed more increases than decreases.

Business in the oil shares market has been very active, and prices of most issues have been very firm. Mexican Eagles were the exception to the general trend, on news of the strike, but rumours of a settlement led to a recovery in mid-week. Prices were stimulated by the excellent results of the Shell Union Oil Corporation for the third quarter, by the good American news, and by continental support. The rubber shares market was firm, but as inactive as ever, but tea shares were neither active nor firm.

The Kaffir market has been fairly quiet this week, with support coming mainly from the investing public. Labour troubles on the Randfontein property caused some nervousness, and prices weakened in mid-week. The West African section found favour on a growing scale until mid-week, when activity died away, but prices remained firm. The most active of all markets of the week was in the Rhodesian Copper section, where a regular speculative boom was in full swing, and resumed their progress after a pause for profit-taking. Tin shares have moved irregularly.

Fear of political developments was the cause of a selling movement on the Paris Bourse on the first two days of the week which left rentes and home corporation issues lower, and internationals higher. Prices recovered partly in mid-week. Cheerful conditions have prevailed on the Berlin Bourse, and at the opening of the week at Amsterdam, but at the latter centre only oil shares were active in midweek, with Royal Dutch prominent.

NEW YORK STOCK EXCHANGE

WALL STREET closed very strongly at the end of last week; current business reports, declarations of earnings and dividends, combined with Mr Myron C. Taylor's statement on the prospect for the steel and other heavy industries to generate a feeling of considerable optimism. Steel, Motor and Railroad issues were in the lead. In place of foreign selling the market has been found increased support from abroad to stimulate it further. This week dealings opened with prices still very strong, but some uncertainty developed and prices became irregular later. As profit-taking had its effect in the leading sections, interest was switched to some of the more backward sections, in particular utilities, where optimism was encouraged by the progress of conversations between the T.V.A. and the private power companies to organise a co-operative power pool for mutual benefit. Buying in this section was directed mainly to preferred shares. In mid-week, the motor section went ahead, with General Motors prominent, and signs of life were evident in the railroad group. Speculative bonds were active, and Treasuries dull on the bond market. Despite Mr Taylor's boost for the steel industry, *Iron Age* estimates a further reduction in activity this week, and does not look for a rapid recovery to the peak level; automobile production is not yet up to expectations, and consequently the industry's demand for steel is lagging. Electricity output is running at 16.5 per cent. higher than the level of the corresponding week of last year.

(Continued on page 178)

LONDON ACTIVE SECURITY PRICES AND YIELDS

In calculating yields on fixed interest stocks quoted below allowance is made for interest accrued since the last date of payment, less income tax at the standard rate. Where stocks are definitely redeemable at a certain date the yield includes any profit or loss on redemption; where stocks are redeemable at or before a certain date the final date of redemption is taken when the stock stands at a discount and the earliest date when the quotation is above par. The return on ordinary stocks and shares is calculated by reference to the latest dividends, account being taken of any enhancement or reduction of interim dividends. Allowance is made for accrued dividends in calculating the yield on "cum div." shares.

CAPITAL ISSUES

THE winter new issue season is now in full swing. This week's operations have included two trustee issues, an Argentine conversion (which was discussed in last week's *Economist*, on page 122), an "issue" for an issuing house—Philip Hill and Partners—on which we comment on page 171, and three other prospectuses. *Aberdeen*, whose accuracy in pitching its terms for new loans is unrivalled, has appealed for £1,500,000 3 per cent. stock (rather less than half representing new money) at 99½. The terms of redemption have a wider "straddle" than recent trustee issues, for the city has taken optional redemption powers between 1953 and 1963, compared with the recent five-year period, 1958-63, which is, indeed, adopted by *Dumfries County Council*. The "advice" which is being tendered to the corporation issue market is evidently still designed to procure the successful subscription of these loans, and to avoid any danger of "indigestion" by offering the incentive of a small initial premium. *Everards Brewery* 4 per cent. debenture stock, which has been offered for sale by Lazard Brothers, is well secured by recent earnings, and is a sound stock in its class. *C.T.C. Bazaars (South Africa)* is another addition to the growing list of South African undertakings whose shares have recently been marketed in London. This undertaking is in process of a considerable programme of building extensions, for its present establishments are inadequate. It may, therefore, be noted that the directors' estimate of profits is based on "the first year in which the new capital becomes fully productive." The past profits record shows considerable fluctuations, including a sharp fall for 1933-34, which is hardly to be attributed to the unsettling effects of South Africa's departure from the gold standard at the end of 1932. Investors who are willing to pay 200 per cent. premium for the 5s. ordinary shares must accept the risks inherent in extending an established business in a competitive trade, with the object of earning profits approximately three times as high as those achieved hitherto. *Hale and Hale (Tipton)* is another offer for sale of preference shares at a small premium and 5s. ordinary shares at 120 per cent. premium. This concern, which produces malleable castings, is at present operating at the highest rate of profits yet recorded. The original vendors retain control through a majority holding of the ordinary shares and receive £173,375 in cash for the shares offered. The company's net assets are valued at £126,503. The offer, therefore, is designed on "peak profits" terms, —with which may be contrasted the profits of 1931, when only £2,562 was earned. No consideration of technical efficiency, either of this or other firms of similar size, can be directly related to a high capitalisation, unless it is supported by a corresponding profits record stretching over the full trade cycle. Statements "for information only" have been published by *Everards Brewery* (in respect of the 5 per cent. preference shares) and by *Bay Hall Trust*.

ISSUES OF THE WEEK

January 1 to October 17, 1936, including conversions, Old Basis, £328,425,379.
January 1 to October 17, 1936, excluding conversions, Old Basis, £144,935,292.

PUBLIC OFFERS

Aberdeen Corporation.—Issue of £1,500,000 3 per cent. stock at 99½ per cent. Redeemable at par by November 15, 1963, or from November 1953, at three months' notice. Proceeds for repayment of temporary loans, etc. (£875,000) and balance for capital expenditure. Estimated population 1936, 176,400. Net rateable value 1936-37, £1,578,738. Outstanding debt at May 31, 1936, £5,452,090. Rates, 8s. 2½d. in the £.

Dumfries County Council.—Issue of £1,200,000 3 per cent. stock at 99½ per cent. Replaces £772,447 short-term loans and for capital works. Redeemable at par, November 15, 1963, or after November 15, 1958, on three months' notice. Net debt £1,250,726, of which £632,954 revenue producing. List closed 12.25 p.m. October 20th.

Philip Hill and Partners, Ltd.—Issue of 1,250,000 5 per cent. cumulative £1 preference shares at 21s., and 1,250,000 5s. ordinary shares at 15s. Incorporated March 31, 1932, as issuing and finance house. Net assets, £1,303,186, combined profits, Philip Hill and Partners and Quadrant Trust, years ending in: 1933-4, £95,648; 1934-35, £179,364; 1935-36, £291,920. List closed 9.1 a.m., October 20th. Heavily oversubscribed.

BY OFFER FOR SALE

Everards Brewery, Ltd.—Offer for sale of £600,000 4 per cent. debenture stock at 102 per cent. Lazard Brothers purchase stock at 98, plus 1½ per cent. expenses and 280,000 5 per cent. £1 preference shares at 20s. 6d. each. Debentures repayable at 103 by September, 1976 or from September 1946 on three months' notice. Net assets, March 31, 1936, £1,476,181. Profits after depreciation, years to September: 1933, £81,632; 1934, £86,877; 1935, £91,134. List closed 9.5 a.m., October 20th. Oversubscribed.

Hale and Hale (Tipton), Ltd.—Offer for sale of 190,000 5½ per cent. cumulative 10s. preference shares at 10s. 6d. and 190,000 5s. ordinary shares at 11s. Specialists in malleable iron castings. Net assets £126,503, acquired for £199,900 in preference and ordinary shares. Profits, before depreciation: 1933, £8,279; 1934, £18,518; 1935, £24,203. Six months to June, 1936, £14,803 (after depreciation). London Industrial Finance Trust acquired preference shares at 10s. 2d. and ordinary shares at 10s. Lists closed 9.5 a.m., October 22nd. Heavily over-applied for.

C.T.C. Bazaars (South Africa), Ltd.—Offer for sale of 125,000 6 per cent. cumulative £1 preference shares at 21s., and 250,000 5s. ordinary shares at 15s. Acquires C.T.C. Bazaars and Cape Trading Company Properties. Combined profits after depreciation, years to June 30th: 1933, £35,955; 1934, £24,150; 1935, £35,140. List closed 9.5 a.m., October 20th. Substantially oversubscribed.

BY STOCK EXCHANGE INTRODUCTION

Bay Hall Trust, Ltd.—Particulars of £800,000 3½ per cent. "A" registered debentures, sold at 98 per cent. less ½ per cent. commission. Bulk of proceeds to redeem outstanding 4 per cent. Notes. Total assets, £1,363,125; profits 1935, £92,211.

BY TENDER

Croydon Gas Company.—Sale by tender of £103,883 4 per cent. preference stock at minimum price of £106 per £100 yielding at that price 3 15s. 5d. per cent. Net revenue, after debenture interest: 1933, £93,485; 1934, £95,549; 1935, £97,745. Total accumulated funds December 31, 1935, £183,084.

BONUS ISSUES

W. T. Henley's Telegraph Works Co.—The directors recommend distribution to ordinary shareholders on register at December 31, 1936, of bonus ordinary shares in proportion of one new ordinary share fully paid in respect of each share held on that date.

Rand Leases (Vogelstruisfontein) Gold Mining Company.—Offer to shareholders £900,000 5 per cent. debentures at par to repay the sums advanced by Anglo-Transvaal Consolidated Investment Company and Johannesburg Consolidated Investment Company amounting to £582,000. Shareholders can subscribe at par in the proportion of £30 of debentures for every 100 shares registered on October 31, 1936. Debentures will be redeemed at par by 10 annual drawings commencing January 1, 1941.

Sphere Investment Trust, Ltd.—The Sphere Investment Trust has issued 100,000 6 per cent. cumulative preference of £1 at 27s. each.

CONVERSIONS AND REPAYMENTS

Argentine Government Conversion Loan.—Issue of £2,500,000 3½ per cent. sterling bonds. Holders of Argentine Railway Guarantees Recession 4 per cent. Bonds, offered exchange at par and £15 10s. cash. New Bonds repayable in sterling on or before January 1, 1972 and in whole or part on three months' notice.

COMPANY MEETINGS, &c.

GOLD EXPLORATION AND FINANCE COMPANY
OF AUSTRALIA, LIMITED

FAVOURABLE DEVELOPMENTS

The second ordinary general meeting of this company was held, on the 19th instant, in London, the Right Hon. L. S. Amery, M.P. (the chairman), presiding.

The Chairman, in the course of his speech, said:—In considering our various investments I propose first to deal with our interests in the State of Western Australia. These include 349,400 fully-paid shares, and the option over an additional 273,450 shares, in Gold Mines of Kalgoorlie. Our shareholding represents between 29 and 30 per cent. of that company's issued capital. The past year's work on the Gold Mines of Kalgoorlie properties has been thoroughly satisfactory and affords encouragement for the future.

In Triton Gold Mines we have a direct interest of 139,720 shares, or say, 15 per cent. The company paid its first dividend of 6d. per share in July, and has declared a second dividend of a similar amount payable on November 12th. The chairman of the company, Sir Colin Fraser, at the annual meeting, expressed the opinion that, subject to satisfactory conditions continuing, the company would pay dividends at the rate of 2s. per share, or 20 per cent. per annum.

WESTERN MINING CORPORATION

The balance, and, indeed, more important section, of our interests in Western Australia is represented by our holding of approximately 95 per cent. of the capital of Western Mining Corporation. That corporation holds about 81 per cent. of the share capital (apart from options) of Central Norseman Gold Corporation, which has within its leases and reservations by far the greater part of the important Norseman gold field. The first unit of the milling plant on this property started up in April, and to the end of September had treated approximately 15,500 tons of ore for a yield of 4,408 oz. of fine gold, worth in Australian currency £37,866.

In Cox's Find, near Laverton, Western Mining Corporation holds a 75 per cent. interest. Now that the mill is running profitably, the development of the mine at greater depth is being pushed ahead and the exploration of the leases for extensions of the known ore body and for possible parallel lodes, will be undertaken.

Generally, our interests in Western Australia are progressing well. In this connection it may not be out of place if I state that the Western Mining Corporation, Gold Mines of Kalgoorlie, Triton Gold Mines and Gold Exploration and Finance Company have together expended over £1,270,000 (Australian currency) in exploration and in the acquisition, development and equipment of gold-mining properties in Western Australia. I am confident we shall soon begin to receive rewards which will eventually reach a level commensurate with the risks we have run and the confidence we have displayed.

POSITION SUMMARISED

Summarising the position, in Western Australia we appear to be justified in regarding our interests in Central Norseman, Triton and Gold Mines of Kalgoorlie, on what is already known, as of major importance, while Cox's Find promises well and Cosmopolitan and Great Fingall are possibilities; in Victoria the Gold Dredging Company should yield satisfactory profits, while the estimates on which we based our big investment in Bendigo will, we hope, be justified by the results. Next year should be marked by a substantial increase in production from the properties in which we are interested, both in Western Australia and Victoria, and I am hopeful that in 1938 we shall have completed the period of exploration, development and equipment which, while trying and costly, must precede production as is, of course, essential to success.

We have grown into a big business, and that requires corresponding finance. As you were advised last year, it has been necessary to supplement the original £525,000 raised by the issue of shares in 1934, and for this purpose an issue was made in July last of £500,000 convertible six-year notes, to pay off the amount of a temporary loan which had been raised and to furnish the further capital required for exploration, development and equipment. The funds provided by the issue will, we believe, enable us to finance our share of the cost of bringing our major interests to a revenue-producing stage within a reasonable period.

The report and accounts were unanimously adopted.

PERAK RIVER HYDRO-ELECTRIC POWER COMPANY,
LIMITED

BIG EXPANSION AND GOOD PROSPECTS

MR GEORGE BALFOUR'S SPEECH

The tenth annual general meeting of the Perak River Hydro-Electric Power Company, Limited, was held, on the 22nd instant, at Winchester House, London.

Mr George Balfour, J.P., M.P. (the chairman), said that the report and accounts submitted were the tenth presented since the incorporation of the company but the first since the capital reorganisation scheme was carried into effect. Regarding that scheme, it was interesting to note that the shares exchanged for the old 7 per cent. participating debentures at to-day's market price would provide repayment in full, together with all unpaid interest to date of settlement. Federated Malay States loan at to-day's date represented by preference shares was equal to repayment of the loan in cash with a considerable surplus, and that surplus, together with the value of shares received for the old preference and ordinary shares, represented a substantial value against their shareholdings, which, without reorganisation, must have been entirely lost.

During the year 50,000 preference and 50,000 ordinary shares had been placed at par to provide funds to meet urgent requirements, and, in addition, 8,835 ordinary shares had been given in exchange for shares in the Kinta Electrical Distribution Company, in which their total holding was now 683,460 shares of \$1 each out of a total of 700,000 shares.

GROWTH OF BUSINESS

The maximum load recorded was 36,800 kw., compared with 23,200 kw. for the previous year, and the units sold were 176,287,000 compared with 111,864,000. Those increases were linked to the condition of the tin industry and reflected the effect of a twelve months' average Malayan tin quota of 60.45 per cent., compared with 32.8 per cent. for the previous year. The revenue from the sale of current, etc., amounted to £398,713, after providing £40,000 written off stores and plant on consumers' premises, which compared with £260,205 in the previous account, after provision for £23,000 written off stores and plant.

There had been a considerable increase in expenditure. Generation at £67,682 showed an increase of £40,804, of which £33,439 was accounted for by increased expenditure on coal due to additional steam operations. Distribution at £36,267 showed an increase of £8,318, largely due to expenses incurred in diverting lines to meet mining conditions and normal increase due to extension of business.

POSITION AND OUTLOOK

Output and revenue for the first two months of the current financial year were satisfactory and showed a moderate increase compared with the corresponding period of the previous year. Last year he had pointed out that they would, with increasing load, draw a larger proportion of their supply from the steam generating stations, and that was borne out by the figures before them. They had had to resort to steam plant to meet the ordinary daily demand. In the absence of any great depression expenditure on coal would increase in proportion to increased output. Therefore, any increase in output and in receipts from the sale of that output would show a smaller percentage of net revenue than the output to date.

Taking into account all the operating conditions, he thought he could venture to forecast that if they continued on more or less the same average tin output they could look forward to a moderate increase in revenue during the current year. Their relations with the Government and with their consumers were excellent and, he believed, rested upon a solid foundation of mutual confidence. He hoped that by the conduct of their business they would continue to maintain the trust and confidence which had been established.

The balance at credit of net revenue account, £264,543, together with £11,947 brought in, amounted to £276,490, and after providing prior lien and debenture stock interest, sinking fund, depreciation reserve and preference share dividend, there was a balance of £73,062 out of which the directors recommended the payment of a dividend of 6 per cent., less income tax, on the ordinary share capital, requiring £63,682, leaving to be carried forward, subject to directors' further remuneration as provided in the Articles of Association, £9,379.

The report and accounts were unanimously adopted.

RUBANA RUBBER ESTATES, LIMITED

SOUND FINANCIAL POSITION

The twenty-sixth annual general meeting of the Rubana Rubber Estates, Limited, was held on the 22nd instant, at 85 Gracechurch Street, London, E.C.

Mr F. E. Maguire (chairman of the company), in the course of his speech, said:—The accounts show a profit of £10,319, as compared with £11,815 earned during the previous year. The total amount available is £56,628, out of which we recommend the payment of a dividend of 3 per cent. For the company's previous financial year, 1934-35, the permissible exports under the Rubber Regulation scheme averaged 77½ per cent. of our standard production, while during the year we are now reviewing, 1935-36, the average was reduced to 62½ per cent.

Our crop for 1935-36 was in consequence less by over 400,000 lb. than that for 1934-35, and as the price for smoked sheet during 1935-36 averaged only .189d. per lb. more than for the year before, we naturally show a smaller profit. As showing the slow but, as I hope, the sure working of the Rubber Regulation scheme, it is interesting to note the trend of restriction and price during the company's last two financial years.

In 1934-35 the rate of restriction was being steadily increased, but the price of rubber was almost equally steadily going down. In 1935-36 the increase in restriction was continued till October, after which it remained steady for the rest of the year, towards the end of which came the announcement that restriction would be reduced in July, but during this second year the price was on the upgrade.

To-day, with a cut of 35 per cent. in force, the price is 1½d. per lb. better than it was at our last meeting, when the cut was 40 per cent., while world stocks at the end of August show a decrease of no less than 193,000 tons in the twelve months. I think these figures show that the scheme is now working smoothly and effectively, so that while we do not expect, nor wish, for anything like the inflated prices of boom years, we may look forward to earning reasonably good profits for some time to come. The replanting programme which I mentioned last year is now in full swing. The balance sheet shows that the company is in a very sound financial position.

The report was unanimously adopted.

TRINIDAD LEASEHOLDS, LIMITED

DEMAND FOR "REGENT" SPIRIT

The annual general meeting of Trinidad Leaseholds, Limited, was held, on the 19th instant, in London.

Mr A. W. Rogers (the chairman), in moving the adoption of the report and accounts, said that the financial position of the company had again improved. Oil profits and other revenue amounted to £669,128, an increase of £119,636 on the previous year. An interim dividend of 7½ per cent. had been paid, and it was proposed to pay a final dividend of 17½ per cent., less income tax. The year under review had been one of general expansion for the oil industry in Trinidad, and in that the company had taken a prominent part. Their company had acquired, or had promised, considerable further acreages in various areas.

The important expansion of their petrol business in the United Kingdom market was proof of the recognition by the motoring public of the excellent qualities of the various Regent motor spirits, which they claimed to be unsurpassed. Until April last year they had marketed in this country three grades of petrol, "Regent Super" and "Regent Benzol Mixture" No. 1 grades and "Regent" in the commercial grade. Since then a fourth grade, "Regent Ethyl," had been put on the market to meet the requirements of that section of the motoring public who wanted a spirit of exceptionally high quality in respect of anti-knock values.

The United Kingdom was dependent on foreign countries for more than 75 per cent. of its oil requirements, and it would definitely appear to be in the national interests that all potential sources of supply within the Empire should be explored and developed, with the active support and encouragement of the British Government. It was earnestly to be hoped that the efforts now being made towards that desirable end would be recognised by the Imperial Government and that special treatment for Empire-produced oil products, which had long been sought, would be granted.

It was proposed to increase the capital to £1,700,000 by the creation of 200,000 shares of £1 each, and it was proposed to issue the shares to the shareholders at £3 15s. a share on the basis of one new share for every four held.

The report was unanimously adopted and the proposed increase of capital was approved.

THISTLE-ETNA GOLD MINES, LIMITED

INCREASE OF CAPITAL APPROVED

An extraordinary general meeting of Thistle-Etna Gold Mines, Limited, was held on Friday, October 16, 1936, at the Institute of Chartered Accountants, London, E.C., to consider, and if thought fit, pass a resolution increasing the capital to £150,000 by the creation of 120,000 additional shares of 5s. each.

Sir G. B. H. Fell, K.C.I.E., C.S.I. (the chairman), said that the programme which they had set before them had been carried out during the past two years according to plan, but it took longer, especially during the initial stages, than they had expected. On the other hand, the results achieved had more than fulfilled their expectations, and he thought shareholders would agree that recent developments had been most satisfactory and gave promise of their ultimately being able to mine and treat ore of a better grade than they had anticipated when the company was formed.

SPEEDING UP DEVELOPMENT

They had to decide now whether to continue their original programme and gradually develop sufficient ore to furnish 40,000 tons per year to the mill, or whether to take the opportunity of increasing their capital and so be in a position to speed up the development and equipment of the mine, and thus bring nearer the time when their venture might be expected to yield good dividends. They had decided unhesitatingly to ask the shareholders' approval of the second course. With the recent collapse of the gold *bloc* and the consequent rise in the value of gold, the prospects of the gold mining industry had definitely improved, and there was additional encouragement to those who were engaged in the industry to take every legitimate opportunity to increase and expedite production.

The exact terms on which an issue would be made had not been finally decided, but they hoped to be able to settle the matter in the course of the next few days, and their decision would at once be communicated to the shareholders.

The resolution was carried unanimously.

BATU RATA (SUMATRA) RUBBER PLANTATIONS,
LIMITED

INCREASED PROFITS

The twenty-sixth annual general meeting of this company was held on the 21st instant, in London.

Mr M. S. Parry, J.P., the chairman, said that they were able this year to present a more favourable balance-sheet. The profits had increased by £2,293 and they were proposing a dividend of 3½ per cent. which equalled 9d. per share, less tax. The directors felt that the improvement in the outlook and general conditions justified some drawing upon accumulated profits of the past for the purpose of that dividend. After setting aside for special reserves £1,200, they still had the fairly substantial carry-forward of £4,066, which was more or less the same figure as the actual profits.

The crop for the year was 239,779 lb. less than that for the previous year, which had necessitated the cessation of tapping operations during February and March in order to bring their surplus to the recognised permissible stock. Their standard production assessment for 1936 was 1,256,864 lb.; that for 1937 was not yet known, but there was every reason to hope for an increase both in the assessment and in the exportable quota.

Expenditure on the estates had been less than in the previous year, and, despite the smaller crop, the cost per pound was only slightly higher. On the other hand, it was most satisfactory that the gross selling price was 1.11d. per pound above that of the previous year. It was a relief to know that Holland had gone off the gold standard, and, as far as the general conditions of the rubber planting industry went, the prospects seemed very favourable.

The report and accounts were unanimously adopted.

Orders for the publication in these columns of the reports of Company Meetings should be addressed to the Reporting Manager of THE ECONOMIST, 8 Bouverie Street, Fleet Street, London, E.C.4.

CABLES INVESTMENT TRUST, LIMITED

PROMISING OUTLOOK

The first ordinary general meeting of the Cables Investment Trust, Limited, was held, on the 19th instant, at the Incorporated Accountants' Hall, Victoria Embankment, London, Mr John C. Denison-Pender (the chairman) presiding.

The Chairman, in the course of his speech, said that the income for the period under review had amounted to £273,571, and the expenses to £10,856, leaving a balance of £262,715. The directors proposed to pay a dividend on the ordinary shares of 1½ per cent., absorbing £30,000, and to carry forward the sum of £8,102. They were satisfied that a full year's income on the securities held at June 30, 1936, should, in the absence of unforeseen circumstances, exceed the amount of £315,000 referred to in the prospectus. The period covered by the first report and accounts of the company had witnessed great unrest in the sphere of European politics. In those circumstances the continued progress of recovery in this country was the more remarkable.

As regarded the distribution of the securities at the close of their financial year, 50½ per cent. were in bonds, 11½ per cent. in preference, 38 per cent. in ordinary and, of the whole, 83½ per cent. were securities of, or registered in, the British Empire. Opportunity had been taken to increase to some extent the holdings of ordinary shares, and, up to date, that policy had proved highly profitable. Profit on sales of investments and forward exchange contracts amounted to £43,727.

The outlook for securities, especially those of the British Empire and the United States of America, appeared to be full of promise, provided that no untoward political development should materialise; while the recent Anglo-French-American currency agreement could be regarded as one of the greatest contributions of recent times to the work of restoring international trade.

They had recently taken advantage of the high price and low yield of some of their securities to realise a sum sufficient to purchase £93,000 of their 3½ per cent. debenture stock. That was in addition to the £15,000 purchased and cancelled for the year 1936 in accordance with the provisions of the trust deed.

The report and accounts were unanimously adopted, and a resolution providing for the conversion of the issued preference and ordinary shares of the company into stock was approved.

HOSCOTE RUBBER ESTATES, LIMITED

INCREASED DIVIDEND

The fourth ordinary general meeting of Hoscote Rubber Estates, Limited, was held, on the 19th instant, at 1-4 Great Tower Street, London, E.C.

Mr Eric Macfadyen, the chairman, said that the net cost of the planted acreage was about £29 per acre. The rise in costs was mainly due to a reduced crop. A company ending its financial period last June had to work against the handicap of a lower exportable percentage than in the preceding twelve months. In the company's case they had new areas ranking for assessment for the first time, but even so the crop accounted for was down by more than 10 per cent.—and that had had an appreciable effect upon the incidence, per pound, of overhead charges. The year before they had tapped, on the average, three-quarters of their mature trees; this year only half. As, however, the price they obtained for their rubber was better by three farthings per pound, they brought in a larger net profit than the year before.

In the current period he looked to see an increased output, lower costs, and—with luck—a better price. If those hopes were fulfilled, the promise he had held out a year ago of progressively improving results would continue to be justified.

If they cleaned up the balance sheet by eliminating the balance of their reconstruction expenses, and added £500 to income-tax reserve, as recommended, there would be enough left to pay a 4 per cent. dividend—against 2½ per cent. a year ago, and to carry forward £848 more than was brought in. A rubber company had to work hard for its living these days, and 4 per cent. on their present nominal capital represented a modest return on the money the original shareholders had put into the business, but they had known worse times and could look forward to better. But for the triumph of co-operative effort, which had resulted in the international regulation of the industry, they would still be wallowing in the mire of over-production; their estates would be under-cultivated, their staffs underpaid, and the shareholders would be going without any return at all. They had a good deal to be thankful for.

The report was unanimously adopted.

CHOSEN CORPORATION, LIMITED

MR PORTMAN'S STATEMENT

The thirteenth annual general meeting of the Chosen Corporation, Limited, was held, on the 20th instant, at Winchester House, London, Mr G. W. B. Portman presiding.

The Chairman, in the course of his speech, said that in view of the discussion that took place at the extraordinary meeting in July regarding the report which the company's auditors had been asked by the board to prepare, it would be a matter of satisfaction to all shareholders to have read the very satisfactory and reassuring report of Mr Harold Bell, chartered accountant. All the obligations of the Banque Franco-Asiatique towards the company had been met in full, and the bank was under no liability of any kind towards the company.

UNWARRANTED CRITICISMS

Following certain animadversions and other adverse criticisms that had been made, the directors had instructed the auditors and solicitors to look into a number of matters, and the professional charges so incurred and other expenses involved as a result of the attacks upon the board had meant an expenditure during the year of many thousands of pounds. The directors felt that the shareholders would agree that the charges against the directors had been made without a due sense of responsibility, and it was at least satisfactory to the board to be able to present the unqualified certificate of the company's auditors.

PROFIT AND DIVIDENDS

The balance of profit and loss amounted to £39,212, including £11,968 transferred from share premium account. An interim dividend of 5 per cent. was paid in June and a further 5 per cent. had since been paid on the fully-paid shares, leaving £7,344 to be carried forward.

It was expected that at the annual meeting of the Nurupi next month a substantial dividend would be paid, and, in turn, the Chosen directors expected to declare the usual interim dividend in December.

All the resolutions submitted were unanimously approved.

SEAGER, EVANS AND COMPANY, LIMITED

AN IMPREGNABLE POSITION

The thirty-eighth annual general meeting of Seager, Evans and Company, Limited, was held on the 21st instant at Caxton Hall, London.

Sir Allan Horne (the chairman) said that his predecessor last year had given a comprehensive outline as to what the directors were doing to place the company in an impregnable position and how it was their intention in a number of directions to increase the productive capacity, distribution and the selling organisation. All that had been done, and the programme laid down in 1934 had been more than justified. As had been said, they intended to hasten slowly, but at the same time they did not intend to lose any opportunity to increase the earning power of the company. It was therefore with a great deal of satisfaction that they were able to meet the shareholders, knowing that the directors' anticipations had been largely realised, although even now the company had not as yet reaped the full measure of benefit from the widespread reorganisation which had been effected throughout the company and its subsidiaries.

The company and its interests continued to occupy a position of marked financial strength. Current assets, including stock in trade, sundry debtors and cash in hand, showed a surplus of £195,065 over current liabilities, or approximately 52 per cent. of the issued share capital. Further substantial sums had been expended during the year in connection with their sales, advertising and promotion programme.

Their principal product, Seager's gin, had been placed on a national basis, and at the same time they had placed Seager's cocktails in the forefront. To-day they had by far and away larger sales of that type of product than any competitor. They had also increased enormously the sales of Seager's egg flip, which was recognised more and more as being a unique pick-me-up. In addition, they had increased the sales of Segavin, the finest wine value on the market. The volume of their sales was increasing at a very satisfactory rate, despite the strong and well-organised competition which they had to encounter.

In conclusion, the Chairman said that they now had a company resting on solid foundations, and they anticipated another satisfactory year.

The report was unanimously adopted.

BRITISH RUBBER ESTATES OF JAVA (1932), LIMITED

IMPROVED PROSPECTS

The fourth ordinary general meeting of the British Rubber Estates of Java (1932), Limited, was held, on the 20th instant, in London.

Mr James Davenport (the chairman), in the course of his speech, said: "The result of the year's working is again disappointing, but the factors that made such a result inevitable were entirely beyond our control. Rubber is our principal crop. Although our standard production assessment was higher, our export allowance was 476,858 lb. less than was allowed the previous year. On top of that, at the request of the N.E.I. Government we transferred licences for 286,459 lb. to the Government. Altogether our crop last year was 964,268 lb. less, and the net result was an increase of 3d. per lb. on our cost of production. Against the higher cost we have to offset a net selling price practically a penny per lb. better than that of last year. The net result, however, was a reduction in profit of £4,911. Results during the current year should be different. There is not likely to be any need to transfer licences to the N.E.I. Government, and as the export percentage is higher we shall be allowed to export a considerably larger quantity. The market price is higher, and exchange has taken a turn that is definitely favourable to us. We can hope, therefore, for an improved result from rubber during the current year.

With regard to tea, there was little difference in the result from that commodity last year as compared with the preceding year.

Our last remaining product is coffee, and that commodity has again had a most unsatisfactory year.

On last year's working, had the guilder exchange averaged, say, F.9.40 per pound instead of the F.7.2495 actually secured, the final result would have been a profit of over £14,000 instead of the £590 shown. Larger crops would have produced a much better result, and whilst our coffee crop is unlikely to be more during this current year than was obtained last year and the export allowance of tea may not be increased, I think we may safely calculate on being allowed to export about 700,000 lb. of rubber more than last year. I trust, therefore, I am not being unduly optimistic if I express the hope that when we meet in twelve months' time we may have a more cheerful story to tell.

The report was unanimously adopted.

GOVERNMENT RETURNS, &c.

NATIONAL ACCOUNTS

The total ordinary revenue for the week ended October 17, 1936, amounted to £13,463,082, against ordinary expenditure of £13,573,875. After allowing for an increase in Exchequer Balances of £127,956, the operations for the week, as shown below, increased the gross National Debt by £436,000 to approximately £8,000 millions.†

(000's omitted)	
Treasury Bills.....	+ 6,086
Public Department Advances	— 4,850
National Savings Certificates	— 70
P.O. and Teleg. (Money) Acts	— 750
.....	— 5,650
+ 6,086	— 5,650

† Including £375 millions on Account of Exchange Equalisation Fund and Borrowing for Statutory Sinking Fund.

A complete analysis of the approximate position of the National Debt at September 30, 1936, appeared in the *Economist* of October 3, 1936.

GOLD MARKET

Messrs. Samuel Montagu and Company write on October 21, 1936 :—

The Bank of England gold reserve against notes amounted to £248,660,346 on October 14th, showing no change as compared with October 7th. No purchases of gold by the Bank were announced during the week under review. In the open market about £2,600,000 of bar gold was disposed of at the daily fixing. Offerings were taken mainly for America, the price being maintained at about dollar parity. The s.s. "Viceroy of India," which sailed from Bombay on October 17th, carries gold to the value of about £653,000.

SILVER MARKET

The market developed an easier tendency and there was a fall in prices during the past week. Business with the Indian Bazaars was hampered by the communal disorders in Bombay, and with little demand from other quarters support was poor. However, offerings on China account continued and prices declined from 20d. on October 15th to 19½d. yesterday; the declining rates attracting buying for America, and also some speculative demand. At yesterday's level sellers were more hesitant and there was an improvement to-day when, following a resumption of Indian buying, 19½d. was quoted for both deliveries. The tone of the market is steadier with the prospect of conditions in Bombay becoming more settled.

(c) Paid on a trebled capital.

† Free of Income Tax.

ANTOFAGASTA (CHILI) AND BOLIVIA RAILWAY.—Dividend, 2½ per cent., less tax, on the 5 per cent. cumulative preference stock on account of arrears. To be paid on December 15th. A similar distribution was made last December. With the dividend now to be paid, payment will be brought up to June 30, 1933.

AVIATION AND UNIVERSAL.—First half-yearly distribution, 2,139,479d. per unit free of tax, equal to 2.8d. per unit gross.

GAUMONT-BRITISH PICTURE CORPORATION.—Net profits, year to March 31, 1936, £715,514, a decrease of £4,998. It is proposed to place £200,000 to a special reserve. Carry-forward, £147,921, against £150,265. No dividend on the ordinary against 7 per cent. for previous year.

HAMBROS BANK, LTD.—Interim dividend, 8 per cent. against 6½ per cent. on partly-paid shares. Increase made to bring interim and final dividends near to the same amount. Directors state that it must not be taken as an indication that final dividend for year will be increased. Interim dividend on fully-paid "A" shares, 3 per cent.

COMMERCE AND TRADE

SURVEY OF COMMODITY MARKETS

The tendency of the prices of leading primary products was again firm this week.

The metal markets attracted considerable interest. Despite the increase in the quotas of the members of the copper restriction scheme a week ago, prices continued to advance and turnover was heavy. Since world stocks of copper now represent less than three months' demand and as consumption is still increasing, the upward trend of prices is scarcely surprising. Tin also was in the limelight, but for different reasons. Following Wednesday's meeting of the International Tin Committee, it was stated that the "Committee were unable to arrive at agreement with the Government of Siam for the renewal of control after the expiry of the agreement now in force." As restriction, unless renewed, is due to lapse at the end of this year, time is running short. The statement that a report regarding the negotiations with Siam will be issued after the next meeting of the Committee on November 5th suggests that the adherence of Siam has not yet been secured. Nevertheless, the market remained fairly optimistic, for quotations declined only slightly on the news of the negative result of Wednesday's meeting of the Committee. Lead and spelter were again marked up in price this week.

The market in linseed and linseed oil was dull owing to uncertainty concerning Argentina's crop and price policy. On the other hand, the improvement in rubber prices was maintained, and the market in timber, which has witnessed a rise in prices of about 30 per cent. since the beginning of the year, remained firm. Among textile raw materials, American raw cotton is scarcely changed on the week and the market in wool remained firm.

After the sharp advance last week, quotations for Liverpool wheat futures, December delivery, were slightly lower, partly on the news of better weather conditions in Argentina and Australia. On the other hand, quotations for raw sugar, which had fallen to a very low level, showed some recovery. Cocoa was again marked up in price.

In the United States, the general trend of quotations for primary products was downwards. Moody's index of staple commodity prices declined from 184.6 (December 31, 1931 = 100) on October 14th to 102.4 on October 21st, compared with 181.6 a month ago and 172.6 last year.

COAL

SHEFFIELD.—Export business is quiet. There has been some demand for cobbles, hards and washed nuts for prompt shipment and inquiries for forward delivery of doubles and smalls. The market for foundry and

furnace coke continues good. Demand for household fuel on the inland market is steady and industry is taking substantial quantities.

NEWCASTLE-ON-TYNE.—Northumberland steam coals of all grades and classes continue firm and are not easy to obtain for delivery over the winter. The increase in the French import quota has brought a little more inquiry from that direction, but the strength of the steam market lies in home trade requirements. Durham colliery coal is in slightly better demand from abroad, which, combined with active home requirements, is making this class of fuel difficult to obtain. There is more trade in prime gas coals, while bunkers continue to have a steady outlet. Patent oven coke remains a good market.

GLASGOW.—Export trade has shown some improvement, and there is now quite a promising inquiry from various quarters. The Scandinavian markets have been rather better. A large business continues to be done with industrial consumers. Supplies generally are moving away steadily, and prices are upheld, nuts being stronger as a rule than large coal. Steam coals in Ayrshire are in short supply and strong in tendency.

CARDIFF.—Coal shipments at the South Wales ports last week were the lowest recorded by the Great Western Railway Company since January, but even at 399,400 tons they were still about 36,000 tons less than in the corresponding period last year, and for the current year up to the end of last week the decrease in volume was about 2 million tons. There are prospects of a further improvement during the next few months, for the French Government has not only increased the import quota by 10 per cent., but has also reduced the tax on import licences from 15 francs on bituminous coals and 20 francs on anthracite coals to 6 francs per ton. charge than even the old duty of 4 francs per ton. Hopes are also entertained that a renewal of business with Italy as the result of the commercial works has renewed contracts which have been suspended since March, 1934, and orders have also been placed for small quantities by North Africa. Large coals continue a glut on the market, while higher than those prevailing before the system of centralised control of sales was inaugurated in August. Colliery owners are still in consultation with Government departments over the question of the rebate on export coal as from December 1st next, and hopes are entertained that the Government may find a way of continuing the present average rebate of about 8½d. per ton. Coke is very firm, and there is a steady market for patent fuel.

IRON AND STEEL

LONDON.—The weekly report of the London Iron and Steel Exchange indicates that activity in the iron and steel markets is increasing. Many consumers are finding that they have under-estimated their requirements, and are consequently pressing for additional supplies. In most departments of the industry, however, producers have disposed of the greater part of their output for considerable periods ahead, and it is exceedingly difficult to place orders for supplementary parcels for anything approaching near

In some areas producers of pig iron are falling behind in deliveries, and supplies are again becoming stringent. The system of rationing consumers to ensure a fair distribution of available supplies is now in force in practically all districts. In the basic iron departments of the market, however, the position is easier, and consumers' fears of a shortage have been removed.

In the semi-finished steel department the supply position remains tight, although relief has been afforded by increased supplies of Continental material. The demand for British semis, however, is on an exceptionally heavy scale, and producing works are operating at capacity.

Home trade requirements of finished steel appear to be growing, and many manufacturers are hard pressed to meet their customers' needs. The volume of export inquiry has expanded lately, but the British steel industry has not much surplus material to send abroad.

SHEFFIELD.—The iron and steel market shows very little change this week. Producers of foundry pig iron find difficulty in meeting consumers' demands. Forge requirements are becoming heavier and the material on offer is well taken up. Business is active in both East and West Coast hematite, and in the case of the latter new supplies are not easily obtainable. The position appears likely to give rise to some anxiety on the part of users. In view of the rising cost of production there is a prospect of a revision of iron prices before long and all contracts are made subject to any changes. In finished iron, common bars are prominent. Business in marked bars is steady; demand for basic steel billets continues unabated. Acid billets, wire rods, strip and bars are in active request. Prices throughout the market are stable.

The building of the sister ship to the "Queen Mary" is already bringing important orders to this area. Many firms are busy on armament and allied work, and there is a big call for steel for aircraft.

GLASGOW.—West of Scotland steel makers are still overwhelmed with work. Not only are shipbuilders calling for very heavy tonnages, but the demands from structural engineers, marine engineering firms, and makers of machinery of every description are on an impressive scale, but producers, meantime, are unable to increase output. Sheet makers have made a considerable addition to the number of mills operating within recent weeks, and sheets are passing very quickly into the hands of users. Export business is improving for both black and galvanised sheets, and in the home trade there is an exceedingly brisk demand for finely finished sheets for motor-car work and for the manufacture of cooking appliances, etc. Local tube makers are again busier and work on hand is considerable.

CARDIFF.—There has been no material change during the past week in conditions in the South Wales iron and steel industry. The demand for pig iron and steel is as strong as ever, and the output quota for the tinplate industry is unchanged at 65 per cent. Prices are also unaltered, but it is reported that the present c.i.f. schedule of the International Tinplate Cartel will come under review at the meeting of the Management Committee which is being held this week-end at Locarno. For the home market there is a better inquiry for galvanised steel sheets, but the export trade continues quiet.

OTHER METALS

COPPER.—Despite last week's increase in the quotas, copper prices have again tended upwards, reaching £41 17s. 6d. on Wednesday—the highest level for over four years. The rise represents in the main the market's reaction to the statistics of the American Copper Institute, according to which world visible supplies at the end of September had returned to a more normal level of just under 380,000 tons, representing less than three months' consumption. Since consumers are buying in anticipation of increased activity in copper consuming industries, a further price rise is possible. Such an advance would, however, in all probability be followed by another increase in production quotas. Meanwhile the American domestic price remains at 9.75 cents per lb.; but, since the New York export quotation exceeded the 10-cents limit on October 20th, an increase in the domestic price is now more than possible.

Sales on the London Metal Exchange: 4,350 tons on Monday, against 2,900 tons last week, 1,100 tons on Tuesday, against 3,800 tons last week; 5,550 tons on Wednesday against 3,850 tons last week. Domestic spot was quoted at 9.87½ cents per lb. in New York on Wednesday, against 9.72½ cents a week ago and 9.65 cents a month ago. Wednesday's official closing price for standard cash in London was £41 17s. 6d. to £41 18s. 9d., compared with £40 18s. 9d. to £41 a week ago. Stocks of refined copper in British official warehouses at the end of last week, at 47,340 tons, show a decrease of 1,257 tons, while stocks of rough copper, at 1,841 tons, show a decrease of 50 tons.

LEAD AND SPELTER.—Lead prices have hardened slightly in sympathy with other metals, but no new features have been apparent. Spelter rose by 1 per cent during the week ended Wednesday, the advance being due mainly to speculative demand, arising from the consideration that spelter prices have recently been unduly low.

Sales of lead on the London Metal Exchange: 1,300 tons on Monday, against 650 tons last week; 1,700 tons on Tuesday, against 550 tons last week; 1,950 tons on Wednesday, against 700 tons last week. The New York quotation on Wednesday was 4.65 cents per lb., against 4.65 cents a week ago and 4.60 cents a month ago. The official closing quotation in London for soft foreign for shipment during the current month was £18 11s. 3d. per ton, compared with £18 5s. a week ago.

Sales of spelter on the London Metal Exchange: 2,050 tons on Monday, against 575 tons last week; 1,750 tons on Tuesday, against 450 tons last week; 1,550 tons on Wednesday, against 950 tons last week. Wednesday's quotation in East St. Louis was 4.85 cents per lb., against 4.85 cents the week before and 4.85 cents a month earlier. Wednesday's official closing quotation in London for "good ordinary brands" for shipment during the current month was £15 3s. 9d. per ton, against £14 3s. 9d. last week.

TIN.—Prices moved within narrow limits until Wednesday, when the International Tin Committee at its meeting in London again failed to reach an agreement with Siam. Another meeting is to be held on November 5th, after which, it is stated, a communiqué on the negotiations with Siam will be published. Operators on the London Metal Exchange are inclined to take an optimistic view. The statistical position is still satisfactory, and since Bolivia and Nigeria will be unable to overtake arrears of shipments in the near future it is not believed that prices will slump even if the International Committee should again fail to reach agreement with Siam on November 5th. Whether or not this anticipation is correct remains to be seen.

Sales of tin on the London Metal Exchange: 550 tons on Monday, against 220 tons last week; 250 tons on Tuesday, against 250 tons last week; 495 tons on Wednesday, against 245 tons last week. The New York quotation on Wednesday was 44.10 cents per lb., against 44.55 cents a week ago and 44.95 cents a month ago. Wednesday's official closing quotation in London for standard cash was £200 10s. to £201 per ton, compared with £200 to £200 5s. a week ago. Stocks of tin in London and Liverpool at the end of last week totalled 964 tons, an increase of 118 tons on the week.

OTHER NON-FERROUS METALS.—Among other non-ferrous metals, aluminium ingots and bars for home delivery were again quoted at £100 per ton, and rolling billets at £102 per ton. Nickel, for home and export,

at £200 to £205 per ton, remains unchanged. Quicksilver, on the spot, was quoted at £14 2s. to £14 2s. 6d. per flask of 76 lbs., as against £13 17s. 6d. to £13 18s. last week. Chinese antimony was quoted at £56 per ton ex warehouse, the same as last week. Chinese wolfram for "October-November" shipment was quoted at 28s. to 29s. per unit, c.i.f., the same as last week. Refined platinum was quoted at £10 15s. per ounce, as against £10 5s. last week.

TEXTILES

COTTON.—Manchester.—The position of most spinners and manufacturers tends to improve. Compared with a month ago, there is more resistance against low offers. Numerous producers have better order lists, and there is less pressure for fresh contracts.

Rather wider fluctuations have occurred in raw cotton prices, but they are almost unchanged on the week. According to some advices from the United States, the crop may be rather larger than expected. The latest statistics, however, indicate an increasing world consumption. Hedge selling has not yet come to an end, but the peak of the movement must now be near at hand.

A more cheerful feeling has prevailed in the yarn market. An active demand has again been experienced in coarse and medium American counts. The shortage of operatives in certain districts is a serious matter for mill managers. Inquiry in Egyptian yarns has broadened, and more business has been done.

Demand in the cloth section continues better. Many buyers are slow in raising offers, but a fairly encouraging business continues to be done and manufacturers are firmer in quotation than a month or two ago. Inquiry for India has improved and freer buying has taken place, principally in light whites and printed and dyed goods for Calcutta, Karachi and Madras. Fancies of various kinds have been booked for Java and the Straits Settlements. Some reports with regard to trade for Egypt have been rather better, and a steady business has again been done for South America. Demand for the Continent has been more active in heavy materials for Germany, finishing styles for Scandinavia, and fine fabrics for Switzerland. Standard makes have moved off fairly well for the Dominions and the home trade. Makers with wide looms continue busier.

JUTE.—Dundee.—A definite improvement can be recorded in the jute industry. Both spinners and manufacturers are busy, and inquiries indicate that further orders can be expected. Strikes at several of the works owned by Jute Industries, Ltd., have limited the supply of jute yarns, and, although the situation has improved now and many of the workers have returned to work, there is still a keen demand for urgent delivery. Quotations for yarns have improved; 2s. 1d. is the lowest rate for common 8 lb. cops and 2s. 2d. for 8 lb. spools, business having been done at these prices for delivery December-January. Other qualities of yarns are equally firm, and twist is now quoted at 3½d. for 3 ply 8 lb., while sacking yarns have been sold at 2½d. for 24 lb. weight and 3½d. for 8 lb. chains, with a tendency to rise to a higher level. Rove is firmer at £19 10s. for 48 lb. and £15 15s. for 200 lb., and the finer yarns are dearer at 2s. 8½d. for second quality 8 lb. Rio warp, 2s. 5d. for third and 2s. 3d. for fourth. Carpet yarns have been largely sold at 3½d. for 14 lb. warp.

The statistical position of the raw jute market is strong, and prices have advanced about 20s. during the past week. The Indian Mills have been free purchasers, and they are evidently making sure of their requirements for the present season, which, if production is continued at its present rate, will amount to roughly seven million bales. It is estimated that they have already bought about four million bales in the first 3½ months of the season, while other countries are reputed to have taken 1,500,000 bales. This makes a total of 5,500,000 bales, and the final forecast of the crop for this season was only 8,711,000 bales. The price of Daisee-2/3 has risen to £17 17s. 6d. for the full group and to £18 5s. for short group and good single marks, with Daisee-4 sold at £16 12s. 6d., Tossa-2/3 quoted at £18 17s. 6d., and fours at £18, October/November. First Marks are nominal at £20 15s., and good Lightnings are offered at £19 7s. 6d. for Double Triangle Gouti to £19 17s. 6d. for Triangle Jajodia, with Hearts at £18 10s., November/December.

Jute cloth prices are tending upwards, and the lowest rates now are 2½d. for 10 oz. 40 in. and 2½d. for 8 oz. in the narrow widths, and ¾d. more obtainable in the wide widths.

Demand for Calcutta goods has recently been good, and prices have advanced a little. The failure of the mills in India to settle the controversy over working hours is still a factor responsible for keeping prices at a very low level. For 10 oz. 40 in. 16s. 6d. is quoted for November/December, and 16s. 5d. for January/March, with 8 oz. at 13s. 1d. and 13s. 2d., respectively.

GRAIN MARKETS

WHEAT.—After continuing to advance in the early part of the period under review, prices suffered a reaction, and closed on Wednesday only slightly higher on the week. Moderate rainfall has been experienced in Australian growing areas, while the outlook in Argentina has also been improved by good rains. The *Corn Trade News* estimates that the export surplus of Australia and Argentina may amount to an aggregate of 25 million quarters in the calendar year 1937, against a shipping surplus of 18½ millions in the present year.

On Wednesday last, "December" futures were quoted in Chicago at 114½ cents per bushel, against 116½ cents the week before and 115½ cents a month ago. Quotations in London, Wednesday: No. 1 Northern Manitoba, ex ship, 45s. 6d. per 496 lbs., against 45s. 3d. a week ago; No. 2 Northern Manitoba, ex ship, 44s. 9d., against 44s. 6d. a week ago. According to the *Corn Trade News*, total shipments of wheat and flour

last week totalled 1,302,000 quarters, against 1,300,000 in the previous week and 1,470,000 quarters in the corresponding week a year ago.

FLOUR.—Prices are again higher on the week. Wednesday's London quotations (excluding quota payments) were: Straight run, delivered Home Counties, 37s. 6d. per 280 lbs., against 36s. 6d. a week ago; delivered inner London, 37s., as compared with 36s. a week ago; Manitoba patents, ex store, 35s. to 36s. 6d., against 34s. to 35s. 6d. a week ago. Australian, ex store, 30s. 6d. to 31s., against 30s. to 30s. 6d. a week ago.

BARLEY.—The market in imported feeding barley remains steady. Supplies of best English malting descriptions are limited, inferior samples being difficult to dispose of. "October" futures were quoted at 58½ cents per bushel in Winnipeg on Wednesday, against 62½ cents a week ago. Quotations per 448 lbs. in London on Wednesday were: "English feed" (new), at farm, 30s., as against a nominal quotation a week ago; "English malting" (new), at farm, 32s. to 50s., against 32s. to 50s. last week; Californian (new), ex ship, 47s. to 58s., against 47s. to 58s. last week; Chilean, brewing, ex ship, 36s. 6d. to 42s., against 36s. 6d. to 42s. a week ago.

OATS.—On Wednesday, "December" futures were quoted at 40½ cents a bushel in Chicago, against 41½ cents a week ago and 42½ cents last month. Quotations in London, Wednesday: "English Black" (new), at farm, 20s. per 336 lbs., against 20s. a week ago; "English White" (new), at farm, 20s., against 20s. a week earlier; mixed Canadian feed (Vancouver), landed, 21s. per 320 lbs., compared with 21s. last week.

MAIZE.—Prices have eased on a less active demand. The Argentine Government's final estimate puts this year's crop at 45,860,000 quarters, or 7,000,000 less than the quantity harvested last year. "December" futures were quoted on Wednesday at 93½ cents per bushel in Chicago, against 95½ cents a week ago and 94½ cents last month. Quotations in London, Wednesday: "Plate," landed, 24s. 3d. per 480 lbs., compared with 24s. 6d. a week ago; "Plate," ex ship, 23s. 3d., as against 23s. 6d. a week ago; "Plate," "October," 23s. 3d., as against 23s. 9d. a week ago; yellow maize meal, ex wharf, was quoted at £6 7s. 6d. to £6 10s. per ton, as against £6 10s. last week.

AMERICAN WHEAT MARKETS.—The following table shows wheat quotations for selected weeks in 1934-35:

NEAREST FUTURE	Jan. 3, 1934	Jan. 2, 1935	Oct. 23, 1935	Dec. 31, 1935	Oct. 14, 1936	Oct. 21, 1936
Winnipeg (No. 1, Manitoba) — Cents per 60 lb.	65½	82½	88½	84½	114½	111½
Chicago (No. 2 Winter) — Cents per 60 lb.	84½	98½	99½	75½	116½	114½

The visible supply of wheat in Canada amounts to 87,684,000 bushels, against 86,843,000 bushels last week, and 147,071,000 bushels in the corresponding week last year.

SALES AND PRICES OF BRITISH CEREALS.—The following table gives the estimated sale of home-grown wheat during the harvest years 1932-33 to 1935-36:

	1932-1933	1933-1934	1934-1935	1935-1936
Estimated sales of home-grown wheat	Cwts.	Cwts.	Cwts.	Cwts.
1 week to October 17	317,338	431,860	462,156	388,877
7 weeks to October 17	2,709,909	3,659,747	3,377,179	2,062,760
Average price of English wheat per cwt.	s. d. 4 10	s. d. 5 0	s. d. 6 1	s. d. 8 6

The following is a statement showing the quantities sold and the average price of British cereals in the past two weeks, and for the corresponding week in each of the years from 1932 to 1935:

Week ended	QUANTITIES SOLD			AVERAGE PRICE PER CWT.		
	Wheat	Barley	Oats	Wheat	Barley	Oats
	Cwts.	Cwts.	Cwts.	s. d.	s. d.	s. d.
October 15, 1932	360,142	356,237	69,372	5 8	7 11	6 3
October 14, 1933	317,293	527,304	38,598	4 10	6 6	5 5
October 20, 1934	431,860	424,488	53,675	5 0	9 4	5 5
October 19, 1935	462,156	497,969	49,012	6 1	9 3	6 2
October 10, 1936	306,492	453,111	63,863	8 3	10 0	6 10
October 17, 1936	388,877	474,279	69,620	8 6	10 1	6 10

OTHER FOODS

BACON.—The market has been generally steady during the period under review. The official quotations (per cwt. for No. 1 Sizable) which formed the basis for dealings on the London Provision Exchange this week were: English, 92s. to 94s.; Canadian, 90s.; Danish, 100s., as against 92s. to 94s., 90s., and 100s., last week. Arrivals in London last week included Danish, 12,889 bales; Canadian, 5,748; Dutch, 2,098; Lithuanian, 1,933; and Polish, 2,924; as against 12,275, 4,898, 2,078, 1,878 and 2,265 bales, respectively, in the previous week.

BUTTER.—Prices for Colonial makes have firmed up this week, but Danish turned a shade easier. Quotations (per cwt.) on the London Provision Exchange on Wednesday were: New Zealand, finest salted, 98s.; Australian, choicest salted, 98s.; Danish, 121s. to 122s., compared with 96s.; 96s. to 97s., and 122s. to 124s., respectively, a week ago.

CHEESE.—New Zealand cheese has been firm, with prices of other makes steady. Quotations (per cwt.) on the London Provision Exchange on Wednesday were as follows: English, finest farmers, 80s. to 84s.; Canadian, finest coloured, 68s. to 69s.; and New Zealand, finest coloured, 66s. 6d. to 67s., against 82s. to 84s.; 68s. to 70s., and 65s., respectively, a week ago.

COCOA.—The speculative rise in the price of cocoa has continued this week. The spot quotation in New York on Wednesday was 8½ cents per lb., as against 8½ cents per lb. last week. In London, on Wednesday last, good fermented new crop, "November-January," was quoted 40s. per 250 kilos, c.i.f. Continent, against 38s. a week ago. Last week's movements of cocoa in London were as follows: Landed, 2,843 bags; delivered, for home consumption, 4,605 bags; exported, 1,305 bags; stocks, 149,825 bags, against 125,317 bags a year ago.

COFFEE.—The London market was quietly steady, but quotations in New York have risen. On Wednesday, Rio No. 7 (cash) was quoted at 8 cents per lb. in New York, as compared with 7½ cents per lb. last week and 7½ cents per lb. a month ago. Movements of coffee in London last week were as follows: Brazilian, landed, 16 cwt.; delivered, for home consumption, 19 cwt.; exports, nil; stocks, 9,849 cwt., against 13,038 a year ago. Central and South American, landed, 388 cwt.; delivered, for home consumption, 2,265 cwt.; exported, 784 cwt.; stocks, 70,578 cwt., against 100,657 last year. Other kinds: landed, 1,393 cwt.; delivered, for home consumption, 3,759 cwt.; exported, 1,298 cwt.; stocks, 103,169 cwt., against 123,343 last year.

EGGS.—With supplies rather short, the London market has been firm, with prices showing a further seasonal advance. At Smithfield, on Wednesday, English (ordinary packing, Grade I, about 15-15½ lb.) realised 22s. to 23s. 6d. per 120, as against 21s. to 22s. 6d. last week, while Danish (15½ lb.) made 15s. to 15s. 6d., as against 14s. to 14s. 3d. last week.

FRUIT.—With supplies generally ample for requirements, business at Covent Garden has been rather quiet and prices easier, states *The Fruit-grower*. The continuance of bright and cold weather might, however, be expected to lead to an improvement. Supplies of apples are exceptionally heavy and prices low. Pears, however, are not so prominent, while plums are practically cleared. Blackberries are a less active trade at easier rates, but cobnuts are a point firmer and walnuts encounter a fair demand. Hothouse grapes have been a rather slow item, with prices moderate. Arrivals of Spanish pomegranates have now commenced. Oranges have eased slightly on larger supplies, and lemons are also a little cheaper. Supplies of grapefruit are abundant, and prices are consequently moderate.

MEAT.—After a moderate opening on Monday, business at Smithfield was quiet and some prices were again weaker. On Wednesday last, Argentine chilled hindquarters were quoted at 3s. 4d. to 3s. 8d. per 8 lbs., as compared with 3s. 4d. to 3s. 10d. a week ago. New Zealand frozen mutton was 3s. to 3s. 8d. per 8 lbs., against 3s. to 3s. 8d. a week ago. According to the Smithfield Market official report, supplies during last week amounted to 9,784 tons, a decrease of 205 tons on the corresponding week last year. Beef and veal accounted for 4,939 tons, mutton and lamb 2,604 tons, and pork and bacon 1,263 tons, as compared with 5,043, 2,847 and 1,256 tons, respectively, in the same week of 1935.

PEPPER.—Wednesday's spot price for black Lampung (in bond) was 2½d. per lb., against 2½d. a week ago. Movements of pepper in London during the past week were as follows: Black, landed, 9 tons; delivered, 12 tons; stocks, 1,780 tons, against 1,503 tons a year ago. White, landed, nil; delivered, 27 tons; stocks, 11,957 tons, against 15,656 tons a year ago.

RICE.—The spot price of Burma No. 2, cleaned, new crop, was 9s. 1½d. per cwt., ex warehouse, on Wednesday, as compared with 9s. 1½d. per cwt., a week ago. "October-November" in singles to Continent and U.K. was quoted at 7s. 10½d. per cwt., against 7s. 10½d. last week. Movements in London during the past week were as follows: Landed, 728 tons; delivered, 255 tons; stocks, 2,562 tons, against 7,758 tons a year ago.

SUGAR.—In London firm conditions have ruled, and the New York market has been quietly steady. The spot price in New York on Wednesday was 3-35 cents per lb., as compared with 3-35 cents per lb. last week and 3-40 cents per lb. a month ago. Wednesday's sales of raw sugar in London included December delivery at from 4s. 8½d. to 4s. 9½d., against 4s. 5½d. to 4s. 6d. a week ago. The movements of raw sugar at public warehouses in London and Liverpool last week were as follows: Imports, 8,720 tons, against 19,780 tons last week and 4,991 tons in the same week of last year; deliveries, 19,170 tons, against 15,886 tons last week and 15,886 tons last year; stocks, 106,420 tons, against 116,870 tons last week and 144,059 tons last year.

TEA.—The following table shows the average prices (compiled by the Tea Brokers' Association) of tea sold in Mincing Lane on Garden Account in recent weeks:

Week ended	Northern India	Southern India	Ceylon	Java	Sumatra	Africa	Total
Oct. 17, 1935	15-34	12-79	16-76	13-15	11-05	11-85	15-16
Sept. 10, 1936	14-82	12-13	13-31	11-02	10-06	11-28	13-88
Sept. 17, " "	14-29	12-13	13-32	11-03	9-06	11-53	13-56
Sept. 24, " "	13-86	12-04	13-29	10-75	9-95	11-46	13-29
Oct. 1, " "	13-39	11-95	13-41	10-91	9-90	11-55	13-09
Oct. 8, " "	13-22	11-92	13-62	10-81	9-95	11-63	13-03
Oct. 15, " "	13-18	12-00	13-87	11-06	10-11	11-30	13-12

The quantities catalogued for the public auctions in Mincing Lane this week comprised 54,438 packages of Indian and 22,822 packages of Ceylon tea. The Indian teas encountered a good demand and prices were fully maintained, with a tendency towards dearer rates in the case of low medium sorts. An active demand was also in evidence at Tuesday's Ceylon sales and medium teas were dearer.

VEGETABLES.—Supplies of both tomatoes and cucumbers have declined and prices are consequently firmer, states *The Fruit-grower*. Covent Garden report. Mushrooms have declined to a more reasonable level, while lettuce has risen on short supplies. Most of the regular lines of greenstuff continue abundant with prices moderate, and some Paris green asparagus has now put in an appearance. Dutch onions have eased in price, but Valencia onions are dearer. Meanwhile, potato prices at the various London markets remain steady. At the Borough, on Tuesday, best siltland King Edward again made 8s. to 9s. per cwt.

MISCELLANEOUS COMMODITIES

RUBBER.—Although the market has been somewhat inactive, the price of ribbed smoked sheet has remained steady at 7½d. per lb. throughout the period under review. With this week's reduction, United Kingdom stocks have fallen below 100,000 tons for the first time since June, 1934. Meanwhile, attention is now centred on next Tuesday's meeting of the International Committee. The spot price in New York on Wednesday was 16½ cents per lb., compared with 16½ cents per lb. a week ago and 16½ cents a month ago. Wednesday's official buyers' price for standard ribbed smoked sheet on the spot in London was 7½d. per lb. as against 7½d. on the at 7½d. to 7½d. for "November" shipment, as against 7½d. a week ago. Stocks in London and Liverpool at the end of last week totalled 99,208 tons, against 100,617 tons a week earlier. A year ago stocks amounted to 173,734 tons.

FURS.—The autumn series of fur auctions was continued in London this week, and an irregular tendency was again evident. Interest was mainly concentrated on Persian lambs, supplies of which were readily

absorbed a large quantity of furs, American opossum, squirrel and musquash cheaper than the better quality skunks, and Russian furs were also in demand. The market was slightly easier. In most cases 70 to 75 per cent. of offerings were sold. The former gold bloc countries, however, some reserve was shown by the market. The market was slightly easier, however, showed interest in the market.

VEGETABLE OILS AND OILSEEDS.—The market for vegetable oils and oilseeds is no disposition on the part of consumers to cover immediate requirements. In view of the poor demand for oil, linseed is in small request; the outlook remains uncertain regarding developments in Argentina. There is a fair balance of old crop still unsold, and prospects for a two-million-ton crop this season continue favourable. The critical

period for the growing plants is now at hand, but unless weather conditions deteriorate considerably a very large yield is confidently expected. That being so, the question is whether the Argentine Government will maintain the present fixed minimum price to growers; until that is answered, crushers hesitate to enter into forward commitments. Meanwhile, new Argentine soybean oil is being shipped at £10 15s. per ton. Oil, in sympathy with seed, has declined to the lowest level recorded this year, and for October-December delivery ex Hull is quoted at £24 per ton. The quantity of linseed oil for Europe is 134,600 tons—15,000 tons less than last week—and Argentina and India have an estimated exportable surplus of 274,000 tons, against 378,000 tons actually shipped in the remainder of last year. Little or no business is passing in either cottonseed or cotton oil. Black Egyptian to Hull has been sold at £6 17s. 6d., January-March.

WHOLESALE COMMODITY PRICES

AMERICAN SHARES LIKELY TO PAY EXTRAS SOON

British investors should find this timely analysis valuable under present boom conditions in American markets. This analysis will be sent without extra cost if you accept the trial subscription offer below. The promising outlook for American business and American securities makes it important for you to keep well informed on America's leading corporations. This you can quickly and easily do by reading America's leading Investment Weekly.

Return this advertisement and only four shillings for the four next issues of the authoritative and unbiased FINANCIAL WORLD of America and you will also receive the following extra aids to better success with American securities: latest issue of our share ratings and data book entitled "Independent Appraisals of (1300) Listed Shares," 64 "Share Factographs" and 6 special analyses of great value to British investors at this time. Among these analyses are "American Shares Likely to Pay Extras Soon" and "A New Market Factor in Prospect."

Post only Cheque or Postal Order for 4s. for our four weeks' trial offer, or £2 8s. for one year, to:

THE FINANCIAL NEWS

Special articles due to appear next week on the Leader Page of THE FINANCIAL NEWS are as follows:

MONDAY, OCTOBER 26.—CHANGES IN THE FUR TRADE. Leipzig, once the centre of the World's Fur Trade, has been deprived of its supremacy by the effects of three years of Nazi economics. Much of its lost business has come to London, now the chief centre of international fur dealings. A Special Correspondent will discuss both the recent strengthening of London's position and the general outlook for the international fur trade.

TUESDAY, OCTOBER 27.—INDIAN COPPER CORPORATION. Our Special Mining Correspondent, MINOTAUR, in his usual Tuesday article, deals this week with the unique position of a company which, naturally helped by the recent big rise in copper, has the added advantage of an almost monopolistic position in a local market shielded by a tariff from world competition.

WEDNESDAY, OCTOBER 28.—ENGINEERING ACCESSORY COMPANIES. The prospects of most well-established concerns on the fringe of the motor, aircraft and light engineering industries have been fully examined in earlier articles. This article analyses the outlook for a selection of the smaller and newer companies in the light of current technical and other developments.

THURSDAY, OCTOBER 29.—FRANCE AFTER DEVALUATION. It is but four weeks since the surprise announcement of the Tripartite currency pact, yet already people are saying that devaluation in France has failed. Our Paris Correspondent, in a special review, surveys the progress of the past month and discusses the major problems, political as well as economic, which the net position has raised.

FRIDAY, OCTOBER 30.—CIVIL AIRCRAFT COMPANIES. The Government's Air Force expansion drive has naturally overshadowed recent developments in the sphere of Civil Aircraft. These, none the less, have been important. This article discusses Civil Aviation in general and the prospects for British Aircraft manufacturers in particular, in the light of the growing importance of air communications.

AIR-POWER AND INDUSTRY

SIR THOMAS INSKIP has been busy this week co-ordinating the Air Ministry and the aircraft industry; and the public has become convinced, if it was not convinced before, of the need for his beneficent activities. For, unquestionably, much sincere anxiety has been raised by the Nuffield-Swinton affair. Adequate air equipment to-day has become so vital to this country as to be equally important with naval equipment, if not actually more so. The suggestion that we may not be making the best use of our resources for producing aeroplane engines, or preparing for the mobilisation of all these resources in time of war, is consequently very disturbing indeed.

The facts of the relationship between the Air Ministry and the aircraft industry, which form the background of the dispute, may be briefly summarised. Before the present expansion programme began at all, the Air Force obtained its aeroplane engines from four selected firms: Rolls-Royce, Bristol, Armstrong-Siddeley, and Napier. These firms were in a special position because their engines had been tested over a long period, and because they had maintained personnel and plant during years in which orders were comparatively few. Meanwhile, air frames were made by a larger number of firms, about 15 in all.

The expansion programme, as it has now developed, must be conceived as in two parts: first, the ordinary expansion of production and plant required to raise the peace-time strength of the Air Force from 500 to 2,000 front-line machines; and secondly the creation of a "shadow" industry designed to come into operation in the event of war.

Under the normal expansion programme extra engines were to be provided by means of an extension of the plant of the above four firms. These extensions were to be made out of capital raised by the firms themselves, though some sort of Government guarantee was requested in certain cases; and some of the firms were to arrange sub-contracts for parts with other firms. The general plan, however, was to

confine orders for engines to the four selected firms who had borne the cost of maintaining their plant in the post-war years.

At the same time air frames for the expansion programme were to be made by extension of the plant of a large number of companies, including Hawker, Bristol, Fairey, Westland, Handley Page, Vickers-Aviation, Vickers-Supermarine, Armstrong-Whitworth, A. V. Roe, and General Aircraft. These extensions were also to be made with capital provided by the companies themselves, and here again parts were to be bought from a large number of outside companies.

Secondly, there was the scheme for the "shadow" industry, formulated in April, 1936. This affected both engines and frames, and was to consist of a set of new factories built at the expense of the Government, but supplied with skilled labour and management by the private companies. It was to be available during war; and during peace it was to be kept going by orders for parts and possibly by some orders for engines and frames under the ordinary expansion scheme. The "shadow" industry producing engines was originally to consist of seven factories managed respectively by Austin, Daimler, Rootes, Rover, Standard, Wolseley and Singer. Each factory was to produce separate parts, which were then to be assembled into individual engines. Subsequently, Wolseley dropped out as a result of Lord Nuffield's dispute with the Air Ministry, and Singer as a result of private difficulties unconnected with the Air Force. Bristol were then brought in to replace Wolseley and Singer; and the "shadow" industry (for engines) consequently now consists of Austin, Daimler, Rootes, Rover, Standard and Bristol. The "shadow" industry for producing air frames consists of two firms only: Austin and Rootes.

Finally, it should be recalled that two of the firms with which Lord Nuffield is associated have been concerned in the programme. Wolseley Motors were to have taken part

in the "shadow" industry; while it was Wolseley Aero Engines from which Lord Nuffield wished to produce Scorpio engines on his own.

The gist of Lord Nuffield's charge against the Ministry was, first, that it had on insufficient grounds refused the co-operation of Wolseley Aero Engines in the expansion scheme; and secondly, that the co-operation of Wolseley Motors in the "shadow" industry was impossible, because the scheme was both technically and strategically unsound. A full reply was made to these charges in the Government's White Paper, issued on Wednesday. On the first count the White Paper argues that it has been the policy of the Air Ministry ever since the war to "interest and retain the services" of a few selected firms; that "as in aeroplanes, so in engines, it has been, and is, the considered policy of the Government to avoid, as far as possible, a multiplicity of types"; and that extensions of plant by the selected firms have proved sufficient to carry out the expansion programme at a satisfactory rate. Moreover, the original Scorpio engines manufactured by Wolseley, "in the hope of securing a civil market," were too low-powered for the Air Force; while a number of the later and more powerful engines were actually ordered for training purposes.

Secondly, on the issue of the "shadow" industry, the White Paper shows that the plan of manufacturing separate parts in separate factories had been approved, though after some difference of opinion, by a committee representing all the seven firms concerned, including Wolseley Motors; and that before August the representative of Wolseley Motors had several times expressed his willingness to take part in the scheme. Finally, a letter from Lord Austin, dated October 26, 1936, is published with the White Paper, in which it is reported that a meeting of representatives of the six firms at Coventry that day unanimously confirmed their approval of the "shadow" scheme.

The personalities of the controversy, though they have necessarily caught the public eye, are really of little importance. One cannot read the published documents without gaining the impression that a certain dictatorial temper coloured Lord Nuffield's attitude to the whole question, and that at the same time less than the maximum possible tact was shown by the Air Ministry in overcoming this obstacle. It would also appear from the simultaneous changes of personnel and policy in the Morris organisation that there was more than one school of thought among Lord Nuffield's subordinates.

On the first substantial question at issue, the refusal of the Air Ministry to buy Scorpio engines as part of the expansion scheme, Lord Nuffield seems to have a very weak case. His aeroplane factory, originally designed mainly for civil purposes, was not producing an engine suitable for the Air Force; and the expansion scheme was being punctually executed by the existing firms. There was no reason why the Ministry should have bought the Scorpio engines; and to buy American engines, manufactured by Wolseley, as Lord Nuffield later suggested, would have been contrary to the Ministry's considered policy—however short-sighted such rigidity may be.

The merits of the controversy over the "shadow" industry are not so clear. The case for manufacturing parts separately is mainly based on the need to economise machine tools; and the case against it rests on the alleged difficulty of assembling the parts and the alleged danger in war of the destruction of one of the factories by bombing raids. This latter point was met by the statement of Lord Swinton on Thursday that in case of war whole engines would be produced by each individual factory—or at least by several chains of factories. On the technical question of the assembly of parts, and of the shortage of machine tools, the layman cannot possibly judge. But it is plain from the White Paper that difference of opinion on this point exists among the experts; and some form of independent inquiry might perhaps be held with advantage. The matter cannot end entirely with Lord Swinton's statement in the Lords on Thursday that the Government had decided to adopt a policy with which Lord Nuffield unfortunately disagreed.

If some further inquiry can be held, and if Lord Nuffield's services are recruited once more—not on his terms but on those of the Ministry, and not necessarily in the "shadow" scheme—the ventilation of the dispute may not have been wholly against the public interest.

SPAIN AND THE POWERS

WITH the virtual investment of Madrid by the various forces of the rebel Generals and their 48-hour ultimatum to the capital, the Spanish tragedy reaches its *dénouement*. But as there is often a long succession of minor crises after the *dénouement* before the curtain is rung down on a tragedy, so the capture or surrender of Madrid will only usher in a protracted and doubly embittered epoch of conflict—warlike conflict in Spain, political in Europe. Perhaps for years, Spain and her oversea territories must now become a political, if not a real, powder-magazine. Unhappily, the rest of Europe also bids fair to become a political firework display in the next year or two. And this is no safe environment for powder-barrels.

His Majesty's Government and the Popular Front Government of France agreed at the outset of the Spanish rebellion that the supreme danger against which their joint efforts should be directed was lest the Powers of Europe should, by material support of the party in Spain with which their Governments or peoples sympathised, become embroiled with each other. That this was—indeed is still—a danger cannot be gainsaid. In the Commons debate on Thursday Mr Eden rightly emphasised the perils of a conflict between two sets of European Great Powers. The contingency seems the greater in that the aims and outlook of the Spanish rebel Generals naturally commend themselves to the European aims and policy of Herr Hitler's and Signor Mussolini's totalitarian States. Moreover, the quandary in which the rebellion has placed successive Spanish Governments has proved almost an exact parallel to the European quandary of the two great Western democracies—that of being lamed and deprived of initiative by violent tactics. Thus, the sincere endeavour of the French and British Governments to secure an effective non-intervention agreement among the Powers principally affected, though it was not what the Spanish Government might reasonably have expected from so-called friendly Powers, could at least be justified in the dangerous state of political tension all over the Continent. The Governments of France and of this country had lost the initiative in European affairs as a result of their cumulative hesitations, misunderstandings and errors in the face of that long train of unilateral wanton acts which led from Manchuria to German conscription, the sanctions *débâcle*, the rape of Abyssinia, the remilitarisation of the Rhineland, and the eventual understanding between the two Fascist dictators.

We still believe—as we said at the outset of the rebellion in Spain—that if the British and French Governments had at once jointly warned all other Powers, Russia included, not to carry material aid to either side in Spain under the penalty of running a joint Anglo-French naval blockade, neither Herr Hitler's nor Signor Mussolini's nor M. Stalin's minions would have been given any military support by their principals in the event of an attempt to break that blockade. For such action the British and French Governments might have adduced as justification the international instruments of 1907, 1908 and 1912 reserving the Spanish North African zone, Tangier, and the Straits of Gibraltar—all vital British interests—as zones of peculiarly French and British concern.

As it was, however, the British and French Governments pinned their faith to the good faith of others. It was a risky proceeding in the temper and tension of political feeling in Europe. The Supervisory Sub-Committee of the Non-Intervention Pact—itsself so tardily concluded as to be unavailing at the outset—became thereby the matrix of accusation and counter-accusation over the various Powers' alleged non-observance of the Pact. Despite overwhelming private evidence that breaches of the Pact have been made by Germans, Italians, Portuguese and Russians, the Supervisory Sub-Committee has supervised nothing beyond the clash of European interests within it. While the French and British representatives have been, like Agag, treading delicately, the ban on the supply of arms to Spain has worked plainly against the Spanish Government and in favour of the rebel forces.

It is significant that, despite Mr Eden's deprecation of this conclusion, he admitted on Thursday that warlike stores

had without doubt been sent to the rebels from Italy and elsewhere, at any rate before the conclusion of the Pact. And the Spanish Government's contention that they have the men while the rebels have secured the material has been borne out this very week by two British war correspondents who were captured by Italian troops manning rebel tanks. Again, many Italian and German fighting aircraft of the latest types have been shot down by Government forces.

Thus, Mr Eden's argument that, because Italy is situated geographically in a natural position to supply the rebels with arms, the British people should not conclude that the Pact had worked against the Spanish Government, is a palpable *non sequitur*. France is even more favourably situated; but she has enforced the Pact upon her chafing subjects. The supervisory Committee of the Powers has, during the last ten days, been proved impotent either to investigate or to adjudicate on the charges and counter-charges made by the Spanish Government and Russia on the one hand, and by Germany, Italy and Portugal on the other. Its chairman, Lord Plymouth, only announced on Wednesday a verdict of "insufficient evidence" in favour of Italy and Portugal, leaving the German and Russian cases of alleged non-observance *pendente lite*. And the Committee, its membership intact, has adjourned for another sterile week. In the Commons, Mr Eden has informed us that nothing can be investigated in Spain or Portugal; and that the British and French Governments are resolved to adhere to their support of the Pact as the lesser of two evils.

This naturally ran completely counter to the Russian Government's declaration that the Pact and the Committee's work amount to "a torn-up scrap of paper." But it also evoked bitter protests from the Opposition on Thursday. In accordance with the unanimous decision on Wednesday evening of the three Labour organisations composing the National Council, their speakers demanded the suppression of circumstances which, they declared, in effect enabled one side in Spain to secure all it needed and denied equivalent facilities to the other.

The truth is that the Committee, as we expected, has proved to be Europe in miniature. In it, as in the Continent *in grosso*, the Powers have found that Spain is just a temporary centre of gravity, about which the parallelogram of their political forces maintains an uneasy equilibrium. None can "pull out." None dares openly to rush in. And the issue in Spain must be fought out, with a strong bias—provided by the impotence of Britain and France, as prisoners of their own good faith—in favour of the rebels. True, even the military issue is not yet decided. But that will not be the end. It will be only the beginning of yet another alignment of forces—perhaps even more unfavourable to France and the British Empire than the present—in a Continent whose political destinies are being meekly surrendered to militant dictatorships. It will take more than soft words in the Commons to avert the reckoning in store.

THE DEPRESSED AREAS—I

(BY A SPECIAL CORRESPONDENT)

THIS autumn legislation will have to be passed renewing the Special Areas (Development and Improvement) Act, which came into force two years ago as a result of considerable popular agitation on behalf of a number of districts standing out as islands of depression and hopelessness in the midst of the rising tide of recovery. The Commissioner for the Areas of England and Wales, Mr Malcolm Stewart, is retiring, by all accounts a tired and disappointed man. This is therefore obviously the proper juncture at which to examine the situation in the areas and the results hitherto achieved.

The Ministry of Labour have kindly made available the latest figures for the Areas of England and Wales (for lack of experience and detailed information the Scottish Area must be neglected). The following table compares the situation in November, 1934, just before the Commissioners took office, with that on September 21, 1936:—

	Date	Total Registered Unemployed	Percentage of Insured Persons
West Cumberland	Nov., 1934	13,530	38.3
	Sept., 1936	12,460	35.2
Durham and Tyneside	Nov., 1934	176,862	33.5
	Sept., 1936	128,721	24.6
South Wales	Nov., 1934	156,748	37.1
	Sept., 1936	141,771	34.2
Total Special Areas...	Nov., 1934	347,000	35.3
	Sept., 1936	283,000	29.1
Great Britain	Nov., 1934	2,120,785	16.9
	Sept., 1936	1,624,339	12.9

Two salient facts are clear from these figures. The first is that the percentage of unemployment in the areas, the best measure of its severity, remains to-day nearly 30 per cent., or two and a half times as great as that for Great Britain as a whole. The second is that while there has been some improvement, notably on Tyneside and in Durham, the improvement has been considerably less than the average for the country. A simple calculation shows that the unemployment reduction during the two years in the Special Areas is about 18 per cent., against over 23 per cent. for Great Britain. In spite of Mr Malcolm Stewart's efforts, the contrast between the plight of the areas and the comparative prosperity elsewhere has been greater. When it is considered that practically the whole of the reduction in unemployment (64,000) can be accounted for by official and unofficial transfer, which was certainly not the object of the Special Areas (Development and Improvement) Act, it is evident that the results of the Act have been extremely meagre.

But perhaps the most serious feature of the situation is the fact that during the period in question there has been a great recovery in precisely those heavy industries upon which the Special Areas so largely depend. In spite of this, only Tyneside, Clydeside and parts of Durham, which are

benefiting from the revival of shipbuilding as well as from re-armament, show an appreciable improvement, while the economic position in most of the other scheduled districts is actually tending to deteriorate. There can be no doubt that the boom in heavy industry, upon which the Government has obviously counted for a solution, will not in fact solve the problems of the areas, even when it is having most effect, unless advantage is taken of it to put the areas on a sounder economic footing.

As Mr Malcolm Stewart has pointed out, the chief need of the areas is the establishment of new and as far as possible diversified industries. Yet here he has had to record almost complete failure. During 1935, 510 new factories were completed in Great Britain, of which only five were in the Special Areas. And the only industrial development which the Commissioner finds worthy of mention in his Reports is the re-opening of the Ebbw Vale Steel Works by Messrs Richard Thomas.

Nothing could be more unfair than to blame the Commissioners and their staffs for this tragic failure. What are the real reasons?

In his first Report, Mr Malcolm Stewart contrasts a number of statements made by members of the Government during the passing of the Special Areas Act with the realities of his powers. Mr Chamberlain had spoken of "cutting through all the ordinary methods" and giving the Commissioners "a very wide discretion." The Parliamentary Secretary to the Ministry of Labour had referred to the difficulty of putting into practice valuable ideas "if you go through the elaborate procedure of Government Departments to make sure that every single thing you do will stand the criticism of the Public Accounts Committee and questions across the floor." The Government believed that it was possible to cut that procedure short and to go behind a great deal of red tape.

There was much more in the same vein, but the speakers seemed to be under a misapprehension about the Bill they had introduced. For, as Mr Stewart pointed out, the Commissioner is as much subject to financial control as any Government Department. The Minister of Labour is responsible for him, can be asked questions about his actions and has to sanction all the main lines of policy. There are innumerable restrictions on his actions, and one of the most vexatious prevents him from offering or supplementing grants where grants are payable by Government Departments. Thus he cannot help local authorities to construct roads, bridges, tunnels, canals or quays, or to develop any education service, since Government Departments are able, although they may very well not be willing, to do so. All he can do is to go hat in hand to the Ministers and "make representations"; but since they are bound by their "general standards" not to give special treatment even to the Special Areas this is not much use. Since he cannot do or assist anything outside Great Britain, he can neither promote emigration nor help the Development Councils to advertise their areas abroad. Yet another legal opinion has prevented the provision of hostels for people transferred from the Special Areas because hostels do not of themselves "afford employment or occupation." Mr Stewart feels that the strict limitation of his powers to the Scheduled Areas has also been detrimental, particularly in South Wales, where Cardiff, Newport and Swansea have been excluded from what is in essence one economic unit. Above all, the Commission can give no financial assistance towards the establishment or development of new industries, or for that matter of any industries, operating for profit. Yet only "industries operating for profit" can save the Special Areas.

One cannot help wondering whether Mr Stewart read his Act, or at any rate had it authoritatively interpreted to him, before he accepted his purely honorary but none the less onerous job. Yet the legal limitations were only a small part of the story of frustration.

It would be difficult to find any better example of the limitations of bureaucratic procedure in general than the experience of the Commissioner himself, his local Commissioners in the various districts, and his staff. Instead of getting down to the job and doing it, their lives must have been one long consideration of the question who—what

individual, organisation or public body—was competent for what, and how best to persuade them to act. Everywhere, even with organisations wholly financed by the Commissioner like the Development Councils, they had to walk very warily for fear of treading on prominent and touchy toes. Nearly every major scheme was dependent on the assent of various authorities, not all of whom were good bedfellows. And all the while the unemployed men and women in the Special Areas stood at the street-corners.

Much of this was probably inevitable, but not all. Had the Commissioner possessed wider powers to make grants, he would have been able to use the weapon of financial influence with far greater effect, and the difficulty of the Departments' "general standards" would have been overcome. It was not always necessary for him to renounce executive authority, as for example by giving his assistance through central bodies like the National Council of Social Services and the Land Settlement Association in the form of block grants, thus preventing his local Commissioners from having any influence over the way the money was spent. The divorce between the Commissioner's office and the Development Councils is also carried to extremes—one cannot even get the publicity literature of the Councils at Broadway Buildings; while as for the newly-formed Special Areas Reconstruction Association, both it and the Commissioner's staff hold up their hands in horror at the idea of the slightest connection.

A solution can only be found by amending the Act and securing better co-ordination of the efforts and expenditure on behalf of the areas. There must be something wrong when £5,000,000 of public money is spent with such meagre results. In particular, a closer and more workable connection between administrative action and private enterprise is urgently needed, whatever the Board of Trade may feel. Lasting effects can only be secured by establishing new industries and encouraging private enterprise in the areas, and in a second article some practical suggestions will be put forward to this end.

THE MECHANICS OF PRESIDENCY

ON Tuesday next, November 3rd, "the Tuesday following the first Monday in November of every fourth year," the voters of the United States go to the polls to accomplish what has been called their "quadrennial revolution." Thereby they will achieve the ante-penultimate stage in the long process of electing a new President of the United States. We say the ante-penultimate stage advisedly, for though the newspapers next Wednesday will proclaim that Mr Roosevelt, or Mr Landon, has been elected, they will be guilty of a technical solecism. Technically, neither Mr Roosevelt nor Mr Landon enters into next Tuesday's election at all. The voters who will troop to the polls will not vote for either of them. What happens on Tuesday is that the voters elect the Electoral College of 531 electors.

The Constitution prescribes that every State shall have as many electors as it has Senators and Representatives combined. The Constitution further prescribes that every State shall have two Senators and a number of Representatives in proportion to its population, with a minimum of one. The number of votes a State has in the Electoral College thus varies roughly with population. Six small States have the minimum of three votes each. At the other end of the scale, New York has 47 votes, Pennsylvania 36 and Illinois 29.

The Constitution leaves it to the State legislatures to determine how the electors shall be chosen. In the early years of the Republic, the electors were generally nominated by the State legislatures themselves. But for the last hundred years they have been elected by popular vote. There is nothing whatever to prevent a State deciding that its electors shall be chosen in single-member constituencies, or by Proportional Representation through-

out the State. In fact, however, in every State they are chosen *en bloc* by the majority vote of all the citizens of the State.

This practice has the peculiarity that it can result in the victory of a party which has not received the largest number of votes. The block of 47 votes from New York goes to the party with the largest popular vote in the State, however narrow its majority. This means that a narrow majority in one of the large States is much more important than unanimity in three or four small States. The twelve largest States have a majority of the Electoral College; whichever party gets 51 per cent. of the votes in each of these twelve States wins the election, even if it does not get a single vote in any of the remaining 36 States. It is thus mathematically possible for a party to get nearly 75 per cent. of the popular vote and yet lose the election. Actually, this never happens. In every election this century the candidate with the highest popular vote has been elected. Even in 1916, though Woodrow Wilson had just less than half the total vote, he had a comfortable margin over Mr Hughes. The system tends, nevertheless, to concentrate campaigning in the populous States between New York and Chicago.

The Electoral College never meets in the flesh. On a given day the electors meet separately in each State capitol and solemnly cast their votes. On a later date these votes are counted by the President of the Senate in the presence of Congress; only then is the new President officially chosen. The Founding Fathers had originally hoped that the Electoral College would exercise some independent choice; actually, of course, the electors are mere party dummies, and the result is foregone as soon as the popular election has been held. The original idea was that the candidate with the second highest vote for President should be elected Vice-President. But with a party system this is a patent absurdity; it might result in Mr Landon being President with Mr Roosevelt relegated to the Vice-Presidency. Accordingly the Twelfth Amendment in 1804 altered the system and the Electoral College now votes separately for President and Vice-President. By the same Amendment it was provided that if no Presidential candidate receives an absolute majority of the Electoral College, the House of Representatives may choose from among the three highest candidates. If no Vice-Presidential candidate gets an absolute majority, the Senate chooses between the two highest candidates. Since the election of John Quincy Adams these provisions have never been put into effect, but if a strong Third Party ever arose, this clause might become very important. Before the passage of the Twentieth Amendment, the House of Representatives which would have had to do the choosing would have been the one elected two years previously, and possibly dominated by a party which had just been rejected at the polls.

In all previous Presidential Elections the leisurely timetable of the eighteenth century has been followed. The "electors" met in their several States on the second Monday in January, their vote was counted on the second Wednesday of February and the President took office on March 4th. The Congress elected in November did not necessarily meet until the December of the following year. By the Twentieth Amendment, however, which came into effect shortly after Mr Roosevelt's inauguration, the process is somewhat speeded up. The members of the Electoral College record their votes before the end of the year. The newly-elected Congress meets on January 3rd; the vote of the Electoral College is counted on the same day and the President is inaugurated on January 20th. Even that is two and a half months after the popular election.

Much, therefore, remains to be done after Tuesday's vote. But equally much has gone before. The process of electing a President began many months ago. The parties had first to nominate their candidates. This was done in the great party Conventions held in June. But the delegates to the Conventions had themselves to be nominated. In some States this is accomplished by miniature State conventions attended by the nominees of the local party managers. These State conventions nominate the State delegates to the party conventions which nominate the candidates. In other States the delegates are actually chosen by the voters themselves, by the peculiarly

Sun Life Assurance Company of Canada

(Incorporated in Canada in 1865 as a Limited Company)

The Company has been rendering service to the public in Great Britain for more than 41 years by enabling prudent men and women to safeguard their own and their families' future, through comprehensive Life Assurance and Annuity plans.

Sums assured by new, paid-for Life Assurance policies issued during 1935 in Great Britain and Ireland total

£5,500,000

Total Assurances in force at November 15th, 1935, in Great Britain and Ireland

£69,500,000

H. O. LEACH (General Manager), 2, 3 & 4 COCKSPUR ST., LONDON, S.W.1

American device of the primary election. This is a formal poll of the voters, supervised by the State Governments. Each elector votes, of course, only in his own party's primary, but otherwise the election is as other elections are.

The system of nominating conventions serves to increase the power of the party "machine." Since none save party men attend the conventions, the candidate himself must be a man of unimpeachable party regularity. This is one reason why changes of party are so rare among practising American politicians. Moreover, since any candidate with an original personality or individual views is almost certain to arouse enough antagonism to ensure his defeat at one of this series of complicated intra-party elections, the successful politician is usually either a man of negative personality or one who, like Mr Roosevelt in 1932, keeps his views to himself until after nomination and election.

One more formality remains to be mentioned. Before a voter can cast his vote on Tuesday he must have formally registered his intention of doing so about a month previously. This again strengthens the hand of the machine, since the casual unattached voter is automatically barred.

By this time the European reader's head is doubtless reeling with the complications of the American political system. But the half of it is not yet told. It would be difficult enough for the elector in, say, New York State to remember that though he wanted to support Mr Roosevelt he had actually to cast his vote for Mr Abrahams, Mr Brown, Mr Caplan, Mr Donovan and so on down a list of 47 Electors, to be distinguished from similar lists of 47 put forward by the other parties. But in addition he has to vote for a Senator, a Congressman, a Governor of the State, a State Senator, a State Assemblyman, several Judges, Sheriffs, Mayors, Aldermen, county officials, etc., etc. (all of them previously nominated by conventions or primaries), in addition to expressing his views on one or more proposed amendments to the State Constitution. By this time even the hardened head of the American voter is reeling. In most States, accordingly, the encyclopædic ballot-sheet or voting machine (for in many States the voter votes mechanically, recording his choice on a gigantic time-clock) contains a small space in which the voter can "vote the straight ticket," that is, give a blanket franchise to the Democratic or Republican Party to fill all the offices for him. This greatly simplifies the voter's task, but it once more strengthens the hold of the "machine" over its adherents.

It is no simple operation, then, that will reach its ante-penultimate stage on Tuesday, no simple Fascist plebiscite in which the voter can vote "Yes" or stay at home and nurse his bruises. Nevertheless, so penetrating are the perceptive powers of the Press that within a few hours of the polls closing the newspapers will be proclaiming Mr Roosevelt or Mr Landon President. They will, of course, be unconstitutionally premature; but they will not be far wrong.

MINING ROYALTIES—II

(BY A CORRESPONDENT)

In a former article, which appeared in last week's *Economist*, the disadvantages of the system of private ownership of mineral rights were set out at length. It remains now to discuss some of the technical problems of the purchase of all royalties by the State, the total probable cost of which was estimated by the Samuel Commission ten years ago at not more than £100,000,000.

The general principle of nationalisation must be to give fair and just compensation to the present royalty owners. The opportunity might, however, be taken of providing that all unsuspected or undiscovered coal deposits, and known deposits at such deep levels as to be unworkable, should henceforth belong to the State, without any compensation to the owners of the land under which they lie. This principle, or one very similar, has already been accepted in the case of the Petroleum Production Act, and it can be applied to coal without inflicting injustice on any existing landowner.

Another exemption might possibly be made in respect of cases where the royalty owner and the mineowner are the same person. It would seem to be pedantic to buy the royalty owner out, and then compel him to make payments to the State. The common-sense solution would seem to be to grant a perpetual lease at a nominal rent, with the option of State purchase where desired. In any event, the colliery owner who has acquired the minerals in order to increase the efficiency of his undertaking ought not to be placed in a worse position than he is now.

The crux of the problem of nationalisation is the method to be adopted for assessing the compensation to be paid to the existing royalty owners. That compensation should be "fair and just," but there is no reason why it should be more than "fair and just." There are many cases in which there never was any justification for the royalties levied, and there is still less to-day. In other cases, sums have been paid in the past, in "fixed rent," without coal being mined, and these sums might well be deducted from the present value of the royalties. Again, the post-war tendency, when leases have fallen in for renewal, has been to reduce the charge; and this tendency, without nationalisation, would undoubtedly continue. The total amount of royalties in the future might, therefore, be less than to-day. It is obvious that the problem of valuation is not going to be easy.

Several alternative methods have been suggested. The most obvious is that the value of each individual royalty should be determined by Government valuers appointed for the purpose. Another is that the general basis should be fifteen years' purchase of the amount received by the royalty owner on a five-year average, less mineral rights duty. Another is that, as the districts are clearly defined, a total sum should be allotted to each district or even to the country as a whole and its distribution settled by a specially appointed tribunal. Whatever method may be adopted, the present variations are so great that nothing like uniformity can be expected. Very careful consideration will have to be given, among other matters, to the changes in the volume, nature and direction of the demand for coal, to the inequalities of the royalty charge not only as between mine and mine but also as between district and district, to the fact that some landowners have exploited the needs of the producer while others have not, and to cases where the more valuable seams have been exhausted as compared with those in the earlier stages of production.

The essential thing is to see that the total charge to be imposed on the industry is as small as possible. It should be the ultimate aim, if not to abolish royalty payments altogether, at least to reduce them progressively until they are only a nominal charge; and the favourable terms on which the Treasury can now borrow money may make it possible to include a substantial sinking fund without increasing the total sum now being levied on the industry. Whether the State should make a further contribution towards the rapid extinction of this burden on the industry is, logically, an entirely separate question. But at a time

when shipping, beet sugar and various branches of agriculture are being subsidised and manufacturing industry is being protected, the coal industry may justly press its claims.

It is to be presumed that in the forthcoming Bill the Government will make provision for taking over the whole of the minerals comprising the coal measures, including those ancillary to the winning of coal, and that a body of Commissioners will be appointed, in whom the administration of the national mineral estate will be vested. In the light of the past experience of the industry, there are four considerations to which great importance should be attached in setting up this body. First, if it has statutory powers, it is essential that they should be clearly and definitely set forth, without leaving any loophole for stultifying litigation. Secondly, it should be a body of independent persons, business men, lawyers or mining engineers, without representation either of the mineowners or of the workers. Thirdly, it should be removed, like the Import Duties Advisory Committee, from all possibility of direct political pressure. And finally, appeal from its decisions should lie to a single outside independent tribunal, whose judgment should be final, thus avoiding the possibility of lengthy and costly litigation.

It would be for the Commission to evolve the principles on which it would administer the royalties. It is obvious, however, that its first task would be to consolidate existing leases, granting one lease to every existing undertaking, instead of the present average of five separate leases. While it is out of the question that absolute uniformity either in the length or in the conditions of leases can be secured, the Commission could at least advance towards uniformity, e.g., by abolishing "fixed rents" and by bringing the length of leases into some relation to the probable life of the mines.

The opportunity of the forthcoming Bill should also be taken for clarifying the position of wayleaves, which are another grievous burden on the industry. The subject of wayleaves is, strictly speaking, distinct from that of royalties, but the two are closely related. Wayleaves are charges exacted by landowners, not for the mining of coal from under their land, but for transporting it either under or over their land after it has been mined. Wayleaves may be exacted for the right to convey coal from the seam to the shaft, or up the shaft, or from the pit to the railway, blast furnace, coke oven or loading wharf. These landowners are monopolists; the coal must pass over or under their land, and they have, therefore, a power which they do not fail to use. Commission after commission has reported that the charges levied are frequently extortionate. In a recent judgment, Mr Justice McKinnon said that the lessor of a wayleave had nothing to sell except his unwillingness to grant. "The value of the land can only be fixed by the factor of his own cupidity and the necessity of the lessee, who is the only possible purchaser." The system reaches its height of absurdity in the case of underground wayleaves on coal brought through an exhausted area. The landowner, having received royalties for his coal, can demand and receive payment for the right to bring other coal through the valueless area left behind.

The present state both of wayleave charges and of the law can be illustrated by the case of the Conssett Iron Company, Ltd., and the trustees of the Clavering and Towneley estates, which came before the courts in 1934 and 1935. In this case the wayleaves related to land used as a railway, constructed, worked and maintained by the Conssett Iron Company. There was no other way of transporting the coal. The land consisted of about 27 acres of a maximum letting value of £5 per acre per annum, and the landowners refused to sell the land. From January 1, 1890, to December 31, 1931, the company had paid, for the use only of this land, a total of £164,473, or an average of about £145 per acre per annum. This is an average, but the charge to-day is £6,000 per annum, or £222 per acre per annum. The case came before the Railway and Canal Commission in 1934. Support) Act, 1923, and the Mining Industry Act, 1926, which were passed with the intention of relieving the industry of excessive charges of this nature. The court

found in favour of the company, and ordered the rent to be reduced to £10 per acre per annum. The lessors appealed and in 1935 the judgment was reversed in the Court of Appeal. There is no appeal to the House of Lords. The result is that the manifest intention of Parliament has been thwarted. In Scotland, there have been no appeals from similar decisions of the Railway and Canal Commission, so that the law now means one thing in England and another in Scotland.

The burden of wayleaves is not as heavy as that of royalties. But it is none the less considerable, the rates varying from 0.09d. per ton to as much as 4½d. per ton. It can be argued that the landowner is contributing even less to the industry or to the national income in the case of wayleaves than in that of royalties, since he is not even selling minerals which the law declares to be his private property; he is merely charging for the use of his land. The least that Parliament can now do is to restore to the Railway and Canal Commission the power, which was intended to be conferred upon it by the Acts of 1923 and 1926, of reducing rents of this character where they are excessive or extortionate.

LIBELS ANCIENT AND MODERN

A YEAR ago Mrs Albertini, who is the wife of an American millionaire and lives in Windsor Park, gave a party. A week ago, by way of sequel to the party, she brought an action for libel. The action was against *Everybody's Weekly* and was founded on a criticism which that paper made, without mentioning names, of the extravagant nature of her entertainment. The hostess had, in fact, gone to much trouble and expense to please her guests, spending a sum which was agreed between the litigants as £962 6s. 7½d., and giving the party a Tunisian setting which appealed so strongly to two journalists (present by invitation) that they gave her most flattering notices—glamorous was the word—in the *Sunday Express* and *Sunday Dispatch*. These notices were the raw material of the criticism in *Everybody's Weekly* and so led to last week's libel action, which the plaintiff lost on the ground that her party was a matter of public importance inviting comment.

How history does repeat itself! Exactly one hundred years before this party of Mrs Albertini, another famous hostess, Mrs. Leo Hunter, gave a party at The Den, Eatanswill, and, thanks to the lucky chance of having Mr Pickwick as a guest, achieved a publicity more lasting than Mrs Albertini's. Between the two parties there are some striking points of resemblance, and to the social historian it is a task of no little interest to trace the parallel. Mrs Albertini arranged a Tunisian setting for her ensemble and spent £130 on the necessary structure. Mrs Hunter aimed at an Oriental effect and achieved, according to a competent observer, the Fabled Gorgeousness of Eastern Fairy Land Itself. Mrs Albertini had a perfectly lovely dance band complete with crooners. Mrs Hunter had a band of musicians in pasteboard caps and four something-een singers in the costume of their country. Mrs Albertini had no wish for personal publicity. Mrs Hunter abhorred it. Mrs Albertini invited journalists from the *Sunday Express* and the *Sunday Dispatch*. Mrs Hunter invited Mr Pott from the *Eatanswill Gazette*. Mrs Albertini did not invite the editor of *Everybody's Weekly*. Mrs Hunter did not invite the editor of the *Eatanswill Independent*. Mrs Albertini was congratulated by the *Sunday Express* and the *Sunday Dispatch* on her glamorous party. Mrs Hunter was congratulated by the *Eatanswill Gazette* (the word glamorous not being then current) on a scene of varied and delicious enchantment and adornment refined with perfect harmony. Mrs Albertini was abused and criticised by *Everybody's Weekly*. Mrs Hunter was sneered at by the *Eatanswill Independent*, through four numbers, in the very largest type, with all the adjectives in capital letters.

At two points, unhappily, the resemblance breaks down.

First, Mrs Albertini not only supplied her refreshments on tablecloths of satin but provided 500 guests with 462 bottles of champagne at a sworn and certified cost of £223 17s., whereas Mrs Hunter went on the principle of issuing cards for 100 and refreshments for 50. Mrs Albertini comes well out of this comparison. Second, Mrs Hunter recited to her guests her ode to an Expiring Frog, which Mrs Albertini does not seem to have done. We may be allowed to hope that at her next party Mrs Albertini will maintain the first point of difference between her hospitality and Mrs Hunter's but see her way to abolishing the second.

It may be thought that there is a third point of difference in that Mrs Albertini's party was followed by a libel action and Mrs Hunter's was not; but that would be a mistake. The truth is that there was an action, but Mr Pickwick completed his memoirs before it came on and consequently did not mention it in the Papers. But in the archives of the Hunter family there is a report of a libel action which was brought by Mrs Hunter against a Mr Slurk, proprietor and printer of the *Eatanswill Independent*, in which the plaintiff claimed damages for defamation of character and pleaded that the said paper had held her up to ridicule, hatred and contempt by the publication of offensive comments on her hospitality at The Den. The case was heard at the Court of Common Pleas, Guildhall, before Mr Justice Stareleigh, Mr Serjeant Buzfuz appearing for the plaintiff and Mr Serjeant Snubbin for the defendant.

Mr Serjeant Buzfuz opened the case by saying that never in the whole course of his professional experience—never from the first moment of applying himself to the study and practice of the law—had he approached a case with feelings of such deep emotion and such a heavy sense of responsibility. His client, Mrs Hunter, was in the habit of giving a party to those who had rendered themselves celebrated by their works and talents, and the party with which they were concerned in the present case took place in August, 1835. The articles of which Mrs Hunter complained were published in four separate issues of the defendant newspaper, and the plaintiff declared that they held her up to ridicule and put her before the world as a woman who gave the party out of sheer vanity, with the result that many of her friends despised the whole business. The defendant pleaded fair comment, but what did he know of the charitable activities of Mrs Hunter? Damages—heavy damages—were the only punishment with which the jury could visit the defendant—the only recompense they could award the plaintiff.

Giving evidence for the plaintiff, Mr. Pott, Editor of the *Eatanswill Gazette*, denied that Mrs Hunter was a vain woman who sought publicity. At the party in question, when he had ventured to compare her looks favourably with those of her two daughters, Mrs Hunter had tapped him on the arm with her fan and called him a naughty man, declaring that she did not wish her praises to be repeated before strangers. Other witnesses for the plaintiff included Count Smortork, Mr Pickwick, Mr Snodgrass, Mr Winkle, the young lady who "did" the poetry in the *Eatanswill Gazette*, the young gentleman who "did" the review department, and Mr Jingle, whose evidence was taken on commission. The witnesses were cross-examined by Mr Serjeant Snubbin on the agricultural depression, admitting that they had heard something about it but denying the suggestion that there were 2,000,000 people in the country on the verge of starvation.

Addressing the Court for the defendant, Mr Serjeant Snubbin argued that there was no case to go to the jury, and asked for judgment on two grounds: (1) that Mr Slurk's articles were not defamatory and (2) that Mrs Hunter, by inviting the editor of the *Eatanswill Gazette* to her party, had made the function a matter of public importance and thereby invited criticism and fair comment.

Mr Justice Stareleigh, having heard the arguments of learned counsel, ruled that the words of the articles were capable of a defamatory meaning, but withdrew the case from the jury on the second ground. In giving judgment His Lordship said that he saw no impropriety in anything that Mrs Leo Hunter had done. "For the life of me," said His Lordship, "I can see nothing wrong in what she did. The only mistake she made was in making her private

al fresco entertainment a matter of public importance by inviting Mr Pott to come to it. If, having decided to have a party, you invite an editor to come to it, you cannot complain if afterwards the Court holds that you have made it a matter of public importance. Nevertheless, I am bound to say that I feel very sorry for Mrs Hunter. The articles were to my mind very cruel attacks on her. They were very defamatory and I find not the least justification for them. The comment contained in them was abusive and

extravagant and I cannot approve of it; but there is no evidence that it was dishonest comment, and Mrs Leo Hunter's case accordingly fails. There must be judgment for the defendant with costs.

No. No. This can't be right. A hundred years ago this kind of trivial libel action was unknown and Mrs Leo Hunter was much too sensible to go to law with Mr Slurk. The report must be a forgery.

NOTES OF THE WEEK

New and Old Ministers.—A series of Cabinet changes was announced on Thursday. Mr Elliot, Minister of Agriculture for over three years, goes to the Scottish Office. He is succeeded at the Ministry of Agriculture by Mr W. S. Morrison, Financial Secretary to the Treasury, and Mr Hore-Belisha, while remaining Minister of Transport, becomes a member of the Cabinet. The most significant change is the departure of Mr Elliot from the Ministry of Agriculture. Back in the far-off days of 1932-33, when prices were falling and crisis was in the air, Mr Elliot came to the Ministry full of determination to restore prosperity to British agriculture by bold experiments with a patent new system of economics. As time went on, however, he became aware that prices can only be raised either by expanding demand or restricting supply; and, despite some praiseworthy attempts at the reorganisation of marketing, he came to rely more and more heavily on the hoary device of restriction. As a result, the public came to associate his name with rising food prices; and his departure to the Scottish Office is bound to be interpreted by some as being not unmixed with satisfaction at escaping the odium of that association. To Mr Morrison we tender our congratulations and our sympathy; for he has taken on a difficult job. His recent experience at Geneva, however, is a good omen. It may stimulate him to see the problem of Britain's food imports a little more steadily and whole than was Mr Elliot's wont. Mr Hore-Belisha certainly deserves his place in the Cabinet. Despite the slightly flamboyant showmanship with which his tenure of the Ministry of Transport began, there has certainly been a vigorous attempt to diminish road dangers while he has been there. Perhaps we may also hope that Mr Belisha will exert a liberal influence on the Cabinet's deliberations.

The Jarrow March.—The march of the Jarrow unemployed to London has at least aroused widespread public discussion. This week the Bishop of Durham, though urging the claims of Jarrow, asks what a march can do to "illumine the intelligence of the Legislature or quicken the conscience of the nation." The answer is that quickening the conscience of the nation is exactly the effect it will have. Moreover, this is exactly what needs to be done; for it was not lack of "intelligence" that led to the rejection of the Jarrow steel scheme last summer. The Bishop also joins with the Cabinet's recent declaration in suggesting that the march is not "constitutional." There is certainly a rich irony in the attitude of those who repudiate as "unconstitutional" the march of 200 unemployed to lay a petition before Parliament, while accepting as apparently hallowed by constitutional precedent the action—avowed and undisputed—of certain interests within the Iron and Steel Federation in using semi-official powers to suppress the Jarrow scheme on admittedly sectional grounds. If the former is unconstitutional and the latter not, we are certainly moving nearer to the Corporative State than had generally been supposed.

The Cotton Dispute.—Negotiations between the operatives and the employers in the spinning section of the cotton industry broke down on Monday. The operatives are asking for a restoration of the 14 per cent. cut in wages

made in 1932, and the employers contend that "the cotton industry under present circumstances is financially incapable" of meeting this request. Both the card room workers' and the operative spinners' unions are now to take a strike ballot; for owing to the abandonment of the conciliation machinery set up in 1932 no further opportunities for discussion are available. It is probable that the operatives will vote for a strike; and if the vote were carried into effect not merely the 120,000 weavers as well, would be thrown out of work. We find it hard to believe, however, that matters will be allowed to come to this pass. It may be that the complete restoration of the 1932 cut is not practicable; but profits in the cotton industry are now on a higher level than they were four years ago. It would pay the employers much better to compromise on a partial restoration of the 1932 cut than to incur the fearful wastage of a strike.

Belgium Keeps Her Head.—In Belgium last Sunday a march on Brussels was once more stopped at Waterloo. As always, however, the historical repetition was with a difference; for, apart from the greater economy of means in producing the result, the Rexist Waterloo was possibly a French victory, and certainly a Prussian defeat. So far from being swept into dictatorial power on the crest of a wave of 250,000 hypnotised Belgian *petits bourgeois*, young M. Degrelle was quietly arrested by the police. He has since been subjected to the still more serious ignominy of being as quietly released—under a summons. This is not the Hitler of 1933 or even the Hitler of 1923; for in his Munich fiasco Herr Hitler did at least succeed in getting machine guns fired, and himself interned in a fortress. But happily nothing as sensational as that was achieved by M. Degrelle in Brussels on October 25, 1936. In spite of the efficient measures which the Government had taken to control the approaches to Brussels and to prevent the assembly of the Rexist in special trains or motor-bus flotillas, a certain number did manage to get through. After assembling in the Cathedral of St. Gudule, they poured out into the Place St. Gudule at the close of High Mass. Immediately, the self-appointed Belgian *deus ex machina* made his epiphany—complete with loudspeaker—at a second-floor window over a shop. That was alike the beginning and end of it. M. Degrelle was arrested as he emerged from the house, and he came quietly. Subsequently the Rexist and their myopic allies, the Flemish Nationalists, resorted to obstructionist tactics in the Chamber; but the only result was that the majority of the deputies invited them to join their friends in Berlin as soon as possible. For the sake of Europe as well as Belgium, we may hope that little more will now be heard of a Fascist ramp which is as inexcusable in Belgium as it is in this country. In Belgium, as in the United Kingdom, the Communism against which M. Degrelle has been raising the hue and cry is a negligible force; a high degree of prosperity has been achieved; the parliamentary constitution is a going concern; all political views deeply and seriously held are well represented by one or other of the constitutional parties; and the people as a whole manifestly wish to continue to lead an orderly political life. M. van Zeeland is

to be congratulated heartily on his firm and skilful handling of this affair. There is at least one good European left in Western Europe who is not afraid to show that Western Europe is not going to be bounced out of her own ancient and admirable political institutions.

The Italo-German Meeting.—Signor Mussolini's son-in-law and Foreign Minister, Count Ciano, has now paid his visits to Berlin and Berchtesgaden and gone home again. For twelve months past the British and French Governments have been parading before the eyes of Herr Hitler and Signor Mussolini with their tails between their legs—as though they were determined to make the dictators understand that the initiative in European politics was now theirs for the taking. Even, however, under the peculiarly favourable circumstances with which we have presented them, it looks as though the two Fascist Powers were finding themselves able to agree in Africa (if Africa begins at the Pyrenees), but not in Europe (if Europe includes the Danube Basin). The Italo-German policy over Spain—the point on which the new Fascist front seems to come nearest to being a reality—is discussed in this issue of the *Economist* in another place. In regard to Abyssinia, Herr Hitler has now formally recognised the Italian Empire of Ethiopia in exchange for an Italian promise of a share in the economic pickings. This German gesture is of no great importance, since Germany ceased to be a member of the League a few weeks after the Italo-Abyssinian conflict came to a head, and she kept aloof from the sanctions organised against Italy. For Italy, no doubt, it is a pleasure to add Germany to Austria and San Marino on the list of countries that have recognised her annexation of Abyssinia up to date. But it remains to be seen how Germany is to find the foreign exchange for buying raw materials in "Italian Ethiopia" more easily than she finds it, for example, for making the same purchases in Tanganyika. Conversely, the one thing that Italy cannot hope to obtain from Germany is the capital that she needs if her conquests are to be economically exploited.

—And Locarno.—If this is all that the Italo-German understanding amounts to in Africa, its results are still more meagre in Europe. In their European policy, Germany and Italy seem to be agreed on the point of offering France and England peace at the price of a French and English renunciation of any say in the settlement of the destiny of Eastern Europe. Seen nakedly, this is an offer to us to drop the threat of another war in the West on condition that we give Germany and Italy *carte blanche* to seize the hegemony of Europe. Germany and Italy, apparently, are ready to conclude a new Locarno on the original lines of a renunciation of war as between Germany and France, with Italy and England acting as guarantors. But England is still to be a guarantor only, without receiving any guarantee for herself; and the commitments of France to Germany are not to be subject to any prior commitments to Russia or to any other East European country. Here we see a shrewd attempt to combine the German desideratum of a free hand against Russia with the Italian desire to avoid a situation in which the position of the British Empire in the Mediterranean would be guaranteed by Germany and by France—if not by Italy herself. This is certainly a far cry from Stresa. Yet the Italian problem which brought Signor Mussolini to Stresa still remains unsolved; and that is the problem of what Italy is to do about the German *Drang nach Osten*. For it is one thing to proclaim that Eastern Europe is an Italo-German preserve from which England and France are to be excluded; it is quite another thing to agree how the eastern bearskin is to be divided. The tripartite alliance between Italy, Austria and Hungary still bars Germany's road; and Germany has not, so far, been invited to make a fourth at the periodical meeting, which is to take place on November 11th and 12th between Italy and her two Danubian satellites. In Danubia, the eight million bayonets with which the Duce's one little olive branch is hedged

about have a message for Germany, too; and it is as hard as ever to see how Italy's present advantageous position in South-Eastern Europe can be continued by any other means than by a maintenance of the *status quo* on the lines laid down at Stresa. For if Italy and Germany go hunting in Eastern Europe together (as is the fashion among Fascist "he-men" nowadays) it is certain that General Göring will bag a Ukrainian aurochs, while Count Ciano will have to be content with a Dalmatian puppy or a Corfiote dwarf-owl. It seems, then, that in Eastern Europe, Signor Mussolini's gesture of changing over from the Anglo-French to the German camp will saddle him with the task of keeping by himself, that "Watch on the Danube," which France and even England were ready to share with him only eighteen months ago.

Germany, Italy and Central Europe.—The vagueness of the joint Italo-German statement about Central Europe is understandable when compared with developments in that region during the last week or so. Far from following the Belgian precedent, the Czech Foreign Minister, M. Krofta, declared to the Foreign Affairs Committee of the Chamber last week that if Czechoslovakia deliberately tore up her French, Russian and Little Entente treaties it would simply facilitate, rather than prevent, war in Central Europe. The Government would loyally stand by its engagements and strengthen them. The Czech Premier declared to foreign journalists last Friday that he fully supported M. Krofta's declaration. Moreover, Dr. Hodza authorised the journalists to publish his emphatic denial that there was even any question of abandoning the Czecho-Russian Pact, and his assertion that the Little Entente was being progressively cemented. This fact received confirmation in the strong declarations of Little Entente solidarity by President Benesh and King Carol of Roumania in Prague on Wednesday; and the sudden visit of the Roumanian Prime Minister, M. Tatarescu, to Belgrade last week now appears, on good authority, to be more a proof of the closer defensive measures in process of adoption by Roumania and Yugoslavia than of any approaching dissolution of the Little Entente. Moreover, the Central European developments in the last few days which point the moral of the *Italo-German statement* about that region have not been confined to the Little Entente countries. In Bulgaria, linked in sympathy with Italy, the King's ready acceptance of the resignations of the two Tsankoff Party Ministers has rebuffed the pro-Nazi group; and the appointment of Dr. Nikolaev, editor-in-chief of the most pronouncedly anti-German Bulgarian newspaper, makes the Bulgarian Cabinet to-day wholly composed of democratic or "neutral" personalities. And M. Krofta has announced that the Bulgarian Prime Minister, M. Kiosseijvanov, has expressed his desire to co-operate systematically on a permanent basis with the Little Entente. These signs of an extensive solidarity through Central and South-Eastern Europe confirm the impression—described in the *Economist* of October 17 in an article entitled "The Central European Scene"—that the Nazi star in that sphere is paling beside the ascendant Italian constellation. In this connection, the Hungarian ex-Prime Minister's, Count Bethlen's, speech last week against any attempt to continue the Gömbös regime and against any Hungarian orientation towards National Socialism, has aroused widespread favourable comment in the Little Entente countries. The visit of M. Stoyadinovitch, the Yugoslav Prime Minister, to Ankara this week may even bring Greece and Turkey—the other two members beside Roumania and Yugoslavia in the Balkan Entente—into line with the Little Entente, and Austria, Hungary and Italy.

The Radical-Socialists Back M. Blum.—The French Radical-Socialist Party's annual congress in Biarritz last week enabled the flames of the Spanish civil war to be felt strongly enough to scorch the delegates' faces. At the opening meeting, the ardour was so great that the assembly split into two opposing mobs of gesticulators. It looked as though a Party whose most valuable function is to serve as a mediating and stabilising force in French politics was on the point of being split and polarised round two opposing extremes. If that had actually happened the consequences might have been disastrous. The Party leaders, however, proved equal to the occasion. The storm was allayed; and the congress closed with the passage of a unanimous resolution in which the Party re-affirmed simultaneously its support of M. Blum's administration and its devotion to the Declaration of the Rights of Man, and at the same time gave itself the pleasure of calling for the full application of the Radical creed as set out in seven points, none of which was either provocative or sensational. This must be counted as a signal victory for the French Prime Minister; for, if he can thus succeed in retaining the allegiance of the extreme right wing of his composite army, he can feel reasonably confident of his ability to keep the Front Populaire in being. The irritation of the Right-Wing Radicals was partly due to what seemed to them to be the Prime Minister's excessive lenience in his handling of the stay-in strikes. But no doubt the main irritant was the extreme unsatisfactoriness of the Communists in the rôle of collaborators. This experience recurs so regularly whenever any non-Communist party does take the present Communist offers of collaboration at their face value, that it cannot be regarded as accidental. The Communists remain awkward customers in nominal friendship as in open enmity. It is not their fault that M. Blum is still in office.

* * *

The French Budget for 1937.—After two cabinet meetings on Tuesday, M. Vincent-Auriol, the French Finance Minister, outlined the Blum Government's proposals for their first Budget to the Chamber's Finance Committee on Wednesday. The by now habitual dichotomy into "ordinary" and "extraordinary" Budgets is maintained, the latter including that State expenditure which Governments elect to treat as "non-recurring," since it only recurs at wider intervals than one year: e.g. on three-year military or air programmes, public works schemes, etc. The 1937 ordinary Budget shows a deficit of Frs. 3,700 millions, and the two components of the extraordinary Budget—a joint military and emergency air programme involving loan expenditure of Frs. 8,500 millions and a public works programme of loan expenditure of about Frs. 3,500 millions—bring the total of 1937 State expenditure uncovered by revenue up to Frs. 15,700 millions.

* * *

French Finances.—In judging this situation, three things must be borne in mind. First, the Blum Government has had to carry over to 1937, and therefore cover, a deficit of Frs. 6,000 millions on the actual 1936 accounts: the *damnosa heritas* left to them by those who drew up the 1936 Budget. Secondly, the Frs. 3,700 millions deficit envisaged in the ordinary Budget exactly equals the amount statutorily required for the annual sinking fund payments on the public debt. The Government's decision to borrow for these payments and not to suspend them pays the British national accounts of 1931-32 and 1932-33 the sincerest form of flattery. Nevertheless, though, as M. Vincent-Auriol said, this by itself will certainly not constitute any fresh demands on the money market, there are heavy maturing bonds next spring; and the extraordinary expenditure can only be covered as to Frs. 5,000 millions of the Frs. 15,000 millions profit on the "writing-up" of the Bank of France's gold stock; for Frs. 10,000 millions of it is already earmarked as the Exchange Fund. That leaves—apart from the Frs. 3,700 millions of

ordinary deficit and Frs. 5,000 millions from the "writing-up" profits accruing to the Government—about Frs. 7,000 millions of the total extraordinary deficit to be covered somehow, plus the maturing debt requirements next spring. The third point favourable to the Government, however, is that of the expected *reprise* in business activity and tax yields. The Finance Minister has already budgeted for Frs. 4,000 millions more tax revenue under this head, on the basis of the Belgian experience after devaluation last year. Again, greater liquidity in the money market is to be expected from greater payments of taxes, the expenditure of the Frs. 5,000 millions of "writing-up" profit in the extraordinary Budget, and the ability of the Caisse de Dépôts et de Consignations to sell, against cash, Government paper to the Caisse d'Amortissement for cancellation. These factors may combine to bring interest rates down with a run before long. Conversion of the national debt charge must still remain the goal of policy in France.

* * *

Health and Housing.—This year's Ministry of Health Report contains, as usual, a mass of invaluable information about public health services, housing, town and country planning, public assistance, local government finance, national health insurance, and a number of minor subjects. It is shown by the Report that out of the total of 271,389 houses built by private enterprise in the year 1935-36 as many as 35,257 were Class C (working-class) houses. This is rather higher than in recent years. The total of houses built by local authorities under the slum-clearance and other schemes during the year was 52,315. At the end of the year the London County Council alone had under erection or under contract 5,000 flats on sites in the County of London for the purpose of re-housing and the abatement of overcrowding; and there were also 1,300 houses and flats in course of erection on cottage estates. The amount of Exchequer contribution actually paid in respect of housing during the year was £13,997,553. Figures given by the Report suggest that an appreciable rise in the cost of building houses has now begun. This should not have any serious effect on the slum-clearance and "overcrowding" programmes, however, since the slackening in private house-building now probable should relax the pressure on building materials and labour.

* * *

Speculation in Cocoa.—Since we drew attention to the marked rise in the price of cocoa this year in the *Economist* of September 19th, quotations have been rushed up another 18 per cent. Despite the slight reaction this week, the current quotation in Liverpool, at 38s. 6d. per cwt. (ex quay), is still about 65 per cent. above the average price in 1935. Such a steep rise of prices seems scarcely justified unless there be a prospective scarcity of supplies, due to a considerable increase in consumption and/or a sharp decrease in production. But such evidence as is available does not point to a shortage of supplies. According to *Gordian*, a recognised source of cocoa statistics, the trend of production and consumption in recent years has been as follows:—

WORLD PRODUCTION, CONSUMPTION AND PRICE OF COCOA
(In thousands of metric tons)

Year	Production	Consumption	Year's Surplus	Average Price† (Accra, per cwt.)
1931	546.8	535.5	11.2	26 5
1932	569.2	542.3	26.9	28 0½
1933	569.4	549.9	19.5	23 1
1934	592.9	579.8	13.1	22 8½
1935	678.6	666.7	11.9	23 3½

† Ex quay, Liverpool.

World consumption of cocoa has tended to increase in recent years with the expansion of economic activity. But,

as the statistics indicate, production of cocoa has more than kept pace with the increase in demand. Consequently, stocks in the principal producing and consuming countries, as calculated by *Gordian*, rose from 323,600 metric tons at the end of June, 1934, to 335,900 tons in 1935 and 362,600 tons in 1936. Nor is there any evidence of a prospective shortage of cocoa. Complete information concerning production and consumption in 1936 will not be available until early in 1937, and various market estimates show considerable divergences. It appears, however, that consumption this year may be about 55,000 metric tons, or 8 per cent. heavier than in 1935. Against this probable increase in consumption, estimates published on October 13th in the *Daily Market Report* of the New York Cocoa Exchange indicate an increase of 72,000 metric tons, or 10 per cent., between 1934-35 and 1935-36 in the total supplies available from the Gold Coast, Nigeria, Ivory Coast, Bahia and Trinidad. While it is true that the main crop of the Gold Coast during 1936-37 is officially expected to yield 18,000 metric tons less than in the past season, this decline may be made good by an increase of 10,000 metric tons in Trinidad's crop and by smaller increases elsewhere. In any case there are no grounds for anticipating any marked reduction in the world crop of 1936-37. Moreover, in view of the stocks accumulated in recent years, an actual shortage of supplies seems even less imminent, even if consumption should continue its upward trend. Some rise in prices may have been justified by the improvement in consumption and by the fact that the 1936-37 crop may not be heavier than in 1935-36. But a 65 per cent. rise seems hardly in consonance with the present and prospective supply-demand position, and appears to have been brought about mainly by the shortage of supplies in the United States earlier this year, which provided an opportunity for the speculator. But a redistribution of stocks between producing and consuming countries neither diminishes nor increases total supplies. Meanwhile the hectic price movements of recent months are neither in the interests of producers and manufacturers nor of consumers.

* * *

The Price of Copper.—Although a substantial proportion of the output of copper outside the United States is controlled by a restriction scheme, the leaders of the industry in this country have frequently declared that they are opposed to any unreasonable advance in the price of their product. But despite three recent increases in production quotas (effective on August 1st, October 1st and October 15th respectively), prices continued to rise. Fresh evidence of the producers' determination to check the upward movement is forthcoming this week in the shape of a further relaxation of restriction. As from November 1st, production will be at the rate of 95 per cent. of the standard tonnages, which will liberate an additional 6,500 tons a month—a substantial quantity in view of the seasonal decline in consumption. Nevertheless, on Wednesday the London cash quotation rose to £42 8s. 9d. per ton, the highest since 1932. If this buoyancy continues a further increase in output may be looked for. Such an increase would present no difficulties, since the standard tonnages approximately correspond to the level of production at January, 1935, when most of the participating companies were operating at only 50 to 60 per cent. of capacity. The effect of this week's decision on the different companies concerned is discussed in an Investment Note on page 224. Meanwhile, the American domestic price was raised on Monday from 9.75 to 10 cents per lb.—the level ruling at the beginning of 1931. The fact that the Kennecott concern has now agreed to the increase was due not only to a genuine market improvement, but also to the recent advance in the New York export price. This week's increase in the American domestic price will obviate any danger of a shortage of copper in America, by making exports less remunerative, and will thus protect the European market. While this week's increase may have been justified, it should be remembered that copper consumption in the United States is still about 50 per cent. below the 1929 level, whereas consumption elsewhere is now over 25 per cent. in excess of that level.

* * *

Higher Rubber Quotas.—In view of the steady expansion of the consumption of crude rubber and the rise of prices to nearly eightpence per lb., the decision of the International Rubber Regulation Committee to increase export quotas from 65 per cent. to 70 per cent. of assessed capacity during the first half of 1937 was wise. The decision was received with satisfaction by the market, which promptly raised the price to eightpence per lb., the highest level since 1930. World consumption of crude rubber rose from 689,000 tons during January-September, 1935, to 745,000 tons during the first nine months of this year. During the same period world exports were reduced from 628,000 tons to 619,000 tons, and stocks at the principal points consequently fell from 644,000 tons at the end of September, 1935, to 458,000 tons at the end of last month. The measure of the improvement in the supply-demand position of crude rubber is revealed by the fact that stocks at the end of last month were equivalent to only 5½ months' consumption, or little more than at the end of 1929. At the end of 1930 stocks were sufficient for more than ten months' consumption. Moreover, the difficulty of controlling exports of native rubber from the Dutch East Indies appears to have been practically overcome, for the quantity shipped in excess of the quota during January-September, 1936, was only 806 tons, compared with 29,774 tons during the whole of 1935. Supplies are now well under control, for shipments of rubber from countries outside the agreement are almost negligible. Meantime, prospects of a further increase in demand at current prices are favourable. On the assumption of a 70 per cent. quota for the whole of 1937, exports, inclusive of shipments from non-restricting countries, may reach about 970,000 tons next year. But as world consumption this year may not fall far short of that figure and will probably continue to increase next year, the downward trend of stocks is likely to persist in 1937. The

* Cmd. 5291. H.M. Stationery Office. 2d. net.

position of the rubber growing industry, therefore, is fairly strong; and as efficient producers have no reason to complain of their profit-margin with increasing sales at about eightpence per lb., it is to be hoped that the International Rubber Committee will take steps, if necessary, to prevent a further rise in prices above that level.

Sterling and International Prices.—The advance in wholesale prices continues. In England, the complete *Economist* index number has risen during the past fortnight by 1.1 per cent., while the primary products index has risen by 0.3 per cent. American primary products have also risen by 0.3 per cent., while the complete Irving Fisher index number is 0.2 per cent. higher. Since the latest low point of May 27th, British prices have risen by 7.0 per cent. for all commodities, and by 12.0 per cent. for primary products. The increase in American primary products is 19.0 per cent., but the Irving Fisher index number has only risen by 3.5 per cent. In France, wholesale prices remained unchanged during the past fortnight, for while imported products rose by a further 1.1 per cent., domestic products fell by 0.6 per cent. Since September 26th, imported goods have risen in price by 18.8 per cent., domestic goods by 6.4 per cent., and all commodities by 9.9 per cent. There was a slight fall in the German wholesale index number during the past fortnight.

1924 = 100	52.2	63.6	63.8	64.5

Grain prices were irregular, but there were advances in flour and English wheat. Meat was dearer, but there was a reduction in the price of bacon. There were numerous advances among other foods, partly off-set by a fall in butter. Cotton prices were irregular, but there were advances in wool, flax, jute and hemp. Non-ferrous metals

are definitely higher than a fortnight ago. In the miscellaneous group there were price increases in Swedish timber, rubber and creosote, and a decline in linseed oil.

The Last Round.—The American Presidential Election is winding up with the usual crescendo of oratory and recrimination. The Republican National Committee, which has hardly won a reputation for the moderation or good sense of its pronouncements during the campaign, has attempted to stampede the workers by suggesting that the funds to be raised by the "pay-roll taxes" imposed under the Social Security Act will not be used to finance the unemployment insurance and old age pension schemes, but to pay the salaries of "brain-trusters" and for other purposes of Governmental extravagance. This accusation of intended dishonesty, which cannot possibly be based upon facts, since the alleged breach of trust lies in the future, came from Mr Landon's most intimate friend and manager, and will have done much in the minds of moderate voters to offset the welcome return, in Mr Landon's own speeches, to the Liberal views which were once his greatest asset. It is unlikely, however, that such patent scare-mongering will affect more than a handful of voters. All the indications point to a comfortable victory for Mr Roosevelt. Judging by the campaign speeches of his opponents, he deserves it. Indeed, the greatest disappointment of the campaign has been the total failure of the Republicans, even after their rejuvenation under Kansas leadership, to play the part of a true opposition. Faced with the possibility of enunciating a real economic policy for America, consistent where the New Deal is erratic, sound where it is faulty, moderate where it is extravagant, they have produced nothing but violent abuse and absurd allegations. This is poor statesmanship. It looks as if Tuesday's vote will prove it to have been poor politics also.

Retail Trade in September.—Retail trade continued to expand steadily with the improvement in general business activity. The index of the value of retail sales, published in the *Board of Trade Journal*, recorded a seasonal increase, from 101 (1933 = 100) in August to 109 in September. Compared with September, 1935, the value of retail sales last month shows an increase of 4.5 per cent. All the five districts of the country shared in the improvement, the smallest increase being in Central and West End London. The increase in sales over a year ago was most marked in the case of food and perishable articles (plus 7.4 per cent.). On the other hand, the turnover of other articles rose by only 1.2 per cent. Meanwhile, the gradual expansion of retail trade may be expected to continue.

Changes in Money Wages.—For the first time, the International Labour Office has published statistics for some twenty countries of the aggregate amounts paid in wages and salaries to the employed population. The figures given (writes our Geneva correspondent) are naturally subject to numerous reservations owing to the variety of the sources used, of the methods of compilation, and the resulting defects in drawing comparisons. The International Labour Office has expressed the result as an index number (1929 = 100) of aggregate money wages in the case of the following countries:—

	1930	1931	1932	1933	1934	1935
Germany	93	78	60	60	68	74
Australia	93	69	61	65	71	80
U.S.A.	92	77	60	57	65	70
France	106	101	92	87	80	76
Great Britain ...	97	94	92	...	...	...

The continued fall of money wages in the gold bloc countries is well illustrated by the French index.

UNITED STATES

MR ROOSEVELT "COMFORTABLY AHEAD"

THE full effect of the intrusion of the N.R.A. into the campaign, in its final stage, can only be told on election day. Its sudden appearance was an aberration from President Roosevelt's proverbial "luck." The Republicans had been concentrating on the "red herring" of Communism in their attack on the New Deal, but without noting any mass effect on voters. Then the N.R.A. was donated to them as a gift by the President's own family. Son James, speaking at Gardner, Mass., said, according to the stenographic notes of listening newspapermen:—

"If the N.R.A. had not been knocked out we would not have had as much unemployment. The way to correct this is to shorten hours of labour. In order to accomplish this, the President intends to continue the principles of the N.R.A. by going before the people and seeking an amendment to the Constitution to make the principles of the N.R.A. the law of the land."

(In his own version of what he said, published after the speech, there was no reference to his father's intentions, but only an expression of his own personal views.)

Thus two first-rate issues are raised, the Constitution and the N.R.A., on both of which the President had good reason for saying nothing in the campaign. The constitutional issue, while unquestionably the outstanding question before the United States, is too fertile a field for raising a crop of quick growing prejudices. The N.R.A. would be still more unwelcome; for it is without doubt the most unpopular of all the sudden improvisations of the New Deal. Washington correspondents have long suspected that the President has been waiting for the antipathy to the N.R.A. to die down to propose something like it again. But Republican use of the suspicion has had to be confined to innuendo. Now the N.R.A. can be displayed to the public mind again as an intrinsic part of the New Deal, and even a denial from the White House will hardly dispel the illusion.

Save for this lapse in the President's luck there is little evidence on which to predict the close election which, a few months ago, seemed inevitable. Mr Roosevelt is now comfortably ahead. The Roosevelt campaign has not been specific and educational. The President has talked about his record, chiefly in relation to recovery, but not about plans for the next four years. In other words he has a defensive strategy. But the Landon campaign has not been a match for the Roosevelt defence. The way for the Republicans to have won, it now seems, would have been to offer a sound alternative to the New Deal, demonstrating how to do wisely and consistently what Roosevelt has done with impulsiveness and often with equivocation. But dating from his Minneapolis speech, when he accepted the economic nationalism of George Peek and denounced the Hull trade treaties, Governor Landon began a downward deviation from the intellectual standards he had set for himself at the start of his candidacy. His critique of the Social Security Act was not accompanied by a Republican programme of really generous social services.

Mr Landon finally took part, in the same bravado as Mr Hamilton and Colonel Knox, in charging Roosevelt with betraying the "American" system, even to the length of saying that the crisis of 1933 had been a pretext for the President to build up his own power. Thereupon he scurried out to California to pick up the votes of the Townsendites, who have no ticket of their own in that State and are being instructed by their leader to vote for Landon. Thus those who predicted that a Kansas Liberal could not override the overwhelming reactionary spirit of the Republican Party have been vindicated. It is reported that Governor Landon finally persuaded Chairman Hamilton to drop his "red herring," and he himself on his last trip to California tried to undo the damage of the

Minneapolis speech, explaining that tariffs should never be used to protect inefficient industries, unless they were vital in time of war. But the repentance did not come in time to keep James Warburg and Dean Acheson from returning to the Roosevelt fold, in a handsome tribute to Secretary Hull's uphill fight for the reciprocal trade agreements. They probably symbolise large numbers of independents who are being driven to vote for Roosevelt, despite cogent objections, by the tenor of the Republican campaign.

Singularly little attention is being paid by the metropolitan newspapers to the smaller parties. The Union ticket, headed by Congressman Lemke and supported by Father Coughlin and Dr. Townsend, began with talk of ten million supporters, but will be lucky to poll a third of that number. These it will draw from both the older parties, with perhaps a larger drain from the Democrats. In Massachusetts and Ohio they may tip the scales for the Republicans. The Socialist Party has been elbowed out of the campaign by the decision of the Lewis trade unions and the Communist board of strategy to support Roosevelt. The labour vote in New York State and Pennsylvania will be of crucial value to Roosevelt. Probably the most pathetic spectacle of the season has been Senator Borah's abject acceptance of the Townsend Plan in his effort to hold his seat in Idaho. But it also is a reminder of the existence of factions and forces in the continent which perhaps make prediction uncertain. Most of the straw polls, except that of the Literary Digest, point to the comfortable victory of the President. But without polls, and ignoring the factions, the result should be easy to forecast.

Mr Roosevelt, with the Solid South already "in the bag," needs only a few minor victories in the West and North to be elected. Mr Landon, starting with a bag of New England States and Kansas, must tuck away New York, Pennsylvania, Ohio, Illinois and a dozen other States before he has his majority in the electoral college. Thus the South, the "forgotten region" of both major parties for half a century, plays a decisive rôle in the election for which it receives no comparable political reward.

WASHINGTON, October 20.

RECOVERY AND THE ELECTION

PERHAPS no feature of a none-too-realistic campaign strikes the observer with such force as the contrast between the tone of a large proportion of the political oratory and the actual state of production and trade. Much of the campaign debate is couched in the general language of depression. In varying degrees this is true on both sides. The Democratic argument is largely a reminiscence of the depths from which the country has recently emerged and of the imminent danger of its falling back into the slough, and the Republican argument insists that there has not been much recovery anyway. This latter thesis is buttressed by continuous reference to the 11 millions unemployed, and by data indicating that our recovery has been

less than in certain European countries. Despite the cloud of "estimates," the 11 millions unemployed are, in many people's opinion, statistically analogous to Falstaff's seven men in buckram. As for the relative measurement of our recovery and that of other countries, economic indices do not lend themselves to precise international comparison.

Stated in the simplest terms, the amplitude of our descent from the boom of 1929 to the depth of 1932 was exceeded by few countries; and while our indices do not show recovery to the boom levels of 1929, analysis suggests that we have reached a level which compares favourably with any period of our past except one recognised to be a "boom." Furthermore, there are rather good statistical reasons for supposing that the Federal Reserve index understates the level of business activity. As the rate of population increase diminishes, the proportion of economic effort devoted to certain forms of capital goods might be expected to change, and an index weighted appropriately for the period 1923-25 would not necessarily be equally applicable to the current economy. A good many trades to-day are far above their 1929 boom peaks, particularly in consumer goods lines. For example, there are said to be more retail establishments in actual operation than at that time. It is impossible to over-emphasise the thought that after such a cataclysm as that experienced between 1929 and 1932 all statistical series should be suspected of discontinuities unless continuity has been rationally evidenced. The upshot of it is that, while politicians are still talking in terms of recovery from a depression, Wall Street is thinking in terms of the proximate development of prosperity into boom.

INDUSTRIES WORKING AT "CAPACITY"

Three major industries are occupied at virtually economic capacity—the railways, the utilities and the steel industry. Car-loadings in the week of October 10th were 820,000; and this would be the seasonal peak or near it. It was the largest for any week since November, 1930, and although far below the yearly peaks of the late 'twenties (1,209,000 in 1926 and 1,202,000 in 1929) was close to the maximum the railways can handle with rolling stock which has been allowed to decline for half a dozen years. The pressure of existing demand upon the generating facilities of the utility companies has reached a point when it becomes a major consideration in the general problem of the relation of the industry to the Federal Government. In steel, while operations are at but 75 per cent. of rated capacity, bottle-necks have already appeared. For example, the output of pig-iron is at capacity, and the demand for scrap has lifted the price to comparatively high levels.

What is true in these great primary industries appears to be unequally true in minor instances. One constantly hears of individual and specialised concerns which are fully occupied, and which, from the state of their order books, anticipate a larger demand in the not distant future. In no important case has the problem of securing delivery actually appeared; but there is an abundance of evidence that only a small increase in demand from this level would raise the question of deliveries, and move definitely in the direction of a sellers' market. The pervasive shortage of labour in most skilled trades, and, in some areas, of unskilled labour, is mentioned more and more frequently—a condition that could hardly exist if there were any substantial supply of labour outside the Relief rolls.

Of course, at the moment there are two qualifications to be borne in mind. Ordinarily, October is about the peak month of certain seasonal activities; and from now on in the Northern States the recurrence of freezing temperatures affects, for example, some type of building activity. Second, in the past six months there has been a very heavy outpouring of Federal money, including the Bonus, which may have given some artificiality to demand, and from which some relapse is always imaginable. On the other hand, it is easy to exaggerate anything so conspicuous as Federal spending, and to underestimate, for example, the effects of the increased dividends which presumably will be disbursed between now and the year-end. The consequence of the increase in corporate earnings in 1936 has only been partially reflected in general conditions.

The past week has thrown little additional light on the operation of the "new gold standard." Yet it cannot be said that it has been without international implications. First, the flow of foreign funds into the New York security market not only continues, but seems to have risen to an unprecedented magnitude. Second, this flow is now accompanied by a gold influx much smaller than in the last days of the gold *bloc*. In part, the force seems to expend itself in a gradual and orderly decline in sterling against the dollar; partly, it may be that foreign balances already in this market are now being invested. In passing, it may be remarked that French balances in this market are put at about \$120 millions, but the reliability of this figure is not too well established.

The New York market has noticed that of all international rates none is more stable than the dollar price of gold in London, worked out on the exchange quotation at the time of the morning fixing. This persistently gives a figure of \$34.77, and of course, at this figure, London, to the Continent, is about 50 cents an ounce cheaper than New York. It is supposed that the Continental Stabilisation Funds have been offered some dollars, but on such cross rates the transaction apparently would not lead to a movement of gold. There has been some earmarking for unstated takers. There has been a good deal of hypothetical discussion whether, if the exchanges turned against the dollar, the gold would be furnished by the Reserve Banks, and charged against an exporting bank or the working balance of the Stabilisation Fund, reported to be \$200 millions; or would be shipped from the non-monetised \$1,800 millions of the Fund. At the moment, the question is purely academic; for it would appear that the new scheme offers considerable flexibility in meeting gold exports. So far as is known, all or most of the gold bought in times past by the Stabilisation Fund has been promptly offered to the Reserve Banks, and immediately monetised in the form of excess reserves.

NEW YORK, October 20.

FRANCE

AFTER THE RADICAL CONGRESS

THE resolutions at the Radical-Socialist Congress at Biarritz were as foreseen. Stay-in strikes and attacks on property and the "liberty of work" were condemned; and a vigorous effort to balance the Budget was demanded. What was less expected, however, was the repeated singing of the "Marseillaise" and the giving of the Fascist salute by sound Republicans in response to the closed fist of the Popular Front supporters—the Fascist salute, however, did not imply support for Fascism. The warning to the Communists was categorical: (1) On the foreign field, no "idealist crusade"; and (2) on the economic field, no immediate rupture. Either the Communists will now surrender, or they will have to be responsible for an eventual Ministerial crisis. This would be of minor importance to the country, since the Communists would be opposed not only by the peasants and the middle classes but by many trade unionists and by a large number of Socialists, as well as by the great mass of public opinion. This country, when all is said and done, has great reserves of strength, and its first aim is still the preservation of liberty.

The Popular Front is thus alive, but the bitter tone of the last speech of M. Blum at Narbonne shows that the Cabinet's liberty of movement is confined henceforth within certain limits. The lesson of the Radical Congress is that, if the Communist leaders are sometimes overborne by their troops, this also was the case at Biarritz with the Radicals, who encountered unexpected resistances in their task of saving the life of the Cabinet.

What will then be the Communists' tactics? The same apparently as before: the maintenance of the Popular Front Government. But these tactics will be rendered more difficult by the new resistance which Biarritz has aroused against the Communists. Employers, for instance, may show themselves less conciliatory in negotiations for

the settlement of social conflicts. In the coal industry, for instance, a large company has suppressed its interim dividend "because of stay-in strikes." And the president of the Coal Mines Committee has declared in a letter to the Prime Minister that the 40-hour week will be loyally applied; but he adds that this will entail serious complications: a diminution of the French miners' productivity, a rise in the cost price of coal at the mine, and a reduction in the economic efficiency of the country. The Communists reply, as did M. Blum at Narbonne, that certain capitalist interests are impeding the Government's experiment by restricting supplies in order to raise prices and demoralising the Stock Exchange by suppressing dividends.

POLITICS AND CONFIDENCE

These political troubles are all the more inopportune in that the French economy urgently needs calm and the Treasury urgently needs an atmosphere of confidence. But the internal agitation, combined with the exceptional taxes on profits from devaluation, have delayed the repatriation of capital. Day-to-day money costs 1 per cent.; but 4½ per cent. Rentes stand at 80; so that long-term money costs 5½ per cent. A large increase of deposits in the banks would be very desirable after their fall in recent years:—

	August 31, 1935	July 31, 1936	August 31, 1936
Crédit Lyonnais	11,016,173,245	9,677,814,294	9,493,566,414
Société Générale	9,182,324,771	8,111,624,732	8,060,639,178
Comptoir National d'Escompte	7,061,368,009	6,229,161,393	6,176,511,023
Crédit Industriel et Commercial	1,329,214,645	1,315,422,271	1,248,019,446
	28,589,080,670	25,334,022,690	24,978,736,061

Deposits in 1931 reached the record figure of 38,000 million francs.

The Government is trying to alleviate the position of debtors. The Bank of France has already been ordered by the monetary law to rediscount all public debentures presented to it. Moreover, a new convention will be arranged with the Crédit Foncier, which will entail an advance to this Institute of 3,000 million francs, which will come out of the revaluation of gold profits. At the same time, French experts are studying the British system of open-market operations in order to promote a cheap money policy.

The Treasury should not be in any difficulties in the immediate future. This is the period of heavy revenue from direct taxation. There is also 2,000 million francs to the account of the Treasury at the Bank of France; and the new advances by the Bank have been balanced by the profit accruing from devaluation.

PARIS, October 29.

GERMANY

THE FOUR-YEAR PLAN FOR RAW MATERIALS

AS "Commissioner for the Four-Year Plan," which is the official description of his new office, General Göring last week published in the form of a decree a description of his new organisation. This announcement brings the raw material project a step forward; but throws no light on the proposed dimensions of the supplementary output or on the measures by which fulfilment is to be ensured. In general, new offices are not created. But existing authorities are brought together, firstly, for the settlement of general principles and, secondly, for co-ordination of the special interests involved. The chief body is a "Ministerial Council," consisting of the various Ministers already interested, the chief of the Reich Chancellery, and Dr. Keppler, who since 1933 has been Herr Hitler's "Commissioner for Economic Questions," and who has been conducting his own raw material campaign.

In the proceedings of the Ministerial Council Secretary of State Herr Körner and the directors of the "business groups of the Four-Year Plan" will also participate, as General Göring's representatives. The business groups are: (1) Production of raw materials; (2) distribution of

raw materials; (3) provision of labour; (4) agricultural production, in so far as it is connected with the Plan, (5) prices; and (6) foreign exchange. The directors of most of these groups are prominent Nazi Party men. In general this scheme is merely for co-ordination. The functionaries already engaged in fostering or controlling raw material output will, it seems, retain their powers; but as the exercise of these powers involves many competing, or even conflicting, interests, such as finance, foreign exchange and labour, compromises will have to be brought about.

The attitude of business towards this project is not yet clear. The first effect of Herr Hitler's announcement of a Four-Year Plan at Nürnberg was to advance industrial securities on the Bourse; but since Herr Göring's decree there has been a sharp reaction. The latest measure has been presented in certain Nazi circles as "anti-capitalistic" in a loose sense. General Göring's decree expressly promises "the planning and execution of the manufacture of German raw materials." Taken literally, this implies compulsion on certain important sections of industry and agriculture. To industry the problem appears to be primarily one of investment of private capital and of profitability. But General Göring's announcement contains no reference to new investment regulations, or even to the very considerable power in this matter already possessed, and often exercised, by the Ministry of Economy. General Göring says indeed that "the financial questions of the expansion programme are to be considered in association with the Reich Finance Ministry and the Ministry of Economy"; but this passage seems to refer exclusively to State finance (credits, bounties, etc.), in which the latter Ministry is concerned through its control of credit.

Everything points at present to a more active official campaign against the rise in prices. The rise is one obstacle in the way of the Four-Year Plan. From the viewpoint of foreign trade and of the foreign balance of payments this problem has probably little importance. German foreign trade is not a function of relative prices. The real problem to be solved is the almost unbearable lot of home consumers, the buying power of whose officially stabilised earnings declines from month to month.

FORCED LABOUR AND SERFDOM

Labour is one of the numerous elements in the Plan which demand adjustment. Although there is still unemployment, labour is short in several trades. It is, indeed, shortest in trades which the Plan concerns, in particular agriculture, the heavy industries and building. Theoretically, labour for the new production of raw materials might be gradually supplied through the decline in manufacturing for export which ought to result automatically from the proposed reduction of imports of the same raw materials. But German labour is largely specialised, and the adjustment would take a long time. Indeed, most of the Autarkists expect no such solution; for (though they do not admit any increased debts service, much less any export of capital) they expect exports to flourish without imports. It is admitted that the present specialist labour shortage cannot be made good out of the heterogeneous unemployed reserve.

The remedies proposed mostly involve compulsion of some kind. One plan is for a system of priorities for public and private contracts. Other plans are for hardly-veiled systems of forced labour. The new "work book," which since October 1st must be carried, may be used as a lever, it is suggested, for withdrawing workmen from some occupations and forcing them to enter others. This measure would mean annulling the already restricted right of choice of residence. Apparently the Four-Year Plan may be another lever; for under this Plan General Göring last week ordered 250,000 labour service men to assist farmers. Hitler Youth circles suggest that landowners and farmers should be compelled to establish agricultural labourers on their land. This measure would be practicable only if also the labourers were subjected to compulsion.

In similar direction, but much more reactionary, is a plan recommended two years ago by the present Food Minister, Herr Darré, and now championed by the Reich Nutrition Corporation, to restore certain semi-servile institutions which obtained before the emancipation of the serfs and the Stein-Hardenberg agrarian reforms, which

reforms are now treated with great contempt as relics of Liberalism. One is the *Heuerling* (hireling) system, once common in many European countries, under which farm labourers in exchange for a house and some land were compelled to work a certain number of days for landowners or large farmers. The labourers would be tied permanently to the estates. This solution might solve the harvesting labour problem, and it might gratify the large landowners (a consideration important for the Nazi Party).

The unbroken, though slow, rise in the price of manufactured goods continues. The percentage of occupied places in all industry rose in September from 71.6 to 72.3. Owing to seasonal (including advanced Christmas) demand, the improvement in the consumption goods trades was considerable; but the greatest improvements were in iron and steel, non-ferrous metals and building. Output of ingot steel in the first nine months of 1936 was 14,468,800 tons, against 11,942,400 tons in 1935. The Solingen cutlery industry reports a considerable improvement in home business, and the cement trade continues to benefit from the great activity in building.

BERLIN, October 28.

BELGIUM

THE "REXIST" AGITATION

THOUGH the economic situation is much improved, there is a certain feeling of uneasiness in the country. The Communists are said to be organising more propaganda; and, on the other hand, the new party, which calls itself "Rexist" and employs Fascist methods, though the leaders deny it is Fascist, has begun an agitation whose future cannot be foreseen. The programme of the Rexist is very nebulous, and even the leaders seem to avoid explaining it—perhaps because their supporters have conflicting views. This unrest is not, of course, favourable to a recovery of business, but the recovery is not yet threatened. Much depends on the course of events in France. The international position inevitably inspires some uneasiness. The King's recent speech, however, represented the point of view of all those Belgians who dislike the Franco-Soviet pact.

The Government has introduced its Budget for the fiscal year 1937 on the prescribed date. Revenue shows a surplus on the estimates of 171 million francs. But the Government will reduce taxes by 150 million francs; so that there will be virtually no surplus on the ordinary Budget. Belgium has also an extraordinary Budget. This amounted to not less than 2,260 million francs for each fiscal year 1936 and 1937. This extraordinary expenditure is mainly on armaments and public works.

SPENDING ON PUBLIC WORKS

Though the extraordinary Budget distorts Belgian finance, which has had such a brilliant recovery, one must not forget that the objections to it are more of theory than of fact. There is a large difference between a voted extraordinary Budget and an actually expended extraordinary Budget. A lot of the anticipated work will not be executed in the course of the fiscal year, and according to Belgian Budgetary technique it is not possible to carry forward to the following years the amount remaining unspent. Instead of the 2,250 millions anticipated in the extraordinary Budget, hardly 1,000 million francs were spent in 1935. This is why the profit on the revaluation of the gold reserve of the National Bank has not yet been touched. In any case, the extraordinary expenditure will not much exceed 1,000 million francs.

In general the Belgian Budget appears satisfactory. In the ordinary Budget more than 500 millions are required for the redemption of public debt; social charges, including old age pensions, are also heavy. Actually the public debt is no longer more than 25 per cent. of the total expenditure on the ordinary Budget; and debt redemption takes a fifth of this amount.

Tax receipts are coming in very satisfactorily; and business activity remains in general good. In the mines a shortage of hands has actually retarded production.

Nevertheless, there still remain about 5,000 totally unemployed among insured mineworkers. Actual unemployment is less in Belgium than the Governmental officers register. Out of 100,000 totally unemployed who are inscribed on the rolls, a large number are unlikely ever to find a suitable job again. Most of them are too old.

Belgium was unaffected by the devaluation of the gold *bloc*. As it had been anticipated, even small business men and shopkeepers had avoided holding assets in French currency. The tourist trade is likely to be less active than in the two last seasons, though the cost of living is still much lower in Belgium than in France. The French funds sent to Belgium are still here at present. Along the French boundary some small holders of Belgian banknotes have been exchanging them against French currency. Belgian speculators are thought to have bought some stock in Paris at the moment of the devaluation; and this is why some gold was sent from Brussels to Paris.

The gold reserve of the National Bank of Belgium has not been much affected by the return of refugee capital to France. Official statements indicate a diminution of only about 600 millions. It must be remembered that the Belgian Government repaid in October the American and Swiss *tranches* of the 7 per cent. stabilisation loan of 1926. For this was used the surplus of the revaluation profit, which had been held in the form of gold ingots. This shipment did not therefore appear in the accounts of the central bank. The revaluation profit, amounting originally to about 4,000 millions, has been used to nearly half, for repayments of the public debt.

LOUVAIN, October 26.

SWITZERLAND

NO RISE IN THE COST OF LIVING

THE devaluation of the Swiss currency will certainly have an influence on foreign trade; but it has so far not affected the cost of living. The Government is closely watching the prices of all goods in order to prevent any illicit rise in prices; it has also reduced Customs duties on foodstuffs and on a number of other goods, and it has announced its intention of relaxing import quotas to a certain extent so as to facilitate trade with other countries. The effects of devaluation are being felt in the money and securities market. Gold and banknotes which were hidden in safes are coming out again; and there have been heavy purchases of securities. After devaluation there were rises of 20 to 35 per cent. in the price of almost all Government, industrial and banking securities.

The outstanding feature of the past fortnight has been the big success of the National Defence Loan, which was oversubscribed, despite the uneasiness at first caused by devaluation. Switzerland had placed so much confidence in the League of Nations in bringing about a general reduction of armaments and of reducing the chances of armed conflicts, that she had greatly reduced her military expenditure. The failure of the Disarmament Conference, the denunciation by Germany of the Locarno Agreement, and the disturbed European political situation, compelled the Government to alter its policy and to reinforce the national defences. The building of fortifications along the northern frontier, which is the least protected by nature, the reorganisation of the Army and Air Corps, and the development and modernisation of armaments, absorbed a sum of 80 million francs voted by Parliament two years ago. That scheme was adopted, involving a total expenditure of 235 million francs. It was decided to obtain this by means of the issue of a National Defence Loan at 3 per cent.; and the subscription towards the end of September. The response was so immediate that a week before the closing it was certain that the whole amount of the loan would be subscribed. On October 15th the subscription was closed, and by then 332 millions had been subscribed by 192,366 subscribers. Last week, the Government decided to accept the surplus and to form with it a special fund to be used for national defence in case of need.

The foreign trade returns show that the situation improved during the third quarter of the year. Imports were 279,798,307 francs and exports 210,327,785 francs. The results of the three quarters were as follows (in millions of francs), compared with 1935:—

	Imports		Exports	
	1935	1936	1935	1936
1st quarter	293.1	268.5	200.0	192.4
2nd quarter	329.4	273.5	201.2	203.8
3rd quarter	311.6	279.7	188.3	210.3

The results of the third quarter of the present year were not affected by devaluation. The decrease in imports, compared with 1935, is mainly due to import quotas. The situation of the export trade is better, but it is too early to speak of a recovery. The results of the four chief exporting industries are nevertheless very encouraging, as is shown by the following figures (in millions of francs) for the first nine months of 1935 and 1936:—

	1935	1936
Watchmaking	80.0	92.3
Silk	52.7	53.0
Cotton	62.0	63.3
Machines	69.2	77.7

The improvement is particularly noticeable in the watch-making and machines industry, the situation of which seemed almost hopeless two years ago.

GENEVA, October 27.

CZECHOSLOVAKIA

EFFECTS OF FURTHER DEVALUATION

DURING the Parliamentary holidays in August and September calm prevailed. The Defence Loan met with considerable success, and the amount subscribed was Cz.K3,500 millions. The Corn Monopoly was also reorganised. In view of accumulated stocks at the end of the 1935-36 season amounting to 70,000 trucks of wheat, it became necessary to make the Corn Monopoly independent financially and to adjust the price limits for purchase and sales as well as to limit the area of cultivation on the 1930 basis.

The devaluation of the Czech crown was effected on October 9th. As a result of the devaluations carried out in France, Switzerland, Holland and Italy, tense conferences were conducted by the Government in the first week of October. In his first statement, the Prime Minister pointed out that Czechoslovakia had to a certain extent anticipated the recent devaluations by her own devaluation in 1934. The Agrarian and the Social-Democratic Parties wanted to go much further than the actual Government Bill did. Ultimately an agreement was reached, and the value of the Czech crown was lowered to 30.21—32.31 mg. of gold, against the previous 37.15 mg.; and the Government was empowered to fix the value within these limits. It has decided on 31.21 mg. of gold, which gives an approximate devaluation of 16 per cent. against the previous value of the Czech crown, and 30 per cent. against the pre-1934 value. Simultaneously strict measures were taken against unjustified increases in prices.

The consequences of the devaluation have naturally first been felt in those industries which depend on imports for their raw or semi-raw materials on foreign countries, where the devaluation resulted in higher purchase prices. Some difficulty also arises from the fact that the devaluation is being effected at a time when prices are rising both at home and abroad. Government employees, who had their salaries reduced during the crisis, are putting forward their claims for the abrogation of these cuts.

Parliament has now been presented with the balance sheet of revenue and expenditure for 1935. Revenue amounted to Cz.K8,444.6 millions, and expenditure to Cz.K10,097.9 millions, so that there was a deficit of Cz.K1,656.3 millions. Expenditure exceeded the estimates by Cz.K617 millions, and revenue fell short by Cz.K959 millions. The increased expenditure is mainly on defence, on social welfare and on unemployment relief.

The Budget for 1937 is as follows:—

	1936	1937
	Mill.	Mill.
Expenditure	8,032	8,455
Revenue	8,034	8,456.5
Receipts of Government undertakings	998	1,065.1
Allotments to autonomous bodies from taxes	2,733	2,823.1
Public debt service and amortisation	1,988	1,700.9

The Government debt now stands as follows:—

	Mill. Cz.K.	Mill. Cz.K.
Internal debt	30,773.3	36,605
External debt	8,160.4	8,149.4
Currency debt	2,000	2,030
Total	40,933.7	46,784.4

The internal debt rose, therefore, by Cz.K5,832 millions. The interest and amortisation require a smaller total in the Budget than they did in the 1936 Budget, owing to savings which result from the unification of Government debts. The Finance Minister is to be empowered by law to utilise the proceeds of the Defence Loan to provide for defence needs up to Cz.K438 millions and to credit State investments up to Cz.K794.7 millions. According to the Minister's statement, some Cz.K5,250 millions will be allotted in 1937 to the construction of public buildings and works as a part of the Government's three-year programme.

FALL IN UNEMPLOYMENT

The Budget reckons with higher revenue from taxes, due to the revival of economic activity. This year's yield of taxes in the first eight months, at Cz.K5,732.4 millions, are higher by Cz.K591.5 millions than for the same period last year. At the same time, unemployment had fallen by the end of September to 470,850, compared with 573,362 in 1935.

According to the preliminary estimates, the harvest, in thousands of quarters, will be as follows:—

Wheat	14,714 or 2,185 less than a year ago.
Rye	13,953 or 2,431 " "
Barley	9,732 or 882 " "
Oats	12,194 or 1,922 " "

This diminished harvest yield has improved the situation of the Corn Monopoly.

There has been a substantial revival in the building trades, and improvement has been noticeable in the engineering and leather trades, and in the manufacture of clothing. Output in various industries in September, 1936, was as follows (in thousands of tons):—

		Increase over September, 1935
Coal	1,130	+ 126
Lignite	1,451	+ 172
Coke	163	+ 28
Iron	93	+ 20
Raw steel	140	+ 46

Imports in the first nine months of 1936 amounted to Cz.K5,230 millions, against Cz.K4,528 millions in 1935; and exports to Cz.K5,544 millions, against Cz.K5,463 millions in 1935; so that the export surplus was Cz.K313.9 millions, against Cz.K935.4 millions in 1935. Exports rose, especially to the countries of the sterling *bloc* and the United States.

PRAGUE, October 22.

EGYPT

SOCIAL REFORM LEGISLATION

SINCE the signing of the Anglo-Egyptian Treaty on August 26th there has been a marked lull in local political activity. While much speculation has been going on concerning the form and extent that opposition to the present Wafdist majority is likely to take during the coming months, economic and social problems are drawing much greater attention than heretofore. It is felt in all Egyptian circles that, now the question of the Anglo-Egyptian relations has been settled, much of the nation's energy should be devoted to the improvement of the living conditions of the masses. During the late Parliamentary Session the only noteworthy measure to be adopted was a law insuring workers against accidents. Care was taken to include even the smallest industrial and commercial concerns.

The reformers, however, wish to extend their activity beyond these narrow limits, and they often appeal to English social institutions. One of their principal aims is an improvement in housing and sanitation in the villages, where both have remained deplorably low. Plans for model villages have already been devised, and one or two unimportant experiments attempted some time ago. But the carrying out of this scheme on a large scale will require expenditure far exceeding anything present or coming Budgets could provide. With a big expansion in the military services in sight, work would have to proceed at a much slower pace than planners originally forecast.

As the present Budget does not provide for the new expenditure that will result from the application of the military clauses of the treaty, £5,000,000 have been taken over from the reserve fund and will be used for roadmaking and barrack building. The figure given during the discussion of the present Budget and before the aforementioned appropriation was £33½ millions. As, however, securities belonging to the fund have appreciated by about £4½ millions, the actual figure may be put at £37½ millions.

Foreign trade during the first seven months of the year shows the following changes:—

(In thousands of £E.)				
	Imports		Exports	
	1935	1936	1935	1936
Great Britain	3,645	4,408	5,402	5,909
Germany	1,536	2,147	1,581	1,331
Japan	2,294	1,229	916	1,154
All countries	16,699	17,203	17,989	16,756

After several years of sustained efforts, imports from Japan have been brought down to the level of exports. Thus, one of the chief aims of Egyptian commercial policy has been attained. The consequence, however, will be to strengthen the position of Japan in future negotiations. German exports to Egypt, however, are now fast exceeding her purchases from this country. Great Britain is in an intermediate position.

OXFORD UNIVERSITY PRESS

SOUTH AFRICA

MORE SIGNS OF PROSPERITY

DOUBTLESS the most spectacular sign of South Africa's unprecedented prosperity is to be found in the Empire Exhibition. Few criticisms have been made of the Exhibition itself as a display or of the abundance of its popular attractions. But its financial aspects have to some extent given cause for anxiety. The public attendance has not quite come up to its promoters' optimistic expectations. It is officially estimated that in the three weeks since its opening admissions have totalled about 300,000. This, of course, includes a large proportion of second and subsequent visits and also some 25,000 school children for whom the South African railways have provided special travelling facilities from all parts of the country. A Cape Town critic has expressed the opinion that the Exhibition may result in a deficit of £500,000 or even £750,000, though vigorous replies have pointed out that this figure is actually higher than the expenditure incurred by the Exhibition organisers (apart, of course, from costs devolving on individual exhibitors), and, in any case, any possible deficit is covered by guarantees, so that the individual tax- or rate-payer has apparently no cause for anxiety in the unlikely event of the Cape Town critic's estimate being well founded. The Exhibition has till mid-January to make up for any disappointments so far experienced.

RECORD BUILDING ACTIVITY

But there are more concrete and indisputable evidences of South Africa's prosperity. The National Federation of Building Trade Employers of South Africa is holding its annual congress in Pretoria from October 12th to 15th, and the Federation's annual report states that in the twelve months ended June 30th the value of building plans passed in Johannesburg, excluding the Witwatersrand (an area extending about forty miles east and west of the city), was £8,744,800, a figure which exceeded the total value of plans passed in the whole Union during the twelve months ended June 30, 1931, which was then considered to be a good year. The Witwatersrand area, excluding Johannesburg itself, accounted for plans in the past year totalling in value £4,058,472. Cape Town's figure was £2,663,347; Pretoria plans represent a value for the year of £1,110,913, Durban £1,005,450, Port Elizabeth £567,112, East London £377,943, Maritzburg £121,338, and Bloemfontein £53,294. The aggregate of these districts' building development in the twelve months thus reaching the impressive figure of £18,794,459.

A timely—but, it is to be feared, little heeded—corrective to the jubilations which Johannesburg is indulging in, has just been voiced by Professor E. D. Mountain in his presidential address at the annual meeting of the South African Association for the Advancement of Science, which is one of many congresses and annual gatherings being held in conjunction with the Empire Exhibition. While recognising the country's indebtedness to its gold-mining industry as the basis of its present abounding prosperity, the Professor warned his hearers that all mineral reserves must be regarded as wasting assets as compared with the products of the farming community. Although, admittedly, South Africa's gold ores are of a somewhat unique type, the life of gold mines elsewhere had been very ephemeral. Seventy-five per cent. of South Africa's exports comprised mineral products, consisting overwhelmingly of gold.

At the same time, while the gold production of the Union in point of value of output was a record, it had to be remembered that South Africa's percentage contribution to the world's production had rapidly dwindled from 51 per cent. in 1930 to 35 per cent. in 1935. This was principally due to the phenomenal increase from 1,400,000 ounces in 1930 to 5,700,000 ounces in 1935 in the Soviet Union. "At this rate," commented the Professor, "the U.S.S.R. are well on their way to becoming the leading producers of gold." Professor Mountain then said that it was a source of satisfaction that action had already been taken by the South African Government with a view to developing the production of other minerals than gold.

JOHANNESBURG, October 9.

LETTERS TO THE EDITOR

BRITISH MONETARY POLICY

TO THE EDITOR OF THE ECONOMIST

SIR,—*The Economist* has been retreating step by step since September, 1931, from its former position as perhaps the most zealous supporter of existing gold standards among all the financial journals. We recall the applause, in your issue of May 2, 1925, with which you greeted the return to the pre-war gold standard. Although you have since agreed that the 1925 decision was a "disastrous" mistake and have declaimed against the "horrors" of deflation, in as far as other countries have since been concerned, it is very obvious to us from your article "British Monetary Policy" of October 17th last that if action be taken upon your advice we shall ourselves again suffer from disastrous mistakes.

This article solely concerns itself with a prospective slump in about two years' time, in building and armament activities, and, urging the desirability of smoothing out fluctuations, advises that inflationary tendencies be checked. May we ask your consideration for basic industries, such as agriculture, coal-mining, mercantile shipbuilding, shipping and cotton, and more especially for exporting industries? Your article takes for granted that "something like 900,000 'special' unemployed in the distressed areas" and others in depressed areas will never again find work in their old vocations. We strenuously oppose your implied suggestion that the industries concerned should be abandoned to their present fate.

The horrors of deflation still remain also with primary producers in all those parts of the Empire and of the world in general which are directly or indirectly subject to, or strongly influenced by, British currency control. Their plight is still desperate. Having suffered a 50 to 60 per cent. fall in the price of their own produce since 1924, and with debts and taxes undiminished, they are now permitted by our currency control only a 5 to 8 percentage points increase in their earnings. Deflation has been responsible for this disastrous fall of prices; and, until primary producers again have their earnings restored to a prosperity level, deflation persists. A currency control which will substantially reduce the wholesale commodity value of our money is absolutely essential to remedy both the defects and the effects of currency control since 1924.

If, on the above-mentioned pretext, the necessary inflationary (we prefer the word reflationary as more exact) measures are checked, all primary producers within the sphere of British influence will remain acutely depressed. But, with post-1924 defects adequately remedied, it is certain that the "special" unemployed will all be required back in their old jobs to meet the greatly increased demand for the necessities of life and for the capital equipment used in producing and transporting them.

Yours, etc.,

W. M. WIGGINS,

Chairman, Monetary Policy Committee.

The Federation of Master Cotton Spinners'

Associations, Ltd.,

Fifth Floor, Royal Exchange, Manchester.

[We would point out to Mr Wiggins that, partly as a result of the reflationary policy pursued in the last five years, and consistently supported by *The Economist*, our index of the sterling prices of primary products has risen 45.7 per cent. since September, 1931. Moreover, a great part of our first article on Monetary Policy was devoted to suggestions for meeting the deflationary tendencies that may break out two years hence. The "special" unemployed, in our opinion, cannot be rapidly absorbed in their old trades as a result of any monetary measures, but only by a freeing of international trade. We have constantly pleaded the case of these industries, and we would refer Mr Wiggins to an article entitled "A Chance for Statesmanship" in our issue of October 10th.—ED. *Econ.*]

TO THE EDITOR OF THE ECONOMIST

SIR,—As an old reader of *The Economist* I beg to ask you for a little space and quote from the last paragraph of the excellent article which you published on October 24th under the title "British Monetary Policy—II." The paragraph opens thus: "The truth is that the old rigid gold standard is not able to cope with fluctuations and disturbances on the scale customary to-day, and that no equally automatic method can be devised to succeed it."

The first sentence quoted merely states a fact. But it is with the second that one has to disagree. Those who have for the last twenty years and more been aware of the truth of the first sentence, namely, of the fact that the gold "standard" is inefficient and indeed dangerous, have not only devised a method for the internal management of the currencies on a scientific basis (which certainly the gold standard cannot provide); but they have also devised a method for stabilising parities which is as automatic as the working of the gold standard can be at its best. And that method is the system of *purchasing power parities*.

The example of Sweden, and the one is forced to conclude—accidental policy of British monetary authorities, are proof enough for the contention that currencies can be managed fairly well by basing the policy on the internal purchasing power of the currencies concerned. All that is essential for the establishment of purchasing power parities is that currency authorities who use this new method of management of currencies agree among themselves, or at least announce their intention, to keep the rates of exchange more or less pegged to the purchasing power parity, as far as the latter can as yet be ascertained. Except for temporary large-scale speculative or other movements of capital, which have to be attended to by means of market interference by what we now call "Equalisation Accounts," the rate of exchange will on long-term *ipso facto* coincide with the purchasing power parity. There are many statistical difficulties standing in the way of the scheme, but we believe they can be overcome.

JO. HENRY BUCHI,

Director of Studies and Research,

Free-Economy Federation of Great Britain.

31 Alexandra Villas, London, N.4.

"ACCESS TO RAW MATERIALS"

TO THE EDITOR OF THE ECONOMIST

SIR,—Recently Mr Eden again renewed this country's offer of greater access to raw materials, but I have never yet seen it suggested how this end is to be achieved. In fact, as has already been pointed out, the market in raw materials is open to any bidder, but the trouble is that such countries as Germany have no foreign exchange with which to buy.

Would not a possible way for giving this access be for the Government departments of the Mandated Territories to be instructed that when they require manufactured goods from Europe, say for railway replacement, hydro-electric plant, etc., they should definitely favour quotations from German firms?

If Germany were given increased access to the world markets as suggested, her purchases would help to absorb the surplus of raw materials available, and raise their price to a more balanced level. This in its turn would raise the purchasing power of all raw material producing countries and thus increase the demand for our own manufactured products.

Yours faithfully,

W. EDE LACY HAMILTON.

BOOKS AND PUBLICATIONS

HINDENBURG

IN 1847, in Posen, Paul von Beneckendorff und Hindenburg was born. In 1911, at the age of 64, after an undistinguished career in the Prussian army, he retired to collect pictures of the Madonna and Child; a minor General, almost ignored by the great General Staff, who were still busy on the Schlieffen Plan for the invasion of France through Belgium. Yet Schlieffen's retirement in 1905 enabled the Kaiser (who "had to have his Moltke") to push the younger Moltke into the supreme position of Chief of the General Staff; and it was the younger Moltke's error in departing from Schlieffen's dying adjuration—"Only see that my right wing is strong"—which weakened that right wing, halted Von Klück's advance, and decided that the Western smashing campaign should become a war of attrition. Thus, the Russian danger in the East became a real threat; the armies of Samsonov and Rennenkampf—the ghastly tale of the latter's hatred of the former is one

of the chances which make history anything but materialistic—descended upon the weak German force in East Prussia; the German leaders there panicked; and the Kaiser, Moltke and Falkenhayn at the Imperial General Staff at Coblenz had to supersede them. They easily found the right man for the Chief of Staff in the East: the brilliant and temperamental Ludendorff. Finally, a junior officer unearthed a long-forgotten and retired military cousin as General. And so Paul von Beneckendorff und Hindenburg was recalled by telegram. He and his Chief of Staff met on the station platform at Hanover on August 23, 1914, on their way to East Prussia. And so was founded that alliance of brilliant verve with stolid age which made their names known throughout the world.

Mr Wheeler-Bennett's latest book* aims at giving us the Hindenburg of the legend: the Wooden Titan who won at

* *Hindenburg: The Wooden Titan*, by John W. Wheeler-Bennett. Macmillan, 507 pages, 21s. net.

Tannenberg: the statuesque personality on whose broad shoulders were placed, in fatal succession, the conduct of the war, the safety of the All-Highest War Lord, the whole structure of the German Weimar Republic, and—the responsibility for the bringing of the Nazis to power. The book is brilliantly written, documented, penetrating. But it has one major weakness; it begins only in 1914 with Benedict's recall to active service. Who was the essential Hindenburg; how his personality was formed between 1847 and 1911; what manner of man it was that was twice recalled to supreme authority after the age of 65—in 1914, and to save the young Republic in 1925—we have no trace in Mr Wheeler-Bennett's book.

For the story of Hindenburg and his legend, as here told, is truly fascinating. The author shows, with damning clarity, how wooden this Titan really was. It was young Hoffmann, the junior Staff Officer at Marienburg, who gave the orders which Ludendorff later arrived to confirm, and so really won Tannenberg. It was Ludendorff's genius that won the victories and held on like grim death against the world in the West; the "old man" was even screened by Ludendorff from essential information. It was Groener—the poor, maligned but honest and "brave Suabian," Groener—who was left to face the All-Highest with the awful truth, to urge his own War Lord's flight, to take all the responsibility for co-operating with the Republican Government to evacuate the routed German Army in 1918. It was Groener again who faced the calumnies of his Prussian ex-colleagues when he accepted the Versailles Diktat, and steeped to build up the cadre of the Prussian Army with worn-out tools. It was Bruening who bore the heat and burden of the day in the crisis; who came within an ace of carrying back his economic and political victory to Berlin in 1932; and who was dropped by the old Titan as a result of a conspiracy between Von Papen, Schleicher, and Hindenburg's son, to warn the French that Bruening would not be in power sufficiently long to make negotiations with him worth anything. They were all dropped: the Kaiser, Hoffmann, Ludendorff, Groener, Bruening; yes, and finally both Von Papen and Schleicher themselves. Hitler came; and Death—"Friend Hein," as the Titan called him on the day he died—enabled Hitler to stay.

Hindenburg's strength was his weakness: his stolidity, his loyalty, his complete lack of imagination, his doggedness, his incapacity to think a problem out and act on logical conclusions. These were the qualities that refused to treat for an honourable peace, that largely made the rout of 1918, that refused to face the Kaiser's abdication as a necessity, that kept Hindenburg loyal to his Junker cronies in face of Bruening, that "let down" the Right in 1925 and the Left in 1932. Mr Wheeler-Bennett's powerful book leaves anything but a pleasant impression.

SHORTER NOTICES

"Mr. Keynes and the Labour Movement." By A. L. Rowse. Macmillan. 68 pages. 2s. 6d.

In this short, fervent and very readable book Mr Rowse argues that Mr J. M. Keynes's latest work "The General Theory of Employment, Interest and Money" supplies a fundamental vindication of the outlook and policy of the British Labour movement. Mr Rowse notes the emphasis laid by Mr Keynes on the need for low interest rates, the danger of over-saving, and the desirability of increasing consumption as well as investment if unemployment is to be avoided. These, he suggests, are powerful arguments for the orthodox Labour policy of financing increases in the social services and of direct taxation imposed on the rich; and he quotes Mr Keynes in support of this important inference.

Mr Rowse perhaps accepts a little too much at its face value Mr Keynes's claim to have effected a Copernican revolution in economics, and he takes the possibility of a zero—or negligible—interest rate a little more seriously than would probably be wise in a practical Labour politician. But, in general, he has concentrated on the more valuable and suggestive parts of Mr Keynes's new book, and made interesting and relevant comments. Those who want to discover the practical implications of Mr Keynes's book without reading the whole of it themselves, might very well begin with Mr Rowse's commentary.

"Fundamental Issues in the United States." By E. A. Radice, with the Assistance of the Information Department of the Royal Institute of International Affairs. Oxford University Press. 74 pages. 3s. 6d.

The object of this pamphlet is to provide a discussion of some of the fundamental problems underlying the Presidential Election in the United States for the information, in the main, of British readers. The general criticism can be made that the task is far too large for the dimensions of the pamphlet, and that Mr Radice has not always succeeded in avoiding the alternative dangers of superficiality and obscurity. His first two chapters are open to the former charge; it is really impossible to survey the whole of American history and the New Deal in 24 pages.

The three remaining chapters, dealing with the problems of Federal versus State powers, the creation of an efficient Civil Service, and the future of the Federal Budget, are most illuminating and interesting, but they pre-suppose a considerable knowledge of American affairs. This general criticism, however, is almost the only one that can be made of the pamphlet. Here and there Mr Radice is led by brevity into dogmatism, but on the whole, his discussion is both moderate and penetrating. Could not Mr Radice expand his last three chapters into a full-scale volume, which would undoubtedly be a most valuable contribution to the elucidation of that most obscure subject, the American political system?

MONEY AND BANKING

FRANCE AFTER DEVALUATION

The hesitancy of the French national economy to "pick up" after the devaluation of the franc a month ago, and the recent weakness of the franc, give point to the following article by a well-informed French contributor.

THE present course of events in France, as exemplified by the downward trend of *rentes* and French shares on the Bourse, is undoubtedly as disappointing to the French Government as it is surprising to foreign observers. It had been expected that devaluation would bring a rapid return of capital, which would make conversion of all internal indebtedness to lower rates of interest possible; while a general "pick up" in business would take place. Although no reliable figures can yet be cited, it is obvious that the return of capital has not reached anything like the several thousands of millions of francs which the Government had anticipated.

Popular explanations of these disappointments are of two kinds; political and financial. It is argued that the political dangers of the present international situation are making Frenchmen reluctant to repatriate their funds. There is scarcely any more danger in France than in many other European countries where French capital has fled; but the bearing of the war danger on the French armament programme is undoubtedly making the French budgetary dilemma still more awkward. Internal politics ("the confidence factor") have undoubtedly a more immediate effect. From its inception the *Front Populaire* Government has encountered the distrust of many *bourgeois*, and has never enjoyed even the degree of tolerance which Labour Governments in England (with which it has many common features) were accorded by their Conservative opponents. The Communist Party is supporting it; and its intricate relations with the Trade Unions have given rise to a slogan of the Opposition, according to which the present parliamentary Government is leading directly to a revolution. Such an attitude on the part of the "possessing classes" may, of course, act as a brake on the economic forces working towards recovery; but the question arises whether it can constitute an absolute obstacle to them. To this point we revert later.

From the financial point of view, it cannot be denied that the situation is still serious and that the Government's need to borrow will remain great for some time ahead. Should present unofficial estimates prove true, the amount of Government expenditure next year (including that on the railroads) which will have to be financed otherwise than out of tax revenue would not be far short of Frs. 30,000 millions. Out of this total, some 6,000 millions would be allotted to public works. Payments under this head could probably be delayed, while so enormous a total could logically be reduced if an extensive business recovery sets in. A less optimistic view can be expressed about military expenditure, which will account for nearly Frs. 10,000 millions of the above total. These cannot be easily reduced. The new air programme announced on Tuesday alone accounts for Frs. 5,000 millions.

All these reasons tend to explain the hesitancy in the trend of repatriation of capital. The taxing of gold hoards and of Stock Exchange profits have worked in the same direction and lent support to rumours—despite official denials—about the taxation of the profits in francs on holdings of foreign securities. Another technical argument may be mentioned: the Bank of France considerably reduced its discount rate as soon as devaluation was over, and short-term funds receive very low remuneration in Paris at present. This policy, more precipitate than that followed by the Bank of England in 1931, naturally attracts no foreign short-term balances to Paris, the more as the forward premium on pounds and dollars more than offsets whatever profit may arise from the operation.

It is possible that the Government may also have nourished some illusions about the amount of hoarded and exported capital liable to return to active circulation in

France. It has been common ground among all previous Governments that there exist in France enormous amounts of hoarded banknotes. This statement, however, is authoritatively questioned in the June issue of the *Revue d'Economie Politique*, which suggests that, while possibly a few thousand million francs have been held apart in this form, such hoarding cannot reach the high figure of Frs. 20,000 or 25,000 millions, which has been commonly accepted. Most banknotes of large denomination issued during the last years should be considered as part of the working capital of private citizens. As to gold hoards, their return to the Bank of France has naturally been considerably retarded by the fixing of the repurchase price at the former franc parity. On the other hand, allegedly fraudulent exports should logically have the same effect as the return of gold to the Central Bank; since the chances are that the proceeds of French gold sales in Switzerland or Belgium are in many cases repatriated in French francs. It is likely, however, that part of the gold hoards is held in abeyance in the expectation of more liberal legislation.

As to the seriousness of exports of capital, this is a reality beyond doubt. It is not unlikely that as much as Frs. 30,000 millions were exported in 1935 and 1936. But only a part (though probably the major part) of this amount could be expected to be quickly transferred into francs, since the balance has presumably been invested at more or less long term, and is not intended to be returned to France unless a slump threatens on the London or New York Stock Exchanges. They can be considered as a standing proportion of all French foreign investments. Thus the Frs. 60,000 millions which the French Government estimated should return into active circulation in France should be reduced by something like one-half.

If, then, the amount of possible capital repatriation is smaller than expected; and if, further, its trend is slower than expected; there remains but one source of funds for the Government's needs. That is the development of internal savings. Here emphasis should be laid on the possibilities of economic recovery within the country. This is, perhaps, a point not sufficiently appreciated by Frenchmen themselves; and on this account alone a little more optimism on their part would probably be justified.

The index of industrial production has, it is true, declined from 102 in May to 93 in August; but it is not lower than in August of last year. The number of unemployed receiving benefit is higher than at the corresponding date last year; but temporary unemployment is distinctly lower. Orders are reported to be coming in in increasing quantities by several industries, including all branches of the textile industry, which suffered most from the depression. French industries, whether exporting or not, are receiving many inquiries about prices from former clients.

In too many cases, however, French producers refuse to quote prices because they fear the eventual consequences of rising prices, rising costs, reductions in hours, and the social legislation. The introduction of the 40-hour week may prove to have been untimely. There is a chance, however, that the Government may soon be forced to pursue a somewhat firmer policy over wage disputes, as a result of the Radical Congress last week; and this should help to restore a due sense of the normal risks of enterprise in the minds of French producers. Further, even if a large part of the exporters' exchange premium be eventually wiped out by higher costs, an increase in production can be predicted with a fair degree of safety. It is arguable that the French devaluation, contrary to other devaluations, was effected under unfavourable political and financial circumstances. But never has a devaluation been made with better prospects of international trade. Not only has France

reduced tariffs and quota restrictions, but Italy and Switzerland have done the same; and this movement towards freer trade may well go some steps further. Moreover, the exporters' exchange premium in sterling or dollars is not wiped out by other countries' devaluations at the same time. And competition is now slightly easier the world over. Even products subject to the control of international cartels should be able in time to obtain larger import quotas.

There is little doubt that these purely economic influences will be stronger than the reluctance of the French public to invest and lend to the Government immediately. The time element remains the crucial factor; and it will take at least a few months before increased tax revenue reflects increased business activity. The dangerous psychological effect of the budgetary deficit may then be allayed by a decrease in this deficit; and this may prompt a return of such short-term funds as have not at that time been repatriated by direct transfers or by increased imports. Before this optimistic hypothesis is borne out, the Bank of France will undoubtedly have to provide the Treasury with liquid funds; but the dangerous character of such a policy is often exaggerated. For the real danger for a Central Bank is not that a part of its assets consists of Government paper; but that this part constantly increases.

It is not contended here that all the obstacles to speedy recovery in France are imaginary, nor that equilibrium will soon be reached. But one fact, perhaps, deserves attention. France is no more isolated from a world well on the way to recovery; and prices and exchange relations are no less important in 1936 than they were ten years ago. Thus, to-day, the international influences making for general recovery may play a predominant and beneficial rôle both in French finances and France's national economy.

FINANCIAL NOTES

Repatriation and British Policy.—In the *Economist* of October 10th we drew attention to some of the possible consequences of a repatriation of foreign funds from London offset by purchases of sterling by the British Exchange Equalisation Account. The point we then made was that as the Account sold gold and bought sterling, it would be able to take over Treasury bills held in the banking system. Thus the drop in joint-stock bank deposits, due to repatriation, would be offset by a drop in the banks' discounts and not in their cash. The banks' cash ratios would therefore increase and—apart from their natural desire to maintain broadly the same proportions of their different assets—credit would tend to become easier. While repatriation of French money has so far been on a modest scale, funds have returned more freely to Holland and Switzerland, and there is some sign that the authorities have taken measures to meet the contingencies we have described. An obvious remedy would be for the Exchange Account not to apply its sterling acquisitions to the redemption of Treasury bills, but to immobilise them in public deposits at the Bank of England. In this event, the reduction in the joint-stock banks' deposits would be offset by a contraction in their cash, leading to a fall in their cash ratios and more stringent credit conditions. This explanation accorded with the facts up to October 21st, for between September 23rd and October 21st the Bank return showed the following changes:—

	Sept. 23rd	Oct. 21st	Change
Gold	247.6	248.7	+ 1.1
Note circulation ..	445.1	440.1	— 5.0
Reserve	63.6	69.6	+ 6.0
Public deposits.....	10.4	37.6	+ 27.2
Bankers' deposits...	108.0	81.4	— 26.6

The drop in the note circulation affords some evidence of foreign dishoarding; but the most significant fact is the transfer of over £25 millions from bankers' to public deposits. Meanwhile, tender issues of Treasury bills only fell during the same period from £621 to £615 millions; but the floating assets of the Departments (including the Exchange Account's sterling investments) rose from £219 to £242 millions. *Prima facie*, it looks as if the authorities

have not applied the whole of the Exchange Account's sterling acquisitions to the redemption of Treasury bills issued by tender.

An Alternative Explanation.—It is only fair to add that there are three arguments against the above theory and in favour of a totally different explanation. The first is that it would denote a departure from previous official practice, and the second is that since the second week of October little intervention by the British Exchange Account has been traceable. The third is in many ways much the most interesting. During recent weeks the Departments have been heavy and successful sellers of 2½ per cent. Funding Loan, and the above statistics suggest that the cash proceeds of these sales have been lodged in public deposits instead of being re-lent on Ways and Means or re-invested in Treasury bills. These Funding Loan sales may easily be the principal explanation of the expansion in public deposits, but in any case the market has not unnaturally formed the view that the authorities may be clearing the decks for another Government issue. A specific re-armament loan is not expected, for so far the cost of re-armament is not great enough to justify a major operation of this character. If a new loan is issued, it will be for the general purposes of the Government, including possibly the funding of some Treasury bills, the covering of current expenditure, and perhaps the conversion of another block of outstanding debt. For example, there may be an offer to the holders of 4½ per cent. Conversion Loan, 1940-44, which is rapidly becoming a "money market" security. Meanwhile last week's experience suggested that the authorities had carried the accumulation of money in public deposits a little too far. On October 21st stringency began to develop in the discount market, and to relieve the situation heavy open-market purchases of bills became essential. These bills were not bought by the Bank on its own account, for Government securities at the Bank remained unchanged. Apparently they were taken either by the Exchange Equalisation Account or by one or more of the Departments. The Bank return for October 28th also showed a drop of £10 millions in public deposits, coupled with some increase in bankers' deposits. Thus the official policy of cheap money remains unaltered, but our whole monetary system to-day calls for very delicate management.

Washington and Paris.—The authorities abroad are also having to adjust themselves to new circumstances. Probably no definite rate for sterling has been agreed between Washington and London, nor will any attempt be made precisely to fix a rate. Instead, if sterling either falls below \$4.86 or rises above \$4.95 or \$5.00, one Exchange Fund will intervene with the tacit assent of the other. The London market price of gold will be governed by the dollar exchange with, at times, a small premium if a demand for gold develops. This means that, converted into dollars, it will remain constant at about the American official price of \$35 an ounce. The French authorities are not finding the new conditions too easy. For reasons developed in the leading article in this section the franc has recently been at a discount of Frs. 1½—equivalent to 6 per cent. per annum. This is a wide margin for a devalued belgas, which followed last year's Belgian devaluation, and the premium on forward Swiss francs, which replaced the valued. There is also a fear that the French franc was devalued sufficiently to allow for the rise in French prices, and that it is still over-valued. Hence bear attacks occurred when the French authorities were only just beginning to operate their newly-created Exchange Funds, and so far the official operations have not prospered from Frs. 105½ to Frs. 106½. They then came in suddenly and buffeted the rate back to Frs. 105½. This probably taught the bears a salutary lesson, but at the cost of a temporary disturbance to the market. The British

Control has learned by experience how to intervene in such a way as to prevent these speculative attacks from developing at all, with the result that it is now able to prevent such wide fluctuations. We suggest it is desirable that monetary co-operation between England and France should be extended to include a pooling of information and acquired knowledge in the technique of Exchange Fund operation.

The Foreign Exchanges.—This week's chief movement in the London market has been the appreciation of the guilder rate from Fl. 9.07 to Fl. 9.03½. The explanation is that Belgium has been repaying the Mendelssohn credit and has been drawing on Belgian-owned sterling balances for this purpose. Thus there has been persistent Belgian selling of sterling for guilders. Forward guilders, however, are practically unchanged, and the market quite expects the spot rate to slip back again so soon as this special operation is complete. The French sterling credit reaches maturity on November 20th and is expected to be repaid. Francs remain weak. Repatriation of French capital has now practically ceased, and the French Government may be coming to realise that the imposition of penal taxation on private devaluation profits was from this point of view a tactical error. Another deterrent against repatriation is that a better return on short money is at the moment obtainable in Holland and Switzerland. The franc therefore remains weak, with three months' francs at the relatively wide discount of Frs. 1½. Spot Swiss francs are steady at Frs. 21.28, but the forward premium has shrunk to par to Frs. 2 premium for three months' francs, which suggests that the repatriation of Swiss funds from London has now ceased. The tendency now is for Swiss money to be transferred from London to New York. Dollars have been steady, at \$4.89½ on Thursday, and at upper and lower limits of \$4.88½ and \$4.89½ for the whole of the week. There has been no pressure to buy dollars, and in Paris they have been offered at Frs. 21.50. There are suggestions in London that the Austrian schilling will be devalued at the New Year or possibly in January.

Central European "Clearings."—The "clearing" systems by which Central and South-Eastern Europe is riddled are losing some of their popularity. The various countries are becoming more orientated towards Italy and the devalued lira, from which they expect freer trade, than towards their erstwhile heavy debtor, Germany, with whom their trade is still completely controlled. At the recent discussions between German and Yugoslav experts at Dresden, Germany offered to expand her trade and tourist traffic with Yugoslavia on a strict compensation basis, so that no debit balance could arise. (The former German debt of about 500 million dinars has been offset by purchase and equipment of the Zenitza ironworks by Yugoslavia from Krupps.) While this has hit French and British trade with Yugoslavia—which provides free *devisen*—the new agreement with Germany may even once again prove simply a new way to extract trade credits for Germany, which will again need to be thawed. While Germany is now Yugoslavia's largest customer, as she is of Bulgaria, Yugoslavia's second-best customer, Italy, may yet prove the most profitable; for the German "additional exports" prove very dear when valued at nominal rates of exchange into Reichsmarks. Again, the agreements between Roumania and Bulgaria, on the one side, and the Soja A.G. (a subsidiary of the German I.G. Farbenindustrie), on the other, which two years ago induced Roumania and Bulgaria to grow soya bean for Germany, have now expired. Originally, Germany was to pay for the beans up to 100 per cent. of the agreed value in German goods. The new agreements, however, include an interesting clause: that Germany can now pay partly with German and partly with Italian goods. This may be a result of Count Ciano's visit to Berlin; it may be the result of a German favourable trading balance with Italy; or it may be due to the natural desire of the Roumanians and Bulgarians to secure cheaper Italian manufactures of equivalent quality to the dearer German products under the agreements. Again, Hungary now exports about

25-30 per cent. of her total exports to Germany, and she also sends soya bean. Hitherto, it was only possible for Hungary to sell this big block of exports to the German market; but on November 11th and 12th the Rome Protocol Powers—Italy, Austria and Hungary—meet in Vienna to regulate the situation brought about in their trilateral "clearings" by devaluation of the lira. World markets are expanding slowly, and Hungary may find more profitable markets than the German. While the *pengő* was effectively devalued last December by a uniform surcharge of 53 per cent. on foreign exchange, the Austrian schilling has remained where it still is for nearly three years; and the devaluations of the lira, Swiss franc and Czech crown have largely altered the financial basis of Austria's trade—and competition—with her neighbours, with most of whom she has trade and exchange agreements. Evidently, rising world prices and the recent devaluations are proving potent enemies of the bilateral "clearings" and compensation agreements which have for so long paralysed and arrested trade in Central and South-Eastern Europe. We hope the moral will not be lost on the British authorities. France and this country could do a lot to ease the path of Central and South-Eastern Europe towards freer trade.

The Money Market.—The Bank Return shows that this week £10 millions has been released from public deposits, and about £5 millions of this amount has returned to bankers' deposits, that is, to the cash holdings of the joint stock banks. This has made money easier and there has been less pressure than earlier in the month. There was the usual calling by the clearing banks on the first three days of the week, but October 29th being the fifth Thursday of the month, there was no calling on that day. Conditions, therefore, were very easy, and there was a tendency to press money on the market.

	Oct. 8, 1936	Oct. 15, 1936	Oct. 22, 1936	Oct. 29, 1936
Bank rate.....	%	%	%	%
Clearing banks' deposit rate ...	½	½	½	½
Short loan rate:—				
Clearing banks	½-1*	½-1*	½-1*	½-1*
Others	½	½	½	½
Discount rates:—				
Treasury bills	½	½	½	½
Three months' bank bills	½-¾	½-¾	½-¾	½-¾

* Loans against Treasury bills and other approved bills and British Government securities within six months of maturity; 1 per cent. Treasury Bonds and other gilt-edged stocks within six months of maturity; and other collateral respectively.

The replenishment of their cash has made the banks freer buyers of bills. They are now ready to take January Treasuries at ½ per cent., and are taking mixed parcels of Decembers and Januaries at ½ per cent.

The Bank Return.—The increase of £2.6 millions in the note circulation represents the normal movement at the end of the month, and so shows that last week there was no further dishoarding by foreign holders of British currency. The Bank's gold holdings have remained unchanged since the devaluation of the gold *bloc* currencies at the end of September.

	Oct. 30, 1935	Oct. 7, 1936	Oct. 14, 1936	Oct. 21, 1936	Oct. 28, 1936
	£ mill.	£ mill.	£ mill.	£ mill.	£ mill.
Issue Department:—					
Gold	194.7	248.7	248.7	248.7	248.7
Note circulation	399.9	450.8	446.4	440.1	442.7
Banking Department:—					
Reserve	55.6	58.9	63.4	69.6	66.9
Public deposits.....	26.2	24.8	31.6	37.6	27.6
Bankers' deposits	82.5	84.2	82.2	81.4	86.5
Other deposits.....	38.6	40.9	41.2	41.1	41.4
Government securities ...	85.9	79.8	80.4	79.9	80.2
Discounts and advances..	11.2	9.3	9.6	6.7	6.6
Other securities	12.3	19.6	19.4	21.6	19.5
Proportion	37.7%	39.3%	40.8%	43.4%	43.0%

This week's drop of £10 millions in public deposits still leaves them on the high side compared with September, when they averaged only £16 millions. Bankers' deposits have only risen by £5.1 millions, this smaller increase being partly explained by the week's currency withdrawals by the public.

THE STOCK EXCHANGE

ARGENTINE RAILWAY PROSPECTS

FOR some months the best asset which the Argentine railway market has enjoyed has been its lively hope of recovery to come. Of all industrial equities, those of the railways, with their substantial *corpus* of fixed charges, are most responsive to advancing earnings. But it cannot yet be said that any appreciable improvement is reflected in the accounts of the Argentine systems which have been published this month. The Central Argentine report has not yet appeared, but the B.A. Great Southern and B.A. and Pacific show reduced operating profits, and the B.A. Western a very small increase.

The Argentine Republic has just passed through one of the least fortunate years in its agricultural history. Failure of the fine cereals crops has checked a recovery which had been reflected in the railways' peso receipts in earlier years, and this experience has been reflected in every branch of railway operation. On the B.A. Great Southern, indeed, receipts from fine grains fell last year by no less than 40 per cent., from £2,496,457 to £1,505,269, and but for the improvement in certain other classes of goods and in livestock, the full force of this loss would have fallen on total operating receipts. In addition, earnings from wharves were reduced by almost one-half. Passenger traffics, which continue to be affected by road competition, particularly on the suburban routes, declined by 5½ per cent. Last year's fall in earnings, in short, was mainly due to natural factors outside the control even of the most competent railway administrators. It could not be offset, moreover, by a corresponding reduction in operating costs. The railways have already carried the process of "pruning" costs to the limit of practicability. Many elements in their total expenses bill have a more or less "fixed" character; in particular, they are still debarred from varying their labour forces to correspond with the demands of traffic.

The effect of these conditions may be seen in the following table, which compares the main heads of receipts and expenditure and the volume of traffics for the past year with those of 1934-35 and of the pre-depression year 1928-29:—

WORKING RECEIPTS AND EXPENSES				
Year to June 30, 1936	B.A. Gt. Southern	B.A. Western	B.A. and Pacific

{ 1928-29	- 3.8%	-20.6%	-26.6%	

All three lines showed a further reduction in passenger receipts, although the average fare per passenger was slightly higher in each case. Compared with 1928-29, the Southern has lost 20 per cent. of its passenger revenues, the Western 36 per cent. and the Pacific as much as 46 per

cent. This persistent loss of revenue is due in no inconsiderable part to the same factor which affected British railway revenues a few years ago. Road competition in the Argentine is still extending, and the companies have cut their rates severely, both for short suburban and long distance travel. Their policy is re-attracting a considerable volume of traffic, but can hardly do more than maintain the existing level of revenue.

The recent trend of goods and livestock receipts suggests the need for differentiation, on the investor's part, between the position of individual railway systems in a group subject to the same general problems. B.A. Great Southern is a fine cereals line; in 1934-35, with a more normal harvest, as much as 12½ per cent. of its gross receipts were derived from wheat alone. B.A. Western is substantially interested in cereals, but regularly obtains well over 20 per cent. of its revenues from livestock shipments. Last year, indeed, the proportion was as high as 23.4 per cent. With its moderate equity in the maize business (in which the B.A. Great Southern has no share), the Western has achieved results which are, at least, as good as investors could expect. B.A. and Pacific has an "all-round" distribution of traffics between cereals, maize and livestock, and its receipts from the wine traffic (which accounted for 37 per cent. of its total goods takings last year) showed a further advance after the gratifying recovery of the preceding year. This company consequently produced the best percentage increase in gross traffic receipts last year—though the rise, in fact, was limited to 4.6 per cent.

Before trying to assess the effect of any potential future recovery in terms of dividends, investors may be advised to examine the cost side of the Argentine railway equation, whose component items are set out in the table above. The following figures show total working expenses, changes in net receipts and proportionate earnings on different classes of securities:—

* After adding other income and deducting other expenses and exchange losses.

Responsible spokesmen for the railway companies—for example, the Director-General of the B.A. Southern and Western companies in his comprehensive reports—make no attempt to gloss over the problem of future expenditure. It is clear that the larder is bare of further major retrenchment measures. Substantial sums are now required

for current maintenance, in the narrow sense, quite apart from renewals. B.A. Great Southern spent 4.3 per cent. more last year for vehicle maintenance, although—by one of the few favourable consequences of the drought—it was able to effect further savings in permanent way costs. Running expenses, both on the Southern and the Western, were only slightly changed. This relative stability, however, conceals an effective saving, since no deductions were made from wages last year, whereas for three months of the preceding year they were subjected to a cut of 5 per cent. Maintenance is not the least pressing problem of the B.A. and Pacific, and the company is facing it on the lines suggested in our article of July 18th last, when we first reviewed the past year's traffics. Of an increase in working expenses totalling £508,450, no less than £326,000 is attributable to expenditure on renewals and provision for deferred renewals, spread fairly evenly between permanent way, locomotives and goods vehicles. Capable managements may still find small economies in running and workshops costs; but really substantial savings in expenditure would seem to be effectively precluded, on the one hand, by the inflexible labour policy which the railways are compelled to follow, and, on the other, by the demands of maintenance and adequate renewals reserves. Who, with the British railways' experience in mind, would rule out the probability of pressure for increased wages if traffics improved?

The past year's experience, however, has revealed one satisfactory feature. Since last January the Argentine authorities have allowed the railways to make remittances at a rate only 5 per cent. above the official buying figure, and exchange losses, consequently, have been substantially reduced on all the lines. The figures are set out in the following table:—

EXCHANGE LOSSES				
Year to June 30, 1936	B.A. Great Southern	B.A. Western	B.A. and Pacific	
Loss on remittances.....	1,364,657	330,023	985,586

{ 1928-29	Nil	Nil	Nil	
Total exchange losses.....	1,173,982	273,755	710,059	
Corresponding figures for { 1934-35	1,552,722	310,544	803,061	
{ 1928-29	27,072	14,404	Nil	

The railways have taken credit for amounts released from earlier provisions against the depreciation of floating assets, and, altogether, have obtained satisfactory exchange savings. The agreement, however, is due to expire at the end of the calendar year 1936. It is, therefore, impossible to judge the extent of any potential savings on exchange during the current railway year.

What of the outlook? The year 1936-37 will certainly be eventful, and may be decisive from the viewpoint of the Argentine railway investor. The market, whose short-term movements witness its perennial ability to find hope and reassurance in a difficult situation, is already discounting the probability of better cereals traffics. It would be cruel, indeed, if Nature were to repeat last year's unkindnesses. But her favours cannot be reflected in railway receipts until the second half of the financial year. For the time being, receipts are still affected by the small carry-over from the last harvest. Can the railways look for expanding revenues in other directions? They are fighting road competition with the only weapon which the prolonged delay in passing the comprehensive Transport Co-ordination Bill has left them. But will fare reductions do more than maintain passenger receipts? British experience, at any rate, suggests that any more substantial result is unlikely. Again, the improvement in the livestock traffics of the three lines brought a welcome addition to their receipts last year. But can investors ignore the long-term repercussions of British agricultural policy, not on these receipts alone, but on the level of prosperity of Argentina's whole economy? This question, which closely concerns all the railways, is particularly relevant to the B.A. Western.

British investors will have every sympathy with the Argentine Government if it finds itself torn between the

desire to make maximum concessions to foreign railway capital and the necessity to "retrench" owing to a reduced balance of payments. In the last resort, Argentina's economic progress will be determined largely by Great Britain's trade policy. On the other hand, it may be questioned whether some of the more extreme political propagandists in Argentina do not greatly underrate the decisive contribution which the railways have made to the Republic's past development. Recognition of this fact might be appropriately expressed by the passage of the Transport Co-ordination Bill, which is long overdue.

If, therefore, some improvement in the short-term prospect seems apparent, the companies are still faced with all the problems which have been inherited from earlier years. A certain scepticism is therefore permissible over the present market value of some of the marginal preference stocks:—

Sir Follett Holt and Viscount St. Davids assured their stockholders this week that prospects were more promising for the current year. No one, indeed, could legislate for a longer period. And the ordinary stocks, alas, are still far from the Promised Land. Under the bludgeonings of the last few years they have become of interest mainly to the option-money speculator, and even his experience has not been happy.

INVESTMENT NOTES

"Policy" and Gilt-Edged Issues.—In the season of sere and yellow leaf, discussion in the City of London turns inevitably to the prospect of a Treasury issue, for the last few weeks of the year have more than once been the chosen time for a major operation. If any such event is, indeed, in prospect, the recent weakening of the home corporation issue market is untimely. At the end of September, after the market had had two months' respite from major issues, the London County Council issued a £10 millions loan of which as much as £6,100,000 was new money. The response was gratifying enough at the time, but the heavy meal appears to have taken the edge off the investor's appetite. Early in October, Manchester Corporation issued £5,000,000 to repay short loans, and the authorities took the opportunity to step up the issue price of the invariable 3 per cent. stock from 99 in the L.C.C.'s case to 90½ in that of Manchester, and to lengthen the "life" from 20-25 years in the one case to 22-27 years in the other. Manchester, apparently, was designed to serve as a "new model," for Bristol subsequently offered £3,000,000 and Dumfries County £1,200,000 on the same terms. These issues were followed by an offer of £1,500,000 by Aberdeen, with a maximum "life" of 27, but a minimum of only 17 years. The lists remained open for some hours, and the issue was barely covered, though underwriters were relieved. All the four October scrips are now standing a little on the wrong side of their issue price. The authorities would appear to be faced with the alter-

native either of giving the market another "rest," or of floating the next batch of corporation offers on rather more favourable terms to subscribers. Meanwhile, they have "recommended" the same terms for a £1,500,000 issue on behalf of the borough of Leicester, although its reception can hardly be generous. Even those who sympathise with the Treasury's declared policy of maintaining low interest rates may question what good purpose is served by the continuance of existing tactics in the new issue market. A series of advances and retreats, punctuated by intervals of "rest," have left the market, on balance, less favourable to borrowers than at the beginning of this year, when 3 per cent. Corporation issues were being made at 101. There is, of course, a minimum of investment money which must be placed on almost any terms, and by making the intervals between each series of issue sufficiently long the authorities can screw up rates and secure a temporarily satisfactory response. But the value of such a result as a guide to the probable reception of a Treasury offering on the grand scale is difficult to perceive. And in the meantime the paradox remains that, with interest levels at almost the lowest point for a generation, gilt-edged borrowers are raising less capital in the market than they did a few years ago.

* * *

"London Curb Exchange."—A statement has been issued this week by a company registered last August under the style "London Curb Exchange, Limited," with a nominal capital of £100. The company is about to increase its capital to £63,000, in order to acquire premises in the City of London (at an address in close proximity to the Stock Exchange), where it will establish an exchange with two purposes. The first will be to provide a centre for the sale and purchase of securities which "owing to the absence of a free market are difficult to deal in at reasonable prices"; and the second, "to enable companies at present unlisted to raise capital." Thus, it is suggested, London will have an institution fulfilling the functions of the New York Curb Exchange and the Paris Coubisse. All members will be shareholders, and "merchant bankers, finance houses, trusts and the like" will be available for membership. Advertising and circularising will be allowed, but members will be strictly accountable to an elected committee for all statements. Detailed comment on the aims, functions and desirability of the new institution will be relevant only when matters have reached the stage of accomplished fact. Of the three present directors, Mr Frederick Walter Barker would appear, by current works of reference, to be a director of Mining Securities, Limited, which is described in the 1936 Edition of the *Stock Exchange Official Year Book* as a company registered in 1934 to acquire certain mining rights, with an authorised capital of £45,000 and an issued capital of £12,100 10s. The *Directory of Directors* gives no particulars of the remaining directors, Lieut.-Colonel Ewen Allan Cameron of Landavra, and Mr Gerald Hyde Villiers. Presumably, when the promised prospectus is published in the next few weeks, the *raison d'être* of the new institution will be more fully set out. At the moment, it is difficult to appreciate the exact nature of the wares which will be dealt in on the new exchange. The London Stock Exchange, unlike some overseas Bourses, already endeavours to make its dealings comprehensive. Its Supplementary List, for example, contains the names of numerous new and relatively small companies which have obtained "permission to deal"; and some investors have tended, rightly or wrongly, to draw the conclusion that where permission has been refused, the Committee has regarded its action as in the interests of those likely to deal. The scope for the new exchange will doubtless be described, in due course, with considerable detail; for, *prima facie*, it would seem to be the crux of the matter.

* * *

Alberta's Credit.—If the Province of Alberta continues in her present path, it will soon be necessary to speak of her credit in the past tense. Earlier this month the report of an investigation into Alberta's economic position was published. The two experts responsible concluded

that the Province is "economically and fiscally solvent," that it can pay all its interest obligations in full, and can reasonably expect surpluses in the near future. The committee of investigation was prepared to recommend temporary suspension of sinking fund operations to ease the burden of the debt service, but declared unhesitatingly that the Budget could be balanced without imposing new taxation. The Province, however, is now making interest offers *à la grecque*. It is proposed, in other words, that holders of the 4½ per cent. registered stock, 1943, should accept only half of the coupon due on November 1st, entering into a formal agreement to take this amount in full discharge of this and all future sums due. The strong Protective Committee which has been formed in London rightly recommends that stockholders should refuse to sign away half their rights in perpetuity on the grounds of temporary inability—or reluctance—to pay the interest due. Alberta has already defaulted on the principal of certain dollar issues, and a further lapse from grace was understood to be imminent as we went to press, for the Dominion Government, lacking the statutory authority and probably the inclination to make advances for debt repayment, has not responded to Mr Aberhart's appeal for funds to meet a \$1½ million obligation which matures on November 1st. The Bank of Canada has also refused to lend \$3,500,000 to the Province for bond redemption purposes. This is, in any case, a correct attitude, but unfortunately Alberta's policy is already having regrettable, though inevitable, repercussions on Canadian credit as a whole.

* * *

Actuaries' Investment Index.—This week's calculations of the Actuaries' Investment Index enable investors to summarise the net movements of an exciting month. The industrial markets were in a state of boom before October was a week old, and during the second week, the Morris placing diverted the energy which had previously been spread over the industrial markets into a narrow and congested channel. Although there has been a considerable amount of technical correction in certain sections of the industrial market, the general level of quotations has resisted profit-taking attack. Thus, the average level of 178 ordinary shares in the Index rose during the month from 88.2 to 90.4, with a corresponding fall in the yield figures from 3.62 to 3.54 per cent. A year ago, the Index stood at 76.5, and the average yield at 3.83 per cent. (December 31, 1928=100.) The following table shows the movements in selected groups, and in the leading fixed-interest classes:—

Group (and No. of Securities)	Prices (Dec. 31, 1928 = 100)			Yield (%)		
	Year Ago (Oct. 29, 1935)	Month Ago (Sept. 29, 1936)	This Week (Oct. 27, 1936)	Year Ago (Oct. 29, 1935)	Month Ago (Sept. 29, 1936)	This Week (Oct. 27, 1936)
Fixed Interest:						
2½% Consols	147.3	150.9	151.0	3.03	2.85	2.85
Misc. Indust. Debts. (17)	124.5	125.6	126.2	3.90	3.93	3.91
Misc. Indust. Preference (44)	117.7	122.8	123.0	4.37	4.18	4.19
Ordinary:						
Building Materials (5)	91.3	107.1	104.7	4.47	4.64	4.79
Cotton (6)	49.9	42.3	47.5	2.21	2.09	2.01
Iron and Steel (12)	64.2	80.1	84.1	3.32	3.78	3.63
Motors (5)	53.3	58.1	61.2	3.91	4.07	3.90
Oil (5)	66.3	90.4	93.3	3.38	3.01	2.91
Electric Supplies (10)	121.0	150.2	156.4	4.23	3.61	3.44
Shipping (4)	15.6	21.9	25.1	...	0.55	0.48

The only significant fall during the month is in building materials shares, which have been particularly affected by poor "plans approved" figures for the second month in succession. The electrical equipment group has again been active, steel shares have attracted more interest than in September, and motor issues have been favoured by the Annual Show and much good company news. The depressed groups—cotton and shipping—have made further progress. Of the yield figures, two things may be said. The margin between industrial debentures and preference issues yields remain sub-normal, while the general return on ordinary shares is discounting favours to come more confidently than at any time since the pre-dividend season of last February.

COMPANY NOTES

London Transport Accounts.—Investors who had credited the Board with strategic motives for the mere maintenance of the 4 per cent. interest on the "C" stock will find little to confirm their theory in the third London Transport report. The increase in traffic receipts, from £29,016,085 to £29,724,723, is short of the Board's anticipations, and although the average receipt per passenger has increased as a result of longer journeys, the report definitely records a decline in the rate of traffic expansion. Operating expenses, however, provide the Board—and "C" stockholder—with the chief problem. They have increased by almost exactly £1,000,000 to £23,515,821, a growth of 4½ per cent. Of this increase, £707,307 is attributable to wage adjustments and to increased staff (with £155,000 per annum still to accrue), £182,934 to electric current and fuel (excluding duty), £113,409 to stores and £124,725 to taxation. After charging £2,300,000 for renewals (against £2,526,000 for the previous year), crediting some £63,000 more from Other Receipts and charging nearly £50,000 less for miscellaneous expenses, the amount available for appropriation (including £28,632 from the "C" stock interest fund) is increased from £5,126,271 to £5,202,671. The following table gives an analysis of revenue and its appropriation:—

	Years to June 30th		
	1934	1935	1936
Revenue:			
Total Traffic Receipts	27,379,351	29,016,085	29,724,723
Working and general expenses	21,583,744	22,515,889	23,515,821
Provision for renewals	2,020,500	2,526,000	2,300,000
Net traffic receipts	3,775,107	3,974,196	3,908,902
Other receipts	1,520,408	1,500,014	1,563,214
Miscellaneous charges	Dr. 338,824	Dr. 347,939	Dr. 298,077
Available for appropriation	4,956,691	5,126,271	£5,202,671
Appropriation:			
Tramway debt fund and interest	35,895	26,158	20,337
"A" stock interest	2,891,537†	2,893,169	2,894,955
"B" stock interest	1,181,694‡	1,183,506	1,185,492
"C" stock interest	874,664‡	1,015,192	1,027,952
Ditto rate %	3½	4	4
Payments under guarantee, etc.	21,275	8,246	43,296
	4,956,691	5,126,271	£5,202,671

Note: These figures are not strictly comparable owing to the acquisition of undertakings during the period.

† Includes £28,632 transferred from "C" stock interest fund.
‡ Less £48,374 charged to capital cost of new works. § Includes £30,639 transferred to "C" stock interest fund, being surplus earned over 4 per cent.

Of the fuller import of these figures, we hope to comment on a later occasion. For the present, the investor's attention may be directed to three main features. First, the 4 per cent. "C" stock interest has been earned with no more than £30,639 to spare, representing 0.12 per cent. Secondly, the renewals provision has been reduced by £226,000 to the conveniently round figure of £2,300,000, fortunately, and indeed inevitably, for the maintenance of the "C" stock payment. But there are a considerable number of miscellaneous road vehicles still to be withdrawn from service, and the replacement of rolling stock must be above normal until it has finally been standardised. Finally, the Board calls attention to the growing burden of taxation, including under this heading local rates, freight rebates, licensed vehicle duty and other licences, and duties on petrol and other fuel, but excluding income tax. The total cost of these items—£2,665,829—is equivalent to 10.37 per cent. on the "C" stock, to 8.52 per cent. of total receipts and to 10.33 of total working expenses. Of the total, as much as 75 per cent. is attributable to licence and fuel duties on bus and coach operation. The report, in sum, gives no clear indication that the Board is within sight of earning the further amount of £355,000 necessary to meet the standard rate of 5½ per cent., assuming that the present renewal allocations are maintained. This problem the Board must solve within the next twenty months, if it is not to invite the sanctions of "receivership"—whatever that may mean. The "C" stock has fallen steadily from a high level of 112½ this year to par.

FOR SECURITY: STABILITY: STRENGTH

SECURITY FIRST TRUST

spreads your investment over the shares or stock of 23 first-class British companies, all sound dividend payers and notable for their very strong financial and trading positions.

THE COMPANIES ARE:

London Midland & Scottish Railway Co.	Bass, Ratcliff & Gretton Ltd.
London & North Eastern Railway Co.	Distillers Co., Ltd.
Allied Ironfounders Ltd.	Imperial Tobacco Co. (G.B. & I.) Ltd.
Powell Duffryn Steam Coal Co., Ltd.	Geduld Proprietary Mines, Ltd.
Richard Thomas & Co., Ltd.	Government Gold Mining Areas (Modderfontein) Cons., Ltd.

	Daily Mirror Newspapers, Ltd.

LLOYDS BANK LIMITED are Custodian Trustees of the underlying securities. They collect the dividends thereon and distribute the income to the Sub-Unit Holders on 1st February and 1st August each year.

YIELD: Based on the cash distributions from the investments during the past year, the yield at the present price is approximately 5 per cent. Proceeds of the sale of bonus shares and of new issue rights are not taken into account. Large capital bonuses are added to the capital of the Trust; fractions of bonus shares and of new issue rights are sold and the proceeds are distributed as capital. All management charges have been allowed for. With a few exceptions, the underlying securities consist of ordinary shares, distributions on which are subject to fluctuation.

Investments in the Trust can be made through any Stockbroker or Bank. Applications for sub-units will only be accepted on the basis of the information contained in the descriptive Booklet EC2, which can be obtained free of charge from the Managers.

Gaumont - British Accounts.—Gaumont - British shareholders, long since promised a consolidated statement of the Corporation's position, have again received a report which for obscurity can have few rivals. So far as the position is ascertainable from the figures submitted, it appears far from favourable. No investor can interpret the inward meaning of a fall in "Profit, including income from investments, etc.," from £720,483 to £715,514. This amount is distributed between depreciation, debenture interest and preference dividend, and the resulting earnings of £196,756 (8.6 per cent.), against £234,146, on the ordinary capital have a purely formal significance. More important is the transfer of £200,000 to a special reserve against films produced for the American market, and the "substantial fall" in the profits of Gaumont-British Distributors, whose function is to bear the cost of all films completed by the Corporation. It is, however, on the balance sheet that the attention of shareholders will be largely concentrated. Of total assets of £14,219,752, no less than 75½ per cent. is represented by interests in subsidiaries. In the following table we show the growth in these items in recent years, and the methods of its finance:—

	Totals at March 31st,			
	1931	1934	1935	1936
Assets:				
Advances to and sums due from subsidiaries	590,981	750,197	812,951	1,050,878
Shares in subsidiaries	5,763,383	5,185,410	5,288,407	5,478,871
Debentures of subsidiaries	12,970	4,313,847	4,270,710	4,224,769
Cash	169,418	1,197	1,327	1,145
Liabilities:				
Debenture stock	966,900	5,000,000	5,108,580	5,036,718
Bank overdraft	270,000	133,172	667,537	1,149,785
Preference capital	1,250,000	3,250,000	3,250,000	3,250,000
Ordinary capital	2,500,000	3,000,000	3,000,000	3,000,000
General reserve	2,500,000	500,000	500,000	500,000

The rising demands of subsidiary companies have been met, first by a substantial increase in the prior charges of the parent concern (financed on cheaper terms than those available to the constituent companies) and more recently by resort to the Corporation's bankers. An increase of £1 million in the bank overdraft during the past two years has been accompanied by an expansion in subsidiary interests of roughly half that sum, increased amounts for stocks and debtors making up most of the balance. Shareholders will certainly welcome any detailed exegesis of the consequences of these developments which the chairman can see his way to make at next Monday's meeting. In the meantime, the 10s. shares at 10s. 6d. are a speculative holding.

Mitchells and Butlers.—The market was correct in anticipating a significant improvement in the earnings of this prosperous Midlands brewery, but it was guilty of over-estimating the directors' willingness to distribute them. A mere half of one per cent. tax free in extra dividend for a year of record prosperity in the Birmingham district does indeed seem somewhat scant, but the report shows how comfortably the 17½ per cent. tax free distribution has been earned. Total profits are nearly £45,000 higher at £719,119, and thanks to the low gearing of the ordinary shares the sum of £612,895 is available for their dividend, compared with £566,842 for the previous year. These earnings, as the following table shows, are equivalent to 20.7 per cent. tax free:—

	15 months to Sept. 30, 1934	Years to September 30, 1935	1936
Balance from trading account, after depreciation, tax, etc.	824,512	674,438	719,119
Directors' fees	2,500	2,411	2,500
Interest	36,965	29,486	29,246
Preference and max. ordinary divs. ...	93,402	75,699	74,478
Ordinary shares (tax free):—			
Earned	691,645	566,842	612,895
Paid	555,056	503,251	518,052
Earned %	18.7*	19.1	20.7
Paid %	15*	17	17½
Reserve	75,000	60,000	65,000
Carried forward	549,775†	553,366	583,209

* Equivalent per annum, tax free. † Includes £9,077 surplus on realisation of investments.

This year's conservative distribution cannot be attributed directly to the programme of modernisation in which the company is still engaged. Profits, in fact, are struck after providing for depreciation, and in any case the fixed assets have again increased this year from £7,357,000 to £7,579,000. The doubling of the amount carried forward during the last decade and the increase in the general reserve from £1,350,000 to £1,550,000 during the past four years—they amount together to 72 per cent. of the ordinary capital—reveals the impressive strength of the undertaking. Shareholders may reflect that this has been achieved by taking longer views than the market sometimes permits itself. The shares rose to 113s. on the publication of the report, and yield 4 2s. 6d. on a gross basis.

"Re-Armament Boom Finance."—In a Leading Article under this heading which appeared on page 71 of the *Economist* of October 10, 1936, we included Steel Barrel Scammells in a list of offers made this year by twenty companies whose activities were related to the Government's defence programme either directly or by implication. We stated, further, that in a number of border-line cases we had regarded the prominent display of a claim to inclusion among War Department contractors as a deciding factor. Under this definition we based the inclusion of the company on the fact that the "particulars" given in the offer for sale on its behalf stated that the Steel Barrel Company, Limited (one of the businesses taken over) was "one of the largest and most complete organisations engaged in . . . Naval and Air armaments . . ." and that the company had in hand considerable orders for Air Ministry, Admiralty and various well-known concerns. As regards other constituent businesses, it was disclosed that G. Scammell and Nephew, Ltd., had in hand a considerable Air Ministry contract for metal bodies, and that further orders were anticipated; further, Carrimore Six Wheelers, Ltd., had recently executed orders for the Air Ministry. We are now officially informed by the Steel Barrel Scammells Company that although it has a large volume of Government orders in hand at present, these are only a small percentage of the combined total production. In the case of the road wagon and storage tanks and other steel structures manufactured by the Steel Barrel Company, the percentage of Government business is stated to be very small indeed. The sales of Carrimore vehicles are almost entirely confined to business firms, and Government orders form only a negligible percentage of the volume of the output. G. Scammell and Nephew, we are informed, has in hand a large order for the Air Ministry for winches in connection with the scheme for a rope barrage defence for important towns; otherwise its trade continues in precisely the same manner as before the air armament programme was instituted. The reason for our inclusion of Steel Barrel Scammells in our list will be apparent in view of the particulars in the offer for sale. The facts which we are now able to publish with the company's authority will be of assistance, however, to investors who desire to assess the contribution which "armament" orders may make to the company's profits.

Motor Industry's Outlook.—The motor industry has been much in the news during the past month, which has included the Morris Motors ordinary share "placing," a major controversy of State over the relations between the largest British manufacturer and the Air Ministry, and, finally, an annual exhibition which is stated to have produced orders of £88 millions. Against such a background, the annual meetings of the Standard Motor Company and of Joseph Lucas have unusual interest. The Standard Motor Company, by general consent, has been one of the recent "winners" in the strenuous race for public favour. Its productive capacity is now in process of extension. Last year, in fact, some £156,000 was expended on new buildings and £188,000 on new plant and equipment. The company increased its turnover by 50 per cent., and even secured an increase of upwards of 35 per cent. in its export trade. To investors in motor shares generally, however,

the most significant part of the chairman's speech at last Tuesday's meeting was undoubtedly his clear statement of the relations between the company and the Government. The company is erecting a factory on its land, for the production of aero engine components, but the Government will bear the whole cost, and the company will merely manage the factory in return for a management fee. This, declared the chairman, "is not a scheme from which any large profits will accrue to the company." That is a clear statement, which leaves investors no room for optimistic misapprehension. The chairman of Joseph Lucas, at the meeting held on the same day, dwelt on the company's share, as the maker of electrical and other accessories, in the motor trade's prosperity. There were, however, he declared, three clouds on the horizon. The first was the international situation; the second, the rise in raw material prices; and the third increased labour costs. The company has been carrying out a comprehensive scheme of internal reorganisation, and the results of many years' effort have come at an opportune moment. Nevertheless, the tenor of the speech would seem to be that the company's ability to maintain its rising profits depends on two factors—the maintenance of the demand for motor vehicles at its present high level and the securing of further "economy through organisation"—which tends to become more difficult the further the company's schemes progress. On the "armament" aspect, the chairman was as specific as his colleague of the Standard Motor Company. Although all the resources of Joseph Lucas are available if the Government requires them, "we wish to be left to develop our civil business, and are not competing for armament work of any kind."

Third Quarter Earnings in America.—The financial results now reaching this country of American company earnings during the third quarter of the year, provide solid foundations for the recovery in share prices on Wall Street which has been apparent in recent weeks. It is not yet possible to make a very comprehensive survey, but an analysis of the earnings declared by some 50 companies show a combined increase of just over 60 per cent. compared with the third quarter of last year. This growth in earnings, combined with the new tax on undistributed surplus, has produced a number of dividend increases, or has enabled arrears to be paid off. Steel companies have naturally been prominent in this direction. In the third quarter of last year the United States Steel Corporation reported a net loss, before preferred dividends, of \$1,305,205; this year 84c. per common share were earned, after paying the usual quarterly preferred dividend of \$1.75 and \$2 toward preferred arrears, which now amount to \$16.25 per share. The preferred dividend was stepped up to \$1.00 in the second quarter of the year, after running at 50c. a quarter since 1933. Inland Steel report earnings of \$2.52 per share in the third quarter of 1936, against \$1.25 last year; and Youngstown Sheet and Tube show a net profit of \$2,360,000, against \$575,000. A robust improvement in September quarter profits is also reported by the General Motors Corporation. Net profit of 75c. per share this year compares with 66c. last year, on net sales of \$261,233,000 this year and \$236,642,000 last. The flow of company reports on such lines has naturally encouraged the Stock Exchange, and most prices were higher this week. The prospects appear to be bright, both on the present level of earnings, and on current forecasts for the future. The Chairman of U.S. Steel reported that new business in the fourth quarter was running at third quarter level, and *Iron Age* estimates that steel mill activity may run at its present level through the rest of the year, that prices may rise early next year, and that there will be a new wave of anticipatory buying orders.

Phillips' Lamps Setback.—The slump in Phillips' Lamps ordinary shares on the Amsterdam market (on which we commented in our issue of August 15th, page 317) correctly anticipated the very disturbing fall in profits which is revealed by the full accounts for the year to April last. The dividend has been reduced from 11 to 6 per cent.; net trading profits have fallen from 9,271,237 florins

to 4,063,910 florins; no special provisions against participations have been made; and no extra staff remuneration is payable. The effect of the fall in profits on the cumulative preference and ordinary shareholders is evident from the following table:—

	(In thousands of Florins)		
	16 mos. to April, 1934	1935	Years to April 1936
Net profit	9,700	9,271	4,064
Depreciation, and items written off	1,100	1,300	Nil
Staff remuneration, etc.	914	1,476	Nil
Preference divs.	1,561	1,108	949
Earned for ordinary	6,125	5,387	3,115
Paid	5,744	5,744	3,133
Paid %	11*	11	6
Carried forward	381	24	6

* For 16 months.

The reasons for this disturbing fall in earnings are more than a twice-told tale. The company has been increasingly compelled to divert its manufacturing operations in other countries owing to tariffs, while currency disturbance has involved considerable expense in covering exchange risks and providing for blocked currency losses. Since, however, the report claims that total turnover slightly increased, the reduction in profit-margins on the company's chief manufactures—lamps and wireless receivers—must evidently have been very considerable. Average sales proceeds per article, indeed, have fallen further since the end of the financial year, and the increase in total cash turnover during the first four months of the current year is therefore anything but a conclusive indication of earnings prospects. The directors rightly insist upon the need for caution in making estimates of the course of the year's business at this stage, although they are broadly appreciative of the improved outlook which the devaluation of the guilder has produced—or may produce. The shares, which opened this year as high as 231½ in Amsterdam, and have been as low as 155, have recently recovered to 248½. They are clearly not undervalued if the directors' caution proves justified.

Imperial Airways Profits.—The preliminary announcement issued by Imperial Airways this week gives the bare details of the results for the year to March last. After charging £199,328 for obsolescence, the net profit amounts to £140,705. The latter figure apparently compares with £133,769 for the previous year, when £192,960 was charged for obsolescence. The ordinary dividend has been raised by a further 1 per cent. to 8 per cent., including 2 per cent. as "bonus," and a slightly increased amount is carried forward. It is impossible to comment upon these figures in detail until the full report is published. Meanwhile, investors may consider two factors affecting Imperial Airways prospects—the continued dependence of dividends upon the Government subsidy, and the intention to raise new money. At 51s. 10½d. the £1 shares appear to be discounting both possibilities fairly liberally, for the current yield is no higher than £3 4s. per cent.

Sudan Plantations Progress.—The substantial increase in the profits of this Syndicate from £457,300 to £589,509 is the more satisfactory in view of the decline in the cotton crop from 166,325 to 157,668 bales. These profits include a dividend of £13,603 received from the Kassala Cotton subsidiary, which has paid a 10 per cent. dividend on its reorganised capital out of profits increased by £21,443 to £90,470. The area operated by the Kassala company yielded 3.8 kantars per feddan, compared with 5.5 for the previous period, while in the Gezira area the yield was 3.7 kantars against 4.3. The Sudan Plantations pays a 10 per cent. dividend, compared with 8 per cent., which is comfortably covered by earnings, as the following table shows:—

	Years ended June 30.		
	1934	1935	1936
Profits.....	355,697*	457,300	589,509
General expenses	180,014	189,436	191,538
Depreciation and Gezira reserve	38,099	60,190	72,018
Staff funds and taxes.....	...	...	40,681
Shares—			
<i>Earned</i>	137,584	207,674	285,272
<i>Paid</i>	135,000	198,000	247,500
<i>Earned %</i>	6.1	8.5	12.0
<i>Paid %</i>	6	8	10

Carry forward..... 220,471 223,851† 374,168‡
 * Includes £3,350 profit on sale of investments. † After placing £6,294 to general reserve, in addition to £13,706 share premiums transferred direct. ‡ After crediting £112,545 reserve against advances to tenants.

The Gezira reserve allocation has been raised to £60,000, accompanied by a small increase in depreciation allowance, while a substantial provision for tax has been made with £33,681. Although the margin between the amounts earned and paid on the shares is considerably wider than for the previous three years, increasing the balance forward by £37,772, the large sum of £112,545 has been released from the reserve against tenants and also credited to the carry-forward. The balance sheet reveals important changes in the financial position. Cotton stock stands at £2,934,997 against £2,487,580, and debtors of £91,519 and creditors of £1,362,940 compare with £22,139 and £790,347 respectively. The Kassala balance sheet also shows large changes, mainly arising from repayment of expenditure on the Gash Delta by the Sudan Government. The current prospects of the cotton market account for the relatively low yield of £4 8s. per cent. on Sudan Plantations £1 shares at 45s. 6d.

Copper Share Prospects.—Investors who have an equity in copper and rubber have been well served by the respective restriction authorities this week. As we show in Notes on page 205, the commodity markets interpreted the two quota announcements bullishly. Copper shareholders, of course, have become familiarised with the metal market's eager absorption of increasing supplies. Of the copper share position, there is no reason to depart from the encouraging view which has been taken here in recent weeks. It is, indeed, possible to obtain some quantitative indication of earnings of the leading Rhodesian producers. There are, of course, certain difficulties, particularly in computing the Rhokana estimates, owing to the Corporation's

cobalt production. Again, Mufulira, in which Rhodesian Selection Trust is interested to the extent of 64.07 per cent. and Rhokana to the extent of 32.303 per cent., is now well inside the zone of high earnings, although investors are perforce ignorant of the directors' probable distribution policy. Assuming that production quotas remain unchanged for the remainder of the year—an assumption which looks distinctly conservative at the moment—and making a reasonable assessment of working costs, it appears that Rhokana would earn some 52 per cent. on its ordinary capital, including its due share of Mufulira earnings, provided that copper averages £40 per ton during the current year, and that electrolytic prices maintain their present differential against blister. Each £1 increase in the average price represents approximately 3 per cent. for the ordinary shares. For Roan Antelope, the calculation can be put forward more confidently. Beginning with an average price of £40 per ton, prospective earnings amount to 65 per cent., and increase by about 4 per cent. for each £1 increase. Rhodesian Selection Trust, as participant in Mufulira, should earn about 11½ per cent. with copper at £40, and about 1 per cent. more for each £1 increase. These estimates, it should be emphasised, apply to the indicated production during the current year to June, 1937, and would be immediately changed if the 95 per cent. quota was altered. Taking a prospective average of £42 per ton for illustrative purposes, Rhokana £1 shares at 11½ would be on a potential earnings basis of about 5 per cent., Roan 5s. shares at 55s. 6d. might yield 6½ per cent. in earnings, while the estimated earnings return on R.S.T. 5s. shares at 21s. would be 3½ per cent. These calculations suggest that the market is steadfastly backing the long-term potentialities of Rhokana and Mufulira.

South African Manganese and the Investor.—Recently published official figures show that 26,240 tons of manganese ore were produced in the Union of South Africa last August, compared with only 9,710 tons in August, 1935. This sharp increase is the first tangible result of the reorganisation of the South African manganese industry during the second half of last year. By that reorganisation, which was fostered by Anglo-Transvaal Consolidated Investment Company of Johannesburg, the chief manganese properties of the Postmasburg and Kuruman districts were brought under the single control of Associated Manganese Mines of South Africa, Ltd. This company, which has now started production on a larger scale, has a capital of £450,000 divided into £350,000 in 5s. shares and £125,000 in 7 per cent. Cumulative 5s. Preference Shares. The shares have been quoted at Johannesburg since February, and it is expected that they will shortly be introduced to the London market. Apart from Anglo-Transvaal Consolidated Investment and Associated Manganese Mines of South Africa, Huelva Copper and Sulphur Mines also has a large equity in the South African manganese industry, since the Manganese Corporation (1929), Ltd., which is controlled by Huelva, receives from the Associated Manganese Mines a royalty on each ton of manganese ore sold as part consideration for its leases and plant. If the recent rise in South African manganese output is maintained, the Union will become one of the leading sources of manganese supplies within a few months. Although the South-African manganese ore is not of high grade, it is in keen demand for armament and construction purposes, and difficulties in marketing the rising production are not likely to arise. The known ore deposits are extensive, and will cover production for decades ahead.

North Broken Hill.—The cabled summary of results of this important base metal concern, writes our Mining correspondent, indicates that the increase in last year's profits arose mainly from the marked increase in metal prices. The quantity of material treated, however, was slightly higher than for the preceding year, and the contents showed a slight improvement at 15.26 per cent. lead, 11.89 per cent. zinc, and 9.80 ounces per ton silver. Last year's net profit amounted to £636,940, against £396,580, and dividends absorbed £490,000 compared with £280,000. Provision for taxes and royalties was naturally higher at £130,000, but depreciation reserve again received £30,000.

The balance of £549,280 carried forward shows an increase of £46,100 over the sum brought in. Surplus liquid assets on June 30th last, exclusive of shares in other companies, amounted to £1,006,300, compared with £935,080 twelve months previously. Ore reserves now total 4,750,000 tons, showing an expansion of 250,000 tons. The long-expected decision to split the shares from £1 to 5s. denomination will facilitate dealings. The current quotation is over £9—a high level for recent times. Transactions in lead and zinc are being well maintained at rising prices.

Other Company Results.—The results of 45 further companies are analysed on page 238. The net profits of *Gordon Selfridge Trust* are £73,419 against £43,721, owing to the receipt of a doubled dividend from the operating company. *Redpath Brown's* earnings amounting to £103,060 for a nine-month period, compared with £76,976 for a full year. The fall in *Henlys* profits from £42,916 to £38,297, with a halving of the dividend, is disappointing in view of the general expansion of motor sales. *S.S. Cars*, on the other hand, have earned £32,084 against £27,895. Among the week's best results are those of *O.K. Bazaars*; past records have been exceeded with profits of £201,462 (£58,669 more than for the previous year), the dividend being raised by 5 per cent., and the carry-forward by over £20,000. The *North British Rayon* report reveals further progress, with profits of £17,487 against £14,689. *Francois Cementation* have not maintained the improvement of the previous period, for the net profits are reduced to £25,567, against £34,036. *Herbert Morris* report an increase of 12½ per cent. in earnings, and have raised their dividend from 15 to 22½ per cent. tax free. Among four Trust results published, two show small declines in profits, but *Southern Stockholders*, in contrast, show an advance unusually high for investment trusts, for net revenue amounts to £41,143 against £30,376. The week's rubber company reports reveal rather irregular progress; the most important setback is that of *Tanjong Malim*, which, however, maintains the 3½ per cent. tax free dividend. *Killinghall*, on the other hand, have earned £18,064 against £11,722, while a more moderate recovery is shown by *Ledang Bahru*. *British Oxygen* maintains the interim dividend at 7 per cent., but the directors state that the results to date justify an increase.

Company Meetings of the Week.—On later pages of this issue will be found the reports of the following company meetings:—Buenos Ayres Great Southern Railway, Buenos Ayres and Pacific Railway, Assam Railways and Trading Company, El Oro Mining and Railway, New Modderfontein Gold Mining, Cam and Motor Gold Mining, Rhokana Corporation, Eaglehurst Rubber Estates, Genatosa, and Anglo-Continental Guano Works. At the Buenos Ayres Great Southern Railway meeting, Sir Follett Holt explained a large loss of direct revenue by the ruin of crops through drought, but considered that some progress had been made towards better results as the uncontrollable factors weighed less heavily. Mr Douglas Turner, at the Assam Railways and Trading meeting, discussed the competition by motor buses in the railway and by Bengal coal in the colliery businesses. The chairman, at the El Oro Mining and Railway meeting, pointed out the difficulty of making arrangements for the future owing to the impending labour law in Mexico. At the New Modderfontein Gold Mining meeting, Mr R. S. G. Stokes estimated that out of a fall of 15 per cent. in dividend declarations (after omitting non-recurrent allowances), 10 per cent. was due to the changed system of taxation and 5 per cent. to the lower grade of ore. Sir Archibald Mitchelson, at the Genatosa meeting, commented on the growing popularity of certain of the company's products. At the Anglo-Continental Guano Works meeting, he referred to a temporary solution of the problem arising from the conversion into superphosphate of large quantities of by-product sulphuric acid at the Avonmouth smelting works. At the B.A. and Pacific Railway meeting, Viscount St. Davids pointed out that interest arrears on the Pacific and Argentine Great Western companies had been paid off. Sir Auckland Geddes, at the Rhokana Corporation meeting, explained that the

greater operating profit was due to a higher price obtained for copper. At the Cam and Motor gold mining meeting, the chairman reported a decrease in working costs. Mr P. J. Burgess, at the Eaglehurst Rubber Estates meeting, ascribed the lower profits to the distribution of fixed charges over a smaller turnover.

THE WEEK IN THE MARKETS

THE STOCK EXCHANGE

TICKET	SETTLING DAYS	ACCOUNT
NOVEMBER 3		NOVEMBER 5

THE investment markets this week have abandoned their recent *bravura* for a more discretionary rôle. October, which opened in a condition of "near boom" has closed with a rather chastened appearance. The mid-monthly settlement was encountered fairly satisfactorily, but this week has witnessed a considerable wariness on the part of professional operators. What the carry-over will reveal must be left until the week-end has passed, but it is widely evident that the market's technical strength is much less solid, and the "Morris Settlement" does not promise to be entirely comfortable. And meanwhile there are considerable open profits whose holders may be awaiting the signal.

After a nervous opening, therefore, the markets never succeeded in regaining their stride. Even in the gilt-edged market, where the mid-week tone was rather better, the improvement was purely fractional. The market's hope of a corporation issue holiday was disappointed by the Leicester underwriting. Dominion issues were again firm.

The foreign bond market, however, lacked even the brief mid-week inspiration of gilt-edged. Argentine stocks were a little higher, anticipating success for the conversion issue, but Brazilian bonds remained heavy. Far-Eastern bonds have also been depressed, and the European group is still in the throes of political uncertainty, which the events of the week have done nothing to relieve.

Buying of home rail stocks was at first concentrated upon London Midland and Scottish and Great Western, but it was not maintained. In mid-week the whole market turned easier, discouraged by the traffics. London Transport "C" stock fell further in anticipation of the Board's accounts (analysed on page 221).

Argentine rail stocks (whose prospects are discussed at length on page 218) found no support. The B.A. Western accounts contained no surprises, nor did the moderately hopeful speeches at the B.A. Great Southern and B.A. and Pacific meetings, act as a stimulant, in the face of indifferent traffics.

The industrial market opened with a general display of irregularity, but in mid-week dealings conditions became brighter for a time. Steel shares were irregular at first, although particular features like Cammell Laird were to be found. In mid-week, Dorman Long were strongly supported, on trading estimates and reports of a new issue. B.S.A. fluctuated considerably after publication of the debenture scheme. Electrical equipment shares, led by Associated Electric, opened firmly, lost ground on Tuesday, and revived in mid-week. The recent dullness in the aircraft group was maintained until mid-week, when interest revived before the Secretary of State's announcement on Thursday. An easier tendency was also apparent among motor shares, owing to a considerable volume of profit-taking, but some of the shares worst affected—like Leyland and Standard—found renewed support at lower levels and recovered part of their losses.

Among breweries, Ansells were an outstanding feature, with repeated advances. The Mitchells and Butler dividend caused disappointment (the report is discussed on page 222), and Distillers weakened on profit-taking. Tobacco shares were mostly featureless, Carreras being more lively after early dullness. Store and catering shares made a mixed showing. Unilever were irregular, and Marks and Spencer slipped back slightly.

The Problem of the Foreign Exchanges

by L. L. B. ANGAS

This book goes right to the heart of one of the most crucial economic questions confronting the business-men and statesmen of our day.

Financial News: "Mr. Angas has written the most clear and searching criticism of the gold standard which I have ever read."
Journal of the British Institute of Bankers: "His summing up of the prerequisites of a successful functioning of a free gold standard is masterly."

Macmillan & Co., St. Martin's Street, W.C.2.

Price 61 net.

Most rayon issues at first lacked support, until mid-week, when Courtaulds advanced strongly. Other sections of the textile market were mainly dull. Among miscellaneous issues, building materials were generally weak, though Associated Portland Cement and Alpha Cement made up some part of their losses. London Brick were among the weaker shares. Other miscellaneous shares were inclined to sag, engineering components being exceptional. Two of the best features were British Thermostat and Radiation. Shipping prices made steady if unspectacular progress.

The oil shares market has been rather unsettled this week, and after their recent rapid rise, prices have been rather sensitive. The market was disappointed with the interim dividends declared by Anglo-Iranian and by V.O.C., which merely maintained the previous level against expectations of an increase. In mid-week there was heavy selling of Mexican Eagle, as the labour troubles do not appear to have been settled. By way of contrast, Royal Dutch attracted a good demand both from New York and from the Continent, and Shell remained very steady. Otherwise the volume of transactions was relatively small. Rubber shares found some discriminating support in the early part of the week, which spread over the whole market after the increased quota was announced and the commodity price had risen to 8d. Tea shares were monotonously dull, and such interest as existed was directed toward tea-cum-rubber issues.

Kaffirs opened the week with a good turnover, but prices were slightly soft. Later, conditions improved, and the settlement of the labour troubles helped in developing a firmer tendency. In mid-week, interest from the Cape and the continent began to reappear and combined with the higher price at which the October output has been fixed to encourage prices. Finance descriptions were in demand, particularly Anglo-American, which has diversified interests. West Africans lost some of their previous attraction in the early part of the week, but revived later, and prices remained very firm. Rhodesian copper shares were again the centre of attraction, although a quieter period developed after the further increase in production quota to 95 per cent. Tin shares were weak at first, but turned firmer on the rise in the commodity price, and went ahead in mid-week.

In the early days of the week dull conditions prevailed on the Paris Bourse, but later the tone became much firmer on optimistic anticipations of the Budget terms. Business became active, and Renten particularly made good progress. Irregularity ruled on the Berlin Bourse, with banks higher and industrials mostly lower.

NEW YORK STOCK EXCHANGE

MARKET conditions oscillated toward quiet repose at the end of last week, and Saturday's short session found prices little changed. But the new week opened hesitatingly, and a wave of selling left closing prices at the day's low. All the leading issues were affected, and the movement was attributed to closing of speculative positions as the day of election comes nearer. Government issues were easier, and most prices on the Bond market were lower. But the weight of third quarter company earnings and dividends came to the rescue, and lost ground was regained by mid-week. The General Motors and the United States Steel Corporation statements were very well received, and steel, motor, and copper shares were prominent in the recovery. The large number of increased dividends may have been one reason for the strength of Mail Order and Amusement shares, on the assumption that the increase would be largely diverted to consumption goods and services. Railroads were strong, partly on the sympathetic attitude expected from the Interstate Commerce Commission toward the railways' demands for revision of freight schedules to compensate for the emergency surcharges which expire at the end of the current year. Railroad equipment shares found a good market, and utility issues are regaining favour as the outlook for a successful compromise between private operators and the T.V.A. becomes brighter. On the Bond market Treasury issues remained easy this week, but industrial and railway bonds made good gains. Iron Age estimates steel mill activity for the week at 74 per cent. of capacity, around which level it is expected to remain for the rest of the quarter.

LONDON ACTIVE SECURITY PRICES AND YIELDS

In calculating yields on fixed interest stocks quoted below allowance is made for interest accrued since the last date of payment, less income tax at the standard rate. Where stocks are definitely redeemable at a certain date the yield includes any profit or loss on redemption; where stocks are redeemable at or before a certain date the final date of redemption is taken when the stock stands at a discount and the earliest date when the quotation is above par. The return on ordinary stocks and shares is calculated by reference to the latest dividends, account being taken of any enhancement or reduction of interim dividends. Allowance is made for accrued dividends in calculating the yield on "cum. div." shares.

Prices, -Year 1935				Prices, Year 1936 Jan. 1 to Oct. 28 inclusive				Last two Half-yearly Dividends				Name of Security				Prices, Oct. 21, 1936				Prices, Oct. 28, 1936				Rise or Fall				Yield Oct. 28, 1936

Proceeds to finance hire purchase sales and for new shops. Net assets, £260,205. Profits, after depreciation, six months to June 30, 1934, £8,004; years to June 30: 1935, £25,156; 1936, £50,682. Lists closed at 9.5 a.m., October 27th.

BY STOCK EXCHANGE INTRODUCTION

Chepping Wycombe Corporation (High Wycombe).—Particulars of issue of £250,000 3 per cent. stock purchased by Pember and Boyle at 99½ less one per cent. Repayable at par 1956, or from 1954 at three months' notice. Ranks *pari passu* with other loans. Estimated population, 33,000. Rateable value, £257,586. Net debt, £1,633,187, of which £1,163,885 housing. Proceeds for new capital purposes (chiefly housing and education).

Albion Drop Forgings Company, Ltd.—Issued capital, 480,000 5s. ordinary shares; introduced to Birmingham Stock Exchange. Makers of drop forgings; founded 1900. Net assets, £130,760. Profits, after depreciation, years to September 30th: 1934, £12,643; 1935, £14,978; 1936, £19,146.

W. H. Dean and Son, Ltd.—Issue to Charterhouse Investment Trust, Ltd., of 100,000 5½ per cent. preference shares at 19s. and 100,000 5s. ordinary shares at 15s. Engineers, sheet metal workers, etc., of Burnley; founded 1895. Profits, after depreciation, years to mid-December: 1934, £32,474; 1935, £29,580; seven months to July 14, 1936, £22,271. Net assets, £126,575, acquired for £175,000 (£48,425 goodwill) payable by £100 cash, 100,000 £1 preference and 299,600 5s. ordinary shares.

Third Guardian Trust, Ltd.—Particulars of issue of £50,000 3 per cent. debenture stock, purchased by Cazenove, Akroyds and Greenwood and Company at 90 per cent. net, with option on further £50,000 of stock at 90 per cent. Repayable at par, 1973 or from 1963 at six months' notice. Ranks *pari passu* with 3½ per cent. debenture stock.

TENDERS.

Barnet District Gas and Water.—Issue by tender of £25,000 4½ per cent. preference stock at a minimum price of £120 per £100. Yielding at that price £3 15s. per cent. Accumulated funds December 31, 1935, £109,329. Net revenue, 1935, £73,742.

BONUS ISSUE

Clan Line Steamers, Ltd.—£150,000 of the reserve is to be capitalised and applied in paying up in full 150,000 unissued shares to be distributed as capital bonus in fully paid £1 ordinary shares to holders of ordinary shares registered October 22nd in proportion of one new for every three ordinary shares held.

ISSUES TO SHAREHOLDERS ONLY

Booth's Distilleries, Ltd.—Issue of 100,000 £1 ordinary shares at 31s. 6d. each in proportion of one share for each £5 ordinary stock.

Cammell Laird and Company, Ltd.—Meeting called for November 11th to consider issue of 800,000 5s. shares at par in the proportion of one for each £2 of ordinary stock held on October 29th.

English Steel Corporation, Ltd.—Issue of 848,340 deferred £1 shares at par in proportion of three new for each share held.

Louis G. Ford.—Issue of 20,000 6 per cent. cumulative preference shares 10s. at 11s. 3d. in the proportion of one for every three preference held on October 20th. The new shares will be entitled to six months' dividend on January 1, 1937.

Owen Thomas and Company.—Issue of 675,000 1s. ordinary shares at 1s. 3d. each in proportion of four ordinary shares for each seventeen ordinary shares held.

Southern United Investment.—15,000 new £1 shares to shareholders on register October 16th at 25s. each in proportion of three new shares for each fourteen held.

Venterspost Gold Mining.—Issue of 700,000 of the reserve £1 shares at £2 each to shareholders registered November 5th in proportion one new for each four held.

CONVERSIONS AND REPAYMENTS

Birmingham Small Arms Company, Ltd.—Meetings called for November 4th at Birmingham to consider creation and issue of £2,000,000 debenture stock to bear interest at a rate not exceeding 4 per cent. per annum. The directors contemplate to issue sufficient new stock to redeem the £1,576,811 outstanding 6 per cent. debentures which are redeemable at 102 at one month's notice.

Ebbw Vale Steel Debenture Repayment.—Arrangements have been made for repayment in full in course of next three months of the outstanding nominal amount of the 6 per cent. Ebbw Vale Debentures together with interest thereon (at rate of 3 per cent. per annum) to date of repayment.

English Sewing Cotton Company, Ltd.—£957,694 4 per cent. debenture stock, with accrued interest, will be redeemed on

April 30, 1937. The company will be prepared to make earlier repayment at any time from now until February 27, 1937, with accrued interest to the date of payment, to any who may so desire.

Western Australia 3 per cent. Inscribed Stock 1916-36.—The whole amount outstanding will be repaid at par on December 1, 1936.

REPORTS AND NOTICES

BANKS

BANK OF IRELAND.—On page 22 of our Banking Supplement of October 17, 1936, it was inadvertently stated that the liability of stockholders in the Bank of Ireland for debts of the Bank had not been decided. We regret that we were in error on this point, since the liability of stockholders was declared by the Bank of Ireland Act of 1935 to be limited, except in the matter of Note issues, for which members remain rateably liable. The Bank, further, has no office in London.

BARCLAYS BANK LTD.—Mr W. Favill Tuke has decided to retire from the office of chairman of the Board of Directors of Barclays Bank Ltd., and the directors have accepted his resignation with great regret. They have elected Mr Edwin Fisher (a deputy-chairman) to succeed him. Mr Tuke has been elected deputy-chairman. Mr Tuke will continue as a director of the bank.

ENGLISH, SCOTTISH AND AUSTRALIAN BANK, LTD.—Mr H. L. Balding has been appointed sub-manager in London in place of Mr J. Jamie who has retired on pension. Mr C. N. Harrison has been appointed to succeed Mr Balding as assistant secretary.

WESTMINSTER BANK LTD.—The Most Hon. the Marquess of Willington, G.C.S.I., G.C.M.G., G.C.I.E., G.B.E., has been appointed a director of Westminster Bank Ltd.

INSURANCE

TRADE INDEMNITY COMPANY, LTD.—Mr Herbert Lewis, chairman of the Commercial Union Assurance Company, Ltd., has accepted the chairmanship of the Trade Indemnity Company, Ltd., in succession to Mr C. E. Heath, O.B.E., who had intimated his desire to be relieved of the position. Mr Heath will, however, remain a director of the company. Of the London and Lancashire Insurance Company, Ltd., has resigned his seat on the board of the Trade Indemnity Company, Ltd., and his London and Lancashire Insurance Company, Ltd., has resigned the managing director of the Excess Insurance Company, Ltd., Mr E. Merrick Tylor, elected to a seat on the board of the Trade Indemnity Company, Ltd.

GUARDIAN ASSURANCE COMPANY, LTD.—Following the appointment of Mr W. A. Osborne, F.I.A., formerly actuary and secretary, as Company, Ltd., have appointed, as from November 1st, Mr F. R. Norton, F.I.A., F.C.I.L., secretary, and Mr E. E. Hawes, F.I.A., F.F.A., actuary of the company.

MISCELLANEOUS

"INDUSTRIAL EARNING POWER."—In column two of page 152 of last week's *Economist*, under this heading, it was stated that the companies whose figures were analysed had paid £3,046,000 in debenture interest, in their latest year, before striking the profits shown in a subsequent table. The true figure (as was evident from the context) was £3,946,000, the mistake being the result of a typographical error.

MANCHESTER LINERS, LTD.—Manchester Liners, Ltd., reports a profit of £44,352 for the year ended June 30, 1936, and the balance available less tax, which leaves £27,946 to be carried forward, compared with £23,452 brought in. In 1934-35 profits (including income from investments) after providing for depreciation, directors' fees and all charges, amounted to £46,230.

S.S. CARS, LTD.—Trading profits for the year to July 31, 1936, amounted to £35,825, or £3,691 more than in the previous year. After providing for depreciation, tax, etc., the net profit is £27,367 against £24,209. The ordinary share dividend is repeated at 10 per cent. General reserve and capital increase expenses—eliminating that item. The carry-forward is increased from £1,183 to £4,150.

NATIONAL SHIPBUILDERS SECURITY, LTD.—The report for year to March 31, 1936, states that the purchase of the following establishments of Workman Clark (1928), Ltd., at Belfast, and of David and William Henderson and Company (in liquidation) at Glasgow, and of William Caird and Company, Ltd., at Greenock and J. Crichton and Company, Ltd., at Connaught Quay and Saltney.

COMPANIA HISPANO-AMERICANA DE ELECTRICIDAD, S.A. (CHADE).—Permission to deal in certain numbers in series "D" and series "E" is withdrawn until further notice.

COMPANY MEETINGS, &c.

NEW MODDERFONTEIN GOLD MINING COMPANY, LIMITED

(Incorporated in the Union of South Africa)

BURDEN OF TAXATION

Mr R. S. G. Stokes, the chairman, presiding at the annual meeting of New Modderfontein Gold Mining Company, Limited, held in Johannesburg on October 23rd, said that there had been a further substantial increase in the treatment capacity and declines in the yield per ton in working profit and in ore reserve value.

The accounts showed a net profit of £2,046,963. The dividend of 42½ per cent. declared for the second half of the financial year showed the heavy shrinkage of 12½ in the percentage rate as compared with the previous dividend, but even at 42½ per cent. the declaration did not fully reveal the harmful effect of the more onerous taxation imposed upon the company under the new Act.

Both periods were affected by credit adjustments in respect of previous taxation. Omitting these non-recurrent allowances the declaration would have been 52½ per cent. and 37½ per cent. for the two half years respectively, representing a fall of 15 in percentage, of which about 10 per cent. would have been attributable to the change in the system of taxation and 5 per cent. to the decline in the grade of ore. During the current half-year, ending December 31st, there would be no such relief and the full weight of the current tax burden would be felt. Subsequently, the decline in the rate of annual dividends should, with the maintenance of present industrial conditions, be comparatively small in conformity with the gradual decline in working profits.

Increases in capacity due to minor additions to plant and to metallurgical improvements had minimised the adverse influence of the declining grade which had been in evidence since 1928.

FUTURE ORE PROSPECTS

Under the present active policy of exploration and development, there were good prospects of disclosing several million tons of additional profitable ore. The fall in the yield per ton milled would become gradually slower as the average value of ore reserves more closely approximates to that of the new payable ore developed in the upper leaders and South reef. Ore mined during 1935-36 totalled 2,586,119 tons, of which approximately one-half—1,283,000 tons—was drawn from ore reserves.

The balance, of lower but highly profitable average grade, was obtained from undeveloped areas, and from other stoping sources outside payable reserves and from development faces.

The available ore reserve as re-estimated at June 30, 1936, amounted to 7,736,500 tons at 4.5 dwts. over an estimated stoping width of 46.2 ins., in addition to which there were 1,460,300 tons at 5.9 dwts. in shaft and safety pillars, the great bulk of which should, ultimately, be extracted.

For the first quarter of the current financial year the total working profit has fallen from £469,683 for the previous quarter to £437,652, due to a drop in yield from 4.32 to 4.205 dwts. per ton, and to the lower price of gold. Subsequent improvement in the price of gold combined with the prospects of greater stability was a circumstance of exceptionally favourable significance to New Modderfontein, which was now within the category of low-grade mines, after a brilliant record of achievement among the richest in the world.

INEQUITABLE TAXATION

Provision for taxation during the quarter had called for £180,586. The method of calculation of the new taxation represented a desirable simplification. But the results of its application had proved inequitably severe and the change for the worse has been disturbingly abrupt. This company was penalised heavily under a formula because of the low level of its working costs, due in large measure to the economy of past and current managements and to the heavy expenditures incurred by shareholders in the remarkably efficient equipment and layout of the mine.

In the first six months of 1932, when the working revenue per ton was 33s. 3d. and the working profit per ton was 18s., taxation amounted to 3s. 6d. per ton, or 19.3 per cent. of the working profit, whereas in the first six months of 1936, when the working revenue per ton was 30s. 6d., taxation amounted to 7s. 1d. per ton, or 43.1 per cent. of the working profit.

The consistent aim of the company was to ensure the payment of maximum total dividends during the remaining years of production. The extension of profitable life was a closely related objective. Additional time for systematic exploration

1936 — OUR CENTENARY YEAR

"The best pledge of the future
is from the past"

THE LIVERPOOL AND LONDON AND GLOBE INSURANCE CO., LTD.

Head Office: 1 Dale Street, Liverpool, 2 | (Chief Office): 1 Cornhill, E.C.3 London:

strengthened the hope that no important quantities of payable ore capable of contributing to the final aggregate of dividends would be lost through any avoidable failure to disclose and develop the full resources of the mine.

The report and accounts were adopted.

CAM AND MOTOR GOLD MINING COMPANY (1919), LIMITED

LARGER NET PROFIT

The ordinary general meeting of the Cam and Motor Gold Mining Company (1919), Limited, was held, on the 29th instant, in London, E.C.

Mr L. E. B. Homan (the chairman) said that the profit and loss account showed that they had made a profit at the mine of £169,654, compared with £148,271 in the previous year, due to an increase in the bullion recovered of £15,000 odd and to a decrease in total costs of £6,000 odd, thus accounting for the increased working profit of about £21,000. The net premium on gold, £217,235, was approximately £14,000 less, so that they came out with an increased net profit of approximately £8,500 after allowing for a slightly lower charge for income tax. The available total was £378,423, of which £300,000—an increase of 1s. per share—had been distributed among the shareholders.

Their cash position showed an improvement of approximately £40,000. Their working costs were satisfactory at 18s. 5d., compared with 18s. 10d. in the previous year. With gold at £7 they should do better in the current year than in the period under review.

The year's development footage was reduced by 4,273 feet, but nevertheless, ore reserve tonnage had been more than maintained, and the value was only slightly lower. The tonnage given indicated a life of at least five years ahead, apart from the ore to be developed below the present bottom levels. It was worth noting that the broken ore in stopes amounted to well over two months' requirements for the mill. The development details showed that the Cam, Cam Spur and Motor lodes still maintained satisfactory values at the bottom of the mine—especially the Motor lode—while the values on the less important Petrol lode were somewhat poor.

Reclamation in the upper levels of the mine would continue for two or three years yet, but the gradual exhaustion of the ore available from that source and the steadily increasing depth at which mining operations were being carried out would tend towards an increase in cost per ton milled, which would, however, be more than offset by the increased price of gold. Extraction at 83.5 per cent. showed little variation from the previous year, the percentage of output obtained from amalgamation being as high as ever at 71.2 per cent. Power costs were very satisfactory. Results since the end of the financial year had been very satisfactory, as shown by the published monthly figures. Shareholders would have noted that the premium taxation was slightly heavier than it used to be.

He was sure that shareholders who listened to, or perused, these remarks would be thoroughly satisfied with the position at June 30th. He felt justified in saying that after considering the financial position and results for the current six months they would be able to declare an increased dividend in December.

The report was unanimously adopted.

BUENOS AYRES GREAT SOUTHERN RAILWAY COMPANY, LIMITED

UNFAVOURABLE CONDITIONS

The ordinary general meeting of the Buenos Ayres Great Southern Railway Company, Limited, was held, on the 28th instant, at River Plate House, London, E.C., Sir Follett Holt, K.B.E. (the chairman), presiding.

The Chairman, in moving the adoption of the report and accounts, said that, in addition to exchange and the many other difficulties, they had been the victims during the past year of the effects of a spell of drought, which to all intents and purposes had ruined the wheat, oat, barley, rye and linseed crops, and had thrown upon the railway not only a direct loss in revenue of over £1,000,000, but, as a result of the decreased purchasing power in their zone, a further large sum in other traffics. Fortunately, part of the heavy loss had been made up by traffic improvements connected with other industries and also both exchange losses and working expenses were less, but, after charging the renewal expenditure of the year to the renewal fund, they still found, after meeting fixed charges, that the disposable balance in their revenue account was lower by £487,000, which was the reason why they had been obliged to cut down the sum allocated to preference dividends to an almost negligible figure.

The past year had been no easy one for those who carried the weight of responsibility for these immense British interests. There were many factors unfortunately which remained outside of their control. Climate, legislation, exchange, and even to some extent conditions of labour, were among them, but for their part, on looking back over the past 12 months, he thought it could be said that, through domestic arrangements within the industry, progress and even substantial progress had been made towards securing better results as the uncontrollable factors became less unfavourable than they had been in recent years.

He could not say much on the subject of the details of the Trade Agreement between Argentina and the United Kingdom, for it was still under negotiation.

The past of the Great Southern had been good, and the immediate future was more promising than it was a year ago.

The report was unanimously adopted.

BUENOS AYRES AND PACIFIC RAILWAY COMPANY, LIMITED

IMPROVED RESULTS

The ordinary general meeting of the Buenos Ayres and Pacific Railway Company, Limited, was held, on the 29th instant, in London.

The Viscount St. Davids (the chairman) said that their gross receipts for the year under review had increased by £300,000 and the working expenses by £508,000. On the face of it that did not look like a good result, but the working expenses included £168,000 increased wages in accordance with the President's Award, and they also included £326,000 for special renewals. Those two items came to £494,000, so that the whole of the real extra expenses incurred in earning £300,000 was £14,000—not a bad result. They had cleared off all the arrears of interest on the second debentures of the Pacific and Argentine Great Western companies and had paid the holders 5 per cent. interest on those arrears, so that they were clear of them. The stocks ranking next for interest under the scheme were the Pacific 4½ per cent. consolidated debentures and the Argentine Great Western 5 per cent. debenture stock; one-half a year's arrears on both would be paid on December 1st.

As to exchange, they had had a more favourable rate during the past calendar year as a result of negotiations carried on in Argentina by two of their directors. The special rates made for them were an indication of the goodwill of the Government towards the railways, and as partial compensation the railways had made a special rate for maize.

It was very satisfactory to report that after much negotiation an agreement as to the scope of the competition by Government lines had been arrived at, and they hoped that that agreement would secure that competition would be on regulated lines with fair conditions to both parties and for the benefit of the public.

This year the estimated area to be put under wheat and linseed was 1,101,000 hectares, as against 738,000 in the previous year. Up to now the wheat and linseed were looking well. If they got a good wheat crop on the increased area now sown, the results of this company a year hence should be at least as good as those submitted on the present occasion.

The report and accounts were unanimously adopted.

ASSAM RAILWAYS AND TRADING COMPANY, LIMITED

DIFFICULT OPERATING CONDITIONS

The fifty-sixth ordinary general meeting of this company was held, on the 28th instant, in London.

Mr Douglas W. Turner presided in the absence through indisposition of the chairman of the company, Mr E. A. A. Joseph, whose prepared speech he read, and which stated that in the railway account profit was less by £3,000 while the balance of the trading account was less by nearly £11,000, of which the collieries were responsible for £6,000. More coal had been sold, but at lower average prices. Interest and dividends were a little better than last year and they were left with a balance of £78,881, which was about £9,000 less than a year ago.

The two main branches of the company's business—railway and colliery—in the recent world-wide depression were the two industries which had suffered at least as much as, if not more than, many others. As to the railway, first-class traffic was now to all intents and purposes non-existent, while third-class traffic—their mainstay—had been very hardly dealt with by motor-bus competition. The board were doing everything they could to meet their difficulties, and had instituted a number of shuttle services as a direct answer to bus competition with encouraging results.

As to the collieries, their business was being affected by the most intense competition from Bengal coal, which was now being marketed almost at their door. The company's other departments were not doing too badly at the present time, but everybody was cutting expenditure to the lowest possible level.

With regard to their investments in tea, both did well last year. The matter of a reconstruction scheme for the company had engaged the minds of the board for some time, and should things reach a definite stage shareholders would immediately be consulted.

The report was unanimously adopted.

EAGLEHURST RUBBER ESTATES, LIMITED

ECONOMICAL ESTATE WORKING

The tenth annual general meeting of the Eaglehurst Rubber Estates, Limited, was held, on the 29th instant, at 411-419 Salisbury House, London Wall, London.

Mr P. J. Burgess, who presided, said:—If you will look at the profit and loss account you will see that the net result is a small profit of £641 to be carried to the balance sheet. Estate expenditure in comparison with last year is £1,000 less, and at £5,433 shows that the estate has been worked economically in every way, receipts from sales of rubber is less by £2,000, and this is due to the amount of rubber brought into account being more than proportionately reduced, namely, from 397,119 lbs. in the previous year to 290,575 lbs. in this year, and of this reduced amount 22,726 lbs. were not covered by coupons and as scrap rubber fetched very low prices.

The reduced crop makes the costs of the rubber appear high owing to the distribution of the fixed charges such as rent and general establishment over a smaller turnover of the commodity, and is responsible for the falling off in the profit, which at £641 your directors recommend be added to the amount of £811 brought in from the previous accounts and carried forward to next year.

I would draw your attention to the financial position, which is a reasonable one, but also one which we should like to see somewhat further strengthened when profits are big enough to do so without unduly trenching upon dividends. As our stock position has been built up and carried forward at cost we are now able to take advantage to the full of the coupon releases allowed us. The figure of release of 65 per cent. under which we are now working is higher than last year's and increases by a further 5 per cent. to 70 per cent. in January, 1936, and this, with the higher price for our commodity, should enable the company to make a satisfactory return to the shareholders in 1937.

The remaining point on which I should like to say a few words concerns the policy of replanting some of the older areas and thereby substituting in their place a much more highly productive plant either as budded rubber or selected seed rubber. We have already some considerable representation of budded rubber, of which about 100 acres will become mature next year, and we propose to add a further 57 acres in 1937 on the Eaglehurst Division. Under the Rubber Regulation Control we are permitted to replant 20 per cent. of our planted acreage during the five years ending May, 1939; this allows us to replant in all 237 acres. The extent to which we shall be able to take advantage of this regulation must depend upon several factors, of which

the chief is financial and the next in importance the degree of obsolescence, shown by the existing areas. The special inducement to replant while restriction continues lies in the continuation of an assessment allowance for the areas cut out and replanted.

The report was unanimously adopted.

EL ORO MINING AND RAILWAY COMPANY, LIMITED

SATISFACTORY YEAR

The thirty-seventh annual general meeting of the El Oro Mining and Railway Company, Limited, was held, on the 28th instant, in London.

Mr J. H. M. Shaw (the chairman) said that in the circumstances of the past year the result was a satisfactory one. At El Oro the receipts were £30,732, against expenses of £27,545. The Inversiones Company had given them £51,097, interest received was £1,350, and £5,000 previously reserved for income-tax was not now required. For the first six months of the year they worked under fairly satisfactory conditions, but in December last the American Treasury gave up their free purchases of silver and there was a heavy fall in price, from which there had been practically no recovery.

The impending labour law would make conditions very difficult indeed, and there seemed little doubt that labour would endeavour to obtain another increase in wages after the turn of the year. Coming at a time when the grade of ore had fallen very close to the profit limit the scale might easily be turned against them. Again, should any profits be left at all, the new mining law would, it was thought certain, contain a clause that 25 per cent. of such profits would have to be reinvested in Mexico. The directors were faced with a difficult task in trying to foresee and make the best arrangements for the future. In the meantime, after providing for the dividend, there was rather more than £100,000 in cash with which to embark on new business, and he asked shareholders' sanction for extending their operations outside Mexico.

The report and accounts and the payment of the dividend of 1s. per stock unit of 5s. were carried unanimously.

On a show of hands the shareholders gave the directors authority to extend the operations of the company outside Mexico.

RHOKANA CORPORATION, LIMITED

INCREASED PROFIT

The fourteenth ordinary general meeting of the Rhokana Corporation, Limited, was held, on the 29th instant, at Southern House, London.

The Right Hon. Sir Auckland C. Geddes, P.C., G.C.M.G., K.C.B. (the chairman), said that they were still carrying in the balance sheet their share in Mufulira Copper Mines, Limited, at the same valuation as last year. There was no Stock Exchange quotation for those shares, but a fair indication could be obtained by taking a line through Rhodesian Selection Trust shares, which company owned 5,471,200 Mufulira shares. At the present market value of Trust shares this company's holding in Mufulira would be worth over £4,800,000.

The operating profit had risen from £575,870 to £826,744, due to the higher price obtained for their copper. The average cash price for standard copper on the London Metal Exchange for the month of February, 1935, was £27 4s. 1d. The corresponding figure for the month of June, 1935, was £30 16s. 8d., and for the month of July, 1936, was £37 5s. Towards the end of July, 1936, the Committee appointed under the Curtailment Agreement had decided to increase production of the co-operating companies from August 1, 1936, and in September had decided to make a further increase in production as from October 1, 1936. Further increases of production had since been authorised, and provided there was no further change, the Corporation's production quota for the year July 1, 1936, to June 30, 1937, instead of being 55,580 long tons, would be 62,790 long tons.

It was the policy of the directors to encourage the extension of the uses to which copper could be put and the market in copper. They therefore wished to see a stable price of copper at such a figure that would carry out that policy and at the same time give them satisfactory financial results. It was satisfactory to note that the stocks of refined copper throughout the world, including the United States, had gradually fallen from 854,133 short tons in 1932 to 379,727 short tons in September, 1936. In 1932 the year's consumption was only 804,974 short tons of refined copper. In 1936 it was running at a rate which led them to expect a consumption of over one and three-quarters million short tons.

The report was unanimously adopted.

GENATOSAN, LIMITED

GRATIFYING RESULTS

The nineteenth ordinary general meeting of Genatosan, Limited, was held, on the 27th instant, in London.

Sir Archibald Mitchelson, Bt. (the chairman) said:—Ladies and gentlemen, the net profit for the year of £65,357, after providing for all trade charges, depreciation, directors' fees, taxation and doubtful debts, is a very satisfactory one. Adding £13,441 brought in, we show a total available of £78,798. Deducting from this the full year's dividend on the pre-preference and preference shares and the interim distribution of 15 per cent. on the ordinary shares, there remains £50,478.

We propose allocating £5,000 to general reserve—raising that fund to £30,000.—£10,000 to writing down establishment expenditure on dental and other preparations, £20,000 to the payment of a final dividend of 20 per cent. on the ordinary shares, making 35 per cent. for the year, and carrying forward £15,478.

Your directors—and I think you will agree with them—can only regard a result which enables us to maintain an ordinary dividend of 35 per cent. and to strengthen the financial position further to the extent of £20,000 in the allocations referred to, as very gratifying. This rate of dividend on the ordinary shares has now been paid for ten years in succession, in some cases free of tax, while a share bonus of approximately one in three was given in 1931. We by no means, however, would wish to regard such results as the ultimate goal of our aims.

Our very valuable product, Sanatogen, continues in increasing demand, and its reputation and popularity appear to be more firmly established than ever. Genasprin, the Safe Brand of Aspirin, commands a widening circle of customers, and the smaller packs of this preparation are bringing its great medicinal merits within the reach of a much larger public. The dentifrice Genozo and also Cystopurin, Stabilised Calcium Aspirin, Fissan and other valuable products of our laboratories are steadily working their way into the knowledge and, we hope, experience of the public, and, we expect, should prove in time valuable assets of your company.

We have a great asset in the goodwill and support of the medical and pharmaceutical professions.

The report and accounts were unanimously adopted.

ANGLO-CONTINENTAL GUANO WORKS, LIMITED

PROFITS MORE THAN MAINTAINED

The nineteenth ordinary general meeting of this company was held, on the 27th instant, in London, Sir Archibald Mitchelson, Bart., chairman of the company, presiding.

The Chairman, in the course of his speech, said: The net profit for the year at £73,448 1s. 3d. has been more than maintained as compared with that of the previous year. It is proposed to pay a dividend of 7½ per cent., less tax, on the ordinary shares in issue, requiring £11,437 10s., to transfer £5,000 to depreciation reserve and £15,000 to general reserve, raising this fund to £75,000, and to carry forward the balance of £42,707 9s. 9d.

With regard to the year's trading, the fertiliser trade for the year has been a somewhat difficult one. Generally speaking, the agricultural season has not been good. It is therefore gratifying that we have been able to maintain our position. Hard work and good salesmanship are largely to be credited with this result.

As the result of an increased production of spelter at the large Avonmouth smelting works, considerable quantities of by-product sulphuric acid are now being converted into superphosphate there. This new factor has presented a problem for superphosphate manufacturers generally, but a temporary solution has been found which it is hoped may lead to a permanent settlement satisfactory to all concerned.

Shipments of high-grade guano from Peru are still held up by an increase in home consumption in that country. Fortunately, other sources of supply have been found, by which we have been enabled, with stocks carried over, to keep our regular guano buyers furnished with an acceptable grade of pure bird guano.

Our investment in the pharmaceutical business of Genatosan, Limited, has made an excellent return for the year under review, and is still "going strong." The cash value of our holding, at the present market quotations, exceeds many times the figure at which it stands in our books to-day.

I feel that you will agree with your board that, in all the circumstances, we have had a successful and satisfactory year, and I trust that, when we meet again, we shall have at least as good, if not still better, results to put before you.

The report and accounts were unanimously adopted.

GOVERNMENT RETURNS, &c.

NATIONAL ACCOUNTS

The total ordinary revenue for the week ended October 24, 1936, amounted to £13,960,500, against ordinary expenditure of £7,780,000. After allowing for an increase in Exchequer Balances of £149,357, the operations for the week, as shown below, decreased the gross National Debt by £6,031,000 to approximately £7,994 millions.†

COAL

SHEFFIELD.—All grades of industrial fuel are in strong demand and full contract deliveries are being made. Fuel consumption is increasing with the extension of works now in progress. The export market continues quiet, but there is a steady inquiry for smalls and nuts for shipment. Coke works are taking a larger share of washed smalls and all grades of smalls are in greater demand for electricity generating stations than for some time. There is little coke to be had outside contract and output goes almost immediately into consumption. Demand for household coal has lessened somewhat during the last week.

WORKINGTON.—The seasonal improvement in the coal trade is already marked. Lacking the output of the Whitehaven pits, production will be inadequate to satisfy needs by the end of next month. Even now Welsh coal is being imported to supplement local supplies for the coking plants. The Irish market will feel most the shortage of coal during the winter. Prices are steady.

NEWCASTLE-ON-TYNE.—The market in Northumberland steam coals continues very firm. Shipments to home coasting ports are brisk and there is also a steady trade with Scandinavian countries. Durham steam coal is also a firm market, while coking coal is showing much greater strength under home requirements and a better demand from the Continent. Owing to an increasing home demand, patent oven coke is difficult to obtain for export.

GLASGOW.—Shipping business has been handicapped by the stormy weather, and as a result of the delays in getting boats away there are large wagon loads of coal awaiting clearance. Apart from prompt business, collieries are quite well placed for some time ahead, and in the case of best steams and certain sizes of nuts, there is now little material available for new business this year. Continental demand has shown some improvement, and London is again active in the market for nuts. Prices show little change on the week, but are generally firm.

CARDIFF.—Conditions on the Cardiff coal market have not undergone any material change during the past week. In the foreign and coastwise trades coal shipments last week totalled 366,400 tons, compared with 399,400 tons in the previous week and 359,956 tons in the corresponding week last year. In view of the reduced shipping tonnage available during the past few days there seems little prospect of any expansion in volume for the current week. The raising of the French quota by 10 per cent. has not yet been reflected in the shipments to France, and trade with Spain remains practically at a standstill. A delegation has been appointed to go to Italy to discuss conditions of a resumption of exports to that country as soon as the negotiations between the British and Italian Governments for a new commercial agreement are concluded. The Algerian Railways are inquiring for 120,000 tons of large coals and 30,000 tons of patent fuel, and an order for 4,000 tons has been placed by Tunis Tramways. The approved prices of the Control Board continue on the basis of the old minimum schedule for all classes of large coal, but slightly above the schedule for washed and sized smalls. South Wales coke producers have approved in principle the terms of the proposed International Coke Convention under which imports of Continental coke into the United Kingdom will be limited to a quota, variously estimated at from 36,000 to 45,000 tons per annum, and British coke exports to about 21 per cent.—nearly 2.4 millions tons—of the new Cartel's total provisional basic export tonnage of 11,374,000 tons.

IRON AND STEEL

LONDON.—The weekly report of the London Iron and Steel Exchange indicates that activity in the iron and steel markets has been well maintained. Although new business is rather quieter than for some time past it is chiefly because of the reluctance of producers to add to their already heavy commitments. Many consumers have covered their requirements until the end of the year and in some cases for the greater part of the first quarter of 1937. A considerable volume of business is offering, however, in the form of supplementary parcels, which are not easy to place for the dates on which the material is required as producers are already hard pressed to maintain their deliveries on contracts already in hand.

In the pig iron market demand appears to be gradually expanding and in most districts is well in advance of production. Schemes for the equitable distribution of the available pig iron amongst users have been put into operation, but the uncertainty with regard to supplies of raw materials operates against the starting of additional furnaces.

Business in semi-finished steel continues heavy, and, although British works are producing at capacity, they are still unable to keep pace with demand. The position of consumers, however, has been relieved by imports of Continental material.

There has been no diminution in activity in the finished steel section of the market. Demand for structural steel is on an almost unprecedented scale, and it is not surprising that some consumers complain of delays in deliveries.

MIDDLESBROUGH.—There is an increasing scarcity of pig iron. At present only one blast furnace is producing foundry pig iron and supplies are being rationed in order to keep consumers supplied with sufficient iron for day-to-day use, but foundries are unable to accumulate any stocks. There are ten blast furnaces at present producing hematite pig iron on the North-East Coast, and, as iron ore imports are being fairly well maintained, it is not anticipated that there will be any reduction in the output of hematite pig iron. Actually, an increase in production is required to meet the increasing demand, but there is no indication of any further furnaces being put into blast in the immediate future. Pig iron prices are unchanged. There are 17 blast furnaces producing basic pig iron and two on other kinds. This is hardly sufficient for the requirements of the steelworks, which are trying to meet the large requirements of re-rollers for semi-finished steel and of the shipbuilding and constructional steel trades for finished steel.

Further shipbuilding orders have been placed on the Tyne, and the construction of one of the new battleships there, announced recently, will create further demands for steel.

Foreign ore is arriving fairly regularly; the quantity imported into the Tees during the first 27 days of October amounted to 132,466 tons, against 138,379 tons during the same period in September. Although the output of good Durham blast furnace coke is increasing, makers have no difficulty in disposing of their output and the price is based on 24s. 6d. per ton delivered at the furnaces. Heavy melting steel scrap is freely taken at 60s. per ton delivered.

SHEFFIELD.—Business in the iron and steel market remains at the high level of past months. Makers of pig iron hesitate to add further to their heavy commitments, and many have to ration their customers. Recent expansion of output has had little effect. Consumers find it difficult to place new business for foundry and basic iron. Business in forge iron is brisk. Demand for hematite continues to outpace supply, but East Coast material is less scarce than West Coast iron. Business in finished iron shows considerable improvement compared with six months ago, except

in the case of crown bars. Acid steel billets are in heavy request, and the whole output of basic billets is being taken up. Business continues good in stainless steel sheets, and wire rods, strip and bars are heavily sought. Prices all round are firm, with a general upward tendency. Iron and steel scrap is in good demand. The slowing down of imports from America and the Continent is bringing home-produced steel furnace scrap into more active request, merchants demanding 60s. per ton, delivered in substantial parcels.

WORKINGTON.—A shortage of foreign ore and technical difficulties are responsible for the early blowing out of a furnace in West Cumberland and the same causes are likely to bring about a similar result later on in the Furness district. Thus, production diminishes at the very time it should expand. Demand is heavy, and the imposition of a premium of 10s. per ton, in the event of Government permission being granted, will not retard the flow of orders when forward business can be entertained again. The greater part of the output will, of course, be reserved for the steelworks at Workington and Barrow. The rolling mills there are working at capacity and likely so to do for another year. Users in the Midlands, South Wales and Scotland will bear the brunt of the reduction in supplies, and in a few days' time there will be 3,000 tons of iron less for distribution among them. In these circumstances makers can accept no further orders until the time comes for renewing contracts. Casual business has ceased altogether. Prices are firm. Bessemer mixed numbers stand at £4 5s. 6d. per ton at Glasgow; at £4 11s. at Sheffield; at £4 13s. 6d. at Manchester, and at £4 17s. at Birmingham, with from 2s. 6d. to 8s. per ton for special qualities. Malleable iron, at £6 5s. delivered at Birmingham, refined iron, ferro-manganese, at £11 15s. home, and spiegel, at £6 15s., are all in keen request. The steel trade is active and prospects are excellent. Native ore is in heavy request. Production is a little larger, but no ore is being sold outside the district; it is quoted at 16s. to 17s. 6d. per ton.

GLASGOW.—Business in iron and steel continues to expand, heavy tonnages of material being required by many local manufacturing industries. Steel makers and others are already working at capacity and are assured of constant employment till the end of the present year at least, for there is still much work on hand and new business is plentiful. There is a particularly heavy demand at present for sheets and plates and rolling mills are fully employed. During the week a large amount of new business in several lines has been placed in the West of Scotland, and there is much important work under consideration.

CARDIFF.—The heavy branches of the iron and steel industry in South Wales continue exceptionally active; there is a steady demand also for tinplates; but the export market for galvanised sheets is still very limited. No information has been disclosed concerning the decisions reached at last week's meeting of the management committee of the International Tinplate Cartel, but it is understood that the recently revised arrangements have been prolonged for a period of twelve months, subject to such price adjustments as were necessary in consequence of the devaluation of the French franc and other Continental currencies. On the Swansea Metal Exchange on Tuesday it was stated that there had been no change in the current prices for tinplates, sheets, and steel bars.

OTHER METALS

COPPER.—Prices continued their upward trend till the end of last week, the standard cash quotation exceeding the £42 mark on Friday, for the first time since 1932. The increase in the production quotas to 95 per cent. of the standard tonnages (effective from November 1st) caused a setback, but on Wednesday there was a sharp rally to £42 8s. 9d. per ton. A further increase in the quotas is expected if the upward movement of prices continues. Meanwhile, in the United States the long-expected increase in the domestic price from 9.75 to 10 cents per lb. took place on Monday. Sales at the old price to certain special consumers amounted to an aggregate of approximately 100,000 tons on Monday and Tuesday last, so that a period of quietude is possible on the American market in the immediate future. The copper position is further discussed in a Note of the Week.

Sales on the London Metal Exchange: 2,800 tons on Monday, 4,350 tons last week; 3,800 tons on Tuesday, against 1,100 tons last week; 4,450 tons on Wednesday against 5,550 tons last week. Domestic spot was quoted at 9.97½ cents per lb. in New York on Wednesday, against 9.87½ cents a week ago and 9.55 cents a month ago. Wednesday's official closing price for standard cash in London was £42 8s. 9d. to £42 11s. 3d., compared with £41 17s. 6d. to £41 18s. 9d. a week ago. Stocks of refined show a decrease of 360 tons, while stocks of rough copper, at 1,390 tons, show a decrease of 450 tons on the week.

LEAD AND SELLER.—After considerable fluctuations, both metals closed on Wednesday showing little change on the week. Trade buying has been substantial and some speculative demand for spelter has also been apparent. World lead production, according to the American Bureau of Metal Statistics, fell from 120,700 short tons in August to 118,300 short tons in September—practically the whole of the reduction being in the despite the recent arrival of a substantial consignment from Mexico.

Sales of lead on the London Metal Exchange: 850 tons on Monday, against 1,300 tons last week; 1,750 tons on Tuesday, against 1,700 tons last week; 2,500 tons on Wednesday, against 1,950 tons last week. The New York quotation on Wednesday was 4.70 cents per lb., against 4.65 cents in London for soft foreign for shipment during the current month was £18 13s. 9d. per ton, compared with £18 11s. 3d. a week ago.

Sales of spelter on the London Metal Exchange: 1,100 tons on Monday, against 2,050 tons last week; 1,550 tons on Tuesday, against 1,750 tons last week; 1,000 tons on Wednesday, against 1,550 tons last week. Wednesday's quotation in East St. Louis was 4.85 cents per lb., against 4.85 cents the week before and 4.85 cents a month earlier. Wednesday's official closing quotation in London for "good ordinary brands" for shipment during the current month was £15 1s. 3d. per ton, against £15 3s. 9d. last week.

TIN.—Despite the continuance of uncertainty concerning the future of the restriction scheme, prices rallied this week, the cash price on to American buying, which seems likely to continue in view of the shortness of American supplies and forward purchasing by the automobile industry. Rumours that the Dutch East Indies are asking for a higher standard tonnage and that Siam is likely to insist on her recent demands for a higher quota have been circulating this week; altogether, the outlook for on Thursday next is accordingly awaited with keen interest. On the London Metal Exchange, however, there is no anxiety concerning the condition of the market, the statistical position of tin and the technical for, even if next week's meeting should prove abortive.

Sales of tin on the London Metal Exchange: 150 tons on Monday, against 550 tons last week; 400 tons on Tuesday, against 250 tons last week; 600 tons on Wednesday, against 495 tons last week. The New York quotation on Wednesday was 45.52½ cents per lb., against 44.10 cents a week ago and 46.10 cents a month ago. Wednesday's official closing quotation in London for standard cash was £205 10s. to £206 per ton, compared with £200 10s. to £201 a week ago. Stocks of tin in London and Liverpool at the end of last week totalled 1,132 tons, an increase of 168 tons on the week.

OTHER NON-FERROUS METALS.—Among other non-ferrous metals, aluminium ingots and bars for home delivery were again quoted at £100 per ton, and rolling billets at £102 per ton. Nickel, for home and export, at £200 to £205 per ton, remains unchanged. Quicksilver, on the spot, was quoted at £14 2s. to £14 2s. 6d. per flask of 76 lbs., the same as last week. Chinese antimony was quoted at £56 per ton ex warehouse, the same as last week. Chinese wolfram for "October-November" shipment was quoted at 28s. 6d. to 29s. 6d. per unit, c.i.f. as against 28s. to 29s. per unit last week. Refined platinum was quoted at £9 15s. per ounce, as against £10 15s. last week.

TEXTILES

COTTON.—Manchester.—The cotton industry has continued active. There has been a larger inquiry for yarn and cloth and turnover has increased. The feature has been the increased business for India, chiefly in light fabrics. Some transactions have been larger than for many months back. Buyers reached the conclusion that lower prices were improbable and decided to place orders further ahead. World consumption of American cotton continues on a large scale, but this bullish factor has been offset by favourable weather conditions in the American cotton belt and also by the ginning report, which showed that 8,568,000 bales had already been dealt with this season. This led to the view that the final crop will be larger than expected. There has also been persistent hedge-selling, but the peak movement has now been reached and this influence should be less felt in succeeding weeks. The undertone remains strong, but fresh factors will have to present themselves if a sustained upward movement is to be recorded. There is now more confidence, however, in current rates being maintained.

There has been a larger inquiry for cloth for abroad and more business has been done. Many leading shippers and merchants with connections in India have purchased speculatively. Most of the contracts have been in light goods, such as mulls. Fancies have been sold for Rangoon and the Straits Settlements. There has been a little more price-testing for Egypt, with a fair turnover for West Africa. A mixed business has been done for South America. Steady support has been given by Empire markets. There has been a useful turnover for the home trade.

The yarn market has presented a firmer appearance. Sales of American descriptions have been in excess of production during the past three weeks. Producers' margins are improving. There has also been a larger turnover in Egyptian yarns. Taking the market as a whole producers have extended their order lists and big efforts are now being made to obtain better prices. General trade prospects are considered to be brighter, but the outlook is somewhat overshadowed by the possibility of labour trouble in the spinning section, discussed in a Note of the Week.

WOOL.—Bradford.—Wool markets continue to make good progress, and everywhere the raw material is gaining strength and realising higher prices under increasing competition. Increased competition indicates an expansion of trade at home and on the Continent. Since the devaluation of her currency, France has greatly improved her home and export trade, and Germany, too, is a much larger buyer in Australia than last season. The latest cables are to the effect that America is buying steadily, while a Tokyo cable states that an agreement has now been reached between Japan and Australia, whereby the former country has agreed to purchase 300,000 bales of wool in Australia. It is very doubtful if Japan has gained anything by refusing to buy in Australia, for she has paid much higher prices for wool in South Africa.

Trade continues good in the West Riding of Yorkshire. Mills are generally busy, with the woollen section in many cases running overtime, and consumption is heavy. The entire wool textile industry is enjoying a further period of prosperity. The wool position appears sound, and the outlook encouraging.

GRAIN MARKETS

WHEAT.—The reactionary tendency continued till the end of last week and, despite an improvement after the weekend, prices on Wednesday showed a net decline compared with those ruling seven days earlier. The firmer tone noted during the past few days is attributed in the *Corn Trade News* to the disturbed political situation, further purchases by Italy, and an official forecast of 129½ million bushels for the Australian wheat crop. This indicates a smaller crop than in any recent year, but, on the other hand, prospects in Argentina have been steadily improving in recent weeks.

On Wednesday last, "December" futures were quoted in Chicago at 11½ cents per bushel, against 11¼ cents the week before and 11½ cents a month ago. Quotations in London, Wednesday: No. 1 Northern Manitoba, ex ship, 44s. per 496 lbs., against 45s. 6d. a week ago; No. 2 Northern Manitoba, ex ship, 43s. 6d., against 44s. 9d. a week ago. According to the *Corn Trade News*, total shipments of wheat and flour last week totalled 1,555,000 quarters, against 1,302,000 in the previous week and 1,253,000 quarters in the corresponding week a year ago.

FLOUR.—Wednesday's London quotations (excluding quota payments) were: Straight run, delivered Home Counties, 37s. per 280 lbs., against 37s. 6d. a week ago; delivered inner London, 36s. 6d., as compared with

37s. a week ago. Manitoba patents, ex store, 34s. 9d. to 36s. 3d., against 35s. to 36s. 6d. a week ago. Australian, ex store, 32s. to 32s. 6d., against 30s. 6d. to 31s. a week ago.

BARLEY.—"October" futures were quoted at 6½ cents per bushel in Winnipeg on Wednesday, against 58½ cents a week ago. Quotations per 448 lbs. in London on Wednesday were: "English feed" (new), at farm, 29s. to 30s., against 30s. a week ago; "English malting" (new), at farm, 34s. to 50s., against 32s. to 50s. last week; Californian (new), ex ship, 47s. to 58s., against 47s. to 58s. last week; Chilean, brewing, ex ship, 36s. 6d. to 42s., against 36s. 6d. to 42s. a week ago.

OATS.—On Wednesday, "December" futures were quoted at 4½ cents a bushel in Chicago, against 40½ cents a week ago and 41½ cents last month. Quotations in London, Wednesday: "English Black" (new), at farm, 20s. per 336 lbs., against 20s. a week ago; "English White" (new), at farm, 20s., against 20s. a week earlier; mixed Canadian feed (Vancouver), landed, 21s. 3d. per 320 lbs., compared with 21s. last week.

MAIZE.—The tone of the market has again been quiet and prices are lower on the week. "December" futures were quoted on Wednesday at 9½ cents per bushel in Chicago, against 93½ cents a week ago and 93½ cents last month. Quotations in London, Wednesday: "Plate," landed, 23s. 9d. per 480 lbs., compared with 24s. 3d. a week ago; "Plate," ex ship, 22s. 9d., as against 23s. 3d. a week ago; "Plate," October, 22s. 9d., as against 23s. 3d. a week ago; yellow maize meal, ex wharf, was quoted at £6 5s. to £6 7s. 6d. per ton, as against £6 7s. 6d. to £6 10s. last week.

AMERICAN WHEAT MARKETS.—The following table shows wheat quotations for selected weeks in 1934-36:—

NEAREST FUTURE	Jan. 3, 1934	Jan. 2, 1935	Oct. 30, 1935	Dec. 31, 1935	Oct. 21, 1936	Oct. 28, 1936
Winnipeg (No. 1, Manitoba) —Cents per 60 lb.	65½	82½	85½	84½	111½	111½
Chicago (No. 2 Winter) —Cents per 60 lb.	84½	98½	97½	75½	114½	115½

The visible supply of wheat in Canada amounts to 86,736,000 bushels, against 87,684,000 bushels last week, and 147,928,000 bushels in the corresponding week last year.

SALES AND PRICES OF BRITISH CEREALS.—The following table gives the estimated sale of home-grown wheat during the harvest years 1932-33 to 1935-36:—

	1932-1933	1933-1934	1934-1935	1935-1936
Estimated sales of home-grown wheat—	Cwts.	Cwts.	Cwts.	Cwts.
1 week to October 24	296,803	368,019	461,621	433,293
8 weeks to October 24	3,066,712	4,027,766	3,838,800	2,496,053
Average price of English wheat per cwt.	s. d. 4 10	s. d. 5 0	s. d. 6 2	s. d. 8 8

The following is a statement showing the quantities sold and the average price of British cereals in the past two weeks, and for the corresponding week in each of the years from 1932 to 1935:—

Week ended	QUANTITIES SOLD			AVERAGE PRICE PER CWT.		
	Wheat	Barley	Oats	Wheat	Barley	Oats
	Cwts.	Cwts.	Cwts.	s. d.	s. d.	s. d.
October 22, 1932	357,285	384,157	67,487	5 7	7 9	6 3
October 21, 1933	296,803	476,392	43,097	4 10	10 2	5 5
October 27, 1934	368,019	428,997	46,273	5 0	9 2	6 7

TEA.—The following table shows the average prices (compiled by the Tea Brokers' Association) of tea sold in Mincing Lane on Garden Account in recent weeks.

Week ended	Northern India	Southern India	Ceylon	Java	Sumatra	Africa	Total
Oct. 24, 1935	d. 75	d. 68	d. 59	d. 56	d. 41	d. 33	d. 75
Sept. 17, 1936	14-29	12-13	13-32	11-03	9-96	11-53	13-56
Sept. 24, "	13-88	12-04	13-29	10-75	9-85	11-46	13-29
Oct. 1, "	13-39	11-85	13-41	10-91	9-90	11-55	13-9
Oct. 8, "	13-22	11-92	13-62	10-81	9-95	11-63	13-03
Oct. 15, "	13-18	12-00	13-87	11-06	10-11	11-30	13-12
Oct. 22, "	13-24	12-08	13-96	11-32	10-07	11-59	13-22

The qualities catalogued for the public auctions in Mincing Lane this week comprised 54,162 packages of Indian and 21,645 packages of Ceylon tea. Competition was again good and the rising trend of quotations continued.

VEGETABLES.—According to *The Fruitgrower's* Covent Garden report tomatoes are easier, but cucumbers firmer on limited supplies. All forms of greenstuff are in abundant supply and sell at low rates. Celery sells well, while carrots, turnips, parsnips and onions are inclined firmer.

The Potato Marketing Board announced this week that, as from November 1st, registered producers on making application to the Board will be granted permission to sell "seconds" for human consumption. "Seconds" are defined as sound, marketable potatoes which have passed through a riddle of 1½ inches and will stand on a riddle of 1¼ inches. "Seconds" may, however, be marketed unless special labels, to be supplied by the Board, are attached to the containers used. Meanwhile, the potato trade at the various London markets has been moderate this week, with prices steady. At the Borough on Tuesday, best siltland King Edward again made 8s. to 9s. per cwt.

MISCELLANEOUS COMMODITIES

VEGETABLE OILS AND OILSEEDS.—Markets are steady but not very active. In the case of linseed, crushers here and on the Continent are buying only sufficient to cover immediate requirements, and are anticipating more favourable terms as a consequence of the improved outlook for supplies. The official report of the condition of the new crop in Argentina confirms private advices, and, unless weather conditions become unfavourable between now and December, a yield of at least two million tons is predicted. In these circumstances the question is asked whether the Argentine Government will maintain the present price guaranteed to the growers. Until that is known forward business will hang fire. The balance of the old Plate crop is being steadily reduced, and now only 200,000 tons of last year India is expected over 300,000 tons shipped in the remainder ago. The quantity of seed aboard ship about the same quantity as a year ago, and that for the United States to 104,000 tons. After a slight upward movement, linseed oil is again easier and quoted at £24 5s. per ton for October–December, ex Hull mill. Foreign oil is competing actively, despite the duty of £5 per ton.

Rather more interest is shown in Egyptian cottonseed, but trade in oil remains quiet and Hull quotations were reduced by 10s. Demand for oilcakes is improving and prices are steady.

FURS.—The autumn series of London fur sales closed on Friday of last week, the tendency of prices showing no further change. The following table compares the chief fur prices paid at the Hudson's Bay Company's October sales with those realised at the sales last April, all quotations being in shillings and pence per skin (raw):—

	Spring Sale, 1936	Autumn Sale, 1936
<i>Beaver</i> , Mackenzie River (Canada)— Ex ex large.....	73/- to 74/-	70/-
<i>Ermine</i> , (York Fort (Canada)— Ex ex large.....	5/7 to 6/1 4/8 to 5/-	5/10 to 6/1 5/10
Scandinavian ex ex large		
<i>Fisher</i> , York Fort, etc.— 1 and No. 2 dark	170/- to 370/-	165/- to 350/-

<i>Otter</i> , Canada, etc.— 1 and No. 2 ex dark	166/-	unsold
Skunk, York Fort 1	7/1 to 8/-	5/10 to 8/2
<i>Squirrel</i> , Lapland.....	1/- to 1/2	unsold
<i>Wolf</i> , York Fort— Ex large 1	40/- to 65/-	51/-
The next Hudson's Bay Co.		

The next Hudson's Bay Company's silver fox sale will take place on November 17. The general London winter fur sales will commence on February 1, 1937.

TIMBER.—Imports of building and joinery softwoods in September were far in advance of those for the corresponding month of the past two September, bringing the January–September receipts close to those for January–September, 1934, the record year for imports in these descriptions. Two with a much larger consumption, they are insufficient to pace down. This year, firm on a high level, with little unsold stocks left in European shippers' hands. There are, however, still large quantities, already purchased, or would therefore be shipped. A late closing of ports in northern Europe would into the country as possible. British Columbia, however, open to this coming winter and spring will help to keep the spot market from rising too high.

As stated in the *Economist* dated October 10th (p. 58), the members of the European Timber Exporters Convention, have agreed to leave their export quotas for planed and sawn timber practically unchanged in 1937. As the U.K. (the principal buyer) is expected to use quite as much wood in 1937 as in 1936, while Continental countries should easily increase their

all, restriction of output is likely to keep prices high. There is, however, a likelihood that Canada, with plenty of time for planning, will ship even more than her record quantities to this country two years ago.

The forward and hardwood markets rule very firm on the whole, with large receipts going steadily into consumption. The dearer dollar means an extra cost of about 6d. in the pound on purchases by U.K. operators—unless it can be recovered from American shippers. Prices rule generally firm for American woods, but here and there are to be found weak shippers. Teak has been arriving in good volume in recent weeks, and shippers are still well booked up ahead. Demand here is principally for wagon building, although the demand for good grades is also showing improvement. Mahogany is of good character and size are firm in price, with stocks light on the hands. Plywood has arrived in immense quantities, this week, seems to go into consumption almost as quickly.

RUBBER.—At its meeting on Tuesday, the International Rubber Regulation Committee decided to increase the export quotas for the first half of 1936 by 5 per cent, to 70 per cent of the available supplies. Some increase in the price had already been discerned in the market, prices at the level, and the publication of the Committee's statement resulted in an all-round firming up of quotations, which show a rise of about 3d. on the week. The spot price in New York in Wednesday was 16½ cents per lb. compared with 16½ cents per lb. a week ago and 16½ cents a month ago. Wednesday's official buyers' price for standard ribbed smoked sheet on the spot in London was 8½d. per lb., as against 7½d. on the corresponding day last week. In forward positions, business has been done at 8½d. to 8½d. for "December" shipment, as against 7½d. a week ago. Stocks in London and Liverpool at the end of last week totalled 97,730 tons, against 99,208 tons a week earlier. A year ago stocks amounted to 170,630 tons.

The following are Extracts from articles which have appeared in the columns of

THE FINANCIAL NEWS

during the past week.

CORPORATION ISSUES

The behaviour of the Gilt-edged market during the past week is somewhat difficult to interpret. Whatever its cause may be, however, the present *malaise* and uncertainty certainly comes at an inauspicious moment for the authorities. If the Treasury had been contemplating the issue of a new funding (or defence) loan in the fairly near future, the present temper of the Corporation issue market must necessarily give it cause for pause. The reception of the last batch of issues does not encourage the hope that the market will soon be ready for a major funding and borrowing operation. What would rather be more in order, indeed, would be a relaxation of the pressure of new issues for a fortnight or so, in order to allow the market to absorb the stock which has been forced upon it during the last month. The evidence suggests, indeed, that the effort which was required to subscribe £6,200,000 of entirely new money for the London County Council—albeit on the most attractive terms—has proved itself to be a greater test of the market's absorptive capacity than we had expected at the time. For the more recent issues there has been relatively little demand. Dumfries, Bristol and Manchester stand at fractional discounts. The Aberdeen issue, which was offered at 99½, had a minimum life of only seventeen years, and represented only £625,000 of new money, was only barely subscribed, and dealings began and continued at a discount. This is a discouraging position, in the middle of an autumn in which markets have on the whole been good. It suggests that loans have come a trifle too fast, and even that the stepping-up of the price was a little over-precipitate.

How far this congestion of the Corporation loan market is just one part of the general slight lapse of confidence in the Gilt-edged market as a whole is not quite clear. Certainly Gilt-edged prices have been a little unsteady during the last week or so. Positive reasons for this are not easy to find. There appears to be no essential factor in the short money market, nor in the Budget position, nor in the banking position as a whole, which would warrant any decline at this particular moment. After a four-month rise, of course, a certain amount of profit-taking is inevitable, although it should not normally be of sufficiently great dimensions to make the market as dull as it was at the beginning of this week. The more probable influence is the growing feeling that the Three-Power monetary agreement may sooner or later necessitate a hardening of interest rates here. In the long run, of course, this is true, although the extent to which the Government is prepared to sacrifice the known advantages of cheap money for the potential advantages of stable exchange rates is not yet known. And, in any case, the possibility is a possibility only in the long run. The first sign of it would be a movement of capital back to Paris and Amsterdam (and that movement could be quite substantial without harming interest rates). But so far there has been little sign of such a movement: both Paris and Amsterdam are still too uncertain depositories for funds. The possible dangers of dearer money, therefore, are still a long way ahead.

If the market is beginning to think that the cheap money period is drawing to a close, however, the authorities will have considerable difficulty in maintaining their present policy in the Corporation issue market. The terms of the next batch of Corporation issues will assuredly have to be more attractive—either in price or in redemption date—than those of the October group. Even if Gilt-edged prices as a whole are well maintained for the next few months (the most probable hypothesis), a considerable period may elapse before the market is again willing to take new 3 per cent. loans at par. The experience of the last couple of years suggests that when once the price has been reduced, it is usually a long time before the ground is regained. In January of this year, for example, the price was stepped down from 101 to 100½ and then to 100, and in April it was

stepped down again to 99, but it was not until the beginning of October that the conditions were ripe for an advance to 99½, and events since have shown that even that advance was perhaps a little premature. The conclusion which we may draw from this experience is that the new issue market will not be in a suitable state of mind to receive a big Government funding loan for some months to come. If the loan, of course, like its predecessor at the end of last year, were issued on highly favourable terms, then its success would no doubt be assured. But if the authorities intend to make the terms competitive, then they will have to wait until the present *malaise* has passed.

B.A. WESTERN ACCOUNTS

The general feeling when the B.A. Western dividend was announced was a good deal better than B.A.G.S., but not very good all the same. Last year the holders of the Second Preference got 2½ per cent.—this year they get only 1 per cent. The full accounts are interesting, but not exciting. Once again, they are better than B.A.G.S.'s, but that is about all one says about them.

Receipts are up by £13,383 11s. 9d.—a matter of 0.38 per cent. Passenger traffic (like the B.A.G.S.) has fallen. Fewer people went by train, and they paid less. Road competition is the point here, and the company's enterprising excursion policy could not offset it. When we come on to goods, the position again is much the same as that of B.A.G.S., but the emphasis, of course, is somewhat different, for Western carries less grain and more maize, and so has fared the better of the two.

The company's real activity, however, is centred in the live-stock traffic. Live-stock, in fact, accounts for more than one-third of the total non-passenger traffics. And this has done quite well. The increase has actually offset the goods loss. How far this can be repeated, however, is a question which no Western stockholder can discover for himself. It all depends upon Mr Elliot.

If this levy goes through, and the British people are prevented from buying Argentine beef, then beef sales and Western traffics will decline. That is a matter of arithmetical certainty. If, of course, the same volume of beef still comes in, the matter is different. Either the consumer will pay the levy—which is not what Mr Elliot intends—or the producer will pay, in which case he will want lower freights from the B.A. Western. It is exceedingly difficult to see how the Western can come well out of such a business. And in Western, as in the others, there are maintenance arrears, and labour problems—and traffics so far this year are lower than they were last.

THE FINANCIAL NEWS is now recognised as by far the most informative financial daily paper. It is noted for its independent and penetrating criticism of company reports, new issues, and financial matters generally, written by experts in their particular field of investment. Its share market reports and extensive lists of prices are essential for the investor who really follows the markets, and its columnists "Midas," "Lex" and "Viadux" should be read daily by the alert investor.

If you are not a regular daily reader of THE FINANCIAL NEWS and would like to sample the service it renders its readers day by day, fill in the form below and a copy of THE FINANCIAL NEWS will reach you daily free of charge for a fortnight.

A MODERATE PROGRAMME

THE King's Speech on Tuesday outlined a programme of legislation which, in contrast to the November gloom of the morning on which the Speech was made, must be accounted encouraging in more than one respect. In the first place, it contains a high proportion of domestic reforms, unconnected with precautions against war; and this at the present time is certainly something to be thankful for. Secondly, it includes a number of measures which are in substance non-contentious and hold out the promise of constructive co-operation between Government and Opposition.

At the moment, naturally, the public is most interested in the measures proposed to curb the dangers inherent in Sir Oswald Mosley's anti-Jewish campaign. The intentions of the Government on this matter were expressed in the King's Speech as follows:—

My Ministers have come to the conclusion that the existing law requires amendment in order to deal more effectively with persons or organisations who provoke or cause disturbances of the public peace. A Bill for strengthening the law without interfering with legitimate speech or assembly will be submitted to you.

In the subsequent debate, Mr Baldwin, without revealing the details of the proposed Bill, said that he regarded it as of "great importance and urgency," and added that it would be introduced before Christmas.

If, as has been reported, the Bill contains provisions for the prohibition or at least limitation of quasi-political uniforms, it will be very widely approved. For the public, while anxious to avoid panic measures and preserve genuine liberties, would certainly regard as intolerable the continuance of the present situation in the East End of London. It may consequently be hoped that, if the Bill comes up to expectations, both sections of the Opposition will as far as possible co-operate to make it a non-party measure. Nothing could do so much to strengthen the

prestige of democratic institutions both in this country and abroad at the present time.

A number of other measures have a fair chance of all-party support. The need for a new Factory Act has long been apparent; and both Mr Baldwin and Mr Attlee emphasised the importance of it in their speeches on Tuesday. Few again are likely to oppose the lowering of the health insurance age to 15, or the extension of unemployment insurance to "black-coated" workers, or the implementing of the recent official committee's report on unit trusts, or the standardisation of Ministers' salaries, or the transfer of national roads to the jurisdiction of the Ministry of Transport. The proposed measures for improving "physical education" may be more contentious. Much will depend on how far "education" turns out to mean better nutrition and recreational facilities and how far to mean mere physical drill. The association of this subject at the Conservative Conference with recruiting difficulties has naturally aroused some suspicions. This week's debate on the Address, however, left no doubt how great is the interest taken by the public in nutrition and health, and how general is the demand that some positive advance should now be made.

The Bills for the reorganisation of the coal and meat trades are bound to provoke more dissension. "Unification" of mining royalties will not be contested by the Opposition, so long as the terms of compensation are not over-generous to the holders; but it seems now too much to hope that the Government will again introduce the effective provisions for compulsory amalgamation of mines that were abandoned last summer under pressure from the Mining Association. If they do have the courage to do so, however, they can be assured of support from many Conservatives as well as both sections of the Opposition. On meat policy, on the other hand, there seems little chance of agreement; for the Government is apparently bent on

imposing a levy on foreign imports in order to finance a permanent subsidy. A levy is certainly better than a quota. But if the levy is introduced, the quota ought to be abandoned, and the levy ought to be adjusted to price levels so as to be self-liquidating in the event of rising prices, like the existing wheat levy. It may be that the need to preserve home supplies of meat in case of war will be urged in support of protectionism for the home beef producers. In fact, however, this argument cuts precisely the other way. For the amount of imported feeding-stuffs necessary to raise a given amount of beef requires more shipping space than the imported beef itself.

Perhaps the most disappointing feature of the King's Speech was its failure to indicate any new plan for the reconstruction of the Distressed Areas. The present programme is merely to be continued; but this programme, as the two special articles printed in our columns last week and this week have shown, has proved, and must prove, quite inadequate. Mr Baldwin, after a most bracing affirmation of his faith in freedom and tolerance, relapsed into something like complacency in discussing the state of trade and employment. He did not appear to recognise the necessity for positive measures to assist the Distressed Areas, to revive international trade, or to avert the danger of a business recession eighteen months or two years hence. The same complacency—to use no sharper word—was apparent in the satisfaction implied in the King's Speech with the present situation of the League and the re-armament race now distracting the world.

Unfortunately the threatened storm that hangs over Europe cannot fail to overshadow and, one must fear, to embitter, many of the debates of the new Parliament. All that we can now perhaps dare to hope is that at least some time will be given to domestic reform, and that at least some sign of inter-party collaboration will be on occasions apparent. If the Government would return to the liberal phase displayed just before the General Election, it would be surprised by the response it would evoke, both within the House of Commons and without.

MR ROOSEVELT'S TRIUMPH

NOT even the most optimistic prophet in President Roosevelt's entourage can have foreseen such an overwhelming victory as the American people accorded to him on Tuesday. There were some people who thought that Governor Landon would have a narrow majority. Perhaps the majority of forecasters expected a victory for Mr Roosevelt, but with a very much reduced majority and with the possibility of a Congress so nearly balanced between the two parties that further progress with the New Deal would be difficult. The official managers of the Democratic campaign predicted a victory "nearly" as sweeping as in 1932, but their statements were considered to be little more than the compulsory eve-of-the-fight optimism common to politicians and pugilists the world over. If any seers thought that Mr Roosevelt would actually improve on the vote which put him into office in 1932, or that he would be supported by a Congress even more unprecedentedly one-sided than that which was elected in 1934, they were unable to induce a newspaper to print their speculations.

Yet that is precisely what has happened. In 1932, Mr Hoover could find only six States to support him, and only one of these, Pennsylvania, was of major importance. His vote in the Electoral College was only 59 out of 531. At the time this was considered, and with some justification, to be such a humiliating defeat that poor Mr Hoover has ever since been a liability to any cause to which he has attached himself. With a Republican Party rejuvenated under more vigorous and more "liberal" leadership, it was not thought that Governor Landon could possibly do any less well than Mr Hoover. But he has carried only two States, both of them of negligible importance, and the Electoral College vote will be 523 for Roosevelt and 8 for Landon. The peculiar American system of voting (which was described in an article in last week's *Economist*) has, of course, exaggerated the difference between the majority and the minority. But there is no alibi for the Repub-

licans in the electoral system. In 1932 Mr Roosevelt received about 57½ per cent., and Mr Hoover about 39½ per cent., of the total popular vote. The full figures of this week's vote are not available as these lines are written, but it is already obvious that Mr Roosevelt has increased his proportion of the total. Judging by the provisional figures, he has out-voted all his rivals in combination in the proportion of 3 to 2. The Congressional elections have followed the same trend. Though final results are missing again here, it seems that the Democrats have increased their majority both in the Senate and in the House of Representatives.

After Tuesday's vote it is no more than a recognition of simple fact to say that Mr Roosevelt is the most popular President that America has known, certainly since the Civil War, and probably since the Revolution. What are the reasons for this abounding popularity? The policies of the New Deal were surveyed in some detail in a Supplement to the *Economist* of October 3rd, and though the final judgment then pronounced was more favourable than adverse, nobody could claim that the policies of the New Deal have been either uniformly successful or uniformly popular. Why, then, has the American electorate so enthusiastically endorsed the President who conceived and executed these policies?

One reason can be found in the contrast between the condition of the country in March, 1933, and its state of rapidly-returning prosperity to-day. *Post hoc ergo propter hoc* is a logical fallacy; but perhaps for that precise reason it is a sound political principle.

A second reason can be found in the personality of the President himself. He is all that a successful politician should be. His campaign smile, his radio technique, his phrase-making gift, his surpassing abilities as a charmer, his rarely-failing instinct for what will appeal to the plain man, even his choice of enemies—all have helped him.

Another powerful factor in his favour has been the fact that many millions of voters have been directly assisted by his policies, even apart from the indirect benefit to them of the general revival in trade, which he may or may not have promoted. The Democratic Party organisation has not failed to remind the beneficiaries of relief and of "agricultural adjustment" that they owe their cash receipts to the policies of a Democratic President and a Democratic Congress. In some districts this steady flow of cash has been used for more than the cultivation of gratitude and has served to irrigate the parched coffers of the Democratic "machine" itself.

Neither particular benefit nor general recovery nor personal charm, however, is sufficient—nor are all three in combination—to explain such an overwhelming victory. There is obviously something about the New Deal which has fired the imagination of the country. One does not need to search very far to find this inner element of Mr Roosevelt's strength. On the day of his inauguration he promised "Action, and Action now," and ever since he has contrived to give the impression that he was leading a democracy on the march. The march has, it is true, led into more than one *cul-de-sac*, from which direct retreat has been necessary. But always the American democracy, under Mr Roosevelt's leadership, has been on the move, always the voter could consider himself one of an army continually striving to combat privilege, to relieve misery and to establish "the abundant life." Mr Roosevelt has caught a little of the spirit which in other countries has been distorted and debased into Fascism.

The moral of his triumphant re-election—and it is a moral that all democratic countries, Great Britain not least, should take to heart—is that the people will forgive the bold experimentalist his occasional errors in gratitude for his strenuous good intentions. They will never tolerate the cautious pedant who waits before moving to be sure that every last detail of his plan is approved by the orthodox, and consequently seems never to move at all. Mr Hoover may or may not be the better economist, but in any case it is not he who can rally the multitude and organise the democracy. And since politics is the art of the possible, not the science of the ideal, it is the Roosevelts who, with all their faults and inconsistencies, become, and deserve to become, the great statesmen.

The full consequences that will flow from this week's

vote cannot yet be predicted. They depend in very large measure on the conclusions which Mr Roosevelt himself will draw from the unprecedented vote of confidence he has been given. The victory is so complete that he would be justified in proceeding even with those parts of his programme which have been thought to be unpopular. A continuance of relief in its present form, of agricultural adjustment, of social security, of public utility regulation can all be confidently predicted. A revival of experiments such as the N.R.A. is not improbable. Mr Roosevelt may even feel himself strong enough to tackle the problem of the Constitution itself in order to break out of the sterile dilemma in which recent decisions of the Supreme Court have placed the Federal Government. Proceeding to still bolder flights of imagination, it is even conceivable that he may venture to act upon the belief that a great nation such as the United States should have a foreign policy.

Equally interesting, and equally speculative, are the probable effects of the election, not upon policy, but upon politics. When one party has had a majority in American elections in the past, it has always been because it has been able to build up a larger coalition of States than its rival. Other Presidents in the past have received as large a proportion of the popular vote as Mr Roosevelt (Harding in 1920, for instance, received over 60 per cent.), but they have always had to face large geographical minorities. Mr Roosevelt, however, gets his majority in 46 States and almost sweeps the board of the Electoral College. This can only mean one thing—that the old geographical basis of the parties is breaking down and being replaced by a division of policies or interests. The Democrats are becoming, under Mr Roosevelt's lead, the party of the Left; the Republicans, in spite of Mr Landon's "Liberalism," the party of the Right. Where this new alignment of parties will lead American politics we can as yet only dimly foresee.

A TALE OF TWO CITIES

AT Milan last Sunday Signor Mussolini delivered another of those orations to the Fascist faithful and the infidel world which we are rapidly being schooled to expect—from the Duce himself or from his opposite number in Berlin—almost every week-end. This time the Duce reverted to an habitual theme in his grandest "olive branch on 8,000,000 bayonets" manner. An organisation for perpetual peace, we were told, was both futile and otiose. Men must fight; the League of Nations and its principle of collective security might now be allowed to die quietly; "indivisible peace" meant indivisible war; and so forth. This part of his speech was doubtless mainly intended for home consumption. Many other speeches of a like nature were so intended before the Duce began his war of aggression against Abyssinia.

But just as such speeches by the Italian dictator in the recent past have had epoch-making effects on European political alignments, so it would be rash to-day to dismiss these words of the Duce as insignificant. They must now be read in a European context; and that context, which the hesitations and fumbblings of British and French Governments have done so much to provide, was summarised by the Italian dictator himself last week-end when he said: "This vertical line between Berlin and Rome . . . is an axis round which all European States animated by the will to peace and collaboration can co-operate." This is, then, the new tale of two cities—Rome and Berlin; not henceforth, as in the story of Dickens, London and Paris. Yet the rest of the world wonders whether Europe as a whole can, in fact, support anything approaching equilibrium round the new Rome-Berlin axis.

The thinking Englishman or Frenchman notes the long train of wanton breaches of plighted engagements, the cynically accomplished facts, the invocations by the twin dictators of Italy and Germany of blood and iron as the agents of *raison d'Etat*. He recalls the hopes of a new

7, CHANCERY LANE, LONDON

world order based on respect for the rule of law which the post-war world nourished, and asks whether these hopes now offer precisely nothing. And the people of the other countries bordering on Italy or Germany are all asking the same questions. Is there any reality in this much-advertised association between Rome and Berlin? Even if it is hoped to regroup Europe about the new axis, can it really become effective against the constellation of forces which, though alarmingly weakened in the last twelve months, still centres round the London-Paris line, prolonged to Geneva? Finally, will not the attempt to shift Europe's centre of gravity—if it comes—be inevitably accompanied, if not achieved, by war?

The answer to such questions is lost in a maze of doubt and uncertainty. The contrast between the public utterances of irresponsible dictators and the more responsible diplomatic conduct of their foreign relations is not the least of the difficulties which totalitarianism has bequeathed to Europe. The two remaining democratic Great Powers of Europe, France and Britain, have to decide where speaks the authentic dictator and what is his real policy: the unexpurgated and unrepudiated *Mein Kampf* or the dulcet utterances of Herr von Ribbentrop; the olive branch which Signor Mussolini offers to England or the 8,000,000 bayonets on which it was presented; the militant fulminations against Russia by Herr Hitler and his adjutants at Nuremberg, and the invective against the League and collaboration with "Communists" on the one hand, or on the other, the fervent official desires of March 7th last for a general European settlement and a return of Germany to a reformed League; the Duce's minatory demands for the cessation of British naval measures in the Mediterranean, or his request for an "understanding" with this country. Both Signor Mussolini and Herr Hitler have so repeatedly belied their plighted word in the last three years that to-day no Government in Europe dare trust implicitly to any of their pronouncements. The result is a breakneck race in armaments among all their immediate neighbours, even the so-called "neutrals." The word has gone round with a grim twist to it: *inter fascies silent leges*.

Since the Italo-German agreement over Austria of July 11th last the two Fascist dictatorships have officially presented to the world something which looks like a united front. A fortnight ago that front was apparently cemented by Count Ciano's return visit to Berlin; and last Sunday Signor Mussolini explicitly confirmed it. Rome and Berlin seem now to have agreed to make a sudden, joint diplomatic offensive aimed at London and Paris. It is clearly directed at the complete segregation of Eastern and Western Europe; the separation of Russia from France and Czechoslovakia; and the driving of a wedge between France and England. Moreover, the Duce was at pains—as we note on page 252—to try and blind Roumanian and Jugoslavia to the danger which a German sally against Czechoslovakia would ultimately mean for them, and thus to break up the defensive solidarity of the Little Entente.

Then, with France isolated and preoccupied by the fear of a new Fascist Power upon her remaining land frontier, the Duce and Führer could together bluff, or, in the last resort, threaten England with two alternatives: either a strictly limited West European "settlement" which lay under the control of Germany and Italy, or else a ruthless united front of Italy and Germany in every European question, as over Spain. Naturally, if the British Government accepted this Italo-German programme, it would enable the Nazi Party to attain the next objective of its own independent foreign policy: that free hand in the south-east of Europe which is the condition precedent of a militant "forward policy" destined to consolidate all Central and South-Eastern Europe under rigid political and economic German rule.

But at this point of the story we begin to suspect Signor Mussolini of "hedging" with his Northern colleague. The Duce may conceivably be prepared to throw part—or all—of Czechoslovakia to the wolves, but he cannot blink the fact that once Moravia goes to Germany, neither Vienna, nor Austria, nor Yugoslavia, nor Fiume, nor Trieste, nor even Venice herself and the Adriatic, can be defended by Italy against Germany on any conceivable strategic front. The Duce would only contemplate giving Germany the supremacy in these vital zones of Italian interest if he were convinced that the French and British Governments have finally abdicated their world position and are too weak or too unwilling to face a steadfast Italo-German combination; or, alternatively, that the situation in Central Europe is capable of being turned to Italo-German advantage by German military action against Czechoslovakia. Italy might then stand aloof and threaten England and France with that same threat of general European war which has done such yeoman service in the crises over Abyssinia, Spain, and the militarisation of the Rhineland.

It is difficult to believe that so shrewd a diplomat as Signor Mussolini can imagine that German penetration to the south-east can possibly be to Italy's advantage. If, on the other hand, he is counting on the former possibility above, both he and the Führer, and any of their European sympathisers, will be rudely and catastrophically disillusioned. Unfortunately, as before 1914, it is always impossible to say in advance upon precisely what point democratic British—and to-day, French—opinion will take a sudden stand. But that such a stand will one day be taken, we have no doubt. Mr Eden, in the Commons on Thursday, told the Duce that Britain had no aggressive designs in the Mediterranean; and that the British route through that sea was "not a short cut, but a main arterial route." At the same time Mr Eden reciprocated German desires for friendship with this country, but attached the two important conditions that "such friendship cannot be exclusive," nor can it be "directed against anyone else." If perchance the Duce really thinks that he can keep England and France quite quiet, while he profits at their expense in various parts of the world, we would beg him, with all the earnestness of which we are capable, to temper his natural optimism after Abyssinia and Spain with a greater admixture of realistic caution. After last Sunday's ebullition, we have the uncomfortable suspicion that the Duce's glee over the discomfiture of Britain and France may impel him to become even less cautious than the German military authorities. They at least realise their unpreparedness for a truly general European war of attrition, and are by no means sure that an external adventure south-eastwards could be begun without leading to war all over the Continent. But if Berlin actually started such a move, the Duce might find himself compelled suddenly to "swap horses."

Try as we can to feel our flesh creeping at these threats of a firm and immutable Italo-German front in Europe, we confess we can only discern something that looks extraordinarily like bluff—a bluff which has its uses for the conclusion of a "Western Locarno" favourable only to Germany, but none the less a bluff which seems to us peculiarly dangerous to the Italy of Signor Mussolini. After all, if Duce and Führer have, for the moment, wrested the European initiative from the British and French Governments, they have wrested with it the responsibility for whatever befalls on the Continent.

CORN IN BRITAIN

THE cultivation of the principal corn crops—wheat, barley and oats—accounts for about three-sevenths of the total arable area of Great Britain, and some 5 per cent. of the value of agricultural and horticultural produce sold off British farms. Four years ago the Government secured the passage of a Wheat Act which completely transformed the outlook for home growers of wheat and upset the traditional balance between wheat and other cereals. What has been the subsequent course of events?

The Act guaranteed to domestic growers of millable wheat a subsidy in the form of "deficiency payments" equal to the difference between the ascertained average price of home-grown millable wheat and a statutory standard price of ros. per cwt. The subsidy was financed by a levy on the flour millers, which has been, of course, passed on to the final consumer. Fortunately for him, however, the full subsidy was limited to 27,000,000 cwt. of millable wheat. The Act provided that if—as quickly occurred—production were to exceed this figure, the deficiency payments were to be scaled down proportionately. Thus wheat production was made much more profitable, but indefinite expansion was capable of being checked by declining prices. Some effects of this measure may be traced in the following table:—

WHEAT—PRODUCTION, IMPORTS AND PRICES

	1913	1929	1932	1934	1935	1936
Acreage ('000 acres)—

The inducement to wheat farmers to expand their acreage, coupled with favourable weather conditions, produced large crops in 1933 and 1934. A deficiency of rainfall caused a setback last year and a further contraction—due, paradoxically, to superabundance of rain—occurred this season. It remains true to say, however, that the Wheat Act has offered a powerful incentive to the wheat farmer to expand his production; and that the resulting expansion has been accompanied by a decline in imports and (until the present season) by a reduction in prices. More recently the factors discussed in an article on the world wheat position in the *Economist* of October 10th have raised the world price and consequently reduced the deficiency payments to British growers.

Undoubtedly the subsidy has benefited the Eastern counties, where, incidentally, farmers have also profited from the sugar beet subsidy. It is in this area that the bulk of Great Britain's wheat is produced. Part of the extension of the wheat acreage has doubtless been at the expense of barley, whose recent experience is summarised in our next table:—

BARLEY—PRODUCTION, IMPORTS AND PRICES

	1913	1929	1932	1934	1935	1936
Acreage ('000 acres)—						
England and Wales	1,559	1,120	961	861	792	819
Scotland	198	101	68	96	76	74

Barley is cultivated over a rather wider area than wheat; but while the demand for wheat is almost exclusively for human consumption, the demand for barley comes from two distinct sources. The better qualities are used by the brewing industry, and the remainder is consumed for feed-

ing purposes by the livestock and poultry industries. Owing to the long-term decline of both those demands, the area under barley in Great Britain has shrunk to little more than one-third of its dimensions in the quinquennium 1876-80. The acreage reached a record low level in 1935, with a slight recovery this year. The decline has been least evident in counties like Norfolk, Suffolk, Lincoln, the East Riding of Yorkshire, and Cambridge, where soil and climate are best suited to the crop. Since 1929 imports have shown a rising trend and prices have been acutely depressed.

In the Eastern Counties barley and wheat may both be grown on the same farm, but certain other barley-growing areas are not suitable for wheat production. From these districts, inevitably, there have come appeals for State assistance to put the barley grower on a more equal footing with the subsidised wheat producer. The problem is complicated by the difficulty of drawing a clear line of demarcation between malting and feeding barley. A tariff on all imported barley would seriously affect the livestock industry, which is already, in its turn, depressed. Barley in grain still enters the country duty-free, while foreign imports of wheat pay 2s. per 480 lbs. under the Ottawa Agreements Act. Growers, however, benefit in two ways. First, pearled barley and other barley products from foreign sources bear a duty of 3s. 6d. per cwt. or 20 per cent. *ad valorem*, whichever is the greater. Secondly, there is a "gentlemen's agreement" between the brewers and the Import Duties Advisory Committee, under which the former purchase a minimum of 7,500,000 cwt. of home-grown barley annually. According to the *Brewing Trade Review*, brewers' purchases in the year ended June 30th last actually totalled 7,729,000 cwt., against 7,458,000 cwt. in the preceding season.

Oats, finally, can be grown in more exposed positions than wheat and barley; and are raised not only in England, but also over wide areas of Wales and Scotland. The progressive decline in the number of horses, in a motoring age, is mainly responsible for the heavy falling off in the post-war consumption of oats, which is disclosed by the following table:—

OATS—PRODUCTION, IMPORTS AND PRICES

	1913	1929	1932	1934	1935	1936
Acreage ('000 acres)—						
England and Wales	1,975	1,854	1,580	1,402	1,418	1,417
Scotland	938	889	868	817	827	828
Great Britain	2,913	2,743	2,448	2,219	2,245	2,245
Production ('000 tons)—						
England and Wales	(a)	1,522	1,251	1,116	1,138	1,034
Scotland	(a)	755	746	645	681	(a)
Great Britain	1,988	2,277	1,997	1,761	1,819	(a)
Imports ('000 tons)—						
United Kingdom	908	346	324	161	178	110(b)
Prices (per cwt.)—

(b) Estimated on the basis of nine months' figures.

The decline in consumption has been less at the expense of home production than of imports, which have been subject, since 1932, under the Import Duties Act, to a duty of 3s. per cwt. on foreign imports. Oatmeal and certain other products of this grain pay no less than 7s. 6d. per cwt. Though the decline in the domestic price since 1929 has been similar to that of barley, the fall is not so serious from the growers' point of view, since oats are much less a "cash crop" than either wheat or barley.

In post-war years, therefore, cereal production in Great Britain has been carried on in face of a long-term price decline, which occurred at a time when costs of production were showing a relative increase. As the labour bill represents some 36 per cent. of gross farm costs,* the burden of the minimum wage provisions, first imposed under the Corn Production Act of 1917, may readily be appreciated. The vexed question of tithe has also an important bearing on total costs. The rise in expenditure has been to some extent counteracted by the use of labour-saving machinery and by the concentration of production on those crops which need least human labour. But from the viewpoint of many farmers, all other considerations have been subordinate to

* See "The Labour Bill and the Output on Arable Farms." By R. McG. Carslaw and P. E. Graves. *Journal of the Royal Statistical Society*, Part IV., 1935.

the effect of the passage of the Wheat Act. Wheat production in certain areas has undoubtedly been rendered highly profitable. But the extension of wheat acreage has been by no means a net gain, even from the purely quantitative aspect. Expansion in the Eastern Counties, for example, has been partly at the expense of barley and possibly also at the expense of oats. The process of readjustment is not yet complete. Unless the Government intervenes yet again, the transfer to wheat from other cereals will continue until "marginal production" is equally profitable in all three instances—which is not the case as yet.

THE DEPRESSED AREAS—II

(BY A SPECIAL CORRESPONDENT)

AN article in last week's *Economist* examined the condition of the Special Areas, discussed some of the reasons for the comparatively meagre results achieved by the Commissioners, and stressed the need for a more active policy for stimulating industrial development. The present article suggests some of the practical forms which such a policy might take.

The most urgent matter is that of the Commissioners' powers. The King's Speech, this week, promised merely "to extend the period of operation of the Special Areas (Development and Improvement) Act, 1934," and Mr Baldwin subsequently made it clear that the Government's intention is to include the measure in the Expiring Laws Bill before Christmas. Parliament will thus be denied an opportunity of criticising the Act in detail, or modifying its terms. It may be sincerely hoped, however, that before the Debate on the Address ends, early next week, an opportunity will have been taken to press for proper reconsideration of the hampering restrictions and anomalies mentioned in Mr Malcolm Stewart's reports. In particular wider powers to make grants, even though these were "payable" by Government Departments, would not only free the Commissioners from the most paralysing effects of the "general standards" of the bureaucracy; they would greatly increase the influence of the Commissioners over the local government and other bodies through which they have to work.

The most serious limitation of the Commissioners' powers, however, is not easy to remove. It is impossible to allow them to be faced with innumerable demands for pecuniary assistance to private profit-making concerns. But it is quite another question whether a definite financial incentive on a clearly limited basis should be given to enterprises ready to take the risk of launching out in the areas. Sir Harry McGowan has suggested that this incentive might take the form of a percentage grant towards capital expenditure on fixed assets. After all, we are subsidising agriculture to the tune of £33,000,000 annually and giving £2,000,000 to tramp shipping. To grant a non-recurring subsidy to new enterprise would intrinsically

be far less objectionable than to allow a vested interest like the beet sugar industry to profit perpetually at the tax-payers' expense.

Apart from transfer, with all its disadvantages, the only possible solution of the Special Area problem is the stimulation of industry, and above all of new industries. Since, as Mr Malcolm Stewart has repeatedly explained, the recovery of the old industries will be quite insufficient, and there is not enough local talent and enterprise in most of the Areas to start new trades, it is essential to attract industrialists from outside. And although the growing shortage of labour in the prosperous districts is giving manufacturers some anxiety, it will hardly of itself prove a sufficient incentive to induce them to launch out in completely new areas.

It is, above all, this problem of incentive which has to be faced. Here the real difficulty seems to lie with the Board of Trade. The Board feels that to give an inducement to Mr A to start his factory in one district rather than in another is the first step on the slippery slope towards dictating the location of industry. Thus in spite of the obvious national advantages of inducing manufacturers, so far as is economically possible, to start new undertakings in areas where labour is available instead of increasing the congestion, say, on the Great West Road, very little can be done. This attitude probably explains why none of the help given to the Special Areas really constitutes a differential incentive to manufacturers. Trading estates (though they may prove valuable assets to the areas) can be found elsewhere and the terms which the Special Areas Reconstruction Association is able to grant, even with the partial Government guarantee against loss, are not so different from those obtainable elsewhere as to have very much effect in attracting industry.

Subsidies are by no means the only way of providing an incentive. The writer has before him a letter from an experienced manufacturer who is anxious to develop an experimental toy-making industry in West Cumberland on a considerable scale. He admits that the costs would probably be slightly higher than elsewhere, but this disadvantage would be more than outweighed if he could be helped to obtain a market for his novelty products, at any rate while he was establishing himself. And he strongly urges that an attempt should be made to capitalise the good will universally felt towards the areas from a marketing point of view. A Special Areas Marketing Board running a campaign to popularise Special Area goods would probably have a very great effect towards attracting the secondary consumption industries which are so badly needed.

A similar inducement can be given by preferential treatment to the Special Areas in Government orders. This is, in fact, the Government's declared policy, and, according to the Prime Minister, the necessary instructions have been issued to the Departments. But what a manufacturer contemplating the establishment of a factory in a Special Area wants to know is whether, if he turns out goods up to standard, he will really obtain definite orders which would not otherwise have gone to him. While here and there preferential treatment may have been given, neither the principle nor the mechanism has been sufficiently developed for the policy to exercise a real "pull" on industrialists.

For such help as is available, even in obtaining orders, manufacturers depend on the Development Councils. These bodies are clearly anxious to do all they can; but with their very limited resources and tiny paid staffs they are expected to cope with practically all the manifold tasks involved in securing the recovery of their Areas. This question was dealt with most emphatically by Sir Harry McGowan in a speech last November, when he declared that both the resources and the personnel of the Councils were inadequate and that the grants made to them out of the Commissioners' funds needed to be largely increased. In particular, the vitally important research into the suitability of various areas for different manufacturers took a great deal of time and cost a lot of money. He suggested that, provided the funds were available, many industrial firms or associations would be able and willing to lend qualified men to explore specific possibilities of manufacture.

Once the research is done, the problem of setting up the industry arises. It has hitherto been practically useless to

approach established industrialists in other districts. A possible way out of this dilemma may be to approach the younger men in the industries concerned—men of more elastic habit of mind than their elders—who may be dissatisfied with their position and prospects. Such men might be more likely to see opportunities and more ready to make a move in order to seize them than any established industrialist. In this connection an interesting suggestion has been made that the younger executives of established concerns should be attracted by the guarantee of their existing earnings for a period of years. In many cases the man who conducted the original research might be prepared to take on the business.

If the Development Councils are to proceed on such lines, they will need not merely larger resources, but wider powers. In particular, they will need to be able to meet some expenses in the experimental stage of new industries, which would be held at present to contravene the restrictions on all money emanating from the Commissioner, the source of the Development Council's funds.

There are many other ways in which a more liberal supply of funds to the Councils would be of value. For example, publicity for most of the Areas has hitherto been comparatively unco-ordinated and ineffective. Publicity is largely a matter of spending money; and a determined and thorough attempt to put the Areas "on the map" might show surprising results. Residential conditions are a further point, to which little attention has hitherto been directed. Mr Malcolm Stewart has written of "vaguely defined and vaguely felt prejudices" against settling in the Areas, and it may well be that some of these are not such as industrialists care to mention to official inquirers. After all, the men in the new industries are progressing quite well in the South. They enjoy opportunities for pleasant social contacts and all the attractions of London. Yet if businesses are to be established in the Special Areas, managers and managing directors must be prepared to live there. The problem is not easy, but an energetic attempt to develop attractive parts of the Areas (such as West Cumberland) as holiday and residential centres, coupled with the skilful use of social influence and a general atmosphere of welcome to newcomers on the part of all concerned, would certainly have some effect.

There are many other possible ways of stimulating enterprise which will occur to any business man. For example, during the last few years a great many foreign industrialists have started factories in this country in order to come within the tariff barrier. At the same time, political circumstances in Germany have made available a wealth of industrial enterprise and talent comparable only to that of the Huguenots and the Flemish weavers in the past. Yet although the Government command various means of influencing the actions of immigrant industrialists, there has been no concerted attempt to induce suitable men to come or to establish their businesses in the areas where they are really wanted.

Even in the arms industry, where Government influence is paramount, there has been no widespread endeavour to make use of the obvious strategical advantages of West Cumberland and South Wales. All in all, it is difficult to resist the conclusion that the Government has failed entirely to realise the great economic advantages of spreading the present boom over a wider area, largely owing to its unwillingness—in this respect, though certainly not in many others—to depart from the paths of orthodoxy.

THE PRIVATE ARMS TRADE

On February 20, 1935, before the Government's two White Papers on National Defence of March, 1935, and March, 1936, a Royal Commission was appointed with, *inter alia*, the following terms of reference:—

(1) To consider and report upon the practicability and desirability (both from the national and international point of view) of the adoption (a) by the United Kingdom alone, (b) by the United Kingdom in conjunction with the other countries of the world, of a prohibition of private manufacture of and trade in arms and munitions of war, and the institution of a State monopoly of such manufacture and trade.

The Commission was further to consider and report whether any steps might usefully be taken to remove or minimise the kinds of objections to which private manufacture is stated in Art. VIII, para. 5, of the League Covenant to be open; and, finally, to examine and report whether the present control in this country of the export trade in arms and munitions required revision, and if so in what directions.

At first sight the Report of the Commission, issued last Saturday, seems to be a victory for the anti-nationalisers and a defeat for the critics of the present system. But second thoughts leave a more mixed impression. It is unfortunately true that many of the proposals of the Commission are vague, and in their wording show evident signs of compromise between conflicting opinions. But in spite of this defect, the Report contains a statement of principles which, if strictly applied, would go far towards removing the evils so strongly resented by public opinion.

It must be admitted that much of the argumentation of the Report is unconvincing. The Commission makes great play with the argument that whereas Great Britain ought to fall in with any international agreement whereby armaments might be reduced, and in that event should be ready to fall into line on a universal plan for abolishing their private manufacture, circumstances have for the time being ruled out of court any hope of limiting armaments by agreement; and in the present period of frenzied competition we cannot possibly contemplate national monopoly of armament production. Yet almost in the same breath the Commission observes that the armament business is wholly nationalised in Russia; except for the factor of private profit, is completely under national control in Germany and Italy; and is about to be partially nationalised in France. It is not obvious why sauce for the goose is not sauce for the gander. Yet the Commission adds that "none of these examples seem to us to have much value for British industry." In the light of experience elsewhere and of what the Government is itself doing in this country, the critics will not be convinced by the assertion that since all the country's industries work directly or indirectly for armaments, nationalisation of arms manufacture could only be achieved satisfactorily by a scheme for the nationalisation of industry as a whole. This argument would apply to the London Transport Board, electricity, and a dozen other public services.

Nor is the argumentation over private profit very lucid. It is recognised that there is something revolting to the conscience of ordinary people in the idea that war and preparation for war are profitable to particular persons and that the public are doubtful of being able to remove by direct methods the evils that may arise from the existence of this incentive. The intense and genuine public feeling on this matter, says the Commission, ought not to be disregarded. Yet, they say, the complete removal of the profit motive is "neither necessary nor desirable." The outcome is a compromise suggestion that measures should be taken to restrict profits to a reasonable remuneration—a course which is justified on its merits "having regard to the fact that the private industry is in effect engaged in a public service and is virtually of a monopolistic character."

But in spite of all these defects and compromise formulae, the Commission reaches three statements of principle which if applied would at least remove the worst objections to the present system, would relieve public anxiety and would make easy any further step that might subsequently be called for. This in itself is no small achievement, for it would be difficult to imagine circumstances more unfavourable to the calm consideration how this industry should be run than those of the last twelve months.

The first proposal of the Commission is that the Government should assume complete responsibility for the armaments industry in the United Kingdom and should organise and regulate the necessary collaboration between the Government and private industry. This should be done through what would in effect be a Ministry of Munitions, and its task should include not merely control of the industry in peace time, but the preparation of plans for the immediate expansion of armament production—the Commission uses the phrase "the conscription of industry"—in the event of war. The task of this Ministry should be facilitated by the recommendation that some specimens

WORLD-WIDE LETTERS OF CREDIT AND DRAFTS ISSUED.

of all types of armament should be manufactured in the Governments' own establishments. This scheme for a Ministry of Munitions, which is adumbrated in outline only, is likely to find favour in many quarters which are dissatisfied with the present apparent lack of order and inadequate control over the private industry of armament manufacture.

Secondly, while disclaiming that it possesses the necessary technical qualifications for framing a suitable scheme, the Commission urges that a plan should be devised for limiting the profit of armament firms in peace time in the manner already referred to.

In the third place, it is proposed that a different attitude should be adopted towards the export of arms. Instead of assuming that licences should be granted unless cause were shown to the contrary, the licensing authority should satisfy itself that the export was desirable. Licences should only be granted to firms specially authorised to accept orders by the new Ministry of Munitions; they should be restricted to orders from foreign Governments; and instead of the present system of granting open licences for certain classes of arms, specific licences should be required in all cases. This view is based on the dictum—which should dispose of much fallacious argument—that the nucleus for expansion of productive capacity provided by the export trade is not sufficiently great to justify a policy of active encouragement of the trade by the Government. This is a highly significant conclusion.

Finally, in this matter of the arms trade, the Commission, somewhat indirectly but nevertheless clearly, states its opinion that the Government made a mistake in rejecting the proposal made in 1934 by the United States delegation for an international control of the manufacture and trade in arms. It recognises that the suggestion then made for international inspection and the disclosure of information might be distasteful to many Governments, including presumably our own; but the very suggestion "commanded a wide measure of support abroad," and "the possibility should not be missed of securing international agreement in the domain of arms control, even on a limited scale."

Subsidiary recommendations are that the private export trade in surplus and second-hand munitions of war should cease; and that public officials "should not accept appointments with armament firms except with the approval of the Minister in charge of the department in which they are serving or have served." The first of these suggestions is admirable, and if universally adopted would put an end to much possible buccaneering. The second is also perfect in theory, but in practice is one of those suggestions which changes nothing, for it is not to be supposed that permission would ever normally be withheld.

Taken as a whole, the Commission's report is much more searching than might have been expected at a moment when re-armament is in full swing and private industry in all directions is receiving largesse from the Service departments. It takes cognisance of the fact that suspicion of the effect of the profit motive in the arms trade stirs the public more deeply perhaps than any other sentiment. At the same time, something like war mobilisation in miniature is taking place. Paradoxically it may prove that this very fact may lead even a Conservative Government to take a much firmer control of the arms industry than it could have been persuaded to do by a dozen commissions in halcyon days of peace.

NOTES OF THE WEEK

Municipal Elections.—Municipal elections are always difficult to interpret; for only a third of the total councils are elected in any one year, and the results of one year have therefore to be compared with those of three years before. In England and Wales, Labour made a net gain of 200 seats in 1933; and this year has suffered a net loss of 81 (128 losses and 47 gains). This loss was partly made to the Conservatives, who showed a net gain of 44, and partly to the Independents, whose gain was 42. Stafford, Warrington and Mitcham have now been lost to Labour; and at Birkenhead, Leyton and Gateshead anti-Labour gains have made party strength equal on the councils. On the other hand, Eastleigh and Southall, two new boroughs, will have Labour councils; and Labour and anti-Labour representatives are equal at Coventry. In Scotland, Labour lost three councils and gained one. In general, it would probably be a mistake to connect the Labour losses with dissensions over foreign policy; for this is not an issue in municipal elections. The main cause is probably the great increase in employment since 1933. The recovery from depression has meant a slight shift of local sentiment in favour of stability rather than change.

A New Jarrow Scheme.—Sir John Jarvis stated in a speech to the Jarrow marchers on Tuesday evening that he had decided to lay down a plant for making tubes at Jarrow. Sir John said that he had purchased the boiler works at Palmer's Yard and the freehold land on which it stands. He was sharing the cost of laying down the plant with one of the big banks, and the new Government Department, the Special Areas Reconstruction Association, was subscribing the maximum amount of capital permitted. "So far as I am concerned," Sir John declared, "I neither want nor shall accept any profits on my money." He hoped that the new plant would be producing by the spring. At first it would employ hundreds, but might later employ thousands. In reply to Sir John Jarvis, the Mayor of Jarrow remarked, with perhaps pardonable incredulity, that he would believe in the new factory when he saw "smoke coming out of the chimney." If, however, as seems fair to hope, the scheme actually follows the lines foreshadowed by Sir John Jarvis, something will have been done for Jarrow at last. In that case everyone will applaud Sir John's public spirit; but the responsibility resting on the Government will be none the less. Indeed, it will be the greater; for a Government worthy of the name can hardly leave it to private benefactors to perform public duties at their own expense. The chairman of the Jarrow Conservatives suggests this week that the best permanent solution of the Jarrow problem would be the return of an Admiralty shipyard to Jarrow. This may prove one feasible plan; but no good reason has yet been advanced for the abandonment of the original steel scheme. At any rate the Government must clearly propose something in response to the petition laid before Parliament on Wednesday.

The Spanish Struggle.—Beleaguered Madrid has this week been subjected to continuous aerial bombardment, mainly in the working-class quarters; and on Thursday the capture by the rebel forces in the south-west of the Getafe aerodrome and adjoining villages enabled them to shell the capital. The rebels' progress is almost entirely in the south-western sector of their front, which extends over two-thirds of the circle round Madrid; and though the Government forces have made two big counter-attacks, one of which temporarily freed the line to Valencia through Aranjuez, they have not been able to hold up the rebels' advance. In Oviedo the rebels have again lost ground; and in the north and the south-eastern littoral region their efforts are merely aimed at holding the position reached, until the fall of the capital. It is reported that General Franco is preparing to land forces in Catalonia under cover

of aerial bombardment, in order to take the Government forces there in the rear, once the Government, as is to be anticipated, removes to Barcelona. Meanwhile, *The Times* Madrid correspondent on Wednesday confirmed the report that some of the rebels' artillery is Italian, and that it is manned by Italian troops sent from Genoa with 15-inch guns and ammunition. It may be that the Italian men and material were sent before Italy finally "agreed in principle" to the Pact. The Committee met again for its weekly meeting on Wednesday, and again it adjourned, having decided nothing. The German allegations of breaches of the Pact by Russia, though stoutly supported by the Italian representative, were found to be unsubstantiated. With such "tit-for-tat" procedure the British and French Governments, seeing the pass to which things have now come in Spain, can scarcely be content. But, as we said last week, they are the prisoners of their own good faith. They are as silent as they are impotent.

Dr. Goebbels on Colonies.—Dr. Goebbels replied this week to foreign criticisms of General Göring's recent pronouncement on colonies. General Göring had stated that both Germany's colonies and her gold had been "stolen" from her, and that it was consequently impossible for her to pay for raw materials with gold. Commentators on this remark pointed out that it was, nevertheless, possible for Germany to obtain raw materials by exporting in the ordinary way and securing foreign exchange. This observation is described by Dr. Goebbels as "impudent and insulting." It is not clear why. Our Ambassador in Berlin has entered a courteous protest against such utterances, which are not calculated to ease Anglo-German relations. With the argument that Germany was "robbed" of her gold by reparations we deal in a leading article on Germany's present exchange position, which appears on page 264 of this issue. For the rest, there is no substance in the suggestion that Germany's present raw material troubles have anything to do with colonies. In the first place, the bulk of raw materials do not come from colonies; and in the second place, in so far as they do, they must normally be paid for, not by gold, but by exports. The implication of much Nazi propaganda on this subject is that, if Germany possessed colonies, she would merely take the raw materials without paying for them at all. Fundamentally, Germany has the ability to buy her necessary raw materials, if only her bilateral trading policy were relaxed. For if her contention is that it is foreign tariffs which prevent her exporting and obtaining foreign exchange, the answer is that every nation's exporters have to face tariffs, and that German tariffs are not the lowest. In actual fact, Germany's difficulty in importing ordinary "civil" raw materials is due to two main causes: her expensive re-armament programme, with its heavy needs of specific raw materials, and her insistence on holding her currency in artificial relation to separate foreign currencies. There may be good reasons why Germany should govern colonies: but this question of raw materials is not one of them.

Mussolini Muddies the Danube.—In his Milan speech the Duce took occasion to muddy the waters of the Danube, which in recent months had begun to look a little bluer under the sunshine of his smile. He said that "no final co-ordination of interests in the Danube basin" could be accomplished until justice was done to Hungary, the great mutilated nation, 4,000,000 of whose people lived outside her present frontiers. (Incidentally, the Duce seems to have discovered about half a million exiled Magyars more than the Hungarians themselves have claimed!) The Duce went on to mention Roumania and Yugoslavia as neighbours of Italy whom Italy wanted as close friends. The omission of Czechoslovakia in connection with friend-

ship with Italy was clearly intended as a hint that revision of Hungary's frontiers should only come from the Czech territory. Now while the manner and extent of Hungary's mutilation was one of the greatest injustices of the Peace Treaties, the Duce knows well enough that for some months relations between Czechoslovakia and Hungary have been improving, and that Prague has been urging Belgrade to make a reconciliation with Rome. In this good work, Vienna has been a kind of bridge between Prague, Rome and Budapest; and, despite the Hungaro-Italian rejection of the Czech Prime Minister's, M. Hodza's, *démarche* last spring for closer economic co-operation between the three Little Entente countries and the three Rome Protocol countries, the recent conversations between M. Kánya, the Hungarian Foreign Minister, and M. Krofta, the Czech Foreign Minister, had opened up vistas of real co-operation in the Danube basin. Such economic co-operation might easily, after a sifting period of growing prosperity, enable some measures of political revisionism to be achieved. Indeed, the mere opening-up of closer economic co-operation between Hungary and the Little Entente could justify Hungary in requesting, and the Little Entente in accepting beforehand, revision of the disarmament clauses of the Treaty of Trianon—clauses whose equivalents in the cases of Germany and of Austria have already been unilaterally torn up. The case of Turkey and the recently agreed remilitarisation of the Straits is an auspicious precedent. But for this, a beginning of closer Danubian co-operation is first necessary. Now Signor Mussolini rushes in to muddy the waters, with the callous calculation that he will be better able to fish up for himself two of the three Little Entente minnows, while securing the amity of Herr Hitler and Hungary by leaving the third minnow to them. Happily, neither the Roumanian nor the Yugoslav authorities have risen to the bait; and the mud which Signor Mussolini has stirred seems merely to be acting as a screen for persistent consolidation of relations between the three Little Entente States on the one hand and—what may yet prove a shock to both Italy and Germany—between them and Poland on the other.

Cotton Trade Dispute.—The Lancashire cotton industry is preparing for extended discussions and negotiations on the wages question. This week (our correspondent writes) the Skipton strike has been brought to an end after lasting ten weeks. During the strike the Cotton Spinners' and Manufacturers' Association refused to appear before the Conciliation Board, as in their opinion the strike was entirely contrary to the procedure laid down under the joint rules. It is understood that no time will now be lost in fixing a date for the Conciliation Board to meet under the chairmanship of Mr Charles Doughty, K.C. There is no probability that the full demand of the operatives will be granted, but during the last few weeks cloth manufacturers in quoting for their goods have borne in mind the probability of some increase in the wages bill. The demand of the operatives in the spinning mills for the restoration of the reduction in wages in 1932 means an advance of 14 per cent. To-day (November 7th) a delegate meeting of the Operative Spinners' Amalgamation is being held in Manchester, when it is expected that the Executive Council will be given power to take a ballot on the question whether the members are willing to withdraw their labour to enforce the demand. It is necessary for 80 per cent. to be in favour before action can be taken. It is anticipated that the necessary support will be given, and in a few weeks the trade unions will give one month's notice to the employers of their intention to cease work unless their application is granted. It is therefore probable that no real crisis will arise before the middle of December. Many things may happen, but it is generally believed that a stoppage of work will be avoided by a compromise.

The Bedwas Ballot Result.—A general strike was threatened in the South Wales coalfield in September because Sir Samuel Instone, of the Bedwas Colliery management, refused to allow his employees to belong to the South Wales Miners' Federation on the ground that it was not representative. Eventually, Sir Samuel agreed to the

Scandinavian places through our
offices at Gothenburg, Stockholm
and Malmö.

SKANDINAVISKA
KREDITAKTIEBOLAGET

holding of a secret ballot in which the men could declare their preference for the Federation or for the "Industrial Union." The result of the ballot, declared on Friday, was as follows:—

For the Federation	1,177
For the "Industrial Union"	309
Majority for Federation	868

The claim of the Federation to represent the men is thus substantiated by an 80 per cent. majority. It may be hoped that Sir Samuel Instone will accept the implications of the result with a good grace, and that a dispute which might have involved a whole coalfield will be disposed of without any aftermath of bitterness.

Coup d'Etat in Iraq.—On October 29th a military *coup d'état* was ruthlessly carried out in Iraq. A flight of Army planes over Baghdad suddenly dropped copies of a manifesto signed by an Iraqi officer, General Bakir Sidki. The manifesto demanded the dismissal of the existing Cabinet and named the new Prime Minister—Sayyid Hikmat Sulayman. The demand was soon reinforced by the appearance of a second flight which dropped bombs. Two hours later it was announced that General Yasin al Hashimi's Cabinet had resigned, and that Sayyid Hikmat Sulayman had duly been entrusted with the formation of a new Cabinet. Before the day was over, one of the most distinguished members of the late Government, General Jafar al Askari, was treacherously murdered by a "safe conduct" officer while on his way from the King to meet Bakir Sidki by appointment. The other members of the late administration have escaped with their lives, but have been summarily evicted from their country—among them the late Foreign Minister of Iraq, Nuri Pasha as-Said, who has been one of the leaders of the Arab national movement, and who, only the other day, was playing a constructive part in helping to bring the fighting in Palestine to an end. The change of regime in Iraq may give food for unpleasant reflections both to the non-Arab minorities in that country and to the people of this country—who had hoped that all the British effort that has been put into Iraq during the past 22 years might bear fruit in the growth of a civilised, democratically governed, Iraqi national state in permanent friendship with Britain. Such hopes are now overcast; for the new military dictator of Iraq is notorious for one thing. That is the brutality with which—on his personal initiative—the Assyrian minority was crushed in 1933. Moreover, his puppet Prime Minister is the man who, as Minister of Justice at that time, condoned Bakir Sidki's conduct. The policy of ruthlessness towards the Assyrians was accompanied in the bearing, and even in the words, of both these men by a truculence towards Great Britain which would have been offensive had we not been determined to take no offence. Half a century ago, the Bulgarians astonished by their ingratitude the Russians who had liberated them from the Turks in 1878. Are the British destined to be treated to a similar experience at the hands of a few Iraqis?

Next Week's Issue of

THE ECONOMIST

will include a

SPECIAL SURVEY

dealing with

THE ENGINEERING INDUSTRY

This Survey will contain articles on such branches of the industry as:

Agricultural Machinery Machine Tools
 Prime Movers and Boilers Textile Machinery
 Marine Engineering Engineering and Building

The Survey will contain, *inter alia*, a special analysis of leading concerns in the industry

A New Austrian Cabinet.—True to recent precedents, the Cabinet of Chancellor Schuschnigg resigned and was promptly reconstructed under the Chancellor on Tuesday night. The reshuffle had been expected ever since the Chancellor, with the reported concurrence of Signor Mussolini, "dropped" Prince Starhemberg as Vice-Chancellor last May, secured his retirement from the leadership of the Heimwehr in September, and finally abolished the separate existence of the Heimwehr last month by absorption in the forces of the centralised "National Front." Accordingly, this week's reshuffle has eliminated Heimwehr influence from the Cabinet; for Major Baar-Baarenfels (the Vice-Chancellor who succeeded Prince Starhemberg when he was dropped), Dr. Draxler (Minister of Finance), Herr Hammerstein-Equord (Minister of Justice) and Herr Stockinger (Minister of Commerce) were all pronounced supporters of the Heimwehr, and they have all been dropped. Of the four new Ministers, the Vice-Chancellor, Field Marshal Hulgerte, and the new Finance Minister, Dr. Neumayr, are unknown quantities; but the latter's advent will scarcely affect Austrian currency and exchange policy, which remains in the hands of Dr. Kienboeck, the President of the National Bank. The important thing is that all four new Ministers are pro-German, without necessarily being pro-Nazi; and this will clearly twist the Cabinet towards co-operation with the Nazis while it strengthens the Chancellor's immediate position. It is perhaps significant that one of the new Ministers, Dr. Neustädter-Stürmer, becomes Minister for Public Security, while Colonel Glaise-Horstenau is Minister for the Interior. They are both pan-German in sentiment, in key positions. Chancellor Schuschnigg is evidently bent on squaring the circle of Austrian politics; but a Cabinet is a difficult theatre in which to attempt such a manoeuvre.

The Keelung Incident.—For the second time within a few months the British and Japanese authorities are completely at variance with each other over a serious question of facts in which the parties immediately concerned are members of their respective forces. Last time the scene of the incident was Peking. British soldiers stationed there were accused by the Japanese of being guilty of the murder of a Japanese officer—a charge which was not substantiated by the results of an official inquiry on the British side. The latest incident occurred at Keelung, in Formosa, on October 7th; and the victims are three British blue-jackets. There is no doubt about the maltreatment which these men received, for the physical condition in which they were released by the Japanese police affords evidence which cannot be disputed. The Japanese account how the men came to be mishandled is that they resisted the police when the latter were dealing with them on account of their failure to pay a taxicab fare. The British inquiry has resulted in a version of the facts irreconcilable with the Japanese story. The men say that they went quietly to the police-station in order to give their own account of the facts, and that they were there mishandled, and even

tortured, in order to make them sign statements corroborating the police story. It appears that the Japanese police in Formosa have a bad name for extorting "confessions" of this kind by such means; but usually, of course, the victims are natives who have no means of making their voices heard. Meanwhile, the British Naval Commander-in-Chief of the China station has cancelled a courtesy visit which he was on the point of paying to Japanese ports. This incident is curiously like the outbreaks against foreigners in Japan itself, which were one of the outstanding features of that uneasy interval between the reopening of Japan in the middle of last century and the great reforms of 1867-68. Since then it has been the boast of Japan that she has established within her frontiers a system of justice to which the nationals of the civilised countries in the world may confidently entrust themselves; and the validity of this claim was recognised when, at the turn of the nineteenth and twentieth centuries, the foreign Powers, one after another, agreed to the abolition of extra-territorial jurisdiction in Japanese territory. Have the Japanese forgotten that in this movement it was Great Britain that took the lead?

London's Millions.—London to-day, with its 8,000,000 or 9,000,000 inhabitants, is something of a miracle—if not in every way a pleasant one. Unusually interesting information about the working of the miracle is contained in the third Annual Report of the London Passenger Transport Board. Most remarkable of all perhaps is the rapid growth of Outer London and the steady shrinkage of the centre:—

	Estimated Population.			L.P.T.B. Area
	County of London	Outer Zone of Greater London	Total for Greater London	
At mid-year				
1911	4,521,000	2,748,000	7,269,000	7,970,000
1921	4,524,000	3,012,000	7,536,000	8,360,000
1931	4,406,000	3,832,000	8,238,000	9,200,000
1935	4,185,000	4,290,000	8,475,000	9,500,000

These figures show that during the last 24 years the population of the County of London declined by nearly 340,000, despite a natural increase of 270,000. On balance, therefore, some 610,000 people moved from the County area, which is, roughly, within five miles of Charing Cross, to districts outside the County but within "Greater London," which is, roughly, within 15 miles of Charing Cross. The combined effect of migration from the provinces into Greater London (380,000) and from the County into the surrounding area (610,000) since 1921 has therefore been to add 990,000 persons, or, allowing for the natural increase, about 1,280,000 to the population of the outer zone of Greater London. The Report also tells us that every Londoner travels on the average 440 times a year in a London Transport vehicle; that the number of private cars licensed in London and the home counties was 426,000 in September, 1935 (270,000 more than 10 years previously); and that there are now about 2,000,000 bicycles in the London Transport Area. Nothing but the coming fall in population, it seems, can prevent a grand universal deadlock appearing one fine day (or probably one wet day) in the London streets. And in the meantime, the problem of coping with "rush-hour" transport demands is becoming increasingly complex.

The Gold Clause Again.—The question whether a promise to pay in gold coin of a specified weight and fineness is to be interpreted as prescribing a mode of payment or laying down a measure of value has been one of the most troublesome legacies of the "devaluation era." Is the obligation satisfied by payment, pound for pound or dollar for dollar, in a devalued currency, on the ground that payment in the old gold coins has become impracticable or even illegal? Or was the clause designed to provide a yardstick for measuring the debtor's obligation in the old currency in terms of the new? In Feist's Case, the British House of Lords decided that the "measure of value" interpretation applied to a sterling debt with a gold clause. Subsequently the Supreme Court of the United States found, broadly, that a dollar gold clause was to be similarly construed, though creditors were powerless owing to their

inability to sue the American Government. It happened, however, that the British Government was a debtor under the gold clause, since it had issued 5½ per cent. dollar bonds, in America, in 1917, payable at holder's option either in United States gold coin or in sterling at \$4.86½. Last November, on a petition of right brought in the King's Bench Division on behalf of a bondholder, Mr Justice Branson found that the matter was to be decided not by United States law but by English law. He held, however, that the "mode of payment" interpretation applied and the British Government could discharge its obligation by paying an identical number of depreciated gold dollars. The case went to the Court of Appeal, which last Monday upheld the "measure of value" interpretation and set the finding of the lower Court aside. The Master of the Rolls made it plain that the Court was impressed by the desirability of a uniform construction of the gold clause by different Courts. Leave to appeal to the House of Lords has been granted, and finality will be reached only when that House has delivered its judgment. If the view of the Court of Appeal is upheld, however, the interpretation most welcome to creditors, and least welcome to debtors, will have scored a famous victory, and the "gold clause" will have a weapon against future currency devaluation, will not have proved wholly a broken reed. The question, incidentally, is still of interest to the British Government, for \$20 millions of the original issue of £143½ millions of 5½ per cent. bonds were outstanding last year.

Tin and Copper.—As we suspected, when commenting on the tin position in the *Economist* of September 26th, Siam chose to wait until the last moment before yielding to the entreaties of the International Tin Committee. According to a statement issued by the Committee after Thursday's meeting, agreement has at last been reached with Siam about the terms under which she is willing to adhere to a new restriction scheme. But no details have been published with regard to these terms. It would not be surprising, however, if the terms were more favourable to Siam than those which the Committee was willing to concede at the beginning of negotiations. In any case, the continuation of restriction next year now seems almost assured, and the market promptly reacted by raising the "cash" price of tin to £224 per ton on Thursday, compared with £217 per ton on Wednesday. Another event of importance was the decision of the copper mining concerns adhering to the international restriction scheme to raise quotas on Thursday from 95 per cent. to 105 per cent. of the standard tonnages, based on output in January, 1935. But, like the previous quota increases, the latest increase had little effect on the market, Thursday's closing price, at £44 7s. 6d. per ton, showing a rise on Wednesday's figure. Since August 1st copper quotas have been raised by no less than 50 per cent. That prices continued to advance in spite of the successive relaxation of restriction is an indication that the speculator has taken a hand in the market, though his activities do not seem confined to copper.

Bacon-Pig Contracts for 1937.—Under the Pigs and Bacon Marketing schemes bacon-pigs are sold on contracts between feeders and curers, the terms of which are fixed annually by negotiation between the two Boards concerned. This year, after protracted negotiations, the Boards were unable to reach an agreement, and Sir Robert Greig was accordingly nominated by the Minister of Agriculture to adjudicate on the differences between them. In consequence of Sir Robert's award, announced last week-end, considerable modifications will be made in the 1937 contract, which should be highly satisfactory to the pig producers. A basic price of 12s. per score (i.e. 20 lbs.) will be paid when an agreed ration of feeding stuffs costs 7s. 6d. per cwt.; this is the price which the Pigs Board have been asking for. With every rise of 3d. per cwt. in the cost of feeding stuffs, 1d. per score will be added to the basic price, while with every fall of 3d. per cwt. 1d. will be deducted. Moreover, the contract price will not in future have any reference to the selling price of bacon, and there is to be no question of securing "equitable dis-

tribution" between the curers' factories by requiring feeders to send their pigs long distances. A final concession to the producers is contained in the provision that if 2,400,000 or more pigs are offered on contract to the curers for 1937 an additional 2d. per score will be added to the basic price. The Pigs Scheme has been in chronic danger of breakdown ever since its inception, but it is anticipated that the support of the producers may now be more readily given. Incidentally, the curers will benefit more than before from any rise in the price of bacon—a fact whose significance will not readily be overlooked by consumers.

Volume of Overseas Trade.—The latest returns of quarterly changes in the volume of Britain's overseas trade, published in last week's *Board of Trade Journal*, are a little more encouraging. During the first two quarters of this year, the volume of British exports was actually somewhat smaller than during the corresponding periods in 1935; but in July-September the quantity of exports of manufactures showed an increase of 5.2 per cent. over the third quarter in 1935:—

VOLUME AND VALUE OF IMPORTS AND EXPORTS

Period	Retained Imports				Exports of Domestic Produce			
	Declared Values	Index of Average Values	Values in terms of 1930 Values	Index of Volume	Declared Values	Index of Average Values	Values in terms of 1930 Values	Index of Volume
	£ Million	1930 = 100	£ Million	1930 = 100	£ Million	1930 = 100	£ Million	1930 = 100
1924 ...	1,137	135.0	842	88.0	801	120.8	663	116.2
1930 ...	957	100.0	957	100.0	571	100.0	571	100.0

The expansion of British exports in the third quarter of this year is gratifying in view of the inability of some of our leading export trades, especially the iron and steel and engineering industries, to meet current home demand. The improvement was most marked in the case of textiles, apparel, vehicles, and paper and cardboard; the volume of exports of iron and steel and machinery was only slightly larger than in July-September, 1935; and shipments of nonferrous metals and manufacturers, cutlery, hardware, implements and instruments, and electrical goods and apparatus were actually smaller than a year ago. Owing to the expansion of business activity in this country, the increase in the volume of retained imports was even more marked and amounted to 9.1 per cent., compared with the third quarter of 1935. The quantity of raw materials purchased abroad in July-September this year was 19.3 per cent. heavier than a year ago, and the volume of manufactured imports showed an increase of 14.2 per cent. over the corresponding period in 1935. The average value of both imports and exports was slightly higher than in the third quarter of last year. Present indications point to a further expansion of the volume of overseas trade.

INFLUENCE OF THE MACMILLAN REPORT

As the first emotional reactions to the French devaluation and the Gentleman's Agreement ebb away, Wall Street is attempting to reach some conclusions about the implications rather than the contents of a document which it rates as platitudinous in expression, but of solid import. As Wall Street sees it, the Agreement is not a contract guaranteeing stabilisation, but an official acknowledgment of international understanding of the need of replacing monetary autarky, or at least monetary nationalism, with recognition that an exchange rate is, by its very term, a mutual relationship. This is, of course, an elementary and fundamental idea; but one which has not been too influential in recent years. The second fact is a slow realisation of the extent to which the recommendations of the Macmillan Report of 1931 are becoming incorporated in the monetary system not only in England, but here. It is questionable if the directors of American monetary policy have been consciously guided by that report; but the fact remains that the American system appears to be developing along its suggestions; even though Washington is fond of reiterating that all its monetary policies are on a twenty-four hour basis.

One aspect of the arrangement arising out of the monetary agreement is widely criticised—its intended secrecy; and on two grounds. The first objection is that there is no such thing as true secrecy in operations of magnitude. One way and another, a considerable number of persons are able to learn or infer the facts, if not the details, and to conduct themselves accordingly; while at the same time, the majority of persons equally interested, are in ignorance. The second objection is that commonly raised against the gold-exchange standard of the '20's—that under the system it is possible for minor elements of instability and disequilibrium to accumulate uncorrected and unnoticed except by the closest observers, until a major problem has developed.

An action of local significance has occurred in the insistence by the Securities Exchange Control on what is called the segregation of broker and dealer activities in the Stock Market. In Wall Street there is no such differentiation of functions as exists in London between brokers and jobbers. The nearest counterpart of the London jobber is the "specialist," who "keeps the book" on one or more shares. The same firm may (a) conduct a general brokerage business, (b) have a floor member who is a specialist, and (c) trade actively for its own account.

In a long report on the subject, the S.E.C. urged its views largely on the argument that the "mixed" firms offered opportunities for the abuse of a fiduciary relationship, although it cited no instances of such abuse. Indeed, this is certainly not one of the more common forms of iniquity in Wall Street. On the main question whether the functional purpose of a security market would be better served by the retention of the American system, or by the adoption of a segregated system, perhaps more analogous to that of the British market, there is real ground for argument; but the report is silent on that issue. It is quite clear that the proposed segregation would involve difficult readjustments in Wall Street, and it seems equally probable that the S.E.C. intends to press for legislation.

Not only did the seasonal summer recession in business fail to appear this year, but the approach of the election has brought no visible sign of hesitancy or uncertainty. In fact, since early spring, production and trade have continuously surpassed expectation. This phenomenon has raised the question whether or not a part of the unexplained production is leading to an accumulation of stocks. Two arguments are generally advanced by those suspecting overbuying: the possibility of labour troubles which would interrupt production; and the prospect of advancing prices. Both, but particularly the latter, are persuasive reasons for

liberal present and active forward buying; but high as production has been, the bulk of the evidence supports the idea that the passage of goods into consumption has kept pace. The data on stocks are not among America's best statistics; but on the whole, surprising as the production figure has proved, there is little evidence and little definite rumour of accumulating stocks. On the contrary, there are rather strong reasons for believing that fourth quarter production will be unusually well maintained, and that the consumer trade at Christmas will surpass that of any previous year.

In this connection, it is worth while to remark again on the economic importance of the shifting of the motor season. The motor industry is America's largest single industry, and by reason of the practice of annual changes in models, has always had so large an amplitude of seasonal fluctuation as to come very close to producing an annual business cycle. Formerly the new models were introduced in January to catch the spring trade, with the result that the seasonal mid-winter low in the motor industry coincided with inactivity in the outdoor industries, like building, thus intensifying the seasonal distress of the industrial population. The shift in the motor season has probably distributed employment and production more evenly, although the two years of its trial have been so strongly characterised by ascending general activity that its specific advantages have been obscured. The change was regarded with some trepidation two years ago; but one might venture the opinion that it has proved one of the major innovations of the period, and possibly capable of some extension to other industries.

WIDENING FEDERAL ACTIVITIES

In its capacity to ignore problems or to avoid joining issue on acknowledged problems, the electoral campaign just closing has been typical of its predecessors. As Wall Street sees it, whichever candidate be elected, the scope of Federal activity will continue its general tendency to widen. That is, the number of points of tangency between Government and institutional production and finance will be more numerous rather than fewer; and the problems of relationship will be more complicated rather than less complicated.

The traditional American method of finding its administration is the spoils system plus a rather embryonic civil service. For the most part, the civil service never extended beyond the minor positions, and practically not much beyond simple clerkships; and while it afforded considerable security to its membership, it offered only limited prospects of promotion, since, generally speaking, the more advanced positions were reserved for the spoils system. This does not imply that the *personnel* appointed under the spoils system was either incompetent or corrupt; it does imply that it was composed of amateurs who had barely an opportunity to become familiar with their work before their appointments expired, or they sought other employment.

Of necessity, the additional administrative mechanisms created in recent years were hastily recruited and manned almost exclusively under the spoils system. These administrators have neither security of office nor prospect of advancement except through political favour. The situation has often been compared to the war period; but the analogy is false, since the war organisation was by nature temporary, and much of the present enlargement of Federal activity is by nature permanent. In a few instances, civil service status was extended, but never beyond the elementary clerical grades. In Wall Street, the question of creating a permanent civil service, competent to handle "professionally" the enlarged activities of the Federal Government, is one of the major issues of the time. The National Civil Service Reform League has submitted a questionnaire to some 900 candidates for Congress, about a proposed Constitutional Amendment, which would provide for the establishment of a general Federal Civil Service; approximately 95 per cent. of the replies were favourable.

NEW YORK, October 27.

FRANCE

NO SHARP RISE IN RETAIL PRICES

PARLIAMENT returns from the recess this week; and at once will be faced with the Budget. The present Cabinet originally promised a recovery of business to be achieved by an increase in the purchasing power of the masses. The cost of this policy was an increase of 4,000 million francs in the Budget deficit; an increase in the public debt of about 10,000 millions; and certain further expenditure connected with the Wheat Office, advances to business, nationalisation of the arms industry, etc. But the recovery of business failed to reveal itself in official statistics. The rise of retail prices between April and August was nearly 6 per cent., whilst the rise of wholesale prices in the same period was not more than 5.5 per cent.

With devaluation a new experiment has begun. A reduction of public expenditure is now inconceivable, though a further increase would be dangerous. The hope of balancing the Budget must rest on the prospect of an increase in receipts, caused by the recovery of business. But this will not be possible if social peace is not restored.

The policy of the "Front Populaire" Government is based on the belief that the rise of retail prices will be less than the rise of wholesale prices, and that there will therefore be an increase in the purchasing power of the masses, which will launch the revival of business. The rise of prices has been stimulated by several causes: the revalorisation of farm products, the new social laws, the devaluation and the rise in world prices, the bad crops of this year, and other influences of minor importance, such as the Italian and the Spanish conflicts. It is naturally very difficult to say what part of the rise must be attributed to each cause. The following table shows, however, the level of the retail prices of 19 food products a year ago; on May 15th, i.e. on the accession of the present Cabinet; on September 15th, i.e., on the eve of the devaluation; and on October 15th.

RETAIL FOOD PRICES (FRANCS)

Products	Units	Oct. 15, 1935	May 15, 1936	Sept. 15, 1936	Oct. 15, 1936
Bread	kilogramme	1.60	1.60	2.15	2.15
Red wine	litre	1.35	1.65	1.90	2.05
Sugar	kilogramme	3.35	3.20	3.50	3.65
Chocolate	"	11.90	10.80	11.20	12.00
Rice (Saigon)	"	1.40	1.40	1.50	1.50
Jam	"	9.80	9.80	10.40	10.60
Table oil	litre	5.80	5.70	6.40	6.40
Vinegar	"	3.60	3.60	3.60	3.60
New milk	"	1.20	1.20	1.20	1.30
Butter	kilogramme	15.00	15.00	14.80	15.60
Cheese (Camembert)	piece	2.50	1.60	2.25	3.10
New Eier	"	0.70	0.45	0.60	0.85
Paris ham	kilogramme	31.50	32.50	33.00	30.00
Ribs of beef (without bones)	"	20.00	21.50	23.00	22.00
Veal (loin without bones)	"	19.50	21.50	21.00	21.50
Shop stew	"	8.00	9.00	9.50	9.50
Rabbit	"	9.00	9.50	10.50	9.60
Chicken	"	13.50	23.00	16.75	15.70
Potatoes	"	0.50	1.20	0.60	0.90

This table shows that the rise in retail prices was very small up to May 15th, despite the revalorisation of farm products, but that in the period between May and September, which covered the introduction of the new social laws, there was a marked rise. This may be accentuated in the next few months for various reasons: (1) the seasonal decline of prices during the summer will now be reversed; (2) the Price Committees induced private interests to sell their stocks at existing prices, but this will not last longer than the stocks; (3) the devaluation must in time produce some effect. Much will depend on factors still unknown, such as the 40-hour week (which the Government is to make very flexible for small firms) and the rise in world prices. Factors tending to restrain the rise will be the reduction in taxes and transportation charges and the lowering of the rate of interest.

The coal market in September was again very active, with orders exceeding the normal. Consumption was 5,802,000 tons, against 5,490,000 tons in September, 1935. Production was 3,567,000 tons, against 3,210,000 tons in August and 3,972,000 tons in July (3,787,000 tons in

The Distinctive System

of
The Scottish Provident
Institution

Under *The Distinctive System* the premiums are so moderate that, at early and middle ages, the annual sum charged elsewhere for a Whole Life Assurance of £1,000, with profits, will here secure from the first as much as £1,300 or thereby with right to share in the Surplus.

Write for an explanatory booklet

The Scottish Provident Institution

London (City) Office - 3 Lombard Street, E.C.3
HEAD OFFICE - 6 St. Andrew Square, EDINBURGH
FUNDS EXCEED £24,000,000

September, 1935). Stocks diminished by 286,000 tons in August and 353,000 tons in September. Imports were 1,968,000 tons in September, or 300,000 tons more than in September, 1935. The average price of imported coal was 96.68 francs a ton, or 2.26 francs more than in the preceding month.

French consumption during June, July, August and September, 1936, was thus 22 million tons, an increase of 820,000 tons over 1935. Production during the same period fell by 883,000 tons, or 6 per cent. Stocks during the last twelve months have decreased by 1,635,000 tons and by 663,000 tons during the last four months. In October the mines continued to sell more than they produced. Conditions in the French coal industry in the first nine months of 1935 and 1936 have been as follows:—

	(000's omitted)		
	First nine months of 1935	First nine months of 1936	Differences in 1936
Consumption	49,484	50,862	+ 1,378
Production	34,816	34,420	- 396
Imports (Saar included)	16,439	16,705	+ 266
Exports	1,091	1,054	- 37
Stocks	5,002	3,367	- 1,635

Following the application of the 40-hour week the price of domestically produced coal has risen by 21 francs (from November 1st).

The figures of iron and steel production show an important rise in comparison with August, 1936, and also with September, 1935. Production of cast iron was 492,000 tons in September, against 465,000 tons in August and 472,000 tons in September, 1935. Production of steel was 541,000 tons, against 460,000 tons in August and 522,000 tons in September, 1935. For the first nine months of the year steel production was 4,884,000 tons, against 4,580,000 tons for the same period of 1935.

Unemployment for the week ending October 24th was 409,195, against 411,610 on October 17th. This fall is contrary to the seasonal movement usual at this time of year.

PARIS, November 5.

GERMANY

NEW PRICE REGULATIONS

A REICH Price Commissar was appointed last week; new measures for regulating prices and the use of raw materials were taken; and the Reich Board for Land-Regulation was authorised to participate in the choosing of localities for the new raw material works. Apart from these measures, the Four Years' Raw Material Plan has made no visible progress, and it has ceased to affect the Bourse. General Göring's broadcast speech of last week was vigorous propaganda. Vigour will certainly be displayed; but even "an old swashbuckler, a bull," as Herr Hess described the

dictator of raw materials, cannot stamp the indispensables out of the ground. General Göring denounced foreign nations and native parasites, and in general presented Germany as a beleaguered country, which is resolved, he vowed, not to capitulate. Much of his speech concerned the food shortage, which he intimated must be borne. He threw no light on the proposed quantity of supplementary production, or on the mechanism by which the production is to be attained. He promised that the State is going to establish these works. That would be against Nazi policy.

Everything indicates that the Reich's remaining participations in private business will be abandoned. The participations in the Steel Trust, in the Hamburg-America Line, and in certain banks were disposed of some months ago. Last week Reich shares in the Commerz und Privatbank were sold; and it is reported that the Reich's interest in the Hamburg-Amerika Company will also be sold. General Göring declared that industry must not wait for public initiative or compulsion. Industry must itself proceed to realise the plan. "We hear much talk," he said, "of free initiative in business. To-day business has freedom for initiative. Let business make use of it."

The new Reich Prices Commissary is Herr Josef Wagner, Ober-President of Silesia. In General Göring's skeleton organisation Herr Wagner had already appeared as price-regulator for the Plan. Henceforth he will be a general price authority. The same office was twice formerly held by Dr. Goerdeler, first during Dr. Brüning's deflation campaign, and later in 1934-35. Since 1935 the office has been vacant and the Ministry of Economy has been the supreme authority. This Ministry continues to regulate prices, having in the past few days decreed reductions for cement. If industry is to have free initiative in establishing new raw material factories, the price question will be vital, more important even than the capital shortage question; for with free initiative nobody will even consider investing in factories unless he is assured of a profit. Quality for quality, the production cost of substitute raw materials is higher than that of imported, or domestic natural, materials. It seems, therefore, that free initiative must conflict with the declared official policy of preventing a rise in the general price-level.

RAISING THE CAPITAL

On the question of capital General Göring said nothing. The problem is discussed in the Press languidly and inconclusively. No private person, and probably no official, knows even approximately the dimensions which the raw material plan will take. Capital can hardly be raised by orthodox means. The embargo on private share and debenture flotations, imposed in the interest of Reich debt funding, is still in force, though occasionally relaxed for small operations. Under this system, between early 1935 and September, 1936, the Reich (including the Railways Corporation) was able to raise Rm. 3,360 millions, in part by virtually forced loans.

It is suggested that the hidden reserves of industrial concerns would suffice to finance a great part of the new construction. Little is known about the magnitude of these reserves. It is certain that they have been reduced by investment in enormous constructions, in particular for mineral oils and substitute textiles, during the last year. The excessive liquidity of company finance, the main cause of the money market plethora in 1935 and in the first months of 1936, has disappeared. The companies, however, continue to hold Reich work-creation and armaments bills, which could be turned into cash with the assistance of the Reichsbank. The financing of raw material factories with bank money is already under way, much to the displeasure of banking purists.

It is also understood that the banks are considering a plan for the centralised financing of raw material enterprises, with joint liability. The banks' resources, however, are limited. Whereas as a rule money market fluidity is associated with increasing bank deposits, in the present industrial boom deposits have stagnated. They have even declined, though by only a little. At the end of 1933 deposits in the five leading Berlin banks totalled Rm. 6,500 millions; in August this year Rm. 6,140 millions. Indus-

trial concerns preferred to invest their free monies directly in Reich short-term securities, which in the matter of liquidity are practically as good as bank deposits, and which yield much higher interest.

An official return of wages for June shows very little change in the average rate per hour since March, but an increase of some 2 per cent. in average earnings in consequence of longer working hours. The average sum earned per week (men and women) in the metal-consuming industries is Rm. 42.25, in chemicals Rm. 37.77, in paper Rm. 31.18, and in textiles Rm. 23.13.

The production of private motor cars in the first three-quarters of 1936 was 185,956, of which 24,669 were exported, against 157,086 and 16,480 respectively in the same portion of 1935. The production of lorries and motor cycles has also risen, and exports have doubled. There is talk of a new export credit to Russia. Against the Rm. 200 millions credit negotiated in April, 1935, orders for Rm. 168 millions had been booked down to September this year. The Russian Trade Mission in Berlin attributes the non-completion of the deal to unduly high German prices, too long delivery terms, refusals by some firms to conclude transactions on a five-years' credit basis. The journal of the Russian Committee of German Industry complains against Russia on the score of unreasonably low price offers, arbitrary rejection of deliveries, and impediments arising from Russia's desire to use her own ships.

Reich revenue from taxation in the first half of the financial year (April-September inclusive), as compared with 1935, was:—

Taxes	Millions of Marks	
	1935	1936
Direct and on business	2,873.9	3,781.7
Customs and excise	1,663.6	1,739.7
Total	4,537.5	5,521.4

The increase, it will be noted, falls almost entirely to direct and business taxes. The municipal Citizens' Tax has been altered by law, mainly in the direction of increasing the rate on large incomes. On October 29th the market discount rate was unexpectedly restored to 3 per cent. in consequence of a heavy and sudden demand for cash. Before this the month-end demand had hardly been noticed. The Reichsbank's return for October 31st shows the large increase of Rm. 554 millions in credits and investments, as against Rm. 434 millions in the same week of 1935. The financial Press continues to publish reports from London about a possible British export credit to Germany. It is pointed out that Germany is interested in raw material imports, certainly not in facilities for the purchase of British manufactured goods.

BERLIN, November 4.

HOLLAND

BEGINNINGS OF BUSINESS RECOVERY

VARIOUS opinions have now been expressed about the extent of depreciation of the guilder desirable for the economic welfare of the country. At a meeting last week of the Association for Economics and Statistics, various well-known economists stated that a depreciation of about 30 per cent. would be necessary to achieve the desired expansion of economic activity, without involving a large rise in money wages or the cost of living.

In the Second Chamber's report on the State Budget several Members of Parliament contended that the change in monetary policy must be sufficiently drastic, as otherwise it would be of no benefit to the country. The Government would have to forsake their old policy of "readjustment" (i.e. deflation), members stated; and the new principles of policy suggested were as follows:—

- (1) The new monetary policy would have to be put into practice not only technically, but with express economic and social purposes, so as to strengthen the position of the country both internally and externally.
- (2) A determined policy was needed to stimulate the development of trade and industry. This was the best and in fact, the only efficacious guarantee against social deterioration.

On this basis members were prepared to accord the present Cabinet their continued support. It is anticipated that the Government will shortly make a definite statement on its future economic policy.

From various industrial centres encouraging reports of increasing activity and declining unemployment are being received, and some degree of relaxation in the economic tension is already becoming perceptible here and there. Reports in the Press also announce a "scheme of recovery" for combating unemployment, in the preparation of which three Catholic ex-Ministers have co-operated. This scheme is based on the thesis that the problem of unemployment needs to be tackled vigorously and that the Government has been wrong to leave important public works partly or wholly unexecuted. The scheme indicates a number of works which should be put into execution immediately; and it would provide employment for 20 years for tens of thousands of persons, apart from the indirect benefits which would accrue by way of "secondary" employment.

AMSTERDAM, November 2.

GREECE

FASCIST SYSTEM TO BE INTRODUCED

ONE of the aims of the present Government is the financial restoration of the country. According to official declarations, the public finances are to be restored by drastic economies. The Finance Minister promises not only to cover the Budget deficit, but also to open the road to progressive tax alleviations. In fact, certain tax remissions or reductions have already been made. For the time being, however, these alleviations will not be extensive, since considerable sums have to be taken for social expenditure and for defence. On the other hand, tax reforms shifting the burden of taxation from the middle-class and working-class to the rich will render possible a corresponding reduction in taxes on articles of first necessity.

But financial restoration would be incomplete, in the eyes of the Government, without a definitive arrangement with the foreign bondholders. On the understanding that the bondholders will discuss such a settlement, the Government recently agreed to raise by 5 per cent. to 40 per cent. of the normal rate the service on the foreign debt for the financial years 1935-36 and 1936-37. Payment of these percentages will start soon, and the necessary instructions have just been received by the International Financial Commission from the foreign Governments represented on it.

Another pressing question is monetary policy. The steady deterioration in the foreign exchange position of Greece during 1935 and the current year led the Government to adopt strict measures of economy in public as well as private spending abroad. Since these and other measures were taken, an appreciable increase in the exchange and gold reserves of the Bank has been apparent. In fact, these reserves, after having declined from Drs. 4,013 millions at the end of 1934 to Drs. 3,261 millions on December 31, 1935, and to Drs. 2,560 millions on August 7th last, have since risen steadily, and stood on October 7th at Drs. 2,874 millions. The wise decision was taken, after the dissolution of the gold bloc, to link the drachma to the pound.

The Government aims at making Greece as self-sufficient as possible—at least, for the time. A complete plan of organisation of production and of economic development is being prepared by the competent Government services. The co-ordination, study and application of the plan to be thus elaborated will be entrusted to a "Committee on National Production," composed of the Ministers of Agriculture, National Economy, Finance, Labour, Railways and Merchant Marine. The Superior Economic Council now existing, duly reformed, will act as a consultative organ to that committee. Moreover, the Council of Economic Defence, founded in 1935 for the purpose of co-ordinating the economic and financial policies of the country, and consisting of members of the Cabinet and the Governor of the Bank of Greece, under the chairmanship of the Premier, will apparently be maintained.

GIVE HER AN INCOME FOR LIFE

The Widow's Pension Policy provides an income in the event of your death before or after retirement age. If you provide your widow with an Income by means of this policy you can say with certainty that the financial future of your family is secure. To provide an adequate income by means of the interest on a capital sum would require a greater amount than the average man can accumulate, but by means of the Widow's Pension Policy you can assure quite a substantial Income for a moderate outlay. If at 60 or 65 you feel the protection is no longer required you are assured of the return of the greater part of your premiums. Here is a simple means whereby you can make sure that your widow will never want. Obtain a detailed illustration showing benefits and cost applicable to your own case by quoting your age next birthday to the

LEGAL & GENERAL ASSURANCE SOCIETY LTD.

Head Office: 10 Fleet Street, London, E.C.4.

General Manager: W. A. WORKMAN, F.I.A.

Established 1836.

Assets exceed £36,000,000

A more far-reaching Governmental plan, however, aims at converting Greece into a Corporative State. The authorities profess to believe that the bankruptcy in the post-war period of the Parliamentary system of Government, as well as of economic liberalism, is beyond doubt. This is due, according to the Finance Minister, M. Zavitsianos, who is also vice-president of the Ministerial Council, "to the inability of these systems to adjust themselves to the new social and economic synthesis, which emerged from the war." The Minister believes that a syndicalist organisation of the professions will become obligatory; that such an organisation will be distinguished not according to social classes but according to the branches of production and their necessary sub-divisions. The corporations to be thus formed will be united in federations, etc., and will function under a simple State control. They will collect rates, control and rationalise production, adjust it to consumption, make contracts for collective work, and, generally, regulate all questions concerning trade, industry and agriculture.

A "NATIONAL GOVERNMENTAL PARTY"

Related to the organisation of national economy on the lines above indicated is the more general question of the political system under which Greece will be hereafter governed. Questioned on this point, the Premier, General Metaxas, stated that at present the Government was occupied with the preparation, development, study and realisation of their primordial object; the "moral" healing of the nation. "We are now concerned," he remarked, "with the substance, not with the form. However," he went on to say, "as is the case with Turkey, Italy and Germany, in this country also a National Governmental Party will be formed in due course, originating and deriving its power from the people."

As one of the principal aims of the present regime is to combat Communism, the authorities are not confining themselves to taking punitive measures against the

Communists, but are endeavouring to eradicate them by positive steps. On the one hand, due attention is being given to the education of the masses, and especially of youth. On the other hand, special measures have been enacted for the purpose of improving the lot of the workers and the poor. Among other measures taken to this effect, minimum wages for workers and minimum salaries for inferior employees have been fixed, and provision has been made for a readjustment of these minima after the lapse of six months in case of a rise in the cost-of-living index number; collective contracts of work have been initiated, and compulsory arbitration of differences between employers and employees has been introduced. Moreover, particular attention is being paid to the organisation of an adequate system of social relief for the poor, the unemployed, the old and the sick; while the health and the recreation of the masses are also being given due consideration. Finally, social insurance against sickness and old age is being organised.

SOVIET FOREIGN POLICY

SOVIET foreign policy cannot properly be understood in any other terms than those of national self-interest. Soviet Russia behaves like any other nationalist Government; "world revolution" has become no more than a convenient legend. What are the aims of Soviet foreign policy? To obtain as many allies as possible against German aggression. The Soviet conception of collective security may be interpreted as good or bad for other nations; certainly the Soviets interpret it as self-protection. M. Stalin wants to "build Socialism in one country"; in other words, to organise his own Government according to his own ideas. His foreign policy is designed to protect his country during the process.

The Soviets believe, with apparent sincerity, that an insurgent victory in Spain means increased prestige for Germany and Italy. They believe that Britain and France, as well as Russia, should be interested in checking German and Italian aggression, which in their opinion will eventually plunge Europe into war. Whether or not that belief is justified, there is no question that it inspires Soviet foreign policy. If Soviet methods are sometimes clumsy, they should not obscure Soviet aims. Events in Spain, and Belgium's neutrality policy, have weakened Soviet hopes for collective security. The Soviets have been thrown back on their own resources, and are increasing the pace of armament building.

Soviet leaders have used the Spanish civil war to arouse their people's patriotic fervour for their own system; to impress them with the horrors of that "Fascism" which they are told threatens to invade their country. They thus prepare their people for the continued sacrifices necessary to complete their war machine. Yet Soviet Russia is not rich enough to spend one-eighth of the national income on armaments and at the same time substantially increase the living standard.

THE BURDEN OF ARMAMENTS

Production figures for the first nine months of 1936 show the burdens of armament building. Of a total production of 49,532 million roubles, 30,243.7 millions were in "means of production"; and only 19,388.3 millions in consumers' goods. A large percentage of the first figure went into armaments in addition to one-tenth of the national income directly budgeted for the Red Army. Heavy industries produced 35.1 per cent. more than in the same period of 1935; consumers' goods industries only 30.9 per cent. more. Capital construction, which includes housing—fixed at 34,200 million roubles for 1936—completed less than half its plan in eight months. Every possible means is being used to force the pace of production under the slogan: "Complete the second Five Year Plan in four years"; in other words, by the end of 1936. If that objective is attained, it will be only by averaging industries ahead of plan with those behind. Military and heavy industries are ahead; consumers' goods and construction industries behind.

Official figures are cited to show that the standard of living is rising. The average industrial money wage rose by 21.8 per cent. in the year ending October 15th, while food prices—bread, meat, milk, eggs, sugar—dropped by an average of 20 per cent. But the figures take no account of clothing prices, which are higher. For example, the cheapest men's woollen suit costs 140 roubles and a suit which would cost £6 in London costs 750 roubles in Moscow. Against this must be set the average monthly industrial wage of 207 roubles. Wage increases may be attributed to the "Stakanov movement," which fixed higher "norms" and increased piece-rates above the norm. In other words, some workers receive higher pay for harder work.

The 15 per cent. of the workers who fail to achieve norms are on a subsistence level. It is doubtful whether the Government has made much progress in its attempt to strengthen the internal purchasing power of the rouble by raising wages and lowering prices. The "Stakanovists"—shock workers—have more money for harder work. More consumers' goods are available for those with money to buy them. But the ordinary worker seems to be a little better off than he was a year ago. Meanwhile, the foreign exchange rate of the rouble—fixed in February at three French francs to the rouble—has failed to follow the course of the devalued franc. The rate remains unchanged at 25 to the pound sterling.

Soviet Russia, like Germany and Italy, is on a "war economy." Recent events in Europe are not likely to moderate Soviet determination to assign as much of the national income as possible to military and heavy industries. The Soviet people must continue to pay a heavy price for self-defence. The vast State propaganda machine endeavours to persuade them to pay the price cheerfully.

Moscow, October 22.

JAPAN

HEAVY INCREASE IN DIRECT TAXATION

THE keynote of the Government taxation programme, lately published, is a "re-distribution of the tax burden as equitably as possible over the whole nation"; so that the incidence may fall heavier on the urban than on the rural population, on corporations than on individuals, and on personal than on real property. The chief points in the programme are an increase of about 80 per cent. in the corporation income tax; an average increase of 30 per cent. in the individual income tax, with direct assessment on individuals of interest on Government securities, companies' debentures, and bank deposits; a doubling of the capital interest tax; and the fresh imposition of a general property tax, a turnover tax, a security tax, and a petrol duty. As for local taxation, rates on households and taxes on buildings will be repealed, and the power to levy taxes on buildings will revert to the National Treasury. The Exchequer grants to local authorities will be increased to make good such losses. The scheme will yield 420 million yen more in 1937-38 and 590 million yen more in a full year. The proposal has come as a severe shock to the business community.

According to Mitsui Gomei Kaisha's half-yearly analysis of the profit and loss accounts of Japanese joint-stock banks and industrial joint-stock undertakings, aggregate net profits of 250 banks for the first half of this year totalled 81,597,000 yen, an increase of 1,524,000 yen upon the second half of last year. The total net earnings of 1,000 industrial companies for the June half-year amounted to 422,373,000 yen, an increase of 7,010,000 yen over those earned by the same concerns in the December half-year of 1935. The great majority of trades, particularly sugar, tanneries, shipbuilding, machinery and tools, and electricity and gas, still continue to show considerable increases in profits, although the pace of growth has slowed down appreciably in general. Textiles, trading companies and stores, stock and produce exchanges, and shipping disclose much smaller earnings. The ratio of net profits to capital was 11.2 per cent., and that of amounts put to reserve was 2.8 per cent. In the preceding half-year the profit

percentage was 11.2 per cent., and the reserve percentage was 3.0 per cent. The following table gives the comparison for profits in the last three half-years:—

	No. of Companies	(000's omitted)		
		First half-year 1935	Second half-year 1935	First half-year 1936
Banks	250	Yen 80,915	Yen 80,072	Yen 81,597
Industrial companies	1,000	388,631	415,362	422,373
Total	1,250	469,546	495,434	503,970

Out of the total, 55 industrial companies reported a loss for the June half-year, and aggregate net losses amounting to 3,542,000 yen, as compared with 53 companies having the combined loss of 1,574,000 yen in the December half-year of 1935.

BETTER CROP RESULTS

The Department of Agriculture and Forestry estimates the rice crop for the country as on September 20th at 67,846,000 koku, or an increase of 10,422,000 koku (18.1 per cent.) upon the actual yield of last year, and 8,721,000 koku (14.8 per cent.) above the quinquennial average. The Korean crop also is reported to be better, and is placed at 19,942,000 koku, an increase of 2,057,000 koku (11.5 per cent.) upon last year's actual yield. The wheat, rye and barley crops, however, have been poor this year. The total yield of wheat and allied grains for the country, excluding that of Hokkaido, amounted to 20,679,000 koku, a decrease of 2,502,000 koku (10.2 per cent.), as against last year, and 402,000 koku (2 per cent.) below the average for the last five years.

The trade returns for September show that, as compared with the corresponding month of last year, imports, at 189,618,000 yen, rose by 55,317,000 yen, or 41.2 per cent. Exports, at 243,712,000 yen, rose by 16,369,000 yen, or only 7.2 per cent. Nearly half the increase in imports is accounted for by raw cotton. Output of cotton yarn during September totalled 116,166,000 lbs., a decrease of 549,000 lbs. over August; while rayon production amounted to 22,919,000 lbs., an increase of 1,119,000 lbs. The Bank of Japan's wholesale index number for September rose 0.1 per cent. on the month. The advances in metals, building materials and fuels have been largely offset by the declines in rice and other grains. The price index for the month of September of all shares listed on the Tokyo Stock Exchange moved up by 5 points to 139.5.

Tokyo, October 10.

AUSTRALIA

COMING MONETARY REPORT

THE Royal Commission on the Monetary and Banking Systems in Australia, which has taken voluminous evidence since last January, is now considering its report, which is not expected to appear before the end of the year. The subject has been treated largely from the point of view of the supply of money for country and city borrowers, and on this point evidence has been taken not only from banks but also from wool companies, whose lending is incidental to their agency business; trustee companies which have to invest the funds of the individual estates in their hands; and life insurance offices. During the last few years, however, there has been less disposition, especially on the part of private individuals, to lend on mortgage, owing to moratorium and other legislation; so that while mortgagors were protected on the then existing loans, borrowers found it much less easy to obtain fresh money.

Another change has been the competition of Government borrowing with private enterprise, the effect of which has been felt more appreciably since the revival in general business and in private demand for money. The experience of pre-depression years when the Government were constant borrowers is thus being repeated. As regards the banks themselves, the evidence made it very clear that, notwithstanding amalgamations, competition between them for eligible business is as keen as ever, and that with their

network of branches the public is exceedingly well served.

The relations between the ordinary banks and the Commonwealth Bank have gone through various stages. Formerly, the banks held large gold reserves in Australia, and in the middle of 1914 their local holdings of gold and other coin and bullion amounted to £36 millions (apart from £5½ millions in New Zealand). Since then the banks' gold reserves, plus current production from the mines, have been exported, principally as a means of supporting public finance in various ways. The banks now hold locally Australian notes and cash with the Commonwealth Bank, together with Commonwealth Treasury Bills as liquid assets on the spot, while in addition the Commonwealth Bank, as a matter of practice without statutory obligation, transfers funds from London to Australia when desired.

A question which has now arisen from the point of view of the Government and the Commonwealth Bank is that of the adequacy of available resources to provide permanently for Government remittances abroad. At present there is the "mobilisation" arrangement with the banks, by which they provide for Government requirements by monthly instalments. The smooth working of this arrangement obviously depends upon the balance of payments, which is liable to be disturbed by fluctuations in production and exports, and there is a feeling in official circles that the arrangements require to be strengthened. It is proposed to do this by giving the Commonwealth Bank access to overseas funds, so that the London funds in the Australian banking system should be available to the Commonwealth Bank to the extent necessary. To this, however, the ordinary banks are opposed, as it would hamper them in the handling of their London funds. One question which has arisen is whether the exchange arrangement between the Government and the banks is permanent, or is open to withdrawal.

Another question is whether exchange business conducted outside the banks by exporters should be left free from responsibility while the banks are carrying the whole burden of Government requirements. The question of regulating the proceeds of all exports and not only those financed through the banks, might be expected to arise in a serious form whenever the trade balance is again deranged.

The subject was referred to in the last half-yearly report of the Commonwealth Bank, which stated that London funds at present were sufficient for normal requirements, but were not sufficiently high to provide an adequate reserve against adverse circumstances. The Commonwealth Bank accordingly recommended building up London funds and maintaining them at a higher level by means of a favourable balance of payments for a number of years.

The whole subject, however, points to the desirability of a large reserve being maintained in London by the Government itself, after the manner followed by certain other governments, to provide both for their own requirements in case of need, and also to maintain exchange standards.

So far as the 1936-37 season is concerned, the outlook at the moment is fairly clear, owing to the improved prices ruling for wool and wheat. The probable wheat harvest, however, is difficult to estimate.

MELBOURNE, October 13.

LETTERS TO THE EDITOR

POLAND AND COLONIES

TO THE EDITOR OF THE ECONOMIST

SIR,—Your Warsaw correspondent pointed out in his letter last week that a lot of the economic difficulties of that country were due not to a "surplus" of population but to the absence of a better land distribution and an intensified rural economy. May I be allowed to add that, as in other East European countries, the natural growth of the population in Poland has steadily fallen off since the war? In saying this I am not concerned to defend the Jews in Poland so much as to warn other countries against unjustifiable colonial demands based on an alleged "surplus" population.

With thanks, I am, Sir, your obedient servant,

EMANUEL WEINER.

Church End, Barley, Royston, Herts.

"P.R." AND EUROPEAN DEMOCRACY

TO THE EDITOR OF THE ECONOMIST

SIR,—The analysis of the difficulties of democracy in Europe which Dr. Hermens outlined in his letter in your issue of October 24th, seems to be coloured by the theory that a two-party system, or something very nearly approaching it, is essential for the successful functioning of parliamentary government. If this theory were true, there would be little hope for democracy in most of the countries in Europe. For in these countries we find many parties, whatever the method of election.

The German Reichstag which existed under the Empire from 1870 to 1918 was elected under the single-member system. It contained as many different parties (not including Alsations, Danes and Poles) as existed after the adoption of Proportional Representation. No election in Germany while the single-member system prevailed ever produced a majority for any one party. In Italy, likewise, under its single-member system, there were a large number of political parties and there were fifty-four Governments within sixty years. In France, which uses the single-member system, and in Spain, which uses the limited vote, there are to-day many political parties. Neither of these two countries has ever used Proportional Representation. Clearly, these many parties have sprung from causes other than the method of election, and had Germany retained the single-member system it is practically certain that it would not have developed a two-party system.

It is quite true that a method of election may bring about, as in France and Spain, a coalition of parties for the express purpose of winning the advantages which the electoral law may confer upon a majority. But such an artificial division of a nation into two bitterly hostile political armies does not make for stability in government, and may even, as in Spain, bring in its train the disaster of civil war. The rebels allege that under the non-proportional system of Spain the Popular Front, although it won a large majority of the seats, polled only a minority of the votes. It is not clear that this was so, but it could easily have happened.

We can solve more surely the problems of parliamentary government if we adhere to principles that command our mental assent and respect. There are two main problems: (1) the

election of the Parliament; (2) the formation of the Government. Does the English electoral system command our respect? The General Election of 1918 deprived the millions of Englishmen who desired a moderate peace of their due share of representation; the result helped to determine the terms of the Versailles Treaty. The "Zinovieff letter" election of 1924 must make everyone feel ashamed of our system of election; so small an incident can under our present system produce a completely unrepresentative Parliament. The elections of 1931 and 1935 resulted in a grave under-representation of those who were favourable to a strong League of Nations policy.

The method of election determines what our Parliament shall be; it is a big factor in shaping history. It ought not to be a gamble; and we can do better. Two British Parliamentary Conferences have expressed approval of the British form of P.R., the single transferable vote. It is a system that differs very materially from the rigid form of P.R. adopted by Germany. The German elector could vote only for a list of candidates arranged in order by the party organisation. Under the English system the elector has freedom of choice. Moreover, instead of the large constituencies of Germany, it is proposed for Britain to have constituencies of a moderate size, but sufficient to assure fair representation to all substantial bodies of opinion.

Two ways of forming a Government are open to us if no party has a majority. The Scandinavian countries all use proportional systems. Neither in Sweden, nor in Norway or Denmark, has any party a majority. In each the largest party has assumed office, while depending on the support of others, and in these countries parliamentary government seems to be working a good deal more satisfactorily than if one party, through an unjust electoral system, had obtained an absolute majority and was tempted thereby to ignore the real mind of the nation. Switzerland uses P.R. Its Government includes German, French and Italian speaking Swiss; it includes members of three political parties; but its Government is probably the stablest in the world.—Yours faithfully,

JOHN H. HUMPHREYS.

82 Victoria Street,
Westminster, London, S.W.1.

BOOKS AND PUBLICATIONS

ECONOMIC RECONSTRUCTION*

THESE two weighty and labyrinthine volumes contain much invaluable material. They have been prepared by a joint committee of the Carnegie Endowment and the International Chamber of Commerce, assisted by a Committee of Experts, comprising Professor T. E. Gregory, Professor E. Boehler, Professor Bertil Ohlin, Dr. Leo Pasvolosky, Professor Andreas Predöhl and Professor Charles Rist. The first volume contains a long introductory report by Professor Ohlin, a general report by Professor Gregory and a summary of practical conclusions by the Expert Committee. The second volume is made up of a large number of separate memoranda by individual economists, including Mr H. D. Henderson, Professor L. von Mises, Professor Lionel Robbins and others. Those who feel disinclined to tackle the whole of the two volumes would do well to read Professor Ohlin's admirable report (140 pages) at the beginning of the first volume and the "practical conclusions" (17 pages) at the end.

Professor Ohlin starts by reviewing the international economic system of pre-war days. He does not believe that the failure to restore that system is due simply to the perversity and wickedness of post-war politicians and business men:—

Even though it is true that the course of events in recent years has in many ways been deplorable, yet it must be recognised that this development has not been arbitrary and due only to the foolishness of political and economic leaders, but that it is to a large extent the result of an

inherent necessity. . . . It would serve no useful purpose to assume that internal economic policy can rapidly return to pre-war conditions and international economic relations be based thereon.

He thinks that "it would be a serious mistake to attempt the building up of a stable and rigid system of international economic relations without in any way considering the risks of so binding Governments in their domestic policy as to make energetic anti-depression measures difficult or impossible." He recognises, however, the need to minimise exchange fluctuations, and consequently suggests a compromise solution: "there are certain premises in favour of the adoption of a middle way between an extremely rigid system and one permitting of wide fluctuations of the foreign exchange rates."

Professor Ohlin adds a highly interesting section on the demand for colonies, and the attendant questions of raw materials, markets, population and investment. He rightly points out that the solution to the economic problems here raised must be achieved by freeing trade rather than transferring territories.

The Expert Committee, in its "practical conclusions," makes suggestions both for tariff demobilisation and monetary reconstruction. Since a "general tariff truce is politically impossible," the Committee urges, "instead of endeavouring to achieve uniform reduction by an all-round and simultaneous lowering of tariff rates according to a given percentage," it would be preferable that States should "undertake, by multilateral agreement, to fix maximum rates which should only be exceeded in individual cases specified in advance." The Committee also recommends that *ad valorem* should be substituted for specific duties, and that multilateral agreements to abolish quotas, or at least supersede them by tariffs, should be attempted.

On monetary policy the Expert Committee does not seem to have been in such close agreement. But it suggests a "Joint Declaration on Monetary Policy" by the world Powers, "not committing any one of them to irrevocable

decisions on specific rates of exchange." Such a declaration would "cover the following points":—

- The avoidance of currency depreciation as an instrument of international trade competition.
- The preservation of the existing stability of rates except as necessitated by adjustment to fair parities.
- The elimination of seasonal variations in the value of currencies.
- Recognition of the desirability for a transition to a more permanent regime without undue delay.

On the nature of the "permanent regime" the Committee, in its collective capacity, is none too precise. But Professor Ohlin's conclusions, quoted above, represent the kind of compromise policy which, as has already been urged in these columns, has the greatest chance of success.

SHORTER NOTICES

"The Profits of War through the Ages." By Richard Lewinsohn. Routledge. 304 pages. 10s. 6d.

Who profits most from war, and how are these profits built up? These are the questions which Mr Lewinsohn sets out to answer in this historical sketch. The evolution of war profits has gone through five stages in which the main gainers have been first the military leaders themselves—from Julius Cæsar to the Condottieri and the Duke of Marlborough—then the bankers and financiers, then the armament firms, then the contractors, and finally the speculators. "It thus appears," says the author, "that the centre of gravity, as it were, of war profits has been on the whole, if not regularly, shifting away from the actual theatre of military operations." Even the armament firms are menaced, and their "more innocent" productions may be their most profitable even in times of war.

This analysis follows logically from an examination of the economic basis on which wars are conducted. The technique of waging war has always been a potent factor in economic development, but to-day whole economic systems have re-armament as their main object. It may well be that war profits in Mr Lewinsohn's modern sense will be impossible in totalitarian States or indeed in times of war in any State which is efficiently organised for the conduct of war, and that the time may come when profits will once more be simply the spoils of conquest to be apportioned according to the whim of victorious dictators. Democrats in all countries may well ask themselves whether something more than the nationalisation of armament firms may not be necessary in order to take the profit out of war.

The variety of Mr Lewinsohn's historical examples is remarkable, and though there are one or two points which historical scholars might perhaps question, any mistakes he has made are unimportant in the development of his thesis. This is a stimulating and often fascinating book, containing much information with which the ordinary reader will be unfamiliar, but which is none the less vitally necessary to a full understanding of one of the most pressing of modern problems.

"The Functions of a Bank in Relation to the Capital Market." By F. W. Hooper. Gee and Company. 63 pages. 2s. 6d. net.

The aloof attitude of the British banker towards the provision of long-term capital is a well-established tradition, often hotly attacked, now and then coolly defended. The Macmillan Committee lent the weight of its great authority to the attackers; and this very readable and entertaining little essay adopts the Macmillan criticism, amplifies it, and suggests that if each bank acted on the lines of the Bankers' Industrial Development Company the criticism would be effectively met. That the investor, confronted with new prospectuses, needs protection, is undeniable. But this essay under-estimates the effects in this direction of the 1929 Companies Act and of Stock Exchange rules. Moreover, the British banker may well argue that recent years have abundantly justified his concentration upon short loans. In the division of labour he has enough to do to pass judgment, from the short period point of view, upon the schemes actually submitted to him.

"King Street, Cheapside." By G. H. Recknell, with a foreword by J. M. Keynes. The National Mutual Life Assurance Society (London). 53 pages.

Life Assurance Societies, says Mr Keynes in the foreword to this most attractive booklet, "do not lightly change their address, once they have struck root." For "they are themselves centenarians or thereabouts, and wish the same for their policyholders." In the ensuing pages Mr Recknell recounts the history of Cheapside and the eventual association of the National Mutual with it. It is an eventful and romantic story, well told by Mr Recknell, and pleasantly adorned with illustrations, ancient and modern.

MONEY AND BANKING

THE GERMAN EXCHANGE ENIGMA

RECENT events have directed fresh attention to the German foreign exchange position. There is no doubt that Germany is experiencing a serious shortage of foreign exchange which has grown more acute during recent months. Hence it is not surprising that certain Nazi leaders have thought fit to allege that Germany's difficulties are due to the action of other countries in depriving her first of her colonies, which were potential sources of essential raw materials; and secondly of her gold, through reparations payments. These allegations were probably designed to placate internal feeling, for it is always easiest to lay the blame upon someone else. Therefore, while this week's British protest was justified, there is no need for us to be too seriously concerned over such statements. The plain fact is that during the years 1925-31 the world invested more capital in Germany than it took out in reparations, and much of this capital has either been lost altogether, blocked indefinitely in Germany, or only recoverable at a heavy loss to its owners, and incidentally without any drain on the Reichsbank's foreign exchange. The present depletion of Germany's gold and foreign exchange reserves was due initially to the big flight of both German and foreign capital in the summer of 1931.

Since then the position has deteriorated, and to-day it is impossible to say what it is. The Reichsbank's gold and foreign exchange reserves, at Rm. 69 millions, are negligible, but no one knows the size of German-owned foreign investments. The German authorities have full knowledge of their extent; and they have been forced at last to begin mobilising them. The foreign trade returns show that Germany is rigorously balancing imports against exports, but in reality they provide a most uncertain guide to the current pressure on the exchanges. There are various reasons for this. First, part of Germany's current exports—notably those of ships, industrial plant and munitions—do not provide fresh exchange, but are made as a means of liquidating outstanding foreign debts previously blocked in Germany, or of paying for previous imports—for example, petrol, cotton, or vegetable oils. Next, approximately 90 per cent. of Germany's foreign trade is settled through exchange clearings or compensation agreements, involving the use of "aski" marks. There are many stories to be told of the devices used to foster this form of trade. For example, a potential German exporter to Ruritania, who is unable to quote a competitive price, will be illegally but surreptitiously advised to find an importer of Ruritanian goods who will subsidise him. The importer will then mysteriously find that his permit is forthcoming, and trade will proceed in both directions. The result of all this paraphernalia of clearings and "aski" marks is that only a small proportion of Germany's foreign trade either produces or requires free exchange. In fact, so far as free exchange is concerned Germany is living on a margin of less than 20 per cent. of her total foreign trade, and a slight shift in these marginal imports and exports may rapidly make a very big difference.

There is no doubt that the recent trend of her foreign trade has been adverse to Germany. Hitherto she has been dependent upon her clearing agreements for obtaining essential food and raw material supplies from South-Eastern Europe and elsewhere. So long as world trade and prices were depressed, these countries were only too glad to secure the German market at any price, but now that world trade and prices are recovering, these countries are becoming restive and Germany is finding it less easy to renew her clearing agreements on terms so favourable to herself. Her suppliers are beginning to find other markets for their goods. On the other side of the account, Germany is finding it less easy to maintain her export trade. To begin with, she is passing through the same experience as we are in Great Britain. Her home trade is very active, and on

it she is superimposing re-armament and an attempt to maintain the standard of living of her people. All this makes it less easy for her industrialists to accept export orders.

Germany, however, has her special difficulties. For one thing, the internal economic outlook is so uncertain that her manufacturers are unwilling to quote prices for long-term export contracts, for fear of a rise in their costs. No such fears exist in the case of home contracts, for the Government can be trusted to intervene in the manufacturers' favour if a rise in costs makes the original terms of the contract intolerable. But the Nazi writ does not run abroad, and so the terms of foreign contracts could not be varied. Meanwhile the factories are so full of home orders that export deliveries of Diesel engines, for example, cannot be guaranteed within twenty months, and so the cost uncertainty rules the business out altogether. In other cases export trade is restricted by an inability to secure adequate supplies of imported raw materials. Thus, certain of the textile trades are only able to work a four-day week.

These difficulties existed even prior to the devaluation of the gold *bloc* currencies. It is early to say how devaluation will affect Germany's foreign trade, but there is no doubt that Germany is right in fearing that it will intensify her economic isolation. The unfortunate fact for Germany is that her only way of escape is for her to devalue and relax her exchange restrictions. Yet she cannot do this, for the overpowering reason that exchange control is an integral part of her whole economic, social and military system.

This brings us to the final and most important cause of Germany's exchange difficulties, namely the trend of her internal policy. The Nazi authorities are committed both to re-armament and to a general policy of providing employment and maintaining the standard of living. They have succeeded to the point where unemployment is reduced to a minimum, and, according to a foreign observer, the conditions of her "submerged tenth" are possibly better relatively than similar conditions abroad. On the other hand, the remainder of her population are probably relatively worse off than in other countries. But apart from internal difficulties touched upon by our Berlin correspondent on page 257, this fostering of industrial activity increases her demands for imported raw materials, while the rapid execution of her stupendous re-armament programme adds to this demand. The result is that raw material imports have first claim on her available foreign exchange supplies, and food imports have to take second place. But this winter Germany must import much more food- and fodder-stuffs, owing to deficient home supplies. Meanwhile, although the latest trade returns show some increase in exports, she has in reality comparatively little productive capacity left free for export trade, and this year's increase in exports represents goods shipped under clearing agreements and new trade with Russia. Hence it is not surprising that, as the following table shows, food imports have, in spite of Germany's general revival, only risen since last year by 0.9 per cent.

	First nine months		Difference	
	1935	1936	Rm. millions	%
Imports:—				
Livestock	27.1	67.1	+ 40.0	+ 147.8
Food	703.2	709.2	+ 6.0	+ 0.9
Raw materials	1,923.7	1,977.2	+ 53.5	+ 2.8
Finished goods	436.5	385.2	- 51.3	- 11.7
Total	3,090.5	3,138.7	+ 48.2	+ 1.6
Exports:—				
Livestock	1.9	1.9	...	...
Food	51.9	54.8	+ 2.9	+ 5.6
Raw materials	551.9	548.5	- 3.4	- 0.6
Finished goods	2,455.9	2,853.5	+ 397.6	+ 16.2
Total	3,061.7	3,458.6	+ 396.9	+ 11.3

The plain truth is that Germany is living beyond her means and is trying to do too much at once. Her exact economic and financial position is deliberately concealed from view, and very little is known of the shifts to which she has been put to finance herself. There are rumours that manufacturers are being forced to grant extended credit. It is also believed that the Reichsbank's adjunct, the Golddiskontbank, has now been reduced to the rôle of placing with the banking system the Reich's short-term promissory notes, of guaranteeing as best it can the standstill agreement, and of organising the subsidisation of Germany's export trade. As regards the renewal of the standstill agreements, due early next year, the recent visit of a British banker to Berlin was probably connected with that problem, but this year's continued deterioration of Germany's exchange position inevitably suggests that this problem will be even more intractable than before. The only redeeming feature is that the devaluation of the gold *bloc* countries has reduced the Reichsmark value of Germany's remaining foreign indebtedness to the gold *bloc* countries.

Naturam expellas furca, tamen usque recurret. Germany is trying to make political needs over-ride basic economic truths, and she is now beginning to pay the penalty in the inevitable loss of her foreign exchange reserves. In the present temper of the country and its rulers it is difficult to see how her policy can be reversed, and so the world must be prepared for the warning that economic deterioration will continue. It is a warning to other countries as well as to Germany, for if internal revival based on prodigal Government expenditure on re-armament or other objects is pushed too far, the same troubles will arise. Meanwhile, despite all protestations to the contrary, Germany's exchange difficulties are ceasing to be a legacy of the past and are becoming due to her current policy. Can she reverse the engines in time, and, if not, what will be the economic and political consequences to herself and the rest of the world? This is the real problem to-day, and Germany's exchange enigma is fraught with ominous possibilities.

FINANCIAL NOTES

Barclays Bank New Chairman.—It was officially announced on October 30th that Mr William Favill Tuke had resigned the chairmanship of the board of directors of Barclays Bank. He was elected two years ago at the age of 72 in succession to the late Mr Frederick Goodenough, but it was understood at the time that his tenure of office would not be long in view of his advanced age. He is succeeded by Mr Edwin Fisher, the deputy chairman, who since he joined the bank in 1908 as assistant secretary has almost without a break been Mr Favill Tuke's right-hand man. In 1911 he became secretary of the bank, and after serving in His Majesty's Forces during the war he returned to be appointed a local director in Birmingham. In 1925 he came to London as general manager and in 1932 he became a vice-chairman. His appointment as chairman of the board is the well-earned reward of a long banking career on which he is to be congratulated. At the same time, we regret to learn of the death of Sir William Carruthers, who was general manager of the bank in the difficult years which followed the war, and who since his retirement from the management has been a member of the board.

Sir Osborne Smith's Resignation.—At the end of last week the India Office announced that with real regret but in deference to his own wish the Governor-General in Council had accepted Sir Osborne Smith's resignation from the Governorship of the Reserve Bank of India. Sir Osborne began his banking career in Australia, first with the Bank of New South Wales and later with the Commonwealth Bank, and in 1926 he went to Calcutta as Managing Governor of the Imperial Bank of India. In 1934 he was

appointed the first Governor of the new Indian Reserve Bank. His resignation has come as a surprise to the City, which had hoped that he would act as Governor for several years to come. Sir Osborne, however, probably felt that he had seen the new Reserve Bank through its initial stages, and that the time had now come when he could safely retire and leave the bank in the hands of a successor. Contrary to certain rumours in the City, the motives behind his resignation are entirely personal and do not indicate the smallest disagreement anywhere, either in London or India, on questions of policy. In particular, all suggestions that there is a movement in favour of the devaluation of the rupee are completely unfounded. The suggestion that devaluation would check the exportation of gold from India is certainly curious in view of the fact that devaluation would raise the rupee price of gold.

The Institute of Bankers.—The main body of Sir John Caulcutt's address to the Institute of Bankers on Wednesday was concerned with a survey of conditions in this country. Though tolerably satisfied with the condition of agriculture, which he considers has at least recovered to the level of 1929, and that of industry, which, except in the Special Areas, is enjoying a salutary revival, he insists that further advance must depend on an improvement in the export trade. Increasing imports and stationary exports may enable foreign debtors to liquidate their debts to this country, but from no other point of view is this situation satisfactory. In this respect, however, he places great faith in the devaluation of the gold *bloc* currencies and the reciprocal agreements between the United States, France and this country, which by stimulating trade should at the same time minimise political interest. In the portion of his address devoted to banking matters Sir John touched on the principles attaching to bank advances. As examples, he said that in financing house building it is in accordance with banking custom to make stipulations which, if properly applied, tend to prevent a building programme getting very far ahead of the demand for the houses being built. In the matter of Stock Exchange speculation, the normal attitude of a bank towards advances sought for purely speculative purposes tends to discourage unhealthy conditions. We should have liked to have seen Sir John Caulcutt develop both these points in greater detail.

Australian Credit Control.—An important question from the point of view of this country is discussed by Mr Hytten, economic adviser to the Bank of New South Wales, in his replies to the questionnaire issued to economists by the Australian Royal Commission on Monetary and Banking Systems. In answer to the question: what would be the effect under present conditions of an expansion or contraction of central bank credit in Australia, Mr Hytten shows that Australia recently reached a difficult stage in the process of recovery where a choice had to be made between further expansion and a prudent contraction. The recent restriction of bank credit in Australia showed that the latter alternative had been chosen, at least temporarily, and Mr Hytten believes that the effect of this was, and will continue to be, salutary so long as recovery is only checked and not obstructed. There is an obvious parallel with this country, where a return of confidence backed by government expenditure has initiated boom conditions, indicated, among other things, by the marked rise in industrial securities. The same choice confronts us. Is this expansion to be encouraged until a boom is in full swing, or is the boom to be controlled and flattened, thus avoiding the rapid fall from peak to trough that is the culmination of the trade cycle? The latter course is the saner, but with the political element strongly intruding in the shape of the re-armament programme, restriction, which should naturally begin with Government expenditure, would not seem to be feasible. We have reached a stage in the trade cycle where control is still theoretically possible. At a later stage it may prove impossible to apply

the brakes. In view of this, developments in Australia, where the policy of contraction has been chosen, will be compared with interest with developments in this country, where expansion continues to be the order of the day.

Irish Banks' Return.—The banking return for the September quarter, published by the Irish Free State Currency Commission, is shown in condensed form below. The figures refer to the total business of all banks operating in the Free State, and thus include one London Clearing Bank (the National Bank Limited), with substantial business in Great Britain, and exclude the Belfast Bank Limited, which confines its operations to Northern Ireland:—

	£'000 omitted		Sept. Quarter, 1936		
	Sept. Quarter, 1935	June Quarter, 1936	In I.F.S.	Elsewhere	Total
Liabilities:—					
Capital, reserves, etc.	17,265	17,235	10,255	7,174	17,429
Notes in circulation	8,515	8,855	5,127	3,627	8,754
Current deposit and other					
Accounts	163,219	164,474	117,458	46,236	163,694
Other liabilities	4,519	5,928	2,795	2,003	4,798
Total	193,519	196,492	135,635	59,042	194,677
Assets:—					
Cash and balances with London					
agents and other banks	13,474	14,518	4,658	8,845	13,503
Money at call and short notice	10,242	10,604	5,073	1,171	10,602
Bills	6,618	6,403	5,073	1,171	6,244
Loans and advances	68,297	67,849	43,742	23,563	67,305
Investments:—					
(a) Government	77,851	79,605	3,551	75,874	79,425
(b) Other	9,307	9,679	3,469	6,474	9,943
Other assets	7,728	7,834	3,168	4,482	7,650
Total	193,519	196,492	135,635	59,042	194,677
Excess of assets outside I.F.S. over liabilities outside I.F.S.	69,982	72,366	...	...	71,970

The note circulation is higher than last year. Deposits have increased and advances have diminished since last year, probably as a result of the repayment of loans by farmers who have been experiencing better conditions. The increase in cash, money at call and short notice, and investments has strengthened the already very strong liquid position of the banks. The difficulty would appear to be to find borrowers to make use of the plentiful resources available. The increase in the last twelve months in the net excess of external assets indicates that the balance of payments has again become favourable, as a result of the increased prices of agricultural exports and the larger dividends received on British investments.

The Foreign Exchanges.—Early in the week there was a sudden flurry in the free rate for Argentine pesos, which appreciated sharply from Pes. 17.55 to Pes. 16.85 to the pound on rumours that the dual export rate of Pes. 15 and import rate of Pes. 17 were going to be combined into a single official rate of Pes. 16. Such a step would deprive the authorities of their "turn" on official exchange dealings, and the rumour was obviously unfounded. In consequence the free exchange rate returned to Pes. 17.55 on Tuesday. Otherwise the market remained quiet until Thursday, when the reassembly of the French Chamber led to a fresh weakness in the franc. In contradistinction to the early part of the week, the Banque de France gave no support, and so the sterling rate rose from Frs. 105½ to Frs. 105½, while forward francs widened to Frs. ½ and Frs. 2 for one and three months respectively, or to 10 and 8 per cent. per annum. There have been signs of official sales of forward francs in London. This must be on French account, for the British Control has never operated on the forward market. Guilders have been erratic. Our Amsterdam correspondent reports a fair "repatriation" demand for guilders, and the Bank of England has been selling guilders against sterling in Holland under its own name. Nevertheless, the spot rate has fluctuated between limits of Fl. 9.11 and Fl. 9.03, while three months' guilders remain at a discount of 8 cents. Swiss francs are very steady at Frs. 21.27½, and the rate is rigidly controlled. The New York rate is also steady at \$4.88½, and it is conceivable that for the moment it is thought desirable that sterling should remain at that level.

Interest Rates in Holland.—Our Amsterdam correspondent writes that the effects of devaluation are making themselves felt by the fall in both long- and short-term interest rates. Discount rates on the open market at Amsterdam have fallen to 1½-1½ per cent., which will make it possible for the Bank rate, which was lowered on October 20th from 3 to 2½ per cent., to be again reduced. On the investment market interest rates for State and municipal loans and mortgage bonds are also falling. Several 4 per cent. municipal loans have already been launched with success, but the Province of South Holland's attempt at 3½ per cent. was premature. The time is evidently approaching for the conversion of the 4 per cent. Netherlands State loans, an operation which would be highly beneficial, as interest is a heavy item in the State Budget. The falling rates have also assisted the latest issue of Exchequer bonds, which included Fl. 13 millions of five-year 3 per cent. bonds at par. It was later reported that the issue of a 20-year loan of Fl. 100 millions at 3 per cent., issue price 95½, has been decided on by the Government.

The Money Market.—Conditions have not been too easy this week, and money has been very usable. There has been a keen afternoon demand for money, and one or more of the clearing banks have called on each day. This cannot be ascribed to the usual end of the month demand for money, for this slight stringency was a subsequent development. The truth is that, as the Bank return shows, money remains segregated in public deposits. This is a little surprising in view of the Government dividend payments on November 1st.

	Oct. 15, 1936	Oct. 22, 1936	Oct. 29, 1936	Nov. 5, 1936
Bank rate	2	2	2	2
Clearing banks' deposit rate	½	½	½	½
Short loan rate:—				
Clearing banks	½-1*	½-1*	½-1*	½-1*
Others	½-1	½-1	½-1	½-1
Discount rates:—				
Treasury bills	½-1	½-1	½-1	½-1
Three months' bank bills	½-1	½-1	½-1	½-1
* Loans against Treasury bills and other approved bills and British Government securities within six months of maturity; 1 per cent. Treasury Bonds and other gilt-edged stocks within six months of maturity; and other collateral respectively.				

The market has been a keen seller of bills, but the banks have been not too eager to buy. A few January bills were bought at ½ per cent. but most went at ½ per cent. Mixed parcels of December and January Treasuries were consistently bought at the minimum rate of ½ per cent.

The Bank Return.—The main feature of this week's Bank return is the expansion of £4.4 millions in the note circulation. A certain expansion is always expected at the end of the month, but this is disproportionate and suggests either a recrudescence of foreign hoarding or a marked increase in general activity. The former is the more probable alternative.

	BANK OF ENGLAND				
	Nov. 6, 1935	Oct. 14, 1936	Oct. 21, 1936	Oct. 28, 1936	Nov. 4, 1936
	£ mill.	£ mill.	£ mill.	£ mill.	£ mill.
Issue Department:—					
Gold	195 5	248 7	248 7	248 7	248 7
Note circulation	402 2	446 4	440 1	442 7	447 1
Banking Department:—					
Reserve	54 2	63 4	69 6	66 9	62 5
Public deposits	21 0	31 6	37 6	2 6	27 2
Bankers' deposits	89 6	82 2	8 4	86 5	85 3
Other deposits	36 6	41 2	41 1	41 4	41 8
Government securities	87 2	80 4	79 9	10 2	82 0
Discounts and advances	11 0	9 6	6 7	6 6	7 7
Other securities	12 5	19 4	21 6	19 5	20 0
Proportion	36 8%	40 8%	43 4%	43 0%	40 4%

Bankers' deposits have been reduced this week by £1.2 millions and stand at a relatively low figure. This is somewhat surprising, as after the heavy dividend payments on November 1st it was expected that there would be a transfer of funds from public to bankers' deposits.

THE STOCK EXCHANGE

LONDON TRANSPORT PROBLEMS

TOWARDS the end of last week the largest urban transport undertaking in the world issued its Report. It consisted of 25 pages of text, 27 pages of financial and statistical data, six pages illustrating various aspects of its operations, and, to conclude, four maps depicting the London Passenger Transport Board's road and rail services. The Report is a social, economic and financial document which might well be taken as a model by many other undertakings. Its analytical and aesthetic merits, however, must be subordinate in the investor's mind to the major financial questions implicit throughout its pages. What are the prospects for the holder of London Transport "C" stock?

The question can hardly be answered on a study of the Board's financial results alone. These, as we showed in a Note on page 221 of last week's *Economist*, are undoubtedly disconcerting to optimistic purchasers of the "C" stock up to 112½ this year. The market's unmistakable disappointment has been signalled this week in a fall of 2 points in the "C" stock to 98, although part of the movement must be ascribed to the distribution of the Thomas Tilling holdings to that company's shareholders at 92. In fact, to reach a first general conclusion on their prospects, stockholders might well review the main lines of the Board's constitution. It is in law required "to secure the provision of an adequate and properly co-ordinated system of passenger transport" in its area, and to provide "most efficiently and conveniently" for its needs.

The Board's primary duty is owed to the travelling public; the earning of any given rate of interest on its capital is a secondary consideration, whatever the Act may say about "receivership." It is from this angle, we suggest, that its results and future prospects should be judged.

From the investment aspect, as we showed last week, the Board's third year of working has been disappointing. Total traffic receipts increased from £29,016,085 to £29,724,723—an advance of 2.44 per cent. Working expenses, however, were approximately £1,000,000 higher. The revenue account is analysed below:—

	Years to June 30th		
	1934	1935	1936
Revenue:			
Total traffic receipts	27,379,351	29,016,085	29,724,723
Working and general expenses	21,583,744	22,515,889	23,515,821
Provision for renewals	2,020,500	2,526,000	2,300,000
Net traffic receipts	3,775,107	3,974,196	3,908,902
Other receipts	1,520,408	1,500,014	1,563,214
Miscellaneous charges	Dr. 338,824	Dr. 347,939	Dr. 298,077
Available for appropriation	4,956,691	5,126,271	5,202,671
Appropriation:			
Tramway debt fund and interest	35,895	26,158	20,337
"A" stock interest	2,891,537	2,893,169	2,894,955
"B" stock interest	1,181,694	1,183,506	1,183,492
"C" stock interest	874,664	1,015,192	1,027,952
Ditto rate %	3½	4	4
Payments under guarantee, etc.	21,275	8,246	43,296
	4,956,691	5,126,271	5,202,671

Note: These figures are not strictly comparable owing to the acquisition of undertakings during the period.
† Includes £28,632 transferred from "C" stock interest fund.
‡ Less £48,374 charged to capital cost of new works. § Includes £30,639 transferred to "C" stock interest fund, being surplus earned over 4 per cent.

These results fully confirm the Board's cautionary statement last February. Analysis of the increased costs reveals from what directions the Board may still be vulnerable. Wages, which form 66 per cent. of the total costs, increased by £707,307 last year—a rise of 4½ per cent., which is equivalent to 2½ per cent. on the "C" stock. This increase, further, does not represent the whole cost of wage adjustments, for a further charge of £155,000 per annum has still to accrue. Nearly £300,000

has been needed to meet the general rise in prices of fuel and stores, while taxation has absorbed nearly £125,000 more.

It is not comfortable, from the "C" stockholder's viewpoint, to find a steady rise in receipts more than offset by an advancing operating ratio. There is no guarantee that this trend will speedily be reversed—the presumption is rather that it will continue. Before increased receipts begin to inure to the "C" stockholder there are other claimant hands outstretched to receive their share. Meanwhile, the rate of expansion of traffic in the Board's area has slowed down. Last year's net increase in the number of passengers handled by the "pool" undertakings was only 1.83 per cent., compared with 2.49 per cent. in the previous year. Although the average receipt per passenger journey has certainly increased, this in itself reflects the tendency of the growing population of Outer London to travel for a longer average distance.

If many of the quantities in the Board's operating equation are thus adverse, its solution will provide no easy task for its trusteeship and enterprise. The next problem—that of renewals expenditure—has a closer bearing on the immediate prospects for the "C" stockholder. The following table analyses the composition of the renewals provisions during the last three years:—

	Railways	Buses and Coaches	Trams	Trolley Buses	Total
Renewals:					
1933-34	763,796	823,028	418,144	15,532	2,020,500
1934-35	943,727	1,054,883	507,732	19,658	2,526,000
1935-36	865,668	934,858	442,812	56,662	2,300,000
Total, 3 years	2,573,191	2,812,769	1,368,688	91,852	6,846,500
Capital expenditure to June 30, 1936:	74,255,309	9,955,443	9,509,989	1,357,379	95,078,120
Rolling stock value, June 30, 1936:	8,010,149	6,925,668	1,933,737	827,684	17,697,238
Rolling stock maintenance, year to June, 1936:	430,547	1,720,554	652,685	35,001	2,838,787
No. of vehicles	3,148	6,298	2,323	300	12,069

The figures provide the material for examination of the extent of future renewal requirements. Of the total of £6,846,500 provided during the past three years, only £437,083 has yet been employed, leaving a balance of £6,409,417 generally available for further use and not earmarked by the different departments. Since the Report discusses renewals policy only in terms of passenger vehicle standardisation, we show the values of rolling-stock assets in each section and the amount charged last year for maintenance. The lay analyst of the Report must assume that the latter sums represent no more than fair wear and tear. If that is so, the renewals allocations presuppose average lives of the following rough dimensions for the rolling stock if renewals are solely applied thereto:—

Railways	9.3 years	Trams	4.4 years
Buses and coaches	7.4 years	Trolley buses	14.6 years

"C" stockholders may ask whether these calculations suggest any unreasonably short expectation of life. The trams in due course will be replaced by trolley buses, and generous provision against that day is appropriate. It is for the Board's technical officers to pass final judgment on the adequacy or abundance of these provisions. But they suggest that if present allocations are generous (as some investors tend to assume), they may include a smaller rather than a larger surplus over "normal" requirements.

If this argument is valid, it appears that the size of renewals provision may largely determine the prospects of the "C" stock for some time to come. The Board is bound, under pain of "receivership," to pay 5½ per cent. on that stock for the year to June 30, 1938, at latest. Last year the total revenue earned—£1,029,959—only slightly exceeded 4 per cent., and a further sum of £384,000 would be needed to meet a 5½ per cent. payment. If we assume that the Board's operating factors are unchanged over the next twenty months, it is clear that this sum can

come from one source only—a temporary reduction in the renewals provision. Are we, therefore, to regard the "C" stock as one which will rank as a "4 per cent. minimum" security, in two years out of three, and receive 5½ per cent. in the third? If so, it could hardly command more than par. Is the distribution of the Thomas Tilling holding of "C" stock at 92 based on this sort of calculation?

History alone will resolve this all-important question. But recent operating statistics throw some light on the possible course of net receipts. We set out below the latest receipts of the London passenger traffics pool, compared with the two preceding years, and also the working expenses per car mile of the Board's four operating departments.

	Railways	Buses and Coaches	Trams	Trolley Buses	All
	£	£	£	£	£
Passenger receipts of London Traffic Pool, 1935-36	18,499,092	15,959,445	5,719,103	428,699	40,606,339
Compared with 1934-35	+ 651,597	+ 185,392	+ 213,735	+ 264,898	+ 888,152
" 1933-34	+ 1,518,912	+ 1,324,853	+ 176,817	+ 270,826	+ 2,937,774
Working expenses, per car mile, 1935-36	d. 5.752	d. 11.078	d. 11.194	d. 10.411	...
Compared with 1934-35	- .057	- .344	- .235	- .665	...
" 1933-34	+ .082	+ .217	+ .389	+ .166	...

Notes.—See previous table re comparability. * Excluding general expenses and renewals.

Railway receipts have increased by the largest absolute amount during the period. But it is becoming increasingly difficult to cater for a purely "peak" traffic, and at present it is uneconomical for the Board to extend its railways. After the consolidation of the Board's bus operations, by the acquisition of the Tilling undertaking, the progress of receipts has not been exciting. Are the problems of City congestion affecting net receipts, through an additional rise in the cost factor? Of trams and trolley buses, it is possible to speak with more confidence. Already trolley-bus operating costs per car mile are lower than those of the trams. This may be due in part to lower maintenance requirements, but the fact that the Board is to seek powers to complete the conversion of trams to trolley buses shows that its experience so far has been satisfactory.

Finally, the investor may consider the potentialities of the extensions which are financed, under Treasury guarantee, at an average interest charge of little over 2½ per cent. These should have a considerable potential equity for the "C" stock, but that equity is essentially of a long-term order. On the other hand, if the Board may always rely upon a Treasury guarantee for what new capital it requires, its interest in the trend of the "C" stock may, to that extent, be correspondingly reduced.
